THE Budget estimates for 1932-33 have passed the Financial Committee of the House of Deputies without alteration, and there is every reason to believe that they will be voted by Parliament before the present financial year ends on June 30th. The second quarterly report of Mr Royall Tyler, the League resident representative in Budapest, dealing with the financial situation in the first quarter and the prospects of the future, appeared at a particularly opportune moment, on the eve of the general Budget debate. Its conclusions have already found wide echo in the Press and in parliamentary discussion, both in Government and Opposition circles. Mr Tyler states with satisfaction that the Hungarian Government has made further notable progress towards balancing the State's finances, and it has kept current expenditure within the limits of its programme announced when the League Financial Committee visited Budapest in October last. On the other hand, the report strongly and justly criticises the finances of the State undertakings and those of the local authorities, the deficit of which threatens the financial recovery of the country. Thorough investigation by some energetic and objective agency and unreserved publication of its findings are required. So far, such economies as have been realised appear to be trifling, observes Mr Tyler, and he declares that in view of the sacrifices which the taxpayer is making in order that the State's Budget may be balanced, the local authorities cannot be permitted much longer to spend on the scale reached in the years of prosperity, even if a serious constitutional issue has to be faced in this connection.

The finances of the cities, towns, counties and communes are in a very bad way. More than one local authority has recently been unable to pay the salaries of their employees. According to the figures of Mr Tyler's report the deficit of the local authorities in 1931 amounted to 54.6 million pengö, and although a parliamentary sub-committee was engaged to carry out the necessary curtailments in expenditure to restore budgetary equilibrium such results as have been reported up to the present (April 15th) are disappointing, and there will be a substantial deficit in 1932. The debts of the local authorities are reported to amount, as at December 31, 1931, to 747.2 million pengö, of which 421.4 million pengö was accounted for by the city of Budapest. The wasteful expenditure and the reckless borrowing of the public authorities has in no small degree contributed to the financial plight of the country.

The economic situation shows no sign of improvement and the prospects are not encouraging. Foreign trade returns show further contraction. The first quarter of 1932 has resulted in an adverse balance of 12.8 million pengö, imports amounting to 85 million pengö and exports to 72.2 million pengö. The total value of the exports are so low that they would not suffice to maintain the service of Hungary's foreign indebtedness (about 25 million pengö per month), even if the importation of foreign goods were entirely stopped.

As to commercial policy, Mr Tyler observes that the results of the exchange clearings agreements are not satisfactory. The drawback of the Austrian clearing agreements is that Hungarian importers, able to secure means of payment that are accepted in Austria, buy from them articles which are either not needed in Hungary or might be bought, if exchange were available at more advantageous prices on other markets. Great consternation was caused in Hungarian agrarian and commercial circles by the recent decision of the Austrian Government to prohibit the importation of cattle, poultry, eggs, milk, wine, etc., articles which form the bulk of Hungarian exports to Austria. A new quota treaty with Austria will be necessary, and there is little doubt that it will result in a further strangulation of trade. Negotiations with Czechoslovakia for a more satisfactory commercial treaty have been unsuccessful, and Germany

does not show much willingness to take Hungarian agricultural products.

There has been an increase in cereal prices of late, because the surplus was exported last autumn, but there was a marked fall in the price of horned cattle. In the rural districts the peasants are compelled to kill their cattle because they cannot afford to feed them. Mr Tyler's report points out that over the last two years the decrease in wholesale prices have only amounted to 5 per cent., whilst in most countries of Central and Eastern Europe it has been between 20 per cent. and 30 per cent., and there was actually an increase last year. As regards private banking, Mr Tyler is of the opinion that the wisdom of distributing dividends—as practised by the Hungarian banks with one exception for the past year—is questionable where the value of the banks' holding probably represents, at any prices that could be obtained at present, but a fraction of that given in the balance sheets.

BULGARIA.

Exchanges — Debt Relief — Sugar.

(FROM OUR CORRESPONDENT.)

SOFIA, April 16.

AT MARCH 31st the National Bank's reserves of foreign exchange were 207.5 million leva, which, together with the gold reserves, give a cover of 35.73 per cent. of the note circulation and other sight liabilities. There is not the slightest possibility of increasing the foreign exchange reserves. The collapse of commodity prices is the chief obstacle, since grain constitutes the most important item of Bulgarian export. For the first three months of the current year, the unfavourable tendency, already visible in 1931, grew worse, especially during March, which, in spite of a decrease in imports, brought an unfavourable balance of 73.1 million leva, against a favourable balance of 207.8 million leva for the corresponding period of 1931.

In addition, the difficulties in the way of exports are increased by Customs barriers, import quotas, and foreign exchange clearings, so that the inflow of foreign currencies is almost prevented. By a new restriction order, the National Bank commandeered all reserves of foreign exchanges within the country under heavy penalties. The Bulgarian delegates will insist, before the Council of the League and the Council of Foreign Bondholders, on a reduced ratio for the valorisation of the pre-war loans, according to Article 8 of the Agreement of December 11, 1926, and on a further postponement of the amortisation and a reduction of the interest on the post-war State loans of 1926 and 1928, in accordance with the fall in commodity prices since 1929. Though these temporary reliefs will be of great value, full financial and economic recovery cannot be attained without new foreign credits, and the Report of the Financial Committee of the League recommends financial assistance. The inflow of foreign capital will help to mobilise the frozen assets in the country and thus enable the rationalisation of Bulgarian farm production and increase the output per acre. During the last five-year period 1927-31 the average wheat yield per hectare of cultivated land was only 11.2 quintals, against 24 in Great Britain, and over 30 quintals in Holland and Denmark. Foreign capital would make possible some substitution of grain production by the production of other commodities whose prices have fallen less and which command a better export market. In this connection the proposed Danubian Federation is of great importance, for Bulgaria will have to be included. The economic relations of Bulgaria with the five Danubian States, Austria, Hungary, Czechoslovakia, Roumania and Yugoslavia, are on a firm basis. During 1931 a quarter of Bulgarian foreign trade was conducted with these States: exports to them were 1,465 million leva, out of a total of 5,934.2 million leva, and imports from them were 1,104 million leva, of a total of 4,600 millions.

The Minister of Agriculture, as a representative of the Agrarian party in the Cabinet, has introduced a Bill for the alleviation of the debts of the farmer-proprietor, while the Minister of Justice, as a representative of the National

Liberal Party, did the same for the reduction of indebtedness in general. For those farmers whose properties do not exceed 25 hectares of land, that is, nine-tenths of all 840,000 Bulgarian farms, and with a debt up to 200,000 leva, the alleviation is to 40 per cent. of their debts contracted before January 1, 1931. The repayment of the remainder of the debt is to be made in several instalments. Four hectares of the general land property of a farmer form a so-called "untouchable" part, which cannot be sequestered or sold for debts in any way.

In regard to general indebtedness, each case is to be dealt with individually. Reductions are to vary from 1 to 30 per cent., and terms of repayment are to be revised. These legislative measures relate only to debts owing to private banks and individuals, while debts to the State, the State banks (National Bank, Agricultural and the Central Co-operative Bank), the Bulgarian Mortgage Bank (which works with foreign capital) and the Co-operative Popular Banks, remain as before.

According to the new law for sugar production, the five sugar factories in the country, four of them working with foreign capital, have been obliged to enter upon new agreements with the Ministry of Agriculture, which will fix strict quotas for the cultivation of sugar beet and production of sugar. For the next sugar campaign the total output of sugar is fixed at 26,000 tons, covering domestic consumption for a year. At present the sugar factories hold stocks of 45,000 tons, produced for export under State bounties. These export bounties have been abolished, so that the sugar export problem is aggravated after October 1st, and will be more so when the factories will no longer be able to sell for domestic consumption.

Letters to the Editor.

THE POLITICS OF THE SCHELDT.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Will you allow me to offer some comment on your note on "The Politics of the Scheldt" in your issue of April 9th? It is quite true that the negotiations between Holland and Belgium about waterway questions and other matters have been dragging on now for many years, but your view of the position seems to err on the gloomy side. If the essentials of the case are remembered, there will be no temptation to compare it with the evil sores of Eastern and Central Europe.

According to your account, the crux of the matter is Antwerp's communication with the sea by means of the lower Scheldt, which is under Dutch sovereignty. To this you add the Wielingen puzzle, the significance of which is, however, not economic, but strategic. As regards the navigation on the Scheldt, you write that "Trouble is inevitably bred by a situation in which the buoying and lighting of a channel in which Belgium has a vital interest is the business of Holland, who has no interest whatever in equipping the port of Antwerp to compete with Rotterdam."

In the years immediately after the war a great deal was heard about the intolerable hardships to which Antwerp was exposed by Holland's position on her waterway to the sea. It is now clear, however, that these complaints must be considered as part of the annexationist campaign to which Belgium in the flush of victory had committed herself. It is true that the demand for the cession of Zeeland Flanders (the strip of Dutch territory south of the Scheldt) was never officially put forward, but a demand for "les attributs de la souveraineté" on the lower Scheldt was, and the allegations against Holland of neglect were intended, to support that policy. Later on more moderate counsels came to prevail in Belgium, and very little was said any more about Antwerp being suffocated by the Dutch masters of the Scheldt. In the negotiations which were carried on between the two Governments, no doubt the Belgians sought to strengthen their share in the administration of the Dutch part of the river, and when complete agreement is at last reached, they will certainly be seen to have obtained something in that respect. Meanwhile, however, the provisions of 1839, which were intended to safeguard the interests of Antwerp, are carried out by Holland in a spirit which has in no sense hindered or cramped the growth of the Belgian port. The best proof of this is in the fact that hardly any attention is given to this side of the problem during the long delays to

which the negotiations have been subjected. These delays themselves are not due to Holland refusing improvements in the economic regime of the Scheldt. The question that was largely responsible for the rejection by the Dutch First Chamber of the Treaty submitted to it in 1927, and that is almost wholly responsible for the hitch occurring at this moment, is the question of the communications of Antwerp, not with the sea, but with the Rhine.

These communications, too, were safeguarded to Antwerp by the Treaty of 1839, and Holland is not, of course, denying, or, in fact, neglecting, her obligations in this respect. But Belgium is now asking for a large-scale new canal to be dug across Dutch territory, and it is this point which is again proving difficult. Dutch public opinion is not moved only by the rival interests of Rotterdam; there is a certain suspiciousness remaining from the unfortunate days of 1918 and 1919, when Belgium was seen trying to use a favourable international situation to encroach upon the integrity of the Dutch State. At any rate, it should be kept well in mind that the Scheldt-Rhine canal question is one in which Holland is asked to make concessions far beyond her treaty obligations. This is not to say that no agreement on a basis of reciprocity is possible. Holland, too, has her desiderata. But it can serve no useful purpose to write as if the peace of Western Europe depended on Holland's pliability.—Yours faithfully,

London.

P. GEYL.

April 22nd.

[We were careful to refer to this matter as one which "complicates" the life of Western Europe—and not as one which threatens its peace. If at times in its long history it has occasionally reached the stage of being a "dangerous" issue, the purpose of our note was to call attention to the possibility of the present negotiations finally removing one of the possible sources of friction in Western Europe.—Ed., *Economist*.]

ROAD OR RAIL.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your last issue a correspondent says, "It is absurd that they (the railways) must be made solvent by bleeding the more mobile road."

Has he thought of the fact that if the railways were put out of business there would, owing to fog, frost, flood and snow, be no reliable means of transport for two months every year, to say nothing of the damage heavy lorries do to property, gas and water mains; on an average one of these mains gives out every week.

It is not a question of fair play, but the interests of the community which demands that some limitation should be placed on the activities of road users.—Yours truly,

167, Gloucester Terrace,
Hyde Park, W.2.

SURVIVAL AND EFFICIENCY IN INDUSTRY.*

THE introductory course or textbook on economics frequently opens with an exposition of the advantages of the division of labour, which leaves the average beginner with the dangerous impression that he is now well-informed on the question of the most profitable scale for industrial enterprises of various broad types. Thus is swollen the wearisome army of armchair critics, who, without having seen so much as the outside of an ironworks, a foundry or a steel mill, are fully prepared to tell British iron and steel manufacturers exactly why they fail to meet foreign competition.

To these, and to more modest possessors of a little knowledge, the latest volume in the Cambridge Economic

* "The Structure of Competitive Industry." By E. A. G. Robinson. Nisbet and Cambridge University Press. 5s.

The recent formation of the Business Transfer Partnership & Property Agents Institute of Great Britain raises the status of the profession of Business Transfer Agents. EFFICIENCY PUBLISHING COMPANY. 71, Lowlands Road, Harrow

Handbooks series is especially to be commended. Mr Robinson, who devotes about three-quarters of his book to the question of the optimum unit in industry and the optimum size of an industry, envisages his problem as one of very delicately balanced forces, differing in every instance, and he contrives to infuse into his treatment of it much of the fascination which a skilful presentation of an analogous subject in biology would have for the interested layman. He has particularly interesting observations to make on the question of survival, and the chapters on "risks and fluctuations," "the reconciliation of optima," and "the problem of growth" are especially rewarding. A sparing but extremely apt use of illustration adds to their effectiveness.

Mr Robinson's masterly handling of a section of the subject matter of economics which is rarely made the subject of interesting treatment, except in books designed for specialists, must be his excuse for leaving so little space for the remainder of his field that rationalisation has to be relegated to one short chapter. As those parts of his subject which receive disproportionately small space are also those parts which are best dealt with elsewhere, this arrangement is, perhaps, not a ground for complaint. Not the least of the virtues of this little book is the success with which it maintains the tradition of the series to which it belongs, that the reader, though not yet possessed of economic knowledge, is an intelligent and educated person.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

The United States in World Affairs. 1931. By Walter Lippmann, in collaboration with William O. Scroggs. (London) Harper and Bros., 90, Great Russell Street. 15s. net.

The Agricultural Situation in 1930-31. (Rome) Treves, Treccani, Tumminelli, Via Michelangelo Caetani, 32.

A commentary on the International Yearbook of Agricultural Statistics.

Banking Credit and the Crisis. By J. W. Kempster. With a Foreword by Sir Josiah Stamp. (London) London General Press, 6, Bouverie Street. 12s. 6d. net.

Ungarns Aussenhandelspolitik nach dem Kriege. By Dr. E. Kilbenbeyer. (Berlin and Leipzig) Walter de Gruyter and Co.

A German essay on Hungarian post-war trade policy.

Statecraft. By William Sanderson. (London) Constable and Company, Limited, Orange Street. 8s. 6d. net.

A discussion of the objects of politics, the need of experience, and the problems at present awaiting solution.

The New Gold Standard. By O. I. Stausing and D. Erik Sjöstrand. (Stockholm) C. E. Fritze. 1s.

An plan for an international gold standard currency to be administered by an international gold reserve bank.

The World Economic Crisis, 1929-31. By Paul Einzig. (London) Macmillan and Company, Limited, St. Martin's Street. 7s. 6d. net.

COMPANY RECONSTRUCTION.

SURGICAL skill advances with grim rapidity in wartime. The present depression has afforded accountants over-abundant opportunities of perfecting the technique of company reconstruction. Major industries, like coal, steel, shipbuilding, engineering and textiles, having been left dry by an ebb-tide of profits after expanding their capital obligations during and after the war, have provided material for the financial hospital knife. Further, though no epoch has a monopoly in human misjudgment and folly, it has happened that, during the last few years, company failures from this cause have been unusually numerous and important. There is a helpful convention, common to all liberal professions, under which members enjoying special facilities for research place the fruits of their experience promptly before their fellow practitioners and the public. As all readers are aware who have followed our records of company "accidents," no accountant has latterly performed more major operations with skill and success (if success be judged by the patients' survival) than Sir William McLintock, whose part in the formulation of the Royal Mail Scheme of Arrangement is fresh in the public memory. Investors, therefore, may be well advised closely to study the conclusions in which Sir William has embodied his experience, in the reprint of a lecture recently given at Edinburgh.*

At the outset, Sir William draws a sharp distinction between "shareholders'" and "creditors'" reconstruction schemes, confusion between which has probably been responsible for more premature and abortive capital plans than all other causes together. His view is, clearly, that capital reductions affecting only shareholders, *inter se*, have tended, of late years, to be unduly numerous, ill-considered and unbalanced. In many instances, directors have formulated and rushed through such schemes immediately their companies have emerged from a period of trading losses, before there has been any opportunity to discover true future earning power. The motive in practically every case has not been financial conservatism, but the reverse. Unless the cleaning-up of the balance sheet is a preliminary to the raising of new capital, the operation has merely a bookkeeping character, which adds nothing to the resources of the company, and, in far too many cases, is intended merely to facilitate the resumption of dividends. Its whole *raison d'être* would frequently disappear if British law permitted the issue of "no par" shares, whose valuation would be automatically adjusted to changes in the assets.

There is force in Sir William's point that the dangers of under-estimation or over-estimation of future profits alike counsel caution in framing schemes for capital reduction. If the directors' "budgeting" is over-rosy, the whole process may be required to be gone through a second time, after a company, possibly, has weakened itself by paying out, in dividends, resources which should have been retained as floating capital, and by reducing its annual depreciation charge on its written-down assets. If earning power, on the other hand, is likely to increase, the wisest course may be to defer reconstruction in the hope that it may be avoided altogether. Leyland Motors, in this way, has cleared off a million of accumulated losses, paid all preference arrears, and rehabilitated its ordinary capital. Austin Motor, after writing 15s. off its ordinary capital in 1927, is now compelled to explain, for the benefit of organised labour and other interests whose misapprehensions might be embarrassing, that a 100 per cent. annual dividend is not the "profiteering" figure it appears. Conversely, a reduction of 33 per cent. in paid-

up capital, in 1924, failed to save Agricultural and General Engineers from a winding-up order in 1932.

The truth is that few reconstructions involving shareholders alone are really urgent. If and when they are decided on, it is essential that preference shareholders obtain equitable treatment. The latter are concerned solely with the possibility that, after reconstruction, earnings will be sufficient to provide the fixed sum of money to which they are annually entitled. It is not their business to facilitate, by personal sacrifice, the early resumption of payments to ordinary shareholders. If the nominal value of their shares is written down, their interest rate should be raised proportionately, so that their *income* rights remain unaltered. If insistence in this regard would merely prolong a company's difficulties, the appropriate compensation for a reduction in income is a share in the equity, which, *pro tanto*, reduces that of the ordinary shareholders. They should not be asked to relinquish dividend arrears, unless they are compensated by an enhanced dividend or the issue of additional preference or ordinary shares. They should not consent to reconstruction by way of the registration of a new company unless their position in this respect is safeguarded, since in a winding-up all rights to dividend arrears are automatically extinguished.

The position of ordinary shareholders is simpler. They own the equity in surplus earnings, and it matters nothing whether their tokens of ownership are nominally valued at 1d. or £1. Their chief legitimate concern is that they be not extinguished altogether, even when the whole of the "ordinary capital" appears to have been lost. They are entitled at least to hold a deferred claim on the future, against the possibility of an eventual restoration of earning power. Equity rights can never perish entirely, so long as a company remains a going concern.

The most difficult reconstructions of the post-war era in British finance have not been "shareholders' schemes," which at bottom have been mainly matters of convenience, but "creditors' schemes," which have arisen out of circumstances threatening the very existence of large concerns in industries like steel, engineering, shipbuilding, textiles and shipping. Many British trades are threatened by the same catastrophe as the world in general—asphyxiation under the pressure of debts too grievous to be borne in an epoch of greatly reduced income. Sir William's examination of this aspect resolves itself into an indictment of heavy funded debt in general, and "bad" debentures in particular. The debenture, at first sight, holds out many attractions as an investment medium. It is a cheap form of long-term capital, the market yield on the best industrial debentures being, as a rule, only about $\frac{1}{2}$ per cent. higher than that on British Government stocks. Debentures can be floated in times, like the present, when the market will not look at equities. They are a favourite means of getting a company "out of the bank." They are well regarded by many ordinary shareholders, who argue that, while they involve no diminution of their own sovereignty (debenture holders having no votes) they increase the value of the equity. If a company can raise £1,000,000 in $\frac{1}{2}$ per cent. debentures, and earn 10 per cent. on the money, an additional £45,000 will be available each year for ordinary shareholders. Hence, industries with large amounts of fixed assets to pledge, like the "heavy" trades, railways, breweries, etc., have resorted largely to the debenture. Other trades, such as tobacco, merchanting and retail trading concerns, have a smaller proportion of debentures, mainly because investors have regarded a floating charge as affording much less "solid" security than a fixed charge.

Recent experience has shown, however, that, while rights of foreclosure may protect debenture holders against

* "Company Reconstruction Schemes," By Sir William McLintock, G.B.E., C.V.O., C.A. Being a lecture delivered to the Chartered Accountants Students Society of Edinburgh on February 4, 1932; reprinted from "The Accountants Magazine" for February, 1932.

short-term fluctuations of income, they are illusory and dangerous when earning power has been more permanently affected. Prolonged payment of unearned interest may bleed a company of working capital. When default occurs, holders may find that assets which provided ample "cover" when a concern was doing well, may have little or no break-up value. Practically all the iron and steel reconstructions of the last ten years—including Pearson and Knowles, Partington Steel, Armstrong-Whitworth, Baldwins, Barrow Hematite and Cammell Laird—have involved heavy sacrifices by debenture holders of their "paper rights" in order to keep their concerns alive.

Investors who would see Sir William McLintock's ideas in concrete shapes will find them all expressed in the Royal Mail Scheme. They depend upon the fundamental principle that, when security has ceased to be enforceable, in any productive sense, everybody's best interests are served if it disappears altogether. Creditors, by becoming equity holders in law, as they already are in fact, may profitably relax their hold on assets, to allow a company to secure new working capital and may agree to accept interest out of earnings alone, whenever they have reason to think that a concern, in the future, may be worth more to them alive than dead.

This proposition appears, however, to be subject to a number of qualifications. The technical details of freeing assets from charge, once creditors have agreed, are essentially simple. It is necessary only to form an operating company to take over the assets in return for its own shares, to which the rights of creditors will then attach. Where more than one company is involved, two objects may be achieved simultaneously by making the new unencumbered operating company a merger concern, which can proceed with "rationalisation" measures on the administrative side. This principle has been applied successfully in the Royal Mail, Vickers-Armstrong, and Cammell-Laird schemes. But it involves a difficult question regarding the duration of the periods during which creditors, compelled by *force majeure* to step into the shoes of proprietors, should be asked to accept the inferior status of, virtually, pre-preference shareholders. In some of the earlier "creditors' reconstructions" of the last decade, debenture holders were induced to part with their foreclosure rights for ever. In later schemes, creditors have insisted on the insertion of provisions for amortisation within the earliest possible period, though the latter's duration has frequently been, perforce, indefinite, since those drawing up the schemes have insisted on making amortisation, like the payment of interest, dependent upon future earnings. The recent Cammell-Laird reconstruction, for example, provided for the repayment of principal of two mortgage debenture stocks by sinking funds whose amounts, with a specified annual maximum, were governed entirely by the dimensions of future profits.

It is not improbable that the universal acceptance of the thesis that, in adversity, the distinction between the rights of a creditor and a proprietor is chiefly one of priority would have far-reaching reactions. Credit-givers might tend considerably to restrict their facilities, in normal times, if the impression became widespread that an unexpected turn of fortune might change them into quasi-permanent shareholders. Bankers, who are expert in the technique of "nursing" temporarily frozen loans, will, when their voice is paramount in reconstruction, usually agree only to the suspension of their rights for a limited period, such as the three years granted in the Royal Mail Scheme, rather than to their metamorphosis. Debenture holders, being more numerous, scattered and incoherent, will usually be guided by the advice of their trustees, whose point of view is not infrequently more closely identified with the "long-term" aspect than that of other outside creditors. There may be much to be said for the view that the utmost a creditor should be asked to do is to relinquish his claim to interest until a company has sufficiently recovered to make it more profitable for him to foreclose, and get out. A first debenture holder who, after waiting a few years, sees the prospect of recovering his principal by sale of the assets, even though the latter may leave little or nothing for second debenture holders, may ask what material inducement can be offered him for holding his hand.

The conclusion would seem to be that in company finance, as elsewhere, prevention is better than attempted cure. Since economic forces are always changing, demand for human satisfactions finding new channels, and industries rising and falling, no concern can wisely pledge its assets for very long periods on the assumption that, because it is prosperous to-day, it will be prosperous in twenty, thirty or forty years' time. The unenviable position occupied by the iron and steel industry in the last ten years may be filled, later, by other trades at whose identity one cannot guess. Prudence may dictate, in future, the limitation of short-term indebtedness to a reasonable figure, and, possibly, the eventual disappearance of "funded indebtedness" as a medium of sound company finance. Informed opinion may insist that a provider of long-term capital, as distinct from short-term accommodation, should, from the outset, freely accept the implications of proprietorship, and not be induced to tolerate a speciously low yield on his investment by being offered the shadow of immunity from earnings fluctuations. In other words, the process of investment evolution may be inimical to the survival of the mortgage debenture, in its present form—though this may be looking far ahead.

THE WEEK IN THE MARKETS. THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.
May 24.

ACCOUNT.
May 26.

AFTER Monday's May Day holiday, the markets made a mixed showing. Investment interest was again concentrated on Gilt-edged stocks, some British funds establishing new high records, while the drain of resources from equity shares continued. The movement, however, tended to lose impetus, and by mid-week was tentatively reversed. British Government stocks began slightly to lose ground, although the 3 per Cent. Treasury Bond issue was regarded as moderately successful. Industrial shares, simultaneously, showed a slight recovery, which was probably no more than an upward reaction after a fortnight of unusually rapid decline. Continental buying of more speculative issues, simultaneously, accentuated the outward and visible results of a change in sentiment which had every inward sign of evanescence.

Early business in Gilt-edged stocks was on a large scale, but the rapidity of the movement in quotations invited profit-taking. Funding Loan was in keen request, but reacted subsequently. India loans remained firm, and Australian stocks hardened slightly on the end of Mr Lang's physical resistance to Commonwealth "attachment" measures.

Recent home corporation issues maintained their premiums, but dealings in the Hull stock were done at a discount.

Greece's default (discussed on page 1086) had unfavourable reactions in the market for European bonds, particularly those issued under League of Nations auspices. Austrian Sixes, however, after a sharp decline, were assisted by sinking fund operations. Far Eastern stocks were weak. The San Paulo scheme (summarised on page 1086) had little effect, apart from the attraction of a modicum of speculative interest to 7½ per Cent. Coffee Bonds, which were not included within its scope.

Selling of home rails continued unabated until Thursday, when sentiment changed somewhat abruptly, despite the continued unfavourable nature of the traffic returns. The market, indeed, had shown signs of being oversold, and moderate closing sufficed to put prices better, particularly as regards the junior stocks. In the foreign rail market, the directors of the Buenos Aires Great Southern and the Buenos Aires Western sprang a pleasant surprise on their proprietors by the publication of announcements showing the cash and earnings position in a much better light than the market had foreseen. The ordinary stocks of the Argentine "Big Four" quickly responded to the news.

Although the new Account, covering the Whitsun holiday, was of the unpopular three weeks' duration, the tone of industrial shares was perceptibly more cheerful, and the decline in values was checked. Electrical issues remained dull, and breweries uncertain, despite moderate selective support from the provinces. The Dunlop accounts, dealt with on page 1037, were well above expectation, the ordinary recovering on the payment of full preference dividends. The denunciation of the 1919 agreements in the cotton trade was not regarded as a bear point for textiles, reports of slightly increased manufacturing orders and turnover causing a modest recovery in prices. The market was also inclined to discount the possible success of efforts to induce the Government to change its mind as regards the silk duties. The "Rothermere" newspaper reports of the week were deemed satisfactory, despite the reductions in earnings and dividends. The decline in tobacco shares was arrested, though the market still had an appearance of instability. Iron and steel shares again failed to benefit from their prospective gains as tariff beneficiaries. Unilever were purchased from Amsterdam. Harrods remained on offer. Bank shares were dull, with the exception of Hong-Kong and Shanghai and New Zealand institutions, which reflected improved local conditions. Little investment interest was shown in insurance shares, numerous fractional falls being recorded.

Evidence of declining production, at long last, in the rubber industry encouraged a few inquiries for the better-class shares, though the volume of actual buying orders was disproportionate. The prospects of the enactment of proposals for a 5 cents per pound duty on rubber entering the United States were not regarded seriously. Tea shares were again subject to liquidation, the disappointing report of the Eastern Produce Company depressing the market. Oil shares were more active and cheerful than for some time past, partly on Continental support and partly on speculative exploitation of the possibilities of the New York Conference on "co-operation."

A large volume of business was done in the mining market, almost entirely owing to Continental support. The movement was ascribed, obscurely, to French desire to insure against the possible assumption of power by the parties of the Left. Rises were general among the international "Kaffir" favourites. De Beers moved in sympathy despite the announcement that the company would probably refuse to give evidence before the Diamond Commission. Rhodesian shares did not benefit from the steadiness of copper, and only trifling gains in tin share prices followed the sharp speculative rise in the commodity on the announcement of new and drastic output restriction proposals, which are discussed on page 1038.

In response to the petition they have received, the Committee for General Purposes announce that the Stock Exchange will be closed on Saturdays, the 7th and 14th instant. The further closing of the Stock Exchange on Saturdays will be considered at a later date.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The faint signs of an improved undertone in the markets did not survive a severe buffeting at the hands of Congress. The passing by the House of Representatives of the Goldsborough Bill, calling on the Federal Reserve System to restore prices to the 1926 level, was regarded as of purely theoretical interest, but much more anxiety was shown over the mutilation of the Budget programme, and the report that the Senate Finance Committee had fixed a flat 4 per cent. transfer tax on bond sales, together with the approval by Mr Owen Young of the principle of bond issues for \$2,000 millions for new nationwide relief works. Stock Exchange business was severely restricted, with prices, particularly of railroad issues, drifting downwards, though a sharp rally occurred on Wednesday after many issues had broken to new record low levels. Oil stocks were a prominent exception, their relative strength being due partly to reduced production figures, but mainly to propaganda associated with the opening of the Producers' Conference for a world-wide restriction scheme. Steel ingot production showed another slight increase from 23½ to 24 per cent. of capacity.

PARIS.

Weak conditions prevailed at the outset, but subsequently a certain liveliness developed, for reasons connected with the political outlook, to which, in election week, all other French interests are normally subordinate. Mid-week arbitrage operations assisted all securities with

(Continued on page 1034.)

NOTE.—Stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

a London quotation. Bank of France improved after early weakness. The Bourse was closed on Thursday, in common with those of other Continental centres, but a fair amount of buying was done through London.

BERLIN.

The opening of the Berlin Bourse was quiet and uneventful, but the tone steadily improved. A.E.G. rallied on the publication of a further reassuring statement by the management to the effect that no capital reduction was contemplated. Siemens recovered after initial heaviness, and Dye Trust were marked up. Bank shares, however, were weaker, and potash shares were out of favour, but Reichsbank shares were a better market.

AMSTERDAM.

The Amsterdam Bourse was quiet, and the volume of business small. Philips Lamps were firm on more favourable dividend hopes, and Unilever improved. Royal Dutch reacted immediately to the announcement of a world oil conference in America. Activity fell away on the eve of the mid-week holiday, without any perceptible weakening of the market's undertone.

	Apr. 28, 1932.	May 2, 1932.	May 4, 1932.		Apr. 28, 1932.	May 2, 1932.	May 4, 1932.

OTHER CENTRES.

The minor European bourses experienced quiet but improving conditions. Brussels opened dull, in sympathy with Paris, but business broadened perceptibly as the week progressed. Vienna was heavy. Buying was just sufficient to keep prices steady at Stockholm, but Copenhagen remained irregular.

INVESTMENT NOTES.

Treasury Bond Issue.—The response to the sale by tender of 3 per Cent. ten-year Treasury bonds is discussed on an earlier page. The market is now discussing the possibility that the relative success of the issue may encourage the Treasury to make a conversion offer to holders of 4½ per Cent. Treasury Bonds, 1932-34. As the next table will show, there is a wide field for conversions of short-dated Government bonds this year and next:—

Amount of Loan.	Stock.	Accrued Interest.	Price.	Flat Yield per Cent.	Redemption Yield per Cent.
(Millions.)					
14	Treasury 4½% (Feb. 1, 1933)	£ s. d. 1 3 5	101½	£ s. d. 4 8 4	£ s. d. 2 1 6 (1933)
140	Treasury 4½% (Feb. 1, 1932-34). (Repayable at 3 months notice.)	1 3 5	100½	4 9 0	3 16 10 (1934)
51	Treasury 4½% (Feb. 1, 1934)	1 3 5	102½	4 7 4	2 15 8 (1934)
115	Treasury 5% (Feb. 1, 1933-35)	1 6 0	102½	4 17 9	2 1 8 (1933)
105	Treasury 4% (April 15, 1934-36)	4 8	102½	3 18 2	2 16 8 (1934)
					3 8 0 (1936)

From this table it would appear not outside the bounds of possibility that the 4½ per Cent. Treasury Bonds, 1932-34, and Treasury 5 per Cent., 1933-35, amounting in all to £255 millions, may be the object of conversion operations within the next twelve months.

Accountants and Disclosure.—The presidential address of Mr H. L. H. Hill to the Institute of Chartered Accountants, on Wednesday, would seem to be intended as a formal dissociation of the Institute from the policy suggested by the Society of Incorporated Accountants and Auditors, which was described on page 981 of our last week's issue. Mr Hill's address dealt specifically with two of the main questions vexing the accounting profession to-day—secret reserves and disclosure by holding companies—but arrived at the conclusion that, while the law was not incapable of improvement, auditors did not require increased powers to enable them faithfully and properly to discharge their duties. This attitude may disappoint some who had hoped for a clear lead from the Institute. The larger accounting firms, who have invariably taken a high view of their duties and responsibilities, may doubtless be in a position to bring moral pressure to bear on directors. But individual accountants and small firms laboriously building up a practice—who represent no inconsiderable part of the profession—may be at a disadvantage if they are compelled, in effect, to choose between extra-legal ideals and their bread-and-butter. While we believe that the Council of the Society of Incorporated Accountants would have been wise not to commit itself to any specific programme in advance, we consider that a *prima facie* case has been made out for inquiry by an official body. If the Institute had seen fit to associate itself with such a request, the Board of Trade could scarcely have refused to listen to the unanimous voice of the two great professional associations.

Depression and the Gramophone Trade.—The £1 shares of Electrical and Musical Industries, which were as high as 23s. 6d. earlier this year, touched 7s. 7½d. this week, and are now quoted at 10s. 6d. The company has issued an announcement to the effect that the work of co-ordination of the operating and subsidiary companies is progressing satisfactorily, and British sales have exceeded expectations. Unsettled conditions abroad, however, have so affected foreign sales that a trading loss must be anticipated for the current fiscal period, which closes on June 30th next. The financial position of the company, however, remains liquid. This statement did not come altogether as a surprise, since it was known that the foreign factories both of the Gramophone (H.M.V.) and Columbia subsidiaries—established in some cases to offset

the effects of high tariffs—were suffering from depression, which had been proportionately more severe in foreign countries than in Great Britain. At home, though sales of records (on which the large companies are now much more dependent than on sales of gramophones), have been relatively well maintained, on the whole, competition is severe, and numerous price reductions have recently been made. A process of consolidation is continuing among the "outside" companies which have survived the heavy mortality of the period of collapse following the unhappy boom of 1928-29. The Crystalate Company, an old-established and successful concern, which does a large business in the cheaper records sold by multiple stores like Woolworth and Marks and Spencer, has taken in the Vocalion Company. The latter has a considerable output capacity in the cheap and medium-priced types, though its recent financial results have been somewhat chequered. The Decca Record Company took the lead, last autumn, in the policy of price reduction of dance records, in which the "quantity" business of the industry is chiefly done. To this factor, and possibly to the acquisition of the services of a popular conductor, may be attributed a subsequent increase in sales, with its inevitable corollary, increased competition throughout the home market. The company has also extended its interests by acquiring the British rights in the "Polydor" records produced by the German Polyphon Company and, more recently, those of the (American) Brunswick organisation, through the acquisition of its British offshoot. At present prices, all gramophone companies must secure a large minimum turnover in order to make profits, and much depends upon the future stability of prices. From the point of view of shareholders, therefore, the continuance of the policy of co-ordination of H.M.V. and Columbia, mentioned in the

directors' statement, is of the utmost importance, though the company may continue to market the products of the subsidiaries under separate trade names, to which a valuable goodwill attaches.

Course of Equity Share Values.—The past month has been a depressing period for holders of equity shares, both in this country and in America. Prices during the preceding four months had shown a series of minor rallies and recessions, but had tended to return, at four- or five-weekly intervals, to a more or less constant point of dead centre. During April, however, quotations broke well below this level in both centres, and, by the month-end, had shown no definite signs of having found a new bottom. In neither case were the reasons far to seek. American sentiment was discouraged by the publication of unfavourable earnings statements by large corporations like U.S. Steel, the tardiness of spring recovery in industry, the absence of all evidence of a responsible, constructive policy on the part of Congress, and the failure of much-advertised "reflation" measures to stimulate economic activity. In Great Britain industrial factors similarly played an important part in the decline in share values, particularly in the latter part of the month, when such indicators as the weekly returns of gross railway traffic suggested that trade recovery had suffered a perceptible, if slight, setback. The abortive nature of international discussions between responsible statesmen, and the growing evidence of financial weakness in certain European countries, also contributed to the creation of an unfavourable market "psychology." Much the most potent influence, however, was Mr Chamberlain's first Budget, which, with its insistence on

BRITISH AND AMERICAN INDUSTRIAL SHARE VALUES, November 1931 to April 1932. (1928=100)

British: "Financial News" Index of 30 Ordinary Shares. American: "Standard Statistics" Index of 50 Common Stocks—Daily Figures.

the need for grim, continued sacrifice, left speculation less than nothing to go for. The decline in values in the second half of last month, which was much the steepest of its kind during any month since last November, was a conscious "safety first" movement out of equities into gilt-edged stocks, which the new tariffs, recommended by the Advisory Committee, were powerless to check. It will probably be followed by the inevitable upward reaction, but it remains to be seen whether any decided improvement will take place before the Ottawa and Lausanne Conferences.

American Industrial Profits.—A compilation of American industrial profits by the National City Bank, covering 1,620 concerns, suggests that the percentage decline last year was much more severe than in this country. The bank's figures are arrived at after deducting all charges but before allowing for preferred or common dividends. The results for large groups of enterprises are as follows:—

	Number of Companies.	Net Profits (million \$).			Average Return.		
		1929.	1930.	1931.	1929.	1930.	1931.
Manufacturing and Trading.....	1,302	3,525.8	1,936.6	718.1	13.5	6.7	2.5

Grand Total.....	1,620	5,164.1	3,009.8	1,329.5	11.3	6.0	2.6

* Fire and casualty insurance. Figures show total shareholders' gains or losses on both underwriting and investments.

Last year's losses were severe, even as compared with the reduced figures for 1930. The insurance companies showed a debit balance, finance companies' earnings fell by 24 per cent., and Class I railroad earnings by 75 per cent. The "average return" figures are calculated by reference to the "net worth" of the companies, the latter term covering outstanding preferred and common stocks plus the amount of surplus at the beginning of each year. If the figures had been related merely to issued capital, as in the case of the *Economist's* computations for British companies, the "average return" percentages would have been somewhat higher. Among separate industrial groups, only five—chain stores, paint and varnish manufacturers, pipe-line petroleum, shoe-making and tobacco—showed even small increases in profits last year. Large groups like agricultural implement manufacture, cotton textiles, iron and steel, copper-mining and petroleum, showed net losses. The bank declares that whereas 1930 was a year of marked contraction of the volume of business, accompanied by severe inventory losses, industry in 1931 plumbed the depths of depression and witnessed a thorough "house-cleaning." Heavy charges were made against future contingencies, fixed assets were written down to cover lower estate values as well as obsolescence, and investments in subsidiary companies were stringently reviewed. The relatively good results of the electrical and gas concerns were due to stability of consumption by domestic customers. The railroads were unable to offset, by reduced expenses, more than a part of the drop in gross revenues, which were no less than 83 per cent. below those of 1929. The wage reduction effected since February 1st last has, however, enabled a number of roads to show a gain in net income in their most recent returns. The losses of the insurance com-

panies were due to severe depreciation in bond and share investment values. Their real loss was greater than the figures show, since in a number of States official authority was given for the valuation of securities on December 31st last, at the end-June quotations.

Greek Default.—The discussions which have been proceeding between the Greek Government and the Financial Committee of the League of Nations regarding the financial assistance required to avert the calamity of default have been described in recent issues of the *Economist*. It was confidently expected in the market that a default would be avoided. The Greek Government had asked for a suspension of sinking funds for five years and a temporary postponement of funds for the May 1st coupons, pending the receipt of financial assistance, but it was felt that M. Venizelos had, possibly, slightly exaggerated Greece's financial plight in order to obtain the largest possible assistance. It came, therefore, as a considerable shock to the market to learn this week that Hambros Bank had not received the necessary funds for the payment of the May 1st coupons of the 7 per cent. Refugee Loan of 1924. The laconic *communiqué* from the Greek Government: "We request bondholders to tolerate the provisional postponement of the transfer of the coupons of May 1st and to defer any other negotiations until the next meeting of the Council of the League of Nations," created a most unfavourable impression. It was argued that if Bulgaria could find the funds to meet the May 15th coupons in full on its 7½ per cent. Stabilisation Loan of 1928, Greece could scarcely plead complete poverty. The bondholders are not, however, entirely defenceless. The International Financial Commission, which manages the assigned revenues of Greece, has protested against the action of the Greek Government, and is retaining from the assigned revenues the amount necessary to cover the service of the loan at the current rates of exchange, and has stated its intention, in the event of further depreciation of the drachma, to retain additional sums from the current yield of the revenues. The League, it is hoped, will use its best endeavours on behalf of the bondholders who subscribed to its loan. In all other cases the claims of the League of Nations' Reconstruction Loans have been respected. Hungary, for example, when she declared a moratorium last December, made an exception in favour of the 7½ per cent. League Loan of 1924. The Greek 7 per cent. Refugee Loan has fallen 10 points this week. The following table gives the present prices of other League of Nations' loans:—

	High, 1931.	High, 1932.	Present Price.	Flat Yield %.
Austrian 6% Guaranteed.....	105½	100½	80	7 5 0*
Bulgaria 7% Settlement, 1926	78½	34½	21½	35 18 0
7½% Stabilisation, 1928.....	83½	38	25½	34 2 0
Greek 7% Refugee, 1924.....	104½	81½	30	Nil
6% Stabilisation, 1928.....	94½	66	25	26 2 0
Hungary 7½% 1924.....	104½	70	30½	26 6 0
Danzig 7% 1925.....	96½	92	50	14 6 0

* Redemption yield.

The League of Nations Financial Committee have intimated that they cannot secure differential or special treatment for the loans issued under their auspices from debtor countries. It may be, therefore, that Greece will see the wisdom, in the interests of her own credit, of keeping her League of Nations' loans intact—at any rate as to interest.

San Paulo Debt Scheme.—A decree relating to the service of foreign loans of the State of San Paulo was issued on April 29th by the acting Federal Interventor. The loans concerned are the 5 per cent. loan of 1904, 5 per cent. Hypothecated Railway Gold Loan of 1905, External Gold Loan of 1907, 8 per cent. Loan of 1925, 7 per cent. Waterworks Loan of 1926, and 6 per cent. of the 8 per cent. Loan of 1921, for which the yield of the tax of 5 francs per bag of coffee may not be sufficient

will also be included in the terms of the decree, while the Government will meet immediately in the same manner those instalments of the service of the loans which, at the present date, are in arrears. Under the scheme, the State Treasury will remit to the bankers of each loan on due service dates two promissory notes carrying interest at 5 per cent. due in two years from the issue dates, one corresponding to that part of the service relating to interest and the other to that part relating to amortisation. As cover and in guarantee of the promissory notes, the Treasury will employ in the country in easily realisable securities, the deposits which it undertakes to make monthly in the Bank of Brazil: viz., beginning on April 30th of the current year inclusive, and in each of the eight succeeding months, 4,000 contos of reis; during the next succeeding nine months, 5,000 contos of reis; and during the next six months immediately following, 6,500 contos of reis. Such deposits can only be withdrawn or negotiated for the purpose of being converted into dollars, pounds or francs or other currencies mentioned in the respective contracts and remitted to the bankers. The proceeds of the remittances will be used for the redemption of the promissory notes, the maturity of which may be prolonged for one year at the option of the Government, provided it deposits monthly the sum of 5,000 contos of reis. The redemption of the promissory notes issued for amortisation may be made in bonds of the respective loans at the price at which they were purchased. The purchases of the bonds will be made by the bankers of the respective loans at prices previously agreed between the Treasury and the bankers. In the case of anticipated payments the Treasury may redeem in the first place the promissory notes for amortisation, but following the chronological order of their issue, and the redemption shall be *pro rata* to the amount of promissory notes for amortisation issued for each loan.

Kreuger (Continued.)—The Banking Committee of the Swedish Riksdag has issued a report regarding the management of the Riksbank in the Kreuger affair. The Conservative and Farmer members of the Committee consider that the granting of extensive credits to the Kreuger group contributed to the tightness of money in the latter part of 1931 and to the suspension of the gold standard. The Social Democrats and Liberal members, on the other hand, see no reason to reproach the Riksbank leadership. In their opinion, the Riksbank rightly extended these credits to avoid the disaster of bankruptcy of the Kreuger group, since they could not have known, at that time, that the annual balances of the Kreuger and Toll companies had been falsified. Reference is made in the report to demands which Kreuger made in October, 1931, for a Riksbank loan of Kr. 40 millions against the security of foreign Government bonds and for another credit of Kr. 86 millions against the security of Boliden Mine shares. Both requests were refused. On October 23rd a conference was held, the Prime Minister, the Finance Minister and the chief of the Riksbank attending, at which the Government representatives emphasised the grave consequences for the country if the Kreuger group were compelled to suspend payments. The Riksbank, accordingly, granted a credit of Kr. 40 millions against the security of the Boliden shares and a partial guarantee from the Skandinaviska Kreditaktiebolaget. On February 23, 1932, the Swedish Match Company was required to meet an engagement due in America of \$2 millions, while on March 1st Kreuger and Toll were due to pay \$1,200,000. Application for this money was made to the Riksbank and to some of the private banks. At a meeting attended by the Prime Minister it was agreed to grant the Swedish Match Company a credit of Kr. 16,680,000, of which two-thirds were to be found by the Riksbank and the balance by the private banks. It was made a condition that Kreuger and Toll should grant an opportunity for the bankers to make a complete investigation of its position, and on March 13th a meeting was arranged which Kreuger was asked to attend to answer questions. The day before this meeting Kreuger committed suicide. The Police Commission in Stockholm have now issued three reports concerning their investigation into the activities of MM. Lange,

Holm and Hultdt, who are under arrest. M. Lange declares that he was instructed by Kreuger each year as to the book-keeping, and that in 1930-32 he was sent to different places in France to sell Kreuger's own holdings in Kreuger and Toll. M. Hultdt is alleged to have acted secretly for Kreuger in amalgamating the still independent match companies in France and Belgium. The police continue their investigations into the Kreuger defalcations, and a fifth Swedish subject, named Bredberg, has been arrested. This man had been living at Zurich since 1923, where he acted as the manager and accountant of five small subsidiary companies connected with the Kreuger and Toll group. An estimate of the Swedish losses in connection with the collapse of the Kreuger group gives the total Swedish holding in Swedish Match and Kreuger and Toll shares and debentures at Kr. 335 millions at Stock Exchange values on July, 1931. This estimate can only give a very rough idea of the Swedish investment as the original purchase prices and subsequent sales are left out of account. The loss of prestige which Sweden has suffered in consequence of the Kreuger frauds cannot be measured in figures.

Dunlop Accounts.—Dunlop ordinary units, always a sensitive market, improved from 7s. 9d. to 10s. 6d. on the issue of the report for 1931, which showed that although preference dividends had not been fully earned (thanks to higher taxation requirements), the company had more than maintained its liquidity, stock-in-trade having declined by £490,000, while British Government and other securities increased by £704,000, cash by £673,000, and net current assets by £565,000:—

The Dunlop accounts have increased in detail and clarity during recent years. The present report contains, not only the inevitable apology for reduced earnings, but a recital of the steps taken to meet them and the way in which every balance sheet item has been arrived at. The tyre business has necessarily been affected by a heavy reduction in world motor vehicle output and "replacement demand." The Dunlop companies in France, Germany and Japan, and the Dunlop Perdreau Company of Australia, nevertheless, maintained a healthy position, but the United States and Canadian companies encountered hard times. The parent concern has made full provision for its proportion of subsidiary losses, and transferred a further £1,000,000 from general reserve to special reserve, as a measure of prudence. In addition, £156,000 has been charged to general reserve against exchange losses arising out of the abandonment of the gold standard, though no credit has been taken for an increase in value of approximately £2,500,000 in the company's investments abroad. Stock-in-trade, a source of weak-

5/- nett.

ness more than once in the past, to-day is low and conservatively valued, and the company is not burdened by onerous forward contracts. The balance sheet itself is, without doubt, the most informative document published by any major British concern. Every species of asset and liability is separately given and arranged under its appropriate generic heading. Taxation reserve, for instance, is segregated from sundry creditors, the reserve for inter-company profits in subsidiary stock valuations is disclosed, and proposed dividends are treated as a liability, so that the profit-and-loss balance shows the net amount remaining in the business. The directors and accountants may next consider the possibility of publishing quarterly accounts and a consolidated balance sheet.

British Match.—The directors of this company, which holds all the ordinary shares of Bryant and May and J. J. Masters and Company, have already issued a reassuring statement to the effect that the concern has no holding of shares in Kreuger and Toll or Swedish Match, and that no loans have been made with these companies or any financial guarantees undertaken. The latest accounts should confirm favourable impressions as to the company's position. Revenue from investments has declined by a modest 5 per cent., and an unchanged ordinary distribution is fully covered:—

Year to April 30.	1930.	1931.	1932.
Revenue from investments	£ 506,993	£ 480,314	£ 455,917

‡ Included under "Expenses."
† Including £7,649 repayment of income tax in 1930, £4,210 in 1931 and £5,972 in 1932.

Goodwill stands in the balance sheet at £680,000. The position is liquid, cash having increased from £326,504 to £401,700. A continuous transfer audit has been performed during the year, and a certificate dated May 2, 1932, states that balances on the share registers as on April 30, 1932, agree in total with the number of shares issued as shown in the balance sheet. At £1½, the £1 ordinary shares yield about £5 8s. per cent., tax free.

Combined Pulp and Paper.—On Wednesday, May 4th, a City of London Special Jury, in the King's Bench Division, returned a verdict in favour of the plaintiffs in an action in which Combined Pulp and Paper Mills, Limited, claimed damages for alleged conspiracy, fraud and breach of duty, and repayment of dividends from certain parties. The company was formed in October, 1927, with a capital of £395,000. It was alleged that the defendants had represented, fraudulently, that the company's profits for the first year were £200,000, whereas, in fact, a loss was incurred. It was also alleged that on the basis of these representations they had issued a further £395,000 of capital at such premiums that they received over £600,000. Further allegations were that a dividend of just over 20 per cent. had been paid out of capital and that at the end of the second year a profit of £100,000 had been declared, whereas a loss had been incurred and all the assets had disappeared. The jury returned a verdict for the plaintiff company against the defendants, A. M. Oppenheimer, Sir Walter Townley, Adolph Goldsmith and Eugen Spier, assessing the damages in each case at £92,400—the amount of the dividend which had

been voted on the advice of the former directors. The jury awarded the plaintiffs £267,000 as against Bruno Philipp, whom Mr Justice MacKinnon described as the villain of the piece, and £24,400 as against Thomas Froude. In the case of Sir Henry Penson, the jury returned a verdict in his favour against the company. It was directed that any question against the firm of Messrs. Oscar Berry, Froude and Company should stand over. Judgment was entered on these lines, but a stay of execution was granted. As regards the legal ground for the verdict, Mr Justice MacKinnon stated that the jury had sent a message asking whether they should specify whether they found a verdict on the ground of fraud or wilful default, but that he had told them that in his view the distinction was immaterial.

Spillers Directors' Fees.—The sting of the latest report of Spillers, Limited, lies in its tail. The company, in the year to January 31st last, has completed the excellent recovery initiated during the previous twelve months. Profit has risen from a minus quantity of £170,000 in 1929-30 to £414,000 in 1930 and £549,000 in 1931-32, and the deferred shareholders this year are receiving a dividend of 10 per cent. after going dividendless since 1924-25:—

† For losses sustained by subsidiaries.

‡ Loss on sale and depreciation of investments.

§ After deduction of directors' extra remuneration: £5,417.

|| Before deduction of directors' proposed extra remuneration: £38,632.

The directors have tabled a resolution under which they will receive, in respect of the past year, a further £38,632 and a future maximum of £40,000, or £74,500 in all. The additional remuneration will be based on the dividends earned and paid on the deferred shares. The directors claim to devote the whole of their time to the business of the company, but a maximum remuneration of £10,643 to each of seven individuals is decidedly high. The cost of the additional remuneration will fall entirely upon the deferred shareholders, so long as the latter's dividends do not exceed 15 per cent. It would appear objectionable in principle to base additional directors' remuneration on the payment of dividends, so that potential conservatism in profits distribution must be associated with pecuniary sacrifice by the board.

Drastic Tin Restriction.—In an Investment Note in the *Economist* last week, we referred to the decision of the International Tin Committee to recommend to the four signatory Governments—Bolivia, Malaya, Dutch East Indies and Nigeria—a cut at the rate of 20,000 tons a year as from June 1, 1932, in allowable quotas, which would bring down the world production for the restricting areas to 90,000 tons per annum. The London Council of the Tin Producers' Association has now proposed a far

more drastic scheme. This provides for a further curtailment of production by way of entire suspension for two consecutive months in all the participating countries from June 1, 1932; or alternatively a restriction of the quota to 13½ per cent. of standard for the first three months, i.e., from June to August. Production thereafter under this plan will be resumed at the rate of 40 per cent. of standard and will continue on this basis until the price of tin averages £200 per ton per calendar month, when the quota will be advanced to 50 per cent. of standard. This scheme is conditional on the International Tin Pool's increasing its minimum selling price to £200 a ton. The quota of production is to be maintained at 50 per cent. of standard until the pool has realised one-third, namely, 7,000 tons, of the tin it holds, such releases to begin when the price has averaged £200 a ton for a calendar month with a quota running at 50 per cent. Should the price fall back below £200 a ton for a calendar month, the quota is to revert to 40 per cent. and further releases by the International Tin Pool will cease until the price has again averaged £200 per ton for a calendar month. The remaining two-thirds of the tin held by the Tin Pool will be released when the price of tin has been maintained at £210 a calendar month and the quota will be kept at 50 per cent. of standard until the Pool has been finally liquidated. The standard tonnage allotted to Malaya, Bolivia, Dutch East Indies and Nigeria under the quota scheme is 161,846 tons. 40 per cent. of the standard thus represents a rate of 64,738 tons. The present quotas are at the rate of 91,096 tons, and the 20,000 tons cut proposed by the International Tin Committee, if accepted by the four Governments, implies a reduction to 71,096 tons. The Tin Producers' Association are of the opinion that the sacrifices which this scheme calls for from the tin producers during the first three months will be fully recompensed by the higher price for tin which should be assured. It is believed that the production will be brought within the present rate of consumption, while there will be an appreciable reduction in stocks. The effect of this scheme has been to cause an immediate jump in the price of tin, the price on Thursday being £130, as compared with £117 per ton on Monday. Whether the price of tin can be run up to £200 a ton within the next twelve months by means of an arbitrary bureaucratic restriction of supplies appears on the face of it improbable, for it implies a buoyancy of demand which only a world recovery in trade will bring about.

An Oil Truce (?)—In a leading article, last week, we referred to the possibility of an advance in petrol prices, following upon the elimination of price-cutting in the British and European markets. We referred in particular to the negotiations for the purchase of the foreign properties of the Standard Oil Company of Indiana by the Standard Oil Company of New Jersey which would eliminate a most important source of price-cutting, and leave the Russian Oil Products and the Roumanian exporters as the only possible cause for future trouble. It is now announced that a conference is to be held in New York to discuss the world restriction scheme propounded by Mr Aug. Kessler (described in the *Economist* of March 26, 1932, page 695), at which the Roumanian and Russian representatives will be present. Whether any agreement can be reached regarding restriction on a world scale in accordance with Mr Kessler's plan is doubtful, but no doubt an opportunity will be taken to arrive at an agreement with the Russian and Roumanian producers regarding a quota of the export trade in the various markets. A report of the negotiations has already brought about a recovery in the oil share market.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies: Union Bank of Scotland, London and Lancashire Insurance, Scottish Union and National Insurance, Licenses and General Insurance, Equitable Life Assurance Society, Friends' Provident and Century Life Office, Anglo-American Debenture Corporation, Calcutta Tramways, and James W. Cook and Company. At the annual meeting of the London and Lancashire Insurance Company

Mr F. W. Pascoe Rutter referred to the burdens under which the country was suffering. When it was considered that our aggregate taxation amounted to no less than £16 7s. 1d. per head (50 per cent. more than that of France and 100 per cent. more than that of any other country), it must be clear that its prolonged continuance would be an arithmetical impossibility. Presiding at the annual meeting of the Scottish Union and National Insurance Company, Mr G. A. Connor pointed out that a very satisfactory feature of the balance sheet was that they had not found it necessary to provide for any depreciation in the value of the assets, any decrease in the market value of the company's sterling assets having been made good by the increase in sterling values of the company's holdings of American and Canadian dollar investments. At the annual meeting of the Anglo-American Debenture Corporation Mr R. S. Guinness said the fall in values during the past year had been heaviest in their United States holdings, which, however, represented only about 8½ per cent. of the total investments. The depreciation of their American securities was no less than 58½ per cent., against 12 per cent. for quotations in this country.

CAPITAL ISSUES.

Apart from the issue of Three per Cent. Treasury Bonds, which is dealt with on earlier pages, the week's new capital offerings were, with one exception, of an industrial or public utility character. The exception was the offer by the *Hull Corporation* of £1,000,000 4½ per Cent. Stock at a premium of ½ per cent. This was a trustee issue by a progressive borough with an outstanding debt representing about seven times the rateable value, of which two-thirds was in respect of productive undertakings. The *Scottish Power Company, Limited*, issued 600,000

The Bank has over 370 Branches in Africa, and Agents and Correspondents throughout the World. The closest touch with Trade and Industrial conditions is maintained, with special attention to Commercial and Credit Intelligence. This service is available to Exporters, Importers and others wishing to develop trade with South, East and Central Africa.

THE STANDARD BANK MONTHLY REVIEW is sent post free on application. It gives the latest information on all South, East and Central African matters of Trade and Commercial Interest.

6 per Cent. £1 Cumulative Preference shares at a premium of 8s. to repay a temporary bank loan and to finance expenditure on the Grampian Hydro Electric Works and other developments. The company is destined to play a leading part in the exploitation of Scotland's electric power resources in the future, and the shares are a promising and well-covered investment. The *Metal Box Company*, which issued Mortgage Debenture stock and Preference shares, is the head of a group which now supplies over half the British output of plain and decorated tin boxes and about 90 per cent. of the cans purchased by fruit and vegetable canners in Great Britain. Results have been somewhat affected by the current depression, but the company's tactical position should ensure it an adequate return in an industry with wide potentialities of future development. The cover for the debenture stock is satisfactory without being generous, while the Preference shares have a moderate margin of earnings. *Cadena Cafes*, which, since its inception of business at Bristol in 1894 has built up an important business with twenty-two branches in the South of England, has shown a steady rise in earnings, approximately proportionate to its increases in capital, during recent years, and has been only slightly affected by trade depression. The company has no debentures. The week's operations also included the preliminaries for placing £1,000,000 of *Wolverhampton Corporation* 4½ per Cent. Stock.

Public Offers.

Three per Cent. Treasury Bonds.—Issue of 3 per cent. Treasury bonds by tender at a minimum price of £97 16s. per cent. The bonds will be redeemable at par by means of annual drawings of not less than 10 per cent. Tenders must be for sums of £10,000 or multiples thereof.

Hull Corporation 4½ per Cent. Redeemable Stock, 1952-72. Issue of £1,000,000 stock at £100½ per cent. Trustees are authorised to invest in this issue. Unless previously cancelled by purchase or agreement, the stock will be repaid by the corporation at par on July 1, 1972, but the corporation reserve the right to redeem the stock at par on or after July 1, 1952, on three months' notice. The rateable value of the city is £1,593,061, and a rate of one penny in the pound will produce £6,175. The loan is required to discharge expenditure in connection with improvements.

Scottish Power Company.—Issue of 600,000 6 per cent. cumulative preference shares of £1 each, at 23s. per share. The company was incorporated in 1909, and owns the earlier issued capital of a number of Scottish companies. The authorised areas of supply of the operating companies cover approximately 5,900 square miles. The proceeds of the issue will be utilised in the repayment of a temporary bank loan, towards current expenditure on the Grampian company's hydro-electric works, and towards further development expenditure. The profits of the operating companies for the past three years, before depreciation, were £213,218, £271,635 and £332,605 respectively. Net profits of Scottish Power, before charging interest on loans, were respectively £150,610, £196,376 and £235,671.

Metal Box Company.—Issue of £600,000 5½ per cent. first mortgage debenture stock at £96 per cent. and 200,000 7 per cent. cumulative preference shares of £1 at 21s. per share. The company was founded as a private company in 1921, and after acquiring a controlling interest in a number of old-established businesses, became a public company in 1930. The company manufactures plain and decorated tins and cans for fruit, vegetables and other foodstuffs, supplying over 90 per cent. of the cans purchased by fruit and vegetable canners in this country. Certified net profits, before interest and income tax, were as follows: 1926-7, £211,825; 1927-8, £212,413; 1928-9, £236,896; 1929-30, £235,217; 1930-31, £158,409; six months to September 30, 1931, £83,795.

Cadena Cafes.—Issue of 50,000 ordinary shares of £1, at £2 per share. The company was incorporated in 1894 and carries on business at twenty-two addresses in various towns in the South of England. Certified net profits, after all deductions, amounted to £35,913 in 1928-9, £45,637 in 1929-30, and £41,131 in 1930-31 (53 weeks). Dividends of 20 per cent. on the ordinary shares have been paid for the past seven years.

Luton Water Company.—Sale by tender of such amount of consolidated ordinary stock as will realise a net sum of £34,828 19s. 5d., to bear a maximum dividend of 4 per cent. The company was incorporated in 1865, and supplies an estimated population of about 73,000. Net revenue for the year to December 31st last, after debenture interest, totalled amounts to £242,500.

Mid-Southern District Utility Company.—Sale by tender of £100,000 4 per cent. consolidated preference stock, minimum price £75 per £100 stock. The company is the statutory supplier of gas, water and electricity in and around Aldershot. The loan is required for the purpose of further widening the scope of the company's activities. Net revenue of the company for the year ended December 31st last was £67,201, of which interest on loan capital absorbed £17,363, leaving £50,338 to cover dividends on preference stocks which, including the present issue, amount to about £32,746.

Lowestoft Water and Gas.—Offer for sale by tender of £60,000 5 per cent. perpetual debenture stock, minimum price par. Net revenue for the year ended December 25th last was £27,196, after depreciation, covering interest on the loan capital, including the present issue, nearly four times.

Province of Buenos Aires 3-3½ per cent. Loan, 1906-9.—Tenders are invited for amortisation on July 1, 1932, of bonds of this loan to the aggregate nominal value of £46,960.

Wolverhampton Corporation.—Particulars of an issue of £1,000,000 4½ per cent. redeemable stock, 1952-62. The proceeds of the issue will be applied to borough improvement schemes. Trustees are authorised to invest in this stock. The stock will be redeemed at par on April 1, 1962, but the after April 1, 1952, on three months' notice. A rate of one penny in the pound produces £2,860. The whole of the issue has been sold to Messrs. Cohen Laming Hoare at 99½ per cent.

COMPANY MEETINGS, &c.

THE LONDON AND LANCASHIRE INSURANCE COMPANY, LIMITED.

CONDITIONS AT HOME AND ABROAD.

MR F. W. PASCOE RUTTER'S INTERESTING REVIEW.

The seventieth ordinary general meeting of the London and Lancashire Insurance Company, Limited, was held, on the 4th instant, at the company's offices, Chancery Lane, London.

Mr F. W. Pascoe Rutter, Governor and Chairman, presided over a full attendance of shareholders.

The notice convening the meeting was read by the Secretary, Mr Thomas Wallas.

The Governor, in proposing the adoption of the report and accounts, said: The past twelve months has been the most absorbing of any year which we can remember.

If the troubles under which the world is labouring have been occasioned by the nations themselves in their rivalries and jealousies, they can only be cured by a frank recognition of the facts, and by a generous disposition to contribute to the solution.

The distrust created has led nation after nation to close its doors, and to think only of itself. And from this vogue of insular nationalism, engendered by peace idealism, we have not been immune. We have been driven to put up a shield of protection. Tariffs have been wisely adopted, partly as an expedient to obtain revenue, and partly as a weapon of defence against the pronounced tariff systems of other countries. But, tariffs are a barrier to international trading, and, like the race in armaments twenty years ago, must be futile if everybody can play the same game to an unlimited degree. The salutary perturbation, therefore, of other countries, because of our Government's action, has been its best justification.

For ourselves, we cannot ever forget that we are not a self-contained country; that our revival and even our survival must depend upon our ability, with an open door and a free hand, to exploit and trade with the uttermost nations of the earth. For it is this freedom and enterprise that made Great Britain the country which it has been, and which we all hope it will be again.

OUR ADVANTAGES.

Through all this uncertainty and confusion, there emerge three things which have sustained us through the great crisis, and which have blazoned to the world that, with all our debts, and all our anxieties, we are still sane, and masters in our own house.

And the most important of these things was the great awakening, the realisation by the country of what had been in the minds of many for years before, namely, the dangerous precipice to which we had been trending. Then came the National Government, which it is to be hoped will remain a comprehensive and united body—at any rate, until we see daylight.

And the third cause for satisfaction with the happenings of the past twelve months was the great and spontaneous vote of the people, when they understood the gravity of our position, and when they saw that heroic treatment was necessary for a case that had become so critical.

Therefore, we have much to be thankful for. We have stemmed a dangerous tide. We have balanced our Budget. We have restored confidence in the country, and extorted the admiration of other countries.

So far so good. But, for anybody to think that we have thus regained prosperity, or that we have grounds for feeling content, would be a grave fallacy.

OUR BURDENS.

First, we have our external debts, complicated by the reverberating, and, so far, insoluble, problem of reparations. However this problem may be settled, we know that at present what we owe is definite, and has been increased by our going off the Gold Standard; and that what is owing to us has already been whittled down, and some of it may never be paid to us at all.

Still, if all reparations, as well as war debts, were being paid and were then extinguished, we should probably be the worst off in actual finance. But we should gain, as the whole World would gain, by a final settlement of this question which hangs over Europe like a great cloud.

Secondly, we must remember that we have our internal debt of £6,329,000,000. It amounts to £138 per head, and bear in mind that

that capita comprises not only working men and workless men, but women and children. The service of that debt may, by schemes of conversion, be reduced, but the saving in interest would come out of the pockets of the people. Whilst, therefore, the very conversion of itself would enhance the revival of confidence in our ability to pay our way, the only pecuniary benefit to the people would be by the Government correspondingly reducing direct taxation.

The enormous debt itself cannot really be reduced except by substantial annual contributions to the sinking fund, that is to say, out of the country's profit and loss account.

Nevertheless, any satisfactory conversion scheme must help the appearance of our Budget, and further stimulate the confidence of our own people and of those abroad.

Finally, we have a rate of taxation which is notorious—a dead-weight upon the efforts of industry to struggle on to a plane of even decent solvency. When you consider that our aggregate taxation amounts to no less than £16 7s. 1d. per head; that this is 60 per cent. more than that of France, and that it is quite 100 per cent. more than that of any other country on the face of the Globe, it must be clear that its prolonged continuance, if our country is to survive, is an arithmetical impossibility.

As I have ventured to indicate before, our invisible exports, upon which, as a world-wide trading country, so much of our success in the past has depended, are diminished, and are still diminishing. In 1929 they amounted to £484,000,000; in 1930 to £414,000,000; in 1931 to £301,000,000; and in 1932 they are bound to be still less. If then we are to reach the revival of prosperity for which we have so long been yearning, it is obviously essential that we must get down to fundamentals, which means the question of wages, or hours, or both, as the Trades Union Council must by this time have surely realized. Only by dealing with this question courageously may we feel assured of that impetus to our internal trade which in its turn should lead to an increase in our direct exports, the foundation of any trading country's livelihood. Already there are evidences of some tentative revival, especially in the stricken districts of Lancashire and Yorkshire, and we must fervently hope that the measure of tariff protection which has been enacted will prove more than a mere help to our revenue, and, indeed, a real benefit to our industries and exports.

ECONOMY.

But beyond this question of the stimulus to our internal trade, there is the further pressing need for economy if the staggering item in our Budget of £330,210,000 is to be successfully reduced. Just think of it. That that sum for Civil Services (that omnibus item which covers so much questionable expenditure) is nearly twice the entire total expenditure of the country's Government only twenty years ago. Even the year before the War, our aggregate budgeted expenditure was no more than £195,684,000.

Political economy is a phrase which seems to have lost its meaning. But there is no doubt about the simple word economy, which, having regard to our prodigal expenditure on social services, our enormous departments, and our swollen bureaucracy, is still crying out for further adjustment. We cannot and must not forget that so much of our present disease is due to the post-war extravagance of governments, municipalities and individuals, so that spending became not merely a habit, but a fashion. Much more, therefore, has to be done in this direction if we are to reach the goal of true solvency, and be able to reduce our unparalleled taxation, which is so grinding the faces of rich and poor alike, that the one is becoming unrecognisable from the other.

Our national account has been upset first and foremost by unwarranted wholesale extravagance—it can only be soundly rectified by determined wholesale economy.

EFFECT UPON INSURANCE BUSINESS.

Almost every event which happens in any country—whether political or economic—affects us somehow. Exchanges alone in their violent oscillations have been a serious factor, involving more intricate calculations than in any year which I can remember. But, through it all, we have had buoying us up the welcome fact that, by transacting as we do, such a business in practically every

quarter of the globe, a reverse in one direction is frequently offset by an advantage in another. The extraordinary thing is that, with conditions so dislocated and depression everywhere, we should still come out, not only on the right side, but with an account which in almost every feature must have given you considerable gratification.

The reduction of stocks and their market values have been aggravated by the further drop in the exchanges of Australia, New Zealand, Brazil, and Uruguay, following upon the 1930 attrition in Spain, Argentina and China.

On the other hand, we have the paradox of South Africa where I spent a couple of weeks in March. For, there, the adherence to the Gold Standard has undoubtedly largely influenced the serious decadence in trade—both exports and imports—of which there is evidence on all hands.

FEATURES OF YEAR'S RESULTS.

Our fire premiums for the year amounted to £3,040,001, or a reduction of £183,832, as compared with the previous year. The profit amounted to £345,319, or 11.3 per cent., against 10.0 per cent. in 1930.

Our accident business, with premiums of £2,196,863, showed a falling-off in volume of £161,479, and, with a slightly accentuated expense ratio, the profit was £77,766, or 3.5 per cent., against 3.6 per cent. in the previous year.

Accident business abroad has proved, as you will quite understand, very difficult in various countries, and, whilst at home, we have done quite well, we were not assisted by any additional profits accruing from the new Road Act, but rather the contrary, as we have found by experience that many of the cars and motor cycles which had not been insured were in many cases, from the expert view of the underwriter, really uninsurable.

Our marine business has again been not only satisfactory, but highly satisfactory. Had it not been for our abandonment of the gold standard in September last, there would have been an undoubted fall in our premium income, but the immediate, and continued, greater value of the dollar meant a corresponding increase in our marine premiums in the United States, and, of course, a corresponding increase in our liabilities, the main effect of which has yet to be encountered.

This dollar appreciation, therefore, solely accounts for the fact that our marine premium income for the year, at £1,296,045, showed a slight increase over the previous year. The loss experience was, fortunately, quite good, but there is an increase in the expenses of nearly 2 per cent., the whole of which may be put down to foreign taxation.

The net result is a profit of £200,558, or 15.5 per cent., against 14.7 per cent. in 1930. It will again be pleasing to you, as it is to me, to know that this profit has been derived from both our companies—the "Marine" and the "Standard," and we are continually indebted to Mr Darby and Mr Barnes for the success accruing from their judgment and work.

Thus we come to the total premium income of £6,532,909, which is a drop of £317,782, but still, less than the reduction in the previous year.

The total outcome of all these underwriting operations, after crediting, of course, the 40 per cent. reserve on the reduction in income, is a profit of £623,643, or 9.5 per cent., against 8.7 per cent. last year.

From this you will require to deduct British income tax belonging to 1931-32, namely, £157,916, which leaves a net surplus of £465,727, just £30,000 better than in 1930.

Our life business, conducted, as usual, through the medium of the "Law Union and Rock," has proved satisfactory.

Interest from investments has, after deducting the interest which we have to pay on outstanding debenture stock, yielded £502,442. The reduction is mainly due to increased income tax.

The total surplus for the year, therefore, after including the small amount from the fixed term account, and the life profit of £32,184, and after making all necessary deductions, was £1,001,855.

The dividend has been maintained at the handsome figure of 20s. per share, less income tax, to which it was raised last year.

INVESTMENT OF FUNDS.

The problem of the wise investment of your funds has been greatly accentuated during the past 12 months. For you will bear in mind that the five years ending 1929 were precisely those years when the whole country, and the whole world, seemed to have forgotten that there ever was a war, and came to the conclusion that the temporary phase of pseudo-prosperity was real and would last.

Of course, it was nothing of the kind, as 1931 rapidly revealed. We found ourselves at December 31st with a position where the valuation of our investments had to be made at almost the very bottom of the market. Hence, we have written off in the profit and

loss account, the sum of £240,000 to cover the depreciation in our Stock Exchange investments as they stood at the end of the year.

Since then, there has been a substantial recovery, especially in "gilt-edged" securities, which predominate amongst our investments. And, as a matter of fact, if our valuation had had to be made at April 30, 1932, instead of December 31, 1931, there would have been some appreciation, which would, therefore, not have occasioned any special treatment.

It will probably be welcome to you to know that, of all our Stock Exchange investments comprised in funds belonging to the shareholders, the percentage of our holding in ordinary stocks does not at the present moment exceed 1½ per cent.

That is practical evidence of the conservatism which has guided your directors during the difficult times through which we have been passing.

THE UNITED STATES.

We operate in the United States, not only in our own name, but through the intermediary of four subsidiary companies. The requirements of the Federal Government, and of many individual States, are exacting, and thus we have been required to deposit and otherwise invest in the country a very large amount, sufficient to more than provide for all our probable liabilities.

Hence, when we come to a period of such grave disturbance as the United States has been encountering during the past three years, one is necessarily exercised by the position and the outlook. For two years past, although our loss is nominal, we have made no money in the United States from our underwriting, and there is no indication of improvement in the experience this year. This will not at all surprise you, as it would be difficult to find any company which had been making money there during this period of stress and depression.

UNITED STATES INVESTMENT POLICY.

The investment policy pursued by American companies has been much more elastic than ours. Many of them anticipated continuous unchecked financial prosperity by putting a very large proportion of their holdings in ordinary and preferred stocks—investments which are most liable to fluctuation.

You will, therefore, be relieved to know that, even in prosperous times, we have consistently pursued a policy of caution. Consequently, we have not suffered through investments in ordinary stocks during the anxious industrial period through which the United States has been passing.

The whole of the depreciation which we are writing off, and even more, does come from the United States, and applies almost exclusively to what were regarded as "gilt-edged" securities. At the present moment, whilst the figures of our total investments are quite satisfactory, America shows a not unimportant depreciation.

UNITED STATES MORAL HAZARD.

Before I leave this transatlantic question, I might refer to a psychological difference in making a comparison between this country and the United States, a difference which has an important bearing upon the results of our operations under what seem to be almost identical conditions. Both the United States and Great Britain have been suffering, and yet, on the one hand, the insurance experience in this country, that is to say, the incidence of fire loss, has been quite satisfactory. In the United States it has been the exact reverse—even private dwelling-houses, especially when mortgaged, suffering from the prevalent mortality. The disparity between the loss experience in the United States and here at home, during precisely similar times of difficulty, is a testimony to the commercial honesty of our people.

Most of us have been surprised at the intensity and length of America's ordeal of depression. But anybody who knows America, with its vast possibilities, its resilience and its comparatively small debt, must feel convinced that some day—perhaps before long—violent fluctuations and probable spectacular recovery, but with before they can again settle down into their stride.

BANNER OF SOUND TRADING.

Through all this disturbance the business of insurance, &c., in its multifarious phases, has managed to continue to hold aloft the banner of sound and, in some cases, even prosperous, trading. If our accounts are any criterion, it is the one section of our invisible exports which has stood up against adverse conditions. And, whilst I am not an optimist as to the prospects of the next few years, believing, as I do, that the world is barely on the threshold of the solution which must eventually come about, I am sanguine that we shall hold our own and be able to still set an example of what can be done by British enterprise and by sound finance.

The Marquis of Reading (Deputy-Chairman) seconded the resolution, which was carried unanimously.

THE UNION BANK OF SCOTLAND, LIMITED.

GRATIFYING RESULTS—STRONG POSITION.

The annual meeting of the shareholders of this bank was held, on the 4th instant, in Glasgow, the Right Honourable Viscount Novar, K.T. (chairman of the board), presiding.

In submitting the directors' report, the Chairman referred to the eventful nature of the twelve months which had elapsed since their last meeting and reviewed the circumstances which resulted in the Bank of England's decision in September last to suspend gold payments. Some of them had doubted the wisdom of the return to the gold standard in 1925 without anything being done to rectify the disparity between wages in the sheltered and unsheltered trades, thus making it more difficult than ever to compete in the world's markets, but it was a matter for regret that they had been forced reluctantly to lose for the time being their anchorage to gold. Much had been said recently about the tremendous amount of harm caused by mal-distribution of gold and the wrong use to which it had been put by certain countries. At a time when there were many loudly proclaimed but extremely doubtful cures, it had to be remembered that the gold standard was all right so long as the rules of the game were observed, as had generally been the case prior to the war. Gold had then been used to settle international differences only and had not been used as a commodity to pay debts. Until that comparatively simple position was arrived at and accepted universally once more, it mattered but little what standard was adopted or whether currency and credit were "managed" or otherwise, as real world recovery would be well-nigh impossible.

The one good thing about the crisis of 1931 was that they had been forced before it was too late—but only when on the brink of disaster—to commence to put their house in order. It was a matter for congratulation that they had now a strong National Government divorced from party politics, but it was regrettable that so little had been done in the way of economy. While the May report was a most valuable document and had helped greatly in bringing the nation to its senses, it did not pretend to be the last word, and much more required to be done before we were in a really sound financial position. The noteworthy alteration in our fiscal system was also referred to, and the hope was expressed that this would result ultimately in freer trading conditions all round. It was now over 13 years since the Great War ended, and a weary world now waited for the political leaders to do now what must be done sooner or later; that is, make a final and reasonable settlement of reparations and war debts.

YEAR'S RESULTS.

Dealing with the affairs of the bank, the Chairman stated that, considering the difficult times through which they had passed, they had every reason to be gratified with the results of the year and with the strong position disclosed in the balance sheet. The events he had narrated briefly had been accompanied by abnormal changes in money rates, and they would appreciate how this added to the difficulties of management. Quite contrary to ordinary public opinion, high rates were not welcomed, nor were they profitable to banks such as theirs, and their profit at about £330,000 showed a moderate decline of £24,000. All bad and doubtful debts had been fully provided for, as usual, and the amount appropriated from inner reserves to complete that process was a very moderate one and appreciably less than the amount—£100,000—which, in view of the extremely uncertain outlook, they had thought it prudent to place to contingencies. There was not much change in the balance sheet figures, deposits showing a decrease of £828,000. Owing to depressed trading conditions and normal liquidation by their customers, loans and advances were lower by £673,000, but they had nevertheless continued to support liberally the various industries with which their clients were connected, and they had ample resources available for suitable financing when times became more propitious. The extremely strong position of the bank was illustrated by the fact that the total of cash on hand, money at call and Treasury bills, close on £10,000,000, represented 31 per cent. of their liabilities to the public, and, if their holding in British Government Securities were included, the percentage was over 57. During the year the bank had opened a number of branches, and in the course of a few weeks another branch in London would be opened in Kensington High Street, where an excellent site had been obtained.

The report was adopted and a dividend at the rate of 18 per cent. per annum declared.

After referring to the valuable services rendered by His Grace the Duke of Atholl, K.T., as chairman of the bank since 1921 and to the regret with which they had learned of his desire to be relieved of the duties of that office, Sir Ludovic J. Grant, Bart., moved that the Right Honourable Viscount Novar, K.T., be elected chairman of the bank, and this was unanimously agreed to.

FRIENDS' PROVIDENT AND CENTURY LIFE OFFICE.

CONDITIONS IN PAST YEAR.

MR HAROLD J. MORLAND'S REVIEW.

The annual general meeting of the Friends' Provident and Century Life Office was held, on the 4th instant, at the London head office, 7, Leadenhall Street, London, E.C.

Mr Harold J. Morland, M.A., J.P., F.C.A. (the chairman) presided, and, in the course of his address, said:—Fellow members,—The life assurances effected during 1931 were mainly taken out for the primary purposes of protection for dependants and thrift. There was a falling off in single premium assurances, and also in the larger policies issued in connection with financial transactions, to an extent which more than accounted for the decrease of £325,778 in the new business as compared with 1930. The total of £1,520,950 secured was larger than that of any year prior to 1928.

The mortality profit has been well maintained, and was, in fact, larger than in any previous year except 1930.

LIFE REVENUE ACCOUNT.

During the past year single premiums were only £17,148, which was £172,918 less than for 1930. The premium income derived from annual premiums increased by nearly £20,000, a satisfactory record, especially in view of the wastage of premium income arising out of the larger numbers of policies now being surrendered. This is one of the ways in which a life office is affected by a serious trade depression, and it may be of interest to give the following particulars:—

Year.	Number of surrenders.	Amount of cash paid.	Sums assured surrendered.
1929	424	£41,110	£195,600
1930	491	80,968	255,900
1931	585	102,958	370,360

INVESTMENTS.

If you will turn to the balance sheet you will see that the invested assets of over £7,750,000 have been placed in a variety of classes of holdings. The board has not restricted its investments to gilt-edged securities, but has deemed it justifiable to venture outside that category to the extent of the purchase of a certain proportion of debentures, preference, and even ordinary stocks of well-founded commercial and industrial undertakings. Realising the possibilities of considerable fluctuation in the quoted values of marketable securities, it has been the board's policy to place considerable sums in carefully selected mortgages in the United Kingdom and also in Canada.

The Stock Exchange securities showed almost without exception a considerable depreciation. Even British Government stocks were at lower prices than for many years past. On balance, the depreciation amounted to £386,024, which was 5.3 per cent. of the funds.

INTERIM BONUS RATE.

At the end of 1929 the bonus declared was on a higher scale than at any previous declaration since the present premium rates were instituted.

In our case there is no necessity to have a valuation prior to the end of 1934, which will be five years from the previous valuation at the close of 1929.

After careful consideration, and as a measure of precaution, the directors have made the decisions stated in the report as follows:—

(1) To defer the next actuarial valuation until December 31, 1934—that is, five years from the date of the last valuation.

(2) In respect of policies becoming claims during the year 1932 to declare the following interim bonus: £2 2s. per cent. per annum compound in respect of each year's premium paid for the years 1930 and 1931, but no further bonus in respect of any premium which may be paid during 1932.

After the close of this year the directors will decide, in the light of the conditions then prevailing, the rate of interim bonus to be paid during 1933.

CENTURY ACCOUNTS.

The accounts of the Century Insurance Company, Limited, are, as usual, appended to the accounts of the office.

The fire premium income was reduced by about £67,000 (nearly 20 per cent.), and amounted to £275,000. The reduction was almost wholly abroad, the home income being fully maintained.

The year 1931 was one of the most critical years in the experience of any of us, but assurance offices have emerged comparatively little affected. No body of co-operative investors is so solidly placed and has emerged from the test so successfully as the life office.

The revenue accounts and balance sheet and report of the directors were unanimously adopted.

THE EQUITABLE LIFE ASSURANCE SOCIETY.

REMARKABLE BUSINESS FIGURES.

The one hundred and seventieth annual general meeting of the Equitable Life Assurance Society was held, on the 4th instant, at the society's house, 19, Coleman Street, London.

Mr H. L. M. Tritton (the president) said that he was again able to report a satisfactory increase in the business transacted and to refer with pride to the remarkable results accruing to policyholders. The directors and the actuary had no hesitation in giving a certificate that in their belief the assets set forth in the balance sheet were in the aggregate fully of the value stated therein. There were, moreover, other margins in the accounts in connection with various items, and he hoped and believed that the accounts of the Old Equitable would never be without substantial margins.

New business had reached a figure of £1,297,300, an increase of £322,750 on 1930, a figure of new sums assured only once exceeded by the Equitable—namely, in 1810—when the new sums assured were just over £1,500,000. The premiums last year had been inflated by an exceptional amount of single premiums, but, even without that, the premium revenue was over £500,000, and he would emphasise the fact that that premium income was obtained without the payment of a single penny in commission—a material saving to policyholders in the "Old Equitable."

The statement of claims by death showed how extremely satisfactory life assurance with the Equitable was, even if a policyholder died in old age after paying premiums for many years. On the average each £1,000 of sum assured (payable only at death) during 1931 was increased to £2,443—a result of which they could be proud. There was one claim included in the list amounting to over £13,500, of which the original sum assured was £4,000. He would ask—was there any other office in the world that would have paid £13,500 for an original sum assured of £4,000? The endowment assurances should be just as much a source of pride to the members of the society. The average rate of bonus had been £2 2s. per cent. per annum of the sum assured—a wonderful rate, remembering that endowment assurances now maturing were effected before the war, and that during the time they had been in force the society had suffered depreciation and taxation due to the war.

The report was unanimously adopted.

THE LICENSES AND GENERAL INSURANCE COMPANY, LIMITED.

SUCCESSFUL RESULTS—GOOD DIVIDEND RECORD.

The forty-second ordinary general meeting of the Licenses and General Insurance Company, Ltd., was held, on the 4th instant, at the offices of the Company, Moorgate, London, Mr A. W. Ruggles-Brise, J.P., D.L. (Chairman), presiding.

The Chairman said that while 1931 was a difficult year to all engaged in commerce or finance, they had this comfort, that it presented no tragedies for the "Licenses," but, indeed, some items of comfort and satisfaction. The direct home income of the company did not suffer, despite the bad times, but was slightly enhanced. The profit for the year in the fire department amounted to £5,074, and was transferred to profit and loss. In view of the interest which continued to be centred on the United States of America, that land of big figures, he thought it well to reiterate that they still continued to hold aloof from the American market and saw no good reason to alter that decision. An almost unique position. With regard to management expenses, the policy of retrenchment had been continued—spending reduced by nearly £6,000—and the fact that the ratio of working expenses throughout, including commission, amounted to no more than 43.5 per cent. on the reduced income was satisfactory and compared favourably with the experience of other offices.

The total of assets showed a reduction on the previous year, and definitely coincided with the reduction of liability, but, as a rough and ready test of value, the ratio of total assets to premium income in 1930 was 141.9 per cent., and for this year it stood at 146.3 per cent. It was interesting, he said, to note that the company commenced paying a dividend as far back as 1896, and that the total amount of dividend payments since that time slightly exceeded a quarter of a million pounds. On an original issued capital of £70,000, this surely created a record of which they all might well be proud.

In conclusion, the Chairman said their direct income since the year closed showed consistently the maintenance of the business. Indeed, one might almost venture to express the presence of an improvement, the first three months' figures being quite satisfactory.

The report was unanimously adopted, and a final dividend of 14 per cent., less tax, making 20 per cent., less tax, for the year was declared.

ANGLO-AMERICAN DEBENTURE CORPORATION, LIMITED.

THE CRISIS AND ITS SOLUTION.

The forty-second ordinary general meeting of the Anglo-American Debenture Corporation, Limited, was held, on the 4th instant, at Winchester House, Old Broad Street, London.

Mr Richard S. Guinness (the chairman) said that he thought shareholders would not be dissatisfied with the results now submitted. The revenue from investments showed a fall of a little over £17,000, or about 10 per cent., but nevertheless the income received of £155,392 showed a return of 6½ per cent. upon the book cost of the investments. Last year they paid a dividend of 15 per cent., placed £25,000 to reserve, and increased the carry-forward by nearly £2,200. This year it would have been possible to repeat that dividend, but the directors had to bear in mind not only the past results of the company but also the prospects for the coming year.

Only a few weeks ago the financial markets of the world received another shock by the disclosures of irregularities in the affairs of the Swedish Match Company and its subsidiaries, but he was glad to say that this company had no interest, and had not had for some time, in any of the companies. As might be expected, the fall in values during the past year had been heaviest in their United States holdings, which now, however, represented only about 8½ per cent. of the total investments. The depreciation was no less than 58½ per cent., but many of the prices quoted for American securities seemed to be quite out of relation even with the very depressed conditions ruling in that country. The same applied to a smaller extent to the quotations in this country, where, however, the fall was only 12 per cent. With any spark of recovery the well-seasoned list of investments which they held should substantially improve both in assets value and in income production, but, until the world's lost or misplaced capital had been readjusted—whether it be Government debts, inflated industrial or real estate capitalisation, or paper finance—there was no hope of recovery. The world was calling out for such readjustments, not by conjuring tricks of currency or tariff manipulations, but by world-wide reconstructions—by the methods, in fact, used by our fathers for solving financial and political crises.

The report was unanimously adopted.

CALCUTTA TRAMWAYS COMPANY, LIMITED.

SUCCESS OF NEW ROLLING STOCK.

The ordinary general meeting of the Calcutta Tramways Company, Limited, was held, on the 3rd instant, at 1 Queen Victoria Street, London.

Mr John G. B. Stone, the chairman, in the course of his address, said: The traffic receipts, £372,712, show a decrease of £5,248, of which £1,953 is attributable to Calcutta and £3,295 to Howrah. During the first three months of 1930 the "civil disobedience" movement had not affected operations to any great extent. It was not till April, 1930, that there was any serious falling-off in our earnings. Omnibus competition, judged by the number of vehicles licensed, was certainly as intense as during the previous year, but during the closing months the tramcars were able to attract a larger proportion of the traffic offering, due to the running of a quicker and more regular service coupled with the putting into operation in October last of the first instalment of the new rolling-stock. This is shown in the distinct improvement in the number of passengers carried, the total increase being 10½ millions, or over 15 per cent. on a 5½ per cent. increased mileage.

Revenue expenditure in respect of the tramways amounted to £248,603, a decrease of £2,747, notwithstanding the increased motor omnibuses, £4,744, there remains £122,816, out of which £11,727 interest and dividends received, there remains £79,543, leaving £25,180. Adding £5,499 brought forward, there is £30,679. The directors recommend a dividend on the ordinary shares of 3½ per cent., less income tax, carrying forward £6,179.

As regards our motor omnibuses we have been able to dispose of a few at fairly reasonable prices and we have dealt with the remainder by writing off the total cost, £93,265, against the depreciation fund. The policy in dispensing with the motor omnibus services has been fully justified by the improved tramway results. This improvement continues, the total tramway receipts for the current year to date showing an increase of £2,073 compared with the combined tramway and omnibus receipts for 1931, and of period.

We can only again express our confidence that with the return of normal conditions the tramways will maintain their position as the cheapest and most reliable form of transport for the city. The report and accounts were adopted.

SCOTTISH UNION AND NATIONAL INSURANCE COMPANY.

SUCCESSFUL RESULTS IN A DIFFICULT YEAR.

ANOTHER LIFE BUSINESS RECORD.

Mr G. A. Connor, chairman, presided at the 107th annual general meeting of the shareholders of the Scottish Union and National Insurance Company, held at Edinburgh on May 4, 1932. In moving the adoption of the report and accounts for the year 1931, he stated that, notwithstanding the disturbing conditions caused by the world-wide economic collapse, the life department of the company's business had continued to forge ahead. For the fourth year in succession all previous records have been broken. Another satisfactory feature is the reduction in claims by death of nearly £29,000, which follows a reduction of over £72,000 in the preceding year.

FIRE ACCOUNT

The fire account is much less satisfactory than we have been accustomed to in recent years. The serious fall in our income in 1931 of some £156,000 is mainly attributable to our operations in the United States of America. This has been occasioned by the great depression prevailing in that country. We cannot be forgetful, however, that up till the year 1930 we had for a long period of years a favourable experience in our American business, and we are satisfied that when normal times do return we can look forward to a repetition of good results. The total fire losses of the company, including contributions to fire brigades, show an increase of nearly £18,000. The amount transferred to the profit and loss account from the fire account is approximately £68,000. The fire insurance fund is 119 per cent. of the year's fire premiums. It is somewhat early to predict the results of the operations in the fire department for 1932, but I am pleased to say that the fire losses to date this year are considerably less than those experienced during the corresponding period of last year, this experience being largely due to a reduction in the American losses.

ACCIDENT, EMPLOYERS' LIABILITY AND MISCELLANEOUS ACCOUNTS.

The accident, employers' liability and the miscellaneous accounts together showed premiums amounting to over £255,000—an increase over the previous year of £4,000. The profits realised and transferred to the profit and loss account, although not quite up to those of the previous year, amount to the substantial sum of over £30,000.

MARINE ACCOUNT.

As regards the marine account, the premiums for last year show an increase of £4,000 over the previous year, but the losses are down by approximately £27,000. A sum of £30,000 (i.e., £10,000 more than in the previous year) was transferred to the profit and loss account.

PROFIT AND LOSS ACCOUNT.

In the profit and loss account it will be observed that £20,000 has been applied to reduce the book value of house property in the balance sheet and £50,000 has been transferred to a contingency fund. This latter item the directors considered it prudent to set up in view of the uncertainty in foreign exchanges throughout the whole world, but from time to time may be applied to other contingencies which may arise. After payment of the dividend

Banking in Finland

CAPITAL AND RESERVES:

(HELSINGFORS), FINLAND

Established 1889.

this year, the carry-forward is fully £309,000. This sum represents more than two years' dividends at the present rate.

SATISFACTORY VALUE OF ASSETS.

It will be seen from the balance sheet that the assets exceed £15,680,000, being £36,000 more than the total assets of the previous year. A very highly satisfactory feature of the balance sheet is that we have not found it necessary to provide for any depreciation in the value of the assets. Any decrease in the market value of the company's sterling assets has been made good by the increase in the sterling values of the company's holdings of American and Canadian dollar investments.

JAMES W. COOK AND COMPANY, LIMITED.

DECREASED PROFITS DUE TO DIFFICULT CONDITIONS.

YEAR'S OPERATIONS REVIEWED.

The thirty-fifth annual general meeting of James W. Cook and Company, Limited, was held, on the 29th ultimo, at 130-135, Minorities, London, E.C., Mr W. J. Clarke (chairman and managing director) presiding.

The Chairman, in moving the adoption of the report and accounts, said that at the last annual meeting he was careful not to indulge in any prophecy as to the future, and he was glad that was so, for the year under review had been one of continued difficulty. The result of it was shown in their decreased net profit, and that decrease was very largely due to the universal crop shortage of one of the articles they handled, resulting in a quicker sale after the crops were harvested and with consequent heavy decrease in the rent income they were able to secure for storage.

Their lighterage department had maintained itself during the past year, but here they suffered from the heavy ratio of wages to total expenditure, which became more difficult to maintain as world conditions were making competition keener and keener.

Referring to their subsidiary companies, he said the tanker fleet of the Bulk Oil Steamship Company, Limited, had been kept fairly employed during the past year. With regard to their other subsidiary, Eastern Roadways, Limited, they were making progress and had gathered together a good business in a short space of time. Here they were pursuing the same sound method of using all available profits for writing down and strengthening their fleet of lorries, and in a few years they should be able to reap the reward of their enterprise by receiving definite benefit from their activities.

The report was unanimously adopted, and a dividend at the rate of 15 per cent. per annum for the past half-year on the ordinary shares, making 10 per cent. for the year, less income tax, was declared.

LAW UNION AND ROCK INSURANCE COMPANY, LTD.—On April 28th, Mr James Stirling, F.F.A., secretary and actuary of the Law Union and Rock Insurance Company, Ltd., retired on pension with the best wishes of his friends and colleagues. Mr Stirling joined the Scottish Union and National in 1882 and went to the Scottish Imperial in 1897 as secretary, subsequently becoming manager and actuary of that company. In 1905 he was appointed sub-manager of the Law Union and Crown, now the Law Union and Rock, and became secretary and actuary in 1920. On the retirement of Mr James Stirling, the directors of the Law Union and Rock Insurance Company, Ltd., have appointed Mr A. H. Shrewsbury, F.I.A., secretary and actuary of the company. Mr Shrewsbury, who was formerly on the head office staff of the Royal Exchange, was actuary of the British Equitable from 1925 until October, 1931, when he joined the Law Union and Rock as an assistant secretary.

Government Returns, &c.

NATIONAL ACCOUNTS.

The total ordinary revenue for the week ended April 30, 1932, amounted to £7,885,000 against ordinary expenditure of £7,954,600. After allocating £505,000 to Sinking Fund and having allowed for an increase in Exchequer Balances of £603,696, the operations for the week, as shown below, decreased the National Debt by £29,000 to £7,590,842,000:—

OIL OUTPUTS.

BRITISH CONTROLLED OILFIELDS, LTD.—Production for the week ended April 20th:—Venezuela, 38,858 barrels; Trinidad, 35,490 barrels; total, 74,348 barrels. Production for the week ended April 27th: Venezuela, 38,335 barrels; Trinidad, 40,868 barrels; total, 79,203 barrels.

LOBITOS OILFIELDS LIMITED.—The production of the Peruvian Company for February is cabled as 21,701 tons. The production of the Peruvian company for March is cabled as 23,406 tons.

THE MEXICAN EAGLE OIL COMPANY, LIMITED.—Production for the week ended March 5, 1932, was 242,000 barrels. Production for the week ended March 12, 1932, was 239,000 barrels. Production for the weeks ended March 19 and 26, 1932, was 241,000 barrels and 235,000 barrels respectively. Production for the week ended April 2, 1932, was 236,000 barrels. Production for the week ended April 9, 1932, was 248,000 barrels. Production for the week ended April 16, 1932, was 248,000 barrels. Production for the week ended April 23, 1932, was 260,000 barrels.

Commercial Reports.

MARKET SUMMARY.

In view of the continued deterioration in the international economic situation, coupled with a progressive shrinkage in the demand for raw materials, the movement of prices is still in a downward direction. With the exception of tin, whose advance has been caused by the probability of a further drastic restriction in supplies, non-ferrous metals were weak in New York. Rubber has been a little steadier but cotton slumped heavily, following the recommendation of the American Cotton Advisory Bureau to the Farm Board to adopt a sales policy in regard to the stabilisation holdings. Among cereals, wheat, maize and rye all show a decline on the week. Coffee and cocoa showed some improvement, but sugar was again cheaper owing to the small demand from American refiners. Sterling quotations, which lend themselves to grading and therefore to international arbitrage, moved in sympathy with gold prices, while others—particularly dairy produce and meat—continued to decline. According to various reports from industrial centres, the coal trade is increasingly hampered by foreign import restrictions, while iron and steel has so far made little headway. The fall in the raw material has dislocated business in cotton manufactures. The wool trade is still fairly active, while activity in the rayon trade, though slightly smaller than at the beginning of the year, is still satisfactory.

THE COAL TRADE.

SHEFFIELD.—The South Yorkshire coalfield is experiencing a full share of the grave difficulties suffered by the coal industry which were outlined in the House of Commons this week. The position has been growing steadily worse since the beginning of the year. The problem of the export trade is the scarcity of forward contracts and a shrinking of deliveries. Prices are weaker for best steams, although still quoted at 15s. 6d. to 16s. f.o.b. Industrial requirements are also below normal, and the proximity of summer prices is responsible for quietude in house coal. Best South Yorkshire house is quoted at 22s. and 22s. 6d. at pits. Business is far from brisk in furnace coke at 12s. to 12s. 6d. at ovens.

GLASGOW.—The Scottish coal trade is still without any encouraging feature, new business continuing on disappointing lines, with prices just steady for the most part. Screened steam coals are slightly firmer for shipment from Fife and the Lothians, and among nuts washed doubles are in rather better demand. Export business is poor, with forward business almost at a standstill. Current quotations for the shipping trade are approximately as follows (f.o.b. district ports): LANARKSHIRE.—Ell best, 14s. 3d.; splint best, 15s. 6d.; splint second, 14s. 3d.; navigation, 15s.; navigation second, 14s. 6d.; Hartley, 15s.; steam, 13s. to 13s. 3d.; trebles, 11s. 6d.; doubles, 9s. 9d.; singles, 8s. 9d.; pearls, 8s. 6d.; dross, 8s. 9d. FIFE.—Screened navigation, 16s. 6d.; first-class steam, 11s. 9d.; third-class steam, 11s.; trebles, 11s. to 13s.; doubles, 10s. to 10s. 6d.; singles, 8s. 9d.; pearls, 8s. 6d. LOTHIAN.—Prime steam, 11s. to 11s. 6d.; secondary steam, 10s. 9d. to 11s.; trebles, 11s.; doubles, 9s. 9d. to 10s.; singles, 8s. 9d. to 9s.; pearls, 8s. 6d.; AYRSHIRE.—Unscreened navigation, 16s.; jewel, 16s. 6d.; steam, 12s.; trebles, 12s.; doubles, 10s.; singles, 9s. 9d.; pearls, 9s.; dross, 9s.

CARDIFF.—There has been no improvement this week in the state of business on the Cardiff coal market, and both the docks and the collieries have been only partly employed. The dock returns of the Great Western Railway Company show that on Wednesday less than 50 per cent. of the tips at Cardiff, Newport, Port Talbot and Swansea were working, while from all the steam coal districts of the coalfield temporary stoppages have been reported. Prices have been nominally unchanged, but inquiries have been received from Paris to the effect that the French Government is contemplating further restrictive measures on imports. The only gratifying feature of the situation is that the contract commitments of the collieries and exporters are fairly large, and the Customs returns for the month of April give total foreign shipments of 1,433,377 tons, compared with 1,335,140 tons in March, and with 1,531,853 tons in the corresponding month last year. The following are the current approximate quotations: Best Admiralties, 19s. 6d.; Black seconds, 18s. 9d. to 19s. 4d.; best dries, 18s. 6d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steams, 13s. 6d.;

cargo smalls, 11s. 6d. to 12s. 6d.; coking smalls, 13s. 6d. to 13s. 9d.; anthracite, best large, 36s. to 38s. 6d.; Red Vein, large, 22s. 6d. to 27s. 6d.; machine-made cobbles, 40s. to 48s. 6d.; French nuts, 40s. to 48s. 6d.; stove nuts, 39s. 6d. to 43s. 6d.; rubbly culm, 8s. 3d. to 8s. 9d.; foundry coke, 32s. 6d. to 35s.; patent fuel, 19s. to 19s. 6d.; pitwood, ex ship, 18s. 9d. to 20s. 3d.

IRON AND STEEL.

MIDDLESBROUGH.—The demand for Cleveland iron continues slow, but the position is regarded as satisfactory, writes our correspondent, and a gradual improvement is confidently anticipated. The present make barely covers current requirements, and stocks are very low. Consumers are still holding off the market, and purchases do not extend more than a month or two ahead, but the market is being closely watched, and a change may occur very quickly. Possibly the fact that makers are able to make substantial concessions to Scotch consumers has something to do with local users holding back, but these concessions may be reduced or withdrawn altogether at any time, as the competition of other irons for the Scottish trade is not now so keen. There was a firm tone at the weekly market on Tuesday, but the business transacted was not of large volume, and consisted of moderate parcels to home consumers for early delivery. Official prices were unchanged, viz.:—No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; and No. 4 forge, 57s., f.o.b. or f.o.t. In hematite, there is also very little forward buying, but sales of prompt lots are more numerous, and a further cargo of 1,000 tons has just been despatched to South Wales, which is a favourable feature, and gives encouragement to the hopes that this business may extend. Mixed numbers for early delivery are firm at 63s. 6d. per ton, but more is asked for forward, according to period. In the finished trades, more business is coming to hand in some departments, and indications point to a steady improvement all round. Prices for steel under the rebate scheme are unchanged at £8 15s. for plates; £8 7s. 6d., angles; and £8 15s., joists. Other products are: Iron Crown bars, £9 15s.; heavy steel rails, £8 10s.; 24-gauge galvanised corrugated sheets, £10; and 24-gauge black sheets, £8 5s., all for home use. There is no change in the ore market. New buying is still suspended, and deliveries against contracts are on a small scale. Best rubio is nominally 15s. 6d. c.i.f., and the freight Bilbao/Middlesbrough is about 4s. 9d. Imports of all kinds of ore into Middlesbrough during April totalled only 29,767 tons, against 38,617 tons in March. Coke remains in plentiful supply, and ordinary blast-furnace qualities can be obtained at 15s. 6d. delivered works. The number of furnaces in operation in the district remains at seventeen.

SHEFFIELD.—Conditions in the iron and steel branches fail to improve; in some sections sales and output have declined further. Tariff changes and uncertainties are militating against the placing of new business, and the requirements of the principal users of iron and steel remain far below the normal level. Specifications from railway, shipbuilding and engineer trades are disappointing. The only active sections are for stainless steel, alloy steels, cold rolled strip, motor parts and certain classes of tools. Improvements in trade resulting from tariffs and the position of sterling have not come up to expectations. Lincolnshire makers, however, seem confident of an early improvement in the demand for crude steel. Local firms are pressing

such a poor demand for shipbuilding material. Most branches of the iron and steel trades in Glasgow and neighbourhood are quiet, including tube makers, re-rollers of light bars, &c., and sheetmakers. The latter, who have on the whole been better employed than most branches during recent months, are maintaining a steady home trade, but export business is not quite so satisfactory.

CARDIFF.—Since the withdrawal of the minimum price, quotations for tinplates have declined, and on the Swansea Metal Exchange on Tuesday they ranged from 14s. 6d. to 15s. per basis box. Business was comparatively quiet, and shipments last week totalled only 87,715 boxes, compared with 127,792 boxes the previous week, and 96,752 boxes in the corresponding period last year. Welsh bars are quoted at 95s. per ton net, and foreign bars at 82s. to 84s. per ton delivered. Galvanised sheets are easier at from £9 5s. to £9 7s. 6d. per ton f.o.b. for corrugated's in bundles.

OTHER METALS.

TIN.—The possibility of a two months' "shut-down" from June 1st on the lines advocated by the Tin Producers' Association, coupled with a further turn of the restriction screw, caused a sharp recovery in tin prices. It must be remembered, however, that at £126 per ton, the sterling quotation is still about £3 below the average of March last. In New York the metal was quoted at 22 cents per lb. on Wednesday, against 19.45 cents per lb. a week ago and 19.25 a month ago. Wednesday's official closing quotations in London, in terms of sterling for "standard" cash at £126 to £126 5s. per ton, compares with £114 10s. to £114 15s. on the corresponding day last week. Stocks in London and Liverpool at the end of last week, at 33,221 tons, show an increase of 220 tons on the week.

COPPER.—In the absence of any improvement in demand the market in copper was dull and prices remained weak. On Wednesday, "Domestic" spot was quoted at 5½ cents per lb. in New York, against 5½ cents a week ago, and 5½ cents a month ago. Wednesday's official closing price for "standard cash" in London, in terms of sterling, at £30 3s. 9d. to £30 6s. 3d., compares with £30 5s. to £30 7s. 6d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 20,635 tons, show a decrease of 336 tons, while stocks of rough copper, at 769 tons, are unchanged.

LEAD.—The market in lead, though inactive, was steady, as holders were loth to make concessions. In New York the metal was quoted at 3.00 cents per lb. on Wednesday, against 3.00 cents a week ago, and 3.00 cents a month ago. Wednesday's official closing quotation for "soft foreign" in London, in terms of sterling at £11 13s. 9d. per ton for shipment during the current month, compares with £11 12s. 6d. on the corresponding day last week.

SPELTER.—Although there was a further falling off in demand in the United States, the market in London was active, and prices show a slight rise on the week. Wednesday's quotation in New York, at 2.50 cents per lb., compares with 2.60 cents a week ago and 2.80 cents a month earlier. Wednesday's official closing quotation in London, in terms of sterling for "good ordinary brands," was £13 per ton for shipment during the current month, against £12 10s. a week ago.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals the quotation for aluminium remained unchanged, at £95 per ton, while nickel advanced from £220-£225 per ton to £225-£230 per ton. Foreign antimony declined from £26-£26 10s. per ton to £26 per ton. Quicksilver was quoted at £16 per flask, against £16 10s.-£16 15s. a week ago. Platinum was maintained at £10 11s. per ounce.

TEXTILES.

THE COTTON TRADE.—**Liverpool.**—Imports for the week April 28th to May 4th (inclusive) are 43,898 bales, of which 21,576 are American, 53 Peruvian, 138 Argentine, 12,511 Egyptian, 2,326 African, 6,097 East Indian and 1,197 sundries.

Manchester.—Depressing reports have been given out in the Manchester market during the past week regarding the amount of business done in yarn and cloth. Owing to the easier tendency in raw-cotton prices, buyers have been content to look on, and it is only in isolated instances that business has been attempted. The turnover in piece-goods has been on a comparatively small scale. The usual styles of light bleaching fabrics have been in request for India and occasional transactions have taken place for Karachi and the up-country districts. There has been a little more price testing in dhooties for Calcutta, but Madras and Bombay have given no support worth mentioning. Only a scrappy sort of trade has been done for China and Hong Kong. Small transactions have been recorded for the remaining minor outlets. Manufacturers' order lists continue to run down. The turnover in American yarns has been below the output. Margins remain unsatisfactory. In the Egyptian section stocks are being kept down by the curtailment of production scheme. There has, however, been increased price irregularity. The general trade outlook remains very uncertain, and it is disappointing to record that no general improvement is in sight.

THE WOOL TRADE.—**Bradford.**—Since the reduction of the import duties on yarns and piece-goods a somewhat pessimistic tone has developed in Bradford, but, writes our correspondent, this has been due more to unrealised expectations than to any reversal in the prospect for wool. Indeed, there are many firms who still have quite as much confidence as ever in merinos, and who are looking for a maintenance of values for anything above 50's quality. Fine crossbreds and average merinos are the most popular qualities to-day, and as the Australian season is drawing to a close, there cannot now be any further big quantity of good combing types. Firms anxious to buy raw material for standard merino tops have no big selection to work upon. Several of the buyers for the big importing firms have practically finished for this season, and it is gratifying to find the end so near with such firmness in prices as cable information from Sydney and elsewhere reveals. Crossbreds are still a disappointing proposition so far as visible consumptive requirements are concerned. The chief consolation here is that the wool is very cheap, and it is understood that some further purchases of 40-44's quality. So far as prices are concerned, the top market is no worse than before the lower duties came into force, but only a small amount of new business is being done in either merinos or crossbreds. Spinners are complaining about increased short time, due to the unwillingness of manufacturers to take up contracts.

THE GRAIN MARKETS.

WHEAT.—Nothing has happened to alter the international wheat situation during the past week. Prices moved within narrow limits, under the influence of varying crop reports. On balance, Chicago quotations show a slight drop on the week, which was occasioned by the improvement in climatic conditions in North America and in Northern Europe and by a temporary decrease in Continental buying. Another adverse factor was the weakening tendency of Stock Exchange values in New York and in London. The British wheat crop, though still backward in growth, has benefited by the recent improvement in weather conditions. On Wednesday, "May" futures were quoted at 54 cents per bushel in Chicago, against 56½ cents on the corresponding day last week, and 56 cents a month ago. Quotations in London, Wednesday: No. 1 compared with 33s. 6d. a week ago; No. 2 Northern Manitoba, as Vancouver, ex ship, 29s. 6d., against 30s. 9d.; No. 3 Northern Manitoba, Vancouver, ex ship, 28s. 6d., against 29s. 9d.; Australian, ex ship, 28s. 3d. to 28s. 9d., against 28s. 6d. to 29s. 6d. a week ago.

WHEAT FLOUR.—Business in flour has been a little more active. North American shipments, at 213,000 sacks, showed an increase of 38,000 sacks as compared with the previous week. Of this total, 61,000 sacks have been consigned to Europe. Quotations in London, Wednesday: Straight run, delivered country, 26s. per sack 25s., against 25s. Manitoba patents, ex store, 24s. 9d. to 27s. 9d., against 24s. 9d. to 27s. 9d.; and Australian, ex store, 20s. 6d. to 22s., against 20s. 6d. to 22s. a week ago.

BARLEY.—Demand for feeding barley in this country and on the Continent has been on a small scale, and quotations gave way a few points. On Wednesday, "May" futures were quoted at 39½ cents per bushel in Winnipeg, against 41½ cents last week and 41½ cents a month ago. Quotations in London, Wednesday: "English feeding," f.o.r., per 448 lbs., 28s., as compared with 28s.; Russian, landed, 24s. per 400 lbs., against 24s. 6d. a week ago.

OATS.—Although Argentina continues to export substantial quantities of oats, the market has remained firm. "May" futures, which last week stood at 22½ cents per bushel in Chicago, sold at 22½ cents per bushel on Wednesday this week, against 24 cents a month ago. Quotations in London, Tuesday: "River Plate," landed, 19s. per 320 lbs., as compared with 19s. 3d. last week; "River Plate," ex ship, 18s., against 18s. 3d.; "Chilean White," landed, 26s., against 26s. a week ago.

MAIZE.—Though maize is still in good demand, particularly in Continental countries, the increase in shipments from Argentina caused a slight weakening in prices. Wednesday's quotation in Chicago for "May" futures, at 31½ cents, shows a decrease of ½ cent on last week, and a fall of 5½ cents as compared with the "Plate," landed, 21s. 3d. per 480 lbs., compared with 22s. last week; "Plate," ex ship, 20s. 3d., as against 21s.; "Plate," May, was quoted at £6 per ton, against £6 a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1931-32, 1930-31, 1929-30, 1928-29:—

	1931-1932.	1930-1931.	1929-1930.	1928-1929.
Estimated sales of home-grown wheat—	Owts. 123,779	Owts. 101,987	Owts. 83,867	Owts. 132,984
1 week to April 30	2,885,035	4,141,350	8,317,585	8,874,130
35 weeks to April 30				
Average price of English wheat per cwt.	s. d. 6 0	s. d. 5 7	s. d. 8 11	s. d. 9 11

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1928 to 1931:—

Weeks ended	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
Apr. 23, 1932	Owts. 121,632	Owts. 27,186	Owts. 25,794	s. d. 6 0	s. d. 7 10	s. d. 7 6
Apr. 30, 1932	123,779	16,908	29,350	6 0	7 5	7 7
Apr. 28, 1928	278,138	56,229	37,442	10 5	11 1	12 2
Apr. 27, 1929	168,682	35,975	39,684	9 11	10 0	9 9
May 3, 1930	161,749	48,855	21,810	9 0	7 10	6 8
May 2, 1931	95,326	22,081	38,327	5 5	7 1	6 3

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks with comparative figures for 1930:—

NEAREST FUTURE.	Jan. 2, 1930.	Jan. 2, 1931.	May 6, 1931.	Jan. 4, 1932.	April 27, 1932.	May 4, 1932.
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.	148½	56½	62½	62½	62	60½
Chicago (No. 2 Winter) —Cents per 60 lb.	130½	79½	82½	55½	56½	54

The visible supply of wheat in Canada, at 65,634,000 bushels, shows an increase on the week of 785,000 bushels. Supplies a year ago stood at 61,279,000 bushels.

OTHER FOODS.

SUGAR.—In the absence of an expansion in the demand from refiners in the United States, the pressure of holders to realise raw sugar had a depressing influence on the market. "May" futures in New York were quoted at 0.51 cent per lb. on Wednesday, against 0.58 cent per lb. a week ago, and 0.72 cent per lb. a month earlier. Wednesday's sales of "raws" include "May delivery" at 4s. 2½d. per cwt., against 4s. 5d., and "December," at 4s. 8½d. to 4s. 9d., against 5s. 1d. to 5s. 1½d. on the corresponding day last week. The movements of raw sugar in London and Liverpool during last week are set out in the table below:—

	Imports.		Deliveries.		Stocks.	
	1932.	1931.	1932.	1931.	1932.	1931.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
London	1,367	1,960	892	2,468	7,227	29,985
Liverpool.....	28,816	20,434	13,971	19,576	102,945	69,561
Total tons	30,183	22,384	14,863	22,044	110,172	99,546

Last week 24,266 3,019 16,133 18,745 94,852 99,206

COFFEE.—Movements in the New York coffee market have been erratic, but, on balance, quotations show a slight improvement on last week. The London auctions were characterised by a steady demand for good qualities at firm prices. Last week's movements of coffee in London were as follows: Brazilian, landed, 22 bags; delivered for home consumption, 261 bags; exported, 112 bags; stocks, 4,817 bags, against 2,254 bags last year. Central American, landed, 8,921 packages; delivered for home consumption, 2,545; exported, 1,531; stocks, 130,479 packages, against 123,905 a year ago. Other kinds, landed, 3,371 packages; delivered for home consumption, 2,460; exported, 688; stocks, 106,130 packages, against 107,799 a year ago.

COCOA.—After the recent reaction, the market in cocoa was more active and prices advanced, both in New York and London, to the level of a month ago. "May" futures were quoted at 4.09 cents per lb. in New York on Wednesday, against 3.95 cents per lb. a week ago and 4.12 cents a month ago. As compared with the corresponding day last week, Wednesday's quotation for Acara, fair fermented, new crop, May-June, at 24s. per cwt., f.o.b., London contract, shows a rise of 6d. per cwt. on the week. Last week's movements of cocoa in London were as follows: Landed, 9,551 bags; delivered for home consumption, 17,775 bags; exported, 433; stocks, 180,263 bags, as against 220,616 last year.

TEA.—Public auctions were resumed this week. The quantities catalogued for this week's auction comprise 56,834 packages of Indian, 29,938 packages of Ceylon, and 12,443 packages of Java and Sumatra tea. Monday's Indian auctions opened with a good demand and firmer prices, which were maintained on Tuesday and Wednesday.

RICE.—The market in rice was steady, and the improvement in quotations has been maintained. Wednesday's "spot" price, at 10s. per cwt., shows no change on last week, while forward positions at 9s. 6d. show an advance of 6d. per cwt. Movements in London during the past week were as follows: Landed, 570 tons; delivered, 59 tons; stocks, 1,825 tons, as against 635 tons last year.

POTATOES.—Supplies at the principal markets have again been plentiful in relation to demand, and prices remained unchanged. At the Borough Market, "Best King Edward" sold from 12s. to 12s. 6d. per cwt., as compared with 12s. to 12s. 6d. per cwt. a week ago.

SPICES.—The market in spices has been quiet, and quotations were slightly easier. Wednesday's quotation for "Black Singapore"

pepper at 6½d. per lb., shows a fall of ½d. on the week. Movements of pepper in London during the past week were as follows: Black, landed, 20 tons; delivered, 14 tons; stocks, 353 tons, against 556 tons last year. White, landed, 48 tons; delivered, 75 tons; stocks, 663 tons, against 765 tons a year ago.

MEAT.—There has been no recovery in meat prices during the past week. At the Smithfield Market beef prices were generally unchanged, but New Zealand mutton was a shade easier, and pork was cheaper. On Wednesday, Argentine beef (chilled hindquarters) was sold at 3s. 10d. to 4s. 4d. per 8 lbs., against 3s. 10d. to 4s. 4d. on the corresponding day last week, while New Zealand frozen mutton realised 2s. 6d. to 3s. 4d., as against 2s. 6d. to 3s. 6d. a week ago. According to the Smithfield Market official report, supplies of meat during last week amounted to 9,089 tons, as compared with 9,722 tons in the corresponding week last year. Imported beef, principally Argentine, formed 83.3 per cent. of the supplies, as against 84.9 per cent. a year ago; and imported mutton, mainly New Zealand, formed 83.1 per cent. of the total supply, as against 85.2 per cent. last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OLSEEDS.—Extremely quiet conditions rule in practically all sections, and prices generally have a weaker tendency. Exchange fluctuations and a poor trade in oil and oil-cakes have affected business in oilseeds. Linseed, in sympathy with wheat, has declined to former low levels. Plate, May shipment, offering at £7 15s. The current value of seed on passage is the same, and June shipment is around £7 17s. 6d. No interest is taken in Indian linseed, and prices are purely nominal. Shipments from Argentina are again on a modest scale. The quantity afloat for Europe is 140,800 tons (including 6,300 from India) or 4,500 tons less than last week, and comparing with 203,600 tons a year ago. Cottonseed remains dull, and in the absence of demand, prices have fallen. Egyptian (black) afloat offering at £5 12s. 6d., and shipment £5 15s. to £5 17s. 6d. Trade in vegetable oils is at a low ebb, demand being almost negligible in spite of almost record cheapness. Linseed oil is in very small request, and easier in sympathy with seed raw oil for May-August delivery quoting £12 10s. per ton naked ex Hull mill. Cotton oil is largely nominal with crude Egyptian ex Hull obtainable at £19, and refined at £21. Oilcakes and meals are in slow request, and are slightly less money.

HIDE, LEATHER AND ALLIED TRADES.—There was no change in the prices realised for ox and heifer, cow and bull hides at the sales held in Manchester this week, but all calfskins were unsold.

outside banks were calling while the activity in gilt-edged stocks also absorbed a fair amount of funds. In consequence, the rate for new money firmed up to $1\frac{1}{2}$ per cent. The following day, Bank Rate was reduced to $2\frac{1}{2}$ per cent., and for a short time some uncertainty existed, pending the decision of the clearing banks regarding their own rates. They quickly decided to conform to the Bank Rate reduction, and lowered their London deposit rates to $\frac{1}{2}$ per cent., and their minimum rates on loans to the money market to $1\frac{1}{2}$ per cent. Late that afternoon, the general impression was that money might become less plentiful, partly because of the Whitsun currency demand, and partly because of the instalment on the recent Treasury bond issue due the following day.

Bill rates have remained weak, as the absence of any alternative outlet for their money is making holders very reluctant to sell. Last Friday's applications for the £35.0 millions of Treasury bills on offer amounted to £62.1 millions, and as the market was determined not to miss the tender by bidding too high, the average rate fell sharply from £1 17s. 1.81d. to £1 10s. 11.36d. per cent. This last rate is the lowest on record since the system of tendering was introduced. Early this week "hot" Treasury bills were quoted at rates which gradually fell from $1\frac{1}{2}$ to $1\frac{1}{4}$ per cent., while three months' bank bills were quoted at $1\frac{1}{2}$ per cent. The discount market took some time to settle down after the Bank rate reduction, as bill-brokers were awaiting the clearing banks' decision. Ultimately "hot" Treasury bills were quoted at $1\frac{1}{2}$ per cent., and three months' bank bills at $1\frac{1}{2}$ per cent., with $1\frac{1}{2}$ to $2\frac{1}{4}$ per cent. charged for standstill bills.

