In addition to the Danat Bank and the Dresdner Bank in Berlin, the State also intervened last week in an important matter in the provinces. The Saxon State Bank and the Allgemeine Deutsche Kreditanstalt of Leipzig (Adca), one of the oldest and most respected provincial banks, have combined under joint guaranty of the State of Saxony. The purpose of the coalition is stated officially as "the strengthening of banking interests for the protection of Saxon economy." Saxony has been most severely affected by the industrial depression of the last two years, and the Saxon State Bank and the private Adca have undoubtedly suffered heavy losses. In addition to this the State Bank has, in the interest of Saxony's economic life, supported a number of industrial undertakings which would otherwise have closed down and thus increased unemployment, such, for instance, as the Horch automobile works and the Döhlen steel works. The stocks and credits of these concerns that were taken over are naturally frozen at present. The Adca has a stock capital of 40 millions and 11 millions of reserves; the State Bank has 10 millions stock capital and 8.5 millions of reserves. The balance of the combined undertakings probably exceeds 600 million marks.

ROUMANIA.

Political Situation — Budget — Commercial Treaty with Germany — Hoover Proposal — Cereal Exports — Bank Suspension.

(FROM OUR CORRESPONDENT.)

BUCHAREST, July 23.

THE political sensation of the last few weeks was furnished by Mr Maniu's resignation from the chairmanship of the National Peasant Party and withdrawal from the political arena. In spite of the objections and the insistent appeals of his friends and partisans he has made it known that his decision to return to private life is irrevocable. It is difficult to say what is the reason of this withdrawal. Although the letter by which he takes leave of his party and former adherents is couched in the most hearty terms, circumstances seem to indicate that it became more and more difficult for Mr Maniu to see eye to eye on important questions with his more pushing colleagues. Mr Maniu was first and foremost the leader of the Transylvanian section of his party. Ever since the union of the more ponderous and intellectual Transylvanian Nationalist Party with the old Roumanian Peasant Party of somewhat demagogic inclinations it has been a question whether the two wings would be able to agree for any length of time, and this has been particularly so during the time the National Peasant Party was in power. Perhaps the secret of Mr Maniu's move is that he is sacrificing himself to avoid a split. A difference of opinion with the King on a certain question, which is hinted at in some quarters, may have helped to this decision.

As a result, the Transylvanian wing of the party feels to a certain extent disorientated, and Mr Duca, the leader of the Liberal Party, has not been slow to take advantage of the new situation. In a clever speech at Cluj he accused Mr Maniu of favouring Transylvania to the detriment of the old Kingdom, and makes a warm appeal for national unity, naturally under the Liberal

banner. Thus the fight of the two principal parties, the Liberals and the National Peasants, is developing while the present Government provides the stopgap until the time when one of the two is strong enough to take the reins. Meanwhile, Mr Maniu's friends are endeavouring to create a mystic halo round his figure, holding him up as a kind of popular hero. One cannot help suspecting from these activities that there are some hopes of Mr Maniu eventually changing his mind.

The most important measure passed by Parliament during the short session which has just been concluded is the rectification of the Budget for 1931. Already when the Budget was published at the end of 1930 it was patent that the estimates of the receipts were too optimistic. It has now come to light that the estimates for the expenditure were insufficient and certain necessary items were left out entirely. As a result of this omission there is now shown a deficit of almost 5,000 million lei, to which must be added over 4,500 million lei for old debts contracted between 1921 and 1929 which have been left unpaid. Treasury receipts for the first six months of the year have fallen short of the estimates by a very respectable sum, which even the most sanguine of Government officials could not hope to cover by Treasury receipts during the second half of the year. The official view reckons with a deficit of 5,000 million lei. From the figures divulged and considering the state of the trade of the country, it would seem that the official view again errs considerably on the side of optimism. It seems also that the old debts will have to be left to take care of themselves for the present. The Government has made economies in the Budget amounting to a little over 4,000 million lei. In any case it appears certain that the year will close with a very substantial deficit.

The commercial treaty with Germany has at last been signed, and offers important concessions to Roumanian imports of grain. Germany is reducing the import tax on maize by 60 per cent. and that on barley and other cereals by 50 per cent. A quota of 10,000 head of cattle and 80,000 pigs is to be admitted to Germany. The treaty also grants facilities for the transport of cut meat to France, and makes concessions in favour of the import of birds, eggs, butter and other similar articles. The reductions of the duty on grain are especially welcome to the Roumanian farmer, as Germany has been always his principal customer for maize and barley. But in view of the most-favoured-nation clause, this part of the treaty is subject to the agreement of other countries which export grain to Germany, notably Canada, the United States and the Argentine.

Roumania has pinned great hopes to the completion of the commercial treaty with Germany, and is therefore very much interested in the economic re-establishment of this valuable customer. On the other hand, the Hoover proposal is not very favourable to Roumania. According to the statement of the Minister of Finance in Parliament, this year's instalment of the Roumanian debt to the United States has already been paid, and there remains a sum of about 160 million lei to be paid to England, France and Italy. Against this Roumania has to receive from Germany about 240 million lei. These payments would be postponed under the Hoover proposal, so that Roumania would be 80,000 millions to the bad. Unfortunately, against the sum of 240 millions due from Germany Roumania has entered into contracts for the purchase of material to a corresponding amount, and German manufacturers will have to be paid for these goods. It is hoped, however, that the question will be settled satisfactorily for all parties concerned.

An important concession to agriculture has been made by a new law which grants an export bounty of 10,000 lei per wagon of wheat and 13,000 lei per wagon of flour. The money for the payment of the bounty is to be provided by a small tax on bread, and it is expected that it will result in a substantial rise in the price of wheat even for internal consumption, and thus ensure the producer a satisfactory profit.

The general economic crisis through which the country is passing assumed very threatening proportions when recently the Banque Générale du Pays Roumain of

Bucharest had to close its doors. So far, only provincial financial institutions of more or less importance had fallen victims to the prevailing conditions. The Banque Générale is the first bank of importance in Bucharest which has got into difficulties. The last balance sheet of the bank for the year 1930 showed a capital of 60 million lei, reserves of a little over 60 million lei, and deposits and creditors in current account of nearly 865 million lei. An attempt was made to prevent the disaster by means of a credit of 100 million lei placed at the disposal of the Banque Générale by several large banks. This, however, proved entirely inadequate, and the inability of the banks in question to give more efficient assistance rather than emphasised the weakness of the general situation. The result was a general run on the banks in Bucharest. Happily the measures taken to meet the rush proved effective, and the alarmed public was calmed in a few days. The Banque Générale has asked for a "concordat préventif," and it is expected that the depositors will eventually receive their capital, if not the interest, in full. A very dangerous phase of the crisis has now passed, and the Bucharest banks have come out of the ordeal with considerable credit. Still, on account of the bad Budget, bad trade and lack of confidence all round, the situation remains very delicate, and responsible people look ahead with anxiety.

POLAND.

Banking Situation — Budget Deficit — French Railway Loan — Hoover Moratorium — Bank of Poland — Foreign Trade — Crops.

(FROM OUR CORRESPONDENT.)

WARSAW, July 24.

THE financial difficulties which came to a head last week in Germany caused no serious repercussion in Poland. The Katowice (Polish Upper Silesia) branch of the Danatbank was closed, and for a few days there was a keen demand in Warsaw and elsewhere for dollar currency (said to be for German account), but otherwise banking and stock exchange business went on as usual, with no apparent apprehension in the public mind either as to the safety of Polish banks in general or as to the stability of the zloty. Since it was assumed to be the sudden withdrawal of German short-term money that caused the depreciation of the zloty by approximately 70 per cent. in 1925, the recent trouble in Germany might have been expected to do so indicates in the first place that the Poles did not believe the German crisis to be anything like as serious as it was made to appear; secondly, that there is now very little German short-term money with Polish banks; and, thirdly, assurances were perhaps received that—for political reasons—French banks would if necessary come to the rescue. It is still possible, however, that trouble may be experienced by industrial enterprises—particularly in Upper Silesia—which have been financed mainly by German banks. There may also be serious difficulty in connection with the financing of Upper Silesia's Soviet orders for iron and steel products, which so far has been handled largely through Berlin.

The published figures on the present year's Budget (which began on April 1st) show a deficit of 21 million zlotys in the month of April, 12 millions in May and 44 millions in June—or a total of 77 millions. Revenue declined from 229 million zlotys in April to 200 millions in May and to 176 millions in June. This gives an average monthly revenue of about 200 million zlotys, or a total for the year of 2,400 millions, which is approximately the figure to which the Budget was reduced shortly after the commencement of the fiscal period, when it became abundantly clear that the estimates voted by Parliament were much too high. Even the reduced figure of 2,400 millions, however, will not be realised, as the first quarter of the fiscal year is the most prolific in tax yield, and the collectors have been especially energetic this year.

Strenuous efforts are, of course, being made to keep expenditure as close as possible to the amounts collected,

and a further reduction of 25 per cent. (on top of the 15 per cent. announced in May) has been made in the salaries of most public employees. Moreover, a large number have been dismissed. Army and police salaries, however, have so far been reduced only by 5 per cent., and this discrimination is causing a great deal of resentment. It means that the Ministry of War will absorb well over one-third of this year's Budget revenue. The deficits so far have been met out of Treasury reserves, by borrowing from the Bank of Poland and by using up the balance of the Swedish Match loan available for that purpose. These sources of supply, however, are now largely if not entirely exhausted, and with no new money in sight it must be anticipated that for the balance of the year outgo will be bound to exceed income. There may accordingly be a sharp pinch in public finance by about September or October, especially as the so-called French Railway Loan (for the completion and operation of the new coal line from Polish Upper Silesia to Gdynia on the Baltic) arranged in April does not, as was at first represented, mean an important cash consideration for the Polish Government. The Government have assumed serious responsibilities in connection with this French financing, besides handing over to the Franco-Polish concessionaire more than half the length of the total line in a completed condition, but the immediate financial recompense now appears to be negligible.

The Hoover plan for a one-year moratorium on war and war relief debts will be of very material assistance to the Polish Government during the present fiscal year. An amount of more than 12 million zlotys, representing principal and interest due and paid to Great Britain on July 1st has already been reimbursed to the Polish Government and made available for Budget purposes. Excluding small payments due to Denmark, Norway, Sweden and Switzerland on relief debts, it is stated that Poland during the year's moratorium will be relieved of debt charges to France, Great Britain and the United States in the amount of 106 million zlotys, of which 36 millions represent payments on account of principal and 70 millions for interest. Furthermore, when Parliament, several months ago, approved the conditions of the Swedish Match Loan, the Government were authorised to employ 50 million zlotys of the proceeds for the prior payment of external debts. Assuming that these figures are correct, and that there will be no hitch in the Hoover Plan, the Budget for the present year will be greatly relieved by the unexpected windfall of 156 million zlotys.

Between June 10th and July 20th the Bank of Poland's foreign exchange holdings serving as cover declined from 283 to 167 million zlotys. They stood at 217 millions a year ago. The gold and silver reserve remains virtually unchanged for the month at 568 millions, but is down by 135 millions compared with a year ago; while foreign bills not serving as cover increased during the month indicated from 100 to 131 million zlotys. Currency circulation has been further contracted in consequence of the loss of foreign exchange, and on July 20th had reached the very low figure of 1,170 million zlotys (1,220 millions on the corresponding date of 1930). The stabilisation plan adopted in 1927 provides very effective safeguards against orthodox currency inflation; while the borrowing power of the Treasury at the Bank of Poland is moreover limited to 50 million zlotys.

With an excess of exports over imports for June, valued at 32 million zlotys (imports reaching the exceptionally low figure of 129 millions), the active foreign trade balance for the first half of 1931 amounted to 145 millions—according to the preliminary figures. The active balance for the corresponding period of 1930 was 88 millions. Imports declined in value from 1,147 million zlotys in the first six months of 1930 to 668 millions in 1931.

The cereal crop outlook is generally regarded as favourable, the harvest in most sections of the country now being well advanced. Wheat seems likely to yield about the same surplus for export as was available last year; and while the rye crop will be somewhat smaller, there should be a substantial balance for export. In consequence of the small stocks remaining from the last harvest, grain prices have continued firm throughout the past month and, with

the exception of wheat, have been quoted higher than they were a year ago. New crop prices, however, have not yet been established, and it may be found later in the year that the very great difficulty now being experienced in obtaining harvesting credits will contribute towards a sharp decline in grain prices. The Polish-German Rye Convention, which has controlled the export marketing of Polish rye during recent years, has been discontinued.

JAPAN.

Money Market — Stock Exchange — Capital Issues — Foreign Trade — Population.

(FROM OUR CORRESPONDENT.)

TOKYO, July 10.

CONDITIONS in the money market remain almost unchanged. The turn of the half-year was very comfortably negotiated. The note circulation showed a steady contraction after the turn of the month, despite the demands for Bon Festival; while the bank's gold holdings are steadily increasing and its technical position is thus becoming strong. As from July 10th, the leading banks lowered the rate charged upon overdrafts from 6.57 per cent. to 6.2 per cent. The bankers' committee also is considering a proposal to allow no interest on current accounts. In this country it is the general custom to allow a fixed rate of interest on the whole of the current account, though the rate is now reduced to $\frac{1}{2}$ per cent. This, together with their decision last month not to allow interest on balances kept with them by provincial banks, is an attempt on the part of the city banks to reduce their interest charges in view of diminished earnings.

President Hoover's moratorium proposal has obviously favoured bullish operations in the stock market, which had long been in a depressed state, and there has been a steady rise in shares all round since the latter part of last month. Some speculative favourites have advanced by 20 yen to 25 yen in the past fortnight. According to the official estimate, all the shares and stocks quoted at the Tokyo Stock Exchange increased in value by 276.6 million yen, or roughly 10 per cent. in the two weeks ended on Tuesday last. Conditions in many sections of the commodity markets also have suddenly undergone a marked improvement. The raw silk market, in particular, has recovered appreciably. Cocoon prices have steadily advanced in sympathy to an average of 3.40 yen per kamme, as compared with a mean of 2.70 yen for earlier crops. This has given some measure of relief to the agricultural situation.

But the moratorium proposal came apparently too late to affect the general level of commodity prices during last month. The wholesale index number of the Bank of Japan for June registered a further sharp drop of 2.1 per cent. on the month, being down to the same level as in May, 1916. The principal contributors to the decline are barley, wheat, tea and timber.

The new capital raised during the first half of the year was 440 million yen, as compared with 669.4 millions in the corresponding period of last year. The decrease is solely accounted for by the Government borrowings, which fell by 325.7 millions. But, apart from Government issues, the issues for non-Government purposes totalled 822.8 millions, or an increase of 96.5 millions upon a year ago. This increase, however, does not suggest a revival of activity in the new capital market, for the severity of the slump in new issues was almost unprecedented during the first six months of last year immediately following the return to gold.

The trade returns for last month show that, as compared with June, 1930, imports fell in value by 20,512,000 yen, while exports increased by 1,333,000 yen. The decline in imports is largely accounted for by raw cotton, iron and steel, and machinery; while raw silk is mainly responsible for the expansion in exports. A small but welcome recovery, however, is disclosed here and there on the whole list of both imports and exports. Imports of wheat, ammonium sulphate, oilcake, and jute, flax and hemp have appreciably increased; while on the export

side wheat flour, rayon products, hats and toys have done better. The total value figures for the first six months of the year reveal that, in comparison with the corresponding period of last year, imports declined by 265,134,000 yen, or 27.7 per cent., and exports fell by 154,806,000 yen, or 21.1 per cent., the excess of imports over exports amounting to 113,537,000 yen, as against 223,865,000 yen.

The birth-rate in Japan was lower last year. According to the recently published report of the Bureau of Statistics the natural increase in 1930 was 912,592 persons, or 14.16 per 1,000 of the population, the numbers of births and deaths being respectively 2,083,991, or 32.84 per 1,000, and 1,171,399, or 18.18 per 1,000. In 1929 the natural increase was 815,493, or 12.96 per 1,000, the birth-rate and death-rate being 33.00 and 20.04. The larger natural increase in 1930 was thus accounted for by a lower death-rate rather than a higher birth-rate.

CANADA.

Crops — Grain Marketing — Business Conditions — Foreign Trade — Federal Parliament — The Beauharnois Scandals — Reorganisation.

(FROM OUR CORRESPONDENT.)

OTTAWA, July 21.

THE latest crop report of the Dominion Bureau of Statistics gives a very optimistic account of the crop conditions in the eastern provinces where, thanks to favourable weather, corn, wheat, truck and fruit crops are excellent, and, although drought has reduced the yield of hay and root crops, they will still be up to the average. There is also some improvement in the prairie provinces, where the serious fodder situation has been relieved since the recent rains by a new growth of grass and late-sown grains. But the rains came too late to save the wheat crop over large sections of the main south central wheat area of the prairie country. In the northern and west central districts, where there is plenty of moisture for the present crop, prospects, though irregular, are, generally speaking, better. Some heavy hail losses have been reported in Saskatchewan, while grasshoppers and stem rusts are causing damage in Manitoba. No estimate of the probable western wheat yield has yet been officially hazarded, but authoritative crop experts now forecast that it will not be much in excess of 215,000 bushels. The carry-over on July 31st will be somewhere below 120,000 bushels, and, after allowance is made for domestic needs, Canada should, therefore, have over 200,000 bushels of an exportable surplus.

During the past week the problems of the complicated wheat pool situation has been the subject of a series of conferences at Ottawa, Winnipeg and Regina. The Bennett Ministry could not see its way to grant the request of the Premiers of the three prairie provinces for the revival of the wheat board system, but the argument that, under present conditions, the interests of the producer demanded some plan of central selling was impressive, and Premier Bennett suggested that there be brought into existence "an ordinary trading corporation" to handle the wheat crop of 1930; Mr Bennett made the further suggestion that for this season at least the elevator systems of the three provincial pools should be leased to this trading corporation. But the representatives of the pools thought that this proposal would be unpalatable to the farmers, and they made the suggestion as separate units under the existing control and should enter into an agreement with the proposed trading corporation to act as its agent in buying grain at open market prices and delivering it to the corporation for disposal. This plan is likely to be adopted and a substantial portion of the grain of Western Canada will probably still be marketed this year through a single channel. The Manitoba pool has already announced that it will operate on an optional open market policy, which means that pool members can either sell in the open market or continue

August 8, 1931.]

under the pooling system. It has also been announced that terms of repayment of the excesses on the 1929 crop, which resulted from prices dropping below the figure at which the initial payment on pool grain had been seized, have been arranged on a basis acceptable to the provincial Governments and the respective pools. The arrangements involve repayment by the pools over a term of twenty years at a low rate of interest of the moneys which the provincial Governments have been compelled to find for meeting their obligations to the banks under their guarantees. It is expected that Mr John I. McFarland, who is now general manager of the Central Selling Agency, will be put in charge of the new trading corporation.

No change is visible in the general business situation, although merchants report that the continued fall in prices is encouraging the public to make generous purchases, and that, although their profits are curtailed, their volume of sales is as large as a year ago. The carloading figure for the week ending July 11th, at 47,729 cars, showed an increase of 4,184 cars as compared with the previous week, but was still 13,259 cars below the figure recorded in the corresponding week of 1930. During June the value of building permits issued by sixty-one cities was \$8,470,738, which was a decrease of 28.6 per cent. as compared with the May total, and a fall of no less than 54.5 per cent. as compared with the total for May, 1930. Despite lower costs of construction, the value of permits issued during the first six months of the present year is, roughly, only two-thirds of the value of the permits issued in the same period last year.

The trade figures for June are again unsatisfactory. They show imports valued at \$52,507,534, as compared with \$91,543,981 in June, 1930, while exports were valued at \$54,348,421, as compared with \$78,703,281. It is the first time, however, for a long period that exports have exceeded imports in value.

The Federal Parliament is still in session and prorogation depends upon developments in the Beauharnois Committee. Most of the budget is through the committee stage and there have been comparatively few modifications of the tariff changes originally proposed. Mr Bennett has, however, withdrawn all the proposed amendments to the Income Tax, including the proposed tax of 2 per cent. on the dividends earned in Canada by non-residents. He has taken this course on account of allegations, made by prominent Liberal politicians, that he was personally deriving a very substantial relief from taxation by the proposed changes. The Bill establishing a new type of Tariff Board has also become law.

But at Ottawa everything else has been overshadowed by the sensational revelations of the Committee of the House of Commons which is investigating the activities of the Beauharnois Light, Heat and Power Corporation as the result of charges made by Robert Gardiner, the leader of the Progressives. This company is engaged on an extensive power canalisation project east of Montreal on the River St. Lawrence, and has begun the construction of its works under a lease of waterpowers from the Province of Quebec and a permit to divert 40,000 cubic feet of water per second from the channel of the river. Mr Sweezy, the President of the Corporation, has testified that he paid, prior to the last election, \$700,000 to the campaign fund of the Federal Liberal Party and \$3,000 to the Provincial Liberal Party of Ontario. An offer of \$200,000 to the Federal Conservative Party was refused, but the company gave generous donations to individual Conservative candidates and also handed over \$125,000 in Victory Bonds to a gentleman who is supposed to be the agent of the Provincial Conservative Party of Ontario. He, under examination, claimed that he had still possession of these bonds or their equivalent in securities, and intended to keep them as a reward for certain services he had rendered the company. His own testimony of his services, however, was not of the most convincing character, and the suspicion is freely asserted that more illustrious personages in the political world are interested in these bonds. It has also been shown that the Beauharnois interests dispensed fees on a most generous scale to a group of lawyers and lobbyists at Ottawa and Quebec.

From the testimony given it is estimated that the profits of the original syndicate were between \$7 and \$12 million, according to the price at which they disposed of their allotments of the common stock of the Beauharnois Light, Heat and Power Corporation. One very prominent Liberal politician testified that on an original investment of \$90,000, he had made profits of half a million dollars, and other members fared even better. The revelations have profoundly shocked the Canadian public, and there is a general demand that the inquiry, which is still in progress, should be prosecuted to the bitter end.

Letters to the Editor.

MINERALS AND INTERNATIONAL POLITICS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In the *Economist* of May 23rd is an unsigned review of my book on "World Minerals and World Politics," in which some of my statements of fact are contradicted. Such criticisms in a responsible journal like the *Economist* will naturally carry weight, and can hardly be allowed to pass unchallenged. In the nature of the case no one can claim to know all the facts in so large a field, but it has been my business to study this subject for a long time, with the best of facilities for personal observation and for source material. These facilities have included many committee investigations, contacts with foreign mineral specialists in the Peace Conference at Paris and since, advisory connections with our Government Departments, and many other institutional and professional relationships. I am sure that some of my British colleagues will be as much surprised as I am by the calm assurance with which certain facts, which have been pretty well agreed on professionally, are thrown aside in favour of a reviewer's impression of the subject, obviously based on partial knowledge of source material. If your reviewer is right, then other competent reviewers, including some well-known mineral specialists, have missed essential errors.

The reviewer quotes my statement that "the centre of gravity for minerals will remain as before with the North Atlantic countries," and then says "these assertions are largely in the nature of assumptions unsupported by evidence." I do not know what should be regarded as evidence, in view of the many citations of distribution of specific minerals contained in the book itself. This conclusion, subject to qualifications cited in the book, seems to be pretty well agreed on by the best qualified men in the mineral field the world over.

The reviewer says "Far from being static, the centre of gravity in regard to minerals is a changing centre," and cites in support the fact that the tin industry has migrated from Cornwall to Malaya, Bolivia and the Dutch East Indies. This does not touch the point which the book seeks to establish, namely, that while many shifts have been made in the past, and others are predictable for the future, the constantly increasing scale of consumption has tended to convergence of demand on a few large sources of supply, and the chance of duplicating such sources on a scale large enough to materially change the geography of the industry is becoming small as the world is better known. Nearly every tin specialist who has written on this subject has stressed this point for this particular mineral.

The reviewer questions the statement that in no other region now known outside of the great steel-making regions of America, England, the Ruhr, and North-Eastern France and adjacent territory would it be possible to duplicate these large units with equal efficiency, and intimates that the Russian developments have been overlooked. Iron and steel happens to be my special field of interest, and the statement is based on consideration of all elements in the problem. In making the generalisation quoted, the Russian resources and plans were carefully weighed, particularly as to scale and cost. The reviewer quotes a German statement, two and a half years old, of the results expected in Russia, and ignores recent important changes in plan based on the failure of expected raw materials to measure up to expectations.

The reviewer says that it is hardly accurate to say that "in most of the Empire, excepting Malaya, under direct control of the British Government, there are restrictions against alien exploration and acquirement of minerals," etc. This is again a subject which has been given most detailed study. Our Bureau of Mines, in conjunction with the State Department, has published digests of laws and regulations for all of these territories.* I have discussed this subject with informed

* "Information Circulars." U.S. Bureau of Mines, Washington, D.C.

specialists at a round table conference before your Institute of International Affairs.

The reviewer says: "It will be news to many, too, to learn that the same Government has taken an active interest in the nickel industry of Canada and in the manganese industry of the Gold Coast of Africa," etc. Apparently it is news to the reviewer, but he should look up the affairs of the British-American Nickel Company, the discussions published at the time of the change in control of the International Nickel Company, and the political obstacles to the American effort to acquire manganese concessions in the Gold Coast.

Quoting again from the reviewer: "The assertion that 'the British Government owns the majority of shares in the Anglo-Persian Company' is incorrect—the interest is less than one-third." The reviewer apparently overlooks the fact that ordinary shares carry two votes and preference shares one-fifth of a vote. The actual voting control of the British Government, as given in Skinner's "Oil and Petroleum Handbook for 1930," published in London, is slightly over 51 per cent.

In general the reviewer questions the statement that the British Government is giving political aid to the exploration of minerals outside its own spheres of influence, and calls it "a figment of the author's imagination." This is astonishing in view of the many public records of these activities, some of which are specifically cited in my book. An enlightening review of the relations of the British Government to oil development, published in *Foreign Affairs*,* is a good case in point.

The "author fails to take into account the probable new discoveries of gold, the recovery of gold as a by-product in the treatment of other ores, and the possibilities, with the improvement of scientific methods, of the extraction of gold from substances at present valueless for that purpose." Especially has the author overlooked the pre-Cambrian shield of Canada as a future source of gold. This is, so to speak, home ground. I am sure that even the most optimistic Canadian promoter would be slow to claim that the world will show a greater peak of production than in the past through future discoveries in this region. The reviewer should look up the recent discussion of the gold subject at the Economic Conference in Geneva. The American part of this discussion was based on rather elaborate investigations of reserves by our own Government departments, and corroborated by many European engineers. In a "gold" symposium at the Council on Foreign Relations in New York during the past winter the subject was threshed over by a competent group, and a conclusion reached which is flatly in contradiction to the reviewer's statement that "there can surely be little doubt that a greater peak will be reached in the future."

The reviewer doubts the existence of a steady trend toward common ownership and centralised directing of the mineral industry "in view of the number of separate and distinct productive units at the present time as compared with, say, 60 years ago." Again he had better look up his facts. My statement is based on careful and detailed analysis of the actual commercial control of the bulk of the mineral industries.

That "the known supplies of liquid fuel are nearing exhaustion in the United States," and that "the centre of gravity with respect to copper will within a short time shift from the United States to Northern Rhodesia," will certainly be news to American engineers whose business it has been to study these subjects. In both cases the obituary is decidedly premature. While Rhodesian copper developments have been large, the reviewer should compare them in scale with recent developments in Canada and South America, and particularly the recent huge additions to the Chuquicamata deposit in Chile.

The book discusses highly debatable subjects, affording wide latitude in interpretation. The statements of fact, while necessarily generalised and sometimes subject to qualification, were prepared with the utmost care and in collaboration with many competent specialists. To cite all sources specifically would have greatly extended the book and defeated my purpose to present a compact statement understandable to the general reader.—Yours, etc.,

University of Wisconsin,
Madison.

C. K. LEITH.

[Our reviewer writes:—Professor Leith complains of the "calm assurance with which certain facts, which have been pretty well agreed on professionally, are thrown aside in favour of a reviewer's impression of the subject, obviously based on partial knowledge of source material." Your reviewer does not wish to appear harsh, but that is precisely what he complains of in regard to Professor Leith's book.

Let us examine, in the order, in which he gives them, the points in the Professor's letter:—

1. *The Centre of Gravity for Minerals*.—Professor Leith says that his "conclusion, subject to qualifications cited in the

* Veatch, A. C.: "Oil Great Britain and United States." *Foreign Affairs*, July, 1931.

book, seems to be pretty well agreed on by the best qualified men in the mineral field the world over." Your reviewer contends that it is not pretty well agreed on, and the Professor quotes no authorities.

2. *Changing Centre of Gravity*.—That the centre of gravity of mineral production is not static is evidenced by the history of mineral development, e.g., Australia was at one time the centre of gravity of gold production; now South Africa is the chief source of production; probably in the future Canada will be able to claim predominance. The author produces no evidence in his letter in support of his contention that "the constantly increasing scale of consumption has tended to convergence of demand on a few large sources of supply, etc.," but shelters behind the general statement that "nearly every tin specialist who has written on the subject has stressed this particular mineral," but he names no specialist. Your reviewer, for instance, has written on the subject and has not "stressed this particular mineral." The author might, for instance, consider the case of coal as well as of tin, the field of supply of which has been greatly extended geographically of late years.

3. *Russia as a Steel Centre*.—The Professor does not appear to take seriously the opinion of Dr. Krummer embodied in his report of two and a half years ago, although this report was made to Messrs Blair and Company of New York and the Deutsche Bank of Berlin, after his visit to Russia. Perhaps the Professor has not seen the report. Far from ignoring recent changes in Russia your reviewer has been peculiarly alive to them. Last year Mr H. R. Knickerbocker, foreign correspondent of the *New York Evening Post*, was sent to Russia by his paper to report on the industrial conditions there. The result of his investigations has been published recently. In describing the steel plant at Magnetogorsk he designates it "the largest construction camp in the world, at the base of the most highly concentrated deposit of iron ore in the world, which American engineers, operating under the biggest contract ever closed in engineering history, are helping to turn into what is planned to become the greatest steel centre on earth." Eight hundred million roubles is being invested by the Soviet Government in the undertaking. The neighbouring supplies of iron ore are put by Mr Knickerbocker at 275 million tons of magnetic iron containing 62 per cent. of metal. He says: "There is no doubt in the minds of the American engineers at work here that the Magnetogorsk plant will be finished very nearly on time, and that by October of next year the first two blast-furnaces will go into operation, and at short intervals thereafter more furnaces will be installed until all eight are working." Far from there being a "failure of expected raw materials to measure up to expectation" the reverse is the case, we have seen what the supplies of iron ore amount to. As to fuel, Russia is exporting her surplus. Of suitable fluxes, the supplies are vast. Wherein then lies the deficiency?

4. *Restriction against Alien Exploration and Acquisition*.—Professor Leith produces in his letter no evidence that contradicts your reviewer's criticisms. He does not adduce any evidence in support of his assertion that the British Government has taken an active interest in the manganese industry of the Gold Coast of Africa, and in the effort to secure high-grade iron ores. The American Bureau of Mines has unpublished digests of the laws and regulations of various British territories, so has the Imperial Institute in London—and your reviewer prefers the latter.

5. *The British Government's Holding in the Anglo-Persian Company*.—Professor Leith stated of the British Government in his book (page 87) that "It owns the majority of shares in the Anglo-Persian Company." According to the Stock Exchange year book, the capitalisation of the company and the British Government's holding therein are as follows:—

Issued capital, £23,925,000.
Divided into 13,425,000 ordinary shares,
7,000,000 first preference shares,
3,500,000 second preference shares.
The holding of the British Government is:—
7,500,000 ordinary shares,
1,000 first preference shares.

or a total of 7,501,000,
which is less than one-third, which was what your reviewer stated.

6. "Especially true of the British Government—that it is giving political aid to the exploration of minerals outside its own sphere of influence."—Your reviewer stated that, in order to be of any value, such a declaration should be supported by actual instances. None were forthcoming in the Professor's book and none are forthcoming in the Professor's letter.

7. *Peak in Gold Production*.—This must remain a matter of opinion. Time alone will prove who is correct, Professor Leith or your reviewer. But the view of the eminent authorities with whom the latter has discussed the point, coupled with his own knowledge of the subject, leads him to the definite conclusion that the record of production has not yet been reached, for the reasons given in his review.

8. *Supplies of Liquid Fuel in the United States*.—As to the resources of oil in the U.S.A., the Professor is doubtless acquainted with the conjoint report of the United States Geological Survey and the Association of American Petroleum Geologists to the President of the U.S.A., from which it is evident that, at the present rate of production, the life of the oilfields was very limited.

9. *Copper and Northern Rhodesia*.—Your reviewer is well acquainted with the copper developments in Canada, having recently made a tour of inspection of Canadian mines, and is informed as to the developments at Chuquicamata in Mexico, but these are far surpassed by those of Northern Rhodesia. Further comment seems unnecessary.]

EXPORTS AND EMPLOYMENT.

TO THE EDITOR OF THE ECONOMIST.

SIR,—There is one point in connection with the letter which you published from me last week to which it is desirable to refer. In your editorial comment you referred to the question of the proportion of salaries to total remuneration, and owing to the omission of two or three words in the letter, I think it possible that my point may not be clearly understood. The sentence in the fourth line from the bottom on page 224 should have read: "For (a) alone, I took salaries at 10 per cent.," etc. The words italicised, though in my draft, were omitted in the typed letter sent to you, and it is possible that their omission may cause difficulty in following my argument.—

"Thornhill,"

Yours faithfully,

E. C. SNOW.

Kenley.

August 4, 1931.

THE FIDUCIARY ISSUE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—While no one will deny that we are glad that the Central Banks of France and the United States have agreed to give us a credit of £50,000,000, there are some people who will question its necessity, and many who will hope that recourse to these credits will be unnecessary. One of the best remedies for an unfavourable exchange and gold drain is an export of commodities. To have recourse to these credits would be to retard the development of our export trade. This is stimulated by a depreciated exchange which is a natural stimulus and often provides a corrective. Another remedy is a transmission of bullion. This has evidently proved ineffective. There remains a third remedy, i.e., to contract the note issue, and this is generally accompanied by a rise in the Bank rate. To increase the fiduciary issue by £15,000,000 appears to me likely to accentuate our troubles rather than to relieve them. It will not improve the exchange nor stop the gold drain. What is wanted is a decrease in the fiduciary issue, not an increase. I hope, therefore, that this proposal will not be proceeded with, and that there will be no recourse to the credits. "The fault, dear Brutus, is not in our stars, but in ourselves that we are underlings." Economy and sound finance will help to bring about prosperity.—Yours, etc.,

34, Queen Anne's Gate Gardens, S.W. 7. D. M. MASON.

[Our views on these questions are expressed in an article on a previous page.—Ed., Econ.]

ARMAMENTS, TARIFFS AND CONFIDENCE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—As one who has over a lengthy period of time made a detailed study of the subject of armaments, will you permit me to express my doubts as to the advantage to be gained by approaching the goal of confidence from the angle that appeals alike to you and to the Government?

Surely armaments, however expensive or inexpensive they may happen at any time to be, are the means to an assumed end of national self interest? They are an effect rather than a first cause of a lack of confidence.

So long as States seek or have, because of the distrust and frequently antagonistic interests of their more influential nationals, a disposition to perpetuate their political separation, there is going to be no disarmament save under the influence of some entirely transient itch for economy.

Whilst France and Germany have no over-riding material inducement, such as an interchange of investments and an interdependence of essential industries, they will not be able to live down the memories of what have been in the past by no means purposeless quarrels over the allocation of Lorraine or the occupation of the barrier towns of the Netherlands. And, in the event that international statesmanship does nothing to help Italy find an outlet for her rapidly expanding population otherwise than to the disadvantage of her nearest neighbours, or France to have safe passage for men and materials between Marseilles and Northern Africa, a few submarines and cruisers more or less will make scarcely an atom of difference to the tension between these two national States.

Tariff truces and Customs unions, also, must follow and not precede the merging of vitally important economic interests. These, like the more destructive means of advancing or defending the latter, will atrophy when there is felt no longer a need to safeguard property and person against another State.

Such were the origins of the United Provinces, of the Union between England and Scotland, and of the German Zollverein. That politicians, who think invariably in terms of the mechanism of the State, even if it is only one which, as in the case of the Labour Government, they have begun to take over, should so put the cart before the horse and seek first Free Trade or disarmament and then confidence as a means to undisturbed economic intercourse, is not something whereat to wonder.

All the same, it is the exact opposite of the direction in which to travel to the solution of the problem.

Remove the cause of all war and armaments will become a luxury that no nation will continue to have produced for it—even to find employment at high wages for workmen and high rates of interest on credits advanced by the bankers. Instead, the world can, if it so wishes, turn for this purpose to the less dangerous, though almost equally uneconomic, expedients of Mr Cole and Mr Keynes.—Yours very truly,

11, Lilyville Road,
Fulham, London, S.W. 6.
July 20th.

WALTON NEWBOLD.

COMPANY LAW REFORM.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The heavy losses of capital in British industrial and other public limited companies of late years, often in excess of dividends received, has caused widespread distrust and want of confidence amongst shareholders and investors.

The Company Law wants strengthening to give them greater capital security and control over the selection of directors, who should be legally compelled to state their business, technical or professional qualifications and experience. All directors, secretaries, auditors and company valuers should have registration certificate or licences, which could be suspended or cancelled in cases of incompetence, misconduct, carelessness or neglect of duty.

The numbers and remuneration of directors are often very excessive and quite unnecessary with good whole-time managers and staffs. The promotion of public companies should be done through registered firms or companies of financial soundness and good repute.

The registration or licensing system eliminates "undesirables," who can be struck off the registers, if justified, and prohibited from doing further mischief. The raising of new capital, particularly debentures and preference shares, as prior charges or *pari passu* with existing securities (often depreciated in consequence), should not be allowed without a certificate from auditors and valuers that the assets of the company will be adequate to cover fully the increased capital when subscribed.

Over-capitalisation is a frequent cause of company failures. The safeguarding of shareholders is of vital and urgent importance in the national interest to restore confidence in industrial and other public limited companies, so that anyone, even if inexperienced, can invest their money in reasonable safety without the risk of losing it.

Much Parliamentary time is wasted, instead of concentrating on the things that matter, such as Company Law Reform.

Yours truly,

D. H. WILLEY.

THE FACTORY ACTS.*

"Redgrave's Factory Acts" is so well known to those concerned with the legislation with which it deals—the present edition is the fourteenth—that a very brief indication of its contents would have sufficed were it not that the editor of the new edition has done more than simply bring the book up to date. "Redgrave," as its users know, is a full and comprehensive text-book on the Factory Acts and other industrial legislation associated by subject-matter with the main series. The Factory Acts have twice been consolidated—once in 1875 and again in 1901—and they now include numerous amending Acts passed since the last consolidation. Besides the long chain of Acts, there are many regulations made under them and revised from time to time, and, after an interval of six years, a reissue of "Redgrave" was undoubtedly needed. Mr Joseph Owner, the present editor, who, besides possessing legal qualifications, looks back on a long experience in the Factory Department of the Home Office, has taken the opportunity to rearrange the contents of the volume more systematically and to enlarge the index, and so has effected a substantial improvement in this standard work. The further consolidating legislation, promised again and again in the King's Speech, has failed to materialise. Bills, it may be recalled, were prepared by a Labour Government in 1924 and by a Conservative Government in 1926, but were not proceeded with. Pending the long-deferred consolidation the assistance of a text-book is specially useful. Moreover, in recent years various judicial decisions have been recorded and other changes calling for notice have occurred and have been duly incorporated. Besides the principal series of Factory Acts with the regulations for dangerous trades (which are now arranged alphabetically) the book covers the Truck and Shops Acts and Regulations, as well as various Education and other Acts affecting persons industrially employed. Thus it brings a mass of information between two covers, but the volume is not so well produced as it might have been.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]
(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

Unemployment Problems in 1931. (London) P. S. King and Son, Ltd., 14, Great Smith Street. 6s.

A general account of the position, based on the report of the Director of the International Labour Office, with essays by well-known experts on some of the most important causes of unemployment.

* "Redgrave's Factory Acts." By Joseph Owner. 14th edition. (London) Butterworth & Co. (Publishers), Ltd., and Shaw and Sons, Ltd. 21s.]

The House of Industry. By S. G. Hobson. (London) P. S. King and Son, Ltd., Orchard House, Westminster. 1s.

A proposal to substitute for the House of Lords an elected chamber representative of the various industrial groups.

Wage Determination in the Coal Mining Industry. (London) P. S. King and Son, Ltd., 14, Great Smith Street. 2s. 6d.

An international survey under the auspices of the League of Nations.

Statistical Year-Book of the League of Nations, 1930-31. (London) George Allen and Unwin, 38, Great Ormond Street. 7s. 6d.

The latest edition of this valuable handbook contains new tables giving statistics of unemployment by groups of industries, strikes and lock-outs, yields of bonds, share indices, discount rates, etc.

A Century of Progress, 1831-1931. (Bourneville) Cadbury Bros., Ltd. 2s.

A profusely illustrated booklet containing an account of the activities of the Cadbury firm during the hundred years of its existence.

The Banker. August, 1931. (London) Financial Newspaper Proprietors, Ltd., 20, Bishopsgate. 2s. 6d.

This issue contains an article by M. Parker Willis on "Real Estate" Obligations in American Banks.

Handbuch der Exportpraxis. By Walter Schück. (Stuttgart) C. E. Poeschel Verlag, Calwer Strasse, 18. Rm. 18.

A treatise on exports, with special reference to the export of German manufactures.

Statistical Contributions to Canadian Economic History. By C. A. Curtis. In two volumes. (Toronto) The Macmillan Co. of Canada, Ltd., St. Martin's House. \$10.00.

A remarkable collection of statistics of banking, foreign trade and prices.

Bills, Cheques and Notes. By J. A. Slater. Fifth Edition. By L. Le Marchant Minty. (London) Sir Isaac Pitman and Sons, Ltd., Parker Street, Kingsway. 5s. net.

An account, for the student and general reader, of the law relating to bills, cheques and notes.

Handbook of New York City Banks. Edited by F. Edmonds Tyng. (Nek York) Overseas Statistics, Inc., 261, Broadway. (London) London General Press, 6, Bouverie Street. 10s.

The new service gives in a concise form up-to-date statistical information on all the leading New York banks and trust companies.

Mass Production. By Sir Eric Geddes. (London) The Pelican Press, 2, Carmelite Street. 6d.

A pamphlet illustrating the importance of mass production and adducing it as an argument in favour of protection.

The Austrian Year Book, 1931. Edited by the Austrian Federal Press Department. (Vienna) Manzschke Verlags-und Universitäts-Buchhandlung.

A detailed survey of political, economic and cultural conditions in Austria. Most of the information and statistics are taken from official sources.

Financial and Economic Statistics of Japan (1913-1930). (Kobe) Institute for Commercial Research, University of Commerce.

A useful statistical year book.
Scienza delle Finanze e Diritto Finanziario. By Professor Avv. Giovanni Fasolis. (Genoa) Gruppo Universitario Fascista.

A Fascist treatise on public finance.

The Roumanian Handbook. By Norman L. Foster and Demeter B. Rostovsky. (London) Simpkin, Marshall, Ltd., Stationers' Hall Court. 10s. 6d. net.

An illustrated account of political, economic, cultural and social conditions in Roumania.

HOME RAILWAY EARNINGS.

WITH the publication of interim dividends this year, each of the main-line British railways has made public much more detailed information in regard to the trend of expenditure than on any previous occasion. This departure is greatly to be welcomed, for the railways undoubtedly have a great deal to explain. In recent years stockholders have suffered a heavy decline in the value of their securities, which, to-day, are standing at lower levels than at any time since the "grouping" of the railways in 1923. Since the regular publication of weekly railway traffic figures affords stockholders immediate intelligence, in depressed times like the present, of every decline in gross revenue, whereas details of economies tending partially to offset such losses are reserved for the annual reports, the market attaches the utmost value to the opportunity of checking its impressions in the light of the information given in the half-year's statements.

Though the market has frequently appealed to the railways for the publication of net traffic figures at monthly intervals, on the American model, all the boards have hitherto been adamant in their refusal—though the last request was, in fact, backed by every large firm of Stock Exchange dealers in Home Railway securities. The railways maintain that conditions in Great Britain and America are not on all fours. An important percentage of the British railways' receipts is derived from ancillary businesses, whereas there is no similar complication in the United States. On the American railways passenger traffic revenue is far less important than on the British systems, where the variation in the incidence of Bank Holidays makes comparisons month by month unreliable. Finally, the railways declare, on many American railways climatic conditions differ widely between summer and winter, and the heaviest charges can be made to fall against the months of heaviest receipts. In Great Britain, on the other hand, it is profitable to apportion expenditure more evenly, regardless of receipts in individual periods, so that net figures for any particular month may be unrepresentative of those for a whole year.

Whatever the merits of these arguments, investors must clearly rely, for the present, on such infrequent intimations of the true earnings position as the railways are prepared to afford them. From the official statements issued in the last fortnight by the four group railways, supplemented by published traffic receipts for the first twenty-six weeks of 1931, it is possible to gain a fair insight as to how far the individual companies have succeeded in reducing their expenditure proportionately to their losses in revenue. Unfortunately, the statements of the four railways are not issued on a uniform basis, and it is, therefore, advisable to take in turn the figures made public by each company.

On the London, Midland and Scottish Railway, the published traffic figures for the first twenty-six weeks of 1931 showed a decrease of 6½ per cent. in passenger receipts, 14½ per cent. in merchandise receipts, and of 2½ per cent. in coal receipts, with a gross railway traffic loss of £2,965,000 (9 per cent.). Since gross revenue is stated to have fallen off for the first half year by £3,400,000, it may be taken that gross receipts from ancillary services and miscellaneous sources dropped by rather more than £400,000. Expenditure was reduced by no less than £2,400,000, but since £400,000 of this was in respect of the 2½ per cent. deduction in salaries and wages which applied for the first nineteen weeks of 1930, the reduction in net revenue under comparable conditions for the first half-year stood at £1,400,000.

On the London and North Eastern Railway the published traffic figures for the first twenty-six weeks of the year showed decreases of 9 per cent. in passenger receipts, 14½ per cent. in merchandise receipts, and 8½ per cent. in coal receipts, with a gross railway traffic loss of £2,866,000 (11½ per cent.). Since gross revenue is stated to have fallen off for the first half-year by £3,130,000, it

may be taken that gross receipts from ancillary services dropped by rather more than £250,000. Expenditure was reduced by as much as £2,140,000, so that the net revenue fell by approximately £990,000.

The Great Western Railway's published traffic figures showed a falling off of 7½ per cent. in passenger receipts, 11 per cent. in merchandise receipts, and 14 per cent. in coal receipts, with a gross railway loss of £1,469,000 (10 per cent.). The gross revenue is stated to have fallen off for the first half of the year by £1,777,000, of which gross receipts from ancillary businesses accounted for £308,000. Gross expenditure was reduced by £988,000, but the net figure was stated to be £815,000, thus leaving a reduction of £962,000 in net receipts.

The Southern Railway's gross returns revealed decreases of 5½ per cent. in passenger receipts, and 8½ per cent. in merchandise receipts. There was, however, a 7½ per cent. increase in coal receipts, the gross railway traffic loss being rather over £500,000, or approximately 5 per cent. Railway expenditure was reduced by over £300,000, but net receipts from steamboats were £36,000 less, although this decline was offset to a small extent by a slight increase in net receipts from docks (presumably at Southampton). An increase of £57,000 in general interest, chiefly from allied omnibus companies, was more than offset by the £75,000 required for dividends on the £3,000,000 of additional guaranteed preference stock issued in April, 1930.

The reductions in expenditure achieved on all four lines are imposing. They have not saved the London and North Eastern from the necessity of drawing temporarily on general reserves to pay first preference dividends, or the London, Midland and Scottish from postponing and the Great Western and Southern from reducing their interim ordinary distributions. Nor have they removed the qualms of prior stockholders on the two largest systems lest even the "Chancery" Trustee status of their holdings may be prejudiced, some months hence, if traffic receipts continue to decline. In the absence of substantial economies, however, the immediate prospects for most stockholders would have been dark indeed, and from their point of view the reductions in wages and salaries from the end of last March came none too soon.

During the first nineteen weeks of last year, a 2½ per cent. voluntary "cut" in all salaries, fees and wages was in force, which came to an end in May, 1930. Since the beginning of April this year, however, a new reduction of, roughly, 4 per cent. has been effected under the Board's award. Since no deduction was in force during the second half of 1930, whereas for the second half of 1931 the existing deduction will apply throughout, the comparative benefit, in the matter of net receipts, will be materially greater than during the first half of this year.

This year G.W.R. figures have reflected the serious repercussions on trade in South Wales of the coal stoppage from January 1st to 17th, and it may be hoped that there will be no recurrence of any such item in the remaining 1931 figures. On the other hand there was little sign during July of any improvement in the weekly traffic receipts of any of the four companies, and there is no present indication, either in the index of price levels, or the unemployment figures, that any real improvement is to be expected in the near future.

In short, final dividend prospects on all the four lines will be mainly dependent upon the companies' ability to keep expenses to the present low level, and possibly even to cut them still lower. It is relevant to point out, in this connection, that no British railway has as yet permitted its maintenance policy to get into arrears, though such a policy has admittedly been followed by many foreign railways, including even some of the largest American systems. The physical condition of British railway properties, indeed, is as good to-day as it has

ever been, if each system is taken as a whole. Apart, however, from the economies which are steadily being achieved through standardisation of rolling stock and other internal improvements which are cumulative as the years pass, there must obviously be a limit to the extent of possible reductions in expenditure, other than wage rates, which have now been stabilised, at least until April, 1932.

As regards individual systems, the two Northern lines have naturally suffered more seriously from the stagnation of industrial production than have the Great Western and Southern Railways. During the past half-year the tonnage of manufactured iron and steel carried by the L.N.E.R. has dropped by nearly 40 per cent., and iron ore traffic on the L.M.S.R. by 45 per cent., as compared with the corresponding period of 1930. That the L.N.E.R. should be able to cut down expenses by £2,140,000 is decidedly creditable, particularly as the pre-group railways in this company were, on the average, less strong than those comprised within the L.M.S.R., which, nevertheless, is entitled to take a pride in its achievement of cutting its expenditure by £2,000,000. In toto, the savings of the four groups amount to well over £5,000,000, as compared with a loss in receipts of about £8,500,000. These savings are the more noteworthy since they follow savings of £18,000,000 effected since 1922. Doubtless the fall in prices of materials has been of great assistance to the managements, but in the main the savings under headings other than wages have been due to better organisation and increased technical efficiency. The Southern Railway has been greatly assisted by the development of the Kent coalfield, which has been important, less for the traffic it has brought to the system, than for its effect on the total fuel bill. The inability of the G.W.R. to offset its loss in receipts to the same extent as the Northern companies may be explained in part by the South Wales coal stoppage in January, but to a greater degree by the fact that the railway under the grouping scheme, was far more homogeneous than any of the other three systems. The bulk of the Great Western's potential economies from amalgamation have probably been already obtained, while those of the Northern companies may continue to be a material, if decreasing, factor for some time to come.

It is clear that junior stockholders of all the systems in varying degrees will have an awkward fence to cross next February. Their holdings, being part of a "high-gear" structure, with much fixed-interest and relatively little equity capital, must reflect in exaggerated form all fluctuations in net earnings. The L.M.S.R., for instance, has £319,000,000 of debenture, guaranteed and preference stocks ranking in front of its £95,000,000 of ordinary capital, and every 1 per cent. fall in the net receipts below last year's level represents a decline of 15 per cent. in the available revenue for the ordinary stockholders in 1930. Further, the railways' policy has always been to pay out earnings up to the hilt, so that there is no dividend equalisation reserve to act as a cushion between bad and good times.

† Based on interim statements.

In due course, however, it may be presumed that railway earnings will recover, once the abnormal trade depression has passed. The trend of the figures during

recent years, rather than their behaviour in an abnormal year, may be the best criterion of the real potentialities of every group from the stockholders' viewpoint. The table of "peak" prices for junior stocks in recent years, shown at the foot of the preceding column, suggests that, on the two "heavy" lines at least, while the drop in preference shares regarded as being "within the danger zone" has dated only from the last few months of acute depression, the fall in ordinary stock values has extended over a much longer period.

The figures suggest that ordinary stockholders should not merely examine the figures for 1931, but should look with retrospective eye over the record of more normal years and, in effect, ask of each railway *quo vadis*? The material for such a survey is contained in an *apologia* issued this week by the railways. The propose, accordingly, to discuss the conclusions suggested by this document in a subsequent article.

THE WEEK IN THE MARKETS. THE LONDON STOCK EXCHANGE.

SETTLING DAYS.
TICKET. August 12. ACCOUNT. August 13.

BUSINESS was resumed after the holiday under quiet conditions in a "thin" House. Uncertainty still prevailed regarding the international situation, and though the closer co-operation of the central banks and the week-end news of the Franco-American credits created a good impression, the market found some difficulty in estimating the import of the new developments. Quotations were fairly firm at the opening, but showed a weaker tendency subsequently. Though the majority of values moved within narrow limits, Wednesday's sharp fluctuations in sterling were reflected in the course of values for British Government stocks.

Gilt-edged securities opened in satisfactory fashion, Consols and Funding Loan being well supported, though War Loan declined on Mr Snowden's "conversion" statement. The crop of rumours which circulated in mid-week, together with fears that gold withdrawals would be resumed and would be followed by a fresh increase in Bank rate, were in the main dispelled on Thursday, but weakness in the Funds recurred after a short-lived improvement. Among Dominion stocks the New South Wales issues responded to the premature announcement that interest payments would be met, while other Australians remained firm on news that Treasury bills were being renewed on a lower interest basis. India stocks were initially firm, but subsequently there was some selling of the long-dated issues.

Idle conditions prevailed in the Foreign Bond market. Brazilians suffered from scattered realisation and the receding milreis, and San Paulo Coffee 7½'s eased perceptibly. Argentine stocks were heavy in sympathy with the peso and Chileans remained a nominal market, following the delay in meeting the August coupon on the 6 per Cents. in 1926. Europeans were extremely dull, absence of selling pressure being in itself insufficient to prevent the gradual decline of German, Austrian and Hungarian loans.

Home Rails were friendless, and quotations continued to ease. The week's traffics showed no change in the current trend. Recent earnings figures are the subject of comment on an earlier page. Undergrounds and Metro-politans shared in the depression. Foreign Rails were again despondent. Argentine rails were detrimentally affected by a bad patch of "traffics," the decline in the case of B.A. Great Southern being particularly severe.

In the Industrial market, selling pressure and visible support were alike absent, though a few issues were slightly better on bear closing before the end of the account. Transatlantic issues opened firm, with the exception of Nickels, which relapsed following the cut in the quarterly dividend. Irregularity later supervened, Paris being a seller of internationals. Cables and Wire-fluctuated irregularly. Moderate support was forthcoming for breweries on the issue of the Guinness and

Watney Combe reports, but the improvement was not maintained. Motor shares were not particularly active, with the marked exception of Leylands, which advanced sharply on provincial buying. Slaters and Bodega among the caterers declined on the proposed merger with R. E. Jones (discussed in a Note on page 283). Celanese stocks were steady on the maintenance of the Canadian Celanese preferred dividend. Banks and insurance shares were inclined to droop.

The Oil share market was quiet, what little news there was being far from encouraging. Dullness in the Shell group followed the announcement of poor earnings by Shell Union for the June quarter. Rubber shares found few supporters, the commodity touching a new low level at 2½d. Trusts were easier and Sua Betong again relapsed. There were few quotable alterations among Tea shares, the movement in Consolidated Tea and Lands being only one of several against holders.

In the Mining share market Kaffirs continued to hold their own, buoyed up by the satisfactory nature of the last monthly returns. Professional profit-taking brought small declines on Wednesday, but West Rand, West Springs and Randfontein had a satisfactory appearance. Rhodesians were idle, "Chartered" fluctuating to a lower level. De Beers failed to hold an initial advance. Tins were again far from popular, and Tinto resumed their downward course.

FOREIGN STOCK EXCHANGES.

NEW YORK.

Activity in all markets has remained at an exceptionally low level, total share transactions failing to reach the million mark on any day this week. A favourable interpretation was at first placed on the week-end news of the international position, the Franco-American credit to the Bank of England being expected to have an immediately tranquillising influence. In view, however, of reports of the mixed reception of the news in London, and the impression that negotiations for clearing up the German situation were making slow progress, a more uncertain tendency subsequently developed. Domestic business indications remain unsatisfactory. Steel plants were working last week at only 30 per cent. of capacity, the July production figure being the lowest since November, 1921. The United States Steel Corporation has announced a 10 to 15 per cent. reduction in salaries from August 15th. Car loadings have shown more than seasonal declines, and another unfavourable factor has been the announcement of trading losses for the first half of the year by concerns like Shell Union Oil, Packard Motors, General Asphalt, Patino Mines, and Pittsburgh Steel. Among leading concerns which have followed the Steel Corporation's example and reduced their dividends to a lower annual basis are Bethlehem Steel and Standard Oil of Indiana. Commodity prices, concurrently, have shown signs of renewed instability, cotton having been particularly weak. The application of the railroads for increased rates will not

have a smooth passage, the Interstate Commerce Commission having shown a disposition to initiate independent enquiries into railroad methods.

SALMON P. CHASE, Secretary of the U.S. Treasury under LINCOLN

Corporate Trustee Service

MATERIAL benefits are gained by appointing The Chase National Executors and Trustees Corporation to act as executor and trustee under your will.

These include continuous corporate life, varied financial experience and unquestioned responsibility.

Moreover, as a subsidiary of The Chase National Bank of the City of New York, the extensive facilities and wide experience of the bank as a whole are at the disposal of the executive officers of this corporation in the administration and settlement of estates; a decided advantage particularly where the estates include American or other foreign assets.

All the directors of this Corporation are officers of The Chase National Bank.

Write to the Management for full particulars.

THE CHASE NATIONAL EXECUTORS AND TRUSTEES CORPORATION, LTD.

10 MOORGATE, LONDON, E.C.2

A subsidiary of The Chase National Bank of the City of New York.

LONDON ACTIVE SECURITY PRICES AND YIELDS.

NOTE—Shares with a New York quotation, or with definite American interest, are distinguished by italics.
In calculating the yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

PARIS.

The financial crisis which disturbed all markets during the past month was perhaps felt less severely in Paris than elsewhere as a result of France's strong monetary position, which increased her powers of resistance, while the fact that operations were practically limited to professional speculators made possible a fairly moderate, if general, decline in values. That the gravity of the financial situation in Germany has not had a more disastrous influence on prices may indeed be regarded as an encouraging symptom. The technical situation of the Paris Bourse shows no appreciable change. The end-of-month settlement was accomplished without difficulty, with money at 1/2 per cent. instead of 1/4 per cent. as at the end of the first fortnight.

INVESTMENT NOTES.

The Gilt-Edged Market.—The recovery in the gilt-edged market at the beginning of this week was a little surprising. The Economy Committee's report, published last week-end, might have left anyone who did not understand the financial strength of Great Britain with the mistaken impression that the Government's finances were in a disastrous condition. The immediate effect of the Economy

Committee's report was, however, offset by the announcement of a Franco-American credit of £50 millions for the Bank of England. This was interpreted as an act of statesmanship and the market opened on Tuesday on the assumption that the stability of sterling was assured. On Wednesday the sharp fluctuation in the foreign exchanges caused undoubted misgivings, but a recovery took place before the end of the day. On Thursday the market opened weakly, and it became clear that the Economy Committee's report was having its inevitable effect, enthusiasm for the Franco-American credit meanwhile having cooled considerably. The extent of the improvement in gilt-edged stocks, and the subsequent reaction, are shown in the following table:—

	Highest Price, 1931.	July 31.	Aug. 4.	Aug. 5.	Aug. 6.
5% War Loan	104 1/2	102 1/2	101 1/2	101 1/2	101 1/2
Consols 2 1/2%	60 1/2	57 1/2	58	57 1/2	57 1/2
Do. 4%	97	90	90 1/2	90 1/2	80 1/2
Conversion 3 1/2%	85 1/2	80 1/2	81	80 1/2	90 1/2
Do. 4 1/2%	104 1/2	99 1/2	100 1/2	99 1/2	99 1/2
Do. 5%	108 1/2	104 1/2	105	104 1/2	104 1/2
Funding Loan 4%	97 1/2	92 1/2	93	92 1/2	92 1/2
Local Loans 3%	70 1/2	67	67 1/2	67 1/2	67 1/2

That 5 per cent. War Loan did not share in the temporary improvement in the gilt-edged market may be attributed to the announcement of Mr Snowden last week that he had prepared "a huge conversion scheme" for War Loan by which "a large saving on interest on the debt would be effected." Had it not been for recent financial developments, he said, this conversion loan would have been floated before now, but he was anxious to launch it at the first available opportunity. It will be remembered that after the fall in Bank rate to 2 1/2 per cent. on May 14th, the possibility of calling the entire block of £2,000 millions of War Loan was seriously discussed in the City. In this air of expectancy the long-dated stocks rose sharply—the highest points are shown in the foregoing table—while 5 per cent. War Loan remained stationary or reacted. Unfortunately, Mr Snowden missed this rare opportunity of launching a conversion scheme—perhaps his illness was the cause of his inactivity—and it is a little difficult to see why his threats should now be taken very seriously. In view of the state of the exchanges and the rise in Bank rate to 4 1/2 per cent., not to mention the difficult situation which confronts the Chancellor as a result of the Economy Report, the possibility of an early conversion of 5 per cent. War Loan would appear small. In these circumstances, it would not be surprising if a recovery in 5 per cent. War Loan coincided with a reaction in long-dated gilt-edged stocks, pending complete assurance as to the position of sterling.

Great Western Dividend.—The tale of British railway interim dividends is completed by the announcement of the Great Western, which is paying an interim of 1 1/2 per cent. on its consolidated ordinary stock as compared with 2 1/2 per cent. a year ago. In the course of a detailed statement the directors show that, although the gross receipts from railway and ancillary businesses for the half-year ended June 30, 1931, were £1,777,000 less than in the corresponding period of 1930, the decrease since the end of March was only 8 1/2 per cent. against 16 per cent. in the first quarter, which included a coal stoppage in South Wales. Over the six months passenger train receipts fell off by 7.6 per cent. and goods train receipts by 11.9 per cent., the decline in the latter being most severe in the case of the heavy industries. A total drop in gross receipts from ancillary businesses of £308,000 was more than accounted for by a decrease in dock receipts of as much as 22 1/2 per cent. Altogether net savings in expenditure totalled £815,000, the reduction in net receipts being £692,000. The interim dividend has not been fully earned, the directors having drawn on "considerable profits" from the realisation of investments and appropriated an unnamed sum, temporarily, from free reserves. The company's earnings' position is discussed in the course of a leading article on page 277.

New Ford Plans?—Rumours of a new Ford model (to which reference was made in a Note in the *Economist* of July 25th, page 686), under the heading "Chrysler and the American Motor Industry") have been substantiated by two recent announcements. The Ford Company in Detroit has stated that manufacturing is to cease during the whole month of August, though the assembly of the existing stock of parts will continue. So far as is known, the only previous occasion when manufacturing was completely suspended was in the summer of 1928, when the necessary changes were made preparatory to the introduction of the present "A" model. The second statement comes from the English company in connection with the progress of the new factory at Dagenham. As the Ford Motor Company had previously forecast that production would start at Dagenham in February, 1932, it might have been expected that the installation of the necessary machinery would now have been well under way, or at least that the type of machinery to be installed would have been decided upon. However, the company are now understood to have declared, in answer to an enquiry, that they are unaware not only when production will commence but also what model will be manufactured at Dagenham. As the vast manufacturing hall would appear to be ready to receive machinery, the presumption is that further progress is being held up to await the new American model. The present "A" model was introduced to this country comparatively recently, and is only now beginning to gain the popularity it deserves. In spite of the decision of the Chrysler Company to enter the cheaper four-cylinder market, the trend of motor sales in the United States would seem to be towards the more expensive multi-cylinder car. It is in this direction that the Ford Company is expected to move. Six-cylinder cars, which accounted for 42.6 per cent. of the total sales in 1930, will, according to estimates, account for 50 per cent. this year, the gain being at the expense of the four-cylinder vehicle. This trend is explained in some quarters by the increasing traffic congestion in American cities and the public's consequent demand, in spite of money tightness, for a higher-powered, smoother-running engine with improved acceleration. Whether the same trend will be observed in this country, where the annual tax is so important a consideration, is uncertain. It is doubtful, further, whether the car on which Mr Ford is reported to be basing his hopes of regaining his position in America would be equally successful in meeting the competition of British manufacturers in this country, where one of the largest companies already has a six-cylinder car on the market, priced just under £200. Since Dagenham, however, will be independent of the advantages of both new and old models in a special European car. So far as Detroit is concerned, the change-over to a new model, however expedient, would have its obvious inconveniences. Its cost would be high, and the company's financial position must obviously be less comfortable than on the occasion of the last change in 1928, when there was a surplus of \$82,000,000 on the year's trading to discount the cost of changes amounting to \$72,000,000.

Catering Companies' Merger.—When the prolonged directorial dispute concerning the affairs of R. E. Jones was brought to an end in February last with the appointment of Mr. R. A. R. Field, managing director of Slaters and Bodega, as chairman and managing director of R. E. Jones, the prospects of closer union between Slaters and Jones, the two companies were clearly enhanced. With an ordinary capital of £168,000 and a preference capital of no less than £1,479,000, the latter company recorded net earnings in 1930 of only £1,641 and carried forward a debit balance of £182,629. In view of the necessity for drastic reorganisation, the offer made this week by Slaters and Bodega for the company's assets comes opportunely. Under the terms of the offer, holders of the 10 per cent. £1 non-cumulative participating preference shares of R. E. Jones will receive two 6 1/2 per cent. £1 cumulative second preference shares of Slaters and Bodega for every five shares, and the holders of the 5s. ordinary shares of R. E. Jones will receive one £1 ordinary share of Slaters and Bodega

for every fifteen shares. It is pointed out that the market value of two Slaters and Bodega preference shares is about 45s., against an approximate value of 33s. 9d. for five R. E. Jones preference shares; while the value of the Slaters and Bodega ordinary shares is 26s. 6d., against an approximate value of 22s. 6d. for fifteen R. E. Jones ordinary shares. The acceptance of the scheme, which is recommended by the directors of both companies, will involve an increase in the authorised capital of Slaters and Bodega to £1,591,438 by the creation of 591,438 second preference shares, which, with part of the unissued ordinary shares, will be required to carry through the amalgamation. Some shareholders of R. E. Jones, not unnaturally, have suggested that a better price might have been obtained for their shares had the company been reconstructed before the merger took place. There is some force in this argument, but as the shareholders have themselves appointed the managing director of Slaters as their chairman, they can scarcely expect the latter to give of his time and energy in order to put up the eventual price of R. E. Jones against his own company.

Associated Portland Cement Buying "Red Triangle."

—As far back as last April it was announced that Sir William McLintock, who had been appointed receiver and manager of Allied Cement Manufacturers (the "Red Triangle" group created by Mr Horne), had received a provisional offer for the assets both of the company and its subsidiary operating companies. The offer, it was then stated, was to provide for the repayment in full of the debenture stock of Allied Cement Manufacturers, the debenture stock of Greaves, Bull and Lakin (Harbury Works), Ltd., and the preference capital held by the public in Dunstable Portland Cement Company. The offer, as was well known at the time, came from the Associated Portland Cement Company ("Blue Circle" group), and a statement was issued by that company this week giving the arrangements which the directors have made for financing the acquisition. The total purchase

Wherever.

YOU
CAN BE
SURE
OF
SHELL

consideration is £2,025,000, plus a sum for certain manufacturing stocks and materials. The Associated Portland Cement is issuing 500,000 new £1 ordinary shares. The ordinary shareholders are given the right of taking up at par one new share for every six shares now held, the new shares ranking for one-half of all dividends in respect of the year ending December, 1931. The issue has been underwritten at a commission of 9d. per share. The ordinary shares of Associated Portland before the announcement of this issue were standing at 21s. 6d. and on the day following were quoted at 21s. 4½d. ex rights, the new shares being dealt in at 4½d. premium. The company is also placing £150,000 5 per cent. second debenture stock and £180,280 5½ per cent. £1 preference shares, while a further £750,000 5 per cent. second debenture stock will be issued on completion of the purchase. The capital and last reported profits of the principal parties to the merger are shown in the following table:—

	Issued Share Capital. £	Loan Capital. £	Net Profits, 1930. £	Divi- dends, 1930. %
Associated Portland Cement				
Manufacturers	5,500,000	3,979,018	387,650	8
British Portland Cement§ ...	3,155,000	1,559,911	262,023	15
Allied Cement	1,848,445	587,400	49,140*	...
Holborough	1,000,000	...	104,342†	...
Greaves, Hull and Lakin.....	325,000	199,750	35,927‡	5½
Dunstable	1,075,000	...	31,359‡	...

* Including £30,000 from taxation reserves.

§ 75 per cent. of the ordinary share capital is held by Associated Portland Cement.

† Fifteen months to March 31, 1930.

‡ Nine months to March 31, 1930.

The response in the market was favourable, as indeed it should be. The prosperity and conservative management of the "Blue Circle" group has inspired confidence, and the acquisition of the "Red Triangle" removes from the field of open competition a group which might have given trouble in the future as it had done in the past. In 1928 the "Blue Circle" and "Red Triangle" groups were engaged in a price war, which only ended when the "Red Triangle" joined the Cement Manufacturers' Association. The two groups together will now control about 70 per cent. of the domestic trade and a still larger proportion of the export trade. Some shareholders may have considered that it would have been better to allow the "Red Triangle" group to disappear entirely, but there is little doubt that if the "Blue Circle" group had not acquired control other interests would have stepped in.

"Independent" Gramophone Company Profits.—The uninspiring results of the majority of the lesser gramophone companies which have issued their reports since the beginning of the current year suggest that the difficulties of this section of the industry are not confined to the normal consequences of trade depression. Of the five companies whose returns are compared below, only one, Crystalate Gramophone, records a profit and pays an ordinary dividend. The other four companies show an aggregate net loss of £157,727, against an aggregate loss last year of £38,931.

Name of Company.	Net profit, 1929.	Ordinary.		Net profit, 1930.	Ordinary.		1929.		Present Price.
		Earned	Paid		Earned	Paid	High.	Low.	
Crystalate Gramophone	£ 57,548	36.2	33.3	£ 71,488	49.0	20½	6/9	3/3	2/-

Gramophone	8,803	7.3	5	Dr. 9,927	Nil	Nil	2/1½	-6	-2½
Vocalion ...	27,310	17.8†	Nil	Dr. 46,235	Nil	Nil	16/3	13/-	3/9

* Period February 14, 1929, to March 31, 1930.

† After adding back £17,266 income tax reserve.

The results strongly suggest that the flotsam of the 1928 boom is still impeding the progress of the industry. Several

of the companies were very liberal in their estimate of future earnings at the time their prospectuses were issued. The Decca Record Company's invitation to the public, for instance, contained an estimate of net profits, after charging all expenses and making adequate allowance for depreciations of £160,000 for the first year and £300,000 per annum "when the full complement of presses came into operation." Dulcetto Polyphon was more restrained, but its results have so far failed to justify expectations. The heavy losses suffered by investors in new gramophone concerns since the 1928-29 boom are strikingly revealed in the last three columns of the table.

Stock Exchange Values.—The Actuaries' Index of British Stock Exchange values suggests that during the last two months, despite disturbed financial conditions, security prices were far more stable than in any earlier period since the beginning of the slump. The chief exceptions were British Government securities, which declined by about 5 per cent. during the month of July. Other fixed-interest stocks, for the most part, have gained ground slightly since the end of May, the most striking feature being the advance of about 3 per cent. in the prices of industrial preference shares—a phenomenon suggesting that "industrial risks" have recently weighed less heavily with shareholders. Industrial ordinary shares still have a capital value not much more than half that at the top of the boom in December, 1928; but in June last their declining price trend was definitely arrested, though the gains were not entirely held in July. The following summary table shows recent movements in the most important groups:—

"ACTUARIES' INDEX."

Class of Security.	No. of Securities.	Price Indexes (December 31, 1928=100).				
		July 29, 1930.	Dec. 30, 1930.	May 26, 1931.	June 30, 1931.	July 28, 1931.
British Government securities	3	100.5	104.6	108.0	108.4	103.3
Home Corporations	5	99.0	103.6	105.1	105.9	106.0

Insurance companies.....	24	88.1	90.9	83.9	87.0	85.4
Investment trust companies	17	94.0	84.8	75.6	75.8	75.4

(a) Coal, electric light and power, iron and steel, etc. (b) Electric supplies, shipping, stores and catering, etc. (c) Companies not included under other headings.

The figures are geometric averages, accrued interest and bonus issues being allowed for. The index is revised periodically and includes all the equity shares, debentures and preference shares of all the public companies operating in Great Britain whose equity shares have a market capitalisation of over £2,000,000. The nominal amount of any issue of debentures or preference shares included in the index has been fixed at a minimum of £500,000.

Arthur Guinness.—Though the net profit of this famous Dublin brewery for the financial year ended June 30th last shows a decline of a little under 6 per cent. by comparison with the figure for the previous year, £2,880,357 it is still well above the profit of £2,209,887 recorded in 1929. Preference dividend, after tax, requires £98,000, and the ordinary dividend, maintained at 80 per cent. plus a bonus of 5 per cent, takes £2,084,875. After

deduction of tax, the distribution being once again well covered by earnings.

Year to June 30.	1929.*	1930.	1931.
Net profit	£ 2,209,387	£ 2,522,080	£ 2,380,357
Brought forward	728,969	642,356	807,436
Pref. dividend	96,000*	94,500*	93,000*
No. of times covered	23	27	25
Ordinary dividend—			
Amount	2,100,000*	2,062,500*	2,034,375*
Earned %	35.2	41.2	40.9
Paid %	35	35	35
Reserve	100,000	200,000	100,000
Carried forward	642,356	807,436	960,418

* After tax.

In the following table the percentage earnings and dividends on the ordinary shares are set out for the past decade:—

Year to June 30.	ORDINARY CAPITAL.		Year to June 30.	Earnings and Dividends	
	Earned %	Paid %		Earned %	Paid %
1922	41.9	29	1927	28.6	28
1923	25.2	24*	1928	29.2	28
1924	30.3	26	1929	35.2	35
1925	38.9	32	1930	41.2	35
1926	33.3	32	1931	40.9	35

* Plus capital bonus of 50 per cent.

A further sum of £100,000 is added to reserve account, bringing that item to the very satisfactory figure of £2½ millions. The carry-forward is increased from £807,436 to £960,418. With investments of £4,924,021, debts to the company of £1,908,363, and a cash item of £1,233,788, amounts due to creditors of £3,028,286 are amply covered. At their present price of £5 per share, the £1 ordinary shares give a yield of about £7 6s. per cent., allowing for the final dividend and bonus of 20 per cent.

Watney, Combe, Reid.—In common with most breweries, this big London concern is beginning to experience the effects of the reduction of public purchasing power. Net profit in the last twelve months was £135,562 lower at £1,207,243. The following table shows the results of the past three years:

Year ended June 30.	1929.	1930.	1931.
Net profit	£ 1,263,460	£ 1,342,805	£ 1,207,243
Preference dividend.....	84,247	84,247	84,247
No. of times covered	14.9	15.9	14.3
Preferred ordinary dividend	127,416	127,416	127,416
No. of times covered	5.9	6.3	5.6

Deferred ordinary—			
Amount	637,082	668,837	605,067
Earned %	31.0%	35.5%	31.2%
Paid %	20%	21%	19%
Reserve funds	400,000	400,000	400,000
Inc. or dec. in carry-forward	+ 14,715	+ 62,305	- 9,487

The two main alterations in the balance sheet concern premises, plant, etc., £121,978 less at £14,910,382, and investments in gilt-edged securities, £202,067 more at £1,085,024, a figure less than the market valuation of June 30th last. Investments in subsidiaries, and sums due by these companies are £2,953 greater at £1,968,271, but debtors at £890,532 are £23,004 below the 1930 figure. During the year a further £88,000 of debentures were cancelled. Creditors and deposits rose by £40,884, to £1,668,226, making the surplus of liquid assets over current liabilities £205,718. The preference capital is secured by tangible assets of £672 2s. 11d. per £100 of preference stock. At the present price of 47s. per £1 unit, the deferred stock yields £8 10s. 4d. per cent.

Tootal, Broadhurst, Lee.—In view of the acute depression in the textile industry, the report and balance sheet for the year to June 30th last can be regarded as fairly satisfactory. The year's profits again showed a considerable decline, attributed by the directors to the fall in the value of stocks and raw material, but the surplus of liquid assets over current liabilities stands at about £587,478.

After providing for all bad debts and general charges, the directors recommend a dividend on the ordinary and employees' shares of 5 per cent., less tax, but of this only about 1½ per cent. has been earned. In view of the decrease in profits, it has been decided not to allocate any sum to the reserve account.

Year ended June 30.	1929.	1930.	1931.
Net profit	£ 99,937	£ 66,618	£ 24,870
Preference dividend.....	16,000	15,750	15,500
No. of times covered	6.2	4.2	1.6
Ordinary dividend—			
Account	67,607	49,383	32,922

Reserve fund	50,000	...	...
Inc. or dec. in carry-forward	- 33,670	+ 1,485	- 23,552

The balance sheet total has declined by £192,451. Sundry loans by creditors show an increase of £1,492, and amounts owing by subsidiary companies are down by £2,316.

Drapery Trust.—Though retail business has been less badly hit than many other branches of trade during the present depression, the Drapery Trust, as a holder mainly of ordinary shares, has continued to be affected by the recession in earnings generally. Net profit fell in the year to May 31st last by £41,558 to £241,237, and the ordinary dividend was reduced to 5 per cent.:—

Year ended May 31.	1929.	1930.	1931.
Net profit	£ 345,247	£ 285,795	£ 241,237

ENTERPRISE!

¶ The intrepid enterprise of Columbus over four centuries ago opened up all the possibilities of an undeveloped Continent.

¶ Since then, the enterprise of succeeding generations has resulted in phenomenal development of the vast resources of the New World.

¶ To-day a great and growing volume of overseas trade is transacted annually by the Latin American Republics, and complete facilities for every description of modern banking business are afforded by

**THE ANGLO-SOUTH
AMERICAN BANK LTD**
117 OLD BROAD ST. LONDON, E.C2

During the year 5½ per Cent. Notes for £123,275 were issued to provide for the settlement of spurious documents issued during the Hatry scandals, and made possible a settlement of legal proceedings. An associated company advanced £378,942, and is now a creditor for £380,817. Secured loans to the company were reduced by £117,941 to £393,372, and a further £190,513 was lent to another subsidiary company. Investments stand at £4,684,355, as compared with £4,638,334 in 1930. The settlement suspense account stands at £128,693. No mention is made as to the relation between the market valuation and balance-sheet valuation of the investments.

Canada Power and Paper Company.—Our Ottawa correspondent writes:—The plan for the reorganisation of the capital structure of the Canada Power and Paper Company is encountering opposition from Belgian interests who had a considerable stake in the Belgo-Canadian Pulp and Paper Company, one of the units absorbed in the Canada Power and Paper Corporation. Mr H. Biermans, who was President of the Belgo-Canadian Company, has come out to Canada and at a meeting of the bondholders of this corporation has advised the holders of the company's 6 per cent. bonds to withhold their securities. He urges that the "Belgo" Company should withdraw from the Canada Power and Paper organisation and resume its separate identity, promising to secure sufficient working capital for the purpose of enabling it to operate as a separate unit. He also alleges that the old board of directors which has brought the fortunes of the Canada Power and Paper Company to their present pass will still continue in control and that the Belgo-Canadian Company would fare better operating by itself. The Hon. C. A. Dunning, who is chairman of the protective committee of security holders of Canada Power, has issued a statement in reply to Mr Biermans, declaring that seven new directors will be nominated who have not been associated with the previous management and who will constitute a majority of the board. He adds that the most competent management obtainable will be enlisted and declares that the practical question confronting the committee is to discover an alternative for the evils which liquidation would involve both for the security holders and the newsprint industry in general. He claims that the reorganisation scheme is virtually assured of the necessary support, since securities of more than \$65 million of par value have already been deposited with the committee, representing 69 per cent. of all bonds, 60 per cent. of debentures and 60 per cent. of preferred stocks in the constituent units of the corporation. It is now understood, however, that opposition has developed from certain security holders of another unit, the Laurentide Company.

New Capital Issues in July.—In the following table we show the new capital raised in London by issue to the public or to shareholders, in July, and in recent years:—

(000's omitted)					
Monthly Average.	United Kingdom.	British Possessions.	Foreign Countries.	Total.	
1924	7,051	6,023	4,370	17,444	
1925	12,918	5,077	1,356	19,351	
1926	10,765	4,431	4,036	19,232

The total new capital raised in London during July was the lowest for some months. Sales of National Savings Certificates exceeded encashments by £1,600,000. Only three issues were made of sums exceeding £500,000, the largest

being the Tanganyika 4 per cent. guaranteed stock of £3,000,000, issued at £94 10s. per cent. The most important issues to shareholders include £300,000 in £1 ordinary shares, at a premium of 1s., in the Power Securities Corporation, and £160,000 in 6½ per cent. debenture stock, at £98 10s. in Associated London Properties. A semi-speculative issue of some interest was the offer by Great Universal Stores, of £300,000 in £1 7½ per cent. cumulative preference shares at par, and 400,000 5s. ordinary shares at £1.

COMPANY MEETINGS, &c.

CONSOLIDATED TIN SMELTERS, LIMITED.

SATISFACTORY RESULTS.

The second ordinary general meeting of Consolidated Tin Smelters, Limited, was held, on the 5th instant, at 93, Gresham Street, London.

Mr R. J. Hose (the chairman), in moving the adoption of the report and accounts, said: The profit and loss account covers a period of nine months only. The net profit amounts to £177,698, and we propose to deal with the disposable balance of £193,116 as set out in the directors' report. I think you will agree that the results are satisfactory, and particularly so when you consider the conditions which have prevailed in the tin industry.

In regard to the future, under the quota scheme the output is being regulated, with the object of preventing further accumulations of stock and making some inroad into the existing stocks. We, as smelters, have only an indirect interest in the price of tin, because our business is to extract the tin from the ore as economically and efficiently as possible, and not to carry tin at market risk. We have, however, the greatest possible interest in the prosperity of the miners who are our customers, and it will be our policy to help forward in any way we can whatever measures the mining industry consider to be for their advantage.

Curtailement of output is not to our advantage, but, as smelters, whatever the immediate effects on our business may be of any policy adopted by the mining industry, we shall consider it to be our duty and our interest in the long run to support it.

For some time past there has been a considerable amount of discussion on the question of adjusting the output of commodities to the world's actual power of absorption. The school of thought which believes in the survival of the fittest may be perfectly right in regard to certain primary products, but, if this policy is allowed to operate in such an article as tin, it seems to me that it may lead to alternating periods of abundance and scarcity, with the inevitable and disastrous consequence of violent and extreme price movements. For my part, I can see nothing economically wrong or unwise in adjusting the output of such an article as tin in order to avoid as far as may be possible these severe market movements. I am not without hope of improvement in general world conditions, and that is the great need of the tin and all other industries. It will interest you to know that, adjusted to the basis of a full year's working by all our subsidiary companies, the gross profits earned in the period under review show a very small variation from those earned in the preceding period.

The report and accounts were unanimously adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

The total ordinary revenue for the week ended August 1, 1931, amounted to £10,073,800 against ordinary expenditure of £18,971,000. After allocating £630,048 to Sinking Fund and having allowed for an increase in Exchequer Balances of £214,818, the operations for the week, as shown below, increased the National Debt by £9,742,000 to £7,651,269,000:—

(000's omitted.)		£
Treasury Bills	+ 13,332	500
National Savings Certificates	+ 400	2,900
		— 3,990
	+ 13,732	

A complete analysis of the National Debt at March 31st, 1931, was printed in the *Economist* of April 4th.

The Queensland National Bank, Ltd., has confirmed as from August 1st the appointment of Mr. Lionel William Mortimer as London manager.

The Bank of London and South America, Ltd., and the Anglo-South American Bank, Ltd., announce that, in order to concentrate their respective interests in certain of the republics of South America, it has been agreed to close the branches of the Anglo-South American Bank, Ltd., in Uruguay, and two (i.e., Antofagasta and Santiago) of the three branches in Chile of the Bank of London and South America, Ltd., which will continue at Valparaíso. Under a mutual agreement the business of the Anglo-South American Bank, Ltd., in Uruguay will be cared for by the Bank of London and South America, Ltd., and that of the latter institution at Antofagasta and Santiago in Chile by the Anglo-South American Bank, Ltd. This arrangement will take effect as from August 31, 1931.

Barclays Bank, Limited, announce the opening of a new branch at 15, Langham Place, W.1, under the management of Mr H. E. Davy. A new sub-branch has been opened at 14, Upper George Street, Luton, under the management of Mr H. F. Smith, who is also manager of 28, George Street, Luton branch.

National Provincial Bank, Limited, announce that the business of their Princes Street Office, with the exception of the Foreign Department, has now been transferred to the new premises at 1, Princes Street, London, E.C.2; also that the business of the Overseas Branch has been transferred to the same address. The Princes Street Foreign Department, at present in temporary premises at 11, Lombard Street, E.C.2, will be transferred to and merged with the Overseas Branch on the 10th instant.

The Bank of England gold reserve against notes amounted to 132,034,694 on the 22nd of the month, as compared with 132,034,694 on the 22nd of the month.

On the 29th ultimo (as compared with £148,773,846 the previous Wednesday), and represents a decrease of £15,590,928 since December 31, 1930. On the 30th ultimo the Bank of England raised its rate of discount from 3½ per cent. to 4 per cent. The rise in the Bank Rate and the announcement of the £50,000,000 credit placed at the disposal of the Bank of England by the Bank of France and the Federal Reserve Bank of New York, at first had the desired effect on the foreign exchanges and during this week there was a cessation of the heavy withdrawals of gold from the Bank of England. To-day, however, movements of the exchanges suddenly became momentarily unfavourable and as a consequence there is a possibility of some resumption in the demand for gold. At the time of writing this demand is only on a small scale. An interesting event was the arrival to-day in London from France of a consignment of £500,000 of bar gold, which was sold to the Bank of England. No reason can yet be ascribed for this return of gold from France under present exchange conditions and therefore it can only be assumed that it has been sent for some special purpose. On the 31st ultimo £1,000,000 of bar gold from Australia was offered in the open market and was secured by an unknown buyer at 84s. 11½d. per fine ounce. The shipment of bar gold which arrived from South Africa this week amounted to £952,000, nearly all of which had been sold prior to

DOMINION-SCOTTISH INVESTMENTS LIMITED.—The directors have declared a dividend on the 5 per cent. cumulative redeemable preference stock (par value \$50.00) of the company at the rate of 5 per cent. per annum for the quarter ending July 31, 1931, payable on August 1, 1931, to shareholders of record at the close of business on July 20, 1931.

VICKERS, LIMITED.—The directors give notice that the following interim dividends for the half year ended June 30, 1931, will be paid to the holders of the preferred stock and preference shares of the company who are registered in the books of the company on Saturday, August 8, 1931: 2½ per cent. on the preferred 5 per cent. stock (less income tax), 2½ per cent. on the 5 per cent. preference shares (less income tax). Payment will be made on Friday, August 28, 1931. The transfer books of the company relating to these issues will be closed from Monday, August 10, to Saturday, August 15, 1931, inclusive.

REPORTS AND NOTICES.

Mr William Alfred Crowther, of Edgerton Hill, Huddersfield, has been elected a director of the Yorkshire Electric Power Company to fill the vacancy caused by the death of Mr E. R. Benson.

In view of the continued depressed state of the rubber industry the Wampoe Tobacco and Rubber Estates, Ltd., has decided to stop tapping forthwith and to place the company's estate on a care and maintenance basis.

Mr A. W. Rogers, a director of the Central Mining and Investment Corporation, Ltd., has been appointed chairman of Bernhard, Scholle and Company, Ltd., in the place of Mr F. Heim, who has resigned from the board.

Mr. George William Malcolm, M.B.E., J.P., chairman and managing director of the Mersey Power Company, Ltd., has been elected a director of British Power and Light Corporation (1929), Ltd., and North Wales Power Company, Ltd.

At the extraordinary meeting of the members of the London and Lomond Investment Trust, Ltd., held on July 30th, the resolution to convert the shares into preference and ordinary stock was unanimously adopted.

The Perak River Hydro-Electric Power Company, Ltd., announce that as from August 1, 1931, the transfer office for the 7 per cent. participating debenture stock and the ordinary shares will be at 50 Watling Street, London, E.C.4. Telephone No. : City 2046.

Commercial Reports.

MARKET SUMMARY.

During the past week markets were largely under the influence of the holidays, but, in view of the financial crisis, many commodities suffered a further decline in prices. According to reports from various coal-mining districts the situation in the coal trade continues to deteriorate. Fortunately, a deadlock has been averted in Scotland by the agreement reached on wages between owners and workers. There are no signs of an improvement in the iron and steel industries, but prices have been maintained. Among non-ferrous metals, tin is alone in showing a slight rise in value. Copper, lead and spelter were again weaker. In textile raw materials the outstanding feature is the further sharp decline in cotton prices in the absence of an improvement in the manufacturing trade. Wool has been steady. Among cereals, wheat continued its downward movement. On August 5th No. 2 winter was sold at 48½ cents per bushel in Chicago, as against 96½ cents per bushel a year ago. The meat trade has been quiet, and prices were slightly easier. Among miscellaneous commodities, vegetable oils and oilseeds declined further, and rubber established a new low record, but hides have been maintained.

THE COAL TRADE.

SHEFFIELD.—The demand for South Yorkshire steam coal for export is declining. Production has been reduced, yet stocks have accumulated at pits and at the Humber ports. Supplies are excessive in all sections of the trade. Best steams continue firm, however, at 17s. 3d. to 17s. 9d. f.o.b. Industrial requirements are extremely small on account of the holidays. Trade in house coal is normal, but merchants exhibit a disinclination to contract for forward requirements. Best ordinary house is quoted at 18s. 6d. to 20s. at pits, or a shilling more than a year ago. The poor demand for blast-furnace coke has brought prices down to as low as 10s. and 10s. 6d. at ovens. Consumption is the lowest for many years.

GLASGOW.—The miners in Scotland have by a substantial majority voted in favour of the draft agreement on wages reached between their representatives and the owners, so that one serious restrictive influence on business will now be removed. The wage agreed upon is a standard minimum of 8s. per shift of seven-and-a-half hours. Meanwhile, demand on both home and export account is quiet, and all sizes of fuel are obtainable without difficulty. Shipment prices (f.o.b. district ports): LANCASHIRE.—Ell best, 14s. 3d.; splint best, 15s. 9d.; splint second, 14s. 6d.; navigation, 15s.; navigation second, 14s. 6d.; Hartley, 15s. 6d.; steam, 13s. 6d.; trebles, 12s. 6d.; doubles, 11s. 9d.; singles, 10s. 6d.; pearls, 9s. 6d.; dross, 9s. FIFE.—Screened navigation, 16s. 6d.; 17s. 6d.; first-class steam, 12s. 6d.; third-class steam, 10s. 6d.; trebles, 12s. 13s. 6d.; doubles, 12s.; singles, 10s. 6d.; pearls, 9s. 3d. LOTHIAN.—Prime steam, 11s.; secondary steam, 10s. 6d.; trebles, 12s. 6d.; doubles, 12s.; singles, 10s. 6d.; pearls, 9s. Ayrshire.—Unscreened navigation, 16s.; jewel, 17s.; steam, 13s. 6d.; trebles, 12s. 6d.; doubles, 11s. 9d.; singles, 9s. 6d.-9s. 9d.; pearls, 9s. 3d.-9s. 6d.; dross, 9s.

CARDIFF.—In view of the closing of the pits for the first three days of the present week, practically no new business has been transacted on the Cardiff coal market, and it is anticipated that, owing to the dearth of orders, some of the pits will remain idle throughout the week. As a result of representations made by the deputations representing the Central Coal Council and the Coal Exporters' Association, the French Government has modified the operation of its coal import decree by authorising shipments during the present month at a rate equal to the monthly average exports from the United Kingdom to France over the three years 1928, 1929 and 1930. Under this concession, permissible exports will exceed by between 180,000 and 200,000 tons those which would otherwise have been authorised under the proposed 20 per cent. restriction. As a sequel to the recent refusal of the South Wales Coal Marketing Association to alter its minimum schedule, one of the more important of the colliery groups is applying for arbitration on its demand for a reclassification of its coals.

IRON AND STEEL.

MIDDLESBROUGH.—Tuesday's weekly market was not held this week on account of the holidays. There is nothing fresh to report in regard to Cleveland pig iron; the demand continues exceedingly quiet, and stocks in makers' hands are reported to be increasing. Further additions are likely to occur during the month, as practically all the local consuming works will close down at the end of next week for the annual week's holiday, and if the blast furnaces are kept going, as is expected, there will be a surplus production. Official prices are unchanged, viz.: No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; No. 4 forge, 57s., f.o.b. or f.o.t. The hematite market is steady, but there is still a decided disinclination on the part of consumers to place forward contracts, and the business coming to hand is practically confined to moderate quantities for early delivery, which are procurable on the basis of 61s. 6d. for mixed numbers, but threepence to sixpence more is asked for delivery ahead, according to period. In the finished departments new business is slow to mature, and although some works have a fair number of old orders to complete, operations will be considerably restricted very soon unless fresh ones come to hand. Prices under the rebate scheme are unchanged. The ore market remains practically idle. Best Bilbao rubio is nominally 14s. 6d. c.i.f. for prompt delivery and the current freight, Bilbao-Middlesbrough, is about 4s. 3d. Imports of all kinds of ore into Middlesbrough during July totalled 67,563 tons, compared with 68,385 tons in June and 78,117 tons in May. Coke has been in rather better demand recently, but

stocks in producers' hands are still large, and prompt supplies of good blast-furnace qualities can still be obtained at 15s. delivered consumers' works in this district. No change has been made so far in the number of blast-furnaces operating in the district, which remains at 22.

SHEFFIELD.—Comparatively little work is being done this week in the local iron and steel industry, and there is no sign of change in the general situation. Rather more open-hearth steel is being produced, but, on the other hand, there is a tendency to shrink in the rolling departments. Business is poor in wrought iron, and a great scarcity of skilled puddlers is reported. The output of Lincolnshire pig iron in June was about half the quantity in the corresponding month of last year. Production of steel in the Sheffield district in the same month recorded a decline of about 60 per cent. The figures were, however, nearly equal to those of May. About 20,000 local iron and steel workers are unemployed, but the total unemployed stands at 60,000 or more. The holiday is being extended at many works. Prices have not been altered this month, although consumers are demanding concessions on the ground that costs have been reduced considerably during the last three months.

GLASGOW.—Although at most plants work has now been resumed there is still very little business being done at the iron and steel works in Glasgow and neighbourhood, and orders which have accumulated during the holiday period do not amount to any great tonnage, and it would seem that there is likely to be a continuance of the short-time working which has been the rule at most plants for some considerable time, there still being no increased demand for shipbuilding materials. In the sheet metal makers of thin black sheets have a fair amount of work on hand and there are still a number of inquiries on the market. The export demand for galvanised sheets is not satisfactory, and in both the black and the galvanised trade prices are very low. In almost every branch of the iron and steel and allied industries business remains quiet and plants only partially employed.

CARDIFF.—Owing to the holidays and the suspension of work at the tinplate and steel works no meeting of the Swansea Metal Exchange has been held this week. Prices of tinplates, galvanised sheets and steel bars are nominally unchanged.

OTHER METALS.

TIN.—Alone among non-ferrous metals, tin improved slightly during the last week, and the price now appears to be on a definitely higher level. Although world stocks (excluding "carry over in Straits") have not yet declined, the first effect of the restrictive scheme is seen by a decrease in the quantity of the metal held in the Straits Settlements. Wednesday's official closing quotation for "standard cash," at £109 to £109 5s. per ton, compares with £108 10s. to £108 12s. 6d. on the corresponding day last week. Stocks in London and Liverpool at the end of last week, at 31,636

INSPIRATION

To build a great business, those responsible for its destiny must spin into the threads of its policy a love of the highest standard of craftsmanship.

There must be the courage to decline business offered at a price which, if accepted, would result in the quality of the work being lowered.

A business must succeed as long as there is in its constitution the persistent pursuit of this definite aim.

The Chatwood Tradition—
"Achievement is but another milestone along the highway of progress—the end of the journey lies ever beyond"

is just as strong to-day as when the great pioneer, Samuel Chatwood, founded the firm almost a century ago.

J. E. S.

THE CHATWOOD SECURITY

THE CHATWOOD SAFE CO., LTD.,
Bankers' Engineers,
SHREWSBURY, England.

Folder No. 10—
Classified Service

tons, show a decrease of 163 tons on the week. According to the London Metal Exchange, the world's visible supply at the end of July (excluding "carry-over in Straits"), at 51,707, shows an increase of 81 tons on the month, but the "carry-over in Straits" at 6,612 tons, was 588 tons smaller.

COPPER.—In contrast to tin, copper prices declined further during the week. A further cut of 0.25 cents per lb. in the minimum price of Copper Exporters, Ltd., did not bring about an increase in demand, and domestic "spot" touched 7.50 cents per lb. on Wednesday. Wednesday's official closing price for "standard cash" in London, at £32 15s. to £32 17s. 6d., compares with £33 1s. 3d. to £33 3s. 9d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 19,027 tons, show an increase of 461 tons, while stocks of rough copper, at 1,110 tons, were 26 tons smaller.

LEAD.—The market in lead has been quiet, but in the absence of selling pressure prices showing a slight decline. Wednesday's official closing quotation for "soft foreign" in London, at £12 6s. 3d. to £12 10s., compares with £12 8s. 9d. to £12 11s. 3d. on the corresponding day last week.

SPELTER.—Spelter was firm at the beginning of the week, but in view of the heavy supplies the market declined on Wednesday. Wednesday's official closing quotation in London for "good ordinary brands," at £11 3s. 9d. to £12 10s., compares with £11 16s. 3d. to £12 5s. on the corresponding day last week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, "foreign" antimony, at £22 10s. to £23 5s. per ton, compares with £23 to £23 10s. a week ago. The quotations for aluminium and nickel at £85 per ton, and at £170 to £175 per ton, respectively, have been maintained. Quicksilver again changed hands at £17 per bottle.

TEXTILES.

THE COTTON TRADE.—Liverpool.—Prices have continued to decline steadily, the lowest point of this season being reached this week. It can hardly be claimed that heavy selling has caused the decline. It has been the absence of buyers to absorb some slight liquidation and small offerings from the South. Crop news continues quite good, and private estimates now received run from 13½ to 14½ million bales, all over the present world requirements. Weather in parts has been such as to encourage the boll weevil, but its ravages so far have been negligible. Business continues to be poor in the extreme. The spot sales for the week July 29th to August 5th (inclusive) are 15,000 bales, of which 5,950 are American, 600 Brazilian, 550 Argentine, 2,750 Peruvian, 1,500 Egyptian, 1,350 African, 1,350 East Indian, 730 Russian, and 220 sundries. Imports for the same period are 18,575 bales, of which 2,653 are American, 2 Brazilian, 6,748 Argentine, 4,139 Peruvian, 520 Egyptian, 2,509 African, 1,675 East Indian, and 329 sundries. Quotations, August 6th: American Middling, 4.48; Sakel, 6.90; Uppers, 5.33; Brazilian Fair, 4.40; Peruvian Smooth, 4.70; West African Middling, 4.40, and East African G.F., 5.40.

Manchester.—The Cotton Trade.—The general position of the market does not improve and since a week ago business has been adversely affected by the holidays and the further decline in raw cotton prices. There is still a disposition in all sections to restrict purchases as much as possible, writes our correspondent. Merchants who bought goods a few weeks ago are seriously handicapped by the depreciation in values. A certain amount of cloth inquiry has been experienced for India, but workable offers have been scarce, business being confined to odd lots in light whites and dyed goods. There continues more demand in fancies for China and some fair contracts have been arranged. Not more than a retail business has been done for the several minor outlets east and west, and on the whole home trade buyers have shown more caution in placing orders with producers. The owners of weaving sheds are experiencing increasing difficulties in carrying on and reports are being circulated of more firms going out of business. Prices in American and Egyptian yarns have favoured buyers, and in some quarters a rather larger turnover has taken place in coarse American counts. Only limited operations have occurred in Egyptian numbers.

THE WOOL TRADE.—Bradford.—This week, writes our correspondent, information has been received from South Africa that the forthcoming clip will be a good one, bounteous rain having fallen in mid-winter. The whole country is well supplied with water, and feed is plentiful. According to a Government return the quantity of wool carried over on June 30 at all the ports was 39,994 bales, this comprising mostly short clothing, which will no doubt find a market between now and the end of this month, when the long combing clip will become available. Developments on the Continent during the next few weeks will have an important

bearing upon Australian, South African and other wool values. Many mills throughout the West Riding are closed this week, and the second week in the month is the Bradford holiday. This, however, is only a temporary suspension of production, and even now preparations are being made for new cloths for next spring. Some manufacturers are fairly well pleased with the success already achieved in this direction. Weather conditions have been unfavourable for the sale of big quantities of light-weight goods for summer, with the result that retail clothiers are carrying bigger stocks than expected. Merino fabrics are certain to be popular, for fine wool is at a very reasonable price.

THE JUTE TRADE.—Dundee.—During the past fortnight the jute trade has ruled very quiet, with little change in prices all round. The Calcutta goods market has gone slightly easier, even though the figures of the stocks of both hessians and heavy goods show a drop at the end of July compared with those at the end of June. These stocks, however, are still very large, and prove a deterring factor to trade generally. The value of Calcutta 10 oz. 40 in. is 16s. 6d., and of 8 oz. 13s. 4½d., for August-September shipment. There is no further indication of the Indian jute mills considering shorter hours, but recently the mills agreed to carry on the present restricted working period of 40 hours per week all next year. The raw jute market has received little support from consumers, and business has been mostly confined to speculative operations, though there is little margin for even speculators to sell meantime at the low prices ruling. Offers from Calcutta have been quite plentiful. Best First Marks are quoted at from £18, and good Lightnings are obtainable at from £16, at which business has been done for August-September shipment. Heart D.R. has been sold at £15 5s., but sellers might now accept £15, same shipment. The full group of Daisee assortment has ruled unchanged at £15 5s., and good short groups at £15 10s., while the value of D.S. Tossa assortment is £16 10s., and of Motilal £16 12s. 6d., September-October. Spinners have picked up only a few small parcels of the fibre where rates have been most reasonable. Jute yarns have been practically without a test. Spinners are still naming 1s. 10½d. for common 8 lb. cops and 1s. 11½d. for 8-lb. spools, but the position is that buyers will not pay more than 1s. 10d. and 1s. 11d., respectively. The majority of spinners are more inclined to allow their machinery to stand than go on selling at prices which can only disclose a loss. Twist is from 3½d. for 3 ply 8 lb., and sacking yarns are steady at from 3½d. for 8 lb. chains and from 2½d. for 24 lb. web. Rove is on the easy side at from £18 15s. for 48 lb. and £15 15s. for 200 lb., buyers pressing for the lowest possible prices. Fine yarns are quiet and unchanged, while there is nothing doing in carpet descriptions. The cloth end of the trade remains very dull, and there is not much accumulation of orders over the holiday period, and any that have come in are for only small quantities. Prices remain quotably unchanged at from 2½d. for 10½ oz. 40 in., and from 1½d. for 8 oz., but if business of suitable dimensions were forthcoming, there is no doubt that concessions could be obtained. Linoleum hessians and heavy goods are dull and nominal.

THE GRAIN MARKETS.

WHEAT.—Despite the low levels already reached, prices continued to decline during the past week and on Wednesday, October wheat touched 3s. 9½d. per 100 lbs. in Liverpool. Russia is offering increasing quantities of the cereal, and although some damage may probably have been caused to her crop by her recent spell of hot weather, harvesting appears to be progressing, and yields are expected to be satisfactory. The German crop has been estimated at 20.5 million quarters. Although in some districts of France the probable yield appears to be low, her total crop is estimated to reach over 34 million quarters. Quotations: No. 1 Northern Manitoba Atlantic, ex ship, 23s. 9d. per 496 lbs., as compared with 24s. 3d. a week ago; No. 2 Northern Manitoba, Atlantic, ex ship, 22s. 9d., against 23s. 3d.; No. 3 Northern Manitoba, Atlantic, ex ship, 21s. 3d., against 21s. 6d.; Rosafe, ex ship, 19s. 3d., against 20s. 6d.; Australian, ex ship, 20s. 6d. to 23s., against 21s. 6d. to 23s. 6d. a week ago.

WHEAT FLOUR.—The home trade in flour has been steady, but in view of the declining tendency in wheat prices, millers are limiting their purchases to immediate requirements. North American shipments, at 161,000 sacks, show a decrease of 62,000 sacks as compared with those of the previous week. Quotations: Straight run, delivered country, 22s. per sack of 280 lbs., as compared with 22s. last week; delivered London, 21s., against 21s. Manitoba patents, ex store, 21s. to 24s., against 21s. to 24s.; and Australian, ex store, 16s. 9d. to 17s. 9d., against 17s. to 18s. a week ago.

BARLEY.—The market in barley has been dull, and although supplies in importing countries are said to be limited, demand has so far failed to expand. Quotations: "English feeding," f.o.r., sold at from 34s. to 50s., as compared with 36s. to 40s. last week; "Australian Chevalier" changed hands at 28s. to 32s., against 28s. to 32s. a week ago.

OATS.—The spot market has again been steady, but trade in futures has been quiet. Quotations: "River Plate," landed, 11s. 3d. per 320 lbs., as compared with 11s. last week; "River Plate," ex ship, 10s. 3d., against 10s.; "Chilean Tawny," landed, 12s. 9d., against 13s.; English white, per 336 lbs., 20s., against 20s. to 21s. a week ago.

MAIZE.—Argentina is still shipping heavily; last week's shipments amounted to 1,201,000 quarters, and although demand is still satisfactory, prices have shown a slight downward tendency in anticipation of further heavy arrivals. Quotations: "Plate," landed, 15s. 9d. per 480 lbs., as compared with 16s. 6d. last week; Plate, ex ship, 14s. 6d., as against 15s. 3d.; Plate, August-September, new, 14s. 6d., as against 15s. 3d. Yellow maize meal,

ex wharf, was quoted at £5, as against £5 2s. 6d. per ton a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1930-31, 1929-30, 1928-29, 1927-28:—

	1930-1931.	1929-1930.	1928-1929.	1927-1928.
Estimated sales of home-grown wheat—				
1 week to August 1	Owts. 25,067	Owts. 68,712	Owts. 33,950	Owts. 86,987
48 weeks to August 1	4,881,325	9,488,794	9,657,299	10,897,782
Average price of English wheat per cwt.	s. d. 6 5	s. d. 8 3	s. d. 11 3	s. d. 10 11

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1927 to 1930:—

Weeks ended	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
July 25, 1931	Owts. 31,618	Owts. 2,333	Owts. 8,438	s. d. 6 5	s. d. 6 4	s. d. 6 8
Aug. 1, 1931	25,067	1,499	7,136	6 5	6 4	6 8
July 30, 1927	44,232	3,889	14,631	12 7	11 8	10 3
Aug. 4, 1928	86,086	5,364	26,659	10 11	10 9	11 4
Aug. 3, 1929	40,833	4,743	10,109	12 0	9 11	9 5
Aug. 2, 1930	68,712	5,239	10,800	8 3	6 6	6 0

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1930:—

NEAREST FUTURE.	Jan. 2, 1930.	Aug. 6, 1930.	Jan. 2, 1931.	July 22, 1931.	July 29, 1931.	Aug. 5, 1931.
Winnipeg (No. 1 Manitoba)	148½	102½	56½	57½	54½	52½
Chicago (No. 2 Winter)	130½	96½	79½	54	51½	48½

The visible supply of wheat in Canada at 62,640,000 bushels shows an increase on the week of 1,826,000 bushels. Supplies a year ago stood at 56,882,000 bushels.

OTHER FOODS.

SUGAR.—The market in raw sugar, both in London and New York, has been quiet this week, but prices remained steady. Sales of refined sugar have also been on a smaller scale. Wednesday's sales of "raws" included "August delivery," at 6s. 4d. per cwt., against 6s. 3½d. to 6s. 3¼d., and "December," at 6s. 7½d., against 6s. 7¼d. to 6s. 8¼d. on the corresponding day last week. The movements of raw sugar in London and Liverpool during last week are set out in the table below:—

	Imports.		Deliveries.		Stocks.	
	Tons.	Tons.	Tons.	Tons.	1931.	1930.
London	1931.	1930.	1931.	1930.	27,494	28,715
Liverpool	2,204	254	843	1,043	68,623	97,817
Total	18,619	31,433	14,157	9,841	96,117	126,532
Last week	4,932	18,388	14,153	18,981	90,394	105,729

COFFEE.—No auctions have been held this week. They will be resumed on August 11th. Meanwhile, the spot market, though quiet, remained steady. Last week's movements of coffee in London were as follows: Brazilian, landed, 12; delivered for home consumption, 74 bags; exported, nil; stocks, 2,451 bags, against 1,561 bags last year. Central American, landed, 729 packages; delivered for home consumption, 1,941; exported, 1,050; stocks, 101,648 packages, against 92,259 a year ago. Other kinds, landed, 684 packages; delivered for home consumption, 3,481; exported 1,806; stocks, 78,787 packages, against 101,473 a year ago.

COCOA.—Cocoa has been a quiet market, and prices were again lower. As compared with the corresponding day last week, Wednesday's quotation for Accra, fair fermented, mid-crop, August-September, at 17s. 3d. per cwt. f.o.b. London contract, shows a fall of 6d. Last week's movements of cocoa in London were as follows: Landed, 3,668 bags; delivered for home consumption, 3,144 bags; exported, 343 bags; stocks, 222,450 bags, against 194,708 last year.

TEA.—No auctions have been held this week, but the market will reopen next Monday. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Auction:—

Week ending	Northern India.		Southern India.		Ceylon.		Java.		Sumatra.		Nyasa-land.		Total.
	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	
July 31, 1930	1 1.13	1 0.64	1 4.65	0 9.49	0 10.29	0 8.30	1 2.64						
July 9, 1931	0 7.68	0 7.99	0 10.28	0 6.20	0 6.25	0 4.87	0 8.62						
July 16, "	0 7.90	0 8.46	0 11.40	0 6.35	0 6.68	0 5.18	0 9.46

July 30, "	0 8.69	0 7.44	1 0.64	0 7.09	0 6.67	0 4.23	0 10.49						

RICE.—Rice has shown a further improvement during the week. Wednesday's quotation for Burma No. 2, cleaned, August-September in singles to the Continent and to the United Kingdom, at 8s. 7½d. per cwt., shows a rise of 9½d. as compared with last week. Movements in London during the past week were as follows:—Landed

204 tons; delivered, 42 tons; stocks, 741 tons, as against 2,111 last year.

POTATOES.—Supplies of new potatoes are now plentiful and prices were again lower. At the Borough Market, "King Edward" sold at from 6s. 6d. to 7s. 6d. per cwt.

SPICES.—Although the spot pepper market was quiet during the week, prices were maintained. Wednesday's quotation for "Black Singapore," at 5½d. per lb., shows no change on the week. Movements of pepper in London during the past week were as follows:—Black, landed, nil; delivered, 24 tons; stocks, 583 tons; against 845 tons last year. White, landed, 46 tons; delivered, 30 tons; stocks, 536 tons, against 468 tons a year ago.

MEAT.—Trade at the Smithfield Meat Market has been quiet during the week and prices were slightly easier. On Wednesday, Argentine beef (chilled, hindquarters) was sold at 4s. 6d. to 4s. 10d. per 8 lbs., against 4s. 8d. to 5s. on the corresponding day last week, while New Zealand frozen mutton realised 3s. 4d. to 3s. 10d., as against 3s. 4d. to 3s. 10d. a week ago. According to the Smithfield Market official report, supplies of meat during last week amounted to 9,071 tons, as compared with 7,916 tons in the corresponding week last year. Imported beef, principally Argentine, formed 85.8 per cent. of the supplies, as against 81.9 per cent. a year ago; and imported mutton, mainly New Zealand, formed 86.6 per cent. of the total supply, as against 82.6 per cent. last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OLSEEDS.—Very quiet conditions prevail in the markets for oilseeds and vegetable oils accompanied by a further weakening of values. Large quantities of linseed afloat and yet to be shipped and the incapacity of crushers to absorb more than a modest proportion continue to depress the market and very little business is recorded. Plate on passage and for shipment to September is quoted nominally £8 7s. 6d., with October a fraction more. The quantity now on passage to Europe is 166,200 tons, or only 700 tons less on the week, and compares with 99,200 tons a year ago. Cottonseed is neglected and weak. Black Egyptian old crop offers around £4 15s., and new crop September loading £4 17s. 6d., but buyers are difficult to find. Vegetable oils generally are quiet and reflect the dullness in oilseeds. Linseed oil on spot ex Hull mill has declined to £15 15s., and September-December delivery to £15 5s., but trade is painfully slow. Cotton oil is quiet, crude Egyptian ex Hull quoting £18 10s. and common edible £21. Oilcakes and meals are in moderate demand and about unchanged.

PLAYER'S

NAVY MIXTURE or NAVY CUT TOBACCO

In the calm contemplation of a pipe of good tobacco new hopes are born and life's little problems are viewed in their true perspective.

HIDE, LEATHER AND ALLIED TRADES.—Owing to the August holiday supplies of domestic hides and skins were sold for a fortnight at the auctions held last week, consequently prices this week are unchanged and the market remains steady. Business in connection with foreign hides has been quiet, and with the present uncertainty prices for most descriptions are inclined to be lower. In the South American market both dry and wet salted hides have been taken up in only limited quantities. In the former B. A. Americans have been sold at just under 5½d., with 5½d. paid for M. V. Americans, 4½d. for Cuyabanos and a fraction more than 3½d. for B. A. Inservibles. The bulk of the business in wet salted South Americans has been in connection with Argentine ox, which have been sold to the United States trade on the basis of 5½d., while second ox have realised 4½d. Cows are figured at from 4½d. to 4½d. Little interest is being taken in Africans and generally speaking quotations are weaker. For Capes, 5½d. and 4½d. is still asked for firsts and seconds dry salted 20/30 lbs., but buyers' ideas are below these figures. Dries are quoted at 6½d. and 5½d. Australians also are a quiet market and the tendency of values is easier. Turnover in regard to sole leather this week has been on a small scale, as with most of the shoe factories closed for the annual holiday manufacturers are out of the market for supplies until they again resume operations. Inquiry, however, has been going around for English and wet salted bends for the repairing trade, and although the business so far has not been large it is thought that once the holidays are out of the way larger business will be forthcoming. Previous to the closing down moderate sales were again made of offal, and although the bulk of the inquiry was for pinned stock a certain amount of trade was negotiated in regard to rough shoulders. The call for upper leathers is in sympathy with that of bottom leather, and producers and distributors do not anticipate much activity until the shoe factories resume operations. Willow calf and glacé kid in black and brown sold in small quantities until the Friday of last week, in addition to which considerably more inquiry was experienced for patent. Suede and reptile leathers also were asked for in small quantities, but trade generally was restricted to the footwear orders which needed immediate execution.

RUBBER.—The market in rubber has again been dull, and prices declined further. Shipments of crude rubber from producing countries during the first six months of this year at 393,411 tons show a decline of only 17,133 tons as compared with 1930. In view of the heavy decline in consumption which led to the accumulation of large stocks, the continuous weakness of this commodity can easily be understood. Wednesday's official closing price for standard ribbed smoked sheet, at 2½d. per lb., shows a fall of ½d. as compared with the corresponding day last week. In forward positions, business has been done at 2½d. to 2½d. for October-December, against 2½d. to 2½d.; and at 2½d. to 2½d. for January-March, 1932, as against 3½d. to 3½d. a week ago. Movements of rubber in London and Liverpool during the past week were as follows: Landed, 2,420 tons; delivered, 1,643 tons; stocks at the end of last week, at 136,216 tons, show an increase of 777 tons, as compared with the preceding week.

COMMODITY PRICES IN THE UNITED STATES.

(New York quotations, unless otherwise stated.)

THE MONEY MARKET.

EARLY in the week conditions were extremely stringent. On Monday up to 4½ per cent. was paid for new money, and the following day, when one of the clearing banks was calling heavily, the rate was still 4½ per cent., or even higher. Slightly easier conditions prevailed on Wednesday and on Thursday. Business in the discount market was limited early in the week, with three months'

quoted at 4½ per cent. On Wednesday there was a small but welcome revival in the Continental demand for bills, and the rate eased to 4¼ per cent. On Thursday, owing to special buying, three months' bills were quoted at 4½ per cent., with "hot" Treasuries at about ½ per cent. lower. Short bills stood at 4¼ per cent. and long bills at 4½ and 5 per cent.

The revival in the Continental demand shows that the 4½ per cent. Bank rate is taking effect, and the foreign exchange market is also steadier. The New York and Paris rates are now well within the export gold point, and the Amsterdam rate, at Fl. 12.04½, is not far below it. The exchange on Zurich still remains obstinately at Frs. 24.90 or well below the gold point. Still, this week's return of gold movements shows that the outflow of gold has been, for the moment, checked. The withdrawal of £2,520,627 from the Bank on August 6th was the last big movement, and since then daily losses have first fallen to the order of £300,000 and since ceased. The arrival of £614,000 in sovereigns from Australia, and subsequent releases from earmark amounting to £1,250,000, and the receipt of £200,000 in sovereigns from South Africa, have further minimised the net gold losses, so that for the week ended August 11th they only amounted to £1,524,000, against weekly losses of £17,000,000 and £15,000,000 towards the end of July. Finally, the price of Cape gold in the London market has fallen sharply from 84s. 11½d. (the Bank's selling price) to 84s. 10½d. per fine ounce, which is evidence of a definite alleviation of the foreign pressure on our gold.

	July 23, 1931.	July 30, 1931.	Aug. 6, 1931.	Aug. 13, 1931.	Previous Rate and Date Changed.
Bank Rate	3½	4½	4½	4½	3½ (July 30, '31)
Banks' Deposit Rate..	1½	2½	2½	2½	1½ (July 30, '31)
Discount Call	1½	2½	2½	2½	1½ (July 30, '31)
Houses' Notice	1½	2½	2½	2½	1½ (July 30, '31)
Market rate (3 months' bills)	3½-7½	4½-5½	4½-5½	4½-5½	...

One point of interest is how far this relief has been obtained at the expense of drawing upon the £50,000,000 credits opened in New York and Paris at the beginning of this month. On this matter, of course, no definite information is forthcoming, nor can anything be gleaned from the Bank return. The steadiness of the exchanges and the present revival in confidence suggests that if the credits have been touched at all, the total draft is a comparatively small one. It must be emphasised, however, that fundamentally the position has not altered, and that the presence of a temporary calm is no justification for any relaxation, but rather an opportunity for redoubling the efforts needed to rectify the position of the national finances. Money market opinion agrees that the revelations of the Economy Report imply no immediate threat to the stability of sterling, and that foreign centres that take a contrary view fail to realise that the danger is still very remote. Still, as the recent experience of other centres has shown, it is easy to impair confidence, and while for that reason every care must be taken not to exaggerate the situation, it must be realised that the centre of pressure has for the moment been transferred from Berlin to London and that evidence of national determination to deal immediately and effectively with the threatened Budget deficit is from the monetary standpoint the most urgent need of the moment.

The July returns of the nine English clearing banks reveal an insignificant increase in deposits. Acceptances have fallen to a new low level of £113.0 millions, this decline reflecting the set-back to prices and trade caused by the German crisis and the uncertainties that dissipated the good effect of the Hoover declaration. The contraction in cash is a normal movement, as the June cash increases were inflated by half-year balance-sheet preparations. There was a further decline in advances, again evidence of the depressed state of trade and of the prevailing uncertainty which is forcing bankers to act with great circumspection. The expansion in dis-

counts and investments is a familiar movement required to compensate for the increase in deposits and the decline in cash and advances:—

In New York call money has remained steady at 1½ per cent. Opinion is, on the whole, becoming reassured with the course of events in Europe. It is generally believed that London's gold losses are due to what Professor Gregory has just described as "panic attitudes in other countries." The relaxation of the German imports restrictions, the successful reopening of the German savings banks, the result of the Prussian referendum, and the reduction in the Reichsbank rediscount rate, have all had a favourable effect. German bonds are stronger, but elsewhere the improvement in tone has been neutralised by the sharp break in cotton prices. Assets of 6,805 reporting banks are returned at \$27,643 millions on June 30th. These figures compare with \$28,126 millions for 6,935 banks on March 25th and with \$29,116 millions on June 30th last year.

A quieter and less uncertain atmosphere prevailed in the foreign exchange market this week, and the absence of disturbing factors and a general return of confidence in the pound led to the steady appreciation of sterling against nearly all the more important currencies. The New York rate moved up to 4.85½, after being a little higher, as against 4.85½ last week. Montreal followed New York, and went to 4.87½. Paris was at 123.96, the highest for the week, and Brussels rose to 34.89, also the highest point. Milan lost a point at 92.86. Madrid was weak and uncertain and moved up from 55.90 to 56.35. Amsterdam moved in our favour to 12.04½. Berlin was a little weaker at 20.55. Switzerland touched its highest point for the week at 24.91. The Scandinavian exchanges were steady, Stockholm gained ½ at 18.15½, but Oslo lost ¼ at 18.16½, and Copenhagen ¼ at 18.16½. Of the South American currencies Rio was weak at 8½d., after being 8½d., against 8½d. last week. Buenos Aires was considerably better at 32½d., against 31½d., and Montevideo jumped from 20d. to 23½d., after touching 24½d. In the Far East the rupee and yen were firm and steady at 1s. 5½d. and 2s. 0½d. respectively. Batavia improved to 12.06½. In the forward markets dollars and francs were quoted below the gold point for both one and three months' delivery, the former being at premiums of ½ cent and 1½ cents, and the latter at 20 and 50 centimes premium. Brussels rose to 5 and 8 centimes premium. Milan was more offered at wide discounts of 12 and 40 centesimi. The premium on forward Amsterdam rose from 1½ cents to 2½ cents for one month, and from 2½ cents to 4½ cents for three. No quotation for forward Berlin is yet to be recorded although it is understood that isolated deals in forward reichsmarks have been made. Switzerland was at 2 and 4 centimes premium, or exactly double last week's level. Silver prices eased by ½d. to 12½d., for both cash and forward, as a result of complete neglect by buyers rather than any rush to sell. The China silver exchanges fell away in sympathy, Hong Kong losing ½d. at 11½d., and Shanghai ½d. at 1s. 2½d.

ECONOMIST INTELLIGENCE BRANCH.

Our Intelligence Branch, which has been amalgamated with Moody's Investors Service, Ltd., is available to our readers for the supply of economic, statistical and other information, at a charge proportionate to the work involved. Inquiries should be addressed to Moody's Economist Services, 8, Boulevard Street, London, E.C.4.

DEMOCRACY AND ECONOMY.

In the concluding sentences of their report the Majority of the May Economy Committee pose the question whether democracy is to be shipwrecked on the hard rock of finance. They might with equal force have put the question the other way round. Is sound finance to be shipwrecked upon the hard rock of democracy? That is the real question which faces the Cabinet to-day. How, with the present working of democratic machinery and with the present composition of the House of Commons, can unpalatable measures of economy be carried into force?

Regarding the matter from the political angle, the Economy Report has presented the Cabinet with the biggest dilemma which they have met in the realm of domestic affairs in their two years of office, and recognition of this fact has brought the Prime Minister hastily back from Looe to meet with financial advisers as to the necessary steps which must be taken to achieve a Budget balance in 1932-33. The position is by no means clearer than it was a week ago. Mr MacDonald has, in a Press interview, laid emphasis on the fact that it was the House of Commons, and not the Government, that insisted on the appointment of the Economy Committee, that each of the three Parties nominated two members, and that the House of Commons itself must share with the Government the responsibility for acting upon it. Mr Baldwin, while offering support to adequate measures of retrenchment, insisted that the full responsibility must remain with the Government. He has now hurried back to London, presumably, in the same frame of mind. The official Liberal attitude remains unknown until Mr Lloyd George's convalescence has proceeded further, or Sir Herbert Samuel, recalled from holiday, speaks for him. But Sir Donald Maclean has in general terms assured the Government of Parliamentary support for setting the national finances straight, and Lord Grey and Sir John Simon have spoken for the dissident branches of the Liberal Party. In addressing his constituents at Cleckheaton, on August 7th, Sir John Simon said that if the Government "shirks the duty which now rests upon it, no other consideration would justify the House of Commons maintaining it in office." Lord Grey, in his address, on the same day, at Embleton, spoke strongly for dole reform, and expressed a doubt (which is no doubt to Sir John Simon) as to whether too big a price was being paid by the Liberals for keeping a spendthrift Government in office. On the Labour side there are known to be divisions in the Cabinet; no secret has been made of the bitter opposition of the Trade Unions to the May Report; and much depends on the weight which Mr Snowden can carry, and the strength of the support which he will receive from his Prime Minister. Mr MacDonald's comments, referred to above, naturally recall to our mind his first speech to the House of Commons during his present tenure of office, in which he expressed the hope that Parliament would function as a Council of State. Here, surely, is, if ever there was, an opportunity for Parliament to function in that capacity. But there are three main questions that require to be answered. Will the Liberal Parliamentary Party make adequate economy the condition for supporting the Government and face an election if such economy is not forthcoming? Will Mr MacDonald stake his political future either on an appeal to the country or on co-operation with other parties against strong currents of feeling in his own, or will he seek to temporise on a middle path? Thirdly, have we at last reached the stage where a new alignment of parties begins to become a possibility?

The answer to these questions will take shape slowly, and on the political phase of the question only this remains at the moment to be said. By painting the financial position with the blackest paint and the thickest brush, the May Committee have achieved the main object of their heavy labours in arousing the whole country to a common recognition that quick action must be taken. Thus, just such an atmosphere has been created in which our nation is traditionally liable to respond handsomely to a call for sacrifice, provided that all classes are con-

vinced that the sacrifices demanded are properly and fairly proportioned. How such fair proportioning can be achieved is the hard core of the problem with which Mr MacDonald and his colleagues on the Cabinet Economy Sub-Committee are grappling this week, and it is the obstacle against which both the Majority and the Minority of the May Committee stumbled. The position as we read it is very much as follows. The Economy Committee of the Cabinet feel that, while to swallow the Majority report whole would be politically impossible in any case, alternative plans of severe retrenchment might be put through the House of Commons, if it could definitely be shown that the shoulders of all classes were being put to the wheel. Thus, though too much should not be made of the memoranda sent to the Chancellor by certain leading bankers and though much of the Press conjecture concerning Mr Snowden's conversations with the signatories is obviously irresponsible, yet there would be few things less surprising than that the Chancellor should be energetically exploring the possibilities of large-scale debt conversion, or at least of floating the operation in connection with the huge 5 per cent. War Loan, which, as he informed the House of Commons, he has already prepared.

To put it in blunt terms, the Chancellor might well say to the City that large-scale conversion, representing substantial voluntary sacrifice by the bondholder, would render it politically more possible to impose sacrifices on other sections of the community. To which, no doubt, the City would reply that a condition essential to the carrying through of such operations would be an unequivocal assurance either that a very substantial part of the May proposals will be implemented or that equivalent savings will definitely be effected by other methods. On the whole, we are not unfavourably impressed with the way in which the situation is developing. Granted a real national appeal and a nation-wide effort at economy, there is no reason for thinking that successful large-scale debt conversion as an integral part of that scheme is impossible, in spite of certain adverse circumstances in the present market position, which would probably render such an operation, standing by itself as a single measure, impossible of success. In some quarters anticipation has jumped so far ahead of actualities as to assume that not merely the conversion of the 5 per cent. War Loan to a 4 per cent. basis—which would, if wholly successful, save the Treasury over £20 millions a year—is in immediate contemplation, but also the refinancing on a lower interest basis of the whole internal debt. Such assumptions are, to say the least of it, premature; for, although the water runs fast under the bridges in these times, only a few days have passed since Mr Snowden made a speech in the House of Commons which was interpreted to mean that he had for the time being missed the opportunity of launching his War Loan conversion scheme. Thus although in every country, and not least in Britain, the conversion to a lower rate of interest of the whole internal debt is a consummation devoutly to be wished by Treasuries and taxpayers, exaggerated rumours of "an Australian plan for Britain" should be discounted, not only because they detract from the study of immediate tasks, but also because they will be distorted or misinterpreted abroad by those whose confidence in London's position has recently been unnecessarily impaired.

One thing at any rate has been gained. The temporary damage to the prestige of British credit wrought by the publication of the May Report has been offset by its effect at home. It has awakened the public at last to a general recognition that quick economy is essential, and it has created a general temper in which a real national effort is possible, given bold leadership from the top. Mr MacDonald is presented with a big opportunity to capture the imagination of the country and to show the world beyond a peradventure that whatever Budgetary disorder exists in the British household—and in what national household is it absent?—it will be firmly and effectively set straight. If he seizes that opportunity, he will have the leaders of thought in every party and every walk of life behind him.

SECOND THOUGHTS ON THE CRISIS.

THE events of the past week have served to relax tension and give the world a breathing space. We ought surely to use it in all countries for a thorough national stock-taking of the international situation and for a frank international discussion of the various national points of view—concentrating our attention upon just those issues that are most controversial. In a breathing-space like the present, we have a chance, which may not soon recur, of examining the facts objectively and discussing them without animus. If we can achieve this now, the results will not be lost when the crisis threatens us again.

In this matter, the last bout of the crisis has done the world one service at least. It has secured public acknowledgment for certain fundamental facts, which, till recently, remained unrecognised by the world at large. The first of these facts—or may we now venture to call them truisms?—is that all the major problems of international affairs are inter-related. Financial credit is seen to be bound up psychologically with political security. Without political security there can be no financial and economic recovery for the world; and, in the second place, there can be no political security without political compromise.

The paradox of the present political situation is this. In every country the vast majority of people want security, and this from the bottom of their hearts and not just perfunctorily. The differences that divide us are differences of method and not of aim; and the feelings aroused by these differences are acute just because the common aim, which we are each pursuing by these different methods, is being ensued by all of us with the same sincerity and fervour. We are sore with one another because we are each finding ourselves unable to achieve security by our own favourite method, whichever that may be, in the teeth of our neighbours. All that we can do—and this we can each do most effectively—is to hinder our neighbours from carrying their rival method through.

Take our own British policy to begin with—a policy which the British Government has been pursuing in common with that school of statesmen in Germany which has been represented in succession by Dr. Stresemann and by Dr. Brüning. Our solution for the security problem is to reduce armaments and revise treaties all round, *pari passu*, until we have arrived at an international state of affairs which rests upon mutual satisfaction and common consent, instead of resting, like the present state of affairs, upon a military preponderance of the countries whom it pleases over the countries whom it irks. This is our policy; and we believe as firmly as ever that the true path to security lies this way. At the same time, we see clearly enough now that we can neither coerce nor cajole our neighbours into exploring this path in our company beyond a certain point; and that some of our neighbours, if they choose, can hold up all further progress in this direction. The French, for example, in concert with their continent European military allies, can hold it up by vetoing any further reduction of armaments and any beginning of treaty revision. The Nazis—if they become sufficiently powerful in Germany—can sabotage the Stresemann-Brüning policy of fulfilment and conciliation by building more "pocket-battleships" and by ranging Germany side by side with Fascist Italy and Communist Russia in an anti-French coalition.

As for the French policy of maintaining the peace treaties sacrosanct and inviolable in perpetuity and trusting, for the security of France and her allies, to a permanent military preponderance, the whole history of Europe, and indeed of the Human Race, shows that such a policy is doomed to failure. Victories are wasting assets; and, in a universe where existence is synonymous with change, time always works against any attempt to perpetuate a momentary *status quo*. "The one thing that you cannot do with bayonets is to sit on them"; and, if France continues to put her trust in military preponderance, she will find herself driven, sooner or later, to defend herself against an ever strengthening counter-coalition by taking the offensive against it before the preponderance passes to her adversaries' side. And that

would bring France into direct conflict with the traditional British policy of preventing any single Power from becoming permanently and decisively dominant on the Continent.

Could Great Britain carry out this traditional policy in the future as in the past? Presumably she could, and at any rate she has virtually pledged herself, in the Pact of Locarno, to make the attempt. But the experience of three centuries, culminating in the experience of 1914, shows that this country's power to influence the course of international events by merely going her own traditional way is fatally limited in scope and negative in character. In this way we can maintain the Balance of Power, but we cannot maintain peace; and we can only maintain the Balance of Power by intervening each time ourselves, on the weaker side, whenever a general war on the Continent breaks out.

Here, then, is the paradox and the peril of the present international situation. The clash between incompatible policies, all of which are sincerely directed towards the common aim of security and peace, is bound, if allowed to continue, to produce the common catastrophe which we all dread and all sincerely wish to avert. Surely there is an overwhelming case here for stocktaking and discussion and compromise; and, as we pointed out the week before last, the recently published French memorandum on disarmament has indicated a possible line of diplomatic advance. The forthcoming Disarmament Conference, say the French Government, can have no hope of achieving further reductions in armaments unless its scope is widened to include the question of international sanctions and guarantees. Let us carry this French line of argument to its logical conclusion by suggesting that if the Conference is to succeed it must be allowed to cover the whole field of the Security Problem; in other words, to deal not only with armaments and with sanctions but with the third factor in the problem (albeit the French memorandum expressly rules this factor out). And this third factor, of course, is treaty revision.

If the parties to the forthcoming Conference agree to accept an "all-in" agenda, what are the diplomatic prospects? If negotiations are to succeed, there must be the elements of a bargain. The several parties must each have in hand assets of approximately equal value to be "traded" against one another. Now, surely, in the case in point, this condition is fulfilled. Each of the principal parties concerned has something to offer which the other parties urgently want. Without the concurrence of France and her allies there can be no mitigation of the present disparity of armaments and inequality of treaties; without the concurrence of Germany there can be no substitution of an international state of affairs resting on mutual consent for one resting upon *force majeure*; without the concurrence of Great Britain and the other English-speaking countries there can be no permanent guarantees. In fact, we each command assets that are equally valuable in our own estimation and in that of our neighbours. Has not the time arrived for "trading" these precious assets against each other?

In each country the first reaction to any such suggestion will be, no doubt, the usual instinctive recoil. For we each have our cherished bugbears. In France and Poland the bugbear is called Disarmament and Treaty Revision; in Germany it is called an Eastern Locarno; in the English-speaking countries it is called the Geneva Protocol. But is it not time for us all to consider seriously whether our attitude towards these bugbears is not neurotic? And also whether, in refusing to face these shadowy terrors ahead, we are not all in equal danger of allowing ourselves to be overtaken by the definite and deadly catastrophe of war and chaos which is stalking us all the time from behind? Let us face these bugbears, then, and see whether they are really the worst alternatives that lie in wait for us.

Consider coolly, for instance, the risk involved in our British bugbear, the Geneva Protocol. How could it really be riskier than the present state of affairs which, by mere *vis inertiae*, will infallibly produce another general war sooner or later if we let things drift? Supposing that we could secure a modicum of treaty revision which would take the edge off present continental discontents, would

not some British commitment in the nature of that dreadful protocol really be tantamount to a war risks insurance at a rather cheap rate? And supposing that, by assenting to a modicum of disarmament and treaty revision, France and Poland could persuade Germany to accept nine-tenths of the peace settlement in the East of her own free will instead of under *force majeure*, as she has already accepted it in the West, would they not be acting like prudent men of affairs when they accept the conversion of a short-term investment with an artificially high nominal value into a long-term investment with a rather lower nominal value which corresponds more closely to the genuine value of the asset? And supposing that Germany were to agree to an "Eastern Locarno" with Poland and the Little Entente, in exchange, let us say, for the Anschluss with Austria and East Prussia, regime in a corridor between Germany and East Prussia, traversing the present corridor between Poland and the sea; would she not be acting like a prudent firm which writes off old losses in order to transact new business with a free hand?

Surely if we exert ourselves to prepare the ground for the forthcoming Conference by working out some such ideas as these, we may hope, within the next twelve months, to break the present political deadlock in international affairs and thereby to open the door for the financial and economic recovery of the world.

BRITISH INSURANCE COMPANIES IN THE U.S.

I.—Fire.

ALMOST without exception the 1930 accounts of insurance companies which have been analysed from time to time in these columns indicated a marked falling off in premium incomes; and it was made abundantly clear at the annual meetings of several companies that while the home business had been relatively well maintained the full force of the prevailing depression had been experienced in the United States. As is well known, British offices are heavily interested in American business, since probably something of the order of 50 per cent. of the total premiums is derived from that part of the world.

The table which follows is based on the final reports of the companies furnished to the American insurance authorities and published annually by the Spectator Company of New York. The figures are, of course, published in terms of dollars and have been converted into sterling at a rate of exchange of \$4.80 to £1 for 1924 and 1925 and at \$4.86½ to the £1 for subsequent years. Twenty-one companies or groups of companies have been selected, comprising all the principal British offices operating in the United States. In the form in which the figures are set out in the Spectator Company publication, allowance has not been made on the British system for a reserve for unexpired risks at the end of each year in respect of policies then current. Accordingly, the profits have been recalculated on the British model, allowing for an unexpired risk reserve equal to 40 per cent. of the total premiums, and deducting also from the premiums the cost of claims and expenses. The aggregate results for each of the past seven years on this basis are as follows:—

Year.	Premium Income.	Underwriting Profit.	
		Amount.	% of Premium Income.
1924	£	£	%
1924	31,085,285	726,648	2.3
1925	32,814,506	392,925	1.2
1926	33,601,253	752,354	2.2
1927	31,710,646	2,110,373	6.7
1928	31,717,814	2,531,231	8.1
1929	31,277,814	2,236,280	7.1
1930	31,224,583	647,149	2.3
	27,688,317		

This table reveals that the decline in premiums, which has now been going on for some two or three years, became very pronounced in 1930. Several causes have contributed to this result. In the first place the reduction has coincided with falling commodity prices, whose accentuated rate of decline during the past eighteen months was of itself sufficient to account for most of the

1930 shrinkage of premiums. Some part of the falling off has also, no doubt, been due to the greatly intensified competition in the United States from existing domestic companies, and the recent appearance on the scene of a great number of new companies. Again—and, to the extent to which it has operated, this influence is favourable—the companies themselves have subjected their American business to a very careful pruning process, with a view to eliminating bad risks and those to which a high degree of moral hazard attaches. This reduced volume of business has also operated adversely on profits. Expenses and commission, which in large part are fixed, naturally bear a higher proportion to the reduced premiums than before, while the well-accepted axiom that a decline in trade goes hand-in-hand with heavier fire losses has again been justified by the event.

It now remains to consider the results of individual companies and groups of companies. The following table has been compiled in order to show the individual results for each of the last two years:—

Company or Group of Companies.	1929.			1930.		
	Premium Income.	Underwriting Profit or Loss.		Premium Income.	Underwriting Profit or Loss.	
		Amount.	Percentage of Premium Income.		Amount.	Percentage of Premium Income.
Atlas	£ 971,593	£ 38,953	4.0	£ 887,378	£ 2,488	0.3
Eagle, Star and British Dominions	676,351	43,376	6.4	520,993	34,424	6.6

Yorkshire	679,103	23,545	3.4	566,287	— 18,686	—3.2
	31,224,583	2,236,280	7.1	27,688,317	647,149	2.3

As far as the premium income is concerned, it will be seen that the reduction has been almost universally experienced. Only two companies in 1930 show an increase, and that in each case a small one, though the amount of the reduction varies greatly between individual companies. With regard to the underwriting results, eight companies out of 21 showed a loss in 1930, compared with only three companies in 1929, but the range between the least favourable and the most favourable result is quite extraordinary. The "General Accident," for instance, experienced a loss of 7.6 per cent. in 1930, while the "Eagle Star" exhibited a profit of 6.6 per cent. Speaking generally, it seems to be the case that the larger companies have shown the most consistent results and have emerged most successfully.

L'AFFAIRE BEAUHARNOIS.

(BY OUR OTTAWA CORRESPONDENT.)

WHAT is known in the French-Canadian Press as "l'Affaire Beauharnois" has provided during the parliamentary session which is now in its closing stages at Ottawa not only a very serious political scandal, but an illuminating insight into the same sort of interlocking connections of politics and power interests in Canada as are prevalent in the United States. The history of the whole sorry business is, if not wholly at least partially, told in the report of a special committee of the Canadian House of Commons, which, at hearings occupying nearly three weeks, tried to unravel the mysteries of business and evolved a unanimous report, now adopted by the House

of Commons. The existence of water powers which were capable of developing a large volume of hydro-electric energy had long been known to exist on what is known as the Soulages section of the River St. Lawrence, which connects Lakes St. Francis and St. Louis, two expansions of the river, and they had been developed on a small scale by a company known as the Beauharnois Light, Heat and Power Company. But about 1925 Mr R. O. Sweezy, an investment banker of Montreal, who had been trained as civil engineer, became seized of the possibilities of these water powers and determined to take a hand in their development.

The story of the methods followed by Mr Sweezy and his associates is told in the committee's report. They formed a syndicate with some \$50,000 capital, split into 5,000 units, and proceeded to acquire for 600 of these units the rights of a family called Robert, who controlled the existing Beauharnois Light, Heat and Power Co. By the disposal of the balance among different investors, they obtained cash resources amounting to \$261,000. Subsequently another syndicate called the Beauharnois Power Syndicate was formed, with a capital of the face value of two and a-half million dollars. It took over the assets of the old syndicate in exchange for 10,000 shares of the new one, which were valued at a million dollars; it disposed of 1,300 shares to different investors at \$100 per share, and it bought out for 2,000 shares a company called the Sterling Industrial Corporation, which had filed an application for the same power rights at Ottawa and had acquired what the secretary of the Beauharnois Company described as "a nuisance value." Now this Sterling Industrial Corporation had been organised by Senator W. L. McDougald, a prominent member of the Liberal Party, and Mr R. A. C. Henry, who at one time was a high official in the Canadian National Railways, and later became Deputy Minister of Railways and Canals at Ottawa, and from the sale of what Mr Gordon, the chairman of the committee, in view of the fact that it had a capital of only \$2,500 and no assets, characterised as "this barren company," they realised a profit of over half a million dollars each. Simultaneously with these financial transactions the Beauharnois group had been conducting negotiations at Quebec City and Ottawa, with the result that they secured from the Provincial Government of Quebec, which controlled the water powers, a lease of them on very generous terms, and from the King Government, which had jurisdiction over navigation rights on the St. Lawrence, a permit to divert from the main channel of the river into a canal running parallel to it 40,000 cubic feet of water per second, an amount which they were subsequently able to increase to 53,000 cubic feet. These concessions gave them the prospect of being able to develop 500,000 horse power, and they forthwith floated a new corporation called the Beauharnois Power Corporation, which had a common stock capital of \$30,000,000 and was able to place a bond issue for a similar amount. Before this company was floated Mr F. P. Jones, a well-known Montreal industrialist, and some associates who had been heavy shareholders in the Beauharnois Power syndicate, being dissatisfied with the financial plans adopted, sold out their holdings to Mr Sweezy and his friends for \$550 per share. But when the Beauharnois Power Corporation was successfully launched, each of the holders of the shares of the prior syndicate received \$150 cash plus 40 shares of Class A common stock in the new corporation; since it was selling at that time for \$15, the value of an investment of \$100 in the second syndicate had come to be worth \$750. This rapid enhancement was due partly to the value of the concessions secured and partly to the fact that the corporation had been able to conclude contracts first with the Hydro-Electric Commission of Ontario and, secondly, with the Montreal Light, Heat and Power Company for the sale of the greater portion of its 500,000 h.p. as soon as it was ready for delivery.

Evidence was tendered to the committee, estimating that the profits of the original syndicate were between 12 and 19 million dollars, contingent upon the price at which they disposed of their allotments of common stock; it was at one time selling as high as \$17 per share, but has now receded to \$4. Extraordinary individual profits

were also secured; Senator Raymond, a well-known Liberal politician, with a modest investment of \$95,000, made profits of half a million dollars, and Mr Frank P. Jones and the Honourable Walter Mitchell, formerly Provincial Treasurer at Quebec, did even better for themselves, as their profits were in the neighbourhood of three-quarters of a million dollars. Another substantial shareholder in the syndicate was the late Honourable J. L. Perron, Minister of Agriculture in the Provincial Government of Quebec, which executed the actual lease of the water powers to the company. Accordingly Mr Sweezy and his friends had an abundance of money to play with, and apparently they scattered it abroad with astounding generosity to a corps of lawyers and lobbyists who enjoyed a high reputation at Ottawa and Quebec as political "fixers."

But the real sensation of the inquiry came when Mr Sweezy, who holds the office of President of the Corporation, was examined on the subject of campaign funds. Apparently he had suffered much at the hands of politicians, for in his evidence he cast discretion to the winds and proceeded to make most embarrassing disclosures about campaign funds which by a polite fiction had been supposed to drop as manna from heaven and had always been barred out as a subject for public discussion. He justified quite frankly that he had paid to the Federal Liberal Party, whose leaders were the Ministers granting the permit for the diversion of water, \$600,000 out of his own pocket and, in addition, \$100,000 of the Beauharnois Corporation's funds. Furthermore, he made a contribution of \$3,000 to the manager of the Provincial Liberal Party in Ontario. He had also been willing to hand over \$200,000 to the Federal Campaign Fund of the Conservative Party; but Mr Bennett, who while in Opposition had severely criticised the Beauharnois Company and its activities, had instructed this offer to be declined. However, Mr Sweezy had contributed to the Conservative war chest in Montreal and taken a practical financial interest in the fortunes of individual Conservative candidates. Moreover, as the result of representations that "gratitude is always an important factor in dealing with democratic Governments," he had handed over a packet of \$125,000 worth of Federal Government bonds to Mr John Aird, junior. He said that he had given this sum in the belief that it would reach the campaign war chest of the Provincial Conservative Party of Ontario. Mr Aird, junior, was then called as a witness, and, admitting the receipt of the bonds, was able to account for most of them in his possession and the balance as exchanged for other securities; but he could not give any satisfactory account of having performed services for Mr Sweezy which would justify this reward, and suspicion was deepened when leading officials of the Hydro-Electric Commission declared that they had no dealings with Mr Aird to justify such a commission.

The proceedings of the Committee were suddenly halted on July 28th, and a few days later the Committee produced a voluminous report about which unanimity, apparently, was only reached after considerable controversy. It found that, from a technical point of view, the Beauharnois enterprise was fundamentally sound and that a navigable canal could be developed synchronously with the power development and form a link in the St. Lawrence great waterway, but it also found that the company was violating its agreement with the Federal Government, and in its construction work was proceeding with plans which had not secured the necessary approval. In regard to campaign funds it declared that Mr Sweezy's contributions had been "shamelessly, needlessly and wastefully given for the purpose of securing favourable consideration from the King Government for the company's plans," and ordered the repayment of all moneys which had been paid out of the company's treasury for this purpose. It severely criticised Senators Raymond and Haydon, who had been the collectors of the campaign funds, but it reserved its severest condemnation for Senator McDougald, asserting that his general actions in relation to the Beauharnois Company "could not be too strongly condemned." It also dealt severely with Mr Henry, the ex-Deputy Minister of Railways, and urged his removal from the management

of the Beauharnois Company, while it passed censure upon two prominent officials of the Public Works Department at Ottawa.

The motion for concurrence in the Report produced an interesting debate, lasting nearly two whole days, on June 30th and 31st in the House of Commons. Mr Mackenzie King occupied three and a-half hours in an exhaustive review of the Report and an explanation of his own position. He denied that he had any knowledge about campaign funds and said that he had made it a settled practice to leave such delicate matters to the party organisers in order to be free from an embarrassing sense of obligation. Mr Bennett waxed sarcastic at Mr King's avowal of complete innocence about campaign funds, but devoted most of his speech to a discussion of the position of the Beauharnois Corporation and the future of its enterprise. He took the line that Mr. Sweezy and his associates deserved little consideration, as they had not only bought favours with campaign funds, but had also flouted the Federal Government by going ahead with plans which had never secured the necessary approval from Ottawa. So he announced that his Government intended to classify the Beauharnois canal "as a work for the general advantage of Canada," and take it over under its constitutional powers for acquiring such works, and also to cancel the Order-in-Council which permitted the diversion of water and substitute for it some arrangement which would better safeguard the public interest. He was able to intimate that the provincial Government of Quebec was willing to acquiesce in this move. The disposition of the hydro-electric energy which will be developed remains within the jurisdiction of Quebec, and Mr Bennett held that it was unlikely that it would countenance the proposal made by Mr Woodsworth, the Labour leader, that the power development should be undertaken and managed as a State enterprise. He was inclined to the view that the corporation would have to be thoroughly reorganised and placed under different control, and that if this were done it might be able to secure the necessary financial backing for the completion of the project. Before Parliament rises a Bill to carry out the Government's preliminary plans will be put through Parliament.

This action will close the present chapters in the Beauharnois affair, but echoes of it will be heard for many a long day. There is general complaint in the Press, both Liberal and Conservative, that the inquiry was concluded with a strange and unseemly haste, and a demand that mysteries like those involved in the story of Mr Aird, junior, should be probed more fully. And the *Toronto Globe*, the leading Liberal paper in Eastern Canada, has been publishing a series of bitter editorials in which it declares that the Liberal Party must profit by experience and undertake a thorough process of domestic house-cleaning.

THE PRICE OF RUBBER.

(BY A MALAYAN CORRESPONDENT.)

This week rubber has touched a new low record price of 2½d. per lb. What is the economic price level which this commodity can hope to reach when the present depression is over? We print below a contribution by a Malayan correspondent to the discussion of this controversial topic.

The overproduction which has led to rubber's price collapse can be traced directly to the violent fluctuations of the past ten or twelve years. When rubber was soaring, money for new ventures flowed freely; production costs were a comparatively unimportant matter, with the result that there exist to-day several companies that are hopelessly over-capitalised. Those companies are doomed, and the persistent failure of their directors to realise that the days of half-crown rubber have passed for ever is the principal factor in prolonging the slump. Reserves are being frittered away uselessly in the vague hope that a miracle will happen, and all the other people will collapse first. Before the present slump the average all-in cost of production was in the region of sevenpence per pound. On this basis a selling price of at least tenpence per pound—and the estimate is a very modest one—was necessary be-

fore the more extravagantly financed estates could be run profitably. In the past year average production costs have been reduced to a little over threepence per pound, but this figure makes no allowance for replacement or development works. With a selling price of sixpence, the majority of estates—that is to say the soundly-financed and economically-run companies—could pay dividends. If the price went to a shilling, or a figure that would enable the high-cost producers to work at a profit, there would follow in a few months a crisis of over-production even worse than the present. A sudden jump in price to a shilling or more might bring very temporary relief, but it would not avert ultimate disaster to those boom flotations whose refusal to recognise facts is responsible for a continuance of threepenny rubber. The vital factor in the whole problem is the native grower. There is, in Sumatra, a vast acreage of native rubber that is at present tappable, but is not being tapped because it is growing so far from any means of cheap transport that it cannot be marketed profitably at ruling prices. There are other expanses of native rubber that will mature in the next few years, but their produce is never likely to reach the market unless the price is inflated.

All sorts of estimates have been published as to the potential annual tonnage represented by these idle sources of supply. Taking the most conservative of them, and modifying even that a little, it can be said that if rubber went to a shilling a pound before the end of 1931, world production would increase by 40 per cent. in 1932. There are differing views as to the price necessary before this native rubber can be produced and transported at a profit, the middle figure being about eightpence. As an individual opinion, slightly over sevenpence is suggested here. Therefore we may classify rubber producers generally into three groups: those who can produce profitably at sevenpence; the native who is without reserves and cannot tap a huge area until the price exceeds sevenpence; and the overcapitalised estate where rubber cannot be produced and sold profitably at under tenpence or a shilling. Many of those in the last category are still putting rubber on the market and meeting the loss out of reserves. The folly has continued for so long already that there is little hope of persuasion by the recital of known and admitted facts. The many must struggle along while the few throw away such sums as would serve at present to pay out their shareholders at a rate in some cases in excess of the current market quotation for their shares. This journey to voluntary ruin will take months yet, and then we shall see the output of rubber restricted in a voluntary manner—by the cessation of activity on the part of companies that have been economically unsound since their formation in an era of financial madness. Thereafter, the remaining cultivators will be faced with the task of keeping the price of rubber at about sevenpence, and as long as this figure is not greatly exceeded the Sumatra avalanche will be effectively checked.

