Siegfried, who recently read the Briton so admonishing a lecture on greed, luxury and inability to save. Mr Keynes, on the other hand, in a brilliant and somewhat caustic contribution, urges a vigorous policy of productive spending; and both he and Sir Basil Blackett (who takes rather an unnecessarily long time to arrive at his point) come down definitely on the side of a planned national economy, in which they are joined, though in part and with distinct hesitations, by Sir Arthur Salter. Sir Josiah Stamp appears to be halting between several opinions.

The book makes stimulating reading, especially for those whom the world crisis has only just now driven to the painful process of thought, and Sir Arthur Salter's masterly summary of its causes could hardly be bettered. But the impression left by it, on the whole, is that the gulf between those who would begin to plan on a national scale and those who would trust to the older remedies is only just beginning to show and will yawn far wider before it is either bridged or destroyed by the disappearance of one side or the other. It is significant that Sir William Beveridge, when giving his own conclusions, is dogmatic only on the abolition of war debts and tariffs and the "reasonable provision" for unemployment; and on the major issue has literally no advice to offer, except the very sound remark that a mixture of control and non-control is likely neither to work nor to please anybody.

This being so, it is interesting to find that this week's "bag" includes two books from the country which has "gone nap" on control and which declares that, as a result, the third of Sir William's proposed remedies has no longer any interest for it. Owing to the peculiar position of Soviet Russia, its books published for consumption in foreign countries are still either advertisement or polemic, or both; objectivity, in fact, is neither achieved nor sought. Of the two works listed here, the first is pure advertisement, a collection of photographs of which it may be said that, while not up to the standard either of the best Russian films or of the periodical entitled *U.S.S.R. in Construction*, it yet compares favourably with the

THE GERMAN POINT OF VIEW

The recent formation of the Business Transfer Partnership & Property Agents Institute of Great Britain raises the status of the profession of Business Transfer Agents. A very comprehensive course dealing with B.T. can be secured for £1 1s. 0d., spread over 4 monthly payments of 5s. 3d. each. Course is sent on receipt of first payment.

EFFICIENCY PUBLISHING COMPANY, 71, Lowlands Road, Harrow.

brochures issued by steamship companies and other agencies for foreign travel. The second is a book mainly of facts and figures suitable for foreign reading, coupled with a little polemic. The facts are suggestive and worth study, in spite of an occasional uncertainty on the part of the authors; and as to the polemic, the interesting feature is that it is no longer, as in earlier days, a matter of violent abuse of capitalist countries as the enemy, but of scorn, both for the failure, or alleged failure, of those countries to achieve their own humanitarian aims (viz., to protect women and children, to shorten the hours of labour and improve conditions, etc.), and for those economists and reformers who believe that a national "planned economy" can be built on anything but a proletarian revolution. In this respect the Soviet writers appear to agree with Sir William Beveridge; and the whole of the chapter on labour conditions—the most interesting, as well as the frankest, in the book—will repay reading by anyone anxious to grasp the "ideological basis" of the Russian experiment.

Finally, we have Dr. Renatus's pathetic plea against the "dead-weight of war-indebtedness" throughout the world. He shows, and shows abundantly, that this mass of non-productive but interest-bearing capital is strangling industry and commerce, causing a feverish rationalisation which only makes matters worse, and reducing international trade to barter. In the eyes of one reader, as in those of Sir William Beveridge, he has proved his case to the hilt; what effect it will have, if any, remains to be seen.

SHORTER NOTICES.

"The Capital Question of China." By Lionel Curtis. (London). Macmillan. 10s. 6d. net.

THIS book is interesting and valuable in virtue of the personality and experience of the writer. Mr Curtis has brought to his study of China the fruits of his previous study—and previous action—in India, in South Africa and in other parts of the British Commonwealth, not to speak of his experiences at the Peace Conference of Paris. He presents, very forcibly, the essential truth that the Western nations, and particularly the British, having forced China to trade with them, have unintentionally, but most thoroughly, turned the life of China upside down. And he argues eloquently that duty and interest alike forbid us to leave our relations with China at that. He urges that, on both considerations, we ought to help China to find her feet again in a Westernised world. The service which he requires us to render to her is to impart to her our own special political experience, or, in other words, to assist her to learn from us the Western art of self-government. The gist of the book is contained in the following two sentences on page 288. "We shall fail in all our dealings with China until we recognise that our own interests are misconceived wherever they seem to conflict with hers. The first interest of China is admittedly the establishment of orderly government." The book is divided into two parts: "Narrative" and "Comment." The latter part is the author's original contribution—particularly the last chapter of all, which presents Mr Curtis's own personal conclusions—and it is to be regretted that Mr Curtis has modestly confined Part II to one-sixth of the volume and has given the other five-sixths to a historical narrative which is really the scaffolding of Mr Curtis's building and not the building itself.

"Taxation During the War." By Sir J. C. Stamp. 247 pp. (London). Oxford University Press. 10s.

"American Public Finance and Taxation." By William J. Schultz. 635 pp. (London). Pitman. 21s.

To make the detailed record of British war finance into a narrative which would hold the attention of the reader without effort on his part might seem an almost impossible task. Sir Josiah Stamp, however, who has been known on a previous occasion to infuse a detective-story element into a statistical essay, has contrived to relate the story of the growth of British taxation during the war in a manner most absorbing. The first part of the book (which is published under the auspices of the Carnegie Endowment for International Peace) traces the development chronologically, and consists largely of very skilful summaries of budget debates, with a discreet amount of comment from the author, whose official position during the war years gives his criticisms a particularly live quality. The remainder of the

book is devoted to an examination of the gradual modification of taxation under war conditions, to a detailed account and discussion of the excess profits duty (a particularly valuable piece of work) and to the author's final conclusions.

The combination of a general textbook on public finance with a handbook on the finances of Government bodies in the United States has produced a somewhat unwieldy volume. A very large amount of ground is covered, and in consequence the student may find the discussion of particular theoretical points so compressed as to be bewildering. As a handbook of United States practice, however, it should be very useful. The chapters on the constitutional aspects of taxation and on the inter-relations of federal, state and local finance furnish information which are not conveniently accessible to students elsewhere.

"Kimber's Record of Government Debts, 1931." (New York). Overseas Statistics Inc. (London). London General Press. \$15 net.

AMONG the various books of reference designed to enable financial houses and other investors to appraise the value of any given security, a high place must be given to "Kimber's." This compact and well-arranged manual gives, very tersely, all the relevant information about the internal and external obligations, direct or guaranteed, of all the national governments of the world and of such provinces, states and municipalities as have bonds or notes outstanding in countries other than their own. In addition, statistical and other information bearing on the public credit of the Government is given for each country under a series of uniform heads, including, *inter alia*, production, foreign trade, currency, Government revenue and expenditure, and public debt. Where space on the reference shelves is extremely limited, this book may serve a dual purpose, as it provides statistics on the minor countries which would not otherwise be conveniently accessible in a single volume.

"The Whitley Councils Scheme." By John Barton Seymour. 253 pp. (London). P. S. King. 12s.

BECAUSE we are rarely conscious of the machinery which serves us until something goes wrong with it, we hear far more of occasional industrial disputes than of the machinery which is working continuously to maintain industrial peace. Joint Industrial Councils, very much in the public eye at the time of their inception, have attracted less and less attention as they were brought into permanent working order, and the appearance of a history and criticism of their working is therefore very welcome. Mr Seymour's book falls into three parts: the history of the scheme; an account of its working; and an appraisal of its value. His criticisms are constructive, and his belief in the scheme, provided—and it is a large proviso—that public lack of interest in it can be overcome, is very encouraging. In Mr Seymour's view, lack of interest is largely due to lack of knowledge, and he therefore advocates greater publicity in the form of publication of Whitley Council decisions and records. He is also anxious to see more co-operation between the different councils. The appendices include lists of councils and the text of the first Whitley Report, and there is a useful bibliography.

THE UNILEVER COLOSSUS.

THE Unilever combine and Communism have not a few points of similarity—in a strictly business sense. The combine is governed by committees innumerable. It controls the working life of the vegetable oil industries almost as completely as the Soviet monopolises the working life of the Russian people. It embraces every activity from the production of the raw materials to the retail selling of finished goods. And, curiously enough, both Soviet and Unilever catch whales in the Antarctic. For the investor and economist, however, the significant feature is that the more enlightened and efficient Unilever and the Soviet become, the more difficult it is to investigate their operations and to analyse their accounts.

We may recall that the Unilever combine originated in the amalgamation, in 1927, of two old-established margarine manufacturing companies—Anton Jurgens and Van den Berghs. It was found necessary, in order to avoid dual taxation, that a Dutch company—Margarine Unie—should acquire the Dutch interests and an English company—Margarine Union, Ltd.—the English interests. In 1929 the group extended its Continental interests by the absorption of the Schicht and Hartog concerns, both manufacturers of margarine and soap, the former operating in Central and Eastern Europe and the latter in Holland. Finally, in September, 1929, this already vast combine amalgamated with Lever Brothers, which itself

was an enormous holding concern engaged in every branch of the soap and oilseed crushing industries. This acquisition involved the changing of the name Margarine Union to Unilever. One of the subsidiaries of Lever Brothers was the Niger Company, which had merged with the African and Eastern Trade Corporation under the name of United Africa. To this company were transferred the West African interests of Margarine Union. Owing to the poverty of African and Eastern, which has been unable to find more than £500,000 of the £3,500,000 of new capital recently required, the interest of Unilever in United Africa has now been increased from 50 per cent. to 80 per cent. To complete the hold on its products from the raw material stage to retail distribution the Unilever group acquired control of several English multiple grocery shops, including Home and Colonial Stores, which now controls Liptons, Maypole Dairy and Meadow Dairy, which in turn controls Pearks Dairies, Brouchs, Sherry's Dairy and Neale's Tea Stores. An attempt to bring International Tea Stores into this grocery combine in 1930 failed. To simplify the buying and administration of the raw materials, two companies were formed in 1931, one in England called Unilever (Raw Materials), Ltd., to hold the stocks for the associated companies in Great Britain, and one in Holland called Unilever Grondstoffen Maatschappij N.V. to perform the same functions for the associated companies on the Continent. The companies associated with the Lever and Unilever organisations number over 600. For the convenience of the reader we have shown the ramifications of the group in greater detail in the chart on the preceding page.

By general agreement, the Unilever colossus is efficiently managed. The chairman of Unilever remarked in his last speech that the knowledge which old-established companies like Jurgens, Van den Berghs and Schicht had gained of the difficulties of trading in Continental countries, under conditions of fluctuating exchanges and restrictions in currencies, had been of great advantage to Levers, while the knowledge that Levers had acquired, through forty years of advertising and of handling proprietary brands, had been of great assistance to their associates. The management of the vast interests of the combine is now divided into groups under the control of directors and managers qualified by knowledge and experience to deal with the special problems of the group concerned. A small number of the directors have the special task of keeping in touch with these executives to ensure that they work to a uniform policy. We are satisfied that no greater and more efficient decentralisation could be seen inside the Kremlin.

The more efficient Unilever becomes in its management, however, the more obscure its trading appears to the investor. We presume that the management knows precisely where it stands, because we have the chairman's statement that there is a strong internal audit department, which carries on a continuous supervision. The facts remain, however, that the combine does not publish consolidated accounts; that it is impossible to discover from the separate accounts of the two holding companies and their five principal subsidiaries what are the real earnings of the group; and that the formation of the two raw material companies (which, being privately owned concerns, will not publish their accounts) will make it impossible to discover the manner in which the group has dealt with depreciation or appreciation of its stocks of raw materials.

The present position regarding stocks is interesting. According to the chairman of Unilever, as raw materials were consumed throughout the year 1931 their averaged cost prices were charged against the profit and loss accounts, which in this way were made to bear the full burden of the high cost prices as compared with the market prices. New purchases of raw materials, particularly in the second half of 1931, were made on the basis of the much reduced price level, until at the beginning of 1932 the point was reached when the book value was lower than the replacement value. This condition still prevailed at the date of the chairman's speech on April 29th, the only exception being whale oil. However, Lever Brothers, Jurgens and Van den Berghs wrote down their whale oil holdings before transferring them to the English

raw material company, and the Jurgens and Van den Berghs holding companies in Holland created special reserves for the same purpose. In addition, £350,000 was set aside by Unilever and Fl. 13,500,000 by Unilever N.V. for the benefit of the raw material companies. These allocations brought the price of whale oil stocks into line with that of the other raw materials. In future the requirements of the consuming factories will be supplied by the two raw material companies at the averaged cost prices, so that in the event of a rise in commodity prices the trading companies will immediately show the benefit in their trading accounts. If, on the other hand, the raw material companies were to "invoice" the goods supplied to the trading companies above cost price, the investing public would be none the wiser.

Instead of giving consolidated accounts the Unilever holding companies publish the accounts of their principal subsidiary and associated companies—Lever Brothers, Jurgens, Van den Berghs, N.V. Anton Jurgens Vereeniging Fabrieken, N.V. Van den Berghs Fabrieken, and N.V. Hollereen Tot Expl. Margarine Fabrieken. It may be interesting to compare these companies' results, but the process does not enable shareholders of Unilever to ascertain their real earnings. The comparative results of the two holding companies for the past three years are shown in the following statement, together with the combined ordinary and total capital and reserves:—

	Net Profits.	1929.	1930.	1931.
Unilever, Ltd.		£580,382	£1,798,856	£1,733,807
Unilever N.V.	f.	35,332,819	f. 30,064,333	f. 30,023,715
Total (in £'s sterling at 12 fl. to £).....		£3,524,784	£4,304,217	£4,235,781
Available for ord. after pref. dividend.....		£3,256,328	£3,950,708	£3,851,052
Percentage earned on ord.		20.0	17.5	15.7
Percentage paid on ord....		10.0*	10.0	8.0 (in gold)
Combined ord. capital.....		£15,788,583	£25,507,375	£25,507,375
Total combined capital.....		£19,623,666	£31,038,573	£31,162,458
Total combined reserves....		£8,969,018	£13,813,929	£13,833,929

* And cap. bonus 6½.

Two comments are necessary on this table. In the first place, Unilever, Ltd., holds all the ordinary capital (£6,500,000) of Lever Brothers, the acquisition of which accounts for the rise in Unilever, Ltd., profits in 1930. In the second place, the dividends on the ordinary shares in both companies are paid in Dutch guilders. The interim and final dividends, on the ordinary shares in Unilever, Ltd., for 1931 at the prevailing rates of exchange were 1s. and 1s. 08d., being equivalent to 5 per cent. and 5½ per cent. respectively.

With regard to current prospects, the chairman of Unilever has declined to indulge in prophecy. He has stated, however, that the actual net profits for the first quarter of 1932 exceeded those for the same quarter of 1931. Moreover, the chairman of Lever Brothers has declared that the accounts of United Africa for the year ending April 30, 1932, showed no loss. World trading conditions have, however, deteriorated since April, restrictions with regard to currencies have been intensified, and the prices of raw materials have moved downwards. It must also be remembered that the prosperity of the oil and cattle cake companies last year was largely responsible for the maintenance of Lever Brothers' profits.

Whatever the future, the combine certainly maintains strong cash resources. The total cash and bullion (a new item of liquidity) of the two Unilever companies, Lever Brothers and the five subsidiary companies of Unilever, whose balance sheets are published amounted at the end of 1931 to £5,648,047—taking the guilder at the rate of exchange on December 31st last. As far as the Unilever holding companies are concerned, the cash position has been improved in 1931 by nearly £1,900,000. The investor, however, would be more impressed if he were allowed to discover the consolidated cash position of the entire group. The decline in the ordinary shares of Unilever to 1½ from a high level of 1½ this year is some indication that the investing public is taking a conservative view of this year's dividends.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
June 21.	June 23.

A SLIGHT hardening of sentiment did not last beyond mid-week. Investors were impressed less by the prospect of pre-Lausanne discussions between Mr MacDonald and M. Herriot and by Mr Hoover's "Rapidan" programme than by further hints that the possibility of higher taxation was not absent from the minds of British statesmen. Gilt-edged were firm at the outset, with a certain amount of foreign buying in evidence, but turned mildly reactionary later. Equity shares remained just above recent low levels, with no more than a trickle of selling after the publication of increased unemployment figures for May. Though the effects of the failure of a large firm of metal brokers were localised within the tin market, the feeling that weak positions in other cases might not be maintainable indefinitely served to restrict business.

Buying of British Government stocks at the beginning of the week was largely of a "safety first" character, the strength of War Loan being regarded with mixed feelings. On Wednesday and Thursday prices lost ground, though declines were only fractional. Dominion issues were steady, New South Wales stocks tending to "close up" on Commonwealth stocks, while the latter, in turn, were favourably affected by the maintenance of a satisfactory Australian visible export balance.

European bonds reflected, mainly, the market's inability to interpret a complex European political situation. German bonds improved on the favourable construction put on certain parts of the new German Chancellor's declaration, but subsequently reacted on doubts whether M. Herriot's speech portended any relaxation of French foreign policy adequate to contemporary European needs. The new bond proposals of the Greek Government were deemed no more satisfactory than their predecessors. The Chilean revolution failed further to depress prices already at default levels. Japanese stocks were sold on reports of growing social distress.

The week's railway traffic figures, and the pessimistic case prepared by the companies for the Rates Tribunal caused further dullness in home railway stocks. Metropolitan reacted on the absence of an official statement regarding the Transport Bill position. Argentine rails remained friendless. United of Havana debentures receded further on the extended moratorium proposals.

The new account in the industrial market opened with an access of unexpected cheerfulness, which, unfortunately, proved short-lived—largely owing to the absence of expected improvement in America. Iron and steel shares became undecided, after modest activity on the announcement of a National Committee to consider reorganisation measures. Cables and Wireless reacted after buying on somewhat more hopeful anticipations regarding the forthcoming accounts. Motor shares, similarly, failed to hold an early improvement. The market found the terms of the Singer progress statement ambiguous. Electrical shares were irregular with business on a reduced scale. The defeat of back-bench Parliamentary efforts to secure a reduction in the beer duty had been foreseen, the only substantial change in the brewery list being a slight rise in Guinness on Dublin inquiries, after the announcement of the Anglo-Irish discussions. Textile shares made no headway, the labour situation still causing uneasiness. Store shares showed a further easy tendency, though Great Universal rallied on support after the meeting. Insurance shares showed no recovery, the market fearing dividend reductions. Anglo-South American Bank "A" shares changed hands, at one time, at nil, the latest official statement being held not to preclude the possibility, in certain circumstances, of a call on unpaid capital. Dealings were suspended on Thursday.

The oil market opened fairly active under New York influences, but Monday's advance was sharply checked

by the inertia of New York, the Continent remaining neutral, apart from Amsterdam selling of Royal Dutch. After faint signs of increased interest, the rubber share market returned to its habitual dullness, Rubber Trust failing to resist moderate selling. The decline in tea shares continued unchecked, Indian issues being the chief sufferers. The recent weakness of tea prices is discussed on page 1310.

Lack of interest was evident in the mining markets, though selling orders were neither numerous nor extensive. Paris gave slight intermittent support to selected South African mines, in regard to which a certain inside activity was noticeable. Johannesburg was a buyer of Sub Nigel. West Australian shares were easier on the subsidence of last week's buying movement. Activity in tin shares had so long been at a low ebb that the news of the failure of Messrs Lewis Lazarus (discussed on page 1285) and the subsequent break in tin prices caused no widespread selling, though the market, undoubtedly, was shaken by the failure.

FOREIGN STOCK EXCHANGES.

NEW YORK.

After a technical rally over the week-end, during which markets endeavoured to make the most of factors like the bond buying pool, dealings became dull and depressed once more. The persistent inelasticity of sentiment, despite successive injections of hopeful news, was keenly disappointing to official observers. For example, a tendency was prevalent to regard the efforts of the bond pool as prematurely doomed to failure. The presence of the "bonus army" in Washington was also regarded as a dangerous portent. Utility stocks were sold on expectations of reduced earnings through the operation of the new tax on power. Freight car loadings for the week ended May 21st, at 515,450, reached a new low record. The total for the preceding week was 517,667 and for the corresponding week of 1931, 754,738. It was understood that only eleven American railroads had earned their bond interest for 1932. A meeting was held on Wednesday, at which the most important companies were represented, to consider the working out of a "depression policy." Steel production last week fell to 20 per cent. of capacity, as a result of further recessions in building operations and an almost complete absence of buying by the railroads. The business index of the *New York Times* for the week ended May 28th was 55.3, against 55.7 in the previous week.

(Continued on page 130A)

The List of Applications will be opened on Monday, the 13th day of June, 1932, and closed on, or before, Tuesday, the 14th day of June, 1932.

CENTRAL ELECTRICITY BOARD.

ISSUE OF £10,000,000

Central Electricity 4½ per Cent. Stock, 1957-1982,

Under the Electricity (Supply) Act, 1926, the Central Electricity Board (Increase of Borrowing Powers) Special Order, 1930, and the Central Electricity Board Borrowing Regulations, 1928, pursuant to a Resolution of the Board, dated the 9th day of June, 1932.

Interest will be paid Half-yearly on the 1st February and the 1st August.

A first payment of £2 per £100 Stock will be made on the 1st February, 1933.

PRICE OF ISSUE £96 PER CENT.

The GOVERNOR AND COMPANY of the BANK OF ENGLAND are authorised by the Central Electricity Board to receive applications for the above issue of Stock, payable as follows:—

On Application ...	£ 5 per Cent.
On Monday, 4th July, 1932 ...	£16 "
On Friday 5th August, 1932 ...	£25 "
On Wednesday, 7th September, 1932 ...	£25 "
On Monday, 10th October, 1932 ...	£25 "

£96 per Cent.

The Stock now issued and the interest thereon rank *pari passu* with £3,000,000 Central Electricity 4 per Cent. Stock, 1959-1989, £10,000,000 Central Electricity 5 per Cent. Stock, 1950-1970, £5,000,000 Central Electricity 4½ per Cent. Stock, 1951-1973, and £7,000,000 Central Electricity 5 per Cent. Stock, 1955-1975 already issued, and are a first charge on the whole undertaking and the net revenues of the Board.

The Board reserve power to issue further Stock ranking *pari passu* with the above Stocks.

The Stock of the present issue will be redeemed by a Cumulative Sinking Fund, commencing not later than the year 1938, sufficient to repay the whole of the Stock by its maturity date. This Sinking Fund will be provided out of the Redemption Funds which the Board are required to provide for the amortisation of their capital expenditure and will be applied in the purchase of Stock or invested temporarily in accordance with the Borrowing Regulations. Any Stock not previously redeemed will be repaid at *par* the on the 1st August, 1982, but the Board reserve the right to redeem at *par* on any interest date on or after the 1st August, 1957, all Stock then outstanding on giving at least three calendar months' previous notice by advertisement in two London daily newspapers.

The Central Electricity Board were constituted by the Electricity (Supply) Act, 1926, and are acting under statutory powers in adopting and carrying out the Schemes referred to in the Statement appended.

The Board are empowered, with the consent of the Electricity Commissioners, to borrow £50,000,000. Of this sum the Electricity Commissioners have already given consents in respect of £37,800,000, of which £12,500,000 is in respect of standardisation of frequency, and £25,300,000 is in respect of the construction and acquisition of main transmission lines, working capital and other purposes. The proceeds of the Stocks already issued and of that now being issued form part of the sum of £37,800,000 mentioned above.

The proceeds of the present issue will be used to provide further funds for the construction and acquisition of main transmission lines, the cost of standardisation of frequency, working capital and other authorised purposes including payment of interest on the Stocks already issued so far as it is payable out of capital and on the Stock now being issued until the 31st December, 1939, if and so far as the expenditure does not become remunerative at an earlier date.

The Register of the Stock will be kept at the Bank of England. The Stock will be transferable by ordinary Transfer Deed in multiples of one pound.

Applications, which must be accompanied by a deposit of £5 per Cent., will be received at the Bank of England Loans Office, 5 & 6, Lombard Street, E.C.3. In the case of partial allotment the balance of the amount paid as a deposit will be applied towards payment of the first instalment; should there be a surplus after making that payment such surplus will be refunded by cheque.

Applications must be for sums of £100 or multiples thereof. Payment may be made in full after allotment under discount at the rate of 1 per Cent. per annum. In the case of full payment being made before the 4th July, 1932, discount will only be allowed from the latter date. Default in the payment of any instalment by its proper date will render the allotment liable to be cancelled.

Interest on the Stock will be payable half-yearly on the 1st February and the 1st August. A first payment of £2 per Cent. will be made on the 1st February, 1933. Warrants will be transmitted by post.

Scrip Certificates to Bearer in denominations of £100, £500 and £1,000, will be issued in exchange for the allotment letters. Fully paid Scrip Certificates may be registered on, and after, the 4th July, 1932.

A Commission of 5s. per £100 will be paid to Bankers and Stockbrokers on allotments made in respect of applications bearing their stamp.

Prospectuses and Application Forms may be obtained at the Bank of England Loans Office, 5 & 6, Lombard Street, E.C.3, or at any of the Branches of the Bank; of Messrs. Mullens, Marshall, Steer, Lawford & Co., 13, George Street, Mansion House; at any Stock Exchange in the United Kingdom; at the Head Office of the Central Electricity Board, Trafalgar Buildings, 1, Charing Cross, S.W.1, or at any of the District Offices of the Board.

BANK OF ENGLAND,
LONDON, E.C.2.
10th June, 1932.

STATEMENT.

The Central Electricity Board consists of a Chairman and seven Members, appointed by the Minister of Transport pursuant to Section 1 of the Electricity (Supply) Act, 1926. The present Members are:—

SIR ANDREW R. DUNCAN, *Chairman*.
THE RIGHT HON. THE LORD HARNBY, C.M.G.
SIR JAMES DEVONSHIRE, K.B.E.
MR. FRANK HODGES.
MR. W. WALKER.
SIR DUNCAN WATSON.
SIR RALPH L. WEDGWOOD, C.B., C.M.G.
MR. W. K. WHIGHAM.

The main functions of the Board are to construct main transmission lines (commonly known as "the grid"), to concentrate the generation of electricity at standard frequency in the most efficient stations, to supply electricity in bulk for distribution, and by these means to increase the availability of electricity throughout the country and reduce the cost of production.

The revenues of the Board will be derived from the sale of electricity in bulk and by a levy by the Electricity Commissioners under Section 9 of the Electricity (Supply) Act, 1926, on the whole of the electricity supply industry within Great Britain of annual sums equal to the interest and sinking fund charges in respect of money borrowed for the standardisation of frequency.

The following Schemes have been adopted by the Board under section 4 of the Act:—

- (1) Central Scotland Electricity Scheme, 1927;
- (2) South East England Electricity Scheme, 1927;
- (3) Central England Electricity Scheme, 1928;
- (4) North West England and North Wales Electricity Scheme, 1928;
- (5) Mid-East England Electricity Scheme, 1929;
- (6) North East England Electricity Scheme, 1929;
- (7) South West England and South Wales Electricity Scheme, 1930;
- (8) East England Electricity Scheme, 1930;
- (9) South Scotland Electricity Scheme, 1931.

These Schemes cover the whole of Great Britain except North Scotland. Wayleaves have been obtained for 3,725 miles of the 4,000 miles (approximately) of overhead main transmission lines estimated to be the total mileage required for the Schemes. 2,770 miles of these lines have been constructed. 1,200 miles of these lines and 50 miles of cables are in operation in order to facilitate standardisation or to give supplies to authorised undertakers who would otherwise have had to instal generating plant.

Progress in several areas is very advanced and during the current year normal trading will commence in two or more areas with the owners of the Stations at which the Board's electricity will be generated on the terms applicable to them and with other authorised undertakers at the tariff to be fixed under Section 11 of the 1926 Act. Construction work in the other areas is proceeding rapidly.

In fixing their tariff for any area, the Board are required under Section 11 so to calculate it that over a term of years to be approved by the Electricity Commissioners the receipts on income account shall be sufficient to cover the expenditure on income account, including interest and sinking fund charges, with such margin as the Electricity Commissioners may allow. For the Central Scotland area the Electricity Commissioners have approved 10 years as the period within which the receipts on income account shall be calculated to provide a margin after meeting all expenditure on that account, including deficiencies estimated to arise in the earlier part of the period.

The rapid growth of the Electricity Supply industry can be judged from the figures given below, which are taken from the Official Returns of the Electricity Commissioners. These figures show the total amount of electricity generated during the last few years by all authorised undertakers and railway and tramway authorities in Great Britain; a few non-statutory undertakings are also included, but generation by private plants is excluded:—

Year ended.	Units Generated.
31st March, 1922 ...	4,884,666,038
31st March, 1923 ...	5,738,718,485
31st March, 1924 ...	6,681,524,272
31st March, 1925 ...	7,415,375,529
31st March, 1926 ...	8,122,961,823
31st March, 1927 ...	8,565,857,198
31st March, 1928 ...	9,227,850,630
31st March, 1929 ...	10,878,980,925
31st March, 1930 ...	11,961,621,965
31st December, 1930† ...	12,332,948,844
31st December, 1931 ...	12,809,350,246

* Year of General Strike.

† The official figures are now published for the calendar year.

The annual output of the industry in Great Britain is thus over 24 times as much as it was 10 years previously.

The Board are satisfied from detailed estimates of the financial operation of the several Schemes which have been adopted by them that when those Schemes are in full operation the revenue for the respective tariff periods will provide ample margins over and above the amount required to meet the interest and sinking fund charges in respect of the total expenditure on the Schemes.

In calculating yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

† Free of income Tax

* 2-hour session.

PARIS.

The Bourse was adversely affected at the outset by the Lazarus failure in London. M. Herriot's policy speech was, if anything, rather too acceptable to the Socialists to be altogether pleasing to the Stock Exchange. The cautionary note struck by the subsequent speech of the Finance Minister caused appreciable selling of Rentes and bank shares. Speculative "international" shares, however, were relatively steady. On Thursday there were fractional improvements in most sections, but business remained on a small scale.

	June 2, 1932.	June 6, 1932.	June 9, 1932.		June 2, 1932.	June 6, 1932.	June 9, 1932.

BERLIN.

Buying by small and medium-sized investors maintained a firm tendency on the Stock Exchange from its reopening until the middle of May. Subsequently, however, offerings from domestic and foreign holders were accentuated by rumours of impending Government crisis and Austrian transfer moratorium possibilities. The resignation of the Brüning Government, however, was followed by a violent upward movement in share values. The simultaneous selling of Rentes betrayed unmistakably the movement's origin in fears of inflation, which were simultaneously reflected in the animation of the real estate and commodity markets. Between May 26th and June 1st I.G. Farben rose from 82½ to 95, and Siemens from 107 to 123. Panic purchases, however, did not last long. The reassuring declaration of the Government, to the effect that it intended, in co-operation with the Reichsbank President, to maintain the stability of the mark, gave support to Rentes, and the market has since been quiet, speculators and public alike calmly awaiting developments. Recent falls in equities, however, have not completely wiped out the earlier gains. Coal and iron shares, for instance, are still higher than a month ago:—

AMSTERDAM.

Listless and irregular conditions prevailed under the influence of unfavourable foreign news. Royal Dutch lost ground owing to the liquidation of a large line of stock, and Unilever on rumours of a forthcoming preference share issue. Netherlands Trade Bank shares were sold heavily after the publication of an unfavourable annual report.

	June 2, 1932.	June 6, 1932.	June 9, 1932.		June 2, 1932.	June 6, 1932.	June 9, 1932.

OTHER CENTRES.

Business on the remaining European Bourses was restricted in practically all cases. Brussels was heavy, initially, on arbitrage selling from London, but the tone improved slightly in mid-week. Stockholm was dull and featureless, and Vienna apathetic.

INVESTMENT NOTES.

The American Markets.—The New York Stock Exchange derived only temporary relief from the announcement last week that a company had been incorporated under the title of American Securities Investing Corporation with a capital of \$100 millions with the object of supporting the bond market. The managers of the Corporation are Messrs J. P. Morgan and Kuhn, Loeb, and the directors are representative of these and other leading New York banks. The buying power of the Corporation is to be increased by the issue of debenture bonds to banking institutions. The formation of the "bond pool" was coincident with President Hoover's statement of the results of the conference at his summer camp at Rapidan, namely, that the lending power of the Reconstruction Finance Corporation was to be increased by \$1,600 millions, the distribution of which was to be arranged through joint committees of industry and finance, and that rigid economy in all Government expenditure was to be enforced, with the absolute prohibition of bond issues for non-productive public works such as the States Congress Democrats had proposed. These announcements caused an immediate improvement in both bonds and shares, rises of 1 to 7 points being seen in certain depressed railroad bonds and utility preferred stocks. The improvement, however, was short-lived. Industrial news continued to be disappointing, further declines being reported in power output, railway car loadings and steel operations, the last being only 20 per cent. of capacity. Further, the 3 per cent. tax on utility company revenues, although capable of being passed on to the consumer, and payable out of net income (after bond interest), had a depressing effect upon the preferred and common stocks of the utility companies, with the exception of those of the gas industry, which was exempt from the impost. The general liquidation on Wednesday completely wiped out the gains of last week and created the impression that the "bond pool" could be written off as a failure from the market point of view. The Stock Exchange is now wearily looking forward to the adjournment of Congress, which it is thought will enable markets to recover some semblance of equilibrium.

Building Society Interest Rates.—The announcement by the Abbey Road Building Society that, in order not to "accumulate funds in excess of its requirements" it will open no new fully-paid share accounts, is symptomatic of a general desire on the part of many building societies, especially in the South, to limit their commitments for the present. The Abbey Road is not the first society to discourage unlimited expansion, but, as it is the second largest in the country, its decision is momentous. In a leading article in the *Economist* of April 23rd last (page 919) we suggested that the pace of post-war building society activity could not be maintained indefinitely, seeing that the particular section of the property market in which the societies were chiefly interested was not unlimited. In the last ten years the new advances on mortgage made by building societies have totalled £565 millions. Allowing for repayments, the balance outstanding on mortgages has increased from £84 millions in 1922 to £360 millions at the end of 1931. As the average annual new advances were only £9 millions and the annual average increase little more than £1 million in the post-war decade, the enterprise with which the societies have utilised their post-war opportunities will be appreciated. There is no question of the societies' ability to obtain further large amounts from investors so long as they maintain rates of interest which, having regard to the degree of security offered, are high in proportion to those obtainable elsewhere—particularly in a period of low money rates like the present. Small investors, for example, can obtain only 2½ per cent. on Post Office Savings Bank deposits, and only £4 2s. 9d. per cent. on National Savings Certificates if they are prepared to leave their money untouched for ten years. For encashments, say, at the end of one year, they obtain

only £1 11s. 3d. per cent. Large investors can secure a yield of only approximately 4 per cent. on long-term British Government stocks and only ½ per cent. on bank deposits, both subject to tax, whereas they have been able to secure 5 per cent., without payment of income tax, on many building society shares, withdrawable upon moderate notice. The societies, naturally, are unwilling to act as a repository for large amounts of short money. Their real problem, however, goes deeper. Investment in real property is not in itself a particularly "liquid" form of activity. The majority of societies have so far reduced its "risks" to a minimum by the development of a particularly sound technique in the making of advances, but dangerous tendencies will obviously be introduced if, at a time when opportunities for first-class mortgage business may be somewhat more restricted than in earlier years, ability to obtain rather than to place new resources is allowed to be the dominant criterion of policy. The movement cannot retain its enviable reputation if it is allowed to fall under the suspicion of becoming an appanage of the speculative builder. The significant feature of the Abbey Road announcement is not only the embargo upon new fully-paid share accounts, but the limitation of new deposit accounts to a maximum of £500 in any one case. Building society interest rates are still high, in relation to general interest levels, even after recent reductions, but the leading societies, for various reasons, are averse to unduly frequent changes. The Abbey Road is, in effect, following the policy pursued by the Treasury with regard to National Savings Certificates, by maintaining a moderately high yield but limiting new individual accounts to a comparatively low total figure.

The Chilean Situation.—The news that a successful Socialist *coup d'état* had been carried out in Chile over the week-end caused not a little apprehension in New York and London. Attention was directed in particular to the securities of "Cosach," the great nitrate combine, in view of the report that the junta led by Don Carlos Davila proposed to nationalise the concern forthwith. Chile copper bonds fell 8 points in Wall Street on Monday,

"BP"
PLUS

Plus what?
Plus a little
something
some others
haven't got

but Chilean quotations in London were hardly affected. Prices had previously been written down to "default levels," and stayed there, for the convincing reason that practically no business was done:—

Cosach 7% sterling bonds	25	10	...	...	31/5/32	25
Antofagasta Railway ord.	16½	7	8	7	6/6/32	8½

The two last columns testify to the absence of contemporary market interest in the securities of a country whose credit formerly ranked higher than that of almost any other American borrower. The last business in Cosach 7 per cent. sterling bonds (issued last year at 96) was "marked" on May 31st at 25. The latest reports from Chile state that the new Government has decided to delay the confiscation of the combine until the situation has been studied by experts. The stability of the new Government itself, however, is far from assured, and it is idle at this stage to speculate on what may happen before the projected meeting of a new Congress in November. The question is further discussed in a leading article on page 1293.

Central Electricity Board.—A further issue of £10,000,000 stock is to be made by the Central Electricity Board early next week. The total value of contracts approved by the Board for the construction of the grid, standardisation of frequency and other works is now £31,678,591. The construction of the national main transmission system had, at the end of May, reached a point at which, out of 4,000 miles required for overhead lines, wayleaves for 3,725 miles had been obtained. For primary lines alone, operating at 132,000 volts, only 84 miles remained to be negotiated out of a total of 2,876 miles. Some 2,770 miles had been constructed, and about 1,250 miles, including cables, were in operation, principally in Central Scotland and in South-East, Mid-East, Central and North-West England. Satisfactory progress has been made in the standardisation of frequency, especially in Central Scotland and North-East and Central England. The production of electricity by authorised undertakers in Great Britain showed a further expansion in the first five months of this year, aggregating 5,260 million units—an increase of 8.3 per cent. over the corresponding period of 1931.

Two Investment Trust Results.—The report of the Investment Trust Corporation discloses a depreciation on its investments of 23.6 per cent.—namely, £2,124,000 on a book cost of £8,998,771. For a pre-war company, registered in 1888, this depreciation is high. The percentages of the investment portfolio held in bonds, preference and ordinary shares are normal, and as regards the geographical distribution, Great Britain accounts for 46.4 per cent., the United States of America for 11.2 per cent. and Europe for 15.7 per cent. The somewhat large proportion of the total securities held in railway stocks, namely 20 per cent., is perhaps some explanation of the high depreciation. The revenue account shows only a slight fall in gross income and dividends are maintained at 20 per cent. The following table gives the comparative results of the past two years:—

Year ending May 1st.	1931.	1932.
Gross income	£ 608,957	£ 591,269
Expenses and tax	101,583	98,533
Debt interest	147,489	155,000
Earned for dividends	359,885	337,736
Preference dividends	84,000	87,000
Earned for deferred dividend	275,885	250,736
Earned per cent.	25.5	22.5
Paid per cent.	20.0	20.0

Carry-forward..... 204,082 237,318
The break-up value of the deferred stock at the present market value of the investments is only 73½ per cent., but in view of the high earning power the market is probably justified in valuing it at 278 to yield 7.19 per cent. on dividends of 20 per cent. The results of the Second Co-operative Investment Trust bear no comparison with those of the Investment Trust Corporation. As at March 31, 1932, the investments of the Second Co-operative, having a book value of £1,207,675 had a market value at middle prices of only £640,944, depreciation thus being 53 per cent. Though the directors declare that this does not represent a true measure of the value of the portfolio, it is difficult to see how the whole of this large capital loss can be made good when markets recover. The Second Co-operative has a capital of £1,174,522, of which £54,085 is in the form of 5 per cent. withdrawable preference shares. The directors are calling a special meeting to sanction the conversion of these shares into 4 per cent. shares of a like character. The attractions of the proposal for preference shareholders are not self-evident. The directors might, instead, be asked to co-operate with a committee of investigation in a thorough overhaul of the company's position.

Beecham's Pills.—This company has significantly extended its interests in the medicinal drug business. Since the last accounts the preferred capital has been increased by the issue of 236,082 additional preferred shares in exchange for further shares in Yeast-Vite, Ltd. The preferred dividend of 10 per cent., therefore, requires £141,047, against £95,755, but the increase in net profit more than covers this additional requirement:—

Year to March 31.	1930.	1931.	1932.
Income	£ 202,887	£ 163,492	£ 241,698
Directors' fees	3,000	...	...
Income tax	49,500	27,896	59,208
Net profit	150,387	135,596	182,490
Brought forward	24,874	30,799	41,577
Preferred dividend	95,400	95,755	141,047
No. of times covered	1.6	1.4	1.3
Deferred dividend—			
Amount	49,062	29,063	30,000
Earned %	28.0	20.6	20.7
Paid %	25	15	15

Carried forward..... 30,799 41,577 53,020
The associated companies appear to be fully dividing their earnings. Yeast-Vite is paying dividends of £60,000 on net profits of £56,247 (against 1930 payments of £32,550 on profits of £57,639), while the dividend of Prichard and Constance is 20 per cent., against 10 per cent. Veno Drug shows a considerable enhancement of profits from £17,323 to £111,309, of which £20,000 is placed to special reserve. The directors of Beecham's Pills have applied the balance of £47,257 standing to reserve account on March 31, 1931, in reduction of trade investments and advances. They are of the opinion that these investments are now "worth" the figure at which they stand. The board proposes to seek the withdrawal of the provision under the articles of association by which the directors are debarred from fees unless a dividend of at least 25 per cent. is paid on the deferred shares, "in view of the desirability of conserving profits." The object of this alteration, doubtless, will commend itself to shareholders and its results to the directors. The extent of the balance-sheet's liquidity is not ascertainable, since the trade debtors and stock-in-trade are lumped in one item. The 1s. deferred shares, at 1s. 9d., yield £9 9s. 6d., per cent., less tax.

Industrial Profits.—During May we received 196 company reports, aggregate profits showing a decline of 33.30 per cent., compared with 13.66 per cent. in April:—

Reports.	No. of Companies.	Variation in Net Profits (1931 compared with 1930).
Published in 1931—		%
April	217	— 10.49
May	211	— 22.3
June	192	— 21.93
July	185	— 39.46
August	55	— 19.59
September	74	— 44.02
October	170	— 58.26
November	147	— 35.59
December	157	— 68.54
1932—		(1932 compared with 1931).

Other Companies				
Total	440	53,386,135	41,498,130	— 22.27

The figures for May were adversely affected by the results of seven oil companies, which showed a reduction in profits of 42.56 per cent. One of the best reports was that of Marks and Spencer, which increased its profit from £476,073 to £670,117. British Match earnings were also fairly well maintained at £442,597, compared with £461,387 last year.

Oil Conference Breaks Down.—It was announced at the end of last week that the delegates to the Oil Conference in New York had failed to reach agreement and that the attitude of the Russian delegates had made it impossible to continue negotiations. The Conference was called at the instigation of the Socony-Vacuum Oil Corporation and was attended by representatives of the other Standard Oil Companies, the Royal Dutch-Shell group, the Anglo-Persian-Burmah Oil group, and the Roumanian and Russian producers. It was understood that the international combines had offered to purchase the Russian output for a period of years, but that the Russian delegates had refused to curtail future shipments to the 1931 level or to give up their distribution facilities in Great Britain, Germany and Spain. Further, the Russian Government possessed contracts for the supply of oil to French and other Government navies, which they did not desire to relinquish. It is thought that the combines would have agreed to allow the Russians their present contracts and marketing outlets if the Soviet Government had been willing to curtail their production to the 1931 level. The Conference, however, served one purpose. It brought together the representatives of the Standard Oil, Royal Dutch-Shell and Roumanian exporters and enabled

some agreement to be reached for the limitation of price-cutting in the most competitive world markets. Moreover, it is not believed that negotiations have been finally abandoned. The President and Vice-President of the Socony-Vacuum Oil Corporation are leaving for Europe early next week and it is thought that another world conference will be held in Paris or London, which the Russian delegates will attend.

Anglo-Persian Oil Company.—The accounts of the Anglo-Persian Oil Company show a decline of about 50 per cent. in trading profits. This result compares unfavourably with that of Burmah Oil, but is on a par with that of Shell Transport. The company estimates the royalty payable to the Persian Government at only £134,750, as compared with £1,014,955 in 1930. On the other hand, the amount payable for preference dividends has been increased by the issue last year of 231,059 8 per cent. and 1,973,414 9 per cent. preference shares to the holders of the preference shares of Scottish Oils, Broxbourne Oil, Oakbank and Pumpherson Oil Companies. The new preference shares carried interest from April 1, 1931, and involved the extra payment of £147,069 (equivalent to £196,092 in a full year). The earnings on the ordinary shares, after deduction of preference dividends, amounted to 3.7 per cent., as against 19.5 per cent. in the previous year. Thus, even the reduced ordinary dividend of 5 per cent. (against 10 per cent. in 1930) was not earned. The results for the past two years are shown in the following table:—

	1930.	1931.
Net profits	£ 6,717,498	£ 3,409,518
Royalty	1,014,595	134,750
Directors' fees	14,066	12,815
Tax	1,258,782½	671,485
Depreciation and amortisation	587,218	601,944
Debt interest and redemption	481,475	471,750
Earned for dividends	3,361,362	1,516,774
Preference dividends	875,000	1,022,068
Earned on ordinary %	19.5	3.7
Paid on ordinary %	15.0	5.0
General reserve, &c.	263,000	...
Carry-forward	896,676	720,129

† Including £500,000 tax reserve.

The directors' report attributes the fall in profits to the slump in oil prices. Sales have been well maintained, and various important economies have been effected in the fields and in the refineries. In particular, the association, from January 1, 1932, of the company's petrol subsidiary, British Petroleum, with the Shell-Mex, Limited, in the new company Shell-Mex and B.P., Limited, marks, according to the directors, "a most important step in the direction of rational and economical distribution, from which very considerable advantage should accrue to the company." The balance sheet shows that a strong financial position has been maintained, the surplus of current assets over current liabilities amounting to £5,198,098, as compared with £5,421,111 in the previous year. British Government securities and cash totalled £5,819,000, as against £5,553,000 in the previous year. The ordinary shares reacted on the dividend reduction, and were not improved by the publication of the accounts. The present market quotation is 24s. 6d. and the yield £4 4s. per cent.

Burmah Oil and Taxation.—Sir John Cargill, at the meeting of the Burmah Oil Company, instanced a number of disquieting facts regarding taxation of petroleum products. In this country the petrol tax is 8d. per gallon. In India the selling price includes almost 1s. per gallon of Government tax, representing over 77 per cent. of the well-head return to the producer. It has been estimated that, exclusive of wages, 46 per cent. of the total annual cost of running a motor 'bus in Madras represents direct taxation, and, in the case of a private motor car, some 29 per cent. During the past year the Burmah Oil Company contributed to the Government of India through royalties and Excise duties a sum of no less than £2,766,000, and in Indian income tax, State duties and municipal taxes some £470,000. In respect of wharfage, port dues and rail freight the company paid out £1,162,000, and in wages,

salaries and commissions £2,527,000. The value of the company's operations to India can scarcely be questioned. Sir John Cargill had no difficulty in showing that the company had ample liquid resources with which to face a continuance of the present difficulties. Investments in British and Indian Government securities were £3,993,376 and cash £1,784,876. In spite of the fall in the market value of Anglo-Persian and Shell Transport shares, the book value of holdings in these companies was still below the aggregate market value. No special depreciation was, therefore, required in the books of Burmah Oil.

Lower Tea Prices.—Tea market quotations have recently shown a weaker tendency, as the following comparative table of London tea market averages shows:—

	Week to June 4, 1931.		Jan. 1 to June 2, 1932.		Week to May 5, 1932.		Week to June 2, 1932.	
(Per lb.).	s.	d.	s.	d.	s.	d.	s.	d.
Northern India.....	0	9.94	0	10.01	0	9.74	0	6.73
Southern India	1	3.55	0	10.26	0	10.32	0	9.13
Ceylon	1	2.65	1	2.16	1	5.80	0	10.71
Java	0	6.76	0	7.55	0	8.62	0	5.30
Sumatra	0	7.79	0	6.83	0	7.48	0	4.60

The heavy drop in the last month has been the more disappointing to growers since the statistical position (as we showed in a Note on May 21st last, page 1150) is not in itself unsound. It has reflected partly a decline in quality and partly heavy offerings. It is clear that buyers laid in supplies largely before the Budget, and to this extent demand at the moment may be below normal. Another factor, however, cannot be overlooked. There is a definite danger involved in an increase of the retail price of tea to the consumer of about 20 per cent. on the cheapest "canister," at a time of increasing pressure on individual standards of living. This has been the inevitable result of the reimposition of a preferential tea duty in the last Budget. As we suggested last April, the benefits of Imperial preference may be two-edged if they involve the imposition of higher prices on Empire products in order that still higher prices may be paid on non-Empire goods.

The Revival in West Australians.—The moral of last week's observations (writes our mining correspondent) is pointed by the annual reports of two companies. During 1931 the Great Boulder Proprietary produced somewhat less gold than in the preceding period, but, thanks to the gold premiums, the revenue amounted to £245,000, as against £153,600, the net profit being £35,970. The dividends of 25 per cent. absorb somewhat more than the earnings, but the bulk of the 12½ per cent. disbursed in respect of 1930 came out of the carry-forward. No allowance for depreciation on plant has been made for some considerable time, although the machinery has been kept in a good state of repair; but on the present occasion the company's shareholding in the Carmen Valley is completely written off. Advances to that concern figure for £13,000, and 11,700 Wiluna shares stand at £4,800—much below their market value. Irrespective of these items, the balance sheet shows a cash surplus of £112,600—subject to the final dividend and to a reserve of £39,550, against tributers' claim under appeal. At 132,100 tons the ore reserves display an increase of 45,000 tons, the value of 8.1 dwts. being about 1 dwt. down. Referring to the new developments, the directors observe that "should the lode disclosed continue south, as seems probable, the prospects of the mine must be enormously improved." The Sons of Gwalia Company owns property at Mount Leonora, several hundred miles north of Kalgoorlie. At one time the company paid fairly good dividends, but it has been out of the list since 1930. Indeed, but for financial assistance from the Government of Western Australia, the mine would probably have been under the necessity of closing down. Last year an operating surplus of £57,700

was made, against £17,800 in 1930. The bulk of the former amount is swallowed up by taxes and special appropriations; still, sufficient remains to provide a distribution of 6d. per share—subject to the scaling down of the capital by one-half. The Government loan has been reduced from £64,900 to £43,500. Developments last year are described by the directors as "generally satisfactory"; categorical details are not given in the report.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Antofagasta (Chili) and Bolivia Railway, British Bank of South America, Suez Canal, Investment Trust Corporation, City of London Real Property, Burmah Oil, Lobitos Oilfields, Howard and Bullough (Securities), Amalgamated Metal, Telephone Rentals, J. and P. Coats, Boots Pure Drug, and W. J. Bush and Company. At the annual meeting of the British Bank of South America, Sir Bertram Hornsby said that as regarded coffee, the drastic steps decided upon last year had resulted, he understood, in the destruction up to May 28 last of 6,863,333 bags, and the National Coffee Council was sparing no effort to solve that problem, upon which the whole economic position of Brazil depended so largely. Addressing the shareholders of J. and P. Coats, Mr J. O. M. Clark said that by the end of 1931 there were seventeen countries from which it was either impossible to remit money or from which such transactions could only be accomplished with difficulty and delay, and in some cases at considerable sacrifice. Presiding at the annual meeting of Boots Pure Drug Co., Lord Trent emphasised the minute care taken in the preparation of medical products. The annual meeting of Burmah Oil is referred to on page 1309.

CAPITAL ISSUES.

The week's sole issue, at the time of going to press, was made by *Allied Newspapers, Limited*, which offered 2,000,000 6½ per cent. first preference £1 shares (not underwritten) at par. The proceeds were designed to discharge bank loans incurred by a subsidiary, Allied Northern Newspapers, in connection with the purchase of newspaper properties. The security for dividends on the new shares will be, first, the earnings of the issuing company, and, secondly, the prospect that the Northern subsidiary will be a profitable property now that the "provincial newspaper war" has ended. The pre-present issue, will be somewhat heavy, on the basis of last year's profits, although the latter were actually sufficient to cover the dividends on the new first preference shares 4½ times. For the second preference and ordinary shareholders of Allied Newspapers, therefore, much will depend upon the confirmation by events of the forecast of the directors that dividends, equal to 20 per cent. of the Allied ordinary capital, can now be looked for from Allied Northern. This estimate, obviously, depends on the assumption that no further decline will be experienced in newspaper revenues generally, and that there will be no future recrudescence of the "provincial war." Particulars were published at the week-end of a new issue of £10,000,000 *Central Electricity Board* £26,000,000. The flotation brings the total borrowed by the Board within £14,000,000 of the maximum of £50,000,000—a fact which itself reflects the rapid progress made in recent months with national electrification under the "grid" scheme. We refer to the current position, in this respect, in a Note on page 1308. The present issue (which gives a running yield of £4 13s. 11d. per cent.), utility stocks.

Public Offers.

Central Electricity Board.—Issue on June 13th of £10,000,000 4½ per cent. stock, 1957-1982, at £96 per cent. The stock ranks with previously issued stock as a first charge on the undertaking and net revenues of the Board. The stock will be redeemed by a cumulative sinking fund, commencing not later than 1938. Any stock not previously redeemed will be repaid at par on August 1, 1982, but the Board reserve the right to redeem at par on any interest date on or after August 1, 1957, on three months' notice. The proceeds of the issue will be used to provide further funds for the construction and acquisition of main transmission lines, for working capital, and other purposes.

Allied Newspapers. Issue of 2,000,000 6½ per cent. cumulative first preference shares of £1 each at par. Holders will be entitled to convert not more than one-fourth of such holding into an equal nominal amount of ordinary shares on June 1, 1936, into an equal nominal amount of ordinary shares. The company was registered on March 24, 1924, and either directly or through subsidiaries owns and controls a large number of national and provincial newspapers. Net profits for the past five years, before deducting income tax, were as follows: £735,191; £797,712; £721,902; £642,765; £586,454. The dividend on the preference shares now being issued requires £130,000, and is thus covered about 4½ times.

Rugby Gas Co. Offer for sale by tender of £25,570 5½ per cent. preference stock, minimum price of issue, par. The company was incorporated in 1882. Net revenue for the year ended December 31st last was £15,125 and loan interest £3,836, so that dividend on the preference stock, including the present issue, was nearly four times covered.

Further Stock Exchange information, including the latest profit and loss accounts, reports and notices, dividend announcements and American railroad monthly receipts, will be found, under the heading "Company News," on page 1328.

COMPANY MEETINGS, &c.

BURMAH OIL COMPANY, LIMITED.

DIVIDEND OF 17½ PER CENT.

STRONG BALANCE SHEET POSITION.

FURTHER LARGE ALLOCATIONS TO RESERVES.

CONDITION OF THE OIL INDUSTRY.

DEMAND AND PRICES.

SERIOUS EFFECTS OF EXCESSIVE TAXATION.

COMPANY'S CONTRIBUTION TO INDIA'S WELFARE.

SIR JOHN T. CARGILL'S ADDRESS.

The thirtieth annual general meeting of the Burmah Oil Company, Limited, was held, on June 3rd, within the Merchants' Hall, 30, George Square, Glasgow.

Sir John T. Cargill, Bart. (chairman of the company), presided over a large attendance of shareholders.

The Chairman: Ladies and Gentlemen,—I have here the certificate of the posting of the notice calling this meeting, which I presume I may, as usual, hold as read, and I will call upon the Secretary to read the auditor's report.

The Secretary (Mr F. G. Holdsworth) read the auditor's report. The Chairman: Ladies and Gentlemen,—The report and accounts have, as usual, been in your hands for fully a week. I suppose I may hold them as read. (Agreed.)

SERVICES OF MR. WATSON.

I am sure that you will all share my own and my colleagues' great regret that our managing director, Mr R. I. Watson, is not with us to-day. As probably most of you are aware, Mr Watson is in America taking part in a very important oil conference being held there, at which he is watching the interests, not only of the Burmah Oil Company, but of the whole indigenous oil industry of India, to which in the past he has rendered signal and invaluable services. It is sincerely to be hoped that, as the result of this conference, arrangements may eventually be come to among the principal oil producers in the world to put an end to the reckless over-production and wanton waste of petroleum—to-day the most important product of Nature in the whole world—and to restore the oil industry generally to a state of reasonable prosperity.

I have so often spoken of the great services Mr Watson has rendered to your company that I feel I need not repeat myself here, and all I will say is that we may consider ourselves fortunate to have as managing director a man of the outstanding ability and devotion to his duties of Mr Watson, and one who has such a marvellous grasp of all the ramifications of the oil industry.

WORLD TRADE CONDITIONS.

Much has happened in the world since we last met to add to the difficulties and uncertainties under which trade, and particularly international trade, has had to be carried on in recent years. There has, however, been at least one compensation. For these currency and exchange and other crises have acted, so to speak, as rockets warning the nations of their nearness to the rocks of universal disaster and of the necessity for early and concerted action to avoid that shipwreck.

But the way back to safe waters remains to be found. There are as many opinions as there are captains, and signs are still lamentably lacking of any agreement on ways and means and as to where and how and when to begin their application.

To-day I am concerned merely with the unfortunate fact that there has yet been no apparent advance towards anything in the nature of an international settlement of reparations and war debts and tariffs, and without some such comprehensive settlement there can be little hope of any real revival of trade and return to prosperity.

NEED FOR NATIONAL ECONOMY.

As regards the position in and the outlook for our own country, I think it will suffice if I repeat what I said the other day in my speech at the annual meeting of the Glasgow and West of Scotland Economic League in connection with the financial position of the

nation—namely, "For nine years now we have been spending in round figures £800,000,000 a year. A continuance of expenditure on anything approaching these figures could, in my humble opinion, only lead to national bankruptcy, and that before very long—especially as in the direction of death duties and surtax we were using as revenue what, if the nation's finances were run on sound lines, ought to be treated as capital." (Hear, hear.)

There have been both favourable and unfavourable reactions on the fortunes of your enterprise from some of the events in connection with world trade to which I have just referred, although the latter have predominated. Demand for your products depends on the prosperity of the Indian people, which in turn depends on the prosperity of the world as a whole. Demand has, therefore, been slowed down; but while there has been keener competition for the smaller outlet which exists the linking up of the rupee with the pound sterling and departure by this country from the gold standard have given us some advantage over importers of foreign oils produced in gold standard countries.

POSITION OF THE OIL INDUSTRY.

For the first time in its history expansion in demand for the products of the oil industry is marking time; indeed in many countries there has been an actual decline. And this is happening at a time when there never was a more realised and potential supply of the commodity, never greater need for it, and never greater means in existence for its profitable utilisation, or, so far as the industry itself is concerned, never a time when its products were available at so low a figure.

On the other side of the account the general commodity productive capacity, and consequently the earning and spending capacity of the countries of the world, was never more able than to-day to take advantage of the cheapening of transport and of movement as a whole which the products of the oil industry make possible.

It is under these conditions that the illogical is happening. International trade generally—and petroleum is an international commodity, produced in many countries, and consumed to a greater or less degree in every country of the world—is being threatened with complete eclipse, except possibly between certain points clearly defined by mutual currency standards and/or by preferential or prejudicial tariff barriers. Every ingenuity of science and engineering, all the fortitude and the best of the adventuring spirit of the youth of the world is in the air, in the water, and on land drawing the girdle smaller and tighter round the world and bringing its peoples into closer communication and contact, while politics, currencies, and national economies are creating barriers against these improvements and what they should be yielding towards the sum of human happiness and world recovery and prosperity. (Applause.)

There is a common saying with us that things have sometimes to get worse before they can be better, and one can only hope that so it may be to-day—that this apparently senseless piling up and aggravation of the world's difficulties, and creation of endless obstacles to world recovery, is merely the darkest hour before the dawn of better things, and that world statesmanship will not prove so bankrupt of that art as to fail at the eleventh hour to find the way out. (Applause.)

LESSENED DEMAND IN INDIA.

Last year I made clear to you all that these conditions—with others peculiar to our industry and to the market where our

products are sold—were already breaking down values, and that the outlet for our products was being circumscribed to a point where prices might have to go lower if we were to secure the share of the trade necessary to prevent a reduction in the scale of our operations. These anticipations were unhappily realised. The depressed economic condition of India consequent on the gravely reduced ability of its foreign customers to purchase its primary products, the political unrest, and the fresh exactions by Government from petroleum products have all operated to reduce the buying capacity of the people. Demand for all petroleum products—petrol for the first time—has registered a considerable decline, which is continuing. For the smaller outlet there has been intensified competition, but not even the seriously lower prices which have resulted have been able to stem this shrinkage in demand.

TAXATION OF PETROLEUM PRODUCTS.

I have referred to the further direct taxation on petroleum products which the Government of India has seen fit to impose during the year. You will remember that at our last meeting I told you of the increases in excise duties which the Indian Budget of the preceding March had imposed. To these, in September, surcharges were added—as they were also to import duties—amounting to 25 per cent. of the then existing duties. This selection of petroleum by almost every Government to assist in the relief of distressed Exchequers is not the least of the serious difficulties being laid up for the future of the industry. An opportunity has been presented by the low levels to which increased production competing for attenuated demand has reduced price levels. It is notorious—just as in the case of rubber, tea, sugar, and indeed most commodities—that these price levels are uneconomic for the greater part of the industry, whose production will in normal times be essential to meet demand. Petroleum is not a luxury. It is a wealth-producing fuel and lubricant on which the industrial and commercial life of the whole world is to-day very deeply dependent. These are not taxes on the profits of the industry. They are taxes in effect on the industries and on the commerce which require and use petroleum, directly or indirectly, for their economic existence. These industries are thus paying special taxation.

The oil companies are merely tax collectors. The consuming industries themselves may not greatly, or so greatly, feel this taxation to-day. It has slipped in and on to petroleum values abnormally low because of the disequilibrium between petroleum production and consumption. But by one means or another, whether by agreement or by exhaustion of the less fit, equilibrium will one day come back to the petroleum industry, and if, as it must, it then raises prices for products to an economic level, these other industries which, directly or indirectly, depend so much on these products for the success of their operations will find that State taxation has put their costs up to grievous levels. It may then be that the petroleum industry and the State will be faced respectively with reduced consumption and reduced revenues.

EXTENT OF THE BURDEN.

Taxpayers as a whole and those who use petroleum products—and who does not to-day?—and those who are interested in the fortunes of oil companies should watch and ponder this tendency very carefully. You may or may not be aware that the petrol you use in this country, coming mainly from overseas, carries 8d. per gallon of Government tax in its price to you. In India the selling price includes almost 1s. per gallon of Government tax. It represents to-day over 77 per cent. of the well-earned return to the producer, and out of the balance the producer has all his overhead expenses, depreciation, administration, income tax, and fixed interest to meet before he can consider what, if any, is left for reserves and the ordinary shareholder. I see that it has been represented to the Madras Government that, exclusive of wages, out of a total annual cost of running a motor bus in that Presidency, amounting to Rs. 8,253, 46 per cent., or Rs. 3,801, represents direct taxation. And, if there be any profit left, there is income and profession tax on that. In the case of a private car some 29 per cent. of the annual running cost is given by the same authorities as due to direct taxation. Is it any wonder that, under such conditions, the value of the internal-combustion engine in opening up and developing production and consumption in a country where, if anywhere, it is so badly required, is being rapidly lost? Imports of motor vehicles to India fell in 1930-31 by 33½ per cent. and in 1931-32 by 37½ per cent. on the preceding years.

EXAMPLE OF KEROSENE.

I attach so much importance to this dangerous tendency that I ask your indulgence in giving you another very striking illustration of how far it has travelled. You have all frequently heard of our kerosene price restriction policy. That policy was initiated in 1905, and the price then fixed for some 200,000 tons per annum of our kerosene has never been advanced, despite the almost revolutionary changes in valuations and increases in costs which the events of inter-

vening years have brought about. Our price for this oil to-day is what our price was in 1905. Direct State taxation has, however, under normal conditions, increased it to the consumer by Rs. 1.6.6 per eight gallons and has rendered it meantime completely ineffective for the purpose for which it was instituted. In other words, the benefit we intended to give to the consumer, and did give him to his enormous advantage for at least a quarter of a century, has now been taken away by the State, although at the moment, because of the keen competitive conditions in the market to which I have referred, the consumer is paying only Rs. 0.14 of the State tax of Rs. 1.6.6 on this oil.

COMPANY'S SERVICE TO INDIA.

By way of showing you and all those interested in the prosperity of India what the operations of your company mean to that country, both as to resources and employment, I gave you some interesting figures when I last addressed you, and I think it would not be out of place if I put before you again a few facts in this connection.

During the past year we contributed in round figures to the resources of the Government of India through royalties and Excise duties a sum of no less than £2,766,000. In Indian income tax, State duties, and municipal taxes we contributed £470,000. Then in respect of wharfage, port dues, and rail freight we paid out £1,162,000. Turning now to employment, I find that in wages, salaries, and commission to selling agents we paid out during the year no less than £2,527,000.

These figures, totalling as they do close on £7,000,000 sterling, are somewhat staggering and must induce in the minds of all dispassionate persons who are interested in the welfare of India some conception of what the operations of your company mean to the country. The figures do not represent the sum total of the advantages which India derives from our operations. I have taken only the principal headings and I have not included the operations of our associated companies, the Assam Oil Company and the Tinsplate Company of India, although I have taken into account the expenses incurred on the sale of our products in India through our associate, the Burmah-Shell Oil Storage and Distributing Company of India, Limited.

These figures represent very important factors in the economic and industrial life of India.

ITEMS IN THE ACCOUNTS.

If you will now turn to the accounts which you have before you I shall, as usual, go through the more important items.

At £637,172 18s. 6d. we have applied £56,258 10s. 11d. more for depreciation than in 1930. There has been considerable capital expenditure on refinery account due to installation of the most modern plant for distillation and treatment, which, as the report has told you, gives us not only greater flexibility in process, but also increased volumes of higher quality and value products. Obsolescence in refining plant is rapid owing to the big advances constantly being made in technique, and it is, therefore, very desirable to depreciate here on a very liberal scale.

After charging this depreciation the balance of profit taken into the profit and loss account amounts to £1,586,222 16s. 1d., as compared with £2,033,388 7s. 7d. in 1930. Transfer fees and interest and dividends amounted to £998,891 19s. 5d., or £431,920 13s. 3d. less than in 1930, due, as in 1929, mainly to smaller dividends from our holdings in the Anglo-Persian Oil Company, Limited, and the Shell Transport and Trading Company, Limited. These receipts increase the balance in the profit and loss account to £2,585,114 15s. 6d., and, deducting directors' and the auditor's fees, income tax, subscriptions, employees' provident fund contributions, and interest on debentures, in all £715,619 10s. 2d., the balance of profit carried down amounts to £1,869,495 5s. 4d., which compares with £2,736,013 4s. 6d. for 1930.

ALLOCATIONS TO RESERVES.

From this there has been allocated to:—

General reserve, £300,000, bringing it up to £2,300,000.

Insurance reserve, £20,000, bringing it up to £580,000.

Taxation reserve, £350,000, bringing it up to £700,000.

You will remember that I told you last year that we felt we could leave the "Fields Expenditure Equalisation Reserve Account" at the round £1,000,000 to which our then allocation brought it, and we have thus a saving this year under that heading. Considerable economies have been realised in fields and refinery costs, and the management is reasonably satisfied that the risk of violent fluctuations in the cost of crude oil production has now been sufficiently discounted by this reserve.

On the other hand, taxation is more obscure. In my earlier remarks on the direct taxation of our products I have indicated the danger of reliance on and the objections to such heavy burdens as those presently current in India, and the Finance Member of the Government there has, in imposing the more recent additions, promised their removal as soon as the Budget can be balanced

without them, although more recently—misled, I am afraid, by speculative and not consumptive demand for kerosene at the low level of prices lately ruling—he has suggested that they do not appear to be an unbearable burden on at least that product. There, as elsewhere, prices advance with increases in and fall with reductions of duties, and, for this and other taxation risks, your board feels that this reserve account should thus be strengthened.

MARKET VALUE OF THE INVESTMENTS.

Reserves thus get £670,000, as against £970,000 in 1930. Despite the heavy depreciation which has taken place in almost everyone's investments, and, in the circumstances of our heavy investments in the Anglo-Persian and Shell companies, inevitably also in our own, the aggregate market value of our investments at December 31st last was, and is to-day, above the cost at which they stand in our books. (Applause.) No special depreciation is therefore required in that connection.

I would like here to repeat what I said last year with regard to these oil investments of the company. The Assam Oil Company is surely, if slowly, being brought into a position to take the fullest advantage of the better times when they come. Meantime it can be expected at least to hold the ground gained in recent years. Some of you may already have read my speech at its annual meeting in London on the 30th ultimo. In any case, reprints of that speech will as usual be circulated to you with reprints of this, and you will see from what I then said that that company, even in these difficult times, has made further substantial advance in cleaning up its balance sheet and is approaching the time when it can hope to resume payments of dividends on a sound basis. We are now reasonably assured for a long period of supplies of raw material fully up to the volume of operations to which we have meantime set it, and which, under normal conditions, should enable it to earn and pay reasonable dividends.

ANGLO-PERSIAN AND SHELL HOLDINGS.

Then as to the Anglo-Persian and the Shell investments, I know of no reason to qualify the confidence I expressed last year. Both companies are well and conservatively managed. Technically—I mean as to the volume and costs of their raw materials and the efficiency of their production, refining, and marketing arrangements—both are stronger, if anything, than they have ever been. In the past both have dealt conservatively with their revenues, and I have no reason to doubt that this continues to be their policy and that their resources will be maintained liquid and sufficient to meet all the changes of these times. As you are aware, they have recently merged their distributing companies in this country with, I am satisfied, enormous advantage, both realised and potential, to their position. With the return of better times in the industry both companies should once again contribute satisfactorily to your revenue.

DIVIDEND FOR THE YEAR.

Turning back to the accounts, we have now to add the carry forward of £812,517 11s. 11d., giving us £1,812,012 17s. 3d. to be carried to the balance sheet, or £353,775 4s. 2d. less than the 1930 figure. From this the preference and interim ordinary dividends have taken £523,044 4s. 7d., and from the remaining balance of £1,288,968 12s. 8d. we have recommended the payment of a final dividend on the ordinary shares of 2s. 6d. per share, less tax at 3s. 7½d. per £, which is the United Kingdom rate of 5s. less Dominion income tax relief. With the interim dividend of 5 per cent. your confirmation of this recommendation will give a total ordinary dividend for the year of 17½ per cent. (Applause.) There will then be left £586,045 11s. 2d., which your board recommends should be carried forward.

There is no change on the liabilities side of the balance sheet in respect of capital. "Sundry creditors and credit balances" at £1,058,646 3s. 2d. compares with £1,244,139 11s. 2d. in 1930, and "Fire and marine insurance account" at £1,235,225 9s. 2d. shows an increase on 1930 of £65,608 16s. 8d., representing the excess of premia credited over claims in the period.

THE ASSETS.

On the assets side, "Refineries, etc.," at £1,507,750 1s. 7d., shows a net increase of £17,245 14s. 3d., due to the considerable capital expenditure incurred in the year, to which reference has already been made. The fields block account, which is the next item, is, according to our practice of years, not increased by the capital expenditure there in the period. "Fields electrification" and "Pipe line" accounts have been reduced respectively by net figures of £46,470 4s. and £13,008 1s. 9d., and "Tankers and tank installations" increased by £18,926 16s. 6d. Heritable property remains at the 1930 figure. "Stocks of plant and stores," at £1,345,597 6s. 5d., compares with £1,532,459 6s. 10d. in 1930, while "Stocks of products," including petrol and kerosene which have borne the higher rate of Excise duties, at £1,304,630 8s. 9d., com-

pares with £1,250,314 18s. 2d. in the previous year. "Loans to employees" has fallen to £8,483 10s. 7d.—fully secured by provident fund balances, or otherwise.

Investments in British and Indian Government securities are higher at £3,993,376 0s. 11d. than in 1930 by £1,067,325 2s. 10d.; "Miscellaneous" is down on 1930 by £67,093 14s. 4d. to £8,400,240 17s. 1d.; "Subsidiary companies" has been further reduced by £42,581 15s. 8d. through repayment of debentures; and a small capital adjustment has increased "Associated companies" by £17,411 17s. 11d.

Under the heading of "Indebtedness" that of "Subsidiary companies" has been reduced by £304,526 12s. 9d., and "Associated companies" by some £68,872 13s. 8d. And the last item, "Loans, deposits, and cash," is up by £61,163 19s. 11d. at £1,784,876 9s. 2d.

STRONG POSITION.

That, ladies and gentlemen, is the result of our stewardship of your great business through trying and difficult times, and these our recommendations to you for keeping your position strong and your resources liquid to meet and weather their continuance. I cannot pretend to see the end of these conditions, but I can say with complete confidence that, so far, you have emerged from them much better than most shareholders in even the best and strongest companies in the industry. (Applause.) Among none of these will you find a balance sheet better fortified to withstand what the future may have in store in the shape of further adversity, or a technical position better able to reap the fullest benefits of any turn in the tide. (Applause.) Once more, on your behalf and that of your board, I wish to convey to the management here at home and to the staff and our employees as a whole both West and East an expression of appreciation of loyal and efficient service rendered under very trying conditions. (Applause.) All have pulled well at the oar and have contributed in their respective stations to the foregoing results.

During the difficult times of 1927-28 we set going a campaign of "sound economy"—i.e., the securing and marketing of our production at the lowest possible cost consistent with efficiency and with taking advantage of every technical advance to maintain the quality of our products second to none. That campaign, continued ever since, has penetrated to an extent that has really become a habit throughout your organisation. Stabilised in the volume of our operations as we have been for years there has not been the same scope for spectacular reductions in costs as have been possible to others differently situated. These have nevertheless been substantial, and there has been a general tightening up of control and improvement of organisation materially strengthening the producing, refining, and marketing efficiency of the whole machine.

CURRENT YEAR'S PROSPECTS.

As regards prospects for the current year, you will, I know, not expect me—especially in these very trying and uncertain times—to depart from my usual caution. The year opened with very low prices in India for kerosene—our principal product—and when the very heavy Excise duty which we have now to pay on this product is taken into account the returns realised during the first two months of the year fell to a lower level than any we have hitherto experienced. There was a substantial rise in March, which has so far been maintained; but prices are still, on average, below those secured during the first nine months of last year, and when the much higher Excise duty ruling this year is taken into account our returns on this product will show a very considerable shrinkage.

With the prospect of smaller dividends from both the Shell and the Anglo-Persian Companies and much lower rates of interest on our cash balances we shall not have as large an income from our interest and dividend account. Against these unfavourable features equipped ourselves adequately in the past in the matter of fields and refinery plant and appliances, and that we continue to realise satisfactory results from the economy campaign to which I have referred. Then there will be a reduction in round figures of £100,000 in income tax, and, with £700,000 at the credit of taxation reserve account, I think we have for the present made ample provision for any probable liabilities in that direction.

COMPANY'S STRONG POSITION.

We are not yet out of the wood, however, and, as trade is running to-day in India and is being competed for, we have to choose between accepting prices to ensure our required offtake and a reduction in the volume of our operations with additions to our stocks of products for which but for foreign imports there would be room and to spare in India. Under such conditions we continue in our determination to take the outlet we require and to avoid restricting the scale of our operations with all that that would involve in unemployment in India and Burma.

Fortunately, as a result of the policy which we have pursued in the past, we have a strong balance sheet and ample liquid resources

with which to face a continuance of the present difficulties through which we, like the rest of the industry, are now passing, and I think we can look forward to the future with confidence. (Applause.)

I beg to propose "That the report of the directors and audited statement of accounts, including the balance sheet and profit and loss account to December 31, 1931, presented to the meeting be received, approved and adopted," and I shall call on Mr G. C. Whigham, assistant managing director of the company, to second this motion. After the motion has been seconded an opportunity will be given to shareholders to ask questions or make comments.

Mr G. C. Whigham: I beg to second the motion.

The Chairman: Any questions, ladies and gentlemen?

No questions were asked.

The Chairman: There being none, I have now much pleasure in formally putting to the meeting the resolution which I have just proposed and which Mr Whigham has seconded.

The resolution was unanimously adopted.

DIVIDEND RESOLUTION.

The Chairman: I have now pleasure in moving, "That the dividend on the ordinary shares recommended by the directors at the rate of 12½ per cent. per annum (2s. 6d. per share), less tax, making with the interim dividend paid in November last 17½ per cent., less tax for the year, be adopted and that the same be hereby authorised to be paid on June 10, and that the balance of £586,045 11s. 2d. be carried forward."

Mr William Ferguson: I beg to second the motion.

The Chairman: I am perfectly certain, ladies and gentlemen, you are all in favour of that. (Applause.)

The resolution was adopted.

The Chairman: I beg to move, "That Mr H. S. Ashton be re-elected a director of the company."

The Rev. Robert Asher: I have much pleasure in seconding the re-election of Mr H. S. Ashton as a director.

The Chairman: I am sure you are all agreeable to that. (Applause.) I now beg to move, "That Mr R. A. Murray be re-elected a director of the company."

Mr W. J. McLeod: I have much pleasure in seconding the re-election of Mr R. A. Murray as a director.

The Chairman: Are you all agreeable, ladies and gentlemen? (Applause.)

Mr James Ferguson: I beg to propose the reappointment of Mr James Herbert Wilson, C.A., as auditor for the current year.

Mr F. J. Stevenson: I beg to second the motion.

The motion was adopted.

The Chairman: That is all the business from the chair.

VOTE OF THANKS TO THE CHAIRMAN.

Mr J. A. Ralston Mitchell: Ladies and Gentlemen,—Before we leave I should like to take this opportunity, with your permission and on your behalf, of tendering our thanks to Sir John Cargill for his occupancy of the chair to-day. If ever there was a year in which the chairman and directors of this great company required the sympathy and assurance of the confidence the shareholders place in them, it is on this occasion. We all know the great difficulties of the times through which we are passing, and I am sure that one and all of us feel proud, grateful, and thankful for the wonderful balance sheet which has been presented to us to-day. (Hear, hear, and applause.) I think that this is the twenty-eighth consecutive annual meeting over which our worthy chairman has presided.

We all look forward at each annual meeting with intense interest to the chairman's speech. This year we have again not been disappointed in his speech. We hope that Sir John will long be spared to be with us at many meetings in the future. (Applause.) We feel sure that his speeches will always contain the interesting details, given with weight and authority, which we all so much admire. Ladies and gentlemen, I will not keep you longer, but will merely ask you to accord with me a very hearty vote of thanks to Sir John for his presence with us to-day and to give him our assurance of the confidence and support in which we uphold him. (Applause.)

The motion was carried with acclamation.

THE CHAIRMAN'S TRIBUTE TO THE LATE MR DONALD.

The Chairman: While listening to the very kind words in which Mr Ralston Mitchell has proposed the usual vote of thanks to me as chairman of this meeting, my thoughts instinctively carried me back to our meeting last year, when in his own inimitable, gracious, genial and genuine way the late Mr T. F. Donald, not for the first time, proposed the vote of thanks to me, and I feel I would like to take this opportunity of publicly expressing my great appreciation to one who for fully 50 years occupied an outstanding position in the professional, the business, and the social life of our great city. The professional, the business, and the social life of our great city. Mr Donald was a firm believer in, and staunch supporter of, the Burmah Oil Company and a regular attender at all our meetings, and his loyal support of myself in my business and my public life and

his unfailing friendship and happy companionship in my private life will always remain as one of my happiest and most treasured memories.

THE COMPANY'S DIVIDEND RECORD.

I have to thank you, ladies and gentlemen, for the very warm reception you have given me to-day and for the very patient hearing of what I am afraid was a very lengthy address. I do not think I have anything material to add to what I said in that address. I sometimes think that people—very naturally in the case of shareholders—are led to look too much to the dividend record of a company and not to its position apart from dividends. Well, as regards dividends, I do not think we have anything to be ashamed of—(applause)—because since my late father in 1888 guaranteed a 10 per cent. dividend for three years on the shares of the company in order to raise the £40,000 which he required to float the Burmah Oil Company, we have never paid less than that, and we have sometimes paid a bit more—(laughter and applause)—but, proud as I am of our dividend record, I am infinitely more proud of our balance sheet. (Applause.)

I have on more than one occasion referred to the balance sheets which I was submitting to you as the finest and strongest in the history of the company, and to-day I repeat that statement with every assurance. (Applause.) I can only repeat what I said in my speech, that with such a balance sheet you can look forward to whatever times happen to be in front of us with quiet confidence and equanimity. (Applause.)

The proceedings then terminated.

HOWARD AND BULLOUGH (SECURITIES) LIMITED.

FIRST RESULTS AS A HOLDING COMPANY.

SIR GEORGE BULLOUGH'S REVIEW.

The thirty-eighth annual ordinary general meeting of the shareholders of Howard and Bullough (Securities), Limited, was held at Globe Works, Acerington, on Wednesday, June 8th, at 12 o'clock noon. The chairman of the company, Sir George Bullough, Bart., presided.

The report of the directors and auditors and balance sheet were taken as read.

In moving the adoption of the reports and accounts, the Chairman said:—

Although this is our thirty-eighth annual general meeting, it is nevertheless the first meeting of Howard and Bullough (Securities), Limited. As our new name indicates, our function is not now that of a manufacturing concern, but is in the nature of a holding company; your assets are no longer in buildings and plant, but are now mainly in stocks and shares. In the report and balance sheet, which I presume you will agree may be taken as read, there are some items to which I propose to refer.

BALANCE-SHEET ITEMS.

Owing to the changed conditions consequent upon the transfer on October 1, 1931, of the manufacturing assets, and trading having ceased to be carried on by your company at September 30, 1931, it is not practicable to compare the result with former years. The profit includes our income from interest and dividends on investments, as also income tax recovered, whilst on the other hand depreciation has been written off chiefly prior to the date of transfer to the Textile Machinery Makers, Limited.

You will observe that a large sum has been written down for loans and debts under schemes of arrangement, &c. This consists of various amounts deemed to be irrecoverable, all incurred prior to September 30, 1931. In former years it was considered that the reserves were ample to cover these, and so long as there was any hope of realisation they were not written off the books, but your directors now consider that all such debts, &c., should be written off so as to leave the books clear. The contingency reserve was formed in order to make provision for losses of this nature.

FUTURE SOURCE OF INCOME.

As I intimated to you at the extraordinary meeting on November 11th last, our income in future will consist of interest and dividends from investments, cottage property rents, &c., and such return as there may be from Textile Machinery Makers, Limited. After payment of sundry expenses, and should this income be maintained and no unforeseen loss sustained, the net income will be sufficient to pay the debenture interest and leave a substantial balance.

You will also note from the balance sheet the shares in Textile Machinery Makers, Limited, are difficult to value, but as you are all aware, the state of the textile machinery trade has, for some time, been in a very depressed condition, and unfortunately still continues so, and as you will readily conceive, even with economies accruing to reorganisation, the pooling of technical resources, and selling

conditions, a greater amount of business must be obtained to enable profits to be earned. The market value of shares is fixed according to the profits they yield; therefore, having regard to these conditions, I am sure you will realise that it is impossible to state the value of the shares in Textile Machinery Makers, Limited, at the moment.

DIVIDEND.

Your directors recommend that, in addition to the full preference dividend, a dividend of 1½ per cent., less tax, for the year, be paid on the ordinary shares. Although this is only a small return, I venture to hope you may not deem it entirely unsatisfactory under the very difficult conditions, and trust our recommendation will meet with your approval.

I now beg to move that the report of the directors and auditors and accounts as presented in the balance sheet be allowed and passed.

The resolution was duly carried after being seconded by Mr F. L. Dawson, Chorlton-cum-Hardy.

Mr W. I. Bromiley, Bolton, moved that a half-yearly dividend at the rate of 6 per cent. per annum, less income tax, be paid on the preference shares, making with the interim dividend already paid a total of 6 per cent. for the year, and that a dividend of 1½ per cent., less income tax, for the year, be paid on the ordinary shares.

Mr George D. Berry, Accrington, seconded, and the resolution was agreed to.

Mr W. Collison, of St. Annes-on-Sea, expressed his pleasure in moving the re-election of Mr George Boothway as a director of the company. This was seconded by Mr J. S. Wilkinson, Clayton-le-Moors, and unanimously approved.

Mr Boothway tendered thanks for his re-election.

Messrs John Adamson, Son and Company, Manchester, were re-elected auditors of the company on the same terms as before, under a resolution moved by Mr J. Drake, Accrington, and seconded by Mr W. C. Miller, Accrington.

The meeting terminated with a vote of thanks to the chairman, co-directors, and staff, on the proposition of Mr W. Collison, St. Annes-on-Sea, seconded by Mr A. Foster, Ashton-on-Ribble, to which the Chairman suitably replied.

BRITISH BANK OF SOUTH AMERICA, LIMITED

BRAZIL'S DIFFICULT YEAR.

The sixty-ninth ordinary general meeting of the British Bank of South America, Limited was held, on the 7th instant, at the head office, 117 Old Broad Street, London. Sir Bertram Hornsby, C.B.E., chairman of the bank, presiding.

The Chairman said that 1931 had been another year of great difficulty for Brazil in common with the rest of the world. The Provisional Government had continued to make the most strenuous efforts towards rehabilitation of the national finances, paying off accumulated debts of past administrations, ruthlessly reducing expenditure, and increasing taxation, but, owing to exchange difficulties, had been obliged in March last to make a funding arrangement with its foreign bondholders. He was glad to recognise that Brazil, in the face of great difficulties at home and abroad, was showing determination to do all it could to meet its obligations.

The chairman then quoted the export and import figures for 1931 and the previous five years, and pointed out how clearly those demonstrated the effect of the continued fall in world prices. He said that, whilst coffee continued to be by far the largest export, the Provisional Government continued to encourage in every possible way the production of other articles, the development of the fruit trade with Great Britain being particularly satisfactory. As regarded coffee, the drastic steps decided upon last year had resulted, he understood, in the destruction up to 28th ultimo of 6,863,333 bags, and the National Coffee Council was sparing no effort to solve that problem, upon which the whole economic position of Brazil depended so largely.

As regarded the extraordinary reduction in imports, he pointed out the remarkable ability of Brazil to do without those goods which could not be supplied from her own still largely undeveloped natural resources.

The profit and loss account showed an available balance of £168,916 after paying the interim dividend of 3 per cent., amounting to £30,000 in September last. As stated in the report, the directors proposed—in view of the present world-wide abnormal conditions—to transfer £50,000 to contingencies account and to carry forward £118,916, as against £118,759 brought in from 1930. Taking into consideration the exceptional trading difficulties, they considered the result satisfactory. The capital employed in Brazil showed an estimated depreciation of £117,944, which was covered by the carry forward; the reserve was unchanged at £1,000,000.

The report and accounts were unanimously adopted.

SUEZ CANAL COMPANY.

REVIEW OF A DIFFICULT YEAR.

The seventy-eighth annual meeting of the Suez Canal Company was held on Monday, June 6th, in Paris.

The Marquis de Vogüé (the president) presented the report of the Council of Administration, which was substantially as follows:—

As was inevitable, the results for the past year show the effects of the intense economic crisis which has raged throughout the whole world for nearly three years. The industrial and commercial depression, which had already affected the results of the year 1930, was still more severe during 1931, and the canal traffic shows a further decrease as compared with the preceding year. The year, however, opened under comparatively satisfactory conditions; during the whole of the first six months, in fact, traffic was appreciably greater than the average of the last five years and was only slightly smaller than in 1930; but, from July onwards, the situation changed, and the second six months was much less favourable than the first. During the period under review net tonnage showed a decrease of 5 per cent. as compared with 1930 and of 10 per cent. as compared with 1929, a year which was exceptionally good. This decrease in traffic must, after all, be considered moderate, under the present circumstances.

As you will remember, we told you at the last meeting that we absolutely refused to yield to the pressure of aggressive demands, but that, the moment a reduction in charges appeared opportune, we would not hesitate to act. In November, the position having altered considerably, a reduction in tariff charges seemed necessary. From that moment the agitation against your company stopped completely and the excellent relations which had existed for so many years between your company and its customers were re-established. Furthermore, the shipping industry, particularly affected by the crisis, was in a very grave position, to which we could not, either morally or as a matter of policy, be indifferent. Meanwhile, the depreciation of the pound sterling began to impose on the majority of our shipping clients a large, though perhaps temporary, increase in the transit charge. In view of these various considerations, we have thought your company would be false to its traditions if it ignored the need for co-operation, and we have decided to reduce the charge, as from November 15th, to 6 francs for loaded ships and to 3 francs for ships in ballast. But, in order to show the exceptional character of this reduction and to emphasise that it was brought about by circumstances which must come to an end some day, we have decided to limit its duration, but to extend it if the present circumstances continue unchanged.

In 1931, transit receipts have thus suffered from the double effect of smaller traffic and lower charges. As against this, we have, fortunately, now reaped the fruit of efforts made during years of prosperity to improve the canal; its excellent condition has allowed us to make large reductions in maintenance charges without impairing in any way the safety or facilities of its navigation. Whilst expenses showed a considerable reduction for 1931, they will be still further reduced during the current year. Also, only a small provision need be made for improvements. We do not propose making any allocations this year to reserve for depreciation and renewals. This is much bigger than the value of the existing material and, furthermore, no important work is in view for the moment. As against this, we have allocated 60,000,000 francs to reserves for insurance and contingencies in order to be able to deal with the depreciation which, as we shall explain to you later, certain of our assets have undergone.

The profits for the year 1931 show a marked decrease, but we consider that the exceptional circumstances justify our taking a large sum from reserves built up during years in which the franc was depreciated in order to meet any future exchange fluctuations. By taking 50,000,000 francs from the extraordinary reserve, which at the moment exceeds 60,000,000 francs, it will be possible to declare a gross dividend of 605 francs per share. The statutory reserve will, moreover, remain intact. As you know, it is 200,000,000 francs, and very greatly exceeds the minimum fixed by the Articles.

As you can see, your company has maintained, through a very difficult period, a very strong financial and moral position.

The total receipts at 979,877,486 francs, show a decrease on those of the preceding year of 118,870,032 francs. This decrease is explained principally by the fall in transit receipts which are lower by 107,080,951 francs. Expenses have been reduced to 295,438,818 francs and are 18,543,884 francs less than in 1930.

After all allocations, the excess of receipts over expenditure amounted to 564,794,833 francs, to which has to be added 1,436,346 francs brought forward from 1930, and the amount of 50,000,000 francs taken from the extraordinary reserve, making a total of 616,231,183 francs. Of this sum it is proposed to distribute among the shareholders 612,326,760 francs, and to carry forward 3,904,422 francs.

The dividend will amount to 605 francs gross and 486 francs 64 net for bearer, and 507 francs 78 for registered shareholders.

BOOTS PURE DRUG COMPANY, LIMITED.

RECORD YEAR.

945 SHOPS AND 129,000,000 CUSTOMERS.

The forty-fourth annual general ordinary meeting of Boots Pure Drug Company, Limited, was held, on the 8th instant, at Station Street, Nottingham.

The Right Honourable Lord Trent, chairman of directors, presided over a large attendance of shareholders.

The Chairman said: Turning to the balance sheet, you will see that freehold properties are up by £159,727. Practically all of this is accounted for by outlay on our new manufacturing laboratories at Beeston. Plant and fittings have increased by £133,810 for the same reason.

The building is now rapidly approaching completion, and already one department is housed there, but it will be several months before the various manufacturing sections are in full production in their new home.

Stock-in-trade shows a decline of £50,482 on last year's figures.

The amounts owing by subsidiary companies have increased by £90,230.

On the other side of the balance sheet, sundry creditors, provision for income tax and contingencies, show an increase of £52,624.

We have again transferred £30,000 to the general staff pension fund, which, with £13,309 on account of interest, now amounts to a total of £309,498, which sum has been set aside by the shareholders during the past ten years out of their profits, on which income tax has been paid. Apart from this, however, during the past year we have continued our usual practice of paying retiring allowances to those who have retired through sickness or old age, and altogether on these and general welfare work the firm spent the sum of £50,000 during the year. In addition, the retail companies have contributed nearly £12,000 to their chemists' pension fund.

DEPRECIATION CHARGES.

I should like to say a few words in explanation of the very large increase in the depreciation fund. It has always been our custom to depreciate plant at a very much larger figure than is allowed by the income-tax authorities. We are thus in the very desirable position of being able to replace even comparatively new equipment if it has been superseded by some improved type. Owing, however, to the large amount of new plant which is being installed at Beeston, our depreciation charges during the next few years will be much higher than usual.

We have, therefore, adopted the course of making a special provision of over £36,000 before arriving at the trading profit, which will be applied during the next few years in equalising the depreciation charges. This sum, together with the normal charge of £55,790 appearing in the profit and loss account makes a total increase in the depreciation fund of £92,070.

Referring to the works development fund, you may recall when that fund was started in 1927 that I said in the chairman's speech "We think it wise to set aside the sum of £100,000 as a fund out of which we can pay for the inevitable expense of transferring departments to a new site."

We have taken £60,000 during the past year to reduce the book value of certain properties which we shall no longer require when the Beeston works are fully developed. It is recommended that a further £100,000 should be set aside for this fund, making a balance of £140,000 available for any additional expense incurred in the removal. Your directors feel that this sum should amply cover any further charge on this fund, as the remaining buildings being vacated by the manufacturing departments are urgently required for other purposes.

PROFIT AND LOSS ACCOUNT.

Turning to the profit and loss account, you will notice that the net balance, after charging repairs and renewals and the other items to which I have just referred, amounts to £731,891, or an increase of £9,627 over last year.

If you add the £36,000 which I mentioned a few moments ago to the sum of £866,950 trading profit, you will see that the company had a record year, which, in view of the extraordinary difficult business conditions, must be considered very satisfactory.

After payment of all preference and preferred ordinary dividends, and of four quarterly dividends of 6 per cent., less tax, on the ordinary shares, we have a balance from the year's profits of £275,141 to which, together with the balance from last year, amounts to £495,484. Your directors recommend the payment of a bonus of 1s. per share, free of income tax, on the ordinary shares, absorbing

£75,000, which is the same as last year. They also recommend that £100,000 shall be added to the reserve fund, which will then stand at £1,400,000, and a transfer made of £100,000 to the works development fund, leaving £220,484 to be carried forward to next year.

CONFIDENCE OF THE PUBLIC

The increasing confidence of the public in the firm is shown in many ways. For instance, the dispensing in the branches, both of private and National Health Insurance prescriptions, showed a greater increase than in any other year of our history. Although there was no serious epidemic last winter, and very little cold weather, the number of prescriptions dispensed was up by nearly half a million.

We had also an increase of nearly 5,000,000 of sales transactions, or, as it is more generally referred to, of customers, making a record total of 129,000,000 for the year. This has naturally meant a great increase in the amount of tonnage sent out.

Although in the retail business the sales during the year of our drugs, medicinal and toilet preparations, and surgical requisites reached record figures, even better results were obtained from the export side, where the amount of our own medicinal products and fine chemicals exported showed a very large increase indeed. This, I am sure, will be particularly gratifying to our shareholders, as it shows that, while we recognise that it is our duty as retailers to provide the public with the best value we can get and the newest products of medicinal skill from any part of the world, we are also contributing in the vital matter of exports.

THIRTY-FOUR NEW SHOPS.

I think it would be of interest to our shareholders and customers to know that not only are our special medical products carefully controlled by our chemists and analysts as regards their activity and absolute purity, but when all our chemical and biological tests have been completed we still do not issue these products to the medical profession until they have first been approved by physicians and chemists of high standing in certain of our leading hospitals and universities. We are extremely fortunate in having connected with us as consultants some of the leading biochemists, physiologists and physicians who assist us in the scientific and clinical investigations which are so important in connection with new or improved products.

During the year, 10 shops were rebuilt almost entirely, and the total was brought up to 945 shops by the opening of 34 new ones, including one in Wigmore Street, London, in a convenient position for the specialists and nursing homes in that district; this branch is fully equipped to deal with their particular requirements.

We have a splendid staff who always do their utmost for the success of the company, and we are extremely glad to be able to say that the above results have been obtained without our having had to put in any general wage reductions.

I have now much pleasure in moving: "That the accounts be accepted, and that the appropriations out of the profits as printed in the directors' report be and are hereby approved."

Mr J. E. Greenwood seconded the adoption of the report, which was carried unanimously.

On the proposition of Mr J. W. Hind, seconded by Col. Braithwaite, the retiring directors were re-elected as follows: Messrs J. E. Greenwood, H. R. Gillespie, L. K. Liggett, Dr. P. C. Brett and Mr. B. A. Bull.

Messrs Sharp Parsons and Company, chartered accountants, Birmingham and London, were reappointed auditors, on the motion of Mr A. N. Bromley, seconded by Mr T. S. Ratcliffe.

A cordial vote of thanks to the chairman and directors was heartily approved, on the proposition of Sir Harry Peat, seconded by Mr. G. C. Bond.

The Chairman, in reply, said: I am not going to make any prophecies for the next year. In times like these I do not think one should, but our staff know that wages will be the last thing to be touched and not the first, and we are quite satisfied that has a great deal to do with the magnificent spirit they show in working for this organisation. I can only say nobody hopes more than I do myself that when the time comes for our meeting next year I shall be able to place before you results at least as satisfactory as we have to-day.

AMALGAMATED METAL CORPORATION, LIMITED.

PRODUCTION AND PRICES.

MR CHARLES V. SALE REVIEWS THE POSITION.

The ordinary annual general meeting of the Amalgamated Metal Corporation, Limited, was held on the 8th instant at the Fur Trade Sale Room, Garlick Hill, London. Mr Charles V. Sale (chairman of the company) presiding.

The Secretary (Mr F. G. Palin) having read the notice convening the meeting and the report of the auditors,

The Chairman, in the course of his speech, said: I ask your attention in the first place to the combined balance sheet covering the results of the two companies for the year ended December 31, 1931.

The current assets, amounting to £3,133,582, were all good, and after making provision for doubtful debts and accrued charges, including income tax, the excess of current assets over current liabilities was £1,360,095.

INVESTMENT HOLDINGS.

The investment holdings, standing in the balance sheet at £2,932,230, are subject to the valuation shown by the inset figures to which I will refer later. In order to clarify the accounts, it has been considered desirable to reclassify these investment holdings under four headings. Leaving aside the differences entailed by the transfer from one heading to another, there is a net increase in the group total of £492,000.

Of the principal items making up this sum, £226,000 has been lent to a subsidiary company against the deposit of securities, replacing bank loans. After this replacement the subsidiary companies of the British Metal Corporation have no loans other than those from their parent company. A further £226,000 was invested partly in companies in connection with agency contracts for the sale of their output, and partly in Huntington Heberlein and Company, which handles our technical and metallurgical business. Under the fourth heading, namely, allied companies, there are advances of £106,000 to our New York, Montreal and other agencies, and £275,000 invested over the last two or three years, through our Montreal office, in the development of a Canadian mining property which is wholly under our control. The equipment of the mine has been recently completed, there are ample reserves of ore, but the mill will not be operated until the prices of lead and zinc improve.

The operating profit of the constituent companies was £265,126; a transfer was made from internal reserves, including income tax not required, of £137,654; while the amount brought forward from 1930 was £19,184; the three sums together making a balance for disposal by the constituent companies of £421,964.

The transfer of £137,654 from internal reserves just mentioned together with £52,346 from current revenues, making £190,000 in all, was allocated to reserves—£20,000 as an addition to the general fund, bringing the total up to £800,000, and £170,000 to the creation of a reserve for contingencies, to replace the internal reserves which have been held from time to time. There are no known contingencies against which this reserve has been created.

The sum remaining to the credit of profit and loss was £231,964, of which £203,438 was paid in dividends to your corporation, and the remainder, namely, £28,526, carried forward to the year 1932. The final total of reserves and undivided profits of the constituent companies on December 31st amounted to £998,526, against £857,590 a year ago.

VALUATION OF INVESTMENTS AND SHARES.

Before leaving the combined balance sheet, will you please refer again to the valuations of investments and shares in subsidiary companies which are inset, and show by comparison with the balance-sheet figures a difference, that is to say, an estimated depreciation, of £530,635.

The investments are mostly a permanent part of your business. They have, in the main, either been acquired to secure contracts guaranteeing the supply of ores and metals to the merchandising and trading departments, or to secure a share of the distributing trade in other countries. In our opinion, there is no need at present to deal with the question of their depreciation; we are confident that the world cannot be long supplied with metals and ores at prevailing prices, and we look forward to a rise which will, of course, be followed by a commensurate upward adjustment in capital values. For the time being we draw your attention to the estimate which has been made, and, on the other hand, to the reserves and undivided profits.

Turning now from the combined balance sheet to the profit and loss account of your corporation, you will see that credit has been taken for the dividends of £203,438 received from the constituent companies in respect of the year ended on December 31, 1931. Half-yearly dividends at the rate of 6 per cent. per annum on the

cumulative preference shares were paid in June and December, and your directors recommend a dividend of 3 per cent. upon the ordinary shares, payable, less income tax, on June 13, 1932, leaving £18,403 to be carried forward, against £11,360 brought in.

WORLD PRODUCTION AND PRICES.

In considering the course of your trade in 1931, it is only possible to gain a correct perspective by taking into our survey the events of the last three years. For a long time after the financial crisis of October, 1929, there was no material reduction in the supplies of non-ferrous metals. Producers clung to high output in the belief that the market decline was only temporary and this view was particularly widely held in the United States, which plays such an important part in this trade. It will be seen from the figures of world production which follow, that, speaking broadly, there was little change in this attitude until the closing months of 1930:—

	Average Monthly Production, 1928-1929.	Average Monthly Production, 1930.	Average Monthly Production, 1931.	Production, January, 1932.
Copper.....	149,600	130,200	111,700	75,000
Tin	15,400	14,600	12,100	9,600
Lead.....	140,300	137,400	115,000	108,000
Spelter.....	118,600	115,900	83,000	72,000

The year 1931 was, as you may judge for yourselves, one of extreme difficulty—falling prices, slackening demand, accumulating stocks.

The Chairman then indicated by the following table the extent of the continuous fall in prices:—

LONDON METAL EXCHANGE CASH QUOTATIONS.				
Average for	Standard Copper.	Standard Tin.	Soft Pig Lead.	G.O.B. Spelter.
Year 1913—	£	£	£ s. d.	£ s. d.
Gold	68	202	18 6 0	22 14 0
Year 1929—				
Gold	76	204	23 5 0	24 16 0
Year 1930—				
Gold	55	142	18 1 0	16 11 0
Year 1931—				
Sterling.....	38	118	12 19 0	12 4 0
January, 1931—				
Gold	45	116	13 17 0	12 15 0
January, 1932—				
Sterling.....	39	140	15 2 0	14 8 0
May, 1932—				
Sterling.....	28	122	10 13 0	12 9 0
The equivalent gold prices for January, 1932, and May, 1932, would be—				
January, 1932—				
Gold	28	99	10 13 0	10 3 0
May, 1932—				
Gold	21	92	8 1 0	9 7 0

The year ended, he continued, on a markedly lower level of both prices and consumption, the only satisfaction, poor though it be, is that we all recognise how futile it is to take ores out of storage in the earth, convert them into metal and hold them in storage in our warehouses.

CO-OPERATION V. NEEDLESS COMPETITION.

Looking ahead, we must remember that the production of non-ferrous metals under modern conditions requires large, and often very large, capital outlay, and the trade has therefore tended to concentration in the hands of great companies, and this makes for international co-operation in the control of output and distribution. Proof of this tendency may be seen in the formation of international cartels which, certainly in the case of tin and spelter, have done much to lessen the wasteful burden of unwanted stocks. This process of working together to save needless competition is being carried further. In the meantime, we cannot expect the measures effective until the world causes of depression are removed. Among these, I lay stress on the restraints imposed upon international trade and exchange. When the stream of commerce is allowed to the first to recover, and the prices of its products among the first one which is becoming even greater by reason of this period of strain and stress, and, with the organisation and experience at its command, and the devoted services of its efficient staff, stands ready for the improvement in trade for which we are all hoping.

The Chairman concluded by moving the adoption of the report and accounts, which was carried unanimously.

J. & P. COATS, LIMITED.

A PERIOD OF UNEXAMPLED DIFFICULTIES.

The forty-second annual ordinary general meeting of J. & P. Coats, Limited, was held, on the 9th instant, in Glasgow.

Mr J. O. M. Clark, chairman of the board, presided, and in moving the adoption of the report and accounts, he said:—I can hardly expect that many of our shareholders will have received this balance sheet with much satisfaction, as it shows a substantial reduction in both profits and dividend as compared with those to which they have been accustomed, but I hope that the results obtained during a period of unexampled difficulties will not, in the light of what I am going to tell you, be considered as unsatisfactory as they may at first sight have appeared.

After referring in detail to a number of items in the balance sheet, he proceeded: In order to meet the payment of the dividend of 10 per cent., which we ask you to confirm, it has been necessary to withdraw from the dividend reserve fund a sum of £350,000. As there seems to be some misapprehension regarding the purpose of this fund, I would like to remind you of the circumstances under which it was started. It originated in the year 1902, when the company first started paying quarterly dividends, and a sum of £450,000 was reserved out of profits and earmarked for this purpose. In subsequent years further sums were added to this reserve until it amounted to £2,550,000, the figure at which it stood up to this year. The original intention of the board, as expressed at the time, was to make sure that the company would be justified in making the payment of quarterly dividends in advance, and before the result of the year's working had been ascertained. It was not contemplated that this should be looked upon as a dividend equalisation fund, though it has on a number of occasions been referred to as such by shareholders.

Those of you who were shareholders in 1921 will recollect that £250,000 was withdrawn from this dividend reserve fund and added to the profit and loss account, but was replaced in the fund the following year. The directors maintain, and I am sure their attitude will meet with general support from the shareholders, that this fund exists rather for the purpose of helping the company over a difficult time like the present, than for the purpose of maintaining dividends at a high rate, regardless of whether the company is earning them or not, until the fund is exhausted. In view of the extreme uncertainty of the times, they feel that most of the shareholders would prefer to receive dividends during this crisis at a moderate rate rather than see their reserves rapidly dissipated, and that they will consider that 10 per cent. in these times is a reasonable rate.

At our annual meeting last June I informed you that we proposed to pay a quarterly dividend of 9d. per share, and that we hoped to continue quarterly payments at that rate. The statement was purposely made in guarded terms, but we did not anticipate any immediate likelihood of our failing to implement that intention, and I feel that it is now incumbent upon me to give you an explanation of why our policy had to be so quickly reversed. In order to make this as clear as possible to you, I think I cannot do better than trace very briefly the events of the year 1931 as they have affected our business.

The year started with stock values written down to what appeared to be a very low level. During the months of January and February our sales held up well and values showed a steady improvement, until at the beginning of March the prices of our principal cotton qualities had risen about 30 per cent. During the next three months, while prices were not fully maintained, they were still, at the middle of June, well above the figure ruling at the end of 1930. At the beginning of July a sudden break in the market took place and values fell rapidly until in the middle of August Egyptian cotton was being freely offered at a figure never before touched, and with enormous crops both in America and Egypt in sight, and practically no demand, there seemed to be no particular reason why the price should not fall a great deal further.

The depreciation at this point in the value of our stocks amounted to over half a million pounds, and it was not a question simply as to whether we should pay a dividend of 9d. for the quarter ending in September, but whether we should pay any further interim dividends until the result of the year's working had shown that such were justified.

At the end of September the situation again changed. Great Britain, as you all know, went off the gold standard, and the prices of cotton and other commodities in terms of sterling at once rose. Simultaneously with the rise in raw materials the demand for our goods temporarily increased. Though prices ruling at the end of September were not maintained, the cotton market remained relatively steady, and the year finished with values very similar to those at the start.

The benefits which it was expected would accrue to British export trade as a consequence of the abandonment of the gold

standard were to a large extent neutralised by the exchange restrictions which one country after another imposed to protect their own currencies. Indeed, this has been, and remains, one of the most substantial of our difficulties. By the end of the year there were seventeen countries from which it was either impossible to remit money or from which such transactions could only be accomplished with difficulty and delay, and in some cases at considerable sacrifice. Since then the position has become decidedly worse, and the number of countries affected by restrictions has more than doubled.

It is in view of this situation that we have reserved £550,000 from our profits and set it aside for exchange differences. The necessity for this step must be so evident to most of you that very little in the nature of justification for having made this provision is required from me. The figure has been arrived at on a conservative basis and whether it will all be needed or whether it will eventually prove to be insufficient depends much less on anything that we can do than on the course of events and the stability of those countries where the money is at present held up.

Comment having been made upon trading conditions in various markets, the speech continued: Economic nationalism of an extreme order is everywhere apparent, and in the anxiety of most countries to increase their manufacturing capacity there is a danger that the real advantages of commerce may be overlooked. It is true that by this process a country becomes more and more self-supporting but only at the expense of greater effort and increased cost to its own nationals, and ultimately to a fall in their standard of living. Natural advantages and traditional skill are by no means evenly disposed throughout the world, and inevitably particular countries are able to do certain things to greater advantage than their neighbours, who may be situated where conditions are less favourable and it is not for the good of mankind as a whole that barriers should be set up which restrict the free interchange of commodities. The theory, which has received too ready acceptance in recent years that it is "good business to sell goods but not to buy" is gradually strangling international trade, and is not the least of the causes that have contributed to the present world-wide depression. It is to be hoped that those who attend the coming Conference at Ottawa will keep this before them, because there are parts of the British Empire where in our experience this psychology of self-sufficiency has been as highly developed and fostered as anywhere else.

Reference was then made to the acquisition of a part of Messrs Lister's business, and the Chairman went on to say: With regard to the future, I can merely repeat that which I told you last year, when I stated that business can only improve when general conditions throughout the world are better. When that day arrives the directors are confident that as the result of the economies and reorganisation which have been made to maintain the efficiency of the organisation, the company will be better equipped to meet competition than at any other time in the past, and to retain the position which it has so long held.

That our trading profits are £200,000 more for 1931 than for 1930 has no special significance, being almost entirely due to the fact that a very large sum was required for the writing-down of our stocks the previous year.

One is loth to talk in a pessimistic tone if the adoption of any other note would hasten the return of that confidence which is so much required, but I feel I should be misleading you if I followed the lead of some of our politicians both in this country and abroad who seem to be willing to adopt any attitude rather than that of facing the facts as these present themselves. Indeed, their statements leave one with the impression that they are mainly anxious to soothe their public and delay taking those steps—among which the most pressing is, perhaps, the need for economy in public expenditure—which alone offer hope of bringing about a better state of affairs. I am certain that circumstances will compel this country to undertake most drastic reductions over a wide field of public expenditure, both local and Imperial, and it would appear most necessary that those in authority should without delay prepare the public mind for sacrifices that will require to be borne if the economic life of the community is to be restored to a sound and solvent condition.

It is difficult to see how we can look for much business enterprise in any direction until either a considerable rise in the level of prices has occurred or a reduction in the burden of taxation by which, at the moment, industry is so much hampered.

The chairman concluded with an appreciative reference to the long connection of two directors who are now retiring from the board, and a warm acknowledgment of the efficient services of the staff in a year full of difficulty.

Resolutions were then passed adopting the accounts and re-electing directors and auditors.

At an extraordinary meeting held at the close a resolution converting shares into stock as from July 1st was adopted.

A vote of thanks to the chairman concluded the proceedings.

THE INVESTMENT TRUST CORPORATION, LIMITED.

20 PER CENT. DIVIDEND MAINTAINED.

MR H. A. VERNET'S ADDRESS.

The forty-fourth annual general meeting of The Investment Trust Corporation, Limited, was held on the 8th instant at the offices of the company, Gresham House, 24 Old Broad Street, London, E.C.

Mr H. A. Vernet (the chairman) presided.

The Secretary (Mr Hildred Carlisle, F.C.I.S.) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,—In the capital account the only alteration of note is the increase of £125,000 in the issued share capital, 75,000 4 per cent. preferred shares and 50,000 deferred shares having been offered for subscription to the deferred stockholders at par, and, when fully paid, they were converted into corresponding amounts of the respective stocks.

REVENUE ACCOUNT.

Turning to the revenue account, the balance remaining after debenture interest, management and other expenses, and provision for income tax, is £250,735, compared with £275,884 a year ago, or a diminution of £25,149. The income of the two years is not exactly comparable, because of the £125,000 of new capital mentioned above. Apart from that, the past year's income has been augmented by the premium realised on foreign currencies converted into sterling, which has contributed £29,789 towards the net revenue receipts. The balance remaining is equal to 23.05 per cent., less tax, on the deferred stock, and we are proposing a dividend of 20 per cent. When making our usual estimate a year ago we foresaw a diminution on the amount of revenue received for the previous year. It is necessary and proper to warn you to-day that a considerable further reduction in revenue is forecast, and will in all probability be realised during the current year. In the meantime, the balance proposed to be carried forward on net revenue account is increased from £204,081 to £237,317, which is equivalent to 21.7 per cent., less tax at the current rate, on the deferred stock.

VALUATION.

It has been the custom in this company for many years past to afford the stockholders information as to the market value of the investment holdings. A year ago, an appreciation over book cost of about £280,000 was indicated; this year a depreciation of approximately £2,124,000 is arrived at, or 23.6 per cent. under book cost. Against this, there are the reserve and balance carried forward totalling £1,937,317. It has sometimes seemed to me to be rather unkind to stockholders to attempt a valuation figure under such conditions as now prevail. However that may be, you have been warned in the past, when times were prosperous and surpluses large, not to attach undue importance to the valuation. It is right, therefore, that your attention should be drawn to the fact that to-day current quotations represent little more than what may be termed option prices on many stocks of erstwhile high reputation and record. Take, for example, two American railroad stocks whose names are almost household words. New York Central shares of \$100 were obtainable a few days back at \$9 per share, and Pennsylvania Railroad \$50 shares at \$6½. Until the year 1932, the former had paid regular dividends since the year 1870, and the Pennsylvania since 1847. Atchison stock, too, on which, in 1929, earnings were equal to \$22.7 per share, and which was quoted as high as \$298, recently sold at \$23½ per share. Such prices are, I submit, little more than option prices; and other striking illustrations might be quoted, both in the United States and nearer home. True, more than 56 per cent in value of our holdings is in bonds, and another 24 per cent in preferred stocks, but in those classes also some remarkable prices are being recorded. Let it therefore be borne in mind that depreciation in market values at a given date is not synonymous with a realised loss. The classifications set out on the second page of the report inform you of the geographical location and ranking of the investments.

THE PAST YEAR.

During the past year we have seen a devastating setback in world prosperity. Among other arresting occurrences, our own country has been forced off gold parity, and shelled out of the Free Trade trench which she had defended through long years, and, in years gone by, at great advantage to her commerce. At great tribulation and expense, an unbalanced Budget has been

restored to equilibrium, and we have seen a return of some degree of confidence. Let us not omit to look at the other side. We cannot prosper so long as our overseas customers are impoverished. We must manufacture cheaply and export largely in order to pay for our necessary imports; and export trade is faced with a perfect sea of troubles and obstacles. Take the pressing, the all-important question of reparations and war debts. President Hoover's moratorium will shortly come to an end. A conference is to meet at Lausanne this month, after a deferment from January–February of this year, one effect of which deferment has been to prolong uncertainty; on the other hand, it has had the advantage of giving time to think, and there have been signs from time to time on both sides of the Atlantic that the time has not been altogether wasted. One cannot put it higher than that. Unless the Conference can arrive at agreement, the outlook is dark indeed, and dark not only for the debtor nations. Failing agreement, it is surely time our country took a line of its own. World prosperity depends to a large extent upon the exchange of commodities between the nations, and what do we see? Every kind of obstacle to international trade, wide fluctuations in currency values, "blocked" accounts so-called in local currencies, restrictions on exchange, high protective tariffs, quotas, and generally such a bagful of inanities that one is tempted to exclaim with Hans Sachs, "Wahn, wahn, überall wahn!"—Mad, mad, everywhere mad! Some of the effects of all this are illustrated in the long list of defaults by foreign States, and the numerous reductions and passings of dividends by commercial companies heretofore prosperous.

There are, happily, exceptions to the bad fashion of default by foreign States, even in South America. The Argentine stands out as an honourable exception. Not only interest payments, but also what appear disproportionately large payments for sinking fund on foreign loans are being regularly met, and a real effort made to balance the budget and fund an unwieldy floating debt. The way is long, the difficulties are great, and many of them have yet to be solved. Business is unprosperous and the railways are going through a period of great privation and troubles of various kinds, many of which—not all—are due to crop and price conditions. For a country whose exports consist of cereal and pastoral products to have maintained in full its onerous foreign debt payments, in spite of the world level of prices, is surely creditable to the Argentine Republic.

THE OUTLOOK.

I have stated that we are faced with the prospect of a reduced revenue. What are the prospects of recuperation?

As regards our own country, we are now in a period of cheap money. The reduction in interest rates is beginning to have its natural effect on securities. Not many weeks ago there was little demand for anything outside the category of "gilt edged"; recently there has been a small but distinct broadening of the demand. Unless financial history is falsified, the demand will extend and confidence revive, though not rapidly—too much money has been lost for that, and world conditions are too uncertain. Then we should not overlook the fact that the general price-level of commodities is low, thus furnishing a correspondingly safe basis for an upward movement in industry and commerce. It may be argued that low prices are due to over-production, coupled with widespread impoverishment—questions of supply and demand. Quite true. Take for illustration the case of wheat. The last official report showed an estimated reduction of no less than 346,000,000 bushels in the winter wheat crop of the United States, or more than 38 per cent. on last year's total crop, winter and spring, which was 892,300,000 bushels. The United States Farm Board—one of the most undesirable institutions ever invented by governmental wisdom—is understood to have an over-carry of large amount, not only in wheat but also in cotton. No recent figures are available as to the amounts, but I have not heard the overhang of wheat in the United States put as high as 346,000,000 bushels. Yet the net effect on the price has been almost insignificant. There is, for the time being, plenty of wheat in the world. It will not always be so. To those who favour governmental action to raise the price of commodities I respectfully suggest the above figures for reflection. Foster the demand by reducing taxation and enabling people to have: leave the supply to adjust itself.

CURRENCY AND CONFIDENCE.

Inflation is the subject of much writing and speaking. Admitting as we must the evils of unremunerative prices and widespread unemployment, may it not be worthy of consideration whether old-fashioned remedies—saving and investing, wise spending, economy in Government expenditure, reduction of taxation, honest money (I know "honest" is a hard-worked adjective), a return of sanity among nations—are not likely to furnish a surer basis for recovery than that will-o'-the-wisp, inflation? The chief thing needful is a revival of confidence. It is not the lack of currency which is causing the trouble to-day. Take the situation in the United States. Published figures show that the Federal Reserve policy of buying Government securities, and so furnishing additional funds to the banks, has not, so far, secured the hoped-for results of raising prices and inducing the banks to utilise idle money. The past few days have furnished some signs of a turn in the tide. Up to then, loans and investments by the banks had not increased, they had diminished. The reasons are many: shortly summarised they are a Budget unbalanced, long-continued depression in business, a widespread loss of confidence, with consequent lack of demand for credit for business purposes. I mention this example in no narrow spirit of criticism of, or distrust in, the United States. Remedies are being diligently sought and applied, and results will undoubtedly follow, even if it be the case that the gold dollar has ceased to be an honest dollar, as Senator Borah is quoted as saying (that hard-worked adjective "honest" again). Among "remedies" may be included the Reconstruction Finance Corporation, the committee of twelve leading bankers and industrialists, and the American Securities Investment Corporation. The troubles of the United States to-day are not due to lack of bank credit or currency, but to other causes, some of which I have indicated briefly; to which I will venture to add another—politics in a presidential year. If any of our shareholders favour inflation, it may be suggested that they should first make up their minds what they mean by inflation, and then decide to eschew it. (Laughter.)

I will now move: "That the report and accounts as presented be and they are hereby received, approved and adopted, and that dividends of £2 per cent., less income tax, on the preferred stock, and £12 per cent., less income tax, on the deferred stock (making, with the interim dividend, 20 per cent. for the year ended May 2, 1932), be and the same are hereby declared."

The resolution was carried unanimously.

The retiring director (Mr C. L. Dalziel) was re-elected, and, on the motion of Mr Wallace, seconded by Mr Jones, the auditors (Mr C. O. Webb and Mr Lionel Baddeley) were reappointed.

The proceedings terminated with a cordial vote of thanks to the chairman, directors, and staff.

WEST RAND CONSOLIDATED MINES, LIMITED.

DEVALUATION OF SOUTH AFRICAN CURRENCY DESIRABLE.

Sir George Albu, the chairman, presiding at the annual general meeting of the West Rand Consolidated Mines, Limited, held in Johannesburg, on May 17, 1932, said that the whole of the debt to the General Mining and Finance Corporation, which stood at £216,125 at the end of 1930, had been repaid, and for the first time for very many years the company was out of debt, had funds in hand, and, moreover, was earning a very satisfactory scale of profits. Active sinking operations at the South Shaft were commenced on January 1st of this year, and since that time the speed of sinking and the cost at which this work has been accomplished have been nothing short of remarkable. For the four months during which regular sinking has been carried on, the average cost per foot, including timbering and all other operations incidental to shaft sinking, was only £26 13s., a figure which, for a shaft of this size, is probably unparalleled. At the present rate of sinking, which it is hoped to maintain unless troubles with water or bad ground are encountered, it is anticipated that the shaft will reach its final depth of approximately 4,000 feet about the end of the current year.

The fully-developed payable tonnage available for attack at the end of the year under review was 5,018,000 tons, of an average value of 5.2 dwts. over 46 inches. The position now is that they have an ore reserve representing in itself an assured life of many years for the property and an excellent equipment which is operating satisfactorily. Apart from expenditure on the new South Shaft and its equipment, which will be distributed over a period of from two to three years, the future capital expenditure should be relatively unimportant, as the remaining extent of the mine, approximately 10,000 ft. on the strike and 6,000 ft. to the dip of the lowest point so far reached in development, will be exploited from the south shaft and incline shafts or haulages according to the dip of the reef, which already shows signs of flattening in depth.

Sir George Albu expressed the opinion that some measure of devaluation of the South African currency seemed to him to be highly desirable. As far as the West Rand Consolidated Mines is concerned, great benefit would accrue in many ways if they could obtain the advantage of an increased price of gold as a result of such devaluation. To illustrate the effect on the revenue and profit of the company, he assumed that by devaluation they could obtain locally a price for their gold 25 per cent. in excess of that now received in South African currency, even this being considerably less than the present price obtainable in British sterling. It is not considered that working costs would rise to any material extent, but so that their estimate might be a conservative one, he assumed a 10 per cent. increase, which is a very generous allowance for all contingencies in this connection. The combined result of these assumptions, if carried into effect, would be that on the present scale of working the profit from the mine would be increased by about £220,000 per annum.

W. J. BUSH AND COMPANY, LIMITED.

DIFFICULT TRADING CONDITIONS.

The thirty-fifth annual general meeting of this company was held, on the 8th instant, at the Great Eastern Hotel, London, Mr James M. Bush (chairman and one of the managing directors) presiding.

The Chairman, in moving the adoption of the report and accounts said:—The conditions which led to the remarkable events in our national affairs since our last meeting and the intensified world-wide trade depression foreshadowed a decline in our turnover and profits. It has been a difficult year. The Gold Standard (Amendment) Act, 1931, fluctuating foreign currencies and foreign exchange restrictions have given rise to varied complications, as we have assets and liabilities in many countries. To meet the position we have created, as you will have noticed in the balance sheet, an exchange reserve of £18,807, in which we have merged the Australian exchange contingency reserve shown in our previous balance sheet.

I will refer briefly to the more important changes shown in the balance sheet when compared with that of the previous year. The advance of £59,000 made by the National Provincial Bank against our deposit with the Bank of Australasia has been reduced to £43,000. Since the accounts were made up it has been further reduced to £32,500, the amount on deposit remaining the same—namely, £59,000.

Our American and Canadian subsidiary companies made satisfactory profits during the year, although smaller than in the previous year. Both show substantial surpluses and are in a strong financial position.

It is too early to judge the effect of the Import Duties Act passed in March last. It was obviously an emergency Act, designed both to raise revenue and to reduce the adverse foreign trade balance of the country. Many of our raw materials not produced within the Empire bear the 10 per cent. tax, which makes it difficult, and in some cases impossible, to meet foreign competition in export markets. We are also placed at a disadvantage in our export distributing trade in many articles. The position has been put before the Advisory Committee by the trade associations of which we are members, and already announcements have been made in the Press that it is proposed to put on the free list a number of articles to which I have referred, but no orders as yet have been put into force. The creation of a scientific tariff is a complicated matter, but I believe eventually the Import Duties Act, when the Advisory Committee have had time to make its investigations, will be beneficial not only to this company but to the country generally.

The Right Hon. Lord Hayter seconded the resolution, which was carried unanimously.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached: To Publisher, "Economist Newspaper Ltd.,"

8, Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

CITY OF LONDON REAL PROPERTY COMPANY,
LIMITED.

SIR EDGAR HORNE ON THE BOARD'S POLICY.

The ordinary general meeting of the City of London Real Property Company, Limited, was held on June 6th at Southern House, Cannon Street, London, Sir Edgar Horne, Bart. (the chairman), presiding.

The Chairman, in the course of his speech, said: The death of our late chairman and managing director, Mr W. E. R. Innes, came as a great shock to us all. His kindly nature endeared him to all his friends, and his ripe experience, legal knowledge, and devotion to the welfare of the company made the loss of his services particularly unfortunate to this company.

Mr Innes joined the board in 1904 and became chairman and managing director in 1928. Upon his death I at once realised that the man most qualified to succeed him was Sir William Burton, the former manager of the company, but he had retired from that position when Mr Innes took it on, although he still remained a member of the board. I found Sir William very reluctant to accept the office, and he pleaded the many other claims on his time, and that during the four years he had got out of touch with the intimate and daily associations which are essential in dealings with real property in the City of London. There were, too, many details of administration which would require adjusting, as even if he accepted the position of chairman he would be unable to take on the general managership. He offered, however, that if I would accept the chairmanship for the time being to give me all the assistance in his power.

Your board, on hearing this, elected me chairman and Sir William Burton vice-chairman, and invested us with full authority to act in whatever manner we thought best, reporting such actions to them at the monthly meetings of the board. Sir William and I have devoted some 30 meetings to a full investigation and examination of the situation, and I am delighted to be able to tell you that, as soon as the details have been arranged, we shall unanimously elect Sir William Burton as chairman of the company.

RESULTS OF INVESTIGATION.

Several points came before us during our investigations which we have had to consider and on which we have been obliged to come to a decision. The first concerning the conversion of the shares into stock is before you, and I need hardly say that, in our opinion, it will result in a very considerable economy in the working of the office.

Our next decision involved the payment of the dividends in the future half-yearly instead of quarterly. The practice of the company has hitherto been to pay the dividends in advance of the profits declared for the year, a method which in my opinion has little to recommend it and, in the case of a diminishing revenue, demands a certain dependence on external aid. Thirdly, we had to face the fact that the severe trade depression of the last two years, and which still continues, was bound to be reflected in our receipts from rents, and that while some of our tenants renewed their agreements at reduced rents others had to go out of business. In the latter case we had to consider the question of re-letting at a lower rent. You will, I feel sure, understand that in our business there is a certain "lag" when business is depressed before we feel the full effect, but, on the other hand, some time must elapse before we feel the full benefit of prosperity, and we recognise that this year's accounts will show a still lower rent roll.

Fourthly, Sir William and I came to the conclusion that the obsolescence of our properties had not been fully met by the provisions to reserve and maintenance which had been allowed in past years. Many of our buildings were put up before lady clerks were to be found in the City or lifts were thought of, whereas many blocks of modern offices have been built in the West End less expensive to construct, and on land costing less to buy, which has enabled the owners to offer accommodation with many modern amenities at lower rents. There is no doubt also that the telephone and greatly increased banking facilities have induced business houses to forsake the City and enabled their principals to avoid the waste of time contingent upon the congestion of the traffic in the City of London.

We think, therefore, that for the next few years we should not contemplate a higher dividend being declared than 4 per cent., but, in our opinion, so far as we can judge this rate can be counted on; your board would then be able to devote adequate sums to the bringing up to date of the existing blocks of offices and the possible building or rebuilding of others so that in future years your directors may safely revert to the old rates which used to obtain.

The report was unanimously adopted, and a resolution was passed approving the conversion of the shares of the company into stock.

ANTOFAGASTA (CHILI) AND BOLIVIA RAILWAY
COMPANY, LIMITED.

MR A. W. BOLDEN ON THE POSITION.

The forty-fourth ordinary general meeting of Antofagasta (Chili) and Bolivia Railway Company, Limited, was held, on the 7th instant, at Winchester House, London, E.C.

Mr A. W. Bolden (chairman and managing director) said that for 1931 gross receipts were only £866,120, compared with £1,350,454 for 1930. Expenditure, at £613,554, showed a reduction of just over 29 per cent. The districts served by the railway had suffered greatly, particularly in Chile, where out of thirty nitrate oficinas which ordinarily would be served by their line and its associated companies, only one was in operation throughout the whole of the year. For the first time in the company's history the board could not recommend a dividend on the ordinary capital. The directors had been influenced by the fact that the outlook for the current year was even worse than it was at this time last year, as up to date there was a falling off in gross receipts of £145,650.

Referring to the position of Cosach, the national nitrate company of Chile, the chairman said that shareholders were no doubt aware that conversations had taken place with the various groups interested as to what could be done to improve the situation, and a committee had been appointed in London to watch over British interests. One could only hope that the result would be some mutual agreement among the interests involved, and particularly that there might be some improved sales of nitrate. The new tin restriction scheme gave ground for hope of gradually improving conditions for that industry, which, if brought about, would be reflected in the company's traffics. The outlook for copper appeared less promising.

As to events in Chile during the past few days, and the change in Government, it was all to the good that there had been no particular disturbance, and, knowing Chile and the Chileans fairly well, he thought that law and order would be maintained and obligations respected. The board had decided to postpone the payment of the interim dividend on the 5 per cent. cumulative preference stock customarily paid on July 1st. The operating results to date showed that that dividend had not been earned, even with the aid of income received this year by the Andes Trust. The matter would be considered again in the early autumn.

The report was unanimously adopted.

LOBITOS OILFIELDS, LIMITED.

STRONG FINANCIAL POSITION—BOARD'S DIVIDEND POLICY.

The twenty-fourth annual general meeting of this company was held, on the 8th instant, at Winchester House, Old Broad Street, London.

Mr H. C. R. Williamson (the chairman), in moving the adoption of the report and accounts, first referred to the great loss they had sustained through the death of Lord Forbes, who had been chairman since the inception of the company in 1908. Continuing, he said that the total profit for the year amounted to £113,889, as compared with £182,158 for 1930, the main differences arising through the diminished profit of the tankers—namely, £25,765, as compared with £80,562, and to the fact that the Peruvian company, which gave them a dividend of £40,000 in 1930, made a loss in 1931.

It might be wondered why in the face of these reduced profits the board had reverted to the practice of paying an interim dividend. The interim dividend and the increased final dividend were made possible by the fact that they considered their reserve funds ample at present, and that the possession of large liquid resources, built up out of profits, enabled the company to await with confidence a return of prosperity to the industry. The loss made by the Peruvian company had not been taken into the accounts, and they did not consider it necessary to depreciate their holding in the company on account of such loss for the reason that its productive capacity was unimpaired and a moderate increase in the price of crude oil would wipe off its debit balance in a short time.

Another factor which had influenced the board in their decision regarding the dividend was that, as compared with this time last year, there was undoubtedly a less pessimistic feeling abroad in and States to take action to prevent wasteful output and competition, and it was widely held that common sense and motives of self-preservation must in the end result in an agreement which would be at any rate a step toward restoring a modicum of prosperity to this great industry.

As regarded the future generally, he felt that of all industries perhaps that with which they were immediately concerned showed most signs of attempting to put its house in order.

The report and accounts were unanimously adopted, and a final dividend of 7½ per cent., making 12½ per cent. for the year, was declared.

TELEPHONE RENTALS, LIMITED.

RENT ROLL AND DIVIDEND INCREASED.

EXTENSIVE SALES DEVELOPMENT.

The third annual general meeting of Telephone Rentals, Limited, was held, on the 9th instant, at Southern House, Cannon Street, London, E.C.

The Chairman (Mr Fred T. Jackson), in the course of his address, said: As your company derives the greater part of its income from its subsidiary companies, I will first give you a few facts and figures relating to the British and Australian companies, for it will enable you to follow my address more clearly. The figures relating to the Australian company have been included at the par of exchange. The capital cost of installations on rental in the British and Australian installation accounts stands at £655,362, and against this sum we have a reserve of £344,584; therefore the net figure is only £310,778. Our appropriation to reserve is £11,612 more than in 1930. In addition to our depreciation reserve, we have a capital reserve of £37,368, which is only available for writing down assets of a capital nature, but is a very useful figure; also a special reserve of £8,146, which will ultimately be available for distribution to the parent company. We thus have total reserves in the accounts of the British and Australian companies of no less than £388,099.

LARGER GROSS REVENUE.

The year under review has been an extraordinarily difficult one. We regarded 1930 as a year of unparalleled depression, but there is no doubt that 1931 was far worse, with the result that during the whole of the period we have had constantly to concentrate our attention on sales development in order to maintain our rentals at the figures at which they stood at the close of 1930, as in times such as we have been going through we are always faced by the recovery of installations due to bankruptcy and bad trade. I am pleased to be able to say that we have been more than successful in achieving this object, as during the year we have been able to increase our rent roll by approximately 4 per cent. This percentage is on the revenue taken to the credit of profit and loss account, not on contracts secured and not executed at the date of the accounts. We feel, taking into consideration the trade depression which ruled during nearly the whole of 1931, that the ability shown not only to hold our position but to increase our gross revenue is no mean achievement.

IMPROVEMENT OF THE ORGANISATION.

At the beginning of 1931 we felt that the period was a very suitable one to make our plans for, and to carry into force, improvements in our organisation which we had had in mind for some time. We accordingly planned and put into operation the nucleus of an extensive sales development and servicing scheme, which will be capable of extension when general trade becomes better, and which will be of very great value to us in future years. The whole of the cost of this has been charged against revenue. In addition to this work, we commenced a systematic overhaul of our old telephone installations, with the object of bringing them up to date. This work will continue through the current year. The whole of this has also been charged against revenue, although in both instances such expenditure should result to the benefit of future years. This accounts for the fact that, although our gross revenue for the year ending December, 1931, was higher, the net profits are somewhat lower. I am pleased to be able to tell you that this sales development is already bearing fruit. A substantial increase in contracts secured commenced in September of last year and has continued right up to the present time.

A STRONG BALANCE SHEET.

I will now ask you to turn to the accounts of the parent company. Amounts due to subsidiary companies, £12,358, compares with £14,685 last year, and the explanation involves amounts due from subsidiary companies of £35,675 on the asset side of the balance sheet as compared with £43,719 last year. These items are explained by the fact that the parent company draws all surplus funds which the subsidiary companies have in their banking accounts from time to time. You will realise that these amounts in the aggregate to a considerable sum, and could not be used profitably individually, but in the hands of the parent concern can be utilised for loans to subsidiary companies who may be more busy than others. Any surplus still remaining can be invested.

General reserve has been increased to £50,000 as compared with £30,000 last year, your directors having appropriated a further £20,000 from last year's profits.

Cash at the bank is £34,862, as compared with £15,011. It is of interest to note that the sundry investments and cash in hand are considerably more than the general reserve fund, and we have liquid assets of £95,333. I think, therefore, we are justified in

considering that as these accounts are only the third set presented to you, representing less than three years' working, we have built up an extraordinarily strong balance sheet in a very short space of time, and can look forward to the future with very considerable confidence.

PROFIT AND DIVIDEND.

Turning now to the profit and loss account, you will notice that the dividends received from subsidiary companies are £2,961 less than those received in the previous year. The reasons for this I have already explained earlier in my address in dealing with the accounts of those subsidiaries.

The net profit is £59,342 17s. 11d., as compared with £62,520 5s. 3d., being £3,177 less than the previous year. In spite of this, your directors feel that, as the accounts of the subsidiary companies have been prepared on such a conservative basis, there is no reason why they should not recommend the distribution of a slightly increased dividend, making the full rate for the year 6½ per cent., as compared with 6 per cent. for last year.

The report and accounts were adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

The total ordinary revenue for the week ended June 4, 1932, amounted to £6,680,400 against ordinary expenditure of £57,104,800. After allocating £610,000 to Sinking Fund and having allowed for an increase in Exchequer Balances of £172,757, the operations for the week, as shown below, increased the National Debt by £50,861,000 to £7,654,736,000:—

(000's omitted.)

Public Department Advances	£	5,650
Treasury Bills	18,199	
By 3% Treasury Bonds	26,900	
National Savings Certificates	100	
Land Settlement Repayments	12	
	+ 50,861	

A complete analysis of the National Debt at March 31, 1932, was printed in the *Economist* of April 2, 1932.

REVENUE.	Total Receipts into the Exchequer.			
	April 1, 1932, to June 4, 1932.	April 1, 1931, to June 6, 1931.	Week ended June 4, 1932.	Week ended June 6, 1931.

REPORTS AND NOTICES

MISCELLANEOUS.

BARROW HEMATITE STEEL COMPANY, LTD.—At a series of meetings of the security holders and shareholders of the Barrow Hematite Steel Company, Ltd., which was held on June 7th, the proposed scheme of arrangement was approved in each case by very large majorities. It was explained that a new scheme had been necessitated by the fact that times, since passing the original scheme, had become worse instead of better, and the directors had found themselves unable to carry through the previous scheme in all its requirements. The original scheme had been modified, the principal change being the proposed amalgamation of the Barrow Company's colliery interests and business, with the Barnsley Main Colliery Company. The two properties adjoin, and more economic and efficient working should be possible. Modifications had also

been made with regard to the mode of issue of prior lien notes, without, however, increasing the total amount to be issued. At an extraordinary general meeting which followed, the resolutions were unanimously approved.

IMPORTANT FORD AGREEMENT.—In an investment note which appeared in the *Economist* dated May 21, 1932, page 1148, entitled "Important Ford Negotiations?" we dealt with the possibility of important developments taking place of interest to shareholders. We now learn that a reciprocal agreement has been concluded between the Ford Motor Company of Canada and the Ford Motor Company, Ltd., of London and Dagenham. Mr W. R. Campbell, president of the Canadian company, has been in this country for some time with the object of securing such an agreement to ensure that the supply of Ford cars and other products throughout the British Empire should be derived from an Empire factory. Arrangements have now been made for the recently announced small 8 h.p. Ford car to be manufactured by the Ford Motor Company Ltd., and marketed and sold throughout the British Empire by the Ford Motor Company of Canada, and its subsidiary companies in India, Australia, South Africa and Singapore, and all other parts of the Empire where there is already an established organization of concessionaires and dealers. The new V-8 cylinder Ford car, recently placed upon the market by Mr Henry Ford, is now in

full production at the Canadian factory, and arrangements have been made for the sale of the complete vehicle and component parts thereof by the Canadian company to the British company for distribution, not only in the United Kingdom, but also throughout Europe and other portions of territories controlled by the British company. Hitherto, the Canadian company, under concession granted some twenty-five years ago, has had the sole right to manufacture and sell Ford motor cars, trucks and other products, throughout the British Empire (excepting the United Kingdom).

SINGER AND CO., LTD.—In a circular issued by this company dated June 6, 1932, it is stated that the total liabilities of the company are less than £390,000 (of which £166,000 only is current) and the stock of cars (£66,000), finished spare parts (£120,000), and partly manufactured and raw materials (£314,000), total approximately £500,000 in value. In addition, the properties, machinery and plant stand in the books at more than £1,400,000. The company has, of course, suffered a fall in sales common to the motor industry, but it is believed its share of the general demand for cars has been obtained. The directors have caused all current on-costs outlay to be materially reduced and if the sales for the month of June and July equal the average of the last ten months, the trading result, although not up to standard, should not be considered entirely unsatisfactory, having in view the prevailing conditions during the year which were beyond their control.

CANADIAN WALLPAPER MANUFACTURERS, LTD.—The directors of the Canadian Wallpaper Manufacturers, Ltd., announce that owing to the trade depression in Canada the results of the trading for the past year do not justify the payment of any dividend. The balance at credit of profit and loss account is carried forward, viz., \$302,185, as against \$307,552 brought in from last year.

THE WALLPAPER MANUFACTURERS, LTD.—The directors of the Wallpaper Manufacturers, Ltd., whose company has a substantial shareholding in the Canadian company, advise us that last year the dividend from the Canadian company amounted to £12,608, and the absence of this dividend will not materially affect their results as indicated by the trading position to date.

exceed consumption and bargains are available. Prices range from 10s. 6d. to 12s. at ovens.

GLASGOW.—The feature of the market is the strength of treble nuts and in lesser degree of doubles in Fife and the Lothians, and also of first steam in the former area. Trebles especially are short of requirements, but the three brands are well booked and have not yet overtaken business secured during the recent stoppage. Other-wise values hold steady, for although orders are scarce, production is now on a smaller scale. Many Lanarkshire collieries are closed owing to the lack of industrial demand. Shipment prices (f.o.b. district ports): **LANARKSHIRE.**—Ell best, 14s. 3d.; splint best, 15s.; splint second, 14s. 3d.; navigation, 15s.; navigation second, 14s. 6d.; Hartley, 15s.; steam, 13s.; trebles, 11s. 6d.; doubles, 9s. 9d.; singles, 8s. 9d.; pearls, 8s. 6d.; dross, 8s. 9d. **FIFE.**—Screened navigation, 16s. 6d.; first-class steam, 12s. 9d.-13s.; third-class steam, 11s.-11s. 3d.; trebles, 13s.-14s. 6d.; doubles, 10s. 6d.-11s.; singles, 8s. 9d.; pearls, 8s. 6d. **LOTHIANS.**—Prime steam, 11s.-11s. 6d.; secondary steam, 11s.; trebles, 12s. 6d.; doubles, 10s. 6d.-11s.; singles, 8s. 9d.; pearls, 8s. 6d. **AYRSHIRE.**—Unscreened navigation, 16s.; jewel, 16s. 6d.; steam, 12s.; trebles, 12s.; doubles, 10s.; singles, 9s. 9d.; pearls, 9s.; dross, 9s.

CARDIFF.—The most favourable feature of the conditions in the South Wales coal trade this week has been the activity in the export trade at Swansea and Port Talbot, where the demand, principally for anthracite coals, is keeping the docks fairly fully employed. Loading operations have also been a little more active during the early part of the present week at the eastern ports, where there has been a gratifying increase in the supply of prompt tonnage. Last week the total shipments from the South Wales ports in the foreign and coasting trades were 435,060 tons, compared with 407,295 tons the previous week, but with 504,747 tons in the corresponding week last year. There are prospects of a further improvement in the volume of trade in the next few weeks in view of the fact that the French Government have granted licences for the importation of an addition of 152,300 metric tons to the recently reduced quota. This supplementary supply is exclusively for the service of the ports, and South Wales is the principal source of the supply of the seaborne imports of France. Prices are nominally unchanged. Quotations for dry nuts and cobbles are still ruling above the schedule, but practically all steam grades are ruling at the minima figures. The following are the current approximate quotations:—Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 4½d.; best drys, 18s. 6d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steams, 13s. 6d.; cargo snalls, 11s. 6d. to 12s. 6d.; coking snalls, 13s. 6d. to 13s. 9d.; anthracite, best large, 36s. to 38s. 6d.; Red Vein, large, 22s. to 26s. 6d.; machine-made cobbles, 39s. 6d. to 48s. 6d.; French nuts, 40s. to 48s. 6d.; stove nuts, 38s. 6d. to 45s.; rubbly culm, 8s. 3d. to 8s. 9d.; foundry coke, 32s. 6d. to 35s.; patent fuel, 20s.; pit-wood, ex ship, 19s. to 20s. 6d.

IRON AND STEEL.

MIDDLESBROUGH.—Slackness of work in different foundry departments locally and elsewhere has caused a reduced demand for Cleveland iron, and it is feared that there will be rather important increases in stocks at the furnaces unless there is a change in the position before long. Several Government and public works schemes involving considerable tonnages of foundry work are held up on the grounds of economy and the suspension of this work will prove of serious consequence to the trade if it is long continued. In the meantime pig iron requirements are reduced locally and for Scotland, and there is practically no demand for export, as was fully reflected in last month's overseas figures. The business transacted in Cleveland iron during the past week has been small in extent and no improvement was reported at the weekly market on Tuesday, when official prices for markets other than Scotland, where special concessions are offered, were unchanged, viz.: No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; and No. 4 forge, 57s. f.o.b. or f.o.t. The demand for hematite is only on a moderate scale and is practically confined to early requirements. No disposition is shown on the part of consumers to enter into forward purchases, although a move in this direction has been long expected. Ordinary mixed numbers are now obtainable at 62s. 6d. for prompt delivery, while 63s. is generally quoted for delivery over a few months. Shipments of pig iron this month are on a poor scale, the total cleared to 7th inst. being 3,757 tons, against 545 tons to same date last month. In the finished trades new orders come to hand very slowly and short-time working is prevalent in several departments. Prices under the rebate scheme are unchanged and also for the other main commodities. There is practically no buying of ore. Best rubio is nominally 15s. c.i.f. and the freight Bilbao-Middlesbrough is easier at about 4s. 6d. Coke continues in excess of requirements. Good blast-furnace qualities are offering at 15s. 6d. delivered works. The number of blast furnaces in operation in the district is unchanged at seventeen.

SHEFFIELD.—The past week has failed to develop any change for the better in the conditions of the local steel industry. Bulk orders are as scarce as ever and inquiries are deficient in number and importance. The finished branches are patchy. A few of the local factories are busy, the remainder being on short time. The rolling mills and forges have never been so slack in normal times. Traders are hopeful of benefit resulting from the work of the National Committee to reorganise the steel trade. Already members to constitute a local sub-committee have been nominated. Representations have gone up to the Government from Sheffield urging an extension of the amount which the Export Credits Committee are prepared to guarantee credits on Russian orders. The amount of £1,600,000 is already practically exhausted. It is said that Sheffield could secure valuable orders from Russia if

credit terms could be arranged. All the luxury products of Sheffield are badly depressed.

GLASGOW.—Business in the steel trade in the West of Scotland remains very quiet, with only a small proportion of the plant in operation. The appointment of the National Committee to prepare a scheme for the reorganisation of the iron and steel industry and the formation of regional committees is regarded as a step in the right direction, as in the West of Scotland there has been a general feeling for some time that the trade must be reorganised and that it could only be properly dealt with by the trade as a whole. In the tube trade things are quiet, but there has been a little more activity in the butt welded section than there has been for some time. Sheet makers, while better employed than most branches, are having rather a quiet spell, though there are a good many important inquiries on the market at the moment. Bar iron makers and makers of re-rolled steel bars do not report any improvement. In the shipbuilding yards there is no new work and there is less repair work than was on hand a few weeks ago.

CARDIFF.—On the Swansea Metal Exchange on Tuesday quiet conditions were reported in the steel and tinplate markets. Tin-plate bars at 95s. per ton net, and foreign, principally Belgian, bars at 82s. to 83s. per ton delivered. Galvanised sheets were unchanged at £9 5s. per ton f.o.b. During the March quarter of the current year the output of tinplates was 30 per cent. greater than in the corresponding period last year, and the exports of tin-plates 41 per cent. greater; while in the galvanised sheet industry there was an increase in production of 6 per cent., but in the export trade of 46 per cent.

OTHER METALS.

TIN.—Owing to the failure of a prominent firm on the London Metal Exchange, business was partly dislocated on Monday, and dealings in tin were suspended. On Tuesday, however, the secretary of the Metal Exchange announced that "in reference to the recent failure on the London Metal Exchange, the pool which was formed of tin to take over the tin has already been dissolved and the tin disposed of." On Tuesday the market opened quietly at a level about £7 per ton below that of Wednesday last week. On Wednesday there was a good demand for the metal at slightly firmer prices. According to the Metallgesellschaft A.G., the world's mine production of tons in March. In New York the metal was quoted at 19.60 cents per lb. on Wednesday, against 20.75 cents per lb. a week ago and 21.37 a month ago. Wednesday's official closing quotations in London, in terms of sterling for "standard" cash at £115 15s. to £115 17s. 6d. per ton, compares with £122 2s. 6d. to £122 5s. on the corresponding day last week. Stocks in London and Liverpool at the end of last week, at 33,317 tons, show a decrease of 78 tons on the week.

COPPER.—The domestic price for copper in the United States has slightly hardened as a result of the import duty of 4 cents per lb., but export prices remained unchanged. The steadiness of New York was reflected in the London price of the metal, which fluctuated quoted at 5½ cents per lb. in New York, against 5½ cents a week ago, and 5½ cents a month ago. Wednesday's official closing price for £26 17s. 6d., compares with £26 15s. to £26 17s. 6d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 19,224 tons, show a decrease of 504 tons, while stocks of rough copper, at 769 tons, are unchanged.

LEAD.—The London market in lead was active on Monday (sales totalled 1,200 tons), but owing to liberal offerings prices declined. On Tuesday demand was quiet, but in the absence of selling pressure prices remained steady, only to give way on Wednesday, when supplies were more liberal. According to the Metallgesellschaft A.G., the world's smelter output of lead in April was 93,148 metric tons, as compared with 99,737 metric tons in March. In New York the metal was quoted at 3.00 cents per lb. on Wednesday, against 3.00 cents a week ago, and 3.00 cents a month ago, in terms of sterling, at £9 13s. 9d. per ton for shipment during the last week.

SPELTER.—Spelter declined steadily in value at the London Metal Exchange owing to the falling off in demand. According to the Metallgesellschaft A.G., the world's smelter production of metric tons in March. Wednesday's quotation in New York, at 2.825 cents per lb., compares with 2.825 cents a week ago and in London, in terms of sterling, Wednesday's official closing quotation at £11 15s. per ton for shipment during the current month, against £12 1s. 3d. a week ago.

OTHER NON-FERROUS METALS.—Amont other non-ferrous metals the quotations for aluminium and nickel have been maintained at £95 per ton and £225-£230 per ton respectively. Platinum sold at £23 10s. to £24 per ton, against £24 to £24 10s. a week ago. Quicksilver was reduced from £14 per flask to £13 5s. to £13 15s. per flask.

TEXTILES.

THE COTTON TRADE.—Liverpool.—Imports for the week, June 2nd to 8th (inclusive) are 39,482 bales, of which 15,927 are American, 1,695 Peruvian, 3,018 Argentine, 13,460 Egyptian, 3,329 East Indian, and 2,053 sundries.

Manchester.—The market during the past week has continued quiet. Although a fair amount of inquiry has been dealt with,

buyers have hesitated to place orders of more than retail dimensions. There has been a good deal of nervousness with regard to finance. Some shippers of cloth to India have received rather more favourable advices from the other side and more business has been done in fancies and specialties, but it has been exceedingly difficult to arrange sales in standard makes. Operations for China have been within a small compass, but reports are being received of rather improved clearances in the Far East. Some moderate lines have been booked in specialties for Java and Singapore. A few more offers have been about in bleaching cloths for Egypt and the Near East. Most of the demand for the African markets has run on printed styles. Very little has been done for South America. Fancies have moved off fairly well for home trade use. Engagements of manufacturers tend to become more irregular. A slow feeling has prevailed in the yarn market. Quotations in American and Egyptian counts have been irregular when tested. The turnover has again been less than the output.

THE WOOL TRADE.—Bradford.—The fourth series of London sales have finished, writes our correspondent, but the position of wool is virtually the same. Values did not make any real recovery, but merinos and fine crossbreds remained firm. Unfortunately, a larger quantity of wool was carried forward for the succeeding series than at the end of April. The bulk of this was crossbred. Better competition from the Continent was an important factor at the close of the series. There is only a short interval before the commencement of another series, but after that the last series but one of the year will not commence until September 20th. It therefore looks as if at the present rate of consumption a big volume of wool will be absorbed. Machinery activity in the West Riding of Yorkshire is better than many people are prepared to admit. Within the past week more business has been done in tops and yarns in Bradford, but there has not been a big general movement. Some spinners say they have not participated in it at all, and are still quite confident that they can buy both merino and crossbred tops without paying any advance. It really seems as if the trade done has only been possible by selling cheaply, and margins are very poor indeed, calculated on the present market value of wool. Still, most of the machinery is being kept fairly busy.

Australian Wool.—The London Committee of The National Council of Wool Selling Brokers of Australia has received the following particulars of disposals and stocks of wool for the 1931-32 season as at May 31st last. The figures for the corresponding period of the 1930-31 season are shown for purposes of comparison:—

	July 1, 1931, to May 31, 1932	July 1, 1930, to May 31, 1931	Increase or Decrease
Received into store	2,766,101	2,439,166	+ 326,935
Sales of wool	2,533,877	2,284,035	+ 249,842
Shipped from brokers' stores (unoffered and withdrawn)	34,994	35,701	- 707
On hand	197,230	119,430	+ 77,800

In addition, 48,707 bales carried over from the 1930-31 season have been disposed of in the period under review. The average price in Australian currency for greasy wool in the month of May was 6.48d. per lb., and £8 8s. 10d. per bale. The average from July 1, 1931, to May 31, 1932, was 8.55d. per lb., and £11 0s. 4d. per bale.

THE JUTE TRADE.—Dundee.—Continued quietness in the jute trade is leading to a decline in prices of most commodities. Buyers' wants are easily satisfied, and the tendency is still to purchase only sufficient to meet immediate needs. An increase in the stocks of goods in Calcutta at the end of May, compared with the figures at the end of April, has not helped the market. Stocks of heavy goods were especially augmented by 20 million yards, while hessians were increased by 1½ million yards. This is generally a quiet season of the year in the jute trade, but the usual period for buying comes on in a month or two, when it is expected that the situation will brighten up. Meantime, prices are all very low and uneconomical. The raw jute market is of small interest. New crop prospects continue very favourable, and, with a larger crop expected next season, sellers are inclined to sell at low rates. There are still very few offers being made to this centre, and new crop is not mentioned, but the Indian Mills have bought some new fibre and some speculative business has been done. Spinners here are still showing very little interest, and only a few small lots on spot are being disposed of. Shipment prices are mostly nominal, but actual offers have been made of Daisee—½ full group at £15, June-July, and of Motial Tossa—½ at £15 7s. 6d., afloat. Jute yarns are quiet, after some

business has been done in hessian descriptions. Spinners accepted 1s. 9½d. for common 8 lb. cops and 1s. 10½d. for 8 lb. spools, and these rates are still possible. Other quantities of yarns are selling in trifling lots. Twist is obtainable at 3½d. to 3¾d. for 3 ply 8 lb., and sacking yarns are quoted at from 2½d. for 24 lb. weft and 3¾d. for 8 lb. chains. Rove is quiet at from £18 for 48 lb., and something less than £16 would be taken for 200 lb. Fine yarns are dull and nominal at from 2s. 7d. for second quality 8 lb. Rio warp, 2s. 4d. for third and 2s. 1d. for fourth. Carpet yarns are being quietly bought at from 3d. to 3½d. for 14 lb. warp. The cloth market is slow and prices are tending easier. The value of 10½ oz. 40 in. is from 2½d., and 8 oz. from 1½d. per yard. The bulk of the orders placed are for only small quantities. Even inquiry is of small dimensions, and there are no signs of improvement. Linoleum hessians are idle and heavy goods are very quiet. Prices of Calcutta goods have come down to 17s. for 10 oz. 40 in. to 12s. 10½d. for 8 oz., June, 17s. 1½d. and 13s. 1d. for July-September, and 17s. 3d. and 13s. 3d. for October-December. Liverpool twills are offered at 48s., and "B" twills at 42s., June to September.

THE GRAIN MARKETS.

WHEAT.—The international wheat situation has deteriorated sharply this week. The chief factors making for the sudden decline in quotations are the favourable weather in the spring wheat regions of Canada and the United States, and on the Continent of Europe, and the publication of estimates of the North American crops. The following table gives the estimated crop for Canada and the United States, together with the actual harvests of last year:—

	(Thousands of bushels.)	1931.	1932.
United States winter wheat		787,000	433,000
United States spring wheat		105,000	253,000
United States total		892,000	686,000
Canada (Prairie Provinces)		284,000	405,000
Total North America		1,176,000	1,091,000

It will be seen that the failure of the United States winter wheat crop has been practically outbalanced by an increase in the yield of the spring crop and of the Canadian crop. The total North American crop is therefore expected to be only slightly below the level of 1931. Another factor making for a decline was the selling pressure of Canadian holders to secure the export bonus of 5 cents per bushel. Considerable resistance to this downward movement was offered by heavy Continental buying. On Wednesday, "July" futures were quoted at 50½ cents per bushel in Chicago, against 55½ cents on the corresponding day last week, and 55½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 28s. per 406 lbs., as compared with 31s. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 26s. 9d., against 29s. 6d.; No. 3 Northern Manitoba, Vancouver, ex ship, 25s. 9d., against 28s. 3d.; Australian, ex ship, 28s. to 28s. 3d., against 28s. 9d. to 29s. a week ago.

WHEAT FLOUR.—There has been no decline in demand, but prices declined in sympathy with the fall in wheat. North American shipments, at 141,000 sacks, showed a decrease of 53,000 sacks as compared with the previous week. Of this total, 59,000 sacks have been consigned to Europe. Quotations in London, Wednesday: Straight run, delivered country, 25s. per sack of 280 lbs., as compared with 25s. 6d. last week; delivered London, 24s., against 24s. 6d. Manitoba patents, ex store, 24s. 6d. to 27s. 6d., against 25s. 6d. to 27s. 6d.; and Australian, ex store, 20s. to 21s., against 20s. 6d. to 21s. a week ago.

BARLEY.—The demand for feeding barley in this country and on the Continent has been quiet and prices quickly lost a few points

ESTABLISHED at the most important commercial centres in South America and Portugal, the Bank of London & South America Ltd. is particularly well equipped to carry out modern banking business of every description.

ARGENTINA—BRAZIL—COLOMBIA
CHILE—PARAGUAY—URUGUAY
PORTUGAL.

BANK OF LONDON & SOUTH AMERICA LIMITED

6, 7 & 8, TOKENHOUSE YARD, LONDON, E.C.2

MANCHESTER: 36, Charlotte St. *Affiliated to Lloyds Bank Limited.* BRADFORD: 33, Hustlergate.
And at NEW YORK, PARIS and ANTWERP

[June 11, 1932.]

under selling pressure, particularly from Canada. On Wednesday, "July" futures were quoted at 36½ cents per bushel in Winnipeg, against 37½ cents last week and 39½ cents a month ago. Quotations in London, Wednesday: "English feeding," f.o.b., per 448 lbs., 27s. to 28s., as compared with 27s. to 28s.; River Plate, landed, 24s. to 25s., against 24s. to 25s. 6d. a week ago.

OATS.—Business in oats on the Continent has become smaller in volume and prices showed a weaker tendency. "July" futures, which last week stood at 22½ cents per bushel in Chicago, sold at 20½ cents per bushel on Wednesday this week, against 23½ cents a month ago. Quotations in London, Wednesday: "River Plate," landed, 17s. 3d. per 320 lbs., as compared with 17s. 9d. last week; "River Plate," ex ship, 16s. 3d., against 16s. 9d.; "Chilean White," landed, 24s. 6d. to 26s., against 24s. to 26s. a week ago.

MAIZE.—Argentine shipments continue to be readily absorbed by European countries, but quotations have been a little lower in sympathy with wheat. Wednesday's quotation in Chicago for "July" futures, at 28½ cents, show a decrease on last week, and a fall of ½ cent as compared with the price a month earlier. Quotations in London, Wednesday: "Plate," landed, 19s. 3d. per 480 lbs., compared with 19s. 9d. last week; "Plate," ex ship, 18s. 3d., as against 18s. 9d.; "Plate," May-June, 18s. 6d., as against 18s. 3d., as against 18s. 9d.; "Plate," May-June, 18s. 6d., as against 18s. 3d., as against 18s. 9d.; "Plate," May-June, 18s. 6d., as against 18s. 3d., as against 18s. 9d.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1931-32, 1930-31, 1929-30, 1928-29:—

	1931-1932.	1930-1931.	1929-1930.	1928-1929.
Estimated sales of home-grown wheat—				
1 week to June 4	Cwts. 81,938	Cwts. 81,244	Cwts. 84,388	Cwts. 67,167
40 weeks to June 4	Cwts. 3,381,315	Cwts. 4,518,621	Cwts. 8,805,613	Cwts. 9,265,980
Average price of English wheat per cwt.	s. d. 6 3	s. d. 6 0	s. d. 6 7	s. d. 9 7

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1928 to 1931:—

Weeks ended	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats

Chicago (No. 2 Winter) —Cents per 60 lb.	130½	79½	57½	55½	55½	50½

OTHER FOODS.

SUGAR.—Following an increase in the demand for refined sugar in the United States, the market in raw sugar became firmer. Although refiners continue to buy only for immediate requirements, an increase in the volume of purchases was quickly reflected in values, as there is at present no selling pressure on the part of the principal holders. "July" futures in New York were quoted at 0.63 cent per lb. on Wednesday, against 0.61 cent per lb. a week ago, and 0.63 cent per lb. a month earlier. Wednesday's sales of "raws" include "December delivery" at 5s. 0½d. to 5s. 1d. per cwt., against 4s. 10d. to 4s. 10½d., and "March, 1933," at 5s. 0½d. to 5s. 3½d., against 5s. 1½d. on the corresponding day last week. The movements of raw sugar in London and Liverpool during last week are set out in the table below:—

	Imports.		Deliveries.		Stocks.	
	1932.	1931.	1932.	1931.	1932.	1931.
Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
London.....	282	655	1,461	1,515	10,301	30,614
Liverpool...	...	12,465	17,215	13,949	105,859	71,060
Total.....	282	13,120	18,676	15,464	116,160	101,674
Last week	21,349	12,508	14,045	13,437	134,555	104,018

COFFEE.—There was a further decline in future quotations in New York. "Cash" coffee was slightly easier owing to a reduction in demand. The varieties offered at Wednesday's London auctions met a poor demand. Last week's movements of coffee in London were as follows: Brazilian, landed, 70 bags; delivered for home consumption, 77 bags; exported, 252 bags; stocks, 4,188 bags, against 3,026 bags last year. Central American, landed, 2,850

packages; delivered for home consumption, 2,190 packages; exported, 1,747 packages; stocks, 131,412 packages, against 128,048 a year ago. Other kinds, landed, 3,114 packages; delivered for home consumption, 2,388 packages; exported, 1,002 packages; stocks, 97,292 packages, against 96,253 a year ago.

COCOA.—Following last week's decline in prices, the market was a little steadier. "July" futures were quoted at 3-83 cents per lb. in New York on Wednesday, against 3-84 cents per lb. a week ago and 4-11 cents a month ago. As compared with the corresponding June-July, at 24s. per cwt., f.o.b., London contract, show a rise of 6d. per cwt. on the week. Last week's movements of cocoa in consumption, 11,852 bags; exported, 41 bags; stocks, 167,981 bags, as against 227,953 last year.

TEA.—The quantities catalogued for this week's auction comprise 54,818 packages of Indian, 31,339 packages of Ceylon, and 15,449 packages of Java and Sumatra tea. Monday's "Indian" auctions were characterised by a better demand for common and low medium grades, but medium and fine varieties were irregular. The improvement in the demand for the cheaper grades was maintained at the spread to higher grades of "Indian" tea. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account:—

AVERAGE PRICE PER LB.									
Week ending	Northern India.	Southern India.	Ceylon.	Java.	Sumatra.	Nyassa-land.	Total.		
June 4, 1931	s. d. 9 9 4	s. d. 1 3 55	s. d. 1 2 65	s. d. 0 6 76	s. d. 0 7 79	s. d. 0 6 72	s. d. 0 11 41

May 12, "	s. d. 9 9 4	s. d. 1 3 55	s. d. 1 2 65	s. d. 0 6 76	s. d. 0 7 79	s. d. 0 6 72	s. d. 0 11 41		
May 26, "	s. d. 9 9 4	s. d. 1 3 55	s. d. 1 2 65	s. d. 0 6 76	s. d. 0 7 79	s. d. 0 6 72	s. d. 0 11 41		
June 2, "	s. d. 9 9 4	s. d. 1 3 55	s. d. 1 2 65	s. d. 0 6 76	s. d. 0 7 79	s. d. 0 6 72	s. d. 0 11 41		

RICE.—The market in rice has been a little steadier this week, but prices failed to recover. Wednesday's "spot" price, at 9s. 4½d. 8s. 6d., also remained unchanged. Movements in London during the past week were as follows: Landed, 930 tons; delivered, 127 tons; stocks, 3,115 tons, as against 582 tons last year.

POTATOES.—There has been a brisk demand for potatoes at the principal markets. Arrivals of new potatoes have been increasing recently, while prices have shown a downward tendency. At the Borough Market, "Best King Edward" sold from 11s. 6d. to 12s. per cwt., as compared with 11s. 6d. to 12s. per cwt. a week ago. New "Jerseys," at 22s. per cwt., show a decline of 4s. per cwt.