	Apr. 21, 1932.	Apr. 28, 1932.	May 5, 1932.	May 12, 1932.	Previous Rate and Date Changed.
Bank Rate	$\frac{3}{4}$	$\frac{3}{4}$	$\frac{3}{4}$	$2\frac{1}{2}$	$\frac{3}{4}$ (May 12, '32)
Banks' Deposit Rate...	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$ (May 12, '32)

Market rate (standstill bills)	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$1\frac{1}{2}$	...

The main change in the Bank return is a further big increase of £12.2 millions in the Issue Department's holdings of Other Securities—presumably *devisen*. Other Securities in the Banking Department have also increased by £1.0 millions, so that there is a total increase of £13.2 millions. Government Securities have been reduced by £9.1 millions net, so that allowing for a small increase in Discounts and Advances, the Bank's earning assets have expanded by £4.6 millions. The approach of Whitsun is responsible for a small increase of £1.7 millions in the note circulation and an equivalent reduction in the Reserve. Among liabilities, Public Deposits have risen by £3.5 millions, and Bankers' Deposits by £3.0 millions. Other Deposits are reduced by £3.2 millions. The Proportion stands at 30.5 per cent., against 32.6 per cent. last week.

Demand for the recent Treasury bond issue has increased, and the price has risen to a small premium. Originally the banks did not apply extensively for the bonds, but they have since become fairly substantial buyers. This week it was officially stated that only £10.0 millions of the total allotment of £110.0 millions were taken up by Government Departments, and as the money market is known not to have applied very heavily, some curiosity is expressed as to where the bonds have gone. Insurance Companies were probably substantial applicants, and it is possible that some of the bonds have replaced Treasury bills as backing to the note issue; such an operation would of course be profitable to the Government. Incidentally, the money market feels that inasmuch as War Loan is now being bought largely as a short-term security, and so is passing into the hands of interests who are not in a position to accept a conversion offer, but who will require cash, it would be in many ways wise if any impending offer appeared without undue delay.

The April returns of the nine English clearing banks reveal a further increase in deposits, but at a much reduced rate.

	April, 1931.	January, 1932.	February, 1932.	March, 1932.	April 1932.
Capital and reserves.....	132.1	122.8	122.8	122.8	122.8

Discounts	209.1	237.0	205.3	214.7	238.2
Loans and advances.....	923.8	889.3	886.3	886.0	864.8
Cover for accept., premises, &c.	157.0	141.9	133.9	142.0	141.6
Total assets	1,945.6	1,898.8	1,835.1	1,860.8	1,864.3

Cash and call money are both somewhat lower than in March, and advances have fallen by £21.2 millions. This last contraction probably reflects the repayment of loans obtained earlier in the year for income tax payments, but a contributory factor is undoubtedly the revival in the new capital issue market, as many recent issues have been made wholly or partly for the purpose of repaying bank loans. Investments are only £5.7 millions higher, but discounts have expanded by £23.5 millions.

The outflow of gold from New York continues. For the week ended May 4th, exports are returned at \$15.8 millions, of which \$5.9 millions went to Holland, \$4.6 millions to France, and \$4.0 millions to Switzerland. Later shipments include \$16.4 millions to Holland, \$4.0 millions to Switzerland, and \$756,000 to Belgium. For the week ended May 4th, earmarkings on foreign accounts increased by \$11.0 millions, and since then there has been a further net increase of \$2.2 millions. Call money has remained at $2\frac{1}{2}$ per cent., but on May 5th open market discount rates were raised by $\frac{1}{4}$ per cent. On May 11th, however, they were reduced by $\frac{1}{4}$ per cent. to their previous level of $1\frac{1}{2}$ per cent. for 90-day bank bills. The rate paid by clearing house banks on demand deposits is to be reduced to $\frac{1}{2}$ per cent. as from Friday of this week. The latest weekly statement of the Reserve system shows a further decline in member bank loans against securities. Contrary to expectation, member banks as well as the Reserve Banks are buying Government bonds, so that the cheap money regime has not served to divert bank resources into other channels, nor has it stimulated a bigger demand for bank loans.

The Foreign Exchange market was very quiet this week. New York was unchanged on balance at 3.67 $\frac{1}{2}$, after some earlier weakness. Montreal lost 4 points at 4.14, Paris was unchanged at 93 $\frac{1}{2}$, after being higher and lower, as was Brussels at 26.15. Milan weakened by $\frac{1}{4}$ to 71 $\frac{1}{2}$, and Madrid improved from 46 $\frac{3}{8}$ to 45 $\frac{1}{2}$. Amsterdam moved in our favour to 9.07, and Berlin gained 2 points at 15.41, but Switzerland fell away by the same margin to 18.77. The Scandinavian exchanges were uncertain and weak at one time, but improved on balance, and became steadier at the close. Stockholm gained 20 points at 19.70, and Oslo 5 points at 19.70, while Copenhagen was unchanged at 18.30. The South American exchanges were steadier and firmer than of late, Rio advancing from 4 $\frac{1}{2}$ d. to 4 $\frac{3}{4}$ d., and Buenos Aires from 36d. to 36 $\frac{1}{2}$ d., Montevideo being unchanged at 29 $\frac{1}{2}$ d. In the Far East the rupee remained at 1s. 5 $\frac{1}{2}$ d., but the yen, after hesitation, fell away from 1s. 9 $\frac{1}{2}$ d. to 1s. 9 $\frac{1}{4}$ d. Batavia lost 3 points at 9.13. In the forward market dollars were rather firmer at $\frac{1}{2}$ cent and $1\frac{1}{2}$ cents discount. Paris declined from 5 and 15 centimes to 3 and 7 centimes premium for one and three months respectively. Madrid, one month, was unchanged at $\frac{1}{2}$ peseta discount, but three months' delivery was firmer by $\frac{1}{2}$ at $\frac{3}{4}$ peseta discount. Amsterdam, from par and $\frac{1}{2}$ cent discount, went to premium quotations of $\frac{1}{2}$ cent for both periods. Switzerland fell away from 2 and 4 centimes premium to $\frac{1}{2}$ and 2 centimes premiums. Silver prices advanced by $\frac{1}{4}$ d. for both deliveries to 17 $\frac{1}{2}$ d. for cash and 17 $\frac{3}{4}$ d. for forward. The China silver exchanges also improved, Hongkong from 1s. 2 $\frac{1}{2}$ d. to 1s. 3 $\frac{1}{4}$ d. and Shanghai from 1s. 7 $\frac{1}{2}$ d. to 1s. 8 $\frac{1}{2}$ d.

FACTORS IN RECOVERY.

II. REPARATIONS AND WAR DEBTS.

A YEAR ago it was not unreasonable to believe—as Mr Hoover and many statesmen and bankers believed—that the lifting of the burden of reparations and war debts would be such a relief to the world that it would turn the tide of depression. That belief is no longer possible; it is abundantly clear that action in a much wider field is now necessary. But an agreement regarding reparations and war debts is what the lawyers call a "condition precedent" to recovery, and it is daily becoming more evident that, unless such conditions are created, the world must go from bad to worse. Whatever else may be done at Lausanne, a final and definite conclusion must be reached on the main problem on the agenda. There is, moreover, no time to lose. It is certain that Germany will not be able to resume payment, even of the unconditional annuities, after June; and to allow Germany to default would give the world just cause to despair of its statesmen. Another stop-gap solution would perpetuate financial uncertainty; while a fresh postponement would be the last straw to break the heart of a world already suffering from an almost intolerable strain.

This is particularly true of Germany, for though there are some small signs of a seasonal easing of the crisis, that country has been for two years under extreme psychological, as well as economic, depression. In view of their great underlying human and material resources it may well be that, in retrospect, the extreme pessimism that now prevails, not only in Germany, but in the United States, may seem as unbalanced and short-sighted as the excessive optimism of the boom years in the latter country. Recent events have, indeed, proved how difficult it is to crush the economic life of nations. At the same time, the example of Russia in 1917 is proof that it is possible for the framework of a modern State completely to disintegrate. Moreover, Germany's own experience in 1923 shows that, if the financial system collapses, widespread distress and starvation will ensue; and, if measures are not taken to reconstruct, there must follow steady degradation of the standard of living or a shrinkage of population, or both. That Germany has accepted severe measures of self-discipline, with comparatively little political violence and without a social upheaval, is a strong testimony to the sanity of the German people. But it would be taking a very heavy risk to call upon them to face another winter without hope that things will mend.

It is, however, one thing to say that final settlement is necessary; it is quite another to see what it should be and how it is to reconcile conflicting views. Let us briefly review the position of the chief interested parties—among whom, of course, we must include the United States.

Germany's position, as stated by Dr. Brüning, is that she cannot resume payment after June. This refers not merely to the conditional part of the annuity, which the Basle Committee agreed that she would be justified in postponing, but also to the unconditional part. The Chancellor has, indeed, gone further and declared that payments cannot be resumed in future without disastrous consequences to the world, and that, therefore, Germany will urge the final cancellation of these payments. It is, however, important to observe that Dr. Brüning has been careful not to say that Germany refuses to pay anything again or that Germany has gone back on her word.

The German thesis, which points direct to the wiping out of what Mussolini has so aptly termed the "tragic book-keeping of war," has hitherto met two obstacles in France—one psychological and the other material. The "sacred right" to reparations remains for France a matter of justice. But the French are emphatically a practical people quite capable of drawing their own conclusion from the experience of the last two years. They are now well aware that the world as a whole has come to regard these payments as a first-class nuisance, has satisfied itself that they have played a prominent rôle in up-

setting the whole credit structure, and will not lift a finger to help France to get reparations from Germany. Indeed, most informed Frenchmen think that reparations on a substantial scale will never be revived. But there are two material difficulties. One is that the cancelling of reparations leaves France to pay for the devastated areas, and the other is that it leaves France to pay her war debts due to England and America out of her own pocket.

The former is of sentimental as well as financial importance; but the parties of the Left, it seems, are now prepared to reconsider—in a practical spirit and having regard to the sum that Germany has already paid—what further payment, if any, can be obtained towards the restoration of the devastated areas. Last winter M. Laval took his stand on the integrity of Germany's "unconditional" payments under the Young Plan—not because this annuity represents or is earmarked for "restoration" or, indeed, was allocated to France for that purpose—but because, firstly, it is, in fact, "unconditional" in the sense that Germany has solemnly undertaken without condition to meet it, and, secondly, because it was intended to become the basis for floating loans. If it is not maintained intact, it could never again become the basis of mobilising new loans. But other and more imperative considerations have now come into the picture, and France has said nothing which would make it impossible for her to accept a radical reduction of her "solde nette."

But behind this is the more serious matter of France's outpayments, which run to very large figures, especially to the United States. However willing France might be to bow to the stern logic of economic experience and write off her surplus claim on war account, it will be extremely difficult—possibly even politically impossible—for her to agree to a cancellation in June unless she has an assurance that the United States and Great Britain will write her debts off correspondingly.

America's attitude, on the other hand, was made unpleasantly clear in the discussions of last December, when Congress grudgingly accepted the Hoover Moratorium with the express proviso that there would be no further moratorium or cancellation. That this is America's last word no one believes. Indeed, even during the debates of last winter, a good deal was heard of a suggestion that, in the case of the British debt at all events, there was a case for re-adjustment—at least to the extent needed to bring our payments into line with those of other countries. If a substantial cut were made on these grounds, any relief would be passed on—under the Balfour Note—to our debtors, including Germany, and the situation to that extent relieved. But a moment's glance at the figures shows that, though our payments to the United States are at present much larger than those of other countries, and will be so for many years to come, no cut that might be made in the British annuity by juggling with the rate of interest would bring the total to be paid to the United States within any total that could be extracted from Germany—and, however America may regard the matter, that is a vital point for Europe. The mooted concession to Great Britain alone does not, in fact, untie the knot. This is, indeed, recognised by many in America, who gravely doubt whether the debts will ever be collected again.

At the same time, it is not to be expected that a country in the throes of wrestling with the largest Budget deficit the world has ever seen in time of peace should be very willing to write off a substantial annual income from abroad. Great though America's resources are, the budgetary side of the problem cannot be ignored. There is, moreover, a larger question than the money involved, and that is the feeling that, while in certain circumstances it might be wise and prudent to cancel the debts, there is a grave danger that the looked-for advantage will not

be forthcoming. This point of view is clearly reflected in Senator Borah's recent speech, upon which we commented last week, and in the indications which come from so many sources in the United States that, while America cannot be a party to the Lausanne Conference and cannot make any offer there, the whole country will be watching Europe in the hope that a wise, clean and statesmanlike effort will be made to clear up the whole problem. If this is done, but only if this is done, it may be possible later, when political circumstances admit, for the United States to make a concession which would justify the European Powers in having concluded *inter se* a definite settlement. But, for the moment, say these United States observers, it is not for America to make a move.

Faced with this dilemma, Great Britain's position—which may be accepted as being also that of Italy—is clear. Great Britain believes that it would be best for the world if reparations and war debts were wiped out altogether. So far as our own claims are concerned, we offered ten years ago to forego them. We believe this to be now a necessity for the world. If some small payment by Germany would make it easier for public opinion in France and the United States to fall into line, Great Britain would probably not stand in the way of a settlement. But such a settlement must fulfil certain conditions.

Taking it as axiomatic that private persons will not again within any foreseeable time lend money to Germany so long as such investments are balanced by reparation payments and are therefore not a net addition to Germany's real resources, the payment on reparation account must be so small that it can in normal times be met out of Germany's export surplus.

Germany's net payments due abroad on account of public and private debts amount to some 1½ milliards (£75,000,000) a year—this figure including not merely the charge for the Young and Dawes loans, but interest on the foreign capital which has made it possible for Germany to make the reparation payments of the last seven years. Is it possible for Germany to have an export surplus substantially in excess of 1.5 milliards? No one can say with certainty what the situation will be ten years hence, what will happen to prices, or to the volume of production. But the facts are that for no prolonged period has Germany ever had a surplus in excess of 1 milliard, and that though during the past winter the figure rose to a very much higher rate, this was only under the utmost pressure of her poverty at home and the necessity to meet payments abroad. The aftermath of this effort is shown in the diminution which is now rapidly taking place in Germany's export surplus.

Next, any future payment must not only be within Germany's capacity, but it must be universally believed to be within that capacity if confidence is to revive. It must, moreover, become due only when conditions permit further transfer to be made.

In the light of the facts, these conditions mean that no further payment can be made for some years to come, that practically no addition whatever can safely be made to Germany's fixed charges on external account, and that the only payment that can be looked for is a payment dependent on prosperity—a dividend as distinct from a mortgage charge. The cash value of any such device would be very small—pence instead of pounds; and it should further be added that, if the hoped-for results are to be achieved, such a plan must involve no control and no new committees, and must, by transfer of governmental as soon as possible into commercial obligations, cross the term "reparations" out of the international vocabulary.

While it is greatly to be desired that circumstances—if not now, then in the near future—should enable the policy of the clean slate to be carried into effect as part of a great scheme of appeasement and reconstruction, it will clearly be one of the tasks of Lausanne to explore what scheme of the many that might be proposed will fulfil the conditions here laid down.

Having decided upon these maximum terms, which we may call *x*, and assuming that the Powers concerned do not desire to force the issue of the debts at a moment when America is in the throes of electioneering, the Conference

will have to consider what action it will take. In our mind the minimum required of it is that it should declare:—

(1) That the maximum that can ever be obtained from Germany—consistent with any hope of economic recovery, and without precipitating further disaster—is *x*.

(2) That having regard to their responsibility to their own countries and to the world the creditors of Germany will not ask any further payment from Germany for three or four years, and will in any case reduce their claims to *x*.

(3) That the economic problems involved, and the financial consequences which must follow, if war debts are not liquidated by a transfer of goods, are precisely the same as in the case of reparations; and that, therefore, the radical revision of war debts, in the light of recent experience, on the lines of the reparation settlement is essential for world recovery.

This involves no immediate action by the European Powers *vis-à-vis* the United States, nor does it involve the latter in any reciprocal action until further debt payments become due next December. It does require that France and Britain should commit themselves in advance of knowing what America will do; but that is really no more than to recognise realities. It is realities for which the public in all countries—in advance, we believe, of the statesmen—is looking. The swing to the Left in France suggests—and the same is almost certainly true of the United States—that the real France is less fixed in her ideas than those who have spoken for her hitherto in Parliament. We are confident that the desire to get away from the present economic *impasse* is now so great and so widely spread that a serious attempt to sweep away the whole legacy of the war would meet with a great response.

THE MORROW OF THE FRENCH ELECTIONS.

THE past week has witnessed a series of major political events in France—the tragic death of President Doumer last Saturday morning from wounds inflicted by a crazy assassin the afternoon before; the second ballot in the General Election on Sunday, and the election of President Lebrun in President Doumer's place on Tuesday. The sole alleviating feature in the shocking crime of Friday last is that it was so manifestly without political significance that it could not rationally lead, and has not actually led, to any political complications. It is a stroke of irony that the chief magistrate of France, of all countries, should have been assassinated by a madman on the score that the country represented by his victim has displayed insufficient hostility towards the Bolsheviks. But it is also a fortunate accident that the madman who perpetrated this crime on this fantastic ground should happen to have been a White Russian, and not a Red Russian or a German—or, for that matter, an Italian, or an Englishman, or an American, as he might equally well have been since homicidal mania is no respecter of nationalities. The French nation has shown its good sense and steadiness in taking the crime for the meaningless act of madness that it is, and not allowing it to influence the course of the elections. There is no reason to think that on Sunday any French elector cast his vote otherwise than he had intended to cast it up to Friday afternoon by the assassin Gorgulov.

The death of President Doumer has evoked expressions of sympathy from all countries of the world, and these tributes are not perfunctory, though they are necessarily official. The public sympathy with France coincides with himself, and these sentiments are shared by those of us who do not share the dead President's political outlook. The brutal murder of an old man of seventy-five, after four shocking, and the victim represents a venerable type of France from the Ancient World.

Nothing reveals so manifestly the achievement of the French Revolution and the nobility of the civilisation of

post-revolutionary France as a survey of the careers of distinguished modern Frenchmen. There are some countries in which the finest flower of culture is still the monopoly of certain classes, or even certain families, and is beyond the attainment of individuals whose ancestors have not been steeped in a certain social atmosphere for several generations. In France, on the other hand, a man can rise straight from the people and still become heir, in his own person, to all that is best in the national culture. The cultural heritage resides in the nation itself, and not in any narrow class or caste, and hence it is within full reach of any French citizen who is capable of making it his own. This social phenomenon, which is the glory and the strength of modern France, is exemplified in the careers of a Doumer and a Briand. And the new President of the Republic, M. Lebrun, is a Frenchman of the same stamp.

In the unprecedented constitutional situation produced by the death of a President in the midst of a general election, the new President has been elected by the old Chamber and the Senate, sitting together as the National Assembly, and President Lebrun's politics inevitably answer to the political complexion of the old Chamber rather than to that of its successor. The old Chamber, elected in 1928, was a Poincaré Chamber, and M. Lebrun has been one of M. Poincaré's personal adherents. Like M. Poincaré himself, he comes from the north-east frontier—from that part of Lorraine which was just not torn away from France and annexed to Germany in 1871, but which was overrun and occupied by the German armies in 1914-18. These Lorrainers have a stiff-necked, implacable bent which is ill-adapted for grappling with the present world crisis. We do not know to what extent M. Lebrun shares his fellow-Lorrainer, M. Poincaré's, temper. We do know, however, that the President of the French Republic only enjoys restricted political powers, and we also know that President Lebrun has proved himself a conscientious servant of the State who is not likely to be deflected by any personal political proclivities from the scrupulous performance of his presidential duties.

So much for the change in the French Presidency, but when we come to the change in the Ministry, we find ourselves groping in much deeper obscurity. With the taking of the second ballot last Sunday, the elections have come to an end. But the results of the second ballot are not in themselves conclusive. They exclude one possibility—that is, the reconstruction of a Tardieu Ministry—only to leave the choice open between other alternative possibilities which are vastly different from one another. This choice is no longer in the hands of the French electorate. It lies now between M. Herriot, in the first place, and M. Blum, in the second place, in consultation with their respective party organisations. The choice is unlikely to be made—or, at any rate, to be made public—for some days.

Perhaps the simplest way of stating the position is this. In the first vote of confidence which he asked for after forming his late Government, M. Tardieu received 309 votes in his favour, while 262 votes were cast against him. Had M. Tardieu challenged the new Chamber, and had the various parliamentary groups—in the altered strengths in which they have now been returned—then proceeded to vote on the same lines as before, M. Tardieu, on this showing, would have been defeated in the new Chamber by 357 adverse votes to 265 in his favour. M. Tardieu has drawn the right moral from these figures and has resigned office this week, without waiting for the new Chamber to reassemble. The question is: What morals will be drawn from the same figures by MM. Herriot and Blum?

It is obvious from the figures that if the late Opposition were now to combine after the elections in order to form a Socialist-Radical and Socialist Coalition Government, as it has just co-operated during the elections in order to put the Tardieu Coalition out of power, this Herriot-Blum combination could command a workable majority in the new Chamber. The Socialist-Radicals have been returned 157 strong in a Chamber of 605 seats in all (apart from the

VIEWS

Imperial and Parochial

Soundness of judgement usually rests upon an ability to combine the 'close up' with the bird's-eye view. To encourage the wide angle, the Westminster Bank issues a periodical 'Review' of current trade conditions, with surveys based on local reports drawn from all over the country. Readers of *The Economist* may obtain copies monthly, without cost, on addressing a request to the Manager

WESTMINSTER BANK
LIMITED
41 LOTHBURY, LONDON, E.C.2

Colonial deputies); the Socialists in the new Chamber muster 129; and if these two powerful groups worked together, the Independent Socialists and Republican Socialists, who stand between them 37 strong, would certainly work with them.

Can the Socialists and the Socialist-Radicals agree upon a common policy and arrange to take office in coalition? If they can achieve this, we may look forward to seeing a Government of the Left in power in France, and we can count with some confidence upon this Government making an important new departure in foreign policy. For while M. Herriot, when it comes to the point, has a way of taking up positions, on the questions of reparations and of disarmament, which are not easily distinguishable, to foreign eyes, from the positions of his Conservative opponents, the majority of M. Herriot's political supporters appear to be well to the left of him, while the French Socialists undoubtedly mean business in international affairs. If, therefore, a coalition of the Left is formed, we may not unreasonably hope for a change in French foreign policy which might transform the whole aspect of international affairs.

There are, however, great obstacles in the way of this alternative coming to pass; for, besides the gulf that has to be bridged between Socialist and Socialist-Radical policy, it is a maxim of French Socialist parliamentary tactics never to take office in coalition with any bourgeois party. Suppose, then, that this possibility proves impracticable on trial, what is M. Herriot's alternative? In 1924, he formed a Ministry in coalition with the Centre groups, with the Socialists standing outside and observing a benevolent neutrality. But this experiment proved unsatisfactory, for the Centre soon deserted M. Herriot and enabled the Right to take office by going into coalition with them instead. Last week, one of the few declarations of intention to which M. Herriot committed himself was that he was determined not to take office again under the 1924 conditions. And now, in the event, it would seem that this alternative is not open to him. For the Centre groups have lost heavily at the polls. They now number no more than 62 deputies—a number which is insufficient to confer a majority upon either M. Tardieu or M. Herriot. In order to obtain a majority by leaving the Socialists out and coalescing with groups to the right of him, M. Herriot, in the new Chamber, would have to take in not only the Centre, but half the Right as well—M. Tardieu's half, in fact, as opposed to Mr. Marin's. M. Herriot, however, has declared outright that he is not going to co-operate with M. Tardieu again in any circumstances. Thus it looks as though the real alternatives were a Socialist and Radical-Socialist coalition or an *impasse*. And that is all that can be said at the moment.

STEEL AND THE TARIFF.

In the course of the speech in which he moved for Parliament's approval to the April 19th Order made under the Import Duties Act, Mr Chamberlain explained that the motives which had induced the Advisory Committee to recommend, and the Treasury to impose, a duty of 33½ per cent. on semi-finished iron and steel imports, in comparison with a 20 per cent. duty on finished articles, were the desire to give an opportunity for the situation to remain stable while the Committee pursued further investigations into a subject which, he admitted, was "very complicated and difficult." Pending the "permanent system of Protection" which the Committee would proceed to devise for the industry, the consuming trades would not, in the Chancellor's opinion, suffer in any way from the temporary "prohibition of imports" resulting from the higher schedule of duties on semi-finished products; for, as a result of forestalling, large stocks had been accumulated in this country.

How far Mr Chamberlain's predictions will be borne out by the event remains to be seen. At the moment, the whole situation of the European steel industry is so chaotically influenced by the combined effects of trade barriers and the financial crisis that the short-term consequences of our fiscal policy in relation to iron and steel may be quite other than those which ultimately eventuate. It is, however, possible even now to indicate some almost certain tendencies. At the foot of this page we give a table showing the volume and value per ton of our net imports and domestic exports of iron and steel products divided into the three categories of crude iron and steel, rolling mill products, and "more-finished" products. The first two categories are now subject to an import duty of 33½ per cent.—with the exception that pig iron, imports of which amounted during the past two years to about 290,000 tons annually, is subject to 10 per cent. only. The "more-finished" articles are, as stated, liable to a duty of 20 per cent.

What picture emerges from the table? It is a picture essentially of an industry which has built up, on the basis of the economic use of cheap imported crude materials, an export trade predominantly of finished products. The key to the industry's present difficulties is to be found not so much in the shrinkage of sales abroad of rolling mill products, nor yet of crude products, which represent only a small fraction of our total exports, but in the catastrophic decline of our exports of finished goods. On this situation the immediate effect of our tariff, so far as can be judged, is taking two forms.

On the one hand, Continental producers of semis are being forced still further to cut their prices and so accentuate a process of capital consumption, whose ultimate effects on Europe are likely to be disastrous. In the absence of an alternative market for the goods for whose output their plant has been primarily organised, they are temporarily making good to the British consumer a part of the addition to the selling price represented by the new tariff duties. Thus it seems unlikely that Mr Chamberlain's claim that a 33½ per cent. duty is "prohibitive" will be borne out by the facts, and the benefit felt by the primary producers of steel in this country may be somewhat limited.

On the other hand, the increase in the price of semis which, even so, is being brought about by the tariff, is enough to prove a serious handicap to British manufac-

turers making more finished products for export. Indeed, a case has already come to our notice in which a British manufacturer, whose export business had been built up on the basis of cheap imported semis, has now shut down his works and converted his enterprise into a merchanting business for buying the finished products direct from the Continent and selling them to the markets abroad in which his established goodwill is still an asset. More important than this, Continental producers are planning vigorously to divert their production more from crude products to finished articles. Although temporarily they are being driven to attempt, by recourse to accumulated stocks, to retain as much as they can of the British market in semis, even at a loss, they are naturally not prepared to continue business indefinitely on these lines. If the "permanent system of Protection" for the British steel industry is to be on anything like the scale now temporarily imposed, it is certain that foreign competition in the export markets, in which, so far as finished goods are concerned, we have hitherto enjoyed a favourable position, will be greatly intensified. And as the foreign producer of more finished products, ranging in the scale of manufacture from tinplates upwards, will have the benefit of raw materials produced by the basic Bessemer process and costing less than half our domestic product under the tariff, that competition may well be formidable.

It is, in fact, clear that even in a few months almost irreparable harm may be done to our export trade in iron and steel if we are not careful. The Government, according to Mr Chamberlain, desires that the position should be temporarily "stabilised." If "stability" is to be maintained and if the grievous decline of our finished exports is not to be accelerated, it is essential that our manufacturers, whether of galvanised sheets, tinplates, tubes or railway material—to say nothing of the engineering and other industries using steel, whose exports are not included in the accompanying table—should have access to their raw material supplies at the world price. As a matter of extreme urgency we submit that the Advisory Committee and the Treasury should lose no time in availing themselves of the provision in the Finance Bill authorising the formulation, where desirable in the national interests, of a scheme of drawbacks on materials used in the manufacture of products afterwards exported. However clumsy and difficult to administer such a scheme may be, its immediate introduction appears to us to be indispensable if the persons engaged in the iron and steel using industries, who are eight times more numerous than those employed in primary iron and steel production, are not to have their position seriously damaged by the rash and hasty imposition of ill-considered protective duties.

THE DANUBIAN PROBLEM.—I.

THE failure of the Four Power Conference last month postponed a solution of the Danubian problem; it did not make the problem any the less pressing. Whether the final solution is along the lines they proposed or takes some other form, the issues must soon occupy afresh the attention of the statesmen of Europe. It is pertinent, therefore, to look once again at the facts of the problem. The old Austro-Hungarian monarchy was a State between its agricultural and industrial activities. Though by

(basis Jan.-Mar.).																

no means the most highly protectionist country in Europe, its foreign trade per head was small. After the war the sub-division of the dual monarchy took place without regard to economic considerations, and there is no regrouping of the States, with their present territorial limits, which would restore the balance. Moreover, in the ensuing years, the policy of ill-considered nationalism led to the reckless duplication of both industrial and agricultural activities, and the economic structure of territories which formerly formed parts of one interlocking whole gradually drifted apart. The economic advantages of the territorial division of labour were lost.

This disintegration, which was largely responsible for the poverty of these States in the post-war years, had the effect of reducing trade between the areas concerned to something like half of its pre-war level. According to the Layton-Rist Report on the economic situation of Austria in 1925, trade between the Succession States had diminished by some 60 per cent. as compared with the pre-war situation; and, as we shall see below, there has been no appreciable improvement since 1924. (Moreover, as the Austrian exports to non-Danubian countries are also down by some 20 per cent. as compared with the pre-war level, there is obviously no compensation—in the case of Austria, at any rate—for the loss of Danubian trade in the trade with other countries.)

The authors of the French proposals seemed to think that the situation could be remedied, and the impending breakdown averted by substituting one form of trade for another. Mutual preference between the Danubian countries, limited, if necessary, to certain contingents of imports, would improve trade between them without entailing great internal changes; for the Protectionist character of each country's policy would still be preserved. We can imagine some conditions under which trade might be diverted from third parties in this way. But it is evidently not always the case, and it is worth while to examine in some detail how far an expansion of "inter-Danubian trade"—by way of preferential treatment—would increase the total volume of trade, and how far it would merely divert it from one channel to another.

The following tables, which show the trade between the countries in question as a proportion of their total trade, are based upon the returns relating to the "inter-Danubian trade" of the Danubian countries in relation to their total trade for the years 1928-31, which are contained in the memorandum* recently published by the League of Nations. For purposes of comparison, we have compiled similar figures relating to the years 1923-24.

I.—PROPORTION OF TOTAL EXPORTS OF DANUBIAN STATES DESTINED TO OTHER DANUBIAN COUNTRIES.

Exports from	1923.	1924.	1928.	1929.	1930.	1931.
Austria	39.3	36.8	34.5	33.9	31.2	29.5

(2) Rumania excluded.

As the period between 1924 and 1928—after the era of currency inflation and before the outbreak of the crisis—was the only relatively "normal" one in the life of the

* "Chiffres essentiels de Commerce Extérieur des Pays Danubiens." 1re Série des Etudes Relatives au Problème des "Rapprochements Economiques Européens." Société des Nations, 1932, II. B.3.

Danubian countries, a comparison between these two years may be found more significant in judging the trend of development than an examination of the changes that have taken place since.

The inter-Danubian exports of Table I and the inter-Danubian imports of Table II refer, of course, to the same goods looked at from two different angles. They nevertheless, represent a smaller proportion of total imports than of total exports, for the reason that the balance of trade of the five Danubian countries taken together is adverse vis-à-vis the rest of the world. In short, the differences between the average proportions in the two tables indicate the growing foreign indebtedness of the five Danubian countries. In 1931, when further capital imports ceased, the two proportions became equal.

The tables show that the relative importance of inter-Danubian trade has diminished, without exception, between 1924 and 1928. The diminution was the greatest in the case of Czechoslovakia, whose exports to Danubian countries have fallen by nearly 25 per cent. relatively to her other exports. This is entirely due to the growth of her exports into other countries; for the value of her "Danubian" exports remained unchanged between these two periods, being in both cases approximately Kc. 6.4 milliards. Yugoslavia's Danubian exports, on the other hand, have fallen more in absolute value than in relative proportion, as the value of her total exports has also fallen from 9,539 million dinars to 6,445 million dinars. Hungary's exports to Danubian countries have fallen slightly in proportion to her total, but have considerably increased in actual value, the growth being due to an increase of agricultural exports to Austria and of industrial exports of Yugoslavia. In 1928 the four Danubian countries still took more than 60 per cent. of Hungary's exports, while more than 50 per cent. of the total exports consisted of agricultural products. Hungary is, therefore, dependent, more than any other country, on Danubian trade; she was more hit than the rest by the strangulation of trade in the last few years, and is likely to benefit more from a Danubian trade revival. Austria increased the value of her exports to Czechoslovakia and, slightly, to Hungary; while the value of her Rumanian and Yugoslavian exports diminished. In her case, also, extra-Danubian trade increased relatively to Danubian exports. Rumania increased her exports to Austria and Czechoslovakia, while her exports to Hungary have diminished.

It is not easy to draw general conclusions from these figures. Yugoslavia and Hungary, for instance, are both agricultural exporting countries, and yet their trade shows widely diverging movement. Although the average proportion of inter-Danubian trade for the five countries together has diminished from 39.1 to 35.5 per cent. between 1924 and 1928, it has been maintained in value and probably increased in volume. The total value of exports and imports and the value of "Danubian" exports and imports of the five Danubian countries (converted into United States dollars at the average rate of exchange of each year) has been as follows:—

U.S.A. \$'s (000,000's omitted.).

	1923.	1924.	1928.	1929.	1930.	1931.
Total exports ...	753*	1,131	1,375	1,411	1,232	960
"Danubian" exports	294*	442	487	507	419	274
Total imports ...	866*	1,230*	1,578	1,553	1,256	924
"Danubian" imports	303*	431*	482	479	402	262

* Without Rumania.

The difference in trade between 1923 and 1924 is probably exaggerated, as in the former year goods were undervalued in terms of dollars, owing to acute inflation in some Danubian countries.

The fact that Danubian "exports" are in most cases shown at higher figures than Danubian "imports" reveals a bias of official statistics to undervalue imports and over-estimate exports.

Finally, the trade returns reveal a striking growth of the trade with Germany in all Danubian countries. Between 1924 and 1928, the proportion of total exports destined

to Germany increased from 3.7 to 27.9 per cent. in the case of Rumania, from 4 to 12 per cent. in the case of Yugoslavia, from 13.1 to 18.5 per cent. for Austria, from 7.9 to 11.8 per cent. for Hungary, and from 19.42 to 22.1 per cent. for Czechoslovakia. With the exception of Czechoslovakia, imports from Germany have increased in similar proportions. For three out of the five countries—Austria, Czechoslovakia, Rumania—as well as for the Danubian countries taken as a whole, Germany was the largest single buyer and the largest single seller in 1928. She took about 20 per cent. of the total Danubian exports as a whole, and accounted for more than 30 per cent. of total Danubian imports. If German trade were also included in "inter-Danubian trade," it would be found that the relative importance of "inter-Danubian exports" in relation to total trade would not have diminished, but actually has increased between 1924 and 1928—from 52.2 to 55.3 per cent.

So far as the period 1928-31 is considered, the diminution in the relative importance of inter-Danubian trade is much less significant than the figures seem to suggest. The fall has been due partly to the catastrophic fall in agricultural prices, which diminished the value of the agricultural exports of the agricultural countries more than in proportion to the fall in their total exports (these agricultural exports are mainly destined to Danubian countries)—partly to tariff discrimination by the Danubian countries against each other, partly to quotas and import prohibitions. Czechoslovakia, for instance, who is an industrial exporter, has actually increased the proportion of her Danubian trade from 30.8 in 1928 to 31.9 per cent. in 1930; while the fall in 1931 to 24.8 per cent. is mainly due to the tariff war with Hungary, which started at the end of 1930 and reduced at a stroke the volume of trade between these two countries to less than one-fourth.

The fall in the proportion of inter-Danubian trade in the last four years can, therefore, by no means be interpreted as a decline in the relative importance of this trade. It merely signifies the disastrous effects of commercial policy and the magnitude of the agricultural crisis. Even if no preferential tariff agreement is concluded, we may expect, therefore, a considerable rise in the proportion of inter-Danubian trade as soon as conditions return to "normal," i.e., as soon as the Danubian countries stop discriminating against each other (even if the tariff wars between some Danubian countries are disregarded, trade between countries which have bilateral exchange restrictions is necessarily discriminated against, in comparison to the trade between such countries where exchange restrictions are merely unilateral) and as soon as agricultural prices start to rise.

The importance of "inter-Danubian trade" for the Danubian countries is, therefore, of a similar order of magnitude as the importance of "inter-Imperial trade" for the members of the British Empire. But while the latter has been, and is to an increasing degree, supported by tariff preferences, in the case of the former the reverse is the case.

INDIAN FEDERAL FINANCE.

THE Indian Federal Finance Committee appointed in connection with the Round Table Conference had a difficult task. Its most important work, as indicated by the letter from the Prime Minister to the chairman, Lord Eustace Percy, was to submit to the test of figures the scheme of revenue suggested by the Round Table Conference, to estimate the probable financial position of the Federation and the Provincial Governments, respectively, and to suggest on the basis of these figures what adjustments, if any, should be made between the Federal Government and the Provinces.

This task was particularly difficult, for two reasons. In the first place, at a moment when every country's Budget in the world is in deficit, when no one knows what the future of prices will be, and when the economic and financial outlook is obscure, it must be very largely a matter of guess-work to forecast the probable situation some years ahead. It is, however, impossible to set on foot any Federal scheme—which must clearly involve a

differentiation of functions between the units and the Federation itself—without making appropriate financial arrangements; and this must inevitably involve some element of prophecy. Under these circumstances, the Committee was clearly right in assuming that the Budget estimate for 1932-33, with its emergency taxation and its very heavy cuts in expenditure, some of which are definitely intended to be temporary, is no permanent guide. They therefore assumed that the present depression will come to an end and will be followed by a period of reviving trade, accompanied by a gradual increase of prices, which, if not reaching the pre-slump level, will rise appreciably higher than those now prevailing. While they have not made an estimate for a specific year, they have, in fact, indicated that they have in mind a situation which would be likely to occur in 1935-36. They add, however, that their conclusions should be subject to review immediately before the Federation, in fact, comes into being.

In the second place, the Committee had to work within a framework laid down by the Round Table Conference, dictated rather by political considerations than by the needs or financial capacities of the various parts of India. Some of the shortcomings of this scheme, from the point of view of solving India's financial problems, were pointed out in these columns when the Report of the Round Table Conference was issued. At the root of these difficulties lies the fact that the great Provinces of British India do not form natural fiscal units; that the existing taxes raised within the various Provinces are by no means in proportion to the needs of expenditure; that, since the Provinces and other units of the Federation are to retain all the functions which are likely to involve increased expenditure on a large scale, it is necessary to contemplate a far-reaching reallocation of the resources of India; and, finally, that political as well as economic considerations stand in the way of developing fresh and expanding sources of revenue. The present Committee, for example, were not left free to consider the big question of the taxation of agricultural incomes—a matter of very far-reaching importance in view of the enormous preponderance of agricultural activity in India—but were only invited to consider the possibility of empowering individual Provinces, if they so desired, to raise or appropriate the proceeds of a tax on agricultural incomes. Indeed, for the purpose of establishing the Federation, the Round Table Conference contemplated nothing more sweeping than the allocation of income tax to the units, and the making good of the consequential loss to the Central Government, so long as might be necessary, by contributions from the Provinces. The Committee, therefore, are careful to say that, if they were restricted to the assumptions of the Round Table conclusions, those conclusions are not of their choosing, and that, as these matters may come up for subsequent debate, their Report must not be read as committing them individually to particular views on questions of principle or policy on which, indeed, they retain complete liberty of action.

Following the assumptions mentioned above, the Committee come to the conclusion that on the existing basis of taxation a surplus in normal times of 4½ crores may be expected in the Central Budget. The Committee do not see their way to count confidently on many other additional resources of taxation, except an Excise on matches, the levy of which is in contemplation and whose proceeds are estimated to amount to 3 crores, of which 2½ crores will be raised in British India. This gives a total surplus for the Central revenue of 7 crores. Similar forecasts for the years 1933-34 and 1937-38, after allowing for the transfer of the liability for accounts and audits, show deficits in all Provinces, except the United Provinces, and the Punjab. The largest deficit is that for Bengal, namely 2 crores; the deficit for Bihar and Orissa is 70 lakhs, and those for Bombay and Assam 65 lakhs. These figures are apparently a little less pessimistic than those actually supplied by the authorities, and, in particular, the Committee have allowed more for Excise revenue. The figures for the taxation of country liquor are, in fact, very low; but the Committee point out that the Province which deliberately forgoes revenue in this matter cannot fairly ask for special treatment in the distribution of income tax at the expense of other Provinces. The Committee are

also evidently not quite satisfied that the utmost has been done in regard to economies; and, in particular, they observe that, while Bihar and Orissa, which certainly has not the least difficulties to contend with, hopes to balance its Budget for the present year as a consequence of severe retrenchment in all its services, other Governments have not apparently made similar efforts.

The only item by means of which it was open to the Committee to deal with this situation is the income tax, with regard to which it makes the following proposal. After deducting the cost of collection, the super-tax on companies (which the Committee assume will be absorbed into the new proposed Federal Corporation Tax) and taxes on Federal officers and on personal income, etc., in Federal areas, there remain 13½ crores available for distribution. Broadly, it is proposed that this should be distributed in accordance with the residence of the taxpayer; but, as statistics of residence are not entirely available owing to the fact that much of the tax is collected at the source, it is proposed that distribution should be in proportion to the estimated amount creditable to various Provinces. It is suggested, however, that the income of non-residents and undistributed profits of companies (amounting together to about one-seventh of the revenue) should, in view of the difficulty of tracing the origin of such income, be distributed on the basis of population. Reasons were given in the Simon Report why distribution according to the origin of income or residence of the recipients was not a good test of the extent to which the receipts should be distributed to the various Provinces of India; and it was for that reason that, in the Financial Report of the Simon Commission, a distribution of a substantial revenue on a population basis was proposed as a supplement to distribution of income tax according to its source.

Next comes, however, the question of the contribution to be returned to the Central Government, seeing that the latter can afford to distribute a portion only of the 13½ crores available. Indeed, the Committee think it prudent to suggest that out of the surplus of 7 crores, referred to above, some 2 crores may be required for new expenditure arising in connection with the establishment of the Federation. When, however, they come to consider the basis of contributions to be made by the Provinces, they come to the broad conclusion that these payments should be in proportion to the amount of income tax distributed. In other words, the Committee propose the distribution to the Provinces of that proportion only of the income tax revenue that the Centre can afford. Tables compiled by the Committee show that, if 5 crores are distributed on the basis indicated above, five of the Provinces will have surpluses, but Bengal, Bihar and Orissa and Assam will still have very substantial deficits. The only way of meeting this situation is for these deficits to be met at the expense of the income tax contributed to the other Provinces; in other words, they suggest not that the income tax should be a prerogative of the units concerned, but that it must in fact be used to meet the provincial deficits.

In spite, however, of the limitation of their immediate task, the Committee has in some respects taken a wider view of the problem. It has, for example, emphasised the need of uniformity of taxation in certain fields throughout India. On the other hand, they have considered the necessary powers of taxation of the Federation in view of emergencies, etc., and they come to the conclusion that where the Central Government levies taxes for the benefit of the units it should have a general right to empower a surcharge for its own purposes. But in return it may be necessary to accord to the units of the Federation some interest in the proceeds of Federal Excises and to give the Federal Government liberty to assign the whole or any part of the proceeds to them as may be laid down in the Federal Act imposing the particular duty. Such allocation would naturally be upon the basis of population. Both these suggestions are in the direction of the financial scheme suggested in the Simon Report.

But even if they had been given the mandate, the political complexities and financial strain would make it almost impossible to invent an ideal solution of this difficult fiscal puzzle now. The Committee could not in the circumstances hope to do more than put up a makeshift plan.

Notes of the Week.

British Monetary Policy.—In the course of the debate on the Finance Bill, while isolated voices urged with good reason the need for further economies in expenditure, interest centred mainly on the demands of successive speakers—whose advocacy of "reflation" was in some cases more enthusiastic than discriminate—that the Government should declare its intention with regard to monetary policy. The reply of the Chancellor contained some observations which may be helpful as an indication of intentions both to the business world and to the countries most vitally interested in our future monetary career. But the statement was marred by some almost incidental comments which seemed to betray confusion of thought as to what is needed to restore prosperity. The Government, said Mr Chamberlain, desired to see a rise in wholesale prices in this country, and, although not to the same extent, a rise in retail prices. Such an increase would be conducive to the restoration of profitability in industry. They were averse to any further appreciation of the pound and were hopeful of seeing a period of low Bank rate. So far so good. But the Chancellor, after going on quite properly to damp down excessive expectations as to the results of purely monetary action, went on to refer to the tariff as one of the factors that would help to bring about the needed upward movement of wholesale prices. This is indeed a remarkable train of thought. The purpose of a rise of prices is to enlarge buying power, both at home and abroad, and to set in motion a growing circle of trade. Prosperity is not to be attained by restriction of trade or by making our home prices high by a device which will diminish both imports and exports. That would be to neutralise the effects of cheap money. It is of the highest importance to realise that tariffs, exchange controls, and the rest of the restrictionists' bag of tricks are deflationary devices. It is not possible for us, any more than for any other country, to create prosperity for ourselves by organising an island of high prices in a world in which trade is languishing and prices falling for lack of circulation. Nor was the Chancellor very helpful as regards international co-operation in monetary matters; in his view there had been "enough conferences to last for a considerable period." In winding up the debate, however, the Financial Secretary to the Treasury replied that if co-operation were initiated by, say, the United States, this Government would welcome such a move. The impression conveyed by this adumbration of the Government's attitude is one of desire to wait upon the event rather than to take a lead.

The Free State and the Preference.—The Government have been well advised in the manner in which, after Mr Thomas's early attempt at melodrama, they have conducted the controversy with the Free State over the oath and the annuities. They might have threatened and bullied, not, of course, with a military but with a fiscal bludgeon; nothing would have been better calculated to harden the hearts of the Irish and to drive over doubters into Mr de Valera's camp. The Government might have taken the line urged upon them by some of their supporters, and said "Get out of the Empire if you will, and take the consequences"; that again would merely have played into the republicans' hands. Wisely they have adopted the course of treating the whole oath issue, not as a legal conundrum, but as involving an unquestionable breach of a solemn pact between the representatives of two peoples. What follows from that was indicated by Mr Thomas on Wednesday, when he stated in the House of Commons the Government's opinion that if the Bill to remove the oath becomes law it would be unreasonable to expect that they should enter into further negotiations—for instance, for a renewal of the preference given to the Dominions under the Import Duties Act, which expires on November 15th—with a Government which had thus repudiated an agreement already concluded. The loss of preference might be of considerable importance to the Free State. In 1930, gross imports into the United Kingdom from the Free

State totalled £43.0 millions and in 1931 £36.7 millions. But out of £42 millions of retained imports in 1930, almost one-half consisted of live animals, either for food, for breeding, or for other purposes. Meat, hides and skins, and raw wool, which are on the free list, accounted for a further £4 millions, while over £5 millions' worth of beer was outside the scope of the Import Duties Act for another reason. The main categories of Irish produce upon which the new duties would fall are butter (£3.2 millions in 1930), eggs (£2.7 millions), fresh milk (£0.4 million), poultry and game (£0.8 million), and various classes of manufactures, including lace, machinery (farm tractors), and wool textiles. In 1930 the Free State supplied 7 per cent. of our imported butter and 17 per cent. of our imported eggs in shell, Denmark being the principal competitor in either case.

The Silk Duties.—The silk and rayon industries have recently provided a striking illustration of the difficulties and confusion that arise from a protective tariff. In 1925, Mr Churchill imposed both Customs and Excise duties upon the raw material and finished products of these industries alike, but care was taken to differentiate between the two sets of duties so as to give some measure of protection to the home producer. The ruling duty was a Customs duty of 33½ per cent. *ad valorem* upon imported made-up goods of silk or rayon, while specific Customs and Excise duties were imposed upon raw silk and on silk and rayon yarn. The fall in prices during the past few years entirely destroyed the balance between the various duties, while during the last few months the position has been complicated still further. In the first place, last December, imported silk and rayon goods were subjected to an Abnormal Importation Duty of 50 per cent., and, secondly, silk and rayon articles were excluded from the purview of the Import Duties Act, and so from consideration by the Tariff Advisory Committee, on the ground that they were already subject to the Churchill duties. Then came the adoption of the first set of recommendations of the Tariff Advisory Committee, and the abrogation therewith of the Abnormal Importation Duties. The result is that the silk and rayon industries suddenly found themselves deprived of any measure of protection beyond that afforded by the original Churchill duties, now nullified by the fall in prices. The representatives of these industries at once began to complain with no uncertain voice, adducing the familiar list of examples of factories about to close down and orders being diverted abroad. Gladly "squeezeable," the Government have not only given way, but have done so without sufficient thought. As a panic measure, and in submission to the extreme pressure suddenly brought against them, they have firstly superimposed upon the 1925 duties on imported yarns and tissues a Customs duty of 10 per cent.; and, secondly, they have imposed upon apparel—as an alternative to the Churchill duties plus a new duty of 10 per cent.—a new scale of specific duties, which range up to 5s. per lb. for rayon goods and 12s. per lb. for silk goods in the case of articles where the value of the rayon or silk component exceeds 20 per cent. of the value of all components of the article. It is further provided that the higher of the two alternative duties shall be charged. The result is that at current wholesale prices imported silk and rayon made-up goods are in fact subject to an *ad valorem* duty ranging from 43½ to 87½ per cent., the higher percentage applying to the cheaper goods. Thus one dozen pairs of foreign rayon stockings, weigh roughly 1 lb., and so are subject to a duty of 5s. Their wholesale selling price is now 6s. a dozen, and so the duty is now equivalent to 83½ per cent. *ad valorem*, against the Churchill duty of 33½ per cent. Incidentally, the home producer has to pay only an Excise duty of 1s. per lb. on his raw material, so that he now gets a protective margin of 4s. upon goods whose worth, excluding duty, is only 6s. Duties of this magnitude completely destroy the Government's claim that their tariff falls within the moderate scale, but the Government's haste has produced still more amazing anomalies. One is that the resolution contains no provision for preference upon Empire silk and rayon goods—an omission to which Canada will

doubtless have something to say. The other is that no drawback is allowed upon goods which have been subject to any process of improvement in this country, and this is clearly to the detriment of home manufacture and our *entrepôt* trade alike. Seldom can any country have seen a case where under a tariff confusion has become worse confounded, or where panic measures due to sectional pressure have had a more disastrous and anomalous result.

Lord Lothian on India.—In our last issue we had occasion to note the signature of the Lothian Committee's report on the Indian franchise. Last Tuesday the Chairman of the Committee, on the eve of his departure for India, issued a statement which ought to do whatever can be done by frank and friendly words towards clearing the Indian political atmosphere. Lord Lothian looks forward to a general election in India next year; and while he underlines the magnitude of the task of introducing the paraphernalia of parliamentary government among an inexperienced electorate at this speed and on this scale, he reveals himself an optimist—and this on the strength of his direct experiences in India during the last three months. His references to Congress are generous, and this generosity gives force to the appeal for co-operation which follows. "Parliament," he recalls, "has approved the principle of a Constitution on the lines laid down by the Round Table Conference, and, let me add, by the Indian National Congress. If only all classes in India, including those who are making sacrifices to-day for the sake of their own ideas of the road to self-government and reforms, will throw themselves into constructive work..." We know that Lord Lothian's deeds, during the past months, have been as good as his parting words. If all Englishmen in positions of corresponding responsibility for the shaping of Anglo-Indian relations would act and speak like this, the task of bridging the gulf between the Indian and the British peoples would be vastly lightened. Indeed, the whole Indian outlook might be rapidly changed for the better.

The Disarmament Conference.—The Disarmament Conference is expected to resume its sittings early in June, when a new French Government will have taken office, and to remain in session throughout June and July. Last Tuesday, in the House of Lords, a motion of censure on the work of the Conference was moved by Lord Ponsonby, on the ground that "qualitative disarmament or prohibition of certain weapons and methods of warfare is not calculated to assist an advance towards the desired aim of complete disarmament and the eventual abolition of international war." A motion sponsored by so sincere and so disinterested an advocate of disarmament as Lord Ponsonby will be treated by all friends of disarmament with respect. But we are not surprised that Lord Ponsonby found himself without support, or that his motion was opposed by the spokesmen of the Labour Party in the House of Lords as decidedly as it was opposed by the spokesmen of the Government. For our part, we cannot see why the qualitative approach to the problem of disarmament should rule out the application of quantitative methods of reduction to any armament which the qualitative method leaves in being. And in view of the remarkable consensus of the statesmen in favour of getting to work on the qualitative method, we are afraid that the Disarmament Conference's last chance of practical achievement, however meagre, lies in this direction. Qualitative disarmament has in fact been accepted in principle by the great majority of the Governments apart from France and her Continental European military allies; and France, when the Conference meets again, may speak with a very different voice from that in which she has been spoken for by M. Tardieu. On these grounds, we disagree with Lord Ponsonby when he condemns the qualitative method, in principle. He would have been on much stronger ground if he had discharged his broadside not against the Conference itself and its policy of qualitative disarmament, but against the technical committees, which have been hard at work making fools of

their principals and nonsense of their principle while the Conference is in recess. In this mischievous behaviour, the gentlemen of the Naval Committee seem to have been the worst offenders, each national Assembly exercising all its ingenuity in order to salvage, as a defensive weapon, the particular kind of floating engine of destruction which happens to be nearest to its own heart. The British want then to save floating mines, if submarines are to remain on the scene. We hope that the first act of the statesmen, when they resume their seats, will be to say to the Admirals: "Gentlemen, you have convincingly condemned them all! Capital ships, submarines and mines; they shall all go simultaneously to the scrap heap!"

The Position of Dr. Brüning.—Dr. Brüning, by his personal merits, appears to be winning for himself an almost unique position among the statesmen whose fate or fortune it is to find themselves responsible for the governments of their respective countries during the world crisis. As the crisis goes on and grows worse, the condition of Germany is patently deteriorating in at least the same measure as the condition of her neighbours. Yet, whereas in most countries in the world to-day the growing difficulty of life is bringing more and more discredit upon the responsible statesmen, we see in Germany the spectacle of the Chancellor's prestige and authority rising steadily. Dr. Brüning's political strength is the more remarkable inasmuch as he has to face a particularly truculent opposition in the shape of Hitlerism, and it is instructive to note the attitude of the Nazis towards the Chancellor since the Prussian elections. On the eve of these elections, in which the National Socialists had made spectacular gains, Dr. Brüning's Government had the courage to dissolve the Hitlerite "Brown Army" throughout the Reich. That step was followed on May 5th by two new emergency decrees—one dissolving the various anti-religious organisations of the Communists; the other bringing all semi-military private organisations that are not dissolved under the control of the Reich Minister of the Interior. This latter decree seems to indicate that the Reich Government intends to control, but not to dissolve, the Conservative Stahlhelm organisation and the Republican Reichsbanner. In short, the Nazis have been singled out for severer treatment than their rivals; and this might have been expected, in the circumstances, to make them furious. Instead, we have heard the Nazi spokesman in the Reichstag, last Monday, going out of his way to pay Dr. Brüning a tribute. It looks as though the Nazis are realising that Dr. Brüning is so strong that their only chance of obtaining a share of power lies in coming to terms with him. And why is Dr. Brüning so strong? Is it not because his countrymen of all parties have come to recognise that he is championing Germany's cause in the world on a high level of courage and public spirit which could only have been maintained by a man of rare character? What Dr. Brüning stands for is illustrated by the notable speech which he made last Sunday. In this speech he gave effective expression to the deep desire for equality of treatment which is the key to German feelings to-day, as it is the key, always and everywhere, to the feelings of "under dog." He argued cogently that the inequality between the victors and the vanquished in the late war, which was perpetuated in the peace settlement, has been one of the major causes of the present world crisis. But he also declared his conviction—and this is characteristic of the man—that he could only obtain the best results for Germany in the pending international negotiations if it were proved that Germany's aims were consistent with the interests of the rest of the world. This is the kind of statesmanship that the world most needs.

The Japanese Withdrawal.—Last Tuesday the Japanese Cabinet reached the decision that the military forces now stationed in and around Shanghai shall be withdrawn within a month, and one division has, in fact,

already left Shanghai for Manchuria. The Japanese troops in Shanghai will be reduced to the footing on which they stood before the extension of the Sino-Japanese armed conflict to this theatre in January; they will be reduced, that is, to a small landing party of bluejackets, such as any of the interested Powers might keep on shore in the International Settlement at any time for the protection of its nationals. The Japanese official spokesman at Tokyo, in announcing this decision, has frankly admitted that it represents an abrupt reversal of Japanese policy. The previous Japanese intention, he says, had been to maintain "a semi-permanent garrison of at least one division" in Shanghai and its hinterland; and the extreme obstinacy which has been displayed by the Japanese representatives in the local armistice negotiations during the past weeks had already revealed this intention to the world before it was officially avowed. This new decision to evacuate, almost immediately after the Armistice Agreement has been signed, therefore implies a remarkable *volte face*. It is reported, moreover, that this new decision has been taken on the initiative of the Japanese War Office—a proposition which is really self-evident, since past history shows that the Japanese War Office could not possibly have been dragooned by the Japanese Civil Government into a step of this kind. The inference from all this is clear. The Japanese Army is now finding itself so hard pressed in Manchuria that it feels unable to keep two separate fronts on foot simultaneously. Autocratic though its powers may be within certain limits, these limits are set rather rigidly by the two checks of financial stringency and public opinion. The War Office knows what its limits are, and, within these limits, it now needs every available soldier and every available yen for dealing with the more and more awkward situation in Manchuria. Observers who have the cause of international peace and collective security at heart will watch these Japanese distresses with mixed feelings. They will be delighted to see Japanese militarism taught so quickly that it does not pay. On the other hand, they will regret that the lesson is being administered, not by the League of Nations in Geneva, but by Chinese guerilla bands in Kirin.

Albert Thomas.—The death of M. Albert Thomas, Director of the International Labour Office, is a serious blow not only to that organisation but to the League generally. Among the high officials of the Geneva organisations he stood pre-eminently as a courageous and independent protagonist of the idea of international common sense, and he was governed alone by service to the cause. No man ever accused Albert Thomas of truckling to any Government. The criticism was more frequently that of being too frank about their shortcomings; but he stood his ground with good humour and firmness. In him the institution of the League as a whole had a fearless spokesman who was not intimidated by Governments or parties. His own staff loved and respected him, and he inspired in them the keenness and enthusiasm of his own infectious nature. The I.L.O. is his creation more than that of anyone else; it is stamped with his individuality. His influence at Geneva, and the part he was able to play in developing his own particular organisation, were due in part to the fact that when he took up this office he was already a politician of high standing, not merely in his own country, but in the international world. A man of humble origin, and prior to 1914 known only to his own countrymen, he was called back from active service very early in the war to the supremely important task of organising France's supply of munitions. It was in that capacity that he first came in contact with British and other Allied statesmen, generals and industrialists; and there were none of them who were not impressed with his tireless energy, his knowledge of his job, his quick grasp in discussion and his unfailing good humour and enthusiasm. It was later that there was revealed to them the bright flame of idealism that has illumined the whole life of Albert Thomas. Whether in the first flush of victory the creators of the League of Nations aimed too high in definitely attempting to bring into force international standards in labour

and industrial conditions, time will show. Valuable though the research work of the I.L.O. has been as a contribution to the building up of knowledge of international conditions, a man of Albert Thomas's disposition must have chafed at the constant succession of disappointments which his organisation encountered in trying to give effect to the liberal ideals embodied in the labour chapter of the Peace Treaty. One day, no doubt, these ideals will be achieved; meanwhile Thomas has created a tradition and an institution imbued with life. He will long be remembered as the creator of the I.L.O. and as one who devoted his life's efforts to raising the lot of the masses of the people throughout the world.

The Irish Free State Budget.—In introducing his first Budget, Mr Sean McEntee, the Finance Minister in Mr De Valera's Government, described the coming year as presenting a grim and forbidding aspect. The amount he had to provide for amounted to £26,926,000, while revenue on the basis of existing taxation would only yield £23,310,000. He thus had to fill a deficit of £3,616,000. To a limited extent he proposed to meet this by economies, for a general reduction in Civil Service salaries is envisaged, amounting to 15½ per cent. in the case of the highest salaries. He further hoped to save £100,000 as a result of a complete overhauling of the administrative services by an expert committee, and also made a somewhat nebulous allowance of £380,000 for "over-estimation." This reduced expenditure to £26,247,000. For the remainder, and also to meet certain fresh expenditure, he had to resort to new taxation. In the field of direct taxation, the standard rate of income tax is to be raised from 3s. 6d. to 5s. in the £, and reductions are to be made in personal allowances. The surtax exemption limit is to be reduced from £2,000 to £1,500, and the rates of surtax to be adjusted to the British scale. Corporation tax is increased to 7½ per cent. for Free State companies, and foreign companies with registers or branch registers in the country, and to 10 per cent. for other foreign companies. An additional tax of 1½ per cent. is to be imposed on banks in respect of their notes, and a further 3 per cent. on that part of the banks' note quotas which is not in circulation. Coming now to Customs and Excise, increase in various revenue duties, including tea, tobacco, entertainments, and a special package tax on all imported commodities ready packed for sale are proposed, while the expected yield on the new protective import duties is also to be taken into account. The anticipated yield upon all these proposals is summarised below:—

Income tax	£ 1,056,000
Surtax	77,000
Corporations profits tax	230,000
Bank notes tax	90,000
Customs and excise	350,000
New import duties	910,000
Total	2,713,000

Mr McEntee also specified certain minor changes, and then found himself left with a surplus of £12,885. He next proceeded to enumerate certain proposals for the relief of unemployment, together with their cost:—

Increase of grants under Housing Act	£ 100,000
Grants to be spent on public health works and arterial drainage	350,000
Distress works	150,000
Special road works (to be financed by borrowings on security of Road Fund)	1,000,000
Local health works and housing schemes (to be financed out of Local Loans Fund)	550,000
Supplementary grant in relief of rates on agricultural land	250,000
Grants to provide milk for necessitous families	100,000

As the table shows, part of these grants are to be financed by borrowing, while a further £650,000 is to be obtained by a new 25 per cent. tax on the hospitals' share of all sweepstakes drawn after March 1, 1932. It is clear, however, that like many other countries the Free State is hard pressed to make revenue balance expenditure, and as Mr McEntee frankly admits, the state of the Irish Free State finances is a powerful motive behind the determination of Mr De Valera and his colleagues to abrogate the annuities payable to Great Britain.

Two-and-a-half Per Cent.—On Thursday morning the wheel came full circle, for Bank rate was reduced to 2½ per cent., the point at which it stood exactly a year ago. This week's reduction was by no means unexpected, for market loan and discount rates had for some weeks been completely out of touch with the 3 per cent. Bank rate. Greater interest, therefore, attached to the policy of the clearing banks, especially as at the time of last year's Bank rate reduction from 3 to 2½ per cent. they did not vary their rates. This year, of course, a totally different position exists, for money is super-abundant and there is no longer any necessity to retain foreign balances in London; indeed, the need to-day is to check too excessive an influx of foreign funds and to drive money out of idle bank deposits into more productive channels. The clearing banks, therefore, at once decided to reduce their rates paid on London deposits to ½ per cent., and their rates for short loans to the money market to 1½ per cent. Their decision is to be highly commended. It is, indeed, a matter for consideration whether the reduction in rates should not be extended to other fields. Country deposits have for a long time been receiving interest at the fixed rate of 2½ per cent., this rate being partly determined by competition from the savings banks and building societies. The latter are already being forced to reduce their rates, for they are being offered more money than they can remuneratively employ. As regards the Post Office savings banks, 2½ per cent. has for some time been the normal rate, but it is not a sacrosanct figure, and the question of its maintenance should be approached with an open mind, especially if it is an obstacle in the way of a reduction in the clearing banks' country rates. Finally, there comes the rate on bank advances. It is true that the minimum of 5 per cent. is subject to modification to-day in many cases, but it would be desirable if the Bank rate reduction could be reflected generally in the rates charged on bank loans, at least in so far as such loans are used for genuine business as distinguished from the carrying of stocks and shares. If such a distinction were thought advisable, bank managers would experience no practical difficulty in making it. The real need is that the 2½ per cent. Bank rate should be more than a symbol. It must act as a lever for making money cheaper all along the line.

Foreign Trade in April.—As compared with those for March, our foreign trade returns for the past month show a further decline of nearly £8 millions in gross imports, whereas domestic exports are £3.6 millions higher. The following table summarises the leading figures for April, and for the first four months of 1932, in comparison with a year ago:—

	MONTH OF APRIL. (000's omitted.)					
	April, 1932.	Increase or Decrease as compared with		April, 1931.		April, 1930.
		£	%	£	%	£
Imports	53,487	-16,463	-23.6	30,429	-35.9	34,782
British exports	34,782	+2,299	+7.1	12,080	-25.8	4,641
Re-exports	4,641	+1,947	+29.6	3,203	-40.9	39,423
Total exports	39,423	+352	+0.9	15,282	-27.9	14,064
Excess of imports over total exports	14,064	-16,815	-54.5	15,147	-52.1	

	FIRST FOUR MONTHS. (000's omitted.)					
	Jan.—April, 1932.	Increase or Decrease as compared with		Jan.—April, 1931.		Jan.—April, 1930.
		£	%	£	%	£
Imports	246,833	-32,869	-11.8	120,548	-32.8	127,113
British exports	127,113	+8,716	+6.4	83,881	-39.7	20,757
Re-exports	20,757	+3,160	+13.4	11,568	-35.8	147,869
Total exports	147,869	+11,876	+7.4	95,449	-39.3	98,964
Excess of imports over total exports	98,964	-20,993	-17.5	25,099	-20.2	

The figures require to be looked at with the consideration in mind that this year Easter fell in March and last year in April. The effect of the additional duties imposed

under the Order of April 19th would not be seen in the past month's trade returns. In order to bring out more clearly the recent trend, we show below for the past four months figures of retained imports and domestic exports under different categories:—

Period.	RETAINED IMPORTS. (In million £.)				Total (Incl. Animals not for Food, and Parcels Post).
	Food, Drink and Tobacco.	Raw Materials.	Manufactures.		
1932 January	29.6	14.7	12.1		57.0
" February	32.9	12.8	18.9		64.7
" March ...	29.3	14.2	11.6		55.7
" April ...	26.1	11.1	10.9		48.8

Period.	DOMESTIC EXPORTS. (In million £.)				Total (Incl. Animals not for Food, and Parcels Post).
	Food, Drink and Tobacco.	Raw Materials.	Manufactures.		
1932 January	2.8	3.6	23.4		31.1
" February	2.8	3.5	22.6		30.0
" March ...	2.7	3.5	24.2		31.2
" April ...	2.9	4.0	26.8		34.8

On the import side, manufactures remained close to the low level to which they were reduced by the 10 per cent. *ad valorem* duty imposed at the beginning of March, while foodstuffs and raw material imports both contracted appreciably. With regard to exports, the increase of £500,000 in raw materials shipped reflects an increase of 700,000 tons in total coal shipments, notably to Italy, Egypt and the Irish Free State. Among manufactured exports there was an appreciable expansion last month, as compared with March, in our sales of machinery and of ships, the latter representing presumably the fortuitous delivery in April of an unusually large number of completed contracts. As compared with a year ago, manufactured exports were £2.4 million higher, the only improvements of note being those in deliveries of ships, as aforesaid, and in machinery and textile exports. The picture presented by the returns, namely, that of a marked contraction of imports, coupled with some slight recovery of exports, has naturally been hailed by our Protectionists as a vindication of their theory. Nothing could be more illusory. It has to be remembered that the trade returns for a particular month represent the results of industrial activity several months earlier. The movement of our unemployment figures, on which we comment in the following note, suggests that our export returns—still benefiting, at present, from the depreciation of sterling—will shortly make a much less favourable showing. In any case, the revelation of a fall of 33 per cent. in imports and of 39 per cent. in exports, as compared with two years ago, in the showing of the year to date is hardly a matter for congratulation.

Unemployment.—According to the latest unemployment return, issued this week by the Ministry of Labour, the total number of registered unemployed on April 25th amounted to 2,652,181, as compared with 2,567,332 on March 21st and 2,520,113 a year ago. The increase of 84,849 during the month was more than accounted for by a rise of 93,887 in the numbers of those temporarily without work. The total of those wholly unemployed fell from 2,042,444 on March 21st to 2,031,888, while the unemployed among persons usually in casual employment rose from 102,212 to 103,730. A large proportion of the total increase is attributable to conditions in the coal mining industry, where the numbers unemployed rose by 63,000 during the month. Unsatisfactory though these figures are, they appear in an even more unfavourable light if account is taken of the effects on the register of the administrative and legislative changes introduced into the Unemployment Insurance system last autumn. It was estimated in the April issue of the *Ministry of Labour Gazette* that the live register figures had been reduced through these measures by approximately 171,000 between October, 1931, and March, 1932. It would, therefore, appear that, on the unreformed basis, an unemployment figure in April of probably rather more than 2,830,000 is comparable with the 2,811,615 (actual) recorded on September 21st last. The recent retrogress-

sion suggests that the export stimulus accruing from our abandonment of the gold standard has not long withstood the restrictive influence of the collapse of foreign markets on which, *pace* our Protectionists, this country is vitally dependent.

Health Insurance Reform.—In moving the second reading of the National Health Insurance and Contributory Pensions Bill in the House of Commons on Tuesday Sir Edward Hilton Young disclosed a critical situation, and explained a series of somewhat complicated proposals necessary to prevent Health Insurance from sliding down "the slippery slope" of insolvency, in the same way that Unemployment Insurance has done. The present situation is due to two main causes—falling off in contributions owing to large-scale unemployment, and an amazing increase in the benefit claims made by married women. During the past valuation period, said Sir Edward, sickness and disablement benefit paid to married women was nearly £4 millions in excess of actuarial expectation, and the excess was greatest in the last year. Unless the situation were remedied, he explained that before the end of the current valuation period "there would be widespread deficiency among approved societies," and the whole scheme might become insolvent and break down. Of the two courses open, namely, to increase contributions or decrease benefits, the Government chose the latter. A differentiation in this matter is made between married and unmarried women. For the latter, sickness benefit is to remain unchanged at 12s. a week, and the rate of disablement benefit reduced from 7s. 6d. to 6s., while for the married the new rates are to be 10s. for sickness and 5s. for disablement. Another major trouble dealt with in the Bill is the case of arrears of contributions due to unemployment. Under the 1923 Act all such arrears were excused. This concession has proved too costly, and in future only half the arrears are to be forgiven. Against these tightening measures can be set certain important concessions which the Bill makes to meet cases of hardship. Of these the chief is the granting of easier conditions to those who, through continued unemployment, would otherwise forfeit both insurance rights and the contingent pension. It is now proposed that those whose contributions are in arrears owing to unemployment should be allowed medical benefit up to the end of 1933, and that they should not forfeit pension rights until the end of 1935. A minor concession is the lowering of the age at which pension rights would be unprejudiced by failure to pay contributions owing to unemployment from 60 to 58½. Thus, on the whole, the Bill, while taking necessary steps to secure solvency for the scheme, tempers the wind for some of the closest-shorn lambs. Much of the scheme propounded in the new Bill, especially the concessions just mentioned, must be regarded as temporary and experimental. A general statutory review of all the circumstances and conditions of National Health Insurance is due in 1935. By then the future of trade and employment may be less obscure than to-day. Sir E. Hilton Young's Bill tides us over three years without inflicting more hardship than the essential aim of solvency involves in these difficult times.

The Encroachments of Bureaucracy.—Even in these docile and well-dragnoned days, John Bull retains at least a little of his old traditional jealousy of his normal rights and liberties. Therefore, when, two years or more ago, the Lord Chief Justice revealed in his book, "The New Despotism," the extent to which Parliament had delegated powers of legal decision and regulation upon Ministers and Departmental Committees, there was enough of a stirring of public opinion to secure the appointment of a Committee to examine the whole question. This Committee, which was presided over by Lord Donoughmore, and comprised members of all political parties, has now reported.* On the whole, the report is rather reassuring. The encroachment of bureaucracy does not appear to be on such a big scale as was thought by the suspicious.

* Report of Committee on Ministers' Powers. H.M. Stationery Office. Cmd. 4060. Price 2s. 6d. net.

Nevertheless, strong safeguards are clearly needed, and the recommendations of the Committee, which are unanimous, should be carried out. Eschewing legal technicalities, and putting the matter in a nutshell, the Committee's advice is principally as follows:—(1) That the growing tendency of modern legislation to place powers of modification of an Act's provisions in the hands of a Minister should be jealously watched by Parliament, and should only be given in exceptional cases. (2) That where such powers are given, they should be scrutinised by Standing Committees of both Houses. (3) That no Departmental Order, issued under an Act, should (save in exceptional circumstances) be excluded from the purview of the Courts of Justice. (4) That any aggrieved person should have the right of appeal to the Courts on questions of law, though not on questions of fact. Such recommendations, provided they are carried out, would seem to meet the position for the moment; and by their promulgation the Committee fully justify their existence. But since British bureaucracy is presumably no less apt than bureaucracy all the world over to take an ell sometimes, when given an inch, we doubt not that continued vigilance will be required; and it is ominous that Miss Wilkinson, in an annexed note to the report, champions the delegation of legislation. For the moment, however, let us be grateful to Lord Hewart for writing his book, and to the Committee for its practical recommendations.

Iron and Steel Production in April.—According to the statistics just issued by the National Federation of Iron and Steel Manufacturers, three blast-furnaces were blown out for relining during April, reducing the number blowing at the end of the month to 69. The production of pig iron, at 316,900 tons, was at practically the same rate as in the previous month (335,600 tons for 31 days) and as in April, 1931 (323,200 tons). Steel production, however, declined rather sharply from 462,800 tons in March to 433,800 tons in April, especially when it is remembered that the previous month included the Easter holidays. Continental manufacturers are making strenuous efforts to retain their hold on this market and are offering semi-finished and finished steel at prices, including the 3½ per cent. duty, well under British prices. Great Britain has been by far their largest market for Continental iron and steel manufacturers, and their other markets have been considerably curtailed owing to the world depression and exchange and quota restrictions. Exports of iron and steel from France, for instance, which in 1930 averaged 333,700 tons per month, and in 1931, nearly 300,000 tons per month, are now averaging about 200,000 tons per month; exports from Germany, which in 1930 averaged 372,500 tons per month and in 1931, 329,200 tons per month, fell to slightly under 150,000 tons in March. The measure of the decline in exports from Belgium cannot be stated, as the foreign trade returns for Belgium are undergoing revision. Exports of iron and steel from Great Britain in April were 180,500 tons, so that unless Germany's exports show an unexpected rise, Great Britain's exports of iron and steel are now in excess of those of Germany, but less than those of France. Home demand in Great Britain is also very restricted, shipbuilding under construction was never lower and although the tonnage of vessels laid up in British ports fell by 166,000 tons last quarter it is understood that this decline was due to ships being sold for breaking up and not to employment being found for ships previously idle. British prices remained steady during April, the price index being 104.0 (1913 = 100) compared with 104.3 in the previous month.

Cotton Trade Labour Conditions.—As anticipated, writes our Manchester correspondent, the Cotton Spinners' and Manufacturers' Association, the organisation in Lancashire which controls the weaving section of the industry, decided on Tuesday last to give the trade unions one month's notice of the termination of all wages and hours agreements. The original intention was to abrogate only the 1919 agreement, which provided for a reduction in working hours from 55½ to 48 per week and an advance in wages of 30 per cent. on list rates. The em-

ployers, however, have decided to sweep the board, but it is understood that the uniform list of wage rates will be the basis for working in the future. When the month's notice expires on June 11th it will be open to individual employers to make special arrangements with their own workpeople. It is quite possible, however, that an attempt will be made to arrange district agreements. The employers have been compelled to take this step in view of the refusal of the trade unions to adopt the "more looms" system or consider a general wages reduction. The action now taken is bound to result in considerable chaos in working conditions throughout Lancashire, but it is hoped that before very long the representatives of the operatives will be readier to consider fresh agreements as increasing irregularity will not be to the advantage of the trade unions. It is eminently desirable that without any delay there should be a resumption of collective bargaining between the employers and the trade unions.

The Cotton Trade and Ottawa.—At the beginning of this week there was important discussion at a meeting of the board of directors of the Manchester Chamber of Commerce with regard to the question of cotton trade representation at the Ottawa Conference. The President, Mr T. D. Barlow, reported fully on the deputation who waited upon Mr J. H. Thomas and Mr Walter Runciman at the end of last week, and the board endorsed the recommendation of the deputation to accept the arrangement for an accredited cotton trade representative to be sent to Ottawa, supported by a number of technical advisers. On behalf of the board it was announced that from the point of view of Great Britain the fact has to be faced that our existing export trade to foreign markets is of great size and importance, and it would be fatal for us to embark on a policy which ignored such trade or placed it in jeopardy without adequate assurances that any trade lost would be replaced in other directions. Certain raw products now obtained from foreign sources are essential to some of our chief industries, and to impede or prejudice the import thereof might entail the gravest consequences. Unless both the United Kingdom and the Dominion statesmen recognise these and similar facts, the outcome of the Ottawa Conference from the trade point of view will not stand the test of time. The board condemns, as highly inimical to the best interests of Great Britain, the tendency in some quarters to regard the Ottawa Conference as a primarily anti-foreign movement. Foreign trade is necessary to Great Britain and also to other parts of the Empire. The aim of the Conference should not be the exclusion of foreign trade, but the stimulation of inter-Empire trade by arrangements which will increase the fundamental economic strength and well-being of the Empire countries.

Cotton Trade Redundancy Scheme.—In Manchester, on Wednesday last, a special meeting of the Joint Committee of Cotton Trade Organisations gave consideration to a revised scheme for concentrating production and scrap-ping redundant machinery. In the first instance, the scheme will apply to the American and Egyptian spinning sections, but it may be applied to any other section of the cotton industry by order of the Board of Trade if sufficient support is received from that particular section. Provision is made for the appointment by the Board of Trade of not less than three nor more than five Commissioners to administer the scheme with a whole-time chairman. The Commissioners will serve for a period of five years, and within three months of appointment they will be compelled to dispose of any financial interests they may have in the textile industry. The levy will not exceed 3d. per mule equivalent spindle per annum, and these levies shall not be imposed for a longer period than ten years from the date of the commencement of the scheme. Firms scheme will be liable for an amount not exceeding the levy which would have been due if such spindles had been installed at the date of the commencement of the scheme and had been continuously operated throughout the period. No plant shall be operated unless all levies under

the scheme have been paid. Owners of any plant which is operated before such payments have been made shall be liable to a penalty not exceeding ¼d. per mule equivalent spindle per day on all spindles contained in the mill concerned until payment has been made. The Commissioners will be empowered to take action for the recovery of the penalty, and may raise loans on the security of the levies which they are empowered to impose. They may buy any cotton spinning plant that may be offered to them, but they cannot purchase stocks of raw material, goods in process or finished goods. The Commissioners will be empowered to dismantle, break up or otherwise dispose of any plant they may acquire. The salaries and other expenses of the commissioners which shall be paid from the levies imposed will be fixed by the Board of Trade, and the expenses of administering the scheme shall also be subject to the approval of the Board of Trade. The Commissioners shall not be empowered to raise loans or buy property after three years from the scheme's commencement except by the written authority of the Board of Trade, which shall not in any case extend these powers beyond five years. A panel of assessors not exceeding fifteen members shall be appointed. The scheme will now be submitted to all firms in the spinning section, with a request that they should indicate whether they approve of it or not. It will be remembered that early this year a ballot of spinning employers was taken on a provisional scheme of this character, and the result showed that the owners of 46.97 per cent. of the spindles were in favour of the principle, there being 28.69 per cent. against, whilst no votes were received from the owners of 24.34 per cent.

The Bank for International Settlements.—As was to be expected, the second annual report of the B.I.S. makes interesting reading, for it gives within the compass of a few pages a bird's-eye view of the whole international crisis. It divides the "year's work," as it calls it, into three phases, the points of division being the announcement of the Hoover Moratorium and the British suspension of the gold standard. During the first phase the bank concentrated upon its customary functions, which included what was to prove a vain attempt to direct the superabundant and dangerous international accumulation of short-term capital into long-term channels. Even then the danger to the world had been foreseen, but events moved too quickly for it to be removed. The second phase witnessed the emergency help that had to be given through the B.I.S. to numerous central banks. Thus, instead of being a stabiliser of seasonal or transitory monetary fluctuations, the bank found itself acting as a granter of credit during a general economic depression. There were obvious limits both to the amount and the efficacy of the relief so given; but even so, the report is fully justified in pointing out that without this relief and the opportunity which the B.I.S. provided for speedy consultation and joint action between central banks, the acute credit crisis might have been still more catastrophic and widespread. During the third phase it was clear that credit-giving alone had become an inadequate palliative, and so the B.I.S. felt obliged to refuse new applications for advances which came to it from several central banks as a consequence of the fall of sterling. Moreover, by this time the resources of the B.I.S. itself had become depleted, partly because of the effect of the Hoover Moratorium upon its resources of Government origin, and partly because of the general and sudden jettisoning of the gold exchange standard. Hence the B.I.S. ceased to act as a credit-giver, and, instead, once more turned its attention towards the examination of monetary phenomena and problems so as to convert itself into a convenient centre of discussion and action in connection with monetary reconstruction, if the central banks so desired. It is emphasised, however, that "the real solution of the problems involved requires the determined and concerted action of the Governments." The report also contains an interesting analysis of the international short-term credit situation—short-term international indebtedness at the beginning of 1931 is now estimated at 50 milliard Swiss francs—together with a complete statement of the bank's own accounts.

The Austrian Crisis.—The resignation of Dr. Buresch has left Austria this week in a still unresolved Cabinet crisis. Dr. E. Dollfuss, the former Minister of Agriculture, has been requested by the President to form an Administration, but it seems doubtful whether he will succeed in obtaining the necessary support. Meanwhile, a recent issue of the *Reichspost* foreshadowed, apparently with official inspiration, the imminence of "drastic action" by Austria in order to maintain financial stability in the event of no financial help being forthcoming through the medium of the League. Whether this is a portent of a coming declaration of a complete transfer moratorium by Austria remains to be seen. Such a development would be scarcely surprising. What is certain is that when the League Council meets next week it cannot afford simply to adjourn again without any positive steps being taken on the report of its Financial Committee, which it received at the beginning of April, on the straits of the South-Eastern European countries. We had occasion at the time to criticise the report of the Financial Committee as embodying palliatives whose efficacy was open to question, but the Committee might at least be given the opportunity to reconsider its advice. To let the situation simply drift is to court the risk of a breakdown, whose ultimate consequences cannot be foreseen.

The Argentine Budget.—The 1932 Estimates, writes our Buenos Ayres correspondent, provide for administrative expenditure of \$778,336,326 paper, with a further \$61,871,920 for public works and armaments, financed by the sale of bonds. Total revenue receipts, excluding bond sales, are estimated as bringing in \$762,626,247, while charitable subsidies for \$27,829,860 are met by lottery and other sundry income. Hence the two sides of the account for 1932 read as follows:—

\$ paper (000's omitted).			
Expenditure.		Receipts.	
Service of public debt.	297,198	Customs and port dues	290,000
General administration	453,708	Internal revenues	152,900
Charitable subsidies....	27,430	Land tax, stamps,	
Covered by bond issues—		licences	97,000
Public works	52,973	Income tax	51,000
Armaments	8,899	Tax on transactions ...	45,000
		Autonomous dept. profits	12,000
Total expenditure	840,208	Posts and telegraphs ...	46,000
Surplus	12,120	Financial services	40,000
		Sundry revenues	28,726
		Lottery, etc., p.c. charit-	
		able subsidies.....	27,830
		Sale of bonds	61,872
		852,328	852,328

Impressive at first sight though this apparent surplus may be, the figures whereby it is obtained are, unfortunately, little better than guesswork. With salaries months overdue and an urgent need for important sums of ready money wherewith to meet internal and external obligations, the present Government had perforce to take over the rough sketch of a Budget drawn up by the Provisional Government on the basis of increased but as yet unapplied taxation, and make it do for the time being. Income tax and the Tax on Transactions are unlikely to yield anything like the estimate put down. Nor is it safe to count on enhanced revenue from higher import and internal revenue dues. On the first four months of the year customs receipts are \$10,000,000 paper down. Nor will the new "patriotic loan" help in this matter of the Budget. It is to consist of \$500,000,000 paper in bonds bearing 6 per cent. interest plus 1 per cent. cumulative amortisation. Pending public demand, the bonds may be negotiated through banks with the Conversion Office for 85 per cent. of their face value. It is proposed that the percentage of gold cover for the total circulation held by the Conversion Office be reduced from 40 per cent. to 36 per cent.; this will allow a maximum of \$400,000,000 pesos to be issued at need by means of re-discounting the bonds aforesaid. Such rediscount will, however, only be allowed after consultation between the Banco de la Nacion and an honorary Junta or Board charged with surveillance of the amortisation fund formed in connection with the new loan. On their agreement as to the need for money, they will communicate their

decision to the Government, who will thereupon decree that such rediscount may be carried out. Excellent in its intention, and trying hard to obviate all use of the words emission or inflation, this measure cannot disguise the fact that at the end of April the Government has an outstanding liability of some \$150,000,000 paper for salaries, while its unpaid accounts are admitted by the Minister of Finance to have stood at over \$250,000,000 paper at the end of February. At the same time the Government's direct and indirect debts to the Banco de la Nacion are, on the same authority, between 600 and 700 millions paper. Thus \$400,000,000 paper will soon be absorbed, and there are many who hold that this sum will be insufficient to straighten out the Government accounts. There is, however, a brighter side to the picture. In the first place, the legislature shows a serious mood of concentration that has not been manifest in Congress for many years; secondly, there is a consensus of opinion that economy in administrative charges must prevail; thirdly, trade is on the whole improving, and will do so even more rapidly than it is doing at present if Argentina is assured of the retention of her European outlets for her produce, and more particularly of the British market.

The Lithuanian Elections.—Last week a general election was held for the Diet of Memelland—the strip of territory, constituting the extreme north-eastern tip of pre-war Germany, which had been detached from Germany and attached to Lithuania in the Peace Settlement. The present elections are the consequence of certain high-handed action on the Lithuanian Government's part, upon which we commented at the time. Last February the German President of the autonomous Government of Memelland was arrested by the Lithuanian Governor for visiting Germany without authorisation; a Lithuanian President was appointed in place of him; and the Memelland Diet, which had protested against these acts, was dissolved in consequence. In the international field, these events evoked a German protest *auprès* the four Powers that are signatories of the Memel Convention—Great Britain, France, Italy and Japan—and these Powers have responded by instituting proceedings against Lithuania before the Permanent Court of International Justice at The Hague. The case is to be heard there next month. Meanwhile, the Lithuanian Government has received a wholesome lesson in the results of the election. The "Memelland parties" (*i.e.*, the German parties) in the Diet have not only retained their previous absolute majority over all other parties in the aggregate, but they have actually gained one seat. In the previous Diet, they held 18 seats out of 29, as against six held by the Socialists and Communists and five held by the local Lithuanians. In the new Diet, the German parties emerge with 19 seats, as against five Socialist and Communist seats and five Lithuanian. The failure of the local Lithuanians to make any gains is very striking when it is considered that they had the whole weight of administrative authority on their side—a leverage which the Lithuanian Government did not hesitate to exert with vigour in the recent incident out of which these elections arose. The Lithuanian Government seems to have drawn the proper inference. The Lithuanian Governor of Memel has resigned; and a more conciliatory policy towards the Memellanders is foreshadowed from Kovno. This is the right and sensible line for the Lithuanian Government to take.

Naval Mutiny in Peru.—In Latin America, each depressing turn of the economic screw has its political accompaniments; and, in times of distress and disturbances navies are apt to be the focusses of unrest. In Chile, last summer, the navy revolted as a protest against cuts in pay, and was reduced to submission by intensive bombing from the air. Last week-end there was a minor drama of the same kind in Peru, though happily the hostilities did not have to go, in this case, to the same lengths before discipline was restored. This was partly thanks to the action of a loyal sailor, who swam off from one of the two Peruvian cruisers in Callao Harbour, whose

crews were plotting revolt, and gave the Peruvian Government timely warning. This enabled the Government to arrest about half the mutinous crews when they were on shore leave, and thus to cripple the fighting power of the mutineers before the fighting began. Even so, the rump of the two crews was bold enough to disregard the signals to surrender which were flashed to them during the small hours of Sunday morning; and they had to be shelled by submarines and be given a demonstration of bombing from the air before they could be induced to hoist the white flag. By 7.30 a.m., however, the mutiny had been quelled; and the Peruvian Government is to be congratulated on having restored order, in so serious a crisis, without loss of life.

Shipping Freights.—As measured by our index number, whole-cargo shipping freights during April showed a fractional rise of approximately one-half of 1 per cent. :—

AVERAGE 1898-1913=100.					
	Average, 1913.	April, 1931.	February, 1932.	March, 1932.	April, 1932.
European Waters	110.0	86.0	88.7	87.3	86.1
North America	113.1	95.0	85.5	86.3	91.7
South America	123.4	94.4	89.0	87.0	86.0
India	106.3	94.0	87.4	87.7	90.8
Far East and Pacific	117.4	91.4	95.8	95.9	99.3
Australia	127.9	103.3	99.7	103.3	96.1
Total	116.3	94.0	91.0	91.2	91.7

The freight market was again quiet and featureless during the month. Outward coal business showed signs of further contraction, while ore cargoes homewards from Bay and Mediterranean ports were few in number. A moderate amount of chartering took place for Plate grain, but the North American market was again disappointing. East of the Suez Canal business was extremely dull, and in the case of Australian grain rates weakened considerably. Charges in the various sections of our index number were as under :—

AVERAGE 1898-1913=100.					
	Index Number.	Inc. or Dec. Points.		Index Number.	Inc. or Dec. Points.
Home trade	77.2	- 0.5	South America—outwards	65.2	...
Bay—outwards	99.1	...	South America—homewards	106.7	- 2.0
Bay—homewards	88.7	...	India—outwards	81.4	- 1.4
Mediterranean—outwards	85.3	- 4.1	India—homewards	100.2	+ 7.5
Mediterranean—homewards	88.9	- 2.2	Far East, &c.	99.3	+ 3.4
North America	91.7	+ 5.4	Australia	96.1	- 7.2

Expressed as a percentage of the average for 1913, the total figure of our index number for April works out at 78.8, compared with 78.4 in March and 80.8 a year ago.

The 1930 Census of Production.—Volume IX of the preliminary reports of the Census of Production of 1930, published in a recent issue of the *Board of Trade Journal*, deals with the boot and shoe, rope, hemp and linen, soap, cocoa, and glass trades. The following summary shows the gross value, the net value (gross value less cost of materials and work given out to other firms), and the net output per person employed in the various industries in 1924 and in 1930 :—

Industry.	Gross Output.		Net Output.		Net Output per Employee.	
	1924.	1930.	1924.	1930.	1924.	1930.
Boot and shoe	Thous. £.	Thous. £.	Thous. £.	Thous. £.	£	£
Rope, twine and net	50,545	45,213	21,990	19,973	169	171
Hemp and linen	7,433	5,954	2,344	1,888	172	135
Soap, candle & perfumery	9,128	4,798	3,159	1,727	129	110
Cocoa and sugar confectionery	31,914	28,074	12,288	12,543	425	485
Glass	40,220	35,375	16,754	15,794	216	225
	12,962	13,223	7,997	7,994	217	208

The total number of boots and shoes made in 1930, at 9,694,000 pairs, was 233,000 pairs less than in 1924. The decline in the total selling value is therefore due chiefly to a reduction in prices, amounting to 9 per cent. in the case of men's boots and shoes made of leather. There has

been a substantial decline in the output of the hemp and linen industries. The average number of workers in 1930, at 15,759, shows a reduction of 8,788 as compared with the previous census year. The output of linen piece-goods fell from 37,914,000 square yards in 1924 to 31,058,000 square yards in 1930. Activity in the soap trade appears to have been well maintained. The total quantity of soap produced in 1930 was 8,773,000 cwts., against 8,860,000 cwts. in 1924. The decrease in the total value is ascribed to the fall in raw material prices. The total net selling value of soap, candles and perfumery shows a slight increase. The fall in the total value of cocoa and sugar confectionery conceals a substantial quantitative expansion in output. Owing to the incompleteness of information, no comparison is possible between the total output of glass manufactures in 1924 and in 1930. The increase in employment and in the total selling value suggests, however, that the quantitative progress of the industry has been substantial.

INSURANCE NOTES.

London Assurance.—Thanks to a disproportionately large marine account, the underwriting results of the London Assurance for some years have, by comparison with those of other composite companies, been rather unsatisfactory. The 1931 report is distinctly poor, and it would have been worse still but for the unexplained release of a large sum from the reserves of the marine account, which leaves the fund equal to little more than one year's premium income. Unfortunately, detailed comparison with 1931 is impossible, because the accounts are now presented in a consolidated form, and the operations of the various sections of the accident branch are lumped together in one account. The consolidated accounts show that the premiums are derived as follows :—

	£
Fire	1,987,528
Accident	1,190,538
Marine	879,093
Life	625,576
Sinking fund	250,289
	4,933,024

Both the fire and accident accounts show an underwriting loss, in the former case of £520 and in the latter £61,480. The sum of £125,000 has been released from the marine account, and the net trading surplus works out at £40,000. The dividend has been maintained at 45 per cent., and the payment necessitates a small draft of £30,000 on the trading surplus. The strongest and most prosperous branch of the company is the life department, which has a fund of nearly £6½ millions, and transacted a new business last year (in sums assured) of £1,796,000. In spite of the Stock Exchange depreciation, the book values on December 31st showed an excess over market values of only £42,000, and this has now been more than recovered.

General Accident, Fire and Life Corporation.—The form in which this company's accounts are presented has long been unilluminating; the barest minimum of information is supplied, and that in a form which renders detailed comparison impossible. There is all the more need in this case for the frankest disclosure, since the company's reserve position is none too strong and it operates as an independent organisation outside the "tariff" ring. So far as 1931 is concerned, the company is entitled to claim that the underwriting results have been eminently satisfactory. The bulk of the business consists of various branches of accident insurance largely derived from America, and although the income from this has fallen slightly from £6,707,000 to £6,688,000, the income from annual and long-term contracts is actually some £300,000 greater, this increase being rather more than balanced by a fall in premiums from monthly and short-term contracts. The basis of the unexpired risk reserve in this account is not disclosed, though it has been slightly strengthened during the year. For the purpose of the usual table of profits, provision has been

made for the usual 40 per cent. reserve calculated on the annual and long-term contract premium income. The fire department produced premiums of £602,000, and the marine department £86,000, and the total premiums from all departments (excluding life) show a diminution of no more than £10,000. The usual table of profits is given below :—

	1930.		1931.	
	Amount of Profit.	Percentage of Premiums.	Amount of Profit.	Percentage of Premiums.
Fire	72,265	11.9	74,146	12.3
Accident	323,619	4.8	198,391	3.0
Marine	13,752	18.8	915	1.1
	382,132		273,452	
Less items debited to profit and loss account	318,919		217,937	
	63,213		55,515	

The dividend has been steadily increased year by year to its present level of 56 per cent., but the decision to call a halt to further advances will be approved as a measure of prudence, though the interest earnings would be sufficient to cover a distribution of over 70 per cent. Exchange and Stock Exchange depreciation have made a big inroad upon reserves. Altogether a sum of £613,000 has been needed for these purposes—£200,000 from the life department, £400,000 from general reserve (leaving £600,000 in this fund), and the balance from profit and loss account.

Northern Assurance.—The 1931 report of this company reflects the prevailing depression, which, in the insurance business, is exemplified by falling premium incomes and diminished or non-existent profits. The actual decline in premiums, from £4,802,000 to £4,634,000, is moderate in the circumstances. The fire department is responsible for nearly one-half of the total premiums, and the underwriting profit, as will be seen from the table which follows, has almost vanished. It should be mentioned that the Northern is another of the companies which maintains a reserve for unexpired risks of 50 per cent. of the premiums, and it has, therefore, been necessary to recalculate the profits on the more usual and comparable basis of 40 per cent. :—

	1930.		1931.	
	Amount of Profit.	Percentage of Premiums.	Amount of Profit.	Percentage of Premiums.
Fire	53,315	2.3	6,004	0.3
Accident	139,567	8.6	147,229	9.1
Marine	5,403	0.6	...	...
Non-profits life fund	100,000		...	
Annuity fund	25,000		...	
Leasehold redemption fund	5,000		...	
	317,479		153,333	
Less items debited to profit and loss account	114,278		87,016	
Total net trading surplus	203,201		66,317	

For many years the dividend has been at the rate of 85 per cent., and this has been declared for 1931. The payment requires a sum of £258,000, of which interest earnings provide £207,000, and trading surplus the remainder. Consequently, the net result of the year's trading operations has augmented the company's free resources by £15,000. The funds of the life department now amount to nearly £7 millions, and new business was transacted last year for sums assured of £1,016,000, compared with £1,227,000 in 1930. Transfers of reserves have taken place on a large scale. All the departmental reserves in excess of the 50 per cent. unexpired risk reserves have been transferred to general reserve (apart from £80,000 which has gone to contingencies, together with a further £47,000 direct from profit and loss account), and this fund now stands at £2 millions—a sum amply sufficient to cover the depreciation of £554,000 in the book values of the assets.

Licenses and General Insurance.—One of the provisions of the Road Traffic Act (1930) imposed upon insurance companies transacting motor insurance business the necessity of making a separate return for this class of business. Rather than complicate the accounts by

this additional schedule, the Licenses and General, in common with some other companies, has taken the opportunity to present the whole of its operations, other than fire and marine, in one consolidated account. This alteration, while simplifying the 1931 accounts, makes impossible a detailed comparison with previous years. The fire business, as foreshadowed last year, shows a large reduction in premium income, from £140,000 to £100,000. This is in line with the company's policy of reducing treaty reinsurance business, which experience has shown to be unremunerative. None of the fire business is derived from America, a circumstance which in these times is a source of comfort. The premium income in the consolidated account, at £371,000, shows actually a small increase on that of the preceding year, but the underwriting profit has practically disappeared. Included in this account are the premiums derived from the class of business, namely, indemnity to licensees in the event of non-renewal or forfeiture of their licences, for the provision of which the company was originally founded some forty years ago. Details of the underwriting profits in each department are shown below:—

	1930.	Per- centage of Profit.	1931.	Per- centage of Profit.
Fire	688	0.5	8,019	8.1
Accident	1,074	7.2		
Employers' Liability	535	1.7	261	0.1
Licenses and General	3,606	1.1		
Marine	135	0.6	603	3.3
Profits from sales of securities..	17,834		4,676	
	22,532		12,353	
Less items debited to Profit and Loss Account	14,935		10,669	
Total Net Trading Surplus.....	7,597		1,684	

The dividend has been maintained at 20 per cent. and costs £15,400, compared with interest earnings of £20,300, so that the company has succeeded in increasing its surplus resources as a result of the year's operations by about £6,500. The book value of the company's total assets amounts to £715,000, and the depreciation on these is stated to be fully covered by an existing investment reserve of £75,000 and an augmented contingency reserve of £40,000, leaving intact the general reserve of £100,000.

London and Scottish Assurance.—The share capital of this company was acquired in 1923 by the Northern for a sum of £840,000. Owing to disastrous Marine losses, which were brought to light immediately afterwards, the investment has so far been a liability, and, except for one small payment in 1927, the Northern has had to forego all dividends. During the last five years, however, the company has been very carefully nursed, the Marine premium income has been drastically curtailed, and the net result has been an augmentation of the company's free resources by a sum of £260,000, equal to more than twice the paid-up capital. In 1931 the underwriting experience has received, except in the Marine Department, a set back, and the company has had to face also heavy investment and exchange depreciation. The detailed results are shown below:—

	1930.	Per- centage of Profit.	1931.	Per- centage of Profit.
Fire	10,888	3.5	952	...
Accident and General	22,498	6.7	12,201	3.5
Marine	5,403	3.2	...	...
	27,983		13,153	
Items debited to Profit and Loss	13,959		17,708	
Total Net Trading Surplus.....	14,024		4,555	
Add Interest Earnings.....	37,492		38,770	
Total increase in surplus re- sources.....	51,516		34,215	

With regard to the Marine Department, the 1931 account has terminated its first year of existence with a very light claims ratio, and if this tendency is continued this year

the account should now be showing a satisfactory profit. The company has a life fund of over £4 millions, and last year transacted new business of £758,000, compared with £825,000 in 1930. Approximately one-half of the business is transacted outside the United Kingdom, principally in Canada, where one-quarter of the total fund is invested. The next quinquennial valuation of the life account, which is due to take place on December 31st next, will put the company to a severe test, for while the basis of actuarial reserves is only moderately stringent, there was, on December 31st last, a net uncovered depreciation on book values of 7½ per cent. of the Life Department assets.

Friends' Provident and Century.—Our attention has been called to the analysis of this company which appeared in our last issue, and to the reference contained therein to the directors' decision to omit payment of interim bonuses for 1932. In order to remove ambiguity, we are glad to amplify the reference and to explain that, although no interim bonus for 1932 will be paid on claims arising in that year, full interim bonuses will be paid in respect of such claims for the years 1930 and 1931. The directors' interim bonus policy therefore accords with that followed by the Atlas, whose accounts were also reviewed last week.

UNITED STATES.

Banking — Gold Position — Industry.

(FROM OUR CORRESPONDENT.)

NEW YORK, May 4.

In well-informed quarters the legislative attempts to interfere with the freedom of the Federal Reserve Banks have been taken seriously only in so far as these efforts tended to impair confidence abroad. The much-discussed Gold-borough Bill as finally presented to Congress was couched in innocuous terms and did little more than express the wish that old price levels could be restored through an inflationary policy carried on by the Federal Reserve Banks. On their own motion the Federal Reserve Banks are carrying on with undiminished vigour their operations designed to stop deflation of bank credit. The ultimate goal is re-entry of the member banks of the system first into the bond markets and lastly into a more liberal lending mood, in the hope that, with greater stability given to security prices, business men will be more ready to borrow and will then find it easy to obtain plenty of credit at low interest rates. Critics of the cheap money policy are not lacking. Some urge a much faster pace of credit expansion; others fear too much is now being done. In the past week the Reserve Bank purchase of Government bonds exceeded a hundred millions, bringing the total for the past three weeks to about \$306 millions. Total Federal Reserve Bank credit in use has increased since the end of March by \$200 millions. However, in the same period the loans and investments of reporting member banks in leading cities have fallen approximately \$300 millions. Even in the New York district there was a further increase in deflation, but this was owing largely to loan calling which the banks indulged in to subscribe for the new Treasury notes totalling \$450 millions. The issue has been heavily oversubscribed.

The member banks have been increasingly embarrassed by the surplus reserves piled up as a result of Federal Reserve policy, and they must take action soon to employ the excess. It is assumed that first of all good corporation bonds will be purchased, and that greater stability in the market will encourage business men to borrow to embark in a new enterprise, or at any rate that the press for liquidation of securities and commodity stocks will stop. At the end of April the Federal Reserve system, applying the Glass-Steagall Act's provisions, had about \$1,355 millions of free gold to use if required in credit

expansion. Without that Act, the free gold on the same date was only \$201 millions.

The New York Federal Reserve Bank states the case for the new credit policy as follows:—

"Indebtedness of member banks at the Reserve Banks has been reduced by more than \$300 millions during the past two months. This reduction in indebtedness, together with a decline of nearly \$100 millions in other forms of Federal Reserve credit, due principally to maturities from the acceptance holdings of the Reserve Banks, has absorbed somewhat more than half of the funds received by member banks, but there was an increase of \$236 millions in their reserve balances. Thus, the position of member banks as a whole has been changed within the past two months from one of heavy indebtedness, in which they were endeavouring to relieve their situation through credit liquidation, to a position in which many banks throughout the country have been able to retire, or greatly reduce, their indebtedness, and a considerable number of banks have surplus funds with which they can increase the amount of their credit employed in investments or extended directly to their customers."

The monetary gold stock was reduced \$26 millions in April, following a gain of \$36 millions in March. The bulk of the exports last month went to France and Holland. Gold held under earmark was reduced last month by \$4 millions. In spite of the turmoil at Washington and the threat of European countries to remove further gold, the underlying position remains exceedingly strong. Throughout the year the monetary stock of gold has averaged \$75 millions higher than late in 1929, when credit expansion was near its peak. The first effects of the strong movement of European currencies against the dollar, attributed mainly to anxieties over the Gold-borough Bill's passage through the Lower House of Congress, were shipments of \$10 millions in gold to France, Belgium, Switzerland and Holland. The export has caused some uneasiness among the timid, but in good quarters it is stoutly asserted that the movement will in no degree swerve the Federal Reserve Banks from their cheap money course.

The present rate of Federal Reserve Bank operations could continue a year or more without endangering the gold reserve, and while the confusion and lack of a proper sense of responsibility among Congressional leaders is arousing increasing disgust in the entire country, a reaction is fairly sure to set in. There is little likelihood that Congress will adjourn next month without having passed a tax Bill which, on the surface, promises to balance the Budget. How far it will go toward genuine reduction in expenditure is difficult to say, but should the returns from such taxation as may be adopted prove disappointing, the next session of Congress, following the November elections, will be in a much better position to take action. No responsible person in the financial community seriously believes the country will be allowed to drop the gold standard.

Industrial activity is as slack as ever. Some increase in steel activity is reported for the first week of May, but the daily rate of pig-iron output in April was nearly 9 per cent. below the March average. Steel output is hovering around 24 per cent. of capacity. Motor production in March was 118,959 units, as estimated by the Department of Commerce, against 117,418 in February. First quarter output of 355,721 vehicles was 48 per cent. below that of a year ago. Railroad traffic fails to improve, and net earnings for March ran about 28 per cent. below a year ago, bringing the first quarter to nearly 40 per cent. worse than last year. Industrial companies which have so far reported first-quarter profits show a drop of 80 per cent. from last year, according to a compilation made by the National City Bank, and their return on net worth was less than 1 per cent.

FRANCE.

Politics — Budget.

(FROM OUR CORRESPONDENT.)

PARIS, May 11.

THE assassination of M. Doumer, on the eve of the second round of the elections, resulting in the development of an entirely new adjustment of parties in the Chamber, the election of M. Lebrun to the headship of the State and the resignation of the Tardieu Ministry, with a full three weeks' interregnum before a new Cabinet will meet the Chamber, have contributed, within a period of only four clear days, to a complete change in the French political horizon and, to a great extent, in the international outlook also. M. Doumer, whose election to the Presidency of the Republic took place only a year ago, had barely had time to make his dignified, upright and strenuous character known to the nation at large. There is abundant evidence, however, to justify the view that within a further few months he would have acquired great popularity among the mass of the French, and that the end of his tenure, had he lived to complete it, would have left his name among those of the few French Presidents to whose work history will pay deserved tribute.

M. Lebrun, who was elected yesterday at Versailles to succeed M. Doumer, starts his term of office under the favourable light of the fact that his selection had the almost unanimous support of the two Houses of Parliament in joint assembly. In the actual polling he received 633 votes, or over three-fourths of the 826 cast. M. Lebrun's non-political career has been that of an engineer, and the worst that his opponents can say of him is that he has for many years been more or less associated with the great French iron and steel interests. He succeeded to the Presidency of the Senate, the second highest post in the French hierarchy, when M. Doumer was elected last year to assume the Presidency of the Republic. Towards the end of 1926, M. Lebrun, after a varied Ministerial career, was chosen by M. Poincaré, when the Caisse d'Amortissement was brought into existence, to preside over that important new national organism. This great post M. Lebrun relinquished only last year, when he succeeded M. Doumer as President of the Senate. During his five years' tenure of office the wise policy followed by the organisation under his direction resulted in the reduction of the total circulation of National Defence Bonds from 48,000,000,000 francs to 28,000,000,000 francs by the end of 1930; the conversion of the whole of the shorter term bonds into two-year maturities (thereby reducing the total falling due for reimbursement or renewal every month from an average of between 7,000,000,000 francs and 8,000,000,000 francs to 1,200,000,000 francs monthly; the lowering of the interest rate paid on them by 50 per cent., and public debt reduction to the extent of some 20,000,000,000 francs. Incidentally, the 3 per cents., which fell to 40.80 in 1926, recovered to over 90 by 1930, while the 1918 4's, which stood at 36.50 in July, 1926, were in September, 1930, quoted at over 102. M. Lebrun's services as protector of the public credit need no other comment.

Last Sunday's second ballots amply confirmed the forecast that the 1932 general elections would show the usual swing of the pendulum. The Socialistic Radicals (M. Herriot's party), the Internationalist Socialists, French National Socialists and Communists (comprising the whole of the so-called Left) secured 356 of the 615 seats to be filled, leaving the non-Herriot Radicals, the independents of all shades, the Tardieu-Laval groups and the Marin Nationalists with 259. This paper majority of 97 in favour of the Cartel des Gauches, however, is much more apparent than real. Should M. Herriot decide to share power with the International Socialist Party (with or without their participation in its responsibilities), which it now seems practically certain he will not do, he would have to reckon with the consistent opposition of the 23 Communists and Anti-Moscow Communists, which would automatically reduce his majority to 64, provided there were no other defections.

What line M. Herriot intends to take in regard to either the Socialists or the Moderates of the former majority

parties remains still unknown. M. Herriot, on his return to Paris on Monday, stated emphatically that he will hold his decision secret until May 18th, which will give him another ten clear days in which to perfect his plans. Meanwhile the Socialists, who benefited less than the Radicals by the adoption of Cartellist tactics last Sunday—Radical help assisted them to gain only 17 extra seats, while Socialist help aided the Radicals to increase their strength by 48—appear to be in a quandary as to whether M. Herriot will on this occasion accept their co-operation in any form. He has, in any case, as it appears, skilfully avoided binding himself by any pre-election pledges. A new Centrist Ministry, composed of Radicals (*genre Herriot*), the bulk of the groups forming the old Tardieu-Laval majority and the Republican Socialists (Painlevé group), but excluding the Marin Nationalists (76) and the Extreme Right, would furnish probably a working majority of around 80 (344 against about 260), and would appear capable, at the time of writing, of furnishing the stable majority of which the Chamber has so long been in need.

The task before the new Government, whatever its complexion may be, will be exceptionally difficult, so far as the national finances are concerned. The Budget Bill, adopted on April 1st, to provide for expenditure until the end of the current year, showed a nominal surplus of 3,381,000 francs. This, however, as the Ministers primarily responsible for it frankly admitted, is a merely paper balance, and in no way represents the country's actual financial position. But for the facts of the tragic prevailing situation—the economic crisis, the suspension of German reparation payments, the possible insistence on the maintenance of American debt payments, the increasing drop in revenue, the certain automatic increase in expenditure as compared with the estimates—the new Budget might almost, indeed, be described as farcical, although it was undoubtedly the best that could have been postulated, in view of the general uncertainty. Estimated revenue from taxation alone—based, as usual, on the rule of taking the yield during the penultimate year as a starting-point—is foreshadowed by M. Abel Gardey, the Senate Budget *rapporteur*, as likely to be at least 1,000,000,000 francs less than the printed figures suggest. Another almost incredible fact is that, although estimated expenditure is for nine months only, the estimated yield from taxation and other resources represents a full twelve months' recoveries; that is to say, in order to balance the accounts for the nine months' "year" ending December 31st next, the estimated taxation yield during the first quarter of the following financial year, representing about 1,800,000,000 francs, has been appropriated to help meet the current nine months' expenditure.

Further sums incorporated in the new Budget, in order to produce a balance, are 700,000,000 francs drawn from the reserve funds of the Service des Alcools, and 455,000,000 francs from the profits accruing to the State from the Mint. These will obviously not be available next year, and, consequently, represent 1,155,000,000 francs which will have to be obtained by additional taxation or other means. Finally, the 1932 Budget estimates assume, on the revenue side, the receipt of 1,173,000,000 francs in the form of German reparation payments. From the technical point of view the inclusion of this sum in estimated revenue is no doubt justifiable, in view of the fact that German reparation payments are theoretically merely under temporary suspension. The practical facts, nevertheless, justify the view that this item also must be regarded as contributing to the huge deficit that will result from the 1932 Budget. These items represent a total of 5,128,000,000 francs of estimated revenue which there is no reason to expect will be received, and only a fraction of the amount can be offset by reduced expenditure (in the form of a postponement of the corresponding annuity of French debt payments to the United States). Add to this total further unprovided for expenditure, estimated at over 1,000,000,000 francs, representing supplementary credits which may be expected to be voted before the end of the present financial year, and the 1932 Budget may be expected to result in a real deficit of from 2,500,000,000 francs to 3,000,000,000 francs; and, if non-renewable revenue, which normally would not be utilised for bringing about a really balanced Budget, be included, of between 6,000 and 7,000 millions.

GERMANY.

Budget Supervision — Foreign Trade — Insurance.

(FROM OUR CORRESPONDENT.)

BERLIN, May 10.

THE Reichstag assembled on Monday after a long recess, but the 1932 Budget has not yet been presented to it, as the Cabinet has not yet decided upon the means by which the unemployment relief programme is to be financed. It is expected that the programme will be met out of an independent fund, which will have to provide its own income out of contributions, and to which the contribution of the Reich will be strictly limited. Assuming this contribution to be one milliard, the 1932 Budget, according to the Finance Minister's statement to the Reichstag, balances at 8.3 milliards, against 9.3 milliards in the final Finance Act of 1931. Of this total, 2.3 milliards have to be handed over to the States, so that the actual expenditure of the Reich only amount to 6 milliards, 1,200 millions of which will be needed for war pensions, 477 millions for the Reich contribution to social insurance (apart from the new unemployment relief programme), 700 millions to the debt service, and 420 millions to the extraordinary redemption of short-term credits.

Considering the circumstances, the movement of the floating debt is very favourable and reflects great credit upon German financial policy. Leaving out of account for the moment the Treasury Bills issued for the support of the banks, the floating debt of the Reich has fallen from 1,983 millions on March 31, 1930, to 1,591 millions on March 31, 1932. This reduction was in part rendered possible by the Kreuger Loan, out of the proceeds of which 293 millions of floating debt were funded. The funded debt of the Reich, which amounted to 10,208 millions on December 31, 1931, was 300 millions lower than in the autumn of 1930, though against this must be set the fact that as a result of the crisis the Reich has definitely lost 400 millions, against part of which Treasury bills were issued. (Further Treasury bills were issued in connection with the rectification of the banks, but these are backed by sound claims on the banks.) All told, the assistance given by the Reich during the crisis has involved it in obligations amounting to about Rm. 1,500 millions, but this includes a guarantee of 400 millions to the foreign creditors of the Danat bank, which involves no risk as the Dresdner bank, which has taken it over, is fully able to deal with its commitments. The total also includes a number of other guarantees which will never be called upon.

The report of the Budget committee on the State accounts for 1930 shows that Germany has succeeded in establishing a model system of parliamentary supervision of the execution of the Budget. The Budget committee has set up a special sub-committee which has turned the auditing of the actual payments from a mere formality into a very serious examination of the legality and efficiency of the conduct of the Budget. This sub-committee begins its examination a few months after the close of the financial year, and finishes it so punctually that it is able to report to the Reichstag before the discussion of the next Budget but one is opened.

The committee has conducted a vigorous campaign against the excess of expenditure over the Budget votes which was previously both frequent and extensive, especially in the case of the Foreign Office. It finally succeeded in obtaining the dismissal without pension rights of those officials who were chiefly responsible for the particularly gross offences which occurred in the Foreign Office in 1928, thereby setting a precedent for the personal responsibility of officials for unjustifiable expenditure which will certainly be a great aid to economy in German public finance.

A further result of this parliamentary examination of accounts is to render the Budget much more comprehensible. The meaning of many items in the Budget has been revealed for the first time by this examination, and the sub-committee has discovered that in many cases funds disbursed under several entirely different headings were ultimately to serve the same purpose—in most cases the maintenance of cultural, scientific or economic activities. Often the individuals responsible in the different ministries

had no idea that the society or institution in question was also receiving grants from another official source. By this means, skilful officers of societies and managers of institutions were able to secure lavish assistance. This auditing of expenditure has also established that in many instances the organisations assisted by the Reich had been conducting their affairs with an extravagance that increased their need for assistance. All this has provided the Government with valuable data for a reduction of expenditure. It is particularly important that at a time when the parliamentary system is subjected to such fierce attacks in Germany, a parliamentary institution should be able to show achievements of such great value to the State.

The new checks imposed on commerce by tariffs and exchange restrictions have transformed Germany's trade relations with other countries. Soviet Russia has now displaced Great Britain as Germany's principal market, as the following table shows:—

GERMAN EXPORTS TO PRINCIPAL COUNTRIES.
(Million Reichsmarks.)

	January-March, 1931.	1932.
Soviet Union	129	181
Holland	244	167
Great Britain	262	150
France	228	135
Switzerland	125	125
Belgium-Luxemburg	124	80
United States	133	81

Russia is the only important country which bought more from Germany in the first quarter of 1932 than in the corresponding period of 1931. The maintenance of Germany's exports to Switzerland in spite of the expiration of the tariff treaty is noticeable. The declines may, perhaps, not continue to be so severe, as the fall in the British figure is largely due to reaction after the abnormal imports which took place in anticipation of the tariff. The share of Europe as a whole in German exports has not fallen as much as that of other parts of the world: exports to Europe were 1,305 millions, against 1,883 millions in 1931, to Asia, 113 against 188 millions, to America 150 against 284 millions.

AUSTRIA.

Finance — Railways — Industry.

(FROM OUR CORRESPONDENT.)

May 9.

THE report, which the delegate of the Finance Committee in Austria, Herr van Rost, has just published, has excited general attention on account of its deep pessimism. It expresses serious doubts as to whether the budget can be kept in equilibrium without a severe reduction of the salaries of civil servants. It points out the recession in the holdings of cash and the difficulties of the Federal Railways, and demands the cessation of all capital expenditure, even though it might be undertaken on long-term payment. Herr von Rost has assumed that in the supplementary budget, which the Government had intended to bring in and which has been held up through the Government crisis, savings to an amount of 62 million schillings are to be made. It is a fact that big cuts were actually planned for the supplementary budget, and they were estimated at at least 82 millions. The regression in cash in hand is certainly causing the Financial Administration serious anxiety, and if the views of the delegate to the Financial Committee were accepted in regard to the critical position of the State finances, a transfer moratorium would have to be proclaimed immediately. The last Government refused to take such a step.

It is not easy to survey the practical effects of a transfer moratorium, for it is well known that the National Bank keeps the greater part of its foreign values and gold holdings in foreign countries. The discussion abroad of the possibility of a transfer moratorium has brought about big offers of Austrian rentes. In particular, those in terms of foreign currencies have suffered decline. Whereas at

the end of the previous week the Vienna dollar loan was quoted at 78 schillings, in the course of last week it fell to 65. The American section of the League of Nations loan went down from 116 to 100, and the American batch of the 1930 Federal loan from 55 to 40. Mortgage script was also on offer, but on account of the stringency of the market no deals worthy of mention could be concluded.

The position of the Federal Railways still remains unsettled. As was only to be expected, the Swiss expert, Dr. Herold, who checked the position, has expressed the opinion that the railways should not continue their programme of investment and incur an increase of their floating debts. The cover at the National Bank has sunk below 22 per cent., and the higher rate of taxation on the bank note circulation, viz., 9½ per cent., has come into operation. The limitation of imports is beginning to affect farming interests. Prices of butter, lard and butchers' meat show an upward tendency, and it is feared that if limitation of imports is maintained prices may continue to rise. The check to foreign traffic is hitting the railways particularly hard. In March, goods traffic with Germany sank by 66 per cent., with Switzerland by 21 per cent., against a drop of only 6 per cent. in home traffic. On the other hand, home passenger traffic was 6.7 per cent. higher than in the corresponding month of last year. The decline of exports is having effect throughout industry. On account of accumulation of stocks of crude iron and in consequence of the difficulties caused by the foreign currency regulations in the procuring of coke, the Alpine Works has extinguished its furnace at Donawitz, and now the Schoeller-Blechnmann Works are slowing up. At several of the enterprises connected with the Credit Anstalt, output will be further reduced, as the bank is not in a position to maintain factories which are running at a loss.

Although the season is a favourable one and farm hands are being taken on again, unemployment is being reduced very slowly. It will become necessary to cut down social benefits. In April there was a weekly average of 94 compositions, with creditors and 24 bankruptcies, as against 54 and 18 in April of last year. The difficulties in which some of the firms found themselves were due to the fact that they could not raise any fresh credits. Even the savings banks, which were for a long time open for mortgage business, are now reserved in this respect, as the National Bank and the Financial Administration have warned them to keep funds in hand. For this reason, those in search of credits are more than ever obliged to resort to private lenders. The "back to the land" movement is growing, probably as a result of the crisis. Little employees and even people of the middle classes are trying to acquire very simple houses, which in many cases are designed only for summer use, together with a little ground, in order to cover their absolute necessities through gardening and poultry keeping.

HUNGARY.

Politics — Foreign Debt — National Bank.

(FROM OUR CORRESPONDENT.)

BUDAPEST, May 9.

THE outstanding political event of the past week was the reappearance of Count Bethlen after more than eight months of voluntary seclusion. The reception of his speech in the Budget Debate, in spite of the turbulent scenes which it has evoked from the Opposition benches, proves that he is still the dominant force in the present Parliament. The recent German and Austrian elections, with a swing of the pendulum to the extreme left, have left Hungary unmoved. The desire for revision of the Trianon Treaty is not a party question in Hungary, and there can be no question of unwise provocative steps taken by any party in this respect, because, whatever the internal political differences are between Left and Right Parties, the Government is fully trusted by everybody to do everything in this matter.

During the Budget Debate, Count Bethlen has urged the Government to make arrangements with the foreign creditors for the reduction of the intolerably high interest rates before it is too late. The former Prime Minister has rightly pointed out that the transfer moratorium and the standstill agreements cannot fulfil their aims without some constructive measure to alleviate the burden of the debtors and has suggested that if the foreign creditors do not agree within a limited time to this, the Government should rather assume the responsibility by taking steps alone than let the financial structure of the country collapse. Count Bethlen thinks that Hungary could pay about half of the present 7 and 8 per cent. interest rates charged on her post-war debts when the present strangulation of foreign trade is over, and suggests that until this time the reduced interest rates should be added to the capital debt. How urgent the solution of the foreign debt service is was demonstrated by the attitude of the House of Deputies, where practically all members advised the Government to achieve budgetary equilibrium by suspending altogether the service of the State debts. Out of a total expenditure of 806.2 million pengő for the Administration Budget, 105.4 million pengő are earmarked for the interests and amortisation of the State debt, of which 93.6 million pengő are for external and 11.8 million pengő for internal debts. The most important item is the 1924 League Reconstruction Loan service, requiring 34.1 million pengő, of which 17.9 million pengő represents interest and 15.7 million pengő sinking fund. The League Loan is exempt from the provisions of the transfer moratorium decree, and interest has been, and will be, met in full when due in the stipulated foreign exchanges. On the other hand, it must be pointed out that, owing to the depletion of the National Bank metal reserve and the further contraction of the merchandise export trade, it is questionable whether Hungary will be able to meet the sinking fund of the League Loan. In order to temper the frame of mind of the politicians who advocate complete default on the obligations of the State, it would be wise to suspend the payments of the sinking fund—though not the interest—of foreign debts which cannot be transferred, amounting to approximately 30 million pengő, including the amortisation of the League Loan of 1924 and of the pre-war debts as provided in the various clearing agreements.