Notes of the Week.

A Lull in the Storm.—In almost every direction the week's events connected with the international crisis have been favourable. Following the unexpectedly calm reopening of the German banks and savings banks, the defeat of the extremists of the Right and the Left in Sunday's Prussian referendum substantially assuaged immediate fears regarding the position in Germany, and this favourable impression is confirmed and underlined by our Berlin correspondent, who, on a later page, relates that the temporary "freezing" of the German financial machine has not produced the contraction of trade and increase in unemployment which was generally predicted. Meanwhile, the Reichsbank has been able to reduce its rate; Dr. Brüning has had cordial conversations with Signor Mussolini in Rome; and the latter has agreed to visit Berlin shortly. Looking in other directions, we find that the flurry in the exchanges has disappeared, and sterling has

been steadily gaining ground. Other reasons for increasing confidence are found in the improvement shown by the British trade returns for July, and the vigorous concentration upon economy plans which has brought Ministers, Opposition leaders and bankers rushing back from much-needed holidays. There is no doubt that the course of events has produced a definite improvement in psychology. Confidence, everywhere, is less lacking, and, after all, the restoration of confidence is an essential condition if effective measures are to be concerted to smooth the difficult path which lies ahead.

Mr Gandhi Refuses.—The announcement that Mr Gandhi will not be a member of the British India delegation, which is due to sail for England this week-end, has caused grave disappointment in responsible quarters. About a fortnight ago the Mahatma, who has been making great play with the mystery of his intentions, went so far as to say that he would "probably" visit London. Then, not altogether unexpectedly, a hitch occurred. Mr Gandhi represented to Sir Ernest Hotson, Acting-Governor of Bombay, that the Delhi Agreement was being infringed in the administration of that province, and gave it out that his departure for London depended upon the receipt of a satisfactory reply. Sir Ernest's reply, in which he took the line that the measures complained of represented lawful administration and did not constitute any breach of the Delhi Agreement, did not satisfy Mr Gandhi or the Working Committee of Congress. Mr Gandhi, therefore, appealed to Cæsar, or, in other words, telegraphed to the Viceroy at Simla, intimating at the same time that, in view of Sir Ernest Hotson's reply, "it would be difficult for him to go to London." While the latest pronouncement would seem to be final in its import, at least as regards the present delegation, he would be a bold prophet who would entirely scout the possibility that Mr Gandhi may yet cross the gangway—even if he follows in a later ship.

The Prussian Referendum.—The attempt to secure a premature dissolution of the Prussian Landtag has failed. On the voting day, last Sunday, August 9, only 9,793,328 voted in favour of the proposal instead of the 13,184,000 which was the minimum necessary to secure a winning majority of the Prussian electorate. This desirable result has materialised in spite of the Prussian Government's blunder, at the eleventh hour, in misusing a press law in order to compel all newspapers printed in Prussia, including those supporting the dissolution proposal, to print an official exhortation to the electorate to abstain from the polls. Nor was the voting accompanied, as it had been feared that it might be, by extensive disorders and bloodshed. If the Nazis and the Communists—those strange yokefellows of the moment—came to blows here and there on the occasion of a referendum which they were jointly promoting, the rest of the world may be pardoned for welcoming this ineptitude as a touch of comic relief. The one serious incident was the shooting affray between the police and the Communists in the Bülowplatz at Berlin: The Communist attack, which was made by gunmen firing from windows, was peculiarly cold-blooded; and it may be expected to produce a strong revulsion of public opinion in Germany against the methods of the parties of violence, on whichever wing of the political battle array the assassins may be fighting. There were rumours that the Government of Prussia or of the Reich would retaliate by suppressing the Communist Party officially; but this has been promptly denied. It would, of course, be a political blunder of the same nature, but of far greater magnitude than the petty blunder of the compulsory insertion in the Press. Parties of violence pray for nothing so much as to be able to provoke their opponents into coming on to their own chosen ground; and even if their opponents prove strong enough to suppress them superficially, they always thrive on being driven underground. On the whole, we are warranted in greeting the failure of the referendum with relief. One definite good result which it has produced already is a relaxation of tension in France, where, as the day of voting approached,

the results had been awaited with an increasingly nervous expectancy. Undoubtedly, the European political atmosphere has been cleared; and undoubtedly, too, the result of the voting means a certain "loss of face" for both the Communists and the Nazis in Germany. At the same time, we must be cautious in allowing the wish to be father to the thought that the revolutionary parties in Germany are now "on the run." A decline in their influence cannot be deduced conclusively from elaborate mathematical comparisons between last Sunday's figures and those of the general election last autumn. The atmosphere of a referendum is different from that of an election, and the same individual may also behave differently when he is voting as a citizen of Prussia and when he is voting as a citizen of the Reich. For such reasons as these we must not press our interpretation of last Sunday's results too far; but, so far as they go, we may take note of them with legitimate satisfaction.

Conversations at Rome.—It was a happy inspiration that led Mr MacDonald to invite the German Ministers to Chequers; for the interchange of visits between leading members of the Governments of the principal Powers, which began with the German visit to England in the first week of June, has been proceeding actively since. There has been the German visit to Paris, the Seven-Power meeting in London, the English visit to Berlin, and—latest of all—the German visit to Rome last week; while the American Secretary of State, Mr Stimson, has been paying a round of visits to European capitals. The series has not come to an end; for, before the departure of Herren Brüning and Curtius from Rome, it was announced that Signor Mussolini had accepted an invitation to go to Berlin. This marks a notable departure from the Duce's regular practice, hitherto, of staying at home and leaving it to his lieutenants to represent the Italian Government at international meetings of statesmen. What are these meetings accomplishing? In our disappointment over the meagre positive results of the London meeting a few days ago, we were inclined to wonder whether there had not been much ado about nothing; and it was no doubt true that there was nothing miraculous that could or did ensue from a gathering of statesmen—however eminent in themselves, and in their representative capacity, these statesmen might be. Yet these meetings are assuredly performing one prosaic yet highly important negative service. They are preventing the nervousness and suspicion which have arisen in the field of international finance from spreading to the field of international politics. This service may prove of inestimable value; for it is only in an atmosphere of undepreciated political confidence and goodwill that we can hope to make progress in solving the political problems of disarmament and treaty revision and security; and a substantial advance in this political field is perhaps the necessary prelude to financial and economic recovery. In Rome, the heads of the Italian and German Governments have discussed frankly these delicate but urgent political problems, and the discussion appears to have extended to treaty revision as well as disarmament. But the Italian and German Ministers have been at pains to forestall any anxiety that might possibly arise in France lest these Rome conversations might be inimical to the French conception of security. While the official *communiqué*, issued in Rome, announces that "there was equal agreement upon the necessity of making every effort to ensure that the forthcoming effective results in the interest of peace and of the economic and moral well-being of the world," and while indirect references to treaty revision have appeared in the Italian Press, the *communiqué* places in the forefront, as the key to the solution of present difficulties, "the necessity of an active collaboration inspired by mutual trust between all the Governments." There could be no better watchword than this for the diplomatic preparation which must be carried on intensively during the coming months, if the World Conference, which is due to meet next February, is to enter upon its labours with a fair prospect of success.

Hoover Moratorium Agreement.—The experts' meeting in London, called to discuss the details of the Hoover moratorium proposal, have now arrived at an agreement, which has been submitted to and approved by their respective Governments. The agreement embraces war debts as well as reparations payments, and covers the liabilities of Germany to the Allies, and of the Allies to each other. Certain adjustments in the case of Bulgaria are still being negotiated, and one or two reservations by certain Powers have had to be expressed and dealt with. The broad principle is that all reparations and debt payments suspended during the "Hoover year" shall be repaid by ten equal annuities from July 1, 1933, together with interest at not more than 3 per cent. as from that date. These repayments will be unconditional obligations, not entitled to postponement. The service of the Dawes and Young Loans shall proceed, and shall be excluded from the terms of the moratorium. The remaining unconditional portion of the Young annuity shall actually be paid by the German Government, but shall at once be re-lent to the German railway companies, so that, in effect, the transfer of this sum from Germany is suspended, as envisaged by the original Hoover declaration. As regards reparations in kind, existing credits shall be continued, both for the completion of outstanding contracts and for the execution of new contracts if any surplus remains. Every effort will be made to continue deliveries in kind according to existing arrangements, provided only that they may be suspended if their continuance through the moratorium year involves a charge upon the creditor state. In interpreting these provisions, it must be remembered that the sudden suspension of deliveries in kind would be prejudicial to German industry as well as to the recipient countries. Special recommendations are made for the continuance of certain Hungarian and Bulgarian payments, and the question of the Greek payment to Bulgaria under the Caphandaris-Molloff agreement has been left to be settled by the two Governments. In view of the complexity of their task the Committee have done well to leave so few loose ends behind them. Their work has been rather overshadowed by that of the emergency committees since set up to deal with the German crisis, but so soon as financial order is restored in Germany, and the world is free to turn its attention to the implementation of the Hoover declaration, its value will become apparent.

Australian Conversion Progress.—Events in Australia have lately been overshadowed by the European crisis; but it is pleasing to be able to record the steady progress that the Dominion is making in the rehabilitation in her finances. It is common knowledge that, a few months ago, matters had reached such a state that their rectification required a grand assault all along the line, including general Dominion and State Government expenditure, civil service salaries, wages, pensions, and, finally, interest on the internal debt. This week, the assault is being delivered. The Acts necessary to enforce economies have now been passed, and on Monday the latest of these Acts, namely, the Debt Conversion Act, came into force, and the lists were opened for applications from bondholders for voluntary conversion. They are to remain open until August 31st for bondholders domiciled in Australia and until September 29th for those resident abroad, and objections against conversion, which entails a reduction in interest to a basis of 4 per cent., must be lodged within that period. When it is realised that the average saving to the Government, and, therefore, sacrifice by the bondholder, is equal to 22½ per cent. of the interest payable on the internal debt, the fine response that is already being made assumes a large significance. The banks have given a lead by reducing the interest on their deposits and also on certain classes of loans, and Ministers have followed this up by broadcast and other appeals to the people. According to cables, dated Wednesday, it was estimated that, during the first two days of the campaign, £566 millions, or one-fifth of the total, had already been converted. Meanwhile, the Loan Council has appointed a permanent Committee, consisting of the State Under-

All Baltic and Scandinavian Currencies bought and sold by SKANDINAVISKA KREDITAKTIEBOLAGET

Phone Stockholm 0101

Treasurer, Commonwealth Officials, and Professors Giblin and Melville, to watch the application of the general economy plan. Already Australia's efforts are bearing fruit, for London Stock Exchange quotations of her sterling loans are appreciably above the lowest points touched earlier in the year, and the depreciation of the Australian pound has been checked. Further progress will be watched with interest, not only because of the goodwill felt towards Australia herself, but also because of the moral her success will contain for other countries.

The German Credits Committee.—The Committee of experts nominated by the Central Banks to investigate the credit needs of Germany assembled at Basle last Saturday and has been at work throughout the week. The American representative, Mr Wiggin, head of the Chase National Bank, was appointed chairman. At the outset of the proceedings a statement on the German position was made by Dr. Melchior and discussed by the Committee; and they have also invited representatives of various banking groups to visit Basle in order to hasten and co-ordinate definite arrangements for the prolongation of short-term credits in Germany. No statement has yet been made as to when or whether the Committee will proceed to Berlin to examine the situation *in situ*.

Overseas Trade in July.—When allowance is made for the ill-effect upon prices and business of the international crisis, the July overseas trade figures are better than might have been expected. Imports were the highest since April, and exports of British goods the best since January. Re-exports, as might be expected from the breach in international trading and credit relations, were the lowest of the year. The relevant figures for July and also for the year to date are given below:—

MONTH OF JULY.
(000's omitted.)

	1931.	Increase or Decrease as compared with			
		July, 1930.		July, 1929.	
Imports	£ 70,146	£ -15,020	% -17.6	£ -23,399	% -24.9
British exports	34,252	-16,495	-32.5	-82,268	-48.5
Re-exports	4,936	-1,727	-25.9	-3,034	-38.0
Total exports	39,188	-18,222	-31.8	-85,302	-47.5
Excess of imports over total exports	30,958	+ 3,201	+ 11.5	+ 11,903	+ 62.5

FIRST SEVEN MONTHS.
(000's omitted.)

	1931.	Increase or Decrease as compared with first seven months of			
		1930.		1929.	
Imports	£ 487,935	£ -138,831	% -22.1	£ -210,228	% -30.1
British exports	233,408	-122,190	-34.4	-191,854	-45.0
Re-exports	40,644	-15,299	-27.3	-27,888	-40.7
Total exports	274,052	-137,489	-33.4	-219,742	-44.6
Excess of imports over total exports	213,883	- 1,342	- 0.6	- 9,514	+ 4.7

Even allowing for their slight improvement over previous months, the July figures are lamentably low, and the

following table shows the extent to which the cumulative figures for 1931 lag behind those of previous years:—

SOME LEADING EXPORTS.
(Quantity.)

	First Seven Months.		
	1929.	1930.	1931.
Coal..... tons	33,941,394	33,202,249	24,817,804
Pig iron and ferro alloys..... tons	340,750	216,131	130,862
Railway material..... tons	286,508	278,329	126,863
Total iron and steel..... tons	2,616,533	2,100,984	1,167,551
Textile machinery..... tons	79,138	59,403	30,316
Total machinery..... tons	333,120	301,036	196,968
Cotton yarns..... lbs.	100,637,300	83,124,600	73,763,700
Cotton piece-goods..... sq. yds.	2,289,501,000	1,685,260,100	1,025,232,400
Wool tops..... cents	188,631	164,090	164,736
Worsted yarns..... lbs.	21,616,500	17,866,500	15,137,600
Woolen tissues..... sq. yds.	64,441,400	47,913,600	33,056,300
Worsted tissues..... sq. yds.	29,324,200	20,740,400	17,789,300
Linon piece-goods..... sq. yds.	43,389,600	40,254,300	37,558,700
Leather boots and shoes dozen pairs	554,029	630,037	585,993
Leather..... cwts.	200,526	164,787	94,473
Paper and cardboard..... cwts.	2,882,152	2,700,400	1,846,328
Locomotives..... tons	22,593	28,564	13,632
Motor cars and chassis..... number	24,968	19,044	13,982

With coal exports down by 25 per cent. on 1930, iron and steel down by 45 per cent. and textiles by amounts ranging up to nearly 40 per cent. for cotton piece-goods, this year can only be called disastrous, especially when the disappointing character of the 1930 returns, in comparison with those of previous years, is recalled. Even if there is an improvement in the autumn, which, barring a sudden and complete settlement in Europe, at present looks unlikely, it will come too late to neutralise the poor results of the first seven months of the year.

Cotton Price Slump.—Our Manchester correspondent writes:—Late on Saturday last the Agricultural Bureau of the United States Government published a surprising report on the cotton crop for this season. In market circles it was expected that the Bureau would estimate the crop at about 13,800,000 bales, but the official forecast was 15,584,000 bales, which compares with an actual yield for last season of 13,932,000 bales. The condition of the crop was stated to be 74.9 per cent., against 62.2 per cent. on the same date last year, and a ten-year average of 67.5 per cent. The yield per acre, at 185.8 lb., has caused much surprise, as this compares with the final estimate of 147.7 lb. for last year's crop. It may be mentioned that, when the record growth of 18,000,000 bales was produced in 1926-27, the production per acre was only 181.9 per cent. When the statistics were issued the markets of the world were closed with the exception of Chicago. In the circumstances there was considerable interest in the opening of the Liverpool market on Monday morning, and the first prices for American futures showed a decline of nearly 1d. per lb. There was a slight recovery a little later, and since then prices have been fairly steady. The spot quotation in Liverpool this week has touched 3.64d. This is the lowest figure since 1904, when 3.63d. was registered. If the Government estimate proves to be correct there must be a glut of cotton for a long time to come. The carry-over from last season was 9,000,000 bales, so prospective supplies are about 24,500,000 bales, whereas at the present time the world consumption is very little more than 11,000,000 bales per annum. In trade circles the opinion is held that, if the weather in the belt continues favourable, there is a possibility of prices falling to a lower point than ever reached before. The lowest price ever known was 2½d. on February 1, 1895. From the point of view of spinners, manufacturers and merchants this sharp drop in values is a calamity. All firms that are compelled to carry stocks of raw material or manufactured goods will feel acutely the depreciation in values. This fact has had its influence on the shares of the chief textile concerns this week. According to some authorities in Lancashire cheap cotton may be the salvation for the industry. In view of the lower prices now ruling there should be an increased consumption of manufactured articles. But for the uncertain outlook in India and on the Continent it is likely that many merchants would be prepared to anticipate future requirements. It is understood that many spinners in Japan and in European countries began to buy cotton more freely several weeks ago under the impression that prices were safe. In

such circumstances Lancashire firms should be favourably situated in competing for world trade. Although the immediate effect has been very disturbing, there is ground for believing that the reduction in prices will result in trade on a larger scale at an early date.

Shipping Freight Index Number.—Depression in the whole-cargo shipping and freight market continued during July, and our index number of freights at 87.3 shows a further fall of 4.0 per cent., following a decline of 4.5 per cent. in June. The present figure compares with 90.8 a year ago and 110.3 for July, 1929. The following table summarises recent movements of the various group indices:—

	AVERAGE 1898-1913=100.				
	Average, 1913.	July, 1930.	May, 1931.	June, 1931.	July, 1931.
European Waters.....	110.0	86.3	85.0	82.4	81.2
North America.....	113.1	89.6	96.5	89.6	85.5
South America.....	123.4	94.6	94.7	89.8	86.3
India.....	106.3	102.8	94.8	91.8	87.6
Far East and Pacific.....	117.4	78.3	96.0	93.0	87.8
Australia.....	127.9	93.5	104.1	98.8	95.2
Total.....	116.3	90.8	95.2	90.9	87.3

Outward coal freights to the Mediterranean suffered an appreciable fall, and the development of the financial difficulties of Central Europe was reflected in a further contraction in the general volume of grain chartering. A moderately active business continued to be done between the Plate and Europe, but the North American grain market was at an abnormally low ebb. Generally business in miscellaneous cargoes other than grain and coal was very limited. Individual changes recorded by the various sections of the index number are given below:—

	AVERAGE 1898-1913=100.				
	Index Number	Inc. or Dec. Points.	Index Number	Inc. or Dec. Points.	
Home Trade.....	72.6	+ 0.3	South America—out-wards.....	69.4	- 2.1
Bay—outwards.....	95.4	...	South America—homewards.....	103.2	- 4.9
Bay—homewards.....	82.3	...	India—outwards.....	86.3	- 4.6
Mediterranean—out-wards.....	83.5	- 8.6	India—homewards.....	88.9	- 3.8
Mediterranean—homewards.....	80.9	- 0.2	Far East, &c.....	87.8	- 5.2
North America.....	85.5	- 4.1	Australia.....	95.2	- 3.6

Expressed as a percentage of the average for 1913, the total figure of our index number for July works out at 75.0, compared with 78.1 in June and 78.1 a year ago.

The Position in Argentina.—The course of financial and political events in Chile have undoubtedly reacted to some extent upon the foreign appreciation of Argentina's position, while the heavy exchange depreciation now ruling in connection with the Brazilian and the Uruguayan currencies must also be reckoned as an unfavourable factor. A simple declaration that Argentina is on quite a different footing, financially as well as politically, from the other republics mentioned, will not be sufficient to reassure the foreign public unless it can be shown that material grounds exist for such an assertion. Taking the political situation first, and regarding it strictly from the standpoint of its reaction on financial affairs, every day that sees the present Provisional Government in office spells additional strength imparted to Argentina's finances, inasmuch as expenditure has been strictly curtailed in all departments and such loan obligations as have fallen due have been punctually met and discharged. It was sheer ill-luck that brought about the abortive mutiny of a regiment in the Province of Corrientes within the same week that saw the beginning of trouble in Chile. For the revolt in question was dealt with promptly, thereby emphatically disproving the statement circulated by its promoters to the effect that the plot had widespread ramifications and was but the prelude to universal resistance to President Uriburu and his Government. How far members of the former regime were directly concerned in the business need not be discussed here, since even in Argentina considerable doubt

exists on this point. Certainly there was evidence enough to warrant the promulgation of the decree which, while it emphasised the intention of the Provisional Government to call the country to elections on November 8th, expressly stated that no candidature of the present Government would be permitted. For the rest the present Government has steadily and remorselessly cut down expenditure, and at the same time it has fulfilled to the letter all its foreign obligations, while refraining from increasing foreign indebtedness. The balance of trade is also moving in its favour, the figures for the first six months of 1931 showing a favourable balance of \$41,003,000 gold, as compared with an unfavourable balance for the first half of 1930, which stood at \$36,344,000 gold. Diminished imports, however, though they improve the balance of trade, have seriously reduced revenue receipts. It is idle to deny, therefore, that the settlement of the \$50,000,000 United States loan falling due on October 1st is a serious preoccupation alike to the Ministry of Finance and to the local money market. It has even been suggested that payment thereof may be effected by employing gold from the Convent Office, over and above the balance of \$17,400,000 gold now held in London for account of the Conversion Fund; and such a step is possible without unduly depleting the percentage of gold to paper. But renewal would be preferable, seeing that Argentina is still seriously handicapped in her financial and currency arrangements by the fact that up to the present time it has not been found possible to unify her currency. For this reason she has been chary of increasing the limit under which the discount operations can be effected, and, fortunately, the diminished movement of trade and the general stagnation which characterises the local money market make the present amount of currency in circulation, namely, \$1,217,523,000 paper, ample for all the necessities of her internal trade. The exchange position, however, is suffering from the general international uncertainty, which is also translated into lower prices for practically all Argentine produce, wheat touching the low level of \$5.10 paper per 100 kilos. spot, while maize is \$3.75 and linseed \$11.90. Nor does the fact that the cable rate on London stands at 38½d. appear to have any beneficial effect upon the prices of grain. It is undoubtedly a depressing situation, but it must be emphasised that, intrinsically, Argentine affairs are rather better than they were a month ago.

Polish Textile Difficulties.—Our Warsaw correspondent writes on August 12th:—Very serious embarrassment has been caused in Lodz by the recent application of the Widzewska Mills for court supervision pending the conclusion of satisfactory arrangements with their creditors. Further consideration of the application has been postponed until the latter part of September in order to give Widzewska time to submit a more complete and accurate statement of assets and liabilities. Widzewska is the best-equipped spinning and weaving establishment in Poland, and almost the largest. Its plant has been completely rebuilt since the war, and the management has always been regarded as highly efficient in a technical sense. Its inability to "carry on" under present conditions not only means that a large number of local and foreign holders of Widzewska obligations are placed in a difficult position, but that several thousand workers will be thrown out of employment unless new cotton credits are promptly arranged for. The current liabilities of Widzewska are estimated at between £700,000 and £800,000, most of which is owing for cotton. The property and stocks are valued at many times this figure, but the liquid assets appear to be practically nil. British financial houses serving as intermediaries in the furnishing of raw materials are understood to figure prominently among the creditors. The principal creditors have lodged no objection to the proposed moratorium, and it is expected that the British Vice-Consul at Lodz will represent the creditors on the Widzewska board when—and if—the court agrees to legal supervision. The general feeling in Poland is that, with Widzewska unable to meet its liabilities, the position of other Lodz mills must be very uncomfortable.

Transvaal Gold Output.—The gold output of the Transvaal mines during July amounted to 916,843 fine ounces, as compared with 897,750 fine ounces in June. In the following table we show the monthly output since the beginning of 1925:—

Month of	1925.	1926.	1927.	1928.	1929.	1930.	1931.
January	823,592	796,270	839,782	843,857	876,452	882,801	914,576
February	753,925	753,924	779,339	816,133	815,284	818,184	839,937
March	825,479	834,340	860,511	877,380	866,529	889,370	910,998
April	787,519	803,303	824,014	825,907	872,123	868,606	882,337
May	813,249	849,214	859,479	886,186	897,598	916,215	910,279
June	780,251	822,145	855,154	862,365	856,029	881,867	897,750
July	818,202	860,134	851,861	867,211	889,480	912,852	916,843
August	806,218	843,654	865,345	891,853	889,601	921,081	...
September	797,247	859,939	842,118	857,731	849,553	903,176	...
October	812,832	853,296	855,743	897,720	888,690	926,561	...
November	787,633	840,276	848,059	872,484	861,593	884,753	...
December	791,455	836,167	852,225	859,761	851,134	908,792	...
Total..	9,599,702	9,962,852	10,130,630	10,358,596	10,414,066	10,719,760	6,272,654

The number of natives employed by members of the Witwatersrand Native Labour Association and Contractors at the end of July totalled 223,484. Comparative figures for the last eight months are shown below:—

	Nov., 1930.	Dec., 1930.	Jan., 1931.	Feb., 1931.	Mar., 1931.	Apr., 1931.	May, 1931.	June, 1931.	July, 1931.
Gold mines	205,030	203,473	209,442	209,777	207,239	206,770	207,109	207,309	208,155
Coal mines	13,973	13,763	13,869	13,740	13,436	13,242	13,303	13,286	13,512
Diamond mines	4,748	4,607	4,325	4,333	4,106	4,030	3,689	3,345	1,817
Total	223,751	221,843	227,636	227,850	224,781	224,042	224,103	223,940	223,484

It will be noticed that the increased employment in the gold and coal mines in July, as compared with the preceding month, was more than offset by a reduction of the numbers at work in the diamond fields.

Overseas Correspondence.

UNITED STATES.

International Credits — Stock and Money Markets — Industry — Prices — Company Earnings.

(FROM OUR CORRESPONDENT.)

NEW YORK, August 8.

IN most quarters here there was some surprise when, shortly before plans were completed for the Bank of England credit, intimation was received that such action had been decided upon. There never had been any doubt as to the strength of the Bank of England or Great Britain's financial resources, nor any question as to ability to obtain a credit for any amount asked for. Nevertheless, it had been thought that a credit would not be necessary. Receipt of \$1,000,000 in gold to-day from London was explained as a private transaction unconnected, except remotely, with the recent weakness in sterling. Banks here have been united in the avoidance of gold shipments which might have complicated the situation abroad. Largely as the result of placing \$30,000,000 gold net under earmark during July, the month brought a net loss in metal of about \$18,000,000, the first decline since August, 1930. For the year the net gain at the end of July was \$355,000,000.

Selection of Albert H. Wiggin, chairman of the Chase National Bank, to represent American bankers on the German credit committee was regarded as a good and logical one, the Chase having perhaps the largest share in short-term German credits. Mr Wiggin is an able and energetic man, and, moreover, a forward-looking one. While there can be, of course, no direct connection with the recommendations of this committee and eventual disposal of the reparations problem, the financial community is mindful that, in his annual report to stockholders last winter, Mr Wiggins declared that purely as good business it would be well for this country to consider a reduction of reparations and inter-allied debt payments. Recommendations which the committee may make on these

extensions will have great weight here, but there is likely to be lively opposition to any scheme involving freezing beyond six months. Local bankers have organised a committee which is working on a six months' extension scheme to enable the German banks to reopen this month. The plan, it is believed, was suggested by the German Government. The local committee has been acting for some time as a clearing house of information on German developments for out-of-town banks with German credits. Of the \$600,000,000 in German credits estimated for this country, about \$350,000,000 are short-term banking credits involved in these negotiations. Country banks are showing a disposition to follow the lead of the city institutions in this matter.

Trading in nearly all markets has been stagnant. In the share market the daily turnover of a million shares or less has brought no great change in prices, after wiping out the June rise on the Hoover debt plans, but it emphasises, as does also the further decline in brokers' loans of \$26,000,000 last week, the distrust of the market by the public. Bonds also are sluggish and irregular, and give little inspiration for the floating of new issues beyond municipal, Federal Treasury and small issues of the highest quality. Most of the July financing was high-grade public utility offerings. There were small State and municipal bond sales and a \$15,000,000 Federal Intermediate Credit Bank issue. Only Canadian bonds were sold for foreign account. The Federal Reserve Bank estimates the new financing of the first half-year, including shares and bonds and refunding, at \$3,040,000,000, against \$2,530,000,000 in 1930 and \$5,070,000,000 in the first six months of 1929. Foreign issues for new capital purposes in the first six months this year were only \$229,000,000, against \$752,000,000 last year. Although these figures are small, the proportion of productive capital raised this year to the total financing has been greater than in recent years, especially in those years in which the investment trust boom was in progress.

Treasury financing is taking the form of a weekly offering of from \$50,000,000 to \$60,000,000 in non-interest bearing bills, which are finding ready takers, owing to the huge excess bank reserves. The market expects the Treasury to hold its long-term bond issue for the December 15th tax date, although money conditions might be such as to bring it out on the September 15th date. That date was left free of all maturities except two certificate issues aggregating \$634,000,000. Tax receipts will take care of a large portion. Money market conditions by the middle of next month probably will permit sale of \$500,000,000 or so of 3 per cent. bonds, with conversion privileges for the 1½ and 2½ certificates due then.

Current demands on the Treasury are not large, and are being carried by the weekly bill issues. The cash position is satisfactory. Last June the Treasury announced it would redeem on December 15th the third and last series of 3½ per cent. Treasury Notes, Series C, amounting to \$451,000,000. In addition, a certificate of \$268,000,000 and one of \$275,000,000, both at 1½ per cent., fall due on the December tax date. Early action on the Liberty issues is not anticipated. In the first place, these issues are selling too high for a refunding offer possible for the Treasury at this time to be made, and a conversion offer could not be backed by threat of early call for redemption.

Slackness in trade is a bit more pronounced than mere seasonal slowness, although encouraging improvement is taking place in some trades. The sugar industry is improving and conditions in the shoe and leather and woollen industries are quite favourable. Motor tyres, also, are doing well. Heavy industries continue to find times difficult. Although gasoline consumption this year is breaking all records, the difficulty of restricting the flow of the East Texas and Oklahoma fields is depressing crude and gasoline prices. More oil companies have had to cut dividends. The steel trade is operating at about 30 per cent. of capacity, but this rate probably will mark the bottom. Coal is depressed and also is suffering from strikes in the bituminous regions. Some copper mines are shutting down

altogether, and a few others may follow. Building fails to gain much, and the motor industry is feeling the mid-summer slackness, and the Ford shutdown will restrict August production. Building contracts let in the first half-year were about 31 per cent. under 1930, and it is estimated that the third quarter will not fall more than 20 per cent. from a year ago. Retail trade is doing better than manufacturing. Department and chain stores are reported to be running ahead of last year. Still, business insolvencies of all sorts are running high.

Commodity price weakness continues, but it is largely among agricultural products. Dun's index fell seventenths of 1 per cent. in July, compared with a gain of one-half of 1 per cent. in June. In most quarters the feelers put out by the Government for disposition of Farm Board holdings of wheat and cotton to Germany on long-term credit are not very eagerly received. It is felt that the Farm Board has done too much already to interfere with private trade.

As shown by company earnings, the second quarter was better than the first, even allowing for seasonal gain, which amounts to about 19 per cent. Earnings of more than 200 companies, as compiled by the National City Bank, dropped 38 per cent. under 1930 in the second quarter, compared with a decline of 51 per cent. in first quarter, or an increase in second over first quarter of 31 per cent. For the six months earnings were 45 per cent. under the same period of 1930. Figured on net worth, in the first half-year 325 reporting industrial and mercantile companies earned 5.5 per cent., compared with 10 per cent. in 1930 and 14.8 per cent. in 1929. Interpretation of these results should be made in the light of a considerable increase in operating efficiency. Declines in dollar volume and in physical volume of business transacted were general in most industries.

FRANCE.

Franco-German Relations — Prices — Production — Public Finance.

(FROM OUR CORRESPONDENT.)

PARIS, August 12.

FRENCH relief at the defeat of the German extremist parties in last Sunday's Prussian plebiscite has been sincere and deep, and it is generally felt here that the way is now clear for resumption, with a fair hope of success, of the Franco-German conversations begun in Paris prior to the London Conference. The fact that the German Republican parties triumphed, by a majority totalling 63 per cent. of the voters, over an ill-assorted minority composed of such irreconcilable partners as Hitlerites and Communists is regarded by French opinion as marking an appreciable advance towards more stable conditions in Germany, while the energetic steps that are being taken by the Berlin leaders to restore the financial situation have been welcomed here with sincere satisfaction and approval. There is, of course, an underlying sentiment to the effect that, as one journal expressed it, "the German Republic has been saved, if reparation payments have not!" but the more serious majority are satisfied that the last word has by no means yet been said in regard to the financial obligations of the Versailles Treaty, and that the German Ministers, now that Hitlerism has ceased—for the moment at least—to be a serious menace, will be prepared to treat reparations, as well as many other factors, from as reasonable a point of view as are their French colleagues. The fact that the French have agreed to participate in the pending loan to Hungary, as well as in the extension of international credits to Germany, may be taken as significant of the more conciliatory attitude which is steadily growing here in regard to resuming friendly relations with former enemy countries.

The index figure of wholesale prices at the end of July shows a drop of 11 points on the month, as compared with 3 on the previous month, or 28 since the end of April. The drop in July was mainly due to the fact that prices of imported goods were brought down 18 points during the

month, as the following analysed figures show (base: July, 1914=100):—

	No. of Articles.	End of month of May.	June.	July.	1928.	1929.	1930.
General index figure	(45)	480	477	466*	634	623	543
Products of French origin	(29)	552	539	532	619	635	591

* Gold equivalent, 95.

The figure for foodstuffs alone is returned for July at 516, or 13 points below that for June. Vegetable foods show a drop of 57 points on the month, while meats are returned 23 points higher. The figure for raw materials is returned as 424, or 10 points lower, the principal fall being in the six categories of textile materials, which are returned as 15 points lower. These figures cover unweighted prices of 45 commodities. The weighted index figure (provisional) for July, covering 126 commodities, is returned as 501, against 518 in June and 540 at the end of April. The figure representing retail prices in Paris of 13 articles of household consumption stands at 615 (against 632 in June, 601 in July last year, 606 in July, 1929), thus corresponding to a weighted figure in gold of 125. The fixed price of bread in Paris has now been brought down 10c. per kilo.—from 2 francs 45 to 2 francs 35.

Industrial production during June—the July figures will not be available until early next month—shows a further drop of three points, the index figure for the month being 126, against 129 in May, and monthly averages of 140 in 1930, 139 in 1929 and 127 in 1928. Of the nine great industries covered, paper output alone shows an increase (equivalent to two points). The metallurgical industry fell off 8 points to 103 (base: 1913 = 100); textiles 7 points to 71 (this, the lowest level reached, being largely due to the recent general strike in the Roubaix district); extractive industries, 7 points; rubber, 15 points (to 910); motor-vehicle construction, engineering and building, from one to two points each. Iron and steel output figures for June were given here last week, and showed an appreciable drop under both headings. Steel output in June, which was 9 per cent. above the pre-war level, was about 10 per cent. under the 1917 level; while consumption was over 10 per cent. more. Coal output in June totalled 4,191,453 tons for the 26 working days, against 4,095,245 tons in May (24 days) and 4,212,044 tons in June, 1930 (24 days). Daily average production in June was 162,210 tons, against 170,635 tons in May and 175,502 tons in June, 1930. The labour force engaged in June was 3,400 units fewer than in the previous month and 11,000 fewer than in June, 1930. The output of metallurgical coke by the colliery plants was 368,711 tons, against 398,900 tons in May and 416,992 tons in June last year. Coal production in June was 10 per cent. higher than in 1927, while consumption remained at practically the same level.

All indications suggest that French industrial production is still suffering from the effects of the monetary inflation, followed by the industrial inflation, and the lethargic economic policy of 1929-30. Internal prices are still being very largely maintained by tariff manipulations, or the control of imports, in spite of the falling off in exports and the shrinkage of the home market. Wages are being kept at practically the same level, notwithstanding an increase in at least partial unemployment and the falling off in industrial activity; while agricultural prices and the cost of living are being maintained at unduly high levels, in spite of the difficulties with which industry is faced. Above all, no serious effort is being made to reduce budgetary expenditure. Expenditure on social legislation, armaments and public servants' scales of pay is being continued without regard to the fact that there was a serious deficit in the 1930-31 revenue, and that the burden of taxation has admittedly surpassed the economic safety maximum. The dominating factor of the situation, so far as these various aspects of it are concerned, lies in the fact that general elections are due next spring. All parties in the Chamber appear to be hypnotised by the fear that any policy of economy, retrenchment and reform will be fatal to their chances of securing re-election.

The Bourse is complaining of having reached a state of greater stagnation than has been registered, even during the principal holiday month, for many years past. The

actual volume of business has probably never been smaller during recent years, and not even the stimulus of the Hoover moratorium project, or the successive favourable factors that have developed since then, has been able to cause it to shake off its torpor. The index figure, representing quotations of 300 French issues of variable yield at the end of July, is returned as 311 (base: 1913 = 100), as compared with 329 in June, 373 in February, and means of 437 in 1930, 507 in 1929 and 415 in 1928.

GERMANY.

Prussian Referendum — Politics — Banking and Economic Position — Schroeder Bank.

(FROM OUR CORRESPONDENT.)

BERLIN, August 11.

THE failure of the referendum for the dissolution of the Prussian Diet means much more than a success for the Prussian Cabinet under the leadership of Otto Braun. It means the first great defeat for years of the radical groups; it means that the Brüning Cabinet can continue its work for the rehabilitation of economic life, since the Braun Government in Prussia gives the Socialists participation in power and responsibility even if they are not represented in the Reich's Government, and thus hinders a sharp opposition by the Socialists against Brüning in the Reich. It increases the credit of German economy, since the conditions precedent to order in the State are firmly established. The referendum appeared at first to be a serious danger, owing to the fact that the Communists, with their large number of voters, joined the parties of the Right. On July 22nd, after the rejection of an ultimatum which they had presented to the Prussian Government, they called on their followers to support the referendum. They may have done this out of blind hatred for the Socialists, or because they desired to intensify the political and economic crisis in Germany and thus create a "revolutionary situation," or perhaps with the idea that the foreign policy of a German Government of the Right would inevitably force Germany to join with Soviet Russia, since the hopes of the National Socialists to find allies in England and Italy would be shown to be in vain. Be that as it may, none of these considerations brought conviction to the supporters of the Communist Party; they were far from following the parole in full numbers. The 9,700,000 votes cast for the referendum are not only 3¼ millions less than the number required for its success, but are also some 2¼ millions less than the number of votes cast at the Reichstag elections of 1930 for the parties supporting the referendum. The greatest falling off was recorded precisely in those districts in which many Communists votes were cast at that time; for instance, in Berlin and Rhineland-Westphalia. It may be suspected that the Communist Party compromised itself greatly in the eyes of its voters by its summons to support the Right, and that the Socialists have at the moment made considerable headway over the Communists.

But the National Socialist movement obviously no longer possesses the driving force necessary to offset the lack of success of its Communist allies. It cannot be known, of course, whether radicalisation is still going on within the parties of the Right themselves. Since all parties on the right of the Centre called on their members to support the referendum, the result does not permit any conclusions as to whether, in case of an election, the National Socialists would draw into their camp further sections of the German Nationals, the Economic Party, the German People's Party and the smaller groups of the Right. The referendum itself cannot be exactly compared with an election, since the non-voters here have the same effect as if they had cast "no" votes, for, under the Prussian law, the number of "yes" votes must amount to at least half of all enrolled voters and not merely of those actually voting if the referendum is to succeed. But, if one assumes even 20 per cent. of non-voters, there would still remain of the 16 millions who, following the parole of the Socialist, Centre and State Parties, abstained

from voting, some 13 millions, as against 10 millions who followed the summons of the parties of the Right and the Communists. Perhaps this does not mean that one could to-day secure by new elections a Reichstag capable of doing real work, for it is not clear how many apostate Communist voters would return to their party in case of a general election. But the result of the referendum indicates that the time is coming nearer when a rehabilitation of German politics will become possible by a return to the normal forms of Parliamentary democracy.

From a purely economic viewpoint also Germany has had a week of calm and a relaxation of tension. The resumption of normal banking operations on August 5th brought, surprisingly, no considerable strain on the Reichsbank. The total of currency in circulation, including coin and notes of private banks, rose only 300 million marks over the first week of July. The holdings of drafts and cheques increased by 190 millions, but advances decreased by 180 millions—a result of the possibility created by the Acceptance and Guaranty Bank of converting holdings of securities into negotiable paper and also, doubtless, of the very large margin between the discount and the Lombard rate. The liquidity of the Reichsbank is proved by the fact that it was able to get rid of 132 millions of Reich Treasury certificates. Devisen increased by 60 millions. Note covering amounts to 38.2 per cent., against 36.1 per cent. in the preceding week. Even though it is to be assumed that the opening of the savings banks on Saturday, which required somewhat greater payments to depositors, may have burdened the status of the Reichsbank somewhat, this can be but temporary. For since then payments by the savings banks have become normal throughout the Reich: obviously only the accumulated requirements of the depositors—not any lack of confidence in the institutions—were responsible for the heavier withdrawals on Saturday.

All these things afforded reason why the Reichsbank should reduce the discount rate. At the time of writing it is still undecided how great that reduction shall be, but in any event it will be regarded as a signal that the worst is over, and it will, in addition to its psychological effect, also through its material effect help German economy to overcome the losses which it suffered through the credit crisis. That this economy possesses a high degree of resistance to a damaging situation is shown by the figures covering unemployment at the end of July. From the middle to the end of July the numbers increased by only 20,000, which is quite in accordance with seasonal developments. But one must count on further results of the credit crisis, and must not be surprised if the report for the middle of August should be less favourable. But there can plainly be no talk of any catastrophic dwindling of economic life, such as has been feared in many quarters.

The new decree governing devisen (foreign currency and securities) caused at first much confusion among importers, since the Reichsbank did not feel itself in a position to place at their disposal sufficient devisen to meet the full requirements for payments of imports. The attempt was therefore made to distinguish between urgent and less urgent imports, but this could not be carried out in a satisfactory manner, and it also brought about the danger of a protectionist misuse of the decree. But towards the end of the week the National Government and the Reichsbank decided to satisfy import requirements without any distinction, and merely to provide that devisen should not be used for aiding the flight of capital. The last great task in the restoring of normal economic life will be the reopening of the bourses. It is impossible at present to say when this will be possible, but it is obvious that a reduction of the interest rate will facilitate a normal shaping of quotations, and will thus create the conditions necessary for the reopening of the stock market.

The reconstruction of the Schroeder Bank in Bremen has now been brought to a formal conclusion. The bank will be completely reorganised and will also alter its designation to "Norddeutsche Vereinsbank A.-G." The former manager-owners, including I. G. Schroeder, will leave. The bank's losses are estimated at more than 43 million reichsmarks. The stock capital and reserves, amounting to 30 million reichsmarks, are lost, and the

State of Bremen stands for the rest, so that no private creditor will lose anything. The manager-owners surrender their stock gratis. The new capital of 12 million marks will be paid in, and 3 millions of open reserves will be created by paying in the shares at an average of 125 per cent. This form of financing is like that of the Danatbank. Of the 12 million reichsmarks in shares, the State of Bremen takes 7 millions, Bremen economic circles 3 millions, and the Reichskreditgesellschaft and the Berliner Handelsgesellschaft each one million. But, as in the case of the Darmstädter Bank, the Reich will advance 5 millions for three years to Bremen economic groups and in part also to the State for the payments on the shares. It is further rumoured that the Reich has also granted a credit of 25 millions to the Schroeder Bank. A former director of the Hamburg branch of the Deutsche Bank has been appointed director. The large holdings of shares of the North German Lloyd and the Deschimag have been taken over by the Reichskreditgesellschaft and the Handelsgesellschaft, with a guarantee of their quotation by the Reich, and they will endeavour to place them in the next one and a-half years.

NORWAY.

Finance — Labour Dispute — Industry — Foreign Trade — Fisheries — Unemployment.

(FROM OUR CORRESPONDENT.)

TRONDHEIM.

In spite of eventful days in America and in Europe, money market conditions have not altered in any marked degree during recent weeks. The returns of the Norges Bank show comparatively slight variations since the turn of the half-year. Notes in circulation have decreased during the month by some 9 million kroner, loans and discounts declined from 175.5 million kroner to 170.2 million kroner, while deposits show a negligible decrease. In view of this stability and of the present exceptionally difficult position of trade and industry, the Norges Bank has not followed the lead of the Bank of England and other central banks in raising its rate, and it is not likely that any step will be taken in this direction in the near future unless exceptional developments at home or abroad alter the situation.

The repercussions of the German trouble and the general unrest in European centres have been almost negligible on the Oslo Bourse, whereas the fear of a rise in bank rates caused a general sagging of prices on Government municipalities and other bonds.

In spite of energetic efforts on the part of the Public Mediator to bring about reconciliation, the labour conflict is apparently still as far from settlement as when the lock-out was declared about fourteen weeks ago. The parties concerned are, however, showing signs of exhaustion, and it is noteworthy that a general meeting of the Board of Representatives of the Labour Association has been called for the 27th of this month, where the dispute will no doubt be discussed in all its various aspects.

The concessions to the De-No-Fa and the Lilleborg Fabriker in connection with the agreement of these concerns with Unilever—the result of which caused the fall of the Radical Government in April last—have now been granted. The concessions have been given on the usual conditions with regard to Norwegian administration, Norwegian raw materials, and, further, on the condition that the concerns guarantee the maintenance of their production in this country as well as their export. On wood industry, it has been found necessary to take steps to regulate the import of sawn and planed wood, and a provisional Government decree to this effect was issued last week. Applications regarding the import of these goods will be dealt with by an advisory board, shortly to be appointed. The regulation will remain in force until the next Storting have discussed the matter.

The statistics of our foreign trade in May show the lowest figure on record—as far as exports are concerned—

since the compiling of such statistics were commenced. While exports during May last year amounted to 57.3 million kroner, the figure for the same month this year is only 24 million kroner, which is about 10 million kroner below the figure for April, 1931. The value of imports also has declined considerably—from 97 million kroner in May last year to 71.3 million kroner this year. The excess of imports over exports during May amounts to 47.3 million kroner, and the corresponding figure for the first five months of the year slightly exceeds 150 million kroner, as compared with 130 million kroner for the same period last year. The lock-out situation, of course, accounts for the heavy decline in the value of exports, while a large percentage of the increase of the imports excess is due to the import of ships.

The question of East-Greenland continues to attract a good deal of public attention, and is the subject of much discussion in the Press. The matter will shortly be dealt with by the Court of Arbitration at the Hague, and it is to be hoped that this old dispute between two friendly nations will then be definitely settled.

The spring cod fisheries in Norway show a total catch of 127,685 tons, which is considerably less than any year since 1921, when the figure was 117,000 tons. Norwegians are also carrying on cod fisheries off the coast of Iceland, and the catch this year has so far been very satisfactory.

According to the report from the various labour exchanges the number of unemployed at July 15th was 20,869, against 11,997 at the same time last year. This figure is the highest recorded since 1923, and is, of course, largely due to the labour dispute which has affected indirectly activities in many branches of industry.

AUSTRALIA.

Government Loans — Deposit Rates — Foreign Trade.

(FROM OUR CORRESPONDENT.)

MELBOURNE, July 3.

THE Bill for reducing the rate of interest on internal Government loans by 2½ per cent., which is now before the Commonwealth Parliament, provides that after the interest on the existing securities is reduced the difference between the reduced rate and 4 per cent. for the remaining term of the original stock is to be capitalised to form part of the new 4 per cent. stock. Thus on the 6 per cent. 1938 bonds, reduced from 6 to 4 1/8 per cent., the difference of 1 7/8 per cent. for 7½ years is reckoned as equivalent to 4 3/8 per cent., so that the total amount of the new 4 per cent. bonds to be issued will be £104 3s. 6d. Except in special cases the maturities of the new 4 per cent. bonds are to be distributed equally between ten different dates, the earliest being December 15, 1938, and the latest September 15, 1961, the Government reserving the right to redeem in whole or in part at any time after December 31, 1950, any securities due after that date. The scheme is described as "voluntary," but this is backed up by the threat that, if they do not convert, the bondholders themselves will suffer most, as the Treasurer, Mr Theodore, stated in his broadcast speech on July 2. The manner in which the loans issued in London are to be dealt with has not yet been publicly disclosed. The Victorian State Premier has, however, stated that this will be a matter for another Premier's Conference and a separate measure; while another Minister stated on June 21st that there would probably be a conversion loan of the £500,000,000 borrowed in London on a very much cheaper basis than the interest at present paid. A recent official statement shows debts in London as at March 31, 1931, at £551,986,430, on which the annual interest is £26,157,553, these figures including indebtedness to the British Government.

The reduction of 1 per cent. in fixed deposit rates by the trading banks and the Commonwealth Bank, and also by the Commonwealth Savings Bank, has been welcomed from the point of view of borrowers, but as the trading banks hold a large amount of deposits at the higher rates it will be some little time before they can pass on the

effect in corresponding degree in their lending rates without loss to themselves. The Stock Exchange quotations for Commonwealth Government securities show high yields (including redemption). After making all calculations for conversion into the new 4 per cent., the yields range from £5 10s. 5d. for a 1961 maturity up to £8 12s. 1d. for a 1938 maturity.

The Commonwealth trade returns for the eleven months ended May 31, 1931, reduced to British currency on both sides, show exports at approximately £79,500,000, against imports of £57,300,000, leaving an excess of exports of £22,200,000. These figures include several millions on account of gold exports, most of which was drawn from stocks. The sum of £22,200,000 for the eleven months leaves a substantial margin as compared with the £36 millions per annum required for Government remittances alone. The outside exchange market has eased during the last few days, but quotations show much irregularity.

SOUTH AFRICA.

Japanese Immigration and Trade — Iron and Steel Industrial Corporation — Reserve Bank Meeting.

JOHANNESBURG, July 8.

THERE has been—and is likely to be—very considerable discussion in regard to the agreement between the Government of the Union and the Japanese Government, relating to the admission to the Union of Japanese subjects for the purposes of trading. This agreement, entered into in the latter part of last year, provides for the entry into the Union, on the recommendation of the Consul for Japan, of tourists, students, and merchants and their staffs, together with their wives and children. The permits are for periods of a year at a time, and the agreement is subject to two months' notice of intention to review. From the point of view of the Union, the object of the agreement is presumably to develop the export trade to Japan. In 1929 and 1930 respectively imports from Japan—the cheaper class of manufactured goods—were valued at £1,399,820 and £1,557,208 respectively. The export trade in the two years was valued at £87,064 and £101,859. Of these amounts, £80,000 and £87,000 were accounted for by wattle bark and wattle extract. During the three months ended March 31, 1931, Japanese goods to the value of £605,000 entered the Union, while exports amounted to £19,000. The quality of Japanese goods—formerly notoriously bad—is now very much better and in many cases very good indeed. As regards price, they are so low as to be unaffected by any ordinary tariff. Men's and women's canvas shoes are being imported at a wholesale price of 10s. 3d. per dozen pairs. Thousands of natives are wearing shoes regularly who have never owned shoes before. Good quality khaki shirts—a stock line with workmen, both European and non-European—land at Durban at 19s. a dozen. Far inferior material from occidental manufacturers costs one pound for material alone. Local manufacturers with large orders placed in England for shirting material are trying to cancel the orders owing to the impossibility of competing with the Japanese. It is reported that the Japanese, who have hitherto operated through local importing houses, are about to establish local agencies of their own. In the markets which they have entered they are causing the greatest alarm to all their competitors—for once the local manufacturer and his English, German and American rivals are all in the same trouble. Critics of South African policy point out that South African majority opinion is responsible for the existence of many of our manufactures, for the European labour policy, and for the maintenance of a standard of living equal or superior to that in the most advanced countries. It is a policy which creates difficulties when we desire to open an Oriental market for our raw material, such as wool. The new agreement is alleged by some critics to contain the germs of purely social difficulties, in addition to the economic ones which are already in evidence. It is true that the permits provided for in the agreement are renewable from year to year, and that the agreement is subject

to revision at two months' notice, but the Union may not find it easy to take a firm line on these points after the Japanese have acquired vested interests here.

On June 30 the second ordinary meeting of shareholders in the South African Iron and Steel Industrial Corporation, Ltd., was held in Pretoria. The report of the directors shows estimated establishment expenses of £5,500,000, and the value of contracts placed at June 15 at £2,500,000. It is estimated that the works will be started up at the end of 1933, and will produce 150,000 tons of steel products per annum. The directors state that they have never wavered in their conviction of being able to produce a first-class article at a low price. They estimate the cost of producing pig iron in Pretoria at thirty shillings per long ton. For the present the board proposes to confine its activities to the manufacture of primary steel products, of which it hopes to supply about one-third of the country's requirements. In his speech at the meeting the chairman, Dr. H. J. van der Bijl, gave categorical reasons for rebutting the criticism and prophecies of failure with which the corporation has had to deal since its inception. The most important factor, he said, is the extremely low cost and great purity of the hematite ore, but beyond that there would be the advantage of a complete and self-contained modern works, designed as one unit. He said that the work could easily compete successfully with existing works in other parts of the world, and even at present prices for steel could make substantial profits.

At their eleventh ordinary meeting on Tuesday, July 7, the stockholders in the South African Reserve Bank assembled in their new building, which has replaced, in a central site in Pretoria, the temporary premises which the bank has hitherto occupied. In his address the Governor commented briefly on the various items in the accounts. In 1929-30 the bank discounted domestic bills to the amount of £18.7 millions, whilst in 1930-31 the corresponding figure was £10.5 millions—a figure which tells its own story. The bank has invested some of its funds during the year in Union Government stocks, which yield a higher interest than can now be obtained on short-dated bills in London. The gross profits of the bank declined by some £84,000 to £360,500. This was due partly to the lower rates obtainable for the use of money overseas and partly to a drop in the note circulation. The Governor dealt at some length with the sound position of the Union, the total balances in London on Union accounts amounting to between forty and fifty million pounds. He pointed out that British investors bought Union loans eagerly, and that the Government had lately raised about £8,700,000 within its own territory. The Reserve Bank has been trying to encourage the development of a local market for short money by holding itself open to rediscount Treasury bills at very moderate rates. The Governor dealt at length with the slump, pointing out that South Africa, not being a self-contained country, is wedded to an economic world which is at present out of joint. As regards internal causes of the local section of the slump, he expressed the opinion that the farmers are suffering from one chronic trouble—very many of the farms are somewhat heavily over-capitalised. The only remedy for this is resolute saving in years of prosperity.

Letters to the Editor.

THE FIDUCIARY ISSUE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In reply to my letter on this subject which appeared in your issue of the 8th inst. you very kindly refer me to your article on "The Exchange Crisis" which appeared in the same issue. In that article you point out that the reserve would have been reduced to £29.6 millions and the proportion to 27½ per cent. had it not been for the increase in the fiduciary issue. You state that this would have been adequate, but might have left little margin in hand for future emer-

gencies. Surely the real question which interests the public and breeds confidence or the reverse is an increase or decrease in the gold reserve. That shows a decline, and therefore confirms the statements made in my letter. You state that it was to meet first such an emergency as this that the relevant clause was inserted in the 1928 Act. In the same Act it was also provided that the amount of the fiduciary note issue, on the request of the Bank, may be, by the direction of the Treasury, reduced. I imagine that an increase might be justifiable in time of panic or expanding trade, and a reduction to check a gold drain, when an export of commodities or a transmission of bullion had proved ineffective. To borrow or have recourse to credits is most unsound, and to increase the fiduciary issue, as I have ventured to state, is to aggravate rather than to relieve the situation at the present time. I am glad that you do not anticipate the likelihood of these credits being used, and trust that you may now press for the retirement of these additional notes.—I am, Sir, your obedient servant,
August 10, 1931.

D. M. MASON.

[Mr Mason's remedy is essentially a long-term remedy. By reducing the fiduciary note issue he hopes to force down British costs to below the world level, and so to stimulate British exports and restore the exchanges in that way. Unfortunately many elements in British costs have become so rigid that it is more than doubtful if they would respond to Mr Mason's treatment, and the only result would be a deadlock expressed in a physical dearth of currency. Still, whatever the merits of Mr Mason's remedy, he surely does not imagine that it would add within the next few weeks £50,000,000 to our export trade, and it is the urgency of the emergency that the opening of the foreign credits and the temporary expansion of the fiduciary note issue is designed to meet. The application of these short-term remedies, which we agree in hoping with Mr Mason will be a purely temporary necessity, is not inconsistent with a long-term policy of bringing British costs down to the world level.—Ed., Econ.]

Books and Publications.

INTERNATIONAL LAW.

SEVERAL of the articles in this year's issue of *The British Year Book of International Law** relate to current developments interesting not only to jurists, but also to a wider circle. Professor J. L. Brierly writes on the results of last year's Codification Conference, held at The Hague under the auspices of the League of Nations, which attempted to reconstruct on a more systematic and satisfactory basis the rules concerning nationality, territorial waters and responsibility of states for injuries to foreigners. A more definite and more immediately successful move towards international codification, namely, that relating to the laws of bills of exchange, is described by Professor H. C. Gutteridge, while an unsigned article is devoted to the discussion of certain questions affecting the Permanent Court of International Justice, in connection with the establishment of which the problem of codifying international law originally came up for the attention of the League. The Year Book, it may be noted before referring more particularly to these contributions, conveniently summarises in each issue (this year's volume being the twelfth) the pronouncements of the Permanent Court and of other international tribunals, as well as those of English, Canadian and United States courts involving points of international law, and forms a very useful reference book to the legal side of international affairs.

In his paper on Codification Professor Brierly deals not only with the results of last year's conference, which was the first ever definitely organised on a world-wide basis, but with the question of what further steps can usefully be taken in continuation of efforts made to codify international law. Disappointment at the actual results of the Conference of 1930 is, he remarks, very general, and consideration of the future of the League's activities in the domain of codification has been postponed until the meeting of the Assembly in September of the present year. It is found that when we try to reduce international law to

* *The British Year Book of International Law*, 1931. H. Milford, Oxford University Press. 16s. net.

systematic form there is a necessity not merely of codifying but also of legislating, in order to adjust differences. Codification can be done by lawyers, but legislation involves, in the first place, decisions as to the future policy of the law. The Conference of last year was expected to codify, but failed to make much progress partly because it was not constituted so as to be able first of all to determine the lines upon which codification was to proceed. Steps must be taken, Professor Brierly very clearly indicates, to arrange for legislative codification, and "the most essential change is that the preparatory work should not be committed to lawyers." The preparatory work "belongs properly to advisory commissions composed of specialists in particular fields, such as finance, health, communications and the like, who are able to expose existing defects in the law relating to the subject in which they are expert, and to frame policies for its correction." Subsequently a conference may with advantage meet with a view to the conclusion of a convention, and thus international codification may be carried out by the detailed application of this method to particular subjects.

This seems to be common sense, and this method, it is worth noting, has been favoured in observations which have recently been forwarded by the British Government to the League. It was the method adopted with success in connection, for instance, with the laws of bills of exchange. Professor Gutteridge describes in detail in the Year Book how bankers and merchants, as well as lawyers and diplomatic representatives, worked together last year in the preparation of a convention for unifying Continental laws relating to bills of exchange. The Continental system could not be assimilated with the Anglo-American rules, but a great simplification should result from the work which was done, and this method can very well be applied to other subjects so as by degrees to bring about a considerable measure of codification of international law. Thus the prospect of some advance being made may be brighter than seemed to be the case immediately after last year's initial effort at codification, which was not on the right lines. Codification within suitable limits is desirable not only to systematise the rules of law which may have to be applied by the Permanent Court of International Justice, but also for the general convenience.

THE WAY TO RECOVERY.*

For the last few years Sir George Paish has been consistently and insistently a prophet of woe—of the very woe which has now come to pass and has been engulfing the economy of every nation. Messengers of ill-tidings rarely receive popular acclaim, but Sir George Paish can claim sufficient correctness for his prophecies to entitle him to a careful hearing when he writes a book designed to guide the feet of the world back into the path of prosperity. The present volume is the more timely because it was written primarily for American consumption and, happily, catches the tide of changing opinion in America in relation to the interdependence of countries, new and old. There is little new in the book which, perhaps, Sir George himself would not claim to be more than an epitome of the arguments he has used so freely on many occasions since the war. Rising tariffs, the failure to disarm, the maintenance of debts and reparations, the absence of adequate international co-operation, these are tendencies responsible for the present crisis, and it is in the reversal of all these tendencies that Sir George Paish's way to recovery lies. The book may not unfairly be called a counsel of perfection, but is it not good sometimes to have laid before us the ideal goal? What is a little depressing is Sir George's insistence that nothing short of the full and rapid carrying out of his counsel of perfection will save the whole world from utter wreckage. Defeatists will read it and gloat. Idealists will read it and purr. Realists will read it and sigh. Optimists will read it and shudder. And none will be the worse for reading it.

* "The Way to Recovery." By Sir George Paish. (London) Putnam. 7s. 6d.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]
* (It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

The History and Economics of Transport. By Adam W. Kirkaldy and A. Dudley Evans. (London) Sir Isaac Pitman and Sons, Ltd., Parker Street, Kingsway. 16s. net.

Among the additions to the fifth edition is a chapter on civil aviation. The bulk of the book is devoted to railways, canals and shipping, and road transport is not dealt with.

Statistics Relating to the Worsted, Woollen and Artificial Silk Trades of the United Kingdom. (Bradford) Chamber of Commerce, Commerce House. 5s.

This useful publication contains statistics, sometimes dating back as far as the eighteenth century, of wool production, consumption, imports, exports and prices, together with miscellaneous factory statistics.

Memorandum on International Trade and Balance of Payments, 1927-1929. Vol. III. Trade Statistics. (London) Geo. Allen and Unwin, 38, Great Ormond Street. 10s.

A League of Nations publication giving detailed trade statistics of sixty-four countries from 1927 to 1929, and including provisional summary figures for 1930.

Economics of the English Banking System. By W. J. Weston. With a Foreword by Sir Malcolm Hogg. (London) Sir Isaac Pitman and Sons, Ltd., Parker Street, Kingsway. 5s. net.

An account of the system for the general reader.

Armaments Year Book, 1930-31. Seventh edition. (London) Geo. Allen and Unwin, 38, Great Ormond Street. 20s.

The statistical information contained in this valuable League publication is of particular interest in view of the forthcoming Disarmament Conference.

The Annals of the American Academy of Political and Social Science. July, 1931.

This number is devoted to a series of papers on American Foreign Policy.

The Key to Prosperity. By Noel M. P. Reilly. (London) George Allen and Unwin, Ltd., 40, Museum Street. 4s. 6d. net.

A suggested solution of the problem of over-production by means of a policy of national wage control.

The Greenbacks and Resumption of Specie Payments. By Don C. Barrett. (London) Oxford University Press, Warwick Square. 12s. 6d. net.

A critical account of the attempt to manage a paper currency during the Civil War in the United States.

The Practical Company Secretary. By P. F. Knightley. With a Foreword by Sir George Touche. (London) Sir Isaac Pitman and Sons, Ltd., Parker Street, Kingsway. 7s. 6d. net.

A useful text book for the student and company secretary.

Rationalisation and Displaced Labour. (London) National Industrial Alliance, 42, Broadway. 3d.

The report of an inquiry into the steps which are taken to safeguard displaced workers.

BRITISH FILM FINANCE.

ON the last occasion on which we reviewed British film finance we had the mournful duty to perform of counting the cost to the investing public of the "bubble" film promotions of the 1928-29 boom in new issues. We then examined the reports of twelve new companies, and discovered that, as compared with their par value of £3,322,000, the market value of the shares issued to the public was only £613,255. To-day it is only £256,297. This was the first result of the Films Act of 1927, which imposed on renters and exhibitors a certain quota of British films, beginning with 7½ per cent. in the year ending April, 1929, and rising by 2½ per cent. each year to 20 per cent. of their annual turnover. We may now review the commercial results of the Films Act after three years of somewhat painful operation. Most of the "bubble" promotions have disappeared or no longer count—the advent of the "talkies" gave them their *coup de grâce*—and the few survivors, together with the pre-Act companies, namely, the Gaumont-British and British International Pictures and a few fleeting private enterprises, are now beginning to show results in quantity, even if the quality of British films has not yet reached the level of the best American productions. The following table, compiled by Moody's Economist Services, gives the average weekly length in feet of films registered, and shows the increase in the British proportion of the total over the past two years:—

Period.	Silent		Synchronised.		All Films.	
	Total Feet.	British Proportion of Total.	Total Feet.	British Proportion of Total.	Total Feet.	British Proportion of Total.
Weekly average:		Per cent.		Per cent.		Per cent.
1928 (a)	112,532	13.6	61,482	7.5	112,532	13.6
1929	72,065	14.9	133,547	11.5	133,547	11.5
1930	44,752	15.0	96,074	14.5	140,826	14.7
1931 (7 mos.)	85,585	14.4	712,717	16.2	798,302	16.1

(a) January 17 to December 25.

It will be seen that in 1929 the British producers had not yet adapted themselves to the new technique of talking films, the proportion of British synchronised films to the total being only 7.5 per cent. In 1930 the proportion had risen to 14.5 per cent., and in the first seven months of 1931 to 16.2 per cent. This, at any rate, shows a material advance. If the quality of British films is criticised, it must be remembered that the American market is barred to British films on account of the stranglehold of the big American film combines, and that a British producer has to recoup himself solely on the proceeds of the domestic and European markets and the limited markets in the world outside America. This means that no British film company can afford to spend lavishly on a production solely in the interests of the shadow art: it has to cut its clothes according to its cloth, i.e., to its limited market. Thus, the British producer has developed a type of film which offers commercially less risk—namely, the translation of stage plays, with little alteration, into talking films. The cost of such films has been relatively lower than the cost of "silent" films of a similar grade, and the producer has been further assisted by the abundance of good English plays and actors. But it cannot be denied that the results, with one or two prominent exceptions, fall short of the artistic excellence of the old silent films, and bear no comparison with the best American talking films. Indeed, a few private companies have taken advantage of the protection afforded by the Films Act by turning out cheap talking films for a price around £5,000, merely to satisfy the quota requirements of American distributors. The Films Act inevitably lent itself to abuse in this way—who would expect artificial protection and artistic merit to go together?—but at any rate it can be said to have assisted British studios to survive as commercial entities, which

was, no doubt, one of the chief objects of Government interference.

As regards the finance of British film production, no commercial success can yet be claimed. It may be presumed that the British International Pictures and the Gaumont-British Picture Corporation are conducting their studios on a profit-earning basis, but it is impossible to give figures in proof, seeing that their profit and loss accounts include dividends derived from distributing and theatre-owning companies. Elsewhere there are only losses to report. Gainsborough Pictures, a producing company associated with Gaumont-British, has not published accounts beyond those for the year to June 30, 1930, which showed a loss of £42,000 after writing down unsaleable silent films by £50,000. British Lion Film Corporation, at March 31, 1931, was carrying forward a loss on profit and loss account of £95,634, and is now reducing its capital by cancelling 7s. 6d. per preferred ordinary share of £1, and 8d. per deferred share of 1s. British Instructional Films have sought refuge in a management contract with British International Pictures, which has assumed control both of their undertaking and that of Pro Patria Films. British and Dominion Film Corporation and British and Foreign Films published their accounts in December last, and both showed heavy losses, the total debit on profit and loss account for the former being £181,349 and for the latter £144,754. British and Foreign Films has now gone into voluntary liquidation. British and Dominions, which has purchased a section of the sound studios at Elstree from British International Pictures, subletting space to the Paramount-Famous-Lasky Corporation, has survived to produce some "quality" films, but its financial position is not yet established. The rest of the new companies do not count, and it is certain that no further money will be obtained from the public to enable more film-production gambles to be promoted.

A review of the finances of the British film industry therefore devolves into an examination of the accounts of the two big groups engaged in production, distribution and exhibition of films, namely, British International Pictures with its theatre-owning subsidiary, Associated British Cinemas; and the Gaumont-British Corporation, whose principal theatre-owning subsidiaries are Provincial Cinematograph Theatres, Denman Picture Houses, General Theatres, and United Picture Theatres. These two groups control approximately 500 theatres out of a total of 4,000 in this country, Gaumont-British comprising the larger circuit of over 350 theatres. On the other hand, British International Pictures is the more important of the two as producer, its output of films being in excess of 35 per annum. Gaumont-British has not yet published its accounts for the year ended March 31, 1931, but the directors have announced that they are satisfied that the profits will show a substantial advance on those of the previous year. The accounts of the British International Pictures for the year ended March 31, 1931, were published last week and compare with those of the previous year as follows:—

	Year ended Mar., 1930.	Year ended Mar., 1931.
Trading profit (after tax)	177,948	186,661
Less property depreciation	15,000	20,000
Less investment reserve	15,000	15,000
Other expenses	1,957	24,735
Net profit	145,991	126,926
Preference dividends (gross)	20,000	20,000
Per cent. earned on ordinary shares	21.7	18.4
Per cent. paid on ordinary shares	8	8
Write-offs	6,687	...
General reserve	37,862	50,000
Carried forward	46,053	56,479

It will be seen that the company's profits declined slightly last year. It earned approximately 18½ per cent.

on its ordinary capital as compared with 21.7 per cent. in the previous year. The directors have wisely limited dividends in each year to 8 per cent. and are building up reserves. It is not possible to say what proportion of the annual revenue is represented by profits from the renting or distribution of films and from studio rentals, but from its holding of 2,000,000 ordinary shares in Associated British Cinemas it is receiving a revenue of £40,000 gross, or about 20 per cent. of its total income. It is clear that a conservative dividend policy is needed in view of the onerous financing which film production requires. The revenue from a film does not begin to accrue for approximately twelve months, and two years may elapse before the final results are ascertainable. In the company's balance sheet at March 31, 1930, the cost of films, less amortisation and advances, stood at £541,982, which was written down by the appropriation of £100,000 from reserves to £441,982. In the balance sheet of March 31, 1931, the cost of films had risen to £492,820. If the company is always to be out of pocket on a year's output of films (which last year was 35), this item in the balance sheet does not appear excessive. On the other hand, the company does not appear to be in a liquid position, for its current liabilities amount to £184,767, against current assets of £122,022, if current accounts with subsidiaries in both cases are included. Disregarding the current accounts with subsidiaries, the company's cash (£82,777) and debtors (£22,352) almost balance with creditors (£57,052). It is interesting to find that the market values the prior charges, both in the case of British International Pictures and Gaumont British, on a very conservative basis, although it seems to attach a considerable speculative value to the equity shares:—

	Highest Prices. 1930.	Present Price. 1931.	Yield. %
Gaumont British—			
6½% 1st mort. debenture	104	103½	101
7½% cum. pref. shares (£1) ...	18/3	15/3	16/4½
10s. ordinary shares	19/-	14/6	10/4½
British International Pictures—			
8% cum. pref. shares	19/9	19/9	18/1½
5s. ord. shares	7/0½	7/3	5/9

We may now compare the results of the principal theatre-owning subsidiaries of the two groups, namely, Provincial Cinematograph Theatres and Associated British Cinemas:—

	P.C.T. Year to Jan. 31, 1930.		A.B.C. Year to Mar. 31, 1931.	
Net profits (after tax)	434,833	506,810	210,199	310,655
Depreciation	69,000	75,000	50,000	75,000
Sinking fund	18,750	20,000	...	...
Earnings	347,083	411,807	160,199	235,655
Prof. dividends	52,500	52,500	138,749	152,857
Preferred ord. dividends	150,000	150,000	...	...
Per cent. earned on ord. shs. ...	23.6	15	17.9	28.0
Per cent. paid on ord. shs. ...	32.3	15	8.0	8.0
General reserve	20,000	40,000	40,000	90,000
Write-offs	45,034	90,069	20,000	34,815
Carry-forward	110,483	114,721	17,570	21,303

* Gross. † After tax.

It will be seen that both companies substantially increased their trading profits, Provincial Cinematograph Theatres by 16.5 per cent. and Associated British Cinemas by nearly 50 per cent., the latter as a result of its further theatre acquisitions on terms which must have been very favourable to the company. Yet neither showed a liquid position in its balance sheet, which may possibly be attributed to the charges accruing for films worked and not yet exhibited. The A.B.C. is indebted for mortgages of £294,000 and for secured bank loan of £650,000. Both companies refer to the diminution in theatre receipts in the current year as a result of the trade depression, but the Associated British directors claim that losses in receipts will be offset by economies in working, while the P.C.T. directors declare that "results should not be disappointing." It is a little surprising to find that, in spite of the security afforded by the "cash" nature of the cinema theatre business and the apparent popularity of "talking" films, the market continues to value the prior charges of these companies on a conservative basis and to show little interest in the equities. The next table gives the highest and lowest prices, present prices,

and yields obtainable for the principle cinema theatre securities:—

	Highest.		Present	Yield.
	1930.	1931.	Price.	%
P.C.T.—				
6% 1st mort. deb.	96½	99½	96½	6.42
7½% cum. pref.	21/3	19/3	18/6	8.45
Part. pref. ord.	19/4	18/3	14/9	10.18
Denman Picture Houses—				
7% 1st mort. deb.	97½	99½	94	7.73
7% guar. conv. deb.	94	94	86½	8.43
General Theatres—				
6½% deb.	92	86½	70	9.74
Associated British Cinemas—				
7½% cum. pref. shares	37/-	16/10	16/-	9.83
5s. ord. shares	6/10	5/7	4/10½	8.94

These market valuations are a fair index of the City's cautionary attitude even to the established and prosperous end of the British film industry. It is evident that until the British companies are in a stronger position in their relations with the powerful American film combines (which can, at one and the same time, bar British films from American theatres and dictate prices for American films to British theatres), the finances of the British film industry will not be regarded in the City as outside the field of speculation. It is true that Gaumont British has a curious relationship with the Fox Film Corporation, its control being vested in a syndicate in which the Ostrer Brothers and the Fox Film hold equal voting rights, but this has not resulted in any sort of co-operation in the production and exhibition of films. Sooner or later Gaumont British and British International Pictures must come together in demanding from the American industry a place in the sun for British films.

BRITISH RAILWAYS—1923-30.

In an article in last week's *Economist*, under the heading "Home Railway Earnings," we suggested that while the decline in the market value of railway fixed-interest securities was a comparatively recent phenomenon, attributable mainly to an abnormal fall in revenues in a depressed year, the decline in railway ordinary stocks had been of longer duration. The trend of railway earnings is obviously a matter of great moment to equity stockholders, for whom the events of 1931 are merely the latest development in a sequence which began with the grouping of the main-line railways in 1923.

A concise discussion of the main landmarks during this period, as seen through railway eyes, is contained in a paper prepared for the International Union of Railways and published in the April Bulletin of the Union, in Paris. This shows that the position of the railways, when "grouping" was achieved in 1923, was particularly difficult. The new groups inherited a position which had always differed from that of Continental and American railway system by virtue, first, of the shortness of the average haul for all classes of freight traffic in Great Britain (some 54 miles, as compared with 818 miles in the United States of America, 104 miles in Germany, and 59 miles even in Belgium); and, secondly, as a result of the existence of strong coastwise shipping competition. This limited the "monopoly" of the railways and resulted in about 70 per cent. of the merchandise traffic being carried at exceptional rates, before ever the internal combustion engine became a competitor for road haulage on an important scale. The new groups also inherited, after the war, a railway system whose maintenance, under Government control, had fallen seriously in arrear, while, simultaneously, road competition was entering upon a period of rapid expansion. The railways had always been required to meet competition for traffic, say, between Newcastle and London. Now they were compelled to face an even more dangerous threat on their "internal" lines of communication, which applied to both freight and passenger traffic, was particularly effective as regards the latter in country areas (where, in many cases, branch railway lines had never been an altogether satisfactory paying proposition), and was unhampered by Parliamentary and other restrictions applying to the railways as general carriers.

LONDON ACTIVE SECURITY PRICES AND YIELDS.

NOTE—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating the yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

INVESTMENT NOTES.

Stock Exchange Prices.—The Stock Exchange Committee have put into operation this week an alteration in the method of quoting prices ex dividend, as a result of which dividends will henceforth be deducted from prices on the Contango Day, instead of on the Account Day, at each Stock Exchange Settlement. The innovation has received general approval, writes a "House" correspondent, and it is understood that the Committee have several other matters of Stock Exchange procedure under consideration. One matter which still provokes unceasing perplexity among clients is the manner in which quotations are sent out daily in the Stock Exchange Official Lists. These lists have recently been the subject of useful legislation on the part of the Committee, who now have the opportunity still further to extend their public services by asking members responsible for the prices quoted whether they cannot give "closer" figures. For example, the price of 3½ per Cent. Conversion Stock is set out daily in the Official List with a margin of two points between the selling and buying price. In the ordinary way, a broker expects to get a price with only a 5s. margin. An official quotation, say, of 79-81, gives little indication of the actual "mark," which may have been anything between 79 to 79½ and 80½ to 81. The explanation is perfectly reasonable. The lists are made up each day to 3.30 p.m., and it frequently happens that price-changes occur during the half-hour between 3.30 and 4 p.m., when the Stock Exchange closes. The dealer responsible for sending out a price allows for the possibility of fluctuations during that half-hour; and, to be on the safe side, quotes a liberal margin. In the case of Corporation and County stocks, similarly, the usual difference between selling and buying prices in the List is two points, whereas much closer prices can be obtained in the market. As these very seldom vary, except in accordance, e.g., with changes in Bank rate, it would be no difficult matter to "close up" quotations so as better to reflect the actual market level. A move in the right direction has recently been made in the case of Australian stocks, some of which have been narrowed from a 10 to a 5 point margin. The position, obviously, is still capable of improvement. Instances might be multiplied from every section of the Stock Exchange Official List. From time to time the Committee have appealed to the members responsible to close up wide margins, but little has as yet been done in this direction. This is the more unfortunate since the impression prevails among some investors that a price, say, of 79 to 81 involves a two point profit to a jobber dealing in the stock. If this were the case, every dealer would quickly be able to retire with a comfortable fortune. It may be hoped that, in this matter, the Committee will not be weary in well-doing.

Australian Developments.—Mr Lang's inability to pay his civil servants has been a blessing in disguise for New South Wales bondholders, since it has compelled that statesman to bow to the dictates of the Australian Loan Council. When Mr Bruce formed the Loan Council in 1927, Mr Lang, then Premier of New South Wales,

refused to join, leaving Mr Bavin to introduce the State to the Council on assuming office in October, 1927. Mr Lang's latest attempt at independence has ended in his return, after promising to introduce economy measures and make a sincere effort to balance his Budget. Quotations for New South Wales stocks, however, have not responded, the whole market for Australian securities having fallen this week, partly on sales from New York:—

Every Australian State has now passed Bills to balance its Budget. The Australian Debt Conversion Act, further, came into operation on Monday last. This operation is discussed in a "Note of the Week" on an earlier page of this issue. It has opened, at least, under good auspices, some £100,000,000 of debt, it is understood, having been converted on the first day. The Australian people, indeed, have shown a readiness to rise to the occasion which augurs well for the future. This was evidenced last year, when £24,000,000 was subscribed to Mr Lyon's cash loan. After the troubles of the 'nineties of last century, again, the credit for Australia's recovery was earned mainly by the efforts of her own people, and, given reasonably satisfactory external conditions, there is now hope that history may repeat itself.

National Shipbuilders' Security.—Sir James Lithgow, presiding at the annual general meeting of the National Shipbuilders' Security, Ltd., made an important statement in regard to the position of the company's 5 per cent. debentures. For some time past the appalling conditions of the British shipbuilding industry have led to a certain questioning of the security for the company's debentures. The chairman, dealing with these rumours, emphatically denied that there was doubt as to the adequacy of the security. National Shipbuilders' Security, Ltd., was formed in February 1930 to work a collective scheme within the industry for eliminating redundant shipyard capacity and securing economies by concentration of production. The main revenue of the company is derived from a levy of 1 per cent. on the value of all vessels of 300 feet or over built by members of the company (which represents practically all the builders of such craft in the British Isles). This levy, however, only took effect on orders placed after November 1, 1930, and, as a consequence, no income has been derived from that source during the last year. Even during the present year (according to Sir James Lithgow) little is to be expected. The statement, therefore, that a voluntary levy, fixed on a co-operative basis, has already provided sufficient funds to meet the full services on the present issue up to the end of 1934, is of the utmost importance, for not even the most pessimistic can doubt that there is bound to be some recovery from the present depression. This, however, is not all. In addition to the voluntary levy, there will be a substantial balance available from the sale of shipyard plant. The sum required by the company for the full service of its present issue is, roughly, some £86,000, which presupposes a minimum annual figure of £8,600,000 for new shipping orders. This, by past standards, is a modern total, but the first six months of this year have been the blackest in the history of shipbuilding, and the figure have not been reached by a considerable margin. The directors, however, taking a long view, express themselves "well pleased with the progress so far made," though they observe that many of those in control of struggling concerns still have a totally inadequate idea of the extent of losses in which their continued existence must involve them.

Rothermere Group Dividends.—Advertising in provincial newspapers is admittedly more expensive, per unit of circulation, than in the national dailies; it was not surprising, therefore, that the first dividend reductions in the Rothermere group during the present depression should be in those of the companies with large provincial interests. Both Daily Mirror Newspapers, Ltd., and Sunday Pictorial Newspapers, Ltd., have reduced their quarterly dividends by one half, to 3½ and 3¼ per cent. respectively. Both companies are large shareholders in Northcliffe Newspapers, Ltd., a young and as yet unremunerative provincial enterprise. They hold, in addition, a substantial interest in numerous other country newspapers, and from these investments a considerable part of their income is drawn. Advertising in the *Daily Mirror*, on the basis of a quarter's returns, is some 14 per cent. below the levels of a year ago. This suggests a fall in revenue of about £100,000, and the income from the company's investment, which stand in the books at nearly £2 millions, must have fallen substantially, if the earnings for the ordinary shares have declined from £408,149 to £210,000—which is the annual rate required by the reduced dividend. The same consideration affects the *Sunday Pictorial*, the earnings for the equity holder of which, in the year ending February, 1931, were £245,000. The annual rate of distribution has now been reduced to £181,250; but, as one of the quarterly dividends (if already been paid at the old rate, this year's dividends (if there is no further fall) will take £164,000. The chief operating company of this group is Associated Newspapers, Ltd., which publishes the *Daily Mail*, *Sunday Dispatch* and *Evening News*, and is due to declare its next interim dividend in October. Hitherto the quarterly rate of 10 per cent. on the deferred shares has been maintained, but it may be questioned whether a reduction must not be faced sooner or later. Advertising in the *Daily Mail* has fallen off, within the past year, by about 15 per cent. The expectation is, therefore, that some £630,000, as against £992,000 in the last accounts, will be available for deferred shareholders, reducing the quarterly distribution to not more than 7 per cent. There remains a contingent liability in respect of £3,000,000 of 5½ per cent. debenture stock issued by Northcliffe Newspapers. Principal, premium and interest on this stock are guaranteed by Associated Newspapers and Daily Mirror Newspapers. Northcliffe Newspapers, Ltd., has not yet paid a dividend; and, in its accounts carried forward was £188,000. The sharp marking down in the price of Associated Newspapers deferred, which followed the announcement of the *Daily Mirror* and *Sunday Pictorial* dividends, reflects some apprehension lest the guarantee should be called. If this should be the case, the amount available might be reduced to £540,000, and the quarterly dividends on Associated might be reduced from 10 to 5 per cent.

Anglo-Foreign Newspapers.—In the absence of any appreciable current earning power the task of setting Anglo-Foreign Newspapers on its feet is unenviable. For the year to April 30th last the company reports an income of £48,680, compared with £49,239, and a net profit, after the deduction of expenses, of £28,417, against £11,478 for the preceding accounting period of 15½ months. During the course of the year it became essential to reduce bank loans, which stood in the last balance sheet at £141,460, and which now appear at £52,187, and also the loan of £181,277 from Carmelite Trust. A considerable proportion of the company's investments were consequently realised, the sale involving losses amounting to £245,109. Depreciation on the remaining marketable securities already amounts to £583,509, including £432,950 on the shares held in the Carmelite Trust, which is now in liquidation. The report announces that a settlement of the points in dispute with Carmelite Trust has now been reached, and the subject will be dealt with by the chairman at the forthcoming meeting. The profit and loss account, after debiting the loss on investments and the adverse balance brought forward from last year, shows a debit of £221,842, which is carried forward.

	Year to April 30.	1930. *	1931.

Carried forward	Dr. 5,150	Dr. 221,842	

* Period January 10, 1929, to April 30, 1930.

Accompanying the report is a circular notifying shareholders that certain of the directors and their friends have accepted an offer from the Associated Iliffe Press for a large block of shares owned or controlled by them at the price of 9d. for each ordinary share and ½d. for each deferred share, a condition of the sale being that the other shareholders of the company should be given the opportunity to dispose of their holdings at similar prices. These, of course, are rubbish prices. Shareholders can scarcely judge of their adequacy until they have been informed what exactly are the company's interests—a matter as to which they have been in the dark ever since the company's inception. In 1929 the ordinary 5s. shares touched 6s. 9d. and the 1s. deferred shares 4s. 6d.

Friary Holroyd.—In common with most other brewery concerns whose results for recent months have so far been made available, Friary Holroyd shows a moderate falling off in earnings, which remain, however, above the level of two years ago. The directors have taken a conservative view, and although 17.9 per cent. was earned on the ordinary capital have reduced the dividend from 15 per cent. to 11 per cent. (on a capital increased by a bonus issue from reserve) and added £40,000 to the reserve fund:—

--------	-------	-------

Property, including tied houses, plant and machinery, stands at £774,581, as compared with £748,137 in 1930. The directors state that payments of duties and taxes during the year amounted to £387,535. The surplus of liquid assets is only slightly lower at £133,104. The preference capital is secured by net tangible book assets of £3 0s. 9d. per £1 share. At 27s. 6d. cum dividend the ordinary shares yield £8 7s. 6d. per cent.

British Celanese—A Questionable Proposal.—In a circular issued to the holders of British Celanese 7½ per cent. convertible second mortgage bonds, notice is given of a meeting to be held on Thursday, August 20th, when authorisation will be sought for a variation of the company's obligations as regards the redemption of the bonds. Under the trust deed securing the bonds (of which £3,000,000 nominal were issued at the end of 1927), the company is obliged to redeem £800,000 nominal annually during the inclusive period 1932-1936 by drawings at 110 per cent., and to pay off at the same price any amount outstanding on December 31, 1937. It is now proposed that the company should be empowered to apply towards the fulfilment of its annual sinking fund obligation any bonds already purchased and any bonds subsequently purchased by it in the open market at a cost below 110 plus accrued interest. The bonds are at present quoted at 67½. It is argued that the acceptance of the proposal will not only ease the company's financial position, but will provide bondholders with a more satisfactory market

for the bonds. In addition to the normal annual provision against profits which the company has hitherto made in respect of the redemption premium on the bonds, the company will, to the extent to which bonds are purchased in the market at a cost below par, place to a special reserve account the difference between par and the cost of the bonds. The holders of the bonds will be glad to note that this reserve will not be used for preference or ordinary dividend purposes until the whole of the bonds have been redeemed. It is difficult, however, to discover the advantages, from the bondholders' point of view, of a scheme which, far from providing any major relief to a badly depressed market, is calculated further to undermine confidence by varying a past contract. If British Celanese, under present depressed severe conditions, is finding its annual redemption obligations a serious burden, it would appear more advantageous that the facts should be put frankly before the bondholders, and, if necessary, that that a revision of the trust deed should be asked for.

Fras. Hinde and Hardy.—This textile concern has fared even worse in 1930-31 than in the previous year, the total loss shown being £7,556 greater at £29,978. No dividend was declared on any class of shares. With the balance brought in, the total debit to profit and loss account was £48,686. This has been entirely written off by a transfer from reserve account, which is now reduced to £1,314. The results of the past three years have been:—

Year ended June 30	1929.	1930.	1931.
Net profit	£ 17,364	Dr. £ 22,422	Dr. £ 29,978
Preference dividend	13,125	...	...
No. of times covered	1.32	...	...
Ordinary dividend:			
Amount	7,500	...	...
Earned %	2.82	...	...
Paid %	5	...	...
Reserve fund	Dr. £ 5,000	...	Dr. £ 48,686
Inc. or dec. in carry-forward	+1,739	-22,422	+18,708*

* Debit balance carried forward subsequently written off.

The company's overdraft (secured by debentures) has been reduced by £22,453 to £38,611, and stocks are £31,873 lower at £103,442, a figure which reflects considerable writing-down. Finished products and raw materials, indeed, are declared to be "on a lower basis than ever before recorded."

Shell Union Oil Corporation.—The publication of the accounts for the second quarter of the year by the Shell Union Oil Corporation left a painful impression on the shareholders and was responsible for a drop of ten points to 65 (now 68) in the market quotation of the 5 per Cent. Bonds. The position of the company is not, however, so distressing as it would appear on paper. It is the known policy of the Shell Union to write down at the end of each quarter its stocks of oil to current market values. During the June quarter there were further substantial cuts in American oil prices, and there is no doubt that the item of operating expenses has been swollen by the writing down of inventory values. At the same time, the allowance made for depreciation and depletion (drilling expenses) contains a heavy book depreciation of the fixed assets, the actual drilling expenses having been curtailed to the bare minimum. The figures which follow should be read in the light of these qualifications:—

	1st Quarter, 1931.	2nd Quarter, 1931.
Gross operating income	\$ 44,233,398	\$ 42,568,580
Operating and general expenses	41,267,362	40,675,862
Net income	2,966,036	1,892,717
Depreciation and depletion	11,292,881	11,417,000
Debit balance	8,346,850	9,524,283
Interest	1,563,693	1,531,751
Net loss	9,903,472	11,058,034

It will be seen that, in spite of lower selling prices, the gross operating income of the company is very little different from that of the previous quarter. This can only imply that there has been no falling off in consumption, and that the company has been operating its marketing plant at something like full capacity. The balance of

profit and loss account, which showed a surplus of \$18,821,200 at December 31, 1930, has now been exhausted, and shows a deficit of \$3,308,326 after allowing for the payment of preference dividends which have been continued. The fact that the directors have made no announcement with regard to the passing of the preference dividends may be taken to imply that the cash position of the company remains satisfactory. Shareholders may find it disagreeable to be confronted with such disastrous paper losses, but the policy would appear to be justified by the exigencies of the present situation in the oil industry. No other American oil company, within our knowledge, is writing down its inventory values in so conservative a fashion as the Shell Union.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies: Mitchells and Butlers, Watney, Combe, Reid, and British International Pictures. The chairman of the last-named company (whose report is commented upon in a leading article on the British Film Industry on page 314 of this issue), stated that during the first three months of the current financial year the company's gross turnover had been at the rate of £1,000,000 per annum. Sir Richard Garton, at the Watney, Combe Reid meeting, discussed the possible findings of the Royal Commission on Licensing in England. At the Mitchells and Butlers meeting, Sir William Waters Butler, discussing the Scottish Commission's report, dwelt upon the increased sobriety of this country. Annual convictions for drunkenness, he showed were now only one-fourth those of 1899.

COMPANY MEETINGS, &c.

MITCHELLS AND BUTLERS, LIMITED.

YEAR OF ABNORMAL TRADING CONDITIONS.

HEAVY TAXATION BURDENS OF THE TRADE.

CHAIRMAN ON THE ROYAL COMMISSIONS ON LICENSING.

The forty-fourth annual general meeting of the shareholders of this company was held at the White Horse Hotel, Birmingham, on Thursday, the 13th instant, under the presidency of Sir William Waters Butler, Bart.

The Chairman, in moving the adoption of the report and accounts, said: Ladies and Gentlemen,—It is very rare for the chairman of this company to report to the shareholders a lower profit than that of the previous year. The last time was in 1923 in consequence of a big slump taking place after a period of intense high production to make good the world-wide depletion of stocks brought about by the Great War. This re-stocking was so overdone that the boom ended abruptly; the values of stocks and raw materials fell sharply and caused a re-valuation in our stocks to be made, which necessitated a heavy writing down and resulted in a lower trading profit in that year. Since then we have earned increasing profits, partly due to investing undivided profits in new directions and affording improved service to our patrons by the concentration of business in "fewer and better" houses, a policy your company has followed for many years past, and one it will continue to support, but only so long as Licensing Justices impose reasonable conditions in consenting to the "removal" of old licences accompanied by the surrender of others, or, where "redundancy" does not exist, the fixing of a fair monopoly payment for a reasonable tenure of licence, giving by the application of either method a commercial return on the requisite capital expenditure in site, buildings, etc., necessary to provide for the needs of the public.

ADVERSE FACTORS.

This year we have had to contend with very abnormal trading conditions brought about by the bad state of industry generally, probably unequalled in the lifetime of anyone present, with over 2½ millions of people unemployed existing on a "dole" provided by the State and those working, the cost of living having to be made up with savings, where there may be any, which must result in retarding the resumption of normal spending-power when employment is again available.

Naturally the board much regrets the unavoidable fall in profits during the past year, but one cannot imagine any shareholder would expect the profits to equal those of last year, which were a record. Firstly, we were handicapped from the commencement of the financial year with the imposition of the additional beer duty of three shillings per standard barrel, coupled with the assurance given to the Chancellor of the Exchequer that no part of this additional charge to an already heavy duty of over ten times the pretential charge to a standard barrel, be passed on to the war duty, should, during the financial year, be passed on to the consumer through increased retail prices or weaker beer; which arrangement was loyally carried out by your company. In addition to this onerous burden we were called upon to bear an increase of 12½ per cent. in the income tax, of which we had not the faintest indication when agreeing to the higher beer duty.

EFFECTS OF FALL IN OUTPUT.

These two new charges which we have borne to the full during the past year represent the addition of an amount equal to nearly six figures to our trading costs had our output of the previous year been maintained; but, unfortunately, the industrial position of the country during the past year became increasingly depressed and is without signs of improvement, the consequence being the spending-power of our customers was decreased, resulting in a fall in output, which although serious, was not, I am pleased to say, so great as the decrease indicated by Government Returns to have taken place in other trading areas.

The drop in output effects us more from a profit point of view than most brewing firms, as we are probably the largest direct sellers to the consumer through managed houses in the country, so that during trade depression not only are our wholesale profits affected, but also our retail profits; the latter more so, as it is almost impossible to diminish the running costs of a licensed house when takings fall.

The operations of the company with its constant additions—this year our property asset increased by £325,825—necessitates the hold-

ing of an adequate amount of cash, and it is this covering amount which should mainly regulate the rate of dividend payable in times of decreasing profits, which are naturally times of difficulty for raising new capital.

ALLOCATIONS.

Your board having in view the present trade position and the future prospects, gave careful consideration to the question of the maintenance of the rate of dividend, and as an abnormal amount of £50,906 was added to the carry-forward last year, making the total amount of profit available for distribution this year within £18,971 of the amount last year, and the cash position permitted its payment, decided to recommend the same rate as last year, although the trading results show a decrease, but not to such an extent as necessitates our trespassing upon any of our reserves for dividend purposes; in fact, we recommend that the balance of our profits, £107,249, after meeting our dividends, should be disposed of by adding £100,000 to our general reserve, making this £1,250,000, and adding £7,249 to our carry-forward, making it £438,347. In addition we have a contingency reserve of £800,000, the three sums totalling £2,488,347, well over 50 per cent. of our total issued preference and ordinary capital.

We can only hope for a revival of general trade to bring about an improvement in profits. We cannot expect raw materials to be cheaper, and, candidly, I hope the agriculturalist may obtain a better price for his crops, for depressed agriculture is of no benefit to us or the country.

TAXATION OF FOREIGN BARLEY.

Here let me refer to a proposal which has been made for reducing imports and that is to place a duty upon foreign malting barley. The brewing trade requires, particularly when we have passed through a summer devoid of sufficient sunshine to ripen native barleys, to purchase barleys from sunny climes for producing the proper quality of beers. This foreign malting barley may be rightly described as a raw material unobtainable from home growers, and, therefore, an import which should not bear a duty, but as large quantities of the foreign barleys which enter this country are of a type which can be grown here, the brewing trade, to help in aiding our sorely depressed agricultural industry, would not oppose the imposition of a reasonable duty upon all foreign barleys, but would resist as being unjust the limitation of the import duty solely to the barleys used by the brewer and distiller. I was sorry to note that last year there was a decrease of over 25,000 workers in agriculture, which means that the majority of these men have joined the already large number of unemployed in the industrial centres.

FURTHER IMPOSITIONS ON BEER UNJUST.

One regrets to see in our financial papers references to the possibility of higher beer duties, and to read in Mr. Snowden's startling speech made in the House a few days ago on the financial position of the country, vague references to certain classes of people who may be called upon to shoulder additional burdens. If these statements should mature into still further impositions upon the beer drinker, then I have no hesitancy in saying that they would be looked upon as grossly unjust and partaking of the nature of vindictiveness, for there is no valid reason for singling out the consumer of alcoholic beverages for differential treatment from consumers of other beverages, or other taxpayers. His drink to-day is nearly saturated with duties.

REDUCTION IN MUNICIPAL AND NATIONAL EXPENDITURE ESSENTIAL.

The Report of the May Committee on Economy indicates very plainly that it is absolutely necessary municipal and national expenditure must be largely reduced, otherwise additional onerous taxation must be imposed to avoid the nation being driven to living upon its capital, if it is not already doing so, which must, in time, inevitably lead to terrible suffering and ruin.

Recommendations to avoid this position have been made to the people of this country by those well qualified to advise, which we must have the courage to carry out. All should be called upon to

meet the bill, without fear or favour, no question whether he is a payer of income tax or not, a smoker or non-smoker, or a drinker of or an abstainer from alcoholic beverages. Equality of burden must be the foundation of any proposals that are to be made to relieve the load upon the national finances. They must not take a form similar to that of the Land Tax, which is simply a tax upon ownership of one form of wealth, or, in plain words, gradual confiscation. It is impossible to say what the consequent liability will be which will fall on your company if the tax is imposed, but without doubt it will be a substantial sum; another burden upon all industries, as the Chancellor declined to free them from the imposition.

REPORT OF SCOTTISH COMMISSION.

Since we last met the English and Scottish Royal Commissions on Licensing have continued their sittings. The Scottish Commission has already presented its Report; its Majority Report exhibits business-like conclusions arrived at in a broad-minded spirit. This Commission was not troubled with repetitions of voluminous statements lacking facts and scientific backing, such as were presented to the English Commission through the organised so-called Temperance Associations. The result is that its Report has made an early appearance, while that of the English Commission will not be ready for some time to come, notwithstanding the forecasts one has read in the Press as to its early production and proposed recommendations.

The General Conclusions of the Scottish Report are what one would have expected, among them being—

"Unfeigned pleasure to be able to report as the result of the evidence presented to us that its outstanding feature (and one in considerable contrast with the report of the last Royal Commission) is the continuous and progressive improvement in the habits of the people in relation to the subject of our remit. This evidence does not come from one rank or shade of opinion. On the contrary, all classes of opinion, including that of chief constables, the members of licensing courts, and the representatives of our large cities . . . alike agree on this, that, in general, sobriety has increased, that instances of drunkenness have become fewer and fewer, that excess is restrained by a sober opinion, and that a younger generation is growing up, to which, as a whole, any resort to alcoholic excess as a necessary or usual practice is almost totally unknown.

GREAT ADVANCE IN SOBRIETY.

I am of opinion that the English Commission will report in regard to drunkenness in similar terms to those of the Majority of the Scottish Commission, for so great has been the advance in sobriety since the Report of the Royal Commission in 1896 was issued, that the annual convictions for drunkenness in England and Wales are now less than one-fourths those in 1899, being only 1.36 persons per thousand, as against practically 6 persons per thousand in 1899. This is a wonderful reduction, the more so when you consider that to-day simple drunkenness is looked upon by the law as a much more serious offence than it was, say, 20 years ago. How rare it is to see a drunkard in our streets to-day! The causes which have brought about this great social improvement are many, and no one is more pleased with it than those engaged in the production and distribution of alcoholic beverages. Drunkenness is harmful to the licensed trader, and brings upon him unfair odium and trying responsibilities.

Drunkenness as the fundamental for debate has failed teetotalers, and the enemies of the Trade are having to shift their ground. It appears their attack is now to be based on the proposition recently stated by "A Social Student" of the *Observer* that "The alcohol problem to-day is not drunkenness, but drink and the expenditure thereon." I think even I could support that declaration, but from a different point of view, for it is a scandal that a perfectly temperate man has to expend so much to obtain his reasonable requirements of alcoholic beverages in consequence of the unjust imposition of heavy duties; but did you ever hear of a teetotaler suggesting that the "economic menace of grave proportions" brought about by such expenditure, as described by a witness before the English Royal Commission, should be lessened in its severity by a reduction of the beer, wine and spirit duties which form by far the greatest portion of the cost of such beverages to the consumer?

NOT ONE PLEA FOR TOTAL PROHIBITION.

I read a report of a public meeting held a short time ago in Birmingham, in which it was stated that the Bishop of Worcester (Dr. Perowne) had said that "during the hearing of the witnesses before the Royal Commission, there was not one single plea made for total Prohibition. It is no good crying for the moon"! What a cold douche that must have been to those Prohibitionists who day

in and day out had been telling their audiences of the great blessings that had been realised in the United States through Prohibition, and now had heard that not a man of that crowd of criers of false news—and several appeared before the Commission—mentioned that the solution of the so-called "Drink Problem" was Prohibition.

SCOTTISH COMMISSION MINORITY REPORT.

The four members of the Scottish Commission who drew up a Minority Report—which one may truthfully say was devoid of any practical constructive proposal—exposed their holding of preconceived views when they declared:—"It would be deplorable if suggestions for alteration of the licensing law were made that proceeded on the assumption that the drinking of intoxicating liquor were a permanent element in our national life." They were not competent to give an unbiased verdict upon the evidence submitted to them. Their attitude of mind emphasises the weakness of setting up a Commission made up of panels of men known to hold directly conflicting views to sit with others who are looked upon as an impartial panel, trusting it to act as umpire between the bodies holding preconceived opinions.

I fully concur in the view expressed in the Majority Report of the Commission that "it must be frankly recognised that difficulties are often created by attempting to act in advance either of public opinion or of the general habits of the people of the country." It would be well if temperance reformers realised such difficulties and when putting forward proposals for amending licensing legislation gave consideration to their practicability.

STATE MANAGEMENT AND DISINTERESTED MANAGEMENT.

The main reason given for the recommendation that the State management experiment should cease, seems to be that its operations cut across the ordinary system of licensing, and the evidence appears to indicate that the position is a difficult one in case of local veto polls, while the Scots appear to resent any control or direction in a Scottish area having an imprint of the hand of an Englishman, or even of a Scottish Minister, if he conducts administrative operations in the neighbourhood of Whitehall. "Home Rule for Scotland" is detected through the mist.

The introduction of disinterested management or reformed public-house on a large scale, also did not gain the approval of the Commission for what appears to be a similar reason for the recommendation of the discontinuance of State management, namely that it would be an excrescence on the existing licensing system.

The Scottish Commission's reasons for their recommendation as to State Management in Scotland I do not think can be fairly applied to the Carlisle area which is, of course, of far greater magnitude than the two small rural and widely separated Scottish areas, in which licensing conditions are so very different from those of England.

I do not propose to make any further reference as to what may be the nature of the English Commission's Report. One cannot expect it to be a unanimous one for obvious reasons. Candidly, I am feeling quite comfortable about the Report in view of the splendid record of the Trade's operations and of the great advance in national sobriety, vouched for, not by biased witnesses or fanatics, but by public officials whose daily activities and experiences have enabled them to gain a first-hand knowledge, and who were thus qualified to present facts and not theories to the Commission.

SLUR ON MEMBERS OF THE COMMISSION.

The Right Hon. Leif Jones, M.P., the ex-President of the United Kingdom Alliance, founded for the bringing about of Prohibition, said at the annual meeting of the Alliance: "I am not very hopeful of what the Commission may do. They have a lot of good evidence, but we cannot give them the necessary wisdom for handling it." What a slur upon the members of the Commission, to whom, one would think, he owes an apology. I think his downheartedness rather supports by own hopeful view of the result of the Commission's deliberations. We shall see!

With these remarks, Ladies and Gentlemen, I beg to move the adoption of the report, and will ask Mr Herbert W. Bainbridge to second the resolution.

Mr Herbert W. Bainbridge seconded the resolution, which was carried unanimously.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8, Bouverie Street, Fleet Street, London, E.C.4.

WATNEY COMBE REID AND COMPANY, LIMITED.

THE LICENSING COMMISSIONS.

The ordinary general meeting of Watney Combe Reid and Company, Limited, was held, on the 10th instant, at the Windsor Castle Restaurant, Victoria, London, S.W.

Sir Richard Garton, G.B.E. (the chairman), in the course of his speech, said:—"The dividend is smaller than it was last year, but in this respect we are not alone in our particular industry. The decline in profits has not reached a stage to call for uneasiness, but we are, in common with all other industries, passing through difficult times, and we attach great importance to conserving our cash, knowing full well the value of an extra shot in the locker. By keeping our profits so far as possible in the business we are able continually to improve and rebuild our houses to meet modern requirements, whereas if we distributed more in dividends we should either have to reduce our programme of improvements or issue new capital.

It will not, I think, be inappropriate if I refer briefly to the Royal Commissions on Licensing in this country and in Scotland, and to the report of the Scottish Commission which was issued on July 17th.

TRIBUTES TO THE TRADE.

I have little to add to my remarks of a year ago on the subject of the English Commission. The Licensing Authorities would, I think, agree that our trade has earned an even more favourable position than it then occupied, whether we judge by general observations, by the examination of relevant statistics, or by the proceedings of this year's Brewster Sessions, in the course of which acknowledgments, which have now become almost customary, of the manner in which our trade is conducted were made by practically all the Chairmen of Licensing Justices and Chief Constables. Similar acknowledgments were also made by similar witnesses before the Royal Commission. This satisfactory condition of affairs is, of course, a matter of congratulation, not only to the trade, but to the public which it serves. Some years ago our task was how to defeat prohibition and local veto, and it was consequently less difficult than is our task to-day, when the aim of our opponents is no longer to prohibit drink (even by the indirect method of local veto), but to replace private enterprise by some system of State ownership or control. It is, therefore, imperative that we should be able to convince the public beyond question that our service is better than any they are likely to be supplied with under any other system.

It seems within the bounds of possibility that some of the Commissioners may recommend the creation of a Central Board with power to deal with and supervise licensed trade matters, and perhaps an extension, possibly in some modified form, of the Carlisle system. The creation of a Central Board might quite conceivably have the support of many of the Commissioners as providing some method of supervising and co-ordinating the sale and supply of intoxicating liquor. On the other hand, it would be surprising, as well as disappointing, should a majority report in favour of extending the Carlisle system, for such a recommendation would seem to be in no way justified by the evidence which has been presented to the Commission, and the trade has, in fact, an increasingly good case to present against such proposals, or indeed against any drastic interference or alteration of the present licensing system.

"A VICTORY FOR COMMONSENSE."

The findings of the Scottish Commission, which have been welcomed by the Press as a victory for commonsense, appear to have been based on the admitted improvement in sobriety and general conduct which to-day marks social conditions alike in England, Wales and Scotland. The Report, which is signed by ten of the fourteen Members of the Commission, records that no cause for any drastic alteration of the licensing laws has been established, and proceeds to condemn or severely criticise prohibition, local veto, the Carlisle system of State management in the areas of Greta and Cromarty, which it describes as an excrescence on our licensing system, and disinterested management, which it describes as impracticable. It is of interest to note that the Scottish Minority Report, signed by four members of the Commission, also condemns, but on different grounds, State management, and parts of the Local Veto Act, and, indeed, only disagrees with the report itself in comparatively minor matters.

The rights and conveniences of the public, and the difficulties imposed on the licensed trade in supplying the service to which the public are entitled have been made the subject of considerable and ameliorative recommendations with the sole object of improving the existing laws and regulations in the public interest.

With the knowledge that in this country conditions regarding sobriety and general social improvement are, if anything, even better than they are in Scotland, we may, I hope, look to a report from the English Commission which will mark yet another progressive contribution to the licensing laws of our land.

The report was unanimously adopted.

BRITISH INTERNATIONAL PICTURES, LIMITED.

INCREASED TRADING PROFIT.

FORTHCOMING OFFER TO SHAREHOLDERS.

The annual meeting of British International Pictures, Limited, was held, on the 13th instant, at Winchester House, Old Broad Street, London, E.C.

Mr J. Maxwell (the Chairman) said that after applying proceeds of a recent sale, and taking into account the depreciation reserve of £50,000, the net book value for all studios and plant was approximately £250,000. That figure was much less than their real value, and they had there what was sometimes called a secret reserve of at least £100,000. Film production stock showed an increase of about £50,000, which was comparatively small in view of the relatively greater increase in the quantity of the output. They had completed the writing off of all values of silent and part-dialogue films.

The profit and loss account showed a trading profit of £186,661, as against £177,948. They had made various appropriations to reserve. While he believed, from letters that had reached him, that many shareholders would like larger dividends, the directors felt that the course they were pursuing was in the best interests of the company. Their reserves now exceeded 50 per cent. of the issued ordinary share capital. It was proposed to pay 8 per cent. on the ordinary shares.

The general prospects of the company appeared to be very good. British pictures generally were meeting with a very favourable

HUNGARIAN GENERAL CREDITBANK.

Half-yearly Balance Sheet.

The Board of the HUNGARIAN GENERAL CREDITBANK at their Meeting held on July 28th, 1931, established business results within the first half of the year 1931. The net profits aggregate 2,155,735.69 pengo, as against 3,470,404.19 pengo in the corresponding period of the previous year. The chief items of the balance sheet show the following changes as compared with the data of the balance sheet per December 31st, 1930: Savings Deposits aggregate 56.2 million pengo (61.3 millions in 1930); Deposits on Current Accounts and Cheques Accounts 112.9 million pengo (147.2 millions in 1930); Creditors 128.5 million pengo (136.3 millions in 1930). Debtors aggregate 192.8 million pengo (216.4 millions in 1930); Bills discounted 84.2 million pengo (102.7 millions in 1930); Stock of Securities and Participations in Banking Companies and other Undertakings figure at 51.3 million pengo (53.8 millions in 1930). Owing to the continued sales on the home market the Bank's own mortgage bonds in circulation increased from 28.1 million pengo to 30.6 million pengo, the entire stock of mortgage bonds being placed therewith.

The Bank's Stock of Securities, as well as the Bank's Participations in Banking Companies and other Undertakings, totalling 53.8 million pengo as per December 31st, 1930, decreased, after the effected writings off, to 51.3 million pengo. Nearly four-fifths of these values consist of stocks listed on Stock Exchange and estimated in the balance sheet below their market value. It should be noted that own shares of the Bank which, owing to the unfavourable conditions on the Hungarian and foreign Stock Exchanges, were offered for sale in the market, were placed in a way that altogether only 51,773 shares of the Bank are held by a group headed by the "Hermes" Hungarian General Exchange Office Co., Ltd., an institution closely connected with the Bank.

Approximately one-third of the total outstandings of the Bank consists of credits granted to undertakings, which belong to the Bank's sphere of interest; the above one-third includes also the seasonal and reimbursement credits, as well as the guarantees assumed for loans, which have been raised by the undertakings elsewhere. Regarding these outstandings, such reserves have been created as to provide adequate cover, even though the valuation of these outstandings has been effected in view of the present circumstances with the utmost possible caution.

As long as the definite numerical figures of the half-yearly balance sheet were not available, the Board refrained from replying to the rumours which had come into circulation regarding the Bank's situation. According to the Board's judgment, now however, the numerical data of the half-yearly balance sheet supply ample proof of the rumours referred to being absolutely without any foundation.

reception. The best evidence of that was the very substantial profits made by their subsidiary company, Associated British Cinemas, Limited, which filled a large proportion of its programmes with British pictures.

He had been interested to find out the gross turnover which British International Pictures, Limited, had from film production. During the first three months of the current financial year their gross turnover had exceeded £250,000, or at the rate of £1,000,000 per annum. That was exclusive of dividends on investments, studio rentals and other extraneous income, and it was a satisfactory state for a company which was now holding only its fourth annual meeting. It meant, in effect, that they were collecting and retaining in this country to create useful employment £1,000,000 yearly of revenue from film rentals and sales which would otherwise have gone abroad. (Applause.)

They were also using that money to create useful employment in this country. At the present time, when all the resources of their statesmen were being directed to finding means to restrict imports and retain money in the country, it was satisfying to know that they were proprietors of a company which was making a useful and practical contribution to that end.

In order to provide for the development of the business the directors proposed to issue the 1,000,000 5s. ordinary shares at present unissued. They would be offered, at par, only to the shareholders of the company, and at an early date. It was not proposed to underwrite the issue or to offer it to the general public, as the directors and their friends would take up any shares not applied for.

The report and accounts were adopted.

At a subsequent meeting of Associated British Cinemas, Limited, the report and accounts of that company were adopted.

Mr J. Maxwell (the Chairman) said that the figures in the balance sheet showed increases in almost all items in comparison with the previous year, arising, in general terms, from the growth of the business throughout the year.

Government Returns, &c.

NATIONAL ACCOUNTS.

The total ordinary revenue for the week ended August 8, 1931, amounted to £13,850,000 against ordinary expenditure of £9,628,200. After allocating £465,000 to Sinking Fund and having allowed for a decrease in Exchequer Balances of £423,564, the operations for the week, as shown below, reduced the National Debt by £4,180,000 to £7,647,089,000:—

(000's omitted.)

GOLD MOVEMENTS.

The arrivals and withdrawals of gold during the past week, as announced by the Bank of England, have been as follows:—

1931.	ARRIVALS.	1931.	WITHDRAWALS.
August 7	Bars bought..... 25,014	August 7	Bars sold..... 644,900
	Sovs. from abroad..... 614,000		Sovs. for export..... 311,000
	Sovs. released..... 400,000		Sovs. sold..... 20,000
	8 Sovs. released..... 650,000		10 Bars sold..... 307,700
	10 Bars bought..... 1,702		10 Bars sold..... 72,000
	Sovs. from abroad..... 200,000		11 Sovs. for export..... 72,000
	11 Sovs. released..... 425,000		12 Bars sold..... 6,800
	12 Sovs. from abroad..... 2,842		13 Sovs. for export..... 4,000
	Sovs. released..... 200,000		13 Sovs. for export..... 3,000
	13 Sovs. from abroad..... 3,575		
Total.....	2,522,133	Total.....	1,495,800

Net arrivals, £1,026,470.

Messrs. Samuel Montagu and Company write on August 11, 1931, as follows:—

GOLD.

The Bank of England gold reserve against notes amounted to £133,516,615 on the 5th instant (as compared with £132,034,665 on the previous Wednesday), and represents a decrease of £14,109,007 since December 31, 1930. The shipment of bar gold which arrived from South Africa this week amounted to about £941,000, of which £550,000 had been sold forward. The balance of £391,000, together with £77,000 from the Straits Settlement was available in the open market yesterday. The price was fixed at 84s. 10 1/2d. per fine ounce, at which £420,000 was taken by an undisclosed buyer, £5,000 for India and £43,000 for the Home and Continental trade. The sudden adverse movement in exchange to which we referred in our last letter was followed by a heavy withdrawal of gold from the Bank of England on the 6th instant when over £2,500,000 in bar gold was taken for France and Holland. Owing, however, to the quick recovery made in the exchange the movement was not prolonged. Movements of gold at the Bank of England during the week resulted in a net efflux of £1,521,730. Receipts consisted of £1,675,000 in sovereigns "released," £816,800 in sovereigns received from abroad and £26,716 in bar gold. Withdrawals totalled £4,040,290, of which £3,791,290 was in bar gold and £249,000 in sovereigns taken for export.

SILVER.

The market developed a weaker tendency during the past week. Weakness in the Shanghai exchange was followed by selling of China account, and by the 10th instant prices had fallen to 12 1/2 for both cash and two months' delivery. America has been disposed to sell for near delivery, but has been more inclined to be

Manchester.—Business in the market during the past week has been thoroughly disorganised by the slump in raw cotton prices. Attempts are now being made to adjust matters, but the process is slow, and most buyers are inclined to hold aloof until the outlook is clearer. There is a fear in many quarters of a further decline in

values. Late last week there was increased activity in piece goods for China. Although the bulk of the orders were in fancies, and particularly poplins, a few more contracts were arranged in grey and white shirtings. The change in the cotton situation has had a vital effect upon this demand, and trade has fallen off. Operations in piece goods for India have been very restricted, and merchants complain of the smallness of the turnover. Exporters to the several minor outlets East and West have adopted a waiting policy and home trade buyers have not been in any hurry to place orders with makers. The slump in values is a serious matter for all firms that are compelled to carry stocks, and serious losses will have to be faced. In American and Egyptian yarns prices have been reduced in sympathy with the fall in the raw material. Conditions have been very irregular. Here and there buyers have taken a view of the market, and placed fair lines, but most users continue cautious in operating.

THE WOOL TRADE.—Bradford.—The figures recently published by Dalgety and Company, Ltd., writes our correspondent, showing the quantities of wool produced in Australia and New Zealand during the 1930-31 season are very suggestive. The decrease of approximately 70,000 bales in the Australian production, compared with the 1929-30 season, is more than counter-balanced by an increase in New Zealand. The poor prices realisable for fleece wool brought about a big increase in the number of sheep and lambs slaughtered in New Zealand, and an increase in the output of slipes. When all things are considered, the industry has recovered fairly well from the serious slump experienced during the early part of this year. The trade has to look forward to a big increase in the next Australian clip. It will not be much less than 3,000,000 bales, and a larger output from other sources may be anticipated. Unfortunately the slump in cotton is calculated to react more or less adversely upon merino wool. The two commodities have always moved very much in harmony with each other. The real test for wool will begin when the Australian selling season opens, and further tests will be made as successive clips are offered. It is a foregone conclusion, however, that the fall in cotton has prevented any new upward movement in wool. If prices for the latter hold their own, it will be due entirely to the development of demands which are not now in sight. Traces of weakness are seen in the Bradford market. Quotations for tops are unaltered, compared with a fortnight ago, and certain makers are keeping up a very firm attitude, alleging that where tops are actually needed, they can sell at little or no concession. For bulk business, however, it is admitted that merinos can be bought ½d. per lb. cheaper, and crossbreds are rather weak.

THE GRAIN MARKETS.

WHEAT.—The wheat markets have been a little steadier during the past week. In his weekly survey of the wheat trade, Mr G. Broomhall has compiled an interesting table showing the total wheat supplies of the principal exporting countries. Including the United States, Canada, Argentina, Australia and Russia, the total at 221,600,000 quarters is 7,100,000 quarters below last year's supplies. In comparing these figures it must, however, be borne in mind that the European crops are better than last year and that imports have been made more difficult by many countries by means of restrictions. Quotations: No. 1 Northern Manitoba, Atlantic, ex ship, 24s. per 496 lbs., as compared with 23s. 9d. a week ago; No. 2 Northern Manitoba, Atlantic, ex ship, 22s. 9d., against 22s. 9d.; No. 3 Northern Manitoba, Atlantic, ex ship, 21s., against 21s. 3d.; Rosale, ex ship, 19s. 3d., against 19s. 3d.; Australian, ex ship, 20s. to 22s. 6d., against 20s. 6d. to 23s. a week ago.

WHEAT FLOUR.—The home trade in wheat flour has been more active as a result of an improvement in the demand by bakers. North American shipments, at 188,000 sacks, show an increase of 27,000 sacks as compared with the previous week. Of this total 117,000 were consigned to non-European countries. Quotations: Straight run, delivered country, 21s. per sack of 280 lbs., as compared with 22s. last week; delivered London, 20s., against 21s. Manitoba patents, ex store, 20s. 3d. to 24s., against 21s. to 24s.; and Australian, ex store, 16s. 6d. to 17s., against 16s. 9d. to 17s. 9d. a week ago.

BARLEY.—Barley has been steady and prices have recovered from the fall at the end of last week. The yield in the United States has been estimated at 221,000,000 bushels by the Crop Reporting Board, which compares with 325,893,000 bushels last year. Quotations: "English feeding," f.o.r., per 448 lbs., 20s. to 22s., as compared with 20s. to 22s. Californian sold at from 34s. to 50s., as compared with 34s. to 50s. last week; "Australian

Chevalier" changed hands at 28s. to 32s., against 28s. to 32s. a week ago.

OATS.—Oats have been dull, but in the absence of selling pressure prices have been maintained. Quotations: "River Plate," landed, 11s. 3d. per 320 lbs., as compared with 11s. 3d. last week; "River Plate," ex ship, 10s. 3d., against 10s. 3d.; "Chilean," Tawny," landed, 12s. 9d., against 12s. 9d.; English white, per 336 lbs., 20s., against 20s. a week ago.

MAIZE.—Last week's shipments from the Argentine at 1,261,000 quarters show an increase of 60,000 quarters on the previous week, and the pressure exerted by these enormous supplies have resulted in a further weakening in prices. Quotations: "Plate," landed, 15s. 3d. per 480 lbs., as compared with 15s. 9d. last week; Plate, ex ship, 14s., as against 14s. 6d.; Plate, August-September, new, 14s. 1½d., as against 14s. 6d. Yellow maize meal, ex wharf, was quoted £4 15s. per ton, against £5 a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1930-31, 1929-30, 1928-29, 1927-28:—

	1930-1931.	1929-1930.	1928-1929.	1927-1928.
Estimated sales of home-grown wheat.....	Cwts. 21,284	Cwts. 75,560	Cwts. 39,062	Cwts. 64,499
1 week to August 8.....	4,902,609	9,564,354	9,737,194	11,048,387
49 weeks to August 8.....				
Average price of English wheat per cwt.....	s. d. 6 6	s. d. 8 4	s. d. 12 0	s. d. 10 9

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1927 to 1930:—

Weeks ended	QUANTITIES SOLD.			AVERAGE PRICE PER QWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
Aug. 1, 1931.....	Cwts. 25,067	Cwts. 1,499	Cwts. 7,136	s. d. 6 5	s. d. 6 4	s. d. 6 8
Aug. 6, 1927.....	42,262	2,333	8,765	12 7	11 11	10 3
Aug. 11, 1928.....	64,499	3,599	5,416	10 9	10 7	11 2
Aug. 10, 1929.....	39,062	2,900	7,415	12 0	9 10	9 7
Aug. 9, 1930.....	75,560	3,906	11,495	8 4	6 4	6 11

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1930:—

NEAREST FUTURE.	Jan. 2, 1930.	Aug. 13, 1930.	Jan. 2, 1931.	July 29, 1931.	Aug. 5, 1931.	Aug. 12, 1931.
Winnipeg (No. 1 Manitoba).....	148½	93½	56½	54½	52½	56½
Chicago (No. 2 Winter).....	130½	88½	79½	51½	48½	50½

The visible supply of wheat in Canada at 61,648,000 bushels shows a decrease on the week of 992,000 bushels. Supplies a year ago stood at 55,188,000 bushels.

OTHER FOODS.

SUGAR.—The market in raw sugar has been dull, and in view of the unsettled outlook, buying was confined to immediate requirements. Prices, consequently, showed a weakening tendency. Wednesday's sales of "raws" included "December delivery" at 6s. 3½d. to 6s. 4½d. per cwt., against 6s. 7½d., and "March," 1932, at 6s. 6½d. to 6s. 7½d., against 6s. 10d. to 6s. 10½d. on the corresponding day last week. The movements of raw sugar in London and Liverpool during last week are set out in the table below:—

	Imports.		Deliveries.		Stocks.	
	1931.	1930.	1931.	1930.	1931.	1930.

COFFEE.—At the auctions this week, demand was slow and prices were generally easier. Last week's movements of coffee in London were as follows: Brazilian, landed, nil; delivered for home consumption, 265 bags; exported, 185 bags; stocks, 2,101 bags, against 1,149 bags last year. Central American, landed, 570 packages; delivered for home consumption, 1,513; exported, 861; stocks, 99,844 packages, against 88,980 a year ago. Other kinds, landed, 1,930 packages; delivered for home consumption, 1,812; exported 1,930; stocks, 79,175 packages, against 96,388 a year ago.

COCOA.—The market in cocoa has again been easier during the week. The low level of prices is largely a result of the excess supplies. The quantity of raw cocoa imported in July at 31,985 cwt. compares with 19,389 cwt. in the corresponding month of last year. The quantity entered for home consumption during the first seven months of the current year at 998,509 cwt. actually shows an increase of 18,158 cwt. on last year. As compared with the corresponding day last week, Wednesday's quotation for Acroa, fair fermented, mid-crop, August-September, at 17s. per cwt. f.o.b. London contract, shows a fall of 3d.

TEA.—The quantities catalogued for this week's auction comprised 44,235 packages of Indian, 28,904 packages of Ceylon, and 15,218 packages of Java and Sumatra tea. The Indian auctions on Monday began with an improved demand for good liquoring

OVERSEAS TRADE RETURNS.

HIDE, LEATHER AND ALLIED TRADES.—At the resumption of the sales of market hides and skins at Manchester this week the only alteration recorded in regard to ox and heifers was an advance of 1/4d. per lb. on the first three weights in best clears. Cows and bulls were also unchanged from the previous sale, while very little business was done in calf skins. There has been no improvement in the turnover in foreign hides and, generally speaking, this week prices are again all on a lower level. In the South American frigorific market a few sales have been negotiated in Argentine ox on the basis of 5 1/4d., while 5 1/2d. has been paid by the United States for Montevideo ox. Sales are also reported of second ox to this country at 4 1/4d. Dry hides of South American origin have been a slightly better market, business having been done in M.V. Americanos at 5 1/4d., B.A. Americanos at 5 1/4d., and Cuyabanos at 4 1/4d. The market for most descriptions of African hides remains quiet, although a small turnover has been done in dry Capes at 6 1/4d. and 5 1/4d. for firsts and seconds, with 5 1/4d. and 4 1/4d. paid for drysalted 20-30 lbs. Other descriptions have also been inquired after to a limited extent, but there is no real interest in them, as is also the case to a lesser degree with Australians. Sales of sole leather this week have again not been large, but at the same time there are indications that shoe manufacturers are once more settling down to business. For the manufacturing end of the trade, inquiry has come to hand for medium and heavy weight dry hide bends, while the repairing section have been in the market for suitable weights in English and wet-salted. There appears to be rather more inquiry for offal, as, in addition to a fair turnover in pinned shoulders, bellies are also being sought after with a little more freedom. Apart from a trifle more inquiry in regard to box calf, there has been no change in the position of the market for upper leathers, and the bulk of what business there is being done consists of small parcels of willow calf and black and brown glacé kid. The increased call for patent, however, is still maintained, in addition to which a small sale has been experienced in connection with suede leather. The majority of fancy upper leathers, however, are quiet. The currying section does not appear to be making much headway, and, apart from those who have orders for lining leathers on hand, business with most firms is very slow.

RUBBER.—The failure of producers to begin to bring current output into line with the present rate of consumption, coupled with the absence of any signs of an early improvement in the rubber-consuming industries, resulted in a further weakening of prices and in the establishment of a new low record at 2 1/4d. per lb. Wednesday's official closing price for standard ribbed smoked sheet, at 2 1/4d. per lb., shows a fall of 1/4d. as compared with the corresponding day last week. In forward positions, business has been done at 2 1/4d. to 2 1/2d. for October-December, against 2 1/4d. to 2 1/2d.; and at 2 1/4d. to 2 1/2d. for January-March, 1932, as against 2 1/4d. to 2 1/2d. a week ago. Movements of rubber in London and Liverpool during the past week were as follows: Landed, 2,283 tons; delivered, 1,452 tons; stocks at the end of last week, at 137,047 tons, show an increase of 835 tons, as compared with the preceding week.

THE MONEY MARKET.

MONEY has been definitely easier. On August 14th the week's issue of Treasury bills was allotted at an average rate of £4 2s. 10.92d. per cent., as against £4 5s. 9.5d. per cent. the previous week, and the following day the usual week-end ease was once more apparent. This week new money has been obtainable at 3 1/2 per cent., and even less, with 3 1/2 per cent. quoted outside the clearing banks for renewals. It was thought that a certain amount of

ALLIANCE

INSURANCE COMPANY, LIMITED.

(Established in 1824.) ASSETS EXCEED £30,000,000
HEAD OFFICE: BARTHOLOMEW LANE, LONDON, E.C.

foreign money was on offer early in the week. Discount rates have also weakened under the influence of a good demand for bills from both at home and abroad, supplemented by special buying described below. On Thursday brokers were buying ordinary remitted three months' bills at $4\frac{1}{8}$ per cent., and selling at $4\frac{1}{16}$ per cent. German renewed bills, arising from the special arrangements now required, were dealt in by agreement at $4\frac{3}{8}$ per cent., but even this rate was at times shaded. Hot Treasuries were quoted at about $4\frac{1}{16}$ per cent. As regards other dates, short bills changed hands at $4\frac{1}{16}$ per cent., while rates of $4\frac{3}{8}$ and $4\frac{1}{2}$ per cent. were quoted for four and six months' bills respectively.

	July 30, 1931.	Aug. 6, 1931.	Aug. 13, 1931.	Aug. 20, 1931.	Previous Rate and Date Changed.

While the market is still awaiting political developments, in some respects a better tone is noticeable. The exchanges have been steadier, and even the Swiss rate is at last moving in favour of sterling. The Bank, too, has gained £1.6 millions of gold, raising the Issue Department's holding to £133.6 millions. This increase was mainly due to the receipt of £1,000,000 in sovereigns from Australia at the end of last week, but a further £200,000 in sovereigns were received from abroad on Monday, while later in the week £350,000 in sovereigns was released from earmark. Of the Cape gold on offer in the market on Tuesday, £540,000 was bought on Dutch account, and the remaining £330,000 by an unknown buyer. The price paid was 84s. 11 $\frac{3}{4}$ d. per ounce. It is believed that there is a direct connection between the foreign purchases of bar gold in the market, and the release of sovereigns to the Bank, and that what is happening is that in order to avoid any addition to their gold holdings, certain foreign interests are offsetting purchases of bar gold by disposals of sovereigns to the Bank. The same thing is believed to have happened last week.

The Bank return shows that £5.9 millions of notes have returned from circulation during the week, so that with the Bank's gold acquisitions of £1.6 millions, the Reserve has increased by £7.5 millions. The proportion now stands at 45.8 per cent., but it should be borne in mind that, but for the increase of £15 millions in the fiduciary note issue, the proportion would still be only 33.4 per cent. Other securities have risen by £7.8 millions. It is known in the market that this week the Bank has been making heavy purchases of three months' commercial bills, and this partly explains the prevalent ease in money. Conversely, Government securities have fallen by £5.8 millions, due, it is believed, to sales of Treasury bills maturing on October 28th. These bills were issued at the end of July, and it is known that to ease the uncertain situation at that time they were applied for heavily by the Bank. Hence, now that conditions are more settled, it is natural for the Bank to seek to transfer part of this load to the market. Other deposits have risen by £5.2 millions. This item comprises so many diverse accounts that it is impossible to trace the origin of this movement.

It is not easy to forecast even the immediate outlook, for so much depends upon the decisions reached by the Government after the discussions now in progress. The market insists that any plan intended to deal with the burden of the National Debt must take into account the probable attitude of foreign holders, and that the most essential need is to restore and not impair foreign confidence in London. Already it has been suggested that both the recent weakness of sterling and the decline of War Loan prices is due in part to foreign sales inspired by various unfavourable rumours. It is also urged that, while

it is necessary to bring home to the electorate of the country the need for resolute action, it is equally necessary to make it clear abroad that Great Britain still possesses immense reserves and that there is no real danger to sterling.

Apart from this, it seems reasonable to expect that the bulk of the holiday notes have returned from circulation, and there is little disposition in the market, notwithstanding this week's weaker tendency in rates, to look for a reduction in the Bank rate until the situation has become clearer. The special arrangements for the renewal of maturing German bills will obviously have to be continued. The extent to which the Bank's credits have been used is naturally not known. In view of the general steadiness, and of the suggestion of the return of foreign money, it is possible that little or no additional use has been made of them this week.

New York reports unsettled conditions. The report of the Basle Committee on German credits had a favourable effect, but some disturbance was caused by four important bank suspensions in Toledo, Ohio, affecting resources of \$100,000,000, followed by the news of the closing of the United States National Bank of Los Angeles with eight branches and total deposits of \$13,000,000. Considerable interest has been aroused by an announcement in the Federal Reserve Board's monthly statement to the effect that deposits held by foreign banks at the Federal Reserve Banks rose in July from \$6 millions to \$114 millions. This is attributed to heavy liquidation of dollar bills and securities by the Banque de France, and the effects of this liquidation have also been noticed in the money market. Still, in spite of suggestions of a slightly greater stringency, call money remains at $1\frac{1}{2}$ per cent., and commercial paper at $1\frac{1}{2}$ to 2 per cent. for prime names. Open market rates for 90-day bank bills were also unchanged at $1\frac{1}{8}$ per cent.

With the gradual easing of the international political and financial situation, the foreign exchange market was quieter again this week, and no wide fluctuations were recorded. New York went in our favour to 4.85 $\frac{1}{2}$, but Montreal moved fractionally against us to 4.87 $\frac{1}{2}$. Paris closed a little below the highest at 123.95, a gain of one point on the week. Brussels, after being higher, closed at 34.86 $\frac{1}{2}$. Milan was inclined to be weak, and lost two points on balance at 92.88. Madrid although erratic, showed an improving tendency, and went to 54.85, against 56.35 last week. Amsterdam improved by $\frac{3}{4}$ to 12.04 $\frac{1}{2}$. Berlin gained three points at 20.52. Switzerland moved sharply in our favour to 24.98 $\frac{1}{2}$. Of the Scandinavian exchanges, Stockholm was rather weak at 18.15 $\frac{1}{2}$, Oslo lost $\frac{1}{2}$ at 18.16 $\frac{1}{2}$, and Copenhagen fell away sharply from 18.16 $\frac{1}{2}$ to 18.17 $\frac{1}{2}$. The South American currencies were weak and uncertain, Rio, after frequent fluctuations, losing $\frac{1}{4}$ d. at 31 $\frac{1}{2}$ d., Buenos Aires declining from 32 $\frac{1}{2}$ d. to 31 $\frac{1}{2}$ d., and Montevideo from 23 $\frac{1}{2}$ d. to 21 $\frac{1}{2}$ d. In the Far East the rupee was firm and unchanged at 1s. 5 $\frac{3}{4}$ d., and the yen was better by $\frac{1}{4}$ d. at 2s. 0 $\frac{3}{4}$ d. Batavia lost $\frac{1}{2}$ at 12.07. In the forward market one month's dollars were unchanged at $\frac{3}{4}$ cent premium, but three months' were $\frac{1}{8}$ cent lower at $1\frac{1}{8}$ cents premium. Forward Paris weakened by 5 centimes to 15 centimes premium for one month and by 10 centimes to 40 centimes premium for three months. Brussels was firmer at 6 and 10 centimes premium, as was Milan at 10 and 85 centesimi discount. Madrid was at one peseta discount for one month, and 2 pesetas discount for three. Amsterdam improved by $\frac{1}{4}$ for both periods to 2 and 4 cents premium. Berlin is still unquotable, and so far as can be traced no transactions were put through in forward reichsmarks. Switzerland hardened up to 4 and 8 centimes premium against 2 and 4 centimes last week. The silver market was almost completely idle, and prices for both cash and forward improved by $\frac{1}{4}$ d. to 121 $\frac{1}{2}$ d. for both deliveries as a result of a small bear covering movement. The China silver exchanges were also quiet, Hong-kong and Shanghai both remaining at last week's levels of 11 $\frac{1}{2}$ d. and 1s. 2 $\frac{1}{2}$ d. respectively.

THE BRITISH "CRISIS."

AFTER a week of prolonged sessions of the Economy Committee of Ministers, and finally of the full Cabinet, followed by consultations between the Government and the leaders of the two Oppositions, and culminating, on Thursday, in a conference between the Economy Committee, the General Council of the Trade Union Congress and the Labour Party Executive, we go to press without knowledge of the definite shape which the Government's plans for meeting the present and prospective financial difficulties of the country will finally take. Before these lines are read, details of the programme whose contents rumour has so assiduously and variously forecast may well be public property. We do not propose to add any contribution to the fabric of guesswork.

In any attempt, however, to appraise the merits of a policy propounded as a solution to a problem it is important that the precise character of the problem itself should be correctly appreciated. In the hope, therefore, that we may thereby assist our readers to make up their minds about such plans as Mr MacDonald may shortly disclose, we propose briefly to recapitulate what appear to us to be the essential factors in the domestic, as opposed to the international, situation with which His Majesty's Government have been confronted during the present month. In the first place, to ensure that our power for political leadership internationally should be maintained through the critical days still ahead, it was essential that all doubts should be allayed as to our ability to hold firmly to the gold standard, notwithstanding the strain placed, to the gold standard, notwithstanding the strain placed, directly and indirectly, on London by the Central European crisis. The position was admirably summed up by Mr Alexander Shaw, in a speech delivered at Glasgow on August 18th. "People abroad," he said, "know the great inherent strength of the British financial position; but they know also that it is being sapped because Britain is for the present living far beyond her income. . . . It is only because the enormous strength of that long-term position is obscured by our unbalanced Budget that there are any nervous apprehensions anywhere. Britain is like a millionaire temporarily left short of cash, and unable to pay his taxi fare. Anybody will be ready to lend him his fare and put matters right with the taxi-driver—unless it is notorious that he is living at a rate far beyond even his ample means." It might have been a more complete analogy to say that the millionaire in question has to pay not only his own fare but that of his friends who have been riding with him in the taxi. Moreover, there is no real doubt anywhere as to Britain's ability to pay her debts, for the debts due to her are so much greater than those that she owes. But if foreign balances are to remain here, then it must be certain beyond a shadow of doubt that they will be repaid in money of the same value as that which was lent.

The most convincing assurance that can be given on this point is to carry out the repeated declaration of the Government that it is determined to balance the Budget. But therein lies the difficulty, and, to speak plainly, in so far as concerns Government policy, factors contributory to a certain measure of apprehension abroad, whose existence it would be idle to deny, were (a) the attention focussed, first, by the Interim Report on the Royal Commission and, next, by the May Report on the recognition that the 1931-32 budget must inevitably end with a real excess of expenditure (including Unemployment Fund borrowings) over income, apart from failing to amortise any debt; and (c) the possibility that fears of discriminatory taxation imposed by a Labour Government to meet the serious problem of the 1932-33 budget might lead, as the end of the financial year approached, to a domestic flight of capital into foreign securities. Though the May Committee may have painted the picture in unduly sombre tones, and though it is well to bear in mind that it is a long step from one or two British budget

deficits to depreciation of sterling, there will be common consent that psychological, as much as financial, considerations demanded that the world should receive a convincing demonstration that not only our present, but all our future budgets would be balanced with traditional rectitude.

In the second place, it was of supreme importance, both in our own interests and from the standpoint of foreign opinion of our prospects, not only that every extravagance in "dole" and other expenditure should be eliminated, but that it should be made clear that, while the emergency might demand "equality of sacrifice" from all, the objective of the Government would be the conservation, so far as possible, for productive purposes of the resources of the taxpaying citizen, and not merely the technical achievement of a budget balance by the imposition of new burdens, regardless of their possible ultimate economic disadvantages. And, finally, it was of equal importance that the Government should recognise the cogency of the thesis, expounded more than once in these columns, emphasised by Mr Loveday, Sir Arthur Salter and other authorities, and underlined once more this week by Mr R. H. Brand in a letter to the *Times*—that, apart from immediate causes arising out of the European crisis, an influence affecting adversely our balance of trade and the sterling exchange has long been the disproportionate level of our costs of production in terms of gold. To quote Mr Brand:—

"Usually in such circumstances in the past we should have corrected underlying conditions by a rise in the Bank rate and a restriction of credit leading to a reduction in money incomes—i.e., salaries and wages—and therefore in costs. Exports would then have increased and imports decreased in consequence. But money incomes are now rigid and Bank rate is impotent to produce these results. Moreover the position is complicated by our huge National Debt. Therefore, in the main, the only alternatives are to achieve the necessary reduction in money incomes, either involuntarily by a depreciation of the currency or voluntarily by a sort of national compact by all classes. . . . Nothing but a really comprehensive scheme will now serve our purpose."

That is to say, an essential desideratum in the Government's policy was that it should be framed, not merely to meet the immediate need of allaying the *crise de confiance*, but to promote the solution of Britain's underlying difficulties in the export trades, on which the maintenance of our standard of life ultimately depends.

It is in the light of all these considerations, we suggest, that Mr MacDonald's programme must be judged. We agree entirely with Mr Brand that the achievement of a balanced budget is not of itself sufficient to solve the whole problem, which must be attacked on several fronts at once. The world price level has so fallen, and its recovery has so clearly been postponed by the international crisis of the last few months and by the magnitude of the over-production which has resulted from mistaken schemes for bolstering up prices, that Great Britain is inevitably driven to make a rapid effort to reduce her own price level. We had hoped that we might have met the situation by the slow process of improving the efficiency of our methods of production; we can no longer expect to meet the serious international emergency in this way. An "emergency" tariff, while it might temporarily encourage a feeling of optimism, would only delay and make more difficult the inevitable process of adjustment.

We are confident that if the situation is frankly explained to the nation, they will respond to an appeal to make a readjustment all along the line in prices, salaries and wages. The Government's policy, if it is to be effective, must strengthen our economic position; and that result will not be attained unless, firstly, retrenchment—not increased taxation—is made the primary objective in balancing the budget and, secondly, the task of meeting the needs of the Exchequer is made to fit into a wider scheme for promoting by common effort the national well-being.

THE REPORT OF THE BASLE COMMITTEE.

At first sight it might appear that the net result of the Basle Conference (the Report of which we publish in full this week as a supplement to the *Economist*), like that of the London Conference, has been purely negative. Those, at all events, who hoped that the Committee would evolve a definite plan for a long-term loan for Germany which would enable part of her short-term debt to be consolidated, and would replace some of the capital that has been withdrawn in the last few months, have been disappointed. A closer study of the Report, however, shows that a definite result has been achieved, and that the task of re-establishing the position of Germany on a sound basis has been carried a step farther forward. Practical effect has been given to the proposal of the London Conference that arrangements should be made for continuing the short-term credits already accorded to Germany; the facts regarding Germany's short and long term obligations abroad have been analysed, and are set out in the Report; while finally, and perhaps most important of all, the steps that need to be taken before any long-term loan can be granted to Germany have been clearly set out.

As regards the prolongation of existing credits, the invitation to representatives of each of the banking groups concerned to meet in Basle made it possible, after a few days' discussion with the representatives of German banks, to arrive at an agreement as to the principles on which the prolongation should be made, and there will shortly be available a standard form of agreement to be entered into between creditors and debtors. The scheme provides that the prolongation will be for six months, subject to the renewal of the Central Bank credit of \$100 millions which was accorded to Germany in July. It is not good central banking practice to tie up large resources in a form that cannot be at once realised, and neither the Bank of France nor the Federal Reserve Bank of New York is permitted by statute to make advances for more than three months. But, on the other hand, bankers who had made advances to German concerns in a form which they also regarded as realisable at short notice were naturally unwilling to enter into a six months' "standstill" arrangement if it seemed likely that the first use that would be made of any margin of foreign exchange which the Reichsbank might obtain would be used to reimburse to the Central Banks a credit which had become necessary because other short-term creditors of Germany had succeeded in withdrawing their credits from Germany before the leakage was blocked. While there can be no binding undertaking on the part of the Central Banks concerned, it may be assumed that, before Dr. Luther concurred in the acceptance by the German banks of the general undertaking, he had received such reasonable assurances as it was possible to obtain that the Central Bank credit would not be withdrawn. The agreement also affords two additional forms of security to creditors. One is to associate a direct responsibility on the part of the individual or firm in Germany to whom the credit has finally been made with that of the debtor bank itself. The other is to secure the guarantee of the Deutsche Golddiskontbank for a certain proportion of the credits.

The amount of credits of German banks outstanding in the middle of July was 5.1 milliard marks. An analysis of the returns covering about 85 per cent. of this total shows that 54½ per cent. consisted of acceptance liabilities, 28½ per cent. of deposits and other liabilities payable in foreign currencies, and 17 per cent. of the Reichsmark balances of foreign creditors. The six months' agreement applies, without qualification, to the first two items. As to the third item, there would clearly be a discrimination against foreign creditors if they were unable to transfer Reichsmark balances within Germany, while Germans were allowed freely to transfer their balances; and in part these balances have been left in Germany to meet debts, payment for goods purchased, for example, falling due in Germany. It is true that if such transfer were allowed the sums in question would escape from the "standstill" arrangement, and, would no doubt frequently involve a

call for foreign exchange. As a compromise between the difficulties of the two parties, it has been agreed that 25 per cent. of these balances (the aggregate for all banks probably amounts to 800 million marks), will become transferable in Germany at once, and that the rest will be released at the rate of 15 per cent. a month. In case, however, this release might become too great a strain on the Reichsbank's foreign resources, it is agreed that the monthly transfers may be suspended if the Reichsbank notifies to the B.I.S. that its exchange resources are becoming endangered.

Any disputes regarding the agreement, which, of course, is subject to the approval of the bank groups concerned, are to be submitted to a Committee to be set up by the B.I.S. for adjudication. The agreement does not apply to the affiliations abroad of German banks, nor does it cover the short-term debts of municipalities, which amount to 355 milliard marks, but it is suggested in the Report that these should at once be made the subject of discussion between the interested parties.

This scheme should substantially give to Germany six months' relief, and at the end of that period, even in the absence of a long-term loan, the situation could be kept in hand by normal methods and the present clog in the wheels of ordinary commercial practice be gradually removed if general confidence in Germany had meanwhile been restored. The Committee go further and express the opinion that the relending to Germany of part of the capital that had been withdrawn would present no serious difficulties if this condition is fulfilled. It is clearly, suggested in the Report that the piling of debt by Germany has reached very large dimensions, and is a source of weakness which becomes a very serious danger if a large part of this debt is withdrawable at short notice. It is, however, evident that much the largest cause of the increase in this debt is reparation payment. While the net indebtedness of Germany has grown in seven years by 18.2 milliards, she had had to make payments on account of reparations during the same period of 10.3 milliards. If reparation payments were very substantially reduced, the fear of Germany continuing to pile up external debts in a snowball fashion would largely disappear.

The Committee, therefore, point out that the two preliminary conditions required before Germany's position can be definitely stabilised are that the political relations between Germany and her neighbours, which have been so disturbing to confidence during the last twelve months, must be put on a more satisfactory footing, and secondly that "the international payments to be made by Germany will not be such as to imperil the maintenance of her financial stability." The Committee do not explain precisely what they mean by this nor suggest either by implication or otherwise any fresh figure as the amount of reparations which Germany can safely be asked to pay; but they make it quite clear that, in their opinion, it is urgent that the matter should be dealt with before the six months' grace is up.

If these matters can be settled satisfactorily, the Committee is of opinion that further capital can be found for Germany. The growth of her exports has shown that her competitive position is strong, and though her public finances—and in particular those of the states and municipalities—have been the subject of criticism, and much still remains to be done in this respect, the present Government have proved their determination to effect drastic economies. The key to the situation, therefore, clearly lies with the politicians, who can hardly ignore the representations unanimously submitted to them by the accredited nominees of the chief central banks of the world. Nor is the matter one which concerns Germany alone. The Committee speak of the recent crisis as a shock which has caused partial paralysis in one of the chief members of the world's economic body. If not cured by restoring the free circulation of money and goods, the paralysis will inevitably extend to other members of the body.

The period of grace is short, but the task is clear. If the Governments fail to carry it out, Europe will be faced with a similar situation to that of last July, but under conditions which will make it far more difficult for the problem to be solved.

COLLIERY AMALGAMATION.

THE Coal Mines Act of 1930 contained a section appointing a Coal Mines Reorganisation Commission "to further the reorganisation of the coal-mining industry . . . and for that purpose to promote and assist, by the preparation of schemes and otherwise, the amalgamation of undertakings consisting of or comprising coal mines where such amalgamations appear to the Commission to be in the national interest." The importance of this section is made very clear by a passage in a speech delivered by the Prime Minister in the debate on the second reading of the 1930 Act, when it was passing through the House of Commons. Mr MacDonald said: "When you have got amalgamations, as we shall have, when royalties are nationalised, as they must be, and without delay, then the conditions which make Part I of this Bill necessary will have completely disappeared. . . . If it is found impossible . . . to carry out to its completeness the scheme for reorganisation, then this scheme (i.e., Part I) will have . . . a very much longer life than will be good for the industry." Part I of the 1930 Act, it will be recalled, regulates sales and imposes a quota scheme upon the industry, and subsequent experience has shown that its operation has not been entirely "good for the industry," or indeed for the consumers of coal. In fact, cases have not been lacking where the operation of the quota has definitely driven customers abroad. In these circumstances, it was high time that some evidence of the progress made towards reorganisation was forthcoming.

Early this month the Reorganisation Commission issued a memorandum which they describe as a preliminary survey of the ground. To those who have been looking for early definite action, such a document may appear to be a very small mouse to be born of the Commission's labours to date. Yet within its admitted limits the document is admirable. It begins with a summary of the Commission's problems. It admits that rationalisation is not so simple in the case of mining as in that of manufacturing industry. At the same time it insists upon the vital need of reducing costs by concentration of productive effort, and argues that consolidation through "large-scale amalgamations" would be of great benefit to the mining industry. It does not shirk the admission that consolidation may (and indeed ought to) mean the closing down of uneconomic pits. On the question of royalties, it also speaks plainly, for it says "if the policy of amalgamation is to reap its full advantages, and the proposal to nationalise royalties is not carried out, it may eventually be found necessary to impose some statutory restraint upon the freedom of royalty owners to dispose of their property as they please."

So much for the introduction to the report. The main body consists of a detailed survey of the British coal-fields, which it divides into six large and six small areas. Here the complexity of the problem at once becomes apparent, for a perusal of the survey leaves behind it a strong impression of the diverse conditions, geological, geographical and economic, amidst which the industry has to operate, and of the wide divergences of prices and costs which exist in the different fields. This last impression is accentuated by the knowledge that the figures which give rise to it are themselves averages of the multifarious experiences of all the pits comprised in each separate field.

A few examples will make this last point clear. Gross proceeds at pit head, which in 1930 were 14s. 2d. for the whole country, ranged from 12s. 3½d. for Northumberland to 17s. 9d. for Bristol. Wage costs, with an average of 9s. 3½d. per ton, ranged from 7s. 0½d. for South Staffordshire to 13s. 1½d. for Bristol. Output per man shift, with an average of 21.62 cwt., ranged from 14.44 cwt. for Bristol to 25.12 cwt. for South Staffordshire, thus confirming the general rule that the greater the output the lower the cost. Profits for the whole country averaged 4½d. per ton, but their range was from a loss of 1s. 7½d. for Cumberland to a profit of 1s. 10½d. for Warwickshire.

INTEREST ALLOWED ON DAILY CREDIT BALANCES.

The broad recommendations of the Commission are bold, for ultimately they favour the creation of the following fourteen large units:—Scotland; South Wales; Northumberland; Durham; West Yorkshire; South Yorkshire; Nottinghamshire and North Derbyshire; Lancashire; North Staffordshire; South Staffordshire; Shropshire; Cannock Chase; Warwickshire; and South Derbyshire and Leicestershire. The six smaller coal fields of the Forest of Dean, Bristol, Somerset, Kent, Cumberland and North Wales are perforce excluded from the main scheme. This proposition is still tentative, and no attempt has yet been made to explore its details, while the Commission realise that it may have to be developed by stages. Yet it is doubtful if many of those who vaguely realised the need for the consolidation of the industry had contemplated the combination of complete coalfields into single industrial units.

This makes it essential to know exactly what the Commission means by large-scale amalgamation. The royalty difficulty could be got over by legislation, for it is intolerable to have the operation of the industry governed by a whole mass of independent leases depending not upon geological boundaries beneath the surface, but upon ownership boundaries above. Far more serious is the fact, which the report perhaps insufficiently emphasises, that coal varies from district to district, and even from pit to pit. In these days of scientific testing and grading of fuel, a shipper, to conform to the terms of his contract, with its highly technical and exact specification, may have to draw upon several pits in the same area to obtain the correct "blend," and this apart from the broad distinctions between house, steam and gas coal, or between bituminous and anthracite fuel. The Commission, however, go on to produce evidence showing the extent to which unification has already been carried out. In South Wales 75 per cent. of the 1930 output was produced from mines owned or controlled by seven undertakings. Four groups in Northumberland, and seven in Durham were responsible for just over half the production of those two fields. A similar concentration of the major part of the output in relatively few hands is noticeable in Yorkshire, and the report also calls attention to the recent amalgamation in Lancashire. Some of this grouping is as yet of recent origin, and possibly has yet to justify itself. Still, these groups provide a practical basis for the wider schemes envisaged by the Commission.