SPICES.—The market in pepper was quiet, and prices were slightly easier. Wednesday's quotation for "Black Singapore" pepper, at 6½d. per lb., shows a fall of ¼d. per lb. on the week. Movements of pepper in London during the past week were as follows: Landed, 12 tons; delivered, 15 tons; stocks, 370 tons, against 547 tons last year. White, landed, 45 tons; delivered, 42 tons; stocks, 626 tons, against 579 tons a year ago.

MEAT.—Meat prices at the Smithfield Market showed a firmer tendency this week. Home-grown beef remained unchanged, but Argentine beef, English mutton and pork were all dearer. On Wednesday, Argentine beef (chilled hindquarters) was sold at 4s. 2d. to 4s. 8d. per lb., against 3s. 10d. to 4s. 4d. on the corresponding day last week, while New Zealand frozen mutton realised the Smithfield Market official report, supplies of meat during last week amounted to 8,613 tons, as compared with 8,670 tons in the corresponding week last year. Imported beef, principally Argentine, year ago; and imported mutton, mainly New Zealand, formed 85.7 per cent. of the supplies, as against 84.8 per cent. a year ago; and imported mutton, mainly New Zealand, formed 82.4 per cent. of the total supply, as against 84.9 per cent. last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OILSEEDS.—The position in the markets for oilseeds and their products is no better. Trade both in vegetable oils and oilcakes is on restricted lines and prices generally have an easy tendency. Offerings of linseed continue on a liberal passage to Hull and May shipment are easily covered. Plate on but this week £7 7s. 6d. has been done last week at £7 5s., value of Plate on spot and afloat is around £7 12s. 6d., and for afloat for Europe is 120,900 tons, or 8,200 tons increase on the week. The total includes only 6,500 tons from India. Shipments to Europe so far this year are 95,000 tons less than a year ago. Cotton seed is again quiet and only the remnant of the Egyptian crop is on offer. Present value of black on passage being £5 12s. 6d. loading, is quoted £6 2s. 6d. New crop, for November-December discharging. Cotton oil, after a period of good trade, is easier, (and edible), £22. Linseed oil is in only slow demand and is easier for forward delivery. Raw oil for June delivery is quoted £12 7s. 6d. ex Hull, and for July-August, £12 15s. Other seed oils are quiet and in instances a shade lower. Oilcakes are in very poor request.

HIDE, LEATHER AND ALLIED TRADES.—This week's sales of English hides reveal a further weakening of prices for several

COMMERCIAL TIMES—WEEKLY PRICES CURRENT.

THE MONEY MARKET.

MONEY has remained extremely easy, and it has been a common experience for potential lenders to have funds left on their hands at the end of the day. Over the week-end $\frac{1}{2}$ and $\frac{3}{4}$ per cent. was paid for new money and $\frac{3}{4}$ per cent. for renewals, while by Thursday of this week money was obtainable in places at as low as $\frac{1}{4}$ per cent.,

though $\frac{1}{2}$ per cent. was the more general rate, and some houses stood out for $\frac{3}{4}$ per cent. Further indication of the ease of money was provided a day earlier, when it became known that a fair amount of money was on offer to July 1st at $\frac{1}{2}$ per cent. This will carry its borrowers over the turn of the half-year.

Last week's application for Treasury bills totalled £62.0 millions, against £53.9 millions the preceding week, and only £42.0 millions of the £45.0 millions of bills on offer were allotted. The average tender rate, however, moved in favour of the market from 18s. 1.48d. to 18s. 11.79d. per cent., or to just over $\frac{1}{8}$ per cent. Early this week hot Treasury bills were changing hands at $\frac{1}{8}$ per cent., but by Thursday afternoon the rate had eased to $\frac{1}{16}$ per cent., so yielding a turn of just over $\frac{1}{2}$ per cent. June bills were quoted at $\frac{1}{2}$ per cent., and July and August Treasuries at $\frac{3}{4}$ per cent., and the clearing banks were consistent buyers of all maturities. Three months' bank bills were nominally round 1 per cent., while standstills were quoted from $1\frac{1}{2}$ up to $2\frac{1}{2}$ and 3 per cent., though the finest standstills changed hands at under $1\frac{1}{2}$ per cent. as a result of competition.

	May 26 1932.	June 2, 1932.	June 9, 1932.	June 16, 1932.	Previous Rate and Date Changed.
Bank Rate	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	3 (May 12, '32)
Banks' Deposit Rate..	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	1 (May 12, '32)
Discount (Call)	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	1 (May 12, '32)
Houses (Notice) ...	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$1\frac{1}{2}$ (May 12, '32)
Market rate ("hot")	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	...
Treasury bills).....	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	...
Market rate (3 months' bank bills)	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	...
Market rate (standstill bills)	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	...

Some comment has been aroused in the money market by the maintenance by the clearing banks of their minimum rate of $1\frac{1}{2}$ per cent. upon market loans. It is pointed out that this relatively high rate means that money is thrown back on their hands which they are forced to invest in bills. By so doing, they have contributed towards depressing market discount rates to their present low levels, which are now $\frac{1}{2}$ per cent. or so below the banks' own minimum. At the moment, bill brokers still hold bills bought at the rates of about 2 per cent. ruling two months ago, and so have a margin in hand, but, once these bills have run off, borrowers will be in a difficult position.

The banks, however, do not share the view that if they lower their rates they will necessarily have to buy less bills and so relieve the pressure upon discount rates. On the contrary, they believe that if their loan rates are reduced discount rates will fall still further, while bill brokers will also be encouraged to borrow more for the purpose of investing in Treasury bonds. It is pointed out that the shorter-dated bonds already stand at prices which are sufficiently above their redemption price to make their net yield less than 1 per cent., and if the market invests more heavily in Treasury bonds it risks a severe loss in the event of a reaction in prices. For these reasons, it is argued that a reduction in loan rates might only encourage the market to add to its risks.

The Bank return reveals a further addition of £2.7 millions to the Bank's gold, which now stands at £134.5 millions. The note circulation is practically unchanged, and the Reserve is £2.5 millions higher. Other Securities have been reduced by £2.3 millions and Government Securities by £3.2 millions. These movements were clearly designed to offset the increase in the Bank's gold and a reduction of £5.0 millions in Public Deposits, and in consequence Bankers' Deposits are only £1.7 millions higher at £87.5 millions.

On June 15th the Prime Minister of New Zealand announced that the Exchange Pool would be abolished as from the end of the current month. The Pool was formed at the New Year, and the original intention was to continue its operation for twelve months, but, thanks to the improvement in New Zealand's trade balance, to the recent flotation of the £5,000,000 Government loan in London and the disposal in London of certain Government securities, the New Zealand Government is now able to meet its normal overseas commitments without recourse to the pool. The next question is whether any attempt will be made to shift the exchange from its normal level of £110. The general feeling in both official and banking circles is that any alteration of the rate, especially immediately before the Ottawa Conference, would be undesirable, and the improvement in the trade balance is a strong argument against the view that the New Zealand pound is over-valued. On the other hand, there is ground for believing that banking opinion is not unanimous; and the Prime Minister has thought it necessary to issue the warning that if any bank broke away from the present rate it would have to stand by the rate fixed.

Although the gold drain from New York continues, the opinion appears to be entertained that it is nearing its end. Apart from the restoration of confidence expected to follow the balancing of the budget, it is estimated that foreign short-term balances in New York now amount to only \$750 millions, against a peak of \$3,000 millions in October, 1929. This reduction of \$2,250 millions has been achieved at the expense of net gold losses of only about \$400 millions. Meanwhile the week's gold losses include \$38 millions each to France and Holland, \$12 millions to Switzerland and \$6.8 millions to Belgium, while there is a net increase of \$14.2 millions in ear-markings upon foreign account. Money rates are unchanged at $2\frac{1}{2}$ per cent. for call loans and $1\frac{1}{2}$ per cent. for 90-day bankers' acceptances.

The Foreign Exchange market was very quiet this week and fluctuations small, the tendency of several of the principal countries being slightly unfavourable to sterling. New York went from 3.68 to 3.66 $\frac{1}{2}$ and Montreal from 4.28 $\frac{1}{2}$ to 4.23. Paris gained $\frac{1}{4}$ at 93 $\frac{1}{2}$, but Brussels was little changed at 26.34. Milan was fractionally better at 71 $\frac{1}{2}$, as was Madrid at 44 $\frac{1}{2}$. Amsterdam was firm at 9.06 $\frac{1}{2}$, Berlin lost 3 points at 15.50 and Switzerland was unchanged at 18.80. The Scandinavian currencies showed rather varying tendencies, Stockholm weakening by only two points from 19.50 to 19.52 and Copenhagen by only one point from 18.80 to 18.81, while Oslo fell away rather sharply from 20.02 to 20.40. The South American currencies showed no great change except Buenos Aires, which from being purely nominal was again quoted, but at much lower levels than previously, namely, 34 $\frac{1}{2}$ d., at which rate a small amount of business passed. Rio and Montevideo were unchanged at 5d. and 29 $\frac{1}{2}$ d. respectively. In the Far East the rupee was firm at 1s. 5 $\frac{1}{2}$ d., but the yen weakened from 1s. 9 $\frac{1}{2}$ d. to 1s. 8 $\frac{1}{2}$ d. Batavia gained three points at 9.14. In the forward market dollars were less offered at 1 cent and 3 cents discount, and Paris was also firmer at discounts of 1 and 2 centimes. Belgas remained at par for both deliveries. Milan one month was firmer at $\frac{1}{2}$ lira discount, but three months' delivery Madrid was at $\frac{1}{2}$ peseta discount for one month (the same as last week), but improved by $\frac{1}{2}$ to $\frac{3}{4}$ peseta discount for to $\frac{1}{2}$ cent. discount for both deliveries, and Switzerland was also weaker at $\frac{1}{2}$ centime and 1 centime premium, as against 1 centime and 4 centimes premium last week. The silver market was quiet, and prices fell by $\frac{1}{2}$ d. for 16 $\frac{1}{2}$ d. China both bought and sold, but some Continental to turn the balance. The China silver exchanges were differently affected, Hongkong being unchanged at 1s. 8 $\frac{1}{2}$ d., while Shanghai lost $\frac{1}{2}$ d. at 1s. 8d.

THE CHOICE BEFORE LAUSANNE.

THE oft-postponed and long-awaited Conference, which, it is hoped, will start the process of international co-operation for restoring prosperity, opened at Lausanne on Thursday with the election of the British Prime Minister as President. That act in itself has significance; for apart from Mr MacDonald's personal qualifications, which are very great, and the fact that he represents the most widely trading nation in the world, the British attitude is of vital importance. Indeed, our special correspondent reports the general feeling in Lausanne that "the fortunes of the Conference turn upon the attitude of the British delegation and upon the determination and ability of the Prime Minister to live up to the principles which he enunciated in his opening address."

In that speech Mr MacDonald emphasised in sombre, but by no means exaggerated, terms the gravity of the task confronting the delegates. He pleaded for prompt action; for the castle of despair cannot be taken by siege, but must be carried by storm. While it was not his task to present a solution or even to lay down a programme, he did not hesitate to make clear the angle from which he approached the problem. The principle that engagements solemnly entered into cannot be set aside by unilateral repudiation carried with it an essential corollary, namely, that if default is to be avoided, engagements which have proved incapable of fulfilment should be revised by agreement. Both sides must endeavour to face facts, and among the facts which they had to consider were the questions not only whether the plans hitherto formulated have imposed an impossible burden, but whether and how they have contributed by their commercial and economic unsoundness to the deplorable economic state in which the world now finds itself. From this point it was an easy step to pass to the constructive part of the Conference's work and to show that it had assembled not merely to make a technical adjustment of reparations, but to provide sound foundations from which economic recovery might be built.

At this moment both the warning and the promise are very necessary. The Prime Minister is disturbed even by the thought of repudiation; but, if we are frank, it must be recognised that the Conference, in fact, is sitting, like the guests at Belshazzar's feast, with letters of fire on the wall beginning to spell out that word of ugly import—not in regard to German payments only, but as applied to debts of many kinds and in many parts of the world. Only by a revival of trade and economic activity can the completion of that word by Fate's flaming index finger be averted.

Clearly, however, the settlement of reparations is the first essential step. It has this week been rumoured—and our special correspondent reports that the idea is widespread in Lausanne itself—that nothing better than a six months' postponement is possible because the United States to-day is not in a position to discuss the question of war debts. Any such decision would give the world cause to despair of its statesmen. If we are to wait until a new Congress is effectively in being in the United States, it is a question of waiting not six months, but a year. Again and again, repeated warnings have been given of the dangers of delay; and these warnings have been fully justified by the fact that all the time the economic vitality of the world has been ebbing away. Moreover, procrastination means that not only will the problem itself be unsolved, but also that what little confidence remains in the ability of international conferences to settle these vital matters will be finally dissipated. With the spectacle before us of the failure to grapple promptly with the crisis at Geneva last autumn, and of the inability even to convoke in January the Conference so urgently called for by the Expert Committees in Basle, who will believe that the nettle will be firmly grasped in April or May of 1933, if at the eleventh hour of the Hoover year all that this Conference can do is to arrange for further delay?

The situation as we see it is really a simple one. There is very little doubt in anyone's mind that both reparations and war debt payments have played an important rôle in dislocating the world's financial system. It is equally clear that confidence cannot revive unless these payments are eliminated or reduced to such small proportions as to be patently incapable of creating fresh disturbances in the world's payment balances or of becoming a source of political unrest. There are very few who doubt that in the event these payments will not, in fact, be revived; the only difference of opinion is as to procedure and tactics. On this our view is plain: it is that the time has passed for seeking formulæ or for refusing, in the Prime Minister's words, to face facts. If we know and can agree upon the final goal, let us, in the name of sanity, define it now and relieve the world of suspense. Let the Creditor Powers at Lausanne announce, as their contribution towards recovery, that they cannot take the responsibility of further hesitation, but must make a final settlement *vis-à-vis* Germany to-day, in accordance with the facts.

It may be objected that an agreement covering only one section of the world's political war debts, namely, the inter-European obligations, would not of itself finally remove this element of uncertainty and dissension from the field of international affairs. We agree in the sense that the complete scheme of settlement cannot be finally rounded off until America is prepared with equal realism to face the hard facts of the situation. But this is a reason not for another postponement of a final reparations settlement, but simply for not forcing the debts issue with Washington at a particularly inopportune moment. To-day, America, with her eyes blinded by the dust of the electoral arena, is in no mood to think over much of world problems. By the autumn, the atmosphere in the United States will be different; however successful be the outcome of the Lausanne Conference, the forces of depression and trade strangulation now in motion are so strong that at best the coming months are likely to see an intensification of financial strain and growing world impoverishment; and the unrelaxed pressure of trade paralysis will cause even the Middle West furiously to think whether the attitude which Congress has so far adopted is really the best "business proposition" for the people of America. If a final settlement be achieved at Lausanne, it will be impossible for the American "man in the street" to avoid saying to himself: "In order to remove what they conceived to be a fatal obstacle to the recovery of international trade, these Europeans have cancelled their claims in respect of inter-Governmental war debts among themselves, although they knew that they ran the risk of still having to pay their debts to America at the cost of a great burden to their own Budgets. Should we not perhaps be wise to follow the same policy in our own interests?"

On such lines, we are confident, American thought would work in coming months, when the distractions of the Presidential election were over, provided only that the outcome of Lausanne represented, so far as reparations are concerned, a definite *fait accompli*. There would then be a hopeful prospect for negotiations between America and her European debtors, directed to the end that there should be a radical revision of war debts on a basis satisfying both the demands of equity and the realities of the situation. Such negotiations would clearly have to start from the same premises as those from which the present debates at Lausanne must proceed. Germany has said—and we believe that the Conference will accept this view—that her payments cannot be resumed without grave prejudice to world economy. Europe must say, with due regard to fitting time and method, that the transfer of European war debts cannot be resumed without the same grave danger. It is that proposition which the United States must sooner or later be invited to discuss; and the only good hope for an issue to those discussions on lines which avoid the objections of default, in contrast to agreed settlement, is if the European Creditor Powers give a lead

to-day, not by adopting the fatal attitude that they will perhaps be generous if America is generous, but by settling the business before them at Lausanne on the only basis which will save the system of Europe, as Mr MacDonald said, from "crumbling under our feet."

We repeat: there are two paramount considerations which the Conference will do well to keep ever-present in mind. Firstly, a final settlement of reparations is the only positive contribution which it can make at this moment towards recovery, and without which the assembly at Lausanne must be written down as having failed of its purpose. Secondly, by setting its own house in order first, Europe will be acting in accordance with what is expected of it by American opinion, and will stand the best, perhaps the only chance, of evoking from the United States a complementary response at the appropriate time.

A MINIMUM PROGRAMME.

LAST Tuesday, after a long recess, the Bureau of the Disarmament Conference, under Mr Arthur Henderson's presidency, met again at Geneva, attended by a number of distinguished statesmen *en route* from their national capitals towards Lausanne. Sir John Simon was there and M. Herriot; Signor Grandi and Mr Hugh Gibson; M. Benesh and M. Hymans; and M. Paul Boncour and M. Zaleski. And Mr MacDonald was in the city, though he had no time to attend the meeting. The Bureau decided to postpone convening another meeting of the General Commission of the Conference until the statesmen, coming and going between Geneva and Lausanne, have had a little time for private conversations. They allow themselves, provisionally, ten days.

This suggestion seems to have emanated from Mr Henderson; and presumably it is the price which he has had to pay for leave to side-track the committees of experts, which for weeks have been hard at work reducing the proposals of the General Commission to futility. We certainly feel no enthusiasm for this method of secret conclave; and yet, at the same time, it is plainly preferable to certain suggested alternatives. There was, for instance, the suggestion made by M. Paul Boncour—a French statesman who, having travelled almost all the length of the conventional politician's life-line from Socialism to Nationalism—is at this moment M. Herriot's Secretary for War. M. Paul Boncour apparently wanted the Conference to settle down to a discussion of the report presented by the technical committee on chemical and bacteriological warfare—a procedure which would infallibly have the result of limiting the Conference's whole activity to this tiny field. Mr Henderson succeeded in checking this move by bringing up a new set of general proposals on the subject of qualitative disarmament that have been put forward by the German delegation; and Herr Nadolny then explained that the sense of these proposals was that the principles applied in the Versailles Peace Treaty for the disarmament of Germany should now be adopted—voluntarily and not under duress, and universally instead of unilaterally—by all the parties represented at the Disarmament Conference. On these proposals M. Herriot "renewed the French reservations" until he had had leisure to read the text. The Italian and Russian delegations, which had read the text already, gave these German proposals their support.

Here we see, re-emerging, that dangerous polarisation of the Powers of Europe into two camps which declared itself during the last two sessions of the Preparatory Commission. Germany, Italy and Russia stand in one camp and France and her allies in the other. And where does Great Britain stand, as between them? At an earlier stage of the Conference Sir John Simon played a decisive part in supporting the plan of "qualitative disarmament." He has pleaded the same cause in the House of Commons, and has made himself heard again in this sense the other day. But great persistence and courage are necessary if real results are to be achieved, for the opposing forces are strong, and their resources—in the Press, in political and in economic influence—must be

frankly recognised. Among them is the subtle device of suggestion. It was, for example, persistently rumoured this week that the British Government had been privately and tentatively suggesting a ten or fifteen years' "armaments' truce," whose effect, presumably, would be the stabilisation of existing national armaments for that length of time. Fortunately, this has been categorically denied by the Prime Minister; for a more fatuous suggestion could hardly be made. Neither Germany nor Italy nor Russia would dream of accepting it; and for Great Britain to advocate it would be to promote not disarmament but discord and bitterness.

There is, indeed, no alternative but for the politicians themselves to take the responsibility and live up to the professions which the States members of the League have repeatedly made in the last fourteen years.

"The true test of our sincerity in a policy of disarmament, and as one of the signatories of the Treaty of Versailles, is whether or not we are willing to prohibit, or at least very substantially to reduce, the armaments which were prohibited in that Treaty to Germany—big battleships, military aircraft, big guns, submarines, and tanks."

These words are quoted, not from the new German proposals mentioned above; they will be found in a letter from the Archbishop of York and eight of his fellow-bishops which was published in *The Times* last Tuesday. In common sense and common honesty, the case for this measure of disarmament, if no more, is overwhelmingly strong. It is not, however, in itself enough, but needs to be supplemented by two additional points, which ought not to be allowed to go by default. The first of these points is budgetary limitation; the second is the establishment of a Permanent International Commission for Disarmament.

Budgetary limitation is a programme that will assuredly appeal just now to every taxpayer throughout the world; and if the taxpayers show fight on this point we do not believe that any of the Governments are capable of resisting the will of their electors. Budgetary limitation is a necessary corollary to qualitative limitation; for, if we achieve the latter without the former, the War Department will simply use the money which they have not been allowed to spend on armaments in the "limited" or prohibited class in order to maintain greater quantities of those other armaments that will remain exempt from direct limitation for the time being. Moreover, though budgetary limitations may not be "water-tight," it would be difficult to evade it by chicanery to any serious extent. That, at least, was the view of the technical committee which was appointed by the Financial Commission of the League of Nations to look into the matter.

A Permanent Disarmament Commission was suggested at the last session of the Preparatory Commission, on the analogy of the Permanent Mandates Commission of the League of Nations; and the analogy indicates that the proposal might result in something important and valuable. A Permanent Disarmament Commission would be to watch over the execution of a Qualitative Disarmament Convention and a Budgetary Limitation Convention—assuming that such conventions are successfully negotiated. Its second duty would be to call attention to new problems arising from new inventions. For it is certain that, if some categories of peculiarly offensive weapons are eliminated, the ingenuity of the sixty or seventy general organisations are in duty bound, so long as we maintain them—upon the enterprise of discovering equally deadly, or even deadlier, alternatives. A third function of the Permanent Disarmament Commission would be to study the possibilities of direct quantitative disarmament—pending the assemblage of a second World Disarmament Conference to do those things that have been left undone by the first.

Here is a minimum programme, which the politicians and technicians will sabotage at their peril. For it is crystal clear that on the outcome of the Geneva Conference, no less than on the decisions taken at Lausanne, will turn the question whether the world is to progress towards recovery or anarchy. Unless the European statesmen who control the destinies of the Disarmament Confer-

once succeed in demonstrating that they have sufficient faith in the maintenance of peace to abate their preparations for war, what hope is there that America will volunteer her co-operation in economic reconstruction, what hope that the confidence, without which no economic reconstruction is possible, will ever be recreated?

STATE SPENDING AND THE CRISIS.

IRRESPECTIVE of the immediate situation, in which the attention of the business world is focussed less upon the particulars of markets than upon the political issues confronting the statesmen at Geneva and Lausanne, there is probably a large measure of agreement to-day among all thoughtful observers of the world crisis that much will depend in coming months on the rôle which the State plays in promoting or hindering each nation's progress towards recovery. We are far from making the large and questionable assumption that the task of reconstruction involves the wholesale supersession of individualist concepts in economic life; but a glance at the position of the world is sufficient to suggest that whether it be in the sphere of international relations, more particularly in the matter of fiscal policy, or domestically in relation to budgets—to say nothing of the application of theories of *planwirtschaft*—the course of events will turn largely on the economic attitude of States. And the consequences of a passive attitude—for example, if a State were merely to refrain from economising—might be almost as important as those which would follow from positive action.

One aspect of this question, namely, the influence of State expenditure, has recently received an airing in the columns of *The Times*, whose correspondence columns have been occupied by a controversy over the merits of public *versus* private economy. The correspondence revealed not merely marked divergence of opinion, but also a considerable confusion of thought; for one at least of those who addressed *The Times* appeared to think that under present conditions the beneficial effect of saving by abstention was so great that it was a patriotic duty to refrain from consumption without any regard either to consequential unemployment of labour or the purpose to which the savings so affected were put. Very properly the advocates of this form of collective suicide by starvation were conclusively routed. Though clearly it is not the duty of any individual to court insolvency by over-spending in order to create employment—any more than it would be for the world's remaining millionaires to sacrifice themselves for the good of the many by perishing of a continual surfeit of caviare—both common sense and the whole weight of economic authority are in favour of individuals and institutions maintaining at a time of acute depression their normal rate of expenditure within the limits of their capacity. This, however, is only one side of the story. The more debatable question has to be

faced: what should be the duty of the State with regard to expenditure both on revenue and capital account?

Let us deal first very briefly with the question of public expenditure on current account, bearing always in mind that we are thinking strictly in terms of the present crisis. Here we have to reckon with two theses. According to the first, given the urgent desirability of "reflation" of the price level, the State should be careful lest retrenchment of its expenditure—whether on salaries, unemployment relief, or other current items—leads to a reduction of purchasing power which is reflected in a further depression of prices and further stagnation of business. In certain circumstances, it is argued, it might even be advantageous for the State deliberately to have a substantial Budget deficit. From this proposition the other thesis emphatically dissents. Since taxation in times of depression, so the argument runs, becomes not only psychologically depressing to enterprise, but also destructive of the saving necessary for new investment and for the purchase of marginal consumers' goods of the more durable type, *e.g.*, motor-cars, the essential thing is for the State to practise rigorous economy and so leave in individual hands a larger volume of liquid funds which can be relied upon automatically to stimulate enterprise and recreate wealth.

As between these two contradictory theses, the real case for public economy has to be carefully stated. So far as the merits of a balanced Budget are concerned, there is little room for dispute. Of all means of bringing about "monetary expansion," the creation of a Treasury deficit is the most likely to become unmanageable and to start the vicious spiral of uncontrolled inflation. Moreover, nerves to-day are so readily worked upon by fears that, as recent experience in the United States has shown, even in an economically almost self-contained creditor country failure, real or apprehended, to balance the Budget of the State may have a positively deflationary effect on enterprise and prices. In the case of countries with more vulnerable balances of foreign payments a "policy of deficit" is too palpably dangerous to merit consideration.

Given, then, the necessity of maintaining a balanced Budget, what are the factors to be considered? If the choice were between (1) adhering to pre-existing rates of expenditure and taxation and (2) wielding a ruthless axe in order to lighten taxes, we should be prepared to agree that opponents of (2) could make out a case against indiscriminate retrenchment by the State. In countries whose exchange is suffering from "import strain," lessened public expenditure is obviously required; but in countries not so handicapped, and where the level of taxation is not oppressively high, it is arguable that (a) the transference of wealth, which the bulk of modern State expenditure involves, may have the effect of mitigating the severity of a depression by maintaining mass purchasing power; and (b) if enterprise is lacking, investment and productive activity are not necessarily fostered by a decision to leave rather more money in the hands of the taxpaying class.

To such arguments, however, the real answer is that the choice to-day is not, in fact, that described above. What Governments actually have to decide is whether to cut down expenditure or maintain it at the cost of adding still further to the burden of taxes whose yield is shrinking *pari passu* with the decline in the national income. And this being the case, the conclusion must be that—quite apart from the psychologically depressing effect of taxation which is felt to be too onerous—it is contrary to the national interest to endeavour to maintain undiminished standards of recipients of State funds at the expense of trenching upon the national capital, restricting enterprise or further curtailing the expenditure of the already hard-pressed taxpayer.

The question of State expenditure on capital account—expenditure which can be financed in other ways than out of tax revenue—is another matter. Here the issue to be decided is how far it may be necessary for the State to embark on capital expenditure of productive types in order to give the necessary stimulus to new investment. In our opinion the question does not and cannot arise until other essential conditions of recovery have been realised. Until the foundations of confidence have been restored by a settlement of the problem of international political debts and by international agreement on saner fiscal policies, schemes of State-financed development would be as fruitless and apt to end in loss and waste as a revival of private enterprise is unlikely. Assume, however, preliminary international accord of such a nature as to relieve political tension and to afford some degree of assurance as to the future of currencies, prices and trade relationships; then it will still remain to be seen whether confidence has not so far been destroyed that an initial impetus towards expansion by State capital expenditure may not be necessary.

It is a question which, as we have indicated, is not of immediate relevance, but it is a question on which clear thinking is required before the assembly of the projected World Economic Conference. For, we suggest, it is on international lines, and on international lines alone, that expansion of State expenditure on capital account can play any useful part in stimulating recovery. The general objection that public works withdraw capital from private activity and employ—at the expense probably of some waste—funds which would be alternatively and better utilised, is not convincing. This common argument is based on the fallacy that the supply of capital is fixed, whereas in fact the capital which finances periods of industrial expansion is not a finite sum available in advance, but is, to a large extent, created as production expands. Moreover, as matters stand, there is a real danger that money which is saved may not be invested, because in the “investment” industries, where depression is greatest and the need for revival most imperative, there is a fatal lack of confidence in the restoration of enterprise to conditions of profitability.

But, however cogent may be these considerations, the fact, we fear, has to be faced that within the limits of national action no great stimulus by the State can be effectively or safely applied. Mere reversal of recent tendencies towards curtailment of capital expenditure by the State would not serve the end in view. For example, in Great Britain, up to 1931, capital outlay by the Government on roads, etc., had been maintained for years at a fairly high level without giving any pronounced stimulus towards industrial revival. To be effective, schemes of State expenditure would have to be on bold lines, which not only led to a definite expansion of demand for capital goods, but had also a stimulating effect psychologically—for example, the electrification of the whole of the British railway system. As matters stand, however, schemes of this nature are scarcely practicable in any country—except possibly the United States—having regard to the fact that (a) unless there were a parallel expansion of activity in other countries, the expanding country's balance of payments might be seriously upset, and (b) the rentier everywhere is so much a prey to apprehension that an economic programme in which the public finances were pledged might gravely impair confidence in the country's financial stability and so lead to increased abstention from investment in that country in other directions. No such objec-

tion, however, would arise if, as a coping stone on a framework of other political, monetary and fiscal agreements, an understanding were reached between, at any rate, the financially stronger countries, that they would simultaneously put into operation large schemes of productive public works as a first step towards breaking a depression which might otherwise drag on even when conditions favourable to recovery had been brought into being.

IMPERIAL PREFERENCE: AUSTRALIA.

THE present economic relations of Australia with the rest of the world have been fashioned by the sudden interruption of international lending, her consequent efforts as one of the world's greatest debtor countries to adjust her balance of trade, and the fall in the prices of her principal exports that accompanied those endeavours. In 1929-30 (all Australian trade statistics are given for the fiscal year July-June), her imports totalled £129.5 millions and her exports (including re-exports) £125.1 millions, which gave her a net inward balance of £4.4 millions; in 1930-31 this was changed to a net outward balance of £42.9 millions, imports having been reduced to £59.2 millions and exports to £102.1 millions. During this struggle to maintain the external balance of trade, the Australian pound was forced away from parity with sterling, and there is now a 25 per cent. premium on the exchange; the committee of experts recently appointed by the Commonwealth Prime Minister to advise what steps might be taken to alleviate the economic situation reported that the rise in the exchange rate, which reduced the world price of Australia's goods without involving a fall in their prices in Australian currency, had been an essential part of the adjustment to present world conditions. The fall in the national income through the decline of prices, the drying up of borrowed money, and widespread unemployment have forced upon Governments and private industries alike the most severe economies, including a 26 per cent. reduction in money wages under Commonwealth awards and a semi-compulsory reduction of internal Government interest, in spite of which State and Commonwealth budgets still show deficits estimated at £18 millions in the current year.

Australia comes to the Ottawa Conference, then, with her interest centred far more upon possible measures designed to resist the fall of commodity prices and to start an upward movement than on mere fiscal adjustments. But that the two problems are not entirely separate was plainly re-affirmed by those same economic experts in a passage upon which every delegate to the Conference would do well to reflect.

To some small extent Australia may help to raise world prices. She is part of the world economy, and any action reviving her prosperity accelerates that of the rest of the world. In particular, she can assist herself and the rest of the world by negotiating treaties with other countries for mutual reductions in tariffs. In addition to the probability of improved terms of trade within the Empire as a result of the Ottawa Conference, it is common knowledge that the governments of important European countries are at this moment ready to respond to overtures from Australia for reciprocal treaties. The removal of barriers to trade and international investment offers the most hopeful way out of the depression.

They are not deaf ears on which this advice falls. One of the first acts of the new Lyons Ministry was to revise the tariff schedules in a generally downward direction—the most notable, indeed the only considerable, reduction of tariffs anywhere in the world during the past few years. The United Australia Party is supported by the Country Party, which is strongly in favour of still further tariff cuts. Speaking at the opening of the Royal Agricultural Show at Sydney on March 23rd, the Commonwealth Prime Minister advised producers to combine in an endeavour to keep down to the minimum the protection given to industries, subject to the necessity of building up secondary industries essential and valuable to Australia.

The Australian Government has been giving careful attention to the questions that Ottawa will present, and a Cabinet sub-committee under Mr Bruce, who will head the delegation, has been considering in detail what Australia might offer and what she might reasonably expect

from Great Britain and other parts of the Empire. The general conditions of the problem are shown in the following table:—

AUSTRALIA'S EXTERNAL TRADE BY COUNTRIES.
(In millions of £'s).

From or to :	Imports.		Exports.	
	1925-26.	1930-31.	1925-26.	1930-31.
United Kingdom.....	65.8	23.3	61.6	50.9
Canada	3.8	1.4	0.9	1.0
New Zealand	2.7	1.0	4.9	3.0
India and Ceylon	8.2	4.8	3.9	3.5
Other British Possessions	5.1	1.6	7.1	3.3
Total, British Empire	85.6	32.1	78.4	61.7
United States	37.2	11.4	13.0	2.9
Belgium	0.9	0.3	6.2	4.2
France	3.8	1.5	18.5	6.7
Germany	2.8	2.0	7.0	5.3
Italy	1.4	0.6	4.7	3.5
Japan.....	4.4	2.4	11.0	9.5
Dutch East Indies	6.2	4.0	2.2	1.4
Other foreign countries..	9.3	4.8	7.5	6.9
Total, foreign countries	66.0	27.0	70.1	40.4
Total, World.....	151.6	59.1	148.5	102.1

The proportion of imports coming from Great Britain, which was 43.42 per cent. in 1925-26, was fairly well maintained until 1930-31, when it fell to 39.37 per cent.; examination of the different classes of imports shows that the fall then was due rather to the disproportionate curtailment of manufactured imports than to any advance made by our competitors. Mr J. C. Latham, the Commonwealth Attorney-General, recently pointed out how important the preference had been in enabling Great Britain to retain so large a share of the Australian market. During the two years 1928 to 1930, he said, over 50 per cent. of our exports to Australia entered duty free, and 46 per cent. of the total were free only because they were of United Kingdom origin.

Nevertheless, the proportion has definitely fallen and there is plainly still room for expansion in our sales, notably of textiles and clothing, iron and steel, and certain groups of machinery and other metal manufactures. The line which the Australian Government has been disposed to take—and it is obviously the correct one—is to seek means of dividing the various branches of a group of industries between the different parts of the Empire so as to secure the maximum efficiency by concentration of production. Mr Latham recently expressed his Government's belief that where a market in Australia was small, and where it was uneconomic to stimulate the manufacture of a particular article in Australia which Great Britain, with its larger output, could produce more efficiently, there was no reason why the tariff should not be arranged so as to give the whole of the market in that article to Great Britain. This view has been endorsed by other Ministers, including Mr Bruce. Representatives of the iron and steel industry have already visited the Dominion in an endeavour to secure co-operation along those lines. Mr Gillett, the Minister for Trade and Customs, said a few days ago that while the Australian delegation at Ottawa would not attempt a meticulous and niggardly weighing of respective concessions, ways would be found to make concessions to Great Britain which would tend to make her as generous to Australia as she possibly could be.

What form, then, is our generosity expected to take? In the five years 1926-27 to 1930-31, as much as 41 per cent. of all Australia's exports to the United Kingdom consisted of wheat and wool, which are by far the Dominion's leading exports, so that at first sight these would appear to be the commodities upon which she would concentrate her efforts to secure fiscal advantages. But, as we saw in considering Canadian wheat last week, there is another side to the problem. For neither of these staples does Great Britain form as much as one-third of Australia's total overseas market, and in each of them the British Empire produces a surplus beyond its internal needs. It is therefore not surprising to find Mr Hawker, the Commonwealth Minister of Markets, declaring that his Government did not intend to encumber its case by seeking preference on wool and

wheat; proposals for enlarging the quota of Dominion wheat gristed in British mills under conditions which would not raise the price to British consumers would dislocate the trade and involve the loss to the Dominions of their hard-won trade relations with other countries, without increasing the return to Dominion farmers. Instead, he added, they would look for assistance on meat, eggs and dairy produce.

Great Britain is Australia's principal, almost her sole, customer for butter, beef, mutton and lamb, as she is for fruit, both fresh and dried. On the other hand, Australia is far from being our principal source of supply. In 1930 she sent us 13 per cent. of the butter, 6 per cent. of the beef (quarters and sides), and 14 per cent. of the mutton and lamb, that we imported. Her exports to us of eggs, cheese and other dairy produce were very small. In butter and mutton one of her chief competitors is New Zealand, in conjunction with whom—since we are unlikely to discriminate between them—she should be considered. Most of our imported beef comes from the Argentine, but, unless and until the method of cold storage is much further developed than at present, Australian beef scarcely competes directly with the Argentine product, since the long journey necessitates its being frozen instead of chilled and its palatability is, thereby, considerably lowered. Thus our opportunities of enlarging the sales of Australian produce in Great Britain are strictly limited. But they are not by any means negligible; and if the Australian Government carries to the point of a definite offer its expressed desire to reduce the obstacles to the sale of British goods, such proposals must be carefully weighed against the disadvantage of levying taxes on staple foods and of prejudicing our trade in foreign markets.

ROAD COSTS AND TAXATION.

(BY A CORRESPONDENT.)

THE problem of the equitable allocation of taxation between the different classes of motor vehicles demands an early solution in the interests of both rail and road transport, and the whole question of road costs needs careful consideration. It is easy to argue that the roads should be paid for by road-users, but, as everybody is to some extent a road-user, this merely begs the question. There are two things to decide; firstly, the total annual cost of the roads, and, secondly, the basis on which the cost should be divided.

The determination of the annual cost of the roads is much the simpler problem. The last complete official figures are for 1928-29, when the total expenditure on the roads, including expenditure out of loans, amounted to £57,342,643. The figure appears subsequently to have risen slightly—mainly on account of grants made in respect of works expedited to relieve unemployment—until the present year, when it has undoubtedly fallen, thanks to the rigid economy of local authorities. The greater part of the money expended on unemployment schemes cannot in any sense be regarded as a proper charge against road-users as such, and should clearly be deducted to arrive at the true cost of the roads. This total should be easily ascertainable; grants from the Road Fund alone towards

unemployment schemes amounted to £1,968,572 in 1928-29 and £16,186,873 in 1930-31. The total cost of necessary road work may to-day very well not exceed £50,000,000 a year. Capital works financed from loans rose from £1,345,011 in 1919-20 to a maximum of £11,431,781 in 1925-26 and subsequently fell to £8,825,571 in 1928-29. The indications are that this figure will continue to decline now that the major part of the reconstruction of the roads to fit them for motor transport has been completed. So far as costs are concerned, there seems no reason to expect any increase in the 1928-29 standard in the future except as part of a policy of public relief.

Indirect unemployment relief, given either through undertaking works which would not have been undertaken, if highways maintenance were regarded purely as a business proposition, or through organising work with the object of employing the maximum amount of manual labour rather than with achieving the lowest possible cost per unit of work through the adoption of mechanical methods, should be excluded from the true cost of the roads. The first step towards the equitable allocation of this cost between road-users is to determine the community-value of the roads, i.e., the value to pedestrians who have no other means of moving from place to place without trespassing on private property, and to the public as a whole for the facilities afforded over or under the roads for various public utility services, such as water, gas, electric light, telephones, telegraphs and sanitation. The use of the roads for the movement of livestock and for pedal cyclists may also be included in their community-value, as neither use can conveniently be taxed. To the extent to which the roads have a community-value they may be considered a proper charge on the ratepayers, and the amount of this charge can only be assessed by reference to the cost of the roads before motor transport came into general use. This was £12,548,000 in 1900-1, a figure which, after adjustment to, say, £20,000,000 to allow for the change in the cost of road work, may reasonably be taken to represent the present-day community-value of the highways system.

The roads are to-day used mainly by wheeled vehicles of various kinds, which, together, should pay for the whole cost over and above their community-value level, but excluding money spent on unemployment schemes. It is usually claimed that the basis of payment in respect of vehicles should be according to the use made of the roads or according to the damage done to them. In practice this implies an ideal of payment on a ton-mileage basis, although ton-mileage takes no account of the type and width of tyres, average speeds, or the amount of acceleration and deceleration, all of which are also important factors in road wear, as well as the particular roads over which the mileage is run. There is, however, a good deal of evidence that ton-mileage is less important than might appear at first sight. The cost of ordinary maintenance and repair of Class 1 roads was £14,561,000 in 1922-23, compared with £13,414,000 in 1928-29 and £13,985,000 in 1929-30. Class 2 roads showed a small increase from £4,547,000 in 1922-23 to £5,278,000 in 1928-29 and £5,388,000 in 1929-30. The change in seven years in the total cost of Class 1 and Class 2 roads was therefore negligible, although the number of vehicles increased in the period by 124 per cent., from 952,474 to 2,130,628, while, from the evidence of the censuses, the ton-mileage of traffic probably increased to an even greater degree. These figures appear to establish the fact that a suitably constructed road will stand up to any normal traffic without appreciably increasing the cost of maintenance. It would seem, therefore, that the factors to be taken into account in assessing the contribution of a vehicle should be its weight and average speed, as these, rather than ton-mileage, have determined the type of road surface necessary to accommodate modern traffic. Considerations such as damage to property from the vibrations caused by motor vehicles, or increase in site values from the development of motor transport, cannot for lack of statistical evidence be taken into account, and in any case probably cancel one another out.

The present allocation of motor taxation between

classes of vehicles may be estimated to be approximately as follows:—

ESTIMATED ALLOCATION OF MOTOR TAXATION.			
	Vehicle Taxes.	Petrol Tax.	Total.
Private cars and motor cycles.....	15,000,000	10,000,000	25,000,000
Commercial goods vehicles	9,300,000	13,800,000	23,100,000
Commercial passenger vehicles ...	3,100,000	8,200,000	11,300,000
Driving licences, etc.....	725,000	...	725,000
	28,125,000	32,000,000	60,125,000

The re-allocation of the proportions on the basis described above would not be a very difficult task, but the result would probably not differ markedly from the present position.

In addition to the difference between the community-value of the roads and their true costs, vehicle owners should also be required to pay for the cost of police and other signalling, and the interest on money spent on the reconstruction of the roads in the period when motor traffic was increasing, but before it was paying its way in motor taxation. The total cost of the roads from 1900-1 to 1928-29 was £792,000,000. The total yield of motor taxation in the same period was £190,000,000, and the approximate community-value, on the basis taken above, some £460,000,000, leaving a balance of £142,000,000 due from road vehicles, or, at 5 per cent., a little over £7,000,000 a year. In addition, a figure of between £2,000,000 and £3,000,000 a year may be allowed for the cost of signalling, making a total for these two items of some £10,000,000 a year. To this must be added £30,000,000, the difference between the true annual cost of the roads (circa £50,000,000) and their community-value (circa £20,000,000). It would seem, therefore, that the total due from motor taxation towards the cost of the roads is in the order of £40,000,000 a year, a figure which is considerably less than the present yield of some £60,000,000 a year from motor vehicle taxes.

NEO-NEP IN RUSSIA.

(BY A MOSCOW CORRESPONDENT.)

THEORETICALLY the Russian Communist leaders believe in large-scale State and co-operative agricultural enterprises and in an apparatus of distribution that leaves no scope for private trade. Practically, when the country is confronted with food shortage, they are inclined to abate something of their theoretical rigidity and to make concessions to the incurable peasant instincts for individual property and private trade—at least until the immediate crisis of supply has been alleviated. The classical illustration was Lenin's proclamation, in 1921, of the Nep, or New Economic Policy, with its substitution of a tax in lieu of the peasants' surplus produce. More recently, in the spring of 1930, Stalin stayed off what threatened to be a major political and economic crisis when he assured the peasantry that membership of collective farms did not mean surrender to common ownership of their houses, gardens, chickens and pigs, and that every peasant family would be allowed to preserve one unsocialised cow. To-day the term Neo-Nep, or Newest Economic Policy, might be used to describe the very important changes in Soviet agrarian collection and distribution methods which are outlined and foreshadowed in decrees on grain and meat supply which have recently appeared under the signatures of Stalin and Molotov, and in other recent legislative and administrative acts.

The main points of the grain decree, which appeared first, are that State purchasing organisations will buy, this year, from the peasants at fixed prices about 18,400,000 tons, assuming an average harvest, against over 23,000,000 tons which were bought in this way during 1931. The peasants are free to dispose of the surplus as they choose—either on private markets, where they can get high prices but must also pay dearly for manufactured goods, or in special "collective farm bazaars," where the established farm prices are lower, but where manufactured goods are also sold at more moderate prices. The

meat decree was practically a repetition of the grain decree, except that the reduction in the centralised collection was more drastic, from 1,414,000 tons to 716,000 tons.

These decrees are calculated to soften and modify quite substantially the system of virtual requisitioning (at fixed prices) of the Russian peasant's most important product, grain—a system which has also applied with varying degrees of strictness to meat, cotton, flax, sugar-beets and other products. From the peasant's standpoint there were two great objections to this system, which was obviously advantageous to the State, interested primarily in assuring the bread supply of the army and of the rapidly growing new industrial centres and in promoting the exportation of grain. Firstly, few travellers who have talked at any length with peasants in collective farms can have failed to hear the complaint that the State collecting agents often underestimated the amount of grain which the peasant family required for its own subsistence and for the maintenance of its domestic animals. Secondly, the roubles which the peasant received for his grain could not be fully or readily converted into manufactured goods. Consequently, the peasant was left with a considerable quantity of roubles; and paper money, in the rural districts, is not a prized possession.

The decision to relax the rigidity of the food collection and distribution system seems to have originated in two causes, which are closely inter-related—the lowered morale and indifference of the peasants and the unsatisfactory food situation of the country. While the Soviet Government has kept the industrial workers, especially in the larger centres, supplied with an adequate ration of the simpler foodstuffs, the shortage of meat and dairy products, even in Moscow, which is better supplied than the provinces, has been more pronounced than usual during the last winter. In Ukraine there is apparently a shortage even of bread for some classes of the population.

There are three main causes for the present food stringency—the necessity for large exports in order to meet foreign commercial obligations; the laying in of reserves for possible military contingencies in the Far East; and the poor functioning of many of the State and collective farms. The first cause is likely to remain burdensome at least for the duration of the world crisis, with its accompaniment of low prices and contracting markets; the removal of the second depends on Japan; but the Soviet authorities are evidently convinced that improvement is possible as regards the third, and that the present decrees will promote this improvement.

Up to a comparatively recent time there was a tendency to look for the solution of the acute shortage of meat and dairy products (itself a prolonged inheritance from the wholesale slaughtering of cattle, pigs and chickens by the peasants in the winter of 1929-1930) in the development of large State cattle and sheep ranches, pig and poultry farms, and in the gradual socialisation of the domestic animals which remained in the possession of collective farm members. A few weeks ago, however, the published results of a Governmental investigation revealed widespread mismanagement in the State livestock farms, with consequent high mortality among the animals and poor condition of those which survived. About the same time a decree severely censured local officials who had been socialising the farm animals of peasant members of collective farms against their will. To-day the provision of individual incentives to the peasants is temporarily at least an essential element in raising agricultural productivity and hence improving the food supply of the country. But the success of the new system will depend primarily on whether the progress of industry will make available a substantially larger quantity of products which the peasants require for everyday consumption.

When one speaks of a Neo-Nep in Russia one should never forget that this is 1932, not 1921, and that conditions have greatly changed during the intervening eleven years. The loosening up of the Soviet distributive system (a loosening which is further emphasised by a new decree abolishing food rationing except for certain staple products, such as bread, flour, meat, herrings, sugar and butter) does not mean an abandonment of the collective farm system or the clearing of the road for any such sweeping revival of speculative private trade as occurred

in 1921. It does mean that the individualist spirit which the Russian peasant by no means discards when pressure of economic circumstances brings him into the collective farm is to receive more consideration, at least in the immediate future.

In a sense the new policy in agriculture is a logical complement to the new policy which has prevailed in Soviet industry since Stalin announced his so-called "six conditions" in an important speech last summer. These conditions, which included the more widespread adoption of piecework and differential wage-scales, greater individual responsibility in industry and a cessation of persecution and discrimination against pre-revolutionary engineers and specialists, have yielded valuable results. The Stalingrad tractor factory, which was a positive eyesore on the Soviet industrial landscape a year ago, is now turning out its full quota of production, and the first quarter of this year showed the substantial gain of 20 per cent. in industrial output over the same period in 1931, although this fell short of the year's plan, which called for an increase of 36 per cent. But food supply, which cannot fall too low without affecting labour productivity, has not kept pace with the progress of industry, and it remains to be seen whether the concessions to the peasant's individualist instincts will fully achieve the desired improvement.

Notes of the Week.

British Monetary Policy.—The concluding debates on the Finance Bill, which secured a third reading last Friday by 409 votes against 34, centred largely round the Exchange Equalisation Account, but did little to throw fresh light on Britain's monetary policy. Pressed for a statement, Mr Chamberlain referred the House to what, he implied, was an accurate series of inferences drawn in a previous speech by a Conservative back-bencher, Mr Albery. From a study of the Chancellor's speeches and answers, Mr Albery had deduced the following six points of policy:—(1) That we are aiming at a return to some form of gold standard, not barring the possibility of a gold-cum-silver standard; (2) that the eventual return will be at a figure below the previous gold parity; (3) that a return to gold is not expected to take place in the near future; (4) that it is intended to control fluctuations in sterling exchange with a view to bringing about a higher price level of commodities; (5) that, meanwhile, every effort will be made to prevent violent fluctuations of sterling; and (6) when the higher commodity price level has been attained, stability of commodity prices will be an objective. These six points, according to Mr Chamberlain, represent "an accurate account of the general considerations which have been in my mind from the first." Nothing more specific could the Chancellor be induced to say; nor did he attempt to reconcile—except by saying that "we must be affected by gold prices"—the apparent incompatibility between the objectives of a stable sterling exchange and higher prices, so confusingly mixed together in Mr Albery's fourth and fifth points. Indeed, Mr Chamberlain's decisiveness was all on the negative side. For any country to be "dogmatic" on monetary policy would be a most unhelpful manner of

bringing about world agreement; if ever the time came for this country to give a lead, this was certainly not the time or the occasion. In short, "to-morrow and to-morrow and to-morrow. . . ." But procrastination in such a crisis as this is the thief of more than time.

The Chancellor on the Outlook.—Winding up the debate on the Finance Bill, Mr Chamberlain took the opportunity of making some general observations on the outlook. Deprecating unfounded pessimism no less than the "breezy optimism which makes its wishes the criterion of its beliefs," he recommended to the House the maintenance of cool, carefully preserved judgment. With regard to the Budget, though the figures of unemployment were disappointing, he saw no reason at present to forecast any considerable shortfall in the yield of inland revenue, while calculations as to the prospective yield of indirect taxation were at the moment premature. In general, not only had confidence in sterling been restored, but our position compared favourably with that of other countries, though Mr Chamberlain added, in a significant passage, that world trade as a whole was continually diminishing and that we could not expect any single country to be prosperous when all the rest of the world was distressed. Many problems remained to be solved, but, even supposing hopes at Lausanne were disappointed, the House need not suppose that further taxation in this country was inevitable. We had not yet come to the end of possibilities of reductions in national expenditure. On the other hand, further large economies could not be achieved without serious changes in national policy with regard to such matters as defence, pensions, education, housing and unemployment insurance. The Government would not introduce changes lightly or without being sure that they were necessary, though they would lose no opportunity of reducing national expenditure where that could wisely and properly be done. The speech went some way to allay fears that an autumn Budget, adding seriously to the burden of taxation, would be inevitable; but it left unanswered a great number of questions that will arise next winter if the world crisis is aggravated, the cost of unemployment relief increased, and no conclusion reached before December 15th as to the annuity due by us in respect of our war debt to the United States.

Sir Donald Maclean.—The tragic and unexpected death of Sir Donald Maclean has removed from English public life a man who was held in universal respect by all with whom he came in contact, whether their opinions agreed with his or not. His courage, his steadfast adhesion to principle, his understanding of the mind of the people and his unflinching good humour and kindness of nature seemed to lift him above the pettinesses of political strife. That is not to say, however, that he was not a bonny fighter. On the contrary, Sir Donald was an ideal man to have alongside of one in a tight corner. No man was more loyal or more staunch in holding to the course which he believed to be right. Without these qualities it would have been impossible for any man to have led the remnants of the Liberal Party through the Parliament of 1918 and to have brought them through it with greater prestige than when it began. The Liberal Party has lost one who seemed to embody in an exceptional degree the Liberal outlook, while England has lost from the stage of her public life a very fine gentleman.

Republicans at Chicago.—The Republican Convention which is being held this week at Chicago could not have been better staged if it had been designed on purpose as an ocular demonstration of the divorce between the traditional machinery of modern democratic politics and the urgent problems of modern social life. We are impatient with the Disarmament Conference because, in 1932, it is talking the language of 1918; and, in an age when events move so fast and furiously towards destruction, a time-lag of fourteen years is serious enough. But what are we to say of an American party meeting which is not fourteen years behind the times but half a century?

The Americans are as old-fashioned in their politics as they are up to date in all that appertains to clock-work; and, in these times of stress and strain, the weak points in obsolete political machinery are likely to be found out. The spectacle of this Republican Convention at Chicago going through its conventional motions in the thick of "the economic blizzard" reminds one of the last days of the "Holy Roman Empire" in the seventeenth-nineties. It is hard, indeed, to understand why Mr Hoover should wish to be nominated again by this body to the Presidential office; and, for our part, we feel that General Dawes has shown greater wisdom in firmly refusing to be nominated for the Vice-Presidency—an office which will be a bed of roses during the next four years compared with the Presidency itself. For the rest, the managers of the Convention have tried to carve a plank for their platform which will shape the Republican Party's policy on the drink question to the common liking of "wets" and "dries"—a result which the eventual decision to go for a plan of local option by individual States, leaving the Federal authority neutral, can hardly be expected to achieve. The rest of their energy seems to be taken up with the effort to avoid hearing the demand for a lowering of tariffs which is coming, in significantly insistent tones, from the Middle West. No doubt, the political virtuosi whom the party machine turns out can reckon to a nicety the number of votes that they are going to lose by leaving undone those things that the American people is demanding of them. But, if they can calculate, they cannot act on the result; for they are the creatures of the machine and not its masters. What will be the upshot? A landslide from the Republican to the Democratic side? Or is the Democratic Party in like case? Viewed from a distance, by eyes no matter how friendly, the processes of securing government "of the people, by the people, for the people," are not inspiring.

The Week in Germany.—The "Government of Barons" is not finding its task too easy. To maintain its position it has to secure at least the benevolent neutrality of the Nazis, whose forces include strong elements likely to be aroused into opposition by the new Emergency Decree described in detail by our Berlin correspondent on a later page. Herr Hitler has temporarily been "bought off" by a decree raising the ban on the Brown Army, which now appears again upon the stage with the blessing of a President who decreed its dissolution only two months ago. A further price which has to be paid is that the Reich Government must enable the Nazis to obtain control over the Prussian Landtag; but the Southern States are already up in arms against the idea of any interference with State rights. Herr von Papen's Minister of the Interior sought to allay the anxieties of the States by giving an assurance of the present Reich Government's intention to respect the present Reich Constitution. This assurance took the form of a statement to individually and not, like the Reichstag, the German people as a whole. This assurance, however, did not pre-empt the Prime Ministers of Bavaria, Württemberg and Baden from visiting Berlin and having an interview with President Hindenburg and Herr von Papen last Sunday. The Southern States object equally to the idea of putting the Prussian Government into the hands of a Reich Commissioner and to the decree resuscitating "the Brown Army"; and they appear to have expressed their objections vigorously. Protests against the resuscitation of Prussia—a Catholic and industrial district which is one of the most important parts of the Prussian territory. Meanwhile, in a broadcast address on Tuesday—the first broadcast talk that has been delivered in the Nazi interest—Hitler's vigorous lieutenant, Herr Gregor Strasser, denounced the exploitation of German nationalism, in the pre-war period, for the service of dynastic and financial interests, and made conciliatory gestures towards the Social-Democrats, the foreigners, and even the Jews. On all round to the alternative of Germany re-arming up to her late adversaries' present level. But he dismissed the

possibility of the present inequality continuing. On this point the Nazi spokesman was obviously speaking, not merely for his own party, but for the whole German people.

Japan Under Pressure.—On paper the present Japanese Government looks strong, for it is a coalition Government of the two political parties, and it has taken office to do the will of the all-powerful military camarilla. But the economic crisis is stronger still; and the effects of this economic pressure in Japan are now translating themselves, in all manner of ways, into politics. The Japanese Government is at present being pressed to devalue the yen; it is being pressed to recognise officially its own puppet Government of Manchukuo; it is being pressed to support the Manchukuo Government in taking the collection and receipt of customs in Manchuria out of the hands of the China Maritime Customs organisation; and it is being pressed to patronise certain projects for the organised mass-settlement of Japanese colonists on the land in the Manchurian countryside. As regards the points relating to Manchuria, some of the pressure comes from the Manchukuo Government—that is to say, from the Japanese officials by whom that Government, such as it is, is managed; but the main pressure evidently comes from Japan itself; and this pressure is formidable, because it represents the last hope of the Japanese agricultural population, who are suffering severely from the slump in international trade, and who have been led to look towards an eldorado in Manchuria as an asylum from their present ills at home. Unhappily for the Japanese Government, in Manchuria "General Winter" has to be faced by the Japanese settler as well as General Ma. The Japanese army controls the towns and the railways; but it is far indeed from being able to make safe, for the Japanese agricultural colonist, the great open spaces of the Japanese countryside; and even if this human difficulty were overcome, there is no indication that the climatic difficulty would prove soluble. Japanese militarism has held out hopes to the Japanese people which it cannot make good.

The Junta in Chile.—Having seized power with a confiscatory Socialist programme, the new Chilean Junta are now confronted with the task of making good their rather drastic undertakings—and this in face of probable opposition not only on the part of the foreign interests concerned, but also on the part of the Chilean professional classes and bourgeoisie. They began operations at the end of last week by taking possession of the Central Bank—an institution in which both Chilean banks and foreign banks operating in Chile are compulsory shareholders—and re-christening it "the State Bank," with the announcement that its shares are to be redeemed at par (without any specification of rate of exchange). They have also issued a decree declaring all deposits of foreign money in the banks of Chile, both Chilean banks and foreign, to be Chilean national property—the owners to be credited, in this case, with the equivalent of their deposits at the rate of exchange which prevailed on the third of this month. These policies, like the policy of dissolving Cosach, are obviously easier to enunciate than to put into action; and, last Monday, the decree concerning the Central Bank was officially retracted by the new Minister for Finance. On the same day, the Government intimated that it now intended to go slow in dealing with Cosach—somewhat naively proclaiming, as new discoveries, that Cosach was a large and complicated organisation and that the destinies of this organisation were, after all, secondary to the prospects of the nitrate industry itself. On the same day, one of the three new dictators, Don Carlos Davila, resigned and was succeeded by Don Rolando Merino, who had already succeeded Colonel Grove (now Minister of War) in the command of the Air Force. There has also been a new appointment to the Ministry of the Interior. These changes suggest that the doctrinaire Socialists on the Junta may be already finding themselves compelled to yield to force of circumstances. Meanwhile, a British cruiser has been sent somewhat hastily to Callao, in Peru, in order to be at hand in case British interests in Chile need protection.

Abyssinian Growing Pains.—Abyssinia is growing, or trying to grow, out of a loosely-knit mediæval monarchy into a standardised state-member of our modern "great society." And it is only natural that she should suffer some growing pains when she is seeking to add this outsize length in cubits to her stature. The recent symptoms all fall within certain well-recognised categories. The French Minister at Addis Abeba has had an "incident" with a nationalistically-minded Abyssinian railway station master; a sub-king has been arrested on the orders of the reigning Emperor Haile Selassie; and the ex-Emperor Lijj Yasu has escaped from his long internment at Addis Abeba—only to be recaptured by the reigning Emperor's troops. The conflict underlying these various disturbances of the peace is a trial of strength between traditionalism and parochialism—represented by the arrested sub-king and the recaptured ex-Emperor—and the centralism and modernism which are represented by the present incumbent of the Imperial throne of Ethiopia; while the station master's fracas with the French Minister is the typical gesture of a re-awakening Oriental nation up in arms to assert its equality of status with the Great Western Powers. In Abyssinia, as in most other Oriental countries that have been through this same metamorphosis, modernisation and centralisation go together; for the old traditions cling to the soil by local roots. In Abyssinia, however, the task of making the authority of the Central Government effective over the local principalities is particularly difficult, since the nature of the physical terrain—a plateau intersected by river gorges and diversified by mountain ranges—gives a formidable advantage to local chiefs who are striving to retain their hereditary powers. The present Ethiopian Emperor has been seeking to atrophy the local magnates' *de facto* powers by compelling them to reside, far off from their tribesmen and retainers, in the Imperial capital, while he has sent his own officials to govern their principalities in their stead. Inevitably, this policy has caused some local heart-burnings, which Lijj Yasu doubtless hoped to exploit when he made his dash to Gojjam; but the ex-Emperor's ignominious failure is not surprising; for, although he has the advantage of being the direct descendant and the appointed successor of the great Emperor Menelik, he spoilt his chances when, in 1916, after occupying the throne for six years, he committed, under Turco-German influence, the greatest *gaffe* that any ruler could possibly commit in the oldest Christian realm in the world. In 1916, Lijj Yasu turned Muslim; his deposition was the inevitable result; and his present failure shows that the indiscretion of 1916 has not been forgotten.

The Credit-Anstalt Negotiations.—Owing to the fact that some of the foreign delegates to the proceedings have had to keep other engagements, the protracted negotiations for the liquidation of the Credit-Anstalt's foreign liabilities have for the moment been suspended. So far, it has proved impossible to reach agreement either as to the size of the annuities to be paid to the foreign creditors in satisfaction of their claims, or on the question of settling those claims in part by the transfer of some of the Credit-Anstalt's foreign assets. According to our Vienna correspondent, a few weeks ago it was believed that the Austrian authorities were prepared to undertake 20 million

ULLMANN & Co. Merchant Bankers.

Telephone:
LONDON WALL 9000.

Telegraphic Address:
ULMACO-AVE.

schillings in regard to the proposed annuities, but that the foreign creditors were holding out for 26 million schillings, while reports from other sources are to the effect that while the Austrians offered payment in 40 annuities representing in the aggregate less than 30 per cent. of the outstanding debt, the foreign creditors have so far sought nearly the full satisfaction of their claims. In view of the importance of a final settlement of this business, in such a way as to obviate a complete Austrian breakdown, it is possible to criticise the attitude hitherto adopted by the foreign creditors; for if they hold out for too much, they may easily end by getting nothing at all. Again, while the transfer to them of the Credit-Anstalt's somewhat scattered foreign assets can hardly be called satisfactory from the creditor's point of view, it is certainly better than nothing, and there is also something to be said for the concentration of these assets in the hands of a strong international committee. One obstacle, however, in the way of the negotiations is doubtless the feeling on the creditors' side that before they can accept any composition of their claims they must satisfy themselves that such composition is final and that they will not be asked to make further concessions at a later date. If this condition is fulfilled, the foreign creditors will be well advised to accept a settlement, even if it involves them in greater loss than is palatable. Meanwhile the Paris negotiations over the extension of further financial aid to Austria are also hanging fire, but there are hopes that some definite progress may be made within a short time, if and when there is an indication of anything tangible being achieved at Lausanne.

Australia and Her Debts.—The swing to the Right in Australian politics, which began with the defeat last month of the Labour Government of Victoria, has been heavily underlined by the smashing victory of the United Australia and Country Parties in the New South Wales elections. Mr Lang's representation in the new Parliament has been more than halved, and Mr Stevens is now in a position to continue the task of restoring New South Wales' finances with a large, solid majority behind him. So far, so good; but, as a corrective to unrestrained optimism over the defeat of "Langism," we would commend to the notice of our readers a letter which we print on page 1356 from an Australian correspondent, whose views are those of an informed and authoritative observer. Writing before the result of the New South Wales election, he remarks that Mr Lang's probable defeat should not be regarded as an indication that the Australian people have abandoned their claim, on grounds of justice, to a reduction in the burden of overseas interest payments. His analysis of Australia's balance of payments and of the sacrifices which she has already been called upon to make reveals strikingly the still unresolved difficulties of the position, unless there is a marked recovery of the world prices of the commodities which Australia exports.

Overseas Trade in May.—At the first glance the Trade Returns for May appear uniformly depressing. Whereas imports are £2 millions higher than in April, exports are nearly £5 millions lower. The May figures are shown below:—

MONTH OF MAY. (000's omitted.)					
	Increase or Decrease as compared with				
	1932.	May, 1931.		May, 1930.	
	£	£	%	£	%
Imports	55,735	-13,893	-19.5	-35,318	-38.8
British exports	30,197	-3,698	-10.6	-20,815	-49.7
Re-exports	4,399	-1,348	-23.4	-4,677	-51.5
Total exports	34,596	-5,047	-12.7	-25,492	-42.4
Excess of imports over total exports	21,139	-8,847	-29.5	-9,826	-31.4

There are, it is true, certain aspects of the returns which qualify their gloomy appearance. Over £1 million of the decline in exports as compared with a month ago is due to the fact that an exceptionally large number of ships was exported in April. There were, however, also notable

declines in exports of wood and timber and of machinery, and small declines in exports of coal, coke, non-ferrous metals, cotton yarns, wool tops and tissues, apparel, paper and rubber. Exports of silk, on the other hand, were higher than in April, and those of cotton yarns and chemicals showed a slight improvement. The increase in imports occurred mainly in the food group, and was attributable mainly to larger purchases of fruit, vegetables and tea. Imports of raw materials were very little higher than in April, increases in timber, raw wool, paper-making materials and iron ore being balanced by decreases in other metals and minerals, cotton, silk, oil seeds and fats, hides and rubber. Manufactured imports were almost stationary at £11,563,801 against £11,839,965 in April, but a number of sections showed increases, including pottery, non-ferrous metals, machinery, cotton, wool and paper. The most marked reductions were in iron and steel, silk, other textiles, vehicles and rubber manufactures. Figures for the first five months of the year are given below:—

FIRST FIVE MONTHS. (000's omitted.)					
	1932.	Increase or Decrease as compared with first five months of			
		1931.		1930.	
	£	£	%	£	%
Imports	302,531	-48,748	-13.4	-155,837	-34.0
British exports	157,310	-12,414	-7.3	-104,696	-39.9
Re-exports	25,155	-4,509	-15.2	-16,245	-38.9
Total exports	182,465	-16,923	-8.5	-120,941	-39.8
Excess of imports over total exports	120,066	-29,825	-20.0	-34,896	-22.5

The 1932 totals are so greatly affected by forestalling of the recently imposed tariffs, that it is premature, as yet, to attempt to deduce the future trend. Protectionists are welcome to make such capital as they can out of the 22½ per cent. reduction in our "adverse" trade balance of two years ago. We would invite their attention to the more significant decline of 38½ per cent. in our total trade.

New Iron and Steel Duties.—Following the recommendation of the Import Duties Advisory Committee, the Treasury have issued an Order extending the temporary "additional" Customs duties of 29½ per cent. to pig iron (other than pig iron smelted with charcoal), spring steel and light castings, and exempting iron bars produced by puddling with charcoal. The imposition of a 33½ per cent. duty on pig iron calls for two observations. Firstly, it carries still further the topsy-turvy principle governing the iron and steel duties, namely, that the earlier the stage of manufacture reached, the higher shall be the duty. Secondly, the object of the duty is to provide protection not against actual but against potential foreign competition, for the report of the Advisory Committee admits that the recent collapse of foreign pig iron prices has not yet been reflected in additional imports. In view of available statistics, the Committee could indeed adopt no other line. In 1930 home production amounted to 6,060,000 tons, and imports only to 290,428 tons, of which 126,081 tons were traceable to India, and so exempt from the duty. In 1931 home production fell to 3,700,000 tons, but total imports (including Indian) were still a mere 283,000 tons, while for the first five months of 1932 home production was 1,624,000 tons, and imports only 74,700 tons. The Committee recognise that the new duty may have adverse reactions upon other sections of the industry, and that its operation will have to be carefully watched with a view to its possible removal. We suggest that inasmuch as new duties can be imposed at a moment's notice, they would have been wiser to wait until the threatened danger was translated into reality.

The Free List.—The additions to the iron and steel duties, noted above, overshadow in importance the recent activities of the Advisory Committee in the opposite direction. It is, however, only fair that we should record that the Committee, "paying particular attention to the availability or otherwise of supplies of British origin and to the export trade of this country," have now recommended the

addition to the Free List of crude emery, mercury, argol and other crude tartrates, gallnuts and kelp. The retained imports of these commodities in 1930 had a total value of about £800,000. The additions to the Free List were duly approved by Treasury Order with effect from June 14th, which was also the date of operation of the new iron and steel duties. For this modest contribution towards greater freedom of trade, our modest thanks.

Cotton Trade Hours and Wages.—Our Manchester correspondent writes:—The labour situation in the Lancashire cotton industry continues to cause much uneasiness. It will be remembered that the recent ballot of the weaving operatives with regard to withdrawing their labour as a protest against the abrogation of all agreements by the employers was indecisive, and the confused position was considered in Manchester at the beginning of this week by the Central Board of the Northern Counties Textile Trades Federation. This organisation embraces the nine trade unions in the manufacturing branch of the industry. After a full discussion it was decided to take a fresh ballot of the members of the trade unions. The operatives are to be asked if they are in favour of withdrawing their labour or in favour of a resumption of negotiations with the employers. The result of the ballot will not be known until the end of next week. The Operative Weavers' Amalgamation is the most important trade union in the Northern Counties Textile Trades Federation, as the membership is equal to 75 per cent. of the workpeople employed in the weaving branch. The Central Committee of the Weavers' Amalgamation have decided to re-affirm their previous decision and recommend their members to vote for strike action. In the circumstances it seems probable that the ballot will show a substantial majority in favour of labour being withdrawn from all the mills in membership with the Cotton Spinners' and Manufacturers' Association. In the meantime, more individual employers are getting their workpeople to accept a reduction in wages. The uncertain outlook is having a very detrimental effect upon business in the Manchester market, as buyers of cloth are refusing to place orders owing to the possibility of lower prices as a result of a reduction in labour costs in the near future. There is every appearance of a crisis arising in about a fortnight; but, if the trade unions decide upon a strike, there is considerable doubt as to whether they will be able to effect a general stoppage.

Sterling and Gold Prices.—With sterling exchange still more or less "pegged" against the dollar, the past fortnight has witnessed the somewhat remarkable phenomenon of a fractional rise in gold prices (so far as can be judged by our admittedly rudimentary index), contrasted with a fall of 1.3 per cent. in our index of sterling prices of primary products, and a decline of 2.3 per cent. in the *Economist's* complete index.

SEPTEMBER 18TH, 1931 = 100.

Sectional movements of the complete *Economist* index are shown in the next column in greater detail. The fall in foodstuffs during the past fortnight has been pronounced and widespread; textiles cheapened, with the exception of raw cotton; and the minerals section was depressed by the slump in tin.

If the authorities are, as they aver, aiming at stability of sterling prices, a fall of 13 per cent. in the *Economist's* complete index during the past four months is a curious comment on their achievement.

Iron and Steel Production in May.—Iron and steel production was fairly well maintained in May at the low levels which have recently been ruling; for the slight recession in steel production can easily be accounted for by the Whitsun holidays. The number of blast furnaces, in operation remained at 69; the production of pig iron, at 315,300 tons, was 1,600 tons less than in the previous month; while steel production, at 416,900 tons, compared with 433,300 tons in April and 435,100 tons in May, 1931. Reduced demand, accumulated stocks, and the new import duties, all combined to keep imports of iron and steel (144,000 tons) at the comparatively low level of April and some 84,000 tons less than in May last year, though in what proportion these various factors contributed to the result it is impossible to say. Certainly in many products foreign material is being offered at prices considerably below the home price in spite of the depreciation of sterling and the import duties. Continental prices fell further during the month; on a gold basis the price of billets, f.o.b. Antwerp, fell by 3s. to £1 19s. at the end of May; sheet bars by 3s. to £2; and joists by 2s. to £2 2s. These prices admittedly involve a substantial loss; for instance, the report of the Comité des Forges de France, submitted to the annual meeting on May 19th, stated that export prices had fallen by 50 per cent. since 1930 and left the works with a loss of 30 to 40 per cent. on the cost of production. Although the total imports remained the same as in April, imports of sheet and tinplate bars rose by 5,500 tons to 42,200 tons. Exports of iron and steel fell sharply to 151,300 tons, but for the third month in succession were in excess of the imports. The decline of 80,000 tons as compared with April was chiefly due to decreases in the exports of pig iron, galvanised sheets, and tinplates and sheets.

Lee Higginson's Position.—According to a notice issued in New York on June 15th, the firm of Lee Higginson and Company plan to discontinue the issuance and distribution of securities and, with certain exceptions, to withdraw from the deposit business. A corporation to be known as Lee Higginson Corporation, with its capital paid in from sources outside the present partnership, is presently to be formed to engage in the security business, with offices in New York, Boston and Chicago. The assets of Lee Higginson and Company will remain with the partnership, and, following the formation of the new corporation, the firm will devote itself to the protection and eventual liquidation of its assets, and to the handling of its existing acceptance business. The Paris firm of Lee Higginson et Cie. will similarly reduce its activities. The above statement does not apply to the London firm of Higginson and Company, which will continue all its business as heretofore. This announcement will be received with general regret; for it marks the definite curtailment of the activities of a famous house which was founded as long ago as 1848, and is now compelled to liquidate a position which has become untenable. There is little doubt that this decision has been forced partly by the heavy depreciation of the American stock markets, but finally by the extent to which the firm must have suffered from the Krueger failure. The only pleasing aspect of the news is that the London house is not

[June 18, 1932.]

involved, and is able to continue its full activities. In actual fact, the only connection between the London and New York houses is that some of the American partners are shareholders in the London house, and one English partner holds shares in the American house. The credit of the London house has remained unaffected by the news, and we understand that bills carrying its name will continue to be taken readily both by the money market and the Bank of England.

International Production.—In the following table we have converted the indices of the physical volume of production of various countries to a percentage of the average of 1928:—

(a) Quarterly Index. (b) Adjusted for seasonal variations. (c) Partly adjusted for seasonal variations. (d) January–February. (e) January. (f) Provisional.

A comparison of the first quarter of the current year with the first three months of 1931 shows that in most countries the momentum of the downward movement of production has lost none of its force in the intervening period. The only exceptions are Sweden and the United Kingdom, which have derived a relative advantage from the suspension of the gold standard. In France, where the effects of the world depression were scarcely felt during 1930, the situation began to deteriorate rapidly last summer. The indices for Poland, France, Germany and the United States show a fall of 27.5 per cent., 23.9 per cent., 21.8 per cent. and 18.7 per cent. respectively. The turn of the year has brought no relief to these countries. On the contrary, the downhill pace appears to have been quickened.

Germany's Economic Crisis.—Our Berlin correspondent writes:—The German Institut für Konjunkturforschung reports a continuation of the decline in world production, prices and turnover, and a further increase in currency difficulties, but states that in the credit system of some countries, especially Great Britain, there are signs of a certain relaxation. The report speaks much less favourably of conditions in Germany. There has indeed been a slight ebb in the confidence crisis, as is evidenced by the tendency of the Stock Exchange, and by the increasing willingness of the public to give up hoarding money, but economic conditions in general are growing worse. Unemployment, when allowance is made for seasonal influences, is greater; the production index is falling; and there has been practically no seasonal improvement. Income from labour, according to an estimate of the Konjunkturinstitut, is 36 per cent. lower than in 1929; wages and salaries are about 19 per cent. lower and the loss in income from unemployment is about 21 per cent. There is no sign of any relaxation of tension in the German credit market and the demands on the Reichsbank are still very great. The Reichsbank has even granted some credit on long terms, as all other sources of long-term credit have failed. The reduction in the rate of discount has had no effect in checking deflation, and in the opinion of the Institut it could only have such an effect if discount policy were supported by an open market policy, which is impossible under the existing law. German experts, however, and probably the Reichsbank itself, are opposed to any change in the law in this sense.

British Foreign Investments in 1930.—Further light is thrown on the international financial position of this country, and on the causes of the sterling crisis, by the figures of foreign investments calculated by Sir Robert Kindersley and published in the June *Economic Journal*. Sir Robert's investigations, begun four or five years ago, now cover not only Government loans, but also the whole field of commercial capital. In that field "sampling" is inevitable (it would have been more useful to students, incidentally, if the number of satisfactory returns forming the basis of these estimates had been disclosed), but Sir Robert and his assistants are to be congratulated on the completeness as well as the interest of their results. The main figures are summarised in the table below:—

BRITISH CAPITAL ABROAD, 1929 AND 1930.
(In £ millions.)

Type of Security.	1929.			1930.		
	Capital.	Income.	Repay- ment.	Capital.	Income.	Repay- ment.
Empire Governments and Municipalities	1,061	46.4	20.3	1,080	46.9	9.8
Foreign Governments and Municipalities	351	18.2	10.1	357	17.8	9.9
British Companies operating Abroad:—						
Share capital	802	67.7	...	815	59.0	...
Loan capital	385	18.3	8.5	390	17.5	9.5
Companies Registered Abroad:—						
Share capital	436	42.0	...	391	31.7	...
Loan capital	403	19.7	9.6	391	19.3	9.7
Total	3,438	212.4	48.5	3,424	192.2	38.9

Sir Robert Kindersley adds an estimate of £300 millions (the same in 1930 as in 1929) for holdings of securities not dealt in on British stock exchanges and for other direct investments, the income distributed in 1930 being raised to £209 millions, compared with £231 millions in 1929. The results do not represent net British investment abroad, since there is a considerable volume of British securities held abroad in counterbalance. Sir Robert also points out, what is not always fully realised, that foreign holdings of overseas sterling loans and of the securities of British companies operating abroad (which he puts at £481 millions) to a great extent offset the limited amount (£550 millions, according to his estimate) of our overseas capital holdings which might be fairly readily mobilisable in defence of the exchange. The most serious aspect of the figures is, of course, the decline of the income yield. Sir Robert Kindersley puts forward a tentative estimate of £169½ millions for the income received in 1931, showing a further fall of £89½ millions after the drop of £22 millions in the previous year. The extension of default and the continued reduction of dividends makes the further outlook still blacker, but it must be remembered that in terms of real receipts some part of the decline has been offset by the enormous fall of prices.

Bank of British West Africa.—The most pleasing feature of the latest accounts of this bank, relating to the year ended March 31st last, is the partial recovery in net profits. It will be recalled that for 1930-31 profits were only £24,600, against £121,800 in the preceding year. The dividend had to be reduced from 6 to 4 per cent.; nothing was available for reserves; and £28,000 had to be withdrawn from undivided profits. This year, despite the amount to £59,600, which is sufficient to cover the dividend of 4 per cent. and to raise the carry-forward from £30,000 to £41,600. So far as the succession of instantaneous pictures presented by the balance sheets at the developments, deposits fell during the past year from £5,909,000 to £5,550,000, while the trade depression was reflected in the drop in bills for collection from £818,000 to £691,000, and still more in the decline in acceptances from £315,000 to a mere £21,000. Cash has been reduced from £1,513,000 to £1,009,000, but investments in British Government securities have been increased from £1,269,000 to £1,742,000. Bills are lower at £1,130,000, against £1,327,000, and advances have fallen from £2,616,000 to £2,390,000. Notwithstanding the fall in

cash, the bank's cash rate stands at the adequate figure of 18.2 per cent., while the recovery in its net profits in the face of the trade depression which affects West African produce very seriously indeed, is evidence of careful and economical management.

Sun Insurance.—In the 222nd year of its existence the Sun has produced a report showing a premium income of £4,496,000, on which it has earned a net trading surplus of £235,000. The corresponding figures in 1930 were premiums of £4,473,000, and a net trading surplus of £114,000, and, in the circumstances, the comparison reflects very great credit on the company. The foundation of the company's business is the fire department, and the premiums in this department fell by some 1 per cent. to £2,455,000, the fall having occurred mainly in the foreign field; but the notable feature of the fire account is the enhanced rate of profit earned. In the accident account the premiums have risen substantially, from £1,396,000 to £1,474,000, the increase being due partly to the growth of the American subsidiary, the Sun Indemnity, and partly to the effects of exchange rates. In discussing the outcome of the account, which shows a lower profit than in 1930, the chairman at the annual meeting referred to the unfavourable effect on motor insurance business of the compulsory insurance provisions of the Road Traffic Act, 1930. Although the passing of this Act brought the company a considerable volume of new business, most of it was applicable to motor cycles—in which group it was estimated that 50 per cent. of users were uninsured prior to the Act—and experience of this type of business shows that the existing low rates of premium are wholly inadequate having regard to the disproportionate number of accidents. The marine account is a post-war development, and out of the accumulated profits of past years the sum of £50,000 has been transferred in 1931 to profit and loss account. Even after this transfer the fund amounts to nearly 120 per cent. of the premium income. The details are as follows:—

	1930.		1931.	
	Amount of Profit.	Percentage of Premiums.	Amount of Profit.	Percentage of Premiums.
Fire	150,685	6.1	213,214	8.7
Personal Accident	5,831	10.9	53,950	3.7
Employers' Liability	18,637	12.6	50,000	8.8
Burglary and General	62,794	5.2	...	...
Marine	...	...	...	...
Less items debited to profit and loss account	237,947	...	317,164	...
	123,586	...	82,602	...
	114,361	...	234,562	...

In addition to the trading surplus, there remains a surplus of interest earnings after paying the dividend of 5½ per cent. of £24,000 in 1931 and £21,000 in 1930. In common with many other companies, the Sun has retained its American assets at their previous book rate of exchange, which in the case of the Sun was \$5 to the £. The sum of £250,000, representing slightly less than the total net trading surplus of the year, has been applied to writing down the value of investments, and it is stated that after this writing down the aggregate book values were fully equal to the market values.

Phoenix Assurance Company.—It is gratifying to observe that the gross underwriting profit in all departments of this company is greater than the corresponding figure of 1930, and that, after allowing for items debited to profit and loss account and for the usual dividend of 14s. per share, there remains a small surplus on the year's working. The premium income in the fire department, at £3,086,000, has been virtually maintained at the same level as before, but in the accident department there was a drop of £120,000 to £3,673,000. Marine premiums, at £709,000, are practically unchanged, and this account now shows definite signs of having turned the corner and of being established on a profit-earning basis. Indeed, the

transfer to profit and loss is the first evidence of profit from this account for several years past. The detailed results are as follows:—

	1930.		1931.	
	Amount of Profit.	Per-centage of Premiums.	Amount of Profit.	Per-centage of Premiums.
Fire	76,262	2.5	88,457	2.9
Personal accident	1,003	.6	...	...
Employers' liability	8,846	5.6	110,456	3.0
General	30,390	.9	...	...
Marine	...	...	20,000	2.8
Life (Phoenix fund)	40,000	...	30,000	...
Sinking fund	35,000	...	...	...
Less items debited to profit and loss account	191,501	...	248,913	...
	143,910	...	171,819	...
Total net trading surplus	47,591	...	77,094	...

The accident profit shown above represents on this occasion the amalgamation of personal accident, employers' liability and all other classes of accident insurance, including motor insurance. Hitherto separate accounts for personal accident and employers' liability have been published, but the coming into force of the Road Traffic Act, 1930, necessitates a separate return for motor business to the Board of Trade, and rather than provide this additional information in the annual report the company, in common with a number of others, have taken the opportunity—though we consider the step to be a retrograde one—of amalgamating all classes of accident business into one conglomerate account. New life business was well maintained during 1931, the amount transacted being £3,102,000 compared with £2,935,000 in 1930, and the life funds now amount to over £15½ millions. The sum of £450,000 has been set aside in the life fund by way of investment reserve; and after allowing for this, and a contingencies reserve in the general funds of over £2 millions, the book values of the assets are stated to be worth fully the values in the balance sheet. The American assets and liabilities have been valued for balance sheet purposes at par of exchange.

Transvaal Output in May.—According to the statistics issued by the Transvaal Chamber of Mines, the May gold yield from the mines of the Transvaal was 965,644 ozs., representing an increase of 15,848 ozs., compared with that of the shorter month of April, and of 83,307 ozs. upon the result for May, 1931. It sets up a fresh record, the previous best having been 960,035 ozs. in March. The daily average for last month works out at 31,150 ozs., against 31,660 ozs. previously. In the following table we show the monthly output since the beginning of 1926:—

Month of	1926.	1927.	1928.	1929.	1930.	1931.	1932.
January	796,270	839,782	843,857	876,452	882,801	914,576	936,784

Budget — Bond Pool — Industry.

(FROM OUR CORRESPONDENT.)

NEW YORK, June 8.

THE new Tax Bill, it is hoped, will produce \$1,118 millions of additional revenue for the fiscal year beginning July 1st. How far receipts will go to meet the estimates is necessarily unknown, but inasmuch as the bulk of the new revenue will come from some form of sales tax, the Bill should not fall far short of the goal. Personal income tax rates are raised sharply and, by lowering exemptions, the number of people paying direct taxes will be doubled or tripled. Additional revenue from individual income taxes is estimated at \$178 millions and from corporations at \$41 millions. About \$450 millions will come from special excise taxes on gasoline, electricity, motors, parts, tyres, toilet goods, furs, jewellery, radios, matches, fire-arms, candy, beverages, and the like; and \$152 millions from miscellaneous items such as telephone, telegraph, theatre admissions, bank cheques and postal rates. Higher transfer taxes are placed on share and bond transfer and a tax of 5 cents for each \$100 sale of commodities is imposed.

The new Bill is accepted with general approval as being fairly good so far as it goes. Wall Street does not like the tariffs on copper, oil, coal and lumber. It believes that the effect will be to increase domestic production somewhat, fail to raise prices and lose, in copper at least, some export business. The Treasury expects to collect only nominal sums from these tariffs, and they frankly were passed at the insistence of Western States in the hope of increasing employment in mines, lumber camps, coal mines and oil regions in this country.

Most of the favourable comment on the Tax Bill arises from the relief that something positive has been done. The deficit for the 1932 fiscal year, with three weeks to run, has already exceeded the estimate of \$500 millions. It now amounts to \$2,700 millions, which includes the expenditures of the Reconstruction Finance Corporation. In spite of all the proposed economies for the coming year and the full yield from the new taxes, another deficit is likely. However, the new Congress which will meet in December, fresh from the November elections, will most likely be more courageous and will have time for fresh measures to forestall any additional borrowing. Passage of the Garner relief Bill, for an outlay of about \$2,300 millions, would upset the equilibrium. The Bill has passed the House, but its chances in the Senate are not particularly good, nor is it believed that a bonus measure will go through, even though the siege of Washington by a large number of unemployed ex-service men has had its spectacular side and necessarily exerted some pressure on Congress.* It has failed to impress the country.

Treasury financing for the June 15th tax date has been announced at \$750 millions, or about \$150 millions more than expected. The additional amount comes as a result of fresh money taken by the Reconstruction Finance Corporation. The new borrowing is in one-year certificates and three-year notes and will end new borrowing for this fiscal year. These issues carry 3 per cent. for the long terms and 1½ per cent. for the short terms. Wall Street expects allotments at 10 per cent. on the short terms and about 25 per cent. on the notes. They raise about twice the amount of maturing obligations. The Treasury seems to have exceeded the total net new financing promised for the last six months of the fiscal year by \$200 millions, since the aggregate is \$1,700 millions, against \$1,500 millions promised. In reality the net increase is only

* The Garner Bill has been killed by the Senate Finance Committee. The bonus measure has been carried in the House by 209 votes to 176.—Ed. Econ.

\$100 millions, on account of recent extensive purchases of 3½ per cent. Treasury bonds for the sinking fund. In this fiscal year the Government has sold a total of \$9,448 millions of securities and retired \$6,781 millions, and the public debt will have risen about \$2,668 millions to a total of \$19,467 millions on June 30th.

Much interest has been attracted by the formation of the American Securities Investing Corporation, with an initial stake of \$100 millions. This is the so-called bond pool, which has been organised with a life of five years for the purpose of purchasing bonds to hold for long term, to make money for the corporation, and incidentally to supply bids for sound underlying issues and recreate confidence in the bond market. Subscribers consist of the twenty important New York banks and two or three banks in Chicago, and possibly in one or two other large cities. The subscribing banks took 6 per cent. five-year debentures. The corporation will operate under the direction of J. P. Morgan and Company, Mr Thomas W. Lamont being president and Mr George Whitney the chairman, both of the Morgan firm. The organisation is seeking to acquire at good prices the bonds it wishes, and is in no way attempting to churn up the market or make quick turns. Applications for a share in the concern are numerous from banks over the country, indicating a desire of banks to invest in bonds but a reluctance to trust individual judgments.

The bond market has improved rapidly in the past week, and share markets also have felt the change in sentiment, but the continued lack of cheer in business news is restraining activity in shares. Another railroad, the Mobile and Ohio, has gone into receivership, bringing the total for the depression to four, and it may be that two or three more will follow before the end of the year. The Commerce Commission rather than the Reconstruction Finance Corporation is adopting a policy of reserve towards the loans asked for by some of the weaker lines. The resignation of Charles G. Dawes as president of the R.F.C. does not mean any change in policy, but was prompted rather by the pressing claims of Chicago for Mr Dawes. His presidency was calculated to help accomplish one object of the R.F.C. at the outset, namely, restoration of confidence. Funds for the use of the corporation will be made available in almost any amount.

Few pretend to have much idea of what to expect from the Lausanne Conference. The Government's fiscal programme does not contemplate extension of the moratorium, but in Wall Street there is not much expectation of debt receipts from abroad in the coming year. The prevailing opinion still seems to be that some reparations should be paid, at least after a further rest period.

Trade news is colourless. Steel ingot output in May was the smallest since 1921, and the average mill rate of operations was 20.1 per cent., the worst in this century. Motor production, on the other hand, expanded about 20 per cent. in May as compared with April, owing to the increase in Ford activities. General Motors sales to dealers in the United States, Canada and abroad fell 15 per cent. from April. Railroad traffic has risen slightly and may be expected to enjoy some seasonal increase now that the wheat movement is about to begin.

FRANCE.

Politics — Industry — Prices.

(FROM OUR CORRESPONDENT.)

PARIS, June 15.

ALL that has taken place since the general elections suggests that France will not enjoy any more stable government during the next four years than previously. Analysis of the election returns proves that the number of seats won by the Radicals and Socialists, thanks to the operation of the Cartel des Gauches at the second ballots, was out of all proportion to the comparatively small volume of 400,000 votes transferred, and that the present Chamber, instead of being divided into two approximately equal halves, like the last, consists of three distinct

groups, each of a total strength of about 200 votes. Last week's initial vote, which gave the new Ministry a majority of 269, was largely artificial, as is now generally admitted, and can in no way be regarded as indicative, except on the assumption that M. Herriot is prepared to bring forward only such measures as will meet with Socialist approval. On this point the Socialist Party has already showed its hand very clearly.

No sooner had the Vote of Confidence in the Government been registered last week than the technical Ministers in the Cabinet made public the general lines of their plans for the balancing of the Budget and the "immediate putting into operation" of sweeping economies necessary to this end. These were understood to include substantial cuts in credits voted for military and other expenditure under the current Budget. The Ministers for Finance and the Budget, MM. Germain-Martin and Palmade, appear to be decided that 1,500,000,000 francs, on 12,000,000,000 francs of military credits opened under the current Budget, is the maximum of saving that can immediately be effected without compromising national security, and this view is understood to be also that of M. Paul-Boncour, the War Minister, M. Painlevé (Air Minister) and M. Georges Leygues (Navy), none of whom can be regarded as jingoistic. The bulk of the rest of the 6,500,000,000 francs declared necessary to balance the present Budget, they suggested, might be obtained as to 600,000,000 francs by annulling (in view of fall in rents and retail prices) part of the cost of living allowances of the public servants. Other possible economies suggested were a reduction by 50 per cent. in the increased allowances voted recently for former soldiers, which it is estimated would represent a saving of a further 650,000,000 francs; cuts in recent increases of pensions; supplementary taxation on modes of transport which compete with the railways; the increase to 12 per cent. of the present 10 per cent. rate of income tax on wages and salaries; and the withdrawal of certain recent reductions of taxation, from which neither consumers nor the saving public have benefited.

The bare announcement of some of these "compressions of expenditure and fresh readjustments" had the effect of a bombshell. Ministers and deputies supporting the Government were bombarded with telegrams and other communications from associations of public officials all over the country, many of these reproaching their recipients for the "ingratitude" now shown by them towards those who had so largely contributed to their success at the elections. The trade unions mobilised the C.G.T. leaders, and MM. Léon Blum and Vincent Auriol, the Socialist chiefs, delivered what amounted to an ultimatum to the Government, protesting that it was unthinkable that the Socialist Party, "participating for the first time in power," should be faced at the start with "the prospect of having to enter into conflict with the syndical organisations of the public servants and with the C.G.T." M. Herriot himself, it is asserted, was astounded at the storm aroused. On Friday the Speaker, at a sitting of the Lower House which lasted barely five minutes, suddenly announced that the next sitting would take place on June 21st. On Monday M. Herriot and several of his Ministerial colleagues left, with Mr Ramsay MacDonald, for Geneva and Lausanne. The business community is pessimistic, and fears the economy plans have already been shelved.

It is significant of the atmosphere which prevails in both Houses that MM. Caillaux and Chéron have brought forward a proposal in the Senate for secret, instead of nominative, voting to be again rendered possible, while a similar proposition has been put forward in the Chamber by a Moderate deputy. An outstanding party incident of the week has been the resignation of M. Tardieu and 32 of his colleagues from the group of Républicains de Gauche (of which he was the founder and leader), and the formal organisation by them of a new group called the "Centre Républicain." M. Tardieu makes no secret of the fact that his action has been due to dissatisfaction that 35 members of his group abstained from the Vote of Confidence division last week, and did not follow their 25 other colleagues in voting against the Government. The new group comprises 33 out of

the 61 "Tardieu group" members returned at the last elections (against 64 at the previous elections). M. Tardieu has not had a pleasant week. At a Paris municipal council election on Sunday his nominee, after a desperately fought *ballottage*, was defeated by a candidate of the Marin Nationalists (a group which has now taken the official title of Fédération Républicain U.R.D.—Union Républicaine Démocratique.)

Industrial production figures for April indicate that the slump in output continues serious. The general index (1913 = 100) is 95, a drop of 3 points on the month, of 36 (or 27½ per cent.) on the twelve months, and of 34 per cent. since the record high levels set up in the earlier part of 1930, before the economic slump had reached this country. The paper industry, thanks to recent favourable tariff manipulations, actually registered an improvement of a point in April to 111, following a two-point rise in March, and was thus nearly 2 per cent. above April, 1931, in output volume. The heaviest decline during the month was in motor-car production, which fell 7½ per cent., bringing the net drop on the year to 27 per cent. The rubber goods industry fell off 5 per cent. in April to 656, as compared with 930 in April, 1931. The decline in metallurgical output now seems to have reached bedrock at 71, the same figure as in March, 40 per cent. below the volume of production in April, 1931. The remaining figures for April show declines in the year of 36 per cent. in textiles, 25 per cent. in engineering, 17 per cent. in leather, 16½ per cent. in building and 16 per cent. in extractive industries.

The general index figure for wholesale prices at the end of May (July, 1914 = 100) is 421, a decline of 4 points on the month, 59 points since the end of May, 1931, and 203 points below the mean returned for 1929. The figure for prices of French products (29) is 492, or two points lower on the month and 60 points on the year, while that for prices of imported goods is 294, a drop of 7 points on the month and 56 on the year.

Retail prices in Paris at the end of May (13 articles of common household use) are represented by an index of 562, a drop of 4 points on the month, while the figure representing wholesale prices of the same goods has risen 5 points on the month.

GERMANY.

Reich and State Finance — Trade Treaties.

(FROM OUR CORRESPONDENT.)

BERLIN, June 14.

At the end of last week the Government appeared in the Reichsrat, the representative body of the German States, and also conferred with the leaders of the State governments. In these discussions it was very clearly revealed how sharp the opposition is between the points of view of Herren von Papen and von Schleicher, on the one hand, and the South German States, on the other. They are opposed in two matters: the South Germans are determined to resist any anti-democratic policy; and Bavaria in particular, which has already had one experience of a Hitler *putsch* in 1923, is particularly uneasy at the proposed withdrawal of the prohibition of the Hitler army. In addition, the Governments of Bavaria, Württemberg and Baden see a serious threat to the rights of the States in the fact that the Reich Government is toying with the idea of appointing a Reich Commissioner for Prussia. It looks as though the effect of these South German protests has been to drive the idea of a Commissioner for Prussia into the background, but it is difficult to say whether the Cabinet will definitely give up the project, as it is not known what agreements have been made between Hitler and the Government on the Prussian question.

Future developments in domestic politics will be decisively influenced by the results of the Lausanne Conference and by the effect upon the public of the new emergency decree. This decree will raise the emergency tax on wages, now called "employment tax," by 1½ per cent., making it 6½ per cent. of income. It is also extended to

the smallest incomes, those under 1,500 marks, and to officials, the rates for both being 1½ per cent. In addition, a salt tax is being introduced; and turnover tax is to be levied even where the turnover is under 5,000 Rm. The reductions in expenditure will principally affect unemployment relief; emergency benefit and relief will in future be at the same rates, 15 per cent. below the former relief rate. Benefit proper will be reduced by 23 per cent., and there will be a means test after six weeks of benefit. Accident and disablement benefit and war pensions are also reduced.

The measures taken by the emergency decree are evidence of an extremely vigorous financial policy which shrinks at nothing in order to balance the Budget. The sacrifices required seem substantially greater than those which Dr. Brüning intended to impose upon taxpayers and recipients of relief. The decree will give rise to great political difficulties for the Government, but from the financial standpoint it must be recognised as a great and courageous achievement on the part of the Finance Minister, Graf Schwerin von Krosigk. The Finance Minister still has, however, to face his most trying test, in coming to terms with the agrarians, who are demanding a subsidy.

The Prussian Government, too, though it has formally resigned and is only carrying on current business, has taken upon itself a fresh burden of unpopularity in order to balance its Budget. It was moved to do so not only by the imperative financial need but also by the desire to give the Reich Government no excuse for interference in Prussia. A special Prussian emergency decree has reduced the salaries of State and communal officials by 2½ per cent. This 2½ per cent. is, however, credited to the officials at the Treasury and will be repaid by instalments, beginning in July, 1937. In addition, Prussia has introduced a tax on the slaughter of animals, and the reduction of rent tax for persons of small incomes has been very much limited. The reduction in salaries is extended to the officials of the communes, so that the strain on communal finances is now slightly relaxed. The Reich emergency decree gives them some further relief by grants in aid of poor relief. This help was urgently needed; a few days ago for the first time a large German town, the Rhenish industrial town of Duisburg, was obliged to declare itself unable to meet the interest on its loans.

The artificial restrictions which have hampered German exports for more than half a year are still multiplying. Germany's neighbours—especially Italy, Switzerland, Holland and Denmark—are endeavouring by means of tariffs and exchange regulations, and, in some instances, by private boycott, to reduced German exports at least sufficiently to prevent Germany from having an active trade balance. If Germany is to meet even the amount of interest and amortisation of her debt required under the standstill agreement, however, she must have an active balance with her neighbours, since her trade balance with overseas countries which export raw materials must necessarily be passive. In order to make a break in this circle of restrictions, Germany would have to offer compensation in the form of a reduction in her own duties on agricultural products. In particular, a change in the German butter duty would probably make it possible to abolish completely the defensive measures of Holland and Denmark. The butter duty at present ranges from 50 to 170 marks per 100 kg. As Finland has the right by treaty to import 5,000 tons of butter into Germany at a duty of Rm. 50, Germany considered herself bound to allow the same amount at this rate to all countries with which she has a most-favoured-nation agreement. A supplementary duty of Rm. 36 per 100 kg. on butter from countries whose currency is depreciated is now demanded. For quantities over 5,000 tons the rate is 100, for countries with depreciated currencies 136, and for countries having no trade treaty with Germany 170 marks. The result of this regulation has been that countries like Finland and Hungary, whose exports have never reached 5,000 tons, maintain their exports or even increase them to that limit at the expense of their more heavily taxed competitors,

while Holland, which sent over 16,000 tons to Germany in 1931, and Denmark, whose imports amounted to over 30,000 tons, have lost a substantial part of their market. In order to clear up her relations with Holland and Denmark, Germany would have to abolish entirely the protection of the butter duty. To do this she would need the consent of Finland, under the terms of the German Finnish Commercial Treaty. This consent could probably be obtained if the proposed uniform duty were not too high; but the establishment of such a moderate rate of duty, which would have to be in the neighbourhood of Rm. 75, is strongly resisted by the agrarian interests which have now more influence than ever before.

The Bureau of Statistics has published the following figures of the debts of the Reich, States and communes at the end of 1931:—

(In millions of marks.)		
	Total Debt.	Foreign Debt.
Reich	11,704	3,209
States	3,014	732
Larger communes	6,601	639

As compared with June, 1931, the debt of the Reich has risen by about 167 millions, that of the States by about 70 millions, and that of the communes by not quite 10 millions. A substantial amount of debt redemption has, however, been set off in these figures against fresh borrowing. The Reich, for example, redeemed over 300 millions of old debt, but had to issue large numbers of Treasury bills, mainly for purposes of bank reorganisation. From the end of September to the end of the year the debt was reduced, as the credit markets were so stringent that, in spite of the urgent need, the sums repaid could no longer be replaced by fresh credits.

HOLLAND.

Shipping — Industry — Exchange Regulations — Capital.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, June 7.

THE Government Bill introduced into Parliament for the provision of relief to the distressed Dutch shipping industry has failed to meet with unanimous approval. The Dutch Association of Shipowners have signified their dissatisfaction with the relief measures as proposed, their opposition being chiefly directed against the fact that the Government demand interest and security for such credits as they give. Under the regulations as proposed by the Government, the ship-owning companies themselves would actually have to shoulder the burden of the relief measures. The Association of Shipowners argue that the forms of relief granted to other branches are borne by the community, and similar arrangements are desired for the ship-owning interests too.

According to figures issued by the official statistical bureau, at the end of March, vessels to a total of only 51,000 gross register tons were under construction at Dutch shipyards, as compared with 121,000 tons at the end of March, 1931, and 179,000 tons on the same date in 1930. There are hardly any new orders. At the Philips Lampworks only 9,400 persons are employed at present, as compared with 21,000 employees two years ago; and part of the output of this company has been transferred to factories abroad in the meantime. In the cotton textile which were not affected by the strike, even in the factories silk industry, two factories have again had to reduce their personnel by 200 employees, due partly to the disappointing markets in the East.

The foreign exchange clearing Bill has been passed by the Second Chamber. This measure is to confer consideration upon the Government, and is directed primarily, though not solely, against Germany, as that country fails to provide foreign exchange for the purpose of paying for exports from the Netherlands. The new law is to provide extreme measures for safeguarding the

interests of Dutch exporters against the effects of foreign exchange restrictions abroad, but the powers are only to be exercised in case of the utmost necessity.

The import of gold has continued, so that the gold cover for our bank note circulation is approaching 100 per cent. The new 5 per cent. State Loan at 100 per cent. for 250 million guilders has not been a very great success, and it has been possible to allot all subscriptions in full. Business on the new issues market is again at a complete standstill. The issues amounted to only 663,000 guilders in May, as against 173,653,000 guilders in May, 1931. For the first five months of the year the total is 142,748,000 guilders, as against 253,540,000 guilders in the corresponding period of 1931. More than two-thirds of the figure for 1932, however, is accounted for by the issue of the 5 per cent. State Loan, which called for 100 million guilders of new money. Issues of municipal loans are no longer being floated at all.

AUSTRIA.

Finance — Employment — Imports.

(FROM OUR CORRESPONDENT.)

VIENNA, June 11.

HOPES of a loan and the negotiations with the foreign creditors of the Credit Anstalt have been the topics prevailing in financial discussions this week. The position of the State finances is again critical, and the moratorium and other measures for checking foreign payments can only be avoided if success is achieved in obtaining the help of foreign credit. The economic associations have within the last few days again passed strong resolutions against increases of taxation. It is pointed out that the purchasing power of the public is still receding, and that the direct taxes are already insupportable. An employee who has 400 schillings per month salary gets only about 360 schillings when the different imposts have been deducted, and has to pay income tax in addition. The contributions which the employer has to make for such an employee also amount to about 50 schillings per month, so that the taxation in Austria is very oppressive even in the case of the low incomes.

The Government has put off all important action until it knows the outcome of the loan negotiations and of those with the creditors of the Credit Anstalt. The last discussions nearly came to a deadlock, because, in view of parliamentary feelings and of the bad position of State finances, the Government was afraid to concede the demands of the creditors, which it regarded as exorbitant. Endeavour will be made to arrive at agreement* by which a portion of the Credit Anstalt assets in the Succession States will be handed over to the creditors by way of payment, in addition to annuities.

As no improvement on the labour market has accrued from the strict application of import prohibitions, and as there is an insistent demand for modification of the regulations, it has been decided that, from July 1st, applications for import permits may comprise requirements for the period July to September. The permits are to be more liberal than heretofore, and in special cases sponsored by the Chamber of Commerce the basis of the permit can in general be one-quarter of the total imports of the year 1931. As a matter of fact, in the last quarter of 1931 and the first quarter of 1932, in spite of the foreign exchange restrictions and the restrictions on importation, 55,000 metric centners of wool were imported, against 50,000 in the corresponding period a year before. In the case of rubber, the increase was as much as 4,000, and in chemical requisites 9,000 metric centners. In view of the circumstance that a year ago silk imports figured at 11,200 and this year are only 1,000 metric centners less, and that the reduction in linen imports amounts to only 600 metric centners, it is comprehensible that since April imports have had to be cut down and that the complaints of the interested circles concerning shortage of merchandise are not taken very seriously. Special measures are being taken to collect the excess profits which cattle

* A reference to the breakdown of these negotiations will be found in a Note of the Week.

importers are making on account of the high domestic prices.

The difficulties of tourist traffic between Austria and Germany, Yugoslavia and Hungary have been partly relieved by means of agreements, which afford foreign visitors the possibility of procuring schilling credits. The settlement is arrived at between the respective Post Office savings banks or the National Bank. It is hoped that these facilities will lead to an increase of the foreign tourist traffic. The National Bank is still keeping credit short, and it requests the banks and savings banks to adopt a cautious policy in relation to fresh credits. There is consequently difficulty in raising mortgages.

HUNGARY.

Politics — Finance.

(FROM OUR CORRESPONDENT.)

BUDAPEST, June 14.

THE House of Deputies has voted the Budget and passed it on to the Upper House, so that in all probability the Budget will become law before July 1st, when the new financial year begins. The Government has successfully averted a threatening political crisis, for the time being, by complying with the demands of the agrarian deputies for relief to the distressed smallholders and for a conference to discuss the wishes of the agrarians for a large-scale debt settlement and for a general reduction of the interest and amortisation dues to their creditors.

The Finance Minister has made important declarations regarding Hungary's foreign creditors. Having deplored the fact that, in spite of repeated appeals from the Hungarian Government, the foreign creditors have failed so far to appoint a duly representative body with which to deal for a temporary debt settlement, Baron Korányi said that if the forthcoming negotiations in Geneva and Lausanne bring no relief to Hungary, the Government—very reluctantly—might be compelled to take one-sided action in order to preserve the basic financial structure of the country. He emphasised, however, that no unilateral action will in any way prejudice the existing rights of the foreign creditors, and that the Hungarian Government will endeavour to reach a satisfactory settlement with them at the earliest date.

The Finance Minister pointed out that since the declaration of the partial transfer moratorium on the foreign debt service (December 22, 1931), the economic situation has gone from bad to worse, so that the priorities given to the transference of the League Loan service and certain other State obligations have ceased to have any practical value. In fact, the foreign exchange holdings of the National Bank are so low that the monthly instalments of the League Loan service were not transferred in May or in June. There have been no transfers in foreign exchange of the services of any other loans for months past, nor are there likely to be. Negotiations to conclude a commercial treaty with Czechoslovakia have failed, and there are difficulties with Austria and Italy, the most important markets for agrarian products. Merchandise imports have consequently been further restricted; the new list affects especially the textile trade which will enjoy an almost monopolistic position in the home market.

According to the last statement of the Finance Minister total receipts in the first ten months of the financial year amounted to 645.2 million pengő, as against 693.7 million pengő in the corresponding period of the past financial year. Baron Korányi estimates that by the end of the fiscal year (June 30th) total receipts will amount to 773 million pengő, apart from the 174.8 million pengő of borrowing at home and abroad last August and in April in the form of Treasury bills. Expenditure of the Administration Budget in the first ten months amounted to 714 million pengő, and will amount up to the end of June to about 860-865 million pengő, leaving a deficit of approximately 90 million pengő. It will be remembered that the Hungarian Government promised the Financial Committee of the League last October to limit the expen-

diture for the present financial year to 890 million pengö. The Finance Minister can be congratulated on having achieved further economies in the Administration Budget, but unfortunately these savings are more than offset by the advances made to the State undertakings to cover their deficit. In the first ten months the advances amounted to 41.7 million pengö, of which the State railways received 17 million pengö, and the State ironworks 12.4 million pengö. Allowing for further advances necessary to the undertakings and other purposes reaching 50 million pengö, and a deficit of the Boletta Fund (grain bounty) amounting to 20 million pengö, there will be a deficit of 160 million pengö, which will decrease the Treasury loan of 174.3 million pengö at the end of the financial year to approximately 15 million pengö, just enough to provide for the July salaries of the State employees, and thus the Finance Minister will start the new financial year with an empty treasury and bad revenue prospects in July and August. The estimates for the new Budget year provide for an administrative expenditure of 806.2 million pengö and 401 million pengö for the States undertakings. There is little doubt that the estimates will have to be thoroughly revised after the debt settlement plans of the Government become operative, because on the basis of the current receipts it would be unwise to vote more than 725 million pengö for the administration and 350 million pengö for the undertakings in the next financial year, and thus there is a prospective deficit of more than 100 million pengö unless new economies are made or new revenue resources devised.

SWEDEN.

Unemployment — Trade — Prices — Stock Exchange.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, June 2.

THE first effects of the Kreuger shock are beginning to fade away, and since the special Committee of Investigation submitted its report and bankruptcy proceedings began, the matter has been removed principally into the criminal field. The effects of the general world depression, however, have now become more clearly marked in Sweden, and are especially apparent in the labour market. As a rule, unemployment reaches its seasonal climax at the beginning of the year, usually in January. This year it continued to rise in February, after which a certain improvement occurred, though by no means the normal seasonal recovery. The official report of the labour market for April shows only a decline in the number of applications for work per hundred vacant posts from 343 to 341, after having been as high as 412 in February. The corresponding figure for April last year was only 194 and to find a figure higher than that for this year we must go back to 1922, the culmination of the post-war crisis. The deepening of the depression is visible in all branches of industry, though primarily in the export industries, which, owing to steadily growing obstacles to a free exchange of goods throughout the world and diminished buying power abroad, have had to struggle with great difficulties. Even the home market, which had previously shown a great power of resistance, is also clearly beginning to feel the general economic depression, and the depression in agriculture is also reacting on the industrial market.

The balance of trade is again unfavourable this year. For the first four months it showed a surplus of imports of Kr. 27, 18, 37 and 37 millions respectively. It may be that this tendency is seasonal and quite a normal phenomenon, but the passivity this year has been greater than usual, except in February. Certain adjustments of imports to our export possibilities have, however, begun to appear, and this has been possible without any serious inroads on free trade. While exports diminished by 14 per cent. in April, there was a decrease in imports of 21 per cent., and during the first four months of the year, whereas imports have been cut down by 15 per cent., the decline in exports is not more than 11 per cent. It is probable that declining purchasing power will lead to the continuance of this adjustment, and the period of the year

already elapsed is the one least favourable to the balance of trade. Even if the adjustment during the remainder of the year should not be greater than hitherto, there will be no difficulty in meeting the balance with our own resources. It is, however, clear that the necessary reduction of the import surplus cannot be affected by currency depreciation of customs duties, as the effects of these influences are automatically eliminated by counter-measures in other countries.

It is, moreover, highly questionable whether the present international depression of the Swedish krona will remain. There cannot be any doubt that present quotations represent a considerable undervaluation. Whereas normally the Riksbank has to provide the market with exchange to a large extent, this year it has been able, slowly but surely, to increase its exchange reserve. Thus until the third week in May this reserve fell last year to Kr. 99 millions, whereas during the same period this year it rose by Kr. 71 millions. Last year's developments were thus very exceptional, to all appearances very largely owing to the large demand for exchange by the Kreuger concern. Such a normal year as 1929 showed a decline of Kr. 33 millions for the same period in the exchange reserve of the Riksbank. There has also been an improvement in our balance of payment, whereas usually in the spring months the tendency is the reverse. Our net bank claims abroad have risen in the period January-April by Kr. 32 millions. Last year they fell instead by Kr. 181 millions and in 1929 by Kr. 53 millions.

This development is due to no small degree to imports of capital, and a clear tendency is visible with current rates of exchange to call in foreign investments wherever possible. In every month in this year capital movements show a net import, the total of the first quarter having been Kr. 88 millions and for April Kr. 7 millions so far as the banks are concerned. It is not improbable, moreover, that foreign exchange privately held since the autumn for speculative purposes is gradually being brought into the market in proportion as a continued depreciation of the Swedish krona becomes improbable.

The price level is remarkably stable. In the months immediately after the abandonment of the gold standard the Swedish price level reacted, it is true, somewhat in an upward direction, but this year it has remained practically steady and has even shown a tendency to fall. Thus, the Riksbank has succeeded in realising the programme drawn up in the autumn for our monetary and exchange policy to maintain the internal purchasing power of the krona exchange. Confronted with the beginnings of a fall in prices, the Riksbank recently lowered its rate by $\frac{1}{2}$ per cent., a measure probably induced by the anticipated easing in the money market after the Kreuger crisis.

Another sign that the worst effects of the Kreuger crisis are over is the position on the Stock Exchange. The panic selling to which the Kreuger crash gave rise resulted in the month of March in a phenomenal fall of Kr. 1,075 millions in the Stock Exchange values of "A" shares. During the first three weeks of April this fall continued by a further Kr. 238 millions, but after that the tone became calmer and was gradually transformed into a recovery and a natural reaction from the worst exaggeration of Kr. 129 millions, at which point the recovery ceased. During the following three weeks there was a rise and towards the end of May the Stockholm Stock Exchange was dominated more and more clearly by the same factors as those visible in the leading foreign stock exchanges.

CANADA.

Industry — Foreign Trade.

(FROM OUR CORRESPONDENT.)

OTTAWA, May 31.

BUSINESS and industry remain static at an unsatisfactory level, and the movement of merchandise is slower even than in May, 1931, according to the evidence of car-loading figures and bank debits. It is true that for the week ending May 21st the car-loading figures, at 43,777

cars, reached its peak point for the year, but in the following week the figure of 43,678 cars was 7,009 cars below the figure for the parallel week of 1931. Bank debits for April, at \$2,073,900,000, showed a slight gain over the figure for the preceding month, but they were 25.5 per cent. below the figure for April, 1931, and the figure for the first four months of 1932 shows a decline of 22.7 per cent. Industrial conditions show little improvement, and one of the few hopeful signs is a better demand for farm implements. The unemployment situation still remains serious; and the seasonal gain in April was far below normal. On May 1st there were 799,944 people on the pay-rolls of employers reporting to the bureau as compared with 799,544 on April 1st. At the recent meeting of the Canadian Political Science Association in Toronto, Professor G. E. Jackson, of Toronto University, in a discussion on the unemployment situation, placed the number of Canada's unemployed in the middle of May at roughly 729,000, which would be about 35 per cent. of the total workers, but the accuracy of his figures has been challenged by a spokesman of the Government. The programme of special public works for relief purposes is not to be extended after enterprises already begun have been completed, but the respective authorities will have to spend during the summer large sums in direct relief.

The iron and steel plants are experiencing great difficulties through lack of orders, and for the first four months of 1932 the output of primary steel in Canada aggregated only 133,131 tons, as compared with 331,037 and 441,980 tons in the parallel periods of 1931 and 1930 respectively. To prevent the closing down of the steel mills at Sydney, Nova Scotia, the Government has used its influence to place with them an order for steel rails for the Canadian National Railways; and to help the mining industry in the Maritime Provinces it has given a further subsidy for domestic coal used for the manufacture of coke. It had been hoped that a revival of motor manufacturing in the spring would help the steel plants and firms supplying parts and raw material for motor vehicles; but, despite greatly reduced prices, the demand for new cars has been light, and the output of motor vehicles in April was only 6,810 as compared with 8,318 during March, and the figure for the first four months of the year was 19,863, as compared with 36,607. The only factories which could be described as busy are the textile mills, whose level of production is ahead of a year ago; but the boot and shoe firms and the tanneries are reasonably well supplied with orders.

The foreign trade returns go from bad to worse:—

	April, 1931.	April, 1932.
Imports	\$ 51,189,376	\$ 29,794,296
Exports (domestic)	33,935,075	26,975,756
Exports (foreign)	739,036	479,656
Total trade	85,863,487	57,249,708

The total trade for the month was about two-thirds of the volume for April, 1931, but Protectionist interests are finding comfort in the fact that imports contributed over 21 million dollars to the decline and exports only 7 millions, and that the excess of imports over exports was cut from 17 $\frac{1}{2}$ to 3 million dollars.

NEW ZEALAND.

Exchange Pool — Parliament — Economists' Report.

(FROM OUR CORRESPONDENT.)

CHRISTCHURCH, April 28.

THE effects of the low level of prices for primary products are now being severely felt. Compared with the price indices of 1929, export prices are now down by 47 per cent., wholesale prices by 11 per cent., retail prices by 13 per cent. and wages by 11 per cent. Despite the disparity between prices and costs in the farm industries, production has been well maintained. For the eight months ending March, total gradings of butter amounted to 89,000 tons and of cheese to 72,000 tons, compared with 84,000 tons of butter and 76,000 tons of cheese in the previous season. The number of carcasses of lamb and mutton exported was much the same as last year, while

wool exports up to the end of March were 447,000 bales in 1931-32, compared with 337,000 bales in 1930-31. Moreover, the January-February declared values averaged £8 12s. a bale, against £7 12s. a bale in 1931—an increase of 13 per cent.

By Order-in-Council issued on December 24, 1931, the Government established a system of compulsory exchange control over the proceeds of all export trade. The regulations provide that goods shall be exported only under licence, and that the exporter applying for a licence shall enter into a bond to remit all proceeds to New Zealand through the bank nominated in his application. The effect of these regulations is to give the banks complete control over all the proceeds of exports and to prevent any outside competition in the major part of the exchange market. Since no provision is made for dealing with the proceeds of invisible exports, the scheme does not involve complete exchange control; but invisible exports are unlikely to be large during the coming year, and the degree of control over exchange is great enough to enable the banks to sell foreign exchange at such prices and under such conditions as they may decide.

For the year ending February, exports for 1931-32 amounted to £35.9 millions, against £40 millions in 1930-31, while imports declined to £23.4 millions, against £40.3 millions in the preceding year. Imports, however, are recorded in sterling, while exports are in New Zealand currency. If allowance is made in the latter for the predominant exchange rate (8 $\frac{1}{2}$ per cent. premium on demand drafts), the sterling value of exports is £33.1 millions. This leaves a favourable balance of visible trade of £9.7 millions, part of which should appear in an increase of exchange funds held abroad. Comparing the 1931-32 bank returns for the March quarter, total deposits have declined from £54.1 millions to £53.3 millions, and advances from £54.3 millions to £50.2 millions. Government securities, however, have increased from £4 millions to £6.6 millions. The banking figures cover only business in New Zealand, and exclude bank capital. In March, 1931, the return of total assets exceeded total liabilities by £8.2 millions, while from March, 1932, this excess was £6.2 millions. During the year, therefore, the excess assets held in New Zealand have declined by £2 millions, which implies that the assets held overseas mainly for exchange purposes have increased by that amount. The exchange position has been further improved by the flotation of a loan of £5 millions in London, bearing 5 per cent. and issued at 98 $\frac{1}{2}$; 47 per cent. was left with the underwriters. Of the amount raised, £4 millions is to be used to fund Treasury bills due in June, and the other million is available for exchange. No change has yet been made officially in the exchange control scheme. But the Government requirements for exchange have been reduced from about £12 millions to probably less than £7 millions, mainly by the flotation of this loan, and the supply of exchange has been increased by the favourable trade balance. The case for exchange control is therefore much weaker than it was, and it is reported that the banks have voluntarily relaxed their control substantially.

An interim report of the National Economy Commission, appointed at the beginning of February last, has been published. The Commission makes a detailed review of Government expenditure and recommends all-round reductions. A National Expenditure Adjustment Bill embodying most of these recommendations is under discussion in Parliament, and though strongly opposed at every stage by the Labour opposition is likely to become law without much modification. Parliament has been in session since February 23rd, and is considering legislation dealing with the crisis. An Act has been passed substituting compulsory conciliation and voluntary arbitration in labour disputes for the compulsory arbitration which has been in force since 1904. A new unemployment policy, aiming at absorbing the unemployed in land settlement, has been adopted, and a special wage tax of 1s. in the £ has been imposed to finance unemployment relief.

The greatest interest is attached to a Financial Statement presented on April 7th. The statement opened with a review of the returns for the first eleven months of the

financial year. Basing his conclusions on these returns, the Finance Minister anticipated that the expenditure for the year would exceed the estimate by £0.5 million, the increase being due mainly to debt and exchange charges. The revenue would fall £2 millions below the estimate, the deficiency in Customs being £0.85 million and in income tax £0.5 million. In consequence, despite large prospective shrinkages in revenue provided for in the ordinary and Supplementary Budget for 1931-32, the year's operations are expected to result in a deficit of about £2.5 millions. This deficit is to be met from the accumulated surpluses of the war years, which have been held in reserve and are invested in soldiers' settlement. The financial prospects for 1932-33 disclose a serious position. It is anticipated that if present rates are continued there will be a decline of £2.34 millions in taxation and £2.4 millions in other receipts, while expenditure would increase by £1 million. Under these conditions expenditure would total £26.1 millions and revenue £17.8 millions, leaving an anticipated deficit for 1932-33 of £8.3 millions. The Government considers that it is not practicable to cover the whole of this deficit during the coming year. It is proposed, therefore, that savings should be made totalling £4.1 millions (Public Service salary reductions £1.1 millions, abolition of unemployment subsidy from Consolidated Fund £1.45 millions, transfers from Highways Fund of £0.6 million, extension of Hoover Moratorium £0.6 million, and other items £0.3 million). Additional taxation to yield £2.2 millions is to be imposed, and may include a sales tax, and the uncovered deficit of £2 millions which remains is to be financed by the issue of Treasury bills. Legislation embodying these changes is now before Parliament. The provisions include reductions in Public Service salaries, in pensions of all kinds, in expenditure on education and in various subsidies. A special stamp duty of 10 per cent. is to be imposed on Government and local body securities and on company debentures, the proceeds of this duty being returned to the local bodies and companies concerned. The legislation also provides for compulsory reduction of mortgage interest and rents by 20 per cent. of the rates in force prior to 1930. The Finance Minister has stated his personal disagreement with the principle of interference with contracts appearing in this legislation, but has subordinated his personal opinion to the views held by the Cabinet, which probably represent the bulk of public opinion throughout the Dominion.

ARGENTINA.

Patriotic Loan — Trade Balance — Prospects. (FROM OUR CORRESPONDENT.)

BUENOS AIRES, May 28.

THE issue of the first series of Argentina's Patriotic Loan, \$100,000,000 paper, has begun satisfactorily. The issue price is 90 per cent., and the interest coupons, which represent 6 per cent. per annum, are payable quarterly. There is also 1 per cent. cumulative amortisation to be set aside, so that the new loan, as far as the public is concerned, stands on an equal footing with the Argentine Internal Credit Bonds issued since 1925. The basic difference does not directly concern the investing public, as the facility for rediscounting the bonds with the Conversion Office at 85 per cent. of their nominal value is not available to the general public. That option must be made use of without delay if the promises regarding payment of salaries and overdue accounts are to be kept. Nor is it probable that public subscriptions will at the present time be able to provide much more than the amount of the first

The recent formation of the Business Transfer Partnership & Property Agents Institute of Great Britain raises the status of the profession of Business Transfer Agents. A very comprehensive course dealing with B.T. can be secured for £1 ls. Od., spread over 4 monthly payments of 5s. 3d. each. Course is sent on receipt of first payment.

EFFICIENCY PUBLISHING COMPANY. 71, Lowlands Road, Harrow.

series, and, even so, subscribers will have to appeal largely to bank credit. The reception of the loan has afforded proof of an awakening of popular interest in the finances of this Republic. This awakening has been accompanied by a tendency to criticise the heavy administrative expenditure that even the current budget does little to correct.

Argentina's trade balance for the first four months of 1932 shows total imports valued at \$124,915,599 gold, while exports were \$238,936,084 gold. The favourable trade balance is almost entirely due to the heavy diminution in imports, which are \$82,007,255 less than in the corresponding period of 1931, while exports shown an increase of only \$16,610,307. Taking into consideration the heavy depreciation of the Argentine dollar, and its effect upon all Argentine payments in foreign currency, there is reason to fear that this apparently favourable trade balance would be found to be a minus quantity if Argentina's invisible imports, that is to say, her public and private payments abroad, were taken into the reckoning. The Exchange Control Committee has published a detailed report covering its operations for the first quarter of 1932. In all, the exchange bought by the banks amounted to \$426,856,700 paper, the main items of cover being derived from purchases of the following export paper:—Cereal trade, \$264,135,300; meat and by-products, \$55,484,600; wool, \$30,956,100; dairy products, \$12,033,300; hides, \$9,953,200. Among remittances, the three most important items read:—Remittances by foreign residents, \$47,776,800; textiles, \$46,431,500; railways, \$43,038,200. Public financial services account for \$28,762,600 for the National Government and for provincial and municipal account, \$16,004,900. It is generally admitted here that the action of the Exchange Control Committee has proved beneficial to the country as a whole, though it undoubtedly presses somewhat heavily upon the interests of foreign capital invested in this country.

The immediate outlook for all sections of Argentine trade is far from clear. Owing to the disturbed state of world markets, prices for all produce continue to be abnormally low, with perhaps a slight improvement in the quotations for wheat and maize. Conditions in the meat trade are far from satisfactory, and considerable anxiety is felt with respect to the probable course of events in Great Britain when once the Ottawa Conference has pronounced upon the subject of inter-Imperial trade. Meanwhile Argentina, by her recent heavy taxation of many imports, has brought about a most unsatisfactory state of affairs where import trade is concerned, besides inflicting serious damage upon her revenue receipts. This damage is cumulative, seeing that in many cases reduced imports spell not only a reduction in the direct duties, but also diminished internal revenue on articles such as liquors, tobaccos and a variety of other luxury goods. The cost of living already shows a rising tendency, due to ill-adviced protection, together with the natural effect of a depreciated internal currency; and it is probable that in the near future labour troubles may spring up, having as their basis a demand for higher wages to compensate for these additional indirect charges.

Letters to the Editor.

AUSTRALIA'S EXTERNAL INTEREST.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Recent political developments in Australia have brought the overseas interest problem into prominence. Reductions in interest on the internal debt, in private interest and rents, in public service salaries and in public expenditure have been faithfully carried out in most States. Owing, however, to the persistent fall in export prices, and the failure of some Governments to impose taxation or make the drastic economies required, the Budget deficits have not been reduced below £18 millions, compared with the £12 millions allowed for in the Premier's plan after adjustments have been made for the "Hoover moratorium." For next year, the recent committee of economic experts estimated that the deficit on the present

scale of revenue and expenditure would amount to £22 millions. In recording this failure to live up to the plan agreed upon in June, 1931, it is necessary to remember two facts: First, half the deficit is accounted for by the Lang Government in New South Wales, which reduced its public service salaries, including railways, by only 12.8 per cent. and its total expenditure by 15 per cent., compared with the minimum of 20 per cent. required by the plan, and nearly 30 per cent. carried out by some Governments. Secondly, Government revenue has been disappointing because of the continued drop in export prices and the fall in national income. Despite the present 25 per cent. exchange discount and the depreciation of sterling, export prices in Australian currency are 43 per cent. below their 1926-27 level in Australian currency, 56 per cent. below in sterling and 68 per cent. in gold. As a consequence of this slump and the absence of overseas loans, national income has also continued to fall. It was £642 millions in 1926-27, £645 millions in 1928-29 and £459 millions in 1930-31. The fall is approximately 30 per cent., and would, of course, have been much greater had Australia attempted to maintain parity with sterling or with gold. Despite these difficulties it is necessary for the Australian people to realise that they must carry out their plan of balancing budgets as a first step to recovery.

The experts also drew attention to the inequalities in the reductions in wages. Whilst wages as determined by the Commonwealth Court have fallen by 26 per cent. since 1928, nominal wages over the whole range of industry have fallen by only 12 per cent. Since the cost of living has fallen in greater measure real wages have risen by 8 per cent. The plan cannot be considered complete until the full adjustment in wages has been made, and the responsibility for this rests with the States.

Naturally Mr Lang objected. In a forceful speech at the Premier's Conference he referred to the burden of external interest that has not yet been brought within the plan. He was supported in part by the Acting-Premier of Victoria, whose Government has just been defeated in the House. So there has arisen the cry of no further reductions in the Australian standard of living until the external bondholder has made his contribution to the general sacrifice. Shrewd observers expect Mr Lang to be defeated in the New South Wales elections, but this must not be interpreted as indicating that the Australian people do not think that there is some justice in the claim that overseas interest should be reduced. So vital has the matter become that the Prime Minister had to make a guarded reply to Mr Lang, in the course of which he stated that: "The prospect of effecting a general reduction in the interest upon Australia's external indebtedness depends upon what action is taken upon an international basis for the relief of debtors."

In order to meet her external obligations in the past two years, Australia has found it necessary to export gold to the value of £36 millions, and to use up most of her surplus banking credits in London. There has been no falling off in export production or in the volume of exports. Had prices remained near their pre-crisis level a moderate decline in imports would have sufficed to enable Australia to meet all her obligations, even if London borrowing had been summarily terminated. This point can be made clear by a comparison of the volume of exports of leading commodities in recent years:—

QUANTITIES OF AUSTRALIAN EXPORTS.

	1926-27.	1929-30.	1930-31.
Butter	76.8	107.7	163.2
Beef	112.2	156.7	155.6
Mutton and lamb	93.5	100.4	109.3
Dried fruits	63.5	114.5	123.5
Wheat	44.4	24.2	71.5
Flour	9.9	9.3	10.5
Skins, sheep	9.4	13.2	12.3
Skins, furred	15.3	10.2	8.4
Wool	827.8	789.3	860.3
Lead	2.6	3.2	3.1
Zinc	.55	.66	.91

There was a substantial increase in the volume of exports, yet the value of total exports of goods in these years was as follows: 1926-27, £132.8 millions; 1929-30, £97.4 millions; 1930-31, £76 millions.

Meanwhile, Australia has cut imports from an average of about £140 millions per annum to substantially less than £60 millions on present figures. Thanks to a good season there will be a surplus in the merchandise balance of trade for 1931-32 of about £30 millions. This will be sufficient to cover the interest on the external debt and other necessary obligations. Australia has a net benefit of about £4.5 millions on account of the Hoover moratorium, and the depreciation of sterling has also given her some relief in recent months. But it is necessary now to send away more than two bales of wool and two bags of wheat to pay the interest that one bale or bag would pay before the crisis. As long as we are favoured by good seasons and the primary producers can continue

UNEMPLOYMENT

WHAT IS EMPLOYING - POWER?

How is the power to give employment brought into existence? Does anyone maintain that it is created by creating money?

7s. 6d.

against such heavy odds we may have the bales and the bags, but a bad season will destroy our surplus however much we reduce our standard of living or cut down imports. At present prices a bad season would reduce the value of Australian exports to a ridiculous figure, and make "default" inevitable. Yet on present volumes of exports, Australia could be building up a reserve in London if prices were at all reasonable.

The recent expert committee worked out index numbers of import and export prices from which it is possible to calculate the terms of trade.

(Base: 1926-27 = 100).

Year.	Import Prices.	Export Prices.	Terms of Trade.
1924-25	111	135	120
1926-27	100	100	100
1928-29	90	99	110
1929-30	90	77	85
1930-31	82	57	70

Prices are expressed in Australian currency. In view of the high exchange rate the fall in import prices is interesting, but it is outdistanced by the fall in export prices, and the terms of trade have worsened by 30 per cent. since 1926-27. If we were at par with sterling the export price index would be 44. At par with gold it would be 32.

While it has been more burdensome for Australia to meet her interest payments at present prices, the income from this interest gives the British investor a greater command over goods and services in Great Britain. This argument can, of course, be pressed too far. Australia was not concerned about the British investor when prices were rising. But this only serves to emphasise the desirability of debtor and creditor alike accepting adjustments when acute difficulties arise, or agreeing from the outset that the real burden of the debt shall be measured according to movements in some index number of prices. Meanwhile, Australia is paying her interest on the public debt abroad, though doubtless (in common with other countries) interest and dividends on private capital are much below what they were two years ago. According to the Board of Trade estimate, British receipts from overseas investments fell from £250 millions in 1929 to £165 millions in 1931. Very little of this decline was due to shortcomings of Australian borrowers. It is true that the loans were raised under the shelter of the Colonial Stock Act and guaranteed by the Governments of Australia. This crisis has, however, brought home to investors that a Government borrowing for industrial and development purposes is subject to many of the risks of an ordinary private enterprise. Just as the borrowing Governments must give up their extravagant ideas of potential resources, so must the lender scrutinise with more care the finances of the borrowing country.—Yours, etc.,

Melbourne,
May 1st.

AUSTRALIAN.

EXCHANGE RESTRICTIONS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I have read with interest the article on p. 1172 of your issue of May 28th, entitled "Exchange Restrictions in Danubia." The writer of this article shows a keen insight into conditions in Central Europe, with the exception of the following passage, which appears in the last paragraph:—

"The removal of exchange restrictions via currency devaluation is a matter of extreme urgency. But a sudden removal would lead to an unnecessary efflux of funds and might cause wholesale bankruptcy."

As a matter of fact, this would not be the case. On the contrary, the sooner currency restrictions are removed the better for the country concerned. To avert the danger of too great suddenness, a period of transition might be arranged, but this could be very short, and it is absolutely unnecessary for any one country to wait for the co-operation of other nations before abandoning currency restrictions.

There is no reason to fear an efflux of funds; various means are at hand to avert this—means which fulfil their purpose without endangering or ruining the economic life of the whole country. For example, banks may only be allowed to sell foreign bills against invoices and bills of lading, and the savings banks could issue certificates instead of cash, such as was done in Germany in 1866 and 1870 with great success.

Every day that currency restrictions are in force brings the countries concerned nearer to the verge of ruin, and it is only with the abandonment of this policy that free circulation of trade and commerce will again be made possible.

As a possible remedy, the writer of the article in question continues:—

"It has been suggested that the simplest way to start might perhaps be for the central banks to raise gradually, day by day, the price of *devisen*, thus satisfying an increasing proportion of the current demand until the point was reached where a daily supply of and demand for *devisen* were equalised."

This suggestion is out of the question, and would, if carried out, only make matters worse. So long as the central banks do not pay the real price they will receive no *devisen*.

Although last year's statistics give the figures for import trade as 250 Austrian schillings per month, the most recent figures point to the fact that the National Bank of Austria is only receiving 8 million schillings per month, and this is dwindling to zero. As a consequence, importation is being made impossible. Everyone knows that a country cannot export unless she imports, and, therefore, Austria is faced to-day with the possibility of a complete breakdown of her international trade, on which about 35 per cent. of the population are dependent.

There seems to be a general idea that, if currency restrictions are removed, the Austrian "schilling" will fall *ad infinitum*. But this need not be the case, and the idea is mostly put forward by people who do not know how to manage currency. If such were the case, it would never have been possible to stabilise or put into normal working order any currency which had once been inflated without having recourse to currency restrictions.

There have been many occasions on which the stabilisation of currencies has been carried out. For instance, the stabilisation of the Russian currency in the eighties of last century by Witte, the same in the Argentine at much the same time; then the stabilisation of the currency in the East Indies some ten years later by Lindsay, in France in 1925 and 1926, and as recently as the cases of Czechoslovakia and Austria.

In these countries the first thing that had to be done was the stopping of inflation and the restriction of the circulation of bank notes. Once this is carried out, and the circulation of bank notes is kept in strict proportion to the volume of trade of the country, everything will have been done to establish the currency on a stable basis. But it is impossible to stabilise a currency already deranged by introducing or maintaining so-called currency restrictions, which in reality mean prevention

of free circulation. A currency which is not allowed to circulate freely, but is artificially restricted, can never remain sound.—Yours truly,
Vienna.
JULIUS MEINL.

June 9, 1932.

MONETARY POLICY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In view of some (unintentionally) misleading glosses on my letter, which occur in your current issue, may I be permitted to make the following additional comments? I should be entirely opposed to the raising of a foreign loan. I am also opposed in general to all attempts by the authorities to secure for us, in present conditions of world distress, a more favourable balance of trade, and, in particular, to the attempt to secure it by depressing the external value of sterling to an unnaturally low level. Our gold and the resources of the exchange equalisation fund, which should be increased if necessary, should be used to maintain the external value of sterling against sudden short-period alarms and excursions. Ultimately internal reflation might entail a further reduction in its external value, but the internal reflation must be made to come first; and, if it did come first, its reviving effect on other countries might lead to price recovery there, in which case a further external fall in sterling might not prove necessary. (Probably there would be some fall *vis-à-vis* gold, but not *vis-à-vis* most other currencies.)

What this country needs is a leader of sufficient intellect and personality to understand the policy and to carry it through. Owing to our unitary constitution, both political and financial, England gives a specially favourable field for the operation of a definite policy. If such a man appeared, the difficulties about public confidence would be speedily solved. England is also uniquely placed for giving an international lead. Instead, we wait for a Conference, at which we shall either have no policy or, at best, endeavour to persuade others to do that which we lack the initiative, though not the opportunity, to do ourselves now.—I am, etc.,

Christ Church, Oxford.

R. F. HARROD.

CHINESE CUSTOMS RECEIPTS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—It has been brought to my notice that, in your issue of April 9th last, your Hongkong Correspondent, referring to the Chinese Customs Revenue Collection for 1931, remarks:—

"... The official notification gives no indication of the amount remitted to Nanking, but it is to be feared that quite a large proportion of the huge revenue collected was retained by local administrations to be squandered."

This inference is inaccurate, and, therefore, entirely misleading. With the exception of that portion of the revenue which was detained by the temporary *de facto* Government in Canton last year, all of the Maritime Customs duties throughout China, less cost of collection, were remitted without deduction to Nanking to be dealt with solely by the Central Government.—I am, Sir, your obedient servant,

26, Old Queen Street,
S.W.1.
June 9th.

PERCY RICHARDSON,
Secretary in London of the Inspector-General of the Chinese Maritime Customs.

BOOKS OF THE WEEK.

The Science of Economics.

PROFESSOR ROBBINS evidently means his title* to be a challenge, and his entire book is written in a militant and challenging tone. He does not mince his words about the wrong-headedness of those who venture to disagree with him; and he seems to conceive of himself as a knight errant pledged to release the distressed damsel, Economic Science, from the dark dungeon into which she has been cast. Professor Robbins is very certain that Economics is a "science," and that a clear understanding of the doctrines of this pure science is the only safe foundation for the practical handling of the problems we are accustomed to call "economic" in a looser sense. He is con-

* *An Essay on the Nature and Significance of Economic Science.* By Lionel Robbins. Macmillan. 7s. 6d.

vinced also that a necessary step towards the general recognition of this claim is a precise and adequate definition of the scope and significance of Economics as a branch of study.

On this matter, Professor Robbins says much that is good in pointing out the inadequacies and false categories of most of the existing definitions, which have gone wrong through trying to mark off certain objective things—material wealth, for example—as falling within the scope of Economics, and others as falling outside it. He is on sure foundations when he asserts that the business of Economics is to study not a limited range of things, but in almost everything. Economics, in his view, is concerned with choices among scarce objects of want, whether these objects are material or not, and whether they are wanted to serve a material or a non-material end. What makes a problem economic is the element of choice among scarce values, which finds expression in

present-day societies in the money demand for different kinds of goods and services.

This conception of the scope of Economic Science fits in well with the familiar doctrines of the Austrian School, which has been undergoing a remarkable revival during the past few years in the circles with which Professor Robbins is associated. It harmonises with the notion that the study of Economics should be centred round the phenomena of prices—not the abstract "level of prices," but the particular prices at which individual transactions take place. Professor Robbins uses it to lead up to the familiar conception of the price-regulator as the means of securing equilibrium in the economic affairs of society. He is more than a little at sea when he attempts to discuss the applicability of his sort of Economics to such a society as Soviet Russia, where the price-regulator functions not freely but under strict control, and the demands for capital and consumers' goods arise finally as the result of decisions made by the central planning authority. He seems to come near to concluding that economic laws would hardly apply at all. Yet obviously the problem of choice among scarce goods would remain in being, though, over a wide field, collective would have been substituted for individual choice.

Professor Robbins dislikes this, because the widest possible range of free individual choice seems to him to be "of the essence of the conception of equilibrium." He does not, indeed, say that States ought not to interfere. Indeed, he expressly declares that it cannot be decided purely on economic grounds whether they should or not. But in regarding free individual consumers' choice as pivotal, he does come near to identifying Economics with individualism; and he delivers a frontal attack on the so-called materialist conception of history, on grounds which leave it very doubtful whether he is fully aware what that much-abused doctrine really is.

No one who reads Professor Robbins' book will doubt his ability; but his argument would be more persuasive if he were rather less positive and not quite so inclined sweepingly to condemn those with whom he disagrees. As an essay in methodology his book is stimulating and, in the matter of definition, persuasive. But it has serious limitations, above all in that, while its author insists that all economic analysis is conditioned by the particular social structure which is assumed, he makes no attempt to analyse the implications of the structure he himself assumes, or the relevance of the Economic Laws accepted by him to the circumstances of a different structure.

SOME INTRODUCTIONS.

UNDOUBTEDLY the present state of the universe has created a demand for reading on economic subjects among persons who had never before considered the subject, as a man with an unexplained pain takes to reading medical books. Pamphlets and small books on various aspects of the economic crisis are bought and read as never before; and as the ordinary school curriculum makes no provision for any economic instruction whatever, the average adult has to begin from the beginning, as it were in words of three letters, and to study some time before he reaches even such elementary propositions as that a steady fall in prices, creating increased unemployment, is not necessarily the boon, even to his own immediate pocket, which it appears to be at first sight. Hence this spate of small books,* half-a-dozen samples of which lie before us.

A perusal of the samples suggests that one desideratum for the training of the elementary student in any subject is sadly lacking. The professors are not sufficiently agreed among themselves upon the major points. This, of course, is plain from their major works; but it stands out far more in would-be simple expositions; and, one fears, will work rather to the befogging than the enlightenment of the hopeful student. In

* *A Primer of Foreign Exchange.* By William F. Spalding. Third edition. (London) Pitman. 121 pp. 3s. 6d. *A Primer of Money.* By Donald B. Woodward and Marc A. Rose. (London) McGraw-Hill. 249 pp. 6s. *The Pinch of Plenty.* By Ann Berkelbach and D. G. Hutton. (London) Sidgwick and Jackson. 170 pp. 3s. 6d. *Money in the Melting Pot.* By Hartley Withers. (London) Sidgwick and Jackson. 136 pp. 3s. 6d. *Economics of Everyday Life.* By J. Frater Taylor. (London) Crosby, Lockwood. 128 pp. 2s. 6d. *Stock Market Forces.* By F. W. H. Caudwell and Sir Ellis Ellis-Griffith. (London) Methuen. 128 pp. 5s. *The Stock Exchange.* By F. W. Hirst. (London) Thornton Butterworth. 250 pp. 2s. 6d.

such a study of fact as Mr Spalding's useful little primer of foreign exchange, now in its third edition, these troubles are not much in evidence; it is when one comes to statements and suggestions bearing on the present crisis that the confusion becomes obvious. What is a student to think, when Mr Hartley Withers tells him that one of the major causes of the present state of things is high tariffs, particularly in America, while Mr Frater Taylor thinks that high British tariffs will be (and, indeed, have already proved!) the only world remedy; when the authors of *The Pinch of Plenty* point out the disastrous result of declining world-consumption, particularly of primary products; while another author assures the reader that all nations have lived extravagantly, and that the time has come to tighten belts all round? If economics be a science, its axioms appear to be somewhat in dispute.

It is, nationally, rather humiliating to have to admit that the most useful of these text-books is American in origin. Messrs. Woodward and Rose know what they want to say, and say it brightly (perhaps a little too brightly) and intelligently. Their book is a useful description both of the primary problems of money and of the special problems which the last ten years have thrown into relief; they know how to distinguish between established fact and conjecture; and though, of course, much of their illustration is American, the book rather gains than loses thereby, because of the freshness of approach.

In Messrs Sidgwick and Jackson's interesting "World Problems of To-Day" series, Miss Berkelbach and Mr Hutton write well and convincingly of the present inversion of Malthus's fears, wherein, instead of "population pressing upon the means of subsistence," the means of subsistence has come to press disastrously upon the population. Their book is less a text-book than an essay on one of the most insane of the insane dilemmas which modern civilisation has created. Mr Hartley Withers covers ground which he has covered before, with clarity but without much hope; he is disposed to blame neither the banking community, nor the French, nor the Americans (except as tariffists) for the present situation, and to take the view that manipulated currencies imply the existence of so much international co-operation as to be impracticable. He favours a slow inflation. Both these books may be read with profit, but Mr Taylor, in spite of his membership of the Macmillan Committee, is too naïf to be of much help. *Stock Market Forces* is an interesting little work, containing tables of fluctuations in share prices, and graphs showing various "trends of the market." *The Stock Exchange* is a new and revised edition of an admirable little volume in the Home University Library series, which gives the investor or the student a concise and lucid picture of the functioning of the machinery of the stock markets.

SHORTER NOTICES.

"Problems of Peace." By H. J. Laski, A. E. Zimmern and others. (London) Allen and Unwin. 8s. 6d.

"The Causes of War." By Sir Arthur Salter, Sir J. Arthur Thomson and others. (London) Macmillans. 7s. 6d.

These two symposia of papers read by distinguished publicists to gatherings convened to study the urgent international problem of the day will provide future historians with evidence of the seriousness with which the problem has been wrestled with by men and women of good will. At this moment, when we are in the thick of the struggle and cannot foresee its outcome, we do not know whether, in retrospect, these efforts will seem pathetic or heroic. At any rate, they are sincere; and the task is certainly enormous. We have to recast the whole of our political institutions from the mould of the sovereign independent national state into the world of a world-wide society in order to bring our anachronistic politics into harmony with our economic life, which has advanced already from parochialism to a world economic order. In the first of the two books here noticed, the theory of an international

society is examined by Professor Laski, while the respective relations of Europe, Russia, America and the British Empire to our embryonic world-community are dealt with by a Professor of International Relations in the University of Oxford, a former Secretary of the German Embassy in Washington, the Secretary for Asia of the Y.M.C.A., a Professor of International Law in the University of Illinois, and the chief of the Diplomatic Division in the International Labour Office. The second symposium deals with the single but dominant problem of war—one of the traditional institutions of an obsolete state of society which has to be plucked out and cast away if the new society is not to be destroyed by it.

"Finance and Politics." By Paul Einzig. (London) Macmillan. 140 pp. 7s. 6d. net.

Dr. Einzig has made a considerable reputation for himself by a series of monographs, which between them provide a running commentary upon current international financial history. This is the latest book in the series, and carries the story nearly but not quite up to the eve of the Lausanne Conference. Dr. Einzig himself would probably not claim that his comments represent the final judgment of the historian, for they are made too close to the event; but his work is undoubtedly of value in bringing together facts which otherwise might escape the notice of the compilers of the final history of the period. Where we would be disposed to criticism is that while he is entitled to believe that France is the "villain of the piece," he pushes his argument a good deal too far. It is undoubtedly true that France has pursued a line of her own, and has at times subordinated her financial to her political policy. Yet it is unfair to imply that France has consistently refused to contribute anything to the common aim, or that she has pursued an objective of "financial hegemony" at the expense of deliberately wrecking Europe. It may be that Dr. Einzig attaches too much importance to the "financial weapon," as he calls it, and his suggestion that had Great Britain been willing last spring to continue accumulating *devisen* indefinitely, she could have brought the world's troubles to an end, surely demands qualification. Such "short statements" illustrate the dangers that beset the commentator upon current events; but at least we can be grateful to Dr. Einzig, not only for gathering together his material, but for having the courage to express his views before he can be quite certain that they will not need modification.

"British Railways in Boom and Depression." By C. Douglas Campbell. (London) King. 122 pp. 6s.

It is no doubt essential, when presenting a thesis for an economic doctorate, to present the examiners with a good dose of tabular and graphical matter, for such is the meat upon which examiners thrive; but Mr Campbell's contribution to the problem of the British railways would have been more useful to the general reader if its statistical frills could have been omitted before publication. For all the calculations in the early part of his book, dealing with the financial position of British railways in relation to the general position of trade, prove, when all is said, little more than what a completely non-statistical mind can discover by the exercise of common sense upon the ordinary figures, and further tend to put off, by a great apparatus of American mathematics, the reader who might have obtained profit from a study of the later chapters. For when Mr Campbell arrives at the post-war period, the amalgamations, and in particular the 1921 Act, he has something important to say and valuable criticisms to make, which may be lost to those who have not the patience to continue. His study, based largely on the researches of the Balfour Committee, of the proportion between the various types of traffic borne by the railways, and his analysis of the shortcomings of the rate-fixing machinery established under the Railways Act, will well repay study.

"Co-operative Banking." By N. Baron. (London) P. S. King and Son., Ltd. 15s. net.

This book is a valuable supplement to Mr Baron's "Russian Co-operative Banking," and though less detailed, gives a very complete account of Co-operative and Labour Banks in over forty countries. The statistics are excellently set out, and fully explain the general position of the most important organisations. His conclusion that the methods of Co-operative have generally been sounder than those of Labour Banks is well supported by his account of the Labour Banks in the United States, but his analysis of the uses to which the funds of Co-operative Banks are put suggests to the reviewer the need for an International Co-operative Bank most apparent. Such an institution might also form the basis of a system of international lending which would be free from some of the political complications which obstruct it to-day. The arrangement of the book makes it easy to find one's way through the large number of organisations dealt with, and there is an excellent index of banks at the end.

OTHER BOOKS RECEIVED.

The Hague Court Reports. Edited with an introduction by James Brown Scott. 220 pp. (London) Oxford University Press. 12s. 6d.

Includes, *inter alia*, the French and English text of The Hague Convention of 1907, Arbitrations before the Tribunals, and the Report of The Hague Commission of Inquiry.

Prospettive Economiche. By Giorgio Mortara. (Milan) Università Bocconi.

An examination of the statistical position and markets of the principal raw materials.

Das Krisenproblem Oesterreichs. By Leo Gestetner and Ekkehard Hauer. 53 pp. (Vienna and Leipzig) Verlag von Carl Gerold's Sohn.

A statistical analysis in which particular attention is devoted to foreign trade and to the proposed Danube scheme.

Die Ursachen der österreichischen Agrarkrise und deren Behebung. By Leo Gestetner and Ekkehard Hauer. 102 pp. (Vienna and Leipzig) Verlag von Carl Gerold's Sohn. Sch. 3.

Part I. deals with the breadstuffs problem; Part II. contains suggestions for overcoming the crisis in all the principal branches of agriculture.

Inflate or Perish. By L. L. B. Angas. 100 pp. (London) St. Clement's Press, Limited. 5s. net.

A plan for controlled reflation. Much good sense, but not a little controversial argument stated with provocative brevity.

Le Franc Suisse. By Amédée Gruchon. 226 pp. (Lausanne) Librairie Payot and Cie. 6 fr.

A study of Swiss currency during and since the war.

La Population de la France pendant la Guerre. By Michel Huber. 968 pp. (London) Oxford University Press. 35s. net.

An exhaustive statistical analysis.

Inflation and Deflation. By Hero Moeller. 36 pp. (Erlangen) Verlag von Palm und Enke. Rm. 1.20.

Reprint of a lecture in which the position of the German currency is discussed and various proposals for its reform examined.

The Destiny of Europe. By F. McEachern. 238 pp. (London) Faber and Faber. 7s. 6d. net.

An analysis of the tradition underlying European history.

Manufacturing Industries of the British Empire Overseas; Part VI., Africa. (London) Erlangers, Limited. 7s. 6d.

A very useful collection of statistics.

France and Germany. By W. G. Moore. 146 pp. (London) Student Christian Movement Press. 2s. 6d. net.

A simple account of their respective points of view.

The Shadow on Parliament House. By A. Dewar Gibb. 39 pp. (London) The Porpoise Press. 1s. net.

This essay poses the question: "Has Scots Law a Future?"

Kelly's Directory of Merchants, Manufacturers and Shippers of the World, 1932. In two volumes. 4,565 pp. (London) Kelly's Directories, Limited. 64s.

Vol. I deals with foreign countries and their possessions; Vol. II with the British Empire.

The Stock Exchange.

FOREIGN GOVERNMENT BONDS.

THE foreign bond market is proverbially exposed to every change in the world's trade winds, but not even its oldest meteorologists, whose memory goes back to the Baring crisis, can recall a hurricane like the present. Every recent week has brought its quota of revolutions, counter-revolutions, defaults, transfer moratoria, exchange restrictions, and prohibitions. Many bond quotations are at default levels, dealing in others is a matter of special negotiation, and offers or purchases of relatively small holdings may move prices several points. The narrowness of the market was revealed, incidentally, by the sharpness of this week's recovery in European issues, on moderate buying, following the announcement of a protective committee for British subscribers to "League of Nations" loans.

The extent of the slump in prices of representative overseas Government bonds since the 1929 boom may be appreciated from the following table:—

FOREIGN BOND VALUES.									
Stock.	Highest Price, 1929.	Present Price.	% Decrease.	Stock.	Highest Price, 1929.	Present Price.	% Decrease.		
"Empire" Loans.									
Australia 5% 1945-75	99½	91½	6.2	Other European.					
N. S. Wales 5% 1935-55	99½	85	14.6	Czechoslovakia 8% 1911	114	85½	25.0		
N. Zealand 5% 1946	104	97½	5.3	German 7% ("Dawes")	107½	65½	39.1		
S. Africa 5% 1945-75	104½	101½	3.0	Norwegian 4% 1911	84	85½	0.1		
India 4½% 1958-68	92½	90	2.7	Swedish 3½% 1908	80	75	6.0		
				Belgian 7% 1910	110½	104½	5.4		
				Finland 6% 1923	100	60	40.0		
League of Nations Loans.									
Austrian 6% 1923-43	103½	86x	14.0	South American.					
Hungary 7½% 1924	104½	36½	65.0	Argentina 4% 1911	88	57½	34.6

Bulgarian 7% Settlement	90	30	61.1	Chile 6½% 1929	96	13	86.4		
				Peru 7½% 1922...	106½	30x	68.1		
				Mexican 5% 1899	38	5½	85.6		
				S. Paulo Coffee, 7½%	105	57½	45.2		
				Far East, &c.					
				Japan 6% 1924	100½	64	36.3		
				China 5% 1913	69½	60	13.6		
				Siam 6% 1934-64	105½	83	21.3		

* Allowing for accrued dividends.

† Per cent. increase.

The table reveals the significant fact that, although the present depression is nothing if not worldwide, the extent of the investor's capital losses has varied widely in different geographical areas. Measured in terms of depreciation from the high levels of 1929, the prices of British Dominion Government issues make a relatively satisfactory showing. Australian stocks have recovered, after a period of widespread selling, to levels only 5 or 6 per cent. below the 1929 maxima, and even New South Wales issues, freed from the incubus of Mr Lang, are overhauling those of the other States. India loans, similarly, have retrieved their position, after declining considerably during the period of civil disobedience. New Zealand and South African issues are little, if anything, below the peak figures of three years ago.

Next come the bonds of the "stable" small countries of Western and Northern Europe—Norway, Belgium, etc.—which have depreciated by less than 10 per cent. These are followed by issues of countries whose own economic conditions may be unsatisfactory to-day, but whose overseas loans, in certain cases, have a special security, such as the Chinese loans secured on the Maritime Customs receipts, and the Austrian "League" loan of 1923, whose service was guaranteed rateably by eight other nations. Depreciation in this group is of the order of 10 to 20 per cent. Next come the securities of Governments which have not defaulted, but are by general agreement hard pressed—including Japan and Argentina, whose leading overseas securities have lost about one-third of their value since 1929. The German "Dawes" and "Young" loans come within this category, but show more than "average" depreciation. Finally, the issues of Governments which have suspended interest and/or sinking fund

remittances have declined by two-thirds to three-fourths. In this group fall the majority of South American Government issues, and, unfortunately, some of the post-war "reconstruction" loans of South-Eastern European States issued under League auspices.

In view of this diversity, one may well inquire how far British lending, before the slump, was distributed between good and bad borrowers—as judged by current quotations. Our regular analyses show that in the decade ended December 31st last no less than £1,056,700,000 was subscribed to capital issues in London for employment overseas, distributed as follows:—

LONDON ISSUES FOR OVERSEAS, 1922-31.
(000,000's omitted.)

	"Empire" Issues.		"Foreign" Issues.		Total "Overseas" Issues	
	Government.	Other.	Government.	Other.	"Empire."	"Foreign."
1922	£ 58.6	£ 16.3	£ 14.3	£ 40.9	£ 74.9	£ 55.2
1923	69.4	23.3	26.4	18.3	92.7	44.7
1924	50.1	22.2	40.6	11.8	72.3	52.4
1925	30.7	30.2	...	16.3	60.9	16.3
1926	31.9	21.3	23.8	24.6	53.2	48.4
1927	55.7	44.1	11.8	36.6	99.8	48.5
1928	40.2	22.9	15.9	26.4	61.0	42.3
1929	26.4	34.6	3.6	22.6	61.4	26.2
1930	49.1	12.4	21.3	14.4	61.4	35.7
1931	30.6	7.9	1.7	7.4	38.5	9.1
Total (10 years)	442.7	235.2	159.4	219.3	677.9	378.8
Proportion of total	42%	22%	15%	21%	64%	36%

So far as Government bondholders are concerned (whose position alone is discussed in the present article), the figures are moderately, if negatively, reassuring. "Empire" Government issues (on which investors have suffered relatively small net losses) have accounted for over 40 per cent. of total London emissions on overseas account, while "foreign" Government loans have represented little more than one-seventh of the aggregate.

Closer analysis, however, shows significant specialisation under both headings. The following totals have been raised by certain individual Governments during the decade 1922-31:—

	Total Money Raised.
"Empire" Governments:—	
India	109,472,500
Australian Commonwealth	80,095,000
New South Wales	35,636,465
Other Australian States	53,508,626
Total, Australia	169,240,091
New Zealand	52,775,000
South Africa	34,483,425
Certain European Governments:—	
Germany	21,840,000
Eight "League of Nations" Loans*	38,000,000
South American Governments:—	
Brazil (Federal and States Govts.)	37,472,250
Chile	8,015,085
Argentina	2,162,500
Other South American States	1,872,639
Total, South American Govts.	49,522,474

* To Austria, Bulgaria (2), Greece (2), Hungary, Estonia and Danzig.

Almost every figure in this table may be explained, in the main, by reference to expediency rather than first principles. London has been a favourable venue for "Empire" borrowers, partly owing to friendly market psychology and tradition, but also largely because the Colonial Stock Act has made Dominion issues available for British trustees. Great Britain has taken an appreciable stake in Germany's "Dawes" and "Young" bond issues, and in "League" loans, as part of her considered contribution to post-war European reconstruction. She has invested somewhat heavily in Brazil because, in the main, that country's representation in the London capital market is in particularly influential hands. She has handled very few post-war Government issues for

other South American States, partly on grounds of conservatism as regards their economic position, but chiefly because the United States of America has been far more interested in that part of the field. Argentina, in particular—whose borrowing was a leading factor in the Baring crisis—has raised practically no Government long-term capital in London, British lending having been effected chiefly by way of subscriptions to railway stocks.

The London new issue figures, in any case, afford no exact indication of the net post-war increase in British investments. The Government of India's borrowings, for example, have been destined, in part, for the purchase of existing capital assets, such as railway properties. Repayments of capital by overseas borrowers have been considerable. In the three years 1928-30 Sir Robert Kindersley has estimated that "Empire" Governments repaid £80,480,000 and "Foreign" Governments £26,713,000 of capital—leaving total outstanding British investments under the two headings, at the end of 1930, at £985,532,000 and £320,112,000, which produced income (during that year) of £42,290,000 and £15,793,000 respectively. Overseas nationals, again, have been considerable buyers of sterling bonds, their total 1930 holdings being put by Sir Robert at £276,306,000 of "Foreign" and of £116,626,000 of "Empire" Government and municipal bonds.

Investors in these difficult times, in short, may solace themselves with the reflection that the major share of Britain's net overseas purchases, since the war, has been of the bonds of "Empire" Governments which have suffered only moderate depreciation, and that some of her heaviest losses, particularly in Europe, have been incurred in a good cause. This, of course, is not the end of the matter. Concentration of limited lending power on the needs of the British Commonwealth of Nations may have been inevitable, and from some points of view desirable, but it is doubtful, for example, whether certain borrowers, like Australia (and, possibly, New Zealand) have not been induced by the abundance of London's resources to mortgage a dangerously large proportion of their future productivity. Nor can many sound conclusions be drawn from the behaviour of bond prices generally under abnormal contemporary conditions. The "eternal risks" of foreign investment have never been closely defined, but they can scarcely include the danger of world trade cessation—by instalments.

INSURANCE SHARES.

ACCORDING to the Actuaries' Investment Index the price index of 24 representative insurance shares fell last year from 91 at the beginning to 67 at the end of the year, while during the same period an index of prices of industrial shares as a whole fell from 64 to 49. Thus insurance shares suffered more drastic depreciation even than industrial shares. As there was nothing in the situation to justify this extreme depression in the price of insurance shares, a rebound naturally occurred this year, and the index was carried up to a high point of 83. A further, though smaller, recession has since occurred, and reduced the index to 79.

The following table of representative quotations shows how current prices compare with the highest recorded in recent years:—

	Highest. 1929.	Highest. 1931.	Highest. 1932.	May 3, 1932.	Present Price.	Yield (%)
Alliance New Ord., £1 fully paid	23	21	23½	20½	21*	£ s. d. 4 5 0
Commercial Union Ord., £2½ fully paid	29½	24½	20½	19½	17*	6 0 0
Employers' Liability Ord., £1 with 5s. paid	4½	3½	2½	2½	2½	10 0 0
London and Lancashire Ord., £5, with £2 paid	33½	28½	27½	25	25½	3 18 5
Pearl Ord., £1 fully paid	13½	13½	12½	11½	12	13 18 0
Prudential "A" £1 fully paid	28½	24½	22½	21½	20½*	4 2 0
Royal Exchange Ord., £1 with 10s. paid	7½	6½	6½	5½*	5½	4 14 0
San Insurance Ord., £1 with 5s. paid	45½	3½	3½	3½	3½*	4 5 0
Yorkshire Ord., £1 fully paid	16	14½	14	13½	13½	11 0 0

* Ex dividend. † £10 shares with £2 paid up. ‡ Free of income tax.

What is the reason for the heavy depreciation that has occurred in some cases? What is the outlook for the future? From an investor's point of view, insurance shares naturally divide themselves into two categories, those of companies transacting all classes of insurance business, including life, and those of companies which transact life business only. By far the greater part of the depreciation has occurred amongst shares in the former class. The composite offices as a whole have been subject to the full effect of the world-wide trade and financial depression, and since, on the average, some 50 per cent. of their premium income is derived from the United States, they have felt acutely the effects of the extreme state of depression in that country. Indeed, many companies have testified to the fact that most of the decline in their total premium income has been due to United States business, and, moreover, that while profits on the home section have been well maintained, the United States business has been run at a loss. A study of the annual reports issued for 1931 shows that fire premiums fell on the average some 5 per cent. as compared with 1930, and accident premiums somewhat less, and in both departments there has been a falling off in the underwriting profits.

In face of the catastrophic fall in commodity prices during 1931, the premium income has been relatively well maintained, but the further fall in gold prices of about 14 per cent. since September, 1931, suggests that the companies this year will be faced with a further falling off in premiums, and so far as the United States conditions are concerned the statistics of fire losses show no improvement in the first four months of this year.