The last return of the National Bank as at April 30th is not very satisfactory. The note circulation has increased to 417.5 million pengő, as against 406 million pengő a year ago. Considering that in 1931 the circulation decreased from 469.2 million pengő at the beginning of the year to 406 million pengő by the end of April, a decrease of 14 per cent., it is disquietening to see that this year it has receded by 1 per cent. only, from 422.8 million pengő to 417.5 million pengő, in spite of the expected deflationary effects of the transfer moratorium, which has now been in operation for more than four months. The National Bank has so far not issued any statement regarding the Foreign Creditors' Fund, and it shows the payments made to this account among the other debtors in its weekly return, which amounted at the end of April to 108.4 million pengő, as against 40.4 million pengő at the end of April of 1931. It would be, however, an error to suppose that all the difference represents the sums paid in for the foreign creditors; at best these payments amount to 50 million pengő and probably even less. It is very desirable that the National Bank should issue an official statement regarding the amount collected by this fund and indicate how it is being used. The bill portfolio of the National Bank, including the rediscounts with the B.I.S., amounted to 575 million pengő, the highest recorded since the beginning of the year. The increase is partly due to the rediscounts of Treasury bills by the private banks, which, in the absence of liquid funds, were compelled to take refuge in the Bank. The sight liabilities of the Bank have declined from 97.5 million pengő at the end of March to 61 million pengő on April 30th, the State deposits declining to 10.8 million pengő and private deposits to 50.2 million pengő; the decrease in the latter is also due to the Treasury bill financing.

SWITZERLAND.

Foreign Trade — Industry — Unemployment.

(FROM OUR CORRESPONDENT.)

GENEVA, April 28.

THE economic situation is far from improving in Switzerland, and the results of foreign trade for the first quarter show that the bottom of the depression has not yet been reached. Imports aggregated 471,204,840 francs, compared with 547,635,973 francs during the corresponding period of 1931. The drop of about 12 per cent. is due not only to the reduced needs of Swiss industry, but also to the enforcement of import quotas which showed their effects in March when there was a decrease of nearly 12,418,000 francs compared with February. Exports, on the other hand, totalled 230,884,291 francs, as against 362,681,354 francs in 1931, a drop of nearly 36 per cent. over the already unsatisfactory first quarter of 1931.

The slump in exports is the consequence, on the one hand, of the general reduction of prices, and on the other hand and principally, of the general depression and the raising of Customs duties in other countries. The result is that the exporting industries are in a very difficult position, particularly the watchmaking, textiles and machines industries, whose aggregate exports show a drop of about 60 million francs, or 39 per cent., on 1931, and of 199 millions, or 90 per cent., on the corresponding period of 1929, which was the last normal year. Some business men are of opinion that the watchmaking industry is so badly hit that it will never recover. That view is perhaps too pessimistic; watchmaking has already passed through terrible crises when its disappearance was forecast by all experts, and it nevertheless survived and even developed. It is true that conditions are now different from what they were some 50 years ago; watchmaking was almost a Swiss monopoly, while, at present, watches are being produced in many other countries. The Swiss watchmaking industry has therefore not only to face adverse economic circumstances resulting from a world-wide slump, but it has also to meet foreign competition which did not exist half a century ago. It is impossible to foretell what the future of that industry will be, but it is clear that its present situation seems pretty hopeless. From 1923 to 1928, watchmaking exports oscillated between 258 and 307 million francs a year, the last figure—the highest of the period—being recorded in 1928. In 1929, they dropped to 233 millions, a figure which was still regarded as satisfactory, but, since then, the position grew worse year after year, exports falling to 208 millions in 1930, and to 133 millions in 1931. If there is no improvement during the current year, and if exports continue at the same rate as during the first quarter, they are not likely to exceed 60 millions in 1932, a decrease of 78 per cent. over the yearly average of the period 1923-28.

The situation of the other chief exporting industries—silk, cotton, machines industries—though not as catastrophic as that of the watchmaking industry, is very bad as their aggregate exports show a drop of nearly 30 per cent. over the previous year. There is, however, more activity in these industries, which sell part of their products on the home market, than in the watchmaking industry, which lives mainly on its exports.

Exchanges with Great Britain, during the first quarter, were less than had been expected. Imports from her totalled 21,095,000 francs, compared with 26,302,000 francs last year, while exports to her aggregated 27,374,000 francs, as against 60,504,000 francs in 1931. Imports from Britain were not fostered, as had been hoped, by the decrease in the value of sterling, and they were furthermore reduced to some extent in March by the introduction of Swiss import quotas. On the other hand, exports to Britain were strongly influenced by the high value of Swiss currency, on the one hand, and by the institution of British Customs duties, on the other hand.

ROUMANIA.

Agricultural Finance — Danube Plan — Crops — Petroleum Merger.

(FROM OUR CORRESPONDENT.)

BUCHAREST, May 2.

A CLIMAX in the debates on the Agricultural Conversion Bill was reached when the banks complained of not having been consulted. A day or two after the protest was made, the Government proposed a convention between the Ministry of Finance and the National Bank by which the latter, and through it the banks, are relieved of the loss incurred by them in consequence of the reduction in the agricultural debts authorised by the new law. It may be estimated that the Government will have to shoulder a liability to the National Bank of about 3,500 millions, and by this amount the Government debt is increased, a procedure in direct contravention of the Law of Stabilisation.

The dearth of funds in the Roumanian Exchequer is critical in the extreme. It becomes more and more difficult to find money for payment of the public functionaries and for pensions, and there are doubts in many quarters as to the possibility of maintaining the debt service on the State loans. The national industries are brought to the brink of ruin by the failure of the State to pay for goods supplied. The whole credit system is weighed down by unpaid debts, the nucleus of which is formed by the debts of the State. The idea of bringing relief by means of the devaluation of the currency is most emphatically combated by the authorities as unsound and dangerous. Official circles look upon the stabilisation achieved in 1929 as the corner stone of the economic edifice which is on no account to be tampered with. Great hopes were therefore based on the London Conference, and it is hoped that the question has not been abandoned. Public opinion in Roumania is fully aware of the advantages to be gained by an economic rapprochement with its neighbours brought about by the lifting of customs barriers, but it is not prepared to make any political concessions to this end. It is argued here that the Danubian countries do not offer a sufficiently important market for Roumanian produce, and some kind of protection for Roumanian agricultural goods from overseas competition in Europe is necessary.

Sowings last autumn were slightly less than in the previous year. The spring sowings this season have been considerably delayed by the long-drawn-out winter and the subsequent floods. The consequence will be a reduction in the production of wheat, barley and oats, which is likely to have an influence on next autumn's agricultural exports. On the other hand, it is expected that a considerably larger area will be put under maize.

At last the negotiations for the amalgamation of several petroleum companies with Roumanian capital have borne fruit. The companies concerned are: Credit Minier, Industria Romana de Petrol, Petrol Govora, Petrolul Romanesc and Sondagul. The total capital of these concerns amounts to about Lei 1,500 millions. The amalgamation is to be effected under Government auspices. The new company is to be called the Société Nationale de Pétrole, and the Government is participating with Lei 300 millions, represented by royalties and taxes owing to it from the companies concerned and by land concessions. The total production of the amalgamating companies amounted to 1,027,412 tons during 1931, against 1,085,985 tons in 1930. Their drilling operations were reduced from 30,986 metres in 1930 to 17,903 metres in 1931. Last year their production represented 15½ per cent. of the total production of the country, against 19 per cent. in the previous year and 23 per cent. in 1927. All five companies have had to suffer severely under the adverse conditions prevailing during the last few years, and their financial position is very unsatisfactory.

TURKEY.

Budget — Railways — Foreign Trade.

(FROM OUR CORRESPONDENT.)

CONSTANTINOPLE, April 26.

In the new Budget, expenditure is estimated at 171,112,705 Turkish pounds and revenue at 171,118,800 Turkish pounds, a drop of 15 millions as compared with last year and of 51 millions as compared with two years ago. The defence services, which the Angora administration has always been unwilling to reduce, have at last suffered some diminution, though the proportion still remains one-quarter of the whole expenditure. If gendarmerie and military factories are included, the estimate for defence amounts to 45,554,675 Turkish pounds. Army, air and sea forces alone are to cost 34.7 millions, the army absorbing over 30 millions, while the air force, now well developed, will account for just on a million. The principal items of expenditure apart from this are ten millions on public works—a considerable diminution owing to the stopping of all projected but uncommenced works—and nine millions on public instruction. The amount set aside for public debt is 54.7 millions. This may be diminished by various arrangements with the creditors.

To meet this minimum State expenditure of 171 millions out of the diminished receipts, it has been necessary to impose new or increased taxes amounting to 18 millions. Within the past three years taxes had in many cases been lowered and Government salaries had been raised, and it has now been necessary to retreat all along the line. There has been no interference with the general scheme of lowered salaries for the Government employees, but exceptional impositions have removed a large part of the benefits they had gained. Apart from the special "tax to balance the Budget," which is to be added to the heavy cuts already made from the salaries of all salaried workers, there are to be increases of the business profits tax and the house property tax and an extension of the transport tax to all means of mechanical transport.

Though Premier Ismed Pasha's present visit to Moscow is principally an exchange visit of political amity, a number of the Government's economic and industrial experts and heads of factories have accompanied the Premier, with the mission of examining the Soviet's reforms and reorganisation in these spheres. It is recognised that Turkey is at the beginning of her development, especially in industry, and that the haste with which the beginning has been made has led to mistakes. Though the principle of private property will not be abandoned, lessons and hints will be taken from Soviet methods.

Turkish railway development, though it is to be slowed down owing to the crisis, reached a further stage this week with the completion of the line Kutahia-Balikessir in Eastern Anatolia at an expense of 24½ million Turkish pounds. At the time of the proclamation of the Republic the country had only 3,719 kilometres of railroad, while to-day it has 5,630. Of these, 3,430 kilometres are exploited by the State and 2,200 by private companies. Since the Republic 1,600 kilometres previously exploited by private companies have been purchased by the State. The Government has not resorted to any loan to achieve this new construction, though some of the railroad-building concessionary groups for a time advanced credits and accepted easy conditions of payment.

Over 150 articles and raw materials which were exempted from customs duties for the encouragement of industry are to have the exemptions withdrawn. In February last imports reached the lowest point they have ever reached, at 4½ million Turkish pounds. The first three months of last year saw imports at 35 millions and exports at 30 millions, while this year imports have amounted to 16½ millions as against exports of 25 millions for the same three months. In volume trade has not diminished so much, and in February the volume of exports was larger than in 1931, despite a fall of over 1½ million Turkish pounds in value. As the quota system is working too drastically in the direction of diminution of imports, some changes are likely to be made.

Books and Publications.

AMERICAN BIG BUSINESS.*

AN examination of the problems of "big business" to-day calls for a wide, international outlook in the author. Professor Wormser has attacked this subject in "Frankenstein, Incorporated," but his outlook is not commensurate with his subject, and he approaches world-wide questions wearing American spectacles. Although, so far as he goes, he writes about what he fully understands, his survey and his suggestions suffer from the consequent limitations.

The first third of the book is historical. While Professor Wormser stresses the point that American capitalism has a hold not merely national, but international, capital held elsewhere, though also employed internationally, scarcely comes into his picture, and the rest of his book is devoted mainly to questions which are not international. They are questions of how American Government action should control American corporations in the interests of the American public.

The longest chapter in the book is devoted to corporate ills and abuses. It deals with such matters as the laxity of incorporation laws in the various States of the Union, with the evils resulting from one-man companies, with questions arising out of current practices as to subsidiary companies, with nepotism and favouritism, with over-payments to executive officers under bonus systems, with abuses incident to watered stock, and so forth. Another development discussed is the invasion by corporations of territory formerly sacred to the professions. Corporations, Professor Wormser is constrained to admit, to-day are practising law, medicine and other professions. To recognise this state of affairs and regulate it is, in his view, the only practicable course.

Professor Wormser also has proposals for dealing with the situation in general, having regard especially to the fact that a handful of corporations, not over 200 in number, are earning 40 per cent. of the nation's net income. Modern American society, he remarks, is a Frankenstein which has created these new and mighty monsters, which he would control by a carefully chosen and highly paid Government commission representative of the different interests in the community. Antecedent approval of trade agreements and mergers by this commission would be required, and the commission would also supervise the operation of these agreements and mergers. Professor Wormser apparently favours not merely the enactment of legal rules, but active and continuing Government intervention and control, as a means of reform in America. With conditions and problems arising elsewhere and with those affecting the world as a whole he does not deal at all.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

Heirs to the Habsburgs. By G. E. R. Gedy. (London) J. W. Arrowsmith, Limited, 57 Gower Street. 12s. 6d.

An account of the Succession States during the first ten years of their separate history, which incidentally provides a valuable background for discussion of the Danube Plan.

The Directory of Directors. Thomas Skinner and Company, Gresham House, E.C.2. 25s.

This unique book of reference contains an alphabetical list of about 30,000 company directors, with a list of the companies of whose boards each is a member.

Les Dépenses Militaires. (Paris) Imprimerie Chaix, Rue Bergère, 20.

Contains statistics and diagrams illustrating the armaments expenditure of various Powers.

Capital Imports and the Terms of Trade. By Roland Wilson. (London) Macmillan and Company, Ltd., St. Martin's Street. 6s. 6d. net.

Die Schweinehaltung der Welt und der Handel mit ihren Erzeugnissen. By Professor Kurt Ritter and Joachim Hartisch. (Berlin) Verlagsbuchhandlung Paul Parey, Hedemannstrasse 28 and 29. Rm. 27.50.

A substantial statistical treatise on world pig industry and trade.

Profit Sharing and Co-Partnership. By Ernest W. Mundy. (London) Industrial Co-Partnership Association, 1, Gordon Square. 6d.

An introductory booklet.

Effetti delle Fluttuazioni nel Potere d'Acquisto dell'oro Sulla Vita Economica delle Nazioni. Riccardo Bachi. (Turin) Ditta Fratelli Pozzo.

An Italian study of one aspect of the world gold problem.

Mittel- und Südost-Europäische Wirtschaftsfragen. By Hermann Gross. (Leipzig) Curt Böttger Verlag. Rm. 8.50.

A collection of essays, by different authors, on various economic problems of Central and South-Eastern Europe.

Scadenze Istantanee della Crisi Mondiale. By Michele Schiavone. (Milan) Soc. Anon. "La Stampa Commerciale," Via dell'Orso, 8.

A discussion of the effects of the crisis in the principal countries.

The China Financial and Exchange Markets in 1931. By E. Kann. Published by the Author at 2A, Kinkiang Road, Shanghai.

Der Neubau des Deutschen Kreditsystems. By Dr. Rittershausen. (Berlin) Verlag von Georg Stilke. Rm. 2.80.

Proposals for the reconstruction of German credit.

Nations and the Economic Crisis. By D. Graham Hutton. (London) Sidgwick and Jackson, Limited, 44, Museum Street. 3s. 6d. net.

The Stock Exchange.

THE FUTURE OF CABLES AND WIRELESS.

THE agenda of the Ottawa Conference may usefully include discussion of a question of urgent Imperial importance—the future of the Cables and Wireless combine. Six weeks ago the directors decided that the results for 1931 did not permit of the declaration of a dividend on any part of the company's £52,503,572 capital. A week later it was disclosed that the combine's new headquarters were to be offered for sale by private treaty. It has naturally been inferred from these announcements that the forthcoming accounts will make a decidedly unfavourable showing. The inevitable disappointment of stockholders might have been less acute had the memory of the bright prospects, held out on the company's formation, been less recent. In view of the unfortunate way in which events have turned out, it may be relevant to recall the conditions under which the company was floated, three years ago.

The original holders of the Cable Companies' stocks and of Marconi shares were induced to convert into Cables and Wireless stock because the combine was a creation of the Imperial and Dominion Governments and of the Government of India, who were represented on the Imperial Wireless and Cable Conference of 1928. They were encouraged to retain their holdings because the experts attached to this Conference had estimated the standard net revenue of the communications subsidiary (Imperial and International Communications, Limited) at £1,865,000 (exclusive of non-telegraphic investment revenue), which represented approximately 6 per cent. on the issued capital of £30 millions. They were induced to regard this estimate of standard revenue as reasonable when the Conference recommended that all revenue in excess of the standard figure should go as to 50 per cent. to the company and as to 50 per cent. to the reduction of rates, or to such other purposes as the Advisory Committee might approve. It was thought that considerable economies would follow the application of modern principles of rationalisation to the communications services of the Empire—by the avoidance of duplication and the elimination of waste—and that the standard revenues would be earned, and even surpassed, in times of normal trade.

The slump may have come too soon to give the great combine an opportunity to reveal its true earning power. It is significant, however, that in the twenty-one months to December, 1929, the Communications Company disclosed earnings at the rate of only 4 per cent. per annum, while in the calendar year 1930 it earned only 1.1 per cent. Cables and Wireless, the holding company, with an issued capital of £52,503,572 (divided into £23,160,741 of 5½ per cent. cumulative preference stock, £20,686,854 of 7½ per cent. "A" ordinary stock and £8,655,977 of "B" ordinary stock), covered its preference dividends in the twenty-one months to December, 1929, with only a small margin. In the calendar year 1930 it earned its preference dividends only with the help of transfers of £329,500 from reserves in its subsidiaries' accounts, and showed no earnings whatever on its "A" and "B" ordinary stocks. The dividends it received from its subsidiaries, excluding the transfers from reserves, amounted to only 2.06 per cent. on the cost of its shareholdings in these 2.06 per cent. In respect of 1931, Cables and Wireless preference dividends, according to the directors' statement, have not been earned. As long ago as July, 1931, a Committee of Inquiry, consisting of Mr Wilfrid Greene, K.C., Lord Ashfield and Mr L. D. Holt, was appointed by the company and the Advisory Committee to inquire into "the causes and consequences of the great discrepancy between the standard revenue and the present earnings, and to suggest measures to remedy the present situation." The report of this Committee has never been issued to the public, and no statement has been vouch-

safed as to the taking of special action in the light of its recommendations.

The directors, obviously, have no responsibility for the fact that Cables and Wireless, in company with every other commercial enterprise, has been exposed to the blasts of the economic blizzard. Cable traffics are a sensitive barometer of international trade, and fluctuations in the receipts of Imperial and International Communications, Limited, the company's operating subsidiary, have corresponded closely with fluctuations in the overseas trade returns of Great Britain. Whenever an encouraging development has occurred (such as the Hoover Moratorium in July, 1931) traffics have tended to improve, and whenever renewed pessimism has returned, traffics have immediately fallen off.

Actually, last year's receipts of the Communications Company, after making adjustments for comparison with those of 1930, amounted to £4,624,437—a decline of £741,124, or 13.8 per cent., as compared with the previous year's figures. This loss in traffic receipts was no worse than that suffered by other companies in the communications industry. Indeed, the International Telephone and Telegraph Corporation, which acquired extensive interests in South America at the inflated prices of the 1928-29 boom, may be in a worse position in this respect than Cable and Wireless. Even the old-established Western Union has only just been able to pay its bond interest. But the stockholders of Cables and Wireless may claim that, on Government advice and authority, they were induced to begin their commercial life with an unduly extensive capital structure, and that to-day their company, thanks partly to its associations with various Governments, is being handicapped in effecting economies which ordinary commercial interests would dictate. In so far as Cables and Wireless is obliged to trade at a disadvantage *vis-à-vis* its competitors, its stockholders may be able to make out a *prima facie* case for reconsideration by the Governments concerned of the obligations and restrictions which were imposed on it at the time of its formation. These may be summarised under three heads.

In the first place, the Advisory Committee, set up in accordance with the Conference of 1928, must be consulted by the Communications Company in regard to all questions of policy. These include the alteration of rates, the institution of new services, the discontinuance of any services which may become commercially unprofitable, and the general distribution of traffic between alternative routes. The Conference recognised that cases might occur in which the interests of the public with regard to cheap communication might conflict with strategic requirements. In such cases the Advisory Committee was required to take the broad Imperial view and decide accordingly. It was mentioned, for example, that it would be desirable that a reasonable proportion of the total cable traffic between Great Britain, Australia and New Zealand should continue to pass over the routes by way of Canada, which do not touch foreign territory at any point. Another case (which the Conference did not mention, but is obvious at the present time) is that of the wireless and cable services to South Africa. The beam wireless services running north and south have a maximum of efficiency. There appears, indeed, in this instance, to be no commercial reason why the cable services should be maintained. For strategic reasons, however, the Advisory Committee may well have insisted that the South African cables should not be discontinued.

In the second place a handicap was imposed on Cables and Wireless at the time of its formation in regard to the maintenance of staffs. It was disclosed in the preliminary Parliamentary debates, and eventually made a condition, that the company was not to dispense with any staff taken over from the Post Office, as regards both cables

and wireless services, for a period of five years. This service guarantee was necessarily extended to the employees of the cable companies and of Marconi, and must obviously tend to handicap its freedom of action, both in the matter of the closing-down of unremunerative services and the inception of rationalisation schemes. Its five-year staff agreements expire in 1934, and until then dismissals are contingent on the payment of compensation.

Finally, it would appear that the Government struck a hard bargain over the sale of its cable assets and the lease of the Post Office beam wireless services. The Communications Company undertook to meet the annual service of the outstanding debt on the Pacific Cable Board and to pay in addition a capital sum of £517,000 for the Pacific cables, £300,000 for the West Indian cable and £450,000 for the Imperial Atlantic cables. The Post Office beam services were leased for twenty-five years at a rental of no less than £250,000 per annum. This rental and the service of the Pacific Cable Board debt were guaranteed by Cables and Wireless. It is true that the Government followed the example set by other participating interests, who were disposed, with one accord, to "talk up" the value of the assets they transferred to the merger company. The nominal capitalisation of the constituent cable companies and of the Marconi company before the merger took place was approximately £16 millions. In the gamble which took place in the equity stocks of these companies, immediately before the completion of the merger, the market valuation rose to about £51 millions. As the issued capital of Cables and Wireless was finally fixed at £52.5 millions, the company was clearly capitalised on the basis of the "peak" prices of a market boom. The purchase price of the Marconi assets, indeed, was said to represent forty years' purchase of pre-merger profits.

Whether a reconstruction scheme can profitably be discussed at the present stage is doubtful. The duration of the slump is an unknown factor and the earning power of the combine under normal trading conditions cannot now be estimated. Of more immediate concern is the extent of any possible relief to which the company may establish an equitable claim, at the hands of the Governments represented on the Advisory Committee. If Cables and Wireless is unable to pay its preference dividends from its investment income, which normally represents 2.7 per cent. on the preference capital, it must be inferred that this investment income is being swallowed up by the losses of the Communications Company. These losses may continue until 1934, even if trade slightly improves, since the five-year staff agreement does not expire until that date. But as long as these losses can be met from investment income, Cables and Wireless may be debarred from pleading for a Government subsidy on general grounds of poverty.

It may be presumed, however, that any more specific claims for relief, made by the stockholders of Cables and Wireless, may be based on four material considerations. First, in so far as cables, not commercially required, are being maintained for strategic reasons (e.g., the cable to South Africa), there may be a case for assistance by way of a subsidy from the Governments concerned. Secondly, a reduction in the high rental charges for the beam wireless station may be requested in view of the refusal of the Government to allow Cables and Wireless the opportunity of operating wireless telephony services from this country. The company's American competitors are subjected to no such handicap by their Governments. Thirdly, the Advisory Committee might be asked to sanction an increase in sterling charges to meet the depreciation in the £ sterling, so that the company's sterling rates would compare with the gold rates of their competitors. To the extent this request for "gold" rates was granted the company would, of course, forgo any competitive advantage it might have acquired through the quotation of rates on a sterling basis. Fourthly, some adjustment might be claimed in the purchase figures of the Pacific and other Cables, on the ground that Cables and Wireless had never been granted the monopoly it was promised. The Commonwealth Government of Australia has refused to acquiesce, for example, in the

tentative agreement negotiated between Cables and Wireless and Amalgamated Wireless (Australasia), Limited, in which the Commonwealth Government has a controlling interest.

On such grounds as these, the stockholders of the combine may be entitled at least to make out their case to the Governments concerned. As the directors of the Communications Company remarked in the 1930 report, "it is clear that the communications services of the Empire cannot continue indefinitely to be conducted not merely with little or no return on the large capital employed, as in 1930, but at a loss when outgoings exceed incomings as on the basis of present traffic seems to be the outcome of the year 1931." This statement was made nearly twelve months ago. The position to-day is even more serious—and the appropriate venue for its discussion, as we suggested at the beginning of this article, is the forthcoming Imperial Conference at Ottawa.

THE "COSACH" DILEMMA.

On March 31, 1931, £2,000,000 of "Cosach" 7 per cent. prior secured sterling bonds were offered to investors in this country by a prospectus bearing august names. Scarcely thirteen months later, names no less august, but more numerous, have reappeared on a Protective Committee which has been formed to guard the interests of holders of "Cosach" securities. The personnel of this committee was given on page 1050 of last week's *Economist*. As the committee includes representatives of shareholders, bondholders and bankers, the conclusion is suggested that these varied interests foresee a common danger.

It is still too early to know on what points the committee will chiefly concentrate its attention, but it is already possible to distinguish the outline of its main problems. It is also evident that June 30th, the end of the financial year, is the critical date on which the programme of action must be based. Unfortunately, the regular returns which used to be published of production, shipments, stocks and prices of Chilean nitrate have been discontinued since the formation of "Cosach," and since no accounts of nitrate concerns have been issued for any nitrate-year since 1930, the uncertainties of the statistical prices, which used to be fixed in advance for the year, are now not known for certain. Though information is scanty, reasonably accurate estimate of the Chilean nitrate situation. The total nitrate exports of Chile for 1931 (calendar metric tons for 1930 and an average of over 2,000,000 metric tons for 1928-1930. The decline, though serious, was not necessarily alarming. This year, however, the imposition of high tariffs or total exclusions on Chilean nitrate by a number of Chile's best customers will cause a further steep reduction. The Government's own estimate is for "under a million tons," from which unofficial estimates differ only by adding the word "substantially."

This nitrate can probably be delivered f.a.s. at the Chilean port of shipment at 7s. 6d. per metric quintal, excluding interest charges. A further 2s. 6d. is required for freight, insurance, etc., to bring the nitrate to market, where it is sold at prices, possibly, between 15s. and 16s. net. Thus, on a hopeful view, "Cosach" will have a gross profit of 6s. per metric quintal on 1,000,000 tons, making £3,000,000; and, on a more moderate view, it will obtain 5s. per metric quintal on, say, 900,000 tons, making £2,250,000. Amounts of this order are all that can be and the Chilean Government, to the last of whom alone some £4,000,000 is guaranteed by law for 1932.

Besides the revenue charges, however, there are some millions of pounds owing on short-term advances to the banks, a large part of which mature on June 30th. These maturities presumably cannot be met, nor can any very attractive case be made out for their voluntary renewal. This is the second of the committee's problems. "Cosach" must have money for its current operations,

but the banks are urgent that its indebtedness should be reduced.

It might be supposed that, in these circumstances, much time be said for suspending production for a time in order to liquidate the nitrate stocks, whose excessive accumulation has been an important cause of "Cosach's" financial difficulties. No stock figures are now issued, but by comparing production and shipments since the last return was published, present stocks may be estimated as at least 1,000,000 tons above the normal. The sale of this surplus around present prices would represent an accretion of £3,500,000, a useful sum. But, though some liquidation of stock has evidently been already achieved by "Cosach," there are two obstacles in the way of immediate relief through stock reduction. First, consumption is small, and there are large stocks of synthetic nitrate in competition with the natural product. Secondly, the central point of the anti-"Cosach" agitation in Chile is that "Cosach" has reduced employment in the north, and so upset the country's traditional economic balance. No Chilean Government, except under extreme pressure, could afford to allow the market to be supplied only by drawing on stocks.

The immediate problem of the Protective Committee must thus be to agree on an equitable division of diminished profits among the various creditors, and to devise some scheme for reduction of bank loans. In any case, the solution can only be partial and slow, and the claims of the Chilean Government, which must draw revenue from the industry, will have to be treated considerably if any kind of permanence is to be achieved in what is arranged. But whatever agreement is reached, it is most desirable that ex-shareholders in the old nitrate companies should not be forgotten. At present, earnings do not even begin to glimmer over their horizon, but it is conceivable that some years hence at least a relative prosperity may return to the industry. The old companies sold their assets (including realisable stocks of nitrate and iodine) for paper which has since had towering prior charges placed in front of it. The old companies would have suffered severely in the depression, but they would not have suffered complete expropriation. In a *débâcle* which will necessitate sacrifices by all interests, abstract justice would suggest that the biggest sacrifices should be endured by those most directly responsible for the more expensive mistakes. The Guggenheim group, however, which this cap fits, has a relatively strong tactical position. It is the latter which, possibly, may chiefly explain the urgent mobilisation of the powerful interests represented on the Protective Committee.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
May 24.	May 26.

GILT-EDGED stocks, advancing all along the line under the influence of monetary considerations, provided the week's chief feature. The reduction in Bank rate strengthened unofficial anticipations of an early War Loan conversion operation. The strength of high-class stocks was not attributable to any further "flight" from industrials, which remained quiet but steady. Foreign buying may have been a factor, but the bulk of the very large business done in gilt-edged stocks came from home sources. On the whole, Mr. Chamberlain's "economy" speech at the bankers' dinner created a good impression.

The rise in British Government stocks was general. Two-and-a-half per Cent. Consols reached a 4 per cent. yield basis, and the 4 per Cents. were quoted only a little under par. India loans were strongly supported, particularly the new Five per Cents. Dominion stocks were firm, Commonwealth Fives of 1945-75 being in steady demand. Home Corporation issues moved in sympathy with the Funds, the new Burnley scrip rising to a small premium, although 89 per cent. was left with the underwriters.

In the Foreign market, German bonds rose on optimistic interpretations of the Leftward movement in the French elections. Hungarian and Greek loans improved, but Austrians were out of favour. Japanese and Chinese issues showed an immediate response to the news of the Japanese intention to evacuate Shanghai. Brazilian loans were less active, though San Paulo 7½ per Cent. attracted some attention.

Anticipations of an early "pooling" arrangement to restrict inter-railway competition produced small advances in Home Rail stocks, particularly the prior charges, despite the continued unfavourable showing of the traffic figures. Foreign rails, however, were much less active, Argentines resuming the downward trend which last week's optimistic official statements had interrupted.

The Industrial share market was quiet, though prices lost no further ground. Electrical shares were helped by the success of the Scottish Power issue. Babcock and Wilcox showed weakness, on forced liquidation from the provinces. Bass were unaffected by the interim dividend reduction, but the lowering of the Buchanan-Dewar distribution caused selling of Distillers. Rayon shares were temporarily better on the Government decision to impose additional protective duties. Iron and steel shares were unsettled. Dunlop were marked up on bear covering in anticipation of the chairman's speech. Bank shares remained dull, Bank of London and South America falling on the interim dividend decision. Insurance shares, however, advanced in sympathy with gilt-edged stocks.

The market for oil shares continued to be narrow, but, on the whole, firmer. Shell and Royal Dutch, however, declined after Thursday's dividend statements (dealt with on page 1092). Rubber shares were idle, and quotations nominal. The tea share market was almost equally inactive. The further decline in profits and dividends in the Finlay group of companies had been generally discounted, and a moderately hopeful view was taken of prospects.

In the mining share market, Paris came in a strong supporter of her "Kaffir" favourites at the outset, but Continental interest was not maintained. The sharp fluctuations in the metal did not appreciably affect tin share values. Copper shares were similarly quiet, Tinto being higher on balance. Ashanti Goldfields were a good feature, and renewed buying occurred of Indian gold shares.

FOREIGN STOCK EXCHANGES.

NEW YORK.

Market dealings were sluggish, with share transactions running at a consistently low level. Prices moved within narrow limits, despite the continuance of pressure against individual issues. A slight advance, indeed, might have been recorded but for the generally unfavourable nature of the news from outside. The New York Central

LONDON ACTIVE SECURITY PRICES AND YIELDS.

NOTE.—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

The only company which maintained its dividends last year has already indicated that it will not do so this year. In all cases the ordinary stocks are selling well above their break-up values. On the basis of break-up value and income yield, the cheapest quotation is that of the U.S. and South American, and the dearest that of Consolidated Trust.

Motor Company Results.—Lower national purchasing power, restricted foreign markets and continued competition have combined significantly to reduce earnings in the British motor industry. The net profits of ten leading companies, which have published their results since the beginning of this year, show a decline of as much as

66.8 per cent. (from £2,322,647 to £771,112) as compared with the preceding year's figures. As the total British output of private and commercial vehicles declined by only 5.6 per cent. last year (from 238,500 to 223,100) the margin of profit on the average unit of output would appear to have been significantly reduced:—

Only three of the ten companies paid an ordinary dividend in respect of 1931, against six in the previous period. Leyland Motors retained a satisfactory proportion of the commercial vehicle market, but halved their ordinary dividend as a precautionary measure. The sharp reduction in Morris Motors earnings was associated in part with an entire reorganisation of the company's models, the results of which may favourably affect the 1932 figures. Rolls Royce, which now concerns itself chiefly with aeroplane engines, slightly increased its profit and maintained its dividend. The reasons for the large "turnover" in Ford profits were discussed in a leading article on April 9th last (page 802). Vauxhall Motors (controlled by General Motors, of America) appears now to have emerged from the period of working losses associated with the reorganisation measures incepted under the aegis of the controlling company.

Kreuger (Continued).—The four directors of the Kreuger group, who were arrested in Sweden, namely, Huld, Lange, Holm and Wendler, have now appeared before the magistrates in Stockholm and been charged with assisting Kreuger in making out false balance sheets and reports. The Stockholm police have made two further arrests in connection with Kreuger and Toll affairs—Digurd Hennig, an accountant in Stockholm, and Bror Bredberg, a director of a subsidiary finance company now resident in Switzerland. The debate in the Swedish Riksdag, however, on the question of the Kreuger credits granted by the Riksbank ended last Saturday with a rejection of the motion censuring the Government. The Finance Minister, Mr Hamrin, described in detail the negotiations regarding the credit of Kr. 40 millions granted on the security of the Boliden Mine shares. An investigation had been made by experts, which confirmed that the metal content of the ore had not been over-estimated by the company and that the ground value could be put at a sum considerably in excess of the Kr. 40 millions. Meanwhile, at the hearing of the International Match receivership, in New York, the evidence of Messrs. Lee, Higginson and Company, the Kreuger and Toll fiscal agents, resulted in disquieting disclosures. The bankers bought for themselves, and induced relatives to buy, \$8 millions in stocks and debentures without questioning Kreuger's statements as to the possession of certain contracts for match monopolies. Among the monopolies Kreuger had claimed were the Italian monopoly, now asserted to be a forgery, a Spanish monopoly which had never existed, and a Diamond Match monopoly as to which no information is yet available. On the \$150 millions in Kreuger securities floated by Lee, Higginson, the brokerage house received a gross commission of \$6,305,000, or 4 per cent. Shareholders in the British Match Corporation, however, have been further reassured by the statement of Sir George Paton, at the general meeting this week, that neither the corporation nor any of its subsidiaries had holdings of shares in any of the Kreuger companies, or had entered into any financial guarantees in regard to them. "It is terrible," Sir George added, in reference to the purchase of the Swedish Match interests in this country, "to contemplate the risks we were running."

"The Road Combine" in Scotland.—In a recent article on the Thomas Tilling—British Electric Traction—Big Four Railway road interests (see the *Economist*, March 26, 1932, page 690), we showed that the Scottish Motor Traction Company, the largest road passenger organisation in Scotland, remained outside the Tilling-B.E.T. sphere of influence, although the L.N.E.R. and L.M.S.R. controlled 42.4 per cent. of the Scottish company's voting power, in equal shares. The possibility is now being canvassed that a recent change in working arrangements may be the prelude to closer association. The whole of the Tilling—British Electric Traction group purchase fuel supplies and accessories through the British Electrical Federation, the petrol contract probably being the largest in the world. It is now understood that the two Tilling—British Electric Traction companies in Scotland (i.e., Caledonian Omnibus and Scottish General Transport, which operate in the south-west) are no longer to take their petrol and accessories from the British Electrical Federation, but are to come in under the Scottish Motor Traction contract. It remains to be seen whether closer relationship with the two groups will be cemented by a financial agreement. Both Thomas Tilling and the Scottish Motor Traction Company increased their capital last year.

Wiggins, Teape Accounts.—Last week we had the pleasant duty of commenting on the clarity of the accounts of the Dunlop Rubber Company. An even more valuable example of willingness to disclose adequate information to shareholders is given by Wiggins, Teape and Co. (1919), Limited, the stationers and paper makers. From the 1931 figures, which are summarised on page 1112, it will be seen that this company, which has steadily increased its earnings and dividends for the last eight years, fully maintained its position last year. The most noteworthy feature of the accounts, however, is the exhaustive disclosure made regarding the financial position of the group of companies of which Wiggins, Teape is the centre. The names of each of the 28 subsidiaries and the dates of their balance sheets are first given. The accounts then show, first, the balance-sheet, profit-and-loss account and appropriation account of the parent concern, and, secondly, a combined balance sheet for the whole group, eliminating inter-company shareholdings and debts, and—an unusual feature incorporated in the accounts for the first time—a summary of the group's combined profit-and-loss and appropriation accounts. In every case the preceding year's figures are appended for comparison. The result is that shareholders know, not merely how much the parent received in dividends from the subsidiaries, but the actual earning power of the whole group. The directors and the accountants may be congratulated on setting an example which it behoves many of the larger British concerns to follow.

Imperial Continental Gas.—Despite a slight reduction in earnings, the accounts for 1931 are eminently satisfactory. The paid-up capital has been increased to £5,600,000 by the issue of £2,800,000 to shareholders in proportion to their existing holdings. Following an interim dividend of 7½ per cent. on £2,800,000, the directors now recommend the payment of a final dividend of 7 per cent. on the increased capital:—

Years to March 31.	1930.*	1931.	1932.
Station profits	35,396	39,977	40,846

Operations in Belgium, Holland and Czechoslovakia continue to give satisfactory results and the profits of subsidiaries have been well maintained. The Compagnie Continentale du Gaz increased its sale of gas by 1½ per cent., though its sale of current was reduced. Antwerpse Gasmatschappij suffered a decline in gas sales of 2.66 per cent., though the number of consumers increased. The Compagnie Nationale d'Eclairage records an increase in electricity consumption of 12 per cent. At 165, Imperial Continental Gas stock yields about £6 16s. per cent. on a 10½ per cent. dividend basis.

Ever Ready.—The turnover and earnings of this progressive electrical equipment concern continue to expand, despite adverse economic conditions. After deduction of directors' fees and depreciation, and the allocation of £3,351 to staff funds and donations, net profit at £329,133 compares with £303,251 for 1931. The maximum preference dividend of 10 per cent. again absorbs £20,000, and the ordinary dividend is maintained at 35 per cent.:—

Year to March 31.	1930.	1931.	1932.
Trading profit	253,899	324,339	355,558

tion and the fluctuation in exchanges. The growth of the business, on the almost complete cessation of foreign imports, necessitated large works extensions, as much as £115,000 being expended during the year by the company and its subsidiaries on buildings, plant and equipment. The current position remains liquid. At 24s. 3d. the 5s. ordinary shares yield approximately £7 9s. 6d. per cent.

Marks and Spencer Meeting.—We dealt in our issue of April 23rd last (page 927) with the 1931 profits figures of this successful chain store company. Last Tuesday the chairman explained the origin of the additional profit of £194,044, achieved in a year of general depression. Mr Simon Marks showed that a further expansion had taken place in the volume of trading, due to the company's policy of passing on to the consumer the advantages of efficient organisation, merchandising skill and large buying capacity. The growth in profits did not represent a full return on the capital so far invested, since many of the newer stores were trading for only part of the year. A rise in prices after the abandonment of the gold standard might have created a special problem for the company, whose price limits were fixed with an upper maximum of 5s. More than 95 per cent. of the goods sold in the company's stores were manufactured in this country. Thirty-three stores were opened during the past year, and the building programme for 1932 already embraced 30 stores, on completion of which 165 stores would be operating throughout the country. Financial arrangements had been made to cover the next three years' programme.

New Issues in April.—In the following table we show the new capital raised in London by issue to the public or to shareholders, in April, and in recent years:—

Monthly Average.	(000's omitted).				Total.
	United Kingdom.	British Possessions.	Foreign Countries.	£	
1924	7,051	6,023	4,370	17,444

April was one of the most active months in the London new issue market since the financial crisis of last autumn, the total new money obtained by public issue being £13,150,000, against £6,638,000 in March, and £7,044,000 in April, 1931. The largest borrowers were New Zealand, which offered £5,000,000 5 per cent. stock, and the Government of India, which issued £10,000,000 5 per cent. stock, of which £6 millions was for conversion. Next came the Agricultural Mortgage Corporation, which borrowed £2,000,000. Three home corporations took the opportunity of raising money at 4½ per cent.

Italian Bourse Conditions.—The Italian Bourses have recently taken a turn for the worse. The index of the Milan Statistical Office (December, 1925 = 100) stood at 50.06 at the end of 1931 and 50.72 on February 27th last, but had fallen on April 23rd to 43.90. All share groups participated in the decline, particularly bank

shares, textiles, iron and steel, real estate and electricity. The last-named group has attracted greatest attention, the fall being attributed to journalistic campaigns against the high company rates. Since it is popularly believed that such campaigns could not be engineered without Government consent, some shareholders have concluded that a plan is on foot to bring electricity and other key industries under State control. There is not, however, the slightest authoritative evidence that such schemes of expropriation are contemplated. The market for fixed-interest stocks remains stable. No one appears to attach importance to the suggestion, quite unofficial, of Professor Mortara, in his "Prospective Economie" for 1932, of a voluntary patriotic conversion of Consols from 5 per cent. to 4 per cent., on the pattern of Australia. In view of the current cash deficit of 914 million lire in the State Budget, this suggestion might receive attention, since it would effect a saving of some 600 million lire.

Royal Dutch and Shell Transport.—The dividend declarations of Royal Dutch and Shell came somewhat as a disappointment to the market, which had been expecting 7 per cent. and 7½ per cent. respectively. The Royal Dutch is paying 6 per cent. and Shell 7½ per cent. free of tax. In respect of 1930, 17 per cent. and 17½ per cent. (free of tax) were paid. It is difficult to comment on these dividends without knowing how the accounts will shape, but it appears that the declarations may be regarded as consolations to the shareholders rather than as profits which have actually been earned for distribution. The shares were slightly easier on the results at 13½ and 14½. An unexpectedly good dividend was, however, paid by the Burmah Oil Company, which declared a final of 12½ per cent., making with the interim of 5 per cent. a total of 17½ per cent. for the year. In this case the market expected a final of 10 per cent., and the shares improved on the results. The following table shows the present dividend yields and prices as compared with the highest prices of 1931:—

	High, 1931.	Present Price.	Divs. %	Div. Yield.
Burmah Oil, £1 ord.....	73/1½	2½	17½	7.8
Royal Dutch, Fl. 100	26½	13½	6	3.7
Shell Transport, £1.....	77/6	1½	7½	4.5†

† Free of Tax.
The Anglo-Persian dividend will be declared later in the month.

"Kaffir" Share Index.—Our "Kaffir" share index reveals the effect, during recent months, of a number of special influences, including a fluctuating sterling exchange, speculation on the possibility of South Africa's coming "off gold" and the operations of arbitrageurs and professionals for the "turn," in the absence of a sustained upward movement. Our index is based on the market quotations for sixteen mines which declared dividends in December, 1928, and had estimated lives of ten years or more. The average market capitalisation of these companies in 1928 was approximately £70,292,000, and this figure is taken as 100:—

	1930.	1931.	1932.
January	87.7	81.3	79.7x
February	82.7x	76.6x	80.9
March	88.8	78.6	77.3
April	81.8	76.8	79.1
May	84.4	77.7	...
June	80.2	77.1	...
July	81.4	76.6	...
August	77.5x	73.6x	...
September	76.5	78.1	...
October	75.1	80.2	...
November	75.1	83.1	...
December	76.6	88.8	...

No regular trend is apparent during the last three months. End-year dividends were declared (in South African currency) in the middle of December. British shareholders received their distributions in sterling at the dividend, in terms of the index, represented a yield of 5.23 per cent. Adjusted to the sterling rate at the above

premium, it was actually as much as 7.1 per cent.—equivalent to 14.2 per cent. per annum. "Kaffir" shares are now becoming "full" of the half-yearly dividends to be declared next month. The general position has shown no important change, and it is expected that dividend declarations will be up to standard levels.

Consolidated Diamond.—Our mining correspondent writes:—The deplorable conditions which prevailed last year in the diamond industry are strikingly reflected in the report of the Consolidated South-West Africa Company. The net receipts from sales amounted to only £272,700, as against £1,192,700 in 1930. The former sum proved insufficient by £28,700 to cover mining and general expenses. Depreciation and debenture interest called for a further £90,000. In accordance with the procedure of the De Beers Group—of which the Consolidated Company is now part—the diamonds on hand are written down to the nominal sum of £1. In the 1930 balance sheet the stocks of stones at cost of production stood at £525,100. Surprise has been felt at the non-utilisation of the preference dividend reserve to meet the interest on this class of capital, which is in arrears since June 30, 1930. This reserve (£168,000), together with the general reserve of £500,000, is now brought into the appropriation account; and after providing for the deficits already indicated, £372,200 remains to go forward, as against £348,600 brought in. The object of thus appropriating the preference dividend reserve and of carrying over a large and increased surplus is difficult to perceive. The balance sheet shows liquid assets £12,200, against loans and interest £240,100, sundry creditors £117,200. Investments in associated companies at cost now stand at £1,804,500, and loans at £21,000, as compared with £1,833,600 for the two items together previously. In the circumstances production and prospecting have naturally been severely restricted. Consolidated Diamond ordinary shares are quoted about 1s. 6d. and the preferred 2s. 6d. nominal, the par value in each case being 10s. A reorganisation would appear likely, sooner or later.

Central Mining.—After having paid 12½ per cent. tax free for seven successive years, this important Kaffir enterprise last year fell out of the dividend list. Actually the earnings of 1930 were not very seriously below those of the preceding period, but large provision had to be made against the company's liabilities in connection with the Anglo-Spanish Construction Co. as well as for depreciation in the other investments. There was no interim distribution on account of 1931, but 6s. per share (3½ per cent.) less tax was declared a few weeks ago. In both cases the decision of the directors came rather as a surprise, and found reflection in a sharp movement in the price of the shares. The accounts for 1931 make a better showing than might have been inferred from the rate of dividend. A further moderate shrinkage has taken place in the earnings, but their total fully represents the old rate of 12½ per cent. The directors, however, have followed the conservative policy of transferring back to the reserve nearly two-thirds of the amount taken therefrom twelve months ago, besides carrying forward a larger balance than for many years. Our usual table is appended:—

	1929.	1930.	1931.
Shares, investments, &c.	7,810,730	6,652,980	7,144,940
Debtors, less reserves	1,502,290	1,637,150	1,617,000
Loans	1,805,270	915,080	449,040
Cash	293,460	1,166,060	1,439,750
Creditors and dividend	6,039,860	5,354,000	5,396,090

CANADA LIFE ASSURANCE COMPANY

Incorporated in Canada as a Limited Liability Company. Established 1847.

J. R. Wandless, F.I.A., Manager, 2 St. James's Square, London, S.W.1.

By the appropriation just mentioned, together with a balance of £79,100 arising out of the directors' valuation of all the investments and interests, the reserve fund has been increased to £729,100. On the other hand, the depreciation reserve of £1,140,000 established last year has been reduced to £996,720 by £143,300 written off the shares of a subsidiary. A departure in the segregation of the assets is liable to cause confusion. The gilt-edged holdings, formerly included amongst the shares and investments, are now classed with the cash. In our tabulation the old method is followed. The principal changes include an expansion in the holdings and in the cash and a decrease in the loans. The position of the Anglo-Spanish Construction Co. is still far from clear, but the outlook for the oil interests is on the whole hopeful. The results of the Corporation's Rand Gold subsidiaries have been dealt with from time to time in our columns.

Anglo-American Corporation.—All this company's interests, except its Rand gold-mining concerns, are in the depths of depression, and the accounts for 1931 make a deplorable showing. Net revenue (including refund of taxation) amounted to only £113,800, against £340,400 in the previous year. All the reserves, totalling £1,240,000, are brought into the appropriation account. As regards the preference dividend reserve, which represents £240,000, the directors explain that this fund was created at a time when conditions were normal, and it was invested in the business. Subsequent events have made the retention of the account purposeless. Towards meeting the depreciation on holdings, £1,059,600 has been applied. In the present valuation of £4,931,700, the quoted securities have been taken at current market prices, except in the case of Rhodesian Anglo-American shares, which figure at a cost. Obviously, the extent of this particular holding is a matter of importance. Some £400,000 is transferred to general reserve, leaving £98,600 to be carried forward, as compared with £204,900 brought in. At £781,800, sundry debtors are £12,000 higher; otherwise all

the balance-sheet items show a contraction of substantial extent. The total of £6,162,900 is £2,766,500 down. Naturally, there is no dividend on the preferred stock; the last distribution on the ordinary was 22½ per cent. in respect of 1921, the year when the capital was split. The preferred stock interest is in arrears since 1930. Little fresh can be said in regard to the Rhodesian copper interests of the company, but note may be taken of the intimation that operations on the part of the Victoria Prospecting Syndicate have not disclosed deposits of economic importance, and no very tangible results have attended the efforts of two other exploring concerns. In connection with the diamond position, the Anglo-American directors, after referring to the close co-operation existing between the Diamond Corporation and the outside producers, make the significant remark that "if the Union Government would fall into line in regard to its production and would not allow the opening up of new areas, these outside companies also would agree to curtail their production." The preference stock stands at £40, and the 10s. ordinary shares at 5s.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies: Great Western of Brazil Railway, The London Assurance, North British and Mercantile Insurance, Alliance Assurance, Guardian Assurance, Yorkshire Insurance, Calcutta Electric Supply, Cawnpore Electric Supply, Dunlop Rubber, Marks and Spencer, Spillers, British Match Corporation, London Electric Wire and Smiths, Odhams Press, and Monte Video Waterworks. At the annual meeting of North British and Mercantile Lord Wakefield said the effect of the depreciation in foreign currencies was a slight decrease in premium income, but the net profit was better at £124,216, or 10.75 per cent. of the premium income. At the annual meeting of the Guardian Assurance Company, the chairman stated that gross new life assurances amounted to £1,603,889, which was substantially more than in 1930, and after deducting re-assurances, the net new business was £1,332,879. Presiding at the annual meeting of the Cawnpore Electric Supply Corporation, Mr J. G. B. Stone declared that the number of units generated in 1931 was 44,008,996, an increase of about 6½ per cent. Presiding at the annual meeting of Spillers, Sir Malcolm Robertson said that if it was made compulsory to use a high quota of Dominion wheat with no compensating advantage by the strict limitation of the import of foreign and Dominion flour, the interests of the company and of the milling industry generally would be gravely affected. Consideration of the question of the directors' remuneration was postponed. The Marks and Spencer speech is discussed on page 1092.

CAPITAL ISSUES.

We suggest on an earlier page that a temporary slackening of the pace of new issues may be indicated by recent events. Though the market obviously has an appetite for, say, home corporation stocks issued on approximately a 4½ per cent. basis, some recent offers may require time for complete digestion. This week's issue by the *County Borough of Burnley* of 4½ per cent. stock at 100½ was left as to 89 per cent. with underwriters, but market dealings, after opening at ¾ discount, were done two days later around par. The borough, which has a total rate of 12s. in the pound, has a total debt of £3,024,347, equal to 5½ times the rateable value. Some 47 per cent. of the total debt is in respect of productive undertakings and a further 29 per cent. is represented by houses which are the property of the borough. The stock is a trustee investment. *The British Power and Light Corporation* (1929), Ltd., this week issued 600,000 £1 6 per cent. cumulative preference shares, the greater part of the proceeds being required to pay bank loans. The company has electrical supply powers over an area in North Wales with a population of approximately 800,000, and the business of its distribution subsidiaries has more than doubled in the last two years. Although

the preference dividend is covered less than 2½ times by last year's profits, the company has much scope for further development and the yield of 6 per cent. is reasonably well secured. A trust company prospectus, in these times of depressed Stock Exchange values, is *rara avis*. *The London and Lomond Investment Trust*, a Grahams, Rintoul company, was founded in January 28, 1931, and thus has escaped some of the worst of the depreciation in share values. In the period to January 31st last, it earned a satisfactory income, but its investments at market values showed a decline of 13 per cent. below book cost. This week's issue of debenture stock offers a flat yield of £5 5s. 3d. per cent., and a redemption yield, allowing for repayment in 1962, of £5 6s. 6d. per cent.

COMPANY MEETINGS, &c.

MARKS AND SPENCER, LIMITED.

LARGE INCREASE IN TRADING PROFITS.

EFFICIENCY OF THE ORGANISATION.

MORE THAN 95 PER CENT. BRITISH GOODS.

FUTURE DEVELOPMENTS.

MR. SIMON MARKS'S REVIEW.

The sixth ordinary general meeting of Marks and Spencer, Limited, was held, on the 10th instant, at Winchester House, Old Broad Street, London, E.C.

Mr Simon Marks (chairman and managing director) presided, and said:—Ladies and Gentlemen,—In accordance with our usual practice, my first duty is to propose that the directors' report and accounts, which were recently submitted to you, be taken as read. (Agreed.)

REMARKABLE PROGRESS.

It gives me great pleasure to submit a report which again shows a substantial increase in net earnings. The profit for the past year amounts to £670,117, which is an increase of £194,044 on those of the previous year. (Applause.)

INTRODUCTORY REMARKS.

The large increase in our profits for the past year is due to the increased volume of our trading. It has always been our policy to expand our sales by supplying the public with the best possible values, and by giving the consumer the advantage of every reduction in cost which the efficiency of our organisation, skill in merchandising, and large buying capacity enable us to secure. An ever widening circle of customers recognise our sound and consistently improving values, the foundation of our merchandising policy, and appreciate the services which we render.

FOSTERING BRITISH MANUFACTURES.

In my previous speeches I have told you that our policy was to foster, as far as possible, the manufacture of goods in this country, even to the point of encouraging foreign manufacturers to start producing their goods here in cases where British manufacturers lacked the special knowledge and technique. That policy had so far succeeded that we were not unduly troubled when the importation of certain goods from abroad became impossible as a result either of the fall in exchanges or of extra Customs duties. To-day we can say with pleasure that the proportion of goods sold by us now manufactured in this country exceeds the very high figure of 95 per cent. (Applause.)

THE QUEEN'S VISIT.

A very notable event in the year's history of the company was the honour done to it by the visit of H.M. the Queen to our Oxford Street store on March 18th. Her Majesty spent a considerable time in investigating the range of goods we display, and made several purchases. Her Majesty was particularly interested in the evidence of the fine values offered by British manufacturers, for the development of British industry is one of Her Majesty's constant cares.

PROFIT AND ALLOCATIONS.

The net profit of 670,117, after deducting £97,407 for income tax, leaves a balance of £572,710, which, together with £53,105 brought forward from the previous year, makes a total of £625,815 available for distribution. The dividends on both classes of preference shares have been duly paid and there is left an available balance of £440,955, which the directors recommend should be appropriated as follows:—

Properties contingency reserve £17,500, against £17,500.

General reserve account £170,403, against £120,000.

Payment of a final dividend on the ordinary and "A" ordinary shares at the rate of 25 per cent. per annum, thus making 35 per cent. for the year ending March 31, 1932, takes £199,650, against £145,200.

By carrying forward to next year's accounts £53,402, against £53,105 brought in.

ISSUE ON BONUS TERMS.

The directors further recommend that a distribution from accumulated past profits be made by way of bonus to the holders of the existing ordinary and "A" ordinary shares of the company in the

proportion of one "A" ordinary share for every ten existing ordinary and "A" ordinary shares held.

RESERVES.

Our general reserve account at the commencement of the year amounted to £329,457, and out of this we propose to pay up in full for the £79,860 of "A" shares being allotted by way of bonus, and to carry to it from the profits of the year a sum of £170,403. This will leave the general reserve account at £420,000.

EXPENDITURE ON PROPERTIES.

Turning to the assets side of the balance sheet, the freehold, leasehold and leased properties stand at £3,501,833, being a net increase of £618,119. The furniture and fixtures stand at £411,877, the net increase being £75,264. These increases are arrived at after deducting depreciation. The total amount charged against the profits for depreciation, repairs and renewals is £121,868, compared with £83,878 in the accounts of last year.

STOCK-IN-TRADE.

The stock-in-trade is £516,624, and shows an increase of £93,841 on the previous year. This increase is partly due to stock required for the new stores, and partly for the extra provision of seasonal requirements. The stock has been valued on our usual very conservative basis.

The cash at bank and in hand amounts to £104,364, being a reduction of £446,469. This is accounted for by our investment in new properties and their development for business purposes, as well as for the additional stock required for our new stores.

I do not think that I need make any further comment on the balance sheet, except to point out that it does not contain any item for goodwill. (Hear, hear.)

CONSTRUCTION PROGRAMME AND FUTURE DEVELOPMENTS.

We opened 33 super-stores in the past year.

Our building programme for this year already embraces 30 stores, on completion of which we shall be operating 165 stores. In addition, we have a large number of other sites under consideration, which should give us this year a development on a much larger scale than in previous years.

We are satisfied that there is room for the profitable expansion of our business for many years to come, provided that the general economic condition of the country suffers no grave change for the worse.

A policy of expansion such as ours cannot be improvised suddenly or executed precipitately. It calls for long-sighted planning—planning relating to sites, building, merchandise production, personnel and finance. In respect of all these our arrangements are another.

FINANCIAL ARRANGEMENTS.

The development programme which we have in mind demands large resources, because the principal investment of the company's capital is in real property for the purpose of the company's own business. I am glad to report that we have made ample financial arrangements to cover the programme we have in mind for at least three years. (Applause.) This additional finance has been arranged for a long period on very favourable terms with the advantage to the company of being able to repay at any time. The arrangements made enable us to call for moneys as and when required, thus obviating the necessity of keeping large balances lying idle at the bank. (Applause.)

MERCHANDISING POLICY.

Experience over many years has shown that by our policy of close collaboration as distributor with the manufacturer, each concentrating on his special task of securing the utmost economies in his respective sphere, extraordinarily good results can be obtained in so far as merchandise values are concerned. There is no other

explanation for the increase in our business. Our profits are not made by big margins, but through large and rapid turnover of merchandise which the public needs. We constantly bear in mind that the reduction of cost and the improvement of value to the consumer are the best means of stimulating sales and ultimately of reducing costs again.

Our selling prices range from 3d. to 5s., and there is no doubt that within these price limits we are able to offer our customers a very large range and variety of useful and attractive merchandise in all departments.

We insist upon perfect and well-finished goods, and we do not offer our public either "jobs" or "sub-standard" articles. We guarantee satisfaction either by an exchange of article or a refund of money if the customer is not satisfied.

THANKS TO OFFICERS AND STAFF.

I take this opportunity of expressing gratitude and thanks, on behalf of the board, to our officials, administrative, and all other ranks of the staff in helping us to achieve these results. They have served us with a loyalty and devotion of inestimable value.

DIVIDEND.

I will now propose that the report and accounts to March 31, 1932, as submitted, be received and adopted, and that the cumulative dividend of 10 per cent. per annum, less tax, for the year to March 31, 1932, already paid to the 10 per cent. preference shareholders, be and is hereby confirmed; that the cumulative dividend of 7 per cent. per annum, less tax, for the year to December 31, 1931, and paid to the 7 per cent. preference shareholders be and is hereby confirmed; that the interim dividend of 10 per cent. per annum, less tax, paid on January 1, 1932, to the ordinary and "A" ordinary shareholders, be confirmed; and that the payment of a final dividend at the rate of 25 per cent. per annum, less tax, making 35 per cent. on the ordinary and "A" ordinary shares, for the year ending March 31, 1932, be declared, and payable by warrant to be posted this evening to those members whose names appeared in the register of members on April 29, 1932. (Applause.)

Mr I. M. Sieff (vice-chairman and assistant managing director) seconded the motion, which was unanimously agreed to without discussion. The increase of capital was approved, and the usual formal business having been transacted, the proceedings terminated with a hearty vote of thanks to the chairman, directors, and the staff.

ODHAMS PRESS, LIMITED.

SUCCESSFUL RESULTS—INCREASED PROFIT.

The twelfth annual general meeting of Odhams Press, Limited, was held, on the 9th instant, at the Connaught Rooms, Great Queen Street, London, W.C.

Mr W. J. B. Odhams (the chairman) said that last year they had been able to report an increase in the net profit from £203,653 to £261,268. In bringing the record up from £261,268 to £276,272 he thought shareholders would agree that it was not an unsatisfactory achievement in a year which had been a severe testing time for all commercial concerns from the smallest to the largest. The addition of the £300,000 debenture stock made during the year had been for general purposes and expansion of the company's business, and for the development programme of the *Daily Herald* on lines previously successfully adopted in the case of *John Bull* and *The People*.

Ten years ago the weekly net sales of *John Bull* had fallen to under 300,000, and it had ceased to be a paying proposition. They had full justification to-day for the expenditure entered into because *John Bull*, with its circulation of over a million and a half, was now one of the most profitable of their assets. *The People* had been taken over in 1925. The publication had not reached a profit-earning basis until the third year. After that the corner had been turned, and since then the publication had made still further progress, and last year the net profit, after meeting the year's development charges, amounted to £84,416. In the case of each of those papers they had decided to go forward.

As to the *Daily Herald*, history had so far exactly repeated itself, and there was every indication that the same satisfactory result would be reached as had been the case with *John Bull* and *The People*. Parenthetically he might remark that recently the space allocated to advertisements had been insufficient to meet the demands of advertisers. Looking, therefore, to their experiences in other fields, and to the unbroken advance of the *Herald* in popularity with both readers and advertisers, their directors believed that the development policy was being justified, and that the prospect of future profits amply warranted the figures in their balance sheet.

In conclusion, the chairman paid a tribute to the managing director, Mr Elias.

The report was adopted.

ALLIANCE ASSURANCE COMPANY, LIMITED.

SATISFACTORY RESULTS IN A DIFFICULT YEAR.

The annual general court of the Alliance Assurance Company was held, on the 11th instant, at the Head Office of the Company, Bartholomew Lane, London, Mr Lionel N. de Rothschild, O.B.E. (Chairman) presiding.

Mr P. F. Nichols (the Secretary) read the notice convening the meeting and the report of the auditors.

The Chairman, in the course of his address, said that the past year had been full of dangers and difficulties but, nevertheless, thanks to the prudent policy laid down in the past by the directors and officials of the company, a policy which the present board and management were striving to maintain, he thought the company could congratulate itself that on the whole it had come through it in a satisfactory position.

With regard to the life department, the new business had been satisfactorily maintained, while the premium income in the active "Alliance" account showed a moderate increase. A special feature had been the new prospectus relating to the "Family Protection" policy. Under this policy, in addition to the ordinary life assurance cover, for a small extra premium a substantial income for dependents was secured during the period when it was most required.

VALUE OF THE SECURITIES.

As to the value of the securities, it was thought unnecessary to deal otherwise with this at the present moment, and, should any writing down be required, this would be dealt with when the respective quinquennial valuations were made. In the active "Alliance" fund the depreciation was approximately £800,000 at the end of the year. A very large proportion of this fund was in foreign Government securities, and the depreciation was mainly due to the difficulty of transfers of exchange, with the resulting default in the payment of services. Except for these foreign Government securities, there had been a recovery in the markets, and a substantial portion of the depreciation had now been recovered. Trading profits for the three years had been normal and, provided the depreciation did not become larger than it was now, there was every prospect of a satisfactory bonus being declared at the end of 1933.

He was pleased to be able to report the usual satisfactory trading results in the fire department. The losses had been appreciably less than in 1930. Conditions, however, were difficult, and in order to maintain the company's position, special efforts had to be made which necessarily involved additional expense. A new item appearing in the account was provision for possible doubtful debts. Restrictions on exchange in foreign countries had prevented the usual remittances from agents, and for various reasons it was felt that a small reserve in this respect was desirable. No substantial loss, however, was anticipated, and the £10,000 set aside was believed to be an ample reserve for any possible losses.

ACCIDENT AND MARINE BUSINESS.

With reference to the accident department, the principal feature of the year had been the working of the Road Traffic Act. The profit earned on motor business was not large and the business was difficult. The claims for personal injuries tended to show an increase.

The marine account perhaps more clearly reflected the course of trade than any other. The income for 1931 was about £53,000 less than in 1930, which itself was £55,000 less than in 1929. The reduction in 1931 was largely due to the return of premiums for vessels laid up. Nevertheless the reduction in income and working of the account was not unsatisfactory. The 1929 account had now been closed, and of the balance that remained in respect of that year's premium £40,000 had been set aside for future contingencies and only £34,462 had been transferred to profit and loss account. The marine fund was exceptionally strong, being nearly 2½ times the present income. With the modern tendency for giant liners and with the enormous value of the shipments of specie which had recently been taking place, it was at times necessary for the company to hold large lines on single boats, and it was therefore only prudent to keep large reserves in case of shipping disasters.

After making full provision for dividend requirements, and after carrying forward approximately the same amount as last year, the directors were enabled to put £100,000 to general reserve, bringing this up to £1,000,000, and they had made a larger appropriation than usual towards writing down premises in view of the rebuilding of the head office. It was satisfactory to note that Stock Exchange securities at the end of the year stood well below their market values, and those also showed a further considerable appreciation since the closing of the accounts.

The report was unanimously adopted.

GUARDIAN ASSURANCE COMPANY, LIMITED.

INCREASED LIFE BUSINESS—DIVIDEND MAINTAINED.

The ordinary meeting of the Guardian Assurance Company, Limited, was held, on the 9th instant, at 68, King William Street, London, Colonel Lionel H. Hambury, C.M.G. (the chairman), presiding.

The Chairman, in the course of his speech, said: To have come through the crisis of 1931 relatively unscathed is, I venture to submit, an incontestable proof of the exercise of care on the part of the directors and management, and perhaps also of the inherent stability of the business of insurance where properly conducted.

The directors have endeavoured to place upon every item comprised in our many funds the value of each as at December 31, 1931, and I have to report that we have not required to use the investment reserve and contingency fund; and, what is particularly gratifying, the life fund required no support other than its own investment reserve of £22,000. Already in this year some of the depreciation in the value of the securities comprised in our funds has been recovered.

LIFE DEPARTMENT.

The gross new life assurances amount to £1,603,889, which is substantially more than in 1930, and, after deducting reassurances, the net new business is £1,332,879, which is greater than in 1930 by approximately £9,500. The claims by death, at £216,733, are about £47,000 more, but still very well within the expectation both as to the number of claims and their amount. Policies matured to the sum of £178,397, which is greater than a year ago by about £15,000. The net premium income of the life department is £557,073, against £543,094, an increase of about £14,000. The net income from interest is £280,201, about £7,000 more than in 1930. The net rate of interest earned on the life fund, after deduction of tax, is £4 11s. 7d., as compared with £4 12s. 9d. a year ago.

The life fund amounts to £6,420,048, an addition in the year of £280,000. The life fund does not require to be supported, the resources within itself having proved sufficient to restore all depreciation in items of investments, whether marketable or otherwise, which have had to be written down to the prices or values ruling as at December 31st last.

The fire premiums, at £1,088,052, are £6,716 greater than in 1930; but the losses, at £544,065, are greater by £40,500. The premiums received in the accident, burglary and general assurance department amount to £784,819, an advance of £9,500. Interest on the accident funds aggregated £40,133, £843 more than in 1930, and there is a profit on exchange of £9,163. The claims, at £404,404, are greater than in 1930 by £8,063. The premium reserve is augmented by £4,300, and the general reserve by £12,532.

MARINE DEPARTMENT.

By the transfer of £28,500 to suspense account, it is anticipated that the outstanding liabilities for 1930 will be adequately provided for, and leave an underwriting profit of £23,480, equivalent to 11.4 per cent. of the premiums, as compared with 3 per cent. for the previous year. The premium income for marine business in 1931 amounted to £189,828, a difference of £14,900, but the claims settled thereon were only £34,036, as compared with £42,946. There is a profit in exchange in respect of outstanding foreign agency premiums, of £9,063. The amount of the marine fund at the end of the year was £425,460, over £15,000 increase on 1930.

THE DIVIDEND.

You will see that at the end of 1930 the balance of the profit and loss account was £189,486, and the carry-forward at the end of last year was £100,837. The directors recommend a dividend at the same rate as last year—namely, 10s. on each ordinary and staff share, less income tax. The balance carried forward to 1932 is only £17,358, as compared with £103,190 last year. I said last year that we should equalise the dividend of 10s. per ordinary share, and pay by equal half-yearly payments, assuming that business remained good. The surplus on our trading accounts is relatively small, but the directors consider that nevertheless they will not unduly strain our resources in paying 5s. for the final dividend.

You will have gathered that the "Guardian" has come through the troubles of the past year without any appearance of marked disturbance. But the good appearance of the company's balance sheet is to be accounted for by reason of the fact that in all our many funds we had, a year ago, hidden reserves of material amount, which, we hope, are now being recreated. On the whole, I hope you will consider that the accounts submitted for the past year are good.

The report and accounts were unanimously adopted.

YORKSHIRE INSURANCE COMPANY, LIMITED.

ANOTHER SUCCESSFUL YEAR.

The annual meeting of the Yorkshire Insurance Company, Limited, was held, on the 10th instant, in York.

Sir James Hamilton, who presided, in the course of his speech, said:—Our activities are world-wide, and in incorporating the accounts of countries outside the United Kingdom care has been taken to avoid inflation.

We are able to show an increase in the net life sums assured of £57,837, these being £1,710,885, against £1,653,048. The claims by death are £209,220, while the fund, after transferring £50,000 to the investment and contingency reserve, is increased by £290,895 to £7,145,100. The expense ratio is the same as last year—namely, 12.9. Twelve months ago I referred to a new scheme of life assurance, known as the "Security" policy. The scheme has met with a favourable reception from the public, and the business transacted under it has fulfilled expectations.

It is a matter for congratulation that, despite the world-wide depression and fall in commodity values, the net premiums in the fire account, at £1,030,221, show an increase of £3,436—a far from general experience. The losses are £528,748, the ratio being 51.3, as compared with 51.4, and, after transferring £30,000 to the investment and contingency reserve, £108,642 is carried to the profit and loss.

In the accident account the premium income has declined from £1,348,010 to £1,305,195. This is mainly a consequence of the depression in the United States. The claims are £728,786, and, after transferring £22,000 to investment and contingency reserve, £89,801 is carried to the profit and loss account, against £80,643 last year; the increase is due to a reduction in the 40 per cent. carried forward for unexpired risks.

The marine account has run favourably, which, in the difficult conditions, is a great tribute to the underwriters and marine managers. Although the premiums show a reduction of £40,157, the fund, after transferring £15,000 to investment and contingency reserve and carrying £30,000 to profit and loss, has been increased from £609,004 to £622,518, and represents 124 per cent. of the premium income, as compared with 112 per cent. the previous year.

Profit and Loss Account.—The total amount carried from the fire, accident and marine accounts is £228,442, which is practically the same as last year. Notwithstanding the higher rate of income tax, the net interest exceeds that for last year, and, with the contributions from reversions and the life account, provides fully for the dividend.

VALUE OF ASSETS.

As regards the value of our assets, the certificate given at the foot of the balance sheet sets forth the position. The revision of the book values is only made when the quinquennial valuation comes round, but each December 31st a comparison is made with the actual values then ruling. Taking the Stock Exchange securities at the mean market prices ruling on December 31, 1931, and converting all our assets and liabilities in foreign countries into sterling at the exchange rates ruling on that date, the result showed a net depreciation. Immediately after December 31st that depreciation began to grow smaller, and is now greatly reduced; yet as it existed at the time of closing the account we felt that it should be met by the creation of an investment and contingency reserve. By transfers from the several departmental funds, the profit and loss account and the general reserve, totalling £225,000, an amount is set aside which more than covers that depreciation.

The directors recommend that the dividend be 9s. 6d. on the £1 fully-paid shares, 4s. 9d. on the partly-paid shares, and 2s. 4½d. on the 5s. fully-paid shares and free of income tax. An interim dividend was paid in October last of 3s. 6d., 1s. 9d. and 10½d. respectively, and it is proposed that the balance be paid forthwith.

That the trading profit and net interest earnings have been maintained in the difficult circumstances will, I think, commend themselves to you as favourable features. We can look forward to the life department we have strong reserves, with a moderate expense ratio, and also an unbroken bonus record, including the war-doubtled security. Reserves have been built up which place us in upon us. Apart from the investment and contingency reserve of £225,000, we have a general reserve of over a million pounds, and free balances in the fire and accident departments of over half a million pounds, and in addition a considerable estimated surplus in the marine fund.

The general reserve, fire, accident and marine funds alone and exclusive of capital represents £1 2s. for every £1 of premium income received in these departments.

The report was adopted.

THE LONDON ASSURANCE.

DIVIDEND 45 PER CENT.—ASSETS EXCEED £14,000,000.

MR COLIN F. CAMPBELL'S REVIEW OF A DIFFICULT YEAR.

The annual general court of the London Assurance was held, on the 11th instant, at the head office, No. 1 King William Street, London, Mr Colin Frederick Campbell (the governor) presiding.

The secretary (Mr S. I. E. Crouch) read the notice convening the court and the auditors' certificate.

The Governor, in the course of his speech, said: If I were merely to suggest to you that last year was a difficult one for those connected with business, it would be but a poor indication of the actual position, for it was, in reality, one of those years of crisis which occur in the history of nations from time to time when nearly everything with which we associate our national life and well-being is put to the test. It is with such a background and in such a setting that we have to consider the affairs of our old corporation to-day, and it seems to me that a composite insurance company, such as ours, is subject in a very special degree to the conditions which are affecting all parts of the world. With operations extending throughout both hemispheres, we have to receive premiums and settle claims in almost every currency, while our premium income is liable to fluctuate with the value of commodities and with the degree of prosperity existing in the particular countries.

If we bear in mind the considerations which I have ventured to suggest, I imagine that you will not look for a report of unbroken prosperity in every department of our business, although I do claim that the picture as a whole is one with which, in the circumstances, the shareholders may be satisfied.

In 1930 we acquired the Guildhall Insurance Company, and last year we followed this expansion by the acquisition of the Federal Mutual Insurance Company of Australia, which has large connections throughout that country and a valuable business.

LIFE DEPARTMENT.

Turning to the accounts now submitted, the progress made during the year in the life department was quite satisfactory, inasmuch as the fund increased by £275,464, and now stands at £6,676,756. The new life business completed during the year amounted to 2,299 policies, assuring £1,795,780 net, as compared with 2,609 policies for £2,055,975 net in 1930. The total premium income was higher by £17,475, and the consideration for annuities granted by £3,788. The gross interest, in spite of the conditions prevailing, increased by £25,428, and the net interest, notwithstanding the higher rate of tax, increased by £6,451. The gross rate of interest earned was £5 9s. 10d. per cent., as compared with £5 8s. 2d. per cent. in the previous year. The claims by death, although higher than in 1930, were, in fact, more satisfactory, as they occurred among the older lives. The actual claims in respect of lives under 63 years of age were only 35 per cent. of the expected, which compares with 51 per cent. in 1930.

With regard to the all-important question of the value of the life investments, we are in a happy position. On December 31st last the Stock Exchange securities showed a small deficit of only £41,615, which has been more than recovered by the appreciation that has since taken place.

The depreciation in investments generally during the past year has emphasised in a marked degree the benefits of life assurance. A life policy provides the only safe method of covering the depreciation of an estate due to a forced sale of securities in the event of death.

The complete provident policy, a form of protection which has been advocated by assurance companies during the past year, is particularly suitable for a young married man, and if effected as an endowment assurance will prove a very attractive investment at the maturity date, quite apart from the special temporary annuity benefit which is provided in the event of death during the first twenty years.

FIRE, MARINE AND ACCIDENT ACCOUNTS.

The results of our fire account have been disappointing, for it is on these that we have grown accustomed to rely for a steady annual profit. The fact is that when the experience in the United States is adverse our account there, which has always been a substantial one, materially affects the results in the home and general foreign fields. While conditions in America continue as they are at present, it is a matter of great difficulty for the management to produce good results in that field. The business transacted in our home department, and through our Dominion branches and foreign agencies, ran off well, and we were able to protect our business in spite of the great depression in world conditions. The fire fund, after transferring £89,302 to profit and loss, amounted at the end of the year to £1,695,000, being slightly over 85 per cent. of the premium income.

With regard to our fire business as a whole, I am convinced that

as soon as any general revival in trade conditions takes place, the effect will be seen in this department.

The marine account, as we anticipated a year ago, has turned out to be a good one, so that, after transferring £159,322 to the credit of profit and loss account, the fund stands at £901,567, which is 102½ per cent. of the premium income. This result is due to some extent to a diminution in the number of total losses, and also to an increase in the hull rates of premium. Conditions in the marine insurance market, however, continue to be very difficult, and far from satisfactory, and the hull account, in particular, requires most careful handling.

The results of our accident department have been unsatisfactory for some time past, largely on account of adverse conditions in the United States. The results last year in America were affected to a very great extent by the serious trade depression in that country, and we have decided not only to revise some of our treaties, but also to strengthen the account by making what we believe to be ample provision for possible outstanding claims. We have, therefore, transferred £135,416 from the profit and loss account to the credit of the accident account, and the fund has been increased to £600,000 by adding £90,000 to the additional reserve.

The business in the home department ran off satisfactorily, and the motor insurance results were rather better than we had expected.

STRONG POSITION.

I have now taken you through our various underwriting accounts, and it would be foolish to pretend that they are altogether satisfactory. There is a small profit in the aggregate, but not such as we expect or consider adequate. Please do not think, however, that I take a pessimistic view, for, when all is said and done, at a time of world-wide depression such as the present the truth remains that we are maintaining our large resources intact and are giving our shareholders at the same time a dividend of 45 per cent., which, I suggest, is no mean return.

You will also observe that, while the amount brought into the profit and loss account at the beginning of the year was £317,670, the amount carried forward to 1932 is £357,847, an increase of £40,177.

The balance sheet shows that the total assets now exceed 14 millions sterling. The Stock Exchange investments taken in the aggregate were standing in our books on December 31st last at prices which were below the market quotations ruling on that date. Consequently, no provision for depreciation has been necessary.

All our associated companies made satisfactory progress.

Mr E. T. Hargraves suggested that it would be of advantage to all concerned if the Government could be induced to agree that life policies, up to £1,000 at any rate, in respect of which no claim for rebate of income tax on the premiums had been made, should be free of death duties on maturity.

The chairman, replying, said that, if anything could be arranged with the Treasury in that connection, it would be a very great relief to those seeking to make provision for the future.

The report was unanimously adopted.

MONTE VIDEO WATERWORKS COMPANY, LIMITED.

GOVERNMENT ATTITUDE TO COMPANY.

The fifty-third ordinary general meeting of this company was held, on the 10th instant, at 52, Moorgate, London, E.C.

Mr Norman B. Dickson, O.B.E., M.Inst.C.E. (the chairman), said that the net receipts for the year showed an improvement of £31,507, which spoke well for the healthy state of their business. The net revenue account, after deduction of loss on exchange amounting to £127,572 and £20,000 for plant obsolescence, with other items, showed a balance of £190,909, and, deducting the balance of £155,322 brought in from the previous year, there was a profit of £35,586 after meeting all charges. The directors much regretted that, in the circumstances, they did not consider it prudent to recommend any distribution on the ordinary stock; not only was there the heavy loss on exchange, but, owing to the stringent restrictions imposed on remittances from Uruguay, there was not the money with which to pay a dividend.

The board had submitted to the Government a claim for a temporary increase in tariffs, but the Government had declined to meet them; another suggestion had been submitted—namely, that the approaching reduction in the tariff should be postponed, and, alternatively, a third offer had been put forward, but the want of sympathy in Government circles in Uruguay for public utility companies could not have been shown more strongly. Not only were all their requests turned down, but the company was attacked in local papers and in political circles. In view of the fact that Britain was Uruguay's best customer, one would have thought that a request from a British company which had done so much to benefit the city of Monte Video would have been received with a certain amount of sympathy.

The report and accounts were unanimously adopted.

NORTH BRITISH AND MERCANTILE INSURANCE COMPANY, LIMITED.

SATISFACTORY RESULTS.

DIVIDEND MAINTAINED.

The 122nd annual general meeting of the North British and Mercantile Insurance Company, Limited, was held, on the 12th instant, at the North British Station Hotel, Edinburgh.

Col. the Rt. Hon. Lord Wakefield of Hythe, C.B.E., LL.D. (deputy chairman of the general court of directors), in the course of his speech, said: I am glad to say that we can again give a good report of our stewardship. Naturally we have suffered owing to the depression in general world trading conditions.

One of the most important tasks in our administration is that of controlling our working costs. The actual total of our expenses shows a decrease over last year of £69,157, but the contraction in our premium income has the result of increasing our expense ratio.

The net result is that for 1931 we show an underwriting profit on our fire account of £246,368, or 6.79 per cent. of the premium income, against £262,435, or 6.73 per cent. in 1930.

ACCIDENT DEPARTMENT.

Our accident figures can well be described as thoroughly satisfactory. The effect of the depreciation in foreign currencies is a slight decrease in premium income, but the net profit is better, at £124,216, or 10.75 per cent. of the premium income, as compared with the 1930 figures of £112,480 and 9.39 per cent.

One of the most important sections of the accident department is that relating to insurances in connection with motor vehicles. When previously addressing you I have referred to the Road Traffic Act, which came into operation as from the beginning of 1931, and which makes it compulsory for every user of a motor vehicle on the road to carry insurance in the shape of indemnity against liability for damages in connection with personal injuries caused by the vehicle to members of the public. The additional work thrown upon the insurance companies by the operation of this Act has been cheerfully and efficiently undertaken by them, and the services they have rendered have been very much to the benefit of motor vehicle owners.

It is still too early to gauge the full effects of the Act on the results of the companies, but one thing seems clearly to be emerging, whether due to the Road Traffic Act or not, and that is the increasing cost of claims arising from the insurance of motor vehicles—a factor which must have a bearing on the future conduct of the companies' accident departments.

MARINE ACCOUNT.

So far as our marine operations are concerned, as was only to be expected with the large number of vessels laid up, the shrinkage in value of goods and in quantity of cargoes transported overseas, has had the natural effect of reducing our premium income. I may remind you that our custom in the case of the marine account is not to take profits until we are satisfied that all claims have been either paid or fully provided for. Marine business is unlike fire and accident business in that claims may continue to come in for several years after the premiums have been received. The amount of £50,000 which we are now transferring to profit and loss, therefore, represents profits which are applicable not to 1930 or to 1931 but which have resulted from our operations in earlier years.

LIFE DEPARTMENT.

In the life department we again transacted a large business during 1931, although our figures were not quite so good as those for 1930. Nevertheless, our net new life business total of £3,816,878 was, I am sure you will agree, a very good achievement in view of the difficult conditions existing, and reflects credit upon the executive and the various members of the staff who are responsible for the "field" work of the company. While there is no question that recent events in the financial world have proved life assurance to be the soundest investment for the average man, one cannot disregard the fact that many a man who would willingly insure his life now has, for one reason or another, found his income curtailed to such an extent that he finds it difficult to effect additional cover on his life.

Although I deprecate borrowing in a general sense, it does seem to me that at the present time a man is thoroughly justified in case of necessity in borrowing upon existing policies to effect new life assurance. Our life department is continually preparing fresh schemes to meet the various needs of the public, and I commend these to the consideration of yourselves and your friends.

FUNDS SATISFACTORILY INVESTED.

Our funds are satisfactorily invested from the point of security of capital, but this question is so important that I propose at a later stage to deal with the whole matter somewhat fully.

In the life department the rate of interest earned has a very important bearing upon the question of bonuses, and during the past year, in spite of the increase in the rate of income tax, the net rate of interest earned was £4 9s. 11d. per cent.

Our next life investigation does not take place until the end of 1935, by which time I hope that conditions generally will be very much better than they are now, and that the item of taxation may not then loom quite so large as it does at the present time.

The annuity department continues to flourish, and in 1931 we received a sum of no less than £343,789 by way of consideration for immediate annuities granted and premiums on deferred annuities, while the fund has increased from £3,545,561 to £3,767,804.

RESULT OF YEAR'S OPERATIONS.

The net result of the year's operations is that after the very substantial writing down of investments by nearly £600,000, our combined balance at the end of 1931 was less than the corresponding figure at the end of 1930 by only £274,000. I am pleased to say, however, that the balance at the end of 1931 shows a very considerable advance on the comparative figure at the end of 1929. The combined balance at the latter date was £5,643,928. In 1930, however, we carried an amount of £250,000 by way of additional reserve to our fire insurance fund. We should therefore add this amount to the balance at December 31, 1931, in order to obtain a fair comparison. Making this adjustment, we arrive at a combined balance of £6,093,260 at December 31, 1931, or, say, an increase of £449,332 over the amount at the end of 1929.

We are proposing this year to pay the same dividend as last year, namely, 23s. per share, payable half on May 14th and half on November 11th.

The report was adopted.

GREAT WESTERN OF BRAZIL RAILWAY COMPANY, LIMITED.

ANOTHER DIFFICULT YEAR.

The ordinary general meeting of the Great Western of Brazil Railway Company, Limited, was held, on the 11th instant, at River Plate House, Finsbury Circus, London.

Mr. Follett Holt (chairman of the company), in moving the adoption of the report, said that the past year had proved a terrible one. The fixed charges, which amounted to £107,672, had been duly met, but the quota representing the amortisation of the balance of the company's capital could not be provided, and the best that could be said, from a capital point of view, was that the discount at which the four per cent. debentures for the sinking fund had been purchased made some amends for the omission. That in such a very bad year it had been found possible to preserve their equity of dividends on their preferred and ordinary shares.

The fall in exchange, and consequently in their sterling receipts, last year was appalling, and the accounts showed what an earnest endeavour had been made on the expenses side to meet that loss. Whatever might have been the deciding factors when railways enjoyed a monopoly, tariffs now largely hinged on road competition—a fact which railway men and shareholders throughout the world were forced to recognise. When the world was again on the rush, the railways would be again called upon to deal with the main burden. Meanwhile, there was a scramble for the reduced trade offering, and rates were being cut to a point injurious to the railways and to road vehicles alike.

The crops had saved their position in the latter part of 1931, and had given a satisfactory carry-over into this year. Moreover, the exchange rate, although, of course, still very adverse, had been more favourable to the company. But, again, what might happen to next crops and the continuance of an exchange rate better than last year. He thought he could say that, given some degree of normality, they should again be able to meet their debenture charges, either out of actual earnings or from the balance of their resources, and so continue to protect the interest or equity they held in the railway. Whether they might look for better results than this must depend upon the cane and cotton crops later in the year.

The Chairman concluded by stating that there was still good life in the railway, and the directors had not lost faith in its ability to recover.

The report was adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8, Bouverie Street, Fleet Street, London, E.C.4.

DUNLOP RUBBER COMPANY, LIMITED.

POSITION MAINTAINED DESPITE DEPRESSION.

FAVOURABLE FACTORS IN THE POSITION.

IMPORTANCE OF OTTAWA.

SIR ERIC GEDDES ON THE OUTLOOK.

The thirty-third ordinary general meeting of the Dunlop Rubber Company, Limited, was held, on the 12th instant, at the Whitehall Rooms, Whitehall Place, London.

The Rt. Hon. Sir Eric Geddes, G.C.B., G.B.E., K.C.B., chairman of the company, presided.

The Chairman said: The final net profit for the year shows a decrease of £61,395 as compared with 1930. In view of the fact that trade conditions all over the world have been most adverse, your directors feel that the company has done well in maintaining its position.

The amount of profits available for distribution has been seriously affected this year by the heavy provision that has had to be made for income tax.

The sum of £374,943 provided in the company's accounts, however, by no means represents the total income tax liability of the whole group of Dunlop companies. In addition, sums have been provided in the accounts of the subsidiary companies amounting to £173,517, making a grand total of, say, £548,460.

One cause of this very heavy provision is the operation of the regulations under which income tax liability is assessed on the profits of the preceding year, and this, I am sure, calls for no explanation as we have all doubtless had painful personal experience of the working of this regulation. It hits us in years when profits are falling, but we look for compensation when profits are rising.

There are, however, several points in connection with income tax which apply to companies such as this, and which call for the sympathetic attention of the Government.

The allowances granted by the Revenue for depreciation and obsolescence are totally inadequate, and in consequence prejudice the re-equipment of industry which is necessary to compete successfully in the world markets.

EXCESSIVE RATE OF INCOME TAX.

The rate of income tax itself is, in the opinion of all industrialists, far higher than the industries of this country can bear, but when to this is added the effects of the methods of assessment which I have just referred to, the result is a quite intolerable burden. How intolerable few can even imagine. For example, in our own company in the final analysis the ordinary stockholders are left with a sum of £380,650 income-tax burden and there is no margin out of which to meet this liability, which, in consequence, has to be provided out of the undistributed profits and reserves accumulated by you in past years.

In addition, of course, in the case of all our foreign companies, foreign tax has also to be paid.

THE BALANCE SHEET.

From a study of the balance sheet you will observe that the financial position of the company is extremely strong. At December 31st last, the company's liquid assets, comprising British Government and other securities, together with bank balances and cash, amounted to £2,821,080 and had increased during the year by £1,376,339. The surplus of current assets over current liabilities amounted to £4,359,785, representing an increase during the year of £564,800.

Every effort has been made to conserve and strengthen the liquid position of the company, and in the difficult times through which we are passing this is naturally a source of great strength.

The inventory position of all of your companies has been thoroughly investigated.

All stocks have, where necessary, been drastically written down, and the stocks of all our companies are in a very healthy condition, and have been conservatively valued. The company has no and have been conservatively valued. The company has no embarrassing commitments, in fact, as stated in the directors' report, the position as regards raw rubber and cotton commitments is completely satisfactory.

LOSSES ON EXCHANGE.

Losses on exchange amounting to £156,125 have been written off to general reserve. This sum of £156,125 is the balance of all the realized profits and losses on exchange that have been made during the year. This loss was practically entirely due to the abandonment of the gold standard by this country, and was a contingency which we had not foreseen. In view of the exceptional nature of this loss, the directors decided that it should be written off against general reserve, as the reserve was created for the specific purpose of meeting unforeseen contingencies such as this.

As this company has a considerable proportion of its capital invested in companies abroad, a converse effect of the abandonment of the Gold Standard by this country was to increase the value of these investments, and, as is stated in the directors' report, on the basis of the rates of exchange at December 31st last, this increase in value amounts to approximately £2,500,000.

You will observe that, after providing for the losses on exchange of £156,125 and the transfer of £1,000,000 to special reserve, the general reserve stands at £1,216,980, in addition to which the carry forward on profit and loss account amounts to £391,859.

Although the profits for the year were not sufficient to cover the full dividends on the preference shares, the directors have decided to recommend the payment of the dividends upon the whole of these shares, which are cumulative as to dividends. If these dividends were not paid this year this payment would merely be deferred. In view of the strong liquid position of the company and the ample carry forward, the directors are of opinion that these dividends can be paid with justification.

When I spoke to you last year, I said that it was impossible to forecast when "trading" conditions would revive, I pointed out that the depth of the depression was without precedent, and that its duration already exceeded past experience, and I expressed the view that recovery would be a long and painful process.

In August and September, our country had to face one of the most dangerous crises that it has ever experienced.

Once again, however, the British people showed its steadfast common sense and its unrivalled capacity to rise to an emergency. For the moment the breach was held, but the adverse forces gathered strength again, and on September 21st we were forced to abandon the gold standard to which we had clung so desperately ever since 1925, and the retention of which economists and statesmen had held up to us as the cardinal point of our financial policy. When a disastrous political crisis might have been expected, the political genius of the nation created, with almost magical ease and celerity, a National Government backed by a quite unprecedented majority.

The abandonment of the gold standard may well prove to have been a turning point in the world's economic history. The post-war international gold standard has broken down, and the task that lies before us, and in which the British Empire may well take the lead, is the reconstruction and reorganisation of international commerce and finance possibly on a fresh basis.

BALANCING THE BUDGET.

Our Government has wisely seen that the first step in this process must be the setting of our own house in order, and in this they have been courageously supported by the taxpayer. The budgets for last year and this year have been balanced, though at a level of taxation which cannot in my opinion be maintained without the most serious danger to our economic stability.

EXCESSIVE TAXATION.

Private enterprise can only function efficiently and afford good employment and a good standard of living for the people, if it is allowed to operate with reasonable freedom and is given the essential conditions for success. The most essential of these conditions is a plentiful and cheap supply of capital. Heavy direct taxation, especially of the present type, e.g., income tax, surtax, and death duties, all at high rates, is peculiarly inimical to the accumulation of capital and a serious deterrent to its investment. It is also psychologically a serious discouragement to the enterprise and initiative which are essential to the wellbeing of an industrial and trading country. The risk of adventuring your capital is so great and the reward after taxation so small, that the will to adventure is being killed.

I confess I should feel happier if I was sure that the Government realised the vital importance of this question.

ENCOURAGING FACTORS.

Having balanced our national account, the next need is to endeavour to protect ourselves so far as is possible, from the effects of international instability, and to create for ourselves a sphere of activity which will make us less susceptible to the effect of these disastrous world conditions.

As you all know, the Government has already taken the first step by the passing of the Import Duties Act and the issue of a comprehensive Order which, though it may be open to criticism in detail, is undoubtedly a substantial step in the right direction. This policy I have no doubt will be followed up. Meanwhile, it is satisfactory to be able to record some small signs of improvement in our own country.

Whereas the decline in production in the other chief producing countries of the world was continuous throughout 1931, there was

in the United Kingdom a definite up-turn in many trades in the last quarter of the year, and this has been continued in the first quarter of 1932.

Another favourable omen is the substantial and progressive increase recorded in the value of imported raw materials in the fourth quarter of 1931, coupled with a reduction of some £10,000,000 in the value of the imports of articles "wholly or mainly manufactured." This followed directly on the Orders imposing import duties, which were issued in November and December.

In regard to exports, though the year as a whole showed a substantial decrease compared with 1930, the latter part of the year had its encouraging features, as there was a small increase in the volume of exports in the third and fourth quarters.

Another very encouraging factor is to be found in the remarkable stability of the British banking system. The year 1931 was a disastrous one for the banks of many of the great industrial countries of the world. None the less, our banks have weathered the storm in such good trim that a writer in the *Economist* of January 16th was able to say "The results for the troubled year, 1931, which have now been published, will doubtless be regarded by future historians as the most convincing testimony ever afforded of the strength of the National Banking system."

I am glad to be able to mention these hopeful factors, but we must not let them blind us to the reverse side of the picture.

THE RESERVE OF THE MEDAL.

We have regained the confidence of the World, and our financial position is vastly improved, but the position of many of our staple industries, such as iron and steel, coal, textile, shipbuilding, is still very far from satisfactory and cannot be completely restored until the export trade, which is vital to this country, is improved.

However much we protect our home market, we must export to prosper and this means that we cannot prosper except in a prosperous world. The most serious factor at this moment is that international trade is becoming paralysed owing to the threatened collapse of many countries, which is resulting in a general lack of confidence and in a general fall in commodity prices and increase in commodity stocks.

Another result is the ever increasing network of exchange restrictions with which various countries are seeking desperately to protect their currency.

In consequence of these various factors, trade with many countries of the world is fast becoming impossible.

Until we know the monetary policy of the Government and until the question of international indebtedness is solved, tariffs must necessarily be of an emergency nature, and it is difficult to see how trade can revive throughout the world under such conditions and on rationed exchanges.

These problems can only be solved by international action. Old hostilities and jealousies must be laid aside, and a policy of bold and sympathetic co-operation initiated. The time for half measures is past, and some of the traditional policies of European diplomacy must be forgotten. Unless the outstanding international difficulties are solved in the near future, there can be but one result, the complete collapse of many countries and a paralysis of international commerce, which may involve the whole world in disaster.

As shareholders in one of the great exporting organizations of the Country and as citizens of a great Empire, we must all do all that lies in our power to avert such a calamity.

THE OUTLOOK.

Coming back to our own company. The directors in their report committed themselves to the belief that "in the absence of unforeseen circumstances, the current year should show an improvement over last year."

That was a forecast given in the unprecedented circumstances in the world to-day, and after mature consideration of all facts and estimates of revenue and expenses now available.

We deemed it right and fair to give our considered opinion to you. If we prove to be right, we will not seek your plaudits; if we are proved to be wrong, we will hope for your indulgence. We give it as our best judgment in all the circumstances.

The economies realized and in process have been so great; the provision for losses such as in stock values and bad debts, have been so fully made, that with our improved budgetary control, we feel we ought in present circumstances, to give a forecast, even remembering the risks of prophecy as we do.

I wish, however, to say something more general. I have already said that things look slightly better in industry in this Country.

A RIFT IN THE CLOUDS.

Surveying as we unfortunately must to-day, a World smothered in the clouds of depression and uncertainty, I see one rift through which the sun is showing, and it may well be that through that rift warmth may come and dispel the lowering clouds over the

World. That rift is the altering fiscal position of this Country and I hope of the British Empire.

We were in my opinion forced by circumstances to change our fiscal policy. As in most great political changes, statesmen and the electorate merely did what they could not help doing. The fact that we, as a Free Trade country, had drawn so much of our requirements in the form of manufactured and luxury articles from other countries gave us alone, among industrial nations, the opportunity of stimulating home manufacture, by the imposition of a tariff, to meet the demand hitherto filled by free imports. We are thus able to realize a potential reserve which may lift this country out of the deep depression from which we and the rest of the World are suffering.

I have travelled this year on your business as far East as Malaya and as far West as the United States, and I have definitely formed the impression that things look better here than elsewhere. When our manufacturers know where they stand on the tariff question, I have little doubt that our improvement will be more marked.

EMPIRE POLICY.

The other helpful element in the situation is focussed in the Ottawa Conference. Our great overseas Dominions have not been free trade units, but they have for the most part been less highly developed industrially than some other countries, and have had to import manufactured goods which their industrial structure was incapable of producing. Here again is a great potential market open to us as the most highly industrialised unit in the Empire if we can obtain that preference which we seek over countries outside the Empire.

Speaking in a practical way, one could hardly imagine a more promising opportunity than exists to-day for reciprocal arrangements to mutual advantage between the nations of the British Commonwealth.

No other people in the world can conceivably create such a favourable situation as can those of the British Empire, and no conference has ever been held which in my judgment equals in importance to us the great Congress which will meet at Ottawa this summer.

The electorate at the last election said, with a voice which impressed the world, that an end must be put to the eleemosynary attitude of mind which was plunging this country to final ruin as the only free trade unit in a protectionist world. If now we effectively bar the door against imports which we can well manufacture ourselves, and if the Ottawa Conference devises that we shall in the British Commonwealth of nations find an export market for our manufactured goods, which the various units of the Commonwealth do not or cannot manufacture themselves, while assuring them an improved outlet for their products, we may well start a move towards prosperity which will spread to the rest of the world. Reciprocal arrangements may result between the Empire and other countries under which a freer exchange of goods is generally possible.

Our Crown Colonies are not highly industrialised, but I believe that we shall be able to make with them also mutually advantageous arrangements, which will be in keeping with our traditional policy of governing those Colonies to their own greatest benefit.

WHEN THE TIDE TURNS.

When, earlier, I gave you figures showing the crushing burden of taxation upon industry, I said that there were two very serious factors in the method of assessment for tax, and pointed out that they accentuated the difficulty of companies in a condition of deepening world depression, and were one of the serious adverse factors which affect a company trading internationally to-day.

You will remember that we are not allowed, for assessment of income tax purposes, to "net" our profits by deducting the losses in subsidiaries, and that we are assessed upon a previous and therefore more prosperous year and have a wear and tear allowance in arrears.

As the law stands to-day, and assuming that it is not changed to our disadvantage, we are entitled to relief in assessment. Once a company starts making profits, we can set off those profits against previous losses retro-active up to six years. We can recover arrears of wear and tear allowance also. Again, as the depression passes, we will benefit by the assessment being based on the previous and therefore less prosperous year, and to that extent the proprietors will be advantaged as trade revives.

I think this incidence of assessment and taxation is not sufficiently widely known or appreciated. Once we start on the up-grade, the law as it stands will operate in our favour. It would be the height of inequity to change it to our disadvantage.

The whole sky is not overcast; there is a filtering gleam of sunlight coming through, and I think it is shining on the Empire upon which the sun never sets.

The report and accounts were adopted.

BRITISH MATCH CORPORATION, LIMITED.

SATISFACTORY RESULTS.

NO KREUGER HOLDINGS.

The fifth ordinary general meeting of the British Match Corporation, Limited, was held, on the 11th instant, at Beaver House, Garlick Hill, London, Sir George Paton (chairman and managing director) presiding.

The secretary (Mr H. E. Hobson, A.C.A.) having read the notice convening the meeting and the report of the auditors,

The Chairman, in the course of his speech, referring to the tragic death of Mr Ivar Kreuger in March last, said that the revelations and disclosures which had followed the suicide of this unscrupulous financier had shocked the whole world, and had shaken confidence to a degree which had seldom, if ever, been experienced. In 1927, when this corporation was formed, they acquired the interests of the Swedish Match Company and its associated companies throughout the British Empire, other than in Asia, and the Swedish Match Company received 30 per cent. of the shares of this corporation for their rights, i.e., 1,800,000 shares, about which there had lately been references in the Press. These shares had been deposited with the Skandinaviska Bank in Stockholm, and he was pleased to report that the corporation had been able to secure an agreement with that bank and the Swedish Match Company, which provided that the shares would continue to be subject to the restrictions made under the original agreement. He held a proxy for those shares.

NO HOLDINGS IN KREUGER GROUPS.

He wished again to emphasise that neither the British Match Corporation nor any of its subsidiaries had any holding of shares in the Swedish Match Company or any of the Kreuger groups of companies, and they had made no loans to these companies, nor had they entered into any financial guarantees in regard to them. He felt sure that this information must have been as gratifying to the shareholders to receive as it was to the board to announce it. The directors were profoundly thankful they had been so fortunate that the company had not been involved in that terrible financial débâcle. They would use all their efforts and experience to protect the interests of the corporation and also to maintain the match industry in the high position it had attained in this country and throughout the Empire.

Under all these conditions it was very gratifying to the board to be able to present accounts showing a profit only slightly less than that of last year, which, he trusted, would be regarded by the shareholders as satisfactory.

DUTIES.

This result had been secured notwithstanding the adverse effect of exchanges, increased income tax, and the new import duties on certain raw materials which they were obliged to import—notably timber. Matches, being already subject to Excise and Customs duties imposed during the war for revenue purposes which had no protective effect, did not come within the scope of the Import Duties Act. As a result of this, foreign manufacturers escaped additional import duties on their matches, which were made from the same raw materials on which the British manufacturer must now pay. They had laid their case before the Chancellor of the Exchequer, but he had not yet seen his way to correct this anomaly.

Dealing with the subsidiary companies had been taken into the accounts, although they had earned considerably more than the declared. In the revenue account the return, at £455,917, dividends declared. This was mainly accounted for by depreciation lower by £24,397. This was a reduced dividend from Brazil, where business had been very disturbed and depressed. The balance of profit was £442,597, against £461,387, and it was proposed again to write £40,000 off goodwill, rights, &c., to make a beginning with a reserve fund by transferring £50,000 to it, and to pay a final dividend on the ordinary shares of 4 per cent., free of income tax, the same as last year, carrying forward £54,185.

BRYMAY CO-PARTNERSHIP.

Bryant and May had a very successful profit-sharing and co-partnership scheme, which had been established for over 13 years. It would be agreed that the position of the corporation and its subsidiaries was financially strong and liquid, and, when trade improved, not only in this country but throughout the world, they had every opportunity to get their full share.

Until such time they must practise rigid economy and endeavour to maintain the sound position which they had attained.

The report was unanimously adopted and a cordial vote of thanks to the chairman, directors and staff terminated the proceedings.

CAWNPORE ELECTRIC SUPPLY CORPORATION, LIMITED.

IMPROVED RESULTS.

The annual ordinary general meeting of the Cawnpore Electric Supply Corporation, Limited, was held, on the 10th instant, at Winchester House, London.

Mr John G. B. Stone (the chairman) said:—It is with satisfaction that we are able to report better results than we showed in 1930.

The number of kilowatt hours, that is, units generated, was 44,008,996—an increase of about 6½ per cent. on the previous year's figure. Units sold for public lighting were 346,452—an increase of 12 per cent., by special contract 33,978,465—an increase of 7 per cent. These latter being bulk supply contracts. Units sold for lighting and fans were 1,456,028, an increase of 10 per cent., for power purposes 2,551,103, an increase of 1½ per cent. The total units sold amounted to 38,332,048, an increase of 6 per cent. on the previous year. Of the units generated we sold 87 per cent., the same percentage as in the previous year. The maximum demand amounted to 9,349 kilowatts, an increase of 10 per cent. over 1930.

During the year 153 additional lamps were added to the public lighting installation. The improvement of the street lighting is at present under discussion. The bulk supply, which realised 0.60 As. per unit in 1930, brought in 0.67 As. in 1931.

Hitherto these supplies have all been charged for on the Two-part Tariff, based upon the size of the installation and the units consumed, but towards the middle of last year we acceded to an urgent demand for a flat-rate tariff for such supplies, and, having agreed to it, we were able to secure further important contracts. These flat-rate bulk-supply rates effect a reduction in our charges, but with the economies to be derived from the use of our new plant and the increased output we expect to maintain the present margin of profit, and at the same time satisfy our consumers by giving them what is an extremely low rate for supplies of this nature.

The supplies to ordinary consumers for lighting and fans brought in a revenue of 4.96 As., as compared with 5.22 As. in the previous year. At the beginning of the present year we introduced a two-part tariff for such consumers. Ours is the first of the undertakings in India to offer a general tariff of this nature. It has a fixed monthly charge based upon the number of rooms in the house, and a low charge per unit. This system of charging is being freely adopted in this country, and with success. The supply for power purposes, which shows little increase over the previous year, brought in 1.81 As. per unit, against 1.78 As. in 1930.

The report and accounts were unanimously adopted.

THE CALCUTTA ELECTRIC SUPPLY CORPORATION, LIMITED.

SATISFACTORY PROSPECTS FOR CURRENT YEAR.

The thirty-fifth annual general meeting of the Calcutta Electric Supply Corporation, Limited, was held, on the 9th instant, at Victoria House, Vernon Place, London, W.C.

The Right Hon. Lord Meston of Agra and Dunottar, K.C.S.I. (the chairman), said that the issue of ordinary shares in March last year, together with the issue of preference shares made in 1930, had helped to finance the policy of steady improvement and extension which the rapid advance of the company's business in recent years had counselled the directors to pursue. The re-conditioning of their Cossipore station had continued, and their largest generating unit, a 20,000 kw. turbo-alternator, had come into commission at the Southern Station. More sensational was the successful tunnelling under the Hooghly between the Southern Station and the right bank. The bore was completed in August, and they were now on the eve of putting their cables through it, and thus solving the grave problem of an efficient supply of current to the southern area of Howrah.

The sale of current had yielded nearly £5,000 less than in the year before. Their industrial load, in spite of prevailing depression, showed an improvement of over 5,000,000 units, and there was a corresponding rise in the revenue from that source. The domestic load, however, increased by barely 500,000 units, and, as their flat rate of charge had been reduced in June from 3 to 2½ annas per unit, there was a substantial drop in the receipts from that quarter. With better times, the cheaper supply which they now gave would, the directors were satisfied, bring its reward in higher consumption. The directors proposed a bonus of 3d. per ordinary share, in lieu of last year's 5d., in addition to the 12 per cent. which they now aimed at securing as their standard dividend in years of ordinary prosperity. In the circumstances the directors trusted that this would not be regarded as unsatisfactory. The customers received by the reduced flat rate a gift which, on the present scale of domestic consumption, was worth roughly £48,000 per annum.

So far as the results of the current year had reached them, the prospects for 1932 were satisfactory.

The report was unanimously adopted.

[May 14, 1932.]

SPILLERS LIMITED.

SUCCESSFUL RESULTS OF THE YEAR.

WHEAT QUOTA DIFFICULTIES.

SIR MALCOLM ROBERTSON'S REVIEW OF POSITION AND PROSPECTS.

The Rt. Hon. Sir Malcolm A. Robertson, chairman of Spillers, Limited, presiding at the annual general meeting of the company, on the 7th instant, at Cardiff, said that the company's profits for the year amounted to £549,184, after making full provision for income tax, depreciation and the staff under the co-partnership scheme. Payments out of these profits, including a sum of £125,000 transferred to the staff and workmen's benefit fund, amounted to £197,107, leaving £352,077 to be carried to the balance sheet. The directors proposed to pay a dividend of 12½ per cent. (making 15 per cent. for the year) on the ordinary shares and 10 per cent. on the deferred ordinary shares.

The company, while still providing the best and cheapest flour in the world, and after eliminating all speculation, had yet made substantial profits on the flour milling side of the business as well as elsewhere. That was partly due to the rationalisation of the milling industry, but also very largely to the reorganisation of the company, which had proceeded with such satisfactory results, and to the fact that the board consisted of whole-time directors.

Apart from the flour milling side of the business, considerable profits had been earned by the company's activity in the manufacture of all forms of animal foods. During the year under review they had actually delivered to customers no less than 453,000 tons of those foods, exclusive of raw grain.

WHEAT QUOTA

As to the future, normal trading conditions for the milling industry were a thing of the past. The effect of the quota policy for home-grown wheat, recently imposed under the Wheat Quota Act, was difficult to foretell, but so far as could be seen at present, there was absolutely no foundation for the belief cherished by some foolish people that it would result in great financial gains to millers. One thing, however, was abundantly clear; the difficulties in running what was already a sufficiently complicated business were definitely increased. The attitude of millers towards the Quota Act had been misunderstood. A quota system was both cumbersome and unnecessarily costly, and could well have been replaced by a straightforward duty on wheat. The delicate machinery of the trade would not then be upset as it would be now, and the price of flour would at the very least not have been higher, and possibly lower, than under a quota.

A much more serious cause for anxiety was the Ottawa Conference. It was difficult to say much on that subject now, but if it was made compulsory to use a high quota of Dominion wheat with no compensating advantage by the strict limitation of the import of both foreign and Dominion flour, then the interests of the company and of the milling industry generally would be gravely affected.

THE NEW MILLS

It had been public property for some months that the erection by the company of new mills at Cardiff and Bristol had been contemplated, and it was anticipated that they would be working within two years. They were situated on Roath Dock at Cardiff and Avonmouth Dock at Avonmouth, both on deep water. They would have the most adequate facilities of every kind, and would undoubtedly represent the last word in milling construction and furnishing in the world.

The directors had decided to recommend that all the company's issued capital, with the exception of the co-partnership shares, be converted into stock. They, like many other large companies in whose shares there was an active market, had found that the clerical labour entailed in connection with the registration of transfers became more and more burdensome as the parcels of shares were split into smaller parcels, because under present law every share had to bear a distinctive number. No such disability applied to stock.

BRITISH OAK INSURANCE

As regards the British Oak Insurance Company, a great improvement had taken place in its affairs. The previous year's loss of £39,877 had been converted into a profit of £24,751, thus reducing the debit balance from £73,395 to £53,644.

Following the rule that he had laid down for himself when he became their chairman, he had, during the year, visited every one of the company's chief centres. He had also personally interviewed every senior member of the administrative staff. The greatest importance was to be attached to those visits and to the feeling which it was hoped they engendered.

In connection with the staff, the shareholders would be gratified to hear that the bonus payable under the staff co-partnership scheme for the past year was equal to the highest yet paid. In addition, the dividend on the co-partnership shares already issued was to be 13½ per cent. for the year. The company had initiated a scheme for assisting the staff in connection with payment of income tax. This scheme was purely voluntary, but had been adopted by the vast majority of the tax-paying staff, and the Board of Inland Revenue had since endorsed the scheme, in its essentials, as suitable for adoption by large employers.

PROVISION FOR STAFF

The directors were anxious to see that the workpeople, many of whom had served the company throughout their working lives, were adequately provided for in their retirement. Although the group pension scheme had been established, the full extent of its benefits could not be felt for many years to come, and that was why provision was made in the accounts for the establishment of a fund for that purpose. The company had a staff, including workmen, which was second to none in the country for efficiency, enthusiasm and loyalty, and the question of recruitment of new employees to replace retired servants was receiving the directors' closest attention.

The report and accounts were adopted.

LONDON ELECTRIC WIRE COMPANY AND SMITHS, LIMITED.

POSITION MAINTAINED.

The twenty-third annual general meeting of this company was held, on the 12th instant, at the Hotel Metropole, London.

Mr W. J. Terry (the chairman) said that the net profit for the year was £63,248. After adding transfer fees and the amount brought forward and deducting directors' fees and preference and interim ordinary dividends, there remained a balance of £48,426. The net profit for the year showed an increase of £3,082.

The fluctuations in the price of copper had again been of an abnormal character throughout 1931, and there had been the same difficulty in covering contracts made with them at prevailing market prices. There was no doubt that the existing price of copper was below its economic value, but it would seem that, if a free market for that metal existed, together with the present restriction of output, a better state of affairs would be speedily brought about.

During the year under report, the company had maintained its position in the electrical industry, although the prevailing world depression had imposed a restriction upon trade which had limited their business to considerably less than their manufacturing economies in working, changes had been and were still being made in their organisation.

The reduced requirements of the trade had necessarily led to severe competition and a lower level of selling prices. The company had, however, paid particular attention to the quality of its products which had been steadily improved and they ranked as high as any obtainable in the world's markets. Every possible avenue would be explored to increase the output of the products manufactured by the company, and every effort would be made to combat successfully the difficulties which naturally arose from the general shortage of orders. The directors had given and were giving careful consideration to a widening of the scope of the company's activities, both as regarded the products of manufacture and methods of distribution.

In September last year the breakdown of the gold standard in this country had assisted trade, but that improvement had only been of a very temporary nature. In November last the Abnormal Import Duties Act had been passed, and in March this year the of the board that a scientifically imposed tariff would be of great benefit to the industry, but there must be no uncertainty about its otherwise there would be further serious dislocation in their trading conditions.

The report and accounts were unanimously adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

The total ordinary revenue for the week ended May 7, 1932, amounted to £11,420,800 against ordinary expenditure of £29,330,600. After allocating £610,000 to Sinking Fund and having allowed for a reduction in Exchequer Balances of £581,185, the

MISCELLANEOUS.

BRITISH ELECTRIC TRACTION COMPANY, LTD.—A bonus of 100 per cent. in fully-paid £1 deferred ordinary shares to deferred ordinary stockholders, out of the balance standing to the credit of undivided profits account, is recommended by the directors of the British Electric Traction Company, Ltd., which controls a number of electric supply companies. In each of the four preceding years deferred stockholders received a capital bonus of 10 per cent. The revenue for the year ended March 31, 1932, amounted to £410,565, against £422,826, being a decrease of £12,261, while the net profit (subject to audit) comes out at £254,314, compared with £271,005 for the previous year. The directors recommend the payment of the following dividends (less tax), viz.: 6 per cent. on the cumulative participating preference stock and a participating dividend of 2 per cent., making the full dividend of 8 per cent.; 8 per cent. on the preferred ordinary stock, and 5 per cent. on the deferred ordinary stock, leaving a sum of £81,049 to be added to undivided profits account. For the previous year £80,217 was added to undivided profits account. The balance sheet at the end of March, 1931, showed £1,309,983 at credit of undivided profits account.

HUDSON'S BAY COMPANY'S LAND SALES.—For quarter ended April 30, 1932:—

	1931.	1932.
Farm lands—Acres.....	3,570	4,112
Sold for	£5,600	£6,600
Town lots—Sold for	£280	£125
Total receipts (gross)	£38,400	£44,200

THE TIN PRODUCERS' ASSOCIATION.—The council of the Tin Producers' Association on Wednesday considered the following resolution, which had been passed *nem. con.* at the annual general meeting of the Malayan Chamber of Mines, held on the 10th instant, viz.: "This chamber, being of opinion that the additional cut of 20,000 tons in the international quota coming into force on June 1st is inadequate to effect its object, recommends in substitution therefor a reduction of the international quota allotted to the four signatory countries, namely, 162,168 tons, to 33½ per cent., namely, 54,056 tons, to take effect as from June 1st, subject to quarterly control; and that no tin shall be exported by the signatory countries during the months of June and July, such tin to be released during the succeeding ten months in such proportions that the rate of total exports by the signatory countries, beginning in August, 1932, shall not exceed 5,406 tons during any one month." The council by unanimous resolution endorsed the recommendation contained in the above resolution.

OTTOMAN BONDS.—Bondholders are advised that the committee appointed for the examination of deteriorated bonds of the reparation public debt of the former Ottoman Empire has commenced operations. Holders of such bonds who wish to submit them for examination are requested to apply for full particulars to any of the paying agents of the Ottoman Debt.

WIGGINS, TEAPE AND CO. (1919).—Profits for 1931 amounted to £309,768, as compared with £281,397. In addition to debenture interest of £64,342, there is tax provision of £3,771, £17,000 (same) for depreciation and £5,000 for trade investments reserve. Final dividend on ordinary shares is again 7 per cent., making 10 per cent. as before. Balance for new account is £52,628. Brought-in figure was £53,456, after allocation of £8,900 to reserve against raw materials and forward contracts. Company's Millholm Mill at Cathcart, near Glasgow, which has been closed down for some time past, has been leased to a tenant for purposes other than paper-making, with an option of purchase. In view of this, the value of the mill in books has been written down to option price by means of transfer of £38,000 from depreciation reserve. A sum of £20,000 has been transferred from reserve to an exchange reserve in view of the uncertain state of foreign and Colonial exchanges. The meeting will be held at Winchester House, London, E.C., on May 19th, at 12.0 noon.

Commercial Reports.

MARKET SUMMARY.

Price movements of raw materials in terms of gold have been irregular during the past week, but there is as yet no evidence of an expansion in demand. In New York, non-ferrous metals, with the exception of lead, were easier. The advance in rubber has been lost by the rejection of the United States Senate of a proposal to impose a tariff on crude rubber. Cotton was a little firmer, but its present price is still considerably below the level of a month ago. Last week's decline in cereals has been followed by a slight recovery, most pronounced in the case of rye. Brazilian coffee advanced a few points and cocoa was also firmer, but sugar shows no improvement. Sterling quotations of commodities, which lend themselves to grading and therefore to international arbitrage, moved in sympathy with gold prices. Meat and dairy products are scarcely changed on the week, but tea was a little easier. According to various reports from industrial centres, the coal trade remains depressed and exports become increasingly difficult to arrange. The iron and steel industry records no progress; the output of both pig iron and steel in April shows a reduction on the previous month. Cotton manufacturers complain of a falling off in new orders, while business in rayon goods has also become less active. So far, the recent level of activity in the woollen industry appears to have been maintained.

THE COAL TRADE.

SHEFFIELD.—Prices of house coal have been reduced by an average of 1s. 8d. per ton, but little or no increased trade has resulted, although merchants had kept down their stocks. Export trade continues bad and owners are agitating for an export subsidy to compete with Continental collieries. There has lately been a good deal of reorganisation in the South Yorkshire coalfield, resulting in the closing of seams and throwing large numbers of men out of employment. Best steams are quoted at 16s. and 16s. 6d. f.o.b. firm. Best house, 20s. and 21s. at pits. The call for manufacturing fuel has declined somewhat of late, particularly in textiles. The position of furnace coke remains unchanged, there being no increase of consumption. Prices are steady at 12s. to 12s. 6d. at ovens.

GLASGOW.—The reduction in supplies of various grades of coal owing to the interruption of work at some of the Fifeshire collieries has given a firmer tone to the spot market, which has also benefited because of a freer arrival of tonnage to fulfil contract shipments. Fife double nuts and Cowdenbeath-Lochgelly steam are notably stronger. Coastwise business remains fairly active, but export orders are dwindling, and with the Fife miners returning to work some reaction in values seems in prospect. Shipment prices (f.o.b. district ports): LANARKSHIRE.—Ell best, 14s. 3d.; splint best, 15s. 6d.; splint second, 14s. 3d.; navigation, 15s.; navigation second, 14s. 6d.; Hartley, 15s.; steam, 13s.; trebles, 11s. 6d.; doubles, 9s. 9d.; singles, 8s. 9d.; pearls, 8s. 6d.; dross, 8s. 9d. FIFE.—Screened navigation, 16s. 6d.; first-class steam, 12s.; third-class steam, 11s.; trebles, 11s. 13s.; doubles, 10s. 10s. 6d.; singles, 8s. 9d.; pearls, 8s. 6d. LOTHIAN.—Prime steam, 11s. 11s. 6d.; secondary steam, 11s.; trebles, 11s. 11s. 6d.; doubles, 10s. 6d.; singles, 8s. 9d. 9s.; pearls, 8s. 6d. Ayrshire.—Unscreened navigation, 16s.; jewel, 16s. 6d.; steam, 12s.; trebles, 12s.; doubles, 10s.; singles, 9s. 9d.; pearls, 9s.; dross, 9s.

CARDIFF.—Conditions on the Cardiff coal market remain extremely depressed. Production is at the rate of only from 700,000 to 750,000 tons per week, and the total weekly quantity exported in the foreign and coastwise trade is less than 400,000 tons, compared with between 450,000 and 500,000 tons at the corresponding period last year. The anthracite trade with Canada is expanding slowly, and there has been also a slight improvement recently in shipments to South America, but in the European market demand is declining, and it is feared that, with the expiration of the present contracts with the Italian State Railways, the trade with Italy will contract still further. Prices for best anthracite and dry smalls are fairly steady at figures above the schedule, but for practically all other grades supplies are in abundance at minimum figures. The following are the current approximate quotations: Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 4½d.; best drys, 18s. 6d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steams, 13s. 6d.; cargo smalls, 11s. 6d. to 12s. 6d.; coking smalls, 13s. 6d. to 13s. 9d.; anthracite, best large, 36s. to 38s. 6d.; Red Vein, large, 22s. 6d. to 27s. 6d.; machine-made cobbles, 40s. to 48s. 6d.; French nuts, 40s. to 48s. 6d.; stove nuts, 38s. 6d. to 45s.; rubbly culm, 8s. 3d. to 8s. 9d.; patent fuel, 19s. to 19s. 6d.; foundry coke, 32s. 6d. to 35s.; pitwood, ex ship, 18s. 6d. to 20s.