On the other hand, the Commission have given in their introduction some idea of the practical limitations of amalgamation. Combination, they say, may enable "coal to be worked to more convenient shafts, water problems and power supply to be dealt with more rationally, economy to be secured by centralising the coking and other treatment of coal, the supply, design and use of wagons, analysis and grading of coal." Another passage implies that amalgamation will only extend to functions that would properly be performed by the directorate, which, it is added, must not be confused with the functions of technical management. The "unit of direction may for purposes of technical management contain many units, each practically autonomous. The task of the directorate would be to determine where the coal for which there is a demand can best be produced, what further development of the coalfield is required, and how and where it shall be undertaken; to control sales and any other activity that conveniently admits of

centralisation (as, for instance, wagons, research and the treatment of coal); and to regulate the financial position and policy of the undertaking."

This limitation of the functions of control may fall short of what has been envisaged by some advocates of amalgamation, just as the size of the units envisaged by the report may go beyond it. It is satisfactory, however, to find that the Commission realise, on the one hand, that coal mining is a most diversified industry, which cannot be rigidly remodelled, and, on the other hand, that the ultimate objectives of reorganisation are to be sought on the broadest lines of large-scale planning.

BRITAIN'S OVERSEAS ASSETS.

THE reference* in the *Economist* a fortnight ago to the importance, in the present crisis, of Great Britain's holding of long-term investments abroad brought us a budget of inquiries from readers anxious to know what in fact is the present value of those assets. When a Chancellor of the Exchequer hints, as Mr Snowden did a few days ago, at the possibility of realising some of these resources in support of the pound sterling, it is indeed pertinent to inquire closely into their worth and liquidity. To attempt a meticulously exact analysis would be far too formidable a task to be accomplished in the space of a few days, even if the material were available; but the *Economist* has been able to base an estimate of the present value of our long-term holdings abroad on the figures of their nominal value, which were published in these columns last year.† We reprint below a table showing the geographical distribution of those holdings in so far as they were traceable.

TABLE I.—NOMINAL VALUE OF CAPITAL ABROAD.

a Excluding Ceylon. b Excluding Ceylon Government and corporation loans. c Including Egypt. d Including Egyptian Government and corporation loans. e Not Egypt. f Not Egyptian Government and corporation loans.

Our investigation a year ago led us to believe that the full total of the nominal value reached the neighbourhood of £4,000 millions.

The new estimate has been constructed from the official quotations for several hundred securities listed on the London Stock Exchange. In most cases the mean price for the last week in July was taken, but where there was no quotation in that week, an approximate figure, usually just above the lowest for the year, had to be used. Securities totalling one half of our aggregate long-term commercial capital abroad, and all but a negligible fraction of our investments in Governments and Corporations, were covered by the inquiry, the results of which are shown in the following table:—

TABLE II.—PRESENT VALUE OF OUR CAPITAL ABROAD.

Total, commercial	1,139	954	797	587
Grand total (round figures)...	1,140	950	2,200	1,660

Before we proceed to draw deductions from these figures we must emphasise that the relation between the columns showing the present value and those showing the nominal amount that was held in this country in 1929 in no way represents the depreciation or appreciation over any particular period of time. The Government stocks, for instance, may never have been worth their nominal value, as a much greater proportion was issued at a discount than at a premium. On the other hand, many shares, especially in the industrial, mining, rubber and tea groups, have been issued, or acquired by British residents, at a substantial premium over their nominal value.

The figure for the present value of mining shares is based much more on guesswork than are any of the others. Comparatively few mining securities are given an official quotation, and the sample available, which actually showed a present value over half as great again as the nominal value, amounted to only one-fifth of the total British holding in this group. A similar criticism applies to the iron and steel group, while the figure for commercial and industrial shares has also been somewhat arbitrarily adjusted downward. Indeed, it is a fair criticism of the whole table, as far as non-governmental securities are concerned, that the stocks and shares for which quotations are recorded in the Stock Exchange Official Intelligence do not form a fair sample of the measurement of average value. They are unduly weighted with the securities of the larger and more prosperous companies. Hence our estimate of the average relation of present to nominal value may be too high. But, as a matter of judgment, the error in the aggregates seems unlikely to exceed five per cent. If we accept the proportions in the table, and apply them to the £660 millions of capital omitted for reasons which were explained in our series of articles last year, it appears that the £4,000 millions (nominal) of British long-term investments abroad had a value, at end-of-July prices, of about £3,140 millions.

This statement requires obvious, and important, qualifications. In the first place, if an attempt were made to dispose of any considerable proportion of the total the price would inevitably be driven down. In the second place, for perhaps one-third of the total the market is extremely restricted and practically confined to this country. On the other hand, to measure the value of so large a portion of the world's total capital by reference to the distress prices prevailing at the moment clearly conveys no conception of its real worth. Nor is it to be imagined that any large fraction of it would be disposed of in present circumstances. At the moment the

marketability of the various groups of securities varied enormously. Most of the Government and Corporation bonds might be expected to find purchasers. We possess some £100 millions or more, in nominal value, of United States securities which could, no doubt, be resold on Wall Street without overwhelming that market, and many of our Canadian holdings, especially in the railways, might also find fresh owners in the same centre. Railways as a whole, however, are too depressed at the moment for their stocks to be readily saleable, though the more amply backed of their fixed interest-bearing securities rank well above those of many Governments, both within the Empire and outside it. Many other industrial debentures have likewise a sound international value, while there is an active world market in mining, oil and public utility shares.

It is plain, therefore, that while a substantial proportion of our capital overseas could only be disposed of with difficulty and at great sacrifice, Great Britain still possesses enormous mobilisable resources which in the event of an extreme crisis might be made available (as a great quantity of them were during the late war) to support our exchange. In spite of the depreciation which the slump has wrought in them, British overseas assets are still far more than sufficient to rule out of the question any such immediate threat to our international exchange position as Germany and other debtor countries have undergone in the past few months.

STATE CAPITALISM IN JUGOSLAVIA.

(BY OUR BELGRADE CORRESPONDENT.)

A RECENT measure of the Yugoslav Government, namely, the introduction of a State monopoly for the export and import of wheat, wheat flour and rye, must be considered as the logical outcome of the economic policy inaugurated by it under the pressure of both internal and external circumstances. Two and a half years ago, when the Government came into power, industry had sufficiently recovered from the upheavals of inflation and deflation to look after itself. Agriculture, however, was still floundering in a morass of debts, some incurred during the period of reconstruction and some rashly during the period of boom. Private debts of about 3,000 million dinars (£11,000,000), at an average rate of 24-30 per cent. interest, were hard to bear for a semi-primitive industry, even without the international slump in prices. The slump brought it to the verge of catastrophe. Debts were merely postponed at usurious rates, arrears of taxation accumulated, land improvement became increasingly difficult. The peasants reduced their purchases from towns to a minimum, and trade, industry and the State began alike to suffer.

The peasants required help, but were hardly able to offer it themselves, unschooled by tradition and incapable of concerted action because of the scattered nature of the industry itself. Private initiative, usury and speculation were only pushing them further down the slope. The co-operatives, although doing splendid work, lacked the power or funds for such a big task. It was to the State, therefore, that the peasants looked for assistance, not merely because of its greater power, but also because of its centralised position and the new responsibilities it had assumed.

Faced by the possible breakdown of the chief national industry and by consequent social discontent, the State was obliged to act, and its action took an interesting form. It resulted in the creation of a number of semi-state institutions of a capitalist character in which the State joined with private enterprise, but in the rôle of chief shareholder and supreme controller. These institutions are the Privileged Agrarian Mortgage Bank, the Privileged Export Society, and the Privileged Company for Silos and

Warehouses. The first of these, during its existence of a year and a half, has lent out to peasants nearly 1,000 million dinars at a rate of 8 per cent. to 10 per cent., which has not merely enabled the peasants to convert part of their previous loans, but has also helped to lower considerably the general rate at which peasants can obtain money. The second, favoured by larger capital, special freights and better foreign service, has successfully combated speculation by offering the peasant the full international price, and is now to act as State agent in the wheat export monopoly. The third, which has not started working as yet, will issue warrants and lombard loans on agricultural goods deposited for export.

In internal management, which is independent, all these institutions are modelled on private capitalist undertakings. They differ from ordinary capitalist enterprises, however, by their avowed intention of serving primarily a national need with a minimum gain, instead of aiming at the maximum profit. As such, all these institutions offer special privileges to the co-operatives in dealing with them, and thus further an economic form which it is the intention of the State to make the chief pillar of agriculture. On the other hand, the State guarantees as a safeguard to the private investor a minimum dividend of 6 per cent.

What will be the future of this policy and of these institutions? The advantages to the Government are obvious. Even if it should run these services without profit (and, at any rate, with the Agrarian Bank, it does not), it has obtained money for the furtherance of its own economic policy at a rate cheaper than it could have obtained it by means of an internal or external loan. The small investor, again, who prefers safety to speculation, is willing to invest, since he cannot obtain more than 5-6 per cent. at the banks, and there savings deposits are still growing and have passed 14,000 million dinars (£51,000,000). Further, the Government is bound to its policy, since, at the present time of wheat pools, international cartels and combines, competition is growing increasingly difficult, and there would be no one to take its place if it were to withdraw. The only possible body, the co-operatives, are neither strong enough nor yet ready. Further, there is in the country, among all shades of political opinion, a tradition of State service fostered by the State ownership of transport, post, monopolies and various other undertakings. Thus, whatever this last reason may be worth under other circumstances and in other countries, in Yugoslavia it is a potent factor, and State capitalism connected with agriculture is likely not only to stay, but even to extend further and further.

THE DIRECTION OF OVERSEAS TRADE.

THE Trade and Navigation Returns for July contain the usual analysis, by countries of origin and destination, of our overseas trade during the first half of this year. As for many months back, any account of the changes in the direction of our trade which these figures reveal resolves itself into a melancholy allocation of greater or less decreases. Broadly speaking, the tendency since the onset of the slump has been for our trade with foreign countries outside Europe to suffer most and that with European countries to suffer least. The latest figures show that this tendency has been maintained: our imports during the first half of this year, at £417,874,000, were, roughly, 23 per cent. below last year's level, but while imports from foreign countries outside Europe declined by 31 per cent., those from foreign European countries and British countries declined by 17½ and 21 per cent. respectively. Similarly, the average decline in exports, which fell to £199,156,000, was 34½ per cent.; but while exports to Europe only fell by 29 per cent., those to other foreign countries and to the Empire fell by 41½ and 36 per cent. respectively.

* See *Economist*, August 8, 1931, p. 258.

† See *Economist*, October 25, 1930, p. 750.

Our trade with European countries, other than the Irish Free State, is shown below:—

* Including dependencies.

Imports from Russia and Hungary increased, and those from Czechoslovakia were almost maintained. Less than the average fall for European countries was shown by imports from Germany, Denmark, Switzerland and Italy, but our purchases from Sweden, Norway, Belgium, and France declined very severely. Exports to all European countries except Russia were lower. Among our most important customers the smallest relative declines were shown by Denmark and France. Exports to Germany, the Netherlands, Belgium, Spain and Italy fell more than the average.

Both imports from and exports to foreign non-European countries, shown in the second table, declined with particular severity:—

* Including dependencies.

Our purchases from Egypt, Persia, the United States, Chile and Brazil were heavily curtailed, those from China and Japan were slightly better maintained, and purchases from the Argentine, though down by £5 millions, were still above the pre-war level. Exports to this group of countries show a fall of 41½ per cent., and in the cases of the United States, Chile and Brazil the reduction is considerably greater than that. Indeed, the decline in our exports to the United States, both relatively and absolutely, is

one of the most disturbing developments revealed by these statistics. Exports to Egypt, China and the Argentine, though substantially reduced, fell less than the average for this group.

The next table shows our trade with the principal countries of the British Empire:—

Imports from Ireland, Australia and the West Indies have fallen least; there has been a distressing decline in our imports from Canada, and an acceleration of the decline already in progress last year in our purchases from India and Ceylon. Our exports to British countries have fallen by more than one-third, and, while the decline in all cases is severe, it is relatively greatest in exports to West Africa, India, Australia and New Zealand. Exports to the Irish Free State, South Africa and Canada have fallen somewhat less than the average.

Re-exports to the principal countries are shown in the last table:—

EXPORTS OF IMPORTED PRODUCE.

* Including dependencies.

Here also there has been a very substantial decline, even though the 1930 figures had already fallen to a level far below that of 1913, and the decline substantially affected all the countries shown in the table.

If any permanent developments are at work in the geographical distribution of our trade, it is as difficult to discern them from statistics dominated by an overwhelming long-term population trend of a nation from statistics covering a period of plague. Most of the more marked changes recorded above can be directly traced to such temporary causes as the disproportionate fall in raw materials and food prices relatively to those of manufactured goods; the Australian financial situation; the reparations difficulties; and the peculiar situation of the markets in certain commodities which dominate the trade of particular countries.

SPAIN AND CATALONIA.

(BY A CORRESPONDENT.)

THE Catalan is the Little Jack Horner of Europe. He combines with a prodigious appetite and a remarkable capacity a self-sufficiency only to be compared with that of a precocious child. He has "always been there first." The proclamation of the Catalan Republic at one p.m. on April 14th, several hours before Spain itself became a Republic, was, therefore, entirely in character. All praise is due to Colonel Macia and his associates for the realist policy which they have pursued in the sequel; but no assessment of the Catalan problem in Spain's new life is complete which does not take into account this factor of the Catalans' "superiority-complex" and, above all, its effect on the other peoples of the peninsula.

The foreign observer, familiar with the previous history of Spain's Catalan problem, may well stand amazed at the moderation which has been shown both by the Government of the *Generalitat* and by the Central Government in Madrid. Below the surface, however, forces are stirring which may yet throw the whole provisional settlement in the melting-pot. It is not merely that the "official" dispute between Madrid and Barcelona with regard to labour control is as far from solution as ever. The Socialist Ministers, who are unlikely to remain in the Cabinet when once the new Constitution is in force, cannot afford to lose their opportunity of smashing the Syndicalist organisation once and for all. Colonel Macia, on the other hand, must keep his pledge to the powerful *Sindicato Unico*, or the turbulent element in Catalonia will stir up such a campaign of violence and sabotage as will wreck all hopes of a political settlement with Madrid. There are now as many possibilities of mischief in Barcelona as at any time since the Dictatorship. Catalan employers, moreover, as in the past, will be found to be secretly supporting the Syndicalists because they are definitely scared at the immense power wielded by the (Socialist) General Union of Workers.

Apart from this immediate issue, which is fundamental, it is probably not realised in England how much friction has been generated among the general public by the divergent interpretations of the Pact of San Sebastian. Your Catalan takes it for granted that this compact of the united Republican parties working for the overthrow of the Monarchy provided specifically for an autonomous Catalonia. Thus, as he interprets it, after the *de facto* establishment of a Federal Republic, a Statute was to be drawn up, approved by a plebiscite in Catalonia and then submitted for ratification by the Cortes (the alteration of the constitution not being so much as natives of rejection or modification not being so much as considered). The other view, which is held widely throughout the rest of Spain, excludes any measure of "autonomy" which is not expressly conceded by the sovereign Cortes. It is really the selfsame psychological conflict that divides the educated Indian thinking all the time in terms of equality of status and the Englishman who, while perfectly willing to meet Indian aspiration, insists that self-government must be conceded by Parliament in London.

As early as April 29th, the Provisional Government published decrees providing that in the schools of the Region under the jurisdiction of the *Generalitat* instruction should be exclusively in Catalan for children up to the age of eight years, with, in addition, a class in Spanish for those above that age. Catalan was also made official equally with Castilian in courts of law. On the face of it this looks to be a satisfactory and common-sense arrangement. Yet at once there was an outcry in the Madrid and the provincial Press, and the dissatisfaction was only appeased by an unequivocal declaration from Don Miguel Maura, Minister of the Interior, that "the faculties, rights and functions of the central Power cannot be delegated, renounced or transmitted, neither at the present nor at any other time."

If the Catalan problem were only a matter of soothing the susceptibilities of a region with marked spiritual and cultural characteristics of its own, the profuse testimonies of goodwill by the Provisional Government should have gone a long way to solve it. Unfortunately every step

taken in this direction is apt to stimulate an equivalent amount of resistance in other parts of the country. Even the measure of indulgence extended to "these Catalans" in the first flush of Republican enthusiasm could hardly be expected to survive Colonel Macia's interpretation of the agreed formula for the interim regime:—"Catalans have deprived themselves for a short time of a modicum of that sovereignty which is theirs by right . . . if the fruits of our plebiscite are denied to us we will fight to the death to achieve our aspirations to freedom."

That non-Catalan opinion has been turned more and more against the idea of Catalonia as an "autonomous State within the Spanish Republic" is the lesson of the last two months. There is the renewed commercial boycott, which, although it does not amount to much at present, is liable to be extended at the first hint of Catalan "direct action." There was the intense resentment aroused by the gesture of the Catalan Deputies to the Cortes, who refused to join in the vote of confidence recently accorded to the Government. And, finally, there was the danger-signal which compelled Colonel Macia to desist from his intention to come to Madrid in person to commend the Statute of the Catalan Provinces to the Cortes.

A significant indication of the trend of opinion on the other side is the fact that, when the draft of Spain's new constitution was issued, considerable sections of Catalonia affected to believe that this document did not apply at all to the region. For integral Catalanists, we should remember, scout with disdain any suggestion that the Catalan question should be treated as one of internal organisation. Their idea is that the "sovereign independent" region must be recognised *de jure* as a separate entity free to choose its future destiny. It might, that is to say, condescend to enter a Spanish Federation; on the other hand, it might, in theory, prefer to attach itself to France.

The notion of "the Ireland of Spain" offering itself to the highest bidder is scarcely dignified: to any one with a sense of political realism (*vide* Catalonia's entire business interests) it is laughable. But this "all or nothing" attitude is an important factor in the whole problem. It is also, incidentally, unmistakable evidence of that very Spanishness which the patriotic Catalan seeks to deny. Herein lies the psychological difficulty of any system of dyarchy carefully distinguished between "reserved" and "transferred" subjects, such as we have known in India during the last twelve years, and such as is adumbrated in the moderate-enough constitutional demands of the *Generalitat*.

The Catalans are proud, and justly so, of their ancient tradition of independence, which they date from the reign of Charlemagne. Barcelona, in particular, boasts of its municipal charter of self-government which translated itself into the institution of a *Cortes*, or elective assembly, a century or more before the establishment of Parliament in England. Its power must have been real enough, too, seeing that Jaime el Conquistador, Catalonia's most famous king, was hauled before these worthy burghers to be admonished for cutting out the Bishop of Gerona's tongue. During the last hundred years the yeast of European "nationalism" has been steadily working on the native substance, with the result that the Catalan people as a whole has taken on all the attributes of a persecuted minority—during the dictatorship of General Primo de Rivera with some reason.

Consequently, while a liberal interpretation of the "social prerogatives to be extended to regions desiring them" (to quote the Committee's Report on the draft Constitution) may be expected to satisfy the aspirations of Basques, Galicians and Andalusians, Catalan "nationalism" requires different treatment. It is natural enough that the leaders of a people which has but recently emerged from the throes of a revolution should favour a Constitution embodying the unitary rather than the federal principle. The French model, moreover, is consecrated by four centuries of tradition. Here is a case, however, when discretion is emphatically not the better part. The *Cortes* must have the courage to strike out boldly on federal lines, with the examples of Switzerland and Germany rather than France in mind. Not otherwise will the new Spanish Republic be able to clear the Catalan hurdle.

Notes of the Week.

Franco-German Relations.—Dr. Brüning's Government have lost no time in taking advantage, in the field of international relations, of that fresh lease of stability which has been given to them by the outcome of the Prussian Referendum. At the end of last week, the German Chancellor sent Monsieur Laval and Monsieur Briand an invitation to pay a personal visit to Berlin, on the precedent of the visits which the German Ministers themselves have paid to London, Paris and Rome, and of the return visit which has been already paid to Berlin by Mr MacDonald and Mr Henderson and has been promised by Signor Mussolini. The French Ministers have promptly accepted this German invitation, but the date has had to be postponed out of consideration for the health of Monsieur Briand, who, like Mr Montagu Norman, has been compelled to recuperate from the strain of the past weeks by going on a complete holiday. The circumstances were explained personally by Monsieur Laval to Dr. Brüning in a telephone conversation, between Paris and Berlin, which the two statesmen held last Sunday. This friendly and informal substitute for "the usual diplomatic channels" is, in itself, a good augury for the future development of Franco-German relations; and it may be no disadvantage that an indisposition—which is certainly genuine, and not "diplomatic"—has made it necessary to postpone the French visit to Berlin until after the next meeting of the League Council at the beginning of September. For the relations between France and Germany are, of course, the crux of the international problem; and while a successful meeting between the heads of these two Governments, *tête-à-tête*, without the presence or mediation of any third party, would be the best proof imaginable that the international situation was improving, it is evident, for the same reason, that this particular meeting is more difficult to carry off successfully than any other. It is difficult because the two great European countries which are the most deeply estranged from one another in sentiment, and the most sharply opposed in policy, are also, for the time being, at the greatest disparity of power as a result of the Versailles Treaty. This disparity makes a *tête-à-tête* meeting a difficult matter for both parties; and the meeting may easily produce more harm than good unless, before it takes place, each party clears up, in its own mind, some searching questions on fundamental points of policy. The French have still to decide whether it is really security or hegemony that they are seeking. Are they willing to treat Germany as an equal of France again, if and when the Germans have once satisfied France that they will accept wholeheartedly a state of affairs in Europe which guarantees French security? Or is French predominance over Germany an end in itself for French statesmanship? On the other side, the Germans have still to decide whether what they want is equality of status with other Powers and that minimum of treaty-revision which is needed in order to make the new Europe tolerable for Germany; or whether they really want a general upheaval—to be produced by Fascist or Communist revolutions or by new international alliances—which will break up the post-war settlement altogether. Here are grave issues on both sides; and on both sides it will require the utmost wisdom and self-control to make the right choice. Even if the French visit to Berlin is postponed till October, there is evidently plenty of mental stocktaking to be done in the interval in both France and Germany.

The Disturbances in Cuba.—The disturbances in Cuba, which came to a head last week, seem to have had the character of an organised insurrection against the Government of President—or General, or Dictator—Machado. The fighting has been severe and the casualties numerous; and though the Government claims successes, fighting continues; and insurgents' defeats offers no guarantee that the trouble will not break out again. This may be prophesied for two reasons. In the first place, the discontent against the Machado regime has

been mounting up for some years. In the second place, the United States Government, under President Hoover's administration, has abandoned its former policy in the Caribbean of maintaining its influence over the local republics by refusing to permit the regime of its choice, in this or that Caribbean country, from being overthrown by revolution. As for the causes of discontent in Cuba, we may take it that these do not differ materially from those which are prevalent in other Latin-American countries. In Latin America, politics are highly personal; and the advantages of holding office and the penalties of being in outer darkness are both so considerable that Governments are constantly tempted to repress and oppositions to revolt. In such a situation, disturbances can hardly fail to arise when the normal tension between the "ins" and the "outs" is intensified by the general malaise resulting from a world-wide economic depression. Since the summer of last year there has been a wave of revolution in Latin America through the combined operation of these causes; and Cuba, like so many of her Latin-American neighbours, is particularly susceptible to the effects of the slump inasmuch as her national income depends on the production of one or two staple raw commodities for export. Thus the outbreak in Cuba last week is not at all surprising in itself; but it is interesting as a symptom of that change of policy at Washington which has been mentioned above. This new orientation, which was explicitly affirmed by the Secretary of State, Mr Stimson, a few months ago in a public address, has already been signalled in practice in other Caribbean countries. In Nicaragua, for instance, since 1927, the United States has allowed the so-called Conservative Party, which had previously been kept in office by American marines, to be replaced by the Liberals through a general election which was held in fair conditions under American supervision. In the Dominican Republic, the United States has recently intervened—on the occasion of just such an outbreak as that which occurred in Cuba last week—in order to arrange for a change of regime by agreement. Finally, in Haiti, the United States Government has itself taken the initiative in winding up the Government of President Borno—through whom the Americans had virtually administered Haiti since 1915—and has allowed a regime of an anti-American complexion to take General Borno's place. It remains to be seen in what fashion the Government at Washington will apply this new policy of Liberalism to the present situation in Cuba.

Liveliness on the Irish Border.—During the last few days there have been incidents in the neighbourhood of the border between Northern Ireland and the Free State which have quite an East European flavour. At Cootehill, County Cavan, on the Free State side, on Wednesday, August 12th, railway lines were pulled up, and a band of a couple of hundred young bloods were on the war-path. At Hewitt's Bridge, Rich Hill, County Armagh, last Sunday, another band tore up the rails, awaited the arrival of a goods train, and compelled the driver, at the pistol point, to run his locomotive over the dislocated section of the track. In truth, Ireland is the least un-European of all the blessed overseas countries in its style of conducting politics. Yet "Anglo-Saxon attitudes" are terribly infectious, and the Irish, in spite of themselves, are not quite as other Europeans are. For let us examine and compare more closely. Who was it, for instance, that tore up the tracks on either side? Supposing that these incidents had occurred on either side of the German-Polish frontier or the Yugoslav-Bulgarian, it would have been safe to wager, without hearing the evidence, that the tracks in Germany and Yugoslavia had been torn up respectively by Polish and Bulgarian raiders, and those in Poland and Bulgaria by Germans and Yugoslavs. But what do we find in insular Ireland? We actually find that each party has relieved its feelings by tearing up its own railway tracks and not its neighbours'. The sabotage on the Free State side was apparently the work of Republicans, and the sabotage on the Ulster side the work of Orangemen. And both these alarms were produced for the harmless purpose of preventing excursions. The

Southerners damaged their own railway property at Cootehill in order to prevent the local minority of Orangemen from holding a demonstration in the town; and the Northerners did the like to their own property at Rich Hill in order to prevent the Hibernians of Ulster from holding a demonstration at Armagh. Sure enough, an excursion train which was to have conveyed the Hibernians of Bessbrook and Camlough to Armagh had to be cancelled, and the discomfiture of all would-be Hibernian excursionists to Armagh was completed when the roads as well as the railway leading to the city were blocked by an abbatis of felled trees. How lively, but how pacific! There is an unmistakable family likeness between this Irish exchange of amenities and the recent trial of strength between the Governor of Texas and the Governor of Oklahoma, when the Texan blocked his end of one of the two bridges that span the river which separates the two States; while the Oklahoman blocked his end of the other bridge. Here, on both sides, the State militias were brought into the action without bloodshed, at the sole cost of closing the thoroughfare to all comers in either direction. This over-seas Anglo-Saxon world is undoubtedly the world to which poor Ireland belongs, and, however careful the Irish deputation at Geneva may be to address their colleagues in French, they cannot escape their humdrum destiny. They cannot behave quite like Continentals.

Hungarian Developments.—The news from Hungary is of a conflicting character. Early this week, distinctly encouraging accounts were received. Following the issue of a decree enacting that debts, rates and direct taxes, dealing with the banks, and wages should be payable in terms of a gold pengő (fixed at 0.26,315,789 grams), the Government, under Count Bethlen, put forward a programme, which, by increasing taxation by 100,000,000 pengős, and reducing expenditure by the same amount, bridged the deficit in the Budget. In spite of the new hardships these proposals laid upon the people, they were accepted on Tuesday by the Joint Committee set up by both Houses of Parliament. Meanwhile, Count Bethlen had succeeded at last in relieving the immediate needs of the Exchequer by placing an issue of £5,000,000 Treasury Bonds, the major part of which is believed to have been taken up abroad. The banks had reopened, and the trend of business was described as normal, with fresh deposits in excess of withdrawals. Thus it appeared that the position was improving. At this juncture there came, on Wednesday night, the news of Count Bethlen's resignation, after a period of office of over ten years. It has been accepted by the Regent, and Count Karolyi, the Foreign Minister in the late Government, has been asked to form a new administration. It is not yet clear what interpretation should be placed on this unexpected turn of events, which may be a matter of personal differences between Count Bethlen and the Regent, or the sudden outcome of deeper economic and political forces, both internal and external, acting beneath the surface. For the moment judgment is best reserved.

Mr Montagu Norman.—Last Saturday the Bank of England issued the following statement:—"The Governor of the Bank of England has been indisposed as the result of the exceptional strain to which he has been subjected during recent months. Acting on medical advice, he has had to abandon all work for the present, and has gone abroad for rest and change. He has been assured that a period of complete quiet and entire freedom from work should be sufficient to enable him to resume his full normal duties at the Bank." The City heard this news with regret, but hardly with surprise, in view of the wellnigh intolerable strain to which the pressure of recent events must have subjected the Governor. No one will grudge him his rest, but all will regret both his absence and its cause. All, too, will hope that the City and, indeed, the world at large, will enjoy the benefit of his guidance and advice for many years to come.

French Foreign Trade.—The trade returns of France for July reveal a further set-back in both imports and exports as compared with previous months, while the figures for the first seven months of the year are appreciably below the corresponding results for 1930. The position is summarised below:—

(Fr. milliard.)			
Period.	Imports.	Exports.	Adverse balance.
1930—July	4.12	3.53	0.58
1931—June	3.91	2.51	1.40
July	3.64	2.32	1.32
First seven months—			
1930	30.94	26.18	4.76
1931	26.84	18.65	8.19

The main fact that emerges from these returns is that France's adverse visible balance is twice as big this year as it was last, and it is impossible not to compare this increase with the growing divergence between French internal prices and world prices. An indication of this divergence is found by comparing the relative level of French prices of home-produced and of imported goods. For 1930, home goods stood at 591, and imported goods at 458, 1931 home goods were 29 per cent. the higher. By June, 1931, imported goods had fallen to 365, but home goods only to 539, so that they were 48 per cent. above imported goods. Finally, in July, the two indices were: imported goods 348, and home goods 532, or 53 per cent. above imported goods. Even admitting that part of this divergence may arise from the fact that imported goods are mainly primary materials, which stand at a relatively low price level in all countries, the fact that since 1930 both the adverse trade balance and the price divergence have approximately doubled suggests that there is a definite connection between the two. In other words, it looks as if French gold acquisitions are causing her internal prices to fall less slowly than those of the world at large, and that this growing divergence is reacting unfavourably upon her foreign trade.

More Looms Per Weaver.—At the end of last week, writes our Manchester correspondent, there was a definite forward step in the attempts which have been made to find a solution of the more-looms-per-weaver problem in the Lancashire cotton trade. At the beginning of the month the Cotton Spinners' and Manufacturers' Association sent a communication to the Operative Weavers' Amalgamation inviting representatives to meet them at an early date in order to reopen negotiations. Early this year there was a labour dispute in Lancashire which resulted in a stoppage of work for a month, when the employers brought the dispute to a close and opened their sheds on the old conditions. Since then a special sub-committee of the Manufacturers' Association has been at work with a view to making recommendations that would help to overcome the objections of the leaders of the operatives. It is understood that the employers are now prepared to concede the principle of a minimum wage, the provision of mechanical attachments to ordinary looms, the slowing down of machinery and the help of labourers so as to make it possible for weavers to do nothing else but weaving. The proposals of the employers were considered by the General Council of the Operative Weavers' Amalgamation, and it was decided to submit the question to the District Associations. Replies from these meetings were considered by the General Council at the end of last week, and after discussion the Council decided to give authority to the Central Committee to meet the employers and discuss the question. It is understood that a joint conference will take place in Manchester on Friday next. It is not likely that any important result will be achieved on that occasion, and it is possible that a small sub-committee will be appointed to draw up an agreement which will have to be submitted at a later date to the larger organisations. In Lancashire trade circles there is belief that a settlement of this difficult problem is about to be reached. Until quite recently the operatives have opposed very strongly the more-looms-per-weaver system, but a change in their attitude is now taking place, as the position of the trade unions is being undermined by the

adoption of the new system at isolated sheds in different parts of Lancashire. Responsible leaders of the employers and the workpeople are convinced that it will be an advantage for a definite agreement to be decided upon rather than have varied arrangements at different firms. It has been proved that under the revised system a considerable saving can be effected in the costs of production.

Iron and Steel Production.—The July figures of production, published by the National Federation of Iron and Steel Manufacturers, show a further deterioration in the situation of the iron and steel industry during that month. The output of pig iron, at 317,000 tons, compares with 323,800 tons in June, and is 169,100 below that of July, 1930. Imports of pig iron during July, at 19,700 tons, show a decrease of 8,900 tons on the previous month and one of 4,500 tons as compared with July, 1930. Exports, too, show a decline from 26,500 tons in June to 18,700 tons in July, as against 20,000 in the corresponding month a year ago. The number of furnaces in blast has been reduced from 76 at the end of June to 70 at the end of the past month. Three furnaces have been damped down, four have been blown out, and only one has resumed operations. The output of steel, at 428,700 tons, shows a decrease of only 200 tons on the previous month, but it must be remembered that the number of working days in July exceeded by one that of June. Total exports of iron and steel, at 168,300 tons, show an increase of 5,300 tons as compared with June, while imports, at 231,000 tons, record a decrease of 15,300 tons. Although in quantity imports have been larger than exports since the end of last year, the value of exports is still considerably in excess of that of imported iron and steel. This is explained by the fact that imports consist mainly of cruder materials. Nevertheless, the gap between the value of imports and exports has become continuously narrower, and there are unfortunately as yet no signs of an early improvement in the industry. Figures for the first half-year for the principal steel-producing countries are now available, and are given in the following table, where they are compared with the production of pig iron and steel in the first half of 1930:—

PRODUCTION OF PIG IRON AND STEEL OF THE CHIEF PRODUCING COUNTRIES.
First Half 1930 and 1931.

	Pig Iron.			Steel Ingots and Castings.		
	First Six Months		Decrease % com- pared with 1930.	First Six Months		Decrease % com- pared with 1930.
	1930.	1931.		1930.	1931.	
(In thousands of Tons.)						
United Kingdom	3,720.1	2,006.0	46.1	4,361.7	2,650.1	39.2
U.S.A.	18,261.4	11,105.3	39.2	23,751.7	15,258.6	35.8
Germany	5,505.2	3,291.6	40.2	6,478.8	4,545.0	29.8
France	5,097.2	4,391.5	13.8	4,728.7	4,094.3	13.4
Belgium	1,856.1	1,555.7	16.2	1,850.9	1,486.7	19.7
Luxemburg ...	1,320.9	1,026.2	22.3	1,175.4	996.7	15.2
Total	35,760.9	23,376.3	34.6	42,347.2	29,031.4	31.4

It is interesting to note that the decline is of the same order in the United Kingdom as in the United States and Germany, but the declines are very much less in France, Belgium and Luxemburg.

Employment and the Cost of Living in July.—There was a further increase in unemployment during July. According to the *Ministry of Labour Gazette*, among the workers insured against unemployment in Great Britain and Northern Ireland, the percentage unemployed at July 27th was 22.6 per cent., as compared with 21.8 per cent. at June 22nd and 16.7 per cent. a year ago. It is estimated that at July 27th there were approximately 9,174,100 insured persons in employment in Great Britain. This was 97,000 less than a month before and 549,500 less than a year before. The number of persons registered as

wholly unemployed on July 27th was 1,877,543, as compared with 1,851,421 on June 22nd and 1,226,404 at the end of July, 1930. Those temporarily without work on July 27th numbered 724,690, as compared with 662,141 a month ago and 652,451 a year ago, while of those normally in casual employment 111,117 were unemployed, 2,707 less than a month before, but 17,242 more than a year before. The latest return of the Ministry states that at August 10th the total number of unemployed had risen to 2,714,359, of whom 1,916,813 were wholly unemployed, 686,688 temporarily stopped, and 110,858 usually in casual employment. With regard to the cost of living, the index number of the Ministry of Labour at August 1st stood at 45 per cent. above the level of July, 1914, as compared with 47 per cent. a month ago and 57 per cent. a year ago. The fall of two points in July was mainly due to reductions in the prices of potatoes, the effect of which was partly counterbalanced by advances in the prices of eggs. For food alone the corresponding figures were 28, 30 and 44 per cent. respectively.

Cheaper Atlantic Travel.—Details now available of the reductions in passenger fares being made by the various North Atlantic lines (on east-bound vessels the cuts are already effective, and for west-bound sailings they become operative on October 1st) indicate that the companies have decided to adjust their charges to changed economic conditions and endeavour to stimulate, or at least maintain, traffic by a wise policy of lower prices. Minimum rates for first-class accommodation on the Express Services are reduced by £3 to £5, while the charges for cabins and suites de luxe are much more drastically cut down. Second-class and "tourist-class" fares appear to be maintained more or less at their existing level (subject to certain concessions by way of extending the range of "minimum" rates), but third-class tickets are to be substantially cheaper. The policy of the companies is undoubtedly sound, and it is to be hoped that traffic will respond favourably.

The Five-Day Week.—In the annual report for 1930 of the Chief Inspector of Factories and Workshops (Cmd. 3927), which contains an interesting account of the growth of safety and welfare provisions, and, incidentally, reveals that the trade depression has led to a considerable increase in the working of illegal hours, there is a brief section which reveals that the five-day week is making more progress in British industry than is generally realised. While no industry, as a whole, has adopted the system, individual firms in nearly all the principal industries are practising it. In many industries, where the processes preparatory to the day's work are long and expensive, as, for example, bleaching and dyeing and stereotyping, the half-day's work on Saturday has been found uneconomic; in others, where the works are situated far from any residential district, it is easier to recruit labour when employees are not called upon to make the journey for a few hours' work on Saturday. The system also has advantages where Jews and Gentiles work together. The system appears to be very popular with workers, though, on the whole, it has not involved a reduction of hours below the total which would otherwise have been worked. Analysis of the hours worked shows that in 25 per cent. of the works they are about 45, and in 64 per cent. from 47 to 48. In 48 works they exceed 48, and in 25 they are less than 45. In some cases the consequent extension of the normal working day has involved the firms concerned in the payment of overtime, but in others this has been avoided by agreement with the unions concerned. Reports of the effect on output are distinctly favourable, and employers find several other advantages while employees find the scheme beneficial to their health and very much more satisfactory from the recreational point of view. It is noteworthy that the system is more prevalent in the South and in the newer industries than in the older industrial centres.

Drunkenness in 1930.—The Licensing Statistics for 1930, published by the Home Office (Cmd. 3928), reveal an increase in the numbers of convictions for drunkenness for the first time since 1924. The figures for England and Wales have been as follows:—

TOTAL ANNUAL CONVICTIONS FOR DRUNKENNESS.

	Number.	Per Thousand of Population.		Annual Increase or Decrease.	
		Number.	Per cent.	Number.	Per cent.
1913	188,877	51.16	+ 6.285	+ 3.44	
1918	29,075	7.79	- 17.335	- 37.35	
1920	95,763	25.46	+ 37.815	+ 65.26	
1922	76,347	20.01	- 1.442	- 1.85	
1924	79,082	20.41	+ 1.988	+ 2.58	
1929	51,966	13.12	- 3.676	- 6.61	
1930	53,080	13.40	+ 1.114	+ 2.14	

The increase last year applies to males only, convictions of whom rose by 2.63 per cent., whereas the number of females convicted was 0.39 per cent. less than in 1929. According to the report, the details of the movement were not such as to suggest any outstanding reason for the increase. Comparison with 1913 reveals a remarkable diminution.

A British Trade Ship.—On November 1st, writes a correspondent, there is due to sail from London s.s. *British Exhibitor*, one of the first concrete attempts to follow up the recommendations of the D'Abernon and other trade reports and to capitalise the goodwill created by the recent visit of the Royal Princes to the South American republics and by the holding of the British Empire Trade Exhibition at Buenos Aires this spring. The ship, bound for the Caribbean and South America, will be a floating British Industries Fair, carrying samples of British goods to foreign markets where British manufacturers will be able to make contact directly with foreign buyers through a trained and highly competent team of salesmen. The range of exhibits will be widely representative of British industry, including all types of engineering products, textiles, hardware and fancy goods, furniture, sports goods, hospital equipment and scientific instruments, wireless supplies, foodstuffs, wines, etc. The itinerary provides for 242 days in port out of the total 365 during which the ship will be at sea. Some exhibitors will send their own representatives; others will arrange for their resident agents in each of the ports visited to take over their stands. For exhibitors with inadequate connections the services of some thirty or forty salesmen employed by the promoters will be available on board; for such firms, indeed, the company will act as a sort of international merchant house, appointing agents in every port, collecting market data, and obtaining actual orders on a commission basis. In every port an office will be established in the business centre to ensure wide advertisement of the ship's arrival, to establish contact between local commercial interests and the British manufacturers represented on board during the ship's visit, and afterwards to maintain a continuity of effort. From the results of the first three or four months it will be possible to estimate the potentialities of such a scheme, and if these are found to be encouraging the company hopes to keep s.s. "British Exhibitor" in permanent commission; for the efforts of the company to sell its space for the western trip have revealed a still greater number of firms who would be glad to avail themselves of a similar opportunity which a voyage to India and the Far East would offer. The promoters of the present enterprise have had to face a certain lack of confidence which has resulted from the promotion of similar schemes in the past, none of which has come to fruition. Every effort has therefore been made to inspire confidence; in the first place, none of the money advanced by exhibitors in respect of rent for their stands will be used until after the ship has sailed from the Thames; such sums are being paid into a special trust fund from which they are recoverable in the event of the ship not sailing before January 1, 1932, or such extended date as may be agreed between the company and the exhibitors. In the second place, the company will insure these same sums against their loss in the event of the ship's foundering.

That the ship will definitely sail on November 1st, unless some quite extraordinary circumstances arise, is now stated to have been made certain by the response of sufficient British manufacturers in taking space.

New Capital Issues in the United States.—The stagnation of business in the United States is well illustrated by the inactivity of her capital market. The results of the first half of the current year, set out below in summarised form from the figures published by the Financial and Commercial Chronicle of New York, reveal a decline of over 54 per cent. in the total amount of new capital issues as compared with the corresponding period last year:—

NEW CAPITAL ISSUES IN THE UNITED STATES.
(Millions of Dollars.)

Period: January-June.	1928.	1929.	1930.	1931.
Domestic—Corporate	2,462	4,205	3,321	1,148
Farm Loan Issues	37	...	30	30
Municipal	750	663	748	838
United States Possessions	6	2	10	...
Foreign—Corporate	506	494	345	163
Government	430	70	413	41
Total	4,190	5,434	4,868	2,220
Of which "Foreign"	936	564	758	204

The outstanding features are the marked decline in the amount of new capital issued for commercial and industrial purposes, the small dimensions of foreign issues and the increase in municipal loans which are less subject to fluctuations in business activity. In domestic corporate financing, railway issues at \$272,785,300 show a decrease of 58 per cent. on the corresponding period in 1930, and new investments in oil companies declined from \$230,898,463 during the January-June period last year to \$14,701,500 this year. The end of the investment boom is shown in a decrease of new issues from \$149,237,079 in the first half of 1930 to \$2,300,000 during the first half of the current year.

The Manganese Situation.—Among the many raw materials whose productive capacity is in excess of demand, manganese is an outstanding example. The table below shows the output of ore by the principal producing countries before and after the war:—

PRODUCTION OF MANGANESE ORE.
(Thousands of Long Tons.)

Period.	Gold Coast (exports).	India.	Russia.	Egypt.	Brazil.	World.
1913	Nil	815	1,233	Nil	120	2,200
1924	254	803	302*	148	157	2,200
1928	324	978	723*	135	315	2,900
1929	408	994	1,237*	188	289	3,600
1930	417	...	1,543*	...	...	...

* Years ended September 30th.

It will be seen that before the war Russia supplied more than one-half of the world's output and India over one-third. As this metal is of great importance in the manufacture of steel, the impossibility of obtaining supplies from Russia during the war led to the extensive development of the deposits of the Gold Coast, India, Egypt, Brazil and Cuba. In 1924, Russia produced only about 14 per cent. of the total production, but since then her proportion has been increasing considerably. Owing to the great expansion in the iron and steel industry after the war and because of the extension of the uses of manganese in the non-ferrous metal, chemical, electrical and glass industries, the increased output was readily absorbed until 1929, when the world depression set in. Since then, the manganese industry has not only been faced with a decline in consumption, but also with an enormous increase in the output of Russia. The consequences were disastrous. The price of "best Indian manganese" declined from 17 pence per unit in July, 1928, to 14 pence in July, 1929, and to 13½ pence in July, 1930. Ever since, stocks have been accumulating rapidly in the present quotation of about 10½ pence per unit, which is merely nominal. Russia now dominates the trade, and in view of low production costs that country is able to undercut her competitors. The two principal deposits of Russia are located in the Ukraine and in Georgia, near

Tchiatury. The reserves of the latter field alone have been estimated at over 200,000,000 tons, and besides favourable conditions of exploitation, the distance from the mines to Poti, the Black Sea port, is only 110 miles, as compared with 600 to 800 miles in the case of the Indian fields. Similar advantages obtain in the Gold Coast, whose deposits are only about 33 miles from the nearest port. Improvements in transport facilities have enabled that country to export increasing quantities despite the depression. In judging the influence of Russia in the trade it should, however, be remembered that Russian ore cannot be entirely substituted for that of other countries because of differences in physical and chemical properties which render it unsuitable for many purposes.

Russia's Foreign Trade.—The report prepared by the Commercial Counsellor to the British Embassy in Moscow and published by the Department of Overseas Trade, gives a clear and informative account of the organisation of foreign trade in the U.S.S.R., together with the various regulations and systems of licences in force. With regard to Russia's foreign trade in 1929-30, the report remarks that strenuous efforts were made to increase the volume of exports and that these efforts succeeded in increasing by approximately 50 per cent. the physical volume of the export trade, though the slump in world prices brought down the net value of total exports to a level only 14 per cent. higher than in 1928-29. The main feature of imports was the great preponderance of purchases of plant and raw materials for the supply of industry. As the prices of the manufactured goods forming the bulk of Russian imports fell to a considerably less extent than those of raw materials, the year's trading ended with an adverse balance of 66 million roubles. With regard to the future, the report suggests that, so far as exports are concerned, a continued increase of the exportation of timber, oil, furs and ores, and, given favourable weather, of grain, may be expected. It is considered unlikely, however, that exports of foodstuffs other than grain will expand appreciably, since the supply of livestock has been seriously depleted during the past two years. With regard to exports of manufactures, the following comment is made:—"The shortage of manufactured goods in the Soviet Union is so acute that exports of these articles in the near future are likely to be rather a measure of the desperate need of the Union to obtain foreign currency to pay for its imports than an indication of the capacity of Soviet industries to produce a genuine surplus for export." The continued need for equipment and plant also seems likely to restrict severely the import of articles for consumption.

Overseas Correspondence.

UNITED STATES.

German Situation — Argentine Payments — Capital Issues — Railroad Rates — Industry — Oil Dispute — Banking.

(FROM OUR CORRESPONDENT.)

NEW YORK, August 12.

SENTIMENT over the country and in the security markets has stood up remarkably well for the past week under the burden of unfavourable developments. Liquidation of securities has pretty well ceased for the time being, and it was no mere coincidence that a rally soon followed the failure of the German referendum and the reduction in the Reichsbank discount rate. There has, of course, been no fundamental change, but signs of returning confidence in Germany itself have their effect here. On the whole it is felt that the German people have given a good exhibition of steadiness in the crisis, and, now that they have resolved on self-help and a closer attention to their ordinary

business affairs, it is hoped that the problem of translating short-term into long-term credits will be worked out in due course.

The group of banks here which last week worked out a plan for German credit extensions, and the interior banks which look to them for leadership, are awaiting the opinion of the Reichsbank as to the acceptability of their proposals. The total of short-term credits here is estimated at \$600,000,000, of which about \$350,000,000 is in acceptances. No official announcement of the details of the agreement has been made, but it is believed that the plan involves extension to three months, with probability of a similar further postponement.

It is now learned that the Argentine Government will probably meet with gold shipments the \$50,000,000 note maturity due here in October. The present state of the new capital market, to say nothing of the technical objections to floating a bond issue in advance of the approaching Argentine elections, make it unlikely that advantageous terms for a refunding loan could be secured between now and the maturity of the notes. As bankers here see the question, the shipment of gold would improve Argentina's credit and reassure foreign investors who have been worried by defaults in other South American countries. At the same time the export of so much gold would not unduly tighten money or strain the strong position of the Conversion Office. Argentina has already shipped \$96,000,000 in gold to this country since the beginning of the year.

New capital issues continue small, and are chiefly limited to municipal borrowing and some public utility financing. Last week's offerings were only \$14,000,000 apart from a Treasury bill offer. The Treasury is borrowing at the rate of from \$50,000,000 to \$60,000,000 weekly on discount bills, current loans exceeding by \$10,000,000 weekly the amount of maturities. The market for railroad loans is stagnant, but it might turn active this autumn if the Interstate Commerce Commission should grant, even in part, the application of the railroads for a 15 per cent. increase in freight rates, which they are making as an emergency revenue measure.

Hearings on the matter were resumed this week in Washington, and the opponents stated their case. Six of the north-western agricultural States have organised to oppose the higher rates, joined by farm organisations and some shippers' organisations. In general, the large shippers either support the application or, at least, are not in active opposition.

Railroad earnings for June turn out to have been lower than last year and are at the rate of 2.33 per cent. on property investment. For the first six months they were 37 per cent. lower than last year and at the rate of only 2.15 per cent. on property investment. Freight-car loadings are merely holding steady and give no sign as yet of trade improvement. Other indices of trade give no sign of early improvement, and indicate that the depression became still deeper in July. Steel mills averaged 84 per cent., the lowest since September, 1921, on the basis of steel ingot production. Pig-iron output also was the smallest since the autumn of 1921, although, of course, capacity of the steel mills has risen about 35 per cent. since then. United States Steel Corporation's unfilled orders at the end of July were down 74,000 tons, which was not an unusual drop, and reflected small shipments as well as lethargic ordering. Present operations for the industry are little better than 30 per cent. of capacity.

Motor output last month dropped to 221,485 units, according to the National Automobile Chamber of Commerce estimate, a rather more than seasonal decline of 14 per cent. from June. Seven months' output at 1,855,933 vehicles was 28 per cent. under a year ago. Conditions are growing worse in the copper industry. When a curtailment agreement was entered into last autumn, shipments averaged about 125,000 tons a month. They have dropped to a new low total of less than 70,000 tons for July, while output has fallen only moderately for North and South America. The increase in stocks of refined metal in July was 28,948 short tons, being the fourth successive monthly addition. To the stocks of 440,417 tons

of refined and 619,178 tons of refined and blister copper, the highest on record, must be added stocks in the hands of fabricators and under consignment, which some estimate at from 150,000 to 200,000 tons. Some producers have already shut down entirely, and none can make a profit at the current market of 7½ cents a pound for copper. It is likely that another curtailment conference may be held this autumn, but that in any event complete shut-down for mines in this country may be effected, although that would mean more unemployment. In 1920 the copper mines shut down and remained closed for thirteen months.

Affairs in the Oklahoma oil dispute are at a deadlock, with all but small stripper wells closed by the State troops and refiners in the State doing their best to run on oil brought in from East Texas. It is believed here that a compromise will result in setting a price of probably 75 cents a barrel, against the dollar barrel which Oklahoma's governor demands. In Texas the attempt of the governor to obtain from a special session of the legislature a production law with "teeth in it" apparently is failing.

Mexico's latest monetary change, elevating silver at the expense of gold, is causing some annoyance here. Only two banks have branches in Mexico, though some of the Canadian banks do business there and many American banks have correspondents. Depositors are entitled to draw out 70 per cent. silver and 30 per cent. gold on their deposit accounts, but may pay all debts and bills, as the new law is understood here, in silver. Inasmuch as the most American goods are shipped to Mexican importers on a gold dollar basis, it is feared that the working of this change may be to the disadvantage of American interests.

The recent failure of certain small banks has been of no particular significance. Member banks of the Federal Reserve System continue to deflate loans on securities, but this week a gain of \$52,000,000 (for city institutions) was reported for "other loans." The rise is interpreted to mean no increase in ordinary commercial demand for credit but larger bank holdings of acceptances, the rise being entirely due to New York banks. After resumption in the previous week of investment in securities, the member banks have again turned sellers of securities.

Federal Reserve credit outstanding was up slightly at \$941,000,000 for the week of August 5, owing to month-end operations. Some interest was drawn to the reported decline of \$28,000,000 in contingent liability on bills purchased for foreign correspondents. This drop was believed due to the turning of French balances into cash, and foreign bank deposits rose \$32,000,000. Deposits in the Federal Reserve Bank draw no interest, and hence would avoid payment of the French tax on balances employed abroad. Some bankers here merely surmise that the pressure may be exerted in this way for removal of the tax by making it non-productive.

FRANCE.

Reparations — July Revenue.

(FROM OUR CORRESPONDENT.)

PARIS, August 19.

THE news that a long and cordial telephone conversation took place between M. Laval and Dr. Brüning last Saturday, as the result of which the visit of the French Ministers to Berlin has been postponed until towards the end of September on account of M. Briand's present state of health, was received here with great interest. The German invitation is regarded, by French opinion in general, as marking a definite step towards possible better relations between the two countries, but it is already evident that on both sides of the Rhine this improvement is recognised as entirely dependent on certain contingencies. Until the juridical character of the Austro-German Anschluss project has been clearly defined—and it is doubtful whether this will be possible until after next month's sitting at Geneva—any Franco-German conversations in Berlin must necessarily be based on very unsettled foundations.

The Basle international conversations have had a very bad Press in Paris, from the belief that they constitute a further attempt to turn the French position in regard to reparation payments. French opinion, of all shades, insists that Germany's unfortunate financial situation is in no way whatever due to her reparation debts burden. "Germany," as one writer points out, "is not only a debtor nation because of her war debts, but much more because of the fact that she has always lived on loans—long-term loans when she could get them, short-term loans when those were refused her. Germany's besetting sin, since the war, as M. Germain Martin recently said, has been to finance average or long-term operations from sight deposits. Whenever a financial crisis arises, therefore, people lose confidence in Germany, and this lack of confidence is all the more accentuated by reason of the fact that the Hitlerist movement constitutes a perpetual element of insecurity." French nervousness as to the Basle conference arises from the belief that Germany, when the six months extension of her present credits expires, will be unable again to meet her engagements except by instalments, which would be approximately equivalent to the annuities due under the Young Plan, and that she will then offer her creditors the choice between payment of her reparation annuities or reimbursement of her short-term private credits, on the plea that she is not in a position to satisfy both.

The revenue returns for July confirm that the yield from taxation continues remarkably high, the total for the month being, for all practical purposes, in spite of the heavy taxation relief accorded during the past two years, the same as in the corresponding months of 1930 and 1929. The total yield from all sources covered by the General Budget was 5,543,514,000 francs, of which the amount drawn from "normal and permanent" sources was 5,589,000,000 francs (as compared with 5,502,500,000 francs in July, 1930, and 5,487,847,000 francs in the corresponding month of 1929). The yield for the month was 87,026,000 francs in excess of Budget estimates, but this, as already pointed out, was solely due to an increased yield of 211,416,000 francs from Customs duties, owing to the recent numerous revisions upwards of many of the scheduled rates, with a view to protecting the country's agriculture. The taxes on turnover produced between 9 and 10 per cent. less than a year previously. The tax on Bourse transactions produced only 9,368,000 francs during the month, or 48 per cent. less than estimated for. The yield from the tobacco monopoly and other resources now devoted to debt extinction, through the Caisse d'Amortissement, continues high. Tobacco furnished over 10,500,000 francs more than was expected for the month, representing a total increased revenue from this source for the first seven months of the year equivalent to 52,147,000 francs (due to increased selling prices). The net revenue derived from the tobacco monopoly in 1930, after deducting cost of working and other expenditure, was 3,610,000,000 francs, of which 3,347,238,000 francs was devoted to the National Defence Bonds service and debt extinction.

GERMANY.

Basle Conference — Financial Difficulties of Communes — Wheat Import Vouchers — Harvest Financing — Foreign Trade — Bourses.

(FROM OUR CORRESPONDENT.)

BERLIN, August 18.

THE news from Basle has so far been received with great disappointment here, although no great hopes had been attached to it. The immense obstacles which the "stand still" negotiations are encountering intensify the difficulties of a situation already strained, and the hope of a new long-term loan within measurable distance of time has sunk to zero. The principal subject of dispute, which at the time of writing* has not been settled, is the foreign holdings of marks in Germany, both on current

* Reference to the settlement will be found in a leading article on p. 340.

account and in the form of time deposits. The foreign creditors maintain that a postponement extended to mark holdings would place them in a worse position than the German creditors of the German banks; on the other hand, the Reichsbank rightly adheres to the position that a complete exemption of mark holdings would make the whole "stand-still" agreement illusory, for the effect is the same, whether the 600 to 800 millions which are estimated to be held in marks are withdrawn from the country in the form of marks or of bills. Further, it is feared that when the Stock Exchange reopens large parcels of German securities will be offered for sale by foreigners, and that a renewed outflow of foreign bills might thereby be provoked.

At the time of writing efforts are being made to find a compromise which may yet meet with general acceptance at the eleventh hour in Basle, but Germany has little freedom of movement even in this connection. Even from the Layton Report and its recommendations she can only hope for well-intentioned advice, not for any direct assistance. The Wiggin Committee came up against the stumbling-block of the unsolved reparations problem from the very beginning, and it is impossible to see how this obstacle is to be overcome in the next few months.

With the resumption of internal payments, the anxieties which preoccupied the Government and the public before July 13th are renewed. One of the foremost of these is the financial extremity of the communes. The Emergency Decree of June 5th did little to help the communes, upon which an immense burden of poor relief has been imposed by the great growth in the numbers of the unemployed. Apart from the reduction in official salaries which it imposed, it only provided them with Rm. 60 millions, which the Reich raised by an alteration in the income-tax law and placed at their disposal. The deficits of the communes amount in the aggregate to about 800 millions in the current year. Last week the German Council of Cities, the organisation of the large and medium-sized towns, published a programme embodying the most severe measures of economy, including the abolition of special relief to rentiers who lost their income through the inflation, and other groups of necessitous persons who have hitherto received preferential treatment, and the discontinuance of the obligation of the communes to use a specified proportion of the yield of the rent tax for the construction of new houses. That practically means the cessation of the cheap credits which have hitherto been granted for housing by the communes, and it will make the construction of houses that can be let at rents anywhere near the means of the occupiers virtually impossible. The consequent decline in building will further depress the labour market. According to the programme of the Council of Cities, work on the roads is also to be considerably cut down. In the schools, whose expenses are mainly borne by the communes, extreme measures of economy are proposed, with a reduction in the number of teachers and of subjects.

The communes anticipate a saving of 250 to 300 millions in the year from these measures. As, therefore, only a part of the deficit can be met by these means, they are asking help from the Reich, and intimate that in order to tap new sources of income it is above all essential to extend the liability to unemployment insurance contributions to all workers, including the higher-paid officials. True, these groups have already been hit by the reduction in salaries and by the emergency tax introduced by the June decree, but the state of the public finances makes it essential to adopt the course here outlined.

The shortage of credit in Germany has made the financing of the harvest very difficult. It had been feared for some time that the farmers, burdened with debt and lacking funds to continue cultivation, would be forced immediately after the harvest to sell their grain at any price, to the complete destruction of the market. After rejecting a number of impracticable proposals, including a moratorium for all, or a great part, of the farmers, the Food Minister has prepared, and partly put into effect, a programme which represents a compromise between the wishes of the farmers and the requirements of the financial situation. The position of wheat is more serious than that

of rye, as, after the experiences of 1930, there has been a substantial reduction in the area under rye and an extension of the wheat area, under the influence of an active propaganda with official backing. A new decree has now reintroduced the old system of import vouchers for wheat. Exporters receive, for every ton of wheat exported, a voucher which is valid for the payment of 230 Rm. import duty on a ton of wheat imported. The rate of duty is Rm. 250. Wheat so imported may be milled in combination with German wheat up to 30 per cent., whereas, apart from this regulation, the millers are forbidden to use more than 3 per cent. foreign wheat. It is hoped that by this means, as millers are obliged, for reasons of quality, to use a certain quantity of foreign wheat, so that some wheat import is inevitable, the import vouchers will act as a sort of bounty on exports during the first part of the crop year, though later Germany would have to import a larger amount of foreign wheat.

This temporary unloading of wheat into other countries will reduce the amount of financing required by the harvest. In addition, the Getreidehandelsgesellschaft, whose function is to regulate the grain market on behalf of the Reich Government, is empowered to issue warrants for grain which it is warehousing. Hitherto not much use had been made of these warrants, which could only be issued by warehouses which were not also merchants. Advances are to be made by the Reichsbank against these warrants, within the terms of the banking laws, but that presupposes that the required endorsements by merchants or societies can be obtained for them, as the Reichsbank cannot accept unendorsed warrants. That provides a certain guarantee against the danger of an excessive accumulation of stocks of grain, for unless this is avoided, the societies and merchants will refuse their signatures for fear of a fall in prices. Lastly, in discounting bills arising out of the sale of crops, the Reichsbank will meet the farmers halfway by charging for discounts and advances used for financing the harvest 6 per cent. less than the general rate. In consequence of these measures there has been a sharp rise in grain on the German exchanges. Wheat rose from 190-192 marks per ton on August 8th to 219-221 marks on August 17th, and rye rose in the same period from 159-160 to 165-167 marks.

German foreign trade in July showed an active balance of 265 marks. This was achieved by a further reduction of imports to the very low level of 562 millions, against 909 millions in July, 1930, while exports rose from 749 millions in June to 827 millions in July, compared with 950 millions in July, 1930. These figures show a further accentuation of the tendency which has been visible in German foreign trade for two years—a decline in the total volume with a particularly marked decline in imports. This development will be a great aid to Germany in the gradual liquidation of her foreign debt. It is true, however, that the increase in the Reichsbank's holding of foreign exchange is primarily due to the effect of the decree which empowered the Reichsbank gradually to acquire all the foreign exchange holdings which had been in Germany before July 13, for the export bills are for the most part needed for trade purposes, to replace the documentary credits, some of which are no longer available from abroad, with which imports have hitherto been financed. In the long run, however, the active trade balance will certainly greatly ease the position of the Reichsbank.

The Prussian Ministry of Commerce has definitely decided not to reopen the exchanges during August, and it is still an open question whether they will be opened in September. It is felt that the position has not been sufficiently consolidated for the restoration of free exchange dealings to be safe, and there are many points which give cause for anxiety. There can unfortunately be no doubt that if the Stock Exchange could be opened now it would be at a very low level of quotations. Now, about two milliards of the bank's "debtors" are covered by securities, and it is feared that when it became known that these accounts were insufficiently covered, a vast mass of credits would be called in and forced sales of securities would follow.

In addition, there is the consideration that meanwhile an enormous volume, especially of fixed interest securi-

ties, is awaiting the opportunity of sale. Communes, savings banks, and many industrial and commercial firms, which themselves have debts to pay or need to accumulate cash reserves, naturally want to turn their holdings of rentes, municipal loans, industrial debentures and mortgages into money, and have at present no means of doing so. If all this selling pressure were to burst upon the market at once, a debacle would be inevitable. In Berlin alone fixed-interest securities to the value of 20 milliards of marks are quoted, and it is clear that the offer even of a small fraction of this amount would exceed the capacity of the market. Measures of averting this danger are, of course, being considered. After the experience of the last two years the formation of consortia for the support of the market is generally regarded as out of the question. Individual issuing houses might be empowered to support their own issues, and the Reichsbank would have to provide them with credit for the purpose, and the Reichsbank has no far shown little inclination to do so. Meanwhile attempts are being made to mitigate the severest cases of hardship by numerous loans.

CZECHOSLOVAKIA.

Finance — Agriculture — Industry — Foreign Trade — Commercial Treaties.

(FROM OUR CORRESPONDENT.)

PRAGUE, August 1.

INTEREST has been focussed recently on the disturbing events which have been occurring in neighbouring financial centres. Money market conditions have been influenced by the uncertainty prevailing in the international market and the effect of favourable movements at home has been weakened. The bearish tendency on the Stock Exchange continues, and the Stock Exchange index fell to 95.08 in the second half of June. As a result of President Hoover's action some improvement set in at the end of June and at the beginning of July, but the index fell back again to 96.97 on July 17th. Industrial shares participated in the decline, particularly chemical, building, metallurgical and engineering shares, while many dividends were cut and in the case of some limited companies were passed altogether. The cessation of payments by the Kredit-Anstalt and the Darmstädter und National Bank caused some uneasiness on the money market, but after a temporary drop in share quotations a renewed calm set in, and the National Bank saw no reason for readjusting its discount rates.

The agricultural position has improved, but the question of marketing the coming harvest has been the subject of long discussions in Parliament. In particular, the question of a corn import monopoly, or, alternatively, a system of modified import licences, has been considered, and it has now been decided that the latter scheme shall be adopted during the coming season.

With regard to industry, the depression is especially noticeable in those sections dependent on the export trade, e.g., the glass, china, textile and leather industries. The textile trade is the greatest sufferer and is endeavouring to obtain assistance in the form of a reduction of trade taxes and certain export facilities. There are bitter complaints in the trade of the commercial policies and Customs obstructions of neighbouring countries, and leaders of the industry are seriously considering the necessity—if unemployment and diminished sales continue—of a radical restriction of production and a reduction of plant. Greater activity in the building trade has caused some improvement in the building-material trades and in the iron industry, while in the engineering and the automobile industries negotiations between the leading firms have been conducted with a view to co-operation. A definite agreement between the Skoda Works and the Praga has now been reached and should result in a substantial simplification of production and improved sales conditions. A slight improvement in employment has been noted recently, but this is largely due to seasonal causes. There has also been a decline in the number of insolvencies. The index of wholesale prices fell in June to 108.7.

The June statistics of foreign trade show some improvement in comparison with previous months. Imports for the first half-year stood at Cz.K. 5,546.8 million, against Cz.K. 8,152.7 million a year ago. Exports amounted to Cz.K. 6,384.3 millions for the same period, against Cz.K. 8,452.8 millions last year. The active trade balance for the first half-year is, therefore, Cz.K. 837 millions. An increase in raw material imports seems to point to some improvement in certain manufacturing industries.

The trade agreement with Austria has now been concluded, but, owing to the raising of the respective tariffs, it is doubtful whether it will be of any appreciable assistance to trade. Negotiations for the Hungarian commercial treaty were renewed in Geneva in July and will be resumed again in the second half of August. The chief obstacle to agreement is the question of the importation of Hungarian agricultural produce—particularly of flour—and although it is agreed in principle that certain preferential facilities should be granted to these products, a practical solution has not yet been worked out. Negotiations have been complicated further by the new commercial agreement between Austria and Hungary. This treaty not only grants Hungary various agricultural preferences, but allows for certain industrial preferences on the import of Austrian goods into Hungary. These preferences affect Czech exports and it is felt that, although they are chiefly in the form of credit and communication facilities, they are hardly in conformity with the most-favoured-nation clause.

The bill providing for export credit insurance and State guarantee for losses sustained from long-term export credits has been discussed at length in Parliament and was finally passed with some modifications before the summer recess. Owing to the unfavourable conditions in the issue market, the flotation of a foreign loan as a conversion for the 8 per cent. 1922-24 loan, which may be redeemed next year, has been postponed.

SPAIN.

Catalonia — Land Distribution — Church — Stock Markets — Banking — Industrial Management.

(FROM OUR CORRESPONDENT.)

MADRID, August 6.

THE attention of financial circles is concentrated on the course of events in the newly-opened Parliament. The most important problems to be dealt with, apart from the project of the Republican Constitution, are, firstly, the Statute of Catalonia, which may involve considerable segregations of authority and revenues from the Central Government in favour of other regions; secondly, the distribution of land among the farm labourers; and, finally, the separation of the Church from the State.

The discussion of the future standing of Catalonia within the Spanish Republic promises, undoubtedly, some very heated sessions; but it is to be hoped that eventually an equitable settlement of this vexed question will be made once and for all. The manufacturers of the Barcelona district realise that their industries are dependent upon the high tariff wall built up in their favour by the Madrid Governments of the past, and it is possible that their protests against any discordance with the rest of Spain may have a restraining influence on Catalonian exactions.

The project involving the possible division and distribution of all large tracts of land held by one proprietor has been drafted, and, whilst an attempt is made to give some compensation to the landowners for the property thus confiscated in the form of a guarantee of interest on the capital involved, the interested parties are by no means reassured, for all decisions in the matter would be taken by a committee in which they would have little or no say.

There is, apparently, a decided majority in the Parliament in favour of the separation of the Church from the State, but some very tenacious opposition may be

expected from the representatives of the northern provinces, where the Church and the religious communities are still very powerful.

Whilst it is not generally thought that these problems threaten the existence of the Republic, until they are satisfactorily resolved there seems to be little hope of a revival of activity on the share market. During the past month the volume of business transacted on the Madrid and Barcelona Bolsas has continued to decline, and the official sessions are at present without interest. One of the factors affecting the volume of business transacted is the rather delicate position of some of the weaker banks following on the temporary suspension of the Banco de Cataluña. Several of the private banks have suffered from the effects of unfavourable rumours, and a considerable reduction of deposits has been experienced all round. It would appear, however, that some measure of official support has been forthcoming and no further difficulty is anticipated in this direction for the time being. It is evident, nevertheless, that bank reports published in December next will make unsatisfactory reading for shareholders.

With the object of putting a check on the hoarding of banknotes the Minister of Finance has signed a decree stipulating that all Spanish notes are to be presented at the Bank of Spain for stamping from August 10th this year. Such notes as have not been presented within three months from the said date will not be considered as legal tender. Although no mention has yet been made as to what is to happen after the three months have expired, it is to be presumed that unstamped notes will be taken at the Bank of Spain under a sliding scale of discount.

The Minister of Labour announces that he intends to submit to Parliament very shortly a Bill giving the workmen of all big industries a direct representation on their respective boards of directors. He considers this measure necessary so that the workmen may be in a position to judge for themselves whether the firm is in a position or not to accede to their demands for increased wages. The workmen, he says, are convinced that the majority of firms keep two sets of books, and, in case of dispute, those which show a more unfavourable position are invariably produced. There is every possibility of this revolutionary measure becoming law, as, apparently, it was included in the Pact of San Sebastian, and will, therefore, have the full support of the Government as well as of the benches on the Left.

BULGARIA.

Foreign Trade — Banking — Grain Marketing — Public Finance.

(FROM OUR CORRESPONDENT.)

SOFIA, August 5.

ONE of the most serious repercussions of the Central European financial troubles on Bulgaria's economic position is the dwindling, to an almost unprecedented low level, of exports to the countries involved. For many years the German share in Bulgaria's exports have been between 25 and 40 per cent. Even in the first five months of 1931, exports to Germany reached Leva 1,096 millions, while the total exports for the same period were Leva 2,750 millions. In July the situation became worse; exports of eggs, tobacco, cereals, fruit and hides almost entirely ceased. The consequences may be very serious if the situation abroad does not improve, in view of the fact that while the net balance of foreign trade for the first half of 1931 was a surplus of Leva 689 millions (exports, Leva 3,108 millions; imports, Leva 2,419 millions), the foreign exchange position of the National Bank has not improved, the balance of payments absorbing all excedents of the foreign trade position.

The effects of the European situation on the local money market and on credits have not been very important up to the present. According to the estimates of the National

Bank's Office for Economic Research, the main bank resources are as follows:—

(Million leva.)			
Banks.	Capital.	Reserves.	Deposits and Credit Balances.
National Bank	500	1,184	1,459
Agricultural Bank	640	63	4,584
Central Co-operative Bank ..	107	39	810
Popular banks.....	567	183	2,180
Larger joint-stock banks (approximate figures)	1,100	200	5,200
	2,914	1,669	14,233

The total of deposits and credit balances, Leva 14,233 millions, included, on June 30, 1931, only Leva 1,700 millions of foreign funds—mainly short-term credit balances—as against, roughly, Leva 2,100 millions on December 31, 1930. The diminution is, to a considerable extent, a consequence of the general slump in trade, and the actual withdrawal of credits from abroad has proceeded at a very moderate pace. It is generally estimated that, with unimportant exceptions, almost the total of short-term credits are being granted by large foreign banks to their Bulgarian affiliations. Purely Bulgarian banks are, on the whole, not indebted abroad, and most of them have credit balances in London, Zurich, Paris and New York. The situation in this respect, therefore, may be considered sound, and also by reason of the prevailing supply of liquid funds in the market. The low prices of agricultural produce and the falling off of a great part of the seasonal exports will very probably continue to handicap the much expected revival of trade next autumn. Consequently, the liquid position of banks and trading firms is likely to remain without much change.

The Grain Purchasing Office has been maintained in force, at a heavy cost to the Treasury, chiefly with a view to enable the peasant producer to procure money for paying his arrears of taxes and for purchasing the manufactured goods which he so badly needs. It has been officially stated that, during the last marketing season, closing on June 30th, the Office bought grain for Leva 826 millions and paid Leva 343 millions thereof in cash and the balance in bonds intended for tax payments. On the other hand, the Office sold grain for Leva 524 millions. When the remaining stocks are properly estimated, and due allowance is made for the ultimate value of bonds to the Treasury, the loss sustained by the latter will be at least Leva 350 millions. In the new marketing season, beginning on July 15th, the position does not look much better; a much heavier loss is expected and readily admitted even in official quarters.

The sacrifice is the heavier as the Treasury's position has meanwhile not changed for the better. There is a deficit of at least Leva 1,300 millions due mainly to largely reduced receipts from almost every kind of indirect tax, Customs duty and Excise. This is the natural effect of the standstill prevailing in trade for nearly two years past. Some improvement had set in of late, but the critical turn things have taken abroad quickly checked the favourable trend. In these circumstances, the task of the Government, who pledged their word, during the electoral campaign, to take rapid and radical measures for righting the course of economic and financial policy, becomes particularly hard. Even by drastic retrenchment and economy, the Budget cannot possibly be balanced in the near future. On the other hand, the discrepancy between agricultural and industrial prices is becoming so acute that something will have to be done in the way of a serious reduction of import duties, which are at an almost abnormally high level. This, in turn, will reflect on the Budget receipts, but the situation will hardly withstand further delay in this direction.

Financial and economic difficulties were the chief causes of Mr Liapcheff's defeat, two months ago. Although the new Government undoubtedly enjoy a much larger confidence and a considerably greater prestige, especially among the masses of peasant population, the same difficulties, which most certainly will be experienced for some time to come, are likely to prevent Mr Malinoff and his friends from taking full and practical advantage of the very favourable moral factors of the internal political

situation. This is much to be regretted for such psychological circumstances, containing effective potentialities for reforms and constructive work, do not occur often in Bulgarian political life.

CANADA.

Prorogation of Parliament — Government Relief Measures — Crop Conditions — Business and Industry — Foreign Trade.

(FROM OUR CORRESPONDENT.)

OTTAWA, August 4.

THE Federal Parliament was prorogued on August 3rd after a session which, opening late, had lasted nearly the average period of five months. The legislative output was comparatively small, but it included measures for the establishment of a new type of Tariff Board, which the Liberals severely criticised, and a better system of administration for the national finances. On July 22nd the new commercial treaty with Australia, which materially extends both the range and degree of the preferences accorded by each Dominion to the other, was ratified by the Commons after an interesting debate, and was subsequently passed by the Senate. The Government contended that it was a vast improvement upon the former treaty and that the special concessions to Canada's newsprint, lumber and salmon-canning industries would yield substantial benefits, particularly to the Province of British Columbia. The Liberals and other Opposition groups accepted the principle of the treaty, but were disposed to think that its benefits were being exaggerated. They argued that even the British preferential rates of the Australian tariff which have been conceded to Canadian imports on about 400 items were so high that they would shut out all imports, and also that, in view of Australia's economic troubles and the depreciation of her currency, it would be impossible to sell any great volume of Canadian goods to her for some time.

Perhaps the most important measure of the session was brought down in the closing week in the shape of the Government's Bill to provide relief for urban unemployment and rural distress in the West. Mr Bennett asked for a blanket authority to spend any sums which might be necessary for such relief on the ground that it was impossible to determine with any accuracy exactly what sum would be required. He asked, also, for special powers of a somewhat drastic character for the maintenance of law and order. The Opposition professed complete willingness to vote any definite sum which the Ministry might name, but they objected to giving it a blank cheque for unlimited expenditure and also to conferring upon it arbitrary powers for the maintenance of order. However, some of the Progressives supported the Government, and the Ministry secured their Bill without making any concessions.

During the session the Liberals showed themselves a militant and effective Opposition, but in the closing month the wind was decidedly taken out of their sails by the unfortunate exposures of the Beauharnois scandals, and the Bennett Ministry regained some of the prestige which it had been losing through the failure of its protectionist policy to alleviate unemployment.

The latest crop report of the Bureau of Statistics, published July 28th, is no less pessimistic than its predecessors, and asserts that "the past week of excessively high temperatures, hot winds and negligible precipitation was one of the most disastrous of the season in its effect upon Western crops." By its account the wheat, which is mostly in head, is ripening prematurely over practically the entire area of the prairies, where farmers specialise in wheat production. Observers who have recently visited Southern Saskatchewan describe it as like the Sahara, and, although the drought has been again broken by heavy rains within the last few days, over a huge area there were virtually no crops left to save. More promising reports are forthcoming from the northerly districts of the prairies, but even there the crops have been sustained rather than improved, and the yield will not be high. Stem rust has also appeared in Southern Manitoba, and there have been

severe hailstorms in Alberta. No forecast of the probable Western wheat yield has yet been made, but it is unlikely now to be much in excess of 200 million bushels, and may not even reach that figure. Rye and barley are now being cut on the prairies and showing poor yields, and wheat-cutting will be in this week. The pasture situation, however, has materially improved as the result of the recent rains. Eastern Canada experienced the driest July for many years and pastures and hay crops suffered, but the grain and root crops have fared reasonably well and promise at least average yields, while the fruit crop is better than usual. Consequently, the farmers of Eastern Canada are not in the desperate plight of their prairie brethren, but, owing to the lowness of prices, they cannot hope for large returns, and rural purchasing power is bound to remain low during the coming winter.

There is no improvement to record in general business conditions, and it is doubtful if they are even holding their own. The index number for retail sales issued by the Bureau of Statistics declined from 115.4 in June to 107.7 in May, and the corresponding index for June, 1930, was 114.1. Appended below are also the weighted indices of the physical volume of business for June (1919-24=100), corrected where necessary for seasonal variation and with parallel figures added:—

	June, 1930.	May, 1931.	June, 1931.
Forestry	188.4	165.8	160.5
Mining	146.2	149.7	112.0
Construction	195.8	120.1	99.0
Manufacturing	162.1	163.6	135.7
Employment in trade	143.1	136.7	137.0
Shares traded	548.2	336.1	208.5
Bank debits	151.1	145.0	131.0

The carloading figure for the week ending June 25th, at 59,423 cars, showed a decline of 1,164 cars as compared with the preceding week and of 12,621 cars as compared with the parallel week of 1930. The aggregate decline for the year up to July 25th is 323,486 cars, or, roughly, 18 per cent.

The export movement of grain fell off in July and the stocks in store on July 24th were estimated at 111½ million bushels, which is, roughly, three million bushels above the figure for the parallel date a year ago. Wheat prices have shown a tendency to sag in the past two weeks, and, in view of the holdings of the U.S. Farm Board, no immediate recovery is looked for. There has, however, been a welcome improvement in the lumber export trade, and the exports of squared timber for June amounted to nearly 15 million feet, as compared with nine and six million feet respectively in May and June; there was also a gain in the exports of planks, boards, laths, shingles and other forms of semi-manufactured wood. The newsprint industry shows little signs of recovery, and, owing to the continuance of the depression in the United States, the American demand is still weak. Even the newsprint mills, which have a specially favourable situation, are not making any money. The production of coal and of motor vehicles also shows a downward tendency, but industrial employment at the beginning of July showed some gain and reached its highest level for the present year. The American tourist trade, which is now an important factor in the national economy, threatened at the beginning of the summer to show a serious decline, but it has now greatly picked up, and apparently a great many Americans, who in more prosperous times would have gone to Europe for a holiday, decided to patronise Canada instead. At any rate, most of the summer resorts are well occupied and business is deriving its usual stimulus from this tourist traffic.

The foreign trade returns for June are again very disappointing. Imports were valued at \$52,509,000, as compared with \$91,544,000 in June, 1930, and exports were valued at \$54,438,000, as compared with \$78,708,000. The value of imports from the United Kingdom fell from 14 to 8½ million dollars, but the decrease was proportionately less than in the case of imports from the United States, which declined from 60½ to 33½ million dollars in value. Exports to Great Britain fell from 20½ to 14½ million dollars, and to the United States from 35½ to 22 million dollars.

Letters to the Editor.

CONDITIONS OF TRADE REVIVAL.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In view of past correspondence concerning short- and long-run stock market movements, perhaps you will allow me this opportunity of suggesting that the bottom of the present conjunctural slump has now been reached.

Before industrial revival can occur in any country suffering from depression, the following eight economic pre-requisites must (in the absence of positive currency inflation) usually be fulfilled. These conditions (except No. 7), have already matured in England and America:—

1. A fall in the majority of raw material prices to below average costs of production, thus making future rises more likely than further falls.
2. A fall in retail prices, which makes the fixed-income classes "really" richer and stimulates increased consumption on their part.
3. A fall in long-term rates of interest such as will eventually stimulate borrowing by municipalities and established businesses for capital works, as soon as confidence revives and constructional costs are believed to be at bottom. Such borrowing benefits constructional industry directly, and, by repercussion, consumptive industries as well.
4. Such a fall in wages, retail prices, and in the volume of retail trade that less legal tender is taken from the banks, and their cash reserves and lending capacity are augmented.

N.B.—The maturity of a strong and healthy banking position is one of the first pre-requisites to general trade revival. The general belief must be held that bank credit is more likely to be expanded, given reasonable security, than deflated.

5. A gradual wearing out of privately-owned stocks of goods, thus increasing the desire of the owners to spend as soon as they feel safe about their own future incomes, or as soon as they feel that bottom prices have been reached.
6. A reduction in retail stocks to inconveniently low levels, so that any increase in consumption, when it occurs, will involve immediate replacement orders to producers, and a positive increase in industrial incomes, leading in its turn to increased buying at retail.
7. A rise in the prices of stocks and shares such as will make capitalists feel richer on paper, and encourage them to spend more freely on personal consumption and on productive enterprise.
8. Such a fall in the volume of trade and in the price-level at which it is transacted, that the existing volume of legal tender and bank credit currency in the country—although probably somewhat contracted—nevertheless becomes to some extent redundant in view of the currency work to be done. This stimulates people to spend their surplus idle-balances of money on investments or commodities, leads to a higher speed circulation of money, and sets in motion curative forces.

Underlying economic conditions point to the bottom of the trade cycle having now been reached. All the current news is bad, but in many countries, in America particularly, the conditions which have preceded every trade and stock market revival in the past are now present. Revival in America will increase the demand for raw materials; a rise in their prices will increase the purchasing power of the Southern Hemisphere over European manufactures; and at the same time improve the credit of Southern Hemisphere countries. Foreign lending will increase; and an improved distribution of gold will occur. If there is anything in normal economic sequences, and in the theory of the business cycle, world trade is now set for revival.

England, it is true, has peculiar problems of her own, which result from international influences. The foregoing conditions, however, are the "internal" economic pre-requisites and their maturity provides good grounds for confidence; especially as their fulfilment has also occurred in North America, from whence world revival promises to emanate.—Yours, etc.,

55, Onslow Gardens,
S.W. 7.

L. L. B. ANGAS.

August 19, 1931.

[There is doubtless virtue in robust optimism in these troubled times. Our correspondent, however, appears to

underestimate the difficulties of England's "peculiar problems." The extent to which she is able to meet them, and the precise character of the measures she adopts, must necessarily have a considerable influence on the time-table of economic revival.—Ed., Econ.]

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

3. (It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

The Provision of Credit, with Special Reference to Agriculture. By H. Belshaw, with two chapters on *The Provision of Rural Credit in Great Britain*, by R. R. Enfield. (Cambridge) W. Heffer and Sons, Ltd. 10s. 6d. net.

This book is divided into four parts, dealing with (1) the meaning of credit; (2) the problem of rural credit; (3) long-term credit agencies; and (4) short-term and intermediate credit agencies.

The Soviet Planned Economic Order. By William Henry Chamberlin. (Boston, Mass.) World Peace Foundation, 40, Mt. Vernon Street. \$2.50 net.

A first-hand study of Soviet economic principles by a resident of eleven years standing.

The Riddle of Unemployment. By Douglas Knoop. (London) Macmillan and Co., Ltd., St. Martin's Street. 4s. 6d. net.

A critical examination of the causes of post-war unemployment and the suggested remedies, based on a series of lectures delivered by the author last winter in Sheffield.

Hauptprobleme der Arbeitslosigkeit. By Dr. Alexander Mahr. (Leipzig and Vienna) Franz Deuticke.

A German study of unemployment problems.

The Bankers' Magazine, August, 1931. (London) Waterlow and Sons, Ltd., London Wall. 2s. 6d. net.

Includes an article on the "Progress of Banking in Great Britain and Ireland during 1930."

The Empire Review, August, 1931. (London) Macmillan and Co., Ltd., St. Martin's Street. 2s.

Contains an article on "The World Economic Situation," by Lord Melchett.

The Motor Industry of Great Britain, 1931. (London) Society of Motor Manufacturers and Traders, Ltd., 83, Pall Mall.

This handbook contains a wealth of statistics on the British industry, and many interesting international comparisons.

The Stock Exchange.

CHILEAN NITRATE DEVELOPMENTS.

THE last twelve months have been crowded with decisive events in the Chilean nitrate industry. After prolonged New York negotiations, the Compania de Salitre de Chile ("Cosach"), merging thirty-six concerns, representing over 95 per cent. of Chile's nitrate capacity, has come to birth and obtained, not all the money it might have liked, but a useful sum to be going on with. The various component companies have come in, mostly taking 7 per cent. cumulative preferred shares in the merger company, and the Chilean Government has exempted the company from the export duty of £2 10s. 6d. per metric ton and made over to it nitrate deposits up to 150,000,000 metric tons. In return, the Government is to be allotted 50 per cent. of the authorised capital of the company (in ordinary shares), \$40,149,000 of Secured Sinking Fund 7 per Cent. Bonds (with a second charge on the proceeds of an impost of 30s. on each metric ton of nitrate extracted from the company's deposits), and a cash payment of approximately \$4,500,000, less certain credits. Finally, the new organisation, faced last month with a prohibitive German import duty, has refused up to the present to renew Chile's former marketing arrangements with the synthetic nitrate producers in Europe and elsewhere, and has threatened the latter with the consequences of a state of affairs under which it would be free to sell its products how, when or where it chose.

From now onwards the interests of British shareholders in the nitrate industry will be bound up almost exclusively with the fortunes of Cosach and its main subsidiaries, the Lautaro and Anglo-Chilean companies. The equity in the industry's future progress belongs to the Chilean Government and the American firm of Guggenheim Brothers, the *trans-deus ex machina*, whose intervention has entirely transformed the organisation of both the Chilean copper and nitrate industries. Outside investors are interested (a) in the service of \$50,456,500 (U.S.) of Prior Secured 7 per Cent. Sterling Bonds of Cosach (secured by a first claim on the 30s. tax per ton of nitrate produced, mentioned above), (b) in about £1½ millions of Secured Sinking Fund 7 per Cent. Gold Bonds (part of a total of about £14,000,000, with a second charge on the 30s. tax), issued to certain of the nitrate companies taken over; and (c) in the ability of Anglo-Chilean to meet its preference share payments, of Lautaro to meet its cumulative preferred shares, of Cosach to pay dividends on its cumulative preferred shares. The Lautaro company has not been absorbed by Cosach, which, however, entirely controls its policy through its ownership of Lautaro ordinary shares. In short, the Guggenheim interests and the Chilean Government between them now have sole charge of the destinies of the Chilean nitrate industry.

In one respect, recent conditions were propitious for the strategy of a determined and wealthy organisation. A suicidal policy of restriction in a period of rapidly expanding "synthetic" production had reduced Chile's share to about one-fifth of the total world's consumption of nitrogenous fertilisers. The Chilean Government, taught by adversity, was in a mood to make terms for the removal of the export duty which for years had been a millstone round the neck of the industry.

The thesis of the Guggenheims was that the "Shanks" process of extraction, for all its "selective" merits, was fatally obsolescent, and the only hope for the future lay with their own mass-production process. Their conception was Napoleonic, comprising nothing less than the buying out both of existing producers and the Chilean Government. Unfortunately, before it could be completely carried out, world depression intervened, rendered particularly acute by the fall in the prices of the products of agriculturalists, the industry's chief customers, and the existence of much surplus plant in the "synthetic" industry. Only at the end of last March was the merger finally consummated and provided with working capital by

an international bond issue. Meanwhile, sales of nitrate had fallen to a low level.

The following tables show the course of world nitrogen years, with particulars of visible stocks of Chilean nitrate:—

(1,000 METRIC TONS OF PURE NITROGEN.)
(July 1st to June 30th.)

* Estimates.

† Approximate.

It will be seen that Chilean production in the nitrate year just ended has been approximately 35½ per cent. below the average for the previous five years, and that current visible stocks, nevertheless, are equal to nearly one-and-a-half years' consumption at the present depressed level. The rated capacity of the existing Guggenheim process plants (including that of Pedro de Valdivia, on the construction of which \$20 millions was spent last year) is approximately 210,000 tons (pure nitrogen) per annum, and in addition Cosach owns or controls Shanks process plants with a capacity of, say, 450,000 tons (nitrogen) per annum. The extent therefore, to which the company would stand to gain by an increase in output, sufficient to achieve a larger share of the economies of mass-production, is evident.

Events have moved rapidly since the negotiations for a renewal of the world nitrate agreement broke down in the middle of last month. Propaganda and counter-propaganda culminated last week-end in an inspired statement of pending "cuts" in Chilean prices. Within forty-eight hours it was reported that a new conference was meeting at Brussels, and that the occurrence of certain developments had made the outlook for a new agreement considerably brighter. Though Mr Guggenheim has been at pains to disclaim any intention of provoking a price war, a *outrance*, between the natural and synthetic products, it is doubtful whether any such truce can be more than temporary. Conditions are all against it. A limited market can make little appeal to a dominant interest which has sunk millions of pounds in Chile, which can only become fully remunerative on a big output. The interests of the holders of prior secured bonds of Cosach will be fully covered even if exports of Chilean nitrate are less than one-third of the average for the five years to 1929-30, but a financial return insufficient to meet dividends on the preferred stock of Cosach and Lautaro (the July 1st

dividends on both have been deferred), can hold out small attractions to an interest which must recoup itself for its heavy outlay through the receipt of ordinary dividends. Even if the Guggenheims consider the present period of world depression an entirely unsuitable moment for throwing down the glove, and are willing to make a stop-gap *modus vivendi* with the synthetic producers, their bid for a larger share of the world market must come sooner or later, when more normal conditions obtain. They may be the more inclined to put matters to the test as the obvious over-capacity of the synthetic industry has brought some of the smaller European producers to a bankrupt or semi-bankrupt condition, and burdened even the larger units with uneconomic charges on idle plant, as shareholders in Imperial Chemical Industries, for example, are painfully aware.

The real security for investors in the Chilean nitrate industry, therefore, is the probability that the Guggenheims, with the Chilean Government behind them, having staked their reputation and fortune in creating a grandiose organisation for extracting and selling huge quantities of nitrate of soda, will exert every endeavour to work it profitably. Until this great future issue is decided, however, Cosach balance-sheet figures can obviously be little more than arithmetical exercises, worth, with all due respect, little more than the paper on which they are printed. For example, a *pro forma* consolidated statement as at March 20, 1931, shows that out of total assets valued at \$758 millions (U.S.), some \$540 millions are represented by nitrate reserves taken at 17.50 Chilean pesos per ton, equivalent at par of exchange to 10½d. per metric quintal, as compared with 4½d. per metric quintal paid by the Lautaro Company for a large purchase from the Government two years ago. Exceptional factors may have made the latter price a somewhat unsound criterion, but whether the valuation put on Cosach nitrate reserves be high or low, it is, admittedly, arbitrary. A valuation at a figure 25 per cent. lower or higher would have decreased or increased the total balance-sheet assets by as much as \$135 millions. Lautaro and Cosach together have an issued capital stock of \$398 millions and a funded debt of \$196 millions, making \$594 millions out of total balance-sheet liabilities of \$758 millions. The whole position thus turns on the question what is a fair price to put on the company's right to 253,503,000 tons of nitrate still in the ground, whose ultimate selling price no one can forecast.

The market, at the moment, takes a conservative view of Chilean nitrate prospects, as the following table suggests:—

	Highest, 1929.	Highest, 1930.	Highest, 1931.	Present Price.	Yield at Present Price.
"Cosach" prior secured 7% stg. bonds	...	...	94	83	£ 8 s. d.
Do. 7% deb.	...	...	75	75	9 6 8
Do. 10% "B" ord.	...	...	...	...	Nil
Do. 10% "C" ord.	...	...	...	...	...
Anglo-Chilean Nitrate 7% 1st mort. deb. stk.	103½	99	93	78	8 19 6
Lautaro 6½% 1st mort. deb. stock	100	99	94	86	7 11 0
Lautaro 7% cum. pref. (stg.) bearer	3½	3½	3½	14	28 0 0
Lautaro Nitrate Corp. ord. (no par)	99½	101½	94½	11½	...

For good or evil, the Chilean nitrate industry is committed to a regime of mass production. Although the Shanks process plants now owned by Cosach supplied all the Chilean nitrate of soda exported before 1927, a special reserve has been created to write down their balance-sheet value from \$51 millions to under \$5 millions. The future lies with the big Guggenheim process plant at Maria Elena, the larger plant at Pedro Valdivia, and the projected Pissis and Nebraska plants, on which work was to have started this year (though economic depression may lead to modification of this programme). Whatever agreement the industry may make, *ad interim*, sooner or later Cosach may be expected to endeavour to achieve the economies of mass production, though the day of the decisive battle may be not yet.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET. August 26.	ACCOUNT. August 27.
-----------------------	------------------------

Alternating periods of limited activity and uneasy quiescence marked the course of Stock Exchange business this week. Economic factors were to a great extent overshadowed by political considerations, and, in the absence of any reliable information, prices tended to move with the rumours of the moment. The fluctuating activities of the week are discussed in an Investment Note on page 362.

Gilt edged shared in the general uncertainty, an appreciable amount of liquidation in the earlier part of the week being succeeded by a more cheerful tone as sterling improved. Substantial buying orders were in evidence on Wednesday, and Funding Loan, Consols and Five per Cent. War Loan all recorded advances. India stocks moved within very narrow limits, and Australians were quiet but steady, pending the outcome of the conversion operation.

In the foreign market idle conditions prevailed. German Seven per Cents. gained half a point in mid-week, after marked heaviness, and Austrian Sixes found support; but Roumanian 4 per cent. Consols came on offer. Brazilians again suffered a decline on adverse exchange movements, and San Paulo 7½'s eased. Little business was done in Chileans (the position of which is discussed in a Note on page 364), and Argentines remained unsettled following a renewed relapse in the peso.

Home railways, after being neglected for the greater part of the week, enjoyed a brief spasm of renewed popularity, despite the publication of a poor batch of traffic returns. An all-round rally occurred in the ordinary stocks, due more to the extremely sensitive nature of the market than to any revival of confidence in the immediate future. Metropolitan and Undergrounds shared the improved tone. Foreign rails derived little encouragement either from general conditions or from "traffic" figures. Argentines came in for renewed selling, and Americans receded.

In the industrial share market the factors making for disquietude elsewhere were especially influential, and the mere possibility that a revenue tariff might materialise acted as a sharp spur to a number of issues. Early adverse movements in Bradford Dyers and J. and P. Coats followed unsatisfactory dividend announcements, and the heavy tone was shared by other textiles. Among iron and steel shares, Guest Keen attracted attention, and Vickers were in request. Among the other leaders, Turner and Newall, Dunlops, Imperial Chemical, Leylands and Courtaulds all responded to tariff hopes. A fair inquiry was heard for some electricals, and Cables and Wireless rallied on bear covering after an unsatisfactory week. Tobacco Securities Trust proved a weak feature at the opening session, but the tobacco share market enjoyed increasing popularity, while breweries declined on taxation fears.

The oil share market experienced a period of marked activity in mid-week, but heavy selling from Amsterdam which later supervened was attributed to disappointment that Shell Union had decided to pass its preferred dividend. The rubber share market remained under the adverse influence of a falling commodity, the price of rubber touching a new low level during the course of the week. Trusts were steady after a heavy opening, but Anglo-Dutch scored a small advance. Tea shares were almost entirely deserted, but Jokais and Darjeeling Consolidated had a steady appearance.

The mining share market was comparatively idle, and price movements were mostly against holders. Among the gold shares, Geduld and East Geduld found support; but in the Rhodesian section the lethargic appearance of the leaders was unrelieved. London Tin recorded a small advance among a number of declines; while in the Australian section, Wiluna, which reached 6s. 8d., after

touching 36s. 10½d. in 1928, came in for considerable adverse comment.

FOREIGN STOCK EXCHANGES.

NEW YORK.

Markets were firm last week-end, but turned weaker on news that four banking institutions, with deposits of over \$100 millions, were in difficulties in Toledo. Though exceptional factors may have been partially responsible for the suspensions, they were regarded as symptomatic of the unbalanced conditions in many parts of the Middle West. New York, however, showed no tendency unduly to emphasise the significance of the failures, and by mid-week a moderate rise in values had occurred. Oil shares were prominent on the rising tendency of crude prices following the spectacular events in Oklahoma and Texas, though the permanence of the movement was greatly distrusted in conservative quarters. Merchandising issues were well maintained. The president of the Woolworth Company has stated that American sales for the first eight months of this year will surpass those of the corresponding period of 1930. On the whole, however, the efforts of the bulls to induce the market to discount a substantial autumn trade improvement are hanging fire. Steel mill activity is now 32 per cent. of capacity, against 30 per cent. a week earlier. The bond market remains a weak spot, particularly as regards foreign issues, with rumours of impending defaults in the air. Some of the recent liquidation of bonds has undoubtedly come from corporate investment sources. German bonds have been an exception to the prevailing trend, the Basle Report on the financial situation being well received. Unofficial Wall Street opinion, with singular unanimity, has refused to accept health considerations as the ruling motive of a conference with officials of the Federal Reserve Bank being widespread.

AMSTERDAM.

Once again the Amsterdam stock market witnessed an exciting month under the influence of events in Germany, and German loans fluctuated 7 or more points a day. In other sections trading was on an extremely small scale at gradually declining rates. Among industrials Philips Lamp Works dropped to 65, as compared with the quotation of 955 which these shares attained in 1929. Accoustiek declined to about 10 on the unsatisfactory news as to the state of the company in Germany; in 1929 the quotation for these shares reached 282. Netherlands Ford declined sharply to about 230, but recovered somewhat later. Oils were weak following the continuous drop in the price of the commodity and the unsatisfactory quarterly report of Shell Union. Tobaccos were irregular. Commodity markets were mainly weak, and the corresponding shares were lower in consequence. Sugar, however, was an exception to the general rule. The world's visible supplies were estimated at 8,240,524 tons on July 1st, as compared with 7,035,995 tons on July 1, 1930. The new low record for rubber demoralised the share market and changes were all downward.

papers in Kent. Among its investments, the company counted 33,800 Associated Newspaper deferred shares, 5,175 Anglo-Newfoundland Development ordinary, 432,950 Carmelite Trust ordinary, 12,616 Daily Mirror ordinary, £12,000 Foreign Railway Investment Trust ordinary stock and 1,000 Sunday Pictorial ordinary shares. Referring to the company's relationship with the Carmelite Trust, Mr Philip Inman stated that they held 25 per cent. of the share capital of the latter company at a cost of £500,000, while they had a claim for the rescission of certain sales of shares and options or, in the alternative, damages to the amount of roughly £220,000. After lengthy negotiations, it was agreed that, in view of the fact that in the last Carmelite accounts they appeared as debtors for £147,115 in respect of a loan, against which they had lodged securities which to-day would be worth £45,207, the claims between the two companies should be cancelled, and the debt extinguished. With regard to Anglo-Foreign subsidiaries, holdings in which stood in the balance sheet at a cost of £410,503, it was clear, said the chairman, that the acquisition of properties in this country was never completed, so that they now found a number of rather scattered—though valuable—assets which, for lack of capital, could not easily be co-ordinated. Their interests were largely in trade journals, which derived most of their revenue from advertising, particularly for the heavy industries, and had consequently met the full blast of the industrial depression. In any valuation of their assets they had to consider to what extent depreciation of a permanent nature had arisen through such decreases in the earning capacity of particular journals. Two of their subsidiaries, however, had shown increased figures, both of circulation and profits. In the meantime, the amount of the company's capital to be regarded as permanently lost was in excess of £1,000,000. The Associated Iliffe Press, as a result of its recent offer, had already obtained over 50 per cent. of the capital, and shareholders had to decide whether they preferred to take cash to the extent of 9d. per ordinary share now, or to risk a problematical rise or fall in value during the next two or three years.

British International Pictures.—In our leading article last week we reviewed the position of the leading British film companies. Some interesting details of the finance of film production were given by Mr John Maxwell, the chairman of British International Pictures, at the company's meeting. British pictures, declared Mr Maxwell, were generally meeting with a favourable reception in the cinema theatres. His company's gross turnover from film productions in the first three months of the current financial year exceeded £250,000, and was thus at the rate of £1,000,000 per annum. This figure excluded dividends on investments, interest on loans and studio rentals, and represented the actual value of studio employment the company had created, an expenditure which otherwise would have gone abroad in the purchase of foreign films. For the purpose of developing its film production business the company is issuing to shareholders at par the 1,000,000 ordinary shares of 5s. at present unissued. It is not proposed to underwrite the issue as the directors and their friends have undertaken to take up any shares not applied for by the shareholders. This indicates a healthy confidence in the ability of the company to make profits out of British talking film productions. It is satisfactory in this connection to hear from Mr Maxwell that the company has completed the writing-off of all values of silent and part-dialogue films. Some £100,000 was taken from reserve for this purpose in 1929-30, and in the last year an additional and final writing-off was provided for out of earnings. In other words, British International Pictures has emerged successfully from the revolution of the talking film. The ordinary shares of the company were quoted after the meeting at 5s. 3d., as compared with a high level of 7s. 3d. this year.

Slump in Chilean Bonds.—It will be recalled that, following the declaration of a partial moratorium by the Chilean Government on July 15th last, a proposal was made by the Cabinet for the suspension of the foreign debt service on August 12th. On Thursday last it was officially stated that the payment of foreign debts would be suspended during the next five months, and Chilean bonds became a nominal market. Chile has always been regarded as one of the best of South American borrowers. By law the gold reserve of the country is fixed at a minimum of 40 per cent. of the note issue. A few months ago the reserve ratio was as much as 95 per cent. It is now below 60 per cent. During the boom of 1928-29 American money poured into the South American Republics. Interest on heavy borrowings, together with the effects of increasing imports and declining exports, have produced an adverse balance of trade, necessitating large exportations of gold to meet overseas commitments. In order to limit imports and increase the national revenue, an emergency tariff has been imposed. Chile relies mainly upon copper and nitrate exports for her foreign credits, and has admittedly been badly hit by the heavy fall in the prices of these commodities. The decline in London quotations for Chilean bonds in the last fortnight has been somewhat alarming, as the following table suggests:—

(MIDDLE STOCK EXCHANGE QUOTATIONS.)

	August 5.	August 13.	August 19.
Chilian 4½% 1885	95	50	50
" 5% Gold 1889	65	50	50
" 5% 1911	50	40	40
" 6% 1928	47	40	35
" 6% 1929	47	40	35
Valparaiso 5½% (Water) 1940 ...	90	75	75

It is understood that expenditure has been considerably curtailed and new sources of revenue authorised in the hope that the Government will be able to deposit funds for interest and amortisation at an early date. In any case, the present regrettable action on the part of the Chilean Government cannot fail to do serious harm to Chile's credit in London. It is a pity that those concerned did not think again before impairing their most valuable asset on this side, by a policy which, however natural the desire to protect their gold reserve, cannot but cause acute resentment among foreign bondholders.

Oil Restriction by Force of Arms.—Martial law now prevails in two of the great oil-producing districts of the United States. That restriction of oil output should have failed as a voluntary measure of trade protection, should have been held illegal in the courts of law, and should finally have been enforced by military force on the proclamation of two fire-breathing State Governors, is one clamorous piece of history which the great Republic of the West has contributed to world enjoyment. The "war" broke out in Oklahoma, which is ruled by the picturesque figure of Governor Murray, known as "Alfalfa Bill." Governor Murray decided that crude oil in Oklahoma should sell for \$1 per barrel instead of from 25 cents to 50 cents per barrel. If the price did not advance to \$1, he declared that he would close down the producing wells by force of arms. And this he proceeded to do—with the help of the National Guard. His action, of course, is an attempt to blackmail the crude oil-purchasing companies into paying more for their oil than it is worth. As a result, the production of Oklahoma, which was at the rate of 425,250 barrels a day on August 1st, will come down to 50,000 to 70,000 barrels a day, production being allowed only from "stripper" wells. The Governor of Texas, who had convened a special session of the Texas Legislature to pass an oil restriction Bill, was fired by Governor Murray's martial ardour, and decided to close down the new East Texas oilfield by force of arms rather than allow the operators to make up for the involuntary shut-down in Oklahoma. The Restriction Bill was actually passed by the Texas Legislature last week, but the Governor did not wait for the Railroad Commission to work out and enforce a pro-rata restriction scheme; he sent out the National Guard on August 17th to close down the wells. Presumably when the Railroad Commission's restriction orders are put into effect the reign of martial law will be ended in Texas. For the week ended August 8th the East Texas oilfield was producing at the rate of 654,200 barrels a day, a new peak level for the field, and it is expected that the new restriction scheme will have the effect of bringing down its output below 500,000 barrels a day. Kansas is now following the example of Oklahoma. The Governor threatens to close down the oil wells in the State if the price of oil is not increased to 60 cents per barrel. Meanwhile, as a result of these martial interferences with the laws of supply and demand, the price of gasoline has been advanced, and refiners are reluctant to quote except for very limited quantities for immediate delivery. Actually the statistical position of the gasoline market shows an improvement. Stocks of gasoline at refineries have been falling, and on August 8th amounted to 35,881,000 barrels, or about twenty-seven days' consumption, as compared with 47,440,000 barrels, or thirty-six days' consumption, at the end of March. But the seasonal decline in consumption is approaching, and nothing is more certain than that no real improvement can be effected in the economic position of the oil industry by the behaviour of two or three energetic State Governors. The oil surplus remains underground, and as soon as the troops are removed from the oilfields an overproduction can quickly be developed in spite of all the State restriction schemes. That the directors of the Shell Union do not regard the outlook hopefully is evidenced by their passing of the preferred dividends this week.

Bisichi Tin.—Our mining correspondent writes:—In view of the conditions prevailing last year, it is satisfactory that this Nigerian tin enterprise has made a small profit after allowing for depreciation on plant, works, etc. (though not for the loss on its holding in Treskillard Minerals—a Cornish tailings proposition). The sum involved, £1,500, has been written off share premium account, reducing that entry to £11,700. In 1929 the output showed a marked expansion over that of the preceding year, and the cost at railhead was reduced from £180 to £75 per ton. A dividend of 5 per cent. was paid. Last year production was restricted to 863 tons. The average price realised was £88—the lowest in the history of the company. Nothing is said in the report regarding costs, which must, naturally, have increased. The esti-

mated proved reserves are now stated at approximately 10,000 tons, excluding certain areas. In the 1929 report the proved reserves were stated at approximately 11,285 tons. Possibly the difference (less the quantity taken out during the year in excess of the 145 tons proved) is accounted for by the exclusion of the areas in question. The point is of importance, and should be fully explained. The cash position is strong, liquid assets at the date of the balance sheet exceeding liabilities by £105,000.

NATIONAL ACCOUNTS.

The total ordinary revenue for the week ended August 15, 1931, amounted to £9,284,000 against ordinary expenditure of £9,063,000. After allocating £600,000 to Sinking Fund and having allowed for a decrease in Exchequer Balances of £102,229, the operations for the week, as shown below, increased the National Debt by £481,000 to £7,647,570,000:—

(000's omitted.)

REPORTS AND NOTICES.

The directors of the Peruvian Corporation announce that Mr Archibald Samuel Cooper, C.B., C.M.G., has been elected to be a member of the board. It will be remembered that until a few months ago Mr Cooper was representative of the board in Peru, a position which he has held for the past thirteen years.

Sir Arthur Worley, Bart., C.B.E., of the North British and Mercantile Insurance Company, Ltd., has been elected chairman, and Mr W. A. Workman, of the Legal and General Assurance Society, Ltd., has been elected deputy-chairman, of the British Insurance Association.

The Central Mining and Investment Corporation, Ltd., announces that Sir Sothern Holland has decided to retire from the chairmanship of the corporation as from August 31, and that Sir Evelyn Wallers has been elected chairman as from that date. Sir Sothern Holland will retain his seat on the board.

Mr Arthur Digby Besant, hitherto general manager and actuary of the Clerical, Medical and General Life Assurance Society, relinquishes his title of actuary, but retains his position as general manager, and Mr H. D. O'Neill retires from the position of secretary. Mr A. H. Rowell has been appointed actuary, and Mr C. H. Lawton secretary of the society.

Mr F. T. Bridges, the late general manager of the Australian Mutual Provident Society, having retired under the provisions of the Officers' Provident Fund, Mr A. C. Hollingworth, A.I.A., has been appointed general manager, and Mr A. W. Sneddon, F.I.A., has succeeded Mr Hollingworth as manager for New South Wales. Mr V. Wheatley has been appointed secretary. Mr Hollingworth was for some years associated with the society in London as the manager for the United Kingdom.

The Central Mining and Investment Corporation, Ltd., announces that Monsieur Jacques Aguilon and Baron Etienne de Sigalas—who occupy influential positions in French business and financial circles—have joined the board of the corporation. French shareholders of the corporation are now represented on the directorate by M. de Vornouil, M. Jacques Aguilon, Baron Etienne de Sigalas, and Comte Pierre de Villoutreys. The Crédit Lyonnais, 19 Boulevard des Italiens, Paris, are now the responsible representatives and financial agents of the corporation in France.

Commercial Reports.

MARKET SUMMARY.

In view of the uncertain economic outlook the principal commodity markets remained quiet, and the tendency of prices is still weak. The depression in the coal trade is as acute as ever, and there has been no improvement in the activity of the iron and steel industry. Non-ferrous metals have been dull, and last week's advance in the prices has not been fully maintained. In textile raw materials, cotton declined further; but wool values have been steady. Reports of flooding in the jute-growing districts of India caused a slight advance in prices. There has been no improvement in the demand for finished cotton or wool goods. Among cereals, wheat prices are scarcely changed on the week; but maize was dearer, supplies have been more plentiful, which resulted in a slight decline in prices. Among miscellaneous commodities, rubber established a new low record at 2½d. per lb., and the market for vegetable oils and oilseeds has been dull.

THE COAL TRADE.

SHEFFIELD.—The contraction in the South Yorkshire coal market continues. There is little business doing on export account, although best steams maintain their prices of 17s. 3d. and 17s. 6d. Deliveries of industrial fuel which were suspended for the holidays have not yet been fully restored. Accumulations of small fuel increase. Some stocking of house coal is taking place, but the tonnage is not equal to a year ago. Export demand for furnace coke has been rather better lately. The home demand is weaker than ever, and lots can be bought as low as 10s. at ovens.

GLASGOW.—The Scottish coal trade has shown no improvement during the week. One or two qualities of washed nuts have been in a little better demand, with London taking some interest in the market, but large coals have been freely offered without attracting buyers. Prices show little change, but washed doubles are very firm at the quoted price. For shipments current quotations are approximately as follows (f.o.b.) district ports:—LANARKSHIRE.—Ell best, 14s. 3d.; splint best, 15s. 9d.; splint second, 14s. 14s. 3d.; navigation, 15s.; splint second, 14s. 6d.; hartley, 15s. 6d.; steam, 13s. 6d.; trebles, 12s. 12s. 6d.; doubles, 11s. 9d. 12s.; navigation, 16s. 6d. 17s. 6d.; first-class steam, 12s. 3d.; third-class steam, 10s. 6d.; trebles, 12s. 13s. 6d.; doubles, 11s. 6d. 12s.; 10s. 9d. 11s.; pearly, 9s. 3d.; trebles, 11s. 6d. 12s.; 10s. 9d. 11s.; secondary steam, 10s. 6d.; trebles, 11s. 6d. 12s.; navigation, 16s.; jewel, 17s.; steam, 13s. 6d.; trebles, 12s. 6d.; doubles, 11s. 9d.; singles, 9s. 3d. 9s. 6d.; pearly, 9s. 3d. 9s. 6d.; dross, 9s. 7d.

IRON AND STEEL.

MIDDLESBROUGH.—Business is practically suspended on account of the annual district holidays, and the weekly market was not held on Tuesday. Consuming works are considerably reduced, and requirements of Cleveland pig iron are being curtailed to some extent by the damping down of two or three furnaces so as to prevent excessive accumulations of stocks. Official prices are unchanged, viz.:—No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; and No. 4 forge, 57s. per ton f.o.b. or f.o.t. The production of hematite iron is not being seriously reduced, but one of the seven furnaces now operating will be put out towards the end of this week for an indefinite period. There is still very little business obtainable for hematite for forward

delivery, but makers are receiving a fair number of orders for short periods ahead both from home consumers and also for export. Mixed numbers for prompt are obtainable at 61s. per ton, and at 3d. to 6d. per ton more for delivery over periods ahead. In the finished trades no new orders of importance are reported, and practically all the large plants are closed down for the week. Prices are generally unchanged. The ore market remains idle. Best Bilbao rubio is nominally 14s. 6d. per ton c.i.f. for early delivery, and the current freight Bilbao/Middlesbrough is 4s. 3d. Coke is in excess supply, and consumers' requirements are on a reduced scale. Ordinary blast-furnace qualities are offered at 15s. delivery consumers' works, and a trifle less would probably be accepted. The number of furnaces blowing in the district this week is reduced from 22 to 15. There are 5 producing Cleveland, 7 hematite and 3 other kinds.

SHEFFIELD.—Business in the iron and steel industry is still suffering from holiday influences, but certain branches indicate a more active tendency, and the output of open-hearth steel is being maintained, although at a low and unremunerative level. Imports of ferro-silicon—an essential material in steel making—during the past half-year were 50 per cent. below the quantities in the corresponding period of 1930. The Board of Trade Returns for July indicated some improvement in exports of iron and steel material, but this was not shared by the alloy and other high-grade steels in which Sheffield specialises. Indian pig iron continues to be imported here to the amount of nearly 2,000 tons per month. There is still a great scarcity of orders and inquiries for railway and shipbuilding steel, and the rolling mills are very short of work in sheets and rods. A Sheffield firm is building a hydraulic steel forging press for Russia of 6,000 tons capacity. Several other substantial Russian orders are on hand in the district, mainly in the engineering side of industry. This market could be greatly developed but for the long credits demanded. Prices of iron and steel materials are unchanged. There is little or no forward buying. The cutlery, plate and tool branches complain of depression, but the tendency is slightly towards increased turnover.

GLASGOW.—Business in the West of Scotland is very much the same as indicated a week ago. Buyers are few, and such business as is being placed at the steelworks is for very small quantities, and works are finding it exceedingly difficult to keep going. In most cases there is very little on hand for forward delivery, and the plants are dependent on incoming orders for a continuance of work. Employment as a consequence is very irregular. In addition to the shipbuilding contracts reported last week further orders have been placed with yards at Bowling and at Govan. In the sheet trade a fair amount of business is being placed with local works both for home and export, prices, however, showing further reductions. There is no improvement in the demand for pig iron. At the tube works also things remain very quiet.

OTHER METALS.

TIN.—The sharp rise in tin prices last week has not been fully maintained, but tin values are now well above the low level reached earlier in the year. Consumption has not yet increased, but production is now slightly below requirements, which will soon make itself felt in a decrease in stocks. Wednesday's official closing quotations for "standard" cash at £113 7s. 6d. to £114 per ton, compares with £115 5s. to £115 10s. on the corresponding day last week. Stocks in London and Liverpool at the end of last week, at 31,781 tons, show an increase of 84 tons on the week.

COPPER.—In view of the unfavourable statistical position, which shows an increase in stocks coupled with a decrease in deliveries, the market in this metal has again been dull, and prices failed to improve. Wednesday's official closing price for "standard cash" in London, at £32 8s. 9d. to £32 10s., compares with £32 10s. to £32 11s. 3d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 21,368 tons, show an increase of 973 tons, while stocks of rough copper, at 1,150 tons, are unchanged.

LEAD.—At the beginning of the week lead was offered in considerable quantities and quotations declined, but on Wednesday sellers became more reserved, which brought about a slight rise in values. Wednesday's official closing quotation for "soft foreign"

FIGURES OF ASSURANCE A.M.P.

By careful and prudent administration the A.M.P. has made more than £42,000,000 for the benefit of its Policyholders since its establishment in 1849, and this, after providing for all expenses of management, commission, taxes, etc. A.M.P. premiums are low. Bonuses high and policies, as befits the largest British Mutual Life Office, world-wide. Assets £83,000,000. Annual Income £11,800,000. Full particulars on application.

MUTUAL AUSTRALIAN PROVIDENT SOCIETY Established 1849.
75-76 King William St., London, E.C.4.
D. E. WALKER, Manager for the United Kingdom.

in London, at £11 12s. 6d. to £11 15s., compares with £11 16s. 3d. to £11 18s. 9d. on the corresponding day last week.

SPELTER.—It appears that the scheme on which agreement was recently reached by representatives of the International Cartel of Zinc Producers, which aims at the control of production, came into operation on August 1st. Meanwhile the market has been steady and prices show no further decline. Wednesday's official closing quotation in London for "good ordinary brands," at £11 7s. 6d. to £12, compares with £11 7s. 6d. to £12 1s. 3d. on the corresponding day last week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals the quotations for aluminium and nickel at £85 per ton, and at £170 to £175 per ton respectively, have been maintained at last week's level. Antimony again changed hands at £22 10s. to £23 per ton for "foreign," while the "spot" price for quicksilver remained unchanged at the recently reduced price of £16 7s. 6d. to £16 10s. per bottle.

TEXTILES.

THE COTTON TRADE.—Manchester.—There has been very little activity in the market during the past week, writes our correspondent. Rather wider fluctuations have occurred in raw material rates with a tendency towards lower values. It is impossible at the moment to establish any confidence in the general situation and buyers are inclined to restrict their operations as much as possible. Reports with regard to conditions in China are not favourable, and business is being adversely affected by the disastrous floods, but further buying of poplins has taken place for Hong Kong. Only a limited demand has been met with for India, the sales consisting of small lots in light fabrics for Bombay and Karachi. Makers have met with very little support from Egypt and the Near East, but a few more contracts have been arranged in sheetings and drills for South America. Home trade buyers seem to be more cautious than for some time past. Quotations in American and Egyptian yarns have been very irregular when tested. The turnover remains very disappointing, and there are no signs of spinners obtaining any relief.

THE WOOL TRADE.—Bradford.—No definite move has yet been made in wool in this centre, writes our correspondent, and several factors are at work which tend to prevent the development of business on really sound and profitable lines. The decision of the B.D.A. directors not to pay an ordinary interim dividend and a drastic reduction in the quarterly interim dividend by J. and P. Coats indicate quite plainly that the industry at the consuming end is not yet out of the wood. The latter firm being cotton thread spinners, the dividend announcement does not interest the wool trade to quite the same extent as the B.D.A. At the same time, big quantities of cotton are used in conjunction with wool, and the decline in the former, along with the decision of cotton firms not to pay usual dividends must be counted among the factors operating against an advance in wool in the near future. In spite of these considerations, there is a fair amount of confidence in merinos. It is quite likely that the season will commence in Australia at the end of this month, without values being any lower than they are to-day. Supplies are not expected to come forward more quickly than home trade and Continental buyers can absorb them. The real test will be later in the season when bulk supplies are submitted, and advancing values are entirely dependent on bigger requirements than those which are in sight to-day. At this moment there is enough crossbred wool of the last season to meet all immediate requirements. Very little new business is being done in tops in Bradford. Some interest is being shown by spinners in buying on forward account, but little prices are being bid for delivery early next year. The policy of topmakers is to hold their hand until it is known more definitely how wool values are likely to move. Where business is done prices for merinos and crossbreds are about steady, though within the past fortnight reasonable figures have been accepted by those disposed to sell.

THE JUTE TRADE.—Dundee.—Consumers of jute goods at the moment are taking more interest, and an increased business at the Calcutta centre has resulted in an advance in prices. Heavy goods, especially, have been freely bought, and a rise of about 3s. per hundred bags is recorded during the past fortnight, while hessians have increased in value to the extent of one shilling per hundred yards. The market is so sensitive that prices readily respond to the slightest movement. The improvement is very welcome, after the long period of depression, and it is now a question of waiting to see whether the demand will be sufficiently sustained to maintain prices. Unfortunately, the Dundee market has not felt any beneficial effect of the rise in prices of raw jute and inquiry is made. It is not a case of buyers waiting for lower prices,

as these are already low and unprofitable and cannot be further reduced. The use of jute goods is much restricted, and the demand is simply not there. Prices of raw jute have advanced on account of flooding in the jute-growing areas, which has tended to keep back supplies. New crop imports into up-country stations in India are very small, and these markets are very firm. Spinners here have displayed little interest in the fibre at the dearer limits. Best First Marks are now offered at from £80 10s., and Lightnings from £16 15s., this being the value of Triangle Jadodia, August-September shipment. Ram and Mitsui rates were raised 10s. per ton to £19 5s. for Red Circle Ram First Mark, £17 10s. for Green Ram Lightning, and £16 for Heart Ram tops, August-September, and £18 per Fuji-M, £17 10s. for Asahi Lightning, and £16 10s. for Asahi Hearts, September-October. Daisee assortment rose to £15 15s., but later sellers came out at £15 7s. 6d. for full group, October-November. Tossa assortment is quoted at £16 15s. for five goods marks, October-November. Jute yarns are quiet, but prices are notably steady and unchanged. Spinners are naming 1s. 10½d. for common 8-lb. cops, and 1s. 11½d. for 8-lb. spools, but they have difficulty in getting buyers to pay more than 1s. 10d. and 1s. 11d. respectively. Most spinners are refusing these unprofitable rates. Twist is from 3½d. to 3¾d. for 3-ply 8 lb., according to quality, and sacking yarns are unchanged at 2½d. for 24-lb. web, and 3½d. for 8-lb. chains. Rove is being sold occasionally at from £18 15s. for 48 lb., and from £15 15s. for 200 lb. Fine yarns are inquired for, but business is quiet. Carpet qualities are again slow. Cloth business continues to disappoint. Manufacturers are adhering to their quoted rates of from 2½d. for 10½ oz. 40 in., and from 1½d. for 8 oz., at which small quantities are being bought for immediate use. Linoleum hessians are dull and nominal, and business in heavy goods is generally quiet.

THE GRAIN MARKETS.

WHEAT.—There has been no improvement in the wheat markets during the past week. Reports of adverse climatic conditions in Europe and of an offer from China to the Federal Farm Board to buy wheat on long-term credit caused a slight advance in prices, but in view of the general situation the higher quotations were not maintained. In his "Corn Trade News" Mr G. Broomhall has now published his estimate of the probable export surplus of the world and of import requirements during the current season. He estimates the surplus at 121,000,000 quarters and import requirements at 97,000,000 quarters, thus leaving an unexported surplus of 24,000,000 quarters at the end of the season. Weather conditions in this country have hampered harvesting and in some cases standing crops have been beaten down by the heavy rain. According to the first official estimate of the Ministry of Agriculture, the wheat crop of England and Wales at 4,700,000 quarters, shows a decline in yield of 300,000 quarters on the previous year. Quotations: No. 1 Northern Manitoba, Atlantic, ex ship, 25s. per 496 lbs., as compared with 24s. a week ago; No. 2 Northern Manitoba, Atlantic, ex ship, 23s. 9d., against 22s. 9d.; No. 3 Northern Manitoba, Atlantic, ex ship, 22s., against 21s.; Rosafé, ex ship, 20s., against 19s. 3d.; Australian, ex ship, 20s. to 21s. 6d., against 20s. to 22s. 6d. a week ago.

WHEAT FLOUR.—Business in flour has been steady and the improvement in the demand of bakers in this country has been maintained. North American shipments, at 187,000 sacks, show a decline of 1,000 sacks as compared with the previous week. Of this total 85,000 were consigned to non-European countries. Quotations: Straight run, delivered country, 21s. 6d. per sack of 280 lbs.; as compared with 21s. last week; delivered London, 20s. 6d., against 20s. Manitoba patents, ex store, 20s. 3d. to 24s., against 20s. 6d. to 24s., and Australian, ex store, 16s. 6d. to 17s., against 16s. 6d. to 17s. a week ago.

BARLEY.—The home trade in barley has been more active, but a large proportion of business was done in Russian barley. According to an official estimate the barley crop in England and Wales is expected to be 4,400,000 quarters against 4,100,000 quarters a year ago. Quotations: "English feeding," f.o.r., per 48 lbs., 20s. to 22s., as compared with 20s. to 22s. Californian "new" sold at from 34s. to 50s., as compared with 34s. to 50s. last week; "Australian Chevalier" changed hands at 28s. to 32s., against 28s. to 32s. a week ago.

OATS.—Oats have again been dull, the crop in England and Wales has been officially estimated at 8,900,000 quarters, which shows a decline of 500,000 quarters as compared with last year. Quotations: "River Plate," landed, 12s. 6d. per 320 lbs., as compared with 11s. 3d. last week; "River Plate," ex ship, 11s. 6d., against 10s. 3d.; "Chilean Tawny," landed, 13s. 9d., against 12s. 9d.; English white, per 336 lbs., 20s., against 20s. a week ago.

MAIZE.—The market in maize has been active, and although shipments from the Argentine continue on a large scale the expansion in buying brought about a slight rise in quotations. Quotations: "Plate," landed, 16s. per 480 lbs., as compared with 15s. 3d. last week; Plate, ex ship, 14s. 9d., as against 14s.; Plate, August-September, new, 14s. 9d., as against 14s. 1½d. Yellow maize meal, ex wharf, was quoted £4 15s. per ton, against £4 15s. a week ago.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1930:—

NEAREST FUTURE.	Jan. 2, 1930.	Aug. 13, 1930.	Jan. 2, 1931.	Aug. 5, 1931.	Aug. 12, 1931.	Aug. 19, 1931.
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.	148½	93½	56½	52½	56½	46½
Chicago (No. 2 Winter) —Cents per 60 lb.	130½	88½	79½	48½	50½	55½

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1930-31, 1929-30, 1928-29, 1927-28:—

	1930-1931.	1929-1930.	1928-1929.	1927-1928.

OTHER FOODS.

SUGAR.—The raw sugar markets, which, until recently, have been characterised by a considerable turnover, have been quiet during the past week, and prices declined in the absence of support from buyers. In order to stimulate the market in "British refined" sugar, prices were reduced 3d. per cwt. on Wednesday. Wednesday's sales of "raws" included "December delivery" at 10½d. to 5s. 11½d. per cwt., against 6s. 3½d. to 6s. 4½d., and 5s. 10½d. to 5s. 11½d. per cwt., against 6s. 3½d. to 6s. 7d. on "March," 1932, at 6s. 1½d. to 6s. 2d., against 6s. 6½d. to 6s. 7d. on the corresponding day last week. The movements of raw sugar in London and Liverpool during last week are set out in the table below:—

	Imports.		Deliveries.		Stocks.	
	1931.	1930.	1931.	1930.	1931.	1930.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
London.....	196	623	877	1,218	27,177	27,509
Liverpool.....	12,331	20,960	13,319	18,699	76,522	104,565
Total.....	12,527	21,583	14,196	19,917	103,699	132,074
Last week	22,544	19,356	13,293	15,480	105,368	130,408

COFFEE.—This week's auctions revealed a poor demand for coffee, and a large proportion of the quantity offered was withdrawn. Last week's movements of coffee in London were as follows: Brazilian, landed, nil; delivered for home consumption, 174 bags; exported, nil; stocks, 1,927 bags, against 1,176 bags last year. Central American, landed, 1,395 packages, against consumption, 2,010, exported, 848; stocks, 98,381 packages, against consumption, 2,010, exported, 848; stocks, 98,381 packages, against consumption, 2,236; exported 560; stocks, 79,596 packages, against 90,692 a year ago.

COCOA.—The market in cocoa has been steadier following a slight improvement in demand. As compared with the corresponding day last week, Wednesday's quotation for Accra, fair fermented, mid-crop, August-September, at 17s. 3d. per cwt. f.o.b. London contract, shows a rise of 3d. Last week's movements of cocoa in London were as follows:—Landed, 1,516 bags; delivered for home consumption, 2,494 bags; exported, 146 bags; stocks, 224,003 bags, against 201,163 last year.

TEA.—The quantities catalogued for this week's auction comprised 43,603 packages of Indian, 81,195 packages of Ceylon, and 11,181 packages of Java and Sumatra tea. Business was slightly less active this week and teas of low quality were cheaper. There was, however, again keen competition for the limited quantity of tea of outstanding quality which was on offer. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account:—

Week ending	Northern India.		Southern India.		Ceylon.		Java.		Sumatra.		Nyasaland.		Total.

RICE.—The recent improvement was not maintained during this week. The market has been quiet and prices were easier. Wednesday's quotation for Burma No. 2, cleaned, August-September, in singles to the Continent and to the United Kingdom, at 8s. 1½d. per cwt., shows a fall of 1s. as compared with last week. Movements in London during the past week were as follows: Landed, 13 tons; delivered, 35 tons; stocks, 1,009 tons, as against 1,969 tons last year.

POTATOES.—Supplies of potatoes have been sufficient to meet all requirements, but prices remained steady. At the Borough

Market, "Best King Edward" sold at from 6s. to 7s. per cwt., as compared with 6s. to 7s. a week ago.

SPICES.—Business in "spot" pepper has been negligible, but prices have been maintained. Wednesday's quotation for "Black Singapore," at 5½d. per lb., shows no change on the week. Movements of pepper in London during the past week were as follows:—Black, landed, 5 tons; delivered, 1 ton; stocks, 570 tons; against 847 tons last year. White, landed, 15 tons; delivered, 39 tons; stocks, 493 tons, against 437 tons a year ago.

MEAT.—Supplies of meat have been heavier this week, and prices were slightly easier. Wednesday, Argentine beef (chilled, hindquarters) was sold at 4s. 10d. to 5s. 2d. per 8 lbs., against 5s. to 5s. 10d. on the corresponding day last week, while New Zealand frozen mutton realised 3s. 4d. to 3s. 10d., as against 3s. 4d. to 3s. 10d. a week ago. According to the Smithfield Market official report, supplies of meat during last week amounted to 7,990 tons, as compared with 8,010 tons in the corresponding week last year. Imported beef, principally Argentine, formed 86.1 per cent. of the supplies, as against 82.6 per cent. a year ago; and imported mutton, mainly New Zealand, formed 81.0 per cent. of the total supply, as against 82.8 per cent. last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OILSEEDS.—Difficult conditions have ruled in the market generally, the tone of which is quiet and inclined easy. Demand for linseed is of a meagre description, and with large supplies afloat seeking buyers and a favourable outlook for the new crop in Argentine, values have again taken an easier turn. Plate on spot at Hull and afloat to August is now around £8 and shipment to October £8 5s. to £8 7s. 6d. New crop Plate to Hull January-February shipment has been dealt in at £8 8s. 9d. and is now quoted £8 5s. The quantity of linseed afloat to Europe has increased to 184,000 tons, which is 24,500 tons higher on the week and compares with 110,400 tons a year ago. Cottonseed has recovered somewhat from the sharp setback following the publication of the American cotton estimate, old crop Egyptian (black) now being held for £4 15s., while for new crop, September-October, to Hull, £5 has been paid. Demand for vegetable oils continues restricted. Linseed oil has been very erratic and closes lower, raw oil on spot at Hull quoting £15 10s., August to December £15 and January to April £15 10s. Cotton oil is steady with crude Egyptian ex Hull at £18 10s. and common edible at £20 15s. Other seed oils are quiet and easy and oil-cakes in exceptionally poor request, despite a further reduction in quotations.

HIDE, LEATHER AND ALLIED TRADES.—The market for most descriptions of hides and skins is weak, writes our correspondent, and although ox and heifers at the Manchester sales changed hands at last week's figures, there is a feeling that with better supplies now coming forward declines in value will be recorded at the auctions to be held over the week-end. Calveskins are a poor sale, and with others from the Continent being made here at low figures, the tendency of prices for the English article is downward. Sheepskins in some cases show a slightly firmer tone, but generally prices are unchanged. Sales of imported hides have been on a small scale in spite of the low figures now ruling for many kinds. In the South American market business has been put through on account of the United States trade for Argentine ox at 4½d., while second ox have changed hands at 4d. The market for dry South American hides is quiet, and apart from a few sales of B.A. Americanos at 5½d., M.V. Americanos at just under 4½d., and a few other descriptions, there has been very little business passing. Africans are not much sought after, although there has been some small business done in dry salted Capes at 5½d. and 4½d. for 20/30 lbs., while first and second dries have realised 6½d. and 5½d. The market for Australians remain more or less steady in the absence of any sizeable business. Rather more interest has been taken by consumers in the position of the sole leather market, and although business is by no means satisfactory, the turnover generally shows signs of expansion. Manufacturers of footwear still hesitate to commit themselves to any great extent, and although inquiries are going around for dry hide bends the actual business so far resulting has been small. The repairing section, however, has been a fairly good customer for English and wetsalted descriptions, and moderate sales of both heavy- and medium-weight bends have been made. There has been no further improvement in the call for offal; small quantities of pinned shoulders and bellies continue to be moved off, but the demand for rough stock is very restricted. Sales of upper leathers have usually been confined to small quantities, with more interest taken in the heavier than the lighter grades. Both box and willow calf in the former are now receiving attention, in addition to which manufacturers of footwear are inquiring for side leathers. The demand for patent remains fair, as is also the case with glace kid in both black and brown, but there is little business of any consequence being done in other directions.

THE TIMBER TRADE.—The drastic reduction of 32s. 6d. per standard in the c.i.f. prices of Russian deals, battens and boards (of which the Soviet shippers are conceding 20s. and the most British syndicate 12s. 6d.), writes our correspondent, is the most important item of timber trade interest during the past month. This concession brings the Russian goods once more well into line of competition with the other European specifications, and will have the effect of speeding up the sales of the Russian supplies here and to come forward this season. Total imports of sawn deals, battens and boards again were light in July, and for the seven months consist of about 521,550 Petrograd standards (of 165 cubic feet)

against 689,565 standards for the corresponding period last year. Russian shipments are much more backward this year compared with last, which few imported here will regret, and, although large supplies arrived from Finland last month, the total quantities from that Republic and from Sweden and Latvia are down compared with a year ago, to the benefit of the spot market. Stocks generally in London docks are smaller in volume compared with a year ago, whilst the Port of London Authority's July returns also show much better deliveries compared with the corresponding month last year. The slight increase in stocks of sawn deals, battens and boards is much more than set off by the appreciable deliveries in July, even although part of them may have helped to replenish merchants' private yards. Another factor is that the Ministry of Labour Gazette shows costs of buildings outside the L.C.C. area for which plans were passed last month at £7.2 millions, compared with £5 millions in June and £6.5 millions in July, 1930, the increase being for housing. Adverse factors are that the returns of unemployed building trade operatives show an increase of 5 per cent. compared with a year ago, and now total 18.9 per cent.; and the best time for building operations here this year has gone by. The experience of the past eight months has been the right one, but there will be larger business the remainder of the year for late autumn, winter and early spring requirements. The hardwood market has continued very slow over the month, not unexpected for August, but, nevertheless, the repetition of slow trade must be irritating to those engaged in it. But in all departments of the hardwood log market—mahogany, cedar, satinwood, rosewood, ebony, teak—shipments to this country are wisely reduced in sympathy with the poor demand. The only appreciable increases in hardwoods in July are sawn woods from the United States, but previously U.K. stocks of this American lumber were ample. Home and Colonial woods naturally are affected, not only by the keen American competition, but by the generally bad state of the wood-consuming trades. Importers and merchants of plywood also are operating very cautiously in their purchases this year; that can be gauged by the extent of the imports from abroad (the U.K.

makes only the very best), which are about 37 per cent. short of last year's (January-July) receipts from overseas.

RUBBER.—There has been no improvement in the market for rubber, and at 2½d. per lb. a new low record was established. Despite the low prices, business remains on a limited scale in the absence of an expansion in the demand for rubber goods. Wednesday's official closing price for standard ribbed smoked sheet, at 2½d. per lb., shows a fall of ½d. as compared with the corresponding day last week. In forward positions, business has been done at 2½d. for October-December, against 2½d. to 2½d.; and at 2½d. for January-March, 1932, as against 2½d. to 2½d. a week ago. Movements of rubber in London and Liverpool during the past week were as follows: Landed, 2,396 tons; delivered, 2,366 tons; stocks at the end of last week, at 137,077 tons, show an increase of 30 tons, as compared with the preceding week.

COMMODITY PRICES IN THE UNITED STATES.

THE MONEY MARKET.

MONEY was plentiful over the week-end, with only a small demand for loans, and rates ran about 3 per cent. Considerable stringency, however, developed on Monday. Falling as it did three months after Whit-Monday, that day held no Treasury bill maturities, and, with new Treasury bills to pay for, the market was short of funds. Furthermore, as the Bank return shows, heavy tax payments had diverted market resources into public deposits, while

SP The years when a man is making his way are critical ones for his Dependents.

He may be earning an income which maintains his wife and family in comfort, but he has not had time to save. Should he die, such life insurance as he has been able to afford will yield but a fraction of the income to which his family has been accustomed. The "Adequate Income" plan supplements the ordinary Life Assurance Policy and enables provision to be made for a larger income for dependents during the critical period than can be secured by other means.

Particulars of the "Adequate Income" plan will be sent on application.

Correspondents to the Italian Treasury.

current political and financial developments, including heavy foreign withdrawals, produced a general feeling of nervousness and some widespread movements of funds. As a result, rates for new money ran up to 4-4½ per cent.

The next day still greater stringency prevailed. New money still commanded 4½ per cent., with renewals outside the clearing banks at 4 per cent., but a small amount had to be borrowed at the Bank. Discount rates were also harder, and three months' bank bills were quoted at 4½-½ per cent., with hot Treasuries at 4½ per cent. Just over £500,000 of bar gold was on offer in the market, of which £485,000 came from the Cape. This was taken by an unknown buyer, and although as in previous weeks a corresponding number of sovereigns were released from earmark at the Bank, the price paid for gold was 84s. 11½d., or the Bank's statutory selling price. This, in conjunction with the failure of the principal foreign exchanges to respond quickly to the change of Government and the knowledge that sterling still needed special support added to the uncertainty of the market.

	Aug. 6, 1931.	Aug. 13, 1931.	Aug. 20, 1931.	Aug. 27, 1931.	Previous Rate and Date Changed.
Bank Rate	4½	4½	4½	4½	3½ (July 30, '31)
Banks' Deposit Rate...	2½	2½	2½	2½	1½ (July 30, '31)

Houses (Notice) ...	2½	2½	2½	2½	1½ (July 30, '31)
Market rate (3 months' bills)	4½-½	4½-½	4½-½	4½	...

On Wednesday the situation changed definitely for the better. Treasury bill maturities had by this time made funds more plentiful, and new money fell to 3½ per cent. Discount rates, too, were a shade easier, though there was hardly a quotable change. Better still, there was a general improvement in the foreign exchanges. The New York rate rose from \$4.85½ to 4.86½, and the Paris rate from Frs. 123.95 to Frs. 124.00, and these rates were no longer "pegged" rates, but for the first time for several weeks arose from a genuine foreign demand for sterling. The Dutch, Belgian and Swiss rates, which had never been directly "pegged," also improved, Amsterdam from Fl. 12.04½ to Fl. 12.05½, Brussels from Belgas 34.82½ to Belgas 34.85½, and Zurich from Frs. 24.94 to Frs. 24.97½. In short, sterling was once more "afloat." The following day money was not over plentiful, but the ruling rate fell to 3½ per cent., and discounts were fractionally weaker.

This has led to an improvement in tone, which is all the more marked as it was known that, if it had been necessary to give further support to sterling, fresh arrangements would have been very soon required. The wider question of the outlook for sterling in the changed political circumstances, and of the further assistance that may have to be sought abroad to ensure the absolute stability of the pound until such time as the proposals of the new Government come into force and restore foreign confidence, are discussed elsewhere. One consideration, however, may be mentioned here: it would be distinctly dangerous to maintain sterling by building up an unsound short position similar to that which existed up to last July, and which was one cause of the crisis. The only genuine long-term remedy is the rectification of England's commercial and financial balance of payments.

The Bank return reveals the return of a further £3.8 millions of notes from circulation, and with the Bank's gold holdings virtually unchanged, the reserve has risen by £3.6 millions. The higher fiduciary limit of £275.0 millions has been extended for another three weeks. In the banking department, discounts and advances have risen by £2.4 millions as a result of Tuesday's borrowings. Tax payments and the absence of Treasury bill maturities on Monday probably explain an increase of £6.6 millions in public deposits and a decrease of £8.2 millions in bankers' deposits. This last item has fallen to

£53.6 millions, which is a figure low enough to account for the stringency earlier in the week. Other deposits have again risen, and now stand at £48.7 millions, against £34.9 millions only a fortnight ago. The increase in this portion of the Bank's liabilities may not be unconnected with the support recently given to sterling, but it is also known that in both London and New York the Banque de France has been turning part of its foreign assets over from bills to balances, and this may be the one explanation.

In New York, money has remained plentiful and easy, with call rate still at 1½ per cent. and commercial paper at 1½-2 per cent. for prime names. Ninety-day bankers' acceptances are quoted as before at ½-1 per cent. The change of Government in England has made a good impression. There was never any attempt at dictation on the part of the American banking authorities, and any suggestions to this effect are resented. Some surprise was caused on Monday by the news that the Bank of England's credit had been nearly exhausted, but the opinion is freely expressed that, while Great Britain could never have borrowed in New York money to "pay out in doles," this week she can raise all she needs.

The foreign exchange market was active this week as a result of the important political developments, and sterling was very firm towards the close, when the formation of a National Government was announced. The New York rate went from 4.85½ to 4.86½. Montreal weakened by ½ to 4.87½. Paris went in our favour from 123.95 to 123.99. Brussels gained ½ on balance at 34.86, after being considerably lower. Milan weakened to 92.92, a loss of 4 points. Madrid, after hesitation, improved to 54.00, against 54.85 last week. Amsterdam was very firm, and was inclined to move against us at first, but fell away at the close to 12.05½, against 12.04½ last week. Berlin was steadier and stronger at 20.49. Switzerland gained ½ on balance after being considerably lower. Of the Scandinavian exchanges, Stockholm was fractionally weaker, and lost ½ to 18.16. Oslo moved from 18.16½ to 18.17½, whilst Copenhagen fell away by ½ to 18.17½. The South American currencies were again uncertain, but fluctuated within narrower limits than of late, Rio being unchanged on balance at 3½d., and Buenos Aires ½d better at 31½d. Monte Video improved from 21½d. to 24d. In the Far East the rupee and yen were firm and unchanged at 1s. 5½d. and 2s. 0½d. respectively, as was Batavia at 12.07. The forward market saw considerable changes from last week. Dollars were quoted at ½ cent and 2½ cents premiums, against ¼ and 1½ cent premium last week. Paris moved to considerably higher premiums of 25 centimes for one month and 73 centime for three. Brussels was unchanged for one month's delivery at 6 centimes premium, and 1 centime better a 11 centimes premium for three. Milan discount quotation narrowed from 10 and 85 centesimi to 3 and 20 centesimi. Forward Madrid was nominal at last week's levels. Amsterdam was stronger at 8½ cents and 7 cents premium for the two periods respectively. Berlin quotations remained rather shadowy at par to 15 pfennigs discount for one month and par to 20 pfennigs discount for three, only a few isolated and small transactions being recorded. Switzerland was firmer by one point for each delivery at 5 and 9 centimes premium. The price of silver improved by ½d. to 12½d. for both cash and forward as a result of Indian bear covering in a narrow market. The Chinese silver exchanges responded to this upward movement, both Hong Kong and Shanghai were better by ½d. at 11½d. and 12½d. respectively.

GERMANY'S CREDIT SITUATION.

THE GOVERNMENT AND ITS TASKS.

IN the dénouement of the immediate political phase of Great Britain's domestic crisis the entry into office of Mr MacDonald's new administration holds two major points of advantage. At a moment when the stability of sterling and the maintenance abroad of British credit were in serious, imminent jeopardy, we have been spared the intolerable prolongation of perilous uncertainty which would have been involved in a Dissolution. By the formation of a Government of Co-operation, in which leaders of the two Oppositions will sit side by side with the late Cabinet's Prime Minister and Chancellor of the Exchequer, we have avoided what, in view of the tasks to be faced, would have been a much less desirable alternative — the establishment (with or without Liberal participation) of a predominantly Conservative administration.

The gravity of the national emergency, and the obviously unpalatable nature of many of the remedies which must be applied if Great Britain is not to abandon its century-old position as a Great Power, called emphatically for the nearest approach to the achievement of a *Union Sacrée* to apply to the situation that "swift, decisive and effective action" which Mr MacDonald has now promised in his admirable broadcast appeal to the nation. In severing himself from the majority of his late colleagues and from a party which he had spent the greater part of his life in building, Mr MacDonald has staked his whole political future on the cause of the national interest. He and those of his supporters who have followed him have deserved well of their country; and the commendable attitude of the heads of the Conservative and Liberal parties in agreeing readily to take office under Mr MacDonald's leadership is a correct interpretation, we are convinced, of the wishes of the overwhelming majority of those whom they represent.

The personnel of the new administration, details of which will be found on a later page, has made an excellent impression abroad and should command at home as much confidence as could well be hoped for, having regard to the fact (on which we shall have more to say) that an Opposition will not have ceased to exist. Compact in numbers and drawn largely, as was right, from statesmen with the maximum of experience to their credit, the Cabinet is well manned, and the Ministry as a whole gives the appearance of a strong Government, well fitted to face stern facts and the fire of hostile criticism. Its programme, in detail, is still awaited as we write, and for the moment we have to rest content with the official statement that there will be "a very large reduction of expenditure," and Mr MacDonald's broadcast assurance that, in order to place British credit in security, the Government will produce "a scheme consisting in economies on the one side and further revenues on the other, a scheme well balanced, with burdens imposed as lightly as possible, but imposed equitably." Already, however, the formation and composition of the National Government have done much to allay the *crise de confiance*. The whole world, watching with not wholly unfounded anxiety the credit-worthiness of Great Britain, has welcomed, from considerations of mutual interest and goodwill alike, this first convincing earnest of determination on our part to set our house in order.

This much of good augury may be said in honesty, with unqualified satisfaction: grave immediate perils have been averted, a promising first step towards betterment has been courageously made. Yet it would be of disservice, we believe, if we contributed in these columns towards the creation of any degree of complacency or disposition to minimise the magnitude of the many-sided problem still to be solved. It is a problem which, as we have repeatedly emphasised, must be tackled on all sides at once if solution is to be rapid or complete; but for the present purpose, and in the light of the past week's change of Government, it may be conveniently reconsidered under

three heads: (1) The British political problem; (2) the international crisis; and (3) the deep-seated British economic crisis.

To begin with, the fact must be frankly appreciated that, in contrast with Mr Lloyd George's war-time Coalition, the present "emergency" Government of Co-operation has not only the attacks of a numerically strong Opposition to face; it holds within itself the seeds of its own disintegration. The importance and the implications of these two factors require to be carefully weighed. In the first place, though the meeting of the Parliamentary Labour Party has yet to be held as we write, the attitude adopted on Wednesday by the Party Executive in joint session with the General Council of the T.U.C. points unmistakably to all the forces of Labour being mobilised by the political and industrial sections of the Party machine in uncompromising hostility to the only sort of programme which the Government can conceivably announce, or which will satisfy the vital needs of the case. Mr MacDonald obviously cannot count on the support of more than a handful of adherents in the ranks either of the Parliamentary Party or of trade union officialdom. Nor is this all. It would be idle to ignore the danger that the Labour Party, freed from the responsibilities of office and lacking the guidance of two of its main "moderate" leaders, may allow itself to drift insensibly Leftwards—away from realist policies to counsels of intransigent extremism. On Mr Henderson, to whose great work as Foreign Secretary we pay elsewhere a merited tribute, and who will now presumably lead the Party in Mr MacDonald's stead, there rests a heavy responsibility. That he will use his influence in favour of sane, patriotic policy we are reluctant to doubt; but he will have explosive material under his hands, and though we may discount the malicious, irresponsible propaganda alleging a "bankers' ramp" already emitted by the official Labour newspaper and honourably refuted by the Prime Minister, there may be an irresistible temptation for the Labour Party to make electioneering capital out of the national emergency by arraigning Mr MacDonald's administration as a "hard-faced Government," subservient to financial interests and bent on the exploitation of the working class. Unless Labour is wisely led, it may be only too easy for the Left Wing to organise, irrespective of the real views of the mass of the nation, such an outwardly formidable-looking opposition to the Government that a Cabinet not wholly united in its conception of right policy might be led to lose faith in its mission and to question whether it held sufficiently the country's confidence.

Is that unity of conception present in the Government which Mr MacDonald has formed, and how long can it be guaranteed to endure? To the first part of the question a more confident answer can be given than to the second. There need be little fear of any substantial difference of opinion within the Cabinet on the immediate need to balance the Budget or on the means necessary to that end. But suppose that the achievement of budgetary equilibrium be only the first, and easiest stage on the painful road to recovery; suppose (and, as readers of the *Economist* are aware, this has long been our considered conviction) that further, equally unpalatable contributions by way of common effort and sacrifice are called for by the obduracy of the trade depression. Under those circumstances could the Conservative section of the present Government be relied upon to resist pressure from their followers that they should have recourse to a tariff—a remedy which every Conservative leader has advocated as a means to raise or maintain the British standard of life, but whose adoption (our own views of its merits are familiar) would split the Government from top to bottom? It is a big assumption, but upon it may depend the Government's prospects of life.

What conclusion is to be drawn? The official announcement which heralded the Government's formation stated that "the specific object for which the new Government

is being formed is to deal with the national emergency. . . . When that purpose is achieved the political parties will resume their respective positions." Later, Mr Baldwin announced that his Party had agreed "for a limited period of time to enter a National Government, which is to be formed for the express purpose of carrying out such measures as are required to balance the budget and restore confidence in our national credit, and there is no question of any permanent Coalition. The National Government has been allotted a definite task, and on its completion it is understood that Parliament should be dissolved as soon as circumstances permit." On the strength of these statements there is talk in political circles and in the Press of an autumn Election, the idea being that Parliament will be asked to rush through several Economy Bills and a Finance Bill to make good the remainder of the deficit, and will then, in comparatively few weeks' time, be dissolved. Let us say at once that such a prospect seems to us to be disastrous. We cannot conceive that Mr Baldwin could construe in this sense the duration of the "emergency," or that Mr MacDonald, who has spoken of inviting the country's verdict "when the danger has passed," could contemplate imperilling the whole work to which he has bravely committed himself by dissipating the energies of statesmen and of the country in the confusion of an electoral struggle on party lines at a moment when no more than one phase of the crisis can have been tackled.

Essentials of Foreign Policy.

This brings us straight to the second aspect of the Government's task, the rôle which Great Britain has to play in external affairs, including the constitutional problem of India. Here, happily, there is little or no divergence of party view making for discord in the administration or suggesting the need for an appeal to the judgment of the electorate. In the case of India we see no ground for imagining that Mr Baldwin will lack the support of the great bulk of his followers if he stands steadily, as we believe he will, for the broad lines of policy laid down by the Round Table Conference last January, endorsed then by the new Secretary of State, and assured from the Liberal side of unqualified assent. No Government could be better fitted than the present to deal with the issues of the imminent Indian Conference—issues which cannot be burked or delayed without serious detriment to our relations with India and our trade in the East.

Still less can we afford procrastination or the interruption of an electoral struggle in our conduct of policy with regard to the European crisis. One of the most cogent reasons why it was necessary that we should spare no effort, no sacrifice entailed in putting the stability of British currency and credit beyond suspicion was that otherwise, had we been in the position of a great banker questionably solvent and visibly reluctant to curtail his personal expenditure, we should have forfeited the prestige and influence which all parties in this country would desire us to exercise in endeavouring to straighten out the international tangle. This is no question of pure, disinterested altruism for us or any other country. Indeed, for us it is a matter of vital self-interest. Until the politico-economic crisis in the affairs of Europe is allayed, there can be no hope of world trade recovery. And, without world trade recovery, the British "emergency," in one form or another, will persist.