Another unfavourable factor has, of course, been depreciation on securities, though in this connection it is satisfactory to notice that in practically every case the hidden and disclosed reserves were more than amply sufficient to meet all the depreciation that occurred. Indeed, the depression has served to emphasise, in the case of British companies operating in America, their relatively strong financial position compared with the native companies. American fire and casualty companies are allowed by law to invest in preferred and common stocks, and, in fact, over 40 per cent. of their assets are invested in common stocks and nearly 15 per cent. in preferred stocks. The colossal depreciation in these classes of securities has been a very serious matter for the native companies. A number of them have had to be assisted by the Reconstruction Finance Corporation, and over 50 companies in 1931 has been the marine account, where underwriting profits have been more satisfactory than for many years past.

As regards life assurance, most of the business of life companies is confined almost entirely to this country, and in this field not only has new business been extraordinarily well maintained, but general profit-earning capacity, in regard to interest, mortality and expenses, has also been of a very satisfactory nature. In view of their larger funds the problem of depreciation in the case of the life companies looms larger, but those companies whose hidden or disclosed reserves are insufficient to deal with this factor all have enormous hidden reserves in their basis of valuation.

To sum up, we may say that the outlook for life assurance companies for the moment is relatively more favourable than that for companies transacting all classes of business, although there are, of course, in this latter category a few companies whose shares, by reason of special circumstances, are still attractive.

THE WEEK IN THE MARKETS. THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.
June 21.

ACCOUNT.
June 23.

SENTIMENT, always incalculable, chose to regard favourably the reports of the MacDonald-Herriot discussions in Paris, the Prime Minister's review at the opening of the Lausanne Conference, and the announcement of a strong

protective committee of sterling holders of "League" bonds. The advance of gilt-edged stocks was renewed, 4 per cent. Consols reaching par. Bear covering on a narrow market gave a sharp upward twist to numerous European bonds. To the firmness of fixed-interest securities in general there was one prominent exception—railway prior charges, which were affected by the worst batch of traffic receipts recorded for some weeks. Dealings in equity shares, by contrast, were restricted, though quotations were fully held. Indeed, the market's cheerfulness was largely superficial, and gave an impression of inability to withstand any really bad news.

The best indication of the reversal of the previous reactionary attitude towards gilt-edged stocks was the concentration of demand on long-dated issues like Four per Cent. Consols, while War Loan remained stationary. Other stocks made new records, Five per Cent. Conversion going above 110 and Victory Bonds touching 102. India loans were strong after the redemption of the 6 per cent. Bonds of 1932-33, the pending closure of the Rupee Loan being expected to bring fresh money into existing stocks. The decisive defeat of Mr Lang's party caused a further recovery in Australian stocks.

The upward reaction in European bonds was due more to inevitable bear closing on the eve of Lausanne than to optimistic views of the rôle of the League Bondholders' Protective Committee. The market's attitude towards Argentine issues remained conservative, but an increased demand for Brazilians followed the repayment of a credit by the Bank of Brazil, the remittance of £175,000 for the debt service, and the due performance of the sinking fund operation in respect of the Five per Cent. Funding Bonds. The confused political situation again failed to influence Chilean bond prices.

Tentative buying of home railway prior charges was decisively checked on Wednesday, when the week's traffic figures upset the whole market. "Depressed" preference stocks were weak, and ordinary quotations reached the lowest points ever recorded. Small offerings of Argentine stocks caused fresh price declines, the trend of receipts on all the main lines being downwards. Canadian Pacific, on the other hand, improved slightly on better crop reports.

Dealings in the industrial markets remained restricted. International counters were irregular, but slightly higher on better Wall Street sentiment. Some home equities showed rises of a few pence, but irregularity developed before the close on most days. Electrical shares were somewhat easier, and iron and steel shares dull, the Guest, Keen report (dealt with on page 1367) being unfavourably regarded. Stewarts and Lloyds, exceptionally, were firm on reports of large Australian orders in anticipation of tariff increases in the autumn. The speech of the chairman of J. Lyons (discussed on page 1367) attracted investment notice, the shares continuing to gain ground, while most catering issues were easier. International Tea, however, remained steady in anticipation of a relatively favourable report. Textile shares receded on disappointment with the unions' decision, on Monday, to submit the question of strike action to a further ballot. Breweries remained heavy. Insurance shares were steadier than of late, but banking shares remained slightly reactionary. Anglo-South American Bank "A" were dealt in, by negotiation, at a discount.

Oil shares became slightly irregular after a firm opening. Continental business was not extensive, the tone being set mainly by New York. Demand for Anglo-Persian from the North of England, however, found the market bare of stock. Rubber shares remained stagnant, with changes few and far between, in the absence of any appreciable variation in the price of the commodity. The volume of liquidation of tea shares, however, showed signs of diminishing, a number of moderate improvements in quotations reflecting the reappearance of bargain hunters.

Trading in mining shares was quiet, the Continent being apathetic. The Kaffir dividend announcements (referred to on page 1369) were regarded as satisfactory, but had been discounted. Among Rhodesians, Cam and Motor attracted interest on rumours of a return of 5s. or 7s. 6d. of capital per share. Tin shares showed little change despite the wide fluctuations of the metal, which was

particularly weak on Tuesday. Bangrin and Siamese Tin improved on the issue of annual reports. Speculative activity in West Australians, particularly Great Boulder, was intermittently resumed.

NEW YORK.

The markets opened irregularly, but improved in the course of the week. The cheerful attitude of London with regard to the Lausanne Conference had some influence, but the main factors in a modest improvement were the recovery in the dollar exchange and relief over the prospect of the adjournment of Congress without any further disturbing legislation. In particular, the market was reassured by the belief that the Soldiers' Bonus Bill had no prospect whatever of becoming law. Bond prices fully reflected the market's better sentiment, but little direct effect was traceable to buying by the pool. In view of the somewhat negative character of the forces making for improvement, doubt was expressed whether the promised resumption of group speculative operations would go very far. Business conditions remained unsatisfactory. Steel operations reached a new low point at 18 per cent. of capacity. Freight-car loadings for the week ended June 4th were 447,897, a decline of 72,613 as compared with the previous week and 314,000 as compared with the corresponding week of last year. Owing to the incidence of the end-May holiday, however, the figures were not entirely comparable. The business index of *The New York Times* for the first week of June touched a new low point at 55.1, against 55.3 in the previous week.

NOTE.—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

* 2-hour session.

PARIS.

The tone was slightly more cheerful, though the volume of business was restricted. Rentes were adversely affected by offers from holders anxious to change into new National Equipment bonds. Tintos, Royal Dutch, Lautaro, Central Mining and De Beers were supported in the early sessions. Selling later gained force, Bank of France being weak on disturbing rumours regarding the interim dividend. On Thursday there was resumed buying, and better prices were quoted for international issues and the more speculative shares, including diamonds, mines and rubber. Rentes were appreciably stronger.

	June 9, 1932.	June 13, 1932.	June 16, 1932.		June 9, 1932.	June 13, 1932.	June 16, 1932.

Royal Dutch	11,500	11,800	12,500	"Johnnies"	88	88	88

BERLIN.

Markets opened fairly firm on the eve of Lausanne. Banks showed a modest improvement, but the turnover in other markets was on a small scale. Dye Trust were supported, but A.E.G. were out of favour. Hamburg-Amerika and North German Lloyd again strengthened. A general weakening of quotations followed the publication of the Cabinet's new tax proposals.

	June 9, 1932.	June 13, 1932.	June 16, 1932.		June 9, 1932.	June 13, 1932.	June 16, 1932.

Norddeutscher Lloyd	13½	12	12	Svenska Tandstols	9	6½	...

AMSTERDAM.

Though Government loans showed slight weakness, other markets were steady in the first part of the week. Royal Dutch, Unilever and Philips Lamps all improved. Plantation shares were a shade harder, and sugar shares reflected the firmer tone of the commodity. Profit-taking, however, tended to upset the market in mid-week.

	June 9, 1932.	June 13, 1932.	June 16, 1932.		June 9, 1932.	June 13, 1932.	June 16, 1932.

Java Cultuur	67½	76	94½	Handels Am.	129	138	148

OTHER CENTRES.

Most of the smaller European Bourses were cheerful at the outset, in sympathy with London, Paris and Amsterdam. Frankfurt, however, developed weakness after Siemens and Dye Trust had been in noteworthy demand. Stockholm opened hopefully, but no increased activity occurred. Brussels fluctuated within narrow limits. Prices at Milan were steady, but little business was done.

INVESTMENT NOTES.

Australian Government Stocks.—The decisive defeat of the Lang Party in the New South Wales elections has contributed to the strength of Australian Government stocks this week. That Australia's position, nevertheless, is not yet fully assured is suggested by a letter we publish on page 1356 from an Australian well qualified to express an opinion. Budgetary deficits are causing the Premier's plan called for a reduction in the Budget deficits to £12 millions, it is believed that the fiscal year ending June will disclose larger deficits than £18 millions. Up to the end of May the deficit in the accounts of New South Wales alone exceeded £10 millions. The most favourable factor in the Australian situation, however, is the improvement in the trade balance. During the present financial year it is estimated that the Dominion will cover its present external interest requirements of £31 millions with about £4 millions to spare. The mainable wheat crops and wool clips, but a difficult situation might arise if a bad season occurred before the prices of primary products had risen. So far nature has come to the rescue of Australia. The total wheat crop for the season 1932-33 is estimated at 3,168,000 bales, which is a record. This improvement in the trade balance and the departure of Mr Lang have been jointly responsible for a

June 18, 1932.]

considerable advance in Australian Government stocks this year:—

Stock.	Prices, 1932.		Yield (%) at Present Price.	Yield (%) with Redemption.
	High.	Low.		
Australia 5% 1945-75	92	75	£ s. d.	£ s. d.
New South Wales 4½%, 1935-45	78½	64	5 8 6	5 9 6
Queensland 5%, 1940-60	87½	70	5 15 6	6 0 0
Victoria 4%, 1940-60	75½	59	5 7 6	5 17 0
West Australia 4%, 1942-62	73½	58½	5 9 0	5 17 6

The shorter-dated securities are still returning relatively high yields. Commonwealth 6 per cent. 1931-41, for example, is quoted at 99½. New South Wales 5½ per cent. stock, of which £11,721,000 is outstanding, falls due for redemption on November 1st this year. It is at present quoted at 99. The balances accruing to the Commonwealth Government in London have increased very largely in recent months, and there should be no difficulty in making a short-term issue if the Australian Loan Council decided that the moment was not opportune for making a long-term conversion offer to the New South Wales bondholders.

Payment of Directors.—An important question was raised this week by the request of the directors of Beecham's Pills, Limited, and Scribbans & Company, Limited, that shareholders should cancel a clause in each company's articles making the payment of directors' fees contingent, in the one case on the payment of a 25 per cent. deferred dividend, and in the other on the distribution of a sum in excess of £226,666. The recent results of the two concerns have been satisfactory, but have not justified the payment of the "minimum" dividends, so that the unfortunate directors of Beecham's Pills have received no fees (other than managing directors' remuneration and fees from subsidiary companies) for two years and the directors of Scribbans for five. The chairman of both companies is Mr P. E. Hill. The objections to making directors' remuneration dependent upon dividends of any specified figure are obvious. Forces making for distribution of profits up to the hilt are sufficiently insidious without being augmented by clauses compelling directors, on occasion, to choose between financial conservatism and personal loss. Some criticism, however, was voiced of the suggestion, in the present instance, to abandon the "profits test" altogether. We believe, however, that, on first principles, the directors made out a case. At first sight the suggestion appears attractive that fees should be made dependent, in whole or part, on the achievement of minimum results (judged by the criterion of earnings, not of dividends), so that those in charge of a company's destinies should have a vested interest in the realisation of its prospectus estimates. On broad grounds, however, directors may claim to perform certain professional services, which may be no less meritorious and are sional services, which may be no less meritorious and are certainly no less arduous in bad times than in good. A company's workers expect to receive their wages, and its solicitors and auditors to receive their fees, whether it has made a profit or a loss. A doctor receives his honorarium whether a patient recovers or expires, but in the latter event the prospect of future payments disappears. Similarly, the main incentive to directors to give of their best (apart from their own ideas of what is professionally fitting), is not the possible loss of a single year's fees, but the danger that continued bad trading results may bring a company—and with it the prospect of all further fees—to an untimely end. Even if it be argued that a system of "bonuses" may be as useful in the boardroom as the workshop, the calculation of additional payments by reference, say, to net profits, holds dangers not apparent at first sight. Net earnings are struck after providing for depreciation and—even more important—generosity in estimating future contingencies may at times be highly desirable, in a world in which the unexpected so often happens. If surplus payments are to be made contingent on results, their basis of assessment should be gross turnover rather than net profits.

J. Lyons Meeting.—Major Isidore Salmon was spared the necessity of apologising for the results of his company at last Monday's meeting. As we showed in our issue of June 4th last (page 1252), depression has been powerless to check the prosperity of J. Lyons and Company, which last year earned 28.7 per cent. and paid the customary 22½ per cent. on its ordinary shares. The company, however, on Major Salmon's showing, enjoys no immunity from the difficulties common to all trades. Its profits depend on the securing of "microscopic" earnings from an immense number of sales. The board's policy is to reduce prices immediately opportunity arises, but, whenever expectations of a consequent increase in business are unrealised, to restore price levels before losses can accumulate. The process of adjustment and readjustment calls for careful and minute scrutiny every week throughout the year. Major Salmon frankly admitted that the profits shown as being available for distribution did not strictly coincide with the actual earnings of any one year. The company's policy was to set aside "hidden reserves," to be used, for the most part, in financing changes of plant, reorganisations of methods, etc. These reserves, in other words, would appear to be regarded as a species of additional "obsolescence" provision. A substantial part of their balance was, in fact, used last year, together with the premium on an issue of preference shares, to write down the value of machinery and plant in addition to the normal depreciation. The creation and use of reserves for such a purpose are highly commendable. We venture, however, to suggest to Major Salmon that if the "man in the street" does, in fact, display the high degree of intelligence in reading accounts with which he (Major Salmon) credits him, he would be unlikely to press for inconveniently high dividends if the directors paid him the compliment of revealing the actual dimensions of earnings and contingency appropriations.

Guest, Keen and Nettlefolds.—In view of the unfavourable trend of recent results, it may be regretted that the directors of Guest, Keen and Nettlefolds have not seen fit to take shareholders more fully into their confidence. In the post-war decade the company earned and maintained a regular 10 per cent. ordinary dividend, which ceased abruptly in 1930-31. This year the second preference shares have gone dividendless. It is clear that world depression, particularly in the export trades, is seriously affecting the earning power of a group which has always been regarded as one of the strongest in the heavy industries:—

	Years ended March 31,

* Free of tax.

Shareholders can frame no estimate of the earning power of the Guest, Keen group last year. Some £16,034,000 of total parent company assets of £20,611,000 is represented by interests in subsidiary companies. For the second year in succession no provision has been made for losses of certain of these subsidiaries, on the ground that the undistributed balances of other subsidiaries exceed these losses. This procedure is open to the criticism that, as no consolidated profit and loss account and balance sheet are given, shareholders are left without guidance on a supremely important question—namely, how fast and how far the losses of one part of the organisation are, in effect, eating up the accumulated reserves of the better situated properties. The holding company's balance sheet shows few

significant changes other than a decline of £588,000 in amounts owing to subsidiaries and of £780,000 in total interests in subsidiaries and associates. Neither is explained in the report. The composite "creditors" item has been sub-divided, and the existence is revealed of a bank loss of £450,000 "in respect of foreign investments." Reserve has been debited with £125,202 additional depreciation of marketable securities and £22,824 provision for possible loss on exchange, and now stands at £3,469,238. The company has reserves for taxes, contingencies, etc., of £264,960. Presumably the company has received no income from the British (Guest, Keen-Baldwins) Iron and Steel Company, but its accounts presumably include dividends of approximately £124,900 received from John Lysaght, last autumn, in respect of the latter's trading in the calendar year 1930. This figure is equal to over 60 per cent. of last year's Guest, Keen profits available for shareholders. Guest, Keen ordinary shares are quoted at 9s. 9d., against a high point of 36s. 10d. in 1930, and the £1 5 per cent. tax free second cumulative preference shares at 10s. 7½d.

William Cory.—Depression has not yet seriously affected this old-established company of coal factors. Income for the financial year to March 31st last showed a very moderate decline of 11 per cent., and was sufficient to cover the customary 17½ per cent. dividend payment. The directors, however, have chosen the better port of conservatism:—

	Year to March 31,		
	1930.	1931.	1932
	£	£	£
Income	733,687	675,053	601,648

The company handles over 20 million tons of coal per annum, and has branches in a large number of towns at home and abroad. Its interests include the selling agency for the Anglo-Persian Oil Company. The strength of its financial position is demonstrated by the fact that its assets of £9,510,691 include no less than £2,620,514 of gilt-edged securities. The balance sheet reveals a thoroughly liquid position. At ½ the £1 ordinary shares yield about £6 6s. 6d. per cent.

The Unilever Group.—In our article on "The Unilever Colossus" last week we gave a list of Danish subsidiaries of Unilever N.V., which included, *inter alia*, Aarhus Oliefabrikken. We are now officially informed that this company is not a member of the Unilever group.

Brazilian Traction Report.—A frank directors' report accompanies the accounts of the Brazilian Traction Light and Power Company for 1931. The combined gross earnings of the subsidiary companies declined by 25.6 per cent., and net revenue accruing to the parent company declined by 41.4 per cent., the discrepancy being due largely to the slump in the milreis. Further, the subsidiary companies were able to remit only a limited portion of their funds, exchange transactions being controlled by the Bank of Brazil. The business of the subsidiary

companies was fairly well maintained, but increasing taxation and duties will affect results this year:—

	1929.	1930.	1931.
	\$	\$	\$
Gross earnings from operation	49,351,215	46,898,444	34,896,767
Net revenue of subsidiaries	28,334,959	27,742,431	21,016,361
Bond interest and other charges of subsidiaries	3,787,334	3,588,938	3,374,070
Subsidiaries' reserves for depreciation and sinking funds	7,362,991	7,745,594	7,850,999
Balance of revenue to Brazilian Traction Co.	17,184,634	16,407,899	9,791,292
Net revenue, ditto, after general expenses and amortisation	16,861,096	16,025,339	9,389,103

Some \$23,604 was taken by preference dividends, \$3,371,784 by two quarterly cash dividends of 25 cents on ordinary shares, and \$3,916,525 was distributed in two quarterly stock dividends of one in fifty. Net earnings are equivalent to \$1.41 per share on the average number of ordinary shares outstanding, against \$2.56 in 1930. The consolidated balance sheet shows a liquid financial position, current assets totalling \$23,308,265 and current liabilities \$7,677,969. The sum of \$2,098,534 has been transferred from general reserves to write down the gold dollar value of the milreis assets of the subsidiary companies and to meet depreciation in Canadian Government bonds. The shares were firmer on the report at \$11½, against a low point for this year of \$9½.

Kreuger and Toll.—We have received a copy of the interim report of the Protective Committee formed in New York on behalf of the holders of the 5 per cent. secured sinking fund gold debentures of Kreuger and Toll. The chairman of the Committee is Mr Grayson M. P. Murphy, of the New York Stock Exchange house of G. M. P. Murphy and Co. The Committee was formed on April 12th and instructed Messrs Sullivan and Cromwell as counsel, one of whose partners proceeded to Stockholm to confer with the Swedish authorities. The change in the collateral of the secured debentures, involving the substitution of Central European bonds for French rentes, has already been discussed in the *Economist*. The Committee find that the exchanges were made under the provisions of the debenture agreement which expressly authorised substitutions. The greater part of the pledged collateral was held by the Skandinaviska Bank, of Stockholm, and the Committee are advised by Swedish counsel that the securities are not subject to any levy or attachment by other creditors of Kreuger and Toll. On account of the moratorium applied to the Kreuger and Toll group by the Swedish Parliament the Committee were denied permission to remove the collateral from Sweden. A protest has been lodged with the appropriate department of State and cognisance has officially been taken of the contractual rights of the secured debenture holders. The Committee are hopeful that the existing moratorium legislation will not be employed to work any injustice upon the debenture holders. An examination of bonds of the Hungarian Land Reform Society are subject to the moratorium decree of the Hungarian Government. Interest has so far been paid on the balance of the pledged securities, although default is expected in a number of cases. On the basis of market values, however, it is apparent that there will be a very substantial deficit on the realisation of the collateral, which will constitute an unsecured claim against the general assets of Kreuger and Toll, an examination into which is still proceeding. It is believed possible to establish some legal or equitable basis for participation by the creditors of Kreuger and Toll in certain of the match concessions and interests of the Swedish Match Group. The Committee appear to will not be content until they secure possession of the pledged collateral, the liquidation of which will necessarily present great difficulties.

Rand Dividends.—A satisfactory feature of the first batch of June half-yearly dividend announcements of the Transvaal gold-mining companies has been the entry into the list of East Geduld, which began crushing operations in July last year. This new producer is distributing 1s. per share. Geduld Proprietary, which, with Union Corporation, has a joint interest in East Geduld, is paying 3s. 6d. per share, the same rate as for the second half of 1931, comparing with 3s. 3d. per share for the four preceding periods. The Modder Deep dividend is reduced from 3s. per share (for the second half of last year) to 2s. 9d. Sub Nigel will pay 4s. per 10s. share, a fresh advance of 6d. per share. The Robinson Deep "A" dividend is unaltered, but the "B" shares receive 6d., against 4½d. per share for the corresponding half-year of 1931. West Rand Consolidated re-enters the dividend list with a distribution of 3d. per 10s. share, the last dividend (9d. per £1 share) having been paid as long ago as 1910. Van Ryn Gold is paying a final of 5 per cent. tax free, making 8½ per cent. (against 5 per cent.) for the year. At the annual meetings held so far the chairmen have, naturally, tended to take a favourable view of immediate prospects. Profits have been well maintained, or increased; tonnage milled has been higher, and in most cases the ore reserves' position remains satisfactory. Modder Deep, of course, is approaching the end of its career, though full-scale milling operations will probably continue until the end of 1934, when there will remain a quantity of low-grade ore. Notwithstanding a fire which occurred in the West Shaft engine room of the West Rand mine, and resulted in an increase of 2d. per ton in working costs, the total profit of £282,514 showed an improvement of £25,683. At the present rate of sinking, it is anticipated that the South Shaft will reach its final depth of approximately 4,000 feet at the end of the current year. Since the close of last year, East Geduld has made further improvement. The figures for May, compared with December, show an increase in tonnage milled from 51,000 to 57,300, an improvement of 1s. 2d. in the yield per ton milled (to 26s. 4d.); a reduction of 3d. in the cost per ton milled (to 18s. 9d.), and an improvement in working profit. The longer-life mines are taking comfort from the possibility of a future world shortage of gold, which could only be prevented by a radical change in world currency habits, of which, at present, there is little sign. At the same time, the chairman of West Rand has pointed out that the abandonment of the gold standard by South Africa would considerably augment the profits of the gold producers, while at the Union Corporation meeting Mr P. M. Anderson contended that it would rectify palpable injustices.

Lonely Reef.—Development last year on the part of this Rhodesian undertaking proved even less fruitful than in the preceding period. Reliance, therefore, has to be placed in an increasing degree upon ore from reclamation. Of the material milled during 1931, over 80 per cent. came from this source. The remaining 20 per cent. had the effect of drawing the ore reserves down to 33,000 tons, value 11½ dwts. over 44 ins. A large quantity of reclamation ore—between 400,000 and 500,000 tons—still remains, but "values are proving extremely erratic and unreliable." The treatment of accumulated slimes, which has been in progress four years, has given highly satisfactory results, but the dump will be exhausted within about a year from the present time. Last year's net profit from all sources amounted to £85,100, a decrease of £12,300. The dividends, however, were maintained at 20 per cent., and an interim distribution at the same rate has recently been declared on account of the current session. A further £10,000 has been placed to reserve, making £35,000 in all. The financial position is good, the balance sheet showing a cash surplus of £75,000. Options have been taken over three neighbouring properties.

Zinc Corporation.—The gross value of mine production fell from £1,008,430 in 1930 to £806,733 in 1931. As a result of the virtual suspension of all development work and the reduction of working costs from 29s. 8d. to 26s. 5d. per ton, mine expenses fell by a greater percentage than receipts, being £717,265 against £994,992, after making allowances for difference in English and Australian currency. There remained a net profit of £81,388:—

	Year to December 31,		
	1929.	1930.	1931.
	£	£	£

* Before exchange adjustment.

† After exchange adjustment at 130 per cent.

The Broken Hill Mine in New South Wales worked only 75 per cent. of normal full time, the ore raised being 264,979 tons, compared with 337,041 tons in 1930. Ore reserves at December 31, 1931, were estimated at 2,800,000 tons for lead lode and 249,000 tons for zinc lode. The reduction in the estimated ore reserves, however, was only 80,000 tons, stripping operations on the lead lode having exceeded estimates. Floating assets and liabilities in Australia have been converted for balance-sheet purposes at £125 Australian to £100 British, but no adjustment has been made in fixed assets. The value of lead on hand has been reduced in the balance sheet to £11 per ton sterling, and for this purpose the sum of £8,987 has been transferred from suspense account no longer required. Investments contributed £77,888 to revenue account, against £105,461 in 1930. Of the total of general investments, amounting to £298,982, 26.2 per cent. are in British or Dominion Government securities. The market value is greater than the figure appearing in the balance sheet, but the majority of the holdings in associated companies, totalling £543,397, have no market quotation. The 10s. ordinary shares are quoted at 18s. 9d.

Company Meetings of the Week.—On later pages will be found the reports of the following companies:—Suez Canal, J. Lyons and Co., Union Corporation, Forster's Glass, Beecham's Pills, Golden Horseshoe (New), East Geduld Mines, Geduld Proprietary Mines, and Modderfontein Deep Levels. At the annual meeting of Union Corporation, Mr P. M. Anderson discussed the attitude of the mining industry of South Africa towards the Union's maintenance of the gold standard. At the Suez Canal meeting, the chairman said the company had not shrunk from efforts to fulfil its responsibilities towards world commerce. It had now been decided to continue the 10 per cent. reduction in transit charges for a further six months. At the annual meeting of Beecham's Pills, Mr Philip Hill referred to the successful trading experience of subsidiaries, particularly the Veno Drug Company (1925). At the meeting of Forster's Glass Company, Sir Sydney H. H. Henn referred to the serious effect of increased beer taxation on the bottling trades, in which the last three months of each year were a period of high seasonal activity. Taxation plus reduced national purchasing power, he declared, had resulted in a reduction of nearly 50 per cent. in sales of bottles. The meeting of J. Lyons and Co. is referred to on page 1367.

CAPITAL ISSUES.

Of the week's two public issues, the *Central Electricity Board* offer was dealt with in this column last week. The lists closed quickly on Monday, applicants for over £1,000 being given allotments of 81 per cent. In the market the stock opened at a small discount, but subsequently rose to $\frac{1}{2}$ premium. The other issue of the week was made by *Wright, Layman and Umney (1932), Limited*, which has taken over a drug and chemical business established in 1849 and incorporated in 1909, its best known production being Wright's Coal Tar Soap. Of the purchase price of £320,000, some £260,000 is being paid in cash. Some £225,490 is attributable to goodwill. Seeing that the vendor company has been long established, more than three years' profit figures should have been given in the prospectus. The dividend requirements of the preference shares (which have no normal voting powers) are covered only twice by the profits of 1930, and less than three times by those of 1931.

Public Offers.

Wright, Layman & Umney (1932).—Issue of 280,000 7 per cent. cumulative preference shares of £1 each at par. The company has been formed for the purpose of taking over the business of Wright, Layman & Umney as a going concern, and developing the manufacture of Wright's Coal Tar Soap and other coal tar specialties. The purchase price has been fixed at £320,000, payable as to £260,000 in cash and as to £60,000 by allotment of 60,000 ordinary shares of the new company. Net profits of Wright, Layman & Umney for the past three years have been as follows: 1929, £48,709; 1930, £42,745; 1931, £55,999. Dividend on the present issue requires £19,600.

South Suburban Gas Company.—Sale by tender of £200,000 5 per cent. perpetual debenture stock, minimum price £105 per £100 stock. The area supplied by the company comprises 174 square miles. The proceeds of the issue are required to replace monies of the Co-partners' Superannuation Fund at present employed in the company's business. Dividends of 6 per cent. per annum or more have been paid on the ordinary stock of the company for the last ten years.

West Hampshire Water Company.—Offer for sale by tender of £12,000 5 per cent. perpetual debenture stock, minimum price £103 per £100, yielding at that price £4 17s. 1d. per cent., and 1,000 £10 ordinary "B" shares, minimum price £13 per share, yielding at that price £5 7s. 8d. per cent. on the basis of a maximum dividend of 7 per cent. per annum. The net revenue of the company for the year ended June 30, 1931, was £16,300, while the Ringwood Rural District Council guarantees £2,600. The interest on the debenture stock, including the present issue, is therefore covered more than four times.

Weston-super-Mare Gaslight Company.—Offer for sale by tender of £2,000 5 per cent. irredeemable debenture stock, minimum price £105 per £100 stock, yielding at that price £4 15s. 3d. per cent., and £14,380 5 per cent. irredeemable preference stock, minimum price £97 per £100 stock, yielding at that price £5 3s. 1d. per cent. The net revenue of the company for the year ended December 31st, last was £15,050. Interest on loan capital, including the present issue, will require present issue, will require £3,419. Sales of gas were 358 million cubic feet in 1925, and over 416 million cubic feet in 1931.

Stock Exchange "Introductions."

Odams' Properties.—The company was incorporated on March 9, 1932, with the object of purchasing properties in London and Manchester. Issued capital: 15,000 8 per cent. and 350,000 ordinary shares of £1 each. There is also £700,000 7 per cent. first mortgage debenture stock outstanding. An underwriting commission of 2 per cent., and an overriding commission of 1 per cent. were paid to Investment Registry, Ltd., for underwriting the whole of the company's stock.

Basinstoke Gas Company.—An amount of £15,000 5 per cent. redeemable debenture stock, redeemable at par on July 1, 1947, has been disposed of to Messrs. Seymour, Pierce & Company at par, less 2 per cent. commission.

OIL OUTPUTS.

VENEZUELAN OIL CONCESSIONS, LTD.—Production for the week ended February 27th was: Bolivar district, 84,514 metric tons; Maracaibo district, 7,273 metric tons; total, 91,787 metric tons. Production for the week ended March 5th was: Bolivar district, 84,657 metric tons; Maracaibo district, 7,063 metric tons; total, 91,720 metric tons. Production for the week ended March 26th was: Bolivar district, 84,960 metric tons; Maracaibo district, 7,202 metric tons; total, 92,162 metric tons. Production for the week ended April 2nd was: Bolivar district, 84,446 metric tons; Maracaibo district, 7,505 metric tons; total, 91,951 metric tons. Production for the week ended April 9th was: Bolivar district, 85,624 metric tons; Maracaibo district, 6,791 metric tons; total, 92,415 metric tons. Production for the week ended April 16th was: Bolivar district, 92,857 metric tons; Maracaibo district, 7,011 metric tons; total, 99,868 metric tons. Production for the week ended April 23rd was: Bolivar district, 86,400 m. tons; Maracaibo district, 7,043 m. tons; total, 93,443 m. tons. Production for the week ended April 30th was: Bolivar district, 85,342 metric tons; Maracaibo district, 7,103 metric tons; total, 92,445 metric tons. Production for the week ended May 7th was: Bolivar district, 91,985 metric tons; Maracaibo district, 7,117 metric tons; total, 99,102 metric tons. Production for the week ended May 14th was: Bolivar district, 85,192 metric tons; Maracaibo district, 6,415 metric tons; total, 91,607 metric tons. Production for the week ended May 21st was: Bolivar district, 84,900 metric tons; Maracaibo district, 6,847 metric tons; total, 91,747 metric tons. Production for the week ended May 28, 1932, was: Bolivar district, 91,260 metric tons; Maracaibo district, 6,360 metric tons; total, 97,620 metric tons. Production for the week ended June 4th was: Bolivar district, 84,495 metric tons; Maracaibo district, 6,481 metric tons; total, 90,976 metric tons. Production for the week ended June 11, 1932, was: Bolivar district, 84,969 metric tons; Maracaibo district, 6,444 tons; total, 91,413 tons.

INFLATE OR PERISH
by L. L. B. Angas

How to bring about immediate recovery by currency policy, without at the same time setting in motion uncontrolled inflationary forces.

TRADE RELATIONS OF LITHUANIA AND GREAT BRITAIN.

By M. LIPCIUS,

Director of the Lithuanian State Treasury.

RADICAL changes in the course of agricultural production have taken place in Lithuania during recent years, when the trend of production swerved from almost exclusive grain and flax raising to livestock breeding and dairy-farming. The number of workers employed in abattoirs, canning and preserving factories showed an increase of 120 per cent. over a period of two years. Production in the two existing abattoirs increased 350 per cent., two new ones were constructed, and a third is contemplated for this year.

Notwithstanding the low prices of agricultural products on the world markets, a substantial increase of exports was noted. 28,841 tons of fresh, smoked and conserved meats, totalling 45,746,700 lbs., were exported, as against 12,789 tons, valued at 45,746,700 lbs. in 1930. Butter exports of 8,705 tons and valued at 47,196,000 lbs. compared favourably with 7,357 tons, amounting to 46,890,100 lbs. in 1930. Livestock, meat and dairy-product exports during 1931 made up 61.9 per cent. of the total exports; in 1930, 51.2 per cent.; in 1928, 26.1 per cent.; in 1926, 26.4 per cent.; and 14.4 per cent. in 1924. In the year 1928, flax and linseed exports formed 20.5 per cent. of the total exports, but by 1930 had declined to 10.1 per cent., and in 1931 were only 5.3 per cent. of the total volume. It is possible that, with the rise of flax prices on the world markets and a greater general demand, flax raising may again occupy an important place in Lithuania's export trade, for its cultivation is well understood by the farmers and conditions are most favourable for its production.

LAND BANK AND AGRICULTURAL CREDITS.

The development of the livestock breeding and dairy-farming industries was greatly aided by the extension of long-term credits through the Land Bank. This bank was established by the Government in 1924 with the sole object of providing credits for agriculture. The sum of 40 million lits of the 60 million lits loan received for the Swedish match monopoly, together with other funds granted for this purpose, brought the total of long-term hypothetic credits up to 83.5 millions by the first of this year. This development can be said to have also been greatly aided by the timely centralisation of all branches of agriculture, thus making it possible more easily to reach foreign markets than as private unorganised bodies. Therefore, the buying and selling of agricultural products and their preparation to meet the requirements of the market is done mostly through co-operatives. A good example of this co-operative movement is afforded by the Central Union of Associated Dairies through which 90 per cent. of the country's butter export finds a place on foreign markets. Another well-organised group is the Association of Lithuanian Agricultural co-operatives. They are engaged mostly in the buying and selling of agricultural products, especially grain, fertilisers, agricultural machinery and groceries. The curing and conserving of meats, production of bacon, and their export are conducted mostly through the Government joint-stock company "Maistas."

Closely allied to agriculture are the country's industries and foreign trade. The main branch of industry which is engaged in the preparation of agricultural products supplies not only inland markets but also takes a leading position in the export trade. On the proper exploitation of this industry depends the farmer's purchasing power, and consequently an increase of imports. Other branches of industry, which import their raw materials, cater mostly for the domestic needs and are therefore less developed.

DEVELOPMENT OF INDUSTRIES DESPITE CRISIS.

In spite of the fact that the economic crisis still held sway in most European countries, the year 1931 found Lithuania but slightly affected. The industries of the country not only experienced no slump during this period, but on the contrary, showed a development for the year with 113 new establishments, representing investments of about 17 million lits. Of these new enterprises, worthy of mention are the new sugar factory, two abattoirs, flour mills, saw mills, dairies, etc.

Timber exports in past years were a very important item of foreign trade. In 1924 they represented 24.8 per cent. of the total exports; in 1928 they reached 12.5 per cent., in 1930, 8.7 per cent., but had declined to 5.6 per cent. by 1931. In more recent years but little sawn timber has been exported, and timber working factories have accordingly had to restrict their output to some extent. On the other hand, woodworking factories supplying the

home market with building material, furniture, etc., showed some expansion. This is evident from the large-scale building which went on throughout the year representing a capital investment of about 66 million lits. An increase of building activities was especially noticeable in Kaunas, the present capital.

EXPORT AND IMPORT FIGURES

Perhaps the most far-reaching effects of the general world economic depression were seen in the volume of foreign trade. The restrictive import policies of various countries (raising of duties, fixing of quotas, limiting of exchange, etc.), especially in the case of Germany, with which there were many commercial interests, prevented an expansion of foreign trade. From 1923 to 1930 exports increased by 56 per cent. and imports by 50 per cent. Last year's figures, in comparison with 1930, show an 18 per cent. decline in exports and 11 per cent. in imports.

Foodstuffs occupying the most important place in exports made up 57.38 per cent. of the total export value of 1931. Second place was taken by raw and semi-finished products, which made up 24.56 per cent. of the export value, followed by livestock, representing 13.13 per cent., and prepared products 4.92 per cent. Of imports, manufactured goods ranked first, making up 63.88 per cent. of the total import value, followed by raw and semi-finished products 25.92 per cent., and food products 10.03 per cent.

In comparing the characteristic features of the foreign trade of Lithuania and Great Britain, we find that they are not in competition with each other, but rather in a position to supplement each other's needs. Lithuania's agricultural products comprise the most important items of Great Britain's import trade, e.g., bacon, butter, flax fibre, timber and its associated products, veneer and cellulose. The purpose of the country's industry is not a competitive one directed against other highly industrialised countries, but is confined mostly to the preparation of agricultural and food products for domestic consumption.

Though heretofore the trade of such a small Baltic State as Lithuania can have made but little impression on that of Great Britain, it is self-evident that during the past few years the trade relations between the two countries have become more active, as the trade statistics reveal.

EXPORTS TO GREAT BRITAIN.

During the 1923-31 period Lithuania's exports to Great Britain amounted to 512,670 tons, valued at about 561,906,000 lits, while Great Britain's exports to that country, reached 574,284 tons, valued at 171,968,300 lits. The rapid growth of bacon and butter exports, which find a ready market in Great Britain, the stability of the litas throughout the economic depression and foreign currency disturbances, afford reason to hope that in the future commerce between these countries will grow at even a greater pace.

Lithuania exports to Great Britain mostly foodstuffs, raw materials and semi-finished products, and a lesser quantity of finished goods. Foodstuffs exported during 1927-31 fluctuated between 6.7 million lits and 90.4 million lits. Last year's bacon export reached 52.6 million lits, butter 10.3 million lits, and eggs 2 million lits. During 1923 and 1924, egg exports to Great Britain used to average about 12 million lits. Grain also was an important item during that period, the export of oats alone having reached 3.2 million lits in 1924.

Of raw and semi-finished product exports in 1931, the most important were cellulose 11.4 million lits, linseed 1.9 million lits, flax 1.2 million lits, and tow 1.4 million lits. The export of finished products is insignificant, the most important item being veneer, the export of which in 1931 amounted to 4.1 million lits. Total exports to Great Britain in 1931 amounted to 65,567,600 tons, valued at 90,435,700 lits. These exports represent 33.11 per cent. of the country's total exports.

IMPORTS FROM GREAT BRITAIN.

During the past year imports of prepared foodstuffs from Great Britain amounted to 5.6 million lits, and including herrings, rice, cocoa, salt, fresh and dried fruits, and other sundries. Raw and semi-finished products, including coal and petrol to the amount of 1.4 million lits; manufactured goods, such as woollen and cotton

fabrics, yarns, thread, agricultural and industrial machinery, motor vehicles, musical instruments, articles of iron, steel and rubber, chemicals, cosmetics and paper, to the amount of 12.7 million lits. Total imports from Great Britain reached 26,020.6 tons, and were valued at 19.7 million lits, which is 7.7 per cent. of the country's total import value.

Exports to Great Britain			Imports from Great Britain	
Year	Tons	Value in 1,000 lits.	Tons	Value in 1,000 lits.
1923 ...	30,211.9	39,482.4	63,723.7	8,247.3
1924 ...	82,689.9	74,465.7	154,850.9	16,747.9
1925 ...	57,443.5	58,607.3	102,853.4	20,917.4
1926 ...	61,824.5	63,100.8	33,157.9	19,112.6
1927 ...	52,506.4	61,075.8	51,639.9	17,924.7
1928 ...	39,721.5	52,264.4	39,845.3	19,254.0
1929 ...	62,738.9	57,431.9	60,247.1	26,036.4
1930 ...	60,065.7	65,042.0	41,945.3	24,066.6
1931 ...	65,467.6	90,435.7	26,020.6	19,661.4

From the figures given above can be noted the marked disproportion between export and import of the two countries, imports from Great Britain in all these years being much less than Lithuania's exports.

The conditions responsible for the comparatively small import of English goods, however, are such as can be easily remedied. Heretofore the greatest obstacle in the way of expanding this import trade has been the relatively high price of English goods when compared with those of other countries. Now, however, it is safe to say that the stabilisation of the sterling will appreciably improve the position of English merchandise as regards competition with other countries' goods on the Lithuanian market. The proximity of German markets was also one important reason why commercial

relations with Great Britain were not formerly more active. The situation of Berlin made it a most convenient market for Lithuanian foodstuffs, such as butter, livestock, poultry, and other products.

ALTERED SITUATION.

Recently these favourable conditions have somewhat altered owing to the high protective tariffs imposed by Germany. Factors in the past which encouraged the import of German goods were their low prices, though of inferior grade, when compared with English merchandise and the ability of the Lithuanian importers to carry on their commercial negotiations in the German language. Another consideration was the numerous agencies of German firms which operated in Kaunas, Klaipeda and other Lithuanian towns, and were able to recommend and popularise their goods directly. Owing to these conditions it was therefore not surprising that Lithuania's trade with Germany alone made up between 50 and 60 per cent. of her total foreign trade.

It is expected, however, that the present high German tariffs will lead Lithuania to seek methods of freeing herself from dependence on her neighbour's market. Trade figures on January 1st of the present year reveal that Lithuania's exports to Germany represent but 31.13 per cent. of the total exports in comparison to 53.15 per cent. during the same period in 1931. Imports from Germany during that time decreased from 51 per cent. to 45.42 per cent. In the meantime there are many opportunities for the expansion of Great Britain's trade with Lithuania. British goods, especially textiles, machinery of various kinds, reproducers, etc., enjoy a high reputation on Lithuanian markets on account of their excellent quality. There are also good prospects for enlarging imports of iron, steel, and coal. The market for English goods could further be strengthened by having representatives of English firms both in Kaunas and Klaipeda. The recent establishment of a British-Lithuanian navigation corporation, whose ships will keep up regular communication between Klaipeda and British ports, is a further indication of the expansion and increase of mutual trading.

SUEZ CANAL COMPANY.

TRIBUTE TO THE LATE LORD INCHCAPE.

REDUCED CHARGES EXTENDED FOR FURTHER PERIOD.

THE MARQUIS DE VOGÜÉ'S ADDRESS.

The annual general meeting of the Suez Canal Company was held, on the 6th instant, in Paris.

The Marquis de Vogüé, president of the company, in the course of his address, said:—Our report had already been printed when we received news of the sudden death of our vice-president, Lord Inchcape, after a long convalescence spent in the sunshine of the Mediterranean. The Press of the entire world has already paid homage to the eminent qualities of that great worker, who occupied posts of the highest importance with distinction and well-merited of the most enviable honours in the course of a career made up of intense labour and splendid achievement.

His life is an admirable and rare example of what can be done by determination coupled with an adaptable intellect and a penetrating sense of realities.

Thanks to his work as well as to his natural gifts, he always showed himself equal to circumstances. The success of his efforts in the most diverse fields, and his wide and unrivalled knowledge of affairs, gave him considerable authority in every circle. Our company has lost a good and faithful friend in him, one of those true friends on whom one can count in difficult moments, as a Frenchman I shall be permitted to add, one on whom our country also could rely. Associating ourselves with the sorrow of his family and the mourning of the entire British community, we pay a tribute to his memory by the expression of our heartfelt regrets.

REDUCTION IN RATES.

The Suez Canal Company has always regarded as its first duty and as the best policy, that it should give the greatest satisfaction to its clients. It has shrunk from no efforts to fulfil the responsibilities which it has assumed towards world commerce and the common interest of all peoples. It was in this spirit that our board decided in November last to make a temporary reduction of 10 per cent. in the transit charges, and this very morning again, in view of the continuance of the situation that led to our former decision, it decided to maintain this reduction for a further period of six months.

It is obviously open to dispute whether a reduction in rates, whatever sacrifice it may mean to the shareholders, can have much effect on world trade, since our charges only represent a very small

proportion of the price of the goods when delivered on the various markets. However, in granting it your board desired to show that it realises the solidarity of interests which meet in the Suez Canal and that it attaches the greatest importance to the maintenance of good will between the company and its clients. It is unanimous on this point, and those of its members who are also numbered among the company's clients—I owe this tribute to my British colleagues as I do to the memory of the lamented Lord Inchcape—are no less in favour of the mutual concessions which this policy involves. We think we know your feelings sufficiently well to be sure that it is also your policy, and that you will approve the gesture to which it inspired us.

REDUCED EXPENDITURE.

The years of prosperity have not been years of inaction for us. The Canal improvement works laid down by the 1921 programme have been accelerated. The equipment, renewed and completed, has reached a high degree of perfection. By the termination of the house-building programme, the big problem of housing the workers has been solved under the most favourable conditions. During this time, large reserves have been built up in view of eventualities which the vicissitudes of human existence make it always necessary to anticipate.

You are to-day reaping the fruits of this policy. Because we have always worked hard and saved wisely, we can now, after having granted a considerable reduction in rates, reduce appreciably the estimates of expenditure, meet by normal means the exceptional charges arising as a result of the circumstances, and limit in this way the reduction in your dividend to that in the transit receipts, which are the natural source of your profits.

The present condition of your undertaking allows it to view future eventualities with confidence. The economies and the reduction in expenditure which a bold yet prudent management part the reduction in receipts, which for some time to come must still be anticipated.

THE FUTURE.

However, if the circumstances of the moment do not authorise any cries of victory, neither do they justify any fits of despair. The storm will pass, as the others have passed. We look forward with confidence to better times, when the world will have regained its balance and when the circulation of wealth, freed from its shackles, will once more shed full light upon the services which the immortal work of Ferdinand de Lesseps is rendering to the

COMPANY MEETINGS, &c.

UNION CORPORATION LIMITED.

YEAR'S PROFIT AND DIVIDEND.

SOUTH AFRICA AND THE GOLD STANDARD.

MR P. M. ANDERSON ON THE GOLD POLICY.

The ordinary general meeting of shareholders of the Union Corporation, Limited, was held in Johannesburg on May 27th, Mr P. M. Anderson presiding.

The Chairman in the course of his remarks said: It is almost superfluous to remind you that the world depression which commenced towards the end of 1929 has continuously deepened and interests lie largely in the gold mining industry in this country, which has only suffered relatively moderately, we also have base-metal mining and industrial interests, which have felt the full effect of general conditions.

One event which has affected us particularly is the temporary abandonment of the gold standard by the United Kingdom from September 21st last and, as South Africa elected to remain on the gold standard, we have had to deal with the problem of two gold currencies. How it has been dealt with is related in the directors' report. We are a South African company, and our accounts accordingly should be and are kept in South African currency.

BALANCE-SHEET ITEMS.

In the case of our liabilities and floating assets, we have written down all sterling items to the basis of South African currency—that is, we have reduced the affected items on both sides of our balance sheet by 27½ per cent., being the difference ruling at the end of December.

In the case of our shareholdings, we have, as usual, taken each holding at cost or market price, whichever is the lower, but in the case of holdings which are not South African and where the London price is the only one available for valuation, we have adopted the London sterling market price without reducing it further to a South African currency basis. This means that if a difference between the values of South African and English currencies persists, and if these holdings are realised, there would be exchange differences to be adjusted. I may say that the spread between these two currencies is to-day reduced to 23½ per cent.

YEAR'S PROFIT.

During the last three years the depreciation in the value of certain of our shareholdings has been heavy, but it has been largely counterbalanced by considerable profits from share transactions. Our revenue last year from dividends showed a considerable fall. Though the end result was that our realised profit, as shown on the right-hand side of the profit and loss account, actually rose from £274,836 in 1930 to £286,823, while our net profit, after making a provision of £30,000 in respect of United Kingdom income tax, was reduced from £248,888 to £229,117.

In view of the uncertainties of the general situation and having regard to the possible exchange differences on shareholdings already referred to, the directors thought it wise to set aside £100,000 as a special reserve. This reserve is not earmarked, and is intended to be used as circumstances require, so that when the present situation clears up it must be expected to disappear, either because it proves to be needed for some particular purpose or purposes, or because, so far as it is not needed, it becomes free to be dealt with in some other manner.

INCREASED CARRY FORWARD.

As a considerable part of the dividend we have just distributed was payable either in French currency or in foreign currencies, via sterling, the board decided to pay a dividend in English currency of 2s. 6d. per share and to pay the South African equivalent of that amount to those entitled to receive the distribution in South Africa. We were able to turn gold assets into sterling for this purpose at a rather favourable rate, so that the dividend absorbed only £126,162 in South African currency. This enables the amount carried forward to be raised from £111,017 to £113,972.

It is some satisfaction to note that the results we are able to put before you compare favourably with those of any other company carrying on similar business.

Our liabilities have declined from £2,243,350 at the end of 1930 to £1,732,499 at the end of last year, while our cash assets, exclud-

ing debtors, have fallen from £1,979,609 to £1,764,222, so that on balance our cash position has improved to the extent of £295,465.

You will note that we have no loans or other credits outstanding in Germany or other Central European countries. We have thought it well to make this statement in the report in view of the idea which seems to have got abroad that the contrary is the case.

CURRENCY SITUATION.

Though we are chiefly interested in the gold-mining industry, we are also obviously interested, both for sentimental and material reasons, in the well-being of South Africa as a whole. It is, therefore, pertinent to say something on the currency situation from the wider angle of national affairs.

Let me first outline the course of events which it is now largely agreed has led to the present world depression. As a consequence of certain creditor countries erecting tariff barriers and failing to lend adequately abroad, debtor countries have been compelled to pay their international debts in gold. This has so depleted the stocks of monetary gold of the rest of the world that there has been set in train the disastrous fall in prices which now endangers the economy of the whole world.

A fall in prices means that the same quantity of money gives a title to a greater quantity of goods; if prices fall, therefore, holders of money and of contracts to receive money can obtain a greater quantity of goods from the nation's production than they originally bargained for. Now this additional share of the nation's goods is an entirely uncovenanted and unearned benefit, which the recipients obtain, not through their own endeavours, intelligence or merits, but through what is, from their point of view, an entirely fortuitous change in the purchasing power of money. Recipients of this benefit include all those who receive fixed interest, rent, repayment of capital and such semi-fixed payments as wages, salaries, railway freights, port dues and the like.

BURDEN ON PRODUCERS.

At whose expense do these classes obtain this uncovenanted benefit? Obviously at the expense of all those who owe money or have contracts to pay fixed or semi-fixed amounts of money—that is, at the expense of the farmers, industrialists and other producers who, in the course of their business, are usually in debt and have contracts for services at rates which are more or less fixed, and of debtors and employers in general.

Within each country, therefore, this change in the relationship between the nominal value of debt and the value of the goods in which it has ultimately to be settled has involved a vast change in the distribution of purchasing power, to the detriment especially of producers and entrepreneurs. Internationally it has imposed on debtor countries the need to transfer to their creditors an equivalently larger proportion of their products at a time when the demand abroad for such products has seriously contracted.

The mischief does not stop there, however. The burden on producers lessens the incentive to produce, curtails production and creates unemployment, while the burden on debtors leads to default and thus to the embarrassment of the creditors concerned. And so, the wage-earner out of work, the creditor with insolvent debtors, and in the end many other classes of the community also, are gradually drawn into the whirlpool of industrial depression. In the end the mischief spreads to practically all classes and all countries, whether creditor or debtor.

As world prices expressed in gold continue to fall, one country after another is constrained to abandon the gold standard, and by doing so to free their internal price level from the incubus of tumbling gold prices. With internal prices able to rise to a more reasonable level, the distribution of the nation's goods, at least within the country, returns automatically to a more normal and healthy balance.

There is no question of default in this. Goods, and not gold or money, are the only real wealth of mankind, and the abandonment of the gold standard in such circumstances merely redresses an unforeseen and unjustified change in the ownership and title to the goods produced by the nation, and thus merely rectifies a palpable injustice.

THE GOLD STANDARD IN SOUTH AFRICA.

In the same way the statement that if this country left the gold standard or devalued its currency the gold mines would be benefited at the expense of the rest of the country is an entirely misleading one. Either of these steps would merely take away from one section of the community a share in the real wealth of the nation to which it is not entitled and restore it to the other section of the community to whom it rightfully belongs.

If, on the other hand, a nation, hard pressed, in the face of steadily falling prices, tries to remain on the gold standard, it can only do so by inflicting great hardships on all producers of goods and debtors, and particularly on the farmer, who generally ranks in both classes. In this country the policy so far has been to adhere to the gold standard, but the force of events has necessitated the application of measures which, in effect, attempt to achieve the needed redistribution but which fail to do so because of their necessarily limited and discriminatory nature.

It is held that the Union, as the largest producer of gold, is in a peculiarly strong position to stay on the gold standard. In the long run this is not a sound argument. The countries remaining on gold, other than the Union, are mostly creditor countries. In spite, in some cases, of gigantic gold reserves, they have been hit by the fall in prices as hardly as debtor countries, but their large accumulated savings have enabled them to remain on gold. Debtor countries, which have no such savings, have been forced to abandon it. South Africa is a debtor country; and no amount of gold in ore as yet unworked will enable her to stay on the gold standard if circumstances conspire against her. In every mind, therefore, there must be a doubt whether or not this country will be able to cling to the present gold standard and such a doubt is an absolute deterrent to the much-needed inward flow of fresh capital.

IMPORTANCE OF STERLING GROUP.

That the abandonment of the gold standard by South Africa will defer the day when gold is again accepted as the basis of international currency is another misconception. If anything, the reverse is the case. What the future common basis for international currency will be and when it will be adopted now depends on the policy of the great trading and creditor nations and chiefly on the policies of the United Kingdom and the United States. Before the war London was the clearing house of the world, and the management by London of sterling in relation to gold was the fundamental basis of the pre-war gold currency systems.

After the war, the United States entered the scene as a great creditor nation, and the sole management by London ceased—with disastrous consequences. The United Kingdom has now temporarily abandoned the gold standard, and a number of countries and Dominions have grouped themselves round her by linking their currency to sterling: that is to say, they elected to link themselves as in pre-war days to a currency managed from London. This group comprises an area inhabited by more than 500,000,000 people, and in the matter of world trade is now as important as, if not more important than, the group of countries that still remain strictly on the gold standard. Incidentally, international trade within this sterling area is moving far more freely than the trade between the remainder of the world, and this in itself is a strong inducement to join the group.

NEED FOR CO-OPERATION.

But there is a more important aspect than this. It is hardly conceivable that the sterling group will return to gold as a basis for currency until the remaining gold standard countries are induced to co-operate with them in the proper management of that standard. It appears, therefore, that the best way to prepare the ground for a general return to gold as an international basis for currency is to strengthen and broaden the area of the sterling group as much as possible and thus to hasten the day when the remaining gold standard countries will be induced to co-operate with the sterling group in the way suggested. By clinging to gold in the present circumstances, South Africa is, if anything, deferring the re-instatement of her chief product, gold, in its old position as the international basis for currency.

The mining industry is unanimous in the view that the best interests of the country would be served by a departure from the gold standard, and in this it is supported by the chief commercial banks and by the organised bodies representing the farming, industrial, commercial and financial interests of the country. It is to be hoped, therefore, that this view will be heeded by those in whose hand the decision lies, in spite of the unconvincing report to the contrary issued by the Select Committee a few days ago.

The Chairman then reviewed the affairs of the Witwatersrand gold mining companies in which the corporation is principally interested, on the lines of the addresses from the chair at the recent general meeting of these concerns, and referred to the corporation's interests elsewhere.

The report and accounts were adopted.

FORSTER'S GLASS COMPANY, LIMITED.

INCREASED PROFIT.

The thirteenth annual general meeting of Forster's Glass Company, Limited, was held, on the 16th instant, at Winchester House, Old Broad Street, London, E.C.

Sir Sydney H. H. Henn, K.B.E. (chairman of the company), in the course of his speech, said: The net profit of £16,664 has been arrived at after providing for all charges, and compares with £10,684 last year. While the profit is £5,500 higher than last year, trading conditions have been very much worse. Sales have shown a further slight decline in quantity, chiefly in goods supplied for the export trade. The average price obtained for bottles has again fallen, while the costs of materials and labour have remained practically on a level with those of the previous year. It will thus be realised that only by increased efficiency and a reduction in overhead expenses has the profit been obtained.

Turning to the balance sheet, you will note that a new liability appears in the bill payable due to Messrs Watney, Combe, Reid and Company, Limited, but this was explained at our last annual meeting, and the bill will be replaced when our present second debenture is repaid next month, by the issue to Messrs Watney, Combe, Reid and Company, Limited, of a second debenture for the £50,000 at 6 per cent.

BEER TAX AND TARIFFS.

The increased tax on beer which was introduced in the second Budget last year had a very serious influence on our results, as the last three months of each year are generally our busiest time in the beer bottle trade, and the increased tax, together with the decreased purchasing power of the public, resulted in our sales of beer bottles being reduced by practically 50 per cent. for last year over the previous year.

With regard to the effect which the introduction of tariffs may have on our business, it is rather too early yet to say very much about this, as under the Abnormal Importations Act little benefit was derived by us owing to the fact that trade and demand was very quiet and very large stocks were held in this country. As these stocks are being gradually liquidated, we are getting a slightly increased demand, but this has been offset to a large extent by the decreased inquiry due to bad trade and the diminished purchasing power of the country generally.

Your directors recommend the payment of a 5 per cent. dividend on the ordinary capital.

The report and accounts were unanimously adopted, and at a subsequent class meeting of the preference shareholders the proposed debenture issue was approved.

GOLDEN HORSE SHOE (NEW) LIMITED.

RETURN OF CAPITAL PROPOSAL APPROVED.

An extraordinary general meeting of the Golden Horse Shoe (New), Limited, was held, on the 14th instant, in London, to consider a special resolution to reduce the capital of the company to £165,000 by returning to the holders of the 1,100,000 shares that have been issued paid-up capital to the extent of 1s. a share and by reducing the nominal amount of each share from 4s. to 3s.

Mr F. H. Hamilton (the chairman) said that the financial position of the company was both strong and liquid. They had at the moment, in addition to cash in Australia, money on loan, and their investment in the Wiluna Corporation, mainly in the form of 10 per cent. notes, a cash balance in London of about £120,000, which alone was approximately equal to 60 per cent. of their issued capital. The company's creditors, apart from their liability for income tax here and in Australia, were negligible. In these circumstances the board felt that a substantial distribution with the least possible delay was desirable.

EXCELLENT RESULTS FROM RE-TREATMENT PLANT.

The results from the re-treatment plant continued to be excellent. Up to the end of March they had treated 902,000 short tons from the dumps, which were originally estimated to contain 2,859,000 tons, leaving 1,957,000 tons, or about two-thirds of the original stock, still to be treated.

With regard to their investment in the Wiluna Corporation, the progress that had been made at the Wiluna mine could only be characterised as remarkable. Substantial profits were being made, new lode of a grade well above the previous mine average was being rapidly opened up on three levels, and there was now good reason to think that the Wiluna would more than fulfil the expectations originally formed, and would develop into the largest gold mine on the Australian continent.

The resolution was unanimously adopted.

J. LYONS AND COMPANY, LIMITED.

ANOTHER SUCCESSFUL YEAR.

VOLUME OF BUSINESS INCREASED.

STRONG FINANCIAL POSITION.

MAJOR ISIDORE SALMON'S REVIEW.

The thirty-eighth ordinary general meeting of J. Lyons and Company, Limited, was held, on the 13th instant, at the Trocadero Restaurant, Piccadilly Circus, W.

Major Isidore Salmon, C.B.E., D.L., J.P., M.P. (chairman and one of the managing directors) presided.

The report of the directors for the year ended March 31, 1932, states that:—

	£	s.	d.
The balance from trading account is	942,000	0	0
To which is to be added the amount brought forward from last year	49,781	16	9
Showing a total available for distribution of	£991,781	16	9
	£	s.	d.

From this amount is to be deducted:—

Dividend on 5 per cent. preference shares paid to November 30, 1931, and proportion provided for period to March 31, 1932	32,353	5	0
Dividend on 7 per cent. preference shares paid to March 31, 1932	280,000	0	0
Dividend on 8 per cent. preference shares paid to March 31, 1932	80,000	0	0
Dividend on 6 per cent. preferred ordinary shares paid to September 30, 1931, and proportion provided for period to March 31, 1932	28,000	0	5
Interim dividend (1s. 8d. per share) on ordinary and "A" ordinary shares already paid for the half-year ended September 30, 1931	135,731	1	8
Interim dividend (4d. per share) on proportional and "B" proportional profit shares already paid for the half-year ended September 30, 1931	15,833	6	8
And the directors propose to deal with the balance as under:—			
To place to reserve (making a total of £1,500,000)	100,000	0	0
To pay a dividend of 2s. 10d. per share on the ordinary shares and "A" ordinary shares for the half-year ended March 31, 1932	230,742	16	10
To pay a dividend of 6.8d. per share on the proportional and "B" proportional profit shares for the half-year ended March 31, 1932	26,916	13	4
To carry forward to next account	62,204	12	10
	£991,781	16	9

The amount of the premium on new shares issued, less the expenses of the issue, amounting to £112,959 6s., together with a further sum taken from contingency reserves, has been utilised to write down machinery plant.

During the financial year the following establishments have been opened:—

- 274, Edgware Road, W.2.
- 9, Cranbrook Road, Ilford.
- 450, Strand, W.C.
- 8, St. Mary's Gate, Manchester.
- 54/56, George Street, Luton.
- 30/31, Petty Cury, Cambridge.
- 12/13, Church Street, High Wycombe.

Additional premises have been acquired and will be opened in due course, and negotiations for other premises are proceeding. The issue of £1,000,000 7 per cent. preference shares created by resolution of June 23, 1931, was made to shareholders on March 22, 1932, and was many times over-subscribed. The amount of £18,358 19s. 2d. showing on the balance sheet as not fully paid at March 31st, has since been paid.

Messrs G. W. Booth and B. A. Salmon retire from the office of directors and being eligible offer themselves for re-election.

Messrs George Dee and G. A. Pollard, employed directors, retire and are eligible for re-election.

Messrs Turquand, Youngs and Company, the auditors, retire and are eligible for re-election.

The dividends received from subsidiary companies have been included in the company's trading account. In the aggregate the profits of the subsidiary companies exceeded the declared dividends.

Losses of subsidiary companies so far as they concern this company have been dealt with in this company's accounts.

Mr H. H. G. Bennett (one of the secretaries) having read the notice convening the meeting and the report of the auditors,

The Chairman said:—Ladies and gentlemen,—I am pleased to welcome you to another annual meeting. It is becoming rather a commonplace at company meetings of late for directors to refer to the difficult times their companies have been passing through, and you will not expect to hear from me that this company has been any exception. Continually falling prices of commodities and continually increasing taxes do not tend to make things easy for management. It is therefore all the more gratifying to your directors to be able once again to meet a body of shareholders who are satisfied with the results of their stewardship. That you are satisfied I have assumed; I hope, in fact, that you are pleased even though for the first time for many years we do not report a substantial advance.

RESULT OF YEAR'S WORKING.

The balance from trading account is £942,000—practically the same as last year. Adding to this the sum brought forward, the amount available for distribution becomes £991,781, the allocation of which, given in detail on the first page of the report, I need hardly elaborate upon. I shall shortly propose to you the payment of final dividends on the equity shares at the same rate as last year, which, after placing to reserve £100,000, will leave to be carried forward £62,204.

Before making any comment on the figures before you, I should just like to mention the recent issue of 7 per cent. shares. I know there has been a certain amount of dissatisfaction that applicants did not get as large allotments as they would have liked, but none of us did. The only persons who had allotments in full were those who applied for very small amounts and the staff, whom we encourage to take up shares and so have an added interest in the company's affairs. As regards the remainder, the allotment was made in the manner which we considered on the whole to be of greatest value to the company's interests. I hope this will be sufficient answer to anybody present who may still be feeling aggrieved.

BALANCE-SHEET ITEMS.

I need not, I think, comment in any detail on the figures of the balance sheet; I will only deal briefly with those items in it which show any substantial difference from last year. Freehold land and buildings, leaseholds, plant, machinery, etc., the main item on the assets side, is on balance approximately £100,000 less; but we have utilised the balance of the share premiums on the recent issue and a substantial sum from contingency reserves to write down machinery plant; to this I shall refer again.

Under the heading "Subsidiary Companies" the first figure, representing shares, is £50,000 less. We have written down the assets of subsidiaries by this amount out of reserves and this, together with the provisions made in the accounts of those companies, has obliterated all goodwill from their assets—(hear, hear)—so that those assets stand as a whole at what we may call gold values. The other two figures under that heading—namely, loans and current accounts—taken together are some £10,000 more, the former being £28,000 down and the latter £38,000 up. Stock in trade is slightly more than last year.

Sundry debtors, etc., shows an increase of £180,000, but includes amounts advanced to Cumberland Hotels, Limited—of which we and the Strand Hotel, Limited, are joint owners—which is developing the site at Marble Arch. This amount will be steadily growing as the work proceeds, for you will remember that I told you last year that the capital for it is being provided equally by the two parent companies.

Balance of loans to staff explains itself, I think; it refers to facilities we gave to members of the staff to acquire shares in the recent issue. Cash at bankers reflects the amount subscribed for 7 per cent. preference shares, the bulk of the money having been received just prior to the close of the financial year.

THE CAPITAL.

Turning to the liabilities side, the capital is increased by the amount received up to March 31st in respect of the issue of new shares and by the 12,500 "A" ordinary shares allotted during the year to the managing directors. I may say here that the privilege

GEDULD PROPRIETARY MINES, LIMITED.

ALL-ROUND IMPROVEMENT.

At the thirty-first ordinary general meeting of shareholders in the Geduld Proprietary Mines, Limited, held at Johannesburg, on May 19, 1932, Mr P. M. Anderson (chairman of the company) presided, and, in the course of his remarks, said:—

The results of last year's operations compare so closely in detail with those of the previous year that they call for no comment on individual items. There was, however, an all-round improvement, the aggregate effect of which was to permit of the payment of an increased dividend.

The tonnage milled was 1,000 tons more; the yield per ton milled, at 27s. 1.3d., was about a farthing higher; and working costs per ton milled, at 16s. 3.3d., about a penny-farthing lower, so that the working profit per ton milled was 14d. higher at 10s. 10d.

From the 1,012,000 tons of ore milled during the year the working profit derived was £548,047, or £6,761 more than in 1930, but sundry revenue was £774 less than in the previous year, the net result being a gross profit of £576,865. After providing £73,988 for taxation and £2,834 for donations and contributions, there remained £500,043 to be carried to the appropriation account, making, with the amount brought forward, a total of £702,637 to be dealt with. Out of this a further £6,000 was set aside towards the company's outstanding liability to the miners' phthisis compensation fund; £493,039 was distributed in dividends; and there was left unappropriated at the end of the year, after meeting the additional remuneration due to the directors under the articles of association, an amount of £201,798. The two dividends distributed during the year totalled 33½ per cent., or 6s. 9d. (Union currency) per share, as against 32½ per cent., or 6s. 6d. per share, for the previous year. The amount of £201,798 carried forward in the appropriation account was represented by cash assets to the value of £83,749 and £118,049 in cash.

MILLING COSTS REDUCED.

The development work completed during the year totalled about 600 ft. less than in the previous year, and did not quite suffice to maintain the ore reserves position, which, at the end of the year, was re-calculated at 5,900,000 tons of an average value of 6.6 dwt. over an estimated stoping width of 59 in., the value and width being unchanged as compared with a year previously, but the quantity 100,000 tons less.

In addition to the development operations for our own account, a total of 4,225 ft. was done by us last year in the adjoining property of the East Geduld Mines, completing the programme in respect of which the agreement between the two companies was entered into.

The gradual opening up of the East Geduld Mines, which now pumps its own water, has had a marked influence upon the water position in our mine, it being only necessary to pump from our workings during the year a total of 422 million gallons, which was about 36 per cent. less than in the previous year.

During the first four months of the current year milling operations have proceeded on a somewhat greater scale than during the corresponding period of last year, an additional 5,300 tons having been crushed. Working costs per ton milled have been still further reduced, and the gross profit to the end of April has exceeded that for the same period of last year by about £4,000. Development operations also have been conducted on a more extensive scale, 5,727 ft. having been completed, as against 4,466 ft. in the corresponding period of last year. 4,360 ft. were on reef, and the payable disclosures have been of the same average value as those of last year.

TAXATION RATE.

With regard to taxation, you will have noticed from the Budget speech of the Minister of Finance that the Government has decided to increase the rate of taxation on gold mining companies by one-third, namely, from 3s. to 4s. in the pound of taxable amount. With profits on last year's level this increase is equal to about 4d. per share per annum for our company.

During the past year your company exercised its right to participate equally with the Union Corporation in the subscription at par of 60,000 new shares issued by the East Geduld Mines, and as a result our shareholding in that company has risen to slightly over 35½ per cent. of the issued capital of £1,560,000. I think you will be aware that this neighbouring mine in which we are so largely interested reached the production stage about the middle of last year. Though full-scale operations have not yet been reached, the mine is making satisfactory progress, and may be expected to enter the list of dividend payers at an early date, and the income from this source will, of course, have an important influence upon the dividend distributions of your company.

The report and accounts were adopted.

EAST GEDULD MINES, LIMITED.

INCREASE IN TONNAGE MILLED.

THE CHAIRMAN'S REVIEW.

At the fifth ordinary general meeting of shareholders in the East Geduld Mines, Limited, at Johannesburg, on May 19, 1932, Mr P. M. Anderson (chairman of the company) presided, and, in the course of his remarks, said:—

When we met a year ago the position was that the shaft had intersected the reef and everything was expected to be in readiness for the commencement of hoisting operations, and possibly also milling operations, within the next two months. Actually, the shaft was ready by the end of June, stoping of ore commenced on July 1st, and trial crushing began on July 6th. All units of the reduction plant were gradually and successfully brought into commission, and the first small clean-up of gold was made at the end of August. This period naturally resulted in a substantial loss on working account, which was augmented by a further small loss in September, so that at the end of the quarter there was a debit balance of £63,000.

October marked our first working profit, which in round figures was £5,000, followed by £10,000 in November, and £15,000 in December, so that by the end of the year the loss on working account was reduced to £33,000, to which has to be added £2,600, being excess of sundry expenditure over sundry revenue, due to interest charges on the advances we had obtained from the Union Corporation, Limited, to tide us over the period of financial stress.

WORKING RESULTS.

Since the close of the year there has been steady improvement in all directions and the figures for last month compared with December month show an increase in tonnage milled from 51,000 to 57,300; an improvement of 1s. 2d. in the yield per ton milled to 26s. 4d.; a reduction of 3d. in the cost per ton milled to 18s. 9d., which includes 3s. per ton for development; and an improvement in the working profit to £21,681, the profit for the four months totalling £73,308.

These working results will continue to be improved upon until the full capacity of the mine and plant is reached. You will no doubt have noticed that the consulting engineer states, in his report, that the plant is capable of dealing with more than its nominal capacity of 60,000 tons per month. Though he does not mention a figure, I think we may safely assume the excess to be at least 10 per cent. The mine is being rapidly brought into a position to supply such tonnage by means of additional stope faces which are now becoming available and by additional transport facilities underground. With regard to the recovery value per ton, this should at no distant date conform to the average value of the ore reserves, after making due allowance for the admixture of ore from development faces, sorting and the value of residues. Working costs per abnormal expenditure.

DEVELOPMENT WORK.

Milling operations were started at the earliest possible moment; in fact, only four and a half years from the date of the formation of the company, with a minimum number of unopened stope faces and very limited transport facilities underground. In these circumstances, it is a very creditable performance on the part of our men done.

Although working costs per ton milled have been entirely satisfactory and reflect equal credit on our staffs, I should explain that these costs have included not only a standing charge of 3s. per ton for development, but have had to meet a large number of abnormal and non-recurring items, particularly in the early stages.

As regards development operations, the work undertaken by the Geduld Proprietary Mines under the agreement with this company was completed in the early part of the year. The total development stations; 6,210 ft. were on reef, of which 57 per cent. was payable, having a value of 13.9 dwt. over a channel width of 44 in.

During the first four months of the current year development has proceeded on a much greater scale than hitherto, 8,325 ft. having been accomplished in the first four months. 5,060 ft. of the current year's work has been on reef, of which 72 per cent. was payable, averaging 487 in.-dwt.

At our last meeting I referred to the particularly gratifying feature that the highest-grade ore exposed at that date was contained in the deepest workings, which were then on the sixth level. I am very glad to be able to tell you to-day that this has continued to be a feature of the development results in the central area. Work has now reached the seventh level, and the values disclosed there to date are even better.

NEW SHARE ISSUE.

Owing to the restriction of development footage during the year, the tonnage taken from ore reserves after the commencement of stoping operations exceeded the quantity developed during the year. The ore reserves as re-measured and valued at the end of the year were 3,750,000 tons, valued at 6.9 dwt. over a stoping width of 58 in.

The capital expenditure to the end of the year amounted to £1,529,213, apart from the value locked up in stores and materials on hand and purchased in advance. Towards the end of the year your directors deemed it desirable to cover the over-expenditure on capital account by an issue of 60,000 new shares, increasing the capital of the company to £1,560,000. These shares were subscribed by the Union Corporation, Limited, in terms of the agreement with that company, and fully paid up.

The Government decided to increase gold mining taxation by one-third, namely, from 3s. to 4s. in the pound of taxable amount. In terms of our lease agreement with the Government the amount payable as Government share of profits will be reduced by the amount payable on account of this increase in taxation. Consequently dividends will not be affected.

You are aware that our eastern neighbour, the Grootvlei Proprietary Mines, Limited, has made arrangements for the opening up of its property, and in connection therewith our company has undertaken to grant certain facilities. Briefly stated, the arrangement is that East Geduld has undertaken to accelerate the sinking of certain of its inclines with a view to these being extended as quickly as possible to the common boundary of the farms Geduld and Grootvlei, thereby providing means of access to the property of the Grootvlei Company. East Geduld receives suitable compensation for carrying out this work ahead of its own programme, and when the Grootvlei Company requires capital funds over and above the first £1,223,540 which is otherwise earmarked, East Geduld has the right to subscribe for up to 120,000 shares at par, less 5 per cent. commission.

The reports and accounts were adopted.

MODDERFONTEIN DEEP LEVELS, LIMITED.

THE YEAR'S OPERATIONS.

At the thirty-first ordinary general meeting of shareholders in the Modderfontein Deep Levels, Limited, held at Johannesburg, on May 19, 1932, Mr P. M. Anderson (chairman of the company) presided, and in the course of his remarks said:

A very gratifying feature of the year's operations was the milling of 533,800 tons of ore, which was 3,400 tons above the preceding year's total, and exceeded the mine record by 2,300 tons. From this tonnage, 268,790 fine ounces of gold, 25,086 fine ounces of silver and 224 ounces of osmiridium were recovered, which realised £1,142,334, or £28,698 less than the 1930 production. The gold production was three-tenths of a pennyweight lower consequent upon the decrease in the value of the ore reserves. Working expenses per ton milled, including the expenditure on development, were 23d. below the 1930 average. The working profit and sundry revenue were both less than in the preceding year, the gross profit for the year being £738,388. After providing for taxation and sundry donations and contributions, the sum of £635,474 was carried forward, the appropriation account, which, with the amount brought forward, gave a total of £773,793 to be dealt with. Out of this £15,500 was given towards the company's outstanding liability to the Miners' Phthisis Compensation Fund; £600,000 was distributed to shareholders in two dividends of 60 per cent. each; and, after meeting the additional remuneration due to the directors under the articles of association, there remained an unappropriated balance of £157,293, which is £18,974 more than the carry forward for the previous year.

The unappropriated balance, equivalent to about 1s. 7d. per share, was made up of £39,251 in cash assets, and £118,042 in cash; and you will observe from the directors' report that this was represented to the extent of £502 by British sterling assets less liabilities.

ORE RESERVES.

The development work done during the year totalled 1,893 feet on the main reef and 3,443 feet on Hanging Wall Leaders. The reduction of 40 per cent. in the footage on leaders reflected a gradual curtailment of the exploratory work in these upper areas, to which I referred last year. Work was concentrated during the year mainly on the 200 foot leader, and disclosed very little payable ore; further exploration of this leader during the current year has been given no encouragement to continue this work, and it has been suspended since the end of March. When the ore reserves were re-calculated at the year-end those on the Main Reef were estimated at 1,600,000 tons of an average value of 8.3 dwt. over a stoping width of 78 inches, and those in Hanging Wall Leader blocks at 100,000 tons of an average value of 4.9 dwt. based on a width of 60 inches.

During the first four months of the current year milling has proceeded at the same rate as last year, but the yield per ton milled has declined correspondingly with the lower value of the ore reserves, and, though working costs per ton milled have been reduced by about 2d. below last year's average, the gross profit for the period—approximately £233,700—is nearly £10,000 less than was earned in the same period of last year.

According to the Budget Speech of the Minister of Finance, taxation of South African gold mining companies is to be increased this year by one-third, which in the case of our company would have the effect of reducing the amount available for dividends by about 4d. per share per annum if profits were maintained at last year's rate.

THE MINE'S FUTURE.

It has been suggested on this occasion I might give shareholders some information as to the probable life of the mine and the future dividends to be expected. This is a subject which I approach with a good deal of diffidence, because no matter how accurately an estimate may be framed in the light of existing conditions, unforeseen circumstances may arise which may considerably modify the picture.

On reference to the plan accompanying the annual report before you, it will be observed that, without relying on any appreciable tonnage from the upper leaders, the payable tonnage remaining is mainly contained in pillars and a number of small blocks. Though the extraction of this tonnage from areas surrounded by large worked-out zones presents a mining problem of some difficulty, it is anticipated that the sand-filling operations which have steadily proceeded for several years past will enable the whole of the remaining payable ore to be recovered. The present expectation is that full-scale milling operations will continue until about the end of 1934, and there will then remain a quantity of low-grade ore from the treatment of which only a small profit can be expected if conditions remain as they are to-day.

As regards the dividend aspect, a reasonable expectation for the three years combined, based on present indications, appears to be an aggregate of about 14s. to 15s. gold currency per share. In addition, there will be available for distribution after the cessation of operations the funds then in hand, the value of the clean-up of the reduction plant, and the proceeds of the realisation of the company's assets. At this stage it is impossible to estimate even approximately the amount that may be realised by disposal of the assets, but it is certain that a substantial further sum will ultimately become available from these sources for distribution by way of return of capital. If, as a pure guess, we assume this last distribution to be 3s. to 4s. per share, it would bring the total up to about 18s. per share, equivalent at the present rate of exchange to about 23s. 4d. in sterling.

The report and accounts were adopted.

BEECHAM'S PILLS, LIMITED.

CONTINUED PROGRESS OF THE BUSINESS.

The third ordinary general meeting of Beecham's Pills, Limited, was held, on the 16th instant, at Hotel Metropole, Northumberland Avenue, London, W.C., Mr Philip E. Hill (chairman of the company) presiding.

The secretary (Mr B. L. Hobrow, A.C.A.) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Ladies and gentlemen, I do not propose to read to you the report and accounts, as they have already been circulated. At our last meeting I stated that increased profits for the year now under review were assured, and I am glad that my anticipations have been fully realised. The company's acquisition of Yeast-Vite, Limited, was fully dealt with at the last meeting and has proved a satisfactory investment. Our other subsidiaries have all had a successful year, particularly the Veno Drug Company (1925), Limited, from which we have received a dividend—the first since the incorporation of the company—and in future I have little doubt that we shall regularly receive reasonable dividends from this source.

The company's pills and powder business continues to be satisfactory. Difficulties still exist, however, in relation to our export business, but I am afraid this is common to all concerns dealing with other countries. The recent change in the fiscal policy of Ireland has to some extent dislocated business there, but we are taking active steps to overcome the difficulties that have been created, and I have no doubt that they will be satisfactorily dealt with.

I am pleased to be able to tell you that the business of the company and its subsidiaries since the commencement of the current financial year continues to progress, and although these are not days for optimism, unless anything extraordinary takes place, I believe the profits for the coming year will be maintained and, I hope, increased.

[June 18, 1932.]

I shall be submitting to the meeting a resolution—notice of which has been given—with regard to the payment of directors' fees. The affairs of the world have so changed since the incorporation of the company and trading conditions are so difficult that I feel sure the shareholders will not wish the directors to conduct a business of this size without remuneration. The directors' fees of £3,000 a year are, in my opinion, extremely moderate.

The report and accounts were adopted and the other resolutions submitted having been approved, the proceedings terminated with a vote of thanks to the chairman.

Government Returns, &c.

NATIONAL ACCOUNTS.

The total ordinary revenue for the week ended June 11, 1932, amounted to £7,257,700 against ordinary expenditure of £8,627,600. After allocating £475,000 to Sinking Fund and having allowed for a reduction of Exchequer Balances of £21,942, the operations for the week, as shown below, increased the National Debt by £1,823,000 to £7,656,559,000:—

(000's omitted.)

Treasury Bills	£ 7,473	Public Department Advances ..	£ 10,150
By 3% Treasury Bonds	4,600	P.O. and Telegraph Money	400
National Savings Certificates ..	300		
	+ 12,373		- 10,550

A complete analysis of the National Debt at March 31, 1932, was printed in the *Economist* of April 2, 1932.

THE ANTOFAGASTA (CHILI) AND BOLIVIA RAILWAY COMPANY, LTD.—The directors of the Antofagasta (Chili) and Bolivia Railway Company, Ltd., announce that an interim dividend in respect of the year 1932 on the 5 per cent. cumulative preference stock will not be paid on July 1st next. The operating results for the current year to date show that no dividend has been earned even after taking into account the estimated income receivable during the current year by the Andes Trust, Ltd., and in view of that and the necessity for conserving cash resources, the directors consider it is in the best interests of the company to postpone for the time being the payment of any dividend on the said stock. They will review the situation in the early autumn when a further announcement will be made.

THE ARGENTINE NORTH-EASTERN RAILWAY COMPANY, LTD.—The directors regret to announce that, in consequence of the heavy decline in traffic receipts and the losses incurred by the continued low sterling value of Argentine currency, it will not be possible for this company to pay the six months' interest due July 1, 1932, on its "B" debentures and debenture stock. A meeting of the holders will be called shortly, when proposals to meet the situation will be placed before them for their approval. Holders of "B" debentures (bearer) are requested to send their names and addresses to the Secretary of the Company, River Plate House, Finsbury Circus, London, E.C.2.

BANK OF NEW ZEALAND.—The profits for the year ended March 31, 1932, after providing for expenses of management and all necessary appropriations are £408,222. From this has to be deducted interest on guaranteed stock, £21,199, leaving balance of profit for the year £387,023; to which has to be added balance brought forward from last year, £626,002; and from which there has been paid dividend on preference A shares, £50,000; interim dividend, £316,276; leaving available, £846,749. This the directors propose should be disposed of as follows: Dividend on C long-term mortgage shares at 6 per cent. per annum, £7,031; dividend on D long-term mortgage shares at 7½ per cent. per annum, £17,578; dividend on preference B shares, £139,584, making £181,250 for the year; dividend on ordinary shares, 1s. 6d. per share, £287,500, making 2s. 10d. per share for the year; balance carried forward, £395,056.

AGAR, CROSS AND COMPANY, LTD.—In view of the adverse trading results, consequent on the continued low prices of cereals and other products in the Argentine, and the depreciated rates of exchange, the directors regret that they are compelled not to pay the dividends on the 7 per cent. cumulative preferred shares of the 6 per cent. second cumulative preferred shares of the company for the half-year ending June 30, 1932.

Commercial Reports.

MARKET SUMMARY.

The movements of prices of primary products at the principal international commodity markets has been irregular during the past week. In the United States, quotations have generally been a little steadier. Among non-ferrous metals, copper and lead were maintained, but tin and spelter showed an easier tendency and turnover was small. The market in rubber has been a little more active and raw cotton gained a few points. The grain markets have been easy under the influence of lower wheat prices as a result of Canadian selling pressure. Maize, however, was slightly firmer. The outstanding event was the sharp recovery in raw sugar from about 60 cent per lb. to 75 cent per lb. Cocoa has also advanced a little, but coffee was easier. Sterling prices of commodities which lend themselves to grading and therefore to international arbitrage moved in sympathy with gold prices. Business in this country was generally on a small scale. Prices of foodstuffs are scarcely changed on the week. Meat and potatoes are a little cheaper. On the other hand, the tea auctions showed an improvement in demand and prices. Reports from various industrial centres fail to disclose any marked improvement. The coal trade remains dull, but South Wales is experiencing a slight revival in the export of anthracite. Transactions in iron and steel remain on a small scale. The situation in the principal textile industries has undergone no change for the better.

THE COAL TRADE.

SHEFFIELD.—Business in South Yorkshire coal fails to expand, although there is a better inquiry for gas coal for export. The export market for steams is rather easier, owing to reduced buying

and delivery. Prices of house coal are lower, and demand has dropped since the arrival of warm weather. Industrial demand remains as restricted as ever, and there is a surplus of coke. Best steams are quoted at 16s. f.o.b., best house at 20s. at pits, and furnace coke at from 10s. 6d. to 12s. at ovens.

GLASGOW.—A sharp falling-off in shipments last week reflects the quieter conditions of export business, and with industrial and household demand slow, supplies are plentiful at or near minimum prices. Washed treble nuts and, to a less extent, doubles and first life steam are the only strong brands, the first and last named being well booked until about the end of the month. Shipments prices (f.o.b. district ports):—LANARKSHIRE.—Ell best, 14s. 3d.; splint best, 15s.; splint second, 14s. 3d.; navigation, 15s.; navigation second, 14s. 6d.; Hartley, 15s.; steam, 13s.; trebles, 11s. 6d.; doubles, 9s. 9d.; singles, 8s. 9d.; pearls, 8s. 6d.; dross, 8s. 9d. FIFE.—Screened navigation, 16s. 6d.; first-class steam, 13s.; third-class steam, 10s. 9d.; tebles, 13s. 6d.-14s. 9d.; doubles, 10s. 6d.-11s. 3d.; singles, 8s. 9d.; pearls, 8s. 6d. LOTHIAN.—Prime steam, 11s.-11s. 6d.; secondary steam, 11s.; trebles, 12s. 6d.-13s.; doubles, 10s. 6d.-11s.; singles, 8s. 9d.; pearls, 8s. 6d. Ayrshire.—Unscreened navigation, 16s.; jewel, 16s. 6d.; steam, 12s.; trebles, 12s. 6d.; doubles, 10s.; singles, 9s. 9d.; pearls, 9s.; dross, 9s.

CARDIFF.—There was a further improvement last week in the volume of the coal traffic in the foreign and coastwise coal trades of the South Wales ports. The total shipments were 448,095 tons, and this quantity has been exceeded in only three other weeks during the present year. It compares with 435,060 tons in the previous week, and 485,413 tons in the corresponding week last year. The improvement has been due principally to increased activity in the anthracite trade, and the shipments at Port Talbot were the highest recorded since October, 1930. Several contracts have been secured recently, and hopes are entertained that the present position will be maintained. Current inquiries, however, are very scarce, and prices for most descriptions are stationary at the minimum schedule figures. Patent fuel quotations are firmer at 20s. per ton f.o.b., and the Algerian State Railways are reported to have placed an order for 30,000 tons with British Briquettes Limited. The following are the current approximate quotations: west Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 4d.; best dross, 18s. 6d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7d.; best small steams, 13s. 6d.; cargo smalls, 11s. 6d. to 12s. 6d.; cooking smalls, 13s. 6d. to 13s. 9d.; anthracite, best large, 36s. to 38s. 6d.; Red Vein, large, 22s. to 26s. 6d.; machine-made cobbles, 39s. 6d. to 48s. 6d.; French nuts, 40s. to 48s. 6d.; stove nuts, 36s. 6d. to 45s.; rubble culm, 8s. 3d. to 8s. 9d.; special foundry coke, 32s. 6d. to 35s.; patent fuel, 20s.; pitwood, ex ship, 19s. to 20s. 9d.

IRON AND STEEL.

MIDDLESBROUGH.—The increase in the duty on foreign pig-iron from 10 per cent. to 33½ per cent., which came into force June 14 (Tuesday), is expected to have a favourable effect on our local trade. Although practically no foreign pig iron has been imported into the Tees this year, and less than 5,000 tons entered during the whole of last year, very important quantities went to Scotland and South Wales, and the increase in the duty is expected to divert some of the orders to this district. So far, no appreciable increase is noticeable in the demand, but it will be a little time before this develops, and in the meantime a steadily improving trade is looked for. At Tuesday's weekly market, a slight increase in business in Cleveland iron was reported, and official prices were unchanged, viz.: No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d., and Scotch consumers. Trade with the latter continues on a small scale, as founders are badly off for orders and in many cases are only working short time. The hematite trade has particularly suffered through the importation of large quantities of iron into South Wales by the Dutch furnaces. This market was formerly a good customer for East Coast hematite, and it is hoped now to regain a substantial portion of the trade. A few cargoes have been sent from the Tees recently, and another of 960 tons has cleared this week. New business continues quiet so far, and purchases are still available at 62s. 6d. for prompt and 6d. more for delivery a month, the total cleared to the 14th instant being 6,864 tons against 3,535 tons to May 14th. In the finished trades new orders are very partially employed. Prices for the different materials are unholding off and refuse to accept deliveries of arrears under old c.i.f., and the current freight, Bilbao-Middlesbrough, for early loading is about 4s. 6d. Coke continues in abundant supply, and delivered works. The number of blast furnaces in operation in the district is unchanged at 17.

SHEFFIELD.—A considerable amount of confidence in an autumn recovery of trade is now prevalent among local business people. There is nothing, however, in the existing position to support this view, as the volume of work in the city still tends downward, and the work of the iron and steel committee and the Conference at Ottawa. One of the few satisfactory features of the overseas of returns for May is the increased shipment of special steels—materials dropped heavily since it carried a duty of 33½ per cent. The duty of has been reduced to 10 per cent. Indian pig iron has been a factor in United Kingdom trade for a couple of years, and competition

from that source will be intensified by the new duty on imported pig. Arrivals so far this year have averaged about 1,200 tons per month. Output of open-hearth steel is being maintained, but is not being absorbed by orders, which are still falling off in number and value. Rolling mill and forge working is below half capacity. Extreme quietude is general in Sheffield's quality steels. Departments which are holding their own include wire, wire goods, and wire rods, cold wrought steel, stainless steel, magnets and safety-razor blades. Some sections of the tool trade are busy; others have little to do. The cutlery and plate trades are stagnant apart from safety razors and scissors.

GLASGOW.—Conditions in the West of Scotland show no change; everywhere business is dull, and there are no apparent signs of increasing activity. At the steelmaking plants, things are exceedingly quiet, and there is practically no demand for semis, either of home or Continental manufacture. Ship repairers have rather more work on hand than they had just recently, several yards having a number of vessels under repair at the moment. Bookings of both black and galvanised sheets for export have been somewhat better during the present week, and there is a steady home demand, but there is not sufficient work to keep plants fully employed. At the tube works there is little new work, but there are a number of inquiries on the market meantime. There is no improvement in the demand for wrought iron. Sheet metal workers in this district are fairly well employed at present.

CARDIFF.—Business on the Swansea Metal Exchange on Tuesday was reported a little more active, and tinplates were a shade harder at from 14s. 9d. to 15s. 3d. per basis box, f.o.b. works' port. Shipments last week were also fairly heavy, totalling 124,830 boxes, compared with 69,575 boxes the previous week, and 86,503 boxes in the corresponding week last year. Galvanised sheets were quiet and unchanged, while South Wales steel bars were quoted at 95s. per ton net delivered locally, as compared with from 82s. to 83s. for foreign bars.

OTHER METALS.

TIN.—Following last week's dislocation consequent upon the failure of Messrs. Lewis Lazarus and Sons, the market in tin has been a little steadier. There was a steady demand for the metal, but prices offered little resistance to realisations, with the result that quotations on Wednesday closed only slightly above last week's low level. In New York the metal was quoted at 19.25 cents per lb. on Wednesday, against 19.60 cents per lb. a week ago and 20.90 a month ago. Wednesday's official closing quotations in London, in terms of sterling for "standard" cash at £111 5s. to £111 7s. 6d. per ton, compares with £115 15s. to £115 17s. 6d. on the corresponding day last week. Stocks in London and Liverpool at the end of last week, at 33,216 tons, show a decrease of 101 tons on the week.

COPPER.—The market in copper both in New York and London was characterised by an absence of buying. Nevertheless the metal opened a little firmer in London last Monday, and, owing to the attitude of reserve adopted by sellers, the improvement was maintained on Tuesday and Wednesday. On Wednesday, "Domestic" spot was quoted at 5½ cents per lb. in New York, against 5½ cents a week ago, and 5½ cents a month ago. Wednesday's official closing price for "standard cash" in London, in terms of sterling, at £27 3s. 9d. to £27 5s., compares with £26 16s. 3d. to £26 17s. 6d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 19,470 tons, show an increase of 246 tons, while stocks of rough copper, at 794 tons, are 25 tons larger.

LEAD.—Business in lead on the London Metal Exchange was on a small scale and, as sellers offered no resistance, quotations continued to decline. In New York the metal was quoted at 3.00 cents per lb. on Wednesday, against 3.00 cents a week ago, and 3.00 cents a month ago. Wednesday's official closing quotation for "soft foreign" in London, in terms of sterling, at £9 3s. 9d. per ton for shipment during the current month, compares with £9 13s. 9d. on the corresponding day last week.

SPELTER.—The demand for this metal was quite active on Monday, but the existence of substantial supplies prevented an improvement in prices. When business became less brisk on Tuesday and Wednesday, values gave way under liberal offerings. Wednesday's quotation in New York, at 2.80 cents per lb., compares with 2.825 cents a week ago and 2.325 cents a month earlier. Wednesday's official closing quotation in London, in terms of sterling, for "good ordinary brands," was £11 7s. 6d. per ton for shipment during the current month, against £11 15s. a week ago.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals the quotations for aluminium and nickel have been maintained at £95 per ton and £225-£230 per ton respectively. Platinum remained unchanged at £9 15s. per ounce. Foreign antimony was sold at £23 to £23 10s. per ton, against £23 10s. to £24 a week ago. Quicksilver was reduced from £13 5s.-£13 15s. per flask to £12-£12 10s. per flask.

TEXTILES.

THE COTTON TRADE.—Liverpool.—Imports for the week June 9th to 15th (inclusive) are 23,842 bales, of which 8,420 are American, 3,870 Peruvian, 1,574 Argentine, 6,120 Egyptian, 274 African, 3,105 East Indian, and 479 sundries.

Manchester.—The tone of the market has been rather steadier, but spinners and manufacturers have not been able to report increased activity. Buyers have again adopted a policy of purchasing from hand to mouth. This attitude is partly due to the anticipation of a reduction in the wages of the operatives at an early date, and thus a decrease in production costs, which will mean

lower prices for goods. It is recognised that, even should there be some satisfactory arrangement with regard to war debts and reparations, foreign trade cannot expand until there is a removal of the many restrictions upon international trade. Shippers of cloth have received rather more favourable advices from India, and scattered sales have occurred, chiefly in light bleaching descriptions and fancies, without the turnover being at all important. The auction sale in Shanghai has been resumed, but with a poor offtake, and new business has continued on limited lines. Printed and dyed goods have attracted a fair amount of attention for North and West Africa, but business for South America remains very poor. Some reports from the home trade have been rather more favourable. Cloth prices have favoured buyers partly owing to more makers securing wages concessions from their operatives. Yarn quotations have been rather steadier, but a restricted turnover has taken place in both American and Egyptian counts, with a tendency for more machinery to stand idle.

THE WOOL TRADE.—Bradford.—Australia will shortly commence another wool season. The cable sent to London by the National Council of Wool Selling Brokers of Australia, writes our correspondent, is one of the most significant communications received for quite a long time, for the statement that the 1932-33 production is expected to be 3,168,000 bales, shows that a record clip is probable, and that low prices are not so far resulting in a decrease of supplies. During the whole of the season less wool was held off the market than might have been expected. Favourable seasons have been quite as influential in increasing supplies during recent years as the desire of pastoralists to put more wool on to the market. Also, so long as seasons continue good, pastoralists are losing less, even when wool is cheap, than when their flocks are decimated by drought. Looked at in this way, the prospect for merino wool is fairly good, and, as Mr. Douglas Hamilton pointed out in his broadcast speech on Tuesday evening, the wool industry continues year by year to absorb the world's wool clip with little more than a normal carry-over. Also the consumption of wool has not been very seriously reduced by the reduction of the import duties on yarns and piece goods. There was a big outcry when the 50 per cent. *ad valorem* duty was taken off, and only 10 per cent. added to the general tariff which still covered piece goods, but there is reason for saying that the proportion of active spinning, weaving and other machinery throughout the manufacturing districts of this country is very little less than the maximum reached after the 50 per cent. *ad valorem* duty came into force. Since the close of the last London sales, values for tops have slightly eased in Bradford, but otherwise the situation is unchanged. There is not much new business, and traders generally are waiting for the results of the Lausanne and Ottawa Conferences.

THE GRAIN MARKETS.

WHEAT.—There has been no improvement in the international wheat situation during the past week. The principal adverse influences bringing down prices last week were the favourable reports of the North American spring wheat crops and Canadian selling pressure. To these factors has now been added the expectation that Continental countries will soon once more increase the restrictions on imports. Italy has already given notice that her import quota will shortly be reduced to 5 per cent. Nevertheless, the outlook cannot be considered discouraging. The continuous fall in wholesale prices in general has left wheat almost unaffected, which means that in terms of commodities in general wheat has actually risen in price since the beginning of the year. Further, prices are bound to be affected by crop reports for some time to come, and weather conditions may still change completely the prospects of spring-sown wheat in a large number of countries. Under the influence of warm and sunny weather, English crops, which have been backwards so far, are making good progress. On Wednesday, "July" futures were quoted at 49½ cents per bushel in Chicago, against 50½ cents on the corresponding day last week, and 55½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 27s. 3d.

per 496 lbs., as compared with 28s. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 25s. 6d., against 26s. 9d.; No. 3 Northern Manitoba, Vancouver, ex ship, 25s. 3d., against 26s. 9d.; Australian, ex ship, 25s. 9d. to 26s. 3d., against 28s. to 28s. 3d. a week ago.

WHEAT FLOUR.—The demand for flour has been maintained, but quotations have been reduced in proportion to the decline in wheat prices. North American shipments, at 141,000 sacks, showed no change as compared with the previous week. Of this total, 35,000 sacks have been consigned to Europe. Quotations in London, Wednesday: Straight run, delivered country, 24s. per sack of 280 lbs., as compared with 25s. last week; delivered London, 23s., against 24s. Manitoba patents, ex store, 23s. 6d. to 26s. 6d., against 24s. 6d. to 27s. 6d.; and Australian, ex store, 20s. to 21s., against 20s. to 21s. a week ago.

BARLEY.—Business in feeding barley has been dull, both in this country and on the Continent. On Wednesday, "July" futures were quoted at 37½ cents per bushel in Winnipeg, against 36½ cents last week and 39½ cents a month ago. Quotations in London, Wednesday: "English feeding," f.o.b., per 448 lbs., 27s. to 28s., as compared with 27s. to 28s.; River Plate, landed, 24s. to 25s., against 24s. to 25s. a week ago.

OATS.—The demand for oats has fallen off considerably as a result of the relative cheapness of maize and plentiful supplies of grass. "July" futures, which last week stood at 20½ cents per bushel in Chicago, sold at 20 cents per bushel on Wednesday this week, against 23½ cents a month ago. Quotations in London, Wednesday: "River Plate," landed, 17s. 3d. per 320 lbs., as compared with 17s. 3d. last week; "River Plate," ex ship, 16s. 3d., against 16s. 3d.; "Chilean White," landed, 24s. 6d. to 26s., against 24s. 6d. to 26s. a week ago.

MAIZE.—The market in maize is still dominated by Argentine varieties. Despite heavy shipments from that country, prices have remained steady and demand has not shown any signs of falling off. Wednesday's quotation in Chicago for "July" futures, at 29½ cents, show an increase of 1½ cents on last week, and a fall of ½ cent as compared with the price a month earlier. Quotations in London, Wednesday: "Plate," landed, 19s. 6d. per 480 lbs., compared with 19s. 3d. last week; "Plate," ex ship, 18s. 3d., as against 18s. 3d.; "Plate," May-June, 18s. 3d., as against 18s. 6d. Yellow maize meal, ex wharf, was quoted at £5 10s. per ton, against £5 12s. 6d. a week ago.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks with comparative figures for 1930:—

NEAREST FUTURE.	Jan. 2, 1930.	Jan. 2, 1931.	June 17, 1931.	Jan. 4, 1932.	June 8, 1932.	June 14, 1932.
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.	148½	56½	60½	62½	55	54½
Chicago (No. 2 Winter) —Cents per 60 lb.	130½	79½	57½	55½	50½	49

The visible supply of wheat in Canada, at 56,546,000 bushels, shows a decrease on the week of 906,000 bushels. Supplies a year ago stood at 48,574,000 bushels.

OTHER FOODS.

SUGAR.—The improvement in the international sugar situation, noted last week, has led to a sharp advance in values. The upward movement was further strengthened on the news that President Machado of Cuba had signed a decree restricting exports to the United States next year. The turnover on the New York "futures" market was 45,000 tons on Monday, 64,000 tons on Tuesday, and 27,000 tons on Wednesday. "July" futures in New York were quoted at 0.75 cent per lb. on Wednesday, against 0.63 cent per lb. a week ago, and 0.60 cent per lb. a month earlier. Wednesday's sales of "raws" include "December delivery" at 5s. 4½d. to 5s. 4½d. per cwt., against 5s. 0½d. to 5s. 1d., and "March, 1933," at 5s. 7½d. to 5s. 7½d., against 5s. 0½d. to 5s. 3½d. on the corresponding day last week. The movements of raw sugar in London and Liverpool during last week are set out in the table below:—

	Imports.		Deliveries.		Stocks.	
	1932.	1931.	1932.	1931.	1932.	1931.
Tons.			Tons.		Tons.	
London.....	1,659	413	601	1,234	11,359	20,793
Liverpool.....	6,532	15,896	13,316	12,485	99,075	74,471
Total.....	8,191	16,309	13,917	13,719	110,434	104,264
Last week	282	13,120	18,676	15,464	116,160	101,674

COFFEE.—The market in coffee was again easier in New York. The auctions in London on Tuesday and Wednesday met with a poor demand, and prices remained barely steady. Last week's movement delivered for home consumption, 71 bags; exported, nil; stocks, 4,122 bags, against 2,913 bags last year. Central American, landed, exported, 2,237 packages; stocks, 129,762 packages, against 120,840 a year ago. Other kinds, landed, 1,702 packages; delivered for home consumption, 2,232 packages; exported, 1,311 packages; stocks, 95,451 packages, against 93,117 a year ago.

COCOA.—Cocoa has been in good demand, and last week's advance in prices was maintained. "July" futures were quoted at 3.96 a week ago and 4.00 cents a month ago. As compared with the fermented, June-July, at 24s. per cwt., f.o.b., London contract, London were as follows: Landed, 3,084 bags; delivered for home consumption, 3,176 bags; exported, 472 bags; stocks, 167,417 bags, against 229,848 last year.

TEA.—The quantities catalogued for this week's auction comprise 52,343 packages of Indian, and 31,332 packages of Ceylon tea. Last week's advance in prices was maintained at the "Indian" auctions on Monday, and there was an improvement in the demand for the higher grades. The "Ceylon" sales are characterised by irregularity, owing to the deterioration in quality, but "Indian" was again in good demand on Wednesday. The following table

OVERSEAS TRADE RETURNS.

RICE.—The market in rice has been dull, and prices were easier. Wednesday's "spot" price, at 9s. 3d. per cwt., shows a decline of 1½d. per cwt. on last week, while forward positions, at 8s. 1½d., show a fall of 4½d. Movements in London during the past week were as follows: Landed, 250 tons; delivered, 63 tons; stocks, 3,367 tons, as against 559 tons last year.

POTATOES.—Owing to the increasing supply of new potatoes at the principal markets, prices of both old and new varieties have been reduced substantially. At the Borough Market, "Best King Edward" sold from 10s. to 11s. per cwt., as compared with 11s. 6d. to 12s. per cwt. a week ago. New "Jerseys," at 18s. per cwt., show a decline of 4s. per cwt.

SPICES.—The market in spices was dull, and pepper was cheaper. Wednesday's quotation for "Black Singapore" pepper, at 6½d. per lb., shows a fall of ½d. per lb. on the week. Movements of pepper in London during the past week were as follows: Black, landed, nil; delivered, 7 tons; stocks, 363 tons, against 542 tons last year. White, landed, 49 tons; delivered, 88 tons; stocks, 590 tons, against 603 tons a year ago.

is quietly steady, crude Egyptian ex Hull offering at £19 and refined (technical and edible) at £21 10s. prompt. There is little movement in other seed oils, and oilcakes are in very poor demand and cheaper.

HIDE, LEATHER AND ALLIED TRADES.—Weakness of prices is still a feature of the market for hides and skins of both home and foreign origin, and in view of the limited demand for most descriptions, improvement does not seem likely for some time yet. Most classes and weights of ox and heifer hides were unchanged in value at the auctions at Manchester this week, but at Leeds the balance of exchanges was in favour of buyers. Similar conditions were noticeable in regard to cows; at the first-mentioned auctions only first clears recorded lower figures, but at Leeds the bulk of the sales were effected at a reduction of 1d. per lb. Calfskins were weak, declines of from 1d. to 1½d. per lb. being general. Sheepskins are difficult to sell except at very low figures. Any alteration in the basis of quotation for imported hides has usually been downward, in view of the limited amount of business. In the South American market, wet-salted Argentine ox have remained steady at just under 2½d., while Montevideo ox have changed hands at 3½d. Dry hides from the same source have also remained steady in price, B.A. Americanos being offered at 4½d., while 4½d. is asked for Sierra Cordobas and 2½d. for B.A. Inservibles. African hides are fractionally weaker on average, with only a very restricted business passing, while there has been no alteration in the position of Australians, which are still quoted at comparatively high figures. There has again been a fair inquiry for English and wet-salted bends in the light and medium averages suitable for the repairing section of the boot trade, but sales of heavy weights remain small. Rather less business has been done in dry hide bends for shoe manufacturing, and there has also been a slight falling off in the inquiry for pinned offal. Rough bellies and shoulders continue to be a quiet market. Producers and distributors of upper leathers have not met with any improvement in turnover, but regular sales of glacé kid are being made all the time, in addition to which there is a limited inquiry for willow and box calf and patent leather. Reptiles, both real and imitation, account for fairly decent sales, providing the price at which they are offered is right.

RUBBER.—The market in rubber both in London and New York has been a little steadier, following a slight increase in turnover.

In New York, Wednesday's spot price for rubber, at 2½ cents per lb. shows a rise of ½ cent per lb. on the week. Wednesday's official closing price for standard ribbed smoked sheet in London was again 1½d. per lb. In forward positions, business has been done at 1½d. rubber in London and Liverpool during the past week were as follows: Landed, 1,142 tons; delivered, 2,609 tons; stocks at the end of last week, at 114,187 tons, show a decrease of 1,467 tons as compared with the preceding week.

usual this month, no bills fell due on Monday, and this week payments were concentrated towards the beginning and maturities towards the end of the week, so that by Wednesday the market was somewhat short of money. This incidentally is reflected in the Bank return, which shows a turnover of £15 millions from private to public deposits. Renewals, too, hardened during the week from $\frac{1}{2}$ to $\frac{3}{4}$ per cent., but money has been obtainable into next month at a level 1 per cent. Certain of the Dominion banks have decided to depart from the rates charged by the clearing banks and to lend money at a minimum of $\frac{1}{4}$ per cent.

Applications for Treasury bills amounted last week to £65.8 millions; £65.0 millions of bills were offered, but only £42.0 millions were allotted. The average tender rate fell from 18s. 11.79d. to 16s. 0.06d. per cent., which constitutes a new low record. Early this week "hot" Treasury bills changed hands at $\frac{1}{16}$ per cent., but the rate has since hardened to $\frac{1}{8}$ per cent., and at times to $\frac{1}{4}$ over. These last rates leave a very small turn on the tender rate. July maturities have been quoted at $\frac{1}{16}$ per cent., and August at $\frac{1}{8}$ per cent., and it is reported that the banks are buying bills less freely than earlier in the month. Three months' bank bills are still quoted round 1 per cent., but a firmer tone is apparent, and certain foreign buyers have had to pay $\frac{1}{8}$ per cent. more. Standstill bills are quoted at $\frac{1}{8}$ -3 per cent.

The Bank return shows a further increase of £1.2 millions in the Bank's gold, but this has been practically offset by an expansion of £1.1 millions in the note circulation, and so the reserve is only £0.1 million higher. Other securities are reduced by £4.2 millions, a movement which suggests that the improvement in the dollar has enabled the Bank to run off part of its *devisen*. Government securities show a net increase of £3.0 millions, taking both departments of the Bank together. Among the Banking Department's liabilities, Public Deposits are increased by £15.1 millions, while Bankers' Deposits are reduced by £13.9 millions and Other Deposits by £0.8 million. The reasons for this turnover have already been explained.

	June 2, 1932.	June 9, 1932.	June 16, 1932.	June 23, 1932.	Previous Rate and Date Changed

Treasury bills).....	2 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$	...
Market rate (3 months' bank bills)	1-1 $\frac{1}{2}$	1-1 $\frac{1}{2}$	1 $\frac{1}{2}$ -1 $\frac{1}{2}$	1-1 $\frac{1}{2}$	...
Market rate (standstill bills)	1 $\frac{1}{2}$ -2 $\frac{1}{2}$	1 $\frac{1}{2}$ -2 $\frac{1}{2}$	1 $\frac{1}{2}$ -2 $\frac{1}{2}$	1 $\frac{1}{2}$ -3	...

Next week may witness fairly wide fluctuations in money. On Monday and Tuesday there are no Treasury bill maturities, for these days correspond to Easter Sunday and Monday. Thursday is the last day of the half-year, and so maturities are likely to be concentrated upon that and the preceding day, while new bills will mostly be applied for to be paid for on Friday and Saturday. Again up to and including Thursday, there will probably be the usual half-yearly market borrowing at the Bank, but present indications are that the clearing banks will have to call less heavily than usual next Thursday in order to establish their cash ratios. Money, however, in general is likely to remain very easy, as will be apparent when all these disturbing cross-currents have spent their force.

In the Foreign Exchange market the main event of the week has been the improvement in the dollar. In part this arises from the better tone now apparent in New York, but the main cause probably lies in the completion of the withdrawal of the French dollar balances. So long as these withdrawals were proceeding, the dollar exchange was subject to bear attacks, and this week's improvement

probably means little more than that the last bears have been caught. This rally in the dollar has also served to dispel the wholly erroneous impression that has lately grown up in this country that sterling had been definitely stabilised at \$3.67, with the implication that we were virtually back on the gold standard at that point. That assumption never had any basis, and it is as well that it should have been disproved. It is still true, however, that the authorities will strive to prevent wide fluctuations in the exchanges, such as are calculated to encourage speculative operations.

As had been generally anticipated, the outflow of gold from New York is rapidly diminishing. During last week exports amounted to only just over \$10 millions, of which \$4.1 millions went to Belgium and \$6.0 millions to Switzerland, and the fact that earmarkings on foreign account fell by \$8.2 millions suggests that most of these shipments consisted of earmarked gold already withdrawn from the monetary system. It is generally believed in New York that all surplus French balances have been withdrawn, and that they now stand at the minimum level required for current exchange transactions. Money rates are unchanged, call loans still standing at 2 $\frac{1}{2}$ per cent., and open market discount rates on 90-day bankers' acceptances at 1 $\frac{1}{4}$ per cent. The New York Bank rate is reduced from 3 per cent. to 2 $\frac{1}{2}$ per cent.

The Foreign Exchange market was again very quiet this week, but fluctuations were frequent and sterling was inclined to weakness against the principal currencies, although it recovered in part at the close. The feature was the demand for spot dollars, it is believed largely on French account. New York, after touching 8.59 $\frac{1}{2}$, settled at 8.62 $\frac{1}{2}$, against 8.67 last week. Montreal was firmer at 4.15 $\frac{1}{2}$. Paris gained a franc at 92 $\frac{1}{4}$, after 91 $\frac{1}{4}$. Brussels improved to 25.94, but reacted to 26.00, a gain of 34 points on the week. Milan gained $\frac{1}{2}$ at 71 $\frac{1}{4}$, and Madrid $\frac{1}{2}$ at 43 $\frac{1}{4}$. Amsterdam went from 9.06 $\frac{1}{2}$ to 8.96. Berlin was considerably better at 15.23, as was Switzerland at 18.60. The Scandinavian currencies were again inclined to be weak, but recovered towards the close. Stockholm improved by 5 points to 19.47 and Oslo by 10 to 20.30, but Copenhagen lost 4 points at 18.35. The South American currencies were rather stronger, but largely nominal, Rio being quoted at 5 $\frac{3}{4}$ d. (sellers), and Buenos Aires at 34 $\frac{1}{2}$ d. (nominal), while Montevideo was unchanged at 29 $\frac{1}{2}$. In the Far East the rupee was $\frac{1}{4}$ d. worse at 1s. 5 $\frac{1}{4}$ d., but the yen was very weak at 1s. 6 $\frac{1}{2}$ d., against 1s. 8 $\frac{1}{4}$ d. last week. Batavia improved to 8.98. In the forward market dollars were at $\frac{1}{2}$ cent and 1 $\frac{1}{2}$ cents discount. Paris from one and 2 centimes discount improved to par for both deliveries. Brussels was weaker at $\frac{1}{2}$ and one centime discount. Milan improved by $\frac{1}{4}$ to $\frac{1}{2}$ lira and $\frac{1}{2}$ lira discount, and Madrid by the same margin to $\frac{1}{2}$ peseta and $\frac{1}{2}$ peseta discount. Amsterdam stood at par for one month, and $\frac{1}{2}$ cent discount for three. Switzerland was at $\frac{1}{2}$ centime and 2 centimes premium for one and three months respectively. The silver market was quiet, cash improving by $\frac{1}{4}$ d. to 16 $\frac{1}{4}$ d. and forward by $\frac{1}{4}$ d. to the same level as a result of some buying by the United States and the bazaars. The China silver exchanges improved in sympathy, Hong Kong and Shanghai both rising by $\frac{1}{4}$ d. to 1s. 3 $\frac{1}{4}$ d. and 1s. 8 $\frac{1}{4}$ d. respectively.

THE CRISIS

By Sir HENRY STRAKOSCH.

Bound reprints of this Memorandum, which was published as a Supplement to the Economist of January 9th, may be obtained from the Publisher, 8, Boulevard Street, E.C.4., price 1/-.

MONTHLY TRADE SUPPLEMENT

We publish this week our Monthly Supplement, in which will be found an appreciation of the trade situation at home and abroad, together with statistical information on the foreign trade, price movements, currency, and production of the leading commercial countries of the world. Its contents include an index of electricity production, and a series of indices of British trade activity.

LAUSANNE AND GENEVA.

OUR special correspondent's report on the first week of discussion at Lausanne conveys the impression that the protracted MacDonald-Herriot conversations have at least brought the participants squarely up against the crux of the problem. Some critics are already complaining that there is as yet no evidence of agreement, even on general principles, and we cannot be surprised that there are such complaints from a weary world that has become impatient of talk. But when it is remembered that the two Governments, in Paris and Berlin, chiefly concerned with reparations have been in office for only a few days, and that preliminary preparation was therefore impossible, the public may reasonably be asked to restrain their impatience a little. The Conference very promptly brought to light frank statements of the differing points of views from which the various nations approach the problem; and it must take more than a few hours of negotiation to reconcile them.

No useful purpose would be served at this stage by dwelling over-much on the differences. On the contrary, it is more pertinent to emphasise the large amount of common ground. Indeed, those who recall previous reparations discussions must be very forcibly struck by the immense distance all the parties concerned have travelled from the point of view of three years ago. Germany on her part eased matters at the outset by making it quite clear that she does not repudiate her signature, but puts the case for relief entirely on the ground of expediency—or, perhaps we should say, of overriding economic necessity. It is universally agreed that annuities on the scale of the Young Plan are dead, and that even the "unconditional" portion has gone by the board; and the whole debate turns on the practical question whether there is any final payment which Germany could be asked to make without doing more harm than good to the general economic situation. France is still impressed with the view that Germany is certain to recover sooner or later, and will one day be able to pay something. She insists that the wiping out of reparations would give Germany a great advantage in competitive power. The British view, on the contrary, is that to insist on reparations is to strengthen artificially the force of such competition, and that the only certain way of removing the present paralysing uncertainty is complete cancellation. With the issue narrowed to this one question, it is unthinkable that the statesmen at Lausanne will be unable to reach an agreement where none can afford to fail.

There has been, however, another reason for dilatory progress. The chief delegates have been compelled to divide their attentions and give part of their time to the problem of disarmament. Indeed, before the Conference opened several of them went to Geneva to see if it were possible to stimulate activity there; for it has long been patent that failure or stalemate in the disarmament discussions would create a very bad atmosphere in which to attempt to settle reparations and to make a new start, whereas success would strengthen the sense of security which M. Herriot rightly regards as an essential condition of a good understanding. Hence there have been many comings and goings between Geneva and Lausanne; and when Mr Gibson and Mr Norman Davis paid an unexpected visit to Mr MacDonald's hotel at Lausanne it was evident that Washington—though officially disinterested in the Reparations Conference—was as anxious as Europe that there should be tangible achievement in disarmament now.

It is, of course, perfectly true that from the purely economic standpoint there is no direct connection between disarmament and debt payments. It is now well understood that if arrangements requiring large transfers from one country to another are blocked by tariffs and other trade obstructions, disastrous results will be produced on the financial structure and ultimately on international trade itself. In any frank discussion on reparations and debts, therefore, it would have to be realised that

America's tariff policy has in fact been a far more important direct cause of the breakdown of trade than our present armaments. The tariff problem must be dealt with if any solution that may be reached in Switzerland in regard either to debt payments or disarmament or both is to produce the desired results. But that disarmament and the economic problems which are being debated at Lausanne are—in a very vital, if indirect, manner—closely associated, cannot be denied. Obviously there is a much greater chance of reaching a radical solution of reparations if there is ground for confidence that the United States will treat the problem of the debts in a similar radical manner. This, in turn, depends very largely on the assurance of real progress in disarmament.

Some arguments presented to the American public in support of this point of view are plausible rather than sound. For example, it is said that America cannot be expected to reduce debts if the only effect is to leave Europe with more money to spend on armaments. But the simple fact of the matter is that the policy of the "clean slate" will benefit Germany and not the countries whose armaments are believed to be excessive. Indeed, both France and Great Britain will be left with a deficit, and, if payments to the United States had to be resumed, it would mean in both cases an addition to a burden of taxation which is already much higher than that of the United States. It is, moreover, not altogether irrelevant to recall that the armaments expenditure of the United States itself is by far the largest of any country in the world. At the same time, Mr Hoover is perfectly right in insisting that all the world needs relief from the armament expenditure which is burdening our various budgets, and it is obvious that this particular form of retrenchment can only be achieved by international agreement. It is even more pertinent to insist that the maintenance of arms on their present basis creates a sense of insecurity, is a cause of political suspicion, creates an atmosphere in which credit cannot thrive, and makes impossible any drastic modification of existing policies of economic nationalism. Until these conditions change the commerce of the world cannot revive.

We therefore welcome wholeheartedly Mr Hoover's latest proposals, whose details we summarise in a Note of the Week, both for the stimulus they will give to the work at Geneva and for the assistance which any specific achievement along these lines would afford in solving the problems of Lausanne. It may be that the radical character of his scheme will frighten the timid, and it will certainly provoke objections from many quarters. Some of these will arise from real difficulties created by differences in the problem of defence which each nation has to face, as a result of geographical or political conditions. On these matters the experts will have much to say, and—as happened at Washington ten years ago—when it comes to drawing up a definite treaty many complications may have to be specially provided for in applying a simple rule. But this American initiative will make a powerful appeal to the plain man in many lands (the cynics have already dubbed it an election manifesto!), in the first place because it accords with his view that if there is anything in this business of organising peace in a civilised world it is high time to have a real cut at preparations for war, and secondly because it is a simple proposition which he can understand. This last is a point of real importance; for if public opinion is to overcome the forces of obstruction and inertia it must rally to some plan which can be readily understood. We shall get much further, and foster the growth of a real sense of security much more readily, by means of simple solutions than by complicated agreements. It is for the statesmen and not for the experts to define the general lines of such a policy. Mr Hoover has laid his ideas on the table. It is for Geneva to convert them, or alternative principles that may by agreement be substituted for them, into a fresh bulwark of international security.

THE IRISH DEBATE.

THE Irish debate in the House of Commons last Friday was the necessary result of the abortive negotiations of the week before, when Mr Thomas and Lord Hailsham went to Dublin, and Mr de Valera came over to London, without finding it any easier to arrive at an agreement by personal discussion than they had found it by correspondence. One important result, however, which these conversations did produce was a formulation of Mr de Valera's "views as to the only basis of lasting peace and good will in Ireland—what he called his ultimate aim." These views were reported to the House of Commons by Mr Thomas in the following terms, which had been previously submitted to Mr de Valera for verification. Since Mr de Valera declined to confirm the formula without offering to repudiate it, it may perhaps be accepted as substantially correct. According to Mr Thomas, the first of Mr de Valera's ultimate desiderata is the union with the Irish Free State of the six counties now constituting Northern Ireland, while the second is the recognition of such a united Ireland as a republic—subject to some form of association with the British Commonwealth in some circumstances and for some reasons, with the recognition of the King as head of this association within whatever its sphere of operation might be.

As an ultimate objective, to be reached by free agreement between all the parties concerned, we do not see that Mr de Valera's second desideratum need be dismissed *a priori* as unacceptable in all circumstances from the British standpoint. The pride of the British Commonwealth is its elasticity. The hypothetical relation which Mr de Valera has sketched out as his ideal for Great Britain and Ireland is, as a matter of fact, the goal towards which Great Britain and Egypt have been tending in the repeated attempts to negotiate a permanent and mutually satisfactory settlement of the Anglo-Egyptian problem. It is not inconceivable that mutual economic advantage might lead to the establishment of some such relations between the British Commonwealth and other countries which, like Egypt, have never been, and never will be, Dominions of the British Crown. Therefore we do not quarrel with Mr de Valera's ultimate objective No. 2. And as for his objective No. 1, is not the reunion of all Ireland something which every sane person would be delighted to see accomplished?

As "ultimates," then, Mr de Valera's two lines of policy are admirable; and the Free State Prime Minister's mathematical mind is doubtless content with the knowledge that his pair of parallels will infallibly meet at infinity. The rest of us, however, are mundane creatures concerned with "here" and "now"; and our trouble is that, in real life, these two lines of policy quite obstinately refuse to coincide. You may press for the reunion of Ulster with Southern Ireland; but if you want to achieve that desirable object within any finite span of time, then you must refrain from pressing at the same time for a loosening of the tie between a United Ireland and the British Commonwealth. Conversely, if you wish to establish an Irish Republic by any predictable date, then you must postpone till the Greek Kalends the idea of a reunion of All Ireland. The one thing certain is that, in Ireland and the Commonwealth and the world as they are, you cannot achieve both these aims in practice here and now at the same moment. The only conceivable circumstances in which they could be achieved simultaneously would be if the British Commonwealth found itself on the losing side in the next great war. In that case, Southern Ireland might annex Ulster by force. But that is not at present practical politics; and, if it unfortunately were to become practical politics one fine day, does Mr de Valera really believe that a "basis of lasting peace and good will in Ireland" would then have been established? The history of Central and Eastern Europe since the last war suggests that the answer to this question is rather emphatically in the negative.

Moreover, as Mr Thomas pointed out to Mr de Valera during the conversations of the week before last, it is not these high matters, but the terrestrial questions of the Oath and the Annuities that are at present making the

trouble; and, as a result of the conversations, the respective positions of the two Governments have at least been made clear, though they have hardly been brought nearer together. On the Oath question, Mr de Valera is quite intransigent. He maintains that the Oath is purely the Free State's business, and that the Free State Government is entitled to take what action it likes in the matter without consulting anybody—treaty or no treaty. The Government at Westminster maintain that their treaty rights are engaged in this matter, and that the Free State is not entitled to proceed by unilateral action. The disagreement is absolute, and there, for the moment, the matter stands.

On the question of the Annuities, on the other hand, Mr de Valera has made a new proposal, which Mr Thomas recited in the House of Commons:—

"The Government of the Irish Free State accepts the principle of arbitration and agrees that a tribunal of the general character outlined in the Report of the Imperial Conference of 1930 would be suitable, but it is unable to agree to the restriction of the personnel of the tribunal solely to citizens of the States of the British Commonwealth."

For our part, we agree with Mr Thomas in believing that a tribunal composed exclusively of British subjects could be trusted to do the Free State, as well as the United Kingdom, justice. And if the crux is the choice of one or more of the arbitrators from States members of the Commonwealth other than the two States directly concerned in this controversy, we may point out that in Australia there are eminent British subjects of Irish origin, as well as of English or Scottish or Welsh, and that there is no reason to suppose that a French Canadian or a Dutch South African arbitrator would be biased against the Irish case. At the same time, we think that Mr Thomas has perhaps made a mistake in tactics in treating Mr de Valera's caveat as an insult to the British Commonwealth. It need not be read as an insult. It looks much more like the proverbial suspiciousness of one who has been "under-dog" and who has made up his mind to take no risks now that, at last, he finds himself on top again. This is a crocheted that ought to be humoured. If the British case is as strong as we believe it to be, then we need not pick and choose the nationality of the arbitrators, so long as their personal ability and integrity are assured. And there is also substance in a point which was made, in the course of the debate, by an opposition speaker. If a permanent inter-Imperial tribunal had been inaugurated by the last *ad hoc* arrangements, Mr de Valera's present doubts and hesitations might perhaps have been spared. For these hesitations we have partly ourselves to blame, and we should be wise, in the circumstances, to accommodate ourselves to them with good humour.

There is, however, a second paragraph in Mr de Valera's despatch which is rather more awkward. The opinion is advanced that

the matters to be submitted to the tribunal for determination must include not merely the Land Annuities but also the items of the other annual payments to the British Government by the Government of the Irish Free State, except those made in pursuance of agreements formally ratified by the Parliaments of both States.

It will be seen that Mr de Valera's second paragraph threatens to raise more issues than his first paragraph promises to settle; and it is not unnatural that Mr Thomas should have expressed the opinion that the despatch leaves the position worse than it was before.

Meanwhile, the Irish Annuities will remain unpaid. The Government at Westminster has apparently not yet decided to indemnify itself by retaliating in kind and withholding payment of moneys due, under existing financial agreements, from the United Kingdom to the Free State. It does, however, stand by its declared intention to allow trade with this country, to expire automatically on November 15th next unless an agreement has first been reached on the points at issue in the present controversy. "We cannot make a new agreement with people that have broken the agreement," is Mr Thomas's phrase.

The Secretary for the Dominions was supported in a vigorous and amusing speech by Mr Lloyd George, who is presumably as well acquainted as any other living

British statesman with the intentions and conditions on both sides at the time when the treaty of 1921 was negotiated. It remains to be seen how far Mr de Valera's policy will commend itself to the Irish people when they have had leisure to think it over.

UNEMPLOYMENT INSURANCE PROBLEMS.

A YEAR and more has passed since the Royal Commission on Unemployment Insurance issued its first Report. That document was produced at high speed for the purpose of contributing towards escape from the financial emergency into which the country was drifting. Its recommendations were, in the main, limited to questions of financial reform, and for the most part they, together with additional recommendations made by the Economy Committee over which Sir George May presided, have been adopted and put into force, partly by the late Labour Government before it left office, and partly by the National Government, as one of its first and most urgent tasks after assuming power last September. The financial results of the institution of these reforms have been examined in recent articles in the *Economist*. Sacrifices by participants in the scheme, the assumption of fresh burdens by the taxpayer, together with the application of a means test for "transitional" beneficiaries and the elimination of improper claims, have combined to call a halt to the rake's progress which a year ago was so potent a factor in arousing distrust of Britain's financial stability. The most urgent aspect of the question has been solved for the time being.

Big problems, however, remain to be faced, and it may be presumed that after a year's deliberations the Royal Commission will soon be in a position to present its final Report, which must be of even greater importance than its interim pronouncement. The former Report produced expedients for dealing with what we all hope may be a transient period of acute depression. It is the task of the final Report not merely to outline schemes for the financial solvency of the contributory insurance scheme itself, but also to lay down the lines of a permanent policy to be adopted by the State in dealing with the relief of all unemployed citizens. The interim recommendations and the emergency which called them forth have so completely monopolised public attention that the broader tasks of the Commission are in danger of being forgotten. It is worth while, therefore, to remind ourselves of the very wide terms of reference that were given to the Commission. It was instituted to "inquire into the provisions and working of the Unemployment Insurance Scheme and to make recommendations with regard to: (a) its future scope, the provisions which it should contain, and the means by which it may be made solvent and self-supporting; and (b) the arrangements which should be made outside the scheme for the unemployed who are capable of and available for work."

Taking these terms of reference in order, it may at the outset be argued that the Commission are asked to do the impossible; for if, unhappily, any deepening of the world depression should add very largely to the numbers of unemployed, no reforms or expedients could make the scheme self-supporting, or relieve the taxpayer of the burden of meeting a serious gap between incomings and outgoings. Presumably, however, the Commission will assume, in framing its plans, that no grave increase will take place in the volume of claims which the Fund will have to meet. This being so, it is easy to suppose that major attention is being concentrated upon four main questions:—(1) How long can the scheme go on carrying workers who have exhausted their actuarial rights to benefit? (2) Can the scheme, as such, continue to cater fully for industries (e.g., coal mining) in which large-scale unemployment threatens to be permanent, and in which any man over middle age who falls out of work is unlikely to obtain re-employment? (3) What is the State to do for the chronic unemployment which no real insurance scheme can properly carry? and (4) Would it be helpful or unhelpful to the State, and fair or unfair to present and projected contributors, to extend the scope of the scheme to other industries?

There are, of course, hosts of other problems. It will be interesting, for instance, to see what methods the Commission suggests for dealing with the accumulated debt of the Fund; and one of the toughest nuts which it has to crack is that of the intermittent worker. Is it, or is it not, possible to devise a scheme by which each contribution (with its accompanying right to benefit) really represents a week's work? Fairness demands that such a scheme should be established; but the practical difficulties are formidable. To mention one of many other possibilities, the Commission will doubtless review the question whether a flat rate of so-called "dole" is a necessity, or whether benefits can be scaled up or down in accordance with the conditions in various localities and different industries. Yet again, the possibility of lowering the Old Age Pensions age, in order to relieve the scheme, will doubtless receive careful consideration.

The mention of such items as these serves to emphasise that the terrain of investigation covered by the four headings enumerated above is immense, and the complexities involved are manifold. What is expected of the Commission is this: that it should first of all indicate how and within what scope of employment (in the absence of abnormal economic depression) an actuarially sound contributory insurance scheme can be maintained; and secondly, how the country can best perform the function of relieving from distress those whom a sound insurance scheme cannot possibly carry. The first of these tasks involves a definite decision as to the employment area to be covered by the scheme. Are railway workers to be included, or agricultural labourers, or domestic servants? The inclusion of the first-named might assist the finance of the scheme, for in railway service employment is relatively regular; but would compulsory inclusion be fair to the railway workers if the object of their inclusion be to make the scheme safer for other sections of wage-earners? Again, how far can the Commission afford to embrace in the scheme industries where large-scale unemployment has been for years past, and threatens for years to come, to be chronic?

The composition of the Commission is not such as to arouse hopes of a unanimous final Report. But from the Report of the majority two things at least will be confidently expected; first, that they will effectively repulse all the vigorous attacks which have been made upon the contributory system; secondly, that they will somehow or other succeed in drawing a clear line between actuarial insurance and eleemosynary State relief. On the question of relief, pure and simple, there will be much curiosity whether the Commission will advise that it should be organised centrally or locally. The decision of this question will doubtless be influenced to no small extent by the evidence received as to the work of the local Public Assistance Committees who are administering the "means test" and advising on rates of transitional benefit. On the whole, the performance of these local bodies, apart from certain rather sharp variations in the application of the test, is believed to be more satisfactory than was expected.

One interesting query about the Report is whether Judge Holman Gregory and his colleagues will give their considered views upon the value of State expenditure on public works as a measure for relief of unemployment. In any case, the Commission's findings will be of first-rate social, industrial, economic and political importance to the country; will be eagerly scanned by many other countries in which the unemployment problem has assumed serious proportions; and, finally, will eventually provide the House of Commons with a heavy legislative task, which must be completed before next spring.

IMPERIAL PREFERENCE: S. AFRICA.

Or the two main subjects to be discussed at Ottawa, monetary policy and Imperial preference, the former at least will present some difficulties in the case of South Africa. So far, the Union remains the one British Dominion which clings to the gold standard, and, as our Johannesburg correspondent reports on a later page, the official commission of inquiry has recommended the continuance of this policy. Although a certain section of public opinion favours a departure from the gold standard,

there seems no likelihood, at any rate for the time being, of such a move, so that South Africa will be unable to participate effectively in such part of the Ottawa discussions as may relate to the "management" of non-gold currencies on a sterling basis.

In the matter of Imperial preference, South Africa's position is less complicated than that of either Canada or Australia. She has practised some measure of preference since 1903, and when, in 1925, provision was made for reciprocal most-favoured-nation agreements with foreign nations, it was provided that such agreements should not apply to goods on which a preference had been granted to the United Kingdom. The preferential agreement with Australia was cancelled in 1926, but Canada and New Zealand, along with the United Kingdom, still enjoy preferential treatment. Trade with British countries always forms much more than half the total, though for a period of several years until 1930 the percentage had been steadily declining. In 1931 imports from British countries were 56½ per cent., and exports to British countries 82 per cent. of the total. The following table shows the origin of imports to and destination of exports from South Africa; gold bullion, exports of which to the United Kingdom amounted to £24.5, £33.4 and to £39.0 millions respectively, and specie are omitted:—

MERCHANDISE TRADE.
(In millions of pounds.)

Total	70.8	79.0	50.3	45.8	45.1	21.2

The decline in the British share of South African imports, which had been going on for some years before 1930, was due to an expansion in the total, to which motor cars and petroleum contributed very largely, while the amount coming from the United Kingdom remained almost stationary. When the slump came, however, United States imports, which had increased by 50 per cent. between 1925 and 1929, fell off more sharply than those from other countries. Motor car imports, for example, declined from £3.7 millions in 1929 to £1.4 millions in 1931, but while those from the United States fell from £2.5 to £0.8 million and those from Canada from £0.6 to £0.2 million British motor imports were maintained practically unchanged at £0.4 million.

The principal South African imports fall into two main classes, motor cars, machinery, and certain other iron and steel products—in most of which the United States is our principal competitor—and textiles and apparel, in which the chief challenge to our position comes from Japan, the industrial countries of Europe, and, in certain lines, from India. In cotton piece goods, of which we supply more than half, Japan has greatly strengthened her position during the last two years, partly at the expense of the United States, Italy and Belgium. Of rayon piece goods, which South Africa imported to the value of about half a million sterling in 1931, Japan supplied nearly half, whereas she only sent 1 per cent. of the much smaller import of 1929. Japan has also received a slightly larger absolute and relative share in the silk piece goods trade. Of imports of woollen piece goods this country supplied three-quarters, both in 1929 and 1931. France and Germany were our chief competitors, but their share was comparatively small.

If, therefore, South Africa wishes to offer any concessions at Ottawa, those which would be of most value to this country would be preferential treatment in respect of textiles, apparel, motor cars, machinery and iron and steel. On some of these the United Kingdom already receives preference, but in many cases the maximum duty is too low for the preference to be very effective. As, however, the Dominion has always tried to avoid a tariff policy which would increase more than need be the costs of its own industries, it is not likely to lend a very favourable ear to proposals which would involve an increase in the duties on foreign iron and steel manufactures. Nor, as the purposely protective duties on textiles and apparel are in most cases fairly high, is an increase of British preference in this field likely to be very easy to obtain.

The prospect of obtaining these concessions would be very much brighter were there any evidence that South Africa herself hoped to obtain substantial advantages at Ottawa. This Dominion has given singularly little evidence of interest in the forthcoming conference, and a glance at the statistics of her principal exports leaves the reason not far to seek. In the three years preceding the trade depression, 1927-29, exports of South African produce, apart from gold and diamonds, averaged £35.1 millions. Of this, £16 millions represent exports of wool, £3.8 millions hides and skins and £2.8 millions maize. No other export approaches these in value at present. Now wool, as we explained last week, is a fruitless subject for Imperial preference, as the Empire as a whole produces more wool than it consumes. This fact is recognised in South Africa, and therefore by far her most important export is ruled out of discussion. As to maize, the United Kingdom was taking, before the slump, about 70 per cent. of the South African output, but this is only a negligible part of total consumption in the United Kingdom. In the years 1927-29 we imported an average of 39 million cwt. of maize and maize products, of which 28 millions came from Argentina and about 5 millions from South Africa. To enable the Union to increase her sales of maize to us by means of a preference we should therefore have to penalise the British consumer in respect of nearly three-quarters of his maize supply.

In respect of the remaining large South African export, hides and skins, Great Britain is a much less important market. France, Germany, Italy and Belgium are all large purchasers of hides from South Africa, and France and the United States take a large share of the Union's goat- and sheepskin exports, the sheepskin purchases of the United States far surpassing our own. Except for our imports of wet oxhides from Argentina, the bulk of our hides and skins come from British countries, and it is therefore possible that the market for South African skins in this country might be extended without too great a burden upon the taxpayer.

As South Africa is very anxious to extend her overseas sales of fruit, it is possible that some preference in this direction will be asked for by the Union. It seems, however, clear that the only commodities an expansion of whose markets would afford the South African exporter a substantial immediate advantage, are just those in which there is no case for a preferential tariff by this country, so that South Africa can hardly be blamed for not taking a very lively interest in the forthcoming Conference. In addition, her own hands are to some extent tied by the most-favoured-nation treaty concluded with Germany in 1928. Article 8 of this treaty provides for most-favoured-nation treatment by each country of the produce or manufactures of the other

"provided that in respect of the goods now specifically enumerated in the existing legislation of South Africa the German Reich may not claim the minimum rates or rebates which can only be granted on such goods if produced or manufactured within Great Britain and Northern Ireland and the British Dominions, Colonies, Possession or Protectorates and when imported therefrom for consumption within the Union nor such minimum rates or rebates as have actually been granted to Canada and New Zealand respectively in respect of the articles specifically mentioned in Schedule II, Parts II and IV to Act No. 38 of 1925 of the Union of South Africa."

The italicised passages (the italics are our own) seem to imply that in respect only of existing and not of future

preferences is South Africa exempt from the obligation to extend them to Germany. This additional obstacle, superimposed upon the statistical situation analysed above, leaves very little prospect of any very far-reaching preferential agreements with South Africa.

THE FISHING INDUSTRY.

JUDGED by the number of persons which it employs or by the proportion of the annual value of its production to the total national income, the contribution of the fishing industry to the sum of our economic activities would not appear to be very great. It gives direct employment to approximately 60,000 persons in the United Kingdom; and in 1930 the value of the total British landings of wet fish was £18,803,000. These figures are hardly imposing when we compare them with those relating to our great manufacturing industries. But though the fishing industry has to-day lost much of the importance which belonged to it when England was still an agricultural country, and when, incidentally, the sailing ships of the Navy drew a much larger proportion of their seamen from the ranks of fishermen, its present position and the many difficulties confronting it are nevertheless deserving of attention. Fish is still a valuable element in the national food supply.

In Scotland the industry is not only in a critical condition; it is a factor of considerable importance in the life of the people. There are many miles of coastline along which small towns and villages are scattered where fishing is almost the only source of livelihood. To these communities the difficult times through which the predominantly Scottish herring industry has been passing since the war have brought real hardship. In England the greater part of the men employed in fishing are engaged in deep sea trawling, a section of the industry which until recently was making steady progress. But about a third of the total of English fishermen belong to the category of inshore fishermen, a class which may be compared with the smallholders of agriculture. While large-scale methods have been introduced into the industry, and at great fishing ports such as Hull, Grimsby and Fleetwood steam trawlers land about 95 per cent. of all British landings, the inshore fishermen using small boats, with crews of three or four, continue to carry on the old occupation of fishing in much the same manner as in the past. When the weather is rough they can fish only with difficulty and they land very little. When, on the other hand, conditions are favourable, their catch, though fresher than the fish brought in by long-distance trawlers, is only a small part of the total supply. In consequence, their bargaining power is small, and they often fail to obtain even a reasonable price.

Thus, with the exception of the deep-sea trawling section, the fishing industry has for some time been a depressed industry. The problem is the more urgent in that in just those sections which are most impoverished (the herring industry and the inshore fisheries) the position of the fisherman as a joint-venturer whose earnings take the form of a share in the profits places him outside the scope of the unemployment insurance scheme. Nevertheless, the economic facts which lie behind the difficulties of the industry are not such as to encourage the hope of any easy solution. They will be found fully set forth in the report published a few months ago by a Committee of the Economic Advisory Council.* The report brings out the fact that the increase which up till 1930 was taking place in the consumption of "white" fish (a term which, roughly speaking, includes all wet fish as opposed to shell-fish, with the exception of herrings, sprats, pilchards and mackerel) is largely to be attributed to a marked shifting of demand from herrings to white fish. White fish is not exported from this country on any large scale, and the industry is primarily interested in the home market. The British Trawlers' Federation has recently pursued a vigorous policy of advertisement financed by a levy, with the object of persuading the consumer to "eat more fish."

and the market has been further developed by improved methods of filleting fish at the ports and of direct supply from port merchant to retailer. Thus during recent years trawling has been an expanding industry. The fleet has increased in numbers, and is mainly composed of modern vessels specially constructed for the service. New fishing grounds have been discovered in the region of Bear Island, and the application of scientific research to the problem of discovering the best methods of storing and preserving fish on the voyage home from the fishing grounds is making possible on an increasing scale the exploitation of the more distant grounds. Thus between 1926 and 1930 British landings of white fish showed a substantial increase, while the figures for imports remained fairly constant. The total consumption of white fish increased over the same period from 13,326,000 cwt. to 16,809,000 cwt., and it is only recently that the effects of trade depression have made themselves felt in a marked fall in the quantity of British landings, and a more than proportionate fall in price.

Unfortunately, the increase in the consumption of white fish cannot be said to have reflected a growth in the prosperity of the fishing industry as a whole. As we have already observed, it has taken place to a considerable extent at the expense of a tendency to eat less herrings. A comparison of the average consumption of herring *per capita* during the years 1911-13 with that over the period 1927-29 shows a decline of 4.5 lbs. per head, or 35 per cent. In round figures this has meant a reduction in consumption of 1,400,000 cwt. out of a total production in 1913 of 11,763,000 cwt. But the herring industry has always depended in a large degree upon exports, and the decline in home consumption, serious though it is, has not been so disastrous in its effect upon the industry as the almost complete loss of the Russian market for pickled herrings. Before the war this important market accounted for roughly three-quarters of the total British cure. Including re-exports from Germany, Russia consumed about 1,600,000 barrels annually. Since the war she has been no more than an occasional buyer of moderate quantities at irregular intervals, her largest purchase being 276,000 barrels in 1924. In place of British herrings the Russian Government now obtains its supplies from Norway, who produces pickled herrings of an inferior quality but at a much cheaper price.

It is difficult to see in what way any substantial part of this market is to be regained. In 1931 the production of pickled herrings fell from 1,517,000 barrels to 879,000 barrels. Thus the industry is facing a period of acute crisis which comes on top of ten years of depression. Throughout those years the persistent problem of the industry has been that of redundant productive capacity. It is true that in comparison with pre-war times the number of vessels at work and of men employed shows a considerable reduction. But the loss of markets has been much greater. The Committee of the Economic Advisory Council, in considering the situation, were forced to the conclusion that a policy of maintaining or even increasing the productive capacity of the industry by the provision of loans to fishermen for the purpose of building new drifters could only lead to an intensification of the evils from which it was suffering. They felt more hopeful of the possible economies in costs to be obtained from the new motor-drifters with which experiments are being

conducted. They also recommended the setting up of statutory boards of producers to regulate the production and marketing of pickled herrings for export. At home it is possible that something might be done to increase the demand for herrings. But it is by no means certain that if the Norwegian herrings at present imported in the early months of the year were to be excluded, the kippering industry would be able to obtain regular supplies in sufficient quantity. A less hazardous line of advance might be found in the increased advertisement of the kipper. But at present the raising of the necessary funds would be difficult.

The problems of the herring industry are, in general, similar in character to those with which all our export industries are faced. In comparison with these, the case of the inshore fishermen is of a different kind. Their difficulties are due not to changing conditions of demand, but to the attempt to maintain, in a world where the scale of organisation is constantly growing, the individualistic methods and outlook of the past. For many years now those who have examined the position of the inshore fishermen have been unanimous in the opinion that only by adopting co-operative methods can these small producers hope to meet the competition of the large-scale trawling industry and resist the attempts of unscrupulous middlemen to force them to accept unduly low prices. The Fisheries Organisation Society, a body formed in 1914 under a scheme framed by the Development Commissioners, has done valuable work in advocating the policy of co-operation. But their efforts meet with serious obstacles in the conservatism and independence of the fishermen. Nevertheless, co-operation is essential if the inshore fisherman is to survive. Without it, it is difficult to avoid the conclusion that, except as a producer of luxury fish and shellfish, he is destined to lose ground even more rapidly in the future than he has been doing in the past.

AFGHANISTAN.

(BY A CORRESPONDENT.)

ORDER having been restored under a strong ruler, who will follow the path of progress at a less breakneck speed than King Amanullah, an era of cautious economic development is being opened in Afghanistan. The foreign trade of the country has never been large. It was estimated before the War at £5,000,000, of which two-thirds passed over the frontiers of British India; the bulk of the remainder went northwards to Russia, but a little wool and opium were exchanged on the Persian border. In 1924, when Russian Asia was disturbed, the value was placed some 20 per cent. lower, and since then prices have fallen heavily in Afghanistan as elsewhere. All estimates are, however, entirely uncertain, since no statistics of frontier traffic were maintained by the Afghan Government before 1931, and the Indian Government has in recent years recorded only the weights and quantities of goods at certain terminal railway stations, abandoning the attempt to assess money values at the head of the frontier passes.

British goods now hold but a small place in the Afghan market, for the familiar reason that their price is too high. Piece goods and hardware are Russian and Japanese; from Russia also come oil and tobacco, sugar and grain, while Japan supplies matches and hardware, perfumes and soap. Great Britain prevails in some types of machinery (not motor-cars, which are all American), while from India enter grain and salt, oil and tea. Afghanistan's chief exports are wool, carpets and rugs, which travel to both Russia and India, but her fruit sales are also considerable, while tobacco and grain are exported in quantities roughly equal to the imports, the exchange being due to difference of quality and season. A substantial balance in favour of Afghanistan is paid in treasure, amounting to £150,000 in 1930. The extension of the Khyber railway to the frontier has not appreciably added to the northern trade, the route from Quetta to Kandahar is still preferred; and, in view of the unsettled state of the country during the late disturbances, it is not sur-

prising that the total volume of goods crossing the frontiers has not increased. Afghanistan contains no railways, and though a proposal has been mooted that Japanese capital and engineers shall be employed in their construction, no final agreement has been reached. The suggested line would connect Kabul with Kandahar, and Kandahar with Herat, the direct Kabul-Herat alignment being rough and mountainous. A line would also run from Kabul towards the Khyber Pass, but if this were to surmount the 8,000-ft. ridge near Kabul Khurd, only a modest gauge would presumably be used in the interests of economy. Nothing has been said of a branch towards Kushk, on the Russian border, or to meet the narrow (2 ft. 6 in.) Indian line in the Kurram Valley from Parachinar to Thal. The Russian gauge is 5 ft., the Indian broad gauge at Quetta and in the Khyber Pass 5 ft. 6 in. The Afghan Government may perhaps desire to have a break at the frontier, and may prefer the metre gauge or the European 4 ft. 8½ in. to a wider and more costly scale. Full surveys have yet to be made.

In a hilly country, however, aeroplanes and roads enjoy an advantage over railways. Afghan pilots have been trained for military duty, but are not available in such numbers or with such experience as to man a commercial fleet. A weekly Russian air-mail connects Kabul with Termez, and thence with Moscow; and the German firm of Junkers has been granted a license for a service within Afghanistan and to the capital of Persia. There is at present no Indian connection, though the evacuation of the Kabul Legations by air in 1929 proves that no technical difficulties need arise. For outlying districts the prime necessity is a levelled but not always a metalled road, whereby the motor-lorry may penetrate to the villages, replacing the camel and the mule. Several roads round Kabul have been metalled, including the greater part of that to the Khyber Pass; a good unmetalled road runs to Kandahar, a variable track to Herat, and the three years' task of levelling the mountainous route to Mazar-i-Sharif in Turkistan should be completed in 1932.

Only when communications are open will the efforts of King Nadir Khan bear appreciable fruit. Afghans trained in France are starting to assist the silkworm-growers and silk-reelers of Kandahar, Egyptian and American cottonseed is being imported for acclimatisation on the Government agricultural farms, a raw sugar factory is working at Jalalabad, cloth factories are busy at Kabul and in Badakhshan, and a woollen shawl (pashmina) factory is established at Kandahar. Carpet-making with modern machinery has not been attempted, and there is a grave danger of standardisation and artistic loss when this occurs. Articles in which the producer's personal taste is relatively unimportant have wisely been handled first, and industries such as tobacco-curing, fruit-drying and the tanning of skins and hides await the attention of patriotic Afghans. If, as is hoped, the oil deposits in the neighbourhood of Herat are found to be of economic value, the progress of that remote province may be extremely rapid. The Ministry of Commerce has sent samples of the oil to Europe for examination, and is contemplating the grant of a monopoly. Foreign capital and enterprise will evidently be invoked.

Mining developments are anticipated, but previous efforts have been unsuccessful in consequence of the backward state of the country. Gold exists in the north, but is still inaccessible and its amount unknown. A mint has been set up in Kabul, but uses imported metal. Copper and lead are so situated as to be out of reach, lapis lazuli is worked only sporadically, but coal has now been found in an approachable position in the north of Kabul province, and its exploitation is to be begun. The finance of all these projects is not easily arranged. Afghanistan is reluctant to incur the liability of foreign loans, at all is scanty, and public confidence is weak. Financial help from America might be acceptable, but a guarantee of security from interference would no doubt be required by the capitalists from whom the funds are derived, and, however genuine the good faith of the Afghan ruler and his Government, an unexpected turn of fortune might always upset his plans. The annual revenue of the State is about £5,000,000, derived principally from Customs and

the land tax; the main heads of expenditure are the army and the civil administration, with minor allocations for education and public works. There is no margin for bold enterprises out of revenue, and the advance of Afghanistan must consequently be limited under present conditions to a moderate pace.

Notes of the Week.

The First Week at Lausanne.—Our special correspondent cables:—The Reparations Conference opened with a burst of excitement. The leakages and rumours indicated that some form of moratorium was contemplated, and for this Conference "moratorium" spells failure. But in the event, the signature of a declaration by the principal creditors of Germany that as far as they were concerned—and they invited all the other Powers to join them—all reparation and war debt payments due during the period of the Conference would be "reserved," was properly received as a preliminary success. It was due to British initiative, and was not brought about without difficult negotiations with the French. The cynics say that the Conference has now only to adjourn indefinitely, without ever formally dissolving, and its task is done; but the mere adjustment of reparations is only part of its problem. The Prime Minister has all along insisted that reparations must be regarded as a facet of the world crisis, and that whatever solution the Conference may reach must be of such a character as to provide a big stimulus, both psychological and direct, towards general economic recovery. So long as this broader view is maintained, the British case is impregnable. There is no sign yet of any relaxation of the British thesis, but the Conference cannot hang fire for ever, and Mr MacDonald's patience may break before M. Herriot's. Perhaps our strongest card is the argument that, if France were niggardly about reparations, we, as well as the United States, would have to insist on our rights under our debt agreements. M. Herriot has blown hot and cold; he is clearly worried, and the addition of American pressure for a big disarmament move has added greatly to his cares. The report that Mr Gibson associated debt revision with disarmament is officially denied, but it is widely believed that he presented the case for disarmament from the point of view of the American public, in whose mind the two things are clearly linked together. The French are very isolated at this Conference. They have, of course, their usual satellites in Eastern Europe, and they are reported to be making common cause with the Belgians in demanding "payement globale," after a moratorium, of 7 or 8 milliards of reichsmarks; but Great Britain and America are much closer than Great Britain and France over disarmament, and as far as reparations are concerned France stands alone against the rest of the Great Powers. The Germans are waiting and watching while others do the talking; perhaps that is as well, since it absolves them from having to make any flat declaration of refusal to pay, which Herr von Papen was careful to avoid in his admirably-phrased opening speech. On Wednesday and Thursday Franco-British negotiations reached a fairly definite stage. Mr MacDonald has attempted to confine the discussion to a consideration of four points on which there is general agreement. Firstly, the settlement must be final. Secondly, any solution must bring about a revival of economic confidence. Thirdly, Germany can pay nothing either immediately or during the period necessary for her recovery. Finally, if any proposal involves payment in the future, such payment must be possible as a result of normal commercial intercourse. It is in the interpretation of these principles that difference of opinion arises. The British delegation have made them the basis of powerful arguments for cancellation, which they have presented in reply to the statement of the French case which M. Herriot delivered on Wednesday. Briefly, the British position is this:—Finality, which is absolutely essential for a restoration of world confidence, is out of the question if future reparation payments remain hypothetical. Any

sum which Germany might with certainty be able to pay in the future is so small as to be almost worthless and would be altogether outweighed by the handicap on trade revival which the consequent uncertainty and political irritation would involve. Moreover, if at the end of an indeterminate period reparations had to be reviewed, Germany's private creditors would merely seize the opportunity to withdraw their credit. The revival of German economic life and of the purchasing power of the German people, so far from being a commercial handicap to other countries, is essential to their economic recovery. As to the argument that Germany's industry would receive an unfair advantage by being relieved of the reparations burden, Mr MacDonald is believed to have argued that, although reparations might be an intolerable charge on external trade, they form only a minute part of total German industrial fixed charges, and that, apart from borrowing, which cannot be continued indefinitely, it would be only by limiting imports and by forcing exports that reparations could ever be paid. It is not too much to say that the Conference has resolved itself into a pitched battle between economics and politics.

Mr Hoover's Show-down.—The phase of "private conversations" in which, as noted by our League correspondent in his letter on page 1404, the Disarmament Conference was still immersed during the earlier part of this week, was dramatically ended on Wednesday by the hasty summoning of the General Commission for the purpose of hearing proposals transmitted through Mr Gibson by President Hoover. The American proposals were, briefly: (1) That the armaments of the world should be reduced by roughly one-third; (2) that in the case of land forces, all tanks, chemical apparatus and large mobile guns should be suppressed; and that the strength of armies over and above a "police component" necessary for the maintenance of internal order and proportionate to the average allowed to Germany and other defeated States under the peace treaties, should be reduced by one-third, subject to necessary corrections for Powers with colonial possessions; (3) that all bombing aircraft should be abolished; (4) that the Washington Treaty numbers and tonnage of battleships should be reduced by one-third, and the Treaty tonnage of aircraft carriers, cruisers and destroyers by one-quarter; that the Treaty tonnage of submarines should be reduced by one-third (subject to a maximum for any nation of 35,000 tons), and that in carrying out these proposals the French and Italian strengths of cruisers and destroyers should be calculated as though they had signed the Treaty of London. In describing Mr Gibson's statement as "deeply interesting and profoundly important," Sir John Simon stated that the British Government welcomed the wide view thus taken of the disarmament problem. Reserving fuller judgment until he had had more time to study the proposals, he observed, however, that Great Britain would like to go further in the direction of abolishing submarines, or at least of limiting their size to the strictly "defensive" limit of 250 tons. In addition, he suggested that the proposals might also be supplemented by agreement to reduce to 25,000 tons all future capital ships and to reduce gun calibre from 16 inches to 12 inches. Signor Grandi announced Italy's unconditional acceptance of Mr Hoover's terms, and a warm welcome was also accorded to them by M. Litvinoff for the U.S.S.R. and Herr Nadnoldy for Germany. Objections, however, were at once raised in the name of France by M. Paul Boncour, who is reported as saying that the Hoover proposals would be unacceptable to France unless they were coupled with the acceptance of the French plan for the organisation of an international "security force." The reception of the proposals by the French Press of the Right was unequivocally hostile.

King Albert's Message.—Last week-end it was announced from Brussels that King Albert had sent an important message to M. Renkin, the Belgian Prime Minister, who is attending the Lausanne Conference. The message began by referring to the opinion, expressed by

all experts consulted by governments since the war, that the prosperity of nations depends on greater freedom of movement for goods, capital and labour. It went on to observe that, in the words of the Financial Committee of the League of Nations, the present measures taken by each State, acting alone, in an endeavour to escape the effects of the crisis are resulting in the strangulation of international trade, the paralysis of markets both at home and abroad, and the doubling of the number of unemployed.

There is thus definite proof that no country can alter the course of economic evolution to its own advantage by the use of its own resources. Only concerted action and international solidarity can remedy the ills from which the world is suffering. It is time for this solidarity to be shown otherwise than by words. It seems to me that Belgium should not hesitate to take the initiative in this direction required by circumstances, and to this end to associate with herself those other States which are convinced of the need for a change in economic policy.

This admirably phrased message was followed, as we show below, by consequences in the sphere of fiscal policy which we trust will ultimately prove far-reaching.

The Dutch-Belgian Tariff Convention.—Within twenty-four hours of the publication of King Albert's message, there came from Lausanne the news that the representatives of the Dutch, Belgian and Luxemburg Governments had initialled at Ouchy a Convention "for the reciprocal and progressive reduction of economic barriers," to be submitted without delay for the approval of the respective Governments. The Convention, which is a sequel to the Oslo Conference of eighteen months ago and subsequent conversations at Hamburg, begins with a preamble in which the contracting parties declare their desire to take concerted action towards the progressive realisation of greater freedom of trade—action in which all countries shall have the opportunity to join. The signatories undertake in their reciprocal relations to impose no fresh duties, and to proceed, by means of an annual reduction of 10 per cent., to lower the existing duties to a certain level which, it is understood, is contemplated as 8 per cent. *ad valorem* on manufactured goods, and 4 per cent. on semi-manufactures. Any other State may adhere to the Convention on a footing of equality with the signatory States. We regard the Convention as a most promising development which, we hope, will have the unqualified support of the British Government, more especially since adhesion by the three Scandinavian countries is likely to be dependent on the attitude which this country adopts. As our League correspondent points out on a later page, the Convention frankly represents a departure from the most-favoured-nation principle which in the past has proved an important safeguard against fiscal discrimination. Simply to abandon that principle unconditionally would run the risk of producing a situation in which endless bilateral bargains would lead to a deplorable series of unsettling changes and tariff chaos. But the Dutch-Belgian Agreement provides, in our view, a basis for policy which entails none of these risks. While providing for the case of countries which stand in imperative need of revenue from low tariff duties, it establishes a standard of sane, liberal commercial relationships, whose advantages are open to any State which is willing to conform to that standard. We should welcome the prompt adhesion of this country to the Convention, a step which would in no way prevent us from giving still more favourable terms, should we so desire, to Empire products.

The Politics of Steel.—In his despatch this week our Berlin correspondent writes of the sensation caused in Germany by the disclosure that one of the last acts of Dr. Brüning's Government was to acquire a controlling interest in the German Steel Trust. He refers to the not unnatural feeling in Germany that in view of all the circumstances surrounding this transaction much that is yet unexplained requires to be cleared up. On the face of it, the purchase, at a price far in excess of the market quotation, of the Gelsenkirchen shares seems to require explanation. Rumour is busy with the suggestion that the German Government, in deciding secretly to acquire a majority holding in the Trust, was constrained to do so

at all costs in order to prevent acquisition of control by interests associated with the French Comité des Forges. The question at once arises what the motives of the foreign bidders were in fact, or were supposed to be by the German Government. Economically there is much to be said in favour of restoring the closer union between Lorraine and the Ruhr which existed when Lorraine formed part of Germany. Such a re-union, straddling a vexed frontier, would obviously give rise to difficult questions of control; and it is possible to suppose that the German Government, in retaining majority ownership of Gelsenkirchen shares within the Reich, had primarily economic considerations in mind. It is only too easy, however, for the suspicion to gain credence that political motives, especially having regard to the potential importance of the German Steel Trust in relation to European armaments manufacture, underlay the move which Dr. Brüning sought to forestall. The currency of suspicions and suggestions of this nature is liable to do incalculable damage, and the more light that is thrown upon this transaction the better.

The Lords and Economy.—In the course of a debate on Wednesday in the House of Lords on a motion, proposed by Lord Hunsdon, calling upon the Government "to secure a further reduction of public expenditure and a corresponding reduction of taxation," a contribution of considerable interest was made by Lord Reading, who dealt particularly with the large proportion represented in the Budget by the item of interest and management costs of the National Debt. Observing that a successful conversion scheme which yielded a saving of 1 per cent. on the 5 per cent. War Loan would mean a net gain to the Treasury of only some £15 millions a year, Lord Reading suggested that, on the basis of the present price level and the prospective situation of the Budget, this was unlikely to be enough. He could conceive circumstances in which the Government might find it necessary to take very strong measures—a suggestion whose implication presumably is that there should be a statutory reduction in the rate of interest on all Government securities. Lord Reading was doubtless "thinking aloud" rather than intending at this stage to make any definite proposal on these lines; but support for the principle was forthcoming from the Marquis of Linlithgow, who expressed the opinion that we cannot hope ultimately to correct the disharmony between revenue resources and national expenditure, unless we scale down proportionately the income of the *rentier* from the National Debt.

Austria's Transfer Suspension.—As we go to press the position in regard to the international loan for which the Austrian Government has been asking is still somewhat obscure; but whether or not the current reports are authentic that a loan of 300 million schillings was viewed favourably by the Joint Committee of League and Treasury experts appointed to consider the question, it seems clear that the statesmen at Lausanne are far from being in agreement on temporary aid for Austria. According to reports which still lack confirmation, France has demanded as a condition for her participation in an Austrian loan not only unacceptable political concessions from Austria, but an undertaking from Great Britain that she will join in contributing financial assistance for the States of the Little Entente—an undertaking which the British Government are not prepared to give. However this may be, the Austrian Government on Thursday appeared to have abandoned hope of immediate assistance from abroad, and a partial transfer moratorium came into operation on that day, covering, apparently, for the time being, not commercial indebtedness, but all State and municipal obligations to foreign creditors. The development is none the less regrettable because its inevitability has for some time been foreseen.

Lancashire and Ottawa.—The breakdown of the Conference between the representatives of the British and Canadian cotton industries underlines one aspect of the difficulties which confront the Ottawa Conference. So far

as can be judged from cabled summaries of the statements issued by the two sides in Ottawa on Tuesday, the British delegation contended not only that their trade was greatly handicapped by the complex Canadian tariff, but that the present levels of Canadian protection were excessive and unjustified by the difference in production costs. The Canadians appear to have considered the British demands for lower duties on a flat-rate basis unacceptable on the ground that they would fail to give adequate "shelter" to the Canadian cotton industry, though they were ready to support the diversion of imports from foreign countries to British mills by an increase of general tariff rates coupled with a system of preferential drawbacks. Here stands revealed the formidable obstacle which will be presented at Ottawa by the insistence of Canadian industry on a policy of "ourselves first."