IRON AND STEEL.

MIDDLESBROUGH.—The market for Cleveland iron continues steady, with business on a slightly increasing scale. Better trade is looked for as the effects of the tariffs permeate the different branches of industry, and in the meantime the production is being absorbed. Most consuming works in this district and elsewhere will be closed down on Monday and Tuesday next for the holidays, but this will not interfere very much with pig-iron deliveries, and the increase in stocks at the furnaces will only be slight. A moderate business in Cleveland iron was reported at Tuesday's weekly market, but mostly for fairly early delivery, consumers still hesitating about entering into forward purchases. Official prices were unchanged, viz.: No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d., and No. 4 forge, 57s. per ton, f.o.b. or f.o.t. The hematite market is firm, and although sales are pretty numerous they are only for small quantities and do not extend far forward. Another cargo of hematite will shortly be shipped from the Tees to South Wales, which is extremely satisfactory, and it looks as if this district is likely to recapture some of the trade that was lost two or three years ago. For ordinary mixed numbers, makers are firm at 63s. 6d. for early delivery, with extras for forward periods. Shipments of pig iron this month are disappointing, the total of all kinds cleared to 10th instant being only 1,124 tons, compared with 4,340 tons to April 10th. In the finished branches there is no great accession of new business so far, but small orders are coming to hand in different departments which keep some of the plant partially employed. Most mills will be idle for the first two days of next week, which will probably allow a few orders to accumulate. Prices for steel materials are generally unchanged. The position of the ore market is unaltered. Consumers are still off the market, and the price of best rubio remains nominally 15s. 6d. c.i.f., with freights Bilbao-Middlesbrough about 4s. 9d. Coke is still in ample supply and, with a very restricted demand, good blast-furnace qualities are obtainable at 15s. 6d. delivered works. The number of blast furnaces in operation in the district remains unchanged at 17.

SHEFFIELD.—Certain classes of mechanics' and engineers' tools constitute the only real bright spot in the local industrial situation. The cost of American and German tools, being almost prohibitive, users are buying goods of home manufacture, and some of the

factories have more orders than they can deal with promptly. A wave of quietude is passing over the heavy steel branches. Tonnage orders are few and far between and inquiries have tapered off. The Whitsun holidays are likely to be extended beyond the average period. Demand for cold wrought steel, stainless steel, wire, drop stampings and several specialties, and motor parts, while substantial, is less than a couple of weeks ago. Controlled prices of semi-steel have undergone no change for six months, but the value of steel scrap has declined progressively from 42s. to 35s., or even less. Uncertainty as regards tariff rates is holding back trade in protected finished goods and the activity in scissors and penknives has slackened. Depression is pronounced in silver and electro-plated ware and table cutlery.

GLASGOW.—Up to the present time the increased duty on imported iron and steel does not appear to have had the effect of stimulating demand for the home product, and in Glasgow and surrounding districts quiet conditions continue. There has been a slightly better demand for material for light steel structures and also for ship repair work, but no great tonnage is involved. For such little business in semis as is on the market, Scotch makers are up against keen competition from the Continent, and also from makers in England and Wales. Tube makers are still very badly off for work and only a very small proportion of the plant in the Lanarkshire districts is in operation. The home demand for both black and galvanised sheets is steady and there is a quite important Canadian business being done with local makers, but otherwise the export trade is quiet, and a number of local mills are not in operation this week.

CARDIFF.—No improvement was reported on the Swansea Metal Exchange on Tuesday in the position of the South Wales tinplate trade. Shipments were heavier last week than in the previous week, but there are no indications of expanding inquiry and prices have ruled at 14s. 9d. to 15s. 3d. per basis box. Welsh bars remain at 95s. per ton net, and despite the 3½ per cent. duty, Continental steel bars are being offered at about 84s. per ton delivered South Wales. Galvanised sheets are a quiet market at £9 7s. 6d. to £9 10s. per ton f.o.b. works' port for corrugateds in bundles.

OTHER METALS.

TIN.—The market in tin was erratic this week. Prices declined from £129 per ton on Saturday last week to £120 on Tuesday. Following the adoption of the new restriction proposals by the London Malayan Chamber of Mines quotations advanced to £124 on Wednesday. There has been no improvement in the principal consuming industries. In New York the metal was quoted at 21.375 cents per lb. on Wednesday, against 22 cents per lb. a week ago and 18.50 a month ago. Wednesday's official closing quotations in London, in terms of sterling for "standard" cash at £124 7s. 6d. to £124 10s. per ton, compares with £126 to £126 5s. on the corresponding day last week. Stocks in London and Liverpool at the end of last week, at 33,231 tons, show an increase of 10 tons on the week.

COPPER.—The demand for copper, both in New York and London, was on a small scale throughout the week and prices tended to decline. There are as yet no signs of an expansion in the principal consuming industries. On Wednesday, "Domestic" spot was quoted at 5½ cents per lb. in New York, against 5½ cents a week ago, and 5½ cents a month ago. Wednesday's official closing price for "standard cash" in London, in terms of sterling, at £29 8s. 9d. to £29 11s. 3d., compares with £30 3s. 9d. to £30 6s. 3d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 20,496 tons, show a decrease of 139 tons, while stocks of rough copper, at 769 tons, are unchanged.

LEAD.—Little interest was taken in lead this week and prices receded despite the reserve of holders. In New York the metal was quoted at 3.00 cents per lb. on Wednesday, against 3.00 cents a week ago, and 3.00 cents a month ago. Wednesday's official closing quotation for "soft foreign" in London, in terms of sterling for shipment during the current month, at £10 18s. 9d. per ton for shipment during the current month, compares with £11 13s. 9d. on the corresponding day last week.

SPELTER.—On Monday and Tuesday the demand for spelter was quiet, but on Wednesday the turnover became active on the prospects of a further curtailment of production. Wednesday's quotation in New York, at 2.45 cents per lb., compares with 2.50 cents a week ago and 2.80 cents a month earlier. Wednesday's official closing quotation in London, in terms of sterling for "good ordinary brands," was £12 12s. 6d. per ton for shipment during the current month, against £13 a week ago.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals the quotations for aluminium and nickel have been maintained at £95 per ton and £225-£230 per ton respectively. Foreign antimony was again quoted at £26 per ton, quicksilver at £16 per flask, and platinum at £10 11s. per ounce.

TEXTILES.

THE COTTON TRADE.—Liverpool.—Imports for the week May 5th to 11th (inclusive) are 32,112 bales, of which 18,529 are American, 57 Brazilian, 1,002 Peruvian, 7,817 Egyptian, 2,553 East Indian, and 2,154 sundries.

Manchester.—The tone of the market has continued quiet, and spinners and manufacturers have only been able to secure orders for small lots, buyers being still disposed to restrict their commitments as much as possible. Expansion of trade is being held back by fears of lower values and the many difficulties resulting from the world chaos. In cloth for India there has been a fair amount of inquiry and a moderate turnover has taken place, chiefly in light bleaching descriptions and prints for Calcutta, Karachi and Madras. Offers for China in staple makes have been scarce,

but occasional transactions have been put through in fancies. A few more bids have been about in bleaching descriptions for Egypt, but trade for South America remains very poor. Some necessary buying has occurred in home-trade fabrics, but there are some complaints of deliveries not being taken very well. Cloth quotations tend to become more irregular, partly owing to the varied conditions relating to labour costs. American and Egyptian yarns have moved off slowly and low prices have again been taken by pressing sellers. Very little has been done in export numbers.

THE WOOL TRADE.—Bradford.—This has been a comparatively quiet week, writes our correspondent, but in spite of certain admittedly adverse factors there is quite a cheerful tone among importers and topmakers. It would no doubt be an advantage to see a better demand for super 64's and finer qualities, but the real trouble is at the other end of the scale. There has recently been an improved demand for 46's carded tops, but anything of preparing lengths seems to be dragging as much as ever. No information has as yet been forthcoming regarding the representations with a view to securing some adjustment of the scale of import duties on yarns and piece-goods. The contention of a certain section of the trade is that, even as things are to-day, the home market has been fairly well secured, and, in any case, nothing is likely to happen to exert an adverse influence upon values for wool. The home trade has purchased a substantial proportion of the current Australian clip. All the merino supplies now in sight will be wanted, and even if it is found impossible to make any substantial headway in the exportation of partly and fully manufactured goods, spinners and manufacturers abroad will still want supplies to keep their spindles and looms running. The general outlook is fairly encouraging. There is no change this week in Bradford. Quotations for all qualities of tops are steady, but there is not much new business. Some firms report decent sales extending over a fairly wide range of qualities.

THE JUTE TRADE.—Dundee.—The dispute between the Indian Jute Mills' Association and the five non-associated members of that body has at last been settled. It is quite likely that the ratification of the agreement which is required will be made by all the parties. The negotiations have been very prolonged in an endeavour to get the non-associated members to work less hours, and now these mills have agreed to work for one year on 54 hours per week. The mills in the association are working only 40 hours per week, besides having 15 per cent. of their looms shut down. This may have a more stabilising effect on the Calcutta goods market, in which prices have been fluctuating to some extent, with a tendency to decline. The new jute crop is progressing favourably. Sowings in Bengal have been completed, and the area covered this season is 6 per cent. more than last year. Several tornadoes have been reported in Mymensingh, which is the largest jute-growing

ESTABLISHED at the most important commercial centres in South America and Portugal, the Bank of London & South America Ltd. is particularly well equipped to carry out modern banking business of every description.

BANK OF LONDON & SOUTH AMERICA LIMITED

6, 7 & 8, TOKENHOUSE YARD, LONDON, E.C.2

MANCHESTER: 36, Charlotte St. Affiliated to Lloyds Bank Limited. BRADFORD: 33, Hustlergate. And at NEW YORK, PARIS and ANTWERP

district, but no mention has been made of any damage having been done to the jute crop. Sellers are showing some reserve still, and they are not inclined to make offers of new crop fibre. Few prices are mentioned for old crop material, including Heart Ram-D at £16 15s., Mahabir Tossa at £16 10s., and Lion Daisee at £15 15s., May-June shipment. Spinners, however, are not showing the slightest interest in the further purchase of the fibre meantime, owing to the generally dull state of trade. Jute yarns are steady, and hessian descriptions are quoted at not less than 1s. 10d. for common 8 lb. cops, and 1s. 11d. for 8 lb. spools. One spinning mill is to be closed down at the end of this month. Sacking yarns are quiet, and obtainable at the slightly reduced rates of 3½d. for 8 lb. chains and 2½d. for 24 lb. weft. Twist is steady at 3½d. for 3 ply 8 lb., and only a few occasional sales of Rove are going through at from £18 10s. for 48 lb. and £16 for 200 lb. Fine yarns are quiet and nominal at 2s. 7d. for second quality 8 lb. Rio warp, 2s. 4d. for third, and 2s. 1d. for fourth. Some business is taking place in carpet yarns at from 3½d. for 14 lb. warp. Orders for jute cloth are still of small dimensions, and few transactions of note are occurring. Prices are notably unchanged at from 2½d. for 10½ oz. 40 in. hessian, and 1½d. for 8 oz. Linoleum Hessians are practically idle, and there is only a small business in sacking, bagging and tarpauling.

THE GRAIN MARKETS.

WHEAT.—The international wheat situation has undergone no perceptible change during the week. Markets have been largely under the influence of crop reports. The prospects for the North American spring crops appear to be favourable, but European crops are generally backward. A period of favourable weather would, however, result in a great improvement of the European crops. The Continent will have to import substantial quantities before new home-grown wheat becomes available in sufficient quantities. Requirements would, of course, be considerably larger in the event of a late harvest. The outstanding feature has been the appearance of Russia on the market as a buyer of substantial quantities of Canadian and Australian wheat. The extent of Russian requirements of foreign wheat is not known, but it is believed that further quantities will be purchased. The sowing of the spring crop appears to have been retarded in Russia, but owing to the lack of accurate information, it is as yet difficult to form an opinion of the wheat situation in that country. The British crop has benefited by the improvement in climatic conditions. On Wednesday, "May" futures were quoted at 55½ cents per bushel in Chicago, against 54 cents on the corresponding day last week, and 59½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 32s. 6d. per 496 lbs., as compared with 31s. 6d. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 30s. 6d., against 29s. 6d.; No. 3 Northern Manitoba, Vancouver, ex ship, 29s. 6d., against 28s. 6d.; Australian, ex ship, 28s. to 28s. 6d., against 28s. 3d. to 28s. 9d. a week ago.

WHEAT FLOUR.—International trade in flour has been on a small scale during the past week. North American shipments, at 131,000 sacks, showed a decrease of 82,000 sacks as compared with the previous week. Of this total, 64,000 sacks have been consigned to Europe. Quotations in London, Wednesday: Straight run, delivered country, 25s. per sack of 280 lbs., as compared with 26s. last week; delivered London, 24s., against 25s. Manitoba patents, ex store, 25s. to 27s. 9d., against 24s. 9d. to 27s. 9d.; and Australian, ex store, 20s. to 20s. 6d., against 20s. 6d. to 22s. a week ago.

BARLEY.—The market in both feeding and malting barley has been inactive. For feeding purposes, maize is used largely in favour of barley, which is relatively more expensive. On Wednesday, "May" futures were quoted at 41½ cents per bushel in Winnipeg, against 39½ cents last week and 42½ cents a month ago. Quotations in London, Wednesday: "English feeding," f.o.b., per 448 lbs., 27s. to 28s., as compared with 28s.; River Plate, landed, 24s. to 26s.

OATS.—Argentina is still the principal exporter of oats, but business has been on a smaller scale this week. In this country, home-grown oats advanced sharply owing to the scarcity of supplies. "May" futures, which last week stood at 22½ cents per bushel in Chicago, sold at 23½ cents per bushel on Wednesday this week, against 23½ cents a month ago. Quotations in London, Tuesday: "River Plate," landed, 18s. 9d. per 320 lbs., as compared with 19s. last week; "River Plate," ex ship, 17s. 9d., against 18s.; "Chilean White," landed, 24s. 9d. to 26s., against 26s. a week ago.

MAIZE.—The demand for maize has fallen off, and Argentina varieties of this cereal show a decline in price on the week. Wednesday's quotation in Chicago for "May" futures, at 29½ cents, shows a decrease of ½ cent on last week, and a fall of 4½ cents as compared with the price a month earlier. Quotations in London, Wednesday: "Plate," landed, 20s. 3d. per 480 lbs., compared with 21s. 3d. last week; "Plate," ex ship, 19s., as against 20s. 3d.; "Plate," May-June, 18s. 6d., as against 18s. 9d. Yellow maize meal, ex wharf, was quoted at £6 per ton, against £6 a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1931-32, 1930-31, 1929-30, 1928-29:—

	1931-1932.	1930-1931.	1929-1930.	1928-1929.
Estimated sales of home-grown wheat				
1 week to May 7	126,792	101,987	183,867	132,984
36 weeks to May 7	3,011,825	4,141,350	8,317,585	8,874,130
Average price of English wheat per cwt.	6 1	5 7	8 11	9 11

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1928 to 1931:—

Weeks ended	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
Apr. 30, 1932	Cwts. 123,779	Cwts. 16,908	Cwts. 29,350	s. d. 6 0	s. d. 7 5	s. d. 7 7
May 7, 1932	126,792	13,972	24,967	6 1	7 4	7 10
May 5, 1928	289,262	36,820	32,802	10 10	11 0	12 10
May 4, 1929	167,009	35,021	28,040	9 11	10 1	9 10
May 10, 1930	183,867	55,840	23,827	8 11	7 10	6 10
May 9, 1931	101,987	19,080	29,051	5 7	6 9	6 5

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks with comparative figures for 1930:—

NEAREST FUTURE.	Jan. 2, 1930.	Jan. 2, 1931.	May 13, 1931.	Jan. 4, 1932.	May 4, 1932.	May 11, 1932.
Winnipeg (No. 1 Manitoba) Cents per 60 lb.	148½	56½	62½	62½	60½	63½
Chicago (No. 2 Winter) Cents per 60 lb.	130½	79½	82½	55½	54	56½

OTHER FOODS.

SUGAR.—The markets for raw sugar have been dull. In view of the continued pressure of sellers in face of the "hand-to-mouth" buying policy of United States refineries, prices failed to recover. "May" futures in New York were quoted at 0.53 cent per lb. on Wednesday, against 0.51 cent per lb. a week ago, and 0.61 cent per lb. a month earlier. Wednesday's sales of "raws" include "December delivery" at 5s. 1d. to 5s. 1½d. per cwt., against 4s. 8½d. to 4s. 9d., and "March, 1933," at 5s. 4d. to 5s. 5d., against 4s. 11½d. on the corresponding day last week. The movements of raw sugar in London and Liverpool during last week are set out in the table below:—

	Imports.		Deliveries.		Stocks.	
	1932.	1931.	1932.	1931.	1932.	1931.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
London	1,382	814	910	967	7,699	29,832
Liverpool	17,214	21,930	11,867	13,358	108,292	78,133
Total	18,596	22,744	12,777	14,325	115,991	107,965
Last week	30,183	22,384	14,863	22,044	110,172	99,546

COFFEE.—The quotations for Brazilian coffee in New York show a further improvement on the week. At Tuesday's London auctions, demand was only moderate, but prices remained steady. Last week's movements of coffee in London were as follows: Brazilian, landed, 81 bags; delivered for home consumption, 86 bags; exported, 22 bags; stocks, 4,790 bags, against 3,022 bags last year. Central American, landed, 8,290 packages; delivered for home consumption, 3,030; exported, 2,055; stocks, 133,684 packages, against 128,443 a year ago. Other kinds, landed, 1,917 packages; delivered for home consumption, 2,519; exported, 656; stocks, 104,872 packages, against 107,370 a year ago.

COCOA.—The market in cocoa has been a little more active, and quotations advanced a few points, both in New York and in London. "May" futures were quoted at 4.11 cents per lb. in New York on Wednesday, against 4.09 cents per lb. a week ago and 4.05 cents a month ago. As compared with the corresponding day last week, Wednesday's quotation for Accra, fair fermented, new crop, May-June, at 24s. 6d. per cwt., f.o.b., London contract, shows a rise of 6d. per cwt. on the week. Last week's movements of cocoa in London were as follows: Landed, 7,725 bags; delivered for home consumption, 6,026 bags; exported, 176; stocks, 181,786 bags, as against 221,436 last year.

TEA.—The quantities catalogued for this week's auction comprise 55,183 packages of Indian, 31,785 packages of Ceylon, and 15,572 packages of Java and Sumatra tea. The demand at this week's London tea auctions was again active, but buyers showed more discrimination with the result that certain qualities realised slightly lower prices. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account:—

Week ending	AVERAGE PRICE PER LB.						Total.
	Northern India.	Southern India.	Ceylon.	Java.	Sumatra.	Nyasa-land.	
May 7, 1931	s. d. 0 10-62	s. d. 1 2-87	s. d. 1 5-41	s. d. 0 7-06	s. d. 0 8-14	s. d. 0 5-92	s. d. 1 0-84
Mar. 22, 1932	0 10-88	0 9-32	1 3-87	0 7-39	0 8-88	0 6-59	0 10-90
Apr. 5, "	0 10-17	0 10-41	1 4-34	...	...	0 7-73	1 0-13
Apr. 14, "	0 9-89	0 11-60	1 5-96	0 7-51	0 6-78	0 7-95	0 11-67
May 5, "	0 9-74	0 10-32	1 5-80	0 8-62	0 7-48	0 7-15	0 11-99

RICE.—The market in rice has been less active, and both "spot" and forward quotations were easier. Wednesday's "spot" price, at 9s. 10½d. per cwt., shows a fall of 1½d. on last week, while forward

V.—Parcel Post, non-dutiable articles	69,950,233	53,487,187	279,701,446	246,832,626
Total	69,950,233	53,487,187	279,701,446	246,832,626

positions, at 9s. 3d., show a decline of 3d. per cwt. Movements in London during the past week were as follows: Landed, 458 tons; delivered, 49 tons; stocks, 2,234 tons, as against 567 tons last year.

POTATOES.—The principal markets were again well supplied with potatoes, but the tendency of prices was slightly firmer for good varieties. At the Borough Market, "Best King Edward" sold from 12s. to 13s. per cwt., as compared with 12s. to 12s. 6d. per cwt. a week ago.

SPICES.—The market in spices was dull. Wednesday's quotation for "Black Singapore" pepper, at 6½d. per lb., shows a fall of ½d. on the week. Movements of pepper in London during the past week were as follows: Black, landed, 38 tons; delivered, 17 tons; stocks, 379 tons, against 567 tons last year. White, landed, 15 tons; delivered, 58 tons; stocks, 606 tons, against 745 tons a year ago.

MEAT.—At the Smithfield market, beef—particularly Argentine beef—advanced sharply in price, but New Zealand mutton declined further. On Wednesday, Argentine beef (chilled hindquarters) was sold at 4s. 4d. to 4s. 8d. per 8 lbs., against 3s. 10d. to 4s. 4d. on the corresponding day last week, while New Zealand frozen mutton realised 2s. 6d. to 3s. 2d., as against 2s. 6d. to 3s. 4d. a week ago. According to the Smithfield Market official report, supplies of meat during last week amounted to 8,458 tons, as compared with 9,640 tons in the corresponding week last year. Imported beef, principally Argentine, formed 84.4 per cent. of the supplies, as against 86.0 per cent. a year ago; and imported mutton, mainly New Zealand, formed 79.4 per cent. of the total supply, as against 86.6 per cent. last year.

large quantities of short money. Even so, money has remained easy and plentiful, with 1-1½ per cent. charged outside the clearing banks for new money, and 1 per cent. for renewals. The reason why money has remained easy is to be found partly in special buying of June bills at a rate of 1 per cent., and though the authorities are officially only taking early June bills, in practice they include within that definition bills maturing during the first half of the month. As a 25 per cent. call on the new Treasury bond issue falls due on June 1st, it is clear that ample funds will be available for the 5 per cent. War Loan dividend. It is also clear that the authorities are consciously pursuing a policy of cheap and plentiful credit, and the Bank's recent gold purchases, referred to below, will facilitate this policy.

Unfortunately from the bill-brokers' standpoint, the supply of credit far out-runs the current demand. This fact received abundant proof from the result of last week's Treasury bill tenders, the average rate being only 19s. 6.62d., against a rate of £1 10s. 11.36d. per cent. the week before. Notwithstanding the reduction in Bank rate, there is still a margin of just over 1½ per cent. between Bank rate and the Treasury bill rate, for this week "hot" Treasury bills have been quoted at ¾ per cent., and on Thursday at 1½ per cent. The Government, too, are well supplied with funds, as the result of the 3 per cent. Treasury bond issues, for last week they only offered £35.0 millions of Treasury bills, and even then cut £5.0 millions off the offer when they came to allotment. This helps to explain the low level of discount rates which are more in the interest of the Treasury than of the money market. It also explains the current demand for the new 3 per cent. Treasury bonds, which now stand at a premium; for even if the bonds are hardly a suitable security for the money market, there is at present no better outlet for funds.

	Apr. 28, 1932.	May 5, 1932.	May 12, 1932.	May 19, 1932.	Previous Rate and Date Changed.
Bank Rate	3	3	2½	2½	3 (May 12, '32)
Banks' Deposit Rate..	1	1	1	1	1 (May 12, '32)
Discount { Call	1	1	1	1	1 (May 12, '32)
Houses { Notice ...	1½	1½	1½	1½	1½ (May 12, '32)
Market rate ("hot")	1½	1½	1½	1½	...
Treasury bills.....	1½	1½	1½	1½	...
Market rate (3 months' bank bills).....	2-2½	2	1½	1½	...
Market rate (standstill bills).....	2½-3	2½-3	1½-2½	1½-3½	...

During this week three months' bank bills have remained steady at 1½-1 per cent., but business has been very limited. Standstill bills carrying the name of a London clearing bank are quoted at 1½ per cent., but rates on other standstill bills range upwards to as high as 3½ per cent., each set of bills being dealt with on its merits. There has been a fair demand from the clearing banks for July bills at one per cent., and this has evoked some response in the market, as it is regarded as equivalent to a loan over the turn of the half-year at this extremely low rate. Four months' bills have been dealt in at 1½ per cent., and six months' bills are usually quoted at 1½ per cent. The Indian banks, however, are understood to have bought six months' bills at as low as one per cent., and this shows that they at least believe that we are in for a long period of cheap money. The impression in the market is that a further reduction in Bank rate is inevitable, but that it will not take place for a few weeks.

The Bank return records an increase of £2.0 millions in the Bank's holdings of gold coin and bullion, this reflecting its gold purchases at the week-end, which are discussed upon another page. As the note circulation has only expanded by £0.1 million, the Reserve is £1.9 millions higher. Public Deposits have expanded by £6.7 millions, mainly as a result of the call on the 3 per cent. Treasury bond issue made on Friday of last week. To offset any stringency that might have arisen from this

increase and also from a net reduction of £1.4 millions in the Bank's holdings of other securities, the Bank has acquired an additional £3.9 millions of Government Securities, of which £3.1 millions have gone into the Issue Department. Consequently Bankers' Deposits only fell by £2.4 millions and still stand at £74.6 millions, a figure which is high enough to denote easy monetary conditions. The Proportion has improved fractionally to 31.1 per cent. On Thursday evening, after the issue of the Bank return, the Bank announced the purchase of a further £967,899 of gold. There is a general belief that further purchases are imminent.

The outflow of gold from the United States continues at an accelerated rate, and there is little doubt that the outside world is for one reason or another steadily realising its holdings of dollars. During the past week, \$12,000,000 of gold has been shipped to Switzerland, \$5,700,000 to Holland, \$2,100,000 to Belgium, and \$2,600,000 to France. There has also been a heavy net increase of \$5,200,000 in earmarkings on foreign account. The Reserve System have now put the provisions of the Glass-Steagall Bill into operation, for \$97.3 millions of U.S. Government securities were shown last week as collateral for Federal Reserve Bank notes. This has left ample gold free for export. The proposal to issue \$2,300 Government bonds to provide funds for the relief of unemployment has been dropped, and instead the Reconstruction Finance Corporation is to issue \$1,500 millions of new debentures. Of this sum \$300 millions will be lent to the States for relief purposes, \$40 millions will be used to stimulate exports of agricultural products, and \$1,160 millions will be lent to private undertakings to finance the execution of definite contracts. Money rates are unchanged at their recent low levels. Call Loans are quoted officially at 2½ per cent., and 90-day bankers' acceptances at 1-½ per cent. in the open market.

The foreign exchange market was very quiet this week, and, after earlier weakness, sterling was practically unchanged on balance against most currencies. New York was unaltered at 3.67½ after touching 3.64½, but Montreal fell away by three points to 4.17. Paris, after touching 92½, returned to last week's level of 93½. Brussels moved in our favour to 26.20. Milan lost ½ at 71½, but Madrid improved from 45½ to 44½. Amsterdam gained a point at 9.06, as did Berlin at 15.40. Switzerland was unchanged at 18.77. The Scandinavian currencies were again irregular. Stockholm weakened by three points to 19.73, Oslo fell away from 19.70 to 20.00, and Copenhagen was unchanged at 18.30. The South American currencies were steadier than of late. Rio was unchanged at 4½d., as was Montevideo at 29½d., but Buenos Aires weakened by ½d. to 36½d. In the Far East the rupee, after hesitation, was firmer at 1s. 5½d., but the yen weakened from 1s. 9½d. to 1s. 8½d. Batavia were offered at ¾ cent and 2½ cents discount. Paris also was weaker at par for one month, and 2 centimes discount for three. Brussels was at 1 and 2 centimes discount. Milan was unchanged at ½ centesimi discount for one month's delivery, but weakened from ½ to ¾ centesimi for three. Madrid was at par for one month, and improved to ½ peseta discount for three as against ¾ peseta last week. Amsterdam was steady at ½ cent and 1 cent premium. Switzerland was rather weaker at par for one month and one centime discount for three months. The silver market was quiet. Prices fell away by ¼d. for both deliveries to 17½d. for cash and 17½d. for forward, but the China silver exchanges were but little affected, Shanghai being unchanged at 1s. 8½d., whilst Hong Kong weakened by ¼d. to 1s. 8½d.

ECONOMIST INTELLIGENCE BRANCH.

Our Intelligence Branch, which has been amalgamated with Moody's Investors Service, Ltd., is available to our readers for the supply of economic, statistical and other information, at a charge proportionate to the work involved. Inquiries should be addressed to Moody's Economist Services, 8, Bonville Street, London, E.C.4.

FACTORS IN RECOVERY.

III. REMOVING TRADE BARRIERS.

THE substantial wiping out of war debts and reparations, which we discussed last week, is a necessary step in reconstruction, not merely because these payments are a disturbing influence in the international balance of payments, but also because, until they are cleared out of the way, the confidence needed to permit the international movement of capital will not revive. A monetary policy that will permit of an upward movement of wholesale prices would open the way for a more positive step towards recovery. But neither of these policies will carry us very far unless we can get rid of the hindrances which Governments all over the world are deliberately putting in the way of international trade.

It is unnecessary to enumerate the many devices by which this is being done, or to elaborate statistics which are becoming painfully familiar to our readers. It is enough to recall that there are no countries in the list recorded in our monthly Trade Supplements, except Brazil, Australia and New Zealand, whose exports have not fallen by more than 40 per cent. in the last two years, while those of Germany, France, Italy, Holland, Sweden, Switzerland, Poland, Greece and Yugoslavia in Europe, and the United States, Canada, India, South Africa and Japan overseas have fallen to less than half the level of 1929. These figures are only partly accounted for by the fall in prices; for, wherever quantity figures are available, they also show very heavy reductions. Moreover, the decline has gone on at an increasing pace in the last eight months, and it is clear that, if things do not take a turn for the better, international trade will rapidly disappear altogether.

In face of this decline countries are striving to save themselves by shutting out imports and keeping the home market for themselves; and in some cases, as in Germany, where the Hitlerites are preaching the doctrine of "autarchy," or "self-sufficiency," the possibility is being frankly faced of trying to do entirely without external trade. For nations like Great Britain, to whom foreign trade is a vital necessity, some way out of this impasse must be found, while even in countries less dependent on overseas commerce, recent experience is teaching the inevitable lesson that the throttling of trade—whether by tariffs, licences or exchange control—means increased poverty or unemployment, or both. How to release this stranglehold is becoming a question of greater urgency every day. Since no country will take the risk of acting alone and facing a situation in which no one will buy from it, but everyone will rush to sell, it is clear that common action is needed to break through the vicious circle. To this question we shall return. Our present purpose is to point out that it will be extremely difficult to deal with this immediate problem without at the same time laying down the terms on which trade is to be carried on in the future when present restrictions are removed.

It is vitally important, however, to realise that a return to the conditions of 1929 is not enough. Though the world did its best to shut its eyes to the truth, the fact is now at last being recognised that economic nationalism and high tariff policies under the leadership and stimulus of the United States played a great part in bringing about the world collapse by preventing the adaptation of the economic life of the nations of the world to one another, by stimulating the duplication of agricultural and industrial production, and by preventing the payment of debts.

In this matter of tariffs above all others Great Britain is clearly singled out by tradition and by her economic position to take the lead. In all the great matters of international moment to-day our influence is very great. But whereas in the question of war payments we have something to say to the United States in conjunction with our neighbours in Europe, and in such matters as dis-

armament we find ourselves in a natural alignment with America, on this question of trade we have our own policy to pursue—a policy which will not appeal particularly either to France or America, but which will rally to its support trading nations all over the world. In this crisis of the world's history we speak with exceptional force and authority; for, in spite of our new tariff, we are more than ever the largest market in the world.

In the issue between two conflicting ideas, one, the cultivation by each country of its own resources in order to make itself independent of other countries to its utmost ability, and the other the advancement of the wealth of the world by intercourse, by specialisation and by competition in ideas and efficiency, there can be no question on which side our interest lies. Of all the assets which this country possesses for maintaining itself as a great industrial nation, with a population far larger than can be maintained in comfort on its own agricultural production, the chief and most abiding advantage is our island situation at the focal point of the trade routes of the world. Our ports are the nostrils of Great Britain through which we draw the breath of life. We must take steps to save ourselves from suffocation.

How, then, can we use our position to restart again the movement of trade that has been so rudely checked? The answer is that we should offer, and offer quickly, to trade freely with those who will trade with us, whether they be in the Empire or anywhere else in the world. It is true that this proposition is at variance with the conception of the full-blooded Protectionist who believes that to import anything that might be made within a country, no matter at what expense, reduces production and employment. On the other hand, such a policy should enlist the support of those who in good faith have defended Protection as a means by which ultimately we may attain freer trade. It is true, and the *Economist* has constantly reiterated, that tariff bargaining as hitherto carried on has led nowhere. No one is more alive than we are to the demerits of the system of haggling for tariff concessions, or is more conscious of the fact that in practice it commonly means that duties are put on for the purpose of being taken off again, but that when the bargaining takes place part only of the duties is removed, leaving the obstruction higher than before. We have, moreover, constantly pointed out that Great Britain has gained the full benefit of any concession made elsewhere by reason of our most-favoured-nation rights; and it has again and again been recorded by committees of inquiry that we have lost nothing in the markets of the world in comparison with our competitors for want of a tariff to bargain with.

Nevertheless, the fact has to be faced that our trade, no less than that of the whole of the rest of the world, has for years been clogged by tariffs, as was pointed out in set terms by the World Economic Conference in 1927. Since then persuasion has failed to induce other countries to make a substantial change. For some years past the *Economist* has held that Great Britain was in a position to insist, and the coming of the crisis strengthened our power immensely. If we had used this power wisely we could have obtained very large concessions without actually imposing a tariff ourselves; indeed, its enactment has inevitably complicated the task of using it to clear the way to freer trade, for it has created vested interests, and whetted the appetites of industrialists for protection. The only good that has accrued from our tariff is that events have made it so abundantly clear that our activities are being paralysed, that the public is, we believe, being rapidly disillusioned and is alive to the imperative need of returning to freer conditions. But having once taken the plunge, no matter how ill-advised our precipitancy, it would clearly be foolish of us to remove the tariff or even to modify it without using it as a lever to clear away

some of the obstructions that have been hindering our trade for the last decade.

It is a dangerous and difficult game to play, and it is imperative that we should not be misled by French or other influences, whose ideal is that of a static world, into playing it in the old way of "Pull devil, pull baker." On the other hand, if we are to make a supreme effort at restoration, we must not be afraid to modify the most-favoured-nation principle which has served us so well in the past. In the discussions of recent years there has emerged a new conception which we are in a position to bring into effect. Our new policy should be simply and frankly that we will give very favourable conditions in the British market to those who will give us not most-favoured-nation treatment at a level which each country will decide for itself—but *equal treatment*—that is to say, precisely the same conditions as we give to their trade. The simplest ideal form that this proposition could take would be that we should give a Free Trade entry into our market to those who will give us also Free Trade treatment. To Englishmen who have hoped for a century that other countries would move towards Free Trade this may sound completely Utopian. But it is not so remote as is sometimes assumed, for it is one thing to throw your market open to the whole world and quite another to throw it open merely to a single country which reciprocates this advantage. Indeed, in the summer of last year, before we left the gold standard, there were certain countries of Europe which were prepared definitely to make such an arrangement with Great Britain.

In present circumstances it is, perhaps, too much to hope that a reciprocal Free Trade area could be widely extended. In the first place, few countries have so efficient a tax machine as Great Britain, and most of them need a Customs tariff for revenue. Nor perhaps would it be possible to persuade the present Government, with its out-and-out Protectionist wing in the House of Commons, to move so far. But it would be a practical policy to-day to establish, as the basis of an "equal-treatment" group of nations, a maximum 10 per cent. tariff. If this country were to say that it would give a maximum 10 per cent. *ad valorem* tariff not to all countries, but only to such countries as would similarly give to our products a maximum 10 per cent. *ad valorem* tariff, this offer would meet with a wide response; and a scheme on these lines would in no way preclude us from making special arrangements of a still more favourable nature with the Dominions at Ottawa.

There is good ground for thinking that a scheme of this kind would quickly embrace two major Powers and some six or eight in the next grade of economic importance in Europe, and would probably extend to some nations overseas. It would certainly mean a modification of the most-favoured-nation principle in its present form; but the answer to those who claim that it would be a form of discrimination is that this plan would set up a standard of reasonableness in tariff treatment between nations, and that the objector could at any time secure the benefit of this "fiscal level" in return for the same concession. Although it would involve an element of bargaining, it would avoid any possibility of setting up a series of upward movements; for it would lay down a standard which would be the same for all.

We have said confidently that a number of countries would be willing to come into line, and have given as one reason that so many nations are dependent on the British market; but we anticipate that the trend of international investment would also move in the same direction. Experience having shown what havoc the Protectionist system can make of the world, it would be surprising if investors were to continue to lend to countries which require to bolster up inefficient and uneconomic industries by means of excessive tariffs. An industry which cannot maintain itself against its competitors with the aid of a 10 per cent. duty should either reorganise itself or be superseded. If investors would realise that they are asking for trouble if they put their money into industries which cannot hold their own on reasonable terms, or into countries which are following a fiscal policy which sooner or later must lead them to disaster, pressure to join the low tariff group would be very great.

POLICY FOR WAR LOAN.

TWELVE months ago, when Bank rate stood at 2½ per cent. and before the collapse of the Credit Anstalt signalled the onset of a financial crisis destined to visit in turn every country in the world, the question of the conversion of the 5 per cent. War Loan was actively occupying the attention of the City as an operation which appeared to lie within the field of practical politics. In the event, no move was made by the Treasury; the summer witnessed growing financial strain, and the efflux of foreign short-term capital which drove us off the gold standard; the opportunity—brief and perhaps never wholly convincing—was missed. To-day, however, the chance for conversion has returned under conditions which warrant much greater confidence than could be entertained a year ago. Not only are British Government securities now definitely on a 4 per cent. yield basis, but the soundness of our Budget, impaired up to last September by "uncovered" borrowing for the Unemployment Insurance Fund, has, at least for the current financial year, been re-established. Moreover, liability to the withdrawal of short-term funds on a large scale, which was a dangerous weakness in London's position last May, is no longer a serious factor; confidence in the security of sterling has been restored; and the problem which faces our authorities, so far as the capital items of our balance of payments are concerned, is less to guard against a flight from the pound than to prevent or neutralise an embarrassing influx of funds from abroad.

The advantages of reducing to a lower interest basis the huge mass of over £2,000 millions of a security which not only costs the Government 5 per cent., but is immune from deduction of income tax at the source, need little elaboration. So long as this immunity remains the Treasury suffers trebly—by the loss of tax on foreign holdings, by the delay before the tax is collected from holders resident in this country, and by the opportunity of evasion. The existence of 5 per cent. War Loan, moreover, is a formidable obstacle in the way of reducing the general cost of all new borrowing in London. However low interest rates on first-class bonds and prior industrial charges might otherwise fall, this immense loan must always tend to exercise a countervailing upward pull. The question, in fact, is not whether the earliest possible moment should be chosen for a War Loan conversion operation, but whether that moment has now arrived and what form the offer should take.

With regard to the first consideration, it has been argued in some quarters that, in view of the present tendency of money rates, the Treasury would do well to hold its hand until conversion can be effected on a yield basis of 3½ per cent. at most. To this view we see several weighty objections. Though the situation at present is characterised by rapidly declining short-term interest rates and a glut of money diverted from enterprise into riskless investment, the course of events in, say, six months' time is a matter of great obscurity. On the one hand, a successful end to the Lausanne Conference, marking the beginning of world financial reconstruction, might permit a still more favourable conversion in six months' time. But there is many a slip 'twixt cup and lip, and it is at least as possible that a continued adverse drift in the international political situation, coupled with the cumulatively paralysing effect of the present nexus of standstill agreements and exchange controls, might not only create next autumn a psychological atmosphere much less propitious than that of to-day for a major conversion operation, but might also have reactions on the volume of British trade and employment seriously prejudicial to the continued maintenance of a balanced Budget. Unemployment relief might be costing more, the yield of the 1933 Budget, with forebodings of an unrelieved tax burden, be weighing heavily on the mind of the investor. There is, therefore, in our opinion, an overwhelming case for "making hay while the sun shines" and not risking temptation to wait for a 3½ per cent. basis there is to be set the cogent argument that at best—even supposing the success of each and every international conference—the recovery of British trade is most unlikely to be so rapid

that we can afford to forego the advantage of giving it the very considerable material and psychological stimulus which would be afforded by a successful conversion of War Loan. The loss to the Treasury of the potential extra one-half per cent. would, we think, be more than made good by the advantage to enterprise—and hence, at one remove, to the revenue—of an operation at precisely this juncture which resulted in a general cheapening of all new financing.

Finally, in addition to the fact that it is desirable to make certain of dealing with War Loan before 1933, when £255 millions of 4 per cent. and 4½ per cent. Treasury bonds are redeemable, there are strong reasons on general political grounds why there should be no delay in effecting a reduction in the interest charge on this immense volume of high-yielding stock. The September, 1931, and the April, 1932, Budgets taken together not only imposed an enormous burden on the taxpayer, but called for considerable sacrifices by way of "cuts." The electorate has certainly not forgotten last autumn's insistence by the leaders of the National Government that there should be equality of contribution towards rehabilitation of our national finances. Since the beginning of this year the holder of British Government securities has been the passive recipient of a huge increment in the capital value of his holdings. If Mr Chamberlain is to exercise the full pressure on the spending Departments which the paramount need for alleviation of the tax burden demands, the Government would do well to place themselves in a position of being able to say that the rentier, hitherto drawing 5 per cent. interest from a security which forms practically one-third of our internal debt, has made his contribution towards the easement of the Budget. Allowing for ultimate contraction in income tax receipts (converting from a security not taxable at the source to one so taxed would mean, of course, a useful immediate windfall to the Treasury), the saving to be effected by conversion to War Loan to a 4 per cent. basis might be little more than £15 millions per annum; but this is far from being a negligible sum or one which the Chancellor should care to forego.

In the light of these considerations, we suggest emphatically that there should be an end to Treasury procrastination in the matter of War Loan conversion, and that on June 1st, coincidentally with the payment of the half-yearly dividend interest coupon, the Treasury should avail itself of the provisions of the Finance (No. 2) Act of 1931, to give the prescribed three months' notice to redeem the 5 per cent. War Loan at par. In order to secure the maximum volume of conversions we suggest that there should be a simultaneous offer of three different forms of new stock:—

(1) *Four-year 3½ per cent. Treasury Bonds at 100.* Some such short-term stock would be necessary to cater for the requirements of the money market and other financial institutions whose present holdings of War Loan, since it became regarded as a short-dated security, have grown considerably, and who would not find it convenient to convert into a medium-term or long-term security.

(2) *A medium-term 4 per cent. stock at 100, redeemable in, say, ten or fifteen years.* Such a security would appeal to certain types of investor, and it would be very desirable from the Treasury's point of view to be able to take advantage of any further reduction of interest rates during the next decade. It might, indeed, perhaps be advisable to have two separate offers of this type of stock redeemable in (a) seven to ten, and (b) ten to fifteen years, respectively.

(3) *A long-term 3½ per cent. stock.* In this case the Treasury should have the option, but not the obligation, to effect redemption at par in, say, forty years. The rate at which War Loan should be convertible into this new stock should, we suggest, be one point more favourable to the holder than the market price of the present 3½ per cent. Conversion Loan ruling on the day on which the application for the conversion is received.

If framed on these lines, carried through by the vigorous co-operation of the Treasury with the leading City interests, and accompanied by a well-directed appeal through the Press to the patriotism as well as the self-interest of the War Loan holder, such a conversion operation would, in our opinion, be assured of a reasonable chance of complete success. If its announcement were precluded by a reduction of Bank rate to 2 per cent.—and there is no obstacle to such a step—only a little manoeuvring of the market should be required to raise the quotation for 3½ per cent. Conversion Loan to somewhere in the neighbourhood of 95. If the public, with the evidence of a rising gilt-edged market before their eyes, were duly impressed with the possibility, to put it no more strongly, that the "old" 3½ per cents. might stand near par before September 1st, the general inclination would be to make immediate application for conversion. If special inducements were given to bankers and brokers in the way of a small commission on applications made within fourteen days, and if, as is probably desirable, the Treasury made some concession to banks and finance houses regarding the tax on capital redemption profits, we see no reason why the success of the conversion operation should not be assured before there was any possibility of untoward events at Lausanne or elsewhere abroad exercising an adverse influence. Even if cash wherewith to buy up an appreciable proportion of foreign holdings, and possibly some British holdings, had to be found by September 1st, a temporary increase in Treasury Bills or even Ways and Means Advances would not be open to any grave objection.

A bold bid to deal at one stroke with War Loan would be at once more practicable and psychologically more valuable than a policy of "nibbling" by piecemeal offers, whose reception in the absence of a definite announcement of redemption must be doubtful. In this matter the City, we believe, is readier for bold steps than the Treasury; and in this aspect of the problem of our national indebtedness, as in the many other major questions of policy with which the country is now faced, the vital need to-day is for courage and quick decision.

transitional benefit could (although legally terminable by April, 1933) be drawn without time limit. Under the Economy Act the contributions qualifications for both ordinary and transitional benefit were left unchanged, but a maximum limit was placed on the receipt of ordinary benefit of 26 weeks in any period of 52. As a result, many claimants have been transferred from ordinary to transitional benefit, and a saving of £10 millions is to be effected by imposing a needs test on this swollen category of transitional beneficiaries. Nevertheless, the proportion of transitional beneficiaries rose from 24 per cent. of all beneficiaries on October 26, 1931, to 41 per cent. on March 21, 1932.

The needs test is applied by the local Public Assistance Committees, who also determine the amount of benefit payable to successful claimants. Decisions are reviewed at least once every four weeks. As hitherto, transitional benefit is paid through the Employment Exchanges and charged to the State. Between November 12th, when the test was first applied, and March 19, 1932, 4,222,563 decisions, including revisions, were made in respect of more than 1,300,000 individuals. In 2,292,744 cases, or 54.3 per cent., benefit was awarded at the ordinary rates; in 1,500,429, or 85.5 per cent., at less than the ordinary rates; while in 429,390 cases, or 10.2 per cent., the needs of applicants were held not to justify any payment.

4. Removal of Anomalies.—Restrictions were imposed on payments to certain categories of claimants, chiefly seasonal workers and married women, to whom it was considered benefit had formerly been paid in circumstances which the Unemployment Scheme was not intended to cover. Seasonal workers were made ineligible for benefit during the "off season" unless, during each of the preceding two years, they had been in insurable employment during that season to a substantial extent, and, in addition, could reasonably expect to obtain it in their districts. Married women who had paid less than 15 contributions or who, if married more than six months, had paid less than eight contributions during the three months before the beginning of the quarter for which they were claiming benefit, were also made ineligible unless they had not abandoned insurable employment and could reasonably expect to obtain it in their districts or unless their husbands were incapacitated or unemployed and not receiving benefit.

The application of these provisions, which were estimated to save £3 millions, was left to the Employment Exchange authorities. The examination of claims began on October 20, 1931, and by the end of March, 1932, had resulted in the disqualification of 24,357 out of 32,457 seasonal workers, or 75.0 per cent., and of as many as 152,171 out of 184,874 married women, or 82.3 per cent.; including decisions in respect of intermittent workers, disqualifications totalled 179,137 out of 220,953 examinees, or 81.1 per cent.

THE DIRECTION OF OVERSEAS TRADE.

ALTHOUGH it is dangerous to draw very definite conclusions from a short and abnormal period like that of the last three months, the figures of the Board of Trade showing our imports from and exports to overseas countries during the first quarter of this year offer a foretaste of the changes in the distribution of our trade which may be expected from the influence of import duties. Total imports during the quarter, at £193,415,734, were 7.8 per cent. lower than in the corresponding period of 1931; but, whereas imports from European countries fell by 19 per cent., those from foreign countries outside Europe were reduced by only about 5½ per cent., and Empire imports actually increased by 5 per cent. These figures plainly reflect the influence, on the one hand, of the preferential tariff treatment of Empire imports, and, on the other, of the high rate of "Abnormal Import" duties on manufactured goods, which form the bulk of our imports from most European countries.

The reduction of about 10½ per cent. in British exports, the total of which during the first quarter of this year amounted to £92,330,922, was more evenly distributed. Exports to foreign countries in Europe were 8½ per cent.

lower, to foreign countries outside Europe 13½ per cent. lower, and to British countries 9 per cent. lower. It is remarkable, in view of the rapid multiplication of all kinds of restrictions on imports into so many European countries, that the relative decline in our exports to Europe should be so much less than that in our exports to other foreign countries and no greater than the fall in sales to the Empire. This evidence confirms our contention that the European market for British goods has a peculiar value of whose importance we cannot afford to lose sight.

Trade with the principal European countries is shown in the table below:—

TRADE WITH EUROPEAN COUNTRIES. January to March. (000's omitted.)

* Including dependencies.

There have been particularly large reductions in our imports from Germany, France, Russia, the Netherlands, Belgium and Switzerland, and the relative reduction in our imports from Austria, Hungary and Czechoslovakia was also substantial. Greece, Roumania and most of the Baltic and Scandinavian countries except Denmark, however, maintained or increased their sales to us. In some cases this was probably due to a slight diversion of trade from countries which had maintained their currency on a gold basis to those, like Sweden and Norway, which had followed us off the gold standard. On the export side the only substantial increases were in sales to Russia and Roumania. Exports to Sweden, Denmark, Holland, Austria and Czechoslovakia showed small increases, and exports to France and Norway rather sharp declines. In exports to most of the other countries the declines were very small in comparison with those of the previous year.

The next table shows our imports from and exports to the remaining foreign countries:—

TRADE WITH FOREIGN COUNTRIES OUTSIDE EUROPE. January to March. (000's omitted.)

The most conspicuous feature on the import side is the decline of £4 millions in our purchases from the United States. There were also substantial reductions in our imports from China, Colombia, Brazil and Uruguay. Imports from Japan, Egypt, Cuba, Mexico, Peru and the Argentine, on the other hand, increased slightly. Exports to most Latin American countries were lower, and in many cases, notably the Argentine, Chile and Uruguay, the percentage reduction was enormous. Exports to the United States, though lower, were very much better maintained than might have been expected, and sales to China, Japan, Iraq and Persia showed signs of recovery. The corresponding figures for the countries of the Empire are shown below:—

TRADE WITH BRITISH COUNTRIES. January to March. (000's omitted.)									
	Imports from				British Exports to				
	1913.	1930.	1931.	1932.	1913.	1930.	1931.	1932.

Other possessions	2,550	6,241	4,944	5,019	3,300	7,702	6,353	5,381	
Total	49,639	83,505	63,224	66,690	48,317	73,260	44,445	40,469	

The import side of this table offers the only total which shows an increase on the first quarter of 1931. This increase received substantial contributions from the Australian, New Zealand and Canadian figures, and imports from South and West Africa and the West Indies were also higher. The Irish Free State, India and Ceylon and the Straits Settlements all showed declines. On the export side, reductions predominated, but exports to West Africa, the Straits Settlements and Australia were greater than in the first quarter of 1931.

The last table shows exports of imported produce to the principal foreign and British countries:—

* Including dependencies.

Neither the total nor the components show any remarkable changes, and the necessarily compressed character of this table makes it slightly misleading, as it gives an impression of an all-round reduction in our re-exports to British countries and of a general upward tendency in British exports to European countries. Actually, if there were those to reproduce the individual figures of "other countries" they would show such diverse movements as to prevent any general inference.

The reaction from the "forestalling" imports of the preceding quarter and the uncertainty as to the content of the forthcoming tariff alike contributed to disturb the trade of the first quarter of this year and it is therefore impossible to forecast from it with any certainty the future direction of our trade. For what they are worth,

however, the inferences which appear to emerge from the import figures are what might have been expected, namely, a diversion of our imports to the British countries favoured by the tariff and a very marked reduction in our imports from the manufacturing countries of Europe. The reaction of these changes on the distribution of our exports will take longer to manifest itself; the changes visible during the quarter under review probably reflect the influence of monetary conditions rather than of fiscal regulations.

BRITAIN AND DISARMAMENT.

In the House of Commons last Friday there was a debate on the present state of the World Disarmament Conference. The debate was timely, and Sir John Simon's exposition of the situation had at least the merit of giving—not so much overtly as by implication—a faithful picture of the outlook. Mr Lansbury and Mr Churchill in subsequent speeches joined hands in holding up Sir John's picture for Parliament and the nation to gaze at, as executioners used to display decapitated heads. Mr Lansbury's first words were that the speech was one of the most disheartening on this subject that he had ever heard, and Mr Churchill opened by expressing his agreement with Mr Lansbury's view that the speech was depressing and disappointing. Disheartening, depressing, disappointing; if these strictures apply to the Foreign Secretary's speech at Westminster, it is because they are only too well deserved by the present situation at Geneva which Sir John Simon was accurately setting forth.

Perhaps the most melancholy feature in the Foreign Secretary's exposition was his scrupulous care to omit none of those points which convention requires in a Foreign Minister's speech when Disarmament is his thesis. Sir John Simon reminded us that we and all our ex-Allies have been pledged up to the hilt to voluntary disarmament since the conclusion of the Versailles Peace Treaty. He reminded us of the long and laborious preparation by which the present World Disarmament Conference has been preceded. And, as if these considerations were not sufficient in themselves to demonstrate the degree of the calamity involved if the Conference were to fail, he touched in his peroration upon the unspeakable prospects of the next war, if we are condemned to undergo it. On the technical side, he likewise did what was expected of him by giving a lucid account of the difficulties inherent in quantitative disarmament, and a tactful suggestion of the reasons why the Tardieu project of an international force is impracticable.

All this was common form; and though it may well have been the Foreign Secretary's official duty on this occasion to rehearse it once again, the interest in his speech—at any rate, for the unofficial human being who has the success of the Disarmament Conference at heart—lay in his defence of the practicability of disarmament on qualitative lines. On this question, it is significant that Mr Churchill's criticism of Sir John Simon actually, though no doubt unconsciously and unintentionally, served to strengthen Sir John Simon's case. Mr Churchill rejected the proposed qualitative distinction between offensive and defensive weapons; but he promptly advocated another qualitative distinction which does honour to Mr Churchill's good feeling. "He did not despair of building up strong conventions and conceptions, held by the great nations of the world, against the use

of weapons which fell upon enormous masses of non-combatants." In particular, Mr Churchill raised his voice against the bombing of open towns and the wholesale destruction of civilian life. In other words, Mr Churchill advocates, and regards as practicable, the prohibition of certain ways of employing the whole instrumentation of warfare; and while this is certainly a different thing from banning the use of certain weapons in all circumstances, there is no reason why, if either suggestion is practicable, the pair of them should not be put into practice simultaneously. If qualitative disarmament is accepted, in general, as something which will work, then at least let us apply the principle all round in every way in which it is applicable.

Meanwhile, the debate at Westminster has confirmed a view which the debates at Geneva had already brought to light. Qualitative disarmament is evidently now the least unpromising line of advance. But to-day, unhappily, the Conference is not actually advancing at all. It is stuck in the mud; and the alternatives before it are either to be swallowed up in this slough of despair or to pull itself out by some heroic act and move forward. The nature of the bog in which the Conference is at present floundering was correctly diagnosed by Mr Churchill. "They had an organised and regimented influence in all countries meeting at Geneva in order to make sure that no diminution of armaments was effected which infringed the strong position which their military and naval experts had taken up in the internal discussions which had taken place." The conscientiousness of the national experts, performing their preposterous duty, is the bog in which the Conference is stuck. In the technical committees at Geneva at this moment, the experts are hard at work proving, between them, that every weapon that has ever been invented is really defensive in character.

We know by hard experience how formidable a stumbling block this conscientious *expertise* can be, and how hard it is to overcome. But happily we also know by experience that the feat can be accomplished. It was accomplished once—on November 12, 1921—by Mr Charles Evans Hughes, when, at the Washington Conference, he put forward the American proposals for naval disarmament, whose final outcome was the London Naval Treaty of 1930. The moment has arrived for some other statesman to do for the cause of disarmament at Geneva in 1932 what Mr Hughes did for it at Washington in 1921; and this time it is not America's but Britain's turn. It is for us to make the move because, as the Prime Minister has pointed out, this country is in the unique position of being a protagonist in both the two great regional systems of competitive armaments—the Oceanic system (from which the competitive element has, happily, been eliminated, at least for the moment), and the European system, in which competition, jealousy and fear are still rife in all the elements, on sea, on land and in the air. Thus Britain is better placed than any other Power to perform a dynamic act which will set Disarmament in motion again not merely on this Continent or in that Ocean but throughout the world.

What can be done by Great Britain to revitalise the Conference and rescue it from its present paralysis? Lord Cecil, we think, has pointed the way in a speech which he delivered last Wednesday at Geneva to the International Association of League of Nations Unions. He reminded his audience that whereas experts were charged with the duty of ensuring, as far as possible, victory in war for their own country, the object of the Disarmament Conference was not to secure victory for one or more of its members, but to make the outbreak of war less possible. He urged that the Governments should hold firmly to the policy laid down by the General Committee and continue to demand the elimination as aggressive armaments of those five classes of arms which at Paris were forbidden to the defeated Powers, namely, capital ships over 10,000 tons, submarines, tanks, large mobile guns and all naval and military aircraft. What is wanted to-day is an unequivocal announcement by the British Government that, if other Powers will follow suit, Britain for her part is prepared to accept without qualification a ban on these classes of arms, and to adopt, in addition, any plan of

budgetary limitation to which the Powers are prepared to conform. Now that the conception of quantitative limitation has been lost in a fog of mystification and sectional manoeuvring, the only means of salvation for the Conference lies in a clear-cut announcement on these lines by one of the Great Powers. The whole force of our Versailles Treaty obligations, of our own national interests and of the weight of public opinion in this country requires that the British Government should play this decisive part.

Notes of the Week.

The U.S.A. and the Crisis.—For some time the Democrats, not uninfluenced perhaps by the prospect of a presidential election, have been urging upon the Administration measures of federal relief of unemployment. These have taken varied and incoherent forms—direct relief out of Treasury funds (which has been hanged for its bad name of "dole," while similar disbursements by States, local authorities and private organisations pass under more complimentary titles); a vast programme of federal public works; loans or guarantees to distressed authorities. Doubtless much of this was merely thunder, but worth stealing nevertheless; and the atmospherics of Washington have been further enlivened in the past few days by Mr Hoover's announcement that in consultation with the Democratic Senator Robinson he had approved a programme of federal intervention in the relief of unemployment. The borrowing powers of the Reconstruction Finance Corporation are to be enlarged from \$1,500 millions to \$3,000 millions, the new funds to be used as to \$300 millions for the purchase of State obligations covering unemployment relief expenditure, as to \$40 millions for the promotion of agricultural exports, and as to \$1,160 millions for loans to profitable private business. This compromise between Mr Hoover's prejudices and horrid necessity has been ill-received in those quarters where blessing might have been sought; the financial powers mistrust the increase of federal borrowing and the check to State economy, while the Democrats denounce the use of public moneys for the aid of private enterprise. It is reported that Mr Hoover and Senator Robinson agreed upon the necessity of balancing the Budget as a condition of any device for federal unemployment relief, and maybe the plan has been approved by the President as a means of forcing the hand of an unruly Congress. The Economy and Tax Bills still drag on; it is plain that their passage before the adjournment is vital for the restoration of American public confidence, but many an axe has yet to be ground before the American political army moves from Washington to Chicago, where both party conventions are to be held in June. Meanwhile the federal Budget deficit has passed the \$2,500 millions mark; the relief funds of the States and municipalities are running dangerously low; and the efflux of foreign balances from the United States in the form of gold withdrawals is obtaining significant dimensions.

The Interregnum in France.—An observer from another planet who visited this earth just now might well suppose that there was a general conspiracy among the human race to bring all existing institutions into discredit. Assuredly he would believe this about the institution of parliamentary government in France. Here is a great of international politics which holds at this moment the keys of international politics and international finance. This country has just been through a quadrennial general election, in which the electorate has pronounced its will in favour of a shift to the Left in the personnel and the policy of the next French Government. Yet at this moment, Geneva Disarmament Conference is in session, and when the Lausanne Reparations Conference is in sight, the French constitution apparently decrees that there shall be no effective government in France again till the middle of

June. That, apparently, is how the French constitution works—or fails to work—and the people in high places who might have been expected to exert their authority and energy in trying to speed up the wheels of the constitutional machine at this critical juncture are apparently quite otherwise engaged. It will, we fear, be doing no injustice to President Lebrun or to ex-Premier Tardieu or to prospective-Premier Herriot if we conjecture that they are congratulating themselves upon this heaven-sent inefficiency of the French constitutional machine which is giving them time to frustrate the French electorate's will and to re-saddle France, at their own good time, with a Government that will think and feel and do just what was thought and felt and done by French Governments responsible to the late Chamber during the last four years. The plain fact is that a combination between the Radical-Socialists and the Socialists grows more unlikely every day that the interregnum continues, though that is the combination which would obviously represent what the French electorate has voted for. M. Blum is admittedly exigent. He has announced his willingness to co-operate on three minimum conditions, namely, immediate and appreciable reduction of military expenditure; the creation of a system of national unemployment insurance; and the nationalisation of railways and insurance companies. These are scarcely practicable terms for co-operation, but they need not represent anything like M. Blum's last word. The significant and disquieting thing is that M. Herriot so far shows little inclination to negotiate. The Radical leader's two plainest dicta up to date are: "I still believe that the country ought to have a strong Government supported by a broad Republican (i.e., non-Socialist) majority"; and "In any case there is one principle about which we cannot bargain, and that is national defence based upon a reasonable budget." Unless the Left wing of the Radical-Socialist Party takes command of the situation and overrides its leader, the outlook for the easement of Europe's political tensions is gloomy.

Politics in Germany.—On a later page our Berlin correspondent deals at some length with the moves and counter-moves which have resulted in the resignation of General Groener from the Ministry of Defence. Since General Groener remains Minister of the Interior—a key position in the Reich Government—Dr. Brüning's concession, if concession it be, to the National Socialist Opposition is not perhaps of great material importance. What is more open to question is the influence which General Schleicher on the one hand, and Herr Hitler's followers on the other, are likely to exercise on Germany's foreign policy. On May 12th Dr. Brüning secured a vote of confidence in the Reichstag by a majority of 280 votes to 257; but, as our correspondent points out, it is unsafe to draw over-confident deductions from this voting, since the National Socialists have no desire to take over responsibility before Lausanne. Dr. Brüning's personal prestige is still high in Germany, but it remains to be seen whether recent developments have not narrowed considerably his "powers of manoeuvre" at the Reparations Conference.

Japan.—Last Sunday afternoon a sensational series of criminal outrages was perpetrated in Tokyo by a band of young men, the majority of whom appear to have been naval and military cadets. One party forced an entry into the private apartment of the Prime Minister's official residence, shot down everybody who attempted to oppose their passage, made their way to the room where the Prime Minister, Mr Inukai, was sitting, and assassinated him. Other parties threw bombs at the house of the Lord Privy Seal, the Bank of Japan, and the Metropolitan Police headquarters. The young criminals made their rounds in motor-cars, and were dressed in uniform. At the end of the performance eighteen of them voluntarily surrendered at the Military Gendarmerie headquarters, in the traditional manner of the Forty-Seven Ronin. The outrage produced consternation. The stock and silk and rice exchanges closed, and the surviving Ministers tendered their resignations; but they were commanded by the Emperor (or in the Emperor's name) to remain in their somewhat uncomfortable posts for the time being. The

Emperor has sent for the Elder Statesman, Prince Saionji; but it is evident that the initiative in Japanese politics no longer lies (if it ever really did lie) in the Emperor's hands; for the Army High Command have already stepped in. While disclaiming responsibility for last Sunday's crime, they have intimated their intention to profit by it. They have let it be known that they will no longer tolerate a Government of politicians; and the Japanese Army is in a position to prevent the Japanese politicians from governing Japan. It can prevent them not only *de facto* (as events since last September have shown), but also *de jure*; for, according to the Japanese Constitution, the War Minister has to be a general; no Cabinet can be formed without a War Minister; and no general can take office without the authorisation of his military superiors. The Army now announces its intention of tolerating nothing but "a strong national Government," which, being interpreted, is manifestly a euphemism for a Government entirely nominated, if not entirely staffed, by the Japanese soldiers themselves. It looks as if we were on the eve of seeing the establishment of a new military Shogunate in Japan. If this is the order of the day, it is to be hoped that the neo-militarists will study and copy the policy of the last of the Shogunates in Japanese history. The Tokugawa regime had at least one great merit by comparison with the regime which has prevailed in Japan during these last 65 years. The Tokugawa kept the peace both at home and abroad. Its policy for Japan was "no imperialism" and "no civil war." If we thought that this policy was likely to be revived by the new Shogunate of to-day we should feel less uneasy than we do feel about the present trend of Japanese politics.

Fall of the Belgian Government.—One more Government has been added to the year's toll of casualties. M. Renkin, Premier of a Liberal-Catholic coalition in Belgium, resigned office on Wednesday owing to the opposition, which threatened his parliamentary defeat, aroused by the Government's policy on the language question in public education. The Liberals in his alliance had insisted upon certain amendments to a measure for the reform of elementary and secondary education, which, though satisfying the Flemish Catholic Ministers in the Government, were strongly denounced by other Flemings in the Chamber. The latter can count, not only on most of the 46 Flemish Catholics and the 11 Flemish Nationalists, but also on the 70 Socialists, and thus represent an easy majority of the Chamber of 186. As an election would almost certainly increase the Flemish Nationalist strength it is clear that whatever Government succeeds M. Renkin's—he is reported to be making another attempt himself—must satisfy Flemish opinion on essential points, and the support of the Liberal Party, which numbers only 29, may have to be discarded.

The Week in India.—The news from India during the past week has been unusually bad, even if judged by the standard which we have become accustomed to expect since the resumption of hostilities between the Government of India and the Congress. Last Sunday, it was announced by the Reforms Office that the next meeting of the Consultative Committee, which should have opened on May 23rd, had been postponed to a date left indeterminate. On the same day, an emergency meeting of the Viceroy's Executive Council discussed the question of the prolongation of the Ordinances; and though the substance of their deliberation was nominally confidential, it has been allowed to be an open secret that any general abrogation of the Ordinances on July 4th—the date on which they run out unless renewed—is regarded as being out of the question. It is suggested that they shall henceforth be applied piecemeal and *ad hoc*, according to the state of affairs at any given moment in a particular province or district. This inability, in the minds of British Indian officialdom, to face the prospect of doing without the Ordinances again, when once they have been in operation, is just what we feared might happen when the Ordinances were originally introduced. The Government of India is now in the position of a victim of diabetes

who has taken to insulin. It is unable to relinquish the drug. But there is this unfortunate difference in the circumstances. Insulin can be taken by the human body without untoward effects for the whole term of a man's natural life, whereas these Indian Ordinances are a drug which is warranted to poison any body-politic to death within a very brief term of years. Meanwhile, unhappily, the people of India are doing their best to give the British Government of India reason. There is a controversy on foot between Dr. Shafat Ahmed Khan and Sir Tej Bahadur Sapru over the question whether the time-lag between the introduction of full responsible government in the provinces and at the centre is to be a matter of months or of years. There is another controversy among the princes as to the relative representation of the larger and the smaller Indian States in the central legislature when it is established. Finally, the fact that the politicians have been unable to agree upon the communal question has been underscored by an outbreak of violence *en masse* among the Hindu and the Muslim communities. The occasion of this fresh outbreak of inter-communal violence has been the Muslim holy month of Muharram, and the scene of the disorders has been laid in the most crowded quarters of Bombay and Calcutta. In Bombay, where the excesses have been the worst, the death roll now exceeds 100 and the total number of casualties is 1,000. As far as it is possible to keep order at all, it is only being kept by British troops. India, at such moments, seems on the brink of falling into the anarchy of China. Let her pay heed to that awful warning, and draw back before she falls headlong over the precipice.

Mr Lang's Dismissal.—Last week events in New South Wales reached a sudden climax. The Governor of the State, Sir Philip Game, dismissed the Premier, Mr Lang, from office and called upon Mr Stevens, the leader of the Opposition, to form a Ministry to carry on the administration pending a general election, which naturally is to take place at once. The immediate cause of this summary action lay in an instruction issued by Mr Lang to heads of departments forbidding them to pay over money to the Commonwealth Bank under the terms of the Financial Agreement Enforcement Act. The Governor pointed out that Mr Lang that this instruction was contrary to law, and gave him an opportunity to withdraw it. Mr Lang refused to do so, and his dismissal at once followed. Thus ended an episode which was the last of many efforts at obstruction that have taken place during Mr Lang's long conflict with the Commonwealth Government. In fact, only a few days before, Mr Lang had introduced and passed a Bill imposing a special 10 per cent. tax upon amounts secured by mortgages existing at the time this measure came into force; and the Commonwealth Government had hurriedly to pass a measure preventing this tax from being imposed. Mr Lang cannot fairly complain of his dismissal, and indeed it was the only immediate way of escape from a deadlock which was causing incalculable harm to Australian credit. At the same time, the dismissal, by the representative of the Crown, of a Prime Minister from office is a step which is so unusual as to be justified only by both the clearest possible public need and obvious public approval; and if Mr Lang were to win the day at the forthcoming election the resulting situation would be embarrassing. Fortunately there is very little chance of this taking place, for the recent Victorian elections are but the latest of many indications of the swing of public opinion against Labour Government and Labour finance. Mr Stevens has taken immediate action in making it clear both in London and Australia that he intends to reinstate the credit of the State, and in avowing his intention to follow out the terms of the Australian Premiers' plan. General distrust of Labour, bored irritation at the endless Lang *versus* Commonwealth battle, and satisfaction at having a resolute, workable Government in the saddle should combine to make the result of the election a foregone conclusion. Doubtless Sir Philip Game had weighed the odds well before he took his final decision.

Greece and Her Foreign Debts.—Since we last commented on the Greek default and the relations between the Government at Athens and the foreign bondholders (*Economist*, May 7th, page 1036), the situation has undergone further developments. Last week Mr Neville Chamberlain stated in Parliament that a formal protest had been made by the International Financial Commissioner at Athens, and that the British Minister there had been instructed to make further representations to the Greek Government. On Wednesday of this week a meeting of Greek party leaders was held in Athens to consider certain alternative policies put forward by the Minister of Finance to deal with the question. Two suggestions which are reported to have been put forward, namely, that the bondholders should be consulted with a view to a scaling down of interest, or that coupons should be paid in paper instead of gold francs, were rejected. Agreement appears to have been reached, however, on the following policy. The amount required for the service of the foreign loans for the current financial year is to be deposited in a special account. From this account 600 million drachmas are to be withdrawn to finance the continuation of public works schemes, but any surplus arising from the Budget is to be credited to the account. At the end of the year the problem of transferring the accumulation of drachmas in the fund to foreign bondholders is to be re-examined. The proposed arrangement is one from which the bondholders are unlikely to derive much gratification.

The Anglo-South American Bank.—On Thursday evening the Anglo-South American Bank issued a brief statement to the effect that an arrangement has in principle been concluded with a group of banks headed by the Bank of England, under which certain assets of the Anglo-South American Bank connected with the nitrate industry, amounting to over £7 millions, which cannot at present be realised, will be taken over subject to the guarantee of the Anglo-South American Bank, the bank being simultaneously relieved of a demand liability for an equivalent amount. The contingent liability in respect of this guarantee will rank after deposits and all other liabilities to clients. The substitution of a deferred contingent liability for a cash liability at present payable on demand will strengthen the position of the bank and afford increased security for its clients. As soon as the details of the arrangement have been completed, an official communication will be made to shareholders. This statement disposes of several rumours affecting the bank that have recently been heard in the City, namely, that the bank was about to be amalgamated with or absorbed by some other institution, or that a call was about to be made upon the partly paid shares. The arrangement now disclosed is one which we view with somewhat mixed feelings. It is arguable that only a minority of the shareholders might have been able to meet a call on the partly paid shares, and it was clearly essential that everything possible should be done to maintain the prestige of British banking in South America. Though the shareholders only benefit indirectly by the assistance now extended to the bank, since the operation provides it with no fresh cash or earning power, the bank can now reassure its depositors that its remaining assets are sound and liquid. So far so good; but the wider question rises to the mind whether the indefinite process of "spreading illiquidity" over the banking system has not certain compensatory disadvantages. Looking back, we can already see that it was a bad day for Austria and for the world when it was decided that the Credit Anstalt must be "rescued" from liquidation. If the present announcement is to be regarded as signifying that no British financial institution of major importance will under any circumstances be left without support, it should be recognised that this policy may result, as was the case with the action taken in the Baring crisis last century, in an actual prolongation of financial strain and economic depression.

The Bank's Gold Purchase.—From the time of the suspension of the gold standard until the establishment of the Exchange Equalisation Fund the Bank of England was unable to buy gold except at a loss proportionate to the

depreciation of the pound, the reason being that while in fact it had to pay for the gold at its current market price, in law it would only value it in its books at the price corresponding to the Mint parity of the pound. The establishment of the Exchange Equalisation Fund has removed this disability, for any loss on gold purchases incurred by the Bank can now be made good out of the Fund. In view of the trend of funds towards England, it is not surprising that early this week the Bank announced that it had purchased £2,012,655 of bar gold and a further £967,899 on Thursday. It is not unlikely that these purchases represent transfers of gold to the Bank from the Treasury, who may have previously purchased it in the guise of the "unknown buyer" in the London market, or even have acquired bullion in Paris. It is known that while the Bank was still unable to buy gold, an "unknown buyer" frequently intervened in the London bullion market, and was insistent in his operations to the point of bidding more than the price corresponding to the depreciation of the pound. The April trade returns also show an excess of gold imports over exports to the amount of £6.7 millions, and while part of this excess may represent unsold shipments of Cape gold, or Cape gold earmarked for the South African Reserve Bank, there is obvious ground for believing that it may also include gold bought by the Treasury. If so, the Bank's gold purchase marks the termination of an anomalous position, for hitherto in their joint efforts to back the appreciation of sterling, the Bank has had to buy *devisen*, while the Treasury has been free to buy gold. For many reasons it is best that these respective rôles should be reversed. Purchases of *devisen* by the Bank, so long as the Exchange Equalisation Account was not in existence, exposed the Bank to the risk of a loss which should more fittingly be borne by the taxpayer, whereas purchases of gold by the Bank strengthen its reserve, give it greater freedom to issue notes within the present fiduciary limit, and enable it to follow a more liberal credit policy if it is thought desirable. The announcement of further gold purchases by the Bank would therefore be a welcome sign.

Sterling and Gold Prices.—The past fortnight, during which the sterling exchange has remained—as a result to some extent of official intervention—almost completely stable, sterling prices, as measured both by our complete index and by that of primary products, have declined by 0.6 per cent. The fall in our index of gold prices has been 1.8 per cent. :—

of the upward movements of the cereals and meat group. Textile prices again moved downwards, though the declines were small; non-ferrous metals weakened and, in the miscellaneous group, a slight recovery in the price of hides was balanced by a fresh fall in rubber prices.

Germany's Foreign Trade.—Our forecast at the beginning of the year that Germany's export surplus would approach vanishing point by April or May has been justified by events. The following table shows that there has been a further substantial shrinkage in exports during April :—

(Millions of Reichsmarks.)

Period.	Retained Imports.	Domestic Exports (excluding Reparations in Kind).	Export Surplus (+) Import Surplus (—).	Reparations in Kind.
1929—Total	13,447	12,663	— 783	819
1930 "	10,393	11,328	+ 935	707
1931 "	6,727	9,206	+ 2,479	393
1931—October	483	866	+ 383	13
November	482	738	+ 256	26
December	491	712	+ 221	12
1932—January	425	530	+ 105	11
February	441	527	+ 86	11
March	364	516	+ 152	11
April	427	472	+ 35	9

The decline in exports has been mainly in the category of finished articles, and is ascribed chiefly to the restrictive effect of the new British import duties and to smaller exports to Russia. The expansion in imports from the low level recorded in March suggests that the low limit may have been reached, and that a further contraction is impossible if Germany's economic life is not to be stifled. The export surplus of Rm. 35 millions in April is little more than one-fourth of the monthly sum of Rm. 125 millions required for the service of Germany's public and private foreign debts, let alone reparations.

Argentine Finance.—Our Buenos Aires correspondent writes:—Argentina's Budget estimates for 1932 have been passed by the Chamber of Deputies, with certain amendments. Expenditure is to be \$30,000,000 paper less than the sum allowed for by the majority report of the finance committee, namely, \$840,208,245 paper. It has not been specified where such reduction is actually to be made, and, as the Senate have now gone a step farther by insisting that the reduction must be brought up to \$45,000,000 paper, it is difficult to see where this economy can be brought about without upsetting the whole administrative plan for the current year. This is not, however, the end of the financial story. For Senator Lisandro de la Torre, who, it will be remembered, was General Justo's opponent in the presidential elections, has presented a detailed list to the Finance Committee of the Senate, whereon appear known liabilities that will fall in during the current year, and that therefore ought to be included in the present Budget. The amount of such

omission totals \$106,814,178 paper. Moreover, it must be admitted that Dr. de la Torre, whose financial ability is universally recognised, fully establishes his charge in respect to those items that are open to exact calculation. Thus the amortisation called for by certain loans, including the new Patriotic Loan of \$500,000,000 paper, has been demonstrably underestimated, which suggests that other items on the debit side of the account may also have been understated. The Senate Finance Committee is at present going into the matter, and may even return the Budget Bill to the deputies for revision. On the other hand, it is equally likely that the Government will endeavour to let things remain as they are, and employ the proceeds of the Patriotic Loan to cover the most urgent shortages which this new statement of expenditure is bound to connote. The loan has been passed by the deputies and will be applied as soon as it has been confirmed by the Senate. It is incumbent on this Republic to recognise more effectively the nature of her obligations to foreign capital invested here, and it is to be hoped that the joint memorial just laid before the Government by the railway companies operating in Argentina will be read with attention, and the claims there made be reasonably dealt with. Therein it is pointed out that, although freight has declined and exchange depreciation has further added to the losses of the companies, improved administration and the exercise of many economies is impossible, because reduction of wages and diminution of staff is prohibited under the existing railway law. The companies also do well to emphasise the undoubted fact that current quotations for Argentine railway shares, being as they are far below the true value of the assets they represent, reflect directly upon Argentine credit in the money markets of the world. There is, however, good reason to believe that President Justo's Government will work steadily for the re-establishment of Argentina's economic and financial status.

B.I.S. Meeting.—Advantage was taken of the presence at the annual meeting of the Bank for International Settlements of over forty representatives of central banks to read and discuss four papers on current economic problems. The first paper, by Professor Sprague, dealt with the collection and use of statistical data on foreign short-term funds. He began by explaining and illustrating the methods of collection now in use in London and New York, and after discussing various aspects of the problem made the suggestion that credit bureaux should be established in each market to collect confidential information regarding the amount of credits which were being obtained by individual firms. He also put forward various possible safeguards, including independent auditing and the exercise by credit institutions of greater foresight in times of prosperity. Dr. Kienböck, the President of the National Bank of Austria, had an interesting, if mournful, tale to tell of the working of foreign exchange restrictions. Like ourselves, he has little faith in the system of clearing arrangements, especially when accompanied as they often are in practice by a "black market" in the currencies of the countries concerned. Nor could he speak hopefully of Austria's position, for the most he could say was that the abolition of existing exchange restrictions was dependent upon a return of confidence. Dr. Trip, the President of the National Bank of Holland, threw out some interesting ideas under the general heading of basic monetary problems which could be usefully studied by the B.I.S. In general, he favoured the continuance of the gold standard, but he was not averse to any desirable modifications, and was strongly opposed to the return of gold coins to circulation. As regards "exchange management," by which he seemed to mean the gold exchange standard, he spoke in very cautious tones, but made the useful point that central banks should concentrate their foreign assets wholly with other central banks, or, preferably, the B.I.S. itself. He was dubious as to the wisdom of open market operations, especially as substitutes for bank rate policy, or in neutralisation of the effect of gold movements. Finally came Professor Rist, who in his paper on "The movement of prices and the working of the gold standard," raised some very controversial questions. In brief,

he regards the fall in prices since 1929 as a perfectly natural and not unprecedented movement, and he finds little justification for a policy based on the necessity for returning to the price-level of 1929. He concluded by holding that the economic system could still adjust itself to a fall in prices, as it had done in other similar periods, but he said nothing about the colossal mass of public and private indebtedness that has grown up during the period 1914-29. We have yet to learn how, on Professor Rist's hypothesis, adjustment of fixed charges is to take place here.

Beauharnois Corporation.—Our Ottawa correspondent writes:—On April 18th Mr Bennett made his long-awaited statement to the Commons about the future of the ill-starred Beauharnois Corporation. After giving a detailed history of the enterprise and its troubles and an account of the negotiations which he had carried out with its officials and the representatives of the group of banks who have been financing it, he claimed that the Government had fulfilled its promise to the holders of the collateral trust bonds by guaranteeing advances made by the banks which had permitted the continuance of construction work and by safeguarding the interests of the bondholders. It had, moreover, vetoed a scheme for the absorption of the enterprise by the Montreal Light, Heat and Power Company on the ground that it would strengthen the latter's monopoly, and it had confirmed the right of the company to divert 53,716 cubic feet of water per second into its canal from the channel of the St. Lawrence. In the meantime it could assume no further responsibility, and it was for the bondholders, who could exercise their legal rights arising out of the default in the interest payment on the bonds due on April 1st, to protect their own interests hereafter. He hinted very definitely that the Government, owing to its interest in the navigation aspect of the scheme, might be prepared to take up a substantial block of the company's first mortgage bonds, of which the banks now hold some 15 million dollars' worth as security for their loans, if a plan of financial reorganisation could be agreed upon. Meanwhile the holders of the collateral trust bonds have appointed a protective committee, which is meeting shortly to consider the situation.

Imports of U.S.S.R.—A correspondent writes:—Complete figures of Soviet imports for 1931 are not yet published, but from available data some conclusions may be drawn regarding the changes in the trend of Russian import trade. Imports are, of course, widely different from those of pre-war Russia, when, in 1913, for example, 321 million roubles worth of luxury goods were imported into the country. But, quite apart from this, a change is to be seen in the nature of Soviet purchases from abroad. For the last two years or so a steady decline has been visible in the import of raw materials, and a parallel increase in the import of machinery and equipment. The movement of the figures for the various articles imported may be seen from the following table:—

	1929. '000 tons.	1930. '000 tons.	1931. '000 tons.
Cotton	115.0	57.8	11.9
Wool	42.5	34.7	14.7
Raw hides	37.0	21.7	11.3
Non-ferrous metals	129.5	118.0	54.9
Ferrous metals	300.5	622.9	614.0
Rubber	12.8	16.4	9.2
Cellulose and wood pulp	57.1	75.9	32.5
Machinery and apparatus	69.4	142.4	70.7
Agricultural machinery	79.4	26.5	103.3
Machine parts	29.1	66.8	47.1
Electrical machines and apparatus	10.6	16.8	4.8

The striking increase in the import of ferrous metals is due to the rapid growth of machinery, transport and building in the Soviet Union, all demanding increasing quantities of these metals. Ferro-alloys also are much in demand for the supply of high-quality steel for tractors and automobiles. In 1931 imports of agricultural machinery rose, in contrast to a fall in other machinery and apparatus.

Employment and the Cost of Living in April.—As was stated in last week's issue of the *Economist*, the total number of registered unemployed rose from 2,567,332 to 2,652,181 between March 21st and April 25th. According to the current number of the *Ministry of Labour Gazette* the unemployment percentage rose from 20.8 to 21.4 on April 25th. This compares with 20.9 per cent. recorded on April 27, 1931. It is estimated that the number of insured persons in employment on April 25th was about 9,484,000, or 65,000 less than a month before, but approximately the same as a year ago. With regard to the cost of living, the index number of the Ministry of Labour stood on April 30th at 43 per cent. above the level of July, 1914, as compared with 44 per cent. on April 1st and 47 per cent. a year ago. For food alone the percentage was 25 on April 30th, as compared with 26 per cent. a month ago and 29 per cent. a year ago.

The 1930 Census of Production.—Volume X of the preliminary reports of the Census of Production of 1930, published in a recent issue of the *Board of Trade Journal*, deals with the brick and fireclay, jute, starch, and ink trades. The following summary shows the gross value, the net value (gross value less cost of materials and work given out to other firms), and the net output per person employed in the various industries in 1924 and in 1930:—

Industry.	Gross Output.		Net Output.		Net Output per Employee.	
	1924	1930.	1924.	1930.	1924.	1930.
Brick and Fireclay ...	Thou. £ 20,505	Thou. £ 19,888	Thou. £ 14,150	Thou. £ 14,080	£ 209	£ 201
Jute ...	14,206	9,605	4,390	2,666	128	93
Starch and Polishes ...	7,545	6,824	4,035	3,907	434	507
Ink, Gum and Sealing Wax ...	2,823	3,273	1,549	1,909	482	508

The slight decline in the total selling value of bricks and fireclay products conceals a substantial quantitative expansion in the industry. The number of building bricks made increased from 3,897 millions in 1924 to 4,413 millions in 1930, but owing to a decline of about 15 per cent. in the average selling price the total value declined from £11,129,000 to £10,875,000. The share of the home market held by British-made building bricks fell from 97.9 per cent. to 95.6 per cent. between the two census years. The figures relating to the jute industry reveal a substantial setback in production. The output of jute yarns declined from 2,506,000 cwts. in 1924 to 2,106,000 cwts. in 1930, the production of jute piece-goods decreased from 396,054,000 sq. yds. to 318,487,000 sq. yds., and that of jute carpets and rugs, at 2,935,000 sq. yds. in 1930, shows a fall of 2,867,000 sq. yds. With the exception of carpets and rugs, the share of the home market held by British jute manufacturers has been maintained, but there has been a considerable shrinkage in exports. The substantial decline in the production of starch and polishes has not resulted in a corresponding decrease in the total selling value, as the average price of leather polish and of stove and other polishes increased by 71 per cent. and by 13 per cent. respectively. The information regarding the ink, gum and sealing wax trades reveals a substantial increase in output. The total quantity of printers' ink produced in this country increased from 248,200 cwts. to 371,500 cwts. Despite a decline in the average price of 23 per cent., the total selling value increased from £1,392,000 in 1924 to £1,604,000 in 1930.

The Deep Sea Fisheries.—Larger quantities and reduced aggregate values were the outstanding features of the landing of British-caught wet fish at the ports of the United Kingdom in the first quarter of the year. This was accompanied by some diminution in the fish landed from the deep sea fisheries by foreign-owned vessels and in fish imported from abroad. Altogether, however, the supplies were heavier and the sum realised less than in the corresponding quarter of 1931, as will be seen from

the following table summarised from the official returns of the Ministry of Agriculture and Fisheries:—

	Weight in cwts.		Value.	
	January-March. 1931.	1932.	January-March. 1931.	1932.
British caught:—				
England and Wales...	2,726,507	2,866,822	£ 3,119,526	£ 2,831,560
Scotland	979,942	1,258,109	837,875	821,575
Shell fish	...	...	64,090	65,251
Foreign landings.....	3,706,449	4,124,931	4,021,491	3,718,386
Imports	393,324	290,279	272,397	231,642
	653,427	585,771	875,335	730,370

The wet fish landed by British-owned fishing vessels during the three months at the ports of England and Wales showed an increase of 140,315 cwts. and the first-hand value a decrease of £287,966, while in Scotland the quantity was 278,167 cwts. greater and the value £16,800 less. Thus the average value for England and Wales was only 19s. 9d. per cwt., as against 22s. 2d., and in Scotland 13s. 1d., compared with 17s. 1d. The increased quantity was due to larger arrivals of cod and haddocks and the cheaper kinds of fish. There were decreased quantities of foreign-caught fish and in imports of wet fish, but as these are spread pretty fairly over the three months it is impossible to draw any definite conclusion as to the effects of the import duty of 10 per cent., which operated only from March 1st. It is significant, however, that the British Trawler Owners' Federation regard 10 per cent. as inadequate to afford adequate protection to British-caught fish and are pressing for it to be increased to 33½ per cent. The fishing industry also regard it as a grievance that the duty is collected on the net proceeds; that is, after landing charges, agents' commission, etc., have been deducted. The exports of British-caught wet fish during the quarter were 428,008 cwts., valued at £366,546, as compared with 375,123 cwts. and £361,409 in the corresponding period of last year. We also exported "cured or salted" fish, principally herrings, to the value of £714,173, as against £871,448. At the same time, imports of cured or salted and canned fish into the United Kingdom had a value of £1,086,732, as compared with £961,558.

Transvaal Output in April.—The April statistics of gold production in the Transvaal issued by the Transvaal Chamber of Mines show that the output of fine gold during April amounted to 949,796 ounces, which compared with the record output of 960,035 ounces in March and 882,837 ounces produced in the month of April, 1930. In the following table we show the monthly output since the beginning of 1926:—

Month of	1926.	1927.	1928.	1929.	1930.	1931.	1932.
January	796,270	839,782	843,857	876,452	882,801	914,576	936,784
February	753,924	779,339	816,133	815,284	818,188	839,937	914,012
March	834,340	860,511	877,380	866,529	889,370	910,998	960,035
April	803,303	824,014	825,907	872,123	868,606	822,337	949,796

ULMACO-AVE.

The output figures continue to make a favourable comparison with those of a year ago. The following table shows the number of natives employed at the mines during the past nine months:—

	Aug., 1931.	Sept., 1931.	Oct., 1931.	Nov., 1931.	Dec., 1931.	Jan., 1932.	Feb., 1932.	March, 1932.	April, 1932.
Gold mines	209,409	209,424	208,987	209,270	211,552	215,752	216,171	214,024	214,334
Coal mines	13,563	13,276	13,061	12,882	12,260	12,394	12,177	12,009	11,943
Diamond mines	1,705	1,626	1,517	1,429	1,402	1,598	1,363	Nil	Nil
	224,677	224,326	223,565	223,581	225,214	229,744	229,711	226,033	226,277

The native labour figures show very little change.

London and Provincial Marine and General.—With a total premium income of £310,000 and assets of £1,356,000, this company is the medium for the trans-action of marine insurance in the Yorkshire group, the control having been acquired by the Yorkshire in 1913. The company has been carefully managed, and the marine underwriting has been conspicuously successful throughout the depression, with the result that, compared with a paid-up capital of £300,000, there are reserves of £670,000, apart from the underwriting funds. The detailed underwriting results of the past two years are as follows:—

	1930.		1931.	
	Amount of Profit.	Percentage of Premiums.	Amount of Profit.	Percentage of Premiums.
Fire and accident.....	£ 8,860	— 6.1	£ 6,794	— 4.9
Marine	25,000	14.0	30,000	17.9
	16,140		23,206	
Less items debited to profit and loss account	9,428		12,156	
	6,712		11,050	

For the year 1931, 10 per cent. free of tax has again been paid, and the cost of this is covered by interest earnings with a large margin. On December 31, 1931, it is stated that the book values of the assets exceeded the market values by some £40,000, the difference being, of course, amply covered by reserves.

Yorkshire Insurance Company.—The Yorkshire is in the satisfactory position of being able to show a trading profit and interest earnings both slightly greater than the corresponding figures of 1930. In his speech at the annual meeting, the chairman stated that, taking the 1931 figures of the 17 larger companies whose accounts have so far been published, the underwriting profit on nearly £24 millions on fire premiums approximates to 5 per cent. (compared with the Yorkshire result of 8 per cent.), while on £26 millions on accident premiums the profit works out at approximately 3½ per cent., as compared with 4½ per cent. in the case of the Yorkshire. The details are set out below:—

	1930.		1931.	
	Amount of Profit.	Percentage of Premiums.	Amount of Profit.	Percentage of Premiums.
Fire	93,316	9.1	77,733	7.5
Accident and general	49,819	3.7	58,128	4.5
Marine	...	...	8,315	1.7
Life	9,610		9,610	
Profits from reversions	5,000		5,000	
	157,745		158,786	
Less items debited to profit and loss account	122,529		123,898	
Total net trading surplus	35,216		34,888	

The dividend has been maintained at 47½ per cent. free of tax, and involves a small draft on the net trading surplus. The new life business transacted has been increased from £1,653,000 in 1930 to £1,711,000 in 1931.

The expense ratio has been maintained at the modest figure of 12.9 per cent., and the rate of interest has actually been somewhat increased from £4 11s. 1d. per cent. to £4 12s. per cent. Including £50,000 transferred from the life department, a total sum of £225,000 has been carried to investment reserve account. After deducting this, and allowing for current rates of exchange in respect of current foreign assets and liabilities, the book values of the assets are in the aggregate fully of the values stated in the balance sheet.

Alliance Assurance Company.—Including the life department, the total assets of this company now amount to over £35 millions, and the premium income to £5½ millions. Of these totals, the life, annuity, and sinking fund accounts are responsible between them for over £24½ millions of assets and nearly £2 millions of premium income. The life accounts include the transactions of four subsidiary companies, which are run as closed funds, and in the case of one of them—namely, the Imperial Life—a quinquennial valuation was made on January 31, 1931. The surplus was sufficient to provide for bonuses, and for a sum of £70,000 for the Alliance shareholders, which will be credited in the accounts of the next five years at the rate of £14,000 per annum. New business transactions in the current fund were well maintained last year, the total new business having amounted to £3,223,000 compared with £3,211,000 in 1931. Interest earnings have suffered a reduction, with the result that the rate of interest has declined from the already rather low figure of £4 9s. 6d. per cent. net to £4 5s. 11d. per cent. net, though expenses are limited to the moderate figure of 10 per cent. Of the total life assets, less than one-half are invested in the Stock Exchange, but on December 31, 1931, the aggregate book values of the assets were said to be in excess of market values by some 5½ per cent., equal to approximately £1½ millions. A special characteristic of the Alliance for many years past has been the extraordinarily high profit-earning capacity of the fire department, due partly to a very strong connection amongst the best class of home fire risks, and partly to the company's abstention from the American field. As will be seen from the detailed statement below, the 1931 results of the fire department are even better than before, and the premium income of over £2 millions has been maintained at virtually the same level as before. The miscellaneous departments, including motor, employers' liability and accident, are responsible for premiums of £1,200,000, and there is also a marine account with premiums of £480,000.

	1930.		1931.	
	Amount of Profit.	Per-centage of Premiums.	Amount of Profit.	Per-centage of Premiums.
Fire	324,793	15.9	351,706	17.3
Personal accident.....	2,457	6.0		
Employers' liability.....	40,678	18.9	119,356	10.0
Miscellaneous	101,755	10.8		
Marine	24,277	4.6	34,462	7.2
Life	...		14,000	
Transfer fees	9,796		9,075	
Less items debited direct to profit and loss account	503,756		528,599	
	256,736		271,338	
Net trading surplus	247,020		257,261	

In view of the consistent record of underwriting profits, the Alliance has always felt justified in making a larger draft on its profits for dividend paying purposes than is customary, and the 1931 dividend of 18s. per share (the same as before) costs £472,500, compared with interest earnings of £337,000. A note to the balance sheet states that the assets of nearly £12 millions belonging to the fire and general departments stand in the books at prices which were within the market values on December 31, 1931.

Overseas Correspondence.

IRISH FREE STATE.

Oath — Land Annuities — Tariff — Budget.

(FROM OUR CORRESPONDENT.)

DUBLIN, May 16.

THE constitutional issues raised by the Bill to repeal the Oath of Allegiance continue to occupy the centre of interest on the political stage of the Free State. The Bill will be passed by the Dail without any doubt, but its fate in the Senate is still uncertain. The opponents of the Bill have a clear majority in the Senate, but they have not yet decided whether to exercise their power of delay or to pass the Bill under protest. Any attempt to delay the Bill would probably result in a general election, at which the present Government would almost certainly strengthen its position. Another unknown factor in the situation is the action that will be taken by the British Government if the oath is abolished. Mr Thomas has stated that the existing preferential agreements will not be renewed when they expire in November, but November is a long way off and the Ottawa Conference is near at hand. It is, of course, possible that the Dominions assembled at Ottawa may have something to say about the position of the Free State, but the whole political outlook is extremely obscure.

Next to the oath, the land annuities are the most important problem which the new Government has set out to solve. Signs are not lacking that the attitude on this question is more conciliatory than it was. Difficulties are being experienced in collecting the annuities from farmers throughout the country, who, not unnaturally, fail to understand why they should pay anything for their land to the Free State Government, which never advanced them a penny of its purchase price. It is obvious that the retention of the annuities would give rise to an acute domestic problem respecting their collection, and that any drastic legal action against defaulters would involve the Government in widespread unpopularity among the only class of the community that they have shown any anxiety to please. In the circumstances it is not improbable that the so-called "secret agreement" relied on by Mr Thomas will be invoked to fasten the responsibility for ceding the annuities to Great Britain on the Cosgrave Government, and that the whole matter will be reopened in view of the disclosure of this document.

Meanwhile, in the purely domestic sphere, the spirit of protectionism has completely triumphed. The Abnormal Importations Act, left on the statute book by the late Government, has been used to impose more duties in one month than had been imposed in the previous ten years. The services of the Tariff Commission have been dispensed with, and the new duties have been imposed on the advice, presumably, of permanent officials. In every case a substantial imperial preference has been allowed. This is an important indication that the Government is anxious to preserve the existing system of preferences between the different parts of the British Commonwealth, and is of political significance in connection with the questions that will arise from the repeal of the oath. From the purely commercial standpoint, however, the preferences are of doubtful value to Great Britain on account of the height of the duties. For example, in the case of certain types of motor body the preferential rate is 100 per cent.

On top of the numerous duties imposed under the Abnormal Importations Act, the Budget has imposed forty-three new protective duties at one blow. Many of these will provide acceptable sources of revenue, but they will undoubtedly raise the cost of living. This result is, however, contemplated with equanimity by the Government, which adopts the attitude that a high cost of living is a lesser evil than unemployment. To what extent the new tariff will add to the volume of employment remains to be seen. No doubt additional employment will be afforded in some occupations, but it is equally certain that unemployment will be increased in other directions as a result of the

tariff. In future, the Free State is apparently doomed to be a country of heavy and widely-spread taxation. Newspapers, books, dancing, outdoor games, and the sweepstake are a few of the new objects of taxation. Income tax has been raised by more than 40 per cent.; corporation profits tax has been raised and extended, and the super-tax limit has been reduced to £1,500.

The Budget can certainly not be described as popular. Both rich and poor will pay substantially increased taxes, and the position of the very poor in the towns is particularly unenviable. The necessity for this grim severity is very questionable. It is true that the Government inherited a deficit from its predecessors, but it has added to its difficulties by an extension of social services for which there is no urgent demand and by charging certain abnormal expenditure to current revenue. The only class of the community that appears to be favoured are the farmers, who are given a further £250,000 towards the relief of their local rates. It is questionable whether the relief afforded by this derating will not be neutralised by the increase in non-agricultural prices caused by the new protective duties, and, of course, no mere readjustment of the burden of local taxation could indemnify farmers for any adverse discrimination that they might experience in the British market as a result of political unwisdom in high places.

UNITED STATES.

Finance — Banking — Money — Industry.

(FROM OUR CORRESPONDENT.)

NEW YORK, May 11.

SPURRED by the rebuke of President Hoover, the Congress has shown more diligence in its work on finance, and there is still hope that its virtues may spread far enough to cover a really substantial reduction in expenditure. The Senate Committee has passed a Tax Bill of its own, which does not differ so materially from that of the House as to preclude compromise. The next step will be to carry the Bill on the floor of the Senate, after which an adjustment with the House will have to be made. There seems to be little prospect of a conclusion much before the end of the fiscal year on June 30, though the strong desire of Congressmen to adjourn before the holding of the national presidential nominating conventions next month may hasten matters.

The Senate Bill is designed to raise \$1,030,000,000 in revenue, and it has the merit of toning down a few of the worst of the House suggestions, such as taxes on stock transfer and corporate activities. Both measures fall considerably short of balancing the budget as originally estimated. It remains to be seen what will be done in cutting appropriations, but it is assumed that enough will be done at one end or the other to bring a balanced budget for the 1932-33 fiscal year.

Excitement over the Goldborough Bill, aiming at Federal Reserve Bank action to restore the 1921-29 level of wholesale commodity prices, is dying down. There is little danger that monetary inflation will be resorted to, or that this country will be carried off the gold standard. The danger of anything of the sort, if it exists, lies almost wholly in the public's state of mind, as interpreted by Congress. Meanwhile the Federal Reserve Banks are keeping up the pace of credit expansion. Last week's statement showed a further purchase of \$100 millions of Government bonds (the agreed upon weekly amount), a sharp reduction in member bank borrowing, and a rise of seventy-four millions in total credit in use. Currency circulation rose \$50 millions, but end-of-month operations were largely responsible.

For the second week out of the past three the New York banks show an increase in loans and investments. Reporting member banks for all leading cities in the week of May 4 also show a rise of \$244 millions in loans and investments, all due to subscriptions to the recent Treasury note offering. Government bond holdings rose \$279 millions, with an accompanying rise of \$308 millions in Government deposits. Loans, "security" and "others,"

fell \$40 millions. While some banks still are frightened and continue to press for payment of slow loans and to sell their investments, good, bad and indifferent, the leaven of Federal Reserve policy is beginning to work. Excess reserves here average \$100 millions daily, and there is little employment in sight for it, except the bond market, failing more liberality in making loans. Little change in money rates has taken place recently, and the bill market has temporarily reversed its trend and firmed up an eighth. This was caused by the flow of excess bank reserves to bills until rates were driven to unprofitable levels. The banks then began to sell, which seems to confirm the idea that bank credit is going into channels where it will do more good.

Since the beginning of the month the nervousness abroad caused by the Goldsborough Bill and other rumours have led to a net outflow of \$35 millions of gold. About \$7 millions was released from earmark. Gold held under earmark for Holland is now estimated at about \$15 millions. Free gold, calculated under old style is now around \$169,200,000. Heavy Reserve bank buying of acceptances and repayment of discounts by member banks, which cancel free gold to some extent, accounted for the diminution. However, applying the calculation made possible by the terms of the Glass-Steagall Act, free gold is now \$1,326 millions, against \$1,345 millions in the previous week. It is expected that the representatives here of the Bank for International Settlements will shortly announce distribution to subscribing members of the remainder of the World Bank stock. New security offerings are at a low ebb, and consist mostly of municipal borrowing. Last week's total was around \$16 millions.

Only here and there is it possible to find any expansion in business activity, and the tendency of wages and employment is still downward. The United States Steel Corporation has announced a 15 per cent. reduction in salaries and wages for its employees and officers, to take effect as from May 15th. Other steel companies will follow. Reductions of 10 per cent. were general in the steel trade last autumn, but it is supposed that the bulk of the saving was passed on to steel consumers. Recently stronger efforts have been made to hold prices, and this time some of the wage savings may be retained by the companies. U.S. Steel reports a further drop of 145,000 tons in unfilled orders on its books at the end of April, bringing the total to the smallest in history. Operations of the steel industry have become a shade steadier at around 24 per cent. of capacity. Steel ingot production in April was 12 per cent. under that of March and less than half that of a year ago.

The motor trade is feeling less than the normal seasonal improvement. April output is estimated at 146,584 units, a gain of 15 per cent. over March, but a drop of 58 per cent. from April of last year. For the four months the output has fallen 51 per cent. under a year ago. The leading maker, General Motors Corporation, reports an increase in April of 40 per cent. over March, but a decline of 40 per cent. from last year. Railroad traffic for the last week of April declined slightly, but that probably reflected the increasing competition of motor trucks rather than movement of a smaller volume of goods.

The May 1st estimate for wheat made by the Department of Agriculture suggests a yield of 441,000,000 bushels, or 347,000,000 bushels under the bulky 1931 harvest. The estimate is also more than 100,000,000 bushels under the five-year average.

FRANCE.

Politics — Treasury Bonds — Industry — Prices.

(FROM OUR CORRESPONDENT.)

PARIS, May 18.

THE parties of the Left—and particularly the Radicals—are in a quandary as to how they can find a practical means of applying their electoral victory. The Socialists are inclined to insist that, in return for the help extended to them in the second ballot, the Radicals must take office once more, as in 1924, "on sufferance," and carry out a Socialist programme of government. M. Blum's followers are so far by no means decided that they will allow them-

selves to be represented in a Herriot Cabinet and thus share the burden of responsibility. M. Herriot has repeatedly asserted that he will never again take office "under the same conditions as in 1924"—that is to say, under Socialist domination but without their direct participation. The Radical leader's situation appears to be an awkward one. He refused repeatedly, during the Legislature which expires on May 31st, to co-operate in any Ministry in which the Marin Nationalists were represented, and subsequently this "exclusivité" was specifically extended to bar alliance with M. Tardieu. During the election campaign, M. Herriot emphasised this attitude by announcing that "M. Tardieu, by his Belfort speech, has broken all bridges between us." Meanwhile, in spite of the Radical leader's repeated bulls of excommunication, M. Tardieu continues to adopt the "willin'" attitude of the immortal Barkis.

M. Herriot's problem was foreseen long ago by M. Poincaré, when he pointed out that a union between Radicals and Socialists would be equivalent to a marriage of fire and water and must be mutually destructive. M. Herriot and most of his colleagues are on many points almost as belligerently nationalist as M. Louis Marin and his friends—and particularly in regard to the pressing problems of national defence, reparations, disarmament and security. M. Léon Blum on Monday, in his newspaper, *Le Populaire*, deliberately posed the conditions which he demands as the price of Socialist co-operation with the Radicals. He stated that the Radicals must accept as an irreducible minimum the following three obligations: Immediate and substantial reduction of military expenditure; a really national insurance system, comprising unemployment pay and provision against agricultural risks; and nationalisation of all kinds of insurance business, and of the railways. The powerful Socialist Federation of the Seine demands a still more exacting programme, including immediate unconditional application of the 40-hour week, without reduction of pay; nationalisation not only of railways and insurance business, but also of "all other means of transport and mines"; "control of the banks"; and the creation of *offices nationaux* (in effect, Government departments) to deal with wheat, wine, sugar and chemical manures.

Meanwhile it is impossible, through a hiatus in the Constitution, for France to be endowed with any effective new Government before the middle of June. Technically, the new Chamber will not come into legal existence until June 1st, and before any new Ministry can then ask for a vote of acceptance it will be necessary that the credentials of at least 308 of the 615 deputies shall be examined and their elections pronounced legally valid. This, with the election of the multitudinous officers and commissions, will take at least a fortnight, before the end of which it will be impossible for any real programme to be settled as to any of the immediately pending great international conferences—disarmament, reparations, Danube—at which it is indispensable France shall be effectively represented. Until then, as constitutional obligations demand, it will be impossible for the new President of the Republic to call on M. Herriot or anybody else to form a Ministry, even if the Radical leader be able to find some solution of his problem by that date, and be in a position effectively to assume power. The experts are anxiously seeking some means by which the Gordian knot may be cut.

It was announced here on Friday that, as from the previous Wednesday, the Caisse Centrale of the Finance Ministry had begun an issue of 3,000,000,000 francs Ordinary Treasury Bonds, under authority given by the law of August 7, 1926. This is the first issue of Treasury Bonds made here since the stabilisation of the franc at its present value. The bonds are in maturities varying from three to twelve months, the minimum subscriptions accepted being of 500,000 francs, and interest offered (payable in advance) being, for 3 months' bonds, 1½ per cent.; 3 to 4 months, 1¾ per cent.; 6 months, 2 per cent.; 6 to 8 months, 2½ per cent.; over 8 months, 2¾ per cent. The entire issue was immediately absorbed, it is understood, by the great Paris banks.

The industrial production index for March indicates that output on the whole has for the first time for many

years dropped below pre-war level. The general index figure for the month is 98 (1913 = 100), against 100 in the previous month, 132 in March last year, and means of 127, 139 and 140, respectively, in 1928, 1929 and 1930. Textile production which has dropped 27 points to 55 on the year, still holds by far the most unfavourable position of the nine great industries covered, but nevertheless improved four points on the month. The paper industry (108, against 107 in the previous month), is the only other which shows an improvement. Engineering (99) has now joined metallurgy (71), extractive industries (96), leather (91) and textiles below pre-war level, and indicates a drop of 45 points (144 to 99) on the twelve months. Extractive industries dropped a further two points on the month (making 21 points on the year), and will be a point lower for April. Motor car output in March is returned as 466, or three points down on the month and 133 on the year. M. de Lavergne, *délégué-général* of the Confédération Générale de la Production Française, in his annual report, states that whereas the situation of French industry a year ago indicated that it had relatively escaped the decline which had befallen other industrial countries, this cannot be said to-day. During the past year, he insists, and particularly during the third quarter of it, France felt the full effects of the economic crisis.

The index figure for wholesale prices at the end of April shows a fall of three points on the month to 424, as compared with 494 in April, 1931. The index for imported products is returned as 298 at the end of April (or a drop of 10 points on the month), against 365 in April, 1931. The index representing wholesale prices of French products, on the contrary, has moved up a point to 494 (against 566, end of April last year). These are all unweighted figures, covering 45 articles. The weighted index for wholesale prices, covering 126 articles, is returned as 439. The index for retail prices in Paris at the end of April, covering 13 articles of common household use (July, 1914 = 100) is 566, against 564 and 641.

GERMANY.

Politics — Unemployment Relief Proposals.

(FROM OUR CORRESPONDENT.)

BERLIN, May 17.

HERR GROENER's resignation of his office as Minister for Defence has rightly been appraised abroad as a very important political event; but outside Germany, and to some extent also at home, the proceeding has been misinterpreted. There is no question of a "revolt of the generals" in the sense that there could be any doubt as to the obedience of the armed forces to the constitutional leaders of the State, whatever be the decision as to Herr Groener's office. It is, however, true that prominent officials of the Ministry of Defence allowed their view to be known that Herr Groener ought not to have issued the Storm Detachment decree, or that if he did issue it, he ought at least to have defended it more effectively than he did in his last Reichstag speech.

It is impossible to say simply that the whole matter did not concern the leaders of the Reichswehr. Germany's armed forces are limited by the Treaty of Versailles to a small professional army which is wholly inadequate to defend her long frontiers. Every scheme of defence must therefore be based on the assumption that in case of emergency the army would be extensively supported by private citizens. The peace treaty forbids Germany any preparations for mobilisation and any military organisations apart from the Reichswehr, but it does not prohibit the Reichswehr from keeping in touch with enthusiastic movements among the population from which it could expect assistance should circumstances arise in which it required the support of the entire nation. It is not even certain that the General Schleicher, the Parliamentary Secretary to the Ministry of Defence, and the other principal officers, consider that the spirit of Hitler's Storm Detachments makes them suitable instruments for this purpose, and the contrary is suggested by the fact that Hitler refused to make them unconditionally available in the event of a Polish attack.

The Minister of Defence went beyond the loyal observance of the treaty in including in his programme the suppression of organisations which even resembled military organisations. This item was absolutely essential to his programme, and it is greatly to Herr Groener's credit that he appreciated the necessity so promptly, but it was natural that the generals should not show the same degree of political comprehension. Then Herr Groener, hampered by ill-health, did not succeed in explaining this necessity convincingly to the Reichstag, and so missed the opportunity of taking, as it were, by storm the difficulties which had arisen. While it was not unreasonable that the Reichstag should wish to be heard on the question of this decree, it was unfortunate—and this is the really serious part of the incident—that the weighing of pros and cons by the Chancellor, who covered Herr Groener's decision, did not finally settle the matter, and that a further moral concession to the Opposition was necessary. It was, however, a very modest concession. Herr Groener is retained as Minister for the Interior, and the rumours of an upheaval in this office, too, have so far not been substantiated.

The concession is explained by the abnormal position in which the Brüning Cabinet has found itself for some time. After a very short period immediately following his assumption of office, Herr Brüning made every effort to govern on parliamentary principles. Even the "aloofness from party politics" which he so often stressed served only to facilitate the extraordinarily difficult task of grouping many parties into a parliamentary majority. But Herr Brüning was able to maintain parliamentary government only with serious limitations, as the Reichstag which was elected in September, 1930, proved to be of very limited effectiveness. That to a great extent deprived the Chancellor of the possibility of relying on parliamentary support against the bureaucracy. The Groener case represents one move in the campaign of the political leader of the Government against the bureaucracy which sets up one departmental point of view in opposition to the political interests, and it is little more than an accident that it was with generals of the Defence Ministry and not with Ministers or Secretaries of State for some other department that such a conflict came to a head.

The prospects of National Socialist participation in the Government have not improved. Dr. Brüning's renewed vote of confidence in the Reichstag is not, however, to be taken as a proof of this, for on this occasion even the National Socialists wanted him to stay, as they had no desire to take over responsibility for foreign politics before Lausanne. The speech of their spokesman, Gregor Strasser, was on the whole moderate and aimed at showing how capable the party was of participating in the Government, and it would undoubtedly have made the negotiations which were just beginning with the Centre Party for a coalition of the Right in Prussia very much easier if it had not been immediately given the lie by unheard-of acts of violence by the National Socialists in the Reichstag. These have, without doubt, greatly diminished the inclination of the Centre to govern in partnership with the National Socialists. The Centre will certainly not refuse even now to discuss coalition possibilities, but it will exact from the National Socialists very strict conditions, and as the National Socialists themselves will attach no mean value to the tactical advantages of continuing in opposition, and would only give them up in return for considerable concessions of power, an agreement is not very probable.

It is, however, impossible to prophesy what really will happen in Prussia, for it is becoming clearer every day that the Social Democratic Prime Minister, Herr Braun, has very little desire to govern with the new Landtag, and would be very thankful to be relieved of his office forthwith. Most of his supporters, indeed, feel differently, but it is not yet certain how far this will influence Herr Braun's attitude and that of the other Social Democratic Ministers.

The President of the Reichsbank circulated a few weeks ago to the Chancellor and many other prominent persons a memorandum on the alleviation of the economic crisis. In it Dr. Luther proposes a series of extraordinary measures which he does not expect to hasten the end of the depression, but which he thinks would make its effects more tolerable. It is natural that, as President of the Reichsbank, he

should feel bound to make such suggestions, but Herr Luther is undoubtedly particularly moved to do so by the desire to take the wind out of the sails of the movement in favour of a credit expansion which would be dangerous to the currency. The letter is largely a selection from the numerous proposals which have been put forward by various writers. The most important is a proposal of Professor Lederer that the unemployed, while still drawing benefit, should be allowed to work without wages in factories which at present are closed, and make themselves such necessities as shoes and clothes, domestic utensils and furniture. The plan includes a system of barter, by which the workers of one industry would exchange their products for those of another. The production of those raw materials which do not have to be imported would, of course, have to be included in the organisation.

Such a "moneyless relief economy" could not be constructed on a large scale overnight, and it would, at any rate at first, only be able to include a comparatively small number of workers. It might, however, be some help to these few. Dr. Luther demands the appointment of a Reich Commissioner with extensive powers to organise this scheme. The opposition seems to come principally from the trade unions, though Professor Lederer, the originator of the idea, is a Socialist and holds very much the same views as the unions in other matters—on the ground that the employment of workers in exchange for unemployment pay and payment in kind alone constitutes a danger to the wage level and to wages agreements.

AUSTRIA.

Foreign Loans — Trade Agreements — Stocks.
(FROM OUR CORRESPONDENT.)

VIENNA, May 14.

THE formation of the new Government is causing the greatest difficulty, and, in spite of the fact that the financial crisis is every day becoming more acute, the haggling of the small political parties about the ministerial posts still continues. The retiring Cabinet had to send to the Financial Committee of the League of Nations a demand and a warning to render help at the eleventh hour. The hopes that the 100 million schilling loan, so often considered, would finally be granted are practically gone, and the Austrian Government therefore declared that there was nothing for it but to proclaim a transfer moratorium with the sanction of the Financial Committee.

In view of the efflux of foreign exchange from the Austrian National Bank, Austria is not in a position to maintain the debt service on foreign loans. For months now, the Austrian National Bank has been losing at least 20 million schillings' worth of foreign exchange every month, and at present it has scarcely 33 millions left. For the service of the League of Nations loan Austria requires 90 millions per year, for the Investment Loan, 1930, about 30 millions, for the provinces and municipalities 38 millions, for the financial debts of private interests, which were not included in any standstill agreement, 45 millions. For the debts of industry a sum of 25 millions is payable to foreign countries. Such calls upon the present foreign exchange holdings of the National Bank are preposterous. Two years ago the reserves stood at 715 million schillings. Then came the catastrophe of the Credit-Anstalt, and by the middle of July last year about half the foreign exchange holdings had been lost. At the end of last year about 128 millions still remained in hand, and since that time the efflux has continued very rapid. Exports have sunk to a low level; fresh credits cannot be obtained, and the hopes which attached to the severe restriction upon foreign exchange have not proved justified.

At the same time, the negotiations with the foreign creditors of the Credit-Anstalt have made no progress, nor have the commercial treaty negotiations advanced. The negotiations with Russia have been broken off, and the delegates of each side attribute the blame to the other. The main difficulty is that the Russians insist upon the

conversion into schillings of part of their dollar commitments to Austrian industry, and will not give them new orders until agreement has been arrived at in regard to payment of the old commitments. Austria is counting upon the possibility of making it difficult for the Russians to export Austrian eggs and cotton from Turkestan and several kinds of farm produce.

Industry is feeling the disturbances in export trade more and more keenly. The Alpine Montangesellschaft has extinguished the last of its furnaces at Donawitz. The reason given for this step is that stocks of crude iron are accumulating, and that lack of foreign exchange is causing difficulty in procuring coke from Czechoslovakia. The company has big stocks, and can easily meet any likely demand out of them. The balance sheet of the enterprise, which is to be published shortly will not provide for a dividend. The position of the company has, however, improved in that the bank debts have been considerably reduced. In general, however, debts to the banks are being paid very slowly, although the credit institutes are energetically demanding reduction of overdrafts, as the National Bank is still insisting upon a stringent credit policy. There has been further selling of National Bank shares. At the beginning of the year they stood at 244, and now they are at 148; and this in face of the fact that up to the end of the year these shares were regarded as an investment suitable for conservative savers.

The investment market is completely stagnant, and quotations are constantly falling. Securities in terms of foreign currencies are on offer, because payment in foreign currency is out of the question for the immediate future. In private traffic the Vienna Dollar Loan was quoted at 67, and the American batch of the 1930 Federal Loan at 43 to 44. At the beginning of April the levels were 81 and 71½ respectively. It is remarkable that the activity observable on the real estate market came to an end recently. It would now appear, however, that individual properties are being acquired for foreign account.

HUNGARY.

Budget — Foreign Creditors — Speculation.

(FROM OUR CORRESPONDENT.)

BUDAPEST, May 17.

THE Budget for 1932-33 was voted in the first reading without amendment by the House of Deputies on May 13th, and in all probability it will be passed on to the Upper House in its original form before the end of this month. In closing the general debate the Prime Minister very wisely made it clear that the Government will not resort to a general moratorium, but will endeavour to reach an early settlement with the foreign creditors to reduce the interest rates to a level compatible with the fall in the price level and with the capacity of the country. The Finance Minister stated that the League resident representative in Budapest, Mr. Royall Tyler, who is at present in Geneva at the sittings of the Financial Committee, will communicate the desire of the Hungarian Government with the League to convene all the foreign creditors to a meeting in Budapest, and will ask the Financial Committee to delegate an expert with international repute to this conference.

The fact that the Budget for 1932-33 is balanced on paper will mean very little in reality if it is not accompanied by a satisfactory settlement with the foreign creditors. The last statement of the Finance Minister dealing with the Treasury situation in the first nine months of the present financial year affords ample evidence that revenue returns will be considerably below estimates. Total receipts amounted to 593.9 million pengő, as against 620.5 million pengő in the previous financial year, in spite of the greatly increased taxes. The non-revenue resources of 131.4 million pengő, from the proceeds of the Treasury loan in August last, have been lately exhausted by the deficit of the Administration, the State undertakings, and the Boletta Fund. The deficit of the last quarter will be met by the banks, a considerable part of which has already been re-discounted with the National Bank, though it is clear

that this experiment cannot be repeated without grave consequences to the currency. The deficit of the present budget year will amount to between 175-180 millions by the end of June. Even if we assume that the Finance Minister succeeds in making further economies, a deficit of at least 30 millions must be reckoned with in the July-September quarter.

Great pressure is being brought to bear on the Government to change the provisions of the British Standstill Agreement and the Transfer Moratorium Decree which very rightly prohibited the capital repayments of mortgage and communal debts with bonds outside and in excess of the amortisation schedule. The argument is being pressed that permission to repay the mortgage debts with the bonds would considerably lighten the burden of the heavily indebted States and communes. The conclusive answer is that both the communes and the States, which are heavily indebted, can scarcely meet their current obligations such as interest, and the permission of debt repayment with the depreciated bonds would therefore only benefit speculators and smugglers and deprive the National Bank of the badly-needed export *devisen*. It should not be forgotten that mortgage bonds quoted at 20 to 30 in London and in New York change hands at a considerable premium in Budapest, partly because of the hope of using them for capital repayment, and also because the coupons are paid in pengő, and thus bring a net yield of more than 20 per cent.

HOLLAND.

Foreign Trade — Money — Shipping.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, May 9.

THE first quarter of 1932 witnessed an alarming increase in the difficulties which confront our exporting trade. England imposed the general import duty of 10 per cent., Germany revised the import duties on butter, and France, by way of a retaliatory measure, recently prohibited the importation of potatoes, tomatoes, plants, bulbs and fresh vegetables. In addition, the operation of the foreign exchange restrictions in a great number of countries has had a most disastrous effect on our export trade. In the first quarter of 1932, imports into Holland amounted to 5,847,000 tons, with a value of 357 million guilders, and exports to 3,428,000 tons, with a value of 218 million guilders. Imports and exports by quarters, in the years 1930, 1931 and 1932 are set forth in the following table:—

	IMPORTS.			EXPORTS.		
	(In millions of guilders.)			(In thousands of tons.)		
	1930.	1931.	1932.	1930.	1931.	1932.
1st quarter	647	494	357	452	344	218
2nd "	629	492	...	452	344	...
3rd "	598	466	...	444	342	...
4th "	544	441	...	395	293	...
	(In millions of guilders.)			(In thousands of tons.)		
	1930.	1931.	1932.	1930.	1931.	1932.
1st quarter	7,691	6,842	5,847	4,027	4,038	3,428
2nd "	7,996	7,423	...	4,032	4,235	...
3rd "	8,215	8,120	...	4,237	4,527	...
4th "	7,492	7,514	...	4,320	4,019	...

As compared with the first quarter of 1931, the drop in the weight of imports occurred almost entirely in the raw materials section. The decrease in the import of coal was chiefly responsible for this drop, which was almost entirely at the expense of Germany.