What is the situation abroad which confronts us? The financial collapse of Central Europe has been momentarily checked; disintegration into economic and political chaos has been precariously deferred by injecting into the system a palliative which paralyses its normal functioning. Austria and Hungary are being upheld by temporary foreign credits; the six months' "stand-still" arrangement concluded at Basle to meet the compelling needs of Germany affords a breathing-space, no more, at the cost of immobilising a vast volume of credit needed for the world's general economic purposes and at the price of applying to the body of Germany ligatures which keep that body's members quiescent, numb, slowly dying. An amelioration of that condition can only be achieved, to quote the words of the Wiggin Committee, whose report we published last

week, "if the Governments of the world will realise the responsibility that rests upon them and will take prompt measures to restore confidence." To that end there must be "the assurance that international political relations are established on a basis of mutual confidence . . . and international commerce—on which depends the progress of civilisation—is allowed to resume its natural development."

How far that "mutual confidence" is from being established, the whole world is lamentably aware. Though there is, perhaps, growing realisation in all countries that this summer's crisis, preluded by the collapse of the Austrian Credit Anstalt, marks the end of a phase to which there can be no complete return, the ultimate future of reparations and war-debts remains in the obscurity of "judgment suspended," wherein it was placed by the Hoover Plan. France, understandably, is not yet in any mood to assent to the simple cutting of the Gordian knots of economic entanglement at her expense without some convincing recompense. American opinion, increasingly obsessed by growing distress within the United States, is by no means prepared to be rushed into irrevocable acts of self-immolation in the capacity of world-creditor, without close regard to the deserts of her European debtors. And, in the estimation of those deserts, a major factor is Europe's attitude towards disarmament—military and economic; for the maintenance of armed forces in defence of frontiers and the maintenance of destructive trade-barriers in defence of industrial "nationalism" are manifestations of one and the same attitude of mind. Thus progress towards the solution of the problem of intolerable international indebtedness is inextricably involved in the question of how Europe's political hostilities may be allayed, and the foundations of a consciously co-operative Continent cemented. The task, as the experts have roundly asserted, is a task within the capacity of none but the statesmen; and every hour of delay renders its accomplishment more difficult.

In these circumstances it is unthinkable that the present British Government should nullify their international authority, and risk a fatal procrastination in dealing with the urgent wider aspects of the crisis which we, Europe and the world share in common, by allowing it to be understood that they regard themselves as no more than a stop-gap Ministry formed to settle simply one isolated issue—the rectification of the British Budget. The League Council is on the eve of assembly, with big questions on its agenda; the objectives of European reconstruction require to be pursued with unremitting vigour, and momentous decisions given without hesitation; the vital Disarmament Conference is less than six months away. It is essential that in the critical days ahead in the sphere of foreign affairs Lord Reading should represent this country as the spokesman of a Government resolved to "see it through" on lines continuing (as almost every shade of opinion in Great Britain desires) the policy laid down by the late Administration. Neither we, nor Europe, nor the world, can afford at this critical juncture to have British foreign policy made the sport of an electoral campaign. To assent to such a contingency would be to jeopardise what is perhaps the last chance of saving Europe from anarchy and of paving the way, first by political appeasement, then by economic co-operation, to the realisation of such trade recovery as will alone ultimately allow the value of the pound sterling to be maintained.

Britain's Deeper Crisis.

Will the achievement of world trade recovery of itself suffice to solve Britain's fundamental economic crisis? Here we reach the final phase of the Government's task. On the immediate technical steps which are being taken and which seem to us necessary to deal with the weakness of sterling we comment elsewhere in this issue. There is, however, a deeper aspect of the question, or which emphasis has already been laid in these columns but whose importance is so great that we make no apology for once more underlining the hard, unescapable facts. The achievement of budgetary equilibrium, the retrenchment of State expenditure to the essential minimum, the avoidance of fresh taxation calculated to

The New York Trust Company

EUROPEAN REPRESENTATIVE'S OFFICE:

8 KING WILLIAM STREET, LONDON, E.C.4

depress enterprise or diminish industry's financial resources—all these desiderata must be regarded not as all-sufficient ends in themselves, but as means towards the realisation of a still more fundamental objective, the rehabilitation of British industry and trade. More economical maintenance of three million unemployed is in itself no fit aim for a great nation; our full recovery is itself conditional on their reabsorption into industry. Unassailable solvency of the Exchequer will not in the end save the pound sterling if our share of the world's markets dwindles; and not only the pound sterling but our ability to maintain in these islands a tolerable standard of life will go by the board unless our impaired competitive power is made good.

It is idle to attempt to evade the issue by pretending that this highly populated industrialised island can subsist tolerably on the strength of an insulated home market; dependent, as we are, on external sources for a huge proportion of our food and raw materials, we cannot live by "taking in our own washing." And it is still more futile to argue, as the General Council of the T.U.C. seems inclined to do, that because, admittedly, international co-operation between the Central Banks directed towards an agreed rise in the price level would facilitate economic recovery, it follows that—failing international agreement—Great Britain, in isolation, should seek salvation by inflating its own prices, while adjuring its "capitalists" to improve industrial efficiency. Whether or not the General Council realises the implications of this policy, the fact remains that its consequences would be (a) inevitable depreciation of the pound sterling, with disastrous attendant dislocation of world trade; (b) enforced curtailment of "real" wages and incomes (applied without reference to their recipients' capacity to bear the loss), as a result of the rise in internal prices; and (c) the vicious circle of mounting costs, prices and wages which the experience of every example of inflation since the war has proved to end in complete national impoverishment.

The truth is that the fall in the prices of primary commodities, accentuated by the crisis of recent months, has now gone so far that (whatever may be done in the future by increasing our manufacturing efficiency per unit, or by internationally concerted monetary policy) there is no escape to-day from the necessity of scaling down the cost of our products to meet the reduced purchasing power of our customers abroad. The position may be put very simply. In 1928, by shipping to this country a ton of cereals (the calculation is based on average import values of "grain and flour") a foreigner could obtain in exchange some 55 yards of British woollen tissues. To-day, notwithstanding a reduction of over 50 per cent. in the cost of raw wool, the same quantity of grain exchanges for less than 30 yards of our woollens. We are getting grain cheap? Yes; but the price includes the unemployment, roughly speaking, of two out of every five woollen operatives at work in 1928; and the same sort of calculation holds good for the aggregate of our trading transactions. By rigidity of costs and

prices we are ceasing to be able to create enough production or sell enough abroad to maintain—without fatal inroads into capital—our national standard of living and the value of our currency.

If these hard facts were laid clearly before the people of this country, we are confident that the response would be a very general willingness to contribute, by a broad readjustment of wages, salaries, costs and prices, to a national effort to regain our lost ground in the world's markets. But such a response demands a lead from the Government; a campaign by employers, acting sectionally, for lower wages would create the maximum of friction, bitterness and economic waste; and it is difficult to see how a lead of the kind necessary can be given effectively by any Government save such a Government of Co-operation as is to-day in office. Only such a Government could appeal for voluntary sacrifices on the part of wage-earners without having its motives impugned. Only such a Government would be in a position to enforce by legislation (and we are prepared to face the necessity for such legislation) parallel contributions from the recipients of rent, interest and profit, and to ensure that reductions of nominal earnings were offset to the maximum by lower consumer's prices.

The Need for Continuity.

From this review of the situation in relation to the immediate British *crise de confiance*, the wider international crisis, and the added necessity of strengthening our own insecure balance of trade, we are led back to our considered conviction that the complexity and far-reaching character of the "emergency" demand that all ideas of an early Dissolution should be dismissed from mind. The least encouraging feature of the position is that, as we have already indicated, the Government may split prematurely on the question of Free Trade. Such a result would be deplorable. But is it too much to ask of Mr Baldwin and his supporters that they should consent to keep this controversial issue in "cold storage" until the crisis in its fullest sense is surmounted, even if this means postponing their tariff hopes until the end of the present Parliament's term, three years hence? He would surely be an over-bold, not to say disingenuous, Conservative who would claim to-day that Protection could conceivably obviate the urgent necessity for a drastic, urgent readjustment of British costs by methods more obvious and direct.

With so great a potential measure of common agreement between the various sections of the Cabinet on the essentials of national policy at home and abroad, the duty of the Government, in our submission, is to go on governing until the full fruits of its policy and of the national effort which it must mobilise are visible. It is no part of a right conception of democracy to ask the electorate, in the middle of a world crisis, to pronounce its verdict on an administration whose work is barely begun, or on issues which an electoral campaign would confuse and travesty, but whose bearing it should be the Government's

steady purpose in coming months to expound and clarify with all the resources of the Press and the wireless at their command. Nor would history lightly forgive any of the statesmen who have this week received their seals of office if calculations of electoral advantage led them to draw back before becoming, as it might be thought, too deeply implicated in "unpopular" remedies for economic ills whose gravity no palliatives can cure. If the Government will have the courage to go over the heads of the official Opposition and appeal direct to the mass of the people, they need have no lack of faith that confidence will be placed in them. In their faith and courage lies this country's best, and only, hope.

THE HUNGARIAN CRISIS.

Political events of the past fortnight in this country have tended to divert attention from the still unresolved financial difficulties of Central Europe. The following despatch from our Budapest correspondent describes the situation in Hungary which confronts the new Government under Count Károlyi.

HUNGARY is passing through a financial crisis of the first order, whose magnitude was plainly demonstrated by the three days' closing of the banks on July 14th, and by the dramatic and unexpected resignation of Count Bethlen. After his ten years' uninterrupted tenure of the office of Prime Minister, Count Bethlen's personality had become almost an institution, which was regarded both at home and abroad as the safeguard of political stability, an important asset for a country dependent on foreign funds. Although he was supported by a huge majority in the newly-elected Parliament, Count Bethlen resigned, and, instead of reorganising his Cabinet, as was generally expected, he did not resume office, as he thought that a new Government would be better suited to ask for the heavy sacrifices from all sections of the community which are necessary to restore the disturbed equilibrium of the national finances. The new Premier, Count Károlyi, who also takes the portfolio of Finance, is supported by Count Bethlen, who remains the leader of the party in power and has given Count Károlyi every possible assistance in forming his Cabinet.

The placing of the £5 millions Treasury bonds for a period of one year at 6½ per cent. (banking commission included) of which £3½ millions were placed abroad, and the major part, £2,850,000, has been taken up by a French banking syndicate, has relieved the situation, but it is not more than a temporary relief which has enabled the Treasury to meet its immediate liabilities. Thanks to the good impression created by the placing of the Treasury bonds, and to the Government decree that all banking deposits, claims and debts in pengő are guaranteed to their full gold value, the reopening of the banks did not present any difficulty. The gold pengő is a good temporary expedient, as it makes improbable the creation of speculative debts in the hope that they will be repaid in depreciated currency. Indeed, perhaps its most important function is that of checking the withdrawal of deposits from the banks, and thus counteracting inflation. The National Bank is to fix the relation between the gold pengő and the actual currency in circulation, and the first quotation is to be published on September 1st. It should be the aim of the National Bank to avoid discrimination between the gold and paper pengő in circulation; the bank rate should be increased to a prohibitive level if necessary, to check an abnormal increase of the note circulation.

After the removal of internal restrictions on banking, the Government's task is two-fold. In the first instance budgetary equilibrium must be restored forthwith, and at the same time a "standstill" agreement for the foreign short-term loan obligations of the country must be concluded. Before dealing, however, with the two main problems to be solved it is necessary to examine the factors which led to the crisis, which was precipitated, but not caused, by the collapse of the Austrian Credit-Anstalt and the German troubles. They may be summarised under three headings: (1) Factors which were beyond the control of Hungary, such as the radical change in the price level in the last two

years, which especially affected agricultural borrowing countries, and the unsatisfactory tariff position created by the Peace Treaties; (2) the fact that the country has lived beyond its means since 1927; and (3) defects in the banking system.

It is unnecessary to dwell at length on the difficulties arising out of the heavy fall in prices and the evil effects of protective duties, because their remedy lies chiefly in international co-operation; but it should be pointed out that the maladjustment between agriculture and industrial prices in Hungary can be remedied only by lowering the price of industrial, and not by raising artificially that of agricultural commodities; it is imperative that prices should not be inflated, but adjusted to the world level. Any artificial price inflation, whether in the form of excessive protective tariffs or by way of bounties, would either cut off Hungary from world trade or result in a corresponding depreciation of her currency. Having due regard to the fact that in Hungary's balance of payments the chief passive item is the annual payment abroad of £6 to £7 millions for interest, sinking funds and dividends fixed in gold currencies, it is absolutely necessary to safeguard the stability of the pengő, because an inflated currency would only aggravate the difficulties of the country.

While the adoption of a more reasonable tariff policy in the world in general, and in Central Europe in particular, would do much to alleviate the present economic depression and would undoubtedly improve Hungary's position, the essence of any sound financial and economic prescription for Hungary at present is that the nation must pay its way. Unfortunately it has not done so in the last two years. The budgetary equilibrium re-established by the League of Nations' Reconstruction Scheme in 1924, and maintained in the ensuing five financial years with great success, gave way to a heavy deficit in 1930-31.

The recent report of Dr. Wekerle, the former Finance Minister, for the financial year 1930-31 discloses a total revenue of 927.7 million pengő (£33,000,000) and a total expenditure of 927.6 millions, thus showing a balance of 0.1 million pengő. The balance, however, for 1930-31 is more apparent than real, as the deficit is camouflaged under the heading of departmental receipts. Considering that the total tax revenue for 1930-31 was only 694.6 million pengő, instead of the estimated 784.9 millions, and departmental receipts amounted to 219.4 millions instead of 95.8 million pengő budgeted for, it is obvious that these receipts include borrowings of 100-125 million pengő, the exact amount of which will be known only when the final accounts are published. The true deficit for the financial year 1930-31, estimating the deficits of the Wheat Bounty Fund and Social Insurance at 10 million pengő and that of the State Railways at 30 million pengő, may well amount to 150 to 175 million pengő, that is to say, about £6 millions.

In all fairness to Count Bethlen it must be pointed out that he realised the gravity of the situation so far back as October, 1930, when he urged that the national finances must be balanced. Unfortunately, in November, 1930, when the proceeds of the £3 millions one-year Treasury bonds placed in London were made available, the current budgetary deficit was met therefrom, and the day of reckoning was further postponed by meeting subsequent increases in the deficit by further borrowing on short-term accounts from the Bank and the Postal Savings Bank. The budget for the financial year 1931-32, which began July 1st, must be balanced, though the first two months, July and August, will disclose a heavy deficit, probably 40 to 50 million pengő. Count Bethlen had asked and obtained special powers from Parliament to restore budgetary equilibrium by every possible means. The sound principles of the League of Nations' Reconstruction Scheme, which have been disregarded in the last two years, will have to be reapplied. In fact, the Economy Decree, which was brought by Count Bethlen before the Committee of Thirty-three, provides for the reduction of all salaries and pensions and the cutting down of other expenses, and also for the imposition of higher taxes. It is as yet premature to express an opinion whether these measures will suffice to balance the budget, but it is of paramount importance that the new Government should decree them before September 1st,

because every month's delay means a further deficit of 15 million pengő. In view of the decrease in the national income caused by the fall of agricultural prices, it is impossible to hope for more than 800 million pengő total revenue from current sources; it is, therefore, imperative that expenditure should be kept down to that figure.

The other vital problem for the solution of the financial crisis is the formation of a "standstill" syndicate for the foreign short-term obligations of the country, which amount roughly to £26-27 millions, of which £14-15 millions represent the commercial debts of banks and the rest the floating debt of the State and municipalities, the agrarian and export credits due within the coming year. It is obvious that Hungary cannot repay these sums unless they are consolidated into a long-term loan, because, rightly or wrongly, these monies were partly invested and are partly the working capital of the country, the withdrawal of which would upset the whole economic system.

The Hungarian banks are to blame for not restricting foreign borrowings; and it is obvious that the financial reorganisation of the country would be incomplete without banking amalgamations. There are too many banks in Hungary and their management is too costly. The National Bank must do everything in its power to enforce the necessary reforms and the State must extend every help to bring about a healthier banking system. The National Bank has lost more than £8 millions since the beginning of the year, owing to the sudden withdrawals of foreign funds and the 150 million pengő (£5½ millions) deficit on current items of the Balance of Payments in the first half of 1931. The statutory gold and exchange cover of the National Bank has decreased from 201 million pengő to 115 million pengő, a loss of 86 million (£3 millions); the rest was met from the £5 millions rediscount credit granted by the B.I.S., which the National Bank in Budapest and advise on the situation. The help of the B.I.S. and other central banks has been of immense value to the country, but the credit crisis cannot be solved until the short-term loan obligations, amounting to £26-27 millions, are prolonged for at least two years. According to the Hungarian Press the late Government of Count Bethlen appealed to the League of Nations to use their good offices in the matter of a "standstill agreement," and Sir Arthur Salter has been invited to investigate the financial situation of the country. There is little doubt that an authoritative report on Hungarian conditions is highly desirable.

It should be remembered that Hungary has borrowed about £75 millions abroad since 1924. This sum includes both public and private loans, short-term as well as long-term loans. More than 85 per cent. of the loans granted to Hungary came from London and from New York, the rest was supplied by Switzerland, Holland, France, Sweden, etc. In view of the precarious situation of the Treasury and the National Bank, foreign creditors would act in their own interest if they assisted Hungary in her endeavour to raise a long-term loan of £12-15 millions with which to consolidate her short-term obligations. Count Bethlen's Government, by obtaining a foreign loan of £3½ millions, saved Hungary from a default. Unfortunately, American and British financial houses did not participate in the placing of this intermediate loan, though they lent to Hungary perhaps too abundantly in 1927 and 1928, and it is essential to their interest that the stability of the country should be restored.

It is hoped that the forthcoming session of the Council of the League will take up benevolently the case of Hungary and will come to the rescue of the country which was saved from financial disaster in 1924 by the action of the League. The situation is grave, but by no means hopeless. If the lessons of the crisis are taken to heart it may prove a blessing for the country, because fundamentally Hungary is sound, but the financial errors committed in the past, both at the Treasury and in banking, must never be repeated. It is imperative that the country should face facts and should settle down to a standard of living corresponding to its resources.

THE OUTLOOK FOR STERLING.

Few who listened to Mr MacDonald's broadcast address on August 25th can now fail to realise that the real cause of the downfall of the late Government was the imminent danger to sterling arising from the steady withdrawal of both long-term and short-term foreign funds from London. Some indication of the urgency of this peril was given by the disclosure in the *Times*, on Monday last, that the £50,000,000 foreign credit recently granted to the Bank of England was approaching exhaustion. Whether the revelation, at that juncture, was well advised is open to grave question; but, now that the most imminent perils have been averted, it is, perhaps, well that the British public should have been brought face to face with the hard realities of the situation.

For it is of prime importance that any misconception or misrepresentation of the true facts should be avoided, and on this account all responsible opinion will join in deprecating the allegation in Tuesday's *Daily Herald* to the effect that the Government fell because the New York Federal Reserve Bank had refused to grant London a credit unless certain specific steps (including a cut in the "dole") were taken to balance the budget. This attempt to portray England as the victim of American banking dictation is rightly resented in England just as much as in the United States. Mr MacDonald, in his broadcast, placed the matter in its true perspective. He said:—"We are told that this is a bankers' 'ramp,' or a conspiracy against the Labour Government. . . . I can give you the most emphatic assurance that that charge is not true. We were never presented with any political ultimatum. . . . They (the bankers) told us, when we put up proposals to them, whether in their opinion those proposals would meet the circumstances required to give confidence, so that a loan might be floated." Previously he had said:—"It is not true that foreign countries were deliberately trying to harm us. . . . They have helped us greatly, and they are anxious and ready to help us more; but they need to be reassured about our position."

The plain truth of the matter is this. Last week neither the New York Reserve Bank nor any other foreign bank refused London a credit or consented to grant it only on terms, for the simple reason that no request for a further foreign credit was made. Neither the Treasury nor the Bank of England sought last week assistance from abroad, because they knew that unless foreign centres obtained the "reassurance" about our position to which Mr MacDonald referred, it was useless to do so. Talk of foreign financiers interfering in British politics is beside the point. Foreign bankers, in their duty to their own depositors, would have been bound to adopt just the same attitude as London bankers have adopted frequently in the past when they have refused loans to foreign countries unless and until they put their finances in order. Fundamentally it is the attitude that every one of us individually adopts to an acquaintance who approaches us for a loan.

Already the world is feeling the needed reassurance, for on Wednesday sterling improved to \$4.86½ in New York and to Frs. 124.00 in Paris. The Dutch rate rose to Fl. 12.05½ and the Swiss rate to Frs. 24.97½. Moreover, while sterling had to receive special support early in the week, there is reason to believe that by mid-day Wednesday such support had become unnecessary, and that sterling was "afloat" for the first time for several

weeks. That in itself is eloquent testimony to the solid advantage of a Government pledged to adequate measures of economy.

Yet it is still early to rejoice at the last-minute salvation of sterling, or to assume that the corner has finally been turned. Similar rejoicings were to be heard in Berlin immediately after the Hoover declaration last June, but they did not prevent the disastrous events of July. Those conversant with the underlying position of sterling realise that world confidence is not finally and permanently re-established by the events of a few short days. A reaction from the first emotional feelings will be apt to be followed by a keen scrutiny of the proposals of the Government, and of its power and ability to carry them out. It is imperative that the Government should make it clear from the start that it means to remain in office until the long as well as short-term remedies required have had time to bear their fruits. This is not a matter of weeks, but of months, for the renewal of existing or the raising of fresh credits is but a temporary palliative.

Meanwhile, what are the immediate steps required to ensure that sterling is not again menaced by sudden withdrawals? An essential step, we suggest, is to make it clear that ample support will, under any circumstances, be forthcoming; and this points to the advisability of the flotation of a long-term loan in both Paris and New York. Had unanimity in the Government on the need for adequate retrenchment been obtainable, it might well have been a wise course to float such a loan three weeks ago, before the culmination of the sterling exchange crisis. As matters stand, though the "credit-worthiness" of the British Government has greatly risen, the question of long-term borrowing abroad may have to wait a little on events. Next month financial America will be fully occupied with her own Government refunding operations, and in any case to make success certain it would, perhaps, be advisable to postpone a long-term loan issue until the world knows more of the progress of the Government's plans. Again, on every ground it is to be hoped that it will be possible to launch a major conversion scheme in the autumn, and such a scheme will doubtless require a special foreign issue of British Government stock in exchange for new money, in order to deal with foreign holdings of such existing stock as it is desirable to convert. If, as we believe, foreign long-term funds are required, partly to render the position of sterling impregnable against short-term shocks until the international crisis is surmounted, and partly to enable us to effect, by conversion, savings in the interest charge on the Debt, the two operations could perhaps be combined in one.

On the assumption that a foreign medium or long-term loan will follow, any immediate support needed by sterling may well be obtained by a short-term credit, possibly raised by the Treasury as in 1925. We would suggest that the 1925 precedent be followed in another particular, namely, that advantage be taken of the well-known fact that, the larger a credit, the less likely will be any demands on it. In fact, it might well turn out that a sufficiently large new credit would not have to be used; this, indeed, was the case in 1925. One thing to be avoided is the gradual and early exhaustion of small credits, and their enforced replacement by further limited borrowing. If a new credit is necessary, let it be big enough to be final. Nothings saps confidence so much as frequent and successive applications for little loans.

THE AREA TRAFFIC COMMISSIONERS.

(BY A CORRESPONDENT.)

THE Area Traffic Commissioners, appointed under the Road Traffic Act of last year, actually took over their duties on April 1st. Although they are still something of an innovation, their influence has already become of decisive importance in all questions affecting the organisation of the passenger road transport industry. The problem confronting the Traffic Commissioners, that of "co-ordinating all forms of passenger transport, including transport by rail" and "preventing wasteful compe-

tion with alternative forms of transport" may be summed up in the following tables:—

	No. of Road Passenger Vehicles over 14 Seats.	Main Line Railway Receipts from Passengers.
		£
1925	22,500 (est.) 100	68,819,995 100
*1926	25,195 112	60,584,010 88
1927	28,713 128	63,475,707 92
1928	33,289 148	62,111,952 90
1929	37,934 169	60,020,360 87
1930	41,629 185	56,999,794 83

* General strike.

There is little doubt that in the aggregate there has been an increase in the travel habit during this period. Nevertheless, the railways have suffered a reduction of passenger revenue of £11,800,000 a year, of which roughly £6,800,000 may be attributed to a decline in the number of passengers travelling by railway, and £5,000,000 to a reduction in the fares charged in order to meet omnibus and motor-coach competition.

For the first few weeks the Traffic Commissioners were inundated by a flood of railway objections to motor-coach services. This delayed progress in the real work of detailed co-ordination and the control of time-tables and fares. Many of the objections were remarkable for their frankness in stating that the railways could not compete with the cheap fares charged by motor-coaches, and would be satisfied if they were raised to the railway level. The railways have not been successful (apart from exceptional cases) in persuading the Commissioners to refuse licences for services which were already in operation at the time they took over their duties, although in some cases the frequency of services on particularly congested routes has been reduced, especially where the number of vehicles operating on the routes had been increased since the passing of the Road Traffic Act last August. There has, on the other hand, been a general reluctance, in most cases amounting to a complete refusal, to sanction the licensing of any new services, either of motor-coaches or of omnibuses. It seems probable, therefore, that the increase in the number of passenger vehicles will be checked at once, and the road passenger transport industry stabilised at its present level. The only exception to this would appear to be that of municipal omnibus services on routes within the borough boundaries, over the number and operation of which the Traffic Commissioners have no jurisdiction.

The present ownership of public service vehicles is approximately as follows:—

	No. of Vehicles.
Municipalities	5,000
L.G.O.C. and subsidiaries	5,500
Concerns affiliated with railways	14,000
Other concerns	17,000
Total	41,500

"Other concerns" cover the majority of the motor-coach and charabanc operators, and also the small local omnibus operators. Now that the passenger industry is being stabilised, the railways may be expected in due course to extend their capital investments in motor transport in order to merge the independent omnibus and motor-coach services into the Railway-Tilling group, which already comprises nearly 11,000 vehicles, and seems destined to form the core around which the Traffic Commissioners can construct the "controlled monopolies" of transport towards which, according to the Royal Commission on Transport, they must strive.

Up to the present the reorganisation of omnibus companies under the joint control of the Tilling group and the railways has been very little more than a series of financial manoeuvres, together with a few agreements for combined services on competitive routes. The Area Commissioners will hardly be justifying their existence unless they encourage the amalgamation of operators into large units capable of effecting economies, and passing them on to the public. Economies in buying will not be very considerable, as most of the Tilling concerns now buy through one agency, and there are other local agencies, in South Wales, for example, which enable the small operators, through co-operative organisation, to bargain on the same

terms as the large. The chief economies resulting from amalgamations are likely to be rather in the direction of reducing the cost of repairs, garage and depot charges, and the like. A big move in the direction of amalgamation has, as a matter of fact, been effected quite independently of the Traffic Commissioners in East Anglia, where there has been a fusion of the local services of the United Automobile Services with the Ortona Motor Company, Eastern Counties Road Car Company, and Peterborough Electric Traction Company. The new undertaking is called the Eastern Counties Road Company, and covers fairly exactly the area administered by the Eastern Traffic Commissioners. A small amount of pressure and encouragement from the authorities might bring about a number of other amalgamations for which the ground is now clear.

In the final report of the Royal Commission of Transport a recommendation was made to the effect that, in addition to passenger vehicle services, it was desirable that all haulage contractors should be licensed by the Traffic Commissioners with regard to the suitability of the vehicles and the wages and conditions of service of the sons employed on them. There are estimated to be 70,000 vehicles involved, so that probably any further duties of the Commissioners in connection with a task of this magnitude will be postponed until the passenger industry has reached a state of equilibrium. The position of the railways vis-à-vis the haulage industry would be little changed if the recommendations of the Royal Commission were carried into effect, as no proposal was made in the Report as to the desirability of limiting haulage licences in accordance with the needs of the traffic. The reason for this is probably that the railways do not feel they are suffering sufficiently from competition from the haulage industry for the additional labour involved to be justified. According to the estimates published by the Society of Motor Manufacturers and Traders, the railways hold 79 per cent. of the goods transport business, but only 48 per cent. of the commercial passenger transport business in the country. Should the proposed system of registration have the effect of increasing the competitive power of the haulage industry by improving its organisation, the question of limiting competition would obviously have to be reconsidered.

As the Area Commissioners become more completely responsible for holding the scales between the railways, the roads and the public—a task which, in practice, probably means applying the brake to the development of road transport—it will clearly be necessary for the motor vehicle manufacturers, to watch developments very carefully to make sure that their markets are not unduly restricted. It is, at any rate, noticeable that new registration of omnibuses and coaches (over 14 seats), which showed an increase of 5.2 per cent. for the first quarter of this year, recorded a decrease of 10.7 per cent. for April and May (i.e., since the Commissioners took office), while total registrations of hackney vehicles, which were, in February, 4,000 less than a year ago, were in May 8,000 less. Making due allowance for the influence of the general trade depression, the reduction is significant.

BRITISH INSURANCE COMPANIES IN THE U.S.

II.—Accident.

In a previous article (*Economist*, August 15, 1931), dealing with the outcome of fire insurance transacted in America by British companies, we showed that 1930 was characterised by a pronounced decline in premium revenue, and a still greater falling off in underwriting profits. Unfortunately, accident insurance in the United States has been affected by the same adverse influences, and has fared no better relatively and a great deal worse quantitatively. Although the term "casualty" insurance is unfamiliar to British ears, it will be convenient to use it here since it is the American counterpart to accident insurance. In America, as in the United Kingdom, the premiums cover a heterogeneous assort-

LARGE PREMIUMS

THE BARRIER TO ADEQUATE LIFE ASSURANCE—

large premiums—is removed by the new scheme whereby premiums are paid by monthly instalments. No extra charge is made for this convenience. Ask for Monthly Premium Booklet.

LEGAL & GENERAL ASSURANCE SOCIETY LTD.
Head Office: 10 Fleet Street, London, E.C.4. Estd. 1836

ment of risks. The nature and importance of the principal classes covered are as follows:—

Class of Casualty Insurance.	Percentage of Total Premiums.
Automobile	30
Workmen's compensation	21
Surety	8
Automobile property damage	8
Liability to third parties	8
Personal accident	6
Fidelity	6
Miscellaneous	13
	100

In all the important classes of business there was a very heavy increase in claims costs last year. In automobile insurance as a whole, for instance, the ratio of losses to premiums rose in the aggregate from 56 per cent. to as much as 74 per cent., and in workmen's compensation from 70 per cent. to 77 per cent. Moreover, the prevailing depression has been reflected, as is the case with fire insurance, in declining premium incomes. Automobile and workmen's compensation premiums have been well maintained (the latter rather unexpectedly in view of their direct relation to pay rolls) and the brunt of the decline has fallen on personal accident insurance.

In order to compare the aggregate results over the past few years, the following table has been compiled from the official reports of the companies furnished to the American Insurance Commissioners, and published annually by the Spectator Company of New York. Eleven companies or groups of companies have been selected, including all the principal British offices represented in America in the field of casualty insurance. The published figures have been recalculated to show the underwriting profits on the British system allowing for a 40 per cent. reserve for unexpired risks at the end of each year in respect of policies then current; the underwriting profit is thus the balance of the premiums remaining after deducting claims, commission, expenses and unexpired risk reserve. Dollars have been converted into sterling at par of exchange.

Year.	Premiums. £	Underwriting Profit.	
		Amount of Profit. £	Percentage of Premiums.
1926	25,939,085	— 206,014	— 0.8
1927	27,196,037	— 593,723	— 2.2
1928	28,126,188	774,478	2.8
1929	28,422,634	77,509	0.3
1930	26,863,350	— 418,464	— 1.6

The unprofitable character of the business is clearly reflected in these figures. It has been estimated that over the whole period of 20 years from 1906-25 the leading American companies experienced an aggregate loss of 0.7 per cent. of the premiums; and the foregoing table, which brings the record up to date, contains no element of compensation for earlier losses. The difficulties of British offices operating in the United States are accentuated by the cramping restrictions and regulations of State laws which, in effect, mean that there is not one country but 49 countries with which to deal. The formation of numbers of domestic companies, some of them with insufficient backing, and the tendency to seek premium income for the sake of interest earnings, regardless of the principles of selection of risks, have all combined to rob the business of a due measure of profit, while

the trade depression has superimposed another formidable obstacle to a change in conditions.

It is of interest to trace the results of individual companies, and the following table based on the same sources and compiled on the same methods as the figures relating to aggregate results, has been framed for this purpose:—

Company or Group of Companies.	1929.			1930.		
	Premium Income.	Underwriting Profit or Loss.		Premium Income.	Underwriting Profit or Loss.	
		Amount.	Percentage of Premium Income.		Amount.	Percentage of Premium Income.
Commercial Union	£ 3,427,531	£ 126,417	- 3.7	£ 3,237,673	£ 549,398	- 17.0
Employers' Liability	7,350,936	74,234	1.0	7,043,560	175,653	2.5
General Accident	3,957,690	25,403	0.6	3,611,000	205,625	5.7
Liverpool and London and Globe	4,561,001	92,232	2.0	4,347,472	39,787	0.9
London and Lancashire	666,369	36,297	5.4	665,226	100,821	15.2
Norwich Union	692,914	30,316	4.4	650,051	37,622	5.8
Phoenix	2,667,887	23,235	0.9	2,478,154	87,340	3.5
Royal	4,040,536	128,811	3.2	3,855,789	36,981	1.0
Royal Exchange	394,582	19,305	4.9	458,118	45,255	9.9
Sun	517,157	25,872	5.0	577,423	2,596	0.4
Yorkshire	146,031	33,473	22.9	140,362	260	0.2
	28,422,634	77,509	0.3	26,863,350	418,464	1.6

It will be seen that the business is concentrated in the hands of a few large units, amongst which the largest and the pioneer company is the Employers' Liability. This company has succeeded in spite of the difficulties in increasing its underwriting profit, while the General Accident also makes a much more satisfactory showing. At the other end of the scale the Commercial Union has had a very adverse experience.

Notes of the Week.

The New Cabinet.—Mr MacDonald has secured a strong team to form his National Government, and the Cabinet has been very wisely limited to ten members. The following appointments, which have received His Majesty's approval, carry Cabinet rank:—

Prime Minister and First Lord of the Treasury	Rt. Hon. J. Ramsay MacDonald.
Lord President of the Council	Rt. Hon. Stanley Baldwin.
Chancellor of the Exchequer	Rt. Hon. Philip Snowden.
Secretary of State for Home Affairs	Rt. Hon. Sir Herbert Samuel.
Lord Chancellor	Rt. Hon. Lord Sankey.
Secretary of State for Foreign Affairs	Most Hon. the Marquess of Reading.
Secretary of State for India	Rt. Hon. Sir Samuel Hoare.
Secretary of State for Dominion Affairs; Secretary of State for the Colonies	Rt. Hon. J. H. Thomas.
The Minister of Health	Rt. Hon. Neville Chamberlain.
President of the Board of Trade	Rt. Hon. Sir Philip Cunliffe-Lister.

In addition, Sir Austen Chamberlain becomes First Lord of the Admiralty, Lord Crewe Secretary of State for War, Sir Henry Betterton and Sir John Gilmour take the Ministries of Labour and Agriculture respectively, Sir Archibald Sinclair is to be Secretary of State for Scotland, Sir Donald Maclean President of the Board of Education, Lord Amulree Secretary of State for Air, and Lord Londonderry First Commissioner of Works. An interesting infusion of new blood is represented by the appointment of Lord Lothian as Chancellor of the Duchy of Lancaster. It may in due course become desirable to vitalise the Ministry by the inclusion of some younger men; for the moment, the composition of the Government is impressive and should inspire confidence. At a time when politics and international financial questions are so closely involved with one another, we regard Lord Reading as a wise choice to succeed Mr Henderson in the key position of Secretary for Foreign Affairs; Sir Samuel Hoare should be well fitted to ensure continuity of policy at the India Office; and the retrenchment of Local Government

expenditure is well placed in the hands of Mr Neville Chamberlain. Apart from the Ministry of Health, it will be observed, no other "spending department" is represented in the Cabinet—an interesting and, in the circumstance of the moment, welcome innovation.

The Record of the Late Government.—Governments, like individuals, often fail to realise where their true strength and weakness lies. The Labour Government which has just fallen based its claim to the helm, in 1929, on its peculiar ability to deal with the unemployment question. For the vast increase in unemployment which has mocked these pretensions ever since the Government cannot justly be blamed, but the fact remains that it has placed upon the Statute Book no Act calculated to help in stemming this rising tide, and two Acts, one increasing the Government contribution to the Fund, and the other increasing benefits and throwing upon the unemployment exchanges the onus of proving that any applicant is "not genuinely seeking work," both calculated to increase the cost of unemployment to the Exchequer. This was part of a policy of increasing expenditure on the social services, which also found expression in the passing of the Widows, Orphans and Old Age Contributory Pensions Act—a measure with which, in principle, we have no quarrel, though the doubts we expressed at the time as to the wisdom of the expenditure involved have proved amply justified—and a Bill, rejected by the Lords on the second reading, for raising the school leaving age to 15. Even when their own Royal Commission produced its recommendations for the reduction of the expense of unemployment insurance, the Government felt its hands tied and brought in a Bill which barely touched the fringe of the problem and was further attenuated in its passage through the House by the opposition of the Labour back-benchers. And, apart from the failure to deal with the problems of unemployment and unemployment insurance, the Government's legislative record has been meagre. The few large measures which have reached the Statute Book include the Coal Mines Act, 1930, the Road Traffic Act, and the Land Tax section of the Finance Bill. Many important Bills have been dropped, and the fate of the Consumers' Council Bill, the Town and County Planning Bill, the Representation of the People Bill, and the Sunday Performances (Regulation) Bill is still uncertain. More serious, however, than this paucity of constructive legislation has been the Government's extravagance in the field of administration, which has brought it about that the net result of their policy, combined with the world depression, has been to increase the national expenditure (exclusive of self-balancing departments) from £749 millions in 1929-30 to an estimated expenditure, which will be heavily exceeded, of £803 millions in 1931-32. It is a relief to be able to turn from this history, many of the worst features of which reflect the dilemma of Ministers who themselves know better but are responsible to supporters who will not face facts, to the record of the Government in Imperial and Foreign Affairs. Supporters of the Government's predecessors have paid the Labour policy in India the highest compliment of claiming that it is nothing but a continuation of their own, and the remarkable absence of criticism from responsible sources in this country, is an unusual tribute. Equally difficult, and performed with unusual distinction, has been the task of the Foreign Minister. While Mr Henderson has not had the opportunity of linking his name with any treaty of historic importance, the work he has done at Geneva in turning acrimonious disputes into amicable discussions and in generally promoting and maintaining an atmosphere in which constructive co-operation was possible, has been of incalculable value. That his interpretation of his duty to his supporters should have led him to take the course he has chosen is indeed regrettable, since it deprives this country of the Foreign Minister who has done more than perhaps any other to continue the work begun by the late Dr. Stresemann. Happily, the choice of his successor provides an assurance that the excellent record of the late Government in foreign affairs will be maintained during the life of the present Cabinet.

The Late Ministers' Motives.—Having regard to the gravity of the national and international crisis with which we are faced, it would be a tragedy were bitterness and personal animosities to be imported into the political arena as a result of the severance between Mr MacDonald and the majority of his colleagues. Recriminations against those of the late Ministry who felt constrained to resign would be misplaced: every statesman is entitled to obey, first and foremost, his own political conscience, and, though opposition from the T.U.C. (let us hope we have had the last of these references by H.M. Government to sectional interests) may have weakened resolution, there is no warrant for questioning the sincerity of Mr Henderson and those who shared his interpretation of duty. This, though, requires to be said. However difficult it might be to go back on past professions and acknowledge, tacitly or explicitly, that the national purse was not, after all, bottomless, the fact remains that sufficient is known of the trend of the Cabinet's counsels last week to indicate that Mr Henderson and his fellow-seceders did then acknowledge the reality of the crisis and the compelling need to balance the budget by methods including a large measure of retrenchment. It is not now open to them in honesty to claim that economies proposed by the new Government are needless; the only legitimate line they can adopt is to argue in detail that, as between economies and fresh tax-burdens, the balance is not fairly struck. This is an issue on which the country can be trusted to make up its mind calmly and reasonably; but it will not be inclined to listen to the Opposition if an attempt is made by their leaders lately in Office to repudiate the existence of facts and necessities which they themselves acknowledged a week ago.

Round-Table for Burma.—Though the Burmese rising under Saya San, and the sporadic, still not wholly-suppressed outbreaks which have continued even after the so-called Pretender's capture, have all the appearance of an ebullition of discontent born of the world-wide agricultural depression and the ruinously low price of paddy, there seems little doubt that local political tension and unrest have been contributory factors in providing tinder for the spark of rebellion to kindle. We welcome, therefore, the announcement, made none too soon, by the India Office last Thursday, August 20th, that it has been decided to convene in November (i.e., after the contemplated conclusion of the work of the Federal Structure Committee, but before the end of the full session of the Indian Conference) a Burma Round-Table Conference, at which all the interests in Burma will be represented. The official announcement adds: "The primary task of the Burma Conference will be to discuss the lines of a constitution for a separated Burma. When the results of these deliberations are known, there will be an opportunity for a review of the whole position by all parties concerned before any final adoption and proposal to Parliament by His Majesty's Government of measures to implement their provisional decision in favour of separating Burma from India." The settlement of the intricate details of finance involved in the severance may well be left for arbitration by an impartial tribunal, but it is highly desirable that no further time should be lost in laying down the broad lines of the constitution under which it is proposed that a separated Burma shall begin its new career. Though the great majority of the Burmese opinion probably endorses the verdict of the Simon Report in favour of immediate separation, the Home Rule Party, under the leadership of Mr Tharrawaddy Pu, seem to have been winning some support for the view that the British Government are not ready to concede as much to Burma as to British India, and that the best plan for Burma would be to join temporarily in an all-India Federation, with a view to later secession—perhaps from the Empire as well. Last January, it will be recalled, the Burma Sub-Committee of the Indian Conference resolved "that the principle of separation is accepted and that the prospect of constitutional advance towards responsible government held out to Burma as part of British India will not be prejudiced by separation." In principle, this

policy was endorsed by the Government, but until something more concrete is worked out and agreed, and suspicions that Indian opposition to separation may be influencing Whitehall are wholly allayed, political opinion in Burma is likely to be troubled and the leaven of nationalism unquiet.

Mr Gandhi Hopes to Come.—A fortnight ago we expressed the hope that Mr Gandhi's decision not to attend the Round-Table Conference would not prove to be final. Since then he has definitely announced his intention of coming, but, as we go to press, there appears to be another hitch, though not, as far as can be learned, of a very serious character. These apparent indecisions are capable of an encouraging interpretation. Public opinion behind Congress is growing more insistent that Mr Gandhi should take part in the Conference, and the Congress leaders themselves are increasingly anxious to secure a settlement of the trouble over the Delhi Pact. Difficult as it may be to secure such a settlement, the genuineness of the desire for it, coupled with the good reception with which the Government's reply to Mr Gandhi's bill of charges has been met, and the growing influence of moderate public opinion, suggest that the clouds on the Indian horizon are gradually becoming lighter.

The British Armaments Return.—It will be remembered that last May the Council of the League of Nations requested the States participating in the forthcoming World Disarmament Conference to furnish full information, in advance, of their existing armaments and expenditure. The returns are being made—in pursuance of a suggestion put forward by the Council on British initiative—in the form of the tables annexed to the draft disarmament convention, in order that the Secretariat at Geneva may receive the figures in a shape in which they will be readily comparable with one another and readily applicable to the precise problems with which the Conference will have to deal. Some weeks ago we had occasion to comment on a memorandum, attached to the French Government's return, which set forth the present French Government's views on the controversial issues of disarmament and security. We are glad to find that the British Government, which made public an unofficial summary of its return at the end of last week, has not followed the French precedent in amplifying data by argument. The British return is an extremely precise and detailed statement of fact, and its authors have contented themselves with pointing out that the figures given "are only those of existing armaments and expenditure, and have no relation to the proposals which will be put forward by His Majesty's Government at the Disarmament Conference." It is interesting to observe that the total naval, military and air expenditure shown amounts to £108,000,000—that is, to a figure of the same order of magnitude as the prospective budget deficit which has brought a Government at Westminster to the ground and has changed the face of British politics within the last week. It is not, of course, any rise in our expenditure on armaments that has caused our financial crisis. On the contrary, while expenditure has been rising under other heads, our armaments expenditure, since the close of the war, has been rigorously cut down, and is now, perhaps, not far from the furthest limit to which we are able to go without being accompanied by other countries. Given the total figure, however, it is obvious that any substantial saving on armaments as a result of next winter's conference will mean a proportionately substantial contribution towards solving our budget problem, and, while the condition of reciprocity and simultaneity in the reduction of armaments in all countries remains indispensable, we may reflect that, by next winter, there will be few countries in the world that will not be already more or less in our financial predicament, and none at all that will not be confronted with an imminent prospect of finding themselves in the same predicament if nothing is done to give things a turn for the better. Moreover, a substantial all-round reduction of expenditure on European

armaments may well be a condition precedent to the cancellation of inter-governmental debts. Thus we must pin our hopes on the success of the coming disarmament conference, whose importance makes it vitally desirable that the present Government of Co-operation should make it clear forthwith that its representative will definitely attend its sessions.

Tension in Palestine.—Sunday, August 23rd, was the second anniversary of the Palestine outbreak of 1929. Happily, the day passed off without any commemorative repetition of those disorders; yet the Palestinian situation remains in a state of deadlock which is profoundly disquieting. It had been hoped that the political feud in Palestine between Arab and Jew might be attenuated by a common interest in, and a common benefit from, the economic development scheme which has been put in hand by the Mandatory Power. It was this hope which reconciled the British tax-payer to bearing the initial expense. The week before last, however, the Palestine Arab Executive repudiated the results of certain pourparlers on the subject which their representatives had been holding with the British High Commissioner, Sir John Chancellor; and they have now taken the offensive by publishing a manifesto of protest against the Mandatory Administration's policy of providing some of the outlying Jewish settlements with sealed armouries. This protest comes somewhat strangely from the Arab side; for the events of two years ago showed that the Jewish communities scattered up and down the Palestinian countryside do live under a very real menace of assault and massacre at the hands of the Arab majority of the population. The Jews have every right to be defended; but it is surely a confession of bankruptcy on the Mandatory Power's part to place the onus of this defence upon the Jews themselves. The bankruptcy, as we see it, is political rather than military. Militarily, it is an almost insoluble problem to protect a scattered minority against sudden attacks by a ubiquitous majority through the agency of foreign garrisons. In such circumstances, the garrisons could hardly do the job if they were as strong in numbers as the population itself; and, from the technical military point of view, the most economical and effective method is to provide the threatened communities themselves with armouries which, being under Government seal, cannot be used improperly with impunity. The bankruptcy is not military but political; for the fact that Jews and Arabs in Palestine are in perpetual danger of coming to blows spells the complete failure of the British Mandate, up to date, to fulfil the purpose for which it has been conferred. A regime which rests on military force cannot stand; and a regime which has to hand over to a section of the civil population under its care the arms with which they are to protect themselves in time of need is manifestly at the end of its resources.

The Situation in Spain.—During the past week there has been an abrupt change in both the subject and the locality of maximum disturbance in Spain. Hitherto, the problem of the Spanish Revolution has appeared to formulate itself in terms of two issues: the issue between Castilian centralism and Catalan nationalism, and the issue between bourgeois republicanism and revolutionary syndicalism. These two issues cut across one another at Barcelona, the largest city of Catalonia, which is also the chief industrial centre and the chief stronghold of syndicalism in the peninsula. In our previous comments on Spanish affairs, we have ventured to prophesy that this cross-division would produce a tendency towards moderation and compromise. The Catalan Nationalists are also bourgeois who may be glad of support from Madrid in dealing with the formidable problem of Barcelona; and the Castilian Centralists, on their side, will be anxious not to drive the Catalan Nationalists and the Barcelona Syndicalists into an alliance against Madrid. Up to date our prophecy seems to be coming true. The Catalans' own draft for the local constitution of Catalonia was a moderate document, and, although it inevitably evoked criticism and caused chagrin at Madrid, it was formally

presented to the Constituent Cortes last week without any untoward incident. Meanwhile a threatening storm has blown up rather suddenly from quite a different quarter, and the major anxiety of the Spanish Government at the moment is the hostility excited by the Government's anti-clerical policy in the Pyrenean provinces of the Basque country and Navarre. It will be remembered that the draft All-Spanish Constitution, as it now lies before the Cortes, includes provisions for the dissolution of the monasteries and the nationalisation of ecclesiastical property. Certain ecclesiastical bodies appear, humanly enough, to have considered ways and means of realising their property in anticipation of this threat, and the Government has retorted by arresting the Vicar-General of the Diocese of Vittoria at San Sebastian on the 14th, and publishing, on the 20th, a decree forbidding the sale of ecclesiastical properties or the transfer abroad of ecclesiastical bank balances. This sharpening of the Government's anti-clerical measures has produced something very like the beginnings of an insurrectionary movement in the provinces above-mentioned, and the Government is anticipating trouble there by sending in troops and despatching a warship to Bilbao. These provinces are mountainous, clerical and reactionary. In the middle of last century they were the stronghold of the Carlist Movement, and the recent history of Mexico shows how disastrous it might be for Spain if the new Republican Government had to spend its energies in fighting a guerilla warfare against fanatical Catholic mountaineers. There is a formidable danger here which may perhaps be averted by granting to this, the most backward part of Spain, the full measure of autonomy which is being demanded for herself by progressive Catalonia. Madrid might offer Navarre and Basqueland an autonomy which included local option in regard to the relations between Church and State on the understanding that the Constituent Assembly should have a free hand in ecclesiastical matters elsewhere. In some such compromises as this there lies the best hope of avoiding bloodshed on a large scale. Already, this Monday, blood has been shed in a collision between police and clericals at Pamplona.

The Floods in China.—There are some calamities which are so vast, or so remote from those who receive tidings of them, that they are almost beyond imagination. For Europeans, the unceasing disasters of China—whether caused by natural or by human agency—are apt to wear this character; and so it is with some difficulty that we manage to picture to ourselves, in European terms, what these present floods in the Yangtse Valley mean. It is as if the whole middle basin of the Danube were flooded from Austria to the Iron Gates; as though Vienna had crumbled away in the rising tide, the Hungarian plain been covered by a vast sheet of water, and the frontier-disputes between Hungary and the neighbouring successor-states had been suspended by the submergence of the frontiers themselves, debatable zones and all. What would be the effect of such a calamity as this upon our European situation? Would it bring all Europe, with a shock, into its right mind, restoring our sense of proportion and sense of humanity and bringing back that indispensable European solidarity for common aims which statesmen and publicists have been preaching for a decade to deaf ears. Or would it just add the last touch to our demoralisation and precipitate the final degredingolade? These are the questions which we must ask ourselves about the possible effects of the actual calamity which is visiting China to-day. Statistics are unobtainable. We know that thousands of square miles are under water; that hundreds of thousands of people are drowning or starving; that millions' worth of buildings and crops have been destroyed. We see Mr T. V. Soong, the capable and constructive Finance Minister of the Central Chinese Government, appealing to the Red Cross Societies of the world, and to all Chinese everywhere, to co-operate in doing what can be done to mitigate the loss and the suffering. If a common effort to this end were to produce anything like a change of heart in China which would confirm and perpetuate the tendency towards peace and unity which has been at work, under adverse

circumstances, during the last three years, there would be a positive gain of the greatest dimensions and highest value to set against the terrible figures of destruction which will be revealed when the account of these floods is eventually drawn up. This hope is not altogether fantastic; for the human effort and endurance and solidarity evoked in response to the challenge of inundation has been the dynamic force in Chinese history. In Chinese, as in Babylonian, mythology, the Flood, and the Gods and Heroes who master it, are at the beginning of all things. The river whose floods were the making of ancient China was the Hoang-ho. The men who built the embankments of the Yellow River and rebuilt them every time they were swept away were the fathers of ancient Chinese civilisation. May we not hope that some such heroic and constructive reaction to the floods that are devastating the Yangtse Valley to-day may be the turning-point, in modern China, towards better times?

Shipyard Wages Deadlock.—The final conference, held at Carlisle on August 20th, between the Shipbuilding Employers' Federation and representatives of the shipyard trade unions unhappily resulted in a complete breakdown of the negotiations; but the possibility of a down of the negotiations; but the possibility of a deplorable stoppage of work in an already severely-distressed industry was deferred, at any rate, by the employers' decision to enforce the wage reductions, as proposed by them on June 5th, not with effect from September 1st (as originally intended), but in two equal instalments operative from October 1st and January 1st, respectively. Since discussions between the employers and the unions on the question of the industry's need of cheaper costs to meet the acute depression began as long ago as April last, the Federation can hardly be accused of impatience; nor, in view of the gravity of the industry's position, can their proposals, which left the national time-workers' rate untouched, but sought some alleviation in the relatively higher cost of piece-workers' remuneration, be regarded as exceeding either the necessity reasonably to be regarded as exceeding either the necessity of the case or the limits of what the workers could consider to be a "fair deal." The only thing that can be said in justification of the unions' non *possumus* is this: in relation to wages in "sheltered" occupations, the earnings of shipyard labour (the national "time" wage is—skilled men 60s., unskilled men 41s. per week) are demonstrably low, and men in a depressed industry may well resent being singled out for further sacrifices, no matter how imperious the economic necessity, if others—in an emergency for which the whole nation must bear in some degree the responsibility—are to go scot-free. This unfortunate deadlock reinforces the conclusion that the task of readjusting British costs and wages to meet the necessities of the crisis cannot effectively be accomplished unless the readjustment is made uniformly and simultaneously as a common act of mobilised national effort.

American Cotton Crop.—Our Manchester correspondent writes:—At the beginning of this week the Census Bureau of the United States Department of Commerce announced that, up to the 15th instant, 90,000 bales of cotton had been ginned, against 7,000 bales a fortnight earlier, and 573,000 bales at the same date last year. The small amount ginned so far this season has caused some comment, but this is due partly to the crop being late and partly to farmers not sending supplies forward very quickly in view of the low prices ruling. It is well known, however, that these early ginning returns are no indication whatever as to the size of the crop. It is significant that in 1926, when the ultimate yield was nearly 18,000,000 bales, the amount ginned up to August 15th was only 182,000 bales. The Government will publish another estimate of the crop on September 8th, and, owing to the weather in the belt since the beginning of August being generally favourable, it is not anticipated that there will be much change in the previous forecast of 15,584,000 bales. The fact, however, that the growth is late makes the plants more susceptible to damage later on should the climatic conditions turn unfavourable. In trade circles it

is recognised that, even should it be necessary for the Government to reduce its estimate of the yield, supplies are bound to be plentiful, and there are very few signs at the moment of any real increase in world consumption.

British Production.—The physical volume of production in the United Kingdom in the second quarter of 1931, as estimated by the Board of Trade, was 3.1 per cent. lower than in the first quarter of the current year, and 10.7 per cent. below that of the corresponding quarter of a year ago. The following table shows the figures for the respective groups in each of the last two years, in the June quarter of 1930, and in the March and June quarters of 1931:—

INDEX OF PRODUCTION (1924 = 100).

Group.	Year. 1929.	Year. 1930.	June Quarter. 1930.	March Quarter. 1931.	June Quarter. 1931.
1. Mines and quarries	96.8	91.3	87.4	85.3	79.7
2. Iron and steel and manufactures thereof	114.0	88.8	95.5	68.0	62.9
3. Non-ferrous metals..	120.5	119.1	123.7	95.5	110.9
4. Engineering and shipbuilding	121.0	116.6	122.6	102.5	99.8
5. Textiles	98.5	79.5	78.2	72.6	75.0
6. Chemical and allied trades	115.8	102.2	102.4	98.8	99.1
7. Paper and printing..	†	†	†	†	†
8. Leather and boots and shoes	98.5	101.4	103.8	101.3	99.1
9. Food, drink and tobacco	106.0	104.9	104.9	101.2	100.4
10. Gas and electricity	135.8	139.7†	†	†	†
Total of manufactur- ing industries (2-10)*	115.5	106.3	107.2	97.5	95.2
Total of all groups (1-10)*	111.8	103.3	103.1	95.0	92.1

* Including also various industries not specified above.
† Adequate information in respect of the paper and printing trades has not up to the present been available. The particulars received have been included in the general index.

† Provisional figures of the quantity of gas made have been used for the calculation of the group index for 1930, but no information is available as to the quantities made in each quarter. The available data for electricity have been included in the general index.

It will be seen that the downward trend in the volume of production, which became noticeable early in 1930, has not yet been arrested. A comparison of the past quarter with the January-March period of the current year shows a decrease in each group with the exception of non-ferrous metals, textiles and chemicals. The recession in activity has been most pronounced in the mining and iron and steel industries, which declined by 6.6 per cent. and 7.3 per cent. respectively. The fall of 3.6 per cent. in the engineering and shipbuilding group is largely ascribed to the severe depression in shipbuilding and marine engineering. The fact that during July the situation in the iron and steel industry has further deteriorated, and that employment in most industries has continued to decline, suggests that an improvement in the index for the current quarter is improbable. In comparing the quarterly indices it should be remembered that they are not yet adjusted for inequalities of months or seasonal fluctuations.

Finance in the Antipodes.—Both in New Zealand and Australia steady progress is being made with the restoration of a sound financial position. In New Zealand the budget debate was interrupted so that a motion could be discussed calling for an inter-party conference to decide on steps to adjust the national expenditure and provide equality of sacrifice and a proper distribution of the burden. This motion was accepted by the Prime Minister, who stated that he had long held that the financial position would not be adequately dealt with by a minority Government. The Committee was left free to review the whole field of finance, and the House adjourned for a week to give it time to prepare a report. Meanwhile, further progress is being made with the Australian conversion scheme, and, while no official details are yet available, it is understood that applications so far received account for over half the internal debt. Some relief of a political

character has also been afforded to Mr Scullin by the verdict in favour of Mr Theodore, the Commonwealth Treasurer in the famous Mungana Mines case. Though this case was a civil action, its circumstances were such as to render advisable Mr Theodore's retirement from office pending its determination, and, when Mr Scullin recalled Mr Theodore to office before the case was over, he incurred considerable criticism. Mr Theodore's victory removes much of the force of that criticism as well as a potential source of weakness in the Australian Government. The verdict is all the more to be welcomed as the Government needs its full strength for the completion of the task to which it has set itself.

Depression in the Coal Industry.—The gloomy account of the coal trade during the second quarter of this year, which appears in last week's *Board of Trade Journal*, continues unbroken the trend shown in the recently published Annual Report of the Secretary for Mines for 1930. This report, which includes a history of the coal mining industry in 1930 and of other mining and quarry industries in 1929, records the fact that the output of coal in Great Britain fell from 258 million tons in 1929 to 244 million tons in 1930. The decline was greatest in the principal export areas, where it ranged from 6.3 to 9.7 per cent., as against 3 or 4 per cent. in the principal areas which cater primarily for the home market. Shipments abroad fell from 82 to 75 million tons, and there were further declines both in foreign bunker shipments and in coastwise cargo shipments. Coal required for all purposes at home amounted to 166½ million tons, against 173½ million tons in 1929, but the demand for gasworks and railways was maintained and the consumption of generating stations continued to increase. Prices were well maintained until the latter part of the year, and the average price of coal disposable commercially was 14s. 1d., against 13s. 11d. in 1929. The corresponding averages for coal exported were 16s. 8d. and 16s. 2d. per ton. This downward tendency of all statistics relating to output and sales has been continued so far this year. The quantity of coal available for consumption at home during the second quarter was 1½ million tons lower than during the corresponding period of 1929 and shipments abroad were 3 million tons down. The number of wage-earners in employment since the beginning of the year has declined by 46,500. There has been a slight improvement recently in the average price of coal exported, which rose during the second quarter from 16s. to 16s. 4d. per ton, chiefly owing to the increased proportion of better-quality coal. It is, however, feared, from the figures at present available, that the quarter will show a debit balance of 1d. per ton, as proceeds per ton have fallen and costs of production have risen as compared with the preceding quarter.

New Emergency Decrees in Germany.—President von Hindenburg's latest emergency decree, which authorises the Governments of the 17 States to take all measures necessary to balance State and municipal budgets, even if such measures contravene existing State laws, is proving the occasion for a lively public discussion in Germany, an account of which is given, by our Berlin correspondent, on a later page, of constitutional reform in the direction of a unitary state. Meanwhile the President's legal advisers are satisfied that his constitutional position in respect of this action is unassailable, as the President is not obliged, in applying Article 48 of the Constitution, to observe the normal constitutional limits of competence between the Reich and the States. A curious position appears to arise, however, from the fact that measures taken under the powers of Article 48 can only be revoked at the instance of the President or of the Reichstag. The States may, therefore, find themselves subject to measures which their own Parliaments have no power at any time to revoke. The immediate effect of the decree has been to galvanise the municipal council and borough representatives of Berlin into the voluntary passing of radical measures of economy, including a temporary cut of 20 per cent. in their own salaries, which will effect savings estimated at 25-30 million marks.

The Outlook for Copper.—Once again, writes a correspondent, has there been an increase in the stocks of refined copper in North and South America; the end-of-July figure, at 440,000 short tons, shows a gain of 27,000 tons on that for June 30. Blister stocks were reduced by 9,000 tons, but the nett increase of 18,000 short tons is sufficiently serious to focus attention again on the question of adjustment of production and consumption. Deliveries to domestic and foreign consumers in July totalled only some 70,000 short tons, and are, therefore, well below what was considered, not so very long ago, a reasonable figure for the home market. The position is very serious from the point of view of the big producers, who, banded together as they are in a sales cartel for export business, are bound to keep in step on the home market; and, with demand as poor as it is, the customs smelters are making the pace and taking most of the business that offers. Add to this the fact that European production is now in the neighbourhood of 60,000 tons a year, and that Africa's output is almost entirely absorbed by the Old World, while the future holds in store a big increase in output from this source, and it is not surprising that there is a good deal of uneasiness among copper interests in the United States. The idea of a duty on copper imported by the United States is no new thing, but recently the clamour for some sort of protective tax has increased, and 4 cents per pound has been suggested. This is, of course, aimed at South America, where most of the low-cost properties are situated. Broadly speaking, copper is below cost of production at its present price, and as soon as adjustment is made between output and consumption, however this end be achieved, the quotation will respond; but the future holds no promise of a price much above £50 per ton. Immense world reserves of copper are available, and the outlook suggests that profits are going to be earned by those companies whose properties favour cheap production. It is, moreover, likely that, in spite of the progress already made, still cheaper methods of treating ore will be discovered.

Overseas Correspondence.

UNITED STATES.

Industry — Oil Restriction — Trade — Prices — Money
Market — Banking.

(FROM OUR CORRESPONDENT.)

NEW YORK, August 19.

THERE is little general improvement in industry and trade, but the recent recovery in the share market has once again raised hopes that some increased activity would come with the autumn. A few industries, such as shoes and leather, the woollen and food industries, are doing better, but the heavy trades are still depressed.

Affairs have taken a dramatic turn in the oil industry. Following the passage of a new law by the Texas legislature, giving the State Railroad Commission authority to limit output of any commodity which is accompanied by physical waste, the Governor of the State has emulated the example of the doughty Governor of Oklahoma and called out the State militia to close all oil wells in the East Texas area. Texas produces about 40 per cent. of the country's crude oil-well output, and Oklahoma accounts for 23 per cent. Sudden stoppage on such a wholesale scale (the country's output has been cut about 1,000,000 barrels daily) is, naturally, causing some disagreeable dislocations, but is meeting with general approval of the larger oil companies. Their problem has been mainly one of disposal of heavy inventories, and if the Oklahoma and Texas authorities persist for even a short while, storage oil must be heavily drawn upon. Meanwhile, the price structure is bound to strengthen, as it already is doing, and that will automatically add greatly to the value of the swollen inventories of the principal producers. Crude oil prices are rising in the north and east, and the gasoline market has stiffened. In the end, it is probable that a

compromise will be reached on price with the Governor of Oklahoma. The Governor of Texas, apparently, is not seeking to establish a price, but merely wishes to end the heavy production at prices unremunerative to the majority of producers outside the flush East Texas field. Oil men feel that a compromise will eventually be reached in Oklahoma setting about 75 cents a barrel for crude oil.

So far as statistics are available it is apparent that July brought a further trade decline. Employment, according to the Bureau of Labour Statistics, fell 2 per cent. at manufacturing plants last month, and payrolls dropped nearly 5 per cent., indicating the spread of wage cutting. Foreign trade figures for July show a further recession, but they were better than had been expected. Exports, which usually undergo a seasonal decline in July, fell \$4,000,000 from June to a total of \$183,000,000, the lowest since September, 1914. Imports fell only \$1,000,000 from the previous month.

Although cotton broke badly on the increased crop estimate of the Department of Agriculture, commodity prices generally have shown a somewhat firmer tone. The Bureau of Labour Statistics index for July was unchanged from that of June at 70, which is 16½ per cent. lower than a year ago. Most farm products were lower, but some of the food groups, the leathers, textiles and some of the metals were higher. Building materials lost two per cent. and raw materials as a whole averaged lower. Retail food prices in July in leading cities rose one-half per cent., but were 17½ per cent. under a year ago. A comparison of the Bureau of Labour Statistics wholesale commodity price groups follows:—

	July, 1930.	June, 1931.	July, 1931.
All commodities	84.0	70.0	70.0

Low prices for agricultural products, with the consequent freezing of much agricultural credit, coming on top of the general trade slackness, are bringing a recurrence of bank failures in the Middle West, which, perhaps, is now the worst section of the country, economically and financially, outside some of the Southern States. No really important bank is involved in the recent failures, and it should not be assumed that the banking position has grown weaker. On the contrary, deflation of credit has continued on a considerable scale, and short-term money, at least, is abundant. Bank failures reported for July by the Federal Reserve Board number 92, against 166 for June. For the seven months the total is 778, of which 252 were in the Chicago district, and it is altogether probable that the full year will set up a new record for the casualties. The country has been overbanked, and the elimination of the weaker units will in the end do more good than harm, although at the time the failures are accentuating the slowness of industrial enterprise.

The tone of the money market has been slightly firmer in the past week. Call funds have remained at 1½ per cent., but the amount of money lendable at a concession has diminished and the rate for Federal funds—money borrowed by member banks from each other—has been rising. Ninety-day time money also has risen slightly. Another sign of a firmer tone is the rising rate paid by the Treasury on its weekly bill tenders. From the low record of 0.46 per cent. on 90-day bills, dated July 27, the rate was raised to 0.51 per cent. on August 4, to 0.56 per cent. on last week's bills, and to 0.63 per cent. on this week's offering. Incidentally, the Treasury for August has asked offers and sold bills totalling \$80,000,000 in excess of maturities, the extra money going to general expenditure of the Government.

While money usually shows a seasonal firmness at this time, it is doubtful if commercial demands are being felt

very much. Two new factors have entered the equation. One is the rise in circulation due to withdrawal of bank deposits by timid bank customers, and the other is the shift of foreign bank investments into deposits at the Federal Reserve Bank. These operations presumably are mainly for the account of the Bank of France. The item of foreign deposits has for a long time been unchanged at around \$5,000,000 to \$6,000,000, and deposits in the Federal Reserve Banks draw no interest. Beginning with the middle of June, this account began to rise rapidly, and now stands at \$180,000,000, having jumped \$48,000,000 last week.

At the same time, the Federal Reserve system's contingent liability on bills bought for foreign account has dwindled. It was \$378,000,000 two months ago, and now is \$220,000,000. On this week's statement there was no decline in foreign bills bought, but Federal Reserve Bank holdings of bills and Government bonds rose \$70,000,000 and \$47,000,000 respectively. For the corresponding period reporting member banks in leading cities show a drop of \$131,000,000 in "other loans," which include bankers' bills, and a decline of \$48,000,000 in Government security holdings. The drop in member bank other loans is attributed entirely to bill sales to the Federal Reserve Banks and unreplaced maturities as well as sales to dealers. Also it is understood that the Bank of France has sold holdings of Government bonds carried for it in the Federal Reserve special account and added to its deposits, and, perhaps, has sold investments with member banks as well, transferring that money to the Reserve Bank deposit account. These operations have, of course, reduced member bank reserves and helped to firm up money as well as to cause borrowing at the Reserve through sales of bills. Member banks can obtain credit at the Reserve at 1 per cent. through sale of bills, against a discount rate of 1½ per cent., hence they have chosen that way to rebuild their reserves.

Bankers here are still without accurate information on the disposition of mark deposits held in German banks, but the Wiggan agreement on short-term credits was, of course, in line with their ideas on that subject. Opinion is now, as it always has been in Wall Street, much at variance on the subject of debt reductions. The majority of banking opinion leans to reduction or cancellation of allied payments to this country, which would presuppose cutting down German reparations. However, some people are only lukewarm to the idea, and, in any event, Wall Street is highly sceptical of the acceptance by the country of such a plan. Rumlings are already being heard of plans to increase the national debt through increased soldier bonus payments and unemployment relief schemes.

GERMANY.

Emergency Decree — Plan for Union of Reich and
Prussian Governments — Banking Commission —
Norddeutsche Wollkammerel.

(FROM OUR CORRESPONDENT.)

BERLIN, August 25.

THE financial emergency has forced upon the German people a simplification of their administrative apparatus which is wholly in line with German historical development. They have been compelled to undertake a reorganisation of the relations between the Reich and the States, by which the latter cease to be States having their own parliamentary government and become local authorities, with the Reich as the sole representative of the German State.

The Finance Minister of Prussia, Herr Höpker Aschoff, in a recent article in the *Deutsche Volkswirt*, sketched the lines upon which a joint government of the Reich and Prussia, the biggest German State, might be created. The formation of such a joint government would constitute the first step in such a reform. The article, which came as a great surprise to the public, and has suddenly started a new discussion of constitutional reform, revealed for the first time that the Reich Ministry of the Interior

prepared a plan for such reform some time ago; but, in Herr Aschoff's opinion, that scheme is no longer applicable to present conditions. Though the details of the new plan are purely the work of Herr Aschoff himself, his fundamental ideas reflect the views of his colleagues in the Cabinet as well. The present Prussian Government is thus ready to give up its independent existence and to hand over the administration of Prussia to the Government of the Reich.

This does not constitute any inconsistency of principle on the part of Herr Braun, the forceful and independent Prussian Prime Minister; he has always been a supporter of the idea of a German unitary State, but he was for a long time convinced, as were the majority of the Social Democrats, that a firm government of the Left in Prussia was of such great value while the coalition majorities in the Reich were so unstable that it was necessary to forgo for the time any decisive step in the direction of constitutional reform. Now the position of the Left in Prussia is no longer secure. In spite of its great success at the referendum, the Prussian Government cannot be certain how the elections next spring will go, under the pressure of economic distress. Nor can the Prime Minister be sure how far he can succeed in maintaining the coalition with the Prussian Centre on which his Government depends, if the Government of the Reich under Dr. Brüning, who belongs to the Centre Party, pursues a different policy. There is, therefore, no doubt that, for Herr Braun, the importance of influence upon the Reich has increased and the importance of Prussia has diminished. As he is the strongest man in the Social Democratic Party, this removes an important obstacle from the path of political progress.

Herr Höpker Aschoff's plan requires first of all that the Prussian Minister of the Interior be appointed also to the Ministry of the Interior of the Reich, and that the Reich take over the police administration and supervision of the communes of Prussia. The administration of justice in Prussia would be subordinated to that of the Reich, and the administration of taxes be transferred to the Reich. The Prussian Prime Minister would become Vice-Chancellor of the Reich. These measures would be carried through partly by agreement between the Governments and partly by emergency decree. Herr Aschoff anticipates that the smaller North-German States would simply join Prussia, as they are almost all in pressing financial difficulties, have hitherto resisted union with Prussia only on historical and sentimental grounds, and would readily subordinate themselves to the Reich administration.

The South German States would at first be untouched by the new arrangement, but it would, of course, be difficult for them to remain for long outside such a union with the Reich administration as Herr Aschoff contemplates for North Germany. The South German federalists have already realised that, and the Prime Minister of Bavaria, Dr. Held, has already protested energetically against "constitutional reform by decree." The parties of the Right have moved a resolution in the Prussian Landtag condemning the plans of the Government for the "destruction of Prussia." It is generally expected that the Chancellor will make clear the attitude of the Cabinet of the Reich to this question at the forthcoming conference of the Centre Party in Stuttgart.

The fundamental idea of Herr Höpker Aschoff's plan, that of beginning the reform of the Reich by combining the Governments of Prussia and of the Reich, is not new. It underlay the project of a "League for the Renovation of the Reich," founded by the present President of the Reichsbank, Dr. Luther, and the recommendations of a commission of experts set up by the conference of representatives of State governments in January, 1928.

A Presidential decree, "for the safeguarding of Budgets," empowers the State governments to take any measures which are necessary for the balancing of the budgets of the States themselves and of the communes, even if these measures are contrary to existing State laws. This decree will permit the State governments, among other things, to reduce the expenditure on personnel of the communes, where it is excessive, even when it is protected by State legislation.

The commission of nine experts which the Government has set up to consider banking questions has not yet achieved any tangible results. All that has been done has been to nominate a committee of three to represent the Reich on the advisory board of the Dresdner Bank and to prepare the necessary changes in the membership of the board of directors. It appears that both the Dresdner Bank and the Danatbank are to continue in their present form. The general meeting of the Dresdner Bank, which has formally to consent to the taking over of the preference shares by the Reich, is to be held next Saturday. Meanwhile the Reich has also had to intervene in the affairs of two outposts of the banks which it is assisting. The Dresdner Bank has taken over, with the consent of the Reich, the Egyptian branches of the Deutsche Orientbank, which had to close down a few weeks ago, and are now being conducted under the name of the Dresdner Bank. What is to happen to the remainder of the Orientbank, which is less important, is not yet known. The majority of the Orientbank's shares are held in common by the Dresdner Bank and the Danatbank. The Egyptian branches have now been furnished with adequate sums to meet all the payments which can be demanded; their principal creditors have agreed to wait eighteen months.

In connection with the suspension of payments by the Darmstädter Bank, the Merkurbank in Vienna was involved in difficulties and obliged to close down. The bank has now been enabled to carry on by an Austrian banking syndicate under the leadership of the postal savings bank, which has placed 25 million schillings at its disposal. For this sum, however, the Darmstädter Bank, and therefore the Reich, has to act as surety. The status of the Merkurbank is said, moreover, to be thoroughly satisfactory.

The report of the Norddeutsche Wollkammerei was laid before a meeting of several hundred creditors on August 21st. From this report, which gives the first full account of the course of the catastrophe, it appears that none of the directors except the brothers Lahusen knew what was happening to the Dutch subsidiary Ultramar. In the 1930 balance sheet the claims on Ultramar, which were entirely worthless, were still valued at 74 millions. The losses were due to innumerable essays in stock exchange speculation and other transactions. Losses on shares of and advances to affiliated companies were assessed at 55 millions, and total losses at 255 millions. The debts amounted to 257.17 millions, of which only 20.64 millions were secured. Of the unsecured bank debt 34.7 millions belong to the Danatbank, 25 millions to the Dresdner Bank, 10.4 millions to the Commerzbank, 9 millions to the Deutsche Bank and 6.3 millions to the Schroeder Bank of Bremen. This latter also holds a secured credit of 3 millions. Of the rest of the secured debt, the Bremen Sparkasse holds 4 millions, the Tredeffina 9.1 millions. English banks involved are J. H. Schroeder (6.2 millions), Lazard Bros. (5.6 millions), F. Huth and Company (4.5 millions), M. Samuel (3 millions), Wm. Brandt's Sons and Company (2.5 millions), Anglo-South American (2.1 millions), Japhet and Company (1.9 millions), Barclays (1 million). The Kreditanstalt and the Bankgesellschaft in Switzerland, de Barry and the Internationale Bank (Kongern Danat) in Holland are all involved to the extent of over a million each.

When bankruptcy proceedings were opened the factories were still employing 15,200 workers and 1,340 salaried employees, and orders on the books amounted to 42.5 millions. The proposal is now that the five factories which spin combed wool shall be formed into a new company, and their shares, which will probably amount to 25 millions, shall form part of the assets to be distributed. The other factories are to be disposed of. This has in some cases already been done; in others promising negotiations are in progress, but the value of all the works is only placed at 3.4 millions in the bankruptcy account, against a book value of 47.11 millions in the 1930 balance sheet. The principal asset is the stocks, which are pledged to Tredeffina, which appear in the bankruptcy account at 35.2 millions.

ITALY.

Stock Exchange Declines — Restrictions on Bear Operations — Unemployment — Industry — Foreign Trade — Revenue.

(FROM OUR CORRESPONDENT.)

TURIN, August 18.

FROM August 6th to 19th the Italian Stock Exchanges have been enjoying the regular holiday which has gradually developed out of the old mid-August Ferragosto holidays. All the counterpart of the London Bank Holidays. All operators are devoutly hoping that the recess may have a good effect on the tone of the bourses, which was going from bad to worse. The Milan index for certain characteristic dates was as follows:—

	(December, 1925=100).				
	Dec. 29, 1928.	Jan. 3, 1930.	June 28, 1930.	Feb. 28, 1931.	July 31, 1931.
Banks	110.5	92.4	99.3	93.7	86.9
Navigation and trans- ports	80.4	66.4	80.1	62.9	50.6
Textiles	42.6	19.0	24.6	18.5	23.7
Mines, iron and steel, and engineering	97.0	60.8	72.3	66.3	52.2
Electricity	103.3	77.6	93.8	83.0	67.8
Real estate and agri- culture	80.5	48	68.5	58.4	58.6
Food and miscellaneous	96.7	73.1	94.4	81.8	63.9
General index	88.3	66.4	79.1	69.6	62.0

A few of the thirty-five shares utilised in the index have gone down to a mere nominal fraction of their former price — Venice Cotton Mills (Cotonificio Veneziano) to 2.26 per cent.; Meridional Cotton Manufactures to 9.20 per cent.; Snia Viscosa to 8.27 per cent.; Officine Meccaniche to 1.38 per cent.; and Fondi Rustici to 3.37 per cent. Bonifiche Ferraresi have been dropped altogether from the list. In all these cases particular reasons can be given for the decline. The remainder have been brought down by the complete absence of buyers. Even the spurt after the Hoover move on reparations was short-lived.

In so lifeless a market bears may have a great psychological influence in provoking sales by weak holders, who have lost hope of seeing a ray of sun after so many rainy days. It is probably to counteract the bears' attacks after the recess that a decree published in the official gazette of August 8th gives the Finance Minister new regulating powers in the field of bourse transactions. All sellers of futures can be obliged to deposit at the moment of order the securities sold or a cash cover to 25 per cent. The Minister can make analogous regulations for purchases of futures, and his regulations may cover all securities dealt in or only specified securities, and may relate to all bourses or only to those specifically named. As every purchaser had already the right of obliging the seller to deposit at once the securities sold for a future date, the new decree aims at generalising a rule which could hitherto be enforced only at the request of the interested party. It is hoped that these restrictions on uncovered sales will help to check the decline.

The best cure, however, would be an improvement in the industrial situation. Of that the omens are as yet not very sure. Unemployment was reduced from the peak of 765,325 at the end of February to 573,593 at the end of June, increasing again to 637,156 at the end of July. Other general indices of industrial activity are also doubtful. The electrical energy produced and imported decreased from 4,149.7 million kwh. in the first five months of 1930 to 3,902.9 in the corresponding period of 1931. Imports decreased from 9,545 million lire of 1931. Imports decreased from 6,612.6 in the first semester of 1930 to 6,612.6 in the first semester of 1931. As exports decreased only from 6,535.4 to 5,112.5 million lire, the excess of imports decreased from 3,009.5 to 1,500.1 million lire. This is good for the present balance of payments, but probably bad for the future of industry. Imports of raw jute diminished in the first five months from 27,840 tons in 1930 to 19,433 tons in 1931; cotton from 109,791 to 83,561 tons; wool from 27,775 to 24,992 tons; broken pig iron, iron and steel from 444,828 to 286,080 tons; coal from 4,823,271 to 3,711,635 tons; mineral phosphates from 406,133 to 215,592 tons;

NATIONAL BANK OF GREECE Established 1841

Head Office: Athens.

Branches throughout Greece.

New York Agency, 51 Maiden Lane.

THE BANK OFFERS EXCEPTIONAL
FACILITIES FOR BUSINESS WITH GREECE

Capital paid up and Reserves Drs. 1,205,000,000.

and rubber from 6,807 to 4,428 tons. The average monthly goods carried on the Italian State Railways, which decreased from 5,028,000 tons in 1929 to 4,466,000 tons in 1930, decreased further from 4,440,000 tons in the first half of 1930 to 3,611,000 tons in the corresponding period of 1931. The number of passengers, which had already decreased from a monthly average of 9,740,905 in 1929 to 8,740,070 in 1930, decreased further from 8,308,655 in the first semester of 1930 to 6,910,676 in the same period of 1931.

Deposits in the Post Office Savings Bank increased in the first five months of 1931 by 697.6 million lire (from 13,047.2 to 13,744.8) and those in the ordinary savings banks by 415.7 million lire (from 17,229.2 to 17,644.9). Winding up of old companies and losses of capital so much exceeded the formation of new companies and increases of capital that the capital of joint stock companies decreased from 52,280,765,000 lire at December 31, 1930, to 50,823,703,000 lire at June 30, 1931. The sums cleared at the Clearing Houses, which had decreased from a monthly average of 108,128 million lire in 1926 to 55,370 millions in 1930, decreased further from 54,139 millions the first semester of 1930 to 53,960 millions in the corresponding period of 1931. Failures (ordinary and small), whose monthly average was 1,010 in 1929 and 1,133 in 1930, went up to 1,400 in the first six months of 1931.

Taxes are accounted for by the central accounting office of the Finance Department under 52 separate heads. Of these 16 increased in the financial year 1930-31 over the yield of 1929-30 and 36 suffered a decrease. The total increase was 458.8 million lire; but were it not for the increase in the yield of the wheat duty by 744.7 million lire and on that of the turnover or sales tax by 487.0 million lire, the result would have been far from satisfactory.

HOLLAND.

Financial Relations with Germany — Money Market —
Proposed Customs Union with Belgium — Foreign Trade
— Capital Issues — Shipping.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, August 18.

THE financial difficulties in Germany have not failed to leave their mark on the economic situation in the Netherlands, as is only natural in view of the close financial association maintained between the two countries. It is not merely a matter of the enormous drop in Stock Exchange quotations for German shares and loans, in which so many Dutch investors have been involved, but, in addition, Dutch traders have been encountering very great obstacles in the export of goods to Germany. It is, therefore, not surprising that a member of the Dutch

Parliament put a written question to the Minister of Home Affairs in the following terms:—

Is the Government aware that, owing to the German bank and monetary crisis, numerous Dutch creditors, not only those engaged in the agricultural, horticultural, dairy and similar branches, but also in industrial circles, cannot secure payment from their German debtors, and that difficulties for the trade of the Netherlands have arisen as a consequence?

Is the Government prepared to adopt measures with a view to putting Dutch creditors in possession of the amounts due them?

In reply, the Minister stated that the prevailing situation in Germany was of a temporary nature, so that for the time being he did not consider it necessary to take measures in this direction.

The extent of the financial commitments between the Netherlands and Germany will be realised from the fact that, according to a computation of *De Maasbode*, the nominal amount of the German stocks officially quoted at Amsterdam is at present about 600 million guilders. In addition there are a number of stocks not officially quoted and German ecclesiastical loans, so that since the war the Netherlands have invested at least 700 million guilders in German long-term loans. To this must be added the short-term credits furnished to Germany by the Dutch banks, so that an estimate of 1,000,000,000 guilders for the total will certainly not be very wide of the mark.

A result of the crisis in Germany has been that a great deal of foreign capital is seeking safe investment in the Netherlands. This naturally tended to support the guilder, and this, in conjunction with the weakness of sterling, gave rise to considerable shipments of gold from England to the Netherlands. Some of this gold was withheld by the banks over here, so that not all of it found its way direct to the Netherlands Bank. Nevertheless, the gold reserves of the Netherlands Bank increased within a fortnight by no less than 74 million guilders.

The money market has therefore remained very liquid, and the rise in Bank rate in London has not forced the Netherlands Bank to similar action. The return of the Netherlands Bank showed a further increase in the circulation of bank notes, which amounted to no less than 970 million guilders, a higher figure than has been recorded for a very long time. This is the more inexplicable in view of the enormous drop in prices in recent years.

The propaganda in favour of a customs union between the Netherlands and Belgium is being conducted with especial activity in the latter country. The movement finds its chief adherents among the Flemish population, and aims at freedom from French influences. It is to be doubted, however, whether the time is now ripe for such a union. Holland is fundamentally a Free Trade country and Belgium is protectionist. Moreover, duties in the Netherlands are levied according to the value, but in Belgium according to the weight and description; a complete revision of the customs system would consequently be involved.

A partial customs union might, however, be feasible. There are large numbers of commodities to which it could apply as a beginning without contravention of the most-favoured-nation clause. Apart from these customs matters, there are numerous other affairs in which co-operation and consultation between the Netherlands and Belgium could lead to important decisions, such as, for instance, the revision of postal, telegraphic and telephonic rates, port problems, etc. A resumption and continuation of the work of the Netherlands-Belgian Commission of 1907 would, it is considered, be a matter for satisfaction.

The foreign trade returns of the Netherlands for the first half of 1931 reflect the influence of the trade crisis. In the first half of 1931 imports amounted to 14,280,000 tons (against 15,686,000 tons last year), with a value of 988 million guilders (against 1,276 million guilders). During the same period exports totalled 8,273,000 tons (against 8,049,000 tons), with a value of 677 million guilders (against 880 million guilders). The Dutch figures do not, however, make a worse showing than those of the United States, Germany, France and England. Our trade with the six countries which are of greatest importance for

Dutch commerce is summarised in the following table (in millions of guilders):—

	FIRST HALF-YEAR.			
	1930.		1931.	
	Imports.	Exports.	Imports.	Exports.
Germany	414	194	314	138
Belgium	134	95	99	87
England	118	186	82	158
France	60	66	41	63
United States	109	12	78	14
Dutch E. Indies	49	79	40	45

There have been striking reductions in the imports from England of yarns and fabrics, which receded in value to the extent of 7.6 and 6.4 million guilders respectively. Among the exports to England, vegetable oils and paper show considerable declines.

Issues on the Amsterdam market again showed a decline during the last month. In comparison with the corresponding month of preceding years, the total of issues in July, 1931, was decidedly lower:—

July, 1929 :	46,458,000 guilders.
" 1930 :	35,197,000 "
" 1931 :	25,857,000 "

The amount offered for subscription here last month was entirely for issues of bonds; there was not a single flotation of shares, probably a unique occurrence in the history of the Netherlands new issues market. In addition, by far the majority of the bonds issues marketed were for account of public bodies, among which the Oslo 4½ per cent. loan of 5,820,000 guilders was the only foreign issue of any importance. The issues of industrial enterprises were 90,000 guilders for a French firm, Anciens Etablissements Bouly, and 873,000 guilders for a Belgian borrower, the Brasserie de la Chasse Royale.

In regard to the aggregate of issues here, this year is not very far behind the corresponding period of its two predecessors. The amounts were as follows:—

January-June, 1929	284.3 million guilders.
January-June, 1930	377.6 " "
January-June, 1931	269.4 " "

The influence of the trade decline is naturally apparent in the statistics for shipping traffic. During the first half of 1931, 6,150 ships, with a total of 10,352,773 net tonnage entered the port of Rotterdam, as compared with 7,009 vessels and 11,998,731 net tons in the first half of 1930.

HONG KONG.

Civil War — Exchange — Trade — Cotton.

(FROM OUR CORRESPONDENT.)

HONG KONG, July 25.

OVER two months have elapsed since the political disruption in Nanking, yet so far the opposing camps, despite mutual threats of active hostilities, have confined themselves to a long-distance snarling match. The Canton party is undoubtedly disappointed that the promised support of the Northern War Lords is not forthcoming, and their prospects of driving Chiang Kai Shek and his small following out of Nanking are reduced to vanishing point. There now appears to be on both sides a great reluctance to fight, and while Chiang at one time contemplated an expedition to attack Canton, he has been unsuccessful in enlisting the support of one of the big independent forces of the south. He has naturally decided against a campaign so far from his base without the help of southern troops, for his own army is probably not big enough to be split up into an expeditionary force and an army for the protection of the capital. A stalemate thus prevails, and, so far as can be judged, everyone concerned seems to be content that it should continue. The customs revenue of the two Kwangs is now being paid to the Canton Government, less the portion of 5 per cent. which is earmarked for foreign loan services. The Nationalist Government, of

course, continues to receive the huge revenue of Shanghai, but how much of the duties collected at the Yangtze and northern ports reach Nanking is a moot point. Presumably Chang Hsueh Liang retains, in return for his support, a large portion of the revenue collected in the area under his control. For all practical purposes China is again split up into three main areas, with numerous independent zones, and the pretence that it is a united country under an established central government can no longer be maintained. The Canton clique claim to be the true and only Powers should repudiate Chiang Kai Shek and transfer their recognition to them. But the Canton party has yet to prove that it will prevail. There are too many leaders, varying in opinion from one extreme to the other, to make for stability, and although they are at the moment bound together by a common hatred of Chiang Kai Shek, internal dissensions are inevitable. Already there are signs of a lack of team spirit, and so far the new administration has given no signs of special ability. The foreign consular body in Canton is in an awkward predicament, as relations with the local administration have to be maintained, and it is difficult to do so while official recognition is withheld by their respective governments. The Hong Kong Government has so far avoided any complication in respect of recognition, but the Governor has found it advisable to cancel a trip to North China, which was to have given him an opportunity of calling upon Chiang Kai Shek in Nanking.

The Hoover moratorium proposals had an immediate effect on exchange and speculation in Shanghai, and resulted in a sudden rise in the price of silver, with a consequent advance in the Hong Kong dollar to the neighbourhood of 1s. 1d. The subsequent uncertainties as to the acceptance of the proposal led to a reaction, and after considerable fluctuation the dollar has relapsed to under 1s. Business in Hong Kong has been gradually adapting itself to the abnormally low level of exchange, and a sudden rise is bound to have an unsettling effect. The general opinion at the moment is that there will be a further decline in exchange; but if the moratorium results in an advance in world commodity prices, silver will probably rise in sympathy.

Trade generally is on a healthy basis, thanks to the fall in exchange having enhanced the value of stocks in the colony, and the volume appears to be in no way diminished as measured in local currency. Unfortunately the trade statistics of the colony are not yet on such a basis as to be reliable. The Superintendent of Imports and Exports, in his recently published review for 1930, complains bitterly of the slackness of merchants in rendering their returns. There have been several cases of persistent negligence, and even the foreign banks, through some misunderstanding, made no returns of treasure shipments for some months after the collection of statistics had been resumed. Movements of treasure have been abnormally large during the past twelve months, and the absence of returns meant a very serious omission in the record of the colony's trade. The Superintendent of Imports and Exports goes so far as to threaten to close down the statistical branch of the department if he is unable to secure effective co-operation.

The opening of the buying season for cotton fancies has again been delayed as long as possible, but at the moment of writing dealers' inquiries are beginning to assume a more definite shape. Any possible rise in the value of raw cotton, and as clearances for the present season have been remarkably good, there seems to be every reason to hope for some substantial orders for next season. A good proportion of the goods which arrived during the spring eventually found their way to the Straits and Siam, and it is hardly likely that there will be a repetition of this next spring. It is possible, therefore, that buying may be on a more restricted scale. Piece-goods dealers, however, have had a profitable year, and may be disposed to look for a bigger demand from the interior by reason of the comparatively small offtake this spring.

IRISH FREE STATE.

Past Session — Agriculture — Immigration from U.S.A. — Foreign Trade — Public Finance.

(FROM OUR CORRESPONDENT.)

DUBLIN, August 15.

THE session of the Dail which terminated in July was reasonably fruitful in constructive legislation. The principal measures affecting agriculture were the Land Act, which facilitates land purchase, the increased grant in aid of rates on agricultural land, and the Act regulating the grading and packing of potatoes. The protective tariff was increased by the imposition of duties on the imports of butter, harness and harness leather. The condition of the Shannon Scheme attracted much attention towards the end of the session, when an additional sum of £2,000,000 was asked for by the Government for the Electricity Supply Board. An attempt was made to develop the fishing industry by the establishment of a Sea Fisheries Association designed to provide loans and marketing facilities for fishermen. The Government has persisted in its policy of developing the natural resources of the country to the utmost, and has refused to be stampeded by the prevailing depression into passing the panic protectionist measures demanded by the Opposition, who still clamour for a subsidy on wheat and a far-reaching extension of the tariff.

The outbreak of foot-and-mouth disease in Northern Ireland led to the temporary restriction of exports of cattle from the Free State. If this restriction had been continued in force the country would have suffered an extremely severe loss, but happily it has been removed and the trade is again normal. The closing of the market for cattle would have been an exceptionally heavy blow to Irish prosperity, because cattle are the only agricultural product of which the price has been fairly remunerative. The price of pigs and sheep is very unsatisfactory, and all classes of dairy produce have slumped. The Free State is fortunate in that it relies for the greater part of its income on the production of cattle, and benefits by the fall of the price of cereals and feeding stuffs. That the Free State is feeling the prevailing depression is unquestionable; but it can be safely asserted that the depression has shown no signs of developing into a crisis.

The depression in the United States has had the effect, not only of reducing emigration from Ireland, but of setting up a stream of migration from America to Ireland. In the first six months of the present year the number of immigrants from America was far greater than that of the emigrants to America. One result of this change in the direction of the migration movement is that the population of the Free State is beginning to increase for the first time since the Treaty. While everybody must feel pleased to witness this increase, it cannot be denied that there may be difficulty in finding employment for many of the returned emigrants. The movement, however, shows no sign of abating, and cases are becoming quite common of remittances being sent from Ireland to pay the passage home of destitute relatives in the States.

During the first six months of the present year imports into the Free State amounted to £25,083,055, as compared with £29,422,549 in the corresponding period of last year, and exports amounted to £17,161,856, as compared with £22,051,987. The reduction in the value of the imports reflects the heavy drop in the price of many foodstuffs; the quantities of wheat, flour, maize and tea imported were greater than last year, but the values substantially declined. Among the exports, decreases took place in the case of cattle, bacon, hams, butter and eggs, and increases in the case of pork, horses and fish. While the total external trade of the Free State is less than last year, the amount of the adverse balance remains practically the same.

The financial history of the Free State for the first ten years of its existence is summarised in the following figures published by the Department of Finance:—

Total normal expenditure, 1922-31	£ 211,226,751
Total normal revenue, 1922-31	228,993,054
Surplus	17,766,303
Total abnormal expenditure, 1922-31	38,526,232
Total abnormal revenue, 1922-31	4,613,977
Total abnormal expenditure not defrayed from surplus normal revenue and abnormal revenue	16,145,952

The extremely prudent policy of the Government in respect of borrowing appears from the high proportion of extraordinary expenditure arising out of the pre-truce and post-truce troubles which was met out of current revenue. This expenditure was unquestionably abnormal and non-recurrent, and might have been met by borrowing even on the most orthodox principles of finance. The total amount spent on the army and on compensation for damage to property and personal injury was £34,978,437. The British Government contributed £3,217,542 in respect of pre-truce damage, leaving a net expenditure of £31,760,895. The total dead weight debt not covered by corresponding assets is £15,274,000. It is clear that more than half of the cost of the disturbances was paid for out of revenue. However unpleasant this may have been for taxpayers, it certainly indicates a very high standard of financial prudence which is bearing its fruit to-day. A small national debt is one of the greatest boons that any nation can enjoy during a period of acute deflation.

Letters to the Editor.

FASCISM AT HOME.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In my letter published in the *Economist* of July 11, 1931, I made the point that it is impossible to gauge the material and moral conditions of a city and the feelings of its inhabitants in a few hours of peregrination in the rain between two trains. Signor Villari's reply, published in your issue of July 25, 1931, avoids the facts brought forward in my letter and shifts the discussion to a totally different plane, by putting forward the thesis (a) that the economic crisis under which Italy is labouring to-day is a consequence of the world crisis; (b) that the Italian crisis is less acute than the world crisis; and (c) that in pre-Fascist Italy conditions were worse than they are to-day. I would beg you once again to allow me to demonstrate by what methods Signor Villari tries to confuse the issue for your readers.

(a) The Italian economic crisis, far from being a result of the world crisis, showed itself already in the autumn of 1926 and became acute in 1927. In a speech of November 9, 1927, Mussolini plainly admitted: "There has been a crisis and it has been a grave one. It was bound to come because of the monetary policy for which the regime accepts full responsibility. What stage has the crisis reached? I am convinced that the peak is already past." The peak was far from past. In another speech of June 22, 1928, Mussolini had to admit that the crisis still continued, but reiterated: "I believe that the end is in sight." The end was not in sight. Despite his assurances, on December 9, 1928—"We are out of the dangerous waters; we are in full convalescence"—he had to admit on October 2, 1929: "These very days have seen the culmination of the crisis. We have left the night behind and are marching towards the dawn." Three weeks later came the Wall Street crash. In a speech of December 18, 1930, the Duce explained: "Just as we were almost in sight of land, the American crisis of October 21, 1929, drove us back into the high seas." In other words, when the world crisis began, Italy had for three years been in the throes of a crisis of her own, caused by the hasty revaluation of the lira at so high a figure as to disconcert her export trade. The phases of the crisis are reflected in the following figures of dishonoured bills given by the Banca Commerciale Italiana in its "Movimento Economico," 1931, page 51:—

1926	1297	1928	1929	1930
849,000	1,096,000	1,085,000	918,000	1,003,000

For May, 1931, the figures reached 103,482 ("Bollettino mensile di statistica," June, 1931, page 640), whereas the monthly average in the critical year 1927 was 66,345.

(b) In support of his assertion that the crisis is being less severe in Italy than in other countries, thanks to the measures enacted by the Fascist Government, Signor Villari asserts that (1) if wages have declined, so have prices; (2) the Italian percentage of unemployment compares very favourably with that of Germany, Great Britain, etc.; (3) during the past few months the number of unemployed has been steadily diminishing; and (4) unemployment would be lessened if foreign countries did not "almost entirely" prevent Italian immigration. The truth is as follows:—

(1) Between the spring of 1927 and that of 1931, wages have fallen 30 to 50 per cent. If Signor Villari disputes this statement, and the *Economist* grants me the space to reply, I will prove this fact. If Signor Villari does not dispute the statement he must bring proof that the cost of living in Italy has fallen by 30 to 50 per cent. The official figures ("Bollettino mensile di statistica," June, 1931, page 592) show a drop from 100 in June, 1927, to 83 in May, 1931. This is generally regarded in Italy as too optimistic a figure; but accepting it as a basis, we are still very far from a fall of from 30 to 50 per cent. In a Fascist paper, the *Corriere Padano*, June 14, 1931, Professor Bizozzero, an agricultural expert, advises the Italian peasantry to return to the use of maize as a staple food: "Polenta must take the place of honour as of old, and there must be little bread and hardly any meat in the peasant diet. I see no other way out of our present troubles."

(2) Italian unemployment figures cannot be compared with those of other countries, firstly, because in a country still half agricultural like Italy the conditions are not the same as in highly industrialised countries like Great Britain, the United States or Germany; secondly, because in Italy the agricultural population and a large part of the industrial population, are not in receipt of unemployment relief; and, thirdly, because Italian unemployment figures are systematically falsified. I am prepared, if challenged, to prove this statement.

(3) Unemployment in Italy is to some extent seasonal. It is highest in mid-winter and lowest in summer. Thus the seasonal improvement of the spring months of 1931 is not a proof that the crisis is disappearing. I quote more complete figures from the "Bollettino mensile di statistica," not as a full statement of the state of affairs, but as showing what even a Fascist Board of Statistics was unable to hush up:—

	Winter maximum.	Summer minimum.
1926	156,000	79,000
1927	259,000	214,000
1928	439,000	234,000
1929	489,000	193,000
1930	466,000	322,000
1931	765,000	not yet known

Readers of the *Economist* will remember that in 1927 the crisis was already severe, and will draw their own conclusions.

(4) Signor Villari ignores the drastic measures by which the Fascist Government prevented emigration from September, 1927, to September, 1930, when, scared by the rise in unemployment, it opened the doors to emigration again. In his book "Italy," published in 1929, he wrote: "The emigration policy of the Italian Government has undergone a radical transformation during the last few years. No one is encouraged to emigrate, and obstacles are placed in the way of all incitements to emigration. Everything is done to keep the Italians at home. Now passports are issued only to near relatives of Italians living abroad, and the latter must return to Italy to fetch them. The object of this measure is not only to restrict emigration, etc." (pages 349-50). In August, 1930, the overseas emigrants were no more than 323 and those going into Mediterranean countries were 11,535. In September they leapt respectively to 4,977 and 42,342, and in October to 8,470 and 50,340 ("Bollettino mensile di statistica," January, 1931, page 32). Without the veto on emigration many thousands might easily have been absorbed by other countries in the three years preceding the world crisis. But for the considerable clandestine emigration during this period, the unemployment figures would be higher than they actually are to-day.

(c) Signor Villari asserts that in the pre-Fascist Italy (i) "long before the world crisis" the Italian unemployment figures were as high or higher than those of to-day, and (ii) there were vast numbers of men thrown out of work on account of strikes and lock-outs. I might reply that (i) another world-wide crisis made itself felt from the second half of 1920 to the summer of 1922; during that period the official unemployment figures in Italy showed a maximum of 606,000 for the winter of 1922, whereas in 1931 the figure reached 765,000; and (ii) Signor Villari himself in his "Fascist Experiment" (pages 152-3) gives the official figures of working days lost by labour troubles and the figures of unemployment from 1919 to 1922.

According to them, the number of unemployed was in inverse proportion to the number of working days lost by strikes. But it would not be fair for me to let such figures stand without comment. The truth is that pre-Fascist unemployment figures are no more reliable than those of the Fascist era, only they sin in the opposite direction. Municipalities were then allowed to grant unemployment relief at the expense of the Government, and there were no limits either to their largesse or to the figures of unemployment they gave in to the Government. This abuse ended with the accession of the Fascists to power, but then the statistics began to err in the opposite direction. On this point one should consult an article: "Quel che valgono le statistiche della disoccupazione in Italia," in the review "Riforma Sociale," September-October, 1926.—Yours, etc.,

THE JAPANESE POPULATION PROBLEM.*

It is always a pleasure to recognise the work of a searching and balanced mind. Mr Crocker has utilised two years' tenure of a Commonwealth Fellowship to undertake an acute study—on an economic foundation, but with an understanding of the political environment—into what Japan and the world have to anticipate from the growing pressure of her population. He gives his reasons, not least of them the effects of the Washington Conference, for of them the facile dramatic idea that from this or any other cause the Pacific is on the swift way to becoming an international storm-centre in the gravest sense, but he squarely faces the prospect that the pressure of numbers is bound to be the dominating factor in Japanese policy henceforward, and, unlike more hasty pessimists, he proceeds to apply economic analysis of the past and present to assist him to pierce into the future.

Mr Crocker weighs the factors operating in favour of a lower birth rate—a spread of industrial living conditions, fewer marriages and a later age of marrying, perhaps a changing conception of marriage and of individual liberty and comfort, and the penetration of birth control—against the markedly increasing proportion of those within the child-bearing ages during the next thirty years or so, and though it leads him to refute the more sensational estimates of increase, he cannot escape the conclusion that within the next generation not less than 15 to 20 millions are likely to be added to the present population. If 60 million inhabitants have strained Japanese agriculture into diminishing returns, as he says, how will it fare when the 80 millions have arrived? This leads him to scrutinise the evidence available on the outlook for agricultural production, and then to turn his lens on to the solution which Japanese public men have declared for, the way of industrialisation and the prospects in front of Japan's achievement in the twentieth century to repeat England's achievement in the nineteenth of exporting manufactured goods to pay for essential food supplies. Here, without disparaging Japan's chances of success, he draws attention to the narrow basis of her export trade, which at present depends as to 70 per cent. on two commodities, raw silk and manufactured cotton goods. The way is not unattainable to a people with such will to succeed, yet it cannot but be hazardous.

Turning finally to emigration, Mr Crocker questions the charge that the Japanese have no aptitude for colonising, and examines the directions in which streams of migration might be made to flow; but emphasises that emigration at its utmost strength could only be a palliative, invaluable though it would be as a psychological safety-valve. As an Australian himself, he suggests the preservation of a White Half-Australia by drawing a latitudinal boundary line along the Tropic of Capricorn; but believes that Borneo, New Guinea and some Pacific Islands should be given to Japan by concerted international action for the sake of world peace and justice, with the hope of an invited flow developing also to Brazil.

* "The Japanese Population Problem." By W. R. Crocker. George Allen and Unwin. 10s. 6d.

and possibly (this seems unlikely) to Siberia. Students of the Pacific, and indeed of population problems everywhere, should not miss this book. Mr Crocker has a rare feeling for accuracy of thought and style—though "censi" as a plural is surely unworthy of a Balliol man—and it is to be hoped that he will find scope for further studies of this quality.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

Practical Journalism. By Alfred Baker. With a Section on Newspaper Law by Edward A. Cope. Second Edition revised by Edward A. Cope. (London) Sir Isaac Pitman and Sons, Ltd., Parker Street, Kingsway. 3s. 6d. net.

An interesting little introductory book for the guidance of the beginner in journalism.

Caribbean Backgrounds and Prospects. By Chester Lloyd Jones. (London) D. Appleton and Company, 34, Bedford Street. 15s. net.

A study of the economic and social factors affecting the development of the Caribbean countries, with special reference to the progress achieved since 1900.

Interpretations of Federal Reserve Policy in the Speeches and Writings of Benjamin Strong. Edited by W. Randolph Burgess. (London) Harper and Bros., 90, Great Russell Street. 12s. 6d. net.

An interesting collection of extracts.

International Administration. By Norman L. Hill. (London) McGraw Hill Publishing Company, Ltd., Aldwych House. 15s. net.

A lengthy analysis of international administrative systems.

Insurance Shares as an Investment. Compiled and edited by T. Wheelock. (London) P. W. Cooper and Co., 11, King Street, Cheapside. 5s.

An analysis of the leading companies' reports for 1930.

Annual Statistical Report of the American Iron and Steel Institute for 1930. (New York) American Iron and Steel Institute, 75, West Street.

This latest report, in addition to the usual statistics, contains some new data on pig-iron production.

Mining in Yugoslavia. By Joso Lakatos. (Belgrade) Office for the Promotion of Foreign Trade.

Contains a brief statistical account of the extraction of each of some fifteen minerals.

Transvaal Chamber of Mines. Annual Report, 1930. (Johannesburg) Hortors, Ltd., Leader Building, Harrison Street.

Contains some useful statistics of Transvaal mining activities.

Practical Directorship. By Henry E. Colesworthy. Second Edition. (London) Sir Isaac Pitman and Sons, Ltd., Parker Street, Kingsway. 10s. 6d. net.

A guide to the duties of a company director.

Slater's Mercantile Law. Seventh Edition. By R. W. Holland and R. H. Code Holland. (London) Sir Isaac Pitman and Sons, Ltd., Parker Street, Kingsway. 7s. 6d. net.

A revised edition of a standard textbook.

Guide to Industrial and Social Legislation. By F. Roberts. (London) Gee and Company (Publishers), Ltd., 8, Kirby Street. 10s. 6d. net.

An indexed summary for purposes of reference.

Questions and Answers on Company Law. By G. William Fortune and D. R. Matheson. Second edition. (London) Sir Isaac Pitman and Sons, Parker Street, Kingsway. 3s. net.

A useful book for students of company law and practice.

Mining and Finance Companies of South Africa. Compiled and published by Lemon Bros., 28, Austin Friars, London.

A compact little book, containing the usual financial particulars of each company.

The Stock Exchange.

THE CHILEAN DEFAULT.

THE Chilean Government has now officially announced through its Ambassador in London that it is unable for the remainder of the year to meet the service on its external debt. At the same time, it has expressed the hope that its foreign creditors will regard the default as a temporary phase "which, although involving an immediate sacrifice for them, increases the security of their more permanent interests." If the facts of the crisis had been divulged at an earlier stage, the creditors of Chile might have been in a more forgiving mood, but there is no denying that the abrupt shattering of the faith which had been imposed in Chile as a Republic of South America which had never defaulted has created a somewhat painful impression. Bondholders were first alarmed by the bald official announcement in July that the August payments on the external debt could not be made in foreign currencies, but that the interest due would be paid in Chilean currency into a special account of the Central Bank. It comes as a further shock to find that the Government now regards itself as unable to make payments even in Chilean currency, and that a resumption of interest payments, either in pesos or in pounds sterling and dollars, depends upon the success which attends the Government's efforts to balance the budget, and, in the last resort, upon the duration of the world slump.

The Chilean crisis affects some £250 millions of foreign capital invested in the country. According to an American computation the amount of American investments is \$618,295,300, distributed as to \$216.7 millions in Government bonds and the balance in mining enterprises. The extent of the British investment is estimated by the Commercial Secretary to the Legation in Santiago at over £100,000,000, of which we may estimate that about £30,000,000 is in Government bonds.

The creditors of Chile must, of course, try to appreciate the difficulties of the economic and financial situation. The statement issued by the Chilean Ambassador last week began with the following passage:—"Excessive expenditure during recent years, the great diminution in exports, and the considerable reduction in the ordinary revenue make it impossible for the country at the present time to continue its policy of meeting faithfully its obligations. . . . The present Administration finds the country with trade at a standstill, a large budget deficit, private credit greatly restricted, a high discount rate, a large number of unemployed and a general feeling of distrust, entailing withdrawal of capital and making solution of the difficulties still greater." It was essential, in the Government's opinion, to re-establish confidence by balancing revenue and expenditure and by stimulating the sources of national production. So far, the statement reads very much the same as the daily record of the crisis in Great Britain.

We may add that Chile had difficulties peculiar to herself. In 1928 the Government inaugurated a plan of public works which was carefully prepared and based on the development of its natural resources as well as on the capacity to meet the annual service requirements on the loans contracted to finance the plan. An average annual increase of revenue of 5 per cent. was allowed for, and the Chilean Minister of Finance estimated that ordinary expenditure would not increase by more than 2 per cent. per annum. With this margin it was considered safe for the Government to borrow in order to carry out the construction programme. The advent of the world slump, however, upset the whole scheme, and the Government made matters worse by borrowing (largely from American houses) on short-term through 1930 and into 1931 to finance this public works programme in the hope that it would be able to resume its long-term borrowing before the end of 1931.

Further, the Chilean Government intensified its financial difficulties by its generous treatment of the nitrate industry. In our leading article last week we referred to

the financial consequences of the formation of the national nitrate company ("Cosach") under the auspices of the Guggenheim Brothers. The Chilean Government gave up an export tax of £2 10s. per ton and accepted in exchange a half share in the "equity" of Cosach, together with certain cash payments (the special charge of 30s. per ton of nitrate extracted goes to provide the service of the "Cosach" bonds). These cash payments consisted of £4,500,000 (less certain credits), in respect of 1931, which was to be financed by the issue of \$50,000,000 Prior Secured Sinking Fund 7 per Cent. Bonds, and of approximately £8,000,000 in respect of 1932 and 1933, which was to be found by the issue of \$40,149,000 Secured Sinking Fund 7 per Cent. Gold Bonds. Unfortunately, the state of the financial markets has prevented the public issue of the Prior Secured Sinking Fund Bonds beyond the £2,000,000 issued in London and £1,000,000 issued or placed in Holland, Switzerland and Sweden. The National City Company of New York, which purchased \$19,000,000 of the bonds, has not yet been able to float this issue in New York.

As regards the budget figure, the estimated expenditure for the current year has been reduced from 1,039 million pesos to 960 million pesos, and the Government is endeavouring to reduce the estimate still further to 860 million pesos. At the same time, additional contributions to revenue have been authorised, although the items are not specified. In respect of 1932 the budget expenditure is to be reduced to a sum not exceeding 700 million pesos, which will allow the Government—to quote from the official statement—"to deposit in national currency the total amount of interest on its loans, and eventually to deposit the equivalent of the amount required for the amortisation of these debts, should an improvement in general trade conditions warrant a modification in the low estimate which it has been considered necessary to make in regard to the revenue for the coming year." The estimated revenue for 1932 is 600 million pesos, and, on the basis of a total administrative expenditure of only 400 million pesos, there remains 200 million pesos for the service and administration of the public debt, any revenue in excess of 600 million pesos being applicable to amortisation of debt.

Assuming that these estimates of revenue and expenditure will be realised, the more difficult problem remains of finding sufficient foreign exchange for the resumption of the interest payments abroad next year. Foreign exchange can only be obtained (a) through the export and sale of products abroad, (b) through the influx of new capital seeking investment either on short term or long term, and through loans granted to the Government or its agencies. The influx of new capital has been arrested by the slump, and we have no right to assume that further loans will be granted to the Government when the need of the hour is economy. We must turn to the export balance. Will this be sufficient to provide the annual service requirements on the external funded debt? According to the National City Company, the total funded external debt of the Chilean Government and various public agencies at the end of last year was as follows:—

Government debt.....	\$ [U.S.] 342,171,041
Guaranteed debt	94,143,400*
Other debt	20,713,500
Total funded debt, direct and indirect.....	457,027,941
Divided approximately as follows:—	
Payable in New York	284,384,503
Payable in London	149,069,966
Payable elsewhere	23,573,472
Total	457,027,941

* Included in guaranteed funded debt is a \$10,000,000 maturity of the Mortgage Bank falling due December 31, 1931.

The service requirements—interest and amortisation—of this external funded debt amounted approximately

to \$40,567,000 per annum, including \$30,902,000 for the annual requirements in respect of direct debt of the Government and \$7,891,000 for requirements in respect of guaranteed obligations. In addition to the external unfunded debt, there is the unfunded, or "floating," external debt of the Government and of various public agencies, which, at April 1, 1931, was as follows:—

	\$ [U.S.]
Government debt.....	42,210,000
Guaranteed debt	15,041,000
Other debt	2,663,000
Total floating debt, direct and indirect	59,914,000

Normally, the Chilean Government export surplus is sufficient to provide for this service with a comfortable margin. The foreign trade figures since 1925 are shown in the next table:—

Year.	(Thousand \$ [U.S.]) Imports.	Exports.	Export Balance.
1925	148,820	227,348	78,528
1926	157,251	201,277	44,026
1927	130,535	205,580	75,045
1928	142,330	239,166	96,836
1929	198,224	278,961	80,737
1930	169,951	161,479	— 8,472
1930 (4 months)	62,400	61,600	— 800
1931 (4 months)	45,950	49,150	3,200

The principal items included in total exports were:—

Year.	(Thousand \$ [U.S.]) Nitrate of Soda and Iodine.	Metal Ores, including Copper, Iron, &c.
1929	127,231	118,749
1930	74,572	59,926
1930 (3 months)	25,325	15,989
1931 (3 months)	20,403	13,128

It is difficult to see how the nitrate and copper industries can recover sufficiently in time to allow for the provision of an adequate export surplus in 1932. We need not deal further with the nitrate outlook, which was discussed fully in our leading article last week, but if no agreement is arrived at between the synthetic producers and the Cosach Company, there will be a period of "war" in the markets which can only result in lower prices being realised on the amount of nitrate exported. The Government has announced that "it intends to obtain shortly the equilibrium of its balance of payments through the Committee for the Control of International Exchange Operations, which is already functioning, and through Customs tariffs and other similar measures." It adds:—"Once the *balanza de pagos* is re-established, the Government will be in a position to meet the service of the foreign debt through the conversion into foreign currency of the deposits made in national currencies." All things considered, we think that bondholders will be fortunate if they secure the payment of their interest in foreign currency by 1932.

There remains the question whether the Government has made the fullest use of the gold reserves in the Central Bank. These gold reserves declined by \$10,670,020 in the period from March 27 to July 10, 1931, to \$26,887,965, as compared with \$38,859,801 on January 31, 1931, and \$58,435,699 on January 31, 1930. It is the belief of the Chilean Government and of the Central Bank of Chile that it would be against the interests both of domestic business and of foreign creditors further to deplete these reserves. Any further reduction would involve a contraction in the volume of Chilean currency now in domestic circulation, which might have a serious effect upon the internal banking and commercial situation.

That the market takes a gloomy view of the immediate prospects is suggested by the table, in the next column, showing present market prices as compared with the highest prices this year of the leading sterling and dollar issues.

It will be seen that Chilean bonds have depreciated this year, on the average, by over 60 per cent.

As the National City Company has pointed out, in a recent bulletin, rigorous taxation and drastic domestic economies, however thoroughly applied, will not produce foreign exchange unless it becomes available through the avenues of foreign trade, foreign investments, or foreign loans. Through further curtailments of imports Chile could

materially improve its position in relation to foreign exchange; but until other countries, in particular America, are willing or able to receive Chilean products in a volume approaching that of recent years (United States purchases alone, in active years, have had an annual value of some \$70,000,000), or until foreign capital resumes its flow into the country for investment, the exchange problem will remain difficult of solution. Whether interest payments abroad can be resumed in 1932 must remain, therefore, a matter of speculation.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
September 9.	September 10.

A WEEK-END of political excitement culminated in the formation of the National Government, which brought a strong feeling of relief in most markets. It was generally recognised, however, that while the balancing of the Budget was an essential preliminary to trade revival, the depression affecting practically all industrial securities had its roots in more fundamental difficulties, which at the moment show little sign of early solution. The market's reaction to the changed political outlook is discussed in a first investment note.

Gilt-edged stocks had an uncertain trend, and trading was of small dimensions. The sharp recovery in sterling, following the Prime Minister's broadcast speech, was a bull point, but the hint of a new large loan was so interpreted as to induce a subdued tone. Conversion 3½'s advanced slightly, but the 4½'s and War Loan Fives were weak. India loans improved on the outlook for the forthcoming conference and the appointment of Sir Samuel Hoare to the Indian Office. Foreign bonds were generally firmer than of late. Brazilian issues improved on next month's Sinking Fund operations and Argentines on the renewed efforts to balance the Budget. In the European section, leading German issues had a better appearance, but weakness occurred in Austrian Sevens.

Home rails revealed small change on balance, a temporary improvement in tone in sympathy with other markets being entirely offset by the fact that the week's traffic returns showed no appreciable improvement. A certain uneasiness was felt regarding the Underground group, which this week recorded a considerable decline in receipts. Among foreign rails, the earlier strength of Argentines, induced by bear covering and the possibility of favourable rate decisions was entirely dissipated by the announcement that the Buenos Aires Western Railway would not be paying any ordinary dividend.

In the industrial market considerable irregularity and uneasiness was apparent. Imperial Tobacco and Watney Combe deferred led appreciable declines throughout the tobacco and brewery section on the possibility of higher taxation and reduced demand, following a "cut" in unemployment benefit. Electricals were firm, British Insulated and Siemens rallying. In the iron and steel group Staveley attracted some attention on the maintenance of the final dividend at 3½ per cent. The poor

(Continued on p. 402.)

LONDON ACTIVE SECURITY PRICES AND YIELDS.

NOTE—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating the yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

(Continued from p. 399.)

results reported by Calico Printers had little effect on the price of textiles, but Courtaulds were sold from the provinces, and Celanese were a weak spot. Nitrate issues were adversely affected by the Imperial Chemical statement. A strong feature on Tuesday was provided by Sudan Plantations. Transatlantic shares had an irregular appearance, and the Swedish issues were heavily marked down from the Continent.

The tone of the oil share market was uncertain and irregular. The latest news regarding American prices and output is discussed on page 405. Shell, Royal Dutch and Anglo-Persian all came in for a certain amount of liquidation and finished lower on balance. The price of rubber, which once again reached a new low level, caused further weakness in the share market on Tuesday, but Rubber Trusts and Linggis improved subsequently, Anglo-Sumatra remaining a weak spot. Budla Beta and Jokai recorded small advances among Teas, but in general the market had a more than usually deserted appearance.

Renewed interest was displayed in South African gold shares, the advance in Springs being only one of a number throughout the list. "Chartered" found some support from Paris and moved up, but otherwise the Rhodesian section was idle. A sharp fall occurred in Rio Tinto on Wednesday, and tin shares failed to reflect a substantial rise in the price of the metal.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The stock markets have been quiet and irregular, with daily share transactions running consistently below the million level. The bond market was disturbed at the outset by reports of the depletion of the London dollar credit, but reassured by the more hopeful British political developments. It is believed that any accommodation required for constructive schemes for safeguarding the position of sterling, under the new political regime, will be readily forthcoming. Share prices drifted somewhat aimlessly, though resistance was evident to further downward pressure in the face of discouraging rumours. The autumn trade outlook is less black than it has been

painted in some quarters, but demand in the consuming trades, which has hitherto held up well, may be affected if the movement towards lower wages proceeds. The United States Steel Corporation is understood to be considering a downward adjustment of wage rates, and if this comes about the Corporation's example may be widely followed. Many workers, indeed, have already suffered an effective reduction in earnings under the procedure adopted by many companies of rotating employment in order to keep the maximum number at work. Steel operations are returned at 32 per cent. of capacity, against 33½ per cent. for the previous week. Leading railroad shares have held their ground comparatively well, despite the fact that the first 35 roads reporting for July showed a decrease of 18 per cent. in gross and of 39 per cent. in net receipts, as compared with July, 1930. Commodity prices still have a weak tone, and although increased activity in oil shares has followed recent rises in crude prices, the latter are regarded as largely artificial, and due to armed intervention by certain State Governors.

* 2-hour session.

CANADA.

After losing during July about half the advance recorded in June, the markets brightened up a little in August, the comparative buoyancy of New York producing a sympathetic advance. The weighted index of industrial common stocks published by the Bureau of Statistics, which stood at 85.3 on August 5th, had risen by August 18th to 88.8. The agricultural situation in the West, however, and industrial conditions in the East do not justify any great

hopefulness about the autumn and winter outlook for company earnings. The Street Market in Montreal professes satisfaction with the new board of the Canada Power and Paper Corporation, which is to be rechristened the Consolidated Paper Corporation, but shows little sign of putting any faith in the newsprint stocks. The heavy decrease in liquor consumption (for which the hard times and the decline in the American tourist trade are responsible) has adversely affected distillery stocks. The trend in the bond market has been downward and the mining market has been very dull.

INVESTMENT NOTES.

National Government and Stock Markets.—Members of the Stock Exchange received news of the formation of the National Government with a profound sense of relief. The immediate effect was a tentative marking up of prices by dealers, who are generally short of stock, both in the gilt-edged and British industrial share markets. Very little increase in business resulted, however, and it became evident during the week that the investing public was holding its hand. Prices, therefore, showed a tendency to react and in the industrial markets a number of shares became sensitive to fears of increased taxation—tobacco and brewery shares in particular. In the gilt-edged market a somewhat cautious attitude was adopted, partly because it was felt that complete confidence in sterling would not be restored until the economy plans of the National Government had been announced, and partly because it was expected that further credits might have to be accorded to the Bank of England. The improvement in the exchanges following upon the Prime Minister's broadcast speech failed to stimulate business, and speculation turned upon the reference made by the Prime Minister, in his speech, to the flotation of a loan. The market was not clear whether this was intended to refer to the conversion of 5 per cent. War Loan or to the raising abroad of a long-term loan. In any case, it is significant that 5 per cent. War Loan did not participate in the improvement shown by the long-dated stocks. The following table shows the movements in the gilt-edged market and in the leading British industrial shares:—

	Aug. 21.	Aug. 24.	Aug. 27.

Turner and Newall	26½		

It will be seen that only in a few cases were the best prices held. The exceptional rise in the interim dividend at was due to the maintenance of the interim dividend at the 1930 rate. There is, wisely, no assumption that the economy plans of the National Government will help the domestic industries except those export trades which are able to effect a reduction in costs.

B.A. Western Dividend Passed.—The first of the Argentine railway dividends came as an anti-climax after the sharp recovery in quotations this week. The Buenos Aires Western Railway, which last March decided to pass its interim dividend, has now decided to make no final payment on its ordinary stock. This break with the tradition of many years is stated by the directors to be due to the slump in commodity prices, poor traffic receipts and heavy exchange losses. During the year to June 30th last the company suffered a heavier proportional fall in gross traffic receipts than any of the other major railways of the Argentine, its total receipts (at par of exchange) falling from £4,381,000 to £3,784,000—a decline of 13.6 per cent., as compared with 10.6 per cent. on the B.A. and Pacific, 8.6 per cent. on the B.A. Great Southern, and 4.2 per cent. on the Central Argentine. The company is dependent on livestock traffic to a greater extent than any of the other three main lines, and this trade has not enjoyed a good year. Last March the directors stated their belief that conditions would improve in the later months of the financial year. So far, this expectation has not been borne out, and the company has had to cope with further exchange losses, the peso, which stood at over 39d., with an improving tendency, early in March, having since dropped to under 31½d. This heavy fall must inevitably induce conservatism in the minds of directors of the other Argentine companies in deciding upon their dividend policy. It is understood that the Argentine Government is making successful efforts to balance its budget, and the foreign trade balance may show a total of something like £14 millions on the right side by the end of this year. The maize crop has been of record weight, and, apart from an expected reduction in the area under wheat, the agricultural position is described as "normal." Until the outlook for world trade generally is more assured, however, a real revival in Argentine prosperity is unlikely, and railway

This service is available to Exporters, Importers and others wishing to develop trade with South, East and Central Africa.

THE STANDARD BANK MONTHLY REVIEW is sent post free on application. It gives the latest information on all South, East and Central African matters of Trade and Commercial Interest.

Retail Shop Profits.—In an Investment Note in last week's *Economist* (page 362), we showed that in Great Britain, as in America, earnings throughout the trade depression had been most stable in "consumers' industries" and in retail trade. That national purchasing power has been maintained to a much greater extent than might have been expected, is suggested by the latest retail trade returns, compiled by the Incorporated Association of Retail Distributors and the Bank of England. These show that the sales of representative shops and stores (including the co-operative movement), declined in the six months February-July last, by only 4.2 per cent. in terms of money as compared with the figures for the corresponding six months of 1930. The decline in the Ministry of Labour's cost-of-living index, over the same period, was 6.1 per cent. Sales of food and perishables declined, in terms of money, by 5.2 per cent., and sales in other branches by 3.1 per cent. Recently published reports of retail trading companies suggest that the relative stability of turnover has been the dominant factor governing the level of trading profits. The following is a representative list:—

Company.	Date of Balance Sheet.	Net Profits.		Ordinary Div.

British Celenese Bondholders. —A Question of Principle. —The proposals placed before the bondholders of British Celenese on August 20th last, and carried, raise a fundamental question. In the advertisement of the proposals, the statement appeared that the company would pay to bankers, brokers and other approved agents a commission of 2s. 6d. per £100 of the nominal amount of bonds represented by deposit certificates bearing their stamps, and voted in support of the proposal. In the circumstances,

Proposed R. E. Jones-Slaters Merger.—Marked liveliness characterised the extraordinary general meeting of R. E. Jones, which was held on Monday last for the consideration of resolutions providing for the amalgamation of the company with Slaters and Bodega. Mr R. A. R. Field, chairman and managing director of both companies, made a strong defence of the amended merger scheme, pointing out that the assets of Slaters, which included freehold properties valued at £897,635 by professional valuers, and leasehold properties at cost amounting to £439,649, would provide additional security for the capital of the R. E. Jones' shareholders. Mr Field referred to the recent announcement by Sir T. G. Jones that he had received a cash offer for the assets of R. E. Jones far in excess of Slaters' amended offer, and challenged him to produce it—apparently without success. Resolutions from the shareholders in favour of postponing consideration of the proposals till October, and of appointing a committee of shareholders, were ruled out of order by the chairman. When the official amended resolutions were put from the chair they were defeated by a small majority. Similar resolutions put to holders of the preference shares at a separate meeting were carried. A poll was demanded in each case, but at the moment of going to press the result has not been announced.

Australia's Conversion Scheme.—The authorities at the Australia House, the London headquarters of the Commonwealth Government, have published a *résumé* of the Conversion Scheme at present operating in Australia. From this it appears that the plan will involve a saving of 22½ per cent. in the interest bill of approximately £30,000,000 per annum. Holders of all Commonwealth and State internal loans have been invited to convert in the following manner. Securities carrying annual interest of over 5 per cent. will bear interest of 4 per cent.; existing 5 per cent. securities will become 3½ per cent. or 4 per cent. bonds; while those bearing less than 5 per cent. interest will be converted into either 3 per cent. or 4 per cent. stocks. No loan floated before August 4, 1914, will receive less than 3 per cent. per annum, and, where necessary, new securities will be determined by actuarial calculation. New 4 per cent. securities will be redeemable between December, 1938, and September, 1961, and those of 3½ per cent. will be redeemable in September, 1947. Those securities bearing interest of 3 per cent. will be redeemable on December, 1938—October, 1941. Varying dates of maturity will be allotted to those securities bearing interest of 3 per cent. or 4 per cent. per annum. Existing tax-free securities will remain exempt from Federal and State income tax, while all others will be exempt from State income tax. Tax-free securities maturing before 1935 will, upon maturity, be converted into 4 per cent. securities maturing in November, 1941. Overseas trade moneys temporarily invested in Australian Government internal stocks will be converted into short-term loans. Holders who do not dissent, in writing, before August 31st will be deemed to have converted; while holders who are resident outside the Commonwealth must notify the Federal Treasurer of their intention before September 21st next. It is understood that, to date, £300,000,000 have been converted, and holders of only £7,000,000 have given notice of their dissension. When the loan has closed the Government will consider what course will be taken with those who refuse to convert. Only Australian loans actually floated in Australia are affected, and the new stocks will not be quoted in any Stock Exchange outside Australia. An Act has been passed by every Parliament in Australia protecting those trustees who convert from being sued in any court of law.

Tin Developments.—The International Tin Committee, which has been sitting at The Hague, has deemed it necessary to take certain measures tightening up the effective working of the restriction scheme. To begin with, it was found that Malaya, one of the chief sponsors of restriction had produced in five months some 15 per cent. more than her allotted quota for the period. For the September-November quarter, therefore, it will be necessary to restrict output by 60 per cent., and to arrange for surplus stocks to be held at smelter. At last week's meeting Mr. William Graham, of the Bisichi Company, complained of large allocations of Nigerian quota to the "special case" companies, which have increased their output capacity since 1929. The basic output of Nigeria in 1929 was 10,649 tons; and the admission of 2,636 tons "special"

Oil Mergers?—A suggestion comes from America that the crisis in the oil industry will be solved by next spring, thanks to martial law in the oilfields of Oklahoma and Texas and to the "rush to merge" of the big oil combines. This may be an exaggerated view, but the importance of these two developments is not to be denied. In our issue last week we dealt with the stoppage in the oil fields of Oklahoma and Texas by force of arms under the decrees of two fire-breathing Governors. The effect of this forcible interference with natural laws has already been to force up the price of gasoline and crude oil. The export price of the "U.S. Motor" grade of gasoline at the Gulf ports has risen this month from 3.38 cents per gallon to 5.13 cents per gallon, and the wholesale price ex refinery from 3 cents to 6 cents per gallon. Mid-Continent crude oil prices have risen by 16 to 28 cents per barrel, the present range being 46 to 70 cents per barrel, while East Texas crude oil has been advanced from 25 cents to 60 cents per barrel. The Phillips Petroleum Company has even informed Governor Murray, of Oklahoma, that it will pay \$1 per barrel for crude oil of 40° Beaume, despite the fact that gasoline prices do not warrant it, because supplies at its refineries are running short. Governor Murray maintains his attitude that all companies in Texas, Oklahoma and Kansas must offer to pay and maintain the price of \$1 per barrel before he will allow the Oklahoma wells to reopen. The position in Texas is more complicated because a Conservation Act has now been passed authorizing the curtailment of production for the prevention of physical waste. The Act definitely excludes economic waste, but still allows permits to be given for the drilling of wild-cat wells. The Texas Railroad Commission is therefore, preparing a scheme of restriction, and, when this is put into operation, it is expected that martial law

Castbury
Maker
of Fine Chocolates.

will be removed. Up to the present there has been a rush to produce as much oil as possible before the various closures were made effective, and for the week ending August 22nd the total amount of crude oil in America again showed an increase:—

Week ended.	Average daily U.S. production of Crude Oil. (Barrels).
August 1, 1931	2,500,650
August 8, 1931	2,555,550
August 15, 1931	2,498,500
August 22, 1931	2,605,250

Of the total for the week ending August 22nd the new East Texas oilfield was responsible for no less than 848,450 barrels per day, as against 515,400 barrels for the whole of California and 269,850 barrels for Oklahoma. The next week's production should show a sharp decline as a result of the stoppage in the Oklahoma and Texas oilfields. Meanwhile, the big oil combines are ignoring the interference of the Governors of Oklahoma and Texas and are proceeding with their plans for the elimination of unnecessary competition. Some weeks ago Government sanction was given to the merger of the Standard Oil Company of New York and the Vacuum Oil Company, which are now known as the Socony-Vacuum Corporation. It is understood that preparations are now being made for the amalgamation of the Standard Oil Company of New Jersey and the Standard Oil Company of California on the basis of an exchange of shares. This will be far the largest unit in the industry, which assets of \$2,500 millions, the Standard Oil Company of New Jersey having been the original parent of the Standard Oil Trust. This week another big oil merger was reported to be imminent. Four large oil companies, the Sinclair Consolidated, Prairie Oil and Gas, Prairie Pipeline, and Tidewater Associated, were said to be amalgamating under the leadership of Mr H. F. Sinclair. Whether the Tidewater Associated will join this merger has not yet been decided, but in view of the association of interests already existing between the Sinclair Consolidated and the Prairie Oil, the merger of the first three companies, involving assets over \$3,000 millions, seems assured. If the result of these giant mergers is a further control of crude-oil production and the elimination of unnecessary drilling and production, the oil industry is likely to derive some solid benefit which will last long after the artificial rise in oil prices, brought about by martial law in the oilfields, has been forgotten.

Wiluna Disappointments.—The relentless marking down of the £1 shares of the Wiluna Gold Corporation, which in 1928 were quoted as high as 36s. 10d., but which have since fallen below 7s., has caused considerable uneasiness in market circles. The Corporation was registered in January, 1926, to take over the entire properties of a Western Australian company, consisting of 36 leases and 7 water rights, comprising 793 acres, 110 miles from Meekatharra. Its subsequent developments were accompanied by a crescendo of optimistic statements. Despite the recognised difficulties of working the type of ore found in the company's properties, the Wiluna leases were held as of vast commercial importance. The Government of Western Australia was sufficiently impressed to authorise the construction of a railway to the port of Geraldton, which was completed in January, 1930. Expensive plant was erected. The stage was set, but the curtain refused to rise. From the first, estimates of the amount of capital necessary to bring the mines to the production stage expanded with the estimates of probable ore. The original issued capital of £800,000 was increased to £1,000,000 in June, 1928. In June, 1930, it was reported that the Australian company was raising £300,000 in 6 per cent. seven-year notes, the principal and interest being unconditionally guaranteed by the Western Australia Government. In December, 1930, it was announced that an issue would be made of £300,000 10 per cent. seven-year notes, convertible at a later date into 350,000 ordinary shares. In the directors' report dated December 2, 1930, it was estimated that production would be commenced in March, 1931. At the annual meeting a

fortnight later it was stated that "by the early summer normal production should be reached." Contemporaneously, the announcement went forth that "the present programme provides for the treatment of not less than 40,000 tons per month." On June 17 last, in a progress report, the directors admitted that "breakdowns in the power plant were frequent during the greater part of the month." On August 11th a further report appeared to the effect that "operations to date had proved that the grinding section was under capacity for the treatment of a monthly output of 40,000 tons of ore," and recommended limitation of the output to 30,000 tons for the time being. The output for July was 25,952 tons. The disastrous decline in the company's shares cannot be dissociated from the disparity so far revealed between the directors' prognostications and proved facts.

CAPITAL ISSUES.

The inactivity of the new issue market in a period of financial stress has been scarcely interrupted by this week's issue by the *Blue Cross Line*. The company comes out under good auspices, and has obtained its six steamers, with a total deadweight tonnage of 33,820 and an average age of 17 years, at a reasonable figure (£1 10s. 6d. per ton). The present, however, is not the most favourable time for inaugurating a regular service between the Scheldt and the River Plate, despite the board's somewhat naive contention that "general cargo business (to which the company's activities will be confined) is always more consistently profitable."

ISSUES OF THE WEEK.

By Prospectus or Offer for Sale.

Net total recorded, excluding conversion, January 1 to August 22, 1931, £97,474,114.
Total, including conversion, recorded January 1 to August 22, 1931, £108,351,099.

Blue Cross Line.—Issue at par of 30,000 7½ per cent. redeemable cumulative preference shares of £1 each, and 80,000 ordinary shares of 10s. each. The company has been formed to acquire four steamers for employment between Antwerp or other ports and the River Plate. A net profit of £22,500 is estimated.

COMPANY MEETINGS, &c.

BISICHI TIN COMPANY (NIGERIA), LIMITED.

RESTRICTION ANOMALIES.

The ordinary general meeting of the Bisichi Tin Company (Nigeria), Limited, was held, on the 21st instant, at Southern House, Cannon Street, London.

Mr William Graham (the chairman) said the mining account recorded reductions under almost every head, arising largely through the limitation of output, but economies had been effected and the costs at railhead worked out at £54 12s. 2d., as compared with £75 17s. 10d. per ton in 1929. He wished to record the board's appreciation of the action of the Government of Nigeria in reducing rents by 80 per cent. of the normal amount chargeable. Receipts from sales were, of course, much reduced, not only through the reduction in production, but through the fall in the price of tin. Their tin had sold at an average price of £88 7s. 4d. per ton, which was the lowest yet recorded by the company.

They had been pursuing a policy of restriction, basing it on the importance of conserving their reserves and on the advisability of not incurring losses, curtailing their output to a tonnage which would cover all expenses. That had been done, so that they showed a profit of £1,334.

With regard to restriction, Nigeria was, after all, a small contributor to the tin output of the world, and they had come to the conclusion that it was right for them to fall in with the adoption of the policy of restriction. Restriction, unfortunately, like all of artificial systems of control of output, was open to abuse and anomalies. He thought there had been some grave unfairness, and certainly grave anomalies. In the first place, the restriction of output from Nigeria had been greater than the restriction of the output from other tin-producing countries. The percentage reduction was 25.56 per cent., as compared with 22.4 per cent. in the striction was 25.56 per cent., as compared with 22.4 per cent. in the Federated Malay States and only 16.4 per cent. in the Dutch East Indies.

The international quotas having been fixed by reference to the 1929 output, it would seem logical that local restrictions among individuals should be on the same footing. That, unfortunately, had not been the case in Nigeria, where the principle of the allotment of special quotas had been adopted in favour of individual mines, upon the plea that during the year 1930 substantial development or expenditure upon plant had occurred. That had dealt justice to the mines fully equipped in the year 1929.

The report and accounts were unanimously adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

The total ordinary revenue for the week ended August 22, 1931, amounted to £15,361,000 against ordinary expenditure of £5,686,000. After allocating £1,153,000 to Sinking Fund and £201,143, the operations for the week, as shown below, reduced the National Debt by £8,723,000 to £7,638,847,000:—

Commercial Reports.

MARKET SUMMARY.

The trend of commodity prices during the past week has been irregular, but the downward movement became less pronounced. There has been an improvement in the demand for coal for heating purposes, but the consumption in industry shows no improvement and exports continue at a low level. Little headway is being made by the iron and steel industries and Continental competition continues to have an adverse effect on the order books of British companies. With the exception of tin, the production of which is now fairly well controlled in accordance with requirements, non-ferrous metals have again been dull. In textile materials, cotton has been steadier, but business in finished goods has not shown any signs of expansion. Wool values have been maintained, and the export demand for rayon has been a little better. The output of yarn during July, at 4,900,000 lbs., shows an increase of 250,000 lbs. on the previous month. Jute has further improved under the influence of adverse reports from the growing districts in India. Among cereals, wheat and oats have been steadier, but last week's advance in maize was not fully maintained. Meat prices have been firmer. Among miscellaneous commodities, rubber has again been dull, and vegetable oils and oilseeds were weaker. After a period of steady prices, hides have suffered a setback and buying was confined to immediate requirements.

THE COAL TRADE.

SHEFFIELD.—An increasing shortage of the best qualities of steam coal for export, prices of which remain firm at 17s. 3d. and 17s. 6d. f.o.b., has become noticeable. Demand for fuel generally, however, continues as weak as ever. Although holiday stoppages are curtailing output, supplies are ample, and industrial requirements tend downwards. Rather brisker conditions have developed in the house-coal department. Quotations are 18s. 6d. to 20s. at pits for best ordinary brands. These prices are to be advanced next week. Blast-furnace coke continues to be a drug on the market; consumption having contracted further of late. Some makes are procurable at 10s. at ovens.

WORKINGTON.—The coal trade has been adversely affected by the seven weeks' stoppage that began on June 24th and ended on August 17th. The men were compelled to accept the National Board's award of a seven-and-a-half per cent. reduction in wages. The coal trade has a difficult winter before it, inasmuch as there has been a substantial fall in the demand for small coal, due entirely to the cessation of activity at the coking plants at the service of local ironmasters. The usual seasonal improvement is, however, expected in the Irish market, and the St. Helens colliery, which has been idle since the end of May, is to be restarted on September 14th. Prices are steady. Best round is 22s. 6d.; washed doubles, 21s.; washed singles, 19s., all f.o.b.; smalls, 16s. 6d. per ton; best house coal, 31s. 8d.; and house nuts, 30s. at station; gas coal, 28s. per ton; West Coast coke is from 17s. 9d. to 18s. 3d. per ton.

CARDIFF.—Export demand for South Wales steam coals proceeds very quietly, and in spite of the recent decline in production, supplies of practically all grades are more than sufficient for current

needs. In the past week approximately 23 per cent. of the coaling tips have been idle at the South Wales ports, an indication of the present state of exports. Shipments to France are maintained at the improved level of a week ago, exporters accelerating deliveries in order to take advantage of the import licence concession over August. Demand from other directions is slow. Low Volatile sized coals are scarce and firm, and there is a brisk demand for anthracite, prices of which remain very firm. Prices of all other grades remain easy. Approximate current prices are: Best Admiralty large, 20s.; Second Admiralty large, 18s. 9d. to 19s. 6d.; best dry large, 18s. 6d. to 19s.; ordinary dry large, 17s. 9d. to 18s. 3d.; Monmouthshire Black Vein large, 18s. 3d.; Western Valleys large, 17s. 9d.; Eastern Valleys large, 17s. 3d. to 17s. 6d.; steam smalls, 10s. 6d. to 13s. 6d.; foundry coke, 30s. to 36s.; furnace coke, 16s.; patent fuel, 19s. to 20s.; best anthracite large, 36s. to 37s.; second grade large, 27s. to 32s.; Red Vein large, 22s. to 27s.; machine made cobbles, 40s. to 45s.; French nuts, 43s. to 46s. It has

iron are in fair request at from 2s. 6d. to 5s. per ton above the aforementioned figures. There is only a poor demand for malleable iron at £5 15s. per ton delivered at Birmingham, and ferro-manganese is a weak trade at £10 15s. to £11 5s. per ton home. The steel market is stagnant, but it is stated that orders are held or are promised that will enable the rolling mills at Workington to resume early in October. Native ore is in diminished request at 16s. to 18s. per ton, and very few sales to East Coast and Scottish smelters are taking place.

GLASGOW.—Although there is a general feeling of satisfaction that orders for a number of smaller vessels have been placed with Clyde shipyards during the present month, the tonnage involved is not sufficient to materially affect the situation at the plants which will supply the steel. The demand for structural steel is poor at the moment, and at the steel works employment is very irregular. In the sheet trade there have been further bookings of thin black sheets for Japan, and there are a fair number of inquiries on the market for galvanised sheets for India, and also for Canada. There is still very little business being done in bar iron or in re-rolled steel bars. At the tube works only part-time employment is being obtained by the workers in the various Lanarkshire plants.

CARDIFF.—Very quiet conditions are prevailing in the Welsh steel and tinplate trades. Prices in most cases are below the cost of production, and it is feared many works will soon be forced to close down. Welsh bars are practically idle at £4 12s. 6d. Belgian competition is active at £3 15s. Galvanised sheets are dull at £2; tinplates in very slow request at 13s. 1½d. to 13s. 4½d.

OTHER METALS.

TIN.—The principal event of the week has been the news of the formation of an international tin pool. The following official communiqué was issued on August 24th by the authority of the Committee of Control of the International Tin Pool:—1. An International Tin Pool has been formed with the concurrence of the four governments which signed the International Tin Quota Agreement. The pool will work in close co-operation with the International Tin Committee. 2. The chairman of the International Tin Committee is ex-officio chairman of the Committee of Control of the International Tin Pool. 3. The tin to be acquired by the International Tin Pool will be released in accordance with a sliding scale of prices accepted by the four governments which signed the International Tin Quota Agreement. The initial release of 5 per cent. of the pool's holding of tin will become effective if and when the average price of spot tin on the London Metal Exchange shall, during any completed calendar month, have exceeded £150 a ton. 4. In order to facilitate the formation of the pool, the four governments have given reciprocal guarantees whereby they undertake to continue unconditionally the International Tin Quota Agreement until the date fixed for its expiry, i.e., February 28, 1933; and, further, if at that date the International Tin Pool shall not have been liquidated, to extend the International Tin Quota Agreement up to a total period not exceeding three years from the date, i.e., August 12, 1931, of the formation of the International Tin Pool. Meanwhile, values have recorded a sharp rise. Wednesday's official closing quotations for "standard" cash at £119 10s. to £119 12s. 6d. per ton, compares with £113 7s. 6d. to £114 on the corresponding day last week. Stocks in London and Liverpool at the end of last week, at 31,590 tons, show a decrease of 191 tons on the week.

COPPER.—In contrast to tin, copper has been dull, and throughout the week prices remained at a low level. Wednesday's official closing price for "standard cash" in London, at £32 8s. 9d. to £32 10s., compares with £32 8s. 9d. to £32 10s. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 22,324 tons, show an increase of 958 tons, while stocks of rough copper, at 1,150 tons, are unchanged.

LEAD.—The market for lead has been quiet, but as sellers adopted an attitude of reserve, prices were maintained at about last week's level. Wednesday's official closing quotation for "soft foreign" in London, at £11 8s. 9d. to £12 3s. 9d., compares with £11 12s. 6d. to £11 15s. on the corresponding day last week.

SPELTER.—This metal was freely offered early in the week at declining prices, but, when sellers began to restrict offerings, values hardened at an active turnover. Wednesday's official closing quotation in London for "good ordinary brands," at £11 15s. to £12 4s. 3d., compares with £11 7s. 6d. to £12 on the corresponding day last week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals the quotations for aluminium and nickel at £85 per ton, and at £170 to £175 per ton respectively, have been maintained at last week's level. Antimony again changed hands at £22 10s. to £23 per ton for "foreign," while the "spot" price for quicksilver was further reduced from £16 7s. 6d. to £16 1s. 2s. 6d. per bottle.

TEXTILES.

THE COTTON TRADE.—Liverpool.—There is no special feature on the market at the moment, writes our correspondent. It is generally felt that the crop has continued to make, but whilst rains in places are complained of they are more likely to damage grade than to curtail quantity. The crop is late, picking and, of course, ginning are slow, and therefore hedging sales are in small compass and contracts are scarce. Hence the comparative steadiness of the market. The United States Department of Commerce issued its census report of cotton ginned up to August 15th, on Monday last (24th), the figures being 90,000 bales, against 573,000 up to the same date last year and 304,000 for 1929. Spot sales for the week 20th to 26th (inclusive) are 24,000 bales, of which 8,900 bales are American, 1,300 Brazil, 2,350 Argentine,

4,850 Peruvian, 1,650 Egyptian, 1,950 African, 700 East Indian, 2,020 Russian and 280 sundries. Imports for the same period are 25,343 bales, of which 1,243 are American, 779 Brazil, 6,189 Argentine, 7,783 Peru, 8,039 Egyptian, 537 African, 480 East Indian, and 313 sundries. Quotations, August 28th: American Middling, 3-81; Egyptian Sakel, 5-85; Uppers, 4-59; Brazil Fair, 3-86; Peru G.F. Smooth, 4-16; West African Middling, 3-86; and East African G.F., 4-86.

Manchester.—The market has been rather steadier, writes our correspondent, but there have been very few indications of any trade expansion. Buyers are not afraid of prices going against them, and conditions to some extent have been unsettled by the political situation. Cloth manufacturers have reported a fair amount of inquiry, but there are still many complaints of offers being very low and customers are slow in raising limits. Not more than a miscellaneous business has been done for India, chiefly in light goods and fancies. Further operations have taken place for the Far East in low poplins, brocades and light fabrics, the bulk of the buying being for Hong Kong. Occasional transactions have been put through in white shirtings for Singapore. Restricted operations have occurred in printing and finishing styles for West Africa and South America, but very little has been done for the Continent. Only a restricted turnover has taken place in home trade fabrics. Quotations in American and Egyptian yarns continue irregular when tested. A fair turnover has taken place, but the prices secured have given no satisfaction whatever.

THE WOOL TRADE.—Bradford.—The Australian selling season will commence on Monday at Sydney, and that event will be followed with the closest interest, though, writes our correspondent, it is a foregone conclusion that no section of buyers will be keen to force the pace. At this moment there is a firmer tendency in Continental "futures," but the most important point is what credit banks will be prepared to issue to their wool-buying clients. For various reasons Continental buyers cannot be expected to contribute any big quota to the establishment of values. Germany and France—both big buyers of merino wool under normal circumstances—are still passing through a trying time. The big failures recently seen have resulted in serious curtailment of business activity and restriction of facilities for further operations in the raw material. At this juncture speculation as to the movement of values naturally centres chiefly on merino wool. The attitude of importing topmakers is a very cautious one. They have been receiving bids of 2½d. to 2½d. for good 64's tops; but, so far as it is possible to quote a price to-day, 2½d. is around the figure for a warp combing. At present the rate of exchange is against Australia, and to hold wool in anticipation of more money being realised might necessitate a bigger advance than is likely to be forthcoming unless manufacturing conditions at home and abroad improve much more quickly than seems possible just now. Crossbred tops show a slight weakness, and wool supplies in users' hands, as well as what are available in New Zealand and London, will be quite sufficient for all requirements until the next clip begins to come forward.

THE GRAIN MARKETS.

WHEAT.—Although the actual turnover in wheat has not increased appreciably, several factors made for more steadiness in the wheat markets. In Europe, harvesting has been delayed and crops have deteriorated because of the wet weather; in the United States and Canada severe frost has damaged crops, and reports of crop conditions in Russia have recently been less favourable. It also appears that the wheat acreage in Argentina has been reduced. The total acreage sown for the season 1931-32, at 17,043,000 acres, shows a reduction of over 13 per cent. on the acreage actually harvested last season. It is reported that the United States Federal Farm Board has disposed of 25 million bushels of its holdings against Brazilian coffee, and that it offered to provide China with 30 million bushels on a ten years' credit. In view of the prevailing low prices for wheat, Mr S. Broomhall's figures of the total visible supply at the beginning of the new crop year (August 1st) are of interest:—

TOTAL VISIBLE SUPPLY (WHEAT AND FLOUR).

(Millions of bushels.)				
1927.	1928.	1929.	1930.	1931.
181	227	370	411	462

It will be seen that the "carry-over" has been continually increasing ever since 1927. Quotations: No. 1 Northern Manitoba, Atlantic, ex ship, 25s. per 496 lbs., as compared with 25s. a week ago; No. 2 Northern Manitoba, Atlantic, ex ship, 23s. 9d., against 23s. 9d.; No. 3 Northern Manitoba, Atlantic, ex ship, 22s., against 22s.; Rosafé, ex ship, 19s. 9d., against 20s.; Australian, ex ship, 20s. to 22s. 6d., against 20s. to 21s. 6d. a week ago.

WHEAT FLOUR.—The flour trade has been dull during the past week. North American shipments, at 159,000 sacks, show a decrease of 28,000 sacks as compared with the previous week. Of this total, only 66,000 sacks were consigned to Europe. Quotations: Straight run, delivered country, 21s. per sack of 280 lbs., as compared with 21s. last week; delivered London, 20s., against 20s. Manitoba patents, ex store, 20s. 6d. to 24s., against 20s. 3d. to 24s., and Australian, ex store, 16s. 3d. to 16s. 9d., against 16s. 6d. to 17s. a week ago.