Reich, Länder and Nazis.—The dispute between the present Government of the German Reich and the Governments of the three Southern Länder of the Reich—Bavaria, Württemberg and Baden—over the question of re-legitimising the Brown Army is taking a more and more serious turn. On Thursday of last week President Hindenburg promulgated a decree releasing the Nazi Brown Army—and likewise the Stahlhelm organisation—from the restrictions under which they had been placed by a series of decrees issued during the last twelve months of the Brüning regime. This lifting of the ban has been hedged about with certain reservations and warnings; but, in substance, the Brown Army will recover a free hand if Herr von Papen's Government has its way; and the three Southern States have made up their minds that they will not tolerate this. Apart from the former decrees of the Reich Government, the States have imposed bans of their own, and they have signified that these bans will not be lifted. The legal situation is complicated and obscure; but it is obvious that it involves the whole vexed question of the respective powers of the Länder and the Reich; and though, under the Weimar Constitution, it might be open to the President of the Reich to use his emergency powers in order to suspend the rights of the States in this as in other respects, the use of these powers for this purpose in these circumstances would be an almost revolutionary act, to which the States might conceivably retort by secession. The prospect is dark; for Herr von Papen seems to have given certain undertakings to the Nazis which he is being pressed to honour, so that both parties to the controversy are in an unyielding mood. Last week-end brought a heavier toll than usual in casualties, in both North and South, in those week-end political affrays which have now, unhappily, become almost a normal feature of German life. The tension is increased by the fact that "the Brown House"—the headquarters of the National Socialist Organisation for all Germany—happens to be in Munich. On Wednesday there was a conference at Berlin between the Ministers of the Interior of the Reich and the States; but no agreement was reached, and the rift was merely widened by the exposition of the conflicting opinions—Baron von Gayl speaking for the Reich, the Nazi Premier of Oldenburg and the Nazi Minister of the Interior of Brunswick for the Hitlerites, and the Badener, Württemberger and Bavarian Ministers for the Southern "States Rights" standpoint. The Southerners have gone home to report; and there, at the moment of going to press, the German crisis stands—unresolved and menacing.

Chile in Turmoil.—Chile is a rather different kind of country from the majority of her Latin-American neighbours. There is something dour and almost "Nordic" in the Chilean temperament. Normally, public affairs in Chile are orderly and stable; and so, when Chile does catch the Latin-American distemper of revolution she is apt to take it hard. So it seems to be on this occasion. In origin, the present revolution in Chile is obviously one of those revolutionary outbreaks in which Latin-America has been giving vent to her distress, under the pressure of the economic crisis, during the last two years. In most Latin-American countries this kind of revolution is not a

very serious affair. It is a sort of political thunderstorm which blows over as suddenly as it blows up; and you can go through quite a number of them in a twelvemonth without being very much the worse—or, of course, very much the better either. The present Chilean outbreak is evidently more grim. There is real class-warfare and real xenophobia here; and the revolutionaries have unleashed more violent forces than they had suspected. The realisation of this danger has resulted in a strong swing back towards the right—though it remains to be seen whether the forces of disorder can still be brought under control. This reaction declared itself in a counter-revolution which was carried through on the Thursday and Friday of last week, June 16th and 17th. Colonel Grove and Señor Matte have been hurled from power and hustled off the Chilean terra firma to cool their heels in a distant island; a new Junta has been set up under the Presidency of Don Carlos Davila, one of Colonel Grove's original associates; and the new Government is trying to fortify its authority by obtaining the blessing of the late President (or is he still judicially the reigning President?), Señor Montero, and the last President but one, Señor Ibañez. This turn of the wheel, however, has not been accomplished without friction. It displeases the air force as much as it pleases the infantry; and, what is more serious, it has provoked an *émeute* among a Communist element in the Chilean working class. The country is now under martial law, and there has been severe fighting between the Communists and the Carabineros (gendarmes) in Santiago and Valparaíso. The tragic feature of the situation is that these disorders are calculated to aggravate, as nothing else could, the very ills by which they have been evoked.

Seizure of the Dairen Customs.—The Manchukuo Government—or rather the Japanese officials who are pulling the strings of the puppet—have now carried out their threat to seize the Customs in Manchuria, and they have begun at Dairen. Financially this is intelligible, since Dairen is the principal Manchurian port, and this is the point where the Customs receipts can be tapped with the greatest profit to the tapper. On the other hand, from the diplomatic point of view the scandal is flagrant. To begin with, Dairen is in the Japanese leased territory of Kwantung, and nobody can lift a finger there without the Japanese Government's permission; so that the Japanese Government has now thrown away all pretence of being aloof from the Manchukuo Government's acts. In the second place, this is a breach of an agreement which was concluded between the Japanese and Chinese Governments in 1907, only two years after the leased territory came into Japanese possession as a result of the Russo-Japanese War. Under that agreement Japan undertook to leave the China Maritime Customs Administration in control of the Dairen Customs, and this agreement has been observed ever since. It is strange policy for Japan, who claims that her high-handed action in Manchuria is all in defence of her treaty rights, to brush aside an international agreement of such long standing in this cavalier way. The Manchukuo Government has given the inevitable undertaking that it will pay, out of these Customs receipts, the proper quota towards the service of foreign loans; but, even if this undertaking is carried out, this is not the most important point. It is a matter of general international interest that the Maritime Customs should not be prevented by force, at any point in Chinese territory, from carrying out their lawful duties. And who can guarantee that the Manchukuo Customs service will not be misused, by the Japanese officials who will control it, for the illegitimate purpose of unfairly favouring Japanese to the detriment of non-Japanese trade? These are the really important issues which this fresh act of Japanese lawlessness raises.

The Elections in Malta.—Lord Strickland has made his peace with the Roman Church; and in the General Election which has just been held in Malta, thanks to the restoration of the Constitution which the appeasement has made possible, Lord Strickland has achieved a personal triumph, inasmuch as he has been elected in each

of the four constituencies in which he was a candidate. All the same, the late Maltese troubles have left an aftermath which may still prove troublesome. Though the Church has forgiven Lord Strickland, it has thrown its weight in the elections—as was perhaps only human—on the side of the opposite party; and the result is that the Nationalists and not the Constitutionalists are now in office. Sir Ugo Mifsud, who was Prime Minister from 1924 to 1927, formed his Ministry at the beginning of this week. As far as can be judged, the return of the Nationalists to power is a demonstration of the Maltese people's dissatisfaction with the anti-clerical attitude of their predecessors rather than a positive declaration in favour of the Nationalist policy. But the fact remains that the Nationalists, for whatever reason, have been given a majority; and there is a troublesome possibility that the late dissensions between the Constitutionalists and the Roman Church, which have lasted so long and have been composed with such difficulty, may now be followed by dissensions between the Nationalists and the Imperial Government. The Imperial Government has been compelled, until this week, to re-assume the direct administration of Malta, because constitutional government has been impossible during the continuance of the veto—only lifted the other day—which had been imposed by the ecclesiastical authorities upon the giving of Catholic votes to Lord Strickland and his political friends. The Imperial Government's intervention was no doubt necessary; but it obviously gives a handle to any political party in Malta which wishes to stir up Maltese public opinion against the British regime. Now, unfortunately, the Nationalists have been given a definite incentive for going into opposition to the British Government owing to action lately taken by the Imperial authorities, under letters patent, in depositing the Italian language from its former status as one of the languages of public instruction in Malta. The step was not unreasonable in itself, for Italian appears not to be current among more than about 10 per cent. of the Maltese population, whose native speech is a Semitic language. Nor do we believe that the Nationalist Party's policy of union with Italy really represents the wishes of the mass of the Maltese people. The situation in Malta is not on all fours with the situation in Cyprus. It is all the more to be regretted that the Imperial Government should have done anything to give the Maltese Nationalists the appearance of a grievance.

Spanish Developments.—The disintegration within the ranks of Spanish syndicalists which became evident in the early part of this year was carried a step further this week by the publication in Barcelona of a manifesto, signed by well-known former militants of the National Confederation of Labour, which concludes with a strong appeal for positive action to uphold the achievements and progressive work of the Republic against the growing forces of reaction. This is a somewhat tardy rejoinder to the breakaway of the section headed by Señor Joaquín Maurín, with his programme of "libertarian communism." The Maurín group is a compact and formidable minority, however, sufficient to keep the good citizens of Barcelona in a state of nervous tension when they see them being drilled in semi-military fashion in readiness for a campaign of violence should any clash between Colonel Macia and the Central Government provide the opportunity. Article 1 of the Draft Statute has now been passed. It defines Catalonia as "an autonomous region within the Spanish State, under a constitution . . ." thus explicitly rejecting the claim of Catalans to equal sovereignty through the words "Catalan State," which were included in their own Statute framed and ratified by a plebiscite amid such acclamation last summer. Naturally, the extremists on both sides are dissatisfied, and one of the Catalan deputies, Señor Carrasco Formiguera, was expelled from the minority group because he refused to accept this agreed text. It is evident, however, that Colonel Macia perceives the wisdom of consenting to a certain amount of give and take.

A New Index of Profits.—Readers of the *Economist* will recollect that in our issues of April 30th and May 7th last we gave the results of an investigation which we had made into the profitability of British industry by re-analysing our quarterly summaries of company results. We classified joint-stock undertakings into three groups:—(1) Manufacturing and mining; (2) transport, distribution and services; and (3) companies operating overseas. We eliminated from our list all investment trusts and financial companies, all concerns controlling or controlled by other companies, and all but a sample of the large number of rubber companies whose profits were recorded. Being thus left with a conveniently-sized residue of some 700 companies, we grouped their trading periods on the basis of the income-tax year, thus obtaining a weighted average of the terminal dates of companies' years within a few days of December 31st. In order to show more clearly broad changes in the profitability of industry, rather than dividend-paying capacity, we added back, in each case, the debenture interest paid, since our quarterly summaries show net profit after payment of debenture interest. It now transpires that simultaneously with our examination Sir Josiah Stamp was also working on the data provided by our profit summaries. The results of his investigations were given in the presidential address which he delivered to the Royal Statistical Society on June 21st. We cannot attempt here to summarise the many points of interest raised in his paper; but the gist of what he has done is as follows. In order to overcome the difficulty of the "spread" of terminal dates of companies' years, Sir Josiah has taken only the summaries of reports published by us in the first two quarters of each year, a method which gives him an average terminal date of January 14th. This done, he has taken our aggregate figures after payment of debenture interest and combined them with the statistics of assessments under Schedule D of the income tax. From the resulting figures he has constructed a general profit index. Further, using only the *Economist* figures, he has compiled an index of the profits earned on equity capital after deducting preference dividends. We give below the series from 1925 to 1930 of Sir Josiah's two new indices, together with those for the separate groups published in our issues quoted above:—

	1924=100.			Stamp's Indices.	
	<i>Economist</i> Indices.			General.	
	Manufac- ture, &c.	Transport, &c.	Overseas.	General.	Equity Capital.
1925	92	105	110	104.1	109.3
1926	82	100	107	98.3	103.0
1927	104	110	103	106.5	111.4
1928	101	115	101	106.2	110.7
1929	109	120	95	109.9*	114.3
1930	91	109	74	100.9*	94.4

* Provisional.

So far as the index of profitability of equity capital is concerned, the obvious drawback from the long-term period point of view is that alterations in the "gearing" of company capitalisation might result in an industrial recession of identical dimensions producing at two different dates quite disproportionate results on the index. The general index of profits, which Sir Josiah has compiled, is open to the objections, which we endeavoured to avoid in our three group indices, that the data on which it is based include a good deal of reduplication of profits in the case of holding companies and their subsidiaries, and that results which are obtained by lumping together concerns operating both at home and abroad fail to throw as clear a light as might be desired on the profitability of British industry proper.

Cotton Trade Problems.—During the past week, writes our Manchester correspondent, there has been considerable interest in Lancashire cotton trade circles with regard to the result of two ballots which have been in progress. The members of the Northern Counties Textile Trades Federation, which embraces the nine trade unions in the weaving branch of the industry, have voted on the question of striking against the decision of the employers to

terminate all wages and hours agreements, the alternative vote being in favour of negotiating with the employers for a new agreement. At the time of writing the figures are not known, but as the Executive Council of the Operative Weavers' Amalgamation have recommended their members to vote for a strike, and as this union controls about 75 per cent. of the members of the Northern Counties Textile Trades Federation, it is anticipated that there will be a big majority in favour of labour being withdrawn from all the mills in membership with the Cotton Spinners' and Manufacturers' Association, the organisation which has been instrumental in abrogating all hours and wages agreements. Nevertheless, even should the ballot reveal a strong vote for strike action, it is quite probable that the trade union officials will ask for a joint conference with the employers to discuss the situation before issuing strike notices. The old hours and wages agreements came to an end on June 11th, and since then several firms in Blackburn and one large concern in Preston have been successful in getting their operatives to accept a reduction in wages of 12½ per cent. on current rates, which is equal to 22½ per cent. off piece list rates. The Joint Committee of Cotton Trade Organisations is also expected to publish this week-end the result of the ballot on the scheme for dealing with surplus machinery in the spinning section. In connection with this ballot the vote has been taken by the Master Spinners' Federation and the Cotton Spinners' and Manufacturers' Association for their members, while for outside firms the voting papers have been dealt with by the Joint Committee itself. Although the figures have been kept private, there is ground for believing that the result will be less satisfactory than the previous ballot held earlier in the year. On this occasion the spinning employers have had a detailed scheme before them when voting, and it is very doubtful whether the support given to the proposals will be sufficient to warrant the Joint Committee in proceeding with the matter and asking the Government to provide the legislative facilities in order to make the scheme compulsory.

Germany's Foreign Trade.—According to the Statistische Reichsamt, Germany's foreign trade turnover in May shows a reduction of 12.2 per cent. on the preceding month. As the following table shows, the shrinkage in exports has been uninterrupted since October last year, while imports, after a brief expansion in April, touched a new low level during the past month:—

(Millions of Reichsmarks.)				
Period.	Retained Imports.	Domestic Exports (excluding Reparations in Kind).	Export Surplus (+) Import Surplus (—).	Reparations in Kind.
1929—Total	13,447	12,663	— 783	819
1930 "	10,393	11,328	+ 935	707
1931 "	6,727	9,206	+ 2,479	393
1931—October	483	866	+ 383	13
" November	482	738	+ 256	10
" December	491	712	+ 221	26
1932—January	425	530	+ 105	12
" February	441	527	+ 86	11
" March	364	516	+ 152	9
" April	427	472	+ 45	9
" May	351	438	+ 87	9

The heavy fall in imports is ascribed mainly to falling-off in raw material purchases from Rm. 220 millions in April to Rm. 176 millions in May. The category of food and drink, at Rm. 116 millions, shows a decline of Rm. 27 millions on the preceding month, and manufactures, at Rm. 57 millions, have fallen to insignificant proportions. The shrinkage in exports, though less pronounced, is largely the result of the ever-increasing trade restrictions. Raw materials and semi-manufactured articles fell from Rm. 88 millions in April to Rm. 74 millions in May, while manufactures, at Rm. 351 millions, show a reduction of Rm. 17 millions.

Employment and the Cost of Living in May.—According to the current number of the *Ministry of Labour Gazette*, the percentage unemployed among insured workers in Great Britain and Northern Ireland on May 23rd was 22.1, as compared with 21.4 per cent. on April 25th and 20.8 per cent. on May 18, 1931. It is

estimated that the total number of insured workpeople in employment on May 23rd was approximately 9,402,000, as compared with 9,484,000 a month earlier and 9,516,000 on May 18, 1931. In considering the above figures, however, it should be borne in mind that those for May 23, 1932, relate to the Monday after Whit-week, when employment is usually low owing to extensions of the holiday period, whereas those for May 18, 1931, relate to the Monday before Whit-week, when employment is normally relatively high. The number of persons wholly unemployed on May 23rd amounted to 2,001,127, and was 80,761 less than a month earlier, but 156,182 more than on June 1, 1931. The number of persons temporarily without work on these dates totalled 680,664, 516,563 and 668,973 respectively, while the unemployed among those usually in casual employment amounted to 109,515 on May 23rd, or 5,785 more than a month ago. With regard to the cost of living during May, the index number of the Ministry of Labour stood on June 1st at approximately 42 per cent. above the level of July, 1914, as compared with 43 per cent. on May 1st and 45 per cent. a year ago. For food alone the corresponding indices were 23, 25 and 27 respectively.

United British Insurance.—Originally founded in 1915, the financial history of this company in late years has been a history of repeated losses. In one only of the past seven years—namely, in 1926, when a small profit was made—has the company succeeded in averting a trading loss on its operations, and the combined results of these years show a loss on balance of £285,000, of which £233,000 is due to marine insurance. Two years ago the company was reorganised, and the control passed from the Motor Union to the Royal Exchange and the General Reinsurance Corporation of New York. Association with the latter has been responsible for a rapid and large expansion in the accident account, but the business has proved unprofitable and is now to be taken over by the General Reinsurance Corporation. When this change has been effected, the company will be left with fire premiums of just over £100,000, and with accident premiums of probably something under £150,000. So far as the results for 1931 are concerned, it is satisfactory to note that while they show a loss on trading, the figures show an appreciable improvement over those for 1930. The detailed results are set out below:—

	1930.		1931.	
	Amount of Profit.	Percentage of Premiums.	Amount of Profit.	Percentage of Premiums.
Fire	£10,797	— 9.0	£7,985	— 7.1
Accident	265	8.7	—	—
Employers' liability	219	2.3	4,091	1.3
Motor and General	—19,170	— 5.7	—	—
Less items carried direct to profit and loss account ..	—29,483	—	—3,894	—
Total net trading loss	3,480	—	175	—
Add net interest earnings ..	32,963	—	3,719	—
Total amount available ..	32,966	—	32,906	—
Less preference dividend ..	3	—	29,187	—
Total net increase or decrease in surplus assets ..	21,700	—	21,000	—
Less increase or decrease in surplus assets ..	—21,697	—	+ 8,187	—

No dividend has been paid since 1925.

University Life Assurance.—This society is a small, old and very select affair. The society works under the shadow of the old Equitable, which controls the share capital, and the policyholders have the further advantage that the controlling company guarantees minimum rates of bonus of 30s. per cent. for the first ten years and 35s. per cent. thereafter on all "with-profits" policies. The present rate of bonus declared in each of the last two quinquennia is 50s. per cent. per annum. The society was originally founded in 1825, and membership was then restricted to past and present members of the Universities of Oxford and Cambridge. Since that time the scope has been somewhat widened to include membership of all other universities and public schools and certain educa-

tional institutions, but this restricted area and the absence of any commission payments has naturally imposed a slow rate of growth on the society. Nevertheless, in 1931 new business of £217,630 was transacted, compared with £168,785 in 1930, and the society's total assets now amount to £1,417,000. The expense ratio in the absence of commission is very moderate, and works out at 7.1 per cent. (after adjusting for single premiums), while the rate of interest earned last year was £4 4s. 7d. per cent., and shows a reduction of 3s. 1d. per cent. as compared with 1930. The assets have been retained at the values placed upon them on the occasion of the last quinquennial valuation on December 31, 1929, and at the end of last year showed in the aggregate a depreciation of under 4 per cent. on the book values. This depreciation of £57,000 is more than covered by the carry-forward from the last valuation of £87,000.

LEAGUE OF NATIONS.

Disarmament — Tariff Convention.

(FROM OUR CORRESPONDENT.)

GENEVA, June 21.

THE Disarmament Conference, at the time of writing, is still in the stage of conversations between the representatives of the most heavily armed Powers. Sir John Simon and Sir Herbert Samuel have been busily engaged in conversations with the Americans and the French on precise points, and though experience teaches prudence in expectations, the area of possibilities has certainly widened. M. Herriot is an uncertain quantity, but he does represent a less rigid France, and his colleagues and supporters of the Left are actively concerned to see that he pursues a liberal policy both at Geneva and Lausanne. In any event, the Tardieu plan is no longer France's alpha and omega. The French are now considering what their positive contribution can be. They are credited with definite propositions for a 10 per cent., even a 15 per cent., reduction in national expenditure on armaments and limitation at that level; and for suppression of heavy artillery and of heavy bombing planes. The Americans are pressing for a scheme for limitation of effectives. The British are themselves uncommunicative about their proposals, but from other quarters concerned in the conversations an exceptionally interesting and important plan is reported. It explains possibly the misunderstanding which arose about a supposed British idea of calling for an armaments truce at present levels—an obviously absurd proposal and one categorically denied by the Prime Minister. So far as can be gathered, and subject to considerable reserve, what the British have been suggesting is that for certain categories of the armaments forbidden to Germany by the Versailles Treaty there should be a long truce in construction, during which no replacements should take place. It has been said that the proposal applies to all armaments mentioned in the Versailles Treaty, but this seems scarcely probable, if only from the fact that the British are not prepared for the abolition of military and naval aircraft, and in fact are said not to be going quite as far as the French in respect of heavy bombing planes.

These are, however, extremely promising lines of discussion. If it were possible to reach an arrangement by which there were a 10 or 15 per cent. cut and limitation in expenditure, coupled with a sufficiently long construction holiday without replacement for the more aggressive weapons, such as capital ships, heavy guns, large submarines and heavy bombing planes, it could not be considered a negligible start. It would, of course, fall short of the abolition of all aggressive weapons at one step, but it might well lead to their senile decay and death. The matter of effectives would not be so urgent, and it might be well worth while leaving it to some extent alone as a concession to obtain such a beginning. The Americans, however, have been pressing the effectives issue, and

appear to be in a mood not to fall into line on budgetary limitation unless something is done about it.

The signature at Lausanne of a convention for the gradual and reciprocal reduction of tariffs between Holland, Belgium and Luxembourg, and the letter of the King of Belgium to his Prime Minister reflecting the general lines of the report of the League's Economic Committee, have created great interest in Geneva. This is not merely because the agreement is a piece of practical business in the only direction in which trade can hope to revive, or because it is action in a world which has been letting all things drift, but also because of the character of the agreement which is being submitted without delay to the respective Governments. The agreement asserts the conviction of the signatory States that the gradual realisation of greater freedom in international trade is one of the essential conditions of world prosperity, and that their concerted action has been taken in this sense. They undertake in their reciprocal relations not to impose new Customs duties and to reduce existing duties by 10 per cent. annually, down to a certain fixed level. They also undertake not to apply any new measures of restriction except in special defined cases. Any other State can adhere to the convention on a footing of equality with the signatory States. This, of course, implies a derogation of the most-favoured-nation clause, but the three Governments hold this to be in accordance with the exceptions which the League Economic Committee has regarded as legitimate. It may be that there are States which will not like this development and possible similar developments with the northern European countries, but they have their opportunity to join in, and it would be unfortunate if the most-favoured-nation clause were to be an obstacle to the formation of at least one oasis of common-sense, with the rest of the world insisting upon remaining a desert in which international trade is gradually drying up.

Taking the foreign trade of the principal countries in January and February, 1929, and comparing it with January and February, 1932, the setback in the two months of this year has been 58.8 per cent. for January and 53.2 per cent. for February on imports, and 60.4 per cent. for January and 54.4 per cent. for February on exports. Between January, 1930, and January, 1932, the effect of the economic depression and the measures taken for the control of international trade have been disastrous in every country of any significance. In the United Kingdom, for example, the setback in imports has been 39 per cent. and in exports 47 per cent. in value; in Germany the figures were 66 per cent. and 49 per cent.; in France, 51 per cent. and 51 per cent.; in Italy, 52 per cent. and 46 per cent.; in the United States of America, 58 per cent. and 63 per cent.; in Japan, 37 per cent. and 53 per cent.; in Canada, 60 per cent. and 49 per cent.; in South Africa, 47 per cent. and 48 per cent.; in Belgium, 50 per cent. and 40 per cent.; and in Brazil, 44 per cent. and 21 per cent.

IRISH FREE STATE.

Politics — Tariff — Foreign Trade.

(FROM OUR CORRESPONDENT.)

DUBLIN, June 20.

THE internal problems of the Free State are completely overshadowed by the international complications which have arisen between the British and Irish Governments. A momentary optimism was aroused by the news that conversations were to take place between representatives of the two countries, but the result of the conference has been to make matters worse rather than better. A complete deadlock seems to have arisen, and it is difficult to amount of climbing down by one or both parties. It is by way of reprisal for the retention of the Land Purchase Annuities, and any measures so taken will necessarily prove injurious to the Free State, which has already quite enough troubles to contend with. It is, moreover, almost certain that no agreement will be concluded between

Great Britain and the Free State at Ottawa, and in view of this it is doubtful whether any benefit is to be gained from the Irish delegates' attendance at the Conference.

The haste with which many of the protective tariffs imposed by the Budget were adopted is proved by the numerous alterations that have already had to be made as the result of experience of their working in practice. The alterations, however, are in matters of detail, and the general protective policy has been, if anything, intensified in the last few weeks. New duties have been imposed on meat, and the area of agricultural protection has thus been extended. The dangers of discriminatory rates of duty for different firms engaged in the same industry have been shown by the decision of one of the largest tobacco factories to close down as the result of the preferential excise duty enjoyed by some of its competitors. Considerable unemployment will result from this decision, and the prospect of absorbing the unemployed in some of the other protected industries is very conjectural.

Needless to say, the new tariff has encouraged a certain number of outside firms to open factories in the Free State. The entry of these foreign capitalists is by no means welcomed by the Government, which is anxious to retain the benefit of the tariff for its own citizens. In pursuance of this policy it has introduced a Bill forbidding outside firms to open in the Free State without a licence from the Minister for Industry and Commerce, who is given a complete discretion in the matter of granting or refusing a licence, and power to impose conditions for a grant. This measure invests the Government with considerable powers of control over industry in the Free State, and is pregnant with serious evils unless it is most cautiously employed. It really marks the introduction of a "planned economy" with the Minister as the planning dictator, and is distinctly socialistic in tendency. It is very doubtful whether it will achieve the object of repatriating Irish capital, as capitalists will not invest unless they see a reasonable hope of political security ahead. It is, of course, obvious that the refusal to permit the most unrestricted competition within the protected area may well encourage the survival of relatively inefficient firms, with consequent injury to the consuming public.

The latest Trade and Shipping Statistics contain a very valuable review of the external trade of the Free State from 1924 to 1931, from which several interesting features emerge. With the single exception of Russia, the trade of the Free State declined less in 1929-31 than that of any other country in the world, and during the whole eight years covered by the review the terms of trade moved in favour of the Free State. These results were caused by the remarkable steadiness of the price of cattle during a period of generally declining prices. The statistics suggest that the demand for cattle is far from the point of saturation, and that the stocks of many of the Free State's chief competitors are tending to decline. The almost unlimited capacity for expansion of the British demand for Irish live stock products is demonstrated, and the value of preference for these commodities in the British market is clearly shown. At the same time the possibility of developing trade with the other parts of the British Commonwealth is seen to be very small. This valuable report should be carefully digested by those responsible for the economic policy of the Free State before they decide on any steps that might prejudice our position at the Ottawa Conference.

UNITED STATES.

Gold Exports — Banking — Industry — Trade.

(FROM OUR CORRESPONDENT.)

NEW YORK, June 15.

It was revealed this week by the New York Federal Reserve Bank's gold reports that there had been earmarked and partially shipped in the early part of the week \$55 millions in gold. This metal, it was authoritatively stated, was for the account of the Bank of France, and completed the transfer of French balances into gold,

apart from amounts normally needed to provide working balances here. Gold exports continue. Shipments since the first of June, with this week's prospects, amount to over \$200 millions. The net loss in May was \$196 millions, and that for April was \$30 millions. However, most of the movement has been from earmarked metal, and future movements, with occasional exceptions which will probably include exports to Great Britain, are expected to be merely removal of gold held in the Reserve Bank vaults for foreign central banks.

Much satisfaction is felt in the financial district over the ability of the country to stand the liquidation of heavy foreign short-term funds here and the translation of foreign central bank dollar exchange into gold. Equally keen is the feeling of relief that the major gold movements are probably at an end and that sentiment will not be so frequently disturbed by the publicity given to the gold outflow. Foreign balances here reached their peak in mid-October, 1929, when they stood at about \$3,000 millions. They are now less than \$700 millions, and since it is calculated that about \$1,000 millions is necessary in normal times to provide for the usual trade transactions, it is unlikely that much more will be exported.

Since foreign countries began to withdraw their short-term funds from the New York market in the autumn of 1929, the net loss in gold to the United States has been only \$400 millions. Withdrawals for Europe were offset until last autumn by an influx from Asia and South America, with the result that, last September, America's monetary gold stock reached the record height of \$5,015 millions. It is now \$3,979 millions, of which about \$440 millions is calculated as free gold. Reserves now held are ample for all purposes and provide a further large supply for possible shipment. Of the foreign balances now held here, about \$400 millions are for European account. Gold now held under earmark amounts to around \$500 millions.

While the Senate is attempting to vote some economies in Governmental expenditure, the House of Representatives has turned to the Bonus Bill, which it has passed. Acceptance by the Senate is doubtful, but in any event a Presidential veto of the measure is certain, and the House has insufficient votes favouring the Bill to carry it with the necessary two-thirds majority over a veto. Also the Garner Relief Bill, which would saddle an expenditure of \$2,000 millions or so on the Federal Government, seems to have died without a chance of coming to a vote. Probably a mild relief measure will be passed, providing for additional funds for the Reconstruction Finance Corporation and \$300 millions or so for lending to States, to be used in relief or public works by municipalities. Measures aimed at tampering with the currency, bank reform and commodity price regulation seem to have little chance of passage at this session.

With confidence strengthened by the better performance in Congress and the gold export menace out of the way, it is felt that the Federal Reserve Bank cheap money campaign will meet with more success. Last week the system increased its Government bond purchases from \$50,000,000 to a total of \$75,000,000, but in spite of that and a reduction of \$15 millions in currency in circulation, the member banks had to borrow a small amount and they further liquidated their loans and investments, largely because of the gold exports. Member bank loans in this district shrank sharply on account of repayment of New York City borrowing made in anticipation of May tax collections, and investments declined on preparations for subscription to the new Treasury offerings.

The second quarterly income tax collection date passed without disturbance to the money market. Owing to the large proportion of old Treasury obligations taken in exchange for the new issues of \$750 millions, the cash requirements of the Treasury on June 15th were comparatively small. Reassurance over gold exports and Government finance gave fresh impetus to the United States Government bond market, where buoyancy became so pronounced as to affect other markets. Commodities also showed a tendency to harden, but the various indices of wholesale prices are still falling.

Trade reports show lack of improvement. The steel industry has receded further to around 17 or 18 per cent. of capacity, and no great hopes are held for early improvement. Ford and one or two other motor companies are doing better, but the motor industry is unlikely greatly to increase its steel requirements this summer. Farm implement buying is at a standstill, and although the wheat harvest has begun prices on the farms are too low, combined with a smaller yield for winter wheat, to permit the farmer to do much more than make bare living expenses. His loans and, in many cases, taxes, are having to wait. Railroad traffic also has fallen a little further and is running about 25 per cent. under last year. Few railroads were able to cover their interest charges in April and they probably did no better in May. More dividend reduction and omission has taken place, for railroads, industrial companies and public utilities. Probably junior bondholders on a few railroads also will have to forego interest for a while.

Dividend reduction by a few of the large banks was not unexpected, in view of the sharp fall in securities held by the banks, the slack demand for credit and low interest rates, but most institutions have now done all the writing down that seems likely to be necessary. The decision to liquidate the bond firm of Lee, Higginson and Company was expected, following the losses involved in the Kreuger and Toll affair, and the news caused no disturbance in Wall Street.

Exports in May dropped to a new low figure of \$132 millions and imports to \$112 millions, compared with \$136 and \$127 millions respectively in April. A year ago exports were \$204 millions and imports were \$180 millions. The fall in exports from the previous month was accounted for by smaller cotton shipments.

Interest in Lausanne has been far from general, and the country seems to have relapsed into its old time apathy with regard to reparations, allied debts and disarmament. However, the efforts of the new German Government to increase taxation and cut doles and other expenditures were greeted as highly favourable in Wall Street, which leans toward sharp debt reduction or cancellation. Ex-President Coolidge's recent statement in criticism of any proposal to soften the debt agreements was unpopular in Wall Street. There the feeling is that Mr Coolidge lost sight of the fact that conditions now are quite different from what they were a few years ago when the settlements were made, and that while this country's legal position is perfectly sound in demanding full payment, such a position is untenable in view of actual conditions in Europe, to say nothing of the best interests of the United States.

FRANCE.

Finance — Social Insurance — Foreign Trade.

(FROM OUR CORRESPONDENT.)

PARIS, June 22.

LAUSANNE and Geneva dominate all other subjects so far as French opinion is concerned, and there seems to be little prospect of any definite decisions being taken in regard to the restoration of the national financial situation until some kind of international agreement has been reached on both disarmament and reparations. Meanwhile, however, politicians are earnestly devoting themselves to finding some means of meeting the deficit of at least 4,000,000,000 francs which, it is expected, will otherwise accrue from the current financial year if the economies proposed by the Finance and Budget Ministers are not adopted. As matters now stand, the Cabinet appears to have more or less surrendered to the ultimatum launched by the Socialists forbidding the proposed annulments of at least a proportion of the recent increased extra allowances to the public servants, pensioners and ex-soldiers, voted by both Chambers prior to the General Elections and applicable under the current Budget. The Budget Minister, it is unofficially stated, is now busy redrafting the more or less drastic programme of economies which received such a bad reception from the recent

Ministerial Council, and it now seems to be likely that the Government will be forced to resort to a substantial loan issue as a partial solution of the problem.

Immediate reduction of military expenditure to a maximum of about 1,500 millions, by annulment of credits voted under the current Budget, has already been officially foreshadowed as possible, and this may be regarded as already practically assured, if only for the reason that such a step would most probably accord with any decision for partial disarmament likely to be arrived at elsewhere. Re-organisation of transport services may be so designed as to lead, if not to immediate economies by the railways, at least to the beginning of an era of diminution of the constantly augmenting annual deficit on the national railway undertaking. Another project, it is expected, will deal with the thorny question of the cost of the public services, which now comprise a personnel of some 715,000 and involve a total expenditure by the State, in respect of pay and extra allowances, of 14,664,000,000 francs, or nearly 30 per cent. of the total spent under the national Budget. In this direction probably no immediate economy can be looked for. It is possible proposals may be put forward for a suspension for some years of further recruitment of new officials and of all promotions to higher grades, but this would give only future relief.

Another proposal which is being discussed is for the creation of an autonomous organisation to undertake the entire control of pensions, on similar lines to the Caisse d'Amortissement for public debt extinction. This, it is suggested, would be endowed (like its prototype) with certain permanent sources of income, and placed by a special constitutional law beyond the reach of demagogic influences and impecunious Finance Ministers. Whether such an institution would be any more immune from raids for the benefit of a hard-up Treasury than the Caisse d'Amortissement has recently proved to be, despite its apparently impregnable defences, is a question. The balance of the money needed to wipe out the certain pending deficit would have to be raised by a bond issue, which for this and other purposes, it is suggested, would be in the neighbourhood of between 2,000,000,000 francs and 3,000,000,000 francs. There now seems to be no suggestion of putting into operation the massive Rente conversion plan, which some two years ago appeared imminent and likely to reduce annual expenditure by about 1,000,000,000 francs, and all concerned appear to be agreed that in present circumstances such a step would be for many reasons impracticable.

The possibility that Germany may be freed from reparation payments and may also drastically modify her national insurance law, and thus largely increase her capacity as a competitor in world markets, has given a notable stimulus to the demand by the French business community for a radical reduction of the cost of national insurance. At the annual assembly of the Presidents of the Chambers of Commerce last week a resolution was adopted unanimously calling for a complete recasting of the system, including a revision of even the principles of the present law, and for the application of the sickness assurance clauses to be further adjourned, if not abandoned altogether, in view of the general situation. Other resolutions urged massive Budget economies, reduction of public servants' pay (similar to reductions already effected in industrial and commercial undertakings), conversion of Rentes, administrative reform, diminution of *étatisme* to its essential proportions, and reform of the bankruptcy and company laws.

The foreign trade returns for May indicate visible exports of 1,470,000,000 francs, representing a drop of 272,000,000 francs on the month, 963,000,000 francs as against May last year and 2,205,000,000 francs against May, 1930. Imports were 2,482,000,000 francs, or 355,000,000 francs lower on the month, 1,269,000,000 francs below May, 1931, and 1,608,000,000 francs below May, 1930. The month's total exchanges, which were the lowest registered since the stabilisation of the franc, were 627,000,000 francs smaller than in the previous month, and resulted in an adverse balance of 1,011,000,000 francs. This brought the total excess of imports for the first five months of the year to 4,169,000,000 francs (equivalent to 32 per cent. of the total imports), as compared with a

deficit of 5,579,000,000 francs (or 29 per cent.) in the corresponding period of last year. Exports of manufactured goods were 3,409,000,000 francs, or 40 per cent. lower than during the first five months of last year, imports of the same class being 1,451,574,000 francs, or only 35½ per cent. smaller, notwithstanding increased import taxes. Vast amounts of very cheap foreign goods of poor quality now appear to be entering the country.

GERMANY.

Lausanne — Hesse Elections — Nazis — Trade — Gelsenkirchen.

(FROM OUR CORRESPONDENT.)

BERLIN, June 21.

THE proceedings at Lausanne are being followed with great anxiety by the German public. Reports from Paris received here just before the Conference gave rise to an excessively optimistic idea of the French attitude. It was thought that the Herriot Government was prepared to do away with reparations completely. The fact that the Conference has begun with an indefinite prolongation of the moratorium does not alleviate the disappointment of finding that France is apparently far from any such renunciation, for nobody supposed that payments would be resumed on July 1st. The reparations problem has long been for Germany something more than a mere financial and economic problem. We know that neither German nor world economy will be very much changed overnight by the complete cancellation of reparations, but we know also that any attempt to save world economy presupposes the complete cancellation of debts and that any qualification would ruin the prospects of a campaign to end the economic crisis. Neither Herr von Papen nor any other Chancellor can seriously enter into a discussion of a new moratorium for, say, three years, or of a future examination into Germany's capacity to pay. German economy has already laboured for fourteen years under the burden of the reparation problem. The last hope of recovery would be gone if she still had to reckon for several years with the possibility that part of the fruits of returning prosperity would be harvested by the reparation creditors. To expect anything else is to ask a psychological impossibility, and it is no wonder that Herr von Papen's attitude is being more and more severely criticised in Germany. The Left urgently points out that Herr von Papen's attitude at Lausanne has been much less firm than that of Dr. Brüning would have been, and it is contended from this quarter that the late Chancellor would have been much more successful at the Conference in bringing about the diplomatic isolation of France. The Press of the Right is also critical, as it expected Herr von Papen to ignore the indefinite postponement announced last week. The high hopes which had been pinned upon Lausanne have now sunk very low.

The Landtag elections in Hesse have resulted in gains of five seats to the National Socialists and of two seats to the Social Democrats, as compared with last autumn. The Centre has held its own, and the Communists have lost three of their ten seats. The National Socialists, the Nationalists and the remains of the Moderate Right together command exactly half the seats, and so cannot outvote the Centre, Social Democrats or Communists. That means that the former Government, composed of representatives of the Centre and the Social Democrats, will have to carry on the administration as it is impossible to form another.

More important is the light which this election throws on the prospects for the Reichstag election. The political and social structure of Hesse is certainly no more unfavourable to the parties of the Right than that of the rest of North Germany. If, therefore, the Right, even with the aid of the border-line parties, can only muster half the seats in Hesse, they cannot count on more than half the votes in North Germany at the Reichstag election, and as the position is much less favourable to them in South Germany, they have no chance of securing 50 per cent.

in the country as a whole, unless there should be some special new development in their favour before July 31st. Meanwhile the National Socialist Party is faced with the difficult decision as to how far they must "tolerate" the highly unpopular financial emergency decree in order to avoid inconvenient reprisals from the Government.

The long anticipated political emergency decree was issued at the end of last week, re-establishing Hitler's Brown Army, which immediately reappeared in many parts of Germany in new and very striking uniforms. Bavaria and Baden have prohibited the wearing of uniforms, and Prussia has maintained its ban on public demonstrations. On Sunday there were serious encounters in the Rhine country between the National Socialists and their opponents, and in Bavaria the National Socialists tried to flout the ban on uniforms. The result was a violent encounter with the police, the breaking by National Socialists of the windows of the Prime Minister's official residence, and a general upheaval. This has led to a determination in Munich to apply the curb really vigorously, while at the same time the National Socialists and the Nationalists in Berlin are insisting that the Reich Government should take severe measures against those State Governments which will not fall in with its policy. The Reich Minister of the Interior, Herr von Gayl, is a wise and cautious man who will certainly do nothing to precipitate a serious conflict between the Reich and the States of the South. Already, however, the Right is beginning to attack him, although he belongs to the Nationalist Party, and much will depend on his ability to resist this pressure.

The German active trade balance has increased, partly owing to seasonal causes, from 54 millions in April to 96 millions in May, a surplus which, however, is far from sufficient in view of Germany's obligations. The total trade has sunk to a new record low level, and both imports and exports are less than half the 1930 average. Though the fall in prices is largely responsible, there has been a very substantial decline in volume:—

	Imports.			Exports.		
	1932	Mill. Marks.	Thous. Tons.	Mill. Marks.	Thous. Tons.	
April ...	427		2,694	481		3,497
May ...	351		2,498	447		3,351

Exports to Great Britain and the United States showed a further decline in May.

Owing to an indiscretion, the sensational news has leaked out that the Reich Government has acquired a majority holding in Gelsenkirchener Bergwerks A.G. That means nothing less than control of the majority of Vereinigte Stahlwerke, and consequently the consolidation of State influence in the German mining industry. The importance of this development is scarcely less than that of the participation of the Reich in the leading banks. The transaction was completed in the most complete secrecy, and the contract was signed by the Finance Minister in the Brüning Cabinet immediately before his resignation on May 31st. The Reich has acquired shares to a nominal value of 110 millions, at 90. As the total capital of Gelsenkirchen amounts to 250 millions, it may be assumed that the State has bought in the open market during the last few months the 16 million shares needed to complete its majority, and this explains the striking rise in the quotation from 24 to 41. Even now, however, the Stock Exchange quotation does not represent half the price paid by the Reich. The shares were bought from the Friedrich Flick-Charlottenhütte group, which has long been known to constitute a dangerously weak point in the German heavy industries. Flick established himself during the years 1924-28 as the leader of the German mining industry. Starting with the relatively small Charlottenhütte, which had a mere 20 millions capital, he acquired the majority of Gelsenkirchen and Gelsenkirchen in its turn holds the majority of Vereinigte Stahlwerke. In addition, Flick controlled important sections of the Upper Silesian iron industry. It was, of course, only possible to build up these vast holdings with the aid of enormous German and foreign credits, and there were heavy loans outstanding on the Flick holdings of shares. The credits were, however, on relatively long terms, and

it is asserted that Flick was not forced to sell just now, as no important repayments were due until 1934. He was, all the same, endeavouring to unload, and as early as the end of 1931 various Dutch, French and American interests were inquiring for the Gelsenkirchen holdings. Hearing of this through diplomatic channels and seeing a danger of the most important German key industries falling under foreign control, the Government made Flick a counter-offer, the more readily as the Dresdner Bank, now owned by the Reich, was, in its capacity as successor to the Darmstädter Bank, one of Flick's principal creditors.

For various reasons this proceeding has caused great excitement among the German public. The von Papen Government is repudiating all responsibility for its predecessor, as it has technically every right to do. The Social Democrats are opposed to the transaction, which they regard, in view of the way in which the purchase price was arrived at, as a huge subsidy to the heavy industries, though the penetration of the State into these industries is, of course, entirely in accordance with this principle. The Right regards the affair as an extension of public control into a new field, with unpredictable consequences. And the secrecy with which the Reich has dared to conclude a transaction involving a hundred million marks is generally condemned. The Gelsenkirchen case is likely to preoccupy the German public for some time to come, as many important points have not yet been cleared up.

AUSTRIA.

Banking — Trade — Industry — Railways.

(FROM OUR CORRESPONDENT.)

VIENNA, June 20.

If anything would prove the necessity for a transfer moratorium or foreign credit support, it would surely be the report of the National Bank on its position at the middle of June. Its holdings of foreign exchange had already sunk to 30 million schillings, and it was therefore compelled to resort once more to a sale of its gold holdings to an extent of 15 million schillings and to use the proceeds to strengthen its exchange holdings. But of this amount 2.5 millions have already been paid out. It is true that the bill portfolio has been reduced by 10 million schillings, as the Bank exercises the strictest control of the material handed in, but the Bank will very soon have to declare that it can proceed no further in the present fashion. The Bank still adheres to the 7 per cent. bank rate, although the resistance to it is steadily increasing, and even in Government circles it is pointed out that the high bank rate is of no use, at least as far as the influx of foreign credits is concerned. Private discounting is almost non-existent, so that the bank rate represents the lowest limit for the discounting of bills. Furthermore, the standstill agreement, which the Austrian banks and firms made with foreign creditors in regard to a sum of about 15 million dollars, lapses on July 19, and as the repayment of the credits is out of the question, the agreement must be prolonged for a further six months. On account of its lack of means, the Credit-Anstalt has already stopped the interest service provided for in its standstill agreement, while the other banks and banking firms still continue to pay the interest for the prolonged credits of 15 million dollars.

The dwindling of Austrian foreign trade continues in consequence of the exchange difficulties and the Customs barriers in other countries. In the months of January to May, 1932, imports sank by 269.4 and exports by 280 million schillings as compared with the corresponding period of last year. The deficit has consequently been reduced by 89.5 million schillings, and amounts to 815.4 millions. At the same time, the Government is thinking of extending the list of import prohibitions. The farmers desire prohibition of the importation of hides, vegetables and fruit. The industrialists have sent to the Ministry of Commerce a long list of suggested supplements or improvements of the import limitations at present in force, but commercial interests are opposed to it.

Export to France has become somewhat easier, as under certain conditions the advance payment of 10 per cent. of the value of the merchandise to the Compensation Office in Paris may be waived. Negotiations with Hungary for a new trade treaty are being continued. The Hungarians wished to have the present treaty extended for a further three months, but this was refused by Austria, for after the lapse of that period Hungary would have no interest in a commercial treaty, as Hungarian exportation of vegetables, fruit and grain into Austria takes place almost exclusively in the months of July to September. Austria therefore demands a prolongation of the treaty of at least one year, which would involve some concessions by Hungary.

The limitation of foreign trade and of trade in general is having a most unfavourable effect upon the merchandise turnover tax. The Government is therefore planning an increase of about 50 per cent. in the tax. For the second half of 1932 the Government hopes to derive from the increased merchandise turnover tax an increase of revenue amounting to 40 million schillings. All this is subject to the assumption that consumption does not decline further. The provinces and municipalities, which are in serious financial difficulty, want to benefit by the increase of the merchandise turnover tax.

The position on the labour market has become worse. During the first half of June unemployment in numerous branches, including textiles, clothing, hats, shoes and metals, increased again. In the iron and steel industry output is steadily declining. The Hütterberger ore mine has been closed, as the Alpine Montangesellschaft at present has a stock of 120,000 tons of iron ore against a requirement which has sunk to the low level of 40,000 tons per month, and the concern has no furnaces in operation, so that further deliveries of ore cannot be taken. In regard to foreign tourist traffic, on which great hopes had been set, disappointment is being experienced. The big health resorts report that they have received many cancellations from abroad, while the general impoverishment will mean that many Austrians, and particularly Viennese, who are accustomed to spend their summer vacations in the Alpine countries, will have to content themselves with more modest holidays or spend them at home. The prices which are being demanded are, however, very low. Failure of the tourist traffic would only make the economic crisis still more acute, for much capital has been invested by hotels and private people in the expectation of returns from the summer holiday traffic.

The crisis on the Federal Railways is no less serious. They are trying by every possible means to facilitate transit traffic in view of the fact that transportation in domestic trade is very weak. More railway servants have been dismissed, and a reduction in pensions is now contemplated. The most necessary investments are being refused, but even this attitude will not solve the problem of the Federal Railways, which is becoming a more and more serious threat to State finances.

HUNGARY.

Politics — Agricultural Relief — Gold and Prices.

(FROM OUR CORRESPONDENT.)

BUDAPEST, June 21.

PARLIAMENT is about to be adjourned for a long summer recess, but the majority of the Government Party for the past three weeks is in open revolt against its own Prime Minister, and makes no secret of its desire that Count Károlyi should resign after the Budget has been passed by the Upper House. It is unfortunate that an internal political crisis is raging at a time when the Government is faced with the all-important national problems of preserving social order and of taking urgent steps, involving the shaken financial structure. Though the fate of the Government will be uncertain for another ten days or so, after a joint audience of Count Károlyi and Count Bethlen with the Head of the State it seems that wiser counsels will prevail, as politicians are beginning to realise that on

the eve of compulsory reduction of interest rates and other measures intended to relieve agriculture, all of which demand new sacrifices from the foreign creditors, no change in the Government is in the interest of the country. Whatever the shortcomings of the Károlyi Government in the financial and economic field have been, it cannot be denied that they have established a great deal of prestige both at home and abroad by their honest endeavours to steer the nation through a most trying period, and members of Count Károlyi's own party would do great injustice to the country by hounding him out of office just now.

Great as is the plight of agriculture, it cannot be denied that politicians have presented innumerable demands, most of which could never be fulfilled by any Government without wrecking the banking system of the country. The Finance Minister is planning a wholesale debt settlement for agriculture with a view to reducing the present interest burden, ranging from 10 per cent. and upwards, to about 6 per cent. It is generally expected that the National Bank will reduce its discount rate from 6 per cent. to 5 per cent., and that the deposit rates paid by the banks to the public will be decreased to 4 per cent. Considering that the amount of banking deposits has diminished more than 20 per cent. since the crisis started a year ago, no agricultural relief scheme can be successful which does not take into account the protection of small depositors. The representatives of the agrarians, in reply to a questionnaire issued by the Government, declared that they do not want to discriminate between the different categories of the creditors, which is very gratifying, as there were, and still are, outcries for a complete moratorium on all foreign debts. Baron Kórányi has repeatedly stated that the Government will not declare a complete moratorium affecting either foreign or domestic debts. The demand for special consideration of the heavily indebted smallholders is reasonable, though recent experiments in Roumania show that extreme caution is necessary in this respect. According to the domestic Press, the Government will suspend the forced sale of lands until the end of October, pending the issue of an ordinance for a general debt settlement. Such a step is certainly called for, but the pressure which is being brought to bear on the Government, from interested quarters, to permit the repayment of capital debts with mortgage bonds in direct contravention of the British Standstill Agreement and to the transfer moratorium decree of the Government, is certainly not in the general interest of the country; first, because it would ruin the currency, and, second, because it would benefit smugglers and speculators. There is, however, an alternative proposal for the creation of a *Caisse d'Amortissement* which, if called into being, would put an end to the speculation and smuggling of mortgage bonds and would secure for the State—which is badly in need of funds—the huge profits realised now by the smugglers and speculators, and could devote them to the relief of the heavily indebted smallholders.

The harvest will begin next week, but the Government has not yet decided how to compensate the agriculturists for the discontinuation of the wheat and rye subsidy (Boletta), which inflicted heavy losses on the Treasury both in 1930 and in 1931, and, in addition, made bread more expensive in Budapest than it is in London or in New York, in spite of the very low cereal prices. Instead of the wheat and rye subsidy, the Government has decided to suspend the land tax, as a *quid pro quo* to the farmers, which means a loss of about 30 million pengő for the national exchequer to be covered from a milling tax, which is both unpopular and difficult to collect. Agrarian interests are demanding the maintenance of the Boletta system, but the Government definitely promised the League Financial Committee to discontinue the Boletta system. There are also other reasons against the wheat and rye subsidy: first, that it delays the necessary changes in agricultural production; second, that it benefits chiefly the big estates and brings no relief to the distressed smallholders.

According to the official indices of the statistical department, the wholesale price index at the end of May stood at 97 (1913 = 100), as against 95 a year ago—a rise of 2

points, which is a striking contrast to a fall of more than 20 per cent. recorded in Germany and other gold standard countries in the same period. Yet in spite of the apparently inflated price level, it would be a leap in the dark to abandon the gold standard—however artificial its maintenance seems to be—so long as budgetary equilibrium is not restored, and political conditions are not sufficiently improved among the Danubian countries to permit the removal of the tariffs, quotas and other artificial and prohibitive measures paralysing normal trade relations. Monetary readjustments must be carefully planned with the assistance of the big central banks through the B.I.S. in all Danubian countries, and not in a haphazard way.

ITALY.

Finance — Corporative Council — Grain Quota.

(FROM OUR CORRESPONDENT.)

TURIN, June 13.

FINANCIAL interest is still mainly centred in the Budget situation. The speech of the Finance Minister, Signor Mosconi, was not encouraging. Coming after Senators Federico Ricci, Ancona and others had insisted on the necessity of economies or new taxation—free conversion of consols, further reduction of salaries of public employees, taxation of all bearer securities were among the devices suggested—the Finance Minister stated emphatically that no tax on State securities was contemplated and that dividends on them will be punctually paid. That was satisfactory; on the other hand, after the general reduction of 12 per cent. in salaries of public servants, a further all-round reduction of them would probably not be well received. Nor is it easy to discover new sources of revenue, recent experience going far to prove that taxation has reached its yield limit. The Minister's policy was in some ways disquieting. The Budget for 1932-33 was recommended by him as a "wait-and-see" Budget (*bilancio di attesa*). No doubt the end of the world crisis will put many things right; but the crisis must be aided to approach its end, and the only way in which States and individuals can promote the end of the crisis is by putting their houses in order. To have recourse to a loan instead of to the printing press was certainly sound, but even the loan, however successful, bristles with temporary difficulties. On May 15th the banks completed the payment of the 4,000 million lire proceeds of the 5 per cent. nine-year Treasury bonds into the Exchequer. Private bank deposits being reduced by such a big amount, banks re-discounted bills at the Bank of Italy, and the discounts and advances figure of the Bank jumped up from 5,844.6 on April 30th to 6,819.1 million lire on May 30. As, in the meantime, partly in consequence of payments on bonds subscribed, notes issued decreased from 13,375 to 13,136.8, and current private deposits from 992.5 to 918 million lire, the State Exchequer was forced to come to the rescue and pay into the Bank of Italy part of the proceeds of the loan. Treasury deposits, which had already increased from 1,514.3 million lire on March 31st to 2,350.9 on April 30th, increased further to 4,098.6 millions on May 20th, a record figure for several years. This financial incident shows that the theory widely held of vast cash sums hoarded somewhere, which the State and other borrowers could tempt forth by good investments, is not valid. At the present moment there are in this country no unused hoards ready to accept good offers. The limit to loans for public and private investments is the surplus saved from day to day from current national income.

There have been some very interesting debates at the National Corporative Council, which is tending to become the effective, though only preparatory, legislative body in our country. Under the chairmanship of Signor Mussolini two Bills were formulated, the first accepting the principle of preliminary examination of the priority of industrial inventions, the second on workmen's compensation, which will be in future administered by a public body, exclusive of surviving mutual insurance associations.

The coming harvest is already depressing future wheat and corn prices. While spot prices for wheat are 1,100-1,200 lire per ton, July futures are quoted at only 950 lire; and the corresponding spot and future prices for corn are 800 and 620 lire per ton. Rumours were recently current that the quota policy would be discontinued next year; but a Decree of June 10th, issued by the Minister for Agriculture, re-enacts the quota system. Soft foreign wheat will be milled only up to a maximum of 5 per cent. of total wheat milled from June 27th in Sardinia, from July 7th in Southern Continental Italy and Latium, and from July 15th in Central and Northern Italy. The percentage is increased to 30 per cent., as from June 27th, for Sicily. Hard foreign wheat will be admitted up to 5 per cent. as from July 7th in insular and Southern Italy and Latium, and up to 30 per cent. as from July 15th in the other parts of the country. The system, which was kept very flexible by continuous regional changes in percentages, worked very well in the interest of the farming class throughout the current year.

ROUMANIA.

New Government — Public Finance — Rist Report.

(FROM OUR CORRESPONDENT.)

BUCHAREST, June 14.

THE acute financial difficulties have at last caused the resignation of the Yorga-Argetoianu Government. Mr Titulescu, who was called to the rescue, has been unsuccessful in his attempts to form a national administration on account of the refusal of the Liberal Party to participate, and Mr Vaida Voievod has now been requested by the King to form a Government, a task which he has accomplished. The principal object of the new Government is to preside over the general election which is to take place in July. Incidentally, it will have to find the means of meeting the most pressing demands on the Treasury, such as the salaries of the civil servants for May and June and the pensions. Mr Vaida Voievod is a prominent member of the Transylvanian section of the National Peasant Party. He is a close friend of Mr Maniu, and resigned from the National Peasant Party Government which preceded the Yorga administration at about the time when Mr Maniu gave up the Premiership. He has made it already known that, true to the principles of his party, the elections will be entirely free and untrammelled by administrative influences. It is quite impossible at this moment to make any forecast as to the result. The main issue appears to lie between the National Peasant and Liberal Parties; but it is very doubtful if either of these will be able to secure a working majority without the help of one or more of the other groups, and so far no definite arrangements have been made by the parties with regard to the impending campaign. Feeling runs very high, and startling developments are not impossible.

The Yorga-Argetoianu administration cannot be said to have been a very happy one. Most of the difficulties with which it had to contend sprang, of course, from the world-wide economic crisis, but the means it chose to meet them were unsound. In the wholesale interference in private contracts it followed the disastrous lead given by the extremists who held the sway in the National Peasant administration after Mr Maniu's departure. Its last and principal measures, the Law of Judicial Liquidation, the Spirit Monopoly and especially the Agricultural Conversion, have entirely killed what credit was left in the country.

The new Government has made it already plain that it intends to maintain the stability of the currency and meet the interest on the public debt. For its immediate needs it has already opened negotiations with the National Bank to secure funds which are held by this institution for other purposes on account of the State. Part of these is represented by 400 million lei, a profit resulting from the issue of new coins which was originally intended to be used for the release of certain frozen assets taken over by the State from the National Bank. Meanwhile, the exchange

restrictions instituted three weeks ago for the purpose of defending the currency are causing a great deal of disorganisation. All exchange transactions are centralised in the National Bank, which is unable to cope with the business. Statements published by the National Bank show a considerable influx of foreign exchange. They do not state, however, that many legitimate requests for purchase of foreign exchange have remained unsatisfied. It is clear that by these methods, even in the present adverse circumstances, the value of the lei can be held up for some time to come, but they are not calculated to re-establish public confidence.

It is hardly possible to imagine a more devastating indictment of financial mismanagement than that contained in the report of M. Charles Rist on the financial state of Roumania. It had been the intention, the report says, by the stabilisation of the currency and the international loan accompanying this measure to wipe out the past and establish for the future precise regulations, the principal of which was the strict observance of the equilibrium of the expenses and receipts of the State. Three years after the stabilisation the Government shows a deficit estimated at nearly 10,000 million lei, and the equilibrium of the current Budget is gravely compromised. Since the year 1930 it had been decided that a monthly decree should fix the sums allowed to the various Ministries for their expenses on the basis of the probable receipts of the month. In spite of this regulation, and owing to various more or less flagrant abuses, arrears have accumulated amounting to more than 8 milliards at the end of 1931. To these must be added the numerous guarantees given by the State, an exact list of which it has not been possible to establish so far. This year important guarantees have been added to those already existing by the Agricultural Conversion Law. In addition there has to be taken into account the position of the various autonomous State Régies. The serious diminution of the Treasury receipts is no doubt due mainly to the general economic situation, but the report points out that if the essential rules of good administration of the public finances had been respected, the situation of the Treasury and of the budget could have remained normal.

After examining various methods of liquidating the enormous amount of arrears and putting the State finances on a sound footing, M. Rist makes the following suggestions: separate arrears from current expenditure; give authority to the Institute of Amortisation to eliminate those debts whose legitimacy cannot be substantiated; and—to recuperate the assets of the State—organise a sound equilibrium of the budget which permits first the gradual payment of the arrears in yearly instalments and can serve ultimately as a basis for credit operations assuring the definite restoration of the Treasury.

TURKEY.

Foreign Credits — Trade Restrictions — Tobacco.

(FROM OUR CORRESPONDENT.)

CONSTANTINOPLE, June 6.

THE return of Premier Ismed Pasha from a complimentary visit to Italy with a credit of 300 million Italian lire brings up to 50 million Turkish pounds the credits acquired from Moscow and Rome during the voyages which he made last month to those two capitals. These credits are the first received by the Turkish Republic from foreign Governments, but they do not imply a reversion to the old bad principle of supporting the Turkish budget by means of foreign loans. The Russian credit is to be used entirely for industrial purposes and is to be received in machinery; the Italian credit is to be used as to one-third in the purchase of machinery in Italy, and one-third in regulating outstanding debts to Italian establishments, the balance being paid to Turkey in cash. The only relief which the budget will obtain is from the lightening of the debts section of expenditure by the application to it of a third of the Italian credit.

It is evident that the Turkish Government is taking the line that the nearest and cheapest industrial help can now be obtained, and will more and more be obtained, from

the two countries where a new and wide industrialisation process is going on rather than from the older and more distant industrial countries. At the same time, it must be observed that Turkey has no intention of undertaking a vast industrialisation like that of Russia or, in a less degree, of Italy. The industrialisation which the Government means to carry out is to be on a modest scale, and will chiefly concern the textile, especially the cotton, industry and sugar production. Nevertheless, the Angora leaders are to draw up a three-year plan for the utilisation of the credits along the industrial lines which it is desired to follow.

The advisers of the Government are making it adopt more and more of the restrictive regulations which have been put into force in European States. The latest decree is a demand for a declaration by all residents in Turkey of the amounts of foreign currency held by them at home or abroad. Foreign subjects need only declare the amounts of foreign currency earned by them from work in Turkey. The object of the decree is to enable the Government to examine how it can oblige such moneys to return to Turkey and prevent them being held by their owners abroad. Whether forced repatriation will be a success remains to be seen, but undoubtedly a large proportion of the fortunes of the Turkish capitalistic class are still in foreign countries. Now that the budget is balanced and the trade balance is favourable again, the main problem that remains is the rectification of the unfavourable balance of payments.

Several modifications have been introduced into the restrictive measures upon trade in the direction of increasing exports while at the same time keeping a tight hold on the amount of imports. Exporters of Turkish carpets and mohair are to be allowed to import foreign products into the country free of the restrictive quotas. The freedom given them is intended to bring about a brisker export of carpets and mohair. On similar lines the Government has taken measures to equalise the import of coffee and sugar against exports of tobacco. Opium producers have been formed into a co-operative society in order that the Government may have control of this export too. Another measure which is intended to avoid dissipation of the national fortune by unregulated private competition is a compulsory amalgamation of Turkish shipping.

A conference of Greek, Bulgarian and Turkish tobacco interests has taken place here. The main immediate result has been the establishment of a Tobacco Office in Constantinople to deal primarily with the sale and selling prices of the tobacco of the three countries. The restriction of production to quotas for each of the producing countries, which is the main end in view, was not pushed to a conclusion. Meanwhile Turkey is restricting her tobacco production to the best areas, and the Government has forbidden State employees to cultivate small patches, the increase of amateur cultivators having augmented the tobacco glut and deteriorated quality. Another inter-Balkan development has been the foundation of an Inter-Balkan Chamber of Commerce, which will deal with the trade and exchange interests of Greece, Turkey, Bulgaria, Roumania and Yugoslavia. These are indications that an economic Balkan bloc is gradually being created, though it is still in a tentative stage.

There have been some signs of unemployment lately, and the Government has rapidly passed through the National Assembly a law restricting all the smaller trades to Turkish subjects.

SOUTH AFRICA.

Native Question — Ore Commission — Gold Standard.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, May 30.

THE Report of the Native Economic Commission, based on an investigation which has lasted two years, contains, apart from its major importance as a summary of the facts, some most interesting reading for the student of sociology. It is an old and well-founded complaint of the

South African citizen that many of the fundamental actions of the British Government in the early days of the Cape Colony were not merely disastrous in the eyes of the average "colonial," but were highly unwise even in the eyes of the natives' best friends. Paragraph 203 of the Report concludes: "The more your Commissioners tried to get at the root causes of the actions of Europeans in their dealings with the natives, the clearer it became that the difference in the outlook of the native was hardly recognised as a factor in the good government of the latter."

The opening paragraph of the Report explains that the root of the native problem lies in the fact that when Europeans first came to the country the native was living in a primitive subsistence economy. The European brought a highly developed money economy, and the close contact of the two systems created serious maladjustments. In an early paragraph it sets out the importance of realisation by Europeans that there need be no threat to them in the development of the native, but that on the contrary such development would offer some hope of alleviating many of our economic difficulties. The Commissioners endeavour to indicate some of the ways in which the apparently conflicting interests of black and white may be harmonised in the cause of national progress. The Report has been widely praised by moderate critics of all shades of opinion, and should be studied by those with interests in the country.

The long-awaited Report of the Low Grade Ore Commission embodies some two dozen recommendations, apart from very extensive general comment on the subject matter of its terms of reference. The most important divergence of opinion was on the subject of wage levels. Messrs E. H. Farrer (sometime Secretary for Finance and now a director of the Diamond Corporation and of De Beers Consolidated Mines) and W. Gemmill (General Manager of the Transvaal Chamber of Mines) were in favour of the appointment of a Conciliation Board with a view to a reduction of 10 per cent. in wages; Mr A. C. Sutherland (lately retired from a senior technical post in the Mines Department) considered that a Conciliation Board, if appointed, should not act under any instruction or recommendation; Mr R. van Reenen (Chairman of the Commission and a public official) and Mr D. Reich (representing the Trades Unions) considered that the ordinary sequence of current economic events will force employees to the choice of lower wages or less employment, but did not consider that the question should be brought forward as it would not be in the interests of the State as a whole to risk strikes or lock-outs. It is somewhat difficult to follow the implication that the interests of the State would not similarly be risked by leaving the situation to "develop." A 10 per cent. reduction would approximately balance the fall in cost of living since the Arbitration Board on mine wages in 1927. It is estimated that about thirteen shillings per ton milled on the gold mines is spent in salaries and wages, direct and indirect, in the Union. Probably the Government would not be displeased by negotiations with a view to the reduction of mine wages, as it would keep them in countenance in the policy forced on them by the financial position. Other fundamental recommendations deal with (a) the amendment of the Mining Regulations so as to enable natives to be employed on any work which they can perform without detriment to safety or health, (b) the appointment

THIRD EDITION **PITMAN'S** JUST PUBLISHED

PRIMER OF FOREIGN EXCHANGE

By WILLIAM F. SPALDING,
author of "Bankers' Credits," etc.

The new revised edition of this practical work, providing the layman and the student of finance with a clear insight into fluctuations and their effects, Foreign Exchange quotations, currency problems, and other matters, such as Letters of Credit, the Gold Standard, etc.

135 pp.
MORNING POST: "May be said to constitute the last word as regards a concise, simple, and up-to-date textbook on Foreign Exchange."

Order from your bookseller or
SIR ISAAC PITMAN & SONS, Ltd., Parker St., Kingsway, W.C.2

of an independent Commission of Enquiry on Railway policy, (c) certain amendments of the Gold Law to encourage prospecting and facilitate working of mineral deposits. An Act to consolidate and amend the Mining Laws is very necessary.

The Report of the Select Committee on the Gold Standard is not quite up to date in its comments on the situation. One of the most prominent points in the discussion in South Africa has been the prospect of the rise in internal prices which would follow devaluation of the currency. Too much importance seems to be placed by local supporters of the present gold standard on the slight rise in sterling prices since September, also on the fact that prices would have fallen had Great Britain been able to retain that standard. This seems to attach insufficient importance to the unfortunate effects of a severe fall in prices. Another point which has been overemphasised here is the disturbance in the relations between debtor and creditor which might follow any devaluation of Union currency. A large proportion of Union fixed property is bonded, and mortgagors know all too well that these relations are already seriously disturbed.

Towards the end of the Report it is stated that the abandonment of the gold standard would not increase our national wealth by one penny. This postulates that there would be no increase in the absolute volume of business, but that the existing business would merely be measured in a larger number of smaller units. Most of those practically concerned with production in the Union would at present be inclined to disagree with this assumption.

Letters to the Editor.

BRITISH MONETARY POLICY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—May I trespass once more on your good nature to offer a brief comment on the recommendations of Messrs. Falk, Harrod and the other "Reflationists"?

Is not one of the main causes of the present collapse of world prices the fact that certain countries have already taken an overdose of the nostrum these gentlemen are advocating? Are they not in effect recommending that we should try to cure the economic dipsomaniac by dosing him with demijohns of monetary whisky?

The experience of the United States during the past decade is illuminating. Let me quote a few figures from a leading American authority, Dr. Benjamin Anderson. From January, 1922, to April, 1928, the loans and investments of the commercial banks of the United States (excluding savings banks and private banks) increased by 14½ billion dollars, while their deposits were increased by 13½ billion dollars—that is to say, by an amount considerably larger than the total of British bank deposits of all kinds.

This expansion, moreover, was supplementary to that of the war period.

Despite this vast outpouring of funds, the price level remained practically unchanged throughout the period, so much so that believers in a "stable price level" monetary policy regarded their policy as vindicated.

Subsequent events, however, have made it clear that a losing battle was being fought against the downward pressure on prices of modern power production methods, re-inforced by the over-investment and duplication of capacity, which policies of price maintenance encourage both in the United States and elsewhere. The dramatic collapse of prices after the stock market break in 1929 was a natural consequence of the sudden release of the pent-up forces of this artificially over-stimulated productive capacity.

The magnitude of that expansion of credit is perhaps best appreciated by comparing it with that needed to finance America's contribution to the war.

Between April, 1917, and December, 1918, America financed four Liberty Loans and a great volume of short-term Government paper. She transformed American industry from a peacetime to a war-time basis, at a time when business was being conducted on a price level which was rising under pressure of the artificially induced scarcity of a time of war. She sent an immense army to France, built herself a mercantile marine, and, in general, largely helped to win the war. To accomplish these stupendous tasks bank credit was expanded by just short of six billion dollars in deposits, and seven billion in loans and investments. In other words, the expansion of credit was less than half that between the beginning of 1922 and April, 1928.

How many billions—or should it be trillions—of dollars would it cost to recapture the ground lost since 1929? And how many more to maintain the ground thus regained?

And what fresh disasters would this hold in store for the world at a future date?—I am, Sir, yours faithfully,

Federation of British Industries, Roy GLENDAY.
21, Tothill Street, S.W. 1.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I have noticed in your issue of the 18th instant a reference to my speech in the House of Commons on the Finance Bill on June 9th, in which you refer to confusion as regards the fourth and fifth points which I put forward as part of the monetary policy of the Chancellor of the Exchequer.

I agree that no sentence is perfect which contains an unnecessary word. Fourthly reads in "Hansard": "It is intended to control 'fluctuations' in sterling exchange with a view you take out the words 'fluctuations in' the sense remains the same, but is better expressed, and I think you will then see that there is no real confusion with, fifthly, that 'every effort will be made to prevent violent fluctuations in sterling in the meantime' (the accent, of course, being on the word 'violent').—Yours faithfully,

House of Commons. IRVING J. ALBERY.

BOOKS OF THE WEEK.

Coal * and Its Problems.

THE Economic Committee of the League of Nations, in its 1932 report on the coal problem, commits itself to the following statement:—"To-day we find that the national arrangements which are essential to the preparation and conclusion of any international agreement exist. A rapid organic development has taken place. Both in Great Britain and in Belgium the coal industry has been sufficiently organised. . . . The pre-requisite condition of any international agreement is present." In the same brief report it explains that the main coal-producing

countries showed themselves, in last January's conference, to be already ripe for international action; that the consuming countries fear the effects in raising of prices and shortage of supplies, anxieties which the producers "consider groundless"; and that "a recent difficulty of a psychological nature, which was caused by the disturbances resulting from rapid monetary fluctuations, seemed to have been gradually removed during the course of the meeting." In fact, the Economic Committee of the League of Nations, in spite of the distressing facts about the lag of consumption behind production, the steadily staring in the face the reader who studies its tables, appears to be moderately optimistic about the international future of the industry.

It might, however, have reported less cheerfully could it have studied Mr Merrett's little volume. Mr Merrett, who brings to his task no exceptional statistical or theoretical equipment, but an insight and common sense

all too rare among those who direct the policy of British coal-owning interests, confesses in his introduction that "in recent years I have eagerly but patiently awaited the advancement of a bold policy for the reorganisation of the coal industry from one of the better-known administrators connected with it"; and, on a later page, adds his observation that at international coal conferences our foreign friends "were patient listeners. They have been content to take stock of the lack of unanimity amongst United Kingdom producers, and subsequent events have proved that they have benefited thereby." This statement, written last April, may be usefully set against the comment which is italicised above.

Mr Merrett certainly does not lack courage; for few of us would care, if reorganising the coal industry, to begin with the desperately depressed area of South Wales. Nor does he shirk the difficulties; in fact, he begins with an account of them so vivid and compelling as will persuade many readers that no reorganisation on earth can avail to save the industry. "The coal trade of this country to-day," he says, "stands virtually bankrupt"; but he does not therefore despair. "There is profit in the industry, but for fewer"; and it can be achieved by drastic economic planning, by the formation of central selling agencies, by the elimination of many of the coal-exporting organisations—for whom Mr Merrett has a hearty dislike—by the establishment of State ownership of minerals, and by the closer co-operation of coal-producing companies with the larger consumers of coal, such as railway and gas undertakings.

Mr Merrett, as is only natural, writes from the standpoint of the coal producer: certain passages, indeed, about the desirability of railway companies acquiring all colliery wagons (at what price?) and the inconvenience of passenger trains which force freight trains into sidings bear traces, one feels, of having been written by someone whose railway experience lay in and about Taff Vale. His book is none the less courageous, outspoken and intelligent, and one can wish it a wide circulation among his fellow-industrialists, though the difficulties attendant upon the central selling of coal on a falling market are not profoundly discussed. Those who wish to understand some of these difficulties in practical application would do well to study Dr. Stockder's thesis on the Rhenish-Westphalian Coal Syndicate.

Dr. Stockder has studied closely all published documents available on the history of the syndicate from 1893, the year of its formation, until 1930, and has prepared thereon a monograph in five parts, dealing with its general course, its policy with regard to the regulation of output, its market policy, its price policy, and its labour policy, of which the last is the least satisfactory, since the Syndicate's labour policy and its effect on labour conditions is so deeply bound up with the social insurance policy of the German Government, which cannot adequately be discussed in a few pages. On prices, output and marketing, however, there are three long chapters, all fully documented and charted, which are amply sufficient to show the reader what problems the combine faced, and how complicated, even without the added difficulties of the war and the Ruhr occupation, was the task of self-co-ordination of a coalfield. It is unfortunate, though no doubt unavoidable, that the story in effect stops with the re-establishment of the Syndicate in 1930, and gives no account, therefore, of its fortunes during the subsequent depression; it is also matter for regret that the demand of university bodies that doctoral theses should run to a "respectable" length has forced Dr. Stockder to repeat and recapitulate his facts at quite unnecessary length. These matters apart, the book is a useful and competent piece of work.

The recent formation of the Business Transfer Partnership & Property Agents Institute of Great Britain raises the status of the profession of Business Transfer Agents. A very comprehensive course dealing with B.T. can be secured for £1 1s. 0d., spread over 4 monthly payments of 5s. 3d. each. Course is sent on receipt of first payment.

AN INSTITUTE FOR FILMS.

It is a little unfortunate that the Committee responsible for *The Film in National Life** should have included the word "cultural" in its terms of reference. This is not merely a carping criticism, for to the minds of a very large number of persons (and not by any means the least intelligent or least educated) the word "cultural" as applied to entertainment means "improving" in the most unpleasant sense, viz., an entertainment which ought to amuse you, but does not; a performance which is educational without having the courage so to label itself. This is not, in fact, the Committee's view; they are, perhaps naturally, more concerned than most filmmakers with the educational functions of the films, but they are also very much interested in the film whose prime object is amusement only—Mickey Mouse, Harold Lloyd, *Le Million*, etc.—and it would be a pity if their Report were to be neglected by a large number of those who would support it, under the mistaken impression that it is their desire to turn the films into a branch of a Society for Moral and Social Improvement.

For they have useful things to say upon the growth of the cinema in modern life, upon the practical difficulties, such as "blind booking" and the like, which stand in the way of improving the quality of the films which reach the average audience in second- and third-grade halls, and upon the difficult point of the U. and A. certificates. On the question of children and cinemas the Committee adopt a sensible attitude, noting that the "sex problem," which so troubles the critic, normally bores the child, and, further, with unusual insight, that battle and sudden death are frequently less alarming than the most educational of nature films. "An ant's head a hundred times magnified will give a child nightmare for a week." Indeed it will, as Mr H. G. Wells discovered long ago and used for an excellent fantasy; but unofficial censors have little imagination of their own.

The Committee's main proposal, reiterated rather inartistically, but perhaps effectively, at the end of every chapter, is the establishment of a Film Institute, to be set up under Royal Charter and financed partly out of public funds, in order to be a clearing house for information and advice upon films generally, to undertake research and record work, to certify films for exhibition in various quarters (but not itself to be a producer), and to act as liaison between the trade and the Government, and between the Government and the Dominions. This seems in all respects a sensible and desirable suggestion. One fears that the moment is not the happiest to propose either the expenditure of public money or the collection of an endowment fund from individuals; but it is encouraging to observe that of the funds granted, partly by the Carnegie Trustees, for the Committee's labours sufficient remains unexpended to provide for twelve months' propaganda of their ideas. In the meantime they have given us an ample shillingworth of advice and information.

M. I. C.

* *The Film in National Life*. Report of an Enquiry into Educational and Cultural Films. (London) George Allen and Unwin. 201 pp. 1s.

SHORTER NOTICES.

"A Plan of Action." Edited by the Rt. Hon. L. S. Amery, M.P. (London) Faber and Faber. 275 pp. 15s.

"Horn, Hoof, and Corn." By Viscount Lymington. Faber and Faber. 200 pp. 6s.

For the Ottawa Conference come forth, hopefully, many publications, produced both by those who believe wholeheartedly in Imperial economic unity and by those who find any such idea chimerical and dangerous. To the first class belong the series of reports and essays which Mr Amery has collected, mainly from the research committee of the Empire Economic

Union, and published under a single cover. There is a great deal of meat in this book, and readers who desire to understand accurately the mixture of sentiment, rationalism and economics which makes up the attitude of the Empire Trade advocates will be glad to have their views collected and their proposals clearly set out and documented with facts and figures, even if a study of the facts and figures reveals some lacuna which have to be bridged by faith. For instance, the several drafts of trade treaties with the Dominions, while setting forth in detail the preferences to be given to various classes of Dominion goods in the British market, make no suggestions for the British manufactures which are to receive exchange preferences in Canada, etc., and simply say "lists to be arranged." Here, one feels, may be concealed a greater difficulty than the authors of the reports would admit. Nor are the figures of British trade with Nyasaland, for example, such as to cause unbounded economic optimism. It is, none the less, valuable to have set out the imperialist proposals for dealing with the Colonial Empire, which is too often omitted altogether by ardent advocates of imperial unity, and interesting to observe the steady hostility to the mandatory system which their views involve. Imperialism, it would seem, is prepared to support internationalism in matters cultural and humanitarian, so long as economic questions are omitted. The chapters on imperial finance, with their praises of the Macmillan Committee and demand for the rehabilitation of silver and imperial co-operation in banking policy, also make interesting, if not always convincing, reading.

Lord Lyngington's little book is a slighter treatment of one section—the agricultural section—of the larger work. The opening chapters contain some unnecessary eloquence about the ill-treatment of the English landowner; but when the author reaches his practical proposals for the development of British agriculture in view of the present world position he has some useful things to say, and his New World experience in breeding, etc., adds point to his remarks. It should be observed that neither book, naturally, makes any effort to investigate the world depression in agriculture or the problems arising therefrom.

"The Thirty-Fifth Conference and Germany's Answer." By Professor Dr. F. Grimm. (London) Williams and Norgate. 123 pp. 2s. 6d.

THE fact that thirty-four conferences have already been held to patch up the Versailles Treaty, and that patching is still going on, is reasonably adduced by Professor Grimm as *prima facie* evidence of the rottenness of the original fabric. He traces, very readably and almost entirely without quoting statistics, the history of reparations to the present day—a history, in his opinion, as in that of all his countrymen and many who are not his countrymen, of the piling of insanity upon injustice.

Professor Grimm's criticisms of the American attitude are very restrained throughout, evidently because he still hopes for a change in American war debt policy. Great Britain, he feels, has behaved with moderation and has obtained disproportionately onerous terms from her creditors. It is to France that he attributes the steady closing of a stranglehold upon German industry and commerce which, in his opinion, lies at the root of the present crisis. While it would be difficult to refute most of the individual charges which he lays at the door of French policy, it is also hard to accept his view that every one of these moves was part of a preconceived and consistently executed design on the part of France to bring about the complete collapse of Germany. The French attitude to reparations consists far more of a series of separate reactions to proposals which France regards as threats either to her purse or to her security, than of an elaborately-conceived Machiavellian policy, of which her every political action is a deliberately designed part. It is, however, an understandable point of view; and the reader cannot but sympathise with Professor Grimm's outburst: "As if security were the prerogative of one country! Has not every country a right to security? But does anyone mention German security, notwithstanding the fact that disarmed Germany is surrounded by neighbours whose armaments are steadily increasing?"

Professor Grimm argues very persuasively that the payments already made by Germany cover all the reparations which could justly have been demanded of her, and he makes a reasonable plea for the revision of the treaty on the grounds that its implementation is impossible. If he tends to depict the cancellation of reparations as the way of escape from the present crisis, instead of merely an approach road via which alone that way can be reached, who shall blame him?

The Stock Exchange.

THE STOCK EXCHANGE HALF YEAR.

THE last six months on the Stock Exchange have been, in one respect at least, a satisfactory period from the viewpoint of the student of investment, for the markets have honoured the first principles of investment to the letter. As is fitting under conditions of shrinking trade and rapidly falling money rates, fixed-interest securities of the gilt-edged type have risen steadily in market value, while equity shares have as steadily declined. On the other hand, fixed-interest stocks whose intrinsic security has deteriorated with the deepening of the trade depression have failed to benefit from cheaper money, and have in most cases suffered market depreciation.

In the gilt-edged markets, British Government long-dated stocks began the half-year more or less at the bottom and ended at high levels. At the beginning of the year they were still under the influence of the suspension of the gold standard and a 6 per cent. Bank rate—not to mention loose talk of inflation in some quarters. The balancing of the Budget, the reduction in Bank rate in rapid stages from 6 per cent. to 2½ per cent. (between February and May), the repayment of the dollar and franc credits raised for the support of the pound last summer, and the fall in the Treasury Bill rate to the record low level of ½ per cent., all contributed to the return of British Government funds to popularity. At the moment of writing, the long-dated stocks are returning yields of under 4 per cent., while 5 per cent. War Loan is hanging fire of 10½ in the expectation of an early conversion scheme. Dominion Government and other stocks (trustee or otherwise) of the gilt-edged variety fully participated in the advance. New issues of Central Electricity Board stocks, Home Corporation stocks, and "Tube" railway debentures all commanded high premiums in the market. It was, however, noticeable in the last month that the pace of the advance in all the long-dated stocks slowed down considerably and that there was a growing disposition to exchange into the medium-dated stocks. The course of the market in fixed-interest securities in these six months is best seen in tabular form in the following figures of average prices and yields for which we are indebted to the Actuaries' Investment Index:—

ACTUARIES' INVESTMENT INDEX.

* Latest available.

It will be seen that the preference shares of industrial companies were the sole exception to the prevailing upward movement. This may be attributed to the deterioration in the dividend cover, coincident with the decline in industrial earnings. Preference dividends were passed or deferred in the last half-year by a number of important companies.

Foreign Government and municipal bonds provided the black spot in the fixed-interest markets. The period was marked by default for the first time on some of the reconstruction loans issued under the auspices of the League of Nations. German Government bonds sank to near their record low levels before enjoying a recovery on "bear" closing on the better news from Lausanne.

The course of equity share values over the past half-year was interesting and significant. In general there was an improvement in the first three months and a reaction in the second, but apart from home railway, shipping and to a lesser extent iron and steel, the leading industrial shares showed remarkable steadiness at the lower

† Free of income tax.

level, and even a tendency to recover. This may be due to the slightly better reports now being published, in some instances, for a period covering the suspension of gold. Insurance shares have recently lost practically all the gains made in the first four months, and investment trust stocks have fallen to new low levels. Brewery shares were badly affected by the absence of taxation relief in the Budget and have fallen almost continuously since April. A relatively good showing has been made by stores and catering and electric lighting shares, but the most satisfactory market has been in Bank shares, which have shown an appreciation of about 20 per cent. over the past six months. This may be attributed to the good results published for the year 1931. The following table gives the fluctuations (by classes) in ordinary shares for the past six months:—

ORDINARY SHARES—ACTUARIES' INVESTMENT INDEX.
(December 31, 1928=100.)

We have added a table giving the record of a selection of the most active securities. Some of the individual movements have been extraordinary. Swedish Match, thanks to Mr Kreuger's frauds, have fallen from £6½ to 5s., Unilever have never been offered so cheaply, Shell Transport has slumped badly on the dividend cut, Canadian Pacific and the home railways have broken new low records. There is little doubt but that a favourable outcome to the Lausanne Conference would bring about a sharp recovery in the depressed international securities, but whether an advance in equity shares can be held may depend on factors like the results of the world economic conference in London. If the efforts to lower tariffs, and remove exchange restrictions and trade control fail, there may be significance in the fact that equity share markets in London are standing, to-day, on a higher yield basis than those of New York.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET. ACCOUNT.
July 5. July 7.

The new account opened quietly but cheerfully. The hopefulness of sentiment regarding Lausanne and Geneva persisted at the outset, despite the critical position at the one centre and Mr Hoover's intervention at the other. As the week progressed, however, apprehension regarding the French attitude became more noticeable, and though quotations were well maintained, the undertone of the markets became less firm. The failure of the London, Midland and Scottish Railway to pay a full half-year's dividend on its senior preference stocks was a discouraging factor, but equity shares held their ground, and, in a few instances, showed moderate improvement. Prices in the more speculative markets, similarly, showed no tendency to recede, but the volume of business was restricted. Altogether, the week showed the technical position in a favourable light, but left open the possibility of a check in the event of serious difficulties arising in the course of the present international negotiations.

A steady investment demand continued for Gilt-edged stocks, 4 per Cent. Consols especially being well supported. Further selling occurred, however, of 5 per Cent. War Loan. The tone became slightly easier as the week wore on, but improved prices, as a whole, were held. India loans reacted slightly after initial activity. Australian stocks were firm after the announcement that £3,000,000 of Treasury bills would be paid off as to one-half on July 15th, and the remainder converted into bills domiciled in Australia. Optimism regarding international possibilities sustained the prices of European bonds until mid-week, when an easier tendency developed. Austrians suffered a moderate decline, on the reported insistence of France on unacceptable political conditions as the price of participation in the proposed loan of 300 million schillings to Austria. German bonds were in demand at the outset, but were weak subsequently on reports of a strained Bavarian-Prussian situation. Japanese loans were again sold. Mexican issues were lower on the absence of hope of an early payment confirmed by the circular of the International Committee of Bankers.

The home railway traffic figures showed smaller losses than those of last week, but market improvement was rudely checked by the London, Midland and Scottish announcement, which showed that less than half the last six months' decline in gross earnings had been covered by lower expenses, and that only 1 per cent. would be paid for the half-year on the first preference stock. A slight demand for Argentine rails found the market ill-provided with stock. The earnings' figures remained unfavourable, but the market expected an early alleviation of the exchange situation.

Though business in industrials showed signs of broadening from time to time, conditions remained irregular. Textile shares, on the whole, were better, the improved showing of Bleachers and the large increase in profits of Patons and Baldwins encouraging provincial demand, on the expectation that other reports would show similar

evidence of better trading since the departure from gold. Cables and Wireless were firm in anticipation of the report. A moderate inquiry for P. and O. and Furness Withy had a disproportionate effect on prices in a narrow market. Brewery shares were a shade harder. Distillers improved on bear closing before the dividend announcement. Business in electrical shares was small, though General Electric were firm (despite the reduced dividend) on the maintenance of profits. The company's report is dealt with on page 1420. Motor shares were dull, and steel shares undecided, apart from Lambert Bros., which were in demand on the announcement of a proposed return of capital. More than normal activity was recorded in greyhound racing shares. International counters reflected the irregular trend of Wall Street and the absence of sustained Continental interest. Bank shares were quiet but steady, and insurance shares had a firmer appearance than of recent weeks.

Dealings in oil shares remained on a small scale, quotations failing to maintain a tentative improvement at the outset. The market was moved less by the favourable references to prospects of co-operation among producers, made by the chairman of Shell and Anglo-Persian, than by their warning that no early improvement in world consumption could be expected. A slightly firmer tendency developed in the rubber share market, but only a few shares changed hands. Tea shares remained quiet, but prices were fractionally higher where altered.

Interest in mining shares remained sub-normal. Though Kaffirs were firm, demand was highly selective, attention being concentrated on concerns like Sub Nigel, Daggafontein and Randfontein. Paris was apathetic. The coming into force, on Wednesday, of the United States import duty of 4 cents per pound on copper caused scarcely a ripple of interest in the share market, sentiment remaining as conservative as ever for the reasons outlined in a Note on page 1422. The West Australian market again showed a certain liveliness. Great Boulder showed no further improvement, but Wiluna had a sharp rise on buying from Australia on Wednesday. The news that the "Byrne" restriction proposals (see page 1422) had been accepted by the Governments concerned failed to stimulate dealings in tin shares.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The markets were firm at the outset, became weak and discouraged, and subsequently showed a slight upward "technical reaction." Trading was sluggish and dealings were greatly restricted, the turnover on Tuesday being no more than 50,000 shares. A general disposition was evident to withhold commitments pending the clarification of the situation at Lausanne, regarding which sentiment, on the whole, was restrained. Government bonds

remained the most active of all markets, demand coming from individual investors rather than financial institutions. The Liberty 3½ per cent. tax exempt issue reached a new high level. The market continued to look forward hopefully to the rising of Congress, the refusal of the Senate to limit debate on relief measures being unpopular, for that reason. Stimulating news from industry was absent, but hopes were entertained that the summer seasonal recession might be less than usual. The business index of *The New York Times* for the week ended June 11th was unchanged at 55.1. Steel mill activity, however, made a new low record, being no more than 16 per cent. of capacity last week against 18 per cent. a week earlier. Steel demand from the railroads and from the motor producers (with the exception of Ford) remained at a disappointing level, the mainstay of current demand being State and Federal construction orders. Car loadings for the week ended June 11th, at 501,000, showed an increase of 54,000 as compared with the previous week, but a decrease of 230,000 against the corresponding week for 1931.

* 2-hour session.

CANADA.

By the end of last month many Canadian shares had reached new low points. C.P.R. issues were affected by continued unsatisfactory earnings reports. Power stocks were depressed by decreased consumption for industrial purposes. At the beginning of June, however, improved Western crop prospects lightened the general gloom, and a modest upward "furry" occurred, under the leadership

of Montreal Power, though the volume of trading remained light. Distillery stocks showed activity on predictions that after the Presidential election a process of liberalisation of the American liquor laws would begin. Revelations of the unfortunate plight of Price Brothers, the well-known newsprint corporation, however, caused uneasiness regarding the future of newsprint stocks. The bond market was steady, with securities of the highest class in good demand. The mining market was dull. The Bureau of Statistics' "Investors" index (common stocks) fell from 48.8 on May 12th to 38.6 on June 2nd, but recovered by June 9th to 40.4.

PARIS.

Markets were quiet at the start, profits tending to sag on mild profit-taking. Rentes were heavy and bank quotations lower. After a sizeable rally on improved sentiment regarding Lausanne the markets became quiet and the volume of business declined perceptibly. A moderate interest was taken in gold mining shares. On Thursday the line remained fairly steady throughout, though a further sharp recession occurred in German bonds.

BERLIN.

Though business in Berlin was very restricted in the opening sessions, the tone was not unsatisfactory. State and municipal loans reflected the improvement in German bonds in other centres. Subsequent weakness was attributed to an unsatisfactory interpretation of the news that a large block of Gelsenkirchen shares had been transferred to the Reich, and to nervousness regarding the internal political situation. Mining shares were lower. Dye Trust were heavily marked down.

AMSTERDAM.

An early reaction depressed quotations on the Amsterdam Bourse. Transactions, however, were by no means numerous. Amsterdam Trading declined, but Royal Dutch showed considerable powers of resistance. Subsequently irregular conditions prevailed, an air of anxiety being traceable to the course of events at Lausanne. Rubber shares became easier, and A.K.U. reacted.

	June 16, 1932.	June 20, 1932.	June 23, 1932.		June 16, 1932.	June 20, 1932.	June 23, 1932.

OTHER CENTRES.

The minor European bourses were unsettled and irregular, the uncertainties of the Lausanne Conference being a dominant factor in sentiment in all cases. Stockholm became dull after an early rally, but Brussels developed marked firmness in mid-week. The Hessian elections had an adverse effect on quotations at Frankfurt, where an atmosphere of nervousness prevailed.

NOTE.—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

INVESTMENT NOTES.

Three Capital Schemes.—Preference shareholders are familiar with requests for the jettisoning of their rights when their companies are in distress, but not with proposals for lowering their income at a time when ordinary shareholders have not ceased to receive dividends. Such, however, is the effect of the proposed scheme of arrangement under which the holders of £1,500,000 of 8 per cent. cumulative preference shares of Rylands & Sons are asked to submit to a return of capital of 6s. 8d. per £1 share, plus a "premium" of 2s. per share less tax—on condition that they consent to a reduction in annual dividends on their remaining capital from 8 per cent. to 6 per cent. The company carries on an old-established business of textile manufacturers, exporters and warehousemen. Up to and including the year 1930 its preference dividends were fully covered by earnings. Even in 1931 some £45,080 of the £90,000 required for preference dividends was earned. The whole amount was paid, and ordinary shareholders received a distribution of 4 per cent. We see little inducement to preference shareholders to accept a scheme whose future benefits will go entirely to ordinary shareholders. Grim necessity, however, will doubtless compel acceptance of the far severer provisions of another scheme, put forward by Humber, Limited. This once-prosperous company, a pioneer in the motor industry and now a member of the Humber-Hillman-Commer group, has been recently financed by Rootes, Limited, the large motor distributors. It requires further accommodation and working resources which only the latter can provide. The 7 per cent. preference shareholders are asked to surrender their rights to all dividends up to August 31st next in return for the allotment to them of an additional £4 10s. of preferred ordinary capital (entitled to non-cumulative 15 per cent. maximum dividends) for every £40 of existing preference capital. This is a fair and even generous suggestion, but the ordinary shareholders receive harder terms. In effect, they will hereafter be entitled only to a non-cumulative preferred 7½ per cent. per annum on the present nominal value of their capital, and will lose all their rights in the company's equity. We regard this provision as open to serious objection, on the ground that it is unfair to bar ordinary shareholders from all participation in the fruits of possible future recovery. As Messrs. Rootes, however, own nearly 60 per cent. of the ordinary shares and are providing fresh money so that the balance can be reorganised and the business rationalised, the

matter lies almost entirely in their hands. Finally, Anglo-Foreign Newspapers, which was originally floated during the boom under the auspices of Mr. R. S. Horne, and had an unfortunate early trading experience, has now reached a point at which the clearing up of the balance-sheet position can be undertaken. The 3,000,000 ls. deferred shares will be cancelled and the ordinary 5s. shares reduced to 1s. 4d. and subsequently consolidated into 4s. shares. The reduction will extinguish the existing deficiency account of £1,058,208 and preliminary expenses of £31,901, and will leave a balance of £14,061. The ordinary shares (over 82 per cent. of which are held by the Associated Iliffe Press) actually increase their equity rights under the arrangement, owing to the disappearance of the deferred shares which were entitled to 40 per cent. of distributable profits after the ordinary have received 10 per cent. dividends. The Associated Iliffe Press hold 73 per cent. of the deferred shares, and have presumably consulted the remaining holders in advance.

International Tea.—The results of the International Tea Companies Stores, Limited, for the year to April 30th last, are a tribute both to the excellence of the company's management and the resiliency of retail trade in "necessities" during economic depression. Total profits show a further increase of 8 per cent. and ordinary shareholders receive the customary distribution of 30 per cent., together with a share bonus of one in ten. The results for the last three years are shown:—

	1930.	1931.	1932.
Total profit	755,359	820,163	885,089
Fees, depreciation, interest, health insurance, &c.	138,762	123,358	117,442
Tax reserve	25,000	40,000	60,000
Net profits.....	591,597	656,805	707,647
First preference dividend	36,000	36,000	36,000
"A" preference dividend	45,300	94,771	95,771
Earnings for ordinary	510,297	526,034	575,876
Paid on ordinary	359,756	374,828	374,831
Paid per cent.	30	30	30
To reserves	150,000	150,000	200,000
Brought forward	131,756	132,297	133,503
Carried forward	132,297	133,505	134,547

The earning power of the whole group of companies (which includes Kearley and Tonge, Limited, Star Tea Company, Limited, Ridgways, Limited, and James Pegram and Company) is greater than the above figures suggest, since the profits of subsidiaries, in excess of their declared dividends, have not been brought into the parent company's accounts. The balance sheet is remarkably strong. Goodwill of £1,207,316 was entirely written off two years ago. The purchase of various freeholds during the year brings this property item to £1,732,691, which is regarded as a conservative valuation. The company holds £267,394 of British Government and Dominion Corporation stock and £538,431 of cash. International Tea, so far, appears to have lost little, if anything, through its decision not to associate itself with the Unilever interests. It remains to be seen whether, if the depression is prolonged, British retail purchasing power will be maintained, despite the relative inelasticity of wage rates and the effect of unemployment insurance payments in maintaining the effective demand for "necessities" of workers falling out of employment. The efficiency of the company's organisation, however, has been amply demonstrated, and opportunities for increased turnover at the expense of the small local shop will doubtless remain considerable. The 5s. ordinary shares, cum rights, are quoted at 26s. 10½d.

General Electric.—Though the General Electric Company has benefited from orders under the grid scheme the virtual maintenance of its profits during the year to March 31st last is a creditable achievement. Net profit at £581,648 shows a decline of only 8 per cent. and would

have amply covered a repetition of the previous year's 10 per cent. ordinary dividend. The directors, like those of many other strong concerns at the present time, have, however, decided to conserve the company's resources, and have reduced the dividend to 8 per cent.

	1930.	1931.	1932.
Profit	1,179,007	1,122,008	1,057,657

Carried forward	379,165	400,880	420,136

Political and economic troubles diminished the volume of export business last year, and incoming orders in the heavy engineering section tended to decrease. The balance sheet position is, as usual, strong, liquid resources being £384,000 greater than a year ago at £1,558,000. Reserve account now stands at £1,420,000. At 33s. 9d. the £1 ordinary shares yield £4 19s. per cent.

Stanton Ironworks.—The principal products of this well-managed Derbyshire company are cast iron and concrete pipes. The company also converts blast-furnace slag into road-making material and owns four collieries. The latest report maintains the company's enviable reputation in its industry as a profit-earner. For the third year in succession increased earnings are shown, and for the eleventh successive year (a notable record) a dividend of 10 per cent. (tax free) is to be paid:—

	1930.	1931.	1932.
Profit	240,532	264,193	295,174
Depreciation	40,175	38,229	35,119

Paid, tax free	10%	10%	10%
Amount of dividend ..	113,671	113,671	113,671

Increase or decrease in carry-forward..... + 15,534 + 41,477 + 76,574

Earnings would have covered a moderate dividend increase, but the directors' conservatism is commendable, and shareholders are being offered a bonus of another sort. To defray recent expenditure on improvements and additions and to provide further working capital, the company desires to raise fresh capital. Out of 800,000 new £1 shares it proposes to offer 300,000 to existing ordinary shareholders at 25s.—i.e., about 10s. below the present market price—in the proportion of four for every fifteen fully-paid and four for every twenty partly-paid shares now held. The company will also call up, shortly, the unpaid liability of 5s. on the 462,500 existing partly-paid £1 shares. The effect will be to make £490,625 of new money available, and to increase the ordinary capital ranking for dividend from £1,136,707 to £1,552,332. Demand for the main products remains good, though during the past few months it has been necessary to reduce output. Confidence in the ultimate future is indicated by the acquisition of a controlling interest in the Wellingboro' Iron Company and the decision to erect a new blast-furnace plant. Stanton ordinary £1 shares, fully paid, stand at 35s. cum dividend, yielding almost exactly 6 per cent. tax free. The rights are worth approximately 2s. 4d. per share.

Allied Ironfounders.—This company was registered in March, 1929, to amalgamate certain leading companies in the cast iron trade. Income from dividends and interest of £140,177, last year, showed little change from the £134,994 received in 1930-31. The ordinary shares have not yet received a dividend:—

	1930.	1931.	1932.

Paid %	Nil	Nil	Nil
Carried forward	4,247	37,490	81,018

* Tax free. † Period March 21, 1929, to March 31, 1930. The total trading profits earned by subsidiaries during the financial year were £180,588, including a non-recurring item of £14,930. This compared with £168,618 for the previous year. The maintenance of net profits in a difficult year is attributed to the benefits of internal reorganisation and economies. The balance-sheet position is liquid. The £1 ordinary shares stand at 5s.

Bleachers'.—This twenty-two-year-old merger in the textile furnishing trades rather more than maintained its position in the year to March 31st last. Gross profit amounted to £564,053, compared with £547,272, and as allocations to repairs and to depreciation were reduced, net profit rose from a nominal figure to £112,634, and the preference dividend was met by a small draft on "carry-forward."

	1930.	1931.	1932.
Profit	1,235,217	547,272	564,053
Repairs	464,965	238,836	172,820

Paid %	7½	10
General reserve	5,000	...
Carry forward	86,371	87,823

* Excluding £260,000 dividend from reserve of Barry, Ostlere and Shepherd, transferred to reserve of Barry and Staines.

The accounts include a consolidated balance sheet of the holding company and its subsidiaries, which shows a high degree of liquidity, cash and British Government securities amounting to £1,047,104, to cover current liabilities of £236,674. At 30s. the £1 ordinary shares yield about £6 19s. 3d. per cent., less tax, allowing for final dividend of 7½ per cent.

Oil Affairs.—The abortive conference of world oil exporters, held in New York recently, is to be resumed in Paris on June 29th. It is rumoured that the British and American oil interests, including the Roumanian exporters, will present a united front to the Soviet Government representatives, in order to limit the range of Russian oil competition. There should be no insuperable obstacle to world agreement. As only about 8 per cent. of the 5,000,000 tons of oil exported by Russia last year was sold through the Soviet's own distribution facilities, the Soviet has some inducement to safeguard the position of the remaining 92 per cent. of its exports by coming to an arrangement with the international oil companies. Both Sir John Cadman, in his speech to the shareholders of the Anglo-Persian Oil Company, and Lord Bearsted, in his speech to the Shell Transport and Trading Company shareholders, emphasised the importance of these oil conferences, which had been the means of bringing the leading oil interests of the world together in a real determination to co-operate instead of indulging in cut-throat competition. The New York conference had failed, said Lord Bearsted, only because the Russian representatives had possessed an entirely exaggerated idea of the value of their oil export position. Sir John Cadman gave a lucid explanation of the present difficulties of the world oil industry. The collective efforts to increase production capacities, stimulated by the high prices and the threatened famine of ten years ago, had, he declared, attained a maximum effect on the very eve of the world crisis. The world's visible reserves of oil had been enormously increased by the discovery of huge and easily accessible deposits in many countries. Simultaneously, chemists and engineers had evolved new technical methods whereby every ton of crude oil became capable of making a much more effective contribution to market demand. Having regard to the severity of trade depression, the consumption of the petroleum products had shown a remarkable degree of resistance. Nor, Sir John declared, should it be assumed that there had been a total failure to balance supply with demand. Certainly the Anglo-Persian Oil Company had

done its part by vigorously controlling its own output for several years past. Lord Bearsted, however, warned his shareholders of the probability that both production and consumption would be much further reduced this year. Regarding the position of the Royal Dutch Shell group, Lord Bearsted disclosed some interesting facts. Shell Transport, he pointed out, acted as a banker to its associated companies. That explained why its "holdings in and advances to sundry companies" had increased by £4½ millions while cash and securities had declined by approximately the same amount. The greater portion of these advances had since been repaid, and the Shell's present holding of cash and Government securities was about £17 millions. It would be all to the good, Lord Bearsted added, when this capital could be employed in the business, for large cash reserves were a symptom of business stagnation. Lord Bearsted took occasion to protest regarding the recent events in Chile and the State of Vera Cruz in Mexico, which threatened confiscation of foreign investments. Finally, both Lord Bearsted and Sir John Cadman referred with satisfaction to the amalgamation of the distributing organisations of the Shell and the Anglo-Persian Oil Companies in Great Britain, which had created a more efficient and economical service for the consuming public.

The Copper Position.—The market continues to show only a perfunctory interest in the shares of copper producers. The 4-cent duty on copper entering the United States is now in force. So far, however, values on the domestic market have not responded, in spite of quite a strong lead given by London. Optimism in regard to the outlook for Rhodesia has been engendered by the announcement that a refinery to deal with 1,000 tons of blister copper per week is being erected in this country, but it is unlikely that copper mining shares as a whole will obtain influential support until the metal reaches a more lucrative price level. Despite unofficial canvassing of a British import duty, informed quarters have no belief in the immediate likelihood of the metal's being taken off the free list, and foreign producers have showed no anxiety to anticipate a tariff by speeding up shipments. Rumours have been rife as to the possible dissolution of Copper Exporters, Inc. Such an event, however, if it occurred, would probably be followed by the setting up of a European group. In any case, interests outside the cartel have for months past been securing the bulk of the business available, and the general level of prices in Europe has been below even the custom smelters' quotation, which in its turn has been ½ cent per pound below the official Exporters' figure. Disruption of the Copper Exporters, now that a tariff is established in America, would not be likely to precipitate panic selling. It might, indeed, result in more successful handling of the copper situation, and foster improved prices.

Tin Restriction.—In the *Economist* of May 7th we described the proposals of the London Council of the Tin Producers' Association for a further drastic restriction of output, involving a two months' shut-down or a three months' operation at 40 per cent. of standard. The International Tin Committee, at a meeting in London this week, has now decided to adopt a modification of this scheme—now generally known as the Byrne scheme—which will be put into effect from July 1st next. Production during July and August is to be either stopped or ordinarily smelted. Thereafter the ore is produced or controlled is to be realised at the rate of 10 per cent. per month for ten months. As from July 1, 1932, the new aggregate quotas of the restricting areas are cut down by 17,040 tons below the existing quotas, that is, they are to be at the rate of 54,056 tons a year, or 33½ per cent. of the 1929 production (162,168 tons). No metallic tin or ore produced under these new quotas will be released from the control of the exporting Government before September 1st, and thereafter the releases will be—September, 5,405 tons; October to December, 16,217 tons; and thereafter 16,217 tons each quarter to June 30,

1933, making a total of 54,056 tons from July 1, 1932, to June 30, 1933. The individual quotas from July 1, 1932, will be—Dutch East Indies, 12,823 tons; Nigeria, 3,431 tons; Bolivia, 14,687 tons; and Malaya, 23,115 tons. The announcement of the new restriction had a favourable effect upon the tin market, the spot price advancing to £116 per ton as compared with £112 10s. a week ago.

The Rand Midsummer Dividends.—Our mining correspondent writes: A bird's-eye view of the recent declarations as a whole gives a striking impression of light and shade. The Sub Nigel supplies the most obvious example of the former, and Brakpan of the latter. During almost every recent month the Sub Nigel has established fresh profits records, but doubts have existed regarding the extent to which the extra earnings might be drawn upon for capital expenditure. The directors, in fact, followed a liberal policy in the distribution of profits. For the financial year ending June 30th, the latest announcement of the Sub Nigel, makes the unprecedented total of 75 per cent. for 1931-32, as against 60 per cent. in respect of the preceding period. As regards the Brakpan, the circular of April 8th, announcing formal confirmation of the agreement for purchase of the Witpoort undertaking, stated that the price (£200,000) and the cost of development might be raised by an issue of shares. Conditions (including exchange difficulties) have, however, militated against any emission. Accordingly, the first instalment of the purchase consideration (£50,000) falls to be provided out of profits, and has necessitated a cut of 1s. per share, or 5 per cent. in the dividend. The other instalments are due at intervals of six months, a point those interested would do well to keep in mind. We give below our usual table of company dividends:—

Company.	Total, 1930.	June, 1931.	Dec., 1931.	Total, 1931.	June, 1932.
Brakpan	43½	20	20	40	15

Rand Mines	90	40	40	80	40

* Tax free.

This table does not include declarations made at dates other than June and December.

The dividend of the Van Ryn Gold—whose rate shows a fresh increase—is payable tax free in sterling. The others will be met at the rate of exchange ruling on the date fixed for payment from the head offices of the companies in Johannesburg. This will give British shareholders an addition equal to 25 to 30 per cent. As regards the absence of any announcement on the part of the Johannesburg Consolidated Investment Company, it may be recalled that at the annual meeting last November the chairman mentioned that in future the directors would not declare the final dividend until they had the actual results of the year's work before them. A reminder of this in conjunction with the announcements of the subsidiaries would have obviated the misunderstanding which occurred.

Great Boulder Proprietary.—The explanation of the new developments given at Wednesday's meeting added practically nothing to that embodied in our note of several weeks ago. Opportunely, a further telegram came to hand on Tuesday. This intimated that the results previously reported in respect of the 1,650 and 1,800 ft. levels were being maintained, and contained a fresh estimate of ore reserves. The latest total of 211,000 tons, value 8½ dwts., shows an increase of nearly 9,000 tons upon the December estimate, the value being about ½ dwt. up at 8½ dwts. Mr H. A. H. Collier, one of the directors, stressed the point that the dip of the new lode is to the west, carrying it further and further into the Great Boulder property. He argued that even if the "X" lode should furnish profits equivalent to only one quarter of those derived from the main lode, the recent advance in the price of the shares would be more than justified. Despite the latest cable and the meeting, Boulders failed to make any further progress. The explanation lies in the fact that the rise from 2s. to 7s. which has occurred during the past six months discounts a very great improvement in the prospects. The latter appear extremely hopeful, but prudence suggests that the outcome of further work should be awaited.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Bank of British West Africa, British Empire Trust, General Mining and Finance, British Electric Traction, Straits Plantations, Shell Transport and Trading, Zinc Corporation, Wm. Cory and Son, Scribbans and Company, and Virol. Presiding at the annual meeting of Zinc Corporation, Sir Robert Horne regretted that all the predictions he had made as to the unhappy results of the demonetisation of silver, in view of the policy adopted by the Indian Government in 1926, had been more than fulfilled. He was not without hope, however, that the hour of silver's return to a definite position in the monetary systems of the world was not far distant. At the annual meeting of Wm. Cory and Son the chairman said that the export side of the business had derived some little advantage from the abandonment of the gold standard in September, but this had been to a great extent counterbalanced by the imposition of import licences and embargoes on all coal exported from Great Britain to the Continent. The meeting of Shell Transport and Trading is referred to on page 1422.

CAPITAL ISSUES.

The new capital market has been inactive this week, the only public issue, at the time of going to press, having been made by Dr. Knox's Medical Products, Limited. The gentleman whose name forms part of the company's title was a Pittsburgh medical practitioner (now deceased) who used his "uncanny insight" to treat the "common ills of mankind." The company, according to the prospectus, will start with two valuable assets. The first is the late doctor's formulae, and the second is Sir William Henry Veno, who will act as managing director. The initial capital is small, but, as the prospectus sagely points out, "in this class of business knowledge, experience and proved previous success are more valuable than a large amount of initial capital." The document also enunciates the undeniable proposition that "capital increases in value as a business grows." Every subscriber of 10s. for an ordinary share will receive, free of charge, from Sir William Henry Veno, one management share of 1s. An element of the speculative, nevertheless, would appear to attach to this issue.

Public Offers.

Dr. Knox's Medical Products.—Issue of 100,000 ordinary shares of 10s. each. The company has been formed to manufacture and distribute new proprietary medicines. Sir W. H. Veno has agreed to transfer to the company for a consideration of £6,500 the benefit of certain formulae and methods of preparation and the right to use the name of the late Dr. Knox.

Sheffield Gas Company.—Sale by tender of £250,000 4½ per cent. redeemable debenture stock, 1966, at £96 per £100 stock. The stock will be redeemed at par on July 31, 1966, unless previously cancelled by purchase or agreement. The new capital is required for the construction and equipment of the South Yorkshire Coke Oven Gas Network. Net profits for the past five years have averaged £171,414, covering interest on debenture stock, including the present issue, about 3½ times.

Colchester Gas Company.—Sale by tender of £89,000 5 per cent. perpetual debenture stock or such an amount as with premiums will realise the sum of £89,453 at a minimum price of par. The net revenue of the company for 1931 was £13,939, covering interest on the present issue 3.1 times. The total number of consumers on December 31 last was 11,142. The population of Colchester is steadily increasing.

Further Stock Exchange information, including the latest profit and loss accounts and reports and notices, will be found on pages 1488 and 1484.

COMPANY MEETINGS, &c.

"SHELL" TRANSPORT AND TRADING COMPANY, LIMITED.

CO-OPERATION BETWEEN OIL COMPANIES.

LORD BEARSTED'S REVIEW.

The annual general meeting of the "Shell" Transport and Trading Company, Limited, was held, on the 21st instant, at Southern House, London.

The Right Hon. Viscount Bearsted, M.C. (the Chairman), in moving the adoption of the report and accounts, said: You will all have noted, I have no doubt, the fall in the company's profits available from £5,139,000 to £2,807,000. The causes for that fall are evident, and in no way attributable to special reasons pertaining to the oil business in general or our company in particular. In fact, I would go so far as to say that the surprise is not that our profits have fallen, but rather that very substantial profits still remain. I enumerated last year a series of causes contributory to the world's malaise. I can only say that not one of these causes has yet ceased to operate, and some of them have even been aggravated since I last had the pleasure of addressing you. I therefore approach my task to-day with no feelings of apology, but rather in a spirit of pride which I trust you can all share.

COMPANY'S CASH RESOURCES.

The report tells you of the large cash resources of the group and that the companies in which it has large share interests have in proportion large resources of their own. We look forward to a day when those resources will be employed in the forward march of the oil trade, which in common with all other trades is now arrested. The extent of such halt in 1931 can be seen from the figures in the report, which show that world production was reduced by 10,000,000 tons, and our own production by nearly 3½ million tons. I do not believe that we are yet at the end of such diminution, and you must be prepared for a still further fall in consumption and production in the current year, though I hope there will be no further fall in prices, which have already fallen to an uneconomic level in many countries.

Our capabilities for production are only restrained by the world's capability for consumption. Unfortunately, consumption is still diminishing, and even in the United States the current year will certainly show a substantial fall. In the United States the trade situation in so far as it affects the petroleum industry has not improved. The beneficial results of restricted development in several parts of the country were retarded by the uneconomic development of the East Texas field.

Turning to the balance sheet, you will see that your company, as you are no doubt aware, acts as a banker to its affiliations and advances such cash as they require for their current operations from time to time. The greater part of the advances which figure in this balance-sheet has since been repaid and your company's present holding in cash and Government securities is about £17,000,000 sterling. Of course, this large amount must be regarded as working capital, and it will be all to the good when it is employed in the business. The fact that it is at present liquid is a symptom of the present stagnation in the world's affairs. Naturally, the present low price of oil and freights calls for less cash to finance our current operations. I am giving you these somewhat elementary facts to prove that for companies such as ours an over-liquid condition is a sign of bad trade. Until such time as your directors see a proper use for their cash it will be kept as their main protective weapon. But I emphasise that, proud as we are of our financial strength, we would much rather employ it in trade than in buying Government stocks.

SHELL UNION OIL CORPORATION.

The Shell Union Oil Corporation produced somewhat less in 1931 than in 1930, but as a result of several important discoveries during the year their proven reserves were materially increased. In common with practically all other petroleum companies within the United States, the Shell Union operated at a loss, but its rates of depreciation and its method of valuing inventories were in no ways varied, whilst its cash position during the year became substantially stronger. In spite of the heavy drilling programme necessitated by the obligations of our leases and the offsetting activities of our neighbours in East Texas, as well as the construction of a new pipe-line to Houston, the company was able to make substantial economies in capital and in operating expenditures, with the result that its cash increased during the year by \$11,400,000. It is safe, therefore, to say that that company continues to be in an

unusually strong position, with assets unimpaired, and that as soon as conditions permit it will be in the forefront of those companies reaping the benefits from conservative and sound management. Fortunately, out of the stress and turmoil of these present days has come a greatly improved atmosphere amongst the more important petroleum companies, and I am happy to say that, generally speaking, the relationship between the various units composing the industry has never been so satisfactory as at present.

DISTRIBUTING ORGANISATIONS.

I think I told you when we met last year that no matter what competition we might have to encounter, we were determined to maintain our rightful share of the trade. I am happy to say that we have been successful in that aim. In that connection I have to refer to the amalgamation which took place at the beginning of this year in the United Kingdom and in Ireland of the distributing organisations of your company and of the Anglo-Persian Oil Company. This amalg

THE BRITISH EMPIRE TRUST COMPANY, LIMITED.

STRONG AND SATISFACTORY POSITION.

The thirty-first general meeting of the British Empire Trust Company, Limited, was held, on the 20th instant, at the Abercorn Rooms, Great Eastern Hotel, London, Mr J. Davidson, chairman and managing director, presiding.

The Chairman, in moving the adoption of the report and accounts, said that the year to April 30th had been the most anxious and difficult the company had ever encountered. Changes affecting adversely the credit of individuals, companies, and even of governments, seemed to spring up without warning, and any kind of financial business was accompanied by much uncertainty and risk. Among the changes to which he referred, the most momentous and far-reaching in consequences was the announcement in September last by the British Government of the suspension of gold payments. He was not criticizing that action: it was not a matter of choice but of necessity, and obviously no warning of such an event was possible. He was glad to say, however, that, notwithstanding the adverse conditions and the tremendous shrinkage in values which had taken place in many directions during the past year, the company on balance had suffered depreciation amounting only to 7½ per cent. of the value of the investments held. This, thanks to the cautious manner in which the affairs of the company had been handled, had all been provided for, and the directors recommended the same dividends as last year, viz., 5 per cent. on the preferred ordinary and 7 per cent. on the deferred ordinary shares. It was most gratifying to know that, after making these payments, the capital of £845,259 and the reserve of £225,000 remained intact. He reminded the shareholders that the company was not merely an investment trust company which could afford to disregard the prevailing value of its investments. The company was formed to carry on a financial business of wide and general character and to act as trustees. The company was now acting as trustees for an aggregate of £59,000,000, and it was essential that the standing and credit of the company, which were among its most valuable assets, should be maintained in a sound position, which could only be achieved by valuing the investments on a reliable and safe basis.

The Chairman stated that the company had with great success for many years past specialised in Canadian investments. The trend of events had led to the major portion of the capital being now invested in Great Britain. This had resulted largely from exchange conditions of, he believed, a temporary character, and did not mean that the directors had lost faith in Canada as a field for profitable investment. On the contrary, they were only awaiting a favourable opportunity to reinvest in that great Dominion, which contained tremendous potential wealth in raw materials and a virile and industrious population.

WEST GLOUCESTERSHIRE POWER COMPANY.

After referring to some of the more prominent Canadian companies with which the trust was associated, the Chairman said that in 1931 the West Gloucestershire Power Company, whose electricity supply area covered 679 square miles in Gloucestershire and Monmouthshire, increased its sales of electricity by 20 per cent. over the previous year. The figures for the first five months of 1932 showed continued improvement, the units sold from January to May being 13,048,000 as compared with 11,265,000 for the corresponding period in 1931, an increase of 1,783,000 units, or 16 per cent. The company had now 235 miles of mains in operation, and supplied electricity in forty-eight towns and villages. Having regard to the state of industry, and to the fact that the official figures of units generated for the whole country showed an increase of 4½ per cent. for 1931 over 1930, and 8·3 per cent. for the first two months of 1932 as compared with the first five months of 1931, and that the corresponding increases for these periods achieved by the West Gloucestershire Power Company were 20½ per cent. and 16 per cent. respectively, the rate of progress being made could only be regarded as most satisfactory.

In concluding his remarks, the Chairman said again that the credit of the company had been well maintained and that, bearing in mind that this was the third successive year of the greatest depression ever witnessed, it was no mean achievement to be able to present accounts showing such a strong and satisfactory position. With regard to the future, the greatest hopes for recovery rested on the fact that every country in the world had been affected, and efforts were being made in every direction to bring about improved conditions. The directors, therefore, proposed to continue their policy of vigilance and energy in the firm belief that when conditions did improve the company would reap the reward of its efforts.

Mr. T. Blundell Brown seconded the resolution, which was carried unanimously. The formal business having been transacted, a cordial vote of thanks to the chairman and directors terminated the proceedings.

SCRIBBANS AND COMPANY, LIMITED.

PROGRESS IN A DIFFICULT YEAR.

The fifth annual general meeting of Scribbans and Company, Limited, was held, on the 17th instant, at the Hotel Victoria, Northumberland Avenue, London, Mr Philip E. Hill (chairman of the company) presiding.

The Secretary (Mr W. Coutts Donald, C.A.), having read the notice convening the meeting and the report of the auditors, The Chairman said:—Ladies and gentlemen,—We have made a total profit for the year under review of £248,180—notwithstanding the fact that we have carried out considerable developments of the business without taking into the profit and loss account any sum from the development reserve—a result which I suggest can be regarded as satisfactory. Of the total profit earned, £4,043 2s. 4d. is received from our investments other than that of our subsidiary. We have written down our Stock Exchange securities by £11,113—leaving a sum of £237,067 to be dealt with.

The company's factory in Dublin has been completed, and in view of the recent change in the fiscal policy of Ireland, this extension should prove remunerative. The extension of the company's main factory at Smethwick referred to at our last meeting has been completed. The biscuit business in which your company holds the controlling interest continues to progress satisfactorily, and I would remind you that our new factory has been built and equipped almost entirely out of accumulated profits.

You are being asked to-day to pass a resolution with regard to payment of directors' fees. The facts in relation to this are stated clearly in the directors' report, but since the report was sent out I have reconsidered the matter and as, with the exception of three, all the directors are full-time officials of the company, I do not think it is necessary that their remuneration should be increased—in fact, I am proposing a reduction in the salaries of all the full-time officials of the company having regard to the fact that the cost of living is materially reduced—and under these circumstances the amount of the directors' fees I am asking you to agree to will be £2,000 to be divided among the directors other than those who are in the employ of the company. In my opinion, the fees suggested are extremely moderate.

The report and accounts were unanimously adopted and the resolution with reference to the fees of the directors was approved.

The meeting closed with a hearty vote of thanks to the chairman, directors and staff.

WM. CORY AND SON, LIMITED.

EXPANSION IN OIL FUEL TRADE.

The thirty-sixth annual general meeting of Wm. Cory and Son, Limited, was held on the 21st instant, at Southern House, London.

Sir A. C. Cory-Wright, Bt. (the Chairman), said that, in view of the great uncertainty of the immediate trade outlook, the Board considered it prudent to pursue a cautious policy, and, although the profits earned would have justified the payment of a final dividend of 12½ per cent. as in the previous four years, they recommended that the final dividend should be 10 per cent. It must, he thought, be considered very satisfactory that, in spite of the difficult conditions of trade generally, the volume of tonnage handled by the company and its subsidiaries had not suffered to any appreciable extent. On the export side of the business they had been able to derive some little advantage from the abandonment of the gold standard last September, though that had been to a great extent counterbalanced by the imposition of import licenses and embargoes placed on all coal exported from Great Britain to the Continent.

They had also had to contend with more intensive competition from other European coal-producing countries, as well as all the difficulties of remitting foreign currencies to this country. The company's export trade had been further handicapped by the curtailment of output and the fixation of minimum prices by the collieries under the regulations imposed on them by the Coal Mines Act.

In such a year it was gratifying to be able to record an increased activity in their oil fuel trade, which continued to show a steady expansion, and again exceeded that of any previous year. At the same time the board were fully alive to the importance of securing, wherever possible, fresh markets for coal both in the United Kingdom and abroad, and the directors utmost efforts were constantly devoted in that direction.

The company had a sum amounting to £1,853,000 invested in subsidiary companies, most of which were entirely owned and controlled by this company. Their operations extended to all parts of the globe and in many spheres not directly concerned with the coal trade. With very few exceptions those investments had proved satisfactory, and the dividends received were equal to those of the previous year.

Every department of the business had been completely overhauled and drastic measures of economy in working were being carried out. The report was unanimously adopted.

BANK OF BRITISH WEST AFRICA, LIMITED.

IMPROVED NET PROFIT.

The thirty-eighth annual general meeting of the Bank of British West Africa, Limited, was held, on the 23rd instant, at 37 Gracechurch Street, London.

The Right Hon. the Earl of Selborne, K.G., G.C.M.G. (the chairman), after expressing regret at the tragic death of Mr. D. Q. Henriques as the result of a motor accident, said that in their main sphere of operations—West Africa—there had been no substantial improvement, and they could not look for better results until the exports from West Africa yielded better prices to the producers. Trade in West Africa and Morocco remained stagnant and depressed because trade in the whole world remained stagnant and depressed. On ground where so many financial and economic experts differed as to causes and remedies he was not going to venture to tread, but there was one point, and one point only, on which they were all agreed, and that was that they would not even begin to emerge from the very grave condition in which the industrial world found itself to-day until the wholesale prices of staple commodities began to rise. Any large increase in wholesale prices would be followed by an increase in retail prices, but the gap between wholesale and retail prices was too large and there would be no justification for retail prices following closely any upward movement of wholesale prices.

It was exactly that increase in the wholesale prices of cocoa and ground-nuts, palm oil, palm kernels and tin which alone could bring back to West Africa a flourishing trade. Was there any way in which Governments could legitimately and without doing more harm than good assist in raising the level of wholesale prices?

The net profit was £59,625, as compared with £24,568 in the previous year, a welcome improvement of £35,057. An interim dividend of 1½ per cent. had been paid last December, and they now recommended the payment of a final dividend of 2½ per cent., making 4 per cent. for the year, less tax, the same as last year. They had been able to maintain their dividend because their trading results had been somewhat better, because their losses had been kept down to a minimum, and because the economies which they had inaugurated two years ago had been effective. Their position was very liquid, and their inner position was correspondingly strong.

The report was unanimously adopted.

BRITISH ELECTRIC TRACTION COMPANY, LIMITED.

BONUS STOCK DISTRIBUTION.

The thirty-sixth ordinary general meeting of this Company, was held, on the 21st instant, at Winchester House, London, Mr. J. S. Austen, the chairman, presiding.

The Chairman, in moving the adoption of the report and accounts, referring to the proposed bonus, recalled that a year ago he formulated a scheme which was then believed to be good and greatly to the shareholders' advantage. In the autumn, however, a circular was issued pointing out that times had changed and that they must postpone consideration of the scheme until the end of the year. When that time came times had still more changed and the question was, what was the best they could do? After anxious thought the directors could find nothing better than to give a bonus of 100 per cent. in stock. It had always been their object to give the stock the highest possible capital value. The doubling of its amount would make it more marketable and so achieve that object. He would make it more marketable and so achieve that object. He might point out that, the stock being doubled, the payment of the same rate of interest meant that the amount they received as dividend would be doubled. As to the value of the stock, he had no hesitation in saying that if the company went into liquidation to-day, if they sold their securities at the prices ruling to-day, and if they paid off the debentures and preference stock at par, the return to the holders of deferred stock would be very considerably more than the price which it now commanded in the market.

As to the prospects, the situation was that if things remained exactly as they now were, as far as they were concerned, there was no reason whatever why their income for the current year should not be equal to the income of the past year. Certain securities not be equal to the income of the past year. On the other hand, they had about £350,000 in cash which paid no dividend last year and must pay something this year. That was money in cash or on deposit, earning very little, and he did not say it was going to pull its full weight for the whole of the year. Practically three months had gone and a large part of that money had only just reached them. Furthermore, they were not going to allow it to burn a hole in their pockets.

The report and accounts were adopted, and it was resolved that £202,889 of undivided profits be capitalised in the form of fully-paid deferred ordinary shares, ranking for dividend from April 1, 1932, and distributed *pro rata* among the deferred ordinary stockholders.

VIROL, LIMITED.

ARGENTINE EXCHANGE.

At the annual general meeting of Virol, Limited, held on June 21, 1932, speaking of his visit to the Argentine, Lord Luke said:—

I have just returned from the Argentine, which is, I believe, the only country in South America that is bravely and honourably meeting the whole of its overseas debt interest service, in spite of serious exchange difficulties, and when I mention that over half the Argentine external debt is held in North America, and that by far the larger part of the interest payments are made to the United States, a country that buys comparatively little from the Argentine, you will realise the magnitude of Argentina's task as regards exchange. Moreover, the fact that so much exchange is being used to meet those external payments is causing the greatest possible inconvenience to the ordinary financial and commercial business which the Argentine usually carries on with England and other countries.

No one could condemn more strongly than I do any suggestion of mere repudiation by debtors, but, at the same time, I feel strongly that in the unhappy conditions now prevailing it behoves the favoured and sheltered ones to consider seriously how they can make things easier for the under-dogs. The fixed-charge owners must consider how they can make it worth while for the less favoured holders to carry on.

At present the whole Argentine trading and financial structure is being inconvenienced and endangered so that the bondholder may have his full annual "pound of flesh," and this at a time when Argentine products are exported at under half the price of 1923 and when the bondholders must be buying on the basis of commodity values at under two-thirds of the prices of three years ago.

Surely some halfway house can be found between full payment and default in full? I believe it would be in the interests of the bondholders themselves if the Argentine arranged to pay two-thirds of its external interest for the present, adding the other one-third to capital for later payment—it would at once release a large amount of exchange for ordinary business and the payment of external interest on the debentures and preference shares of great railways and other national utility services, and would create a freer market in exchange. I feel sure that the heavy drop in Argentine debentures, and especially the loss of prestige occasioned by a descent to a nominal quotation in exchange, is doing more harm than a compromise with foreign bondholders would do. The payment of overseas interest by Governments is in the long run only made possible by overseas commerce, and if you cripple this eventually there will be nothing to pay the bond interest out of. I suggest that it would be in the best interest of bondholders themselves (or any organisation that represents them) to propose a compromise with part payment of interest for a period, rather than risk a total default at some future date.

THE ZINC CORPORATION, LIMITED.

SIR ROBERT HORNE ON WORLD CONDITIONS.

The twenty-first ordinary general meeting of the Zinc Corporation, Limited, was held on Wednesday last at River Plate House, E.C.

The Right Hon. Sir Robert Horne, M.P. (the Chairman), after reviewing the corporation's accounts and the position of the mining property, dealt with the economic condition of the world, which, he said, since they last sat had become decidedly worse. A year ago he had said that an essential element in the solution of the grave problems with which the world was faced was an increase in the level of wholesale commodity prices, and that concerted action in dealing with that situation was the inescapable duty of the leading nations of the world.

So far there had been no concerted action, and the gravity of the world's peril increased day by day. The commodity price level had been deflated to a point which must ultimately involve general bankruptcy, and as a consequence international trade was rapidly being strangled. A complete world collapse was imminent unless rectification came soon.

All the unhappy predictions he had made as to the results of the demonetisation of silver after the unfortunate policy adopted by the Indian Government in 1926 had been, he regretted to say, more than fulfilled. There were now signs of a change of attitude. The United States, France, the Dominions and this country were all deeply interested, and he was not without hope that the hour of silver's return to a definite position in the monetary systems of the world was not far distant.

Taking a long view of the outlook for the corporation's products, he was optimistic. Since the last meeting this country had altered its fiscal policy, and in the tariff now in force there were duties

REDUCED RATES for LIFE ASSURANCE for the NEXT FIVE YEARS

for those who want to obtain immediate and adequate life assurance protection, but whose present incomes are either temporarily restricted or small in relation to future prospects.

Write to-day for full particulars (state age for quotation purposes) to THE

LIVERPOOL & LONDON & GLOBE INSURANCE COMPANY, LTD.

LIVERPOOL (Head Office) LONDON (Chief Office)
1, Dale Street. 1, Cornhill, E.C.3.

designed to benefit the production and manufacture of non-ferrous metal within the Empire.

The duties were small, and the preference to Empire metal as a consequence was lower than he thought it might be, but, provided the Dominions permitted their metal, when manufactured in the United Kingdom, to re-enter the country of its origin at a rate of duty not unreasonably high, there should be no difficulty in making the scheme much more advantageous to both the British manufacturer and the Dominions. Both the Dominions and the Mother Country would ultimately benefit by freer Empire trade, and it was earnestly hoped that the Ottawa Conference would accomplish much in that direction.

The report was adopted.

THE STRAITS PLANTATIONS, LIMITED.

A DIVIDEND FOR THE PAST YEAR.

The ordinary general meeting of the Straits Plantations, Limited, was held, on the 23rd instant, at 2-4 Idol Lane, London.

Mr Eric Macfadyen (the Chairman) commenced by expressing regret at the death of the late chairman, Mr J. McNeill Miller. Dealing with the early history of the company, which was formed some thirty-three years ago, he said that it showed steady confidence and a stalwart refusal to accept defeat on the part of the early backers of the venture, including Mr Miller, that the means of overcoming the persistent setbacks of the experimental era had been forthcoming. Throughout those critical years, the company had had no more constant or resourceful friend than the late chairman. He had always been an assiduous and well-informed director.

He had been chairman for the last 8½ years, a period of notable progress, the outstanding feature of which was the absorption of the Coconut Plantations of Perak, Limited. The maintenance of a steady dividend record, the extinction of debt, the expansion of the estates and of the issued capital, and latterly striking reductions in the costs of production, marked the steady progress made by the company under the guiding hand of a chairman who had known how to combine business enterprise and financial prudence.

With regard to the operations of the year, they had harvested over thirty million nuts and made 6,821 tons of copra—15 tons more than in the previous year. The crop had been harvested more cheaply than ever, but when they came to revenue the tale was a sorry one. For seven years they had averaged a net price of over £21 per ton; in 1930-31 it was £13, and in the year under review no more than £9 3s., and they had no assurance that they might not be called upon to face a further decline.

They found themselves in a position to pay a small dividend—4½ per cent.—because, thanks to the writing down of assets, the issue of shares at a premium and the allocation of past profits to reserves, the estates stood in their books at a much lower figure than cost. They would be able to pay some dividend on the current year's working provided that prices got no worse, but in the general demoralisation of commodity markets the prospects for all producers must be uncertain, and any rise in costs of production would immediately be reflected in their profit and loss account. The fact remained that they could make a better showing than the majority of plantation enterprises, and he had been interested to note some evidence recently of increased interest in their shares on the part of investors. The net profit was £19,290, and after the payment of the proposed dividend the balance carried forward was £26,945. The report and accounts were unanimously adopted.

GENERAL MINING AND FINANCE CORPORATION, LIMITED.

SOUND AND STABLE FINANCIAL POSITION.

At the annual general meeting of the General Mining and Finance Corporation, Limited, held in Johannesburg, June 21, 1932, Sir George Albu, Bart., the Chairman, stated that the period under review had been a particularly difficult one, but, despite the abnormal conditions, they had fortunately been able to maintain the Corporation's financial position on a sound and stable basis, despite the heavy depreciation in almost every form of investment. The realised profit of £97,538 showed a decrease of £14,449, but there had been a saving of £8,572 in administration expenses, therefore the available profit, at £55,821, showed a decrease of only £6,854, which, in the circumstances, must be considered satisfactory. As the net profit, together with the carry-forward, was inadequate to provide for the heavy depreciation of shareholdings and investments, it had been found necessary to transfer to appropriation account the whole of the remaining balance of the general reserve, amounting to £300,000, in order to write down certain of the holdings to or under the market price at the end of the year.

Dealing with the balance sheet, Sir George mentioned that stocks and shares showed a decrease of £151,313, representing the net difference between the depreciation and the actual increased holdings during the year. Sundry debtors had been substantially decreased, due to the repayment of advances made to the West Rand Consolidated Mines, Limited. Considering the very difficult conditions, they had been extremely fortunate to be able to maintain the liquid financial position at such a high level. A very large proportion of the item "Debtors" represented money to be received from the Witpoort holding during the present year, while a further substantial proportion represented accrued dividends. Advances against securities were also liquid, and these two items, together with Government and municipal securities and cash, represented over £600,000 of readily realisable assets against current liabilities amounting to only £211,000, which was eminently satisfactory.

The Chairman referred to the satisfactory position of the West Rand Consolidated, which, now out of debt and earning substantial profits, had declared a dividend of 2½ per cent.

Sir George, referring to the reports of the Select Committee on the Gold Standard and the Low Grade Ore Commission, said that the findings of the former were in direct opposition to the evidence given by such influential bodies as the Banks, the Chambers of Industries and Commerce and the Chamber of Mines, with whom the directors were in complete agreement. If the Government maintained the gold standard, it would have to give serious consideration to the recommendations of the Low Grade Ore Commission, as, in the absence of devaluation, it would be necessary to reduce working costs by methods involving wage reductions, which would be unpopular and less equitable than devaluation.

Government Returns, &c.

NATIONAL ACCOUNTS.

The total ordinary revenue for the week ended June 18, 1932, amounted to £11,193,300 against ordinary expenditure of £12,511,500. After allocating £610,000 to Sinking Fund and having allowed for an increase of Exchequer Balances of £118,738, the operations for the week, as shown below, increased the National Debt by £2,037,000 to £7,658,596,000:—

(000's omitted.)

INDIA COUNCIL REMITTANCES.

India: Remittances to the Home Treasury.—There were no remittances from the Government of India to the Secretary of State for India during the week ending June 18, 1932.—India Office, S.W. 1. June 21, 1932.

BULLION.

The following statistics of imports and exports of gold for week ended June 23, 1932, are issued by the Statistical Department of H.M. Customs and Excise:—

Imported into Great Britain and Northern Ireland.		Exported from Great Britain and Northern Ireland.	
From—	£	To—	£
Germany	11,370	Poland	3,000
Netherlands	56,377	Germany	2,791
France	18,119	Netherlands	1,273,448
Iraq	3,384	France	183,454
United States	663,543	Switzerland	7,190
British South Africa	952,183	Spain	400
Kenya	16,859	Austria	2,700
British India	675,419	Czechoslovakia	29,480
Straits Settlements	10,740	Other countries	56
New Zealand	23,995		
Other countries	2,629		
Total declared value of imports	2,434,609	Total declared value of exports	1,502,519

GOLD MOVEMENTS.

The arrivals and withdrawals of gold, as announced by the Bank of England, have been as follows:—

1932.	ARRIVALS.	1932.	WITHDRAWALS.
June 17	Bars bought	June 17	Bars bought
" 18	Bars bought	" 18	Bars bought
" 20	Bars bought	" 20	Bars bought
" 21	Bars bought	" 21	Bars bought
" 22	Bars bought	" 22	Bars bought
" 23	Bars bought	" 23	Bars bought
Total	1,239,386	Total	Nil

Net arrivals, June 17, 1932, to June 23, 1932, inclusive, £1,239,386.
Messrs Samuel Montagu and Company write on June 22, 1932, as follows:—

GOLD.

The Bank of England gold reserve against notes amounted to £134,479,710 on the 15th instant, as compared with £131,720,738 on the previous Wednesday. Purchases of bar gold announced by the Bank of England during the week amounted to £1,241,502. Supplies of gold available in the open market have been fairly substantial and included about £90,000 of Rhodesian gold disposed of yesterday, but the source of most of the offerings has not been revealed. The amounts offered were taken for the Continent, and owing to appreciation of the gold exchanges, prices showed a considerable advance.

Quotations during the week:—

June 16	Per fine ounce.	Equivalent Value of £ sterling.
" 17	112s. 10d.	15s. 0-7d.
" 18	113s. 1d.	15s. 0-3d.
" 20	113s. 11d.	14s. 11-0d.
" 21	114s. 0d.	14s. 10-8d.
" 22	114s. 5d.	14s. 10-2d.
Average	114s. 0d.	14s. 10-8d.
	113s. 8-5d.	14s. 11-3d.

SILVER.

Prices have again shown very little movement, but have been inclined to harden in sympathy with the appreciation of the dollar in terms of sterling, and this, on occasion, brought some demand from America in the afternoon. Otherwise, the market has continued rather inactive, selling by the Continent and buying by China by the Indian Bazaars. On the whole, buyers and sellers are apathetic, and prices seem to have settled for the time being into rather a narrow groove pending the intervention of some new factor of importance sufficient to indicate a more definite tendency. The following were the United Kingdom imports and exports of silver registered from mid-day on the 13th instant to mid-day on the 20th instant:—

IMPORTS.	£	EXPORTS.	£
Japan	21,427	Hongkong	119,534
British West Africa	15,874	British India	10,000
Belgium	5,135	French Possessions	4,000
Canada	4,976	In India	4,232
British India	2,506	Straits Settlements	5,908
Other countries	630	Other countries	5,908
	50,548		143,674

Quotations during the week:—

REPORTS AND NOTICES.

Lt.-Col. H. W. Woodall, C.I.E., M.Inst.C.E., M.Inst.Gas E., M.Inst.Water Eng., Chevalier Légion d'Honneur, has accepted the invitation to join the board and become chairman and managing director of Parkinson and Cowan, Ltd., and its group of subsidiary companies. This is to fill the vacancy caused by the recent death of the late chairman, Sir Henry Cowan. Colonel Woodall is a well-known industrialist, associated with gas, water, electricity and coal and iron. With the late Sir Arthur Duckham, he founded the Woodall-Duckham group of companies.

RAILWAYS.

B.A. PACIFIC MORATORIUM CARRIED.—At meetings held June 14th of 4½ per cent. second debenture, 4½ per cent. consolidated debenture, and 5 per cent. (1912) debenture stockholders of the Buenos Ayres and Pacific Railway Company, Ltd., and 4 per cent. second debenture, 5 per cent. debenture, and 6 per cent. guaranteed preference stockholders of the Argentine Great Western Railway Company, Ltd., resolutions approving the moratorium scheme as amended were carried by overwhelming majorities.

LONDON MIDLAND AND SCOTTISH RAILWAY.—It has been announced by the London Midland and Scottish Railway Company that during the first half of 1932 the estimated receipts show a decrease of £2,200,000. Large economies, however, have been effected. These amount to £1,200,000, of which £420,000 is due to reduced wages and salaries. Thus the net fall in receipts is £1,000,000. The directors have decided that an interim dividend of 1½ per cent. be paid on the 5 per cent. preference shares, and 1 per cent. on the 4 per cent. preference issue, but there is nothing for the holders of the 1923 preference shares.

MISCELLANEOUS.

ELECTRICAL DISTRIBUTION OF YORKSHIRE, LTD.—At an extraordinary general meeting, held in Leeds, the special resolutions necessary for the authorising of the increase of capital to £1,900,000, by the creation of 400,000 6 per cent. cumulative preference shares of £1 each and the adoption of new articles of association, were approved. The above shares have been offered for subscription at the price of 21s., to shareholders registered in the books of the company on March 31, 1932. The directors state that the issue has been applied for more than nine times over. They have decided to make an allotment to all shareholders who made application in proportion to their holdings, and in dealing with the small balance available to have regard to the amount of the applications, special consideration being given to the small applicants.

KUALA LUMPUR RUBBER COMPANY.—As a result of negotiations with the directors of Sedgley (F.M.S.) Rubber Company, Ltd., the board has made a provisional offer for the acquisition of the issued share capital of the Sedgley Company, the shareholders of that company to receive one Kuala Lumpur £1 share for one Sedgley £1 share. The capital of the Kuala Lumpur Company will be increased from £250,000 to £300,000 by the creation of a further 50,000 shares of £1, corresponding to the authorised and issued capital of the Sedgley Company. It has been agreed that, prior to the completion of the exchange, a cash dividend of 5 per cent. net will be distributed to the Sedgley shareholders.

OSWALD TILLOTSON, LTD.—The third annual report and directors' statement of accounts of Oswald Tillotson, Ltd., show that the dividend has been maintained at 10 per cent. In spite of the industrial depression, the business continues to make satisfactory progress, and during the year under review there has been a considerable increase in turnover. The department dealing with the sale of private cars has been closed down, as the capital and floor space involved can be better employed in connection with commercial vehicles. The meeting will be held at Summit Engineering Works, Manchester Road, Burnley, on May 12th.

P. AND O. AND BRITISH INDIA STEAM NAVIGATION COMPANIES.—The following appointments have been unanimously made by the boards of both companies: The Hon. Alexander Shaw to be chairman and managing director of both companies; Mr Frederick Charles Allen to be joint deputy chairman and a managing director of both companies; Sir William Crawford Currie to be joint deputy chairman and a managing director of both companies.

STERLING BONDS TEST ACTION.—An action is to be taken in the Chancery Division to obtain a ruling as to whether the interest on the 5½ per cent. sterling bonds of the Société Intercommunale Belge d'Electricité, S.A., are payable in terms of sterling or of gold. Under the terms of the bonds, principal and interest are payable "in sterling in gold coin of the United Kingdom of or equal to the standard of weight and fineness existing on the 1st day of September, 1928." A ruling on the interpretation of this clause will be in the nature of a test action. Holders of these bonds have been asked to subscribe 5s. per £100 bond towards a fund to defray the costs of the action, which is being organised by Messrs. James Campbell, C. H. Falloun and A. R. Rubin, c/o The Mercantile and Investment Corporation, Ltd., 24 Old Broad Street, London, E.C.2.

UNION MINIERE.—Gross profits of the Union Minière du Haut Katanga for 1931, including the amount brought in, were 234,000,000f., against 354,000,000f. for 1930. Various charges total 42,000,000f., and it is proposed to write off 68,000,000f. from property, 290,000f. expenses of bond issue, and 49,000,000f. from stocks. A dividend of 30f. is proposed on the preferred shares, and 40,000,000f. carried forward. For 1930, the preferred shares received, in addition to the fixed dividend of 30f., a participating dividend of 140-80f. The capital and dividend shares received 199-20f. each. The meeting will be held July 11, 1932.

Commercial Reports.

MARKET SUMMARY.

A survey of the movement of prices at the principal international commodity markets reveal little of an encouraging nature. Supplies are usually in excess of demand and the policy of buyers only to purchase for immediate requirements is still generally pursued. In the United States, quotations fluctuated within narrow limits, and none of the more important primary products has been subject to violent fluctuations in value. Among non-ferrous metals, copper, tin and spelter, though dull, remained unchanged, but tin was a little firmer on the news that the drastic turn in the restriction screw had been accepted by the respective Governments. Both raw cotton and crude rubber lost a few points. Among cereals, wheat, maize, oats and rye remained weak. Coffee has also been easier and cocoa was barely steady. On the other hand, last week's advance in sugar has been maintained. Sterling prices of commodities, which lend themselves to grading and therefore to international arbitrage, have been slightly higher as a result of the weakening of the £. According to reports from various industrial centres, the coal trade remains depressed except in South Wales, where a slight improvement has taken place. Transactions in iron and steel have not so far increased either in volume or value. On the other hand, business in cotton goods has been a little more active following the greater steadiness in raw cotton values, and sales of rayon piece-goods have been stimulated by the warm weather.

THE COAL TRADE.

SHEFFIELD.—The shrinking tendency of the South Yorkshire coal trade has continued, accompanied by easier rates in all sections. Sales of best steams for export are down, compared with twelve months ago, and 16s. f.o.b. is top price for this class of fuel. Supplies of all kinds of coal are in excess of sales. Industrial demand fails to expand and the output of blast furnace coke is excessive. The house coal section is experiencing the usual summer slackness. Best qualities are quoted at 20s. to 20s. 6d. at pits. Cheap parcels of furnace coke are to be picked up. The ordinary market quotation is 12s. at ovens.

WORKINGTON.—The coal trade has slumped, and most of the collieries are losing a day or two each week. House coal and industrial fuel are both dull, and the Scottish, Northumberland and Durham competition makes it very difficult for Cumberland owners to retain their footing in the Irish market. Prices are unchanged, and nominally best round is quoted at 22s. 6d.; washed doubles, 21s.; washed singles, 19s., all f.o.b. Small, 16s. 6d. per ton. Best house coal, 31s. 8d.; and house nuts, 30s. at station. Gas coal 28s. per ton. West Coast coke is from 16s. 6d. to 17s. 6d. per ton.

GLASGOW.—The fall in weekly shipments to the region of 200,000 tons reflects the quieter condition of demand. The effects on export business of the prevailing depression are accentuated by import restrictions in several countries abroad, which render major portion of the Swedish railways contract, although 33,000 tons will be supplied from Scotland, and additional business is under negotiation. First steam in Fife and washed treble nuts are the only firm features in the market, other grades being plentiful (ports):—LANARKSHIRE.—Ell best, 14s. 3d.; splint best, 15s.; Hartley, 15s.; steam, 13s.; trebles, 11s. 6d.; doubles, 9s. 9d.; singles, 8s. 9d.; pearls, 8s. 6d.; dross, 8s. 9d. FIFE.—Screened navigation, 13s. 6d.; first-class steam, 13s.; third-class steam, 10s. 9d.; trebles, 11s. 6d.; doubles, 10s. 6d.; 11s. 3d.; singles, 8s. 9d.; pearls, 8s. 6d.; LOTHIAN.—Prime steam, 11s. 11s. 6d.; second steam, 11s. 6d.; trebles, 12s. 6d.; 13s.; doubles, 10s. 6d.; 11s.; singles, 8s. 9d.; pearls, 8s. 6d. Ayrshire.—Unscreened navigation, 16s.; jewel, 16s. 6d.; steam, 12s.; trebles, 12s. 6d.; doubles, 10s.; singles, 9s. 9d.; pearls, 9s.; dross, 9s.

CARDIFF.—Anthracite coals and some of the dry steam classes have been the most favourable features of the South Wales coal market during the past few days. At Swansea and Port Talbot shipments continue active, and on Wednesday a few vessels were waiting their turn at the loading berths. Last week the shipments at Swansea totalled 78,290 tons, compared with 76,930 tons the previous week, and 62,020 tons in the corresponding week last year, and there appears every likelihood that the returns for the current week will also be better than those representing the average weekly exports for the current year. In the steam coal market also the position is slightly better. Loading operations are more regular than they have been recently, and the dock returns on Wednesday morning showed that there were only 19 tips idle, compared with 40 a week ago. Prices are with few exceptions ruling at the minimum schedule figures. It is reported that the Paris-Orleans Railways have placed a contract for the supply of 100,000 tons of locomotive coals, but the details have not been divulged, although it is rumoured on the market that the price paid is from 22s. to 22s. 6d. c.i.f. St. Nazaire. The market is without any further information concerning the purchases of the 1,200,000 tons balance of the 3 million tons which the Italian Government in 1929 agreed to buy on behalf of the Italian State Railways over the period of three years ended 1932. The view is held that the validity of the Hague Agreement is not affected by the cessation of payments

either under the Versailles Treaty or the Young Plan. The following are the current approximate quotations:—Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 4½d.; best dries, 18s. 6d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steams, 13s. 6d.; cargo smalls, 11s. 6d. to 12s. 6d.; coking smalls, 13s. 6d. to 13s. 9d.; anthracite best, large, 36s. to 38s. 6d.; Red Vein, large, 22s. to 26s. 6d.; machine made cobbles, 39s. 6d. to 48s. 6d.; French nuts, 40s. to 48s. 6d.; stove nuts, 36s. 6d. to 45s.; rubbly culm, 9s. to 10s.; special foundry coke, 32s. 6d. to 35s.; patent fuel, 20s.; pitwood, ex ship, 19s. 3d. to 21s.

IRON AND STEEL.

MIDDLESBROUGH.—The pig-iron markets are slow to show any improvement as a result of the increased duty on foreign imports, but the trade is confidently looking forward to an expansion in business in the near future. Stocks of Continental foundry iron are held at different consuming works, and until these are used up little increase in the demand for home products can be expected. Apart from this, the foundry trades locally and in Scotland are short of work at present, which causes a lessened demand for Cleveland iron than usual. The weekly market on Tuesday was quiet, and only moderate sales were reported. Official prices for Cleveland were unchanged, viz.: No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d., and No. 4 forge, 57s., f.o.b. or f.o.t., with special concessions to Scotch consumers. Hematite is in slightly better demand for early delivery, but there is still an absence of interest in forward purchases on the part of consumers. The price for ordinary mixed numbers for early delivery is inclined to harden, and although some makers are still willing to accept 62s. 6d., others are asking 63s., and look for this price to become the ruling figure. For delivery over a few months, 63s. 6d. is quoted, but there is little business passing to actually test prices. Shipments of pig iron, though small, are ahead of those of last month, the clearances to 21st instant, amounting to 8,318 tons, compared with 6,256 tons to same date in May. In the finished departments, new orders are difficult to secure, and short time is being worked in many departments. Prices for steel for home under the rebate scheme are unchanged, viz.: Plates, £8 15s.; angles, £8 7s. 6d.; joists, £8 15s. Other main products are iron crown bars, £9 15s.; heavy steel rails, £8 10s.; 24-gauge black sheets, £8 5s., and 24-gauge galvanised corrugated sheets, £9 10s., also for home use. The ore market shows no change, and there is practically no new buying on the part of consumers, who have considerable arrears to take out against old contracts. Best rubio is nominally unaltered at 15s. c.i.f. for prompt, and the current freight, Bilbao-Middlesbrough, is 4s. 6d. Coke is in excess of requirements, and good blast-furnace qualities are weak at 15s. 6d. per ton, delivered local consumers' works. The number of furnaces in blast in the district is unchanged at 17.

SHEFFIELD.—The local industrial situation has undergone little change since Whitsun, when trade fell off in most sections of iron and steel. The volume of work on hand and orders on makers' books is considerably less than in the first quarter of the year, while unemployment has gone up. Not much improvement is anticipated in the immediate future, as July and August are normally the quietest months of the year. Optimism is not lacking in the business life of Sheffield. Manufacturers hope to benefit by the results of the Ottawa Conference, and by schemes of reconstruction and rationalisation in the steel trade which are under consideration at the present moment. A considerable amount of export trade is being held back owing to restrictions on imports and upon payments for imports enforced by most foreign Governments. The most seriously depressed branches of Sheffield's industry are those producing shipbuilding and railway material. The motor industry is furnishing a good deal of valuable work, as are other of the newer trades of the country.

WORKINGTON.—With the approach of the half-year end business in the North-West Coast hematite pig iron market has undergone the customary decline, Continental, Scottish and South Wales needs having dropped to a low level and the Midland demand alone being steady. Local consumption, however, remains heavy, and the make of the furnaces in blast between Workington and Barrow continues to be absorbed. No favourable results have yet followed the imposition of a duty on foreign iron, but none are anticipated until the stocks of foreign iron accumulated early in the year have been consumed. Business remains wholly of a hand-to-mouth character, but as no concessions would bring any expansion of buying, prices are maintained, Bessemer mixed numbers being quoted at £3 12s. 6d. per ton at Glasgow; £4 1s. at Manchester; £4 3s. 6d. at Sheffield; and £4 4s. 6d. at Birmingham. Special and semi-special descriptions are from 2s. 6d. to 5s. per ton above these figures. There is a fair Midland demand for malleable iron at £5 17s. 6d. per ton delivered at Birmingham, and ferro-manganese is in slightly improved request at from £10 15s. to £11 5s. per ton home. All that can be said of the steel market is that there continues to be small additions to the orders already on the books, and that Barrow and Workington remain engaged on the production of rails, sleepers, sleeper plates and billets. The shipments from Workington this month include 3,850 tons of rails and sleepers to London and Bombay, and 3,520 tons of pig iron to Antwerp, Liverpool, Port Talbot, Glasgow and Connah's Quay. Native hematite ore, at from 16s. to 18s. per ton, is in fairly good local request, but sales to East Coast and Scottish smelters are few.

GLASGOW.—It is now about three weeks till the commencement of the regular Glasgow Fair holidays, but already it has been intimated that the stoppage at many of the Clyde yards will be of longer duration than is customary and that this year yards will

be closed a week earlier. In the heavy steel trade business remains exceedingly quiet, but there is some little expansion in the home demand, prompt delivery being required in most cases. The situation is practically the same in every branch of the steel manufacturing industry and there is much idle plant. Machinery makers in different areas in the West of Scotland have fairly well-filled order books at the moment, and the number of inquiries both for home and export is satisfactory. Naturally much interest is being taken in Glasgow in the Scottish Regional Committee for the Reorganisation and Development of the Iron and Steel Industry, of which it is officially announced this week Mr John Craig has been appointed chairman, and in the statement that a start has already been made with the investigation of the problems. It is generally believed here that the natural resources of Scotland are such that, in capable hands and with co-operation between the different sections, almost every branch of the industry could be carried on profitably. It is confidently anticipated that under the guidance of this Committee, consisting as it does of recognised leaders in their own branch of the industry, developments will take place which will help to bring prosperity once more to the iron and steel industry of the West of Scotland.

CARDIFF.—On the Swansea Metal Exchange on Tuesday no material change was reported in the conditions in the tinplate and steel bar trades. Tinplates are quoted firmly at from 14s. 9d. to 15s. 3d. per basis box, and shipments last week totalled 81,714 boxes compared with 69,375 boxes the previous week, and only 38,460 boxes in the corresponding week last year. Moreover, notwithstanding increased production stocks are less than 200,000 boxes compared with 259,716 boxes a year ago. Imports of foreign steel bars have declined during the past few weeks.

OTHER METALS.

TIN.—At a meeting of the International Tin Committee, held on June 21st, it was announced that the signatory governments have accepted the restriction scheme, now generally known as the modified Byrne scheme, and this scheme will be put in force from July 1 next. The broad features of the scheme are as follows:—(1) Production during July and August, 1932, either ceases, or is held up under control in the countries where the ore is produced, or ordinarily smelted, for these two months; (2) thereafter, the ore or metal so controlled is released at the rate of 10 per cent. a month for ten months; (3) as from July 1, 1932, the new aggregate quotas are reduced at the rate of 17,040 tons a year below the existing quotas. The net effect is that the new annual quotas are 54,056 tons—namely, one-third of the production of 1929. The committee points out that:—(1) The aggregate of the permitted quotas of production and export allotted to Bolivia, Malaya, the Netherlands East Indies, and Nigeria, from July 1, 1932, is at the rate of 54,056 tons a year of metallic tin; (2) no metallic tin or tin ore produced under the above quotas will be released from the control of the exporting Government concerned prior to September, 1932; and, subject thereto, the aggregate permitted quarterly quotas of release will be:—July, nil; August, nil; September, 1932, 5,405 tons; October-December, 1932, 16,217 tons; January-March, 1933, 16,217 tons; April-June, 1933, 16,217 tons. Although the market had already largely discounted the new agreement, the market in tin has been steadier. In New York the metal was quoted at 10.70 cents per lb. on Wednesday, against 19.25 cents per lb. a week ago and 21.10 a month ago. Wednesday's official closing quotations in London, in terms of sterling for "standard" cash at £116 5s. to £116 10s. per ton, compares with £111 5s. to £111 7s. 6d. on the corresponding day last week. Stocks in London and Liverpool at the end of last week, at 33,139 tons, show a decrease of 77 tons on the week.

COPPER.—The market in London opened firm on Monday, but on Tuesday demand fell off, and despite the lower exchange value of the £, the metal closed only slightly above last week's level. In New York, the metal attracted little attention. On Wednesday, "Domestic" spot was quoted at 5½ cents per lb. in New York, against 5½ cents a week ago, and 5½ cents a month ago. Wednesday's official closing price for "standard cash" in London, in terms of sterling, at £27 11s. 3d. to £27 13s. 9d., compares with £27 3s. 9d. to £27 5s. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 18,604 tons, show a decrease of 866 tons, while stocks of rough copper, at 894 tons, are 100 tons larger.

LEAD.—Lead opened dull on Monday at the London Metal Exchange, but on Tuesday demand improved, and 1,000 tons were sold. Trading was less active on Wednesday, but prices remained steady. In New York the metal was quoted at 3.00 cents per lb. on Wednesday, against 3.00 cents a week ago, and 3.00 cents a month ago. Wednesday's official closing quotation for "soft foreign" in London, in terms of sterling, at £9 13s. 9d. per ton for shipment during the current month, compares with £9 3s. 9d. on the corresponding day last week.

SPELTER.—The London market in spelter has been steady, and although sellers were inclined to make concessions, prices are scarcely changed on the week. Wednesday's quotation in New York, at 2.80 cents per lb., compares with 2.80 cents a week ago and 2.875 cents a month earlier. Wednesday's official closing quotation in London, in terms of sterling, for "good ordinary brands," was £11 10s. per ton for shipment during the current month, against £11 7s. 6d. a week ago.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals the quotations for aluminium and nickel have been maintained at £95 per ton and £225-£230 per ton respectively. Platinum remained unchanged at £9 15s. per ounce. Foreign antimony was again sold at £23 to £23 10s. per ton. Quicksilver was reduced from £12-£12 10s. per flask to £11 15s.-£12 5s. per flask.

TEXTILES.

THE COTTON TRADE.—Liverpool.—Imports for the week, June 16th to 22nd (inclusive) are 57,025 bales, of which 38,920 are American, 7,307 Peruvian, 3,453 Argentine, 3,463 Egyptian, 2,149 African, 438 East Indian, and 1,295 sundries.

Manchester.—The tone of the market has been firmer and the hardening movement in the raw cotton prices has brought out rather more inquiry in yarn and piece-goods. Although the sales have not been at all important the turnover has been slightly larger than recently. The prices secured by spinners and manufacturers, however, have given no satisfaction whatever. Shippers of cloth to India have received better advices from the other side and rather freer operations have taken place in light whites, prints and fancies for Karachi, Madras and Calcutta. Reports from China continue poor and there is some anxiety with regard to the financial position of dealers in Shanghai. Printed and dyed goods have been in fair request for Java and Singapore. A few more lines have been booked in bleaching cloths for the Near East. Producers of printing styles have done rather better for North and West Africa, but demand for South America remains very slow. There continues a little more activity in home trade circles. Traders continue rather nervous owing to the uncertainty with regard to the wages question. Quotations in American and Egyptian yarns have been rather steadier. There has been a slight improvement in the turnover, but to secure orders spinners have had to accept wretched prices.

THE WOOL TRADE.—Bradford.—The outstanding feature in the Australian wool world, writes our correspondent, is the four days sale that has taken place at Brisbane. The sales will be resumed next week. We understand that a fair proportion of the offerings consist of new clip wools, and the selection is better than most buyers expected. All cables indicate an encouraging market, with wider competition than most people thought possible. Germany is reported to be a big buyer, and France, England and Japan are all taking their quota with the result that prices are very firm, with practically no soft spots, as was the case last series, and there are much fewer withdrawals. At home consuming centres deliveries of merino tops continue on an encouraging scale. Bradford has improved somewhat in tone, and some fair sales of tops have taken place during the week. Crossbreds do not move with that freedom which one would like to see, but the demand for super 60's remains fairly good. It is in the lower qualities where most dissatisfaction is expressed, and these are still very slow of sale. There is also a little more inquiry for by-products, but prices do not improve, noils being particularly cheap. Spinners and manufacturers are all needing more business, and there is considerable standing machinery, both spindles and looms. Active preparations are being made for next Spring. In the meantime, all descriptions of semi and fully manufactured products remain firm.

THE JUTE TRADE.—Dundee.—The volume of business passing in all sections of the jute trade remains small, and the market is quite featureless. All the curtailment of production at all producing centres has made little or no impression on the situation, and buyers prefer to purchase only sufficient to meet their immediate needs. The raw jute position is more or less unchanged. New crop prospects continue very favourable, and a good yield is expected in the coming season. Though perhaps rather larger than that of the present season, the supply will be greatly under normal, but probably sufficient to meet the requirements of the trade in view of the greatly curtailed production. Sellers of new crop fibre have still shown much reserve in offering, and there has not been much business done so far. Any prices mentioned in this market are considered too dear, and they are, when compared with the rates at which old crop can be bought. For new crop First Marks of best quality £17 17s. 6d. is named, while good Lightnings are quoted at £16 10s., August-September, with Motilal Tossa two-thirds, at £16 10s., and Rangal Daisee assortment at £15 15s., September-October. Sales have been made of good marks of Daisee assortment on the spot at £14 10s., ex-warehouse. The yarn market is quiet, but prices are all steady. Common 8 lb. cops are lowest at 1s. 9d., and 8 lb. spools at 1s. 10d., which are the best rates buyers will pay for the small quantities now required. Twist is unchanged at from 3 1/2d. for 3-ply 8 lb., and sacking yarns are quiet, and more or less nominal, at 2 1/2d. for 24 lb. twist and 3 1/2d. for 8 lb. spools. A good business has been concluded in Rove at £15 15s. for 200 lb. and £18 5s. for 48 lb., but the fine yarns are dull at 2s. 6d. for second quality 8 lb. Rio warp, 2s. 3d. for third, and 2s. for fourth. Carpet yarns are steady at from 3d. to 3 1/2d. Trifling quantities usually constitute the business passing in jute cloth, but manufacturers are strictly adhering to their prices, which already show a loss. The value of 10 1/2 oz. 40 in. hessians is 2 1/2d., and of 8 oz. 1 1/2d. Linoleum hessians are very quiet,

and prices are nominal, while only a little is being done in heavy goods. The Calcutta goods market has ruled quiet, with slight fluctuations in prices. These, however, are still somewhat higher than the lowest rates recently touched. The consumption of jute goods in America is still very much restricted, for the month of May being only 35,000,000 yards of hessian cloth of Calcutta make.