The exports of a number of industrial products which have been encountering the 50 per cent. anti-dumping duty in England since November and the beginning of December have been almost wiped out altogether. The exports of cloth and other fabrics only reached a total of 110,000 guilders in the first quarter of this year, as compared with no less than 4,780,000 guilders in the corresponding quarter of 1931. The exports of wall tiles, glass-ware and cycle tyres, which were also subjected to the 50 per cent. anti-dumping duty, dropped to insignificant figures. The Dutch industries are therefore now demanding additional safeguarding measures from the Government. The various quota measures are practically all ment. The various quota measures are practically all being renewed automatically on expiry of their three

months' duration. Additional measures, however, are demanded, and a few days ago a deputation of the Dutch agricultural and industrial interests submitted a manifesto to the Minister of Home Affairs, in which Germany is threatened with a complete boycott. In this important manifesto it is pointed out that not only the export of our agricultural produce but also that of industrial products is seriously impaired by the operation of the German foreign exchange decrees. The committee, representing the entire agricultural and horticultural, as well as industrial interests of the Netherlands, was of the unanimous opinion that the most vigorous measures must be adopted with regard to the export trade to Germany, in order to counteract further dislocation of Dutch economic life. It was pointed out that the Netherlands ought to be able to achieve far more in this respect than it has so far done, for our imports from Germany are considerably larger than our exports to that country.

The financial situation in the Netherlands continues to develop satisfactorily. The money market remains very liquid. The average rate for prolongations in April was 1.0250 per cent., against 1.5833 in April, 1931, while private discount rates are quoted below 1 per cent., so that a further reduction in the official bank rate on the part of the Netherlands Bank is not out of the question, especially as the guilder has also been well maintained on the foreign exchange market. The guilder has been particularly firm as compared with the dollar, which currency has been quoted below the gold import point already for several days. The shipment of gold from America to Amsterdam accordingly seems likely in the near future. The Netherlands Bank has decided to withdraw its deposit of gold in New York. Although this will result in an increase in the importation of gold into Holland, the movement will not, of course, involve a change in the total gold position of the Netherlands Bank.

The various annual reports issued by the important shipowning companies all make a very disappointing showing, and even our big East Indies lines had to pass their dividends. The annual reports of the plantation companies are also very unsatisfactory.

ITALY.

Budget Control — Taxation and Debt — Reforms.

(FROM OUR CORRESPONDENT.)

TURIN, May 16.

PARLIAMENT has been busy in both Chambers in passing budgets—every department has its own expenditure budget—and if private members' speeches were not remarkable, the reports of committees were, as usual, of great interest. The report of Signor Mazzini on behalf of the General Budget Committee of the House of Deputies on the revenue and general expenditure budget makes rather sad reading. Assuming a reduction of 33 per cent. since 1928, Signor Mazzini estimates the present national income at between 60 and 70 milliard lire, say 68 milliards, if Professor Mortara's estimate be adopted. The tax revenue of the State, provinces and municipalities—exclusive of miscellaneous items and public services—amounted in 1913-14 to 2.5 milliards, in 1925-26 to 20 milliards, and is estimated in 1931-32 at 20.5 milliard lire. The significance of this burden can best be gauged if we translate these lire into lire of stable purchasing power. This gives a total tax revenue rising from 9.2 milliard lire in 1913-14 to 11.1 milliard lire in 1925-26 and to 23 milliard lire in 1931-32. The proportion between taxation and national income, which was about 12.5 per cent. in 1913-14, thus rose to 20 per cent. in 1925-26 and to 30 per cent. in 1931-32.

The crisis is playing havoc with general branches of revenue. Comparing ascertained results of 1929-30 with estimates for 1932-33, the yield of income tax has fallen from 5,192 million lire to 3,905 million lire, and the budget has therefore had to rely more and more upon indirect taxation. Stamp, registration and sales taxes rose from 3,168 million lire to 3,868 million lire, Excise and Customs

duties from 5,321 million lire to 5,568 million lire, and salt, tobacco, matches and lottery monopolies from 3,493 million lire to 3,712 million lire. As the estimates for 1931-32 appear largely in excess of realised revenue (for the first eight months Excise and Customs duties were estimated at 3,860.3 million lire and realised only 3,073.6 million lire), Signor Mazzini fears that estimates for 1932-33 may be in some respects too optimistic.

On the other hand, many items of expenditure are growing; for instance, the burden of public debts has risen from 4,572.7 million lire in the estimate for 1931-32 to 4,895.9 million lire in the estimate for 1932-33, exclusive of the interest and premiums appropriations for the last issue of 3 milliard lire fresh Treasury bonds, which will bring the total to about 5,150 million lire. The main cause of the increase in the annual cost of the public debt is the growth of the floating debt, in its turn caused by the difficult Treasury situation. Some comfort may be drawn from the fact that the Treasury position is, in part, due to the payment of arrears of expenditure budgeted for in past years. Further comfort is to be found in the thought that the State is keeping the floating debt at a high level in order to maintain a big cash account at the Bank of Italy, thus keeping down the note circulation.

Signor Mazzini is, however, gravely concerned at the outlook, and insists strongly on two points:—(1) No new burden in the budget shall in future be created except by law. The system of executive decrees should be stopped, to keep expenditure within strict bounds. (2) An end, or, at least, a very severe limitation, must be put to the system of State grants in aid of industry. The report quotes the instances of the Cogne Mines Company, a relic of the Ansaldo vertical industrial system, which was inherited by the State. The Cogne Co., directly or by subsidiaries, has absorbed several hundred million lire of State money, and now plans the utilisation of 500,000 h.p., instead of the present 60,000 h.p., and the building of a big thermo-electric plant of 200,000 h.p. for the utilisation of the anthracite mines situated in the mountain fields of La Thuile. The budget *rapporteur* is horrified at such grandiose expenditure of State money in the face of 2,000 millions unsold kw.h., which the electric industry vainly endeavours to put on the market. In the Senate, Senator Ciccotti strongly opposed a Decree, dated February 3, 1932, which appropriated yearly one million lire as grant in aid for the fiscal years from 1931-32 to 1945-46 to the Lardarello Borace Co. Such criticisms are a good omen. Economy, and very strict economy, is the only way to bridge the big and, we hope, transient gulf between revenue and expenditure.

GREECE.

Forced Currency — Exchange Regulations — Bank of Greece.

(FROM OUR CORRESPONDENT.)

ATHENS, May 4.

IN introducing to the Chamber the Bill for the suspension of the obligation of the bank of issue to exchange its notes against foreign gold exchange, Mr Venizelos stated that this measure was insisted upon by foreign circles who had taken a leading part in the stabilisation of the Greek currency. The necessary exchange for the discharge by instalments of commercial debts, payable abroad in foreign currencies contracted before the application of the new law, may be granted only after permission of the Exchange Committee, which fixes the amount payable each time on each debt. The payment of such debts cannot be enforced by law, if the debtor proves by a written certificate of the Committee that he filed an application for a sum equal to 10 per cent. at least half-yearly of the amount of the debt involved and was refused. Both creditor and debtor are required to declare to the Committee, within a month from the application of the law, the amount and particulars of such debts.

Debts in foreign currencies payable within the country are settled in drachmas at the current rate of exchange on

the date of payment. The same applies to bank deposits in foreign currencies, with the exception of deposits of persons residing permanently abroad before the application of the new law, which may be repaid in foreign currency. All bank deposits at sight, existing before September 28th of last year (when the first forced law for the protection of the currency was enacted), are payable three months after the application of the new law.

It is further forbidden to the banks (1) to buy abroad for their own account, or for account of their customers, securities, Greek or foreign; (2) to invest drachma deposits or their share capital or their reserve funds in foreign exchange or currencies or securities; (3) to create stocks of foreign currencies from their daily purchases of exchange. The exportation of securities and coupons, Greek or foreign, as well as of foreign bank notes, is not allowed without permission of the Bank of Greece. It is forbidden, moreover, to grant loans in drachmas on the pledge of gold and foreign currencies, exchange and securities. Bank notes, cheques and credits in drachmas may not be exported except by the banks authorised by the law to transact foreign exchange operations, and so far as they represent the proceeds of sales of foreign exchange. It is forbidden also to export foreign exchange in cheques, credits and by any other means if not issued or opened by one of the said banks. Forward exchange operations and for the carry-over are not allowed unless they relate to genuine commercial requirements duly ascertained by one of the same banks. So far, the new regulations have not checked speculation, while the drachma has further depreciated.

As the new law suspends entirely the obligation of the bank of issue to maintain a reserve against its notes in circulation and other demand liabilities, fears have been expressed by competent circles that the door is thereby opened for a monetary and credit inflation. The suggestion is again made that the Bank of Greece should be absorbed by the National Bank of Greece, since the stabilisation of the currency, for which it had been created, has had to be abandoned. The authorities are opposed to the suggested amalgamation. The alternative suggestion is that the maximum note circulation of the Bank of Greece shall be fixed by law at the present figure, plus the sums it may have to pay for the settlement of deposits made with it and of other obligations determined in its statutes. It will be possible to increase this limit only up to a maximum amount, fixed beforehand, for the purpose of rediscounting, after severe scrutiny, the portfolio of banks containing genuine commercial bills of not more than three months' date. These rediscounts should be shown separately in the weekly statement of the Bank, which should cease to transact all the other business at present allowed by its statutes. In this way the danger would at least be obviated of a credit inflation, a danger which, it is contended, the policy followed hitherto by the Bank shows to be very probable. The note circulation will be covered by short-term commercial bills, at the maturity of which the notes put in circulation shall be withdrawn.

CANADA.

Crops — Business — Unemployment — Coal — New Zealand Treaty.

(FROM OUR CORRESPONDENT.)

OTTAWA, May 3.

THE snow and frost have now vanished, and the farmers everywhere are busy on the land. The seeding season is later than usual, but conditions are satisfactory; there have been generous rains over practically the whole area of the Prairie Provinces, and not for many years has such an excellent seed bed been available for planting the crop. It is realised that in the districts stricken by drought last summer the soil was parched to such a depth that only abnormal supplies of moisture can assure a good crop, but hopes of the western farmers are now running high that the era of poor crops has come to an end. The Bureau of Statistics estimated that on March 31, 1932, the total stocks of Canadian wheat amounted to 248,800,165

bushels, as compared with 280,095,891 on the corresponding date of 1931, and that it was divided as follows: 176½ million bushels in elevators afloat or in flour mills, 8½ millions in transit and 58½ millions in farmers' hands, the decrease in the latter item of 35 million bushels accounting for most of the total reduction. Estimating the exports for the remaining five months of the crop year at 85 million bushels and making the necessary deductions for seed, human consumption and livestock feed, it forecasts that the carry-over at the end of the crop year on July 31st will be roughly 103 million bushels. This is some 30 million bushels less than the carry-over last year, but it is much larger than the average carry-over, and can scarcely fail to have a depressing effect upon prices for the new crop.

There are signs of greater activity in some manufacturing centres, but the rate of improvement is slow. The textile mills and the factories turning out electrical equipment and radio sets are fairly well employed, but some of the footwear factories, having filled their spring orders, are curtailing their operations. A fair amount of new building is in progress, but contractors are hampered by the moratoria on mortgages in various provinces, which discourage people from lending money on mortgages to finance the erection of buildings. The navigation on the St. Lawrence is now fully open and, as a result, there is an improvement in the unemployment situation in Montreal and other ports on the St. Lawrence, but it still remains an acute problem in inland cities like Montreal and Toronto. Owing to the expense, the policy of special public works has been largely abandoned, and the unemployed are being given direct relief.

The Bennett Government has, however, announced the details of a new policy, whose aim will be to put as many unemployed families as possible in the way of gaining a subsistence from the land. The Government will enter into an arrangement with any province that so desires, under which it will capitalise the cost of maintaining an unemployed family for a year and will make the resulting sum available for settling the family on the land. The Government, however, enters the caveat that the scheme is in no sense a State-aided plan of settlement, but is merely a temporary measure designed to relieve the present strain upon the resources of towns and cities. No responsibility will be assumed for a longer period than a year, and the provincial Government who join in the scheme will be asked to undertake the selection of the families to be settled, the choice of the most suitable land and the work of location.

The latest trade returns still make a poor showing, and the following are the figures for March, with the comparative data:—

	1931.	March.	1932.
Exports	\$ 56,295,520		\$ 41,018,757
Imports	75,349,345		57,925,035

March is usually a month of heavy imports, and the adverse balance of roughly \$17 millions for the month has cut down the total favourable balance for the whole fiscal year ending March 31st to \$8½ millions. The comparative figures for the last two fiscal years are as follows:—

	Fiscal Year.	1931-32.
	1930-31.	
Exports	\$ 817,028,043	\$ 587,565,517
Imports	906,581,671	578,980,733

Figures just published show that during 1931 the expenditures of tourists in Canada were estimated at \$250,776,000, a decrease of some \$29 millions from the figure of the previous year, and, when the \$76½ millions spent by Canadians in other countries was offset against this, there remained a favourable invisible balance under this head of roughly \$176½ millions.

The Government have this week promulgated an Order-in-Council under which the Minister of Mines is empowered to pay out of Federal funds to owners of coke ovens and gas manufacturers the difference between the

cost of Canadian and foreign coal. A maximum limit of \$1 per ton is affixed to this bounty, and it is only to be paid on the excess of the quantity of Canadian coal consumed over the quantity of Canadian coal used by the same plants on an annual average during the last three years. The move is welcomed in Nova Scotia, where it is confidently expected to create more work for the local miners.

In the Federal House of Commons last week the trade treaty with New Zealand, which was provisionally signed at Honolulu in January, was tabled, and the ratification Bill was given its second reading. By the treaty the virtual tariff war which has been in progress between the two Dominions is ended, and Canada, in return for tariff concessions on butter (whereon the duty for New Zealand is lowered from 8 to 5 cents per pound), hides, wool, and some other commodities, gets reciprocal concessions on lumber, canned fish, newsprint, motor vehicles, rubber goods and some other articles. On the surface both countries seem to have made considerable mutual concessions, but a closer scrutiny of the exact terms of the treaty raises a doubt whether it will be effective in promoting a great revival of trade exchanges. For one thing, it is plain that the duties fixed by the new treaty in both countries in many cases are substantially higher than the rates fixed by the abrogated arrangements, and, as far as Canada is concerned, her exports will still have to contend with the surtax imposed by New Zealand a year ago. Moreover, the treaty has a time limit of one year, and seems to be merely a stop-gap agreement pending the deliberations of the Imperial Conference.

One of the Canadian complications in relation to the St. Lawrence waterway has now virtually been cleared up by the announcement that negotiations between the Federal Government and the provincial administration of Ontario have resulted in an agreement whereby Ontario has undertaken to contribute \$120 million for the development of Canada's half share of the two million horse-power of electrical energy available on the international section of the waterway. This sum will include the cost of the power house, equipment and transmission lines. It has also been decided that the development will take place in two stages, this being a concession on the part of the United States, whose engineering experts favoured a one-stage development. The contribution of Ontario will be financed through the Hydro-Electric Commission, whose bonds the province guarantees, but it is considered improbable that the whole of the \$120 millions will be expended in one lump, or, in fact, during any short period, but will be spread over a number of years as power is required.

Letters to the Editor.

MONETARY POLICY.

TO THE EDITOR OF THE ECONOMIST.

SIR.—In his letter published in your last issue, Professor Robbins says that "seldom in the memory of man have the factors making for catastrophe seemed so powerful and so menacing." About that proposition there can be little dispute. The views of the many who agree with your recent leading article on monetary policy, and welcome the declaration of the Chancellor of the Exchequer that it is one of the Government's objectives to take such steps as they may find it possible to take in order to raise sterling prices, are opposed by Professor Robbins on the following grounds:—

(a) That a price rise would not cure the "fundamental maladjustments" now existing.

(b) That a price rise would be uneven and would be likely to lead "to investment which afterwards proves unprofitable," would mean a mere delay of the evil day, and cause further maladjustments.

(c) That a price rise might lead to a general uncontrolled inflation and a flight from sterling.

Professor Robbins does not state why a price rise would not mitigate the existing fundamental maladjustments, what the unevenness of the price rise would be, why the new investments would be unprofitable, or what the further maladjustments would be. He gives no reason for supposing that a price rise now would lead to an uncontrolled inflation, which historically is a rare experience, rather than to a controlled expansion which has been the common feature of recovery. Moreover, he suggests no alternative solution of the problem.

Those who are "preoccupied with the anxieties of the moment" are so frightened of the obvious and immediate perils of continued deflation that they will not easily be induced to reject constructive suggestions as to a way of escape by the threats of a bogey of this sort. We do not forget that the terrible fate which was predicted for us as the result of abandoning gold was welcomed on the morning of September 21st as the salvation of the country. For the Pyrrhic victories of sound finance we have suffered enough.

I submit that, although the inflation prior to 1929 caused maladjustments, the major part of the present maladjustment in respect of costs and prices, earning power and debts, is due to excessive deflation, and the under-investment of savings; that a continuation of deflation and an attempt to restore equilibrium by cutting costs will increase the maladjustment and create the necessity for further liquidation. On the other hand, I believe that a rise in prices would check the financial deterioration and the cumulative disintegration of the economic structure, and that it is an essential supporting condition of the successful application of other contributory and admittedly necessary remedies. To apply the stimulus of expansion at a time when capital and labour are largely unemployed, and costs so greatly exceed prices, is a very different matter from forcing inflation upon a fully-employed productive mechanism. For Professor Robbins to imply that any expansion, however deliberate, would result in a great inflation such as we have seen in certain countries in our own time is surely a wilfully misleading inference from experiences differing fundamentally from those of the present time? Professor Robbins says that "the forces making for inflation in the world at large are very powerful already." I agree, but I am convinced that the surest way of increasing such forces and of producing conditions resembling those which led up to the uncontrolled inflations of post-war Europe is to allow deflation to run its course until we reach a level at which inflation is no longer an option but an inevitable result.—Yours, &c.,

OSWALD T. FALK.

Books and Publications.

BRITISH INVESTMENT TRUST COMPANIES.*

It has long been a reproach that inquirers for authoritative text books on the investment trust, one of Great Britain's most characteristic contributions to the science of practical investment, have been perforce referred to the works of foreign students. American specialists like Mr Leland Rex Robinson have done pioneering work, whose usefulness it would be difficult to over-value. Mr Robinson's "Investment Trust Organisation and Management," indeed, remains an indispensable guide to investment trust principles and practice, but in its recently revised form, even more than in its first edition, it is written from the viewpoint primarily of American readers. *Amour propre* alone required that a competent British author should step into the breach, and Mr George Glasgow has performed his self-imposed task with credit. His volumes on English and Scottish trust companies include, in each case, a short review of general principles, with special reference to the practice of existing investment trust companies, and a series of tables summarising the results of a large number of companies, from 1910 or the year of their foundation (whichever is the later) up to 1930-31.

Mr Glasgow has not been content merely to re-state existing data in common form. He has asked himself the question: "What are the really important details bearing upon the principles of investment trust finance?" The answer, he believes, comprises four points: borrowing powers, capital rights, limitations on investment, and distribution of investments. As regards results, as distinct from powers and organisation, he has rightly laid stress on the need for making apparent to the potential investor in the stock of any trust company a limited number of crucial facts, i.e., the visible reserves, the inner reserve, the difference between market values and book values of investments, the percentage of ordinary earnings and dividends, bonuses and "rights," and market prices.

The resulting tables form a compilation which, as a work of reference, merits the willingness of time to vindicate the publishers' claim to have discovered the "standard work on the subject." Unfortunately, these volumes must necessarily be expensive to produce. Their data do not go back to the days of the Baring crisis, the records of which would be particularly valuable for study to-day, when abnormally difficult market conditions have forced many post-war investment trusts into a position very similar to that of the trusts which were "young" in the 'nineties. Further, the very high value of Mr Glasgow's work will diminish, year by year, in the future, unless further editions are regularly published, bringing the figures up to date. For annual or biennial volumes, £5 (inclusive) is a high figure. The method of issuing addenda as regards the 1930 results of the English companies, is not altogether satisfactory for investors who desire to see the achievement of each company steadily and to see it whole.

One may best pay tribute to Mr Glasgow's shrewdness and skill in exposition by expressing the hope that, in subsequent editions, he will see his way to give more than 19 pages out of 197 on English trusts, and 29 pages out of 203 on Scottish trusts, to his treatment of general principles. He has the great initial advantage of a balanced mind, and commends the policy of the best companies heartily, but not unreservedly. He admires the refusing necessarily to endorse their policy of refraining, investments. He advances the argument that the figure of a company's inner reserve may be a more valuable piece of information to proprietors than a published list of investments, but does not endorse this view in so many

* "The English Investment Trust Companies." By George Glasgow, with a foreword by Dr. Gerald T. Moody. "The Scottish Investment Trust Companies." By the same Author. London: Eyre and Spottiswoode (Publishers) Limited, 6 Great New Street, London, E.C. 50s. net. each.

words. He does not commit himself, likewise, to any final judgment on the question whether the success of British investment trusts has been due primarily to risk-spreading or consistent ploughing back of profits of all kinds into their businesses. He ascribes it, indeed, to "constructive pessimism persisted in over a long series of years," which is epigrammatic without being precise.

Nevertheless, it is true to say that rarely has more useful information and sound deduction on any subject been compressed into fewer pages than appear at the beginning of each of these volumes. We suggest that in the next edition of both works Mr Glasgow should deal with the lessons suggested by the present security market depression and its effects both on investment trust internal finance and the course of quotations for investment trust stocks. It would be valuable, also, to have Mr Glasgow's views on the marketability of trust company issues, the manner in which these are distributed among inside quarters and the public respectively, and the extent to which their market, on the Stock Exchange, is really "free," in good times and bad. From the investor's point of view, this aspect is particularly important, and it is scarcely glanced at in either of the two volumes now available.

The Stock Exchange.

NEWSPAPER SHARES—I.

READERS of the humbler types of newspaper fiction are familiar with the heroine who, displaying cheerfulness and fortitude in adversity, is shunned by society for her "past." The plight of this overworked lay figure, by a turn of Fortune, resembles that of her creators to-day. Investors have a vivid recollection of the effects of the heady wine of prosperity, in a recent Stock Exchange boom, on certain Press financiers. Though newspaper earnings have, on the whole, withstood economic depression better than might have been expected, a prolonged fall in share values has reflected the investor's fears that a former state of fierce competition, expensive "circulation-buying," "provincial warfare," etc., may have left the main newspaper-owning combines with onerous liabilities, actual and contingent. This uneasiness, naturally, was not allayed by a fresh outbreak of "circulation" hostilities last summer, by way of expensive gift schemes. Though many newspaper shares are appreciably above their lowest quotations for 1932, the end of this injudicious phase has not appreciably modified the conservatism of the market towards both newspaper prior charges and equities.

The immediate outlook for shareholders can be appreciated only by reference to the extraordinarily ramified capital structure of the leading "national" newspaper-owning interests. We propose, therefore, to discuss the recent profit and dividend records of five such groups, by reference to the scope, internal organisation and financial liabilities of the related concerns in each case. Pride of place, on historical and investment grounds, may be given to the "Rothermere" companies, with their first cousin, the "Beaverbrook" group:—

"ROTHERMERE" AND "BEAVERBROOK" GROUPS.

* Before providing for losses of subsidiary companies, which largely exceeded dividends brought to profit and loss.
† Free of tax.

The "Rothermere" group is the post-war heir of the great journalistic organisation built up by the peculiar genius of the late Lord Northcliffe. The Daily Mail Trust now holds the latter's controlling interest in Associated Newspapers, which, in turn, owns, *inter alia*, the *Daily Mail*, *Evening News* and *Sunday Dispatch*. Daily Mirror Newspapers and Sunday Pictorial Newspapers own the picture papers which were formerly Lord Rothermere's more special *terrain*, a number of provincial dailies (in Derby, Lincolnshire, Swansea, Gloucester, Staffordshire, etc.), and various paper-making concerns, including the Bowater interests and the Anglo-Canadian Pulp and Paper Mills. The combine, in fact, is completely integrated through all the stages of newspaper production. Finally, the group companies are directly interested in Northcliffe Newspapers, which was founded in 1928 to

establish or absorb evening newspapers in important provincial centres—in other words, to be the spearhead of the Rothermere interests in the "provincial war," which was ended in 1930 on the basis of a division of territory.

Though the share market has not invariably been impressed by Lord Rothermere's incursions into politics—a branch of activity left to his elder brother in the old family days—it has always regarded the group's finances as the strongest of the major newspaper interests. The *Daily Mail* still carries more advertisements than any other "national" newspaper. The majority of the "Rothermere" companies, as the table shows, have a low-gear capitalisation, with few fixed charges ranking in front of their equity shares. This is a distinct advantage in a period of falling profits. *Daily Mirror* and *Sunday Pictorial* earnings, however, have fallen appreciably in the last two years, and the attempt to maintain ordinary dividends has been abandoned. The Daily Mail Trust has halved its distribution in respect of 1930-31, despite the stability of its earnings. Associated Newspapers, whose earnings are expected to show a moderate reduction for the year to March 31st last, has already reduced its quarterly deferred share payments from a 10 per cent. to a 5 per cent. basis.

All the "Rothermere" equity shares have shown a fair recovery from the lowest points touched earlier this year, but remain on an ostensibly high-yielding basis. This may be associated partly with the opinion that newspaper earnings have not yet touched bottom and partly with the guarantees given by the more to the less prosperous group concerns. In particular, uncertainty centres round the position of Northcliffe Newspapers, of which the Associated and Daily Mirror Companies have jointly and severally guaranteed £3,000,000 of 5½ per cent. debenture stock. This company's past policy, like the *Daily Mail*'s resumption of "free gift" competition last August, has been a testimony to Lord Rothermere's combative powers rather than to his proverbial financial acumen. In no year has the company earned all its debenture interest, and at June 30th last it had accumulated a debit balance of £200,617. Its asset depreciation was appreciably greater, since no provision was made last year for subsidiary company losses which "very largely exceeded" the dividends brought into the company's accounts. The end of the "provincial war" may have improved the immediate outlook, but the possibility that, sooner or later, the Associated and Daily Mirror Companies may be compelled to implement their debenture guarantee is obviously exercising the minds of shareholders.

The public is interested in Lord Beaverbrook's newspapers only through ownership of preference shares of London Express Newspaper and of £500,000 6 per cent. first mortgage debenture stock of Daily Express Building Company, issued in connection with the erection of the new Fleet Street offices, and guaranteed by the parent company. Lord Beaverbrook's original purchase of the *Daily Express*, at an ebb-tide in its fortunes, was undertaken on the advice of Lord Rothermere, and the Daily Mail Trust to-day has a substantial interest in the London Express Newspaper and Evening Standard Companies. Lord Beaverbrook's newspapers, though valuable profit-earning properties, have been vehicles for the expression of their proprietor's personality, rather than media for large financial schemes. Profits are expected to show some decline for the year to June 30th next, without entrenchment upon the margin available for the publicly-held preference shares. The "Rothermere" and "Beaverbrook" groups, clearly, have so far weathered depression fairly creditably, though the position as regards the former's contingent liabilities remains uncertain. In a subsequent article, we propose to examine the situation of the "Berry," "Inveresk" and "Odhams" groups.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.	
TICKET. May 24.	ACCOUNT. May 26.

DESPITE the long week-end, the upward trend of high-class stocks in general, and British Government securities in particular, was not immediately arrested. Profit-taking on Wednesday and Thursday was quickly absorbed. Elsewhere business was small, though prices were generally maintained. Renewed anxiety was displayed regarding the European situation, particular apprehension being felt as to the consequences of a possible Austrian default.

There was a renewed demand for gilt-edged stocks on Tuesday, when Funding Loan was dealt in above par. Victory bonds resisted the mid-week profit-taking. The strength of the new Treasury Bonds issue was conspicuous. Indian loans, however, were less active, following the grave reports of communal rioting. Dominion stocks were active, the Australian market showing new strength on the defeat of the Labour Government in Victoria and the dismissal of Mr Lang in New South Wales. Home corporation stocks were lower, in sympathy with Government securities, in mid-week.

The Foreign market was clouded by the assassination of the late Mr Inukai and by pessimistic reports concerning the position of Austria and Germany. Central European loans were all heavy, though a few buyers were found for Greek Sevens. The position of Japanese loans is dealt with on page 1147. A drop of five points occurred in the Peruvian Guano loan on Thursday. Brazilians were reactionary, the new 40-year Funding giving way sharply. San Paulo Coffee Sevens, however, were in moderate demand on the encouraging April figures.

The Home railway market was depressed, even prior charges being affected by the poor showing made by the latest traffic figures, which afforded comparison with a non-holiday week last year. Foreign rails were dull. The position of Argentine stocks is dealt with in a Note on page 1147. A little support was received for Antofagasta.

Industrial shares were quiet, but no further recession occurred in values. International shares were adversely affected by the unsettled tone of Wall Street. Anglo-South American Bank "A" shares were again marked down, quotations tending to become nominal, in anticipation of Thursday's statement regarding assistance from the central authorities (discussed on page 1128). Swedish Match improved on nebulous rumours of reconstruction proceedings. Electrical shares were firm, and brewery shares were bought from the provinces. Cables and Wireless resumed a downward trend. Engineering shares remained out of favour, and little interest was taken in iron and steel shares. Textiles obtained little benefit from the slightly improved results of a number of companies, referred to on page 1148. Tobacco shares were steady. Domestic banking shares were firm. Insurance shares moved in sympathy with conditions in the gilt-edged market.

The oil share market was buoyed up by rumours and counter-rumours regarding the conference in America. Royal Dutch and Shell found moderate support, Paris and Amsterdam being buyers on balance. Complete stagnation ruled in the rubber share market, the heavy reduction in London stocks of the commodity being regarded as an abnormal feature, associated with forestalling in connection with a proposed American import duty. Tea shares were as neglected as ever.

Listless conditions prevailed in the Mining share market. Kaffirs remained fairly firm on moderate Cape support, but Paris took little interest in her usual favourites. Rand Mines, however, advanced and held their rise. Among Rhodesians, Globe and Phoenix were firm, and "Chartered" also improved. Rio Tinto, however, declined on intermittent selling from the Continent. De Beers, similarly, were on offer from Paris.

FOREIGN STOCK EXCHANGES.

NEW YORK.

Though the volume of business tended slightly to increase, the markets remained dull and irregular. The worst selling occurred over the week-end, when many price indices reached new low levels. A series of half-hearted rallies followed, but sentiment remained depressed. The market did not welcome the prospect of summer sessions at Washington, but was impressed by the doubts voiced by Congress leaders as to the passing of the Tax Bill and other pressing measures in time for adjournment in June before the National Conventions. The bond market was easier in anticipation of a reduction in official purchases from the \$100 millions level of recent weeks. The possibility was canvassed of large issues of Reconstruction Corporation obligations at an early date. The arrangements made by the Corporation for "relief" in respect of railroads and other institutions were known to be heavy. The position of bankers in respect of reconstruction issues was questioned, the desire of the authorities to issue long-term bonds and the banks' policy of holding short-term issues being somewhat conflicting. Oil shares made the best showing in the equity market, thanks to the favourable movement of weekly production figures and increases in gasoline prices. An initial meeting of the members of the Oil Conference on Monday discussed competition in foreign markets, particularly in the Far East, and a separate meeting of representatives of the largest interests, on Tuesday, examined the possibility of special terms to Soviet producers. General trade remained stagnant. The business index of the *New York Times* for the week ended May 7th reached a new low point at 57.1, against 57.6 in the previous week. Freight-car loadings for the same week were 533,677, against 554,000 in the preceding seven days. Steel mill operations, however, were reported at the rate of 25 per cent. of capacity, the increase of 1 per cent. being attributed to the growth in Ford orders.

LONDON ACTIVE SECURITY PRICES AND YIELDS.

NOTE.—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

* 2-hour session.

PARIS.

The Paris Bourse remained unsettled, in view of domestic political uncertainties. Dealings were mainly professional, and the tone was pessimistic. South African gold-mining shares, however, largely withstood the prevailing tendency. A slight hardening of prices on Wednesday was followed by an all-round improvement on the following day.

	May 11, 1932.	May 13, 1932.	May 15, 1932.		May 11, 1932.	May 13, 1932.	May 15, 1932.

BERLIN.

Conditions on the Berlin Bourse were quiet and dull. Mining shares, exceptionally, were cheerful, and Reichsbank continued to improve, but other banking shares lost ground. Electricity issues proved reactionary and rayon shares showed weakness.

	Apr.	May	May		Apr.	May	May
	28,	15,	19,		28,	13,	19,
	1932.	1932.	1932.		1932.	1932.	1932.

Norddeutscher				Svenska Tandsticks	12	9½	12
Lloyd	16½	13	12½				

AMSTERDAM.

Business was restricted and quotations irregular. Royal Dutch were an active feature, on optimistic expectations regarding the world oil conference in New York. In mid-week, the tone became firmer. Improvements were recorded by Unilever and Philips Lamps. Little change occurred in sugar shares. Though quotations for rubber shares were steady, the volume of trading was very small.

	May 12, 1932.	May 13, 1932.	May 14, 1932.		May 12, 1932.	May 13, 1932.	May 14, 1932.

OTHER CENTRES

A paucity of business was experienced on most of the minor European Bourses. Quotations at Frankfurt had a heavy appearance, electrical shares being particularly weak. Swedish Match were slightly better at Stockholm, where conditions generally were firmer than of recent weeks. Brussels was hesitant and irregular, in sympathy with conditions in Paris.

INVESTMENT NOTES.

Australian Loans.—The rise in Australian Government securities following the dismissal of Mr Lang by the Governor of New South Wales, together with the rout of the Labour Party in the elections in Victoria, has stimulated business in the Australian market. Rises of several points have been general in New South Wales stocks, which have hitherto lagged behind the gradual advance in other Australian State loans. The following table gives the present prices of representative loans as compared with the lowest of 1932:—

	Lowest 1932.	Close on May 13.	May 19.	Yield %
Commonwealth 5%, 1945-75...	75	90 $\frac{1}{2}$	94	5 9 3
New South Wales 5 $\frac{1}{2}$ %, 1947-57	61 $\frac{1}{2}$	79 $\frac{1}{2}$	85 $\frac{1}{2}$	6 6 6
Do. 5 %, 1945-65	60	76 $\frac{1}{2}$	82 $\frac{1}{2}$	6 1 3
Queensland 5%, 1940-60	70	81	86 $\frac{1}{2}$	5 17 0
S. Australia 5%, 1945-75	69	86 $\frac{1}{2}$	90 $\frac{1}{2}$	5 13 6
Victoria 5%, 1945-75	67	85 $\frac{1}{2}$	89 $\frac{1}{2}$	5 15 0
W. Australia 5%, 1945-75.....	74	86 $\frac{1}{2}$	90 $\frac{1}{2}$	5 13 6

Until the elections in New South Wales have been held, it must not be assumed that Mr Lang and his Party have been eliminated from the political scene. The good impression already created, however, has been confirmed by a cable sent by Mr B. S. B. Stevens, the Acting Prime Minister of New South Wales, to the Agent-General in London, who had apparently circulated a pamphlet of the Lang Government containing proposals for a temporary suspension of interest. The Acting Prime Minister declares that the New South Wales Government has pledged itself on behalf of the people completely to observe the decisions of the last Premiers' Conference for the rehabilitation of the Commonwealth and the States. The Stevens Administration, he declares, "unreservedly accepts its responsibility to both internal and external bondholders." If the elections in New South Wales go the way expected, the political risk attaching to Australian Government loans will be considerably reduced. Market values should then be free to reflect the improvement in the economic and financial position of the Commonwealth.

Austrian Bonds.—The urgent appeal for help of the Austrian Government to the League of Nations has had a disturbing effect on the market in Austrian Government bonds. Dr. Buresch, the Austrian Chancellor, in his Note to the League, asking for the Financial Committee to be convened at once to consider means of saving the country from a financial catastrophe, indicated that Austria would be virtually bankrupt unless the League of Nations granted another loan. The country was faced, according to his statement, with the prospect of either exhausting its foreign currency reserves by assigning foreign exchange, as hitherto, for the service of the external debts, or of suspending the foreign debt service entirely. The latter decision would destroy Austrian credit if the League had not previously admitted that default was justified. On the other hand, the depletion of the foreign currency reserve might lead to a situation in which it would become impossible to obtain imports absolutely necessary for the population. The following table shows how the market in Austrian Government bonds has taken the shock of this announcement:—

	Highest Prices.		Present		
	1931.	1932.	May 13.	Price.	Yield %
					$\frac{s.}{d.}$
Austrian 6% Guaranteed Loan, 1931 ...	105½	100½	87	81	8 10
Austrian 7%	98½	50	39½	34	10 5 9

The Austrian 6 per cent. Guaranteed Loan was the first

The Austrian 6 per cent. Guaranteed Loan was the first of the League of Nations' reconstruction loans. It has always been popular with investors, partly because the loan is guaranteed as to both principal and interest by external Powers in the proportions of 24½ per cent. (each) by Great Britain, France and Czechoslovakia, 20½ per cent. by Italy, 2 per cent. (each) by Belgium and Sweden, and 1 per cent. (each) by Denmark and Holland. The guarantor States have deposited with the National Bank of Switzerland their own bonds of like tenor and currency to cover the amount of their guarantees in respect of this issue. This provision explains why Czechoslovakian 8 per cent. Sterling Bonds fell two points on Wednesday and four points on Thursday, the present price being 89. Apart from these guarantees, the Austrian 6 per cent. Guaranteed Loan is secured on the gross receipts of the Customs duties and the tobacco monopoly, which are paid into a special account. A default on this—the premier—League of Nations reconstruction loan would tend to damage the financial prestige of the League of Nations and to check any recovery in international lending of a large-scale public character.

Japanese Bonds.—The assassination of the Japanese Premier reminded the foreign bond market that there was a political as well as an economic risk attaching to investment in Japanese securities at the present time—a fact which had largely been overlooked. Apart from economic considerations, a country where a change of government by violent means is a present possibility can hardly enjoy as high a credit in the capital market as a country with more stable political institutions. To what extent political instability is due to economic difficulties is a matter for discussion. It was apparent that the last Government was unable to balance its Budget and, so far as we know, the present Government has not yet been able to introduce a new Budget to meet the present emergency in State finance. The Japanese Budget is divided into current revenue and loan programmes, and it is clear that the loan budget will be heavily increased. An internal loan of 500 million yen is already being canvassed. In addition to unemployment relief, the costs of military operations have to be provided for. It is probable that Japan may be committed to further expenditure in policing Manchuria, which may involve guerilla warfare of an expensive kind. With an uncertain Budget deficit, the possibility of inflation has, therefore, to be borne in mind. As regards the balance of trade, it is unfortunate that a single commodity—raw silk—accounts for as much as 40 per cent. to 50 per cent. of the total exports. Until a recovery occurs in America, which is the chief market for this product, the price of raw silk can scarcely be expected to rise significantly. The export of Japanese cotton goods has been affected by the boycott in China, the

increased tariffs in India and, before the suspension of the gold standard by Japan, by the competition of British goods selling in depreciated pounds. The depreciation in the yen should now enable Japan to meet British competition, but the stimulation to her export trade which a depreciated exchange would normally bring is lessened by the fact that nearly half the world is already off the gold standard. Japan is likely to seek a restriction of imports to balance her overseas trade, but for the time she may be faced with a debit on her international account. The next table shows the present prices of Japanese Government securities as compared with the highest prices ruling this year:—

	Highest Price, 1932.	Present Price.
Japan 4 per cent., 1899	64	49
Japan 5 per cent., 1907	80	62
Japan 6 per cent., 1924	91	70
Tokyo, City of, 5½ per cent.	83	65
Tokyo, City of, 5½ per cent. Con- version*.....	100½	74

* Payable in gold dollars.

While there is no present suggestion that Japan is likely to suspend her external debt service, it is significant that the assassination of the Prime Minister caused a fall of 3 to 4 points in Japanese Government bonds.

Argentine Railway Stocks.—The stocks of the "Big Four" railways of Argentina have recovered slightly from this year's lowest levels. The traffic figures for the first 46 weeks of the current year and the recent course of market quotations are shown below:—

Railway.	Gross Receipts 46 weeks 1931-32.	Compared with corresponding 1930-31.	Ordinary Stock.			Yield. %
			Highest Price, 1929-31.	Lowest Price, 1932.	Present Price.	
B.A. Great Southern....	Th. £ 9,561	Th. £ - 375	111	21½	27	£ s. d. 3 14 0
Central Argentine.....	9,846	+ 108	100	20½	23	4 3 0
B.A. and Pacific.....	5,733	- 468	108	12	14	Nil
B.A. Western.....	3,353	+ 12	100	15	20	Nil

The receipts make a mixed showing, and the trend of recent weekly returns has been downwards. The market, however, has been reassured by an interim statement made by the B.A. Great Southern early this month. This declared that the fall in gross receipts this year was more than offset by economies in working expenses, that exchange losses had been less than for the corresponding period last year, that the company had no bank overdrafts, and that there was no reason to anticipate difficulty in meeting debenture interest and preference dividends on their appropriate dates. A statement of similarly hopeful tenor was simultaneously made by the B.A. Western. The Argentine economic situation, at least, has not markedly deteriorated in recent months. Cereal prices have ceased to decline with the embarrassing rapidity of 1930-31. Crop yields for the season 1931-32 have been satisfactory. The new Government continues to show determination in following its policy of retrenchment. Further, although, under the present system of restriction, there is a certain artificiality in the exchange market for the peso, the railway companies' exchange losses may be lower this year than last. Nevertheless, even if the further decline in expenses on the B.A. Great Southern is common, in greater or less degree, to the other lines, it by no means follows that last year's ordinary dividends will be maintained. The last ordinary payment of 1 per cent. by B.A. Great Southern was not fully covered by earnings. The Central Argentine Railway, however, being more dependent upon certain descriptions of outward goods traffic, particularly maize, has reflected the slight improvement in the outlook somewhat earlier. In addition, its consolidated ordinary stock is relatively "high-gear," and any improvement through increased earnings and lower exchange losses will inure directly to the benefit of the ordinary stockholders, whose 1 per cent. dividend last year was fully covered. The B.A. Pacific is more dependent upon the wine traffic than the other lines, and in view of the downward trend of receipts, the

immediate position of the second preference stock is not certain. The debenture stocks, however, appear secure. The B.A. Western, which works in fairly close conjunction with the B.A. Great Southern, wrote off particularly heavy exchange losses last year. The payment of the 4½ per cent. preference dividend will probably depend upon a reduction in this item plus savings in working expenditure. Altogether, while it may be premature to expect an early and widespread recovery in ordinary values, the preference stocks of the best lines and the debentures of all the "Big Four" appear to have a reasonable position as regards immediate income. At their present prices—which the "industrial risk factor" has reduced below the levels of more prosperous times—these stocks now fall into the category of second- or third-line fixed-interest investments.

Important Ford Negotiations?—News of moment for shareholders in the Ford Motor Company, Limited, is given in the announcement that the president of the Canadian Ford Company, Mr Wallace Campbell, is sailing on May 21 with his export manager to confer with officials of the English company. At present the territories of operation of the various Ford companies are strictly defined. The American company supplies the United States and South America, Soviet Russia and the Far East. The Canadian company supplies the British Empire. The English company, through its Continental subsidiaries, supplies Europe and those parts of Asia and Africa either geographically or colonially related. This distribution was based on the manufacture or distribution by the companies of a mainly identical product. But Ford has now departed from his traditional policy of mass production of a single product for world distribution. The English company is engaged in the preparation of a new improved four-cylinder "A" model, as well as the new "Baby" Ford. The American company has produced an eight-cylinder model costing only \$50 more than the four, and as differences in running costs, in America, are comparatively small, the newer model may completely eclipse the old. If the American factory ceased, eventually, to manufacture the Four, Dearborn and Dagenham would be turning out totally different products. Much of the *raison d'être* for the limitation of distribution would then disappear. Furthermore, the highly efficient Ford sales and servicing organisation throughout the world would itself be the more profitable for being able to offer a range of cars. The withdrawal of all strictures on its market range would help Dagenham to obtain the output both technically and economically desirable. The coming negotiations between the Canadian and English executives next week may not immediately embrace so wide a scheme, but it would obviously be helpful if agreement were reached to allow the English company to export the new "Baby" Ford to the British Empire (at present the reserved territory of the Canadian company) in return for the opening of the European market to the Canadian company for exports of the new eight-cylinder Ford. At least half the British manufacturers' exports (by number) to all countries are in the "baby" class, while the Ford Eight would probably not be a formidable competitor on the Continent to the English company's Four. Under European conditions, differences in taxation and running costs will be considerable.

Fine Cotton Spinners.—The general impression that textile earning-power showed a slight but appreciable advance after the departure from the gold standard is borne out by the preliminary figures for 1931 of J. & P. Coats (summarised on page 1160) and the report of British Cotton and Wool Dyers (dealt with below). A similar conclusion is suggested by the figures of the Fine Cotton Spinners. A trading loss of £46,944 for 1930-31 has been replaced by a profit of £39,347 for 1931-32. The company, however, has earned neither its depreciation nor its debenture interest:—

	Year to March 31,		
	1930.	1931.	1932.
Profit	697,518	Dr. 46,944	39,347
Depreciation	180,000	180,000	150,000
Directors' fees	16,950	8,759	7,127

† After crediting £200,000, transferred from taxation provision, being no longer required.

Some £200,000 has been drawn from internal reserve to reduce investments in and advances to subsidiary companies. Cash for the present has virtually disappeared, and a bank loan of £175,747 is outstanding. Money on deposit with the company totals £462,519. Altogether, trade improvement must necessarily go much further before the company's position can be regarded as anything but tight. The £1 ordinary shares are quoted at 11s. 3d.

British Cotton and Wool Dyers.—The accounts of "Slubbers" reflect the improvement in the textile trades, which began last autumn. The company returns to the dividend list, with a payment fully covered:—

	Year to March 31,		
	1930.	1931.	1932.
Profit	110,226	37,638	80,842

† Including £11,523 from income tax account, not required.

The balance-sheet position remains liquid, available current assets being £425,241, against trade and loan creditors' claims outstanding of £91,812. The 5s. shares yield about £4 7s. per cent. at 4s.

Barrow Haematite.—In the *Economist* of July 5, 1930, and May 30, 1931, details were given of the scheme of arrangement by which this old-established company hoped to set its finances in order, and of the subsequent modification of the scheme pending the raising of new money. This week, particulars have been published of a new scheme which envisages at one and the same time a new financing and rationalisation of the company's affairs. The plan provides for the sale of the company's coal mines, coke ovens and by-product plant, etc., at Worsborough, near Barnsley, and elsewhere, to the Barnsley Main Colliery Company. In return the Barnsley company will allot to Barrow Haematite £109,225 7 per cent. debenture stock, 69,788 £1 10 per cent. cumulative preference shares and 179,059 £1 ordinary shares, and dent expert advice indicates that the amalgamation of the two colliery undertakings should result in considerable economies to both parties. The interest on the new prior lien notes is to be increased from 6 to 7 per cent., and the company will not have power to charge the floating assets in priority to the notes. The dates have also

necessarily been postponed when (a) the interest on the debenture stock ceases to be paid out of profits only; (b) the sinking fund in respect of the notes begins to operate, and (c) the notes fall due for redemption. The notes are now to be redeemed on December 31, 1950, by means of a sinking fund to be set aside each year from 1936. The company's overdraft, amounting to £141,670, is to be paid off, and the bankers are to advance up to £150,000 on the security of £165,000 of prior lien notes. Satisfactory arrangements have also been made with the Inland Revenue, as a result of which the latter's preferential claim is to be satisfied by the issue of debenture stock, and its non-preferential claims by the issue of ordinary shares. The scheme is conditional on the sanction of share- and stockholders of the two companies. The necessary meetings are to be held on June 7.

Waring and Gillow Receivership.—Sir Albert Wyon, a partner in Price, Waterhouse and Company, has now been appointed receiver and manager for Waring and Gillow. This follows a decision by Mr Justice Bennett in the Chancery Division on the motion of the United States Debenture Corporation and the Law Debenture Corporation, acting for debenture stockholders. The necessity for the appointment, according to a directors' statement, has arisen by reason of the contingent and exceptional liabilities incurred before the present directors took office in November, 1930. The principal liability is in connection with a large building site in the West End of London, which the directors have been unable to dispose of. Altogether, contingent and exceptional liabilities amount to over £600,000, of which about £325,000 may become real liabilities, as a result of which it has not been possible to complete the schemes for the provision of further finance referred to at the last annual meeting. At the same time, the trading position of the business has notably improved. A trading profit of £59,876 was recorded in the year ended January 31, 1932, against a loss of £96,284 for the preceding twelve months. Economies of over £200,000 were effected in overhead expenses in 1931, trade creditors were reduced by £145,346, and a reduction was also effected in the bank overdrafts of £164,762. A scheme of reconstruction may be submitted at an early date. The company's 6 per cent. first mortgage debenture stock is quoted at 74, and the 10s. ordinary shares at 2s.

Paper Company Profits.—Recently-published results of paper-manufacturing companies suggest that the industry is riding-out the depression reasonably well. Aggregate net profits of the eleven companies which appear in the table below amounted in 1931 to £964,036, compared with £975,783 in 1930. Six out of the eleven companies, in fact, increased their earnings:—

Name of Company.	Net Profit, 1930.	Ord. Div.	Net Profit, 1931.	Ord. Div.	Price, May 18.	Yield. %

* 14 months. † 10 months. ‡ Tax free.
(a) 8 per cent. pref. ord. (b) 5 per cent. cum. pref. 25. (c) 7 per cent. cum. pref. 21.

The industry was one of the few which showed an increase in the value of output, despite lower prices, between 1924 and 1930. Of recent years its productive capacity has increased considerably. Raw materials have declined steadily in cost. About 70 per cent. of capacity was employed last year.

Forestral Land Accounts.—Although the accounts of the Forestral Land, Timber and Railways Company for 1931 show a net loss of £22,583, against a profit balance of £362,142 for 1930, the difference is less than the figures suggest. The company's income is now mainly dependent on dividends received from subsidiaries, and whereas nearly 85 per cent. of the subsidiary companies' profits were declared as dividends in 1930, only 32 per cent. were so declared last year. In addition, depreciation, formerly charged in the parent company's accounts (the amount for 1930 being £175,539), is now charged by the subsidiaries. Although no losses were made last year by any of the subsidiary companies, as defined by the Companies' Act, 1929, the boards of these concerns have very properly decided to make adequate provision out of profits for the depreciation in the value of stocks held by them. The statement made by the directors of the parent concern shows that nearly 40 per cent. of their aggregate profits have, in fact, been set against previous debit balances on profit and loss account. The company may be congratulated on its efforts to render the position clear to shareholders. The parent company's accounts are fairly clearly set out. Holdings in every subsidiary are shown separately. The only item of a "portmanteau" character is that of trade creditors, which includes an unstated loss of a subsidiary company in 1930 and "provisions for outstandings." The profit and loss account shows exactly how much has been brought in from internal reserves, and specifies their character. Much the most interesting feature of the accounts, however, is the publication of complete and separate balance sheets for all the five subsidiary companies. For shareholders who possess the necessary time and ability to dissect and co-ordinate these figures the results will be of the highest value. It is clear, however, that if the subsidiaries were more numerous the annual accounts might assume inconvenient bulk. In any case, difficulties of interpretation by the outside investor are inevitable. One of the five subsidiary companies, for example, makes up its accounts in sterling, another in South African pounds, and the other three in Argentine paper pesos, Canadian dollars, and German marks respectively. It would be helpful, therefore, if the directors of the parent company could see their way next year to issue, in addition, a combined balance sheet and a combined profit and loss and appropriation account, on the lines of the Wiggins, Teape accounts, upon which favourable comment was made on page 1091 of last week's *Economist*.

The Oil Truce (?).—In an Investment Note of the *Economist* of May 7th, we referred to negotiations due to take place in New York between the international oil combines and representatives of the Roumanian and Russian oil producers. We incorrectly stated that the conference was called directly to discuss the world oil restriction scheme propounded by Mr Aug. Kessler, of the Royal Dutch Company (described in the *Economist* of March 26, 1932, page 695). No doubt an opportunity will be taken of discussing Mr Kessler's scheme, but the conference was directly called by representatives of the Socony-Vacuum Oil Corporation for the purpose of discussing marketing arrangements with the Roumanian, Russian, Royal Dutch-Shell, and Anglo-Persian representatives in the world areas of greatest competition. While no official statement has been made, as we go to press, it is apparent that the representatives of the Soviet Government are prepared to discuss the question of a marketing arrangement. We referred in our leading Stock Exchange article of April 30th to the negotiations for the purchase of the foreign properties of the Standard Company of Indiana by the Standard Oil Company of New Jersey, which would eliminate an important source of price-cutting. These negotiations have now been successfully completed and the managing director of the Standard Oil Company of Indiana has joined the board of directors of the Standard Oil Company of New Jersey. The price-undercutting by Standard Oil Company of Indiana marketing companies has not yet been stopped, and it may be mentioned that

the long-term contract which is held by the Petroleum Storage and Finance Company, which is marketing Cleveland Motor Spirit, has not been affected. Nevertheless, it is expected that revised selling prices will shortly be arranged with the Standard Oil of Indiana Companies so that undercutting will be eliminated. Whether an agreement will now be reached in New York with the Russian and Roumanian exporters remains to be seen, but there is at any rate greater prospect now than at any previous time of rationalised marketing and the elimination of price-cutting in the principal oil markets of the world.

Tea Share Outlook.—A more hopeful feeling with regard to the immediate prospects for tea company shares is attributable less to optimism regarding the effect of the new duties than to the favourable trend of statistical returns relating to the industry. Although London sale prices this year have averaged 1½d. to 2d. a pound below the corresponding figures for 1931, deliveries have made a satisfactory showing, the total for the first four months of this year being 213.4 million pounds against 184.0 million pounds and 157.1 million pounds in the corresponding periods of 1931 and 1930, respectively. The stocks in London warehouses which are estimated to handle about 90 per cent. of the imports, now stand at 171.2 million pounds against 212.0 million pounds a year ago and 234.8 million pounds two years ago. In other words, so far as the largest tea market in the world is concerned, recent reductions in prices appear to have been sufficient more than to restore equilibrium between supply and demand. The reports of leading plantation concerns issued in the last few weeks suggest that while earnings last year were appreciably reduced, the best companies (outside certain depressed areas), remained on a profitable basis and were able to make satisfactory dividend payments. The following table shows the last two years' results of eleven concerns:—

Company.	Net Profits.		Ord. Dividend.	
	1930.	1931.	1930.	1931.
Nuwara Eliya	111,307	125,891	37	38
Ceylon Tea Plantations	151,759	101,841	30	15
Lunuvu (Ceylon)	98,421	62,375	12½	10
Standard Tea of Ceylon	64,713	53,738	35	30
Eastern Produce	102,289	47,758	22½	10
Galaha	75,884	37,262	20	12½
Dimbula Valley	50,827	36,921	25	20
Ragalla	25,904	19,391	25	17½
Alliance Tea	17,940	15,705	9	7½
Pundaloya	13,944	15,663	25	25
Hanipha	14,727	15,167	12½	15

The experience of different companies has not been identical. Three companies—Nuwara Eliya, Pundaloya and Hanipha—increased their earnings and two their dividends last year. The majority, however, showed a reduction under both heads, the total profits of the eleven concerns being £532,000 in 1931, against £728,000 in 1930—a decline of 27 per cent.

Industrial Profits.—During April we received 244 company reports, aggregate profits showing a decline of 13.66 per cent., compared with 13.37 per cent. in March:—

Reports. Published in 1931—	No. of Companies.	Variation in Net Profits	
		(1931 compared with 1930).	%

Other Companies	71	20,785,998	19,789,883	— 4.79
Total	244	30,005,180	25,903,545	— 13.66

Brewery profits continued to decline, and hotel results were poor. Most iron and steel reports revealed a depressed state of affairs. The motor industry, as evidenced by Morris and Ford, showed a sharp decline in earning power. The most satisfactory showing, among the larger companies, was made by John Barker, Lever and Unilever, Imperial Chemical and Associated Portland Cement.

Copper Position.—World output "control" in the copper industry has so far brought little benefit to holders of mining shares, which remain at depressed levels. The further decline in the price of copper to little above 5 cents has caused renewed selling on the London metal market. Values in sterling now stand at approximately the same level as last September, when abandonment of the gold standard forced a rapid adjustment of quotations. Since the beginning of this year the setback has amounted to about £17 per ton and the losses to the trade have been heavy. Hopes were entertained that the revision of the curtailment programme down to 20 per cent. of capacity would effectively check the decline. In spite, however, of reports that stocks are being drawn upon, the downward movement is continuing. The main cause of weakness seems to be the apathy of buyers in the United States, many of whom are reported to be covered up to the end of this year at prices well above the present figure. In terms of gold, electrolytic copper is priced to-day at about £25 10s., and standard at £21 10s. These values are well below any previously recorded in the history of the metal. Without exception, every mine producing copper is losing money on its output, although complex ores bearing precious metals are possibly being worked at an all-round profit. Obviously, the strain of the present situation cannot be borne indefinitely. It is safe to assume that producers are already discussing plans for curtailment on a still more drastic scale. A number of mines have already been closed, and unless the agitation for a tax on imported copper in the United States succeeds, still more is unlikely, but additional curtailment must be put in hand if copper is to be saved from a further collapse—which would bring its value down to the level of lead and zinc.

General Mining and Finance.—In view of prevailing conditions in 1931, writes our mining correspondent, a further decline in this company's income is not surprising. Net revenue is £55,800, against £62,700. Depreciation, which twelve months ago absorbed £204,200, now requires £359,500. This involves the appropriation of the reserve of £300,000, leaving the reduced balance of £14,800 to go forward. Of the total depreciation, nearly £218,000 has been needed to write down the Witpoort holding to the amount expected to be realised on the liquidation of the company, whose assets have been sold to the Brakpan. The balance

is not a realised loss. Thanks largely to the repayment by the West Rand of advances made, the financial position is strong. Gilt-edged securities stand at £335,700, compared with £170,900 at the end of 1930. The surplus of cash assets over liabilities represents rather more than 20s. per General Mining share, the market quotation of which is around 15s. Moreover, the holdings show a very substantial margin over the balance sheet valuation. Unfortunately, exchange complications render it practically impossible to draw any very definite conclusions as to the position in this respect. The corporation is in need of fresh sources of revenue. The East Rand re-entered the dividend list last December, and the West Rand is expected to resume payments shortly, but the rates paid can scarcely be substantial. The Meyer and Charlton, which has had such a wonderful career, is to go into liquidation at an early date, and the Van Ryn must be near the end. The incursion into the domain of oil has proved far from profitable.

CAPITAL ISSUES.

The absence of any large capital flotation this week marks a lull in, rather than a check to, the new issue revival. Recent activity has done little more than clear off the arrears accumulated during the "sterling crisis." Not all the capital expenditure undertaken by public bodies and large industrial concerns, and financed by temporary accommodation, has as yet been funded, and a start has scarcely been made with the provision of appreciable amounts of money for new capital expenditure. The suggestion that the ground is to be kept clear, as far as possible, with a view to an early British Government operation of the first importance is, of course, pure surmise, in which the wish may be father to the thought.

Bognor Gas and Electricity.—Offer for sale by tender of £25,000 5½ per cent. redeemable debenture stock, minimum price £102½ per £100 stock, yielding at that price £5 5s. 4d. per cent., allowing for redemption at par on December 31, 1950. The net revenue of the company for the year ended December 31 last was £19,707, covering interest on the debenture stock, including the present issue, nearly four times. The company was established in 1865.

South Shields Gas Company.—Sale by tender of £20,000 ordinary stock. Standard rate of dividend is £5 per cent., but over the last eleven years the dividend paid has been at the rate of £5 15s. per cent. per annum. Minimum price of issue, £90 per cent.

PERUVIAN GOVERNMENT 7½ PER CENT. (GUANO) LOAN OF 1922.—J. Henry Schroder and Company are informed by their representatives in Lima that, in accordance with decrees in connection with the suspension of the service of the exterior debt, the Government has directed the Guano Company to hand over all its receipts to the Treasury. The reserve funds in the hands of the bankers are sufficient to pay the coupon falling due on June 1st next, but will not also provide for the current operation of the sinking fund. Baring Brothers and Company, Ltd., and J. Henry Schroder and Company are continuing to make the strongest possible representations to the Peruvian Government, and have applied to the British Foreign Office for official support.

THE BENGAL IRON COMPANY, LTD.—The directors expect to issue the accounts for the year ended March 31, 1932, early in August next, and regret to inform shareholders that, owing to the continued world depression in the iron trade, the result for the year, after providing for debenture interest, will show a substantial loss. Draconic economies have been made, the full benefit of which will only accrue in the current year. The blast furnaces still remain closed down, and the demand for pig iron is at a very low ebb. The foundries have been fairly busy during the year, but owing to continued restriction of buying by the railways, the sleeper foundry is short of work. Last month, however, some fair orders were booked for castings. The output of the collieries is well sold forward, and two batteries of coke ovens are making coke for outside orders.

THE CHARTERHOUSE INVESTMENT TRUST, LTD.—The directors have had under consideration the accounts of the trust for the period from November 12, 1931, to April 30, 1932, particularly with a view to deciding upon the declaration of an interim dividend. The profits of the trust to date compare satisfactorily with those earned in the same period of the last financial year, but since the major part of the trust's investment income is normally received during the second half of its financial year, and the outlook for profitable financial business is still so obscure, the directors have decided to postpone consideration of the dividend until the accounts for the full year to November 11th next are available. A valuation of the securities held by the trust, based in the case of quoted securities upon current quotations, and in the case of unquoted securities upon a valuation made by the board, shows in the aggregate a depreciation which is more than covered by the trust's reserve funds, thus showing the capital of the trust intact with a surplus. There are no bank loans, guarantees, or similar indebtedness outstanding, and the liquid position as shown by the last accounts has been fully maintained.

COMPANY MEETINGS, &c.

LUNUVA (CEYLON) TEA AND RUBBER ESTATES, LIMITED.

MR H. J. WELCH REVIEWS THE POSITION AND PROSPECTS
DIVIDEND OF 10 PER CENT.

The twenty-fifth annual general meeting of the Lunuva (Ceylon) Tea and Rubber Estates, Limited, was held, on Wednesday, May 18, 1932, at 11 a.m., in the Council Room of the Rubber Growers' Association, 2-4, Idol Lane, London, E.C.

The Chairman, Mr H. J. Welch, presided.

The Secretary (Mr J. E. Ritchie) having read the notice convening the meeting and the auditor's report,

The Chairman said:—Ladies and Gentlemen,—The year has been a very difficult one for producers of raw commodities all over the world. We perhaps may find some cause for a restrained satisfaction in the fact that as a net result of our operations the company is able to pay a dividend of 10 per cent. for the year and increase its carry-forward by £3,664, after providing out of profits a sum of £27,393 for depreciation and also £9,500 to cover a new liability for Ceylon income tax.

BALANCE SHEET.

By comparison of this year's balance sheet with that of last year it will be seen that the capital cost of our estates has increased by £15,494, being the balance of expenditure on buildings, machinery, development, etc., after deducting the depreciation written off for the year.

Sundry debtors and payments in advance have increased by nearly £21,000. This is accounted for by an increase of £18,285 in the amount due to the company from brokers for produce sold—which amount has since been received.

The total cash and investments, amounting to £102,795, were £3,000 less than last year.

On the liabilities side our issued capital remains at the same figure as for the last five years, viz.:—£632,758, and the general reserve is unaltered at £245,000.

From the note at the foot of the balance sheet it will be seen that the amount in the hands of the trustees of the staff deposit and retirement funds is now £10,772. This is invested in gilt-edged securities outside the company's control, and shows an increase of £2,200 for the year.

PROFIT AND LOSS ACCOUNT.

A comparison of the profit and loss account with that of last year shows that our proceeds of sales of tea, rubber and copra realised £57,000 less than in 1930. Our sundry receipts and interest accounts combined are practically the same.

On the debit side the cost of production of our increased crop of tea was reduced by £11,000; we spent £17,700 less upon our small production of rubber and the maintenance of the rubber estates, and £1,800 less upon the production of copra. In the cost of production a new item appears, of £9,500 reserved for local taxation. Under a recent law passed in Ceylon a liability has arisen for tax payable during the current fiscal year in respect of profits earned in 1931, and in accordance with the general practice of plantation companies an estimated amount sufficient to cover this liability has been included in the cost of production for the year in which the profits were made.

Freight, marine insurance and selling charges have cost us slightly less than in 1930. The item of loss on revaluation of rubber stocks arises because the board thought it well to be on the safe side and value these stocks at 1d. per lb. net. I hope their valuation will be found conservative, and that at least part of this item will come back to us. The balance of net profit is £37,259 less than for 1930.

TEA PROPERTIES.

We now have 6,909 acres of tea and tea nurseries planted on nine estates, of which about 6,292 acres are in plucking. Only two of the estates produce what is known as low-grown tea, the remainder being of medium or fairly high elevations. We are planting this year additional small areas to five of our estates, totalling in all 229 acres.

The total crop of tea in 1931 of 4,905,895 lbs. was the highest ever recorded by the company. The average yield per acre of 780 lbs. was the highest but one ever obtained by the company.

The price realised, however, was the lowest since 1923, whilst the net profit per acre of £11 11s. 3d. was the lowest since 1926.

The f.o.b. cost of 10.27d. per lb. was lower than any year since 1927. In recent years the tendency has been for the cost of tea production to rise considerably owing to the higher cost of staffs, labour, materials, etc., but with the harder times through which we are now passing, it is reasonable to expect a much cheaper production. I am glad to be able to tell you that our estimates for this year show a further reduction on the cost of last year.

During the year we carried out upon our tea estates our full usual programme of manuring and cultivation and of improvement generally by road making, etc. We extended our existing tea areas by 173 acres of new plantings. We also expended £23,000 odd upon extension and improvement of our factories and upon new machinery, etc., in continuation of our policy of increasing the facilities of our staffs for manufacturing the highest quality teas which will give the greatest profit per acre for their respective estates. Plans and estimates are also now being prepared for a second modern factory on our largest tea estate to deal with the increasing crops from that property.

RUBBER ESTATES.

The company owns 4,200 acres of planted rubber, of which about 3,300 acres are mature and tappable. About 700 acres were rested all through the year, and tapping was stopped gradually on the remainder between the months of February and May, when all production ceased. The directors decided that as rubber is not the company's principal product and as many of its estates are tea-cum-rubber estates, taking the long view, it would gain by resting the areas and conserving the bark whilst prices remain so unremunerative. Unfortunately cessation of tapping did not enable all the economies made to become operative for the whole year, and the expenditure (which included £3,287 written off for depreciation of rubber estate buildings, machinery, etc.) accordingly was heavy.

The company is completing its budgrafting programme of the young rubber on its Vykumbra property, but it does not contemplate any extensions. Its policy will be to maintain as economically as possible its rubber estates in such a manner as to avoid any permanent deterioration of their capital value.

The company will not again produce rubber until the directors are of opinion that the world stocks and the price justifies it. When we are able to resume tapping, our bark reserves and the productive capacity of our rubber estates should be much enhanced as a result of the rest which is now being given them. There is little doubt also that the company will then be able to put in force the more economical methods of production which the depression has taught the industry.

COCONUTS.

We have 860 acres of coconuts, and although until last year they have always shown us a profit, the results from our coconut estates have not been satisfactory in recent years. Since 1928 the average price realised for Ceylon copra has steadily fallen, and now very few European owned estates find their production of copra reasonably remunerative.

At our meeting last year I stated that the company was making strenuous efforts to reduce its cost of production of copra. I am glad to say these efforts were very successful, and although our crop for 1931 was only slightly larger than for 1930, the f.o.b. cost of production was reduced from £15 19s. 11d. to £10 12s. 2d. per ton, which included nearly £1 per ton for depreciation. Consequently in spite of a fall in the average net price realised of £4 per ton, the loss per acre was 11s. 11d., or less than half that for 1930.

ESTATES GENERALLY AND STAFFS.

It may be of interest to you to know that if allowance is made for our surplus of liquid assets (which amounted to £34,689 after providing for our proposed final dividend and appropriations) our estates were capitalised upon December 31st last at £45 7s. 4d. per planted acre.

Two of the company's directors, Mr Horner and Mr Mackie, have visited all our properties since the date of our last meeting, and their visits have been of great value to the board in dealing with special problems arising out of the depressed conditions and in

relation to the general affairs of the company. I will ask both these gentlemen later to tell you the impression they gained on their visits and I will now say little about the condition of the estates generally, except that they have all been well maintained and many, I think, considerably improved during the year.

Our local staffs have worked loyally and well and they and our agents, visiting agents and secretaries (including Mr Ritchie, our acting secretary) are all deserving of our warmest thanks.

ESTIMATES AND PROSPECTS FOR 1932.

Apart from any expense which may be incurred this year upon our projected new factory to which I have referred, our estimated capital expenditure for the year is £6,225 in excess of the £29,000, the estimated amount which will be written off for depreciation.

For 1932 we estimate to produce 5,117,700 lbs. of tea, 542½ tons of copra and no rubber. We hope to produce our tea and our copra at a lower cost. The present estimated expenditure for caretaking and maintenance of our mature rubber areas amounts to about 20s. 9d. per acre, excluding depreciation and London expenses, but we hope to be able to effect further economies on this cost.

In the present chaotic state of the world's finance and industries it is more than usually difficult to give any reliable forecasts of the results for the current year. The world production and consumption of tea last year almost balanced, but the world stocks are doubtless too high. It is yet too early to say what, if any, will be the effect on prices of the new duty on tea and the preference given to Empire grown tea. It seems to me, however, reasonable to suppose that the imposition of the duty must tend to decelerate the increase of consumption of tea in this country, which is the world's largest consumer, and also to accentuate the severity of the competition in foreign markets of other teas with those of Empire growth. Consequently, in my opinion, if any benefits accrue to Empire growers from the duty, such benefits will probably prove to be only of a temporary nature.

The quality of the bulk of this company's teas, however, is well above average, and is such that we may reasonably hope that there will always be a demand for them at a price which will be remunerative to the shareholders.

The current price for copra is equal to about £12 per ton net as compared with £9 18s. 11d. per ton net realised for the crop last year. I am glad, therefore, to be able to state that at the present price the production of copra shows us a profit.

With regard to rubber, there are some signs of diminution of world production, but at present, unfortunately, it is quite insufficient to bring about the much desired reduction of world stocks. It is gratifying to know, however, that the world outside the U.S.A. has fairly well maintained its consumption since the peak year of 1929. The fall in consumption since that year has practically all taken place in America. But until American business again revives and American absorption of rubber is substantially increased, there does not seem much hope of a reasonably remunerative price being obtained for this product.

In conclusion, there is no doubt the fall in the company's profits and dividend is attributable to the world depression, the effects of which this company could not hope to escape. The past progressive policy of the company in relation to the maintenance and improvement of the agricultural value of its properties and their equipment with modern factories and machinery has rendered the maintenance of a dividend possible. It also gives us confidence that we are well prepared to reap the full benefits of any advantages from any improvement in the world's finances and industry which may accrue to the industries in which we are engaged.

I now beg to move "that the directors' report and the statement of accounts for the year ended December 31, 1931, as now submitted be approved and adopted, and that a final dividend of 6 per cent., less income tax, in respect of the year ended December 31, 1931, be paid on May 21, 1932." I will ask my colleague Mr Horner if he will kindly second this resolution.

Mr H. W. Horner: I have recently had the opportunity of visiting again all this company's estates after an absence of some years. I do not propose to take more than a few minutes of your time, but I can say that, without exception, all have much improved in general condition. The tea estates, to which, in present circumstances, we have to look for our profits, have improved since I last saw them both in agricultural condition and in equipment generally, including factories, buildings, roads and so forth, which view I know Mr Mackie—whose visit preceded mine by two or three months—will endorse. The company has spent large sums in the past few years in this direction, as you know, the results of which expenditure are reflected in the accounts before us to-day, since, unless our properties had been in the first-class condition they are, results would have been far less satisfactory under the condition of the tea market which we are now meeting. The rubber estates, too, are in excellent order, and will be maintained this year at a minimum cost, in circumstances the chairman has mentioned. I think it is

safe to say that there is no company in Ceylon whose estates generally are in better condition than ours to make the best of market conditions of the different products in which we are interested, which will doubtless vary from time to time in the future as they have done in the past.

LOYALTY OF THE STAFF.

As regards the staff, I cannot speak too highly of the men in charge of our valuable properties, and I find it difficult to convey the spirit of loyal effort—on keen and efficient lines—which is manifest everywhere. We are—and we ought to feel—much indebted to them. They do not figure in the balance sheet, but are none the less among the company's most valuable assets.

I have much pleasure in seconding the resolution proposed by your chairman.

Mr John Mackie, who was re-elected a director for the ensuing year, said:—I have much pleasure in endorsing all Mr Horner has said. I travelled through a large portion of the tea districts in Ceylon and practically the whole of South India, and I can honestly say I saw no tea in better agricultural condition than our own, while our factories are fully equipped in every way.

As Dr. Norris, the head of the Ceylon Tea Research Institute, said to me when I visited him: "We have nothing to show you Lunuva men; your factories are just as up to date as ours."

Our rubber areas are all being well cared for, and with regard to our small area of coconuts I was impressed with the system of cultivation being carried out there. It is cheap and effective, and our yields are increasing. When the coconut comes into its own again, as I think it undoubtedly will, this estate ought to do well.

I entirely agree with what Mr Horner says regarding our staff—a more efficient body of men, from the visiting agent downwards, it would be difficult to find anywhere, and we are indeed fortunate in this respect.

I can assure you it was a great pleasure to me to visit such fine well-managed properties.

The auditors were re-elected, and the proceedings were terminated with a hearty vote of thanks to the directors and staff in the East.

MADRAS ELECTRIC SUPPLY CORPORATION, LIMITED.

IMPROVED TRAMWAYS REVENUE.

The ordinary general meeting of this corporation was held on the 18th instant, at 1 Queen Victoria Street, London. Mr John G.B. Stone (chairman of the company) presiding.

The Chairman, in the course of his speech, said: While the net results for the year exhibit what I regard as gratifying progress, it is necessary to explain why the revenue from "Private lighting and fans" and "Street lighting" has been stationary, notwithstanding that the usual number of new consumers was connected to the mains. On this point our agent in Madras reported as follows: "The decrease is entirely due to consumers exercising strict economy in current consumption, on account of depressed conditions of trade, and consequent reduced incomes. The falling off in receipts under this heading has been especially noticeable since October, 1931, when the heavy increases in import duties and income tax came into force." Fortunately, the increased demand for power more than counteracted the stationary demand from other sources.

The balance on the net revenue account, which represents the net profit for the year, is £66,656, showing an apparent decrease of £2,354, which is more than explained by the increased provision for depreciation. The directors recommend appropriations as follows: (1) Provision for three months' preference dividend accrued to December 31, 1931, £4,493; (2) payment of a final dividend of 5½ per cent. on the ordinary shares, making 8 per cent. for the year, free of income tax, £26,026; and (3) transfer to general reserve fund, £10,000 (bringing that fund up to £130,000). These provisions make a total of £40,519, leaving to be carried forward to next year's account £11,451.

The improved return on our investment in the tramways reported last year has made further progress. The net profit amounted to £18,206, including £6,520 brought forward. We are of opinion that the popularity of the tramways over omnibuses has been established, and the management is doing everything possible by various methods to make the tramway still more popular.

To meet our further requirements, the whole of the authorised capital of the corporation having been issued, it is proposed to increase the amount from £800,000 to £1,100,000, divided into 476,800 preference shares and 623,200 ordinary shares of £1 each. The new capital will be offered forthwith to the shareholders in the form of preference shares (ranking pari passu with the existing five and a-half per cent., tax free, preference shares) and ordinary shares.

The report and accounts were adopted.

At an extra-ordinary general meeting which followed, a resolution increasing the capital of the corporation was carried unanimously.

HAMBROS BANK, LIMITED SCANDINAVIAN EXCHANGE CONDITIONS.

The twentieth annual meeting of Hambros Bank, Limited, was held, on the 19th instant, at the offices of the bank, No. 41 Bishopsgate, London, E.C.

Mr R. Olaf Hambro, the chairman, who presided, said that their chief business was with the Scandinavian countries, and it was a matter of considerable interest to them whether those countries remained on a gold basis or followed sterling. Very wisely, in his opinion, they had decided to follow sterling; any other course would have been disastrous to their export trade with this country. As a result the bank's business with those countries had not decreased to any great extent. The Swedish kroner had lately been quoted below sterling parity as a consequence of a well-known financial trouble. The board were, however, convinced that that would prove to be a temporary condition.

In Denmark, owing to wise handling through an Exchange Control Board, the Danish kroner had been kept comparatively steady. On principle they were against those control boards, but the board thought in times of extreme difficulty they had a steady effect, although immediately the situation became more normal they should be given up. A very good example might be seen in Finland, where, as a result of economies and judicious control, the exchange had been stabilised in relation to sterling and a favourable trade balance achieved.

The Greek Government had been suffering for want of foreign exchange, owing to an external debt and an adverse trade balance, but Greece, although she had borrowed largely, had spent the money well, and the expenditure would in time produce its own foreign exchange. Their experience of that country inspired them with confidence, in spite of the present very difficult situation. The bank's commercial engagements in Greece were not large, and did not cause any anxiety.

In Germany over 75 per cent. of their engagements consisted of credits granted to banks, including the Gold Discount Bank; in Hungary commitments were small, and in Austria they were almost entirely represented by a debt due by the Credit Anstalt.

The profit and loss account showed a very satisfactory result in a difficult year, with a net profit of £291,188, after providing for all bad and doubtful debts. In view of the general uncertainty the directors had thought it prudent to recommend a reduction of the final dividend, making a total for the year of 18 per cent., as against 22½ per cent. last year.

The report and accounts were unanimously adopted.

RIO DE JANEIRO CITY IMPROVEMENTS COMPANY, LIMITED.

RELATIONS WITH THE GOVERNMENT.

The 70th ordinary general meeting of the Rio de Janeiro City Improvements Company, Limited, was held, on the 17th instant, at Winchester House, Mr. Edward Greene presiding.

The Chairman, in moving the adoption of the report and accounts, having expressed the keen regret of the chairman at his enforced absence, through indisposition, read the speech prepared by Lord Hunsdon. The address, after referring to the adverse conditions which had operated in Brazil, in common with the rest of the world, went on to state that, in spite of these conditions, the board had decided to recommend the payment of the usual dividend, and he hoped that the shareholders might assume the decision to return to constitutional Government signified that those now in authority were of opinion the worst of the crisis was over. During the seventy years of the company's existence the Government's obligations towards it had been strictly fulfilled, and he believed that even in this unprecedented world crisis they had done their best to carry them out. In accordance with the shareholders' authorisation in November, 1926, a contract for extensions of the works within the near watersheds of the districts already drained was signed, but had not yet been legalised. Early in 1931, at the request of the Minister, a revised proposal was submitted to him involving a further extension of the system and a higher payment per house drained. This was not accepted, and towards the end of the year a desire to revert to the terms of the 1926 contract was evinced as being more in keeping with the financial conditions of the times. There the matter rested. It was to be hoped the 1926 contract would be legalised, and that, when conditions in Brazil had sufficiently improved, the works provided for would be carried out. For the contract, besides involving an extension of the system which was highly desirable for the comfort and health of the city, settled many points which had from time to time arisen in the interpretation of the existing contracts.

The report and accounts were unanimously adopted.

WILLIAM BEARDMORE AND COMPANY, LIMITED. DIFFICULT CONDITIONS.

The annual general meeting of William Beardmore and Company, Limited, was held, on the 18th instant, at River Plate House, London, Mr H. A. Reincke (chairman and managing director) presiding.

The Chairman, in moving the adoption of the report and accounts, said that the depressed state of affairs in the shipbuilding industry, on which Parkhead and Dalmuir were largely dependent for work, was reflected in the balance sheet. It was with much regret he had to report an increased trading loss on the operating departments. Much as that was to be regretted, it could occasion no surprise to anyone familiar with the increased stagnation in the trades the company served. It was becoming increasingly apparent there could be no rapid change for the better in the fortunes of the company, and it had consequently been necessary to resort to further devices to keep down expenditure and to husband the resources of the company. Reductions had been recently effected in the fees and salaries of directors and officials, as well as in those of the other members of the staff, and the number of people employed had been considerably reduced.

They must not build immediate hopes on the effect of tariffs. Bearing in mind that the depression in the export trade was due not only to difficulty in meeting foreign competition, but also to the lack of purchasing power the world over, it was easy to see that, even when they had exhausted every opportunity afforded them by the protection of tariffs to increase the efficiency of their industry, their main hope of recovering world trade still rested on the result of the statesmanship of the rulers of all nations and their endeavours to bring goodwill and tranquillity to a distracted world. He did not, however, despair of the future. What he had been at pains to point out was that the reward of the endeavours which had been made, and which they would continue to make, could not in any circumstances be an immediate one and could not, indeed, be looked forward to unless and until means beyond the control of industry were found to engender an effective demand for goods and services in the export markets of the world. It must not be forgotten that some of their works were the finest and best-equipped of their kind in Scotland, and if the steel industry in Scotland had any future at all—as it must have—that future was one in which those works must play their part.

The report and accounts were unanimously adopted.

WIGGINS, TEAPE AND CO. (1919), LIMITED.

SIR WYNDHAM R. PORTAL'S STATEMENT.

The thirteenth annual general meeting of Wiggins, Teape and Company (1919), Limited, was held, on the 19th instant, at Winchester House, Old Broad Street, London.

Col. Sir Wyndham R. Portal, Bart., D.S.O., M.V.O., chairman of the company, said:—Ladies and Gentlemen,—The report and accounts have been in your hands for the requisite period, and I propose, with your permission, to take them as read. Trading conditions during the year 1931 were exceptionally difficult, both in the home market and in the various export markets in which your company and its subsidiary companies trade. Although the year began quite hopefully, trade became worse as the year progressed, and was particularly bad during the latter part of the year. When commenting on the prospects for the year 1931, on the occasion of our last annual meeting, I referred to the centralisation of our organisation and the system of central buying which we had inaugurated. It is largely due to economies obtained with the assistance of these measures, and to lower working costs, that we are able to put before you, for your consideration, and I hope approval, what I suggest should be considered a satisfactory balance sheet.

OUTPUT AND SALES IN 1931.

I am sure you will all agree with me that the year 1931 was a most difficult year for trade. Despite this, the volume of the trade of the Wiggins Teape group of companies in the home market has only suffered to a small extent, as compared with the year 1930. The export trade for 1931 showed a further larger falling off compared with that for the year 1930. In this respect our experience is no different from that of most of the trades in this country engaged in sending goods abroad. In consequence of our reduced sales the total output of paper from the mills of your company and those of the subsidiary companies shows a reduction in the year 1931 as compared with the total output for the year 1930.

DIVIDEND.

Your directors recommend the payment of a final dividend of 7 per cent., less income tax, making with the interim dividend a total dividend for the year 1931 of 10 per cent.

PROSPECTS FOR 1932.

During the current year the trading operations to date, taking into account the continuing trade depression, have been satisfactory. However, it would be highly dangerous of me to prophesy in times such as we are now passing through. I can say this, however, that if conditions get no worse we hope to be able to meet you this time next year with a balance sheet at least as satisfactory as the one we have been considering to-day.

Messrs. Sissons and Company, our accountants, are considering a scheme for us to put into operation whereby we shall be able to provide our shareholders with quarterly progress reports.

The report and accounts were duly adopted; the dividend, as proposed, was approved; the retiring directors were re-elected, and the auditors were reappointed.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper Ltd.,"

8, Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

BULLION.

The following statistics of imports and exports of gold for week ended May 19, 1932, are issued by the Statistical Department of H.M. Customs and Excise:—

Imported into Great Britain and Northern Ireland.	Exported from Great Britain and Northern Ireland.
From—	To—
Other Dutch Possessions in the Indian Seas	Germany
France	Netherlands
United States of America	Belgium
British West Africa	France
British South Africa	Switzerland
Kenya	Austria
Anglo-Egyptian Sudan	Czechoslovakia
British India	
Straits Settlements	
Australia	
New Zealand	
Other countries	

Total declared value of imports 2,491,740
 Total declared value of exports 1,597,011
 Messrs. Samuel Montagu and Company write on May 18, 1932, as follows:—

GOLD.

The Bank of England gold reserve against notes amounted to £120,816,394 on the 11th instant as compared with £120,816,341 on the previous Wednesday.

An interesting event of the week was the purchase by the Bank of England on the 14th instant of £2,012,665 in bar gold. This is the first time since the suspension of the gold standard by this country in September of last year, that a purchase of gold of any consequence has been announced by the Bank.

The gold available in the open market has been taken for the Continent and for a destination not disclosed.

Quotations during the week:—

Average of above 5 days

The s.s. "Comorin" which left Bombay on the 14th instant carries gold to the value of about £666,000.

SILVER.

The steady tone of the market was maintained during the past week. On the 12th instant there was a rise of ½d. in both quotations to 17½d. and 17½d. for cash and two months' delivery respectively, owing to demand from China on a poorly supplied market. The rise in silver followed the receipt from Washington of news to the effect that President Hoover had agreed to submit to the various Government departments for study a proposal that the United States should accept payment of War Debts in silver until 1936. Although the prospect of the adoption of such a proposal seems very questionable, it is possible that the sentimental effect of the news induced some of the speculative buying.

Prices fluctuated subsequently, with some speculative re-selling. China both bought and sold, but the Indian Bazaars and America were more disposed to give support. The undertone still appears steady, but present indications are that any advance would attract offerings from China.

The following were the United Kingdom imports and exports of silver registered from midday on the 9th instant to midday on the 14th instant:—

IMPORTS.	£	EXPORTS.	£
France	112,880	British India	38,913
Belgium	9,865	Belgium	16,650
Australia	14,307	Other countries	4,165
British South Africa	3,548		
Other countries	4,628		
	145,228		59,728

REPORTS AND NOTICES.

MISCELLANEOUS.

WESTERN UNION TELEGRAPH.—Gross operating revenues for 1931, of the Western Union Telegraph Company, Ltd., amounted to \$108,736,949, against \$130,581,858 in 1930. Operating expenses were lower, being \$99,215,430, compared with \$118,941,140. The balance to surplus account was \$5,974,499, compared with \$9,247,032, while the balance at the end of the year was \$93,333,051, against \$95,692,697 at the end of 1930.

J. AND P. COATS, LTD.—A rise in net profits from £1,809,852 for 1930 to £2,024,363 for 1931 is recorded in the preliminary statement of Messrs J. and P. Coats, Ltd. The directors have brought £250,000 from dividend reserve. The sum of £200,000 is set aside for investment depreciation and £550,000 for exchange differences. The ordinary dividend is reduced from 15 per cent. to 10 per cent. for the year. The following comparisons are interesting:—

	To December 31.	1929.	1930.	1931.

Commercial Reports.

MARKET SUMMARY.

In the absence of any signs of an expansion in the world's industrial activity, the principal international commodity markets have been dull and price movements showed a weakening tendency. Among non-ferrous metals, the New York quotations for tin, copper and spelter were all lower than a week ago. Rubber recorded a new low level at 3 cents per lb. and cotton failed to improve. Among cereals, wheat, maize and oats are scarcely changed on the week, but rye continued to decline, and, at about 36 cents per bushel, shows a fall of 18 per cent., as compared with the level of a month ago. Raw sugar has been a little steadier and coffee was firm, but cocoa lost a few points. Sterling quotations of commodities which lend themselves to grading and therefore to international arbitrage, moved in sympathy with gold prices. The price of commodities such as tea, meat and dairy produce which are determined largely by the demand in this country, showed a downward tendency. According to various reports from industrial centres, the coal trade suffers from a shrinkage in export orders and from the decline in the demand for house coal, while industrial consumption fails to expand. Transactions in iron and steel manufactures continue on a small scale. There has been a slight increase in the demand for cotton goods in India. Activity in the wool trade has been maintained, but business in rayon yarns and fabrics has been a little smaller.

THE COAL TRADE.

SHEFFIELD.—Quietude prevails in all sections of the coal industry, although there is no surplus of best quality steams, which maintain former prices, namely, 15s. 6d. to 16s. f.o.b. Secondary qualities are in abundant supply with prices rather weak. Sales of house coal have fallen off still further and merchants are ordering with extreme caution. Best South Yorkshire house is quoted at 21s. and 22s. at pits. The call for industrial fuel does not expand. There is a surplus of blast furnace coke and bargains have been picked up at 10s. and 10s. 6d. at ovens. The nominal quotations are about 12s. or 12s. 6d. at ovens.

GLASGOW.—Fairly good shipments for the season continue to be made from Scottish ports, but these to a great extent relate to coastwise orders (prices for which are keenly cut), and export business remains restricted. As a result of import restrictions in certain countries competition is the more severe in the free markets, but Scandinavian buyers, especially Danish, appear still to favour the British product. With the return to work of the Fife miners the market is more subdued, but washed doubles and Fife steams are as yet none too plentiful. Shipment prices and Fife district ports: LANARKSHIRE.—Ell best, 14s. 3d.; splint (f.o.b.), 15s. 6d.; splint second, 14s. 3d.; navigation, 15s.; navigable, 15s. 6d.; Hartley, 15s.; steam, 13s.; trebles, 11s. 6d.; tion second, 14s. 6d.; trebles, 11s. 6d.; dross, 8s. 9d. doubles, 9s. 9d.; singles, 8s. 9d.; pearls, 8s. 6d.; dross, 8s. 9d. Five.—Screened navigation, 16s. 6d.; first-class steam, 12s.; third-class steam, 11s.; trebles, 11s.-13s.; doubles, 10s.-10s. 6d.;

CARDIFF.—Intimation has been received at Cardiff that the Egyptian State Railways have placed their order for 240,000 metric tons of coal with Messrs. T. Beynon and Company for Monmouthshire coals. This has been the only event on the Cardiff coal market this week. Owing to the Whitsun holidays work at the collieries was suspended till Thursday morning, and the docks were also at a standstill till Tuesday. Last week shipments from the South Wales ports totalled 460,330 tons, compared with 396,330 tons the previous week and 469,794 tons in the corresponding week last year. Heavy decreases both in production and shipments are inevitable during the current week. Current inquiries are very scarce and prices are nominally unchanged. The latest quotations are as follows: Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 4½d.; best dries, 18s. 6d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steams, 13s. 6d.; cargo smalls, 11s. 6d. to 12s. 6d.; coking smalls, 13s. 6d. to 13s. 9d.; anthracite best large, 36s. to 38s. 6d.; Red Vein large, 22s. to 26s. 6d.; machine-made cobbles, 40s. to 48s. 6d.; French nuts, 40s. to 48s. 6d.; stove nuts, 38s. 6d. to 45s.; rubby culm, 8s. 3d. to 8s. 9d.; foundry coke, 32s. 6d. to 35s

OTHER METALS.

TIN.—Despite the drastic turn in the restriction screw proposed by the Malayan Chamber of Mines and endorsed by the Tin Producers' Association, the market in tin was inactive and prices tended to decline. In New York the metal was quoted at 20.90 cents per lb. on Wednesday, against 21.375 cents per lb. a week ago and 19.375 a month ago. Wednesday's official closing quotations in London, in terms of sterling for "standard" cash at £121 7s. 6d. to £121 12s. 6d. per ton, compares with £124 7s. 6d. to £124 10s. on the corresponding day last week. Stocks in London and Liverpool at the end of last week, at 33,446 tons, show an increase of 215 tons on the week.

COPPER.—In the absence of an expansion in demand in the United States, domestic copper prices continued to decline. Although the official export price remained unchanged at 6½ cents per lb. (electrolytic), sales were generally effected at about 5½ cents per lb. On Wednesday, "Domestic" spot was quoted at 5½ cents per lb. in New York, against 5½-5¼ cents a week ago, and 5¼ cents a month ago. Wednesday's official closing price for "standard cash" in London, in terms of sterling, at £28 5s. to £28 6s. 3d., compares with £29 8s. 9d. to £29 11s. 3d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 19,618 tons, show a decrease of 878 tons, while stocks of rough copper, at 769 tons, are unchanged.

LEAD.—The London market in lead was dull on Tuesday, but on Wednesday sales amounted to 500 tons and prices were slightly firmer. In New York the metal was quoted at 3.00 cents per lb. on Wednesday, against 3.00 cents a week ago, and 3.00 cents a month ago. Wednesday's official closing quotation for "soft foreign" in London, in terms of sterling at £10 16s. 3d. per ton for shipment during the current month, compares with £10 18s. 9d. on the corresponding day last week.

SPELTER.—At a meeting of the governing committee of the International Zinc Cartel held in Brussels on May 12th, it was stated that since June 1, 1931, the stocks of undertakings belonging to the Cartel had decreased by 25 per cent. It was therefore decided that production should continue as at present at half the normal rate. It is hoped that in six months stocks will have been exhausted. Meanwhile the demand for spelter has been quiet in London, and the New York price declined further in the absence of an improvement in consumption. Wednesday's quotation in New York, at 2.325 cents per lb., compares with 2.45 cents a week ago and 2.775 cents a month earlier. Wednesday's official closing quotation in London, in terms of sterling for "good ordinary brands," was £12 10s. per ton for shipment during the current month, against £12 12s. 6d. a week ago.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals the quotations for aluminium and nickel have been maintained at £95 per ton and £225-£230 per ton respectively. Quick-silver was again quoted at £16 per flask, and platinum at £10 11s. per ounce. Foreign antimony was sold at £26-£26 10s. as compared with £26 a week ago.

TEXTILES.

THE COTTON TRADE.—Liverpool.—Imports for the week May 12th to 18th (inclusive) are 49,363 bales, of which 35,434 are American; 384 Peruvian; 760 Argentine; 11,647 Egyptian; 47 African; 214 East Indian; and 877 sundries.

Manchester.—Owing to the Whitsuntide holidays the market this week has been very unsettled, and actual trade has been on a limited scale. Rather wider fluctuations have occurred in raw material rates. In the cloth section a feature of interest has been the improved demand in piece goods for India. Some shippers have reported more inquiry and offers than for a long time back. Some fair contracts have been arranged in dhooties, mulls and jacconets for Calcutta, Karachi and Madras, and a few more transactions have been put through in prints for Bombay. Operations for China have been within a narrow compass, but bids have been mentioned in white shirtings for Hong Kong. Not more than a retail business has been done for Egypt, South America and the Continent. Only occasional lines have been reported in home trade fabrics, but rather freer clearances are now being experienced in the wholesale establishments. Quotations in American and Egyptian yarns have been somewhat irregular in price when tested, and only a restricted business has been done in home counts and export numbers.

THE WOOL TRADE.—Bradford.—The resumption of business after the Whitsuntide holiday, writes our correspondent, has not revealed any important change in the situation. Cable information from overseas indicates firmness in raw material values with

buying on home trade account in Brisbane. Attention is already being turned to the fourth series of London sales which will commence next Tuesday. The quantity announced as being available is 125,000 bales, which is about 7,500 bales less than for the third series, when about 97,000 bales were carried forward. Crossbreds will again dominate the catalogues, there being 55,500 bales of New Zealand, and 22,500 bales Punta Arenas. The rate of consumption of fine wools this year has been so good that in some quarters anticipations are entertained that about 500,000 more bales of this description will be wanted in the Bradford district than last year, if it is to be maintained. Private information relative to the consumption of wool by the combing machinery is also encouraging. According to a reliable estimate, 87,500 bales of combing wool were put through the machines each month in 1930, but the average for last October was 126,000 bales, and 139,500 bales last February. It is also contended that there was no increase in the stock of merino and fine crossbred tops during the seven months ended March 31, 1932. Very little new business is being done in tops in Bradford, and there is no change in quotations for any description. All the leading topmakers are simply waiting for a development of business to enable them to realise more nearly cost price for the combed article than would be obtainable to-day by accepting spinners' bids.

THE GRAIN MARKETS.

WHEAT.—In the absence of any important event in the international wheat situation, prices moved within narrow limits and are scarcely changed on the week. Continental countries and Russia bought again substantial quantities from Australia, Argentina and North America. The partial failure of the United States winter crop cannot, of course, be expected to bring about a permanent and substantial rise in prices owing to the size of the stocks still held in that country and in Canada. Crop reports from Europe are a little more favourable, but as far as can be ascertained the Russian spring crop is backward. It is expected in some quarters that Russia will not be able to export on a large scale during the next season, but as the ultimate yield of her crop depends on climatic conditions during the next few months, it is as yet impossible to estimate the influence of Russian wheat on the future course of prices. On Wednesday, "May" futures were quoted at 55½ cents per bushel in Chicago, against 55½ cents on the corresponding day last week, and 57 cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 32s. per 496 lbs., as compared with 32s. 6d. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 30s. 3d., against 30s. 6d.; No. 3 Northern Manitoba, Vancouver, ex ship, 29s., against 29s. 6d.; Australian, ex ship, 28s. to 28s. 6d., against 28s. to 28s. 6d. a week ago.

WHEAT FLOUR.—In this country the demand for flour has been quiet, but some Continental countries—particularly France—have purchased larger quantities. North American shipments, at 168,000 sacks, showed an increase of 67,000 sacks as compared with the previous week. Of this total, 62,000 sacks have been consigned to Europe. Quotations in London, Wednesday: Straight run, delivered country, 25s. per sack of 280 lbs., as compared with 25s. last week; delivered London, 24s., against 24s. Manitoba patents, ex store, 25s. to 27s. 9d., against 25s. to 27s. 9d.; and Australian, ex store, 20s. to 20s. 6d., against 20s. to 20s. 6d. a week ago.

BARLEY.—Business in feeding barley has been on a small scale, but prices remained steady. On Wednesday, "May" futures were quoted at 40½ cents per bushel in Winnipeg, against 41½ cents last week and 42½ cents a month ago. Quotations in London, Wednesday: "English feeding," f.o.b., per 448 lbs., 27s. to 28s., as compared with 27s. to 28s.; River Plate, landed, 24s. to 26s., against 24s. to 26s. a week ago.

OATS.—The scarcity of home-grown oats has brought about a slight rise in prices, but there has been no substantial expansion in the demand for foreign oats, which show a slight drop in prices. The Continent continues to absorb considerable quantities, mainly from Argentina and Canada. "May" futures, which last week stood at 23½ cents per bushel in Chicago, sold at 23½ cents per bushel on Wednesday this week, against 22½ cents a month ago. Quotations in London, Tuesday: "River Plate," landed, 18s. 6d. per 320 lbs., 17s. 6d., against 17s. 9d.; "Chilean White," landed, 24s. 9d. to 26s., against 24s. 9d. to 26s. a week ago.

MAIZE.—Although shipments from Argentina have been smaller, prices have not recovered from the low level to which they have fallen a week ago, as large quantities are expected to be shipped soon. Wednesday's quotation in Chicago for "May" futures, at 30½ cents, shows an increase of ½ cent on last week, and a fall of 2½ cents as compared with the price a month earlier. Quotations in London, Wednesday: "Plate," landed, 20s. 3d. per 480 lbs., 19s.; "Plate," May-June, 18s. 6d., as against 18s. 6d. Yellow maize meal, ex wharf, was quoted at £6 per ton, against £6 a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1931-32, 1930-31, 1929-30, 1928-29:—

	1931-1932.	1930-1931.	1929-1930.	1928-1929.
Estimated sales of home-grown wheat—				
1 week to May 14	Cwts. 68,660	Cwts. 122,997	Cwts. 130,531	Cwts. 88,053
37 weeks to May 14	3,080,485	4,264,347	8,448,116	8,962,183
Average price of English wheat per cwt.	s. d. 6 1	s. d. 5 8	s. d. 8 9	s. d. 10 0

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1928 to 1931:—

Weeks ended	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
May 7, 1932	Cwts. 126,792	Cwts. 13,972	Cwts. 24,967	s. d. 6 1	s. d. 7 4	s. d. 7 10
May 14, 1932	68,660	8,215	18,373	6 1	7 2	8 0

May 11, 1929	152,984	24,324	28,994	9 11	10 0	9 10
May 17, 1930	130,531	46,234	20,428	8 9	7 9	6 8
May 16, 1931	122,997	12,260	25,505	5 8	6 9	6 8

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks with comparative figures for 1930:—

NEAREST FUTURE.	Jan. 2, 1930.	Jan. 2, 1931.	May 20, 1931.	Jan. 4, 1932.	May 11, 1932.	May 18, 1932.
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.	148½	56½	60½	62½	63½	62½
Chicago (No. 2 Winter) —Cents per 60 lb.	130½	79½	82½	55½	55½	55½

The visible supply of wheat in Canada, at 62,850,000 bushels, shows a decrease on the week of 940,000 bushels. Supplies a year ago stood at 51,955,000 bushels.

OTHER FOODS.

SUGAR.—The international raw-sugar situation has undergone no change during the past week. The turnover was not large, but prices did not decline further. "May" futures in New York were quoted at 0.53 cent per lb. on Wednesday, against 0.53 cent per lb. a week ago, and 0.59 cent per lb. a month earlier. Wednesday's sales of "raws" include "December delivery" at 5s. 0½d. to 5s. 1d. per cwt., against 5s. 1d. to 5s. 1½d., and "March, 1933," at 5s. 3½d., against 5s. 4d. to 5s. 5d. on the corresponding day last week. The movements of raw sugar in London and Liverpool during last week are set out in the table below:—

	Imports.		Deliveries.		Stocks.	
	1932.	1931.	1932.	1931.	1932.	1931.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
London	1,548	244	962	1,283	8,285	28,793
Liverpool ...	24,182	14,342	13,262	12,553	119,212	79,922
Total	25,730	14,586	14,224	13,836	127,497	108,715
Last week	18,596	22,744	12,777	14,325	115,991	107,965

COFFEE.—The recent advance in the price of Brazilian coffee in New York has been maintained. The market in London was quiet, but quotations remained steady. Last week's movements of coffee in London were as follows: Brazilian, landed, nil; delivered for home consumption, 85 bags; exported, 9 bags; stocks, 4,696 bags, against 2,839 bags last year. Central American, landed, 3,911 packages; delivered for home consumption, 2,958; exported, 1,757; stocks, 132,880 packages, against 127,763 a year ago. Other kinds, landed, 1,520 packages; delivered for home consumption, 2,449; exported, 1,639; stocks, 102,304 packages, against 104,568 a year ago.

COCOA.—The market in cocoa has been quiet, but quotations in London were firm. "May" futures were quoted at 4.00 cents per lb. in New York on Wednesday, against 4.11 cents per lb. a week ago and 4.01 cents a month ago. As compared with the corresponding day last week, Wednesday's quotation for Accra, fair fermented, new crop, May-June, at 25s. per cwt., f.o.b., London contract, shows a rise of 6d. per cwt. on the week. Last week's movements of cocoa in London were as follows: Landed, 5,063 bags; delivered for home consumption, 5,407 bags; exported, 110 bags; stocks, 181,332 bags, as against 224,502 last year.

TEA.—No auctions were held this week, but the private market was steady. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account:—

Week ending	Northern India.		Southern India.		Ceylon.		Java.		Sumatra.		Nyasaland.		Total.
	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	
May 14, 1931	0 10-26	1 4-61	1 4-63	0 6-99	0 7-49	0 5-95	0 11-88						
Apr. 6, 1932	0 10-17	0 10-41	1 4-34	0 7-51	0 6-78	0 7-95	0 11-67						
Apr. 14, "	0 9-89	0 11-60	1 5-96	0 8-62	0 7-48	0 7-15	0 11-99						
May 5, "	0 9-74	0 10-32	1 5-80	0 7-71	0 5-80	0 7-02	0 11-19						
May 12, "	0 9-30	0 9-75	1 4-53	0 7-71	0 5-80	0 7-02	0 11-19						

RICE.—The market in rice has been dull, and prices declined further. Wednesday's "spot" price, at 9s. 9d. per cwt., shows a fall of 1½d. on last week, while forward positions, at 9s. show a

decline of 3d. per cwt. Movements in London during the past week were as follows: Landed, 1 ton; delivered, 67 tons; stocks, 2,159 tons, as against 572 tons last year.

POTATOES.—Owing to the large supplies of potatoes at the principal markets, a slight decline in prices became noticeable. At the Borough Market, "Best King Edward" sold from 11s. 6d. to 12s. 6d. per cwt., as compared with 12s. to 13s. per cwt. a week ago.

SPICES.—The market in spices was quiet, and spot pepper remained at the lower level reached a week ago. Wednesday's quotation for "Black Singapore" pepper, at 6½d. per lb., shows no change on the week. Movements of pepper in London during the past week were as follows: Black, landed, 7 tons; delivered, 5 tons; stocks, 381 tons, against 595 tons last year. White, landed, 48 tons; delivered, 23 tons; stocks, 631 tons, against 680 tons a year ago.

MEAT.—The tendency of prices at the Smithfield Market was lower this week. On Wednesday, Argentine beef (chilled hind-quarters) was sold at 4s. to 4s. 4d. per 8 lbs., against 4s. 4d. to 4s. 8d. on the corresponding day last week, while New Zealand frozen mutton realised 2s. 6d. to 3s. 2d., as against 2s. 6d. to 3s. 2d. a week ago.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OILSEEDS.—Markets generally are quiet and the measure of business small. Linseed is affected by erratic exchanges, but the demand is poor and prices are difficult to maintain. Both here and on the Continent sales of cake and oil are disappointing, and crushers are in no hurry to purchase seed, although their stocks are said to be low. Shipments from Argentina are still on a modest scale, and the quantity on passage to Europe, at 128,900 tons (including 7,400 tons from India) is 18,600 tons less than last week, and compares with 129,000 tons a year ago. Current value of Plate, afloat and May-June, is around £7 15s., and for July, £7 17s. 6d. Indian linseed is quiet, and Calcutta, May-June, nominally £9 7s. 6d. Egyptian cottonseed is rather steadier, with black, afloat and May loading, quoted £5 15s. Vegetable oils are variable and in only moderate demand. Linseed oil at low levels attracted buyers, but closes easier, raw oil, ex Hull for May delivery, now quoting £12 15s. per ton naked ex Hull mill, later positions being at a progressive premium. Cotton oil is neglected

and dull, and crude Egyptian plentiful at £18 10s., and refined (technical and edible) at £20 ex Hull. Palm kernel oil is steadier. Oilcakes are in declining demand, and prices are easy.

HIDE, LEATHER AND ALLIED TRADES.—In consequence of the Whitsun holiday, no sales of hides and skins were held at Leeds and Manchester this week, the last auction having covered a fortnight's supplies. Generally speaking, there appears to be a slight improvement in the position, as recent business has been done at prices which were firm to a slight upward tendency. Rather more interest has also been taken in the market for foreign hides, where there is also a slightly better outlook in regard to values. For instance, a moderate amount of business has been transacted in South American wet salted at a fraction over 3d. for Argentine ox, while cows have realised 3½d., and Uruguay ox the same figure. Interest has not been great in dry hides from the same source, but a few parcels of B.A. Americanos have changed hands at just over 4½d., while Cuyabanos have been offered at the same figure, Sierra Cordobas at 5½d., and B.A. Inservibles at 2½d. There has been hardly any change in the market for African hides, as is also the case with Australians. Both descriptions have sold in limited quantities, with perhaps more doing in regard to the former than the latter. Turnover in regard to both sole and upper leather this week has been very small. Orders for bends have been confined chiefly to selections suitable for the repair trade. There has been hardly any business passing on manufacturing account, but hopes are entertained that with more normal working conditions at the commencement of next week this section will open out. Sales of upper leather also have been on a limited scale.

RUBBER.—The market in rubber has been inactive, both in London and New York, and the tendency of prices was easier. In New York, Wednesday's spot price for rubber, at 3 cents per lb., shows a fall of ½ cent per lb. on the week. Wednesday's official closing price for standard ribbed smoked sheet in London, at 1½d. per lb., shows no change, as compared with the corresponding day last week. In forward positions, business has been done at

2½d. for October-December, as against 2½d. a week ago. Movements of rubber in London and Liverpool during the past week were as follows: Landed, 1,031 tons; delivered, 5,106 tons; stocks at the end of last week, at 119,010 tons, show a decrease of 4,075 tons as compared with the preceding week.

THE MONEY MARKET.

THOUGH money was at times inclined to be more usable, it has remained very comfortable during the past week. The clearing banks have experienced a relatively light demand for funds, while outside lenders have charged 1-½ per cent. for new money, and a level one per cent. for renewals. The discount market has remained very inactive. There were reports of some special buying of June

</

and July bills, but the extent of this operation was very limited. Bill-brokers were also offering end-of-June bills at $\frac{3}{4}$ per cent. Three months' bank bills were quoted at $1\frac{1}{8}$ - $\frac{3}{4}$ per cent., with a slightly firmer tendency towards the middle of the week, while "standstill" bills were quoted at $1\frac{1}{2}$ - $3\frac{1}{4}$ per cent. Business, however, has been so limited that these rates are largely nominal.

Last week's Treasury bill rate was again under one per cent. Applications for the £35.0 millions of bills upon offer amounted to £53.8 millions and, contrary to expectation, the whole of the bills offered were allotted, the average tender rate being 19s. 6.35d. per cent. "Hot" Treasury bills were subsequently quoted at $\frac{1}{8}$ per cent., but by Wednesday of this week the rate had hardened fractionally to $\frac{3}{4}$ per cent., with one per cent. mentioned here and there. The following morning, however, $\frac{1}{8}$ per cent. was again the ruling rate. This week tenders are invited for £45.0 millions. In view of the increase of £10.0 millions in the amount offered, it will be of interest to see if the rate begins to harden, especially as next week the market will have to deal with the conflicting influences of the War Loan dividend payment and the 25 per cent. call on the 3 per cent. Treasury bonds due on June 1st.

On the whole it looks as if the War Loan dividend payment next week will cause less disturbance than usual. Recent special purchases of early June maturities will have the effect of placing a fair amount of cash at the disposal of the authorities, as and when these bills mature. The call on the 3 per cent. Treasury bonds will by itself yield over £25.0 millions, or half the sum required for the War Loan dividend. Already this week Public Deposits have expanded to £23.6 millions, and if this figure is not fortuitous, it means that about another ten millions is available. It therefore seems likely that this time the dividend will be paid without any borrowing upon Ways and Means from the Bank with its consequent temporary inflation of credit and promotion of artificial ease.

This week's Bank return shows comparatively narrow changes. The note circulation has contracted by £4.2 millions, this being the normal post-Whitsun movement. Gold coin and bullion have risen by £2.2 millions as the result of the Bank's gold purchases, and in consequence the Reserve is £6.4 millions higher. Among the Bank's earning assets, Government Securities are reduced by £1.2 millions and Other Securities by £0.2 million. On the liabilities side of the return, Public Deposits are £2.2 millions higher, and Bankers' Deposits £2.9 millions higher. The Proportion has improved to 34.7 per cent.

In view of the adoption of a policy of cheap money during the past few months, it is convenient to compare changes in the Bank return since February 10th, the last week in which Bank rate stood at 6 per cent. The main movement is the increase of £35 millions in Other Securities, due to the Bank's acquisition of *devisen*. Gold has also risen by £4 millions, but £14 millions of Government Securities have been disposed of and Discounts and Advances are lower by £1 million. This leaves a net increase in assets of £24 millions, but inasmuch as Public Deposits have risen by £8 millions and minor changes have occurred elsewhere, the actual basis of credit, as represented by the note circulation and Bankers' Deposits, has only expanded by £18 millions, of

which eight millions have gone into notes and ten into Bankers' Deposits. These figures show how the Bank has prevented its heavy acquisitions of *devisen* from having too great an inflationary effect. They can be usefully compared with a simultaneous analysis of the American Reserve system given upon a later page.

On Wednesday, the Bank announced the purchase of a further £2 millions of bar gold, while simultaneously there came reports of a shipment of \$4.0 millions from New York to London. It is uncertain whether the last operation is being conducted upon behalf of the Bank or the Treasury, acting through the Exchange Equalisation Account, and, of course, it is quite possible for either authority to buy gold and subsequently re-sell it to the other. It is unofficially reported that gold has been purchased upon British account in Paris, but the absence of any confirmation of this report is an apt illustration of the objections to secrecy, which were voiced in the *Economist* when the announcement of the Exchange Equalisation Fund was first made. There seems little doubt, however, that what is really happening is that part of the British authorities' unwieldy and unstable holdings of *devisen* are being replaced by gold. The American belief that these gold purchases foreshadow a change in British monetary policy obviously possesses no foundation.

Money rates on Wall Street remain unchanged, with call money quoted at $2\frac{1}{4}$ per cent., and ninety-day bankers' acceptance at $1\frac{1}{4}$ per cent. Heavy gold shipments from New York are again reported. On Saturday of last week \$2.6 millions was shipped to France, while ear-markings on foreign account were increased by \$3.5 millions. On Tuesday the shipment of nearly \$4.0 millions to England took place. On Wednesday shipments amounting to nearly \$18 millions were announced, France took \$7.3 millions, Switzerland and Belgium \$3.5 millions each, Holland \$1.8 millions, and England \$1.2 millions. Ear-markings on foreign account were reduced by \$3.5 millions. The gold shipments to England, and also reported British gold purchases in Paris, are exciting some interest, and have led to an erroneous belief that Great Britain may be preparing for a restoration of the gold standard.

The foreign exchange market was generally quiet, but became rather more active towards the close. Sterling was firm throughout, and appreciated against most of the principal currencies. New York went from 3.67 $\frac{1}{2}$ to 3.69 $\frac{1}{2}$, and Montreal from 4.17 to 4.21. Paris was weaker by $\frac{1}{8}$ at 93 $\frac{1}{4}$. Brussels lost 13 points at 26.33. Milan was fractionally weaker at 71 $\frac{1}{4}$, as was Madrid at 44 $\frac{1}{2}$. Amsterdam lost 4 points at 9.10, and Berlin 18 points at 15.58. Switzerland fell away from 18.77 to 18.84. The Scandinavian exchanges were less erratic. Stockholm improved from 19.73 to 19.00; Oslo lost 15 points at 20.15; and Copenhagen lost 10 points at 18.40. The South American currencies were mainly steady, Rio gaining $\frac{1}{4}$ d. at 4 $\frac{1}{4}$ d., and Montevideo being unchanged at 29 $\frac{1}{4}$ d., but Buenos Aires depreciated sharply from 36 $\frac{1}{4}$ d. to 35d. In the Far East the rupee was firm at 1s. 5 $\frac{3}{4}$ d., and the yen was unchanged, after hesitation, at 1s. 8 $\frac{3}{4}$ d. Batavia lost 6 points at 9.18. In the forward market dollars were more offered at rather wider discounts of 1 and 3 cents for one and three months respectively. Paris went from par for one month and 2 centimes discount for three, to 1 centime premium for both deliveries. Brussels improved to par for both periods, against discount quotations last week. Madrid was weaker at $\frac{1}{2}$ peseta and $\frac{3}{4}$ peseta discount. Amsterdam was unchanged at $\frac{1}{2}$ cent and 1 cent premium. Switzerland was firmer at 1 centime premium for one month, and 2 centimes premium for three. The silver market was rather more active, India and China both being inclined to buy, and prices rose by $\frac{1}{4}$ d. for cash to 16 $\frac{1}{4}$ d. Continental selling was, however, sufficient to reduce forward prices by the same margin to the same level. The China silver exchanges fell away, Hong Kong by $\frac{1}{4}$ d. to 1s. 8 $\frac{1}{4}$ d. and Shanghai by $\frac{1}{4}$ d. to 1s. 8d.

FACTORS IN RECOVERY.

IV. THE HOUR-GLASS.

In the last three issues of the *Economist* we have endeavoured briefly to outline the salient features of the immediate problems which confront the world in the present phase of financial and economic crisis, and to adumbrate such policy as seemed to us most likely to be effective in paving the way towards recovery. Beginning with the question of the price level, we suggested that the process of removing concurrently the existing defects in the economic, as opposed to the financial, structure would be facilitated if this country gave a clear lead in the direction of ultra-cheap money, and if the British Government announced that it would welcome and, so far as in it lay, promote a 30 per cent. rise in commodity prices within the "sterling area." Recognising, as we do, the limitations of purely monetary policy, we turned next to the greatest immediate obstacle in the way of restoration of confidence and enterprise—the question of political debts arising out of the war. We suggested that if the policy of the clean slate, as part of a great scheme of appeasement and reconstruction, was incapable of realisation at Lausanne, then at least it was essential that that Conference should achieve a settlement which was final and which ensured that any sum for whose payment, after a long moratorium, Germany became liable—and the evidence of the facts is overwhelming that this would mean for the creditors at best the receipt of pence instead of pounds—should be so demonstrably within Germany's capacity both economically and politically, and so safeguarded with a view to the stability not only of her currency but of the trading situation of the world, as to promote the revival of confidence in her future and the reflux of foreign credits on which her recovery depends. Finally, we urged that whereas a sound and clearly defined monetary policy, accompanied by the substantial wiping out of reparations and war debts, would open the road towards recovery, these preliminary steps would not carry us far unless there was international co-operation for the removal of the trade barriers—protective tariffs, import prohibitions, measures of exchange control—whose maintenance means the annihilation of all international commerce. While the problems of some of the debtor countries, as illustrated by the series of articles which we are now publishing on the problem of the Danubian States, clearly need separate special consideration, Great Britain, we suggested, should give a lead here and now towards greater freedom of trade by endeavouring to form an "equal treatment" group of nations on the basis of a maximum 10 per cent. fiscal tariff.

Whether or not our recommendations in every detail meet with our readers' unqualified endorsement, we are confident that there is a consensus of informed opinion in almost every country in the world that unless the crisis is dealt with in this spirit, if not necessarily on these precise lines, by the statesmen with whom the responsibility for action lies, the possibility of economic recovery will not be created. But this is not all: the very root of the problem as it exists to-day lies in the factor of time; the sands in the hour-glass are running ominously low. It is imperative that the various aspects of the crisis should be tackled comprehensively and radically without further delay.

If the statesmen of any country imagine that the problems with which they are faced can be safely adjourned for another six or twelve months, they are under a disastrous delusion. For one ineluctable conclusion emerges from the developments of the past few months—in fact, since the lamentable decision to postpone the Lausanne Conference until June. Though the necessity of taking political decisions, when agreement is difficult, of taking political decisions in taking no decisions at all, can be evaded by acquiescence in taking no decisions at all, this political "standstill" does not mean that the march of economic events is thereby arrested. The movement towards disintegration and collapse continues steadily. Already Austria, at the last gasp, is on the

point of declaring a partial or complete transfer moratorium; and the suspension of debt services by Greece and (in part) by Hungary and Bulgaria—to say nothing of defaults in South America—is palpably but the precursor of other shocks to the credit system. As the statistics given this week in our Trade Supplement demonstrate, international commerce is perishing with catastrophic rapidity. Whatever be the outcome of attempts at international co-operation this summer, the situation has been allowed to deteriorate so gravely that it may be difficult for Germany in any case to avoid a transfer moratorium—a development for which preparations have already had to be made by the City, but whose effects on London's financial system, on British trade and hence at one remove on our hardly-won Budget balance, will be undeniably serious. Let us not mince words: with every factor in the existing situation making for a drift towards economic collapse, the prospects for next winter are socially and politically terrifying unless by resolute action on the part of international statesmen the influences now at work can be reversed.

There is one chance, and one only, which remains of escaping dangers not a whit less great than those which menaced civilisation in 1914. So far, this year, there has been nothing in the field of international statesmanship but irresolution, petty jealousies, and inability to co-operate on any question. The Disarmament Conference has been allowed to run aground on the shoals of expert Committee procedure; the Four Power Conference in London was a fiasco whose barrenness of achievement it was impossible to cloak; and the deliberations of the League Council over the straits of South-Eastern Europe have resulted in nothing more than successive agreements to adjourn. To redeem these failures the Conference at Lausanne offers one last opportunity. On that Conference there are focussed the questions not merely of reparations and war debts, but of the whole many-faceted problem of European reconstruction, financial and economic. If that Conference fails, not only will what remains of financial stability in South-Eastern Europe be swept away in a flood of uncontrollable insolvency, but in the real danger-point, Germany, worse things may befall than a mere declaration of a moratorium for foreign transfers. There would be the gravest danger of Dr. Brüning's position becoming untenable, and of the Reich heading politically towards a maelstrom in which Europe might be ruinously engulfed.

Under these circumstances the responsibility which rests on the British delegation to Lausanne is enormous, and we should be happy to think that its members had determined resolutely to set their faces against further delay. That they will be exposed to the temptation to adjourn once more the attempt to find agreement on intractable problems, is obvious. From French quarters there may come, we fear, the insidious suggestion—reinforced, it may be, by reference to the new French Government's barely begun tenure of office—that once again finality should be postponed, and any tentative agreement on reparations made contingent on future negotiations with the United States. From the ranks of their own supporters may come the equally dangerous counsel that, whatever may be said of reparations, attempts to reach concerted agreement on monetary and commercial policy had better be postponed until after the Conference at Ottawa. We trust that no heed will be given to any of these delusive voices. The political and economic consequences of adjourning a settlement of reparations beyond this summer would be dangerous in the extreme; and the possibility of achieving special arrangements in matters of currencies or trade at Ottawa between Great Britain and the Dominions is no alternative to the vital need of dealing with the world crisis as a whole. What the plain facts of the situation demand is that the delegation to the Lausanne Conference should determine

to sit until they not only reach a final solution of the question of reparations, but lay down concerted lines of policy to repair the ravages wrought by the crisis in Europe and to pave the way towards removal of trade barriers and renewed freedom of movement for capital.

It may be said that to pursue the good does not necessarily mean achieving it, and that, as in every aspect of the problem to some degree, so particularly in the case of reparations, agreement is dependent on the attitude of creditors other than Great Britain. Yet, though this is true, and though failure to reach all-round agreement on reparations would destroy the possibility of any progress being made at Lausanne in the more general task of reconstruction, this does not mean that Great Britain must needs acquiesce supinely in fatal procrastination at the dictates of others. We dissent with all the emphasis at our command from those who would have this country retire deliberately within a supposedly self-supporting Imperial snail's shell. Though, so far as monetary policy is concerned, we can be masters to some extent of our own destiny, our function in the sphere of international politics must be to secure the maximum co-operation with other countries if we are to escape the repercussions on ourselves of a general economic collapse. But in the last resort, if we fail to secure co-operation from others on the only lines which, in our opinion, are capable of ensuring European recovery, then reluctantly but firmly we must state our policy and adhere to it ourselves. When the Lausanne Conference assembles, if it proves to be impossible to secure French agreement on the final settlement of reparations on a basis which Dr. Brüning is able politically to accept and which is beyond all dispute economically workable—a basis which means substantial cancellation—then the course of the British Government is clear. With every existing trend in Europe to point the warning that the sands of time are running out, and that it is "now or never," the Government must on no account, for no consideration whatsoever, commit this country to sharing responsibility for delay. If others will not follow our lead, we must announce our determination to close independently *vis-à-vis* Germany the old, embittered ledger of reparations payments, and to open on our own account *vis-à-vis* the United States the question of the revision of the British war debt, which in the light of that *fait accompli* would be patently necessary.

RUSSIA AND JAPAN.

THE shadow of military dictatorship in Japan, which creeps steadily forward week by week, is black with the menace of many evils for Japan, her neighbours and the world at large. One of the most serious of these threatening dangers is the possibility of an armed conflict between Japan and the Soviet Union. The interests of the latter in Manchuria, which are now menaced, were originally the spearhead of a Czarist Russian thrust towards Peking and Korea; but that phase of Russian policy is long past. The ambitions which it represented were dealt a mortal blow when the Czarism suffered defeat in the Russo-Japanese War, and they were given their official burial after the 1917 Revolution. In 1924 the Soviet Government, in friendly negotiation with the local Manchurian Chinese Government at Mukden and with the Central Chinese Government at Peking, renounced all extra-territorial rights and claims in Manchuria and scaled down its interests, by agreement with the Chinese, to a half share in the ownership and management of the Chinese Eastern Railway.