BARLEY.—Barley has been steady during the past week, and although shipments, particularly from Danubian countries, continue on a considerable scale, prices have been maintained. Quotations: "English feeding," f.o.r., per 448 lbs., 20s. to 22s., as compared with 20s. to 22s.; Californian "new" sold at from 34s. to 50s., as compared with 34s. to 50s. last week; "Australian Chevalier" changed hands at 28s. to 32s., against 28s. to 32s. a week ago.

OATS.—There has been an improvement in prices, but this is due rather to a temporary shortage in supplies than to an increase in demand. Quotations: "River Plate," landed, 13s. 3d. per 320 lbs., as compared with 12s. 6d. last week; "River Plate," ex ship, 13s., against 11s. 6d.; "Chilean Tawny," landed, 13s. 9d., against 13s. 9d.; English white, per 336 lbs., 20s., against 20s. a week ago.

MAIZE.—Buying, though on a considerable scale, has been slightly less in quantity than last week, and the advance in prices recorded a week ago has not been fully maintained. The Argentine maize at crop has been finally estimated by the Ministry of Agriculture at 43,534,000 quarters, which compares with a crop of only 29,113,000 quarters for the season 1929-1930. Quotations: "Plate," landed, 15s. 9d. per 480 lbs., as compared with 16s. last week; Plate, ex ship, 14s. 6d., as against 14s. 9d.; Plate, August-September, new, 14s. 6d., as against 14s. 9d. Yellow maize meal, ex wharf, was quoted £4 15s. per ton, against £4 15s. a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1930-31, 1929-30, 1928-29, 1927-28:—

	1930-1931.	1929-1930.	1928-1929.	1927-1928.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1930:—

NEAREST FUTURE.	Jan. 2, 1930.	Aug. 27, 1930.	Jan. 2, 1931.	Aug. 12, 1931.	Aug. 19, 1931.	Aug. 26, 1931.
Winnipeg (No. 1 Manitoba)	148½	88½	56½	56½	55½	55½
Chicago (No. 2 Winter)	148½	88½	79½	50½	48½	47½
Cents per 60 lb.	130½	86½	79½	50½	48½	47½

OTHER FOODS.

SUGAR.—After a period of steadiness the markets in sugar have now suffered a definite setback, which, no doubt, is partly ascribed to the general economic uncertainty. It appears, however, that the weakness is also to some extent a result of the political disturbances in Cuba. Following last week's cut, on Monday last, sugar has again been reduced 3d. per cwt. on Monday last, Wednesday's sales of "raws" included "December delivery" at 5s. 9½d. to 5s. 10½d. per cwt., against 5s. 10½d. to 5s. 11½d., and 5s. 9½d. to 5s. 10½d. per cwt., against 5s. 10½d. to 5s. 11½d. on "March," 1932, at 6s. 0½d. to 6s. 1½d., against 6s. 1½d. to 6s. 2d. on the corresponding day last week. The movements of raw sugar in the London and Liverpool during last week are set out in the table below:—

	Imports.		Deliveries.		Stocks.	
	1931.	1930.	1931.	1930.	1931.	1930.
Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
London	105	861	927	1,165	26,117	27,205
Liverpool ...	11,793	18,549	13,142	18,121	75,173	105,003
Total	11,898	19,410	14,069	19,286	101,290	132,208
Last week ...	12,527	21,583	14,196	19,917	103,699	132,074

COFFEE.—There has been no improvement in the demand for coffee, but though the market was quiet, prices remained unchanged. Last week's movements of coffee in London were as follows: Brazilian, landed, nil; delivered for home consumption, 80 bags; exported, nil; stocks, 1,847 bags, against 1,110 bags last year. Central American, landed, 630 packages; delivered for home consumption, 1,983; exported, 585; stocks, 96,443 packages,

against 80,112 a year ago. Other kinds, landed, 352 packages; delivered for home consumption, 2,065; exported, 616; stocks, 77,287 packages, against 87,205 a year ago.

COCOA.—The market in cocoa has been quiet and prices declined throughout the week. As compared with the corresponding day last week, Wednesday's quotation for Accra, fair fermented, mid-crop, August-September, at 16s. 6d. per cwt. f.o.b. London contract, shows a fall of 9d. Last week's movements of cocoa in London were as follows: Landed, 1,068 bags; delivered for home consumption, 4,998 bags; exported, 975 bags; stocks, 219,098 bags, against 207,107 last year.

TEA.—The quantities catalogued for this week's auction comprised 48,169 packages of Indian, 30,611 packages of Ceylon, and 11,586 packages of Java and Sumatra tea. The outstanding feature of the auctions has been the firmness of the price of tea of good quality. Competition for this tea was keen, but medium and common qualities show little or no improvement. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account:—

AVERAGE PRICE PER LB.

Week ending	Northern India.	Southern India.	Ceylon.	Java.	Sumatra.	Nyassa-land.	Total.
Aug. 21, 1930 ..	s. d. 1 3-19	s. d. 0 11-75	s. d. 1 4-78	s. d. 0 9-79	s. d. 0 10-31	s. d. 0 9-16	s. d. 1 2-23

Aug. 6, " ..	Holiday.						
Aug. 13, " ..	0 9-46	0 7-45	1 1-50	0 6-39	0 6-53	0 7-12	0 10-64
Aug. 20, " ..	1 0-14	0 7-46	1 2-33	0 6-32	0 6-38	0 6-11	0 11-68

RICE.—It appears that the rice crop in China and Japan has been considerably damaged, which partly accounts for the steadiness in prices. The market in London has been quiet but steady during the week. Wednesday's quotation for Burma No. 2, cleaned, August-September, in singles to the Continent and to the United Kingdom, at 8s. 3d. per cwt., shows a rise of 1½d. as compared with last week. Movements in London during the past week were as follows: Landed, 13 tons; delivered, 39 tons; stocks, 983 tons, against 1,878 tons last year.

POTATOES.—Potatoes have been in good demand, but supplies were ample and prices remained unchanged. At the Borough Market, "Best King Edward" sold at from 6s. to 7s. per cwt., as compared with 6s. to 7s. a week ago.

SPICES.—The "spot" pepper market has been quiet, and prices have been slightly easier. Wednesday's quotation for "Black Singapore," at 5½d. per lb., shows a fall of 0½d. on the week. Movements of pepper in London during the past week were as follows: Black, landed, 5 tons; delivered, 32 tons; stocks, 671 tons, against 827 tons last year. White, landed, 42 tons; delivered, 28 tons; stocks, 514 tons, against 410 tons a year ago.

MEAT.—The market in meat has been firm during the week, and prices have been generally higher. Wednesday, Argentine beef (chilled, hindquarters) was sold at 4s. 10d. to 5s. 4d. per 8 lbs., against 4s. 10d. to 5s. 2d. on the corresponding day last week, while New Zealand frozen mutton realised 3s. 6d. to 4s. 4d., as against 3s. 4d. to 3s. 10d. a week ago. According to the Smithfield Market official report, supplies of meat during last week amounted to 7,648 tons, as compared with 7,621 tons in the corresponding week last year. Imported beef, principally Argentine, formed 86.8 per cent. of the supplies, as against 82.3 per cent. a year ago, and imported mutton, mainly New Zealand, formed 78.0 per cent. of the total supply, as against 87.0 per cent. last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OILSEEDS.—Variable and generally unsettled conditions have prevailed. At the close there is a rather steadier feeling and slightly better outlook. The lower levels of linseed values have attracted some interest and Plate for September shipment to Hull has been done at £8, which about represents current value on spot and forward to September, a slight premium being asked for October. New crop is easier, and quoted £8 January-February. The quantity of linseed on passage to Europe at 158,000, shows a reduction of 26,000 tons on the week, and compares with 113,500 tons a year ago. Crushers appear to be well supplied, and are far from active in the market. Cottonseed is steady, but demand is slow. Old crop Egyptian (black) is quoted around £4 17s. 6d. afloat, and for shipment, and new crop £5 2s. 6d. Vegetable oils are in very quiet demand. Linseed is irregular and lower, raw oil on spot ex Hull mill quoting £15, and delivery to December, £14 10s. Cotton oil is easier, crude Egyptian offering at £18, and common edible at £20 15s. ex Hull. Other seed oils are a shade lower. Oilcakes and meals are easier, but there are symptoms of an improving demand.

HIDE, LEATHER AND ALLIED TRADES.—Prices for hides and skins from home slaughtered cattle continue to weaken, the auctions at Manchester this week showing reductions of from ½d. to ¾d. per lb. for practically all classes and weights of ox and heifers. Cows, bulls and calfskins were also lower on average. The market for sheepskins remains fairly steady, although a slightly easier tendency is noticed in regard to lambs. Turnover in connection with imported hides continues small, as in view of the unsettled position of prices for most descriptions, tanners are confining their purchases to limited requirements only. In the South American market most descriptions of Frigorifics have been obtainable at reduced prices, Argentine ox having changed hands to the United States at just over 4½d., while second ox have been taken for tanners in this country at 3½d. In spite of the low prices ruling for dry South American hides the amount of business transacted has been small. M.V. Americanos are quoted at 5½d., and B.A. Americanos at 5½d. In regard to African hides, the market is again slightly weaker, dry Capes having been sold at 6½d. and 5½d. for firsts and seconds, while dry salted descriptions have realised 5½d. and 4½d. for 20-30 lbs. Australian hides are quiet with reductions quoted on some lines. In the sole leather market rather more business has been done during the week, and prices for most descriptions remain steady. Shoe manufacturers have been inquiring for dry hide bonds in medium weights, in addition to which the repairing section have been fairly good customers for English and wet salted descriptions. Respectable sales have also been made of pinned offal, but rough bellies and shoulders have not been asked for to any extent. Manufacturers and merchants of upper leathers continue to experience a steady sale for most of the staple lines, box and willow calf and glaze kid being in most request. Patent is also a fair market, while there has been some slight improvement in the call for curried leathers. Fancy leathers for footwear purposes only sell in small quantities, but at the same time there has been some slight improvement in the price position.

RUBBER.—Little interest has been shown in the market for rubber during the past week and prices have failed to recover from the low record established last week. The average daily

consumption of rubber in the United States during July, at 1,228 tons, shows a fall of 230 tons on that of the previous month. On the other hand, stocks are still increasing, as output has not yet been brought into line with the low level of consumption. Wednesday's official closing price for standard ribbed smoked sheet, at 2½d. per lb., shows no change as compared with the corresponding day last week. In forward positions, business has been done at 2½d. for October-December, against 2½d.; and at 2½d. for January-March, 1932, as against 2½d. to 2½d. a week ago. Movements of rubber in London and Liverpool during the past week were as follows: Landed, 1,884 tons; delivered, 2,488 tons; stocks at the end of last week, at 136,473 tons, show a decrease of 604 tons, as compared with the preceding week.

York and Paris was no more than due recognition of their co-operation in facilitating with great rapidity the details of a complex operation; and it should not be overlooked that the French Treasury has reduced, to the full extent of its legal powers, the taxes payable by the British Treasury on the transaction.

There has been in some quarters a disposition to assume that the Bank of England credits will now be redeemed. Obviously this will depend upon circumstances, and the relations between the central banks concerned are now so cordial as to permit this matter to be dealt with under conditions of the utmost elasticity. As to the new credits themselves, we welcome the fact that their total size, £80 millions, is convincingly ample, judged by the needs of any immediate threat to the stability of sterling; and there is good reason to believe that their mere existence is producing the desired effect, for it appears that the exchanges are remaining steady without serious need for support. Whether in the long run lack of confidence in sterling will be finally set at rest depends not on these operations, but on the thoroughness with which the Government carries out the task to which it has set its hand. The fact that these credits have been arranged is a proof of confidence on the part of France and America that this will be done.

PETROL DISTRIBUTION.

(BY A CORRESPONDENT.)

THE increasing intensity of competition in the oil industry is compelling the distributing companies to work on an extremely narrow margin, and, in consequence, a great deal of attention is now being paid to the cost of distribution of petroleum products, and particularly of petrol, as it is in this commodity that the competition is keenest.

There are two distinct systems of distribution in Great Britain. The "national" companies offer a system of distribution covering the whole country and based on a number of ocean installations, where petrol is landed and stored, and from which it is transported, mainly by rail tank cars, to inland depots; of these the "big three" companies have some six hundred each. Several motor lorries operate from each depot and distribute the spirit to all customers within the geographical area served by the depot, in this way giving a uniform level of service to every town and village in the country. The so-called "pirate" companies work on an altogether different plan. They make comparatively little use of inland depots, but normally deliver direct from the installation to the customer, using only long-distance motor transport. In this way a considerable amount of handling charges and all depot expenses are eliminated; but, on the other hand, close working of the ground and immediate attention to customers' orders are not practicable. The "pirates" therefore concentrate on the easy and obvious delivery points, almost entirely on the main roads. A motorist who never left the main roads would, in fact, obtain quite an erroneous view of the relative strength of the "pirates" and the "national" companies in the country as a whole.

The "national" companies have one enormous advantage over the "pirates": that, as they are distributors of well-known and well-advertised brands of uniformly high quality, the "pirates" must substantially undercut the "national" price in order to obtain a market. The "national" companies market motor spirit at two prices—the so-called "No. 1" motor spirit and benzol mixtures, retailing at 2d. per gallon more than the commercial grades, formerly known as "No. 3" petrol. The "pirates" also market two grades of motor spirit, but with this difference, that the sales of their superior grades are negligible, demand being almost entirely concentrated on their cheaper products. It is found in practice that private motorists tend to buy either the best or the cheapest spirit available, while commercial vehicle owners usually prefer a sound medium-quality spirit. It is probably for this reason that the "pirate" companies pay so little attention to their more expensive grades, as, if they did so, it would be more difficult for them to find a market for their cheaper spirit, which not a few of them are careful to avoid describing explicitly as "commer-

cial" petrol. They try rather to give the impression that it corresponds to "national" No. 1 spirit, although retailed at a price slightly below that of "national" commercial-grade spirit.

In a fight of the kind now being waged between the rival groups of petrol distributors of Great Britain, there are only three ways in which a "pirate" company can continue to undersell the "national" companies without working on an even narrower margin than that of the "national" companies.

The first way is by reducing the profit to the garage on the sale of petrol; this is now 2d. a gallon on national "commercial" grades and 2½d. on national "premium" grades. A dealer might increase his total profit on motor spirit by selling a popular "pirate" spirit at a smaller profit than the standard, but this would only last so long as he was the sole dealer in the district doing so, and kept a monopoly of the demand for cheap spirit; for this reason any attempt on the part of the larger "pirate" companies to reduce the dealer's standard profit would be bad policy. Another way of achieving the same end would, of course, be for distributors to retail the spirit themselves through their own service stations, but this also has its drawbacks. Unless confined to sales of oil and spirit, such stations create ill-will among garage proprietors, who naturally resent an infringement of what they consider their proper sphere; while service stations which merely retail petrol and oil without undertaking the other functions of the garage industry can rarely be run at a profit. A further consideration is that the construction and equipment of suitable service stations involves a capital outlay beyond the means of the ordinary "pirate" company. On the whole, any diminution of the retailer's margin by the "pirates" must be ruled out as impracticable.

The second method by which "pirate" costs can be kept permanently below the level of the national companies is by adulterating petrol which has paid duty with non-dutiable spirit of a type intermediate between benzene and kerosene. With a petrol duty of 6d. a gallon, an admixture of 16 per cent. non-dutiable spirit gives a saving of one penny per gallon in costs. A bigger percentage of non-dutiable spirit gives, of course, an even greater saving; while a moderate degree of adulteration is not easy to detect, since a chemical analysis of a mixture of fairly good petrol with spirit just below the dutiable range may give results very similar to an analysis of a very poor grade pure petrol. Adulteration of this kind, if proved, would render the culprit liable to prosecution for evading the petrol duty, provided that the final mixture came within the dutiable range; but, for the reasons given, conclusive proof is exceedingly difficult to obtain. Although the more reputable "pirate" companies could certainly never be suspected of action of this kind, there is not the slightest doubt that it is a common enough practice among their less reputable competitors; the increase in the petrol duty last April from 4d. to 6d. per gallon, combined with the further falls in the price of petrol, have immensely increased the temptation to perpetrate this type of fraud.

The third way in which the "pirate" can undercut the "national" companies, and at the same time obtain the same nett return on the petrol he distributes, is by keeping his distribution costs on a permanently lower basis. The greatest problem facing the national distributors at the present time would appear to be the reduction of their distribution costs to the "pirate" level, without any deterioration in the service they now give. They have the initial advantage of the much greater gallanage of their spirit going into any one area, and the much greater number of ocean installations under their control. However, a thorough overhaul of their system may be necessary, and it may be that they will find that they have something to learn from the "pirates" in the matter of keeping down distribution costs. It is, at any rate, arguable that they have not in the past exploited to the full the possibilities of road vehicles instead of rail tank-cars for their transport as opposed to their delivery work, and that, under the present-day conditions of the trade, the number of inland depots from which they work is excessive. The only alternative to reducing costs, for the "national" companies, is to compel an increase in

the "pirate" costs of distribution by adopting tactics on the sales side designed to force the "pirates" to extend their activities in directions where distribution costs are high, and this might prove much more difficult than effecting economies in "national" costs of distribution.

BANKING CONCENTRATION IN THE U.S.A.—I.

(BY A CORRESPONDENT.)

AMERICAN banking is confronted with new movements which will materially affect the future structure of the banking system. In recent years similar alterations have revolutionised the economic, social and industrial organisation of the nation. To-day the banking system is aligning itself, perhaps in a tardy manner, with these developments. Throughout the country the concentration movement is gaining adherents. As soon as the public discovered an economic advantage in the chain store, it discarded sentiment in deference to economic advantage. If the branch of a metropolitan bank, with its greater strength and prestige, has an economic advantage to offer the small community, the country bank will pass. Centralisation no longer frightens people as it did in the past. The chain store has made an important contribution; in a similar manner it is reasonable to suppose and expect that county-wide, State-wide, or even nation-wide branch banking will perform similar services.

Ever since the dissolution of the Second Bank of the United States in 1836 the banking development of the country has been along lines radically different from those of every other country of financial importance. Sectional feeling and the Federal Reserve System have favoured the enactment of legislation forcing local community bank-branching. Unless, however, the advocates of the unit or independent banking system can offer something better than theories based upon sentiment, it seems likely that banking in the United States is definitely entering a new era. The development of communication, through road building, the automobile and other facilities, has brought the city bank, with its broader facilities and greater resources, within reach of the farmer and rural merchant or manufacturer. Unit banks operating in small towns have been faced with the alternative of seeing their good business go to the city, leaving behind only business which the city bank rejects, or allying themselves with the city bank as a unit in a large banking group or branch system (where legally permitted).

Metropolitan institutions, as a result of their large capital and their ability to secure highly trained personnel, are able to adjust themselves to changed conditions. Centralised financing presents no problem to them except in so far as it is necessary to increase their loaning ability. Competition, while important, is not their main problem; nor are they bothered with constant failures. On the other hand, about three-fourths of the banks of the United States are outside the metropolitan centres and serve a majority of the population. They differ from the city banks not only in size, but in the character of their operations and in their customs. Their problem has been not to develop lending power, but to meet competitive conditions of a very serious nature, and, at the same time, to render improved service to their customers. Owing to the lack of adjustment of this group of banks to modern economic conditions, an excessive number of bank failures has resulted.

Advocates of extensive branch banking indicate two outstanding objectives which a more liberal branch bank law for national banks would secure:—(1) A radical reduction of bank failures; and (2) an adjustment of the banking system to contemporary economic demands and circumstances in a more satisfactory manner than is offered by the institution of group banking. During the ten-year period 1921 to 1930 a total of 6,968 banks were reported as having suspended operations, involving deposits of over \$2,625,000,000. Since 797 were reopened, with deposits of over \$296,385,000, net failures numbered 6,171. During the year 1930 alone there were 1,926 banks which failed, causing the tying up of about \$900,000,000 of deposits. This figure is the largest for any year in the

LONDON OFFICE: 38, Threadneedle St., E.C.2

Every description of Banking Business transacted.

history of the country. Furthermore, in the first five months of 1931, a total of 452 banks have closed their doors.

With regard to sections where suspensions have predominated, it appears that four States along the Atlantic coast—North Carolina, South Carolina, Georgia and Florida—have suffered most among the Eastern States; whereas Minnesota, Iowa, Oklahoma, North Dakota, South Dakota, Nebraska, Kansas and Montana had considerably over half of the suspensions during the ten-year period. On the Pacific coast, where banking has become more highly organised than elsewhere, and on the north Atlantic coast, where banking, though less highly organised, is supported by greater capital accumulation in the general community, bank suspensions, relatively speaking, have been negligible. As further illustration of the wide scope of this economic condition, it appears that in seven States over 40 per cent. of all the banks in existence in 1920 have failed, and in nine States between 20 and 40 per cent. In twenty States, or almost one half of the total, over 10 per cent. of the banks that were in operation in 1920 have since failed.

As already indicated, the outstanding problem in American banking, from the point of view of structure, is the problem of the small town bank—the problem of furnishing safe and adequate facilities for communities of 2,500 population or less, particularly small towns and cities in agricultural regions. There can be no question but that large city banks should be permitted to operate branches in such communities. Guaranty of bank deposits or an intensification of the correspondent system would not be satisfactory palliatives for the difficulties of the small country bank. While it might appear that a Federal statute requiring a minimum capitalisation of \$100,000 for national banks and a similar provision for the various State banks would solve the capitalisation problem, this plan is open to several objections. First, it would require complete legislative co-operation on the part of the State Governments. In the past such co-operation has not been secured. On the contrary, Congress, by the Act of May 14, 1900, had to reduce the minimum capital for national banks from \$50,000 to \$25,000, in order to lower the standard towards that of the States. Secondly, such a plan would cause many small national banks to take out State charters in order to remain in business. Thirdly, many communities, where banks are now operating, would be deprived of local banking services if there was not enough business to justify a larger capital. And fourthly, there might be the danger of giving a single local bank a monopoly in the banking business of the entire community.

It is clear that theories and practices of American banking must undergo great change. Only slight progress has been made in adapting the system to meet modern economic demands. It is cause for immediate concern that the operating conditions faced by country banks show no prospect of improvement under the present system. There are many country banks now operated at a loss and many others operating upon earnings, especially under present business conditions, which are insufficient to justify their capital investment. Attention should be devoted to developing safer and better banking.

The second factor which has made the branch banking question so significant is the unusual development of

chain and group bank systems. A chain system exists where an individual or group of individuals controls a number of component banks, whereas in group banking, which is most decidedly preferable, control is usually exercised by a holding corporation. The latter is usually associated with a large metropolitan bank, or a group of large city banks (i.e., Transamerica Corporation). At the present time there are about 285 chain and group systems in the United States, including over 2,000 banks and approximately \$14,000,000,000 in banking resources. They exist in varying degrees of importance in all except half a dozen States. Group banking would probably have developed more rapidly during the past year and a half had it not been retarded by two factors. One was the business recession, which obviously affected all capital enterprises. The other was the probability of legislation arising out of the House of Representatives Banking and Currency Committee hearings relative to this matter. Group leaders and officials undoubtedly wished to maintain their *status quo* until they could determine what governmental action might have been contemplated.

The legal mechanism of the movement is rather simple. It is based, not upon any act of the banks themselves, but upon the right of a shareholder of the bank to sell his stock, and the right of a corporation to buy it. Possessing legislative authority to hold stocks of other corporations, the group company proceeds to purchase, either with cash or its own securities, a majority or all of the shares of the banks which it plans to affiliate. The affiliated banks maintain their institutions in accordance with a unified plan.

The economic interpretation of the group movement may be reduced to several categories. In the first place a most significant motive for the increase in the number and activities of bank holding corporations is the desire to circumvent the limitations of State and Federal law in order to be in a position, when the necessary laws have been passed, to convert into branch banking systems. As profits and position are the reward for promoters and entrepreneurs, it follows that such forces must be reckoned with as basic causes for organising and directing any form of business or banking unit. Keen competition among group systems has also been a factor. Holding corporations, particularly the Northwest Bancorporation, which has over 125 banks with resources aggregating \$450,000,000, and the First Bank Stock Corporation, of about the same size, have also been organised, among other reasons, for the purpose of securing financial independence of Eastern financial centres.

SOME NOTES ON RUSSIA.

A correspondent, recently returned from a short visit to the U.S.S.R., sends us the following notes of his impressions of the economic situation:—

THE principal subject of talk in Russia to-day, both in town and country, is of food and of the cost of living. The prices of foodstuffs and clothing in the market, particularly of those things which cannot be purchased on a ration card at the Government Co-operative Stores, steadily goes up, and the supply steadily diminishes. Popular wit, which has to restrict itself to the spoken word, has produced the following conundrums. "Why are the Russians the best-fed people? Because they eat a month's food in a day. Why are they the richest people in the world? Because they do not know what to do with their money." The country mouse has no advantage over the town mouse in the way of food supply. For the Government commandeers his produce relentlessly for the consumer in the towns, and leaves him only with what is required for subsistence. The growing pressure of the State for money is indicated by the increase of railway fares and by the raising of the internal rate of postage to the same figure as the foreign letter-rate. So long as the Soviet Government professes that the rouble is worth half-a-dollar, and exchanges foreign currency at that rate, it cannot raise the fee for foreign postage. But

it can make its own people pay more for the carriage of their letters within the Union.

The postage rates are typical of much in the economic life of Russia to-day, where everything is done to encourage the foreigner, and the people of the country are required to make every sacrifice and self-denial, while a policy of greatness by semi-starvation is thrust upon them. The shortage of food is due in large part to the requisitioning of produce for the purposes of export in order to pay for the machinery, cotton, rubber and other raw materials which are required from abroad for the execution of the Five-Year Plan. The boat on which the writer returned from Russia to England was bringing a cargo of 1,200 tons of butter and quantities of eggs, hides and wool; but in Russia butter was sold at 15s. a pound, eggs at 9d. each, and boots were almost unobtainable and unrepairable on account of lack of leather. Yet on the boat were several foreign "specialists"—as they are called—employed by the Government and now returning to their homes for a holiday; and they were agreed as to the goodness of the conditions of the employment.

The Government provides a special shop in the chief cities for the "privileged classes," including these foreign "specialists," where they may buy the best goods that the land can produce at relatively moderate prices. With the same purpose of attracting the foreigner and the valuta which he carries in his pocket, the State has established special stores for foreign visitors in which they buy with foreign currency goods which the Russians can hardly obtain at any price—caviare, preserves, white bread, cigarettes, and fabrics. The principle is thus to encourage "invisible" exports, and so save the costs of transport, commission, etc., of real exports, by selling to the traveller Russian goods which otherwise would leave the country. Elaborate precautions are taken to prevent Russians from using such shops, and to prevent the foreigner from spending there any roubles save those which he can prove to have obtained in Russia, in exchange for his valuta, at the official rate of exchange.

Hence there are four sets of prices current at the same time:—

- (1) At the Government and co-operative stores, for citizens with ration cards;
- (2) At the private shops for those who have the means to buy and have no other source of supplies;
- (3) At the privileged shops for privileged classes;
- (4) At the shops for foreign visitors.

The reason for the growing pressure of the Government on their own people and for the favour to the foreigner is one and the same—the rapid industrialisation which is the forefront of the economic policy. The principles of Communism and Socialism must for the time be modified, the citizens must go on short rations, foreign workers and foreign money must be brought in, and the State industries must be conducted according to the methods of the capitalistic regime, for this one object. For this the farmer must be pressed to farm collectively, and to give up the greater part of his produce at a fixed rate, so that the State may have the wherewithal to feed the factory workers; the factory workers must be paid by piece-work and induced to compete with each other; the hours of work must be prolonged and the days of rest curtailed.

The Five-Year Plan embodies a striking idea, the methodical development of the resources of a great nation so as to secure the progress and the well-being of the whole people, and the orderly correlation of the different aspects of production and consumption. Such a plan was peculiarly necessary in Russia because of the unmethodical and unpunctual ways of the peasant and artisan, and their defective sense of time. For the same reason the inexhaustible resources of State propaganda are utilised all the time to stimulate and to soothe the worker. Religion, say the Communists, was the opiate of the people. To-day the slogans and the diagrams and the flaming figures of the progress of the plan are the opiate; but their sedative effect is occasionally disturbed by the decrees of the State about wages and rations and the hours of work.

It is already abundantly clear that the Piateletka is not final, but is designed to be a recurring factor till Russia has caught up and surpassed the Western nations. Just

as Laban made Jacob work successive periods of seven years, so the State will make the Russian people work one five-year plan after another. And what, it may be asked, of the progress of this present instalment? There is no doubt that certain parts are not realised, and the complete execution of the whole is imperilled. But, on the other side, there is no doubt that agricultural production and industrial output are being steadily increased, and that work is found for everybody who can work, and if the people will stand the strain, Russia will be a much more self-supporting country in 1933 than it was in 1928. On the other hand, fears that the Russian industries will soon imperil the industries of the Western countries, that the goods from the new factories will flood the markets of Europe and Asia, appear to be exaggerated. The goods will not attain the quality; and for years the Soviet State will need the quantity for supplying the needs of its own teeming and materially backward population.

It is difficult to withhold admiration from a people which is willing to endure so much for the sake of the future, or from a Government which has the imagination and the resolution to take a great proportion, estimated by some at 60 per cent. of the national income, for purposes of national reconstruction. No such toll has been taken in modern times from a people save in times of war; and then it was for purposes of destruction. The other side of the picture is the ruthlessness with which the policy is pursued against any class which appears to stand in its way, Kulaks, private traders, and the like. The essential question that has to be answered in action is whether the people will for two more years stand the strain on their physical powers of endurance and their freedom of action. A nation works, just as an army moves, on its stomach; and the Russian people's power of work and of speeding up the industrial development depends ultimately on its having sufficient food—and hope. That need may cause a further change in the plan as striking as the recent deviations from the pure doctrines of Communism. It is the boasted strength of the Soviet Government that it knows how far it can press the people, and when it must relax its pressure.

Notes of the Week.

The Premier and His Constituents.—The executive of the local Labour Party in the Seaham Harbour Division of Durham must be amazingly sure of their own judgment. With indecent haste and without waiting to hear Mr MacDonald in person, they demanded the resignation of the Prime Minister, to whom the King had just entrusted the formation of a Government, but of a man who two years ago was returned to the House of Commons by the votes of Seaham with an almost record majority of over 28,000. One would like to know what reason they have for the immediate assumption that the people of Seaham no longer wish Mr MacDonald to represent them, or, in other words, that at least 14,000 of his supporters of two years ago would now vote against him. The action of the executive was hasty and high-handed, and Mr MacDonald is clearly right in the categorical refusal to resign, which he conveyed in a letter appearing in the Press on Thursday. "Any action I may take," writes the Prime Minister, "in response to any resolution passed will only be after I have finished the duty which I am now undertaking, and not before." In the same letter Mr MacDonald seized the opportunity to emphasise the real gravity of the crisis, which motivated his action, and also to proclaim that "the sacrifice which, for the moment, is necessary shall be spread as equitably as human ingenuity can do it." This passage is a useful corrective to certain impressions created by Mr MacDonald's notable concentration on the dole cut in his broadcast statement last week. Unemployment insurance reform is essential, but it must take its proper place in a general programme of equitably spread sacrifice.

Local Economy.—Although the May Committee were appointed to examine ways and means of economising in national expenditure only, their report emphasised the need and room for retrenchment by Local Authorities. "Taking the country as a whole," ran a significant passage, "the fact remains that in the local as in the national field we have been piling up public burdens. We have been appointed only to review the national expenditure. At the same time, we are glad that some local authorities, recognising the seriousness of the position, have appointed similar committees to survey their own expenditure and recommend reductions where possible. We would earnestly commend this policy to the attention of every authority in the country." There are welcome signs that in the local, as in the national sphere, this appeal has not fallen upon deaf ears. It has been announced, for instance, that the London County Council have given a lead by deciding to hold in suspense "where such a course is reasonably practicable" existing proposals involving fresh expenditure. Moreover, the Chairman of the L.C.C. Finance Committee has stated that his Committee will co-operate fully with the Government in its efforts for economy. It is also understood that many borough councils have decided to review estimates for the coming year with the object of effecting downward revisions in curtailable expenditure, and news from the provinces suggests that the movement is spreading over the whole country. Satisfaction at these signs of general recognition of the needs of the situation is, of course, conditioned by the assumption that in the local, as in the national sphere, economy schemes are carefully and constructively framed and do not merely represent haphazard and panicky "lopping" of reproductive expenditure within even our straitened means.

The Vatican and Italy.—A settlement of the controversy between the Vatican and the Italian Government—a controversy which has been acute for the past three months—was precluded last week by a number of symptoms. The Pope made two public pronouncements hinting at an imminent accommodation, while a conciliatory measure was taken by Signor Mussolini in causing all the Catholic Club premises which had been seized during the crisis by the Italian authorities to be handed back to their owners—with the exception of some premises in Rome itself, in regard to which (it was announced) certain formalities had still to be carried out. The issue, it will be remembered, over which the controversy arose was whether the Italian Catholic Society *Azione Cattolica* was a purely religious organisation (as the Vatican maintains) or whether (as the Italian Government maintains) it had been used as a cloak under which the moving spirits in Don Sturzo's *ci-devant* Catholic political party—the *Partito Popolare*—had been surreptitiously and illegitimately carrying on their political activities. In the concordat of 1928—which was one of the three diplomatic instruments constituting the Pact of the Lateran—the Italian State recognised the organisations belonging to the *Azione Cattolica* in so far as these developed their activities apart from any political party and under the immediate control of the hierarchy of the Church for the diffusion and realisation of Catholic principles. At the same time, the Holy See took occasion to renew for all ecclesiastics and members of monastic orders in Italy the prohibition against their enrolling themselves in or campaigning on behalf of any political party whatsoever. The terms of settlement announced this week provide that the *Azione Cattolica* is to be essentially diocesan under the bishops' control, and aloof both from politics and trade union matters. Its directors are not to include anyone hostile in the past to the present regime, and the flag of the organisation and of its affiliated juvenile clubs is to be the national flag. Its local bodies are to "abstain from athletic or sporting activities," though they may indulge in "recreative or educational occupations with a religious purpose." Thus the Vatican is left some scope for inculcating Catholic principles in the young, always provided that their athletic enthusiasms are not so strong that they prefer to belong exclusively to Fascist organisations. On the whole the Duce seems to have scored.

With the exception of Belgium, all countries reduced their output during the first half of the current year, but the contraction has been most pronounced in Germany and in this country. The decline in home consumption has led to an intensification of competition in foreign markets, and the United Kingdom has suffered most. Belgium and Poland have actually increased their foreign sales during the first six months of the year. Nevertheless, even in these countries the situation is far from satisfactory. The next table of stocks of coal at pithead at the end of June this year and at the corresponding date in 1930 (no figures are available for the United Kingdom and France) shows a large increase in the case of Belgium and the Saar District. Stocks in Germany and in Poland show a small decrease, but it must be remembered that they were already heavy at the end of June, 1930.

STOCKS OF COAL AT PIT-HEAD.
(Thousands of long tons.)

Date.	Belgium.	Germany.	Saar District.	Poland.
June 30, 1930.....	1,560	4,156	292	2,102
June 30, 1931.....	3,208	4,121	458	2,051

The conference, it is understood, will consider the general export situation in Europe, but it will naturally be preliminary in character. Nevertheless, it is a step in the right direction, and may pave the way for future co-operation. In this respect, the Coal Mines Act, in creating a body representative of British colliery owners, has therefore already borne fruit.

French Textile Troubles.—Our Bradford correspondent writes:—That protection is not a safeguard against world trade depression has been abundantly clear from the course of business in the French (Nord) textile district. Much of France's cheap selling of yarns and piece-goods in this country has been put down to lower production costs, particularly wages, but events during the past two or three months show that some of it has been due to a determination to keep machinery running regardless of cost. In the late spring a large worsted spinner and manufacturer operating over 30,000 spindles and nearly 1,000 looms had to meet creditors, among the largest of whom were private bankers. In the last few weeks there have been well-founded rumours of another firm, interested in wool and cotton through every process from raw material to cloth, finding continuance of trading impossible without informing its creditors of the position. Debts due to various banks are stated to be over £400,000. To some extent French wool trade methods differ from those of Bradford, and may be responsible for the severe losses that a number of importers have had to face. Most of the Bradford top-makers work on well standardised types, so that in the event of their foreseeing a fall in the market they can sell forward in any given type. The French practice is to comb each parcel for what it is and sell it afterwards for what it will fetch, there being rarely real similarity between one lot and the next succeeding it through the machinery. In a rising market this method has its advantages; but in a falling market, unless the importer "hedges" in futures in Antwerp or Roubaix, the whole of the loss falls on his own shoulders.

International Economic Planning.—At the World Social Economic Congress, held recently at Amsterdam, several interesting papers were read. Mr Edward A. Filene developed the familiar American thesis that a combination of high wages and low prices is the only route to general prosperity, and advocated the development of mass production and mass distribution, and the general lowering of tariffs, to this end. In a paper by Dr. Person, advocating world-wide adoption of scientific management, an attack was made on the Anti-Trust Laws of the United States as constituting an obstacle to the extension of the system. Particularly timely was an appeal by Professor Joseph P. Chamberlain for more international action in the economic sphere. Professor Chamberlain forecast the negotiation, with increasing frequency, of multilateral treaties: "Not

two countries alone, but a group of countries must unite in common action if certain interests are to be properly served; and the political sense of the world has developed and elaborated the multilateral treaty as an answer to this need." He instanced the numerous matters in respect of which international control had long been accepted as indispensable, as, for example, shipping, aviation, radio and the drug trade, and suggested that experience of control in these matters is an encouragement to develop control of other parts of the economic system. "International anarchy," he said, "in the use of the radio would mean that no one could benefit from it." He might have added that events are rapidly bringing to light many other more fundamental parts of the economic system in which the era of international anarchy will have to be brought rapidly to an end if the system itself is to be maintained.

Seasonal Workers and Unemployment Benefit.—An interesting inquiry, the results of which are published in the current *Ministry of Labour Gazette*, has been carried out by the Ministry of Labour, with the object of determining to what extent insured persons take up seasonal work for a limited period each year, and remain unemployed and in receipt of benefit for most of the rest of the year. The principal occupations covered by the inquiry were those connected with the food industries, such as fishing, fruit picking and food preserving, hotel and boarding-house work, seamen, yachtsmen, stewards, shop assistants, drivers and conductors. The analysis showed that the average number of weeks worked at the seasonal occupation ranged, among the men, from 12 (sugar beet workers) to 29 (maltsters), and, among the women, from 9 (fruit pickers) to 19 (shop assistants and hotel workers). Of the men covered by the inquiries about 30 to 50 per cent. had also worked, during the year preceding the analysis, at other occupations. The proportion was lowest, at, roughly, 20 per cent., among hotel workers, and highest, at over 50 per cent., among salmon fishers and sugar beet workers. Among women the proportion is much lower, ranging from under 9 per cent. among fish-workers to 24 per cent. among hotel workers. The principal non-seasonal occupations engaged in by the men is that of labourer; and the women chiefly have recourse to domestic service, cotton factories, or work as shop assistants, waitresses and barmaids. The amount of non-seasonal work is very low, even when averaged over those workers who engage in it, and rarely exceeds twelve weeks in the year in the case of men. Those women who engage in such work at all seem to do so over a longer period in the year than do the men, and the number of weeks so worked averaged from 10 to 17; but when spread over all the workers in the sample the average number of weeks at non-seasonal work becomes only about two per worker, whereas most of the male groups show an average of 2, 3, 4 or 6. The average number of contributions paid slightly exceeds the total number of weeks worked, owing, no doubt, to broken weeks, but the benefit drawn, averaging 11 to 19 weeks in the case of men and 6 to 13 weeks in the case of women does not account for the whole of the period in the year for which contributions were not paid. A further analysis discloses that the contribution record for the latest complete year of the seasonal workers on the register last January, is only slightly inferior to that of all claimants on the register about the same time. The men had a better contribution record than the women, but they also drew more benefit. Having regard to the exceedingly difficult situation of the labour market during the period covered by this inquiry, the results are better than might have been expected. An analysis during a more prosperous period would, however, be necessary to establish clearly the extent to which unemployment insurance benefit has been voluntarily used as a substitute for an alternative occupation.

Hungary—A Correction.—Owing to a misprint, a sentence in "The Hungarian Crisis" in our last issue (p. 382) was made to read: "the day of reckoning was further postponed by meeting subsequent increases in the deficit by further borrowing on short-term account from the

Bank and the Postal Savings Bank." The words "the Bank" should have appeared as "the banks," the reference being to the commercial banks in Hungary and not to the Hungarian National Bank, whose statutes do not permit of loans being made to the State.

UNITED STATES.

Gifford Committee — Government Financing — British Credits — Industrial Conditions.

(FROM OUR CORRESPONDENT.)

NEW YORK, August 26.

DULL markets for securities and commodities reflect the current state of mind on trade conditions and prospects. With the appointment by President Hoover of a large committee of industrial and banking leaders, headed by President Walter S. Gifford, of the American Telephone and Telegraph Company, to collect money from private sources and superintend the distribution of the necessities of life to the needy this winter, the last illusion with regard to business conditions has vanished. This committee is the Washington Administration's answer to the criticism that it was doing nothing to alleviate present distress or to provide against even greater want this winter, and also it was an attempt to ward off legislation in the next Congress, which meets in December, looking toward appropriation of Federal funds for unemployment relief. The idea of a dole of any sort is greatly disliked by the Administration, as it is over the country generally, but the brand of political courage required to resist demands for doles in some guise or another is not carried by every member of Congress who may be opposed to doles in principle. Some of those who tremble at the hint of a dole have taken courage at the turn of events in Great Britain, and hope that this country will heed the lesson to be learned from the experience on your side.

The current of wage reductions and dividend cuts continues to flow, if a trifle sluggishly, but August is a month which usually brings few changes in dividends and, being next door to expected autumn improvement in trade, is not prolific in wage changes. It is the general understanding that the opposition to wage reductions which has been so prompt from Washington probably will no longer appear above the surface, at least, nor will labour leaders themselves be so loud in opposing what is now regarded as inevitable. Most people in the financial district feel that it will do no harm for the country to face facts a bit more courageously and cease to allow their hopes and wishes to mould their opinions and predictions.

New capital issues in the past week have been scarce. This autumn the market will be called upon to absorb a good deal of Government financing. State and city governments will borrow for unemployment relief, and the Federal Treasury will, of course, be confronted with the necessity of consolidating some of the large short-dated debt into longer term bonds, as well as raising fresh money to carry the Government through this period of larger expenditure than revenues. About \$80,000,000 of additional short money has been borrowed by the Treasury this month on discount bills, and notice was given this week that special financing would come in September. Whether this will take the form of notes and certificates or long-term bonds is a matter of much discussion, with opinion leaning toward the side of half in each form. At any rate, a long-dated bond issue is virtually a certainty before the end of this year, inasmuch as the Treasury at the December tax date is planning to refund Treasury notes.

Including bills to be issued on August 31st, the Treasury has outstanding approximately \$520,000,000 of discount bills in eight issues, maturing at various dates between the end of September and the end of November. Treasury certificates maturing on the September tax date total

\$634,000,000, including \$334,000,000 of 2½ per cents. and \$300,000,000 of 1½ per cents. December 15th tax-date maturities aggregate \$994,000,000, partly the Series C 3½ per cent. notes and partly 1½ per cent. certificates. Thus, the total to be refunded in the next three months or so is \$2,148,000,000. The only maturity schedule for next year is \$624,000,000 of certificates for March 15th. All other tax dates are open, but the June 15th date may be seized for calling the \$536,000,000 of first Liberty 4½ per cents. and possibly also the \$1,392,000,000 of first Liberty 3½ per cents. Treasury bonds of earliest maturity, 1940 optional date, are selling on a basis of about 3.02 per cent. Guesses about the terms of a new bond issue which might be offered next week, to be dated September 15th, favour a 3½ per cent. coupon, the same as the last issue, and possibly at a slight premium.

Widespread satisfaction is felt over the changes made in the British Government, and confidence in the ability of the new Cabinet to balance the Budget and take the necessary measures for economy is strong. It is understood that informal conversations have taken place both here and in Paris on a private banking credit to the British Treasury. Bankers here, while recognising the better feeling which has followed the Cabinet change, as well as the resources at the command of Great Britain, feel that the position should be fortified by such a credit, and, of course, no difficulty would be experienced in arranging one. Short-term private banking credits would eventually be refunded into long-term bonds, in the opinion of bankers, probably within the year if conditions were favourable.

Industrial disturbances, such as the use of State militia to close oil wells in Oklahoma and Texas and the trading of Farm Board wheat for Brazilian coffee, are symptoms of the mental depression induced by the business slump. But sounder counsels are gaining ground. The venture in coffee was strongly criticised in most quarters, for, while the deal will help to stabilise Brazilian exchange, it means the sale of wheat at 40 cents a bushel, and the putting of the Government into the coffee business, without any real improvement in the wheat market. Oil and gasoline prices have stiffened on the south-western curtailment, but no one knows what will be the future policy of the militant governors.

The slightly firmer tone in commodity prices is helpful, but otherwise the industrial position seems to grow no stronger. Railroad traffic is rising slightly, but is less than seasonal, while the steel trade in the past week has receded, and there is still little or no sign of an upturn in the autumn. The operating rate is a little above 30 per cent. of capacity. Takings of steel by the motor industry do not augur well for any significant increase in sales next month. Retail store trade, on the other hand, is doing fairly well, and there is a tendency for rural communities to show more courage.

Short-term money is as abundant as ever, but the bond market is drifting lower, particularly in the railroad list. Recent failures of savings banks in Ohio and scattered closings elsewhere are doubtless bringing some pressure to sell bank secondary reserves to increase liquidity. From an earnings standpoint, the position of the railroads is very unfavourable. July net income ran about 30 per cent. under a year ago.

FRANCE.

British Credits — Report of the Caisse d'Amortissement — Foreign Trade.

(FROM OUR CORRESPONDENT.)

PARIS, September 2.

THE conclusion of agreements last Saturday for the extension to Great Britain by French and American banks of credits totalling \$400,000,000 was received in this market with unalloyed satisfaction, and no doubts are entertained but that the operation will prove a complete and overwhelming success. The French half of the effort consists of two equal moieties, one taking the form of banking

credits and the other that of an issue of British Treasury bills in the Paris market. The bills will be denominated in francs, and will be of twelve months term as from September 10th. The rate of interest will be $4\frac{1}{2}$ per cent., payable on subscription, and the bonds will be issued free of all British taxation, present and future, unless they happen to be held by persons domiciled in Great Britain or subject to such taxation. French stamp duty will be borne by the British Government. The stamp duty is equivalent to 50 cents per 2,000 francs, and represents in this case the ordinary French impost on foreign bills drawn on this country, the pending issue being specially inscribed under the form of such bills. From the taxation point of view, therefore, the British bills will approximate, so far as French holders are concerned, very closely to the native Rentes. The bills will be in denominations of 2,000 francs, 10,000 francs and 50,000 francs, and will be issued at par, less $4\frac{1}{2}$ per cent. interest, payable in advance, subscribers thus receiving them at 95 $\frac{1}{2}$. Reimbursement will be made at par on September 10, 1932, with the possibility of exchange for scrip in a consolidation issue which may be offered coincident with the due date of the bills. In view of the conditions of issue the net yield works out at 4.44 per cent. The cost to the British Government will be heavy, as it will have to cover taxation charges in addition to the $4\frac{1}{2}$ per cent. interest, plus 1 $\frac{1}{2}$ per cent. commission allowed to the banks. With Defence Bonds at $2\frac{1}{2}$ per cent., French issues of fixed yield giving an average of 3.51 per cent. net, issues of variable yield an average of 4 per cent. (end July), and bond issues 4.60 per cent. net, the British Treasury bond issue is an exceptionally attractive one for the French investor. Inquiries in banking circles to-day indicate that the issue will be a great success; and it is expected that the lists will only remain open for a very short time. It is added that applications will be dealt with in the order in which they are received. The exact date of the issue is not yet known. The emission was authorised by a Treasury Warrant dated August 31st, so far as the British authorities are concerned, and the bonds will be entitled to interest as from September 10. No announcement has been made as to when the lists will be opened, however, although notices have appeared in the Paris newspapers stating that French legal formalities in connection with the issue have been accomplished. This caused some surprise, as in the ordinary course no issue can be made until formal legal notice has been published in a special weekly supplement of the *Journal Officiel*, the next number of which will not appear until next Monday. It is generally understood that, in order to facilitate the extension of financial aid to their old Ally, the French authorities have found a means to accelerate the usual formalities and that for all practical purposes the issue has already begun.

The report of the operations of the Caisse d'Amortissement in 1930, which is now available, contains a mass of interesting data concerning the three sections of the institution's functions—management of the National Defence Bonds, exploitation of the tobacco monopoly, and public debt extinction. As will be recalled, the Caisse devoted itself during its first three years—1926-29—solely to reorganising the floating debt, in order to remove the danger of any renewal of extensive demands for reimbursement. The whole of the Defence Bonds were gradually transformed from one-, three-, six- and twelve-months issues into two-year descriptions. This reduced maturities from a monthly average of between 7,000 million francs and 8,000 million francs, to one of about 1,200 million francs, fairly evenly spread over the year. Simultaneously, by amortisation and conversion, the total bonds in existence were reduced from 48,885 million francs in 1926 to 28,211 million francs at the end of 1929. The total maximum circulation during 1931 was fixed at 27,822 million francs (or 28,961 million francs if the 6 per cent. margin of toleration above this total be also taken into account). The interest rate payable was brought down from 6 per cent. to 3 per cent. by May, 1930, and has since been reduced (on February 25th last) to $2\frac{1}{2}$ per cent. Defence Bonds now involve an annual interest burden of 1,767 million francs, as against 2,700 million francs in 1926. The danger from Defence Bonds (to which the operations

of the Caisse was originally limited) having been removed by the end of 1928, its powers were extended to other portions of the debt. During 1929 it was able to devote a large portion of its revenue to extinguishing Rentes, by buying in on the Bourse. During the year Rentes representing a capital of 5,618 million francs were thus cancelled, and the budget relieved of annual charges totalling 274 million francs. The same policy was continued in an extended form during 1930, when attention was chiefly directed to 5 per cent. 1928 Rentes and the 1920 6 per cent. issue, while a beginning was made with the extinction of the outstanding $7\frac{1}{2}$ per cent. and 7 per cent. bond issues made in New York and of the portions of the 1915-16 5 per cent. and the 1917 and 1918 4 per cent. Rente issues made in London. The Rentes bought in during 1930 on the Paris Bourse and in the London and New York markets had a nominal capital value of 3,944,831,888 francs, and were acquired at a cost of 4,172,373,280 francs (owing to all except the 3 per cents. being above par), representing an annual saving to the budget of 215,791,000 francs. The detailed list of the 1930 extinctions is as follows:—

	Nominal Value.	Actual Cost.
	(Thousand francs.)	
3% Rentes.....	157,307	138,110
5% Rentes, 1915-6	893,514	915,018
6% Rentes, 1920	1,002,625	1,034,478
4% Rentes, 1925*	73,368	94,592
5% Rentes, 1928	1,184,623	1,224,190
5% Rentes, 1915-6 (British portion) ...	65,698	68,563
4% Rentes, 1917	3,522	3,638
4% Rentes, 1918	21,720	22,318
7 $\frac{1}{2}$ % Obligations (issued New York)† ...	185,224	235,922
7% Obligations (issued New York)†	357,231	435,545
Totals	3,944,832	4,172,374

* "Caillaux" Rentes, with guarantee against exchange; saving effected calculated at 5f 20c. per 4f. of nominal yield.

† Denominated in dollars; saving calculated at par value in francs.

The revenue of the Caisse d'Amortissement during 1930, showing the sources of the amounts available for debt extinction purposes, is set forth as follows:—

	Francs.
Special tax on first transfers of realty, &c.	519,737,721
Succession duties and transfers at death	2,389,795,966
Voluntary contributions	173,811
Surcharged and special stamps	1,068,949
Budget surpluses (payment on account)	2,000,000,000
Mobilisation of German annuities reparation	3,251,529,578
Net profits of tobacco monopoly*	1,403,537,305
Total.....	9,565,843,330

* Gross receipts of the monopoly in 1930 were 4,541,049,679f.

During 1930, it may be recalled, the Caisse entered into a further convention with the State, under which it undertook, as from the beginning of the current year, on April 1st, to take charge of the greater part of the contractual debts, due by the State "to private parties or collectivities and public and private organisations." This will lay upon the Caisse for the present year additional expenditure of slightly over 1,900 million francs. This step was taken in order to enable a balanced budget to be arrived at without necessitating the imposition of further taxation, and was theoretically based on the calculation that the additional expenditure involved would be compensated for by savings effected in the budget of the Caisse due to the application of plans for the massive conversion of Rentes. The worsening of the general financial situation during the past few months, the suspension of German reparation payments under the Hoover moratorium and other factors, however, have so changed the whole prospects of the public finances that an entirely new situation has been created, both for the Caisse d'Amortissement and the Treasury, which will require serious attention in the near future.

The foreign trade returns for July show a fractional further drop in both exports and imports, after an almost

equivalent recovery in June. Total imports were 3,635,953,000 francs, against 3,914,315,000 francs in the previous month and 4,108,410,000 francs in July, 1930, while exports were 2,419,829,000 francs, against 2,512,623,000 francs in June, 3,554,309,000 francs in July, 1930, and 4,256,822,000 francs in July, 1929. The total exchanges for the first seven months of the year show an adverse balance of 8,183,500,000 francs, as compared with one of 4,758,500,000 francs in the corresponding period of 1930. The more or less normal excess of imports over exports before the war was about 20 per cent., whereas the difference on the first seven months of the current year represents an unfavourable balance of about 30 per cent.

GERMANY.

Politics — Trade Unions — Money and Bourse — Banking Position — Dresdner Bank.

(FROM OUR CORRESPONDENT.)

BERLIN, September 1.

CHANCELLOR BRUNING's speeches at the congress of the Centre Party in Stuttgart have strengthened the impression that he is continuing to keep all paths open and is endeavouring to avoid the necessity of committing himself either to the Right or the Left. This situation has not been altered by the Chancellor's conference with Herr Hugenberg. This discussion between the leader of the Hugenberg. This discussion between the leader of the Reich's policies and the leader of the German National Opposition had been desired for weeks by the Right, and it would seem that considerable hopes had been pinned on it. The disappointment of these hopes has again somewhat sharpened the tone of the Press of the Right Opposition against Dr. Brüning. But the relations of the Government with the Left are no clearer than before. The raising of the problem of a reform of the Reich's structure through Herr Koepker-Aschoff's article in *Der Deutsche Volksgeist*, a summary of which was given last week, confronts the Chancellor with the question whether he will take into his Cabinet Socialist members of the Prussian Cabinet. This matter has lost some of its urgency, however, since the Prussian Prime Minister, Herr Braun, ever, since the Prussian Prime Minister, Herr Braun, under Herr Koepker-Aschoff's proposal, has declared that the National Cabinet as Vice-Chancellor, has declared that he is not inclined to do this. It is true, however, that he added that a reform of the Reich seemed to him an urgent task.

The congress of the "Free" (Socialist) Trade Unions in Frankfurt-on-Main has made apparent the sharp differences between the Reich Government and the Socialist Labour movement, growing out of social-political questions. The Reich Minister of Labour, Herr Stegerwald, who himself belongs to the Centre and derives from the Christian trade unions, in his address of welcome, declared himself opposed to the "one-sided storm against wages and salaries," and declared further that he adhered unconditionally to collective wage agreements and to the State arbitration system for labour disputes, since protection for the labouring classes was particularly necessary in times of crisis. Herr Leipart, chairman of the Central Organisation of the Free Trade Unions, termed this declaration by the Minister of Labour a courageous statement, but he himself criticised the Government's measures in the social-political affairs. Although the leaders of the congress endeavoured in this way to take the wind out of the sails of the more radical element of the leaders. A congress went far beyond the standpoint of the leaders. A very sharp resolution against reductions of wages was adopted. It would seem that this majority's attitude was strongly influenced by the English T.U.C. example. Although the German Government is not composed of Socialists (as was the last British Cabinet), but merely tolerated by them, the situation of the German labour movement has many points of resemblance with that of the English movement. The fact that in Germany political Socialism is not so strongly dependent on the trade

unions as in England rather increases the unions' inclination to exercise pressure on the Government in social-political matters. At present, to be sure, this endeavour appears to be manifest more among leaders of the trade union locals than in the central organisation. In any event, however, it would mean an end of the Socialists' "policy of toleration" toward the Brüning Cabinet if any considerable part of the trade unions should express their opposition to continuing that policy.

At the time of writing the Reichsbank has not yet made its decision as to a reduction of the discount rate. But there can be no question that a reduction will be made. It is assumed that the rate, which is now 10 per cent., will be lowered to 8 per cent., and that the Lombard rate will be reduced correspondingly. This measure of the Reichsbank is intended above all to make possible a fairly normal level of quotations after the reopening of the Bourses on September 3. It is at the moment impossible to venture a prophecy as to the level of Bourse quotations. There will be no action to support quotations, since the means for doing that are lacking. In order to minimise as far as possible the compulsion to sell stocks in order to secure money, the granting of loans on collateral has been somewhat facilitated, above all for mortgage bonds. For these the private mortgage banks have created a Lombard Bank Company with a capital of 5 million marks, from which the Reichsbank will accept, for rediscount or for relending on collateral, paper to a total of about 50 million marks. The public credit institutions have taken similar measures. The quotations heard in private transactions for mortgage bonds indicate that, as a result of these precautions, any urgent pressure to sell these securities bearing fixed rates of interest is hardly to be expected.

It was not easy for the Reichsbank to decide upon a further reduction of the discount rate. Despite the great excess of exports over imports, there has been no increase of the Reichsbank's holdings of gold and devisa. Hence, the Reichsbank, by virtue of the emergency decree covering the flight of capital, has demanded the surrender of all holdings of gold and foreign currencies of 1,000 marks or over: the obligation to deliver such gold and devisa to the bank applied heretofore only to sums of 20,000 marks or over. At the same time, payments to foreign countries of 1,000 marks or over require special permission: the figure was heretofore 3,000 marks.

The interim balances of the German banks for the end of July, 1931, show that the outflow of foreign credits at the beginning of July was still greater than in June. In each of these months the six large Berlin banks lost 1,100 million reichsmarks in credits, although after July 13th any outflow was prevented by the declaration of bank holidays and by the moratorium on payments abroad. The withdrawal of credits varied in the different banks. The Danat Bank lost in the last quarter 33 per cent. of its credits and the Dresdner 26 per cent., whereas the withdrawals from the other banks (DD-Bank, Commerz, Reichsbank, Kredit und Handelsgesellschaft) amounted in each case to roundly 20 per cent. The losses were, for the greatest part, financed by presenting new drafts to the Reichsbank and by the reduction of liquid holdings (Treasury certificates and deposits in banks). A reduction of indebtedness was possible only to a very small extent; while the economic crisis permits but slow progress. But even during the continuance of the "freezing consortium" all banks faced the task of reducing their loans and of increasing their liquid assets.

The annual meeting of the Dresdner Bank on August 29th, which had been looked forward to with much tension, passed off without any particular surprises. The meeting decided with an overwhelming majority to emit preferred shares. The Reich, as has been reported, will pay in the present value of the 800 million reichsmarks of 7 per cent. preferred shares through 7 per cent. Treasury certificates. One hundred million reichsmarks of these certificates fall due on August 1, 1932, at 101 per cent., 100 millions a year later at 102 $\frac{1}{2}$ per cent., and the remaining 100 millions two years later at 104 per cent. The obligation resting upon the bank to pay dividends on the preferred shares is compensated for by the agio on the

repayments. In addition to this, the Reich pays interest on the Treasury certificates from August 1, 1931, whereas the preferred shares are not entitled to dividends until January 1, 1932. The difference amounts to 8 million reichsmarks.

In an elaborate speech the Chairman of the Board endeavoured to explain the developments of the last few weeks as due exclusively to the general situation in Germany: there was in his speech no hint of a confession of any fault on the part of the bank's leadership. The speeches of the opposition, which tried vainly to characterise the emission of preferred shares against Treasury certificates as a "pseudo-transaction" or as an emission below par, had no effect. An appeal was made to the Reich to injure the interests of the original shareholders as little as possible. The Reich itself let it be known that it intends to carry on the bank as a private undertaking. Changes in personnel have also been made in this sense. Of the forty-four members of the board of directors, fifteen have resigned and were replaced by eight representatives of the Reich. Among these, Director Ritscher, of the Reichs-Kredit-Aktiengesellschaft, stands at the head, since he has accepted the chairmanship of the newly-created Credit Committee. Which of the managers of the bank will resign is not yet known, but a new member of the Board of Managers has already been appointed in the person of Herr Goetz, a former director of the Commerz-Bank. To the rumours long current of a coming fusion of the Dresdner and the Danat Bank there has now been added, through these new elections, the story of a fusion of the Dresdner and the Commerz-Bank. But the question of a fusion is not yet ripe: the new elections were based on purely personal grounds, and do not indicate any co-operation of the two banks.

AUSTRIA.

Unemployment — Foreign Trade — Money — Revenue — Stock Exchange.

(FROM OUR CORRESPONDENT.)

VIENNA, August 25.

THE delegates of the League of Nations, who were in Vienna during the last few days, have had an opportunity of acquainting themselves with the seriousness of the situation. It was pointed out to them that unemployment is increasing alarmingly, and that in Vienna alone 88,552 unemployed, or 15,336 more than last year, were in receipt of benefit in the first half of August. This is due to the complete failure of seasonal business and to the marked decrease in public building activity. The municipality of Vienna has this year been obliged to curtail orders still further, as its revenue has declined rapidly. The situation in the housing market has also changed radically. In the city and its environs flats and houses are everywhere being offered for sale, and it even appears that numerous buildings erected for private account with the support of the State housing credit, and therefore obtained very cheaply by their owners, are also on the market. Only small flats are in demand.

There has also been an alarming regression in July exports. Imports amounted to 199 millions schillings and exports to 108 millions, so that there was a deficit of 91 million schillings. In comparison with July of last year imports were 18.9 and exports 30.6 million schillings lower. Whereas usually Customs tariff increases, such as went into force on July 1st, are preceded by increased imports, in order to take advantage of the old rates, no accelerated importing was noticeable on this occasion. Some importers inclined to the opinion that the fall in prices of goods might exceed the rise in Customs rates. Furthermore, monetary conditions have rendered it difficult to import for stock.

In August and September foreign trade will certainly not revive, as the almost complete stagnation of commerce with Hungary will be felt. Austrian industry has very important claims on Hungary, and while the embargo on foreign payments is upheld these will not be

liquidated. Recently there have been meetings of representatives of commerce and industry, in which complaints have been made regarding the cessation of commerce with Hungary. At these conferences of economic corporate bodies energetic intervention on the part of the Government has been demanded. Individual speakers even went so far as to demand sequestration of Hungarian credits until the numerous claims which exist in Austria against Hungary are partly settled.

Trade with Germany has also greatly declined, and complaint is rife concerning keener competition from Germany on the basis of lower prices. At the same time, efforts are in progress to induce agriculture and also the public departments and provincial authorities, as well as industry, to cover their requirements from domestic manufacturers of machines. Export to Russia is somewhat better. The unexpected increase of Russian orders to Austria will probably induce the provincial government of Vienna to extend the 25 million schilling limit of its guarantee in relation to risks on export trade with Russia. Russian contracts have been received by individual machine works, automobile factories and the electricity industry. The Russian representatives have, however, demanded accommodation in relation to the question of interest on outstanding claims, and this is a difficult matter for Austrian enterprise, in view of the fact that the credits cover a number of years. They have to take into consideration the difficulty of negotiating Russian bills of exchange and also the fact that the National Bank, in spite of the recent relaxation of the bank rate, still has an official rate of 10 per cent.

The demand from economic circles for a reduction of the bank rate is becoming increasingly pronounced. The National Bank, however, is obliged to pursue a very cautious rate policy, especially as it is endeavouring further to secure the short-term credits granted to Austria from abroad. The National Bank is still the chief source of credit requirements. It is true that its proportion of cover has receded since the middle of June, but in the interim there have been the very serious crises in Germany and in Hungary and the effects of the Credit-Anstalt affair. At the middle of June, the cover, which in the first week of January had amounted to 79.3 per cent., amounted to 54.3, and on August 15th to 43.1 per cent. In the first week of January, cash in hand amounted to 394.8 million schillings and the amount of foreign currencies, not calculated in cash holdings, to 512.4 millions. The corresponding figures in the report of August 15th are 339 millions and 185.2 millions. This change is largely due to the relief afforded the Credit-Anstalt.

Plans are under consideration for procuring increased revenue for the State and also for the Credit-Anstalt by means of a monopoly of motor spirit and, perhaps, also of matches. The preparations for the motor-spirit monopoly are already well advanced. It is contemplated that the Credit-Anstalt should take a part in the management of the monopoly to enable it to repay more rapidly the money which the State put at its disposal. This is the more important, as the collection by the Credit-Anstalt of outstanding debts in Hungary, Poland, Yugoslavia, and also Rumania, is proceeding very slowly on account of general economic conditions.

State revenue for the first half-year, at 950 million schillings, is 120 millions short of the estimate. In the second half-year the effect of the introduction of the emoluments (Besoldungs) tax will be felt; it will probably bring in 12 million schillings. In social insurance several small savings have also been effected. In any case, when Parliament meets it will have to take up energetically the question of retrenchment; otherwise it will be impossible even approximately to balance the Budget. The result of Government deliberations has been the decision to reduce expenditure from the Budget of 1932 by 300 million schillings. This will mean a severe political struggle, and it is possible that a Coalition will be necessary to create the preliminary conditions.

The provinces and the municipalities are also in financial embarrassment, largely because State allotments to them

will probably be smaller. They are obliged to cut down investments to the minimum as they cannot raise further loans, and the Central Savings Bank of the Municipality of Vienna, which accorded the provinces very substantial credits, is demanding their redemption and is not granting fresh credits.

The closing of the Stock Exchanges in Berlin and Budapest has meant that Austrian and National State securities have come in from those countries for sale in Vienna, and their quotations have consequently declined. Not only shares but also bonds bearing fixed rates of interest have depreciated. To give a few examples: State redemption obligations, which are quoted in sterling, stood at 72 at the end of June, whereas, after rallying, they are now quoted at 64. The housing loan, which stood at 94 at the end of June, and bears 7 per cent., has fallen to 89.4. Alpine shares have gone from 17.50 to 12.56, and A.E.G. shares from 17.0 to 14.0. In addition, the market is suffering considerable losses owing to the fact that large batches of Hungarian securities, and particularly coal and iron shares, in Austrian hands are now unsaleable.

SWITZERLAND.

Foreign Trade — Unemployment — Industry — Banking — Public Finance.

(FROM OUR CORRESPONDENT.)

GENEVA, August 22.

CONDITIONS have not altered very much in Switzerland during the past six weeks, and, though they have not become worse, they show no decided tendency to improve. The foreign trade returns for July were not as bad as had been expected: imports totalled £7,490,065, as against £7,529,888 in June, and exports aggregated £4,383,858, as against £4,407,968 the previous month. Compared with July, 1930, which was a normal month, imports showed a decrease of £2,047,098, and exports a drop of £1,138,418. Imports from Great Britain reached a value of £295,018, as against £1,424,488 in July, 1930; while exports to her totalled £710,190, compared with £832,447 last year.

The number of unemployed has slightly risen since the end of May, and the total is now about 14,700 out of a population of 4 millions, which is a small figure when it is recalled that during the crisis of 1921-23 there were nearly 100,000 unemployed in Switzerland. It should be remarked that unemployment is particularly important in the exporting industries: watchmaking, metal and the exporting industries; while it hardly affects home machines, textiles industry; while it hardly affects home industries, a great number of which are very active—a sign that the home market is sound and that the country has not lost much of its purchasing power.

The present crisis has induced the watchmaking industry—which is very seriously hit by the slump—to bring about a reorganisation of its methods of work and a concentration of its activity. Recently a "super holding," as it is called, has been created by the Swiss watchmakers with a capital of £400,000. Its seat is at Neuchâtel and its full name is "Société générale de l'horlogerie suisse." The object of the company is to encourage by all possible means the concentration of the watchmaking industry and means the concentration of the watchmaking help to the watch-of its sister industries, to give financial help to the watch-making concerns, to control and stabilise prices, and to improve the watchmaking industry as a whole. Its mission further consists in suppressing as quickly as possible the particular trade known under the name of "Shabloning," in other words, the selling of Swiss watch pieces to foreign factories which are making with them cheap and unreliable watches, thus competing with the Swiss watchmaking industry. It will also try to eliminate factories and low-grade dustrials which, by producing cheap and low-grade watches, have done great harm to the influence of the new industry. It is expected that the influence of the coming organisation will already be felt in the course of the action winter. At any rate, the principal result of the action undertaken by the "super holding" will be to restore the old reputation of Swiss watchmaking and the high standard of its products.

The failure at Geneva of the Banque de Genève involved the liquidation of two minor banks, and was the cause of a run which lasted about three weeks, and has now been checked. Another consequence was the fusion of two big Geneva financial concerns, the Comptoir d'Escompte and the Union Financière de Genève, the aggregate capital of which will be £1,600,000. While the Comptoir d'Escompte is a commercial bank, the Union Financière is a society which does not directly deal with the public, but only with the banks, putting substantial sums at their disposal when needed, and specialising in the issue of securities and the creation of syndicates. It has now fourteen members, which are all Geneva private banks. That fusion has certainly helped to restore confidence among the Geneva population, which these developments had rendered very uneasy.

The withdrawal of funds from the Swiss banks has been considerable during the past month, but it did not exceed the capacity of the banks. At the same time funds which had been deposited abroad were recalled, so that money remains comparatively abundant, the interest on deposits has not been raised and does not exceed 3½ per cent. on long-term deposits. It is estimated that the amount of short-term deposits made by the Swiss banks in Germany is about £3,000,000, and the situation might be embarrassing should the foreign investors—mostly French—whose funds were invested in Germany by means of the Swiss banks, be compelled to ask all at the same moment for the repayment of their money; though, even if such an event should occur, it is estimated that the Swiss financial market would be in a position to meet all the needs of the public.

The finances of the Federal Government are sound, and, in spite of the general crisis, it is probable that the estimated deficit will be lower than had been expected. On August 15th the Swiss National Bank had £48,877,200 worth of banknotes in circulation, while its gold reserve was at the same date £47,562,600, to which should be added gold deposits abroad to a total of £21,374,000.

Some economic experts here are of opinion that the worst period of the crisis is over and that trade and industry will slowly improve during the coming months, but the general belief is that no immediate change is in prospect and that the coming winter will be very difficult.

JAPAN.

Foreign Trade — Company Profits — Prices — Money — Industrial Disputes.

(FROM OUR CORRESPONDENT.)

TOKYO, August 12.

THE export season has set in normally this year, though the value figures of foreign trade continue to disclose contraction. The trade returns for July show that there was a favourable balance of 9,727,000 yen, imports amounting to 93,692,000 yen and exports to 103,419,000 yen. As compared with the corresponding month of last year, imports decreased by 10,931,000 yen, or 10.4 per cent., while exports fell by 13,877,000 yen, or 11.8 per cent. The decline in imports is largely accounted for by machinery, iron and steel, timber and oil-cake, while raw silk is almost solely responsible for the fall in exports. The contraction is generally a matter of prices, not of volume, and improvements noticed here and there in two or three previous months appear to have continued. There was a marked recovery in imports of ammonium sulphate, raw cotton, raw wool, and rubber, while exports of rice, tinned and bottled provisions, rayon products, and hats revealed substantial increases. An increase of cotton piece-goods, though small, is also reassuring, especially in view of the absence of favourable external developments.

The earnings statements which have so far appeared of important industrial companies for the past half-year made rather poor showing, and the mid-summer dividends were not maintained in many cases. Kanagafuchi Cotton Mills reduced its dividend from 28 per cent. to 25 per cent., Oji Paper from 12 per cent. to 10 per cent., and Dai-Nippon

Sugar from 10 per cent. to 8 per cent., while the Osaka Shosen Kaisha again passed its dividend. Electric power companies generally maintained their distributions, though their earnings show an appreciable decline, except those of the Tokyo Electric Light Company. The half-year was also one of the leanest, if not the leanest, the Japanese banks have known for many years, and several big banks decided that the occasion was appropriate to reduce their dividends. Of the leading banks which have so far made statements, only Mitsubishi proposes to maintain its usual dividend of 10 per cent. The Dai-ichi dividend is cut from 10 per cent. to 8 per cent., and the Yasuda dividend is cut by 1 per cent. to 7 per cent., as is also that of Sumitomo of Osaka.

The course of commodity prices last month shows a distinct upward movement. The wholesale index number of the Bank of Japan for July registered a sharp rise of 1.4 per cent. on the month, the total being 152.8, as against 150.7 in June. The principal contributors to the advance were the primary foodstuffs and textiles groups, in which rice, eggs, raw silk and silk tissues are prominent. Presumably, excitement over the Hoover Plan was largely responsible for the general rise, with the exception of rice, whose marked advance is explained by the bad crop prospect owing to the unfavourable weather conditions which prevailed during the month.

Money has been extremely difficult during the past fortnight, and short-loan rates have run up to fractionally above 4½ per cent. at the end of July, the highest for many months. One of the primary causes was the withdrawal of foreign short-credits in conjunction with the German credit crisis. The outflow of funds was roughly 100 million yen, and the Bank of Japan has lost 50 million yen of gold since the latter part of last month. The stock market has suffered a continuous decline since the middle of July, and most shares have lost what they gained at the time of the announcement of the Hoover Plan. Commodity markets also have experienced a renewed spell of depression, with the single exception of rice.

Industrial disputes are cropping up in great numbers. According to the report of the Home Office, the number of disputes during the first half of the year was 1,079, and the number of workpeople directly involved was 84,344, as compared with 728 disputes, involving 76,791 workpeople, during the corresponding period of 1930. This year's disputes are mostly of smaller dimensions, and those originating from "refusal to be discharged" predominate in numbers.

Letters to the Editor.

THE OUTLOOK FOR STERLING.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your article entitled "The Outlook for Sterling" you state that "the real cause of the downfall of the late Government was the imminent danger to sterling arising from the steady withdrawal of both long-term and short-term foreign funds from London," and you imply in your leading article that this withdrawal was due to Britain's questionable solvency, caused by the failure to balance her Budget. This may have been the cause of the withdrawal of long-term funds, but seems hardly adequate to explain that of those held on short term. Surely a far more plausible explanation is that London had got into an unsound short-term position, that she had borrowed more on short term from abroad than she had lent. Also, part of her short-term lendings had been made to Germany, and, on account of the crisis there, had become temporarily frozen. Under these circumstances, foreign depositors, particularly in France, began to fear for the liquidity of their balances and so hastened to withdraw them before they became frozen.

Thus, the cause of the withdrawals was undoubtedly our "questionable solvency," but it was the solvency of the City that was questioned, not that of the Budget.

If this analysis is correct, to talk of our being "in the position of a great banker questionably solvent and visibly reluctant to curtail his personal expenditure" is to confuse

the issue, however desirable or undesirable such a curtailment may be *per se*. Further, a mere balancing of the Budget will not remedy the situation. If and when a crisis recurs in Germany (as, for instance, may happen when the present "stand-still" agreement is ended), a withdrawal of foreign funds from London may be expected. The only real solution is for London to cease being a debtor on short term, at least while the present political and economic uncertainty in Europe, and especially in Germany, remains. This could be done, for instance, by mobilising part of our foreign investments and using them to acquire liquid balances abroad.

This is the real issue that has to be faced, whether we are to remedy our short-term position, even if to do so we have to sell some of our foreign investments at depreciated values, or whether we are to remain still "questionably solvent" on short term and so to leave the gold parity of sterling vulnerable to every crisis on the Continent. To face and solve this issue is surely at least as important as to balance the Budget.

176, Highbury New Park, N. 5. Yours faithfully,

F. W. BACON.

[That there is some substance in our correspondent's argument we are not disposed to deny. London's position as a large holder of short-term foreign deposits was vulnerable; and when the Central European crisis developed—with a rapidity which spread alarm through every financial centre—the need felt by our "short" creditors abroad to increase their own liquidity was a factor in the pressure on sterling. But this is to overlook more fundamental considerations. The short-run view of the outlook for sterling may have been influenced to some extent by the knowledge that we had an inconveniently large sum "frozen" in Germany. The pessimistic long-run view entertained abroad—and this was a far more potent factor in the withdrawals of foreign balances and, it may be added, in the expatriation of domestic capital, which threatened to drive us off the gold standard—arose undeniably from the fact that extravagant State expenditure, coupled with a dole system which symbolised and perpetuated a fatal rigidity in British costs and wages, appeared, not without reason, in foreign eyes, to be menacing the British trade balance on which the stability of sterling ultimately depends.—Ed., Econ.]

BRITAIN'S OVERSEAS ASSETS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Following your interesting article last week on "Britain's Overseas Assets," may I point out that it is possible for this country to dispose of a large part of its foreign investments without suffering any real loss in its purchasing power overseas?

Our foreign long-term assets are composed of two parts; first, a fixed-interest bearing part, the capital of which amounts to about £2,239 millions, with interest of £100 millions, and secondly, a variable dividend bearing part, the capital of which is £1,152 millions, yielding an income of £84 millions. Since wholesale prices have fallen 26 per cent. since 1928 (December), when these figures were valid, it is possible to realise 26 per cent. of the fixed-interest bearing part, viz., £582 millions.

Turning to the second part, the gain due to the fall in prices is offset by a decline in the distribution of dividends. Taking the *Economist's* figures of industrial profits, the rate of ordinary dividend fell by about 22 per cent. from the first quarter of 1929 to the same period of 1931. Assuming that this decline is representative of overseas investments as well, and allowing for the fall in prices, it is probable that our income from the variable dividend part has diminished by about one million sterling in real value.

Owing to the depressed state of the industrial markets, it would probably only be possible to mobilise the fixed-interest stock and consequently it is necessary to capitalise this one million loss and deduct it from the £582 millions mentioned above; at 4 per cent. this leaves £567 million (£582-£25 millions) available for mobilisation. On the basis of your estimates in last week's article the current value of this portion of our capital would be about £418 millions. Thus, Great Britain could raise over £400 millions by selling its foreign investments without diminishing the volume of food and raw materials which was at its command in the comparatively good year of 1928.—Yours, etc.,

London, S.W. 11.

August 24, 1931.

J. P. HOLMES.

[Our correspondent's calculations, on paper, are ingenious; his conclusions, in practice, fallacious. In the first place, even if he has not under-estimated the loss which we have to face in our income from overseas investments, he makes no allowance for the fact that other items among our invisible

exports (e.g., receipts from shipping, etc.) have seriously shrunk. Apart from the fact that it is desirable on every ground that we should regain the position of having an annual surplus available to finance the needs of borrowing countries, the present position is that we need every penny of our income from British capital abroad to prevent our balance of trade running into a dangerous deficit against us. In the second place, the conditions under which, during the war, we raised credits in the United States by pledging dollar securities acquired by our nationals when Great Britain was a lending, and America a borrowing, country, are not comparable with conditions to-day. As we pointed out in the article to which our correspondent refers, many of our foreign investments are not saleable abroad; to attempt to liquidate anything like the amount mentioned by Mr. Holmes would completely break the market. Finally, even if arrangements for gradual mobilisation could be made through some international banking consortium, the fact remains that such an operation would rightly be regarded abroad as the jettisoning of capital to meet current expenditure, and would impair our credit. To eat the cake one has is no proper substitute for working to earn bread.—Ed., Econ.]

A BRITISH TRADE SHIP.

TO THE EDITOR OF THE ECONOMIST.

DEAR SIR,—Having just come from my third visit of inspection of the s.s. *British Exhibitor* as she lay in dock at Liverpool undergoing reconstruction for her journey as an Exhibition Ship, permit me to make following remarks on the project apropos your note in to-day's issue.

No exhibit had yet been installed, but three decks had been prepared for the reception of stands and exhibits, and fairly wide communicating stairways constructed. As good a job as was possible has been made of the severely limited space, and the lowest deck, where it is hoped to display heavy machinery, looks roomy—before the exhibits are put in. Inevitably most of the stalls have limited depth and height, and some are very diminutive; the width of alleyways and low roof, the space and facilities generally, whilst the best achievable, can in no sense compare with a land exhibition.

I went over the Irish Free State Exhibition Ship *Killarney* in 1929, and I well remember, when only fifty visitors were on board inspecting the wares, how distressing was the atmosphere and the "traffic jam" in the narrow alleyways of the saloon. The same drawback, I understand, was acutely felt by the *Italian Trade Ship*; the ventilation difficulty was not solved or proved insoluble, and, when lying in port under hot tropical conditions, with a few hundred sightseers aboard, the "ship" was turned into an oven. The *British Exhibitor* has port holes on her 'tween decks, but has to rely solely on artificial ventilation for the orlop and bottom deck, and, whilst the ship is lying in the Victoria Dock, London, tests as to its adequacy will, it is hoped, be made when crowds are on board. Much has been written about this boat carrying a great representative exhibition of all-British manufactures, but, to prevent disappointment and hostile criticism, it is well to realise that this is impossible. The 500 stalls can only represent a miniature exhibition, which at best can only form an attractive sample of a selection of British industrial wares.

The response of Lancashire and Northern industrialists generally has, so far, been poor, and it may be useful to set down their chief doubts and difficulties as there is still time to meet some of them:—

(1) On realising that the British National Ship, Limited, is not really a Government or national trust, but is actually a private money-making concern, traders naturally expect some guarantee that the promoters can carry through the 12 months' programme, with its heavy initial costs and its heavy daily running, victualling and entertaining expenses, canal and port dues, and the like. As the responsible board of directors consists only of two men, neither of whom is particularly well known in the North as a practical shipping man, trader or manufacturer, the call for an effective guarantee is reasonable.

(2) Your note mentions the special trust fund into which "all money advanced by exhibitors will remain until the ship sails on November 1st." (It is not quite clear whether the whole of the exhibitors' payments or only the £5 deposit goes into this trust.) But the terms of the trust make it possible that, on November 2nd, every penny in the fund could be paid out to meet the extremely heavy expenses known to have been so far incurred. It follows that there is no "guarantee" in the business sense that the wherewithal for the ensuing 12 months of heavy expenses will be available; and it must be borne in mind that the venture has to find the entire costs out and home; there is no outward or homeward cargo to bring in freight revenue. At a Liverpool meeting of the promoters I

was given the chairman's personal assurance that this would be all right, which was very decent of him, but is not quite the same as a trust fund.

(3) An approximate idea of the contemplated costs of this venture, which have caused industrialists to fear that the expense might be out of all proportion to the possible benefits, may be gathered from the promoters' own figures of 500 stalls at an average cost for space alone of £300 (i.e., £10 per square foot)=£150,000. If only half the exhibitors send their own salesmen the charge, at £750 each, is £187,500. That gives a total of £337,500 without adding anything for the exhibitor's cost of erecting his own stand, or showing a film in the cinema, and a year's salary for his salesman. These figures assume that the whole of the stalls are eventually let to exhibitors. If the expedition sets off with less than all the stalls and berths occupied the totals would be correspondingly less, although the heavy initial cost and running expenses would be the same, and there would be less income to pay for them.

(4) Some Northern industrialists, whilst impressed by the phrase "In the Wake of the Prince" and the desire to capitalise the goodwill created by the recent visit of the Royal Princes to certain South American Republics, find on examination that this is by no means an accurate reference to the proposed 12 months' itinerary. They see that, besides calling at the West Indies and equatorial ports, the Exhibition proceeds to, and is on view at, Mexican and United States ports, also at Vancouver, also as far south as Punta Arenas.

(5) Some renewal or change of individual exhibits may be possible, but, in the main, the same exhibits are to be shown on the equator as at ports 45 degrees north and 55 degrees south. In many cases goods acceptable at equatorial markets will—from a marketing point of view—be practically "junk" in Canada; appliances for harvesting rubber might be welcome at Para, but a joke at New Orleans or San Francisco; certain styles of textiles, mercery and coffee machinery should prove a success in Brazilian ports, but present only a travelling museum interest at Seattle and Vancouver.

(6) The limited facilities offered for renewal or change of exhibits at the different countries visited are of little avail to many manufacturers who, in an age of specialisation, do not pretend to cater for such widely different markets as Canada, United States and the diversified wants of Central America and all the South American Republics. The only manufacturer whose goods might be equally acceptable on the equator as well at 45 degrees north and 55 degrees south would be he who casts bullion, and I believe he is not exhibiting. Let us at least avoid the old criticism "Here comes the British manufacturer trying to force on us the goods he wants to sell—and not the goods we want to buy!" We who, as a nation, laughed heartily when we learned that the French had sent out huge consignments of snow-shoes, hairpins and grand pianos to enable de Lesseps to build the Panama Canal, must at all costs avoid sending implements for rubber or coffee estates to Vancouver, and to Seattle men's wear and office furniture that is adapted to the different climate of Colon and Balboa.

(7) The call is for responsible directors, partners, managers to accompany the exhibit, but the great length of the trip makes this extremely difficult to arrange, and, if the manufacturer's goods are only suitable for one or two of the countries touched at, he is carried merely as an idle world's-cruise tripper for the remainder. If the exhibitor is going to act as his own salesman and stall attendant he may find it difficult to leave his stall unattended even for the highly desirable purpose of looking up customers or agents, visiting their works, plantations or showrooms, or accepting their hospitality ashore. He has to sign the ship's articles "which shall cover, *inter alia*, attendance on stand, shore leave, daily routine on ship."

(8) Finally, experienced traders to Central America, South America (as well as to the United States and Canada) look askance at the offers made to unrepresented manufacturers that the sales staff provided by the Exhibition Ship Company will book orders and grant credit (but "do not accept any responsibility for bank or other commercial reports"), and is prepared to take a commission on the initial and future orders. The very idea of these officials—who cannot all be trained men knowing the language and the local conditions at all the ports touched—booking orders and arranging credits during a hectic visit of two or three days, gives cold feet to traders who have spent a lifetime in only one of these markets without feeling they know all its risks. As to the "new chum" arriving on Monday with powers to book orders, grant credit and depart on Thursday —! The losses suffered by British and American traders in the past ten years through giving credit in South American markets to weak or dishonest firms, or merely through exchange fluctuations, run into millions. A recent publication of the Bank of London and South America has the warning: "A careful and conservative scrutiny of the credit risk is more essential to-day in Argentina than it has ever been."

Some of these drawbacks are still remediable, and they are worth pointing out because there are suggestions of further ventures of the kind. A three or four months' trip, limited solely

to certain South American markets, each of which might be interested in similar classes of goods, would be less expensive both in the busy man's time and money and probably more useful and practical in results. But a 12-months' trip scouring the stormy seas and shores of the whole Western Hemisphere may be all right for a pleasure cruise or a joy ride, but, I maintain is not a practical business proposition.—Yours faithfully,

HERBERT KENDRICK.

Books and Publications.

SHIPPING DOCUMENTS.*

THERE is no better book on charterparties and bills of lading than "Scrutton," the thirteenth edition of which has now been published. For forty-five years the legal profession has relied on this work, and in banking and mercantile circles, too, it is well known, more especially for those parts which deal with bills of lading—documents that are part of the currency by means of which the world's trade is carried on. These shipping documents have, during the last ten years, tended to assume more and more standardised forms. Those whose familiarity with them covers that period will recall that attempts were made in 1921 to introduce, voluntarily, uniform conditions which were intended to meet merchants' objections to the older forms relieving carriers of many of their liabilities. The original Hague Rules, standardising the liabilities to be undertaken by sea carriers, were, however, accorded a somewhat hesitating reception. They came into partial use and, in a revised form, were endorsed by an International Convention. Their incorporation as part of the terms and conditions of all bills of lading issued in this country was afterwards made compulsory by the Carriage of Goods by Sea Act, 1924, but the edition of "Scrutton" preceding the present, making its appearance just after the Act became operative, could not deal with the interpretation of the Rules which had thus been made statutory otherwise than by anticipation. In the interval a number of judicial decisions have helped towards a more definite understanding of the effect of the Rules, and references to these decisions are the most important new feature of the book for which the present editors, Mr S. L. Porter, K.C., and Mr W. L. McNair, are responsible. As mentioned in the preface, Belgium alone, apart from members of the British Commonwealth of Nations, has given legislative effect to the Rules, but it should be added that probably they will displace the American "Harter Act" as soon as Congress can find time for this piece of commercial legislation, and European countries will, if expectation is realised, follow suit. In the meantime the English courts have been construing the terms of the Rules as incorporated in bills of lading, following their accustomed methods of interpretation. The editors refer to criticism to the effect that this method of construction does not give full effect to the intention of the merchants and shipowners of many nations who helped to frame the code. They deprecate this criticism, taking the view that the intention of the Act and Rules was to modify the previous law in detail and not to supersede it by a self-contained code. They think that the English courts have probably best ascertained the intentions of the parties to shipping documents by following their usual methods. The principles adopted by any other system of laws could not, they suggest, have been applied in construing the statutory Rules, and no doubt it is true that national tribunals would always tend to follow their own system even in dealing with an internationally standardised form of document. The editors of "Scrutton" have preserved the admirably planned form of the work, making only necessary alterations and additions to bring it up to date, without any great increase in size, and the reissue of the book after an interval of six or seven years is welcome.

* "The Contract of Affreightment as expressed in Charterparties and Bills of Lading." By Sir T. E. Scrutton. Thirteenth Edition. By S. L. Porter, K.C., and W. L. McNair. (London) Sweet and Maxwell, Limited. 1931. 33s. net.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

Combines and Rationalisation in Germany, 1924-28. By D. Warriner. (London) P. S. King and Son, Ltd., Orchard House, Westminster. 10s. 6d.

A most interesting and valuable study.

The Pendulum of Progress. By George Young. (London) Oxford University Press, Warwick Square. 7s. 6d. net.

An original, and very readable, essay in political science.

The Theory of Protection and International Trade. By Mihail Manoilescu. (London) P. S. King and Son, Ltd., 14, Great Smith Street. 12s. 6d.

M. Manoilescu subjects the arguments of the classical economist to close examination, and reaches the conclusion that the theory of international trade, upon which Free Trade doctrine is based, is invalid.

Prosperity Problems. By Arnold G. Dana. (New Haven, Conn.) Arnold G. Dana, 300, Livingston Street.

An examination of prosperity and depression in the United States which leads to the conclusion that drastic measures are needed in that country on lines similar to those whose adoption we are urging for Great Britain.

Prices and Production. By Friedrich A. Hayek, with a foreword by Lionel Robbins. (London) George Routledge and Sons, Ltd. 6s.

A very important contribution to the study of monetary influences in the trade cycle.

The Cost of Living in the United States, 1914-30. (New York) National Industrial Conference Board, Inc., 27, Park Avenue.

A study which opens with an interesting chapter on methods of measurement.

Coal Tar. By A. R. Warnes. Second edition. (London) Sir Isaac Pitman and Sons, Ltd., Parker Street, Kingsway. 3s. net.

A short non-technical account of the origin and uses of coal tar.

Mitteleuropäische Kartelle im Dienste des industriellen Zusammenschlusses. By Elemér Hantos. (Berlin) Organisation Verlagsgesellschaft M.B.H. Leipziger Strasse, 115-116.

A discussion of the possibilities of international cartels as a means to the economic unification of Europe.

Die Kooperation der Notenbanken. By Elemér Hantos. (Tübingen) Verlag von J. C. B. Mohr (Paul Liebeck). Rm. 4.50.

A German discussion of central bank co-operation and the services rendered to it by the B.I.S.

The Banker, September, 1931. (London) Financial Newspaper Proprietors, Ltd., 20, Bishopsgate. 2s. 6d.

Contains articles on "Sterling and the Crisis," and on the "German Banking Situation."

Manchester Chamber of Commerce Handbook, 1931-32. (Manchester) Chamber of Commerce, King Street.

In addition to a list of the Chamber's members, trade indexes of their activities and other useful data, this handbook contains some interesting articles on present-day Manchester.

Savory's Insurance Share Annual. (London) Thomas Skinner and Co., Gresham House. 5s. net.

Contains very full details of some thirty-six companies.

The Stock Exchange.

RUBBER'S DE PROFUNDIS.

SINCE the short-lived boom of 1925-26, the rubber-growing industry's history has been a rake's progress. A few years ago the industry was appealing to the Government to "stabilise" the price of rubber at a "pivotal figure" calculated to give producers a profit of 100-200 per cent. To-day, many companies are more concerned to keep out the broker's man. The extent to which earnings have dwindled in the last few years may be appreciated from our annual analysis of the balance sheets of some 300-350 companies. In the twelve months ended June 30, 1927, these showed average earnings per ordinary share of 29.1 per cent. In 1927-28 the ratio was 15.4 per cent.; in 1928-29, 8.4 per cent.; in 1929-30, 8.0 per cent.; and in 1930-31, 1.4 per cent. Some 229 reports issued since the beginning of 1931 actually show an average net loss of 0.7 per cent. Six years ago Stock Exchange clerks were completing transfer forms in the small hours; to-day, few rubber shares have an effective market at all. According to the index of *The Investor's Chronicle* (December 31, 1923 = 100), representative rubber share values have fallen from 248 at the end of 1925 to 30 to-day. In 1925-26, the London spot price of ribbed smoked sheet touched 4s. 9d. a pound; to-day's price is 2½d.

Unhappily, a commodity designed to protect its users from physical shocks has involved producers in continual trouble and controversy for a decade. The adoption of the Stevenson Restriction Scheme in 1922 started a division of opinion between planters and consumers which became acute when, in 1925, refusal to abandon the scheme in the face of famine prices brought in the United States as a formidable adversary. Subsequently, the abrupt termination of restriction by the British Government in 1928, when this decision had lost its diplomatic value as a graceful act, left the industry to face the consequences of a vast increase in productive power, both from "plantation" and "native" sources, on the eve of a world-wide depression destined to fall with particular severity on raw material producers. Rubber prices have now fallen to a level at which strong concerns cannot make ends meet, even after a reduction in costs which a few years ago would have been regarded as fantastic. The rapid accumulation of world rubber stocks has attested the excess of production over contemporary world demand. Yet the weaker producers have persistently maintained their output pending the

complete exhaustion of their working capital or the realisation of vague hopes of some new restriction scheme, and a ruinous price level has produced no proportionate decline in production.

The story of the last few years is epitomised in the following table:—

(FIGURES IN THOUSAND TONS, UNLESS OTHERWISE INDICATED.)

* U.S.A., United Kingdom, and Singapore, Penang, etc.
† January to June, 1931.

Business depression in the United States has hit the rubber trade very badly. That country has accounted for over 60 per cent. of the world's rubber consumption during the last five years, about three-fourths of its takings, in normal times, being absorbed by the motor tyre industry. The world's rubber consumption would have overtaken production by the middle of this year, even though rubber supplies had remained at the 1929 level, if American consumption had but maintained the average 1926-29 rate of growth. If, concurrently,

* Fifteen months.

consumption outside the United States had continued to rise at the same rate as in 1926-29, world consumption would have overtaken production by August, 1930. The immediate causes, therefore, of the industry's present plight are a world depression which has sharply reversed a rising trend of consumption, and the inability of the producing side of the industry to adapt itself to the new circumstances.

Rubber shareholders to-day must ask themselves two questions. How far are the resources of their respective companies adequate to weather the economic blizzard? What conditions are likely to apply when more "normal" times return? The answer to the former question depends on the strength of the internal finances of each company. The figures at the bottom of the previous page show the position of some of the best-known concerns.

If mere capacity to survive is the best criterion of the contemporary worth of a rubber investment (as in the case of many companies it undoubtedly is), columns (5), (6) and (8) of the table deserve close consideration by shareholders. These show the balances of liquid funds and the rate at which the latter are being consumed. If "survival power" is assumed, and attention is concentrated upon probable profit-earning capacity after the slump, column (7) has a special relevance.

The figures reveal that, even among the relatively large concerns, surprisingly wide differences exist as regards estate productivity and profitability. If rubber is destined, eventually, to regain a price level, say, of one shilling, these differentials will be of relatively minor importance. As such a price, however, would release rubber supplies from vast unsurveyed "native" areas, which constitute an untapped reserve against any tendency of quotations to run away, the "normal" price level of the future is much more likely to be around 6d., or some other figure which the whole industry, a few years ago, would have condemned as ruinously low. Some companies could undoubtedly operate profitably on such a basis. Adversity has recently produced a remarkable lowering of costs (though not infrequently part of the reduction represents a mortgaging of future productive power), and a minority of estates might be able to operate at an "all in" cost figure of 4d., even with their present organisation.

For the great majority of producers, however, such a selling price could only be profitable given far-reaching changes in methods and outlook. There is force in the oft-repeated contention that the industry includes too many small, high-cost European producers, but recent research appears to show that while, on individual estates up to about 5,000 acres, production costs tend to vary in inverse proportion to the size of the estate, beyond this figure there is a much less variation in costs than has so far been assumed. Situation, communications, etc., naturally count for a good deal.

The upshot is that amalgamation of small units, indispensable as it may be, is no magic talisman for the salvation of the industry. Forward-looking opinion, in fact, is beginning to ask whether rubber plantation is not entering upon an entirely new phase in its evolution. Originally a "wild" product, rubber entered on the first major stage in its development when Sir Henry Wickham brought the seeds of the *Hevea Brasiliensis* from South America and laid the foundations of the present estate industry of the East. If the latter stage, in its turn, should prove non-permanent, historians will find in the native grower of the East the main agency of its overthrow. Two years ago a committee of the Rubber Growers' Association found that Asiatics controlled approximately half the then total acreage, and European producers must face the implications of this clear demonstration that rubber-growing is not exclusively a "white man's industry." It may well be that the estate company of the future, while exploiting (of which access to large supplies of capital may be one of the most important), will take a leaf out of the native's book, and aim at low costs based on closer planting, high yields of as much as 1,000 pounds from a low capitalisation per acre, much less thorough clearing of the ground—since

the rubber tree has shown itself capable of giving immense yields for long periods even under semi-jungle conditions—and concentration on bud grafting and propagation generally from the most prolific strains.

Reorientation on these lines may be gradually effected by individual producers, utilising their own financial resources, but the process must naturally be protracted. The future alone will show whether the change-over to mass-production may be short-circuited by the intervention of some wealthy outside agency, as has happened in the case of the Chilean nitrate industry, in which the Guggenheim Brothers have professed to make reorganisation not exactly a "banker's proposition," but a practicable speculative risk for outside capitalists. In the meantime investors may deem it prudent to set their faces against all proposals for the re-imposition of restrictionist policy, in any shape or form, which would, *pro tanto*, impede the inevitable process of internal readjustment.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
September 8.	September 10.

OWING to nervousness regarding the possible proposals of the Government, the London Stock Exchange opened in a subdued atmosphere. Early in the week little assistance was gained from the better tone of sterling following the announcement regarding the conclusion of further credits, the "House" being dominated rather by financial and political uncertainty. The acquisition of more gold by the Bank, similarly, failed to arrest the downward movement of values. On Wednesday, however, prices took a turn for the better on the intimation from an unofficial but reliable source that there would be no compulsory conversion of War Loan, and no special tax on fixed-interest securities.

Anxiety was undoubtedly caused by the nature of some of the selling of Gilt-edged early in the week. Jobbers reported an entire lack of support, and War Loan actually fell below par. The succeeding recovery in all British Government securities was the more welcome. Colonial stocks were listless, India loans easing on reports of a private internal issue. Australians failed to respond to announcements of the success of the conversion issue.

Foreign stocks were heavy following the announcement of the suspension of sinking funds in Brazil, discussed in an Investment Note on page 443. German bonds were slightly easier pending the opening of the Berlin Bourse on Tuesday, small losses occurring despite the reduced Reichsbank rate.

Home Rails were a listless market. Scattered selling occurred of Undergrounds. Later, under the lead of Great Westerns, the market recovered slightly in sympathy with Gilt-edged securities. Argentine Rails were easier on the relapse in the exchange and the unsatisfactory trend of traffic figures.

Some heavy marking-down of industrial shares was recorded in the first part of the week, but the market later took on a somewhat healthier appearance. Swedish Match improved, following a reassuring statement by Kreuger and Toll, but later sagged on fears that some countries might seek to change the terms of the group's various concessions, to which the rescission of the match monopoly by Ecuador appeared to give point. The fall in the group's shares is dealt with on page 442. Brazilian Traction lost ground. Brewery and tobacco shares were dull on the inevitable bogey of new taxation. Heavy selling of newspaper shares was ascribed in part to irresponsible rumours of an advertisement tax. Electrical shares remained heavy throughout, but modest support was forthcoming for engineering shares. Motors weakened on the publication of the Singer report (analysed on page 444), Leylands later recovering slightly, while Rolls-Royce and Thomas

Tilling continued to lose ground. Rayons and textiles were listless. Stores and provisions hardened after a slight recession. Slight bear recovery was reported in Dunlops and Imperial Chemical. Bank and insurance shares reflected the movements in the Gilt-edged market.

The Oil market showed incipient signs of life, but could not maintain its improvement in the face of Paris and Amsterdam selling. Rubber shares moved in small compass, the commodity remaining at a "record" low level. The Tea market remained steady, with a slightly increased inquiry.

Mining shares recovered slightly following the improvement in other markets, Kaffirs responding to Johannesburg purchases. "Johnnies" had an easy tendency. Some attention was given to Daggafontein. "Chartered" remained out of favour. Tin shares were neglected, the commodity suffering a reaction on the disappointing August statistics.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The stock markets have had a weak tone in the absence of material and moral support. The continued weakness of cotton and wheat (particularly the former) have had a bad effect on sentiment. Fears regarding the dividend prospects of individual trading concerns are becoming accentuated. The hopes held out of a planting "holocaust" in the cotton belt appear doomed to disappointment, day "in the cotton belt" apparently, not regarding the officials at Washington, apparently, not regarding the proposition as feasible. Government bonds have been firm on the details of the new Treasury issue, which revealed the intrinsic tactical strength of the Treasury's position. Share dealings have remained greatly restricted, apart from intermittent and half-hearted rallies in selected public utility, electric and oil issues. Confidence in the outlook for railroad stocks has been shaken by the announcement that the Lehigh Valley Railroad, is now under the control of the Pennsylvania Railroad, passing its dividend. It is feared that the Pennsylvania Company itself may decide next month to reduce its dividend from the present \$3 annual basis. It is understood that the hearings of the railroads' application for increased freight rates will conclude shortly. The possibility is canvassed of an increase of 10 per cent. in the rates for perishable goods, pending a decision on the general question. Oil production continues to fall, thanks to the enforced shutdown in Oklahoma and East Texas, and gasoline stocks have again shown a decrease, but oil shares are slow to respond. Some selling of motor shares has followed a big cut in selling prices by the Graham Paige Company. Retail sales of automobiles throughout the country, in July last, were 22½ per cent. below July, 1930. Merger negotiations between Sears, Roebuck and Montgomery Ward have been dropped, the board of the latter

regarding the offer of one Sears, Roebuck share for every 2½ Montgomery, Ward shares as inadequate.

SALMON P. CHASE, Secretary of the U.S. Treasury under LINCOLN

Corporate Trustee Service

MATERIAL benefits are gained by appointing The Chase National Executors and Trustees Corporation to act as executor and trustee under your will.

These include continuous corporate life, varied financial experience and unquestioned responsibility.

Moreover, as a subsidiary of The Chase National Bank of the City of New York, the extensive facilities and wide experience of the bank as a whole are at the disposal of the executive officers of this corporation in the administration and settlement of estates; a decided advantage particularly where the estates include American or other foreign assets.

All the directors of this Corporation are officers of The Chase National Bank.

Write to the Management for full particulars.

THE
CHASE NATIONAL
EXECUTORS AND TRUSTEES
CORPORATION, LTD.

10 MOORGATE, LONDON, E.C.2

A subsidiary of The Chase National Bank of the City of New York.

LONDON ACTIVE SECURITY PRICES AND YIELDS.

NOTE—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating the yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

INVESTMENT NOTES.

Stock Exchange Values in the Slump.—Investors who have been disquieted by the continued weakness of Stock Exchange values, recently, would be well advised to study the speech made by Baron Bruno Schroder at the general meeting of the Continental and Industrial Trust on Thursday, August 27th last. Baron Schroder, a merchant banker of the widest international investment experience, referred to the depreciation in the security investments of the Trust, which, on May 31st last, were carried at £3,506,931, and showed a depreciation in value of £905,000 as regards quoted securities and £50,000 as regards unquoted investments. He expressed a view regarding the basis of present Stock Exchange values which has been frequently canvassed in the City of London, but is less widely known outside. His remarks may be aptly illustrated by the following figures of the Actuaries' Investment Index:—

Group.	Price Index.			Average Yield		
	Dec. 31st, 1928.	July 28th, 1931.	Aug. 25th, 1931.	Dec. 31st, 1928.	July 28th, 1931.	Aug. 25th, 1931.
British Government....	100	103.3	102.2	4.51	4.37	4.41
Home Corporation.....	100	106.0	102.0	4.69	4.42	4.59
Industrial debenture....	100	96.3	94.8	5.25	5.66	5.75
Industrial preference....	100	84.2	80.9	5.77	6.40	6.78
Bank ordinary.....	100	86.2	80.6	5.19	5.82	6.21
Insurance ordinary....	100	85.4	78.7	3.88	4.88	5.30
Investment Trust ordinary.....	100	75.4	71.8	4.31	6.23	6.53
Industrial (productive) ordinary.....	100	56.0	54.8	4.56	6.37	6.53
Industrial (distributive) ordinary.....	100	52.2	48.3	5.39	7.06	7.39
Industrial (miscellaneous) ordinary.....	100	51.0	47.0	5.39	7.36	7.91
Industrial ordinary (all classes combined)....	100	52.9	49.8	5.14	6.98	7.39

The table suggests that the decline in the values of all securities has been accentuated in the last few weeks. To-day, British Government securities yield approximately 4½ per cent., good industrial debentures 5½ per cent., sound preference shares 6½ per cent., and representative ordinary shares anything from 6½ to 8 per cent. These figures are eloquent of Stock Exchange depression,

but it is open to serious question how far they are based on "real" values. As Baron Schroder has rightly pointed out, they must be interpreted in the light of two conditions. First, jobbers, during a prolonged depression, have marked down prices all round in order to protect their books. In many cases, if an attempt were made to buy even moderate quantities of stocks at present levels, a sharp marking up would ensue. Secondly, forced sales have, proportionately, affected high-grade to a greater extent than low-grade securities. Holders, requiring cash to meet outside engagements, have found it easier to realise on the best securities at a time when the worst have been, in many cases, practically unsaleable. From these premises, Baron Schroder draws the conclusion that quoted prices to-day are well below the intrinsic value of many stocks, and that a substantial recovery in the prices of high-class securities is inevitable as soon as confidence is re-established. With traditional caution, however, Baron Schroder refrains from committing himself to any prophecy as to the date of such a movement.

Stock Exchange Saturday Opening.—An official notice, giving full details of proposed alterations in Stock Exchange rules and other changes consequent upon the decision to open the "House" on Saturdays, was posted in the Stock Exchange on Tuesday last. The rules altered are those in force before the war-time decision to close on Saturdays was taken in 1917. The chief matter of public interest is, of course, the time of opening and closing the London banks. Although, as yet, no official intimation has been given, it is believed in banking circles that these institutions may extend their Saturday closing time from noon to 12.30 p.m. In the meantime, under the new Stock Exchange arrangements, delivery of securities is to begin at 10 a.m. On the Saturday before Contango Day options must be declared before 11.45 a.m. A new clause in the rules is that, "unless otherwise arranged, no delivery of securities under the headings, 'British Funds,' 'Dominion, Provincial and Colonial Government Securities' and 'Corporation and County Stocks' shall take place on Saturdays." The latest time for the delivery of other securities will be 11.30 a.m. The new hours of opening are to be 9.30 a.m. to 12.30 p.m., and bargains will be marked from 10.30 a.m. till noon. The necessary alterations in the Rules, which have been passed by the Committee, will come up for confirmation on September 7th.

Kreuger and Toll.—The rapid and disquieting fall in the securities of Kreuger and Toll (the "B" shares of which have recently been down to 12½, against 27½ earlier this year), and of the securities of other companies in the group, has produced reassuring statements from the company's fiscal agents in London and New York, and from Mr Ivar Kreuger himself. The former have stated that the total net profits of Kreuger and Toll, of a "recurring" nature, for the first half of 1931, are approximately Kr. 52,238,000, against Kr. 56,716,800 for the first half of 1930, and that the total "recurring" profit for the whole year is estimated at Kr. 89,550,000, against Kr. 93,791,000. In no case has there been any default, delay or difficulty as regards the service of the company's holdings of Government bonds. Mr Kreuger himself has stated that no major change has occurred in the condition of his company. The position is entirely liquid, the company's debts, in fact, having been reduced by about Kr. 75 millions in the course of this year. These statements have sufficed to allay immediate uneasiness, the "B" shares having recovered to 13½. In a period of international dislocation rumour must inevitably concern itself with the position of a company which, at the end of last year, held Kr. 420 millions of foreign bonds, has been associated with large loans to Germany, and, before February, 1933, must find \$30,100,000 in cash for a loan in connection with the Polish match monopoly. One-third of this last amount falls due next February. The world market, admittedly, is closed to further Kreuger financing at present, but, even if the arrangement fell through, the company would still retain the Polish match monopoly

until 1945. A sufficient explanation of recent selling of Kreuger and Toll securities can probably be found in the "liquidity" crisis in Europe. The suggestion that large institutional investors in Great Britain have been unloading in semi-panic may be dismissed, since the London market was not at all a heavy seller until the last few days of the collapse, the main pressure coming chiefly from Zurich and Stockholm. Swiss liquidation may have partly originated in organised bear activity, which Mr Kreuger naturally deplores, but its main cause was undoubtedly anxiety to obtain liquid resources after the "freezing up" of assets in Germany and Central Europe. This tendency would seem to have been even more potent in Stockholm. Sweden, in relation to her size and population, is a very heavy creditor of Germany. Figures given in the report of the Wiggan Committee on Germany's credit situation (published as a supplement to the *Economist* of August 2nd last), show that the total short-term indebtedness of twenty-eight German banks to Sweden in the middle of last July was as much as Rm. 101 millions. The freezing up of these balances occurred at a time when the Swedish banks themselves had abnormally large liabilities outstanding to foreign countries. The desire of banks in other countries to re-establish their liquidity after the German crisis produced a heavy withdrawal of foreign balances from Sweden. During July foreign deposits with the Swedish commercial banks declined from Kr. 303 millions to Kr. 212 millions. The foreign currency reserve of the Bank of Sweden, naturally, was subjected to severe pressure. At the end of last year the Bank held about Kr. 400 millions of foreign currencies. By June 30th last this figure had been reduced to Kr. 295 millions, and on August 22nd it was no more than Kr. 149 millions. Under these conditions heavy realisation of the leading Swedish industrial securities was inevitable, particularly as regards those with a wide international market. Liquidation has resulted not merely by way of realisation by the Swedish banks of their own share holdings, but of the calling in of loans secured by Stock Exchange collateral. Whether Kreuger and Toll is likely to be subjected to pressure from foreign countries for an adjustment of the terms of its various concessions, time alone will show. Meanwhile, however, the fall in its securities may be ascribed mainly to temporary causes unconnected with its own position, and, by the same token, an improvement may be looked for with the settlement of Europe's monetary difficulties.

Brazilian Debt — Redemption Suspended.—Unwelcome, if not entirely unexpected, news reached the Stock Exchange on Monday last when it was officially announced that the Brazilian Government was temporarily suspending the redemption of foreign debts, except the two Funding Loans and Coffee Loan of 1922. This was the more surprising since Brazilian issues had last week been supported in view of the usual September sinking fund operations, and confidence was generally increasing by reason of the Government's acceptance of Sir Otto Niemeyer's recommendations. Prices were immediately lowered, and dealings for a time became practically impossible:—

	Aug. 28.	Aug. 31.	Sept. 1.
Brazil 4½% 1883	49	45	45
Brazil 4½% 1888	49½	45	45
Brazil 4½% 1889	33½	29½	30
Brazil 5% 1895	41	37½	38
Brazil 5% Funding, 1898	77½	76	75
Brazil Rescission	42½	35	35
Brazil 5% 1903	64	60	58
Brazil 4% 1910	30	27½	30
Brazil 4% 1911	57	50	45
Brazil 5% 1913	43	37½	40
Brazil 5% Funding, 1914	59	57	57½
Brazil 6½% 1927	55½	50	50
San Paulo 7½%	60	55	55
San Paulo 7% (Coffee)	78½	74	75½
Brazilian Traction	\$17½	\$16½	\$16
Leopoldina Railway	13½	12½	12

The Brazilian Government's announcement declares that, owing to the fall in the milreis, it is unable to find the necessary foreign exchange to provide for the full service of its external debt. It asserts that its decision will not impede the immediate execution of the plan submitted by Sir Otto Niemeyer, of whose advice it has had

the benefit when deciding upon its present action. With the exception of the two Funding Loans and the 7½ per cent. 1922 Coffee Security Bonds, all sinking fund allocations have been temporarily suspended as from September 1, 1931. In the case of the 6½ per cent. 1926 (sinking fund) Dollar Gold Bonds the September application has been paid to the trustees, and redemption will be temporarily suspended from October 1st next. It is hoped, however, to continue the interest payments on external loans. Sinking fund applications will not be received until such time as the Government considers that neither the exchange nor the Niemeyer plan will be adversely affected. It will, however, pay into a bank, in Brazil, such sums, in milreis, at the rate of exchange of fourpence, as will provide the several sinking fund payments when they become due. Should representatives of the bondholders so desire, the Government will be prepared to destroy the sums, in milreis, referred to, and employ the amount in the redemption of internal bonds.

Cotton Trade Prices and Profits.—In view of the deplorable conditions at present existing in the cotton trade, the last report of the United States Agricultural Bureau on this season's crop of raw cotton caused some dismay to companies whose business compelled them to hold large stocks of raw material. The report estimated that there would be a crop of 15,584,000 bales this season—a figure some 1,784,000 bales above the previous market estimate. Already the carry-over of cotton from last year amounts to 9,000,000 bales, and, as the total world consumption is very little more than 11,000,000 bales per annum, it is obvious that there must be a glut for some little time. The position is the more serious as prices had already slumped heavily during earlier months. Our index number shows that, between August, 1930, and August, 1931, the prices of a representative grade of American cotton declined by 40½ per cent., of cotton yarn by 31 per cent., and of cotton cloth by 22 per cent. It is scarcely surprising, therefore, that many textile companies have lately shown considerable declines in the monetary value of their stock-in-trade, prominent in this connection being large concerns like J. and P. Coats, Bleachers, Crosses and Winkworth, Fine Cotton Spinners, and Joshua Hoyle. The following table gives a list of some of the principal companies affected, with the extent of increase or decrease in profits and stock-in-trade over the past three years:—

(000's omitted.)

Pawsons & Leaf	2	135	...	+2	21	...

The cumulative decline in the value of stock-in-trade may be due to reduced volume as well as reduced value per unit, but the latter factor has undoubtedly played a significant part in the progressive drop in earnings shown by practically every company in the above table. The seriousness of the situation is brought home by the remark of Mr Herbert Lee, chairman of the Fine Cotton Spinners, that: "The fall of every penny per pound in the minimum weight of stock we are compelled to carry to enable us to conduct our business is equivalent to well over £100,000." Fortunately, stocks in

Lancashire are not unduly heavy, but difficulties may arise in the completion of deliveries against old contracts, since producers will have to deliver goods which may appear exceedingly dear to buyers.

Singer and Company.—In view of the desirability of strengthening the company's resources, the directors have decided not to recommend a dividend on the ordinary shares, but instead to increase the general reserve fund to £150,000 by the addition of £61,463. Last year the ordinary dividend was paid in preference shares at the rate of one new £1 7 per cent. preference for every seven ordinary. This year's decision leaves a substantial surplus of floating assets over current liabilities:—

	Year ended July 31,		
	1929.	1930.	1931.
	£	£	£
Paid-up capital:—

* In preference shares.

There has been a sharp drop in net profits, this year's figure of £72,792 (after adding back £30,000 from income-tax reserve) comparing with £144,266 for the previous year. Expenses and advertising costs have increased, the total, at £94,011, being over 50 per cent. above last year's figure. The report declares the present market price of all the shares is "convincingly untrustworthy." This may be true, but the figures given in the company's own report scarcely offer prima facie evidence of its validity. The Stock Exchange quotations for the 7 per cent. preference and ordinary shares are 11s. 3d. and 8s. 9d. respectively, against the chairman's computation of their "assets value" at 20s. and 33s. 7d. respectively.

Eastwoods, Limited.—The accounts of these brick manufacturers and dealers in builders' materials for the year to March 31, 1931, broadly confirm the optimistic progress report issued last February, which complained of low selling prices, but declared that the company's turnover as a whole had been increased. The full report shows that profit, after depreciation, was £78,431, a decline of only £9,670, as compared with the previous year. The company, however, has again made generous provision for bad and doubtful debts, and after various other charges net profits come out at £58,825, against £68,240.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached: To Publisher, "Economist Newspaper Ltd.," 8, Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

Name.....
Address.....

Although earnings would have covered a repetition of the final dividend (7½ per cent.) paid a year ago on the ordinary, the directors have prudently reduced the payment to 5 per cent. (making 10 per cent. for the year, against 12½ per cent.):—

	Year to March 31,		
	1929.	1930.	1931.
	£	£	£

To reserve	20,000	20,000	7,500
To investments reserve	...	...	10,000
Inc. or dec. in carry-forward	+110*	+240*	+825

* £1,000 directors' remuneration subsequently charged.

The company's various brickworks are fully employed, but the price of building materials has fallen. The ordinary shares, at 20s. (including final dividend) yield 10.5 per cent. Of the company's chief subsidiaries, Eastwoods Cement was affected partly by acute competition in the cement trade and partly by forced litigation at a period when sales tonnage was at its highest. The matters in dispute have now been satisfactorily settled, however, and the accounts show a balance for the year to March 31st last, after writing off all expenses, of £17,587, against £24,634 last year. Conservative policy, again, is reflected in a cut in the dividend from 7½ per cent. to 6 per cent. The constructional programme of another subsidiary, Eastwoods Flettons, has made further progress, the first section of the second half of the works for the production of Fletton bricks at Kempston Hardwick, Beds., being nearly completed. Profits after depreciation were £14,224 last year, and a dividend of 7 per cent. was paid on the preferred ordinary shares.

Stock Conversion Trust Scheme.—Shareholders in the Stock Conversion and Investment Trust have not been taken unawares by the reorganisation scheme made public this week. At the annual meeting in March last the chairman made it clear that the company was in a serious position, and that the banks, which at that time held loans to the total of £236,000, had agreed to refrain from calling in their credits only on condition that a scheme for reducing bank indebtedness was put before shareholders. The scheme which now appears provides for the liquidation of the old company and the formation of a new one with a capital of £285,000. On liquidation the whole of the £1 reserve liability of the £1 2s. 6d. ordinary shares will be called up and the proceeds used for the purpose of discharging the costs of liquidation and reconstruction, and of reducing the bank debt, which, since the publication of the last balance sheet has dropped to £183,932. The banks have undertaken to accept an equal nominal amount of 4 per cent. debenture stock of the new company in discharge of any balance remaining. At the same time, for each £3 7½ per cent. cumulative preference stock, holders will receive five ordinary shares of 2s. each in the new company; for every nine annuity shares of 1d. each, two ordinary shares of 2s. each; for each £10 ordinary stock, nine ordinary shares of 2s. each; and for every £1 paid up by the ordinary shareholders of the old company on winding up, one second preference share of £1 and, in addition, one ordinary share of 2s. for every £10 paid up. The loan capital of the old company will be satisfied by allotments in the new company, for each £100 stock, as follows:—

Holding in Old Company.	Holding in New Company.
5½% participating convertible 15-year debenture stock.	£100 4% debenture stock. 50 first preference shares. 50 ordinary shares.
4% debenture stock	£100 4% debenture stock. 25 first preference shares.
5% debenture stock	£100 4% debenture stock. 31 first preference shares.
5½% debenture stock	£100 4% debenture stock. 37 first preference shares.
5½% debenture stock (receiving 5½% interest).	

The directors state that, if the company were forced into liquidation, the assets, together with the proceeds of the liquidation, would not be sufficient to call on the ordinary shares, would not be sufficient to satisfy in full the claims of the debenture stockholders, the banks and the creditors. It is understood that, for the first three years, interest on the debenture stock will be paid only in so far as the profits for the year allow, any interest not paid being carried forward as a charge on future profits.

R. E. Jones's Poll Result.—The announcement that the required three-fourths majorities for the adoption of the scheme of amalgamation between Slaters and R. E. Jones were not forthcoming at the polls taken at the class meetings and the extraordinary general meeting of R. E. Jones, held on August 24th last, throws the affairs of this company once again into the melting pot. The extraordinary general meeting and the 6½ per cent. preference shareholders' meeting of Slaters, called for September 9th, have been cancelled. On the five resolutions submitted to the extraordinary general meetings, votes in favour constituted majorities of approximately 55 per cent. It remains to be seen what steps will now be taken to rescue the company's fortunes from their present deplorable condition, and whether Mr R. A. R. Field, chairman and managing director of both R. E. Jones and Slaters, will find means of overcoming the difficulties in the way of effective working agreement between the two concerns, which were described as the *raison d'être* of the amalgamation scheme.

Canadian Dealings in American Securities.—Our Ottawa correspondent writes:—Business on the Canadian stock markets is usually at a low ebb in the holiday months of July and August. This year, however, the seasonal contraction has reduced trading to negligible dimensions. The total of shares traded in Montreal in July was the lowest recorded for any July since 1924. In some quarters, indeed, there is considerable pessimism about the future of the Canadian stock exchanges. A substantial number of Canadian companies whose shares were formerly popular market counters have been absorbed by large American corporations. The City Dairy Company of Toronto, for example, has been taken over by the Borden Company of New York. Shareholders in these cases have been given shares of American corporations in exchange for their former securities, which have thus vanished from the Canadian lists. Frequently the shares of the American corporations are listed on Canadian exchanges for the benefit of Canadian holders, but people who deal in them often prefer to operate in the New York market, where the volume of trading is much larger. Further, the depressed condition of other common stocks that there is practically no trading in them. Holders, reluctant to sell at present low prices, are merely sitting tight. It is feared, consequently, that both investors and speculators will come more and more to prefer dealing on the New York Stock Exchange, even though the cost may be higher than in Canada.

Rhodesian Selection Trust.—A feature of the Northern Rhodesian copper industry is its insatiable appetite for capital. Following the debenture issues of the Rhokana and the Rhodesian Anglo-American comes the Rhodesian Selection Trust with a proposal for the eventual creation of \$12,500,000 debentures in U.S. gold currency, of which \$7,500,000 are to be issued forthwith. The latter amount will cover the advances up to £1,500,000 agreed to be made by the American Metal Company, Messrs Cull and Company, and the Lehman Corporation. At the date of the balance sheet, June 30th, £1,093,750 had been received. The debentures are to carry interest at 6 per cent., free of British income tax at the standard rate, and are to be redeemable at 105 per cent. on or before December 31, 1946. They will also carry conversion rights. The new agreement also contains provisions enabling the company

to obtain further cash advances up to a total of £300,000 against the collateral security of debentures forming part of the balance of \$5,000,000—which otherwise may be issued "on such terms and conditions as the company shall determine." At the date of the balance sheet, cash and debtors amounted to £41,900, while there were creditors for £13,200. The company's twenty-one special grants are now represented by a two-thirds interest in the Mufulira Copper Mines, to which they were transferred early this year. Interests in two other areas figure at the nominal amount of £1. Other investments at cost, £64,100, represent quoted securities having a market value of £62,600, and an unquoted investment representing the company's interest in the Northern Rhodesia Power Corporation. The ore reserves in the Mufulira group of properties are estimated at 162,000,000 short tons, averaging 4.14 per cent. copper, the great bulk being in the more easily treated form of sulphide. Production here is expected to begin early next year; but "owing to the general copper situation," only one unit of the mill—capacity 1,500 tons daily—is to be treated for the time being. This would mean an output of possibly 10,000 tons yearly. With present large producers seeking a scheme for restriction, additional output from a fresh source is decidedly superfluous at the moment.

Proposed Platinum Amalgamation.—Our mining correspondent writes:—The exploitation of platinum in the Transvaal has furnished one of the outstanding fiascos of modern times. The shares of companies with ground containing deposits of the metal were at one time run up to fancy prices, among them being those of the Potgietersrust Platinums. This company, as the outcome of various absorptions and issues for cash, has a capital of nearly £2,000,000 in 5s. shares, now quoted at about 9d. Operations in the period from February 1st to September 30, 1930, resulted in a loss of £16,826; and at the date of the accounts £98,500 was owing to the parent company, Johannesburg Consolidated Investment. The Potgieters-

THOUGHT

Industrial Great Britain was created by the man of thought and imagination, and yet few of us to-day wish to take the trouble to think deeply.

The Banker, and those with treasure to protect, have every reason to give thought to the degree of protection upon which they rely for security, because the modern burglar, by giving thought to his job, has become a great danger.

During the last 10 years he has made greater progress in his method of attack and has been more successful than in the previous 50 years, while the ingenuity shown in achieving his success proves that the modern burglar is an educated man possessing a knowledge of engineering.

The Chatwood Security is the result of continued thought arising from the experience of almost three-quarters of a century.

rust company had been conducting operations at two different sections; but, owing to the fall in the price of platinum, it was found that it could not be worked at a profit. The mine was accordingly shut down last May, the plant being either disposed of or transferred to the Rustenburg section, where work was continued on a restricted scale. During the quarter ended June 30th 5,786 ounces of crude platinum metals and gold were produced. On June 30th the loan from "Johnnies" amounted to £106,000, while the value of the platinum group metal unrealised was estimated at £50,300. A circular to the shareholders now intimates that negotiations have been proceeding for some months with the view to the formation of a company to stimulate the uses and regulate the marketing of platinum. As the quota which can be allotted to South Africa would be insufficient for two properties to be worked as separate units, it is proposed to amalgamate the company's Rustenburg mine with one belonging to a purely South African undertaking. A company is to be formed to take over the two mining properties, the other assets being retained by the respective existing companies. Since some measures are obviously required to deal with the position brought about by the disastrous drop in the price of platinum, the proposals will doubtless obtain the approval of shareholders.

New Capital Issues in August.—In the following table we show the new capital raised in London by issue to the public or to shareholders, in August, and in recent years:—

Monthly Average.	(000's omitted)				Total.
	United Kingdom.	British Possessions.	Foreign Countries.		
	£	£	£	£	
1924	7,051	6,023	4,370	17,444

Aug., 1931	750	740	Nil	60	1,550

During the month of August sales of National Savings Certificates exceeded encashments by £750,000. Compared with the corresponding issue of capital last year, the amount of new money raised in London shows a slight increase, but is very much below the figure for July, 1931. The main issue included is an offer of 500,000 £1 shares at par to the shareholders of Associated Portland Cement. There was only one offer to the public—that of the Blue Cross Line, which comprises 80,000 10s. ordinary shares at par and 30,000 £1 preference shares, also at par.

Total	1,006,671	Total	68,496
Net arrivals, 1931, 175.			

GOLD.

The Bank of England gold reserve against notes amounted to £133,341,133 on the 26th ult. (as compared with £133,559,785 on the previous Wednesday), and represents a decrease of £14,284,481.

since December 31, 1930. About £901,000 bar gold from South Africa, together with £76,000 from India and the Straits Settlements, was available in the open market yesterday. There was only a small demand from India and the trade, and £957,000 was taken by an "unknown buyer" at the fixed price of 84s. 10 1/2d. The Bank of England announced later in the day that it had purchased £248,100 bar gold, presumably part of the gold acquired by the "unknown buyer." Further, the bank announced the release of 700,000 sovereigns from "set aside," from which it would seem that the balance of the unknown buyer's purchase had indirectly found its way into the Bank of England holding. Movements of gold at the Bank of England during the week resulted in a net influx of £991,956. Receipts totalled £1,077,452, which includes the above-mentioned items, and also £94,000 in sovereigns from Australia, whilst withdrawals consisted of £75,000 in sovereigns taken for export and £10,496 in bar gold.

SILVER.

Quotations have moved within narrow limits during the past week and business has not been upon an extensive scale. Indian bear covering orders have again been a feature, but have mostly been limited as to price, whilst sellers have shown no disposition to press supplies upon the market. China has been inclined to offer the metal and moderate sales have been effected on American account. At to-day's quotations, 12 1/2d. for both cash and forward deliveries, the market is quiet but the tone uncertain. In our last letter we compared figures issued by the American Bureau of Metal Statistics relating to the world production of silver during the first six months of this year and last year. It may be as well to point out that these figures apply only to the important silver-producing countries, namely, U.S.A., Canada, Mexico, Peru, Australia and Burma, which produced about 87 per cent. of the world's production in 1930. The total figures of the world's production for the first half of 1930 and 1931 would be about 124,000,000 and 99,000,000 fine ounces respectively, which would confirm the drop of 20 per cent. indicated by the American Bureau of Metal Statistics.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 24th ult. to mid-day on the 31st ult.:

IMPORTS.		EXPORTS.	
	£		£
U.S.A.	26,659	Latvia	35,030
Mexico	52,531	Other countries	22,377
Other countries	11,976		
	91,166		57,407

Commercial Reports.

MARKET SUMMARY.

A review of the price movements of the principal commodities during the past week reveals an easier tendency in most markets. There are no signs of an early upward movement. There has been no improvement in the situation of the coal trade, but the hope is entertained that the International Conference of European colliery owners, which at the initiative of the British Central Council, created under last year's Coal Mines Act, is to be held in London this month, will lead to an amelioration in the situation. Transactions in iron and steel, which normally show an increase at this time of the year, continue at a low level. Among non-ferrous metals, tin has again been firm, and while copper has also been steadier, lead and spelter were cheaper. In textile raw materials, cotton, wool, hemp and jute have been easier, and no improvement is reported in the trade in manufactured goods. The depression in the jute industry is well illustrated by the fact that although this year's crop has been estimated at only about one-half of that of last year, prices have not materially recovered. Among cereals, wheat has again shown a downward tendency, but barley, oats and maize are scarcely changed on the week. Among miscellaneous commodities, the outstanding feature is the sharp break in the price of hides. Rubber has declined further, and, in the absence of an improvement in demand, vegetable oils and oilseeds failed to recover.

THE COAL TRADE.

SHEFFIELD.—A good demand for best steams, both for export and home consumption, has become noticeable, and the prices are firm at 17s. 3d. and 17s. 6d. f.o.b. Otherwise, export trade is rather weaker than stronger. Small are in excessive supply. The demand for coal for industry remains sluggish, and a good many users are not taking the full deliveries provided in the contracts. House coal has advanced 2s. per ton from Tuesday. Sales of small fuel were brisk preceding the rise, but have now fallen off. Best ordinary house coal is quoted at 20s. to 22s. at pits. Furnace coke is in poor request with excessive supplies, and some orders have been taken as low as 9s. 6d. per ton at ovens.

GLASGOW.—The dispute between the owners and the colliery and boilermen's association has reached a critical stage. The result of the ballot which the association has taken among their members for acceptance or rejection of the wage reductions imposed a fortnight ago was not known at time of writing, but unofficially it is stated that it will show a large majority of rejection. There is still the hope, however, that the drastic step of a stoppage will be averted. The trade position has shown no great change during the week. Business is perhaps a little better, and the collieries are quoting slightly firmer prices in a number of instances. Washed double nuts are a strong spot. London is still taking an interest in the market for nuts. Shipping prices are approximately as follows (f.o.b. district ports): LANARKSHIRE.—EK best, 14s. 3d.; splint best, 15s. 9d.; splint second, 14s. 14s. 3d.; navigation, 15s.; navigation second, 14s. 6d.; Hartley, 15s. 6d.; steam, 13s. 6d.; trebles,

12s. 6d.-13s.; doubles, 12s.-12s. 6d.; singles, 10s.; pearls, 9s. 3d.-9s. 6d.; dross, 9s. FIFE.—Screened navigation, 17s.; first-class steam, 12s. 3d.; third-class steam, 10s. 9d.; trebles, 12s.-13s. 6d.; doubles, 12s. 6d.; singles, 10s. 6d.; pearls, 9s. 6d. LOTHIANS.—Prime steam, 10s. 9d.-11s.; secondary steam, 10s. 6d.; trebles, 12s. 6d.; doubles, 12s. 6d.; singles, 10s.; pearls, 9s. 6d. Ayrshire.—Unscreened navigation, 16s.; jewel, 17s.; steam, 13s. 6d.; trebles, 12s. 6d.; doubles, 12s.; singles, 9s. 3d.; pearls, 9s. 3d.; dross, 9s.

CARDIFF.—There has been no improvement this week in the state of business on the Cardiff coal market. Inquiries have been very scarce, and collieries have been almost entirely dependent on their contract engagements. The agreement by which France undertook to suspend the operation of the licensing decree during the month of August has now expired, and it is feared that shipments to France during the present month will consequently decline. The hope is entertained, however, that the International Conference of European colliery owners, which at the initiative of the British Central Council created under last year's Coal Mines Act is to be held in London this month, will lead to some amelioration of the competitive position in the European markets. The joint audit for the South Wales coalfield for the three months ended July shows a debit balance of £32,106, equivalent to 82d. per ton compared with a profit of £44,189, or 2.32d. per ton, in the previous month. In these ascertainties, however, certain charges, including interest on overdrafts, &c., are inadmissible, and these are estimated to amount to between 8d. and 9d. per ton. The output in the three months ended July was 9.3 million tons compared with 9½ million tons the previous month; the average pithead proceeds declined from 13/9-25 to 13/8-99, while the cost of production increased from 13/6-93 to 13/9-81. The average wage per man shift worked was 8/11-14 compared with 9/0-53. Current market prices have ruled at the minimum schedule basis for practically all grades, but the trade is awaiting with considerable interest the result of the arbitration on the claim of one of the principal groups of collieries for a reclassification of its coals. The following are the current approximate quotations: Best Admiralties, 20s.; seconds, 18s. 9d. to 19s. 9d.; best drys, 18s. 6d. to 18s. 9d.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steams, 13s. 6d.; coking smalls, 13s. 6d. to 13s. 9d.; cargo smalls, 11s. 6d. to 12s. 6d.; anthracite best large, 36s. to 37s. 6d.; Red Vein large, 22s. 6d. to 27s. 6d.; machine-made cobbles, 40s. to 45s.; French nuts, 43s. to 46s.; stove nuts, 39s. 6d. to 43s. 6d.; rubbly culm, 8s. 6d. to 9s.; foundry coke, 30s. to 36s. 6d.; patent fuel, 18s. 6d. to 20s.; pitwood, 2s. ship, 27s. to 27s. 6d.

IRON AND STEEL.

MIDDLESBROUGH.—Demand does not improve in connection with Cleveland iron and the volume of trade passing continues exceedingly light. Local consumers are only covering their requirements from hand to mouth and continue to use important quantities of inland iron which they are able to buy on much cheaper terms than Cleveland. Trade with Scotch consumers is considerably restricted owing to the keen competition of Continental and Northamptonshire iron, and export business has become almost negligible. Altogether the position is distinctly discouraging and there are no prospects of immediate improvement. Local makers how no disposition to meet the situation by reducing

prices, which they say would entail a loss. The only alternative therefore is to reduce production, which, it is expected, will be done very shortly unless outside competition is relaxed. Only a very small business was reported at Tuesday's weekly market and official prices were again unchanged, viz.: No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; and No. 4 forge, 57s., f.o.b. or f.o.t. In hematite the business coming forward consists of small lots for early delivery, it being almost impossible to tempt buyers to enter into forward purchases of any importance. There are now only four furnaces producing on the Tees, and yet some additions to stocks have been made recently, although not of large extent. It is expected, however, that the current make will be eventually absorbed as the home demand seems to be broadening and production on the West Coast is being reduced. Makers are keen to secure prompt orders and have recently accepted 60s. 6d. for mixed numbers, and this is now considered the market figure for early delivery, but up to 61s. is quoted a few months ahead. In the finished trades the only branch that is busy is that engaged on structural work, all other departments being only partially employed. No new orders of importance have been secured recently and the position is causing anxiety. Prices are generally unchanged. There is no business doing in ore. The price of best Bilbao rubio remains nominally 14s. 6d. c.i.f. for early delivery, the current freight Bilbao-Middlesbrough being about 4s. 3d. Imports of all kinds of ore into Middlesbrough during August totalled 46,958 tons, against 67,563 tons in July and 68,385 tons in June. Coke continues in full supply and is freely offered at 5s. per ton delivered works for early delivery. A trifle less has been accepted in some cases. The furnace of ferro-manganese at Minsdale Works is going out in a day or two, which will reduce the total in blast in the district to 19.

SHEFFIELD.—The dull conditions which have prevailed since the beginning of the year continue and in the heavy branches the depression is exceptionally severe. The local output of steel ingots and castings in the seven months of the present year amounted to 45,300 tons, comparing with 637,800 tons in the corresponding period of 1930. Business in ferro-alloys continues to fall off, causing irregularity in prices, many parcels being offered at severely cut rates. This condition indicates that the call for tool and other alloy steels is poor. One firm, however, has booked an order from Russia for stainless steel of the value of £20,000, and other orders of similar steel from the same source are under consideration. The chief characteristic of local industry to-day is the preponderance of extremely small orders accompanied by requests for immediate delivery. Users have adopted the policy of holding back orders as long as possible owing to the prevailing money stringency. Firms complain that they are now trading under retail conditions but at wholesale profits. The tone of business men is rather less pessimistic and there are a few instances of increased order books.

GLASGOW.—There are no signs of improvement this week, and in the West of Scotland business is exceedingly poor. In no branch of the iron and steel industries does there seem prospects of an immediate revival. There is still only one blastfurnace in blast, and the demand for Scotch pig iron is poor. At the steel plants the situation is much the same as during recent months, orders coming in being sufficient to keep plants employed only at far below output in capacity and making short-time working a necessity at every establishment. There is little business being done in semis, and in this branch the competition from the Continent is severe, prices quoted during the present week showing further reductions. In the sheet trade work is being fairly well maintained. There are numerous inquiries on the market, but the tonnage placed during the present week is rather less than for some weeks past. Prices are keenly cut. At the tube works the position is unchanged. There is no increase in the demand for bar iron or re-rolled steel bars.

CARDIFF.—Conditions in the tinplate trade show little improvement, although at the meeting of the Swansea Metal Exchange on Tuesday the undertone was a shade firmer. It is estimated that the current average price of between 13s. 3d. and 13s. 6d. per box involves a loss of about 9d. per ton, and that it is only the protection of long-period contracts that is saving most manufacturers from heavy deficiencies on their total output. Welsh steel bars are unchanged at £4 12s. 6d. per ton, but foreign bars are being imported in increased quantities as a result of further price reductions. Galvanised sheets are easier at from £3 17s. 6d. to £9 per ton.

OTHER METALS.

TIN.—Following the sharp rise in prices as a consequence of the stricter control of output and the formation of an international tin pool, the market has been quieter, but quotations only slightly receded from the high level reached early this week. According to the London Metal Exchange, the world's visible stocks of tin, including the "carry-over in Straits," at the end of August, at 56,781 tons, shows a decrease of 1,538 tons. Wednesday's official closing quotations for "standard" cash at £118 5s. to £118 7s. 6d. closing quotations for "standard" cash at £119 12s. 6d. on the corresponding day last week. Stocks in London and Liverpool at the end of last week, at 31,591 tons, show an increase of 1 ton on the week.

COFFEE.—This metal has again been dull, and, in the absence of an improvement in demand, prices failed to improve. Wednesday's official closing price for "standard cash" in London, at £32 16s. 3d. to £32 17s. 6d., compares with £32 8s. 9d. to £32 10s. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 22,462 tons, show an increase of 138 tons, while stocks of rough copper, at 1,200 tons, were 50 tons larger.

LEAD.—Whereas a week ago prices were kept up by the reserve of sellers, more liberal offerings during this week caused a setback in

quotations, which, however, acted as a stimulus to buying. Wednesday's official closing quotation for "soft foreign" in London, at £11 1s. 3d. to £11 5s., compares with £11 8s. 9d. to £12 3s. 9d. on the corresponding day last week.

SPELTER.—Although this metal was not offered in large quantities, the demand was too small to prevent a further fall in prices. Wednesday's official closing quotation in London for "good ordinary brands," at £11 8s. 9d. to £12, compares with £11 15s. to £12 6s. 3d. on the corresponding day last week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals the quotations for aluminium and nickel at £85 per ton, and at £170 to £175 per ton respectively, have been maintained at last week's level. The unsatisfactory demand for antimony resulted in a further decline in quotations from £22 10s.-£23 per ton for "foreign" to £22 10s.-£22 15s., and "spot" quicksilver was again reduced from £16 1s.-£16 2s. 6d. to £16 per bottle.

TEXTILES.

THE COTTON TRADE.—Liverpool.—Spot sales for the week August 27th to September 2nd (inclusive) are 29,000 bales, of which 10,060 bales are American, 900 Brazilian, 1,400 Argentine, 2,900 Peruvian, 7,200 Egyptian, 3,750 African, 1,200 East Indian, 350 Russian, and 240 sundries. Imports for the same period are 11,145 bales, of which 2,784 bales are American, 356 Brazilian, 3,466 Argentine, 621 Peruvian, 195 African, 4,182 East Indian, and 541 sundries. Quotations, September 2nd: American Middling, 3-66; Egyptian Fully Good Fair Sakel, 5-65; F.O.F. Uppers, 4-60; Brazilian Fair, 3-71; Peru Good Fair Smooth, 4-01; West African Middling, 3-71, and East African Good Fair, 4-71.

Manchester.—The demand for cotton piece-goods for all markets has continued of retail extent. Some sellers have reported a fair amount of price testing, but sales have been few and far between. Most traders are quite content to mark time and purchase only the barest of requirements, and this attitude is likely to be followed out pending the publication of the next American crop report to be issued on Tuesday, September 8th. China has booked further orders in fancies, but this business is now smaller. Only a scrappy sort of trade has been done for India, chiefly in light bleaching fabrics and fancies. There have been no indications of any revival of demand in dhooties. Buyers for the smaller outlets have purchased from hand to mouth. There has been no change in the position of spinners. The bulk of the American mills are, of course, closed down this week on account of the annual Oldham holidays. Quotations have been a little steadier. Egyptian numbers have been purchased rather more freely, but individual sales have been of small extent. Users do not appear to be afraid of any price advance.

THE WOOL TRADE.—Bradford.—According to our correspondent, the trade awaited with considerable interest the opening results of a new selling season which took place at Sydney last Monday. There is a four days' series of sales this week, and another next week, followed by Brisbane on September 14-17, when 50,000 bales will be available. The Sydney results, indicating a decline of 5 to 7½ per cent. on the best fleece wool and average classes 7½ to 10 per cent.

"THE INVESTORS' CHRONICLE"
20 BISHOPSGATE, LONDON, E.C.2.

compared with the last sale in June, is not too good, and, generally speaking, the home trade feels a little disappointed at the results. Bradford especially expected no decline on average to good wools, but apparently there was little activity on Continental account, Japan and the home trade being the chief buyers. The bulk of the cables give the cost of warp 64's tops at 22½d., average 64's 21½d., or a full 1d. less than what was generally expected. This has led Bradford topmakers to sell forward at a fraction less, and the fact that there are considerable withdrawals indicates clearly that there is far too little buying power on the market to lift faulty, burry carbonising wools. These look like being a drag all through the season. The new clip is reported to be very well grown, very shaggy and sound, but a large proportion is expected to be rather waxy and burry, and it will be these wools that will suffer most. Sydney results do not augur too well for the forthcoming London sale, which opens on September 15. The quantity available will be announced next week, when very adequate supplies are expected. In consuming centres there is only a hand-to-mouth business passing in tops, and prices are barely steady. It will have to be a very good warp 64's top to fetch more than 22d., and it is possible to buy average tops at 21d. for November delivery.

THE JUTE TRADE.—Dundee.—The final forecast of the jute crop for season 1931-1932 has estimated the small crop of 5,550,000 bales, from a revised acreage of 1,858,000 acres, but, though this quantity is only about half of the output of last season, little or no impression has been made on the markets. It has been known for some time that a huge reduction on last season's crop would result, and the position had already been pretty well discounted. Sellers of the fibre had raised their prices, but there is again a disposition to bring them down again. Consuming interest is so small that the raw material market is receiving little support. With a large carry-over of old crop material, there is no fear of any scarcity, so long as trade remains in its present dull state. Improvement seems to be as far off as ever, and production continues to be curtailed to a very great extent, estimated at about fifty per cent. of normal throughout the world. In addition to the carry-over of unsold old crop fibre, there are huge stocks in the hands of consumers. It is estimated that the Indian Mills are carrying five million bales, and consuming centres outside of India 1,500,000 bales. Had the jute grown paid no heed to the propaganda which was circulated amongst them, to grow less jute this season, there would probably have been a decided drop in values. Good First Marks now rule from £18 10s. and Lightnings from £16 15s., August-September, while Daisee assortment is quoted at from £15 5s., and Tossa assortment from £16 15s., October-November. Spinners are showing little or no interest at these rates, which mean nothing but a loss at the return obtainable for yarns and cloth. Jute yarns are very quiet, but spinners have tried to enforce the payment of higher terms for hessian descriptions by quoting 1s. 10½d. lowest for common 8 lb. cops, and 1s. 11½d. for 8 lb. spools, but buyers are refusing to pay more than the recently accepted rates of 1s. 10d. and 1s. 11d. respectively. Other yarns are about unchanged all round. Twist is offered at from 3½d. to 3½d. for 3-ply 8 lb., and sacking yarns are nominal at from 2½d. to 2½d. for 24-lb. welt, and 3½d. for 8-lb. chains. Rove is being sold in small quantities at £18 10s. for 48 lb. and £15 10s. for 200 lb. Fine yarns are very quiet, and carpet qualities, after being sold fairly largely recently, are again slow. Only small quantities of cloth are being bought, buyers have apparently no wish to go forward for supplies. Prices continue unchanged at from 2½d. for 10½ oz. 40 in., and 1½d. for 8 oz., which are the very lowest rates that manufacturers will entertain. Linoleum Hessians and heavy goods are quiet. The Calcutta goods market is easier, after being dearer in sympathy with an advance in raw jute values. Closing rates are 17s. for 10 oz. 40 in. and 13s. 9d. for 8 oz., September, and 17s. 6d. and 14s. 2d. for January-March.

THE GRAIN MARKETS.

WHEAT.—The situation in the principal wheat markets has been steadily deteriorating during the past week. Supply has been far in excess of current demand and prices consequently sagged. The principal factors making for a decline, apart from the heavy visible supply, are the large Russian shipments and reports of an improvement in the European crops because of more favourable weather. In view of these immediate factors, the news of a reduction in acreage in the Argentine and in the United States had little influence on the markets. According to the Washington Department of Agriculture, present planting intentions indicate a decrease in acreage of about 12 per cent. It also appears that the Russian crop has recently suffered from unfavourable climatic conditions, but large shipments and further heavy chartering have had an adverse influence. Quotations: No. 1 Northern Manitoba, Atlantic, ex ship, 24s. 9d. per 496 lbs., as compared with 25s. a week ago; No. 2 Northern Manitoba, Atlantic, ex ship, 23s. 3d., against 23s. 9d.; No. 3 Northern Manitoba, Atlantic, ex ship, 21s. 9d., against 22s.; Rosafé, ex ship, 19s., against 19s. 9d.; Australian, ex ship, 20s. to 22s. 6d., against 20s. to 22s. 6d. a week ago.

WHEAT FLOUR.—In sympathy with wheat, flour has been dull during the past week. North American shipments, at 192,000 sacks, show an increase of 33,000 sacks as compared with the previous week. Of this total, 95,000 sacks were consigned to Europe. Quotations: Straight run, delivered country, 21s. per sack of 280 lbs., as compared with 21s. last week; delivered London, 20s., against 20s. Manitoba patents, ex store, 20s. 6d. to 24s., against 20s. 6d. to 24s., and Australian, ex store, 16s. 6d., against 16s. 3d. to 16s. 9d. a week ago.

BARLEY.—The trade in barley has been quiet, but quotations have generally been maintained, and it appears that buyers hold off the market in the hope of lower prices when Russian and

Danubian shipments become larger. Quotations: "English feeding," f.o.b., per 448 lbs., 20s. to 22s., as compared with 20s. to 22s.; Californian "new" sold at from 34s. to 50s., as compared with 34s. to 50s. last week; "Australian Chevalier" changed hands at 28s. to 32s., against 28s. to 32s. a week ago.

OATS.—The recent improvement in the price of oats has been maintained. World shipments are not excessive at the moment, and consumption in this country has shown a slight expansion. Quotations: "River Plate," landed, 13s. 6d. per 320 lbs., as compared with 13s. 3d. last week; "River Plate," ex ship, 11s. 9d. to 12s. 9d., against 13s.; "Chilean Tawny," landed, 13s. 9d. against 13s. 9d.; English white, per 336 lbs., 20s., against 20s. a week ago.

MAIZE.—The demand for maize has recently shown a slight decrease, but as the volume of shipments from Argentina has also been reduced, prices have been maintained. Quotations: "Plate," landed, 15s. 9d. per 480 lbs., as compared with 15s. 9d. last week; Plate, August-September, new, 14s. 6d., as against 14s. 6d. Yellow maize meal, ex wharf, was quoted £4 15s. per ton, against £4 15s. a week ago.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1930:—

NEAREST FUTURE.	Jan. 2, 1930.	Sept. 5, 1930.	Jan. 2, 1931.	Aug. 19, 1931.	Aug. 26, 1931.	Sept. 2, 1931.
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.	148½	83½	56½	55½	55½	52½
Chicago (No. 2 Winter) —Cents per 60 lb.	130½	82½	79½	48½	47½	45½

The visible supply of wheat in Canada, at 50,954,000 bushels, shows a decrease on the week of 3,419,000 bushels. Supplies a year ago stood at 50,372,000 bushels.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1930-31, 1929-30, 1928-29, 1927-28:—

	1930-1931.	1929-1930.	1928-1929.	1927-1928.
Estimated sales of home-grown wheat—				
1 week to August 29	Owts. 21,500	Owts. 103,890	Owts. 137,370	Owts. 80,132
52 weeks to August 29	4,974,715	9,808,016	9,967,256	11,184,664

Aug. 30, 1930.....	103,890	8,360	29,296	8 3	7 3	6 2

OTHER FOODS.

SUGAR.—The turnover in raw sugar is still dwindling, thus causing further weakness in prices. So far, there is no indication of an early revival in buying. Wednesday's sales of "raws" include "December delivery" at 5s. 7½d. to 5s. 8½d. per cwt., against 5s. 9½d. to 5s. 10½d., and "March," 1932, at 5s. 11d. to 5s. 11½d., against 5s. 9½d. to 5s. 11d. on the corresponding day last week. The movements of raw sugar in London and Liverpool during last week are set out in the table below:—

	Imports.		Deliveries.		Stocks.	
	1931.	1930.	1931.	1930.	1931.	1930.
Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
London ...	43	300	946	2,627	25,214	24,878
Liverpool ...	8,191	14,009	14,271	15,235	69,093	103,777
Total ...	8,234	14,309	15,217	17,862	94,307	128,655
Last week	11,898	19,410	14,069	19,286	101,290	132,208

COFFEE.—At this week's auctions demand was quiet, except for superior qualities, which realised satisfactory prices. Last week's movements of coffee in London were as follows: Brazilian, landed, nil; delivered for home consumption, 57 bags; exported, nil; stocks, 1,790 bags, against 1,133 bags last year. Central American, landed, 793 packages; delivered for home consumption, 1,939; exported, 819; stocks, 94,478 packages, against 76,630 a year ago. Other kinds, landed, 806 packages; delivered for home consumption, 2,476; exported, 475; stocks, 75,122 packages, against 82,987 a year ago.

COCOA.—The market in cocoa has slightly been steadier this week, but the demand was not large enough to cause an improvement in prices. As compared with the corresponding day last week, Wednesday's quotation for Accra, fair fermented, new crop, November-January, at 21s. 6d. per cwt. f.o.b. London contract, shows a fall of 6d. Last week's movements of cocoa in London were as follows: Landed, 674 bags; delivered for home consumption, 5,751 bags; exported, 1,785 bags; stocks, 212,236 bags, against 217,214 last year.

TEA.—The quantities catalogued for this week's auction comprised 58,465 packages of Indian, 28,633 packages of Ceylon, and 11,718 packages of Java and Sumatra tea. Teas of good quality have again been firm at this week's auctions, but while common varieties were also steadier, medium teas were irregular. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account:—

AVERAGE PRICE PER LB.