THE GRAIN MARKETS.

WHEAT.—The international wheat situation has undergone little change during the past week. Prices moved within narrow limits, round the low level reached a fortnight ago. Crop news have on the whole continued favourable. The North American Spring crops are well advanced, while the outlook for most European crops has been improving. The Russian crop is an uncertainty, as reliable reports are not available. One of the principal adverse factors is the expectation that the large Continental importing countries—particularly France, Germany and Italy—will soon practically close their markets against foreign wheat. Another weakening influence has been the pressure of Canadian wheat on the markets. Market receipts in Canada continue heavy, and the visible supply in that country is considerably above the level of last year. The wheat crop in this country is making rapid headway, and much of the damage caused by unfavourable weather earlier in the year has already been made good. On Wednesday, "July" futures were quoted at 48 1/2 cents per bushel in Chicago, against 49 cents on the corresponding day last week, and 58 1/2 cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 27s. 9d. per 496 lbs., as compared with 27s. 3d. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 26s. 6d., against 25s. 6d.; No. 3 Northern Manitoba, Vancouver, ex ship, 25s. 6d., against 25s. 3d.; Australian, ex ship, 25s. 6d., against 25s. 9d. to 26s. 3d. a week ago.

WHEAT FLOUR.—Trading in flour has been slack, despite the further reduction in Canadian and United States export quotations. North American shipments, at 126,000 sacks, showed a decline of 15,000 sacks, as compared with the previous week. Of this total, 80,000 sacks have been consigned to Europe. Quotations in London, Wednesday: Straight run, delivered country, 24s. per sack of 280 lbs., as compared with 24s. last week; delivered London, 23s., against 23s. Manitoba patents, ex store, 23s. 6d. to 26s., against 23s. 6d. to 26s. 6d.; and Australian, ex store, 19s. 3d. to 19s. 6d., against 20s. to 21s. a week ago.

BARLEY.—Although the demand for barley—met chiefly by Canadian cargoes—continues poor prices have been a little firmer in the absence of excessive supplies. On Wednesday "July" futures were quoted at 38 1/2 cents per bushel in Winnipeg against 37 1/2 cents last week and 40 1/2 cents a month ago. Quotations in London, Wednesday: "English feeding," f.o.b., per 448 lbs., 27s. to 28s., as compared with 27s. to 28s.; River Plate, landed, 24s. to 25s., against 24s. to 25s. a week ago.

OATS.—Business in oats has been on a small scale, but as Argentine shipments have been decreasing, prices remained steady, and were in some cases even a little firmer. "July" futures, which last week stood at 20 cents per bushel in Chicago, sold at 20 1/2 cents per bushel on Wednesday this week, against 22 1/2 cents a month ago. Quotations in London, Wednesday: "River Plate," landed, 17s. 6d. per 320 lbs., as compared with 17s. 3d. last week; "River Plate," ex ship, 16s. 6d., against 16s. 3d.; "Chilean White," landed, 24s. 6d. to 26s., against 24s. 6d. to 26s. a week ago.

MAIZE.—Argentina, which is the chief exporter of maize, has shipped a somewhat smaller quantity last week. It is expected that shipments from that country will not again reach the high level recorded in previous weeks. Supplies continue to be absorbed readily, and prices have been a little firmer. Wednesday's quotation in Chicago for "July" futures, at 29 1/2 cents, show no change on last week, and a fall of 1 1/2 cents as compared with the price a month earlier. Quotations in London, Wednesday: "Plate," landed, 19s. 6d. per 480 lbs., compared with 19s. 6d. last week; "Plate," ex ship, 18s. 3d., as against 18s. 3d.; "Plate," May-June, 18s. 3d., as against 18s. 3d. Yellow maize meal, ex wharf, was quoted at £5 10s. per ton, against £5 10s. a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1931-32, 1930-31, 1929-30, 1928-29:—

	1931-1932.	1930-1931.	1929-1930.	1928-1929.
Estimated sales of home-grown wheat—				
1 week to June 18	Owts. 68,107	Owts. 69,281	Owts. 111,621	Owts. 71,440
42 weeks to June 18	3,530,378	4,664,425	9,081,605	9,408,372
Average price of English wheat per cwt.	s. d. 6 5	s. d. 6 0	s. d. 8 6	s. d. 9 7

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1928 to 1931:—

Weeks ended	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
June 11, 1932.....	Owts. 80,956	Owts. 5,687	Owts. 15,688	s. d. 6 5	s. d. 6 7	s. d. 8 1
June 18, 1932.....	68,107	3,081	11,941	6 5	6 9	8 1
June 16, 1928.....	183,780	12,202	13,709	11 0	11 2	12 9
June 15, 1929.....	70,952	15,106	11,468	9 7	10 3	9 6
June 21, 1930.....	111,621	20,680	7,920	8 6	6 6	6 4
June 20, 1931.....	69,281	5,352	10,951	8 0	6 3	6 8

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks with comparative figures for 1930:—

NEAREST FUTURE.	Jan. 2, 1930.	Jan. 2, 1931.	June 24, 1931.	Jan. 4, 1932.	June 14, 1932.	June 22, 1932.
Winnipeg (No. 1 Manitoba)	148 1/2	56 1/2	62 1/2	62 1/2	54 1/2	54 1/2
—Cents per 60 lb.						
Chicago (No. 2 Winter)	130 1/2	79 1/2	58 1/2	55 1/2	49	48 1/2
—Cents per 60 lb.						

The visible supply of wheat in Canada, at 59,152,000 bushels, shows an increase on the week of 2,606,000 bushels. Supplies a year ago stood at 51,156,000 bushels.

OTHER FOODS.

SUGAR.—Despite occasional realisation, the remarkable rise in raw-sugar prices has been maintained. The turnover on the New York "futures" market amounted to 32,000 tons on Monday, 36,000 tons on Tuesday, and 27,000 tons on Wednesday. "July" futures in New York were quoted at 0.77 cent per lb. on Wednesday, against 0.75 cent per lb. a week ago, and 0.63 cent per lb. a month earlier. Wednesday's sales of "raws" include "December delivery" at 5s. 7 1/2d. to 5s. 8 1/2d. per cwt., against 5s. 4 1/2d. to 5s. 4 1/2d., and "March, 1933," at 5s. 7 1/2d. to 5s. 7 3/4d., against 5s. 0 1/2d. to 5s. 3 1/4d. on the corresponding day last week. The movements of raw sugar in London and Liverpool during last week are set out in the table below:—

	Imports.		Deliveries.		Stocks.	
	1932.	1931.	1932.	1931.	1932.	1931.
Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
London	4,309	12,439	1,418	1,253	14,250	35,613
Liverpool	10,520	13,115	12,941	12,919	96,654	74,674
Total	14,829	25,554	14,359	14,172	110,904	110,287
Last week.....	8,191	16,309	13,917	13,719	110,434	104,264

COFFEE.—The market in coffee opened dull in New York last Monday, and sales showed a downward tendency on Tuesday and Wednesday. Tuesday's auctions in London were characterised by a poor demand, and prices were barely steady. Last week's movements of coffee in London were as follows: Brazilian, landed, 4,960 bags; delivered for home consumption, 907 bags; exported, 2,067 bags; stocks, 6,108 bags, against 2,831 bags last year. Central American, landed, 2,791 packages; delivered for home consumption, 1,645 packages; exported, 2,337 packages; stocks, 128,571 packages, against 118,653 a year ago. Other kinds, landed, 687 packages; delivered for home consumption, 2,025 packages; exported, 935 packages; stocks, 93,178 packages, against 91,643 a year ago.

COCOA.—The market in cocoa was not very active. There was a slight fall in prices in New York, but quotations in London have been maintained. "July" futures were quoted at 3.83 cents per lb. in New York on Wednesday, against 3.96 cents per lb. a week ago and 4.07 cents a month ago. As compared with the corresponding day last week, Wednesday's quotation for Accra, fair fermented, June-July, at 24s. 6d. per cwt., f.o.b., London contract, show a rise of 6d. per cwt. on the week. Last week's movements of cocoa in London were as follows: Landed, 5,418 bags; delivered for home consumption, 3,875 bags; exported, 640 bags; stocks, 168,320 bags, as against 228,408 last year.

TEA.—The quantities catalogued for this week's auction comprise 48,036 packages of Indian, and 29,803 packages of Ceylon tea. Contrary to last week the "Indian" tea sales were dull last Monday and prices of common and low medium teas declined. The relatively poor quality of "Ceylon" tea offered on Tuesday left buyers unwilling and there was a further deterioration in values at Wednesday's "Indian" auctions. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account:—

Week ending	Northern India.		Southern India.		Ceylon.		Java.		Sumatra.		Nyasaland.		Total.
	s.	d.	s.	d.	s.	d.	s.	d.	s.	d.	s.	d.	
June 18, 1931	0	7.91	0	9.64	0	11.57	0	5.50	0	6.20	0	5.45	0 9.05

June 9, "	0	7.23	0	8.30	0	9.79	0	5.04	0	4.67	0	5.88	0 7.68
June 16, "	0	7.19	0	7.59	0	8.83	0	4.92	0	4.75	0	5.86	0 7.36

RICE.—The market in rice was quiet. Spot quotations were maintained but "forward" values show a further decline. Wednesday's "spot" price, at 9s. 3d. per cwt., shows no change on last week, while forward positions, at 7s. 10 1/2d., show a fall of 3d. per cwt. Movements in London during the past week were as follows: Landed, 173 tons; delivered, 107 tons; stocks, 3,433 tons, as against 578 tons last year.

POTATOES.—New potatoes have become increasingly abundant with the result that there was a further sharp decline in prices.

At the Borough Market, "Best King Edward" sold from 10s. to 10s. 6d. per cwt., as compared with 10s. to 11s. per cwt. a week ago. New "Jerseys," at 13s. per cwt., show a decline of 5s. per cwt.

SPICES.—The market in spices was quiet, but, following an improvement in demand at the end of last week, "spot" pepper became slightly dearer. Wednesday's quotation for "Black Singapore" pepper, at 6 1/2d. per lb., shows a rise of 1/4d. per lb. on the week. Movements of pepper in London during the past week were as follows: Black, landed, 2 tons; delivered, 6 tons; stocks, 360 tons, against 505 tons last year. White, landed, 19 tons; delivered, 44 tons; stocks, 565 tons, against 575 tons a year ago.

MEAT.—The tendency of prices at the Smithfield market has been irregular. English beef remained unchanged while Argentine beef was slightly easier. In mutton, "New Zealand" failed to recover, although there was a slight improvement in English meat. On Wednesday, Argentine beef (chilled hindquarters) was sold at 3s. 10d. to 4s. 4d. per 8 lbs., against 4s. to 4s. 6d. on the corresponding day last week, while New Zealand frozen mutton realised 2s. 2d. to 3s., as against 2s. 2d. to 3s. a week ago. According to the Smithfield Market official report, supplies of meat during last week amounted to 7,816 tons, as compared with 7,770 tons in the corresponding week last year. Imported beef, principally Argentine, formed 85.3 per cent. of the supplies, as against 85.5 per cent. a year ago; and imported mutton, mainly New Zealand, formed 82.0 per cent. of the total supply, as against 81.6 per cent. last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OILSEEDS.—In some sections there is a steadier tone, but business on the whole is of small volume and disappointing. Linseed has derived some benefit from the decline in sterling, and some buying support from the Continent, but crushers on this side have not been in the market. Linseed is rather firmer, and for Plate afloat and June shipment £7 12s. 6d. is wanted, later positions being at a progressive premium. Very little interest is shown in Indian linseed prices, being out of line. Supplies are abundant, and although Argentina alone has thus far this year shipped well over a million tons, considerably more than that quantity remains for shipment from that country alone. The quantity afloat for Europe has increased to 153,100 tons (including 6,500 tons from India) which is 17,500 tons more than a week before. Cottonseed is neglected, but Egyptian (black) afloat or for shipment is steady, at £5 10s. to £5 12s. 6d. New seed for November-January loading is quoted around £6. Trade in vegetable oils is only moderate. Raw linseed oil, after a period of weakness, is firmer, and for June delivery ex Hull is quoted £12, and July, August £12 5s. Cotton oil is dull, with crude Egyptian ex Hull quoting £19, and refined (technical and edible) £21 5s. prompt. The trade in oilcakes and meals does not improve, and mill prices are barely steady.

HIDE, LEATHER AND ALLIED TRADES.—Hides from home-slaughtered cattle were lower in price at the auctions held at Manchester this week, several of the lighter weights in both clear and warbled ox and heifers realising 1/4d. per lb. less money. With the exception of second warbled all cows declined in value by a similar amount, in addition to which there was a reduction of 1/4d. per lb. in the price of bulls. Calfskins remain a poor market, while low prices have to be accepted for sheepskins if business is to result. Rather more trade has been passing in foreign hides, and slightly higher figures have been obtained for some sorts. South American wet-salted hides have commanded more attention from tanners in this country and on the Continent, and sales of Argentine ox have been made on the basis of 3 1/2d., while just over 3 1/2d. has been paid for lights, and a trifle less than 3 1/2d. for Montevideo ox. In regard to dry hides from the same origin, tanners do not appear disposed to pay the increases being asked, with the result that orders for these are limited. The figures mentioned are 4 1/2d. for B.A. Americanos, 5d. for M.V. Americanos, up to 5 1/2d. for Sierra Cordobas, and 2 1/2d. for B.A. Inservibles. Business in regard to African hides also is poor, although prices for some descriptions are fractionally lower. First and second dry Capes are quoted at 4 1/2d. and 3 1/2d., with 4 1/2d. and 3 1/2d. asked for dry salted 20/30 lbs. Unbathed Adis Abebas are offered at from 3 1/2d. to 4 1/2d., Nigerians at 4 1/2d., and Mombasas at 4 1/2d. There has been no change in the position of the market for Australians for which high figures are still mentioned. Trade in leather has been rather better than has been the case of late, and some fair sales have been made of both English and wet-salted and dry hide bands. The former have been wanted in the medium weights, while both light and medium weights have been asked for in the latter. Pinned bellies and shoulders also have received more attention, in addition to which inquiry has been going around for rough offal. A regular if somewhat limited turnover has been done in upper stock, the best selling line of which is still glacé kid. Reptile skins have accounted for an average amount of business, and there has been slightly more attention paid to box and willow calf and patent leather. Sales of the two latter, however, remain small.

THE TIMBER TRADE.—May imports of all sawn softwoods were much heavier than for the corresponding month last year, and for the five months amounted to 627,290 loads (of 50 cubic feet), an increase of 22,100 loads compared with January-May, 1931. Planed and dressed woods showed an increase in May of 6,680 loads, and for the five months 33,300 loads on an import of 172,820. In spite of these increases, however, London dock stocks are lower than a year ago, when supplies were short compared with normal. The above varieties have continued in poor spot demand during the past four or five weeks, mainly on account of the bad state of the building trade, and also because of the unsatisfactory call for timber by

The Economist MONTHLY SUPPLEMENT

New Series.

SATURDAY, JANUARY 30, 1932.

No. 104

The tables in the following pages show summary figures for as many nations of the world as possible, and have endeavoured to combine brevity with comprehensiveness. The greater number of the figures are taken from the Monthly Statistical Bulletin of the League of Nations, supplemented from our records.

THE STATE OF TRADE AT HOME AND ABROAD.

JANUARY is always a difficult month in which to assess the progress of trade, for it follows hard upon the Christmas holidays and is also broken into by stock-taking in the case of many industrial and commercial undertakings. In addition, business this year has been overshadowed by the economic and political uncertainty at home and abroad, the failure to make any definite progress with the reparations and debts question, ignorance as to British tariff policy, and the difficulties under which international trade is conducted and international commercial debts settled.

Even so, it is possible to detect slight signs of improvement in British industry. The latest unemployment returns are those relating to December 21st. Though the total of 2,509,948 for all unemployed workers, including those temporarily stopped or normally in casual employment, is serious enough, it represents an improvement since November of 105,194, which is sufficient to show that the trend is in the right direction. There was an improvement in coal mining and general engineering, in most of the metal trades and all the textile trades except hosiery manufacture, in the glass, paper and tailoring industries, in the distributive trades, and in the dock and harbour, road transport, hotel and boarding-house and entertainment services. Such an improvement is sufficiently general and important to outweigh increases in unemployment in the pig iron and tinplate, pottery, and boot and shoe industries, and in building and marine engineering.

The December trade returns were again moderately encouraging. Too much must not be made of the sharp fall in imports of manufactured goods, for both the November and December returns were distorted by the imposition of the new duties against abnormal imports. More significant is the increase for the second month in succession of raw material imports. This increase reflects, partly, the rise in prices of foreign materials due to the depreciation of sterling, but at least it shows that our manufacturers' purchases of raw materials are being maintained; and, taken in conjunction with the downward trend of unemployment, it points to a slight stirring of trade.

Reports from the industrial areas are also in many cases more hopeful, though naturally they vary greatly between different trades. The heavy industries are perhaps the least satisfactory. Export coal business is still affected by the many restrictions in force abroad.

while the mild character of the winter has proved prejudicial to the house coal trade, both for the home market and for shipment. There has been no real improvement in the iron and steel industries, and the most that can be said is that there is some prospect of the abandonment of price-cutting by Continental producers. On the other hand, the engineering industry is more hopeful, and a certain number of fresh orders are coming to hand. Wool prices have been very firm, to the benefit of both Yorkshire and Australia. Flax spinners are in a strong position, and a good home demand for linen piece-goods is anticipated. Raw cotton prices remain firm, and demand from some markets is a little better.

In many ways the country has gained appreciably in financial strength during the past few weeks. The big influx of income tax and other revenue has been of great assistance to the Treasury and, as a secondary consequence, has enabled substantial

HOME INDUSTRIES AND TRADE.

The following reports on British industries cover, in most cases, the period to the middle of January. In the remainder they relate to the month of December.

THE COAL TRADE.

Business is irregular. The North-East Coast reported a fair improvement early in January, especially for bunkers, coking coal and coke. Later accounts, however, are less encouraging. The South Wales trade is still impeded by Continental import restrictions, while shipments have at times been delayed by stormy weather. Sheffield states that the mild weather has reduced the demand for house coal to a relatively low level. Home industrial demand is a little better, but is still far from satisfactory. Export business is very irregular, but in some respects the outlook has improved. Reports from Scotland are not very encouraging. Fifeshire coal is moving off well, but forward business at Glasgow is held up by international trade and exchange uncertainties.

IRON AND STEEL.

No real improvement has occurred, but there is a feeling that Continental producers will before long be forced to abandon their policy of price-cutting, and that the position of the British industry will improve. The December output figures, though far from satisfactory, were a little better than those for November, when allowance is made for the Christmas holidays, and it is hoped that the improvement will be maintained in January. At the moment, demand for pig iron is limited to immediate requirements, but stocks of hematite on the North-East Coast are gradually being reduced. Sheffield reports a few more inquiries from abroad and a better demand for special steels, while in the Midlands a more sanguine feeling is noticeable, especially among re-rollers. The South Wales tinplate trade is now working at 70 per cent. of capacity, and many firms have enough business to keep them occupied until the end of March.

ENGINEERING.

A slight but definite improvement has taken place. December exports of machinery were the best for eleven months, and there has been a further small decline in unemployment. Inquiries are now circulating more freely, and a certain number of new orders have been received. There is a very good demand for all general kinds of small machinery, and the trend of the industry is such as to suggest that the suspension of the gold standard is at last proving of some benefit. Demand for engines and boilers is fairly good, and machine-tool makers are looking for an early revival. Unfortunately there is no improvement among textile machinists, and locomotive builders cannot look for any great expansion in business so long as foreign Governments have to cut down their expenditure upon railways and other public works. There is no change among agricultural engineers, and shipbuilding and marine engineering remain very depressed.

PRODUCTION OF ELECTRICITY.

In the *Economist* of July 10, 1926 (pages 57-8), we published a new index of electrical generation in the chief industrial areas of Great Britain. We show below a résumé of the results achieved during recent periods:—

INDEX OF GENERATION OF ELECTRICITY.*
(Monthly Average 1923-24 = 100.)

Period.	Britain, excluding London and Wales.	Coal Mining, Iron and Steel, Ship- building, Heavy Engi- neering.	General Engineering and Auto- mobile Construc- tion	Chem- ical.	Marine Transport, Docks, etc.	Textiles, Cotton, and Wool.
1926—Monthly average	119	100	138	162	134	120
1927	146	143	158	210	163	139
1928	156	150	177	237	193	147

October	176	149	240	219	232	180
November	199	168	266	227	256	207
December	207	173	276	196	268	219

* Prepared by the economic and statistical department of the British Electrical and Manufacturers' Association.
Increase due to special causes.

The improvement recorded above registers a further increase in generation of electricity. The corrected figure for December, allowing for seasonal fluctuations and the steady expansion in the use of electricity was 96.0, against 92.2 in November and 94.0 for December last year.

ELECTRICAL INDUSTRY.

While the latest figures recorded below, which represent the average for the twelve months ending with last December, record a decrease, December itself was one of the best months of the past half-year. More home orders were received from municipal undertakings for small turbines, and these totalled 15,000 k.w. Reconstruction and partial equipment orders, mainly from Birmingham Corporation, accounted for a further 30,000 k.w.

INDEX OF NEW ORDERS RECEIVED BY ELECTRICAL
MANUFACTURING INDUSTRY.*
(1920=100.)

Period.	Home.	Export.	Total.
1926—Monthly Average	84	100	88

MOTOR INDUSTRY.

The motor industry is fairly busy, but there is still plenty of room for improvement. In some cases manufacturers are operating at full capacity, and there is a growing demand for heavy oil engined vehicles. Total exports for 1931 show a drop from last year, there being 18,992 private cars and chassis and 5,320 commercial vehicles and chassis, as against 23,210 and 6,543 respectively, exported in 1930. Imports also have fallen considerably. Manufacturers, however, seem very hopeful regarding the future, and unemployment in the industry is steadily decreasing. In the motor-cycle section trade can only be reported as fair.

THE COTTON TRADE.

The Christmas and New Year holidays had a disturbing effect upon business, and during the first fortnight of January demand was quiet with a tendency for spinners and manufacturers to lose ground. During the latter half of the month, however, inquiry has broadened and there has been some improvement in the turnover. To some extent business has been forced out by the hardening movement in raw material rates. No particular change has occurred with regard to the supply of raw cotton, but the holding policy of growers in the United States has resulted in a shortage of contracts in the futures market, and there have been more buyers than sellers. Inquiry in piece-goods for abroad has increased. An improvement has shown itself in the demand for India, and merchants have received more favourable advices from dealers on the other side. More activity has shown itself in light fabrics and fancies, chiefly for Calcutta, Madras and Karachi, and clearances in India are reported to be on a freer scale. Demand for China has continued quieter, but quite a number of useful lines have been booked in fine goods and fancies for the Straits Settlements and Java. Reports from Egypt tend to improve, and some fair lots have been booked in bleaching descriptions. Towards the close of the month printed and dyed cloths moved off rather more freely for the Continent. There has not been much activity in home-trade circles. Engagements of manufacturers are very irregular, but, compared with a month ago, there is not much change in the extent of order lists. During the past fortnight the offtake in American and Egyptian yarns for home use has increased, and spinners are now presenting a rather stiffer front to customers. Supplies of most counts and qualities, however, are by no means scarce. Isolated sales have occurred in yarns suitable for China, and a few more bids have been forthcoming for fine numbers for India.

THE WOOL TEXTILE TRADES.

Australian markets have been active, and South Africa reports better inquiries for raw wool. Fine crossbreds are also moving more freely in South America. The January London sales opened well with a firm tone, but it has since been decided to curtail them by two days. Even so, prices have remained firm, and a better tone is in evidence at Bradford. Merino and fine crossbred tops are moving off well, and quotations are very firm. New business in yarns has fallen away, but spinners are still well employed, and particulars against outstanding orders are coming in well. There is a good home inquiry for dress goods, but foreign business is disappointing.

THE JUTE TRADE.

Little fresh business is coming forward, and Dundee manufacturers are badly in need of orders. Unless trade improves very soon, production will once more have to be curtailed. Prices at present are mainly nominal, and recent arrivals of raw jute are, in many cases, unsold. Demand for yarn and cloth is also dull.

THE RAYON TRADE.

There is a satisfactory turnover in rayon yarn and fabrics for the home trade, and certain sections of the export trade are showing a better tendency. Most yarn producers are booked up well ahead with orders, and several companies are making extensions. A steady increase in business is anticipated during the next few months.

THE LINEN TRADE.

Bulk flax sales have been put through at full rates. Prices of Irish fibre are now almost 50 per cent. above limits ruling twelve months ago. Yarns are passing steadily into consumption, and manufacturers are being pressed for delivery of cloth contracts. New business in cloth has been on a more restricted scale, as is usual at this time of the year, but renewed inquiries for good qualities are now being dealt with.

BOOTS AND SHOES.

There has been no improvement in demand, though the January sales should help to lighten stocks. A keen discussion is now in progress on the advisability of attempting to stimulate trade by making a cheaper grade of shoes, and opinion is sharply divided. The leather trade is quiet, with perhaps a better turnover in sole leather.

THE CHEMICAL INDUSTRY.

In spite of the uncertainty arising from the continual variation in sterling, a very fair volume of business was transacted during December. Demand for industrial chemicals showed a decided improvement, particularly for those products used by the rayon industry. Acetone and formaldehyde continue the best items in this section. There was a better demand for acetates during the month, so that there is now a general improvement in the wood distillation industry. All grades of acetic acid, chromium compounds, sodium phosphate, boric acid and borax increased in price during the month. Sales of coal-tar pitch and creosote oil have been good, and most other coal-tar products are in satisfactory demand. Business in pharmaceutical chemicals was rather unsettled, demand being chiefly for small quantities. Quotations are only nominal for the products covered by the Abnormal Importations Act, but there has not yet been time for the full effect of the new 50 per cent. duties to be apparent. The Board of Trade figures show a decrease of nearly £5,000,000 in the value of chemicals, drugs, dyes and colours exported during 1931, as compared with 1930. The heaviest declines were for sulphuric acid, tartaric acid and tartrates, ammonium sulphate, bleaching powder, coal-tar products, sodium compounds, and painters' colours and materials. Imports were nearly £300,000 higher than in 1930, increases being shown for most products.

AGRICULTURE.

According to an official report, work on the land was generally well forward at the New Year. It was estimated that a somewhat larger area of wheat had been sown than at the corresponding date last year, but that there had been no increase in the case of barley and beans. From some parts of the country a slight decrease was reported in the area under oats. Autumn-sown crops had done well and looked healthy. Where the clamps had been opened it was found that in many cases there were a number of diseased potatoes, but, where the potatoes were carefully picked over before pitting, the position appeared fairly satisfactory. With a few exceptions the swede harvest was completed. The mild, open weather was favourable to stock, and milk yields improved somewhat during December. The outlook for winter keep continues satisfactory.

SHIPPING.

The volume of chartering on most routes showed little change in January. Coal export trade was very dull, and in the Mediterranean ore trades business was stagnant. With regard to grain, there was fairly active Black Sea chartering, Argentine demand for tonnage was steady, and Australia took up a number of vessels for Far Eastern discharge; but the North American market was lifeless.

BUILDING.

According to the Ministry of Labour's returns, there was a slight decline in employment during December, and bad weather again inflicted a considerable amount of short time upon men engaged upon outside work. The December employment percentage was 28.6, against 27.0 in November and 22.7 in December, 1930. According to returns furnished by 142 local authorities, plans passed for new buildings in December comprised a total estimated cost of £4,264,500, as compared with £4,012,600 in November and £5,009,400 in December, 1930. Of the total for November, 1931, dwelling-houses accounted for £2,346,100; factories and workshops for £356,000; business premises, shops and warehouses for £348,000; and other buildings and additions and alterations for £1,214,400.

RETAIL TRADE.

A leading London store reports that the Christmas season results were not unpleasing, and that January sales are worse in cash compared with last year, but better in the number of customers. The last week of January has shown a decided improvement. The returns of the Incorporated Association of Retail Distributors, published in the *Board of Trade Journal*, suggest that, taking the country as a whole, Christmas shopping was appreciably curtailed.

a Excluding coal imports.

c Provisional figures.

STATE OF TRADE ABROAD.

Reports from practically every centre agree that the depression and dislocation of trade has lately grown more acute than ever. Even France is now seriously affected by the world crisis.

BRITISH EMPIRE.

Australia.—Unemployment has decreased and there are some indications that the bottom of the depression has been passed. The wheat harvest amounts to 170 million bushels, and growers are assisted by the higher level of prices now current. The wool clip is also large and is selling well. Christmas trade was better than in 1930, and textile factories are fully engaged on orders. The position of most other secondary industries, however, is still little changed.

Canada.—Little change has occurred in the general business situation, and it is only in the textile and footwear industries that conditions are at all satisfactory. The coal industry is very depressed as a result of the mild winter, and the metal industry is badly in need of orders. The newsprint industry has received a fresh setback as the result of a new cut in prices by the International Paper and Power Company. Farmers are on balance looking for an improvement in conditions, mainly owing to the present world wheat situation.

India.—Mail reports from Bombay say that raw cotton prices, though firm, were above the world level. The Japanese suspension of the gold standard naturally had a disturbing effect upon the piece-goods trade, and the outlook has been made very uncertain. Meanwhile, clearances of India goods were, on balance, satisfactory. The Calcutta jute market was very dull.

South Africa.—December rainfall was much below normal, and in many areas drought conditions have returned. Wool prices fell heavily during December, and sales were very restricted except at impossible prices. There was a fair home demand for hides and skins early in December, but it eased considerably later in the month. Maize exports for the season July, 1931-January, 1932, were 179,325 tons, against 424,000 tons the previous season. Christmas trade was below the volume of previous years, but the recent improvement in sales of British motor cars has been maintained.

EUROPE.

France.—Short-time working in the coal industry has increased, the mild weather exercising a further depressing influence. The textile industries remain in a very unsatisfactory condition. Roubaix wool-combers are only able to work at 35 to 40 per cent. of capacity, and spinners are no better placed. Little spinners of various textile materials are, in many cases, contemplating closing down, and numerous wage reductions are being made.

Belgium.—Steel prices are a little firmer, as some producers are preparing to curtail output rather than make fresh price concessions. The coal trade is still very depressed and stocks are increasing. The glass and textile industries are severely affected by the new British import duties, and much short time is having to be worked. Produce markets are very dull.

Germany.—Business remains very difficult, and, in addition to the lack of fresh orders, the many foreign exchange restrictions enforced by neighbouring countries are rendering it impossible for German traders to obtain payment for goods already exported. Consequently, there are suggestions for establishing a clearing house for exporters and importers. The agricultural crisis has become greatly intensified during the past few weeks, largely owing to the reduced purchasing power of the urban population and the depreciation of the Danish kroner. The emergency Decree of December 8th, effecting a general reduction in long-term interest rates, has now been in force for six weeks. The issue of fresh long-term loans or the conversion of short-term into long-term debt are now impracticable, and a fresh Decree was issued on January 11th regulating short-term interest rates. This has placed the banks in a difficult position, and may end in the elimination of the banks from the business of providing industry with credits.

Holland.—Unemployment is returned at 275,000, or 3.5 per cent. of the total population. Export trade is to-day very difficult, and many undertakings are transferring their plant abroad. The Dutch Government are taking powers to regulate imports by means of quotas, and tariff negotiations with Belgium are also in progress. Representations as to the actual position of the shipping industry have been made to the Government, and it is pointed out that during 1931 the tonnage laid up rose from 3,683 to 781,514 gross tons. The building trade is very depressed, and a large part of the brick industry has decided to close down for three months.

Scandinavia.—A further disturbance was caused in Norway during December by the suspension of two leading banks, the Bergens Privatbank and Den Norske Creditbank, which were granted a three months' moratorium. Fortunately, the losses are no greater than can be covered by a capital reconstruction scheme. Swedish industry is overshadowed by general wage negotiations, which, in one case, have led to a lock-out. Export trade has been quiet in most industries. Danish butter prices have again fallen, and agriculture is very depressed. Unemployment has risen to 136,361, or the highest figure since 1922, and the foreign exchange position is still very difficult.

Switzerland.—Exports underwent a marked contraction between November and December, practically every industry being affected except chemicals. Imports showed an increase of Frs. 22 millions, and new restrictions are to be enforced shortly by the Federal Government.

Austria.—Some experience has now been had of the import and export clearing arrangements with other countries, and it is clear that the regulations need further tightening both at home and abroad. In particular, Austria is finding difficulty in discriminating in favour of essential imports such as raw materials and semi-manufactured goods. Austrian industries are still very depressed, with the exception of the textile trades, which have made successful arrangements for obtaining raw material on credit from the foreign suppliers. Following the failure of the Credit-Anstalt, the Mitterberg Copper Works are to be finally liquidated.

UNITED STATES OF AMERICA.

Industrial activity was at a low ebb during December, but wholesale and retail trade reached their normal holiday volume. Steel-mill operations averaged only 25 per cent. of capacity, but automobile production improved slightly with the introduction of new models. There was a seasonal decline in building construction, and cotton mills curtailed production in order to deal with an increase in stocks and falling off of orders. Freight movements were 18 per cent. below last year's level, and rail earnings continued their decline. Commodity prices were slightly lower.

LATIN AMERICA.

During the past month there has been further evidence of improvement in the economic position of Argentina. Cables recently received in London state that new measures of direct and other taxation are to take effect from the commencement of 1932 to offset the Budget deficit, while the official returns of Argentine overseas trade for the first eleven months of 1931 show a further increase in the surplus of exports to 104,715,000 pesos (gold), against an excess of imports of 116,556,000 pesos (gold) in the corresponding period of 1930. Cereal crop and wheat-threshing reports are satisfactory. The commercial situation in Brazil is still difficult, but the Minister of Finance has announced that it was unnecessary to extend the moratorium for commercial bills beyond December 31st last, the Government being in a position to meet all exchange requirements. The new coffee Convention, raising the export taxes on coffee to 15s. per bag, have been ratified by the Federal and State Governments. There is as yet no indication of increased business activity in Chile, and strict application of the regulations for the control of exchange is hampering business. Political disturbances in Peru have ceased, but commercial conditions there remain very dull. In Mexico a new issue of silver notes has been made by the Banco de Mexico; it is hoped that increased elasticity in the currency system may help to relieve the trade situation. Business is dull for the most part in the Central American Republics, but, generally speaking, the coffee crop position appears favourable.

FAR EAST.

Japanese exports for 1931 amounted to Y. 1,171 millions, or 22 per cent. below those for 1930. Imports were Y. 1,310 millions, or 21 per cent. below those for 1930. The adverse trade balance was Y. 139,000,000, or 13 per cent. less than that of 1930. There has been a fall of 36 per cent. in exports to China. Money has become easier since the turn of the year, and the stock markets and commodity markets are firm with an upward tendency. Foreign exchanges have been unsettled since the suspension of the gold standard.

The Economist

MONTHLY SUPPLEMENT.

New Series.

SATURDAY, FEBRUARY 27, 1932.

No. 105.

The tables in the following pages show summary figures for as many nations of the world as possible, and have endeavoured to combine brevity with comprehensiveness. The greater number of the figures are taken from the Monthly Statistical Bulletin of the League of Nations, supplemented from our records.

THE STATE OF TRADE AT HOME AND ABROAD.

THE New Year has opened in indeterminate fashion. On the debit side of the account must be mentioned the increase in unemployment, the decline in raw material imports, the war threat to our trade in the Far East, and the continued depression and financial insecurity on the Continent. Among the encouraging developments come the reduction in Bank rate, the restoration of foreign confidence in our financial stability, and the slight improvement in our steel production.

As regards the unemployment increase, some doubt is felt in industrial circles as to the wisdom of suspending the publication of weekly returns, as monthly figures are likely to record wide and, at times, disturbing fluctuations. The *Labour Gazette* shows that the increase was more than seasonal, and was also spread over most staple industries, including building, the heavy industries, the cotton and wool textile trades, printing, paper and distributive trades, and the road transport and shipping services. Against these increases can be set an improvement in the pottery, tinplate, boot and shoe, and hat and cap industries. It must be remembered that the comparison between January and December often tends to be unreliable, and it is often best to await the February returns before attempting to judge the trend of employment.

Deductions from the decline in raw material imports between December and January are also subject to the qualification that it would be wise to await the February figures. At the same time, it is noticeable that volume decreases were recorded in the case of iron ore, raw cotton, flax, linseed, wet hides and rubber. Against these there were increases in the case of raw wool, jute, petroleum, palm oil and paper-making materials. These increases are sufficient in number and importance to strengthen the view that the January contraction in raw material imports may be less serious than it appears.

The war in the Far East is a much more serious matter. Our business and financial commitments in Shanghai and our trade with China are of such outstanding importance that any threat to them is fraught with the gravest possibilities. As a subsequent report on the Lancashire cotton industry shows, shipments to China are already practically at an end, and, unless a settlement is reached, the war may have nearly as serious repercussions upon Lancashire as the American Civil War had seventy years ago. The general economic and financial reactions upon a world in ill-shape to meet a new strain must also be taken into account.

So much for the adverse items. On the credit side comes first and foremost the recent reduction in Bank rate from 6 to 5 per cent. Its direct benefit to industry may not be very great, though the majority of industrialists undoubtedly hold the contrary view, and believe that in numerous cases it will just make the difference. Its psychological benefit, however will be considerable, so much so that the reduction may be one explanation of the new spirit of optimism now in evidence at the British Industries Fair. There is a further important aspect of the reduction, for it is a definite indication of the restoration of our financial stability. Already world confidence in our finances had been largely recovered by such events as the recent influx of revenue, the assurance that the Budget had been balanced, the repayment of the Bank of England's foreign credits and the strong position of our banking system revealed in the December 31st balance sheets. If an early reduction of Bank rate to 4½ per cent. proves practicable, it will finally re-establish confidence in our stability, and at the same time restore a Bank rate under which, as past experience has shown, British industry and enterprise can make progress.

The immediate effects of the tariff have still to be determined. It would be natural to expect it to give a temporary stimulus to the protected sections of industry. On the other hand, it has had very little effect upon Stock Exchange prices, which should be a fairly reliable guide, and doubts are heard in many quarters, including some which have long been agitating for a tariff, as to the wisdom of including certain primary products in the dutiable list.

The position abroad is no better. The new American banking reforms are welcome in that they impart a much-needed elasticity to her banking and credit system, and will make it easier for frozen credits to be thawed out and for business to revive. Of real revival, however, there are, as yet, no signs. On the Continent, it is clear that France is now one of the biggest victims of the world depression, and the financial and business deadlock in Germany and Central Europe has, notwithstanding the renewal of the German standstill agreement, become intensified. The condition of European trade and, above all, the difficulties experienced by foreign exporters to those countries in obtaining payment for their goods, are serious in the extreme, and South American trade is equally hampered by exchange restrictions. Thus, if the outlook for internal British trade is in some respects better, that for our foreign trade has, if anything, become worse since the New Year.

HOME INDUSTRIES AND TRADE.

The following reports on British industries cover, in most cases, the period to the middle of February. In the remainder they relate to the month of January.

THE COAL TRADE.

Export trade will derive some benefit from the decision of the French Government to remove the sur-tax of 15 per cent. imposed last autumn upon imports of British coal, but any possible benefit will be seriously qualified by the maintenance of the French system of licensing imports, as this restricts British shipments to a quota of 64 per cent. of the monthly average shipments for 1928-30. As British export trade was at a relatively low level during these years, the imposition of this quota will confer an advantage upon exporters to France from other countries. Taking British export trade as a whole, business is very dull. Yorkshire steam coal prices are easier and trade is very limited in Scotland, Wales and the North-East Coast. Home demand for industrial fuel is also poor, and the house coal section has been affected by the mild winter.

IRON AND STEEL.

January pig-iron production showed some improvement over previous months, and the number of furnaces in blast rose from 70 to 76. Steel output was also increased, and it is reported that further steel furnaces will be brought into use in South Wales very shortly. Even so, business generally is very slow, and the fundamental position of the industry has undergone no change. Little benefit is expected to result from the 10 per cent. duty upon imported iron and steel, and it is understood that foreign exporters will only raise their prices by 5 per cent. and will pay half the duty themselves.

ENGINEERING.

While in many respects the Government's initial tariff proposals are welcomed, some perturbation was felt at the exclusion of copper from the free list, for the extra cost due to the 10 per cent. duty might in some cases have made just the difference. This week it was announced that unwrought copper would be placed on the free list. Little change is noticeable in most branches of the industry, but there is a tendency to minimise the January increase in unemployment. There is a slight improvement in marine engineering, which probably reflects the increase in new tonnage commenced, which was registered in the last quarter of 1931. Makers of prime movers and boilers are also a little more active, and a more hopeful tone is noticeable in the machine tool trade.

PRODUCTION OF ELECTRICITY.

In the *Economist* of July 10, 1926 (pages 57-8), we published a new index of electrical generation in the chief industrial areas of Great Britain. We show below a résumé of the results achieved during recent periods:—

INDEX OF GENERATION OF ELECTRICITY.*
(Monthly Average 1923-24 = 100.)

Period.	Britain, excluding London and Wales.	Coal Mining, Iron and Steel, Ship-building, Heavy Engineering.	General Engineering and Automobile Construction.	Chemicals.	Marine Transport, Docks, etc.	Textiles, Cotton, and Wool.

1932—January	193	160	266	165	258	207

* Prepared by the economic and statistical department of the British Electrical and Allied Manufacturers' Association.
† Increase due to special causes.

The decline in the total January figure arises mainly from a sharp fall in the chemical index. The corrected figure for January, after allowing for seasonal fluctuations and the steady expansion in the use of electricity, was 88.5, against 96.0 in December and 93.8 in January, 1931.

ELECTRICAL INDUSTRY.

No new contracts of any importance were received during the month. Reconstructions necessitated by the change-over of power stations to the grid are providing most of the work now in hand.

INDEX OF NEW ORDERS RECEIVED BY ELECTRICAL MANUFACTURING INDUSTRY.*

MOTOR INDUSTRY

The general situation shows very little signs of improvement. The private car section in particular has been hard hit, not only by the industrial depression, but also by the increasing difficulty of finding new customers, due to the fact that the considerable increase in taxation has had the effect of raising the level of income at which running a car is possible. The increased taxation has not affected the sales of commercial vehicles to the same degree, as it is possible in some cases to pass the increased tax on to the customer. During January exports of all motor vehicles show an increase of over 300 on the corresponding month of 1931. The motor-cycle industry shows no signs of improvement. Not only have sales declined by a considerable percentage, but the total vehicles in use have decreased by nearly 100,000.

THE COTTON TRADE.

Despite certain adverse factors, the general demand experienced by cotton spinners and manufacturers continues more encouraging. There are complaints that orders are for relatively small quantities and that numerous buyers require such early delivery that contracts cannot be arranged, but the turnover tends to expand. Buyers are now showing rather more confidence in prices, partly owing to the continued healthier, and the firmer policy of the Government is undoubtedly bringing about more confidence on the part of dealers. The better demand for Calcutta has been very welcome, and some makers of dhooties have booked contracts. An increased turnover has taken place in light fabrics for Karachi, Madras and Rangoon. The situation in China still causes anxiety, and practically all shipments are stopped. Useful support, however, has come through from Singapore and the Straits Settlements. The offtake for Egypt and the Near East remains disappointing. Heavy goods have attracted more attention for West Africa. The improvement in sales for the Continent in printing and finishing styles has been maintained. Some manufacturers are experiencing difficulty in maintaining their position, but two or three idle sheds have just been reopened in Blackburn and district. An increased business has been done in American and Egyptian yarns for home consumption, but it has been difficult for spinners to obtain more money to meet the rise in raw material rates. A rather larger turnover has taken place in fine yarns for India.

THE WOOL TEXTILE TRADES.

The early February sales closed on a firm note, and prices have since remained firm in overseas markets, with fine wool moving freely out of growers' hands. It is only in South Africa that the position of fine wools causes any anxiety. Top prices have also been harder, but new business has lately fallen away and users are probably awaiting the results of the next sales, due to open on March 1st. Demand for cross-bred tops and for noils has been quieter throughout the month. Business in yarns is also irregular and restricted, and some spinners are not finding it easy to keep their machinery in full operation. Makers of dress goods are occupying on old orders, but fresh business is at present inclined to hang back.

THE JUTE TRADE.

The recent rise in raw jute prices has stimulated interest in yarn and cloth, but spinners and manufacturers have found it very difficult to keep their machinery running, and there is much leeway to be recovered. Heavy stocks of unsold jute, too, are being carried in Dundee, and so any rise in prices or curtailment of sales or production in India may have less effect than usual.

RAYON.

Home demand for rayon yarns has been well maintained, and for many types of yarns producers are behind with delivery, while the weaving, knitting and lace industries are all using larger quantities of rayon. Overseas business in both yarns and fabrics is restricted.

THE LINEN TRADE.

The threat of a 10 per cent. import duty on foreign flaxes (which, however, did not materialise) and the general hardening of fibre values forced both spinners and merchants to cover possible requirements for some time ahead. Bulk business was also done in yarns, chiefly in the heavier sizes. Importations of Continental spinnings are on an unprecedented scale to anticipate the 10 per cent. duty coming into force on March 1. New business in plain cloths is satisfactory, and manufacturers are well booked for several months to come. There has also been an encouraging turn in damasks.

BOOTS AND SHOES.

In the Northampton area trade has improved since the New Year. Small orders from the home trade have been coming forward with fair regularity, and fresh enquiries and orders have been received from overseas.

THE CHEMICAL INDUSTRY.

Although there has been no great activity, a steady business has been transacted. Very few changes in quoted prices have occurred. Most industrial chemicals have been in fair demand, and, in view of the tariff proposals, prices are very firm. With the exception of cresylic acid, sales of coal tar products continue satisfactory. Pitch is in particularly good demand for export, the best items in the home market being refined tar and creosote oil. Business in pharmaceutical chemicals is still rather limited and confined to spot. The most satisfactory sales reported were for aspirin, lactic acid, and sodium benzoate. Bromides, iodides, and bismuth salts are cheaper.

AGRICULTURE.

According to an official report, work during January was largely confined to ploughing and carting, owing to the wet state of the land, but some spring corn was sold in the Eastern counties. The condition of autumn-sown crops was satisfactory. In some districts potatoes are keeping comparatively well, but in others many

diseased tubers are found when clamps are opened. The fall of lambs has been good, and stock generally has made normal progress. In some areas milk yields have been below average on account of the poor quality of the hay. Sheep on turnips are doing well.

SHIPPING.

Conditions in the cargo freight markets showed little change in February. Outward coal business was dull, and the year had begun with a weak tendency in most homeward markets. There was, however, a fair demand for grain tonnage from the Argentine and Australia, and towards the end of the period under review the market was firmer.

BUILDING.

According to the Ministry of Labour's returns, there was a further decline in employment during January, the percentage of unemployment being 32.8, against 28.6 in December and 27.0 in January, 1931. According to returns furnished by 146 urban authorities, plans passed for new buildings in January comprised a total estimated cost of £4,351,200, as compared with £4,423,400 in December and £4,943,700 in January, 1931. Of the total for January, 1932, dwelling houses accounted for £2,750,200, factories and workshops for £190,600, business premises, shops and warehouses for £291,300, and other buildings and additions and alterations for £1,119,100.

RETAIL TRADE.

A London store reports that the past month has shown a slight general improvement, but the public are still not spending as freely as could be wished. According to the calculations of the Incorporated Association of Retail Distributors, appearing in the *Board of Trade Journal*, retail sales in January showed a decline of 5.6 per cent. as compared with the preceding January. For the twelve months ended January the decline was 4.9 per cent. The January decrease was greater in London than in Great Britain as a whole, being 8.7 per cent. for the Central and West End area and 6.5 per cent. for the suburban area. Outside London decreases were registered of 4.5 per cent. for Scotland and the South of England, and 4.9 per cent. for Wales and the North of England. Sales of hardware showed a comparatively small decline, but those of clothing declined heavily, and there was a big fall of 9.7 per cent. in the sports and travel departments. Stocks fell only by 1.2 per cent., and employment was practically unchanged.

a Excluding coal imports.

c Provisional figures.

STATE OF TRADE ABROAD.

Reports from practically every centre agree that the depression and dislocation of trade has lately grown more acute than ever. Even France is now seriously affected by the world crisis.

BRITISH EMPIRE.

Australia.—Unemployment is steadily declining, and there are signs of improving trade, concentrated mainly upon local manufacturers and lower-priced goods. Retail trade is expected to expand as the season's wheat and wool sales proceed. Recent rains should benefit summer crops, and the condition of stock and pasture is satisfactory. A wheat harvest of 177 million bushels is expected, and the large wool clip is selling rapidly at advancing prices.

Canada.—No definite change in the business situation has occurred, but the underlying situation is now sounder. Stocks of goods have been reduced and there is a better balance between prices and costs. Unemployment, however, is still severe, and in many industries production remains very limited. Grain prices stiffened during January, but export sales are restricted by Australian and Argentine competition. A favourable balance of trade has now been established, and this has eased the New York exchange position.

India.—The Bombay raw cotton and Manchester goods markets were closed during January owing to political troubles. Sales of Indian-made piece goods were also interrupted, but the volume of inquiry has continued to expand. The Calcutta jute market has been quiet, with a very limited demand. January tea sales were dull, largely because only unattractive lots were coming forward.

South Africa.—Business is still hampered by the prevailing financial stringency, and numerous price concessions are being made in the case of cash sales. Farming conditions are fairly favourable, but rainfall in the interior has been below normal, and stock has suffered. Maize remains firm, but the crop is backward. Large quantities of wool are arriving at the ports, and about half the offerings at the public auctions are being sold.

EUROPE.

France.—The situation in the coal trade is no better, and practically every pit is having to stand idle for at least five days a month, while pithead stocks increased by 100,000 tons during January. A new wage agreement, imposing a reduction of $7\frac{1}{2}$ per cent., has been reached. Both home and export demand for steel is very restricted, and production is again being reduced. A slight improvement in the Lille textile trades is noticeable, and manufacturers are purchasing raw materials more freely. Russian flax prices have hardened. The Roubaix woollen industry remains very depressed. Unemployment continues to increase, and combers are working at a maximum of 40 per cent. of capacity.

Belgium.—Business in the iron and steel industry remains very quiet and prices weak. Production has again been curtailed. The coal trade is no better, and the curtailment in production has not served to reduce stocks. Steps have been taken to reduce imports of coal, the method adopted being a shifting of the basic period on which the quota is calculated from 1930 to the first half of 1931, and a reduction in the quota itself from 76 to 70 per cent. The glass industry is better, and stocks have been reduced.

Germany.—January exports showed a decline of Mks. 196 millions on December, of which Mks. 50 millions was due to shipments to Great Britain alone. Imports fell by Mks. 50 millions, so that the trade balance worsened by Mks. 146 millions. The total number of unemployed on January 15th was returned at 5,966,000, against 4,765,000 on January 15, 1931. Nearly half of these have exhausted "insurance" and "crisis" benefit.

Holland.—The quota system for regulating imports has been extended to include meat, boots and shoes, woollen and part-woollen fabrics, knitted wear, and outer garments. Foreign trade, both import and export, continues to diminish, but internal trade is no worse. Unemployment is unchanged at 25,000, or 3.5 per cent. of the population.

Scandinavia.—Norwegian imports for 1931 were Kr. 856.5 millions, against Kr. 1,065 millions in 1930. Exports fell from Kr. 684.0 to Kr. 466.6 millions. Idle tonnage of the Norwegian merchant fleet rose by 31 vessels and 70,000 tons, the figures for shipping laid up, on February 1st, being 325 vessels aggregating 1,465,000 tons, or one-quarter of the Norwegian registered tonnage. Preparations for the reconstruction of the Bergens Privatbank and Den Norske Creditbank are well in hand. Norwegian timber shipments to England were accelerated during February in anticipation of the British tariff. Industrial production in Sweden has again fallen away, and unemployment has increased to a current figure of 20 per cent. Export trade remains depressed, and the new British paper duties have seriously affected the industry. In Denmark butter prices have lately improved, but export trade has been seriously affected by the increase in the German butter duty, the Dutch quota restrictions upon beef imports, and the impending British duty of 10 per cent. upon butter and eggs. A new Exchange Centralisation Office was established upon February 1st, and all imports are now subject to permits from this office.

Switzerland.—The foreign trade turnover for January showed a decline of Frs. 60 millions in comparison with December, imports having fallen by Frs. 40 millions and exports by Frs. 20 millions. Part of this decrease is seasonal, but the contraction is also due to the new British duties and to the crisis in the Far East. This winter season has witnessed a considerable decline in visitors, but thanks to the price reductions made by hotel keepers and to their practice of basing their charges upon sterling, results are better than might have been anticipated.

Austria.—No improvement in industrial activity is noticeable, and the foreign currency clearing treaties have so far proved a failure. Further dismissals have taken place in the Steyr automobile industry, and the hopes of an improvement in Austrian brown coal sales have so far not been realised.

Czechoslovakia.—Christmas trade was fairly satisfactory, and the home market has improved. 1931 pig-iron production was returned at only 40 per cent., and steel production at 34 per cent. of capacity, and two-thirds of the works are now closed. The denuding of Czechoslovakian foreign balance, due to exchange restrictions abroad, has forced the imposition of Czechoslovakian restrictions, limiting the use of foreign exchange to a special list of imports as from January 18th.

UNITED STATES OF AMERICA.

Business activity showed rather greater stability during January. Steel mill operations averaged 29 per cent. of capacity, but there was some improvement in automobile production, following the appearance of new models. The decline in building construction continued, but there has been a moderate improvement in the textile trades. Freight movements underwent a seasonal expansion, but are still at a low level. Wholesale and retail trade have been variable, and commodity prices remain weak.

AMERICAN TRADE STATISTICS—JANUARY, 1932.

	Dec., 1931.	Jan., 1932.	Compared with Jan., '31.

* Preliminary estimates made by Messrs. Moody, subject to revision. † Based on reports of U.S. Labour Bureau and of Bureau of the States of New York, Wisconsin, and Pennsylvania. ‡ Average of actual prices. § Partly estimated.

LATIN AMERICA.

Trade with practically the whole of South America is at present inactive, owing to the almost general exchange restrictions. Following upon previous reports of drought and locust damage to the general rains have now fallen. Prospects for the crop are therefore improved, whilst the early-sown maize is now ripening and should be safe. Trade in Chile is still depressed, but 1931 closed with a substantial surplus of exports for the year, against a small excess of imports in 1930. Brazilian exports last year exceeded balance of only £12,000,000 in 1930, against a favourable balance of only £12,000,000 in 1930. A good impression has been created by the payment in advance of the due date of the instalment of one-twelfth of the Brazilian short-term loan of £6,500,000 of early improvement, being still affected by the low prices of both cotton and sugar. In Venezuela, difficulties have been experienced owing to the shortage of exchange, but it is hoped that the situation in this respect will improve shortly, as the active average crop of around 1,000,000 bags will be available. Colombian trade conditions continue quiet, due partly to emergency measures which have tended to reduce the volume of imports. Credit is somewhat restricted, and coffee prices low. On February 18th it was announced that Ecuador had suspended the gold standard.

THE FAR EAST.

Trade has been seriously affected by the outbreak of hostilities at Shanghai. Many of the Japanese traders who rely mainly upon China for their market have suffered, and cargo shipping services to Shanghai have been suspended. Japanese sugar companies, whose sales are mainly to China, are having to close down.

The Economist
MONTHLY SUPPLEMENT.

New Series.

SATURDAY, MARCH 26, 1932.

No. 106.

The tables in the following pages show summary figures for as many nations of the world as possible, and have endeavoured to combine brevity with comprehensiveness. The greater number of the figures are taken from the Monthly Statistical Bulletin of the League of Nations, supplemented from our records.

THE STATE OF TRADE AT HOME AND ABROAD.

DEVELOPMENTS in the home position during the past few weeks have been confined largely to the financial sphere. The reduction in Bank rate from 6 to 5 per cent. on February 18th was followed by further reductions—first, to 4 per cent. on March 10th, and then to 3½ per cent. a week later. In the meantime, the repayment of a large proportion of the Treasury credits on March 4th and the simultaneous withdrawal of the restrictions upon foreign exchange dealings were the prelude to a rapid appreciation of sterling from just under \$3.50 at the end of February to a peak rate of \$3.77 ten days later. The cumulative pressure of Indian and British gold sales, the influx of short money from abroad and speculative foreign purchases of sterling "for the rise," proved temporarily irresistible, and for a day or two there were fears that London might be unable to absorb all the foreign exchange on offer and that sterling might rise to a level which would have serious repercussions on British trade and the internal price level. Fortunately, the exchange has since been brought under control, partly because of a warning by Mr Neville Chamberlain that an artificial and speculative appreciation of sterling would not be tolerated, and a week before Easter there were indications that the rate had once more been pegged.

On the whole, British industry has gained from these developments. The reductions in money rates are advantageous for money can now be regarded as definitely cheap. Whereas a few weeks ago the standard rate of interest upon bank advances was as high as 7 per cent., to-day the minimum rate of 5 per cent. is in force, and doubtless lower rates can be obtained in approved cases. High-class securities have equally benefited from the change, and their appreciation has proved of assistance not only to such normal holders as banks and insurance companies but also to all industrial undertakings who, as a result of the trade depression, have found themselves in possession of unwanted resources which have had to be invested pending a revival in trade. The new capital issue market is showing signs of life, and recent experience has proved that there is a keen demand for new securities of standing. This should ultimately be of assistance to sound industries in need of fresh finance, while the appreciation of sterling has so far been too limited to have caused any serious embarrassment to industry.

As regards the state of individual industries, no real progress can be recorded in the iron and steel trades and, notwithstanding the new 10 per cent. tariff, Continental competition is as keen as ever. The engineering trades,

however, apart from marine engineering, are more hopeful, though little actual improvement has as yet taken place, and the revival in the cotton and other textile industries has been well maintained. The unemployment returns for the end of February on the whole bear out these views. The percentage figure has fallen since January from 22.4 to 22.0 per cent., which compares with a figure of 21.7 per cent. for February last year. Improvements were recorded in many of the chief textile and clothing trades (except boot and shoe manufacture), in metal goods, in paper and pottery, and in shipping services. A deterioration took place in coal mining and in the jute industry.

As regards overseas trade, the February import returns were distorted by forestalling in anticipation of the general 10 per cent. tariff which came into force on March 1st. Imports of raw materials and exports of British goods were disappointing, and there is no doubt that the position of our foreign trade is difficult in the extreme. One grave source of trouble lies in the numerous foreign exchange restrictions in force both in Europe and S. America. A British firm which finds that the only form of satisfaction which it can obtain in respect of former shipments of goods consists of the payment of the sum due into a "blocked" account in a bank in the importing country, is naturally chary about making further shipments, and there is growing evidence that these difficulties are proving a deterrent to British export trade.

Foreign news is no better. The American banking law changes may have been of some use in loosening credit, restoring confidence in the banking system and in checking bank failures and note hoarding, but industry shows no improvement. French trade is now involved to the full in the world depression, and complaints are heard that the continued gold influx, the recently increased customs duties and other restrictions upon imports are raising French prices and costs above the world level to the further detriment of French export trade. The financial situation in Central Europe is subject to an increasing strain, and in many countries there is grave fear that the breaking-point has been nearly reached. Sweden is having to deal with the consequences of Mr Kreuger's death, which indeed has had repercussions all over the Continent. In South America, the outlook in the Argentine has in some respects improved and there is a prospect of an alleviation of the exchange restrictions. Taking the world as a whole, it is unfortunately still true to say that with the possible exception of this country the situation is rapidly deteriorating.

HOME INDUSTRIES AND TRADE.

The following reports on British industry cover, in most cases, the period to the middle of March. In the remainder they relate to the month of February.

THE COAL TRADE.

Little improvement is noticeable in export business, as although the French surtax has been removed, shipments are still restricted by the quota. Germany, too, is now curtailing imports, but labour troubles in the Polish fields and the depreciation of sterling are reported to be benefiting the British coal trade in several foreign markets. In Cumberland Irish demand for coal has revived, and many collieries are relatively busy. House coal has lately been moving more freely both in Lancashire and Yorkshire, and there has been a fair amount of buying in anticipation of the Easter holidays. Home demand for industrial fuel is so far little better, but the outlook is thought to be more hopeful.

IRON AND STEEL.

The outlook is still very difficult. Continental makers of sheet bars are still cutting their prices, and whereas only a short time ago they were quoted at 81s. per ton, delivered South Wales, current quotations are 74s.-75s. per ton. As these new prices include both freight and the new 10 per cent. Customs duty, the maker's price is now insufficient to cover the cost of the pig iron. It is admitted that heavy losses are being incurred, and these cannot continue indefinitely, but there is no sign of this price-cutting coming to an end, and while it lasts it is impossible for British steelmakers and tinplate makers to arrive at any agreed and stabilised basis of prices. Production generally was fairly well maintained in February, with the pig-iron output at 318,000 tons and the steel output at 480,000 tons. These figures are better than those of January, when operations were curtailed by the holidays, but the number of furnaces in blast fell from 76 to 71 during February, and production showed a tendency to decline as the month progressed.

ENGINEERING.

Current activity compares very favourably with that of a year ago, and February exports of machinery were actually greater than those of February last year. A more hopeful feeling is also apparent in the industry. The recent Bank rate reductions have had a good effect, and manufacturers are in no way perturbed at the recent improvement in sterling. Considerable anxiety is felt, however, over the numerous exchange restrictions in force in foreign countries, and engineering firms are becoming chary of accepting fresh orders. The outlook in the textile machinery, agricultural engineering and power equipment branches is considered good, but business actually in hand at the moment leaves room for improvement. The machine-tool trades have lately been affected by abnormal imports in anticipation of the tariff. There is no prospect of any improvement in the marine engineering section, but locomotive builders see a prospect of some revival in foreign demand.

PRODUCTION OF ELECTRICITY.

A general improvement has been registered in the production returns. The corrected figure for February, after allowing for seasonal fluctuations and for the expansion in the use of electricity, was 93.0, against 88.5 for January and 91.0 for February, 1931.

MOTOR INDUSTRY.

During the last month business has shown a slight improvement, chiefly in the overseas division. Exports for private cars have increased by over 1,000 on February, 1931, and commercial vehicles during the same comparative periods have risen from 407 to 567, although their value has decreased by over £23,000. The latest new registrations in Great Britain (January, 1932) show a decrease of 4.1 per cent. for private cars and 8.4 per cent. for commercial vehicles on the corresponding month of last year. Registrations for motor cycles rose by 6.4 per cent. in January, 1932, compared with 1931. It should be noted that this increase in motor cycle registrations is largely due to tricycles; the industry on the whole, including the export market, is showing no signs of improvement over last year.

THE COTTON TRADE.

Although progress by cotton spinners and manufacturers has not been rapid, there has been some improvement in the position of numerous firms. On the whole, sales have been larger than output, and more cases are reported of producers increasing production, and thus reducing unemployment. Buyers are also beginning to display more confidence in current prices. Fluctuations have occurred in raw material prices, but on balance there has not been much change in the level of values. The general inquiry in piece-goods for abroad has been on a healthier scale. A feature of interest has been the improved demand for India, especially in light goods and fancies. Increased activity has taken place for Calcutta, but makers of dhooties are still in need of bulk orders. Freer operations have been received from Bombay. There has been a good deal of comment at the freer purchasing of fine mulls for Rangoon. Advances stopped have now been resumed, and rather more fresh business has been done, especially for Hong Kong. Some manufacturers have met with an increased turnover for Singapore, Java and the Straits Settlements. Although more offers have been about for Egypt, the turnover continues comparatively poor. More favourable support has been met with from certain African outlets, South America and the Continent. Irregular operations have occurred in home trade fabrics. Most manufacturers in Blackburn and Preston are more favourably situated than a month ago. The turn-larger scale, but it is still exceedingly difficult for spinners to improve their margins as supplies of most counts and qualities are generally plentiful. The better demand in bundles for India has been maintained, and a few more contracts have been arranged for China.

THE WOOL TEXTILE TRADES.

Once more a good demand has been experienced at the London sales, though the inability of Germany to purchase her normal quantity affected the sale of cross-breeds. Still, competition was active, and the sales closed on a firm note, especially in regard to merinos. This has brought out more inquiry for tops at Bradford, and sellers are now able to display a firmer attitude, and a fair amount of business is passing, including some orders from the Continent. Spinners are still occupied on old contracts, but fresh inquiries for piece-goods are beginning to come forward, but the home trade is unchanged.

THE JUTE TRADE.

Raw material prices have lately been firmer with buyers showing greater reserve. Sowings for the new crop are now proceeding, and it is expected that they will be less than last year, but definite information is not yet available. At Dundee demand for yarns is very quiet, apart from some heavy purchases of carpet twist. Sales of cloth remain poor.

RAYON.

The turnover in yarns has been well maintained, and the general outlook is fairly promising. There are some large orders on hand for both hosiery and weaving yarns, and most producing companies are well booked up with orders. Business in acetate yarns has not been quite so brisk, but there is still plenty of work on hand. The home trade is providing the bulk business in rayon fabrics, but there is rather more moving on export account.

THE LINEN TRADE.

All classes of flax are very firm at recent advances. Operations in yarns have been restricted by the reluctance of producers to take on further contracts. Prices are very firm and all spinning plants are heavily engaged. There has been a gratifying expansion in general cloth business. Buyers' most insistent demand is for delivery, and this has led to a large increase in the number of looms in operation. Demand for home trade requirements is a special feature.

BOOTS AND SHOES.

Northampton reports business to be irregular, and the Easter trade has been disappointing. Orders for women's shoes are better than those for men's shoes. Inquiries from abroad are now falling away, partly because of foreign tariff increases. Bristol trade is also disappointing, with a noticeable absence of repeat orders.

POTTERY.

Demand for china is very dull, but earthenware manufacturers are more active. Good orders were taken at the British Industries Fair, and these have improved the outlook.

THE CHEMICAL INDUSTRY.

There has been a fair amount of interest in chemical markets during the past month, an active spot business in imported products being transacted before the tariff duties came into force on March 1st. Acetone and potassium permanganate continue good items in the industrial chemicals section. Formaldehyde and acetic acid are in satisfactory demand, and sales of sulphuric acid are increasing. There has been a steady improvement in the wood distillation industry, methyl acetone and charcoal being particularly good items. Sales of most coal tar products have been satisfactory. Pitch and refined tar are in good demand, but stocks of cresylic acid are large and business poor. Amongst pharmaceutical chemicals, sales of benzoic acid, phenacetin and lactic acid have been on a good scale. Owing to a considerable reduction in the price of crude iodine, quotations for iodides are considerably lower.

There has been more activity in the essential oils market. The Board of Trade figures for February show a decided improvement in the value of exports of chemicals, drugs, dyes and colours. For the first time for many months an increase is shown on the previous year, the figures being approximately £1,300,000 for February, 1932, and £1,200,000 for the same month of 1931. The value is, however, only about two-thirds that for February, 1930. The most disappointing products during the month were ammonium chloride and sulphate. Probably owing to the tariff there was a considerable increase in the value of chemical products imported during February.

AGRICULTURE.

According to an official report, autumn-sown crops are looking very well apart from some slight damage to oats by frosts and cold winds. Conditions have on the whole been favourable for spring cultivation, especially on light and medium soils, but rain is beginning to be badly needed. Spring sowing has taken place a little earlier than usual. The lamb-fall has been about average. Cattle generally are in normal condition, and milk yields average, except in the case of cows foddered on hay of inferior quality. Sheep on turnips are doing well.

SHIPPING.

There are few developments to record in the freight markets. Except for moderately active Argentine grain chartering, business remains at a minimum. The trouble in China has been a serious interference with Far Eastern trade; coal traffic has undergone in all directions a further shrinkage; and the tone of the markets has weakened appreciably.

BUILDING.

According to the Ministry of Labour's information, employment remained bad during February, except in a few districts such as Gateshead, parts of Wiltshire, Southend-on-Sea and Weymouth. The percentage of unemployment was 32.5, against 32.8 in January and 25.5 in February, 1931. According to returns furnished by 145 urban authorities, plans passed for new buildings in February comprised a total estimated cost of £4,596,300, against £4,314,900 in January and £5,713,300 in February, 1931. Of the total for February, 1932, dwelling-houses accounted for £3,135,100, factories and workshops for £150,800, shops, offices, warehouses and business premises for £420,900, and other buildings and alterations and repairs for £889,500.

RETAIL TRADE.

According to the experience of a leading London store, business during the last month has shown a slight improvement.

a Excluding coal imports.

c Provisional figures.

STATE OF TRADE ABROAD.

The American banking reforms have served to check bank failures and note hoarding, and there is some prospect of an alleviation of exchange restrictions in South America. Otherwise no improvement in the world situation is apparent.

BRITISH EMPIRE.

Australia.—Confidence is now reviving, and the favourable trade balance of £21 millions for the past seven months has created a good impression. Export trade is good, but internal trade is no better except in the textile industries, and unemployment remains serious. Rain is needed in Queensland, but elsewhere farming and grazing conditions are favourable. The wheat harvest exceeded estimates, and export trade is active. The season's wool sales amounted to 2,000,000 bales. Prices are now a little easier.

Canada.—Business is no better, for increased activity in some industries such as boots and shoes is offset by a curtailment of operations in the textile and other trades. The iron and steel industries are working far below capacity, and exports of flour have fallen away since last year to the detriment of the milling industry. Wholesale prices are again falling after the pause in their downward trend experienced last autumn.

India.—Bombay reports raw cotton prices to be very firm, with a fair demand for American cotton. The Broach and Dholera crops are now arriving, and the former is of unusually good quality. Trade in Manchester goods is restricted by political pressure, but a fair amount of business has been done for up-country. Sales of Japanese goods have been satisfactory, but business in Bombay goods has been interrupted by the closing of the cloth market, and orders have been lost to Ahmedabad. Calcutta reports the jute market to have been quiet. The tea sales have come to an end until June.

South Africa.—Christmas and New Year trade exceeded anticipations, but even so, compared unfavourably with previous years. Collections have in some cases proved difficult. Wool has lately been moving with greater freedom in consequence of the increase in the export subsidy from 10 to 25 per cent. Rain was needed in the maize areas at the end of January.

EUROPE.

France.—The coal trade remains very depressed, and though prices are nominally unchanged, it is believed that the removal of the surtax upon British coal has forced certain districts to grant rebates. The outlook in the iron and steel trades is perhaps a little better. Makers of plates are fairly active, and the comptoir for thin sheets has now been successfully started, while it is hoped that the foundry iron comptoir will soon be established. Belgian competition in steel merchant products is being felt. Conditions in the silk textile trades have improved. Flax exports to Great Britain are increasing. Cotton and jute prices are firmer, and orders for yarns are coming forward more freely. Roubaix wool-combers are only working at 50 per cent. of capacity, and some spinners are only working three days a week. Other spinners, however, are better employed, and a bigger demand for dress goods is noticeable.

Belgium.—Demand for house coal is a little better, but trade in industrial fuel is unchanged. The recent appreciation of sterling has proved of no benefit to the steel trade, where business remains very poor. Antwerp produce markets remain inactive, but the outlook is thought to be a little more hopeful.

Germany.—The industrial situation remains no better, and it has been calculated that early in the year industry taken as a whole was only working at 40 per cent. of capacity. The foreign trade position has grown perceptibly worse during January and February, and this has made inevitable a further tightening of the exchange regulations. The reduction in the Reichsbank's rediscount rate from 7 to 6 per cent. in early March is regarded as the first hopeful sign since the intensification of the crisis last summer.

Holland.—It is still too early to see the effect of the recent imposition of import quotas, but an extension of the quota system is under consideration, and a Bill has also been introduced to set up clearing systems in respect of import and export trade with countries subject to exchange restrictions. Meanwhile there is some evidence that the quota upon imported boots and shoes has revived the home industry. Against this, the Dutch dairy industry has been seriously hit by the recent increase in the German butter duty. The financial situation remains sound, and the Kreuger difficulties have had little effect in Holland.

Scandinavia.—Attempts are still being made to circumscribe the consequences in Sweden of M. Kreuger's death. There is a general disposition to recognise that the strength and value of his industrial enterprises, as distinguished from his financial operations, should be unimpaired, though their sub-division into smaller independent units may be necessary. No change either way has so far taken place in the timber and wood-pulp industries. Norway reports that a further increase in laid-up tonnage occurred during February, the final figures for the month being 363 vessels of 1,606,390 tons. The reconstruction schemes of the Bergens Privatbank and Den Norske Creditbank have been approved by the shareholders, and the Bank of Norway, under authority from the Storting, has placed liquid funds at the disposal of the banks, which therefore were both able to reopen on March 15th. Norway was not much affected by M. Kreuger's death.

Switzerland.—Exports to Great Britain received some stimulus during February from the approach of the British tariff, but the position of all export industries, except that of aniline dyes, which has consistently gained ground, is very difficult. This is mainly

due to foreign trade and exchange restrictions, but is also partly due to price divergencies. Thus English textiles are now definitely cheaper than corresponding Swiss goods.

UNITED STATES OF AMERICA.

Business sentiment improved during February, but actual gains were slight. The reduction in bank failures and in the private hoarding of currency reflected the improvement in the credit situation. The industrial improvement was confined chiefly to consumers' goods, and the seasonal expansion in the basic industries was below normal. Steel mill operations averaged 27 per cent. of capacity, and the automobile industry was awaiting developments in the field of low-priced vehicles. There was a slight improvement in building construction, but freight movements showed a decline of 20 per cent upon last year.

LATIN AMERICA.

On the basis of the new taxation measures, the Argentine Budget for 1932 is estimated to provide a surplus of 50,000,000 pesos (paper), and the Minister of Finance has declared that there will be no moratorium on the external debt. Liabilities in commercial failures rains have fallen over the maize districts and the crop is now safe, some 40 per cent. of the whole. Chilean trade conditions generally better. According to recent reports, Chile proposes to suspend the relief to the nitrate and copper industries. Brazilian trade conditions remain depressed, especially in the import trades, which are affected by the difficult exchange situation. The local manufacturing outlook is still difficult. In Peru the local manufacturing outlook is still difficult. An important Decree has recently been issued in Mexico, under which the Central Banking Council has been dissolved and certain reserve deposits will be returned to the authority for the issuance of its notes against rediscunts, as well as the coinage of silver. Following the recent political disturbances in Salvador, credit conditions there became difficult, and the Government has been obliged to declare a moratorium, as well as the country's departure from the gold standard.

THE FAR EAST.

Japanese export trade with China has been seriously affected by the crisis, for the February returns revealed a decrease of 48 per cent. below the corresponding 1931 figure. Trade in cotton piece-goods has become more active owing to the temporary closing of the Chinese mills. Exports of cotton yarn and rayon have been good, but sales of raw silk less satisfactory. The Bank of Japan reduced its rate from 6.57 to 5.84 per cent. on March 12th in recognition of an easing of the Shanghai crisis and in furtherance of the Government's policy since the suspension of the gold standard to afford every possible assistance to industry.

The Economist

MONTHLY SUPPLEMENT.

New Series.

SATURDAY, APRIL 30, 1932.

No. 107.

The tables in the following pages show summary figures for as many nations of the world as possible, and have endeavoured to combine brevity with comprehensiveness. The greater number of the figures are taken from the Monthly Statistical Bulletin of the League of Nations, supplemented from our records.

THE STATE OF TRADE AT HOME AND ABROAD.

RECENT and current reports as to the state of home trade are once more very conflicting. In many respects there is evidence of definite improvement. Thus the March trade returns record a small increase in raw material imports—nearly sufficient to neutralise the setback of the previous month—and also an expansion in exports of British manufactured goods to the highest figure recorded since July of last year. Steel production, too, though less than in February, compares very well with last year's monthly returns, and pig iron production was also well maintained, with a net increase of one during March in the number of furnaces in blast.

Unemployment also had a definitely downward seasonal trend. The percentage for March 21st was 20.8. This is the smallest figure since last May, and is also 0.7 points below that of March last year, this being the first time for over two years that any period of twelve months has shown a decrease. Improvements were recorded in a large number of staple industries. The major industries were well represented by building and coal-mining, engineering, most textile trades, the metal industries and motor and cycle manufacture, while employment was also better in the pottery and glass trades, in woodwork and printing, and in the distribution trades and hotel services. Against these, unemployment became worse in pig iron manufacture, constructional engineering, the boot and shoe and rubber industries and in dock and harbour services.

Thus most of the tangible indications unite in suggesting that trade is definitely more active, and up to a point this is confirmed by the reports from separate industries summarised upon another page. Yet it is difficult to find any real agreement that there has been a genuine improvement, and in some respects the outlook has become a trifle worse. First comes the unsettling effects of last month's appreciation of sterling. This coincided with a further depression of gold prices, with the result that since early March sterling wholesale prices have fallen heavily, and many markets and trades have been affected. This is particularly true of the cotton industry, where the relative activity of previous weeks has given place to dullness and depression.

The budget, too, in one sense came as a disappointment. It is true that by the time of its introduction all hopes of any remission of taxation had disappeared, but earlier in the year, when it first became clear that the budget had been balanced, some such hopes were entertained. Apart from this, many people, both in industry

and the City, are gravely disappointed that no further large-scale efforts in the direction of economy are being made, and that there is no prospect of an early lightening of a burden of taxation which they consider to be intolerable. They further hold that no revival in business can take place so long as taxation remains at its present grievous level, and to the extent to which these views are held it must be recognised that the present heavy direct taxation is reducing the incentive towards a trade revival.

Though welcomed in many industrial quarters, the recommendations of the Tariff Advisory Committee have also had an unsettling effect. Hitherto the main complaints have come from those industries which had previously had the benefit of a 50 per cent. Abnormal Importation Duty, and which now are in some cases to receive a duty of only 15 per cent. It is still too early to tell how the new tariff is affecting our internal and external trade. It seems fairly probable that our export trade will become more difficult than before, owing to defensive measures such as import quotas and exchange restrictions adopted by foreign countries who have to protect their balance of trade.

The introduction of the budget was followed by a reduction in Bank rate from 3½ to 3 per cent., so that in contradistinction with the situation of little over two months ago, money is now definitely cheap. Unfortunately, cheap money has so far been of little benefit except to the gilt-edged market, and so to the prospects of a conversion scheme. Requests for accommodation from commerce and industry are no greater in number, and there is no real revival in the new capital issue market.

Apart from a slight increase in industrial activity in certain Dominions and in France, overseas news is no better than in previous months. The position of Central Europe is rapidly going from bad to worse, while Sweden has been under the shadow of the Kruger revelations. In the United States the usual seasonal revival is lacking, while trade in South America is still dominated by exchange restrictions. Fortunately the first reports of the damage caused by the volcanic eruptions in the Argentine appear to have been greatly exaggerated. In the Far East, Japanese financial conditions remain difficult, and there is no improvement in industry. In short, the developments of previous months have been repeated, in that such progress as has been made in England has been largely offset by a further deterioration of the position abroad.

HOME INDUSTRIES AND TRADE.

The following reports on British industry cover, in most cases, the period to the middle of April. In the remainder they relate to the month of March.

THE COAL TRADE.

Export trade remains very unsatisfactory. Further restrictions upon imports have been imposed by France and Germany, the French quota for April and May being only 64 per cent. of imports for 1928-30, while certain minor concessions have now been withdrawn. The volume of business at Cardiff has fallen by 10-15 per cent. in comparison with a year ago, and collieries are finding that even these reduced allocations for the June quarter are more than they can market. In Yorkshire there is perhaps a better demand for large coal for prompt shipments, but contract business is very scarce and output is having to be curtailed. The advent of summer time has had its inevitable effect upon the house coal trade. On the other hand, Derby has just reported more activity in house coal, though this is only a temporary phase. Business in Northumberland and Durham is very dull. Some orders are coming from Scandinavia for gas and coking coal, but shippers of steam coal are experiencing very keen Polish competition. Trade in Scotland is very inactive and prices are weaker.

IRON AND STEEL.

Output was well maintained during March, and an additional furnace was brought into blast, raising the total number in operation from 71 to 72. The industry has hardly had time to determine the probable effect of the new tariff proposals. There are reports that foreign manufacturers are tentatively prepared to quote on the basis of the current price plus half the duty, but it is conceivable that the duty of 33½ per cent. upon many steel products is bigger than they had envisaged. Apart from this, existing stocks held in the country are very large, and it will take some time for them to be absorbed. In some quarters disappointment is felt at the failure of the Tariff Advisory Commission to include pig iron within the scope of their recommendations.

ENGINEERING.

The general tone continues hopeful, and there was a substantial improvement in employment during March. Exports are also well maintained. It is difficult to detect, however, any genuine improvement or appreciable influx of orders. Conditions in the machine-tool trades are not so bad, and there is some seasonal improvement in the demand for agricultural machinery. The depression in shipbuilding and marine engineering is as acute as ever, and Lloyd's returns for the first quarter of the year established new low records, with only 373,000 tons in hand and 26,000 tons begun during the quarter. The 373,000 tons of work nominally in hand includes 165,000 tons upon which work is now suspended. Makers of power equipment are fairly well employed. Locomotive builders are a little busier, but it will take several years to restore their foreign orders to their volume of three years ago.

PRODUCTION OF ELECTRICITY.

Apart from the textile industries, the improvement which set in in February was maintained in March, the "corrected" index figure being 93 compared with 93 in February and 96.5 in March of last year. Chemicals showed a very marked rise, while coal mining, iron and steel and shipbuilding did not experience the usual seasonal fall.

† Increase due to special causes.

ELECTRICAL INDUSTRY.

Very little change was recorded during the greater part of March. A big order, however, was received in connection with the S.W. Scotland power scheme, and this should influence next month's index. A better tone is apparent in both home and export trade.

INDEX OF NEW ORDERS RECEIVED BY ELECTRICAL MANUFACTURING INDUSTRY.*

MOTOR INDUSTRY.

The upward tendency in the motor industry has been maintained. Private car sales in February showed an increase of 4.4 per cent. over the corresponding month of last year. It is difficult to determine, however, how much of this increase was due to a fortuitous circumstance which caused a hump in the sales trend, this being the increased purchasing power in the hands of the public arising out of sales of gold and sovereigns. Commercial vehicle sales have declined in comparison with 1931. It is interesting to note that the total private cars and commercial vehicles licensed have increased by over 4 per cent. The balance of trade still shows a great improvement over 1931. The motor cycle industry is showing signs of renewed activity, and the February sales when compared with last year show an increase of over 30 per cent., although this increase is not so far sufficient to bring sales up to 1931.

THE COTTON TRADE.

Spinners and manufacturers have experienced a setback, as shippers and merchants have been less active, chiefly owing to the wider fluctuations in raw cotton prices. Producers' order lists are lighter than a month ago, and in most sections there has been great irregularity in prices. Spinners' margins are as unsatisfactory as ever, and it is only in a few instances that cloth manufacturers have been able to present a firm front to buyers. There has been a fair amount of inquiry in cloth for India. The bulk of the manufacturers remain in urgent need of relief. There has been a falling off in demand for China and Hong Kong, and there are, as yet, no indications of the resumption of the Shanghai auction sales. Central and South America has been within narrow limits. The speciality makes. The industrial situation in fine fabrics and about the same as a month ago, but unless demand quickly revives activity in the yarn section, and it is evident that the restarting of some machinery, which coincided with the falling off in demand, has worsened the position of most producers. There has been a fair turnover in Egyptian yarns, but the unsatisfactory state of affairs in this section is reflected in the decision to restrict production to 80 per cent. of capacity for a period of six weeks, which began on April 11.

THE WOOL TEXTILE TRADES.

The recent sales in London opened in disappointing fashion, so much so that it was decided to abandon the last four sales. The decision imparted a firmer tone to the market, as, although 30,000 bales will now have to be carried forward, a big weight of wool top-makers report a better inquiry for merinos and fine cross-breeds. Business in yarn and piece-goods was held up pending the announcement of the tariff proposals, and their publication gave rise to considerable disappointment.

THE JUTE TRADE.

Prices have again fallen, and unfavourable crop reports have had little effect upon the market. Spinners are feeling very apathetic, and although current prices are such as to involve them in a heavy loss, efforts are being made by buyers to depress prices still further. Inquiry for cloth has lately expanded, but apart from some new orders for linoleum hessians, current business is very limited and prices are unremunerative.

RAYON.

Business in rayon yarns has been rather quieter during the past month, but the number of forward orders on hand has enabled production to be kept up at a very high level. Producers are, in fact, still having difficulty with giving deliveries of certain types of yarns. Overseas business in both yarns and fabrics is still very limited.

THE LINEN TRADE.

Flax supplies are limited and quotations unchanged. Sales to United Kingdom are of a retail nature, consumers being unable to meet current prices. New business in both yarns and cloth is confined to current requirements, but machinery is well employed on contracts placed earlier in the season, against which quick delivery is required for both home and export markets.

BOOTS AND SHOES.

Trade has been very dull, and many Northampton factories closed down for a fortnight at Easter. The outlook is not considered to be hopeful.

POTTERY.

Recent export returns are disappointing, but early in April a more hopeful view was taken of the future. The recent 50 per cent. Abnormal Importation Duty upon earthenware was of little benefit, owing to the huge stocks of goods imported prior to the imposition of the duty. The new tariff duty is to be 20 per cent., and it is too early to tell what effect it will have.

THE CHEMICAL INDUSTRY.

Although markets were quieter than during the previous month, a very fair amount of trade was transacted during March. Industrial chemicals continued in good demand, with quotations almost unchanged. The best items in the section were acetic acid and acetone. Chlorates were rather dull. Sales of most wood distillation products continued to increase, but the demand for miscible wood naphtha and tar was unsatisfactory. A steady flow of business in coal-tar products was reported throughout the month. Owing to the fluctuations in sterling and the new import duties, a number of changes occurred in quotations for pharmaceutical chemicals. Amongst these were reductions for iodides, bismuth compounds and quinine salts. There was a good demand for salicylates and glycerophosphates, but sales of most pharmaceutical

products were rather limited. The Board of Trade returns for March show increased exports of a large number of items falling under the heading "Chemicals, Drugs, Dyes and Colours," as compared with the figures for March, 1931. Amongst these were considerable increases in both quantity and value of exports of copper sulphate, glycerine, zinc oxide and dyes and dyestuffs. Exports of ammonium chloride and sulphate, bleaching powder, potassium chromate and bichromate, potassium nitrate and sodium compounds also increased.

AGRICULTURE.

Autumn-sown crops benefited greatly from the rain which fell at the end of March, and spring corn has been sown earlier than usual. The preparation of land for potatoes and beet-sugar and the planting of early potatoes are well advanced. The fall of lambs among lowland flocks was up to average. Cattle and sheep did fairly well, and milk yields were normal. Pastures were improved by rain.

SHIPPING.

Liverpool reports some seasonal movement in the grain trade, and some fixtures for the Baltic are reported on the North-East Coast. Otherwise demand for tonnage remains very limited and rates are easier.

BUILDING.

According to the Ministry of Labour's information, a general improvement in employment occurred during March, the percentage of unemployment falling from 32.5 to 29.0 per cent. The corresponding figure for March, 1931, was 22.5 per cent. Returns furnished by 144 urban authorities show that plans passed for new buildings in March comprised a total cost of £5,271,300, against £4,649,100 in February, and £5,313,600 in March, 1931. Of the total for March, 1932, dwelling-houses accounted for £3,719,600; factories and workshops for £234,400; shops, offices, warehouses and business premises for £312,300; and other buildings and alterations and additions for £1,005,000.

RETAIL TRADE.

A London store reports a further slight improvement, but progress has been retarded by the early date of Easter. This is confirmed by reports received by the Incorporated Association of Retail Distributors.

a Excluding coal imports.

c Provisional figures.

STATE OF TRADE ABROAD.

Little real change for the better is noticeable, and in Central Europe the situation has become more serious than ever. Some slight improvement has occurred in Australia, Canada and France, but industrial conditions in the United States are no better, and affairs in Sweden are overshadowed by the Kreuger failure.

BRITISH EMPIRE.

Australia.—General conditions show some improvement, due in part to the readjustments of wages, rents and interest. Weather conditions are excellent in all parts except some districts of Queensland. The disposal of the wool clip is well advanced, but prices have only averaged a little less than 9d. per lb. The unsold balance of the wheat export surplus was estimated at about 25,000,000 bushels in early April. The volume of exports is well maintained, and for the past nine months there has been a favourable trade balance of £26,000,000 sterling.

Canada.—Normal spring buying was retarded by the prolongation of winter conditions, but there has been some expansion in industrial activity, particularly in the rayon, furniture and boot and shoe trades. Little revival is noticeable in the cotton and steel industries. Grain prices remain low, but many farmers have been able to bring their costs more into line with current prices, and an increase in the seeded area in the Prairie Provinces is anticipated.

India.—Mail reports from Bombay state that the piece-goods markets were closed for the whole of March, with the result that business was only carried on under difficulties. Raw cotton prices were weak and unsettled, partly as a result of the appreciation of sterling against the dollar, which restricted the demand for Indian cotton from Europe or the Far East. Calcutta jute prices eased during March, and the Indian Jute Mills' Association has experienced some difficulty in its attempt to organise the curtailment of working hours. The new crop reports are unsatisfactory, as work has been retarded by lack of rain.

South Africa.—Business remains quiet, with stringent money conditions, and there is little sign of any improvement. Unemployment continues to increase. Transvaal gold output for March established record figures of 960,035 fine ounces, valued at £4,077,969. Weather conditions are fairly favourable, but more rain is needed up-country. In spite of recent shipments to Canada, maize stocks remain large. The second official new crop estimate is 17,065,000 bags, against 16,008,000 bags last season. Wool prices have fallen, and there is little demand for mohair. Merino skins are easier, but there is good competition for hides.

EUROPE.

France.—Some signs of improvement are apparent in the steel trades. Prices are firmer and orders are being placed more freely. Little change is noticeable in the cotton industry, but Roubaix reports a slight improvement in certain sections of the wool textile trades, particularly in dress goods and hosiery yarns. Business, however, remains far below normal, and the outlook, especially for the export trade, is most uncertain. There is no better demand for house coal or industrial fuel, and coal-owners are perturbed by the rising tendency of internal prices and their high production costs.

Belgium.—The coal trade continues to work under difficulties, which are accentuated by uncertainties regarding the regulation of imports from England and Holland, where definite conclusions have still to be reached. No seasonal revival in the steel trade has yet taken place, and makers are largely working to stock. Prices are weaker, and the French import restrictions are proving detrimental. The glass and textile trades are seriously affected by the British duties and by British competition.

Germany.—Negotiations are in progress for the acceptance by the Stahlwerks Verband of a Russian order for 300,000 tons of rolled steel, but owing to difficulties of finance only half the order has so far been placed firm. Otherwise the difficulties of the export trade in steel have been intensified by further reductions in Belgian and French prices. The March foreign trade returns showed an export surplus of Mks. 163 millions. Further indications of the bad state of trade are given by the shrinkage in imports of iron ore, copper, hides and leather, and by the rapid increase (by 60 per cent. in past six months) in the number of unemployed who have exhausted their right to benefit and crisis relief.

Scandinavia.—Events in Sweden have been overshadowed by the Kreuger revelations. The krona weakened temporarily to Kr. 20.80 and the Stock Exchange is very depressed, while the full extent and character of the losses have still to be determined. Trade remains very difficult. A serious strike has broken out in the pulp industry, and the market is dull. Timber exporters are receiving a fair number of orders for prompt shipment, but otherwise business is hampered by foreign tariffs and restrictions on imports. The Norwegian-krona also weakened as a result of the Kreuger revelations, in spite of the fact that Kreuger securities were never dealt in or quoted in Norway. The timber trade was quiet in early April, pending the announcement of the British tariff proposals.

Holland.—Unemployment is no better, the latest figure being one of 380,000. Foreign trade for the first quarter of 1932 showed a substantial decrease on previous years, imports being 55 per cent. and exports 48 per cent. of their value for the first quarter of 1930. The agitation for the extension of the quota system on imports is spreading.

Switzerland.—Foreign trade continues to decline and unemployment is increasing. The latest returns record 66,000 fully and 70,000 partially unemployed.

Austria.—The situation is rapidly deteriorating, and recent increases in unemployment have exceeded even the worst apprehensions. Import quotas for certain commodities are to be established, and the foreign exchange regulations are to be tightened still further. New exchange clearing agreements are being negotiated, and agreement with France has actually been reached.

Czechoslovakia.—There is no improvement in the industrial situation, and the unemployment returns have reached 626,000. Export trades and those engaged in the manufacture of "capital" goods are very hard hit, and the resumption of building activity has been retarded by the late spring.

UNITED STATES OF AMERICA.

The financial situation improved during March and there was a substantial reduction in the number of bank failures, but industrial expansion was below normal for the time of year. Steel operations were only estimated at 25 per cent. of capacity in March, and in early April a figure of only 22 per cent. was returned. There was some improvement in automobile production, but makers are watching carefully the effects of competition in the low-priced car field. Construction contracts remain low, and activity in the textile industries is reduced following a lessening of demand. Car loadings improved, but are still 20 per cent. below last year's level.

LATIN AMERICA.

Trade conditions in South America continue to be overshadowed by the world depression and by the adverse effects of foreign exchange restrictions. In Argentina, the exchange position is comparatively comfortable, and, while import trade continues on a very reduced scale, exports are being well maintained, so that a two months of 1932 of some 48,000,000 pesos (gold), against only 5,500,000 pesos (gold) in January and February of 1931. The first report of the Andean volcanic eruption were very much exaggerated, and it is hoped that the fall of ash should ultimately be beneficial to the Argentine agricultural areas. Chilean trade conditions continue dull. During the past month, the new Chilean Monetary Law has become effective; this provides for the temporary suspension of the convertibility of the currency note issue. In Brazil, the scheme for the elimination of coffee stocks is proceeding normally, and it would appear that the situation should immediately respond to any revival in the overseas demand for the commodity. There has as yet been no relief of the trade depression in Peru, Colombia and the Central American countries continue to be affected by the dull conditions in the markets for coffee and cocoa.

THE FAR EAST.

Japanese money rates are easier, but the banks are still displaying caution, and fresh accommodation is not too readily available. Cotton spinners are to maintain their curtailment of production with special provision for new spindles brought into use after next July. Exports of yarn and piece-goods remain satisfactory with the exception of those to China. Home demand is less active. Raw silk prices have declined in sympathy with the prevailing inactivity and the fall in prices abroad.

PRODUCTION. (Thousands of Metric Tons.)

The Economist

MONTHLY SUPPLEMENT.

New Series.

SATURDAY, MAY 28, 1932.

No. 108.

The tables in the following pages show summary figures for as many nations of the world as possible, and have endeavoured to combine brevity with comprehensiveness. The greater number of the figures are taken from the Monthly Statistical Bulletin of the League of Nations, supplemented from our records.

THE STATE OF TRADE AT HOME AND ABROAD.

WHILE little actual change in the state of British trade has become noticeable during the past month, there is some evidence that the general tone is less hopeful than it was earlier in the Spring. The Budget undoubtedly has had a deadening effect, particularly upon the heavy industries and others engaged in the manufacture of capital or equipment goods, as opposed to articles for immediate consumption. It is true that, by early April, no one really believed that a reduction in direct taxation would be practicable, but even so the whole tone of the Budget speech and of subsequent declarations by responsible Ministers has been such as to inspire the belief that any relief of taxation will be deferred for a very long time.

The tariff changes have also exercised an unsettling influence. In some cases Abnormal Importation Duties of 50 per cent. have been replaced by lower duties running down to 10 per cent., and in such cases manufacturers are finding that foreign competition has once more become effective. In other cases the new duties have so far not provided the stimulus to home production for which the beneficiaries hoped, partly because of the existence of pre-duty stocks and partly because the general trade depression is forcing foreign manufacturers to quote prices which include the duty and yet remain competitive. Many home manufacturers expected too much of the tariff, and also imagined apparently that its benefits would accrue immediately. They are now being disillusioned.

The result is that at the moment British industry is experiencing just the same seasonal lull as it used to experience every May during the years of relative prosperity that ended in 1929. The unemployment returns for April bear this out. Between March 21st and April 25th this year the unemployment percentage rose from 20.8 to 21.4, and the latest figure is 0.5 per cent. above the corresponding percentage for April, 1931. During April employment declined in the coal mining and textile industries (excluding rayon yarn manufacture); in iron and steel, tinplate, glass and paper manufacture; in constructional engineering; and in shipping, dock and harbour services. An improvement was recorded in the rubber industry, and also slight seasonal revivals in building, tailoring, dressmaking, the distributive trades and in hotel and boarding-house services. These returns show that the deterioration occurred in many of the staple industries of the country.

The real question is, how far is it legitimate to regard this setback as a temporary and seasonal lull. Taking

a broad view of the position at home and abroad, it is perhaps true to say that British trade and industry have, on balance, held their own since the suspension of the gold standard last year. They have not, however, recovered any of the ground previously lost, and it must also be admitted that abroad the situation has seriously deteriorated during the same period, and is still rapidly deteriorating. It is thus a question how long British industry will be able to avoid being dragged down by the steadily declining trend of world activity; for palpably,

unless the trend of events abroad is rapidly reversed, home trade will not be able to hold out for long. It is by no means certain that to-day's lull is not the beginning of a major recession.

There are two pieces of evidence in support of this pessimistic view. The first is the failure of cheap money to have any effect. To-day both England and the United States are committed to a cheap money policy designed to infuse fresh credit into industry, and to-day both countries are having to face the fact that cheap credit can by itself do little so long as confidence on the part of both lender and borrower is lacking. This does not mean that the banks should relax their efforts to see that cheap credit in the money market is translated into cheap credit to commerce and industry, just as in England to-day traders would be well-advised to weigh the advantages of financing their business by means of bills of exchange as opposed to bank over-

drafts. But adequate machinery of finance is not enough. There must also be the will and desire to make use of it, and this depends upon confidence.

The other and more serious fact is that, as a perusal of the trade reports upon subsequent pages will show, time and time again the depression in a particular country or industry is directly attributable to exchange or import restrictions imposed by another country. To-day there is copious evidence to show that international trade is drifting into a state of deadlock, and, indeed, is fast disappearing altogether. Already matters have reached the stage where exporters are deliberately refusing to accept business offered to them, and this is reacting upon trade, production and prices everywhere. In short, the work of reconstruction has already been too long delayed. If international trade is to survive, all the evidence shows that policies directed vigorously to removal of trade barriers and the restoration of credit and confidence must be put in hand at once.

HOME INDUSTRIES AND TRADE.

The following reports on British industry cover, in most cases, the period to the middle of May. In the remainder they relate to the month of April.

THE COAL TRADE.

Business remains very quiet. Export trade continues to be hampered by restrictions in many directions, and the only event of note is the placing in South Wales of the Egyptian State Railways' contract for 240,000 metric tons. Demand for house coal has now been reduced to its summer level, and sales of industrial fuel, though fairly well maintained in certain centres, show little sign of increasing. Many collieries remained closed for three or four days at Whitsuntide owing to the prevailing lack of orders.

IRON AND STEEL.

Conditions remain disappointing. The April steel output amounted to 433,300 tons, which compares unfavourably both with the March figures (462,800 tons) and those for April last year (397,000 tons), as this year Easter fell in March. Pig-iron production was better, and little significance need perhaps be attached to the reduction of three in the number of furnaces in blast, as three furnaces were blown out for relining and should automatically come back into blast when ready. Unfortunately, stocks both of iron and steel remain heavy, and, notwithstanding the new import duties, ranging up to 33½ per cent., Continental producers are still offering semis on terms with which many English firms cannot compete. The May trade returns are not expected to record any substantial improvement.

ENGINEERING.

While actual conditions show but little change, the tone is less hopeful than a few months ago. The Budget came as a keen disappointment to the industry, and the immediate benefits of the tariff are less than the industry had expected, even though they are having a definitely protective effect. April exports were comparatively good, those of machinery being the best since January 1, 1931. Unemployment was slightly worse than in March. As regards different branches of the industry, demand for machine tools is fair, but textile machinists are no better placed, and foreign orders are coming forward very slowly. Makers of power equipment are expecting fresh orders, as it is known that certain large essential renewal operations are imminent. Agricultural engineers have found this year no better than last, and marine engineering remains depressed. There is a fair demand for printing machinery.

PRODUCTION OF ELECTRICITY

INDEX OF GENERATION OF ELECTRICITY.*

* Prepared by the economic and statistical department of the British Electrical and Allied Manufacturers' Association.

The corrected figure for April was 92.0. This compares with one of 93.0 for March and one of 87.7 for April last year.

ELECTRICAL INDUSTRY.

The increase in the home index is attributable to large orders received in connection with the Galloway power scheme. Unfortunately, so far as the total output of electrical plant is concerned, this increase is offset by the decline in export orders.

INDEX OF NEW ORDERS RECEIVED BY ELECTRICAL MANUFACTURING INDUSTRY.*

MOTOR INDUSTRY.

The usual seasonal improvement in the motor car trade is taking place, but this year it is confined largely to the cheaper classes of cars. In the commercial vehicle section demand is mainly for light lorries, and makers of heavy lorries are relatively inactive. The motor cycle and pedal cycle trades remain fairly steady.

THE COTTON TRADE.

The experience of spinners and manufacturers during the past month has not been encouraging. There has been a fear of lower fluctuations in raw material rates have been comparatively narrow. Rather more favourable reports have been received concerning crop prospects in the United States, but the Government acreage estimate will not be published until early in July. The general inquiry in piece goods for India has kept up fairly well. The demand has indicated that many dealers in the bazaars want to re-low. A little more activity has shown itself in dhooties and light whites for Calcutta, and some producers of mulls, nainsooks and jaconets have done fairly well for Karachi and Madras. Heavier goods have attracted very little attention. Transactions for China weekly auctions in Shanghai. For Hong Kong, however, some useful lots have been sold in light whites and fancies. Most of the buying for Java and the Straits Settlements has been in specialities. Very little has been done for Egypt and the Near East. Difficulties with regard to trading with South America are still very pronounced. Manufacturers have not met with much support from customers on the Continent. Home trade buying has been limited, and the unseasonable weather has had an adverse effect upon clearances the yarn section. A slow feeling has prevailed throughout Egyptian counts have operated sparingly. Irregularity in prices has decided to abrogate all wages and hours agreements with the trade unions the operatives are balloting on a strike, but no definite decision on this point has yet been reached.

THE WOOL TEXTILE TRADES.

Current supplies of merino and fine wools are not excessive, and immediately before the opening of the fourth London sales on May 24th the general impression was that prices would be maintained. The position of medium and low-grade cross-breeds, however, was quite different, as in all probability more wool is on offer than can be readily absorbed. In the West Riding spinners and the 50 per cent. Abnormal Importations Duties by the lower duties imposed under the new tariff. At the moment new business is coming forward less freely than earlier in the year, and there is a fear that in certain lines foreign competition will again become effective.

THE JUTE TRADE.

The new crop is progressing favourably, but sellers are, so far, not disposed to make offers of new crop fibre, while spinners, in steady, but business is very dull, and one mill is to close down at the end of the month. Orders for jute cloth are still very limited, and prices are no better. Still, the dispute regarding hours between the Indian Jute Mills' Association and five non-assorted manufacturers has been settled, and this should help to stabilise Calcutta piece-goods prices.

RAYON.

New business in rayon yarns has been relatively scarce during the past month, and the delivery position has been considerably eased. At the same time, forward orders have, up to the time of writing, enabled production to be well maintained, and a larger turnover is anticipated during the next few weeks as a result of the new duties. Overseas business in rayon fabrics remains at a restricted level.

THE LINEN TRADE.

There is little flax offering as markets are almost cleared and supplies have mostly passed into merchants' hands. Values are unchanged. With the exception of Soviet Russia, from which no reports are available, sowings for next season both here and on the Continent will be even less than last year, when they were the lowest recorded. Possibilities arising from this are causing anxiety in both spinning and manufacturing ends of the trade. Business has been quiet in both yarns and cloth. There has been some inquiry for forward contracts, but little has been done. The reduction of the import duties from 50 to 20 per cent. is the chief cause of the uncertainty.

BOOTS AND SHOES.

At Northampton conditions are no better, and most works were closed at Whitsun for a longer period than usual. One or two firms are relatively busy upon export orders. Bristol manufacturers report heavy cancellations of Irish orders as a result of the increases in the Free State tariff, and at the moment business is practically at a standstill.

POTTERY.

Business remains dull. Some good orders are being received from Canada, but home trade is inactive.

THE CHEMICAL INDUSTRY.

The tone of the chemical market was rather subdued during the month of April, but quoted prices were well maintained in most cases. The coal tar section was about the most satisfactory. Refined tar and pitch continued in good demand, and a very fair business was transacted in creosote oil. Even the cresylic acid market, which has been very dull for some time, showed signs of improvement. There were steady sales of industrial chemicals throughout the month, and the consumption of most wood distillation products was satisfactory. Demand for pharmaceutical products is still very limited, but there was a slight improvement towards the end of the month. The Board of Trade returns show an increase in exports of chemicals, drugs, dyes and colours as compared with April, 1931, although the improvement was not so pronounced as that for March. Exports of disinfectants, insecticides, etc., glycerine, sodium sulphate, potassium nitrate, chromate and bichromate increased both in quantity and value, whilst those of sulphuric acid and coal tar products showed a rise in value as compared with the corresponding month last year. There was a considerable decrease in the value of

chemical products imported during the month, a decline being shown by nearly every item. The only products showing an appreciable increase were acetic anhydride and potassium nitrate.

AGRICULTURE.

Though their condition was satisfactory, autumn-sown crops were less forward than usual at the end of April, and the cold weather had retarded the germination of spring-sown corn. About one-third of the main crop of potatoes remained to be planted. Except on the heavier lands, preparations for the drilling of roots were well advanced. Cattle have not wintered too well, and, owing to bad weather and backward pastures, have been turned out later than usual. Milk yields have only been maintained with difficulty.

SHIPPING.

Except for a moderate demand for tonnage to load Plate grain, business continues to contract, and the May indices of freights are expected to show a fairly substantial decline.

BUILDING.

According to the Ministry of Labour's information, a further slight improvement in employment occurred in April, mainly due to seasonal activity in the painting and decorating trades. The percentage of unemployment fell from 29.0 in March to 27.0 in April, against 19.5 per cent. for April last year. Returns furnished by 143 urban authorities showed that plans passed for new buildings in April comprised a total cost of £5,517,700, against £5,389,900 in March and £5,840,800 in April, 1931. Dwelling-houses accounted for £3,939,500 of last April's total; factories and workshops for £215,400; shops, offices, warehouses and business premises for £286,700; and other buildings and alterations and additions for £1,076,100.

RETAIL TRADE.

According to the calculations of the Incorporated Association of Retail Distributors, published in *The Board of Trade Journal*, sales reported for April last showed a decrease in money value of 2.2 per cent. compared with April, 1931. In order to smooth out the effects of the Easter holidays, it is best to combine the results for March and April, and here the decline since last year is one of 4.3 per cent. In Central and West-End London the value of sales in April was 0.3 per cent. higher than a year ago, the expansion being particularly marked in the case of furniture. Taking the country as a whole, stocks at cost fell by 3.6 per cent. in value during the year ended April 30th, and employment declined by 0.6 per cent.

a Excluding coal imports.

STATE OF TRADE ABROAD.

No change for the better is noticeable, and in Central Europe the situation has become more serious than ever. All the evidence shows that international trade is rapidly being destroyed by almost universal restrictions upon the movement of goods and funds.

BRITISH EMPIRE.

Australia.—Conditions and prospects in the rural areas are very favourable except in the interior of Queensland, where rain is deficient. This season's wool clip is the largest on record, but prices are very low. The wheat crop is in excess of estimates, and butter production is again expanding. Many of the secondary industries are more active than a year ago, and the textile and clothing trades are fully employed. Consumer demand is covering a wide range of goods, including a greater proportion of luxuries.

Canada.—The seeding season is later than usual, but conditions are satisfactory, as good rains have fallen all over the Prairie Provinces. Stocks of wheat have been reduced from 280.1 to 243.3 million bushels during the year ended March 31st last, but the latest figures are still very high, and they foreshadow a carry-over on July 31st of no less than 103 million bushels. Some improvement is noticeable in the chief industries, especially in textiles. Navigation on the St. Lawrence is now open and this has helped employment in the St. Lawrence ports.

India.—The Bombay cotton market was weak during April, and stocks have been growing. There was a fair demand for piece goods during the month. The Calcutta jute market was dull and depressed, with shippers showing little interest.

South Africa.—Seasonal rains have improved farming prospects, and extensive sowing of winter crops is reported. Heavy rains are still needed in the Northern Provinces. Wool prices are unchanged. The season's clip amounted to 928,000 bales, of which 85 per cent. had been sold up to the end of April. The hide and skin market has become weaker owing to a cessation of American demand. The maize market is also weaker owing to the poor home demand and uncertainties over the export quota position; 1,000,000 bags of the old crop will probably be still unsold at the end of June, but a reduction is expected to be shown by the next new crop estimate. Business remains at a low ebb.

EUROPE.

France.—There has been some slight seasonal improvement in unemployment, but the outlook remains most uncertain, and the result of the election has been a disturbing feature. Railway traffic receipts have fallen by Frs. 180 millions since last year, and the March production index fell below pre-war for the first time for many years. Demand for industrial fuel is very limited, and steel exports are being checked by the British tariff. The Lille cotton industry has been unsettled by the renewed fall in raw cotton prices, and, apart from a small seasonal revival, the Roubaix wool industry is no better off, and many combs are likely to stand idle during the summer.

Belgium.—The tone in the iron and steel market is slightly better and there are rumours of substantial Russian orders for rolled products. There is a satisfactory demand for house coal, but sales of industrial fuel are very limited, and stocks are growing. Business in plate glass is very restricted. Makers are only working three days a week, and exports of the cheaper goods are practically at an end. In the textile trades spinners are working at a loss. Exports are very restricted, but imports of British goods have been checked by the recent increase in the Belgian tariff.

Germany.—The number of unemployed fell by 197,000 in the second half of April, against 270,000 in the corresponding period last year. Since the seasonal maximum was reached in the middle of February the improvement has amounted to 390,000, against 590,000 last year. The position of the building industry has not been so unfavourable recently as had been imagined, but the demand for agricultural labour has not shown a normal seasonal expansion. The textile industry is still in a better position than the industries which manufacture producers' goods, but the decline in the metal-producing and metal-working industries seems recently to have been checked.

Holland.—Both imports and exports have fallen substantially since 1931, mainly as a result of world-wide trade restrictions. The various quota restrictions upon imports into Holland are being renewed automatically as they expire. The financial situation remains sound, and drastic economies are being effected or are in contemplation in both public and private finances. General business is no better, apart from a slight seasonal revival in certain industries.

Scandinavia.—Efforts are being made to dissociate Norway from the Kreuger failure, and it is pointed out that the April fall in the krone was quite unwarranted. It is reported that an agreement has been reached regarding the production of whale oil, and discussions between Norwegian and foreign interests have been taking place. The dispute in the Swedish pulp industry continues, and output is being seriously affected. Timber shipments to date are only half their normal level, and the paper trade has not yet benefited from the reduction in the British duties. In Denmark, butter prices have been depressed by the new Belgian import restrictions. It is understood that the Danish exchange control will be continued, and that only a small proportion of importers' applications for permits for the next three months will be satisfied.

Switzerland.—Reduced purchasing power and new trade restrictions abroad are responsible for a heavy fall in exports, and unemployment is rife in the chief export industries, such as watch-making and textile manufacture. Home trade remains firm.

UNITED STATES OF AMERICA.

The credit situation improved during April, but no progress was made by business or industry. Steel operations averaged 22 per cent., with a tendency towards an improvement at the end of the month. There was some expansion in automobile production, but it did not come up to expectations. Building activity increased slightly as the result of an expansion in public works construction. The textile mills have curtailed production owing to poor demand. Shipments of merchandise have expanded, but remain well below last year's level. The banking situation has again strengthened.

LATIN AMERICA.

In Argentina ploughing for the fine cereal crops continues actively, and sowing of wheat and linseed has commenced. Export demand for grain has recently improved. The foreign trade returns for the first three months of 1932 show a marked advance in the surplus of merchandise exports, to 81,283,028 pesos (gold), against 1,627,455 pesos (gold) in the corresponding period of 1931. This is due partly to an increase in the aggregate value of exports, but also to the continuance of a sharp contraction in the import trade. In Brazil the coffee industry shows some improvement. Market conditions are more satisfactory, and, in a recent message to Congress, the Provisional President of the Republic stated that Sao Paulo stocks will be exhausted by June, 1933. Chilean trade is still depressed on account of the inactivity of the major export industries. The gold standard was suspended in Peru on May 14th, a decision which has been necessitated by the depression in the sugar, cotton, petroleum and mining industries of the Republic. Colombian trade has been restricted. In Ecuador, although reports of the current cocoa crop are favourable, general trade remains inactive.

THE FAR EAST.

In Japan there was an excess of imports of 6,000,000 yen for the first four months of 1932, this being 4,000,000 yen more than for the corresponding part of last year. Trade with China is beginning to improve, especially with Northern China and Manchuria, but exports to Central and Southern China still compare unfavourably with last year. It has been suggested that the Bank of Japan should be authorised to raise the limit of the fiduciary note issue. Share and commodity markets have both remained dull.

PRODUCTION. (Thousands of Metric Tons.)

MONTHLY SUPPLEMENT.

New Series.

SATURDAY, JUNE 25, 1932.

No. 109.

The tables in the following pages show summary figures for as many nations of the world as possible, and have endeavoured to combine brevity with comprehensiveness. The greater number of the figures are taken from the Monthly Statistical Bulletin of the League of Nations, supplemented from our records.

THE STATE OF TRADE AT HOME AND ABROAD.

AFTER a glance round the industrial areas of the country at the present moment there is only one verdict that can be delivered, and that is the verdict of "little change." All the available statistics of trade confirm the finding that there has been, at the most, relatively small alterations. The production figures of the heavy industries were practically unaltered between April and May, when allowance is made for Whitsun. Railway receipts were also unchanged, and even the recession in exports is largely explained by a purely fortuitous export of ships which helped to swell the April figures. Finally, the rise in unemployment is partly explained by Whitsun, for the May returns were collected on the Monday after Whit-week, and so were affected by extended holiday stoppages in many works.

Reviewing the unemployment returns in detail, it will be observed that the increases were mainly in the numbers temporarily stopped, and related to the textile, clothing and boot and shoe industries, and to engineering, iron and steel, tinplate, vehicle and metal goods manufacture. Unemployment also increased in ship-building and ship repairing, and in dock and harbour services. There was a somewhat surprising improvement in coal mining, and there were also seasonal recoveries in the building industry and in hotel and boarding-house services. In general, however, the figures suggest that our industries are barely holding their own; certainly they are not making any real progress. A certain number of isolated reports which we have received point to current activity being better than that of a year ago; for example, an encouraging indication of underlying strength is to be found in the position of the machine tool trades, which at present are fairly satisfactorily placed. This suggests that some sections, at least, of British industry are able to replace and renew their equipment. But, such exceptions apart, the evidence points to a significant absence of any movement towards expansion.

As regards monetary policy, the situation to-day is fairly simple. Every effort is being made to keep money cheap and plentiful, and the very low level of money and discount rates show that these efforts are succeeding. It is, however, apparently thought inadvisable to infuse fresh supplies of credit into the country's system until confidence returns and brings with it fresh demands for credit of a character which can be safely and reasonably satisfied. The business world can assume that if and when they feel justified in undertaking fresh commitments, the

necessary credit will be made available, and will be kept available over a reasonably long period. Unless an emergency occurs, industry need not fear that its operations will be checked by a sudden restriction of credit.

While home trade is no worse, the same unfortunately cannot be said of the current international trade situation. British complaints of the serious effect of import quotas, new surtaxes, and foreign exchange controls enforced abroad are growing in number every day; and even if, so far, the size of our export trade does not compare too

unfavourably with last year, there is no doubt that orders are either not being placed or are having to be declined as the direct consequence of the numerous restrictions now in force. In Denmark, efforts are being made to relax exchange restrictions in favour of British goods, but even here very little has so far been achieved.

In general, the news from abroad is as depressing as ever. There is no improvement in United States activity, and South America is having to contend with the repercussions of the Chilean revolutions. Inside the Empire, Canada and South Africa report no change for the better, and business in Australia has been interrupted by the recent elections. In India, the Bombay cotton market has been affected by the recent fall in prices, and trade has been checked by political disturbances.

On the Continent, things are drifting from bad to worse. The French textile trades are only partially employed; in Belgium stocks of coal are growing steadily, and two more glass-works have had to close down. There is no improvement in the German industrial situation, and the position of Central and South-Eastern Europe grows more desperate every day. In Scandinavia, Sweden is recovering from the first shock of the Kreuger failure, but her industries are seriously affected by the world depression. In Switzerland, home trade is keeping up fairly well, but export industries are depressed.

The fact is that the business world is despairingly awaiting a lead, whether from Lausanne, Ottawa or some new quarter. To-day it is still impossible to say if that lead will be forthcoming, and that alone makes it very difficult to gauge the outlook for world trade. This much, however, can be said with certainty: the international credit system is very near the breaking-point, and it is imperative that there should be no further delay in making a beginning in the task of relaying the foundations on which confidence can be rebuilt.

HOME INDUSTRIES AND TRADE.

The following reports on British industry cover, in most cases, the period to the middle of June. In the remainder they relate to the month of May.

THE COAL TRADE.

South Wales reports a slight recovery in export business, mainly in the anthracite trade, and shipments at Port Talbot for the second week of June were the highest recorded since October, 1930. New contract business for steam coal is very limited and prices remain at the minimum laid down by the schedule. On the North-East Coast, the Northumberland mines are better placed than those in Durham, and a fair number of Scandinavian inquiries are coming forward. Unfortunately these are slow in materialising into actual orders, and there is little sign of an early expansion in the general demand. In South Yorkshire, export demand is easier, and prices of house coal are lower. Sales of industrial fuel are disappointing. Export business is equally unsatisfactory at Glasgow, and home demand is slow.

IRON AND STEEL.

Little change has occurred since April, for the slight shrinkage in the May production figures is easily explained by the Whitsun holidays, and the number of furnaces in blast remains at 69. Foreign producers of steel have so far been inclined to regard the new duty of 33½ per cent. as abnormal and temporary, and have continued to quote competitive prices in order to retain a place in the British market. British steel producers, however, have lately reduced their prices from a level of £5 7s. 6d. per ton to £5 5s. for lots of 100 to 250 tons, £5 for lots of 250 to 500 tons, and £4 17s. 6d. for larger orders. This reduction is probably a gesture in response to the new tariff. Business, however, is very slow. Orders for ship plates are limited to a few from Russia, and the tin plate and sheet trades are quiet.

ENGINEERING.

The expected improvement in May exports was not realised, and the new duties imposed at the end of April have not so far affected the total value of imports. To a large extent they have not yet had time to do so, but it is noticeable that the average value of the May imports of machinery was £216 per ton, which is a high figure. It is suggested that the tariff is beginning to exclude the cheaper machinery, and that imports are now consisting more of expensive specialised machinery which is not made in England, and for which the demand is too limited to justify its manufacture here. If so, such machinery may eventually be admitted at a lower duty or even transferred to the free list. As regards the various branches of the industry, the machine tool trades are not so badly placed, and there is a fair demand for prime movers and boilers. Marine engineering remains very depressed, and locomotive builders have made less progress than had been hoped. There has been a small seasonal revival in agricultural engineering, but this has now come to an end.

May	168	135	219	175	208	164

* Prepared by the economic and statistical department of the British Electrical and Allied Manufacturers' Association.

The May figures record a very sharp fall in the consumption of electricity, particularly by the chemical and textile trades. The corrected figure for May was 89.0. This compares with one of 82.0 for April and one of 84.2 for May last year.

ELECTRICAL INDUSTRY.

The rise in the home index is due to an order for two 60,000 kw. turbo-alternators placed by the Fulham Corporation. Apart from this, the returns are disappointing.

MOTOR INDUSTRY.

Sales of new private cars and goods vehicles for the month of April show increases of 2.9 and 1.3 per cent. respectively when compared with 1931. Total sales, however, for the four months ending April are still slightly below 1931. The most encouraging feature is the continued growth in exports when compared with 1931. Commercial vehicle exports for May show a 100 per cent. increase and exports of all vehicles for the five months ending May show a 50 per cent. increase. Motor cycle business is still below the level of last year, both as regards home and export sales. An interesting feature, however, is the growth in tricar sales.

THE COTTON TRADE.

Conditions in the cotton trade have deteriorated during the past month. Very few spinners and manufacturers have been able to book orders equal to their limited production and there has been a tendency for contract lists to run down. An uncertain feeling has prevailed partly owing to the labour crisis and partly as a result of the international political situation. To an increasing extent export trade is being hampered by the numerous restrictions, especially with regard to dealings in exchange. Raw cotton prices have not changed very much. The new crop in the United States is understood to be doing fairly well. Cloth inquiry for India has been of fair extent and although practically all the orders have been for limited quantities a moderate turnover has taken place in fine goods and fancies for Calcutta, Karachi and Madras, with isolated transactions for Bombay. After being suspended for two or three months the auction sale in Shanghai has been resumed, but the market on the other side remains unsatisfactory and new business has been at a low ebb. Makers have met with very little support from Egypt and the Near East. A steady demand has been met with from several African outlets, and exports to the West Coast are increasing. It has been very difficult to arrange favourable reports have been received from the home trade, and establishments. The owners of more weaving sheds have been successful in getting their operatives to accept a reduction in wages. There is a danger of a strike by the trade unions as a protest against the abrogation of all wages and hours agreements by the employers. It has been a disappointing period for spinners of yarn. The turnover has been less than the output. In both American and Egyptian yarns users have purchased from hand to mouth. If anything margins are worse than a month ago.

THE WOOL TEXTILE TRADES.

The fourth series of London sales closed early in June with prices substantially unchanged. Merinos and fine worsteds remained firm, but a larger quantity of wool—mainly cross-breeds—was carried forward than at the end of April. At Bradford, there is in the aggregate a fairly good turnover of tops and yarn, and machinery bred tops are largely neglected. Still medium and low crossbred sales. More home inquiries have lately come forward for piece-goods, but bulk business is slow in materialising, and whole-sale buyers still lack confidence.

THE JUTE TRADE.

Conditions remain very quiet. Buyers' needs are easily satisfied, and prices continue to sag. Calcutta reports increases during May of 20 million yards in stocks of heavy goods and 1.5 million yards in hessians. New crop prospects are very favourable, and this is limited apart from some recent sales of hessians. The cloth market again easier.

RAYON.

The turnover in rayon yarns remains rather restricted, mainly as a result of seasonal reasons. Actually producers are still working on a large scale, and it is possible that some of them are

working to stock. The warmer weather is helping to clear stocks of summer fabrics, which will prepare the way for a good autumn trade.

THE LINEN TRADE.

Flax prices remain firm and unchanged, with supplies reduced. Most markets are now closed till next season. Yarns are slow of sale, and production is gradually reduced as current contracts become filled. Cloth is also selling slowly. There is new business to be placed, but buyers are disposed to hold off for the time being. Latest returns show that exports of linen are well maintained and that home manufacturers are getting an increasing share of business in the British market.

BOOTS AND SHOES.

Apart from some slight improvement in the demand for women's shoes, Northampton reports no change in the situation, and it is generally realised that no expansion in the boot and shoe trade can take place so long as the leading industries of the country remain depressed and unemployment stays at its present high level. Export trade to France is affected by the French depreciated currency customs surtax, and the Northampton Chamber of Commerce have made representations to the Board of Trade.

POTTERY.

Business is very slack and many firms are closing down their works alternate weeks owing to lack of orders. The export trade for the past five months shows a considerable decrease compared with the corresponding period of 1930 and 1931, and home markets are very quiet.

THE CHEMICAL INDUSTRY.

May was a quiet month in the home chemical industry. A small though steady business was reported from most sections, and very few price changes occurred. Inquiries for coal tar products continued the most satisfactory. Refined coal tar for road-making and creosote oil were both in good demand. Very little change occurred in industrial chemicals. Business in pharmaceutical chemicals was rather better in some directions than during the previous month. Although, according to the Board of Trade returns, there was a further large fall in the value of chemicals, drugs, dyes and colours imported during May, there was also a decrease in the value of exports as compared with May, 1931. This decrease was largely due to a drop in the exports of ammonium sulphate, tartaric acid and tartrates and copper sulphate. Amongst the products for

which increases were recorded were sulphuric acid, ammonium chloride, bleaching powder, caustic soda and coal tar products. The decrease in imports amounted to £474,885 on the figure for May last year, acetic anhydride and potassium nitrate again being the only products for which appreciable increases were recorded.

AGRICULTURE.

According to an official report, corn crops at the end of May were not unpromising except upon heavy land. Early potatoes were backward, but looked well, and where the main crop was showing it had a healthy and promising appearance. Drilling of roots was hindered during May by unfavourable weather, but early sowings of mangolds were a fair plant. Hop vines were also growing fast at the end of the month. Cattle and sheep did moderately well, and in some places there was a seasonal increase in the milk yield.

SHIPPING.

Cargo shipping activity underwent further contraction in May, and freights on most routes fell sharply under pressure of "unfixed" tonnage seeking employment. The North American grain season has opened very inauspiciously; outward coal business is poor, and competition in almost all trades is increasingly severe.

BUILDING.

According to the Ministry of Labour's returns, building showed a further slight seasonal improvement in May, but outside work was seriously interrupted by abnormally wet weather, and only in a few centres could conditions be described as even fair. The unemployment percentage for May 23rd was 26.4, against 27.0 per cent. in April and 18.1 per cent. in May last year. Returns furnished by 145 urban authorities (excluding the London County Council area) show that plans passed for new buildings in May comprised a total cost of £6,000,300, against £5,552,400 in April, 1932, and £5,723,800 in May 1931. Of the total for May, 1932, dwelling houses accounted for £4,149,200; factories and workshops for £361,780; shops, offices, warehouses and business premises for £373,800; and other buildings and alterations and additions for £1,118,600.

RETAIL TRADE.

A London store reports business to be expanding slightly. Business in fashion goods, however, is spasmodic, and is much influenced by weather conditions.

a Excluding coal imports.

c Provisional figures.

STATE OF TRADE ABROAD.

No real improvement is noticeable anywhere, and in many countries business conditions are worse than they were a month ago.

BRITISH EMPIRE.

Australia.—The recent elections in three States caused some interruption to trade, which was accentuated by heavy tax collections. Still the May volume of trade was larger than a year ago, though the aggregate value was less. Textile manufacturers are supplied with orders for several months ahead, and there has been some slight improvement in building. Current prospects for wool, wheat, butter and lambs are all excellent. The favourable trade balance for the past ten months was £34.0 millions sterling, which is an improvement of £14 millions on the corresponding returns for 1930-31.

Canada.—No improvement has occurred in business conditions. Unemployment remained serious during May and the seasonal gain in April was below normal. An unofficial estimate placed the total unemployment at 729,000, or 35 per cent., in the middle of May, but this figure has been officially challenged. The iron and steel industries are seriously affected by lack of orders, and production of steel for the first four months of 1931 was only 133,131 tons, against 331,837 tons in 1930. Demand for motor cars remains light, and activity is largely confined to the textiles and boot and shoe industries.

India.—The Bombay cotton market has been disturbed by the prevailing uncertainty regarding the American Farm Board's intentions, but the low level to which prices have fallen has stimulated demand from foreign countries. The bazaars were closed during part of May by the communal riots, and this has dislocated the piece-goods trade and checked demand for both Indian and British goods. Mills, consequently, are carrying heavy stocks, and dealers have been hit by the recent fall of prices.

South Africa.—Business remains at its recent low level and industry depressed, but farming conditions have recently improved as the result of heavy rains. More rain, however, is needed in the Northern Provinces. The local wool markets were more active and firmer during May. The season's clip is now estimated at 928,000 bales, of which about 85 per cent. had been sold by the end of April. The third official estimate of the maize crop is 16,669,000 bags, this being a slight reduction on the previous estimate.

EUROPE.

France.—The coal trade is unchanged, but there are rumours of an impending change of policy regarding import licences. French steel production is still in excess of demand, and orders for "semis" are more restricted than ever. The textile trades are no better. Confidence is still lacking in current prices, and manufacturers in the Lille area are working short time, while Roubaix wool-combers are curtailing production by 50 per cent.

Belgium.—Stocks of coal continue to increase and have lately been estimated at about 4,000,000 tons. Business is even scarcer than before. Demand for iron and steel is very limited, but every effort is being made to maintain prices, even at the cost of reducing output. In the glass industry two more businesses have been closed, leaving only three at work out of a total of 18.

Germany.—Industrial activity remains at a low ebb. Car-loadings for the four weeks ended June 4th averaged only 100,600 per week, against a corresponding figure of 118,500 last year. Coal production for the same period averaged 234,400 tons per week, against 291,600 tons last year. Iron production, however, rose from 11,200 tons per day in April to 12,300 tons per day in May, and steel production from 20,000 to 27,100 tons per day. On the other hand, the engineering industry is only able to work at 30 per cent. of capacity, and fresh orders are falling away. Shipping is very depressed.

Holland.—There has been a slight seasonal improvement in unemployment, and in financial circles the tone has reacted favourably to the opening of the Lausanne Conference. A Bill has just been passed designed to protect the interests of Dutch exporters against the effect of foreign exchange restrictions abroad, but its powers will only be used in case of absolute necessity. Reports from the electric lamp, cotton and rayon industries are discouraging, and in the first of these part of the work of the companies concerned has been transferred to foreign factories.

Switzerland.—Home trade remains relatively good, but export industries continue to be seriously affected by the world crisis. Employment shows some seasonal recovery, particularly in agriculture, but for the first time for many years the building industry reports a decline in employment. It is calculated that only 46 per cent. of Swiss industries are now experiencing a satisfactory degree of activity.

Scandinavia.—Sweden is beginning to recover from the effects of the Kreuger crisis, but the effects of the world depression are now becoming more apparent, more especially in the export industries. In Denmark, exporters of British goods have been chafing at the exchange restrictions, but it is understood that the restrictions are now being slightly relaxed. There is no doubt that it is intended to keep the krone near to parity with the pound, but it is not yet known what measures will replace the control exercised by the Exchange Centralisation, now due to be wound up on August 31st.

UNITED STATES OF AMERICA.

Business and industry continued at a low level during May, but there was an improvement in the credit situation. Steel mills were operating at 24 per cent. of capacity, but automobile production was the highest since August, and building construction expanded. Activity in the textile mills was heavily curtailed and car-loadings were below their normal level for the time of year.

LATIN AMERICA.

In Argentina, the export season for fine cereals is terminating, and it appears that foreign exchange is somewhat less freely available. Trade returns of the Republic for the first four months of the current year, however, show that the export surplus was over 114,000,000 pesos (gold), as compared with only 15,400,000 pesos during the past month by sharp changes in the political situation. A coup d'état occurred on June 3rd, but the Junta then formed character, and latest cables received are reassuring. There is as yet no considerable improvement in Brazilian trade conditions, but around last year's level, and the elimination by the National Coffee Council of considerable quantities of surplus stock is proceeding well supported over a period of some months. In regard to the Central American countries, exports of coffee from Guatemala for the current season are expected to reach a satisfactory total. Prospects for the coffee crop in Nicaragua are good.

THE FAR EAST.

In Japan, the raw silk market was dull at the beginning of June, and the further fall in prices has made it difficult to carry out the scheme for the disposal of existing stocks. On June 6th it became known that contracts with the Asahi Silk Company had been cancelled and that the goods affected were to be taken up by the Government and this strengthened the price of piece-goods from exports to China are growing. The Government is taking steps to issue has been increased to 1,000,000,000 yen, and 50,000,000 yen help the silk cocoon industry. If deemed necessary to assist home industries, existing customs duties will be increased by Imperial Ordinance.

2. Foreign Debt.

Germany was peculiarly susceptible to the credit crisis by reason of the large amount of her short-term foreign liabilities. In the first seven months of 1931 Rm. 2.9 milliards of short-term credits were withdrawn, principally in June and July. A census taken by the German Government of the amount of foreign capital in Germany as on July 28th shows that the total commercial debt, and in particular the amount lent on short term, was even larger than was indicated in the available figures which were submitted to the Bankers' Committee early in August last. This census indicates that the total of advances repayable by Germany at short term outstanding at the end of July amounted to nearly Rm. 12 milliards. But this figure of Rm. 12 milliards includes nearly Rm. 4 milliards of non-banking credits, which, in all probability, are not so likely to be withdrawn to the same extent as banking advances, and to a considerable extent are set off by direct counter assets. The Standstill Agreement, under which the banking creditors of Germany undertook not to call in their credits for six months as from September 1st, applies to rather more than half of the Rm. 12 milliards.

The Standstill Agreement, however, permitted the repayment of certain credits, and, under these provisions, sums estimated at Rm. 1,200 millions have been withdrawn during the period ending November 30th.

3. Trade Balance.

Some set-off for the recent withdrawals has been found in the fact that they have coincided with a growing export surplus, which began at the end of 1929. The figures are as follows:—

	(In millions of Rm.)			
	Imports.	Exports.	Imports.	Exports.
Monthly average, 1925-29	1,051	959	92	...
Monthly average, 1930 ...	866	1,003	...	137
Monthly average, January-June, 1931	634	794	...	160
1931—July	562	827	...	265
August	454	803	...	349
September	448	835	...	387
October	483	879	...	396
November	482	749	...	267

The recent heavy export surplus is in part the result of certain abnormal factors, and it is doubtful if economic conditions will permit it to continue at the same high level. Exports have been maintained, partly because the need for cash has put pressure on manufacturers to sell off stocks, in many cases at a loss, while some exceptional sales have been made to Great Britain in anticipation of tariffs. Imports have been reduced, because unemployment, lower wages and high taxation have reduced the consuming power of the country, and, therefore, the demand for imports of consumable commodities. The general reduction of industrial activity has curtailed the demand for imports of raw and semi-finished material, and in any case the sharp reversal in the flow of foreign credit handicaps purchases abroad. The surplus has, moreover, been increased by the fact that, up to now, the world price level of the type of goods imported into Germany, viz., raw materials, foodstuffs, etc., has fallen much more than that of the type of goods exported by Germany, viz., finished products.

But it is impossible to disregard the existence of powerful general factors adverse to the continuance of this favourable development. Tariffs, exchange control measures in other countries, import restrictions and contingents, together with the enhanced competition which Germany is likely to meet through the depreciation of sterling and other currencies, all tend to hamper German exports; on the import side, it will be necessary for Germany to replenish her stocks of raw materials, and to purchase food from abroad.

In any case, the surplus represented by the above figures has not become immediately available to Germany in the form of foreign exchange which can be utilised to repay debts. In view of the prevailing lack of confidence there has been an increasing tendency to call upon Germany to pay cash for her imports, while she has had to give ex-

tended credits for her exports. In particular, German exports to Russia, which are running at about Rm. 80 millions a month, on the average of the last four months, have been made on very long credit terms. On the other hand, even exporters have been able, in spite of the legal restrictions, to keep abroad part of the foreign exchange resulting from exports.

4. The Balance of Payments.

Taking the year as a whole, the extent of the exodus of capital which Germany has to meet by means of her export surplus (disregarding the qualification explained in the preceding paragraph), together with such other resources as have been available to her, is indicated by the following rough balance sheet for the year 1931:—

(In millions of Rm.)			
Export surplus for year (estimated, including services and deliveries in kind).....	3,000	Reparation up to June 30	800
Utilisation of foreign assets of German banks	1,300	Interest and normal amortisation on Germany's foreign liabilities (estimated)	1,500
Rediscount and other credits (including that from Central Banks and the Bank for International Settlements)...	1,200	Balance representing capital withdrawn.....	4,900
Drawn from gold, &c., reserve of the Reichsbank	1,700		
	7,200		7,200

An examination of the above table, which can obviously be only an estimate, as will be seen from the Report of the Sub-Committee, shows how great a part of Germany's income from the surplus of exports has been absorbed by the amounts required for the interest and normal amortisation of her foreign liabilities, and for reparation payments before the Hoover Plan. The withdrawal of capital, besides exercising considerable pressure on the balance of trade, as already described, forced Germany to have recourse, not only to the reserves held against their foreign liabilities by the German private banks, but also to increase such credits as were commercially available by the rediscount of credits granted to the Reichsbank and Golddiskontbank. This did not obviate heavy sales of gold, and the striking feature of this balance sheet is the drain which the withdrawal of capital has placed upon the reserve of the Reichsbank, which has profoundly influenced the policy of the latter.

5. The Reichsbank.

The Reichsbank reserve, which stood at Rm. 2,685 millions at the end of 1930, and even at Rm. 2,576 millions at the beginning of June, 1931, had fallen to Rm. 1,610 millions on July 31, 1931. Of this last amount, however, it owed at short term Rm. 630 millions in respect of the rediscount credits granted to it by the Bank for International Settlements and the Central Banks and to the Golddiskontbank by an American banking consortium. In order to ensure that the necessary foreign exchange should be available to meet the service of Germany's long-term debt, for such repayment of short-term credits as is permissible under the Standstill arrangements, and for the imports necessary to Germany, the Reichsbank has been forced to take or recommend a series of measures of increasing stringency, in order to limit to the greatest possible extent the other calls for foreign exchange which might be made upon it. Nevertheless, the reserve has fallen still further, until on December 15th it was no more than Rm. 1,161 millions, of which Rm. 630 millions represent the amounts due under the rediscount credits referred to above.

The percentage cover for the note issue has thus fallen to 25.6 per cent., or, if the Rm. 630 millions be excluded, to 11.7 per cent. The note circulation itself amounts to approximately Rm. 4.6 milliards, which compares with a figure of Rm. 4.3 milliards a year ago. In view of the reduction of business activity in the last year, as well as of certain measures taken to economise the use of

currency, the present note circulation is high; this may be attributed to a decrease in the velocity of circulation and to a certain tendency on the part of the public to hoard notes.

An important change in the situation is revealed by an examination of the volume of bills now held by the Reichsbank and the private banks respectively. Before the crisis, the proportion of gold and foreign exchange to the total note issue fluctuated around 60 per cent. e.g., on April 30, 1931, the Reichsbank held gold and exchange reserves of Rm. 2,526 millions, and domestic bills of Rm. 1,520 millions, against a total note issue of Rm. 4,340 millions, i.e., 58 per cent. of the note issue was covered by gold and foreign exchange. At the same date the credit banks held nearly Rm. 2,900 millions of domestic bills, representing an immediately liquid asset which the credit banks held as a reserve against their deposit liabilities.

The heavy withdrawal of deposits from the credit banks during the crisis, whether by external or internal creditors, induced the banks to seek assistance from the Reichsbank, by discounting such material as they had available, and in addition creating (to some extent with the assistance of the Acceptance and Guarantee Bank) further material for discounting with the Reichsbank. The latter has thus, to a considerable degree, extended its own credit in substitution for the deposits and other credits, which have been withdrawn from the credit banks as well as from the savings banks. As a result, the domestic bill holding of the Reichsbank on December 15th amounted to Rm. 4,213 millions (including Rm. 542 millions of bills set aside against credits granted to the Reichsbank as referred to above), while that of the credit banks on October 31st (the last available date) had fallen to Rm. 1,792 millions. In these circumstances we hesitate to express an opinion on the advisability of the recent reduction in the Reichsbank rate.

6. Production and Employment.

In order as far as possible to protect the external position—the reichsmark exchange and the export market—Germany has pursued a deliberate policy of stringent and sharp reduction of the level of wages and prices. The index figure of wholesale prices fell from 140 in November, 1928, to 106 in November, 1931, and prices are further to be reduced under the Emergency Decree of December 8th, while wages are reduced under that Decree to approximately the level prevailing at the beginning of 1927.

Taking 1928 as 100, the index of industrial production rose to 101 in 1929, fell to 86 in 1930, and for September, 1931 (the latest figure available) it had fallen to 66—in other words, one-third of the industrial life of Germany has stopped.

This gradual atrophy of industrial and commercial activity has further increased unemployment, which was already high before the crisis. The figure of unemployed (excluding part-time workers) on December 1, 1931, had reached a level of 5 millions out of approximately 21 million employed persons.

The crisis has also seriously affected German agriculture, which in 1925 employed about 30 per cent. of the working population of Germany. Having contracted debts at high rates of interest when prices were high, it now finds it difficult, if not impossible, to earn sufficient to meet the interest on these debts, and measures of protection and of financial relief, amounting almost to a moratorium, have been taken in order to prevent a general collapse.

Ever since the inflation period the demand for capital in Germany in relation to the supply from domestic sources has kept interest rates above those prevailing in other countries. During 1930, advances to manufacturers of first-class standing seldom cost less than 8 per cent.; in recent months the cost has been about 50 per cent. higher, i.e., the rates have risen to about 12 per cent. This burden naturally imposes a heavy strain on German industry, and is one of the causes of the present decline in industrial activity.

7. The Budget.

The decline of economic activity, the fall of profits resulting from the fall in prices, and the lower yield of the taxes on wages due to increased unemployment and lower wage rates, have seriously reduced the yield of taxation. This fall (taken in conjunction with the cost of maintaining the growing army of the unemployed) has produced a critical situation in the public finances of Germany. In the five years preceding the depression, the revenue and expenditure both of the Reich, the Federal States and the Communes showed a rapid increase. Owing to the system of taxation under which the latter received a proportion of the taxation collected by the Reich, the situation can best be shown by combining the budgets of all the authorities concerned. The figures are shown in the following table, which also gives the total expenditure of all these authorities, including expenditure covered by receipts from State property, from loans and from other sources:—

	(In millions of Rm.)			
	Taxes* raised and retained by the Reich (i.e., excluding the tax transfers to the States, &c.).	Taxes raised by States and Communes, including the tax transfers from the Reich.	Expenditure of Reich.	Expenditure of other Authorities.
1926-27 ...	5,312	6,363	6,561	10,639
1927-28 ...	6,357	7,189	7,154	11,647
1928-29 ...	6,568	7,730	8,375	12,426
1929-30 ...	6,686	7,593	7,987	12,936
1930-31 ...	6,634	7,482	8,193	12,770

* Including the contribution of the Railway Company.

The expenditure of the Reich includes an item for reparations which rose from Rm. 1.3 milliards in the year 1926-27 to Rm. 1.8 milliards in the year 1930-31, i.e., about 12½ per cent. of the total tax revenue of the Reich, the States and the Communes.

The revenue receipts for 1930-31 fell considerably short of the original estimates. The position in 1931-32, in which the revenue was expected to equal that actually received in the preceding year, has rapidly deteriorated. Fresh estimates made in September, 1931, showed an estimated fall in the total receipts from taxes collected by the Reich (including amounts subsequently transferred) of not less than Rm. 1 milliard. It is further estimated that the yield of taxes collected by the Reich at the rates in force prior to the recent Decree will show a further fall next year of Rm. 1 milliard and amount to not more than Rm. 7½ milliards as compared with receipts of 9½ milliards in 1929-30. This fall of Rm. 2 milliards is after taking credit for a series of measures imposing taxation during the preceding two years, amounting to Rm. 1½ milliards. Had the rates of taxation not been increased, therefore, the revenue would have fallen off in the last two years by some Rm. 3½ milliards, or about 40 per cent. (It is estimated that the present Decree will raise the revenue to approximately the same level as in the present year, i.e., about Rm. 8 milliards.)

Apart from the increase in taxation referred to above, attempts are being made to meet the falling off in revenue by sweeping reductions in expenditure. So far as the Reich is concerned, expenditure on all objects other than service of the debt, transfers to the Federal States, external war burdens, and emergency unemployment relief has been reduced between 1929 and 1932 from Rm. 4,780 millions to Rm. 3,720 millions, i.e., a reduction of Rm. 1,060 millions, or 22 per cent.

Measures similar in character have been taken by the Federal States and by the Communes. The latter were empowered about a year ago to increase taxation and they were asked to reduce expenditure, and in any cases where these powers have not been exercised the competent higher authority may step in to see that the necessary measures are taken. Part of the economies effected have, however, been offset by the increased cost of unemployment relief due to the growth of unemployment in the last two years. It has been possible to effect considerable economies in this sphere by reducing the average monthly benefit paid to the unemployed, which, from a former average of Rm. 80.93, has fallen to Rm. 63.86 in 1931. Expenditure

under the emergency relief system, which averaged Rm. 71 a month, has dropped to Rm. 60.75, while welfare relief payable by the Communes—varying according to the locality—may be estimated probably in the neighbourhood of Rm. 50 monthly.

It is, however, an advantage from the purely budgetary point of view that the internal debt and the annual charge which it involves is comparatively very low as a result of the inflation prior to 1924 which wiped out the greater part of the previously existing debt. On the other hand, the German Government in the sketch estimate for 1932 has included a considerable sum for the amortisation of its short-term debt incurred to meet the deficit of previous years. This provision has been made by Germany in view of the fact that the shortage of credit is such that the Government is practically unable at present to rely on borrowing in the money market in order to meet its maturing short-term obligations.

In view of the measures taken in the four Decrees relating to taxation and expenditure issued in the last two years, and in particular in that of December 8, 1931, the Committee is of opinion that the burden of taxation has become so high that there is no margin for a further increase.

8. German Railway.

The growing stagnation in German business activity has naturally been reflected in the gross receipts of the

German Railway Company, which fell in 1930 by 14.6 per cent. compared with 1929. Although energetic measures of economy were taken to meet this loss of income, the surplus of receipts over operating expenses fell from Rm. 860 millions to Rm. 480 millions, i.e., Rm. 180 millions short of the amount necessary to cover the reparation liability. A further fall has taken place in 1931, the receipts of which are 28 per cent. below those of 1929, and it is estimated that the surplus of receipts over operating expenses will amount to only Rm. 178 millions. In these circumstances the railway in 1931 will not be able, even after drawing upon its reserves, to cover out of earnings the liabilities incumbent upon it in respect of reparation and debt charges, though the cash position is met by the financial arrangements made between the German Government, the railway and the Bank for International Settlements in connection with the Hoover Plan. It is impossible to estimate what will be the operating results of the year 1932. Nevertheless, the Sub-Committee, who were asked to report upon the position of the German Railway Company, came to the conclusion that once Germany and the world at large had recovered their balance and returned to something like the economic conditions which we are accustomed to regard as normal, the railway company, fundamentally a sound undertaking, will be able in future years, if managed on a commercial basis, to yield a net operating surplus comparable with that earned by other big foreign railway systems.

CHAPTER II.

Circumstances and Conditions which have led to the Present Situation.

The circumstances and conditions which have led to the situation we have been describing are partly international and partly peculiar to Germany.

1. Course of the Crisis.

Like all other countries, Germany has suffered from the consequences of the extreme fall of prices which is the characteristic trait of international economic life since the end of 1929. The fall of about 30 per cent. in wholesale prices in the world as a whole far exceeds in magnitude the fall in prices that has taken place in any period of depression in the last 100 years. It is impossible to say if this fall is permanent or if it will be followed, after the acute depression has passed away, by a substantial rise. What is certain is that it has deeply affected all economic activity and that no effort to maintain prices—by whatever means it may have been attempted—has hitherto attained any success.

The sharp reduction of purchasing power of large masses of consumers has involved in the last two years the reduction or complete disappearance of industrial profits, serious unemployment and an interrupted slump in Stock Exchange securities. It has threatened, in consequence, the status of a large number of banks; this banking crisis, in its turn, has provoked a general lack of confidence and involved a withdrawal of foreign capital from countries which hitherto have had the use of it, and, in particular, from Central Europe. It has only been possible to maintain the exchange value of the currencies of some of these countries on a nominal basis by a system of decrees regulating the exchange market and by the suspension of a part of their foreign payments.

This situation has naturally aggravated the "crise de confiance" in the lending countries themselves. The abandonment of the gold standard by certain of them has created a fresh source of disturbance in international trading relations, and given rise to the universal tendency to hoard, which, if it were to continue, would bring to a standstill the whole system of credit.

Finally, to this monetary crisis is now being added a tariff crisis, each country seeking to defend its diminished production against foreign imports by a fresh increase in import duties and other forms of trade restrictions, which, in turn, result in the still further shrinkage of international trade.

We cannot here attempt to examine all the underlying causes of this profound disturbance to the economic life of the world, but certain of its aspects are intimately linked with the problem with which we are directly concerned.

Among these factors, the Banking Committee which met in Basle in August had called attention to the fact that "in recent years the world has been endeavouring to pursue two contradictory policies, in permitting the development of an international financial system which involves the annual payment of large sums by debtor to creditor countries, while at the same time putting obstacles in the way of the free movement of goods," and that the case of Germany provides a most forcible illustration of this dilemma. So long as the payments to be made were offset by loans to the debtor country this dilemma did not arise, but as soon as such capital movements ceased, as happened in the autumn of 1929, it becomes evident that, in the long run, as the Dawes Committee clearly pointed out, these payments can only be made in the form of goods. The change from a period of excessive expansion of foreign lending by certain creditor countries, followed by an abrupt cessation of such lending, constitutes one of the chief points of contrast between the period 1924-29 and 1930-31, and has been one of the principal features in the credit situation of recent times. If barriers are imposed to the free movement of goods, the world cannot readily adapt itself quickly to important changes in the course of credit and trade. Attempts to maintain the international balance of payments by means of larger and abnormal movement of gold has weakened the monetary foundations of many countries. In fact, when the withdrawal of large sums of capital took place the gold reserves of the countries concerned proved quite inadequate to stand the strain. This led in some countries to the strict control of foreign payments and in others to the suspension of the gold standard.

2. Capital and Commercial Debt of Germany.

Germany's demand for capital to fill the gap left by the war, the aftermath and the inflation, was very great. As a matter of fact, the influx of foreign capital, which began as soon as the mark was stabilised, and which was estimated by the Bankers' Committee to be about Rm. 18 milliards, has been partly offset by the Rm. 10.3 milliards of reparation payments.

But in any case, between 1925 and 1930 Germany has invested a very large amount of capital in both private and public enterprises. She has, for example, reconstructed the merchant fleet, she has modernised and rationalised many of her industries, and her towns have carried through large programmes for public purposes. The figures furnished to us by the German Delegation show for the period 1924-29 the investment of a sum amounting to Rm. 32,845 millions, of which Rm. 22,428 millions represent investments by public authorities, for public utilities, housing (other than houses financed purely by private means), roads, canals, etc.

These sums have, of course, been forthcoming partly from Germany's own savings, which reached very high figures in the course of recent years. But the foreign holding of so large a proportion of her capital wealth makes her peculiarly vulnerable to financial disturbance, particularly to the extent that this capital is withdrawable at short notice. Moreover, a substantial part of these short-term credits have proved to be immobilised in long-term investments. The withdrawal of these credits must, therefore, threaten, not only the exchange, but also the liquidity of the banks themselves.

3. Growth of the German Budget.

Turning to Germany's budgetary situation, the rapid development of Germany's economic activity in recent years has been paralleled by an increase of Government expenditure. The continued increase of expenditure from 1925 to 1930 has absorbed as fast as it came into being the growing taxable capacity of Germany. In spite of a rapid increase in normal receipts, which increased between 1926-27 and 1929-30 from Rm. 14,719 to Rm. 18,054 millions, the increase of expenses has been equally rapid. Indeed, they have risen from Rm. 17,200 to Rm. 20,823 millions, and have resulted in an increase of debt. Among the expenditure items, outgoings for buildings, education and social charges (chiefly due to increasing unemployment) have continuously increased, and now represent 43 per cent. of the total expenditure, and amount in 1929-30 to Rm. 8,897 millions.

While expenditure thus increased, the debt grew in a disquieting fashion. When stabilisation took place, inflation had reduced the public debt to a very small amount. On the other hand, by 1931 this debt reached more than Rm. 24 milliards, of which Rm. 8.4 milliards were for public undertakings (water, gas, electricity, transport, roads), for the building of houses and for various public works (hospitals, sanatoria, etc.). In particular, from 1928 to 1931—in three years—the debts of the States and Communes increased from Rm. 7.5 to Rm. 12.7 milliards.

When the crisis came, with the inevitable reduction of private incomes and budgetary receipts which it naturally

involved, the fact that expenditure had been so high meant that the deficit was correspondingly large.

This policy of growing expenditure, as also the system of financial relations which exist between the Reich, the States and the Communes, has often been the subject of criticism. The Reich levies taxation of which it retains part only, and of which a proportion fixed by law is automatically handed over to the States and Communes, which only cover their expenditure from their own resources to the extent of 75 per cent. Such a system means that the control of expenditure is divorced from the responsibility of raising the revenue to meet it, and although the system may have been moderated by recent ordinances of the Reich, we think that reform in this matter would have beneficial results.

In concluding this analysis of the circumstances and conditions which have given rise to the present budgetary position of Germany, the following observation should be made.

Notwithstanding the exceptional character of the present crisis, there is no instance in economic history of a crisis, no matter how great, which was not followed by periods of stability or prosperity. Just as it would be wrong to forecast a country's economic future on the basis of a period of prosperity, so it would be unjustifiable to judge its chances for the future on the basis of a period of depression.

At the present time the budgets of all countries and of almost all privately or publicly owned railways show a deficit. In every country efforts are being made to restore the equilibrium of these budgets by cutting down expenditure and by adjusting receipts to changed conditions. To assume that in the present case equilibrium will not be regained would be a counsel of despair.

What is true of the budgets and railways of other countries is obviously equally true of Germany. In past years Germany has built up an immense and powerful economic equipment, capable of yielding a great return. The restriction of markets and the fall of prices have prevented her from utilising this equipment to the full. The activity of her factories is now necessarily reduced, but, although it is impossible to fix a date for the recovery of stability, which is still threatened to-day, it is none the less certain that this stability will ultimately be restored with the help of the measures suggested in Chapter VI.

In the course of our investigations we were able to ascertain from the figures submitted to us that, as regards both the railways and the budget, receipts are no less elastic in the case of Germany than elsewhere.

On the other hand, it would be rash, both in the case of Germany and in the case of other countries, to presume to indicate the precise moment at which this exceptional and unfortunate period through which we are now passing will come to an end.

CHAPTER III.

Special Measures taken by Germany to Meet the Crisis.

In the course of its deliberations the Committee had the opportunity of receiving a synopsis of the special measures taken by the German Government by form of emergency decrees as from July, 1930, in order to meet the increasing difficulties of the situation.

The primary object of the German Government was to secure the stability of the currency and in general the functioning of the German economy within the frame of the world economy. To this end they devoted all their efforts to securing the balance of the budget, not only in the Reich, but also in the States and Communes. Direct taxation was augmented by two increases in the income tax; indirect by the imposition of further heavy duties on beer and tobacco, while finally the turnover tax has lately been increased from 0.85 per cent. to 2 per cent. Sweeping economies have been effected in the expenditure of the Reich; a series of cuts in the salaries of all public

servants, reducing them by over 20 per cent., has been made in the last 18 months, so that salaries will be now on a lower level than at the beginning of 1927.

Similar measures have been taken with regard to the budgets of the Federal States and the Communes. The latter have been authorised and in certain cases compelled to levy new and additional taxation in the form of a poll tax, a local beer duty and a tax on beverages. The reductions in salaries apply also to officials employed by these bodies.

Contributions under the unemployment insurance scheme have been raised to 6½ per cent. of wages, while considerable reductions in the scope and scale of the benefits paid by the Insurance Institute have been made.

A further main point in the programme of the Government was the reduction of prices and wages. Prices were

generally reduced by 10 per cent. Rents are being reduced to a similar percentage. Even the rates of interest on long-term obligations must be reduced by about 25 per cent. In the sphere of wages a general reduction to approximately the level prevailing at the beginning of 1927 has to take place.

The magnitude of the crisis forced the Government to emergency measures in the field of credit policy. Such measures have been taken for supporting a series of banking institutions and for strengthening the position of the money market. A system of general control of the banks has been set up, with a Commissioner responsible to a Board, including representatives of the Reichsbank and of the competent Government authorities. New regulations have been made for the carrying on of the business of the savings banks and allied institutions, in particular limiting the extent to which they may finance the municipalities in future. For the time being they are not allowed to grant them new credits. The law governing public companies has been revised and the provisions regarding the responsibility of directors sharpened, while new regulations are made regarding the auditing of accounts.

Transactions in foreign exchange have been centralised in the Reichsbank with a view to limiting the purposes for which foreign exchange may be acquired, and all purchases of foreign exchange require prior authorisation. All persons becoming possessed of foreign exchange, whether

by exports or otherwise, are compelled to offer their holdings to the Reichsbank. It is no longer possible to remit abroad the proceeds of sales of securities on behalf of foreigners. Stringent provisions seek to limit the flight of capital. All the above-mentioned prescriptions are secured by heavy penalties (fines and prison). Repayment of foreign credits is regulated by the Standstill Agreement, or, if not covered by this agreement, under decree.

Finally, in order to prevent a widespread collapse of agricultural credit, measures amounting practically to a moratorium for agricultural debts have been taken, chiefly for the eastern parts of Germany. Farmers suffering from special difficulties are allowed to appeal for protection against foreclosure or distraint on condition that they carry on their business under the supervision of trustees, pending approval of a scheme for relieving them of the immediate burden of their debts. Such schemes may provide for reduction of interest rates and the diminution of the capital debt, in certain cases even without the consent of the creditors.

The question how far the measures described above will be successful cannot be answered at the present moment. But the Committee consider that the steps taken to defend and to maintain the stability of the currency and the budget show, in their opinion, a resolute desire on the part of the German Government to meet the situation.

CHAPTER IV.

Conclusions.

It is evident from the facts outlined in the preceding chapters that Germany would be justified in declaring—in accordance with her rights under the Young Plan—that in spite of the steps she has taken to maintain the stability of her currency she will not be able in the year beginning in July next to transfer the conditional part of the annuity.

The Committee, however, would not feel that it had fully accomplished its task and justified the confidence placed in it if it did not draw the attention of the Governments to the unprecedented gravity of the crisis, the magnitude of which undoubtedly exceeds the "relatively short depression" envisaged in the Young Plan—to meet which the "measures of safeguard" therein contained were designed.

The Young Plan, with its rising series of annuities, contemplated a steady expansion in world trade, not merely in volume but in value, in which the annuities payable by Germany would become a factor of diminishing importance. In fact, the opposite has been the case. Since the Young Plan came into effect, not only has the trade of the world shrunk in volume, but the very exceptional fall in gold prices that has occurred in the last two years has itself added greatly to the real burden, not only of German annuities, but of all payments fixed in gold.

In the circumstances the German problem—which is largely responsible for the growing financial paralysis of the world—calls for concerted action which the Governments alone can take.

But the problem has assumed a world-wide range. We can recall no previous parallel in time of peace to the dislocation that is taking place and may well involve a profound change in the economic relations of nations to one another. Action is most urgently needed in a much wider field than that of Germany alone.

The economic interdependence of the various countries of the world to-day needs no further proof; recent years have most strikingly illustrated it.

Since July last, for example, it has been evident that, if the crisis by which Germany has been overwhelmed were not remedied, it would spread to the rest of Europe, destroy the credit system so painstakingly built up, and create profound repercussions in other parts of the world.

The Committee appointed by the Bank for International Settlements, on the invitation of the London Conference, after describing this situation in its Report of August 18, 1931, sounded a most emphatic note of warning, urging that if disasters were to be avoided before the period of postponement of credits recommended by that Conference expires on February 29, 1932, immediate steps must be taken by the Governments.

But events did not wait. The year 1931 has not yet ended, and already the crisis has taken formidable dimensions, shattering the exchanges of many countries one after the other and accumulating difficulties which, if not dealt with, will only prove forerunners of further catastrophes. Unemployment has increased; stock exchanges remain closed; economic activity continues with difficulty at a very low ebb in the face of restricted credit, rigid control of the exchanges and paralysing restrictions on international trade. Slowly the effects of shrinking economic activity are making themselves felt in one country after another.

This state of things is complicated by the repercussion of economic affairs on the political situation and *vice versa*. The economic decline which has taken place in the last two years, and the increasing distress which it has brought in its train, have produced a general political instability from which an anxious world is suffering more and more. Similarly, political considerations have often been allowed to influence the treatment of economic problems by the Governments, thus preventing the latter from viewing these problems in their true light and from dealing with them on their merits.

When Governments come to examine the whole group of questions allied to the subject of the present Report, they will have to take account of many matters relevant to these complex problems—which can only be solved in conformity with economic realities.

In this connection certain considerations seem to us of great importance.

The first is that transfers from one country to another on a scale so large as to upset the balance of payments can only accentuate the present chaos.

It should also be borne in mind that the release of a debtor country from a burden of payments which it is

unable to bear may merely have the effect of transferring that burden to a creditor country which, in its character as a debtor, it, in its turn, may be unable to bear.

Again, the adjustment of all inter-governmental debts (reparations and other war debts) to the existing troubled situation of the world—and this adjustment should take place without delay if new disasters are to be avoided—is the only lasting step capable of re-establishing confidence, which is the very condition of economic stability and real peace.

Finally, although the German Government is energetically defending the stability of its currency, steps are necessary to secure that these measures shall have a permanent effect.

The European Governments during recent years have made great efforts towards re-establishing the stability of currencies after the disasters of the war and post-war inflation. The destruction of this work would mean an extremely disquieting setback, which would be heavy with

consequences. The maintenance of the stability of the German currency, as of the currency of any debtor nation, may be placed in the greatest peril if the confidence of investors is lost.

We appeal to the Governments on whom the responsibility for action rests to permit of no delay in coming to decisions which will bring an amelioration of this grave crisis which weighs so heavily on all alike.

ANNEXES TO THE REPORT.

ANNEX I.

Application by German Government.

To: The President,
The Bank for International Settlements,
Basle.

Mr President,

In the name of the German Government I have the honour to transmit to the Bank for International Settlements in Basle a Memorandum, in which the German Government applies for the convocation of the Special Advisory Committee for which provision is made in the New Plan.

I have the honour to remain, Mr President,

Faithfully yours,
(signed) H. DIETRICH.

Finance Ministry of the Reich.

Berlin, W.8.
November 19, 1931.

MEMORANDUM.

The German Government hereby applies for the convocation by the Bank for International Settlements in Basle of the Special Advisory Committee for which provision is made in the New Plan of the Hague Agreement of January 20, 1930. In regard to the cause and purpose of this application the German Government has the honour to make the following statement:—

As early as the beginning of June of this year the German Government became convinced that, in spite of the most severe retrenchment in Government expenditure and repeated increases in the burden of taxation, it would be incapable of continuing the payment of the annuities under the New Plan. The economic and financial situation of Germany was at the time already most gravely threatened. The German Government had accordingly decided to draw the necessary conclusions from this situation.

This decision was followed on June 21st by the declaration of the President of the United States of America, proposing the postponement during one year of all payments on intergovernmental debts, reparations and relief debts. The purpose of the far-sighted initiative thus taken was, in the words of the declaration, to assist in the re-establishment of confidence, thus forwarding political peace and economic stability in the world; the debtor countries were to be given time to recover their national prosperity. The hope that this proposal would bring about a decisive turn in the world crisis was not realised. In consequence of subsequent events, the Hoover holiday year was not in itself sufficient to overcome the danger of collapse. Accordingly, the British Government in July took the initiative of summoning the London Conference. The recommendations of the Conference led to the prolongation of the rediscount credit accorded to the Reichsbank, the Basle Standstill Agreement and the Report of the Basle Committee of Experts set up by the Bank for International Settlements.

Important as all these measures were for immediate relief, they were essentially merely preparatory in character. The London Conference itself in its closing declaration stated that the measures

recommended were only intended as a first step which would form a basis for more permanent action to follow. Accordingly, the experts who collaborated in the execution of the London recommendations constantly had in mind the provisional character of all these measures. The Standstill Agreement states, for example, that the contracting parties have approved the settlement therein provided "pending a more permanent solution of the German short-term indebtedness problem." Similarly the Report of the Basle Committee of Experts closes with an urgent appeal to the Governments concerned to "lose no time in taking the necessary measures for bringing about such conditions as will allow financial operations to bring to Germany—and thereby to the world—sovereignly needed assistance."

In the intervening months the economic and financial situation of Germany has become exceedingly critical. The characteristic facts of this situation are universally known. In other countries also the pressure of the crisis has had a most serious effect. The world has come to realise in an increasing measure the inter-relationship of the various financial problems to which the situation has given rise, and the necessity for immediate action for their solution as a whole. In considering the most suitable method of handling this problem the view has gained ground that the Special Advisory Committee should now be convened. As under the terms of the New Plan the convocation of the Special Advisory Committee is dependent upon an application by the German Government, the German Government has determined to make this application, in order to do all in its power to pave the way for comprehensive and joint measures on the part of the Governments.

In accordance with the New Plan the application requires a declaration by the German Government to the effect that "they have come to the conclusion in good faith that Germany's exchange and economic life may be seriously endangered by the transfer in part or in full of the postponable portion of the annuities." In making this declaration, the German Government must expressly state that such a declaration does not do justice to the present situation. Since the New Plan was framed, the economic and financial situation in the world, and particularly in Germany, has been fundamentally altered by a crisis without parallel. As the New Plan requires the Committee to examine the situation from all points of view, the Special Advisory Committee must investigate the problem in its entirety by taking into consideration all its factors, with special reference to the circumstance that the question of Germany's private indebtedness must duly form the subject of a new settlement before the end of the month of February next, by means of an agreement to be reached between foreign creditors and German debtors.