This was a perfectly fair and reasonable arrangement, for the Chinese Eastern Railway had not only been built by Russian enterprise and kept in running order by a Russian personnel; it was also, and still remains, the direct line of communication between the main body of the Soviet Union and the Union's outlet on the Pacific Ocean at Vladivostok. The Maritime Province, in which Vladivostok lies, is not, of course, isolated geographically from the main body of the Soviet Union, as East Prussia is isolated from the rest of Germany. It is possible to travel by train from Moscow to Vladivostok without trespassing at any point outside the bounds of Soviet territory.

The short route via Manchuria and the long all-Russian route via Never and Habarovsk diverge at Chita, in Transbaikalia, to meet again, a few miles north of Vladivostok itself, at Nikolsk. The all-Russian route, however, is about twice the length of the Manchurian route, and it runs for most of the way through inhospitable and undeveloped country. Thus the maintenance of the Manchurian route to Vladivostok via the Chinese Eastern Railway, under a system of joint Russo-Chinese ownership and operation of the line, is a matter of importance to Russia and is nothing but a benefit to China herself. In 1929 the local Chinese authorities had the folly to break their treaty with the Russians and to attempt the seizure of complete control over the C.E.R. by a combination of force and chicane. On that occasion the Soviet Government acted with prudence and forbearance, but also with firmness, and thereby compelled the Chinese to make a full restitution of Russian treaty rights. During the last few months, however, the Japanese have been repeating the Chinese violation of Russian railway rights in Manchuria. While they have made fairer professions than the Chinese made, they have been acting with equal lawlessness, and they have, of course, an infinitely more effective military force at their command to back their action if necessary.

In these circumstances the Russians have momentarily allowed their railway interests in Manchuria to go by the board and appear to have concentrated their efforts, in the first instance, upon salvaging Vladivostok. They have done nothing in Manchuria which might have given the Japanese a pretext for overrunning, not only the three Eastern Provinces of China, but the Soviet Maritime Province as well. On the other hand, they have been bringing troops and, above all, equipment and munitions via the all-Russian route to Vladivostok in order to defend this Russian outlet on the Pacific against Japanese attack if the attack should be eventually delivered.

What is the Japanese policy towards Russia going to be? There are two main alternatives. Either the Japanese may refrain from violating Russian territory and thus provoking the Soviet Government to war, and may concentrate their ingenuity upon ruining the Soviet Union's position in the Far East by a turning movement; or, alternatively, they may attempt to do with the Russian Maritime Province what they have done with the Chinese Eastern Provinces already.

If the Japanese elect to follow the more cautious of these two policies, they hold some very good cards for playing this game. Their first step will be to complete the construction of a through-railway, parallel to the Chinese Eastern Railway, from Changchun (the railhead of the Japanese South Manchuria Railway and the capital of the new sham Manchurian Government) to one of several alternative ports in Japanese territory along the north-easternmost stretch of the coast of Korea. Any one of these ports would have a material advantage over Vladivostok in being open during the winter. (Vladivostok is icebound by nature during several months, though an artificial channel is kept open by ice-breakers.) The commercial effect of this piece of Japanese railway construction would be to starve the Chinese Eastern Railway of traffic and the port of Vladivostok of trade by draining the whole trade of Northern as well as Southern Manchuria into Japanese commercial channels. The strategic effect would be to shorten and strengthen the Japanese line of military communications with the interior of Manchuria considerably. At present Japanese troops en route from Japan to Changchun have to travel roundabout, landing on the Asiatic mainland either at Fusan, on the south coast of Korea, or at Dairen, on the tip of the Liatung Peninsula. Either of these routes involves a much longer train journey, after landing, than the prospective North Korean route involves; and, more than that, the troops have to be ferried first through narrow seas offering facilities for attack by submarines. From the Japanese staff-officer's standpoint, the direct route across the open sea from the north-west coast of Japan to the opposite coast of Korea is more attractive. Its utilisation depends upon the completion of the through-route by railway from the north-east coast of Korea to the heart of Manchuria at Changchun; and the greater part of the work has already been done. At the Korean end

there is already a railway from the coast to the Manchurian frontier. At the Manchurian end there is already a line running east-south-east from Changchun to Kirin and on beyond Kirin to Tunhwahsien. The Japanese have only to bridge the gap, and to leave the parallel section of the Chinese Eastern Railway between Harbin and Pogranichnaya in the hands of Chinese guerillas, in order to put the Chinese Eastern Railway out of action and bleed the port of Vladivostok white. It is significant that recent reports of damage by "brigands" to the Chinese Eastern Railway all relate to the Harbin-Pogranichnaya section, leaving traffic from North-West Manchuria free to proceed as far as Harbin on the Chinese Eastern Railway and thence to be diverted south via Changchun to Dairen.

Will the Japanese be content with this less adventurous policy, or will they, instead of merely side-tracking the Russian Maritime Province, attempt to bring this territory likewise into the ambit of Japan's expanding continental empire? The seizure of the Russian Maritime Province would convert the Sea of Japan into a "Japanese lake" by making the Japanese Empire mistress of the whole circuit of its shores. And it would give the Japanese army a river frontier on the continent from the mouth of the Amur at Nikolayevsk right up to the point where the Amur's great tributary, the Argun, is crossed by the Chinese Eastern Railway near the frontier between Manchuria and Transbaikalia. In order to bring the Maritime Province under their thumb, the Japanese have no need to annex it forcibly. Manchuria swarms with "White" Russian refugees, and the Japanese could exploit the hatred between "Whites" and "Reds" by setting up, at Vladivostok, a sham "White" Russian Far Eastern Republic of the same kidney as Mr Henry P'u's sham Manchurian Government at Changchun. To a Japanese militarist of the mentality of Mr Inukai's assassins this prospect is no doubt tempting. There is only one stumbling-block in the way. If the Japanese do attack Vladivostok, then the Red Army will undoubtedly show fight. It will fight, of course, under certain disadvantages, since its line of communications with the heart of Russia is inordinately long. On the other hand, the Soviet forces now concentrated at Vladivostok are reported to have been considerably strengthened, and in Far-Eastern operations it by no means follows that the Soviet Government would rely primarily on divisions sent from European Russia over the long trans-Siberian line. So long as the Russian transport facilities were sufficient to ensure an adequate flow of munitions, including artillery, tanks and aeroplanes, the most effective policy would probably be to mobilise local levies against Japan, stiffened with a sprinkling of regular troops. The Soviet Union could clearly profit by the sympathy of many millions of Chinese and Koreans living in the war zone. It thus seems probable that if the Japanese do go to war with the Russians, they will not have it all their own way.

AMERICAN PUBLIC FINANCE.

RECENT figures issued by the American Treasury reveal a probable deficit on the federal budget for the fiscal year ending on June 30th next of \$3,000 millions. Although the emergence of disequilibrium in the national finances has been a natural accompaniment of the course of the world depression in nearly every country, so large a gap between revenue and expenditure, amounting to practically three-quarters of the estimated expenditure for the year, must necessarily affect confidence in the financial situation in America until a remedy is found in substantial measures of economy or the provision of increased revenue from taxation. Unfortunately, the interval which must elapse before this can be done is longer in America than it would be, for example, in this country. The Administration there has no Government majority in the House of Representatives ready to pass the budget virtually without amendment. Nor is the power of the second Chamber to alter the provisions of the Finance Bill so limited. Moreover, in this instance a method already sufficiently devious was further complicated by the break-away from party allegiances which occurred when a com-

bination of Republicans and Democrats secured the rejection in the Committee of the whole House of the General Sales Tax, which had been put forward by the predominantly Democratic Ways and Means Committee in place of some of the original tax proposals of the Treasury.

At present, although both Congress and Administration are convinced of the importance of balancing the budget for 1933, it remains undecided in what way this will be done. In the meantime it is of interest to consider briefly the general course of governmental revenue and expenditure in the United States in recent years and the size and nature of the present deficit in the federal budget. It may be recalled at the outset that federal expenditure in the United States does not cover the whole field to which national, as opposed to local, expenditure is directed in England. It is mainly limited to those objects, such as national defence and the conduct of foreign relations, which are exclusively the function of the federal Government. The provision of roads, for example, and the maintenance of law and order fall chiefly on the budgets of the individual States, whose Governments have extensive police powers denied to the federal Government. The separation between federal and State finance extends also to means of raising revenue. Although certain taxes, such as income tax, are levied by both federal and State Governments, customs duties are constitutionally reserved to the federal Government, while property and poll taxes (for administrative reasons) and petrol taxes and motor licence revenues (by tacit agreement) are reserved to the State and local Governments. An important item of State expenditure is the provision of grants to local Governments in respect of education, expenditure on which, together with that for the construction and maintenance of road, social welfare and police and fire protection, absorbs the greater part of local revenues.

The following table (derived from the National Industrial Conference Board's "Cost of Government in the United States, 1928-29") shows the large increase which has taken place in all governmental expenditure since pre-war times and the percentage of total expenditure attributable to federal, State and local expenditure, respectively.

TABLE 1.—AMERICAN GOVERNMENTAL EXPENDITURE, SELECTED YEARS, 1903 TO 1928.

From the figures given *per capita* in "1913" dollars it will be seen that, even allowing for the increase in the population and the rise in the price level which took place between 1913 and 1928, the volume of governmental expenditure in the United States increased during that period by approximately 40 per cent. In the case of the federal Government this increase is largely to be attributed to the burden of interest and sinking fund necessitated by the addition to the public debt brought about by the war, while another important charge has been the scheme of pensions and compensation for war veterans. But the pronounced rise in State and local expenditure, though perhaps partly due to the inflationary influence of war finance, and partly reflecting the social and economic development of the country, is mainly a result of the expansion which has taken place in govern-

mental activities, particularly with regard to capital construction projects. It is estimated that more than half of the State and local bond issues made between 1925-29 were for the purpose of financing the building of roads and school buildings.

Expenditure of this kind has necessitated a considerable increase in State and local indebtedness. Thus the combined net debt (i.e., gross debt less sinking fund assets) of the forty-eight States, which in 1922 amounted to \$936 millions, had increased by 1929 to \$1,856 millions. Similarly, local debt (for which only figures of net bonded debt are available) increased from \$8,602 millions in 1925 to \$11,106 millions in 1928. The total amount of State and local indebtedness outstanding represents a considerable proportion of the total national indebtedness. But a more important consideration than the total volume of the debt is the recent deterioration of State and local credit which has taken place owing to lack of confidence on the part of investors in the ability of these Governments to raise sufficient sums in taxation to meet the service of the debts thus incurred. As will be seen from table 2 (source as above), up till 1929 the very considerable increase in the national income allowed of an expansion in the tax receipts of the State and local Governments, though federal tax receipts owing to reduction in taxation remained fairly constant.

Since 1929, however, the still continuing increase in governmental expenditure has no longer been accompanied by an increase in the national income, but on the contrary by a heavy decrease. Preliminary estimates from unofficial sources place the total of all governmental expenditure for 1931 at \$14,000 millions, but suggest that the national income has declined to \$52,500 millions.

Whatever the accuracy of this latter estimate, it is evident that the recent emergence of a deficit in the federal finances is a development which started earlier and has, therefore, been carried further in the budgets of State and local Governments. If these were not balanced in the days of prosperity, it is natural that now that America is feeling the full force of the depression they should in many cases be in a serious position.

The condition of State and local finances must, therefore, be borne in mind in considering the recent change which has taken place with regard to the federal budget. Together with the political manoeuvres and vagaries of Congress, it tends to create an atmosphere of uncertainty which much exaggerates the effect on business confidence

of the present budgetary position. But for these factors, even so large a federal deficit as exists at present could not be regarded as a grave danger in view of the large reductions effected in the federal debt in the decade ending in 1930, and the reserves of taxable capacity which may be held to exist, even now, in view of the reductions in taxation made over the same period.

In the ten years ending June 30, 1930, as much as \$8,100 millions of interest-bearing public debt of the United States was retired, the total debt outstanding at that date being \$15,922 millions. Forty per cent. of the total reduction was effected through Treasury surpluses totalling \$3,250 millions, the largest of which, that for 1927, amounted to \$635,800 millions. Sinking fund provided \$3,000 millions and payments by foreign Governments over \$1,416 millions. This extremely favourable record was radically altered in 1931, when for the first time the federal budget showed a deficit of the considerable sum of \$902 millions. But the results for the fiscal year ending June 30, 1932, will be far more adverse. As stated above, the latest estimates of the deficit run as high as \$3,000 millions. In his Annual Report for the fiscal year 1931, published last December, the Secretary of the Treasury estimated the deficit for 1932 at \$2,123 millions, and for 1933 at \$1,420 millions, including the provision of \$426 millions for sinking fund. There can be little doubt that, as in the case of 1932, so in 1933 this estimate will require considerable revision. In spite of the fact that estimated expenditure for 1933 shows a reduction of \$365 millions, it is evident that without further economies or an increase in the sums raised by taxation there would still be a very large deficit on the budget for 1933. The following table, taken from the Annual Report for 1931 of the Secretary of Treasury, shows the receipts and expenditures of the United States Government for the fiscal year 1931 and the estimates of receipts and expenditures for 1932 and 1933.

TABLE 3.—RECEIPTS AND EXPENDITURE OF THE UNITED STATES GOVERNMENT. (In \$ millions.)

	Fiscal Year ending June 30th.		
	1931 (actual).	1932 (estimated).	1933 (estimated).
RECEIPTS (Ordinary):—			
Customs	376.6	410.0	480.0

Panama Canal	9.3	11.0	13.4
Operations on special accounts	211.6	176.0	36.3
Adjusted service certificate fund	224.0	200.0	150.0
Other ordinary items	9.5	9.5	9.5
Public debt retirements chargeable against ordinary receipts—			
Sinking fund	391.7	411.8	426.5
Purchase from foreign repayments	48.2	—	69.1
Other items	—	—	1.2
Total expenditure chargeable against ordinary receipts	4,091.6	4,361.8	3,996.6
Excess of expenditure	902.0	2,123.0	1,420.1

It will be seen that estimated collections on income tax, which in 1931 provided 58 per cent. of the total ordinary receipts, show for 1932 a decline of \$720 millions, or roughly 40 per cent. The postponement of payments on inter-governmental debts under the terms of the Hoover moratorium led to a decrease in receipts from foreign Governments of \$235 millions. With estimated total ordinary receipts thus decreased by some \$950 millions, expenditure increased from \$4,091 millions in 1931 to an estimated total of \$4,362 millions in 1932. For 1933, however, as already stated, the estimates of

expenditure are down by \$365 millions, though it is claimed by Democratic critics of the administration that this reduction is largely due to the natural disappearance of non-recurrent items. The proposals for increased taxation put forward by the Treasury last December aimed at a substantial reduction, by retroactive provisions, of the expected deficit for 1932, the provision of revenue for 1933 sufficient to meet current expenditure (that is to say without the inclusion of the sinking fund), and the achievement for 1934 of a fully balanced budget. These objects were to be attained by reverting to the general plan of taxation in force in 1924, including the raising of the personal income tax to a minimum rate of 2 per cent. and a maximum of 6 per cent. Surtax beginning at 1 per cent. on incomes over \$10,000 was to reach 40 per cent. on incomes in excess of \$500,000, as compared with the existing maximum of 20 per cent. on incomes over \$100,000. Personal exemptions were also to be lowered so as to bring back into the taxpaying group some 1,700,000 persons. Corporation income tax was to be raised by $\frac{1}{2}$ per cent. to 12 $\frac{1}{2}$ per cent. The Treasury proposals also included rates for estates tax at the comparatively high level of 1921. Over half the total additional revenue which it was sought to raise was to come from miscellaneous commodity taxes, such as taxes on tobacco, sales of automobiles, radio sets and phonographs, which had either been abolished since 1924 or levied at a reduced rate. Altogether it was estimated that the new taxation would produce \$920 millions in a full year.

These proposals were shelved by the Ways and Means Committee of the House of Representatives which proceeded to frame a new scheme of taxation, a prominent part of which was a general sales tax of 2 $\frac{1}{4}$ per cent. When the Committee's programme came before the House of Representatives a strong radical opposition combination of members of both parties protested that the tax would fall too heavily on the shoulders of the poorer classes. With the phrase "soak the rich" as their war cry, they succeeded in securing the rejection of the tax amid scenes which suggested that many members of the House did not recognise the balancing of the budget as an unconditional necessity. The effect on financial sentiment was marked and the House afterwards expressed its determination to secure a balanced budget, in part by the achievement of drastic economies in expenditure. It is not unnatural to ask how far and in what way this determination will be carried out. So much has been heard lately of the prospect of inflation in the United States, and so far-reaching in importance are the reactions which the American situation must everywhere exert, that the answer to this question will be awaited in many countries during the next few months with the greatest concern.

THE REFORM OF THE "DOLE."—II.

In reviewing, last week, the course of reforms hitherto, we noted that disqualifications under the Means Test and the Anomalies Regulations totalled up to March about 600,000. The combined effects of these disqualifications and of variations in the industrial demand for labour are shown in the following table:—

1. INSURED PERSONS UNEMPLOYED. (000's)

At Date.	Total insured persons unemployed.	Non-beneficiaries maintaining registration or presumed to be unemployed.	Claims under consideration.	Total.	Beneficiaries.			
					Ordinary.		Transitional.	
					Num-ber.	Per-cent- age of Total.	Num-ber.	Per-cent- age of Total.

Jan. 25...	2,784	460	79	2,245	1,440	64	805	36
Feb. 22...	2,742	449	65	2,228	1,390	62	838	38
Mar. 21...	2,595	425	58	2,112	1,248	59	864	41

* These are claims in which it had not been ascertained whether the contributions qualification for ordinary benefit had been satisfied. Owing to the difficulty of fixing the precise position of claims at a particular date, they may include some claims which had, in fact, been settled by the dates given, either by being admitted or by being rejected. In the latter case the claimants might apply for transitional benefit.

A claimant whose benefit has been disallowed is, however, free to continue to register as unemployed, and even if he does not (or later discontinues registration) and is not known to be at work, he is, for a period of two months from the date when contact with him was lost, still counted in the published unemployment figures. Consequently, although between October 26th (just before the Means Test was first applied and a few days after the Anomalies disqualifications began) and March 21st the number of unemployed insured persons in Great Britain had fallen by 127,482, or 4.7 per cent.* (from 2,722,911 to 2,595,429). The number of beneficiaries had fallen by as many as 404,545, or 16.1 per cent. (from 2,516,429 to 2,111,884) with 58,150 further claims under consideration at the latter date.

The financial effects of this fall and of the reduction in ordinary benefit rates, and of the still greater reduction in the rates paid to some transitional beneficiaries are shown in Table 3 (p. 1172). The aggregate amount of benefit (including cost of administration) paid weekly declined from an average of £2,880,000 in October to an average of £2,013,000 in March. Ordinary benefit declined from £1,804,000 to £1,143,000, and transitional benefit rose, owing to the transfer of claimants from the ordinary to the transitional class, from £576,000 to £870,000. Changes in unemployment are analysed by industries in the next table.

2. CHANGES IN UNEMPLOYMENT BY INDUSTRIES BETWEEN SEPTEMBER 21, 1931 AND MARCH 21, 1932.

Industry.	Decreases in Unemployed.		Industry.	Increases in Unemployed.	
	Number.	As Percentage of Insured Persons.		Number.	As Percentage of Insured Persons.

Ships	13	1.8	Net decrease in listed industries	183	2.7
Motor vehicles	10	3.9	Net decrease in all industries	208	1.6
All above industries ...	297	8.2			

While the indebtedness of the Unemployment Fund has continued to increase since the emergency reforms, the rate of increase has diminished considerably, the average weekly deficit falling from £1,172,000 in September to £228,000 in March. At the end of the financial year 1931-32, however, Treasury advances outstanding had reached the authorised maximum of £115 millions, or about £13 millions more than at the end of September, 1931. Consequently, in 1932-33 the Exchequer, as well as making its contribution and bearing the cost of

* Between September 21st and March 21st the fall in unemployment amounted to as much as 208,093 or 7.4 per cent. See Table 2

transitional benefit, will have to meet any further deficits out of current revenue.

The rate of expenditure on transitional benefit since the reforms were put into effect has corresponded roughly with the Emergency Budget estimate of £37.5 millions a year. The State grant estimated to be required to balance the Fund in 1932-33 was £22.2 millions, and represented an average weekly deficit of about £425,000. The weekly deficit in the period November-March, however, was only about £330,000. Unless, therefore, there is a considerable increase in unemployment, the expenditure of the State in this respect in the new financial year will be substantially less. On the other hand, the Exchequer makes a contribution in respect of each insured person in employment, so that if the average live register remains below the three millions on which the estimates were based, the State's liability under this head will be greater than was anticipated. (The Emergency Budget estimates have, in fact, recently been revised and embodied in the actual Budget for the year 1932-33. The new estimates are evidently based on a live register of less than three millions, for the total charge to the State in 1932-33 is now put at £65 millions, of which the contribution to the Fund amounts to £20.1 millions, expenditure on transitional benefit £41.8 millions, and the grant to balance the Fund £3.1 millions). Further light on the financial position and the effects of the reforms is thrown by the table at the foot of the page.

Under present conditions the Unemployment Fund will not become self-balancing without either fresh disallowances or reductions of benefit or an improvement in employment, or all of these. It could balance, of course, apart from these factors, if a large enough number were transferred to the transitional class. To make the contributions balance the cost of benefits the number of ordinary beneficiaries (at existing rates of benefit) would need to be reduced to approximately 1,150,000. For contributions to balance benefits plus the interest payable on the debt, the number would have to fall to about 1,050,000.

In brief, the position is that by increases in contributions, by decreases in benefits, by removal of abuses, by application of the needs test for those who have exhausted statutory rights, by the transfer of new burdens to the taxpayer, the process of borrowing has been abolished. But any increase in unemployment will add to the Budget expenditure for which the taxpayer has to pay; and should such increase unhappily take place, large-scale economies in other directions will be essential, unless the present intense burden of taxation is to be increased.

EXCHANGE RESTRICTIONS IN DANUBIA.

The catastrophic fall in the prices of primary products in 1930 diminished the gold value of the national income of the Danubian countries relatively to that of the rest of the world. Equilibrium in the balance of international payments was for a time maintained by swelling the short-term foreign indebtedness; but this meant creating a most precarious position, which in any case could not have continued for very long. In the event, the Credit Anstalt collapse not only made new borrowing impossible; it led to a sudden efflux of funds, and so precipitated the crisis. Under these circumstances there were three courses open to the debtor States:—(1) Strong immediate deflation by means of high Bank rate policy and open-market operations; (2) abandonment of the gold standard, i.e., to stop the encashment of home currency into foreign currency; (3) an immediate moratorium on all foreign payments.

None of these policies was adopted. Instead, the Central Banks reverted to the old, war-time expedient of exchange restrictions, although they might have remembered that, whatever effects such a policy may bring about, it cannot fulfil the purpose which it is primarily intended to serve—the protection of gold reserves. The old justification for exchange restrictions, as a purely temporary expedient, would have been to provide a sort of "covering barrage" while a policy of deflation was carried out, if such a policy had been deliberately adopted. But, as events have shown, the Danubian Central Banks did not impose restrictions in order to enable a policy of deflation to be carried out; on the contrary, they used these measures in order to evade such a policy. In fact, no deflationary measures were undertaken; Bank rates, after a small increase last July, were repeatedly lowered; and the volume of currency in circulation was maintained at the same level, or even slightly increased. The internal price level, in consequence, moved in sympathy with the British price level rather than that of the world. The logical policy would have been—if the gold value of the currency was intended to be maintained—to depress internal prices to the point of conformity with world prices. The policy of exchange restrictions brought about just the opposite results: it depressed gold prices still further and, at the same time, maintained the relatively high level of internal prices. According to the calculation of the Austrian Institut für Konjunkturforschung, the Austrian price level rose by 27.4 per cent., relatively to the world price level, between September, 1931, and April, 1932, despite the fact that last September Austrian prices were already too high relatively to world prices. In

Hungary, according to the same source, the divergence was of a similar order of magnitude.

In view of these facts, it is easily comprehensible that the policy of exchange restrictions should have led to cumulative deterioration of the economic situation. As the internal and external values of the currency of a "restricted-exchange" country do not move towards a situation of equilibrium, but, on the contrary, move away from it, the policy of control aggravates rather than alleviates the force of those factors which originally brought it into operation. Assuming (which is by no means everywhere the case) that the Central Bank succeeds with the aid of well-elaborated measures in obtaining complete control over foreign exchange dealings, it can momentarily equilibrate the balance of payments by restricting the volume of imports to the actual level of exports—by the simple device of not selling more foreign exchange than it receives. As, however, a country's foreign trade balance depends ultimately on the relationship of internal prices to external prices, such a policy only diminishes the volume of foreign trade without, however, altering the nature of the foreign balance. So long as these price relationships are not adjusted, every restriction of imports must lead to a further decline of exports and, therefore—if a renewed outflow of *devisen* is to be prevented—renders necessary a further restriction of imports to the new (lower) level of exports. The volume of foreign trade is thus cumulatively curtailed, without, however, ever bringing the balance of trade into a position of equilibrium.

There are other no less harmful consequences of exchange restrictions, the foremost among them being that they gradually render three-cornered exchange impossible, and lead in practice inevitably to the adoption of a new Protectionist principle—that which attempts to balance trade, not only *in toto*, but with each country individually. Hungary, for instance, has had in normal years a large favourable balance with Austria and an unfavourable balance with Germany and Czechoslovakia, for the simple reason that her exports consist mainly of bulky agricultural products for which Austria is the cheapest market, while her imports consist of textiles, coal and machines which Czechoslovakia and Germany produce. Since Austria and Hungary both introduced exchange restrictions, the Austrian Government tried to limit imports from Hungary to the level of her Hungarian exports, while Hungary, in consequence, was compelled to adopt a similar policy in regard to countries with which her own trade balance was adverse. All this restricts tremendously the scope of international trade.

As the factors which determine the relative amount of exports and imports between two countries are the same as those which determine the relative magnitude of total imports and exports, it is clear that so long as price-relationships are not properly adjusted it is just as impossible to keep the balance of trade between individual countries in equilibrium as to equilibrate the total balance of trade. Here again the attempt to restrict imports to the actual level of exports causes the latter to decline still further. Moreover, the division of Europe into "free-exchange" and "controlled-exchange" countries causes the latter type of countries to stimulate by all possible means their exports to the former. Besides throttling the volume of trade, therefore, exchange restrictions also have the effect of driving what remains into unnatural channels.

The trade figures for the first quarter of 1931-32 of "controlled-exchange" countries bear striking evidence of our conclusions:—

	Austria. In millions of Austrian schillings.	Hungary. In millions of Hungarian pengős.	Czechoslovakia. In millions of Kč.
First quarter, 1931:			
Imports	526.4	142.7	2,614.7
Exports	314.3	130.3	3,091.7
First quarter, 1932:			
Imports	394.7	85.0	1,931.0
Exports	193.7	72.2	1,834.0

between these two periods was reduced by 45 per cent. (although the turnover of trade in 1931 was only 53 per cent. of the trade in 1929), the excess of imports over exports actually increased from 12.4 millions to 12.8 millions, i.e., from 9.5 per cent. to 17.5 per cent. In the case of Austria, the total balance of trade was reduced by 30 per cent., while the excess of imports over exports has also increased from 41 to 51 per cent. In the case of Czechoslovakia, the total volume of trade was reduced by 34 per cent., while an export surplus of 16 per cent. was converted into an import surplus of 6 per cent.

Exchange restrictions, in short, have proved a complete failure, and have rendered the situation infinitely worse than it was at the time of their adoption. It is one thing, however, to realise the futility and the self-destructive character of the policy of restrictions. It is another to suggest methods for its removal. The country which first starts a policy of relaxation will undoubtedly be exposed to an abnormal strain. The removal of restrictions requires, therefore, not only immediate action, but also concerted action by the countries concerned.

One thing seems certain: exchange restrictions, although primarily called into being in order to save the parity of the exchanges, have actually rendered the maintenance of the old gold basis of the currencies impossible. A year ago it might have been possible to save the gold standard in countries like Austria and Hungary by a deflation of some 15 to 20 per cent. To-day, owing to the relative rise of internal prices to world prices, the restoration of the old parity would require a deflation of 40 to 45 per cent., which is entirely outside the range of practical possibilities. Devaluation, therefore, has become the only policy open; though in the case of the Danubian countries it is by no means such an attractive alternative as it was for England—partly because of the psychological reactions which it may entail in countries whose peoples have already gone through a great inflation, partly owing to the large amount of internal obligations made out in terms of foreign currencies which would have to be compulsorily changed.

The removal of exchange restrictions via currency devaluation is a matter of extreme urgency. But a sudden removal would lead to an unnecessary efflux of funds and might cause wholesale bankruptcy. It has been suggested that the simplest way to start might perhaps be for the Central Banks to raise gradually, day by day, the price of *devisen*, thus satisfying an increasing proportion of the current demand until the point was reached where a daily supply of and demand for *devisen* were equalised. Past this point, the Central Banks might still increase the price of *devisen*—depressing the external value of the currency below the level of its internal value—in order to accumulate reserves. Once this was carried out, the removal of restrictions could follow more or less automatically—although, so long as the debt problem is not settled, complete freedom of capital movements cannot be restored. Several problems emerge in this connection: firstly, the prevention of inflation, which is a budgetary problem; secondly, the settlement of debts; and, lastly, the creation of a favourable balance of trade for the Danubian group as a whole *vis-à-vis* the rest of the world, involving possibly the creation of a Danubian currency bloc. Only when these questions are settled can problems of Danubian commercial policy be tackled successfully.

EMPIRE MIGRATION.

THE Committee on Empire Migration of the Economic Advisory Council have presented a Report (Cmd. 4075) in which the facts are faced so squarely that the Committee's recommendations are already being criticised as inadequate. As far as purely economic reasons for migration are concerned, the Committee take the view that the decline in the birth rate and the improvement of the standard of life in this country, coupled with the acute depression of agriculture in the Dominions, have greatly reduced the normal incentive to emigration, and they see no particular reason, on economic grounds alone, why the State should promote it, except as a temporary policy, when the present crisis is over, for providing for the re-absorption of workers displaced from our declining export trades. As the Dominions, on the other hand, are likely to have far more use for British immigrants in the remoter future than during the period when we shall have most need to send them, the Committee anticipate a "profound disharmony" between the interests of the Mother Country and the Dominions in this matter.

Motives other than economic, however, unite the interests of Great Britain and her Dominions in maintaining a permanent stream of migrants. The sense of unity within the Empire can only be maintained if British stock remains predominant in the newer countries, and this continuous infusion of British blood is also vital to the interests of British trade. Further, a study of the comparative population densities (after eliminating areas which are unsuitable for permanent white settlement the Committee arrives at figures of 3.75 per square mile for Australia, 7.25 for Canada and 16.8 for New Zealand, against 678 for England and Wales and 483 for Great Britain and Northern Ireland) suggests that it is in the interests of both parties that a more even distribution should be brought about. Population in the Dominions is too sparse for full social and intellectual development, while in parts of this country it is too dense to allow of normal physical and mental opportunities. Further, the Report stresses the fact that the growing specialisation of Great Britain as a purely industrial community leaves many individuals no chance of a life really suited to their capabilities.

Because these considerations are non-economic, it is easy to assume that the question is removed from economic discussion, and to criticise the Report on the ground that the means it proposes are inadequate to the end. Unhappily the fact that migration is to be maintained chiefly for reasons unconnected with purely economic reward does not remove the limits imposed upon Government activity by lack of funds, and in our view the Committee have done well to resist the temptation to put forward grandiose schemes for Empire development and to confine themselves to suggestions for the improvement and extension of existing machinery.

Nor would these recommendations, if fully acted upon, prove so inadequate as is sometimes suggested. The Committee approve of the cheap-fare system to Canada, but do not recommend its extension to the more distant Dominions. They are in favour of the maintenance of assisted passages, both because of the control which they make possible and also because they tend to ensure that public money is spent on people who would not have emigrated without it. In connection with voluntary societies, they propose legislation which would enable the State, at its discretion, to contribute more than the present maximum of 50 per cent. of expenditure. They also recommend a co-ordination of the activities of these organisations, in which there is at present some overlapping.

On the various classes of training schemes, the Committee's recommendations differ, but are all directed to the end of securing that money should only be spent on training where a definite demand for the trainees is known to exist. Large-scale land settlement is not recommended, because of the marketing problems it raises. This is perhaps the point at which Empire enthusiasts will join issue with the Committee, for the peculiar anomaly of modern economic organisation has not yet been fully taken to heart, namely that a community which is able and

willing to produce good crops is no longer by any means certain of economic success. Scattered settlement on mixed farms in areas already developed is, however, favoured by the Committee.

Whether these proposals go far enough may be a matter for argument. In any case, it must be some years before the necessary funds can be raised to finance anything more elaborate, and in the meantime the Committee have provided a clear and incisive analysis of the issues involved. This is not only valuable as a basis for the policy of the immediate future, but should serve also as a foundation for any more ambitious structure which it may prove possible to erect when times improve.

Notes of the Week.

Britain's War Debt.—The disadvantages attendant on lack of clear definition of our policy with regard to war debts were illustrated, this week, by the mystification and excitement which were aroused by the statement, in *The Times*, that "the British Government are now arranging annuities, a further annual sum to make up for the suspension of payments during the Hoover Year." This somewhat unhappy phrase, which seemed on the face of it to bear traces of official inspiration, was taken widely to mean that the Government had decided to resume our full war-debt repayment programme, irrespective of the results of the Lausanne Conference. Calculations were gloomily expected this policy to involve, unless it were to be assumed—even less satisfactorily—that the Government had made up its mind that nothing will emerge from that Conference but one more Hoover Year of uncertainty and hopes deferred. As it turned out, the heart-searching was needless. Sir John Simon explained in the House on Wednesday that the U.S. Government had recently requested the British and other debtor Governments concerned to sign an agreement embodying the proviso agreed upon at the London Conference, last August, that annuities suspended under the Hoover moratorium should be made good in ten equal annuities to be added, with interest, to those normally payable from July 1, 1933, onwards. This formality, he added, implied no decision on the principle involved in our war debt relationships, and would not, in his opinion, prejudice the free judgment of the Lausanne Conference on the whole subject of reparations and war debts. Seeing that the corresponding bonds held by the various creditor Governments in accordance with the provisions of the Hoover plan—were assigned, so far as the various inter-European countries are concerned, as long ago as last August, the signing of the agreements of the European powers with America, which clearly ought to take place before the Hoover year is over, is of no particular significance in itself. It is unfortunate, however, that this simple act should have been delayed to a moment when its purpose is not unnaturally misunderstood. Indeed, a regrettable consequence has been regard to the "claims" of France to reparations. As a reassurance to public opinion we welcome Sir John Simon's declaration that our policy is still unprejudiced and our hands free. At the same time, the fact has to be faced that no conceivable Parliament at Westminster would tolerate the perpetuation at our expense of a completely one-sided settlement of war debts. Since it is evident that the whole system of payments arising out of the war has to be radically reconstructed, if civilisation is not to collapse, would it not be as well for the British Government to say so, frankly and honestly, now?

The Week in Parliament.—The debate on the Finance Bill has occupied the House of Commons this week with no great resulting edification to the country. Apart from much talk, not all of it relevant, on Wednesday, with regard to the purposes of the Exchange Equalisation

Account, which some members seemed to view suspiciously as implying an ill-considered return to the gold standard, while others desired that it should be utilised as a stabiliser of prices, the chief interest centred on the necessarily abortive attempts of the Opposition on Monday and Tuesday to secure the rejection or amendment of the clause authorising the Treasury by Order to remove articles from the Free List on the recommendation of the Advisory Committee. Mr Hore Belisha defended this wholly objectionable innovation in a piece of special pleading, whose casuistry beggars description. Mr Chamberlain, he argued, had announced during the committee stage of the Import Duties Bill that he would seek these powers on a later occasion. The occasion had now arisen, and failure to use it would be a "breach of faith" with the House of Commons. Even more singular was his suggestion that if a proposal to remove an article from the Free List in which the House had placed it required the sanction in advance of the House itself, there would be a risk of trade being "dislocated" by a rush of forestalling imports. Seeing that the Free List consists of foodstuffs and raw materials, the suggestion that, if the range of our tariff is widened, it must be done with lightning speed, is grotesque. By 341 votes to 61, however, the House decided that the clause should "stand part of the Bill," and a similar fate was meted out to a Liberal amendment that in framing schemes for drawbacks the Treasury should be enjoined to have regard to the necessity in the national interest of expanding exports. This part of the debate was not, however, wholly fruitless. It elicited from a Conservative member, Mr H. Williams, a gem of economic thought which we feel constrained to quarry from the columns of Hansard. He declared: "There is no particular merit in export trade. . . . Indeed, from some points of view the less you export the better off you are, because in that case you have more to consume yourself." "O God! O Montreal!"—O Ottawa!

Mr Lloyd George Speaks Out.—There is one point and one only in Mr Lloyd George's speech at Llandudno with which we do not agree, and that is his view of the crisis of last September and his implied criticism of the great efforts made to keep on the gold standard. True, the picture of what would happen afterwards was ridiculously overdrawn, and the event has proved that the currency of a great creditor country can with comparative ease be prevented from suddenly crumbling away like that of a debtor nation. But we have pushed the world of business off its golden wall; and, in spite of many suggestions, no one has really shown how to piece poor Humpty-Dumpty together again. On Mr Lloyd George's reading of the crisis weeks a good deal of subsequent history turns. But for the rest, in his searching criticism of the failure to concert international action, the folly of the tariff mania, the weaknesses of a purely Imperial policy, and the danger of pinning faith to a policy of inflation without getting down to root economic causes, Mr Lloyd George's sound sense and his freedom to speak bluntly and without qualification come like a breath of fresh air.

Politics in Prussia.—As a pointer towards the trend of the German political situation the proceedings this week in the Prussian Diet throw little light, though they have generated much heat. Herr Braun's Government having formally offered its resignation, the first business of the Diet was to elect its own President and then a State Premier. Since in both cases an absolute majority is required to secure election, Nazi candidates for these offices could not succeed without Centre support. On Wednesday, Dr. Kerrl, a Nazi member, was chosen President by the combined votes of Nazis, Nationalists and the Centre Catholics. Thereafter the proceedings were interrupted, and the Chamber adjourned for a week, as a result of a sanguinary fray between the Nazis and the Communists, whose provocative references to "murderers" in the Nazi ranks were answered by a barrage of water-bottles, inkstands, lamps and desk tops. These "direct action" tactics of the Nazis are scarcely

calculated to persuade the Centre of the desirability of an accord with them, even if the Nazis were willing to reciprocate. Much clearly depends on the effect on public opinion of the Budget and the forthcoming decree revising the conditions for unemployment benefit, to which our Berlin correspondent refers on a later page. In the Reich, Dr. Brüning's position depends largely on the outcome of present deliberations proceeding behind the scenes on the questions of *Osthilfe* and public relief works. His retention of power is probably conditional ultimately on a successful reconstruction of his Government, but it is doubtful whether that will be done, at any rate until after the fateful meeting at Lausanne, on whose outcome the whole future of German politics hangs.

Political Moves in Paris.—As we go to press, the outcome of the negotiations for the formation of a new Government in France, to which our Paris correspondent refers at greater length, remains obscure. Two things, however, are now so probable as to be almost certain: that M. Herriot will be the next Premier, and that in quest of support he is looking rather to his right than to his left. The Conservative Press, headed by *Le Temps*, is significantly loud in his praise, and the Socialist Press equally critical. This is a disappointing conclusion to a victory of the Left, brought about partly by a working alliance between Radicals and Socialists, which was expected abroad to liberalise French foreign policy and allow a big advance towards disarmament. Here is another example of that process, which M. Siegfried has so ably described, whereby the French voter moves to the Left, while the politicians for whom he votes move to the Right, so that the final result is "no change." It remains to be seen, however, whether M. Herriot can carry the whole of his party with him if his progress rightwards goes so far as to include reconciliation with M. Tardieu. The voices of M. Edouard Daladier and of the *Dépêche de Toulouse* are raised powerfully against him, and he may find, when he meets the Chamber, that a nicely-adjusted centre coalition is in danger of breaking down for want of support from his own group.

Austria in Extremis.—Events in Austria move swiftly towards catastrophe. Last Friday Dr. Dollfuss succeeded in forming an administration based on a coalition of the three bourgeois parties, the Christian Socialists, the Agrarian Landbund and the Heimwehr; but the new Government, which can count only on a majority of one in the Chamber, appears to depend precariously for survival on its power to retain the goodwill either of the Socialists or, alternatively, the Pan-Germans. On the following day the League Council turned down Austria's petition for immediate financial assistance, and, as we write, it appears probable that before these pages are read Austria will have declared a transfer moratorium either on the whole of her foreign obligations or, possibly, on those of the State and municipalities only. Even such a partial moratorium, however, would have serious effects, since the negotiations in progress between the Credit Anstalt and its foreign creditors have been proceeding on the basis of the substitution of State bonds for a portion of that institution's short-term indebtedness. Palpably, if Austria has to default on its foreign public debt, this avenue towards agreement will be blocked. With regard to the decision of the League Council and, in particular, the attitude of the British representative, we commend to our readers the informative letter from our League correspondent which will be found on a later page. We have consistently deprecated "throwing good money after bad" in the form of further makeshift loans to South-Eastern Europe so long as no attempt is made to remedy the conditions which have brought the debtor States of that region into insolvency, but Mr Eden's declaration of policy, with its suggestion that in the special circumstances of Austria we might collaborate in a loan to the extent required to repay the Bank of England, was neither constructive nor helpful. Austria is now left without either fresh credits or guidance from the League as to her

policy, while the ridiculous procedure of further expert "study" is adopted to camouflage the complete absence of agreement among the Powers as to what shall be done to save the situation.

Greek Cabinet Crisis.—The tangled skein of financial embarrassments and political difficulties in Greece grows yet more tangled. Last Sunday—on the morrow of a declaration by M. Politis to the League Council that Greece would do "nothing definite" in relation to the ultimate future of her external obligations without agreement with her creditors—M. Venizelos resigned. The reason for this decision, as announced by the late Prime Minister in the Chamber, was that the Opposition parties, supported by the bulk of the Press, had obstructed the Press Bill, which M. Venizelos regarded as an essential censorship measure for the purpose of protecting the drachma from the influence of damaging rumour and calumny. Under the circumstances, this seems hardly a convincing argument for throwing Greek politics into a state of chaos, and the motives of M. Venizelos appear all the more difficult to understand in that, in tendering his resignation, he is understood to have recommended the President to form a coalition of the Opposition parties, including the Popularists, but with the proviso that a Republican and not M. Tsaldaris, the Popularist leader, must be Prime Minister. The result, so far, has been inability to form any new administration at all. Invited by President Zaimis to participate in an all-party Cabinet, M. Venizelos declined the invitation. The Popular Party refuse to enter any coalition unless M. Tsaldaris is Prime Minister. The Republicans are not anxious to form a Government without the co-operation of the Popularists. What will come of the latest effort, which has been undertaken by M. Papanastasiou, to form a Republican administration with the support of the Liberals, time will show. At a juncture when Greece stands in need of firm guidance if her currency is not to depreciate disastrously, the present political deadlock is singularly ill-timed.

A National Government in Japan.—Public dissatisfaction with party government in Japan having made the appointment of an independent Premier essential, the choice of the Emperor, advised by Prince Saionji, has fallen upon Admiral Saito, the former Governor of Korea, who has, so far, apparently proved acceptable to the public and the Press. The business of the Diet was suspended while Admiral Saito formed his Cabinet. Five major Government posts have been filled with representatives of the Seiyukai and Minseito parties and four with non-party men. In accordance with tradition, the heads of the departments of the Army and Navy, which are under the direct authority of the Emperor, are professionals, General Hayashi and Admiral Okada. Admiral Saito himself will assume the Foreign portfolio. Mr Takahashi remains at the Ministry of Finance, and Mr Hayotama at the Education Department. How far the two parties will be able to work together and with outsiders, and what the policy of the combination will be, remain in doubt; but there are indications that, if this attempt at a National Government fails, public opinion will be inclined to turn rather to Fascism than to a fresh effort by the parliamentary parties.

The New Belgian Government.—The Government crisis in Belgium has been solved, not as seemed likely by the formation of a new coalition excluding the Liberals, but by the latter's foreswearance of those amendments to the Public Education Bill which had incensed the Flemish elements in the Chamber. M. Renkin, relieved by his resignation of his former undertakings to the Liberal party, has indeed reformed his Cabinet on almost the same lines as before, the most notable change being the inclusion of M. Sap, a strong supporter of the Flemish cause. The Liberal party, fearful of its extinction in the Flemish provinces, was not, apparently, reluctant to

sacrifice the Fransquillon policy that it had previously maintained, but the anti-Government Flemings are still somewhat sceptical, and the affair has undoubtedly discredited both the Liberals and the Flemish Catholics, who must have lost some Flemish support while gaining none in the French-speaking constituencies.

Towards Catalan Autonomy.—A correspondent writes:—The debate in the Cortes on the status of Catalonia under the new regime is now in its third week. To give an opportunity for the passions which this question inevitably arouses to cool off, the Government hit upon the bright idea of alternating with it the almost equally important Agrarian Reform Bill. As far as it has gone the discussion has proceeded on common-sense lines. The Catalan Statute was drawn up last July by representatives of the various Catalan parties duly elected for the purpose. It was endorsed by a plebiscite held in all the four provinces of Catalonia in the following month. And there the matter was left, with periodical outbursts of recrimination from the sentimental Catalan Nationalists on the one hand and the die-hard champions of "unity"—in the French sense, as interpreted by four centuries of monarchy following the lead of Ferdinand and Isabella—on the other side. Meanwhile the Cortes got its teeth into the Constitution—which is no mean achievement—skillfully sidetracking the Catalan question until the bases of the new regime had been well and truly laid. The defining formula in Article I of the Constitution—"Spain is an integral State of federative tendencies"—could hardly have been improved upon, since it left open the door for Catalan "autonomy" while, by implication, closing it on any quibble about sovereignty. A Parliamentary Commission was then appointed to draw up a draft statute, on the basis of the Constitution and the clearly-expressed will of the Catalan people, and it is this draft, and not the Statute sponsored by the Catalans themselves, which the Cortes is now asked to approve or amend. It is necessary to recount this sequence of events because, superficially, one might imagine that once again in Spanish history there was either a conspiracy, as the Catalans would say, to deprive Catalonia of her rights or, on the other side, a demand for independence which would fatally impair the stability and prestige of the Republic. Such a psychological deadlock, turning mostly on disputes as to "equality of status," has been avoided. The only real difficulty is over finance. Here an ingenious system of proportional tax levy and collection as between the State and the Region (which no one but the experts will be able to understand) seems to be the likely solution. Meanwhile the Government has needed all its wits about it to cope with disorderly elements, syndicalists and students, who are out to take advantage of the highly-charged atmosphere produced by the discovery of a large-scale terrorist plot timed for May 29th. Bombs and stores of munitions have been sequestered in Seville, in Madrid and in smaller towns of Andalusia, and a number of arrests have been made. All is quiet in Barcelona—quarters there. It is debatable whether national safety at present will permit police and law and order arrangements to be passed over to Colonel Macia's Government.

The Irish Oath.—On May 19th the Bill to remove the parliamentary oath of allegiance from the Constitution of the Irish Free State passed its last stage in the Dail, being supported by the Labour Party, in spite of the recent unequivocal denunciation by Mr Davin, the Labour Whip, of that part of the Bill which removes the force of internal constitutional law from the Treaty. The sensibilities of Mr Norton, the leader of the party, seem to have been rubbed the wrong way by Mr Thomas's recent statement as to the effect of the breach of one agreement upon the possible future agreements between Great Britain and the Irish Free State. It is a pity, perhaps, that Mr Thomas stated his case so bluntly in the first place; he used greater unctious in a speech at Hove last Friday, in

which he declared that the Government's position was not based "on any constitutional theory or question of status, but simply on the sanctity of treaties and the maintenance of agreements." "We believe," he added, "that the prosperity of the Free State is bound up with the prosperity of this country, and that it is in the best interest of both countries that they should remain linked together within the British Commonwealth"—a statement with which no doubt the great majority of Irishmen would agree. Mr de Valera retorted by inquiring whether the sanctity of international agreements did not also attach to the conclusions of the 1926 Imperial Conference and to the Statute of Westminster, which, he claimed, permitted the Free State to amend its constitution as it wished. The *Irish Times* has rather heartlessly pointed out that the paragraph of the conclusions of the 1926 Conference upon which Mr de Valera relies ends with the words: "though united by a common allegiance to the Crown and freely associated as members of the British Commonwealth." In any case, the constitutional equality of two parties to an agreement does not imply the right of either of them to act in contradiction to the agreement even while claiming that there is no contradiction. The impression grows upon us that Mr de Valera, subconsciously at least, thinks of himself and his Ministers not as the normal successors to Mr Cosgrave's administration, as His Majesty's Government in the Free State, bound by their predecessors' international engagements, but as a rightful dynasty supplanting an impostor. His claim to speak with the voice of Ireland may soon be put to another test, for the Senate, who are now debating the Oath Bill, seem likely to make large amendments in it while refusing to challenge the second reading.

Threatened Tariff Duties in U.S.A.—The United States Tax Bill has been turned into a tariff measure by the addition of "riders" providing for import duties on coal, copper, oil and timber. These duties, which have been passed by the Senate, are intentionally prohibitive, and, according to Mr Mills, Secretary of the Treasury, only "car fare" will be derived from them. Their chief object is presumably to bring about a rise in the domestic price of the four commodities by the elimination of foreign competition. It is, however, highly improbable that the duties will achieve the desired object in the near future. The impost on coal is of no immediate consequence, as the United States is, on balance, a large exporter of this fuel. The total value of coal imported in 1931 was only about \$6 millions as compared with \$65 millions sold abroad. On the other hand, the duties on copper, oil and timber will seriously dislocate these industries outside the United States. Although the United States is, on balance, an exporter of petroleum products, she imports large quantities of crude petroleum from Latin America. The world situation of this industry will therefore scarcely be affected; but, owing to the lack of refining capacity, Mexico, Colombia and Venezuela will certainly suffer temporarily from the loss of their market. The tax on timber is calculated to have serious consequences in Canada, which is the principal source of United States imports. More serious still, should this Bill receive the President's signature, the whole structure of the copper industry may crumble, to the detriment of foreign producers and American consumers alike. Whereas the relatively higher cost of production of the majority of United States mines has resulted in a gradual shift of the centre of gravity to Canada, Chile and Africa, the proposed duty of 4 cents per lb. is high enough to exclude all copper imports into the United States. When it is remembered that the United States consumes about 50 per cent. of the world's total production, it will be realised how grave the repercussions on foreign producers are likely to be. In view of the size of the stocks held in the United States, a quick recovery in the internal price is unlikely. On the other hand, the loss of the American market, as we show in an Investment Note on a later page, may seriously prejudice the world situation of this metal.

Federal Reserve Policy.—During the past three months the Federal Reserve Banks have been committed to a cheap credit policy, in pursuance of which they have purchased \$725 millions of United States Government securities. In theory, the credit so released to member banks should have permitted an extension of banking credit to the public of ten times that amount, but no such extension has occurred. Some light on this failure of the practice to conform to theory is thrown by an address recently given by Dr. Benjamin T. Anderson, Jr., of the Chase National Bank, to the Bankers' Forum in New York. Reviewing changes in the position of the reserve banks between February 24th and May 4th, he showed that in this period there was an increase of \$546 millions in the reserve banks' holdings of Government securities. Furthermore, there was a decrease of \$144 millions in the Federal Reserve note circulation, and an increase of \$38 millions in Treasury currency, both of which changes increase the amount of banking credit available and make a total theoretical increase of \$728 millions. On the other hand, member banks used the opportunity afforded by the extension of credit to redeem \$329 millions of their own indebtedness to the Reserve System, while the reserve banks themselves reduced their holdings of bills and other securities by \$98 millions. Allowing for minor changes, including net gold losses of \$5 millions, the actual increase in member bank reserves was only \$269 millions, so that all the open market operations of the Reserve System did was to relieve the pressure upon member banks. It did not stimulate them into extending fresh credit to the public. In actual fact, during the same period, member banks reduced their loans from \$12,609 to \$11,842 millions, and themselves raised their investments from \$6,997 to \$7,435 millions. Deposits were only increased by \$101 millions. It is possible to carry the story of the reserve banks a little further. During the fortnight ended May 19th member banks bought a further \$179 millions of Government securities, but this was largely offset by a reduction of \$41 millions in bank indebtedness to the system, of \$4 millions in bills held by the system, and last, and most significant of all, by gold losses of \$73 millions. In the end, only a further \$45 millions was added to member bank reserves with the system. The lesson of these events seems to be that at a time when the banking system of a country is strained, the first result of a deliberate inflation of credit is to relieve the banks themselves. It also appears that the provision of additional credit can only become effective if accompanied by a restoration of confidence both at home and abroad, for it is because confidence is lacking that member banks are refraining from lending against their newly-acquired reserves, while foreign holders of dollar balances are withdrawing them in the form of gold, thereby neutralising the efforts of the reserve banks to create fresh credit.

Cotton Trade Surplus Capacity.—The Joint Committee of Cotton Trade Organisations has this week sent copies of the scheme for dealing with surplus capacity in the spinning section to all spinning firms with a request that they should indicate whether they approve of it or not. All firms have been asked to give their decision not later than June 14th. It will be recalled that, last December, proposals for reducing surplus productive capacity in the cotton industry were submitted by the Joint Committee to the various Associations represented on it. The spinning section was the first to seek the views of individual firms on the proposals by means of a ballot taken in February last. Firms controlling 27,779,564 spindles, or 46.97 per cent. of all in the trade, expressed themselves in favour; and firms controlling 16,963,259 spindles, or 28.69 per cent. of the total spindleage, voted against the proposals. No votes were recorded by 24.34 per cent. of the total spindleage. It is believed that when the previous ballot was taken many firms voted in favour of the principle involved, but on this occasion the scheme is in a definite form; and, if an adequate vote in favour is obtained, the Joint Committee will approach the Government with regard to legislation making the scheme compulsory. On the last occasion it was disappointing that

practically 25 per cent. of the spinners did not record any vote, and it is anticipated that this percentage will now be considerably reduced. Put briefly, the object of the scheme is to raise funds in order to buy plant which the owners are willing to sell. The levy whereby the compensation fund is to be raised will not exceed 3d. per mule equivalent spinning spindle per annum. The idea of the scheme, writes our Manchester correspondent, is certainly foreign to Lancashire thought and principle in the past; and much uncertainty exists as to whether the Joint Committee will secure sufficient support to warrant further action.

British Production.—The physical volume of production in the United Kingdom in the first quarter of 1932, as estimated by the Board of Trade, was 1.5 per cent. lower than in the fourth quarter of 1931, but 0.6 per cent. above that of the corresponding quarter a year ago. The following table shows the comparative figures for the various industrial groups:—

Group.	INDEX OF PRODUCTION (1924 = 100.)				
	Year 1930.	Year 1931.	Mar. Quarter, 1931.	Dec. Quarter, 1931.	Mar. Quarter, 1932.
1. Mines and quarries ..	91.3	81.6	85.3	85.6	83.0
2. Iron and steel and manufactures thereof	88.8	65.9	68.0	71.6	70.4
3. Non-ferrous metals...	119.1	100.1	95.5	97.4	97.8
4. Engineering and shipbuilding	116.6	94.9	102.5	89.1	91.2
5. Textiles	79.5	77.0	72.6	89.6	91.1
6. Chemical and allied trades	102.2	96.8	97.5	101.7	101.2
7. Leather and boots and shoes	101.4	99.3	101.3	101.3	99.6
8. Food, drink and tobacco	104.9	103.5	101.2	103.6	97.4
9. Gas and electricity....	138.7	143.2	(a)	(a)	(a)
Total of manufacturing industries (2-9)*	106.3	96.8	97.4	100.1	98.8
Total of all groups (1-9)*	103.3	93.8	95.0	97.1	95.6

* Including also various industries not specified above.
(a) Complete information regarding gas production in 1931 is not yet available. The available data for electricity have been included in the general index.

A comparison of the first quarter of the current year with the October-December period of 1931 shows an improvement in engineering and shipbuilding, and in the textile and non-ferrous metal industries. On the other hand, the indices for coal, iron and steel, leather, boots and shoes, and food, drink and tobacco reveal a decline. As compared with the corresponding quarter of last year, the figures for the March quarter show a setback in coal mining, engineering and shipbuilding, leather, boots and shoes and food, drink and tobacco. A slight improvement is recorded in the iron and steel, chemical and non-ferrous metal industries. Textiles show an expansion of about 25 per cent. If allowance is made for the Easter holidays, the advance in British industrial activity occasioned by the suspension of the gold standard appears to have been maintained during the first quarter of the current year. More recent information suggests, however, that this improvement is being gradually lost as a result of the progressive strangulation of international trade.

Threatened Strike in Lancashire.—Our Manchester correspondent writes:—The operatives in the weaving section of the Lancashire cotton industry are inclined to resist the action of the employers in deciding to abrogate all wages and hours agreements from June 11th. The Northern Counties' Textile Trades' Federation, which embraces all the trade unions in the weaving branch of the industry, has decided to take a ballot of the members. The voting papers have been sent out this week, and the workpeople are asked to say "Yes" or "No" to the two following questions:—

- (1) Are you in favour of withdrawing your labour on June 11th against the decision of the employers to end all existing hours and wages agreements?
- (2) Are you in favour of the officials negotiating with the employers?

The ballot papers have to be returned not later than June 2nd, and the result will be announced at Blackburn on June 6th. It is expected that about 200,000 operatives will vote; and of this number about 150,000 are members of the Weavers' Association, whose officials have recommended the members to declare their willingness to withdraw their labour from the mills. The position is somewhat complicated by the fact that during the last six months thousands of operatives have accepted work at mills where the rates of pay and hours of labour are contrary to the agreements existing between the employers' association and the trade unions, while thousands of workpeople are unemployed. It is anticipated that there will be a majority in favour of striking, but it is quite probable that there will be a substantial vote in favour of opening up negotiations with the employers. The Central Board of the Northern Counties Textile Trades' Federation is not committed to take any action according to the result of the ballot, but, when the figures are known, the board will then decide what action shall be taken. On behalf of the employers, it has been unofficially announced that it is unfair to assume that from June 11th there will be an all-round reduction in wages, though after that date employers will be at liberty, without breaking any agreements, to make what arrangements are possible with their workpeople. There is ground for believing that the trade union leaders are very uneasy as a result of recent developments, and may not be disinclined to come to terms with the employers as a result of joint conferences. During the last year or two, however, a supreme difficulty has been the way in which provisional agreements have ultimately been rejected at delegate conferences of the workpeople. Labour conditions in Lancashire at the moment are undoubtedly in a state of chaos, and the danger of the situation's becoming worse should not be minimised.

The 1930 Census of Production.—Volume XI of the preliminary reports of the Census of Production of 1930, published in a recent issue of the *Board of Trade Journal*, covers preserved foods, animal foods, metal forgings, scientific instruments, and umbrellas and walking sticks. The following summary shows the gross value, the net value (gross value, less cost of materials and work given out to other firms), and the net output per person employed in the various industries in 1924 and in 1930:—

Industry.	Gross Output.		Net Output.		Net Output per Employee.	
	1924.	1930.	1924.	1930.	1924.	1930.
Preserved foods	Thou. £ 31,133	Thou. £ 32,435	Thou. £ 12,480	Thou. £ 13,472	£ 337	£ 324
Cattle, dog and poultry foods	6,401	5,565	1,972	1,762	389	350
Forgings	14,395	15,249	6,905	7,421	183	168
Scientific instruments..	9,778	10,236	5,240	5,951	215	248
Umbrellas and walking sticks	2,500	1,606	931	592	192	154

Although a precise quantitative comparison of the output of canned and bottled foods between 1924 and 1930 cannot be made, the increase in the total selling value and in the volume of employment reveals a substantial expansion of production during recent years. The quantity of preserved meats shows an advance of 25 per cent. between the two census years, and the production of dried and canned vegetables increased about sixfold. If allowance is made for the fall of 10 per cent. in the average selling value of feeding stuffs other than dog and poultry foods, the figures of the total selling value suggest that output has been maintained. The production of anchors, chains, nails, screws and miscellaneous forgings in 1930 shows a considerable advance on 1924. The average number of persons employed in these trades increased from 37,692 in the earlier census year to 44,082 in 1930. The information relating to scientific instruments, appliances and apparatus shows a considerable increase in the activity of these industries. Thus, the total value of optical instruments and appliances advanced from £1,131,000 in 1924 to £1,516,000 in 1930, and the value of photographic apparatus and appliances increased from £2,130,000 to

£3,186,000. The number of cameras made in 1930, at 1,059,000, compares with 121,000 in 1924, and the length of positives printed for the cinematograph trade increased from 149 million linear feet to 235 million linear feet.

The Co-operative Congress.—A correspondent writes:—At the Co-operative Congress, which assembled in Glasgow this Whitsuntide, Mr John Downie, in his presidential address, suggested that the modern co-operator had become "peaceful, sometimes to the point of somnolence." He implied that the lure of the dividend on purchases, which was the distinctive practice of the Rochdale Pioneers, upon which co-operation has been reared, is lessening the effectiveness of the movement in meeting the more intense competition of the multiple shops and the campaigns which the bakers and milk suppliers of Scotland had lately levelled at the co-operators. He therefore advocated the revision of the dividend policy in a downward direction. He also suggested that the movement should make a list of enterprises to be systematically tackled so as to add to "the manufactures and services in which we are actually engaged," though, judging from the subsequent discussions, the compilation of such an anticipatory programme would occasion sufficient confusion to delay its realisation. In more general terms, the report of the Central Body boldly tackled the economic situation and declined "to take the patchwork world of panic and perplexities at its own crude valuation." It has "always stood for Free Trade between all nations, believing that policy to be an essential part of the co-operative faith." Discussion on fiscal policy was somewhat curtailed by the desire of 1,700 delegates to settle the constitution of the Co-operative Union, which has been under discussion at the previous two Congresses. Now a national co-operative authority is to be constituted, to which is to be delegated the decision on all matters of national policy. This will consist of the executive of the Co-operative Union, representatives of the two Co-operative Wholesale Societies, the Co-operative Productive Federation, and the Co-operative Party. Hitherto each of these sections has expressed its own views, with resulting confusion in the public mind as to the actual co-operative expression. In future the movement will speak through the one National Co-operative Authority, thus avoiding the clash of opinion that has been conspicuous up to now. With regard to trade results, owing to the fact that nearly 250 societies had omitted to send their returns in time for the Congress, statistics for the past year were presented in the form of estimates. These relate only to the retail societies, which are calculated to have a membership of 6,626,429, with a share capital of £119,611,116. The total liabilities are £169,867,398. The sales for the year were £210,081,312, a decrease of £7,236,689, or 3.38 per cent., while the net profit (inclusive of share interest) was £26,779,090, a fall of only £158,934, or 0.59 per cent.—thus providing confirmation of the presidential view with regard to the desire for dividend that obtains in many societies. There has been a slight lessening of the credit system practised in many societies, but more have developed hire-purchase and credit clubs, with the result that the members' debts now total £5,320,367. The wages bill of the retail societies for the year just closed totalled £24,571,828, this being shared by 123,969 engaged in distribution (a decrease of 1.48 per cent.) and 64,884 engaged in productive service—an increase of 14.3 per cent., mainly due to extended bakery and milk supplies. The retail societies engaged in production to the value of £32,638,976, and when an examination of the returns of the wholesale and the separate productive societies is made it would appear that quite half their turnover consists of goods obtained outside the movement. This is a matter that has received little attention at the Congress, and may have fuller consideration at the annual assembly, which will be held next year at Birmingham.

Insurance in Germany.—The German insurance industry, writes our Berlin correspondent, was not severely hit by the crisis even in 1931. The Allianz-Konzern, by far the largest insurance group, which has recently pub-

lished its balance sheet, has been able once more to extend its business in many directions. In spite of the cancellation of very many old life insurance contracts, the life insurance business has increased from Rm. 3,182 millions to Rm. 3,281 millions, and profits on it have risen from Rm. 31 millions to Rm. 31.6 millions. The large property insurance company Allianz-Stuttgarterverein shows a premium income of Rm. 182 millions, against Rm. 196 millions in the previous year, but the decline is for the most part due to the deliberate curtailment of some branches of insurance. The economic crisis has only reduced the insurance contracts by 4 per cent. Payments of compensation have fallen from Rm. 103 millions to Rm. 95 millions, as 1931 was a year of very small claims for fire, employers' liability, transport and burglary insurance companies. Only credit insurance showed a loss. The Allianz shareholders are again to receive a dividend of 12 per cent.; for, in spite of a heavy writing down of investments and participations, the net profit has not diminished.

Australasian Banking.—Our Melbourne correspondent writes:—The Australian banking returns (exclusive of the Commonwealth Bank of Australia) for the quarter ended March 31, 1932, show that deposits have risen to £282,268,171, or an increase of £20,535,902 as compared with a year ago. The movement is due partly to lack of enterprise. Advances amount to £228,351,889, or a decrease of £18,133,920, which reflects the smaller trading demand for accommodation; but Government and municipal securities, which have risen to £40,001,952, show an increase of £18,133,920, due to the Treasury bills by which loans to the Governments are represented. The Commonwealth Bank returns for the March quarter show that balances due to other banks have risen to £32 millions, against £29½ millions a year ago. The New Zealand banking returns for the March quarter show deposits £53,336,885, or a decrease of £804,179 on the year; and advances and securities together £57,196,576, or a decrease of £2,242,595, though securities alone show an increase of £2,060,107, due to support given to the Government.

Conditions in Malaya.—A Singapore correspondent writes:—The announcement of the failure of the rubber restriction negotiations did what two years of persistent propaganda had failed entirely to accomplish. It brought the rubber companies down to earth and forced them to realise that, by flooding the market with rubber, which was selling at below cost price, they were only aggravating the problem and at the same time eating into financial reserves which could not last for ever. There is at last a definite tendency to curtail production to the extent best suited to the circumstances of the individual companies, and outputs are falling steadily. It will be many months before the effects of this change are seen in the statistics, but there is a general feeling that rubber has touched bottom. Very few people still entertain the idea that rubber will ever again rise to a shilling a pound. The view of the majority is that it will rise very slowly and stabilise itself somewhere between 6d. and 8d. at best. A selling price of 6d. would put a large number of companies in a very satisfactory position, for during the slump costs have been reduced to an extent which would have been regarded as absurd a couple of years ago. On at least one estate rubber is being produced to-day at a fraction under six Straits cents per pound. On the other hand, a recently issued company report gave production costs at nearly 20 cents per pound. It is these high-cost estates that are doomed, and until they do go under there can be no substantial improvement in the position. The biggest danger at the moment is that companies which may be forced into liquidation will put up their properties for auction and that the estates will be bought for a very nominal sum, which will enable the new owner, with only a small capital investment, to produce hard for a year or two without spending any money on maintenance, thus keeping the market heavily overstocked. The position with regard to tin is a source of continual wonder. No one pretends to understand why, with a very heavy restriction quota in

operation, the stock position shows no marked sign of improvement. The price falls steadily and the rate of consumption remains about stationary. Apart from the condition of these two industries, the position in Malaya is difficult, but by no means hopeless. What is urgently necessary at the moment is the introduction of measures of economy in the public services. Retrenchment is being urged in all directions, but little is being done beyond inquiries and recommendations. The estimated expenditure on personal emoluments during 1932 is \$15,144,501; the estimated revenue is \$30,390,044; and the estimated total expenditure is \$45,535,471. The deficit is being met by the transference of \$10,000,000 from the surplus on the Currency Guarantee Fund and the balance from the Colony's surplus. The general financial position of the Colony is extraordinarily sound, which probably explains the apparent reluctance to retrench. There is no public debt, the loans which have been raised in the United Kingdom being entirely for the purpose of re-loans to the F.M.S. and to public bodies who are responsible for payment of interest on the loans and contributions to sinking funds. There is a surplus on local assets, the annual income from which, with rents on Government property, provides about 20 per cent. of the Colony's total revenue. Unfortunately, the outlook in the F.M.S. is much less bright. A committee appointed by the Government to examine a proposal for the establishment of an all-Malayan Customs union reported a few days ago and condemned the idea from all angles. It emphasised the enormous value to the Colony of the century-old principle of the freedom of its ports, and urged that any interference with this policy would destroy entirely the vast trans-shipment trade which has come to Singapore by virtue of its geographical position. Government acceptance of the views expressed in the report has not yet been announced, but it is inconceivable, in view of very vigorous opposition expressed by the committee and of the protests voiced on behalf of all communities in the Colony, that anything more should be heard of the scheme.

Guardian Assurance.—This company adopts the unusual, though salutary, practice of maintaining separate investments for each class of business. As an inevitable result, the balance sheet is somewhat cumbrous, and the departmental accounts include a number of items of a capital nature, which are usually dealt with through profit-and-loss account. During 1931 the total premium income was well maintained, but while the marine account showed a largely increased profit, the fire and accident accounts yielded a return in both cases on a much reduced scale, as the following table shows:—

	1930.	Per- centage of Profit.	1931.	Per- centage of Profit.
Amount of Profit.	£		£	
Fire	87,235	8.1	48,665	4.5
Accident	26,137	3.3	13,738	1.8
Marine	6,120	3.0	24,408	11.9
Life	36,000		36,000	
Profits on investments and exchange	...		36,727	
Less items debited to profit and loss account	155,492		159,538	
Allocation to investment reserve and contingency fund	50,160		33,761	
Net trading surplus	31,553		4,600	
	73,779		121,177	

In addition to the investment items referred to in this table, the sum of £162,000 has been written off investments. As a result, the directors are able to state that the assets, totalling £13½ millions, are fully equal to the book values without taking into account the investment reserve and contingency fund of £360,000. On the life fund of £6½ millions this is a particularly fine achievement, and in commenting on this the chairman pointed out that one-half of the whole fund is invested in mortgages, "the attraction being that a mortgage is not exposed to such great fluctuations in value as are most other forms

of securities, particularly as any mortgage we accept is for a proportion of the approved valuation only, still subject, with hardly any exception, to a sinking fund, from the outset of the advance." The chairman referred also to the existence of the investment reserve and contingency fund as being a means of meeting any further depreciation, and hinted in this connection at the possibility of a portion of the fund being utilised in the near future for the purpose of acquiring another insurance company. It is interesting to note that a resolution was agreed to at the meeting whereby the directors' fees, which have hitherto been fixed at £12,000 per annum free of tax, are henceforth to be at the rate of £15,000 per annum, subject to tax. This represents a slight reduction, which is in line with an internal rearrangement of salaries to certain members of the staff, involving a change over from a tax-free basis to the gross equivalent with tax at 4s. 6d. deducted.

North British and Mercantile.—In 1931 the North British and its associated companies, the Railway Passengers, Fine Art and General, and the Ocean Marine, had to provide a sum of £945,000 for depreciation on the book values. Though a large sum in itself, this is small in relation to total assets of nearly £50 millions, the reason being that the company had large hidden reserves existing on December 31, 1930. The recovery in values this year has, of course, completely altered the situation, and so far as the life and annuity funds, and those of the three subsidiary companies, are concerned, the company has more than recovered the depreciation of £545,000 provided on December 31st. The remainder of the depreciation, namely £400,000, due to the fire account, has not been fully recovered, as in that account a considerable portion of the fund is invested in the United States, though it is stated that all dollar investments have been taken credit for at par of exchange, thus leaving out of account the whole of the exchange profit. On the underwriting side the accounts have yielded in the circumstances a very satisfying return of profits, which in every department are higher than in 1930. The company, however, has not escaped a decline in premium income, which has been particularly marked in the fire department, where the preponderance of American business has reduced the total premiums from £3,901,000 to £3,628,000. The detailed results are set out below:—

	1930.	Per- centage of Profit.	1931.	Per- centage of Profit.
Amount of Profit.	£		£	
Fire	262,436	6.7	246,368	6.8
Railway passengers	112,480	9.4	124,217	10.7
Fine art and general	39,815	11.0	44,240	13.0
Ocean marine	35,000	10.9	50,000	17.3
Life	304,359			
Annuity	105,687			
Sinking fund	12,000			
Less items debited to profit and loss account	871,777		464,825	
Total net trading surplus	171,083		159,653	
	700,694		305,172	

The dividend has been maintained at 92 per cent., and the cost is covered by interest earnings with a small margin. The net result of trading for the year has been to increase the company's surplus assets by a sum of £325,000, though this, of course, leaves out of account the provision for depreciation of £590,000 in the fire and general accounts. In the life department there was some falling off in new business, the amount having declined from £4,105,000 to £3,817,000, but as against this a larger volume of annuity and sinking fund business was transacted last year than in 1930.

Sea Insurance Company.—This company, originally founded in 1875 and centred in Liverpool, is one of the few old-established marine companies to retain its independence. In its own field it has earned consistently good profits, but during the last twelve years, when fire and

accident departments were added to preserve existing connections, the losses on these departments have been throughout a source of anxiety. The total premium income in 1931 was £750,000 compared with £847,000 in 1930, each department having written a smaller volume of business. The detailed results are as follows:—

	1930.	Per- centage of Profit.	1931.	Per- centage of Profit.
Amount of Profit.	£		£	
Fire	5,740	3.0	6,178	3.8
Accident	14,547	20.5	23,854	36.0
Marine	34,842	5.7	40,363	6.9
Less taxes, &c.	14,555		10,331	
Total net trading surplus	9,398		6,481	
	5,157		3,850	

The 1931 marine underwriting account opens with premiums of £521,000 compared with £586,000, but, considering the number of steamers now laid up, the fall of some 12 per cent. is not unsatisfactory. The first year's experience of the new account has been particularly favourable, for claims have absorbed only 28 per cent. of the premiums, as compared with 35 per cent. a year ago. The balance sheet shows total assets of just over £2 millions, and, notwithstanding the depreciation of last year, the company is still in the happy position of being able to state that the market values exceed the book values, and this without the need for any writing down from reserves. As a measure of precaution an investment reserve fund of £100,000 has been created by a transfer from profit and loss account, but at the date of the annual meeting on May 3rd this fund was stated to be intact. The company's £1 shares stand at 3¼, and on the dividend of 17½ per cent. yield nearly 5½ per cent. gross.

Overseas Correspondence.

LEAGUE OF NATIONS.

The Council and the Crisis—League Expenditure.

(FROM OUR CORRESPONDENT.)

GENEVA, May 24.

THE League of Nations Council has concluded a session of considerable importance. It has discussed the serious financial situation of the countries with which it has been specially concerned, the far-reaching proposals submitted to it by the International Labour Conference to meet the general crisis, the final conditions in which Iraq may reasonably expect to become a self-governing State, a variety of disturbing minority and other controversies between Danzig, Poland and Germany, the general policy of League activities and finance, the terrible conditions in Liberia, and a number of other questions of less significance.

The discussion on the financial situation of Austria, Hungary, Greece, and Bulgaria—with more particular reference to Austria and Greece—carried the substance of the matter little further. A warning to Austria of the seriousness of default, a still sterner warning to Greece on the action she is taking with regard to her solemn obligations, a re-assertion of the attitude of Great Britain, France, Germany and Italy on the subject of further financial assistance, and a decision to ask the Financial Committee to set up a delegation conjointly with the Government experts, who have also been at work on the matter (together with three other experts from Belgium, Holland and Switzerland) to study the problem again and make any propositions at which they may arrive—that is the extent of business done in this respect. The Financial Committee has already constituted its delegation of five members—M. Suvitch (president), former

Italian Financial Under-Secretary of State; Mr Norman Davies, former Under-Secretary of State in the United States Treasury; Sir Otto Niemeyer, Bank of England; M. Daynes, French Inspector of Finance; Dr. Paul Kempnes, of Mendelssohn and Company, Berlin; and Dr. Pospisil, Governor of the National Bank of Czechoslovakia. The British Treasury expert is Sir Frederick Leith Ross.

What these experts will be able to do—and hitherto the views of some of the Treasury experts have not coincided with the proposals of the Financial Committee—depends in the first place on how long Austria can hold out and whether Lausanne will achieve something generally substantial. It is not easy to decide whether the risk of losing fresh loans to Austria is greater than the risk of Austrian collapse; or, to put it differently, whether it is wise or not to take the risk of fresh loans in a last effort to avoid the catastrophe that, otherwise, is foreshadowed, and to save what is already there. The British position, as described by Mr Eden to the Council, is not very logical. Great Britain is against new loans because at best they are only suggested as temporary palliatives, and would be a speculation, as their repayment would depend on the hypothesis of a substantial improvement in world conditions within a short period. But Great Britain is prepared to consider the special claims of Austria. Its manner of doing so, however, is somewhat odd. It suggests that the other principal Governments should give a credit similar to the hundred million schillings already advanced by the Bank of England so as to provide the National Bank with suitable reserves in foreign currencies; but, failing that, the principal Governments might facilitate a loan sufficient to strengthen the Bank's reserves after repaying the outstanding balance of the advance made by the Bank of England. The British Government would then facilitate the issue on the British market of an amount sufficient to repay the Bank of England advance. Naturally, the other Governments look upon this as a proposal to them to put their money into Austria to save the Bank of England advance, which, without any further loans, is anyhow in danger. If, as Mr Eden said, further loans would, in the long run, only prove an additional source of weakness, and if it is a mistake so to give false encouragement, it is not logical, and certainly not acceptable to other countries, to propose that they should do the very thing against which this general warning is uttered. It would be better to take a franker and simpler attitude, to leave moralisings aside, to suggest to other Powers that they should follow the Bank of England's example, and leave it at that. We can't have our excuse and eat it. Mr Eden's advice is not likely to be followed in any event. France refuses any loans except on the basis of the general Tardieu Danubian plan, and Italy has no desire to join in providing loans, for example, to Yugoslavia and others in the Danubian area. So all must apparently wait on Lausanne and Lausanne on Ottawa. And what then?

Similar procrastination is evidenced in the attitude of the Powers on the Council to the resolutions by the International Labour Conference on international works, monetary policy, problems of production and international trade. They were all referred to the Assembly, in a resolution which also requests the Committee of Inquiry on Public Works to accelerate its proceedings, which declared that various League organisations are at the disposal of Lausanne should it so desire, and which, in laying before the Assembly the question of calling a world conference on international production and trade, asks the Secretary-General to make the necessary preliminary investigations. Lausanne looms ominously ahead, and has become a dangerously convenient dumping ground.

The agreement reached on the terms upon which Iraq may enter the League as an independent State is a satisfactory conclusion to an important constitutional and political development. Great Britain's conduct in her special relationship with Iraq will be closely watched by other Powers to see that the end of the Mandate is not used to perpetuate the tutelage in other forms. Several acute matters concerning Danzig and minorities were

satisfactorily dealt with for the time being, but not definitely settled; the economic and political relations of Danzig, Poland and Germany do not improve, and all the Council can do for the present is to patch things up and keep them from degenerating into a complete dog fight. The Council has also done its best to persuade Liberia to put into effect the administrative reforms required to safeguard the natives from the terrorism and brutality which were brought to light by the International Commission of Inquiry (1930), and has decided to send out a commissioner to pacify the Kru tribes upon whom terrible cruelties have recently been inflicted by the Liberian frontier force and who have taken to the bush.

The British proposal to set up a commission of inquiry into League activities and expenditure was roughly handled in the Council by all except the representatives of Germany and Panama. Rightly or wrongly, the suggestion was generally regarded as a manifestation of hostility, and the Spanish representative voiced this feeling in a subtly diplomatic analysis of the position. He observed, incidentally, that the League's budget was smaller than that of any ordinary-sized European town, and that it was about as much as it cost to keep London clean. It was pointed out by various members of the Council that the British proposition ignored the prerogatives of the Assembly and the International Labour Organisation, and it was eventually decided that the Supervisory Commission (which is the standing Assembly Commission for budget control) should, with any additional experts required, examine and report to the Assembly on numbers, salaries, and control of expenditure, questions of general policy being excluded as within the sole purview of the Assembly of all the States members. The organisation of the staffs was also excluded, having been the subject of inquiry by a special committee on whose report the Assembly took its decisions in 1930. Mr Eden said it was necessary to convince public opinion in England that the League was economical. Nobody who knows anything about it expects that economies, however drastic, would have the slightest effect on those whose objections to cost are entirely political.

UNITED STATES.

Congress — Banking — Trade — Railroads.

(FROM OUR CORRESPONDENT.)

NEW YORK, May 17.

OUTWARDLY at least there is an increase in the bustle at Washington to get something done before the expiration of the fiscal year on June 30th, and voting may be expected in three or four weeks on a Tax Bill which promises, along with some reduction in expenditure, to balance the Budget. The much-disliked Glass banking reform Bill is not likely to come up for a vote at this session, nor does it now look as though a soldiers' bonus proposal could be resurrected. Various obnoxious forms of taxation have been before both Houses of Congress, but nothing has been agreed upon. There is still a chance that Congress will return to a sales tax as the most efficacious way of meeting prospective expenditure, and the optimistic view is that some reduction in expenditures will have to be made. President Hoover is still making at least an outward attempt to force economy on Congress, but ideas of political expediency are a stumbling block.

Reports that the President has fallen in with a scheme to float a Federal bond issue of two to three thousand millions seem to be wide of the mark. The President's idea, it is thought here, is to keep all Government aid distribution in the hands of the Reconstruction Finance Corporation and to limit it to business needs, avoiding the futility of spending for unneeded public buildings and road building as a means to relieve unemployment. An exception possibly may be made for loans to States which are unable to take care of their unemployed, but this will probably involve no more than two or three hundred millions.

While the Goldsborough Bill, the purpose of which is to

increase commodity prices, is on the sidetrack, the Federal Reserve Banks continue their policy of credit expansion. This week they added another hundred millions to their Government bond portfolio. Member banks cut their discounts by \$35 millions and total Reserve Bank credit rose by \$60 millions. It is now \$1,001 millions greater than a year ago. Current circulation dropped further, and stands \$804 millions above a year ago, with only sporadic bank failures. The member banks are, nevertheless, still pressing for liquidation of loans against stock and bond collateral, and they are doing little more than nibbling at new investment. The week's loan and investment deflation was \$137 millions. On the Stock Exchange the week brought a fall of \$60 millions in brokers' loans.

A feature of the week's Federal Reserve statement was the disclosure that, for the first time, the system had availed itself of the privileges granted by the Glass-Steagall Act. It placed \$97 millions of U.S. Government bonds as collateral with the Reserve agents for note issues. There are \$2,765 millions of Federal Reserve notes outstanding. Collateral behind them is \$474 millions of eligible paper and the Government bonds mentioned, and \$2,219 millions in gold. Last week the country lost \$35 millions in gold, and shipments in sight total about \$20 millions. In the past month the net loss has been \$85 millions. However, the official explanation of the bond substitution is the scarcity of eligible paper. Since last autumn discounted bills have dropped about \$350 millions and bankers' bills bought by the Federal Reserve have fallen considerably, while the market demand for bills has risen, thus increasing the difficulty of obtaining enough for note collateral.

So far as can be discerned, the so-called Robinson Relief Bill, which is said to have the sympathy of the President, does not contemplate a Government bond issue. Rather will it direct the Reconstruction Finance Corporation to widen the scope of its lending, through a public issue of debentures. These will form a contingent liability of the Federal Government, which, in effect, will underwrite them, but the funds, it is hoped, will be used only to promote self-supporting projects. Should the public take an issue of, say, \$250 millions of such debentures, the effect would be to relieve the Treasury of another subscription to R.F.C. stock at this time, each dollar of which would be added to the public debt. The machinery would work somewhat similarly to that of the Intermediate Credit Banks, which issue bonds guaranteed by the Government, but which have not increased the public debt.

Formal announcement has been made of reduction in interest paid on foreign deposits with the commercial banks. The cuts are one-half per cent. Some disappointment was felt at the delay in reducing the New York Federal Reserve Bank's discount rate, but a cut still is expected.

Trade news is not particularly encouraging. Merchandise exports in April of \$136 millions were the lowest since the summer of 1911, excepting August, 1914; and imports dropped slightly to \$127 millions. In the four months the export excess was only 70 millions. The steel trade is barely maintaining a level about 24 or 25 per cent. of capacity, motor production is slack, and railroad traffic is stationary. Some railroad reorganisations will probably be necessary before the end of the year, but rumours of re-ther dividend omissions have been announced, and others are due, but bond interest defaults are likely to be few in the next few months. Some encouragement is taken from Commission in approving loans asked from the Reconstruction Finance Corporation. It is thought that the Commission may yet go so far as to approve loans designed to give constructive work on the railroads as well as merely to meet interest and bond maturities.

The Supreme Court has given a decision on State power to regulate oil production which may have far-reaching effect. Much doubt had existed as to the validity of proration laws, such as the Oklahoma statute, and the matter now is opened for national agreement, which possibly may extend to production of other raw materials involving waste of natural resources.

FRANCE.

Politics — Budget — Debt Redemption.

(FROM OUR CORRESPONDENT.)

PARIS, May 25.

M. LEBRUN, the new President of the Republic, yesterday called MM. Tardieu and Flandin, the retiring Premier and Finance Minister, and M. Herriot, to meet him in a joint conference at the Elysée, for the purpose of enabling the Premier-presumptive to ascertain from his predecessor and his Finance Minister the exact present situation, so far as France is concerned, of the various important international and financial problems with which the new Government will have to deal. It is understood that M. Tardieu, as the retiring Foreign Minister, set forth in detail the situation of the reparations, the disarmament and the Danubian problems, and that M. Flandin afterwards furnished very full financial and other technical information on the same subjects. The Finance Minister also set forth the situation of the Treasury and the general national financial situation, as exemplified by the Budget already voted for the financial period April 1-December 31, and by the preparatory measures taken in regard to the Finance Bill for the twelve months of 1933.

Last night M. Tardieu spent a good deal of time with the heads of the permanent staffs of the departments concerned, and to-day detailed memoranda were handed to M. Herriot giving summaries of the numerous private conversations the retiring Premier has had recently at Geneva with the representatives of the various foreign Governments, on the many questions now awaiting solution. These memoranda constitute a kind of inventory of the situation and will enable M. Herriot to co-ordinate future French policy as he deems fit.

It is abundantly clear, from newspaper articles published during the past few days from the pens of responsible and irresponsible members of both parties to the Cartel, that the whole problem of participation or non-participation, as between the Radicals and the International Socialists, in the pending new Cabinet, is still as far from solution as ever. For the moment, M. Herriot is pressing the Socialists for a decision, both on the principle itself and on the conditions on which such participation might be found possible. M. Léon Blum (as stated last week) has set forth his "irreducible minimum" conditions, but these stipulations will, in any case, have to be ratified by the pending national congress of the party. Reports of meetings of many of the local Socialist Federations leave it an open question whether the majority vote at the congress will be for or against participation, no matter what conditions the Radicals may find acceptable. The Radicals appear to be almost equally divided. M. Herriot himself seems to be hardening rather in the direction of maintaining independence of Socialist demands—certainly as far as national defence and reparation payments are concerned. In an interview printed on Monday the Radical leader said: "I stand on the simple and firm principles which I have unceasingly affirmed as to the indefeasible rights of France, based on treaties and contracts freely signed. . . . Security remains all-important. Economies, if you like, so far, for instance, as regards new barracks, which would be useless, or any other expenditure which would resemble a waste of money; but for the rest I cannot touch the framework of the security of my country. On the contrary, I want to perfect and modernise it, while awaiting the giving of solid international guarantees to nations who mean to labour without discouragement for the organisation of a real peace." More than one other leading Radical has voiced similar sentiments.

M. Lamoureux, one of the Radical financial experts, insists that the Socialist demand for the reduction of expenditure on armaments by 5,000 million francs to 6,000 millions francs in the next Budget is absolutely impossible, although a cut of 1,500 million francs might be feasible. He pronounces unemployment insurance equally unacceptable. As matters stand, at the time of writing, it would be vain to expect the advent of any French Cabinet that will foster any plan of reduction of

armaments which does not provide compensating security guarantees, or any cancellation of German reparation payments unaccompanied by a reduction of French debt obligations to the United States. M. Herriot's position in regard to these two cardinal factors is all the more impregnable in that he can rely on securing a sufficiently large majority, with the aid of the Moderate parties, to enable him, if need be, to dispense entirely with Socialist support.

The attention of all sections of the political world is now closely focussed on four great financial problems, which are all calling for immediate solution. These are: the balancing of the Budget, the restoration of the Treasury, the suppression of the deficit on the railways, and the settlement of the reparations and the American debt questions. The deficit on the nine months' Budget (April 1st to December 31st) is expected to be anything between 3,000 million francs and 4,000 million francs, and that on the 1933 Budget from 6,000 million francs to 7,000 million francs. The finding of the necessary means depends solely on the courage of the new Government and the discipline of its majority. The Treasury, which, according to M. Chéron, some two years ago held surplus funds of something around 19,000 million francs, exhausted these huge resources long ago and also used up the 3,000 million francs "loan without interest" accorded to it by the Bank of France under the Stabilisation Law. It has borrowed 5,000 million francs on current account from the Caisse des Dépôts et Consignations, and the balance of its current account at the Bank a few weeks ago was less than 20 million francs. The Caisse des Dépôts was partly reimbursed by an issue of 1,000 million francs of Treasury Bonds, issued specially for that purpose.

The recent issue of 3,000 million francs of Treasury Bonds will not effectively ease the situation of the Treasury, as the money is earmarked for financing the further programme of public works now being put into operation. Other large issues of Treasury Bonds would appear to be inevitable for the purpose of getting rid of the deficits on the 1931 and 1932 Budgets. The deficit on the railways, which amounted to 2,600 million francs in 1931, and will represent a still larger sum this year, has also to be borne by the State, and must be provided for if the Budget is to be honestly balanced.

Senator Milan, the President of the Caisse d'Amortissement, in a statement setting forth the rôle of the organisation in regard to Budget equilibrium and the public credit, points out that receipts under the Budget and by the Caisse, which in 1926 totalled 43,000 million francs, amounted in 1931 to 53,500 million francs, in spite of taxation reductions of 6,000 million francs between 1928 and 1930. The amount of internal debt extinguished by the Caisse down to March 31, 1932, was 22,000 million francs, the total having been brought down from 286,000 million francs on July 31, 1926, to 264,000 million francs. Taking into account postal department and railway issues, Budget deficits, etc., the net annual direct saving to the Budget now represents nearly 900 million francs. The saving which might have been effected had the Rentes conversion plans been applied as from March, 1931, would have been 1,500 million francs per annum. The most remarkable of the results achieved through the work of the Caisse has been the revalorisation of the Rente issues.

GERMANY.

Politics — Budget — Unemployment — Pulp Industry.

(FROM OUR CORRESPONDENT.)

BERLIN, May 24.

THERE has been no further development in the political crisis in connection with Herr Groener's resignation, and the President has been out of town since Whitsuntide. Meanwhile the Cabinet is principally occupied with the 1932 budget. The postponement of the political difficulties does not, however, help to solve them. Up to the time of writing, Herr Groener has not handed in his

formal resignation, but this does not mean that there is any question of restoring him to the head of the Defence Ministry. The circumstances of his fall, moreover, make it unlikely that he will be able to remain Minister of the Interior, for the blow to his prestige which he has experienced in one office must affect his suitability for the other; the Minister for the Interior, too, even more than the Minister for Defence, requires to be able to conduct a parliamentary battle effectively, and Herr Groener is no orator. In addition to these two offices, however, the post of Minister for Economics is also vacant, owing to the retirement of Herr Warmbold. The Chief Mayor of Leipzig, Herr Goerdeler, who was Price Commissioner for a few months and has been considered for the office of Minister of Economics, does not seem at all anxious to accept the post. That is partly due to actual differences of opinion, for Herr Goerdeler was until recently a member of the German National People's Party, and has probably changed his views very little, especially on social questions, but above all he seems reluctant to throw in his political future with that of a cabinet whose continued existence in its present form seems to him problematical. Finally, there will have to be a change in the Food Ministry, as the present Minister, Herr Schiele, is a heavy burden on the Cabinet, without bringing it any support. The Chancellor is therefore once more faced with the task of reconstructing his cabinet, but so long as it is not clear what course he is steering, he will find it difficult to get persons of standing to serve. It is, however, impossible for him to make it clear until it is known what is going to happen in Prussia; whether and under what conditions the National Socialists there will join the Government. German policy depends upon the decisions which are hoped for from the Lausanne Conference, and Lausanne cannot afford to fail, if democracy in Germany is to be saved.

The Budget for the year ended June 30, 1933, has been presented to the Reichsrat. Meanwhile, however, the Government has to create the conditions which are indispensable to its balancing. The crisis tax, which takes up to 5 per cent. of income from employment, but falls much more lightly on income from capital and the "free" professions, is extended to March, 1933. In addition, there is to be an employment tax of 1½ per cent. on all incomes from employment which exceed Rm. 300 monthly. Unlike the crisis tax, it will also affect officials, who were exempted from the crisis tax on the ground that the special reduction in their salaries exceeded the amount of the tax. The poll tax, levied on every inhabitant of a commune without reference to the level of his income, is to be doubled. Naturally, in view of the monstrous burden which the German citizen already has to bear, these taxes are meeting with strong opposition. The burden is increased by the fact that they bear much more heavily upon income from work than upon income from property; but that was inevitable if a flight of capital and a further check to accumulation was to be avoided.

Unpopular as the proposals are, they are not likely to meet with serious difficulties in Parliament. The Government can point to the fact that these taxes will enable them to achieve important objects. They will produce funds for unemployment relief, and thereby lighten the burden under which the communes are in danger of collapsing. The reorganisation of the unemployment relief system is not to be so comprehensive as was at first intended, and details are not yet known; but the division into insurance (financed by contributions from employers and employed); emergency benefit (of which four-fifths is provided by the Reich and one-fifth by the communes); and communal relief (for which the communes are entirely responsible, though last year for the first time some of them received grants, as they would otherwise have gone bankrupt) is to remain. The gradual transition of the unemployed from one class to another will continue, but the period of unemployment insurance benefit is to be cut down from 20 weeks to 13. The rates of insurance and emergency benefit, which differ from relief in being graduated in proportion to wages, are to be made the same; and the principles on which the means test, which applies to emergency benefit and relief, but not to in-

surance benefit, is applied, are to be unified. This will somewhat simplify the very complicated organisation, but it is doubtful whether these changes will be enough if the depression continues.

The employment tax is expected to yield 325 million, and the extension of the crisis tax 45 millions, while the doubling of the poll tax will yield 250 millions for the communes. These increased receipts are essential in order to balance the decline in revenue, and to make it possible for the communes to restore their shattered finances to soundness. The Reich is also increasing its grants to the communes from 530 to 700 millions. Total expenditure on the unemployed will not, according to the Government's estimate, greatly exceed the 3 milliards spent in 1931, though the calculations are based on an estimate of 5.9 millions unemployed against 4.8 millions. The requirements of 1.1 million unemployed are therefore to be financed entirely out of economies. Whether this will prove possible is by no means certain.

One more failure has been added to the toll of the crisis. The Verein für Zellstoffindustrie A.G. of Berlin, the fourth largest producer of pulp and paper in Germany, has had to suspend payments. The company, which originally had 7 million ordinary shares, issued in 1930 4 million 8 per cent. preference shares and 7 million 8 per cent. mortgage bonds, which were taken up by the public. The new funds, and extensive credits in addition, were used for the purchase and construction of additional factories which have proved a complete failure. Even two years ago the German pulp industry was considered very profitable, but conditions changed rapidly. In the last few months the imports of pulp from Sweden and Finland greatly increased as the industries of those countries were favoured by exchange depreciation. Total German output of pulp in the first quarter of 1932 was only half that in the corresponding period of 1931, while the imports from Sweden and Finland have not diminished. This has forced another and larger producer, the Feldmühle A.G., to pass its dividend for 1931 after paying 10 per cent. the previous year, and the Verein für Zellstoffindustrie, whose financial position has always been more unfavourable than that of its competitors, naturally felt this latest contraction of the market more acutely than any of them. The Government, which considered introducing an equalisation tariff against countries with depreciated exchanges, finally adopted a different course of action. The sanctioning of the use of foreign exchange for the import of pulp has been centralised, so that the imports can be kept down by administrative action to the indispensable minimum. Negotiations between the German and the Swedish and Finnish Governments are to forestall the political difficulties which might otherwise arise. Hitherto the rationing of foreign exchange has not been used to protect individual branches of German industry, and in this respect the regulation of pulp imports represents an undesirable precedent.

AUSTRIA.

Finance — Foreign Trade — Stock Exchange.

(FROM OUR CORRESPONDENT.)

VIENNA, May 23.

THE course of the Geneva Conferences has caused no surprise in Vienna. Politicians and financiers here had assumed that the transfer moratorium was inevitable, but they regard the decision to send a special commission to make fresh investigations in Austria as an unnecessary delay. The Financial Committee is fully acquainted with the position of Austria from the previous inquiries, and the position has certainly not improved during the last few months; on the contrary, it has become worse. It is left to the new Austrian Government to proclaim the transfer moratorium and also to pass resolutions concerning further plans regarding the Credit Anstalt, the negotiations with the foreign creditors, and a partial recasting of the Budget.

The retrenchment in the Supplementary Budget will have to be incisive, but it will not include any further

reduction of the salaries of civil servants, for such a step would lead to far too much political disturbance. In any case, it is certain that, however drastic the retrenchment, it will be partially neutralised through the increased expenditure called for by national insurance payments, by the increasing requirement of credit for the Federal Railways and by the serious decline of revenue from Customs duties. Customs revenue is steadily falling in consequence of the drop in foreign trade. Imports have gone down by about 30 per cent. For the year 1932 Customs revenue was estimated at 250 million schillings, but this sum will certainly not be realised, and the merchandise turnover tax collected on imports will also decline in proportion. In April the value of imports was 125.5 million schillings and of exports 67.6 million schillings, so that the deficit amounted to 57.9 million schillings. In comparison with April of last year imports have fallen by 66.7 and exports by 54.5 million schillings. For the first four months of the present year the deficit amounts to 260.2 million schillings, which is 22.1 millions lower than that for the corresponding period of last year.

One of the outstanding economic and political events of the past week was the retirement of the financial adviser to the Municipality of Vienna, Herr Breitner, whose financial policy has long been highly praised by the Social-Democrats and deeply resented by the bourgeoisie, because tremendous investments have been made, not out of loans, but out of taxes paid by the present generation. The bourgeois parties must, however, admit that Breitner is leaving the affairs of the municipality in perfect order, though the huge expenditure may have to be greatly reduced in view of the strain on the taxpaying classes.

French impediments have been placed in the way of exports to France. France wants traffic to be dealt with through the compensation fund, which has been set up at the Paris Chamber of Commerce and involves disturbing formalities. Furthermore, a 10 per cent. advance to the compensation fund is required. The Austrians are protesting against this, and are thoroughly dissatisfied with the management of the import prohibitions. The National Bank can do little to ease matters, and it is said that the new Government may even increase the duties upon certain very necessary articles. The bill portfolio of the National Bank has increased, especially as it is the only source from which money can be procured. The bank's holdings of foreign exchange have again decreased. In connection with the increase in the circulation of bank notes, certain foreign credits in Austria have been released. The movement of savings deposits has not been satisfactory during the past few weeks. The public is making such deposits only with the savings banks, totally neglecting the banks. As the proposed transfer moratorium has been largely misunderstood by the population of the Federal countries and confused with a general moratorium, withdrawals from the savings banks were frequent. In consequence, all the banks and savings banks have been compelled to keep rather large reserves in hand. The public has again suffered heavy losses on the Stock Exchange, and these are particularly noticeable on the obligation market and in stocks in terms of foreign currencies. Among the most-favoured investments of the conservative public are the obligations of the Danube-Save-Adriatic Railway, which have recently fallen by no less than 50 per cent. This was the result of Hungary's suspension of the interest service and of the fear that Yugoslavia and Austria might follow this example. On June 25th the next instalment will be due, so that it will soon be known whether the payment of the State instalments is to be met.

FINLAND.

Money Market — Foreign Trade — Exchange — Finance.

(FROM OUR CORRESPONDENT.)

HELSINGFORS, April 20.

ON April 19th the Bank of Finland lowered its lowest discount rate to 6½ per cent. from 7 per cent., the rate that had been in force since February 12th. This reduction is

a consequence of the relaxing of the money market, the rise in the value of the Finnish mark and the favourable balance of trade, these three factors being mutually dependent on each other.

The easing of the money market is clearly perceptible in the considerable reduction in the margin between the credits and deposits of the joint-stock banks. This decreased from 1,319.8 million marks at the end of last year to 1,018.8 million marks at the end of February and 856.1 million marks on the last day of March, while deposits, which had been reduced considerably during and after the crisis last autumn, increased again in March by 51.4 million marks. The banks have also been able to increase their cash and to reduce their rediscounted bills at the Bank of Finland, and their net balances abroad rose from 4.8 million marks at the end of February to 47.1 millions at the end of March.

The total credits of the Bank of Finland had dropped to 923.6 million marks by the middle of April, in comparison with 1,309.2 million marks at the end of last year and 1,059.9 million marks at the end of February. Rediscounted bills decreased from 482.8 million marks at the end of last year to 253.5 million marks on the last day of February and only 155.7 million marks on April 15th, while the reduction in direct credits was very small. The reserve of foreign currency, which had melted away in the autumn, increased again in February by 165.2 million marks and in March by 65.2 million marks. The ordinary cover that had dropped below 42 per cent. of all liabilities payable on demand in November had risen to 63.8 per cent. on April 15th.

During the first quarter of the current year Finland's balance of trade was unusually favourable, as it had been during the whole of last year. Imports were 27 per cent. less in volume than last year, and their value only amounted to 506.6 million marks, in comparison with 661.6 million marks and 953.2 million marks in the preceding years. At the same time the volume of exports was 21 per cent. larger than in 1931, which was due to a large extent to the fact that exports to Great Britain were unusually heavy on account of the anticipation of duties. The value of exports amounted to 799.8 million marks, against 631.5 million marks and 843.0 million marks in 1931 and 1930. The balance of trade for the first quarter provided a surplus of exports of 293.2 million marks, compared with only 9.9 million marks last year and an appreciable surplus of imports in previous years.

There was a consequent rise in the value of the Finnish mark abroad. At the end of last year the dollar was quoted at F.mk. 69.30 and sterling at F.mk. 235; by the end of February the quotations had dropped to F.mk. 62.75 and F.mk. 218.50 respectively, and on April 19th the rates were F.mk. 57.15 and F.mk. 216.50. In April the changes in the rates of exchange were insignificant. The probability is that the Finnish mark will be stationary for a time and will rise again in value during the exporting season.

As a direct result of the rise of the Finnish mark, the rise in the level of prices has ceased and has been replaced by a tendency in the opposite direction. Wholesale prices for imported goods have already fallen from 95 points in January to 87 in March, and for exported goods from 81 to 75. Goods produced and consumed within the country have been almost untouched by this fall in prices, but the total index dropped 1 point in February and again in March.

The financial accounts of the Government for the fiscal year 1931 have now been completed. They are clearly affected by the depression, revenue amounting to 3,975 million marks, against 4,398 million marks in 1930. Expenditure was reduced in about the same proportion, from 4,739 million marks to 4,246 million marks. The deficit in revenue was covered by funds from the so-called cash balance accumulated in earlier and more satisfactory years. No loans are included in the revenue, whereas the redemption of State loans is included in the expenditure. The State Budget for the current year allows for a loan of 60 million marks. On this basis an internal premium bond loan was issued to this amount in the middle of April, and the bonds were all sold within a few days.

BULGARIA.**Foreign Liabilities — Balance of Trade.**

(FROM OUR CORRESPONDENT.)

SOFIA, May 7.

THE findings of the Finance Committee of the Council of the League of Nations, concerning the foreign payments of Bulgaria, have to some extent allayed the fear of an economic breakdown, but the relief which Bulgaria receives is only temporary. To meet her public obligations other than reparations, Bulgaria will have to transfer in foreign currencies, during the six months from April 1st to September 30th of this year, only 50 per cent. of the sums due. The balance is to be deposited in leva with the National Bank of Bulgaria, under the control of the Commissioner of the League of Nations. Thus during the six months' period of relief, Bulgaria is to pay a monthly sum of 35.5 million leva, instead of 91 million leva. But the plan proposed by the Finance Committee is based on the following two assumptions:—(1) That exports will yield during 1932 foreign exchange amounting to a monthly average of 300 million leva; and (2) that 200 million leva will cover payments for imports, leaving thus a balance of 100 million leva in foreign exchange with which to meet public and other private payments. It would, therefore, be interesting to know the position of the balance of payments in the first quarter of 1932.

The average of monthly receipts of foreign exchange from all sources has amounted to a little over 300 million leva. The expenditure, however, has been on the whole in excess of the receipts. The National Bank of Bulgaria has, therefore, lost in the course of the three months 50 million leva worth of foreign exchange. At first sight it would appear that the assumptions of the Financial Committee have been justified by the actual events, but this result is due to the extreme restrictions on current commercial transactions, as well as to the great number of deferred private payments. The harmful effect of these deferred payments is already beginning to be felt, and foreign creditors are demanding the liquidation of the existing commercial obligations amounting to over 2 milliards leva.

The outlook for the future may be viewed in the light of the analysis of the balance of foreign trade—the most important factor in this case. The situation in this respect gives little scope for optimism. The balance of trade for March, 1932, shows a deficit of 73 million leva, as against 208 million leva surplus for the same month last year. In comparison with the first quarter of 1931, the value of exports has dropped by 30 per cent., and it is still declining, mainly by reason of the steady shrinkage, both in prices and in quantities of the most important export goods. At present the balance of foreign trade is being sustained mainly by exports of grain, which yield monthly 100-150 million leva worth of foreign exchange. There will be grain available for export until the new harvest. Great quantities of tobacco (about 20 million kilogrammes) are awaiting export, but conditions in foreign markets have grown worse, particularly since the abandonment by Greece of the gold exchange standard, which has made the Greek tobacco more competitive in price. Generally speaking, the prospects of Bulgarian exports are unfavourably affected by the economic difficulties of Germany and the Central European countries, Bulgaria's chief outlets. On the other hand, the increased imports are due to intensive building (mainly in Sofia), which in turn is caused by wavering confidence in the future of the currency.

TURKEY.**Trade Agreements — Currency — Monopolies — Census.**

CONSTANTINOPLE, May 11.

THE visit of Premier Ismed Pasha to Moscow with a mission of Turkish economic experts has confirmed anticipations by resulting in an economic pact whereby the Soviets will supply Turkey with machinery, especially textile and agricultural machinery, to the value of 8

million dollars, against payment in goods by Turkey. The payment will be extended over twenty years. The Soviets offered a still larger supply of machinery on credit, and are willing to expand the credit when Turkey so desires. The Turks, however, decided to limit the amount to 8 million dollars in the first place. There is little doubt that the Turkish Government has been led to enter into this compact by the impossibility it has found of obtaining similar help in America or France. A definite attempt was made last year to interest financial and industrial circles in the United States, particularly in the development of the Turkish textile industry by the provision of machinery, but the Turkish envoy came back empty-handed. It has been so frequently stated that a question of a loan lay behind the protracted present negotiations about the Ottoman Debt in Paris, that there seems little reason to disbelieve that Turkey has nourished hopes in this quarter also.

The commercial relations between Turkey and the Soviets have been characterised by a long series of fractious disputes and difficulties, and the trade balance has remained distinctly unfavourable to Turkey, while Russia has advanced to the position of fifth on the list of importers into Turkey. The present compact will improve the position in these respects and bring a considerable stimulus to economic relations between the two countries. It is thought that Russia will take from Turkey in exchange for machinery principally cotton, wool and mohair. The Turkish economic experts have remained behind in Russia after the departure of Ismed Pasha, and they will continue the study of Soviet methods. The Turks are, however, too adroit to allow themselves to be involved by an economic pact in any kind of subservience to the political designs of the Soviets.

A commission will meet here shortly with a similar object of improving economic relations between Turkey, Greece, and Bulgaria, and of disentangling the restrictions which are hampering trade between Turkey and her neighbours. The Turkish Foreign Minister, on the various recent occasions when he has passed through Sofia, has discussed the matter with the Bulgarian ministers. It appears that a programme is being drawn up which will lead to an extension of the system of barter. Meanwhile the Turkish Government has thought fit to issue a new monetary decree which establishes the principle of retaliation against such countries as impose exchange restrictions upon the operations of Turkish exporters. Greece and Bulgaria are among these countries. The decree also strengthens the machinery for forcing a system of equalisation upon countries which leave a balance of trade unfavourable to Turkey, and authorises the Central Bank of the Republic to conclude clearing-house agreements with countries trading with Turkey.

In order still further to "manage" the national economy, it is possible that the Cabinet will shortly issue a decision not to include under the restrictive quota system any goods imported in exchange for Turkish carpets and mohair. It is proposed also to put under a State monopoly the importation of sugar and coffee. This will be done with the object of offsetting these importations against an export of tobacco. All these measures combined will, it is hoped, tend to increase trade as well as to balance it, and, at the same time, to protect the currency against the danger of Turkish capital being immobilised, voluntarily or compulsorily, in foreign countries.

The Central Bank of the Republic has just received authority to withdraw from circulation a certain quantity of Turkish paper pound notes and to substitute silver coinage. It was at first proposed that all the new silver coinage should be made up of pounds. This appears to have been changed, and the money coined will include five-, ten- and twenty-five-piastre pieces.

It has been revealed that very poor revenue results are being given at present by the wine and spirit monopoly. The 13 million inhabitants of the country only consume—officially—4½ million litres of pure alcohol. It is certain that a much larger quantity is really consumed and that contraband distilleries are responsible. These are being daily suppressed, and the revenue paid to the State

Treasury, which is at the low figure of 4,400,000 Turkish pounds, should soon increase. The yield of all the monopolies will be raised by their present unification under the new Ministry of Monopolies and Customs, though it is only slowly introducing the necessary changes.

The fourth annuary of the Turkish Central Office of Statistics just issued shows that 9 millions of the population, or 85 per cent., are engaged in agriculture or cattle-raising. This is the largest proportion of any Balkan country. The extent of land cultivated is 43½ million deunums. Wheat and barley cover respectively 22 and 10 million deunums. Vegetable plantations only cover 1½ million deunums, whereas industrial plantations—cotton, tobacco and sesame—reach nearly 3 million deunums. The production of sugar, which was non-existent in Turkey a few years ago, has risen from 314 tons in 1926 to 7,268 tons in 1930, the latest year for which figures are available. Another industry which has made strides is coal, rising from 1,216,008 tons in 1926 to 1,595,159 tons five years later. No statistics are yet available for silk manufacture, which is developing faster than any other new industry.

JAPAN.**Bank Reform — Silk Disposal — Industrial Profits.**

(FROM OUR CORRESPONDENT.)

TOKYO, May 7.

THE most discussed topics at the moment are the central bank reform, the provision for loans to provincial banks to relieve their difficulties, and the disposal of the surplus stock of raw silk carried over under the Raw Silk (Indemnification) Act. The Treasury scheme for the reform of the Bank of Japan suggests an increase of the maximum of the fiduciary issue from the present 120 million yen to 1,000 millions, the reduction of the tax on the excess issue from 5 to 3 per cent., the abolition of the 1½ per cent. tax on the fiduciary issue and the State's direct share in the profits of the Bank, and the setting up of a powerful advisory board to the court of the bank. The Treasury also proposes granting a loan of 200 million yen at a low rate of interest to the provincial banks, which have found themselves lacking in liquid assets and are rationing payments to their depositors. These two measures are to be introduced into the special session of the Diet, which will meet in the latter part of this month.

The huge surplus holdings of raw silk under the Raw Silk (Indemnification) Act, amounting to 107,830 bales, were sold last week to Mr Gerli, of the Silk Association of America, at an average price of 455 yen per bale. When the Act was put into force in March, 1930, the price of silk was in the neighbourhood of 1,250 yen a bale. The loss resulting from the disposal, including storage and other expenses, amounts to 90.4 million yen, of which 35 millions will be borne by reelers, 3.7 millions by banks and the rest by the Treasury. The Government's assistance in carrying over surplus stock at the expense of the taxpayers has thus proved futile. Though the buyer has given a guarantee against a fall in price below the ruling quotation at the time of the deal, it is feared that the unloading of such large holdings on the present weak markets in the face of unfavourable economic conditions in the United States will serve further to depress the cocoon-raising industry of the country. The disposal and other unfavourable factors have combined to depress silk prices, and on Friday a new load record was established at 545 yen.

The downward movement in commodity prices continues with renewed severity. The Bank of Japan's wholesale index number for April, following a fall of 1.8 per cent. in March, registered a sharp drop of 2.8 per cent. on the month, and is 2.4 per cent. lower than a year ago. The trade returns for last month show that, in comparison with April, 1931, imports rose by 15.6 million yen and exports increased by 11.1 million yen. The increase in imports is accounted for mainly by raw cotton and iron and steel, while raw silk and cotton manufactures are responsible for the expansion in exports.

According to Mitsui Gomei Kaisha's half-yearly analysis of the profit-and-loss accounts of Japanese joint-stock banks and industrial joint-stock undertakings, the aggregate net profits of 250 banks for the second half of last year were only 12,566,000 yen, a marked decline of 59,586,000 yen, or 82.5 per cent., upon the first half of 1931. The decline in bank earnings is accounted for mainly by the larger institutions, which drastically wrote down their investment holdings. The net earnings of 1,000 industrial companies for the past half-year totalled 138,852,000 yen, representing a decrease of 14.3 million yen, or 9.4 per cent., as compared with those earned by the same concerns in the preceding half-year.

SOUTH AFRICA.**Budget — Railways — Exchange.**

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, April 12.

IMMEDIATELY before the Easter recess, the Ministers of Finance and Railways introduced their respective Budgets, and Parliament is now debating them. The Ministers had unpleasant tales to tell, but the country has been prepared for this for many months past.

The Minister of Finance opened his year on April 1, 1931, with a deficit of £900,000. His estimate of the deficit for the year ended March 31, 1932, was £1,200,000, while on existing figures the forthcoming year would be expected to disclose a deficit of £1,635,000. On the existing basis of taxation the revenue for the year just started would be expected to amount to £25,845,000, whilst the expenditure after rigorous paring would amount to £27,479,000. The Minister had, therefore, to lay before the House proposals for increasing his forthcoming revenue by £3,735,000, or some 13 per cent., at a time when business in the Union is worse than it has ever been.

Except for the impost on gold mining companies the generally anticipated increase in income tax was not included in the proposals, which are as follows:—an increase in the normal tax on gold mines, 3s. to 4s. in the £, to yield £380,000; a tax on fixed interest (i.e., on mortgage bonds, etc.) to yield £350,000; a surtax of 7½ per cent. on gold value of imports (except those used for agricultural purposes) to yield £2,600,000; and additional Customs duties, to yield £205,000, making a total of £3,535,000. This leaves £200,000 unprovided for. The tax on fixed interest begins with a minimum rate of 5 per cent. Interest at 6 per cent. will pay 6 per cent. tax and so on up to 10 per cent. as a maximum tax. Presumably, however, there are not many fixed-interest securities bearing rates of interest as high as 10 per cent. In introducing this tax, the Minister pointed to the position of the *rentier* whose income stands fixed amid the general fall. He justified the increase in the mines' income tax on the same grounds. Customs duty increases are applied on boots and shoes and on ready-made clothing, on sugar, cement, whisky and dried milk. The Minister alleged that individuals with large incomes had of late years formed companies for no other purpose than to avoid taxation. He therefore proposes to make private companies liable to super tax, and to take power to group together companies controlled directly or indirectly by one individual. The surtax on the gold value of imports is intended to be a temporary measure, and the Minister explained in his peroration that the principle on which he had drafted his Budget had been to appropriate to the State a portion of the exchange advantages, and to tax those who were profiting, or at any rate not suffering, by the current economic position.

The Railway Department's Budget presented an even less satisfactory tale. The figures are no better, and the causes of the decline are to some extent of a nature likely to be permanent in effect. The deficit estimated at March 31, 1932, amounted to £2,500,000, in spite of the most strenuous efforts at economy. The Minister explained that the chief cause (although there are other important causes) of the heavy fall in revenue of the

last two years has been the shrinkage in export traffic consequent upon the collapse of overseas markets. Comparing the nine months to December, 1931, with the corresponding period of 1930, the tonnage of export goods traffic was down by 33 per cent.; owing to the condition of trade, all classes of traffic showed heavy falls. The Minister referred to "competition by other means of transport," and appealed to the public to support the Department, whose equipment represented capital expenditure of some £170 millions. The one bright spot in the story was the improvement shown by the Administration's own road motor service—so it is no cause for wonder that competition from road services generally represents a problem which is bound sooner or later to involve a certain measure of surrender by the railways here as elsewhere.

Some attention has been attracted by the exchange rates quoted by the South African Reserve Bank. Sterling exchange at present yields the bank a profit of about one million or one and a quarter million pounds per annum, the rates of discount on sterling being somewhat over 2 per cent. too low, and the remittances, of course, showing a heavy balance outward from the Union. It is understood that the Government is borrowing heavily from the bank.

Some notice has been taken lately of a revival of talk in Natal of secession from the Union. No names of importance have appeared in connection with the movement, but the parties to it presumably have in mind the possible difficulties over the Provincial Council question (the Free State Council having brought this to a head by confessing financial impotence). Natal members took occasion to emphasise in Parliament the action of two prominent Republicans in sympathising publicly with Mr de Valera.

NORTHERN IRELAND.

Budget — Linen Industry.

(FROM OUR CORRESPONDENT.)

BELFAST, May 18.

MR POLLOCK, the Northern Ireland Minister of Finance, made his Budget statement in the House of Commons on May 11th. No relief in existing taxation is possible, but, on the other hand, the economies which were effected last year enable the expenditure to be kept within the revenue even after making provision for the full cost of unemployment insurance out of the income for the current year, whereas last year £840,000 was borrowed for this purpose. The total estimated expenditure for 1932-33 is £12,123,000. The estimates for the Consolidated Fund services (including the Road Fund) amount to £1,058,000, as compared with an estimate of £738,000 a year ago, when the allocation to the Land Purchase Sinking Fund was suspended. Supply services, including unemployment, are estimated to require £8,937,000 as against £8,828,000 a year ago. Tax receipts are expected to amount to £9,965,000, of which £1,512,000 is the anticipated income from transferred taxes—estate duties, stamp duties, certain Excise duties, and motor vehicles duties. Among the reserved taxes the receipts from Inland Revenue duties are estimated to bring in only £3,250,000 in 1932-33, as compared with an actual yield of £3,810,000 last year. Receipts from Customs and Excise duties in 1932-33 are placed at £4,603,000. This figure includes a sum of £590,000, which, it is estimated, will be obtained from the new import duties.

The linen industry continues to show a moderate degree of activity as a result of the depreciation of sterling and the operation of the 50 per cent. Abnormal Imports Duty. Trade with the United States, however, has recently been affected by the weakness of the dollar exchange. The linen trade has been disappointed by the recommendation of the Import Duties Advisory Committee that the existing 50 per cent. abnormal imports duty should be replaced by a 20 per cent. tariff. While it is recognised that the duty of 50 per cent. was a temporary expedient, it is claimed that the new duty should be at least 33½ per cent. It has been stated that, if a figure of 100 is taken to represent labour costs in this country, the corresponding figure

for France is 58, for Belgium 50, Italy 39, and Czechoslovakia about 74, and the industry urged that a distinction should be made between piece-goods and made-up goods, and that on account of the higher expenditure on labour involved in the latter the rate of duty should be higher than on piece-goods. It is stated that, on the average, piece-goods can be imported at 39 per cent. and made-up goods at 53 per cent. below the cost of production in the United Kingdom. It is also pointed out that, since approximately 95 per cent. of the raw material required by the linen trade is imported from abroad, the depreciation of sterling has raised the price of imported flax to the Belfast manufacturer, whereas his competitor in France and Belgium continues to obtain imported flax at the same price as formerly.

Letters to the Editor.

MONETARY POLICY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your current issue, Mr O. T. Falk criticises very strongly my arguments against the policy of inflation. His criticisms do not raise any point which I had failed to anticipate and to take account of. But in view of the great importance of the matter under dispute, perhaps certain further elucidations may not be inappropriate.

May I start by recalling the subject of the discussion. In your leading article of May 7th you urged that, with or without co-operation with the gold standard countries, the Government and the Bank should work for a rise of sterling prices by "say 30 per cent."—in other words, that an attempt should be made to get back to the price-level of 1929. I objected to this on the grounds that to bring about in this way a 30 per cent. price rise involved measures that were definitely inflationary; that such an inflation was almost certain to be followed by a collapse; and that the dangers to our own exchange and to the world at large during the process of inflation were very real and considerable.

Confronted with these objections, Mr Falk adopts an attitude which I confess I find a little bewildering. He admits that the price-level of 1929 was itself an inflated price-level—that is to say that it contained mal-adjustments which were likely to cause a fall of prices and depression. Yet in the same breath, so to speak, he supports a policy which is designed to get back to that level and pooh-poohs the danger of the much greater degree of inflation which is necessary to carry this out. Surely Mr. Falk is allowing his desire to be at the 1929 position to blind him to the nature of the measures which are necessary if he is to get there. Whether we agree with such a policy or not, we must surely admit that it involves something more than passive non-interference with naturally cheap money. To raise prices to the 1929 level involves active inflation. No adoption of terms with less disagreeable emotional associations—reflation, anti-deflation, &c.—can conceal this, if we reflect upon their meaning in this particular context. Mr Falk cannot have it both ways. Either he supports the policy of getting back to the 1929 price-level—in which case, on his own showing, he is not entitled to make light of the dangers it involves; or he does not support it—in which case his strictures on my arguments are largely irrelevant.

Mr Falk suggests that, in the past, recovery has always been accompanied by a certain degree of inflation. I do not deny this: I think it is extremely difficult to eliminate all inflationary influences from the modern monetary system. Nor would I deny that some degree of a similar kind of inflation will probably accompany recovery in the future: if the political forces making for deflation were arrested and if the requisite degree of liquidation had taken place, a considerable rise of prices is almost inevitable. But what I would deny is that there is any comparability as regards danger between the "spontaneous" quickening of the velocity of circulation, &c., which has accompanied earlier recoveries and the drastic 30 per cent. price rise which it is proposed to engineer in this case. I repeat what I said in my earlier letter. I know no ground in theory or experience for believing

The recent formation of the Business Transfer Partnership & Property Agents Institute of Great Britain raises the status of the profession of Business Transfer Agents. A very comprehensive course dealing with B.T. can be secured for £1 1s. 6d., spread over 4 monthly payments of 5s. 3d. each. Course is sent on receipt of first payment.

EFFICIENCY PUBLISHING COMPANY. 71, Lowlands Road, Harrow.

that it is possible to bring about a rapid return to the 1929 position without serious risk of a relapse to a worse position than 1929 left behind it.