RICE.—The market in rice has again been steady, and prices have been maintained at the higher level recently reached as a result of unfavourable crop reports. Wednesday's quotation for Burma No. 2, cleaned, September-October, in singles to the Continent and to the United Kingdom, at 8s. 4½d. per cwt., shows a rise of 1½d. as compared with last week. Movements in London during the past week were as follows: Landed, 2 tons; delivered, 46 tons; stocks, 939 tons, as against 1,782 tons last year.

POTATOES.—A further reduction took place in the price of potatoes in view of the large quantities of the new crop now coming on the market. At the Borough Market, "Best King Edward" sold at from 5s. 6d. to 6s. 6d. per cwt., as compared with 6s. to 7s. a week ago.

SPICES.—The spot pepper market has again been quiet and prices remained at the lower level to which they had fallen last week. Wednesday's quotation for "Black Singapore," at 5½d. per lb., shows no change on the week. Movements of pepper in London during the past week were as follows: Black, landed, 15 tons; delivered, 13 tons; stocks, 573 tons, against 854 tons last year. White, landed, 32 tons; delivered, 35 tons; stocks, 512 tons, against 371 tons a year ago.

MEAT.—The market in meat has been steady, and, while beef was slightly cheaper, both mutton and pork advanced in price. Wednesday, Argentine beef (chilled, hindquarters) was sold at 4s. 10d. to 5s. 2d. per 8 lbs., against 4s. 10d. to 5s. 4d. on the corresponding day last week, while New Zealand frozen mutton realised 3s. 8d. to 4s. 6d., as against 3s. 6d. to 4s. 4d. a week ago. According to the Smithfield Market official report, supplies of meat during last week amounted to 8,050 tons, as compared with 7,402 tons in the corresponding week last year. Imported beef, principally Argentine, formed 85.4 per cent. of the supplies, as against 82.1 per cent. a year ago; and imported mutton, mainly New Zealand, formed 77.7 per cent. of the total supply, as against 79.5 per cent. past year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OILSEEDS.—Unsettled and depressing conditions have again ruled and very little trading has been done. The only cheering item is an improved demand for oilcakes, which may stimulate the purchase of seed. Linseed has again touched a very low figure, the lowest for thirty years or more, contributed to by the heavy supplies pressing for buyers and the increased area and promising outlook for the new Argentine crop. Old crop on spot and shipment to October has declined to £7 15s.; while new crop, January-February shipment, is quoted even below this. The quantity of linseed afloat for Europe is 157,300 tons, or practically the same as last week, and compares with 105,000 tons a year ago. Cottonseed, after a period of firmness on higher Alexandrian advices, is not so steady, current value of black Egyptian (old crop) being £5 or under, and new crop, September and October loadings, £5 2s. 6d. Demand, however, is negligible. Vegetable oils generally are quiet, although a fair trade is reported in linseed oil at the lower

levels of value. Raw oil on spot has declined to £14 10s., and delivery to December to £14. Cotton oil is inactive, crude Egyptian quoting £18 and common edible £20. Other oils are only barely steady. Oilcakes are in good supply and late quotations are maintained.

HIDE, LEATHER AND ALLIED TRADES.—Although there is a somewhat more steady tone in the position of prices for hides and skins from home-slaughtered cattle, the tendency is still weak. At Manchester this week the three top weights in first clear ox and heifers realised ½d. per lb. less money, while all other classes and weights of hides changed hands at last prices. In foreign hides business is still hampered by the fact that values for most descriptions continue to move downward, and so long as this tendency continues there is very little chance of any revival in the demand. In the South American market small business has been done in wet-salted hides to the Continent and this country, Argentine ox having changed hands at just over ½d., while second ox have sold at 3½d., and cows at 4d. Dry River Plate hides have touched very low figures, ½d. having been accepted for B.A. Americanos. Lower prices have also been realised for the Capes which have changed hands during the week, first and second drys having been sold at 6½d. and 5½d., while dry-salted, 20/30 lb., have realised 5½d. and 4½d. The Australian market shows a slightly weaker tendency in the absence of any sizable business. Turnover in regard to sole leather has been maintained at a fair level, the bulk of the demand being in connection with English and wet-salted bends in the light and medium weights. Shoe manufacturers have been in the market also, with the result that quite a respectable amount of business has been forthcoming in connection with the lighter weight bends in dry hide descriptions. Pinned bellies and shoulders have moved moderately well, but the call for rough offal continues to be small. Business remains fairly steady in the upper leather section, and there has been no special call for any particular line. Calf and glazed kid leathers appear to be the best market, but at the same time the improving tendency in regard to patent is maintained. Fancy leathers for shoe uppers are a quiet sale, orders generally consisting of a few dozens only.

RUBBER.—The market in rubber has been as dull as ever, and in the absence of any encouraging feature, either from the producers or consumers' end, prices have declined still further. Wednesday's official closing price for standard ribbed smoked sheet, at 2½d. per lb., shows a decline of ½d. as compared with the corresponding day last week. In forward positions, business has been done at 2½d. to 2½d. for September, against 2½d.; and at 2½d. for January-March, 1932, as against 2½d. to 2½d. a week ago. Movements of rubber in London and Liverpool during the past week were as follows: Landed, 2,687 tons; delivered, 1,956 tons; stocks at the end of last week, at 138,473 tons, show an increase of 711 tons, as compared with the preceding week.

the Bank by special buying first of short maturities and finally of hot Treasury bills, $4\frac{1}{2}$ per cent. being paid for the last. New money cost up to $4\frac{1}{2}$ per cent., and 4 per cent. was paid for renewals. Conditions were slightly easier the following day, while by Thursday the ease had become more pronounced. By that day money called off the market at the beginning of the week was being released, and new money was available at $3\frac{1}{2}$ per cent., with $3\frac{1}{2}$ per cent. charged for renewals.

Discount rates are definitely firmer than a week ago, and on Thursday $4\frac{1}{2}$ was the ruling rate. Business, however, has been very restricted all through the week. Foreign exchange fluctuations and political uncertainties were two principal causes of this, but there is no doubt that the monetary stringency, and also the knowledge that higher discount rates were desirable, contributed materially to the rise. Hot Treasury bills were quoted at $4\frac{1}{2}$ per cent. on Thursday, with short bills at about $4\frac{1}{8}$ per cent., four months' bills at $4\frac{1}{2}$ per cent., and six months' at $4\frac{1}{2}$ per cent.

During the past few weeks there has developed a wide spread, now amounting to $\frac{1}{2}$ per cent., or even more, between discount rates on hot Treasury bills and three months' bank bills. There are various likely explanations for this. One is that with the Treasury bill rate above 4 per cent., there is very little difference between the return from Treasury bills and that from long-term Government stocks. Hence many institutions are now preferring to invest surplus funds in Treasury bills, so as to keep their funds liquid and avoid risk of depreciation, and this has increased the demand for Treasury bills and so depressed the rate. On the other hand, bill-brokers are now displaying greater discrimination regarding the bills they are prepared to buy, so as to exclude from London, both in their own and in the national interest, bills which, under present unsettled world conditions, may be undesirable. Part of this discrimination takes the form of differential rates, for while the full $4\frac{1}{2}$ per cent. is now charged for many remitted bills, "good names" are often being taken at $\frac{1}{8}$ per cent. less. So long as the present uncertainty lasts, it is to be expected that there will be wide variations in quoted discount rates.

Some encouragement was derived from the fact that the Bank was able to buy Tuesday's market gold, amounting to just over £1,000,000. The Bank, however, had to pay 84s. 11½d. per ounce, or only ¾d. below its statutory selling price. The week's return shows an increase of £1.5 millions in the Bank's gold stocks, and this, with the return of £1.0 millions of notes from circulation, has raised the Reserve by £2.5 millions. Government Securities held in both departments have been reduced by £4.6 millions, while "Other Securities" have risen by £3.0 millions and Discounts and Advances by £1.0 millions. There has been a sharp increase of £8.8 millions in Public Deposits, due, mainly, to discrepancies between Treasury bill issues and maturities, including the absence of maturities on Monday. Other Deposits were £1.3 millions lower, and Bankers' Deposits have fallen by £5.5 millions to £54.8 millions. This last figure is low enough to explain this week's stringency.

	Aug. 20, 1931.	Aug. 27, 1931.	Sept. 3, 1931.	Sept. 10, 1931.	Previous Rate and Date Changed.

On Thursday afternoon, immediately before the opening of the Budget, the Financial Secretary to the Treasury gave the House some details regarding the Treasury credits. Most of these confirm the account given in last week's *Economist*, but one or two fresh points have emerged. The discount rate on drafts against the

American credit varies with changes in the New York rediscount rate, but is now at its minimum rate of $4\frac{1}{2}$ (not $4\frac{1}{4}$) per cent. Dollar bills of 30, 60 and 90 days' date have to be deposited against drawings, and can be renewed on maturity at dates within the twelve months' period for which the credit is granted. The commission payable is $1\frac{1}{2}$ per cent. on the whole amount of the credit, and nothing is payable by the Treasury in respect of American taxation. Commission at $1\frac{1}{2}$ per cent. is also payable on the full amount of the French Bank credit. Major Elliott gave the cost of the franc bill issue in respect of French taxation as at most 0.8 per cent. of the size of the issue, and confirmed the news that it was fully subscribed. He denied the suggestion that any commission in respect of these issues was payable to British bankers, and stated that these credits were the only loans raised abroad by the present Government. The cost to the Exchequer of these credits, of course, depended on the extent to which they were used, and so could not be estimated in advance.

Business this week in New York was interrupted by the Labour Day holiday on September 7th. Money has remained easy with call rate at $1\frac{1}{2}$ per cent., and prime commercial paper at 2 per cent. Ninety-day bankers' acceptances are still quoted at $1\frac{1}{2}$ per cent. The August increase in Federal Reserve Bank credit is stated to be due partly to the shifting of foreign balances from the commercial banks to the Reserve Banks; and partly to fresh currency issues required to meet withdrawals of money from banks believed by their customers to be in difficulties. Certain private firms in New York have received unsettling reports on Swedish conditions. Recent gold imports into the United States include \$2,000,000 shipped by the Bank of Montreal from Canada to its New York office.

Conditions in the foreign exchange market were unchanged, feeling being somewhat hesitant pending political developments. Early in the week sterling eased off against New York to 4.85½, but remained steady around that level until Tuesday and Wednesday, when it fluctuated in the region of 4.86. The close was steady at 4.85½. Montreal depreciated to 4.88½, against 4.88½. Paris was steady between 123.95 and 123.96, conditions in Paris being dull. Holland improved by $\frac{1}{2}$ cent to 12.04½. Brussels was on offer and moved up to 34.94½ at the close, against 34.90. Milan was steady at 92.92. Madrid was erratic, at one time touching 55.30, but improving later to 54.00. Berlin was very weak, with marks strongly offered from Holland and Switzerland, but although the rate rose to 21.00 very few buyers were attracted. These marks are believed to represent the proceeds of liquidation by foreigners on the re-opened German Bourses. Switzerland was in demand, falling to 24.91, and closing at 24.92. No change took place in the Scandinavian currencies. Among the South American exchanges, Rio was quiet at 3½d. and Buenos Aires weakened to 31½ against 31½ last week. The Eastern exchanges remained unchanged. In the forward market the premium on dollars narrowed at $\frac{1}{2}$ cent for one month and to 2½ cents for three months. Forward Paris was also on offer at premiums of 12 cents and 50 cents, as against 20 cents and 60 cents a week ago. Wider margins prevailed in forward Brussels with the rise in the spot rate, one month being quoted at 6½ premium and three months at 15 premium. Madrid forwards were at discounts of ½ peseta and 2½ pesetas. Forward Milan narrowed to premiums of 2 cents and 12 cents for the two periods. Amsterdam forwards were 2 cents and 6 cents premium. No business was possible in forward Reichsmarks, which were unquoted. Forward Switzerland was fairly active, closing at premiums of 3 cents and 8 cents. The silver market was quietly firm, rising to 13d. for spot and to 13½d. for forward delivery. Hong Kong was quoted at 11½d. and Shanghai at 1s. 3½d.

ECONOMIST INTELLIGENCE BRANCH.

Our Intelligence Branch, which has been amalgamated with Moody's Investors Service, Ltd., is available to our readers for the supply of economic, statistical and other information, at a charge proportionate to the work involved. Inquiries should be addressed to Moody's Economist Services, 8, Boulevard Street, London, E.C.4.

THE FIRST LAP.

A FEW days ago the nation found itself looking over a precipice. Strong and courageous hands have pulled it back, and it is now to be given full and fair opportunity so to entrench its position that it will not again drift into peril. That is the position as it is left by this week's momentous meeting of Parliament. A National Government has been formed to meet a national emergency arising out of an unexampled international situation. That Government has received a vote of confidence in both Houses of Parliament and is assured of a working majority in the Commons, which, though adequate in itself is, in our view, an inadequate reflection of its backing in the country at large. It will balance the Budget; it will curtail the national expenditure within its means; and it will endeavour to distribute the burden and the sacrifice equitably among all sections and classes. The world now knows beyond a peradventure that Britain has seriously set her hand to the task of rescuing her State finances from the disorder caused by a policy that might have been permissible in prosperous times but is economically impossible in times of acute depression. Other and more difficult tasks lie ahead. But the country has a breathing space in which to brace itself for their performance.

We have no particular love of Coalitions and are in no way blind to their inherent disadvantages. But we believe the present combination is competent to launch a real national effort, and that, with a bold lead from the top, that effort will be successful. Such a lead has been forthcoming this week. On Tuesday, the morning of the emergency assembly of Parliament, a letter was published from the King to the Prime Minister, in which His Majesty expressed the desire, "in the grave financial situation with which the country is confronted, personally to participate in the movement for the reduction of national expenditure." This desire is translated into an effective practice by the decision to forego £50,000 a year, which represents a cut of more than 10 per cent. in His Majesty's private income. The sacrifice and the example are timely and characteristic. It is supported by the action of the Prince of Wales, who gives £10,000 to the Exchequer as an earnest of his wish "to do what he can to help during the present emergency," while the Prime Minister revealed one item in the Cabinet's economy proposals when he told the House of Commons that his own salary of £5,000—which, incidentally, is regarded by all Parties as too small for the office—is to be cut by 20 per cent. The psychological value of these voluntary sacrifices exceeds a thousandfold their monetary value to the Treasury. When once persuaded of the existence of a real emergency, the people of this country have never failed to respond willingly and generously to such an initiative.

Nor can any but the wilfully blind read Mr MacDonald's speech in the House of Commons on Tuesday without agreeing that a real emergency existed and exists. The facts of the crisis and the stages by which it arose are so familiar to readers of the *Economist* that we do not propose to follow Mr MacDonald's story of how the "typhoon" arose, except to say that it was as accurate in detail as it was forceful in its simple lucidity. In very trying circumstances the Prime Minister was at his best, and his peroration, too, was worthy of the occasion. Scorning counsels of dalliance or drift, he exclaimed:—"Far, far better for all of us to go with tight belts into stability than with loose ones into confusion"; and this slogan he followed up with a promise that the Government would see the danger through. "It is our duty to remain here, and it is your duty to keep us here, until the crisis has passed, until the world is convinced once again that sterling is unassailable." This promise of holding together until the storm is passed was echoed by Mr Baldwin, who, having emphasised the gravity of the position and belauded the courage of the Prime Minister, said: "We are going to see this matter through. We are going to give the Prime Minister

our full and wholehearted support to achieve the object for which this Government was called into being." With equal emphasis Lord Reading, in the House of Lords, and Sir Herbert Samuel, in the House of Commons, associated the Liberals with the determination that the Government should carry the country through its days of trouble.

So far so good. A lead has been given. The Government is acting with promptitude and courage, and is armed with adequate power and with every promise that it will be possible to retain office until the country has sailed again into smoother waters. Yet there were some features of the debate which arouse misgiving. We do not refer to the dispute between ex-Ministers and their late colleagues as to the origins of the crisis or the manner of forming the new Government. Such matters may be left for historians to debate at a more appropriate season. Nor need anyone be seriously disturbed either by the all-round onslaught of Sir Oswald Mosley or by the inflationary proposals of the Labour left wing. Of more serious significance was the insistence on the need for tariffs by Mr Amery and Mr Winston Churchill, and the call made by the latter for an early election. In our view all talk of a dissolution is ill-conceived and dangerous. As Mr Baldwin himself admitted, the immediate task of balancing the Budget and reforming the unemployment insurance system is only a first task. Behind it lies the far more difficult problem of economic rectification, which can only be solved by a national effort directed by a national Government. Moreover, an election this autumn with nothing accomplished but a Budget balance would not merely confuse the country and distract its attention from its stern necessities, but would also renew in its keenest form the uneasiness and mistrust both of home investors and of foreign interests. It would be interpreted abroad as a life-and-death struggle between those who would revolutionise the fiscal system of the country (their victory would be a deadly blow to the efforts now being made in Europe to mitigate the blighting curse of tariff barriers) and those who would by a mixture of inflation and Socialism destroy the economic fabric of the country. And from the point of view of the home front in this battle for prosperity, what could be more deplorable and disastrous than the bitter confusions of an electoral contest fought, perhaps, on such slogans as "Will you be ruled by the banks?" or "Will you be slaves of the trade unions?" Have those who talk so freely of an election in the next few weeks—when at best a new feeling of confidence in sterling will slowly be reviving—considered for a moment how the Bank of England would maintain the exchange during the four weeks of an electoral campaign during which the future policy of this country would for the time being be thrown once again into the melting pot?

It is essential also that in the coming months the British Government should speak with the voice, not of a party, but of the nation, in the vital conferences that must deal with the economic and financial crisis, with disarmament and with other pressing problems. With what authority can the Government act at the Round Table Conference if it is to be here to-day and gone to-morrow? Of what use to form a National Administration at all if its long and arduous tasks be interrupted when only well begun? On all and every ground it is essential for the safety of the nation that the present Cabinet should hold on until full and reasoned confidence has been restored that Britain has not merely re-balanced her Budget but has renewed her economic power. The Government is secure against its critics from without. Its only danger comes from within—from those who are impatient of postponing controversies over which its component parts must split. The one thing that matters is to steer the ship into port. Then, and not until then, can we afford the luxury of reviving controversy between the Conservative and Liberal parties. "Well begun" is not enough. We must be able to say "Well finished" too, before Mr MacDonald and his colleagues surrender the seals of office. The last lap in the race for stability matters even more than the first.

BALANCING THE BUDGET.

REFERRING to the Budget which Mr Snowden introduced a little more than four months ago, we wrote that "the House adjourned on Monday night with an uneasy feeling, shared fully by the direct taxpayers throughout the country, that the day of reckoning had only been postponed." That day of reckoning came on Thursday afternoon, when the Chancellor, on behalf of the National Government, presented a revised Budget designed to re-establish the stability of British public finance. The scene was a very remarkable one. Although Mr Snowden was listened to with rapt attention, there was marked evidence, in the usual preliminary skirmishes and towards the close of the Chancellor's speech, of a very restive feeling on the part of the Opposition, which now consists of the overwhelming majority of Mr Snowden's former associates. But as the Chancellor sat down, the Members on the benches behind him rose in their seats to give him an ovation, for he had indeed carried out his declared intention of facing the facts. Although people of every class and sex will feel the burden, either of the increased taxes that have been imposed, or of the drastic economies that have been made, we have no doubt that the country will acclaim Mr Snowden for having carried out a most unpleasant task with rare courage and for having held the scales as fairly as the situation permits between the various classes of the community.

The Chancellor never exercised his rare gift for succinct and telling statement more effectively than in his opening remarks, when he called attention to the fact that we are living beyond our means, that in many cases wages were being paid out of capital, and that the total burden of taxation was rising to something like a third of the national income, which in recent months had been falling heavily. With nearly three million persons idle, it is impossible to continue indefinitely piling up taxation to pay for services legislated for in more prosperous times. He claimed with justice that, in the situation in which we find ourselves, we would still be carrying out a task of a magnitude unexampled in the world by providing out of our State revenues £100 millions to provide for the unemployed. He might have added that it is probably also without precedent that any Chancellor should be able successfully to face the task of meeting a deficit of no less than £170 millions, and that the country should be able to make the great gesture of confidence in its own strength implied in the cessation of all borrowing for the Unemployment Fund and the decision to support three million unemployed out of revenue.

Revenue and Expenditure.

The situation with which Mr Snowden was faced is the result, in part, of the falling off in revenue due to the world depression, and in part arises from the necessity of stopping borrowing for paying current outgoings—particularly in connection with the deficit on the unemployment fund. He, therefore, presented revised estimates for this year, taking these and other factors into account; and he also gave a preliminary estimate for the Budget of 1932-33. Turning first to the revenue situation, we have constructed from Mr Snowden's statements the following comparative table:—

ESTIMATES OF REVENUE ON EXISTING BASIS.

	Actual Receipts, 1930-31. £ Mn.	Original Estimate, 1931-32. £ Mn.	Revised Estimate, 1931-32. £ Mn.	Estimate, 1932-33. £ Mn.
Customs and Excise...	245.4	245.5	241.5	241.5
Inland Revenue	431.0	447.0	422.0	402.0
Motor Duties	4.9	5.0	5.0	5.0
Total Tax Revenue ...	681.3	697.5	668.5	648.5
P.O. Net Receipts.....	10.1	12.2	12.2	12.2
Crown Lands	1.3	1.3	1.3	1.3
Loans and Miscel- laneous	67.2	88.5	58.2	58.2
De-Rating Account ...	16.0	4.0	4.0	...
Non-Tax Revenue ...	94.6	106.0	75.7	71.7
Total Revenue.....	775.9	803.5	744.2	720.2

Thus, Mr Snowden expects the yield of Customs and Excise to drop by £4 millions below his original estimate,

both in the current and in next year. A much more serious short-fall is shown in Inland Revenue, which he expects this year to be down on his original estimate by no less than £25 millions. Next year he expects the yield to drop by a further £10 millions, and, as he will not be able to count again on the non-recurring £10 millions which he obtained this year by the device of requiring personal income-tax payers to pay in January three-fourths of the amount due instead of one-half, as hitherto, Inland Revenue will drop next year by £45 millions. The other substantial change is under the heading of Miscellaneous Receipts, which are down this year by £30 millions as a result of the Hoover moratorium plan. This £30 millions, consisting of reparations and debt payments due from various sources, will be offset, as will be seen later, to a considerable extent by the postponement of payments which we ourselves have to make to the United States, though the loss of revenue is not entirely covered in this way. There is a similar amount lost to the revenue in the estimates for next year, but in this case £7 millions only is due to the postponement of reparations and debt payments, the remaining £23 millions being due to the fact that in the present Budget the Chancellor took into account a non-recurring item of £23 millions from the Dollar Reserve Fund, which will not be available for future Budgets. There were, in fact, in Mr Snowden's original Budget for this year no less than £37 millions of non-recurring items, consisting of this windfall from the Dollar Reserve Fund, the anticipation of personal Income Tax payments, and the remaining balance from the De-Rating Account.

Corresponding figures for the expenditure side of the account are given in the next table:—

ESTIMATES OF EXPENDITURE ON EXISTING BASIS.

	Actual Issues, 1930-31. £ Mn.	Original Estimate, 1931-32. £ Mn.	Revised Estimate, 1931-32. £ Mn.	Estimate, 1932-33. £ Mn.
Consolidated Fund				
Services:—				
Debt Interest, &c.....	293.2	303.0	289.5	303.0
Other items	9.3	9.3	9.3	9.3
Supply Services	429.9	439.0	473.8	526.0
Total Expenditure ...	732.4	751.3	772.6	838.3
Sinking Fund	66.8	52.1	46.3	52.0
Grand Total	799.2	803.4	818.9	890.3
Revenue (as above)...	775.9	803.5	744.2	720.2
Deficit	23.3	0.1*	74.7	170.1

* Estimated surplus.

The first item in this table shows a reduction of £18½ millions under the heading of interest on account of that portion of our postponed payments to America which represents interest as distinguished from principal. Supply services, on the other hand, show a startling increase. Supplementary estimates for the present year of the ordinary kind account for a £800,000 increase. The rest of the increase in the revised estimates is due to the cessation of borrowing to the extent of £84 millions, of which £25 millions would have been borrowed for the Unemployment Insurance Fund and £9 millions for the Road Fund. This brings the supply services' estimate to nearly £474 millions. For next year the increase is still more serious. The addition to expenditure amounts to £87 millions. Of this, £80 millions is due to the cessation of borrowing for the Unemployment Insurance Fund and £10 millions to the cessation of borrowing for the Road Fund. To this there has to be added an item of £17 millions increase in expenditure next year over the original estimates for this year, of which £10 millions is due to the increased cost of transitional benefit, as a result of the high basis on which the figures are estimated and of the continuance of transitional benefit throughout the year. The Sinking Fund provision included in the revised estimate for the present year shows a drop of £5.8 millions, which represents a half-year's repayment of principal on our American debt, which will not now be due in December. Mr Snowden does not appear to have provided in his statement for any continued suspension of international governmental payments.

Comparing these figures with those of revenue, we reach the serious conclusion that there is a deficit to be covered this year amounting to £74.7 millions, and next year to no less than £170 millions. As a first step towards meeting these deficits Mr Snowden has made some modifications in the provisions for the amortisation of debt by reducing the Sinking Fund for the time being to the figure necessary to cover our contractual obligations as provided in the conditions for certain loans to which specific sinking funds have been attached. These contractual obligations amount to £32½ millions. The reduction of the Sinking Fund to this figure will allow him to reduce his Budget by approximately £13½ millions during the current year and about £20 millions next year. This alteration is one to which little exception will be taken in view of the present emergency, having regard to the fact that the much more serious weakness in our financial position, due to borrowing for current expenditure, is being eliminated. The change reduces the deficit to be covered either by economies or by new taxation to £61 millions this year and £150 millions next year. The programme of economies and £150 millions next year. The programme of economies, details of which are given in the following paragraphs, amount to £70 millions in a full year, but will only benefit the Exchequer to the extent of about £22 millions in the present financial year. This programme of reductions leaves £39 millions to be provided this year and £80 millions to be provided next year out of increased taxation.

The Economies.

Details of the economies to be effected were not given in the Chancellor's statement, but were issued in a White Paper.* The various economies in pay, etc., are to take effect from October 1st of this year. Effect will be given to the other economy measures at the earliest possible dates. Precise estimates of the retrenchment to be enacted during the current financial year cannot be given, but details of the effect of the proposed economies in the full financial year 1932-33 are as follows:—

	£
Reductions of Emoluments of Ministers, Members of Parliament, Judges, Civil Servants and Members of the Defence Services	4,534,000
Defence Services (in addition to reductions of £3,614,000 in pay and pensions)	5,000,000
Education (Great Britain)	10,300,000
University Grants	150,000
Ministry of Health and Scottish Department of Health	1,250,000
Police (Great Britain)	500,000
Agriculture (Great Britain)	655,000
Forestry	478,000
Empire Marketing Board	250,000
Colonial Development Fund	500,000
Unemployment Grants	250,000
Unemployment Insurance—	
(a) Reduction of expenditure from the Unemployment Fund	25,800,000
(b) Increased income of the Unemployment Fund from contributions of employers and workmen	10,000,000
Road Fund	7,865,000
Miscellaneous	2,500,000
Total	£70,032,000

Ministers' salaries are to be cut by 20 per cent. if of £5,000 and over, by 15 per cent. if £2,000 or over, and by 10 per cent. on salaries below £2,000. A 10 per cent. cut is imposed on salaries of Members of Parliament, Judges and other Crown officers whose substantive pay is £2,000 a year or more are to lose 10 per cent., but the 20 per cent. reduction applies over the £5,000 level. As regards Civil Servants a 10-point drop in the cost of living bonus came into force on March 1, 1931, and a further 5-point drop took effect on September 1st. In the defence services, 1925 rates of pay are to be applied all round. Apart from these pay reductions, the cost of the defence services is to be cut by £5 millions.

Education in England and Wales is to contribute the substantial saving of £9,400,000 in a full year (apart from a reduction of £150,000 in grants to universities and colleges), while Scotland saves £1,800,000 under this head. Of the total, £1,450,000 comes from the abolition of the 50 per cent. minimum limit of the grant for elementary

* Cmd. 3952. H.M. Stationery Office. 3d. net.

education; a 15 per cent. reduction of teachers' salaries and revision of the grant formula will save the Exchequer £5,987,500, reductions of grants for higher education consequent upon the cut in teachers pay £712,500, and a reduction in the growth of education expenditure in 1932 £1,125,000. The estimate of the education saving in the current year is £4 millions.

The votes of the Ministry of Health and the Department of Health for Scotland bear cuts estimated at £475,000 in the current year and £1,125,000 in a full year. The doctors' capitation fee is to be reduced from 9s. to 8s., while insurance chemists also take a cut of one-ninth; the Exchequer grant of £140,000 per annum to the Central Health Insurance Fund is to be withdrawn; and in 1932-33 £150,000 is to be saved by "some slowing down of expenditure." Graduated reductions in pay are to reduce the cost of the police to the Exchequer by £500,000 in the first and £1,000,000 in the second year, and the 1932 provision for the Ministry of Agriculture and Fisheries will fall by £580,000. Other cuts will save £478,000 on the Forestry Commission, £250,000 on the Empire Marketing Board, £250,000 on the Colonial Development Fund, and £500,000 under the heading of Unemployment Grants. In place of an estimated borrowing of £10 millions for the Road Fund, the Exchequer is to provide only £2,250,000, and that out of revenue. Miscellaneous and unspecified economies are estimated to save £2,500,000. The wide range of economies thus briefly summarised accounts for roughly one-half of the £70 millions of retrenchment to be effected in 1932-33. The remainder is to come from measures relating to Unemployment Insurance. These measures are five in number:— (1) Reduction of weekly benefit rates (except that for the dependant child) by 10 per cent.; (2) increase in the weekly contributions to 10d. each from employers, employed and the Exchequer in the case of men, with corresponding increases in the case of women; (3) limitation of insurance benefit (as distinct from transitional payments) to 26 weeks in a benefit year; (4) imposition of a needs test for receipt of transitional benefit, the amount of assistance required in any case being determined by the Public Assistance Authorities of the locality; (5) cessation of borrowing for the Unemployment Fund. The position as it exists at present and the financial effect of the proposed measures (taking for purposes of calculation a live register of 8,000,000) is explained as follows in the White Paper:—

SUMMARY OF UNEMPLOYMENT INSURANCE FINANCE.

	£
Benefit at existing rates	130,500,000
Interest on debt at £115,000,000	5,700,000
Administration	7,100,000
Total expenditure	143,300,000
Towards this sum Employers and Employed Persons would contribute at existing rates	28,500,000
Sum to be provided by Exchequer	114,800,000
The savings proposed to be effected, including the removal of anomalies by regulations under the Unemployment Insurance (No. 3) Act, 1931, will reduce this expenditure, as follows:—	
Removal of Anomalies, under the Act of 1931	3,000,000
Needs test for transitional payments	10,000,000
Reduction in rates of benefit	12,800,000
.....	25,800,000
Increase in Contributions of Employers and Employed Persons	10,000,000
Leaving as a charge on the Exchequer in 1932-33, after allowing for economies	79,000,000
This charge will be made up of three parts, as follows:—	
Exchequer contribution on the "Equal Thirds" basis	19,300,000
Deficiency grant, being the sum required to balance the Unemployment Fund for the Year	22,200,000
Transitional payments	37,500,000
.....	79,000,000

The saving to the Exchequer is thus £114,800,000 minus £79,000,000, or £35,800,000.

New Taxation.

As we have seen, the foregoing arrangements still left Mr Snowden with a gap of £39 millions in 1931-32, and

£80 millions in 1932-33, to be filled by fresh taxation. His proposals were as follows:—

Customs and Excise.

- (1) The duty on beer would be raised from £5 3s. 6d. to £6 14s. 6d. per 36 gallons, 1,055° gravity.
- (2) The full duty on raw unstripped tobacco would be increased from 8s. 10d. to 9s. 6d. per lb., with proportionate increases on manufactured tobacco.
- (3) The petrol duty would be raised from 6d. to 8d. per gallon.
- (4) The entertainment duties would be scaled up.

Direct Taxes.

Income Tax.

The standard rate of income tax would be raised from 4s. 6d. to 5s. in the £ for the year 1931-32; and there would be the following changes in allowances in respect of which relief is given from the standard rate of tax:

- (a) The allowance in respect of earned income would be increased from one-sixth of the income with a maximum of £250 to one-fifth with a maximum of £300.
- (b) The personal allowance for individuals, other than married persons, would be reduced from £130 to £100.
- (c) The personal allowance for married persons would be reduced from £225 to £150.
- (d) The allowances in respect of children would be reduced from £60 to £50 for the first child and from £50 to £40 for each subsequent child.
- (e) The housekeeper allowance would be reduced to £50.
- (f) The deduction of tax authorised by the Finance Act, 1930 (i.e., five-ninths of the standard rate of the first £250 of taxable income) would be altered to a deduction of tax at half the standard rate on an amount of income not exceeding £175.
- (g) To prevent the increased rate from hampering industry greater allowances for depreciation are to be permitted.

Sur-tax.

The amount of sur-tax payable under Section 6 of the Finance Act, 1931, would be increased by 10 per cent.

This combination of direct and indirect taxes (and in the former case it will be observed that the incidence is considerably increased on incomes of, say, £300-£600 a year as well as on larger incomes) was put forward by Mr Snowden in fulfilment of his promise to spread the burden as widely and equitably as possible.

Mr Snowden estimated the yield of the above changes in taxation as follows:—

	1931-32. Increase.	In a Full Year. Increase.
Customs and Excise—		
Beer	4,500,000	10,000,000
Tobacco	2,100,000	4,000,000
Petrol	3,900,000	7,500,000
Entertainments	1,000,000	2,500,000
Total Customs and Excise	11,500,000	24,000,000
Inland Revenue—		
Income Tax	25,000,000	51,500,000
Sur-tax	4,000,000	6,000,000
Total Inland Revenue ...	29,000,000	57,500,000
Grand Total	40,500,000	81,500,000

By these means Mr Snowden succeeded in arriving at a Budget balance for 1931-32 and 1932-33 which can be reconstructed in summary form somewhat as under:—

BUDGET, 1931-32.

Estimated Revenue.	£ Mn.	Estimated Expenditure.	£ Mn.
Customs and Excise	253.0	Cons. Fund Services ...	298.8
Inland Revenue	451.0	Supply Services	451.8
Motor Duties	5.0	Sinking Fund	32.5
Non-Tax Revenue	75.7	Surplus	1.6
Total*	784.7	Total*	784.7

BUDGET, 1932-33.

Estimated Revenue.	£ Mn.	Estimated Expenditure.	£ Mn.
Customs and Excise	265.5	Cons. Fund Services	312.3
Inland Revenue	459.5	Supply Services	456.0
Motor Duties	5.0	Sinking Fund	32.5
Non-Tax Revenue	71.7	Surplus	0.9†
Total*	801.7	Total*	801.7

* Excluding Self-balancing Items.

† The actual surplus given by Mr Snowden was £1.5 Millions.

The Chancellor rounded off his proposals by announcing that he will take powers to facilitate the conversion of 5 per cent. War Loan to a lower interest basis at the first available opportunity.

It cannot be expected that the various items in Mr Snowden's scheme will escape criticism. Whether his estimates for 1932-33 will be realised, or not, must very largely depend on the course of world events, and this is not a matter which we alone can determine. Great efforts will be needed in this country, as well as in the field of international co-operation, if we are to restrict unemployment during the coming winter within the three millions which Mr Snowden takes as the basis of his calculation. But if this can be done, the Chancellor's estimates seem to us to be reasonable ones. In times like these forecasting the future is necessarily largely guess-work, but if it proves to be that we are at or near the bottom of the depression, the Government's scheme will undoubtedly place our public finances on a very solid foundation. If Budgets are, as the Chancellor intimated, a symptom of a country's financial stability, this country has this week given assurance to the world at large that should finally set at rest any doubt as to either our determination or our ability to pursue, even in these difficult days, the strictest canons of sound finance.

WHITHER FRANCE?

To fix the eyes upon a single tree is not the best way to see the wood. Though attention in this country during the past week has naturally been focussed on Westminster and the British budgetary problem, the wider international problem, transcending in insistence that presented by the difficulties of any particular nation, dominates the background. Elsewhere in this issue we deal with the outlook at Geneva; but there, as in the whole complex of international strains and entanglements, the key question—yet to be answered—is how France, whose fields (unmenaced now) are yet in some sort held in mortgage to the British and American dead, will react to the immeasurable responsibilities which Fate has laid upon her in this crisis in the world's affairs. The following analysis of the choice which France must make represents the interpretation placed on her alternatives by a distinguished and unprejudiced student of international politics. Our contributor's hopes are endorsed unreservedly by the Economist.

A SURVEY in last week's *Economist* of the unresolved economic and financial world crisis led to the conclusion that "any economic or financial schemes for the restoration of prosperity presume that political troubles are out of the way," and that "the key to the situation lies in the relations between Germany and France." Is it not fair to add that these relations—and the fate of the world, which hangs upon them—depend upon decisions which will have to be taken in the near future by French statesmen in the light of French public opinion, and not by German statesmen in the light of German public opinion? France holds the initiative in international affairs in this thirteenth year of the "post-war" period as unmistakably as Germany held the initiative before 1914. The immense advantages of the initiative lie to-day in French hands, and its immense responsibilities on French heads.

That France should ever stand again where she actually stands to-day would have seemed incredible on the morrow of the Franco-Prussian War and hardly credible on the eve of the War of 1914. France now finds herself on a pinnacle of military and financial and political power which is higher than any that she has attained at any time since 1815. She is in the position of the hero in the opening scene of a Greek tragedy when he finds himself overtaken by unexpected and overwhelming good fortune. How will he meet the inevitable strain upon his character? Will he meet it with restraint and with saving wisdom, or will he lose his head, harden his heart, and overreach himself to his own destruction—the *nepernia* that follows *typhos*? The envious gods are watching and waiting to see which course he will follow; and if he goes to destruction, he will draw after him all his fellow-men whose fates are bound up with his.

Which choice is France going to make in the present international drama in which we are all implicated with her? The question is being debated in France at this moment; and foreign listeners can hear the argument being carried on between two French voices.

One voice seems to be arguing somewhat as follows:—

The New York Trust Company

Capital, Surplus and Undivided Profits \$48,000,000

EUROPEAN REPRESENTATIVE'S OFFICE:

8 KING WILLIAM STREET, LONDON, E.C.4

"Now is the moment for France to stabilise the value of the French victory in the late war at par or above it. At this moment our financial and military and political power combined is irresistible. Let us make the most of our opportunity while we have it. Let us insist, in the forthcoming Disarmament Conference, on maintaining that decisive superiority in armaments which we and our post-war allies at present hold over our late allies and our late enemies. Let us maintain the new frontiers, established by the peace treaties, exactly as they stand, until our East-European allies have become fully masters in their own house by assimilating or ejecting or suppressing their minorities. And when the world comes to us, as it must now continually come, for the financial accommodation which it needs, let us never give anything away without a *quid pro quo*. Let would-be borrowers from France understand, here and now, that loans from France involve a contractual obligation, on the debtor's side, not only to fulfil his part of the financial bargain, but also to renounce any attempt or aspiration to alter the present political 'system of Europe.' Here, at last, within our grasp, are the material guarantees for our security which we have been seeking since the Armistice. Let us take care not to let them slip through our fingers."

That is one voice that is making itself heard in France just now; but another voice is also distinctly audible, and this second voice is disputing the argument of the first.

"Contractual obligations," says this second French voice, "are not good security unless the contract is felt to be morally as well as legally binding by both parties, and nobody ever feels a moral obligation to fulfil a contract which he has been compelled to sign under a *force majeure*. If and when the compulsion ceases, he feels himself morally free. That is why none of us, in France, are satisfied with the undertakings to which Germany and her late allies have been compelled to subscribe in the peace treaties, and why some of us—but not all of us—have been seeking ever since to reinforce these undertakings with additional guarantees which, as others of us believe, are no better security than the original guarantees, because they are no more freely given. Can we really suppose, for instance, that the announcement, made by the German and Austrian representatives at Geneva last week, that they have given up the project of the Austro-German customs union, really comes from the heart, any more than their signatures of the peace treaties a dozen years ago? These unwilling promises have only a paper value. They add nothing to the security which France and her allies desire from their superiority in military strength. On the contrary, they detract from our military security by making our late enemies' hearts burn within them and by giving them an incentive to try conclusions with us again if ever Fortune gives them the opportunity. The more guarantees of this kind that we extort from them, the more we increase our own insecurity by increasing their ill-will."

"And here we come to the heart of the matter. Security

is something subjective and psychological, not objective and material, and it can only be realised in its own kind. No man can ever feel perfectly secure unless he believes that his neighbours have no motive or desire to impair his security; and the only way to arrive at this conviction is to remove, as far as possible, any serious grievance which they may have against things as they are. You say that France, at this moment, is in a unique position of power, and we agree. You bid us make the most of our opportunity while we have it, and we agree again. But the opportunity of the powerful is not to impose his own desires upon his adversary by force, but to win his adversary's goodwill by generosity. The greater the power, the greater the generosity in not taking undue advantage of it, and the greater the goodwill which such generosity will evoke. Moreover, goodwill is not only a better security than main force, it is also a more durable security; for goodwill, once created, grows by compound interest, whereas victory is a wasting asset. 'The one thing you cannot do with bayonets is to sit on them!' Let us seize this opportunity, then, not to write up the value of our late French victory from par to 105, but to write it down to 95 or even to 90, and thereby evoke, among our late enemies and our late allies, a feeling of goodwill towards France which will relieve us, as nothing else can, of those gnawing doubts about French security that haunt us still."

These, as one foreign observer seems to hear them, are the two voices which are debating with one another in France to-day. Neither we, nor the French themselves, can yet foresee which voice is going to prevail; and no English voice can join in the debate with much authority until the pound sterling has received a clean bill of health from the world. France, so the omens suggest, is going—perhaps within the next twelve months—to decide this tremendous issue for herself and for all of us. We can only listen in, and hope that, when her mind is made up, we shall hear the whole of France speaking, through her Government, with the second voice and not with the first.

BRITAIN'S BALANCE OF TRADE.

As a first essential step in the rectification of our national position, the importance of a balanced Budget is beyond dispute, and the programme unfolded by Mr Snowden on Thursday gives the world assurance that this primary need is being courageously faced. Yet Mr Baldwin was obviously talking plain sense when he said, in the House on Tuesday, that the balancing of the Budget was not enough; what we had to do was to set about restoring the economic equilibrium of Great Britain. There is no need to enlarge on the difficulties which have arisen in each of these various storm centres to show the colossal handicap against which our trade is having to fight. It is notorious that there are conditions in the British situation which have prevented us from retaining our previous

proportion of trade in many export markets. But a study of the figures since 1926 shows that in the three years preceding the slump we had not appreciably lost ground, and that the total volume of our export was expanding. Up to 1929, moreover, despite the difficulties of our competitive position and notwithstanding our large surplus of imports on commodity account, we were in the position of having, thanks to our invisible exports and to interest from our overseas investments, a substantial margin for further investment abroad. This margin was, it is true, less than in pre-war days, but we appeared to have reached a position of comparative equilibrium with an annual surplus of some £140 millions sterling a year.

The universal character of the depression has radically changed that position. So far as commodity trade is concerned, the tremendous fall in prices has enabled us to buy practically the same quantity of imports at an immensely lower total figure, with the result that the margin between visible imports and exports has not grown larger, but, if anything, has become somewhat less than in 1929. Other items of the account, however, have shown, even in 1930, a very appreciable reduction, and in the present year this fall has reached quite serious dimensions. According to the Board of Trade the figures for the last three completed years are as follows:—

BALANCES OF INCOME AND EXPENDITURE IN THE TRANSACTIONS (OTHER THAN THE LENDING AND REPAYMENT OF CAPITAL) BETWEEN THE UNITED KINGDOM AND ALL OTHER COUNTRIES.

	1928.	1929.	1930.
	In £ million.		
Excess of imports of merchandise.....	352	382	387
Bullion imports (+) or exports (—)	+6	—16	+5
Excess of imports of merchandise and bullion	358	366	392
Estimated excess of Government receipts from overseas*.....	15	24	21
Estimated net national shipping income†	130	130	105
Estimated net income from overseas investments	270	270	235
Estimated net receipts from short interest and commissions.....	65	65	55
Estimated net receipts from other sources	15	15	15
Total	495	504	431

Estimated total credit balance on items specified above..... 137 138 39

* Including some items on loan accounts.

† Including disbursements by foreign ships in British ports.

This year the adverse balance on visible trade will probably be less than in 1930. But when we look at the other items in the account the position is very different. In the first place, the Hoover moratorium will involve a loss of some £11 millions of receipts which we should otherwise have had from various debtors, chiefly the Empire. Half of this loss will be suffered in the present calendar year. Shipping has had a further setback, and our earnings from this source will probably be down again by, say, £25 millions. Banking, insurance and other commercial profits and earnings will also be less than before. But the most serious item in the account is the reduction in interest which we shall receive from abroad. In a few cases there has been an actual default in payment, but the worst factor is the reduction or the passing of ordinary dividends on securities all over the world (e.g., South American and other railways, mining, rubber, tea and various companies) and the reduction of actual profits of private enterprises. It would be unsafe to place the reduction in this item at less than some £50 or more millions. In short, there is no phase of our activity as a great international trading and industrial nation that has not been affected by the slump, and if we make a rough estimate on the basis of the foregoing considerations, we may well find at the end of the year that our balance of international payments on current account shows not its accustomed surplus, but a deficit which may possibly reach £50 millions. This would mean that far from having any surplus for investing abroad, we should have a deficit on our trading account of £1 million a week; and this deficit has to be met either by the export of gold or by the sale of some of our assets overseas or by borrowing.

Before going further, and in order to keep the picture in perspective, it should be observed that this "running" adverse balance has had little to do with the immediate

crisis which has arisen in recent weeks, for the debit figure, large though it is, is overshadowed by the size of the capital movements which normally take place, while those which have recently been occurring are, of course, of overwhelming dimensions. The figures given in the Basle Report on Germany show that where confidence is lacking and the country owes a large sum payable at short notice, withdrawals may take place on an immense scale, even in a case where the current balance of trade is "positive." In the case of Great Britain the amount withdrawable by foreigners runs into several hundreds of millions sterling, while if confidence in sterling were undermined among the British public and they attempted to sell out British securities and to invest in foreign securities, the total which our investors might seek to transfer abroad could easily exceed £1,000 millions. No such movement has, of course, taken place, and a part only of foreign balances have been withdrawn, but the capital movements of recent times have been sufficient to bring the situation to a head. On what scale precisely the transfer of capital has taken place we cannot say, but we do know that the amount of foreign currency which the Bank of England has had to find from its gold reserves, from its existing holdings of foreign currency and other readily available resources, or from the credits obtained in Paris and New York, amounts in the eight weeks since the second week of July to well over £100 millions. But while capital movements are clearly responsible for the immediate crisis, the fact that we have an adverse balance of payments to meet on current trading is a matter for serious misgiving and presents a situation which clearly cannot be indefinitely continued. As things are at present, the trade depression has affected every single one of our normal means of paying for our requirements from abroad, and though we are being greatly helped by the fact that our imports are at exceptionally low prices, our exports are so badly hit that, even so, we can only pay our way by drawing for the moment upon our capital resources. How can this state of things be remedied?

Now the first thing that strikes anyone who studies the above figures is that the severest blow to our trade balance has occurred through the difficulties of our debtors. Moreover, if our figures are correct, we are still drawing at the rate of over £150 millions a year in interest or dividends or profits from overseas, and if the world depression were to get very much worse our situation in this matter of our trade balance would become still more precarious. Clearly, therefore, it is of first importance from this point of view to bend all the energies that we possess towards the restoration of confidence generally throughout the world. Our task is to collaborate in every possible way in re-establishing the position of countries overseas. Our policy must not imperil the £800 millions of invisible exports which we still have available, and must be directed to restoring their level to the £500 millions which they totalled in 1929.

Even larger figures are, however, involved in our physical trade. It is needless to say that in these circumstances the protectionist sees his golden opportunity. If we have not the means of paying for our imports, he argues, we should at once put on a tariff to prevent them coming into the country. But, before jumping to conclusions, let us look a little more closely at the matter. The reason why, in recent years, our balance of visible trade has reached the high figures of £350-£390 millions is because our exports, in spite of such progress as took place in the last five years, have been, at their best, still a long way below the pre-war level. This fact, which is mainly responsible for our large continuing volume of unemployment, has unquestionably been associated with our high costs relatively to those of other countries. Germany, faced with a similar problem, is making the most strenuous endeavours by increased efficiency and lower wages to reduce her costs and meet her obligations by a considerable expansion of her export trade. Are we to do the same, or are we to throw up the sponge and endeavour to meet the situation by reducing our imports so that they bear a closer proportion to our British exports? Between these two policies there can be no question as to where the national advantage lies. The one is a policy designed to expand the volume of trade and of employment by cheapness; the

other is a policy of restriction and continued unemployment. Consider, also, the effect on the world situation. A general restriction of imports, as the Basle Committee pointed out in connection with Germany, must accentuate the already extreme difficulties of the world situation. It must affect the ability of countries overseas to buy from us; it must tend, therefore, still further to diminish our exports; and it must obviously make it increasingly difficult for debtor countries to pay the interest which represents so important an item of our invisible exports. We can conceive that, if the situation of the world goes from bad to worse, a position might arise in which this country might be unable to continue to pay for imports, even on the present reduced scale, and, at the same time, to maintain the sterling exchange. In those circumstances emergency measures of control might be necessary. But the example of Australia shows the danger to the whole economic life of the country which may arise from trying to maintain behind a tariff wall an uneconomic level of internal prices; and, unless this country can adjust itself to world conditions, no tariff could possibly save us from a diminution of the national production, increasing unemployment and a severe fall in the real standard of living of the masses of the people.

There remains another policy, and that is to take advantage of the new realisation which has arisen in many countries of the world, and in particular in Europe, that the results of a policy of strangling international commerce and waging a war of economic attrition are suicidal. The special problem of Britain has been recognised at Geneva in the fact that countries who recently discussed the abortive tariff truce have invited her to put forward to seven of the nations of Europe a statement of the reduction which she desires in their tariffs. Some of these nations have expressed their willingness to make the reduction for which she has asked. The German Foreign Minister, only this week, invited Great Britain to pursue the discussion. At the moment the Cabinet is so engrossed with its budgetary affairs that other questions have been set aside. It may even be that there is a certain unwillingness on the part of members of the Cabinet to discuss this question in a belief, on one side or the other, that the matter is one for argument on the electoral platform. But we should have thought that there could at least have been this measure of agreement between the members of the Government—whether free traders, revenue tariff men or high protectionists—that, if we could get freer entry for our goods in any quarter of the world, and thereby increase our exports, this would be the most direct means of affecting our unemployment problem, improving our shipping industry, and adding to our commercial profits. History shows that it is a mistake to suppose that countries will never lower their tariff in times of crisis and distress. There is unquestionably a growing and widespread realisation that the removal of trade obstacles is one of the essential conditions of trade recovery. We speak with confidence when we say that there never was a moment since the end of the war when there was a better opportunity for Great Britain to get some of the obstacles in the way of her export industries removed. There is no matter to which the present National Government could more prudently turn its hand forthwith.

HUNGARY AND HER CREDITORS.

(BY OUR BUDAPEST CORRESPONDENT.)

It is officially announced that Hungary has appealed to the League of Nations that her financial situation should be investigated. Had it not been for the change of Government the appeal to the League might have been made weeks ago, as it had been contemplated by Count Bethlen just before he left office. Count Károlyi acted wisely when he invited the League's experts to study the situation on the spot, because without the aid of the League and the creditor nations there is no way out of the financial crisis. It is to the credit of the new Government that at last stern measures have been taken to restore budgetary equilibrium. As from September 1st

"Skandinaviska"

SKANDINAVISKA KREDITAKTIEBOLAGET

the salaries and pensions of the State employees have been reduced by 5-15 per cent., which means a saving of 50 million pengő. Taxes which have been lightened since 1925 have been reimposed to their former level in the hope that they will yield an additional 100 million pengő. If these measures had been taken a year ago Hungary would not be in such a desperate state now. The deficit of the Treasury has undermined the credit of the country so much that Hungary will not, even by balancing her Budget, be able to solve her credit problems without the help of the League of Nations, whose aid restored her finances in 1924.

It is fortunate that Hungarians are beginning to realise the seriousness of the situation and welcome the intervention of the League. Conditions on the eve of the second appeal to the League are very different from what they were in 1924, when the first reconstruction scheme began to operate. The stability of the exchange is more or less maintained and the balancing of the Budget is practically assured, especially if expenditure is further curtailed so that it will not exceed 800 million pengő—the maximum, under the existing price level, which the country can bear. On the other hand, the foreign obligations of Hungary have considerably increased, and the crucial problem of Hungary's financial restoration now is how to pay £8-8½ millions interest and sinking fund in the coming year. At the outset of the first reconstruction scheme in 1924 Hungary's pre-war debt amounted to £45 millions, and the interest and sinking fund payments totalled scarcely £2 millions. But in the period 1924-31 Hungary has borrowed abroad more than £85 millions, including the £5 millions B.I.S. rediscount credit and the £3,350,000 Treasury Bills placed since the crisis began. The interest and sinking fund charges on this new borrowing amount to £6-6½ millions, so that pre- and post-war debt services will total 8-8½ million pengő in the forthcoming year, and are likely to increase further, rather than to decrease, because without a new loan Hungary cannot be made a going concern.

Hungary's balance of international payments is determined by two main factors: merchandise trade and borrowing from abroad. Exact details are not available to show how the £85 millions borrowed from abroad since 1924 was used, but roughly about £35-36 millions was devoted to covering the deficit of the merchandise trade in the past seven years, and about the same amount was utilised in meeting interest and sinking fund on the external obligations of the country in the period 1924-31. The rest, apart from the £7 millions gold and foreign exchange assets of the National Bank (including the £3,350,000 just borrowed by the State), covered other invisible imports.

Excluding the year 1930, when there was an active balance of trade amounting to 77.5 million pengő (£2½ millions), every year since 1924 resulted in a heavy deficit, which was due to excessive borrowing from abroad, especially in 1927 and in 1928. In the first six months of 1931, foreign trade showed an import surplus of 48.4 million pengő, as against 42.8 million pengő export surplus in the corresponding period of 1930, and, what is worse, exports have fallen off in the same period from 451.7 million pengő to 258 million pengő. In view of the bad harvest, there is little hope that exports in the second half of the year will be more than 300 million pengő. Reckoning with a total import of 600 million pengő (£22 millions) in 1931, Hungary will be fortunate

if her balance of trade turns out even. The development of foreign trade in the last seven years is as follows:—
(In million pengö.)

	Imports.	Exports.	Balance.	Total value of Trade.
1924	815.3	667.0	-148.3	1,482.3
1925	864.6	848.0	-16.6	1,712.6
1926	941.0	876.7	-64.3	1,817.7
1927	1,182.3	807.6	-374.7	1,989.9
1928	1,211.4	826.0	-385.4	2,037.4
1929	1,063.7	1,038.5	-25.2	2,102.2
1930	832.9	910.4	+77.5	1,743.3
Probability for 1931..	600-650	550-600	...	1,200

The catastrophic fall in the prices of agricultural commodities is reflected by the sudden shrinkage of the total volume of foreign trade. It is obvious that from a total merchandise export of 550-600 million pengö (£20-22 millions) Hungary cannot meet the services of her external obligations, amounting to 225-235 million pengö (£8-8½ millions), as imports (which totalled, on the average, 1,200 million pengö in 1927 and in 1928 and will be halved in 1931) cannot be forced down to 300-350 million pengö, that is to say, to about a quarter of the value of trade three and four years ago. Foreign creditors who financed imports so lavishly in 1927 and in 1928 can blame no one but themselves if Hungary, cut off from the supplies she readily found in former years, cannot produce the foreign currency which is needed for the service of her external debts.

Hungarians as well as their foreign creditors must co-operate wholeheartedly under the supervision and with the moral support of the League of Nations to overcome the present crisis. Foreign creditors should agree without delay to a "standstill agreement" similar to that of Germany. They will be fortunate if Hungary can pay interest and sinking fund on her external obligations. There can be no question of short-term loans being repaid. It should be borne in mind that the foreign short-term liabilities of Hungary maturing in the next twelve months amount to more than 900 million pengö, or more than 1,000 million pengö (36.5 millions) if the Treasury Bills just placed in August for a period of one year are included. The list of the short-term obligations is as follows:—

LIABILITIES OF THE STATE.	Mill. £.
Treasury bills maturing in November, 1931.....	3.2
Treasury bills maturing in August, 1932	3.3
Medium-term loans, such as agricultural and export credits, and credits obtained for municipal and State enterprises through the agency of commercial banks, but guaranteed mostly by the State	7.0
PRIVATE DEBTS.	
Short-term loans of the commercial banks	15.0
" " other than the banks.....	3.0
B.I.S. rediscount credit to the National Bank	5.0
	36.5

It is clear that Hungary cannot repay a penny of the £36.5 millions in the rest of the year unless a long-term loan is forthcoming with which to consolidate previous short-term credits, as the total gold cover of the National Bank, including the proceeds of the £3.3 millions Treasury Bills, is about £7 millions. The amount of gold the National Bank can afford to part with will scarcely suffice to meet interest and sinking fund charges in the rest of the year, as a minimum gold cover of £4 millions (115 million pengö) is absolutely necessary for a note circulation of 400-500 million pengö. It is true that the position of the National Bank has considerably improved since the banking deposits were liberated and the gold pengö decreed. The note circulation, having reached its peak at 503.8 millions on August 7th, decreased to 414.5 million pengö at the end of August, which is quite normal. On the other hand, the bill portfolio is still higher than is desirable; it amounts to 396.6 million pengö, which is more than double the corresponding figure at this time last year, in spite of the fact that the bills, amounting to 100-120 million pengö, rediscounted with the B.I.S. are not included in that sum. It should be the aim of the National Bank to bring about a decrease of its bill portfolio with the aid of a high bank rate, because it is of paramount importance that prices should not be inflated. The discrepancy between agricultural and industrial prices has widened since the restrictions in

the dealings in foreign exchanges, as many industrialists have increased their prices, showing once more that they are unworthy of the high customs duties which the State accorded to protect for them the home market.

The prospects for the minute are gloomy. If the League takes up benevolently the case of Hungary, the country will be able to struggle through, but if she is left alone it will be impossible to avoid a default, which Hungarians, anxious to meet punctually their obligations, would be reluctant to declare. It must be realised in Geneva and in the creditor nations that the Hungarian problem is a part of a big issue. No lasting solution is possible without solving the future relations of debtor and creditor nations on a broad basis, both politically and financially. What Hungary can do and should do is to balance her Budget forthwith, to maintain the stability of her currency at all costs, and to settle down to a standard of living corresponding with her resources. The rest depends on the attitude of the creditors and the League of Nations.

Notes of the Week.

The Government and the House.—Following the receipt of a vote of confidence on Tuesday, the Government devoted Wednesday to the task of clearing the way for rapid action. Mr Baldwin moved two motions, the first appropriating for the Government all private members' time, and the second providing that the essential Budget resolutions should be disposed of on the day of the Budget statement (Thursday). It is of very good omen that in the divisions resulting from these resolutions the Government majority rose from the figure of 59 at which it stood on Tuesday to 94 and 93. This increase gives very welcome confirmation to the impression that the Government is assured of an effective working majority; and it is noteworthy that, after a speech by Sir Oswald Mosley, arguing that, in spite of his personal disagreement with it, the new Government's policy should be given a trial, Sir Oswald and the small group which supports him abstained from the lobby. The Economy Bill, whose text was issued on Thursday night, provides that during the period of one month from the date on which the Bill is passed the Government may proceed by Orders-in-Council to effect economies in expenditure on Education, National Health Insurance, Police, Unemployment Insurance, and Roads, with power to modify statutory or contractual rights and to impose duties on local authorities in connection with the administration of any of the services named. Though the Labour Party may attempt to assail this procedure as "dictatorship," it is clearly justified by the existence of an emergency which makes rapidity of executive action in the direction of economy essential.

Trade Unionists at Bristol.—If it be a long way from Bristol to Westminster, the attitude of the trade union delegates assembled this week at the annual conference of their Congress may fairly be regarded as equally far removed from the realities of the situation. The time spent upon intriguing discussions of the so-called "bankers' ramp" seems rather a waste in the face of Mr Henderson's admission in the House of Commons on Tuesday that the bankers performed nothing but their proper function of stating the conditions on which they were prepared to lend. The real work of the Conference was the consideration of a report by the Council on the financial situation and the way to meet it, and here, too, the delegates and the Council showed themselves to be living in a world of unrealities. Put tersely the remedies recommended for the solution of the crisis were the abandonment of sinking funds, inflation leading to devaluation of the pound sterling, and the mobilisation of foreign investments. Nobody in their senses would imagine either that the abandonment of sinking funds

could have arrested the *crise de confiance* nor that a mobilisation of foreign investments could have been effected speedily enough to meet the crisis. It really, therefore, amounts to this, that the T.U.C. would simply have let the pound run riot, with the devastating effect upon the workers which any economist could foresee. As regards a revenue tariff, the Council's report goes no further than to recommend "a full investigation into the whole question of fiscal policy." Mr Henderson's speech on Thursday really went little further. He said no more than that if faced by the choice between dole cuts and a revenue tariff he would choose the latter. But at the moment the choice is not within his power to make, and his speech contains nothing that would prevent his adopting the attitude that, since the dole cut has been decreed, a revenue tariff is not called for.

The Syndicalist Disturbances in Spain.—The new Republican Government in Spain is battling its way gallantly through a sea of troubles. The buffets never cease; yet the new regime has been fortunate, so far, in never being struck by more than a single wave at a time. The Catalan syndicalist problem, the Basque clerical problem, the Andalusian agrarian problem, the Barcelona labour problem, are for ever besetting the statesmen of Madrid; but the waves seem to come round in a kind of rhythmical sequence, and sometimes they even neutralise one another. The last occasion on which we referred to the course of Spanish politics was *à propos* of the rising clerical opposition, in the Basque country and Navarre, to the anti-clerical legislation which is under consideration by the Constituent Assembly. For the moment that wave has subsided without breaking—only to be followed by a new wave of labour disturbances which have been most serious at two points: Saragossa and Barcelona. The chronic and widespread telephone strike contains an ever-present danger of acute trouble; and on Monday, August 31st, at Saragossa, a general strike was precipitated by a shooting affair between strikers who fired at workmen repairing a telephone line that the strikers had damaged, and Civil Guards, protecting the workmen, who returned the fire and, incidentally, inflicted casualties (one fatal) upon unoffending passers-by. On Wednesday, September 2nd, there was a mutiny in the prison at Barcelona, accompanied by a demonstration of sympathisers outside the prison walls. Next day a section of the local trade unionists came out in support of the mutinous prisoners, and the telephone line between Barcelona and Madrid was cut, while the authorities, on their side, dismissed the governor of the prison for excessive leniency. September 4th witnesses serious collisions at Barcelona between rioters and police. On the same day, however, it was announced at Madrid that the National Labour Federation (the All-Spanish syndicalist organisation) had called the strike at Barcelona off. The fact is that the cause of the Spanish revolution has led to a split in the syndicalist ranks between an anarchist minority and a majority of moderates. Already, on September 2nd, the moderates had published a manifesto in which they castigated the Provisional Government, but at the same time warned their followers that their own aims would only be frustrated by a policy of violence. The calling-off of the Barcelona strike two days later was another move in this internal conflict. By the week-end the strike was over; and the return to tranquillity seems to have been facilitated by the tact of the Catalan Civil Governor of the City, who did not conceal his determination to keep order while he almost ostentatiously refrained from exceeding his power in the way of ordering the strikers to return to work. In the complicated relationship between Madrid and Catalonia and the Spanish syndicalist movement, with its two wings, the Catalan authorities in Barcelona have, no doubt, an exceedingly difficult hand to play.

Fascism and the Depression.—Nothing has stood out more clearly from the succession of crises which the world is now witnessing in one country after another than the folly of rejecting as "impossible" the essential measures

of reform until such time as precisely the same measures, in twice as drastic a form, become absolutely inevitable. An honourable exception to the list of countries which have committed this folly is Italy; and the publication, by the Department of Overseas Trade, of a report on economic conditions in Italy during the first half of this year affords some data for a consideration of the results of her foresight. Owing to the shrinkage in revenue on the one hand, and the increased burden of unemployment expenditure and earthquake relief on the other, by the end of October, 1930, the Budget surplus of 150 million lire which had existed at the end of June had been replaced by a deficit of 729 million lire. The Council of Ministers announced in November their determination "not to impose any new taxes or increase any existing taxation, but to effect without delay all possible economies in order to obtain a reduction of the fiscal burden." Wages had already declined substantially, and to supplement this salaries and allowances of all persons employed by the State and by public bodies were reduced by 12 per cent., with an estimated saving, in a full year, of 700 million lire. The Government also took the lead in a movement for a 10 per cent. reduction in prices; a campaign for a reduction in salaries, rents, hotel charges and other incomes received extensive Press support; and additional lines of retrenchment were adopted by the Government. It did not prove possible to carry these and similar measures as far as was hoped, but their introduction and partial success at so early a juncture were a symptom of a realist financial policy not always paralleled in other countries. This policy of national economy was reinforced by a rigid adherence to actuarial principles in the granting of unemployment insurance; the Fascist Government has preferred the provision of public works to recourse to "extended benefit." It was not, of course, to be expected that any country, however well administered, could escape the effects of the world depression, nor is it possible to draw from the material in the report, without far more detailed analysis than our space permits, conclusions as to the relative extent to which Italy has suffered, but though her foreign trade and her home industries have undoubtedly experienced a severe decline in activity, the statistics at present available suggest that by facing early the necessity of a reduction in her industrial costs and in her public expenditure, she may have placed herself in a position to weather the depression with greater success than many other countries.

Prospects at Geneva.—The twelfth Assembly of the League of Nations opened on Monday, as our Geneva correspondent remarks in his letter on a later page, under the shadow of a world economic crisis which the delegates had little confidence of being able readily to solve. The prelude to the Assembly had afforded few grounds for satisfaction or optimism. The proceedings of the Council during the previous week had been sterile; the absence from the British delegation of any Minister of the Crown was a disappointing feature; the Commission of Enquiry for European Union had failed to make any constructive use of the material placed before it by its various committees of experts; a disagreeable impression had been created by the lines of division in the advisory opinion issued by the Hague Court on the Austro-German Customs union proposal; and a further regrettable element of national partisanship had been imported into the Geneva atmosphere by the re-election of M. Titulescu as President of the Assembly, largely as a result of the whole weight of French influence being thrown into the scale in his favour. From these inauspicious beginnings, however, the Assembly was rescued on Tuesday by the bold and statesmanlike speech delivered by Signor Grandi. The Italian Foreign Minister rightly insisted that there was no real division between the economic and political aspects of the world crisis. The sense of economic insecurity which resulted in the erection of high tariff barriers, was born of a sense of political insecurity. Equally, reparations and war debts were intimately connected with the general economic problem; but new settlements of the financial obligations left as a heritage by the great war would be unavailing so long as competition in armaments continued. He proposed that, pending the results of next

February's Disarmament Conference, an immediate and effective truce in armament programmes should be declared. The proposal, which is assured of wholehearted support from public opinion both in this country and in the United States, offers the Assembly a chance to rise to the occasion. M. Briand is now at Geneva, and Lord Reading has announced that, if possible, he will pay at least a brief visit to the Assembly before its proceedings are over. Once more we repeat: the time available in which to save Europe from economic and political anarchy is perilously short. We cannot relinquish the hope that the statesmen assembled at Geneva, given this lead from Signor Grandi, will not fail to come to grips with the whole nexus of financial entanglements, competitive armaments and political suspicions which are standing in the way of any chance of European or world trade recovery.

The Hague Decision—and After.—The advisory opinion of the Permanent International Court upon the projected Austro-German customs union was pronounced last Saturday. Since the German and Austrian representatives at Geneva, as we have already recorded, had found themselves compelled under financial duress to renounce the project in advance of the Court's decision, the judgment had in one sense only an academic interest. The voting however, and the grounds on which the majority and minority decisions were based are of some significance. By a majority of eight votes to seven, the Court has rendered the opinion that a regime established on the basis of the Austro-German protocol of March 19, 1931, would not be compatible with Protocol I. signed at Geneva on October 4, 1922, in connection with the financial reconstruction of Austria. Six of the eight judges were of opinion that the project would also be incompatible with Article 88 of the Peace Treaty of St. Germain. The projected regime, they admitted, "does not in itself constitute an act alienating Austria's independence." On the other hand, it would afford Germany advantages denied to third Powers and would be "calculated to threaten economic independence." Dissenting from this opinion, the seven minority judges, who argue the case in much greater detail, reach the conclusion that nothing in the proposed customs regime could be regarded legitimately as incompatible with Austria's continued existence as a separate and independent State. So much for the judgment itself. What is more important for the prestige of the Hague Court is that the majority who pronounced in favour of what may be termed the French thesis consisted of a Frenchman, a Pole, a Roumanian, an Italian, a Spaniard, and three Latin-Americans. The seven dissentients were an Englishman, an American, a Japanese, a Chinese, a German, a Dutchman and a Belgian. It is idle to disguise the fact that the Court was divided into two groups, in whose structure national alliances and racial sympathies played an unfortunate part, scarcely compatible with judicial impartiality. France and her associates, however, have now an open field and a unique opportunity to take the initiative in a wider and more inclusive plan calculated to meet the difficulties which the customs union scheme was designed to remove. In a leading article in this issue of the *Economist* our Budapest correspondent emphasises the critical situation in which Hungary is placed, and the reasons which have led to her appeal to the League; and a request for League assistance has also been made by Austria. It is a question for serious and urgent consideration whether, as the prelude to a comprehensive scheme for the solution of European trade and financial entanglements, reimposition of League control over the finances of Austria and Hungary is not immediately necessary.

The Round Table Resumed.—Pending the belated arrival of Mr Gandhi, the preliminary meeting, on Monday, of the re-assembled Federal Structure Committee of the India Round Table Conference could not be much more than a formality. Nevertheless, the inaugural speeches afforded an opportunity to make one thing clear: the attitude of the British delegation to the complex

problem which awaits solution has not been altered a whit by the change of Government in this country. Just as Sir Akbar Hydari, on behalf of the States, emphasised the Princes' firm adherence to the Federal principle enunciated by last winter's Conference, so the Prime Minister and Sir Samuel Hoare unitedly declared that there had been no change in the aims which the British Parliament's representatives would keep before them in pursuance of a settlement. This was well said, and it is to be hoped that the words spoken will be noted by mischief-makers both in India and here. How far Mr Gandhi, when he arrives, will be an asset or a liability to the Conference time will show. (Would Tolstoi, one wonders, have contributed much to the formulation of a practical democratic constitution for pre-war Russia?) But whether or not the Mahatma is ready to "talk horse-sense" or prefers to cling to Maya-phantasies in terms of his own private imaginings, there is a large body of opinion in the Conference, as there is in India, resolutely determined to deal with the problem in a spirit of realism and mutual goodwill. As Sir Tej Bahadur Sapru observed on Monday, "We cannot afford to let this Conference fail; it would be disastrous to India, and disastrous to the reputation of England."

Naval Mutiny in Chile.—On Tuesday, September 2nd, the petty officers and crews of the Chilean fleet, anchored off Coquimbo, mutinied and took possession of the ships, as a riposte to the reduction in the pay of the Chilean armed forces which the Chilean Government is proposing to introduce as one of the necessary national economies. Next day, there was a change of Government at Santiago da Chile on the issue whether the mutineers should be summoned to make an unconditional surrender under pain of being subjected to a bombardment from the air. The new Government which took office was prepared to carry out this energetic policy, and Parliament met at midnight to empower the Government to declare martial law throughout the country—a power of which the Government promptly availed itself. Meanwhile, the submarine flotilla at Telcahuano made off to join the Coquimbo mutineers. Undeterred by this accession to the mutineers' strength, the Government proceeded to carry its policy into execution. On Sunday the forts at Telcahuano, which had been seized by the naval insurgents, were successfully taken by storm by loyal troops; and on Monday—after the negotiations between the Government's representatives and the mutineers had come to nothing—the fleet off Coquimbo was duly bombed from the air and brought to submission. The Government evidently had public opinion on its side. The bombing was watched, and cheered, by civilian crowds who lined the shore. No doubt, also, the reduction in pay (a reduction of thirty per cent. in the higher ratings, and not of fifty per cent. all round, as the mutineers supposed) is an essential measure. Nor could Chile have avoided lapsing into something very like anarchy if the mutineers had had their way. Accordingly, the Chilean Government is to be congratulated on its energy and the world is to be congratulated on the success with which this energy has been rewarded. Yet what is the further outlook? The economies which evoked the Chilean naval mutiny are a direct consequence of the world-wide economic depression. We need not labour a point which has been dealt with fully, à propos of the Chilean financial default, in recent issues of the *Economist*. The question is: What is going to happen in Chile, and in Latin America at large, if the slump congenerous outbreak against the authority of the Brazilian Government at Niteroy. These Latin-American upheavals—all ultimately due to the catastrophic fall in the price of Latin-American products on the world market—have been happening now, with increasing frequency, for the past twelve months. They have been affecting the most stable and progressive Latin-American countries—such countries as Argentina and Chile. In fact, Latin America shows symptoms of relapsing into the poverty and anarchy out of which she painfully struggled in the course of the nineteenth century. She struggled up by finding a place for herself in the great international

system of production and trade and finance. Now this international machine is failing to work, and the weakest of its component parts are the first to suffer. But what is already beginning to happen in Latin America under our eyes is a warning for us all.

The New Constitution in Yugoslavia.—On Wednesday, September 2nd, King Alexander of Yugoslavia announced to his Ministers his decision to grant a new constitution to the country; and the decree embodying the new regime was read out at the dinner party at which the Ministers were assembled. Any relaxation of a dictatorship, in any of the countries that are at present living under some dictatorial form of Government, is a matter of general interest because of its bearing on the question whether the world trend of politics is to remain democratic or is to move into other channels (older or newer than the democratic channel, as the case may be). Each change, however, must be judged in the light of the local political circumstances; so that, in attempting to appraise the significance of King Alexander's step, we must consider the contents of the new constitution and remind ourselves of the objects with which the King of Yugoslavia swept aside the previous constitution and established his royal dictatorship some two years ago. Is King Alexander's new step a sign of weakness? When the Spanish dictator, the late Marquess de Estella, reintroduced in Spain what was no more than a caricature of a parliamentary body, this concession certainly was a sign that his dictatorship was weakening, as is now obvious after the event. The actual differences, however, between the new constitution and the old in Yugoslavia hardly support this interpretation. They rather suggest that King Alexander, like his contemporary, King Fu'ad of Egypt, at present holds the whip hand, and that—whether constitutionally or constitutionally, wisely or unwisely—he has been deliberately using his *de facto* power, not indeed to abolish the parliamentary element in the Government of his country, but to revise a previous constitution which, in his opinion, was too democratic to suit the general level of political development that at present prevails among his subjects. The new Yugoslavian constitution substitutes a parliament of two houses for a single chamber; it places in the King's hands the nomination of half the members of the new Senate; it gives the King complete independence of Parliament in the making of "political" treaties; and it empowers him to decree exceptional measures in the event of danger to the internal or external peace of his kingdom, or, in other words, to resume his recent dictatorship at any time at his own discretion. Thus, the prerogatives which the King retains under the new constitution are at least as significant as the liberties which he reintroduces; and this question of the points which are not conceded is also pertinent to another issue—namely, that between regionalism and uniformity—which in Yugoslavia is still more important than the issue between democracy and autocracy. The Kingdom of Yugoslavia is an unprecedented experiment in political chemistry. It is an attempt, on the basis of linguistic homogeneity (and this by no means the perfect), to create a new sympathetic nation out of the Yugoslav Catholics and the Yugoslav Orthodox Christians and the Yugoslav Muslims who have each been nurtured in the bosom of a different civilisation. To further this process was the main purpose of King Alexander's dictatorship; its establishment was accompanied by a re-mapping of the internal administrative divisions of Yugoslavia on new lines, which deliberately cut across the traditional frontiers, and by a forcible dissolution of all political parties and even athletic associations (*sokols*) which were organised on a religious or a "tribal" basis. In the new constitution these crucially important acts of the dictatorship are confirmed with little modification; and in consequence the new Government, like the dictatorship itself, has to face the opposition of the most important of the *ci-devant* political organisations: the Serb Radical Party, the Croat Peasant Party, the Slovene Clerical Party, the Bosniak Muslim Party. In fact, the great issue in Yugoslav politics still remains to be fought out.

Ministerial Appointments.—The formation of the new Administration was practically completed at the end of last week with the announcement of the names of most of the junior members of the Government. A list of the appointments of chief interest to the public is printed below:—

Lord Privy Seal	Rt. Hon. Earl Peel, G.B.E. (C.).
Attorney-General	Rt. Hon. Sir William Jowitt, K.C. (Lab.).
Solicitor-General	Sir Thomas Inskip, K.C. (C.).
Lord Advocate	Rt. Hon. Craigie M. Aitchison, K.C. (Lab.).
Postmaster-General	Major the Rt. Hon. W. Ormsby-Gore (C.).
Minister of Pensions	Major the Rt. Hon. G. C. Tryon (C.).
Minister of Transport	Mr P. J. Pybus (L.).
Paymaster-General	Sir John Tudor Walters (L.).
Treasury:—	
Parliamentary Secretary	Com. the Rt. Hon. Sir Bolton M. Eyres-Monsell (C.).
Financial Secretary	Major Walter E. Elliot (C.).
Admiralty:—Parliamentary and Financial Secretary	Rt. Hon. the Earl Stanhope (C.).
War Office:—Financial Secretary	Mr A. Duff Cooper (C.).
Air Ministry:—Under-Secretary of State	Rt. Hon. Sir Philip Sassoon (C.).
Colonial Office:—Under-Secretary of State	Sir Robert Hamilton (L.).
Dominions Office:—Under-Secretary of State	Mr Malcolm MacDonald (Lab.).
Board of Education:—Parliamentary Secretary	Rt. Hon. Sir Kingsley Wood (C.).
Foreign Office:—Under-Secretary of State	Captain R. A. Eden (C.).
Home Office:—Under-Secretary of State	Major the Hon. Oliver Stanley (C.).
Board of Trade:—Parliamentary Secretary	Major G. Lloyd George (L.).
Ministry of Labour:—Parliamentary Secretary	Mr Milner Gray (L.).
General Post Office:—Assistant Postmaster-General	Mr H. Graham-White (L.).
Ministry of Transport:—Parliamentary Secretary	Mr G. M. Gillett (Lab.).
Mines Department:—Secretary	Mr Isaac Foot (L.).
Department of Overseas Trade:—Secretary	Lt.-Com. Rt. Hon. Sir Edward Hilton-Young (C.).
Export Credits Guarantees Department:—Minister in Charge	
Scottish Office:—Under-Secretary of State	Mr A. N. Skelton (C.).
Solicitor-General	Mr John C. Watson, K.C. (C.).

Lord Lothian, the Chancellor of the Duchy of Lancaster, will represent the India Office in the House of Lords and, at the moment, therefore, it will not be necessary to appoint an Under-Secretary for India. Lord Lothian will share with Sir Samuel Hoare and Lord Sankey the chief burden of the conduct of the India Round Table negotiations. Several other minor appointments are likely to be left unfilled on grounds of economy.

Overseas Trade in August.—The preliminary figures of British external trade in August, which have been published by the *Board of Trade Journal*, give no ground for encouragement. The slight improvement shown in July is not maintained, and the best that can be said is that since August is the holiday season, and also contains two less working days than July, the real deterioration is very much less serious than would appear from the first glance at the following figures:—

MONTH OF AUGUST.
(000's omitted.)

	1931.	Increase or Decrease as compared with			
		August, 1930.		August, 1929.	
Imports	£ 65,261	£ -14,592	% -22.3	£ -35,716	% -54.4
British exports	29,137	-13,640	-46.8	-33,908	-116.3
Re-exports	3,850	-2,492	-64.7	-5,170	-135.8
Total exports	32,987	-16,132	-49.5	-39,078	-118.6
Excess of imports over total exports	32,274	+ 1,540	+ 4.6	+ 5,362	+ 16.6

FIRST EIGHT MONTHS.
(000's omitted.)

	1931.	Increase or Decrease as compared with first eight months of			
		1930.		1929.	
Imports	£ 553,060	£ -153,500	% -27.7	£ -245,760	% -44.4
British exports	262,545	-135,830	-51.7	-225,762	-86.0
Re-exports	44,494	-17,791	-39.8	-33,208	-74.6
Total exports	307,039	-153,621	-49.7	-258,970	-84.5
Excess of imports over total exports	246,021	+ 121	+ 0.5	+ 13,210	+ 5.7

For July imports were £70.1 millions, British exports £34.3 millions, and re-exports £4.9 millions. By a curious coincidence the fall in the eight months in imports and total exports is almost precisely the same. A detailed investigation into the position of the country's balance of trade is made in an article on a previous page of this issue.

Scottish Iron and Steel Depression.—Another reduction has been made in Scottish pig iron prices, bringing them to the lowest levels ruling since the war. The position of the pig-iron industry is causing the ironmasters north of the border serious concern, writes our Glasgow correspondent. The trade has been steadily on the down grade since the war, and the stage has now been reached where only one furnace remains in blast out of a total of about 100. Before the war there were regularly about 80 furnaces producing, and in the busier times since then this number has ranged between 30 and 40. The reasons for the dwindling state of the trade are not wholly connected with the widespread industrial stagnation. This has doubtless been a major contributing cause, but in addition difficulties have been created by the increasing use of scrap iron in steel-making, and also by the growing tendency among consumers to import iron not only from the Continent, but from as far afield as India. There is nowadays quite a regular trade in pig iron between India and the Clyde. It may truthfully be said that pig iron making is no longer an integral part of the Scottish steel industry, and whether this is a development which will prove to be beneficial in the long run remains to be seen.

Cotton Industry Negotiations.—A mild sensation was caused, writes our Manchester correspondent, when it was announced on Thursday of last week that the negotiations on the "more looms per weaver" question had been broken off, for it was understood that the discussions were proceeding in a very friendly atmosphere. The differences separating the two sides, however, are not great, and, although both the employers and the operatives regard their own point of view as vital, it is considered probable that a resumption of the negotiations will take place. The whole matter, however, will now be thrashed out by the Central Committee of the Operative Weavers' Amalgamation on Tuesday, and if they find they are unable to reach a decision they will refer the matter to the full General Council meeting of the union, which will be held in Man-

chester, on Saturday, September 19th. The other development, and one which was not entirely unexpected, was the request of the Master Spinners' Federation representing all the spinning employers in the American and Egyptian sections to the Operative Spinners' Amalgamation and the Card Room Amalgamation, representing the operatives, for a joint meeting to discuss the costs of production. The date of this joint conference has yet to be fixed, and the operatives are awaiting the statement of the employers before they desire to express any opinion on the matter. It is known, of course, that the Master Spinners' Federation has, for some time past, been considering the question of lower wages and longer working hours as a means of recovering lost trade. This point of view was clearly stated in their recent statement to the Joint Committee of Cotton Trade Organisations. It is reasonable to expect, therefore, that when the joint conference takes place, the employers will put forward arguments in favour of reducing costs by a wages cut and longer hours. It seems impossible for the subject to be broached without these two points being brought forward.

American Cotton Crop.—The United States Department of Agriculture published its second report on the American cotton crop on Tuesday last. The statement indicated a yield of 15,685,000 bales as compared with 15,584,000 bales in the report a month previously. The yield per acre is now given as 183.6 lbs., as against 185.8 lbs. a month ago, and the condition figure is now 68 as against 74.9. The lateness of the crop is indicated by the comparatively small ginning returns which showed 565,000 bales ginned to September 1st, as compared with 1,878,000 bales ginned at the same date a year ago. The increase in the indicated yield of slightly over 100,000 bales compared with August 1st is largely due to lower than average abandonment in the August 1st report. The decline in the condition figure of 6.9 per cent. is less than the average decline during August, which in previous years has been 11.1 per cent. The acreage expected to be harvested is now estimated at 40,889,000, as compared with 41,491,000 acres planted. The report had very little effect upon prices, and a decline of only about 10 points took place on the Liverpool Exchange. Prospective supplies of American cotton now amount to over 24½ million bales, and consumption during the past season, according to the latest statistics of the International Spinners' Federation, was slightly less than 11,000,000 bales. Users have practically the equivalent of two crops to draw from.

International Cotton Statistics.—Our Manchester correspondent writes:—The International Cotton Spinners' Federation has published its annual statistics regarding world cotton consumption during the season ended July 31st last, and, as expected, they show a big decrease in the use of cotton as compared with the previous season. The total world consumption of all cottons for the twelve months ended July 31st was 22,483,000 bales, as compared with 25,209,000 bales in the previous season, a drop of 2,726,000 bales. The consumption of American was 10,907,000 bales, as against 13,023,000 bales in the previous season; East Indian 5,860,000, as against 6,087,000 Egyptian 852,000, as against 937,000; and sundries 4,864,000, as against 5,162,000. Great Britain consumed 498,000 bales of American cotton for the half-year ended July 31st, as compared with 493,000 bales in the previous half-year. Slightly less East Indian cotton was used during the past six months, the figures totalling to 121,000 bales, as compared with 131,000 bales in the previous half year, but the consumption of Egyptian cotton increased from 113,000 bales to 129,000 bales, and 240,000 bales of sundry cottons were used, as compared with 239,000 bales. The total world's mill stocks of American cotton on July 31st were 1,975,000 bales, as against 1,985,000 bales a year ago. Stocks of East Indian cotton were 1,568,000 bales, as against 1,667,000 bales, stocks of Egyptian cotton were 218,000 bales, against 237,000 bales, and stocks of sundry cottons totalled to 661,000 bales, as compared with 609,000 bales in 1930. The total world's mill stocks of all kinds of cotton were 4,322,000 bales, as against 4,498,000 bales to July 31st a year ago. Wit-

regard to mill activity in Great Britain the Federation reports that the amount of short time working in Great Britain for the whole industry during the six months ended July 31st last was equal to 13.42 weeks of 48 hours, as compared with 13.22 weeks during the preceding six months. Increased short-time working has also been recorded in Germany, France, Italy, Belgium, Switzerland and China, but there has been more activity in the Japanese mills, the stoppage being equal to 5.66 weeks of 120 hours, as compared with 7.70 weeks in the previous six months.

Progress in the Sudan.—In his recently published report* on the progress of the Sudan in 1930, the Governor-General, Sir John Maffey, gives first place to a consideration of the economic condition of the country. In particular he emphasises the close bond which exists between the prosperity of the Government and the financial soundness of the Gezira irrigation scheme, and calls attention to the difficult budgetary position which may emerge if the latter cannot be maintained. In 1930 the budget balanced at £E.4,693,623, as compared with £E.4,835,003 in 1929, and the revenue accruing from the Gezira scheme amounted to only £E.669,426, as compared with a budget estimate of £E.1,158,850, and actual receipts in 1929 of £E.1,008,038. The diminished revenue from this source is, of course, in part due to the fall in cotton prices, but Sir John expresses his concern at the low average yield of the area in 1929-30 and the still lower yield anticipated for 1930-31. The report goes on to consider what conditions of yield and price are necessary to ensure a return from the scheme which, with the strictest economy in every possible direction, would make the financial position of the country "one of reasonable safety." It is estimated that for the Gezira scheme to be self-supporting a return of £E.10 a feddan (1.038 acres) is required, but if the return falls below £E.8 a feddan the project is bound to become a liability on the country. The budget estimate for 1931 of £E.612,400 assumes an increase of 28,000 feddans in the area under cultivation and a net return of £E.8 per feddan, which represents a reasonable expectation in view of the present price level. Turning from the economic to the administrative aspect of the country, the Governor-General reports good progress in the revolutionary policy which has been adopted. The natives in all districts are to an increasing extent becoming associated with the local management of their own affairs. The native courts are developing satisfactorily and enjoying an enhanced prestige, while in such matters as road making, irrigation works, the maintenance of law and order, the collection and assessment of taxes and many other activities, the native is beginning to play a constructive part. Although education is only in its infancy, facilities for technical as well as literary instruction are gradually increasing. Evidence is not lacking that all these measures are sowing the seeds of a higher degree of citizenship, and Sir John welcomes as a good augury for the future the manifestation among the natives of a determination to see the country through its present difficulties.

Australian Bank Returns.—Our Melbourne correspondent writes:—The principal totals of the quarterly average returns of the trading banks in Australia (six States) and New Zealand compare with those for the previous quarter and a year ago as follows:—

	June 30, 1930.	Mar. 31, 1931.	June 30, 1931.
Australia:			
Deposits	£ 268,256,901	£ 263,004,817	£ 261,083,620
Advances and securities	281,962,294	268,937,892	262,604,620
Coin and bullion	4,721,913	2,087,735	1,960,359
Australian notes and cash with Commonwealth Bank	32,857,796	46,782,036	51,145,994
New Zealand:			
Deposits	£ 58,847,387	£ 54,141,064	£ 54,996,125
Advances and securities	60,330,613	59,439,171	58,431,926
Coin and bullion	6,843,567	6,955,422	6,926,030
Legal tender notes of other banks	67,807	59,672	47,813

Westminster Bank Leaflets

Points before Travelling, Notes on the Protection of Travellers from Loss. Thirty-nine Advantages of an Account with the Bank. The Saving Habit, an outline of the Home Safe system. The Postal Account, a service for those living in outlying rural districts. The Financial Machinery of the Export and Import Trade, or the function of the Documentary Credit. Foreign Exchange, with particular reference to Forward Exchange. Safeguards for Travellers, a warning against carrying foreign notes. Securities, their Custody and Supervision. Wills, Trusts, and Settlements, the Bank as an Executor.

Copies may be had by asking at almost any branch or from the Secretary, Westminster Bank Limited
41 Lombury, London, E.C.2

These figures represent local liabilities and assets, and do not include London; and the Commonwealth Bank of Australia is not included. The decrease of £7,173,281 in Australian deposits on the year is mainly the balance between a decrease of £10 millions in New South Wales and an increase of £2½ millions in Victoria, these amounts representing partly the flight of capital from the New South Wales Labour Government and partly the repayment of deposits by the trading banks to the Government Savings Bank of New South Wales, when the latter, prior to its suspension, was endeavouring to meet the demands of its own depositors. Advances and securities in Australia show a decrease of £19,357,674 on the year, the fall in advances alone being £21½ millions, as the result of reduced trading requirements and smaller imports. The cash items in Australia show changes due partly to the transfer of gold from the trading banks to the Commonwealth Bank for export and partly to Government borrowings from the Commonwealth Bank, the effect of which has been to swell the bankers' balances with the Commonwealth Bank. The decline of 1 per cent. in bank fixed deposit rates, as regards fresh deposits, has been followed by a political movement to press the banks to make a complete immediate reduction in advance rates, although the reduction in deposit rates only becomes operative by degrees within the next two years. What the banks have actually done is shown in a statement, issued by the Associated Bank of Victoria that, apart from a few special accounts, advance rates will be reduced by ½ per cent. as from July 1, 1931, and by a further ½ per cent. not later than January 1, 1932 while in some cases a full reduction of 1 per cent. will be made earlier.

Shipping Freight Index Number.—After the severe declines recorded in June and July, the average level of whole-cargo shipping freights remained comparatively stable last month; and our index number records for August a fall of only 0.8 per cent. The current figure 86.6, is 9.9 per cent. lower than a year ago. The following table summarises recent movements of the various group indices:—

	AVERAGE 1898-1913=100.				
	Average, 1913.	August, 1930.	June, 1931.	July, 1931.	August, 1931.
European Waters	110.0	86.7	82.4	81.2	80.6
North America	113.1	94.2	89.6	85.5	82.3
South America	123.4	99.7	89.8	86.3	88.3
India	106.3	104.5	91.8	87.6	88.4
Far East and Pacific	117.4	84.7	93.0	87.8	87.3
Australia	127.9	106.8	98.8	95.2	92.4
Total	116.3	96.1	90.9	87.3	86.1

Outward coal freights, except to South America, had a weak tendency, and the volume of shipments again fell away. The only markets for homeward grain which showed any activity were the Plate and, to a minor extent, the Black Sea. At the end of the month there was a disappointing absence of signs of any seasonal autumn quickening of demand for tonnages. Individual changes recorded by the various sections of the index number are given below:—

AVERAGE 1898-1913=100.

	Index Number	Inc. or Dec. Points.		Index Number	Inc. or Dec. Points.
Home Trade	71.6	- 1.0	South America—out-	69.6	+ 0.2
Ray—outwards	93.6	- 1.8	wards		
Ray—homewards	82.3	...	South America—		
Mediterranean—out-			homewards	106.9	+ 3.7
wards	82.6	- 0.9	India—outwards	84.2	- 2.1
Mediterranean—			India—homewards	92.7	+ 3.8
homewards	81.6	+ 0.7	Far East, &c.	87.3	- 0.5
North America	82.3	- 3.2	Australia	92.6	- 2.6

Expressed as a percentage of the average for 1913, the total figure of our index number for August works out at 74.4, compared with 75.0 in July and 82.6 a year ago.

Gresham Life Assurance.—The year 1930 was the first year of a new quinquennium for this society, and in putting forward its claims to the public the society is able to point to the highly satisfactory valuation at the end of 1929, when the actuarial reserves were strengthened from a 3½ per cent. to a 3 per cent. interest basis at a cost of £330,000. The society is the only Life Office whose interests lie predominantly abroad, and having regard to the disturbed conditions ruling in 1930 the fact that the new business has been so well maintained may be regarded as very satisfactory. New life business within the United Kingdom amounted to £643,000, compared with £651,000, while foreign and colonial business accounted for £1,582,000, compared with £1,589,000. In reviewing the society's accounts in past years we have had occasion to point to the relatively high rate of expense at which the business is conducted, and although this feature persists (the 1930 ratio is 24.6 per cent. of the premiums) it is only fair to point out that a company operating abroad necessarily experiences higher expenses, while the premiums charged in those countries make allowance for local conditions in that regard. The rate of interest shows a further increase, the 1930 rate being £5 0s. 11d. per cent. net, compared with £4 19s. 9d. per cent. net in 1929. Two changes of some interest have occurred in the distribution of the assets, namely, reductions of British Government securities and in Foreign Government securities, the securities sold having been replaced apparently by debentures and debenture stocks. As a result of the new Companies Act, the society's holding in its subsidiary, the Gresham Fire, is separately specified and valued at £275,000. This represents the cost price of its holding of 200,000 £1 fully-paid shares, at which price the yield on the current dividend of 5 per cent. is but 3½ per cent. At December 31, 1929, the certificate to the balance sheet stated that the actual value of the assets exceeded the then book value, but from the wording of the 1930 certificate it is inferred that such hidden reserve as there was then has disappeared, and that the assets are now at their market value.

Gresham Fire and Accident.—A year ago this society, which was founded in 1910 and is controlled by the Gresham Life, sharing the same management and board of directors, passed its normal 7 per cent. dividend. Although the company had experienced an adverse trading result in its fire account, accident profits and interest earnings were more than sufficient to counterbalance this, and the non-payment of the usual dividend may be regarded as a precautionary measure. The 1930 report

shows a pronounced improvement in both departments, as will be seen from the following figures:—

	1929		1930	
	Amount of Profit. £	Percentage of Premiums. %	Amount of Profit. £	Percentage of Premiums. %
Fire profit	— 18,958	— 11.7	1,009	.6
Accident profit	19,650	11.8	16,706	9.8
	692		17,715	
Less items debited to profit and loss ac- count	4,428		1,204	
Total net trading sur- plus	— 3,736		16,511	

Interest earnings, at £19,649, were slightly higher than in 1929, and dividend payments have been resumed by the declaration of a 5 per cent. dividend, costing £12,000. The company has added to reserves the sum of £24,160 during the year from its trading operations. A portion of this has been utilised to strengthen the underwriting reserve in the accident account from 35 per cent. of the premium income to the usual 40 per cent., and a sum of £11,000 has been transferred to investment reserve, which now totals £35,000. In the 1929 balance sheet it was stated that after taking account of the investment reserve fund, which then stood at £24,000, the book values of the assets showed a depreciation of £13,000. The chairman in his speech at the annual meeting this year stated that the increased investment reserve fund of £35,000 was more than sufficient to cover the depreciation in 1930 book values.

Tariff Reinsurances.—After a succession of three disastrous years of trading the 1930 report bears evidence of a very welcome improvement. As its name implies, the company transacts reinsurance business, being one of a number of companies formed for that purpose just after the war. Unfortunately, the company met with early troubles, culminating in a reorganisation scheme in 1926, by which £100,000 was written off, including a scaling down of the £1 shares from 15s. paid up to 9s. paid up. The subsequent underwriting losses have again created difficulties, and the company at the end of 1929 found itself with an adverse profit and loss balance of £19,000, together with an asset value of £42,000 held against the City Fire Office, now defunct. In 1930 the premium income was £285,000, compared with £828,000 in 1929, but whereas there was a loss in that year of £32,000, 1930 has resulted in a small profit of £1,960. After allowing for items appearing in the profit and loss account, a net trading surplus has emerged of £2,281, compared with a loss of £33,603 in 1929. No dividend has been paid since the company was formed, and the addition of interest earnings has had the effect of increasing surplus assets last year by just under £11,000. A sum of £3,000 has been allocated for the purpose of creating a contingency account, and the adverse profit and loss balance has, therefore, been reduced by some £8,000 to just over £11,000. In recent years the company has had the advantage of the support of the Phoenix, and the whole of its contracts are guaranteed by that company.

British Oak Insurance.—Detailed results of the last three years' trading of this company are as follows:—

	1928.		1929.		1930.	
	Amount of Profit. £	Per- centage of Preme. %	Amount of Profit. £	Per- centage of Preme. %	Amount of Profit. £	Per- centage of Preme. %
Fire	20,808	- 20.2	14,282	- 17.7	12,313	- 16.3
Accident	22,920	- 7.5	22,721	- 7.3	31,670	- 9.9
Marine	39,897	- 51.8	7,382	11.2	1,689	- 3.1
	- 83,625		- 29,261		- 45,642	
Add balance of items debited to profit & loss account	8,646		3,737		7,262	
	- 92,271		- 33,358		- 52,904	
Add net interest earn- ings	14,040		13,290		13,027	
Total net loss	- 78,231		- 20,068		- 39,877	

The company has paid no dividend during the course of its history as a public company since 1918, and is controlled by Spillers, Limited. The causes for the disastrous losses in the fire department lie partly in an abnormally

high loss ratio, and partly in unduly heavy expenses, which in 1930 absorbed 53 per cent. of the premiums. The same factors operate in a lesser degree in the accident department. Earlier losses led to a reduction of share capital in 1928, but the writing off was insufficiently drastic, and subsequent losses have again created an adverse profit and loss account balance, which now amounts to £78,000, in addition to which depreciation on investments accounts for £9,000. The paid-up issued capital is £175,000, and it would seem that a further reorganisation scheme is essential. That the situation is being tackled is evidenced by the chairman's speech at the annual meeting, and the board has been reconstituted with six directors, five of whom are directors of Spillers, Limited, the controlling company.

Overseas Correspondence.

LEAGUE OF NATIONS.

The Assembly — Essential Principles — Hague Judgment — Mandates.

(FROM OUR CORRESPONDENT.)

GENEVA, September 7.

THE League of Nations Assembly has opened to-day under the shadow of world-wide difficulties, with little prospect of finding any straight road out of them, or, at any rate, with no chance of discovering a way to immediate restoration of economic equilibrium. The main hope is that, under the relentless pressure of events, there will be growing signs of an understanding that nothing but a bold approach to the terrible problems of our time can be of much use. The remedies suggested at the World Economic Conference four years ago have not been acted upon, and it will be futile if the more drastic measures required to-day are left until the situation becomes impossible. It has been clear for several years that conditions would have to be cleared for some time before there would be a realisation that international co-operation must be a stark fact and not a pious view. Are they to become worse still? For the moment, the depressing fact is that so much depends for immediate action upon one or two States alone. A very great responsibility rests upon the French Government, and not much less upon the German Government. More depends on them than on any others for the restoration of that political confidence which the economic experts and everyone else declare to be the starting point of any check in the economic rot. It is to be hoped that the French will not push their temporary advantage of unique power to such a point as to make it impossible for the Germans to play their part while there is yet time. Austria and Germany have had to renounce their projected union, irrespective of the Court's opinion, because Austria is coming hat in hand to France for credit, and Germany could hope for nothing from France so long as the Customs union remained a part of her policy. But it has done the League no good, helpless though it was in the circumstances. It may be added that a third State upon which great responsibility also rests is the United States of America, which could do probably more than any other single country to encourage political confidence, and, with it, a brighter prospect for reduction of armaments, if it were to give even a modest undertaking with regard to its attitude towards any State which might violate the Kellogg Pact.

Judging by what is said in Geneva and spread from Geneva, there seems some necessity still to emphasise a few elementary principles about the League. Critics assume that it is not possible for the League to put the world straight this winter, and, at the same time, condemn it because the expectation is likely to be true; they fail to recognise that, when there is a world crisis, either political or economic, it is naturally and logically concentrated in Geneva. There is no dictatorship and there is no oracle in Geneva; it is an opportunity for the study and discussion of ways and means, for the pooling of ideas, but not for dictation. The world which meets at Geneva is also

the world outside Geneva, and no miraculous, isolated super-mind.

There is an indication that Governments are realising, as the President of the Assembly, M. Titulesco, declared this morning, that the world is at a new and definite stage in its development and cannot shape its course on preconceived notions. The Assembly, whose general debate opens to-morrow, will have before it the report of the European Commission, with the observations of the Committee of Economic Experts and a variety of other committees on industrial rapprochement, credit problems and a number of cognate questions, the two essential elements emphasised being that Europe cannot hope for a real economic revival if she persists in the traditional conception of separate national economic unities, or if she fails to make efforts to achieve the prompt restoration of confidence. All the rest of the work referred to Governments for consideration, or to the Assembly or standing committees of the League for more precise proposals, is dependent upon these two major principles.

Meanwhile, the Austrian Government's request for League assistance has been referred by the Council to the Financial Committee, which has also been examining in great detail the situation of Bulgaria in the presence of the Bulgarian Prime Minister, the Minister of Finance and the League's High Commissioner. The renunciation of the Customs union by Austria and Germany preceded the reference of the Austrian Government's request to the Financial Committee, and the advisory opinion of the Court, which came later, naturally lost a good deal of its reality. It is not, however, regarded with much satisfaction in Assembly circles that amongst the seven judges in the minority were those who are regarded as the most independent. It is true the case was a fairly open one, but it is unfortunate that the division of judges should have followed almost national political lines, and one leading French comment shows a strange idea of the functions of an international court by supposing that the Belgian judge, in voting with the minority opinion, wrongly imagined he was contributing to political appeasement. If that view were to be extended it would be the end of the Court.

Two other points should be mentioned. One is the unexpected likelihood that during this Assembly Mexico will become a Member of the League; the other is the interesting and rather important discussion in the Council on the Mandates Commission's report about the conditions to be fulfilled before a mandate is terminated. The Italian Foreign Minister was specially concerned with the establishment of economic equality as between all States and with the rejection of any notions that special relations should be created between the mandated territory and the power relinquishing the mandate. The German Foreign Minister also emphasised the importance of economic equality and the open door, and Lord Cecil, agreeing in principle with both Signor Grandi and Dr. Curtius, pointed out, at the same time, the necessity of transitional rules. There seemed to be no difference of opinion between the members of the Council regarding the principle of economic equality. At the request of Lord Cecil the Mandates Commission is to be asked to consider the special case of Iraq, and to present a report to the Council at its session in January.

UNITED STATES.

Security Markets — Public Finance — Money — Debt Questions — Prices — Industry.

(FROM OUR CORRESPONDENT.)

NEW YORK, September 2.

HOPES of even seasonal improvement in trade this autumn have ebbed with the absence of any increased activity in August among leading industries. Disappointment is, nevertheless, less keen than it would have been even a few months ago, for the whole country has undergone a change in its frame of mind toward the business position. There is no longer a tendency to blink the fact of a depression, and less thought is spent on the probable duration than on ways and means of carrying on.

Security markets are the duller in seven years, although a somewhat more cheerful feeling is creeping into the bond market. Prices have strengthened during the past week, in spite of further liquidation of bonds held as secondary reserves by the commercial banks. The improvement has not gone far enough to affect the new-issue business. Capital flotations in August, apart from Treasury borrowing, were the smallest for any month since 1919. They were less than half those of a year ago, and about half the total was city and State borrowing. Activity has continuously diminished since last March, and the total for August was a little over \$100,000,000, as against \$274,000,000 in July. Trading in shares is flat, but the market gained a shade in August and gives every appearance of being well sold out. Operations are largely professional, and there is no longer widespread public apprehension of severe declines.

While industry is not disposed to borrow and the market is unwilling to grant loans to borrowers such as the weaker railroads and to foreign countries, the Federal Treasury is absorbing capital in large quantities. It announces that the recent offer of \$300,000,000 of 1½ per cent. certificates was subscribed about four times over, but the books on the other portion of the September financing, consisting of \$800,000,000 of 3 per cent. 24-year bonds, are still open. The one-year certificates will be allotted entirely against maturing certificates, of which \$634,400,000 are due on September 15th, and these also will be taken against subscriptions to the bonds. The fact that the banks will receive Treasury deposits against subscriptions to the bonds, which are unlikely to be drawn upon for several weeks, makes it likely that the long-term issue will be successful. The market, however, had expected a 3½ per cent. coupon, and, while the Treasury seldom misjudges the market, this issue is regarded as rather uncertain.

The impact of the long-term issue on the market was not altogether favourable. It called attention to the fact that the Treasury is having to make good the deficit, about \$903,000,000 for the fiscal year ended June 30th, with long-term borrowing, but the issue is not large enough to make much impression upon the high volume of short-term Treasury obligations outstanding. The loan at this time does not preclude the possibility of an increase in the income-tax rate for 1931 incomes, though opposition to higher taxation, payable in the election year of 1932, will be considerable in the next Congress. At the same time, due notice by ex-service men's organisations is being served of a demand for further bonus payments, and the pressure for Federal appropriations for poor relief, farm relief and activities designed to spur business will be heavy.

Federal Reserve authorities are giving every indication of an intention to adhere to an easy money policy. Money movements during August were characterised by a lack of increased seasonal demand for commercial credit, but by a considerable rise in Federal Reserve credit outstanding, which occurred in advance of the usual time. This credit, which was around \$900,000,000 for the system in June, increased to \$1,156,000,000 as at August 26th. Additional credit was required to make good the transfer of foreign funds (reported to be French) from short-term investment into deposit at the Reserve banks (the rise in foreign deposits was \$175,000,000 between the middle of June and the middle of August), and to meet a demand for currency by public hoarders frightened by bank failures and by the banks' to strengthen their vault cash reserves. The Treasury also took \$80,000,000 out of the market in addition to maturities of bills.

Currency withdrawals from the Reserve banks last month, according to the New York Federal Reserve Bank calculation, were \$150,000,000 in excess of usual seasonal requirements. Commercial banks in August were no longer able to make good these drains on them through use of excess reserves at the Reserve or of gold imports, and the Reserve banks helped by purchasing \$50,000,000 in Government securities, and granting \$100,000,000 in acceptances (mostly foreign), and \$60,000,000 on member bank discounting. Thus money rates were kept easy, aside from a shade of firmness early in the month. No

ripple was made at this month-end, although, in spite of reductions and omissions, the aggregate of dividend and interest disbursements was heavy. Gold net imports for August were approximately \$44,000,000, rounding out \$400,000,000 net gain for the year to date.

In the financial district interest in the subject of reparations and allied debt revision remains alive, but it is doubtful if much thought is given to the subject in the country at large, where the chief concern is to secure at once larger Government expenditures and to avoid higher taxation. The opinion of a large section of the financial community was adequately expressed in the current bulletin of the National City Bank, of which Charles E. Mitchell, a member of the local Federal Reserve Bank board, is the head. The banker said:—

"When the Hoover moratorium was first proposed its purpose was stated to be 'to give time to permit debtor governments to recover their national prosperity.' It would appear miraculous, however, for such recovery to take place within a year. Two months already of the period of grace have elapsed, and soon people will be concerned with the question as to what is to happen after July 1, 1932. If nothing is done the world at that time will be in danger of a more difficult situation than it was in June this year when the moratorium was first proposed. It is inconceivable that governments will permit the situation to drift in this way. Nevertheless, the uncertainty that exists is casting a blight over business everywhere. So long as no one knows what is going to happen in Europe, business cannot be expected to go ahead with confident plans for the future, and this hesitancy is one of the factors tending to depress the commodity markets."

Commodity markets are still unsettled. The Dun's index for August shows a drop of 2.6 per cent., the decline being mostly in breadstuffs. Cotton has quite failed to respond to the movement in the south-western States to limit planting by law, paying more attention to the decision of the Farm Board to buy no more of the staple. Wheat also has weakened further, although there is some expectation that seeding of the winter crop will decline. Goods going into daily consumption are moving well and price concessions at the retail shops meet with a good response, but the basic industries are flat. Oil prices are rising, and the daily output of crude oil has dropped sharply on the continuance of the shutdown in Texas, Oklahoma and Kansas, but there is lack of confidence in the success of these drastic measures.

Steel ended August about where it began, with a rate a little above 30 per cent. Freight car loadings have failed to follow the seasonal rise. Net earnings in July were about 32 per cent. lower than last year, slightly more than the June decline, and more dividends have been cut. Pig iron output in August fell 12 per cent. from July to the lowest level since October, 1921. Motor production of 223,000 vehicles for this country and Canada in July compares with an estimate of between 175,000 and 180,000 for August.

It is reported that plans are being studied at Washington for the formation of a financing concern to carry frozen real estate mortgage loans over the period of stress. Bankers here also are considering the matter, but sentiment toward it seems to be lukewarm.

GERMANY.

Hague Ruling — Renunciation of Customs Union — Position of Government — Institut für Konjunkturforschung Report — Unemployment.

(FROM OUR CORRESPONDENT.)

BERLIN, September 8.

BUT for the fact that the credit and financial systems of Germany and Austria have been shaken this summer to their very foundations, it would not have been necessary for the statesmen of these two countries to regard the Hague judgment on the question of the proposed Customs union as a defeat. Herren Curtius, Brüning and Schober

were, of course, already aware last spring that only a very narrow course could be steered between the obligations imposed by the most-favoured-nation clause on the one hand, which only allows for exceptions in the case of a Customs union proper and thus involves a relatively close alliance, and the terms of the German Protocol of 1922, which prohibits too close association between Austria and another State, on the other. Moreover, when the League declared in favour of separate agreements between individual States, it did not indicate how these were to be reconciled both with the most-favoured-nation clause and with the full independence of all the participating States (which is required by other political considerations as well as by the Geneva Protocol), but left the solution of this problem to be worked out in practice. If, therefore, there had been no Credit Anstalt affair and no German banking crisis, the German and Austrian statesmen would now have had to begin discussion, on receiving the verdict of the Hague Court that their proposed union was too close, with a view to discovering a means of rendering it looser without either coming into conflict with the most-favoured-nation clause or rendering the agreement nugatory.

The events of this summer have made this impossible, and the Governments of Germany and Austria have had to surrender, not to international law, but to the economic power of France, as was made evident by the fact that Herren Curtius and Schober renounced their plan before the judgment was pronounced. Both within Germany and outside, their reasons for not waiting for the judgment have been regarded as something of a mystery, but the explanation is very simple. Their proposal that their renunciation of the Customs union must give an impulse to serious negotiations for a general European economic agreement was not a tactical device for concealing their defeat, but the determining motive for their choice of the meeting of the Committee for European Union as the occasion for the announcement. Austria, as a mutilated country too small for an economic unit, and Germany with her large manufacturing industry, have a vital interest in the extension of markets. As this is not to be effected by the amalgamation of the two German-speaking States into one economic unit, Herren Curtius and Schober hoped that they would at least be able to give an impulse to the efforts to find a general solution if they contributed their renunciation to the debate at the right moment. Whether they were right in this, time must show, but as far as domestic politics are concerned their course had the disadvantage that it gave the impression of a voluntary surrender and so provided the Nationalists with telling arguments. The entire Right is demanding Herr Curtius's resignation, and he is receiving no support from his own party, the German People's Party. Even in the Press of the Centre there have occurred statements which can only be interpreted to mean that this, the real Government party, is doubtful whether the Foreign Minister can be maintained in office. The Chancellor certainly seems as disinclined as ever to reconstruct his Cabinet.

The Institut für Konjunkturforschung has expressed itself very pessimistically in this quarter's report. It does, indeed, state that the rate of decline in world economy slowed down further in the second quarter of the year, but the consequences of the credit crises in Central Europe threatened the whole world with a new wave of economic contraction. Money rates had in many instances risen sharply. Capital markets, in spite of the small amount of capital expenditure, showed no relaxation.

The Konjunkturinstitut publishes the following indices of production:—

	1928 = 100.		Great Britain.	United States.
1929	Germany.	France.		
1930—April	101.4	109.4	107.9	106.3
June	92.3	113.4	98.4a	95.5
September	82.0	113.4	...	90.1
December	78.8	107.9	88.5b	82.0
1931—January	72.5	105.5	90.4c	73.9
April	67.8	104.7	83.0d	73.9
May	76.3	103.1	78.5a	81.1
June	73.9	101.6	...	80.2
June	74.3	99.2	...	77.5
a Second quarter.		b Third quarter.		c Fourth quarter.
		d First quarter.		

As to conditions in Germany, the report states that the credit crisis nipped in the bud the slight signs of recovery which had begun to appear here and there, especially in the labour market, during the first half-year. Building activity in particular has been practically extinguished by the greatly intensified scarcity of capital, and many industries which produce consumption goods have also experienced a fresh setback. Unemployment in agriculture is unusually severe, and is increasing rapidly: at the end of June 102,000 unemployed agricultural workers were registered at the labour exchanges. Short time has also increased. Working hours, which averaged 43.1 in January, and rose to 44.3 in May, have now fallen to 43.6. The Institut, however, does not consider it possible to make any numerical forecast at present as to the probable condition of the labour market during the coming autumn and winter. The unemployed at present number over four millions, against barely three millions this time last year. It may, however, be assumed that the decline in winter will not be so great, relatively, as in former years, as it is just those industries which are subject to seasonal unemployment—building and agriculture—which are at present experiencing such a high degree of unemployment. According to the report, 60.3 per cent. of the workers in Germany are still employed, counting workers on short time as the appropriate fraction of full-time workers. The corresponding figure for the average of 1930 was 71.7 per cent.

SWEDEN.

Production Index — Foreign Trade — Balance of Payments — Money — Stock Exchange.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, August 26.

THE production figures for June show that the change for the worse recorded in May was merely of a transient nature. *Svensk Finanstidning's* production index reflects an increase in employment from 93 in May to 117 in June (1923-24 = 100). Even if part of this increase is due to temporary circumstances having no direct connection with the general industrial development, it, nevertheless, makes it abundantly clear that the drop in the index number for May constituted a decided over-emphasis of the retrogressive tendency. In the increased production figure for June, woodpulp was the most powerful individual contributor, rising from 89 in May to 134 in June. It should be borne in mind, however, that the yearly production in this industry is regulated by an international agreement under which the output for this year is to be appreciably less than for last year; the high June figure, therefore, merely indicates that producers found it advantageous to utilise their plant extensively during that month. A similar explanation may be offered of the fact that employment at the sawmills increased from 75 in May to 99 in June, and a corresponding diminution of production must be expected in the coming months. The recovery, notwithstanding, is welcome and substantial. The production index shows an average for the first six months of the year of 117, as against 142 for the first half of 1930. Although the unemployment returns are still increasing, it is plain that Sweden is still less affected by the depression than any of the large producing countries, with the exception of France.

The balance of trade in June, contrary to normal experience, shows an excess of imports over exports amounting to Kr. 13.7 millions; in June, 1930, there was a surplus of exports of Kr. 10.3 millions, and in the corresponding month of 1929 a surplus of no less than Kr. 23.6 millions. The first half of this year has resulted in an excess of imports of over Kr. 193 millions, which is Kr. 107 millions more than last year and 138 millions higher than in 1929. As the second half of last year ended with an import surplus of Kr. 27 millions, the accounts for the whole of

this year will, clearly, be bound to disclose an excess of imports of unusually large dimensions. It will hardly be surprising if the balance is even more unfavourable than that brought about by the protracted labour troubles in 1928.

Parallel with the unsatisfactory development of the trade balance there has probably also been a falling off in other items of income in the balance of payments, such as freights and remittances of savings from emigrants. The reduction of the net bank claims abroad from Kr. 554 millions to 337 millions, which took place in the first six months of the year, is no doubt largely due to these causes, while the further sharp fall in these claims in the last four weeks must, in the main, be attributed to the German crisis. The exchange reserve fell in those four weeks by over Kr. 100 millions. The German crisis, before the bank failures rendered the situation acute, brought a considerable amount of German capital to Sweden, both in the form of bank deposits and in bond investments. This influx seems to have been for a comparatively short period only, as the crisis led the German investors to withdraw their Swedish balances and, by selling them to the Reichsbank, as far as possible ease the position in respect of liquid funds. This, coinciding, as it did, with the barring of withdrawals of Swedish balances in Germany, added greatly to the strain on the Swedish banks. The 1 per cent. increase in the Bank rate, following that of the Bank of England, which was designed to ease the pressure, had, apparently, no result whatsoever in so far as the position in Germany was concerned, though it was of importance in relations with other foreign countries. Owing to the Riksbank's discount policy the net foreign balances of the private banks had fallen in May to Kr. 20 millions, while the Riksbank's own exchange reserve was 281 millions. Short-dated bank credits abroad amounted to no less than Kr. 141 millions and foreign deposits to Kr. 343 millions. A slight improvement occurred in June, in that these totals were reduced to Kr. 113 millions and 303 millions, respectively. It is clear that there is room for further and very substantial German withdrawals, even if no account is taken of long-term investments, and these can hardly be affected by increases in the Bank rate. The total market claims on the Riksbank show no undue increase, in spite of the German crisis. The rise in the volume of credit since the beginning of this month has also been much the same as last year. The increase that has taken place is reflected in the fact that the note circulation, which, ever since March, has been lower than for the corresponding months last year, rose again in July somewhat above the figure for July, 1930, the tendency having been most marked in recent weeks.

The Swedish Stock Exchange has in the past month merely reflected the fluctuations caused by the German crisis on the leading foreign bourses. The reason for this is, of course, that the relatively large bulk of Swedish industrials quoted on foreign Stock Exchanges tend, owing to their rapid turnover and capital strength, to dominate share movements in general. The Hoover project brought about a rise in the shares included in the "A" list of, roughly, Kr. 500 millions, but by the beginning of August only 44 millions of the gain remained, the fall in July having been Kr. 456 millions. Of this loss Kr. 63 millions was borne by home industrials, which had gained Kr. 61 millions in June, while the shares quoted abroad suffered losses far outweighing the June advances. The total drop here was Kr. 393 millions, as against a gain of only Kr. 271 millions in June. The Kreuger group lost no less than Kr. 344 millions, of which the shares of the parent company accounted for Kr. 195 millions and those of the Swedish Match Company for Kr. 149 millions, the sharp fall being a natural consequence of the large German interests held by these companies. S.K.F. shares were Kr. 27 millions down, and L. M. Ericsson Kr. 11 millions. The total loss on "A" shares since the beginning of the year amounts to Kr. 601 millions; of this, 380 millions has been on stocks quoted abroad and 221 millions on home industrials.

CANADA.

Crops — Business — Railway Earnings — New Zealand — Relief Measures — Quebec Elections.

(FROM OUR CORRESPONDENT.)

OTTAWA, September 1.

RAINY weather has interrupted harvesting operations in the Prairie Provinces, but the latest crop survey of the *Manitoba Free Press*, published on August 29th, reports that the cutting of wheat is finished in Manitoba and more than half completed in Saskatchewan and Alberta. The process of threshing reveals a good average quality of grain, but confirms the pessimistic forecasts about the meagreness of the yield. However, the feed situation on the prairies continues to improve with a plenitude of moisture, and there will be enough winter provision for livestock. The new wheat is now moving to the seaboard, and the first trainload of wheat to be exported by the new Hudson Bay route will arrive this week at Churchill. Altogether about a million bushels will be shipped from Churchill this autumn, and the first real test of the practicability of the new route will be secured. The grain harvest in Eastern Canada, now virtually complete, has enjoyed very favourable conditions, and the yield is up to the average, but the lowness of prices for farm produce leaves the farmers with slender cash incomes. The fruit crop is excellent, but here again the prices are deplorable. The carry-over of wheat, as estimated on July 31st, the end of the crop year, is heavier than anybody expected, and is placed at 140,179,945 million bushels, which is about 13 million bushels in excess of the carry-over on July 31, 1930. Grain prices have shown a tendency to rise, but have not yet reached 60 cents.

For the marketing of this year's Western grain crop a compromise solution has been reached as the result of a series of conferences between the Federal Ministry and the three prairie provincial administrations and the grain trade. The three provincial pools will continue to function as marketing organisations, and their members will be allowed the alternative of selling their wheat for cash on the open market or of persevering with the pool principle, to which a surprising number of them apparently remain loyal. For those who pool their wheat an initial payment of 35 cents per bushel is guaranteed by the Federal Government, quite apart from the subsidy of 5 cents per bushel previously promised, and Mr Bennett, in an official statement, declared that the pools were now amply provided with credit facilities and that steps would be taken to ensure orderly marketing and avert panicky liquidation. The idea of a central trading corporation which would be the selling agency for the three pools has been abandoned, but there will probably come into existence a joint advisory board for the purpose of co-ordinating their activities.

The foreign trade returns continue to be very depressing, and the following are the figures for July, with the parallel figures for July, 1930:—

	July, 1930.	July, 1931.
Domestic exports	76,407,506	49,675,120
Exports of foreign origin.....	1,498,118	995,458
Imports	84,550,935	48,400,844

It will be seen that there was a shrinkage of \$63 millions, or almost two-fifths, in Canada's external trade as compared with the previous July. By far the greatest loss was in wheat exports, which were only 12 million bushels, valued at about 7 million dollars, as compared with 19 million bushels, valued at \$19 millions, in July, 1930. The value of the exports of newsprint also fell from \$11 to \$8 millions. The shrinkage in imports is finding reflection in the customs returns, for they are down by \$10 millions in the first four months of the present fiscal year. Excise duties are also down by \$5 millions, and, owing to the fall in prices and diminished volume of sales, the fruits of the increased sales tax have not so far been heavy. As a result, the Federal revenues for the first four months of the present fiscal year amount to only \$182,677,101, a decline of roughly \$29 millions as compared with the parallel figure for the previous year. Commodity prices

still continue to fall, and the Bureau of Statistics' wholesale index for July was 71.7 as compared with 72.2 for June.

The general business depression is at present being aggravated by the seasonal lull which usually affects Canadian trade at the end of summer. Both wholesale and retail merchants report a contraction of business, and they do not look for any great upturn in the immediate future. The carloading figure for the week ending August 22nd at 47,461 cars was only 95 cars below the figure for the previous week, but it was 16,448 cars below the figure for the corresponding week of 1930. The export demand for grain remains weak, and grain deliveries at Montreal harbour for August were only about one-half of the volume for August, 1930, which was not considered good. Shipping interests on the St. Lawrence have had a very poor season, as cargoes are scarce and there is virtually no immigrant business, while during July traffic on the St. Lawrence canals was 213,000 tons lower than in July, 1930. The solitary gain in exports to be recorded is in cattle shipments to Britain, which are on a larger scale than in recent years, and several additional steamers have been fitted out.

The majority of factory industries are operating well below capacity and the only plants which profess to be well provided with orders are the woollen mills and the boot and shoe factories. In July the output of motor vehicles showed more than the normal seasonal curtailment, being only 40 per cent. of the volume for the previous July, while motor exports were only valued at \$458,600, as compared with a value of \$1,603,000 in July, 1930. In July the production of newsprint was 182,731 tons, as compared with 193,971 tons in June, and the ratio of operation was 56.8 per cent. of capacity, as compared with 60.3 per cent. in June and 71.3 per cent. in July, 1930. Since production in the United States shows an almost parallel decline, consumption is clearly on the down grade. The low prices of base metals are making most mining operations unprofitable, but the production of gold is being well maintained, and in July the output for Ontario had a value of \$3,609,467, which was a gain of \$58,169 over the June figures.

The latest bank statement, covering the period to the end of June, offers evidence of the seriousness of the business depression, for since the previous June current loans have shrunk by 179½ and call loans by 145 million dollars. On the other hand, the public is evidently disposed to save money, for in the twelve-month period notice deposits have gained by about 40 million dollars. The American tourist trade showed an improvement in August, but it is estimated that, for the whole summer, it has shown a decline of 80 per cent., and the tourists were much more economical than usual. The two railway systems are both feeling the pinch acutely. In July the net earnings of a Canadian Pacific Railway, given as \$1,919,169, show a decline of \$1,330,888 as compared with July, 1930, and for the seven-month period the net earnings are \$10,057,288, as compared with \$12,810,987. The C.P.R., however, has been able to effect economies in working expenses (in July the reduction was \$2,134,159) which have proved impossible for the State-owned C.N.R., and as a consequence the financial showing of the latter is even worse. But it has the prospect of faring better during the latter part of the year as the drought-stricken area, from which little grain will be shipped, is largely served by the C.P.R. and the crops in the more northerly C.N.R. territory are passably good. Both railways are suffering considerably from the competition of motor trucks, which business firms, in the anxiety to cut down expenses, are using more extensively than ever.

The protective committee of security holders of the Canadian Power and Paper Corporation and its subsidiaries has announced that sufficient securities have been deposited with it to enable the reorganisation scheme to be proceeded with; they state that, up to August 13th, there were turned in 76.59 per cent. of the outstanding debentures, 80.91 per cent. of the preferred stock and 84.76 per cent. of the preferred stock. They have selected as general manager of the new corporation, which is to be called the Consolidated Paper Corporation, Mr L. J. Bellknap, who

was formerly manager of the Worthington Pump Company. Exercising the powers conferred upon them by the security holders whom they represent, they decided to increase the number of the new directorate from 11 to 15, and they have also nominated part of the new board, which has an appearance of strength. It includes the Hon. C. A. Dunning, formerly Finance Minister; Mr E. A. McNutt, Treasurer of the Sun Life Insurance Company; Mr N. J. Dawes, of Montreal; and Mr J. J. Rudolf, of Iselin and Company, of New York.

Mr Bennett has spent the last two weeks in the prairie provinces, where he has held conferences with the provincial administrations and other local authorities upon the problems of rural distress and urban unemployment. He has laid down the principle that in the administration of relief, work must be exacted in return for money, and that anything in the nature of the British "dole" must be avoided. When he returns to Ottawa he will proceed to formulate the definite plans of his relief programme and it has been announced that while the Federal Government will undertake the construction of some public works on its own account, the larger share of them, including all highway building, will be initiated by the provincial administrations which will receive Federal subsidies for them. Data now in the hands of the Department of Labour at Ottawa indicate that by the beginning of winter the number of unemployed will be in excess of 400,000, and it is estimated that about 50,000 farming families in the drought-stricken areas of the prairies will have to receive succour to carry them through until a new crop is available.

A provincial election which was held in Quebec on August 24th resulted, to the general surprise, in the return of the Liberal administration of Premier Taschereau with an increased majority. Since the Bennett Ministry exerted all its influence in support of Mr Houde, the local Conservative leader, it was expected that he would gain at least twenty seats and possibly carry the province, but many English-speaking Conservatives declined to support Mr Houde, and as a result his party only carried eleven out of ninety seats. The result is considered a serious rebuff for the Bennett Ministry and also a setback for the St. Lawrence Waterway project, of which Premier Taschereau has been a persistent opponent.

OF THE
WORLD ECONOMIC
DEPRESSION**

(Ser. L.O.N.P. 1931.II.A.1-21)

370 pages. Price 6/- net.

This report, after a brief review of some aspects of the post-war economic developments and of structural changes in the years immediately preceding the depression, and after some review of business cycle tendencies, generally, in the last decade, gives a full description of the present depression. It describes its various phases, and analyses how various factors in economic life come into play, i.e., production, domestic trade and consumption; prices, wages and profits; foreign trade and shipping; speculation, credit and savings; and international capital movements. Finally, the present depression is compared with earlier depressions, and the volume concludes with a summary of the situation in the summer of 1931.

THE AGRICULTURAL CRISIS.

322 pages. Price 7/6 net.

A world balance sheet of the agricultural situation, this report reviews the general characteristics and causes of the crisis, possible remedies, the market conditions in the principal branches of agricultural production, and the position of agriculture in 39 countries.

GEORGE ALLEN & UNWIN, LTD.,
League of Nations Publications Department,
38 Great Ormond Street, London, W.C.1

aged 21 and over) and 896,010 females (of whom 492,248 are aged 21 and over). A noticeable feature is the increasing urbanisation of the population. Of the whole increase in the population of the Union, 48,600, or nearly 33 per cent., is in the district comprising Johannesburg and the eight Reef townships. The Orange Free State population increased by only 1.16 per cent. in the quinquennium, and the number of persons under 21 years of age in that Province is 6 per cent. less than in 1926. The Cape Province population increased by 5.67 per cent. (minors showing an increase of only .7 per cent.), while the Transvaal and Natal Provinces showed increases of 14.34 per cent. and 11.65 per cent. respectively. The populations of the larger towns all over the Union showed increases of from 12 to 81 per cent. The bad conditions of the farming industry have not only intensified the usual drift from rural to urban areas, but have, in addition, led to the reckoning as town-residents of many country folk who will doubtless return to the country when farm product prices improve.

There are definite signs of falling retail prices in the Union—the weighted average price of food in nine large towns being now only .6 per cent. above the level of July, 1914. In Kimberley, food prices are 16 per cent. less, and the general average of all prices only 8 per cent. more than pre-war prices. On the Witwatersrand food prices are 2½ per cent. up, and the general average of all prices 20 per cent. up. In considering these figures it has, of course, to be borne in mind that most food is locally produced, while the tariff policy—which is so great a factor in the prices of clothing, boots and household equipment—has altered very greatly since 1914. Under stress of the financial position, and with some justification from changes in the cost of living, the Government have decided to abolish the whole of the local allowances to Government servants in inland areas as from September 1st. The estimated saving is about £600,000 per annum, of which some £250,000 is at present payable in Pretoria.

It is generally assumed that the Government intends to suspend action on the Interim Report of the Low Grade Ore Commission. One of the main recommendations is understood to be the admission to underground mine work of natives from latitudes north of 22° south. From a purely tactical point of view it is unfortunate for the mines that the available supply of British South African labour has been excessive for some months—for the first time in the history of the mining industry. The course of Cabinet action in the matter will probably be more in accord with the views of the mining industry now that Colonel Cresswell's position in the Cabinet is so doubtful. Even if he is able to remain there, he can no longer speak with the backing and authority which he enjoyed some years ago. In the present state of agricultural markets, it is by no means certain if, or when, the labour position will once more become acute. Should it do so, the prospects of the Government agreeing on terms to the representations of the mines in regard to tropical labour are better than they have ever been.

Operators of all classes in the maize market are endeavouring to solve the various problems arising in the practical application of the Act providing for an export quota. As Rhodesia has passed a similar Act, the Governments of the two territories have amicably agreed to suspend until further notice the operation of the sections of the Customs agreement providing for free exchange of maize and maize meal. Otherwise consumers might find that producers beyond their borders could undercut local producers. It is announced that the Union export quota will be about 33½ per cent. All holders of maize for trading will be required to hold that fraction of export quality for export, the idea being that growers should bear equally the present loss on export. The Reef Gold Mines have under consideration the placing with a leading co-operative society of a contract for their maize requirements for three years at a price which, although above the current market price, is considered to be fair over the period of the contract. The figure is understood to be 10s. 3d. per bag of 200 lbs.

Mr Oswald Pirow, K.C., Minister of Justice, made a speech a few days ago in which he adumbrated drastic action in regard to the granting of credit. There is a general impression abroad that credit is much too indiscriminate in this country. It is alleged that the man who pays does so on account of his own purchases and on account of bad debts owing by others. It is also considered that substantial credit for ordinary articles is granted to people who should receive no credit at all. The result is that a national tendency to live beyond our means is encouraged instead of being curtailed. It is probable that part of the local lag between wholesale and retail prices is due to this cause. Our credit system is no doubt in part due to the widespread system of monthly payments, and also to the fact that cash is available in so many of our extensive rural areas only after the crops are sold. One of the Minister's proposed remedies is the restriction of the period of prescription for shop accounts to six months. Another suggestion is the protection from attachment of earnings up to a certain figure—which may be set fairly high. In this connection it may be of interest to recall Mr W. H. Clegg's repeated condemnation, from the chair of the South African Reserve Bank, of the system of wholesale trading on open accounts rather than on bills of fixed currency.

The Stock Exchange.**THE TEA POSITION.**

DURING the last twelve months, economic depression has ceased merely to inconvenience, and has begun to embarrass producers in the tea plantation industry. Despite the somewhat firmer tone of the London auctions in the last few weeks, prices on the average have fallen by over 20 per cent. in the last year, and do not cover the production costs in an appreciable number of cases. The accounts of about a hundred companies, included in our regular quarterly analyses, show that profits have been steadily falling for some years past. The reports published in the twelve months to June 30, 1928 (referring mainly to profits earned in 1927), showed on the average earnings of 35.9 per cent. per ordinary share. For 1928 earnings were 27.1 per cent.; for 1929, 15.7 per cent., and for 1930, 12.8 per cent. As the average price of all tea sold at the London auctions this year, so far, has been only 11.78d., against 15.23d. over the whole of last year, a further decline in profits will doubtless be revealed in the company reports published during the next few months. *The Investors' Chronicle* index of the market price of ten tea shares (December 31, 1923 = 100), stood at 155.5 at the end of 1927, 88.5 at the end of last year, and 48.1 at the end of last month.

Tea growing, before the war, was a somewhat exclusive industry. Production of the finest qualities was restricted by the limited acreage in Northern India and Ceylon possessing the necessary advantages of soil and situation for the production of the finest qualities, and the fact that heavy crops or heavy plucking invariably resulted in a deterioration of average quality. Since the war, however, the increasing "democratisation" of the tea-drinking habit has been accompanied by a rapid growth in the acreage under tea in the older areas, and the development of production in new localities (particularly in Java and Sumatra), in which quantity rather than quality has been a desideratum.

The whole industry, indeed, has of late been experiencing the painful internal stresses and strains of a period of transition from a "quality" to a "quantity" basis. Throughout the world depression, the commonest teas have been the greatest drug on the market. The disappearance of the preferential duty on Empire-grown teas in the British market, on Mr Churchill's repeal of all tea duties in April, 1929, intensified the competition of supplies from Java, and it was on this rock that the restriction scheme of 1930 broke early in the present year. Tea growing in the Dutch East Indies is a relatively "new" industry, with some years of active development still in prospect. Its position is further complicated by the presence of the native grower. The latter's leaf, representing about one-fourth of the total Java output, is frequently of the lowest quality, but con-

tinues to be bought readily in London for inclusion in the cheapest retail blends of tea.

The following table shows how the statistical position of the industry has varied in recent years:—

† London Tea Brokers' Association figure, estimated since April, 1929, to represent 90 per cent. of total, written up to 100 per cent.

Between 1927 and 1929, tea exports from the most important Eastern areas (excluding China) were increasing, on the average, by about 4 per cent. per annum. The restriction scheme of 1930 envisaged a reduction in crops of 8.65 per cent. in Northern India, 7.65 per cent. in Southern India, 4.37 per cent. in Ceylon, and 6.30 per cent. in Java and Sumatra, the weighted average being 6.85 per cent. The table shows that actual exports from these areas declined by only 5.1 per cent., restriction being effective in Northern India, but nugatory in the Dutch East Indies, where native output proved uncontrollable.

World consumption, however, increased between 1927 and 1929 at an average rate of about $4\frac{1}{2}$ per cent. per annum, and did not suffer any marked setback in 1930. Although stocks had become burdensome before the world trade depression began, restriction and lower prices together were sufficient to prevent any marked increase during 1930. Heavier supplies have been marketed this year, on the abandonment of restriction, and up to the beginning of July prices showed signs of collapsing, the average London auction figure having declined from 13.66d. in the week ended April 23, 1931, to 8.57d. in the week ended July 2. Since then, however, a recovery to the neighbourhood of 1s. has taken place, assisted by the high quality of much of the British tea which has recently come forward. The recent drop in prices, indeed, ruinous as it threatened to be for some producers, appears sensibly to have affected world demand. Although gross imports of all teas into Great Britain during the first six months of this year, at 209 million lbs., were practically identical with those of the corresponding period of 1930, the total home consumption is estimated to have been about 230 million lbs. (against 216 million lbs.), and the total deliveries of tea from Great Britain to all home and foreign markets some 273 million lbs. (against 260 million lbs.). During the six months from January to July this year, London tea stocks are estimated to have declined by 84 million lbs., against an average decline, during the same months, of 71 million lbs. over the four preceding years.

The fall in tea prices since 1927, however, has cut deeply into the profits of old-established producing companies, particularly in recent months when the slump has extended to the finer qualities as well as to common teas. Relevant figures regarding some of the larger concerns are shown in a table on the previous page.

According to a computation in the latest issue of "Wilkinson's Tea and Coffee Share Manual,"* some 181 tea companies in India, Ceylon and the Dutch East Indies made total profits (after paying fixed charges) of £6,641,000 in 1928, £5,180,000 in 1929, and £2,412,000 in 1930. Earnings per ordinary share were 22.2 per cent., 16.9 per cent., and 8.5 per cent. respectively in the three years, and average dividends 20 per cent., 13.9 per cent., and 7.6 per cent. respectively.

Shareholders in the tea industry can at least congratulate themselves on having reached a somewhat more advanced stage on the road from depression to recovery than their colleagues in most other raw material and foodstuff industries. They have succeeded in re-establishing, for the time being at least, some sort of equilibrium between supplies and consumption, and, having freed themselves from a restriction scheme, have no artificially bolstered position as a source of weakness. Thanks to the celerity with which reductions have been passed on to the consumer, particularly during the last few months, effective demand for tea has not fallen off to anything like the same extent as in many other industries.

On a long view, therefore, the industry's position is far from unsound. It is difficult, however, to see any reason why prices should speedily return to the levels prevailing a few years ago. Even after the passing of world depression shareholders may need to adjust their ideas to a regime of distinctly lower profit margins. Something of a quasi-monopoly advantage will always be enjoyed by the owners of the best gardens in districts like Assam, Darjeeling and the hill areas of Ceylon, since natural factors prevent any great extension in the acreage producing leaf of the finest quality, for which a world demand will always be forthcoming. The future position of areas like the Doars, Cachar and Sylhet, is much less easy to forecast. The recent course of the market has tended to bring "good medium" teas nearer to the "common" category, in which competition from areas like Java and Sumatra is formidable. Mass production ideas have always been repugnant to British growers, but they are already put into practice in the Dutch East Indies. If the consuming public, which has now been introduced to the "shilling canister," continues to demand it (the more so as there has been no re-imposition of

the British tea duty by the Chancellor in this week's Budget), many British growers of the commoner varieties may be compelled, in self-defence, to fall into line with their Dutch competitors and effect far-reaching changes in ideas and working methods. For good or ill, the tea industry has been "democratised," and the facts discussed in this article suggest that cheap tea has come to stay.

THE REOPENING OF THE GERMAN STOCK EXCHANGES.

(BY OUR BERLIN CORRESPONDENT.)

THE German Stock Exchanges were closed from July 11th to September 3rd. They were not reopened after the first days of panic were over, principally because of the desire to prevent the general unrest from reacting upon security prices. Many holders of securities appeared ready to unload their investments at any price, in their complete lack of confidence in the future of German economy, and it was therefore desirable, as far as possible, to prevent selling. It was also desirable to avoid a reaction upon security prices of the 10 and 15 per cent. discount rates which had to be maintained during the emergency period.

This blackest period of German finance was, fortunately, over when the exchanges were opened on September 3rd, but quotations were none the less substantially lower than on July 11th, for security prices could not but feel the lasting effects of the latest crisis. Since July, German economy has suffered an increasing scarcity of capital on account of the heavy withdrawals of short-term foreign credits, and the accumulation of capital within the country has diminished in consequence of the depression and of the increased burden of taxation. These two factors have brought about a rise in the rate of interest which can hardly be regarded as transitory. In addition, the profits of German industry have diminished. With the advance of the crisis home demand, and in consequence industrial activity, has declined, while at the same time the keenness of competition has reduced the returns on foreign trade to a minimum.

On the basis of the prices which had been quoted while Stock Exchange transactions were still free, bankers, brokers and Stock Exchange authorities decided to mark down the most important shares on September 3rd to 20-25 per cent. below the level of July 11th. They were, however, without any basis for estimating the probable demand or supply at the reduced prices, and they experienced a very unpleasant surprise in this respect. When the exchanges opened on September 3rd there was an enormous volume of selling orders and hardly any sign of a disposition to purchase. The Stock Exchanges were taken by surprise, and dealings were at a standstill. Some prices were, in fact, established at 25-30 per cent. below the July 11th quotations, but demand and supply were not brought into equilibrium at these levels. The buying commissions were all executed in full, but only a very small proportion, often as little as 5 or 10 per cent. of the selling orders, were carried out. The exchanges had scarcely been open an hour before there was general talk of another closing, and the condition of the German security market seemed desperate.

The very next day the position began to alter, and by the beginning of the next week there was a complete change. It became evident that the quotations fixed on September 3rd were lower than had been generally expected or was believed to be justified. Large sections of the public who had kept right out of the market on September 3rd were induced by these rates to place buying orders. The customers of the small branch banks filled the order books of the brokers with innumerable small commissions, and, at the same time, there was a substantial decline in offerings. The decline was largely due to the withdrawal from the market of persons who, having pledged their securities as collateral for bank loans, had been threatened with their compulsory realisation to meet their obligations. They had now come to terms with the banks on the question of cover, and so were not obliged to sell at a loss. The recovery did not, it is true, represent

much advance on September 3rd as far as quotations were concerned, but trading on the Stock Exchange had become normal and the quotations on September 7th, which are given below, correctly reflect the demand and supply:—

(OFFICIAL "CASH" QUOTATIONS IN ALL CASES.)

					Verein. Stahlwerke	37	27		
					Zellstoff Waldhof	60	46		

The heaviest decline, as compared with July 11th, is of course shown by bank shares. The shares of the Danatbank were, indeed, fairly well supported by the covering purchases of bear speculators, but Dresdner Bank shares fell sharply, as their prospects were seriously impaired by the creation of Rm. 300 million preference shares. Among the big industrials, A.E.G. and coal and iron shares declined most severely.

During the last few days the turnover in the loan market has been greater than in the market for shares. Declines between July 11th and September 3rd amounted to about 15 per cent., but in the succeeding days some of the good bonds recovered a little. The 8 per cent. mortgage bonds of the mortgage banks, the most widespread form of loan in Germany, now stand at about 85, against 97 on July 11th. The 7 per cent. preference shares of the Reichsbahn have fallen from 80 to 69, and the old mark debt of the Reich from 49 to 44. Individual local loans fell more severely, and yield 15 to 20 per cent. on the basis of recent quotations. Fear of compulsory prolongations, reduction of interest rates, or the introduction of coupon taxes, have played a part in these movements, for it is generally assumed that something will have to be done to meet the pressing financial needs of the communes. The average yield of German loans since the recovery of the last few days is about 10 per cent.

The English announcement that the Bank für Textilindustrie (Blumenstinkkonzern) has not met the interest payment due on September 1st on the £1,000,000 7 per cent. long-term loan raised abroad in 1925, has caused no surprise in Germany, as the difficulties of this group have been known for many months. Hitherto there has been no default on a single German loan raised abroad since the war, but this first instance, it is noted with regret in Germany, is not regarded as an isolated case of misapplication of industrial capital, but is looked on by many people as a proof of the unsatisfactory standing of German borrowers. The collapse of the Blumenstein group does not, however, justify the drawing of any inferences as to the state of other German industrial issues. The unsatisfactory state of the German cotton industry would not alone have brought it about; unsuccessful speculation in the shares of all kinds of companies, not all of which belonged to the cotton industry, played a part. It has been a matter of great surprise in Germany that the Bank für Textilindustrie should have been one of the very first German undertakings to succeed in placing a foreign loan, for the standing of this holding company, with its innumerable large and small parcels of shares, was never beyond question. The German bank which had granted large credits to the company is now trying to come to an agreement with the bondholders, who seem to have little prospect of escaping heavy losses.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET. | ACCOUNT.
September 22. | September 24.

THE London Stock Exchange had a very subdued tone, the markets, with one accord, choosing to wait for the publication of Mr Snowden's detailed proposals before attempting to frame any estimates of future possibilities. No quickening of business was caused, consequently, by the Government's victory on Tuesday night, or the Bank of England's further gain of gold. The weakness of Wall Street had an unfavourable influence on the speculative markets, which were further disturbed by Continental selling, and the weakness of the mark.

Gilt-edged securities had a weak tone on scattered realisation before the Budget. Dominion stocks were inactive, but Australians had a heavy tendency on rumours regarding the raising of new money (discussed on page 485). Home corporation issues were dull.

After an uneasy opening, the foreign market became firmer, then again fell away. German stocks again declined, the weakness of the mark nullifying the effect of the greater strength of the Berlin Bourse. Brazilians were steadier, but Argentines came on offer. Japanese issues developed weakness owing to Sino-Japanese political tension following the Nakamura affair.

Home Rails were uncertain, prices easing further on the publication of the weekly traffic figures, but little selling was encountered. Argentine rails were duller despite improved traffic returns, in sympathy with the peso. Canadian Pacific were heavily sold, following news of flood damage.

The industrial market was quiet, dealers preferring to await the Budget before making up their minds either way. Wall Street was a cause of uneasiness. International stocks continued to lose ground, Kreuger and Toll being again a chief sufferer. Hydro-Electric sagged on fears regarding the quarterly dividend. Among home issues, the only firm market was in iron and steel shares, which rose on nebulous tariff hopes. Tobacco and brewery shares were in demand early in the week, but eased slightly with the approach of the Budget. In anticipation of the annual report, there was an improvement in Austin, and Thos. Tilling were firmer on the dividend announcement. Textiles were depressed. Bank and insurance shares followed the fluctuations of the gilt-edged market. Imperial Chemical were marked down heavily, but recovered, partially, on the announcement that the board had not yet met to consider the interim dividend.

In common with other markets, oil shares had a heavy appearance, selling originating mainly in Wall Street and Amsterdam. It was reported, at one time, that German holders were selling through the latter market. Royal Dutch and Shell were the main sufferers. Later in the week, however, Continental pressure was lessened and prices became steadier. Rubber shares were quiet. Following a small improvement in the price of the commodity on Tuesday, however, an increased demand occurred for Linggi, Anglo-Dutch and a limited number of other shares. Tea shares showed no decided trend, though the tea auctions again elicited satisfactory bidding.

Business throughout the mining market was mainly confined to specialities, and nowhere was enthusiasm apparent. Among Kafirs, Randfontein were bought, both on London and Johannesburg account. East Rand and Daggafontein were fairly active. The passing of the half-yearly account preference dividend caused a recession in Gold Fields, while Union Corporation and Rand Selection were easier. Copper shares were unsettled by the fresh fall in the price of the commodity. Rio Tinto again declined. Dealings in tin shares were few and far between, but prices were mainly steady, despite the reaction in the metal.

NEW YORK.

The markets were closed last Saturday and on Monday in connection with the Labour Day holiday. During the interval considerable selling orders accumulated, and by lunchtime on Tuesday a million shares had changed hands at reduced prices all round. United States Steel Corporation were heavily liquidated, together with other market leaders, including General Motors, American Telephone, Westinghouse Electric, Dupont, and International Telephone. In every case, gloomy dividend anticipations were largely responsible. Railroad shares also suffered, the securities of the smaller companies being particularly affected. The markets remained active on Wednesday, but after further heavy selling a fair amount of short covering caused a firmer tone at the close. Sentiment, however, remained more depressed than for some time past. Political developments in London were regarded as helpful, but insufficient in themselves to solve the problem of sterling. The weakness of copper caused uneasiness, accompanied by nebulous talk of new restriction measures. The partial resumption of oil production in East Kansas was a signal for a lowering of gasoline prices, though stocks for the time being continued to show a reduction. The bond market was heavy, railroad issues especially showing weakness.

INVESTMENT NOTES.

The Stock Exchange Before the Budget.—The Stock Exchange as a whole has expressed no enthusiasm for the National Government. The vote of confidence from the House of Commons failed to elicit any response in the gilt-edged market. Instead, prices weakened and the whole market wore an air of depression. This may be attributed to two factors—the fear of increased direct taxation and the realisation that the stability of sterling cannot be assured until the adverse balance of trade has been in some measure redressed. Political uncertainty overhangs all markets, and public interest is at a standstill. Some genuine selling of brewery and tobacco shares took place before the Budget announcement in the expectation that fresh taxation would be levied on these industries. There was also some little inquiry for the lower-priced iron and steel shares, on hopes in certain quarters, of an early protective tariff. Apart from this speculative movement, which was of a professional character, British industrial shares remained dull, while foreign securities were heavily sold from the Continent as the result of the weakness of the German mark and, particularly, the tight condition of the Swedish money market. The persistent selling of the leading oil shares from Amsterdam and the continuing liquidation of the Swedish Match group were a most depressing feature. Matters were made worse by the bearish trend of Wall Street, and most Anglo-American shares reached new low levels. A particularly depressed area has been the market in Canadian Pacific shares, which have now fallen to 17 1/2, as compared with a high level of 46 1/2 this year. The following prices of representative stocks show the weakening of sentiment in the week which preceded the Budget statement:—

	Sept. 3.	Closing Sept. 10.
5 per cent. War Loan	100 1/2	100 1/2
3 1/2 per cent. Conversion	78 1/2	77 1/2
4 per cent. Funding	91 1/2	90 1/2
German 7 per cent.	83 1/2	75 1/2
German 5 1/2 per cent.	55	50 1/2
German Potash 7 per cent.	20 1/2	18

Pinchin Johnson	30 3/8	28 9/8
Courtaulds	3 1/2	3 1/2
Imperial Tobacco	3 1/2	3 1/2

In this atmosphere of gloom Mr Snowden opened his Budget, and it is hard to see how his proposals, which are discussed in our earlier pages, can change the immediate trend of the markets.

Stock Exchange Depression.—The depressed state of the Stock markets is strikingly revealed, to the practised eye, by a single feature in the Stock Exchange Lists, writes a "House" correspondent. Many prices to-day are quoted in round figures, without a fraction. In the ordinary way, any stock, bond or share which enjoys a free market is quoted with a difference of something less, at all events, than a point. Men are standing about in the Stock Exchange to-day as idly as they did in the pre-war weeks of July, 1914. There is, unfortunately, no doubt that numbers of Stock Exchange members, in company with many other people at the present time, are living on their capital, owing partly to lack of employment and partly to the non-payment of dividends on the stocks which they hold to supplement their own incomes. The situation created, for example, by the postponement of an interim dividend on Cables and Wireless 5 1/2 per cent. preference stock, by the suspension of interest payments on Chilean Government bonds, and by the passing of dividends on the ordinary shares of large numbers of stocks and shares to provide money for living expenses. Specu-

lation is almost a dead letter, being confined within such narrow bounds that it scarcely counts as a market factor. To-day's chief problem for many members is how to live. Were confidence to revive even moderately, a new position would quickly arise. Past experience suggests that, however short of money people are, they can generally find capital with which to finance speculative transactions. The Stock Exchange markets offer, however, no promising field for bull operations; while prices are low enough to render bear sales a dangerous matter. Thus Stock Exchange markets have reached something like an impasse, from which, perchance, they may escape now that the extent of Mr Snowden's call for equitable sacrifice is known. The immediate cause of Stock Exchange depression is want of confidence, but other roots—including national extravagance—go deeper. Until they are removed, members of the Stock Exchange are not inclined to look for any genuine revival in their business.