Present conditions being such that the necessary measures require to be taken with the utmost dispatch, the German Government proposes that the Special Advisory Committee should meet immediately and that it should complete its work as quickly as possible, in order that a Conference of those Governments which are competent to take the decisions then to be reached may thereupon at once be held.

Berlin, November 19, 1931.

ANNEX II.

Report of the Sub-Committee on Statistics Regarding Interest and Amortisation of German Foreign Indebtedness.

The German Delegation at the plenary session of the Committee has presented estimates of interest on Germany's foreign indebtedness and of amortisation on funded debt. These estimates have evidently been computed with great care. The task assigned to this Sub-Committee was to examine these computations and to pass judgment upon the degree of their accuracy, or at least upon the extent to which they may be considered as representative.

As a general statement it should be said that all such statistics are to be accepted only with due allowances for differences of opinion regarding classification, etc., for unavoidable duplication, for omissions, and for minor errors of compilation.

The Committee was not in a position to check, in detail, the basic figures from which these computations were derived. The figures in question are those presented by the German Delegation to the Advisory Committee showing a total German foreign indebtedness of between Rm. 28.5 and Rm. 30 milliards as at the end of July, 1931. A large part of these statistics has been compiled as a result of an inquiry made by the Reichsbank. The results of this enumeration have been examined by the Sub-Committee with the idea of checking them as far as possible with comparable information in other countries.

In addition to the statistics compiled from the inquiry, some of the figures presented by the German Delegation have been based upon estimates which it is not possible to check with any degree of precision. In the case of some of these estimates, however, the Sub-Committee makes with all necessary reservations certain tentative suggestions.

A. Long-Term Debt.

The long-term debt has been divided into four groups, which are treated separately.

1. GERMAN FOREIGN CURRENCY BONDS ISSUED ABROAD.

This group of obligations is probably capable of more exact statistical determination than any other, and without question the statistical basis for computation of interest and amortisation charges is more precise than in the other types of indebtedness. The German Delegation has tabulated the following three items for the year 1932:—

(a) Annual interest payments provided in the indenture of the bond	Rm. 398.4 millions.
(b) Annual amortisation charges as and if provided in the indenture of the bond	Rm. 128.8 millions.
(c) Total payments in each year for bonds maturing in that year not retired by means of regular amortisation payments	Rm. 110 millions.

In addition the service for interest and amortisation of the so-called Dawes and Young Loans is shown separately from the above-mentioned items for other public and private issues

Rm. 181.2 millions.

These computations were made for each issue in accordance with the amount outstanding at the end of December, 1930, with allowances for amounts retired. The total interest and amortisation charges as thus computed for the year 1932 amount to 818 million reichsmarks.

This estimate is a maximum figure. The following factors would tend to reduce it:—

- Lower market prices of the bonds permit purchases for amortisation at a smaller outlay than that computed.
- Depreciated currencies permit similar reductions in reichsmark interest and amortisation charges on bonds expressed in such currencies.
- Previous purchases by residents of Germany of German foreign currency bonds reduce the amounts to be paid outside Germany.

It is difficult to estimate the possible effect of these various factors, but the Committee considers that the total figure is susceptible of a maximum reduction of approximately Rm. 150 millions. In this way interest charges would amount to between Rm. 420 and 530 millions, and amortisation to between 250 and 290 millions.

2. LONG-TERM DEBTS NOT ISSUED PUBLICLY.

This second category of long-term debts is sub-divided into two groups:—

- Mortgages on real estate, amounting to 715 million reichsmarks.
- Long-term advances and open-book accounts of every kind, amounting to 1,748 million reichsmarks.

These figures were compiled from the Reichsbank inquiry and it is this category which showed the greatest difference between previous estimates and the new computation of German indebtedness.

For the purpose of estimating the service of these obligations an average interest rate of 8 per cent. per annum had been taken in the German estimate for the first group. The obligations are subject to the terms of the recent emergency decree and the rate of interest has been accordingly reduced to 6 per cent. The service as computed is thus lowered by 14 and fixed at 43 million reichsmarks.

For the second group a rate of 6½ per cent. was assumed. This rate was not directly affected by the emergency decree and it is too early to know what the ultimate effect may be. The Sub-Committee has no means of checking these assumed rates of interest. They seem reasonable in view of the prevailing level of interest rates in Germany during the past few years. The figure of Rm. 113 millions given in the German estimates has accordingly been adopted by the Sub-Committee.

3. GERMAN INTERNAL BONDS OWNED BY FOREIGNERS.

The magnitude of this amount—400 million reichsmarks—was derived by a process of approximation, based upon a previously known figure and a logical inference regarding the influence of subsequent events. There is no way of determining the accuracy of the guess. In any case the amount is small and the interest burden negligible. As a result of the recent decree the German estimate of interest burden may be reduced by 12 and fixed at 24 million reichsmarks.

4. SHARES, PARTICIPATIONS, REAL ESTATE, ETC.

No adequate statistics are available regarding foreign holdings of these types of assets. It has been estimated by the Reich Statistical Office that real estate owned by foreigners may be valued at approximately 2 milliard reichsmarks. Shares, participations, etc., in German enterprise owned by foreigners have been estimated, on the basis of a partial inquiry, at between 2.5 and 3.5 milliard reichsmarks.

The yield on real estate has been computed by the Reich Statistical Office at 50 million reichsmarks per annum.

The yield on shares, etc., previously estimated by the Statistical Office for 1930 of 250 million reichsmarks should be considerably reduced in view of the prevailing industrial depression, perhaps to as low a figure as 100 million reichsmarks.

B. Short-Term Debt.

The estimates for the service of the short-term debts are perhaps the most difficult on which to pass judgment.

The calculations of interest (Rm. 709 to Rm. 825 millions) presented to the Advisory Committee were based upon the figures for German indebtedness for the end of July. These figures seem capable of reduction. Since July repayments have taken place (a sum of Rm. 1.2 milliards has been given by the German Delegation), and, moreover, there has been a depreciation in certain currencies in which a portion of the debt is expressed. Final figures of the amounts repaid during the period in question are not yet available, and the rates of interest which will be chargeable in the future are, to a large extent, dependent upon the decisions of the present Standstill Committee.

With the material at our disposal and leaving out of account the possible variations in the future rates of interest, the Sub-Committee considers that a reduction in the total interest of about Rm. 100 millions to Rm. 600-Rm. 725 millions seems reasonable.

Summarising, therefore, the results of the Sub-Committee's deliberations on this subject, and taking into full account all reservations previously made, the gross service of German foreign debt for the year 1932 could be tentatively estimated as follows:—

A. Long-term debt:—	
(1) Foreign currency bonds:—	
(a) Amortisation*	250—290
(b) Interest	420—530
(2) Long-term debts not issued publicly	670—820
(3) German internal bonds	156
(4) Shares, participations, real estate, &c.	24
B. Short-term debt	150
	600—700
Total	1,600—1,850

This report concerns only German payments and does not consider German receipts from interest, etc., on their investments abroad, which will be the subject of a later report.

* Including an amount of 110 millions reichsmarks for payment in full of two loans maturing in 1932.

ANNEX III.

Report of the Sub-Committee Regarding German Assets Abroad.

I.

Whereas the first Report of the Sub-Committee related to interest and amortisation payments on the German debt, the present Report deals with the foreign investments of Germany and the income which Germany derives from them. For these purposes no direct statistics exist, and, owing to the absolute impossibility of determining exactly the volume of German assets abroad, the Sub-Committee feels itself obliged to formulate the necessary reservations in regard to the accuracy of the estimates contained in the present Report.

The Sub-Committee, nevertheless, attempted, in the first instance, to form a direct estimate of the volume of these assets, but encountered insurmountable obstacles in the almost complete absence of data on which to work. It was compelled to recognise that certain elements are entirely beyond the bounds of its investigations, and that, generally speaking, the figures on which its discussions were based allow of a wide margin of error.

II.

The Sub-Committee, therefore, endeavoured to reach some result by taking as a starting point the increase of Rm. 6 milliards in the volume of Germany's international indebtedness over the estimates furnished in August, 1931, and have tried to determine to what extent a similar figure must appear in the volume of Germany's foreign assets.

III.

The new figure of the German debt need not necessarily imply a corresponding increase in German assets abroad.

There are, indeed, certain conjectures that offer a theoretical explanation of the present difference between the balance of indebtedness and the result of the various balances of payments of the previous years. But it is evidently impossible to state in figures, even approximately, the practical consequences of these conjectures.

- (1) Previous estimates of Germany's net claim on foreign countries have been computed from a base figure of Rm. 2.9 milliards as at the end of 1923. Assuming that in that year Germany's foreign debt was in fact greater, this alone would provide an explanation for a portion of the present difference.

- (2) Assuming that the statistics of the balance of payments for 1924 to 1930 contain only errors insignificant in amount, but tending in the same direction, a further portion of the difference could also be explained in this way. Obviously, minor errors continuing over a period of years would amount in the aggregate to a substantial total.

Such statistics are always subject to error; for instance, the coefficients of adjustment applied by the Statistische Reichsamt to German foreign trade figures for the years 1924-1927 may not have been quite correct.

- (3) Further, the subsequent emigration of Germans, who had already invested their capital abroad during the years under consideration, may create a difference between capital exports as deduced from the balance of payments and the present total of foreign property.

In so far as the difference of Rm. 6 milliards cannot be explained by the above-mentioned items, the conclusion seems, of course, that Germany's foreign property must be greater than was assumed in August, 1931. The Sub-Committee was not, however, in a position to estimate the total amount which should be included under this head.

IV.

The Sub-Committee has, nevertheless, attempted to obtain at least an idea of the magnitude of some part of Germany's foreign property.

- (1) So far as Germany's long-term investments are concerned, a total for this item of Rm. 5 milliards has been tentatively suggested. This total, the result of calculations and inquiries by German institutions, may be incomplete. No

means exist, indeed, for assessing the full amount of foreign bonds in the hands of German nationals.

Such bonds and shares as are included in the German total have been taken at their nominal value. For real estate, participations and so forth, the value of 1929 has been taken owing to the lack of later information.

- (2) The short-term claims of Germany are even more difficult to assess. The lengthy terms which Germany has extended in respect of her exports has resulted in the building up of considerable claims abroad. On the basis of an average monthly exportation of Rm. 800 millions and average credit terms of three months, these credits might be estimated to amount to about Rm. 2.4 milliards. The Sub-Committee would, nevertheless, point out that, in view of the fact that the German exporters have been led lately to increase the length of their credits, an average of three months might possibly be too low. For instance, the Russian credits with State guarantee extend up to 12 to 18 months on the average.

- (3) At the end of July foreign claims by the Reichsbank and German banks were computed at Rm. 1.3 milliards. By November this total had fallen to 1 milliard. A deduction has, however, to be made from these totals because part of the foreign claims of German banks is already included in the estimate for commodity credits. It has been stated that this deduction should amount to Rm. 300 millions, thus reducing the figures to Rm. 1 milliard and 0.7 milliard respectively.

For the above three items, therefore, aggregate nominal amounts of Rm. 8.4 milliards (July) and Rm. 8.1 milliards (November) are obtained; but the Sub-Committee is convinced that, due to the important capital emigration which has taken place recently, these totals must be considerably increased. In the absence of evidence of any kind, it is unable to give an estimate.

It is, accordingly, not possible to provide an estimate for the total property owned by Germany abroad.

The Sub-Committee was also asked to inquire into the amount of interest which Germany might expect to receive during the year 1932. Clearly, this second problem is closely connected with the first and the Sub-Committee has found it impossible to provide a satisfactory solution.

- (1) If an amount of Rm. 5 milliards is taken for long-term assets at an average rate of 3.4 per cent., the yield from such investments would amount to from Rm. 150-Rm. 200 millions.
- (2) For commodity credits no specific income from interest can be estimated; interest on capital of this kind being generally included in the price of the commodities and so in the balance of trade. Russian credits, however, are an exception to this rule, and the Sub-Committee has accordingly included an item of about Rm. 50 millions.

- (3) For the foreign claims of the Reichsbank and private banks Rm. 30 millions have been taken as a reasonable figure for interest.

These items together give interest receipts totalling Rm. 230-Rm. 280 millions.

For the calculation of interest on other German capital, so far as this not included under the above headings, the Sub-Committee, as already explained, has no computation of the capital involved on which to base its estimates. Nor is information available as to the rate of interest on this capital or to what extent that interest finds its way to Germany.

The conclusion was finally reached that for 1932 German interest receipts on foreign investments might be put in round figures at between Rm. 300-Rm. 400 millions.

Obviously, the Sub-Committee is not expected to express an opinion as to future economic conditions or to say what the rates of interest are likely to be in 1932. Conclusions which have been drawn take account of present conditions only, and should be accepted with reserve in view of the prevailing economic instability.

ANNEX IV.

Report of the Sub-Committee on the German Budget.

TOTAL EXPENDITURE OF PUBLIC AUTHORITIES IN GERMANY.

In dealing with the development of the total expenditure of German public authorities, the Sub-Committee was unable to take its inquiries up to the year 1931, since exact figures are not yet available for the expenditure of the Communes in 1931. The Sub-Committee noted that the total gross expenditure of German public bodies increased between the financial years 1926 and 1930 from approximately Rm. 17,200 millions to approximately Rm. 20,963 millions, an increase of Rm. 3,763 millions. This increase was not spread equally over the intervening years, but was particularly sharp in the year 1928. This was due to the increase of salaries granted to public servants by the law regarding salaries of 1927, which the German

The Sub-Committee was appointed to consider, with the assistance of the German experts, the situation of the German Budget. The Sub-Committee, while devoting its attention primarily to the present state of the Budget, has not failed to consider the broad lines of the development of the Budget in the past, in order to be in a position to understand the causes which have led to the present serious financial difficulties of the German Reich.

In particular, the Sub-Committee has considered the development of the total expenditure, not only of the Reich, but also of the Federal States and Municipalities, and has paid special attention to the expenditure of these bodies on housing, education and social welfare.

experts estimated led to a total annual increase of Rm. 1,500 millions. It was pointed out that, since 1925, there had been a steady increase in the level of wages in Germany from the low point at which they stood after the inflation. No corresponding increase of salaries had taken place, and, therefore, in 1927 the German Government felt itself obliged to adjust salaries to wages, with the result that, generally speaking, the lower classes of officials had their real income restored to approximately the 1913 level, while the higher classes (with certain exceptions) remained well below that level. Now, however, as a result of recent emergency decrees, the increase of salaries made in 1927 has been more than cancelled, and salaries will now be on a lower level than they were before the increase.

The remaining principal causes of the increase of Rm. 3,700 millions are to be found under the heads of "Education," "Social Welfare," "External War Burdens" and "Trade and Commerce." The increase in expenditure on "Education" is principally—though not entirely—due to the higher level of salaries; that in "Social Welfare" to expenditure on unemployment relief, while the increase in expenditure on "Trade and Commerce" represents the assistance which the German Government has found itself forced to give to agriculture, communications and industry. These items must necessarily be enhanced by the development of the crisis, and will show a further increase in the current year.

No explanation is needed of the increase in external war burdens.

Thus, the following items account, roughly, for the total increase of Rm. 3,700 millions:—

	Rm.
Increased expenditure on salaries since 1927 ...	1,500 millions.
Increased expenditure on unemployment	1,000 "
Increased expenditure on external war burdens	500 "
Miscellaneous	700 "

The Sub-Committee wishes to draw attention to the fact that of this increase of expenditure of Rm. 3,700 millions, an amount of Rm. 1,600 millions is for account of the Reich and Rm. 2,100 millions for account of the States and Communes.

In connection with the revenue side of the Budget, the Sub-Committee observes that, during the years 1926-27—1928-29, years of industrial and commercial prosperity, the fiscal revenues developed from Rm. 11,675 to Rm. 14,298 millions, showing a total increase of about Rm. 2,600 millions.

This development during the period of expansion was followed by a drop since 1929-30, which would have been almost as rapid except for the fact that tax increases almost equalling previous reductions were on several occasions introduced.

THE RELATION BETWEEN REICH AND LOCAL AUTHORITIES.

The Sub-Committee, nevertheless, felt that some part at least of the increase in the total expenditure of public authorities in Germany had arisen from the fact that the financial relations between the Reich, the Federal States and the Communes permitted the latter in particular to embark upon additional activities which were paid for out of the share of taxes levied by the Reich but transferred on a percentage basis to the States and Communes. As the yield of these taxes rose in times of prosperity, money flowed into the coffers of the Communes, and part of their present difficulty is due to the fact that their receipts from these sources have now fallen off, while their expenditure cannot be easily or quickly reduced to correspond. The amount of taxes transferred by the Reich in this way to other public authorities rose from Rm. 2,620 millions in 1926 to a maximum of Rm. 3,412 millions in 1928, and subsequently declined to Rm. 3,050 millions in 1930 and to Rm. 2,321 millions in 1931. This has forced the Communes to radical measures of economy, but even these have not proved wholly sufficient, and some recourse to the funds of the Central Government has been necessary during 1931. An improvement has, however, been effected by the recent emergency decrees of the German Government, under which the municipalities have the power, and, in certain circumstances, the obligation, to levy additional taxes for themselves. These include a poll tax, a local beer tax, and a tax on beverages, the unpopularity of which acts as a powerful further stimulant upon the municipal authorities to effect economies in their Budgets.

EDUCATION.

As regards expenditure on education, which rose from Rm. 2,167 millions (net) in 1926-27 to Rm. 2,733 millions (net) in 1930-31, the Sub-Committee took note of the fact that the increase was principally due to the increase in the level of salaries of school teachers, etc. It was, nevertheless, pointed out that expenditure per head on education was considerably above the level of certain countries in Western Europe, although practically equivalent to that in other countries.

The Sub-Committee was, however, informed that expenditure on education in Germany will show a considerable decrease in the current year as a result of the lowering of salaries and other measures taken by the German authorities.

HOUSING.

As regards expenditure on housing, which rose from Rm. 861 millions (net) in 1926-27 to Rm. 918 millions (net) in 1930-31, the Sub-Committee received an explanation of the system by which funds for housing are provided in Germany from public monies. The principal source is the tax on house rents, which was created in 1924 after the inflation, during which house property had retained the greater part of its value while investments expressed in money had been largely rendered worthless.

This tax was devoted partly to the general financial needs of the Federal States and the Communes, and partly to filling up the existing housing shortage. Since different arrangements were made in the various States for carrying out this scheme, no brief statement

can be made of the allocation of the tax on house rents, but, roughly speaking, 50 per cent. was devoted to housing purposes.

The authorities responsible were in most cases the Communes, who have frequently acted through public utility companies, of which they themselves may be the owners. Generally, mortgage are only granted out of funds arising from the house rents tax when cover for the total sum required to carry out the building is assured. That is to say, the funds provided by the owner of the building himself and supplemented by a mortgage from a building society are completed by a mortgage granted from the proceeds of the house rents tax. Strict provisions are laid down as to the type of house which may be built with such funds, and as to the retention of a charge on the site until the mortgage is paid off.

The documents circulated by the German Delegation on "German Housing during the Post-War Period" gives in considerable detail the extent of building activity, the method of financing and the amount of public funds involved in such financing. The Sub-Committee noted that the greater part of the money spent on housing has been raised by taxation. A certain amount of the money spent on housing has, however, been raised by loans, and the document referred to showed that this amounts to approximately 25 per cent. of the amount spent by public authorities in the year 1928. This proportion is stated to have been generally applicable, so that it appears that the outstanding liability of public bodies in respect of housing may, for the years 1926-27 to 1930-31, be in the neighbourhood of Rm. 2,000 millions. Out of the total of 306,000 houses erected in the calendar year 1930, 240,000 have been erected with some sort of assistance from public funds.

DEVELOPMENT OF PUBLIC DEBT.

In this connection, the German member of the Sub-Committee supplied the following table showing the development in the last three years of the total debt of all public authorities in the Reich:—

(000,000's omitted.)				
Total at	Reich.	Federal States including Hansa towns.	Communes and Associations of Communes.	Total Public Administration.
31.3.1928	7,130.7	1,693.2	5,774.7	14,598.6
31.3.1929	8,228.5	2,201.4	7,729.3	18,159.2
31.3.1930	9,629.6	2,590.2	9,098.7	21,318.5
31.3.1931	11,342.2	2,802.5	9,934.2	24,078.9

The increase in the public debt has been less marked in each year since 1928. (Net increase in the three years:—Rm. 3.6, Rm. 3.2 and Rm. 2.8 milliards.) The credit requirements accumulated after the currency stabilisation were gradually satisfied and certain tasks (e.g., construction of dwelling houses) were to some extent accomplished. On the other hand, the ever-growing tension on the credit market since the end of 1929 prevented an expansion of the debt.

Of the total increase of Rm. 9.48 milliards in the years 1928 to 1931, more than Rm. 2 milliards were in respect of claims in the debt register for war damages and Polish indemnities and of Reparation loans of the Reich (3 of Young Loan), which entailed a burden for interest and amortisation but brought no new capital which could be employed.

On March 31, 1931, the debt total was accordingly	Rm. 24.1 milliards.
Including the following items:—	
Old debts and debts incurred or authorised prior to April 1, 1924	6.0 "
thus leaving a new debt of approximately	18.0 "
Including the following items:—	
Dawes and Young Loans, claims in the Debt Register in virtue of the Final War Damage Law and the decree on damage incurred in Poland, &c.	3.4 "
Supply of water, gas and electricity and transport undertakings	2.8 "
Construction of dwelling-houses	2.5 "
Construction of roads and waterways... ..	2.5 "
Productive unemployment relief, construction of hospitals, sanatoria, &c.	1.6 "

The Sub-Committee notes that out of the total increase of debts in the amount of Rm. 9.48 milliards, Rm. 4.16 milliards were contracted by the municipalities from the end of 1928 down to the end of March, 1931.

THE BUDGETS FOR 1931 AND 1932.

Apart from discussing the points mentioned above, the Sub-Committee saw little advantage in inquiring at any length into the details of the German Budget prior to the year 1930. Not only are Reparation Payments which are familiar to the world, but also the to the crisis and owing to the measures taken by the German Government, under quite different conditions. The figures supplied by quickly showed itself in the revenue receipts of the German Budget, and that falling off in revenue became progressively more proportions. This is well indicated by the fact that the yield from the will fall in the current year to below Rm. 1 milliard, while for 1932 it can only be estimated at Rm. 700 millions. This means a decline of over 50 per cent. since 1929. Similarly, the Corporation Tax,

which yielded Rm. 560 millions in 1929, is estimated to produce only Rm. 300 millions in 1931, and only Rm. 120 millions in 1932, representing a decline of nearly 80 per cent. Although the German Government has resorted to a series of emergency measures to increase taxation, they have been entirely unable to produce sufficient revenue to meet normal expenditure, which has, therefore, had to undergo sweeping reductions. So far as the Reich is concerned, expenditure on all objects other than service of the debt, transfers to the Federal States, External War burdens and emergency relief has been reduced from 1929 to 1931 from Rm. 4,780 millions to Rm. 4,150 millions, i.e., a reduction of 13 per cent. Measures similar in character have been taken by the Federal States and by the Communes. The latter have been empowered to make reductions, and in any cases where this power has not been taken advantage of, the competent higher authority steps in to see that the necessary measures are taken. Part of the economies effected have, however, been offset by the increased cost of unemployment relief due to the growth of unemployment in the last two years. It has been possible to effect considerable economies in this sphere by reducing the average monthly benefit paid to the unemployed, which, from a former average of Rm. 80.93 has fallen to Rm. 63.86 in 1931. Expenditure under the emergency relief system, which averaged Rm. 71 a month, has dropped to Rm. 60.75, while welfare relief payable by the Communes—varying according to the locality—may be estimated probably in the neighbourhood of Rm. 50.

In the opinion of the Sub-Committee the above figures show very clearly the ruthless economy which the falling off in revenue has compelled the German Government to exercise in all classes of its expenditure.

The Sub-Committee thereafter turned to an examination of the sketch budgets for the years 1931 and 1932 which had been circulated by the German Delegation and explained by Count Schwerin von Krosigk to the main Committee. The Sub-Committee analysed the figures contained in these sketch budgets in some detail.

Taking, first, the sketch budget for 1932 as it has been framed by the German Delegation, and which, at the request of the experts, does not contain any item of expenditure which is or might be the consequent payment of reparations, the Sub-Committee noted that the principal measure introduced by the emergency decree of December 8th on the revenue side was an increase in the turnover tax from 0.85 per cent. to 2 per cent., i.e., an increase of over 130 per cent. The yield of the tax had, however, been increased only by 100 per cent. The German Finance Ministry had thus allowed for a falling off in the theoretically increased yield of 14 per cent. Since, however, the recent emergency decree also contemplates a general reduction in the price level of 10 per cent., the theoretical reduction in yield may not be much more than 5½ per cent.

The Sub-Committee then turned to an examination of the estimates of revenue for the fiscal year 1932.

Under full reserve of the difficulty of giving exact estimates in present conditions, the German member of the Sub-Committee presented certain figures which proved that, against an increase of certain taxes (mainly the increased turnover tax), others showed a decrease in yield which was about equal to the estimated increases.

The Sub-Committee felt unable, with the knowledge at their disposal, to criticise the estimates prepared by the German taxation experts. Nevertheless, they formed the opinion that the figures before them could not be considered as showing the situation in an unduly pessimistic light. As far as some sources of revenue are concerned, there seems to be even serious reason to fear that the estimated figure will not be reached.

Turning to the estimates of expenditure, the German member of the Sub-Committee explained that internal war charges would be

reduced in 1932 because the recipients of war pensions were fewer in numbers and because, under recent decrees, the rates of payments had been reduced. Expenditure on personnel was reduced as an effect of the new emergency decree. Miscellaneous expenditure maintained the reduction effected for the present year under recent emergency decrees, and it was doubtful whether this hope would be realised even though the fall in prices would give some assistance.

As regards social charges, the German member of the Sub-Committee referred to the explanations he had already given to the main Committee as to the danger of reducing the amounts paid for unemployment and poor relief, and showed that it was incumbent upon the Reich to provide those municipalities which were particularly hard hit by the present crisis with some assistance towards meeting their obligations in this respect. He doubted whether the figure shown in the sketch budget for 1932 would, in fact, be sufficient in view of the continuance of the crisis.

The Sub-Committee devoted special attention to the item for the public debt. As had been explained in the main Committee, the figure of Rm. 1,420 millions for 1932 contains approximately Rm. 870 millions, which will go in the reduction of debt. Rm. 420 millions of this represents the legal sinking fund. A further Rm. 350 millions represents the amount necessary to cover the deficit remaining from 1930, which had risen solely on the ordinary Budget, and in accordance, not only with the Fundamental Budget Law of Germany, but also in accordance with all principles of sound public finance, should be covered without delay. The remaining Rm. 100 millions is in respect of Treasury bonds maturing in 1932.

It was pointed out to the Sub-Committee that the repayment of this amount of debt during a year of severe crisis represented a very heavy burden on the German Budget. Should these figures be fulfilled, approximately one-half of the floating debt would be repaid and one-eleventh of the total debt of the Reich. While this consideration was fully appreciated by the German member of the Sub-Committee, he pointed out that the situation of Germany was that the Budget had exhausted its last resource; should the estimates of taxation prove optimistic or should expenditure have to be incurred in excess of that shown, the German Government would have no recourse save to call upon the amounts included for the reduction of debt, i.e., to incur a further deficit.

Without expressing a definite opinion as to the figure included in the sketch budget for 1932 for redemption of floating debt, which figure, amounting to Rm. 870 millions, as compared with the total debt of the Reich, seems very considerable, the Sub-Committee could not but feel, having regard to the alarming increase of the total public debt of Germany shown in the figures given above, that it is vital for the German Government to pursue the firmest policy of debt reduction in order that the burden of debt may not become insupportable, and they consider that the German Government would not be justified unless it included in the Budget a substantial provision for this purpose.

The Sub-Committee has not felt it its duty to offer an opinion as to the probability or otherwise of the estimates laid before them with all reserve on behalf of the German Delegation. They consider that the course of the German Budget during the last two years has shown how the progressive deterioration in the economic life of Germany has led in due course to a falling off in revenue, which has in time become catastrophic. The Sub-Committee has no opinion as to the probability or otherwise of an early reversal of the present downward movement in business activity, not only in Germany, but in the whole world. They wish to do no more than point out that, unless this movement is reversed, there can be no hope of a recovery in the Budget situation, and that, even if a speedy reversal should take place, it must be some time before the Budget will benefit therefrom and return once more to a sound basis.

ANNEX V.

Report of the Sub-Committee on the Reichsbahn.

The Sub-Committee has examined the position of the German Railway Company, as shown by the information furnished by the German Delegation. During the years 1925 to 1930 the operating receipts and payments of the Reichsbahn were as follows:

(In Millions of Reichsmarks.)						
Year.	1925.	1926.	1927.	1928.	1929.	1930.
Receipts	4,669	4,540	5,039	5,159	5,353	4,570
Payments	3,974	3,680	4,158	4,294	4,493	4,090
Excess of receipts over payments	694	860	880	864	860	480
Working coefficient	85.1	81.0	82.5	83.2	83.9	89.5

The above comparison shows that, after payments had been met, operating receipts in each of the years from 1925 to 1929 left a surplus well in excess of the reparation tax of Rm. 660 millions. The average amount of the surplus was Rm. 833 millions. During the period in question receipts rose progressively from Rm. 4,669 millions to Rm. 5,353 millions, representing an average of Rm. 171 millions, or 3.5 per cent. per annum.

During 1930 the world economic crisis found expression in a marked decline in traffic and in receipts, which fell 5.5 per cent. in the case of passenger traffic and 18 per cent. in the case of goods traffic, the total drop being Rm. 783 millions, or 14.6 per cent. Operating payments were energetically curtailed and were reduced by Rm. 403 millions. The surplus of receipts over payments never-

theless fell by Rm. 480 millions, being thus Rm. 180 millions short of the sum required to cover the reparation tax.

In 1931 the economic crisis has become still more intense and receipts are expected to fall to Rm. 3,860 millions, being a further diminution of Rm. 710 millions, or 15.8 per cent. By comparison with 1929, therefore, the decline in receipts in 1931 will probably aggregate Rm. 1½ milliards, or 28 per cent. In view of this marked drop in traffic, the Reichsbahn has naturally had to reduce expenditure in every possible way. Its representatives have explained that the economies realised in 1931 are estimated at 18 per cent. of the expenditure total. They relate both to the programme of works and new orders and to the expenditure on personnel. The staff has been reduced by 30,000 in 1931 as compared with 1930. To-day it numbers 6 per cent. less than before the war and 42 per cent. less than in 1919, when the personnel total was, it is true, unduly inflated.

In short, operating receipts in 1931 are estimated at Rm. 3,860 millions and payments at Rm. 3,682 millions, leaving a surplus of receipts over payments in the amount of Rm. 178 millions.

The reparation payments of the company have been influenced as follows by the putting into force of the Hoover Plan on July 1st last.

The company paid the annual tax during the first half of the year, making Rm. 330 millions. Since then, the Hoover Plan, while considerably easing the cash position of the Reichsbahn, has not released it from its reparation charges. In application of the Plan, the Reich pays Rm. 51 millions to the Bank for International Settlements.

ments on the 15th of each month. On the same date the Bank pays a sum of approximately Rm. 45 millions to the Reichsbahn. In exchange, the Reichsbahn has to hand over certificates of indebtedness by which it undertakes to repay the loan in ten equal annuities, as from July 1, 1933. The company does not retain the counter-value of the Rm. 45 millions, but refunds them immediately, without counterpart, to the Reich.

For the recording of these transactions, the company charges to its operating account the monthly instalment of Rm. 45 millions plus a payment of Rm. 70 millions for the year, or Rm. 35 millions for the second half of 1931, which sum is paid to the Reich as a contribution to reparation payments. In 1931 the company will debit its operating account in respect of reparation charges with a total of Rm. 330 + 270 + 35 = 635 millions.

On the other hand, the company benefits by the amount of the B.I.S. loans which strengthen its cash position and will amount to Rm. 270 millions in 1931 and a corresponding total for the first half of 1932. Allowing for the company's contribution of Rm. 635 millions to reparation payments in 1931, it would appear that the surplus of operating receipts over operating payments in the amount of Rm. 178 millions will leave a deficiency of Rm. 456 millions. Allowing further for the preference share dividend, the service of new debts and the writing off of the concession, the deficiency is brought up to Rm. 567 millions. In order to cover this deficit, it will be necessary to draw upon the whole of the legal reserve (Rm. 450 millions) and upon the dividend reserve (Rm. 76 millions), after which an uncovered balance of Rm. 42 millions will still remain.

For 1932 the company expects a further drop of Rm. 310 millions in receipts, which are estimated at only Rm. 3,550 millions. As the Government of the Reich is at present endeavouring to obtain a general lowering of prices, in conformity with the Emergency Decree of December 8th last, the company desired to support the initiative thus taken by deciding to reduce goods tariffs by some Rm. 300 millions per annum, or 13 per cent. The reductions apply in part as from December 16, 1931. It must be observed that the measure in question is a very daring venture, the object of which is to help bring about a general economic revival. A reduction of transport tariffs in this way is quite exceptional under present circumstances, when the railways of many countries are demanding the increases in rates which are required in order to balance their budgets.

On the other hand, the Reichsbahn anticipates that cuts in wages and in the price of materials will entail a reduction in its expenditure, which is put at Rm. 200 millions for the personnel alone. In the aggregate, the company estimates its operating expenditure for 1932 at Rm. 3,298 millions. The surplus of receipts over payments would then be Rm. 252 millions. Allowing during the first half year only for the reparation contribution amounting, as explained above, to Rm. 305 millions, there remains a deficiency of Rm. 53 millions without provision for any reparation payment in the second half of 1932. It must also be noted that the Rm. 270 millions are returned to the Company by the B.I.S. in the form of a loan repayable in ten years.

In order to reply to a question asked in committee, we give below a comparison of the working co-efficients obtained during the last few years and in 1913 by the Reichsbahn and some other railway administrations. These co-efficients represent, of course, the percentage of receipts which is devoted to operating payments, the surplus being available as cover for capital charges.

WORKING CO-EFFICIENTS

Years.	1913.	1929.	1930.
Germany	72.1	83.9	89.5
Belgium	72.0	86.5	90.9
Italy	98.0	87.2	88.7
France	65.0	78.7	88.3
Great Britain	63.5	78.4	80.8

This table shows that the working co-efficients of the Reichsbahn and of the other railways have varied from year to year under very comparable conditions.

CAPITAL CHARGES.

According to the position as worked out for the end of 1931, the total financial commitments, capital and loans, of the German Railway Company amount to Rm. 2.5 milliards in round figures. Among the principal items in this total are the preference shares issued for the present to an amount of Rm. 1,018 million; and the Young Loan at present totalling Rm. 288.5 millions; there is further included the whole of the loan of Rm. 540 millions granted to the Company by the B.I.S., to which reference has already been made.

CONCLUSIONS.

After examining the figures furnished by the German Delegation, which have been summarised above, the Sub-Committee has reached the following conclusions:—

The results obtained by the Reichsbahn may be classified under three heads, according to the periods to which they relate: the years 1925 to 1929, the years 1930 and 1931, and the year 1932. The figures for 1925 to 1929 show that during this period the annual average excess of operating receipts over payments amounted to Rm. 833 millions, thus enabling the Reichsbahn to meet the contribution of Rm. 660 millions for which it is liable.

It might be argued that, from the standpoint of the Reichsbahn, these years were not entirely normal, since writings off and replacements were not carried beyond a certain limit, precisely with a view to enabling the Reichsbahn to make its contribution. But it should be noted in this connection that earnings were well in excess of the contribution, and further that the working co-efficient, thanks to which the earnings were obtained, varied during the years in question between 81 and 85 per cent., a figure comparable with that of the principal railway systems during the same period.

In 1930, under the influence of the world economic crisis, receipts dropped by 13 per cent. The operating surplus fell to Rm. 480 millions. To meet its reparation and other annual charges the Company was obliged to draw upon the balance brought forward from the previous account. In that year the working co-efficient rose to 89.5 per cent., and a similar increase is to be noted in the co-efficients of other countries.

In 1931 the economic crisis became still more acute. The decline of receipts in two years amounts to Rm. 1.5 milliards, or 28 per cent. To meet its charges the Company is compelled to have recourse to its reserves. It must be pointed out that these charges include the reparation payments, which, in conformity with the Hoover Plan and the London Protocol, are in fact returned to the Company in the form of loans repayable in ten years as from 1933.

It appears that in 1931—after allowing for the decline of receipts and payments which is likely to arise from the general crisis and the measures recently enacted in Germany for the lowering of tariffs and expenditure—it will not be possible to balance the Company's budget.

What will the position of the Reichsbahn be in 1932 and in subsequent years? The question was not submitted to the Committee, which would in any case have been unable to find the answer. Obviously, the financial results will depend upon the development of the economic crisis, its duration and intensity, and also upon the measures which the Company elects to adopt in respect of tariffs and expenditure. In Germany, as in other countries, experience has shown how sensitive the budgets of the railways are to changes in the general economic situation, the marked recovery in Germany in 1925 being a characteristic example.

Nevertheless, the figures cited above, together with the facts ascertained and the comparisons made by the experts, would appear to us to suggest that, once Germany and the world at large have recovered their balance and returned to something like the economic conditions which we are accustomed to regard as normal, the Reichsbahn (fundamentally a sound undertaking) will be able in future years if managed on a commercial basis to yield a net operating surplus comparable with that earned by other big foreign railway systems.

THE CRISIS

A Memorandum

Supplement to *The Economist*,
January 9, 1932.

THE CRISIS

By

Sir Henry Strakosch, G.B.E.

IT is more than two years since the world entered upon the first stage of a crisis which, without doubt, has no parallel in history. Yet, until quite recently, that crisis seems to have been looked upon by all but a few as a mere recurrence of one of those periodic setbacks that are popularly believed to be inevitable dispensations which have to be endured while they last, but which are set to rights in due course by their own momentum. There is no other explanation to account for the complacency with which the events of these two years have been allowed to develop without any serious thought being given to concerted measures for grappling with the crisis at its source. There is no other explanation for the almost frivolous superficiality with which explanations of the crisis, its causes and its workings, have been offered and accepted.

Quite recently a leading Continental statesman—apparently without a blush—suggested that the crisis was due to what he termed “collective neurasthenia.” He made no attempt to support the statement by any sort of concrete evidence of the nature and extent of this pathological phenomenon, nor did he suggest a remedy to rid humanity of the scourge. A pathological phenomenon of another kind, and one far more easily supported by evidence, might have been advanced. Mankind, it could well be argued, has undergone a startling change; its behaviour during the last two years could be shown to point to a perceptible loss of that admirable quality—a sense of humour. Did it not accept, without question, the proposition that the misery of insolvency, destitution and starvation the world over is due to the superabundant supply of all the good things mankind ordinarily consumes, and that nothing but a radical curtailment of production of all those things—nay, the actual destruction of existing stocks—could bring back our lost prosperity? Did it not accept the dictum that the world’s troubles can only be set right by each country redressing its unfavourable balance of trade by drastically curtailing imports and fostering exports, without stopping to inquire who would be buying those universally fostered exports in a world which is universally curtailing imports? More inconsistencies of a similar order could be enumerated in support of this pathological theory of the crisis. But it seems more profitable to examine the events of the past few years on the supposition that we are afflicted neither with “collective neurasthenia” nor with the loss of our sense of humour, and that the crisis is not to be looked upon as an inevitable dispensation of Providence, but that the truth can best be made to emerge from an analysis of the relevant facts in the light of accepted economic doctrine.

Before we embark on this line of investigation it will be useful to review, briefly, the interpretations that have enjoyed popular favour from time to time as the crisis developed.

At first, opinions were by no means unanimous that the fall of the general level of prices was an undesirable thing. The working classes—it was said—would be able to buy things more cheaply and, with a constant level of money wages, would, no doubt, buy more of these things and so revive production and trade.

But as time went on, it came to be realised more widely—until to-day there is probably a fair measure of unanimity on the point—that the effect of a fall in the general level of prices has far wider and more complex implications. It is being appreciated that, while a sharp fall in the general level of prices in no way affects the physical equipment of a country or the possibility of, and need for, that physical equipment being employed for productive purposes, it does profoundly affect the distribution of that production among the various classes of the community; that the greater purchasing power of money confers a greater title to goods on those members

of the community who have claims to money, while obliging those who owe money to give more goods to discharge their debts; that the weight of the increased burden of debt, coupled with the increased real cost of production due to the rigidity of money wages impedes production and enterprise, reducing profits or even converting them into losses; and, finally, that the mere expectation of prices continuing to fall destroys the incentive to produce and thus aggravates the plight of the debtor class, who, from a depleted production, have to supply more and more goods for the discharge of their money debts until they are finally driven into insolvency.

To-day, it is difficult to imagine that, even among the uninstructed, there is anyone who does not regard the fall of commodity prices as the root cause of the present crisis.

It is again instructive to recall the changing opinions that were held regarding the origin of the fall of commodity prices. It is a natural—almost instinctive—notion that superabundance of a particular commodity tends to depress its price. Falling prices being thus associated with superabundance, it is perhaps not unnatural for the casual observer to ascribe the fall of the price of all commodities to a superabundance of each and all of them, and to seek an explanation for this general superabundance in the vague but suggestive term of increasing “rationalisation of production.” This theory of general overproduction held the field for a long while. But it gradually came to be realised that there was a flaw in this line of reasoning, that if there was a superabundance of all the things we generally consume, there was no reason why they would not all be exchanged one for the other—unless, indeed, the power of consumption had reached saturation point. Ocular evidence of poverty and distress, however, was so abundant that the idea of consumption having reached saturation point became repugnant even to the meanest intellect.

Another explanation then came into popular favour. Farm products, it was said, were being produced in such abundance that their price had fallen out of all relation to the prices of manufactured goods. This had so reduced the power of the vast farming population the world over to buy these manufactured goods that they, too, became superabundant. This thesis was later expanded to cover, not only farm products, but all other raw materials.

But when it became evident that a drastic curtailment of production all round still left the world superabundantly supplied with all the goods mankind ordinarily consumes, and that—concurrently with it—insolvency, unemployment, poverty and want increased, faith in this thesis waned. Public opinion—at any rate in this country—began to recognise that there might, after all, be some substance in the interpretation of those who, very early in the crisis, dared to deny that the fall of the general level of prices was due to either general over-production or a disequilibrium in the character of production, and to assert that this fall was, in the main, due to monetary causes. Their case was, and still is, that the phenomenon originated in the exchange of goods and services being impeded by an inadequacy of the supply of currency and credit, which, in turn, in a world that bases its structure of currency and credit on gold, had its origin in the maldistribution and sterilisation of vast amounts of gold in two of the principal money centres.

Those who are examining the problem to-day have a great advantage over those who did so in the earlier period of the crisis. They have at their command a good deal of statistical material—which was then not available—by the aid of which conclusions reached by abstract reasoning can be tested and verified.

An attempt is made in the attached charts to assemble and present in graphic form a few of the principal factors that are relevant to an analysis both of the origin and of

CHART I.

the economic consequences of the crisis. Presented in this form, it is possible to follow the chronology of events, and particularly to determine the points at which the factors portrayed began to take courses which were clearly abnormal in relation to their earlier behaviour, and which may, therefore, be regarded as being the points at which the crisis first made itself felt.

The task of disentangling cause from effect is, and will always be a source of doubt and controversy in economic discussions, and though we should, in the main, rely on logic and reason for distinguishing one from the other, statistical compilations presented in this form enable a valuable test to be applied to our reasoning. Let us apply that test. In doing so, it is well to keep prominently in mind that, as the standard of value—that is, the measuring-rod of values—of almost three-fourths of the world's population has until quite recently been gold, the factors portrayed in Chart I. affect more or less the whole of that vast proportion of human activity.

Gold, Bank Rates and Prices.

Among the group of lines representing gold holdings of Central Banks, it is well to follow, first, the line of progress of the gold holdings of Central Banks of the world as a whole. It will be gathered from the smooth way in which that line ascends that these stocks have been augmented—mainly from newly-won gold—at a fairly regular rate. That augmentation corresponds, in fact, to a rate of about 3.2 per cent. per annum compound. If it had been evenly distributed over all—or at any rate the principal—countries on the gold standard, and on the assumption that the ratio of gold to currency and credit had remained constant over the whole area, that augmentation would have permitted world production and trade to increase at a steady rate of 3.2 per cent. per annum without disturbing the general level of prices, which would have remained stable in these circumstances.

But we know that the flow of monetary gold into the various countries during the last three years was far from even, and that France and the United States have not only absorbed all the newly-won gold that has become available for monetary purposes, but have also attracted to themselves some of the gold held by other countries as their monetary reserves. It is, therefore, relevant to our inquiry to segregate the movement of monetary gold reserves by showing separately the lines of progress in regard to France and the United States, on the one hand, and in regard to the rest of the world on the other. Following these lines, it will be seen that, from the beginning of 1925 to the end of 1927, there was a tendency for the countries other than France and the United States to absorb gold at a slightly greater rate than the rate at which gold was added to the total world stock. That tendency became more accentuated during the first six months of 1928, and coincided with the rather pronounced movement of United States funds for investment abroad. In the latter half of 1928, the ratio of increase of the gold stocks of France and the United States, on the one hand, and of the rest of the world on the other, corresponds closely to the ratio of increase of world stocks as a whole. But in the early part of 1929 a movement set in, which may truly be termed abnormal, and which continued right through the remaining period covered by the Chart. The gold holdings of France and the United States rose steeply, while those of the rest of the world fell equally steeply. The gold holdings at the beginning and the end of the period were:—

(In millions of dollars.)

	Jan. 1, 1929.	June 30, 1931.	Change	%
France	1,254	2,212	+ 958	+ 76%
United States	3,746	4,593	+ 847	+ 23%
Rest of the World (excluding Russia)	4,918	4,197	- 721	- 15%
Total world (excluding Russia)	9,918	11,002	+ 1,084	+ 11%

When the Central Banks of the "rest of the world" found their gold reserves being drawn upon heavily early in 1929, they applied the orthodox measure of protection. They made credit dear by raising bank rates in successive

stages until they reached their peak in September, 1929. This compelled debtors to hasten the repayment of their loans, that is, to sell the commodities and securities upon which these loans were contracted. The process of deflation thus set in motion gathered momentum as it became more and more apparent that the contraction of credit in the gold-losing countries was of no avail in re-attracting gold to their depleted monetary reserves, and that the flow of gold to France and the United States—with only a brief respite in November, 1929—continued unabated. Even the drastic reduction of bank rates, initiated in October, 1929, in an endeavour to stay the movement, and continued until April of the present year, was incapable of breaking the vicious spiral of deflation which had been set in motion. The wholesale and world-wide liquidation to meet commitments thus reacted with continuing and cumulative force on the price of all commodities. The line denoting the course of wholesale commodity prices on Chart I. shows in the third quarter of 1929 the beginning of the steep decline of prices which has persisted uninterruptedly to the present time.

The course of prices by groups (farm products, raw materials and manufactured goods) shown on Chart I. below the line "Wholesale Commodities," is interesting from the fact that the deviation from "normal" in all of them sets in at almost precisely the same time, i.e., towards the end of the third quarter of 1929. These movements, coupled with those shown in the group of Price Ratios (farm products to manufactured goods, and raw materials to manufactured goods), clearly negative the suggestion, referred to on the previous page, that it was the impoverishment of the producers of farm products and raw materials, due to the prices of the commodities they produced having first fallen, which caused the demand for manufactured goods to be curtailed and so brought about the general fall of prices and with it the crisis. The movements of the ratio lines for both farm products and raw materials to manufactured goods followed a normal course up to the end of 1929, that is, roughly three months after the general fall of prices had commenced. Only then did they begin to deviate sharply from "normal," the prices of farm products and raw materials falling far more sharply than those of manufactured goods. This divergence of price movement in the circumstances in which it occurred is a perfectly natural development and a well-known phase of all deflationary movements. This disequilibrium has no doubt aggravated the crisis, but it certainly cannot have created it, for it followed the general fall of prices and did not precede it.

The Course of Deflation.

In summary, then, what conclusions are we to draw from the facts recorded in Chart I?

It is clearly apparent from the course of the movements of gold reserves, bank rates and prices there portrayed, that the period covered falls into two wholly distinct phases; the first covering the period from the beginning of 1925 to the end of 1928, and the second from then to the middle of the past year, and doubtless to the present day if figures had been available to enable one to continue the chart. The characteristics of the two periods at once spring to the eye. In the first, we find gold movements converging, and then gradually conforming to the line of progress shown by the gently ascending course of the monetary gold reserves of the world as a whole, indicating that the new monetary gold that had become available was being distributed between France and the United States on the one hand, and the rest of the world on the other, in proportions fairly corresponding to the rate of the increasing supply of monetary gold. More than that, France and the United States had allowed the rest of the world to absorb some of their abundant supplies, and so to reinforce its own relatively scanty reserves. We find as in the circumstances was to be expected, no violent change in the level of bank rates, though it will be noted that bank rates declined steadily from the beginning of 1925 to the second quarter of 1927 (a movement which finds its explanation in the fact that the greater part of the world was then reverting to the gold standard). We find, too, as was also to be expected, that prices, whether of wholesale

commodities as a whole or of the various groups of commodities, fluctuated but slightly around a stable trend.

While the first period had all the characteristics of normal development, the second shows those of violent disturbance. When France and the United States (for reasons to be discussed later) began to increase their gold reserves at a rate wholly out of proportion to the rate of progress of the gold reserves of the world as a whole—when, in other words, the rest of the world had to go without its rateable share in the gold that became available for monetary purposes, and, in addition, found its existing and scanty gold reserves being heavily depleted—disturbances of the gravest kind ensued, and inevitably so. In self-defence, bank rates were raised sharply in the expectation, no doubt, of arresting and finally reversing the movement of gold. If the movement had been a normal one, this would doubtless have happened and equilibrium would have been restored; but the movement was clearly not normal, and persisted in spite of sharply increasing bank rates; and the fall of commodity prices, which this drastic raising of bank rates had initiated, continued at an increasingly precipitous rate. Desperate efforts were then made to stay the fall of prices by reducing bank rates. But these were without avail, for the simple reason that the decreasing monetary gold reserves of the rest of the world continued to exercise a deflationary effect. Continuous and heavy pressure was thus exercised on the economic activity of more than four-fifths of the people living under the sway of the gold standard, that is, on the economic activity of 1,200 million people. The vicious spiral of deflation took and continues to take its dismal course. It will only be broken when the fundamental causes which have created it are removed.

Balances of Payments.

It has been said, and it will no doubt continue to be said, especially by Frenchmen and Americans, that the movement of gold to their respective countries is a natural and inevitable consequence of the active balance of payments which these two great creditor countries enjoy. But it can be asserted with confidence that gold movements of such persistence and of such magnitude could never take place if their creditor status was the result of ordinary trade relations with the rest of the world. Let us reflect for a moment how an active balance of payments in ordinary trade relations arises and how it is settled. It arises almost invariably in countries whose accumulated savings have been employed to establish highly developed industrial systems. The labour force of such countries is skilled and efficient and therefore more profitably employed in those systems than in the production of primary products; hence the need of these countries to import primary products from countries which—owing to their less highly developed economy, to their scanty industrial equipment, and to their less efficient labour force—have perforce to rely for their livelihood on the production of primary products. But the urge of progress has led, and will continue to lead, these less developed countries to desire to improve and augment their equipment at a rate greater than their accumulating savings would permit. They usually find no difficulty in acquiring that additional equipment from the industrial countries, not by paying for them in gold, but in exchange for securities, because the industrial countries—eager to sell their manufactured products and to participate in the progress of the younger countries—are content to take payment in such securities. That was the course of things before the war, and there is no conceivable reason why it should be different to-day. The industrial countries continue to rely upon the less developed regions of the world for supplies of needed primary products and upon selling to them the equipment they desire, and the latter's current savings continue to be inadequate to permit of this additional equipment being paid for in gold.

One is thus driven to the conclusion that gold movements of the magnitude and persistence which have characterised those of the last three years cannot be due to the settlement of international balances resulting from ordinary trade relations; that they, therefore, doubtless arise from exceptional causes, and that these causes must be looked for in the reparation and war debt payments,

of which the United States and France are, on balance, practically the only recipients.

A test is easily applied from figures that are readily available. We know, broadly, the amount of reparation and war debt payments collected by the two countries, and we also know to what extent their gold reserves have increased. It is easily ascertainable therefore to what extent gold receipts have exceeded or fallen short of reparation and war debt receipts. If gold receipts equal reparation and war debt receipts, it would be true to say that these were paid in gold; if the former fall short of the latter, the difference may be assumed to have been received in goods, services and/or securities; and if the former exceed the latter, then it can be said not only that the two countries have received these payments in the form of gold, but that they have also demanded and received payment in gold for goods, services or securities which they have sold to the debtor countries or for short-term debts which they have withdrawn from them.

Reparations and War Debts.

The figures set out below are grouped so as to coincide with the two periods of equilibrium and disturbance referred to earlier in this paper:—

(In millions of dollars.)

	Reparations and War Debts.	Change in Gold Reserves.	Increase of Gold Reserves less than (—) or in excess of (+) Reparations and War Debt Receipts.
Jan. 1, 1925, to Dec. 31, 1928.			
France	557	+ 544	— 13
United States	807	— 344	— 1,151
	1,364	+ 200	— 1,164
Jan. 1, 1929, to June 30, 1931.			
France	343	+ 958	+ 615
United States	555	+ 847	+ 292
	898	+ 1,805	+ 907

The figures speak for themselves. In the first period—one of ordered progress—France and the United States, taken together, accepted reparation and war debt payments in things other than gold (except for some \$200 millions), whereas in the second period—one of profound disturbance—they collected not only the whole of them in gold, but added another \$907 millions to their gold reserves, no doubt in payment for goods, services and securities sold to the debtor countries or credits withdrawn from them. It may well be that this additional accumulation of gold would never have taken place if it had not been for the deflationary effect which the collection of reparations and war debts in gold had exercised on the rest of the world. That deflation obviously reacted adversely on the volume of international trade and on credit, particularly in the debtor countries.

The close correlation, in the second period, between reparation and war debt payments to France and the United States, and the movement of gold to those two countries, and its deflationary effect as evidenced by the headlong fall of commodity prices since the end of 1928, is strikingly apparent. This conjunction of events was by no means inevitable. If the gold standard had been allowed to function as it is meant to function, the influx of gold would have increased the available purchasing power of the community in the gold-receiving countries, and would have raised their domestic level of prices. They would thus have become, for other countries, favourable markets to sell in and unfavourable markets to buy from. Imports into the gold-receiving countries would have been fostered and exports impeded. If these movements had been allowed free play, the effect would have been to establish a new equilibrium between imports and exports, and thus to stop or circumscribe the flow of gold. But the two countries disliked seeing such a new equilibrium established because they doubtless feared that it would produce inconvenient reactions on their domestic industries. The inflow of gold was therefore prevented from exercising its influence on their price

levels, and tariffs and other barriers were placed in the path of imports.

Thus, the creditor countries, in an endeavour to escape the reactions on their domestic industries which the receipt of goods in payment of reparations and war debts might have occasioned, forced the debtor countries to discharge their obligations in gold. In doing so, they set up a keen demand for it, which drove up its value, and so plunged themselves and the rest of the world into the far more disastrous plight of deflation.

The Consequences of the Fall of Prices.

The manifestations of the crisis, their intimate connection, and their reactions one upon the other are painfully apparent, especially since the crisis entered upon its more acute stage. They arise from the redistribution of real incomes among the several sections of the community, which the greater purchasing power of money involves. But that community is not of one country but of the whole vast area of the gold standard world.

A brief enumeration of the conditions that may be regarded as constituting an equilibrium in the distribution of national incomes will elucidate the point:—

- The share of the national income falling to those who lend money must be great enough to induce them to save and lend, yet no greater than debtors are able to bear;
- The share falling to the producing class (which includes services needed for production) must be great enough to meet their personal wants, maintain their productive equipment, pay wages, taxes and debt charges, yet no greater than the consumers of their production are able to bear;
- The share falling to the wage-earning class must be great enough to induce them to hire out their labour, yet no greater than the producing class are able to bear;
- The share falling to the State and other public authorities by way of taxation must be great enough to enable them to meet the expenses of administration (mainly in the form of wages, salaries and other services), yet no greater than the taxpayers are able to bear.

This equilibrium is disturbed by changes in the purchasing power of money. Supposing the purchasing power of money increases by 41 per cent. (which it did in the brief period from the end of 1928 to September last), then any contract expressed in money terms and entered into before the end of 1928 obliges debtors to give 41 per cent. more goods for the discharge of their obligations than they bargained for when they concluded the contract. In our modern civilisation, with its ever-increasing division of labour, by far the greatest number of transactions involve contracts the settlement of which is deferred over widely varying periods. As the total amount of goods which the community produces varies but slightly from year to year in undisturbed economic conditions, but falls sharply if conditions are disturbed by a sharp fall of prices, it is apparent how violently so great and rapid an increase in the purchasing power of money, and the consequent redistribution of incomes, may react on the community, and how, in particular, it hits the debtor class. This reaction is accentuated by the fact that, in a period of falling prices, the real cost of production increases (owing to the inevitable lag in the adjustment of wages to prices), and that, while prices fall, a perfectly natural inclination develops not to convert appreciating money into depreciating goods, so that both profits of production and the demand for goods decline. Production as a whole thus diminishes and causes the difficulties of debtors and of those who are engaged in enterprise to be further increased.

These developments are graphically shown in the first three lines of Chart II. The first line (K)—Burden of Debt—assumes that debts generally are discharged as to two-thirds in wholesale and as to one-third in retail commodities. It shows how steeply the real burden of debts has increased during the last two years.

The course of profits of enterprise in the United Kingdom is shown in line (L). Being based upon yearly figures, it is not possible to show when precisely they started to decline, but the sharp drop during the last year shown on the chart is instructive. Line (M) records how production in the United Kingdom, the United States, Germany and France has fared. The sharp drop beginning in the last quarter of 1929 is significant. Line (N) traces the proportion of stocks (which cover ten of the principal raw materials) to annual production. It indicates that the abnormal rise of these stocks only began to manifest itself towards the last quarter of 1929. And there is finally added a line (O) showing the percentage of employment, compiled from the relevant figures of the United Kingdom, United States and Germany. How sharply employment has decreased during the last two years is clearly apparent.

The difficulties of the debtor and entrepreneur classes naturally react on those who deal in "credit," that is, the banks and financial institutions. They are creditors as well as debtors—creditors of those to whom they lend and debtors to those who deposit their money with them. The plight of the debtor class, so patently apparent, impairs confidence in the solvency of credit institutions. They, in self-defence, exercise pressure on their debtors, compelling them to liquidate commitments which in unwilling markets merely goes to accentuate the fall of prices and to increase the difficulty of other debtors, and through them again that of the credit institutions.

Curtailed production and trade and falling profits reduce public revenues. Pending an adjustment of expenditure, revenues have to be increased by higher taxation, adding further to the burden particularly of the debtor and entrepreneur classes.

Practically the whole of the civilised world being afflicted by the same difficulties, the export trade all round declines sharply. Debtor countries who rely upon their export surplus to provide funds to meet their foreign debt are unable to do so. Currencies break down, accentuating the impairment of credit and the difficulties of international trade. "Moratoria" become the order of the day. But unless, on the declaration of a moratorium, immediate steps are taken to help the debtor back to solvency by funding or other arrangements, a moratorium, far from solving the difficulties, aggravates them. A moratorium has been aptly described as "insolvency for forward delivery." No debtors, if they can possibly help it, want to be insolvent when the time for "delivery" comes. They, therefore, strain every nerve to realise assets and to curtail purchases in the intervening period, while creditors, bent upon creating liquid resources in case the debtors should indeed become insolvent on the day of "delivery," do likewise. The result is to double the pressure of realisations, and so to accentuate the fall of prices and the lack of confidence it creates.

Measures of the most diverse kind are being applied to deal with manifestations of the crisis that happen at the moment to be most irksome. But, being mere palliatives, they prove, for the most part, worse than useless. The "vicious spiral" set up by deflation will only be broken by removing the cause which has created it, and that, clearly, is the fall of the general level of prices, i.e., the appreciation of gold. And that, in turn, as our analysis shows, is, in the main, due to the collection of reparations and war debts and the insistence of the creditor countries upon receiving them in gold. It is a melancholy reflection that, for the sake of collecting \$400 millions per annum in respect of reparations and war debts, there should have been inflicted upon the world a measure of deflation, and with it a curtailment of production and consumption (that is, a debasement of its well-being), that may well be assessed at some ten to twenty times that amount.

But do not let us be misled into thinking that a mere postponement of reparation and war debt payments can remedy the evil. To establish confidence, which is essential for the restoration of credit and the resumption of normal intercourse in trade and finance, the world wants to be left in no doubt that the disturbances which have brought it to the verge of complete ruin cannot, in future, be repeated.

THE PAST YEAR.

The pages which follow do not make pleasant reading. In every industry and every country which comes under review the picture is dismally similar. The story of 1931 is, in fact, a litany of woe and a commination service against increasing misfortune. When the year 1930 ended, the disastrous fall in world commodity prices was in full swing, and unfortunately nothing occurred to check it in the early months of 1931. As concomitants of this progressive decline came the continued decrease of trade and the automatic increase in the burden of all fixed-interest obligations. At the same time the strain imposed on the debtor nations in discharging their debts to creditors, under circumstances in which the export of goods became every day more difficult, led to a maldistribution of the gold stocks of the world of so serious a nature as to contribute very substantially towards bringing the crisis to a head. The first half of the year was a period of growing uneasiness and apprehension, but it was not until the second half began that actual events occurred which showed that the breaking point had arrived. The first clap of thunder came from Austria, where the great bank, the Credit Anstalt, found itself in gravest difficulty in July. The trouble rapidly spread throughout Eastern and Central Europe, and the storm centre shifted to Germany, where the situation was only saved from immediate disaster by the proposal of President Hoover for a year's holiday from all inter-governmental debt payments and the subsequent agreement of Germany's commercial creditors to prolong their credits.

President Hoover's initiative at the time when it was made appeared to give the world the brightest hope that it had seen for years. It had all the promise of being a real beginning of international co-operation, through which the hopeless tangle of reparations, debts, tariffs and armaments might be solved by international agreement. Unfortunately, although the rest of the world accepted the proposal in the spirit in which it was made, the long-drawn-out bargaining and procrastination of one European power destroyed the psychological effect of America's great gesture, and effectively checked the march of American opinion towards full and helpful co-operation for settling world problems. So completely were hopes disappointed, that the year ended with no plans made and little prospect of agreement regarding the future of reparations and international debts when the Hoover holiday comes to an end on July 1, 1932. Meanwhile, the economic crisis deepened week by week. One country after another

throughout Europe, and, indeed, all over the world, felt itself obliged to take what steps it could to rectify unsatisfactory tendencies in its balance of payments. The result was the almost universal adoption of trade restrictions, heightening of tariffs, and the establishment of exchange regulations of a drastic nature. With every country endeavouring to keep imports down to a minimum, the inevitable result has been a corresponding contraction of the exports by which alone countries may live and pay their debts; and, as the year ended, international trade was coming every day nearer to the point of strangulation. Historians will probably mark the year 1931 as that in which human folly and egotism threw away a great opportunity with devastating results.

Although Europe was the centre of the storm, it is possible to search the world outside without finding bright spots. Despite the great opportunity and possibilities of the Round Table Conference, Indian unrest and turmoil developed. The great United States of America at last felt the full force of the economic blizzard. In the Far East, conditions became more than ever disturbed, renewal of anarchy in China being reinforced by the Japanese operations in Manchuria, which were the prelude to the present grave position at Shanghai. All the countries of South America, dependent mainly on exports of primary products, suffered progressively from the strain imposed by the continued fall in commodity prices.

It was not until August that Britain took the full force of the storm. But it was then concentrated upon London with such fury that on September 21st sterling capitulated to superior forces and left the gold standard. It had been felt for some time that Britain, with her vast international trade and her vulnerable position as creditor and banker, was peculiarly exposed to attack. The attack developed partly through the need of her foreign creditors to withdraw their London balances for their own purposes, partly through the spread of distrust of London's position, and fears of coming restrictions on the movement of capital. Every effort to save the gold standard was made. New York and Paris co-operated by advancing large credits, first to the Bank of England and next to the Treasury, and for the moment it was hoped that the corner would be rounded, but the intervention of a naval mutiny at Invergordon, which was bruited round the world with electric effect, rendered it finally certain that the pound must be driven from its gold moorings.

Before this historic event took place, the British Government and people had begun to face the facts. In the third week in August a National Government was formed with three avowed objects: the first was to balance the Budget, the second to save the pound, and the third to correct any unfavourable trend in the balance of payments. In September Mr (now Viscount) Snowden introduced a supplementary Budget, the features of which were the institution of drastic economy, including salary and wage reductions, the discontinuance of borrowing for the Unemployment Insurance Fund, the placing of the Fund on a sound basis through the decrease of benefits and the increase of contributions, the raising of the income tax to 5s. 6d. in the £, and the increase of the beer and other duties. The results accruing from these measures appear to be adequate, and the Treasury are confident that a balance or even a surplus will be achieved at March 31st. To go off the gold standard with a balanced budget has proved to be a very different thing from going off that standard under the necessity of resorting either to borrowing or to the printing press. Indeed, the pound, after its initial fall, has been easily maintained at a stable quotation; only a negligible increase has taken place in the internal commodity price level; and inflation of credit and currency has been studiously avoided. Our export trade enjoyed at first a slight stimulus from the depreciation of the currency, but the grave difficulties and lowered purchasing power in the countries which are our principal customers went far to offset this advantage.

The only comfort which we can derive from a contemplation of the past year is that, relatively speaking, Britain emerged less scathed than most of the other nations. Her banking structure has stood four-square to all the winds of adversity; unemployment on balance has not increased, and on the whole there is ground for assurance that this country is in a position to take its proper share in a resuscitated world trade if and when improvement sets in. The only qualification to this assumption is the hampering effect upon the export trade which will be exerted by the Government's now avowedly Protectionist fiscal policy. But whatever the grounds may be for comparative complacency with regard to the domestic position, the lesson has been only too clearly learned that no country, least of all Britain, with her enormous international connections, can prosper by herself while the rest of the world is sick. The greatest failure of the year 1931 is that great opportunities were missed and no progress made towards the solution of the international problems which are the legacy of the war, and which must be solved before we can hope to see the dawn of prosperity.

PRODUCTION AND TRADE.

BRITISH INDUSTRY.

The history of British production and commerce in 1931 falls into two parts. The first period, ending with the suspension of the gold standard on September 21st, was characterised by a general and rapid deterioration in nearly all branches of industry and trade. The downward movement was further accelerated in July with the advent of the financial crisis in Central Europe.

As was to be expected, the setback was most pronounced in the export industries and in those trades which are engaged in the production of capital goods. The sharp decline in international trade, and the consequent intensification of competition, left the British manufacturer at an increasing disadvantage because of his relatively higher costs. Since the proportion of the total product of industry and mining normally sold abroad may be put at about 30 per cent., the shrinkage in exports, coupled with a decline in purchasing power at home, greatly reduced the demand for new plant and machinery. A large proportion of existing capital equipment became redundant, and replacements and renewals were deferred indefinitely.

A similar contraction also took place in the industries ancillary to production, namely shipping and railways. Thus shipping freights, as measured by our index

number, declined from 81.5 (1913 = 100) in December, 1930, to 74.7 in September last year. The figures for the first ten months of the year, relating to railway freight train traffic, are given below:—

Description.	Great Britain. (All Standard-Gauge Railways.)		
	Aggregate, Jan.-Oct., 1931.	Inc. (+) or Dec. (-), compared with the corresponding period of 1930.	
	Tons.	Tons.	Per Cent.
Freight train traffic (excluding free-hauled):			
Merchandise*	40,944,848	— 5,465,418	-11.8
Minerals and merchandise†	39,878,486	— 9,869,550	-19.9
Coal, coke and patent fuel	142,457,783	— 16,937,846	-10.6
Live stock	1,659,619	— 318,989	-16.1
Total	224,940,736	— 32,591,803	-12.7

* Excluding Classes 1-6.

† Classes 1-6.

The decline of 12.7 per cent. in total tonnage compares with a decrease of 7 per cent. in 1930. Allowance must, of course, be made for the transfer of traffic to road vehicles, but it will be seen that the decline was most pronounced in minerals and heavy materials, which are not suitable for road haulage. General merchandise shows a fall of 11.8 per cent., and the volume of fuel carried was 10.6 per cent. lower.

Following the abandonment of the gold standard, the depreciation of the £ in terms of gold brought immediate relief to some of the principal industries. The index of production prepared by the London and Cambridge Economic Service rose from 81.1 (1924 = 100) in the third quarter to 89.5 in the December quarter. The principal industries to benefit from the reduction in costs expressed in terms of gold were the textile trades. In the cotton trade the percentage unemployed decreased from 44.6 per cent. to 27.4 per cent. between September and December. In the woollen and worsted trades the percentage fell from 35.2 to 16.6, and in silk manufacture and rayon weaving from 33.6 to 22.6. Many other branches of activity, however, and, in particular, the heavy manufacturing industries, failed to register an expansion in output. In shipbuilding and in several other industries production continued to decline. At best it may be said that the suspension of the gold standard temporarily checked the downward trend in industrial and commercial activity. In short, it enabled some British exporters to increase their proportion of a declining total of international trade. In view of the fact that other countries followed our example, and because of the increase in the obstacles placed in the movement of merchandise between countries, the advantage of lower costs in terms of gold had already begun to wear off at the end of the year.

The results for the whole of 1931 are set out in the table below, in which we have grouped together a number of indices and other data of output and trade for the past three years:—

PRODUCTION AND BUSINESS.			
Indices of production—	1929.	1930.	1931.
London and Cambridge Econ- omic Service (1924 = 100) ...	110.6	98.5	84.1
Board of Trade (1924 = 100) ..	111.8	97.9	(a)
Output of—			
Saleable coal (Mn. tons).....	257	244	220
Pig iron (Mn. tons)	7.6	6.2	3.8
Steel (Mn. tons)	9.6	7.3	5.2
Rayon yarn and waste (Mn. lbs.)	56.9	48.7	54.6
Indices (Economist) of Business			
Activity (1924 = 100)—			
Net imports, raw materials	113	101	95 (b)
Exports, British manufactures ..	109	87.5	65 (b)
Total foreign trade turnover ...	112	102	95 (b)
Consumption of—			
Iron and steel	103.5	103	92
Cotton	106	76	78
Coal	106	106	102
Provincial clearings	99	91.5	91.5
Volume of employment	107	103	99
Shipping movement.....	111.5	109.5	102

(a) For the first nine months of 1931 the figure was 92.2, as compared with 104.4 in the corresponding period of 1930.
(b) Provisional figures.

Indices (Board of Trade; 1924 = 100)—	1929.	1930.	1931.
Postal receipts	116	117	116.5
Building plans approved—			
Dwellings	117.5	124.1	107.5
Others	140.5	135.7	109.8

The average figures for the year necessarily disguise the progressive shrinkage to September, followed by a slight sectional improvement during the last quarter. It will be seen that the fall in activity was much more pronounced in the past year than during the first year of the crisis. A noteworthy feature was the relative steadiness in the industries which are engaged in supplying the home demand for consumers' goods. Among these branches of activity, the food, drink and catering trades, and the tobacco industry are the outstanding examples.

AGRICULTURE.

The agricultural year 1931 will be remembered as a particularly lean one. The normal effect on production of substantial reductions in acreage was intensified by the unfavourable climatic conditions which prevailed throughout the greater part of the year. Moreover, the price level of most commodities showed an even sharper decline than in the previous year, and the producer was thus deprived of the advantage of the rise in prices which ordinarily follows a diminished output. On the whole the year accentuated rather than relieved the depression which has marked the industry during the last few years. The total area returned as agricultural land by occupiers of holdings exceeding one acre was 30,599,000 acres, showing a further net reduction of 75,000 acres. The area under crops and grass was reduced by 97,000 acres, while rough grazings expanded by 22,000 acres. The arable area was 9,582,000 acres, a loss of 251,000 acres (2.6 per cent.) on the year, while the area actually under crops was 471,000 acres less than in 1930. There were substantial reductions in the acreage under all corn crops except barley, which showed an increase of 9,000 acres (less than 1 per cent.). The wheat area was smaller than in 1930 by 149,000 acres (11 per cent.), and that under oats by 127,000 acres (7 per cent.), while the acreage under mixed corn, rye, beans and peas also showed a relatively high reduction. Under the stimulus, doubtless, of the better prices ruling for the 1930 crop there was an increase in the potato acreage of 22,000 acres (5 per cent.), but this increase was heavily counterbalanced by the reduction in the acreages under roots and sugar beet, the former showing a loss of 68,000 acres as compared with the previous year, and the latter a reduction of no less than 114,000 acres. Most vegetables were grown on appreciably increased areas, but there was a decrease in the fruit acreage and a further small reduction in the area under hops.

Yields were generally below average, and this, coupled with a decrease in acreage, resulted in an appreciable reduction in the total production of most crops. The corn harvest was carried out under unusually difficult conditions, and the excessive wet and lack of sunshine resulted in a good deal of corn being harvested in a damp and soft condition. The yield of oats and beans was very slightly above average, but, owing to the reduction in acreage, the total production in each case was much below that of 1930. Wheat, barley, mixed corn and peas were below average, and, except in the case of barley, where there was an increased acreage, the total production fell short of that of the previous year. Notwithstanding the increased area, the total production of potatoes was over 300,000 tons below that of 1930 (i.e., about $\frac{1}{2}$ million tons below average), and was the smallest crop since 1912. The quality of the crop, moreover, was adversely affected by the wet conditions in which it was lifted and clamped. The yield of turnips, swedes and mangolds was also below average, and the total production in each case was nearly 1,000,000 tons below that of 1930. The hay crop was even more abundant than in the previous year, and the yields of both seeds and meadow hay well above average. The quality of the hay, however, was gene-

rally inferior, except for the earlier cuts secured under more favourable conditions. The fruit crop was only fair, most kinds of fruit yielding under average crops, and the hop crop was moderate in quality and below average in yield.

All kinds of live stock except horses showed an increase on the year. Cattle were up by 215,000 (3.7 per cent.), sheep by 1,433,000 (8.8 per cent.), and pigs by 473,000 (20 per cent.). The number of horses on agricultural holdings showed a further reduction of 22,900 (2.4 per cent.). Poultry showed an increase, except geese and turkeys, the number of fowls being nearly 5,000,000 more than in 1930.

The downward movement shown in recent years in wholesale prices of most agricultural commodities was accentuated during the year under review. The monthly general index figure fell as low as 12 points above the level of the pre-war basis (1911-13), and never rose beyond 30 points above the base level, whereas the range in 1930 was between 26 and 48 points. Over the whole year the general index was 20 points above the base years, as compared with 34 points in 1930. Potatoes showed a marked recovery from the level of the previous two years, and fruit and hops were also appreciably dearer. In the case of practically all other commodities there was a marked fall from the price level of the previous year, the drop being most marked in the case of wheat, hay, sheep, pigs, and wool. The following are the principal index numbers compared with 1930:—

1911-13 = 100.			
1930.	1931.	1930.	1931.
Wheat	105	76	147
Barley	100	100	136
Oats	87	88	117
Fat cattle	133	122	138
Fat sheep	160	133	96
Bacon pigs ...	153	107	82
Pork pigs	165	123	47
Milk	161	147	118
Butter	128	111	96
Cheese	130	116	101
Poultry			144
Eggs			116
Fruit			132
Vegetables...			140
Potatoes			188
Wool			52
Hops			77
Hay			86
Feeding stuffs			83
Fertilisers ...			96

Notwithstanding the somewhat depressing picture created by the statistical returns, the year closed with signs of reviving confidence, based, be it said, on the near-sighted fallacies of protectionist dogma. The Horticultural Products (Emergency Customs) Act, 1931, passed at the end of the year, imposed duties on certain imported horticultural products. Oblivious of wider considerations, the agriculturalists found therein a basis for optimism.

OVERSEAS TRADE.

In 1931 overseas trade underwent a violent decline from the already low level of the preceding year:—

FOREIGN TRADE VALUES.

	1924.	1929.	1930.	1931.
Imports	£ mill. 1,277.4	£ mill. 1,220.8	£ mill. 1,044.0	£ mill. 862.2
British exports	801.0	729.3	570.8	389.2
Re-exports	140.0	109.7	86.8	64.0
Total exports	941.0	839.1	657.6	453.2
Excess of imports over total exports	336.4	381.7	386.4	409.0

Substantial though the contraction in imports was, that in exports was even more marked, and there was in consequence a substantial increase in the adverse balance of merchandise trade.

Retained imports and exports in the three principal classes are shown below:—

	1924.		1930.		1931.	
	Retained Imports.	Exports.	Retained Imports.	Exports.	Retained Imports.	Exports.
Food, drink and tobacco	£ mill. 541.2	£ mill. 57.0	£ mill. 451.4	£ . 48.2	£ mill. 396.8	£ mill. 35.5
Raw materials and articles mainly unmanufactured	323.8	106.5	212.1	63.8	147.6	47.1
Articles wholly or mainly manufactured	266.0	618.9	283.3	440.0	244.5	290.6

There was little, if any, decline in the volume of food imports, and the fall in value was mainly due to the lower level of prices. Imports of raw materials, however, showed a decline only too painfully indicative of the state of industry, whereas manufactured imports were comparatively little reduced. Exports of manufactures fell disastrously, and only a small part of this can be attributed to the fall in prices, for the Board of Trade index of the volume of trade shows exports of domestic manufactures in 1931 to have been only 74.2 per cent. of the 1930 level. This is borne out by the more detailed table below, which shows the quantities of some of our most important exports:—

SOME LEADING EXPORTS. Quantity ('000's omitted).					
	1924.	1928.	1929.	1930.	1931.
Coal	61,651	50,052	60,267	54,874	42,750
Total iron and steel manu- factures	3,851	4,261	4,379	3,160	1,981
Cotton yarns	163,056	169,207	166,637	136,988	133,516
Cotton piece-goods	4,443,959	3,866,500	3,671,687	2,406,767	1,716,249
Wool tops	411	344	327	288	280
Woolen tissues	164,740	128,339	108,185	79,042	56,331
Worsted tissues	56,843	42,111	47,281	34,711	29,746
Linens piece-goods	110,786	66,135	71,540	61,450	65,342
Boots and shoes	998	1,079	1,006	897	691
Paper and cardboard	4,757	4,539	5,047	4,257	3,240
Locomotives	24	41	40	61	20
Motor cars and chassis	15	33	42	30	24

These figures reflect eloquently the disorders in the world's commerce. Our coal exports have been affected not only by the idleness of increasing numbers of factories abroad, but also by the French quota system. In general, our export trade has suffered from the rising walls of tariffs and the rationing of imports imposed by exchange regulations in many countries.

In some instances, and to a limited extent, these influences were counteracted during the closing months of the year by the artificial stimulus afforded by the depreciation of the sterling exchange.

The final table shows the volume of overseas trade, as calculated by the Board of Trade, during each quarter of 1930 and 1931, expressed as an index of the base 1930:—

VOLUME OF TRADE. 1930=100.			
	Total Imports.	British Exports.	Re-exports.
1924	91.6	116.2	130.6
1930 First quarter	100.7	111.4	103.3
Second quarter	97.5	98.3	111.2
Third quarter	94.2	96.0	87.8
Fourth quarter	107.6	94.3	97.7
1931 First quarter	95.2	77.7	95.2
Second quarter	97.6	74.0	107.6
Third quarter	99.2	74.4	80.8
Fourth quarter	117.3	78.8	98.9
Year 1931	102.3	76.2	95.6

The decline in exports of domestic produce still looks impressive enough, even when it is not magnified by the fall in prices. Re-exports show a smaller decline because, in the base year 1930, they had already shrunk to extremely reduced dimensions.

INDUSTRIAL PROFITS.

During 1931 the profits of joint-stock industrial undertakings reflected the increasing severity of the industrial depression and the widening scope of its ill-effects. Taking the calendar year as a whole, the accounts of 2,009 concerns showed a decline in net earnings of no less than 22.5 per cent.:—

NET PROFIT (AFTER PAYMENT OF DEBT INTEREST, &c.).

	Number of Companies.	Reports published in		Increase (+) or Decrease (-).
		1930.	1931.	
First quarter	596	75,816,474	67,736,226	-8,080,248
Second quarter	619	79,490,653	64,051,136	-15,439,517
Third quarter	320	24,793,702	15,996,685	-8,797,017
Fourth quarter	474	26,460,390	12,292,859	-14,167,531
Total	2,009	206,561,219	160,076,908	-46,484,311
				-22.5

The fall was progressive throughout the year, every quarter—and almost every month—being worse than the last, while in the final three months the published reports showed a contraction in earnings of not less than 53.9 per cent. In that quarter all groups suffered to a greater or lesser extent from deteriorating conditions. In the following table we show the ratio of net profits to preference and ordinary capital, and the average dividend paid on preference and ordinary shares during the past seventeen years, except the war period.

PROFITS AND DIVIDENDS.			
	Ratio of Profits to Pref. and Ord. Capital.	Average Dividend on Preference Capital.	Average Dividend on Ordinary Capital.
1909	7.4	4.3	6.3
1910	8.2	4.5	7.0
1911	9.9	4.9	8.5
1912	10.2	5.2	8.5
1913	11.7	5.1	10.2
1920	15.2	5.0	12.6
1921	10.3	5.2	10.2
1922	7.0	5.2	8.4
1923	9.8	5.3	9.3
1924	10.3	5.4	9.8
1925	10.9	5.5	10.3
1926	11.3	5.4	11.1
1927	10.5	5.3	10.8
1928	11.1	5.4	10.6
1929	10.5	5.5	10.5
1930	9.8	5.7	9.5
1931	7.2	5.2	7.2

The average rate of interest paid on debenture capital in 1931 was 5.01 per cent., as compared with 5.39 per cent. a year ago and 5.15 per cent. in 1929, while the ratio to total ordinary and preference capital of the amounts reserved showed a further sharp fall at 0.7 per cent., against 1.7 per cent. in 1930 and 1.9 per cent. in the previous year. In the last quarter of the year the average rate of ordinary dividend had fallen to 3.9 per cent., against 8.4 per cent. in the corresponding quarter of 1930, while as compared with a proportion of 15 per cent. of net profits "left in the business" in 1930, there was a call on reserves of 20 per cent. in 1931.

COMMODITY PRICES.

From January to the suspension of the gold standard in September, the progressive decline of wholesale prices, which was the outstanding feature of 1930, continued unabated. Following the departure from gold, sterling prices naturally rose, and our index number at the end of September showed an increase of nearly three points. By the end of the year, however, our index was still below the level of January, 1931, while the average figure for the whole year, at 64.9, compares with 77.6 for 1930:—

1927 = 100.						
Date.	Cereals and Meat.	Other Foods.	Textiles.	Minerals.	Miscellaneous.	Complete Index.
Average, 1925	114.1	101.0	124.0	111.8	108.7	112.0
" 1926	102.8	96.6	97.2	119.8	104.0	104.0
" 1927	100.0	100.0	100.0	100.0	100.0	100.0
" 1928	103.6	93.8	105.1	92.1	95.8	98.1
" 1929	96.9	85.8	92.2	95.6	90.5	92.4
Average, 1930	81.0	77.2	64.4	83.6	81.6	77.6
" Dec. 1929	92.3	83.6	82.6	92.4	89.2	88.3
" Dec. 1930	70.0	71.0	51.4	78.0	75.2	68.7
" Jan. 1931	67.4	69.5	49.2	75.3	72.6	66.3
" Feb. "	66.4	68.0	50.6	76.9	72.7	66.5
" Mar. "	66.9	67.0	53.7	74.5	69.9	66.2
" Apr. "	70.0	66.6	50.8	72.0	68.6	65.4
" May "	69.0	63.5	48.2	69.5	68.2	63.6
" June "	68.8	60.2	48.4	72.4	68.7	63.6
" July "	68.5	60.0	47.1	69.7	67.6	62.5
" Aug. "	69.7	63.5	44.1	70.0	66.2	62.3
" Sept. "	68.0	68.1	49.5	72.9	68.9	65.1
" Oct. "	70.2	66.9	52.5	73.7	65.8	65.5
" Nov. "	70.4	65.4	53.7	74.5	66.6	65.9
" Dec. "	69.0	65.7	52.8	76.7	66.2	65.8
Average, 1931	63.7	65.3	50.0	73.1	68.4	64.9

It will be noted from the above table that in each section into which our index is sub-divided the average for 1931 was below that of the previous year.

In the next table we give the figures of our index number converted to a percentage of the average level of the last pre-war year:—

1913 = 100.						
Date.	Cereals and Meat.	Other Foods.	Textiles.	Minerals.	Miscellaneous.	Complete Index.
Average 1926	143.9	154.0	149.6	145.6	129.5	143.2
" 1927	139.9	159.3	153.9	121.6	124.6	137.6
" 1928	145.0	149.4	161.7	111.9	119.3	135.1
" 1929	135.6	136.8	141.9	116.2	112.7	127.2
" 1930	113.4	122.9	99.1	101.6	101.5	106.8
End June, 1930	115.1	124.0	102.4	100.7	104.7	108.5
" Dec., 1930	98.0	113.2	79.1	94.8	93.7	94.6
" June, 1931	96.3	95.9	74.5	88.0	85.6	87.5
" Dec., 1931	96.6	104.7	81.3	93.3	82.4	90.6
Average 1931	96.1	104.1	77.0	88.9	85.3	89.3

In spite of the rise in sterling prices since September it will be seen that wholesale prices at the end of the year were considerably below the pre-war level.

In the following table we show the annual changes which have occurred in each group of prices since 1926:—

YEARLY AVERAGES (1924 = 100).						
	1926.	1927.	1928.	1929.	1930.	1931.
Cereals and meat	90.0	87.5	90.7	84.8	70.9	60.1
Other foods	90.6	93.8	87.9	80.5	72.3	61.2
Textiles	71.1	73.1	76.8	67.4	47.1	36.6
Minerals	100.3	85.7	77.1	80.0	70.0	61.2
Miscellaneous	98.4	94.7	90.7	85.7	77.3	64.8
Complete index ...	89.9	86.4	84.8	79.9	67.0	56.1

Since our departure from the gold standard, the *Economist* has compiled, for the sake of closer comparisons, two additional indices, indicating, respectively, the course of the sterling prices of certain primary products and that of an approximately corresponding group of gold prices. We print below the monthly figures expressed as a percentage of the level of September 18, 1931:—

(September 18, 1931 = 100.)		
	Sterling Prices.	Gold Prices.
1931.		
	(Primary Products.)	
September 30	112.0	94.7
October 28	114.4	101.4
November 25	114.8	98.0
December 30	117.1	94.4

Our final table shows the average percentage increase, as compared with July, 1914, for all the items included in the Ministry of Labour's cost-of-living figure for the past seven years:—

AVERAGE PERCENTAGE INCREASE SINCE JULY, 1914.—All items (Food, Rent, Clothing, Fuel and Light, &c.).							
Month (beginning of).	1925.	1926.	1927.	1928.	1929.	1930.	1931.
January	80	75	75	68	67	66	53
February	79	73	72	66	65	64	52
March	79	72	71	64	66	61	50
April	75	68	65	64	62	57	47
May	73	67	64	64	61	55	47
June	72	68	63	65	60	54	45
July	73	70	66	65	61	55	47
August	73	70	64	65	63	57	45
September	74	72	65	65	64	57	45
October	76	74	67	66	65	56	45
November	76	79	69	67	67	57	46
December	77	79	69	68	67	55	48

Allowing for the normal seasonal tendency of prices to increase towards mid-winter, the effect of the suspension of the gold standard, up to the end of 1931, on the cost of living was negligible.

MONEY AND EXCHANGES.

MONEY MARKET.

Until the Credit-Anstalt failure in May, events were comparatively placid. Early in the year, financial accord was established between London and Paris, and the drain of gold from London was successfully checked by the reduction of the Banque de France's rediscount rate, by the decision of the Banque de France to purchase standard gold, and by the vigorous open-market policy of the Bank of England. This last operation pulled the London market rate of discount up from 2½ to 2¾ per cent., thereby making the 3 per cent. Bank rate effective and attracting foreign short money to London. The leading exchange rates promptly moved in favour of sterling, and by March the Bank was able to resume its regular purchases of part of the Cape gold after an interval of almost exactly a year.

Early in May, world monetary conditions became still easier. The New York rediscount rate was reduced from 2 to 1½ per cent., and the Bank of England at once relaxed its open market policy and let it be known that it was no longer advisable to maintain market rate at 2½ per cent. A week later Bank rate was reduced to 2½ per cent., or to the lowest point since the war. This reduction, however, did not exercise its full normal effect upon the market, for the clearing banks made no change either in their rates on London deposits or on their minimum rates for loans to the market. The former rates remained at 1 per cent., and the latter at 2 per cent.

Then came the crisis. In May, the Credit-Anstalt suspended payment, and despite immediate efforts made on an international scale it proved impossible to set matters right. This initial shock to world financial confidence rapidly affected Germany, and withdrawals of short money from Germany had by the end of a fortnight reached such dimensions as seriously to threaten her gold reserves and the stability of the mark. For a few days it looked as if an immediate crash was inevitable.

Fortunately there came temporary relief, in the form of the Hoover moratorium declaration backed in more tangible form by a rediscount credit of \$100 millions granted to the Reichsbank by various foreign central banks acting through the B.I.S. For a few weeks the situation was saved, but then confidence again waned as a result of serious business failures in Germany and the delays in obtaining a general adoption of the Hoover moratorium. By the middle of July the crisis had become more acute than ever, for the Danatbank suspended payment, and the German Government had to proclaim a brief bank holiday, followed by drastic restrictions upon financial operations of every kind. These ultimately developed into the Standstill Agreement between Germany and her foreign creditors, first reached in August, and renewed early in the current year.

Until early July, the London money market appeared unaffected by the serious news from the Continent, but London was soon implicated in the crisis, the more so as foreign opinion had been perturbed by the position of the British national finances. Foreign centres began to draw on their London balances, partly in order to strengthen their own cash position, and partly through fear that difficulties might be put in the way of the withdrawal of funds. During July, the Bank lost £30,000,000 of gold, and Bank rate was hurriedly raised first to 3½ and then to 4½ per cent. The market reflected the growing tension by raising its rate to 4½ per cent.

In the following seven weeks there came the "revelations" in the May report on the state of our national finances, and the opening of the Bank of England's Paris and New York credits, amounting in all to £50,000,000. These were accompanied by the increase in the fiduciary note issue from £260,000,000 to £275,000,000, and were followed by the downfall of the Labour Government. Then came the National Government, the balancing of the Budget, and the

arranging of the £80,000,000 Treasury credit in Paris and New York. All this time the drain of funds from London continued, for confidence by then had been destroyed, and banks in France and the United States were faced with ugly rushes by their customers. Germany was by then being propped up by the standstill agreement, and foreign funds in other Central European countries were equally irrecoverable.

On September 21st, the breaking-point was reached. Withdrawals of foreign funds from London had by then reached £200,000,000, and the Bank and Treasury credits were both practically exhausted. The Bank of England received authority to suspend gold payments; Bank rate was raised to 6 per cent.; the Stock Exchange was closed for two days, restrictions were imposed upon foreign exchange dealings, and the pound fell initially to a discount of 20 per cent.

The next few weeks passed fairly comfortably. Money became relatively plentiful, and the clearing banks largely suspended their weekly making-up operations. Withdrawals of foreign funds were partly checked and partly offset by the return of funds from abroad stimulated by the growing confidence in the new Government. The exchanges were also supported by speculative purchases of sterling in foreign centres based on the outcome of the general election, and further confidence was created at the end of October by the successful repayment of £20 millions of the Bank of England's Paris and New York credits. It is true

GOLD AND MONEY RATES.

that £15 millions of gold had to be shipped to cover this operation, but as the gold standard was suspended, this gold loss gave rise to no misgivings. The crisis had shifted to the United States, for September and October witnessed heavy gold shipments from New York, and a rise in that country's rediscount rate from 1½ to 3½ per cent.

It was, however, only outward ease. The immobilisation of funds in Germany under the standstill agreement, the parlous plight of Central Europe, the suspension of the gold standard by the Scandinavian countries, the hurried general abandonment of the gold exchange standard, and banking difficulties all over the world, between them produced a continual crop of unfounded rumours as to the stability of London houses. The discount market in turn began to feel doubts as to the wisdom of taking up German renewal bills drawn under the standstill agreement, and all bank bills were carefully scrutinised and dealt with on their merits. As a result, discriminatory rates were quoted, for while unimpeachable bills were dealt in at rates which at one time ran down to 5½ per cent., 5½ and even 6 per cent. was charged for German renewals. The market in bank bills in fact became extremely narrow, and business was largely confined to Treasury bills. As a result of this, there was often to be obtained a wide and remunerative turn between the tender rate for new

Treasury bills and the rate for "hot" Treasuries the following week.

In November, sterling depreciated heavily once more, and money became tight, as a result, mainly, of preparation for the December War Loan dividend; for by the end of the month public deposits at the Bank had been raised to £27,000,000. Afterwards, the payment of the dividend produced its usual artificial ease, with money unobtainable at rates running down to 3 per cent. Discount rates on bank bills, however, continued to reflect the strain.

In December, the announcement by the German Government that there would be no discrimination against bills maturing after the expiry of the standstill agreement, then due to take place on February 29, 1932, and the consequent decision of London banks and accepting houses to continue accepting German renewal bills right up to February 29th gave only partial relief to the tension. The year closed with the problems both of the money market and the world at large awaiting a final settlement.

The course of Bank rate in different countries during 1930 is summarised below:—

INTERNATIONAL COMPARISON OF BANK RATES.												
End of Months of 1931.												
	January.	February.	March.	April.	May.	June.	July.	August.	September.	October.	November.	December.

Riga	2	2	2	2	2	2	2	2	2	2	2	2

† From July 23rd to 29th, 3½ per cent.
‡ From August 1st to 11th, 15 per cent.
§ From October 8th to 14th, 2½ per cent.
|| From September 11th to 24th, 5 per cent.; from September 25th to 27th, 6 per cent.
¶ From September 21st to 24th, 5 per cent.; from September 25th to 27th, 6 per cent.
‡ From September 5th to 20th, 4 per cent.; from September 21st to 25th, 5 per cent.
d From October 1st to 11th, 7½ per cent.; from October 12th to 25th, 9 per cent.
e From June 8th to 14th, 6 per cent.
f From July 13th to 16th, 6 per cent.; from July 17th to 27th, 7 per cent.

The general increase during the latter part of the year well reflects the crisis and the prevailing tension. In view of the suspension of the gold standard by some countries, the hurried jettisoning of the gold exchange standard by others, the difficulties not only of Germany and Central Europe but also of certain South American countries, and the huge movements of gold directly due to these developments, it is by no means surprising that most central banks have had to invoke the weapon of a high rediscount rate in order to protect themselves. Nor is it easy to envisage much cheaper money rates until more settled conditions are established.

We append our usual table of London rates:—

LONDON RATES.												
Whole Year												
	1922.	1923.	1924.	1925.	1926.	1927.	1928.	1929.	1930.	1931.		
Changes in Bank rate	four	one	none	four	none	one	none	five	four	four		
Highest Bank rate	5	4	4	4	5	5	4	4	5	6

Difference	1/0/10	1/0/10	9/3	9/9	9/9	8/2	7/0	4/8	16/2	7/7		

BANK CLEARINGS.

It was inevitable that depressed trade, lower commodity prices and the growing stagnation of financial business should for the second year in succession have been the cause of serious reductions in bankers' clearings in 1931, as compared with the preceding year. Still, in so far as metropolitan and country clearings are concerned, the reduction is less than might have been expected.

	1931.	Decrease in comparison with 1930.	Decrease in 1930 in comparison with 1929.
Town clearings	£ Mn. 31,816	— 6,967	— 17.9
Metropolitan clearings	1,668	— 114	— 7.9
Country clearings	2,752	— 211	— 7.1
Grand Total	36,236	— 7,322	— 16.8

The 1931 decrease in town clearings is amply explained by the absence of Stock Exchange and discount market activity and by the dearth of new capital issues. The contraction in metropolitan and country clearings is not inordinate when the fall in retail prices is taken into account, and while the returns of metropolitan clearings for the fourth quarter of the year were such as to confirm other despondent accounts of the 1931 Christmas trade, country clearings gave evidence of a slight, precarious improvement in business. Provincial clearings were on the whole disappointing. Taking 1930 and 1931 as a whole, Nottingham showed a decrease of 25.3 per cent., Sheffield one of 15.5 per cent., and Bradford, Leicester, Liverpool and Manchester declines of 10 to 15 per cent. The only redeeming feature in the provincial clearing returns is that as the year progressed the contraction below 1930, taken quarter by quarter, narrowed steadily from 17 per cent. for the first quarter to 3.4 per cent. for the last. This possibly points to some gradual improvement of trade.

FOREIGN EXCHANGES.

The year opened calmly, but an underlying strain was evident, and events were soon to prove how severe this strain was to be. January saw sterling very steady and firm against all the principal currencies, the range between highest and lowest during the month against the dollar being 4.85½ and 4.85½, and against the franc 123.92 and 123.66. February opened ominously with a moratorium declared on foreign debt payments by Peru, and the revelation of a large Budget deficit in Australia. This was preceded by a rapid depreciation of the Australian exchange, the sight buying rate, London on Australia, rising from £109 16s. 3d. per £100 on January 8th to £131 10s. on January 28th. Sterling never went below 4.85½ against the dollar, and was at one time 4.86½, and maintained itself well against all other currencies. The peseta began to show signs of deterioration, but recovered in March. March progressed with the same air of tranquillity, and funds were attracted to London from both Paris and New York. Sterling ranged between 4.86 and 4.85½ and 124.22½ and 123.97½ against the franc and dollar respectively, and against other currencies showed no great change, the tendency if anything being in our favour. The peseta was firmer. On April 1st the Chancellor of the Exchequer anticipated a deficit of £23,000,000, but sterling remained to all intents and purposes unaffected, the franc rate actually touching 124.43½ and the dollar 4.86½, other currencies being quoted equally in favour of the £. The peseta again weakened to 48.90 as a result of loss of confidence owing to political uncertainty which found its echo in the proclamation of the Republic and the flight of the king on the 14th. At the same time it was evident that the world monetary position was gradually becoming involved.

In May the Credit-Anstalt was declared to be in difficulties, and towards the end of the month the United States began to make heavy withdrawals of funds from Europe. The exchanges, however, showed no symp-

toms of serious disturbance. The dollar rate, highest and lowest, was 4.86½ and 4.86½, the franc 124.45½ and 124.16½. As a result of continued political uncertainty the peseta weakened to 56.40 at one time, the best rate during the month being 46.52½, but between these quotations fluctuations were frequent and wide. Early in June there began a panic drain of funds from Germany, followed by Mr Hoover's proposal for an all-round moratorium on political debts and the granting to the Reichsbank of an emergency credit by the New York Federal Reserve Bank and European Central Banks. Sterling ranged between 4.86½ and 4.86½ to the dollar and 124.11 and 124.28½ to the franc, and was correspondingly firm against other currencies. Pesetas were weak and irregular, and fluctuated wildly between 58.25 and 47.90. In July, after the closing of the German banks and stock exchange, a relatively sharp break was recorded in sterling, and simultaneously a heavy drain of the gold reserves of the Bank of England set in, leading to a record withdrawal of £5,000,000 in one day on the 16th. The New York rate moved from 4.86½ to 4.84½, Paris from 124.27½ to 123.12½, and Amsterdam from 12.09½ to 12.02½. Berlin went at one time to 25.75. Between July 23rd and 25th heavy gold withdrawals from the United Kingdom established new records. August opened with the grant of a credit of £50,000,000 by France and the United States to the Bank of England, but another sharp fall in sterling followed.

After the formation of the National Government, sterling touched 4.85 against the dollar and 123.62½ against the franc. The peseta weakened to 57.25. Amsterdam was quoted at 12.03½. From this time onwards Berlin forward quotations became largely nominal, and remained so till the end of the year. Following the suspension of gold payments by the Bank of England, the London Stock Exchange and most foreign bourses were closed, and stock exchange and foreign exchange dealings in London were controlled. Marks were heavily offered in most markets. Sterling rates crashed, the dollar touching 3.65, francs 91.00, Brussels 25.75, Milan 72.00, Zurich 19.00, Amsterdam 8.75, Berlin 15.50, Madrid 40.75; other currencies following suit. In the last quarter of the year the crisis was accentuated, and exchange fluctuations became more violent. Control of the movement of foreign exchange was gradually enforced all over Central Europe. These measures meant, in fact, that the countries concerned were no longer on an effective gold standard, and, although the quotations of their exchanges remained in most cases round about their former levels, they were henceforth merely nominal.

A heavy drain of gold from New York set in in October mostly towards France. At the end of the month the Bank of England repaid £20,000,000 of the £50,000,000 Franco-American credit granted on August 1st. During this period, and in spite of the stringent restrictions, the position of the Reichsbank had steadily deteriorated, until on November 3rd the cover for the note issue was only 27 per cent. On November 5th the National Cabinet was formed in Great Britain, one of its first acts being the introduction of the Abnormal Imports Bill. Otherwise the month was quiet, but there were still symptoms of underlying strain. In December the departure of Japan from the gold standard, the further drastic tightening up abroad of Exchange restrictions and the declaration of a moratorium by many States, notably Hungary and Uruguay, showed that the crisis was becoming even more intense. The reaction of sterling to these events was at first comparative steadiness in early October at about 3.90 to the dollar and 99 to the franc, but a sharp decline set in towards the end of the month, which brought the rate to 3.67 to the dollar and 93 to the franc on November 3rd. Apart from minor fluctuations rather above this level, this rate was maintained until the last week in November, when there was a further drop on December 2nd to 3.23 to the dollar and 82½ to the franc. Some slight recovery followed, and the year closed with the rate at 3.39½ to the dollar and 86½ to the franc. Silver, which touched its lowest price for

the year at 12½d. on May 29th, a level also recorded on other dates, rose on the departure from the gold standard to round about 17½d. at the beginning of October and to its highest level of 21½d. on November 10th, and reacted at intervals to the influences of speculative buying, the possibility of war in China, and also in lesser degree to the proposals for an international conference on silver, and the possible introduction of bimetallism. The silver exchanges were naturally favourably affected, Shanghai rising to 2s. 0½d. and Hong Kong to 1s. 6½d.

The following table is extracted from statistics published by Messrs. Samuel Montagu and Company:—

* Week ending January 2. † December 1.

The total gold holdings of the above central banks expanded from \$7,644 to \$8,302 millions during the year, a net increase of \$658 millions, or £138 millions. The distribution, however, was greatly altered.

At the beginning of the year the United States held 39.2 per cent. of the gold, France 27.7 per cent., England 9.3 per cent., Germany 6.9 per cent., and Japan 5.4 per cent. The two Scandinavian countries held between them 1.4 per cent., and the remaining European countries 10.1 per cent. Thus already France and the United States held two-thirds of the entire amount. By the end of the year the percentage proportions had changed to 35.8 per cent. for the United States, 32.4 per cent. for France, 7.1 per cent. for England, 2.8 per cent. for Germany, and 2.9 per cent. for Japan. The Scandinavian gold holdings had fallen to 1.1 per cent., but those of the remaining

European countries had risen from 10.1 to 17.8 per cent. Thus the joint holdings of France and the United States were, in proportion to the total amount, much the same at the end as at the beginning of the year. The countries who increased their percentage most were Holland, Belgium and Switzerland. Among the causes of these movements were the withdrawal of funds from Berlin, London, and to a lesser degree from New York; the abandonment of the gold exchange standard by Holland, Belgium and Switzerland, the replacement by these central banks of *devisen* by gold coin and bullion, and the flight of refugee capital to Holland and Switzerland.

NEW CAPITAL ISSUES.

A blight fell on the new issue market during 1931. In the first half of the year the total amount of new capital offerings was little more than half that recorded for the first half of 1930. Thereafter the world crisis hit London with relentless force. In the second half of the year new capital applications reached the puny total of £12.9 millions, in comparison with £98.2 millions and £110.9 millions respectively in the corresponding periods of 1930 and 1929. A mere £4 millions represents the total new financing in the December quarter by home trade and industry. No foreign or Colonial Government or corporation, no foreign railway, no rubber, oil or mining company floated an issue in London between October 1st last and the end of the year. The British Government floated no fresh loan, though National Savings Certificates brought in £10.7 millions net, new sales having steadily exceeded encashments in the first three quarters of the year, in spite of widespread unemployment. In the December quarter, however, the tide turned, encashments exceeding new sales. The year's total of new issues, apart from British Government borrowing, was £92 millions against £202 millions in 1930. The total for the December quarter was no more than £3.9 millions, as compared with £75.3 millions in the December quarter of 1930. In the second half of the year, only two British corporations entered the market—the Borough of Walsall and the Galloway Water Power Company, while Tanganyika, with a July loan of £3,500,000 in 4 per cent. stock at 94½, was the only representative in the six months of all overseas governments, Imperial or foreign. Issues obtained for use abroad totalled about £47 millions in 1931, against £97 millions in 1930 and £87 millions in 1929. After July, however, overseas financing practically ceased. As much as four-fifths of the total new money under all heads was subscribed in the form of fixed interest obligations. Altogether, in the first part of the year, activity in the capital market was retarded by the economic crisis, increasing dislocation in world finance, the need for economy and the grave uncertainty of the outlook. In the second half of the year the rise in interest rates, and the departure of sterling from gold, coming on top of earlier difficulties, practically brought new issue activity to a standstill. Similar conditions applied both to flotations offered directly to subscribers, and those effected by Stock Exchange "introductions." The total nominal capital issued by the latter method during the year was only £8,757,183, compared with £22,158,480 in 1930, and £31,519,934 in 1929.

THE STOCK EXCHANGE.

Although an industrial recovery was anticipated in many quarters in the early part of 1931 under the stimulus of cheap money, the causes of depression proved too deep-seated. The Stock Exchange was ready to respond to the first signs of improvement, but none were forthcoming.

Equity share values were relatively steady, with a slightly downward tendency, during the first three months of the year. They declined sharply in April and May under the shadow of the financial crisis, were sensitive to the better atmosphere prevailing in June after the announcement of the Hoover Plan and declined again in July and August on hope deferred. In September and October values regained almost the

whole of the ground lost during the year in a couple of jumps—the first registering the adjustment of prices to "devaluation" and the second reflecting popular optimism as to the improved competitive power of British industry. By the end of the year, more than the whole of this latter rise had been lost. In brief, share values sagged rather than slumped, and the avidity with which the markets snatched at any plausible excuse for buying was as much a commentary on the relative strength of the underlying position as the failure of each short-lived upward movement was indicative of the helplessness of the Stock Exchange in the face of depressing world factors.

For holders of fixed-interest, as distinct from equity stocks, the year was more disastrous. In 1931, the consciousness of a falling national income, which had driven some holders of ordinary stocks to seek refuge in gilt-edged and prior charges, began to prejudice the latter's own security in the popular estimation. While money remained cheap, fears of budgetary disequilibrium held back the values of British Government stocks. Almost immediately after Britain had balanced her Budget, she left the gold standard. The resulting "inflation" panic, with its flight from fixed-interest securities, would probably have been short-lived even in the absence of special Stock Exchange restrictions on speculative dealings (which were partially removed before the end of the year). The immediate and severe rise in short-money rates, however, which followed the decision of September, was sufficient to prevent a really sustained recovery in prices even after the market had realised that gilt-edged quotations need not fluctuate with gold exchange movements, under an inconvertible currency regime.

The fall in the value of equity stocks was more severe among the "less speculative" groups, like banks and investment trust companies, than among "industrials" as a whole. There were two reasons for this phenomenon. Liquidation of the latter, a year

BRITISH SECURITY VALUES IN 1930-31.
(Actuaries' Index, December 31, 1928 = 100.)

ago, had reached an advanced stage, whereas with the former it had scarcely begun. Secondly, companies like investment trusts whose earnings in any one year reflect, broadly, the earnings of other companies at an earlier period, generally show stable results in the early stages and rapidly declining figures in the later stages of a depression. Broadly speaking, holders of British Government stocks and of high-grade domestic fixed-interest securities had much the same unfavourable experience. Holders of Dominion and foreign fixed-interest securities fared, on the average, much worse, particularly in the case of Indian and New Zealand stocks, where losses were demonstrably severe, in view of the fact that the payment of their interest was never in question. Despite the publicity given to Australian finance and politics, none of the issues showed a very

considerable further decline, after their recession in 1930. Defaults and rumours of defaults seriously affected the prices of foreign bonds, heavy capital losses having been suffered either through the cessation of interest remittances or for political reasons.

The lot of railway stockholders was harder still, though losses were less considerable than in the case of foreign concerns where, in some cases, exchange difficulties aggravated the effect of decreased traffic receipts. Home rail prior securities suffered almost as much as equities, partly owing to fears for the "Chancery" status of the senior stocks of the two largest concerns.

The year 1931 produced no sensational "revelations" like those of the Hatry defalcations in 1929 or the Royal Mail debacle in 1930. Apart from a few cases, like that of the Swedish group, the net decline in values was extensive rather than severe, the markets' capacity for further deflation, at the beginning of 1931, being limited.

For holders of more speculative shares, the year was far from happy. Various restriction schemes failed to bring supplies of raw materials into harmony with progressively declining demand. Some of the leading oil and copper shares, in particular, lost over 50 per cent. of their value at the beginning of the year. South African gold mining shares alone attracted increased attention, but the much announced boom repeatedly refused to start, despite the considerable premium at which the price of gold stood in terms of sterling.

Stock Exchange prospects are inextricably bound up with the settlement of outstanding economic and political questions which are of concern to the whole world. Any settlement which appealed to popular opinion as being reasonable and practicable would have far-reaching effects on security values, since technically the markets are well-placed for recovery. On the other hand, the indefinite continuance of world economic dislocation must tend to prolong the stagnation of business and the paralysis of legitimate speculative enterprise, which were the most depressing factors in the Stock Exchange story of 1931.

LABOUR CONDITIONS.

Although the number of trade disputes begun in 1931 was slightly less than in the previous year, the number of workers involved, directly and indirectly, was considerably higher, while the total number of working days lost in stoppages throughout the year showed an increase of over 50 per cent. as compared with 1930. We show below the Ministry of Labour's figures for the past five years:—

Year.	Number of Disputes Beginning in Year.	Number of Workpeople Involved in Disputes Beginning in Year.		Aggregate Duration in Working Days of All Disputes in Progress during Year.
		Directly.	Indirectly.	
1927	308	90,000	18,000	1,170,000
1928	302	80,000	44,000	1,390,000
1929	431	493,000	40,000	8,290,000
1930	422	286,000	21,000	4,400,000
1931	419	424,600	65,100	6,985,000

The two largest disputes occurred in the cotton and coal-mining industries, and together were responsible for nearly two-thirds of the workpeople affected and for over three-quarters of the aggregate number of working days lost. Although there was no marked improvement in employment until the fourth quarter of 1931, there was not, as in the previous year, a steady monthly decline in the numbers at work. The downward movement was checked in February last, and a slight improvement occurred during the next three months, particularly in the seasonal trades and in several branches of the textile industry. From June to September conditions deteriorated, and in the latter month a record figure of 2,897,000 persons unemployed was reached.

Following the suspension of the gold standard, however, the tide turned, and the situation in most industries by the end of 1931 evidenced some improvement. It is estimated that the number of insured workers in employment at the end of the year amounted to 9,593,000, as compared with 9,475,000 in December, 1930. The monthly figures of registered unemployed during the past two years are as follows:—

NUMBERS (INSURED AND UNINSURED) REGISTERED AT EMPLOYMENT EXCHANGES, &C. (At date of Ministry of Labour Monthly Returns.) (000's omitted.)					
1930.		1931.		1930.	
January	1,534	2,671	July	2,072	2,783
February	1,582	2,694	August	2,106	2,834
March	1,731	2,655	September	2,230	2,897
April	1,752	2,594	October	2,308	2,792
May	1,823	2,580*	November	2,359	2,688
June	1,947	2,736	December	2,725	2,574

* May 18.

In considering the above figures, the effect of the recent regulations governing the payment of benefit must be borne in mind. It is estimated by the Ministry of Labour that by December 21st approximately 90,000 persons, most of whom were women, had ceased to register at the exchanges, although apparently they were still without work.

Unemployment among insured workers during the year averaged 21.3 per cent. (wholly unemployed 16.7 per cent., and temporarily stopped 4.8 per cent.) as compared with 16.1 per cent in 1930 and 10.4 per cent. in 1929.

The following table shows the movement of the unemployed percentage in recent years:—

PERCENTAGE UNEMPLOYED AMONG INSURED WORKPEOPLE IN GREAT BRITAIN AND NORTHERN IRELAND.								
	1925.	1926.	1927.	1928.	1929.	1930.	1931.

* Excluding workpeople in the coal-mining industry who were disqualified for unemployment benefit owing to the dispute.

There was considerable improvement throughout the year in the textile and clothing trades and in the manufacture of iron and steel, with the exception of pig iron. On the other hand, building, coal-mining, engineering, motor vehicle manufacture, shipbuilding, hotel services and the distributive trades recorded a falling-off in activity.

The decline in the average level of wage rates in 1931 exceeded that of any year since 1922. The changes recorded in the industries for which statistics are available resulted in an aggregate net decrease of approximately £405,000 in the weekly full-time rates of some 3,000,000 workpeople, and in a net increase of about £5,000 in those of 46,000 workers. The groups most adversely affected by the fall in wages were Scottish and South Wales coal miners, railway engineers, operatives in the Yorkshire woollen and worsted trade, and boot and shoe and building employees. The average decrease in all industries during the year was equal to increased during 1931. Of the workers affected, 239,000 experienced an increase and 108,000 a reduction. The average net increase was 151,000 hours per week as compared with a decline of 873,000 hours in 1930. The bulk of the workers affected were employed in the coal-mining industry, where the application of the Coal Mines Act of 1930 resulted in the adoption of 7½-hour shifts.

A.—EUROPE.

FRANCE.

During the past year the general economic crisis made itself very much more felt in France, and the effect of this can be traced in practically the whole of the figures given below, as representing the comparative result of the national effort during the year.

Trade and Production.—Exports totalled 30,421,327,000 francs (30,329,434 tons), as compared with 42,835,000,000 francs (36,680,000 tons), and imports 42,199,000,000 francs (58,095,899 tons), against 52,510,800,000 francs (60,920,000 tons) in 1930. All categories under both headings were smaller, with the exception of imports of foodstuffs, which were nearly 20 per cent. larger owing to two poor wheat harvests in succession. Steel production totalled 7,800,000,000 tons, against 9,447,000,000 tons in 1930. The number of blast furnaces in activity in December was 90, against 138 in the corresponding month of 1930. Coal output totalled 51,062,000 tons, against 55,026,000 tons in 1930. Imported coal amounted to 28,900,000 tons, including 5,800,000 tons from the Saar district. The general index of industrial production, which reached high record levels at 144 during the earlier months of 1930 (1913 = 100) and which stood at 134 in December, 1930, dropped to 115 in November, as compared with means of 140 in 1930, 139 in 1929, and 127 in 1928. Rubber manufactures again took the lead and stood at 854 in November, as compared with means of 898 in 1930, 861 in 1929 and 587 in 1928. Motor-car production came next with 490, against means of 640, 657 and 610 for the previous three years. The figure for metallurgical output dropped from 119 in November, 1930, to 89 on November, 1931, textiles from 86 to 62 and leather from 104 to 99. All the other six great industries still remained above pre-war level. Railway receipts totalled 14,050,000,000 francs, against 15,471,000,000 francs in 1930, representing a decline of 9.18 per cent. in traffic and a drop of 9.54 per cent. per kilometre operated. The falling off in goods traffic revenue was 10.67 per cent., while that from passengers was 3.18 per cent. lower. All the lines showed a deficit on working, which totalled 2,600,000,000 francs on the year (as against 1,300,000,000 francs in 1930), plus a deficit on the common fund, the accumulated shortage on which now amounts to 5,000,000,000 francs. Inward shipping averaged 4,700,000 tons a month, against 5,058,000 tons in 1930, and means of 4,840,000 tons in 1929 and 4,363,000 tons in 1928. Outward tonnage was 4,000,000 tons a month, against 4,400,000 tons in 1930, 4,099,000 tons in 1929 and 3,868,000 tons in 1928. Bankruptcies and judicial liquidations totalled 9,874 (against 6,149), or an average of 823 per month, against means of 756, 726, and 684 for the previous three years.

Commodity Prices.—The general index figure of wholesale prices (1914 = 100) fell from 498 (101 gold) at the end of 1930 to 413 (84 gold) at the end of 1931, and gave a mean for the year of 461, as compared with 543 for 1930 and 623 and 634 for the previous two years. The figure for domestic products fell during the year from 565 to 471, and that for imported commodities from 377 to 308, the index for the former at

the end of December being within a shade of 55 per cent. higher than that for the latter (against a difference of 50 per cent. in December, 1930). The index for raw material prices dropped from 475 in December, 1930, to 370 at the end of 1931, and that for agricultural produce from 523 to 463. The index representing retail prices in Paris for 34 commodities of common household use (1913 = 100) fell from 646 to 563, against averages of 618 in 1930, and 621 and 584 for the previous two years. The cost-of-living index for a Paris working-class family of four persons at the end of August (the latest return yet available), covering clothing, food, rent, lighting, heating and sundries, was 565 (say 113 gold) as compared with averages of 581, 556 and 519 for 1930, 1929 and 1928 respectively.

Labour.—The number of workless in receipt of relief, which was only 11,952 in December, 1930, rose to 147,000 in December. Fluctuations were to some extent accounted for by a substantial reduction of entries of recruited foreign workers, which were reduced to the lowest minimum, although a certain number of units were still required to meet the chronic shortage of farm workers. Ministry of Labour figures for December, based on data drawn from 8,856 industrial establishments (including mines) employing at least 100 hands, indicated that the total number of units then employed was 2,526,945, against 2,889,500 in December, 1930, representing a decline of a shade over 2½ per cent. on the year.

Crops.—The wheat crop is officially estimated as 72,882,000 quintals, compared with 62,900,000 quintals in 1930, 87,053,000 quintals in 1929, and consumption requirements of around 87,000,000 quintals, thus leaving a deficit of some 15,000,000 quintals. Potatoes registered a bumper crop of 26,428,000 quintals, against 11,954,000 quintals in 1930. The wine harvest is estimated as representing 55,000,000 hectolitres, against 42,000,000 in 1930, 63,000,000 in 1929, and 58,000,000 in 1928.

Money and Stocks.—The Bank of France discount rate was reduced from 2½ per cent. to 2 per cent. on January 2nd and was again raised to 2½ per cent. on October 9th. The rate for advances on securities remained unchanged throughout the year at 4½ per cent. The average net return from issues of fixed yield, which stood at 3.95 per cent. in December, 1930, rose by the end of the past year to 4.31 per cent., that from issues of variable yield moving up similarly from 4.28 per cent. to 5.31 per cent. The net yield offered by new bond issues, which had come down from 4½ per cent. at the end of 1930 to 4 per cent. in October, 1931 (after 5 per cent. in September), moved up to 5.45 per cent. in December, as compared with means of 4.69 per cent., 5.36 per cent. and 6.03 per cent. in 1930, 1929 and 1928 respectively. New issues of capital during the year totalled 16,442,000,000 francs, against 21,925,000,000 francs in 1930. Of the year's total 14,500,000,000 francs consisted of new bond issues—the majority of which were Crédit Foncier and other conversion issues and railway bond offerings—against 17,538 millions in 1930; 1,600,000,000 francs represented additional capital shares issued by old companies and 486,000,000 francs share capital of new companies (against 622 millions in 1930, 996 millions in 1929 and 1,068 millions in 1928). The only foreign

issues were small offerings on behalf of Roumania and other Powers closely associated with French policy.

Public Finance.—The national finances were seriously disturbed by the cessation of German reparation payments under the Hoover moratorium of July, and practical comparisons are impossible, owing to the change in the duration of the financial year. The total revenue from ordinary Budget sources for the first nine months of the financial year, down to the end of 1931, was 34,325,508,000 francs, or 1,187,115,000 francs less than in the corresponding period of 1930. Total recoveries were 49,000,000 francs in excess of Budget estimates, this being entirely due to increased yield from Customs owing to revision upwards of many of the import taxes during the past year. December was the least productive month since the beginning of the current financial year, and it is now known that the twelve months will result in a substantial deficit. During the twelve months of 1931 the Caisse d'Amortissement had a net revenue of 7,136,895,000 francs, or 313,687,000 francs less than in 1930. Of this total 4,581,000,000 francs represented the net yield from the tobacco monopoly, which was 40,000,000 francs larger than in the previous year. The sum of about 2,000 millions, forming part of the deficit on the 1930 Budget, having been charged to the Caisse d'Amortissement, the total available for direct debt reduction by that institution during 1931 was correspondingly diminished. An outstanding feature of the public finances in 1931 was the enormously increased accumulation of capital by the Caisse des Dépôts et Consignations, whose total holdings at the end of the year amounted to over 75,000,000,000 francs, the bulk of which is invested in Rentes and other standard State and semi-State issues. The swollen proportions of the holdings have been due to the raising, a year or so ago, of the maximum limit for savings bank deposit accounts to 20,000 francs and to the assumption by the Caisse of the management of the capitalisation funds of the national insurance system.

Bank of France.—During the year the Bank of France gold reserve was increased from an average total of 30,652 millions in 1928, 37,000 millions in 1929 and 46,000 millions in 1930 to 68,271 millions in December. The note circulation, which averaged 60,000 millions in 1928 and rose to 75,750 millions by the end of 1930, totalled at the end of December last 83,494 millions. The Bank's stock of foreign exchange, which was originally accumulated with a view to the legal stabilisation of the franc in 1928, when it averaged 31,540 millions, and which had been reduced to 26,000 millions by the end of 1930, stood on December 30th last at 22,368 millions, and has since still further diminished. During the year the gold cover for total sight engagements, which averaged 39.12 per cent. in 1928, and stood at 53½ per cent. at the end of 1930, rose to 60.3 per cent., the legal minimum being 35 per cent. By special conventions passed between the Government, the Caisse d'Amortissement and the bank towards the end of the year, Parliamentary sanction was given to a scheme under which the bulk of the bank's heavy losses in connection with its stock of sterling exchange, owing to the drop in the pound, is being reimbursed from the State's own resources.

GERMANY.

The year 1931 will be remembered in Germany as the year of the international credit catastrophe. A panic among creditors led to the withdrawal or attempted withdrawal of almost all short-term credits. Owing to her extraordinarily large foreign indebtedness, Germany suffered sooner and more severely than other countries from the international calling-in of credits.

Banking.—The withdrawal of foreign credits from Germany began on September 14, 1930, with the great success of the Hitler Party at the elections. In the autumn of 1930, the Reichsbank had to provide nearly Rm. 1,000 millions in gold and foreign exchange, to

meet foreign credits withdrawn from the German private banks, and the sales of securities by foreigners on the German stock exchanges. In the first five months of 1931 the position grew quieter and there was even a slight return flow of foreign capital into Germany. By the end of May, however, the situation had grown acute. Between the end of May and the middle of July the German banks paid back Rm. 3,000 millions abroad, for the most part out of the gold and exchange reserves of the Reichsbank. In spite of the effective assistance of the central banks, the Danatbank was obliged to suspend payments on July 13th, and bank holidays were declared in consequence of a run on all the German banking houses. Thanks to statesmanlike measures of assistance for several banks, the domestic credit crisis was surmounted, while external credit relations were regulated by the Basle Standstill Agreement of August 19th. In spite of standstill agreements the German banks repaid Rm. 1,250 millions foreign credits during the remainder of the year, but the total of Germany's short-term foreign indebtedness still stands at over Rm. 7,000 millions.

Money and Stock Exchanges.—Until June, 1931, the money markets were liquid, with discount rate at 5 per cent. and one month money at about 5½ per cent., while the stock exchanges showed little change. With the reduction in the amount of foreign capital available to Germany, rates rose rapidly, and in July the Reichsbank discount rate was 15 per cent. After the re-opening of the banks in August, the interest level fluctuated about 10 per cent. and was not reduced until Government compulsion was applied in the emergency decree of December 8th. The rate of interest on mortgages, mortgage bonds and loans was reduced on the average by one quarter and the rates charged and paid by the private banks were also modified. Since the emergency decree the Reichsbank rate has been 7 per cent.

The stock exchanges were closed from July 13th to the beginning of September, and after a short period of activity were again closed on September 18th, after Britain's departure from the gold standard. There has since been an unregulated trade in securities, conducted by telephone between the banks. Publication of the rates at which these transactions are effected is forbidden as the Government fears that their publication might cause uneasiness. On the average, German stocks and shares have lost about half their value during 1931.

Industry.—The decline in industrial activity has not proceeded as rapidly as the development of credit difficulties, but the industrial depression was intensified during the second half of the year by calling in of bank loans and the impossibility of obtaining fresh credit. Building operations in particular were almost brought to a standstill in consequence, and the steel mills, rolling mills, and engineering works were severely affected. Conditions in the textiles, paper and food industries remained more satisfactory. The total volume of German production declined 36 per cent. in two and a half years, and the number of unemployed, which never fell below 3,900,000 in 1931, passed the six million mark in January, 1932.

Foreign Trade.—German exports exceeded imports by nearly 3,000 million marks in 1931, against 1,650 millions in 1930. Imports were reduced by more than one-third owing to the very great decline in the home demand for industrial raw materials and for luxuries. Exports, on the other hand, only declined by 20 per cent., partly owing to the fact that manufactured goods, which form the principal part of Germany's exports, have fallen very much less in price on the world market than have raw materials. The chief cause, however, of the maintenance of German exports was the decline in the sale of manufactured goods on the domestic market. German industries were obliged to make much greater efforts than usual to sell abroad, in order to keep their works going, and were obliged to do all they could to obtain foreign exchange in payment

for their shipments in order to meet the demand for credit repayments abroad.

Prices and Wages.—The decline in prices continued during 1931, under the influence of the further decline in world prices and the contraction in domestic demand. In the course of two years, wholesale prices in Germany fell 30 per cent. on the average, whereas the cost of living index only fell from its peak of 155 in 1929 to 130 in December. The provisions of the emergency decree of December 8th, which did not come into effect until 1932, are expected to bring down this index to about 115. They include reductions in rent and in the retail prices of certain articles. Wages and salaries underwent a greater reduction than prices, and must have come down some 20 per cent. on the average during 1931. Industrial wages in general have fallen to the level of 1926, or below.

Agriculture.—The prices of certain German agricultural products scarcely fell at all during 1931. The agricultural crisis became so acute that the Government took steps, by means of duties, to reduce to the absolutely necessary minimum imports of those foreign agricultural products which compete with German products. The price of a ton of wheat in Berlin at the end of December, 1931, was Rm. 225, against Rm. 250 a year before.

The crisis found German agriculture in a state of extreme indebtedness. In the Eastern provinces especially, the interest payments due during the year could not be completely met and the Government was obliged to protect farmers by introducing something in the nature of a moratorium. Thanks to these measures the selling up of thousands of estates has for the time being been avoided, but there is at the moment no prospect of setting German agriculture on a sound basis.

Public Finance.—The crisis upset all tax revenue estimates. The financial year ended March 31, 1931, closed with an expenditure of Rm. 11,900 millions and a deficit of only a few hundred millions. The Budget for 1931-32, drawn up at the beginning of 1931, estimated revenue and expenditure, after reductions in all salaries, heavy curtailments of expenditure, and some increases in taxation, at 10,700 millions. This Budget had to be adjusted three times in the course of 1931. Expenditure grew to some Rm. 700 millions more than the original estimates, in consequence of the increased burden of unemployment. Receipts from existing taxes on the other hand were 1,700 millions less. The serious deficit thus involved was met by new taxes (principally by the emergency supplement to the income tax), fresh reductions in expenditure, and the saving effected by the Hoover moratorium. This last item alone amounts to Rm. 1,227 millions for the Budget year 1931-32. Without this saving it would have been impossible to balance the Budget. As it is, it was achieved, with the utmost effort, with revenue and expenditure at Rm. 9,800 millions. The Budget for 1932-33, however, is a cause for far more serious anxiety.

ITALY.

Foreign Trade.—Imports and exports both contracted in 1931, but whereas, according to the statistics published by the General Confederation of Industry, prices went down to 50 and 49.7 per cent. of the 1925 basis, respectively, for the first nine months of the year, quantities decreased to 89.3 per cent. for imports and increased to 108.7 for exports. The index of export prices, according to Bachi, is only 274 on a 1913 basis, against 350 for import prices. As these indices do not relate to the same goods, we cannot infer from them that Italian goods are being dumped in foreign markets; but, especially after the slump in sterling, Italian manufacturers are keeping their hold on foreign markets only by selling without any profit at all. As the surplus of imports over exports did not exceed 1,600 million lire, and the other items of the balance of payments probably offset it, a different explanation must be sought for the decrease from 9,624.3 million lire at December 31, 1930, to 7,796.4 at December 31, 1931, of the gold and gold exchange reserves of the Bank of Italy.

Crops.—Wheat had a fairly good year, whereas other crops were less bountiful. As the price of the wheat after the harvest sank as low as 700 lire per ton, duties were raised to 750 lire, and a wheat quota of 95 per cent. for national wheat was made compulsory for millers. The price rose to 1,000 per ton, and by the end of January, 1932, to 1,100. A National Rice Institute was created, which, by giving an export bounty now fixed at 310 per ton, kept the price at 700 lire, well above the international 450 lire level.

Industry.—The only industries which showed increased activity were rayon and aluminium; in all other fields there was a slowing down, which was in certain instances very pronounced. The building permits for 17 cities decreased from 187,355 rooms in 1929 to 149,740 in 1930, and 92,509 in 1931. Permits, moreover, now not infrequently remain on paper. In the country, rural building is at a standstill, offering a faithful index of the bad plight of farmers. There are many empty flats available and nobody to rent them, especially in old houses. Electric power consumption is well maintained, at the expense of coal imports, which were probably reduced by 2 million tons. Imports of oil and gasoline are also falling; and sales of automobiles are still further reduced.

Prices, Wages, Cost of Living, Average.—Wholesale prices for the year are well under the stabilisation level: the average for 1931 was 341.6 (92.4 gold), the index for the end of December 326.9 (86.5 gold). The cost of living, which in 1929 was lower than the wholesale prices index level (445.6, against 480.7) was in 1931 higher (388.7, against 341.6). In the second half of the year the cost of living diminished slightly to 381.6; and to 340.2 at December 1st. Wages were maintained better with a reduction of about 13 per cent. under the 1929 level; but not unfrequently men are content with wages lower than the trade union rates. Unemployment, moreover, is rising: in 1931 the minimum was

573,593 at the end of June, against 322,291 at the same date in 1930; and the maximum was 982,321, against 642,169 in 1930 (December).

Savings and New Capital Issues.—The great decrease of building permits is an index of decreased direct investments. Indirect investments through banks and bourses are practically nil. The only increasing item is deposits in postal saving banks; but here also the 1,025 million lire increase in the first 11 months of the year is less than the increase of postal certificates (+ 1,339 millions), which give a yield of from 5 to 6 per cent., and are part of postal saving banks deposits. Thus, almost the only important source of new savings is tapped by the public exchequer and used to keep a big State current account at the Bank of Italy, for the sake of keeping down circulation. Other increases in ordinary saving banks and other banks are small. Investment in joint stock companies is for the first time a negative quantity, owing to losses and winding-up of badly-managed or speculative companies.

Money and Stock Exchanges.—Stock Exchanges were practically non-existent for the whole year, with the public absent, and operators forced to squeeze a living out of a dwindling market. The official rate of discount increased from 5.50 to 7 per cent. on September 28th, after England went off the gold standard. First-class commercial paper could be discounted at from 5.25 to 5.75 in the first four months of the year; then there was a relaxation to 4.75-5.50; rising again to 6-7.25 after September. Prolongation rates kept very low for the whole year for State consols, from par to 5 per cent.; while on first-rate industrial securities money could be had from 4.75 to 7 per cent. Foreign exchanges did not depart, until May, from the higher gold point, hovering between 19.09 and 19.10 lire per dollar. Afterwards, the monthly average rates rose from 19.101 in June to 19.118 in August, 19.255 in September (occasionally touching 20-21 towards the end of the month) and 19.438 in December. Stringent regulations were enacted to prevent further rise. At the end of January, 1932, the lira, disregarding the stabilisation legal gold points, seems to be pegged to the 19.70 level.

Public Finance.—The financial year 1930-31 closed with a deficit of 895.9 million lire, but with an excess of cash payments over cash revenue of only 408.5 millions. The first semester of the current fiscal year, July to December, 1931, closes with a bigger deficit of 1,668.9 million lire. As usual, the cash situation is better, because cash revenue exceeds cash payments (on account of effective current revenue and expenditure) by 555.5 millions. Public internal debts, which rose from 88,102 million lire at June 30, 1930, to 91,442 millions at June 30, 1931, decreased to 91,418 at December 31.

RUSSIA.

As the three months ended December 31, 1930, were constituted a special "shock quarter," the Soviet economic year is now coincident with the calendar year. The past twelve months have witnessed the completion of the third phase of the Piatiletka, or Five Year Plan of economic development. The Soviet Union has, so far, been relatively immune from the worst of the world economic depression, the decline in export values being to some extent counteracted by the increase in short credit facilities.

Currency and Credit.—The last available figures relating to the currency position in the U.S.S.R. show that on February 1, 1931, the total currency outstanding amounted to 4,285.3 million roubles, compared with 2,686.6 million roubles on February 1, 1930, and 4,311.8 million roubles on November 1, 1930. In the early part of the year the commercial credit system used in internal business relations was entirely overhauled to eliminate unnecessary stages and provide a better check on decentralised activities.

Finance.—The unified Budget for 1931 (after taking into consideration alterations made as a result of the foregoing credit changes) was fixed at 19 milliard roubles, while the revenue was actually 20.45 milliard roubles. The shortage of income resulting from the incomplete realisation of the Plan was balanced by excess revenue from the Post and Telegraph Department and the Insurance Department and by State Loans. In 1931, though the total national income, expressed in roubles, at 1926-7 prices, failed to reach

the amount estimated, it nevertheless revealed an increase of 13.2 per cent. compared with the previous twelve months, industry contributing roughly 35 per cent. of the whole amount. The "Socialist sector" (i.e., State and co-operative industry, State and collective farms, etc.) provided 81.5 per cent. of the national income, compared with 52.7 per cent. in 1928. Estimates for 1932 envisage an increase in the Budget total from 20,454 million roubles to 27,429 million roubles.

Agriculture.—The process of eliminating individual peasant farms and substituting the co-operative "kolhozi" and the State farms or "sovhozi" continued apace in 1931. Whereas in 1928 only 1.7 per cent. of peasant holdings were "collectivised" and in 1929 3.9 per cent., by 1930 the percentage of "collectivised" farms had risen to 23.6 per cent., and by 1931 the great proportion of poor and "middle" peasants had entered the "collectives," so that 62.2 per cent. of the peasant holdings and 79 per cent. of the land were brought inside the "socialised sector." By the end of the year over 2½ million members of the State and co-operative farms had been trained to use tractors, while the level of agricultural technique showed a marked advance. According to the Piatiletka, the area under cultivation in the fifth year was to have been 141 million hectares, but in 1931 the area was 137½ million hectares, and the planned total is expected to be comfortably achieved in 1932. The sum of 3,600 million roubles was invested in agriculture in 1931, and this amount is to be increased to 4,360 million roubles in the forthcoming year.

Industry.—Industrial output during 1931 advanced by a little over 20 per cent., but the Plan was only partially fulfilled, such adverse factors as inadequate transport facilities, shortage of skilled workers and "unplanned" mobility militating against complete success. Coal output, though it amounted to 57,600 thousand tons, against 45,700 thousand tons in 1929-30, was still well below the planned estimates. Pig-iron output at 4,900 thousand tons was actually below the production for the last complete year, and so was the output of steel at 5,350 thousand tons. In the case of oil, tractors and other machinery, the estimates of the Piatiletka have already been exceeded. Industrial output as a whole was valued in 1931, at 1926-7 prices, at more than 70 per cent. of the 30,455 million roubles planned for the end of the Piatiletka. Special efforts are being made in 1932 to raise the production of coal, iron and steel, and it is anticipated that, quantitatively, on most points, the Five Year Plan for industry will be completed by the end of 1932.

HOLLAND.

Almost all branches of trade and industry suffered the disastrous effects of the general depression in 1931 to a very pronounced degree. For a long time Holland had enjoyed comparative immunity from the economic reverses suffered abroad, and conditions were still satisfactory in 1930. This, however, gradually changed in 1931, and Holland began to feel the effects of the continual decline of prices and the difficulties of marketing abroad.

As Holland is principally dependent upon exports, this entails a great handicap, and so far there is no ray of hope of relief. One result has been that Holland has decided to have recourse to quota systems in order to keep imports within bounds. In addition, negotiations are being conducted with the object of closer co-operation with Belgium in respect of commercial policy.

Trade and Prices.—The trade returns for 1931 show a very steep decline in both imports and exports. The stagnation of international commerce is also distinctly expressed in the decreased shipping traffic, which in turn has had a detrimental influence on the shipbuilding industry. The continued downward course of prices, which has not yet been brought to a standstill, has induced many industries to have recourse to wage cuts, and this, in turn, has involved labour disputes.

Public Finance.—The situation of the public finances has led to an all-round cut in the salaries of Government employees. The Government was compelled to resort to economies in order to balance the 1932 Budget. New taxes and a general increase in the import duties from 8 per cent. to 10 per cent. were also introduced to improve the position of the State finances and avert a threatened budget deficit.

Stock Exchange.—Towards the end of the year conversion of loans had to be dropped, as the stock exchange situation was such that further issues of State or municipal loans had become out of the question. The powerful gold position of our circulation bank, however, soon stimulated the return of confidence. The Netherlands Bank's stock of gold doubled in the course of 1931. The general disquietude among the public led to hoarding of bank notes and gold, with the result that the bank note circulation of the Netherlands Bank rose to well over 1,000,000,000 guilders. On the other hand, deposits with the Post Office Savings Bank rose very considerably. In consequence of the prevailing crisis and the steep decline of security quotations, new issues of shares were confined to a most diminutive amount. Issues for account of foreign borrowers were also almost entirely absent.

BELGIUM.

Production, Prices and Traffic.—General activity seemed stable until the beginning of summer, when the effects of credit pressure arising out of the general state of affairs in Central Europe began to be felt in Belgium. The metallurgical industry operated at 77.5 per cent. of its record output, which was reached in 1929. Compared with the figures of 1930 its output declined 5 per cent. There were only 43 blast furnaces in activity towards the end of the year, against 44 and 58 at the corresponding date in 1930 and in 1929 respectively. In the course of the year the stocks of un-

sold coal increased 1,050,000 tons (42 per cent.), a reduction in wages and the August agreement curtailing coal imports prevented a further increase in the unsold stocks at the pithead. Out of 159,000 hands employed in the collieries at the beginning of the year, 9,000 were no longer so occupied by December. Activity in the textile industry remained on the reduced basis of autumn, 1930, but there was a slight temporary recovery in August and September.

Wholesale prices by December, 1931, had fallen 30 per cent. below the average of 1928, against 20 per cent. only at the end of 1930. In the course of 1931 the cost of living has decreased and retail prices, which fell 12 per cent., are still on the decline. Wages have been curtailed in private enterprises in accordance with the fall in the cost-of-living index, while public servants and railway employees, whose salaries were cut only 6 per cent. on April 1st (small salaries were exempted) have enjoyed a preferential position.

An improvement appeared in the labour market towards May when there were only 56,000 totally and 97,000 partially unemployed against, respectively, 80,000 and 126,000 in the beginning of the year. Unemployment increased again from seasonal causes in November and December; on December 5th there were 94,000 totally and 135,000 partially out of work.

As the fall in prices has affected raw materials more than manufactured goods and imports of raw materials have declined, Belgium's foreign trade balance has become less unfavourable; the deficit of the commercial balance amounts to 828 million francs only, against 4,701 million francs in 1930 and 3,276 millions in 1929.

Money, Exchange and Stock Market.—The money market has been very easy. From August, 1930, till January 13, 1932, the Bank rate stood unchanged at 2½ per cent.; the private rate of discount has varied very little at or about 2½ per cent. against an average of 2½ for 1930, but banks have been more difficult in regard to the quality of paper discounted. Call money has been very abundant and has been granted at very low rates though less easily. Monthly averages varied between 1.27 per cent. (in April) and 0.78 (in July); it averaged 1.068 in December.

The Belgian saving public hesitated in 1931 to invest as usual its capital at long term, being anxious to have it accessible at any moment. The excess of deposits at the Caisse d'Epargne over withdrawals, which was 2,800 millions in 1930, 1,800 millions in 1929, and 750 millions in 1928, amounts to about 1,472 millions only for 1931, because of hoarding in banknotes and reduction in income.

Until September, 1931, gold bills constituted part of the note cover of the National Bank of Belgium, from then onwards they were excluded and gradually transformed into gold. Increases in the deposits of earmarked gold as well as very substantial arrivals of gold ingots greatly strengthened that gold reserve, which increased by 5,992 million francs (about 90 per cent.) in the course of 1931. The general trust in the Belgian currency has caused the belga to stand at a premium in the exchange market, even in ratio to the French franc except in September, when it stood at a ½ per cent. discount.

Public Finance.—During the year taxation receipts totalled only 8,430 million francs, against 8,184 millions for 1930. Reduction in the State's indebtedness (expressed in francs) in respect of sterling public loans retrieved the loss of £12,700,000 suffered on the sterling portfolio of the National Bank. For the fiscal year 1930 the accounts show that the deficiency in taxation revenue in relation to estimates amounted to 254 million francs. In July, finance bills were passed in Parliament raising taxation revenue 1,300 millions per annum; a 300 millions increase was again adopted later on. For the fiscal year 1931 taxation receipts have not declined more than 167 millions, or about 2 per cent., in ratio to budgetary estimates; nevertheless, the fiscal year 1931 will leave a large deficit, estimated at 1,903 million francs, due mainly to declines in non-taxation revenue, especially repara-

tion payments and the State share in the profits of the National Railway Company's. In June the Government contracted an internal one milliard franc loan redeemable in 75 years under the form of 5 per cents. The Government securities which were offered for public subscription at 96 were quoted at the end of the year at 74. On September 30, 1931, the Public debt totalled 52,668 million francs; 26,945 millions of internal and 25,723 millions of external debt (War Debt included).

* Provisional estimates.

SPAIN.

The past year has witnessed a radical modification in the political structure of Spain consequent on the change from a monarchy to a republic. If the attempt now being made by the Government to restore confidence amongst the producing elements of the country is successful, the economic crisis through which Spain is now passing should be considerably mitigated in the near future.

The depreciation of the currency continued during the past year and reached over 80 per cent. as compared with dollar quotations in 1930. The advantages which would have accrued to the Spanish export trade through the low price of the peseta were nullified to a great extent by the world crisis and by the abandonment of the gold standard in Great Britain.

Production and Trade.—While the full effect of recent social troubles has not yet been felt in agriculture, the production of cereals was on the whole lower than in 1930. The wheat crop amounted to 3,266,000 metric tons, against 3,973,000; on the other hand the olive crop, at present being collected, promises a considerable increase over last year's figures which were, however, exceptionally low. The exports of wine show an increase in quantity from 232,747 tons in 1930 to 274,681 tons in 1931, but the total value dropped from 138,914,000 gold pesetas to 57,707,000 in the same period. Experts are unanimous in predicting a poor production of wine in 1932. The quantities of mineral

ores extracted up to December 1st show the following decreases:—iron, 2,927,754 tons (against 4,860,000 tons in 1930); copper, 2,603,292 tons (against 3,280,000); lead, 111,175 tons (against 121,885); while the production of coal, including anthracite and lignite, has risen slightly to 6,971,390 tons (against 6,614,000 tons in 1930). The value of mineral ores exported in 1931 fell to £5,679,000 gold from £13,032,000 in the previous year. The iron and steel industries continue to decline, the production to December 1st being 457,373 tons of pig iron and 576,086 tons of steel, against 558,279 and 790,900 tons respectively in 1930. Other metals show the following increases:—zinc, 10,042 tons, against 9,307 in 1930; copper, 23,414 tons, against 21,650. Lead, however, is down somewhat at 112,554 tons, against 115,224 tons in the previous year.

Trade on the whole has been bad except for some of the poorer qualities of textiles. Imports of automobiles, machinery, raw cotton and chemical products reflected the general depression and fell considerably, especially towards the end of the year. Exports were correspondingly lower owing to unfavourable conditions abroad. The exports of finished goods during the first eleven months of 1931 amounted to 143,601 tons, as against 177,000 tons in 1930. Raw materials exported during the same period dropped from 6,895,609 in 1930 to 4,275,235 tons in 1931. The official figures for the first eleven months of 1931 place the value of imports at £42,740,000 gold (£88,500,000 in 1930), and that of exports at £35,730,000 gold (£81,100,000 in 1930).

Finance, Prices and Stock Exchange.—Contrary to the general custom, the total figures of public revenue have not yet been disclosed, nor are the estimates for 1932 available, but the partial results show substantial decreases under the following headings:—industrial tax; customs (78 million pesetas less than in 1930); stamp duties; tobacco (imports diminished by 16 million gold pesetas); lotteries and petrol. Small increases are recorded in:—real estate duty, income tax, death duties and manufacturing dues on sugar and alcohol. No public issue of bonds has been made by the Spanish Government since 1929, and the amount of industrial securities issued was only 593 millions, as compared with 745 millions in 1930 and 1,895 millions in 1929. Of the total amount of industrial and other issues in 1931 (705 millions against 908 millions in 1930), 378 millions were offered in the form of bonds, the average return on which was 5.65 per cent. per annum. Towards the end of the year there was a large amount of money in the market awaiting reinvestment, as was evidenced by cheap call money and the sharp improvement in the prices of Government bonds, but there has been no attempt to attract it to the development of industry, apart from an issue of shares by the Metropolitan Railway Company of Madrid, which was considerably oversubscribed. The Stock Exchange has been depressed throughout the greater part of the year, quotations reaching an unprecedented low figure in spite of official intervention in the market and severe restrictions on forward operations. In the month of December a sharp reaction took place and in some cases the average 1930 prices were regained, the year closing in an atmosphere of optimism.

The general index of the cost of living has risen from 171.6 in 1930 to 175, the principal increase being in foodstuffs, which stood at 178 in 1930 as compared with 184 for the current year. The tendency, however, showed a decline towards the end of the year, especially in the food index, which may possibly have been influenced by economic developments in England. The premium on gold for the payment of Customs dues rose to 132.86 per cent., as against 83.40 per cent. at the end of December, 1930, and 39.58 per cent. at the same period of 1929. The average monthly price of the pound, which was 46.70 pesetas in January, rose steadily until in August it reached 55.19, after which there was a sharp drop to 50.60 in September, 43.88 in October and 43.54 in November. The year ended with sterling quoted in Madrid at 40.40 pesetas.

SWITZERLAND.

From the economic point of view 1931 was the worst year experienced in Switzerland since 1922. Trade and industry were strongly affected by the general crisis and unemployment steadily rose after the middle of May, when 14,300 unemployed were registered; at the end of December there were over 40,000 unemployed, compared with 23,000 at the end of 1930. Unemployment is mainly concentrated in the watch-making, textiles and machine industries. Banking was active, thanks to the continued influx of foreign funds, but the world financial crisis resulted in the failure of half a dozen minor banks.

The accounts of the Swiss Confederation for 1930 will show a surplus of about 2,000,000 francs, instead of an estimated deficit of 4,500,000 francs. The Budget for 1932 estimates receipts at 409,100,000 francs, and expenditure at 418,200,000, thus leaving an estimated deficit of 9,100,000 francs. The public debt, which totalled 4,919,138,000 francs at the end of 1930 (including the floating debt) was increased by 17,409,000 francs during 1931 owing to a rise in the floating debt, but it is likely to be reduced by about 15,000,000 francs at the end of 1931. The consolidated debt has been lowered during 1931 from 1,888,272,000 francs to 1,870,200,000 francs. The Federal Railways offered some further facilities to travellers, but nevertheless their receipts were about 18,000,000 francs lower than in 1930. Thanks to the economies made in all departments, the surplus will be nearly 118,900,000 francs, as against 132,000,000 francs in 1930. The other Federal services—post, telegraph and telephone—registered smaller surpluses, but their financial situation remains satisfactory.

The official discount rate, which was 2½ per cent. at the end of 1930, was reduced to 2 per cent. in February, and afterwards remained unchanged, while the private discount rate was lowered from 2½ to 1½ per cent.; call loans commanded between 2 and 2½ per cent., and long-term deposits between 3 and 4 per cent. The gold reserve of the Swiss National Bank, which was 67.12 per cent. of the bank note circulation in January, rose to 116.19 per cent. in September, to 149.06 in November, and it was still 145.82 at the end of December. The sterling exchange opened at 25.077 francs in January, it reached its highest level—25.080 francs—in July, but dropped to 17.24 francs in December. Heavy losses were recorded in the Swiss bourses, which were almost inactive during the autumn. The average value of a group of 109 banking, industrial, transport and other securities oscillated between 165.42 per cent. and 99.68 per cent., while that of twelve securities of the Federal Government and of the Railways oscillated between 114.51 per cent. and 107.28 per cent.

Foreign trade recorded in 1931 its lowest figures since 1919. All industries were hit by the depression, but the key industries—watch making, silk, cotton and machines—suffered most, and their exports show drops of respectively 45 per cent., 25 per cent., 28 per cent. and 39 per cent. compared with 1930. Commercial exchanges with Great Britain were less active than in 1930; imports from her totalled 108,600,000 francs, in round figures, as against 231,900,000 francs in 1930, while exports to her aggregated 248,200,000 francs, compared with 288,099,000 francs the previous year.

CENTRAL EUROPE.

Austria.

The past year brought Austria a serious economic setback. Since May, when the Credit-Anstalt ceased payment, the cover percentage of the National Bank of Austria has dropped from 82 to 24.1. In the year 1931 the gold and foreign-value holdings of the National Bank decreased from 860 million schillings to 344 millions, inclusive of the relief credits accorded by the Bank of England and the Bank of International Settlements. A healthy commercial bill portfolio of only 69 million schillings has swollen to more than twelvefold, and has changed essentially in its composition.

The balance of foreign trade clearly shows the severity of the depression. Imports for the year amounted to 2,208 million schillings and exports to 1,340 million schillings, so that there is a deficit of 868 million schillings. The number of unemployed in receipt of benefit has grown from 260,000 at the end of 1930 to 340,000. Insolvencies have gone up from 2,695 in 1930 to 3,421 in 1931, and bankruptcies have increased from 694 to 803. The value of the purely Austrian shares quoted in the official sheets went down from 1,076 to 825 million schillings, and a large number of shares now have nothing more than a nominal price. The stock and share market was closed for a time, and after it was reopened there was no sign of animation, especially as the great quantity of Hungarian shares placed in Austria before the outbreak of the difficulties in Hungary were excluded from official traffic. The public returned to the practice of hoarding its money. Confidence in the banks and savings banks was shaken from time to time, and the deposits at the banks and larger savings banks, which in April, 1931, still amounted to 1,970 million schillings, fell as low as about 1,200 million schillings by the end of the year. Attempts were made to acquire and hoard foreign means of payment, and this had certain advantages, as, when towards the end of the year people were required by law to report and surrender the foreign means of payment at their disposal, very considerable sums of foreign money streamed into the National Bank.

The year 1931 was very critical for all banks. Owing to the withdrawal of short-term foreign credits, the banks were deprived of the possibility of financing their subsidiary enterprises in the usual manner. Numerous factories were closed down and the workers discharged, so that the purchasing power in the hands of the masses was reduced. Further, the State proceeded to dismiss many civil servants and to cut the salaries of those it retained. Nevertheless, there are still many serious problems which had to be carried over into the present year. The question of the federal railways is still unsolved, and, in spite of all savings, it is difficult to see how the deficit can be combated.

Poland.

The past year has been, for Poland, a year of drastic and unmitigated deflation. The severity of the depression cannot be measured by comparative figures of the production of primary materials (coal, petroleum, iron and steel, etc.), which show no important changes from the previous year. Diminishing absorption in the home market, however, where high price levels are maintained by the producing cartels, has resulted in increased exports of primary products at prices very much lower than in the domestic market—notably coal to the Scandinavian countries, iron and steel to Soviet Russia, oil products to Czechoslovakia, butter and bacon to England. While maintaining substantially the same level of production, therefore, the returns therefrom have considerably decreased. The depreciation of sterling, in which currency a large part of Poland's exports are still being invoiced, adds greatly to the loss.

The Bank of Poland during 1931 increased its gold bullion holdings by 38.2 million zlotys (from 562.2 to 600.4 millions), but lost 200.4 million zlotys (from 288.4 to 88.0 millions) in foreign *devisen* serving as cover.

There was a gain of 1.1 millions (from 124.3 to 125.4 millions) in foreign *devisen* not serving as cover, so that the net gold outflow in 1931 was 161.1 million zlotys, with a very decided movement towards the abandonment of the gold exchange standard. Following a net gold (or foreign *devisen*) loss of 77 million zlotys in 1928, 108 millions in 1929, and 252 millions in 1930, the loss of a further 161 millions in 1931 makes a total outflow of 598 millions in four years. With the maintenance of an "active" foreign trade balance now the basis of Poland's economic policy, and with foreign indebtedness on banking and commercial account greatly reduced during the past year, the gold drain is presumably nearing its end.

Budget revenue for the first nine months of the fiscal year, which began April 1, 1931, amounted to 1,725.9 million zlotys, and expenditure to 1,852.9—a deficit of 127 millions (preliminary figures). For the corresponding period of 1930, revenue was 2,066 and expenditure 2,072 millions (revised figures). Expenditure for all Ministries except War has been ruthlessly cut, and it is clearly the determination of the Government to spend only so much as the tax collectors are able to bring in. The 1932-33 Budget will, presumably, be passed by the legislature in the amount of about 2,400 million zlotys, or approximately the same as the revised Budget for the present year.

Except for a substantial decline in the rye crop (from 69.6 million metric quintals to 56.6 millions) and an improvement in the potato crop from 209.0 to 328.8 million metric quintals, agricultural production in 1931 showed no important changes as compared with 1930; slight increases in barley, oats, millet, maize, beans and colza being approximately offset by declines in wheat, peas, flax and hemp seed—as indicated by the estimated yields for 1931. The decline in rye production means that Poland will have to import for internal use some supplies of this grain before the next harvest. Of far greater importance, however, is the danger that the general impoverishment of the agricultural community may lead to much more substantial declines in agricultural output in this and subsequent years. The Polish soil now needs extensive fertilisation, and the lessened use of fertilisers is promptly reflected in the crop returns.

The foreign trade figures for the past three years have been as follows (corrected for 1929 and 1930, preliminary for 1931):—

Year.	Imports.	Exports.	Balance.
	(In thousands of Zlotys.)		
1929	3,110,982	2,813,360	-297,622
1930	2,245,973	2,433,244	+187,271
1931	1,466,329	1,878,484	+412,155

With the introduction on a much larger scale at the end of 1931 of the import permit system, coupled with increased Customs duties and other restrictions on foreign trade, it is likely that the volume of imports will continue to decline—and especially from Germany and the other countries against which the restrictions are understood to be aimed.

Czechoslovakia.

The year 1931 was probably the worst in the economic history of independent Czechoslovakia. The aggravation of the world-wide depression, especially in the last six months of the year, was felt in every branch of industry. Even so it must be said that Czechoslovakia has been affected by the crisis to a much less degree than other countries in Central Europe, or even than many countries further afield.

The volume of foreign trade during the past year has shrunk further by some 50 million gold pounds (8,300 million Czechoslovak crowns) as compared with 1930; the exports being 13,140 million crowns (in 1930, 17,474 million crowns), the imports 11,789 million crowns (in 1930, 15,715 million crowns); there was therefore a favourable trade balance of 1,351 million crowns (in 1930, 1,759 million crowns). Exports of manufactured articles have shrunk by 3,000 million crowns, imports of raw materials by 2,200 million crowns.

The monthly statements of foreign trade during the last months of the year show clearly the disastrous influence of the various monetary restrictions and tariffs on Czechoslovak exports of manufactured articles. That explains why, in December, 1931, imports exceeded exports by 74 million crowns. There was an increase of 115 million crowns in the imports of manufactured articles compared with November. The increase of 64 million crowns in the import of raw materials is a good sign, as well as the increase of 67 million crowns in the exports of manufactured articles.

Savings banks deposits increased in 1931 by nearly 2,000 million crowns, or 744 million crowns more than in 1930. These deposits amounted at the end of the year to 21,280 million crowns. On the other hand, deposits in commercial banks declined a little (from 9,782 million crowns in December, 1930, to about 9,200 million crowns in December, 1931). Current accounts also dropped by over 2,200 million crowns from 16,504 million crowns to 14,300 million crowns. Throughout the year the Czechoslovak currency remained one of the most stable currencies in the world.

As a consequence of the depression the Budget for 1932 had to be cut down severely after it had been adopted by Parliament. In its original form it showed a revenue of 9,323 million crowns and an expenditure of 9,319 million crowns (the figures for the revenue and expenditure in 1930 were 9,844 and 9,838 million crowns respectively). The Government then effected cuts of about 10 per cent. Between May and September there has been a slight improvement in employment; but since October the number of people out of work has increased considerably, and in December there were already 480,000.

The Bank rate was raised to 5 per cent. on August 5th, and again to 6½ per cent. on September 23rd, following the abandonment of the gold standard by England. On December 22nd the Bank rate was reduced to 6 per cent. Fiduciary circulation at the end of December, 1931, was 7,679 million crowns, as compared with 7,824 million crowns at the end of 1930. The gold and silver reserve has risen by 30 million crowns to 1,649 million crowns; the reserves of foreign currencies and bills declined also by 30 million crowns to 887 million crowns.

The downward tendency of all securities, which had already begun in the first half of 1929, continued unabated throughout the whole year 1931. In many cases last year brought the heaviest losses. The sugar industry shares in particular suffered badly, and stood in December, 1931, at about 25 per cent. of their value in January, 1924. The heavy industries also sank to about 50 per cent. of their value as recorded in January, 1924, textiles to 66 per cent., engineering shares to 67.5 per cent., banks to 75 per cent.; on the other hand, chemicals stood at 106 per cent., building trades 107 per cent., and brewery shares at 155 per cent. of their quotations in January, 1924. In the general slump gilt-edged securities fared better, although they also have lost about 7.5 per cent. during the year 1931; the State bonds index stood at 111.5, and others at 100.3. The prices of practically all commodities continued their downward tendency. The index number of wholesale prices fell to 103.8 in December (as against 110 in December, 1930), the foodstuffs index to 98, and the index of raw materials and manufactured products to 109.7.

Hungary.

Instead of the much-hoped-for recovery after the depression of agricultural prices in 1929 and 1930, the year 1931 brought Hungary to the verge of financial collapse, from which she was saved only by a number of cruel measures calling for heavy sacrifices on the part of her citizens and her foreign creditors. The depression, which was keenly felt throughout the country in the first quarter of 1931, developed into an acute crisis after the collapse of the Austrian Credit Anstalt in May.

In November and December it became obvious that the country as a whole was in a state of collective insol-

veny, and the situation of the National Bank became so critical that the Government was compelled to declare a transfer moratorium (with the exception of the service on certain State obligations) in order to preserve the basic financial structure of the country.

The Budget of the Administration for the financial year 1930-31 (ending June 30, 1931) showed a deficit of 116.9 million pengő; that of the State undertakings 33.1 million pengő. In addition to the budget proper, certain departmental debts were contracted so that the total deficit for 1930-31 is well over 200 million pengő. Expenditures of the Administration Budget for 1930-31 totalled 946.5 million pengő, and revenue amounted to 829.6 millions only. The budget voted for 1931-32 provided for an expenditure of 878.3 millions, but it soon became obvious that expenses were understated by more than 100 millions, and revenues were over-estimated by a similar sum. After the League inquiry, budget estimates were revised, and the Government pledged itself not to allow expenditure in 1931-32 to exceed 890 millions. For the first six months of the current financial year there was a deficit of 148 million pengő for the Administration Budget, and another 20.5 million pengő were advanced to State undertakings and for other necessary purposes. The national accounts have disclosed a continuous deficit since the second half of 1929. The deficiency was met after spending the accumulated reserves from short-term loans both at home and abroad. Owing to the fall in agricultural prices, the tax-bearing capacity of the country has reached its utmost limits. Assuming a national income of 3.50 million pengő, the tax burden proper (for the State and local taxes together) amounted to nearly 30 per cent. of the national dividend, probably the highest ratio in Europe.

Hungary decided to remain on the gold standard. Though it has not been possible to sell the pengő at par abroad since July 14th, its internal purchasing power was maintained at a stable level, thanks to the exchange regulations and the introduction of the gold pengő. The returns of the National Bank reflect the extraordinary circumstances, disclosing the paradoxical phenomenon of an inflated bill portfolio and a deflated note circulation, which is due to the fact that the National Bank is the only source of credit, foreign funds being no longer available. The note circulation of the last quarter of 1931, oscillating between 350-450 million pengő, is about 10 per cent. less than in 1930; on the other hand, the bill portfolio of 599 million pengő (including the rediscounts with the B.I.S.) at the end of 1931 is just double that of 1930. Owing to the withdrawal of foreign funds and the flight of capital during two months May 15th-July 14th) the Bank has lost more than 200 millions of gold and foreign exchange. The Bank was able to withstand the pressure, thanks to the aid of the B.I.S. and other central banks which accorded credits to the extent of \$30,000,000, of which \$25,000,000 is still outstanding.

The deficit of the balance of payments amounted to about 350 million pengő, of which about 250 million pengő was devoted to current interest and sinking fund payments, and about 100 millions is accounted for by withdrawals of foreign funds and flight of domestic capital. The deficit was met, apart from a slight merchandise surplus balance, almost entirely by new foreign borrowings of the National Bank (145 millions) and the Treasury (87 millions), and by the decrease of the gold cover of the National Bank. The bank rate was almost totally ineffective. It was raised from 5½ per cent. to 7 per cent. in June, to 9 per cent. in August, and reduced again to 8 per cent. in September. The balance sheets of the banks are not yet available, but there is no doubt that the volume of credit has considerably fallen off. The total deposits and current accounts of the twelve largest Budapest banks and the Postal Savings Bank decreased to 1,177.9 million pengő at the end of 1931, as against 1,414.3 millions on June 30, 1931, and 1,448.5 millions at the end of 1930.

Hungarian agriculture has just had its worst year since the war, and its plight is the main reason for the country's financial difficulties. Crops were smaller in volume than in 1930 or 1929, and prices were very much below pre-war level. Marketing was extremely difficult, and the debt burdens became almost intolerable. Industrial production has declined by 15-20 per cent., owing to the diminished buying power of the farmers. Commerce has suffered from the complete paralysis of trade resulting from the restrictive measures to protect the currency. Foreign trade figures were very low: exports amounted to 572 million pengő and imports totalled 544 millions, the total value of foreign trade having fallen by almost half since 1929.

Roumania.

The year 1931 has closed in complete despondency. There is so serious a lack of funds in the public Treasury that a part of the salaries of the public servants and a large proportion of the pensions have remained unpaid, while the debts owing to home industries are still completely unprovided for.

The Budget for 1931 had to be remodelled in July, but even the reductions and new provisions have proved entirely insufficient, and the monthly Treasury receipts dwindled to 1,900 million lei in December. The total receipts for the year amounted to a little over 23,000 millions, about 11,000 millions less than the estimates. It was only by taking money from other funds that the advance of 2,000 millions, taken from the National Bank at the beginning of the year, could be repaid. Close on 37,000 millions should have been paid out by the State during the year; in fact, only 25,000 millions was paid and the remainder was taken over by the Institute of Amortisation. During the year the new 7½ per cent. foreign loan was launched and all its proceeds used.

Commerce and industry have had the worst year since the war. The fall of the purchasing power of the masses became more accentuated, as is shown by the considerable reduction in imports. Excessive taxation and the lack of credit facilities have crippled all economic activities. A certain relief for agriculturists was provided by the export premium on wheat introduced in August which enabled the exporters to compete successfully with foreign producers and even helped to regain foreign markets. Exports of wheat, in fact, during the nine months ending in September, 1931, were almost three times larger than those of the same period of the previous year, but maize, barley and oats show a substantial reduction in exports.

The petroleum industry is ruined by taxation and over-production. Several concerns have gone bankrupt and others are threatened by the same fate. The most important companies are just carrying on by reducing expenses to a minimum. The total production of petroleum during the year amounted to 665,000 waggons, against 590,000 in 1930 and 481,700 in 1929. About 380,000 waggons were exported, which compares with 350,000 in 1930. The internal consumption amounted to 110,900 waggons.