Mr Falk complains that I state no alternative policy. This is surely an odd complaint. If I see a man who has lost his way in a powder factory, about to strike a match, it is surely not incumbent on me to hold my peace because I do not know the way out myself. And, in fact, I do not know any "way out" by means of grandiose policies. It is the grandiose policies which have brought us to our present position. Mr Falk talks of "the Pyrrhic victories of sound finance." I do not think that there has been much sound finance in our time. I agree the position is most critical. But if we are to recover at all I am convinced that it will be not by still further attempts on a collective scale to disguise from ourselves that we are poor and out of adjustment to our environment; but by sitting down each one to cut our coats according to our cloth and refraining from falsifying our accounts and our measures,—steps which will be hindered rather than helped by inflation. We have not heard much of such measures since the war, for we have become ashamed of the trite maxims of prudence and have sought salvation in paradoxical devices—the economics of the Kreuger period. Nevertheless, if the world is to live, it is to this degree of objectivity that we must return.

May I add just one word. In the course of his observations, Mr Falk asserts that I draw a "wilfully misleading inference"—that is to say that I deliberately pervert what I know to be the truth in this matter. I should have thought that Mr Falk who, in the past, has himself been the victim of vilification for the publication of unpopular views in which he happened to believe, would have been the last to resort to such gratuitous accusations.—Yours, &c.,

LIONEL ROBBINS.

London School of Economics,
Houghton Street, W.C.2.
May 24, 1932.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Will you permit me, as one whose duties include that of giving financial and economic advice to a concern of some international importance, to add my testimony to the mass of evidence that is accumulating as to the harmful effect of the absence of a constructive monetary policy on the part of those responsible for such policy in Great Britain? Here, where I write, we are operating in one of the countries of the sterling area—or the "sterling convoy" it has become the fashion to call it. To adopt this metaphor, how can the vessels in this convoy possibly direct their course, when none of them have the slightest indication of that set by the leader? That the leader, like ourselves, is navigating amidst the rollers of an economic blizzard, to which is added the obscurity of a dense fog, may be granted; but that does not absolve the captain of the convoy from signalling some course, the best he can lay from dead reckoning, which must be followed by all of the fleet who desire to remain in its company. The alternative is drift towards a lee shore that means the break-up of our convoy, that is to say, of civilisation itself.

To your cogent plea for positive policy I should like to add a word. In most British declarations concerning the economic crisis, removal of the international indebtedness arising from the war, is placed in the first rank of remedies, and lowering of tariff barriers in the next. In my opinion, this puts the two factors in the wrong order. There would have been no crisis but for the existence of the tariff barriers, which rendered impossible of execution payments on account of these international debit balances, except through the transfer of gold, then, but no longer, the life-blood of international trade. The then, but no longer, the life-blood of international trade. The hoarding of gold in France and the United States is an economic thrombosis, a clotting that is also a clogging of the life-stream, and the tariff raising is the constriction of the arteries that has induced the thrombosis. The intense prosperity of America previous to its decline in 1928 and its slump in 1929 was local inflammation, due to an inhibition of the normal functions of the rest of the body politic or economic. There is no economic difficulty in making the post-war payments if the debtor countries are allowed to make them. Great Britain has built up an enormous credit position by the transfer of her excess of exports, visible and invisible, to countries now her debtors. The thing can be done, then. But in that case, the other parties were willing to receive our goods and services. Tariffs, not international payments, are the chief obstacle to improvement, and in placing annulment of the debts first, authorities at home and in placing annulment of the debts first, authorities at home are "hunting the wrong hare." Not only that, but by themselves introducing their own tariff, they have drawn a red herring across the trail which makes hunting the right hare infinitely more difficult.—I am, etc.,

NEWSPAPER SHARES—II.

In an article in our last week's issue we examined the showing made, in a period of depression, by the chief companies in two large "national" newspaper-owning groups—the "Rothermere" and the "Beaverbrook" interests. We pointed out that although profits had fallen significantly, and dividends had been reduced, the small proportion borne by direct prior charges to the total capitalisation of the "Rothermere" group was, *pro tanto*, a source of strength in periods like the present. Since our article was written, the chairman of Daily Mirror Newspapers has intimated to shareholders, at the company's annual meeting, that in the absence of "violent or catastrophic" developments, future ordinary dividends are unlikely to fall below 15 per cent. per annum. On this basis it is reasonable to expect the maintenance of Associated Newspaper dividends at the reduced quarterly rate of 5 per cent., making a total of 25 per cent. for 1931-32, and 20 per cent. for the year now in progress. The fly in the ointment, as we suggested last week, is the position as regards contingent liabilities. This arises out of guarantees given by certain group companies, covering the debenture service, in particular, of Northcliffe Newspapers, the spearhead of Lord Rothermere in the now defunct "provincial newspaper war." The Daily Mirror Newspapers chairman, at last week's meeting, was studiously non-committal concerning the company's obligations in respect of various paper and pulp enterprises. He declared that the Canadian industry was suffering from acute depression in the United States of America, and disclosed that the Daily Mirror holdings in one paper-making group had been sold for cash. As regards Northcliffe Newspapers, he merely reiterated the customary statement that the directors regarded their provincial properties as having an "ever increasing value."

We propose to continue our survey of newspaper finance by examining the structure, ramifications and recent earnings of three other groups—the "Berry," "Inveresk" and "Odham's" interests respectively. The following table summarises the results of the chief companies concerned, for the three last financial periods:—

"BERRY," "INVERESK," AND "ODHAM'S" GROUPS.

† Preference dividends unpaid.

‡ Second preference dividends unpaid in 1930, and paid for half-year only in 1931.

§ Assuming full preference dividends, though actually only half-year's dividends paid.

The "Berry," like the "Rothermere" interests embrace an integrated system of properties, ranging from

newsprint production to ownership of an extensive chain of daily and weekly journals, including the *Sunday Times*, *Daily Sketch* and *Sunday Graphic*, published in London, and various morning and evening journals in South Wales, Western and Northern England, and Scotland. The decisive intervention of the "Berry" interests (whose main representatives to-day are Lord Camrose, Sir Gomer Berry and Sir E. M. Iliffe), into the daily journalistic world dates from 1923-27. Important properties of the "Hulton" group, centred in Manchester, having come on the market, were purchased by the Berrys either directly or, subsequently, through the "Rothermere" group. In 1925, Allied Northern Newspapers was registered to take over certain Allied Newspapers properties in the South-West and North-East of England, and to purchase important interests in the Glasgow and Newcastle areas. Finally, in 1926, Amalgamated Press took over a business established in 1888, controlling approximately 100 weekly and other publications (including Lord Northcliffe's famous *Answers*). Amalgamated Press has also acquired the periodicals owned by the House of Cassell, and controls Imperial Paper Mills, which produce practically all the raw material requirements of the group and of certain other newspapers.

The "Berry" interests throughout have been concerned with the commercial rather than the political aspect of newspaper ownership. The Stock Exchange, however, has tended to place the group's securities on a higher yield basis than those of the "Rothermere" interests, in view of the considerable extent to which "goodwill" items have figured in the group's balance sheets since its major acquisitions of the last decade. The proportion of fixed-interest to equity stocks in the group's capitalisation, again, as our table suggests, is much higher than in the case of the "Rothermere" group. Earnings, generally, have tended to fall, during the depression, rather more steeply than those of the "Rothermere" concerns, but have been conservatively distributed. The wisdom of this policy has been apparent, not only by reason of the danger that the earnings margin for ordinary capital may become uncomfortably narrow if profits fall further, but also because it has hitherto been impossible precisely to assess the significance of the group's contingent liabilities, particularly as regards Allied Northern Newspapers, which was heavily involved in the "provincial war." Allied Newspapers has given guarantees for £3,000,000 6½ per cent. first mortgage debenture stock of Allied Northern, and for the latter's unfunded loans in connection with its newspaper acquisitions. Since the termination of the "war," however, improved that all its trading subsidiaries are now stated to be earning "satisfactory profits." Early this month the shareholders of Allied Newspapers sanctioned the creation of £2,000,000 6½ per cent. £1 cumulative preference shares, ranking before the present capital. A successful issue would relieve Allied Northern of pressing bank indebtedness, but it is less certain whether the placing of a fresh £180,000 of annual preferential payments in front of the equity capital would leave a considerable margin for shareholders in Allied Newspapers, in the absence of an early trade revival.

The appeal to the investor of the shares of the "Inveresk" group has been overclouded since the collapse, over three years ago, of the top-heavy structure built up by Mr William Harrison, largely on borrowed money. The task of those who subsequently took over the "cleaning-up" has been prolonged and is not yet near its end. Some of the wide-flung interests of Inveresk Paper, the central concern of the group, have been liquidated—its shares in Koholyt A.G., with a book value of £1,510,313, for instance, having been sold for £1,000,000. The com-

pany retains control of numerous paper manufacturing concerns, has a large interest in Illustrated Newspapers (which publishes various journals of the "society pictorial" type) and holds (without voting control), three-fourths of the ordinary shares of Daily Chronicle Investment. The latter, in turn, holds nearly all the ordinary shares of United Newspapers, which controls Provincial Newspapers and has a 50 per cent. interest in the *News-Chronicle*. The slight improvement in Inveresk Paper earnings, last year, reflected mainly better trading by some of the paper-making subsidiaries—hampered by burdensome long-term contracts. For the present the group is largely in the hands of the banks, and the process of repaying indebtedness through the profits of subsidiaries like Provincial Newspapers and United Newspapers, under depressed economic conditions, must render somewhat remote the date of a practicable resumption of dividends on junior stocks.

Finally, the entry of Odham's Press into the newspaper, as distinct from the "periodical," world has been recent but momentous. The new *Daily Herald* has within a couple of years reached a circulation comparable with that of the chief London "penny dailies," but development expenditure has been heavy. The company also owns *The People*, which has a weekly circulation of over 3,000,000 and earned a net profit of £84,000 last year. Its entire earnings will accrue to Odham's Press as from January 1st last. The company's recent expenditure has been considerable, but its "general" publications are remunerative—particularly *John Bull*, which a few years ago passed through the same expensive "development" stage as the *Daily Herald*. Broadly, therefore, the company's shares, though more speculative than those of the strongest newspaper group, have an equity whose future value depends less on fluctuations in newspaper earnings, as a whole, than on the success of an admittedly enterprising management in applying methods which have been effective in the past, but on a smaller scale.

Our analysis of current newspaper finance, so far, suggests that, although earnings have not fallen by any means disastrously, external commitments, forming the legacy of earlier days of uneconomic competition, are tending to limit dividend-paying capacity. For holders of prior securities, as well as of ordinary shares, much will depend on the behaviour of newspaper earnings in the near future. We propose, therefore, in a final analysis, to review contemporary prospects as regards circulation, advertising revenue and other factors in newspaper earning power.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET. ACCOUNT.
June 7. June 9.

The new account opened in disappointing fashion. The reported intentions of the British Government regarding debt payments to America were at first misunderstood. The subsequent official explanation checked nervous selling, but not profit-taking, in the gilt-edged market. Adverse factors, such as the precarious condition of Central Europe and fears of increased taxation at home, served further to depress sentiment. Equity stocks, after three weeks of relative stability, receded to new low levels.

Gilt-edged stocks suffered from renewed profit-taking and nervousness regarding the financial situation. A better revenue return and talk of a new "economy drive" brought a firmer tone in mid-week. Three-and-a-half per cent. Conversion and Funding Loan found support. India stocks receded steadily, the long-dated loans being particularly out of favour. Dominion stocks, however, remained in fair demand, particularly Australians. The latest news from Greece and Austria accentuated the weakness of foreign bonds, Czechoslovakian Eights slumping heavily on doubts as to the

ability of Prague to meet its 24½ per cent. guarantee of the Austrian 6 per Cents. A few buyers were found for Roumanian Consols. Brazilian stocks were depressed by news of the San Paulo disturbances. Japanese issues were marked down on the recurrence of disturbing reports from Manchuria.

Home Railway stocks had an unsatisfactory appearance, quotations being adversely affected by the poor traffic figures, which compared with the pre-Whitsun week last year. Foreign rails were depressed, Canadian Pacific in particular being subjected to forced liquidation and losing several points. Argentine rails were dull and heavy, the traffic returns again making an unimpressive showing.

A heavy tone prevailed throughout the Industrial share market, prices being depressed by Wall Street and Continental sales and by scattered liquidation from a number of provincial centres. Babcock and Wilcox received favourable attention on news of a big contract, but other iron and steel shares lost ground. William Cory declined at the outset, but recovered sharply after a favourable dividend announcement. Electrical shares lost ground. Leylands were sold from the Midlands, and Fords were heavy on the loss reported by the Detroit Company for 1931. Textile shares reflected fears of a cotton stoppage. Woolworth were marked down on the interim dividend, and Courtaulds, British American Tobacco and Imperial Chemical all came in for early liquidation. Insurance shares were particularly weak on exaggerated fears arising out of the cautious pronouncement of the chairman of one of the largest offices at a shareholders' meeting. Bank shares receded in sympathy, though a sharp recovery in Anglo-South American "A" shares followed the announcement of official support for the bank. Heavy selling of Canadian shares was associated with a recrudescence of discussion regarding the position of a large company.

The oil share market was again short of business. Attention was chiefly directed to the New York Conference, where negotiations reached a critical stage. Quotations were unaffected by a further decline in the United States crude oil output, but the increased Lobitos dividend provided a welcome stimulus to sentiment. The rubber share market was idle and quotations sagged, though there was little or no selling pressure. Selling of tea shares was moderate, but persistent.

Mining shares had an unsatisfactory week. "Kaffirs" were deserted by Paris and Johannesburg. De Beers issues were sold, and "Chartered" continued to fall away. The decision of the United States to tax copper was regarded as threatening the world restriction agreement, and Tinto and Tharsis both receded. Ashanti Goldfields declined further. Tin shares were quiet and lower where changed.

NOTE.—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

FOREIGN STOCK EXCHANGES.

NEW YORK.

All markets showed renewed weakness under a host of discouraging factors, including reactionary commodity prices, stagnant trade and an involved political situation. The formation of a committee of bankers and business men to develop credit expansion schemes was received with the apathy which all the recent "relief" plans of the administration have elicited. It was expected that the new committee would organise a bond-buying pool and promote building schemes with the aid of bank loans. Meanwhile, prospects of an end of the Congress Session before the Party Conventions tended to recede. The passage by the Senate of new duties, including imposts on oil, coal and copper, threatened trouble with the low-tariff democrats. The President was credited with an endeavour to secure that Congress should remain in session, regardless of the claims of conventions, until the full programme of tax, economy and relief legislation had been adopted. A steady stream of market liquidation drove all the share indices to new low levels. Weakness was particularly noteworthy in utility stocks. Foreign bonds remained practically unsaleable in numerous cases. The restriction on short selling exercised no appreciable effect on the course of prices. Oil shares joined in the general dullness, the work of the New York Conference being held up pending the decision of the Russian representatives on specific points. A reduction of 4 cents a gallon in petrol prices in the New York area, on the initiative of the Standard Oil of New York, was explained as a purely local development to meet price-cutting by independent interests. The rumoured intention of the steel companies slightly to advance their schedules of prices for certain products, for the third quarter of the year, failed to stimulate buying. Steel production declined from 25 to 24 per cent. of capacity. Car loadings in the week ended May 14th were 517,000, against 534,000 in the previous week and 746,000 in the corresponding week of last year.

CANADA.

Prices have further declined, and new low levels have become a commonplace. Canadian Pacific has sunk to the lowest point since the eighties of last century. Price "pegs" have gradually been withdrawn, and are now maintained chiefly on the bank stocks. Their artificial character was illustrated by the experience of the Shawinigan stock, which fell from 33 to 11 on the withdrawal of the "peg." Some criticism has been expressed of the governing body of the Montreal Stock Exchange. The critics allege that certain brokerage houses, verging on the border of difficulty, have been improperly protected. Business remains pitifully small, and most brokerage houses cannot earn their expenses. The mining market has been dull apart from a spurt in certain gold stocks. The Bureau of Statistics "Investors' Index for all common stocks stood at 47.6 for the first week of May, which was little more than one-fifth of the "peak" level of 235.4, attained in 1929.

PARIS.

The news of Great Britain's war debt negotiations with Washington was ill-received. The tone of business was persistently dull, with professional liquidation in evidence. The Suez Canal dividend announcement was powerless to check a further decline in the shares. International issues, especially Canadians, showed particular weakness. The report that Générale Electricité was about to increase its capital appreciably was a bear factor. On Thursday a small improvement occurred, Canadian Pacific being in some demand.

BERLIN.

Conditions reflected growing pessimism regarding the outlook for Lausanne and the immediate future of Central Europe. Dye Trust and Siemens were heavy, though slight support was obtained for electricity shares and Reichsbank improved. Shippings shares were slightly firmer on the reconstruction proposals of the North German Lloyd and Hamburg-American companies.

AMSTERDAM.

A minimum of business was transacted, the market being affected by the prevailing European listlessness. Royal Dutch came on offer, and Unilever and Philips Lamps were heavily sold. Rubber shares were dull. Billiton tin receded after an initial recovery.

	May 19, 1932.	May 23, 1932.	May 26, 1932.		May 19, 1932.	May 23, 1932.	May 26, 1932.

OTHER CENTRES.

The dullness of New York, London and Paris affected the minor European Bourses. Frankfurt made a relatively favourable showing after early liquidation of Dye Trust and Reichsbank. Copenhagen, however, was weak, and Stockholm neglected. Brussels receded in sympathy with Paris, liquidation being heavy as regards a number of international speculative counters.

INVESTMENT NOTES.

Gilt-Edged Setback.—The gilt-edged market at the beginning of this week encountered a fair setback on profit-taking, due partly to a week-end speech by the First Commissioner of Works, partly to general apprehension over the decline in international trade in Europe, and partly to increasing misgivings over the prospects of the Lausanne Conference. Of these factors, perhaps the most important was the speech of Mr Ormsby Gore, who raised doubts as to "whether next April would be reached without recourse to fresh taxation or cuts." The market, further, tended to read into the Anglo-American debt negotiations more than they were intended, apparently, to cover. Local Loans fell from 75 to 73, Conversion 3½ per cent. from 98½ to 87, and Consols 4 per cent. from 99 to 97½. In view of the sharp rise which the market has enjoyed, the reaction cannot be considered as more than normal. No doubt a speculative account had been built up which had to be corrected. It would appear, for example, that a good deal of small speculative money had come into Local Loans Three per Cents. The market recovered on Wednesday afternoon, and again on Thursday morning on the reassuring statement of Mr Baldwin that Mr Ormsby Gore was expressing a personal view of world trade and that nothing had happened to lessen the confidence of the Government in its improved financial position. The following table shows the rise in the gilt-edged market for the

past three weeks and the reaction which subsequently occurred:—

	Highest Price, 1931.	Price, May 5th.	Price, May 19th.	Price, May 25th.	Yield Per cent.	£ s. d.
Consol, 4%	97	96	98½	98	4	3 6
Conversion, 3½%	85½	86	89½	87½	4	0 6
Funding 4% 1960-90	97½	98	100½	100½	4	0 6
Victory Bonds 4%	98½	98½	100½	100½	4	0 6
Local Loans 3%	70½	71½	75	74	4	1 6

As was to be expected in view of the prevailing weakness of the market, the issues of British Columbia 5 per Cents. at 99 was not an entire success.

Wall Street and Short Selling.—The tone of the New York Stock Exchange has been little affected by the decision of the Committee, announced on Thursday last week, that a margin of ten points per share must be demanded and maintained on all short accounts, however small the transactions, or whatever the price of the stock. The decision is in the nature of a concession to the feeling of some members of the Senate, as expressed through a committee which is engaged on an investigation of the whole question of short selling. The tendency to make the "bear" a scapegoat in periods of depressed values is as old as organised markets, but the present restriction enforced by the New York Stock Exchange Committee falls far short of attempted prohibition of bear selling. It may tend to eliminate the amateur speculator (who generally has neither inclination, knowledge nor courage for extensive bear activity), but will not seriously hamper the big professional operator. The latter, indeed, has shown no marked anxiety to cover his commitments since the announcement. Whether the New York Stock Exchange will be compelled, by *force majeure*, to adopt more root-and-branch measures against the views consistently expressed by its President, depends on the near future course of prices and, possibly, on imponderable contingencies in American politics.

Lord Inchcape.—The death, on Monday, of the Earl of Inchcape, at the age of 79, robs British shipping and banking of a distinguished representative and the world of a forceful individualist. Born almost within sound of the legendary Inchcape Bell, James Lyle Mackay made his first voyage at the age of six, and twenty years later was on the way to partnership in Mackinnon, Mackenzie and Company, agents of the British India Steam Navigation Company in Calcutta, whose service he had entered as a clerk. In a long career he raised the Peninsular and Oriental and British India companies to a new pinnacle of usefulness and profitability, served on the boards of the National Provincial Bank, the Royal Bank of Scotland, and the P. & O. Banking Corporation, was a member of innumerable Government committees, successfully wielded the post-war economy axe in Great Britain and in India, and realised millions of pounds for the British Government by his shrewd disposals, between 1919 and 1922, of its fleet of 1,400,000 tons of standard ships, built during the war, and its holdings of 2,530,000 tons of enemy shipping. These were only a few of the many achievements of a career crowded with hard work,

accomplished with zest and inexhaustible energy. Lord Inchcape, who was created K.C.I.E. in 1893, raised to the peerage in 1911, and advanced to a viscountcy in 1924 and an earldom in 1929, was, throughout the best part of his life, a foremost protagonist of economic liberty. To him, as shipowner and banker, Free Trade was as the breath of life, and the paraphernalia of official regulation, subvention and "assistance," pure anathema. He lived to see the world throw his idols overboard, one by one, and take on a cargo of trade interference which bade fair to sink the ship. His personality, inevitably, had the defects of its qualities. He regarded the fortunes of his great shipping organisation with a strong personal regard, which, where shareholders were concerned, had not a little of the autocrat behind it. His annual P. & O. speeches were those of a wise professor lecturing a class of first-year students, not without affection, on world conditions—but brooking no questions. The company's balance sheets, which in earlier years carried non-disclosure to a fine point, have recently become progressively more informative, but to the end Lord Inchcape remained a foremost champion of complete "internal" discretion in all financial matters. How far recent events have rendered this attitude anachronistic time must be left to show.

Better Company Accounts.—Mr Henry Morgan, in his valedictory address from the presidential chair of the Society of Incorporated Accountants and Auditors on Tuesday, gave the results of an examination of the accounts of 414 representative British commercial and industrial companies. In 270 cases, he declared, the balance sheets revealed the existence of substantial subsidiary interests, but only in 58 cases was it made clear that the profits and losses of subsidiaries were taken fully into account in arriving at the profit figure. Our own investigations bear out Mr Morgan's views (courageously proclaimed throughout his period of office) that British holding company law, in its present form, has grave defects. In the first place, its provisions relate only to immediate subsidiaries, so that what Sir Gilbert Garnsey has termed "sub-subsidiaries"—which in many cases include important operating concerns—fall entirely outside its scope. In the second place, the Companies' Act does not specify to what extent subsidiary profits and losses must be brought into the parent company's accounts. It merely provides for a statement in general terms, without figures, of the treatment accorded to such items. It frequently happens that subsidiary profits are brought into the holding company's accounts only to the extent of dividends declared, while undisclosed losses may be merely carried forward in subsidiary balance sheets. Under these conditions the shareholder in the parent concern is entirely unable to form a judgment regarding the earning power of the combine, on which the real value of his shares directly depends. It would seem advisable that an amendment of the law should raise the practice of all British holding companies to the level of the most enlightened in this respect. There may be serious practical objections to the universal adoption of the method followed this year by the Forestal Land, Timber and Railways Company, which, as we showed last week, has published separate balance sheets for all its subsidiaries. There is no good reason, however, why more companies should not issue consolidated balance sheets, incorporating the assets and liabilities of the parent and subsidiary companies, and eliminating inter-group cross items, as is done, for example, in the accounts of Associated Electrical Industries and Wiggins, Teape. The latter company has gone further by including combined profit-and-loss and appropriation accounts in its most recent report, and is now examining the possibility of issuing quarterly accounts to its shareholders. The preparation of such accounts may involve difficulties in the case of combines with numerous foreign subsidiaries or a pronouncedly seasonal business. Even if it were found impossible, however, to present quarterly

figures with the detail appropriate to annual accounts, the adoption of the procedure followed by many large American concerns, on the initiative of the New York Stock Exchange, would be of indubitable assistance to investors, who have recently discovered how decisively a company's position may change in the course of twelve months.

Kreuger Developments.—The Swedish Investigation Committee, in collaboration with the British Protective Committee, has found that while there are hopes of reconstructing the Swedish Match Company if a three months' "standstill" can be secured, and a large part of the share capital of L.M. Ericsson Telephone is intact, there is little prospect that unsecured creditors will obtain anything in the Kreuger and Toll liquidation. A formal balance sheet, presented at last Saturday's annual meeting, showed liabilities of Kr. 1,038 millions (approximately £57 millions at par) against assets of Kr. 352 millions (£19 millions). Liquidation will now take its course, and it is clear that little will be realised from the company's claim of Kr. 200 millions on the Kreuger estate. The bulk of the direct financial loss will fall on countries outside Sweden. Professor E. F. Hecksher, in an address in London on Tuesday, estimated that, of the Kreuger and Toll securities, practically all the secured debentures were held in America, while only 30 per cent. of the unsecured debentures and 41 per cent. of the shares were held in Sweden. On the basis of the dividends and interest paid in 1930, he placed the income loss on Swedish holdings of Kreuger securities at about Kr. 47 millions (£2,600,000), or about 1 per cent. of the total national income of Sweden. These figures are eminently reassuring as regards the stability of the Swedish economic structure, which is not seriously threatened by the catastrophe, though State and municipal tax estimates may need revision, and the rate of Swedish individual saving may be temporarily checked. The exceptional position of Stockholm, as a European financial centre second only to London, appears, however, to have been more permanently destroyed. It had been created solely by the genius of Kreuger, who drew his resources increasingly from foreign countries, and had little relation to the area, population and resources of Sweden herself. Out of 60,000 workers employed by Swedish Match, some 52,000 were engaged outside Sweden. The *apologia* published by the Scandinaviska Credit Bank, regarding its share in the Kreuger crisis, suggests that the authorities were maintaining a definitely cautious attitude towards Kreuger for a considerable period before the crash. The Scandinaviska Bank advanced the group various sums on collateral, in connection with its purchase of large blocks of industrial shares from the bank, but refrained from making loans to the Kreuger companies on their own shares or debentures. It was only in 1930 and 1931, when the world crisis threatened Kreuger and Toll with default on its commitments in connection with foreign loan and monopoly contracts, that the bank largely increased its credits to Kreuger. This course appears to have followed with a certain misgiving, and a clear realisation that the advances were likely to be anything but liquid. The decision was taken only after the Riksbank had been consulted and had promised support. The bank's misgivings, such as they were, however, would seem to have been based solely on considerations of "liquidity." It is evident that those concerned had no reason whatever for suspecting Mr Kreuger's personal good faith. The whole world must share the responsibility for accepting a prince among swindlers at his own valuation for eight long years.

Callender's Cable.—This old-established company may be congratulated on the stability of its net earnings for the year to December 31st last. Trading profit declined by 12 per cent., expenditure was cut by 15 per cent., and net profit showed a decline of only 9 per cent. The

ordinary dividend (fully earned) was maintained at 15 per cent. for the thirteenth year in succession.

* Including reserve for taxation no longer required (amount unstated).
† Renewals and contingencies.

The company's holdings in the Surbiton undertaking and the South Wales Power Co. have been disposed of, at a substantial surplus over book value, which has been carried to renewals and contingencies account. The latter has been raised to £200,000 by a transfer from "carry forward." Increased demand for electricity from the operations of the Central Electricity Board, and the extended use of the grid, has not yet fully materialised. The balance sheet, as usual, is liquid. At 2½ the £1 ordinary shares yield £5 12s. 6d. per cent.

International Telephone and Telegraph.—The 1931 accounts of this giant holding corporation inevitably reflect the contraction of world trading activities. Operating expenses have not fallen in proportion to the loss of receipts, and net profit is reduced to \$7,654,002, against \$13,750,133. Dividends were paid at the rate of 50 cents per share for the first two quarters, 25 cents for the third quarter, and 15 cents for the fourth quarter.

	1929.	1930.	1931.
Operating receipts	\$ 89,291,336	\$ 93,075,551	\$ 89,307,937
Miscellaneous income	11,049,254	11,397,048	
Operating expenses, &c.	72,909,552	79,115,044	71,505,235
Associated company charges	6,521,366	6,136,283	4,378,951
Net income	20,909,672	19,221,271	13,423,751
Interest	3,177,513	5,471,138	5,769,749
Net profit	17,732,159	13,750,133	7,654,002
Surplus	21,471,677	28,054,706	22,645,817
Sundry surplus credits	133,053		
Dividends	11,282,183	12,868,408	8,960,288
Other allocations	Nil	6,290,614	2,867,175
Surplus carried forward	28,054,706	22,645,817	18,472,356

The corporation, naturally, is conserving its cash resources to the utmost practicable extent. The balance sheet shows current liabilities of \$63,050,152, against \$15,816,371 of cash and \$39,193,327 in accounts and notes receivable. "Marketable securities" and stocks account for a further \$31½ millions. Gross sales of all manufacturing companies declined to \$61,310,000, against \$80,323,000 in 1930, though 340,458 lines of automatic telephone equipment were installed, as compared with 301,868.

America's Copper Tariff.—It is generally assumed that a 4 per cent. duty on copper imported into the United States will become law within two or three weeks. Already prices on the domestic market in America have hardened slightly. This tariff barrier is being erected avowedly to keep out copper from Canada and Chile—

or for that matter from any other producing country where costs are below the American figure. Prices in America may temporarily rise to the extent of at least part of the 4 per cent. duty, and the anxiety of the banks financing existing stocks will be thereby relieved. The existence of heavy internal stocks, however, will limit the actual rise. The American exporter will be handicapped in competing in fabricated goods on the world's markets. The United States will be self-supporting in copper, with an exportable surplus, as soon as the rate of production, at present down to 20 per cent. of capacity, is increased again under the protection afforded by the tariff. In due course it is not unlikely that output will increase to such an extent that the tax will no longer be reflected in the domestic price. In the meantime, countries hitherto exporting to America, driven to find new markets for their output, will divert their sales to Europe. Germany may decide to foster her growing copper-producing industry by imposing a tariff, while among British consumers fears are entertained that copper will be removed from the free list, except as regards Empire brands. A break-up of Copper Exporters Inc. seems inevitable, followed probably by a new cartel with headquarters in London to regulate production and marketing outside the United States. Some expansion in production may occur, but that copper will be forced on the market at 5 cents is very unlikely.

Oil Production and Politics.—"The world oil situation as seen through Royal Dutch-Shell spectacles" might well be the title of the voluminous report of the Royal Dutch Company for 1931. It is not without humour that the Royal Dutch directors should be found giving advice to the Soviet Government not to concentrate upon the export of oil so much as on the increase in internal consumption. The advice has a sting, for the Soviet Government is reminded that within the next year or two the Iraq Petroleum Company will be exporting to the markets in and around the Mediterranean to which Russian oil is normally consigned. According to the Royal Dutch directors, Russia increased its output of crude oil from 18.8 million tons in 1930 to 22.3 million tons in 1931, while its internal consumption (mainly kerosene) increased from 3 million tons in 1930 to 4½ million tons in 1931. Russia was the only important producer last year which did not restrict its production at all. Even Roumania made some attempt to restrict, although its output in 1931 was larger than in 1930. The following figures of world oil production are taken from the Royal Dutch report:—

	1930.	1931.
United States	126,686,041	116,317,309
Russia	18,727,987	22,334,700
Venezuela	20,191,270	17,294,161
Roumania	5,744,000	6,657,803
Persia	5,797,095	6,440,157
Mexico	6,044,544	5,043,073
Dutch East Indies	5,332,218	4,520,151
Columbia	2,830,626	2,537,223
Others	8,456,106	8,712,812
	199,809,887	189,857,389

The production of the Royal Dutch group was as follows:—

	1930.	1931.
Venezuela	9,655,531	7,702,608
United States	5,524,072	4,936,675
Dutch East Indies	4,806,640	3,811,902
Mexico	1,838,007	1,731,250
Roumania	1,034,042	1,119,636
Others: Sarawak, Egypt, Trinidad, Argentina... ..	1,121,735	1,230,687
	23,980,027	20,532,758

It will be seen that all the important areas controlled by the Royal Dutch-Shell group bore their full share of the restriction. The directors refer to Mr Kessler's proposal for a world oil restriction scheme which is at present under consideration. Reference is made to Government interference in the oil industry, the natural development of which is that the Governments and not the owners of the industry will have the main voice in its operations—a policy which can only lead to inefficiency. It is added that in spite of the restriction of production in every

country, except Russia, consumption declined to a greater extent than production, and prices consequently fell below the level of 1930. The directors deplore the total lack of international co-operation, as a result of which every nation is becoming more and more an isolated unit.

Royal Dutch-Shell "Accounts."—In view of the uninformative nature of the past Shell Transport and Trading reports, the decision of the directors to issue a more detailed report for 1931 is heartily welcome. A reassuring statement is given of the cash position of the Royal Dutch-Shell group as a whole. The two parent companies, and the companies in which they held 100 per cent. interests, had nearly £20 millions in cash and British Government securities at December 31, 1931, whilst of the companies in which they had large share interests the Shell Union had cash to the extent of \$36 millions, the Venezuelan Oil Concessions nearly £2½ millions, the Anglo-Egyptian Oilfields nearly £600,000, and the Mexican and Canadian Eagle over £3,000,000. Against these huge cash resources, totalling about £36 millions, there are no obligations except the public issues of long-term debentures, while stocks of oil, free of all encumbrances, total 10,000,000 tons, of a value exceeding £30 millions. The directors are justified, therefore, in claiming that their group will be able to hold out in the present depression as long as any other oil group. It is regrettable, nevertheless, that the directors of Royal Dutch and Shell Transport do not see their way to issue consolidated accounts. The basis of their partnership is 60 per cent. to Royal Dutch and 40 per cent. to Shell Transport of the shares of the operating subsidiaries, the chief of which are the Bataafsche, the Anglo-Saxon and the Anglo-Mexican Petroleum Companies, as was explained in a leading article on page 974 of our issue of April 30th last. The profits shown by the holding companies offer no direct indication of earning power, since, in order to avoid double taxation, the companies do not draw from their subsidiaries more than they require for distribution in dividends. In the case of the year 1931 they have drawn not quite sufficient to pay their dividends, so that their "carry-forwards" are slightly reduced:—

	ROYAL DUTCH. (In thousand florins.)		SHELL TRANSPORT. (In thousand £.)	
	1930.	1931.	1930.	1931.
Dividends received.....	82,817	23,739	4,768	2,341

Carry forward	4,613	2,252	250	198

* Includes fl. 2,004 directors' and commissaries' bonus.

Dividends received from the subsidiary companies fell last year by 71 per cent. in the case of the Royal Dutch and 51 per cent. in that of Shell, while dividends, as we reported in our last issue, were cut from 17 per cent. to 6 per cent., and from 17½ per cent., tax free, to 7½ per cent., tax free, respectively. The directors state that the past conservative policy of depreciation has been followed, stocks being written down to or below market value. The Bataafsche, it is pointed out, had very large sterling balances. These have been written down to the Dutch guilder value as of December 31, 1931. This involved a provision for depreciation of 46 million guilders. To meet this, 11 million guilders were taken from reserve and the remaining 35 million guilders (approximately £4 millions) charged to profit and loss. Participations in other companies are shown in the books below their market or selling values on December 31, 1931. The directors need hardly have added that the companies of their group all over the world have their accounts audited by firms of the highest standing. The shares of Royal Dutch and "Shell" have been steady since the publication of the reports at about 12½ and 12½ respectively. At these prices the shares return a dividend yield of 5.15 per cent. for Royal Dutch (allowing for exchange at 9.18 florins to £1) and 4½ per cent., tax free, for "Shell," equivalent to 6.06 per cent. gross.

Oil Producers.—The reduction in the dividend of Anglo-Egyptian Oilfields and the increase in the dividend of Lobitos Oilfields suggest that the experience of various oil-producing companies last year was anything but uniform. The comparison in this case, however, is not exact, seeing that the Anglo-Egyptian Oilfields markets its production in Egypt, whereas Lobitos Oilfields sells its product in the crude form to America. The accounts of the Anglo-Egyptian Oilfields for the year ending December 31, 1931, showed a decline in net working profit of 38½ per cent., or of nearly 46 per cent. in total net profits after including other income. The amount earned on the ordinary shares fell from 18.1 per cent. to 8.8 per cent., and dividends were cut from 17½ per cent. to 10 per cent., the "carry-forward" being reduced from £217,278 to £134,036. The accounts of the Lobitos Oilfields have not yet been published, but the final dividend of 7½ per cent. brings the total distribution for the year up to 12½ per cent., as compared with 10 per cent. in 1930, the carry-forward being increased from £216,242 to £236,381. An analysis of the trading results of Anglo-Egyptian Oilfields for the last two years is as follows:—

	1930.	1931.
Net working profits	£ 381,258	£ 194,278
Other income	66,828	46,297
Total net profits	448,086	240,575
Depreciation	109,699*	78,866
Available for ordinary	338,387	161,709
Per cent. earned†	18.1	8.8
Per cent. paid	17.5	10.0
Carry forward	217,278	134,036†

* Includes £7,275 exploration reserve.

† After writing off £58,895 loss or depreciation on investments.

† On "B" shares. The "C" shares are held by the Egyptian Government and are entitled to 5 per cent. plus 10 per cent. of the balance after "B" shares have received £78,500.

The balance sheet shows a liquid cash position, the surplus of quick assets over current liabilities being £429,000 (cash and Treasury bonds £588,000, against £628,000 in the previous year). The report discloses the fact that the total net production of crude oil for the year amounted to 280,373 tons, as compared with 277,556 tons in 1930. The sharp reduction in profits, therefore, indicates the severe fall in selling prices. Moreover, the asphalt trade was particularly affected by the general depression, production showing a decrease of 40 per cent. The report adds that a capital loss of £58,895 was made on investments realised and upon writing down to market value all the investments held by the company. The ordinary shares are at present quoted 22s. 6d. to yield £8 18s. per cent., as compared with a high level of 48s. 6d. last year.

"Finlay" Tea Companies.—Finlay and Company, in addition to its merchanting business, has extensive interests in plantation companies. Its accounts for 1931 reflect adverse trading conditions, including lower prices for the common or medium grades of tea, in which the group is primarily interested. Net profit was £156,654, against £233,807 in 1930. The ordinary dividend, reduced from 15 per cent. to 9 per cent., was not wholly earned:—

Company.	Year.	Net Profit.	Pref. Dividend.	Ordinary.		Inc. or Dec. in carry-forward.
				Earned.	Paid.	
James Finlay	1929	£ 430,000	£ 30,000	28.2	25	+ 25,000
	1930	233,807	30,000	14.1	15	- 21,194
	1931	156,654	30,000	8.4	9	- 8,346
Amalgamated Tea Estates	1929	94,915	21,000	7.8	7½	+ 1,908†
	1930	69,924	21,000	5.2	5	+ 1,089
	1931	13,549	21,000	Nil	Nil	- 7,451
Anglo-American Direct Tea Trading	1929	66,266	16,543	7.8	10	- 13,711
	1930	95,072	23,271	11.1	10	+ 5,564
	1931	83,917	30,000	8.4	7½	+ 4,239
Consolidated Tea and Lands	1929	133,244	78,000	4.6	5	- 4,756
	1930	47,634	78,000	Nil	2½	- 60,366
	1931	Dr120,15	59,800	Nil	Nil	- 61,995
Kanan Devan Hills Produce Company	1929	178,677	33,000	19.4	20	- 4,323
	1930	150,221	33,000	15.6	17½	- 14,029
	1931	125,563	33,000	12.3	12½	- 1,187

† After writing off £265 new issue expenses.

‡ Net.

The plantation companies all recorded lower profits. Consolidated Tea and Lands, which holds ordinary shares in Kanan Devan and Anglo-American Direct Tea, showed a net loss of £12,015. The earnings of the Amalgamated Tea Estates did not cover the preference dividend. The profits of Anglo-American Direct Tea fell by 11½ per cent. and those of Kanan Devan Hill Produce by about 17 per cent. Though the internal finances of the group are strong, the immediate dividend outlook is not impressive, failing an improvement in market conditions.

Rhodesian Anglo-American.—This undertaking, a combination of various interests, has an issued capital of £3,781,890, plus £1,546,350 in 7½ per cent. debentures. Last year a gross profit was made of £25,700, whereof income tax absorbed £21,200. One is forcibly reminded of the mountain and the mouse. It may be noted that the revenue for the twelve months ended March 31st last totalled £131,300—an increase of nearly £27,000 upon the 1929-30 amount. This represents receipts from dividends, interest and other sources, less interest paid and (in the latest accounts), loss on share dealing. How such an amount can have been realised in the absence of any dividends from the company's Rhodesian copper holdings is somewhat of a mystery. Owing to the unfavourable developments in the world copper situation, these interests have experienced severe depreciation. The reserve account, as at March 31, 1931, of £1,400,000 has been increased by £149,000 premiums on shares paid up during the past year, plus £50,960 transferred from appropriation account. The entire round sum of £1,600,000 is applied to depreciation, leaving the investments at £4,849,100, within about £440,000 of their book or estimated value. A loan to subsidiary company figures at £255,000; debtors, £28,900; cash, £340,600; creditors, etc., £67,700. The financial position, therefore, is fairly good. The company's chief holding, directly or indirectly, is in the Rhokana, which has lately entered the producing stage. Results in development, plant construction and treatment have exceeded anticipations; but unless and until a sustained recovery occurs in copper, concurrently with an expansion in demand, profits can only be negligible.

Vereeniging Estates.—Though the past year was disappointing from the profit-earning standpoint, it was marked by substantial progress in some of the company's activities. Additions were made to the estate holdings, and improvements were effected in several directions. Towards the close of the session the new Betty shaft at the Cornelia colliery was brought into commission. The capacity of the plant here has been designed to meet the increasing requirements of the Vereeniging power station and local markets; it is estimated that the demand will eventually exceed 1,000,000 tons per annum. Sales during 1931 reached the record total of 916,850 tons. Unfortunately, owing to decline in the merchant trade, the profit fell off slightly instead of increasing. With the other colliery interests shrinkage occurred in both output and earnings. No dividends were received from the Brick and Tile and the Milling subsidiary, and the revenue from farming decreased. Altogether it is perhaps surprising that the company should have made as much as £113,800, as compared with £161,800 for 1930. The dividend of 4 per cent. leaves £57,600 to be carried forward, in comparison with £7,570 brought over. For 1930 the distributions totalled 10 per cent.; in respect of each of the four preceding years 12½ per cent. Out of the proceeds of the 6 per cent. debenture issue of £650,000, the balance of the 7 per cent. issue (£294,550) was repaid; the premium on the old issue and the expenses in connection with the new—£57,200—were charged against share premium account. The latter was also debited with £148,800 written off the industrial and other assets, and was thus reduced to £88,600. A recovery in earnings obviously depends upon an improvement in general conditions, but the company is in a position to meet any demands which may be made upon it.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Central Mining and Investment Corporation, Gresham Life Assurance, Commercial Union Assurance, Liverpool and London and Globe Insurance, Whitehall Electric Investments, British Shareholders Trust, Oriental Telephone and Electric, Shanghai Electric Construction, Imperial Continental Gas Association, Crown Mines, and Society of Incorporated Accountants and Auditors. At the annual meeting of Central Mining, Sir Evelyn Wallers said that they were participating in the opening up of two new mining areas in the Far East Rand. The first area, to be called the Vogelstruisbult Gold Mining Areas, comprised Government ground on the southern portion of the Farm Daggafontein, in extent approximately 950 claims, and a portion of the Farm Grootfontein, in extent about 880 claims, with approximately 2,575 claims on the Farms Vogelstruisbult and Grootfontein. The second area, to be called Daggafontein East, consisted of the remaining portion of the Government ground on the Farm Daggafontein, in extent approximately 2,470 claims. At the annual meeting of Crown Mines, the chairman informed shareholders that the quantity of payable ore developed, 3,589,051 tons, was greater than in any previous year; the value per ton, 6.9 dwts., was 0.1 dwts. below the 1930 value, but above the average of the past ten years. Their total reserves amounted to 12,997,390 tons, having an average value of 6.7 dwts., of which 10,578,940 tons, valued at 6.53 dwts., were available for stoping.

CAPITAL ISSUES.

This week's prospectuses have been varied and of less "gilt-edged" status than those of recent weeks. In these days, the appearance of a Canadian Government in the London market is rare enough to be noteworthy. That the issue by the *Government of the Province of British Columbia* was priced to give a yield of slightly over 5 per cent., reflected the fact that the stock was not of trustee character and that the Dominion Government's budgetary figures for the year ended March 31st last, were expected to show a deficit. A surplus of revenue is provided for, however, in the estimates of the current year. The offer of the *City of Wanganui (New Zealand)*, was destined entirely for the repayment of existing loans, raised chiefly in London. The borough, though the fifth city in New Zealand, has a present population of only 27,000, and a public debt, less sinking funds, of nearly £35 per head. The debentures are a ten-year maturity, giving a running yield of £6 7s. per cent. and a redemption yield of £6 9s. 9d. per cent. Of the week's two industrial issues, the preference offer of *Edmundson's Electricity Corporation* was designed to repay the Greater London and Counties Trust (which controls Edmundson's, and is controlled, in turn, by the Atlas Light and Power interests of America), for assets acquired in the British electric supply industry. The remainder of the purchase is being financed by a private issue of 5 per cent. debentures at 96½. The preference shares are well secured, but an anomaly appears to be suggested by the fact that, at their issue prices, the debentures give a running yield of £5 3s. 6d. per cent. and the preference shares a yield of no more than £5 14s. 8d. per cent. The *Telsen Electric Company* claims to be the largest manufacturer of radio apparatus in this country. It was founded in 1924, but its rapid progress has occurred only in the last two years. Its trading profits for the year ended May 31, 1930, were £9,840, whereas the directors estimate that profits for the year ending June 30th next will exceed £150,000. The prospective dividend yield of over 15½ per cent., free of tax, offered to subscribers at the issue price (which includes a premium of 200 per cent.), places the issue in the speculative industrial category. Particulars will be found below of three important emissions by way of Stock Exchange "Introduction."

Public Offers.

Government of the Province of British Columbia.—Issue of £1,500,000 5 per cent. stock, 1957-67, at £99 per cent. The stock will be redeemed at par on May 1, 1967, but the Government will have the option of redemption at par on May 1, 1957, on three months' notice. The stock is issued under the authority of the Inscribed Stock Act and is payable, principal and interest, out of the consolidated revenue fund of the province. The proceeds will be applied in refunding Treasury bills. The net debt of the province is \$118,586,751, and the estimated population 728,000. The estimates for the fiscal year ending March 31, 1933, provide for a small revenue surplus.

City of Wanganui 6 Per Cent. Loan.—Issue of £121,400 in debentures to bearer of £100 each, at £96½ per debenture, repayable at par on June 1, 1942. The issue is a direct obligation of the city, and is also secured by a special rate of 1½d. in the £. A sinking fund of 3 per cent. per annum will be provided. The proceeds of the issue will be utilised in repayment of existing loans. The city has a population of about 27,000, and a capital value of £8,731,490, and had a public debt of £1,117,934 on March 31, 1931.

Edmundson's Electricity Corporation.—Issue of 1,250,000 6 per cent. cumulative preference shares of £1 each, at 21½s. per share. The company was formed in 1897, and controls or is financially interested in 66 electricity supply undertakings. Net profits for the last five years, from 1928, were £164,180, £163,046, £215,946, £272,074, £302,285, before charging debenture interest and income tax. The present loan capital is £1,365,000, and a further amount of £1,000,000 is to be

issued. Profits for the year ending March 31, 1932, after deducting interest and sinking fund on the debenture stock issued and agreed to be issued and the fixed interest of £170,800 on the 7 per cent. preference shares outstanding, are more than sufficient to cover the fixed dividend on the present issue. The proceeds of the issue will be applied towards payment of the cash consideration for new assets acquired.

Telsen Electric Company.—Offer for sale of 60,000 shares of £1 each at £3 per share. The business of manufacturing electrical equipment was incorporated into a private company in 1926, and recently into a public company. The average number of employees in 1931 was 2,400. The directors estimate that the profits of the company for the year ending June 30, 1932, will amount to £150,000. A dividend of 10s. per share, tax free, for the current financial year is anticipated. Trading profits for the past three years, before charging directors' remuneration or providing for taxation, were £9,438, £9,840 and £43,861, respectively. A dividend at the rate of 400 per cent., tax free, was paid in respect of 1931 on the then share capital of £10,000.

Reading Gas Company.—Issue by tender of £60,000 5 per cent. redeemable preference stock (1960), minimum price £98 per £100 stock. The stock is redeemable at par on July 1, 1960. The proceeds of the issue are required to meet the cost of additional manufacturing plant necessitated by the continual development of the company's business. The number of consumers has risen from 17,285 in 1911 to 28,050 in 1931. No profit figures are given.

Lewes Gas Company.—Offer for sale by tender of £10,000 5 per cent. perpetual debenture stock, minimum price, par. Net profit for the year ended December 31st last was £5,314, covering interest on the loan capital, including the present issue, more than seven times. The company was established in 1822. The number of consumers on December 31st last was 3,431.

Stock Exchange "Introductions."

Colony of Jamaica.—Jamaica Government 4 per cent. inscribed stock, 1952-62. This stock is being issued by the Crown Agents for the Colonies as part of a loan of £500,000 to meet the cost of road works in the colony. Trustees are authorised to invest in this stock. The Colonial Government has already raised locally £146,612 of the sum, and £200,000 has been sold to the market at 94 per cent., the remainder having been placed privately on the same terms. The principal will be repaid at par on June 1, 1962, or at the option of the Government at par on or after June 1, 1952, on six months' notice. The loan is secured on the general revenue and assets of the Government of Jamaica.

Durham County Water Board.—Particulars of an issue of £400,000 4½ per cent. redeemable stock, 1957. The proceeds of the issue are required *inter alia* to repay short-term loans raised in connection with the construction of the Burnhope Reservoir. The stock is to be sold to Messrs Cohen Laming Hoare and Messrs Foster and Braithwaite at 94½ per cent. net. The stock will be redeemed at par on May 31, 1957. The population served by the board is over 370,000.

London and Lomond Investment Trust.—Particulars of an issue of £250,000 5 per cent. debenture stock, 1957-62, repayable at par on June 1, 1962, or at the company's option at any time after June 1, 1957, on three months' notice. Of the £250,000 of stock, the company has issued and there is now outstanding £80,750. Such stock was issued for cash at 95 per cent., plus brokerage of ½ per cent.

OIL OUTPUTS.

SERVICE PETROLEUM COMPANY, LTD.—Returns from Romano-Africana S.A.R. show the production from the company's oil wells at Gura-Ocnitzi, Moreni and Ceptura for the week ended January 31, 1932, totalling 3,812 tons (26,684 barrels); for the week ended February 7, 1932, totalling 3,881 tons (27,167 barrels). Production from the company's oil wells for the week ended February 21, 1932, totalling 3,512 tons (24,584 barrels). Production from the company's oil wells for the week ended February 28, 1932, totalling 3,306 tons (23,142 barrels). Production from the company's oil wells for the week ended March 13th, 1932, totalling 2,947 tons (20,629 barrels). Production from the company's oil wells for the week ended March 27, 1932, totalling 2,497 tons (17,479 barrels). Production from the company's oil wells for the week ended April 3rd, totalling 2,363 tons (16,541 barrels). Returns from Romano-Africana S.A.R. show the production from the company's oil wells for the week ended April 10th totalling 2,318 tons (16,226 barrels). Returns from Romano-Africana S.A.R. show the production from the company's oil wells for the two weeks ending April 17th and 24th, totalling 2,284 tons (15,988 barrels) and 2,168 tons (15,176 barrels) respectively. Returns from Romano-Africana S.A.R. show the production from the company's oil wells for the week ended May 8, 1932, totalling 1,896 tons (13,272 barrels). Returns from Romano-Africana S.A.R. show the production from the company's oil wells for the week ended May 15, 1932, totalling 1,699 tons (11,893 barrels).

COMPANY MEETINGS, &c.

CENTRAL MINING AND INVESTMENT CORPORATION, LIMITED.

SATISFACTORY POSITION MAINTAINED.

GRATIFYING RESULT OF INVESTMENT VALUATION.

SPANISH RAILWAY INTERESTS.

SOUTH AFRICA AND THE GOLD STANDARD.

RAND MINING ACTIVITIES.

COMPANY'S OIL INTERESTS.

SIR EVELYN WALLER'S SURVEY.

The twenty-seventh ordinary general meeting of the Central Mining and Investment Corporation, Limited, was held, on the 25th instant, at No. 1 London Wall Buildings, London, E.C.

Sir Evelyn Waller, K.B.E. (chairman of the company), presided. The Secretary (Mr R. A. Macqueen) having read the notice convening the meeting, and also the auditors' report,

The Chairman addressed the meeting as follows:—
Ladies and gentlemen, with your permission, we will, as usual, take the report and accounts as read. (Agreed.)

The accounts submitted for your approval to-day show that the corporation has maintained a position which will, we think, be regarded as satisfactory, in view of the continued and pronounced decline in commodity and security values, and the profound unsettlement of markets during the past year. The depreciation of investments resulting from these conditions and affecting almost every category of security is an experience we have suffered in common with all investors, but, on the other hand, we have the fact that some of our South African holdings stood in our books at prices below market prices at the end of December. The board has given a good deal of thought as to the method in which the accounts should be presented in order to give shareholders the clearest possible picture of the corporation's position, and we have decided that this can best be achieved by presenting what is known as a "valued" balance sheet.

VALUATION OF THE INVESTMENTS.

We have always given detailed information in our balance sheets of the classification of the corporation's various holdings, which have been entered at, or under, market prices at the end of each financial year. In the balance sheet now before you, shares and investments have been entered at market prices on December 31st last in all cases in which market quotations were available. Shares quoted only in South Africa have been valued on the basis of market price with, as a measure of prudence, the addition of only one-half of the exchange premium ruling at the end of the year. Interests having no market quotation have been entered at directors' valuation, those located in South Africa being valued without regard to the exchange premium. Our liabilities to others in South African currency are balanced by our cash in South Africa and amounts due to us there. Consequently, in order to avoid inflating both sides of the balance sheet unnecessarily, these items have been treated as the equivalent of sterling.

As you will see from the accounts, the result of the revaluation at December 31st last, subject to the remarks I shall make later regarding the Anglo-Spanish Construction Company, Limited, is that there is a surplus on the valuation of £79,098. This surplus is shown as an addition to the reserve fund, which, after adding £200,000 which it is proposed to transfer from the year's profits, will amount to £729,098. In view of prevailing conditions the position disclosed will, I feel, be gratifying to you, as it is to the board. In future, valuations will be made at the end of each financial year on the lines I have mentioned, and the resulting appreciation or depreciation will be reflected in the reserve fund.

I might add that a further reserve is represented by the low valuation placed on certain unfloat assets, pending their development. For example, we carry at a nominal figure the mining claims owned by the Corporation on Farm Vogelstruisbult No. 36 in the Far East Rand. I shall refer to the proposals for turning these claims to account in the course of my remarks.

There are certain other points in the balance sheet to which I should like briefly to call your attention. The reserve fund, as I have indicated, now stands at £729,098, and the depreciation reserve account figures at £996,720, after definitely writing off £143,280 already reserved against shares in a subsidiary company. As regards the liquid position of the corporation, you will have noticed that our holdings of British Government Treasury bonds and bills, and our cash with bankers, reflect even greater strength when compared with last year. Our shares, interests, and investments totalling £3,472,516 correspond almost exactly with last year's book value.

PROFIT AND DIVIDEND.

Resulting from the method of preparing the balance sheet which I have just described, the profit and loss account will now show on the credit side our annual income from dividends and interest and the balance of profits and losses actually realised on the sale of investments and securities. On the debit side there will appear our ordinary administrative and other expenditure, Dominion income tax, and French fiscal taxes. The balance that can then be carried to appropriation account will determine the dividend policy in each year, subject to the allocation of such amounts as it may be considered desirable to transfer to reserve. For the year ended December 31st last the balance of net profit so arrived at amounts to £445,552. Our dividend income, as would be expected, was lower, and our receipts on interest account suffered owing to the inability of the Anglo-Spanish Construction Company, Limited, to meet interest on its loan from us.

On the other hand, as mentioned in the directors' report, advantage was taken of an opportunity which presented itself to realise at a satisfactory price a portion of one of the Corporation's commercial interests in South Africa. Subject to your approval, it is proposed to pay a dividend of 6s. per share, less income tax at 4s. 6-93d. in the £, to transfer £200,000 to the reserve fund, and, after providing £16,500 for income tax, to carry forward £128,819, which is £101,552 greater than the balance brought in. In the uncertain times through which we are passing, and with the outlook far from clear, we feel that this prudent policy will commend itself to you.

SPANISH RAILWAY INTEREST.

In considering our assets in some little detail I feel it desirable that I should deal first with our Spanish railway interest, which continues to require from us the expenditure of much thought and time, both in London and in our numerous visits to Madrid, in order that your interests may be protected with all possible vigilance.

The position as it exists to-day is briefly but quite clearly set out in the directors' report. The important happening during the last five months has been the regular monthly release of the bonds to the total value of approximately 52,500,000 pesetas, which, you will remember, were deposited by the Government with the Bank of Spain in the name of the Anglo-Spanish Construction Company in January, 1931, but blocked for a period of twelve months. These bonds have now all been received in accordance with the provisions of the Government Decree, and are being realised slowly and with proper consideration for the state of the market. I am glad to say that, although there has been some depreciation in the value of the bonds during the period they were inaccessible, that depreciation has not been heavy.

As you are probably aware, exchange restrictions in Spain are very definite, and so far we have been unable to transfer funds.

The balance of approximately 54,000,000 pesetas owing to the Santander-Mediterranean Company by the Spanish Government for work completed remains unpaid, but it is, to my mind, unthinkable that there should be any ultimate failure to meet their definite and admitted obligations on the part of so great a country as Spain. That country to-day is going through a most difficult period politically and economically. It is faced, as so many countries are, with a considerable deficit in its Budget, and the prices of its chief commodities reflect present world conditions. There are, however, indications that the country is gradually working towards political stability, and there are signs, especially in the south, of a good harvest. If these two factors, political and economic, develop really favourably, it is quite conceivable that the position of Spain and its currency will stand out favourably in Europe as a whole. You will realise at once, when considering the large amount of Spanish currency that is involved, how great is the beneficial effect of even a moderate improvement in the exchange value of that currency upon the value of our investment. But the first and greatest need would appear to be a stable Government, able and willing to govern, and my view of our Spanish investment is that much time, persistent application, and great patience are still required before we can hope to arrive at an estimate of the final value, and, consequently, to-day we are unable to say whether the amount reserved in our accounts will eventually prove to be more or less than sufficient.

POLITICAL PROPAGANDA.

Certain acts of the Dictatorship (and the granting of this concession to the Santander-Mediterranean Company was one) have, unfortunately, been used for some time past for political propaganda. The adverse references to this railway concession, so far as I have read, or heard them in Madrid, are of the vaguest character and, I understand, have no kind of foundation in fact. But, in any case, that particular aspect of the affair has nothing whatever to do with our subsidiary, the Anglo-Spanish Construction Company, which financed a definite contract to construct a railway, and with the strong financial backing of our Corporation that contract has been faithfully carried out by the Spanish company. The standard of construction is at least equal to that of any other railway in Spain, and the construction cost to the Spanish State compares very favourably with any similar work carried out during the same period. I would add here, as a matter of interest, that the Spanish company has found it necessary on several occasions during the present and the preceding regimes to have recourse to the Supreme Tribunal, the highest Court of Appeal in Spain, in connection with taxes, impositions, and Government levies which, in the company's opinion, were in conflict with its clearly defined rights under the Concession. On every occasion the Supreme Tribunal has upheld the company's case and clearly demonstrated the validity and legality of the Concession and of the company's interpretation of its rights thereunder.

We are greatly indebted to the board of the Santander-Mediterranean Compañía del Ferrocarril Estratégico, and in particular to Señor Don Ramon de Aguinaga, its president, Señor Don Jose de Aguinaga, who is in charge of exploitation, and to our own legal adviser in Madrid, Señor Don Eduardo Cobian, for the zeal with which our interests are served.

SOUTH AFRICAN INTERESTS.

I will now turn to our South African interests. The consulting engineer's report on our goldmining and other holdings, attached to the directors' report, deals fully with the technical achievements accomplished during the year and with the operations of each individual mine; it is therefore unnecessary for me to refer to them in further detail.

From the point of view of the gold mines of the group, the salient feature of 1931 was the adequate supply of native labour available for the second year in succession, which enabled the scale of operations to be increased in both the tonnage of ore milled and the development footage driven. In general, the year's work shows a small but definite improvement in efficiency, which, in view of the very high degree of efficiency already obtained, reflects the greatest credit on our South African organisation.

GOLD STANDARD QUESTION.

The Rand Refinery continued to handle the output of the Witwatersrand gold mines, and with the exception of a comparatively insignificant amount consigned to London all the refined gold was sold to the South African Reserve Bank. As a result of Great Britain departing from the gold standard in September last, and South Africa remaining on gold, it became necessary to reconsider

the agreement for the sale of gold to the Reserve Bank, and a fresh arrangement, making provision for the new conditions, was made with that bank. As you are aware, this question of the maintenance by South Africa of the gold standard at the old parity is one of first-class importance to the shareholders in the goldmining companies, and, as is natural, it has been widely debated and discussed in the Union House of Assembly and the country as a whole. The matter was referred to a Select Committee, upon which, for reasons given at the time, the South African Party had declined to sit. The announcement, therefore, which appeared yesterday to the effect that the Committee had recommended the Government to adhere to its policy was anticipated.

The views of the goldmining industry, as expressed by the Chamber of Mines, that the interests of the country and of the industry would be best served by abandoning the present gold standard and linking South African currency with sterling are well known. The extraordinarily fortunate position in which the Union of South Africa is placed as the producer of approximately 52 per cent. of the gold output of the world is so self-evident that it is unnecessary to recapitulate the reasons which have combined, in my mind, to lead conclusively to this standpoint. I would, however, like to make the following brief observations.

ADVERSE EFFECT OF ADHERENCE TO GOLD STANDARD.

First, it seems to me to be unfortunate that what is an essentially common-sense economic question should have been allowed to become, as it has, a matter of political party controversy (hear, hear)—and, secondly, it is an even greater misfortune that the unique opportunity is being missed of obtaining the increased price for the product of an industry upon which the whole country so greatly depends. I venture to put forward this view, not only because the policy of abandoning the gold standard at the old parity would lead to increased revenue for the mines, but also because it would ensure the lengthening of the life of the whole industry. It has been shown, I think, beyond doubt in a wealth of evidence put before the South African Government that there is no justification for fearing any material increase in working costs. Therefore, vast quantities of ore, now classed as unpayable or on the borderline of payability, would become payable, and the development of new areas would be accelerated, thus increasing employment, both directly and indirectly, to the benefit of the whole community. Unfortunately, the converse of this picture is equally true. By remaining on the gold standard at the old parity the export trade of the country and business conditions internally have been very grievously affected. In order to balance the country's Budget, higher taxation, direct and indirect, was rendered necessary, and the mining industry was called upon to bear a share of the increased burden. Any increase in costs must inevitably tend to shorten the life of the industry.

I still feel that the Government of the Union of South Africa must realise before long that it is endeavouring to carry a burden that puts far too great a strain upon the resources of its people, and that devaluation of its currency should and ultimately will be adopted.

NEW MINING AREAS.

As you will have seen from the directors' report, we are participating in opening up two new mining areas in the Far East Rand. The first area, to be called the Vogelstruisbult Gold Mining Areas, comprises Government ground on the southern portion of the Farm of the Farm Grootfontein, in extent approximately 950 claims, and a portion of approximately 2,575 claims on the Farms Vogelstruisbult and Grootfontein, which have been held for many years by our corporation, the Rand Mines, and the New Consolidated Gold Fields. The second area, to be called Daggafontein East, consists of the remaining portion of the Government ground on the Farm Daggafontein, in extent approximately 2,470 claims. The mining and geological evidence available justifies our belief that these areas should develop into profitable enterprises in the course of the next few years.

Apart from gold-mining in South Africa, our other interests referred to in the consulting engineer's report consist mainly of holdings in Transvaal Consolidated Land Company, Witbank Colliery, Pretoria Portland Cement Company, Cape Portland Cement Company, and Hume Pipe Company. General economic conditions in South Africa have naturally affected their well-being to some extent, but, in the circumstances, they have made fair profits.

Our interest in the Potosi Tin Mine in Bolivia has failed to return us a profit during 1931, due to the low price of the metal that has prevailed. We see no reason, however, to alter our view that this mine should develop satisfactorily and produce tin at a cost which will show a good profit when the price of the metal returns to a more normal figure.

The Amalgamated Metal Corporation, Limited, in which our holding is substantial, has had to face a period when business in non-ferrous metals has been, for most of the year almost stagnant, and when prices have steadily fallen. In these circumstances the earnings may be regarded as satisfactory, and they give promise that in more normal times they will make a good showing.

OIL INTERESTS.

As regards your oil interests, you will remember it was stated at last year's annual meeting that the oil industry generally was passing through a difficult period in consequence of the excess of production over consumption, due very largely to depressed trading conditions in most countries of the world. Unfortunately, these adverse conditions were further accentuated during the year under review, with the result that the prices of oil products fell progressively to lower levels. Not only did prices fall, but the contraction of markets led to still fiercer competition. In such a situation it seems to me that a policy of co-operation among oil producers is eminently desirable, and that "rate wars" and such like methods should be discarded.

To come to our own particular oil concerns, Trinidad Leaseholds, Limited, more than maintained the volume of its business during the financial year ended June, 1931, as compared with the preceding 12 months, but profits were lower on account of reduced prices. In its current year the company has continued to maintain approximately its volume of business, but the lower prices received for its products have been more than offset by further reductions in working expenditure and by the exchange premium since last September on sales effected on a dollar basis. It is expected, therefore, that the full year's results will show a considerable improvement over those of the previous year. An interim dividend of 5 per cent. was recently declared, accompanied by the statement that a similar final distribution would be recommended if conditions remain as at present.

"REGENT" PETROL.

I might mention that since the advent to power of a National Government the desire of the British people to buy "British" wherever possible has strongly manifested itself and has materially helped the company to establish firmly in the English market its brand of petrol known as "Regent," which, in addition to its Empire origin, is second to none in quality.

Satisfactory results have already been obtained in the Cumarebo area now being developed by the Standard Oil Company of Venezuela (a subsidiary of the Standard Oil Company of New Jersey) under the agreement concluded at the end of 1930 with the North Venezuelan Petroleum Company. A number of successful wells have been brought in and the first shipment of oil is about to be made. The North Venezuelan Petroleum Company recently entered into a further agreement with the Standard Oil Company of Venezuela, whereby that company undertakes to drill 20,000 ft. in order to test four additional areas.

The Tocuyo Oil Company of Venezuela has continued to meet with disappointment in its drilling programme, and it has been found impossible to maintain production at even last year's low figure. The present field does not appear to hold out any great hope of successful development, but as indicated in the directors' report the North Venezuelan Petroleum Company has agreed to give the Tocuyo Company the opportunity of participating with them in the development of other areas.

The difficult business conditions which have prevailed throughout the period under review have naturally adversely affected the results of Bernhard, Scholle, and Company, Limited. In common with other institutions of a similar nature, the scope for profitable business has become increasingly limited, while heavy depreciation has had to be provided for in respect of its holdings. Drastic economies have been effected and expenditure will be limited to the lowest possible figure commensurate with the proper safeguarding of the assets of the company. I might mention that ample provision has been made, as far as can be foreseen, in the corporation's accounts for actual depreciation of the value of this holding.

THE DIRECTORATE.

During last year Sir Sothern Holland carried into effect a wish to retire from the chairmanship of the corporation, and the board had no alternative but to accept his decision with very real regret. Sir Sothern first joined the board in 1916, and occupied the chair after the retirement of his predecessor, Sir Lionel Phillips, in 1924. We are delighted that Sir Sothern by retaining his seat on the board will continue to give us that business and personal association which we all greatly value. (Hear, hear.)

My colleagues honoured me by appointing me as their chairman.

If you will permit one personal remark, it is this—that having spent my business life mainly in South Africa in the service of this corporation and its predecessors, Werner Beit and Company, you will readily understand how deeply I appreciate that honour. (Hear, hear.)

In fulfilment of the intention expressed by the chairman at the last annual meeting, Monsieur J. Aguilon and the Baron de Sigalas were appointed directors in June last, and we welcome their accession to the board. (Hear, hear.) We are glad to welcome Monsieur Aguilon here to-day.

OUTLOOK FOR CURRENT YEAR.

In concluding the annual review of your affairs, it has been usual to try to give some indication of results in the current year. On this occasion, in face of the existing world conditions, I feel you will agree that it would be unwise to attempt any forecast. I believe that there is some justification for a modest amount of optimism as regards the situation in this country, but the international position at present unfortunately shows no signs of improvement. I am not going to take up your time with a digression on world affairs, because so much is written and spoken daily for general consumption. We can but trust that at the forthcoming conferences at Lausanne and Ottawa a real start will be made on the solution of certain fundamental problems that must be solved before a general world forward movement can take place.

The interests of the corporation are widespread, and you will have realised that a substantial portion of our investment portfolio consists of holdings in the gold mines of the Rand and in the oil industry. These investments, accompanied as they are by considerable strength in holdings of British Government short-term securities and cash, place the corporation in a sound position.

The really effective method of looking after your interests in the various countries is, we feel, only to be obtained by the closest possible personal contact with those in charge of them on the spot. (Hear, hear.) With that in mind, your directors and chief officials continue to pay their visits to the parts of the world in question.

TRIBUTE TO EMPLOYEES.

Your organisation is a large one, and the board is very keenly appreciative of the loyal and most excellent service that the employees of the corporation are rendering wherever they are situated. We feel that you would wish to join in sending them a message of thanks, of encouragement, and of good will. (Hear, hear.)

I now beg to move:—"That the report and accounts for the year ended December 31, 1931, as printed and circulated among the shareholders, be and they hereby are received, approved and adopted; and that the payment of a dividend of 6s. per share, less United Kingdom income tax at 4s. 6d. in the £, to shareholders registered on the books of the company at the close of business on May 17, 1932, and to holders of Coupon No. 37 attached to share warrants, in respect of the year ended December 31, 1931, be and the same is hereby sanctioned," and I shall ask Mr Rogers to second the resolution. (Applause.)

Mr A. W. Rogers seconded the resolution.

After the Chairman had replied to a question, Mr J. Nissim said he was pleased to observe the improved position of the corporation. Referring to South Africa's determination to adhere to the gold standard, he said that economic forces might prove too strong for it to continue its present policy.

The motion was then put to the meeting and carried unanimously.

Mr F. R. Phillips, M.C., proposed the re-election of Sir Evelyn Wallers, Monsieur J. E. Aguilon, Mr John Martin, and Baron de Sigalas, the retiring directors. Sir R. Sothern Holland, Bt., seconded the motion, which was unanimously adopted.

On the motion of Mr W. T. Anderson, seconded by Mr H. S. Mingard, Messrs Cooper Brothers and Company were reappointed auditors of the corporation until the next ordinary general meeting. The proceedings then terminated.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached: To Publisher, "Economist Newspaper Ltd.,"

8, Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

GRESHAM LIFE ASSURANCE SOCIETY, LIMITED.

CONTINUED PROSPERITY

GROWTH OF SOCIETY'S INCOME

LIFE POLICIES AS INVESTMENTS

The eighty-third ordinary general meeting of the Gresham Life Assurance Society, Limited, was held, on Tuesday, May 24th, at the chief offices of the society, 188-190 Fleet Street, London, E.C.

Sir Reginald MacLeod (of Macleod), K.C.B., the chairman presided.

The General Manager (Mr Alex. Lawson) having read the notice convening the meeting and the report of the auditors,

The Chairman said:—Gentlemen, The report and accounts are before you, and I assume that as usual you will be pleased to take them as read. (Agreed.)

When I had the pleasure of addressing you last year I referred with some anxiety to the severe depression which had become apparent, not only in Great Britain, but in almost all parts of the globe. I do not think that any of us at that time envisaged the financial and economic crisis through which we have since been passing and from which the world has unfortunately far from recovered.

I do not propose to enlarge now on the general situation and its remedial measures, inasmuch as these have already formed the subject of many speeches by our eminent economists; let it suffice for me to say that unless means are rapidly found to restore the circulation of money and to re-establish international confidence and commerce, there is little hope of recovery for those nations which are now tottering under the weight of an intolerable burden of indebtedness, and the return to general world prosperity will be indefinitely delayed.

It is my privilege to-day to present to you our eighty-third annual report, and in so doing I would remind you that, although the society has long ceased to transact business in Germany, Austria and Hungary, and other Central European States most affected by the present crisis, its ramifications are still widespread. It is not unnatural, therefore, that the upheaval which has taken place should have, to some extent, influenced our new business returns. In certain foreign countries a proportion of our business has always been effected on a sterling basis, and the departure of Great Britain from the gold standard has adversely affected our figures.

I am glad to say, however, that in spite of unfavourable conditions, 4,971 life and endowment policies were issued during the year, assuring the sum of £2,089,920, with a net new premium income—i.e., after deduction of reassurances—of £103,264.

In addition 33 leasehold policies were issued for an amount of £22,656, with premiums of £8,482.

The new business figures are somewhat below those of last year, but, in the circumstances, may, I think, be regarded as satisfactory.

We received during the past year a sum of £15,009 as consideration for annuities granted, representing an ultimate annual payment by the society of £2,005.

On the other hand, owing to the death of 93 annuitants, the society has been relieved from payments to the extent of £3,083 per annum.

The total premiums received amounted to £915,417, inclusive of single premiums of £4,729, this being a slight increase over the figure for the previous year.

The interest, less tax, amounted to £405,446, as against £394,435 in 1930.

The income of the society from all sources was £1,339,768, showing an increase of £25,467.

The death claims, together with bonus additions, absorbed a sum of £235,133, as against £211,205 in the previous year, and although the total is somewhat larger than in 1930, I am glad to report that the rate of mortality is still highly satisfactory, being about 74 per cent. of the amount expected according to the table used in the valuation. This low rate is continued evidence of the care exercised by the management and their medical advisers in the selection of risks.

The claims under matured policies were £320,676. This is also in excess of last year's figure, but represents no additional strain on the society's funds as full provision has been made for these payments.

The total assets of the society increased during the twelve months under review by the satisfactory sum of £385,640, and now amount to £8,780,399.

The past year has been one of very considerable anxiety to all those who are entrusted with the investment of large funds, and at no time within recent years have security values been subjected to so severe a test as at December 31, 1931—a test which, to a large extent, is artificial, in that the market quotations at that date bore little relation to the intrinsic values of the actual investments.

I am pleased, however, to be able to report that a valuation of the society's assets, and with Stock Exchange securities based upon the market quotations and the rates of exchange ruling as at December 31, 1931, results in only a small depreciation—approximately 1 per cent. in the aggregate value of the assets as they stand in the society's books.

The rate of interest earned upon the society's funds was £4 19s. 11d per cent. after deduction of income tax. This rate is only fractionally below that of the previous year, and, having regard to the increased taxation, may, I think, be considered as most satisfactory.

The expense ratio for 1931 was 23.93 per cent., as against 24.62 per cent. for the previous year. The question of expense is one which receives our continual attention; but I would like to remind you once again that the society's operations extend to many foreign countries where the cost of production and administration exceeds that to which we are accustomed in this country. Provision for these increased charges is, however, made in the rates of premium we apply.

The surrenders, as also the loans granted on policies, show a considerable increase over the similar items for the previous 12 months. This is of course a sign, and a sad one, of the hard times through which we are passing, and, while the feature is one upon which no life insurance company can look with favour, it furnishes other forms of investment can depreciate and may even be unsaleable in an emergency, an insurance policy is free from fluctuations and is always available as collateral. It would be difficult, in fact, to find any other form of thrift combining this great advantage with its essential purpose of protection and provision for old age.

I should perhaps refer to the position of our policyholders participating in the profits of the society. The quinquennium ends on December 31, 1934, and whereas it would be imprudent, under existing conditions, to offer a view as to the future, there is at any rate scope, I think, for cautious optimism. The first two years of the quinquennium, as well as the first four months of the present year, have yielded both a satisfactory rate of interest and an excellent mortality experience, and, given at least some improvement in the international situation, there is no reason why we should not look to the further results with confidence. Meanwhile the annual bonus being received under policies maturing by reason of death or on the occasion of our last division of profits, varying from 35s. to £3 per cent. on the sum assured according to the duration of the policy.

The year has been anxious and difficult, involving more than ordinary strain on the staff, both at head office and at branches, which they have borne with good will and efficiency. The board appreciate the great services rendered by Mr. Alexander Lawson the general manager (now one of their number), and they have pleasure in placing on record their confidence in Mr. John H. Stebbing, now manager and secretary, and the other officers of the society, who have continued to render conspicuous services. (Hear, hear.)

I now beg to move:—“That the directors' and auditors' reports be approved and adopted,” and I will call on the deputy chairman to second that resolution.” (Applause.)

Mr. Courtenay C. S. Fooks (the deputy chairman) seconded the resolution, which was carried unanimously.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8, Bowyer Street, Fleet Street, London, E.C.4.

COMMERCIAL UNION ASSURANCE COMPANY, LIMITED.

STRONG POSITION—DIVIDEND MAINTAINED.

The seventieth annual general meeting of this company was held, on the 24th instant, at 24 Cornhill, London, Sir James Leigh-Wood, K.B.E., C.B., C.M.G. (the chairman), presiding.

The Chairman, in moving the adoption of the report and accounts, said that economic factors had again in 1931 adversely affected the operations of the fire department, the premium income of £6,316,215 showing a reduction of £458,101 as compared with the previous year. This perhaps was not surprising in view of the further and continued decrease in commodity values the world over, even disregarding the general downward trend of rates for fire insurance protection. The greater part of the reduction was sustained in the United States, where the effect of trade depression was probably felt in 1931 to even a greater extent than in the preceding year. They had transferred £250,000 to profit and loss account, which left the fire fund at £7,098,891, representing 112.4 per cent. of the premium income, compared with 110.6 per cent. at December 31, 1930.

The net premiums in the marine department at £733,757 showed an increase of £34,929, while the claims paid and outstanding amounted to £329,151. The transfer of £200,000 to profit and loss account left £52,600 to be added to the marine fund, which now stood at £1,246,949. This figure represented 169.9 per cent. of the premiums compared with 170.9 per cent. in 1930. The large volume of shipping tonnage at present lying idle was a factor likely to reflect itself to a considerable extent in the current year's figures, but as against this there would appear to be a hopeful, if slight, sign of improvement as regarded hull business.

In the accident department the premiums amounted to £7,845,606, a decrease of £812,851. The greater part of the reduction was due to the deliberate curtailment of their commitments in the United States, which had been the black spot, and was still the cause of much anxiety. It was with much satisfaction that he was able to report favourably on their business in the United Kingdom and the general foreign field. With the transfer of £190,744 from profit and loss account, the accident fund amounted to £5,578,011, being 71.1 per cent. of the premiums as compared with 67.3 per cent. at the end of the previous year.

LIFE DEPARTMENT.

In the life department they had issued 6,997 policies, assuring just under £4,400,000 gross and over £4,000,000 net. The premium income increased by over £73,000, and the total funds by over £1,000,000, and the expense ratio (including commission) decreased from 12.90 to 12.25. This was their bonus year, and all “with profit policies” effected this year would be entitled to share in the surplus of the quinquennium. At a time like the present prophecy was even more than usually gratuitous, but they had the results of the last four years before them, and he did not think he was being unduly sanguine when he said they were very encouraging.

The balance of profit and loss account at December 31st amounted to £558,085, and, in view of the fundamentally strong position of the funds of the company the directors had come to the conclusion that, although the results of the year's trading had been unfavourable on the whole, their decision to pay a dividend at the same rate as for 1930 (a total of £1 0s. 6d. per share for the year) was justified. The maintenance of the dividend on the present basis must, however, be dependent on world conditions beyond the board's control. It would be seen from the consolidated balance-sheet that the general reserve fund amounted to £4,260,649, increased by £160,649 represented by profits on realisation of investments and adjustment of exchange values. After making full provision for all liabilities, including adjustment of exchange and the payment of the dividend, the surplus funds amounted to £11,833,887. Including the share capital, £3,540,000, the amount was increased to £15,373,887.

It will be obvious that the revival of international trade is of paramount importance to our country at large, and to the great British insurance companies in particular, who through the ramifications of their business contribute so greatly to the invisible exports of Great Britain.

How to effect a recovery in international trade is engaging the attention of economists and politicians, and the remedies put forward are complex and, I fear, bewildering to many.

It is common ground that until there is a recovery in prices, thus restoring purchasing power to the countries engaged in producing raw commodities, there can be no beneficial result to the world at large. This cannot—at least so I believe—be achieved solely by artificial stimulation of credit or currency in any one particular country. And even though agreement be reached, the ultimate result must depend upon balanced budgets and control of currency in the countries concerned.

Sir Austin E. Harris, K.B.E., seconded the resolution, which was carried unanimously.

WHITEHALL ELECTRIC INVESTMENTS, LIMITED.

PROGRESS OF UNDERTAKINGS.

The tenth ordinary general meeting of Whitehall Electric Investments, Limited, was held, on the 24th instant, at Winchester House, London.

The Hon. Clive Pearson (the chairman), in the course of his speech, said: Our gross income amounts to £577,321, and out net revenue, after charging debenture interest and income tax, is £378,082. The preference share dividend absorbs £187,500, and the proposed dividend of 3 per cent. on the ordinary shares requires £150,000. This leaves to be carried forward a balance of £40,582, which, with the balance brought forward from last year, gives a total carry-forward of £159,008. The investments of your company as stated in the report of the directors may be divided thus: Controlled electrical undertakings in Athens, Leonin (Spain) and the West of England, £3,589,000; short-term electrical investments, £2,162,000; other electrical investments, £3,573,000, and non-electrical investments, £3,947,000—a total of £13,271,000. The value of the investments, namely, £10,358,000, shows a depreciation of 22 per cent.

In the West of England progress has been made with the programme of modernising and developing the various undertakings which we control and the work of changing over the distribution systems from direct current to alternating current is now nearly finished. The gross revenue of the operating companies shows an aggregate increase of 14 per cent. compared with 1930, and the units sold have increased from some 4,700,000 in 1930 to some 5,800,000 in 1931.

The Crediton Electricity Undertaking has recently been added to the properties, and since the issue of our report the undertaking at Budleigh Salterton has also been acquired. In Athens the Electricity Company has made good progress in carrying out its construction programme. The transmission system has been extended in order to cope with the general development of the company's business. The change-over of consumers to the new 230-volt alternating current system has been a work of considerable magnitude, involving the reconditioning of private installations, the changing of motors and apparatus, the installation of some 60,000 new meters, and the employment of some 3,000 men over a period of eighteen months. Sales of energy during 1931 reached a total of some 70,000,000 kw.-h., compared with some 57,000,000 kw.-h. in 1930, an increase of 22 per cent.

With regard to the Leonin Company in Spain, the new hydro-electric plant at Izbor, which will have an initial capacity of 10,000 kw. and an ultimate capacity of 15,000 kw., should be ready for operation before the end of the year. The number of units sold during the year was maintained at some 13,000,000, and when the new power becomes available we may look to an immediate increase in sales by this company. The short-term electrical investments, at £2,162,000 book cost, include the \$10,000,000 6 per cent. Note of South American Power Company, due for payment January 8, 1934.

Other electrical investments, at £3,573,000 book cost, divide as to some £1,500,000 in the securities and shares of various electrical companies giving us interests in electrical enterprises in many parts of the world, and as to some £2,000,000 in 8½ first preferred stock of American and Foreign Power Company. The dividend on the stock has been regularly paid up to January 1st of this year, but in April it was announced that no dividends were being paid owing to difficulties in converting the earnings into United States currency. The interruption of regular dividend payments on this stock is a considerable disappointment, but it arises from current exchange problems.

The non-electrical investments of a total book cost of £3,947,000 divide as to some £1,796,000 in Foreign Government and Corporation stocks, and as to some £2,150,000 in a general list of commercial and industrial holdings.

In general review of your company's position, I would say that the enterprises where we have the shareholding control all hold good promise for the future. The West of England properties give supplies to a number of growing towns on the coasts of Somerset and Devon, which together with the agricultural areas have a population of some 200,000. These properties are in the stage of early development, and I am confident that their earnings, which are low at present, will show satisfactory increments; the extension and reconstruction work of the past two years are now well forward, and will surely be followed by a growth in sales and earnings.

In final summary, our investments are dependent upon world conditions, and we cannot hope to be unaffected by the financial and economic difficulties of the day. The world is out of stride, and a forecast of what the future holds is an unprofitable venture, but on a long view we may be confident that any moderate recovery of industry will quickly react in favour of electrical enterprises.

The report and accounts were unanimously adopted.

ORIENTAL TELEPHONE AND ELECTRIC COMPANY, LIMITED.

JUBILEE YEAR—SPECIAL BONUS.

The thirty-eighth ordinary general meeting of the Oriental Telephone and Electric Company, Limited, was held, on the 20th instant, at the Great Eastern Hotel, Bishopsgate, London, Sir A. Henry McMahon, G.C.M.G., G.C.V.O., K.C.I.E., C.S.I. (chairman of the company), presiding.

The Chairman, in moving the adoption of the report and accounts, said: "When I had the pleasure of addressing you twelve months ago, I think we all cherished the hope that the remaining months of the year would bring some sign of improvement, and that it would have been possible for me to adopt a more optimistic tone in my remarks to you this year. Unfortunately, as you all know, these hopes were not fulfilled."

In these circumstances, I venture to think it is a matter for congratulation to all concerned that we are able to place before you such satisfactory results of the past year's working, and that, while so many other undertakings find themselves obliged to reduce or even to pass their dividends altogether, we are able not only to maintain our usual rate of 12 per cent., but also to make a small additional distribution to commemorate the jubilee year of this company's foundation.

The balance of the net revenue account, after charging £11,794 for depreciation, is £96,110 8s. 5d. Adding the amount brought forward from 1930—namely, £43,168 18s.—and deducting the interim dividends paid last November, there is a balance for disposal of £109,863 13s. 7d., as compared with £110,392 10s. for the preceding year, out of which your directors recommend the payment of a final dividend of 3½ per cent., less tax, on the preference shares; a final dividend of 8 per cent., free of tax, on the ordinary shares; the transfer of £5,000 to reserve; and, in addition, a payment of 2 per cent., free of tax, on the ordinary shares by way of special bonus on the attainment of the company's jubilee. This will leave £41,236 1s. 11d. to be carried forward to next year's accounts.

The chairman, having dealt with various items in the balance sheet, continued:—

The profit and loss account shows some falling off in the receipts from our own branches, as well as in those from our associated companies. On the other hand, charges in respect of working expenses and depreciation show a decline, so that under the former heading the net result is slightly better by some £200. Of the associated companies, the Bengal Telephone Corporation paid only 6 per cent. instead of the 8 per cent. paid for the two previous years, which means a reduction of £4,320 from that source; but the Bombay Telephone Company increased its dividend from 6 per cent. to 7 per cent., so that on balance the reduction is only £1,373. The other companies have paid the same dividends as for last year, and, except for small variations due to exchange, the amounts received from them are about the same.

With regard to income tax, however, a word of explanation is necessary. Income tax for 1930 amounted to £19,710. For 1931 it would have amounted to £21,095; but, as we were successful in establishing a claim for obsolescence in respect of the old manual equipment in Singapore now replaced by automatic plant, there was a relief to the extent of £6,585, and the net amount actually chargeable is reduced to £14,510. For the current year, however, this item is likely to revert to the 1930 figure, even if it does not actually exceed it. Your directors, therefore, have not thought it advisable to credit to the 1931 profit and loss account alone an item which is not part of the trading profit of that year and arises from quite an exceptional source which cannot be expected to recur for many years, especially as—as I have just said—tax obligations may possibly form an even more onerous burden in 1932. We are, therefore, carrying this amount of £6,585 to income-tax reserve, as shown in the balance sheet, and it will form a reserve to fall back upon in the future.

The Chairman next dealt with the working of their branches at Singapore and Mauritius, and of their associated companies in India and the East. Having followed this with a history of the origin and progress of the company from its inception to this, its jubilee year, he continued:—

From 1918 onwards, as not unfrequently occurs after a war, there followed a period of somewhat fictitious prosperity, during which the company and its associates naturally benefited. This was not, however, destined to endure. But if, of late, progress has not kept up with the pace then set, we may perhaps derive some comfort from the fact that this is not the first occasion upon which periods of depression have been encountered and have been successfully weathered, and in like manner, as these phases have passed away, so we may look to the passing of that which confronts us to-day and to the dawn of renewed prosperity.

The resolution was carried unanimously.

IMPERIAL CONTINENTAL GAS ASSOCIATION.

PROFITS MAINTAINED—TAXATION BURDEN.

The ordinary general meeting of the Imperial Continental Gas Association was held yesterday at the Great Eastern Hotel, E.C., the chairman, Sir Henry Birchenough, Bt., K.C.M.G., presiding.

After a sympathetic reference to the heavy loss suffered by the association owing to the death of the late chairman, Col. Le Roy-Lewis, Sir Henry Birchenough said that while the year under review had been one of trade depression, the association had held its own. The total quantity of gas produced by the companies in which the association was interested was 280,000,000 cubic metres, a negligible increase of 0.4 per cent., and the current produced totalled 1,652,000,000 kh., a decrease of 3 per cent. as compared with the preceding year, but the trading profits were approximately the same.

The most marked event in the past year had been the decision of the British Government to suspend the Gold Standard. Fortunately for the association, the countries in which it operated had all remained on the Gold Standard, so that the foreign earnings, in so far as they were available for remittance, produced more sterling. On the other hand, the subsidiary and associated companies had in hand large programmes of expansion, and in many cases it had been necessary to leave dividends and other payments with these companies to enable them to meet their commitments.

The Association was now mainly a holding company, and the Board considered that the subsidiary and associated companies should build up internal reserves of their own so that they might eventually stand upon their own feet. Thus, sums equivalent to £302,000 had been placed to depreciation and reserve during the year under review as compared with £175,000 in the preceding year. This showed that the conservative policy which had always constituted the strength of the Association was being steadily pursued. Eventually it was hoped that the subsidiary companies would be able to provide for their own increasing financial requirements by the issue of debentures locally. The Compagnie Continentale du Gaz in France had already embarked upon this policy, having issued frs. 30,000,000 of 5 per cent. debentures last October at a figure slightly under par.

He was pleased to be able to give the proprietors the gratifying information that as the result of months of arduous negotiation the Antwerp company had just concluded arrangements with the town of Antwerp, subject to the approval of the superior authorities, for the renewal of the gas supply for 30 years. This represented the continuance of a connection which they highly cherished, having been responsible for the supply of gas in Antwerp since 1840.

As regards the future, the chairman saw no reason why the Association should not do at least as well during the current year as during the preceding twelve months. He felt confident that the proprietors would support the policy hitherto pursued by the board—i.e., of paying dividends at as high a rate as prudence could sanction while providing sufficient appropriations to reserve to increase the capital value of the proprietors' holdings.

The market value of the Association's general investments at March 31st showed a comfortable margin over the balance sheet figure.

As no relief could be obtained from English taxation in respect of sums set aside for depreciation of plant and machinery ceded to subsidiaries, it was not proposed to make any addition to the reserves of the parent company for this year. Any sums placed to reserve by the parent company would be taxed here at the full rate, after suffering taxation by the country from which the profits originated. If, for example, the Association were to bring its total profits from Belgium, the total tax borne, British and Belgian, would amount to 8s. 8d. in the pound, and if from France 9s. 8d. in the pound. If, on the other hand, the subsidiaries themselves created reserves to cover depreciation and for the amortisation of their leasehold concessions, no British taxation liability arose upon them.

The Association was one of the worst sufferers from double taxation, and, unless steps were taken in this country to alleviate the burden, it might be necessary to consider selling part of its interests to foreign groups or even denationalisation. Some extension of the system of Dominion income tax relief to profits earned in foreign countries was, in the chairman's opinion, imperative if British enterprise was to receive adequate inducement to engage in foreign business.

The total profits of the Association's group of companies were £127,000 more than in the previous year. It would be seen, therefore, that there had been an increase, and not a decrease, although it must be recognised that a large part of the increase was due to exchange profit.

The report was unanimously adopted, and a final dividend of 7 per cent., less tax, making 10½ per cent. for the year on the doubled capital, was approved.

CROWN MINES, LIMITED.

(Incorporated in the Union of South Africa.)

SOUTH AFRICA AND THE GOLD STANDARD.

DR. SAMUEL EVANS'S REVIEW.

The thirty-sixth ordinary general meeting of shareholders was held in Johannesburg on April 28, 1932.

The Chairman, Dr. Samuel Evans, in the course of his speech, said:—We are continuing to break records, and that the 1931 results were in most respects better than those of 1930. This is in the main attributable to the fact that we had all the labour we required throughout the year.

There has been no material change in our mining property during the year under review. We had at the end of November last 2,539 intact Main Reef Leader claims and 2,830 intact South Reef claims as compared with 1,979 claims on both reefs at the time of the amalgamation in 1909. That is, we have more intact reef-bearing claims to the extent of 560 on the Main Reef Leader and 851 on the South Reef than we had when the amalgamation took place. In this connection I would direct your attention to the statement in the directors' report that included in the capital expenditure last year is the final annuity to the Union Government in respect of the undermining rights leased in 1916, so that all the additional claim area acquired since the amalgamation has been paid for, and we have no further liabilities on that account. It has, of course, to be remembered that the ore in our present intact claims is at a greater vertical depth than the average depth of the ore in the intact claims of the company at the time of the amalgamation; but our past experience shows pretty conclusively that the chances of exposing good ore in our intact claims are just as favourable as they were twenty-five years ago. In fact, we have been getting good values from deep level areas, which were considered in 1908-09 as not likely to contain anything but low grade ore.

CAPITAL EXPENDITURE.

The main consideration which led to the formation of the Crown Mines was the realisation of the fact that Rand ore of average value could not be profitably worked at great depth except by means of large-scale production. That necessitated heavy capital expenditure. At the time the amalgamation was under consideration in 1908-09, and for a few years afterwards, the Rand gold mining industry was attracting capital from abroad. In 1909, for instance, fresh capital amounting to over £9,000,000 was raised for the development and equipment of new mines and for the reconstruction and extension of existing mines. Conditions generally were then favourable, working expenses were low, and it was believed that the formation of the Union would lead to economies in the cost of government and the cost of railway transportation, and would render possible the profitable exploitation of extensive areas of low-grade ore. As a consequence, our company was enabled at the outset to secure the funds necessary to increase and modernise its plant, to exploit its claim area on an extensive scale, to sink shafts to vertical depths of from 3,000 to 6,500 feet, and prove the value of the ore bodies at points on the dip of the reefs several thousands of feet distant from the then workings. That accounts in no small measure for the success so far achieved by the Crown Mines. Unfortunately, after Union, the excessive taxation and other policies pursued by the Government rendered this industry unattractive to capital, and I hardly think that the Crown Mines would have been formed had the existing conditions prevailed in 1908-09.

Our revenue for the year totalled £4,232,953 7s. 4d., as compared with £4,016,756 in 1930.

You will note that although our dividend last year was higher than that of any year since 1924, we also carried forward a larger unappropriated balance than that of any year since 1925.

TAXATION BURDEN.

Taking everything into account, including the recent increases in direct and indirect taxes and railway rates, the burden imposed on us by the Government is well over 45 per cent. of the company's capital. In the case of wealthy shareholders, it is much heavier as they have to pay the Union super tax on the return of capital included in the amount they receive as dividend. I have dealt very fully with these matters on previous occasions and shown how harmful the excessive taxation and other policies of the Government have been, not only to the gold mining industry, but to the country as a whole, particularly the agricultural community.

GREAT BRITAIN AND THE GOLD STANDARD.

The outstanding event of 1931 was the suspension of the self-regulating gold standard by the United Kingdom. What England

has done is often described in terms which are apt to mislead the public. I refer to such expressions "the abandonment of the gold standard." The abandonment is only partial and temporary. In the course of the debate in the House of Commons on the Second Reading of the Financial Emergency Enactments (Continuance) Bill on the 11th of last month, Mr Chamberlain, Chancellor of the Exchequer, made it clear that the intention of the British Government is "to again link up sterling to a metallic basis"; he did "not see any better basis than gold which had in the past served us well." He indicated that when the self-regulating gold standard was restored, the pound would be devalued. To what extent he did not say. He, however, described as the reverse of the truth the allegation that the aim and object of the Government was to raise the then value of the pound. "The Government," he said, "do not desire to see the pound forced up to a rate which is going to be injurious to industry." He expressed his disapproval of the action of speculators who had caused the recent rise in the exchange rates. He added that he "did not want to see the pound taking up a position considerably higher than that at which it had stood for some time previously." On the day Mr Chamberlain was speaking, the exchange rates were:—on New York, 3.68 dollars, and on Paris, 93.5 francs. That being the position, it is, I consider, justifiable to conclude that the Chancellor of the Exchequer had in mind the restoration of the self-regulating gold standard with the quantity of gold in the £ reduced so that its value would not exceed 3.50 dollars or 89.332 francs. The devaluation of the South African pound to the extent contemplated by Mr Chamberlain would enormously improve the position and prospects of the inhabitants of South Africa, particularly the primary producers. Excepting as regards taxation, the gold mining industry would be placed in a position approximating that of 1908-10. Devaluation would also lighten the taxation burden of the industry. Whether or not the industry would become as attractive to capital from abroad as it was in the years mentioned would depend on the policy of the Union Government, and, unfortunately, the Union Government has all along shown a disposition to load the dice against shareholders in gold mining companies. It has singled them out as fit subjects for specially heavy taxation, and the discrimination against them shows no sign of coming to an end. The taxes imposed on the industry are collected at the source, and consequently they have to be borne even by the smallest shareholder. As I mentioned at a previous meeting, it is not an exaggeration to state that small shareholders in the gold mining companies of the Union are about the most heavily taxed small shareholders in the world. It is undoubtedly the case that the taxation policy of the Union Government has driven away and is keeping away the money of investors who can afford to run the risk involved in opening up deep level mines.

DEVALUATION NOT HARMFUL TO SOUTH AFRICA.

I am at a loss to understand how it can be claimed that, in the event of devaluation, the increased profits of the gold mining industry and of the other exporters of South African produce would be at the expense of the inhabitants of the Union. That has not been the case in the many countries that have devalued their currencies. The latest instance is that of Southern Rhodesia. Mr Moffat, the Prime Minister, speaking in the Legislative Assembly, Salisbury, on the 22nd instant, stated that "He could not find, after exhaustive search, that any section of the community was paying for the Colony going off the gold standard. The Government Statistician's figures showed that there had been no rise in the prices of food, fuel, light, rent, or anything else." That is also the case in Sweden. In a Press communication from Stockholm published to-day it is stated that ever since Sweden suspended the gold standard "there had hardly been any fluctuations in the price level"; that "the internal buying power of the krona had been entirely maintained," and that "no restrictions on foreign exchange trading have been introduced." It is particularly to be regretted that our Parliamentary leaders should hold the view that any increase in the dividends payable to overseas investors in these mines as the result of devaluation will be to the disadvantage of South Africa. Apparently it is not realised that had it not been for the capital supplied by overseas investors, the gold production for South Africa to-day would have been insignificant, and, in my opinion, there is nothing more certain than that the continuance of the Government's policy of discouraging overseas investors will in time prove disastrous to the European inhabitants of South Africa.

DEVALUATION INEVITABLE.

I feel convinced, however, that the devaluation of the South African pound is inevitable sooner or later. We shall be forced to follow the example of England, whether we like it or not. There is no other way to overcome our present difficulties. When the gold standard was restored on the pre-war basis in the United Kingdom and in the Union, it was never for a moment contemplated that wholesale prices would fall to the pre-war level or lower. After the deflation at the end of 1920 and the beginning of 1921, prices remained remarkably steady at a comparatively high level for years, and did not seriously decline until the second half of 1929. When the Union Government restored the self-regulating gold standard on the advice of the Kemmerer-Vissering Commission, the level of wholesale prices and of the cost of production were on the whole favourable to the course adopted, and it was generally believed that it would be possible by international co-operation to prevent any further serious fall in world prices. Events have since proved that that belief was not well founded. The movement for the stabilisation of prices at a comparatively high level has not succeeded. On the contrary, gold prices have fallen heavily with disastrous results to Union debtors and Union producers for export excepting the gold mining companies. Many farmers and others borrowed money and mortgaged their properties when world prices were extremely high, and as a consequence, the burden of the debts, measured in the commodities which the debtors produce, has been doubled, trebled and even quadrupled. In fact, the fall in world prices has created a state of affairs which renders it impossible for many of them to avoid bankruptcy. That is the very grave problem which to-day confronts the Government and the European residents of the Union. Delay in facing that problem squarely merely aggravates the position. Now how can Union debtors and Union producers for export be saved? I submit that devaluation is the only practical remedy, that is, such a reduction in the quantity of gold in our currency unit as will substantially lighten the burden of debtors and place the wool farmers, coal and base metal companies and other producers for export in as good a position to compete with their rivals in world markets as they were in in pre-war years.

The fact that most countries in the world have devalued or are devaluing their currencies has not adversely affected the position of gold. On the contrary, its value in commodities and services is steadily appreciating, and, judging by past history, the probabilities are that it will continue to appreciate for several years to come.

The report and accounts were unanimously adopted.

THE LIVERPOOL AND LONDON AND GLOBE INSURANCE COMPANY, LIMITED.

FUNDS EXCEED \$25,000,000.

The ninety-sixth annual general meeting of The Liverpool and London and Globe Insurance Company, Limited, was held yesterday in the company's head office, 1 Dale Street, Liverpool.

Mr A. Allan Paton, C.B., the Chairman, said that in spite of the difficulties of a year in which the problems of finance, underwriting, organisation, and administration had never been exceeded in the company's long history, it had fared reasonably well.

Total premiums, compared with those for 1930, had diminished by only 4 per cent.; net interest, less debenture interest, had fallen by only £7,071 (the increase in British taxation more than accounted for this fall); and underwriting profits—fire, life, marine, and accident—at £219,500, were more than four-fifths of the 1930 figure.

WIDE SPHERE OF OPERATIONS.

The Chairman briefly referred to the origin of this profit and the organisation through which it came. In 96 countries the company maintains 117 branches, supported by over 100,000 agencies, issuing 50 major classes of policy, printed in one or other of 18 different languages, to meet the individual needs of millions of policyholders. The estimated net underwriting profit for 1931, after payment of income and other taxes, was less than an average of 6d. a policy.

1931 RESULTS.

The results for the year 1931 were as follows:—

Net premiums: Fire £4,481,159 (against £4,699,244 for 1930); accident and miscellaneous insurance premiums, £5,399,144 (against £5,695,890); marine premiums, £322,768 (against £356,212).

The profits, exclusive of interest, were:—

Fire, £229,441; accident and miscellaneous, £75,035 (loss); marine, £42,138; and the transfer from life, £23,000. The total interest to profit and loss account was £519,715.

At the record figure of £1,950,000, net new life sums assured were some £47,000 greater than in 1930.

The profit and loss account, after providing for the dividends for the year, and for income tax, etc., shows a balance carried forward of £571,681.

The report and accounts were adopted and a final dividend of 13s. 6d. per share was declared, making 27s. per share, less tax, for 1931.

SHANGHAI ELECTRIC CONSTRUCTION COMPANY, LIMITED.

STRONG POSITION.

The twenty-sixth annual general meeting of the Shanghai Electric Construction Company, Limited, was held, on the 25th instant, at Basildon House, Moorgate, London.

Mr J. S. Haskell (the chairman) said:—The accounts cover a period before the troubles which in recent months have occasioned so much anxiety in regard to Shanghai came to a head. Although the year was free from international complications, the early part of it was disturbed by a strike which, fortunately, was of short duration and did not at any time lead to a complete cessation of operations.

The operating profit of Mex.\$2,979,578 shows an increase of 37.91 per cent. as compared with the preceding year, but a great part of this apparent gain was neutralised by unfavourable exchange. In addition to the operating profit of £148,978, the credit side of the profit and loss account includes the exchange account, already referred to, £5,563, interest and dividends £3,979, and £14,000 from the Singapore Traction Company.

After setting aside £40,000 for renewals, £30,000 for taxation and £1,971 for the staff provident fund, we are able to recommend a balance dividend of 7½ per cent., free of tax, making 12½ per cent., free of tax, for the year, and to increase the carry-forward from £16,995 to £37,516.

The balance sheet shows a healthy state of affairs brought about by the annual appropriation of £40,000 towards renewals. The sum of £160,086 standing to the credit of renewals account is not fully represented by investments because expenditure on capital account has absorbed considerable sums. The second general renewals of the tramway track will have to be taken in hand at no distant date, and there are certain extensions in contemplation. It may, therefore, be advisable in the near future to raise funds by an issue of shares on terms favourable to shareholders.

During one phase of the recent hostilities, traffic fell to about 20 per cent. of normal in consequence of the barring of some of our routes by military defences, the institution of the curfew and general curtailment of social and business activity. Operating conditions are returning by degrees towards normality, but although we are running full services, traffic receipts have not yet fully recovered and will not do so until commerce in Shanghai retrieves the setback which it suffered during hostilities. Damage to our equipment was limited to lines in the northern part of the system, and was fortunately not very serious.

The report and accounts were unanimously adopted.

BRITISH SHAREHOLDERS TRUST, LIMITED.

DIVIDEND MAINTAINED AT 7 PER CENT.

The tenth ordinary general meeting of the British Shareholders Trust, Limited, was held, on the 17th instant, at the registered office of the company, 3 Lombard Street, London, E.C.

Mr Pollett Holt (the chairman) presided.

The Secretary (Mr F. Charlton Fry, F.C.I.S.) having read the notice convening the meeting and the auditors' report,

The Chairman said: Gentlemen, in presenting for your approval the accounts of the trust for the past financial year there is little for me to say, for they show you, fortunately, that your capital depreciation into account, there is a comfortable surplus of £121,854. They show you also that we are able to recommend to you a dividend of 7 per cent., which is the same as that paid during each of the last four years.

The past two years will long be remembered for the violent depreciation that occurred in the market value of general securities. The trust, while not escaping the *débâcle*, has not been, I think, unduly unfortunate in this respect. As shown by the accounts, our investments evidence a depreciation of 27.8 per cent. in book value, which, however, was more than amply covered by the accumulated reserves. This depreciation, as you will understand, does not represent a realised loss, and better times, when they return, should bring back to our books, we hope, a substantial part of the amount represented.

As an issuing house, the past year will also remain in our memory as one that entailed a great deal of work and investigation without

REDUCED RATES for LIFE ASSURANCE for the NEXT FIVE YEARS

for those who want to obtain immediate and adequate life assurance protection, but whose present incomes are either temporarily restricted or small in relation to future prospects.

Write to-day for full particulars (state age for quotation purposes) to THE

LIVERPOOL (Head Office) LONDON (Chief Office)
1, Dale Street. 1, Cornhill, E.C.3.

any concrete result. Conditions were entirely unpropitious for our business, and it is only recently since the turn of our financial year that we have found it practicable to attempt to gauge the capability and the willingness of the investing public to meet the financial requirements of industrial and other undertakings.

There are many first-class companies within the old and within the new home industries which have or will have need of additional capital, and I hope, as taxation becomes less burdensome, and the confidence of the investing public is restored, that their claims will rank ahead of all others, for not only are our industries of vital importance to our national economy, but events have proved once again that the maximum of financial safety lies within our own small island.

This issuing house, being well and solidly equipped, therefore remains always capable and desirous of leading the investor into the field of home industries whenever this can be done to the advantage of both.

The report and accounts were unanimously adopted, and a final dividend of 4 per cent., making 7 per cent. for the year, was declared.

The retiring director and the auditors were re-elected, and a hearty vote of thanks to the chairman and directors concluded the proceedings.

Government Returns, &c.

NATIONAL ACCOUNTS.

The total ordinary revenue for the week ended May 21, 1932, amounted to £10,899,900 against ordinary expenditure of £4,796,500. After allocating £610,000 to Sinking Fund and having allowed for an increase in Exchequer Balances of £2,062,377, the operations for the week, as shown below, reduced the National Debt by £3,431,000 to £7,604,945,000:—

	£		£
By 3% Treasury Bonds	+ 11,000	Public Department Advances ..	- 8,500
		Treasury Bills	- 5,350
		Issues to National Debt	- 581
		Commissioners	- 14,431
	+ 11,000		

A complete analysis of the National Debt at March 31, 1932, was printed in the *Economist* of April 2, 1932.

INCORPORATED ACCOUNTANTS.

MR H. MORGAN ON COMPANY LAW.

The Society of Incorporated Accountants and Auditors held its forty-seventh annual general meeting, on the 24th instant, in the Incorporated Accountants' Hall, Victoria Embankment, E.C.

The President (Mr Henry Morgan, F.S.A.A.), in the course of his address, referred to the report on company law reform by a special committee over which he had presided. That report had recently been adopted by the council and had been published a month ago. Mr Morgan, discussing some of the recommendations of the committee, made it clear that he was giving his own views, which did not necessarily reflect the opinions of his colleagues on the committee.

With regard to the profit and loss account, he said, there should be no deviation from the fundamental principle that the true balance of profit or loss (arrived at according to sound accountancy principles) should be clearly disclosed.

The second recommendation related to the disclosure of debits or credits, abnormal in character or extraneous in their nature to the ordinary transactions of the company, together with any reserves from a previous period no longer required. Such requirements were obviously necessary if the profit and loss account was to show the real result for the period.

The third recommendation dealt with free reserves. Secret reserves resulted from an understatement or non-disclosure of profit. Their existence in the balance sheet and their creation or utilisation in connection with the profit and loss account were generally inconsistent with full and correct accounts.

HOLDING AND SUBSIDIARY COMPANIES.

The last recommendation dealt with subsidiary companies. The question of holding and subsidiary companies presented one of the most difficult problems with which auditors and those responsible for the direction of public companies had to deal. The principle of the subsidiary company possessed many great advantages, but was capable of serious abuse. Many subsidiary companies were, in fact, though not in law, departments or branches of the holding company's business, and therefore their profits were capable of regulation according to the basis which was adopted for calculating the amounts charged or credited in respect of transactions between the holding company and its subsidiaries. The formation of subsidiary companies had been much increased in recent years. He had examined the reports and accounts published since the beginning of 1932 of 414 representative commercial and industrial companies. In 270 cases, or 65 per cent. of the whole, the balance sheets included interests in one or more subsidiary companies. Of these 270 companies, in only 58 cases, or 21 per cent., was it clearly shown by the accounts that the full results of subsidiary companies had been taken into account in arriving at the profit or loss of the holding company. In most other cases, to comply with section 126 of the 1929 Act, a statement was appended indicating that the profits of subsidiary companies were included in the profit and loss account only in so far as they had been declared as dividends.

The recommendation of the society's committee was that in so far as profits or losses of subsidiaries had not been brought into account in the profit and loss account of the holding company, there should be stated on the face of the accounts of the holding company the balance of the ascertained profits or losses of such subsidiary companies.

CONSOLIDATED ACCOUNTS.

An effective method of dealing with that problem, though not always easy to apply, was to publish as supplementary to the balance sheet and profit and loss account of the holding company a consolidated balance sheet and profit and loss account. That method was explained by Sir Gilbert Garnsey in his book on "Holding Companies and their Published Accounts." The principle of consolidated accounts had been adopted in only a very small percentage of holding companies. In his opinion, it was necessary that balance sheets and profit and loss accounts should be drawn up in a form which would show clearly that the profit and loss of subsidiary companies had been brought into account.

The consensus of opinion in the accountancy profession seemed to be that the situation in regard to subsidiary companies was unsatisfactory. The 1929 Act contained extensive provisions as to the minimum information to be included in companies' balance sheets. The subsidiary company provided a counter to this enactment for the protection of shareholders, as it enabled the holding company to withhold information regarding that part of its profits or assets represented by its interest in subsidiary companies.

Total.....	4,215,019		Total.....	Nil	
Net arrivals, May 19th to May 26th inclusive, £2,201,376.					

Messrs Samuel Montagu and Company write on May 25, 1932, as follows:—

GOLD.

The Bank of England gold reserve against notes amounted to £122,830,040 on the 18th instant, as compared with £120,816,394 on the previous Wednesday. The increase is due to the purchase of gold by the Bank of England, to which we referred last week, and the next return should show a further increase in the gold reserve, as purchases of bar gold of £967,899 and £1,234,477 were announced on the 19th and 25th instant respectively. If, as it is thought, this acquisition of gold by the Bank of England has been made possible by the establishment of the Exchange Equalisation Fund, the announcement of further purchases of gold by the bank may be expected from time to time. The bar gold offered in the open market during the week has been taken partly by the Continent and partly by private "hoarders." The amount on offer has been small.

Quotations during the week:—

	Per fine ounce.	Equivalent value of £ sterling.
May 19.....	112s. 11d.	15s. 0.6d.
" 20.....	113s. 3d.	15s. 0.0d.
" 21.....	112s. 10d.	15s. 0.7d.
" 23.....	112s. 9d.	15s. 0.8d.
" 24.....	112s. 7d.	15s. 1.1d.
" 25.....	112s. 8d.	15s. 1.0d.
Average.....	112s. 10d.	15s. 0.7d.

The s.s. "Ranpura" and s.s. "Clan Malcolm," which left Bombay last week, carry gold to the value of £269,000 and £135,000 respectively.

SILVER.

Although prices receded from the level reached last week, the undertone continues steady and the week has seen a fairly active market. China has been a consistent buyer and the Indian Bazaars and America also gave support, but the demand was offset by substantial sales by the Continent. The selling was of a special character, and when discontinued, indications are that the steady undertone may be reflected in slightly improved prices. According to the Canadian Official Mining News Letter, issued from the office of the High Commissioner of Canada, the Canadian silver production in 1931 was approximately 20½ million ounces, or 10.5 per cent. of the world's computed production of 196 million ounces. British Columbia is now the leading silver-producing province in the Dominion, having contributed about 39 per cent. of the total production in 1931.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 14th instant to mid-day on the 23rd instant:—

IMPORTS.		EXPORTS.	
	£		£

Company News.

REPORTS AND NOTICES.

MISCELLANEOUS.

BURMAH OIL COMPANY, LTD.—The report of the Burmah Oil Company for 1931 shows that all fields expenditure has been charged direct to revenue and the profit, after writing off £837,173 for depreciation, is £1,869,495, against £2,736,013. There has been transferred to general reserve £300,000, insurance reserve, £20,000, and taxation reserve, £350,000, and adding the balance brought in of £612,518, gives £1,812,013. Preference dividends for the year absorbed £241,875, and the interim dividend on ordinary of 1s. per share £281,169. The directors recommend a final dividend on the ordinary shares of 2s. 6d. per share, less tax at 3s. 7½d., payable June 10th, absorbing £702,923, and that there be carried forward £588,045.

EASTBOURNE CORPORATION THREE PER CENT. STOCK, 1920-1940.—Williams Deacon's Bank, Ltd., give notice that in order to prepare the interest warrants on the Eastbourne Corporation 3 per cent. stock, 1920-40, payable June 24th next, the books will be closed from June 11th to 24th, inclusive.

IMPERIAL AND INTERNATIONAL COMMUNICATIONS, LTD.—The following is the estimated traffic receipts for four months ended April 30, 1932:—

CANADIAN INTERNATIONAL INVESTMENT TRUST, LTD.—On March 15th last the capitalisation of the company was altered; the par value of the common shares was reduced from \$10 to \$1, the latter being subsequently converted into the report, and resulted in the establishment of a capital surplus of \$1,080,108. This surplus has been transferred to the investment reserve account, which, after other adjustments, amounted on February 29th last to \$798,163. The market value of the company's holdings on February 29th last to \$798,163. The market income for the 12 months under review amounted to \$238,124, as compared with interest was earned 2.15 times. The directors have postponed payment of the year were equivalent to \$5.85 per preferred share due March 1st. Earnings for last standing on February 29, 1932. During the year 650 shares of the company's 5 per cent. cumulative preferred stock were purchased and subsequently cancelled: no further redemption of this stock is contemplated.

Commercial Reports.

MARKET SUMMARY.

The movement of prices of primary products at the principal international commodity markets provide no evidence of an improvement. On the contrary, the demand for many materials continues to shrink, and in many cases the apparent steadiness in price is the result of the deliberate restriction of supplies rather than of an expansion in consumption. Among non-ferrous metals, the New York quotations for tin and spelter show an advance of a few points on the week. Lead has been maintained, but copper weak. Cotton was as low as ever, and as buying of rubber practically ceased, the quotation for that commodity touched a new low level. Among cereals, wheat, maize and rye have been a little firmer, and cocoa was maintained, but sugar failed to improve. Sterling quotations of commodities which lend themselves to grading and with gold prices. Among other commodities, tea has been weak. In meat, beef has been a little firmer, but New Zealand mutton declined further. According to various reports from industrial centres, the general situation in the coal trade shows no improvement, and the iron and steel industry is making little headway.

THE COAL TRADE.

SHEFFIELD.—Curtailed outputs from the pits are causing a scarcity of best-quality seams; although consumption keeps low, comparatively little new export business is coming forward. Prices

remain firm at 16s. and 16s. 6d., f.o.b. Industrial demand has tended to shrink since the beginning of the month. Small and secondary coals are plentiful. Merchants are ordering house coal on a low basis, and the quantities going into consumption are below the average for the time of year. There is a surplus of blast-furnace coke owing to the slackness in the pig-iron and steel trade.

GLASGOW.—Business tends to fall off with the advance of the season, but as outputs have been steadily reduced for a considerable time past, prices remain about steady. New business with foreign buyers is difficult to obtain, owing to import restrictions in some markets and intensified competition in others, although British exporters appear to be holding their position in Scandinavia. Coastwise orders, which have recently been the main source of activity, are also less numerous, and industrial requirements are much below normal. Shipment prices (f.o.b. district ports): LARNAKSHIRE.—Ell best, 14s. 3d.; splint best, 15s. 6d.; splint second, 14s. 3d.; navigation, 15s.; navigation second, 14s. 6d.; Hartley, 15s.; steam, 13s.; trebles, 11s. 6d.; doubles, 9s. 9d.; singles, 8s. 9d.; pearls, 8s. 6d.; dross, 8s. 9d. FIRE.—Screened navigation, 16s. 6d.; first-class steam, 12s.; third-class steam, 11s.; trebles, 11s.; doubles, 10s. 10s. 6d.; singles, 8s. 9d.; pearls, 8s. 6d. LOTHIAN.—Prime steam, 11s. 11s. 6d.; secondary steam, 11s.; trebles, 11s. 11s. 6d.; doubles, 10s. 6d.; singles, 8s. 9d.; pearls, 8s. 6d. AYRSHIRE.—Unscreen navigation, 16s.; jewel, 16s. 6d.; steam, 12s.; trebles, 12s.; doubles, 10s.; singles, 9s. 9d.; pearls, 8s. 6d.; dross, 9s.

CARDIFF.—It has been officially confirmed that the Egyptian State Railways have placed with Messrs. T. Beynon and Co. a contract for the supply of 240,000 tons of Monmouthshire coals for delivery between June and September inclusive. No other business of importance has been transacted during the past week, and the market continues very depressed. It is now officially announced that the French coal import quota has been further reduced from 70 per cent. to 60 per cent. of the monthly average imports in the three years 1928-30, and that it is even possible that the quota may be cut down to 50 per cent. of the quantities received in the datum period. At Swansea shipments have latterly improved, and according to the Great Western Railway Company, they show an increase for the current year to date of about 133,000 tons, although the shipments from all the South Wales ports during this period are down by 255,000 tons. An expansion in the anthracite trade, and the diversion of the bunkering of vessels belonging to a leading British fruit importing firm from Rotterdam to the Welsh port, are the two principal causes for the more favourable position of the coal export trade at Swansea. Dry quality coals continue to command prices above the minima, but for all other descriptions quotations are on

foreign" in London, in terms of sterling at £9 18s. 9d. per ton for shipment during the current month, compares with £10 16s. 3d. on the corresponding day last week.

SPELTER.—The market in spelter was firmer in the United States, but London quotations show a decline on the week occasioned by more liberal offerings in face of a poor demand. Wednesday's quotation in New York, at 2.875 cents per lb., compares with 2.325 cents a week ago and 2.60 cents a month earlier. Wednesday's official closing quotation in London, in terms of sterling for "good ordinary brands," was £12 2s. 6d. per ton for shipment during the current month, against £12 10s. a week ago.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals the quotations for aluminium and nickel have been maintained at £95 per ton and £225-£230 per ton respectively. Quick-silver, at £14 per flask, shows a fall of £2 per flask on the week. Foreign antimony was sold at £24 10s.-£25, against £26-£26 10s. a week ago. Platinum, at £9 15s. per ounce, shows a decline of 16s. per ounce.

TEXTILES.

THE COTTON TRADE.—Liverpool.—Imports for the week, May 19th to 25th (inclusive) are 47,946 bales, of which 38,691 are American, 1,013 Peruvian, 3,882 Egyptian, 735 African, 1,691 East Indian, and 1,934 sundries.

Manchester.—Without there being any particular increase of business in the market, the tone has been rather better, and numerous producers have experienced a larger inquiry. Merchants have expressed the opinion that, but for the restrictions upon dealings in exchange and other barriers, trade would certainly broaden, as goods are wanted in many markets. Some expansion has shown itself in the cloth demand for India and a rather improved turnover has taken place, chiefly in light bleaching descriptions, most of the buying being for Karachi and Madras. Some reports from China have been rather more encouraging, and a few transactions have been put through in standard makes for Shanghai and fancies for Hong Kong. Clearances throughout the Far East are on a healthier scale than recently. A miscellaneous business has been done for several minor outlets East and West, without individual contracts being at all important. Favourable developments in the home trade section are being held back by the unseasonable weather for the time of the year. So far the threatened strike has not affected the market very much. Quotations in American and Egyptian yarns have again been irregular when tested. A fair amount of business has been offering, but most of the bids have been very low, and only a moderate turnover has taken place.

THE WOOL TRADE.—Bradford.—The opening of the fourth series of London sales, writes our correspondent, has been encouraging. Sellers would, no doubt, have been much better pleased if a higher level of values could have been achieved, but topmakers and spinners are right in their contention that wool is dearer than tops, and that tops are dearer than yarn. Without really intending to bring about such a result, it looks as if traders have been gradually depressing the market, and the true cause is to be found in the failure of ultimate requirements to keep pace with bulk supplies of the raw material. Certain descriptions of wool are not being produced in bigger volume than can be absorbed, whilst others are a drag on the market. Even fine crossbreds are not meeting with the same reception as was previously anticipated in some quarters. At the same time, a decline of 5 per cent. is not serious compared with the 10 per cent. fall which is only too often seen in medium and low wools. Considering the weight of supplies and the present absorptive capacity of the trade, the interval since the third series has been short. Crossbred topmakers and spinners especially would have preferred more time to absorb the stocks they have on hand. Meanwhile, the sales are proceeding on fairly satisfactory lines, with firm values for good greasy combing merino. The withdrawals since the opening have not been so large, and whilst the prices realisable for merchantable offerings are very disappointing, these are being let go in the hope of a time coming when a better market will be seen. Bradford has not yet responded to London. The decline in the latter centre has been largely discounted, and, whilst there is not yet much new business in any quality of tops, makers say they will not accept less than 21d. for good average 64's. According to Messrs. Dalgety and Co., the wool sales at Brisbane continue firm. As compared with last sales' closing rates (19th May) all descriptions show a hardening tendency with the exception of dusty merino fleece.