Australia—The End of "Voluntary" Conversion.—It is impossible to congratulate the Australian Loan Council on its decision forcibly to convert to a lower interest basis the holdings of 25,000 internal bondholders, representing a total of £18,293,289 sterling, who dissented from its voluntary conversion scheme. The conversion offer has achieved a great ostensible success, holders of approximately £532,000,000 of bonds having either signified their desire to convert or, having failed to declare their unwillingness, been deemed to have converted, under the terms of the scheme (subject to notification from holders outside Australia received before September 21st). The Council has contended that, if 97 per cent. of the total bondholders are prepared to submit to sacrifice, it is unfair that the remaining 3 per cent. should get off scot-free. More farseeing statesmen would have reflected that the application of compulsory measures to a few holders must inevitably cheapen the patriotic sacrifices of the great majority, and tarnish the credit of Australia. The Commonwealth and the States, indeed, have laid themselves open to a charge of breach of contract without securing even an immediate financial advantage. Already it has been suggested that the entire conversion operation was less "voluntary" in fact than in theory, since internal bondholders were well aware that the weapon of compulsion (either by way of direct forcible conversion or of discriminatory taxation) was being kept well oiled in the Government's armoury. Discriminatory measures, it may be recalled, were freely discussed when the operation was first mooted, and were abandoned on condition that a voluntary scheme should be tried out experimentally. It is difficult not to believe that the consequences of a failure in the experiment have been present at all times in the minds of Australians. In the middle of last month the British Department of Overseas Trade (in an announcement for the information of certain concerns in this country which had invested large balances in Australian internal securities to avoid exchange losses) declared that the position of those who dissented from conversion "had not been settled." It will be revealed, in the near future, whether Australia, by short-sighted action, has not, for the time being at least, destroyed all prospect of further Government borrowing at reasonable rates in her home capital market. The current level of internal issues on the Australian stock exchanges suggests that the various Governments would need to offer something nearer 7 or 8 per cent. than 4 per cent. in order to attract subscriptions for loans which are declared to be necessary for public works, wheat finance, etc. The board of the Commonwealth Bank has informed the Premier's Conference that it can make available only £1 million, in addition to the money it has already provided, of the £8 or £9 millions for which the Conference has asked. The Conference, therefore, is reported to have decided that each Government is free to make its own arrangements for the raising of loan money, one suggestion being that the respective Governments should be permitted to raise funds by sales of bonds "over the counter" at rates which "conform, regarding interest and totals, with the limits imposed by the previous Conversion Loan plan." If this implies that the bonds be-

to carry only about 4 per cent. average interest, the prospects of any Government obtaining large subscriptions are anything but bright. If, on the other hand, it is hoped to raise substantial sums, in the near future, in London and New York, despite the altogether unfavourable conditions for the flotation of large bond issues in either centre, the council's treatment of the minority internal bondholders would appear to be a doubly unfortunate error in tactics.

Industrial Profits in August.—Only 55 company reports were received by us during the month of August, compared with 185 in July. Undue significance should not, therefore, be attached to the fact that the percentage decline shown in aggregate profits was only 19.59 against 39.46 for the previous month. The relatively small decline in brewery profits—which account for £3,757,055 out of the August total of £4,716,033—is partially responsible for the improved figure. In the following table the reports received in July and August are analysed:—

Group.	No. of Companies.	Net Profit (after Payment of Debenture Interest). Reports received during July and August, 1931.	Increase or Decrease.
		1929-30. £	1930-31. £
Breweries	17	8,497,297	7,902,470
Canals and Docks.....	1	6,000	6,000

Shipping	6	771,667	128,753
Shops and Stores.....	5	841,327	Dr. 5,766
Tea.....	24	489,395	78,836
Telegraphs and Telephones	2	1,379,090	1,321,208
Textiles.....	10	455,991	144,182
Tramway and Omnibus.....	1	445,490	144,521
Trust.....	16	1,303,948	1,138,840
Waterworks.....	5	31,199	34,789
Other companies.....	57	3,472,935	2,578,676
Total.....	240	20,196,661	13,390,840

Below are shown the percentage aggregate declines, by months, since April last:—

Reports Published in	No. of Companies.	Per cent. decline in Net Profits (1931 compared with 1930).
April	217	— 10.49
May	211	— 22.3
June	192	— 21.93
July	185	— 39.46
August	55	— 19.59

Of those companies which reported during August, the largest were Watney, Combe, Reid, whose profits showed a decline of a little over 10 per cent., and Arthur Guinness, whose figures declined by 5.6 per cent.

Staveley Coal and Iron.—At a time when the majority of company reports are reflecting the acute depression in the industrial and commercial world, the report of the Staveley Coal and Iron Company does much to contradict the assumption that it is impossible to earn profits in the heavy industries of the country. The earnings of this company for the year to June 30th last show, in fact, an advance on those of 1929-30, and the dividend on the £3,385,356 of issued capital is maintained at 6 per cent., tax free:—

	1929.	Year ended June 30, 1930.	1931.
Net profit	£ 266,118	£ 266,094	£ 286,130
Ordinary:—			
Earned %	7.9	7.9	8.4
Paid %	5	6	6
Amount of dividend ..	169,269	203,122	203,122
To reserve	100,000	75,000	75,000
Increase or decrease in carry-forward	— 3,151	— 12,027	+ 8,009

The general reserve of the company now stands at £775,000. Cash assets, however, have dropped from £630,996 to £505,582, but this can be attributed to addi-

tional expenditure on the new Sand Spun Pipe plant which commenced operation only on June 3rd last. From this business, apparently, the board expects a good deal in the near future. The directors express concern with the coal trade outlook, but shareholders, doubtless, will continue to have confidence in a company which has the advantages of varied interests and efficient management. The £1 shares at 20s. 7½d. (including the final dividend of 3½ per cent.) yield about 6 per cent., free of tax.

Constable Hart and Company.—In view of the recent setback in building trade activity shareholders in this company of contractors and quarry owners have cause for satisfaction with the results of the past year. Trading profit was only £560 lower at £99,787, but heavier administration and taxation charges resulted in a net profit £5,581 lower at £43,325:—

	1929.	Year ended June 30, 1930.	1931.
Net profit	£ 49,222	£ 48,906	£ 43,325
Ordinary dividend:—			
Amount	31,116	31,628	31,225
Earned %	22.90%	23.49%	20.81%
Paid	15%	15%	15%
Reserve fund	6,558	7,000	7,000
Depreciation reserve ..	5,000	5,000	5,000
Increase in carry-forward ..	5,548	5,278	100

Stock-in-trade has increased by £10,240 to £29,812 in stocks. A further £10,000 has been invested in sundry interests (now £11,050) and cash in hand has risen by £10,039 to £28,406. Liquid assets exceed current liabilities by £139,180. At 35s. the ordinary shares yield £8 11s. 4d. per cent.

East Texas Oil.—The weakness of oil shares this week has been attributable to liquidation from the Continent. Actually the change which has occurred in the American oil situation has been for the better. It will be remembered (*vide* the *Economist* Investment Note of August 29th) that the Governor of Texas, following the example of the Governor of Oklahoma, closed down the wells in this new oilfield by force of arms. It was stated that the Texas Railroad Commission was preparing a scheme of restriction to carry out the terms of the Conservation Act which had been passed by the Texas Legislature. A dispute between the Governor and the Texas Railroad Commission arose as to the type of restriction which should be applied. The Governor has now given way, and the Texas Railroad Commission has issued an order to be effective from September 5th allowing a production of 225 barrels a day for each well. Whether the Governor will maintain martial law in the oilfields to make this restriction order effective is uncertain, but the important point is that East Texas will now be able to produce about 380,000 barrels a day. Before it was closed down it was producing 848,450 barrels a day, so that the restriction order is fairly drastic. But whereas the total output for America had been reduced for the week ending August 29th to 1,751,500 barrels a day by reason of the shut-downs in Oklahoma and East Texas, the new restriction in East Texas will cause a rise in the American output to over 2,100,000 barrels a day. The erratic course of production in the last five weeks on account of the military manoeuvres is shown in the following table:—

(Barrels.)					
New East Texas					
	Oklahoma.	California.	Oilfield.	U.S. Total.	
August 1	425,250	404,100	597,550	2,500,650	
" 8	421,400	505,000	654,200	2,555,550	
" 15	264,500	517,000	738,050	2,498,500	
" 22	269,850	515,300	848,450	2,608,000	
" 29	266,000	505,800	Nil.	1,751,500	

The stoppage in the oilfields has already had a marked effect upon the gasoline situation. The refineries have been maintaining their operations by drawing upon their stocks of crude oil at the rate of over 500,000 barrels a day. Stocks of gasoline at refineries have been reduced from

47,444,000 barrels at the end of March (40 days' consumption) to 33,215,000 at the end of August (28 days' consumption). Both gasoline and crude oil prices have risen sharply, although the domestic price has not been held at the top. It has even been suggested in America that the oil industry, with the help of martial law, will be among the first to put its house in order. In spite of the rise in the gasoline prices, cut-throat competition persists in the British market where Standard Oil of Indiana is giving almost unlimited supplies to a pirate company to retail at 11d.-1s. per gallon.

Venezuelan Consolidated Oilfields.—The affairs of the Venezuelan Consolidated Oilfields remain a mystery to many shareholders, and the company's failure to secure the passage of its accounts at the adjourned general meeting on September 4th was not unexpected. The meeting has been adjourned for a fortnight in order to take a poll. The accounts are for the eighteen months to June 30, 1930, and show an excess of expenditure of £11,622, bringing the total debit on profit and loss account to £150,062. The accounts are, of course, meaningless and out of date already, and the directors should be called upon to give a proper account of their stewardship. The company was originally called the Trinidad Friendship Petroleum, the name being changed in April, 1927. It sold its Trinidad holding to the Siparia Trinidad Oilfields, Ltd., for 300,000 shares of £1 in that company, half of which were then resold to Trinidad Leaseholds. It now owns concessions in Venezuela, including the Falcon concession of approximately 360,000 acres. The chairman at the meeting said that the amount realised by the company upon the closing down of operations in Trinidad was below expectations, and of operations in Trinidad was below expectations, and that it was compelled to raise certain loans with Camp Bird, Ltd., and New Consolidated Goldfields, Ltd., totalling £50,000, as security for which the company issued £50,000 of 7½ per cent. debentures. These debentures were secured on the whole of the assets, including the company's shares in Siparia Trinidad Oilfields and in Bolgar Oil Processes. To enable the company to arrange a this loan the chairman stated that Mr C. D. Winant, a director, agreed to buy from the company 50,000 Siparia shares at par, and the company held Mr Winant's note for this amount. It will be interesting for the shareholders to know whether Mr Winant has paid for these shares or whether he has resold them and, if so, at what profit. The chairman also stated that the company had made a substantial investment in Bolgar Oil Processes, which owns a process for the conversion of acid tar into commercial bitumen. If shareholders come to the conclusion that the directors are not taking them fairly into their confidence they should demand an official inquiry into the affairs of the company.

MINING NOTES.

The "Johnnies" Report.—Our mining correspondent writes:—Only as regards two entries does the balance sheet for 1931 present any great contrast with that of a year previously. One is the item sundry debtors and year dividends receivable, which shows a falling off of no less than £458,900. The other is the reserve fund, which has been reduced to £650,000 by the appropriation of £30,000 towards the depreciation on the company's holdings. It will be recalled that in announcing a dividend of 7½ per cent. for the year the directors intimated that this method of dealing with part of the deficiency would be adopted. The (unstated but admittedly heavy) balance of depreciation has been deducted before striking the profit. The latter rather more than covers the dividend of 7½ per cent., less tax, comparing with a total of 15 per cent. for 1929-30, and one half tax free. Including the loans on mortgage and real estate on the credit side, the balance sheet shows a cash deficit of approximately a quarter of a million. The results of the last four years are shown:—

	1928.	Year ended June 30, 1929.	1930.	1931.

† Including final dividend.

During the past session, several of the company's leading interests have fallen upon evil days. Despite the consolidation of the diamond trade by new agreements, the sales of stones have fallen off still further. The Rhodesian copper industry has been depressed by the record low quotation of the metal, while platinum has suffered from price-cutting competition. In regard to Rhodesia the directors of the Johannesburg Consolidated Investment Company express their confidence in the ultimate value of the company's investments. As mentioned in our issue last week, measures are being taken to deal with the platinum position. On the favourable side, the good results from the Witwatersrand subsidiaries are referred to, and in regard to the New State Areas the comment is made that "the mine is in an excellent position, and a long and successful life is looked forward to." Johnnies shares (xd) are now quoted around par, as against 31s. 6d. earlier in the year.

Modder East.—Alterations and additions to the reduction plant last year permitted the treatment of a substantially increased tonnage of ore. Moreover, an improvement of one per cent. to 94.3 per cent. in the ratio of extraction largely offset a decline in the value of the ore milled, the average yield showing only a small decrease. Costs, however, rose 6d. per ton owing to a change in method and to the greater distance from the shafts at which operations are now being conducted. Thus, on balance, the profits fell off, although not in a degree sufficient to imperil the dividend rate which had been paid for the two preceding periods. Our usual table is appended:—

	1929.	Year ended June 30, 1930.	1931.
Ore crushed, tons.....	775,500	817,000	850,500
Revenue per ton	26/7	25/3	25/-
Costs per ton	20/8	20/2	20/6
Profit per ton	5/11	5/1	4/6
Total working profit, £	228,330	206,540	192,360
Dividends.....	185,780	186,160	186,160
Rate per cent.	20	20	20
Carried forward, £	177,370	173,990	167,430
Ore reserve, tons.....	2,045,400	2,013,000	1,985,600
Value, dwts.	6.1	5.8	5.9

During 1930-31 the record development footage of 53,800 was executed, and the payable proportion advanced from 17½ to 27 per cent. Nevertheless, the ore reserve tonnage shows a slight decline. (The trifling gain in average value is accounted for by the reduction in the stoping width from 46.9 to 45.7 ins.) Accordingly, states the consulting engineer, "it is essential to continue the present vigorous development policy, and the active exploration of the remaining virgin areas, while conserving the ore reserve as far as practicable." This affords the explanation of the quotation of the shares at a level showing a gross yield of 15 per cent.

Consolidated Goldfields.—Recent rumours that the last half-year's interest on the second preference shares might not be forthcoming have been confirmed this week by the company's statement that "although the realised profits for the year ended June 30th would have amply provided for the payment of the dividends on both classes

of preference shares," the adverse conditions prevailing and the consequent heavy depreciation of nearly all classes of securities do not justify such a distribution at present." It may, therefore, be taken for granted that the ordinary shares will receive nothing. The company's chief interests on the Rand are in Sub Nigel, Robinson Deep and Simmer. The first-named is enjoying marked prosperity, while the two last-named are earning moderate profits. Like other undertakings of its kind, however, Gold Fields in recent years has gone far afield. It has interested itself largely in American industrial enterprises, in oil, tin, West Australian gold, South American copper, etc. Notwithstanding all the information recently published as to restriction of output, the formation of an International Tin Pool, and so forth, the outlook for tin appears none too clear. The oil industry has been passing through an exceptionally lean period, and some of the leading shares stand at prices lower than have ever before been known. The company's subscription of 100,000 shares in Lake View at 15s. has so far proved a great mistake—at any rate from the market point of view—the current price of Lake View being about 8s. 3d. The subsequent association with Wiluna has turned out even more disastrously. Wiluna £1 shares, even after some recovery, stand at only about 7s. 6d.; while the £100 notes are a nominal market at 70. One is reminded of the adage concerning the cobbler and his last.

Consolidated Main Reef.—Last year's results show expansion, though they do not fulfil the optimistic expectations at one time entertained. The milling of a record tonnage of ore was accompanied by a reduction in working costs almost offsetting some decline in grade. Thus the working profit came out at £173,170, against £166,200 in the twelve months ended June 30, 1930. The dividend was raised from 8½ per cent. to 12½ per cent. This, however, involved a draft of £11,400 upon the carry-forward, which now stands at £128,600 represented by cash or cash assets, irrespective of £15,400 standing to the credit of mine development suspense account. A shrinkage of 195,700 tons, to 193,600 tons, is shown in the available ore reserves, the value per ton being 0.3 dwt. lower at 6.9 dwt. The decline in tonnage arises from restriction in the development footage on the more important ore body, the Main Reef Leader, where the exposures also indicated somewhat reduced values. On the other hand, the South Reef accounts for an increased tonnage of ore, carrying higher values. With the completion of No. 3 shaft, the development of the Main Reef Leader will be expedited. Important measures have been taken by the directors to increase the company's mining area. Application has been made for the proclamation of the portion of Farm Klipspruit No. 8, adjacent to the southern boundary of the property, and also for discoverers' claims on a portion of this area. Klipspruit No. 8 impinges into the ground already held in a manner which would greatly hinder operations in the section of the mine. Presumably the new boundaries will be drawn in such a manner as to square off the property as far as possible. With this additional area available—and there can be little doubt as to the granting of the application—the question of "life" will not seriously arise for years to come.

THE CONSOLIDATED GOLD FIELDS OF SOUTH AFRICA, LTD.—The directors of the Consolidated Gold Fields of South Africa, Ltd., regret to announce that, though the realised profits for the year ending June 30th last would have amply provided for the payment of the dividends on both classes of preference shares in the current year, the adverse conditions which prevail throughout the world and the consequent heavy depreciation of nearly all classes of securities do not justify at present the payment of the dividend due October 1st next on the second cumulative preference shares.

DAVIS AND TIMMONS, LTD.—In an interim report to shareholders, the board announce that after consultation with some of the principal preference shareholders it has come to the conclusion that it is in the interests of the shareholders to defer for the present the consideration of the payment of the usual half-yearly interim dividend on the preference shares. The half-yearly accounts of the company and its subsidiaries to June 30th last, taken together, show approximately that during this period the company have just avoided making a loss. This adverse result, however, it has been necessary to make substantial provision for the further writing down of stock owing to the continued fall in the price of metal and also for other abnormal items. Apart from these exceptional provisions, it is estimated that the half-year's dividend on the preference shares would have been earned. The directors have agreed temporarily to forego 33½ per cent. of their fees, and the salaried staff have accepted a 10 per cent. cut.

The board of Liebig's Extract of Meat Company, Ltd., announce that Mr Kenneth M. Carlisle has been appointed chairman and managing director in the place of the late Mr Charles E. Gunther. Messrs. Frazier Jelke and Company, members of the New York Stock Exchange, have opened a branch office at Shell House, 55 Bishopsgate, E.C., under the management of Mr Claud E. Levita.

COMPANY MEETINGS, &c.

SINGER AND COMPANY, LIMITED.

IMPROVED OUTLOOK.

The ordinary general meeting of Singer and Company, Limited, was held, on the 10th instant, at Canterbury Street, Coventry.

Mr Arthur C. Bournier, F.C.A., who presided, said that the accounts showed a much reduced profit when compared with last year, a state of affairs they assumed would not have surprised the shareholders, seeing the abnormal state of the country and the world generally, and that money, which might under more normal conditions have been used to buy motor cars, had to-day to be paid in heavy taxation. They felt they were not justified in recommending the payment of any dividend on the ordinary share capital at the present time. They had utilised the profit for essential capital purposes. Their net profit for the year was equal to nearly 4 per cent. on their total share capital, and the directors considered that rate satisfactory in all the circumstances.

It should be noted that in the year 1927 they had only been able to offer two distinct models of cars. To-day they were handling six passenger-car models and four commercial vehicle models, ten in all, and, with such a range, they were bound to be able to increase their turnover when trade improved, and they were justified in expecting an increased volume of business as soon as there was the first sign of a revival. The slogan, "Singers Lead, Others Follow," was built on a respectably solid basis of fact. It might be said that a Singer 1931 bore a remarkable resemblance to the 1932 models of other makes. They had contracts from their dealers for over 25 per cent. in excess of those agreed last year, and if they fructified into actual sales, the financial result would be highly satisfactory.

It was obvious that the present market price of the shares was no criterion of their intrinsic value, but was entirely the result of forced sales. That was further emphasised by the fact that the ordinary shares stood at almost the same figure as the preference shares, while the latter had no arrears of dividend, and were covered more than twice by assets even on a break-up basis, thus demonstrating the fact that the investment value of preference shares on a market basis should be not less than 20s. a share.

Mr W. E. Bullock (managing director) said that while the profits of the past nine years, shareholders would agree that their financial position had been much improved. They were completely equipped to double their present turnover, and their products competed both in price and performance with those of their competitors. They believed that a trade revival would enable them once again to resume their ordinary dividend payments.

The report and accounts were unanimously adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

The total ordinary revenue for the week ended September 5, 1931, amounted to £8,450,800 against ordinary expenditure of £15,391,100. After allocating £1,848,700 to Sinking Fund and having allowed for an increase in Exchequer Balances of

Messrs Samuel Montagu and Company write on September 9, 1931, as follows:—

GOLD.

The Bank of England gold reserve against notes amounted to £134,336,490 on the 2nd instant (as compared with £133,341,133 on the previous Wednesday), and represents a decrease of £13,289,132 since December 31, 1930. Bar gold available in the open market yesterday amounted to about £1,073,000, of which £978,000 was from South Africa, £50,000 from India, and £45,000 from the Straits Settlements. A satisfactory feature was that the Bank of England secured about £1,053,000, although the price paid was 84s. 11½d. per fine ounce. The balance of £20,000 was taken for India and the trade. Movements of gold at the Bank of England during the week resulted in a net influx of £1,556,726. Receipts totalled £1,638,726, which includes the above-mentioned purchase from the open market supplies, £300,000 in sovereigns from South Africa, £90,000 in sovereigns from Brazil, and the "release" of £100,000 in sovereigns. Withdrawals consisted of £82,000 in sovereigns taken for export.

SILVER.

Prices have shown little movement, and the market has ruled quietly steady. China has bought and sold, but only to a moderate extent, and the usual bear covering orders have been forthcoming from the Indian Bazaars. America has continued to sell, but offerings have been for near delivery, which, in the absence of off-take, has maintained an easier tendency for cash than for forward delivery; nevertheless, excepting on the 5th and 9th instant, when cash silver was quoted at ½d. discount, even prices have ruled during the week. No change of importance is apparent, neither buyers nor sellers being disposed to press the market at present.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 31st ultimo to mid-day on the 7th instant:—

IMPORTS.	£	EXPORTS.	£
U.S.A.	11,495	France	4,014
Jamaica	10,000	Netherlands	1,500
Australia	4,208	Straits Settlements	1,150
Belgium	3,382	Other countries	4,182
Other countries	2,425

MISCELLANEOUS.

COHEN, WEENEN AND COMPANY, LTD.—The directors of Cohen, Weenen and Company, Ltd., tobacco, cigarette and cigar manufacturers, announce that the net profit for the year ended June 27th last, after charging income tax, depreciation, commissions and directors' fees, amounts to £100,898. The directors recommend a dividend of 36 per cent. actual, on the ordinary shares and a final dividend of 5 per cent. on the 7 per cent. participating preference shares, making 9 per cent. for the year. The sum of £46,562 is to be carried forward, as against £35,664 brought in.

COMPANHIA DE MOCAMBIQUE.—The London Committee state that the Customs receipts for the Port of Beira during July amounted to £26,911 as compared with £32,954 for the corresponding period of 1930.

I. AND I.C. AND SHIPPING EXHIBITION.—Imperial and International Communications, Ltd., announces that the company will have a stand at the Shipping Exhibition next to the Post Office, and that telegrams from overseas may be addressed to exhibitors at their various stands. The I. and I.C. exhibit will be directly connected with Electra House, the company's main telegraph office, and the telephone number will be Shepherds Bush 1305. The company will also be represented in the Pageant of Shipping being organised by the Exhibition authorities. A picture of the s.s. "Great Eastern," which laid the first trans-Atlantic cable, will be on view, together with models of the c.s. "Lady Denison Pender" and the c.s. "Transmitter," two of the cable-laying vessels of the company. Some interesting charts will complete the display.

PINCHIN, JOHNSON AND COMPANY, LTD.—Mr F. E. Powell, who has recently accepted the chairmanship of the American Sugar Commission at the Hague, has tendered his resignation as a director from the board of this company. Mr Powell's resignation has been accepted by the board, and the opportunity has been taken by his colleagues of expressing to him their best thanks for the courtesy and loyal co-operation Mr Powell has always shown during the period of his association with this company.

POWER CORPORATION OF CANADA, LTD.—Gross earnings for year ended June 30, 1931, of \$3,412,404, were only about \$290,000 below the 1930 record, when they amounted to \$3,702,912 and exceeded the 1929 figure of \$3,312,104 by over \$100,000. Included in gross is \$757,717 profit from sales of securities. During the year changes in the company's portfolio of securities held resulted in a loss of \$900,548. This was charged to the investment reserve of \$2,000,000 which was set up a year ago to provide for just such contingencies. After expenses and taxes of \$487,711 net earnings were \$2,924,693, compared with \$3,210,705 in the preceding year, a decline of less than 9 per cent. Earnings were equivalent to \$3.54 a share on the common stock, as against \$4.21 reported last year. Interest charges of \$747,374 leave surplus for year of \$2,177,319. This, added to previous surplus of \$3,771,789, makes a total of \$5,949,108 against \$4,981,877 at the end of the preceding year. Deductions of \$2,417,546, including dividends and investment reserve of \$1,000,000, left surplus balance carried forward of \$3,531,162 against \$3,491,304.

STANTON IRONWORKS COMPANY, LTD.—Westminster Bank, Ltd., the trustee for the Stanton Ironworks Company, Ltd., 4½ per cent. debenture stock, 1931-45 (guaranteed under the Trade Facilities Acts, 1921-24), announces that it has acquired sufficient stock to meet sinking fund requirements for the current year, so that no drawing will be necessary.

Commercial Reports.

MARKET SUMMARY.

The trend of prices in the principal commodity markets has been downward during the past week. Transactions in this country were on a small scale, owing to the uncertain financial situation. Meanwhile, the coal trade has benefited by an increase in the demand for heating purposes. Industrial requirements and exports show no expansion. The normal seasonal increase in the activity of the iron and steel industries has scarcely been noticeable this year. The reasons are the intensification of the world depression and the lower prices of Continental materials. The non-ferrous metal markets have been dull, and quotations for tin, copper, lead and spelter have been easier. Among textile raw materials, cotton has suffered a further setback following the September report of the Washington Department of Agriculture. According to the revised estimate, the yield of the crop, excluding linters, is placed at 15,685,000 bales. Wool, flax and hemp have also been cheaper, but jute has been firmer as a result of the small Indian crop. Among cereals, wheat has failed to recover, and maize weakened in the face of renewed heavy shipments from the Argentine unaccompanied by a corresponding expansion in demand. Among other commodities, hides and vegetable oils and oilseeds declined further in value, but rubber has been steadier.

THE COAL TRADE.

SHEFFIELD.—Conditions in the coal industry continue unsatisfactory in all departments. Notwithstanding reduced pit outputs, owing to holidays and closings, supplies are ample. Best quality steams are in moderate request for prompt shipment, and

prices have hardened to 17s. 6d. and 18s. f.o.b. There is little activity as regards industrial fuels, secondary and small coals, and the household demand is none too good. Best ordinary house is quoted at 20s. and 22s. at pits. Prices of blast furnace coke have stiffened a little with no increase of consumption.

GLASGOW.—The possibility of a fresh stoppage in the Scottish industry as a result of the dispute with the safety men has not had any serious repercussions on the market so far. Prices have been raised by only a penny or two, and the collieries are offering coal normally. Supplies are quite ample as a rule, but among washed nuts doubles are none too plentiful. Steam coal is in need of business. Splint sorts are not now so readily obtainable. Prices for the shipping trade are approximately as follows:—LANARKSHIRE.—Kil best, 14s. 3d.; splint best, 15s. 9d.; splint second, 14s. 14s. 3d.; navigation, 15s.; navigation second, 14s. 6d.; Hartley, 15s. 6d.; steam, 13s. 6d.; trebles, 12s. 6d.-13s.; doubles, 12s.-12s. 6d.; singles, 10s.; pearls, 9s. 3d.-9s. 6d.; dross, 9s. FIRE.—Screened navigation, 17s.; first-class steam, 11s. 9d.-12s. 6d.; third-class steam, 10s. 9d.; trebles, 12s. 6d.-14s.; doubles, 12s. 6d.; singles, 10s. 6d.; pearls, 9s. 6d., all per ton f.o.b. Burntisland or Methil. LOTHIAN.—Prime steam, 10s. 9d.-11s.; secondary steam, 10s. 6d.; trebles, 12s. 6d.; doubles, 12s. 6d.; singles, 10s.; pearls, 9s. 6d. Ayrshire.—Unscreened navigation, 16s.; jewel, 17s.; steam, 13s. 6d.; trebles, 12s. 6d.; doubles, 12s.; singles, 9s. 3d.; pearls, 9s. 3d.; dross, 9s.

CARDIFF.—The most important development on the Cardiff coal market this week has been a revision of the minimum prices for the higher grades of large steam coals. In the leading class there has been a reduction from 20s. to 19s. 6d. per ton f.o.b., in another class from 19s. 9d. to 19s. 4½d., in a third class from 19s. 6d. to 19s. 1½d., in a fourth class from 19s. 3d. to 19s., and in a fifth class from 19s. to 18s. 10½d. These changes were the result of the award of an arbitrator declaring that a revision was desirable. All the best Admiralty collieries are directly affected by the changes, but it must be left to experience to show whether the reductions will have any favourable influence on demand. The most immediate effect will probably be an altered distribution of the current volume of business, and in this redistribution some of the first class coals will probably gain at the expense of the second class large steam coals. The prices of the latter are unaltered, and the old schedule as a whole is unchanged in inland sales. There has been very little inquiry this week, and shipments have been at a weekly rate of less than 400,000 tons, compared with over 500,000 tons at the corresponding period last year. Small coals continue to be in excess of demand. Anthracites are maintaining, on the whole, a fairly firm tone, and the demand for them is slowly improving. It is not anticipated that the French import restrictions will affect this trade to any appreciable extent. The following are the current approximate quotations:—Best Admiralties, 19s. 6d. to 20s.; seconds, 18s. 9d. to 19s. 4½d.; best dries, 18s. 6d. to 18s. 9d.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steams, 13s. 6d.; coking smalls, 13s. 6d. to 13s. 9d.; cargo smalls, 11s. 6d. to 12s. 6d.; anthracite best large, 36s. to 37s. 6d.; Red Vein large, 22s. 6d. to 27s. 6d.; machine made cobbles, 40s. to 45s.; stove nuts, 39s. 6d. to 43s. 6d.; rubbly culm, 8s. 6d. to 9s.; foundry coke, 30s. to 36s. 6d.; patent fuel, 18s. 6d. to 20s.; pitwood, ex ship, 27s. 6d. to 28s.

IRON AND STEEL.

SHEFFIELD.—There is no fundamental change in the position of the local iron and steel industry. Several firms report an increase of orders, but it is questionable whether there is any improvement in the aggregate. A Sheffield firm has booked an order for 35,000 steel sleepers for China, which will be rolled at Workington. A few overseas orders for railway tyres and axles are also on hand. In the Lincolnshire area production of steel has dropped a little since the holidays. There is rather more confidence than formerly. Firms are still active in carrying out changes calculated to reduce costs. The scrap market tends downward and record low prices are being quoted. The lighter steel and tool branches continue quiet, but demand is rather better than worse.

GLASGOW.—In the West of Scotland the political situation does not seem to have materially affected the situation, but generally the outlook seems to be regarded more hopefully than has been the case just recently. At the steel plants little new business is being placed and makers of semis are also exceedingly quiet. Competition from the Continent is very keen in this department, but although Continental prices quoted are exceedingly low, very little business has been placed this week from Glasgow either at home or abroad. Sheet makers are not quite so busy this week, although the home trade both in black and galvanised is well maintained. Messrs Mavor and Coulson, of Glasgow, announced that they had secured last week the largest order for coal conveyors that had ever been placed and valued at approximately £40,000, and they have enough work on hand to keep workers employed during the winter months at least. There are no signs of improvement in the structural engineering trade in the city.

CARDIFF.—Conditions in the South Wales tinplate and galvanised sheet trades are practically unchanged. The market continues to be detrimentally affected by the financial situation, and business has been transacted at prices ranging between 13s. 4½d. and 13s. 1½d. per basis box f.o.b. works' ports. Trade in galvanised sheets is stagnant at £8 17s. 6d. per ton. Welsh bars are unchanged at £4 12s. 6d., but foreign bars have recently been further reduced, and imports have recently been exceptionally heavy. Stocks of tin-plates, at 158,775 boxes, show a decrease of 16,175 boxes compared with the previous week.

OTHER METALS.

TIN.—Tin prices, which have been driven up by speculative buying following the formation of an international tin pool, have this week suffered the inevitable reaction. Nevertheless, present prices are still well above the low level touched earlier this year, though consumption has not yet shown any signs of an early expansion. Wednesday's official closing quotations for "standard" cash at £113 7s. 6d. to £114 per ton, compares with £118 5s. to £118 7s. 6d. on the corresponding day last week. Stocks in London and Liverpool at the end of last week, at 31,451 tons, show a decrease of 140 tons on the week.

COPPER.—The market in copper deteriorated this week and quotations reached a new low level. It is realised that the present rate of output is still in excess of requirements and that it will have to be curtailed still further. Wednesday's official closing price for "standard cash" in London, at £30 11s. 3d. to £30 12s. 6d., compares with £32 16s. 3d. to £32 17s. 6d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 22,748 tons, show an increase of 286 tons, while stocks of rough copper, at 1,200 tons, remained unchanged.

LEAD.—In the absence of any favourable factors, the market in lead was dull, and even a limited quantity offered caused a further weakening in prices. Wednesday's official closing quotation for "soft foreign" in London, at £10 13s. 9d. to £10 16s. 3d., compares with £11 1s. 3d. to £11 5s. on the corresponding day last week.

SPELTER.—The demand for spelter was quiet throughout the week and sales could only be effected at a lower level of prices. Wednesday's official closing quotation in London for "good ordinary brands" at £10 15s. to £11 5s., compares with £11 8s. 9d. to £12 on the corresponding day last week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals the quotations for aluminium and nickel at £85 per ton, and at £170 to £175 per ton respectively, have been maintained at last week's level. Antimony changed hands at the lower price of £22 10s. to £22 15s. per ton "foreign" established last week, but "spot" quicksilver, which had been sold at £16 per bottle a week ago, was reduced to £15 18s. 9d.

TEXTILES.

THE COTTON TRADE.—Liverpool.—Markets have shown little activity, and await the selling against the superabundant supply which it is felt must soon come. Business has been a little better in Manchester and on the Continent, the resulting demand having been just about sufficient to absorb the very limited offerings. The crop has not suffered any set-back and deterioration during August is admitted to have been considerably less than normal. The Bureau Report, issued yesterday, gave the condition as 68.0, against 74.9 last month, production 15,685,000 bales, against 15,584,000 bales last month, and ginnings 565,000 bales against 90,000 bales last month. The feature of late has been the narrowing of the difference between Liverpool and New York, due, undoubtedly, to the idea in America of subsidising exports. Spot sales for the week 3rd to 9th (inclusive) are 49,000 bales, of which 11,700 bales are American, 1,050 Brazilian, 1,400 Argentine, 4,750 Peru, 2,150 Egyptian, 8,250 African, 1,800 East Indian, 17,020 Russian and 280 sundries. Imports for the same period are 30,042 Peru, 8,729 Egyptian, 1,010 American, 7,806 Argentine, 5,061 Peru, 20 sundries. Quotations, September 9th, are: American Middling, 3.64; Egyptian Sakel, 5.55; Uppers, 4.59; Brazil Fair, 3.69; Peru G.F. Smooth, 3.99; West African Middling, 3.69, and East African, G.F., 4.69.

Manchester.—The demand for manufactured goods throughout the world continues to be adversely affected by the low prices ruling for commodities, with the result that sales of cotton piece-goods have been on a low level. Buyers are naturally interested in the steps now being taken by the spinning and manufacturing employers to reduce costs of production. They expect that any resultant benefits will be passed on to them. Demand for India has shown no signs of reviving and only trifling sales have been recorded, chiefly in light bleaching styles. After being quieter, there has been rather more inquiry for fancies and white shirtings. Only a few transactions have been done for the re-for China. Manufacturers as a body have probably experienced the worst week for a long time back. Spinners have only booked trifling transactions. There is still a tendency for production to decrease, but at the same time supplies remain plentiful, even though there is a substantial curtailment of output. Following the publication of the Bureau Report on Tuesday, the undertone of the Manchester market has been rather steadier and the freer testing of prices has been encouraging.

MAJOR C. S. GOLDMAN. J. L. JOURDAN. W. H. A. LAWRENCE
A. A. AURET. D. CHRISTOPHERSON. J. MARTIN
SIR ABE BAILEY, Bart., K.C.M.G., C.B.E. W. A. MACKENZIE

Tonnage Milled, 773,800.

Total Working Revenue	£1,133,444	4	11	£1	8	1
Total Working Costs	959,737	16	5	1	4	10
Working Profit	£173,706	8	6	£0	4	6

Total Profit for the year	£183,671	17	10
Balance unappropriated at 30th June, 1930	139,990	7	8
	£323,662	5	6

This amount has been dealt with as follows:—

Not Expenditure on Capital Account for the Year	£14,430	13	1
Miners' Pensions—Provision on account of Outstanding Liability as at 31st July, 1930	11,489	0	0
Government and Provincial Taxes	17,448	4	10
Forfeited Dividends Account	167	14	6
	42,535	12	5

Dividends declared during the year:—	£280,126	13	1
No. 42 and No. 43 of 6½ per cent. each	151,541	17	6

Leaving a balance unappropriated of	£128,584	15	7
---	----------	----	---

Ore Reserve.—The available Ore Reserve, as re-estimated at 30th June, 1931, is as follows:—

	Tons.	Value.	Width.
		Dwts.	Inches.
Main Reef Leader	1,322,080	7.6	41.5
South Reef	210,470	6.7	43.3
Bird Reef	404,010	4.8	67.1
Total	1,936,560	6.9	45.3

In addition, there is a total of 390,690 tons of payable ore developed, of an average value of 6.8 dwts. per ton, standing in shaft and safety pillars. The Full Report and Accounts (with Plans of Workings) may be obtained from the London Secretaries, A. MOIR AND CO., No. 1 London Wall Buildings, London, E.C.2.

THE WOOL TRADE.—Bradford.—Wool values have been fairly stable, writes our correspondent, and the home trade is doing its best to handle any suitable supplies which are forthcoming. At the moment attention is chiefly directed towards the sales in Sydney. Japanese competition is largely setting the pace in that centre, and those interested in bringing wool to this country are content to let that section go on filling its requirements. The type of merino wool taken is not such as Bradford needs to buy in very big weights, and topmakers are under the necessity to be able to offer something reasonable to their spinning clients. Consequently, the bulk of the purchases for this district are largely average 64's, and the good growth of herbage the sheep have enjoyed also means that the wool contains a larger proportion of burr than usual. Providing the wool can be bought right, this is not detrimental to the buying. The opening of the London sales on September 15th is awaited with no little interest. An offering of 146,700 bales, of which about 42,700 bales are New Zealand and South American wools, will provide enough wool for the time being. This means a three weeks' series. For the wool to be sold owners will be faced with another decline in both merinos and crossbreds. A decline of about 10 per cent. as compared with the close of last series is anticipated. Crossbreds will suffer most, for there are large stocks of both wool and tops in Bradford, particularly 46's and 48's carding. A fairly ready demand for merinos is expected, as stocks are comparatively small, but business in the interval has not been sufficiently active to enable better prices to be paid. The top market is quiet. Spinners are unwilling to buy unless they can do so at some concession. This applies to all qualities, everything being at least a shade cheaper than a week ago.

THE GRAIN MARKETS.

WHEAT.—In the absence of any favourable factors, prices at the principal wheat markets failed to recover. There was a slight increase in turnover, but, in view of the large supplies now forthcoming, no improvement became noticeable. Unfavourable weather has again delayed harvesting in some of the European countries, including the United Kingdom, and the Russian spring crop appears to have suffered considerable damage. It has been reported that definite arrangements have now been made between the Federal Farm Board and China according to which the latter country will buy from the Farm Board 450,000 tons of wheat to be delivered in nine equal monthly instalments. It also appears that Germany was negotiating with the Farm Board for the purchase of 18,500,000 bushels. Quotations: No. 1 Northern Manitoba, Atlantic, ex ship, 24s. per 496 lbs., as compared with 24s. 9d. a week ago; No. 2 Northern Manitoba, Atlantic, ex ship, 22s. 9d., against 23s. 3d.; No. 3 Northern Manitoba, Atlantic, ex ship, 21s. 3d., against 21s. 8d.; Rosaf, ex ship, 18s. 3d., against 19s.; Australian, ex ship, 19s. to 22s. 9d., against 20s. to 22s. 6d. a week ago.

 London: 5, Walbrook, E.C.4, and 4, St. James's Street, S.W.1

WHEAT FLOUR.—The international trade in flour has been more active during the week, and North American quotations were slightly higher. In this country, however, business has been rather quiet, and there has been very little new buying. North American shipments, at 205,000 sacks, show an increase of 13,000 sacks as compared with the previous week. Of this total, 82,000 sacks were consigned to Europe. Quotations: Straight run, delivered country, 21s. per sack of 280 lbs., as compared with 21s. last week; delivered London, 20s., against 20s. Manitoba patents, ex store, 20s. 6d. to 24s., against 20s. 6d. to 24s., and Australian, ex store, 16s. to 16s. 6d., against 16s. 6d. a week ago.

BARLEY.—The market in barley has been dull and, in view of the keen competition of maize for feeding purposes, prices have been lower. The supply of new English barley in the home markets, though increasing, is still small, which accounts for the abnormal rise in prices out of all proportion to the international level. Quotations: "English feeding," f.o.b., per 448 lbs., 20s. to 22s., as compared with 20s. to 22s.; Californian "new" sold at from 34s. to 50s., as compared with 34s. to 50s. last week; "Australian Chevalier" changed hands at 28s. to 32s., against 28s. to 32s. a week ago.

OATS.—Business in oats has been moderate, and the increase in shipments from North America and Argentina has not so far resulted in lower prices. Quotations: "River Plate," landed, 13s. 6d. per 320 lbs., as compared with 13s. 6d. last week; "River Plate," ex ship, 11s. 6d. to 12s. 3d., against 11s. 9d. to 12s. 9d.; "Chilean White," landed, 21s. to 22s. 6d., against 21s. 6d.; English white, per 336 lbs., 20s., against 20s. a week ago.

MAIZE.—After a temporary reduction, Argentina again increased her shipments considerably. As no corresponding expansion took place in demand, prices receded sharply. Quotations: "Plate," landed, 15s. 1½d. per 480 lbs., as compared with 15s. 9d. last week; Plate, ex ship, 13s. 10d., as against 14s. 6d.; Plate, September-October, new, 13s. 9d., as against 14s. 6d. Yellow maize meal, ex wharf, was quoted £4 12s. 6d. per ton, against £4 15s. a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1931-32, 1930-31, 1929-30, 1928-29:—

	1931-32.	1930-31.	1929-30.	1928-29.
Estimated sales of home-grown wheat, 1 week to September 5	Cwts. 42,758	Cwts. 129,208	Cwts. 229,935	Cwts. 178,461
Average price of English wheat per cwt.	s. d. 5 1	s. d. 7 8	s. d. 10 3	s. d. 9 3

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1927 to 1930:—

Weeks ended	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
Aug. 29, 1931.....	Cwts. 21,500	Cwts. 2,625	Cwts. 8,751	s. d. 6 3	s. d. 9 2	s. d. 6 3
Sept. 5, 1931.....	42,758	22,454	17,859	5 1	10 2	5 9
Sept. 3, 1927.....	75,184	34,688	32,310	12 1	14 1	9 7
Sept. 8, 1928.....	178,461	255,496	62,716	9 3	13 8	9 2
Sept. 7, 1929.....	229,935	106,178	49,234	10 3	10 1	8 0
Sept. 6, 1930.....	129,208	33,625	31,959	7 8	8 4	6 0

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1930:—

NEAREST FUTURE.	Jan. 2, 1930.	Sept. 10, 1930.	Jan. 2, 1931.	Aug. 26, 1931.	Sept. 2, 1931.	Sept. 9, 1931.
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.	148½	83½	56½	55½	52½	51½
Chicago (No. 2 Winter) —Cents per 60 lb.	130½	83½	79½	47½	45½	47

The visible supply of wheat in Canada, at 48,301,000 bushels, shows a decrease on the week of 2,653,000 bushels. Supplies a year ago stood at 50,129,000 bushels.

OTHER FOODS.

SUGAR.—After a rather sharp decline in the price of raw sugar last week, the market has been steadier. The improved tendency is partly ascribed to Dr. Mikusch's estimate of European production in 1931. Including Russia, he puts yield of the total crop at 9,147,000 tons, against an actual yield of 10,811,000 during the last season. Despite this improvement in raw sugar, the home market in "British refined" remained dull until quotations were reduced a further 3d. per cwt. Wednesday's sales of "raws" include "December delivery" at 5s. 8½d. to 5s. 10d. per cwt., against 5s. 7½d. to 5s. 8½d., and "March," 1932, at 6s. 0½d., against

5s. 11d. to 5s. 11½d. on the corresponding day last week. The movements of raw sugar in London and Liverpool during last week are set out in the table below:—

	Imports.		Deliveries.		Stocks.	
	1931.	1930.	1931.	1930.	1931.	1930.
Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
London	301	5,312	973	1,998	24,542	28,192
Liverpool	15,975	...	13,733	14,726	71,335	89,051
Total	16,276	5,312	14,706	16,724	95,877	117,243

Last week ... 8,234 14,309 15,217 17,862 94,307 128,655

COFFEE.—The demand for coffee at the auction on Tuesday, when 2,593 packages were offered, showed no improvement. Good qualities could be sold easily, but lower prices were offered for ordinary grades. Last week's movements of coffee in London were as follows: Brazilian, landed, 244; delivered for home consumption, 18 bags; exported, nil; stocks, 2,018 bags, against 1,122 bags last year. Central American, landed, 1,971 packages; delivered for home consumption, 2,513; exported, 1,012; stocks, 92,924 packages, against 71,677 a year ago. Other kinds, landed, 3,237 packages; delivered for home consumption, 2,612; exported, 609; stocks, 75,138 packages, against 80,684 a year ago.

COCOA.—The market in cocoa was dull, and in the absence of any improvement in demand, prices again weakened. As compared with the corresponding day last week, Wednesday's quotation for Accra, fair fermented, new crop, November-January, at 19s. 9d. per cwt. f.o.b. London contract, shows a fall of 9d. Last week's movements of cocoa in London were as follows: Landed, 3,398 bags; delivered for home consumption, 6,248 bags; exported, 2,720 bags; stocks, 206,666 bags, against 213,150 last year.

TEA.—The quantities catalogued for this week's auction comprised 57,255 packages of Indian, 29,321 packages of Ceylon, and 11,973 packages of Java and Sumatra tea. Prices at this week's auctions were generally firmer. The improvement, which so far had been confined to tea of outstanding quality, became general. Towards the end of the week, however, the tendency became easier. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account:—

Week ending	Northern India.		Southern India.		Ceylon.		Java.		Sumatra.		Nyasaland.		Total.
	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	
Sept. 4, 1930	1 4 7½	1 0 2½	1 5 40	0 9 82	0 10 44	0 8 66	1 3 50						
Aug. 13, 1931	0 9 46	0 7 45	1 1 50	0 6 39	0 6 53	0 7 12	0 10 64						
Aug. 20 ..	1 0 14	0 7 46	1 2 33	0 6 32	0 6 38	0 7 12	0 11 68						
Aug. 27 ..	1 2 97	0 7 84	1 2 73	0 6 46	0 6 45	0 7 12	0 11 68						
Sept. 3 ..	1 3 54	0 8 07	1 3 35	0 6 60	0 6 07	0 5 74	1 1 77						

RICE.—The market in rice has been steady, and the recent improvement in prices has been maintained, although the extent of the damage suffered by Eastern crops cannot yet be quantitatively ascertained. Wednesday's quotation for Burma No. 2, cleaned, September-October, in singles to the Continent and to the United Kingdom, at 8s. 4½d. per cwt., shows no change as compared with last week. Movements in London during the past week were as follows: Landed, 2 tons; delivered, 46 tons; stocks, 939 tons, as against 1,782 tons last year.

POTATOES.—Supplies at the principal markets have not been excessive this week, and prices remained steady. At the Borough Market, "Best King Edward" sold at from 5s. 6d. to 6s. 6d. per cwt., as compared with 5s. 6d. to 6s. 6d. a week ago.

SPICES.—The "spot" pepper market has again been quiet, and in the absence of an increase in demand prices remained weak. Wednesday's quotation for "Black Singapore," at 5½d. per lb., again shows no change on the week. Movements of pepper in London during the past week were as follows: Black, landed, 13 tons; delivered, 16 tons; stocks, 576 tons, against 857 tons last year. White, landed, 5 tons; delivered, 42 tons; stocks, 475 tons, against 449 tons a year ago.

MEAT.—At the Smithfield Market, beef and pork prices have been slightly firmer this week, but mutton was cheaper. Wednesday Argentine beef (chilled, hindquarters) was sold at 6s. 2d. to 6s. 6d. per 8 lbs., against 4s. 10d. to 5s. 2d. on the corresponding day last week, while New Zealand frozen mutton realised 3s. 8d. to 4s. 4d., as against 3s. 8d. to 4s. 6d. a week ago. According to the Smithfield Market official report, supplies of meat during last week amounted to 8,618 tons, as compared with 7,456 tons in the corresponding week last year. Imported beef, principally Argentine, formed 85.6 per cent. of the supplies, as against 85.1 per cent. a year ago; and imported mutton, mainly New Zealand, formed 77.0 per cent. of the total supply, as against 81.0 per cent. last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OLSEEDS.—Very quiet conditions rule, and in most sections there is marked weakness owing to the absence of demand. Linseed, in particular, is very depressed, and a new low level of prices has been established. Plate on spot at Hull and afloat having dropped to £7 5s., and September and October shipment £7 7s. 6d. Crushers, both here and on the Continent, appear to be well supplied, and are slow to increase their commitments in view of the poor demand for oil and cake. There is little or no interest in the new crop, which is nominally £7 7s. 6d., January-February loading. Favourable reports as to the progress of the new sowings in Argentina continue to be received. The quantity afloat for Europe, at 140,700 tons, is 16,600 tons less than last week, but still too high. In addition, over 400,000 tons from Argentina and India is awaiting shipment before the end of the

JOHANNESBURG CONSOLIDATED INVESTMENT COMPANY, LIMITED

(Incorporated in the Union of South Africa.)
REPORT OF DIRECTORS.—To be submitted to the Shareholders at a Meeting to be held in the Board Room, Johannesburg Consolidated Investment Company, Limited, Consolidated Building, Fox Street, Johannesburg, on Tuesday, the 24th day of November, 1931, at 11 o'clock in the forenoon.

THE LATE MR. S. B. JOEL.—The Directors record with the deepest regret the loss which the Company and they have sustained by the death of its Permanent Chairman, Mr. S. B. Joel, who passed away on the 22nd May. Mr. Joel had been associated with the Company since its inception, and for thirty-three years was its Permanent Chairman. In that capacity he rendered invaluable services to the Company and contributed largely to its progress and prosperity.

By a unanimous Resolution of the Board, Mr. J. B. Joel has been appointed Permanent Chairman in place of the late Mr. S. B. Joel.

ACCOUNTS.—1. The Directors beg to submit the Company's Balance Sheet and Profit and Loss Account for the financial year ended 30th June, 1931.

PROFIT AND LOSS.—2. The gross profits of the Company for the year under review have been well maintained, but owing to the abnormal depreciation in the market value of certain of the Company's shareholdings a considerable portion of the profits earned has been absorbed. Such part of the depreciation which has not been met out of profits has been provided by an allocation of £350,000 from the Company's Reserve Fund.

After giving effect both to the depreciation and to the allocation of Reserve Fund, the net profit amount to £398,745 5s. 9d. This sum, together with £154,189 17s. 2d. brought forward from the previous year, brings the total available profit to £462,935 2s. 11d.

DIVIDEND.—3. In June last the Directors declared a Dividend of 7½ per cent., subject to the deduction of United Kingdom Income Tax. This distribution will absorb £296,250, leaving a balance of £166,685 2s. 11d. to be carried forward to next account.

The Directors consider it inadvisable to declare the final dividend of the Company until they have the actual results of the year's work before them. In view of the Company's financial year ending on 30th June, they have decided that in future the final dividend will be declared in July, instead of in June as heretofore.

RESERVE FUND.—4. As indicated above, £350,000 has been transferred from this account, leaving a balance of £650,000.

VALUE OF SHAREHOLDINGS.—5. Provision having been made for the exceptional depreciation in the market value of the Company's shareholdings, they stand in the books at current market prices as at the 30th June last, or below those figures.

FINANCIAL POSITION.—6. The financial position of the Company continues to be satisfactory.

MINING INTERESTS.—7. The operations of the Gold Mining Companies managed by the Company, the details of which have been published as usual, have all been of a satisfactory nature.

The value of the gold produced by the Mines of the Group for the twelve months to 30th June last was, approximately, £13,000,000.

It is pleasing to record that the relations between the white employees and the Company's Group continue to be amicable. The supply of native labour has been sufficient for all requirements. This was due to the prevailing industrial depression in South Africa other than in the Gold Mining Industry.

GOVERNMENT GOLD MINING AREAS (MODDERFONTEIN) CONSOLIDATED, LIMITED.—8. The ore treated during 1930 amounted to 2,438,000 tons, resulting in a working profit of £2,711,393 of which the Union Government received £1,469,283 as its share of the profit. The Union Government has now been paid a total sum of £14,462,086 under the terms of its Lease to the Company. Dividends totalling 90 per cent. have been paid for the twelve months ended 30th June last.

The ore reserves at the end of the year were estimated to amount to 10,840,000 tons, with an average value of 9.9 dwts. over a stopping width of 61 inches.

The results for the year show new records for the mine. The tonnage milled, the gold recovered, the revenue and profit for the year, are the highest in the history of the Company.

THE LANGLAAGTE ESTATE AND GOLD MINING COMPANY, LIMITED.—9. For the year ended 31st December last 961,500 tons of ore were crushed, resulting in a working profit of £398,645, an increase of £73,813 as compared with the previous year. Dividends totalling 20 per cent. were paid for the year to 30th June last.

The ore reserves at the end of the year were estimated to contain 1,530,000 tons, with a value of 7.4 dwts. over a stopping width of 43 inches.

The development work in the mine has shown satisfactory values.

In view of the demand for building lots on the Company's township, arrangements have been made to increase considerably the township area.

NEW STATE AREAS, LIMITED.—10. The tonnage milled for the twelve months to 31st December last amounted to 930,000 tons, which the previous year. The Union Government's share of the profit was £211,680. Dividends totalling 20 per cent. were paid for the year to 30th June last.

The Ore Reserves were estimated to amount to 2,715,000 tons at the year end, with an average value of 8.9 dwts. over a stopping width of 60 inches.

The results for 1930 constitute a record for the Company in all respects. The mine is in an excellent position, and a long and successful life is looked forward to.

THE RANDFONTEIN ESTATES GOLD MINING COMPANY, WITWATERSRAND, LIMITED.—11. For the year ended 31st December last, 2,578,000 tons of ore were crushed, resulting in a working profit of £412,520.

The Ore Reserves at the end of the year were estimated to amount to 5,293,000 tons, with an average value of 8 dwts. over a stopping width of 41 inches.

We report to the Shareholders that we have audited the accounts of the Johannesburg Office of the Johannesburg Consolidated Investment Company, Limited, dated 30th June, 1931, and have obtained all the information and explanations we have required. The Audited Accounts of the Johannesburg Office have been properly incorporated in the Balance Sheet of the Johannesburg Office of the Company in its opinion properly drawn up so as to exhibit a true and correct view of the state of the Company's affairs in Johannesburg according to the best of our information and the explanations given to us, and as shown by the books of the Company. We have also verified the securities in South Africa. The Company has kept proper books and records.

SAME THOMSON, Chartered Accountant.

An improvement of nearly half a pennyweight in the grade of ore milled and a large tonnage treated resulted in an increase of £165,800 in the working profit.

Good progress has been made in sinking No. 2 North Shaft, and in June last the Randfontein Leader was struck at a depth of 4,328 feet, showing a value of 6.75 dwts. over a stopping width of 43 inches. At the point of contact the angle of dip was 15 degrees, which is a very considerable flattening compared with the dip in the higher levels. It is anticipated that this flattening of the reef will result in an appreciable saving in capital expenditure. All indications lead to the conclusion that the whole of the Main Reef Series on the property lies at a workable depth. This new shaft will be brought into commission as soon as sinking has been finished and the shaft equipped, which it is hoped will be within the next few months.

It will be seen that the outlook for the property is better than it has been for many years past. The large expenditure in debenture redemption and interest is drawing to a close; the last big payment of £155,200 falling due to be paid in March, 1932. Provided, as is expected, that the present favourable conditions continue, it is confidently anticipated that the Company will re-enter the list of dividend payers in the current year.

VAN RYN DEEP, LIMITED.—The tonnage milled amounted to 771,000 tons for the year to 31st December last, and showed a working profit of £463,516. Dividends totalling 27½ per cent. were declared for the year to 30th June, 1931.

The Ore Reserves at the end of the year were estimated to amount to 2,854,000 tons, with an average value of 7 dwts. over a stopping width of 48 inches.

WITWATERSRAND GOLD MINING COMPANY, LIMITED.—In 1930 the tonnage treated amounted to 659,000 tons, which resulted in a working profit of £37,955. Dividends totalling 7½ per cent. have been declared for the year to 30th June last.

The ore reserves at the end of the year were estimated to amount to 291,000 tons, with an average value of 5.5 dwts. over a stopping width of 54 inches.

DIAMOND MINES.—8. The continuance of the world-wide depression has been the main feature in the diamond trade, and this still dominates the position.

In spite of the fact that the consolidation of the trade in the future has been assured by the completion of the new Inter-Producers' Agreement and new Sales Agreements, the ratification thereof by the Union Government, and the formation of the Diamond Corporation, Limited, sales have fallen off still further.

A clearer appreciation by the Union Government of the importance of the principle of sales through one channel, and the more effective prevention of illicit dealings in diamonds, would go a long way to restore that confidence which is essential to enable the diamond trade to take full advantage of the position when general conditions improve.

COPPER.—9. Since the last Annual Report was issued an amalgamation of certain of the Northern Rhodesian Copper Companies in which this Company is interested has taken place. The result has been the formation of the Rhokana Corporation, Limited. This amalgamation will facilitate any arrangement which may be necessary for the control of production, and will tend to reduce the costs of production to a low level.

During the year the development and equipment of the N'Kana Mine have been pressed with great energy, and it is hoped that the production stage will be reached in January next. On the high grade N'Changa West Mine development is also actively proceeding.

Although the price of copper is at present abnormally low, it is confidently believed that working costs in Northern Rhodesia will enable these mines to compete successfully with production in any part of the world. Notwithstanding the present general depression the Directors have every confidence in the future value of the Company's copper investments.

PLATINUM.—10. The platinum industry has suffered severely during the past year from price-cutting competition. Fortunately, the producers of platinum are in a number, and a Company is being formed to stimulate consumption and regulate marketing. Although the horizon is not yet altogether clear, the Directors have reason to look forward to more prosperous times in the industry.

Benetsephuk Mine, the Rustenburg property of Potgietersrust Platinum, Limited, was actively worked, and the results attained in regard to extraction and working costs were satisfactory.

COAL INTERESTS.—11. The coal mining industry in South Africa suffered during the year somewhat severely from the general depression, but in spite of this, the revenue the Company receives from its coal interests has been maintained.

ESTATES AND TOWN PROPERTIES.—12. The demand for building sites on the Lower Houghton Estate continues to be satisfactory.

DIRECTORS.—13. In terms of the Company's Articles of Association the four following Directors retire by rotation, and, being eligible,

money on Monday ran up to 4½ per cent., with 3½ per cent. charged for renewals. Later in the week money became easier, and by Thursday both old and new money was obtainable at 3½ per cent. The market rate for three-months' bank bills has been a steady 4½-5 per cent., with remitted bills ½ per cent. higher. Some November bills have changed hands at 4½ per cent., and hot Treasury bills were dealt in on Thursday at 4½ per cent. It is noticeable that in comparison with the position a fortnight ago, market discount rates have been pulled up to a more desirable level. This result has been achieved not by open-market operations, but by the recent monetary stringency and by the prevailing excess of Treasury bill issues over maturities.

The Bank return shows a further decrease of £2.3 millions in the note circulation, but against this must be set net gold losses of £0.3 millions, so that the reserve is only £2.0 millions higher. There has been a change-over of approximately five millions in the Issue Department from "Government" to "other securities." Regarding the Bank as a single unit, Government Securities have fallen by £6.8 millions, while Other Securities have increased by £3.1 millions. Public deposits are £5.2 millions lower, so that, with "other deposits" practically unchanged, bankers' deposits have increased by £3.6 millions. The limit of £275.0 millions to the fiduciary note issue is to remain in force for another three weeks.

Gold to the value of £931,000 was on offer in the market of Tuesday. Of this £210,000 went to Holland, and £668,000 was bought by the Bank. The high price of 84s. 11½d. per ounce had to be paid, however, and the Bank's acquisition was neutralised by withdrawals of bar gold amounting to £558,000 on that and the following day. Hitherto the Bank, as an act of grace, has been prepared to sell sovereigns for export in minimum quantities of £2,000, and it has lately become apparent that sovereigns were being withdrawn in reality for purposes of hoarding. To put an end to this undesirable practice, it has been decided to withdraw this facility except in special cases, such as those of some South American States, where sovereigns are part of the currency reserve of the country, and so serve a useful purpose. Such cases will be decided upon their merits. It has been thought advisable to explain this change of procedure, as it has given rise to extravagant rumours such as that the Bank is no longer prepared to part with gold freely on demand. There is no obstacle against withdrawals of gold bars in conformity with the provisions of the 1925 Gold Standard Act.

The half-yearly Court of the Bank of England was held on Thursday morning. The official report to the meeting was that "the profits of the half-year ended August, after making provisions for all contingencies, amount to £875,703 19s. 9d., making the amount of the "rest" on that day £3,600,114 5s. 11d., and after providing a dividend of 5s. 11d. on the income tax, the amount of the while drys are offered at 1029 5s. 11d. 6 per cent. less tax rates are a poor sale, and in t. and Sir Ernest Harvey, the or most descriptions are sliding at the Court, said, "In sole leather does not appear though which we are passing, we of the trade is for English a to be in as good a position as we being experienced for these and distributors of upp black and brown glaci *

holiday currency withdrawals by the public, but much of it may well be due to August tax payments and to the efflux of foreign short money.

Over for accept., premises, &c.	161.7	156.0	157.9	155.2	154.9
Total assets	2,020.9	1,946.2	1,992.6	1,995.6	1,953.3

Acceptances are practically unchanged, while cash has fallen by nearly six millions, this decrease again reflecting currency withdrawals. Advances are £7.8 millions lower, and investments £2.5 millions higher. The main brunt of the bank's loss of deposits, however, has fallen upon discounts and call money, and, in these circumstances, it is not surprising that stringency has lately prevailed in the money market.

Money in New York remains extremely easy, and even a mid-month turnover of funds estimated to amount to two billions of dollars had no effect. Call rate is still 1½ per cent. Currency circulation showed a further increase of \$57,000,000 last week, bringing the total expansion since July to \$293,000,000. Part of this movement is seasonal, but the major portion is undoubtedly due to currency withdrawals from banks by nervous depositors, a development which throws some doubt on the ability of American banks to extend further credits abroad or even to maintain their existing foreign balances. The Federal Farm Board has arranged for the sale of 7,500,000 bushels of wheat to Germany. The terms include a 4½ per cent. long-term credit running to the end of 1934.

Conditions were quiet in the exchange market. Sterling outwardly remained steady, and the undertone of the markets seemed to indicate some return of confidence. New York stood at the end of last week at 4.85½, but after rising to 4.86½ on Monday closed somewhat under the best at 4.86. Heavy American liquidation on the Canadian stock exchanges was responsible for a violent rise in the Canadian rate to 4.91, but the close was slightly lower at 4.90½. Paris continued steady between 123.95 and 123.98, but Belgium continued to be offered, the rate rising to 84.95½, as against 84.94½ a week ago. Holland continued around last week's level, closing at 12.04½, and Switzerland was slightly easier at 24.90. Milan was steady at 92.91, and Spain, after mild fluctuations between 54.00 and 54.25, closed with a slight gain on the week at 53.90. German marks continued on offer, but selling was less violent than last week and business was on the small scale, the close being 20.61. The Scandinavian rates all moved in favour of sterling, Stockholm being 18.16, Oslo 18.18½, and Copenhagen 18.18½. There was no marked change in the Eastern exchanges, but among the South American rates Buenos Aires was very weak, the rate being 29d. and closing at 29½d., with few buyers. Among forwards, dollars were somewhat more on offer at premiums of ½ cent for one and 2½ cents for three months. Paris forwards were also cheaper, 10 centimes and 45 centimes being quoted. Forward Belgium was at premiums of 7 centimes and 18 centimes. Forward Switzerland was in strong demand against spot, at premiums of 4 centimes for one month and 9½ centimes for three months. Forward Milan narrowed to discounts of 1 centesimo and 10 centesimi respectively. Amsterdam forwards were at about last week's levels of 2 cents and 6½ cents for the one and three months' periods. Forward Reichsmarks continued unquoted. Silver was a quiet market, and after minor fluctuations closed at last week's levels of 13d. for spot and 13½d. for forward delivery. Hong Kong was 1s. 6d. and Shanghai 1s. 8½d.

RESTORING THE BALANCE.

THE first objective of the National Government has been achieved, for the reception in foreign centres of the emergency Budget introduced by Mr Snowden last week reveals a general and well-founded conviction that, in so far as the public finances are concerned, effective measures are being taken to secure a real and proper balance in the accounts both of this year and of next. Moreover, the course of events in Parliament and the country has shown both that the necessary measures are assured of a safe passage and that the general public have, on the whole, accepted Mr Snowden's onerous programme of economies and taxes with philosophic resignation. In some quarters, it is true, complaints are heard that this or that section of the community has been unjustly treated. This is inevitable. It may or may not be that complete equality of sacrifice is never obtainable. But it is certainly true that no emergency programme, framed in the short space of a fortnight, to meet a great national necessity, could possibly avoid inequalities and anomalies; and there is no reason why the Government, in the course of working out essential details of administrative procedure, should not succeed in smoothing out these excrescences without impairing the effectiveness of their cohesive plan. The new taxation, described in our last issue, has been sanctioned by the House of Commons, and the Government have been granted powers to proceed by means of Orders-in-Council during the next month to the task of making the economy side of their programme actively operative. Of that there is no doubt. But it is obvious that until the whole administrative machinery has been put into action, and, further, until the actual fruition of the Budget proposals has been definitely assured, the National Government will not have finally performed even the initial task for which it was created. In these circumstances, it is quite unthinkable that the leaders of the Government should stultify an excellent and courageous beginning by failure to recognise that their duty is to carry on and tackle the successive phases of the problem which confronts us.

Budget equilibrium is only one aspect of a larger problem—namely, the adjustment of our economic situation to the world conditions with which we are faced. A striking index of these economic difficulties is afforded by the state of our trade balance, which is a reminder, on the one hand, of the weakened condition into which our foreign debtors have been plunged by the world depression, and, on the other, of the fact that our reduced exports have diminished our capacity to stand such a sudden strain as that recently imposed on us. There has, it is true, been some lack of understanding on this matter, for though the balance of our international payment account is an important indicator of the economic situation, the actual payments to be made have not in themselves been an important cause of the crisis. It was not the gradual deterioration of the British balance of payments (though this was a factor in diminishing confidence in our financial stability), but sudden uncontrollable movements of capital which, towards the end of August, brought the stability of sterling exchange into such imminent peril. Nevertheless, as we showed last week, the spread of the world depression is progressively eating into the country's huge annual volume of "invisible" exports and creating a debit in our account with the outside world. It becomes, therefore, a matter of necessity to study all possible ways and means of wiping out that debit and transforming it eventually into a surplus of sufficient size to restore London's power to resume her rôle as an international lender.

Two main methods of restoring the trade balance are being most prominently canvassed. One is to curtail imports either by a general tariff, or by direct control or prohibition of the less essential classes of goods that now enter our ports. The other is to expand exports, and here there is an unbridgeable gulf between two schools, of which

one would achieve its aim by devaluation of the pound sterling, and the other by an organised effort to reduce the internal price level—including wages, salaries and cost of living—until competitive power has been restored to our exporters. Let us examine first the method of contracting imports. Among import restrictionists there are three distinct schools of thought. There is the school represented by Mr Walter Runciman, who would be content if he could shut out imported luxuries; the school of orthodox full protectionism, represented by the official Conservative Party; and, somewhere in between, the school represented by Sir John Simon, who finds the prohibition of luxury imports inadequate and difficult, and deems some sort of tariff essential. It is unfortunate that Sir John Simon, whose analysis of the trade position obviously impressed the House of Commons on Tuesday, did not make plain the lines or scope of the tariff measures which he would approve. With Mr Runciman we go so far as this, that if it should unhappily prove impossible to restore the competitive power of our export trades, and so expand their volume, some temporary control of imports may be forced upon us, although, like Sir John Simon, we are more impressed with the dangers and difficulties than with the merits of this particular scheme.

There remains the convinced believer in a general tariff. Did we believe that in such a policy lay any hope of quick betterment or durable recovery, lifelong advocacy of Free Trade would not restrain us from supporting it. But the balance of probabilities, both short and long, leads us to an opposite conclusion. On a short view, it may be that the adoption of a tariff would give a considerable initial fillip (partly psychological) to industries producing for the home market; but against that would have to be placed the certainty that, as soon as any real likelihood of a tariff appeared, foreign exporters would rapidly and heavily increase their shipments to Britain, in order to forestall the threatened duties. Thus, in the weeks and months immediately ahead, even serious consideration of a protectionist policy might quickly and appreciably aggravate the position of the trade balance. So much for the short view. When we look to the more distant prospect we fail to detect any counterbalancing advantages to set against adverse results which the adoption of a tariff would certainly bring. It would tend to raise manufacturing costs at the very moment when cheapening is all essential; it would further hamper our already harassed exporters by restricting the power of foreign producers to buy British goods, and by intensifying competition in foreign markets; it would lead other countries to retaliate against our goods; it would nip in the bud every plan for saner economic policy in Europe and elsewhere, to which Britain looks with growing hope of advantage; it would retard the necessary process of rationalisation and increased efficiency in British industry. This is only a partial, but surely a formidable, list of dangers, and, let us remember, if we decide to face them in the hope of some nebulous advantage, we are taking a permanent, not a temporary step. As history tells us clearly, once on the tariff road there is no turning back.

What reason is there to think that salvation lies along that road? High tariffs have not availed the protectionist countries to escape the storm. They share with Britain at least a common degree of distress. And, to turn back to the present problems of the Budget and the trade balance, what reason is there for thinking that in two or three months' time a contraction of exports would not at least balance any contraction of imports, leaving us no better off internationally, and with no net change in unemployment except that it would be concentrated more heavily than ever in our great exporting industries? To the protectionist who believes that it is impossible to restore our export industries and that, therefore, we must re-orientate our economic policy and face a narrower life for a littler England, we reply that we understand his argument, but refuse to share his

despair. To the protectionist who frankly advocates tariffs as a measure, not for maintaining standards of living, but for making a back-door attack upon them, we reply that, if our standards are wrong, we prefer the more direct and straightforward means of approach to their rectification. It is surely better to lead than to delude the country into economic readjustment.

Devaluation Delusions.

From this angle of approach to the question of Britain's weakened trade position, let us turn to the other—the possibilities of an expansion of exports. Here, as we have said, counsels differ profoundly as to the means to be employed. Encouraged by the approval of the section of expert economic opinion led by Mr J. M. Keynes, organised Labour is inclined to toy with the idea of abandoning the gold standard and thus reversing abruptly the monetary policy which is held by the "anti-deflationists" to have caused most, if not all, of our economic troubles. In the Labour Party, and to some extent outside it, devaluation of the pound is being seriously considered as a means of stimulating our exports and so rectifying our trade balance.

The advantages claimed for this policy merit examination, if only because the contentions of its proponents are in some respects contradictory one with another. Devaluation, it is argued, would cheapen British goods in terms of foreign currencies, would discourage imports, while encouraging exports, would stimulate employment and enable us to dispense with wage reductions, and would lighten the burden of internal fixed indebtedness, thus compelling the *rentier* to contribute to the national effort. A moment's thought, however, will reveal that we could not hope to "cash in" all these gains at once. Even if we make the large assumption that equilibrium could be re-attained at a lower sterling exchange level without cataclysmic repercussions on the world's financial structure, the fact remains that (a) the weight of taxation required to meet the internal debt charge, and (b) the burden of fixed interest on industry would be lightened only if British prices, incomes and wages moved in an opposite direction to the falling pound. But, if this occurred, the premium on exports would *pro tanto* be lost, and the check on imports be forfeited. What then do the "devaluationists" mean? Except in so far as the more muddled heads in the Trade Union Congress are unable to distinguish between "nominal" and "real" wages, we suspect that the idea behind the advocacy of abandonment of the gold standard is that it would be easier to resist demands for wage increases by way of compensation for an enhanced cost of living than it would be to ask for reductions in wages as matters stand. If this be so, this policy is open to the same criticism as the "restrictive" thesis of a section of the tariffists: to delude the wage-earners into making a sacrifice may ultimately be more dangerous than to ask for one openly. Admittedly, the industrialist would be helped by any relief from his present burden of wages and interest; but at best—and assuming devaluation by Britain alone—even if he might expect to secure a lower real wages cost or a lightening of overhead charges, he could not hope for both; and experience has shown that other factors might intervene to prevent him benefiting from either.

Such considerations, moreover, must be weighed in connection with a long and most impressive list of objections to devaluation. To start with a relatively minor one, it would leave untouched the existing inequitable disparity between sheltered and unsheltered wages. A more far-reaching objection is that the effects abroad of such a policy, initiated by Great Britain, would be too serious both in themselves and in their reactions on ourselves to be contemplated without the gravest misgiving. It would, in fact, be a disaster for the whole world. True, nothing is gained by endeavouring—as is being done in some quarters—to frighten the country into good behaviour with the suggestion that if the pound were to "go," its course would promptly parallel that of the mark during Germany's inflation period. Such absurd exaggerations are not needed to strengthen the determination of this country to maintain the basis of its credit, but run the

risk of creating an attitude of mind which would greatly increase the difficulties of those responsible for controlling the situation that would arise if we were compelled even temporarily to suspend or modify free convertibility. Nevertheless, any depreciation of the pound, however moderate, would be deplorable enough, and the deliberate adoption of such a policy a counsel of despair. Moreover, the achievement of the object for which it is advocated—namely, the stimulation of British exports—makes the large and improbable assumptions not only that all attempts to restore the level of real wages would be successfully resisted, but also that other countries would be both able and willing to remain on a gold basis. And even if we were prepared to face the resultant loss of London's earnings as an international banking centre, even if we were not impressed with the dangers of precipitate withdrawals of foreign balances and the export—at almost any price—of liquid domestic capital, we should still unhesitatingly reject devaluation for the reason that no country in the world, with the exception of France and the United States, would be able to maintain its currency at its gold parity if the pound sterling were allowed, in the devaluationists' terminology, to "find its own level." The upshot would be an international competition in depreciation of currencies, a disastrous reversion (destroying all the supposed advantages of our own devaluation) to that exchange chaos whose termination was recognised by the Brussels Conference as the prime essential for any ordered expansion of international trade.

The Honest Alternative.

There remains the alternative means of stimulating exports—the reduction of British costs and selling prices. It is the policy which we have consistently advocated in these columns and which we shall advocate to the end. By no fiscal or monetary legerdemain can the hard fact be evaded that the British nation, in a world depression which has halved the purchasing power of its customers in countries producing "primary" commodities, is endeavouring, by keeping up its wages and its prices of manufactures for export at a level which renders many of its good unsaleable abroad, to consume more imports than it is obtaining means to buy. The attempt is doomed to failure; unless and until we can sell more abroad, we must "go without." But whereas a tariff to restrict imports would mean a permanent abandonment of hopes of greater exports (and our means as a tiny insulated enclave would be miserable), while the advantages to be gained by enforcing less consumption through devaluation of the pound would be in all human probability illusory, immediate acceptance of lower nominal wages would give good hope of eventual recovery of greater prosperity, through the lowering of prices and the stimulation of an expanding volume of trade and employment.

That difficulties would remain, we are ready to admit. The problem of fixed indebtedness, national and international, calls in any case for drastic treatment; it is not soluble to-day on anything resembling orthodox lines. And, unless a sense of greater security as between nations can be realised, unless policies of economic nationalism can be replaced by greater co-operation and free exchange of goods, no nation's individual effort can be guaranteed as sufficient to save the civilised world from destruction at its own hands. Yet, inasmuch as the crisis is of the utmost gravity, so is the call for courage and honesty on our own part clear. We have no time to wait for international monetary action directed towards raising the price level; we must accommodate ourselves to prices as they are; we must recognise that trade, stripped of its civilised mechanism, is fundamentally nothing but barter, and that, unless we give the primary producers who are our "opposite numbers" a square deal, we shall ultimately starve ourselves. In the cheapening of manufactures (remembering always that the wage-earning producer is also himself a consumer) lies the sole reliable means of maintaining in this country a standard of life now artificially and precariously supported by foreign credits and doomed to permanent degradation if the electorate, evading the honest policy of "tightened belts and hard work," prefer the fallacious expedients either of currency depreciation or tariff restriction.

CO-OPERATION OR COLLAPSE?

In his dispatch from Geneva this week our League correspondent invites us to draw such comfort as we may from the fact that there has been no decision to postpone the date of the Disarmament Conference. That this should be almost the sole ground for satisfaction at Geneva is eloquent testimony to the barrenness of the results which this session of the Assembly has so far achieved. Elsewhere in this issue we comment on the speeches delivered by M. Briand, Dr. Curtius and Lord Cecil on the problem of armaments and security. Here we are concerned with the economic aspect of the League's agenda; for even if the Assembly had succeeded (and it has not succeeded) in producing some tangible evidence of closer approach to mutual understanding on the question of Europe's fighting forces, it cannot be forgotten that this session of the Assembly met in the midst of a financial and economic crisis which threatens the stability of European and world civilisation. Unless this meeting of the statesmen of the nations comes to grips with the hard facts of that crisis, realises that they must be tackled without delay, and points the way definitely towards progress in their solution, the Assembly will have failed. And up to the present it is difficult to discern grounds for hope that failure will be averted.

Yet it cannot be said that the Council of the League or the Assembly lacked *matériel préparatif* on which to work. A fortnight ago in the *Economist* we reviewed the suggestive and valuable report of the sub-committee of economic experts appointed by the Commission of Inquiry for Europe. That report, together with nine other documents representing the conclusions of other sub-committees and various memoranda dealing with the problems of State loans and other international credits, the difficulties of agricultural producers and questions connected with the unemployment of labour, was presented to the Commission of Inquiry by its Co-ordination Sub-committee on Economic Questions under cover of a General Report,* which the League has now published. This General Report begins by expressing the hope that the number and variety of the subjects dealt with in the documents submitted to the Commission of Inquiry will not create an impression of incoherence.

"In point of fact, anyone who can succeed in grasping the relations between these subjects will find that there is not one of them that is not intimately linked with all the others. Thus the extent and urgency of credit problems—whether they affect Government loans or commercial credit—now demonstrate more clearly than ever that the whole foundation of economic life resides in a ready and adequate supply of capital. . . . The circulation of capital is so closely bound up with the circulation of goods that it must hold a foremost place in any scheme aiming either at greater freedom of international trade in general or at the disposal of cereals in particular. . . . All these questions, together with others . . . touch, complete one another and overlap, each demanding its own special place in the conception of a *rapprochement*. . . ."

The Co-ordination Committee proceeds to review briefly the conclusions which the various sub-committees reach. Of the report of the sub-committee of economic experts, it remarks that it is distinguished by one special feature from the numerous reports previously published by the League on similar subjects and in particular from the conclusions of the World Economic Conference of 1927.

"This feature is the assertion, by a group of men who are daily at grips with the difficulties of economic life, that even when Europe has emerged from the present crisis she cannot hope for a real economic revival unless she is prepared gradually to adapt the traditional conception of separate national economic units and to approximate it—with every necessary precaution, and possibly in forms as yet unknown—to the conception of one vast market accessible on equal terms to all or most of the producers of Europe."

Having noted the practical proposals of the sub-committee (these were summarised in our issue of September 5th), the Co-ordination Committee summarises the dominant idea of the experts as that we should abandon our attitude of considering the phenomenon of commerce from an exclusively national standpoint and "take a bird's-eye view of the network of varied economic relations established among a large number of countries."

* Official Number A.36, 1931, VII.

With regard to credit problems, the most important proposals transmitted by the Co-ordination Committee were those contained in the report of the committee of Government experts which, together with a delegation of the League Financial Committee, was charged with the task of considering what practical steps could be taken to facilitate the issue of Government loans of an international character by more active intervention on the part of the League. The conclusions of this committee were that the Financial Committee of the League should be prepared to consider such applications from borrowing States as might be made to it for assistance. The Financial Committee should not take part with bankers in the formation of lending groups, but should act *vis à vis* potential borrowers in the capacity of an experienced and impartial adviser working in close touch with the B.I.S. and Treasury officials. The report observes that "international loans intended to be devoted to purposes of a sound economic character are an important factor to a revival of general economic activity."

The situation disclosed in connection with questions of agricultural depression, unemployment and provision of short-term credits was less definite; all these matters were noted as receiving or requiring further study. But, even so, the Co-ordination Committee was not guilty of any exaggeration when it referred in its Report to the "wealth and abundance" of the material presented by it. Moreover, so far as the responsibility of the statesmen assembled at Geneva is concerned, the General Report underlines the "major guiding ideas" which it presents in the conclusions of the sub-committees.

"The first of these is that the psychological factor dominates the economic crisis affecting most nations to-day, and it is for politicians, above all, to influence men's minds by spreading through the world, by their actions, a general feeling of confidence."

"The second idea is that there is no one miraculous prescription capable of restoring economic equilibrium in a few months, nor is there any single strict theory which can be recommended as capable, in itself, of leading to success. It would rather appear to be necessary to discard every preconceived opinion, to be guided by experience, and to seek for remedies wherever there seems to be a chance of finding them."

"All the efforts and attempts referred to in this report will be effective if they are permeated by a spirit of co-operation, association and mutual aid."

Again, the Report refers to "Europe's urgent need of a prompt restoration of confidence, meaning by that both the indispensable faith of the capitalist, the merchant, the manufacturer, in the stability of the economic system in which they operate, and the imperative necessity of being able to count on stable and cordial international relations in the political sphere." The sub-committee of economic experts has roundly stated that "it is for the Governments, supported by public opinion, to make efforts to achieve closer co-operation and mutual support in order to restore a better state of affairs." The committee on credit problems is equally emphatic. "Only," it states, "by a visible improvement in political and economic conditions will it be possible to re-establish, along with the revival of confidence, the normal current of investments which in its turn will be a most beneficial factor in restoring prosperity."

The depressing feature about the proceedings of the present Assembly of the League is that, while the statesmen have spoken in general terms of the ideals of security and relief from the menace of competitive armaments, they have not yet begun to talk of these and other cognate matters, such as reparations, international debts and trade barriers, in terms of an actual and present economic crisis. Though the report of the sub-committee of economic experts has been communicated to Governments for their observations, further study of the complexity of the problems raised by the idea of economic *rapprochement* in Europe has been remitted to the League's Economic Committee; but it is obvious that, without active response by the statesmen, the matter cannot be carried further by any part of the League's machinery. Unfortunately, the Governments of the world appear to be too deeply absorbed in their own affairs to give that concentrated attention to the international aspect of the crisis which is so urgently needed. The impression, therefore, which the proceedings at Geneva have created during the past fortnight

† Official Number C.504, M.211, 1931, VII.

one of dangerous drift; for the alternative to collaboration—let there be no mistake about it—is collapse. The only immediate hope discernible is that the Financial Committee of the League, whose report to the Council on the applications for assistance put forward by Austria, Hungary and Bulgaria will be presented during next week, may shock the statesmen into greater realisation of the urgent need of action.

SWEDEN AND THE CRISIS.

UNCONFIRMED rumours that Sweden may find it necessary to raise a foreign loan in support of the kronor have directed attention in the last few days to the effect of the world crisis on that country. We, therefore, propose in this article to summarise some of the available facts regarding Sweden's position, which has hitherto been regarded, and with ample justification, as inherently sound. The country is still enjoying a measure of industrial and commercial activity which compares favourably with that of other Continental nations; there is little reason, as yet, to apprehend difficulties in the maintenance of an assured budgetary balance; and the banking position, until lately, has been one of exceptional strength. Nevertheless, the financial crisis in Central Europe, superimposed on the world trade depression, is subjecting Sweden to considerable strain; and it would be idle to pretend that temporary embarrassment—beyond Sweden's power to overcome—does not exist.

After the settlement of the 1928 labour disputes, Swedish industry and trade reached in 1929 a high level of activity, and, as may be seen from the statistics of comparative international production which we print in a Note of the Week on p. 511, the world slump was slow to hit Sweden hard. The Swedish index of production (1928=100) averaged 119.1 in 1930; the mean figure for January-March, 1931, was still 8.5 per cent. above the 1928 level; and it was not until the second quarter of this year that the index sank to 100. During the past twelve months unemployment (allowing for seasonal "rhythm") has been increasing, and the Svenska Handelsbanken's "corrected" figure for June, 1931, was 16.1 per cent., as compared with 15.6 per cent. in December, and 10.3 per cent. in June, 1930. At the same time, it is to be observed that the latest Report* on Sweden issued by the Department of Overseas Trade notes that, up to the end of June, 1931, the incidence of the depression had not been fully felt in trades catering for the domestic market; retail sales still exceeded their 1929 quantum; bankruptcies had shown only a slight increase; and, generally, internal purchasing power and the standard of living had been well maintained.

The same, however, cannot be said of the Swedish export industries. Whereas imports of consumer's goods have not been greatly curtailed, the inability of Germany to absorb Sweden's iron ore, the slump in the timber trade, and the falling off in the demand for such of her staples as matches, machinery and ball-bearings, have seriously curtailed exports. The following figures speak for themselves:—

MERCHANDISE TRADE.

	(Million kronor.)		
	Imports.	Exports.	Balance.
1928*	1,708	1,575	-133
1929	1,772	1,813	+ 41
1930	1,664	1,550	-114
January-July, 1930	962	873	- 90
" " 1931	802	597	-205

* Lengthy labour disputes.

The visible adverse balance in the first seven months of 1931 has attained dimensions calculated in any case to cause appreciable pressure on the kronor exchange; but the picture is incomplete without reference to other items in Sweden's balance of payments. Unfortunately, the official estimates of "invisibles" (like those for Great Britain) are by no means proof against criticism; their inexactitude is exemplified by a huge annual "allowance for incomplete or doubtful data." From a study of the available evidence, however, the following conclusions emerge. From 1925 to 1929, good trade and expanding net earnings of shipping gave Sweden a substantial annual

surplus on her balance of payments. This she utilised partly in largely enhanced foreign investment (her purchases of foreign securities are estimated to have risen from Kr. 34 millions in 1925 to an average of Kr. 127 millions in 1926-29), and partly in the building up of an impressive volume of banking assets abroad. In 1930, notwithstanding a severe fall in the available surplus, lending abroad was continued on a greatly enhanced scale.

In this connection the following figures of the foreign assets and liabilities of Swedish banks are significant:—

BANK OF SWEDEN AND COMMERCIAL BANKS.

	Foreign Assets.			Net Foreign Assets.
	Balances and Bills.	Govt. Securities.	Total.	
Dec., 1928	423.0	214.0	637.0	515.4
Dec., 1929	508.6	186.7	695.3	583.6
Dec., 1930	572.3	237.1	809.4	554.2
Mar., 1931	463.3	242.3	705.6	416.1
May, 1931	454.7	223.6	678.3	300.7
July, 1931	420.6	173.5	594.1	351.8

It will be observed that in 1929 Sweden's foreign investments appear to have been insufficient to absorb the whole of the year's available surplus, and "net claims" of the banks in foreign countries increased by Kr. 68 millions. In 1930 this trend was sharply reversed; and between December, 1930, and May, 1931, the net surplus of foreign assets held by the banks fell by no less than Kr. 254 millions. In the first five months of this year, it will be noted, there was a considerable inflow to Sweden of foreign balances, followed between May and July by heavy withdrawals—exceeding the rate of diminution of foreign assets. This excess, it is reasonable to infer (having regard to the adverse visible trade balance), was met by sales abroad of Swedish securities—e.g., Kreuger and Toll stocks.

It was not to be expected that the Central European financial crisis, coinciding with a serious adverse balance of merchandise trade, would leave Sweden unscathed. The report of the Basle Committee of Experts noted that Sweden was a creditor of Germany to the extent of Rm. 797 millions on long and Rm. 101 millions on short term. Thus, apart from the questionable security of the long-term commitments, nearly a quarter of the Swedish banks' net surplus of foreign assets in July have been "frozen"; and the continuing effect of this embarrassment is clearly reflected in the comparative statements of the Bank of Sweden over the past twelve months:—

BANK OF SWEDEN.

	Sept. 6, 1930.	Dec. 27, 1930.	June 27, 1931.	Sept. 5, 1931.
Gold	242.4	240.9	238.8	229.8
Foreign Govt. securities	66.0	63.9	54.6	31.5
Balances and bills payable abroad	280.4	327.9	229.8	84.0
Rediscounted bills	77.6	215.1	226.7	305.3
Loans on collateral	38.0	47.2	36.8	35.4

In May, 1931, on the eve of the crisis, the foreign short-term liabilities of the Swedish commercial banks totalled Kr. 377 millions, while their foreign assets amounted to Kr. 397 millions. But, of these assets, Kr. 161 millions represented securities whose rapid realisation in bulk would not have been practicable. Hence there has occurred, during the crisis, the great expansion (shown above) in the Riksbank's rediscounts and the grave drain on its foreign assets, including the export in August of Kr. 8 millions in gold. If the demand on the Riksbank for exchange is not checked, it is obvious that the kronor cannot be upheld for many weeks without foreign credits.

Such, briefly, appears to be the present situation in Sweden—a situation arising less from internal weakness than from causes abroad of which Swedish banking is the victim. It is a situation which closely parallels (*mutatis mutandis*) that of Great Britain. In both countries there are the same phenomena of withdrawals of foreign balances and the "freezing" of assets held abroad. From the Treasury point of view, Sweden is better placed; but she shares with Great Britain the painful position of being a pre-crisis creditor country whose present balance of

payments demands—failing the recuperation of her debtors or the unlikely expansion in the immediate future of her exports at their present prices—either a radical reduction of her production costs or an enforced curtailment of her scale of purchases from the outside world.

BANKING CONCENTRATION IN THE U.S.A.—II.

(BY A CORRESPONDENT.)

THOSE who for business reasons or by inclination object to the future development of United States group banking will probably refer to the increase in the number of small bank closings as indicating that the group banking method of banking concentration is not advantageous to American banking or to the country in general. However, it is unreasonable to suppose that there will be any prolonged halt in the development and progress of Tennessee, Arkansas, and Kentucky, by reason of chain or group failures in these States. Most of the banks that closed were small institutions of only local importance. By April, 1931, practically all of them had either already resumed or soon will resume operations. The loss in money to depositors in such cases will probably be little or nothing. Furthermore, group banking does not claim to be immune from poor management. The outstanding advocates of the group principle have always favoured governmental supervision over bank holding corporations, and admit the dangers of non-supervision.

Leading group organisations, such as the Northwest Bank Corporation, Marine Midland Corporation, Detroit Bankers Company, Guardian Detroit Union Group, First Bank Stock Corporation, and others, have contributed in no small measure to the strength and prosperity of banking in this country. They have maintained the existence of many small banks which otherwise would probably now be out of business, and have restored the confidence of both investors and depositors to a large extent. Indeed, there is a striking similarity in principle between the accomplishments of the Federal Reserve System on a national scale and what might be expected from a system of group banking operating in a smaller area through the medium of the bank holding corporation. There are, however, certain conflicting opinions in this regard. Against the claim that group banking strengthens the banking structure, it is sometimes alleged that only large banks are desired by the controlling interests of the group systems. It has also been stated that group systems cannot afford to operate a local bank with resources of less than \$1,000,000. Such statements are not in accordance with the facts. A study completed during the early part of the present year by the writer, which covered 1,500 banks belonging to groups, showed that 54 per cent. have resources of less than \$1,000,000.

While the constituent banks in a group system are supported by the strength and supplementary facilities afforded by the holding corporation, these organisations embody certain undesirable characteristics. While space forbids a detailed discussion of disadvantages, at least two of the arguments advanced by the opponents of group banking must be mentioned. The group movement has created a problem in the field of public supervision which bank supervisory authorities are unable to cope with at the present time. The component banks in a group system may be subject to supervision as individuals, but to date there is no way by which the organisation as a whole can be brought under the jurisdiction either of the national or the State banking authorities. Bank holding companies have been exempt from banking examination, and even when a bank acts as a parent in a group of banks, it is subject to supervision only to the extent of its own banking operations. Groups often contain both State and national banks and State banks in several States, and both members and non-members of the Federal Reserve System. Therefore, there is no direct or indirect way in which the group as a whole can be examined in its total operations by either State or Federal authorities. Inasmuch as one State cannot examine and supervise banks in another State, even if the banks in question are a part of the same group, the power to conduct such examinations must be brought under the jurisdiction of the Federal Government. The problem, then, resolves itself into the

LEGAL & GENERAL ASSURANCE SOCIETY LTD
Head Office: 10 Fleet Street, London, E.C.4. Estd. 1836

question: Has the Federal Government the power to pass a national law, that would be constitutional, to bring all group systems which extend across State boundaries, and are, therefore, beyond State control, under Federal jurisdiction for regulation and examination?

This problem confronting Congress is, legally, one of the most technical and difficult questions to be found to-day in the realm of jurisdiction. If the matter is to be a subject of Federal regulation, as necessarily it must be if it is to be effectively guided, then it is necessary, as a preliminary step, to ascertain where, if at all, in the Federal Constitution the general regulatory power of Congress may be found. The powers granted under the Commerce Clause, the Clayton Act, and the broad taxing provisions of the Constitution, appear inadequate to handle the problem of supervision from a Federal point of view. It is believed that the first source of authority would be found in the "implied powers" clause of the Constitution. The "currency clause" would probably be a second source of regulatory power. By construing these two clauses together, a strong control over corporations controlling currency is given to the Federal Government. Since bank holding corporations control the operations of affiliated banks through stock ownership, it is also clear that they possess quasi-public attributes, and, accordingly, should be subjected to the jurisdiction of the Federal Government. In the opinion of the writer, there is little doubt that any legislative action, no matter how radical, should be attacked from a practical viewpoint, rather than a legal one. The Federal courts would probably support such action.

Another objection to group banking is that ownership in a holding corporation permits evasion of the double liability of bank stockholders. It has never been decided legally whether a holding company's shareholders are liable. However, a decision on this point will be reached soon in view of the fact that the Banco-Kentucky Corporation is now faced with being held for double the par value of its holdings in its two biggest banks, the National Bank of Kentucky and the Louisville Trust Company, both of which failed some months ago.

Branch banking has been exhaustively discussed elsewhere. Its advocates contend that the customers of a branch bank have available to them all the services performed by the parent institution. Such banks are in a better position than small unit banks to offer experienced investment advice and service, to perform trust services, and to finance foreign trade. They can also better and more safely take care of depositors and stockholders, as well as large borrowers. In other words, the dangers inherent in small banks are eliminated to a large extent. Among these dangers are poor management, due to the fact that small banks cannot afford to employ experienced managers; inadequate capital, non-diversification of loans and investments due to limited funds; and the undue influence of local and personal considerations in making loans.

The Comptroller of the Currency has stated that the branch banking problem can be solved by giving national banks branch banking powers within what he calls "trade areas" surrounding their places of operation in all States, regardless of State laws dealing with branch banking. However, at the present time, there is an indefiniteness about this term, and it seems unsuitable for legislation. The question of what constitutes the "areas of economic influence" referred to in his plan appears most difficult.

The opinion may be ventured that no agency created by Congress could actually lay out such trade areas, owing to the fact that they would overlap. Developments in transportation and communication would probably make it necessary from time to time to recast such trade areas, thereby further complicating the problem. The American Bankers' Association has also expressed the opinion that the trade area system is not likely to gain the support of any large percentage of the banking fraternity. If a working plan could be arrived at and enacted into law, it should be recognised, furthermore, that it will be only temporary, and before long the urge to group trade area branch bank systems into nation-wide groups, associations or otherwise jointly controlled systems, will be the dominant thought.

Branch banking has made considerable progress in the United States. Branch systems control more than \$25,000,000,000, or over one-half of the total loans and investments of all banks in the country. It should be mentioned, in connection with this substantial figure, that many branch and group systems are affiliated, so in effect this sum includes both groups and branches. Over 20 per cent. of the 22,769 banks are in branch or group systems.

The significance of the banking concentration movement has already stimulated a Congressional inquiry into the subject of branch and group banking. Hearings have been completed before the House of Representatives Committee on Banking and Currency, and a similar investigation, though much broader in scope, is now being conducted by the Senate Banking and Currency Committee under the chairmanship of Senator Carter Glass. These investigations will doubtless serve as the basis for any legislation which may be enacted in the future.

SUN LIFE OF CANADA.

ALTHOUGH it is a Canadian company (albeit the largest of the Dominion offices) the name of the Sun Life Assurance Company of Canada is better known in this country than that of many older established British offices. The energy and ability with which its affairs have been conducted have resulted in a rate of quantitative expansion without parallel in modern life assurance history. This, and the progressive investment policy which it follows, have together earned for it a universal reputation. Each year now the company issues new life policies for a face value in sums assured substantially greater than the total amount of its invested funds. The aggregate new business transacted during each of the last three years has been £91 millions, £134 millions and £145 millions, whereas the total assets at the end of 1930 amounted to £121 millions. Although the rate of increase in 1930 shows, not unnaturally, some signs of slowing down, the total for that year is nevertheless of an impressive size.

From the point of view of interest earnings the company enjoys the double advantage of freedom from income tax in Canada, and a high yield from its holdings in common stocks; but a great deal of this advantage is offset by the heavy expense incurred in conducting its business, the relevant figures during the past few years being shown below:—

Year.	Net Rate of Interest.	Expense Ratio.
	£ s. d.	%
1927	6 2 7	26.6
1928	6 3 6	26
1929	6 5 11	30.3
1930	6 0 8	28

The company's reply, doubtless, would be that much of the expense is attributable to its new business, which forms an abnormally large proportion of its total business; and further, that the world-wide nature of its activities is inevitably associated with higher expenses. Nevertheless, the fact remains that the expenses show an increasing tendency, and in each of the last two years they actually exceeded the interest earnings.

By reason of the complexity of the company's accounts an analysis of its valuation results presents unusual diffi-

culties, and the figures which follow, in so far as they relate to 1930, necessarily include an element of conjecture:—

	1928.	1929.	1930.
	£	£	£
Trading surplus	3,193,403	3,440,393	3,603,128
Profits from securities (realised and unrealised)	4,839,131	5,097,903	— 9,406,618
Brought forward	7,205,340	8,752,058	8,803,490
	15,237,874	17,290,354	3,000,000
Allocations:—			
To Bonuses paid to or reserved for policy-holders	3,597,970	5,690,168	6,007,126
„ Shareholders	133,790	194,564	250,751
„ Strengthening of actuarial reserves	699,261	547,337	...
„ Weakening of actuarial reserves	...	...	— 1,500,000
„ Strengthening of investment reserves	2,054,795	2,054,795	...
„ Weakening of investment reserves	...	...	— 3,955,261
„ Carried forward	8,752,058	8,803,490	2,197,384
	15,237,874	17,290,354	3,000,000

On December 31, 1928, in addition to the carry forward of £8½ millions, there were other reserves available aggregating £20 millions. These reserves were represented by an investment fluctuations reserve of £4,109,589 (subsequently increased to over £6 millions), a contingency reserve of £2,550,000, and by a hidden reserve in the book values compared with the market value of the assets. The intervening period has witnessed the slump in industry and on the Stock Exchange. On December 31, 1930, both the investment fluctuations reserve and the contingency reserve had disappeared, and the assets were valued at "market values" instead of at "market values or lower," the disclosed carry forward being reduced from £8½ millions to £2,197,000. Moreover, during 1930 the actuarial bases of the company's reserves have been weakened in certain directions to an extent which may be estimated to amount to £1½ millions. It is true that the "carry-forward" figure of £2,197,000 given above does not tell the whole story, since the figure appearing in the company's Board of Trade return is £6,524,000. The difference between the two is represented by amounts which are contingently apportioned for bonuses which are expected to be payable during the current year; and it is a disputed point whether or not these should be deducted in arriving at a "carry-forward" comparable with that in a British office.

In the speech of the chairman, Mr T. B. Macaulay, at the company's annual meeting, it was stated that on prices at December 31st last the market value of the company's holdings in common stocks was still £1½ millions in excess of cost, and that the only effect of the shrinkage in Stock Exchange values had been "to reduce that portion of the excess of market values which we last year felt justified in bringing to our accounts"; but in view of subsequent price movements it is probable that the company's £80 millions of common stocks are now worth less than book values on December 31st last, and may even stand at less than cost prices. Any such shrinkage, even though it be a paper depreciation out of proportion to the long-range value of the assets, represents a further inroad upon the company's available resources.

Notes of the Week.

A Coupon Election?—From the moment when the National Government took office we have consistently urged that the emphasis initially laid by its leaders on its "temporary formation for one specific purpose" was misdirected. It encouraged from the outset talk of an early General Election, and that talk has been a serious additional complication in the problem—rendered difficult in any case by withdrawals of funds needed to strengthen weakness in other centres—of maintaining the stability of sterling. But while we hope that, even in the section of

the Conservative Party most insistent on tariffs, recognition is growing of the intolerable danger which a three-cornered election fight, with a medley of confused issues, would entail, there have been unmistakable signs this week of an attempt to mobilise support for a plan whereby a "National Government Party," standing on a common platform, would appeal to the electorate for renewal of its mandate. Let us say, without more ado, that we fail to see any possibility of such a plan taking practical shape. To the Conservative wing in such a coalition a high protective tariff would be a *sine qua non*; and even if Mr MacDonald were prepared to drop out of his team not only Sir Herbert Samuel but also Mr Snowden, every indication points to the Liberal Party as a whole declining to stand on a platform whose main plank would be a high protective tariff and determining to fight, on the fiscal issue, as an independent party. Moreover, even if such a programme were agreed upon, the result of the election would still be in doubt; and if those who are urging this course will ask themselves what they would do if they were in the position of a foreigner holding sterling balances when a Dissolution was announced, and knowing that even now the drain upon sterling is still continuing, they will realise at once what would happen. This being so, we would once more urge the members of the Cabinet to realise that their first consideration must be this: a Dissolution at this juncture would mean the inevitable collapse of sterling. To court that eventuality would be an act of irresponsibility beyond pardon.

Protests Against Economy.—Protests against the Government's economy plans were inevitable. As we have said elsewhere, anomalies and inequities are bound to crop up in a hastily-framed programme of large-scale national retrenchment; and apart from this, even sacrifices which are just in the circumstances are not likely always to appear in that light to the people whose pockets are involved. Apart from insistent Parliamentary opposition by the Socialists to the cut in unemployment benefit rates, the two chief protests have come from the teachers, whose salaries are threatened with a 15 per cent. reduction, and, most unexpectedly, from the lower ratings of His Majesty's Navy. In the former case a battle of figures is going on between the authorities and the National Union of Teachers, and the latter body is advertising its grievances throughout the country. In the case of the Navy, a most regrettable demonstration against cuts in pay took the form of a refusal to obey orders by certain elements on the lower deck of battleships in the Atlantic Fleet, which was engaged in autumn manoeuvres off the east coast of Scotland. The incident was serious enough to cause the cancellation of the manoeuvres and the return of the fleet to port. Following a conference at the Admiralty, Sir Austen Chamberlain, the First Lord, informed the House of Commons on Wednesday that grievances would be investigated and suggested remedies considered. Too much may have been made of these events in some quarters, but their importance, both as an infringement of discipline and as an example to all others who are asked for sacrifices, cannot be denied. On the general question of smoothing out injustices and anomalies in the economy programme, the Prime Minister took the only sound line in the House of Commons on Wednesday, when he indicated that while it would be within the competence of the departments concerned to make desirable readjustments of new burdens, the economy programme as a whole must not be impaired.

Mr Gandhi's Position.—In spite of the present tense preoccupation with home affairs, Mr Gandhi's much-heralded arrival in London last week-end excited dramatic interest, which was heightened by his first attendance at the Round Table Conference on Monday, which he strictly observed as a day of silence. The next day, however, in a long, carefully phrased, speech, conciliatory in manner, if insistent in phrase, he stated the Congress position to the Conference. Those who expected from him something in the nature of an ultimatum were pleasantly surprised. Opening with a passage declaring that he came to the Conference "absolutely in a spirit of co-operation," and would in no way "embarrass authority" or "obstruct

the views" of his colleagues, the Mahatma proceeded to give a history of the policy of Congress in the political and social sphere, ending with the famous Karachi resolution, in virtue of which Mr Gandhi is present at the Conference. This resolution, after reaffirming that the Congress aim is nothing short of "complete independence" went on to lay down that the Congress delegation "will work for this goal, and in particular so as to give the nation control over the Army, external affairs, finance, fiscal and economic policy, and to have scrutiny by an impartial tribunal of the financial transactions of the British Government in India, and to examine and assess the obligations to be undertaken by India or England and the right to either party to end the partnership at will." Mr Gandhi himself was emphatic in his demand for complete freedom, but he equally underlined the important proviso that he "would be free to accept such adjustments as may be demonstrably necessary in the interests of India." The Pandit Malaviya followed with an exposition of the complete nationalist view, but expressed full approval of the policy of Federation between British India and the States. It is something, at any rate, that Mr Gandhi has exploded no bombshell and that his entry into the Conference has in no way embittered the atmosphere.

Armaments and Security.—Last week we recorded the important proposal, placed before the League of Nations Assembly by Signor Grandi, for "a real and effective truce in armaments" from now onward until at least the conclusion of the World Disarmament Conference. Since this suggestion was placed before his colleagues at Geneva by the Italian Minister for Foreign Affairs, speeches have been made in the Assembly by three leading European statesmen—Lord Cecil, Monsieur Briand, and Dr. Curtius. Points of agreement and difference are clearly brought out by our League correspondent in the despatch which we print on a later page. Both Lord Cecil and Dr. Curtius welcomed Signor Grandi's proposal, whereas Monsieur Briand passed it by without referring to it. To Monsieur Briand's colleagues this silence must have seemed ominous; and so, no doubt, did Lord Cecil's silence seem to the French Foreign Minister when he tentatively turned to his British colleague for support in making his plea for a revival of the Geneva Protocol. The German Foreign Minister admitted the supreme international importance—on which Lord Cecil had laid stress—of a reconciliation between Germany and France; but he insisted that such a reconciliation could only be based upon a genuine equality of status between the two Powers. On the day of Dr. Curtius's speech at Geneva the German Ambassador in Paris presented the German Government's formal invitation to MM. Laval and Briand to visit Berlin. The invitation was at once accepted; but meanwhile Dr. Curtius's speech at Geneva has had a still worse press in France than Monsieur Briand's has had in Germany, and there is some nervousness in regard to the reception which the French Ministers may have from the German public. All this is very bad. It is evident that we shall not make progress towards that restoration of political confidence on which the economic and financial future so largely depends unless the Powers can bring themselves to make large concessions to one another—Great Britain, Germany and the United States perhaps in the direction of the Geneva Protocol; France and her allies in the direction of disarmament and treaty revision. There is little sign yet, in any quarter, of readiness to compromise to anything like the extent which the international emergency requires. Meanwhile, the sands are fast running out.

Disorders in Central Europe.—During the last few days there have been sporadic outbreaks of disorder in Central Europe. In Austria, early on Sunday morning, September 13th, there was a regular Putsch, organised by the Heimwehr, which is the Austrian equivalent of the National Socialist organisation in Germany. In the provinces of Styria and Upper Austria, which are the Heimwehr strongholds, the Heimwehr momentarily

made themselves masters of a number of towns and villages, occupied Government buildings, railway stations and schools, and posted machine guns. Their leader, Dr. Pfrimer, went so far as to issue a manifesto in which he proclaimed a Heimwehr Government, professed to declare martial law, and gave notice of a new provisional constitution. Happily the movement did not spread into Carinthia or the Tyrol (there was no question of its spreading into Lower Austria, which, as the metropolitan province containing Vienna, is the stronghold of the Social Democrats). Moreover, the Social Democratic organisation in Austria, while representing to the lawful Government of the Republic the necessity of taking prompt and vigorous measures against the insurgents, very wisely refrained from sending their own organised followers into action against their adversaries. In this situation the authorities at Vienna did take effective measures; and by Monday evening the Heimwehr bravos had dispersed, Dr. Pfrimer had gone to earth, and since Starhemberg, the young aristocratic patron of the movement, had been arrested in his castle. Meanwhile, on Saturday night, there had been an isolated outrage in Hungary which is believed to have been intended, by its perpetrators, as a political demonstration. The railway aduct at Biatorbagy was blown up, with a dynamite charge, when it was being crossed by an international express on its way from Budapest, via Vienna, to Paris, Genoa and Genoa. The locomotive and nine coaches were precipitated a hundred feet, with the result that twenty passengers were killed and eighteen injured. The week-end was also signalled by disgraceful rioting—systematically organised by the Nazis—in the streets of Berlin. In the Kurfurstendamm, on Saturday night, there were attacks on the Jews which were so adroitly managed that the police were almost completely unsuccessful in laying hands on the culprits. In the same roughfare, on Monday evening, there was a pitched battle between Nazis and Communists, in which the total numbers of the mob are estimated to have been something like 20,000. This time, again, the police were unable to cope with the disorder, and 65 serious casualties had occurred before the streets were cleared. Each of these outbreaks is more or less serious in itself; and they are even more serious in the aggregate as symptoms. When one reads, against this turbulent background, the counts of the paralysis of statesmanship at Geneva one reminded of a child, with its toy spade and bucket, attempting to dam a stream with a steep fall and a strong current, and not realising that his toy dam will never hold unless he gives the waters an alternative outlet. For every spadeful of sand that he piles on the masterful current sweeps two spadefuls away. In other moment it is going to overwhelm the childish construction and return irresistibly to its natural course.

The Situation in China.—It was perhaps not to be expected that the tremendous national disaster of the recent floods would shock the Chinese nation into unity, but it might at least have been expected to check the tendency towards civil war for the time being. Happily, the news now comes that an expeditionary force is marching northwards from Canton towards the devastated area—not to assist in the work of relief but to attack the authority of the Central Government at Nanking. Thus the monotonous story of unprofitable resistance and inconclusive fighting between Nanking and Canton repeats itself once again—and presumably these repetitions will go on until North and South are added together by the completion of the missing link in the Peking-Hankow-Canton Railway. Meanwhile, anti-Chinese feeling is being dangerously roused in Japan by the failure of the local Chinese Government at Mukden to answer a Japanese note of protest in regard to the murder of Captain Nakamura, an officer of the Japanese general staff who met his death by foul play when he was travelling, last June, from the Chinese Eastern Railway to Taonanfu in the Mukden Government's train. The present outburst of Japanese feeling

against China is no doubt a riposte to the Chinese outburst against Japan on the occasion of the recent anti-Chinese riots in Korea. The best that can be said is that the disorders in China and the tension between China and Japan are neither of them quite as serious at the moment as they have been on several occasions during the last three years.

A Common Misconception.—Sir John Simon seems from his speech in the House of Commons last Tuesday to be under the same misapprehension that troubled his namesake, Mr E. D. Simon, a year ago regarding the use which we make of our income from foreign investments. Clearly the slump conditions of the last eighteen months are exceptional, but Sir John was disturbed by the fact that in post-war years generally we have used an important part of our interest from abroad in paying for imports whereas in former times we could "substantially disregard the interest on foreign investments" as one of the means by which we have paid for our imports.

"I do not believe," he declared, "that any business man, any thoughtful citizen, any man or woman who cares to follow these figures, can fail to come to the conclusion that a very serious change has been gradually taking place which makes us deeply anxious for the future. Much has been said in denunciation of the rentier. In point of fact, the British working-class family which has been maintained so largely by imported food and other imports of recent years, has had that food paid for very largely owing to the circumstance that Britain herself was able to rely on her position as a rentier and to bring in the interest on her foreign investments."

But very few individuals, and certainly no nation, ever adds to accumulated capital the whole of the income derived from interest plus profits (net income from abroad includes both items), and there is no reason why we should do so in connection with our foreign trading account. Certainly we have not done so for generations. The figures are given in the following table, the pre-war statistics being taken from "The Export of Capital," by Mr C. K. Hobson. We have omitted the figures before the strike year of 1928, as the estimates have been modified from time to time and the conditions of international trade had not yet been stabilised on the gold standard:—

	Estimated income from abroad per annum. Million £.	Amount required to balance import account. Million £.	Balance representing net export of capital. Million £.	Percentage of foreign income required to pay for imports. %
1870-79	47.8	15.5	32.3	32.6
1880-89	64.8	22.3	42.5	34.5
1890-99	92.5	56.3	36.2	60.8
1900-09	121.5	56.1	65.4	46.2
1910-13	180.7	-6.8*	187.5*	Nil
1927-29	270.0	146.7	123.3	54.3
1930	235.0	196.0	39.0	83.4

* In Mr Hobson's opinion these figures are doubtful, as he considers the estimates of shipping earnings in 1911-1912 based on freight rates are "probably unduly large" and do not allow for the effect of the strikes and the laying up of shipping in those years.

In forty-four years before the war there were only seven years in which we paid for our imports without using any "foreign income" to balance the account. On the other hand, there were three years in which this income was insufficient to pay for the import surplus, the balance of which had to be met by borrowing (as will be the case this year), while in several other years of depression the proportion of "foreign income" used to pay for imports rose as high as in 1930. Thus, the phenomenon to which Sir John called attention is no new one, and does not in itself constitute an argument for a change in our fiscal system. But it does undoubtedly leave us vulnerable to a severe strain in our exchange position when our income from abroad is imperilled by a world crisis like the present. Moreover, the percentage of our total imports paid for in this way has been rather high in recent years, the proportion, which was 18 per cent. in the decade 1890-99 and 10 per cent. in 1900-09, having risen again to nearly 13½ per cent. in 1927-29 and to a higher figure still in 1930. But this is due to the diminished competitive power of our exports, which, as we have repeatedly pointed out, are the weak point in our economic position.

The Resources of the Disallowed Unemployed.—Part III. of the appendices to the evidence taken before the Royal Commission on Unemployment Insurance is an interesting and valuable document which throws light on an aspect of the present unemployment problem which had hitherto remained unilluminated. It contains the results of a special inquiry into the subsequent history of a sample of persons whose claims for unemployment benefit had been disallowed. The inquiry, which aimed at discovering how such persons are supported, was conducted by separate investigators in London, Southampton, and eight Northern industrial areas, and there is sufficient local divergence in the results to make a study of the separate reports well worth while. Space, however, permits reference only to the introductory summary report. From this, along with many conclusions which were already familiar, there emerge some surprising results, which are summarised in the following table:—

PERCENTAGE OF THE SAMPLE HAVING RECOURSE TO EACH MEANS OF SUPPORT DURING THE PERIOD OF DISALLOWANCE.

	Single Men.	Married and Widowed Men.	Total Men.	Single and Widowed Women.	Married Women.	Total Women.	Juveniles.	Total.
Employment	33.1	30.3	31.8	43.9	18.7	32.1	47.5	33.0
Poor relief	13.1	52.2	31.9	3.5	4.4	3.9	1.9	17.0
Other sources:								
Wife in work	...	4.3	2.1	...	62.7	30.0	...	13.8
Husband in work	...	...	...	...	...	...	...	0.2
Wife in benefit	...	0.8	0.4	...	...	9.8	...	4.5
Husband in benefit	...	...	...	...	20.5	42.1	94.9	46.8
Relations	65.7	21.6	44.3	75.6	5.7	42.1	...	2.2
Pensions	2.8	4.1	3.4	1.7	1.0	1.4	...	4.4
Private means	4.8	9.0	6.8	3.9	1.2	2.6	...	6.0
Other means	8.1	8.4	8.2	5.4	3.6	4.6	...	...

There is necessarily a great deal of overlapping, as most individuals had recourse to more than one source of maintenance during their period of disallowance. The fact that 62.7 of the married women had husbands in work provides corroborative evidence of the unnecessary drain to which the Exchequer has been subject in respect of such women. It is remarkable that nearly one-third of the persons in the sample found work for a part of the time they were unemployed, though in this as in other connections it has to be borne in mind that the sample is overweighted with females and juveniles, who were more successful than the older men in finding employment. The duration of the jobs, however, was brief, and those obtained by the men were, in the main, of the less skilled type, from which the report infers that "in the scramble for a miscellaneous collection of low-grade jobs, which goes on continually in the large towns, particularly in distributive centres, the disallowed persons get their fair share of work with the rest of the unemployed." The reports do not, however, afford any definite evidence that disallowance acts as a stimulus to the search for work. Incidentally, it is notable that very few persons took to work on their own account. The figures for poor relief are surprising. The proportion of the whole sample having recourse to it is only 17 per cent., whereas over half the married men received public assistance. The evidence from the different districts goes to show that degree of poverty, rather than local laxity or strictness in administration, determines the extent to which recourse is had to relief, and the reports make clear the unexpected fact that a very lively dread of falling on the rates still prevails in most areas. That there still survives a keen sense, not only of personal, but of family and even of neighbourly pride in this matter, is evident from the account given by the investigators of the extent to which individuals are supported by relatives, friends and even landladies. This method of maintenance means, of course, that the reduction in the standard of living brought about by unemployment is in no way mitigated, but only spread more thinly over a larger number of people. As the author of the summary report remarks: "That so large a proportion of disallowed persons should have depended on private, rather than upon public resources, for weeks or months at a time, is a significant addition to social knowledge." It is signifi-

cant of another aspect of the psychological effect of State provision that little evidence was found of private charity other than that of personal friends. Savings played a larger part than might have been expected in such an advanced stage of industrial depression, and the outstanding fact revealed by the report is that a majority of the persons investigated managed to maintain themselves without recourse to public provision. While on the one hand, the privation, especially among married men, revealed by this investigation makes it sad reading, on the other, the extent to which the spirit of independence is shown to have survived is distinctly encouraging.

The Incidence of the New Taxation.—Whatever criticism the Opposition may raise against the details of the Economy Bill, they have been unable to argue with any conviction that the burden of new taxation imposed by the emergency Budget has been unfairly shared as between the direct and indirect taxpayer. So far as we can estimate, direct taxation (i.e., all tax revenue other than that derived from Customs, Excise and Stamps) will amount in 1931-32 to 61 per cent. of the total, as compared with 62 per cent. in 1930-31, 58 per cent. in 1928-29 and only 47.9 per cent. in 1913-14. A statement prepared by the Treasury and printed in *Hansard* of September 14th shows the amount payable in 1932 by persons with typical large incomes in order to cover income tax, sur-tax and insurance to provide estate duty:—

A.—IF THE TAXPAYER DERIVES ALL HIS INCOME FROM INVESTMENTS.

Total Income.	Equivalent Capital.	Income Tax.	Sur-tax.	Net Insurance Payment to Provide for Estate Duty.	Total.
£	£	£	£	£	£
5,000	100,000	1,158	337	798	2,293
10,000	200,000	2,408	1,519	2,281	6,208
25,000	500,000	6,158	6,469	8,479	21,106
50,000	1,000,000	12,408	15,957	25,140	53,505

B.—IF THE TAXPAYER DERIVES HALF HIS INCOME FROM INVESTMENTS AND HALF FROM EARNING.

£	£	£	£	£	£
5,000	50,000	1,083	337	267	1,687
10,000	100,000	2,333	1,519	790	4,642
25,000	250,000	6,083	6,469	3,000	15,552
50,000	500,000	12,333	15,957	7,958	36,248

Note.—The taxpayer is assumed to be a married man, aged 45 years, with three children.

The striking fact emerges that an investment capital of £1,000,000 cannot be kept intact after death, unless the recipient of its income foregoes all consumption during his life and contributes, in addition, £3,500 a year from some other source to its maintenance.

International Production.—During the second quarter of the current year, before the financial crisis originating in Central Europe aggravated the general economic depression, signs of an expansion in industrial activity became noticeable in several countries. In the following table we have converted the indices of the physical

volume of production of various nations to a percentage of the average of 1928:—

(a) Quarterly Index. (b) Adjusted for seasonal variations. (c) Partly adjusted for seasonal variations. (d) Provisional.

A comparison of the past quarter with the January-March period of 1931 shows that a slight improvement took place in those countries where the depression had proceeded farthest. The upward movement in the United States was not merely sectional; nearly all the sub-indices show a small rise. On the other hand, France, Sweden and the United Kingdom suffered a further contraction. Unfortunately, the upward movement in the United States and Germany has proved of short duration. Present indications show that the trend in most countries is still menacingly downward.

Iron and Steel Production.—The downward trend in the activity of the British iron and steel industry continued throughout August. According to the National Federation of Iron and Steel Manufacturers, the output of pig iron was 275,700 tons, as compared with 217,000 tons in July, and was 141,000 tons below that of August, 1930. Six furnaces were blown out during August, leaving the total number in operation at the end of that month at 64, as against 104 a year ago. Exports of pig iron declined from 18,700 tons in July to 11,200 tons in August, against 19,200 tons in the corresponding month last year. On the other hand, imports, at 23,800 tons, showed an increase of 4,100 tons on the previous month, and one of 2,800 tons as compared with August, 1930. The output of steel, at 357,900 tons, shows a decrease of 71,400 tons on the previous month, and one of 94,000 tons on August, 1930. Total exports of iron and steel decreased from 168,300 tons in July to 144,000 tons in August, and imports, at 202,000 tons diminished by 29,000 tons. It is clear that the demand for iron and steel materials by the consuming industries in this country has been severely reduced. Further, the fall in home production has been greater than the decrease in imports, which suggests that further ground has been lost by the British industry. This is also illustrated by the sharp contraction in British exports. The encroachment upon British markets, both at home and abroad, is largely a result of the growing discrepancy between prices. Continental quotations, which for many months past have been admittedly below production costs, fell further in August: Sheet bars, f.o.b. Antwerp, fell by 9s. to £2 19s. per ton; steel bars, by 6s. 6d. per ton to £3 4s.; joists, by 4s. 6d. to £3 2s. per ton, and have since fallen still further. British prices for iron and steel products showed little variation during the month, the Board of Trade price index number for iron and steel for August standing at 102.6 (1913=100), compared with 103.0 in July. The numbers unemployed in the iron and steel industry naturally shows an increase, the percentages being 44.6 in August, compared with 41.9 in July and 37.3 in August, 1930.

Cotton Labour Problems.—There is still a deadlock between the employers and the operatives in the Lancashire cotton industry on the question of the "more looms per weaver" system. The negotiations between the two sides broke down owing to a small difference on

the rates to be paid to weavers operating more than four looms. On Tuesday last, writes our Manchester correspondent, the employers' sub-committee, which has the matter in hand, reported to the Cotton Spinners' and Manufacturers' Association, but no decision was reached as to making any effort to bridge the difference. On the same day there was a long meeting of the Central Committee of the Operative Weavers' Amalgamation when the negotiating sub-committee reported on the discussions with the employers. It was decided that a full report on the situation should be presented to the monthly meeting of the General Council of the Weavers' Amalgamation to be held on September 19. On behalf of the operative weavers it was stated that, in the opinion of the Central Committee, there does not appear to be any justifiable reason why negotiations should be resumed unless there is some alteration in the employers' proposals. The Weavers' Amalgamation had hoped that some communication would have been made to them that might open the door to a renewal of negotiations. It is expected that at Saturday's meeting the General Council of the Weavers' Amalgamation will leave the conduct of negotiations in the hands of the Executive Committee. It is the old question of a small difference between the two sides; and neither body wants to make any concession, as such action might be considered a sign of weakness by the other side. It has been stated on behalf of the employers that the wage rates offered cannot be improved if the new system is to be of any real benefit to the trade. In the meantime, at more weaving sheds in Lancashire the six-loom or eight-loom system is operating, individual employers making local arrangements with the workpeople. This is leading to much irregularity, and throughout the industry the opinion is held that it would be to the advantage of all concerned for there to be a county agreement which would be observed by all employers and the trade unions. Arrangements have now been made for the joint conference between the Master Cotton Spinners' Federation, the Operative Spinners' Amalgamation, and the Cardroom Workers' Amalgamation to be held in Manchester on Monday next. This conference has been asked for by the employers for the purpose of considering the major problems confronting the spinning section of the cotton industry, particularly in regard to costs of production, with a view to placing the trade on a more competitive basis. Although no official announcement has been made it is understood that the spinning employers have in mind a definite reduction in wages, and if the trade union officials at the meeting on Monday next do not show any disposition to make concessions relating to the costs of production, it is probable that the Master Spinners' Federation will lose no time in giving one month's notice of a wages reduction. It is quite probable that the question of hours of labour will also be raised, as the decrease from 55½ to 48 hours per week has undoubtedly meant a decided increase in production costs.

Employment and the Cost of Living in August.—Employment in many important trades showed a further decline during August, but, owing to an improvement in coal mining, industry, as a whole, recorded only a small decrease as compared with the previous month. According to the *Ministry of Labour Gazette*, among the insured workers in Great Britain and Northern Ireland, the percentage unemployed at August 24th was 22.7, as compared with 22.6 per cent. at July 27th, and 17.1 per cent. a year ago. It is estimated that the total number of insured persons in employment at August 24th was approximately 9,196,000. This was 22,000 more than a month ago, but 501,000 less than a year ago. The numbers registered as wholly unemployed at August 24th amounted to 1,968,895 persons. This compares with 1,877,543 at the end of July, and 1,333,850 at August 25, 1930. On the same dates those temporarily without work numbered 661,829, 724,690 and 609,309 respectively, while the unemployed among those usually in casual employment amounted to 113,558, or 2,441 more than a month ago, and 17,015 more than a year ago. The latest return of the Ministry shows that by September 8th the total number of unemployed had risen to 2,800,631, which includes 2,002,756 wholly

unemployed, 685,501 temporarily stopped, and 112,374 persons normally in casual employment. The cost of living during August showed no change as compared with July, the index of the Ministry of Labour remaining at 45 per cent. above the level of July, 1914. For food alone the index was also stationary at 28 per cent. above pre-war. The corresponding percentages last year were 57 and 44 respectively.

The German Standstill Agreement.—According to the full text of the "Standstill" agreement, as published in Tuesday's *Financial News*, the following recommendations for the continuance of foreign banking credits in Germany have been made:—The period is to be six months from September 1, 1931, or the period of the central banks' advances under the auspices of the B.I.S., or the adoption of any plan recommended by the Financial Committee appointed on the suggestion of the London Conference, whichever be the shorter. The declaration of a general moratorium in Germany shall terminate the period. The agreement falls into two parts, dealing with foreign currency liabilities and Reichsmark liabilities. As regards the former, foreign banks agree for the defined period to maintain *vis-à-vis* German banks or business undertakings, all acceptances, time deposits, cash advances, etc., granted, provided such credits were actually used, existing and outstanding on July 31, 1931, or were since granted up to a date 21 days after the agreement came into effect. Special credits for financing crops, call loans, short loans against stock exchange securities and mortgages, and claims in respect of breaches of contract are excluded from this agreement. In the case of acceptances granted on account of German banks, the latter shall obtain from their clients (the "German credit-takers"), at the option of the foreign bank creditor, either promissory notes in the same currency and of the same due date as the original acceptance, to be held in trust as collateral security for the foreign bank creditor, or a letter of guarantee addressed by the client direct to the foreign bank creditor. In the latter alternative the German bank shall require his client to give as collateral a charge on the goods or other values against which the original bills were drawn. All encashments received from clients shall preferably be remitted at once to the foreign bank creditor, but if it is impracticable to purchase the necessary foreign exchange they can be deposited in marks at the Reichsbank in the foreign bank creditor's name. After ninety days the foreign bank creditor shall be free to realise such deposits at the best exchange rate obtainable. The German credit-taker shall, without having to undergo a reduction of the total credit held at his disposal, cover all acceptances at maturity either by cash payments or out of the proceeds of replacement drafts. He shall also make every effort to provide a foreign bank creditor with eligible bills for acceptance, and shall give evidence of the true commercial nature of the transactions. The second part relates to Reichsmark liabilities. Here, each foreign bank creditor will be entitled to require the Deutsche Golddiskontbank to take over individual acceptances or parts thereof granted to or under the guarantee of German banks up to 10 per cent. of the total outstanding in his name. The Golddiskontbank can similarly be required to take over 5 per cent. of other forms of indebtedness due to foreign bank creditors by German banks. In the case of credits given directly to German business houses, the foreign bank creditor may require the Golddiskontbank to guarantee 10 per cent. of their aggregate amount, together with a further 10 per cent. in respect of houses that either do not publish balance sheets or are so small as not to belong to the Guaranty Syndicate for the Deutsche Golddiskontbank; provided that the foreign bank creditor may require the Golddiskontbank's guarantee for 15 per cent. of the total amount of his credits to German houses. Credits granted to German houses guaranteed by German banks shall, at the foreign bank creditors' option, be taken over by the German bank and dealt with as above as a Reichsmark liability of a German bank. The Golddiskontbank

can refuse to guarantee the indebtedness of any bankrupt house, and will probably require an arrangement under which it can only be called upon to repay in three equal annual instalments. Credits given to German banks and private houses on joint account are to be split up into the bank portion and the private portion and dealt with accordingly. Commission charges are to be paid in advance and interest charges monthly in foreign currency; and foreign exchange shall be available to permit such payments. Such charges are to be reasonable, and disputes between debtor and creditor may be referred to their respective central banks. All other disputes arising out of the whole scheme are to be settled by a committee appointed by the B.I.S. Special provision is made for outstanding foreign exchange contracts. Overdue contracts are to be settled at once, and forward exchange contracts as they fall due. Reichsmark balances acquired for the purpose of settling exchange contracts must be released in full. As regards Reichsmark bank balances belonging to foreign bank creditors, 25 per cent. are to be released when the foreign bank creditor notifies his debtor of his adherence to this agreement, and a further 15 per cent. every month. The Reichsbank may represent to the B.I.S. that it is desirable that these subsequent 15 per cent. payments should be postponed, and in that case they are to be paid over to the Reichsbank to be held in trust for the creditors. The Reichsbank guarantees the creditor against exchange losses. This completes the summary of the agreement. It was signed by the German banks last week, and by London interests on Monday last.

Australian Trade.—Our Melbourne correspondent writes:—The summary of Australian trade for the financial year ended June 30, 1931, shows totals comparing as follows:—

	1928-29.	1929-30.	1930-31.
Imports:	£	£	£
Merchandise.....	143,281,449	130,758,534	60,159,232
Bullion and specie	366,432	322,786	398,863
Total imports	143,647,881	131,081,320	60,558,095
Exports:			
Merchandise.....	140,923,932	97,378,299	88,991,442*
Bullion and specie	3,926,520	27,748,849	13,046,956
Total exports	144,850,452	125,127,148	...

* Merchandise exports, 1930-31, are in Australian currency, but other figures in British currency.

After reducing merchandise exports to British currency values (making a difference of approximately £13½ millions in that figure) the value of total exports, inclusive of bullion and specie, for 1930-31 is £88,800,000. The actual favourable balance, or excess of exports over imports, is thus £28,300,000 (British currency), against an adverse balance of £5,954,172 for 1929-30 and an adverse balance of £1,202,571 for 1928-29. The great reduction in imports and the change in the balance of trade are the consequences of the decline in Australian purchasing power due to the fall in prices obtainable for wool, wheat, and other exports and inability to continue external borrowing. In order, however, to provide for Government payments abroad at the rate of £36 millions per annum, besides private remittances, a much larger favourable balance than £28,300,000 would be necessary. On the other hand, part of the imports during recent years is represented by funds still held in Australia by importers, partly in Government securities, and partly in bank deposits, the total being substantial. Bullion and specie exports include gold valued at £12,273,562 for 1930-31, against £26,868,539 for 1929-30. These amounts have been drawn almost entirely out of stocks; subject to current production from the mines at the rate of some £2 millions per annum. With the reduction of gold stocks to a low level the process cannot be repeated much further, and the same applies to the process of financing Government expenditure by bank balances, which have helped indirectly to meet the adverse trade balance.

Housing Costs.—Among the many branches of the work of the Ministry of Health dealt with in the Annual Report of the Ministry for 1930-31 (Cmd. 3937) is the provision of working-class dwellings. In the section on housing, it is stated that the number of houses completed in 1930-31, exclusive of those built in connection with slum clearance schemes prior to the Housing Act, 1930, was 183,807, against 202,060 in 1929-30 and 169,532 in 1928-29. The total number built since the Armistice is 1,660,455, of which 994,109 received some form of State assistance. A further 35,528 assisted houses were under construction at the end of March this year. It is clear from the Report that there is still a tendency to provide rather more expensive houses than are necessary, so that the needs of the very poorest classes are less adequately met than those of the better-paid manual workers. In this connection the Report suggests that it might be well for local authorities not only to allow a smaller superficial area for some of their houses, but also to abandon their present practice of pooling the costs of their houses built at different periods and charging a uniform rent, and instead to allow their poorest tenants the full benefit of the lower cost of recently built houses. It is, however, notable that the cost of building has not fallen as much as might have been expected—the average building price of non-parlour houses only fell from £362 in 1928 to £344 last year—and the Report even speaks of a tendency towards a hardening of prices. The Minister asked the Committee on the Prices of Building Materials to make a special review of the position, and though that report is not yet ready, the periodical report of this committee which has just been published (Cmd. 3943) is of some interest in this connection. The Report states that the only general movements since last March have been continued falls in the prices of timber, lead and linseed oil, and a rise in the price of turpentine, but there have been certain local increases in the price of bricks, into which inquiries are at present being pursued. The specimen prices in the table below have been selected at random from the schedule:—

	London (Willesden)			Manchester.		
	April, 1914.	January, 1924.	July, 1931.	April, 1914.	January, 1924.	July, 1931.
Common bricks, 1,000	22/6	59/3	58/-	28/-	55/-	50/6 and 52/3
Pit sand, cub. yd....	6/4	12/9	9/-	4/6	7/6	6/-
English Portland cement, ton	25/-	60/-	44/-	30/-	58/-	41/-
Flooring timber (white 1 in. plain), square	11/-	23/6	22/6	14/6	21/-	17/-
British sheet lead, ton	£24	£40	£19	£20	£38/10/-	£19/10/-
R. W. pipes, yd....	1/3½	2/4½	1/6½	1/5	2/2	1/6½
Bath 5 in. Green-stone enamel....	£2/15/-	£4/5/-	£2/12/3	£3/5/-	£4	£2/11/-
Glass, square foot....	-2½	-4/4	-3½	-2½	-3½	-2½
Plasterers' laths, bundle.....	1/4	2/6	2/-	1/8	2/6	2/1
Linseed oil, gallon....	2/2½	4/3	2/4	2/3	4/5	2/-

* Special housing scheme prices.

From this it is evident that the prices of building materials, the high level of which was such a widespread cause for complaint a few years ago, have now in many instances appreciably declined. There remain, however, a number of materials, of which bricks, tiles and kitchen ranges are the most conspicuous, the prices of which still seem to be completely out of adjustment with the general price level, and it certainly looks as though there were still some scope for a reduction of housing costs through a lowering of the prices of certain important components.

Constitutional Developments in Malaya.—On a miniature scale, British Malaya is a counterpart of British India in the diversity of political status between its constituent territories and in the political and economic problems arising from the impact of modern Western life upon a complex Oriental society. In the matter of status, there is the contrast between three different sets of communities: the Straits Settlements, which are British territory; the five Malay States which are individually in treaty relations with His Majesty's Government in the United Kingdom; and the four Malay States which are federated with one another besides being in relations with the British Government both collectively and individually. In this variegated cluster of communities, the main problem to-day is how to reconcile the need for centralisation and uniformity,

which exists in the economic field owing to the modern tendency towards an increase of scale in economic operations, with the desire for self-determination which has been evoked by the percolation of the modern sense of national individuality. In Malaya, this problem has been tackled first in the case of the Federated Malay States. The Federation was established, on British initiative and under British auspices, in 1896, in response to the need above-mentioned; and during the intervening thirty-five years the pressure towards closer union has been so strong that the Federation has virtually become a unitary state, within which the four original constituents retain a formal rather than an effective existence. This excess of centralisation has produced a natural reaction in favour of local autonomy; and latterly the issue between the two tendencies has been engaging the attention of the British authorities. At a durbar held in the Federated States on August 18th, Sir Cecil Clementi, the British High Commissioner for the Malay States (and Governor-General of the Straits Settlements) made an important announcement of a new departure in policy. The unitary regime now prevailing in the Federation is to be retained in the administration of a number of social services for which it is obviously appropriate, e.g., railways, posts, telegraphs, telephones, customs, shipping, immigration. In other matters, there is to be devolution. In one or two passages in his statement, Sir Cecil Clementi hinted that the new balance between centralisation and devolution which is to be established in the Federated Malay States might provide the basis for an eventual federation of all the communities of British Malaya, including the unfederated Malay States on the one side and the Straits Settlements on the other. It will be seen that, here again, the Malayan and the Indian situation are analogous to one another.

Victory Insurance.—The history of this company is far from the triumphal progress implied by its title. Formed shortly after the war to transact reinsurance business, it has, like Treaty Reinsurances, Ltd., encountered from the start serious difficulties, and in 1926 a reconstruction scheme was effected by which £100,000 was written off by scaling down the ordinary shares from 10s. to 6s. Unfortunately, 1929 resulted in a heavy underwriting loss, and this has been succeeded by an even worse experience in 1930, which has necessitated the passing of the 5 per cent. dividend paid in each of the two preceding years. In 1930 the premiums amounted to £347,000, compared with £322,000 in 1929, but the underwriting loss was £97,000, compared with £26,000. After allowing for profit and loss account items, and including interest earnings, the company's resources were depleted as a result of the year's operations by the sum of £23,000, compared with £19,200 in 1929. As a result, the small profit and loss account balance at the beginning of the year of £1,905 has been wiped out, and the year has closed with an adverse balance on that account of £21,176. In May last it was announced that the company had entered into an agreement for the purchase of the share capital of Treaty Reinsurances, Ltd. Treaty Reinsurances, Ltd., is also a post-war reinsurance company, controlled jointly by the Century, the Phoenix, and the Northern. Although it, too, has had an unhappy trading experience in each of the last two years, the balance sheet is a strong one, for the company at June 30, 1930 (the last balance sheet available) showed a general reserve fund of £100,000 and a profit and loss account balance of £18,000. The only information so far afforded as to the effect of the merger is a consolidated balance sheet of the two companies. This shows that at December 31, 1930, there were total assets of £1,100,000, and a joint premium income of about £1,000,000. The capital of Treaty Reinsurances, Ltd., consists of 80,000 shares of £1, and it is understood that the price paid is approximately £4 per share, at which price, on the dividend of 25 per cent. free of tax, the yield to the Victory on its investment will be 6½ per cent. net. Having regard to the fact that Treaty Reinsurances, Ltd., has depended almost entirely for its premium income on reinsurances from the three controlling companies, an important point is that these three companies have promised to continue their present Treaty arrangements for some years to come.

Mercantile and General Insurance.—The Mercantile and General is a company transacting all classes of insurance business, including life business entirely on a reinsurance basis, and it is controlled by another large reinsurance company, the Swiss Reinsurance Company of Zurich. The results have to be considered in the light of the nature of the business, since, as the chairman has aptly stated, "Reinsurance is the poor relation of direct insurance." The company has made good progress, quantitatively, in recent years, and last year's premium income in the fire and accident account was £812,000, an increase of £73,000 over that in the preceding year; and whereas in 1929 there was an underwriting loss of £18,000, the year 1930 resulted in a reduced loss of £5,600. The company has also a moderate marine account with premiums of £32,000, but the fund for many years now has required a subsidy from profit and loss account. For the underwriting year 1928 now closed this is represented by a transfer of £6,600. The life fund shows a further expansion during the year from £336,000 to £385,000. The company's total gross underwriting loss has been increased by items debited in the profit and loss account to an aggregate loss of £23,000, compared with a loss of £36,000 in 1929. The dividend of 5 per cent. costs £5,000, compared with interest earnings of £36,000, so that the year has closed with an addition to surplus assets of £8,000. The company's total assets amount to £1,513,000, and the chairman has stated that a valuation of investments at prices ruling at December 31, 1930, shows a moderate surplus over book values.

Overseas Correspondence.

LEAGUE OF NATIONS.

Disarmament — Security — Economic Crisis — Mexico — Council Elections — Budget.

(FROM OUR CORRESPONDENT.)

GENEVA, September 14.

The leading statesmen of the Assembly have spoken, the general debate is over, and the committees are at work. Signor Grandi, Lord Cecil, M. Briand and Dr. Curtius all devoted themselves mainly to the economic crisis and to the Disarmament Conference next February, and one definite fact which emerges is that there will be no more talk of the postponement of the Conference. All the speakers from great countries and small made it so plain that they would not tolerate adjournment that M. Briand could scarcely avoid falling into line, despite the many indications of hope in France that the Conference would not take place as arranged. The latest opportunity to put off this unpleasant necessity was the change of circumstances in England which might prevent Mr Henderson from presiding. It is an almost unanimous hope that it will be siding. It is an almost unanimous hope that it will be siding. It is an almost unanimous hope that it will be siding. To postpone the Conference because of his absence would be absurd. But while this fact seems established, and while nearly every speaker urged the need for reduction of armaments as a vital requirement for the re-establishment of confidence, both political and economic, M. Briand's intervention was a dismal repetition, with one exception, of the official French attitude for the last ten or twelve years. It was almost exclusively negative, and showed no inclination on the part of France to consider reduction of armaments unless her perpetual cry for security is first satisfied. As Dr. Curtius pointed out, the Assembly several years ago decided by resolution that the degree of security reached was adequate for reduction to be seriously approached, and M. Briand himself enumerated the various ways in which progress had been made in developing security and peaceful procedure, though strangely omitting any mention of the Locarno treaties. He also passed over in complete silence Signor

Grandi's suggestion of an armaments truce pending the conclusion of the Conference.

The one point in M. Briand's speech was what appeared to be a question to the United States of America on what her attitude would be in face of a violation of the Paris Pact. It is a fair question, but nobody imagines that America can go so far as to give such guarantees to France as those given by Great Britain and Italy at Locarno. Would a consultative pact satisfy France? Would an undertaking not to trade with a declared aggressor satisfy France? Would she continue to claim more and more security? Will she ever admit that the time is ripe for action? Dr. Curtius pointedly observed that there must be security for all, and he asked what sort of security an unarmed Germany could feel surrounded by powerfully armed States. Confidence is a matter of reciprocity, and security based on a preponderance of arms implies insecurity and danger for others. Another observation from Dr. Curtius much to the point was that it is not possible to develop the League's executive action on a foundation of a few heavily armed countries, but only on a foundation of equality.

M. Briand's response to Signor Grandi and Lord Cecil was all the more disappointing as Signor Grandi's opening of the discussion was one of the most thoughtful and progressive analyses of the situation which has yet been given in the Assembly. He argued that disarmament was the basis of security, that armaments were the cause of lack of confidence and economic disorder, and that disarmament was necessary for the liquidation of war debts. If it were not still possible to arrive at a solution of differences by force, and if there were no excess of armaments, the problem of security, as he said, would no longer exist. Dr. Curtius, in a similar direction, declared that the Disarmament Conference must not be subordinated to questions which could only be solved after disarmament had been effected. Mere limitation was not enough; there must be an appreciable and effective reduction of the heavily armed powers; there must be an end to different rules, and the same methods must apply to all. There could not be two systems of weights and measures. He, like Lord Cecil, sympathetically accepted Signor Grandi's suggestion for a truce, ignored by M. Briand, but more will be heard of this on the basis of a draft resolution submitted by Denmark, Norway, Holland, Sweden and Switzerland.

French opinion seems to regard Signor Grandi's proposal as bluff and is angry with Dr. Curtius; but he did no more than repeat the well-known German attitude, and though it is true that in what he said there was very little warmth calculated to improve the atmosphere for this month's meeting between French and German statesmen in Berlin, it is a sad reflection that a demand for equitable conditions and for appreciable reduction should be regarded by French opinion as offensive. Lord Cecil, in a fervent appeal for reduction and a liberal approach to the Conference, put his finger on the point in declaring that seventy-five per cent. of existing anxieties would be cleared away if there were a real Franco-German rapprochement. It was a development for which Great Britain devoutly wished, and he characterised as a gross libel the suggestion that Great Britain was interested in keeping France and Germany at loggerheads. This was confirmed by M. Briand, and it was well that it should be so emphatically uttered. The French and German Foreign Ministers both spoke of their determination to do their best to create better understanding, and in this connection it is altogether unreasonable to suppose that Germany has nothing positive to contribute. It is useless for Germany to shout angrily for everything at once, and worse than useless to expect help from France while so large a proportion of her people spits fire over the frontier. But her disarmament claim is unanswerable.

It was interesting to reflect on the difference of tendency in the speeches by Lord Cecil and M. Briand. Lord Cecil, not even a member of the British Government, representing a specially constituted Cabinet comprising all parties, was yet able, without difficulty to represent the general British desire for disarmament. M. Briand, as French Foreign Minister, but yet not very representative of the Government of which he is a member, was unable to

do anything but repeat the unbending French thesis. France is clearly more isolated in the Assembly than she has been for many years, and cannot make the claim, to which she attaches so much importance, of the appearance, even, of leadership. Inside the League and outside the League, while she may not be losing power for the moment, she is losing moral prestige, and she does sometimes understand what this means. Unless something happens between now and February, the Disarmament Conference will be an exceedingly difficult and anxious undertaking. It remains to be seen whether it is possible to hold out indefinitely against the urgent demands of the vast majority of the States of the world. The immediate opportunity, of course, lies in the meeting of the statesmen in Berlin, but it would be idle to pretend that there is much optimism here about that.

No precise action is so far indicated on economic problems apart from those already outlined by various League committees. Dr. Curtius declared that if anything were to be done, countries should act quickly on the report of the Economic Experts, and he agreed with Lord Cecil in emphasising the main lines of the observations of the Basle Committee. Signor Grandi opposed regional groupings, either political or economic, as hindering good understanding, and said that the collective efforts of European and non-European States, whether members of the League or not, were necessary to discourage the tendency to create closed systems in Europe. The Japanese, Canadian and Indian representatives were clearly not very happy about the developments of the European union. Canada made definite reservations with regard to some of its tendencies; Japan gave a warning against the deplorable effects of a departure from liberal policy represented by the most-favoured-nation clause, and India complained of the decision to set up the Agricultural Mortgage Credit Bank without even awaiting the views of extra-European delegations at the Assembly. It should be noted in passing that this week is issued the report on the causes and phases of the world economic depression prepared on the instructions of the last Assembly.

Mexico has been invited to join the League, has accepted, and has been unanimously admitted without any of the formalities connected with the admission of a new member. This is explained as a desire to repair the injustice done to Mexico in not being included in the States invited to join at the beginning. In its reply, Mexico took occasion to state that she has never recognised the Monroe doctrine. It is an important addition to League membership from the point of view of both North and South America. Mexico was seriously considered as a possible candidate for a seat on the Council, for which the elections have taken place to-day, but she did not stand as a candidate. The retiring members were Spain, Persia and Venezuela. Spain, which was declared re-eligible when she returned to the League three years ago, was again elected, and the two new States on the Council are China and Panama. Guatemala had announced her intention of resigning from the Council, for financial reasons, while remaining a loyal member of the League, but she has been persuaded to withdraw and will remain on the Council. The British delegation is not satisfied with present arrangements, and has presented a resolution asking the Council to consider methods of election to the Council and report on any improvements which may be deemed necessary. Italy has deposited her ratification of the Optional Clauses and the General Act, the latter with reservations which appear to rob it of a good deal of its significance, but there are many people who are not satisfied that the General Act is a step in the right direction. There is not yet any news from the Financial Committee about its consideration of the requests from Austria and Hungary for financial assistance. They are delicate and dangerous problems.

All the delegations are active about the League budget, but some members, notably Great Britain and Spain, have expressed a determination not to allow it to be so restricted as to prevent the League's effective working. Señor Madariaga, the Spanish Ambassador at Washington, declared that it was not possible to consider the

League budget as affecting the financial and economic situation of any country, and he said that if five per cent. of the armaments budgets of the world for 1930 were devoted to the League and invested at five per cent., there would be more than enough money to maintain the League for ever. There is point, however, in the desire that the League should give as far as possible an example of proper economy in these hard times.

UNITED STATES.

Security Markets — Treasury — Business Conditions —
Prices — Money — Mortgage Proposals.

(FROM OUR CORRESPONDENT.)

NEW YORK, September 9.

FURTHER reductions have been made in corporation payments; more are expected in the next two or three weeks. These cuts, together with the persistent pressing for attention to the unemployment problem by labour leaders, Congressmen and others, have encouraged bear operations in the security markets. Most of the trading in the share markets is probably professional, but success in reducing prices to new low levels is no doubt dislodging holdings which would otherwise have remained intact until a distinctly more unfavourable turn in business appeared.

After a brief recovery most sections of the bond market, exclusive of gilt-edged issues, also are duller and new capital offerings in the past week fell to the nominal figure of \$6,000,000. Demand for new capital is small, but a good many railroads and public utilities and even some industrial companies, to say nothing of foreigners, would like to convert short-date bank credits into bonds, though they are prevented from doing so by the weak state of the market. The Treasury has finally closed its books on the \$800,000,000 of 24-year 3 per cents., but demand for them was not so lively as had been hoped, since the interest rate was rather close to the market. Over-subscription amounted to only \$140,559,000. The investment market expects another long-term issue before long, but the slowness of the last is calculated to give pause to some of the expenditure schemes.

Meanwhile discussion is still lively and many-sided over the question of preparing for another year's Treasury deficit, which some think might reach a billion, with borrowing or with an increase in the income tax, or both. Probably much will depend on what Congress does with extraordinary appropriation measures which are bound to come up. With a paring of the budget which the Administration has in mind, there would be support for the policy of carrying on for a year or so with little if any increase in taxation. However, it will be difficult to avoid expenditures by the Federal Government for unemployment relief in one way or another or perhaps for further soldiers' bonus payments. The head of the principal ex-servicemen's organisation, the American Legion, has intimated that nothing more will be asked if it will "embarrass the country," but that is a flexible statement, and in any event the rank and file of the membership seem to be bent on trying for something.

Although thoroughly disillusioned and discouraged with the two-year record of failure of the Federal Farm Board to help them, the grain and cotton growers would still like to see something done for them, and they are politically powerful, but the growing realisation in the country at large that increases in the amount of taxation levied are not necessarily accompanied by proportionate increases in revenue will militate against the fulfilment of their hopes.

The country is slowly becoming acclimatised to a smaller volume of trade, lower prices, lower wages and smaller profits. Up to the Labour Day holidays no appreciable turn for the better had come in the business position. Railroad traffic shows only a mild seasonal improvement and car loadings at the end of August were no higher than at the beginning of the month. Steel-mill activity is not much better than 80 per cent. of capacity, the average steel-ingot output for August averaging 81.18 per cent.

and motor production last month was cut severely by the shutdown of many plants where new models were being prepared. Ford is resuming this month. Oil output is down again sharply, but in Texas the reopening of the East Texas field will probably endanger the position of Oklahoma, which has not succeeded in establishing a price of \$1 a barrel for crude oil. Meanwhile, drilling of new wells is increasing rapidly in Texas.

Commodity prices, after a brief period of greater stability, are weakening. Dun's wholesale commodity price index for August shows a decline of 2.6 per cent. and the Bradstreet's index dropped 3.4 per cent. Declines were the most marked in the breadstuffs group, but textiles, hides and leather also dropped. The shoe and leather trades have been doing a larger volume of business, but profits have not been good.

Money continues excessively easy. The holiday demands for currency did nothing more than firm up the market for Federal Reserve funds. The rate went to $\frac{3}{4}$ per cent., against the $\frac{1}{2}$ to $\frac{1}{4}$ per cent. recently prevailing. Currency hoarding, estimated at around \$750,000,000, has done something to stiffen money, but the effect is more than offset by other factors. Gold is coming in again from Canada and South America. Last week's Federal Reserve System statement showed a further rise of \$33,000,000 in credit outstanding, through larger member bank borrowing and Reserve purchase of bills.

An interesting analysis of the item marked "other loans" made by reporting member banks in New York City has been made by the American Acceptance Council. This item includes bankers' bill holdings, but that class of document is not separated from the so-called commercial loan. The analysis shows that, against an apparent drop of \$272,000,000 in commercial loans, there has been an actual reduction of \$469,000,000 for the banks here. The strictly commercial loan volume has declined steadily since last March, although bill holdings have risen rapidly, so that, while commercial loans are at a very low ebb, bank holdings of bills are at a new peak.