Apart from numerous bank failures in the provinces, the past year has seen the closing of the doors of three important banks of the capital, the Banque Générale, the Banque Bercovitz, and the most important of all, the Banque Marmorosh Blank and Company. Confidence in the banks is severely shaken and the hoarding of money by the public has assumed very large proportions. Credit is restricted to the utmost. The State and the National Bank have done their best to come to the rescue of the banks. The note circulation of the National Bank has increased from 19,600 to 23,360 millions. Bills increased from 7,380 to 13,230 millions, advances from 778 millions to 826 millions. The value of the leu has been well maintained during the year and the foreign exchange market has remained free from all restrictions, but the reserve of the National Bank has fallen from 11,030 million lei to 10,420 million lei, and the proportion of

the reserve to the liabilities shows a reduction from 44.65 per cent. at the end of 1930 to 36.01 per cent. on December 12, 1931.

Jugoslavia.

Economic history in Yugoslavia during 1931 falls into two sharp divisions. During the first half, which culminated in a wheat harvest of 27,080,000 quintals, as against an average of 22,000,000 during the preceding quinquennium, affairs compared favourably with those during the depression of 1929-30. Industry, taking future profit into account, worked at higher pressure, as evinced by the larger consumption of coal and iron. Mining of copper, lead, chrome and salt gave better results. Bank deposits increased from 13,880 to 14,170 million dinars. Government receipts for the period April-August amounted to 4,549 million dinars, as against 4,737 millions for the same period in 1930, the decrease being only 5 per cent. Finally a stabilisation loan of 1,025 million French francs had made possible a *de jure* stabilisation of the dinar.

During the second half of the year Yugoslavia came under the general cloud of impending catastrophe. The disorganisation of agriculture quickly spread to industry and trade, while the Government, in consequence of the ensuing dislocation, was threatened with a deficit of 2,000,000,000 dinars. This gap was bridged by a reduction of 10 per cent. in salaries, by cutting all capital expenditure, by severe all-round economy on one hand, and by an increase in the price of tobacco and the duty on sugar, the application of a new law on business turnover, and a French credit of 250 million French francs on the other.

The general depression has affected all branches of national economy. Foreign trade has shrunk by 80 per cent. as compared with that in 1930, exports for the first eleven months being worth 4,419 million and imports 4,502 million dinars. The index of prices has fallen from 1,175 at the end of 1930 to 1,025 in December, 1931, and would be still lower were it not for the artificial price of wheat maintained through a Government monopoly. Credit is extremely tight, not so much through lack of money as through lack of confidence, and the extent of the rush on banks in September may be gathered from an expansion of credits given by the National Bank from 1,459 to 2,252 million dinars. State securities bearing a fixed rate of interest have all suffered badly, their average loss in value being about 40 to 45 per cent. The bright spots in the picture are that the adverse trade balance is only 82 million dinars, that no bank failure has been reported, and that the stress of the economic depression is very greatly relieved by the extreme cheapness of food.

Bulgaria.

The widespread financial perturbations in 1931 found credit and trade in Bulgaria at an extremely low ebb. Contraction of credit, failures of unsound undertakings, withdrawal of short-term accommodation, and the writing off of trading losses were already taking place. As, moreover, there have been no extensive foreign loans since the war, the financial troubles from abroad resulted in no sudden and catastrophic disturbances in Bulgaria. The repayment of some Leva 1,200 millions of short-term credits was possible in 1931 without placing any excessive strain on business or private finance, which had already shrunk to very modest proportions. The active balance of foreign trade allowed the transfer of funds abroad for meeting all trade, banking and State payments up to the end of the year, when the drain became severe and drastic foreign exchange restrictions had to be introduced.

Reduced trade at low prices, industry operating mainly at a loss, slow and deficient collecting of taxes, public expenditure showing no material reduction, large additional losses to the Treasury on account of the Grain Purchasing Office, and increasing public debt the service brought the accumulated budgetary deficit to the disquieting figure of Leva 1,800 millions, or more than one-quarter of the ordinary Budget.

In spite of untoward general conditions, failures and protested bills have considerably decreased, and there were more active purchases, chiefly by peasants, of manufactured goods. The future, however, is obscure.

Greece.

Greece has felt in 1931 more and more the unfavourable repercussions of the growing world depression. The British crisis of September last temporarily closed the principal source from which capital was being drawn in order to keep the country going. This loss and the further decline of the country's invisible exports are resulting in an adverse balance of international payments, notwithstanding an improvement in the balance of trade and the severe exchange restrictions imposed since September with a view to preventing an exodus of capital and restricting imports. Hence the foreign exchange reserve of the Bank of Greece is gradually diminishing, the proportion having fallen from 44.42 per cent. on December 23, 1930, to 41.18 per cent. on December 29th last.

This enforced deflation produced a shortage of money, which has contributed to increase further the depression of trade and business in general. The bank rate has risen, deposits have been withdrawn from the banks, the Athens Stock Exchange is still closed, the banks have practically ceased their advances to trade and industry, unemployment is growing, and the agricultural classes are suffering from low prices and increasing difficulties in disposing of their produce. Measures of relief of and assistance for classes and individuals in distress had therefore to be taken. Naturally, the public finances have begun to feel the effects of these developments. As revenue is decreasing, drastic economies have been made. Equilibrium of the budget, currency stability and a punctual fulfilment of the country's external obligations constitute the aims of the Government.

SCANDINAVIA.

Denmark.

Denmark did not escape from the effects of the financial crisis which originated in Central Europe early last summer. Although her economic position was sound, the Danish Government decided to abandon the gold standard on September 29, 1931. Until the autumn of last year Denmark suffered less from the world depression than most other countries. Industrial activity had receded considerably, but agriculture, which is her main industry, continued to find a ready outlet for its products in Great Britain. Lower prices had to be accepted, but these were partly compensated by an increase in the quantity of bacon, eggs and butter sold abroad. This expansion of exports has been made possible by an increase in live stock. The number of cattle increased from 4,665,000 in July, 1930, to 4,866,000 in 1931, and pigs, at 5,435,000 in July, 1931, show an increase of 563,000 on the year.

Retained imports during 1931 at Kr. 1,392 millions show a decline of Kr. 245 millions on the previous year, and exports declined from Kr. 1,524 millions in 1930 to Kr. 1,256 millions in 1931. The reason for the abandonment of the gold standard is partly to be found in the distribution of exports. No less than about 60 per cent. of Danish exports are bought by the United Kingdom. In order to protect the financial stability of the country, the Government adopted measures to restrict imports at the end of November. On January 29th this year a Bill was passed by the Dutch Parliament by which the National Bank acquires complete control over foreign exchange transactions and overseas trade. The shipping trade was depressed throughout the year, and the idle tonnage increased.

Norway.

The general idea entertained in business circles at the beginning of 1931 was that the world depression had at last reached rock bottom, or that it was at any

rate within sight, and forecasts for the first months, therefore, took a rather bright hue. These expectations were not only completely frustrated, but things speedily developed into a crisis of unprecedented gravity and extent. That the difficulties were of a serious character was proved in an unexpected way through the suspension of payment in December of two of our largest banking institutions.

Conditions on the domestic money market during the earlier part of the year were comparatively easy. The Norges Bank returns only showed unimportant deviations from time to time, and it was possible to maintain a discount rate of 4 per cent. during nearly three quarters of the year. During this period the Government completed considerable loan conversions on easy terms. On September 12th, however, the rate was raised by 1 per cent., and in the course of a fortnight, as a consequence of the gold suspension, the rate rose by leaps and bounds to 8 per cent., where it remained for ten days. Since October 19th bank rate has been 6 per cent., and at the turn of the year the money market was rather stringent. Foreign exchanges were liable to negligible fluctuations only during the three first quarters of the year, but on the day of the British gold suspension sterling fell to 16.50, and when Norway followed suit gold exchanges rose violently, while sterling nearly regained parity with the krone. At the end of the year the krone was worth about 69 per cent. of its par value in dollars. In the course of the autumn certain exchange restrictions were introduced by voluntary co-operation between importers, exporters and bankers.

The outstanding industrial event of the year was the lockout, which lasted from April 8th to September 11th and included more than 80,000 workers belonging to most branches of industry. Negotiations resulted in a wages reduction of 6 per cent., agreements to be valid for three years. Foreign trade figures generally showed an unfavourable development; the value of imports amounted to 856.6 million kroner, against 1,065 million kroner for 1930, while exports amounted to 466.6 million kroner, against 684 million kroner during 1930.

The year brought a series of events with fatal consequences to our shipping trade, resulting in the laying up of a steadily increasing part of our merchant fleet. Laid-up tonnage now amounts to nearly 1½ million tons. In consequence of the decision of the British Oil Union not to buy any more whale oil, the Whalers' Association decided not to send out any whaling expeditions during 1931. The results of the fisheries were inferior to those of the preceding year, both as regards quantity and profit, while agriculture and forestry experienced serious difficulties on account of reduced prices and heavy interest burdens. The mining industries maintained production relatively well, but prices were lower.

The banks had a favourable year as far as turnover and profit is concerned, but deposits declined. The general world depression, the great lockout and the slump in shipping proved such a hard strain, however, that in the middle of December Den norske Creditbank and the Berkens Privatbank had to suspend payments and were granted a moratorium over a period of three months, with the understanding that plans of reconstruction would be forthcoming before the lapse of that period. Unemployment figures reached about 60,000 by the end of the year, against 45,000 in January, and the cost-of-living index fell during the year by about 10 per cent., against 8.7 per cent. during 1930. Activities on the Bourse have been on a smaller scale than during 1930 as far as shares are concerned, while Government and other bonds attracted special interest.

Sweden.

While Sweden showed a surprising power of resistance to the international depression, its effects made themselves felt in full force during the past year.

For the first nine months of the year the balance of trade deteriorated to no less an extent than 167 million crowns, and in spite of the fact that the introduction of paper currency improved the position somewhat during the latter part of the year, the surplus of

imports for the whole of 1931 amounted to 312 million crowns, a change for the worse as compared with 1930 of 200 million crowns.

A factor in the special position of Sweden which became particularly fateful was the influx of foreign capital. At the end of May the foreign deposits amounted to 343 million crowns. The net liabilities of the commercial banks on short account had then risen to 141 million crowns. The position was thus very far from liquid at the time of the outbreak of the crisis.

In the course of some few months the foreign capital had to be repaid, and the National Bank had to bear the brunt almost entirely. This seriously depleted the currency reserve, the inflation of which had at an earlier stage camouflaged the actual position. Already at the beginning of September the currency reserve of the National Bank was therefore dangerously low, and as this development was not countered in time by raising a big foreign loan the result could not be other than the abandonment of the gold standard.

The fears of the inflationary effect of this have, however, so far proved to be unfounded. The wholesale price level has certainly risen, but to a reasonably slight degree, from 100 in September to 103 in December, according to the *Svensk Finanstidning*. On the other hand, it has been possible to maintain the retail price level and the cost of living unaltered, owing to the high Bank rate and the severe credit restrictions employed by the National Bank.

Industrial production in the more important branches was maintained on a comparatively high level during the first few months of the year, falling to the low record of 93 in May (1923-24 = 100), according to the production index of *Svensk Finanstidning*. After some recovery it again fell to 103 in August, after which an improvement set in, which is to be attributed in some degree to the depreciation of the currency. Owing to the fear of labour conflicts after the end of the year, a forcing of production took place in December, which brought the index figure up to 125.

Imports fell from 1,662 to 1,439 million crowns, as compared with 1930, but at the same time exports were reduced from 1,550 to 1,127 million crowns. The passive side of 312 million crowns will probably have been reduced by invisible exports by about 175 million crowns. As the net result of the movements of capital was an import of capital of 37 million crowns, the change for the worse in the balance of payments should consequently be about 100 million crowns, as compared with 245 million crowns in 1930.

During the first part of the year the money market was very easy, but with the crisis there came increasing stringency, especially during the autumn. The discount rate of the National Bank, which at the beginning of the year stood at 3½ per cent., was 6 per cent. on October 19th, which rate has since been unchanged. The portfolio of home bills of the National Bank, which during the first quarter only amounted on the average to 138 million crowns, culminated in December with an average of 486 million crowns. In spite of this, the increase in the total volume of credit was not more than 138 million crowns for the whole year.

The Stock Exchange reflected very faithfully the general deterioration during the year, and the stormy autumn months in particular brought in their train enormous falls in prices. While in 1930 there was as moderate a drop in the securities of "A" List as 188 million crowns, corresponding to about 4 per cent., the fall in prices for 1931 reached the enormous figure of 1,785 million crowns, or 43 per cent. of the value of the Stock Exchange list at the end of 1930.

Finland.

Finland suffered from depression throughout 1931. Owing to the withdrawal of considerable amounts of its short-term foreign credits, Finland was obliged to suspend the gold standard. The consequences of this step

showed themselves partly in a slight rise in prices and partly in a fall in the value of the Finnish mark in relation to gold currencies. The position of the money market grew strained, and the banks experienced some trouble. In general, however, the banks successfully withstood the strain. Their business was reduced, indeed, and losses were suffered, but most of the joint-stock banks are able to pay a dividend only slightly smaller than that for the preceding years. The joint-stock banks had recourse extensively to the help of the Bank of Finland. Re-discounted bills rose by 333 million marks to 483 millions.

Agriculture yielded an average harvest, and exports of butter, cheese, and meat increased in quantity, but the value of these exports was diminished on account of the fall in prices, so that the financial difficulties of farmers continued. The output of the sawmills was restricted, so that exports fell off from 907,000 to 784,700 standards, while on the contrary the exports of chemical pulp increased by 32 per cent. and the exports of paper, cardboard and mechanical pulp were well maintained. The financial results of these branches of industry were, however, unsatisfactory on account of falling prices.

The most cheerful element in the situation is provided by the balance of trade. Imports were reduced from 1930 by 34.1 per cent. to 3,457 million marks, while the reduction in the value of exports did not amount to more than 17.6 per cent. and their value to 4,455 million marks. There was consequently a surplus of exports amounting to 998 million marks, compared with 156 millions for 1930. The whole of this surplus has been employed in redeeming the foreign indebtedness of the country, the amount of which has been reduced, according to estimates, by about 1,400 million marks. No fresh foreign loans were taken up.

THE BALTIC STATES.

It is possible that the Succession States of Latvia, Estonia and Lithuania suffered less from the effects of the crisis than the more highly organised and industrialised States. The effects of the trade crisis were not far-reaching, and they might have been got over without great difficulty but for the subsequent financial crisis. In each case the reaction took the form of a heavy withdrawal of funds, partly by foreigners, in their need to strengthen the home position; but also by nationals for hoarding. Conditions in all three States were for a time little short of chaotic, and in two of them the immediate result was the adoption of restrictions on foreign means of payment and the drastic control of imports. Latvia, with perhaps the wider contacts with Germany, was the first to suffer, and perhaps suffered most; Estonia, with an important British connection, was affected later by the English crisis and Great Britain's departure from the gold standard. Lithuania, with only slight foreign connections, suffered least of all, but even here, as we shall show, there is evidence of considerable stress. The methods adopted to deal with the crisis varied in each country as widely as the extent to which they suffered, and in no case can they escape criticism. In Latvia the National Bank adopted a rigid policy, which was in essence deflationary, and, indeed, perhaps went too far in that direction. Help was refused to the banks, in spite of the fact that the cover for the note issue was the largest in the Baltic, and at one time stood at over 90 per cent. This refusal forced the banks, excepting one in which British interests predominated, not only sharply to call in loans, but to ration drastically their payments on deposits, and two institutions suspended payments. In Estonia support was given to the banks, and one of the largest institutions, which had been forced to close its doors, was taken over, administered, and financed by the National Bank. It has since been

able to reopen with the aid of some fresh foreign capital. These measures went far to save the situation, but here it must be said that it was only effected at some expense to the note issue, so that there is ground for the criticism that there was some inflation, although to a mild degree. In Lithuania, in spite of the lesser extent of the crisis, heavy withdrawals of deposits occurred, and at the same time there was a sharp expansion of credit, especially to agriculture, to meet the switch over from stock to dairy farming, and to make good the loss of the German market for agricultural produce. Here the criticism may be made that these changes were forced too quickly and involved too great an expansion of credit, which means that there was a definite inflation on some scale. On the other hand, Lithuania took no measures to control foreign exchange operations, with the result that the foreign currency holdings of the National Bank fell from 86.3 millions of lats to 33.1 millions during the year.

Agricultural production in all three States was little affected. The surplus of dairy produce and meat available for export increased, and served to offset the considerable decline in timber and wood products. The domestic situation, in the shape of retail trade and industrial production, appears to have improved in Estonia and Lithuania, in spite of lower purchasing power; but in Latvia the lack of organisation for inland distribution and sale, and the crippling effect on the existing trade organisations of the official financial policy led to confused conditions, and wide divergencies in prices were recorded between producing and consuming centres.

Latvia.

Acreage under cultivation increased, except in rye and flax. Figures of production (in thousand quintals) of the various crops were as follows, as compared with former years:—

	Rye.	Wheat.	Barley.	Oats.	Potatoes.	Flax.
1929.....	2,400	600	2,100	3,400	11,300	200
1930.....	3,600	1,200	1,900	3,400	11,000	200
1931.....	1,600	1,000	2,000	3,600	11,000	200

The heavy imports of cereal foodstuffs which were necessitated by bad harvests in previous years have now declined. The figures are as follows:—

	Rye.	Wheat.
	1,000 Tons.	1,000 Tons.
1930.....	59.6	8.3
1931 (10 months)	7.1	0.7

The live stock census shows a marked increase:—

	(In Thousands.)	Horses.	Cattle.	Sheep.	Pigs.
1913.....	320	912	996	557	
1929.....	356	978	905	382	
1930.....	359	1,026	873	523	
1931.....	366	1,117	923	712	

Foreign trade during the first eleven months of the year shows a fall in imports from 274 million lats in 1930 to 167 millions in 1931; exports fell from 225.5 millions to 152.2 millions.

Exports of timber declined by 31 million lats, or 52 per cent., and textiles by 9 millions, or 80 per cent. Butter export increased in volume by 12,700 cwts. to 368,500 cwts, but the value was reduced from 57 million lats to 48 millions. Similar declines occurred in the value of bacon, flax, linseed and leather exports, but here also the volume was well maintained. Trade with Russia improved considerably, but has not yet reached the figure provided for in the trade agreement. An encouraging sign is the increase in transit trade, and this may play an important part in Latvia's future balance of payments. The French Railway Loan was given for the express purpose of developing the competitive capacity of the Latvian railways and securing this transit trade. Between January 1st and December 31st deposits with the National Bank fell from 19.8 to 17.4 million lats; deposits with the joint-stock banks from 55.1 to 23.1 millions and deposits with other credit institutions from 43.17 millions to 27 millions. In the same period the Bank of Latvia reduced loans and

advances from 155.7 million lats to 136.4 millions, while in spite of the restrictions on foreign exchange operations, its holdings of foreign currencies fell from 36.8 million lats to 13.4 millions. The extent of the deflation is measured by the simultaneous reduction in the note circulation from 116.2 million lats to 106.5 millions. As regards the national finances, there was at first a deficit on the 1931-32 Budget of 25 million lats, largely as a result of the fall in Customs revenue owing to the restriction of imports. This was met by additional taxation. By the end of November, however, a further deficit was revealed of 28 millions, and to meet this the Government has recently cut salaries, increased income tax by 50 per cent. and set up a sugar monopoly, but it seems hardly likely that these measures will succeed in securing a balanced Budget in the short period left.

Estonia.

The agricultural position differs in no respect from that of the neighbouring States, so far as is known, but statistics, unfortunately, are lacking. Foreign trade, on the other hand, shows a most satisfactory improvement as a result of a drastic reduction in the import of iron and steel and cereals, and an increase in exports of most of Estonia's products, except timber and paper. The export of wood pulp and cellulose increased from 38,000 tons in 1930 to 52,000 tons in 1931, and that of potatoes from 10,000 tons to 25,000 tons. Imports fell from 98,000,000 kr. in 1930 to 61,000,000 kr. in 1931, and exports from 96,000,000 kr. to 71,000,000 kr., leaving a favourable balance of trade in 1931 of 10,000,000 kr., against an unfavourable balance in 1930 of 2,000,000 kr. Both the railways and shipping show a small decline on the previous year. Unemployment, which had for some time remained normal, and fluctuated in accordance with seasonal influences only, has recently shown a sharp increase. Withdrawals of funds were not so heavy in Estonia as elsewhere, as will be seen from the fact that deposits in joint-stock banks declined only from 45.7 million kr. to 36.9 millions in the course of the year. Credit, as we have said, was less restricted; the note issue increased from 32.2 million kr. to 32.5 millions, and, although the loans of the joint-stock banks were somewhat lower, this was offset by an increase in advances by other financial institutions. As elsewhere, the restrictions on foreign exchange were not entirely successful, and during the last quarter of the year the foreign currency holdings of the Bank of Estonia fell from 17.6 millions to 13.9 millions.

Lithuania.

The progress of agriculture, as a result of the change over from cereal production to dairy farming, is difficult to assess. Cereals, as the following figures show, fell off, but dairy farming and stock breeding, to judge by the export returns, show a considerable advance. Acreage under the various crops was as follows, as compared with the previous year:—

	(Thousands of Hectares.)	1930.	1931.
Rye.....		226	143
Barley.....		128	117
Oats.....		158	148
Mixed cereals.....		84	83
Potatoes.....		863	708
Flax.....		11	6

The export of butter increased by 37 per cent., and of meat by 119 per cent., which is the more remarkable in that the German market was closed early in the year, so that new markets must have been gained. Foreign trade suffered a setback as a whole, as imports, which fell from 312.4 millions in 1930 to 277.9 millions in 1931, were not so much reduced as in the other States, while exports, though probably greater in volume, fell sharply in value from 332.7 to 273.1 million lats. Deposits with the National Bank fell during the year from 94.9 to 80 million lats; deposits with the joint-stock banks from 72.2 to 60.7 million lats, and deposits with other institutions from 185.6 to 167.0 million lats.

The increase of credits to agriculture may be deduced from the increased figures of advances by the National

Bank from 101 million lites to 117 millions, and by other institutions from 348 million lites to 384 millions, whilst at the same time the note issue increased from 110 million lites to 113 millions. Foreign currency holdings of the National Bank fell from 86 million lites to 40 million lites during the year. The Budget position is fairly satisfactory. Estimates have been fulfilled for several years past, and, so far as can be seen for the present year, revenues have come in well. Only a small deficit, if any, is likely to occur. A favourable item is the smallness of the National Debt, which amounts to little over £2,500,000.

B.—BRITISH EMPIRE.

CANADA.

The full impact of the world-wide economic depression was felt in 1931, and the tale of economic tribulations and difficulties has been almost continuous. As the months slipped by, conditions grew steadily worse until, in the last quarter of the year, business was at least 25 per cent. below the level of the corresponding quarter of 1930 and as low as in the last half of 1925, when the latest boom was beginning to gather momentum. The prospect of any stimulus from good crops vanished by midsummer, when a drought of unprecedented severity devastated what had been regarded as one of the most reliably fertile areas of the Prairie Provinces and reduced the volume of the Western wheat crop to about two-thirds of the average yield of recent years. Forestry, mining and fishing, the other three great primary industries of the Dominion, also continued to suffer from low prices and inadequate markets for their products. The majority of factories throughout the year were working well below their operating capacity and making scant profits. The textile and boot and shoe factories, which were special beneficiaries of the tariff legislation, fared best, but firms engaged in the manufacture of motors, agricultural implements, railway equipment, machinery of different kinds, and the iron and steel plants, all had a very difficult year. The unemployment problem grew worse instead of better, and on December 1st the employment index of the Bureau of Statistics stood at 99.1, as compared with 108.5, 119.1 and 116.7 on December 1, 1930, 1929 and 1928 respectively. The Federal Government was compelled, in co-operation with the provincial administrations and municipal authorities, to undertake a comprehensive programme of public works for unemployment relief, and in addition large sums have had to be expended upon direct relief, including succour to many indigent farmers in the drought-stricken sections of the prairie country. The subjoined data, giving the Bureau of Statistics' weighted indices of the physical volume of business in Canada, based on the six-year period from 1919-1924, and corrected where necessary for seasonal variation, give an indication of the economic fortunes of Canada during the past year:—

	Nov., 1930.	Jan., 1931.	June, 1931.	Nov., 1931.
Forestry	167.2	153.6	160.5	140.9
Mining	136.1	139.5	112.0	115.3
Construction	253.0	246.0	99.0	158.0
Manufacturing	139.7	124.0	135.7	117.7
Employment in trade	139.0	126.5	137.0	128.4
Imports	132.2	115.8	99.8	92.2
Exports	85.0	83.8	102.5	75.2
Car loadings	88.0	103.1	101.9	81.0
Shares traded	184.2	149.1	208.5	170.5
Bank debits	110.3	130.1	131.0	114.2

The contraction of business is reflected in the aggregate car loading figure for the year up to December 26th, which, at 2,570,520 cars, shows a decline of 575,727 cars, or roughly 18 per cent. compared with the figure of 3,146,247 cars recorded in the parallel period of 1930, and is about a million cars less than the corresponding figure for 1929. Naturally, the earnings of both the great railway systems have suffered severely, and while the C.P.R. has halved its dividend, the Canadian National will have barely met operating

expenses. Their plight has induced the Bennett Ministry to appoint a special Royal Commission, whose recommendations are expected to do something to reduce the country's tremendous transport bill.

Crops.—For all Canada the total value of the principal field crops of 1931 is now estimated at \$431,251,000, as compared with \$631,592,900 in 1930 and \$948,981,400 in 1929. The detailed value of the leading crops is as follows:—

	Thousand Dollars.	
	1930.	1931.
Wheat	174,792	108,786
Oats	102,919	76,461
Barley	27,254	16,015
Rye	4,401	1,443
Mixed grains	18,435	12,081
Flaxseed	4,194	2,248
Potatoes	39,858	23,408
Turnips	18,180	10,643
Hay and clover	161,122	113,961
Alfalfa	19,877	19,015

The agricultural picture is not, however, wholly black, and some favourable features have made their appearance. The wheat situation is considered better than a year ago, and there has been during 1931 a notable increase of live stock, particularly hogs, in the Prairie Provinces. Dairy production has increased, and Canada has returned to an export basis for butter; the prices of dairy products remained low, but the producers were favoured by a long pasture season and abundant supplies of cheap foodstuffs. The producers of specialised crops, like fruit, tobacco, and sugar beets, had relatively profitable seasons with high yields, offsetting low prices. The commercial apple production was 400,000 barrels higher than in 1930, and increased acreage resulted in a considerable increase of the tobacco crop, which has now begun to find a profitable market in Britain.

Mining.—The total value, according to a provisional estimate, of the mineral production of Canada in 1931 amounted to \$227,769,000 as compared with a value of \$279,873,578 in 1930, and the decline is attributed to the drastic reduction in metal prices and the lessened demand for non-metallic minerals and structural materials. Gold production increased by 27.5 per cent., the output being stimulated by the fall in commodity prices and the exchange situation.

Foreign Trade.—The foreign trade returns again make depressing reading, and for the twelve months ending November 30, 1931, are as follows:—

	12 months ending Nov. 30, 1930.	Nov. 30, 1931.
Imports	1,032,596,700	648,146,525
Exports:		
Canadian produce	907,697,053	618,900,195
Foreign	20,187,773	12,177,547

However, Britain more than maintained her place in the Canadian market, for while imports from Britain declined in value from \$165 millions to \$113 millions, imports from the United States shrank from \$679 millions to \$407 millions. The loss fell upon the United States, whose exports to Canada declined from 64.9 per cent. to 62.8 per cent., and imports from 44.7 per cent. to 42.6 per cent. During the past year Canada negotiated new commercial treaties with Australia and New Zealand and abrogated a trade treaty with France, whose cancellation also automatically terminates trade arrangements with numerous other countries.

Banking.—The banks have had to face another year of severe stress aggravated by the serious depreciation of the Canadian dollar in New York and the general complications of the exchange situation, but they have successfully stood the test, and in American papers the stability of Canada's banking system is commonly contrasted with the disclosed weaknesses of the American system. The banks were not immune from troubles, but they were able to maintain a remarkably liquid position and to furnish ample credit for all legitimate enterprises. The latest bank statement, covering up to November 30th, showed current loans at \$1,102,493,179, as compared with \$1,183,723,859 on

November 30, 1930, a decline of \$181 millions, and notice deposits at \$1,395,829,124 as compared with \$1,488,611,843, a decline of roughly \$43 millions.

Stock Market.—The stock markets have steadily reflected the business recession, and during the year occasional rallies did not materially affect the general downward course. The drastic nature of the decline is indicated by the Bureau of Statistics' "Investors' Index for the three main groups of common stocks traded in on Canadian exchanges, which fell from 108.8 in January to 59.9 on December 31st. Many leading stocks have been "pegged" during recent months, and most reputable firms have complied with the Government's request to discourage the purchase of foreign securities; the result is that the volume of stock exchange business is at its lowest ebb for many years. Commodity prices fell steadily up to September, when there was the first rise for many months, but the decline was resumed in December. The Bureau's wholesale price index was 76.7 for January (as compared with 95.3 for January, 1930), 74.4 for April, 70.9 for August, and 70.3 for December. During the year retail prices made up some of the earlier lag in the pace of their decline, and the Bureau's Cost of Living index in December was 86.5, as compared with 95.1 in January and 102.1 in January, 1930. Since Britain abandoned the gold standard in August sterling exchange in Montreal showed sharp fluctuations, and at the end of 1931 fell below \$4.00, while about the same time the premium on New York funds reached its peak of about 24 per cent.

Federal Finances.—Revenue collections during the first eight months of the present fiscal year ending November 30, 1931, amounted to \$227,872,635, as compared with \$266,927,699 in the parallel period of the previous fiscal year. Customs revenues showed a shrinkage of \$22 millions, and income tax of \$16 millions, but the most disappointing was the excise tax, which, despite the heavy increase in the sales tax, only increased its yield from \$24 millions to \$36 millions. Meanwhile in this period expenditure showed a slight increase, rising from \$274,296,878 to \$275,742,978, and the national debt, which was placed at \$2,185,733,137 on November 30, 1930, had risen a year later to \$2,809,482,279. In the autumn the Federal Government managed to raise about \$200 millions by a domestic loan, but most of its proceeds will be absorbed by the deficit of the Canadian National Railways and the special demands of the unemployment relief programme and a substantial increase of taxation in the next Budget is anticipated.

AUSTRALIA.

Production.—The year ended June 30, 1931, has been another year of great difficulty for Australia, though the position improved to a certain extent towards the end. The wool clip totalled 2,798,000 bales, compared with 2,867,000 bales in 1929-30. The value of wool per lb. averaged, in 1930-31, 9.15d. for greasy and 13.51d. for scoured, as compared with 11.30d. and 19.34d. respectively for the same period in 1929-30. The current season's clip is expected to be at least as large as last season's. The area under wheat for the 1930-31 season was 18,213,428 acres, and the final estimate of the yield is 212,628,669 bushels, compared with 126,884,622 bushels in 1929-30. This season's crop is not expected to exceed 177,000,000 bushels. The production of butter was estimated at 348,355,000 lbs., compared with 299,080,545 lbs. last year, and the 1931 vintage of wine at 13,000,000 gallons, compared with 16,000,000 gallons last year.

Overseas Trade.—Imports of merchandise for the year ended June 30, 1931, were, in sterling, £60,558,095, and were estimated at approximately £68,200,000 in Australian currency; imports of bullion and specie were £399,053 sterling. Exports of merchandise were £75,764,044 sterling or, in Australian

currency, £88,991,442, a decrease in sterling of £21,614,255 on last year, while exports of bullion and specie amounted to £13,046,956 sterling, a decrease of £14,701,893 on 1929-30. The merchandise figures show an excess of exports of £15,605,002 sterling, as compared with an excess of imports of £33,380,235 for 1929-30. Imports from Great Britain were valued at £23,190,488 in British currency, compared with £54,254,702 in 1929-30. For the U.S.A. the figures were £11,367,822 and £30,316,208 respectively. Practically all items of import show a substantial decrease on last year, the only exceptions being films for cinematographs with an increase of £221,562, and raw silk with an increase of £1,602. The principal decreases were in the textile group, total imports of which dropped from £32,546,428 to £15,885,711, and the metal, metal manufactures and machinery group, in which the total fell from £36,323,308 in 1929-30 to £12,407,201 in 1930-31; in the oils, fats and waxes group the total declined from £11,565,261 to £6,937,359 between these two years, and in the paper and stationery group from £7,912,167 to £4,547,092. The principal items of export are shown in the following table:—

Commodities.	1929-30.		1930-31.		Per cent. Exported to Great Britain, 1930-31.
	Quantities	Values*	Quantities	Values*	
	Lbs. '000.	£'000.	Lbs. '000.	£'000.	%
Wool	744,314	33,380	814,592	32,002	32
Wheat	2,423,442	10,036	7,153,395	14,748	16
Flour	931,466	4,948	1,048,479	3,513	24.3
Butter	107,663	7,001	163,180	8,120	88.5
Frozen meats	257,159	4,955	264,872	4,340	78.5

* Recorded values.

Finance.—The accounts for the Commonwealth and States for the year ending June 30, 1931, are set out in the following table:—

State.	Revenue.	Ordinary Expenditure.	Loan Expenditure.	Gross Public Debt.
	£ (a)	£ (a)	£	£
N.S.W.	17,422,051	20,296,315	6,152,466	287,831,556
Victoria	24,151,198	27,605,396	3,552,767	165,958,684
Queensland ..	15,072,651	15,914,696	1,852,921	112,706,190
South Aust. ...	10,725,811	12,539,668	893,168	100,094,446
West Aust. ...	8,686,756	10,107,294	1,759,263	77,359,685
Tasmania	2,609,290	2,854,394	825,439	23,365,812
Six States	78,667,757	89,317,763	15,036,074	767,316,372
Commonwealth	69,566,920	80,324,539	1,988,820	388,718,545
Total	148,234,677	169,642,302	17,024,894	1,156,034,917

(a) Excluding business undertakings.

The Budget speech was delivered by Mr E. G. Theodore on July 10th. The financial year 1930-31 has closed with a deficit of £10,756,899, and the Budget for 1931-32 shows an estimated deficit of £5,176,800 after giving effect to the proposed increase in taxation. It is proposed to reduce the deficit to the above amount both by increases in taxation and by savings on expenditure. The net saving to the Commonwealth Budget from the loan conversion is estimated at £2,470,000. The net gain to the Budget for 1931-32, if the Hoover plan were carried into effect, is estimated at £4,028,000 (Australian currency), after allowing for suspension of repatriation receipts, £830,000 in British currency (or £1,082,000 in Australian currency). The anticipated deficit would thus be reduced from £5,176,800 to £1,148,800.

The Commonwealth raised six loans in Australia during the year 1930-31, amounting to £30,768,810 in all, at interest rates varying from 5½ per cent. to 6 per cent., the greater part of these loans being raised for

conversion purposes. The Commonwealth Debt Conversion Bill provided for a reduction of 22½ per cent. in the interest on the internal debts of the Commonwealth and States and took effect from July 31, 1931. The Commonwealth and States debts affected amounted to £556,000,000, of which £400,467,000 was represented by Commonwealth securities (including £177,537,000 on behalf of the States) and £155,533,000 was represented by State securities.

During 1930-31, the amount applied to Commonwealth debt redemption totalled £4,644,359, and State redemption totalled £3,249,513 (of which the Commonwealth contributed £1,057,703). The payment on the combined Commonwealth and State debts amounted to £5,454,080 in Australia and £2,442,540 overseas. The public debt of Australia per head is £177 16s. 9d., compared with £170 17s. 6d. in 1929-30.

Banking.—The net profits of the Commonwealth Bank were £700,788 for the half-year and £1,319,713 for the year ending June 30, 1931. Of these amounts, £351,738 and £633,819, respectively accrued from purely banking business. For the Commonwealth Savings Bank the profits were £112,646 for the half-year and £234,186 for the year ending June 30, 1931. The reserve fund amounted to £1,185,717 for the Commonwealth Bank and £1,528,672 for the Commonwealth Savings Bank.

NEW ZEALAND.

In New Zealand the year's experience has been much the same as in 1930—production has shown a healthy increase, but prices a decrease. The additional output has not sufficed to counter-balance lower values. The result has been a decided fall in the total export figures. Naturally, too, importations have diminished, and in a greater ratio than the exports. One effect of this has been to give the Dominion a healthy trade credit balance of £10,340,070.

OVERSEAS TRADE OF NEW ZEALAND.

(Million £'s.)

	1927.	1928.	1929.	1930.	1931.
Imports	44.7	44.8	48.7	43.0	24.8
Exports	48.4	56.1	55.5	44.9	35.1

Public Finance.—The following is a condensed statement of the national balance sheet for the past two financial years. Only the principal items of revenue and expenditure and the respective total units are shown:—

(000's omitted.)

Revenue.	Year ended March 31st.		Expenditure.	Year ended March 31st.	
	1930.	1931.		1930.	1931.
Customs	£ 8,897	£ 7,605	Interest	£ 9,136	£ 9,266
Beer duty	620	575	Sinking fund and debt reduction ..	1,562	1,635
Motor vehicle duties ..	1,510	1,840	Pensions	2,750	2,851
Licenses, &c.	3,405	3,387	Education	3,218	3,230
Stamp and death duties ..	1,506	1,145	Contribution to Singapore Base ..	125	125
Land tax	3,533	4,003			
Income tax	2,132	685			
Railways (Interest on liabilities)					
Totals (including other items)	25,349	23,068	Totals (including other items)	25,200	24,708

The gross debt at March 31, 1931, was held as under:—

Where held.	Amount.
London	£ 154,546,941
Australia	4,175,350
New Zealand	117,311,067
Total	276,033,358

For the year 1931-32 the revenue was estimated at £24,946,000 and the expenditure at £24,763,781, but a supplementary budget issued later in the year to meet unexpected conditions amended these figures. The details are not to hand.

Production.—As already stated, the normal rate of production has more than been maintained during the year, and there has been particular concentration on an endeavour to extend the market for the Dominion's mutton and lamb, butter and cheese, etc., especially in Great Britain. The outlook for wool has considerably improved, though prices are still low. Foreign countries have been more liberal buyers of New Zealand wool than heretofore. Probably the new 10 per cent. British tariff on butter and cheese will assist preferment for these commodities. Unfortunately, export details of the various commodities are not yet to hand. Eleven-month figures (to November 30th) are as follows:—

Wool, £5,194,162; butter, £9,200,723; cheese, £3,907,888; frozen meat, £8,313,135.

INDIA.

The year 1931 has witnessed the continuation and accentuation of the decline in prices, foreign trade and revenue. After touching 100 (the pre-war figure) in March, the Calcutta Wholesale Prices Index Number fell steadily to 91 in September, recovering to 96 in October, 97 in November, and 98 in December. Imports of private merchandise during the year were 136 crores and total exports 170 crores. Net exports of gold and silver on private account were 26 crores. Official revenues meanwhile fell so sharply that it became necessary to introduce an Emergency Budget, imposing heavy new taxation under nearly all headings, to avert an even heavier deficit than had been threatened only six months before. During the eight months ended November the value of imports decreased, as compared with the corresponding period of 1930, by 27 crores, or 24 per cent., and amounted to 85 crores only; while total exports, including re-exports, fell by 55 crores, or 34 per cent., to 105 crores. The exports of Indian merchandise decreased by 55 crores, or 35 per cent., totalling only 102 crores, against 157 crores in the same period in 1930, and comparing with 209 crores in the same months in 1929; these figures, as a measure of purchasing power, indicating the extent to which the decline in the import trade is traceable to non-political causes. The grand total of imports, exports and re-exports amounted to 190 crores, as against 273 crores in the corresponding period of the preceding year, a decrease of 83 crores, or 30 per cent.

Meanwhile, imports of treasure (private and Government) decreased by 14½ crores to 5½ crores. Gold bullion fell by 4½ crores to 94 lakhs, sovereigns and other British gold coin by 5½ crores to 104 lakhs, and other coined gold coin by 13 lakhs to 3 lakhs only. The value of silver imported decreased by 435 lakhs to 348 lakhs, while exports of treasure increased by 19,97 lakhs to 22,39 lakhs, private exports of gold totalling 17½ crores in the eight months, against imports totalling over 12 crores a year previous and 9½ crores in the same period in 1929.

Trade.—Unsatisfactory as the two preceding years were considered, the turnover in 1931 fell to levels not previously envisaged as conceivable. In most commodities, quantities and values have fallen simultaneously. The following figures all related to the April-November periods: In 1929 shipments of raw cotton totalling 413,940 tons were valued at 39 crores. In 1930 exports totalling 403,207 tons yielded 29½ crores. In 1931, however, exports limited to 302,092 tons yielded only 16½ crores. Japanese purchases fell progressively from 16 crores in 1929 to 11½ crores in 1930, and again to 7 crores in 1931. Simultaneously, exports of raw jute have fallen in quantity during three years from 538,000 to 362,103 tons in 1930, recovering to 397,364 tons in 1931, values, however, showing an unbroken decline from 19 crores to 8½ crores, and finally to 7 crores in 1931. Concurrently, shipments of jute manufactures have fallen successively from 64,013 to 568,640, and lastly to 458,556 tons, valued at 36 crores in 1929, 25 crores in 1930, and 14½ crores in 1931. All the staple exports have suffered

the same sort of experience. Gold is being exported because, on the pre-slump scale of values, it is the only product in world demand which yields to the seller what appears to be an attractive margin of profit.

That the import trades have suffered as the sequel and consequence of the decline in export values was to be expected. Large as the exports of gold have been, and may continue to be, they compensate to only a very slight extent for the loss in purchasing power occasioned by the general diminution in the demand for, and the fall in the world value of, Indian produce, and, so far as the Indian market is concerned, if Western countries will not buy, or will only buy at the present price-level, neither will they be able to sell. As already indicated, one outstanding effect of the slump in imports has been to force the Government of India, for budgetary reasons, to raise import duties far beyond protectionist requirements, and in recent months imports from countries still on the gold standard have been further restricted by the incidence of an adverse exchange. Some of the minor British industries interested in the Indian market have undoubtedly benefited as the result of the new exchange situation, and will continue to benefit so long as this situation persists. In relation to cotton piece-goods, however, further experience confirms previous calculations that the complete disappearance of the import trade is only a matter of erecting sufficient mills in India to meet domestic requirements. A number of new mills are under construction, and others are planned and will be proceeded with as soon as capital is available. The joint effects of economic and political influences on the import trade in cotton piece-goods are reflected in the appended totals covering the eight months ended November:—

	Million Yards.			Value in Crores.

Finance.—Following the Emergency Budget, which raised many taxes to levels threatening inclusion within range of the law of diminishing returns, further efforts have been made to reduce official expenditure with no other result but to emphasise that a further reduction in military outlay offers the only chance of substantial economies. The military, as distinct from the financial advisability, and practicability, of retrenchment in this direction, represents a separate issue; the point being that, for all practical purposes, civil expenditure in India is now at the irreducible minimum consistent with administrative efficiency without taking into account the clamant needs of the many departments, Central and Provincial, interested in, and anxious to promote, social and economic progress.

SOUTH AFRICA.

The year 1931 will live in the memory of South Africans as a period of great difficulty. With agriculture struggling in face of falling prices to recover from the previous bad season, merchants and manufacturers contending with new and severe competition, rising public expenditure and falling revenue, and the local share of the world's economic troubles, the country was ill-prepared to contend with the difficulties created by the currency position arising out of England's departure from the gold standard. It is perhaps true that, owing to the prosperity of the gold-mining industry, the position is far better—for a young country working on a small scale—than in some other territories. To South African experience, however, the position has been bad and remains so.

Public Finance.—Even before the beginning of the year it was obvious that the Minister of Finance would have no surplus to declare in 1931. The actual deficit disclosed in April amounted to £1,550,000. Events since then have made the prospects for the next Budget very much worse. It is considered, according to some estimates, that the country is losing from £500,000 to £1,000,000 per week, in addition to heavy capital losses, in consequence of the currency position. Opinions on the gold standard is hardening against the Government policy. One of the disturbing aspects of public finance is the financial position of the railway system. The deficit on working during the year ended March, 1931, was £800,000, and, owing to the severe setbacks in trade, the position since that date has certainly not improved.

Trade and Prices.—The latest available figures for visible trade show imports of £40.7 millions and exports of £54.5 millions during the nine months ended September 30, 1931. Corresponding figures for 1929 were £62.8 millions and £66.8 millions, and for 1930 £48.6 millions and £60.4 millions. As between 1930 and 1931 all the principal exports except gold show severe decreases in value, whilst in many cases quantities are also down in consequence of marketing difficulties. The export of gold for the year amounted to £46,946,683. The high figure is due in part to increased production and in part to the financial position. Trade in the country districts is very depressed, and many houses have withdrawn their travellers. Prices during the year have continued to fall, and the average increase in the cost of living as compared with 1914 over the whole Union is now 21 per cent. on all articles, 15 per cent. on food, fuel, light and rent, and only 2 per cent. on food alone.

Production.—Gold production will once more constitute a record. Owing to the state of trade in other spheres, and the very bad season last year, the native labour supply has been ample to the point of embarrassment—almost for the first time in the history of the industry. Not only have the mines produced more gold, but the opportunity has been taken on many mines of extending the programme of development and other permanent work. The twelve months' output from the Union will amount to about 10,850,000 fine ounces, and the group profits to about £13,750,000. Dividends declared during the year amount to £8,580,000 in South African currency. The large supply of native labour has had its normal effect of increasing the numbers of Europeans employed. Manufacturing production is at the moment hampered by competition—as it is liable to be owing to its small scale, high cost, and absence of export outlets. The building trade seems healthy in the larger towns, and the process of rebuilding Johannesburg seems hardly to slacken in spite of general depression.

Agriculture.—The weather in certain parts of the country—especially the Eastern Transvaal and Northern Natal—is still somewhat dry, although rains have occurred. Of the Union as a whole it can be said that production prospects are generally favourable. The farmers' problem, however, is that of marketing produce at prices which will cover, or even approach covering, their production costs. Owing to the local consumption and a forced export on a quota system applicable to all holders, the position of maize producers is less difficult than that of wool producers, but the deduction of the ruling exchange from prices which even last year were not remunerative has, for the moment, placed the farming community in the worst position they have known for years.

IRISH FREE STATE.

The outstanding event in the Free State in 1931 was the increase in population resulting from the American slump. Emigration practically came to an end, and a large number of former emigrants returned to Ireland. For the first time in its short history the Free State experienced an increasing population.

Agricultural prices fell continuously throughout the year, potatoes being the only exception. The Free State farmer, nevertheless, still enjoys a differential advantage owing to the fact that the price of livestock and livestock products has not fallen so rapidly as that of feeding stuffs and other raw materials of production. It is the existence of this differential gain that has enabled Irish agriculture to weather the economic storm without overwhelming losses. The year has unquestionably been a bad one for Irish farmers, whose only consolation is that they have suffered less than farmers in other countries. The tariff on butter has succeeded in raising the price in the home market during the winter months, but it has not succeeded in stimulating winter dairying. A further measure of protection has been afforded by the imposition of a duty on oats accompanied by an increased duty on oatmeal. The co-operative organisation for the marketing of butter has been dissolved, and the old disorderly competitive marketing methods once more prevail.

The only new duty on manufactured articles is that on leather, but several applications for duties are being examined by the Tariff Commission. A comprehensive anti-dumping measure has been passed but up to the present it has been applied only to imports of cheap foreign bacon. The Shannon hydro-electrical scheme attracted a good deal of public notice during the year owing to the emergence of serious differences between the Government and the Electricity Supply Board. Apparently the accounting methods of the Board were defective, and the charges for current were inadequate. Several important members of the Board have resigned; a completely new system of accounts has been adopted; and the charges for electricity have been increased. The success of the Shannon Scheme has not been in the slightest degree imperilled by these differences on matters of policy.

The claims of farmers for the derating of agricultural land were partly conceded in the budget by an increase of £750,000 in the agricultural grant, financed by a tax on petrol. As the year advanced it became apparent that there would be a serious deficit, estimated at £900,000, on account of the general crisis. A supplementary budget was introduced in the autumn by which income tax was raised by sixpence in the pound and the duty on petrol was doubled. These increases in taxation were estimated to yield £450,000, and the remainder of the deficit will be bridged by an extensive measure of retrenchment in the public services.

The Free State departed from the gold standard automatically with Great Britain. The system adopted by the Currency Act of 1927 was that of a sterling exchange standard, and the value of the Irish pound is identical with that of the British. Even if the Free State had been on the gold standard, it would have been compelled to abandon it as soon as sterling depreciated on account of the magnitude and importance of its trade with Great Britain. Any bounty on exports that the Irish farmer might have enjoyed owing to the depreciation of sterling proved to be fleeting, and disappeared when Denmark and other competing agricultural producers abandoned the gold standard. The joint stock banks enjoyed a successful year, displaying no sign of weakness during the financial crisis. The Dublin clearings amounted to £249,980,000, an increase of £1,677,300 on the previous year.

C.—OTHER COUNTRIES.

UNITED STATES.

Hopes of an arrest in 1931 of the progress of deflation had to be abandoned early in the year and the trade and financial depression deepened virtually without interruption until the end of the year. Even the spring rise in activity was less marked than usual, and there was an almost continuous decline in commodity prices, industrial output, distribution of goods and security values, all indices of prices and business activity stand-

ing at the bottom as the year ended. Money interest rates alone stood somewhat higher at the year's close. The Federal Reserve Board's index of industrial production declined to 72 per cent. of the 1923-25 average in November, against 83 per cent. at the beginning of the year.

Money and Banking.—The average rate for call money renewals on the Stock Exchange was 1.74 per cent., compared with an average of 2.9 per cent. in 1930. Commercial paper averaged 2.3 per cent., against 3.5 per cent., while the 90-day bill rate was slightly over 1½ per cent., against 3½ per cent. in the preceding year. Time money ranged from 2 to 4 per cent. The New York Federal Reserve Bank made three changes in its discount rates. On May 8th the rate was lowered to 1½ per cent., the lowest rate ever quoted; on October 9th, as a defensive measure against the gold outflow, the rate was raised to 2½ per cent., and a week later to 3½ per cent. The eleven other Federal Reserve Banks followed the New York lead, but did not go all the way.

Federal Reserve Bank credit outstanding dropped sharply early in the year to a total of around \$850 millions, and was maintained not far above that figure until midsummer, when a sharp climb began as the central banks sought to offset the reduction in member bank reserves occasioned by gold exports and rise in currency circulation. Reserve credit rose to a peak of about two and a quarter billions at the beginning of November and closed the year at \$2,202 millions compared with \$829 millions a year before. Early imports of gold disappeared under the heavy autumn outflow, so that the monetary gold stock in the country was \$185 millions lower at the year end.

Member bank investments totalled \$7,428 millions at the year end, an increase of \$785 millions. Of this, Government securities of \$4,060 millions were up \$1,068 millions, while other securities held were down by \$333 millions. These figures cover banks with 40 per cent. of the country's commercial banking resources. The same banks ended 1931 with deposits of \$18,215 millions, a decrease of \$3,130 millions, and their borrowings from the Federal Reserve system were up \$596 millions. Total member bank borrowings from the Federal Reserve system were \$1,024 millions at the end of the year, compared with \$251 millions the year before. Total gold reserves were \$2,987 millions, against \$2,941 millions, and the ratio of total reserves to deposit and Federal Reserve note liabilities combined was 61.9 per cent. for the system, against 73.7 per cent. at the end of December, 1930. On the Stock Exchange, the market value of all listed shares was \$26,693 millions at the end of 1931, compared with \$49,019 millions twelve months earlier. The market value of all listed bonds was \$37,848 millions, compared with \$47,384 millions. Total brokers' loans were \$587,159,000 at the end of the year, compared with \$1,893,612,000 at the beginning. Bank failures for the eleven months were 1,932, with deposits of \$1,468 millions.

Government Finance.—The Federal Government wound up the fiscal year June 30, 1931, with a deficit of \$903 millions, the first since the war. The prospective deficit for the 1932 fiscal year is \$2,123 millions. Customs receipts fell from \$587 millions in the fiscal year 1930 to \$378 millions in 1931, and are estimated at \$410 millions for 1932. Corporate income taxes declined from \$1,118 millions in the fiscal year 1930 to \$892 millions in 1931, and are estimated at \$550 millions for 1932. Individual income tax collections dropped from \$1,061 millions to \$730 millions; the estimate for 1932 is \$370 millions. Miscellaneous internal revenue collections fell from \$628 millions in 1930 to \$569 millions in 1931; the 1932 estimate is \$544 millions.

Treasury financing for the calendar year 1931 amounted to a grand total of \$5,024 millions, exclusive of Treasury discount bills of \$1,859 millions, which was a net increase of \$449 millions in amount outstanding. In price, the Treasury bills ranged from an average interest rate of .46 per cent. on July 27th to a maximum of 3.25 per cent. on December 30th. There were

twenty-eight issues. Treasury certificates were issued on the first, third and last of the four tax dates, and there was an issue on April 15th in lieu of the June tax date. These issues totalled \$2,825 millions, of six months to a year, and at interest rates of 1½ to 3½ per cent. Treasury bonds of \$2,218 millions and of from twelve to twenty years' maturities were sold on the first three income tax collection dates, ranging from an interest rate of 3½ per cent. in March to one of 3 per cent. in September. On December 31, 1931, the public debt amounted to \$17,825 millions, a rise of \$1,799 millions on the calendar year.

New Capital Issues.—New capital flotations in 1931, according to the compilations of the *Commercial and Financial Chronicle*, fell progressively during the twelve months, and at the close were confined almost wholly to Governmental issues. Domestic corporate issues totalled \$2,371 millions, against \$4,957 millions in 1930, and domestic and foreign corporate issues were \$2,588 millions, compared with \$5,473 millions. Investment trust financing was virtually non-existent. The total of foreign issues placed in this country in 1931 was \$268 millions, compared with \$1,135 millions in 1930, most of it being Canadian financing. Of the total only \$14,500,000 was for refunding purposes. The grand total of new financing of all kinds was \$4,015 millions, other financing amounting to \$34,581,000. This compares with \$7,677 millions for 1930 and with \$8,114 millions for 1929.

Industrial Activity.—Industrial production and the movement of merchandise receded at about the same pace as in the previous year. Steel output fell 36 per cent., and in the closing month of the year the mills were operating at but slightly above 20 per cent. of capacity. Steel ingot production in the twelve months was 24,900,195 tons, compared with 39,286,287 tons in 1930, according to the American Iron and Steel Institute. The lowest previous annual output was the 19,184,000 tons production of 1921. Pig-iron output for 1931 was 18,275,165 tons, against 31,899,105 tons in 1930. Furnaces in blast on January 1st of this year were 56, the smallest number in service at any time since the summer of 1924. Production of electricity totalled 85,700,000,000 kilowatt hours, compared with 89,467,099,000 in 1930, according to the National Electric Light Association, a drop of 4.2 per cent. The American Railway Association calculated that during 1931 a total of 37,272,371 cars were loaded with freight, a reduction of 8,605,603 cars, or 18.8 per cent. under 1930 and a cut of 29.4 per cent. from 1929. Motor production in the first eleven months was 29 per cent. lower than in 1930, the total being 2,268,197 vehicles, against 3,200,285 in the 1930 period, according to the Department of Commerce. Consumption of crude rubber for the full year was 348,986 long tons, or a decrease of 7.1 per cent. compared with 1930 consumption of 375,980 tons.

The production of crude oil in the United States for the eleven months is reported by the Department of Commerce at 777,101,000 barrels, against 831,039,000 in the 1930 period, a drop of 6.4 per cent. The output of electricity in 1931 was about 85,700,000,000 kilowatt hours, or 4.2 per cent. under production of 89,467,099,000 kilowatt hours in 1930.

Merchandise exports for twelve months were \$2,424,183,000 against \$3,841,181,000 in 1930, and imports \$2,090,107,000 against \$3,060,908,000. The excess of exports was \$334,076,000 compared with excess of \$780,273,000. Gold imports in the twelve months were \$612,119,000 and exports \$466,794,000 compared with imports of \$396,054,000 and exports of \$115,967,000 in 1930.

Commercial failures in the United States for the full year numbered 23,285, an increase of 7.3 per cent. over the 1930 total of 26,355, according to R. G. Dun and Company. These failures had total liabilities of \$786,309,102, or 10.2 per cent. more than the \$688,283,842 for 1930. The total value of construction contracts of all types for 1931 in thirty-seven States east of the Rockies was \$3,092,849,500. While actual production of crops in 1931 was about 10 per

cent. larger than in 1930, the total value of the crops placed by the Department of Commerce at \$4,100,000,000 was down \$1,700,000,000, or 29 per cent. under 1930 and about 49 per cent. under 1929. The large decline in value represents solely the market decline in agricultural values in the past two years with the average of farm prices on December 1, 1931, standing 36 per cent. below the like date in 1930 and 51 per cent. under 1929.

ARGENTINA.

Unremitting economy, alike in official and in private life, has been the keynote of Argentina throughout 1931, and the Republic therefore ends the year in far better shape than it began.

Finance.—All debt services, national, provincial and municipal, have been punctually met, and external indebtedness reduced by approximately \$250,000,000 paper. No fresh loans have been contracted abroad during the year, but the internal indebtedness, due to diminished revenue receipts and the impossibility of immediately cutting down administrative outlay, has risen by some \$200,000,000 paper as compared with 1930. Net revenue receipts for the first eleven months of 1931 were \$549,142,000 paper, as against \$566,128,000 for the corresponding period of 1930. A steady drain of gold, due to the use of the faculty of specie shipment to meet debt services, brought the holdings of the Conversion Office down from \$467,773,917 gold on December 31, 1930, to \$260,890,000 gold, though the paper circulation, which was \$1,260,686,000 at the close of 1930, stands at \$1,245,109,000 on December 31, 1931. Prices for national bonds and the cedulas of the National Mortgage Bank have been remarkably well sustained throughout the year, owing in part to the plethora of funds which existed until the beginning of November, but also to the general confidence felt by local investors. On the year-end quotations the decline as between 1930 and 1931 is roughly 10-12 per cent. Banking accommodation was available throughout the first eleven months of 1931 at 6 to 7 per cent. per annum, but the promise of good crops and improved prices for produce caused a monetary demand, which threatened to become insistent, wherefore deposit rates were hurriedly raised until 5-6 per cent. was paid for three to six months' fixed deposits, and loan business terms were quoted at 7 to 9 per cent. It is probable that the New Year will see a reduction, since it is evident that ample funds are available for handling the harvest.

Foreign Trade.—Comparing the first eleven months of 1930 and 1931 the export position reads:—

	Tons.	\$ Gold.
1930 ...	9,916,706	567,198,132
1931 ...	17,102,464	590,823,321

Import figures, estimated true values, for the first ten months only, are given as \$456,363,000 gold, as against \$629,892,000 gold for 1930. There is thus a slight money increase in exports and a decided saving in imports. Broadly speaking, this means that whereas 1930 closed with a passive balance of \$125,000,000 gold the year 1931 sees the commercial position strengthened by close on \$200,000,000 gold, as far as visible trade is concerned. Imports from the United States were 57 per cent. lower than in 1930. Prices for exports were low throughout the greater part of the year, and the total of commercial failures was heavy, with liabilities of \$369,618,000 paper as against \$228,841,000 in 1930. The year closed, however, with an improved outlook for all Argentine exports except cattle. Prices have fallen sharply in anticipation of restrictive duties likely to be imposed by Great Britain, and the rentable value of pastoral properties has declined in consequence. Nevertheless, viewed as a whole, 1931 closes with greater optimism than it opened, and that on reasonably warrantable grounds.

BRAZIL.

The past year in Brazil has been a period of tranquillity and reconstruction in the political sphere. Following the *coup d'état* in Rio de Janeiro in October, 1930, which placed the present Provisional Government in office, there ensued a strong and united effort to consolidate the economic position of the Republic, to re-establish the national finances on a sound basis, and to meet the difficulties of the commercial situation arising from the trade depression abroad.

The major problem with which the new Administration has been called upon to deal has concerned the coffee-producing industry. As is well known, stocks of Brazil's chief export product have, for many years, threatened to become increasingly excessive. At the same time, the economic crisis has deferred any marked expansion in the demand in the consuming markets, and the Government has taken, during the course of the year, new and energetic steps to meet the situation. A policy has been pursued of destroying surplus stocks of the inferior grades of coffee, funds for this purpose having been secured by the imposition of a new export tax on a gold basis. Further, whereas protective measures for the industry had formerly been financed largely with the assistance of foreign financial interests, an agreement has recently been arrived at whereby further funds will be obtained without addition to external debt commitments, by means of an increased export tax.

Owing to the further fall in prices, the total value of Brazilian exports continued to diminish during 1931, but this tendency was more than offset by economies in imports. In fact, the favourable visible balance of trade during the first ten months of last year amounted to the equivalent of £16,852,000, as compared with only £9,829,000 in the corresponding period of 1930, whilst, at the same time, the volume of coffee exports actually increased from 12,558,000 bags to 14,780,000 bags, the aggregate value declining from £35,253,000 to £28,032,000.

Despite the efforts of the Administration to strengthen the position of the Treasury, to improve the methods of the collection of revenue, and to prevent excessive public expenditure, Brazil has experienced serious difficulties with regard to the exchange position. Every possible effort was made to continue the payment in full of the interest and other obligations in respect to the somewhat heavy total of external debt. The continuance of the world crisis, however, weighed so heavily on the country over a protracted period that, ultimately, towards the end of 1931 the Government was obliged to decree the suspension of the debt services, excepting those on the specially secured Funding Loans and the Sao Paulo Coffee flotations. Brazil should derive considerable benefit from the comprehensive investigation of the economic situation made by Sir Otto Niemeyer in the spring of 1931, and certain of his recommendations have already been acted upon so far as practicable. It is especially worthy of note that, presumably as a preliminary to the establishment of a Central Bank in the Republic, the Banco do Brasil will be converted, as from February 1, 1932, into a Department for the Collection of Government Revenue.

CHILE.

The state of trade in Chile during the past twelve months has been affected by the depressed conditions ruling abroad in a somewhat special manner. The drastic deflation, stringency of credit, and contraction of the demand for primary products have resulted in a serious falling off in the total value of Chilean export trade, and this in turn has had its inevitable effect upon Government revenues. As a result, the Chilean Government has been obliged within recent months to suspend entirely the service of interest and amortisation payments on the external consolidated debt. On the

other hand, Chile has not been inactive in taking constructive measures to adjust and consolidate her basic economy by means of deflating public expenditure, while progress has also been made in the comprehensive reconstruction commenced some two years ago in the nitrate of soda-producing industry, and companies representing a production of approximately 95 per cent. of the whole were definitely incorporated in the Compañía de Salitre de Chile ("Cosach") in March, 1931.

The contraction which has taken place in Chilean commercial activity is clearly demonstrated by the latest available returns of the foreign trade of the country, which relate to the first nine months of 1931. The total value of exports during that period was 774,800,000 pesos, as compared with 982,900,000 pesos in the corresponding period of 1930, but an even more severe contraction took place in imports, which aggregated 607,300,000 pesos, against 1,054,000,000 pesos.

One of the chief considerations which decided the Chilean Government in suspending the service of the country's foreign debt was the need for protecting the exchange value of the currency, and this object has so far been successfully attained. The gold parity of the peso with United States currency has been protected, and, in consequence of the lower value of sterling, Chilean currency has appreciated to the equivalent of approximately 8½d. per peso, as compared with the parity level of 6d. A Control Committee, with wide powers, was set up in Chile in August last to control dealings in foreign exchange and to prevent the undue export of capital.

A surplus of 1,300,000 pesos was realised on the 1930 ordinary Budget, but the continuance of the trade depression has since rendered the situation less satisfactory. The Government, however, continues to seek fresh means for reducing expenditures. Further, the Minister of Finance has passed to Congress a proposal for the unification of the Budgetary system, whereby the financing of public works is to be included in the ordinary Budget instead of in the extraordinary Budget as hitherto.

During the early part of 1931 there was some disturbance of the political situation, and, on July 26, President Ibañez resigned. However, apart from a mutiny of certain naval units in September, which was quickly quelled, constitutional and ordered rule has since been maintained. Presidential elections were held on October 4, when Señor Juan Esteban Montero was returned by a large majority.

OTHER LATIN AMERICAN STATES.**Colombia.**

Despite the state of the world markets for coffee, Colombia has been able to produce and sell her chief product at a profit. It is estimated that, during the 1931-32 season, Colombia will export a total of some 3,200,000 bags, as compared with 3,017,000 bags in 1930-31. The credit situation in the Republic, however, has undergone an appreciable measure of deflation, due to the impossibility of obtaining fresh long-term facilities in New York. To meet the situation, imports have been very much reduced, while it has been found necessary to exercise very strict supervision over dealings in the foreign exchanges, so as to safeguard the currency position.

The Government has been active in reducing the volume of public expenditure. Public works construction has been kept to a minimum, but a fair amount of road building is in progress. In general, there has, as yet, been no relief of the general commercial depression. With the assistance of the measures outlined above, Colombia has been successful in maintaining stability in the exchange, the peso has been pegged on the basis of 103.75 pesos to 100 United States dollars, while the country has so far maintained fully the service of her foreign debts.

Ecuador.

During the greater part of 1931, the political situation in Ecuador was somewhat unsettled. Ultimately, in September, President Ayora resigned office and Colonel Luis Larrea Alba was elected in his stead, and it is to be hoped that the country may now obtain the benefits of a settled administration. Commercially, Ecuador has suffered from pest damage to the cocoa crop, and the failure of the harvest has had an adverse effect upon the national finances, while the gold reserves of the Central Bank have shown a declining tendency. There are indications, however, that the business depression has awakened the country to the necessity for giving serious attention to increasing the production and range of its agricultural resources.

Peru.

The general situation in Peru has been adversely affected during the past twelve months, partly by the universal trade depression and the low market values of the country's chief exports of cotton and sugar, and partly, also, by continued uncertainties in the politico-financial sphere. Disturbances of a political character have been numerous, but ultimately Presidential and Congressional elections were held on October 11, and, in the result, Colonel Sanchez Cerro was formally installed as President.

In regard to the cotton industry, there has recently been created the Banco Agrícola, and, as a result of the financial assistance rendered by this institution, the work of sowing the new crop has been considerably accelerated. All expenses in connection with the production of the crop, such as rents, wages, prices of fertilisers, and local rates, have been cut down, and undoubtedly the latest crop will be by far the cheapest produced in Peru since the war years. The returns of Peruvian foreign trade during the full year 1930 show a reduction in the total value of exports from 335,000,000 soles in 1929 to 241,000,000 soles, whilst imports diminished from 182,000,000 soles to 133,000,000 soles.

Serious difficulties have been encountered in meeting the national expenditure of the Republic. Preliminary figures of expenditure during 1931 were calculated on a basis of 110,000,000 soles, but it is doubtful whether this total can have been fully covered by the national revenue, which has naturally suffered owing to the very depressed commercial conditions in the Republic. The financial difficulties encountered in the general political and economic situation have had a severe effect upon and exchange value of the currency, and, in April last, the Government was obliged to bring about a second devaluation of the sol to the equivalent of 28 United States cents, or a gold parity of 17.38 soles to the £ sterling. Further, the Government was obliged, on May 29th last, to declare a moratorium on all the debts of the Republic.

Uruguay.

The total value of Uruguayan foreign trade has fallen off in the same way as that of other South American countries. The latest available statistics relate to the first nine months of 1931, and these show that exports (the figures are based on actual market prices) amounted to 57,850,458 pesos, as compared with 79,384,098 pesos in the corresponding period of 1930, whilst imports (according to Customs valuations) amounted to 64,799,800 pesos, against 66,455,316 pesos. There was thus an unfavourable balance of merchandise trade in 1931 of 6,900,000 pesos, against a favourable balance in 1930 of 12,900,000 pesos. It is to be noted, however, that the import figures given above were swollen by exceptional clearances through the Customs in anticipation of increased import duties, and, in fact, in import trade conditions were depressed for a period of months on account of the extremely low level of the exchange. Actually, the lowest sterling value of the Uruguayan peso was reached in mid-October last, when a quotation of 19½d. per peso was touched, although there has since been a recovery to around 30d. due to the suspension of the gold standard for sterling.

Bolivia.

Bolivia has sustained a long period of severe trade depression, chiefly owing to the extremely low level of prices recorded for tin in the consuming markets. Tin is the chief export product of the Republic, and it has been only within recent months that any appreciable recovery in the value of that metal has taken place. The political situation has not been entirely settled, and foreign exchange control and a partial commercial moratorium had to be instituted last autumn, whilst service on the external debt has also been suspended.

Paraguay.

Trade conditions in Paraguay have been on the whole favourable; an abundant sugar crop was gathered during the 1931 season, and the cotton and tobacco crops were also good. Crop conditions, however, were not altogether satisfactory, and cattle prices were low. The Republic has been able to maintain a favourable balance of trade, partly as a result of increased customs duties and partly owing to the benefit secured to exporters by the low exchange.

Venezuela.

The commercial situation in Venezuela during the past year has been depressed, owing chiefly to the poor prices obtained for both coffee and cocoa and to the continuance of restricted production in the petroleum industry. The coffee crop has been fairly satisfactory, but the cocoa harvest disappointing. Presidential elections were held in June last, when General Juan Vicente Gomez was the successful candidate, and the general situation has since shown indications of increased confidence.

Mexico.

The Mexican situation has been practically free from political disturbances during the past year, but the country has been seriously affected by external conditions. The world-wide over-production of petroleum has necessitated further contraction of output in the Mexican industry, and even more severe depression has occurred in silver mining, which has passed through a most critical stage due to the very low prices recorded for silver. So far-reaching have been the effects of this latter circumstance that, on July 25th, legislation was hastily enacted demonetising gold, which had formerly been the basis of both internal and external transactions, and establishing the silver peso as full legal tender. Creditors of the country thus suffered an immediate reduction in the value of their collectible debts. Owing, however, to the traditional and customary use of silver for the purposes of internal trade, the new monetary law undoubtedly afforded some measure of benefit to domestic business.

Despite the partial recovery in prices of silver during recent months, the commercial depression in the Republic continues, and there is some stringency in the credit situation, partly on account of the hoarding of currency. Under the monetary law, no new silver pesos may be coined, but there have been placed in circulation silver notes of the Banco de Mexico to a total of about 1,000,000 pesos. These notes have been readily received by the public, and it would thus appear that, by augmenting the amount of the issue, the Mexican authorities have the power to impart increased elasticity into the currency system, a step which might help to relieve the trade situation. The Budget estimates presented by the Government for the year 1932 provide for a reduction in public expenditure of some 86,000,000 pesos as compared with the total for 1931.

Stocks of commodities in the country at the present time appear to be more than sufficient for immediate needs. The production of wheat during 1931 is estimated at 412,000 tons, as compared with 315,000 tons in 1930. The increase thus indicated is satisfactory, but profits have been almost eliminated by reason of the low level of local prices. Similar con-

ditions obtain in regard to the maize crop. The coffee harvest was satisfactory, and the higher grades were sold and shipped at satisfactory prices. The estimated cotton crop was 40,283 tons, against 45,850 tons in 1930, but here again prices have not been attractive to the growers.

Central America and West Indies.

Normal progress in Nicaragua was wholly interrupted by the disastrous earthquake which occurred in March, 1931, and which completely destroyed the capital City of Managua. The process of rebuilding and reconstruction is proceeding expeditiously, and a resumption of normal trading activity can be only a matter of time. In Guatemala the export tax on coffee has been lowered, and the position of the coffee planters has also been improved by economies in production costs. A period of unsettled political conditions in the Republic terminated in February last with the election to the Presidency of General Ubico. Salvador is confronted with stringency in the national finances, and the outlook in that country is somewhat obscure. Conditions in the West Indies are generally depressed, although fair trade activity is observable in some directions. In regard to Trinidad, an adverse circumstance has been the low level of prices of cocoa. Banana shipments from Jamaica last year showed a reduction on those of 1930, and prices realised were also lower. In the Dominican Republic, in Haiti and in Porto Rico commercial conditions have been depressed. There is little sign of trade improvement in Costa Rica; the yield of the coffee crop was less last year, and, in order to improve the position of the national finances, the Government has proposed an increase in certain of the import duties.

MALAYA AND THE DUTCH EAST INDIES.

The incidence of the world depression has been particularly severe in Malaya and in the Dutch East Indies. The population of these countries is largely dependent for its income on just those raw materials which have fallen most in price during the last year. The fortunes of Malaya are intimately bound up with the rubber and tin industries. The prosperity of these industries during recent years has been accompanied by a considerable influx of foreign labour from India and China. Since the end of 1930 this movement has been reversed, but, emigration was not large enough to balance the increase in unemployment. The volume of rubber exported during the first eleven months of 1931, at 395,200 tons, only shows a reduction of 13,000 tons as compared with the preceding year. On the other hand, rubber prices in terms of gold continued to decline, though the increase in sterling prices, following the suspension of the gold standard by the United Kingdom, brought a small measure of relief to Malaya. At present prices hardly an estate can produce rubber at a profit. Nevertheless output has scarcely been curtailed and world stocks show an increase each month. There have recently been negotiations between British and Dutch interests on the question of output restriction, but so far no definite agreement appears to have been reached. Undoubtedly costs of production have been reduced substantially during recent years, and a slight advance in prices might therefore improve the position of the more efficient producers. Tin, too, has suffered a heavy drop in value, though this has been less pronounced than in the case of rubber, partly owing to the approximate adjustment of supplies to demand by an international restriction scheme. When it is remembered that Malaya has to buy abroad a very large proportion of her food and almost all her clothing and raw materials, the gravity of the present situation becomes evident. Malayan exports from January to October, 1931, at \$363,680,000 show a re-

duction of \$198,070,000 as compared with the preceding year. Imports declined from \$603,230,000 during the first ten months of 1930 to \$592,860,000 in 1931. Until the latter part of the past year, the Dutch Possession suffered slightly less than its neighbour. The following table shows the foreign trade of the Dutch East Indies during the last three years:—

	Thousands of Guilders.		
	1929.	1930.	1931.
Exports.....	1,488,000	1,191,000	802,000
Imports.....	1,166,000	922,000	608,000

The position of the country has been weakened by the depreciation in the currency of those countries which compete with it in the production of rubber, tin and tea.

JAPAN.

During 1931 trade and finance were in a desperate position, which eventually culminated in the abandonment of the gold standard, announced on December 13th. Public finance suffered from a huge deficit.

Public Finance.—The revised Budget for 1931-32 estimated expenditure at 1,453,840,000 yen, a saving of 35 millions on the original estimates and a decrease of 119.7 millions upon the preceding year. The national accounts for the first six months, ended on September 30th last, disclosed revenue amounting to 433,837,000 yen and expenditure to 487,168,000 yen, as compared with 395,024,000 yen and 493,900,000 yen respectively for the corresponding period of 1930. The increase in revenue is mainly accounted for by the transfer of 55.7 millions from the preceding year's surplus and reparations payments, while tax receipts are down by 80 millions. The Budget estimates for the next fiscal year show estimated expenditure of 1,479.1 million yen, against estimated revenue of 1,307.1 millions, with a deficit of 172.1 millions to be met by raid on the sinking fund and a new loan.

Money.—The general monetary trend, which remained easy during the first half of the year, underwent a change after mid-summer, and the heavy gold shipments following the British suspension of gold payments caused extreme stringency. The Bank rate was raised twice in October and November to 6.57 per cent. and the banks' deposit rate was advanced in December by one-half of 1 per cent. to 4.7 per cent. The note circulation rose to 1,125 million yen in mid-December which was only 27 millions less than a year ago, despite the Bank's loss of 334.5 millions of gold during the year. The yen exchange fluctuated within very narrow limits during the better part of the year. But since the departure from the gold standard the yen collapsed rapidly. Though foreign currencies were officially unquoted, 39½c. for the dollar and 2s. 3¼d. for sterling were the approximate spot quotations on December 22nd as far as they can be indicated.

Trade.—From January 1st to December 20th imports were valued at approximately 1,182,811,000 yen and exports at 1,108,353,000 yen. As compared with the corresponding period of 1930, imports and exports contracted respectively by 329 millions and 321.8 millions, the apparent adverse balance being 7.3 millions lower at 73.9 millions. As the fall in prices recorded during the year was less than 10 per cent., these changes show that a sharp shrinkage in volume has also taken place.

Production and Prices.—The year's rice crop is officially estimated at 55,027,000 koku, a decrease of 11,847,000 koku on the actual yield of the preceding year and 5,858,000 koku below the five years' average. The wheat crop is better at 19,987,000 koku, as against 18,952,000 koku in 1930. The output of cocoons totalled 92,893,000 kamme, a decline of 18,572,000 kamme upon the preceding year. The Bank of Japan's index number of wholesale prices (July, 1914 = 100) was 116.9 for November, as against 129.0 a year ago.

I.—HOME PRODUCE.

THE CORN TRADE.

No large or disastrous failure marked the British corn trade in 1931. In the case of wheat, it is true, the home crop declined, but the decline was slow.

Canada had a small crop of high quality. The United States had a good wheat crop, but the winter-sown which Old World buyers least appreciate was over the average, while spring-sown, which sells well both here and on the Continent, was comparatively scarce. Figures for the eight chief producing countries follow (millions of cwt.) :—

	1914.	1926.	1927.	1928.	1929.	1930.	1931.
British Isles	33-4	27-6	29-9	26-0	23-0	22-0	21-0
Canada	86-0	219-1	243-0	268-0	180-0	195-0	160-0
India	171-2	174-6	175-0	180-0	173-0	186-3	180-0
Australia	20-0	90-0	68-0	80-0	72-0	115-0	90-0
Empire	310-6	511-3	515-9	534-0	428-0	518-3	451-0
U.S.A.	427-3	453-6	457-0	480-0	556-0	440-0	477-0
Argentina	85-6	117-0	120-0	140-0	112-0	135-0	126-6

Total	1,055-7	1,276-9	1,314-9	1,389-0	1,347-4	1,301-3	1,266-6

The Russian wheat sales to the British Isles, over twenty nine million cwt., were not in accord with crop estimates which were eight and a half million quarters smaller for 1931 than for 1930.

SUPPLIES OF BREADSTUFFS.

In 1931 the imports for July to November were unprecedented for that particular period of five months.

	1925.	1927.	1928.	1929.	1930.	1931.
January.....	409	466	382	456	379	401

Total.....	5,265	6,067	5,696	6,068	5,840	6,507

The sales of home-grown wheat are now usually reckoned at twenty million cwt., but the price paid for poultry food is so good (or that paid by millers so bad) that the calculations of authorities are far less precise than they were. Pig breeding is progressive and wheat is a food of such high feeding value that this demand has become appreciable.

THE PRODUCTION OF SPRING CORN.

The world's maize trade, which was spoken of a year ago as passing to Argentina, in 1931 had been almost wholly centred at Buenos Aires. Of rather over fifty-three million cwt.s. imported into this country, 43,233,723 cwt.s. came from Argentina. Barley nearly held its own in Great Britain but the wet summer was adverse. Germany did well in France but indifferently. The American crop was unexpectedly small, as was that of oats, but when we note that American spring wheat was disappointing, while winter wheat was satisfactory, it seems clear that the weather for the spring-sown grain in general was very unpropitious. Canada fell under the same unseasonable influences, as both barley and oats gave yields well below the average. A circumstance of in some ways even more unsatisfactory

character was the decline in the mean quality of both U.S.A. and Canadian oats. The poor yield of potatoes in the British Isles and also over large Continental areas was an agricultural disaster, which has not yet been at all adequately estimated in its effect on the production of the year.

The Empire regions, fitting as they are to produce maize, fail to enter the arena to any extent worth considering. The barley area of the world is not increasing, but Argentina slowly adds to its area and Germany is nearly independent of other countries for its malt.

MARKET PRICES.

The decline in English wheat was small, but from a price which wages fixed by the State already rendered incompatible with good arable farming it meant a further plunge into the abyss. Canadian wheat rallied, and Canadian flour made a still larger recovery. The so-called market anomaly may possibly be explained by the fact that the British wheat is sold by the grower, the Canadian breadstuffs by men of means (merchants) who have bought the produce off the producer and are holding it for a profit. Bread was unchanged on the year. Other changes are headed by the great rise in potatoes, which added to the call for bread. Sound oats were appreciably dearer on the year, the result of even fair average quality being scarce.

The users of wheat in 1931 have not altered their views as to a mixture of strong and mild types making the best loaf, and prices therefore reflect the market need of both descriptions. The East eats more wheat; China, despite troubles of politics and finance, has increased its purchases. India probably eats more wheat also, but here information is difficult to procure. Barley is a staple like oats which is dependent largely on the supplies of maize.

The following table shows the quantity and value of our imports of wheat, etc., in 1913, 1930 and 1931:—

FRUIT AND POTATOES.

The past year was one of strenuous activity in production and distribution against adverse trade and climatic conditions. Apples were not a big crop and maintained a good price level, especially for the better grades and those marketed under the National Mark; the plum crop was of a medium size, which did not result in the ruinous market of 1930; black currants, red currants and gooseberries were a slightly better trade than last year; the pear crop was not a great one on the whole; cherries, too, were only fair to moderate; and with strawberries the market was not on an economic level. Potatoes, owing largely to the greatly reduced yield, proved a better trade than for the past three years, but vegetables as a whole did not show any marked recovery. As for the glasshouse industry, the year just ended was even worse than 1930.

In 1931 the fruit acreage showed more variation than in 1930. Whereas last year the total differed from the previous year only by about 100 acres, there is an estimated total loss in the acreage, at 306,500 acres, of 6,700, of which 4,200 acres were from the area under small fruit and 2,500 acres from land returned as orchards. Five years ago (1926) the grand total was 240,600, so that the situation is still satisfactory. The drop in small fruit is understandable, and not unexpected. The reduction in orchard acreage was most pronounced in Middlesex (a decrease of 700 acres) and in the South-Eastern and West Midland divisions (net reductions of 600 acres and 1,200 acres respectively). In the latter division Worcester returned 600 acres less, and Hereford had 360 acres fewer than in 1930. In the acreage under small fruit, the most notable changes were seen in Kent (1,500 acres less) and Norfolk (600 acres down). Small fruit totalled 62,000 acres, as against 66,200 acres in 1930; and the comparative figures for orchards were 244,500 and 247,000 acres.—*The Fruit Grower.*

The following table shows the area and yield of potatoes in the last three seasons for this country and some of the largest of the world's producing areas, as estimated by the International Institute of Agriculture:—

	Area (Thousand Acres).			Yield (Thousand Cents of 100 Lbs.).

LIVESTOCK.

By the courtesy of the Ministry of Agriculture we are able to give the following provisional figures, subject to revision, showing the numbers of livestock in England and Wales halfway through 1929, 1930 and 1931 respectively, as compared with the average for the years 1921-30. The figures are collected annually as on June 4th:—

	Average 1921-30.	1929.	1930.	1931.
Horses—				
Horses used for agriculture (a)	No. 761,055	No. 706,765	No. 682,830	No. 666,540

Boars being used for service ..	24,576	21,925	20,770	26,720
Other p	2,209,369	2,037,474	1,970,940	2,354,870
Total of pigs	2,582,805	2,366,543	2,306,940	2,783,010

(a) Including mares kept for breeding.

POULTRY.

That the World's Poultry Congress of 1930 gave a great impetus to British poultry husbandry is evident. That great gathering, together with the publicity of the Empire Marketing Board in their "Buy British" campaign, and of the Ministry of Agriculture regarding national mark eggs, has stimulated consumption. It has also led to a considerable increase in the poultry population of the country. Many specialised commercial farms have been established and others extended.

There has been a steady advance in farm poultry keeping. The Poultry Census, taken on June 4, 1931, revealed the fact that on holdings of an acre and upwards in England and Wales adult fowls had increased from the previous year by 2,143,500, fowls under six months by 2,525,280, adult ducks by 12,580, ducks under six months by 103,520. Geese had decreased by 53,890 and turkeys by 149,930. The increase in consumption has, however, been accompanied by a reduced price of eggs. In the earlier months of the year under review the low costs of feeding-stuffs were about equal to the drop in returns. When the Government abandoned the gold standard there was an immediate increase in the cost of feed without any corresponding advance in prices of poultry products.

Imports of eggs in shell during the last two years were as follows:—

Country of Origin.	1930.	1931.
Soviet (Russia)	Great hundreds. 84,842	Great hundreds. 262,444
Sweden	491,168	339,003
Denmark	6,728,383	7,548,245
Poland (including Danzig)	3,612,564	2,687,069
Netherlands	3,680,696	3,835,698
Belgium	2,333,656	2,072,337
France	658,731	96,680
Egypt	451,479	220,937
China	1,712,568	1,499,989
Irish Free State	4,781,096	4,575,107
British South Africa	474,079	589,302
Australia	554,653	914,474
Other Countries	977,365	1,278,423
Total	26,541,280	25,920,308

China is still the chief source of supplies of dried and liquid eggs, of which 98.5 per cent. came from that country, including Hong Kong, as against 99.2 per cent. in 1930. The figures are:—

Year.	Quantities.	Values.	Per Cwt.
1929	Cwts. 680,086	£ 3,103,403	s. d. 92 6
1930	760,669	3,006,153	79 0
1931	744,435	2,646,287	71 10

The imports of live and dead poultry into Great Britain and Northern Ireland in 1931 were:—

Country.	Quantities. No.	Values. £
Irish Free State	1,054,561	185,304
Other Countries	90,026	8,544
Total alive	1,144,587	193,848
Dead—		
Soviet Union (Russia)	Cwts. 182,745	£ 630,276
France	38,476	250,785
Austria	48,682	250,742
Hungary	118,200	619,103
United States of America	14,149	85,786
Irish Free State	109,118	618,978
Other Countries	155,567	695,284
Total dead	666,837	3,130,954
Less re-exports	13,237	65,268
Net total dead	653,600	3,065,686
Gross total poultry	...	3,259,534
Increase over 1930	...	£173,118

The net values of eggs and poultry imported in 1931 were:—

	£
Eggs in shell	13,768,338
Eggs not in shell, less re-exports	2,646,287
Poultry, less re-exports	3,259,534
Total	19,674,159
Decrease from 1930	£2,809,145

Estimates, which have been scrutinised in every detail as to the values of home and imported supplies of eggs and poultry, based upon Census figures and the lower average prices of eggs and poultry, are submitted below:—

	£
Estimated production in England and Wales	23,658,000
Estimated production in Scotland	2,471,000
Estimated production in Northern Ireland	3,182,500
Total production in Britain and Northern Ireland	29,311,500
Imports of eggs and poultry, inclusive of dried and liquid eggs, less re-exports	19,674,159
Total wholesale values consumption, 1931	£48,985,659

In respect to values, the home supplies represent 60 per cent., and imports 40 per cent. of the total consumption. On the basis of quantities imports are nearer equality with the home output.—*Sir Edward Brown, Secretary, National Poultry Council.*

FISH.

The Board of Trade returns for the landings of sea fish of British taking in 1930 and 1931 include the following:—

TWELVE MONTHS ENDED DECEMBER 31st.

* Including other items not given above.
† Fish of all kinds.

Billingsgate has had a much better year than might have been expected, and, taking everything into consideration, the decrease in supplies as compared with last year is too small to be alarming. The official figures show a total of 154,352 tons of land-borne and 14,284 tons of sea-borne fish delivered to Billingsgate Market during the first eleven months of 1931, compared with 155,305 and 19,032 tons respectively in the corresponding period of 1930. Foreign-caught fish have been well to the fore this year, especially during the latter part, and their regular arrivals have certainly been a good tendency towards the stabilisation of the market when supplies of British-caught fish have fallen

Guaranty Trust Company of New York

Incorporated with limited liability in the State of New York, U.S.A.

Capital and Surplus - \$260,000,000
Total Assets exceed - \$1,494,000,000

A N. international bank handling every phase of modern banking business and by means of its offices in the United States and the principal cities of Europe, offering unusually complete services and facilities to firms developing foreign trade

short. The sales of frozen salmon, which had shown an almost continuous rise between 1921 and 1930, declined somewhat during 1931, but unsold stocks at the present time are very much smaller than at this period last year. Prices generally showed little alteration from the previous year. It has been a bad year for oysters, as the cold weather resulted in a complete absence of spat. As the previous season was also a failure, there is no prospect of any immediate recovery in the British oyster fisheries.

The Grimsby trade has not been sufficiently remunerative to justify the launching of the fleet expansion programme. Hull also has placed no new orders, but record landings have been enjoyed. Fleetwood and Aberdeen report the worst year for a long period. The East Anglian herring fisheries have had a far from satisfactory year.—*The Fish Trades Gazette*.

II.—COLONIAL AND FOREIGN PRODUCE.

TEA.

After two years of acute anxiety, those engaged in tea production were faced, during the year just closed, with misfortunes greater than in any year of this century. During January, prices realised for teas sold in London public auction were about equal to those of the preceding January. For the remainder of the year, there was a steady decline and the average for the year showed a drop of 3d. per lb., resulting in a loss of revenue of upwards of £4,000,000.

Imports of Indian tea into Great Britain and Northern Ireland amounted to 277,142,000 lbs., compared with 290,183,000 lbs. in 1930. Again the quality of the crop has been most disappointing, and it is particularly noticeable how volatile has been the flavour of high grown teas. Producers of Assam teas have suffered least. A rather heavier percentage of the crop has been sold than in the previous year, at a fall in price of only 1½d. per lb. From the Darjeeling and Dooars districts, realisations, however, have been less than the small figure for the previous year, and the drop in value for Darjeeling teas amounted to nearly 4½d., and for the Dooars 2½d. per lb. Slightly more Cachar and Sylhet teas were sold, but at a loss in value of 3½d. per lb. As compared with a drop in value of all tea sold in London public auction of 3d. per lb., the decline in value of Northern Indian tea was only a little over 2½d. From Southern India some very good quality teas were offered, but, on the year, results to producers must have been disappointing. The average value of lots actually sold in public auction showed a decline of 3½d. per lb.

Imports of Ceylon tea into Great Britain and Northern Ireland amounted to 158,888,000 lbs., compared with 152,097,000 lbs. in 1930. The quality generally throughout the year was hardly equal to that of 1930. A further contraction occurred during the year in the off-take by markets other than the United Kingdom. The total shipments for the year showed an increase on those of 1930 of approximately 5,000,000 lbs., but the shipments to the United Kingdom an increase of fully 11,000,000 lbs.; and Ceylon tea is the only growth showing an increase in stock between December 31, 1930 and 1931. The fall in average price realised in London public auction for the year was 3½d. per lb. Ceylon producers, however, had the satisfaction of realising that, as compared with other growths, a larger proportion of their crop secured a margin above actual cost.

The imports of Java and Sumatra tea into Great Britain and Northern Ireland amounted to 85,885,000 lbs., as compared with 84,600,000 lbs. in 1930. The general average quality was fully equal to that of the previous year. A recovery took place in the quantity of these growths re-exported from the United Kingdom, the figures for 1931 being fully equal to those of 1929. The fall in average prices realised in London public auction for the year was Java 2½d. and Sumatra 3½d. per lb. The offerings of both showed a very substantial increase over those of previous years.

The imports of China tea into Great Britain and Northern Ireland amounted to 8,594,000 lbs., as compared with 8,741,000 lbs. in 1930. The quality of the Keemun early arrivals was quickly appreciated by London buyers, and offerings met a ready sale at full prices. Later arrivals, however, were more difficult of realisation, and, although the crop generally showed a marked improvement upon that of the previous year, those best able to judge regarded it as inferior to that of 1929. The quality of Foochow teas was distinctly disappointing.—*Messrs. McMickin and Co.*

The Board of Trade figures for the United Kingdom for 1913, 1930 and 1931 are as follows:—

Imports—	1913.	1930.	1931.
British India.....	203,459,657	290,183,244	277,142,000
Ceylon.....	110,936,427	152,097,341	158,888,000
China (including Hong Kong and Macao).....	16,272,548	8,740,961	8,593,716

COFFEE.

The past crop year, ending in June, 1931, has been disastrous for the coffee grower. Supplies were altogether out of proportion to demand. The average price of Rio No. 7 in New York declined from 11.92 cents per lb. for the year ended June 30, 1930, to 6.90 cents per lb. in the past coffee year. During the year ended June 30, 1929, the average price was 17.61 cents per lb.

The enormous increase in supplies of Brazilian coffee has been caused partly by the policy of the Brazilian Government. By its valorisation schemes, prices were kept at a high level and the plantation of new coffee trees was thereby furthered. The following table shows the production and apparent consumption of coffee with prices during recent years:—

Crop Year ending June 30th.	(Thousands of Bags).						Rio No. New York Cents per lb.
	Production.			Consumption.			
	Brazil.	Other Countries (Mild Coffee).	Total.	Brazilian	Mild.	Total.	
1924.....	19,456	6,868	26,324	15,322	6,714	22,036	12.55
1925.....	10,915	6,762	17,677	13,682	6,824	20,506	20.30
1926.....	15,161	7,052	22,213	14,565	7,140	21,705	19.27
1927.....	14,663	7,068	21,731	14,276	7,022	21,298	16.42
1928.....	25,960	8,003	33,963	15,766	7,770	23,536	17.61
1929.....	9,690	8,660	18,350	13,890	8,361	22,251	18.07
1930.....	30,186	8,273	38,459	15,232	8,322	23,554	17.61
1931.....	12,978	8,633	21,611	16,546	8,545	25,091	11.92
						26,091	6.90

It will be seen that the Brazilian crop varies enormously from year to year, while the production of mild coffee in other countries shows a steady rise roughly proportionate to the increase in demand. The huge crop of 1930 entirely dislocated the coffee market and prices declined sharply. The past year's crop has been deficient and visible supplies on June 30, 1931, show a decrease on the preceding year. Nevertheless prices continued to decline, mainly because of the pressure of the unwieldy stocks. The lowest point was touched in April, 1931, when the average price for Rio No. 7 was 5.3 cents per lb. in New York. In view of the energetic measures taken by the Brazil Government an improvement took place in May. At the beginning of the 1931-32 crop year it became evident that the yield was again in excess of current demand, and prices slipped back until October, when Rio No. 7 was quoted at 5.8 cents per lb. Since then the movement of prices has again shown some improvement, and on December 30, 1931, Rio No. 7 had recovered to 7 cents per lb.

This improvement has been brought about by the determination of the Brazilian Government to prevent the further accumulation of stocks. The National Coffee Council has been reorganised. It will destroy 12,000,000 bags of coffee at the rate of 1,000,000 bags a month, and the export tax on coffee has been increased from 10s. to 15s. per bag.

Despite this drastic policy an advance of prices to the level of 1929-30 cannot be expected in the near future. As will be seen from the next table, even if this year's excess of production is burnt, supplies will probably still equal about one year's demand at the present rate of consumption at the end of the current crop year.

STOCKS OF COFFEE AT END OF SEASON.				
(Thousand bags.)				
June 30th.	"Visible" Supply.			"Interior" Stocks in Brazil.
	Brazilian.	Mild.	Total.	
1924.....	3,766	1,260	5,026	4,592
1925.....	3,805	1,198	5,003	1,786
1926.....	3,354	1,110	4,464	2,833
1927.....	3,262	1,156	4,418	3,312
1928.....	3,916	1,389	5,305	12,852
1929.....	3,647	1,639	5,286	8,921
1930.....	3,934	1,639	5,573	23,588
1931.....	4,657	1,727	6,384	19,297

At the end of December interior stocks in Brazil amounted to about 28,000,000 bags, as against 24,500,000 bags in 1930 and "visible" supplies to roughly 7,000,000 bags, against 5,200,000 bags on the corresponding day a year earlier.

COCOA.

INCREASED CONSUMPTION.

Cocoa prices declined during the first six months of the year under heavy shipments from West Africa, whence more than half of the world's supply is produced. Late in 1930 Gold Coast producers decided to hold up supplies in the hope of an improvement in prices, but they were ultimately forced to release this cocoa and probably suffered additional financial loss by their action, as the value of Accra, fair fermented, fell from 26s. f.o.b., in January to 17s. 6d. per cwt., f.o.b., in May. Prices improved later on adverse crop news and smaller shipments. Values rose further when the gold standard was suspended in September, but the closing f.o.b. quotation for fair fermented of 23s. per cwt. is relatively the lowest of the year if taken on a gold basis. Other growths moved to a great extent in sympathy with Accra, but fine quality Trinidad and Ceylon generally found a good market. The Bahia crop mostly went to the United States at the African price parity.

World production for the year is estimated at 528,000 tons, compared with about 480,000 tons in 1930. Of this quantity the Gold Coast contributed about 230,000 tons and the whole of Africa about 340,000 tons. Bahia harvested about 70,000 tons, Trinidad 28,000 tons, and Venezuela 20,000 tons. The most encouraging feature of the year was the expansion in world consumption, due, for the most part, to the low level of values ruling generally. This is estimated to have risen from 486,000 tons in 1930 to 522,300 tons in 1931. America, as the chief supporter of the industry, took roughly 180,000 tons, against 165,000 tons a year ago. World stocks are fairly heavy, but production tends to decrease rather than to increase.—*The Times Annual Financial and Commercial Review*.

The Board of Trade returns for 1913, 1930 and 1931 are as follows:—

SUGAR.

The rapid expansion of the production of sugar cane in Cuba and Java and of sugar beet in Europe led to a sharp decline in prices during 1930. In order to adjust supplies to consumption, an international sugar convention was signed by the principal producing countries on May 9, 1931, at the initiative of Mr Chadbourne. This convention, (known as the "Chadbourne Plan") provides for the regulation of exports over a period of five years. Among the principal countries not adhering to the convention is Russia. The scheme is based on a system of export quotas, and the total quantity to be exported is based on a calculation of current consumption. Flexibility has been secured by permitting an increase in exports in the event of an advance in prices above a certain limit. The Chadbourne Plan is controlled by an International Sugar Council, presided over by Mr F. E. Powell, formerly chairman of the Anglo-American Oil Company. Each country has been allotted a number of votes, roughly proportional to its output.

The Chadbourne scheme undoubtedly achieved a greater steadiness of sugar prices until the end of the past year. The average price of raw sugar in New York (96° centrifugal) during 1931 was 1.35 cents per lb., against 1.4 cents per lb. in 1930. Early in May last year the quotation had fallen to 1.14 cents per lb., but the signing of the Convention quickly brought about a rise in prices. In July the quotation stood at 1.58 cents per lb. During the remainder of the year, however, values receded, and at the end of December the quotation was 1.15 cents per lb. It became evident that consumption had been over-estimated. The United States was unable to absorb the Cuban quota allotted to her. Java, too, found it impossible to dispose of her quota in the Far East. Chinese imports suffered a severe contraction in view of her economic and political difficulties,

and purchases by India were discouraged by an increase in the sugar duty from 6 rupees to 9½ rupees per cwt.

The world's visible supplies have therefore shown a tendency to increase. On December 1, 1931, they amounted to 8,922,000 tons, against 7,630,000 in 1930 and 6,223,000 in 1929. In view of this situation, negotiations have already been started in order to deal with the surpluses of Cuba and Java and to bring about an adjustment of supplies to the current demand.

THE MEAT TRADE.

In contrast to other primary products, meat has scarcely been affected by the world economic depression until the autumn of 1931. The average price in London of beef and mutton during recent years is shown in the table below:—

(Shillings per 8 lbs.)

Period.	Beef.		Mutton.	
	English Long Sides.	Argentine Chilled Hindquarters.	English Wethers.	New Zealand Frozen Wethers.
1928 Average.....	5.66	4.75	7.40	4.90
1929 ".....	5.50	4.88	6.92	4.68
1930 ".....	5.69	4.89	7.28	4.21
1931 ".....	5.15	4.31	6.13	3.35

The relative stability of meat prices is partly explained by the fact that consumption of meat, contrary to that of other commodities, has remained steady throughout the past year. Ever since the war, Argentina, the principal beef exporting country, has pursued a policy of substituting cereal farming for meat growing as the former appeared to be more profitable. On the other hand, demand has been increasing steadily. When the price of cereals and other agricultural produce begun to decline in 1930, meat growing became once more more profitable, but production in this industry cannot be increased very rapidly. As the demand has not fallen off, prices remained relatively stable. It should be borne in mind that this country provides

Total of mutton and lamb	5,767,967	6,549,720	7,301,319
Total value of meat*	£ 110,305,436	£ 108,378,266	£ 90,536,444

* Including other items not given above.

It will be seen that imports have continued to increase in 1930 and 1931.

As this country is almost the only outlet for meat exports, the suspension of the gold standard did not cause an advance in prices. On the contrary, when towards the end of 1931 meat supplies began to be slightly in excess of demand, prices declined.

TOBACCO.

The following table, compiled from the Board of Trade Returns, show our overseas trade in tobacco during the last three years:—

	Quantities.			Value.		
	1929.	1930.	1931.	1929.	1930.	1931.

RUBBER.

Last year was one of very great difficulty and anxiety to all connected with the rubber industry. It was expected that during the latter half of the year production would have shown some falling off, but with the exception of Ceylon, no country shows any appreciable reduction. This is accounted for by the further considerable cutting down of costs, upon which estates have been concentrating and

which have now reached a very low figure. With few exceptions, directors have chosen to tap their most prolific areas, rather than stop tapping and put their estates on a care and maintenance basis.

The continued financial crisis, and in the autumn suspension of the gold standard by Great Britain and others, have naturally affected the consumption of rubber, and the decline in American consumption is greater than that in any other. Russia and Japan show a good increase, and England has used rather more than last year. The total net exports for the year are 789,000 tons, and the consumption we estimate to be 669,000 tons. The increase in the stocks is chiefly in America, who has been buying the surplus during the past few months; her stocks show an increase from 201,000 tons to 323,000 tons, but she has kept her manufactured inventories low, and her stocks on October 31, 1931, are returned for casings and tubes as 16,621,000, against 19,002,000 at the end of December, 1930.

The year commenced with the price of spot standard sheets at 4½d. to 4½d., which was the highest of the year, with a dull market it fell to 3½d. by the end of February, recovering early in March to 4½d., but falling again quickly to 3½d., and by the end of April to 2½d. At the end of June the market became firmer, up to 3½d., but by the end of July it went back again to 2½d., and on August 27 down to 2½d., which was the lowest price of the year for new spot standard sheet. On the Government's announcement of September 21 that England had to go off the gold standard the price rose from 2½d. to 3½d. by September 25. Since then we have fluctuated between 2½d. and 3½d., mostly remaining about 3d. per lb.

The consumption of the principal countries has been as follows, partly estimated:—

	1929. Tons.	1930. Tons.	1931. Tons.
America	470,000	376,000	349,000
England	72,000	74,000	77,500
France	62,000	67,000	50,000
Germany	49,000	45,000	39,000
Belgium	9,000	11,000	11,500
Canada	35,000	29,000	24,000
Japan	34,000	32,000	41,500
Russia	13,000	5,000	7,000
Australia	16,000	15,000	10,000
Italy	16,000	15,000	10,000
Other Countries	29,080	30,635	29,000

Para is now practically the only wild rubber that is collected. Receipts in para show a further considerable falling off, being 13,680 tons against 17,137 tons during 1930. These figures include Caucho Ball, which has not completely ceased coming even at this very low price, though no doubt a good part has been old stock. Caucho Ball was quoted at 3½d. in January, but to-day the nominal quotation is only 1½ to 1½. Nothing is offering at the moment. At the beginning of the year the price for fine para was 5½d., declining in February to 4½d., and it remained at 4d. to 4½d. until July, when it rose to 4½d., but declined in August to 3½d. and in September to 3½d., the lowest price of the year. From the end of September to December it was quoted at 3½d., but rose on December 11 to 4½d., at which price it now stands. Very little market business has been done, and for many months together there has been little change in the quotations.

UNITED KINGDOM STATISTICS, 1931.

THE OIL INDUSTRY.

The restriction movement in the American oil industry last year was successful in that the total new supply of oil (domestic production and imports) was brought down below the level of total demand (domestic consumption and exports) for the second year in succession, but it will be found that the only big dent in the crude oil production curve occurred in the August-September period when the Governors of Texas and Oklahoma resorted to illegal methods and shut down production in their respective States by force of arms. There were times, indeed, when the restriction movement seemed to be on the point of breaking down. The development of the prolific shallow field in East Texas, with high quality oil and cheap drilling, was the great menace to the production industry. In July and

August the unrestricted production in East Texas—reaching nearly one million barrels of crude oil per day—threw the whole oil industry into chaos, forcing prices to the lowest levels on record. It then seemed that the restriction movement was killed and that the American oil industry would never combine for its own good. It was at this point that the Governors of Oklahoma and Texas came to the rescue, the first closing down the wells in the Oklahoma City Field and the second in the East Texas field by sending the militia out to enforce their illegal orders. The Governor of Oklahoma even threatened to go into the petroleum business in open competition with the large oil combines, declaring that he would not remove his troops until the price of oil in Oklahoma had risen to the price of \$1 per barrel. However, by October 12th he appeared satisfied with a price of 66 cents per barrel and the embargo was lifted. The Governor of Texas followed suit, but continued to restrict the output of the East Texas field by limiting the amount each well could produce per diem. At the end of the year, the total daily average production of the American oilfields was 2,292,900 barrels as compared with 2,082,180 barrels a day at the beginning of the year. In the hectic period of July, production had risen as high as 2,544,650 barrels a day, as the next table will show:—

	Oklahoma.	California.	East Texas.	U.S. Total.
High level for 1930	707,550	806,000	...	2,722,050
Beginning of 1931	448,900	537,500	Nil	2,082,100
High levels in July-August	632,450	523,000	848,450	2,544,650
End of December, 1931	534,950	499,500	316,000	2,292,900

The total production in America last year is estimated at 860,000,000 barrels, a decline of 5.33 per cent. The following are the estimates of world-production in 1931, as compared with 1930:—

WORLD PRODUCTION OF CRUDE OIL.

	1930.	1931.	% dec.
United States	898,000	850,000	- 5.33
Venezuela	137,675	118,000*	- 14.29
Russia	135,165	164,000*	+ 20.59
Mexico	39,550	34,000*	- 14.03
Persia	45,420	47,000*	+ 3.48
Netherland East Indies	40,150	39,000*	- 2.86
Roumania	41,680	46,000*	+ 10.36
Colombia	20,346	18,000*	- 11.53
Peru	12,458	11,500*	- 7.69
Other countries	48,299	49,500*	+ 2.49
Total	1,418,723	1,377,000	- 2.94

* Estimates of Mr Garfias, Foreign Oil Department of Henry L. Doherty and Company.

World oil consumption can only be estimated, but it appears from the figures of oil supply and demand in America published by the United States Bureau of Mines that for the second year in succession the consumption of oil products showed a decline. We give below the estimates for 1931 based on the actual figures for the eleven months ending November 30:—

U.S. OIL SUPPLY AND DEMAND.

	1930 12 months.	1931 12 months. (est.)	Percentage rise or fall.
Supply—			
Domestic production	953,331	892,786	- 6.35
Imports	105,618	86,033	- 18.54
Total new supply	1,058,949	978,819	- 7.57
Demand—			
Domestic consumption	926,450	904,846	- 2.33
Exports	156,499	128,009	- 18.20
Total demand	1,082,949	1,032,855	- 4.62

On the basis of the import figures, less exports and re-exports, the total consumption of oil products in Great Britain declined last year by 7.1 per cent. On the basis of a yield of 30 per cent. of petrol from the crude oil refined, we estimate the petrol consumption in Great Britain last year at 993,744,000 gallons, as against 1,075,135,000 gallons in 1930, a decline of 7.57 per cent., as the following table will show:—

ESTIMATED PETROL CONSUMPTION IN GREAT BRITAIN.

	In Imperial gallons. 1930	1931.
Derived from crude oil imported and refined (30%)	138,290	103,194
Refined imports	954,609	906,492
Total imports	1,092,899	1,009,686
Less re-exports	77,764	75,942
Indicated consumption	1,015,135	933,744
Benzol	60,000	60,000
Total	1,075,135	993,744

The record of prices in the various oil markets last year was the most dismal which the oil industry has ever experienced. It is literally true to say that both crude oil and gasoline on many occasions were given away in America. After the forcible shut-down of production, prices improved, but at the close of the year mid-continent crude oil prices

THE FAMILY MAN'S POLICY provides A SUBSTANTIAL INCOME for Your Widow

In the event of your death within 20 years

- (1) £250 in cash at death and
- (2) £150 per annum until the end of 20 years from the date of the Policy,
- (3) £750 in cash at the end of the 20 years.

If YOU SURVIVE the 20 years

£1,000 will be paid at your death.

THE COST IS SMALL

and may be met by monthly instalments payable until death.

were 19 per cent. and gasoline prices 38½ per cent. below the levels ruling at the beginning of the year, as the following figures will show:—

	GASOLINE PRICES.		CRUDE OIL PRICES.	
	"U.S. Motor" Grade ex Oklahoma refinery, 1931. Cents per U.S. gallons	Santa Fe Springs Crude (Gravity 36° A.P.I.). 1931. Dollars per barrel.	Mid-Continent Crude (Gravity 36° A.P.I.). 1931. Dollars per barrel.	
January ..	6-25	4-25	1-15	1-45
June	6-25	2-50	1-37	0-73
December ..	4-00	2-625	1-28	0-73
Yearly av.	5-85	3-53	1-24	0-73

Taking the average for the year, gasoline prices were 40 per cent. below the level of 1930 and crude oil prices from 41 per cent. to 46 per cent. Prices in Great Britain reflected the American markets. Allowing for the tax of 8d., the retailer's 2d. commission, and the distributing charges of 3d. or, say, 4d., it would appear that little or no profit is being made by the producer of the raw material. The cheapness of ocean transport costs was, no doubt, a contributory cause in the decline in petrol prices.

The earnings of oil companies show the inevitable result of the slump in oil prices. For the first nine months of 1931, the majority of the leading American oil companies reported heavy losses through the writing-down of their stocks to current market values. Others showed a fall in profits ranging from 60 per cent. to 75 per cent. Difficult trading conditions forced the large oil companies into mergers, marketing combinations, and other rationalisation schemes designed to curtail their marketing expenditures. In the British market, the Royal-Dutch Shell group and the Anglo-Persian Company pooled their petrol marketing organisations in a new company called Shell-Mex and B.P. Limited, a combination which should undoubtedly lead to very large economies and cement the close trading relations already existing between the two groups. In the American industry the policy of rationalisation took shape in various oil mergers—the Standard Oil Company of New York with the Vacuum, and the Standard Oil Company of New Jersey with the Standard Oil Company of California. Another large merger is pending between the Sinclair Consolidated, Prairie Oil and Gas, and Prairie Pipeline Company.

III.—BEER, WINES AND SPIRITS.

The first Budget involved no change in the beer duty, but in the second Budget an increase of 31s. per standard barrel, representing 1d. per pint on beer of average gravity and price, was introduced as from September 11th. The additional yield was estimated at £2½ million this year and £10 million in a full year.

The following table gives the rate of duty, output, and average gravity for the years shown:—

Year to Mar. 31.	Duty.* s. d.	Standard Barrels. Great Britain and N. Ireland.	Bulk Barrels. Great Britain and N. Ireland.	Average Gravity.
1923.....	100 0	10,564,212	25,425,017	1,042.72
1924.....	100 0	19,890,033	25,425,017	1,043.04
1925.....	100 0	20,954,392	26,734,825	1,043.12

Wines and Spirits.—The year opened in the wine and spirit trade in an atmosphere of disquietude which became intensified as the months went by. Business tended to contract after the Budget, although no additional duties had been imposed. The national crisis in late August quickened activity in the trade to the extent that imports increased, and stocks were cleared because of fears of heavier taxation and of a luxury imports ban. The abandonment of the gold standard threw the wine trade into a turmoil. Foreign

exchanges reacted against importers to this country, and overseas shippers changed their quotations from sterling to their own currency, which meant obviously increased prices to this country. However, it was soon realised that increased quotations to the consumer in this country would only result in heavily decreased buying, and eventually most firms devised means whereby prices could in the main be kept at the prevailing level, at least until the existing stocks were exhausted.

The importation of all wines during the year is shown in the table below. In addition to the amount of wines cleared for consumption, there was a considerable quantity of British wines on which excise duty was paid, the complete statistics for which are not yet available. The nine months' total was 1,903,753 gallons, compared with 1,865,860 gallons, and on this basis it can be assumed that during the whole year between 2½ and 2¾ million gallons of British wines were consumed.

The extremely adverse circumstances of high duties and stringent financial conditions under which business in the foreign and Empire spirits market has to be conducted has prevented any expansion, and, in fact, there has been some contraction as is shown by the statistics below. The excise statistics relating to the home consumption of British spirits are not yet available, but an estimate may be made by adding the figure for the last quarter of 1930 to the first three-quarters of 1931. This shows a total of 9,892,806 gallons, which compares unfavourably with the 1930 quantity of 10,085,518 gallons.

Exports of British spirits have likewise shown a continuation of the downward trend of recent years, owing to a variety of unfortunate circumstances in the overseas markets during the year. The actual quantity shipped was 5,830,195 gallons, a decline of 387,700 gallons as compared with the 1930 total of 6,217,895 gallons.

The following table shows the imports and clearances for the past two years of wines and spirits:—

	1930.		1931.	
	Imports. Gallons.	Clearances. Gallons.	Imports. Gallons.	Clearances. Gallons.

—Exports of British and Northern Irish spirits were only 5,830,195 gallons, against 6,217,895 and 7,779,002 gallons in 1930 and 1929.—*Ridley's Wine and Spirit Trade Circular.*

IV.—RAW MATERIALS. COTTON.

American cotton for the first four months of the year kept fairly steady in the neighbourhood of 5½d. to 6d. per lb. From 5.65d. in July it shed a penny per pound before the completion of that month, and in August, following the first Bureau report of the season, touched the lowest point of the year—3.60d. An estimated crop of 15,584,000 bales, compared with an actual yield of 13,932,000 in 1930-31, was more or less according to general expectations in view of the consistently favourable weather conditions which had prevailed in the belt. The September report gave the revised figure of an additional hundred thousand bales, and the October one a further increase to 16,284,000, but by this time Great Britain had gone off the gold standard, and the consequent movements in exchange, together with the announcement that the Federal Farm Board had come to an agreement with the Southern Banks to finance the retirement of approximately 7,000,000 bales until July 31, 1932, or longer if necessary, more than counteracted any tendency towards a reaction in values. The preliminary final estimate published in December was 16,918,000 bales, and this was the only surprise in the series of the official reports as a larger increase had been anticipated. The final quotation was 5.39d., which compares with 5.34d. twelve months previously.

In Egyptian cotton there has been a fairly wide margin between the highest and lowest points. The opening rate for F.G.F. Sakellariadis was 7.70d., and by the end of January this had risen to 8.95d. In February the highest price of the year was reached—10.35d.—but during the interval between that date and the close of April more than 2d. per pound had been lost. Three months later the rate was under 7d., and in August the lowest quotation—5.50d.—was recorded, but in the latter part of September it had risen again to 7.90d., only to fall 1d. three days afterwards. There was a recovery to 7.45d. in October, and since that time fluctuations have been comparatively slight. The final quotation stands at 7.05d., compared with 7.70d. on December 31, 1930. Unlike the American growth, the official crop estimate points to the smallest total since 1927, and in Sakellariadis for a much longer time.—*Messrs. Robert Barbour and Brothers, Limited.*

American Cotton.—The following table shows the production and consumption of American cotton during a number of years, and is based on the annual statements of the Liverpool Cotton Association, Ltd.:—

THOUSANDS OF RUNNING BALES.									
	Total Crop.	Total Deliveries.	American Consumption.		Exports to—				
			North.	South.	Great Britain.	France.	North Europe.	Other Countries.	Total Exports.
1885-86 ...	6,550	6,509	1,825	340	2,620	410	968	345	4,344

Arranges Wool and other Produce Credits. Receives Deposits for Fixed Periods on terms which may be known on application, and transacts every description of Australasian Banking Business.

London Office: 29, THREADNEEDLE STREET, E.C.2.

Average value of the Colonial bale:—1914, £17; 1920, £52; 1921, £18; 1923, £28; 1924, £39; 1925, £29; 1927, £27; 1928, £30; 1929, £23; 1930, £14½; 1931, £11½.—Messrs. Schwartz Buchanan and Company.

The following table, compiled by *The Weekly Wool Chart*, shows the amount of wool retained in the United Kingdom in the years stated, the figures for 1931 being for the twelve months ending November:—

(In million lb.)	1913.	1929.	1930.	1931.
Imports, foreign and colonial wool	801	814	783	836
Re-exports, ditto	307	331	288	262
Retained	494	483	495	574
British clip retained	95	66	85	84
Total retained by trade	589	549	580	658

The quantity of wool retained was very large, and implied a substantial increase in stocks. The actual consumption for 1931 may be estimated at about 525 million lb., compared with 500 million lb. in 1930, 515 million lb. in 1929, 525 million lb. in 1928, and 580 million lb. in 1924. These figures are, of course, only approximate.

FLAX, HEMP AND JUTE.

Fibres.—A noticeable feature of the fibre industry for the year 1931 is the reduction in area of jute by approximately one-half, bringing the crop from about 11 to 5.5 million bales. It is indeed indicative of the deplorable state of trade that no changes of any consequence have resulted. The production of hard fibres is still on the decrease, but apparently the reduced quantities are adequate for the limited consumption under present world conditions.

Italian Hemp.—Spinning hems were in poor demand, on account of the quality of the 1930 crop, but cordage types were more readily selected, and there was a steady inquiry for machine tows, carded hems, and strappatura. Early samples of the new crop were excellent, but later arrivals showed a falling off in colour. The market at the beginning of the year was quiet and the price of S.B. remained fairly steady at £29-£30 c.i.f. United Kingdom. Prices strengthened in March to £33, but from April to September there was very little inquiry, and at the beginning of September prices had again fallen to £30 for S.B. Activity during October caused a sharp advance in prices in Italy, which was maintained up to the end of November. The market at the end of the year is showing remarkable steadiness, with the value of S.B. at £41 10s. to £42 per ton c.i.f. United Kingdom, equivalent to a gold price of about £31.

Indian Hemp.—Bombay.—The year has been remarkable for the narrow fluctuations in the price of Bombay fibres. Fine Jubblepore, for example, varied between £13 10s. and £15 15s. during the ten months ending with October, and it was not until the departure of this country from the gold standard, with the consequent necessity for a readjustment of values, that prices moved beyond this range. Supplies were small, and shippers resisted to the utmost any attempt to promote a larger turnover by a reduction in prices. Spinners, on the other hand, felt little necessity to make concessions to obtain Bombay hems, as they were well supplied at low prices with a wide assortment of European hems. The result was a purely nominal market, with only a small business during the greater part of the year.

Flax.—The demand for linens from the United States of America was much below normal, and sales there were disappointing throughout the whole year. In the United Kingdom the position was really critical for the first nine months of the year, particularly amongst spinners of the finer sizes of yarn, and even those spinners producing the heavier numbers who took advantage of the very low prices ruling for Russian flax and tow during the first three months of the year found it impossible to make a profit on their yarns. The departure from the gold standard was of immediate and considerable benefit to the linen industry in the United Kingdom, where spinners were able to book orders for yarns, providing work for several months ahead.

In January the price of BKKO was £35 per ton, basis I, and of Livonian flax £36, basis R. Prices gradually advanced until April, when BKKO was quoted at £42 and Livonian at £41 c.i.f. United Kingdom. There was a slight improvement in the situation during March, when a fair amount of yarn business was placed by weavers and spinners were encouraged to replenish their stocks of raw material. This improvement was not maintained, and from then until the autumn business was of a hand-to-mouth character.

Operations in new crop Russian flax commenced in October, when the Soviet representatives in Berlin concluded the sale of 16,000 tons of flax and tow for November-December shipment, and further sales during November

brought the total quantity up to about 30,000 tons. These sales were concluded on a very much lower basis of price than that ruling for old crop, and at the close of the year the value of BKKO is about £31 to £32 gold per ton, basis I, c.i.f. United Kingdom.

Manila.—This fibre has experienced one of the most difficult periods in its history, the adverse factors ruling in most countries having counter-balanced any bullish extent. How far deflation has been carried is explained by the following table, which depicts the highest and lowest of the most important grades:—

Highest	"S1."	"S2."	"G."	"K."	"L2."	"M1."
(Jan.)	£35 10s.	£28 10s.	£23 10s.	£22	£21 10s.	£21 10s.
Lowest:						
(Sept.)	£26	£21	£15 10s.	£14	£12	£13 10s.

Decreased production is but a natural sequence to these conditions. Receipts fell from 1,300,640 bales to 1,084,000 bales. Stocks from 112,802 bales to 106,000 bales.

SILK.

For the third year in succession the silk market has been most disappointing, and silk is now worth, in gold, one-half of what it was worth in 1920. Production will have to be readjusted to a reduced consumption and this readjustment will force out of business those firms which are weakest technically and financially.

Between January and March prices were more or less upheld by a large consumption of silk in the United States, but the year ended with business almost at a standstill.

HIDES AND LEATHER.

Although the leather and allied industries may not have been so adversely affected by economic conditions as many others, the past year has been one of considerable anxiety and trouble to all concerned. Lack of employment in the large industrial areas resulted in a further diminution in the home demand for most descriptions of leather during the greater part of the year, and, in spite of the low prices which have ruled for raw materials, such as hides and tanning materials, the reductions have not been sufficient to compensate for the lost turnover. In addition, overseas trade has been made more difficult through the imposition of increased duties by several countries, a notable instance of this being Canada, where the tariff on certain kinds of dressed upper leather has been increased to over 50 per cent.

At the same time, during the whole of the period under review home manufacturers of both sole and upper leather have had to face very severe competition in the home market from foreign competitors, who, in not a few instances, have sent leather here to sell at prices which in many instances would not cover the cost of the raw material. This is demonstrated by the net imports of all kinds of leather, which, in spite of the low values ruling throughout the whole of the year, were valued at £3,206,000, as compared with £8,077,000 for 1930. These figures, considered in conjunction with the fact that the value of our exports of leather dropped from £4,006,000 to £2,460,000, show the difficulties with which the trade has had to contend.

Taking Manchester auctions as a standard of values, prices of first clear ox and heifers in that market at the end of the year showed a decline of from ½d. to ¾d. per lb. as compared with those at the commencement of 1931. Seconds recorded a similar reduction, while first warbled were lower by from ¾d. to 1½d., and seconds in the same class by from ¾d. to 1d. per lb. Reduced prices also ruled for cow hides, the decline for first and second clears being from ¾d. to 1½d., while first and second warbled were cheaper by from ¾d. to 1½d. to ¾d. per lb. respectively. Calfskins followed the downward tendency, first at the end of the year being from 1½d. to 2½d. per lb., and seconds from 1½d. to 2½d. per lb. cheaper. The feeling now seems to be gaining ground that bottom has been touched in regard to values for hides and skins from domestic sources, and an upward turn is now awaited. The departure from gold last September was soon felt in the

market for foreign hides. Trade for the first eight months of the year had been uninteresting, with prices weak, but afterwards a stronger demand became evident and values began to move up. Here, also, the increased demand for finished leather did not last sufficiently long to maintain quotations for any length of time, and the result of this is seen in a comparison of the January-December prices for several of the more popular lines of imported hides. For instance, B.A. Frigorifics, at 6½d. were 1½d. per lb. cheaper at the end of the year than they were at the commencement, while B.A. Americanos showed a decline of 1½d. Dry Capes were about 1d. per lb. and Mombasas and Nigerians 1d. per lb. cheaper, while wetsalted N.S.W. Meats, in which little trade was being done at the close of the year, were inclined to be slightly dearer than at the opening.

Buying during most of the year was confined to small parcels, and it seemed that no matter what amount of energy was put into business it was impossible to persuade consumers of leather to take anything more than was required for immediate or near future needs. This, combined with the import position, made values very insecure, and for the first eight months of the year hardly any tanner in this country obtained a reasonable profit on his sales, while at the same time stocks in warehouse were accumulating. The end of September and the commencement of October, however, witnessed a marked change in the position of trade. With the passing of the excitement caused by the departure from gold, however, trade once again settled down to more normal conditions and demand began to slacken. Sales to the public showed no expansion, and the increased purchases on the part of the distributing and retail end of the shoe industry remained unsold. This naturally was responsible for a slowing down in the call for sole leather, and during the last month of the year new business was very difficult to negotiate. In fact, the close witnessed a very poor demand for practically all descriptions, and so far there has been nothing in the trend of trade to warrant an optimistic outlook being taken.

Conditions in the upper leather market were very similar to those ruling for bottom stock; home producers experienced a very lean time until September, owing to the demand from shoe manufacturers running on small quantities, and foreign competition. Brisk business was then experienced for all the staple lines.

The following is a statement of imports and exports of hides and leather during 1913, 1930 and 1931:—

CHEMICALS.

Along with all other branches of industry the chemical industry suffered severely during 1931. The Board of Trade Index of Production average figure for 1930 and the figures for the first three-quarters of 1931 for the chemical industry were respectively (1924 = 100) 102.2, 101.4, 96.1, and 91.1. The figures show that at the beginning of the year anticipations that the chemical industry was gaining on industry as a whole proved to be well founded, but that later on the chemical industry suffered more severely with the continuance of the depression. Exports of ammonium sulphate fell from 557,930 tons in 1930 to 402,012 tons in 1931, while the value fell from £4,419,000 to £2,586,000.

The decrease in the demand for ammonium sulphate, together with unremunerative prices, has put many by-product makers out of production, with the result that the consumption of sulphuric acid has very seriously declined. In the third quarter of 1931 the sulphuric acid industry was working to only 43.8 per cent. of capacity.

Exports of creosote oil fell in value from £671,000 to £307,000, very largely as a result of the decrease in demand for the purpose of wood preservation in the United States. A very encouraging feature of the trade returns is the increase in the exports of coal tar dyes from 106,119 cwts. in 1930 to 117,272 cwts. in 1931, the respective values being £879,000 and £1,016,000.

The Dyestuffs Import Regulation Act of 1920 continued in operation throughout the year without the price factor, which was discontinued at the suggestion of the manufacturers. With the consent of the Colour Users' Association, the Act was again included in the Expiring Laws Continuation Act and extended for another year. Very few licences were granted this year on price grounds. The British dyestuffs industry is undoubtedly gradually coming into its own; it was further consolidated in 1931 by the absorption of the British Alizarine Company in the Dyestuffs Group of Imperial Chemical Industries. A noteworthy British discovery was Duratol Green G, which enabled a green to be produced by the ice-colour process for the first time.

On the import side it is significant that during last November the imports of Chilean nitrate were 27,500 tons, as against only 38,800 tons during the whole of the first eleven months of 1930. This is not the place to discuss whether these large imports come within the meaning of the recent Abnormal Importations Act, but it is not without interest to place in juxtaposition with this the fact that during 1931 synthetic sodium nitrate was manufactured in this country for the first time and marketed at competitive prices.—Based on an article in the *Manchester Guardian Commercial Annual Review*.

Nitrates.—During the past year the economic position of agriculture has deteriorated still further, and the decreased purchasing power of farmers has been reflected in the decline in consumption of fertilisers. The fall has with few exceptions affected every form of nitrogen, whether for fertiliser or for industrial use, in every continent. The biggest reductions in tonnage consumed have been in the U.S.A., Germany, Holland, France and Poland, and the largest percentage decline in Cuba. The greatest increase in tonnage was in Russia, and as a percentage in Portugal. But whereas the world consumption of Chile nitrate has declined by 33 per cent., the demand for by-product and synthetic nitrogen has fallen off by only 13½ per cent. These figures show that the Convention de l'Industrie de l'Azote

(C.I.A.), the European nitrogen cartel, had a beneficial effect in bringing world production in 1930-31 more nearly into line with consumption, instead of being enormously in excess as in the two previous fertiliser years. Since the breakdown of negotiations in July, however, the nitrogen market has been the playground of unrestricted competition. Most European countries which are both producers and consumers have adopted protection in one form or another and maintained a level of prices slightly lower than that of last season. In the free markets a fall in price of the order of 50 per cent. has taken place. The following table shows estimates, for which strict accuracy is not claimed, of production and consumption during recent years:—

WORLD PRODUCTION AND CONSUMPTION OF PURE NITROGEN.

	(In Metric Tons.)		
	1928-9.	1929-30.	1930-31.
PRODUCTION:—			
By-product sulphate of ammonia	376,000	424,440	359,594
Synthetic sulphate of ammonia	485,000	442,100	349,087
Cyanamide*	861,000	866,540	708,681
Nitrate of lime	210,000	263,800	200,352
Other forms of synthetic nitrogen	136,000	130,500	110,585
Other forms of by-product nitrogen†	365,000	427,300	393,150
Chilean nitrate of soda	51,000	51,400	30,940
Total production	2,113,000	2,203,540	1,694,288
CONSUMPTION:—			
Consumption of manufactured nitrogen	1,452,630	1,586,904	1,377,005
Consumption of Chilean nitrate of soda	419,450	363,893	244,370
Total consumption	1,872,080	1,950,797	1,621,375
Agricultural consumption about	1,684,000	1,760,000	1,455,000

* Excluding part of the cyanamide made in Japan, which is included under Synthetic sulphate of ammonia.
† Including ammonia liquor used for industrial purposes.

VEGETABLE OILS AND OLSEEDS.

The vegetable oil industry of the United Kingdom experienced a very difficult and trying period, occasioned by the poor trade in oilseed products, almost constantly falling prices, unsettled financial and economic conditions abroad, and the dislocation and fluctuating exchanges following the suspension of the gold standard. World supplies of all

kinds of oil-bearing material and crude vegetable oils were abundant and generally in excess of requirements. There was no shortage anywhere, and the trade had to withstand the competition of excessive production of whale oil besides fish oils and animal fats. One of the most notable features was the plentifulness and cheapness of linseed in striking contrast to the previous twelve months, when it was in limited supply and high prices effectively curbed demand. Argentina, the chief linseed-growing country, had a bumper crop, one of the heaviest on record, and during the year exported over two million tons, or three-quarters of a million tons more than in 1930. The total world shipments were 2,132,000 tons, as against 1,537,000 tons.

Imports of oilseed, nuts and kernels into the United Kingdom in 1931 were somewhat greater than in 1930, the gross receipts being 1,373,145 tons, an increase of 145,448 tons, equal to 11.8 per cent. This was almost entirely due to the large quantity of linseed, which at 339,295 tons gave an advance of 116,000 tons. Cottonseed and castorseed were somewhat behind, but there were compensating increases in rapeseed, soya beans and nuts and kernels. Plate linseed opened at £8 10s. per ton on spot at Hull, advanced to £9 15s. and gradually fell until £7 5s. was touched in September. When Great Britain went off the gold standard a stimulus was given to trade and the price rose to £10 5s. at the end of October, but at least 20s. of this advantage was lost by the end of the year, when the market was influenced by the promise of another big crop in Argentina. Linseed oil followed more or less closely the movements in seed prices and the lowest figures for many years were recorded.

Supplies of cottonseed in the mills of the United Kingdom again exceeded half a million tons and were the largest individual import of all oilseeds. As usual the greater proportion was derived from Egypt and prices throughout the year were comparatively low. Black Egyptian, on spot at Hull, ranged from £5 12s. 6d. to £7 10s. in the first half, and between £4 15s. and £7 in the latter months. Great difficulty was experienced in selling the products at a reasonable margin of profit and complaints were made that much of the oilcake was disposed of at a loss in consequence of the heavy arrivals of Egyptian cottoncake. The oil also met a poor sale.

The exports of vegetable oils (produce or manufacture of the United Kingdom) summarised from the Board of Trade returns are as under:—

	1928. Tons.	1929. Tons.	1930. Tons.	1931. Tons.
Unrefined oils	96,193	93,463	60,633	53,352
Refined oils	16,370	20,480	17,612	15,957

The production of oil in the mills of the United Kingdom based on the commercial yield of oil from the net imports of oilseeds, nuts and kernels, was 387,760 tons, an increase of 41,312 tons as compared with 1930, the details being as follows:—

	1928. Tons.	1929. Tons.	1930. Tons.	1931. Tons.
Linseed oil	115,774	94,992	74,710	113,017
Cottonseed oil	95,576	94,906	86,635	83,743
Other seed oils	44,549	60,844	40,651	36,308
Palm kernel oil	72,186	67,883	56,608	55,642
Ground nut oil	47,908	52,734	45,532	54,352
Coconut, &c.	24,424	41,137	42,270	44,648
Total	400,597	414,496	346,406	387,710

The position of the vegetable oil supply of the United Kingdom is indicated in the following table:—

	1928. Tons.	1929. Tons.	1930. Tons.	1931. Tons.
Home production	400,597	414,496	346,406	387,710
Deduct British exports	112,923	113,943	78,245	69,289
Net remaining	287,674	300,553	268,161	318,421
Add net imports	208,080	241,639	231,580	205,688
Total remaining in U.K.	495,754	542,192	499,741	524,109

The total supply of oilcakes may be put at 1,320,000 tons, against 1,230,000 tons in 1930. The total c.i.f. value of the gross imports of oilseeds, nuts and kernels, vegetable oils and oilcakes was £18,571,237, as compared with £25,507,866, a decrease of 27 per cent., and the f.o.b. value of exports £2,558,487, as compared with £3,582,556, a decline of 28 per cent. The re-exports of imported produce had a value of £376,134, against £548,667, and in each year were about two per cent. of the total imports.

TIMBER.

Coal Export Trade.—The coal export trade was affected by all concerned, and at the close the position remains serious and the outlook extremely obscure.

The price situation throughout the earlier period was one of great difficulty, the general level of values continuing to fall gradually but steadily, in consequence of which buyers were inclined to limit their purchases as far as possible. With the departure from the gold standard on September 20th the position was immediately changed, and a confused situation arose regarding contracts previously made but still unfulfilled. Values of stocks were based on the current shippers' prices plus the variation on exchange. During October a considerable clearance was effected in stocks, particularly of American woods, these being most affected by the exchange. Enhanced prices were secured all round, although buying was largely confined to medium-priced material. The return of the National Government provided a certain impetus to trade, the effects of which, however, gradually wore off. During the closing months of the year business was again inclined to languish, the adverse rates of exchange, which at times added as much as 50 per cent. to buying prices, having a restricting effect on forward contracting.

In the softwood market the building trade demand was fairly well maintained, but shipbuilding requirements were of the smallest proportions. White and red wood prices continued erratic, while all classes of business were keenly competed for, with the result that values in many cases were unremunerative. In Pacific Coast woods a steady demand continued for Oregon pine in No. 2 clear and better planks and fitches, edge-grained boards, floorings, strips, and in merchantable quality planks and timbers. The volume of forward contract business was at all times of limited proportions, buyers preferring to buy more often but in small quantities owing to the almost steady decline in values. A fairly steady outlet also occurred for Sitka spruce in No. 2 clear and better fitches in both standard and short-length specifications. Port Orford cedar was a more restricted outlet, owing to the scarcity of higher class work. For California yellow and sugar pine the demand was also of limited extent, shipyard requirements being of small proportions.

Yellow pine was in slow movement in Quebec woods owing to the depression in the engineering trades. The demand from shipbuilding sources was at all times of restricted proportions, the scarcity of new work during the earlier half of the year being most pronounced. The demand for pitch pine was of moderate extent, stocks at all times being ample for the requirements. Oregon pine, clear spruce, and other material were in limited request. Among hardwoods teak demands were restricted, and prices tended to fall through-

out the year. Mahogany and other hardwoods were in limited demand.

In the American hardwood market the chief outlets were the furniture manufacturing trades, which maintained a moderate consumption throughout the period. The demand was largely centred on the cheaper classes of materials.—*The Glasgow Herald Trade Review.*

From the statistics below, which are taken from the Board of Trade Returns, it will be seen that the total wood imports last year compared with 1930 decreased considerably, the fall amounting to some £14 millions. As compared with 1929, the decrease is £17 millions:—

† Trade Union figures.

‡ Coal strike.

(a) May–December figures entirely unrepresentative.

Coal Export Trade.—The coal export trade was affected by the greatly reduced world demand for coal, which has given rise to still keener competition, especially in the Scandinavian markets, which Poland continues to dominate. Russia, too, has been sending coal to Europe, particularly to Italy. At the same time Holland has been increasing her coal output and exporting more of it to neighbouring countries. Further handicaps have been placed on the sale of British coal abroad by the imposing of import restrictions. In August a decree was issued restricting imports of coal into France to 80 per cent. of the average for the years 1928–30. As from December this percentage was reduced to 72. Further, a serious situation has been brought about by the imposition of a 15 per cent. tax on imports of British coal into France. In October the Belgian Government issued a decree limiting future imports to 76 per cent. of the tonnage imported in 1930. Italy has also imposed a 10 per cent. tariff on all imported fuel. It is, therefore, not surprising that the exports of coal from this country in 1931 were only 42,749,740 tons, against 54,874,065 tons in 1930.

South Wales.—The year 1931 was the worst ever experienced in the Welsh steam-coal trade. Shipment trade, including bunkers, declined by about six million tons during the year, while inland business also fell away, because of the industrial depression and the closing of works. Railway needs dropped with the reduction of traffic. The total fall in output was rather over seven million tons, and, as estimated decline of something over eight million tons will be about the measure of lost trade in coal, coke and patent fuel during 1931. Welsh shipment trade was about 18,000,000 tons less than in the record year 1913. The average number of miners employed in 1931 was about 154,400, or 16,300 less than in 1930.

Durham.—Except in the early months of the year there has been practically no activity in any branch of the trade, but at the close of the year a steady improvement was setting in which it was hoped would be maintained during

the ensuing twelve months. Output has been greatly restricted, and full quotas, although usually at a low percentage, have seldom been required. The Durham collieries have had to face many difficulties. The home trade has not at any period been satisfactory, and the fixed minimum prices have at times made it exceedingly difficult to secure trade in the face of foreign competition. Several pits were compelled to close entirely. Contract prices have been low, mostly at the minimum, and, with the volume of trade considerably less than normal, there have been many idle days, which greatly increased costs. The minimum prices fixed at the beginning of the year have been maintained for the most part, although occasional alterations have been made in the case of individual brands.

South Yorkshire.—The industrial depression led to another year of difficulty. The export market was weak and irregular until the suspension of the gold standard, which brought about an improvement, especially in South Yorkshire brands. Apart from the improvement in September, industrial fuel has moved slowly throughout the year. Business in gas coal was of a restricted character and trade in domestic fuel was much below the average.

The following tables, compiled from figures published by the Mines Department of the Board of Trade, covering about 96 per cent. of the industry, show output, costs and proceeds for the first three quarters of 1931, as compared with recent periods:—

Great Britain.	1930.		1931.		
	First Quarter.	First Quarter.	Second Quarter.	Third Quarter.

1931	3,758	5,176	2,852	1,981	2 18 7	39-3	45-9	...

The total output of pig-iron in Great Britain amounted to some 3,758,000 tons and of crude steel to 5,178,000 tons, compared with corresponding figures of 6,190,000 tons and 7,330,000 tons in the previous year. Leaving out of account the years 1921 and 1926—when abnormal conditions prevailed owing to the coal strike in 1921 and the coal and general strikes in 1926—pig-iron production in 1931 was the lowest reached in this country since the fifties of last century, while the crude-steel output was the lowest since the opening years of the present century. Exports of iron and steel in 1931 amounted to only 1,980,000 tons, compared with 4,969,000 tons in 1913. Imports were 2,852,000 tons, against 2,231,000 tons in 1913.

North of England.—In the North of England the decline in output has been more marked in pig iron than in steel. The North-East Coast iron and steel companies, without a single exception, have failed to make any return on the invested capital, and it is therefore not surprising that there have been no new construction or modernisation schemes, though the need for modernisation of plant is not denied.

Scotland.—Any pig-iron plant operating has been run at a loss, and the highest number of blast furnaces working at any time during the year was ten. In the sheet trade an improvement has been maintained during the last quarter of the year, but in other branches of the industry the outlook, while improved, has toned down somewhat from the hopes of two or three months ago.

Sheffield.—The year has been one of the worst, if not the worst, ever experienced, but there was a slight easing of the situation towards the end of the year. Depression was general in pig iron until the last quarter, when there was a slight, though in part only temporary, revival. The steel situation was largely saved by stainless and other special steels, output of which probably reached a new high level.

North-West England.—The year will be remembered in this district less for its record of bad trade than for the efforts of hematite pig-iron makers to prepare for the return of prosperity and to consolidate anew their position in the industry. The United Steel Companies, Limited, spent a large sum of money in building at Workington a new furnace capable of smelting 3,000 tons a week, and the steel-making side is also claiming the company's attention. The interests of the North Lonsdale Iron and Steel Company have been amalgamated with those of the Millom and Askam Hematite Iron Company, Limited, and the Millom and Askam Company is building a furnace capable of yielding an output of from 1,400 to 1,500 tons per week.

South Wales.—The manufacturers of heavy steel products appear to have suffered more than any other branch, and

only one plant worked with anything like regularity. The tinplate industry has had a poor year, but prices at the end of the year were beginning to show more firmness. The galvanised sheet market has been in a most depressed condition throughout the year.—*Iron and Coal Trades Review*

The following tables show world production and British prices of iron and steel:—

SILVER.

An interesting development during 1931 was the initiation of a movement for the remonetisation of silver. Many prominent business men and well-known financial experts supported the movement, which arose as the result of the disastrous fall in prices caused by the cornering of gold and because of the serious effect on the purchasing power of silver-using countries of the heavy fall in the price of silver. Three reports by commercial bodies were made on the subject during the year, one by the Federation of British Industries acting in conjunction with the Empire Economic Union, another by a committee of three appointed by the International Chamber of Commerce, and the third by the Silver Association, which was promoted by the China Association. Both the Federation of British Industries and the Silver Association urged that silver should be used to relieve the pressure on gold. The International Chamber of Commerce, however, rejected resort to silver as a result of inquiries among central bankers and others.

The lowest recorded price of bar silver, 12d. per ounce, was reached on February 9, 1931. Later in the year, following the suspension of gold exports by Great Britain, the price touched 21s. 6d., giving a range of 9s. 6d. in the prices of the year, the widest for many years. President Hoover's proposal for a year's postponement of war debt payments caused a rise in price, while on the suspension of gold payments by Britain in September the price advanced rapidly, the rise being greater than could be explained by the depreciation of sterling in terms of gold currencies.

While sales by the Indian Government are believed to have been larger in 1931, sales of demonetised coin by other countries were smaller. A further reduction from 240,000,000 oz. to 190,000,000 oz. took place in production, according to the estimate of a well-known bullion authority, this following a decline of 8 per cent. in 1930, but the same authority expresses the view that the larger decrease in 1931 was probably more than offset by smaller demands on the part of the silver-absorbing countries.—*The Times Annual Financial and Commercial Review.*

COPPER.

The sharp decline in both copper production and consumption that had set in in 1930, continued during the past year. In the following table comparative figures are shown for past years:—

WORLD'S MINING PRODUCTION OF COPPER.

* Apparent.

Refined stocks in producers' hands, as published until recently by the American Bureau of Metal Statistics, showed a further large increase during the year:—

	Long Tons.
End of 1929	150,000
End of 1930	327,000
End of 1931	510,000 (estimated).

In addition, refined stocks in European warehouses increased by about 40,000 tons, making a total increase for the year of about 230,000 tons. Whilst the above figures, particularly those referring to consumption, are estimated and subject to correction, nevertheless the inaccuracies would not account for the apparent contradiction of an over-supply of mine production over consumption of only about

70,000 tons, against an increase in the refined stock of over three times that amount. This discrepancy is explained by:—

	Tons.
Decrease in blister stock	50,000
American electrolytic copper production from scrap	60,000
European copper production from scrap	50,000
Excess of mine production against estimated consumption	70,000
	230,000

Refined copper production from scrap has dropped considerably during the last two years, and, in the United States, probably amounted to less than 40 per cent. of the high figure reached in 1929.

It is our considered opinion that some time will pass before copper consumption will again reach the dimensions of the boom years. For not only was the consumption of copper over-stimulated, along with that of all other industrial raw materials, by the phenomenon of world-wide inflation, industrial and otherwise, but it had received a special impetus in the United States by the rapid development of light and power companies, as well as public utilities in general, and also by a most ambitious expansion programme of the American Telephone Company. It does not appear probable that there will be another period of electrical expansion within the next few years on the scale witnessed in the United States from 1925 to 1930, either in that country or in Europe. It should be borne in mind also that consumption of copper by the electrical industry does not grow at the same rate as the production of electric power. This is shown by the following figures, partly taken from an interesting table published by the American Bureau of Metal Statistics:—

	New Copper used by Light and Power Com- panies.	Net Copper Re- quirements after deduction of Old Copper taken down.	Power Pro- duction in Million Kilowatt Hours.
1925	110,000	93,000	65,870
1926	122,000	104,000	73,790
1927	103,000	82,000	80,205
1928	115,000	91,000	87,850
1929	127,000	104,000	97,352
1930	130,000	94,000	95,240

All efforts to bring about an equilibrium in the copper industry, by continuous sharp curtailment of production, proved unavailing in face of the ever declining demand. World's production, which two years ago ran at the rate of over 2,000,000 tons a year, has been reduced to about

PAPERS ON GOLD AND THE PRICE LEVEL.

By SIR JOSIAH STAMP, G.B.E. 7s. 6d.

PART ONE: Public Opinion and the Price Level—The Movement for Stable Money—A Stable Price Level—National and International Burdens of Price Instability and some Possible Remedies—Gold, the Arbitrator of Destiny—Agriculture and the Price Level—The Trade Depression, Its Causes and Cures—Taxation, Risk taking, and the Price Level.

PART TWO: The Development of Views upon the Effects of Changing Gold Price Levels (1) To the End of 1918 (2) From the End of the War to 1929.

THE VALUE OF MONEY: A Discussion of Various Monetary Theories, and an Exposition of the Yield Theory of the Value of Money.

By TJARDUS GREIDANUS. 15s.

This book gives a classification and discussion of a number of theories dealing with the problem of the value of money. These considerations are followed by the author's attempt at finding a solution which explains the value of money from its interaction with the yield that money is able to produce as an instrument of trade.

Ready Shortly.

CO-OPERATIVE BANKING.

By N. BAROU. 16s.

In their organisation, resources, investment of funds, and profit and loss policy, Co-operative Banks differ considerably from the Capitalist Banks. Co-operative Banks serve as a basis for the establishment of a co-operative financial system in each country and for the formation of an International Co-operative Bank. This book makes an analysis into the working of over 150 Banks in 35 different countries.

P. S. KING & SON, LTD.
14 Great Smith Street, Westminster.

PITMAN'S
NEW ECONOMICS
SERIES

Each volume in this new series provides a clear introduction to an important branch of economic science—including many subjects that have a direct bearing on current financial and industrial conditions. A booklet giving a full description of the series will be sent, post free, to enquirers. The following are among the volumes now ready.

NOW READY.

INTERNATIONAL TRADE. By D. T. Jack, M.A.
Goes fully into the questions of Imperial Preference, Tariffs, and clearly explains "dumping" problems, from the economic viewpoint. 2/6 net.

THE ECONOMIC FUNCTIONS OF THE STATE. By R. H. Soltan, M.A.
An authoritative exposition of the problem of State interference in every-day life. 5/- net.

SOCIALISM. By R. Richards, M.A.
A thorough analysis of the economics of socialism, describing the growth of the movement from the earliest times to the present day. 2/6 net.

BUSINESS FORECASTING. By J. H. Richardson, M.A., Ph.D.
An interesting exposition of the various methods of forecasting business activity. 2/6 net.

THE NATIONAL BUREAU OF ECONOMIC RESEARCH.

Many of the world-renowned publications of the National Bureau of Economic Research are now published in Great Britain by Sir Isaac Pitman & Sons, Ltd. Business men and economists will find the brochure describing the series to be of great interest. It will be sent post free on request to the publishers,

SIR ISAAC PITMAN & SONS, LTD. Parker Street, Kingway, W.C2

1,250,000 tons, without preventing a further heavy increase in the stocks in producers' hands. During the closing weeks of the year another agreement was reached by producing interests contemplating another decrease in production. An outstanding feature is that the unprecedentedly low price level for copper ruling throughout the year has not delayed the rapid development of the new Rhodesian mines, some of which are already in production on an extensive scale, and which will figure far more prominently during the next twelve months. The ore reserves of these undertakings are so vast, their copper contents so high, that it is quite unreasonable to suppose they will be content for any length of time to run at other than full capacity, a factor which will be of prime importance in the determination of copper prices during the next few years. With copper selling but fractionally over six cents, a number of producers undoubtedly find themselves faced with a choice of two evils—i.e., to continue to produce at a loss, or to close down their properties and incur loss in maintaining plant and equipment. The fact is that, with prices lower than was considered possible only a year ago by any but a very few, none of the larger properties have closed down, and even of the smaller mines a surprisingly large percentage have continued in operation.

The point deserves attention, because the importance of the cost of production in determining the selling price is far too commonly overstressed. For, as we have pointed out above, not only is the cost of production a changeable factor and difficult to determine, but even where the absolute minimum of such cost is reached and exceeded by a large portion of the total production, it by no means follows that the selling price may not be forced to an appreciable extent below that minimum for some time.

The price movements of copper during the past year in the main represent the hopeless struggle of the American Export Association to stave off the inevitable.—Messrs. Brandeis, Goldschmidt and Company.

LEAD.

The market for lead declined steadily during the past year in the face of ever falling trade with occasional short-lived recoveries. Statistically, the position has naturally deteriorated both in America and Europe. It is remarkable in some respects that in spite of such low prices as have ruled during the year, the production of lead has kept up as well as it has, especially having regard to the low price of silver, which has usually been an important source of additional revenue to a great many lead mines.

Certainly some mines were forced out of operation by the low prices ruling, but, on the other hand, it is noteworthy that in spite of all adverse circumstances, a large new producer has reached the stage of providing actual supplies. We refer to the Mount Isa Company, which came into effective production in 1931. Naturally this mine—like the other Australian producers—was helped by the additional revenue received from exchange premiums due to the fall in the Australian £. The Mount Isa Company is producing now at the rate of 3,000 tons per month, and hopes before long to achieve a production of 6,000 tons per month, so that this mine will form a not inconsiderable factor in the world's future production of lead. The older Australian Mines at Broken Hill also contributed a fair production of lead again, although there was a reduction in quantity owing to the low metal prices.

There is little doubt that but for the action of the lead pool in effecting a 15 per cent. curtailment from May 1st, the production of lead would have been greater than it was. The arrangements are applied as to groups, the Broken Hill Mines and Burma Mines forming one group. The latter, apparently, decided that with falling prices it would not be able to curtail, as its operations would thereby become unprofitable. The whole curtailment of this group, therefore, had to be shouldered by the Broken Hill Mines, which otherwise would have contributed considerably more to the world's supplies. It is really surprising, having regard to the tremendous fall in values, how large the actual and potential production of lead remains, but it is perhaps more surprising in all the circumstances to note the rate at which consumption has continued. Whilst it is probably true, that during the greater part of the year buyers were somewhat shy and sellers predominated, there has, nevertheless, in our opinion, not been any excessive increase in the stocks of unsold lead in Europe. These are, of course, a little difficult to determine, because a good deal of lead may be stored in private wharves and warehouses, but the fact remains that in a very difficult year consumption does not appear to have suffered so much as had been expected. Russia has been a buyer on and off during the whole of the

period, and has taken quite large quantities, whilst latterly the Far East has appeared as a considerable buyer.

On January 1, 1931, the price of lead stood at £15 for January shipment and £14 15s. for April shipment, and at the beginning of the year the Syndicate made strenuous efforts to maintain the price level, which they considered to be low enough. A different and, we think, better policy was, however, soon adopted, and apparently it was decided to let the metal find its own level. Our opinions on this subject are well known, and we would only like to repeat here that, in our view, had the Lead Producers' Syndicate not followed the aforesaid sound policy, the price of lead would probably have been lower to-day than it is, and the market in far worse shape.

The price fell to £12 15s. February shipment, and £12 16s. 3d. May shipment, during the first week of February, 1931, subsequently recovering substantially to over £14 per ton towards the end of February. Under weak advices from America and a general slackening in demand, the price fell away again, and on rumours of the dissolution of the lead pool there was a sharp recession at the end of March to £12 2s. 6d. March shipment, and £12 6s. 3d. June shipment. The lead pool was then reconstituted and the announcement of a reduction of output caused a temporary rise. By September 19th the price had dropped back to £10 13s. 9d. September shipment, and £10 15s. December shipment. The abandonment of the gold standard by Great Britain in the third week of September caused a sharp rise in the price of lead in common with that of most other imported commodities, and the quotation jumped to £15 10s. for September shipment, which was the highest price of the year. The advance, however, had been overdone, and with a renewed slackening of the demand the price quickly fell back again to around £13 per ton. A slight recovery then took place, and from this point onwards until the end of the year the price remained around £14 10s. per ton, the closing quotation on December 31st being £15 7s. 6d. per ton.

The world's production of lead, shown in thousands of long tons, is as follows:—

	1913.	1928.	1929.	1930.	1931.*
United States	315	551	570	450	274
Mexico	4	49	49	55	74
Spain	62	580	618	534	389
Australia	198	232	245	248	213
Burma	123	121	131	120	83
Canada	...	163	174	164	133
Germany	16	78	80	80	74
Germany and Polish Silesia	151	151	142	148	121
Belgium	195	121	131	149	106
Other countries	53	63	61	60	60
Totals	1,207	1,645	1,726	1,638	1,393

* Our estimate.

In the United States, where the market is practically an independent one owing to the high protective tariff, a continual increase in stocks was registered, and, barring one or two temporary recoveries, the price moved uniformly downwards. The stocks, which at the beginning of the year stood at about 90,000 short tons, increased progressively, until at the end of June they totalled 142,370 short tons. A temporary improvement in the position took place during the next few months, but subsequently the stocks increased again, and at the end of December reached the biggest total of 144,000 short tons. The outlook for this metal, as for everything else, is very obscure.—Messrs. Brandeis, Goldschmidt and Company.

SPELTER.

This is the one market for non-ferrous metals which for a good part of the time was free from the manipulation of cartels or other influences of a similar nature, and here again we are of the opinion that even when it was attempted, no beneficial result accrued through interference with the natural laws of supply and demand. As was only to be expected in the conditions prevailing, the price of this metal suffered a very heavy fall, and touched a price which is the lowest ever recorded. The year had opened with spelter at £13 15s., in itself already a low figure for this metal, but the price had fallen below £10 per ton, the quotation on June 5th standing at £9 18s. 9d. for June shipment.

The price did not long remain as low as this, and by the end of June the quotation again stood at £12 17s. 6d. June shipment and £13 8s. 9d. September shipment. In July there were indications that producers were attempting to jump to £13 3s. 9d. July shipment and £13 16s. 3d. October shipment (gold prices). This, however, could not be maintained because the one thing necessary to cause and sustain rising values, viz., increased consumption, was lacking. The market declined again, and on August 14th

the quotation was down to £11 3s. 9d. August shipment and £11 16s. 3d. November shipment.

America is an independent unit as regards spelter, and here there was also a great fall in price, the quotation falling from 4.15 cents per lb. on January 2, 1931, to 3.15 cents per lb. on December 31, 1931. Naturally, as will be seen from the adjoining table, the lower values obtainable had the effect of reducing output. The number of retorts in operation fell steadily, and we estimate the production in 1931 at 274,000 tons, compared with about 450,000 tons in 1930.

The following table shows the world production of spelter during recent years:—

	1913.	1928.	1929.	1930.	1931.*
United States	315	551	570	450	274
Australia	4	49	49	55	74
Japan	...	19	19	21	20
Belgium	194	205	197	181	137
United Kingdom	58	55	55	50	45
Germany, Poland and Silesia	278	255	256	270	184
Scandinavia	17	11	12	12	10
France	67	95	90	89	62
Holland	24	25	26	23	19
Canada	...	73	73	108	109
Sundries	24	64	77	130	147
Totals	981	1,403	1,424	1,389	1,081

* Estimated.

Belgium shows a marked falling off, the production in 1930 having been 181,000 tons, whilst we estimate that in 1931 not more than 137,000 tons were produced there. Custom smelters everywhere are no doubt finding it more difficult to obtain supplies of ore, as there has been an increasing tendency of late years for mines to treat their ores locally in order to save heavy freight charges and costs in sending the ores long distances to be treated. This is a tendency which will, no doubt, become intensified by the lower prices ruling.

Stocks of spelter do not seem to have shown any great increase except on the Continent. The actual figures of stocks so far as they can be estimated, or are available, are as follows:—

December 31, 1931	Great Britain	21,100 tons.
December 31, 1930	Great Britain	11,829 "
December 31, 1931	U.S.A.	115,000 "
December 31, 1930	U.S.A.	128,000 "
December 31, 1931	Continent of Europe	184,000 "
December 31, 1930	Continent of Europe	94,000 "

This table does not take into account any stocks of sheet metal, oxide of zinc, etc., which may be on hand. There is an increasing tendency for zinc-producing concerns, wherever possible, to take their operations a step further and turn out semi-manufactured products, in order to be able to get the advantage of the profit made in this way as a set-off against losses which they may make and, we believe, in many cases are making on the production of spelter itself. There is, of course, a considerable set-back in both production and consumption compared with the record years 1928 and 1929, when the production totalled over 1,400,000 tons, as against 1,081,000 tons in 1931.

Just before Great Britain went off the gold standard the price of spelter on the London Metal Exchange was £10 10s., but following thereon the price jumped to over £14 per ton. Of course the movement—owing to the concentration of buying at one particular moment—was, as is usually the case, overdone; the price could not be maintained owing to the lack of real demand, and a sharp set-back occurred. Subsequently, towards the end of the year, further steps in the direction of restriction of output were being considered, which kept the market steady to firm.

The quotation on December 31st was £14 6s. 3d. December shipment and £14 15s. March shipment. This would be the equivalent of about £10 gold, which we regard as a very low price for this metal. As in the case of lead, the production of spelter in certain cases, for instance, Australia, was helped by a depreciated currency, whereby producers received a premium in their own money of 30 per cent., without any corresponding increase in their costs. Australian production during 1931, we estimate, amounted to about 74,000 tons, compared with 55,000 tons in the previous year, and 49,000 tons in the three years before that. All metals are low in price, but spelter, we think, is now—reckoned in terms of gold—decidedly below its intrinsic value. Even allowing for all the cheapening of the average production costs, through the increased recovery of zinc as a by-product in lead production, and taking into account all other factors, we still arrive at the conclusion that the ruling price on a gold basis of about £10 per ton is extremely low. The previous lowest, according to the records before us, was £13 5s. in 1885, and the average from 1881 up to the period immediately preceding the war was well over £20 per ton.—Messrs. Brandeis, Goldschmidt and Company.

MIDLAND BANK

LIMITED

"The Service of the Midland Bank"

The first customer of the Midland Bank could never have foreseen the breadth and variety of the facilities available to his countless successors. It is the aim of the booklet bearing the above title to describe some of the services which the Bank now offers to actual and potential customers.

A copy of the booklet is obtainable at any of the 2,100 branches of the Bank

TIN.

This metal has been the subject of continuous manipulation aimed at price maintenance. The attempts to maintain prices were made by two methods. The first was the so-called quota system, to which all the producing countries consented to adhere. The Dutch East Indies, Bolivia, Nigeria and the Federated Malay States were all included in the scheme, and under its provisions each of these producing countries was to control the export of tin, and was not allowed to ship more than an agreed quantity so long as the price was below a certain figure. The scheme provided that a basic world output should be agreed upon of 145,000 long tons a year, with allotments to the participating countries as follows:—

Malay States.....	53,850 tons.
Bolivia.....	34,260 "
Dutch East Indies.....	29,910 "
Nigeria.....	7,750 "

and any alterations which might be agreed upon in regard to the basic tonnage were to be apportioned in the same ratio. Each Government undertook to allot its quota amongst its own producers and to control exports. Meantime, there had been carried over from the previous year a large tonnage of tin, the amount of which had been variously estimated, but which it was impossible exactly to determine, as without doubt it included large quantities of unsold tin shipped to the United States, which entirely disappeared from any published statistics. Some people had already put the figure as high as 20,000 tons at the end of 1930, and probably the quantity was increased during the past year. Various interested parties were then concerned in holding these stocks, and in July, 1931, an International Tin Pool was formed to take up and finance the world's excess tin production. How much this included of the stocks already existing it is difficult to say, but additional purchases were made, and it seems to us highly probable that the total amount of tin thus kept off the market may easily be a good deal in excess of the aforementioned figure of 20,000 tons. In spite of a further reduction in output, undertaken by the Tin Producers' Association, the available tin still proved in excess of the world's requirements, which steadily diminished, as the following figures disclose:—

	Supplies.	Deliveries.
1931.....	118,000 tons.	109,000 tons.
1930.....	142,000 "	128,000 "
1929.....	145,000 "	141,000 "

The stocks in the United Kingdom compare as follows:—December 31, 1931, 31,000 tons; December 31, 1930, 22,000 tons, and December 31, 1929, 12,000 tons.

With the many rumours of different measures which were proposed, and the actual steps which were taken to control the market, it is not surprising that considerable fluctuations were witnessed. The year opened with tin on the London Metal Exchange quoted at £116 10s. to £116 12s. 6d. "cash," from which level the price sagged a few pounds per ton and then rose quickly in February to over £124 per ton three months on the rumoured agreement between the tin producers. The price could not be maintained, and by the beginning of May was back again to £99 15s. "cash," which was the lowest point touched. The year closed with quotations in London at £141 2s. 6d. "cash." It should be noted that £140 per ton, with the depreciation that has taken place in sterling, still represents a gold value of less than £100 per ton. This may be considered a reasonable figure, and it would appear highly probable that, but for the interference of the Tin Producers' Association and the Tin Pool the price might have gone lower.—*Messrs. Brandeis, Goldschmidt and Company.*

Tinplate.—At no time during the past year have the works been running to anything like full capacity, and 60 per cent. would appear to be an outside average of the year's working. 1931 has been a year of constant changes and difficulties, which have overwhelmed many firms, old and new. One of the chief difficulties has been in connection with the international exchanges and the sending of remittances from abroad. This is now so hedged round with restrictions in various countries as to severely limit, if not prohibit, mutual trading relations for the time being. The can-making industry is receiving particular attention in this country, and although the financial results are not invariably of the best, a considerable addition has been made during the year to its productive capacity. This is to cater specially for the canners of fruit, etc., the number of whose factories in this country is reported to have increased from five to forty in two years. The home demand for tinplates has probably shown less shrinkage than the export, owing to the expansion of the home canning industry, as mentioned above, but unfortunately this must to some extent prejudice the export demand, if it means a smaller import of canned goods. One of the notable events

during the year was the collapse of the "pool" among the tinplate makers. It has lasted rather more than two years, and was the successor of two or three other schemes during the last decade. The pact between the American and British makers as to sharing the world's export trade was due to expire on September 30th, and negotiations for a renewal were to begin several months earlier. These were unsuccessful, however, and it was announced in October that the agreement had been allowed to lapse.

Prices.—Starting the year at 15s. 3d., it was not long before the insufficiency of business compelled a reduction to 15s. in February. Strenuous efforts were made to maintain this price, which was said to be getting near cost, and it was not till April that a series of concessions began, failing the improved demand which was eagerly anticipated. The approaching abandonment of the "pool" (which actually occurred in June) emphasised the weakness of the position, and after it became a "fait accompli" the downward process continued till in the middle of September 12s. 9d. was touched. Then came the British departure from the gold standard, which threw so much into the melting pot, and for the time being the trade did not know exactly where it stood. Up to 14s. was quoted for stock plates and 14s. 6d. for plates to be made; but in November things were back at 13s. 6d., rising in December to about 14s., and closing with a tendency to a higher level.

Bars.—There has been very little fluctuation in the price of British bars during the year. It began at £5 and it finished at £5—subject in the latter case to a rebate of 5s. per ton under certain conditions. In the hope of attracting further business the price was reduced at the beginning of June to £4 12s. 6d., and so continued till towards the end of September, when it was put up to £5 upon the abandonment of the gold standard. Even the lower price, however, was still much higher than that of the Continental bar, which has continued to arrive in large quantities, and has in consequence been the subject of one or two deputations to the President of the Board of Trade. The imports of sheet and tinplate bars during the year show a large increase, and for the last three years have been as follows:—1929, 418,838 tons; 1930, 526,956 tons; 1931, 727,918 tons.—*Messrs. Sim and Coventry.*

† According to "Fairplay."

‡ Average for four quarters.

|| Average.

The figures contained in the annual summary of the mercantile shipbuilding of the world in 1931, recently issued by *Lloyd's Register*, complete the story of the deep depression whose steady growth has been the main feature of the British yards throughout the past year. In 1931 the output of steamers amounted to 502,487 tons, comprising 98 and 13 barges of 4,623 tons. The aggregate production figure of 1930, and is the lowest recorded since 1888, when *Lloyd's Register* was first issued. The world output in 1931 amounted to 1,617,115 tons—a decline of 1,272,357 tons as compared with 1930—and is the lowest recorded since 1909, with the single exception of the war year 1915. In the following table we show the tonnage output of Great Britain and of foreign

countries during the past three years, together with the average figure for 1909-13, 1922-25 and 1926-29:—

TONNAGE OUTPUT.

Period.	Tons launched. (000's omitted.)			British Percentage.	Output as Percentage of 1909-13.		
	U.K.	Abroad.	World.		British.	Foreign.	World.
Average—							
1909-13.....	1,522	967	2,489	61	100	100	100
1922-25.....	1,050	1,087	2,137	49	69	112	86
1926-29.....	1,208	1,155	2,363	51	79	119	95
1929.....	1,523	1,270	2,793	54-5	100	131	108
1930.....	1,478	1,411	2,889	51	97	146	116
1931.....	502	1,115	1,617	31	33	115	65

The most disquieting feature revealed by the above table is the recent progressive decline in the British percentage of total world production. In 1931, when foreign output still remained at 15 per cent. above the pre-war level, that of British yards had fallen to one-third of that figure. In this connection, however, it should be borne in mind that the shipbuilding industries in those countries in which subsidies are operative have not yet felt the full effects of the slump. In British yards, although the depression in general shipbuilding started in the autumn of 1929, the placing of contracts for tanker tonnage maintained the figure of "commencements" at a comparatively satisfactory level until the second quarter of 1930, following which the decline was progressively intensified, and in the fourth quarter of that year work begun in the United Kingdom amounted to only 132,000 tons, as compared with 289,000 tons begun abroad. By the June quarter of 1931 the figure had fallen to 23,000 tons, but rose to 39,000 tons in the third quarter and to 105,000 tons in the last quarter of the year. It is too early yet to regard this slight improvement as an indication of any real recovery, as the contracts placed are in the majority of cases for small vessels chiefly for replacement purposes. The following table of launchings in various foreign countries shows that in most cases the output of 1931, although below that of 1930, was still well above the level of 1927:—

TONNAGE LAUNCHED ABROAD (Thousand Tons).

	High record since 1920.	1927.	1929.	1930.	1931.
Denmark.....	139	12	111	137	126
France.....	211	44	82	101	103
Germany.....	526	290	249	246	104
Holland.....	232	120	187	153	120
Italy.....	220	101	71	88	165
Japan.....	227	42	164	151	84
Sweden.....	132	67	107	132	113
U.S.A. (coast).....	995	124	101	214	202

But although subsidised contracts continued to be placed long after British shipowners had ceased to order new tonnage, it is evident from the following figures of work in hand that the depression has now reached a point at which even foreign shipbuilders can expect little but complete stagnation:—

WORK IN HAND DECEMBER 31.

(Thousand Tons.)

	1925.	1927.	1929.	1930.	1931.
United Kingdom.....	885	1,580	1,560	909	401
Germany.....	234	472	253	218	104
Italy.....	310	183	78	180	178
France.....	167	115	167	174	164
Holland.....	109	175	232	160	68
Denmark.....	61	98	105	108	52
Japan.....	52	69	184	86	53
Sweden.....	55	101	98	146	95
U.S.A.....	108	97	179	232	208
World total.....	2,069	3,119	3,111	2,326	1,404

Work begun in foreign yards in the first quarter of 1931 amounted to 209,000 tons, but after a slight increase during the second quarter contracts fell off, and by the December quarter "commencements" totalled only 120,000 tons.

SHIPPING.

This year the world economic crisis passed into a new stage and the desperate attempts made during the autumn months by three-quarters of the world's trading nations to maintain the stability of their currencies took a form which was calculated to paralyse world commerce.

A remarkable feature of the depression so far as Great Britain is concerned has been the country's continued ability to pay for a surprisingly large volume of imports, particularly of foodstuffs. This inelasticity of Great Britain's import demand has been a matter for tempered satisfaction to shipowners, although trade between foreign countries

forms such a large factor in the employment of the British shipping industry that the maintenance merely of British imports is by no means sufficient to offset shrinkage of international trade elsewhere. There is depressing evidence of "frozen" commerce in the returns, published quarterly by the Chamber of Shipping, of laid-up tonnage in the principal ports of Great Britain and Ireland.

Thousand tons net.				
Laid up on —	Average 1926-29.	1930.	1931.	1932.
January 1	368	353	1,331	1,630
April 1	300	892	1,557	...
July 1	539	919	1,694	...
October 1	331	885	1,708	...

It will be seen that after the first onset of the crisis in 1930 there was a period of relative stability between the beginning of April and the end of September in that year, after which a "second round" of depression quickly raised the figure of idle tonnage to over 1½ million tons net. Moreover, the foregoing figures are not comprehensive; including vessels laid up in minor British ports, to which the Chamber of Shipping has this year extended the scope of its returns, the idle tonnage at the beginning of October, 1931, amounted to no less than 2,089,443 tons net, or a dead-weight carrying capacity of approximately five million tons.

In view of these enormous withdrawals of tonnage from active commission, it is not surprising that the Board of Trade statistics of tonnage entered and cleared with cargoes at British ports should show a heavy decline in 1931, as compared with the previous year. In the comparative summary which follows, trade with the Irish Free State is eliminated.

Entrances, it will be observed, fell in 1931 by 5.2 and clearances by 11.2 per cent.; but, though the traffic on which the returns are based is that of ships "with cargoes," it is impossible to say whether the fluctuations in the volume of goods shipped and discharged correspond to changes in the tonnage volume, since no differentiation is made between whole and part cargoes. The only grain of satisfaction to be derived from the foregoing table is that in the case of clearances "with cargoes," the percentage of British tonnage recovered from the fall recorded in 1930.

Since the trend of shipping freights in any period is the resultant of two variables, volume of trade and supply of tonnage, the picture of 1931 may perhaps be completed by a brief reference to the second of these two factors before the history of the freight market itself is chronicled. Though the economic crisis which began in the autumn of 1929, and still lies heavily upon the world, was bound in any case to throw out of commission a large number of vessels which had managed to find employment in the relatively easier years of 1924-28, the enormous volume of tonnage now idle is attributable in part to the heavy launchings of new tonnage which, as shown in the following table, took place on a growing scale between 1929-30:—

WORLD LAUNCHING OF TONNAGE.

Period.		Tons Gross.	
(000's omitted.)		1929.	1930.
Average 1909-13	2,489	2,137	2,699
Average 1922-25	2,137	2,793	2,889
1928	2,699	2,889	1,617
1929	2,793	...	...
1930	2,889	...	...
1931	1,617	...	...

Allowing for the proportion of the large pre-crisis contracts which represent an increment of tanker tonnage, it is clear that building between 1927-30 was on a scale calculated to leave the world's mercantile marine in a position very vulnerable to the onset of a major depression; for the gross addition to the supply of carrying space was by no means offset by breaking up of older vessels, and in the summer of 1931 the aggregate merchant tonnage in the world of all kinds reached, at 70 million tons, the highest level of all time. With the volume of sea-borne cargoes drastically reduced, there was thus no option for shipowners but to withdraw vessels from service on a gigantic scale unless freights were to fall to a level hopelessly below the figure sufficient to cover running costs.—Based on an article by Mr Aylmer Vallance in Lloyd's List Annual Review.

General Engineering.—Trading conditions have been extraordinarily difficult in the heavy sections. Some firms experienced an increased home demand for machinery during the last two months, but this was offset by a decreased demand from foreign manufacturers, who normally produce largely for the British market. The locomotive and aircraft industries also are feeling the depression acutely. The state of the machine tool trade is still poor. Textile engineering has profited recently from the fall in sterling, but national economy has further reduced activity in the structural section. There has been little activity in the agricultural machine trade.

Electrical Engineering.—Though depressed, this industry has suffered somewhat less than many others. The increase in electricity consumption continued, and the work of the Central Electricity Board went steadily ahead. Standardisation of frequency provided much work for the motor section in certain districts. The equipping of textile mills with electric power proceeded actively. There has also been a rapid development of the electric welding industry. The following is an index of activity in the electrical industry of Great Britain, and is copyright by the Economic and Statistical Department of the British Electrical and Allied Manufacturers' Association:—

* Prepared by the economic and statistical department of the British Electrical and Allied Manufacturers' Association.

There was a very marked increase during the last two months of the year.

Motor Vehicle Manufacture.—Reduced purchasing power, both at home and abroad, reacted very unfavourably upon the motor industry. The tendency to transfer to cheaper makes led to an increased concentration of orders in the principal manufacturing centres. Foreign competition was less effective in the home market. This country's share in the greatly diminished export trade was reduced by the instability of sterling, but British manufacturers made headway with the development of markets in South Africa, Japan and China. Total exports of cars were 17,104, valued at £2,644,409, compared with 19,226 and £3,373,255 in 1930. The expansion of the previous year in the overseas demand for commercial vehicles did not continue. Both the home and foreign demand for motor bicycles was greatly diminished, and motor cycles and tricycles exported amounted to only 23,247, against 42,631 in 1930.

BUILDING TRADES.

The percentage of unemployed increased to 23.3, against 17.3 in 1930. A further reduction in wages of $\frac{1}{4}$ d. per hour in all trades was effected in February under the existing agreement. There was a diminution in housing activity during the early part of the year, and later general building schemes were also held up. The trade has suffered severely from the necessity for economy on the part of the local authorities. No important changes in the prices of building materials have taken place during the year. In July, the 1931 form of contract, which clearly defines the obligations of the contractor, came into force, superseding all previous forms.

* Million linear yards. † Beginning of each month. a End of year.
 ‡ Trade Union figure; other figures are Unemployment Insurance returns.

During the last three months of 1931 there was an improvement in the amount of business done in the Lancashire cotton industry, but taking the year as a whole it was another period of depression and unsatisfactory trade. The revival of demand which began in September was almost entirely due to this country's departure from the gold standard, the consequent advance in raw cotton prices and the rise in the value of silver.

On January 2, 1931, the quotation for middling American cotton on the spot in Liverpool was 5.33d. per lb. By February 25th there was a rise to 6.29d., the highest point of the year. At the end of March the quotation was 5.83d. After a further decline to 4.80d. on May 28th there was a recovery to 5.43d. at the end of June. An easier movement occurred during July and in August owing to the big estimate of the crop and the price fell on the 20th to 3.60d., that being the lowest quotation of the year. By September 25th there had been a reaction to 5.19d., but a fall to 4.36d. occurred on October 6th. The figure on November 30th was 4.95d., and the year closed at 5.39d. According to the returns of the International Federation the world consumption of American cotton during 1930-31 was 10,907,000 bales. The carryover at the end of last July was estimated at 9,000,000 bales. It is anticipated that the current crop will be about 17,000,000 bales. The total supplies for the twelve months, therefore, should be about 26,000,000 bales. There are indications of a larger consumption of American cotton this season and the amount is estimated at 12,500,000 bales. The carryover, therefore, at the end of next July should be about 13,500,000 bales, or an increase of 4,500,000 bales on the same date in 1931. On January 2, 1931, the quotation for fully good fair Sakellaridis Egyptian cotton on the spot in Liverpool was 7.70d., and the price at the end of March was 9.40d. On June 30th the quotation was 8.25d., and by September 30th there had been a fall to 6.95d., the quotation on December 31st being 7.05d. The Egyptian cotton crop for last season amounted to 7,552,000 cantars, against 8,447,000 cantars in the previous year. According to latest advices, the Egyptian crop for this season will be about 6,250,000 cantars.

The following table gives cotton and yarn prices for the year:—

1931.	Cotton Middling American.	American Yarns.		Cotton F.G. Fair Sakellaridis Egyptian.	Egyptian Yarn. 60's Twist.
		32's Twist.	40's Wett.		
	Per lb. d.	Per lb. d.	Per lb. d.	Per lb. d.	Per lb. d.
January 7	5-39	9	9½	7-80	16
February 4	5-64	9	9½	7-80	16½
March 4	6-15	9½	9½	8-30	17½

December 30	5-34	9½	9½	7-10	15½

During the first nine months of 1931 spinners met with a very dragging demand and there was a tendency for most firms to lose ground. Despite the extensive curtailment of production the supplies on the market were more than equal to the requirements of users. A distinct change occurred at the end of September as a result of the suspension of the gold standard. There was a sharp rise in raw material rates and in the following fortnight a very big business was done in yarn. Numerous users were caught short and had to secure cover, and many manufacturers of cloth bought speculatively.

Spinners took advantage of this increased activity to put up their prices and there was a distinct improvement in margins and order lists. In the middle of September the production in spinning was from 50 to 55 per cent. of full capacity, but by the middle of November the output had increased to 80 per cent. of full time. Demand then began to taper off and during December the sales were much smaller. A feature of interest during the year was the big buying in yarns for China. This business was of record dimensions. An attempt was made by spinning employers to form a convention for regulating production and prices, but when a ballot was taken on the proposals the figures showed that only 25 per cent. were in favour of the scheme, and the committee of the employers decided to take no further action.

The trade done in piece goods for export during the year was disappointing, and a further fall in shipments has to be recorded. To a greater extent than ever manufac-

The Bank conducts every description of Banking Business, both British and Foreign.
Letters of Credit issued. Home and Foreign Credits established. Executorships and Trusteeships undertaken.

turers felt the competition of other countries. On the whole it was a fairly healthy year for makers and distributors of goods suitable for home consumption. Until the end of the summer curtailment of production in all weaving districts was on a large scale and output was less than 60 per cent. of full capacity. Since then there has been more industrial activity with a reduction in unemployment, and latterly the output has been about 80 per cent. of full time.

The relation between yarn and cloth prices is indicated below:—

* Queensland sourced, super combing. † End of year. a Thousand linear yards.

The year opened with the wool market in a state of confusion owing to the depreciation of the Australian, New Zealand and South American exchanges, while the pressure of heavy offerings at a time when buyers were in a somewhat nervous mood caused prices to slump until a good average 64's top could be bought in Bradford at under 20d. Before the end of January, however, low prices began to attract speculative buyers, and the Australian market received useful support from large firms outside the trade who used wool as a medium for transferring funds to this country. This started an upward movement which continued without a check for fully two months. Subsequent events proved, however, that there had not been sufficient business in fully-manufactured goods, either on home or export account, to support the advance, and prices began to recede.

By September, the prices of all qualities had fallen back to the low level of January, but after the suspension of the gold standard the decline in the value of sterling caused a compensatory advance in the price of wool and the upward tendency at once stimulated demand in the primary markets and in London. The first effect upon machinery activity in the West Riding was that fine yarn spinners received large orders from the Midlands for hosiery yarns because the lower value of the £ gave them a substantial advantage over foreign suppliers, and in a very short time the majority of them were fully booked up months ahead. The approach of the General Election and the anticipated return to power of a Government pledged to tariffs on imports, also had the effect of diverting a good deal of new business in dress goods to British manufacturers.

After the election, in anticipation of a tariff, Continental manufacturers greatly accelerated shipments of all kinds of light-weight goods into this country. This led to the application of a prohibitive *ad valorem* duty of 50 per cent. on woollen and worsted tissues and other fabrics, under the Abnormal Importations Act, and during the three months prior to this measure coming into operation about 12 million square yards in excess of the average for preceding months were imported. In November there was the unique experience of imports of woollen and worsted tissues exceeding exports. Imports of yarns were not increased to anything like the same extent as imports of fully manufactured goods, but the 50 per cent. duty was applied at a later date to all yarns made wholly or in part of wool.

In consequence of these developments spinners and manufacturers of all types of women's wear were exceedingly busy at the end of the year. The fine worsted trade in men's wear showed very little expansion, and was nothing like so busy as the other sections referred to. In spite of the fact that the depreciation of sterling had the effect of a bounty on exports the overseas trade in yarns and piece goods continued to be very poor, and it was made worse than it might otherwise have been by the restrictions imposed by certain foreign Governments on payments for imported goods. The increase in machinery activity in this country was due entirely to the large volume of home trade, which could only be accounted for, having regard to the heavy imports already mentioned, by a desire on the part of distributors to build up stocks in anticipation of rising prices under a tariff regime.

Raw Material Situation.—The average value of wool during the year showed a further fall. The 1930-31 clip in Australia reached a total of 2,798,000 bales, a decrease of 69,000 bales on the record production of the previous season, whilst in New Zealand there was a total production of 785,000 bales, an increase of 70,000 bales. The average price per lb. in Australia was 8½d., as compared with 10½d. in the preceding season and 20d. for the 1927-28 season. In New Zealand the average price per lb. was 5½d., as compared with 8½d. in the preceding season, and 16½d. for the 1927-28 clip. Notwithstanding the unsatisfactory condition of trade throughout the world, the Australian clip was disposed of and there was only a moderate carry-forward of 54,000 bales at the end of June. The South African clip was about 880,000 bales, a substantial decrease on the previous season, and this also met with a good demand at the prevailing prices. At the end of July, there were only 43,700 bales, mostly between-season's clips, left at the Cape. The low level of values, together with the trend of fashion, continued to favour merinos and the finer crossbreds to the disadvantage of the medium and coarse grades. Consequently, there was a carry-forward in New Zealand of about 200,000 bales, together with an unusual accumulation in London. There was no appreciable change in the South American production.

The following table shows the prices of tops on the dates given:—

AVERAGE PRICES OF TOPS.											
In Pence per lb.	Aver. Year 1913.	Dec. 1924.	Dec. 23, 1929.	Dec. 23, 1930.	Sept. 17, 1931.	Dec. 28, 1931.	Dec. 28, 1931, as % of July, 1914.	Dec. 28, 1931, Gold Basis.			
70's average...	30½	84	34½	25½	22	25½	77	17½			
64's average...	29½	81	31	22	20	23	71	16			
60's super ...	28½	79	30	22	20	23	71	16			
58's crossbred	25	66	26	21	19	22½	72	15½			
55's crossbred	23	45	25	17	15½	20	75	14			
50's crossbred	20½	45	21	12½	14½	18½	76	13

* Per gram.

Yarns generally were below the pre-war level, despite the increased cost of conversion.—Extracted from the *Annual Review of the Weekly Wool Chart, Bradford*.

THE RAYON INDUSTRY.

The past year has been notable for the rapid increase in home consumption, which for the whole year has been substantially larger than in any previous period, in spite of the low level of the textile markets generally, and the fact that exports of mixture fabrics have shown a further serious decline. Actually the total production for the year has been slightly smaller than the 1929 total, the largest on record, but this is more than accounted for by the sharp decline in exports of yarns. That rayon, despite adverse factors, should become substantially more important in the United Kingdom is due to several causes. In the first place prices have been at an exceedingly low level, and have remained remarkably steady in contrast to the many cuts of the previous years. Yarns have been improved in quality, and the consuming industries, with their greater experience of the fibre, have been enabled to use rayon for many purposes for which it was previously considered unsuitable. In the early months of the year demand for rayon was relatively poor, but the weaving trade gradually took greater quantities and accounted for a very high consumption in the second quarter. There was a seasonal decline in August, but since then demand has steadily increased and the last quarter of the year saw both production and consumption substantially larger than ever before. The price stability referred to above has been on the viscose side, and viscose accounts for the bulk of the production. Acetate prices fell steadily until the brisk buying movement in the closing months of the year, and by that time special cheap grades which sell at the level of the cheap quality viscose had been introduced. The two yarns, however, are scarcely competitive with each other, and acetate remains a speciality product. The Bemberg factory at Doncaster has been in operation since February and has gradually increased production. Cuprammonium yarns produced at this factory are also selling in cheap grades at the same prices as viscose and acetate, and interesting developments are foreshadowed. Economies have been made on all sides by the yarn producers, and in every direction with a view to bringing costs down in accordance with the low level of prices. The leading firm has relentlessly maintained prices at a steady low level, and though market conditions would have justified an increase in the closing months of the year, this was withheld as it would only have led to a recurrence

of weak competition. The leading firm put their reserve Wolverhampton factory into operation in September and have been responsible for a very large share of the vastly increased output in the last quarter. Several of the smaller companies have been increasing their output and have kept their machinery running much more fully than formerly. Time will show how many of these have approached an economic level of working. While for most of the year the weaving trade has been responsible for the bulk of the consumption, conditions on the hosiery side have been much more favourable in the closing months of the year.

LINEN TRADE.

In 1931, imports of flax averaged slightly less than £55 per ton. This is the lowest price recorded in the import returns for the last seventeen years, and compares with £81½ for 1930, £91½ for 1929, £99½ for 1928, and about £50 for the three years prior to the war. At a price so reasonable, considerable recovery in exports of manufactures would have resulted in normal times, but world conditions have been so adverse that overseas business was as follows:—

EXPORTS AND IMPORTS OF LINEN MANUFACTURES. (Not including Yarns.)

Drafts upon the Branches are issued by Head Office, and may be obtained from the Bank's Agents throughout England, Scotland and Ireland.

Commercial and Circular Travelling Credits issued—available throughout the World.

Telegraphic Remittances are also made.

Bills on the Australian States and Dominion of New Zealand are purchased or sent for collection.

Deposits are received at Head Office at rates of interest and for periods which may be ascertained on application.

VIEWS

Imperial & Parochial

Soundness of judgement usually rests upon an ability to combine the 'close up' with the bird's-eye view. To encourage the wide angle, the Westminster Bank issues a periodical 'Review' of current trade conditions, with surveys based on local reports drawn from all over the country. Readers of the *Economist* may obtain copies monthly, without cost, on addressing a request to the Manager

WESTMINSTER BANK LIMITED

41 LOTHBURY, LONDON, E.C. 2

The United States took over 9 million square yards more piece-goods than in the preceding year, while Germany, Switzerland, the Dutch East Indies, Japan and New Zealand all increased their purchases, but there were heavy falls elsewhere, and shipments to British South Africa, British India, Australia and Canada showed a drop of 2½ million square yards in the aggregate. The net result was a rise in the total of rather more than 5 million square yards. In spite of this improvement, the value of the shipments fell, owing to the reduction in prices following on the decline in raw material. Average prices of exports of piece goods dropped from about 1s. 3½d. per square yard in 1930 to rather under 11½d. in 1931, while handkerchiefs fell only from 3s. 5d. to 3s. 3½d. per dozen. In value, total exports declined by 27 per cent., and net imports by 21 per cent.; so that if our manufacturers have not done so well abroad as they hoped, they have not been overwhelmed with a flood of imports.

JUTE TRADE.

After a series of unfortunate years more hope and encouragement has returned in the jute trade. When this country went off the gold standard, business immediately commenced at advancing prices. It was the largest business done for a very long time, permitting of the employment of more machinery, longer working hours, and also the restarting of one or two mills. From the depths of depression trade took on an encouraging outlook. In six weeks jute advanced £8 per ton, though during the subsequent fortnight it dropped £3 per ton, and this accounted for a pause in general operations. The volume of trade secured provided work over the winter for increased machinery just as steps were being taken further to restrict output.

Another unlooked-for incident followed. Jute piece goods were put upon the list as dutiable from December 4th. This did not include Calcutta fabrics, as all Empire productions remained duty free. This brought orders to manufacturers which they had lost sight of for a very long time, and business in the home trade was stirred in a manner that was not expected to recur again.

At the beginning of 1931 the price of best first marks was £19, and Daisee-2/3 at £14 10s., and in February the prices were the lowest of the whole year at £18 and £14 respectively. With the gold standard suspended, the price of first rapidly advanced to £23 and Daisee to £19, in the latter part of September, reaching £26 10s. and £23 respectively in November, to, however, drop £3 by the end of that month. Following this the former tendency reappeared, with Calcutta most emphatic that a very much higher level would be recorded before the end of the season.

For the first nine months of the year, yarns were most depressing. In January common 8-lb. cops fell from 2s. to 1s. 10d., and the lowest of the year was 1s. 9½d. in March, a price of 1s. 10d. practically thereafter ruling till the third week of September, when the price mounted to 2s. 2d., and kept on advancing till by the middle of November the value was established at 2s. 5d. The course of hessian cloth was similar. From January to the middle of September, 10½ oz. 40 in. was of little interest at 2½d., and 8 oz. at 1½d. By the end of September, however, 10½ oz. was selling at 3½d., and 8 oz. at 2½d., and by the end of November the prices were firmly established at 3½d. for 10½ oz., and at 2½d. for 8 oz., and pointing higher. The improvement of trade was crushed into a very small part of the year, and the impetus came from home trade demand.—*Glasgow Herald Trade Review.*

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have examined the above General Statement of Liabilities and Assets as at December 31st, 1931, and compared it with the books at the Chief Office and with the certified returns from the Branches. The Bank's investments and cash on hand at the Chief Office and at the Toronto and Montreal Branches were verified by us at the close of business on December 31st, 1931. We have obtained all the information and explanations that we have required, and in our opinion the transactions of the Bank which have come under our notice have been within the powers of the Bank. We certify that in our opinion the above statement discloses the true condition of the Bank and is as shown by the books of the Bank.

TORONTO, CANADA, 16th January, 1932.

D. McK. McLELLAND, F.C.A., of Price, Waterhouse & Co.
W. D. GLENDINNING, C.A., of Kiddell, Stead, Graham & Hutchinson } Auditors.

LONDON OFFICE: 108, OLD BROAD STREET, E.C. 2.

The Bank of Nova Scotia conducts a general banking business. Fully equipped for Exchange, Collection and Letter of Credit Transactions with all parts of the world. Particular attention is devoted to business with Canada, Newfoundland and the West Indies, where Branches of the Bank have long been established—332 Branches.

FOREWORD.

THE picture presented by our Budget Supplement of a year ago was one of a situation dominated by the rapid increase of Civil Supply expenditure, offset only in small part by economies in respect of the Defence Forces. Tax revenue had nominally been made to cover the requirements of the Exchequer and to make some small provision towards debt redemption, but this result had been realised only at the cost of recurrent raids upon "nest-eggs," and the real position had, in fact, been concealed by allowing the Unemployment Insurance Fund to accumulate a debt, repayment of which could not be considered as a probability, but for which no budgetary provision had been made.

In the pages which follow, we review in detail the recent course of revenue and expenditure, showing the effects produced by the second Emergency Budget of 1931, whereby borrowing for the Unemployment Insurance Fund and the Road Fund was terminated and provision made—partly by fresh taxation and partly by economies—to fill the gap that then yawned between prospective expenditure (augmented by substituting votes of Supply for borrowing) and tax revenue inevitably diminished by the repercussions on this country of the world financial crisis. In an earlier issue of the *Economist** we have ventured a tentative forecast that on the basis of existing taxation, supplemented by the somewhat incalculable yield of existing and prospective import duties, Mr Chamberlain can look forward, when he opens his Budget on April 19th, to a surplus amounting at most to £25 millions as compared with a bare balance anticipated (*vide* page 12) by Mr Snowden last September. It may be that the Chancellor's expert advisers will be inclined to take a less optimistic view. Though the income tax and surtax payers in the past financial year have proved a remarkably fruitful source of revenue, the assessments on which next year's receipts from direct taxation will depend may well be expected to prove even less favourable than Mr Snowden assumed would be the case last September. Moreover, it is well known that in many instances taxpayers were able to meet the demands made on them during the past quarter only by recourse to banking accommodation. It may not be possible a second time to repeat fully the effort, stimulated by a general sense of patriotic obligation, which was made in the past year. In any case, the fact which emerges from our analysis of the past four years' history of debt redemption, that we have been reducing debt at the rate of less than £10 millions a year, suggests strongly that fortification of the sinking fund should have priority over remissions of taxation.

This being so, the taxpayer is clearly faced with the prospect of little relaxation in 1932-33 of the burden which he is now carrying. It is a burden whose magnitude requires little emphasis. If we include as part of it the whole yield of motor licences and the Post Office surplus, we find that in 1931-32 revenue amounted to £744.5 millions, as compared with less than £695 millions in 1924-25, while tax revenue proper—i.e., excluding the foregoing items—amounted to £710.5 millions or £37 millions more

than seven years ago. In addition, local rates amount to over £165 millions a year. Although of recent years the proportion between direct and indirect taxation has remained relatively constant in the proportion of 3:2, the absolute increase under both heads, as compared with the last pre-war year, is enormous. In comparison with 1913-14 the increase in direct taxation has been 460 per cent., while indirect taxation has risen by about 220 per cent. A year ago we suggested that the national income in 1930 might have been of the order of £4,000 millions, and that tax revenue (including the total yield of motor duties, but not the Post Office surplus) at £704 millions bore to national income a ratio of over 17 per cent. as compared with 7 per cent. in 1913. For 1931 an estimate of national income must necessarily, in view of the violent change in values and chaotic conditions of business, be more than ever a matter of guess-work. If the figure be taken tentatively at £3,500 millions, the ratio of tax revenue to national income works out at approximately 21 per cent., and on the prospects for 1932 it looks as though the figure might reach the serious proportions of 25 per cent.

In these circumstances the need for an unrelaxed drive towards economy is paramount. Although the relief afforded by this country's suspension of the gold standard has led to an increase in employment which has enabled a saving of £13½ millions, as compared with last September's forecast, to be made in the 1932-33 estimates for the Ministry of Labour, the total estimated expenditure on the Supply Services amounts to £447 millions, as compared with £438 millions in 1931-32. Approximately £5½ millions of economies have been effected in the cost of the Defence Services, but on the Civil Services only £8 millions have been retrenched, apart from the savings on the Ministry of Labour vote, as aforesaid, and a reduction of about £7½ millions in the expenditure of the Road Fund, whose borrowing powers, like those of the Unemployment Insurance Fund, were terminated in the Emergency Budget. If the taxpayer is to obtain any substantial alleviation of a burden whose indefinite continuance cannot be lightly contemplated, it is evident that a rigorous pruning of expenditure on all hands must be effected.

It may be that a successful result of the Disarmament Conference will enable Mr Chamberlain to lighten substantially the cost of the Defence Forces. But in this direction, as in others, the data on which the 1932 Budget must be based are liable to so many chances and changes that the Chancellor, we suggest, can do little more this month than make tentative provision for the situation with which he is at this moment confronted. Apart from the incalculable future trend of industrial employment, on which next year's Budget balance so largely hangs, it still remains to be seen what budgetary adjustments will finally be necessary in respect of receipts and payments on account of reparations and war debts, not to mention contingent exchange losses on the repayment of last summer's Franco-American Treasury credits. It might, in fact, be a wise course to present, on April 19th, a provisional Budget for the coming year, to be followed in October, as was the case in 1931, by a revised statement of accounts.

* March 19, 1932.

THE NATIONAL ACCOUNTS, 1931-32.

The picture which is presented by the accounts for the past year cannot readily be appreciated without reference to the two Budgets introduced respectively in April and September, 1931. Last April Mr Snowden found himself faced with prospective expenditure, other than the self-balancing items, of £803.3 millions, including a fixed debt charge reduced from £360 to £355 millions, whereas his estimated revenue on the existing basis of taxation was £37.3 millions below that figure. This gap he filled by increasing the duty on petrol from 4d. to 6d. per gallon, (estimated to yield £7.5 millions), by gaining £10 millions through making three-quarters instead of one-half of 1931-32 income tax assessed under Schedules B, D and E payable on January 1, 1932, and by transferring to Miscellaneous Receipts £20 millions from the Dollar Exchange Reserve Fund, in addition to accrued interest on this Fund also taken into revenue. These arrangements left him with a prospective modest surplus of £200,000.

Since he was left with a prospective automatic shrinkage of revenue for 1932-33, amounting, when the exhaustion of the Rating Relief Suspense Account was allowed for, to £37 millions, and since he was making no provision for the growing indebtedness of the Unemployment Insurance Fund, the impression created by this temporising Budget was far from encouraging, but by September, when the Emergency Budget was introduced, the financial situation clearly called for drastic action. On the one hand the Government's decision to terminate borrowing for the Unemployment Insurance and Road Funds had the effect of raising estimated supply expenditure by £34 millions, in addition to Supplementary Estimates already sanctioned amounting to £800,000. Thus, though the provisions for debt interest and sinking fund could be reduced by £13.5 millions and £5.8 millions respectively as a result of the Hoover moratorium plan, total prospective expenditure amounted to £818.9 millions, against which estimated revenue of only £744.2 millions was in sight, owing to (1) an anticipated short-fall of £4 millions in Customs and Excise, and of £25 millions in Inland Revenue, and (2) a prospective reduction of £30.3 millions in miscellaneous revenue from reparations and war debts in suspense during the Hoover "holiday" year. Altogether, Mr Snowden was faced with a deficit for 1931-32 of £74.7 millions, which he met by reducing the provision for sinking fund to £32.5 millions, by anticipating economies to save £22 millions, and by budgeting for £29 millions from increased income tax and surtax and £11.5 millions from additional duties on beer, tobacco, petrol and entertainments.

In the following table are compared the realised results of 1931-32 with the actual 1930-31 receipts, and with the original and final 1931-32 estimates:—

ORDINARY REVENUE, 1931-32.

SELF-BALANCING REVENUE AND EXPENDITURE, 1931-32.
(000's omitted.)

	Actual Receipts and Issues, 1931-32.	Larger (+) or Smaller (-) than 1930-31 Receipts and Issues.	Larger (+) or Smaller (-) than Original 1931-32 Estimates.
Post Office	£ 58,000	- 1,000	- 232
Motor Vehicle Duties apportioned to Road Fund	22,519	- 347	- 831
Total	80,519	- 1,347	- 1,063

So far as revenue is concerned the yield from Customs was augmented by about £2 millions through tariff duties imposed after the Emergency Budget. Inland revenue, on account of the great fall in the yield from estate duties, would have failed badly to reach even Mr Snowden's second forecast had it not been for the unexpectedly fruitful yield of income and surtax. The shortfall of £12.9 millions, as compared with the final estimate, in Miscellaneous receipts is due mainly to the fact that only £12½ millions instead of a contemplated £23 millions was transferred from the Dollar Exchange Reserve Fund. It appears that by March 31, 1932, the accumulated interest in this Fund amounted to £4 millions, against an estimate of £3 millions in the April, 1931, Budget. Hence the transfer properly to be regarded as on capital account was only £8½ millions.

On the other side of the ledger, the under-expenditure on account of Supply, as compared with the final estimates, is attributable to the fact that whereas in September Mr Snowden budgeted on the assumption of an unemployment figure of three millions, the past winter's average has in fact been less than 2½ millions. The amount shown as allocated to sinking fund is, of course, a nominal figure, which does not reflect the real position of debt redemption during the year. This aspect of the accounts is dealt with fully on page 12.

Before proceeding to examine revenue and expenditure in greater detail, we show below the grand totals of receipts and outgoings, including self-balancing expenditure, over the past eight years in comparison with the last pre-war year:—

(000's omitted.)

	Revenue.	Expenditure.*	Surplus.	Deficit.
1913-14	£ 198,243	£ 197,493	£ 750	£ ...
1924-25	799,436	795,777	+ 3,659	...
1925-26	812,062	826,100	...	- 14,038
1926-27	805,701	842,395	...	- 36,694
1927-28	842,824	838,585	+ 4,239	...
1928-29	836,435	818,041	+ 18,394	...
1929-30	814,970	829,494	...	- 14,524
1930-31	857,761	881,037	...	- 23,276
1931-32	851,482	851,118	+ 364	...

* Includes allocations to Sinking Fund.

The payments on sinking fund account included in the foregoing figures of expenditure are analysed in greater detail in the section of this Supplement dealing with the national debt.

REVENUE.

Before proceeding to examine the salient features of the trend of revenue under its various heads, we show below a comparison of realised receipts during the past three years with those of 1924-25 and 1913-14:—

REVENUE (£ Mn.).

	1913-14	1924-25	1929-30	1930-31	1931-32
Customs	35.5	99.3	119.9	121.4	136.2
Excise	39.5	135.1	127.5	124.0	119.9
Total	75.0	234.4	247.4	245.4	256.1
Income Tax	43.9	273.8	237.4	256.0	287.4
Surtax	3.3	62.7	56.4	67.8	76.7
Estate, etc., Duties	27.4	59.5	79.8	82.6	65.0
Stamps	10.0	22.9	25.7	20.7	17.1
E.P.D.	...	7	2.3	3.0	2.5
Corporation Profits Tax	...	18.1	...	...	...
Land Tax, etc.	3.4	1.4	.8	.8	0.8
Total Inland Revenue	88.0	439.1	402.4	430.9	449.5
Motor Vehicle Duties	...	(a)	4.9	4.9	4.9
Tax Revenue	163.0	673.5	654.7	681.3	710.5
Crown Lands	0.5	0.9	1.3	1.3	1.3
Sundry Loans	1.6	11.9	32.6	32.9	13.8
Miscellaneous	2.3	41.4	36.4	34.3	29.9
Post Office, Net	6.2	5.1	9.2	10.1	11.5
Rating Suspense Account	...	...	...	16.0	4.0
Non-Tax Revenue ...	10.6	59.3	79.5	94.6	60.5
Total Ordinary Revenue	173.6	732.8	734.2	775.9	771.0
Self-balancing Revenue: Post Office	24.6	50.4	58.9	59.0	58.0
Road Fund	...	16.2	21.9	22.9	22.5
Total Revenue	198.2	799.4	815.0	857.8	851.5

(a) Whole yield allocated to Road Fund.

Comparisons of tax revenue in 1929-32 with that of 1913-14 and 1924-25 are complicated by the change in the form of the National Accounts made by Mr Churchill in 1928, whereby Post Office receipts (other than the net surplus accruing to the Treasury) and the share of the motor vehicle duties apportioned to the Road Fund are shown as self-balancing revenue. In the above table, in order to make the figures comparable, we have re-cast the 1924-25 accounts on the same basis as those for the past three years. If, however, total Road Fund receipts and Post Office surplus are included with taxes, the total tax revenue would show the following increase between 1924-25 and 1931-32:—

	1924-25.	1931-32.
Tax revenue as above	£ Mn. 673.5	£ Mn. 710.5
Road Fund receipts	16.2	22.5
Post Office surplus	5.1	11.5
Total	694.8	744.5

The following analysis of the main heads of revenue shows the trend up to the latest date for which particulars are available.

Customs and Excise.—The original Budget estimate for 1931-32 was £245.5 millions, as compared with £245.4 millions realised in 1930-31. Last September Mr Snowden reduced the estimate, on the basis of existing taxation, to £241.5 millions, but raised his prospective revenue to £253 millions by additional duties on beer, tobacco, petrol and entertainments, estimated to yield £11.5 millions in 1931-32 and £24 millions in a full year. In the following table we show the recent course of Exchequer receipts as compared with Budget estimates:—

(Million £.)

	CUSTOMS.		EXCISE.	
	Budget Estimate.	Exchequer Receipts.	Budget Estimate.	Exchequer Receipts.
1924-25	101.8	99.3	135.9	135.1
1928-29	120.6	119.0	140.8	134.0
1929-30	119.8	119.9	130.6	127.5
1930-31	122.7	121.4	129.9	124.0
1931-32	131.8	136.2	121.2	119.9

During the four years 1928-32 the failure of Excise to live up to expectations was a consistent feature. In 1931-32 Customs receipts were augmented by £2 millions through the various Protectionist duties noted below.

Apart from Acts of the present Parliament, the following are the chief remissions and additions which have taken place in Customs and Excise duties in recent years, together with the estimated cost or yield of the modifications in a full year:—

	DUTIES REMITTED.	Estimated Cost in Full Year. £ Mn.
1924	Tea duty reduced from 8d. to 4d. per lb.	5.4
	Sugar duty (maximum rate) reduced from 25s. 8d. to 11s. 8d. per cwt.	18.4
	Coffee and cocoa duties reduced from 28s. to 14s. per cwt.	1.3
	Entertainments duty reduced on seats up to 2s.	4.0
1925	Increased Preference on Empire sugar and tobacco	1.6
1928	Sugar duty reduced on grades not exceeding 98° polarisation; also increased Preferences	2.9
1929	Tea duty of 4d. per lb. repealed	6.2
	DUTIES ADDED.	Estimated Yield in Full Year. £ Mn.
1925	Silk duties imposed (e.g., raw silk and yarn, 1s. 6d. to 6s. 8d. per lb.; rayon, 3s. per lb.; made-up articles, 33½ per cent. <i>ad valorem</i>)	7.0
1927	Tobacco duties increased (main duty from 8s. 2d. to 8s. 10d. per lb.)	3.4
	Wine duties increased (e.g., on wine, 25° to 42° proof, from 6s. to 8s. per gallon)	1.5
1928	Hydrocarbon oil duty of 4d. per gallon	16.3
1930	Beer duty increased by 3s. per standard barrel ...	3.1
1931	(April Budget) Hydrocarbon oil duty increased from 4d. to 6d. per gallon	8.3
1931	(September Budget) Hydrocarbon oil duty increased from 6d. to 8d. per gallon	7.5
	Beer duty increased by £1 11s. per 36 gallons, 1055° gravity	10.0
	Tobacco duties increased (main duty from 8s. 10d. to 9s. 6d. per lb.)	4.0
	Entertainment duties raised	2.5

Besides duties mainly for revenue, there remain the McKenna Duties of 33½ per cent. on imported cinematograph films, clocks and watches, motor cars and cycles and musical instruments, together with the "Safeguarding" duties, which include the Key Industry Duty (mainly certain chemicals and scientific glass and instruments) re-imposed for ten years in 1926; a duty of 28s. per cwt. on translucent or vitrified pottery; a 33½ per cent. *ad valorem* duty on buttons and a 25 per cent. *ad valorem* duty on wrought enamelled hollow-ware. The three last-named duties are due to expire—pottery, April 19, 1932; buttons, April 28, 1933; hollow-ware, June 13, 1933.

These alterations in duties must be borne in mind in reading the next table, which shows Customs and Excise net receipts (these differ slightly from Exchequer receipts because of variations in retained balances) analysed in greater detail. The areas referred to are the United Kingdom in 1913-14 and Great Britain and Northern Ireland since the war:—

CUSTOMS AND EXCISE DUTIES—NET RECEIPTS (000's omitted.)

	1913-14.	1924-25.	1928-29.	1929-30.	1930-31.

Grand total	75,227	235,007	252,819	247,682	246,045

* Duty repealed in April, 1929.

† There was no duty on hydrocarbon oils in 1913-14, but the motor spirit duty (repealed finally as from January 1, 1921) yielded in that year £841,000 which is included with "other revenue duties."

‡ Including British wine, table waters, cider and perry, cocoa, coffee, chicory and substitutes, dried or preserved fruits, entertainments, railway passenger duty, patent medicines, other licences, and miscellaneous.

In 1930-31 the quantity of tobacco retained for consumption was over 154 million lbs., against 129 million in 1924-25. On the other hand, the consumption of spirits has fallen steadily in that period from 14.5 to 11.7 million proof gallons, while in terms of standard barrels (36 gallons at gravity of 1055 degrees) beer consumption has also declined—from 21.9 to 19.6 million barrels. The quantity of imported and home-grown sugar consumed rose, in terms of refined sugar equivalent, from 32.2 cwt. in 1924-25 to 39.4 million cwt. in 1930-31.

A word in conclusion must be added regarding the Protective duties imposed by the present Parliament. The Abnormal Importations Act, which provided for emergency duties up to 100 per cent. to be imposed on foreign manufactured articles for six months from the passage of the Bill, became law on November 20th last.

On November 21st, Mr Runciman imposed by Order a duty of 50 per cent., effective from November 25th, on a large range of manufactured goods imports whereof from foreign countries had totalled £26 millions in value in 1930 and £28 millions in 1929. At the beginning of December a second Order, covering about £5½ millions of manufactured imports on the 1930 basis, was issued, the rate of duty being again 50 per cent. On this occasion Protection was extended to woollen yarns. A third Order, which became operative just before Christmas, brought (on the 1930 basis) another £20 millions of manufactured imports—including, notably, cotton piece-goods—within the scope of these 50 per cent. duties, which were superimposed on all existing duties. Finally, under the Horticultural Products Act, various duties, applicable at specified rates to different portions of the year, were imposed by Order of the Minister of Agriculture. This Act expires in December, 1932.

Motor Vehicle Duties.—In 1931-32 gross Exchequer receipts (i.e., including the "self-balancing" portion allocated to the Road Fund) amounted to £27,480,000, as compared with a Budget estimate of £28.4 millions. The distribution of revenue from this source is shown below:—

MOTOR VEHICLE DUTIES.
(000's omitted.)

Year.	Exchequer Receipts.*	Payments to Road Fund.	Exchequer Appropriations.
	£	£	£
1924-25	16,164	...	...
1928-29	25,357	21,131	4,226
1929-30	26,802	21,882	4,920
1930-31	27,792	22,866	4,926
1931-32	27,480	22,519	4,961

* Before the Local Government Act of 1929 about £600,000 annually was earmarked for statutory payments to local authorities in lieu of previous carriage licence duties.

Since 1926-27 instead of allocating the entire yield of the motor vehicle duties to the Road Fund the Exchequer has appropriated a portion for general purposes.

In 1930-31 the chief items of payments by the Road Fund were:—

	£
Grants for maintenance, &c., of Class I. and Class II. Roads and Bridges	8,500,256
Grants for major improvements and other road purposes	4,559,320
Special Unemployment Programmes	5,727,319

At March 31, 1931, the Fund had a credit balance of £1.6 millions, as compared with £6.5 millions a year ago, whereas commitments in respect of approved future grants totalled £62 millions, as compared with £48½ millions in March, 1930 and £23.2 millions in March, 1929. The April Budget of 1931-32 provided for the Road Fund borrowing £10 millions in that year, but this authorisation was cancelled in the September Budget.

Income Tax.—Exchequer receipts from income tax amounted last year to £287,367,000, as compared with a final Budget estimate of £272 millions and an original estimate of £258 millions. The course of Exchequer receipts from income tax for 1913-14 and from 1924-25

onwards, together with the standard rate of tax for each year, is shown below:—

INCOME TAX.*

Year.	Exchequer Receipts.	Standard Rate of Tax in the £.	Net Yield† per Penny.	Year.	Exchequer Receipts.	Standard Rate of Tax in the £.	Net Yield† per Penny.
1913-14	£ Mn. 43.9	s. d. 1 2	£ Mn. 3.11	1927-28	£ Mn. 250.6	s. d. 4 0	£ Mn. 4.73
1924-25	273.8	4 6	5.06	1928-29	237.6	4 0	4.91
1925-26	259.4	4 0	4.92	1929-30	237.4	4 0	4.87
1926-27	234.7	4 0	4.87	1930-31	256.0	4 6	4.57†
				1931-32	287.4	5 0	...

* For 1913-14 the United Kingdom; from 1924-25 onwards, Great Britain and Northern Ireland only.
† Calculated on basis of net produce of tax.
‡ Estimate.

In his first 1931 Budget Mr Snowden made no alteration in the rate of income tax, but increased his 1931-32 receipts under this head by an estimated non-recurrent sum of £10 millions by raising the instalment of income tax due on January 1st under Schedules B, D and E from one-half to three-quarters of the total annual payment, the remaining quarter to be paid on July 1st. In his September Budget, Mr Snowden raised the standard rate of tax from 4s. 6d. to 5s. in the £, and made the following changes in allowances:—

- The allowance in respect of earned income was increased from one-sixth of the income, with a maximum of £250, to one-fifth, with a maximum of £300.
- The personal allowances for individuals, other than married persons, was reduced from £130 to £100.
- The personal allowance for married persons was reduced from £225 to £150.
- The allowances in respect of children was reduced from £60 to £50 for the first child and from £50 to £40 for each subsequent child.
- The housekeeper allowance was reduced from £60 to £50.
- The deduction of tax authorised by the Finance Act, 1930 (i.e., five-ninths of the standard rate of the first £250 of taxable income), was altered to a deduction of tax at half the standard rate on an amount of income not exceeding £175.

It was estimated that these measures, together with the increase in the standard rate of tax, would produce additional revenue of £25 millions in 1931-32 and £51.5 millions in a full financial year.

"Actual" income (i.e., gross income, less exemptions and reductions for depreciation, etc., but before deducting "earned" and other personal allowances) coming under the review of the Inland Revenue Department has in recent years been in the neighbourhood of £2,500 millions. In the following table we analyse into the five schedules the estimated actual income in 1930-31, as compared with the figures for 1928-29, 1929-30 and 1913-14:—

ANALYSIS OF ACTUAL INCOME.
(000's omitted.)

Schedule.	Income from	1913-14.	1928-29.	1929-30.	1930-31. Estimates.
A.	Ownership of lands, houses, &c.	£ 175,662	£ 254,108	£ 258,716	£ 268,000
B.	Occupation of lands, &c.	5,373	27,433	27,821	26,000
C.	British, Dominion & Foreign Government Securities, &c.	47,776	153,446	154,952	161,000
D.	Business, Professions, &c.	584,346	1,064,927	1,077,674	1,000,000
E.	Salaries of Government, Corporation and Public Company Officials and Employments.*	137,884	710,043	721,898	725,000
	Ditto, weekly wage-earners		284,492	289,696	260,000
	Total	951,041	2,494,449	2,530,757	2,440,000

* Prior to 1923-24, employments (including weekly wage-earners) were assessed under Schedule D.

The total "taxable" income, that is "actual" income, less earned income and personal allowances, amounted in 1929-30 to £1,347 millions, as compared with a pre-war figure of £792 millions. For 1930-31, "taxable" income is provisionally estimated at £1,300,000, and the number of persons chargeable at 2,200,000, as compared with 1,130,000 in 1913-14.

Surtax.—Exchequer receipts from surtax totalled £76.7 millions last year, as compared with a final Budget estimate of £73 millions, and an original estimate of £72 millions. The number assessed to surtax (as revised at April 30, 1931), the total chargeable income (including the first portion on which no surtax is payable), and the Exchequer receipts in 1913-14 and since 1924-25 are shown in the following table:—

SURTAX.

(1913-14 United Kingdom; thereafter Great Britain and Northern Ireland.)

Year	Income Limit.	Number Chargeable.	Total Income Chargeable.	Exchequer Receipt.
	£		£ Mn.	£ Mn.
1913-14	5,000	14,008	176	3.32
1924-25	2,000	96,682	560	62.68
1925-26	2,000	98,030	560	68.51
1926-27	2,000	99,321	559	65.91
1927-28	2,000	99,380	550	60.60
1928-29	2,000	103,027	570	56.15
1929-30	2,000	*	*	56.39
1930-31	2,000	*	*	67.83
1931-32	2,000	*	*	76.7

* Not available.

In his Emergency Budget of last year Mr Snowden increased by 10 per cent. the rates of surtax operative since 1930-31, which ranged from 1s. for every pound of the first £500 above £2,000, to 7s. 6d. for every pound in excess of £50,000. This revision of the rates was estimated to yield £4 millions of revenue in 1931-32, and £6 millions in a full year.

Of the total number chargeable with surtax in 1928-29, over 74,000 persons, with an aggregate income of £224 millions, had individual incomes ranging between £2,000 and £5,000 per annum.

Income and Surtax Combined.—We print below an extract from a schedule issued by the Treasury last autumn showing the amount of tax now payable on certain specimen incomes, as compared with the sum payable in 1929-30:—

INCOME TAX AND SURTAX.

Total Income.	Single Persons.			
	Earned Income.		Investment Income.	
	1929-30.	1931-32.	1929-30.	1931-32.
£	£ s. d.	£ s. d.	£ s. d.	£ s. d.
130.....	...	0 10 0	...	3 15 0

50,000.....	22,156 15 0	28,335 0 0	22,206 15 0	28,410 0 0

Total Income.	Married Couples with Three Children.			
	Earned Income.		Investment Income.	
	1929-30.	1931-32.	1929-30.	1931-32.
£	£ s. d.	£ s. d.	£ s. d.	£ s. d.
130.....	...	...	...	...
150.....	...	...	...	...
200.....	...	...	...	...
500.....	3 3 4	15 0 0	11 10 0	33 2 6
1,000.....	67 3 4	108 2 6	100 10 0	158 2 6
2,000.....	250 10 0	333 2 6	300 10 0	408 2 6
5,000.....	1,081 15 0	1,420 0 0	1,131 15 0	1,495 0 0
10,000.....	2,981 15 0	3,852 10 0	3,031 15 0	3,927 10 0
50,000.....	22,106 15 0	28,290 0 0	22,156 15 0	28,365 0 0

In the case of wholly investment incomes of single persons, the effective rate of income and surtax rises from 4s. 1d. in the £ on an income of £1,000 per annum to 11s. 4½d. in the £ on £50,000.

Death Duties.—The Exchequer received £65,000,000 from death duties in 1931-32, as compared with a final Budget estimate of £83 millions and an original estimate of £90 millions. The short-fall is a striking reflection of the depreciation of securities. The following table shows the receipts from death duties in 1913-14 and since 1924-25:—

ESTATE, &c., DUTIES.

(In Million £'s.)

	Exchequer Receipts.		Exchequer Receipts.
1913-14	27.36	1927-28	77.31
1924-25	59.45	1928-29	80.57
1925-26	61.20	1929-30	79.77
1926-27	67.32	1930-31	82.61
		1931-32	65.00

With the exception of 1925-26, when there was a short-fall of £5.3 millions, Exchequer receipts from death duties up to 1929-30 consistently exceeded Budget estimates. In the last three years, however, receipts fell below the Budget estimates by £2.2 millions, £400,000 and £18 millions respectively.

Of the seven death duties on the Statute Book, only three are applicable to deaths occurring at the present time, namely, the estate duty, the legacy duty and the succession duty. The estate duty yields about 89 per cent. of the total receipts. In the following table we show the rates of estate duty operative at the present time, as compared with those prevailing in 1909-14, 1919-25 and 1925-30:—

RATES OF ESTATE DUTY.

Net Value.	1909-14.	1919-25.	1925-30.	Since 1930.
Exceeding	%	%	%	%
Not Exceeding	%	%	%	%
£ 100	1-3	1-3	1-3	1-3
£ 5,000	4	4	4	4
£ 10,000	5-6	5-7	5-9	5-9
£ 25,000	6-7	8-10	10-14	10-14
£ 50,000	7-8	11-14	15-19	15-19
£ 100,000	9-10	14-18	20-23	20-24
£ 200,000	11-12	19-25	24-27	26-32
£ 500,000	12-14	26-28	28-29	34-38
£ 1,000,000	15	30-40	30-40	40-50

The increases in the scale imposed by Mr Snowden in 1930-31 were estimated to yield £7 millions in a full year.

The total number of estates paying estate duty in 1930-31 (the latest year for which figures are available) was 125,741, as compared with 130,042 in 1929-30. These estates represented a net capital value of £516,800,000, as compared with £538,376,000 in 1930-31, and yielded net receipts of £73,704,000, against £69,548,000 in the previous year. In the following table the 1930-31 figures are analysed to show their distribution as between estates of varying size:—

ESTATE DUTY, 1930-31.

	Numbers.		Net Capital Value.		Net Receipts.	
	—	% of Total.	Thous. £.	% of Total.	Thous. £.	% of Total.
Small Estates*	49,078	39.03	13,507	2.61	94	0.13
Exceeding						
£ 100	61,455	48.87	94,311	18.25	2,554	3.47
£ 5,000	7,035	5.59	52,246	10.11	2,078	2.82
£ 10,000	5,093	4.05	81,655	15.80	5,565	7.54
£ 25,000	1,793	1.43	63,476	12.28	7,301	9.90
£ 50,000	790	0.63	54,799	10.60	9,221	12.62
£ 100,000	307	0.24	43,616	8.44	9,286	12.60
£ 200,000	136	0.11	41,928	8.12	11,075	15.02
£ 500,000	32	0.03	23,496	4.55	7,271	9.86
£ 1,000,000	22	0.02	47,766	9.24	19,267	26.15
Settlement Estate Duty	...	...	...	...	8	0.01
Total	125,741	100.00	516,800	100.00	73,704	100.00

* Estates whose gross value does not exceed £500. These pay duty at a fixed rate under £300, 30s.; £300-£500, 50s.

Of the total gross capital values, namely, £556 millions (from which £99.3 millions in deductions were allowed in arriving at the net capital value of £517 millions), Government and municipal securities represented 22.9 per cent., other stocks and shares 31.6 per cent., house and business property 13.4 per cent., and cash and money owing 16 per cent.

The current rates of legacy and succession duty, each of which is a duty payable with reference to the acquisition of property by beneficiaries, are as follows:—

Relationship of Beneficiary.	Rate of Duty Per Cent.
Husband, wife or child and descendants.....	1
Brother or sister and descendants.....	5
And others.....	10

In 1930-31 the legacy duty yielded £8.22 millions and the succession duty £1.08 millions. The total capital values assessed to legacy duty in that year amounted to £232.5 millions, of which £128.7 millions paid at the rate of 1 per cent., and £28.5 millions at the maximum rate of 10 per cent.

Stamp Duties.—Receipts from Stamp Duties (excluding fee and patent stamps) amounted to £17,070,000 in 1931-32, as compared with a final Budget estimate of £20 millions and an original estimate of £24 millions.

The following table shows the net receipts from the main heads in recent years and in 1913-14:—

	STAMP DUTIES: NET RECEIPTS. (In thousand £'s.)			
	1913-14.	1928-29.	1929-30.	1930-31.
Land and property	1,879	4,856	4,849	4,431
Stocks and shares, &c.....	3,125	11,695	7,270	5,890
Company Capital Duty ..	698	4,416	3,771	1,135
Cheques and bills	2,322	5,122	4,837	4,521
Receipts	669	2,286	2,686	2,641
Other	955	1,759	1,840	1,717
Total	9,648	30,134	25,253	20,335

The shrinkage in receipts in 1931-32, which followed short-falls of £6 millions and £5 millions respectively in the two previous years, was an eloquent reflection of the continued trade depression and inactivity of the Stock Exchange, which in 1930-31 had already reduced by over 50 per cent. the revenue received in 1928-29 from the stamp duties on stocks and shares and company capital.

E.P.D. and Corporation Profits Tax.—Following the repeal of Corporation Profits Tax by the Finance Act of 1924, revenue under the above head has represented the collection of outstanding arrears, subject to adjustments. In 1931-32 Exchequer receipts amounted to £2,500,000, or £800,000 more than the Budget estimate, while in the previous year the yield at £3 millions exceeded the Budget estimate by £1.3 millions.

Receipts from Sundry Loans.—The original estimate for this item of revenue in 1931-32 was £33,500,000, but under the Hoover plan the estimate was revised to £15,400,000. The actual yield in 1931-32 was £13,810,000, or £1,590,000 short of the amended estimate. The following table shows the main heads of receipts in recent years:—

	RECEIPTS FROM SUNDRY LOANS. (000's omitted.)			
	1924-25.	1928-29.	1929-30.	1930-31.
Interest, &c., on War Loans:				
Dominions and Colonies ..	6,429	8,967	9,813	7,684
France	2,082	8,043	10,921	12,500
Italy	...	4,000	4,000	4,000
Other Allied Powers	24	850	1,050	1,200
Interest, &c., on Relief, Recon- struction, &c., loans	810	1,794	1,817	1,965
Suez Canal shares	1,090	1,697	1,834	1,871
Other receipts	1,506	2,760	3,205	3,670
Total	11,941	28,111	32,640	32,890

Of the £7.7 millions received in 1930-31 on account of war loans to the Dominions and Colonies, £5.5 millions were contributed by Australia and £1.7 millions by New Zealand. It is to be noted that £2 millions which were due from Australia on March 31, 1931, were not received until April 1st, and therefore were included in the 1931-32 receipts. The large effect of the annual rise in the French

schedule of war debt payments should be observed. The greater part of the revenue received under the heading "Other Receipts" is on account of sundry contributions towards the expenses of the war, advances under the Land Settlement (Facilities) Acts and shares held in the Anglo-Persian Oil Company. No division is made in the inter-Ally war debt receipts between interest and principle redemption, but in 1930-31 the repayment of principal on other items in this category of revenue totalled £2.7 millions.

The amounts due from July 1, 1931, to March 31, 1932, and from April 1, 1932, to June 30, 1932, which would have been included under receipts from sundry loans but for the operation of the Hoover Plan, are summarised below:—

	1931-32 Budget.	1932-33 Budget.
	£ million.	£ million.
War contributions (India)	0.4	0.4
War Loans:—		
Dominions.....	4.8	0.9
France	9.4	3.1
Italy	3.0	1.0
Other Allies	0.6	0.6
Relief, Reconstruction, &c., loans	1.9	0.4
Total	20.1	6.4

South Africa voluntarily consented to continue payment of her war loan annuity. For Australia, only £3.9 millions of interest has been included, as £1.6 millions of principal repayment had already been postponed. No considerable change appears next year in the schedules of payments due to Great Britain on account of war and reconstruction debts, so any extension of the moratorium would affect the Budget on much the same note as last year. Complete postponement of payment for nine months or more would reduce the receipts in this category to the total of roughly £5 millions covered by the last two items in the first table.

Other Non-Tax Revenue.—This category includes the profits of the Post Office, the net income from Crown lands, the appropriation from the Rating Relief Suspense Account and "Miscellaneous Receipts." In accordance with the estimate, £4 millions were taken in last year from the de-rating account, which was created out of the surpluses of 1927-29, and is now exhausted. The profits of the Post Office, which have been steadily rising of recent years, amounted in 1931-32 to £11,500,000, or £700,000 less than the estimate of £12,200,000. Crown lands brought in almost exactly the estimated yield of £1,300,000. The estimate for miscellaneous receipts, originally £55,000,000, was reduced to £42,800,000 to allow for the effect of the Hoover moratorium. The actual yield was £29,913,100, of which the Dollar Exchange Reserve provided £12½ millions, in place of the £23 millions budgeted for. Miscellaneous receipts include, *inter alia*, Bank of England profits on the fiduciary note issue, the surplus interest earned by the Post Office and Trustee Savings Banks over and above the amounts paid to their depositors, various receipts by Public Departments, and receipts from reparations. Special appropriations—for instance, raids on the Road Fund in 1926 and 1927 and the balance of the Currency Note Account in 1928—have made the aggregate of such receipts very variable. Sale of surplus war stores has ceased to bring in any substantial amount, and easily the most important items in 1930-31 were £3,500,000 from the surplus of the clearing office for ex-enemy debts and £16,810,000 from reparations. The clearing office accounts were wound up under the Hague agreements, and property not yet liquidated was to be returned, hence that item can have produced only a residuary balance in 1931-32. As for reparations and similar receipts, the Hoover Plan suspended the following payments due to the British Exchequer:—

	1931 Budget.	1932 Budget.
	£ million.	£ million.
German reparations.....	10.8	3.6
Czechoslovakia, Liberation Debt	0.1	0.0
Hague annuities (France, Belgium, Italy)	1.4	0.0
Total	12.3	3.6

The above obligations were all couched in terms of gold standard currencies, but conversion has been made at par of exchange.

EXPENDITURE.

The national expenditure in the past two years, compared with that in 1924-25 and 1913-14, together with estimates for the current year, is shown below. In 1924-25 Road Fund repayments were included in the Consolidated Fund. In order to make the figures comparable with those of later years, we have adjusted the accounts for 1913-14 and 1924-25 accordingly. No official estimates will be available in respect of the bracketed items until Budget day, but for the purposes of this table we have assumed that Road Fund and "other consolidated fund" payments are unchanged and have inserted the figure given in Mr Snowden's Emergency Budget for the national debt services.

EXPENDITURE (£'s million).

	1913-14.	1924-25.	1930-31.	1931-32.	1932-33. (Est.)
National Debt services..	24.5	357.2	360.0	322.0	(335.5)
Other Consolidated Fund services	12.8	20.8	9.3	9.4	(9.4)
Total Consolidated Fund services	37.3	378.0	369.3	331.4	(344.9)
Navy, Army, Air	77.2	114.7	110.5	107.3	104.4

Total supply services (excluding P.O.)	135.6	351.8	429.8	439.2	447.2
Total ordinary	172.9	729.8	799.1	770.6	(792.1)
Self-balancing— Post Office	24.6	50.4	59.0	58.0	59.2
Road Fund	...	15.6	22.9	22.5	(22.5)
Total self-balancing ...	24.6	66.0	81.9	80.5	(81.7)
Grand total	197.5	795.8	881.0	851.1	(873.8)

In view of the marked decrease during the past six months in short-term rates of interest and the cost of financing Treasury bills, it is probable that Mr Chamberlain may be able to revise in a downward direction last September's estimate of the 1932-33 cost of the National Debt services. But this item must necessarily remain a matter of great uncertainty until it is known whether provision is to be made, or not, in the Budget for payment of the December, 1932, instalment due under our debt funding agreement to the United States.

In the following paragraphs we examine in greater detail the trend of the main heads of expenditure.

Consolidated Fund Services.—The chief item falling under this head is the cost of the National Debt, which is discussed in a later section of this supplement. The reduction in "other" Consolidated Fund Services as compared with the sum expended in 1924-25 is due to the operation of the Local Government Act of 1929, whereby payments to Local Taxation Accounts were transferred to Supply Votes and fused with the new grants in relief of local rates. The total of £9.4 millions in 1931-32 was made up of £6.3 millions paid to the Northern Ireland Exchequer and £3.1 millions on account of the Civil List and several minor miscellaneous charges, *e.g.*, payments under the Trade Facilities and the Tithe Acts.

Defence Services.—The total estimated expenditure on the Defence Services in 1932-33 amounts to £104,364,000, as compared with actual expenditure of £107,280,000 in 1931-32 and a pre-war figure of £77,179,000. The economies imposed on these services in Mr Snowden's Supplementary Budget were estimated to amount in 1932 to £8.6 millions, including a saving of £3.6 millions on account of pay and pensions. These reductions have in the main been realised, although, as compared with the 1931-32 estimates, amounting to £109,635,000, the actual total saving is only £5½ millions. This apparent discrepancy, as will be seen below, is chiefly accounted for by a normal increase in naval expenditure to cover the 1930 and 1931 new construction programmes, and by the realisation of only a part of the saving anticipated in the

Air Force. We show below the recent course of defence expenditure as compared with 1924-25 and the pre-war level:—

DEFENCE SERVICES EXPENDITURE (EXCHEQUER ISSUES).
(000's omitted.)

	Navy.	Army.	Air Force.	Total.
1913-14	£ 48,833	£ 28,346	£ ...	£ 77,179
1924-25	55,625	44,765	14,310	114,700
1928-29	56,920	40,500	16,050	113,470
1929-30	55,750	40,500	16,750	113,000
1930-31	52,574	40,150	17,800	110,524
1931-32	51,605*	39,930*	18,100*	107,280†
1932-33 (estimate)	50,476	36,488	17,400	104,364

* Budget estimate.

† Actual.

It should be borne in mind that the post-war Army and Navy estimates have to make provision for substantial non-effective charges, *i.e.*, pensions, retired pay, etc. These charges in 1932-33 are estimated to amount to £17.2 millions, as compared with £6.9 millions in 1913-14.

In the following table we show effective charges only for 1913-14 and recent years:—

	Navy.	Army.	Air Force.
1913-14	£ Mn. 43.3	£ Mn. 24.3	£ Mn. ...
1928-29	48.7	32.5	15.9
1929-30	47.4	32.4	16.7
1930-31	43.6	31.4	17.4
1931-32*	42.8	31.2	17.8
1932-33*	41.6	28.2	17.1

* Estimates.

Effective charges in 1932-33 are estimated at £86.9 millions, an increase—including the Air Force—of approximately 27 per cent. above the pre-war level.

The next table shows the strength (or establishment) of the three forces in 1913-14 and from 1924-25 onwards:

	Navy (a).	Army. (b)	Air Force. (c)
1913-14	142,960	185,600	...
1924-25	99,453	161,600	31,429
1928-29	100,680	153,500	30,467
1929-30	99,300	150,500	31,070
1930-31	94,921	148,900	32,118
1931-32	93,650*(d)	148,800*	32,000*
1932-33	91,410*(d)	148,700	32,000*

* Estimate.

(a) Exclusive of Royal Marine Police.

(b) Establishment exclusive of India.

(c) Including about 2,000 paid for by the Government of India.

(d) Maximum for year.

Navy.—The estimates for 1932-33 amount to a net total of £50,476,800, showing a reduction of £11,287,700 on the estimates for 1931-32. The recommendations of the Committee on National Expenditure, which were subsequently embodied in the September Supplementary Budget, provided for a total cut of £3,828,700 in naval expenditure, of which £1,828,700 was to be effected through reductions in pay and pensions and other administrative economies. The Committee recognised, however, that as compared with 1931-32 expenditure an additional sum of £2,700,000 would be required in 1932-33 to cover the normal upward curve of expenditure on the 1930 and 1931 new construction programmes as already approved by Parliament. The First Lord of the Admiralty, in presenting the current estimates, maintained that this figure could not be regarded as "an adequate provision for the needs of the Navy," but had been fixed with strict reference to the needs of the present financial position. Of the total estimates for the coming year, £6,773,545 represents provision for new construction, and compares with an anticipated expenditure in 1931-32 of £5,426,855. The building-programme for 1932 is practically identical with that of

April 9,
1932.

last year, and provides for two six-inch gun cruisers, one cruiser of 5,000-6,000 tons, nine destroyers, four sloops, three submarines and several minor vessels. It was anticipated in last year's estimates that personnel would have fallen to 91,840 by the end of March, 1932, and, as will be seen from the table printed above, the estimated reduction of 2,240 brings the total for 1932 well within this figure.

Army.—The Army estimates for 1932-33 amount to £36,488,000 net, or £3,442,000 less than the estimate for 1931-32. This saving corresponds very closely to the reduction of £3,500,000 in Army expenditure ordered by the Government last autumn, but the Secretary of State for War remarks, in his Memorandum accompanying the estimates, that it has only been achieved "with the greatest difficulty by resorting to a drastic suspension or retardation of many services which are essential to the well-being and efficiency of the Army." Apart from cuts in pay and pensions, economies have been achieved through the cancellation of the annual camp training of the Territorial Army and the Supplementary Reserve, the curtailment of the field training of the Regular Army, the postponement of improvement and replacement of barracks, etc. It is estimated that of the savings effected approximately £2 millions are of a permanent character, while £1.5 millions can only be regarded as temporary economies. Non-effective charges in the present estimates amount to a little more than £8½ millions, and show a reduction of £444,000 on those of last year. In effective charges the largest economy contemplated is a cut of £1½ millions in Territorial and Reserve Forces expenditure. The strength of the Army, including British troops in India, is now approximately 8,000 below establishment, and the provision for pay in the 1932 estimates is £304,000 less than in 1931 and £1,350,000 less than in 1925.

Air.—The Air estimates for 1932-33 amount to a net total of £17,400,000, and show a decline of only £700,000 as compared with those of last year, whereas under the Government's economy schemes expenditure should have shown a reduction of £1.3 millions. The gross total, however, at £19,702,700, is £1.5 millions lower owing to a reduction of nearly £800,000 in appropriations in aid. As in the case of the other two Defence Services, it is pointed out by the Secretary of State for Air that the economies achieved have only been possible "by the postponement of many services, which, under normal conditions, would be regarded as essential, and by makeshift expedients which cannot be repeated." As compared with last year, effective charges have been reduced by £732,000. Vote I., covering the pay of the Force, shows an increase of £23,000, and Civil Aviation a rise of £3,000. All other effective charges have been reduced, technical and war stores showing a fall of £322,000, and works, buildings and lands a decline of £140,000. Non-effective charges, however, are estimated at £32,000 higher than in 1931-32. In accordance with the Armaments Truce, no new units are being formed this year. The present total strength of the Force is 75½ regular squadrons, including 13½ squadrons in the Fleet Air Arm.

Civil Service.—For 1932-33 the Civil Service estimates (excluding revenue departments) show a reduction of £9.3 millions as compared with the final estimates for 1931-32, and an increase of £12.4 millions over the original Budget estimates for that year. We show below the course of expenditure, divided into its main heads, during the last five years in comparison with 1924-25:—

CIVIL SERVICES EXPENDITURE.							
	Education.	Health.	Pensions.		Labour.	Other Heads.	Total.
			War.	Others.			
	£ Mn.	£ Mn.	£ Mn.	£ Mn.	£ Mn.	£ Mn.	£ Mn.
1924-25	46.5	21.8	69.5	25.0	14.1	51.3	228.2
1928-29	47.3	23.5	56.7	38.1	11.8	45.9	223.3
1929-30	47.8	24.5	53.5	39.9	19.5	62.0	247.2
1930-31	52.7	22.0	52.0	45.8	36.8	98.1	307.4
1931-32	55.9	22.3	50.0	49.2	44.9	95.5	317.8
1932-33*	55.9	22.3	50.0	48.2	58.6	104.5	339.5
1932-33†	45.6	22.0	47.2	50.8	64.5	100.1	330.2

* Revised estimates.

† Budget estimates.

The increase, as compared with the original estimates for 1931-32, of nearly £20 millions in the vote for the Ministry of Labour is a reflection of the increased cost to the Exchequer of the Unemployment Insurance Fund, borrowing for which ceased under Mr Snowden's Emergency Budget. As will be seen from the fuller analysis of the Class V. Vote below, the effect of limiting the Fund's borrowing powers to the total of £115 millions already authorised meant that the Exchequer had to make good any deficiency on the Fund proper, in addition to meeting the steadily rising cost of providing transitional benefit to those whose claims to benefit had lapsed. The increase in expenditure under "other" heads between 1929-30 and 1930-31 represents mainly the effects of the Local Government Act, 1929.

Central Government, and Imperial and Foreign (Classes I. and II.).—The all-round reduction of salaries, helped by a reduction in repayments to the Local Loans Fund, has enabled the Class I. Estimates, which cover such items as the Houses of Parliament, the Treasury, the Mint, etc., to fall again below the £2 millions mark. Class II. Estimates, which include the cost of official representation abroad, both in foreign countries and in the Empire, and the corresponding departments at home, have fallen by as much as one-fifth, from £6,045,000 to £4,836,000. The cost of Colonial and Middle Eastern Services is to be reduced by £432,000 to £1,318,000. The vote for the Empire Marketing Board is cut by about one-half its former amount, and the practical cessation of emigration causes the Overseas Settlement vote to fall from £265,000 to £91,000; two years ago £833,000 was provided for this item. The Imperial War Graves Commission is also to cost considerably less. On the other hand, the Disarmament Conference has caused the League of Nations contribution to rise by £64,500, and the diplomatic and consular services will also absorb more next year.

Justice and Police (Class III.).—These estimates total £15,495,000 for 1932-33, against £16,344,000 a year ago. The Police Force, which accounts for £11.2 millions of the estimate, has provided the chief economy, £768,000 having been cut from the grants-in-aid, mainly through reductions of pay and allowances. In 1924-25 the Police Vote was £6.8 millions, but the Local Government Act, 1929, had the effect of increasing Exchequer grants for police by £3 millions. Law charges have also been substantially cut down.

Education (Class IV.).—The total estimate for this class has been cut by £6,371,000 to £52,006,000 for 1932-33. The total is made up as follows:—Board of Education, £42.9 millions (against £48.4 millions); Public museums, university subsidies, etc., £2.3 millions (£2.4 last September, education votes were to be cut by £10.3 millions and university grants by £150,000. The recent course of expenditure on English education is summarised below:—

ENGLAND AND WALES.					
	Board of Education.		Total Expenditure† by L. E. A.'s.		Cost per Elementary Pupil
	Total Vote.	Grants to L. E. A.'s.	Elementary Education.	Higher Education.	
	£ Mn.	£ Mn.	£ Mn.	£ Mn.	s. d.
1913-14	14.7	12.8	25.6	4.4	95 2
1924-25	41.9	37.5	57.5	11.4	233 3
1928-29	41.2	39.0	61.5	14.5	250 5
1929-30	41.6	39.2	63.1	15.3	255 6
1930-31	45.5	42.6	64.7	16.4	262 6
1931-32	48.4	45.2*	66.3*	17.4*	267 9*
1932-33	42.9	39.0*	62.4*	16.6*	251 7*

* Provisional.

† Including proportion borne by the rates.

The reduction of the Board's vote in 1932 is accounted for as to £4.2 millions by the reduction of teachers' salaries by 10 per cent., and the revision of the grant formula for elementary education, and as to £1.4 millions by the abolition of the 50 per cent. minimum limit of the grant

April 9,
1932.

for elementary education. The number of teachers employed by local education authorities is assumed to be 171,500, at an average salary of £224.

Health, Civil Pensions and Labour (Class V.).—The total estimate for this class continues to rise; at £141,294,000 it is £8,196,000 higher than the final estimate for last year and £21,796,000 higher than the original estimate. The following table shows the recent course of expenditure:—

HEALTH, LABOUR AND INSURANCE. (In Millions.)						
	Ministry of Health.*	Pensions.		Ministry of Labour.	Other Items.	Total.
		Old Age.	Widows', Orphans', etc.			
	£	£	£	£	£	£
1924-25...	21.8	25.0	...	14.1	1.5	62.4
1925-26...	22.2	27.1	...	13.6	1.4	64.3
1926-27...	21.4	30.0	4.0	10.7	2.5	68.6
1927-28...	23.1	32.9	4.0	11.1	2.6	73.7
1928-29...	23.5	34.1	4.0	11.8	2.9	76.3
1929-30...	24.4	34.9	4.0	19.5	2.7	85.5
1930-31...	22.0	36.8	9.0	36.8	3.1	107.7

1931-32 (est.)†...	22.3	38.2	10.0	58.6	4.0	133.1
1932-33 (est.)....	22.0	39.8	11.0	64.5	4.0	141.3

* Including Scottish Department of Health.

† Revised Estimates.

In reading the foregoing table it should be borne in mind that the Local Government Act, 1929, relieved the estimates for Health to the extent of £3.7 millions, and that the Acts of 1930 and 1931 altered the basis of unemployment insurance finance (see below).

Health.—Divided into its main heads, estimated gross expenditure on Health (including Scotland) has recently been as follows:—

	MINISTRY OF HEALTH.		
	Housing Grants.	Contributions to Health Insurance Fund.	Administration and Miscellaneous Grants.
	£ Mn.	£ Mn.	£ Mn.
1924-25	9.1	7.1	6.1
1929-30	13.0	6.2	6.4
1930-31	13.7	6.7	3.0*
1931-32	14.6	6.4	2.7
1932-33	15.3	6.4	2.6

* Reduction due to Local Government Act, 1929.

Pensions.—The increase in the cost of Old Age Pensions, supplemented since 1926-27 by Widows', Orphans' and Old Age Contributory Pensions, is a significant feature of the main table shown above. The estimated number of pensions payable under the Acts of 1908-24 and 1925-29 was estimated at 1,440,000 in 1931.

Labour.—This is the division most affected by the changes imposed by the Supplementary Budget of last September. The net estimate of £64,458,000 is reached after deducting an appropriation-in-aid of £7,205,000, practically all of which represents expenses of administering unemployment insurance, recoverable from the insurance fund. Up to last September the Exchequer was responsible only for its share of contributions to the fund, in proportion to payments by employers and employed, and (after 1930) for the cost of transitional benefit to those whose insurance rights had expired; any deficit on the insurance fund was met by borrowing. The course of estimated expenditure under those circumstances is shown below:—

UNEMPLOYMENT INSURANCE.			
	Ordinary Contribution.	Transitional Benefit.	Total.*
	£ Mn.	£ Mn.	£ Mn.
1924-25	13.2	...	13.3
1928-29	11.9	...	12.0
1929-30	15.4	4.0	19.7
1930-31	15.0	22.0	37.2

* Adjusted for minor items.

The changes made by the National Government in the finance of unemployment insurance included the reduction of benefits by 10 per cent., the increase of contributions by all parties, the imposition of the means test upon claimants for transitional benefit, and the immediate assumption by the Exchequer of the whole burden of the deficit on the Insurance Fund. The estimated effect of these changes on the Budget (including the saving of £3 millions through the Anomalies Act) is shown in the following table:—

UNEMPLOYMENT INSURANCE.				
	Ordinary Contribution.	Transitional Benefit.	Deficiency Grant.	Total.*
	£ Mn.	£ Mn.	£ Mn.	£ Mn.
1931-32				
Original estimate ...	15.1	30.0	...	45.4
1931-32—				
Revised estimate ...	16.8	33.0	9.0	59.1
1932-33—				
September forecast...	19.3	37.5	22.0	79.3
1932-33—				
Estimate	20.2	41.7	3.1	65.8

* Adjusted for minor items.

The provisional estimate put forward in September by Mr Snowden was based on an unemployment live register of 3,000,000, and the more optimistic figures now issued, involving a saving of £13½ millions to the Exchequer, are due to the improvement in employment conditions in the past six months. The total cost of unemployment insurance in 1932-33, as estimated in September, was £117.5 millions, and would have been £143.3 millions but for the various economies, whereas the present estimate implies a total cost of £105.2 millions, including £92.4 millions for benefit, £5.7 millions for interest on debt, and £7.1 millions for administration.

Trade and Industry (Class VI.).—The estimates in this class total £11,082,000, against £16,065,000 last year, and £1,218,000 in 1913-14. By far the greater part of the cut is accounted for by the Road Fund grant, which falls from £7,000,000 to £2,750,000. Development grants, on the other hand, at £650,000, show a rise of £250,000. The beet sugar subsidy rises by £25,000 to £2.4 millions, but all the other items suffer reductions except the grant to the Department of Scientific and Industrial Research. The votes for the Ministry of Agriculture and the Scottish Department of Agriculture are cut by nearly £400,000.

Pensions (Class VIII.).—The decline of this vote from £52,680,000 in 1931-32 to £49,856,000 in 1932-33 is due almost entirely to the automatic reduction in the cost of war pensions, which has been shown in a previous table. The other items are £335,000 for merchant seamen's war pensions, £665,000 for Royal Irish Constabulary pensions (after deduction of an appropriation-in-aid of £1,117,000 from the Irish Free State), and £1,612,000 for official superannuation and retired allowances.

Contributions to Local Revenues (Class IX.).—This vote, which totals £45,046,000, compared with £45,446,000 in 1931-32, covers the general Exchequer grants to local authorities under the Local Government Act of 1929 and the corresponding Act for Scotland. It is arrived at after deducting from the gross grant contributions from the Road Fund amounting to £6,474,000.

Revenue Departments.—The cost of the revenue departments in recent years is given in the following table:—

REVENUE DEPARTMENTS EXPENDITURE. (£'s thousands.)					
	1913-14.	1924-25.	1930-31.	1931-32. Estimates	1932-33. Estimates.
Customs & Excise	2,431	4,640	4,929	4,846	5,330
Inland Revenue	2,052	6,316	6,952	7,088	7,300
Total.....	4,483	10,956	11,881	11,934	12,630

Exchequer issues to 1930-31; 1931-32 Estimates, including supplementaries; 1932-33 Estimates.

Debt Redemption.—The following table analyses sinking fund allocations during the five years ended March 31, 1931. In this connection it will be recalled that in the Budget of 1928 Mr Churchill established a fixed charge of £355 millions to cover both interest charges and sinking fund:—

SINKING FUND.
(000's omitted.)

	1926-27.	1927-28.	1928-29.	1929-30.	1930-31.
<i>Specific Sinking Funds—</i>					
Principal of Terminable Annuities	£ 1,044	£ 1,027	£ 991	£ 968	£ 939
Sinking Fund for—					
3½% Conversion Loan	15,099	14,701	16,538	16,113	15,692
4% Consolidated Loan	...	9,210	10,000	10,000	10,000
4% Funding Loan	2,762	2,892	3,026	3,162	3,308
4% Victory Bonds	2,320	2,413	2,510	2,610	2,714
U.S.A. Government Loan	5,141	5,137	5,548	5,548	5,753
Depreciation Fund for 5% and 4% War Loan	2,720	1,666	1,744	...	...
Deficiency on Funding Loan and Victory Bonds surrendered for Death Duties	8,405	12,340	11,489	9,347	12,084
Total of above.....	37,491	49,386	51,846	47,748	50,490
Balance.....	22,509	15,614	5,663	...	16,340
Nominal Sinking Fund	60,000	65,000	57,509	47,748	66,830
Deduct deficit	36,694	...	...	19,343*	23,276
Actual Sinking Fund	23,306	65,000	57,509	28,405	43,554

* Actual deficit amounted to £14,524,000; the remaining £4,819,000 represents excess interest on Savings Certificates met by borrowing.

Of the "balance" nominally available in 1930-31, after providing for specific sinking funds, £16 millions was used to purchase, for cancellation, \$7.2 millions of the 5½ per cent. 1937 United Kingdom Loan in the United States, while the remainder was employed mainly in extinguishing £11 millions of Treasury Bills and £3.7 millions of 3½ per cent. Treasury Bonds. On the other hand, the Budget deficits in both 1929-30 and 1930-31 had, of course, to be covered by temporary borrowing.

In fact, the real history of our recent efforts at debt redemption has been far other than would appear from the foregoing tables, showing "nominal" and "actual" sinking fund allocations. Adding to the totals shown above the "actual" sinking fund appropriation of £24.5 millions in 1931-32 we find that £242 millions have been provided out of revenue for sinking fund in the past six years. Apart, however, from the consideration that we have been crediting to revenue capital repayments on account of our war debts due from our late Allies—whereas the repayments of principal due under our debt funding agreement with the United States are debited not to current outgoings, but to sinking fund—a proper calculation of real debt reduction must take into account not only various specific capital assets used for revenue, but also borrowings for the Unemployment Fund, for which no budgetary provision has yet been made. We summarise below the true position of the past four years:—

DEBT REDUCTION, 1928-29.

Specific Sinking Funds	£'000.
Balance	50,102
Nominal total Sinking Fund	7,407
Deduct—	
Capital asset used for revenue (Currency Note Account Balance)	57,509
Net borrowing Unemployment Fund	13,423
Real debt reduction	11,430
	32,656

DEBT REDUCTION, 1929-30.

Specific Sinking Funds	£'000.
Balance	47,748
Nominal total Sinking Fund	47,748
Deduct—	
Budget deficit.....	14,524
Borrowing for Savings Certificate interest not covered by Debt Charge	4,819
Net borrowing Unemployment Fund	2,990
Real debt reduction	25,415

DEBT REDUCTION, 1930-31.

Specific Sinking Funds	£'000.
Balance	50,490
Nominal total Sinking Fund	16,340
Deduct—	
Budget deficit.....	66,830
Increase in accrued interest Savings Certificates	23,276
Net borrowing Unemployment Fund	3,500
Real debt reduction	36,440
	3,614

DEBT REDUCTION, 1931-32.

Nominal total Sinking Fund	£'000.
Budget Surplus	32,508
Total	364
Deduct—	
Borrowing for Savings Certificate interest not covered by debt charge.....	32,872
Net borrowing Unemployment Fund	8,431
Capital withdrawn from Dollar Reserve Fund*	39,610
Real debt reduction	8,750

* The total sum paid to Miscellaneous Revenue from this Fund was £12½ millions, but £4 millions represented accrued interest which could legitimately be reckoned as a revenue item.

Thus during the first four years of Mr Churchill's New Sinking Fund, instead of redeeming debt at the rate of over £50 millions a year as Mr Churchill foreshadowed, we have, in fact, achieved an aggregate debt reduction in the whole period of only £37.7 millions, or less than £10 millions a year. In addition it has to be borne in mind that, save in the event of the pound being stabilised finally at a figure enabling the sterling value of our gold reserves to be written up in a proportion sufficient to offset the exchange losses involved in the repayment of last summer's Franco-American credits, a further subtraction from our real debt reduction may have to be made on this account.

LOCAL LOAN DEBT.

At March 31, 1929, the loan debt of local authorities in England and Wales had reached the figure of £1,175 millions, an increase of £355 millions in comparison with 1924:—

LOAN DEBT OF LOCAL AUTHORITIES IN ENGLAND AND WALES at March 31st (£'s millions).	1914.	1924.	1928.	1929.
1. Education (elementary & higher)	52.1	42.6	50.0	53.2
2. Sewers and sewage disposal	44.1	46.2	57.1	57.9
3. Housing	12.5	199.5	382.7	416.9
4. Main trading services	363.4	426.5	507.4	519.5
5. Other undertakings	90.5	105.5	124.1	127.5
6. Total	562.6	820.3	1,121.3	1,175.0

Sinking funds at March 31, 1929, had £67.6 millions standing to their credit, of which nearly half was applicable to the loans outstanding on account of trading services.

THE 1932-33 BUDGET.

We append for reference Mr Snowden's preliminary forecast, last September, of the 1932-33 accounts:—

Estimated Revenue.	£ Mn.	Estimated Expenditure.	£ Mn.
Customs and Excise	265.5	Con. Fund Services	312.3
Inland Revenue	459.5	Supply Services	456.0
Motor Duties	5.0	Sinking Fund	32.5
Non-Tax Revenue	71.7	Surplus	0.9
Total*	801.7	Total*	801.7

* Excluding Self-balancing Items.

The Economist BANKING SUPPLEMENT.

VOL. CXIV]

SATURDAY, MAY 14, 1932

[No. 4,629]

Contents include

The Past Twelve Months

British Banking Accounts

The Ebb and Flow of Short Money

Fifteen Months' Gold Movements

Recent Monetary Statistics

Banking in the United States and Germany

The Supplement also includes a complete record of the position of the Bank of England, and of the English, Scottish and Northern Irish joint-stock banks, together with the latest balance sheets, both of these institutions, and of the chief private banks, discount houses and all Dominion and Foreign banks possessing offices in London.

BARCLAYS BANK

LIMITED.

Head Office - 54, Lombard Street, London, E.C.3,

and over 2,080 Branches in England and Wales, and Agents and Correspondents in all the principal towns throughout the World.

FREDERICK CRAWFURD GOODENOUGH, Esq., Chairman.
WILLIAM FAVILL TUKE, Esq., Deputy-Chairman.

GENERAL MANAGERS:
EDWIN FISHER. HENRY THOMAS MITCHELL.
ANTHONY WILLIAM TUKE. NORMAN SHILLINGFORD JONES.
FOREIGN GENERAL MANAGER: WALTER OSBORNE STEVENSON.

Authorised Capital	£20,000,000
Issued and Paid-up Capital	£15,858,217
Reserve Fund	£10,250,000
Deposits, etc. (31st December, 1931)	£335,565,144

EXECUTORSHIPS AND TRUSTEESHIPS UNDERTAKEN.

EVERY DESCRIPTION OF BRITISH AND FOREIGN BANKING BUSINESS TRANSACTED.

FOREIGN BRANCHES:

CHIEF FOREIGN BRANCH: 168, Fenchurch Street, London, E.C.3.

WEST END (LONDON): 1, Pall Mall East, S.W.1 | LIVERPOOL: 45, Castle Street. | BRADFORD: 13, Market Street. | MANCHESTER: 94, Portland Street. | BIRMINGHAM: 63, Colmore Row.

Associated Companies:

BARCLAYS BANK (DOMINION, COLONIAL & OVER-SEAS). Head Office: 54, Lombard St., London, E.C.3.
BARCLAYS BANK (CANADA): Montreal and Toronto.
BARCLAYS TRUST COMPANY OF CANADA. Head Office: Montreal.
BARCLAYS BANK (FRANCE), LIMITED. Chief Office: Paris. Branches in France and Algeria.

BARCLAYS BANK S.A.I.: Rome and Genoa.
THE BRITISH LINEN BANK. Head Office: Edinburgh. 206 Branches in Scotland.

THE UNION BANK OF MANCHESTER LIMITED. Head Office: Manchester. 168 Branches in Lancashire, Cheshire and the West Riding of Yorkshire.

NATIONAL BANK OF INDIA, LIMITED.

Registered in London under the Companies Act of 1862 on the 23rd of March, 1866.
Established in Calcutta 29th September, 1863.

Bankers to the Government in KENYA (B. E. Africa) and UGANDA.

Subscribed Capital	£4,000,000
Paid-up Capital	£2,000,000
Reserve Fund	£2,200,000

Head Office: 26 BISHOPSGATE, LONDON, E.C.2.

BRANCHES:			
ADEN	CHITTAGONG	MADRAS	ELDORET
ADEN STEAMER	COCHIN (S. India)	MANDALAY	KISUMU
POINT	COLOMBO	NUWARA ELIYA	MOMBASA
AMRITSAR	DELHI	RANGOON	NAIROBI
BOMBAY	KANDY	TUTICORIN	NAKURU
CALCUTTA	KARACHI	ZANZIBAR	
CAWNPORE	LAHORE		

The Bank grants Drafts and Telegraphic Transfers on all places where it is represented; negotiates and collects Bills of Exchange; collects Pay, Pensions, and generally transacts every description of Eastern Banking business. The Bank receives Deposits for fixed periods, not exceeding one year, at rates to be obtained on application. The Bank opens Current Accounts, and, provided they do not fall below £200, allows Two per cent. per annum interest on the minimum monthly balances.

Trusteeships and Executorships also undertaken.

THE PAST TWELVE MONTHS.

IN the Banking Supplement to the *Economist* published a year ago, we began by saying that "the year ended March 31st last has proved to be one of extreme difficulty for the banks." Had it then been possible to foresee what the twelve months ending March 31, 1932, held in store for the banking world, this comment would certainly have been expressed in terms of greater moderation, for nothing could have surpassed the difficulties of the year 1931-32. It began and ended with rates at an unremunerative level, it witnessed a progressive shrinkage in the banks' resources, and it subjected the banks to the need of making abnormal provision for depreciation, bad debts and other capital losses. It is, in fact, a high testimony both to the strength of the British banking system and to the confidence deservedly reposed in it by the public that not only did not a single banking failure occur—and in this we are almost unique among all the countries of the world—but that there was never the slightest sign of any loss of confidence, or of the withdrawal of deposits or hoarding of notes by the British public.

Even so, it was in general a year of heavy loss to the banks, and most of them very properly marked their sense of that loss by a moderate reduction in their dividends. Their losses took two main forms. First came the need for abnormal provision for bad and doubtful debts, a need intensified by the cumulation of many years of bad trade. Allied with this was the freezing-up of otherwise good debts and other engagements owing to the conclusion of the standstill agreements with Germany and other Central European countries. The great British joint-stock banks, it is true, were only involved in the standstill agreements to a moderate extent, but several Accepting Houses and especially some of the newer international banking houses founded in London during the past decade were seriously implicated, and the latter also had to face a sudden and wholesale withdrawal last autumn of their foreign deposits, which formed the bulk of their resources. With many of their assets immobilised, they had to meet these withdrawals by sales of securities at a time when the gilt-edged market was abnormally depressed.

The other serious capital loss which the banks had to meet arose from the depreciation of their investments. Last year's withdrawal of foreign funds from England, the suspension of the gold standard and the imposition of a 6 per cent. Bank rate forced the prices of British Government securities down to extremely low levels, at which they still remained on December 31st at the close of the banking year. In accordance with their customary procedure, the banks wrote their investments down to the full extent of their depreciation, even though to a large extent the loss only occurred "on paper." There were two reasons why in many respects this loss has proved to be only illusory. One is to be found in the subsequent recovery of security prices in the early months of 1932, but the other lies in the fact that the bulk of the British banks' investments consist of "shorts," that is, of Treasury bonds and similar short-dated British Government securities which are redeemable in due course at their par value. Hence the banks would have only had to await the maturity of these stocks—at the most a matter of a few years—in order to recoup their losses.

In discussing how these capital losses were met, it is necessary to recall the banks' traditional methods of accumulating reserves. They do this in two ways—through the medium of "published" and "inner" reserves, or in banking parlance "through the front door" and "back door." Before the profits for the half-year are declared, adequate toll is always levied upon them for the benefit of inner reserves, and even after their declaration further appropriation is often

made through the back door in the form of an allocation to contingencies. Drafts upon inner reserves are never revealed, but both allocation to and drafts upon published reserves are announced.

Provision for bad and doubtful debts always takes the form of a draft upon inner reserves, and as a rule the same course is followed when it is necessary to provide for a depreciation of investments. Conversely, investments are never written up in conformity with any appreciation, though if their sale or redemption yields a profit over their book values, such profit automatically goes through the back door to inner reserves. Last year, however, the majority of the banks provided for part at least of the depreciation of their investments by drafts upon their published reserves, but any profits that have since arisen through the recovery in these values have been appropriated to inner reserves. As stated, such profit can only arise in the case of investments realised since December 31st at values greater than those obtaining at that date, but in so far as such profits have accrued, the fall in investment values last autumn and their recovery of this spring have between them resulted in a transfer from published to inner reserves. It therefore follows that notwithstanding last December's drafts upon published reserves, British banks are to-day as strong as ever.

Coming now to current earnings, the first point to notice is the shrinkage in the banks' resources, deposits having fallen from £1,698 millions in April, 1931, to £1,643 millions a year later. This means a proportionate decrease in the bank's gross earnings, subject, of course, to fluctuations in interest rates. As the banks' expenses are to a large extent fixed, though some adjustment of rates and conditions of bank officers' remuneration has proved practicable, this means a still greater proportionate reduction in the banks' net earnings.

The contraction in deposits was due to events beyond the banks' control. Heavy revenue collection, coupled with the progressive contraction of the volume of Treasury bills, was one leading cause, while another was the heavy withdrawals of foreign funds from England, and the consequent gold efflux prior to the suspension of the gold standard. The March and April averages, however, reveal some improvement in deposits, which is evidence of the return of funds from abroad.

Rates have varied greatly during the past twelve months, for in the summer of 1931 Bank rate was down to 2½ per cent. and it was doubtful if the net average margin between the interest cost of deposits (allowing for money lodged on current account and not ranking for interest) and the yield on the banks' assets (including cash which earned nothing) was greater than 2 per cent. From September 21 to February 18, 1932, on the other hand, Bank rate was 6 per cent., and advances earned up to 7 per cent. Allowing for the rise in deposit rates, the banks could then probably obtain a net margin between interest payable and receivable of practically 3 per cent. Next came the fall in Bank rate to an average of just over 4 per cent. in March, and this probably reduced the margin of net earnings to about 2½ per cent. In April, when Bank rate averaged 3.33 per cent., the margin may have been no better than 2½ per cent.

These wide variations, both in rates and in the value of the banks' investments, make it extremely difficult to say how they are faring, and in view of the policy of the banks in not writing up their investments or revealing any profit on their sale, it is not likely that the June 30th balance sheets will reveal much. Still there are steadily strengthening their position, and that they fully merit the confidence so strikingly placed in them during last autumn's crisis by the British public.

BRITISH BANKING ACCOUNTS.

THE wider influences upon the fortunes of the leading British banks have already been discussed, but the analysis of their results can be usefully supplemented by an examination of their balance sheets. The leading features are reproduced in the table given at the foot of this page, which represents the aggregate monthly averages for the nine English clearing banks, namely, Barclays, Coutts, Glyn Mills, Lloyds, Martins, Midland, National Provincial, Westminster and Williams Deacon's. The figures for investments include shares in subsidiary and associated banks.

Beginning with capital and reserves, the main change was the decline of £9.3 millions at the beginning of the current year. This represents the appropriations from published reserves made by the majority of the banks in order to provide in part for the depreciation of their investments. The recovery in the value of the bank's investments since the New Year has served to strengthen their inner reserves, so what has virtually happened since a year ago is a transfer from published to inner reserves.

Until last September the fall in acceptances would largely be attributed to the fall in commodity prices, for even if acceptances in September, 1932, had represented the same volume of goods as in January, 1929, they would have amounted in value to barely £160 millions. The subsequent decline, however, from £118 to £99 millions cannot be attributed to this cause, as since the suspension of the gold standard sterling commodity prices have fluctuated above the level of September last. There is no doubt, therefore, that there has been a substantial decrease in drawings upon London, and in view of the parlous state of world finance and trade, expressed in the conclusion and maintenance of standstill agreements, in the whole new system of import and exchange restrictions and "blocked accounts," and in the many serious banking and commercial difficulties abroad, little surprise can be felt at this further regression.

Banking deposits held their ground until the middle of last year, for the shrinkage in the spring of 1931 was seasonal, being due to the collection of taxation and the redemption of Treasury bills. The decline during the rest of the year, however, was abnormal, and can

only be explained by the large withdrawal of foreign funds, and still more by the Bank of England's gold losses and the consequent contraction of credit. This is proved by the fact that the contractions in deposits and cash during the year ended February, 1932, are both in the neighbourhood of 9 per cent. March, 1932, witnessed an upturn in deposits, due undoubtedly to the return of short money from abroad.

The fall in discounts is the inevitable consequence of the dearth of trade bills, especially of those of a type which the banks care to hold, and the reduction up to February last in the volume of Treasury bills. Advances, too, have contracted with the growing stagnation of trade, and so the banks had in the middle of last year to add to their holdings of investments. Latterly these, too, have contracted owing to the fall in deposits. It may be added that the bulk of the banks' investments consist of Treasury bonds and other short-dated Government securities (except Treasury bills which are included under discounts), and whatever the fluctuations in their market price, these ultimately end up at their redemption value upon maturity. Any profit on redemption over the lowest price to which they may have been written down automatically goes to inner reserves, and does not appear in the profit and loss account.

The composition of the banks' assets is illustrated below:—

Assets.	PER CENT. OF DEPOSITS.				
	Jan., 1928.	Jan., 1929.	Jan., 1930.	Jan., 1931.	Jan., 1932.
Cash	14.3	14.1	14.0	13.3	13.4
Call money	8.3	8.0	7.9	7.7	6.8
Discounts	14.7	14.2	13.8	17.8	14.1
Investments	15.4	15.2	14.7	16.7	17.5
Advances	52.9	51.1	54.8	49.4	53.1

It appears that the banks have been running for the past two years upon a smaller cash ratio, but that in January, 1932, the normal proportion of advances to deposits was restored. The increase in the banks' investments to 17.5 per cent. last January will be noticed. The ratio of capital and reserves to deposits was 7.4 per cent. at the beginning of 1928 and 7.3 per cent. four years later.

(In £ million)

THE EBB AND FLOW OF SHORT MONEY.

WHETHER it be a symptom or a cause of the world's recent financial troubles, there is no doubt that the mass of short money that has been moving about the world during the last few years and the extent of international short-term indebtedness are factors of primary importance in recent economic history. It is, therefore, of interest firstly to try to obtain some idea of the size of this indebtedness, and secondly to recapitulate the action which three of the leading countries have been driven to take in order to combat the effects of the sudden efflux or influx of short money.

Information as to the extent of world short-term indebtedness is inevitably very scanty, but some information can be gleaned both from the Macmillan Report and from the report of the Basle Committee appointed last August to inquire into Germany's immediate further credit needs. The Macmillan Report contains the following estimates:—

England.

End of Year	Deposits and sterling bills held in London on foreign account £ mill.	Sterling bills accepted on foreign account £ mill.	Net liability of London £ mill.
1927	419	140	279
1928	503	201	302
1929	451	176	275
1930	435	161	274
1931 (March) ...	407	153	254

United States.

End of Year	Deposits and bills held in U.S.A. on foreign account \$ mill.	Dollar bills accepted on foreign account \$ mill.	Net liability of New York \$ mill.
1927	637	83	554
1928	595	104	491
1929	632	171	461
1930	573	168	405

The Basle Committee's Report gives the following estimates:—

Germany.

End of Year.	Foreign short-term investments in Germany. Rm. mill.	German short-term investments abroad. Rm. mill.	Net German short-term liabilities. Rm. mill.
1927	6,600	3,900	2,700
1928	9,000	4,500	4,500
1929	11,700	5,500	6,200
1930	10,300	5,300	5,000
1931 (July).....	8,000	3,500	4,500

The net liabilities of London and Germany were of the same order of magnitude, while that of New York was considerably less.

As Germany was the first to be affected by the crisis, it is convenient to begin with her attempts to solve the problem. First came the crisis of June-July, which was met in part by the Reichsbank and Golddiskontbank rediscount credits of Mks. 630 millions arranged in June, and in part by the temporary closing of the banks and by the moratorium of July 13th. These events led up to the appointment of the Basle Committee referred to above and also to the appointment of the first Standstill Committee. Following the investigations of the latter body, the first Standstill Agreement was signed on September 9th.

Under this agreement, which remained in force until February 29, 1932, foreign banks agreed to maintain all outstanding acceptances, time deposits, cash advances, etc., *vis-à-vis* German banks and business undertakings, German banks, in turn, obtaining from their clients (the ultimate "credit takers") security as prescribed by the agreement, and agreeing to remit to the foreign creditor banks all encashments received

from their clients provided that such remittance was practicable. The foreign creditor could also require the Golddiskontbank to take over 10 per cent. of acceptances granted by him through German banks, and 5 per cent. of other forms of indebtedness due to him by German banks. The Golddiskontbank could further be required to guarantee 10 per cent. of foreign bank credits granted direct to German business houses. Outstanding forward exchange contracts were to be settled out of Reichsbank balances as they fell due. Reichsmark bank balances belonging to foreign banks were to be released as to 25 per cent. at once, followed by further releases of 15 per cent. each month.

This agreement worked reasonably well, though it involved a continual drain upon German holdings of *devisen*. From the end of July up to November 7th over one milliard of reichsmarks of foreign credits were repaid, of which standstill repayments accounted for Rm. 350 millions. Net losses of *devisen* during this period amounted to Rm. 464 millions.

Towards the end of January, a month before the expiry of the first agreement, the second Standstill Agreement was signed. It prolonged the period of standstill for a further twelve months up to February 28, 1933, and was designed to be a flexible plan so as to correlate further repayments with the transfer facilities of the Reichsbank. There was to be an initial reduction of 10 per cent. in credit lines, but further repayments were to be determined by a special Advisory Committee in consultation with the German authorities. A general control was to be exercised by the German Government over all payments in respect of German external indebtedness, whether within or without the Standstill Agreement. Foreign creditors could also convert their cash advances to German banks either into ten-year 6 per cent. notes or, under certain restrictions, into "blocked" investments in Germany. The signatories of the report concluded by insisting that the only real solution of the standstill problem was the restoration of Germany's credit-worthiness.

Coming now to the experience of England, between the end of June and the suspension of the gold standard, it was estimated that the efflux of funds from London amounted to £200 millions. This did not involve an equivalent reduction in London's short-term indebtedness, for the efflux also included withdrawals of foreign long-term capital. The efflux was met as to £30 millions by gold shipments, as to £50 millions by the Bank of England's Paris and New York credits, as to £80 millions by the Treasury's Paris and New York credits, and as to the remaining £40 millions by the disposal of *devisen* held in official or private hands. Finally, the efflux forced the suspension of the gold standard and the temporary control of foreign exchange purchases on capital account.

Confidence was naturally slow in returning, and the efflux persisted for several months, as a result of the continued repatriation of external balances by foreign banks and the general abandonment of the gold exchange standard, which meant that many foreign central banks hurriedly turned their *devisen* into gold. Some consequences of this movement are illustrated on the opposite page. Early in the New Year, however, the tide turned, and foreign short money began to return to London.

This brought the British authorities face to face with a new problem, namely, that of preventing an over-rapid and disruptive appreciation of sterling. The first steps taken were to remove the exchange restrictions of the previous autumn, and to repay the bulk of the Bank's and Treasury's foreign credits. This operation involved a net loss of about £30 millions, which falls finally upon the taxpayer, subject to any eventual compensa-

tory gains accruing from revaluation of our stocks of gold. Next there is reason to believe that the Bank made substantial purchases of *devisen* on its own account, but ultimately the limit was reached, and the attempt to hold down sterling had to be relaxed. During February and March the pound appreciated from \$3.48 to over \$3.80 despite a steady reduction of Bank rate from 6 to 3½ per cent.

In April came a further reduction of Bank rate to 3 per cent., and the establishment of the exchange equalisation account under Treasury control. This is a fund, with a limit of £175 millions, whose main purpose is to provide a reserve partly of sterling and partly of *devisen*, out of which abnormal demands for or offerings of sterling can be met. The immediate consequence of its establishment was to check the bull movement in favour of sterling. Positions still open were rapidly closed down, and the New York rate receded to \$3.66. It is clear that the object of the Government is to have at the disposal of the Treasury a fund sufficient to offset any sudden movements of short money into or out of Great Britain upon any scale that past experience shows can be reasonably expected.

The United States have also had to deal with an efflux of short money, but the size of their gold reserves

rendered the problem less acute. The main step taken to deal with it was to pass new legislation giving the Reserve Banks the same freedom of action as is accorded to most central banks. Thus they were permitted for the first time in their history to hold Government securities behind their note issues. Hitherto the power possessed by them to allow the gold backing to their note issues to fall to a minimum of 40 per cent. had been rendered nugatory by the fact that the remainder of the backing had to consist of approved commercial acceptances or other paper, and that a sufficient quantity was not available to provide backing for the remaining 60 per cent. of the notes. Now that Government securities are eligible as backing to the note issue, the Reserve Banks are free to let their ratio of gold to notes drop to 40 per cent., and so a considerable quantity of gold has been set free for export, if so required.

This completes the summary of the special measures taken by these three countries to offset abnormal movements of short money. It must be emphasised that they are only palliatives. The real remedy is to restore world trade and confidence to the point where much of this short money will voluntarily seek long-term employment, and where the remainder will cease to be subject to sudden panic movements.

FIFTEEN MONTHS' GOLD MOVEMENTS.

SHORTLY after the suspension of the gold standard and again at the New Year the *Economist* published an analysis of changes in the gold holdings and other principal assets and liabilities of the leading central banks. The four dates selected were the weeks ending January 10, 1931, and January 9, 1932, these being the weeks marking the beginning and end of last year, though just clear of end-of-the-year balance sheet preparations and movements of funds; the week ending September 19th, the week immediately preceding the British suspension of the gold standard; and the week ending October 31st, which marks the termination of the big autumn gold outflow from the United States. These tables are reproduced herewith, and are also extended to carry the analysis up to the end of the first quarter of 1932. This last period covers the restoration of financial confidence in London, the temporary recovery of sterling to a "peak" of \$3.80, and the return of large quantities of funds to London.

GOLD.

(£ millions : foreign currencies converted at par of exchange.)

Week ending :—	1931.			1932.	
	Jan. 10.	Sept. 19.	Oct. 31.	Jan. 9.	Apr. 2.
Bank of England ...	710	660	660	588	588
U.S. Reserve Banks	2,994	3,486	2,738	2,986	3,018
Banque de France...	2,118	2,296	2,534	2,715	3,005
Reichsbank	527	321	266	234	209
Netherlands Bank...	171	267	336	354	356
National Bank of Belgium	191	224	357	354	349
Swiss National Bank	138	234	422	464	471
Bank of Sweden ...	65	61	57	55	55

Bank of Italy	279	285	294	297	294
Bank of Japan	412	407	342	234	213

The first table deals with gold. It brings to light the wide gold movements of last year, first from England and Germany, and then from the Scandinavian countries, and finally from the United States. It shows the steady growth in French gold stocks by nearly a billion dollars during the fifteen months under review. It shows how the American gold losses were checked during the past five months and how France has derived her fresh gold partly from Germany and

Belgium and partly from fresh supplies, including both newly-mined gold and that from the dispersal of hoards in India and elsewhere. Finally, it shows that since October 31st the gold held by the eleven central banks included in the table has risen from \$8,038 to \$8,590 millions.

DEVISEN.

(£ millions : foreign currencies converted at par of exchange.)

Week ending :—	1931.			1932.	
	Jan. 10.	Sept. 19.	Oct. 31.	Jan. 9.	Apr. 2.
Bank of England ...	(a)	(a)	(a)	(a)	(a)
U.S. Reserve Banks	(a)	(a)	(a)	(a)	(a)
Banque de France...	1,038	1,078	1,082	824	491
Reichsbank	95	85	31	39	34
Netherlands Bank...	99	92	35	34	34
National Bank of Belgium	132	116	...	...	...
Swiss National Bank	66	109	19	19	21
Bank of Sweden ...	101	26	7	16	30
Bank of Norway ...	9	2	3	4	4
Bank of Italy	221	175	134	115	80
Bank of Japan	(a)	(a)	(a)	(a)	(a)

(a) Details not shown separately.

The next table deals with *devisen*, in so far as these returns render it possible to trace the holdings of central banks. The one fact brought out by the table is that those central banks who reveal their holdings have been disposing of their *devisen* as fast as they can, mainly by turning it into gold. The heavy disposals by the Banque de France during the past quarter are particularly striking.

NOTE CIRCULATION.

(£ millions : foreign currencies converted at par of exchange.)

Week ending :—	1931.			1932.	
	Jan. 10.	Sept. 19.	Oct. 31.	Jan. 9.	Apr. 2.
Bank of England ...	1,771	1,710	1,733	1,770	1,755
U.S. Reserve Banks	1,625	2,006	2,384	2,651	2,546
Banque de France...	3,042	3,040	3,279	3,325	3,250
Reichsbank	1,032	1,010	1,130	1,092	1,010
Netherlands Bank...	335	380	417	424	402
National Bank of Belgium	453	464	500	516	510
Swiss National Bank	188	246	288	297	293
Bank of Sweden ...	136	145	143	136	142
Bank of Norway ...	80	76	79	86	83
Bank of Italy	820	766	762	752	726
Bank of Japan	556	455	545	536	527

Few striking changes have occurred in note circulation during the past quarter. The recession in the United States circulation coincides with the partial restoration of confidence in her banking system, but a comparison of the latest figures with those of fifteen months ago suggests that there is ample room for further dishoarding. The French note circulation is at last beginning to contract, but the abnormally large proportion of high denomination notes still in circulation shows that much hoarding is still taking place. The growth in the note circulations of Holland, Belgium and Switzerland have also apparently been checked.

PRIVATE DEPOSITS.

(\$ millions : foreign currencies converted at par of exchange.)

Week ending :—	1931.			1932.	
	Jan. 10.	Sept. 19.	Oct. 31.	Jan. 9.	Apr. 2.
Bank of England (bankers' deposits)	335	285	309	399	266
U.S. Reserve Banks (member bank accounts)	2,444	2,418	2,229	2,036	1,911
Banque de France (comptes courants et comptes de dépôts de fonds)	384	709	879	822	891
Reichsbank (daily maturing obligations)	155	91	123	100	138
Netherlands Bank	69	68	69	46	46
National Bank of Belgium	33	39	40	25	17
Swiss National Bank (sight engagements)	57	131	180	206	218
Bank of Sweden	5	5	6	9	18
Bank of Norway (deposits at sight)	14	15	26	17	23
Bank of Italy (other deposits and drafts)	104	80	76	92	73
Bank of Japan (other deposits)	127	110	65		34

The chief features of the table dealing with private deposits is the increase in those of the Banque de France and Reichsbank, which accept deposits direct from the general public. These increases reflect the

growing lack of confidence in the commercial banks which is causing a steady transfer of accounts to the central bank itself.

REDISCOUNTS.

(\$ millions : foreign currencies converted at par of exchange.)

Week ending :—	1931.			1932.	
	Jan. 10.	Sept. 19.	Oct. 31.	Jan. 9.	Apr. 2.
Bank of England (discounts and advances)	70	41	51	97	57
U.S. Reserve Banks	292	263	717	818	633
Banque de France	305	268	437	256	154
Reichsbank (bills and cheques)	500	673	955	923	790
Netherlands Bank (loans)	35	36	51	47	39
National Bank of Belgium (bills)	118	116	133	132	134
Swiss National Bank (bills and Lombard loans)	24	16	25	19	14
Bank of Sweden (Swedish bills and advances on Government securities)	74	84	111	131	119
Bank of Norway (discounts and loans)	49	50	62	66	69
Bank of Italy (discounts)	193	163	195	242	241
Bank of Japan (bills discounted)	320	310	337	379	378

Rediscounts on the whole reflect a general contraction during the past quarter in the demand for central bank credit, the chief exception being Belgium, where financial stringency has lately prevailed. The reduction of \$183 millions in rediscounts at the American reserve banks has been accompanied by a bigger reduction of \$217 millions in bills bought in the open market and by an increase of \$119 millions in United States Government securities, this last movement being a reflection of the greater freedom conferred upon the Reserve System by recent legislation. Even so, there has been a net reduction of about \$300 millions in bills and securities, reflected in the decreases of \$105 millions in the note circulation and \$125 millions in member bank deposits recorded in previous tables.

SOME STATISTICS RELATING TO RECENT MONETARY HISTORY.

In view of the important and catastrophic events of the past few years it has been decided to restore a precedent set in the Banking Supplement of May, 1924, and to bring together in a table the most important banking and monetary statistics of the past three years. The period covered opens in March, 1929, immediately before the world crisis reached the acute stage, and so the whole of the crisis which began with the collapse of the Wall Street boom in the autumn of 1929 is reflected. The statistics relate almost entirely to Great Britain, and are purposely confined to the banking and monetary field, to the exclusion of such matters as production and internal and external trade.

The first two columns link up the seasonal fluctuations in the margin between national revenue and expenditure with changes in the volume of outstanding Treasury bills, and in particular bring to light the net reduction in the Treasury bill issue. They are followed by the salient items from the Bank of England's return, in which gold is compared with outside liabilities as represented by notes in circulation and bankers' deposits. This last item, in addition to being the generally accepted index of the supply of credit to the money market, links up with the next five columns, which between them give the situation of the nine English clearing banks. Here the decline in deposits and the still greater relative decline in advances is brought to light, and also the gradual transfer of the banks' earning assets first into discounts, and then, as the volume of Treasury and commercial bills declined, into investments. Bank clearings come

next, the figures for Manchester being given in addition to those for London, with the object of determining the velocity of circulation of money in a commercial and industrial, as opposed to a mainly financial centre. It is significant that the decline in Manchester clearings agrees reasonably closely with the fall in British wholesale prices shown in a later column, but in view of the greater stability of retail prices, and also of finished goods prices, it must not be assumed that the volume of trade in Manchester has remained unchanged. Money rates are covered by the next two columns, and it may be added here that "prime" bank bills and not to standstill renewals. The New York and Paris exchange rates are then given, and finally the course of wholesale prices in England, the United States and France. These index numbers are all based upon 1913, but the French index has been scaled down to allow for the revaluation of the franc from a parity of Frs. 25.22 to one of Frs. 124.21 a few years ago. The majority of the figures relate to the end of the month in question, but those relating to the clearing bank balance sheets and to the London and Manchester figures are only given quarterly; while the revenue and sums of money are in millions of pounds sterling. In interpreting the Bank of England's figures, due allowance must be made for the increase in the fiduciary note issue on August 1, 1931, from £260 to £275 millions.

Date.	Public Finance.		Bank of England			Nine Clearing Banks (monthly averages)					Bank Clearings (average weekly figures).		Money Rates.		Foreign Exchanges.		Wholesale Prices. (1913 = 100).		
	Excess of Revenue (+) or Expenditure (-) Quarterly totals.	Treasury Bills outstanding.	Gold in Issue Department.	Note Circulation.	Bankers' Deposits.	Proportion.	Deposits.	Cash.	Discounts. BANKING CONDITIONS IN THE UNITED STATES.

BY A CORRESPONDENT.

At the middle of the spring season, American banking finds itself entering upon what appears to be a new position. The year 1931 could hardly be characterised otherwise than as a period of disaster. The closing of 2,300 banks, the fact that not a few others were known to be in danger, and the rapid curtailment of banking accommodation on the part even of those that were known to be in vigorous and strong condition, had left the community doubtful and uncertain of the future. Gloomy thoughts were entertained and the lack of confidence of the community was reflected in the hoarding movement which was officially estimated (at its height) to have resulted in placing some \$1,500,000,000 in strong boxes and other places of supposed safety.

The four months which have elapsed since the opening of the current year have altered the outlook in no small degree. Starting with the completion of the organisation of the Reconstruction Finance Corporation, one of whose primary duties was understood to be the restoration of American banking to a more satisfactory status, the decline in the number of bank failures has been substantial. During January the number of such failures was 342, but the March figure was only 45. With the great body of failures that has been characteristic of recent weeks, it is difficult to be sure of the precise statistical position, owing to the repeated corrections of earlier statements that have been common of late. What is sure is that the number now is not more than a small fraction of what it was some time ago, while the official testimony of the Governor of the Federal Reserve Board, recently given before a congressional committee, indicates that some 1,800 banks, most of them in the smaller towns and cities, but some at least in the larger places, have received aid through the good offices of the Reconstruction Finance Corporation. Doubtless there is truth in the statement that the weakest of the institutions have failed, or have been helped over their difficulties for

the time, and in either case are out of the picture so far as current problems go.

Where does this leave the banks at the present moment? That question can best be answered by considering the review of conditions of reporting member banks, which is issued weekly. The latest such announcement, giving data for the week ending April 6th, and representing the condition of about 600 banks in the larger cities, is as follows. Figures represent millions of dollars:—

	April 6, 1932.	Increase or Decrease since April 8, 1931.
Loans and investments, total	19,173	- 3,672
Loans, total	12,060	- 3,152
On securities	5,222	- 1,924
All others	6,838	- 1,228
Investments, total	7,113	- 520
United States Government securities	3,882	+ 34
Other securities	3,231	- 554
Reserve with Federal Reserve banks ...	1,475	- 322
Cash in vault	201	- 10
Net demand deposits.....	10,875	- 2,803
Time deposits	5,656	- 1,617
Government deposits.....	381	+ 78
Due from banks	1,010	- 766
Due to banks	2,561	- 1,346
Borrowing from Federal Reserve banks	313	+ 293

thinkers have, as usual, been inclined to "put the cart before the horse," and to attribute the business difficulties of the time to "deflation." Such explanations are difficult to accept, the obvious fact being that, in most cases, the decline of bank loans and bank accommodation is the direct consequence of reduction in actual business demand. The shrinkage of deposit accounts, especially those classified as "time deposits," is also due to the demands of the population, out of work or only partly employed, which draws upon its savings for the wherewithal for paying current expenses, and looks to the banks to provide such funds by selling securities or otherwise liquidating assets—a process which inevitably brings further strain to bear upon the security holders of the country and upon the exchanges where values are traded in.

It is now necessary to turn for the moment to the Reserve Banks in order to complete the general sketch of current conditions in American Banking. Like the commercial institutions, the Reserve Banks have passed through a troubled twelvemonth. Starting with a year ago, when it seemed to many as if a revival was imminent, the Reserve Banks found themselves obliged, first of all, to face the conditions growing out of the so-called "Hoover Moratorium" at the opening of summer, with the suspension of payments on the great body of American holdings of German acceptances—holdings which had been accumulated to so great an extent upon the assurance and with the moral guarantee of the Reserve institutions. This was followed and aggravated by the necessity of making large gold advances to the Reichsbank. Then followed the large gold advance to the Bank of England, and, finally, the severe gold drain to France and other European countries which distrusted the position of the United States. The fact that these adverse conditions and this growth of uncertainty and lack of confidence were fundamentally attributable to the Reserve Banks' own faults, including the reduction of discount rates to 1½ per cent. and the resort to a confessed inflation policy, does not alter, though it helps to explain, the severity of the conditions which had to be encountered. After the loss of over \$700,000,000, during hardly more than seven weeks in the early autumn, the Reserve Banks found it needful to raise their rates, with a tacit agreement to keep them up for a period of three months. Then followed the intense hoarding movement, with the raising of the outstanding circulation (partly in consequence thereof) to near \$3,000,000,000—a much larger figure than any for a decade—and finally the necessity, or what was alleged to be such, of changing the terms of the Reserve Act by the adoption of the Glass-Steagall Act.

At the close of this series of remarkable events, the position of the Reserve Banks is indicated by the statement of April 15, as follows:—

BANKING IN GERMANY.

(BY A CORRESPONDENT.)

Since February 22, 1932, Germany has had only three large deposit banks to a population of over 60 millions, and all three are more or less dependent upon the Government. Two of the great branch banks renounced their independence as early as 1929, when the Disconto-Gesellschaft and the Mitteldeutsche Creditbank amalgamated with other banks, and now the Darmstädter und Nationalbank has passed into the control of the Dresdner and the Barmer Bankverein into that of the Commerz-und Privatbank. The capital of the three surviving banks, which between them conduct most of Germany's deposit business, is now divided as follows:—

	Millions of Reichsmarks.		
	D.D. Bank.	Dresdner Bank.	Commerz-bank.
Share capital:			
Held by public	99	20	23.84
Held by Golddiskontbank	45	50	45
Held by Reich	0	150	11.16
Total	144	220	80

RESOURCES.		
	April 15, 1931.	April 13, 1932.
Gold reserves	\$ 3,141,858,000	\$ 3,018,312,000
Total bills discounted	132,004,000	628,602,000
Bills bought in open market	131,479,000	51,809,000
Total U.S. Government securities	598,635,000	985,024,000
Total bills and securities	862,118,000	1,669,911,000
LIABILITIES.		
F.R. notes in actual circulation ..	1,515,716,000	2,537,075,000
Deposits:—		
Member bank—reserve account ..	2,356,415,000	2,010,899,000
Government	18,859,000	52,494,000
Foreign bank	5,183,000	41,137,000
Other deposits	25,733,000	19,435,000
Total deposits	2,406,190,000	2,123,965,000

Ratio of total reserves to deposit and F.R. note liabilities combined 84.6% 69.4%

In glancing over this statement, it is worth while to observe carefully the immense increase in outstanding circulation (67 per cent.) that has occurred since a year ago, the decline in gold holdings and in gold (or reserve) ratio, the falling off of member banks' reserve deposits, and the practical doubling of the total of Treasury obligations bought and held, as well as other noteworthy alterations in general conditions; and, without going in detail into the causes for such changes, to inquire generally what are the factors that are to-day acting powerfully upon the system.

Of these, the first is obviously the continuation of the effort to produce inflation and thereby to bring about "easy money" conditions, and presumably a trend toward higher prices for commodities and for securities. Of late the Reserve institutions have once more given to the public notice of their intention to force out into current use a large amount of reserve credit, by the well-worn devices of buying Government securities, cutting bill rates, and reducing discount rates. In fact, notice has been given that it is the intent to go to the full limit allowed by the liberal provisions of the Glass-Steagall Act, which permitted a large release of gold, in the expectation that it would be availed of in case of a further foreign drain. In lieu of that, the credit is now to be released at home, notwithstanding the already vast volume of currency put out to meet hoarding calls, which, however, to-day appear to be in process of reduction, though still leaving an immense circulation outstanding. Perhaps the next most significant influence in the case is the growth of bills discounted since a year ago, due to the increasing calls on the part of member banks during the past year for help (latterly also reduced). Exports of gold, though partly offset by imports from the Far East, have left their mark on the volume of reserve.

The Reserve Banks are passing through a crucial period, leading to a new banking situation; but in the opinion of most will have to alter their expansion policy radically.

There are, however, other banking houses in Germany besides the three big deposit banks. The Berliner Handelsgesellschaft and the Reichskreditgesellschaft carry on in Berlin a business without branches, which is mainly concentrated on a few large customers. The large private bankers conduct a business on a similar scale. Of these the most important are Mendelssohn and Company and the Bleichröder Arnhold group. The Reich, as the holder of the entire capital of the Reichskreditgesellschaft, is also represented in this section of the banking world.

Among the banks which operate exclusively in the provinces are two fairly large Bavarian banks, the Bayerische Hypotheken und Wechselbank, and the Bayerische Vereinsbank, both of which have succeeded in keeping their private character even during the crisis. Frankfurt-am-Main and Hamburg also have private banks of moderate size, but the big deposit banks of Saxony (the Allgemeine Deutsche Credit Anstalt) and Bremen (the Norddeutsche Creditbank, formerly Schröderbank) are now dependent upon the Reich and the Reichsbank.

How has this complete transformation in German banking come about? As late as 1929 and 1930 the Treasury was obliged, at a time of great difficulty, to avail itself of the help of the big German banks, which were then still liquid. Two combinations of circumstances have since brought about a complete transformation. The first was the withdrawal of foreign credits. Between the autumn of 1930 and that of 1931 foreign banks withdrew about Rm. 5,000 million short-term credits from the German banks. The repayment of these inordinately large sums was for the most part achieved by the use of the banks' own liquid resources, and by the rediscounting of trade bills at the Reichsbank. In the summer of 1931, however, the foreign drain threatened to become still worse and to create a panic among the home creditors of the banks. The Government was therefore obliged, on July 13th, and in the weeks following, to come to the help of some

of the banks, and the conclusion of the Standstill Agreement and the State support of the Danat and the Dresdner Bank followed.

During the summer of 1931 the second series of circumstances still went almost unheeded. This was that the German banks sustained exceptionally heavy losses in the crisis years of 1930 and 1931. They always held large quantities of industrial shares, and they added to these during the crisis in order to counteract the decline in Stock Exchange quotations. They lost heavily on their advances to industrial and commercial companies. Some of their debtors went bankrupt; others had to have part of their advances cancelled in order to avoid insolvency; and other advances could only be recovered in part and after a long delay. A further source of losses to the banks was the decline in their own shares; until the summer of 1931 they had tried to keep the quotations steady, and in order to do so had been obliged to take up large quantities of their own shares at high prices.

It is idle to ask now whether the banks themselves were to blame for these losses on securities and advances or whether they were inevitable owing to the acuteness of the crisis. One thing only is certain, that almost all the banks suffered equally heavy losses. The big banks were together obliged to provide in their balance sheets for 1931 for about Rm. 1,000 millions losses in the preceding two years. The Danatbank's share in these losses must, in proportion to its turnover, have been only very little larger than that of the other banks.

Must the reorganisation of the banks be completed immediately? Many serious students of German economic conditions say no, and take the view that last February was an unsuitable time for valuing the actual losses. In their view the right course would have been to wait until the crisis was over in order to reorganise the banks. The Government took a different view. They were anxious to avoid the publication of balance sheets for the end of 1931 which must have

appeared inaccurate. It also seemed to them necessary in the interests of the activity and effectiveness of the banks, to write off the losses at once, and to increase the liquidity of the banks by an infusion of new capital.

The capital and reserves of the banks were in most cases insufficient to cover the losses, and the addition of new capital could not be effected by the issue of new shares in the open market. For these two reasons intervention by the Reich was necessary. In order to cover the losses the Reich has given the banks Treasury bills which are only to be redeemable after the lapse of some years, out of their surplus earnings. New capital was provided by the Reichsbank, which has at its disposal enormous reserves which increased still further during the crisis. This accounts for the co-operation between the Reich and the Reichsbank, and the inevitable consequence of their sacrifice has been the loss of the private character of the banks.

Unlike the Dresdner, the Danat and the Commerzbank, the D.D. bank was able to meet its Rm. 275 millions losses on securities and loans without external help. A reduction in its share capital yielded a book profit of 108 millions, and 146 millions were withdrawn from open reserves and 21 millions from the working profits of 1931, to cover the losses.

The Dresdner and the Danat, which have only published a combined balance sheet for 1931, announced losses of Rm. 416 millions. Part of these losses was borne by the Reich; in July, 1931, it undertook a guarantee for all the obligations of the Danatbank, and was obliged in February to make sacrifices in order to relieve itself of this obligation, which it was impossible to support for any length of time. The amalgamated Dresdner-Danat had therefore to be sufficiently strengthened to command the confidence of creditors without any Government guarantee. To this end the Reich gave the Danat, before the amalgamation, Rm. 115 millions of Treasury bills, for which it required no compensation, and allowed the 300 million preference shares of the Dresdner, which it had purchased in July, 1931, to be converted into 200 million ordinary shares of the amalgamated bank. For the rest, the losses were covered by the writing down of the old share capital of the earlier reserves, but the Reich placed at the disposal of the banks further large sums in Treasury bills in order to increase their liquidity. These Treasury bills, and also those which the Commerzbank has received, are repayable. Of future net profits 15 per cent. are to be handed over to the Reich; the rest is to be used for the payment of an 8 per cent. dividend to the shareholders. Profits over and above this are to be divided between the Reich and the shareholders in the proportion of 60 to 40 per cent.

The balance sheet of the Commerzbank for the end of 1931 shows losses of Rm. 107 millions. It was one of the great surprises of February 22 that this bank, which had maintained its reputation during 1931 by remaining liquid, was unable to meet its losses without outside help. The Reich had to come to the rescue, and bought 37.2 million shares which the bank itself had been holding, at par, writing them down immediately to 11.2 millions. This showed a book profit of 26 millions, and in addition the Reich had to place about 40 million Treasury bills at the disposal of the bank for the purpose of building up fresh reserves.

The changes in the share capital and reserves of the big banks are set out in the table below:—

	Million Reichsmarks.					
	D.D.	Dresd- ner.	Da- nat.	Com- merz.	Bar- mer.	Adca.
Capital, end 1930	285	100	60	75	36	40
Reserves, end 1930	160	34	60	40	18	11
Bought up, 1930-31 ...	105	55	35	37.2	23.5	22
Of these, there were						
sold to Reich	...	22	...	37.2	...	...
Capital in circulation...	180	67	25	75	12.5	18
Reduced in ratio	10.4	10.3	10.3	10.3	...	10.3
Reduced to	72	20	7.5	22.5	12.5	6
New issue	72	200	...	45	...	14
New capital	144	220	...	80	...	20
New reserves	25.2	30	...	30	...	6

The new shares of the Commerzbank and Adca were all taken over by the Golddiskontbank, but of the 72 million new shares of the D.D. Bank the Golddiskontbank took only 45 million, while the rest were taken up by private friends of the bank. The 200 million new Dresdner shares were substituted for the preference shares.

The only large German credit banks which have distributed dividends for 1931 were the Reichscreditgesellschaft and the Berliner Handelsgesellschaft, each of which paid 4 per cent. The shareholders of the Reichsbank received an unchanged dividend of 12 per cent. on the share capital of Rm. 150 millions. The profits of the Reichsbank have increased very much, as the banks have been obliged to rediscount far more bills than in earlier years and the discount rate was higher. The bank was therefore able, besides maintaining its dividend, to add no less than Rm. 94 millions to reserve out of last year's profits. This brought the reserves to over Rm. 400 millions, of which 200 millions are now being handed over to the Reichsbank's subsidiary, the Golddiskontbank, and used to take over the new shares of the reconstituted banks. The unusual circumstance of a central bank of issue taking shares in private banks is justified by the Reichsbank on the ground that the profits of last year, which arose out of the intensification of the crisis, should only be used for the alleviation of the crisis. By taking up the shares of the banks, which are its principal debtors, the Reichsbank at the same time improves the state of its bill portfolio. If it had not placed these large sums at the disposal of the banks it would have had to write down its bills in order to balance the losses which would have resulted from the suspension of payments by its debtors. The Reichsbank does not regard the present situation as permanent, and is prepared to part with the shares under its control at any time. Unfortunately, however, it is improbable that the banks will in the near future be in a position to place these shares.

The following table, giving the position at the end of 1930 and 1931, shows the effect of the withdrawals by creditors on the balance sheets of the individual banks:—

	(Million Reichsmarks.)									
	Creditors.		Acceptances.		Total Liabilities.		Debtors.		Cash, balances with other banks and bills of exchange.	
	1930.	1931.	1930.	1931.	1930.	1931.	1930.	1931.	1930.	1931.
D.D. Bank	4,137	2,993	245	273	4,382	3,266	2,293	1,981	1,469	862
Dresdner (inc. Danat)	4,511	2,742	291	438	5,002	3,440	2,185	1,734	1,589	956
Commerzbank	1,489	1,047	109	150	1,805	1,392	809	667	551	398
Reichscreditgesellschaft	597	482	30	21	695	570	267	218	269	234
Berliner Handelsgesellschaft	397	293	25	36	468	369	168	124	137	116

The Dresdner Bank naturally shows the most serious decline in "creditors"; it had about 40 per cent. less deposits at the end of 1930 than the Dresdner and Danat combined the year before. The decline in the those of the D.D. Bank 28 per cent., and in those of the Berliner Handelsgesellschaft 26 per cent., and the "creditors" of the Reichscreditgesellschaft 19 per cent. A large part of the decline in "creditors" was balanced by an increase in acceptances and a reduction in liquid assets, while "debtors" could only be reduced to a relatively small extent. A further reduction of the credits granted to industry and trade, which would mean a further pressure of deflation on German economy, is not, however, necessary. The great advantage of the reorganisation is the equipping them to maintain their "debtors," or even to increase them.

The reorganisation of German banking in the middle of the severe economic crisis is an act of almost unexampled courage and determination whose wholesome effect on German economic life has yet to be seen.

The rectification of the bank balance sheets has been completed, and all losses and predictable risks have been provided for. The real seat of the crisis is, however, in economy and not in banking, and a sound banking system will not alone suffice to overcome the crisis. The future task of the banks has not been made easier by the reorganisation. It, along with the future of German economy, depends mainly upon the accumulation of capital in Germany. The German banks will not be able to attract foreign funds as they

did in the period 1926-30 (it would be a great triumph if even the foreign money which still remains in Germany were left here without standstill agreements), so that the accumulation of new deposits and the formation of a German capital market depends on German thrift. Not until capital accumulation in Germany has advanced so far that industrial companies and local authorities can once more issue long-term loans and thereby repay their bank credits will the German banking system function normally.

BANK SHARES.

DAY-TO-DAY market movements in bank share prices, on the Stock Exchange, not infrequently follow those of gilt-edged stocks. This is both a high compliment to the banks and a recognition of the dual fact that they are themselves large holders of gilt-edged securities and that their credit is vitally bound up with that of the nation generally. Between the beginning of August and the end of September last year, the prices of long-term British Government stocks, according to the Actuaries' Index, fell by 13 per cent. During the same period market quotations for representative bank shares declined by 18 per cent. The greater severity of the latter decline was the resultant of various factors—currency fears, exaggerated unofficial reports of the extent of the banks' frozen assets in Central Europe, and a deliberate discounting of a reduction in bank dividends expected at the end of the year.

Once confidence had been restored in the soundness of Britain's financial position as a whole, however, the majority of these "bear points" were seen to have been over-stressed. This impression was confirmed when the annual reports of the leading banks for 1931 were published. Bank share quotations as a whole thereafter showed a healthy and gratifying recovery. Investors were impressed by the ability of the banks to offset accrued European losses without serious depletion of their contingencies funds, to take up the depreciation in the market values of their investments by moderate drafts on free reserves, and to pay only slightly reduced rates of dividend without infringing the canons of conservative finance. Representative bank share values, consequently, have risen by 26 per cent. since the end of last year and are now appreciably higher than on the eve of Britain's departure from gold.

The following table shows the recent course of market prices and yields on eleven British bank and discount company shares, as compared with those of a group of industrial ordinary shares, according to the Actuaries' Index:—

	PRICES AND YIELDS ("ACTUARIES' INDEX" FIGURES). (December 31, 1928 = 100.)				
	Dec. 31, 1929.	Dec. 30, 1930.	Sept. 15, 1931.	Dec. 29, 1931.	May 3, 1932.
Market prices:—					
Eleven bank and discount co. ord. shares	90.2	96.8	78.1	68.2	84.9
132 industrial ord. shares...	81.9	64.3	46.7	49.3	47.6
Average yields on dividends:—					
Eleven bank and discount shares	5.78	5.38	6.42	7.43	5.52
132 industrial shares	6.81	7.21	7.90	6.94	5.87
Average yields on earnings:—					
Eleven bank and discount shares	6.82	6.33	8.80*	9.17	6.11†
132 industrial shares	8.05	9.87	6.03*	3.04	0.51†
* September 29, 1931.				† March 29, 1932.	

Holders of British bank shares have had a far more favourable experience than investors in industrial securities. Since December 31, 1928 (which marked almost the peak point of the market boom), their holdings have suffered a depreciation, on the average, of only 15 per cent., compared with a drop in industrial securities of 52½ per cent. At present prices, bank ordinary shares yield under 6 per cent. on an income basis, as they have done throughout the market depres-

sion, except for a relatively short period before and after the crisis of last autumn. The table suggests that, during that abnormal interval, investors were discounting much more than a moderate fall in dividends. That, to-day, both the dividend and earnings yields on bank shares are slightly lower than, say, two years ago, is the more reassuring. It suggests that the limited decline which has taken place, on balance, in market values, has been slightly less than proportionate to the reductions made in bank dividends. The market clearly regards the intrinsic security of bank shares as being as unquestionable as ever.

As regards banks whose operations are mainly carried on in the Dominions or in foreign countries, however, a somewhat more conservative view is being taken by investors. On the whole, Australian bank shares have maintained their prices comparatively well over the last twelve months, assisted, in part, by the improvement in Australia's credit since the assumption of office by Mr Lyons' Government in the Commonwealth. † Free of income tax. (t) On basis of 4-11 dollars to £1. (s) Based on last year's dividend of 6 per cent. No interim paid this year.

year ago, however, market values had already suffered severe depreciation, and the relatively high yields obtainable to-day, in some instances, suggest that the market, while remaining assured of the stability of the leading institutions, recognises that their re-attainment of normal prosperity may depend on factors beyond their own control. Similarly, the fall in Canadian bank shares may be regarded as an index, mainly, of the economic difficulties of the period through which the whole Dominion is passing. The value of Indian bank shares, on the whole, has been well maintained during the last year, such declines as have occurred being no more than proportionate to reductions in dividend rates.

The trend of market quotations for the shares of banks operating mainly outside the Empire has been downward for some time past. Investors have been influenced less by actual rates of dividend than by industrial, currency and exchange uncertainties in some areas, like South America, where economic conditions have given rise to difficulties as regards remittance, etc., of a somewhat abnormal character, and by special factors in areas like Central and South-Eastern Europe, where the possibility of "frozen" assets is considerable. Broadly, the market has tended stringently to differentiate between the shares of individual banks operating abroad according to the size of their relative stake in the world's contemporary "devastated areas."

British bank shares, in the near future, may continue to derive benefit from their investment association with British Government stock, which, by current indications, may remain a firm market for some little time. The outlook for other bank shares, however, must needs be governed by the manner in which imponderable forces, let loose in a harassed world, work out their own, and the world's, salvation. In the meantime, shareholders may be required to take due cognisance of changes in local, as well as in more general, conditions.

A RECORD OF BANKING PROFITS.

As the table at the foot of the page shows, 1931 witnessed a further decline in the net profits of British banks, while, in addition, they had to make some provision for the depreciation of their investments. The contraction in profits was in most cases offset by a proportionate reduction in dividends, as is shown by the fact that the ratio of dividends to profits fell from 83 to 82 per cent. Allocations to reserves include those made from the profit and loss account to inner reserves.

Scottish banks were less affected by the international situation, and so profits only fell by a relatively small amount, and the total sum paid in dividends was increased. It also proved practicable to reduce published allocations to reserve, premises and staff funds. The net profits of Irish banks recorded a moderate decline, but their ratio to resources increased, so that clearly the shrinkage in profits was due to a still greater shrinkage in resources. Comparatively heavy allocations had to be made to reserves, mainly at the expense of the amount carried forward. It may be recalled that the amount distributed in dividends in 1930 was increased by £100,000 above normal by a special distribution by the Belfast Banking Company.

HOW WOULD YOU ANSWER THESE QUESTIONS?

Are you likely to save money for investment as regularly as you would pay an insurance premium?

Can you invest as wisely and as well as the experts of a first-class insurance company?

Is there any investment, other than life insurance, which enables you to SAVE income tax?

What will be your income when you give up work?

Can you say for certain how long you will live?

Answer these questions for yourself and then make provision for an income on retirement of, say,

£100, £200 OR £300 A YEAR

and at the same time protect your dependants in the event of earlier death.

ANY AGE, ANY TERM, ANY AMOUNT

NATIONAL PROVINCIAL BANK LIMITED.

Member of London Clearing.

Established in 1833 as the National Provincial Bank of England, and registered as limited in 1880; the Union of London and Smiths Bank was established in 1839, and registered as limited in 1882. Amalgamation took place under title of National Provincial and Union Bank of England, Limited, as from December 31, 1917, and on February 15, 1924, name changed as above. As from December 31, 1917, the Bradford District Bank, Limited, as from December 31, 1918, the Sheffield Banking Company, Limited, and as from December 31, 1919, the North-

amptonshire Union Bank, Limited, were acquired. From January 1, 1920, Messrs. Coutts and Co. became affiliated, December 31, 1919, Messrs. Richards and Co., Llangollen, and June 30, 1920, Messrs. Shilson, Coode and Co., St. Austell, and as from June 30, 1921, Messrs. Dingley and Co., of Launceston, and Messrs. Dingley, Pearse and Co., of Okehampton, were acquired. December 31, 1923, the Guernsey Banking Co., Limited, and the business of Messrs. Grindlay and Co., December 31, 1923, were acquired, the latter undertaking being continued as a private limited company.

S. JAPHET AND CO., LIMITED.
BALANCE SHEET—December 31, 1931.

LIABILITIES.		ASSETS.	
Share capital issued—1,300,000 shares of £1 each, fully paid.	£1,300,000	Cash in hand and at bankers in United Kingdom	£215,566
Reserve account, as per last Balance Sheet, £700,000; less amount applied as a provision for Depreciation of Investments and Doubtful Debts, £300,000	400,000	Cash at call and at short notice	792,060
Deposits, current and other accounts, including Balance on Profit and Loss Account (including \$500,000 secured)	2,271,963	Treasury bills and other British Government securities at market value	361,350
Acceptances for customers, per contra	4,564,066	Colonial, Foreign Government and other securities at market value	213,712
		Notes.—There is a Contingent Liability in respect of Uncalled Capital.	
		Advances to customers, balances at bankers abroad, and other accounts less reserves (including £1,198,027 in Germany, Austria and Hungary).	75,011
		Liability of customers for acceptances, per contra (including £3,394,110 in Germany, Austria and Hungary)	2,131,647
		Freehold premises at cost, less amount written off	4,564,066
	£8,536,029		181,517

Notes.—(1) There are contingent liabilities in respect of bills re-discounted, and guarantees and confirmed credits of £233,531 (of which £170,400 had run off by February 17, 1932), and in respect of unutilised credit obligations in Germany under the "Standstill" Agreement. (2) The value of the "Advances to Customers, etc." and "Liabilities of Customers for Acceptances" in Germany, Austria and Hungary is dependent upon the satisfactory solution of the present financial problems in the countries concerned. (3) The company has in the ordinary course of business entered into forward contracts for the purchase and sale of foreign exchange.

Safe Deposit Service
of the
Midland Bank

ATTENTION is directed to the following features of this service available at the Head Office building in Poultry for limited companies, firms, associations and private persons in individual or joint names:

SECURITY . . . A specially constructed strong room, with a 35-ton circular door and frame, contains a large number of private safes with deed boxes. Only two keys of each safe have been made and both are handed to the renter, who thus has sole access to his safe.

PRIVACY . . . Renters may examine the contents of their boxes, deal with correspondence and conduct interviews in private rooms, each equipped with a telephone.

ECONOMY . . . The fees range from 10s. to £3 per annum, according to the size of safe selected. Private strong rooms are also available at £30 per annum. The renter is not called upon to bear any other expense except in the event of loss or breakage of keys.

ACCESSIBILITY . Access is easily gained by a renter, who may visit the safe as often as he desires. Prompt attention will always be given to his needs.

			67,060,800

* These investments appear at, or under, cost, and in the aggregate below market value at September 30, 1931, depreciation having been met out of contingencies account.

BANK OF BRITISH WEST AFRICA, LIMITED.

The directors' statement for the year ended March 31, 1931, shows that after providing for current charges (including the contribution to the staff profit-sharing fund) and rebate on bills, there remains a balance of £24,568, to which must be added £53,433 brought forward from last year, making a total amount available of £78,001. Of this sum, £30,000, being an interim dividend of 2½ per cent, has already been distributed, less income tax, and the directors now recommend the payment of a final dividend of 1½ per cent., absorbing a further sum of £18,000, less income tax, making a total distribution for the year of 4 per cent., less income tax, leaving a balance of £30,000 to be carried forward. Due provision has been made for all bad and doubtful debts. The investments held stand in the balance sheet at less than their market value as at March 31, 1931.

BALANCE SHEET—March 31, 1931.

BANK OF AUSTRALASIA.

The report for the year to October 12th states that, after providing for rebate on bills current, for British, Australian and New Zealand rates and taxes, the net profit for the year amounted to £217,536. To this has to be added £192,027 brought forward from the previous year's account, and the directors have transferred to profit and loss account from exchange adjustment account a sum of £85,000, set aside prior to October, 1930, the full amount of the depreciation having been provided from the published reserves. A total of £494,563 is thus available, and from it £174,375 was paid as an interim dividend on October 2nd last. The directors have now appropriated a further sum of £169,125 to pay a final dividend of 4s. per share, less income tax at 1s. 2½d. in the £, making, in all, £343,500, equal to 9s. per share less tax, and representing for the year a distribution at the rate of 9 per cent., less tax. There will remain £151,063 to be carried forward to the next account. Bad debts and investment depreciation have been provided for out of contingency funds. Of the reserve fund, of £4,475,000, a sum of £2,000,000 has been specially allocated to currency reserve to cover the depreciation in the Australian and New Zealand assets in relation to sterling as on October 12, 1931. As the result of this allocation, it has been possible to transfer to profit and loss account the sum of £85,000, referred to above, provided in past years for exchange fluctuations, and to re-transfer to internal reserve the balance of the amount transferred from other contingency funds to exchange suspense account, as stated in the balance sheet of October, 1930.

BALANCE SHEET—October 12, 1931.

THE BANK OF NEW ZEALAND.

According to the report of the directors, the profits for the year ended March 31st last, after providing for expenses of management, all bad and doubtful debts, and other contingencies, and after making provision for the annual donation to the provident fund, also for bonus to staff, are £867,013. From this has to be deducted interest on guaranteed stock, £21,199, leaving balance of profit for the year £845,814, to which has to be added balance brought forward from last year, £623,156—£1,468,970; from which has been paid: Dividend on preference "A" shares, £50,000; interim dividend on "C" long-term mortgage shares, £7,031; interim dividend on "D" long-term mortgage shares, £17,578; interim dividend on preference "B" shares, £41,867; interim dividend on ordinary shares, £250,000—£366,276; leaving available for distribution, £1,102,694. This the directors propose should be disposed of as follows: Dividend on "C" long-term mortgage shares at 6 per cent. per annum, £7,031; dividend on "D"

long-term mortgage shares at 7½ per cent. per annum, £17,578; dividend on preference "B" shares (making £162,600 for the year), £120,833; bonus on preference "B" shares, £18,750; dividend of 1s. 4d. per share on ordinary shares (making £500,000 for the year, equal to 2s. 8d. per share), £250,000; bonus of 1 per cent. on ordinary shares, £37,500; transfer to reserve fund (making £3,575,000) £25,000; leaving balance to be carried forward, £626,001.

Profit and loss—Balance as per last balance sheet, £725,478; less transferred to reserve fund, £65,000; E. S. & A. bank officers' Provident fund, £10,000; final dividend, free of income tax, £225,000; contingency account, £70,000; reduction in bank premises, £50,000—£420,000	305,478		
Balance for the year, as per profit and loss account	131,657		
	38,579,690		38,579,690

The report of the directors states that the sum of £1,585,000 has been allocated from the reserve fund to a special reserve for depreciation in Australian currency, but the directors consider it probable that this depreciation is only a temporary phase, and that the amount now allocated will ultimately be restored to the general reserve fund. The gross profits, as shown by the profit and loss account, amount to £1,275,825, less expenses of management, £781,832, and income and other taxes, £227,336—£1,009,168, leaving £268,657. From this the following deductions have been made:—An interim dividend of 4 per cent., free of income tax, £120,000; reserve fund, £15,000—£135,000, leaving £131,657. Brought forward from June 30, 1930, £305,478—£437,135. And it is proposed to make further appropriations as follows:—To reserve fund, additional, making £30,000 for the year, £15,000; to the E.S. and A. Bank officers' provident fund, £5,000; to a further dividend of 4 per cent., free of income tax, making 8 per cent. free of income tax for the year payable out of the profits of the year, £120,000—£140,000; leaving a balance to be carried forward of £297,135.

Apart from currency depreciation, provided for as stated above, and after making provision for doubtful debts and contingencies, the accounts show a profit for the year of £283,019, to which was added £86,991 brought forward from the previous year, making £370,010. The interim dividend paid in January last at the rate of 10 per cent. per annum, equal to 5s. per share, having absorbed £200,000, the amount available was £170,010, out of which the directors declared a final dividend at the rate of 4 per cent. per annum, equal to 2s. per share, making 7 per cent. for the year, free of United Kingdom income tax, payable to proprietors registered in the books of the bank on July 8th. The final dividend will absorb £80,000 and leave £90,010 to be carried forward.

INDIAN BANKS.

THE CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA.

The directors' report states that the profit and loss account of the bank for the year ending December 31st last shows a net profit of \$569,385, inclusive of \$187,597 brought forward from the previous year. An allocation of £1,000,000 from the reserve fund has been made to provide for exceptional losses in exchange, due to this country going off the gold standard, and bad and doubtful debts have been met out of contingency account. The interim dividend at the rate of 14 per cent. per annum paid in September last absorbed £210,000. The amount now available is, therefore, \$359,385, and the directors propose to pay a final dividend at the rate of 14 per cent. per annum, less income tax, and to carry forward the balance of £149,385. Government and

other securities, of which the major portion are short dated, have been taken into the balance sheet at book value, on which there was on December 31, 1931, a depreciation of \$856,866, as compared with the market value. A valuation on March 11th shows that the depreciation has been reduced to about \$41,000, and, under these circumstances, the directors do not consider it necessary to make a special allocation to meet the depreciation.

BALANCE SHEET—December 31, 1931.

LIABILITIES.	ASSETS.
Capital authorised and issued, 600,000 shares of £5 each, paid up	Cash in hand and at bankers

53,129,794	53,129,794

THE EASTERN BANK, LIMITED.

According to the report of the directors, the net profit to December 31, 1931, including the balance brought forward from the last account, amounts to £169,292, full provision for bad and doubtful debts having been made from contingencies account. An interim dividend at the rate of 3s. a share was paid in October, absorbing £30,000, and the directors now recommend a final dividend of 3s. a share, less income tax, at 3s. 10-305d. in the £ (after allowing for relief in respect of Dominion income tax). They propose to transfer to the reserve fund a sum of £20,000, which will then stand at £500,000, to set aside £55,000 on account of contingencies, leaving a balance of £34,292 to be carried forward to the next account. The securities of the bank have been taken into the balance sheet at book value, on which there was on December 31, 1931, a depreciation of £298,730, as compared with the market value. A large proportion of these securities are short dated, and the directors have not thought it necessary to make any special appropriation. A valuation taken at the end of February shows that the depreciation has been reduced to less than £90,000.

BALANCE SHEET—December 31, 1931.

LIABILITIES.	ASSETS.
Capital paid-up, £5 per share	Cash on hand and at bankers
Reserve fund	British Government, Indian Government and other securities (of which £25,000 4 per cent. consolidated loan has been deposited as security for Government accounts), at book value
Current and deposit accounts, including provision for contingencies	(Market value, December 31, 1931, £2,985,426)

THE MERCANTILE BANK OF INDIA, LIMITED

The report of the board of directors shows that the profits for the year, including £166,845 brought forward from last account, amount to £318,927. From this sum has to be deducted £73,500, being the interim dividend of 7 per cent., less income tax, on the "A," "B" and "C" shares paid in September last. The directors have added £15,000 to the officers' pension fund, and written £10,000 off freehold banking premises. They now recommend a final dividend on the "A," "B" and "C" shares of 5 per cent., less income tax (making 12 per cent. for the year), leaving a balance of £167,927 to be carried forward. In view of the depreciation in the bank's investments in Government securities at December 31, 1931, the directors have transferred £450,000 from the reserve fund to inner reserves. Provision has been made for this depreciation, for all bad and doubtful debts and for non-recurring losses on exchange due to the suspension of the gold standard, out of these inner reserves.

BALANCE SHEET—December 31, 1931.

LIABILITIES.	ASSETS.
Capital issued: 30,000 "A" shares, £12 10s. paid, £375,000; 30,000 "B" shares, £12 10s. paid, £375,000; 60,000 "C" shares, £5 paid, £300,000	Cash in hand and at bankers
Reserve fund	Bullion
Notes in circulation	Securities and coin deposited against note issue
Current, fixed deposit and other accounts, including rebates and provision for bad and doubtful debts	British and Indian Government and other securities

and doubtful debts, amount to £470,019, and, adding £278,791 brought forward, the available total is £748,810. From this sum an ad interim dividend at the rate of 20 per cent. per annum was paid on September 18th last, absorbing £200,000, and the directors now recommend a further dividend at the same rate, less income tax. (After allowing for Dominion tax relief, income tax was deducted from the interim dividend at the rate of 4s. 1½d. in the £ only. In respect of that dividend the bank is bearing the additional 6d. in the £ imposed by the Finance (No. 2) Act, 1931.) They propose to add £50,000 to the officers' pension fund and to transfer £20,000 to contingencies account, leaving a balance of £278,810 to be carried forward. The whole of the bank's investments (all redeemable at par and mostly shortdated) have been written down to or below market prices on December 31st last, and for this purpose a sum of £800,000 has been taken from the reserve fund, leaving that fund at £2,200,000. Since December 31st there has been a very appreciable rise in the value of the bank's investments.

THE ANGLO-FRENCH BANKING CORPORATION, LIMITED.

The report for 1931 shows that the current trading profit for the year, after making full provision for all expenses, rebate of discount and commission and directors' fees (the management committee receives no remuneration for 1931), but before making provision for bad and doubtful debts, amounts to £72,672. Out of this amount there has been set aside: Provision for bad and doubtful debts, £48,518; for taxation, £5,500—£54,018, leaving a net trading profit of £18,654. To this must be added the balance brought forward from last account, £2,578, making a total of £21,232. From this fall to be deducted: Loss incurred in the realisation of British Government and kindred securities, £146,545; depreciation written off miscellaneous securities, £42,235; loss incurred in re-purchase of dollars sold against maturing assets in reichmarks covered by gold or dollar guarantees,* £14,688—£203,468. Balance of loss, £182,236; transferred from reserve and contingencies accounts, £40,000; leaving a debit balance to be carried to the balance sheet, £142,236.

* The dollars were repurchased when it transpired that payment in Reichsmarks could not be expected at maturity. (See footnote to profit and loss account.)

THE ANGLO-SOUTH AMERICAN BANK, LIMITED.

The report of the directors states that the net profit, to June 30, 1931, amounts to £461,383, which, together with £207,150 brought forward, makes a total of £668,533, of which £174,613 was absorbed by the interim dividend on the "A" and "B" shares paid on April 27th last, leaving an available balance of £493,920. After careful consideration of the situation at June 30th last and also of subsequent events, the directors have transferred from the reserve fund to a special reserve for depreciation of capital employed abroad and other possible losses a sum of £2,275,000, which they believe to be sufficient to cover such losses and to leave intact the balance of £1,000,000 remaining to the credit of the reserve fund. The directors accordingly recommend that £84,490 be applied to the payment of a final dividend of 2s. per "A" share, and of 4s. 8d. per "B" share, both less income tax, making a total distribution for the year of 6 per cent.; £30,000 be added to the staff pension fund; £26,360 be placed to legal reserves in Chile, Colombia and Ecuador; £100,000 be transferred to investment reserve account; £100,000 be transferred to contingency account, and that the balance of £153,070 be carried forward.

BALANCE SHEET—June 30, 1931.

LIABILITIES.	ASSETS.
Issued capital—873,466 "A" shares of £10 each, £8 paid	Cash in hand, at bankers and at short notice

LONDON: 22 FENCHURCH STREET, E.C.3

CHICAGO:

Mr. J. Kokinatos, Representative,
33 South Clark Street.

The report for the year ended September 30, 1931, states that in view of the prevailing situation the directors have augmented the contingency reserve by a transfer from the published reserve of £1,500,000 to provide for depreciation in capital employed abroad, all bad and doubtful debts, and possible future contingencies. The profit for the year, after deducting all expenses and charges other than bad and doubtful debts, which have been provided for out of contingency reserve, amounts to £331,898, to which has to be added £181,445 brought forward from last year, making a total of £513,343. The interim dividend of 3 per cent., paid in June last, amounted to £106,200. From the unappropriated balance, viz., £407,143, the directors recommend the following distribution: To final dividend of 2 per cent., payable December 21, 1931, making 5 per cent. for the year, subject to income tax, £70,800; to contingency reserve, £150,000; to profit and loss carried forward, £186,343.

LONDON AGENTS:

WESTMINSTER BANK LIMITED, LOTHBURY, E.C.; HAMBROS BANK LIMITED; FREDK. HUTH & CO.

The report for the financial year ended December 31st last states that the gross profits, after allowing for rebate of interest on current bills and drafts, for interest on deposits, and after making ample provision for bad and doubtful debts and contingencies, amount to £292,100; this, with the balance of £108,625 brought forward from the previous year, makes £400,725. After deducting all charges at the head office and branches, including directors' remuneration, government taxes in Brazil, &c., amounting to £201,965, there remains £198,760 available. A dividend on account of 10s. per share, amounting to £50,000, was paid in September, 1930, and it is recommended that a further dividend of 6s. per share, amounting to £30,000, be declared, making, for the year, a distribution of 16s. per share, or 8 per cent., subject to income tax, on the paid-up capital of the bank of £1,000,000. After making this transfer and paying this dividend, there will remain the sum of £118,760, which the directors propose to carry forward.

HAMBROS BANK, LIMITED.

According to the report submitted at the general meeting on May 28, 1931, after payment of all expenses, making provision for rebate on bills discounted, bad and doubtful debts, and income tax, the accounts show a profit of £810,303. Deducting the directors' remuneration of £15,182 and adding the balance brought forward from last year of £91,792, there remains an available total of £386,913. After setting aside £100,000 to contingency reserve account and allowing the sum of £58,125 for the interim dividend on the £10 shares and £9,300 for the interim dividend on the £1 "A" shares paid on October 29, 1930, the directors now recommend the payment of a further dividend of 15 per cent., less income tax, on the £10 shares, making a total of 22½ per cent. for the year, less income tax, and a further dividend of 3 per cent., less income tax, on the £1 "A" shares, making a total of 6 per cent. for the year, less income tax, and that the balance of £93,938 be carried forward.

THE IMPERIAL BANK OF PERSIA.

According to the directors' report, the profits for the year ended March 20, after making provision for expenses of management, general charges in London and at chief office and branches, income tax, royalty, and bad and doubtful debts, amount to £93,013, to which has to be added £44,880 brought forward from last account, making a total of £137,893. The assets and liabilities of the branches in Persia have been converted at the rate of the exchange of 89½ Krans. per £ sterling, being the rate on March 20, 1931, as fixed by the Control Commission appointed by the Persian Government. The rate last year was Krans. 59½. The directors now recommend payment of a final dividend of 7s. per share, and a bonus of 2s. per share, making, with the interim dividend of 4s. per share, a total for the year of 13s., free of income tax. It is also proposed to add £20,000 to reserve, which is thereby increased to £870,000; to write off bank premises £10,000, and to carry forward £42,893.

BALANCE SHEET—March 20, 1931.

THE LONDON AND EASTERN TRADE BANK, LIMITED.

The directors' report for the year ended June 30, 1931, states that after making provision for bad and doubtful debts, income tax, expenses of management and all other charges, and including £19,637 brought forward, there remains to the credit of profit and loss account a balance of £85,200. The directors consider it prudent to conserve the bank's resources, and therefore recommend the placing

of £25,000 to reserve for contingencies and the carrying forward of £10,200.

BALANCE SHEET—June 30, 1931.

LIABILITIES.		ASSETS.	
Capital—60,000 shares of £10 each, fully paid	600,000	Cash in hand and at bankers in London	104,705

OTTOMAN BANK.

According to the report, the accounts made up to December 31, 1930, after providing for bad and doubtful debts out of revenue and provisions previously made, show an amount available of £138,271, including £27,319 brought forward from the previous year. The committee recommend that a distribution be made at the rate of 3s. per share, payable in Istanbul, London and Paris on June 29, 1931, and that, of the surplus, the sum of £40,000 be appropriated as provision for contingencies, leaving £23,271 to be carried forward to the current year.

BALANCE SHEET—December 31, 1930.

SWISS BANK CORPORATION.

The report states that, after deduction of expenses and taxes, and making provision for bad and doubtful debts, etc., the net profit for the year ended December 31, 1931, amounts to £504,341. The board propose to allocate to pension fund £20,000; to pay a dividend of 5 per cent.

on the paid-up capital (according to Article 36 of the articles of association), £320,000—£340,000, leaving a balance of £164,341. After deduction of the statutory participation of directors, £16,434, the remainder, £147,907, together with the amount carried forward from last year, £41,017, viz., in all, £188,924, is at the disposal of the general meeting. The board propose to pay a further dividend of 2 per cent. (making in all 7 per cent. for the year 1931), which will absorb £128,000, and to carry forward £60,924.

BALANCE SHEET—December 31, 1931.

NATIONAL ECONOMIC BANK

(BANK GOSPODARSTWA KRAJOWEGO)

Head Office:

1, Jerozolimska, WARSAW, Poland.

Telegraphic and Cable Address: KRAJOBANK, WARSAW

AGENTS AND CORRESPONDENTS IN ALL PARTS OF THE WORLD.

Paid-up Capital: Zl. 150,000,000
Reserve Fund: - Zl. 64,501,965
Total of Balance Sheet, as on Nov. 30th, 1931, Zl. 2,194,649,480

Offers complete banking facilities to individuals and institutions. Issues of 7½% Mortgage Bonds, 7½% Communal Debentures and 7½% Bank Debentures. All these securities are at one and the same time expressed in Gold Zlotys in U.S.A. Dollars, in Pounds, in Dutch Florins and in Swiss Francs.
Attention is drawn to the fact that all bonds and debentures of the National Economic Bank, which are both secured by a first charge on mortgage loans on properties or by communal loans as well as by a special reserve fund, formed by the allocation of 35% of the annual net profit of the Bank, and a first charge on all the assets and on the whole of the reserve fund of the Bank, and carry in addition to this a guarantee of the State Treasury, afford a perfect security to holders.
Incidentally it should be observed that at the present quotation the actual yields of the aforesaid securities are: the 7½% Mortgage Bonds yield 8.50%; the 7½% Communal Debentures, 8.57%; and the 7½% Bank Debentures, 8.96%.

Full Terms of Business on Application.