At Washington the plan to form a banking organisation to take over from commercial banks and others prime real estate mortgages, which are now selling at a considerable discount, has not been abandoned. It is felt there that the idea is feasible, and that, if capital can be secured, much would be done to relieve the banks of one of their heavy burdens, to say nothing of assisting the hard-pressed real-estate market. What will come of the project, however, is uncertain at this time.

FRANCE.

Budget — British Tariff Question — Import Quotas —
Industrial Production — Prices.

(FROM OUR CORRESPONDENT.)

PARIS, September 16.

THE Chambers, which are not due to reassemble until next month, will be faced from the moment of the resumption of the session with a Budget problem of the first importance, which is already causing serious misgivings. The fact that the new financial year will begin on April 1st, and that the General Election, under French constitutional law, must take place during May, has raised a series of difficulties which must be resolved during the next few weeks. In the first place, in view of the fact that deputies will be busy in their constituencies as from the beginning of March, at the latest, it is regarded by many experts as hopeless to expect that the 1931-32 Budget can be got through the two Houses before the new financial year begins. There is also the question whether a Chamber, the vast majority of whose members will be seeking re-election, should be entrusted with the work of passing a Budget for a financial year beginning immediately before a new legislature assumes control. Further, there is also a danger that the members of the expiring Chamber may be tempted, for electoral reasons, to insist on large amounts of unnecessary expenditure,

which would be more than usually perilous in face of the present situation of the national finances. Two solutions of the problem are suggested. One is to continue the present Budget until December 31, 1932, and then revert to the old system of dating the financial year from January 1st; the other is to leave the new Budget entirely to the new Chamber, and carry on meanwhile until the end of 1932 by means of monthly Votes on Account (*douzièmes provisoires*), thus giving the new Chamber time to take up the Budget seriously in readiness for application as from January 1, 1933. Present indications are that the latter course is the more probable.

The outstanding subject of anxiety here this week is the discussion in Great Britain in regard to the imposition of a protective tariff. The adoption of the proposal to prohibit the entry to Great Britain of "luxury" products of every kind would hit this country more than any other. Of French exports to Great Britain last year, more than 50 per cent. consisted of what it is feared would come under the British definition of "luxury" products. These consisted (in round figures) of the following categories:—

	Millions of francs.		Millions of francs.
Silk piece-goods	890	Hides and skins	125
Dresses, lingerie, &c.....	848	Motor cars	74
Woolen piece-goods	441	Perfumery and soaps....	86
Tanned hides, &c.....	211	Leather goods.....	68
Wines	184	Fancy goods	63
Brandies and liqueurs ...	166	Fancy silver goods.....	26
Precious stones	188	Feathers	5
Fine pearls	112	Floss silk	4
Jewellery, silverware, &c. 5			

There is a good deal of nervousness among British importing agents in Paris lest, in the event of action by the British Government on the lines now being publicly discussed, the French may see fit to resort to reprisals.

French tariff increases are continuing to disturb foreign trade in many directions, while even greater confusion is resulting from the bringing of further categories of imports under quota systems. Since the beginning of the year nitrate fertilisers have been entering the country under special permits, based on fixed annual quotas: In July a similar measure was applied to coal and other combustibles, with a view to preventing a compulsory lowering of domestic prices of French coal, under pressure of foreign competition. The quota system has now been extended, by a recent decree, to wines of all descriptions and to five categories of timber, including common timber (both squared and unsquared, and sawn and unsawn), pit-props and finished planks. In regard to timber, the decree states that foreign imports increased in 1930 by over 50 per cent., with the result that selling prices were brought down from 390 francs per cubic metre to 255 francs, which was barely sufficient to cover the cost of transport and other basic charges, and thus threatened the gravest consequences to the 700,000 workers employed in the French timber industry. The decree also states that, in spite of increased import duties, the amount of foreign wine entering has continued to increase to such an extent that this industry, which forms the principal resource of several Departments, is threatened with catastrophe. In the case of these two products the imposition of the quota system is to be "exceptional and temporary." Meanwhile, it is officially announced that, so far as certain countries are concerned, the quotas of timber allowed to enter have already been exhausted down to December 31st next. A similar situation is understood to have been reached, in some cases, in regard to wine imports. Nearly 100,000 tank-truck loads of Italian wine were reported last week to be held up at the frontier owing to the decree.

Coal production figures for August, which have been issued this week, indicate a total output by the French mines of 3,987,000 tons, as against 4,114,000 tons in July, and a monthly average of 4,586,000 tons throughout 1930. The output by the mines in the Saar district in August was 919,000 tons, as compared with 902,000 tons in July, and a monthly average of 1,108,000 tons in 1930. British and Belgian coal imports into France have now been for some time limited to 20 per cent. less than the average tonnage which entered in 1928, 1929 and 1930. "The

placing of British and Belgian coal imports under a quota system," according to the *Situation Economique and Financière* "has not yet improved the situation of the French coal industry; foreign importers have intensified their efforts in anticipation of the adoption of the new regime." Total coal consumption in France (Saar area excluded) during the first half of 1931 was 41,055,000 tons, as against 44,273,000 tons during the corresponding period of 1930, and 90,000,000 tons in the year 1929.

Industrial production returns for July, which were issued a few days ago, indicate a comparatively sharp drop in practically all industries. The general figure covering the nine principal categories is 123 (1913=100), against 126 in June, and monthly averages of 140 in 1930, 139 in 1929 and 127 in 1928. The motor car industry shows a further seasonal decline from 565 to 555, and most of the other classes falls of from one to two points each. The worst drop is that from 71.2 to 64.2 in textile output, which in July, partly owing to the Roubaix strike, and partly owing to general economic conditions, reached by far the lowest level registered since 1913.

The general index of French wholesale prices at the end of August shows a decline on the month from 466 to 455, equivalent to a fall of 37 on the six months. The detailed figures are as follows:—

(July, 1914 = 100.)

	1930.	1931: End of—	
	Average.	June.	July.
General index figure.....	543	477	466
French products	591	539	532
Imported products	458	365	347
Foodstuffs (general figure)	528	529	516
Vegetable foods	466	537	480
Meats	599	539	562
Sugar, coffee, cacao	503	482	486
Raw materials (general figures)	558	433	423
Minerals and metals	524	408	398
Textiles	473	332	317
Various	630	509	503

The figure for retail prices in Paris (13 common household articles) shows a drop of 20 points, 615 to 595.

GERMANY.

Standstill Agreement — Unemployment Relief Preparations — Stock Exchanges — Bremen Finance.

(FROM OUR CORRESPONDENT.)

BERLIN, September 15.

THE "standstill" agreement was signed on September 9th by the German representatives—the Banking Committee, the Reichsbank and the Golddiskontbank—and is in process of signature by the foreign banking committees. The individual German debtors will then present the agreement to their creditors, in order to bring it legally into force as a private treaty. As the overwhelming majority of the foreign creditor banks—the demands of creditors other than banks are not covered by the agreement—have accepted the banking committees as their representatives, there will be no difficulty about this closing stage of the transaction.

On the German side the requisite technical measures for the implementation of the agreement have been taken by emergency decree. The most essential need was for a legal obligation of the domestic debtors of the German banks to issue promissory notes to the amount of the advances they held on current account or else to provide supplementary "names" in respect of the acceptance credits which the German banks held with banks abroad, as the standstill agreement prescribes that German debtor banks must, on request of the foreign creditor banks, secure such obligations from the undertakings to which they have re-lent the foreign credits. The German bank customer is thus forced to take responsibility for the debt of the bank, although in many cases he was entirely unaware of having indirectly received foreign money. This is undoubtedly a great encroachment upon the rights of the individual. The decree presumably provide that, in the event of refusal by a debtor, the President of the

Board of Inland Revenue can sign the required promissory note on his behalf.

It had been realised from the beginning that only an imperfect protection was afforded Germany by the standstill agreement, but now that its practical execution is imminent, the sacrifices seem even greater than they did at Basle. The release of foreign holdings of marks will force the Reichsbank to meet heavy withdrawals of gold in the immediate future. The acceptance credits, which amount to about 3 milliards, almost half belonging to British banks, will probably be ultimately retained in Germany, though the creditors' right to receive the most eligible possibilities in replacement of bills falling due, and to make inquiries into the commercial character of these bills will create great technical difficulties.

From the German point of view, the solution of the interest question, which was not settled at Basle, also seems unsatisfactory. The final text of the agreement, which will clear up this and many other details, is not yet published, and public discussion is at present of necessity confined to the German proposal to foreign creditor banks which was agreed upon in Basle. In view of the state of German industry, which has, if anything, grown still worse, the pledging of the Golddiskontbank for German commercial and industrial debts is regarded as an especially severe sacrifice. Without the German exchange crisis, and the consequent standstill agreement, the foreign creditor would have had to bear, in Germany as in other parts of the world, the full risk in respect of the solvency of his debtors. Through the agreement he has shifted part of his claim on to the Golddiskontbank, and that practically means on to German industry, which has to take the responsibility for the financial soundness of the Golddiskontbank.

Some time ago the Chancellor made the prediction, afterwards modified, that unemployment might rise as high as seven millions this winter. It is very difficult to foretell what the figure is likely to be, but this forecast seems very pessimistic. Nevertheless, all the appropriate authorities are already busy in the quest for new methods of dealing with unemployment which will lighten the burden on the relief funds, or at least enable more to be done with the funds available. The most prominent project is a proposal for settling large numbers of unemployed persons on the outskirts of large cities, so that, without withdrawing from the industrial labour market, they can have an emergency reserve in the shape of a small farm or market garden. The idea is that they should start work during the coming winter, while still drawing relief, on the preparation of the land, which is to be provided as far as possible by the cities and States, without charge, and on the construction of simple dwellings for themselves. After the first harvest the payment of relief would cease. It would be made possible for the unemployed, to whom the holdings would in the first place be leased at a low rent, ultimately to buy them cheaply.

Simultaneously with this suburban settlement it is intended to extend purely agricultural settlement to cover a wider range of persons by simplifying the necessary buildings and so saving capital. Even so, this extended scheme of settlement would be difficult enough to finance. There is also a proposal to supplement money relief to the unemployed in towns by allowances of potatoes and coal, as it is felt that large stocks of coal are lying useless at the pitheads and depreciating daily in value, while the farmers also will have large stocks after the harvest, especially of potatoes, unless the State spirit monopoly sees its way, in consideration of the financial and economic situation, to entering the market as a large-scale buyer of potatoes. For such relief in kind to be financially possible, however, the coal and potatoes would have to be sold at very cheap rates to the communes and other public authorities, and negotiations to this end will probably be opened.

Not many days after the reopening of the German stock exchanges a very firm tone was established, to the general surprise. After very low quotations had been touched on the opening day, September 8th, the German banks

exerted themselves to support prices by refraining from selling securities which they had purchased to support the market, or which they held as collateral for inadequately secured loans. As a certain amount of savings had accumulated during the two months in which the exchanges were closed, a fairly lively demand for shares and bonds developed, and, in the absence of selling orders, forced the rates upwards. The rise did not, however, last long, and on September 14th prices fell considerably, as was only to be expected, in view of the unsatisfactory economic situation, the financial difficulties of the Reich, States and communes, and the unfavourable exchange situation of the Reichsbank. Share quotations have fallen nearly as low as on the opening day: fixed-interest securities are somewhat higher.

In the course of the reconstruction of the Schroeder Bank, facts keep coming to light which reveal an extraordinarily close association between the City of Bremen and the Bremen shipping industry. It has already been known for some weeks that the packet of Hamburg-Süd shares which came into the city's possession last year had been bought by the Schroeder Bank with money placed at its disposal by the City of Bremen. The city deposited these shares with the Neederlandsche Handels-Maatschappij as security for ten million Dutch guilders, and seems to have secured the support of the Norddeutscher Lloyd, which took over the guarantee of this credit and received in return an option on the shares. The credit runs till March 31, 1932. It now appears that Bremen is also a large shareholder in the Norddeutscher Lloyd and in the Dampfschiffahrtsgesellschaft Hansa. She holds Lloyd shares to a nominal value of 10½ million and 8 million Hansa shares, all of which were bought at prices several times those obtaining to-day, so that the city has lost millions on them. The report of the committee of inquiry into the finances of Bremen, which will throw light on the details of these transactions, is eagerly awaited.

HOLLAND.

Effects of Crisis Abroad — Commercial Relations — Rubber — Tea — Exports — New Issues.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, September 15.

THE repercussions of the financial crisis in surrounding countries have been acutely manifested in the economic situation in the Netherlands during the last month. Our commerce with Germany has been especially handicapped through the closing of the German banks and exchanges. Our exports, especially of dairy and agricultural produce have undergone a sharp drop, as has also our German trade in ore and coal. The Dutch banks have also been feeling the effects of the crisis in Germany and England very severely, and the heavy falls in the Amsterdam quotations for the shares of our big banks have certainly not been without justification. The stoppage of the normal channels of payment made it necessary for the Amsterdam Bill Brokerage Association to postpone the delivery of marks bought in exchange for guilders until the day after the resumption of normal payment in Germany. The negotiations with the Dutch banks for participation in the "Standstill" agreement were very protracted, and agreement was not arrived at until a few days ago. At a meeting of Dutch bankers convened by the President of the Netherlands Bank, Mr. Vissering urged the advisability of an extension of the German credits on the terms of the "Standstill" agreement, not only in view of the advantages afforded by participation, but also in view of the adverse results which might be involved by refusal to participate. The President of the Netherlands Bank assured the representatives of the banks that the Netherlands Bank is prepared to render assistance in meeting difficulties arising from participation in the agreement. One bank reserved its reply.

The results of the dislocation of the foreign exchange markets have been very strongly felt here. In particular, the sharp decline of sterling caused a considerable influx

of gold to the Netherlands. The flow of gold to this country began on July 8th, and since then 208 million guilders' worth of gold has come into the possession of the Netherlands Bank, bringing the stock of metal up to a total of 691.5 million guilders. In consequence, there has been a great increase in the already plentiful supplies of money in the Netherlands. The circulation of bank notes has increased by 105 million guilders to about 960 millions, while the percentage covered by gold has risen from 56.5 per cent. at the end of July to 68.7 per cent.

In addition to the obstacles to trade already referred to, commerce in the Netherlands has had other difficulties to contend with, especially in the coal industry, which has been seriously hit by the French and Belgian measures taken against the import of coal. Holland's exports of coal to France and Belgium were of great importance, and were steadily increasing. Our total exports of coal (exclusive of bunkers) amounted, in the first seven months of 1931, to 2,405,810 tons, with a value of 25,888,000 guilders, as compared with 2,102,866 tons, with a value of 26,876,000 guilders, in the corresponding period of 1930. These exports in the first seven months of 1931 include for Belgium no less than 1,129,503 tons, with a value of 10,743,000 guilders, compared with 967,377 tons and a value of 11,346,000 guilders in January-July, 1930. In the first seven months of the current year, Belgium has been our biggest customer for coal. Next in importance is France, to which country the exports were 862,160 tons (last year 663,920), with a value of 10.59 (last year 9.9) million guilders. The prospects for our coal exports have now become very gloomy through the import restrictions enforced by France and Belgium. The discussions in Brussels with representatives of the Dutch coal industry failed to bear any result.

A commercial and shipping treaty was concluded between the Netherlands and Turkey at Angora on August 26th, replacing the tentative arrangement established on November 21, 1929, by exchange of notes. Omitting any provisions with regard to persons or corporate bodies, which are to be included in a separate treaty, the new treaty sets forth a detailed elaborate regulation of the interests of mutual commerce and shipping. Generally speaking, the provisions correspond with those of the Netherlands-Turkish commercial and maritime treaty which lapsed on November 30th, 1929. Consequently, general and unconditional most-favoured-nation terms have been included, while the shipping of each of the contracting parties, with the exception of the coasting trade and one or two other branches specially reserved, is to be dealt with by the other on the same basis as its own. The treaty, which has also been declared applicable to the Dutch East Indies, Suriname and Curaçao, is to come into force 30 days after the exchange of the ratification papers, for a period of three years, and to be renewed automatically unless notice of withdrawal is given three months before the expiry of the period.

Reports from the plantations in the Dutch East Indies continue to be adverse. The Commission appointed to consider the rubber problem has failed to reach agreement as to the feasibility of a scheme for alleviating the present distressed state of affairs. The Association of Rubber Producers has now published a scheme submitted to the Minister and known as the "Quota scheme." According to this scheme, a restriction of production of 25 per cent. would be sufficient to attain the desired reduction in the surplus world stocks. The idea is to give the market free play, but as soon as the world's visible supply has dropped to the desired level, the world's consumption would be the basis for deciding whether or not to reduce the percentage of restriction. The restriction would have to be international, which would involve legislative measures mutually agreed upon by the Governments interested, in the first place between the Netherlands and the British Governments.

In view of prevailing circumstances, it is not surprising that the new issues market in the Netherlands is practically at a standstill. Foreign countries, at least those in need of credit, are out of the question for the moment. Confidence in them has been completely shattered, and things will have to change enormously before these

countries will be able to appear on the new issue market once more with a reasonable chance of success. Our issue market will, consequently, have to devote itself solely to credit requirements within our own frontiers for the time being. Apart from a few exceptions, however, the issue market is really only available for public bodies at present, as industrial undertakings are not in a position to provide lenders with sufficiently attractive security. The extent to which the market has suffered under the prevailing circumstances is only too evident from the statistics for last month. An aggregate of less than 15 million guilders is low, even for the month of August, but the actual state of affairs is more distinctly illustrated by the fact that there were only three flotations the whole month, apart from conversions. In the preceding month the issues totalled 25.8 million guilders, and 18.1 millions in August of last year.

ROUMANIA.

Financial Crisis — Measures of Relief — State Finance and Monopolies — Protested Bills.

(FROM OUR CORRESPONDENT.)

BUCHAREST, September 8.

JULY and August have been exceedingly trying to financial circles in Roumania. The excitement caused by the failure of the Banque Générale du Pays Roumain in July, reported in these columns, had hardly died down when towards the middle of August, the Banque E. Bercovitz in Bucharest closed its doors. This bank has an activity of about sixty years to its credit, and some years ago it was turned into a joint-stock company by its owners, who retained all the shares. The capital is 150 million lei, reserves 45 million lei, deposits 384 million lei. The fact that it enjoyed a very good reputation in business and private circles made the shock of its failure all the greater, and the very serious situation thus created was accentuated by the news of the unsettled state of European finances in general. Heavy runs began on all the banks, but the measures devised by those in authority to restore public confidence proved to a certain extent successful, and though the drain on the banks' resources by the withdrawal of deposits has not altogether ceased, the movement has so far slackened as to give the banks breathing space and thus remove immediate danger. The Banque Bercovitz has meanwhile obtained the "concordat préventif" guaranteed by the owners with their own private fortune. Under this scheme it has undertaken to pay its creditors in full in three years with 4 per cent. interest.

According to the report on the financial crisis given by the Minister of Finance, the five principal banks of Bucharest lost over 3,000 million of their deposits in the period from May 31 to August 15. They had to return 500 million of their foreign credits. They obtained additional discount facilities from the National Bank of approximately 3,000 million lei. The discounts of the central institution increased from 7,200 million to 11,700 million. The liabilities of the National Bank on bank notes, current accounts and metallic currency rose from 21,814 million lei in June to 25,174 million in August, the increase of banknotes alone amounting to about 2,500 millions. The steadiness of the lei during the whole of this period is another proof of the effectiveness of the measures taken to secure the stability of the currency.

It is common knowledge that the liquidity of the Roumanian banks is dangerously impaired by the volume of their frozen assets. This situation is mostly due to the large indebtedness of the State to the native industries which are financed by the banks. In order to restore public confidence three measures have been devised for supplementing immediately the liquid resources of the banks:—

1. The creation of a banking syndicate, the participants in which constitute themselves joint guarantors with the State of a portfolio of bills of 1,000 million lei for the purpose of discount with the National Bank. The participating banks are:—The Banca Romaneasca, the Banque de Credit Roumain, the Banque Marmorosh Blank and

Co., the Banque Chrissoveloni and Co., and Banca Moldovei. According to their latest balance sheets, the aggregate capital of these banks amounts to 1,255 million lei and their reserves to 1,177 millions. They had deposits amounting to 13,458 million lei on December 31st last year, against which they showed cash resources of 2,317 millions. They have agreed to reduce their deposit rate to 6 per cent. and to work generally towards closer co-operation and the avoidance of excessive competition.

2. The return to the State of a parcel of shares in the Steaua Romana company which was taken over by these banks on the occasion of the nationalisation of this petroleum company, and the substitution of a State obligation for that of the banks to the foreign group from whom the shares were bought. This relieves the banks of a debt of about 1,000 million lei, which they had difficulty in meeting. It will be interesting, however, to see how the State will face this fresh obligation. These shares, which originally were taken over by the banks at the request of the State, have proved a somewhat disastrous investment in view of the fact that the banks paid considerably above par value for them, and the price dropped to about 190 lei for the 500-lei share.

3. The mobilisation of the debts of the State to the home industry by the creation of mortgage bonds guaranteed by the banks and by the State, which these industries will issue. The sum involved is about 1,500 millions. It is understood that the bonds are to be issued for a period of twenty years, with 8 per cent. interest, and it is hoped to place them within the country as well as abroad.

The five principal banks of Bucharest, which alone are affected by these measures, hold about 25 to 30 per cent. of the total deposits in Roumania. The secondary and provincial banks are now in negotiation with the Ministry of Finance and the National Bank to find means of securing their position.

The Treasury receipts for the eight months ending August 31st of this year amount to about 17,500 million lei, as against 20,900 million lei in the same period of last year. Expenditure during these months amounts to 19,300 million lei. The deficit has been met out of an advance of 2,000 million lei which the State has obtained from the National Bank and which is repayable at the end of the year. One has to reckon with a prospective deficit of close on 10,000 million; moreover, the State is behind with its payment of salaries as well as supplies and other obligations. The need for increased economies is only too evident, and it will even be imperative to tap new sources of income. For this purpose there is now under consideration the introduction of a State monopoly in sugar and alcohol. The tax on alcohol has realised in the first seven months of this year only 63 million lei, compared with 1,800 million in 1925. This remarkable falling off is attributed to clandestine manufacture and sale. Whether the introduction of the monopoly will enable the State to overcome this practice remains to be seen, and the success of the scheme as an income-producing measure is for the moment problematical. Sugar is sold under present conditions at the exorbitant price of about 1s. per kilogramme, due to the tax of over 4d. and the high cost of sugar beet fixed arbitrarily by the State. It would appear, therefore, that an increased revenue from this source could only be obtained by an increase in the price of the article.

The total of protested bills in Roumania in the first six months of this year amounts to 2,545 million lei, against 2,043 million in the same period of 1930. Whereas the percentage of smaller bills up to 50,000 lei shows a slight reduction, the proportion of the larger bills has risen from 32.3 per cent. to 41 per cent. It is argued from these statistics that more of the important commercial interests have fallen victims to the economic crisis. It is evident, therefore, that the economic situation has become considerably worse.

NEW ZEALAND.

The Budget — Estimates — National Debt — Niemeyer Report.

(FROM OUR CORRESPONDENT.)

CHRISTCHURCH, August 8.

THE final session of the present Parliament opened towards the end of June. An Unemployment Act, which provided for special unemployment taxes of £1 per year from all adult males, and 3d. in the £ from all wages and incomes (with certain unimportant exemptions), was passed, but

little else was done until the Budget was introduced on July 30th. The year's accounts show plainly the effects of the business depression. Revenue to the Consolidated Fund during the financial year ended March 31st last fell £2,051,000 short of the estimate, and £2,281,000 below the previous year's yield, the chief declines being in Customs and interest on railway capital. Total revenue amounted to £23,089,000, including £18,600,000 from taxation (of which £1,840,600 was special motor taxation earmarked for the Highways Fund) and £4,469,000 from interest-earning assets and other sources. Expenditure for the year amounted to £24,708,000, of which £10,952,000 was spent on debt service and £7,600,000 on social services—education, pensions, hospitals, subsidies, etc. There was thus a deficit of £1,639,000 on the year's working.

The situation to be met by the Finance Minister was a difficult one. The fall in revenue is due very largely to the severe decline in the prices received for exported produce, which has brought general depression, with severe contraction of imports, on which the yield of Customs depends, and of the national income, from which taxation is drawn. At the same time, unemployment and the Government's expenditure on unemployment relief have substantially increased. The Government thus finds itself in a difficult position. On the one hand with an electorate clamorous for increased expenditure on financial relief, and, on the other, with heavy declines in revenue which may not have reached their limit, with the consequent problem of estimating prospective yields of taxation, and with an insistent demand for relief from a burden of taxation which is already very heavy. Moreover, a general election is due about November, and in election year New Zealand is accustomed to expect extra generosity from the Government. In consequence, the estimates for 1930-31 are in the nature of a compromise, but they represent a courageous attempt on the part of a weak minority Government to secure a favourable balance of revenue and expenditure.

It is estimated that, without drastic adjustments, a budget deficit of £6,850,000 would result for 1931-32. The official estimate of the prospective deficit was £4,500,000 last March and £5,500,000 in April. The growth in this estimate shows how rapidly the financial situation has changed. It is now stated that revenue is expected to shrink by £4,810,000, £2,080,000 of which is due to Customs, and the expenditure to increase by £2,040,000, of which about half is due to the consolidated fund subsidy of unemployment relief. According to the budget statement, the prospective deficit is being met by adjustments and economies totalling £5,056,000, and by new taxation estimated to yield £1,800,000. Detailed figures show that the 10 per cent. cut imposed on civil service salaries is expected to yield £1,390,000, and other economies £595,000. Suspension of war debt payments consequent upon President Hoover's proposal means a net saving of £870,000 for the year, and £1,140,000 is being drawn from reserves. Additional postal charges amount to £938,000, and an indirect raid on the Road Fund brings another £125,000. These are the adjustments and economies effected, though some critics claim that, excluding economies and wage reductions, all the items are either loans or taxes. In addition, £1,800,000 is to be raised by further taxation. An all-round increase of 30 per cent. on the prescribed income-tax rates (10 per cent. was added last year, so the present increase is about 20 per cent.), and a lowering of the exemption limit from £300 to £260, are estimated to yield £780,000. The remainder is to come from extra customs and excise duties on tea, sugar, tobacco, beer, etc., and from additional stamp duties. With these adjustments, the estimates for 1931-32 are made to balance. Expenditure is expected to amount to £24,768,781, and revenue to £24,946,000, leaving an anticipated surplus of £182,129.

Gross additions to public debt during the year amounted to £11,123,700, but repayments totalled £2,473,685, leaving a net increase of £8,650,015. Of the gross increase, £7,250,000 was raised in London and £3,873,700 in New Zealand. On public works £8,820,000 was spent, including £3,180,000 on railways, £2,842,000 on highways, and

£1,230,000 on hydro-electric projects. The gross public debt now stands at £276,038,358, against which are shown cash investments and sinking funds amounting to £33,488,000, loans and advances to settlers, soldiers, etc., £46,344,000 and other assets such as State trading capital in railways, post office, electric plant, etc., and lands and forests. The Minister of Finance states that the Government's policy has been to pursue a vigorous public works programme during the past year in order to assist in the relief of unemployment, and this policy appears to have general support in Parliament. Throughout the country, however, there is a strong body of opinion which considers that borrowing for public works, and particularly for railways, should be drastically reduced, since two-thirds of the interest on railway loan capital has now to be found by the taxpayer, and much other loan money has been spent extravagantly on projects that do not directly produce their own interest. Since the end of the financial year a short-term loan of £5,000,000 has been raised in London at a rate which cost New Zealand over 6 per cent., and two-thirds was left with the underwriters. Many local critics of past Government extravagance claim that the comparative failure of this loan should be regarded as a warning against further heavy borrowing abroad, but there is little sign that Parliament is yet considering practical alternatives.

With the Budget, the report of Sir Otto Niemeyer, who visited the country in September, 1930, to report on banking and currency regulation, was presented. It is unlikely to be fully considered before the triennial elections, which are expected about November next, and no definite action seems likely before the new Parliament meets next year. By that time the general financial outlook should be more clearly defined, for next season's export prices are likely to decide the general basis upon which New Zealand's financial policy for the future must be determined.

Letters to the Editor.

A BALANCED BUDGET AND AFTER.

TO THE EDITOR OF THE ECONOMIST.

SIR,—A decision by the recently-formed Government to dissolve itself into its component parts and appeal to the country would be a great misfortune. For, apart from any question of the immediate menace to the stability of sterling, and the presentation of an unenviable choice between Protection and Socialism, there is a fundamental consideration which has been strangely overlooked and which an early election would obscure and render reasonable discussion impossible.

Ever since the war we have been by common consent losing our competitive position in the export markets of the world, and our trade has fallen off not only actually but relatively to that of our principal rivals. It is to this decline that our present unhappy political and economic position can be to a large extent ascribed. Therefore our true and urgent problem is to trace the cause and find the appropriate remedy. Cost of production is only another way of expressing competitive power, and one of the main factors in cost of production is wages. Nominal wages in Great Britain must be reduced to a competitive level.

It does not follow that there need be any serious reduction of real wages. The purchasing power of foreign wages is by no means on so low a level in relation to the purchasing power of wages in this country as their nominal figures would suggest, and the explanation is to be found in the fact that the internal price levels of the respective countries materially differ. Our problem, then, demands an equalisation of price levels, an issue which has never been frankly faced.

When this country returned to gold it was common knowledge, forgotten by now, that we never fully completed the process of deflation. Apparently we hoped that the rest of the world would obligingly help us by uplifting their own price levels. Actually the reverse process eventuated. If evidence be required that the deflationary process was only partially achieved, let me draw attention to one fact amongst others. Ever since the "resumption" we have been compelled to maintain an artificial Bank rate in order to conserve our gold and maintain exchange rates. What in pre-war days

was regarded as a temporary measure to meet seasonal demands has under post-war procedure become the rule and not the exception.

Deflation to be effective must start at the source, i.e., currency, and the credit based thereon. I do not minimise the political difficulties which any measure of deflation would engender, but if deflation is, as I believe, a basic factor in restoring our competitive power, such difficulties are nothing in comparison with the danger involved in the gradual and accumulative sapping of our power to exchange our products for vitally essential imports. It should not be too difficult to explain, even to an unsophisticated electorate, that deflation, if followed by nominal wage and price reductions, leaves the present employed population not only in precisely the same position, but also provides salvation for those who through no fault of their own are now denied competitive power in the world markets.—I am, Sir, your obedient servant.

FRANK MORRIS.

Constitutional Club, Northumberland Avenue.

COTTON PRICES AND PROFITS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In the "Investment Note" on "Cotton Trade Prices and Profits," in your issue of September 5th, there is a discussion of the effect of the cotton price decline on the monetary value of stock-in-trade. Much press comment has been made to the effect that the recent decline has caused enormous losses to holders of cotton stocks in any form. One daily paper computed the loss in Liverpool alone, where approximately 1,000,000 bales of raw cotton were held in stock, at £1,500,000 from August 8th to August 10th. The implication in your "Note" of last week is that the textile firms tabulated have also sustained severe losses from the same cause. The quotation of Mr Herbert Lee's remark adds emphasis to this implication.

It is the custom of Liverpool cotton importers to hedge all cotton in hand and therefore the vagaries in price do not affect their status one iota. The idea that enormous losses have recently accrued is entirely erroneous. Furthermore, stockholders of yarn or cloth have the opportunity to hedge. Those who use this policy can therefore recoup their losses due to the price decline. If a penny per pound decline involves a writing down of stock values to the extent of £100,000 then an equivalent sale of futures to realise £100,000 for a penny decline would balance the movement in stock values.

Unfortunately, this method of insurance against price fluctuation is not used by many firms in the cotton trade, but it is a policy which ought to be extended. In America a hedging policy is adopted throughout the trade and losses are therefore minimised. A management which does not insure against fire would be regarded as grossly negligent and incompetent. Why should not the same imputation be made to those who do not insure against losses due to price changes?

It is inconceivable that the firms mentioned in the table are not aware of this policy. Investors should, therefore, beware of forming estimates of profit and loss by reference to the movement of raw material prices.—Yours, etc.,

14, Brown Street, Manchester.

AN ECONOMIST ON PROTECTION.*

AN EFFECT of the present crisis has been greatly to increase the currency, *a propos* of Free Trade, of that meaningless phrase, so anathematised by James Mill, "it may be all very well in theory, but it does not work in practice." This accession to the protectionist ranks of persons deficient in logical faculty has, however, been accompanied by a concomitant growth in the number of Protectionists who believe that the theory of Free Trade presupposes certain conditions which are no longer fulfilled, and who are prepared to meet the Free Trader in argument upon his own ground. The challenge has now been taken up by an Oxford economist, who, though he aims at stating and

considering both sides of the case impartially, emerges at the end of his pamphlet a convinced Free Trader.

After stressing very vigorously the fact, so often forgotten, that it is possible to be convinced of the economic advantages of Free Trade and yet remain a Protectionist on ethical, cultural or nationalist grounds, and *vice versa*, Mr Fraser addresses himself to the purely economic side of the problem. The core of the matter, as Mr Fraser has no difficulty in showing, is the doctrine that imports are paid for by exports. He explains, in non-technical, but not over-simplified terms how it comes about that imports are, on the average, paid for by exports, though he avoids the too common mistake of implying that every import transaction is balanced by an equivalent volume of exports. While he admits that the exports may be "invisible," the arguments by which he reaches the conclusion that this "is not sufficient seriously to shake the view that a tariff which reduces real imports will also reduce real exports," are very convincing. Less completely satisfactory, perhaps owing to the exigencies of compression, is his reply to the Protectionist contention that this is only a long run relationship.

This point established, many of the most impressive Protectionist arguments, such as that which depends upon a reduction in unit costs supposed to follow upon the extension of the home market are easily met. Mr Fraser then turns to the group of Protectionists who admit that a reduction in imports is likely to be accompanied by a reduction in exports, but who believe, nevertheless, that a tariff is economically desirable. The "infant industry" argument, he admits, may hold good if a certain exacting set of conditions is fulfilled. The argument that a tariff might revive industry by its effect on prices is examined at some length, and the conclusion is reached that in the only form in which it has validity it is really not an argument for Protection but for monetary expansion.

Justice cannot be done here to all Mr Fraser's arguments. It is a relief to meet such a dispassionate examination of the case, for though Mr Fraser's conclusion could hardly be more decisive, on the purely economic aspect of the case, he cannot be accused of bias in his reasoning. The brevity of his pamphlet, however, which is only an expanded lecture, necessarily leaves many points incompletely cleared up, and if a convinced Protectionist of equally scientific turn of mind could be found to meet him on the same level, without attempting to score purely debating points, the innumerable electors who are seeking honest guidance on this burning question would have great cause for thankfulness.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

The End of Reparations. By Hjalmar Schacht. Edited, with an Introduction, by George Glasgow. (London) Jonathan Cape, Ltd., 30, Bedford Square. 7s. 6d. net.

A very important publication. Dr. Schacht's brilliant achievements during the period of inflation in Germany entitle his views on any financial subject to be read with the utmost respect. His political opinions, however, are expressed with a violence which makes it difficult to tell just how far they reflect the prevalent attitude in Germany.

Through Tariffs to Prosperity. By Herbert G. Williams. (London) Philip Allan and Co., Ltd., 69, Great Russell Street. 7s. 6d. net.

In the author's own words, an endeavour to give "a reasonably comprehensive statement of the case for a change of fiscal policy in the light of the experience of recent years and of the facts of the situation now existing."

The Course and Phases of the World Economic Depression. (London) George Allen and Unwin, 38, Great Ormond Street, for the League of Nations. 6s.

A most elaborate analysis of development and structural changes in the years preceding the depression, of business cycle tendencies in the last decade and of the phases of the present business cycle.

Memorandum on Production and Trade, 1925 to 1929-30.

(Geneva) League of Nations. 8s. 3d.

Contains a valuable account of the production, in the principal countries, of staple goods; indices of international trade; a review of the principal industries; and a chapter on the relative movements of the prices of raw products and manufactured articles.

The Struggle for South America. By J. F. Normano. With an Introduction by Clarence H. Haring. (London) George Allen and Unwin, Ltd., 40, Museum Street. 12s. 6d. net.

A most interesting book, in which the position of South America, the intentions and plans of the older countries which are vying in the cultivation of relations with her, and the economic aspect of these relations are discussed in a very stimulating manner.

Essai sur le Chômage Anglais Contemporain. By Henri Lavachery. With a Preface by Georges de Leener. (Brussels) Maurice Lamertin, 58-60, Rue Coudenberg.

An interesting study of British unemployment by a Belgian observer.

Individualism, Old and New. By John Dewey. (London) George Allen and Unwin, Ltd., 40, Museum Street. 6s. net.

An interesting essay on the effect of modern business civilisation upon the individual outlook.

Market Research. By Paul Redmayne and Hugh Weeks. (London) Butterworth and Company (Publishers), Ltd., Bell Yard, Temple Bar. 7s. 6d. net.

The first volume of a series on advertising. The authors give valuable advice on every aspect of marketing, and show how an average business can adapt its selling organisation to the most up-to-date marketing methods.

Business Forecasting. By L. H. Haney. (London) Ginn and Company, Ltd., 7, Queen Square, Southampton Row. 15s. net.

A serious attempt to lay a basis for scientific business forecasting.

Income Tax Principles. By Raymond W. Needham. (London) Gee and Company, Ltd., 6, Kirby Street, E.C.1. 21s. net.

A very well documented challenge of the doctrine of the Crown's option in relation to the schedules and cases, by an outstanding authority on income tax law.

Die Grundlagen der Weltwirtschaft. By Hermann Levy. (Leipzig) Verlag von B. G. Teubner. Paper, Rm. 5; bound, Rm. 6.40.

An interesting study of the development and problems of an international economy.

Some Lessons of the World Depression. By Johan Akermann.

A plea for the prevention of future depressions by the proper handling of booms in their early stages.

Income Tax Summarised. By W. Barrie Abbott. (London) Gee and Company, Ltd., 6, Kirby Street, E.C.1. 4s. 6d. net.

An exceedingly concise handbook for accountancy students which should also be useful to company secretaries and others whose relations with the inland revenue authorities are of more than average complication.

A Miscellany of Frauds and Defalcations. By G. R. Freeman. (London) Gee and Company, Ltd., 8, Kirby Street, E.C.1. 1s.

Ambitious young accountants should read this scrapbook of frauds. They have all come under the author's notice in the course of auditing company accounts, and they throw light on all manner of unsuspected points which require to be watched.

Textile Manufacturers' Book-Keeping. Part II. Cost Accounting and Cost Control. By George Pepler Norton. (London) Gee and Co. (Publishers), Ltd., 8, Kirby Street. 31s. 6d. net.

A treatise on cost accounting, consisting very largely of illustrative tables.

Essai sur l'Universalisme Economique Othmar Spann. By H.-G. Wagner. Preface by Professor G. L. Duprat. (Paris) Librairie Félix Alcar. 30 frs.

A very learned exposé and criticism of the sociology of Othmar Spann.

La deflazione finanziaria nel mondo. By Alberto de' Stefani. (Milan) Fratelli Treves Editori.

A collection of essays on a variety of economic subjects, some of primarily Italian interest, the remainder on subjects of current international importance.

Grenznutzentheorie und Marzismus. By Dr. Leo Köppel. (Leipzig and Wien) Franz Deuticke.

A critical study of the marginal theory.

Der südafrikanische Eingeborene. By Dr. Charlotte Leubuscher. (Jena) Verlag von Gustav Fischer. 12 Rm.

A very elaborate German study of the native problem in South Africa.

The National Trust for Places of Historic Interest or Natural Beauty. Report, 1930-31. (London) The National Trust, 7, Buckingham Palace Gardens, S.W.1.

A very detailed account of the work and finances of the year.

City of Birmingham. Financial Statement, 1930-31. (Birmingham) Treasurer's Department, Council House.

Tin. World Statistics, 1931, Third Year. (London) Anglo-Oriental Mining Corporation, Ltd., 55-61, Moorgate.

A handy little pocket volume of miscellaneous tin statistics.

International Labour Review. August-September, 1931. (London) George Allen and Unwin, Ltd., 40, Museum Street. 4s.

Includes, *inter alia*, articles on "Winter Building as a Remedy for Seasonal Unemployment," and "Building Difficulties and Housing Policy in Post-War Europe."

The Bankers' Magazine, September, 1931. (London) Waterlow and Sons, Ltd., London Wall. 2s. 6d. net.

Includes, *inter alia*, an article on the MacMillan Report and one on British savings banks.

Pacific Affairs, September, 1931. (Honolulu) Journal of the Institute of Pacific Relations. 25 cents.

Includes articles on "World Sovereignty," by Arnold Toynbee; "China's Ten-Year Plan," by C. L. Hsia; and "Economics in Australia," by G. L. Wood.

Empire Review, September, 1931. (London) Macmillan and Company, St. Martin's Street. 2s.

The Economics of Handloom. By Professor N. G. Ranga. (Bombay) D. B. Taraporewala, Sons and Company, 19, Hornby Road. Rs. 2.

A survey of the social and economic conditions of handloom weavers in Southern India.

Report of the Congress Select Committee on the Financial Obligations between Great Britain and India. Vol. I. (Bombay) Karnatak Printing Press, 318A, Thakurdwar. 1 rupee.

Congress Select Committee on the Financial Obligations between Great Britain and India. Professor K. T. Shah's Annexure to the Report. Vol. II. (Ahmedabad) General Secretary, All-India Congress. 1 rupee.

Records of the International Conference for the Unification of Laws on Bills of Exchange, Promissory Notes and Cheques. Second Session: Cheques. (London) George Allen and Unwin, 38, Great Ormond Street. 14s.

A report of the League of Nations Conference, held in Geneva from February 23 to March 19, 1931.

Second Report on Progress in Manchuria to 1930. (Dairen) The South Manchuria Railway.

A comprehensive illustrated report.

The Stock Exchange.

SOUTH AMERICAN DEFAULTS.

IT IS, we think, true to say of the New York bond market, if not of the London Stock Exchange, that it is now valuing the bonds of all South American countries, with the possible exception of Argentina, on a "default" basis. This is an astonishing situation, which *prima facie* does not appear to be justified by the facts. For while Bolivia, Chile and Peru have defaulted in the service on their external debt (with the exception, in the case of Peru, of the 7½ per cent. Guano Loan of 1922), and Brazil in the provision for the sinking funds on all external loans except the 5 per cent. Funding Loans of 1898 and 1914 and the 7½ per cent. (Coffee Security) Loan of 1922, it is still the fact that Colombia, Venezuela and Uruguay, besides Argentina, have fulfilled their obligations to bondholders promptly up to the present time. Yet, as far as the New York bond market is concerned, there appears to be little serious attempt to distinguish between those countries which have fallen and those which have so far stayed the course in the race for the bondholders' stakes. The following table gives the present prices as compared with the highest prices recorded this year for the leading South American bonds in the New York bond market:—

Dollar Bonds.	Red.	Prices.		Yield %.	Redemp- tion.
		Highest, 1931.	Present.		
Argentina 6%	1961	98½	60	10.00	10.40
Buenos Aires (Prov.) 7½ %	1947	97½	44½	16.95	22.80
Bolivia 7%	1969	36	11½	...	...
Brazil 6½ %	1957	70½	35	18.57	...
Chile 6%	1963	87	21½	...	...
Colombia 6%	1961	78	34	17.65	20.00
Peru 6%	1960	40½	13½	...	...
San Paulo 8%	1950	81	37½	21.48	26.00
Uruguay 6%	1964	88½	45	13.33	13.60

The London Stock Exchange does not present a much more optimistic valuation of South American bonds than New York, as the next table will show:—

Sterling Bonds.	Red.	Prices.		Yield %.	Redemp- tion.
		Highest, 1931.	Present.		
Argentina 5%, 1907	1944	94½	65	7.69	10.00
Brazil 5% (Funding 1914)	...	75½	58	8.62	8.77
Brazil 6½ %	1957	79	45	14.44	14.90
Chile 6%	1961	94	27	...	...
Colombia 6%	1954	86	81	7.41	7.77
Peru 6%	1961	52	20	...	...
Peru 7½ % Guano ...	1948	82	60	12.50	13.55
San Paulo 7½ %	...	77½	46	16.30	20.30
Coffee	...	77	45	11.11	12.60
Uruguay 5%, 1914	1951	77	45	11.11	12.60
Buenos Ayres 5%, 1908	1945	95	54	9.26	11.80

There are, it is true, technical factors to account for the *malaise* which has affected the foreign bond markets generally. The pursuit of liquidity on the part of financial houses, accelerated in Europe by the freezing up of banking credits in Germany and in America by the failure of a number of small banks, has resulted in a continual stream of bond sales of all descriptions. For example, the severe liquidation in the New York bond market at the present time may be attributed to the fact that a number of banks have just taken over five smaller institutions whose investments they are now selling in order to pay depositors some 50 cents in the dollar. But these technical considerations are all the more reason why the investor should consider carefully whether or not the markets in New York and London are taking too conservative a view of the length of time the "defaulters" are likely to remain outside, or the "survivors" to remain inside, the dividend-paying list.

Everything depends, of course, upon the duration of the world slump. If it were possible to predict by 1933 a recovery in commodity prices to at least the 1929 level the bonds of all the defaulting South American countries

might be thought cheap at 10 to 25 per cent. below par. A sustained rise in tin prices would restore Bolivia to financial health provided she cut her expenditure on the army, which accounted for 36 per cent. of the total budget this year. A recovery in copper, silver, cotton, oil and sugar would set Peru on her feet provided she had in the meantime reached political stability. Again, the prosperity of the nitrate industry would restore the credit of Chile provided she freed herself from the bailiff-men of the Guggenheim Brothers. But if the world slump were to extend for more than another twelve months it is fairly safe to predict that all the "surviving" South American debtors would default. It is, indeed, worth the investor's while to examine carefully how much longer these "survivors" are likely to hold out.

We begin with Brazil because it seems extraordinary that the Federal Government should have been able to avoid all default so far except in the matter of sinking funds. It has been calculated on good authority that the various Brazilian public authorities—Federal, State and municipal—have an external debt of over £255 millions, the service on which requires about £22½ millions a year. Foreign investments in Brazil outside the debt of the public authorities amount to about £300 millions, and it would be reasonable to reckon the remittances of profits, interest and sundry services in connection with this commercial debt at not less than £12 millions a year. Thus, including various remittances of £1 million a year, the total payments which Brazil has to make abroad amount to about £35½ millions a year. Her favourable visible balance of trade this year may reach £20 millions, seeing that in the first seven months it had just exceeded £12 millions. The suspension of sinking funds will save her about £3.3 millions, and the arrangement with the Federal Farm Board for the exchange of coffee against wheat another £3 millions. If we add £3 millions for the coffee export tax, the total debit of Brazil on international account this year will be reduced to a little over £6 millions. Interest payments on the Federal external debt may, therefore, just be met provided, if we may take such a cynical view, some of the provincial or municipal authorities oblige by defaulting on their external obligations. Cynicism, however, is only too well justified, for the following minor Brazilian defaults have been announced this year:—Pernambuco 7 per cent. dollar loan, State of Rio de Janeiro 7 per cent. Sterling loan. It remains to be added that, while payment of the coupon due on the Federal 6½ per cent. bonds in October is assured, the New York market remains very apprehensive of the continuance of the Brazilian debt service in full. It may be significant that no improvement has yet been seen in the Brazilian exchange.

As regards Colombia, the "default" levels at which her Government bonds are quoted in New York is one of the most curious features of the market. In London, where purchases for the sinking fund constitute the sole market activity, Colombia Government bonds are quoted under a 7½ per cent. yield basis: in New York they stand at no better than a 17½ per cent. basis. Colombia, in particular her department of Antioquia, has been a voracious borrower in New York, and American finance houses may, therefore, have been unduly sensitive to the reports of a local campaign for the suspension of the external debt service. The Government has refused to countenance this movement, but it is not to be denied that the contraction of internal credit, following upon the shipment of gold—by means of which the exchange has been kept at parity—has caused a good deal of discontent. From the figures of visible trade it would appear that Colombia had little cause to worry about a transfer problem. For the first six months of 1931 the surplus of exports over imports was returned at £7,460,185, as against

\$9,729,400. But these figures of visible trade are, we find, misleading, for they include the full value of the banana and oil exports, which properly belongs to the American exporting companies and is not returnable in the shape of foreign currency to Colombia. Actually the balance of payments on international account is adverse to Colombia, having regard to the fact that the annual service of the external debt requires about £4,000,000, of which the Federal service takes £1.17 millions. If the Departments, for example, were to default in their debt service, requiring about £1.4 millions, the transfer problem would be much easier for the Federal Government. Another and more constructive point is that negotiations have been reopened for a match monopoly loan. Should this be obtained there would be less talk of the possibility of a Colombian default.

The Uruguay Government has been less careful of its credit than the Colombian, for it opened up negotiations in London this year for a suspension of the sinking funds. These negotiations were dropped, though it is believed that the suspension of debt redemption is still under consideration. However, the decision to ship gold in payment of the external debt interest has improved the Government's credit. In fact, it is believed that interest payments up to the end of the year have now been provided for.

There remains Argentina, which presents, perhaps, the most perplexing of the South American problems. There are still ample gold reserves in Argentina, amounting to £61,357,459, held by the Conversion Office, an excess of the legal ratio of gold to notes which is equivalent to 3 years' payment of the external debt service of £13½ millions per annum. In this connection it may be observed that objection has been taken to the decision of the Argentine Government to ship gold in redemption of the \$50,000,000 short-term debt due to American bankers in October. A shipment of \$10 million gold has already been made, but it is reported that certain American interests have offered to loan \$30,000,000 to obviate further depletion of the gold reserves. Meanwhile, the exchange has further depreciated—the peso is now 29½d. as against 35½d. at the beginning of the year—and it is even suggested that the recent reaction has been officially inspired in order to facilitate the exports of wheat. The trade returns for the first seven months of this year already show a remarkable change in Argentina's favour. Imports have been reduced from \$444,588,743 gold to \$333,743,114 gold, while exports only fell from \$394,685,043 gold to \$383,852,964. It is hoped that if the export of cereals is maintained at a large volume, the favourable balance of visible trade this year will exceed \$15,000,000. This, of course, does not cover all the external payments which Argentina has to meet—in addition to £13½ millions on the external debt there are certain commercial dividends and sundry remittances to be made, although on a greatly reduced scale—but it gives the promise that with the help of its gold reserves Argentina will be able to meet its obligations to its bondholders if the slump is not prolonged too far into 1932.

week completely faded away on Wednesday, and the atmosphere relapsed into definite gloom on Thursday. Despite the decision of the Bank of England on the latter day not to raise the Bank rate, the market was not unaware that the apparent steadiness of sterling was dependent in part on the prudent utilisation of the Franco-American credits, necessitated no longer by any substantial flight from the pound but by the growing necessity of embarrassed financial centres on the Continent to withdraw funds in order to make their own position more liquid. Other adverse factors coming into play in the latter half of the week were the pronounced weakness in Wall Street and the growing talk of an early General Election in this country, which served to provoke a re-credescence of much of the uncertainty to dispel which the National Government was formed. There are no two views in the House as to the undesirability of an early dissolution of Parliament.

The major adverse factor of the week, namely, the growing and heavy continental liquidation, is well illustrated by the quotations of the favourite international counters on Thursday. On this day Hydro-Electric fell from 14½ to 12½, Kreuger and Toll from 11½ to 10½, Swedish Match from 7½ to 6½, while the pressure of liquidation in Amsterdam was especially responsible for the fall in Royal Dutch to 10½. Foreign bonds have been a weak feature, German loans following the adverse trend of the reopened Berlin Bourse, while Argentine stocks (and the same was true of Argentine railways) recorded sharp losses on the progressive decline of the peso exchange quotation. Brazilians opened better but weakened later on uncertainty regarding the payment of October coupons on unsecured loans, while on Tuesday San Paulo developed considerable weakness.

Despite slightly more favourable traffic returns, Home Rails failed to hold slight early gains. In Home Industries, the prevalence of Press talk of an early imposition of a general tariff led to certain favourites, especially iron and steel shares, being marked up fractionally. No substantial public interest was evoked, however, and with the outlook at Westminster failing to take any more definite shape, the slight gains were mainly lost. This moderate rise and fall applied particularly to Courtaulds among rayons and to Leylands among motors. Electric supply shares ruled firm throughout. After a firm beginning, breweries were slightly easier on the reduction of Meux's dividend, and tobacco shares relapsed on the announcement of reduced profits by the Ardath Company.

The heavy liquidation of Royal Dutch on Thursday spread a sympathetic weakness through the oil list, and the rubber market was stagnant with the commodity remaining almost stationary. Tea shares were inclined to be firmer on the news of satisfactory prices for the Indian produce, but there was no great volume of business. In the mining markets conditions were mainly uninteresting, but Rio Tintos were inclined to be a weak feature, reacting to 12, and other copper shares were also affected, though in lesser degree, by a drop in the commodity to a new low record. In spite of Paris liquidation on Wednesday, Kaffirs have shown good resisting power, but tin shares reacted to a sharp fall in the market on Wednesday, which was produced by strong rumours of a hitch in the arrangements for the international pool, London Tin being an especially weak feature, Rhodesians were idle, the fluctuating course of "Chartered" being a fair indication of market conditions.

THE WEEK IN THE MARKETS.

ACCOUNT.
September 24.

THE tone at the opening of the London Stock Exchange this week gave promise of far better conditions than actually obtained. On Monday a definitely more cheerful mood prevailed, the reasons being a feeling that, in boldly and honestly balancing the Budget, the National Government had achieved the first step in its task, and that Mr. Snowden's statement had satisfied opinion in foreign centres. British Government stocks responded to the better feeling and put on gains of over a point on Monday and Tuesday, 5 per cent. War Loan being an exception to the general movement owing to the tendency among investors to switch over to long-dated securities in view of the possibility of a comparatively early conversion operation. Unfortunately, the promise of the

LONDON ACTIVE SECURITY PRICES AND YIELDS.

Note—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating the yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

FOREIGN STOCK EXCHANGES.

NEW YORK.

THE New York stock markets experienced a week of persistent declines and unrelieved gloom. The week-end accumulation of selling orders took many quotations below the previous lowest of the depression, and minor rallies on bear covering failed to arrest the downward trend for any appreciable time. Business circles are inclined to take a fatalistic view of the future, the lack of any constructive programme for the restoration of confidence suggesting that until the trade cycle takes an upward turn of its own accord, there can be little place for optimism. Numerous fresh companies, including Western Electric, report cuts in or postponement of their quarterly dividends, while Pennsylvania Railroad and Westinghouse have again touched new low levels. Copper was quoted on Tuesday at 7½ cents per pound, a low record for all time, while the increasing output from the East Texas field suggests that it will be found impossible to maintain oil prices at their present level. The weekly decline in freight car loadings continues, while steel mill operations were reported this week at 30 per cent. of capacity. A noticeable feature of the selling wave was liquidation credited to be on behalf of small banks which have recently failed. Bank shares bore their full portion of the general weakness. Money was again plentiful in a saturated call market.

By courtesy of the Standard Statistics Company, Inc., of New York, and 13, Copthall Avenue, London, we print the following index figures of American values calculated on closing prices (1926 = 100):—

AMSTERDAM.

The past month has distinguished itself by being the most exciting since the crisis made its appearance in October, 1929. Unprecedentedly low levels were recorded on all sides, and in many quarters there was talk of partly or wholly closing the exchange, with a view to averting a catastrophe. The occurrences in Germany and England were not the sole causes which led to the weak tendency on the Amsterdam market. The manipulations of an international group of bear operators who not only attacked Kreuger and Toll shares, but also brought down Royal Dutch shares 10 per cent. and more at a time, proved an important factor. Exchange opinion is that the interim dividend of Royal Dutch will be down to 5 per cent. Considerable selling pressure developed from Switzerland, while the Dutch East Indies, where the effects of the slump are now making themselves felt sharply, came on the market with big offers, especially in plantation shares. Sugar, rubber and tobacco shares suffered severe losses as a consequence. Mr Snowden's Budget speech had a reassuring effect, but a fresh setback occurred subsequently. Unilever shares dropped to 115, but recovered afterwards on rumours that an interim dividend of 4 per cent. would be declared. AKU's were well maintained on satisfactory business reports. Bank shares were weak, while shipping shares also declined sharply. Shares in the Holland-America Line dropped to 2½, and the 6 per cent. bonds to 35.

INVESTMENT NOTES.

War Loan Conversion.—The immediate effect of the Supplementary Budget on the Stock Exchange was to cause selling of 5 per cent. War Loan and buying of the long-dated British Government stocks. Second thoughts, arising out of the uncertainties of the political situation and the instability of the exchanges, have brought about a reaction in the long-dated stocks and a further fall in 5 per cent. War Loan. Regarding the projected conversion of that loan, the market is now in possession of fuller information as a result of Mr Snowden's statement in the House of Commons on Wednesday, when he introduced the Financial Resolution giving certain powers to the Treasury and amending the law relating to the National Debt. The main provisions of the Resolution are as follows:—(1) That in the event of 5 per cent. War Loan 1929-47 becoming repayable, holdings in that loan may, unless application is made for repayment in cash, be continued subject to a reduction in the rate of interest and modifications in the terms of repayment. (2) That the Treasury shall have power to issue securities subject to the condition that income tax will not be deducted from the interest thereof, and that in certain cases the capital as well as interest will be free from taxation. (3) That the permanent annual charge in respect of the National Debt for each of the financial years ending March 31st, 1932, and 1933, shall be reduced to £322,000,000. Under the original prospectus of the 5 per cent. War Loan, the Government had the right to redeem the loan at any time after 1929 by giving three months' notice. Under the new Finance Bill, a longer period of notice can be given, and holdings can be converted automatically into the new loan, bearing a different rate of interest and carrying different terms of redemption, unless the holders inform the Bank of England in writing that they do not wish to convert. There is to be no element of compulsion in the conversion offer, but the new powers are designed to facilitate conversion when the right opportunity arrives. Mr Snowden explained on Wednesday that the Government would not consider a conversion scheme unless the effect of it would be to bring a very substantial sum by way of benefit to the Exchequer in the form of a lower rate of interest. There are two interesting points about the powers which the Treasury are seeking. In the first place, the Treasury is to be authorised to continue the practice which applies to the existing War Loan of not deducting income tax at source. This is a valuable provision for the small domestic investor. Secondly, the Treasury is to be empowered to issue stock free of tax on capital as well as interest. This primarily applies to the foreign holdings of War Loan, which Mr Snowden said were very considerable. It may also be construed as applying to the banks and financial houses in this country who are liable to tax on capital profits when their War Loan holdings are redeemed at par. Replying to a question by Mr Pethick Lawrence, Mr Snowden stated that it might be found desirable in a conversion operation which might extend over a great many months to offer a bonus to those who would convert in the earlier stages. This again seems to hold out promise of a strong inducement to our big financial institutions to support the conversion scheme. Mr Snowden ended his statement by remarking that the Government was anxious to reduce the interest on this huge block of debt which was now carrying interest at a rate higher than any other Government stock. According to figures which he had prepared some time ago, the interest on Government stock, apart from War Loan, averaged about 8½ per cent. Mr Snowden should not, however, overlook the point that from the point of view of the investor, it is the yield that counts and not the rate of interest. If long-dated Government stocks fell in market value, so as to return a yield equal to the £5 ls. 6d. per cent. now obtainable on 5 per cent. War Loan, there would be just as much reason to ask all holders of Government debt to accept a lower rate of interest as to demand it of 5 per cent. War Loan holders.

The Outlook for "Kaffirs."—The market for South African gold-mining shares has provided the only firm feature of the Stock Exchange during recent months, for reasons which have lately received much publicity—namely, the stable price of gold in face of falling commodity values and the consequent lowering of production costs. Gold mines, moreover, are outside the direct orbit of European political and economic disturbances such as have affected the earning power and outlook of almost all other industries, while Kaffir dividends are not subject to the full rate of British income tax. Since, also, high taxation is the incentive for speculation as well as for investment in tax-relieved securities, most factors have been in favour of the increased activity which the Kaffir market is now enjoying. The index for all securities (*Investors' Chronicle*) has fallen in the two months July and August by 10.6 per cent., that for Gilt-edged by 3.6 per cent., "All-Business" by 10.8 per cent., and "All-Speculative" by 15 per cent. Gold mines, which are included in the last-named, show a fall of only 4.1 per cent., and much of this may be attributed to the fact that Kaffirs—the mainstay of the gold-mining section—have gone "ex" the half-yearly dividends during the period in question. Kaffirs have, in fact, advanced steadily and considerably against the receding tide of general security values. The following list is representative of the movement over the twelve weeks from June 30th last to date:—

	Price, June 30, 1931.	Net x.d. since.	Price, Sept. 15, 1931.	Gross Rise.

West Springs	10 9	0 7½	12 3	2 1½

Although the advance has already made considerable progress, the possibilities of further appreciation are by no means exhausted. Advantage has been taken by the mines of a plentiful native labour supply to increase development programmes at the expense of current, but to the advantage of future profits. Costs have, therefore, not shown the expected reduction, and the June half-yearly dividends disappointed the most sanguine optimists. Nevertheless, the public is apparently beginning to appreciate the advantages offered by sound Kaffirs as speculative investments.

White Star Line.—The accounts of this once prosperous shipping company, belatedly issued for the year ended December 31st last, reveal a parlous state of affairs. Profit from the year's operations, together with interest and dividends received, totals £154,784, against £437,627. No provision has been made for depreciation. After

deduction of expenses, there remains a net loss of £108,555. No dividend has been received from Oceanic Steam Navigation, which records an operating loss of £211,183 after crediting profit on the sale of a ship. The dividend on the 6½ per cent. preference shares was duly paid last year under the terms of the Royal Mail Steam Packet's guarantee. The dividend for the current year remains outstanding. The directors "recognise that the book value of the fleet is in excess of present-day values and that the value of the shares in subsidiary and associated steamship companies is substantially in excess of their real value."

The company's liabilities, current and accruing, are still enormous. The balance on the purchase price of the Australian Commonwealth line vessels, which is payable by eight annual instalments of £165,000 each, stands at £1,340,502. The balance on the purchase price of shares of the Oceanic Steam Navigation Company payable to the Royal Mail in December, 1936, totals £2,350,000. The balance of the purchase price of shares in Shaw, Savill and Albion has been reduced to £300,000. On the assets side there is due to the company £1,100,550 from shareholders in respect of calls on shares, with regard to the collection of which the auditors have thought fit to append a reference in their report. Debtors account for £23,046, while £356,495 is due from Oceanic Steam Navigation. A committee of preference shareholders was set up in February last to protect their interests. In the meantime, the market has given its opinion of the value of a structure based on a system of interlocking guarantees by financially weak companies, by writing down the £1 6½ per cent. preference shares from a high level in 1929 of 23s. to the present price of 3s.

Crosses and Winkworth Amalgamation.—With the intensification of difficulties in trading consequent on the continued depression in the cotton trade, the directors of Crosses and Winkworth have now agreed with Crosses and Heaton's Associated Mills as to a scheme of amalgamation. Crosses and Winkworth hold all the shares in the capital of Crosses and Heaton, on 906,093 of which shares there is a liability of 12s. per share. The amount of the stock outstanding is £1,424,549, the interest being in arrears as from March 1st last; while debentures to the amount of £600,000 have been issued to the Midland Bank as security for the indebtedness of the company and its subsidiaries. The proposed new company will create £1,424,549 6 per cent. debenture stock, which will be secured by specific charge upon the present fixed assets of Crosses and Heaton's, and will be issued to the present Heaton debenture holders in substitution for their present stock. A series of debentures for £600,000 will also be issued, to be held by Midland Bank, Limited, or their nominees, and secured by a specific charge on the present fixed assets of Crosses and Winkworth. The scheme provides for the creation of a further floating charge on the whole of the assets of the amalgamated company, the benefit of which is to accrue as to three-sevenths to the Heaton debenture holders and four-sevenths to the Midland Bank. Bank interest and charges are to be made payable whether profits are made or not. Subject to such payment, the remaining profits of the company are to be used in paying the accrued interest on the present Heaton debenture stock outstanding at the date of new issue; in paying the

interest on the new Heaton debenture stock and any arrears, and in providing a new cumulative sinking fund of 1 per cent. per annum on the original amount of the new Heaton debenture stock. The amalgamated company is also to place to a special reserve account all surplus profits until they amount to two years' interest on the outstanding Heaton debenture stock. This account is to be maintained at a figure equal to two years' interest, which, though it may be used in business, cannot, at any time, be resorted to by shareholders for dividend purposes. Any further profits will be available for distribution to shareholders, or otherwise as the board thinks fit; but the amalgamated company is to have the right to augment the Heaton debenture sinking fund out of such profits. The maximum limit of the bank overdraft is to remain at £600,000 until June 30, 1932, when it will be reduced to £590,000, and thereafter by minimum half-yearly reductions of £15,000.

Port of London Authority.—When the total values of imports and exports through most British ports were showing ominous signs of contraction the figures of the Port of London continued to bear witness to steady if slight expansion. The difficulties of the present industrial position, however, are now becoming evident, and stockholders can scarcely be surprised to learn from Lord Ritchie, the chairman of the board, that "the business of the whole country is now in a critical condition, and this is bound to be reflected in the trade of the Port of London." The latest report of the board shows a falling-off in the figures under most headings, and, although the board have accomplished a great deal by way of economies in working expenses, it is their intention to take still further steps. The net register and deck cargo tonnage of shipping liable to river tonnage dues, inwards and outwards, during the year ended March 31, 1931, totalled 42,258,020 tons, compared with 43,138,737 tons for the previous year, a decrease of 880,717 tons, composed of 301,766 tons in the foreign and 578,951 tons in the coastwise trade. Of the total, 25,997,889 tons used the wet docks—a decrease of 483,218 tons. The shipping entering the dry docks of the Authority was 3,471,539 tons, an increase of 48,651 tons. The total revenue for the year was £5,828,658, the total expenditure £4,463,606, and the interest on Port stock and other charges £1,404,783, leaving a deficit of £39,781. The sum of £520,632 has been brought forward and some £480,901, consequently, is carried forward. During the year the Authority landed or received 2,808,367 tons of import goods for warehousing or for immediate delivery—an increase of 1,434 tons on the tonnage dealt with in the preceding year. The stocks of goods in the warehouses directly controlled by the Authority at the end of March, 1931, amounted to 621,326 tons, compared with the 645,036 tons at the corresponding time last year. Export traffic handled on the dock quays showed a fall of 154,000 tons on the year, the total number of tons being 578,449, against 732,455 for the preceding year. In considering this all-round decrease in the workings of the year it is well to remember that the Port of London shows only the second smallest decrease in imports and exports of the six principal ports of Great Britain: Liverpool, Manchester and Southampton having a far greater percentage decrease on the 1929 figures.

D. Gestetner.—This small but hitherto markedly successful company (which manufactures duplicating machines) suffered a setback in 1930-31. The profit of the parent company fell only from £151,871 to £110,445—not an unsatisfactory result in the circumstances—but no less than £75,000 had to be set aside for the losses of the American subsidiary. By what in retrospect must be accounted an error of judgment, the company was committed to expenditure on an intensive sales campaign in America at the time when the trade depression came on. A sum of £20,000 was allocated to contingency reserve a year ago to cover losses in America, so that the American venture appears to have cost £95,000 in two years. All

the other subsidiaries have made profits, for which no credit is taken in the parent accounts; they appear to have paid no dividends this year. The dividend on the ordinary shares has been cut from 25 per cent. to 5 per cent., and, even so, has to be met almost entirely by a draft on the carry-forward. No allocation to general reserves has been made:—

Years ended August 31.	1929.	1930.	1931.
Profit	147,201	151,871	110,445

To general reserve	75,000	15,000	...
Inc. or dec. in carry-forward	-24,257	+121	-15,305

The balance sheet, which is strong, shows no important changes. A cash holding of £197,937 against outside liabilities of £25,115 only and no debentures is impressive. The general reserve and the carry-forward together total £104,935, and patents and goodwill stand at £1. The company's accounting methods are commendably scrupulous, evidently permitting no unseen losses to accumulate. This asset, and the fact that it manufactures the type of "twentieth-century" article which will become more and more important in world trade, must be set off against an undeniably poor year's figure.

Second Alliance Trust.—In a year which has been so frequently marred by interest defaults and dividend reductions, the net profit of £104,753 earned by this well-known pre-war investment trust cannot be considered unsatisfactory. Gross income actually shows an advance of £1,715 at £215,790, but as a result of increased expenditure the net figure is down by £7,297. Preference dividend absorbs £24,412, while the ordinary dividend, maintained at 22 per cent., is still amply covered by earnings. A further £20,000 is transferred to the contingency reserve fund, while debenture issue expenses take £779. The carry-forward remains practically unchanged at £11,031.

Year to June 30.	1929.	1930.	1931.
Income	193,142	214,075	215,790

* Plus capital bonus of 20 per cent.

The company's holdings in bonds and stocks at the close of the year represented approximately 96 per cent. of its invested funds, and were spread over 841 different investments, compared with 803 last year. The report states that a valuation of these investments, which appear in the balance sheet at £3,497,494, at July 31st last showed a depreciation of 11½ per cent., which is more than covered, however, by the available reserve fund of £555,000. At the latest available price of 460, the ordinary stock yields £4 18s. per cent., allowing for the final dividend of 11 per cent.

Hawthorn Leslie.—In view of adverse conditions, the maintenance of the profits of this Tyneside firm of ship-builders and engineers, for the year to June 30th last, is a welcome achievement. The balance for the year, after debiting depreciation and including income from the £714,865 of British and Colonial Government securities and the £55,274 of other investments, amounts to £42,497, compared with £44,057. The 5 per cent. dividend on the ordinary shares is practically covered by earnings:—

	1929.	1930.	1931.
Profit	32,442	44,057	42,497
Directors' fees	...	1,700	1,600
Leasehold redemption	937	937	937

Paid %	3.5	5	5
Carried forward	17,631	18,606	18,176

The balance sheet position is strong, and the company should be well equipped to weather the industrial storm. In these days shareholders in an operating company who can count on 4 or 5 per cent. by way of income from their company's investments, apart from trading results, may consider themselves fortunate. The price of the ordinary shares has been relatively well maintained, the present quotation of 18s. 9d. comparing with a highest for the year of 15s. The yield is approximately £7 17s. per cent., allowing for the dividend.

Whitworth and Mitchell.—A note of optimism is struck by the chairman of this Manchester textile manufacturing company in the report circulated with the accounts to June 30th last. Trading profit is practically maintained at £224,739, the decline in net profit from £188,414 to £175,756 being due entirely to increased provision for income tax:—

	1929.	1930.	1931.
Trading profit	211,083	226,906	224,739
Other income	7,182	4,952	7,932
Expenditure	50,339	43,444	56,915
Net profit	167,925	188,414	175,756
Brought forward	...	16,414	29,202
Preference dividend.....	21,011	30,000	30,000
No. of times covered	...	7.3	7.3
Ordinary dividend :—			
Amount	95,500	95,625	95,625

Reserve	35,000	50,000	50,000
Carried forward	16,414	29,202	29,333

The balance sheet reveals a strong liquid position, and the chairman's report emphasises in some detail the sound basis on which the company's fortunes rest. The investment in Avon Silk Mills is stated to have proved invaluable for experimental purposes. The parent company's

Name.....

Address.....

trading last year created a new record so far as yardage turnover was concerned, though, owing to lower prices, the total value of sales showed some contraction. At 46s. 3d. the £1 ordinary shares yield £10 8s. per cent., allowing for the final dividend of 15 per cent.

Selfridge Provincial Stores.—The subsidiary companies of this concern showed decreased profits during the past year, and the parent company received only £151,028 in dividends as compared with £228,216 in 1930. Net profit was £66,255 lower at £96,719. The dividend on the ordinary shares was reduced to 2½ per cent., and £30,000 was written off preliminary expenses, which now stand at £50,000. Last year's contribution of £10,000 from Selfridge and Company was not repeated. The results of the past three years are shown in the following table:—

Year ended.	Aug. 31, 1929.	Aug. 30, 1930.	Aug. 31, 1931.
Net profit	£ 167,439	£ 162,974	£ 96,719
Ordinary dividend:

Inc. or dec. in carry-forward	—561	+224	+8,594

* Contributed by Selfridge & Co., Ltd.

The outstanding feature of the balance sheet is the repayment of the bank overdraft of £94,000 made possible by the reduction of £95,982 in the item "dividend declared but not received." Loans from subsidiaries rose by £2,288 to £165,678, while loans to subsidiaries rose by £5,820 to £76,790, and cash £32,396 to £38,668. Consequently, the excess of current liabilities over liquid assets decreased by £24,830 to £60,270. The ordinary capital is secured by net tangible assets of 21s. 8d. per £1 share fully paid, and at their present price of 5s. these shares yield £11 2s. 2d. per cent. per £1 share.

Rio Tinto.—Having regard to the course of the company's products, especially copper, it was a foregone conclusion that this enterprise would be unable to maintain even the reduced dividend rate of 1930. In some quarters no more than a cut was looked for; in others, the opinion was confidently held that the company would not be able to make any interim distribution at all. The last-named opinion proved only too accurate. Indeed, the position indicated in an explanatory circular issued by the directors exceeded the worst anticipations. The trading profit for the half-year is estimated at about £250,000, as against a million for the whole of 1930. Provision has to be made for a full half-year's service on the debenture issue, and the preference dividend will be met; but there is to be no distribution on the ordinary. A development not reckoned upon by outsiders consists in the fresh exactions of the Spanish authorities. Provisional payments had been made "on computations considered reasonable" in respect of additional taxes covering the years 1923-25. Now, after the lapse of eight years, a final liquidation has been demanded on arbitrary bases. Past and present taxes total no less than £760,000. Of this, £465,600 has been drawn from suspense accounts and other advance provisions, and £141,400 has been charged to current revenue. Liquidation of the balance with any further claims is to be spread over future years. The directors give a relatively favourable account of the operations of the pyrites subsidiaries, and describe the measures taken to deal with the labour position in Spain. Curiously, they make no specific reference to the slump in copper, but they do make the significant admission that the copper content of the ore in the Tinto mine is gradually falling. Hence, partly, the decision to become interested in Northern Rhodesia. Realising, from correspondence, that many of the proprietors do not know what the Rhokana Corporation is, the Tinto directors, in a separate circular, set out the history and position of that undertaking. Unfortunately for those interested, astronomical figures

of ore reserves now count for little, and depreciation of disastrous extent has occurred upon those as well as all the other holdings. Altogether it looks as though the second half of the current year is likely to be no more profitable than the first. Rio Tinto debentures, issued in March last year at 91½, are now quoted at 67 nominal. The £5 preference shares stand at about £2 10s. and the £5 ordinary at £11 15s. The quotation of the dividend-paying preference shares at 50 per cent. discount and of the non-dividend ordinary shares at about 140 per cent. premium constitutes a distinct anomaly.

COMPANY MEETINGS, &c.

INITIAL SERVICES (1928), LIMITED.

INCREASED TRADING PROFIT.

The third ordinary general meeting of the Initial Services (1928), Limited, was held, on the 16th instant, at Winchester House, London.

Mr A. P. Bigelow (chairman and managing director), in moving the adoption of the report and accounts, said: The accounts show that the trading profit for the year is £210,720, an increase on the previous year of £3,780. This slight improvement, however, is discounted by two items. First, interest received is reduced by £1,500, owing to the lower rates obtainable during the year; second, depreciation is increased by £2,000, which is partly accounted for by our having provided depreciation of freehold land and buildings. As a result, the total profit carried to the balance sheet is £210,542, compared with £210,482 for the previous year.

The balance of profit and loss account brought forward, £15,436, together with the net profit of the year, amounts to £225,978. After deducting 12 months' dividend on the 8 per cent. cumulative preference shares, the interim dividend of 2d. per share on the ordinary shares, and transferring £30,044 to taxation reserve account, the available profit amounts to £120,434. The directors recommend that £45,000 be transferred to general reserve account, increasing this account to £100,000. They further recommend a final dividend on the ordinary shares of 4d. per share, less tax.

Since the report and accounts were sent to you the rate of tax for the present fiscal year has been increased. The effect of this will be that more tax will be deductible from this final dividend.

After so many years during which this business has shown a steady increase of profits it must naturally cause some regret that the accounts for the past year indicate a temporary check in this upward tendency. Nevertheless, taking into consideration the general conditions of trade, the addition of new business during the period was encouraging and speaks well for the utility and economy of the various services offered by the company and its subsidiaries.

The volume of business from the end of last June to the present time is satisfactory, and I hope that we may at least maintain our profits during the current year.

Mr W. J. Chinneck seconded the resolution, which was carried unanimously, and a vote of thanks to the chairman and directors concluded the meeting.

LONDON AND THAMES HAVEN OIL WHARVES, LIMITED.

ISSUE OF NEW CAPITAL.

An extraordinary general meeting of the London and Thames Haven Oil Wharves, Limited, was held, on the 17th instant, at Winchester House, London, to consider a resolution increasing the capital of the company to £1,500,000 by the creation of 500,000 new ordinary shares of £1 each, 300,000 of which are to be issued forthwith at the price of not less than £2 10s. per share.

Mr Thomas C. J. Burgess (chairman and managing director) said that the company's audited accounts for the six months to June 30th showed an improvement over those for the same period of the previous year. Other companies in which they were interested in this country were also doing better. Their business had been built up on charges which had always represented a minimum for the facilities given and the work done. With regard to the Compagnie Industrielle Maritime, the landings of oil at Le Havre represented an increase of over 10 per cent., and the gross tonnage of the ships berthed at North Quay was 1,233,020 tons, an increase of 116.5 per cent. Both those figures were for the eight months to the end of August.

As to the new capital, there had been no pressure from the company's bankers, but he maintained that it was not fair to continue for an indefinite period financing the capital of a business by means of bank overdrafts. He was satisfied that the issue would be a complete success. One shareholder alone had definitely undertaken to apply for the whole 50,000 extra shares. If the proposed resolution was passed, the issued capital of the company and the reserve would both stand at £1,300,000. That reserve was represented by hard cash invested in businesses entirely independent of the company's operations. During the last thirty years they had not lost one penny on their investments, but had made handsome profits. The opinion of the board was that their present investments would follow the usual course.

The Port of Havre, by virtue of its situation, was ideal. As to the sea approach there was practically no danger such as was met with in almost every other port. It was one of the easiest to find, even in foggy weather. It was itself, and in its surroundings, equipped with all the gifts, not only of Nature, but of science, to make it safe in its accessibility. What they had laid themselves out

for, of course, was the Atlantic traffic—to enable the largest liners crossing the Atlantic to come safely and rapidly alongside the quays, and within three hours of entering the port, the passengers to arrive in comfort in Paris. There was no other port in France situated in a way that made that possible—no other port in France that could actually compete with Havre in all that went to make a port's success. Had it not been the best proposition that could be envisaged, the board would not have been engaged in developing it.

The resolution was carried unanimously.

Government Returns, &c.

NATIONAL ACCOUNTS.

The total ordinary revenue for the week ended September 12, 1931, amounted to £28,839,300 against ordinary expenditure of £11,681,100. After allocating £600,000 to Sinking Fund and having allowed for an increase in Exchequer Balances of £35,157, the operations for the week, as shown below, increased the National Debt by £3,477,000 to £7,690,125,000:—
(000's omitted.)

Treasury Bills	+ 5,027	National Savings Certificates	£ 150
Public Dept. Advances	+ 200	Road Fund	1,200

NOTICES.

The Midland Bank announces that the business which, during reconstruction of former premises, has been conducted in Lloyd's Building, Leadenhall Street, has been transferred to the bank's new building at 140 Leadenhall Street, London, E.C.3. Safe deposit facilities are available at this branch.

The Midland Bank announces the opening of new offices as follows: 23 Jersey Parade, Great West Road, Lampton, Middlesex; University Branch, 27 Blenheim Terrace, Woodhouse Lane, Leeds; 235 Northolt Road, South Harrow, Middlesex; and 58 Chesterton Road, Cambridge. Each of the first three named branches is equipped with night-safe banking facilities.

COOPER, McDONALD AND ROBERTSON, LTD.—The directors announce that during the current financial year the company's turnover and trading figures have been satisfactorily maintained, having regard to the continued depressed world conditions. Owing, however, to the disturbed state of international finance and to the large proportion of the company's total trade which is transacted with countries overseas, where further depreciation in local currencies has taken place since the close of the company's last financial year, the directors have decided not to pay an interim dividend on the ordinary shares of the company. The half-yearly dividend on the 7 per cent. cumulative preference shares of the company will be paid as usual on September 30, 1931.

Commercial Reports.

MARKET SUMMARY.

Prime movements in the principal commodity markets have been irregular during the past week, and the turnover was generally on a small scale. The situation of the coal trade shows no improvement. An increasing demand for house coal has been counterbalanced by a further decline in exports and in industrial consumption. The depression in the iron and steel industry has become increasingly severe. In view of the growing discrepancy between British and Continental materials, this country is continually losing ground, both at home and abroad. Nevertheless, the British Steel Makers' Association, at a meeting held this week, has decided against a reduction in prices. The market in non-ferrous metals has been dull, and prices were again lower. Among textile raw materials, cotton and flax were slightly firmer, while jute remained at last week's level. At the opening of the fifth series of London sales wool values were from 10 per cent. to 15 per cent. lower than those obtaining at the end of the July auctions. Among cereals, wheat has been a little firmer in view of an expansion in demand and the damage done to Central and North European crops by unfavourable climatic conditions. Among other commodities, rubber maintained its recent improvement, but hides were again cheaper.

THE COAL TRADE.

SHEFFIELD.—While export business still tends to shrink, prices of best quality hard, which are in limited supply, have stiffened. They now command 17s. 6d. to 18s. per ton, f.o.b. The market for all sorts of industrial fuel, including furnace coke, is rather quieter, and there are on hand large stocks of second quality and small coals. Sales of house coal are moderately brisk, best ordinary qualities being quoted at from 20s. 8d. to 22s. at pits. Furnace coke has been sold at as low as 9s. 6d. per ton at ovens.

GLASGOW.—There have been no outstanding developments in the Scottish coal trade during the week. In the market, business is moving much on the same lines as for the past month or two, although enquiries are now beginning to broaden out. Washed doubles and trebles are strong features, most other qualities being steady. Current prices for shipping trade are approximately as follows (f.o.b. district ports):—LANARKSHIRE.—Ell best, 14s. 3d.;

splint best, 15s. 9d.; splint second, 14s. 14s. 3d.; navigation, 15s.; navigation second, 14s. 6d.; Hartley, 15s. 6d.; steam, 13s. 6d.; trebles, 12s. 6d.-13s.; doubles, 12s. 6d.; singles, 10s.; pearls, 9s. 3d.-9s. 6d.; dross, 9s. FIFE.—Screened navigation, 17s.; first-class steam, 11s. 9d.-12s. 6d.; third-class steam, 10s. 9d.; trebles, 13s. 6d.-14s. 6d.; doubles, 12s. 6d.-12s. 9d.; singles, 10s. 6d.; pearls, 9s. 6d. LOTHIANS.—Prime steam, 10s. 9d.-11s.; secondary steam, 10s. 6d.; trebles, 12s. 6d.-13s.; doubles, 12s. 6d.; singles, 10s.; pearls, 9s. 6d. all per ton f.o.b. Leith. Ayrshire.—Unscreened navigation, 16s.; jewel, 17s.; steam, 13s. 6d.; trebles, 13s.; doubles, 12s. 6d.; singles, 9s. 3d.; pearls, 9s. 3d.; dross, 9s. 7d.

CARDIFF.—There has been no abatement this week in the severity of the depression in the coal export trade. At the South Wales docks between 30 per cent. and 40 per cent. of the tips have been idle, and shipments have been between 20 per cent. and 25 per cent. less than at the corresponding period last year. Monmouthshire large coals are well stemmed over the next week or two, largely on account of the shipments to the Egyptian State Railways, but the demand for other classes of large steam coals, as well as for smalls, of practically all descriptions, has been very limited. On Tuesday the Advisory Committee of the South Wales Coal Marketing Association considered a request that the minimum prices of small coals should be reduced, but a decision was reached not to make any change in the schedule, and it is unlikely that any revision will take place in the near future. The Customs returns for August show a decrease in the average realised price of all coals exported from South Wales of 7½d. per ton compared with July. This fall, however, was due principally to the depressed conditions in the anthracite trade, where the shipments were 62,000 tons less than in July, and the declared f.o.b. price about 2s. 4d. per ton lower. The following are the current approximate quotations: Best Admiralties, 19s. 6d. to 20s.; secondas, 18s. 9d. to 19s. 4½d.; best drys, 18s. 6d. to 18s. 9d.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steam, 13s. 6d.; cargo smalls, 11s. 6d. to 12s. 6d.; coking smalls, 13s. 6d. to 13s. 9d.; anthracite, best large, 36s. to 37s. 6d.; Red Vein large, 22s. 6d. to 27s. 6d.; machine-made cobbles, 40s. to 45s.; French nuts, 43s. to 46s.; stove nuts, 39s. 6d. to 43s. 6d.; rubbly culm, 8s. 6d. to 9s.; foundry coke, 30s. to 35s. 6d.; patent fuel, 18s. 8d. to 19s. 9d.; pitwood, ex ship, 25s. to 26s. 6d.

IRON AND STEEL.

MIDDLESBROUGH.—The market for Cleveland iron continues in a very depressed state, and little improvement can be looked for under present conditions. Scotland, which was formerly one of the best customers for Cleveland iron, is taking very little from this district now, owing to the keen competition of Continental and Northamptonshire iron, and the latter is even coming to our own local foundries at much lower prices than are quoted by Cleveland makers. As long as the latter adhere to present price levels an increase in demand is improbable, and it will become a question of reducing the present limited production, as works cannot continue to pile up stocks indefinitely. In hematite, demand has not improved to the extent that was expected, and only small purchases are being made for early delivery, a marked disinclination to enter into forward contracts being shown by consumers, which is difficult to understand with prices at their present low levels. Mixed numbers are now offered for early delivery at 59s. 6d. per ton, but for further ahead a little more is asked. Stocks are heavy at all producing works, but the two furnaces at Ayresome Iron Works are going out this week, and it is stated that others are likely to follow very soon, unless trade improves. In the finished departments, producers of structural materials continue to be busy, but in other branches trade is very slack, and several mills are working only part time. It is satisfactory to note that Cargo Fleet Iron Co., Limited, are to share in the South African Railway Board's order for 9,500 tons rails along with United Steels, Limited, and Lancashire Steel Corporation, Limited, although the quantity to be supplied from Furness Shipbuilding Co. have received confirmation of the order. The two steamers, of about 5,000 tons cargo each, for which negotiations have been proceeding for some time. The vessels are for to be delivered early next year. It is understood that there is a prospect of more shipbuilding orders being secured for the Tees. The representatives of the British Steel Makers Association held meetings in London on Tuesday and Wednesday this week, but it was decided to make no change in prices. There is no new business Bilbao Rubio is nominally 14s. 8d. c.i.f. and the current freight blast-furnace qualities is freely offered at 15s. delivered consumers' works, and a trifle less would be accepted for a prompt order. The number of blast-furnaces in operation in the district is now nineteen.

SHEFFIELD.—The immediate effect of the disclosure of the Budget proposals has been to intensify the quietude in the iron and steel industries. People fear a reduction of buying power, and are with-holding orders as much as possible until the general effect of the financial plans are clearer. As a result, transactions in the markets for iron and steel material have fallen off considerably. Manufacturers report decreased order books, and few enquiries of importance, in the direction of protective tariffs is causing anxiety in bar iron, steel and pig iron required in the production of ferro alloys, steels. Prices of ferro-alloys have dropped to the lowest levels recorded since the War, yet none is being bought forward. The Budget has also had the effect of checking the development of the customary autumn revival of trade in cutlery and plate. Shop-

keepers are buying with extreme caution, fearing that the public will curtail its buying of luxury or semi-luxury goods. Overseas trade in all sections continues quiet.

GLASGOW.—Trading conditions continue to be unsatisfactory in the West of Scotland, and there is no evidence of an early improvement. In practically all branches there is not nearly sufficient work coming in to keep plants occupied, and in some cases there has been further curtailments of the working week. There is keen competition for such business as is on the market, and prices ruling are exceedingly low. Although things are still quiet in the tube trade, bookings during the past week show some improvement. In the sheet trade there is somewhat less demand for export, but the home business remains fairly satisfactory.

CARDIFF.—On the Swansea Metal Exchange on Tuesday, further weakening characterised the tinplate market, and business was reported to have taken place on the basis of 12s. 9d. per box, or approximately 9d. per box below the current average cost of production. Imports of foreign steel bars continue on a heavy scale, and for these supplies the current quotations are about £3 15s. per ton compared with £4 12s. 6d. for local bars. Galvanised sheets are a stagnant market, with prices ruling down to £8 15s. per ton for corrugated sheets in bundles.

OTHER METALS.

TIN.—The reaction in the price of tin which became noticeable last week has proceeded further. The turnover has been small, and even at the lower price buying remained restricted in the absence of an increase in demand. Meanwhile, a re-assessment of the tin mines in Malaya is carried out by the sub-committee of the Central Assessment Committee in order to bring the output of that country into line with the quota allotted to it. Wednesday's official closing quotations for "standard" cash, at £110 15s. to £111 per ton, compares with £113 7s. 6d. to £114 on the corresponding day last week. Stocks in London and Liverpool at the end of last week, at 31,197 tons, show a decrease of 254 tons on the week.

COPPER.—In the absence of any encouraging feature from the consuming end of the industry, the metal again sharply declined on the publication of the August statistics of refined copper show a further large increase, but stocks of rough copper are slightly lower. Wednesday's official closing price for "standard cash" in London, at £28 10s. to £28 12s. 6d., compares with £30 11s. 3d. to £30 12s. 6d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 22,495 tons, show a decrease of 253 tons, while stocks of rough copper, at 1,199 tons, were 1 ton smaller. According to the Metal Exchange, the August approximate copper statistics for North and South America are as follows:—

	July.	August.
Tons.	Tons.	Tons.
Refined stocks.....	392,857	407,143
Blasted stocks.....	159,600	157,229
Foreign deliveries, refined...	23,214	25,893
Domestic deliveries, refined...	38,393	41,071
Refined production.....	85,714	80,357
Mine production.....	34,821	34,821

LEAD.—The market in lead has been quiet, and the metal became slightly cheaper under selling pressure. Wednesday's official closing quotation for "soft foreign" in London, at £10 11s. 3d. to £10 15s., compares with £10 13s. 9d. to £10 16s. 3d. on the corresponding day last week.

SPELTER.—The demand for spelter showed no improvement. Prices remained steady early in the week, in view of the reserve of sellers, but later gave way as supplies became more plentiful. Wednesday's official closing quotations in London for "good ordinary brands" at £10 13s. 9d. to £11 3s. 9d., compares with £10 15s. to £11 5s. on the corresponding day last week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals the quotations for aluminium and nickel at £85 per ton, and at £170 to £175 per ton respectively, have been maintained at last week's level. Antimony again changed hands at £22 10s. to £22 16s. per ton "foreign" established last week. "Spot" quicksilver was steady at £15 18s. 9d. to £16 2s. 6d. against £15 18s. 9d. a week ago.

TEXTILES.

THE COTTON TRADE.—Liverpool.—There has been rather a better feeling during the week, partly due to the continued holding movement causing some short covering. The South has not been a keen seller, and up to now values have been sustained by the paucity of hedging. The International Federation of Master Cotton Spinners and Manufacturers Association figures show during the twelve months ending July 31st, a diminution of 2,726,000 bales in the world's consumption of cotton. American shows a decline of 2,118,000 bales, whilst other growths show a decline of 610,000 bales. In other words, as compared with last year, whilst the use of cotton shows a decline, the use of growths other than American, has increased from 48 per cent. to 51½ per cent. of the total consumed, whilst the use of American has declined by a corresponding percentage. The present price, however, gives some hope of an increase in the use of American as compared with "others." United States consumption for August was 426,000 bales, against 451,000 bales for July, the daily rate being 18,000 bales and 18,400 bales respectively. Weather in the cotton belt has been excellent this last week. Spot sales for the week 10th to 16th (inclusive) are 30,000 bales, of which 16,930 bales are American, 500 Brazilian, 1,050 Argentine, 4,700 Peruvian, 3,000 Egyptian, 1,050 African, 2,120 East Indian, 1,620 Russian, and 20 sundries. Imports for the same period are 16,606 bales, of which 1,157 bales are American

5,780 Peruvian, 500 Egyptian, 554 African, 8,598 East Indian and 17 sundries. Quotations, September 16th: American Middling, 3-78; Egyptian Sakel, 5-75; Uppers, 4-76; Brazil Fair, 3-89; Pora G.P. Smooth, 4-19; West African Middling, 3-89; and G. F. East African, 4-89.

Manchester.—Although the amount of business done in the market during the past week has not shown any particular improvement, in some quarters, there has been an increased inquiry. Raw material rates have been rather firmer, and there seems to be less expectation of lower values. An unsettled feeling still prevails, owing to the uncertain outlook relating to the political situation and the possibility of a tariff. In the piece-goods section there has been a good deal of interest in the increased demand for China. More offers have been reported in grey and white shirtings for Shanghai and Hong Kong, but only occasional sales have taken place. Further buying has been reported in poplins, broads and lawns, especially for Hong Kong. The offtake for India remains disappointing and leading merchants complain of the paucity of bids from the other side. Small lots, however, have been booked in light bleaching descriptions and prints chiefly for Karachi and Madras. Very little has been done for Egypt and the Near East, and shippers to South America have restricted their commitments. Some home trade buyers have placed orders a little more freely owing to the anticipation of higher prices, should a tariff be decided upon. Rates in American and Egyptian yarns have been rather steadier, and some spinners have experienced a little more inquiry. Transactions of any importance, however, have been scarce, and business for the most part has been confined to odd lots.

THE WOOL TRADE.—Bradford.—Another test of wool values has been afforded by the opening of the fifth series of London sales. Wools which are at all attractive, writes our correspondent, have found a fairly ready market, the home trade being largely responsible for the level of values paid. The worst feature of the auctions is that considerably less than the quantity of wool available in London will be catalogued, even if the sales continue for the fourteen selling days for which arrangements have been made. The home trade is an extensive buyer of the best greasy merinos, but the prices realisable for these are 10 per cent. below the close of the July auctions. Ordinary wools are practically 15 per cent. cheaper, particularly anything of Continental style. A good demand has been experienced for fine greasy crossbreds, but prices are 10 to 15 per cent. cheaper, medium and low sorts showing 15 per cent. drop. Some irregularity has been seen in scouring merinos. The fall in good 70's is no more than 10 per cent., while ordinary lots are 15 per cent. down. Superior scoured fine crossbreds are 10 per cent. cheaper, faulty wools 15 to 20 per cent., whilst medium lots show a decline of 15 per cent., and low 20 per cent. So far there has been only a small offering of New Zealand scoured crossbreds, and these are 10 to 15 per cent. cheaper, there being a decline of 10 per cent. in fine slope lambs, and 7½ per cent. in medium. No important development has yet been seen in Bradford. The fall in wool prices has already been largely discounted, and quotations for tops are steady. New business is developing slowly, and topmakers are concerned to see how values move during the remainder of the London series. Large stocks of cloth still have to be carried by the manufacturers, and this, along with the scarcity of new business is making them unwilling to speculate heavily in yarn. Decreasing exports, increasing imports, and uncertainty about

FIGURES OF ASSURANCE A.M.P.

By careful and prudent administration the A.M.P. has made more than £42,000,000 for the benefit of its Policyholders since its establishment in 1849, and this, after providing for all expenses of management, commission, taxes, etc. A.M.P. premiums are low. Bonuses high and policies, as befits the largest British Mutual Life Office, world-wide. Assets £83,000,000. Annual income £11,500,000. Full particulars on application.

MUTUAL AUSTRALIAN PROVIDENT SOCIETY Established 1849.
75-76 King William St., London, E.C.4.
D. E. WALKER, Manager for the United Kingdom.

tariff developments all contribute to retard the desired increase in machinery activity.

THE JUTE TRADE.—Dundee.—While prices of raw jute continue to fluctuate, sellers are showing considerable reserve, which is induced by the firmness of up-country markets in India. Supplies of the new crop at these stations are small, which, of course, is only in keeping with the greatly reduced outturn of the crop forecasted this season. The Director of Agriculture for Bengal, in his official estimate issued last week, simply confirmed the figures of the district returns, but stated that the quality may be affected in the districts in which flooding had occurred recently. Prices are slightly above the lowest points touched this season, but trade in jute goods has not improved to any material extent. Spinners and manufacturers in Dundee are quoting unchanged rates, and refuse to accept anything less when buyers show a disposition to purchase larger quantities for delivery some distance ahead. Stocks of Calcutta goods are still very large, and these prove a deterring factor to the advancement of prices at that centre. There are few offers of good first Marks being made. Fuji-M is quoted at £19 2s. 6d., and good Lightnings are offered at £17 10s., while Heart Ram assortment is named at £17, September-October. Daisee assortment is back again to £15 10s., after being up to £16, with three's at £15 5s., and four's at £14 10s., October-November. Tossa assortment is offered at £17, three's at £16 15s., and four's at £15 15s., October-November. The quoted rates for common 8 lb. cops and 8 lb. medium spools are 1s. 10½d. and 1s. 11½d. respectively. Buyers, however, are not inclined to pay more than 1s. 10d. and 1s. 11d., the latter having been sold on several occasions at the price. By the closing down of one spinning mill for an indefinite period from the middle of October, the supply of these yarns will be further curtailed. Twist is steady at from 3½d. to 3½d. for 3-ply 8 lb., and sacking yarns remain unchanged at from 2½d. for 24 lb. web and 3½d. for 8 lb. chains. Rove is in small request at from £18 10s. for 48 lb. and £15 10s. for 200 lb. The finer yarns are wanted by Brazil, and firm rates are quoted. For second quality 8 lb. Rio warp 2s. 7½d. is named, for third quality 2s. 4d., and for fourth 2s. 1d. Carpet yarns are slow and nominal. Orders for jute cloth are of small account, and buyers appear to be purchasing only sufficient to meet their immediate needs. Prices are steady, at from 2½d. for 10½ oz. 40 in., and from 1½d. for 8 oz. Linoleum hosiery are quiet, though business has already been done in sufficient volume to enable some firms to keep running on longer hours than hitherto. Heavy goods remain quiet. Calcutta goods were dearer, but the tone recently has been easier, with sellers now at 17s. 3d. for 10 oz. 40 in., and 14s. 1d. for 8 oz., September, and 17s. 5d. and 14s. 2d. respectively, October-December.

THE GRAIN MARKETS.

WHEAT.—During the past week the wheat markets have been a little steadier. Estimates of probable supplies and requirements are still conflicting as harvesting has only partially been completed. There is no doubt, however, that the weather has recently been unfavourable to the crops of Northern and Central Europe. Estimates have been reduced and the margin required to be met by imports has become considerably larger. Another favourable factor has been an increase in the volume of trade in the absence of selling pressure. On the other hand, the world's supplies are known to exceed probable requirements considerably. No estimate has yet been published of the yield of the Russian crop and it is therefore not yet possible to gauge accurately the total quantity which that country is likely to export during the current season. The Federal Farm Board has disposed of 7,000,000 bushels to Germany. It will be remembered that the Board has already arranged to exchange 25,000,000 bushels for coffee from Brazil, and that it has recently disposed of 15,000,000 bushels to China. Quotations: No. 1 Northern Manitoba, Atlantic, ex ship, 23s. 9d. per 49½ lbs., as compared with 24s. a week ago; No. 2 Northern Manitoba, Atlantic, ex ship, 22s. 6d., against 22s. 9d.; No. 3 Northern Manitoba, Atlantic, ex ship, 21s., against 21s. 3d.; Russian, on sample, 18s. to 20s. 6d., against 18s. to 20s. 6d.; Australian, ex ship, 19s. to 22s. 9d., against 19s. to 22s. 9d. a week ago.

WHEAT FLOUR.—The demand for flour has been on a larger scale than recently and prices have been well maintained. North American shipments, at 162,000 sacks, show a decrease of 43,000 sacks as compared with the previous week. Of this total, 85,000 sacks were consigned to Europe. Quotations: Straight run, delivered country, 21s. per sack of 280 lbs., as compared with 21s. last week; delivered London, 20s., against 20s. Manitoba patents, ex store, 20s. 6d. to 24s., against 20s. 6d. to 24s., and Australian, ex store, 16s. to 16s. 6d., against 16s. to 16s. 6d. a week ago.

BARLEY.—The market in barley has again been dull and quotations were generally easier. New English barley is, however, still dear owing to the scarcity of new supplies. Quotations: "English feeding," f.o.r., per 448 lbs., 20s. to 22s., as compared with 22s. to 24s.; Californian "new" sold at from 30s. to 50s., as compared with 34s. to 50s. last week; "Australian Chevalier" changed hands at 26s. to 32s., against 28s. to 32s. a week ago.

OATS.—Despite the heavy shipments from North and South America, oats have been firmer as a result of an improvement in demand. Quotations: "River Plate," landed, 13s. 9d. per 320 lbs., as compared with 13s. 6d. last week; "River Plate," ex ship, 12s. 6d., against 11s. 6d. to 12s. 3d.; "Chilean White," landed, 21s. to 22s. 6d., against 21s. to 22s. 6d.; English white, per 336 lbs., 20s., against 20s. a week ago.

MAIZE.—In view of further large shipments from the Argentina, prices suffered a further setback. Quotations: "Plate," landed 15s. per 480 lbs., as compared with 15s. 1½d. last week; Plate, ex ship, 13s. 9d., as against 14s.; Plate, September-October, new,

13s. 6d., as against 13s. 9d. Yellow maize meal, ex wharf, was quoted £4 12s. 6d. per ton, against £4 12s. 6d. a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1931-32, 1930-31, 1929-30, 1928-29:—

	1931-1932.	1930-1931.	1929-1930.	1928-1929.
Estimated sales of home-grown wheat—				
1 week to September 12	Owts. 64,859	Owts. 183,823	Owts. 309,008	Owts. 266,589
2 weeks to September 12	Owts. 107,617	Owts. 313,031	Owts. 538,943	Owts. 445,050
Average price of English wheat per cwt.	s. d. 4 9	s. d. 7 3	s. d. 9 11	s. d. 9 2

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1927 to 1930:—

Weeks ended	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
Sept. 5, 1931.....	Owts. 42,758	Owts. 22,454	Owts. 17,859	s. d. 5 1	s. d. 10 2	s. d. 5 9

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1930:—

NEAREST FUTURE.	Jan. 2, 1930.	Sept. 17, 1930.	Jan. 2, 1931.	Sept. 2, 1931.	Sept. 9, 1931.	Sept. 16, 1931.
Winnipeg (No. 1 Manitoba)	148½	80½	56½	52½	51½	53
Chicago (No. 2 Winter)	130½	83½	79½	45½	47	49½
Chicago (No. 3 Winter)	130½	83½	79½	45½	47	49½

The visible supply of wheat in Canada, at 45,804,000 bushels, shows a decrease on the week of 2,497,000 bushels. Supplies a year ago stood at 73,779,000 bushels.

OTHER FOODS.

SUGAR.—The past week has witnessed a further downward movement in sugar values despite unfavourable crop reports from European producing countries. The home market in "British refined" remained dull until prices were again reduced 3d. per cwt. on Tuesday. Wednesday's sales of "raws" include "December delivery" at 5s. 6d. to 5s. 6½d. per cwt., against 5s. 8½d. to 5s. 10d., and "March," 1932, at 5s. 9d. to 5s. 9½d., against 5s. 9½d. on the corresponding day last week. The movements of raw sugar in London and Liverpool during last week are set out in the table below:—

	Imports.		Deliveries.		Stocks.	
	1931.	1930.	1931.	1930.	1931.	1930.
London	Tons. 99	Tons. 50	Tons. 5,014	Tons. 1,196	Tons. 19,627	Tons. 27,046
Liverpool	Tons. 1,288	Tons. 5,902	Tons. 8,825	Tons. 13,140	Tons. 63,798	Tons. 81,813
Total	Tons. 1,387	Tons. 5,952	Tons. 13,839	Tons. 14,336	Tons. 83,425	Tons. 108,859
Last week	Tons. 16,276	Tons. 5,312	Tons. 14,706	Tons. 16,724	Tons. 95,877	Tons. 117,243

COFFEE.—The finer qualities of the 3,487 packages offered at Tuesday's auction met with a good demand and prices were slightly firmer. Last week's movements of coffee in London were as follows: Brazilian, landed, 524; delivered for home consumption, 40 bags; exported, nil; stocks, 2,502 bags, against 1,081 bags last week. Central American, landed, 598 packages; delivered for home consumption, 2,614; exported, 938; stocks, 89,970 packages, against 67,737 a year ago. Other kinds, landed, 5,465 packages; delivered for home consumption, 3,148; exported, 709; stocks, 78,746 packages, against 79,017 a year ago.

COCOA.—The demand for cocoa has been on a small scale, with a consequent further decline in prices. As compared with the corresponding day last week, Wednesday's quotation for Accra, fair fermented, new crop, November-January, at 19s. per cwt. f.o.b. London contract, shows a fall of 8d. Last week's movements of cocoa in London were as follows: Landed, 411 bags; delivered for home consumption, 6,835 bags; exported, 143 bags; delivered 200,099 bags, as against 209,509 last year.

TEA.—The quantities catalogued for this week's auction comprised 48,970 packages of Indian, 26,077 packages of Ceylon, and 10,298 packages of Java and Sumatra tea. The market in tea has again been firmer. At this week's auctions there was keen competition for all good qualities. Medium teas were irregular, but table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account:—

RICE.—The recent improvement in prices has not been maintained. Wednesday's quotation for Burma No. 2, cleaned, September-October, in singles to the Continent and to the United Kingdom, at 1½d. per cwt., shows a decline of 3d. as compared with last week. Movements in London during the past week were as follows: Landed, 5 tons; delivered, 33 tons; stocks, 890 tons, as against 1,592 tons last year.

POTATOES.—The market in potatoes has been active, and prices show a slight advance. At the Borough Market, "Best King Edward" sold at from 6s. 6d. to 7s. 6d. per cwt., as compared with 6d. to 6s. 6d. a week ago.

SPICES.—The "spot" pepper market remained steady during the week. Wednesday's quotation for "Black Singapore," at 5½d. per lb., again shows no change on the week. Movements of pepper in London during the past week were as follows: Landed, 25 tons; delivered, 12 tons; stocks, 600 tons, against 831 tons at year. White, landed, 67 tons; delivered, 50 tons; stocks, 492 tons, against 438 tons a year ago.

MEAT.—Supplies of meat at the Smithfield market have been very this week, and prices of beef and mutton and lamb were generally lower. Wednesday Argentine beef (chilled, hind quarters) as sold at 4s. 4d. to 4s. 10d. per 8 lbs., against 5s. 2d. to 5s. 6d. on the corresponding day last week, while New Zealand frozen mutton alised 3s. 6d. to 4s. 2d., as against 3s. 8d. to 4s. 4d. a week ago. According to the Smithfield Market official report, supplies of meat during last week amounted to 9,417 tons, as compared with 8,432 tons in the corresponding week last year. Imported beef, principally Argentine, formed 83.9 per cent. of the supplies, as against 82.6 per

first clear ox and heifers, together with seconds, were from ½d. to ¾d. per lb. cheaper. First warbled ox and heifers also realised less money, while seconds in the same class changed hands at last prices. Less money was also accepted for clear cows, firsts showing a reduction of ½d. and seconds of ¾d. per lb. Calf skins were steady except for a slightly easier tendency in regard to light weights. Business in foreign hides continues to be restricted to small parcels, and in the absence of any real interest in the position of the market prices have touched still lower levels. In the frigorifico market Argentine ox have been sold at the equivalent of 4d. A little more interest has been displayed in dry South American hides, but even so, prices are lower, 4½d. having been accepted for B.A. Americanos, while Inservibles have sold at 2½d. Only a limited amount of business has been passing for most descriptions of African hides, and dry Capes are now quoted at 5½d. and 4½d. for firsts and seconds, while 4½d. and 3½d. has been accepted for dry-salted 20-30 lbs. Australians have been a moderate sale, but the tendency of values is weaker. The leather market is inclined to be rather more bright than last week, but business for the most part continues to be on a hand-to-mouth basis. In the sole leather section English and wetsalted bends have again accounted for a fair amount of trade from the repairing end, particularly in the medium weights. The lighter averages in dry hide bends have also been taken up on account of shoe manufacturers, but little movement has been noticed in other weights in this description of stock. Pinned bellies have shown further improvement, in addition to which a steady call has been met with for shoulders in the same class. Rough offal, however, remains slow. Producers and distributors of upper leathers report a steady flow of small orders for most of the staple goods, with the bulk of the inquiry centred on willow calf and glacé kid. Box calf and patent, however, are lines fairly frequently asked for, but inquiry for fancy upper stock is confined to a few lines which must be low in price to sell.

RUBBER.—The market in rubber has been a little steadier and the recent improvement in prices has been maintained. The demand for rubber shows, however, no improvement. The consumption

per working day in the United States during August at 1,081 tons shows a fall of 187 tons on the previous month and one of 115 tons as compared with the corresponding month a year ago. Wednesday's official closing price for standard ribbed smoked sheet, at 2½d. per lb., shows no change as compared with the corresponding day last week. In forward positions, business has been done at 2½d. to 2¾d. for October, against 2½d.; and at 2½d. to 2¾d. for January-March, 1932, as against 2½d. to 2¾d. a week ago. Movements of rubber in London and Liverpool during the past week were as follows: Landed, 1,043 tons; delivered, 1,491 tons; stocks at the end of last week, at 135,802 tons, show a decrease of 448 tons, as compared with the preceding week.

foreign exchange dealings. An order was issued on Tuesday in pursuance of this clause forbidding the purchase of foreign exchange by British nationals or residents in Great Britain except (a) for legitimate purposes of trade, (b) for the fulfilment of contracts entered into before September 21st, and (c) for reasonable travel or personal objects. The previous day a meeting had taken place between representatives of British and foreign banks and accepting houses, at which means of giving effect to this order were discussed and agreed.

The money market naturally took some time to adjust itself to these momentous changes. On Monday money was very difficult. The prevailing uncertainty led to a certain amount of precautionary calling, while in any case the absence of Treasury bill maturities would have caused some stringency. To relieve the pressure, some special purchases of early December Treasury bills were made at $5\frac{3}{8}$ per cent.; but, even so, the market had to take a fair number of bills to the Bank for discount, as is shown by the increase of £5.3 millions in discounts and advances in this week's Bank return. New money was only available at rates running up to $5\frac{1}{2}$ per cent., with 5 per cent. charged for renewals. Discount rates were a nominal $5\frac{1}{2}$ per cent.

By the following day conditions had become more settled. Money was a little easier, though some special buying of November Treasury bills at $5\frac{3}{8}$ per cent. and of hot Treasuries at $5\frac{1}{2}$ per cent. was still necessary. The market rate of discount on three months' bills settled down at $5\frac{1}{8}$ per cent. On Wednesday and Thursday still easier conditions prevailed. Money became more plentiful, and the market was able to return to its normal business and to realise that three months' bills had become the desirable end of the year maturity. Consequently some demand for hot Treasury bills arose, and these were dealt in at rates running down to $5\frac{1}{2}$ per cent. $5\frac{1}{8}$ per cent. was still charged for remitted bills, the rate varying with their status, but on Thursday three months' bills were dealt in under competition at $5\frac{1}{16}$ per cent.

Some surprise has been expressed at the institution and maintenance of a 6 per cent. Bank rate. It is argued that with the suspension of the gold standard the normal function of a high Bank rate, namely, the attraction and retention of foreign funds, has ceased to operate, and that the only effect of the 6 per cent. rate is to penalise unnecessarily home trade and industry. Such a point of view is perfectly legitimate, but it should scarcely have occasioned surprise that the authorities should have felt it desirable in a situation of almost unparalleled uncertainty to take, at least as an initial measure, normal precautionary steps.

Details of foreign exchange movements are given in a subsequent Note. It must be remembered that in this, as in previous weeks, the exchange value of the pound is governed mainly by big capital movements. Last week the effect of an outflow of funds was to cause gold shipments, but this week and henceforward capital movements will express themselves in wide variations of the actual rates of exchange, which are no longer held in place by the gold points. Many apparently baffling fluctuations in the exchanges must be expected during the next few weeks, and it is far too early to determine what is the intrinsic value of the pound and at what level in the exchange market it is likely to settle down.

As was to be expected, the Bank return records several wide changes, some of which relate to the period of the heavy drain upon London during the last three days when the gold standard was still in force. There has been an increase of only £1.1 millions in the note circulation. This is a perfectly normal movement, and shows that home confidence in the British banking system is unabated. Gold losses amount to £1.9 millions, all of which occurred last week. The Reserve consequently is £3.0 millions lower, but the Proportion still stands at the strong figure of $41\frac{3}{4}$ per cent. Among the Bank's earning assets, there has been a net reduction of £11.5 millions in Government Securities and an increase of £22.7 millions in other Securities, but in the Issue Department alone there has been a change-over of £22 millions from Government to Other Securities. The increase of £5.3 millions in Discounts and Advances has already been noticed. On the liabilities side, Public Deposits have risen by £6.4 millions and Other Deposits by £6.5 millions. The latter now stand at £64.9 millions, which is a figure high enough to afford the market sufficient freedom of movement in the present abnormal circumstances.

At the end of last week, pressure in New York against sterling and British bonds became intense, though much of it was attributed to Dutch selling consequent upon the weakness in Amsterdam. The news of the suspension of the gold standard in Great Britain was taken very well, many bankers endorsing Mr Pierpont Morgan's view that it was a hopeful and not a discouraging event, and was the next stage in the work of the British Government after the balancing of the Budget. New York foreign exchange rates were completely upset by the break of the pound, and many European currencies were unquoted. So far as this week's quotations possess any significance, lire have been erratic with a tendency to slump on Tuesday, while Scandinavian currencies have fallen by over two cents. Dutch florins have held their ground. The decision to reopen the London Stock Exchange was welcomed, and on Wednesday the bond market registered numerous improvements.

In the exchange market sterling remained outwardly steady until Saturday, September 19th, although late on Friday and on Saturday there were exceptionally heavy withdrawals of foreign balances. The following rates were current at Saturday's close:—New York, 4.85 $\frac{1}{2}$; Montreal, 4.95; Paris, 123.97; Brussels, 34.83; Italy, 92.88; Holland, 12.03; Spain, 53.45; Switzerland, 24.86; Stockholm, 18.16; Oslo, 18.184; Denmark, 18.184; Berlin, 20.51; India, 1s. 5 $\frac{1}{2}$ d.; Japan, 2s. 0 $\frac{1}{2}$ d.; Buenos Aires, 29d.; and Rio, 3d. After the departure from the gold standard it was hardly possible to quote any but the principal exchanges. Dollars fluctuated between 4.05 and 4.30, Paris between 103 and 120, and Holland between 10.00 and 11.00. Conditions, however, gradually settled down as time went on, and the rates at midday on Thursday were as follows:—New York, 3.95; Montreal, 4.25; Paris, 100.50; Brussels, 28.25; Italy, 78.00; Holland, 9.75; Spain, 44.25; Switzerland, 21.25; Stockholm, 16.00; Oslo, 17.25; Copenhagen, 18.25; Berlin, 17.25; India, 1s. 5 $\frac{1}{2}$ d.; Japan, 2s. 4 $\frac{1}{2}$ d.; Buenos Aires, 32 $\frac{1}{2}$ d.; Rio, 3 $\frac{1}{2}$ d. Many of the quotations, especially in the less active exchanges, remain entirely nominal, including that for Copenhagen—it being announced that Denmark had also gone off the gold standard. The only forward quotations were those for dollars, which were $2\frac{1}{2}$ cents and $6\frac{1}{2}$ cents premium for one and three months respectively. Present quotations hardly express the true exchange values of the pound sterling, and time will be needed for them to adjust themselves. It is significant, however, that gold has commenced to leave New York for Paris. Shipments to date since Saturday total \$190,000, and a further \$250,000,000 is reported to be earmarked. Silver improved in value from last week's level of 12 $\frac{1}{2}$ d. for spot and 13d. for forward to 16 $\frac{1}{2}$ d. and 16 $\frac{3}{4}$ d. respectively. The silver exchanges were quoted: Hong Kong 1s. 2 $\frac{1}{2}$ d. and Shanghai 1s. 5 $\frac{1}{2}$ d.

THE END OF AN EPOCH.

It is safe to predict that Monday, September 21, 1931, will become a historic date; the suspension of the gold standard in Great Britain on that day, after the six years of painful effort which followed this country's return to gold in 1925, marks the definite end of an epoch in the world's financial and economic development. It is idle now to argue, in the light of after events, whether the reversion to the gold standard six years ago was well advised. This country took the lead—rightly, as we think—in endeavouring to restore the world's currencies to stability after the post-war chaos into which many of them had fallen. Since the war, Great Britain has endeavoured—and again, we think, her policy was right—to carry on her shoulders a large part of the burden of financing countries which were short of capital, particularly those of Central Europe. That effort would have been fully justified if the respite that it afforded had been used not merely to establish in those countries formal budget equilibrium as a condition of assistance, but also to create reasonable political and trading conditions between the nations of the world and to harmonise their economic life one with another.

Nine years ago the *Economist* urged that those who were responsible for sponsoring one loan after another in the world's chief capital markets ought to insist as a condition of assistance that the underlying economic structure was sound, and that the countries concerned were being placed in a position to play their appropriate rôle in a sane international order and not merely being helped to strangle one another's trade. Although material well-being has greatly increased since the war in almost every country, the slump that followed the extravagances of the American boom showed up in all their crudity the various defects which have prevented the gold standard from working properly and have led to growing trade depression. The story of the rapid spread of the depression—the causes of which are succinctly told in the Memorandum of the International Chamber of Commerce which we print in a later article—is too familiar to need further repetition.

Since last May, when the collapse of the Credit-Anstalt gave the first signal that the combined forces of indebtedness, catastrophic declines of commodity prices and world-wide unemployment were producing a situation of imminent crisis, Great Britain endeavoured—and once more we think she was right—to maintain the exchange value of the pound sterling, even at considerable cost to the Treasury. All these efforts have failed; the decision which the Government reached last Saturday represented not a deliberate act of policy, but the acceptance of the inevitable.

The leading features of this last phase of the world crisis are summarised in the diary which we print on a later page. Undeniably the reckless and ill-considered propaganda, launched by a section of the Conservative Party in favour of a General Election, had a seriously adverse effect on foreign confidence which was disturbed in addition by reports of insubordination in the Navy. But, though these factors accelerated the *dénouement*, they were not wholly, or even in the main, responsible for it. While the formation of a National Government and the rectification of the British Budget did much to reassure opinion abroad as to our determination to maintain British credit on a firm basis, these domestic developments had done and could do nothing in themselves to alleviate the international crisis whose repercussions last week began to extend to financial centres such as those of Holland, Switzerland and Scandinavia. The consequent scramble to increase banking liquidity, in face of a violent slump in security values, resulted in the repatriation of balances held in London, causing a strain on sterling which could not, in any case, have been indefinitely supported. In view of the intensification of the pressure on sterling between Wednesday and Saturday last week, the Government had no option but to suspend the convertibility of the pound into gold. It may be that at the beginning of August a bolder policy in

the use of Bank rate and the mobilisation of overwhelming foreign support for sterling would have been a wiser policy than that which was followed; but as the matter stood on Saturday the situation could not be retrieved by further credits, or even by throwing into the defences the whole of the Bank's gold reserves.

The new situation with which we are confronted is such as to occasion neither alarm nor satisfaction. As we suggest in later articles, it is still premature to attempt to assess the effects either at home or abroad of Great Britain's departure from the gold standard. So far as this country is concerned, there has been a commendable absence of any sign of panic, and the *sang froid* with which the banking system, the stock markets and the public have stood up to the shock of changed conditions merits tribute. But however desirable it may have been to encourage the "man in the street" during the early days of this week to discard from his mind alarmist talk, to which he had so recently been treated by politicians, with regard to the cataclysm which might be produced by "letting the pound go," we do not propose in these columns to gloss the facts of the situation. To pretend that by suspending the gold standard we have now set our feet unerringly on the path of prosperity and given a lead to world recovery is futile and dishonest. In one sense we are relieved from a load of suspense which was having a restrictive and depressing effect, but we have brought into being new and formidable problems. In a word, we have exchanged one crisis for another. In the next article we deal more particularly with some of the urgent questions which this country will have to tackle on its own initiative. Here we are concerned more generally with the consequences of our abandonment of gold in relation to the pre-existing and still continuing world crisis as a whole.

The facts must be faced that the disappearance of the pound from the ranks of the world's stable currencies threatens to undermine the exchange stability of nearly every nation on earth; that even though London's prestige as an international centre may gradually recover from the severe blow which the sterling bill has received, banking liquidity throughout the world has been seriously impaired, much more so in other countries than this; that international trade must be temporarily paralysed so long as the future value of many currencies is open to grave uncertainty; and that, though the memory of the disastrous effects of post-war inflations should be a useful deterrent, there is an obvious risk lest we may have started an international competition in devaluation of currencies motivated by the hope of stimulating exports and leading to a tragic reversion to the chaotic conditions which existed five or six years ago.

In these circumstances it is imperative that the authorities responsible for monetary policy, both in this and other countries, should realise, and should make it plain to less well-informed public opinion, that what has happened this week is not a temporary deviation from a "normality" to which we may expect with less or more effort to return. Even if it were possible to go back to the *status quo*, it would not necessarily be desirable. In any case, it is an impossible policy. In the last few years the post-war gold standard has functioned under conditions which have distorted it so badly that in the end it has produced widespread misfortune. There is much else wrong with the world beside the mishandling of its monetary medium. But merely to aim at restoring it without qualification would only lead us to the same *impasse*, and the attempt would be bitterly resented by those who have suffered from its recent vagaries. On the other hand, it is of paramount importance that the present depression of world trade should not be accentuated by a recrudescence of anarchy in the world's foreign exchanges.

This being so, the fact which the world must face to-day is that the real post-war crisis—the "debtor crisis"—has

now become coterminous with the world itself. And, just as continuity of stable government and an agreed policy is essential for Great Britain, so is there imperative need for international agreement on monetary policy. An international conference of statesmen, assisted by their experts, should be convened without delay to deal with the great difficulties which have threatened the economic life of every country in the world. One of the main tasks of such a conference would be to ensure that the exchange standards of the future are worked out on the basis of a common international rule, whether related or not to gold. The monetary aspect of the world trade depression is not the whole story. Revalorisation in the interests of debtors and producers will not dispense with the need of better organisation of world production, employment and trade. But the question of currency values and exchange ratios is fundamental, and even if new rules and ratios cannot be worked out immediately until exchanges have had time to be tested in free conditions, a start can at least be made in clearing away the present *débris* with which the world is crippled. So far as the intractable reparations-debt-security complex is concerned, the United States and France have now more than ever to lose and greater incentive than ever to take the initiative. But from whatever source it comes, the initiative must be found; for until a start is made confidence to rebuild will be lacking.

EFFECTS AT HOME.

DEPRECIATION of a currency resembles certain medical stimulants and poisons in that the rapidity of its effects varies in inverse proportion to the resisting power of the organism which is subjected to its influence. In a country like Great Britain, with a highly organised economic system, great internal banking resources and powerfully entrenched traditions of ordered business life, it was not to be anticipated—*pace* the political scaremongers of a few weeks ago—that the suspension of the Gold Standard Act would have immediate, cataclysmic reactions. And so the event has proved. Reviewing the situation after four days' experience of an inconvertible pound, we find that, so far, we have accommodated ourselves with remarkably little disturbance to the change in conditions.

What have the initial, outward effects been? The banking system, its stability apparently unquestioned by any domestic depositor, has continued to function, for all internal transactions, as normally as before. Sterling exchange, disorganised on Monday, steadied round the mean level of its immediate 15-25 per cent. depreciation. The discount market, after a brief interval of acute credit stringency, has adjusted itself to a 6 per cent. Bank rate and accepted philosophically the temporary dislocation of its dealings with foreign institutions. No disastrous flood of liquidation, either from home or from foreign investors, attended the unexpectedly prompt reopening of the Stock Exchange on Wednesday; and while gilt-edged stocks naturally fell, though only to a moderate extent, the movement of equity shares of British industrial companies reflected general optimism as to the future. In the commodity markets, fluctuations have represented mainly the adjustment of sterling prices to gold equivalents, and retail prices have substantially remained unaltered.

In itself, this capacity of Great Britain to withstand financial shocks, without losing courage or equilibrium, is a matter for unqualified satisfaction. At the same time, it would be of poor service to our understanding of the situation, and our ability to cope with its full consequences, were the temporary appearance of "normality" to blind us to the real significance of what has happened and may ensue. Though there is no occasion for despairing pessimism—indeed, our abandonment of the gold standard may yet be turned to good advantage not only for ourselves but for the world—there is bound to be a cost as yet uncounted, and difficulties still not widely appreciated will have to be surmounted.

In a situation of crisis whose development, both at home and abroad, has to be reckoned in terms of hours, a weekly journal like the *Economist* obviously suffers the disability

of having to write of tendencies which may have altered, and of probabilities which may have become *choses jugées*, when its columns are read. Realising this, we think we can best serve our readers by attempting, as each week passes, to indicate what, in our judgment, is the criterion whereby to assess past and likely happenings. And, at the present juncture, the important thing, we suggest, is that all of us should try to have a clear picture in our minds of what the consequences to Great Britain of departing from the gold standard are likely to be—in theory and in practice.

Let us begin with the elements of economic theory, remembering always that Great Britain is a highly populated industrial country, carrying a terrific burden of internal debt, dependent predominantly for existence on foreign trade, enjoying the benefits of being the world's chief banking centre, possessed of a large net income from long-term investments abroad, but heavily indebted (in her rôle as world's banker) to other centres on short-term account. What consequences is the depreciation of sterling calculated to bring in its train?

Firstly, in so far as countries competing with us do not follow our example in depreciation of currency, the cheapening of sterling on the foreign exchanges should act both as a deterrent to imports and a bounty on exports, so long as there is no proportionate increase in British salaries and wages. As a result, British manufacturers, making due allowance for the higher cost of imported raw material, should benefit by fuller use of productive capacity and increased profits. But—though the existing disparity between wholesale and retail prices suggests that by no means the whole of the rise in the cost of imported primary and manufactured products need be passed on to the domestic consumer, some rise in the cost of living is inevitable. If the manufacturer is to be assisted, this must fall, wholly or partly, on the shoulders of the salaried worker and weekly wage-earner, as well as on the rentier. Moreover, the benefit accruing to the British manufacturer cannot ultimately be great if world trade fails to expand or, still less, if it is paralysed by chaotic currency exchanges. And the immediate disturbance to all trade, and particularly that financed through London, must be considerable.

Secondly, devaluation of the currency does not of itself lighten the burden of internal State debt. In so far as industry's profitability is improved, the weight of its fixed interest charges is lessened; but, save that an (improbably great) increase in industrial and commercial profits might make a lower standard rate of income tax adequate to produce enough to meet the fixed debt charge in Consolidated Fund estimates, the "income-earner" in a country whose exchange is devaloured gets the rentier "off his shoulders" only in so far as wages, salaries, etc., are increased proportionately to the devalorisation. If this occurs, the stimulus to exports is *pro tanto* forfeited; and if steps are not taken to check the resulting tendency to inflation, the budget becomes unbalanced and a vicious circle of endlessly mounting prices and wages ensues, accompanied by an indefinitely falling exchange, which increases the burden of external indebtedness fixed in terms of gold, and lessens the value of income from foreign investments fixed in terms of domestic currency, *i.e.*, in our case, sterling.

Finally, a centre like London, whose contribution to the national balance of payments in the shape of banking and other financial services is great must be hardly hit if foreign customers, suffering in any case an immediate enforced exchange loss on sterling credits, are rendered apprehensive of the risk of trusting to sterling in future, and prefer to look to other centres for acceptance or insurance facilities.

So much may be said of the theoretical consequences inherent in the devaluation of the currency of a country situated as is Great Britain. The question, precisely what consequences we may, in fact, expect from the suspension of the Gold Standard Act, depends on two factors, neither of which is yet measurable. Firstly, at what point is the exchange value of an inconvertible pound likely to settle down in the near future without interference or deliberate management? Secondly, what monetary policy do the

authorities in this country intend to follow? The answer to the first question is still, at the moment, a matter of pure speculation, and may, indeed, never be capable of a precise answer, for the cross currents of capital movements in a centre like London are very large in comparison with other exchange transactions. Under present conditions these movements are particularly baffling.

On the one hand, the need on the part of foreign banks to strengthen their internal cash resources may lead to substantial selling of sterling investments and withdrawals of balances held in London, while any untoward political developments in this country, such as a confused tariff election, would certainly lead to large scale removals of foreign balances from fear of still greater exchange losses. On the other hand, given the assurance of the continuity of stable government in Great Britain, the present tendency of foreign banks not to make hasty decisions to convert their present sterling foreign investments into other currencies may well continue. There is also the probability of a growing number of countries, whose exports find in Great Britain an important market, deciding to suspend their connection with gold with a view later on to linking their currencies to sterling; and this factor may check, or possibly more than counteract, the influences tending to depress the sterling exchange. For the moment, while properly taking steps calculated to restrain pure gambling in the pound, the Government are undoubtedly right in making no attempt to place undue restrictions on the freedom of the exchange in order that, after the initial disturbances have quietened, the many factors in the problem may be assessed with greater certainty than is possible at present.

To let the pound, however, find its own temporary level is only the first stage; and, as we have said in the previous article, an international conference, one of whose tasks must be to re-establish order among currencies, is an urgent necessity. In the meantime, it is desirable that both the Cabinet and the Bank of England should occupy themselves in thinking out at once what they propose to do with the pound so far as its future can be determined by our own internal policy; for, unless such considerations are kept in mind from the very start, there is always the risk of our drifting into an unwise and ill-considered policy difficult to reverse. Whether we like it or not, "management" of the currency is now thrust upon us.

There are several possible courses open to us. Conceivably we might decide deliberately to create an inflationary boom. It is a policy which no responsible person would recommend, and one which would lead not only to an unbalanced Budget, but, as the experience of Germany proved, to national impoverishment. So long as we reject this policy we can reasonably assume that the Budget will balance. A depreciated pound means that our foreign debtors will find it easier to pay the interest they owe to us; and even if we suffered a greater diminution than we now expect in our income from foreign investments, a 15 to 20 per cent. depreciation of the pound should increase the yield of income tax from industrial profits. But

though, in so far as there is an increase in the cost of living, the cuts imposed by the Economy Bill may have to be modified, we must, if we are to avoid inflation, still adhere to the broad lines of retrenchment policy, and, unless our success in that respect is to be prejudiced, it will be necessary for the Government to keep a close watch on the course of retail prices with a view to suppressing drastically any form of profiteering.

Dismissing deliberate inflation from the field of practical politics, we might conceivably go to the diametrically opposite extreme and endeavour by deflation and restriction of credit to restore the pound once more to parity with the dollar and revert to the gold standard. As we have said in an earlier column, there would be no sense in this country again linking its currency to gold until we have assurance that the mechanism of the international gold standard will be radically improved. But even given that desideratum, it would be open to very serious doubt whether we either could or ought to seek to raise the pound again to parity with such currencies as remain linked to gold.

A decision not to do so would imply very serious consequences. It must not be forgotten that for ten years our whole effort has been directed to encouraging all countries to stabilise on gold. Very few of them have done so on a pre-war parity, but nearly all have joined the group of gold countries, and in doing so many of them have had such confidence in the stability of the system, and in particular in the security of the dollar and of sterling, that they have been content to adopt the gold exchange standard and to leave part of the reserves of their currencies in New York or in London. By our action the value of the legal backing of a number of currencies has suddenly shrunk. We have, therefore, a grave international responsibility in this matter, and we cannot consider this question purely from a national point of view.

On the other hand, we have resisted the pressure as long as possible and have only acted in the end under *force majeure*. Now that a break has been forced upon us, may it not be wise to aim at restoring our financial situation on a basis that will not impose so great a strain upon us? Renewed deflation to the advantage of the British rentier—whose claims upon the national resources (whether in the form of public or private debt) have been immensely increased by the five years' fall of prices—and at the cost of again making our goods too costly in foreign markets would not only revive once more the problem of eliminating an adverse balance of trade, which devaluation of the pound may at least solve for us, but would undoubtedly bring the whole capitalist system in this country into jeopardy.

Whatever the answer finally given to these questions of world-wide importance, the immediate aim of our authorities should be so to manage the exchanges on the one hand and our internal finances on the other, that the inevitable price of a depreciated pound does not fall with intolerable severity on any section of

the community and that the export bounty given to our manufacturers is not so great as to provoke retaliation by other countries. For, if Great Britain, by means of a depreciated pound, invaded foreign markets to a greatly increased extent, the immediate risk of intensified tariff warfare might easily become acute. Before we can finally shape our course, we must enter into international conference in the hope of securing international agreement on a wise monetary policy.

THE EFFECTS ABROAD.

THE situation created in foreign financial centres by Great Britain's sudden suspension of the gold standard is subject to such rapid changes that, after only four days' experience of the new conditions, it is quite impossible to attempt to assess the effects which have been, or are likely to be, produced. The *dénouement* of the crisis came as such a surprise that minds have not yet been adjusted to the realisation of what has happened or what the consequences are likely to be. The sterling bill enters so deeply into the whole mechanism of international trade, and so many foreign banks, including the central institutions of many countries, have been accustomed to keep a large portion of their reserves in the form of sterling balances in London, that the shock caused by the sudden depreciation of sterling to some 80 per cent. of its value has necessarily been profound. The exchange markets of foreign capitals have remained closed disorganised and many bourses have remained closed throughout the week, though some have found it possible to continue dealings or to resume business after a short closure. In a situation of great obscurity it has been difficult for one centre to be assured of what was happening or intended in another; rumours have had full play; and the dominant feature which emerges from the picture is still one of paralysing confusion.

In a later article we print some preliminary observations by a foreign observer in close touch with international banking whose views may be regarded as a reflection of informed opinion abroad; and such despatches, written since Monday, as we have received for this issue of the *Economist* from our foreign correspondents give some indication of the initial reactions of their countries to what has happened in London. The keynote is one of bewilderment mixed with a sense that a position has been created which must be handled with extreme wisdom and care if a major world disaster is to be prevented.

Thus our Berlin correspondent writes that the suspension of gold payments in England is regarded by the German public as the worst symptom yet seen of the world crisis, and as a development which must intensify Germany's difficulties and still further impair confidence throughout the world. Fears are felt in Germany that one consequence of the depreciation of sterling may be to strengthen disastrously the tendency to cripple trade by tariff impediments. On the other hand, the hope is entertained that now that England has been driven off gold there may be better prospects of international co-operation to check or reverse the disastrous decline of world prices.

Writing from Paris, our correspondent says that the news of the British Government's decision temporarily to abandon the gold standard "fell like a bombshell on the market." Adequate steps were taken to curb "bear" speculation and to prevent in advance any possibility of the development of panic; and our correspondent remarks that, "so far as can be seen at the time of writing, the immediate repercussions of the sterling crisis appear to have been withstood well, so far as Paris is concerned." It is perhaps significant, however, that his letter reflects the expressions of opinion in Paris that "the present situation of the pound may be speedily remedied." In reality, apart from the question of possible heavy exchange losses on French balances, notably those of the Banque de France, held in London, we believe that there is beneath the surface in Paris deep anxiety as to the ultimate future of the majority of the world's currencies.

Similar evidence of inability up to now on the part of foreign centres to do much more than endeavour to take steps to sustain the initial shock is afforded by others among the despatches which we print. For instance, our Amsterdam correspondent, who is concerned more particularly with the immediate steps taken in that centre to safeguard against stock exchange liquidation, speaks with satisfaction of the recovery on the bourse. At the same time he draws attention to the strain which, on the eve of the crisis, international developments were already placing on Amsterdam. Again, our Vienna correspondent reports that the news from London made a deep impression and caused, at first, considerable disquiet. After the first shock, apprehension was steadied by recognition that Great Britain, by its Budget policy, had shown a determination to do all in its power to maintain British credit; but the repercussions of the new crisis on Hungary were a matter of grave concern, and it was realised that Austria's own disabilities were likely to be accentuated. From Switzerland, too, the impression derived is one of concern at difficulties yet barely glimpsed. Our Basle correspondent refers to various causes of anxiety in Switzerland, including the country's large dependence on sales to the United Kingdom, but he observes significantly that many bankers can hardly bring themselves to believe that the news from London is really true, or to realise "that a new chapter—and probably a long one—has begun in the economic history of the world."

At Geneva, where the League is in session, the sensation produced by Monday's news appears to have been profound. In his letter, our League correspondent observes that everyone at Geneva realises that the present happenings are very different from the previous monetary crises in Germany and France, and that, though there is strong belief in the capacity of Great Britain to meet the situation successfully, the calmness is not paralleled in "some of the other countries which might have been expected to have been less shaken in their self-confidence." He adds that the main source of satisfaction is the belief that the past follies of international financial and economic policy have now been made manifest, and that "things which States have been too obstinate or too short-sighted to do will now be more or less thrust upon them by the force of events."

The main items of daily news from other centres will be found in summarised form in our "Diary of the Crisis." Denmark has decided to follow sterling, and this policy appears to be shared by Australia and New Zealand, though South Africa and Canada have determined to stick to gold. In the United States there has been reassuring evidence, particularly in the support given to the United Kingdom bonds, of confidence in British credit and in the economic and political stability of this country; and Wall Street generally has stood up well to the shock. It would be premature, however, to jump to the conclusion that the full eventual repercussions have yet begun to be experienced in the United States. For one thing, the volume of short-term credits held by France, Holland and other European countries in New York is very great, and it is significant that already gold in large sums has begun to be withdrawn on foreign account from the Federal Reserve system.

In centres as distant as those of the East the news from London has produced much more chaotic conditions. An attempt made in Japan on Wednesday to reopen the Tokyo Stock Exchange resulted in a calamitous fall of prices and the rapid suspension again of all business. Here, of course, the Manchurian troubles were an additional depressing factor. In India, to whose situation further reference will be found in a Note of Week, the announcement that the rupee would continue to be linked to sterling led to violent speculation in silver and cotton, as a result of wild rumours of fantastic currency depreciation.

So much for the initial outward developments. In so far as there has been no panic rush on the part of foreign countries to convert their holdings of sterling into gold currencies, we may regard their attitude rather as a tribute paid to the traditional stability of British character than as evidence that they have any clear idea as yet either as to the future level of sterling or as to the monetary policy which they will eventually follow.

So far as we are aware, though many private conversations have taken place, no attempt has yet been made broad to initiate concerted action or to consult regarding common policy to meet the situation that has been created. The board of the Bank of International Settlements is not due to meet until October, and there must be some delay before M. Laval can pay his contemplated visit to Washington. It is, however, to be expected that such earlier consultations will be arranged as soon as there has been time to reflect on the consequences of the change that has taken place.

Meanwhile, attention is being turned to the repercussions of a depreciated pound on the world's international commerce, the effects of a possible diminution in the sale of goods to Great Britain and an increase in her competitive power. This is even more important than the effects created in the commercial field by the German crisis in view of the fact that Great Britain is the market for nearly 1 per cent. of the world's exported produce.

With regard to this aspect of the question, the following table gives some indication of the importance to various countries of the British market:—

Exports in 1929 to the United Kingdom as percentage of total exports of:—			
British Free State	92.3	Holland	21.6
Denmark	56.4	India	21.2
Australia	38.1	Switzerland	20.0
Argentina	32.2	Belgium	18.1
Norway	26.5	United States	16.2
Canada	25.2	France	15.1
Norway	24.8	Germany	9.7

In so far as depreciation of the pound must tend to restrict Britain's purchases from her former clients, an inducement exists to follow the devaluation of sterling. At this is only one of many vital considerations which must be exercising the minds of those responsible in foreign countries for monetary policy. On the one hand, countries who are primarily debtors to Great Britain would in by maintaining their currency at gold parity when their debts are expressed in terms of sterling. From another angle, as we have said in a previous column, the depreciation of the pound means that the currency reserves of many countries which are kept in the form of sterling balances have been seriously impaired, and the existing strain on the banking system of many centres is bound temporarily at least to be aggravated by the unusual shock which confidence has suffered. For example, the Swedish bank rate has been raised in two stages from 6 per cent.

Yet again, in countries which have suffered from the effects both of tariff impediments to their exports and from the difficulty in balancing their budgets as a result of the depreciation of gold, there may be a grave temptation to the risk of abandoning the attempt to keep their currencies linked to gold. In such an event it would be rash to conclude that the operation could be performed without much more serious danger of the anarchy of inflation than Great Britain has incurred. Fortunately, there is the case in this country that reversion to inconvertibility in the case of the world's main international currency has brought to a head a situation involving such issues for the future of everyone now living that international action on the part of statesmen responsible for the well-being of their countries must not be delayed.

THE POUND: A FOREIGN VIEW.

We print below some observations by a foreign observer close touch with international finance, dealing with factors operating to determine the value of the British pound, and the effects that would follow the adoption of various policies by the British Government. It would be appreciated that these are necessarily only first impressions, but we think that many of our correspondent's reflections suggest useful lines of thought.

It is not difficult to indicate what factors will be of importance in determining the value of the British pound, but it is very difficult to indicate the relative

strength of the forces moving in different directions. The following two factors will certainly operate: (a) the level of prices in Great Britain; (b) the short-term debt position, including the question of the flight of capital. The writer proposes to deal separately with these two factors

I. *The Level of Prices in Great Britain (or the problem of the amount of purchasing power in the hands of the public).*—Up to last Sunday the international value of the pound was determined by its gold parity. For a bit of paper called a banknote you could get gold at the Bank of England. When gold can no longer be obtained the banknote acquires a value because you can exchange it for commodities and services. The latter value is more indefinite, but something may be said to indicate the order of magnitude.

Last week the amount of purchasing power in the hands of the public in Great Britain was probably 15 per cent. too high to establish equilibrium in the balance of payments, apart from capital movements. The Government has lately taken certain stern measures to reduce the internal purchasing power in the hands of the public by reducing Government officials' salaries, the rate of unemployment benefit, and certain other incomes, by about 10 per cent. Further, the Bank of England has put up the rate of discount to 6 per cent. The present situation in England is completely different from the situation in Germany during the inflation period following the war, for in that case the Government increased the internal purchasing power by a constant issue of fresh notes.

If a tariff of, say, 10 per cent. were introduced, it would be possible to keep in England an internal price level which would be higher than would otherwise be possible, but the 10 per cent. would operate only as regards imported goods and home market goods in sheltered industries. As regards export goods, it would tend in the long run to increase the cost price; in the short run, however, the tendency would hardly make itself felt if the new tariff were kept within a reasonable limit, as, for instance, that mentioned above. The effect of a 10 per cent. tariff would probably be to allow a readjustment of the English price level by about 5 per cent. It is likely that the imposition of a tariff would reduce imports practically at once, would increase profits fairly quickly, and would probably produce a favourable psychological effect on investors and entrepreneurs, while it would not make the production of export goods more expensive; the effects in the long run would probably be far less favourable, but that is another question. If a tariff of 10 per cent. were introduced, it is likely that, judging the situation only on the basis of the existing level of prices and the amount of internal purchasing power in the hands of the public, a depreciation of 10 per cent. in the pound would be quite sufficient to restore equilibrium.

II. *Short-term movements of capital and credits.*—These may greatly affect the balance of payments. A great deal will depend upon what measures are taken, not only on account of these measures themselves, but also on account of the very important part which the idea that is formed about the future value of the pound will play in determining that value itself. Will the foreign investor believe that he must be content with 15s. in the pound, or will he hope to get at least 18s., or perhaps

20s., and what will the British people believe? Personally, I should think that very few people will sell out at a price as low as 15s. in the pound, which would mean a loss of 25 per cent. in the case of withdrawal of funds. A French or American investor will probably hesitate to sell at such a loss, for he may have to write it off in his balance sheet.

Apart from the money invested in Great Britain in British securities, etc., there is the question of what will be done by those who normally and regularly maintain funds in London as working balances of one kind or another. They may only slowly liquidate those balances, but it is likely that they will put no more money into the London market before they are assured of the definite value of the pound. It should not be forgotten that most people before 1925 counted on the fact that Great Britain would return to the gold standard at the old parity, and such a belief naturally made people inclined to keep money in the British market. It is not likely that the same inclination will be found at the present moment, as there is a great difference between *not yet* being back on the gold standard and having been pushed off that standard.

On the whole, it is likely that much will depend on the measures taken in London. There is a vague idea going about that, now that Great Britain has left the gold standard and is no longer tied to the policy of the United States and France, she can act on her own initiative, and will be wise to have a bout of inflation in order to stimulate trade and industry, not caring what happens to the external value of the pound. If that idea gains ground the value of the pound may fall very quickly. If, on the other hand, rather stringent measures are taken on the London market whereby "bear" speculation will be counteracted, and if the inflation theory be ruled out, then the depreciation of the pound may be much less.

The most important immediate problem would seem to be whether the pound should be "pegged" as soon as possible (say between 4 to 4.50 dollars to the pound) or left to fluctuate at liberty. In the latter case, hardly anyone would accumulate new funds in England, and that would mean that the London market would gradually lose the funds which are at present kept as available balances.

Assuming that England desires to maintain the pound at the best possible rate, it would be the right policy to try to attract as much attention as possible to the price situation, and in particular to the fact that all the measures so far taken by the British Government and the Bank of England are calculated to lead to an actual reduction of the public's purchasing power.

There was an article in *Le Matin* of last Monday in which it was said that if the pound went down 10 per cent. to the same level as it was before 1925, the Bank of France would lose 1,250,000,000 French francs. There are probably many who would be inclined to believe that the British situation is about the same as before 1925, and that therefore the pound will be depreciated about 10 per cent. as soon as the market has found its proper level. Whether or not that belief can be enlisted in support of the pound is, of course, difficult to tell, but it is not quite excluded.

I have not discussed whether or not it would be advisable for Great Britain, on account of the magnitude of her internal debt, to peg the pound at, say, 16s. By doing so, Great Britain would exert a depressing influence on other countries, but would probably be able to stimulate business in her own industries and would relieve the burden of the public debt. On the other hand, something would be lost of the foreign investments, and the loss of the City as a money centre of the world would probably be great. If the English currency stood at the rate of 18s. to the pound, there might be a slight chance of regaining parity through an increase in the American level of prices, but it would seem hardly worth while to count on that chance. If England wanted to reduce the value of the pound to (say) 18s., I think the decision should be taken quickly, for, as has been said above, the spread of the idea that inflation is possible might completely run away with the value of the pound.

CARRY ON.

It is not yet possible to gauge the ultimate effects on the political position of the suspension of the gold standard. At first belief was prevalent that the divorce of the pound from gold would have a happy sequel in a political wedding, and that certain leaders of the official Labour Party, Mr Henderson included, might join forces with the present Cabinet, thereby creating a real National Administration, symbolising to the world a unified national will to pull together until the delicate tasks of readjustment and recuperation had been performed. But the banns were scarcely put up before the wedding was cancelled. Although Mr MacDonald threw to his late colleagues a sop in the shape of a reduction in the pay cuts to teachers and the Services, which are to be limited to 10 per cent., it was not sufficient to induce them to sink their political identity and undertake a share of the responsibility for severe and unpalatable measures that still remain to be carried through. The breakdown of the plan for an all-party government led to vigorous renewal inside the Conservative Party of the demand for a quick general election, at which the present Government should appeal to the country on a tariff programme. Whether this clamour will win the day cannot be known until the Prime Minister returns to London next week after his short enforced rest. But we most earnestly hope that the grave danger of an early election is coming to be more widely realised, and that it will therefore be averted.

Advocates of an early parliamentary dissolution are now arguing that, since the gold standard has gone, any risks that might previously have attached to the holding of an election have gone also. That is certainly not the case. The pound is now floundering in mid-stream, and although, as we show elsewhere, this critical week has passed off more satisfactorily than could have been expected, the coming weeks and months will demand both the full and uninterrupted concentration of a strong Cabinet and also an absence of any event calculated to aggravate existing uncertainties. This week's events are a mere preliminary to the grave matters which will thrust themselves upon us in increasing numbers with every day that passes. We are a long way from the time when the country can afford to let its Ministers be absent for a fortnight from their executive posts. The new situation needs most careful guidance; the problems which it raises must be studied in the calm of the council chamber, and do not lend themselves to partisan debate upon the hustings.

But the argument against an election does not consist merely in the danger of the distraction and confusion that it would cause both abroad and at home. It lies also in the absurdity of choosing a time when so much is in the melting pot to outline a clear-cut policy and ask for a five years' mandate to carry it out. Who can foresee the world development of the next few weeks or months accurately enough to know what particular measures may or may not be imperatively called for? Any policy now propounded to the country and approved by it might have to be jettisoned almost before the election shouting had died down.

It is as curious as it is true that the demand for an election still comes from the Protectionists. In our last issue we criticised at some length the arguments advanced in favour of tariffs and devaluation for the restoration of our economic situation. Those two policies produce the same effect upon imports, though the latter also acts as a bounty upon exports, whereas a tariff hampers exports. We have now willy, nilly, got devaluation, and the case for tariffs as a means of balancing the current items of our international payments account has gone. If the pound were to slide badly we should approach more and more to a condition of blockade, and we might, indeed, eventually arrive at a state where we should have to control imports for the sake of ensuring the maintenance of essential supplies. But the need of dealing with whatever exceptional and emergency conditions may arise in the next few weeks is no justification for seeking a general mandate for a tariff of undefined height and character as a permanent feature of our fiscal system.

In this connection Sir John Simon, who urged that the case for tariffs was not weakened by the depreciation of

the pound, was very wide of the mark when he argued that the bounty on exports is not due to the fact that "your currency is at a lower figure than it was yesterday," but to the fact "that it is going to be lower still to-morrow." If Sir John Simon will do us the compliment of reading what we have written in a preceding article on the conditions under which depreciation affords a bounty on exports, he will see that this statement is not accurate. Equally open to question is his statement that when the inflation was over (in other countries which had suffered currency depreciation) "every one of them had an adverse trade balance, and every one of them needed assistance from outside in order to get right." True, they all borrowed. But they did so *in order to obtain imports* to get their internal economic life going again after the ravages of inflation.

The truth is that the continued talk of a tariff election has centred round matters which are clearly at this moment of comparative unimportance. We venture to prophesy that in the very near future the Government will be forced to face many tasks of a very different kind. It was easy to understand that through months of growing depression and strain a large number of those who had never accepted the Protectionist thesis began to show a willingness to give tariffs a trial, if only as a *pis aller*. But to-day we are faced with a world emergency and it is difficult to believe that responsible politicians will stand fast by their demand for an immediate tariff election. For if the case for a tariff, such as it was, has been profoundly changed, the dangers of an election remain as real and as formidable as ever.

It is in one way very unfortunate that at this moment Parliament should be engaged on a new Budget which is making most sweeping changes; for with a possibility of important changes in the price level and in our economic position in the near future, it is difficult to be sure that the proposals will be equitable as between various classes and groups. But it is clearly more imperative than ever to proceed with the task of balancing the Budget, for if that were left unaccomplished the dangers of inflation would be immensely increased. It can hardly be said that the opposition has fully realised this. Indeed, the exaggerated joy with which the suspension of the gold standard was received seems rather to have created the impression that all will now be easy. The opposite is, of course, true. To steer a course which will ensure some degree of stability of sterling, avoid wide movements of capital and permit the London market to remain relatively free, will call for the utmost skill on the part of those who will have to carry out this formidable task. This and other matters will require the undivided attention of the Government, and the steady support of Parliament and the nation.

There is every reason for satisfaction in the calm and confident manner in which the London markets have passed through this critical week. Confidence at home has not wavered, nor has foreign confidence in England been wholly lost. One thing more than any other would help to carry on the good work of restoring world faith in London, and that is a clear announcement that the present Government intends to remain in power and put party politics in cold storage until the present tasks are finished and the next great problems faced and handled. We need steady hands at the steering wheel. Let the present navigators stay at the helm and carry on.

THE CAUSES OF THE TROUBLE.

WE do not recall a better short summary of the causes of the world crisis than that which is contained in a report, circulated at the end of last week, by the British Committee of the International Chamber of Commerce. The suspension of gold payments by Great Britain and the repercussions which this important step has involved throughout the world have created a new situation which may require rather different handling from that contemplated by the Chamber. But in this new situation it is more than ever necessary that the causes of the trouble should be clearly understood if international action, which is now more urgent than ever, is to be effective. We,

therefore, make no apology for reproducing this report textually:—

The World Economic Crisis.