THE JUTE TRADE.—Dundee.—No brighter movements can yet be recorded in the jute trade. The fact that the Indian Jute Mills Association has practically concluded an agreement with the non-member mills regarding the working hours of the latter has infused a certain amount of steadiness in the Calcutta goods market, but

this is looked upon as being more of a sentimental effect than any increased confidence in the position. The mills outside of the Association will work only 54 hours per week from August 1st next. They have been working for some time at the rate of 108 hours per week. The agreement will expire on June 30, 1933. The new jute crop prospects continue quite satisfactory, and it is estimated that the area sown this season is slightly increased compared with last. Apart from some business having been done by the Indian mills, there is very little interest being taken in the fibre. Sellers are, however, just about maintaining their prices, which, so far as this market is concerned, are more or less nominal for shipment in the absence of business or even offers. Good First Marks are round about £18 15s.; Lightnings, £16 15s.; Daisee assortment, £15 5s., and Tossa assortment, £16 10s., May-June. A few small lots on spot are being picked up where prices are reasonable. Jute yarns are very quiet, but spinners are adhering firmly to their terms. Common 8-lb. cops are unchanged at 1s. 10d., and 8-lb. spools at 1s. 11d., with buyers offering to pay 1s. 9½d. and 1s. 10½d. respectively for some spins. Twist is steady at from 3½d. for 3-ply 8 lb.; sacking yarns, 2½d. to 2½d. for 24-lb. warp, and 3½d. to 3½d. for 8-lb. chains; rove from £16 for 200 lb., and £18 5s. for 48 lb.; while finer yarns are nominally unaltered at 2s. 7d. for second quality 8-lb. Rio warp, 2s. 4d. for third, and 2s. 1d. for fourth. Carpet yarns are being steadily bought at from 3½d. for 14-lb. warp. There is only a small business taking place in jute cloth, with few orders of any consequence. Manufacturers recognise that there is no good to be gained by quoting lower prices, and these continue at from 2½d. for 10½ oz. 40-in. hessians, and from 1½d. for 8 oz. Severe losses are being made by producers, and unfortunately there are no signs of improvement. Linoleum hessians are dull and nominal and heavy goods are only purchased in small lots.

THE GRAIN MARKETS.

WHEAT.—Nothing has occurred during the past week to alter the international wheat situation, and world prices have fluctuated within narrow limits. The Continent is still buying substantial quantities, and will probably continue to do so for at least another month or longer. Under the influence of more favourable weather conditions, European crops have made good progress usually, but no improvement is recorded as regards the North American spring crop. According to Mr G. Broomhall, the world's visible supplies on May 18th, at 530 million bushels, shows a decrease of 66 million bushels on the month. The figure for May 1, 1931, was 531 million bushels. On Wednesday, futures were quoted at 58½ cents per bushel in Chicago, against 55½ cents on the corresponding day last week, and 56½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 31s. 6d. per 496 lbs., as compared with 32s. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 29s. 6d., against 30s. 3d.; No. 3 Northern Manitoba, Vancouver, ex ship, 28s. 9d., against 29s.; Australian, ex ship, 28s. 6d. to 29s., against 28 to 28s. 6d. a week ago.

WHEAT FLOUR.—Trading in flour has been quiet. North American shipments, at 110,000 sacks, showed a decrease of 58,000 sacks as compared with the previous week. Of this total, 49,000 sacks have been consigned to Europe. Quotations in London, Wednesday: Straight run, delivered country, 25s. per sack of 280 lbs., as compared with 25s. last week; delivered London, 24s., against 24s. Manitoba patents, ex store, 25s. to 27s., against 25s. to 27s. 6d.; and Australian, ex store, 20s. 6d. to 21s., against 20s. to 20s. 6d. a week ago.

BARLEY.—Business in feeding barley is quiet, but the Continent continues to absorb substantial quantities of Canadian barley. On Wednesday, "May" futures were quoted at 41 cents per bushel in Winnipeg, against 40½ cents last week and 42½ cents a month ago. Quotations in London, Wednesday: "English feeding," f.o.r., landed, 24s. to 26s., against 24s. to 26s. a week ago.

OATS.—Argentina is still the chief seller of this cereal, but demand was less active and lower prices had to be accepted. "May" futures, which last week stood at 23½ cents per bushel in Chicago, sold at 22½ cents per bushel on Wednesday this week, against 22½ cents a month ago. Quotations in London, Wednesday: "River Plate," landed, 18s. per 320 lbs., as compared with 18s. 6d. last week; "River Plate," ex ship, 16s. 9d., against 17s. 6d.; "Chilean White," landed, 24s. 9d. to 26s., against 24s. 9d. to 26s. a week ago.

MAIZE.—The demand for the maize on offer (mainly Argentine) continues brisk at steady prices, both in this country and on the Continent. Wednesday's quotation in Chicago for "May" and a fall of ½ cent as compared with the price a month earlier. Quotations in London, Wednesday: "Plate," landed, 20s. per 480 lbs., compared with 20s. 3d. last week; "Plate," ex ship, 19s., as against 19s.; "Plate," May-June, 18s. 9d., as against 18s. 6d. Yellow maize meal, ex wharf, was quoted at £5 15s. per ton, against £6 a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1931-32, 1930-31, 1929-30, 1928-29:—

	1931-1932.	1930-1931.	1929-1930.	1928-1929.
Estimated sales of home-grown wheat—				
1 week to May 21	Cwts. 120,841	Cwts. 71,209	Cwts. 138,801	Cwts. 141,532
38 weeks to May 21	3,201,326	4,335,556	8,586,917	9,103,715
Average price of English wheat per cwt.	s. d. 6 2	s. d. 5 10	s. d. 8 7	s. d. 9 10

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1928 to 1931:—

Weeks ended	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
May 14, 1932	Cwts. 68,660	Cwts. 8,215	Cwts. 18,373	s. d. 6 1	s. d. 7 2	s. d. 8 0
May 21, 1932	120,841	14,694	29,333	6 2	7 4	8 0
May 19, 1928	251,856	25,855	25,228	11 3	11 0	12 11
May 18, 1929	88,053	17,386	18,407	10 0	10 4	9 9
May 24, 1930	138,801	21,393	19,652	8 7	7 4	6 7
May 23, 1931	71,209	11,221	19,793	5 10	7 5	6 8

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks with comparative figures for 1930:—

NEAREST FUTURE.	Jan. 2, 1930.	Jan. 2, 1931.	May 27, 1931.	Jan. 4, 1932.	May 18, 1932.	May 25, 1932.
Winnipeg (No. 1 Manitoba)	148½	56½	58½	62½	62½	63½
—Cents per 60 lb.						
Chicago (No. 2 Winter)	130½	79½	82½	55½	55½	58½
—Cents per 60 lb.						

The visible supply of wheat in Canada, at 60,323,000 bushels, shows a decrease on the week of 2,527,000 bushels. Supplies a year ago stood at 50,221,000 bushels.

OTHER FOODS.

SUGAR.—The principal international markets in raw sugar have been quiet with transactions on a small scale. Prices of the New York futures market fluctuated within narrow limits and are scarcely changed on the week. "July" futures in New York were quoted at 0.61 cent per lb. on Wednesday, against 0.61 cent per lb. a week ago, and 0.69 cent per lb. a month earlier. Wednesday's sales of "raws" include "December delivery" at 4s. 10d. to 4s. 10½d. per cwt., against 5s. 0½d. to 5s. 1d., and "March, 1933," at 5s. 0½d. to 5s. 1d., against 5s. 3½d. on the corresponding day last week. The movements of raw sugar in London and Liverpool during last week are set out in the table below:—

	Imports.		Deliveries.		Stocks.	
	1932.	1931.	1932.	1931.	1932.	1931.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
London	840	3,004	1,624	1,534	7,501	30,263
Liverpool ...	13,963	7,445	13,425	12,683	119,450	74,684
Total	14,803	10,449	15,049	14,217	126,951	104,947
Last week	25,730	14,586	14,224	13,836	127,497	108,715

COFFEE.—The New York market in coffee has been active at higher prices. There was only a moderate demand at Wednesday's London auctions but quotations remained firm. Last week's movements of coffee in London were as follows: Brazilian, landed, nil; delivered for home consumption, 28 bags; exported, nil; stocks, 4,668 bags, against 2,786 bags last year. Central American, landed, 5,963 packages; delivered for home consumption, 3,155; exported, 1,567; stocks, 134,121 packages, against 130,514 a year ago. Other kinds, landed, 1,707 packages; delivered for home consumption, 2,090; exported, 1,458; stocks, 100,457 packages, against 102,359 a year ago.

COCOA.—The recent improvement in cocoa prices has been maintained. "July" futures were quoted at 4.07 cents per lb. in New York on Wednesday, against 4.12 cents per lb. a week ago and 4.25 cents a month ago. As compared with the corresponding day last week, Wednesday's quotation for Accra, fair fermented, new crop, May-June, at 25s. per cw., f.o.b., London contract, shows no change on the week. Last week's movements of cocoa in London were as follows: Landed, 2,495 bags; delivered for home consumption, 3,533 bags; exported, 92 bags; stocks, 180,202 bags, as against 227,725 last year.

TEA.—The quantities catalogued for this week's auction comprise 58,345 packages of Indian, 35,821 packages of Ceylon, and 18,588 packages of Java and Sumatra tea. Although no auctions were held last week, the Indian tea offered on Monday met a poor demand. Both common and medium teas realised lower rates and a substantial quantity of tea was withdrawn. Ceylon teas offered on Tuesday made no better showing and realised considerably less than at the last Ceylon auction. There was no improvement on Wednesday, when Indian teas were offered again.

RICE.—There was little interest in rice and prices show a substantial decline on the week. Wednesday's "spot" price, at 9s. 6d. per cwt., shows a fall of 3d. on last week, while forward positions, at 8s. 7½d., show a decline of 4½d. per cwt. Movements in London during the past week were as follows: Landed, 47 tons; delivered, 96 tons; stocks, 2,110 tons, as against 580 tons last year.

POTATOES.—As the supply of old potatoes has again been plentiful at the principal markets, prices show a slight decline. At the Borough Market, "Best King Edward" sold from 11s. 6d. to 12s. per cwt., as compared with 11s. 6d. to 12s. 6d. per cwt. a week ago.

SPICES.—The market in spices has been dull. Wednesday's quotation for "Black Singapore" pepper, at 6½d. per lb., shows no change on the week. Movements of pepper in London during

the past week were as follows: Black, landed, 6 tons; delivered, 7 tons; stocks, 380 tons, against 542 tons last year. White, landed, 20 tons; delivered, 26 tons; stocks, 625 tons, against 644 tons a year ago.

MEAT.—Following the recent decline in beef prices at the Smithfield market, quotations have been firmer this week. Both foreign and home-grown beef was dearer. There was an advance in the price of English mutton, while New Zealand grades show a further decline. On Wednesday, Argentine beef (chilled hind-quarters) was sold at 4s. 2d. to 4s. 8d. per 8 lbs., against 4s. to 4s. 4d. on the corresponding day last week, while New Zealand frozen mutton realised 2s. 4d. to 3s., as against 2s. 6d. to 3s. 2d. a week ago. According to the Smithfield Market official report, supplies of meat during last week amounted to 7,886 tons, as compared with 9,075 tons in the corresponding week last year. Imported beef, principally Argentine, formed 85.6 per cent. of the supplies, as against 85.3 per cent. a year ago; and imported mutton, mainly New Zealand, formed 84.6 per cent. of the total supply, as against 82.5 per cent. last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OILSEEDS.—Very quiet conditions continue and only a small business is passing in any commodity. With regard to linseed, large and ample supplies are assured to the end of the year. Crushers, who are now experiencing a much reduced demand for oilcakes for cattle food, are under no necessity to anticipate requirements and are buying sparingly and only in near positions. Plate on passage to Hull has been done at £7 10s., a new record low level, but is now somewhat steadier and quoted on spot at £7 12s. 6d., and for shipment to August £7 12s. 6d. to £7 17s. 6d. There is little interest in Indian linseed, Calcutta to London, May-July, offering at £9 5s. without attracting buyers. The quantity of linseed afloat for Europe has undergone further contraction, and at 123,300 tons is 5,600 tons less than a week ago. Cottonseed is neglected and easier, black Egyptian afloat and shipment quoting £5 12s. 6d. to £5 15s. New crop for October-December loading is quoted £6 2s. 6d. Trade in vegetable oils is very disappointing. Linseed oil is in poor demand but about steady at £12 7s. 6d. for May delivery, with later positions at a progressive premium. Cotton oil is lifeless. Crude Egyptian ex Hull mill offers at £18 10s. and refined at £20. Oilcakes and meals are in slow request and prices are barely steady.

HIDE, LEATHER AND ALLIED TRADES.—After an interval of a fortnight the auctions for hides and skins from home-slaughtered cattle were resumed at Manchester this week, when, with the exception of an advance of ¼d. per lb. in the price of the two top weights in first clear ox and heifers, the position of the market was unchanged from that ruling previous to the Whitsun holiday. Business in regard to calfskins remains difficult, while sheepskins can only be disposed of at low figures. A rather better tone prevails in the foreign hide market, as, although prices generally are unchanged, a trifle more business is passing. In South American wet-salted descriptions sales have been made of Argentine ox at the figure quoted last week, viz., a fraction over 3d., while Montevideo have made just under 3½d. Prices are fairly steady in regard to dry South American hides, but there is little business forthcoming on account of these from the trade of this country. The prices quoted are 4½d. for B.A. Americanos, 2½d. B.A. In-servibles, and 5½d. to 5½d. for Sierra Cordobas. Africans are perhaps slightly weaker, dry Capes having changed hands at 4½d. and 3½d. for firsts and seconds, while drysalts are obtainable at 4½d. and 3½d. for the same selections. Australian hides are still quoted at what are considered too high figures to permit of much business being done in this country. So far there has been little or no improvement in the trade in sole leather since the holiday, although it is confidently expected that now the shoe factories have again got back to something like normal working conditions better business will soon be forthcoming. In the meantime, requirements from this section of the trade have been confined to small parcels of light and medium weight dry hide bends—mostly deliveries of orders placed before the holiday. Repairers of footwear, however, have been buying moderately well, and, all things considered, some fair quantities of medium weight English and wet-salted bends have been moved off for this purpose. There has been practically no improvement in the call for bellies and shoulders, although it is possible to obtain supplies at very low figures—often at below the cost of tanning and not taking into account the price of the raw material. Producers and distributors of upper stock also have experienced a quiet week, business generally having consisted of a few inquiries for small quantities of black and brown glaze kid and box and willow calf.

THE TIMBER TRADE.—Our correspondent writes: As imports of European building woods in April were low and the four months' receipts show a reduction of 25,760 loads (of 50 cubic feet) on total receipts of 434,000 loads, and as dock stocks are moderate, the market ought to have been favourable to holders this month and for weeks to come. Consumption, however, has been so poor and the outlook for the building trade so discouraging, that the timber spot market remained in a depressed condition. As regards the forward market, Russia's principal competitors are as anxious as ever to sell and to bring their offers nearer into line with Soviet quotations. More Canadian logs have come forward this year, but log timber is a small branch of the United Kingdom softwood trade. It is the sawn that matters, and in this the Dominion is not yet up to her exports of the past two years to date. It would be unwise to ignore the fact that, in high quarters of the United Kingdom trade, there is anxiety regarding the Ottawa Conference, and possible promises in connection with timber which might prove ultimately difficult to fulfil. However, between now and the Conference there should be sufficient time for the position of the

United Kingdom timber trade and its essentially cheap and quick service to British industry, particularly the building industry, to become familiar to our rulers. At present, with European woods even cheaper than three or four months ago—and they may become cheaper yet, a month or so hence—they are most difficult to sell. In the hardwood section of the trade, receipts generally of the sawn woods are heavier than in 1931 in face of a lower consumption. Shipments from the United States show an advance, which, under present conditions, must mean weakness, but with a deplorable consumption over there and the world's markets unresponsive, the United Kingdom naturally is getting as much as it wants, despite the high dollar and the 10 per cent. duty. The Canadian sawn hardwoods, too, are increasing in import, logs also, and if the Dominion could but send us still more cheap hardwoods and concentrate less on the softwoods, of which our neighbours on the Continent have so much to offer, one Empire problem would be nearer solution. Mahogany lumber (i.e., sawn wood) from the United States fell heavily in import this year; trade will increase with Empire mahogany countries as soon as revival in the consumption sets in. Imports of plywood are remarkably large, and stocks in the country are heavy. These consist mostly of the cheap quality wood from European sources, and could not be made here at a profit. Trade with the United States is hampered by currency and duty conditions. We are likely to see more of the better class material made at home and from the Empire countries. It is an almost new line of manufacture, and which should undoubtedly attract Canadian softwood and hardwood lumbermen, both for domestic consumption and export to the United Kingdom, and—duties permitting—to other Empire and foreign countries.

RUBBER.—The market in rubber has been dull and inactive, and quotations touched new low levels in London and in New York. The reaction is ascribed mainly to the falling-off in American buying following the heavy purchases made before the import duty was dropped. In New York, Wednesday's spot price for rubber, at 2½ cents per lb., shows a fall of ½ cent per lb. on the week. Wednesday's official closing price for standard ribbed smoked sheet in London, at 1½ d. per lb., shows a fall of ½ d., as compared with the

corresponding day last week. In forward positions, business has been done at 1½ d. for October-December, as against 2½ d. a week ago. Movements of rubber in London and Liverpool during the past week were as follows: Landed, 1,630 tons; delivered, 1,451 tons; stocks at the end of last week, at 119,189 tons, show an increase of 179 tons as compared with the preceding week.

THE MONEY MARKET.

MONEY was very easy over the week-end at rates running down to ½ per cent., and little change was noticeable on Monday or Tuesday, as even the foreign exchange settlements and other movements of funds on the last day of the month failed to have any effect. On Wednesday, however, money was rather more wanted at 1 per cent.

and even higher, and a little was borrowed from the clearing banks on that day. The reason for this relative stringency was that the 25 per cent. call on the 3 per cent. Treasury bonds had to be met, while as most June bills had previously been bought by special quarters, the market was deprived of any funds as a result of maturities. It is true that the War Loan dividend was paid on that day, but as a rule it takes a few days for the warrants to be cashed and for the money to reach first the clearing banks and then the market, and it was only on Thursday that this money began to emerge.

Although last week's Treasury bill offer of £45.0 millions was only just comfortably covered by applications amounting to £50.1 millions, the average tender rate was the very low one of 17s. 9.99d. per cent. This rate is extremely unremunerative to bill-brokers, but it is pointed out that so long as applications barely cover the tender, it is within the power of applicants to make the tender rate what they like. This week the clearing banks have been buyers of bills. Running June bills were quoted at $\frac{1}{2}$ per cent. and special dates at $\frac{1}{4}$ per cent. July bills were $\frac{1}{4}$ per cent. and Augusts $\frac{1}{2}$ per cent. Hot Treasury bills were dealt in at $\frac{1}{8}$ per cent. early in the week, but were subsequently wanted at $\frac{3}{8}$ per cent. Three months' bank bills stood at 1- $\frac{1}{2}$ per cent. and standstills at 1- $\frac{1}{2}$ per cent.

	May 12, 1932.	May 19, 1932.	May 26, 1932.	June 2, 1932.	Previous Rate and Date Changed.

The Bank return records a further increase of £3.6 millions in the Bank's gold, which now stands at £128.6 millions, against £120.8 millions early in May. The note circulation has risen during the week by £1.2 millions, so that the Reserve is £2.4 millions higher. In addition to its gold purchases, the Bank has clearly had to buy large quantities of *devisen* in order to control the pound, for Other Securities show an increase of £10.2 millions, of which £8.9 millions have gone to the Issue Department. Government Securities are reduced by £4.4 millions, but even so the total resources of the Bank are £9.4 millions higher. Allowing for the increases in the note circulation and in Other Deposits, and also for a fall of £5.0 million in Public Deposits, Bankers' Deposits have risen by £12.4 millions. Thus some expansion of credit has taken place during the week.

The steady outflow of gold from New York, the wide discount upon forward dollars, and reports of substantial operations in the Paris exchange market by a New York bank have concentrated attention upon the dollar. The forward exchange discount is due partly to speculation—or rather to the failure of speculators to fill their needs—partly to panic selling in New York, and partly to operations in connection with the renewal of American standstill bills, a large number of which matured at the end of May. Early in the week the discount for three months' dollars stood at 6 cents, but the passage of the American Tax Bill created a good impression, causing the pressure to relax and the discount to narrow.

The recent heavy purchases of dollars by an American bank in the Paris exchange market were apparently a normal banking transaction. The dollars so purchased are sold in New York for gold, and the gold in its turn is shipped to Paris and sold for francs to the Banque de France. With the New York-Paris spot exchange rate below the export gold point, this operation yields a profit. Inasmuch as part of the dollars purchased in Paris represented Banque de France holdings, the net result is that

the Banque de France has repatriated part of its holdings of dollars in the form of gold; and in actual fact during the three week's ending May 20th, the latest date for which details are available, the Banque de France's gold stocks have increased by Frs. 1,045 millions, while its *devisen* have shrunk by Frs. 1,780 millions. There is no evidence that the Banque de France inspired these operations, which under recent conditions have been profitable in themselves.

Nor is there any evidence that official support is being given to the dollar, either in London, Paris or New York. So far as the Federal Reserve system is concerned, so long as American gold reserves remain adequate to meet current demands, official intervention is clearly unnecessary. In fact, it would be much better to let both the foreign exchanges and the consequent outflow of gold take their natural course, as continual gold losses are calculated to bring home to public opinion and also Congress at Washington the need for balancing the national finances, and it is possible to infer a connection between America's gold losses and the acceptance of the Tax Bill by the Senate. As regards London, the authorities obviously have their hands full in regulating sterling, and if from time to time they buy dollars, the object is not so much to support the dollar as to prevent an undesired rise in sterling. This distinction is not quite so fine as it appears, for the pursuance of this policy involves the purchases of other currencies (notably francs) besides dollars, and there is ground for believing that part of the franc proceeds of the American gold shipments to Paris were resold for sterling.

The heavy outflow of gold from New York continues, and last week's shipments of \$73.0 millions constitute a record for any single week of the year. For the current week, beginning with Friday, May 27th, exports of nearly \$34.0 millions are reported, included \$20.2 millions to France, \$7.8 millions to Holland, \$4.2 millions to Belgium, \$1.0 millions to Switzerland and \$450,000 to England. Earmarkings upon foreign account also increased by \$10.7 millions. Public opinion is not unduly perturbed at these shipments, as, once the Tax Bill is passed, they are expected to be checked. According to calculations made at the end of last week, the amount of "free gold" at present available for export is \$800 millions, but this could be greatly increased by means of the further use of Government securities as backing to the note issue in accordance with the provisions of the Glass-Steagall Bill. Money rates are unchanged. Call loans are quoted at 2 $\frac{1}{2}$ per cent., and the open-market discount rate on 90-day bank bills is 1- $\frac{3}{4}$ per cent.

The foreign exchange market was not very active this week. New York, after touching 3.72 $\frac{1}{2}$, went to 3.68 $\frac{1}{2}$, against 3.69 $\frac{1}{2}$ last week. Montreal gained a point at 4.20, Paris was better by $\frac{1}{2}$ at 93 $\frac{1}{2}$. Brussels was rather weaker at 26.35. Milan gained $\frac{1}{2}$ at 71 $\frac{1}{2}$, as did Madrid at 44 $\frac{1}{2}$. Amsterdam, after touching 9.11, recovered to 9.09. Berlin was unchanged at 15.58, and Switzerland improved by 3 points to 18.81. The Scandinavian countries were steadier, Stockholm gaining 8 points at 19.42, Oslo 10 at 20.05, and Copenhagen 11 at 18.29. The South American currencies were steady except Buenos Aires, which again weakened to 34 $\frac{1}{2}$ d., a loss of $\frac{1}{2}$ d. on the week. In the Far East the rupee was weaker at 1s. 5 $\frac{3}{4}$ d., but the yen improved from 1s. 8 $\frac{3}{4}$ d. to 1s. 9 $\frac{3}{4}$ d. Forward dollars, after standing at discounts of 2 $\frac{1}{2}$ to 6 cents, recovered to 1 $\frac{1}{2}$ cents discount for one month and 4 cents discount for three. Paris, from 1 centime premium for both periods, went to 1 centime discount. Brussels remained at par for both deliveries. Milan was at $\frac{1}{2}$ lire discount for one month and 1 lire discount for three. Madrid was unchanged at $\frac{1}{2}$ peseta and $\frac{3}{4}$ peseta discount. Amsterdam was firmer at 1 cent and 2 cents premium. Switzerland was unchanged at one centime premium for one month, but was firm at 3 centimes premium for three months. The silver market was steadier, and prices improved by $\frac{1}{4}$ d. to 16 $\frac{1}{4}$ d. for cash and by $\frac{1}{4}$ d. to 17d. for forward. The China silver exchange reacted differently, Hong Kong being unchanged at 1s. 3 $\frac{1}{2}$ d., while Shanghai gained $\frac{1}{4}$ d. at 1s. 8 $\frac{3}{4}$ d.

A WORLD ADRIFT.

In a week which has brought little news of good augury and much that is disquieting, there have been two developments which, in conjunction, illustrate significantly the trend of events in a world whose behaviour invokes, with more justification each day, comparison with Bedlam. From America there comes the news that the Government at Washington is ready to consider favourably participation in yet another conference, to be convened on the initiative apparently of the Government at Westminster—a World Economic Conference, whose functions, as yet barely adumbrated, are to be the consideration, according to Sir John Simon, of "methods of stabilising world commodity prices," or, according to Mr Stimson, of "economic" problems in general; excepting always the question of the political debts arising out of the war. On this side of the Atlantic the dramatic development of the week has been the fall of Dr. Brüning and his replacement in office by an administration of predominantly Right Wing Junker complexion—a development which we discuss more fully in the following article, but of which almost the only good thing to be said is that it has been received in France with less excitement or apprehension than might have been expected.

It may perhaps be unduly cynical to suggest that the idea of a World Economic Conference—a proposal which, given certain conditions, is intrinsically sound, and which we have ourselves strongly recommended—was conceived by Mr MacDonald and President Hoover as an expedient which would permit of failure at Lausanne being covered up by the promise that complete success at a later and more widely representative assembly would atone for shortcomings at the more limited meeting this month, or even at the purely Imperial session at Ottawa. Even so, it is difficult to entertain great enthusiasm for a conference which can hardly get to work on economic problems with any chance of success unless two conditions precedent are first realised—a final settlement of the question of political war debts, and the creation among the world's statesmen of a really effective will towards constructive co-operation on sound lines, without regard to vested interests, popular illusions or electoral tactics. And the outstanding feature of these unhappy days, typified by the coincident news of Germany's Cabinet crisis and of the World Economic Conference project, is that, whereas all the machinery exists for the guidance of ships of State, more and more helms are either held in nerveless impotent hands or left swinging idly with no effective control at all upon the bridge.

Let us take a brief glance around the Governments of the world at a moment of extreme crisis, when the fateful Conference at Lausanne—on whose outcome turns the question whether or not a beginning in the task of reconstruction can be made in time—is almost due to assemble. In Paris, the Chamber has met this week after the General Election with no Government yet in the saddle, and with little prospect that the will of the electorate will be reflected in the formation of a Government either of liberal tendencies in international affairs or secure in its tenure of office. Across the Rhine, a ministerial anachronism, born of the misguided influence exercised by reactionary elements on the aged President, is stepping into the shoes of a great Chancellor, with no sign that it possesses either the sanity to govern well or the power, indeed, to govern at all. In Belgium, a new Government was formed last week at the cost of political compromises which have inevitably weakened its authority. In Austria, only a fortnight ago, the previous Government was replaced by a coalition which has a bare majority of one in the Chamber and depends precariously for survival on the goodwill of opposing parties who each refrain from killing Charles only because of their disinclination to make James King. The new Government formed in Greece last week-end has little greater authority or expectation of life than that in

Vienna. The fall of the Rumanian Government was announced only this Tuesday. In Japan the new administration of Admiral Saito is already reported to be suffering from internal dissensions, and is, in any case, not master in a house in which its military servants call the tune. Last, but not least, in the United States, President Hoover, impotent to control Congress, stands fatally enthralled by the forthcoming party conventions and the electoral machine; and in Great Britain itself, though the Government is assured of a docile parliamentary majority, the Cabinet is suffering from the grave embarrassment of being led by a Prime Minister who is unable, by singular ill-fortune, to read, and a Chancellor of the Exchequer who, thanks to a deplorable visitation of gout, is unable to walk—heads of a team whose views on fiscal and economic policy are, by open confession, at sixes and sevens. Without turning more pages of the map of a world in which Italy and Russia alone among the Powers can boast of a Government at once secure and resolute, it is clear that, side by side with the development of economic crisis, there is marching a loss of political stability which threatens dangerous disintegration.

What the world in fact has failed to do is to throw up through its political institutions leadership which can succeed in expressing in concrete policies the general will of mankind to work together, create wealth and consume the fruits of the earth. It may be that democracy is proving to be a political system fitted well enough to determine the distribution of wealth when the heap is growing, but incapable of grappling with conditions which demand sacrifice and exceptional effort. It may be that after a bitter interregnum, in which the conceptions of Hitlerism, of "autarchy," and all the other delusive nostras of crisis-begotten unreason and hysteria must be given an opportunity to work themselves out—like infections of the blood which flourish until the phagocytes are sufficiently stimulated—nations will succeed in placing in power elected representatives who have the will and the capacity to make the world safe, not for heroes, but for the "common economic man." We do not despair of the future, but there is one disquieting feature in the situation: the time factor is terribly against the world in the race between the realisation of sound policies and disaster. In fact, the crux of the situation to-day is how long it will take before the pressure of the small section of informed and balanced opinion, which exists in every country, can make itself effectively felt. Never more than to-day has there been a vital need for such opinion to be made vocal and insistent.

We are not among those who are beginning to acquiesce in the belief either that a "crash" of the whole world's economic and political structure is now inevitable, or that the delicate and, as some would have us believe, unnatural, cobweb of international credit and trade has been so shattered that we must take refuge in a new world of self-sufficient States whose economic intercourse with one another would be a negligible factor in their lives. Such a world would be a world to which Hobbes' famous description of the life of primitive man could only too fitly be applied. There is time yet for the nations to escape from both these deplorable eventualities, but the sands are running perilously low. Unless more can be done to mobilise the opinion of "right thinking" men and women on both sides of the Atlantic, and to force those now on the bridge to steer their ships of State away from the already ominously resonant breakers, there is little comfort to be derived from the reflection that twentieth century civilisation is not menaced, as were the lost civilisations of past history, by barbarian aggression from without. Civilisation is capable of perishing at the hands of disintegrating forces within itself if "God's scorn of all men governing" is evoked by their irresolution and incapacity to think or act.

THE FALL OF DR. BRÜNING.

At noon last Monday the Chancellor of the German Reich, Dr. Brüning, handed in his resignation. This momentous step was not the result of a vote of no confidence in the Reichstag, where Dr. Brüning had never failed to secure a majority, albeit by a narrow margin. The resignation was the consequence of an interview between the President and the Chancellor on the previous day, when Dr. Brüning had asked for, and failed to obtain, certain measures on the President's part which the Chancellor regarded as essential, not only for the practical conduct of the administration in the immediate future, but perhaps even more for their significance as a reaffirmation of the President's confidence in Dr. Brüning's Ministry. On this occasion, the requisite confidence in the Chancellor was not forthcoming on the President's side, and Dr. Brüning's resignation is the result.

This breakdown of the co-operation between Dr. Brüning and President von Hindenburg is a grievous public calamity both for Germany and for the world. This co-operation, while it lasted—and it has actually lasted two years—was the keystone of the dam which has hitherto held back, under rising pressure, the turbulent waters of German politics. Now that this stone has been dislodged, the whole dam may crumble; and if the deluge breaks loose in Germany now, no one knows how many other countries may not be engulfed by it.

From the international point of view, the history of Dr. Brüning's administration may be summed up very simply. Finding himself responsible for the Government of Germany at a time when the whole trend of world affairs was working, with all its might, to make a moderate and reasonable Government in Germany impossible, Dr. Brüning strove magnificently. Any ordinary politician in his position would assuredly have fallen this time last year, when Dr. Brüning had to persuade his countrymen to accept a terrific turn of the financial screw in a most drastic Emergency Ordinance. Dr. Brüning was able to induce the German people to accept these sacrifices—followed by even severer demands in December—without kicking over the traces, by sheer force of personality. For, in times like these, human nature will accept, at the hands of a leader who is known to be personally disinterested and austere and ascetic, as well as courageous, a standard of public spirit which might be preached to deaf ears by politicians of coarser clay. Dr. Brüning induced the German people to endure in patience for a year longer than anybody could have expected. In other words, he gave the world a year's respite in which to relieve the strain—throughout the world and therefore incidentally in Germany—by at last beginning to set the world's distracted affairs in order. In doing so, moreover, he won for himself by his straightforward dealing and his understanding the confidence of foreign countries that was formerly accorded to Stresemann. This confidence in the man who is authorised to speak for Germany is vital if a co-operative Europe is to be rebuilt. If the other men in high places who, between them, have held the world's destinies in their hands during this twelvemonth have failed to make use of the respite which Dr. Brüning secured for them, that is everybody's misfortune, but it is certainly not Dr. Brüning's fault.

Had the Brüning-Hindenburg regime been overwhelmed by the National-Socialist wave in the Reich Presidential elections or in the Prussian Landtag elections, that would have been comprehensible; and the gravity of the result would at least have been matched by the potency of the cause. For, whether one likes or dislikes Hitlerism, it is manifest that Hitlerism is a tremendous political force. In the actual event, however, the Brüning-Hindenburg regime has survived the National-Socialist assault—only to succumb, thereafter, to what seems to be little more than a personal intrigue. Dr. Brüning has fallen, not because his position has been taken by storm by Herr Hitler, but because President von Hindenburg's ear has been caught by certain survivors of the pre-war Prussian regime who are not, we believe, an effective force in Germany to-day and who are almost certain to be swept away to-morrow by the flood-waters which they themselves have now released.

Marshal von Hindenburg's alienation from Brüning was, to all outward appearances, recent and rapid; for until after the Presidential election, the alliance between the President and his Chancellor was unimpaired. Indeed, the President owed his re-election to the exertions of Dr. Brüning in the election campaign more than to those of any other man—a personal and public service which would not normally be forgotten in a few weeks by a man of von Hindenburg's character. But though the Nazis failed to achieve a direct break-through on the Brüning-Hindenburg front, they did succeed in disorganising their opponents' position by forcing the Chancellor to make a counter-attack—the suppression of the Hitlerite "Brown Army"—in which he failed to carry the President all the way with him. On the whole, however, President von Hindenburg seems to have been moved less by a spontaneous feeling that the Nazis had not received fair play than by the backstairs influence of generals and Junkers. The intrigue seems to have been begun in Berlin, in the Ministry of National Defence, and to have been completed in the countryside, during the President's recent visit to East Prussia. The President is now a very old man; old age is notoriously apt to relapse mechanically into the outgrown ruts of youth; and, in accounting for President von Hindenburg's action, we have to bear in mind that the people to whose suggestions he has now apparently yielded are the people among whom he grew up and lived his life from beginning to end of his pre-war career. They are also the people who governed Germany before the war. It looks as though the President had fallen into the error of imagining that these same people have a title, and a capacity, to resume the reins of government now.

If this diagnosis of President von Hindenburg's action is correct, what are the probable consequences? We do not for a moment believe that "the Government of National Concentration" which is hastily being raked together by Herr von Papen will last. Hitherto, Herr von Papen has been known to history exclusively for his war record as German military attaché at Washington—a post from which he was recalled at the instance of the United States Government. This is not a good introduction for a German Chancellor who will have, if he survives, to discuss the fate of Germany and the world with the administration at Washington sooner or later. As for the Junkers, they were incensed against Dr. Brüning because, as some *quid pro quo* for the millions of German public money which have been poured, without avail, into trans-Elbian agriculture through the organisation of the *Osthilfe*, he had proposed that a certain number of landed estates which, in spite of subsidisation, are hopelessly bankrupt, should be confiscated and divided up among smallholders. No doubt this policy does not appeal to the trans-Elbian landowners, but it might well prove acceptable alike to the Social-Democrats and to the National-Socialists. And if those two parties were to approve that policy, we do not believe that the Junkers could withstand them. The Nazis we know and the Social-Democrats we know and the Catholic Centre Party we know. Those three parties are all great powers in post-war German politics. But as for the Generals and the Junkers, who, in post-war Germany, are these? If President von Hindenburg believes that he can govern post-war Germany through these professed "old hands," he is making the mistake that was made by Louis XVIII when he tried to found the post-Napoleonic restoration in France upon the support of the antediluvian aristocrats who had learnt nothing and forgotten nothing during a quarter of a century of exile.

Faced by the fact that the new Government was disowned by the Centre Party, by the People's Party, and by the Bavarians, the President will probably dissolve the Reichstag. Will he hold elections forthwith, or embark on the dangerous expedient of an unconstitutional Directorate? The position is obscure and is complicated by the fact that, though the Hugenberg industrialists would like to launch a fresh attack on wages, they seem inclined to break with the "old" Nationalists in favour of Hitler, who would hardly regard wage-cuts as a popular plank in his platform. Meanwhile a yawning deficit has to be dealt with and money found for paying salaries and wages. Even more serious, from the world's point of view, is the fact that there is no one to speak for

Germany with knowledge and authority at Lausanne. Some commentators in the Press have said that this is really an easy task, since the only thing Germany has to say at that Conference is an emphatic "No." This is an utter misunderstanding; for, if the policy of the clean slate is to be put over successfully at Lausanne with any advantage to the world, it can only be if Germany brings to the council chamber her assurance of co-operation and goodwill in the rebuilding of Europe, in which she must obviously play so important a part. The negative side is the least important of the problems which Germany's statesmen have to face in meeting the political difficulties of France and the economic and financial conundrums of her other neighbours. By this unhappy intrigue Germany's pilot has been thrown overboard just as the ship was making the harbour.

THE COAL BILL.

If there is one thing which can safely be said about the Coal Mines Bill, for which the Government secured a second reading on Tuesday night by 391 votes to 58, it is that, in one respect at least, it will not fulfil the hopes which the Cabinet appear to have based upon it. Introducing the measure on Monday, the President of the Board of Trade expressed the optimistic belief that the passage of the Bill would take coal mining out of the arena of politics for at least a period of five years. The course of the subsequent debate emphasised what was already implicit in the nature of the present measure—that, however devout the wishes of the Government, such a consummation is not to be expected.

It will be recalled that last July, when the Act of 1926, which increased the statutory working day from seven to eight hours, was due to expire, a short Act was passed providing that until July 8, 1931, the working day should be seven and a half hours, and that during the twelve months covered by this temporary prolongation the minimum percentage addition to the basic wages and the subsistence wage rates in every district should be stabilised at the level at which they stood when the 1930 Act came into force. The present measure consists of two clauses. The first prolongs until December 31, 1937, the operation of Part I of the Coal Mines Act, 1930, which was due to expire at the end of 1932. That is to say, the powers conferred by Parliament on the mine owners to regulate the output and price of coal are given a fresh five years' lease of life. The second clause provides that the 7½-hours day shall continue in force until the coming into operation of an Act to give effect to the Geneva Convention limiting hours of work underground to 7½ hours per day. No reference to wage rates is made in the Bill, but the Government have stated that the mine owners in each district have given a guarantee that there will be no attempt to reduce wage rates during the next twelve months.

Having thus resolved to take the initiative and decide a matter on which negotiations between the mine owners

and the miners reached complete deadlock a month ago, the Government have been inevitably criticised by the miners' representatives for siding with the owners. One of the arguments used by the miners—that if the extra half-hour were to be added for an indefinite period to the pre-1926 working day, there should be similarly indefinite continuance by statute of existing wage rates—must obviously be dismissed as impracticable. Whatever might be done in normal times—and at best there are the gravest objections to Parliament assuming the functions of a wage-fixing authority—it is obvious that in the present situation of world trade in general, and of the coal industry in particular, it would be an economic absurdity for Parliament to demand that mine owners should be called upon unconditionally to stabilise for years ahead the wage rates payable under a 7½-hours day. More sympathy is merited by the alternative plea which the miners put forward, that the period of prolongation of the 7½-hours day should be coterminous with the twelve months' guarantee of stability of wages given by the owners—a guarantee which the Secretary for Mines stated in the House on Tuesday would, if necessary be enforced by a supplementary single clause Act.

The Government's case against criticism by the miners on this score has been, in effect, that while they pledge themselves to ratify the Geneva 7½-hours Convention, if it is ratified by the other chief coal-producing countries of Europe, they are anxious to avoid another "hours' crisis" arising in the British coal industry in July, 1938. Wage rates, however, are just as potent a factor in creating industrial disturbances as is the question of hours of work; and if, a year from now, the industry is to be thrown into chaos by resistance on the miners' part to attempts in the poorer districts to force wage reductions, the mere elimination from the present Bill of a time limit to the prolongation of permission to add an extra half-hour to the working day will not create the desirable conditions of security and confidence calculated to enable owners to make long-distance production plans. In fact, the present Bill, no less than that of last year, is essentially a stop-gap measure; and, this being so, we can find little justification for prolonging unconditionally for another five years the output and price control provisions of the Act of 1930.

The crux of the situation, as we see it, is twofold. In the first place, if the industry is to be saved from the chaos which internecine wage-cutting competition between districts threatens to produce next summer—a resolution in favour of an immediate strike was defeated at the miners' delegate conference on Wednesday by an ominously narrow majority—and if wage rates are to be given a freedom, which is in many ways advantageous, from the rigidity imposed by statutory fixation, then it is essential that a National Wages Tribunal should be established. Faced with the owners' refusal to sit on the National Board which the Act of 1930 created, the Government argued on Tuesday that to make participation in

a board obligatory would be to introduce compulsory arbitration, which neither side of the industry desired. This argument, however, scarcely holds water. The Railways' National Wages Board cannot legitimately be described as compulsory arbitration, for its findings need not be accepted by either side. Its authority, however, has been a strong influence for good; and there is no reason, so far as we can see, why "compulsory conciliation" should not be introduced into the coal-mining industry by providing, as the Railways Act of 1921 provided, that all questions likely to occasion a major stoppage of work must come before a National Board for judgment.

In the second place, it is obvious that the capacity of the coal industry to maintain scales of wages which will obviate the danger of recurrent labour disputes in future will depend, not merely on the course of world trade, over which the industry has no control, but on the industry's own ability to rationalise its organisation and eliminate such uneconomic units as are found to be redundant. The only justification for establishing in 1930 a thoroughly vicious system of output restriction by means of quotas was that the industry was thereby assured of a breathing space, in the form of stability of prices, which could enable it, with the aid of the Coal Mines Reorganisation Commission, to set its house in order. Lacking adequate powers, the Commission has done little or nothing; the industry itself has done no more. Admittedly, to allow the present system of output control to come to an end this year would, as Mr Runciman argued, lead to a serious fall in coal prices, which would throw the industry into confusion. Just as under present circumstances it was necessary by common consent (even the miners scarcely gainsaid it) to prolong temporarily the 7½-hours day, so there was a good case for extending Part I. of the 1930 Act for a further twelve months. There was no case, however, for prolonging until 1937 a mechanism whose imperfections have been glaring and whose shelter has been used by the mine owners, with certain commendable exceptions, as an excuse for obstructing the reorganisation of the industry.

We welcome the indication, which was given by a Conservative representative of a mining Division on Tuesday, that a section at least of the mine owners are ready to promote far-reaching amendments to the quota system. We are equally glad to note the assurance given by the Attorney-General that it is the Government's intention that, in the twelve months of comparative stability now vouchsafed to the industry, the Reorganisation Commission should pursue its task with the certainty that the Government are determined that it should achieve its objectives. So far, so good. But, if the Government really propose to live up to their good intentions and to secure such essential developments as scientific reorganisation of export marketing, the elimination of uneconomic pits, and in general the reconstruction of the industry on more efficient lines, they will have greatly to increase the Reorganisation Commission's statutory powers, and will almost certainly have to face the need for nationalising mining royalties. That coal should in future be "kept out of politics" is a development which is neither likely nor, unless the attitude of mine owners greatly changes, a development which the country can afford.

THE FUTURE OF DANUBIA.

We suggested in a previous article that the removal of exchange restrictions by means of currency devaluation is a matter of extreme urgency for the Danubian States and must precede any other measures of re-adjustment. Devaluation, however, may prove a dangerous expedient unless steps are taken at the same time to ensure the maintenance of the internal purchasing power of the currency. A second period of inflation would bring utter ruin to these countries; for psychological distrust would tend enormously to speed up the process of depreciation, while it is most unlikely that the experiment of 1923-24 can be repeated, or that foreign aid from the private investor, at least, can be once more obtained for purposes of stabilisation.

As far as Austria and Hungary are concerned there is already an acute danger of inflation—a danger arising

from the fact that all other ways of financing public deficits are nearing exhaustion. Taxes cannot be increased any further; on the contrary, a considerable lightening of the burden is urgently needed. Neither the Hungarian nor the Austrian Government can resort to further borrowing, as the resources of the banks are exhausted and the proceeds of new foreign loans—even if such were obtainable—would be required to consolidate the swollen amount of floating indebtedness. Meanwhile, the deficits of the State administrations, the public undertakings and the local authorities are still piling up. In Hungary, despite the two supplementary estimates designed to balance the Budget, the deficit in the current year will amount to some 180 million pengős, 135 millions of which were covered from the proceeds of the Treasury loan obtained last summer. For the rest the Government are issuing Treasury bills which are eligible for rediscount with the National Bank. In Austria last year's accounts closed with a deficit of 275 million schillings and, according to the latest reports, the deficit in the current year will amount to 100-130 millions, excluding the deficits of local government bodies. In fact, we regard it as very doubtful whether it is possible to achieve permanent budgetary equilibrium on the present scale. Since taxes are being paid partly out of capital, the very continuance of the present rate of taxation must lead to a steady diminution of receipts.

The steady increase in the burden of taxation of Austria can be seen from the following table. (The figures refer only to that part of public expenditure which is covered by taxation; they exclude the Post Office, railways, etc., as well as the receipts of Social Insurance):—

THE ADMINISTRATIVE EXPENDITURE OF AUSTRIA
(In millions of Austrian schillings).

	Federal Government.	The Governments of the "lander" and municipalities.	Total.
1924	773	476	1,249
1925	865	556	1,421
1929	1,097	780	1,877
1930	1,097	870†	1,967
1931	1,088	840†	1,932
1932*	1,097	790	1,887

* Estimate.

† Figures partly based on estimates.

The increase in taxation between 1924 and 1931 amounts to over 55 per cent. If the fall in prices since 1924 is taken into account, the increase in the real burden has been still more considerable. Even if Austria could succeed, therefore, in the near future in reducing the expenditure of the administration to the level of the post-stabilisation period the real burden would still be much greater now than it was then.

Comparing the State expenditure in Hungary in the years after the stabilisation period we find a similar situation:—

STATE EXPENDITURE OF HUNGARY.
(In million pengős).

	Administration	State Undertakings.	Total.
1924-25	747.8	424.7	1,172.5
1925-26	727.7	417.3	1,145.0
1926-27	806.6	415.8	1,222.4
1927-28	891.1	444.3	1,335.4
1928-29	974.4	486.2	1,460.6
1929-30	974.0	462.9	1,436.9
1930-31	946.5	450.6	1,397.1
1931-32*	922.9	433.2	1,356.1
1932-33†	806.2	423.0	1,229.2

* Estimate.

† Budget as voted by Parliament.

Between 1924-25 and 1929-30 the expenditure of the State administration increased by over 30 per cent., although the above figures do not include the so-called "extraordinary items" for capital outlays, etc., which at the beginning of the period were financed out of the budgetary surpluses of the previous financial year, and, in late years, by short-term credits. The Budget for the coming financial year is reduced to the level of 1926-27, but considering the diminution in the money value of the national income, the real tax burden is still more than 30 per cent. higher than it was six years ago. Still further economies will therefore have to be effected.

Next to the restoration of budgetary equilibrium, the settlement of the debt presents the most urgent problem

for the Danubian States. The transfer moratorium to which Hungary resorted last December and Austria threatens to resort in the near future actually renders such a settlement more, rather than less, difficult; because whenever and on whatever scale payments are going to be resumed, a special provision will have to be made with regard to the funds accumulated in internal currency during a transfer moratorium; and there is little likelihood that the current export surplus can be made sufficient to transfer these funds in addition to the transfer of the current debt service. The sooner the "transfer moratorium" comes to an end, therefore, the easier it will be to reach agreement upon future payments.

The following estimate of the foreign indebtedness of Austria and Hungary may throw some light on its magnitude. We have expressed the yearly services of the loans as a percentage of total exports, as, in our view, this gives more information regarding a country's ability to pay than any other index:—

FOREIGN DEBTS OF HUNGARY AND AUSTRIA.

	Hungary. Million pengos.	Austria. Million schillings.
I. State debt—		
1. Long term	1,315	1,933
2. Medium and short term	314	200*
II. Other debt—		
1. Long term	1,289	1,100†
2. Short term	1,176	1,500†
III. Total yearly charge on interest and amortisation	303	375‡
IV. Total yearly charge as a percentage of exports—		
(a) in 1928	36.7	16.9
(b) in 1931	53.4	27.9
* Excluding Credit-Anstalt liabilities.		
† Estimate.		
‡ After allowing for depreciation of £.		

At the present (1932) volume of foreign trade, the total value of the exports of Hungary would not be sufficient to cover interest and amortisation of the debt—even assuming that the short-term debts were funded in long-term loans. In the case of Austria, the early debt service amounts to some 50-55 per cent. of the present (1932) value of exports, but, considering that Austria has a visible import surplus of over 50 per cent. at the moment, it is equally unlikely that she will be able to pay a substantial portion of her present commitments. In order, therefore, that payments should be resumed at all, a new settlement of the debt service both for Austria and Hungary is essential.

Such a settlement must deal, in particular, with the following matters:—(1) Conversion of medium- and short-term debts, as well as the funds accumulated during the transfer moratorium, into long-term obligations; (2) suspension of amortisation payments for a number of years; (3) reduction of interest rates, either permanently or temporarily.

The settlement of these questions undoubtedly necessitates long-drawn-out negotiations, and it would be of real help for the Danubian countries if, at the Lausanne Conference, a permanent debt commission were formed to deal with Austrian and Hungarian debts. The Governments of the latter two countries, in agreement with the Financial Committee of the League, might assist the work of such a commission by putting forward detailed proposals which might form the basis of the subsequent negotiations. Such a settlement, which would enable these countries to resume payments in accordance with their ability to pay, would go much farther towards a solution of the Danubian problem than either the granting of new loans or a preferential treaty, which the authors of the Tardieu Plan recommended. If a debt settlement provided for interest payments on a sliding scale, e.g., in accordance with the level of agricultural prices, this might create a vested interest among the creditor countries in Danubian recovery, and might induce them to grant more substantial concessions in the field of tariffs.

To sum up. The solution of the Danubian problem involves, in nearly all its aspects, international, concerted action; but the creation of the Danubian Customs Federation ought to mark the end, and not the beginning, of a long chain of measures. Concerted action is required to secure the removal of exchange restrictions; to create a cur-

COLLECTION

of Bills, etc., on all

KREDITAKTIEBOLAGET**

Göteborg — Stockholm — Malmö

rency bloc through mutual credits of the Danubian central banks, under the supervision of the Bank for International Settlements, when once the necessary degree of devaluation has been ascertained in the case of each country; to bring about a debt settlement under which the debtor countries can hope to maintain payments; while the assistance of the League might be required to restore budgetary equilibrium. In the most vital matter of commercial policy—with regard to which some provisional arrangements in substitution for the present militant protectionism must be made at once, to be followed by a more permanent plan that may perhaps have to be achieved by stages determined in advance—a sane solution can only be achieved when some sort of stability in the internal situation of these countries is already secured.

NEWSPAPER FINANCE.

In the last two issues of the *Economist* we examined, from the angle of the investor, the visible effects which the economic depression has had so far on the net earnings of the chief newspaper groups in whose securities the public is mainly interested. The conclusion which we reached was that, although profits have not fallen by any means disastrously, dividend-paying capacity has already suffered to some extent as a result of the shrinkage of advertisement revenue, on the one side, and the high cost of commitments, forming the legacies of earlier days of uneconomic competition, on the other. We now propose to examine briefly, in more general terms, the contemporary situation of newspaper finance and its future prospects.

In times of acute trade depression or economic crisis newspapers have one source of strength and one underlying weakness. The commodity which they sell costs so little, in proportion to its return by way of entertainment for the average purchaser, that the daily penny for a "national" morning paper is perhaps the last sacrifice which most men and women are inclined to offer on the altar of retrenchment. Whether it be that interest in critical world developments is sufficiently real to retain the adherence of "mass" readers, even in days when a penny is a consideration, or whether the more cynical view be correct, that the spasmodic sensationalism and irrelevant "stunts" of the popular Press harmonise subtly with the mood of a harassed community which desires a way of escape from painful realities, the fact remains that the penny "national" dailies have succeeded during the depression in maintaining, on the whole, a satisfactory stability of circulation. Of the four newspapers with London headquarters whose daily sales exceed a million, one, the *Daily Herald*, has achieved during the past year an increase in net sales from 1,200,000 to over 1,500,000. Notwithstanding the *Herald's* expansion, however, the three other "national" penny dailies have more or less kept up their circulation, though that with the largest net sale, the *Daily Mail*, shows an appreciable decline from the high-water mark of just under two million copies reached in 1929. All things considered, circulation has shown a high degree of inelasticity.

Sales revenue, however, is by no means the determining factor in the finance of newspaper production; for it has to be remembered that, in the case of "national" dailies with large circulations, each copy is being sold for about three-fifths of a penny (net receipts after deduction of

wholesalers' and retailers' margins), whereas its cost ranges from a penny to a penny-farthing. In these circumstances, fluctuations in the advertising receipts which are needed to bridge the gap have necessarily a potent influence on net earnings, particularly if production costs are relatively rigid. The statistical measurement of changes in the receipts of the Press from advertisements is necessarily a matter of estimation for which no claim to precision can be made. Within such limits of accuracy, however, as are compatible with "sample" tests, we have endeavoured to obtain some indications of the recent trend. In the following table, for which the material is derived from the *World's Press News*, we show the total advertising space, exclusive of "house" advertisements, occupied in different groups of newspapers during 47 weeks for which data are available between May 1, 1931, and May 1, 1932, together with the corresponding figures for the previous year:—

	Thousand "column-inches."		
	1930-31.	1931-32.	Per cent. Decrease.
Six "national" dailies.....	1,753	1,697	3.3
Two "national" illustrated	230	215	6.5
Three London evening	527	519	1.6
Ten "national" Sunday ...	466	460	1.5
Total	2,976	2,891	3.5

The showing made by the foregoing figures is surprisingly favourable. Conclusions, however, somewhat less encouraging to investors are arrived at by an investigation whose results we have obtained through the courtesy of the statistical department of the London Press Exchange. On the basis of a fairly wide, though by no means complete, survey of advertising in a large sample of both "national" and provincial dailies, evening papers, Sunday papers and weekly and monthly periodicals, an estimate is made that receipts in 1931 showed a decline, as compared with 1930, of approximately 8 per cent.

As a further indication of the trend, we show in the next table the results which we have obtained from another "sample" inquiry, based on data given in the "Space Barometer" of the *Newspaper World*. The figures relate, in the case of each winter, to the aggregate of the first weeks of the months of October, January, February and March. The "General Group" comprises three "national" and five provincial penny dailies; the "Illustrated Group" consists of two "national" dailies.

Since the recession in advertising expenditure became much more pronounced after the on-set of the "financial liquidity" crisis last summer, it is not surprising that the foregoing sample test, which reflects conditions later in date than that based on the *World's Press News* figures, should point to a situation less favourable to the newspapers. The curve of advertising receipts was certainly falling throughout last year; though expenditure by groups selling petrol, liquor, patent medicines, tobacco and food-stuffs appears to have been fairly well maintained, the volume of financial, clothing, wireless and motor-car and motor accessories advertisements fell sharply, while expenditure by retail distributors was, in general, progressively curtailed. From the evidence of the foregoing

sample inquiries, it seems fair to conclude that in 1931 the shrinkage of Press advertisement revenue lay between the limits of 5 and 10 per cent. as compared with 1930, and that the decline is now probably in excess of the higher figure. Moreover, it has to be borne in mind in this connection that there has probably been in recent months a growing tendency for newspapers to make concessions to advertisers in the way of "cut rates" for special positions or for exceptional contracts.

Are there any favourable factors which can be set on the other side of the account? So far as production costs are concerned, there has been a reduction in the price of newsprint, which now stands at £12 2s. 6d. per ton, and will fall as from July 1st to £11 17s. 6d. Since newsprint accounts for over one-third of the cost of production, this saving is of importance; but, so far as other items in the actual cost of producing a newspaper are concerned, readjustments are difficult to achieve. On the other hand, something has been done to minimise expenditure brought about by the warfare of competing groups. Last February there was a concordat between the Berry and Rothermere combines in the provincial area, whereby there was a truce to competition in Newcastle, Derby and Bristol. Still more important from the point of view of the "national" dailies, an agreement was concluded in the same month to limit the expenditure of rival groups on canvassing for new readers. At the beginning of the year, under the lead of the *Daily Mail*, insurance benefits were increased; but in this sphere, as in other directions, including costly gift schemes, etc., the recent tendency appears to be in the direction of restricting outlay by common agreement.

That the modern newspaper, with its vulnerable dependence on advertisement receipts as an essential factor in the equation of production costs with selling prices, should be unscathed by the present economic crisis, was not to be expected. The financial situation of the newspaper industry has clearly undergone a radical change from the conditions of booming receipts, mounting circulations and costly rivalry which reached their culmination in 1929. If the earning capacity of newspapers is to be adequately maintained, the present situation calls obviously for economies in all possible directions. Unless, however, the trade of this country undergoes further marked deterioration, such evidence as is available of the trend of circulations and the volume of advertising space points to a position which, if difficult, is by no means critical. If straitened resources lead to the permanent abandonment of the wasteful and ludicrous "circulation campaigns" to which the prosperity of earlier days gave birth, the newspaper world may well be the saner and healthier.

IMPERIAL PREFERENCE.

Less than two months hence the representatives of Great Britain, India and the self-governing Dominions will be assembling for the Imperial Economic Conference at Ottawa. There has been a tendency among many whose views on the general question of Protection and Free Trade are not unlike our own to belittle the Ottawa Conference and to minimise its importance. We do not take this view, but on the contrary regard it as highly important, seeing that while it may bring advantages to British trade, unwise arrangements might do very real harm. It is also critical, for it is our first essay in tariff negotiation, and the nature of the agreements, if any, that are arrived at may well influence the possibility of effective action in the wider field of tariffs generally. Concessions to our exporting industries would be bought at too high a price if they prevented us from taking a firm stand for the mutual reduction of the barriers throughout the world that are not merely paralysing trade but are making impossible the restoration of the free movement of capital. On the other hand, the common ties which unite the countries of the Empire and the exceptional interest that each unit has in the prosperity of the others should create a favourable spirit of accommodation. The Empire has a great opportunity of setting an example of mutual concession and farsightedness. We have here an opportunity of showing to the world that there are some

countries, at all events, which appreciate the truth that countries must buy freely if they wish to sell freely, and that a wise seller will try to promote the prosperity of his customers.

We shall have occasion hereafter to examine the economic position of the several Dominions, the chief characteristics of our mutual trade, and the possibility of bringing about by agreement adjustments and preferences in the various tariffs of the Empire. The final views of the Dominion Governments will not emerge until the Conference itself, but their Ministers have been sufficiently outspoken in the past few months to justify a reasoned guess as to what their policies will be. Before we consider, however, the different parts of the Empire separately and in detail, and before we offer any definitive comment upon this country's line of policy at Ottawa, it seems necessary to lay down a few general principles which must guide us in all our considerations of Imperial preference.

Tariff preferences are designed, whether in return for corresponding fiscal advantages or for wider reasons, to divert trade from one channel into another. In general, this must tend to the reduction of the world's wealth, since it would be most unlikely that artificial devices would be needed to secure the most advantageous division of economic effort. But if the grant of preferences implies, in the sum, a reduction of tariffs, then the uneconomic diversion of trade may very well be outweighed by the promotion of trade within the limited area. If, to take an extreme and unlikely instance, France and Germany were to enter into a complete customs union, then despite their continued tariffs against other countries the event would almost certainly enhance the general wealth of the world. That is a consideration of leading importance for us at Ottawa. Its implication is—and the same conclusion could be reached upon much more specific grounds—that Dominion tariffs must be reduced and not merely increased against third parties—as has so often been the case in the past. Moreover, the reduction must be substantial if it is to make good any of the restrictive effects upon trade generally that have been caused both by our own tariff and by the serious increases that have lately been made in those of the Dominions.

Leaving aside the question whether substantial reductions are at all likely, the British delegates must clearly consider carefully what effects are likely to be produced by any particular tariff that may be maintained by Great Britain for the sake of Imperial preference. Obviously if at present the Empire supplies us with only a small proportion of our imports of some commodity, to impose a tax on the foreign product would mean a considerable burden upon British consumers and, if its preferential intention were successful, a peculiarly uneconomic diversion of trade. In such cases, any preferential arrangement would be a very one-sided bargain unless a very large reduction of Dominion tariff barriers to British goods were offered in exchange. On the other hand, if the Empire already supplied us with a large proportion of our needs, the diversion and the burden would be correspondingly slight—but so would be the possible advantage accruing to the Dominions and Colonies. Of our imports of mutton, for instance, over two-thirds comes from the Empire, so that even if some preferential arrangement involving the removal of mutton from the free list were to halve our imports from foreign countries, no Empire producer could count upon increasing its sales to Great Britain by more than one-quarter of their present amount. Other commodities in this category are frozen beef, tea, cocoa, apples, tinned pineapples, asbestos, rubber, ground-nuts and palm kernels, while in the former group—products of which the Empire supplies only a small proportion of our needs—are included maize, oil cake, tinned meats, bacon and ham, eggs, fish, most classes of fruit and vegetables, condensed milk, tobacco, soft woods, hemp, and cotton.

The division between the two categories is, of course, more or less arbitrary, and there is really a continuous

range from those articles of which the Dominions and Colonies supply all but an insignificant fraction of our imports (live poultry, for instance, of which 93 per cent. of the imports come from the Irish Free State) to those where the position is reversed (such as condensed milk, of which nearly 95 per cent. of our imports come from foreign countries). It is, incidentally, necessary to be sure that the classification in the trade returns really covers a homogeneous group. It would be misleading, for example, to take as the basis of a fiscal argument the bare fact that 86 per cent. of our imports of cheese in 1930 came from the Empire, since the foreign cheeses were most of them special varieties, and it is ridiculous to suppose that Camembert competes merely on the scale of prices with Canadian cheddar. The question of alternative products is also important. Soya beans, for instance, are now produced almost entirely outside the Empire, whereas the production of ground-nuts in India and tropical Africa actually exceeds the total demand by Empire markets; but these products, along with palm kernels, may in many uses be directly substituted for each other, and the value and disadvantages of Imperial preference must be considered in that light. It is obvious, therefore, that the economic effect of Imperial preference cannot in most cases be discussed in general terms. Each proposal has to be examined on its merits, bearing in mind the proposition with which this discussion opened, that the net result, properly calculated, must be a reduction of tariff barriers.

But there is one general class of products about which definite conclusions can be established in advance, namely, those of which the Empire is a net exporter; that is to say, those of which the normal exportable surplus of the Dominions and Colonies exceeds the normal demand of Great Britain and other Empire countries. This category includes three extremely important items—wheat, wool and jute. The conclusion that logically follows is that no preferential expedient, whether tariff advantage or import quota, can assist the Empire producers either to market a greater quantity of their product, or to obtain a better price for it, unless competition is somehow dismissed from the industries concerned. Consider wheat as an example. It is true that Great Britain imports large quantities of wheat from the Argentine and other foreign sources. But even if we were prepared to face all the far-reaching effects both to ourselves and to other countries and endeavour to buy exclusively from the overseas Empire, Canada and Australia would still have to sell part of their crop to foreign countries. Moreover, no matter how high the duties imposed by Great Britain on foreign wheat, the Dominions would have to accept the world price for their whole crop so long as competitive conditions prevailed within the Dominions or between them. Indeed, it is possible that the world price might actually be driven down by the concentration of non-British competition in neutral markets. A compulsory or otherwise complete Wheat Pool in Canada might succeed in holding the British consumer up to ransom, but even then co-operation with a similar organisation in Australia would be necessary in order to eliminate competition between the two Dominions. A preference on products of this character could never do much good, and it might do considerable harm.

The field of possible advantage by Imperial preferences is thus strictly limited. It is still more restricted by the determination of the Dominions to maintain their secondary manufacturing industries at all costs. There is very real danger that in their ardour for Imperial preference for its own sake, and their determination to bring back some spoils from Ottawa, the British delegates may be led to impose fresh and serious restrictions upon our own trade either without any returns from the Dominions or in exchange for a still further enhancement of the latter's duties on foreign goods—a step which would still further put out of balance the productive forces of the world and make the present confusion of world trade worse confounded.

Notes of the Week.

Washington and the Budget.—For a fortnight the United States Tax and Economy Bills have been bogged in the slough of Senate discussion. But the stagnant waters were stirred on Tuesday last, when Mr. Hoover appeared unheralded before the Senate and lectured them on the need for balancing the budget at once. The foolish foreign investors who were causing a run on the dollar did not realise, he said, that, slow as their processes might be, the United States Government were determined and had resources to place the finances of the country upon an unassailable basis. Even misguided American citizens, he admitted, had not properly understood the grinding of the mills of Washington. Therefore he pleaded for the ratification of the Tax and Economy Bills so as to ensure the balance of the budget, and for the passage of relief legislation "to assure the country against distress and to aid in employment pending the next session of Congress." More specifically, he supported a general manufacturers' sales tax and an unemployment relief programme which would put the Reconstruction Finance Corporation in a position to lend up to \$300 millions to State Governments for the relief of distress and to make advances to public bodies or established enterprises for the promotion of income-producing projects. The Senate Finance Committee rather rudely replied by rejecting the Sales Tax, but they threw in some other taxes, including an increased income tax, and what we should regard as the derisory excise of 1 cent a gallon on petrol; and the Appropriation Committee recommended an Economy Bill which is estimated to raise \$238 millions. These measures, which are reckoned to produce a nominal balancing of the 1932-33 budget, have now to go before the House of Representatives, where they may once more languish in the doldrums until their psychological effect is quite undone. The Administration, the Senate and the House are still at sixes and sevens over unemployment relief. The scheme supported by the President accords so closely to that put forward by the Democratic Senator Wagner—who has been the protagonist of unemployment relief for the last two years—that there seemed a fairly safe prospect of its being passed. But the Democrats in the House have now spurned it, and are unanimously backing the plan of Mr. Speaker John Garner, of which the keys are direct Federal relief, under the direction of the President, and a \$1,000 million programme of public works. This nostrum, so reminiscent of Mr. Lloyd George's plan in 1929, has been roundly abused by Mr. Hoover, who would probably use his veto if it were approved by Congress; but he has not thereby increased his chances of re-election to the White House, while Mr. Garner's stock has gone up.

Politics in France.—On Wednesday the newly elected Chamber assembled for the first time in Paris; but the Government bench was untenanted, and unfortunately it is now clear that, when the new Government is eventually constituted, it will not reflect adequately, in its composition and policy, the will of the French electorate as it was expressed a few weeks ago at the polls. There is no doubt that the electorate voted for a moderate Government of the Left, such as could be provided—and could only be provided—by a coalition between the Radical-Socialists and the Socialists. This week, however, the Central Organisations have definitely failed to agree upon a common platform; and it seems, therefore, now certain that M. Herriot will have to take office with the support of the groups to the right of him. Indeed, now that he has broken with the Socialists, it is hard to see how he can be sure of a majority in the new Chamber without seeking allies as far to the right as the followers of M. Tardieu. The issue between the Socialists and the Radical-Socialists was brought to a head on Tuesday, May 31st, when the Socialist Party Congress adopted, by 3,862 votes to 154, a resolution laying down nine conditions for entering into a coalition Government with the Radicals. For the French Socialist Party to consider entering into a coalition on any terms with a bourgeois party is, of course, a notable

concession on a point that has always been regarded as capital in the rigid orthodox tradition of French Socialism. On the other hand, the nine conditions covered a wide field in both home and foreign affairs; but at the same time they were none of them impossible for bourgeois Radicals to swallow, and they were not presented as an ultimatum. The Socialist Congress appointed delegates to present the programme contained in the resolution and to bring back the Radicals' reply to the Socialists. In other words, the Socialist Congress deliberately left open a door for negotiation; but unhappily, and surely unwisely, M. Herriot has declined even to peep round the door, but has closed it, instead, in the Socialists' faces. In a written reply M. Herriot has rejected all the Socialists' nine points except two and a half, and the Socialists, on their part, have now declared the negotiations to be at an end. From the international standpoint, it is M. Herriot's attitude towards the first of the Socialists' nine points that is most significant. This point had two sub-divisions—compulsory arbitration and the reduction of French expenditure on national defence to the level of 1928 in two budgets at most. M. Herriot agrees to compulsory arbitration, but on disarmament he is as uncompromising as M. Tardieu. He declares that he will submit the military estimates to a close scrutiny along with all the other estimates, but that any idea of reduction will be conditioned by the need for assuring the safety of the country in all conceivable circumstances. This is a formula which may be used to postpone the prospect of any reduction in French armaments till doomsday. The outlook in Paris as a result of the week's political developments is sufficiently discouraging to nullify much of the favourable impression made by M. Painlevé's courageous and far-sighted advocacy of a policy of "complete liquidation" of the war's political debts.

The Week in India.—The Bengal Ordinance of November 30, 1931, which ran out last Sunday, has been replaced, as was expected, by a new Ordinance; and if this new Ordinance is shorter than its local predecessor, that is largely because a number of the provisions in the local Ordinance which has now expired are covered by the Emergency Powers Ordinance of January 4th, which applies to the whole of British India and which still has a month more to run. The best that can be said is that three out of the seven articles of the new Bengal Ordinance are restricted, in the first instance, to one section of Bengal, namely, the Chittagong district. Meanwhile, there have been fresh outbreaks of inter-communal violence—not, this time, in Calcutta, but in Bombay, with the usual toll of arson, looting, wounds and deaths. Apparently it is suspected that this recurrent trouble in Bombay is not spontaneous; but the organisers—if there are deliberate organisers—have not been run to earth. The difficulty of maintaining, simultaneously, the two sides of "the dual policy" of progressive transfer of political powers and chronic administrative repression obviously grows greater with every week that passes.

The Roumanian Government Falls.—Professor Jorga's Administration at Bucharest has suffered shipwreck, like many other Governments, on the rocks of financial distress. At the end of May the Roumanian Government had not the money in its Treasury to pay more than a 50 per cent. instalment on the salaries falling due to the Civil Service and the Army; and they had already tried, and failed, to raise a loan abroad. On the other hand, the King insisted that the State's financial obligations to its public servants must be honoured "at any price," and he accepted President Jorga's resignation on this issue. Professor Jorga has managed to carry on a stop-gap administration, for the King's convenience, for a surprisingly long time; and King Carol will probably find it easier to let the Jorga Government go than to secure an effective substitute. The Roumanian Minister in London, Monsieur Titulescu, has been summoned to Bucharest by telephone to form a coalition ministry if he can. It is already known that he will have the Liberal Party against him; and the Liberals are experienced and influential, though unrepresentative and corrupt.

His hopes are centred upon the support of the National Peasant Party—a combination of the peasants of the pre-war kingdom of Roumania with the Transylvanian intellectuals. This is the soundest and most representative, though perhaps not the ablest in point of personnel, among the post-war Roumanian political parties; and in present circumstances it is conceivable that they may be inclined to return to office under Monsieur Titulescu's skilful leadership, since, in their first term of office, now several years ago, their great expectations were frustrated by their lack of experience. Roumania to-day needs all the ability and experience in her Government that she can muster. She has to cope, like the rest of us, with a serious decrease in the yield of taxation owing to the diminution in the volume of trade, and she has her own national handicaps of inefficiency and corruption to overcome into the bargain. Monsieur Titulescu has a formidable task.

The Disarmament Conference.—In varying degrees, writes our League correspondent, it is probable that all the technical commissions of the Disarmament Conference will produce results similar to those of the Naval Commission, which has compiled the reasons given by different groups of experts why their own pet weapons are harmless and peace-preserving, why their own pet abominations are wicked and aggressive, or, as frequently occurs, why many weapons may be either offensive or defensive. When the General Commission meets again it will find that the technical commissions have been of no assistance whatever. The "expert" interregnum, which was deliberately organised to cover the interval required for the formation of the new French Government, has perhaps been necessary, but when the Governments represented on the General Commission resume, they will find things less easy than they were even on the particular subject of qualitative disarmament. The truth of the matter is that in this, as in nearly every other question, there is no leadership. Every State, without exception, is playing for its own hand, and there is much justification for the suggestion that Germany would prefer re-arming herself to the disarming of others. That tendency will probably be accentuated by the change of Government in Germany, and M. Herriot had already begun to show signs of fright even before Dr. Brüning resigned. Tremendous efforts are being made in France, and doubtless elsewhere, by the armaments interests to prevent any agreement, and while all kinds of economies are being preached, even to the extent of reducing war pensions, there is little apparent disposition to save on the colossal sums expended on the manufacture of the means of production of future war pensioners. Those on the side of sanity have a terrific game against odds in which the dice are loaded, and the feeling is growing more and more pronounced out here that so long as the private manufacture of arms is not dealt with the essential difficulties will remain. That, however, requires the sort of courageous and single-minded statesmanship which is so painfully lacking in most things. The only hope is still, as it was at the beginning of the Conference, that the Governments will be frightened into doing something, but they now seem to be getting beyond reaction to any development whatsoever. The Conference cannot go on indefinitely, but there will probably be further delays on account of the Lausanne meeting, and the atmosphere will be made more difficult if Lausanne fails to do anything worth while. The present talk points to a continuation throughout the summer, and, if nerves do not become frayed, it certainly seems wise to struggle on towards the possibility of definite achievement in some direction or other. The General Commission is expected to meet again towards the end of next week. It is difficult to face the idea of a breakdown, even with all the encouragements to do so, but if a breakdown is to be avoided the Governments will have to show a far greater determination than has yet been manifest.

Debtors in Distress.—With what appears to have been a last-minute change of mind, the Austrian Government has decided not to declare a general transfer moratorium until

the results are known of the joint meeting of the League and Treasury experts which is now being held in Paris to consider, *inter alia*, Austria's necessitous position. It is difficult, however, to entertain much confidence that Austria will not soon follow the example of Greece. So far as the Greek debt is concerned, a statement made last Monday by M. Varvaressos, the new Finance Minister, underlined the difficulties which has led to Greece's default. The public debt of Greece funded abroad was calculated, he said, to have amounted on March 31st last to over \$340 millions (U.S. currency), of which 55 per cent. was held in Great Britain. To meet the charges for interest and amortisation in 1932-33 would have meant, now that the gold standard had been abandoned, that the Greek Government would have had to include in the Budget a sum of 4,390 million drachmas, whereas ordinary Budget receipts would at best be 8,500 million drachmas. Accordingly, in his opinion, default was inevitable, but the Government would do all in its power to deal fairly with the creditors, within the limits of the economic resources of the country. With this meagre comfort the bondholders must at present rest content.

The Unrest in Spain.—The continued agitation among working-class elements reported from districts as far apart as El Ferrol, in the north-west, and the Provinces of Sevilla and Murcia, has certainly failed in its objective, which was to undermine the authority of the Government. Indeed, the reverse has happened. Exemplary vigilance on the part of the police and the Civil Guard seems to have consolidated the tendency of the general public to rally to the régime represented by Señor Azaña and his colleagues lest worse befall. But, although the assassination plot and general strike which was to be the signal for peasants' risings throughout Andalusia were foiled, the situation of the landless labourers in that area and also in the Province of Toledo is still very bad. Consequently there is no time to be lost if the measure of agrarian reform, which is now under discussion in the Cortes, is to supply a remedy. After many vicissitudes, a Bill has been submitted which retains very little of the original Socialist character, and which amounts to little more than a redistribution of the land of the *latifundia* into small holdings, under the general protection of the State. The agrarian reform in Central and Eastern Europe has, it is true, been taken as a model, but care is being taken to ensure fair treatment for those of the big landowners who have cultivated their estates, if only by old-fashioned methods. Only absentee landlords are to be expropriated without any form of compensation. The need for a corresponding organisation of agrarian credit seems to be appreciated.

Waterloo Bridge.—On Wednesday night the House of Commons suspended the consideration of the Coal Mines Bill to interpose a bad piece of work in connection with Waterloo Bridge. The London County Council Money Bill, providing for the demolition and rebuilding of the bridge was thrown out by 222 votes against 154. Thus the whole question of the bridge has now once again been thrown into the melting pot. The motives which inspired the opponents of the L.C.C.'s proposal are difficult to fathom. Though Rennie's bridge was in many

ways an admirable structure, it is rather absurd to argue that it cannot be replaced by a new bridge which architecturally would do equal credit to London's river. We are inclined to think that for all the fine talk about "saving a masterpiece," the real consideration which weighed with the majority was that the cost of reconditioning and widening the present structure is estimated to be slightly less than that of building a completely new bridge capable of carrying the prospective volume of traffic. Surely, however, the advocates of economy in this connection cannot successfully maintain the contention that to spend a million on a patchwork, unlikely to be durable even for a generation, is financially a sounder proposition than to spend a million and a half on building something which should last a century. This is being penny wise and pound foolish with a vengeance. Besides, however great may be the need for public economy on items of current outlay, there is no case whatever for arguing that under present circumstances we must cut short each and every form of capital expenditure, no matter how productive or otherwise desirable may be its objects. The reverse, indeed, is rather the case; and it is a grave pity not merely that the Waterloo Bridge scheme should have been intolerably held up, but that we have let slip the opportunity of dealing, on lines worthy of a capital city, with the whole project of a new bridge and roadways at Charing Cross.

Sterling and Gold Prices.—During the past fortnight the downward movement of prices has been accelerated. Gold prices, as measured by our index, have fallen by 2.5 per cent.; the level of sterling prices of primary products by nearly 5 per cent.; and our complete sterling index by 2.4 per cent. :—

A significant feature of the past fortnight has been the widespread character of the decline, to which relatively few commodity prices have offered resistance.

Empire Rationalisation.—The first fruits of the enlargement made by the 1930 Imperial Conference in the terms of reference of the Imperial Economic Committee is a Report* on industrial co-operation within the Empire. The Report deals perforce in general terms with a subject which detailed experience alone can properly illuminate, but it sets down some valuable principles and may well be of assistance towards practical progress hereafter. The changing economic circumstances of the modern world, write the Committee, including the rapid growth of

* H.M. Stationery Office. Price 6d.

economic nationalism and the difficulties of national industries in reconciling a growing rigidity in the means of industrial production with an increasing fluidity in consumers' demands, make it all the more necessary for Governments to survey most carefully in the national interests all attendant circumstances before granting official assistance, by tariffs or otherwise, to industries for which the economic development of their countries may not yet be ripe. The establishment of such industries diverts local labour and capital into occupations which are inherently insecure, and thus inevitably strains the national economic structure. Co-operation between the industrially more or less developed parts of the Empire could obviate such trouble, could relieve the consumer in the importing country, and could aid established and protected industries there by technical assistance and by assuring them a cheap supply of semi-manufactured raw material and their specialised industrial equipment. This rationalisation by division of industrial function between the several countries of the Empire will have to be based on understandings among those engaged in the industries concerned—which must therefore be nationally organised as a preliminary—promoted, if need be, and possibly supported with fiscal measures, by the various Governments. If the standpoint of this Report were that of our delegates to the Ottawa Conference we should feel less apprehensive as to its results.

Sir Otto Niemeyer and the B.I.S.—On Friday morning of this week it was announced that Sir Otto Niemeyer had been appointed to succeed Sir Charles Addis as the second British director of the Bank for International Settlements. Apart from Sir Otto Niemeyer's obvious personal qualifications for the post, the appointment is in two respects an interesting one. In the first place, it departs somewhat from the spirit of the statutes of the bank which laid down that the second director, other than the Governor of the central bank of the country, shall be a representative of "finance, industry or commerce"—thereby implying that he shall have wider interests than those of the central bank alone. The phrase is of course vague, but it was hardly to be contemplated that the second post would be filled by an official of the Bank of England, however distinguished. The post is of some importance, for just as the Bank of England itself is closely associated with the life of the City of London through the wide connections of its directorate, so it is highly desirable the commercial community should be directly in touch with the work of the B.I.S. It is a source of weakness if central banking policy is regarded as a hidden mystery to be revealed to experts alone. In this particular case, however, there is a second consideration of great importance to offset against this objection. Sir Otto Niemeyer is not only an official of the Bank. He is also a member of the Financial Committee of the League of Nations, and, we understand, intends to continue his membership. Two years ago, when Dr. Melchior was appointed to the board of the B.I.S., he felt obliged to resign his membership of the League Financial Committee, on the ground that the two posts were incompatible, and this has naturally left an impression that there may at times arise a divergence of view between Basle and Geneva. Sir Otto's appointment is almost certainly intended to dispose of this impression, and to bring the B.I.S. and the financial work of the League into closer contact, and it is conceivable that this was one of the main motives behind the appointment. It is, indeed, essential that Basle and Geneva should be brought into the closest possible alignment and that any possibility of friction between organisations of international economic activity should at all costs be avoided.

Hambros Bank.—Like other international banking houses, Hambros Bank has been seriously affected by the international crisis and the consequent repatriation of funds previously lodged abroad. According to the balance sheet dated March 31, 1932, which is incorporated in the report issued this week, deposits have fallen during the preceding twelve months from £18,850,000 to £10,652,000.

In consequence, cash has been reduced from £7,456,000 to £4,451,000, bills of exchange from £3,987,000 to £1,526,000, investments from £4,147,000 to £2,943,000, and advances from £5,002,000 to £3,867,000. Acceptances have also fallen from £10,989,000 to £9,203,000, and part of these are now doubtless subject to standstill agreements. The net profit for the year 1931-32 was £291,188, as against £310,303 for 1930-31, but it has been felt advisable to increase appropriations for contingencies from £100,000 to £125,000, and this has necessitated the reduction of the dividend upon the £10 shares from 22½ to 18 per cent. The "A" shares of £1, however, are still to receive 6 per cent. Depreciation of investments was initially dealt with by an appropriation from contingencies, and the directors have now transferred £50,000 from the Reserve Fund to contingencies. This leaves the Reserve Fund still at £1,000,000, against issued and paid-up capital of £1,400,000; and according to the report the contingency fund is raised to a level which is both higher than that of last year and is also fully sufficient to deal with any eventual loss which might arise out of German, Austrian and other Continental engagements, which, we understand, consist almost entirely of acceptances. The loss of deposits in all probability represents withdrawals of American and French short money, mainly in the summer and autumn of 1931. It is highly probable that no reduction at all has occurred in Scandinavian deposits, and there is reason to believe that the bank was in no way affected by the Kreuger failure.

The Wiener Bankverein.—According to reports from Vienna, the Wiener Bankverein's balance sheet for 1931 reveals that the bank has lost almost the whole of its reserve fund, together with half its subscribed capital. These losses arise mainly from general causes, though some of them appear to have arisen from purchases of its own shares made by the bank in order to support the market. It has simultaneously become known that steps have been successfully taken to assist the bank. Certain German and Belgian banks who had banking claims upon the Wiener Bankverein have agreed to exchange them for shares in the bank, and this transaction is now complete. The Austrian National Bank has also undertaken to contribute 3,000,000 schillings as part of the scheme of assistance to the bank. Contrary to reports that have been received in London, no special legislation is required by the situation, though general legislation, which has no particular reference to the needs of the Wiener Bankverein, is being introduced. Rumours of the insolvency of the bank are apparently without foundation, and the news of the assistance scheme seems to have reassured public opinion in Vienna.

The 1930 Census of Production.—Volume XII of the preliminary reports of the Census of Production of 1930, published in last week's *Board of Trade Journal*, deals with sugar and glucose, and with the brush-making, metal smallwares, small arms, and roofing and flax felt trades. The following summary shows the gross value, the net value (gross value, less cost of materials and work given out to other firms), and the net output per person employed in the various industries in 1924 and in 1930 :—

Industry.	Gross Output.		Net Output.		Net Output Per Employee.	
	1924.	1930.	1924.	1930.	1924.	1930.
Sugar and glucose	Thou. £. 53,016	Thou. £. 43,417	Thou. £. 2,215*	Thou. £. 7,363*	£ 334*	£ 437*
Brush-making	3,240	2,994	1,600	1,584	159	164
Metal small wares	2,956	2,818	1,718	1,740	139	166
Small arms	624	450	374	295	180	219
Ice	1,376	1,088	1,034	828	459	442
Roofing and flax felt ..	711	882	285	362	353	376

* Exclusive of duties.

The output of refined sugar increased from 19,785,000 cwts. in 1924 to 37,948,000 cwts. in 1930, and retained imports declined from 11,792,000 cwts. to 1,092,000 cwts. between the two census years. Exports, at 5,581,000 cwts. in 1930, show an advance of 4,184,000 cwts. on 1924. The share of the home market held by British re-

fined sugar increased therefore from 61.9 per cent. to 96.6 per cent. This expansion of the British sugar-refining industry is the result of the British Sugar (Subsidy) Act of 1925, and of the reduction, in 1928, of about 2s. 4d. per cwt. in the import duty on raw sugar with no corresponding change in the duty on fully refined sugar. The total quantity of refined sugar produced from home-grown sugar beet was 7,952,000 cwts., as compared with less than 500,000 cwts. in 1924. The gross selling value of refined sugar and molasses produced mainly from home-grown beet was £9,550,000 in 1930. Against this amount must be set the cost of materials (£11,465,000), and customs and excise duties (£1,920,000). After including the subsidy of £6,022,000, the net selling value was £2,787,000. The decline in the gross selling value of refined sugar and molasses made chiefly from imported sugar from £53,016,000 to £33,867,000 is ascribed mainly to the heavy fall in raw-sugar prices and to the reduction in the import duty. On the other hand, the net selling value, at £4,576,000 in 1930, show an increase of £361,000 on the earlier census year.

German Shipping Fusion.—The appointment of Dr. Albert as General Director of the North German Lloyd, writes our Berlin correspondent, gives the finishing touch to the State-aided reorganisation of German shipping. The Lloyd and the Hapag have for two years been bound together by irrevocable agreements, but the friction between the Bremen and Hamburg managements, which remained separate, has never ceased. Now the organisation of the entire shipping service of both companies is to be unified; all agencies are to be combined, and the expenses and earnings of the vessels will be set down to joint account, though the separate company names will be retained for their advertising value. The combination is made easier by the fact that owing to the death of Herr Stimming a few months ago, the Lloyd has no Bremen expert at its head. Ex-Chancellor Cuno is still general director of the Hapag, but the position of his future colleague, Herr Albert, will be strengthened by the fact that he takes office at the instance of the Government. The proposal for the financial reorganisation of the companies, to be presented to the shareholders at the end of this month, is as follows :—Hapag is to cancel £20,000 of its own shares and reduce its capital by two-thirds to £2,660,000, leaving £68,500 preference shares untouched. The North German Lloyd is to cancel £575,000, to reduce its capital by two-thirds to £2,475,000 and to convert £167,000 of preference into ordinary shares. Hapag will place £7,685,000 to depreciation and Lloyd £7,025,000, and each company would set aside £1,200,000 to special reserve for further losses. This reorganisation is made possible by the fact that, in addition to the savings on shares cancelled, the North German Lloyd receives a further £1,203,000 and the Hapag £1,888,000 in respect of the released American properties.

The British Association.—The Economic Science Section of the British Association has arranged an interesting programme for the meeting at York from August 31st to September 7th. Professor Robbins will speak on

ULLMANN & Co.
Merchant Bankers.

4 LONDON WALL BUILDINGS

Telephone:
LONDON WALL 9000.

Telegraphic Address:
ULMACO-AVE.

"The Gold Standard and the Great Depression"; Dr. Roll will discuss "The Effects of the World Depression on the Banking Systems of Central Europe," and Dr. Benham will treat of "Agriculture and Economic Change." In view of the various Industrial Surveys which have recently been undertaken at the request of the Government, special interest attaches to the symposium on the "Location of Industries," in which Professor Marquand, Mr Jewkes and Mr Brindley Thomas will participate. The Section will be under the presidency of Professor R. B. Forrester, who has selected the important problem of "Britain's Access to Overseas Markets" as the subject of his presidential address. Further particulars of the sectional arrangements can be obtained from the Recorder of the Section, Dr. K. G. Fenelon, College of Technology, Manchester.

INSURANCE NOTES.

Eagle Star and British Dominions.—Included in the 1931 report is a statement as to the results of the quinquennial valuation of the current life fund. Although the report shows a life and annuity fund exceeding £15 millions, the amount appertaining to the current fund is under £6 millions, the balance being accounted for by the four closed proprietary funds, the Eagle, the Star, the English and Scottish, and the Sceptre, acquired by the Eagle Star and British Dominions, and used as the foundation for the company's subsequent expansion. The valuation has been made on the same net premium basis as before, and the financial history of the fund is detailed below:—

	1917- 1921. £	1922- 1926. £	1927- 1931. £
Trading surplus earned during quinquennium:—			
With-profits section.....	81,594	217,419	438,923
Without-profits section and annuity fund.....	7,401	116,089	
Combined profits from investments ...	— 4,524	42,131	— 155,922
Brought forward from previous valuation:—			
With-profits section.....	...	968	7,052
Without-profits section and annuity fund.....	...	7,401	75,621
	84,471	384,008	365,674
Allocations:—			
To Bonuses to with-profits policy-holders	59,492	190,202	200,724
„ Shareholders from:—			
With-profits section	16,610	21,133	22,302
Without-profits section and annuity fund	...	90,000	83,000
„ Carried forward:—			
With-profits section	968	7,052	5,994
Without-profits section and annuity fund	7,401	75,621	53,654
	84,471	384,008	365,675

The investment losses have made a considerable hole in the trading surplus, which otherwise would have been ample to support a much higher bonus than before. The bonus actually declared for the five years is at 28s. per cent. per annum on the sums assured, compared with 35s. per cent. per annum in the preceding five years, and even this declaration has entailed some reduction in the carry-forward. The figures in the foregoing analysis have been separated as far as possible into with-profits and without profits, including annuities, since the shareholders are entitled not only to the whole of the profits from the without-profits and annuities section, but also to 5 per cent. of the profits from the with-profits section. The company's operations in fire, accident, and marine business have had, in the circumstances, a satisfactory outcome for 1931, for the total premiums have declined only moderately from £3,000,000 to £2,890,000, and the trading profits in these departments are actually somewhat higher.

	1930. Amount of Profit. £	Percentage of Premiums. %	1931. Amount of Profit. £	Percentage of Premiums. %
Fire	13,409	1.6	11,596	1.4
Accident	43,225	32.7	14,059	21.6
Employers' liability.....	1,092	0.6	1,518	.8

Marine	...	...	...	...
Life:—				
Current series	...	...	30,302	...
" Eagle "	22,000	...	...	...
" English & Scottish "	75,518	...	...	...
	207,803	...	153,436	...
Less:—				
Items debited to profit and loss account ...	97,716	...	80,003	...
Written off acquired closed funds	50,000	...	...	...
	147,716	...	80,003	...
Total net trading surplus	60,087	...	73,433	...

For the second year in succession no transfer has been made either to or from the marine account, and as the premium income is now much reduced, at £414,000, the fund has increased to 113 per cent. of the premiums, and at that figure no doubt includes a certain amount of undisclosed profits. The ordinary dividend has been maintained at 20 per cent., and is now covered by interest earnings with a small margin. Although the foreign assets and liabilities have been included at par of exchange, an exchange reserve fund of £125,000 and an investment fluctuation account of £100,000 have been set up to provide for the net difference, in addition to which there is a general reserve fund of £1,250,000.

Royal Insurance Company.—With a world-wide business involving assets of over £50 millions and a premium income of nearly £15 millions, the Royal has naturally felt the effect of the universal financial and trading disturbance. Nevertheless, the company is able to show a net trading surplus in all departments, and a total profit not much less than the 1930 figure. In the main, the story presented is the familiar one of a fall in premium income, and a greatly increased claims' cost, particularly in the United States of America, though the marine department is exceptionally a bright spot.

	1930. Amount of Profit. £	Percentage of Premiums. %	1931. Amount of Profit. £	Percentage of Premiums. %
Fire	446,692	6.8	402,072	6.6
Personal accident.....	7,253	3.2	117,321	2.2
Employers' liability...	32,236	8.5		
General	172,593	3.4	125,537	13.0
Marine	46,465	3.9		
Life	40,000	...	40,000	...
	745,239	...	684,930	...
Less items debited to profit and loss account	316,438	...	307,128	...
Total net trading surplus.....	428,801	...	377,802	...

The dividend, which has been maintained at 65 per cent., involves a disbursement of £1,375,000, which is met as to £1,330,000 out of interest income, so that virtually the whole of the net trading surplus is available to increase the company's surplus assets. In the course of his speech at the annual meeting the chairman entered a spirited protest against the abuse by certain countries of the system of deposits, which are the pre-requisite of transacting business in foreign countries. While it is clearly reasonable that a moderate amount of deposit should be lodged as a guarantee of *bona fides*, the universal adoption of the system, and particularly the recent tendency towards raising deposits, and to restrict their form, has greatly handicapped British companies in keeping their funds liquid for the purpose of meeting catastrophes. A new menace has recently appeared, wherein certain countries have resorted to the device of levying increased deposits on insurance companies for the purpose of tiding themselves over an internal financial crisis.

Gresham Life Assurance.—In view of the fact that much of this society's business is derived from abroad, and particularly from European countries, and that the crisis must have had a marked effect on its sources of business, the society is entitled to claim that the 1931 report is by no means unsatisfactory. New business has naturally fallen off: home business from £643,000 to £614,000, and foreign business from £1,582,000 to £1,382,000; but the totals are still substantial. A small reduction in expenses has been achieved, from 24.6 per cent. to 23.9 per cent., and the rate of interest earned, at £4 19s. 11d. per cent., is only a shilling lower than that in 1930. The book value of the assets of £8,780,000, after taking credit for exchange profits, shows only a small depreciation in market values of 1 per cent. of the total assets. Included in the assets is the society's controlling holding in the Gresham Fire, valued at the cost price of £275,000. A note to the balance sheet states that after taking into account the investment reserve of the Gresham Fire there was an uncovered depreciation in that company's assets of £65,000.

Commercial Union Assurance.—In reviewing the 1931 accounts at the annual meeting, the chairman frankly acknowledged that the results of the year's trading had been unfavourable, and although relying on the company's fundamental strength, the board decided to repeat the dividend of 41 per cent.; this involves a substantial draft on trading surplus, and a maintenance of dividends at this level was stated to be dependent on a recovery in world conditions. The company operates through sixteen subsidiaries, but the accounts are in the usual consolidated form. In the fire department there has again been a considerable reduction in premiums, from £6,774,000 to £6,316,000, the greater part of the reduction being sustained in the United States. The accident premium income also registered a considerable decline from £8,658,000 to £7,846,000, and the company's largest subsidiary, the Ocean, which is mainly responsible for the accident business, had to report a loss on trading last year. In both departments it is evident that efforts are being made to secure economies in expense, and it is evident that there is considerable scope for these. In 1925, for instance, when accident premiums were £8,400,000, the expenses were nearly £250,000 less than they are to-day on a much reduced premium income, and that in spite of the fall in prices that has occurred in the meantime. The marine department shows a small increased premium income at £734,000, and once again produces a useful profit.

	1930. Amount of Profit. £	Per-centage of Premiums. %	1931. Amount of Profit. £	Per-centage of Premiums. %
Fire	195,374	2.9	36,840	.6
Accident.....	5,570	...	— 112,202	— 1.4
Marine	200,000	28.6	200,000	27.3
Life:—				
Commercial Union.....	28,088	...	28,088	...
Union Life Fund.....	5,000	...	5,000	...
Hand-in-Hand Fund	50,000	...	150,000	...
	472,892	...	307,726	...
Less items debited to profit and loss account	216,922	...	241,415	...
Total net trading surplus	255,970	...	66,311	...

It will be seen that the net trading surplus is only one-quarter of the 1930 total, and a small fraction only of the average figure of the last few years. Indeed, after paying the dividend, the company's net surplus resources will be depleted as a result of the year's operations by £86,000. The life department produced new business of just over £4 millions in 1931, and although this is somewhat lower than the 1930 figure, that year was itself a record one. The funds of the life department now amount to £19½ millions. In spite of the depreciation which has occurred, the company is in the rare and happy position of being able to state that there was still a hidden reserve existing on December 31st in the book values of the assets. Since that time the margin has widened, and the chairman dis-

closed that the hidden reserve at the end of April exceeded £1 million. In face of these trading results and the warning as to dividends, the price of the shares has fallen from 20½ to 18½ in the past week.

Overseas Correspondence.

UNITED STATES.

Budget — Reconstruction Plans — Prices.

(FROM OUR CORRESPONDENT.)

NEW YORK, May 25.

In spite of the growing restlessness of the country at the time wasted by Congress, work on the Tax Bill is proceeding but slowly, and the inattention to the main business leaves the door open to all sorts of quack legislative nostrums for curing the depression. Nevertheless, in spite of surface discouragements, the undercurrent at Washington is running strongly toward budget balancing, and in well-informed quarters in Wall Street there is much confidence that before it is too late a satisfactory Tax Bill will be passed and that at least the worst of the proposals involving large Government expenditure will be side-tracked. Evidence of this may be seen in the formation here a few days ago of a committee of twelve men, headed by Mr Owen Young, to assist in carrying out sound ideas of the authorities, to supplement with their personal influence with business and banks the easy-money policy of the Federal Reserve Banks and, if possible, to work out plans of their own to help to stem the depression and establish public confidence. The committee has the full confidence of Wall Street, as well, perhaps, as its sympathy; for it is realised that the wide publicity attending its appointment by Governor George Harrison of the Federal Reserve Bank places it under an obligation to deliver something.

The committee, which will have its counterpart in Chicago and other large centres, could work best, no doubt, if it could keep out of the public eye. It has been proposed to it that a pool be formed to support the bond market. While in good quarters the idea of concerted purchase of bonds on a large scale by the strong banks, corporations and others is entertained, it is unlikely that a pooling of funds under single management will be decided upon, especially at this time when the general public sees so much uncertainty. The committee probably will first devise more individualistic ways of inducing the member banks of the Reserve system to employ their excess reserves. These excess reserves are now approximately \$800 millions, which probably is about the figure at which Reserve Bank policy would like to see them until they diminish through employment in loans and investments. At any rate, the past week saw the first reduction in six weeks of the Reserve System's scale of United States Government bond purchases, the drop from the usual \$100 millions being 20 per cent. This must not be regarded as any retreat from the position, but merely as a means of keeping the excess reserves at the desired figure.

A plan which has been submitted to Governor Harrison's committee, but on which no definite commitment has been made, is for the large and financially powerful industrial organisations, chiefly the manufacturing concerns, such as du Pont de Nemours, U.S. Steel Corporation, Standard Oil, General Electric, Westinghouse, Bethlehem Steel and General Motors, to guarantee credit to small business men. The plan would amount to a new form of bankers' acceptance paper, bearing the names of industrial companies and therefore eligible for discount at the Reserve Banks. It is hoped by sponsors for the scheme that this would tempt loans from country banks who are not unable or afraid to extend credit directly to their local business men, and thereby would encourage dormant business enterprise. The plan has certain obvious merits, such as independence of Governmental or Reconstruction Finance Corporation credit, a probable increase

in the supply of eligible paper for discount, which is now sadly lacking and was one of the reasons for the Glass-Steagall measure substituting Government bonds as collateral behind Reserve Bank notes, and lengthening of time for the borrower to pay. Ordinary commercial sales are made on the basis of 30- or 45-day payments, against the 90-day trade bill as now proposed.

On the other side, some critics of the idea fear that it may have the result of stimulating borrowing by those who should not extend themselves at this time, that the large industrial companies ought to keep their working capital and credit free of all entanglements, and that this partial invasion of what has been considered strictly a banking field might turn out to be unwise in the long run, just as the flow of industrial money into the call money market in the boom period stimulated the rise in securities.

Last week's Reserve Bank credit expansion amounted to \$69 millions. It was accompanied by a shrinkage of \$40 millions in the gold stock, a rise of \$18 millions in money and a drop of \$6 millions in member bank borrowing. Since last week gold shipments have risen, and another \$50 millions has already left or been consigned. The bulk is going to France, Switzerland, Holland and England. The banking authorities are not disposed to view this further loss with alarm, provision for it having been made; but it has its counterpart on this side in a general feeling of anxiety, particularly with regard to European affairs.

Some reassurance has been given by President Hoover's strong statement of his platform, which includes budget balancing, no further borrowing by the Treasury, avoidance of public works which are not essential, extension of the functions of the Reconstruction Finance Corporation, and reduction in the Government pay roll. Meanwhile Congress has busied itself with various tariff measures, such as duties on copper, lumber, coal, rubber and oil.

Commercial banks continue to reduce their loans and investments, and the security markets are slowly falling to new low levels. Commodity markets, on the other hand, have shown more steadiness. Wheat has risen sharply, but the movement has had a good deal of speculation in it which may not last. Wholesale commodity prices as computed by the Bureau of Labor Statistics were down three-quarters of 1 per cent. in April, the index standing at 65.5, as against 74.8 for April of last year.

Railroad traffic has gone backward against a seasonal rising trend, and this week the steel industry declined a point or two in rate of operation. Prices are holding, and some increase in demand is still hoped for from the motor industry. Ford works are increasing production. A balance sheet published for Ford covering 1931 operations apparently shows a loss of \$10 millions, against a profit of \$44 millions in 1930. Preferred and common share dividends continue to be reduced or eliminated, but over 60 per cent. of the preferred issues and 45 per cent. of the common share issues listed on the New York Stock Exchange continue to pay dividends. In spite of the low and declining prices for shares, the real disquiet is coming from the persistent weakness in bonds, which weakens the position of the banks and finance companies, as well as the faith of investors generally.

FRANCE.

Politics — Revenue — Coal Production — Quotas.

(FROM OUR CORRESPONDENT.)

PARIS, June 1.

DURING the past week France has again been under the *régime des Clubs*, as in the epoch of the Revolution. The respective Radical and Marxian Socialist caucuses have been practically in permanent separate sessions, debating what the nature of the new Ministry shall be, as the outcome of last month's general elections. Both parties had previously made clear their desire to continue in the

Chamber the co-operation applied during the second ballots, but each side had left open the conditions under which combined participation in the new Cabinet would be acceptable. M. Blum, the Socialist leader, took the first step by laying down in his newspaper the three "irreducible minimum" conditions under which his party could participate in the new Government. M. Herriot replied on Sunday with a spirited article in a Lyons newspaper, based on the text that "the situation of France is serious." He emphasised that the country is faced with three great outstanding problems, which are superior to all others, namely, those of the Budget, reparation payments, and disarmament, and he demonstrated (although without directly saying so) that, in view of the general foreign situation, any desire to apply the Socialist "irreducible minimum" was unthinkable. So far as foreign affairs are concerned, the article suggests that M. Herriot's programme is likely to approximate fairly closely to everything that has latterly been spoken or written by M. Tardieu himself.

The Socialist National Congress, after debating the matter for three clear days, yesterday adopted a resolution, which represents a slight attenuation of M. Blum's "irreducible minimum," embodying the conditions on which the party was prepared to negotiate with M. Herriot. The principal points insisted on for immediate application were (1) extensive reduction of military expenditure within the next two Budgets, (2) prohibition of all trade in arms and nationalisation of arms factories, (3) control of the banks and nationalisation of railways and insurance companies, (4) application of a 40-hours' legal week, without reduction of wages. Later in the day the executive committee of the Radical Party, comprising over 1,500 delegates from all parts of France, passed, by an overwhelming majority, a resolution refusing to allow its Parliamentary representatives to be "associated with men whose policy of isolation abroad and financial deficit at home has been strikingly disavowed by the country," approving M. Herriot's declarations, and leaving the door open for negotiations with the other parties of the Left for the constitution of the new Cabinet. To-day, as was expected, the Socialist Congress, by a practically unanimous vote, definitely broke off all negotiations with the Radicals. All chance of a Socialist-Radical Ministry is removed. M. Herriot is understood to be prepared to meet the Chamber with a new Ministry on Tuesday or Wednesday next. Whether this can survive, except by dependence on two alternating and entirely distinct majorities—one for foreign affairs, based on the support of the Centre Parties and a portion of those of the Right, and the other for semi-Socialist legislation, depending on the support of the Socialist Party—remains to be seen.

The revenue returns for April, the first month of the new financial year, indicate total recoveries from all "normal and permanent" sources of 3,096 million francs, against 2,526 million francs in the previous month, 3,303 million francs in April, 1931, and 3,494 million francs in April, 1930. The improvement of 570,000,000 francs on the month indicates that the period of Treasury low water has ended, and that new annuities of direct taxation are beginning to come in. Total recoveries from indirect taxes during the month were 154,519,000 francs (or 5 per cent.) below Budget estimates. The yield from turnover taxes was 104 million francs (or 15 per cent.) lower than in April, 1931, and 137,563,000 francs below Budget estimates. All the other principal categories of indirect taxes were appreciably smaller in yield than a year ago, with the exception of Customs, which produced nearly 15 per cent. more than in April, 1931, thanks to recent revisions of import taxes upward. The yield from imposts on motor spirit and petroleum was 53,824,000 francs (or 22 per cent.) larger. Direct taxes produced 178,567,000 francs, or 60 million francs less than in the corresponding month of 1931. The revenue of the Caisse d'Amortissement totalled 581 million francs, all three categories of sources from which the Caisse draws its revenue being lower.

Coal production figures for April indicate a total output from the French mines of 3,947,439 tons, against 3,887,992 tons in the previous month, and a monthly average of 4,586,000 tons in 1930. The output of metallurgical coke by the colliery plants was 267,712 tons, against 296,638

tons in the previous month and 408,928 tons in April last year. The duel between British coal exporters to this country and the French authorities, in regard to the alleged discrimination applied to British coal entries under the quota system, has now resulted in legal action being taken by the importers, for the purpose of testing the system's legality. An appeal has been entered for hearing by the Conseil d'Etat, a supreme tribunal which in this country approximates somewhat to the British Privy Council, and whose rôle is to act as arbitrator in regard to administrative acts, its decisions having all the force of law. The British importers claim that the institution of the quota system constituted an illegal act, as it was imposed arbitrarily by decree and not by Parliamentary vote, and that the recent further reduction of coal entries by 10 per cent. by the expiring Tardieu Government, to a basis of 60 per cent. of the average imports of the previous three years, was equally illegal, from the fact that it was promulgated by a Ministry which had already resigned and was remaining in office only for the purpose of carrying on current business. British exporters complain that they alone remain subject to import licenses, whereas German, Dutch, Polish and Belgian coal importers, although still held under the quota system, have been relieved from the necessity of procuring permits. The French retort is that entries of British coal, which constitute by far the greater proportion of foreign coal imports, consist mainly of industrial combustibles, and are the chief reason for the huge stocks of industrial coal now accumulated at the French pitheads, and leave no room for household coal. It is urged that foreign importers should devote themselves chiefly to household descriptions.

GERMANY.

Change of Government — Budget Problems.

(FROM OUR CORRESPONDENT.)

BERLIN, May 31.

THE forces which have brought about the fall of the Brüning Government have been at work for a long time. President von Hindenburg, from the very beginning, wanted the Brüning Government to govern as a Cabinet of the Right. In spite of his conscientious endeavours to accustom himself to politics, he was never able to appreciate the fact that the Chancellor was obliged to work in co-operation with the Left because the Socialists, his former opponents, helped him to carry out tasks which were necessary in the interests of the State, while the supporters of the parties of the Right were joining the National Socialists, who were prevented by the necessity for continual agitation from making any concessions to considerations of State. The pressure exercised by the President upon the Chancellor did not diminish when Herr von Hindenburg was re-elected with the support of the Left, and Herr Brüning was only able to resist this pressure until the result of the Prussian elections gave a new impulse to the demand that his policy should tend more to the Right. To this was added the fall of Herr Groener, which greatly damaged the Chancellor's prestige.

Perhaps all these difficulties might still have been overcome had it not been for two economic problems which made it possible for certain quarters of the Right to widen the breach between the President and the Chancellor. One of these problems arose out of the condition of agriculture in the East. In the course of this winter it became clear that the "Osthilfe" credits in many instances were going to involve, not the rescue of the farms to which they were granted, but merely useless expense, because these farms were so heavily indebted and so unprofitable that not even the cancellation of half their floating debt and extensive compulsory reduction of interest, as provided by the November decree, could enable them to carry on or to pay the interest on the public credits provided for the redemption of the most pressing of their private debts. Dr. Brüning, in agreement with the Minister of Labour, Herr Steger-

wald, had planned that the land of those farms which were hopelessly overborrowed, about one-sixth of the total, should be bought by the State, or under State authority, at a very low price, in many cases only the amount of the first mortgage, and used for peasant settlement. The idea was the same as that which has for some time been the foundation of the Prussian Government's agrarian policy, the replacement of the decaying large farms of the East with small holders who will be better able to withstand the agricultural depression. Opinions differ as to the prospects of this policy, but it is the only way of finding any kind of purchasers for the land of these collapsed estates. All the same, the owners of the land regard this policy as "Bolshevik." They want to get rid of the burden of debt by curtailing the rights of creditors to a greater extent than was done by the November decree. They have in mind particularly a compulsory conversion of the first mortgages to 80 per cent. of their value, and a further compulsory reduction in interest rates. As the President spent his Whitsuntide holiday in East Prussia, he was very accessible to the opinions and wishes of the large landowners.

The second economic question was one of social policy. Large and influential industrial circles wish to take advantage of the crisis to do away with State interference in wages and working conditions, and to strike as severe a blow as possible at the trade unions. Not only are they violently resisting the compulsory introduction of a shorter working week proposed by Herr Stegerwald, but they wish to abolish compulsory arbitration in industrial disputes. In these quarters also influence has been brought to bear upon the President or his advisers.

Thus it came about that on his return from East Prussia the President laid before the Chancellor at their first meeting last Sunday three demands: first, the renunciation of the new emergency decrees which had been prepared, and which were to contain the necessary provision for the taking over of the Land Settlement Office and for the balancing of the Budget; second, that the Chancellor should make no changes in the personnel of the Cabinet (which would mean in particular that he could not get rid of Herr Schiele, who is supporting the agrarian demands); third, the adoption of a more rightward orientation in policy. Herr von Hindenburg personally did not expect that the Chancellor would agree to these demands, and they were merely a way of dismissing the Cabinet. It is, however, quite likely that Herr von Hindenburg counted on persuading Dr. Brüning to enter the new Cabinet as Foreign Minister, but in that he was mistaken.

For a correct estimate of the situation it is essential to bear in mind that Herr von Hindenburg still wishes to govern by constitutional means. Nor has he any leanings whatever towards the National Socialists, but he considers it necessary to make them share the responsibility of Government in some form or other. If they refuse,* a general election seems almost inevitable. At the present moment this would be a dangerous experiment, which would be by no means certain to produce a workable solution.

The principal task of the new Government, apart from foreign politics, will be the Budget. Dr. Brüning's dismissal has made the problem much more difficult, for it is hard to see what other statesman still possesses the necessary authority to persuade the German people to assume new burdens, especially as the President intends to issue no more emergency decrees, and a parliamentary majority for additional taxes will be impossible to obtain. What Dr. Brüning could do only by exercising every ounce of his political strength, nobody else is likely to achieve at all. The introduction of the employment tax, without which the expenditure on unemployment cannot possibly be met, is therefore probably impossible for the time being. It will, however, be equally difficult for a politically weak Government—and the Government of the next few weeks will necessarily be politically weak—to decide upon severe reductions in expenditure. Even the industrialists, who are counting upon a reversal of social

* Since this letter was written the National Socialists have definitely refused participation in Herr von Papen's Government.—*Ed. Economist.*

policy, will have to postpone their hopes for the present, for the National Socialists will not be ready even to tolerate a Government if such toleration would saddle them with the responsibility for unpopular measures before the general election.

An attempt will probably be made to solve the unemployment problem by an extended programme for the provision of work. One of the reproaches which has recently been levelled at Herr Brüning by his opponents was his "dilatoriness" in this matter. But Dr. Brüning had his reasons for not giving in to the demands for a "grandiose" programme for the provision of employment. Currency considerations must, in the present position of Germany, set limits to any such activity, and now that Dr. Brüning has gone, the President of the Reichsbank will undoubtedly take over the task of preventing any danger to the mark from credit expansion. Dr. Luther will also have to exercise his well-known firmness in another direction. The exchequers of the Reich and of the States are threatening to run dry. As Dr. Brüning would have presented a balanced budget to the Reichstag, these difficulties would have been overcome; but now that the balancing of the budget is not certain, it will be difficult to maintain the liquidity of the treasuries of the States without assistance in the form of credits, which would be unsound. The importance of Germany's possession, in her Reichsbank president, of an absolutely reliable guardian of her currency, can hardly be over-rated.

HOLLAND.

Shipping Reorganisation — Dairy Industry.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, May 24.

A BILL has recently been introduced by the Government for the safeguarding of our national mercantile fleet. The situation is now such that 54 per cent. of the world's mercantile fleet is in the hands of shipowners domiciled in countries with depreciated currency. In consequence, Holland, which had its full share in the expansion of the world's mercantile marine, has been driven into a very precarious position. For many Dutch shipping companies it has become practically impossible to continue operations. The Government considers that the reorganisation demanded by the present situation should not be delayed by granting support in the form of subsidies. Generally speaking, no relief will be granted unless the company in question has submitted a scheme of reorganisation providing ample guarantee of economies. In some cases it is to be considered whether merging or other forms of close co-operation between the necessitous companies are desirable and provide better prospects for the future.

In order to realise these aims without endangering the interests of the State, and at the same time to ensure that the temporary indispensable help is not withheld from the shipping companies, it is considered desirable that arrangements be made for the founding of a company, under the direction of shipping experts, which is to procure its capital largely from Government advances, and accordingly is to be under Government supervision. The share capital is to be 5 million guilders, the majority of which, 2.6 millions, is to be in the hands of the State. In addition to the State, shipowners can become shareholders, and the companies securing advances will be required to hold the shares. The Government advances will only be granted against commercially sound security, at a reasonable rate of interest.

Another Bill, to be presented to the Second Chamber by the Minister of Economic Affairs and Labour, provides for measures for the furnishing of support to dairy farming. This country produces about 4,000,000,000 litres of milk annually, of which about 2,200,000,000 litres are used for butter, 900,000,000 litres for cheese, 100,000,000 litres for other products, and about 800,000,000 litres for domestic consumption. According to the 1930 statistics, the production of butter was 87,000 tons, almost half of which (42,000 tons) was exported. Of the production of cheese, amounting to 136,000 tons, 94,000 tons, or ap-

proximately two-thirds, were exported. There are 200,000 farmers engaged in the raising of cattle, in addition to which about 10,000 persons find employment in the associated dairy industries. At present the farmer is losing at least two Dutch cents on each litre of milk, representing a loss of 80 million guilders a year on the basis of an output of 4,000,000,000 litres of milk. In order to provide relief for the distressed farmers, a tax is to be imposed on butter and margarine, and, in addition, the admixture of butter in margarine is to become compulsory. The proceeds of these extra taxes, borne by the community, are to form a special fund for the provision of relief to the dairy farmers.

SPAIN.

Catalonia — Stock Exchange — Banks — Economic Committee.

(FROM OUR CORRESPONDENT.)

MADRID, May 12.

THE Catalan question, on being presented to Congress for discussion, has raised a crop of violent polemics. Feeling on both sides runs very high, and, unless a compromise is reached soon, a political crisis may result. The possibility of the Catalan Statute becoming law seems to have caused the parties of the Right to sink their differences and to put up a combined opposition to what they consider a dismemberment of the country. The students have taken sides against Catalonia, and disturbances, which remind one of pre-republican days, have broken out at the principal universities. On the other hand, the chiefs of the Catalan party have been making menacing remarks as to what is to happen if the Statute is not approved in its present form. Whichever way one turns, therefore, there are clouds on the horizon, and political peace, with the consequent return of confidence, seems as far off as ever.

As a result of this uncertainty it has again been necessary to peg the principal quotations on the Stock Exchange, thereby considerably diminishing the volume of business transacted. Altogether the situation of the Stock Market is frankly pessimistic, although any favourable factor would cause an immediate reaction, in view of the large amount of money available for investment. The Minister of Finance has presented a Bill to Congress which relieves banks of the necessity of paying further tax on the increased value of their portfolios of securities, which were written up (or down) to market value on December 31, 1931, in accordance with the recommendations of the Superior Banking Council. In spite of the measures taken to ensure a wide distribution of the recent short-term Treasury Loan, and the general belief that that object had been attained in a noteworthy measure, the latest figures of the Bank of Spain show that some 60 per cent. of subscriptions were based on bank credits. The digestion of the loan, in unfavourable market conditions, is, therefore, proving very laborious.

While the names of the persons who are to form the Committee for the Study of Economic Conditions in Spain have not yet been made public, the new organisation is considered to be a further manifestation of the Socialist tendency of the present Government, as the committee is to have access to all documents, whether private or official, that they may consider essential for the carrying out of their mission. It is pointed out also that the members of the committee, though personally not politicians, will be nominated by the different Ministries. In the preamble, the decree states that the organisation will not follow the lines of the British Committee for Industry and Commerce, created in February of 1924, but rather those of the German Commission established in April, 1926.

A new departure in Spanish educational methods is embodied in a decision recently taken by the Minister of Education to distribute each year amongst students who distinguish themselves in the examinations 500 free kilometre railway tickets, with an allowance in cash for their expenses so that they may visit the artistic monuments and places of historical interest in Spain. In other ways,

also, there is evidence that greater attention is being paid in Spain to the question of education, and, within the limits of Budget restrictions, considerable encouragement is being given to any measures which tend to raise the standard of education.

AUSTRIA.

Bank Reconstruction — Credit-Anstalt — Industry.

(FROM OUR CORRESPONDENT.)

VIENNA, May 30.

THE Austrian Government has presented to Parliament a Bill designed to enable banks and industrial enterprises, as has been done in Czechoslovakia and Germany, to reduce capital in order to eliminate the losses which they have suffered in the last few years. At the same time an increase of capital is also to be facilitated. The first bank to avail itself of this law will be the Wiener Bankverein. During the last few years it has intervened on the market in order to maintain the value of its shares, it also had to take over shares from members of former syndicates, and, finally, it had 550,000 of its own shares, which constitute a fifth of the total share capital, in its hands. These shares will be withdrawn, and the capital will be reduced from 55 to 44 million schillings. At the same time, 50 per cent. of this capital will be written off, so that it will then appear at 22 million schillings.

In order to provide new capital, a group, consisting of the Belgian connections, Société Générale Belgique, the Banque Belge pour l'Etranger, Brussels, and the Deutsche Bank und Discontogesellschaft, Berlin, will take over 13 million new shares, while an Austrian group under the leadership of the National Bank of Austria will take 10 million schillings' worth of new shares. Of the ten millions, the National Bank itself will supply three million schillings. Through this transaction the Bankverein intends to meet all its previous losses and to write off appropriate sums from its share holdings and its debtor accounts. At the same time, a small reserve of five million schillings will be formed. The old open reserves of 27 million schillings have been used for the purpose of rectifying the balance sheet.

The Bankverein will succeed in continuing consistently the policy it has so far practised of reducing its overhead expenses. It will have further to reduce the number of its clerks, it will also limit the number of branches, and it is becoming constantly clearer that the tremendous building of the head office is now much too large for the present reduced circumstances of Austria. It must, however, be acknowledged that the management pointed out again and again in recent years that it was necessary to adapt policy to the crisis and published honest balance sheets.

Recently, repeated rumours have cropped up to the effect that certain influential circles would like to see a fusion of the Credit-Anstalt with the rest of the big banks. The management of the Escompte-Gesellschaft has always taken the view that it would not take part in such a transaction and sets particular value upon centralising business in its own house. But before such questions can be considered, the relations of the Credit-Anstalt to its foreign creditors, to the Government and to the National Bank of Austria must be cleared up. The negotiations at present being held with the foreign creditors have made no progress so far. It is very difficult for the Austrian Government to bind itself in the Credit-Anstalt affair, so long as it does not know whether the Paris negotiations, which still hold out faint hope of credit relief, will be successfully terminated, or whether the transfer moratorium will be decided upon. It is certain that the National Bank has made all preparations for such a measure. It rejects the expression "transfer moratorium" and merely speaks of an interruption for some time of the allocation of foreign values to meet foreign debts. The Austrian debtors are to pay the sums due into a fund to be managed by the Austrian National Bank and its adviser. A moratorium for domestic debts is not contemplated, according to the latest declarations of the National Bank and of the Government. This decision was

necessary, because some savings depositors had again become anxious and were withdrawing their money from the banks and savings banks. The Minister of Finance recently estimated the amount of schilling notes in private keeping at 300 millions.

Economic conditions are still very unfavourable. In its report, the Alpine Montangesellschaft stated that export of iron has ceased almost entirely. Output of crude ore hardly amounts to 40 per cent. and of crude iron to 51 per cent. of the output of 1930. Orders on hand have sunk to only 15 per cent. of normal, and Alpine has again dismissed hands. The contemplated cut in wages has, however, been postponed, as the newly formed Cabinet intends to take measures to help the coal mines of the Alpine. It is true that this is difficult to reconcile with the fact that the Federal Railways draw 500,000 tons of Ruhr coal from the State mines in Germany, and of that total require 300,000 tons for their own purposes and want to sell the remaining 200,000 tons on the open market. Domestic commerce protested strongly against this, and there has also been a lively dispute between the management of the Federal Railways and the Ministry of Commerce. The latter demanded that the domestic coal mines should be supported in every possible way. To this end a decree will shortly come into force requiring the admixture of a certain proportion of Austrian coal with all coal sold in Austria.

In spite of the very low quotations ruling on the Stock Exchange there has been a further fall. The index figure for May is 6.8 per cent. below last month's, but several groups on the quotation list have been harder hit, particularly the iron and metal industry, in which there are falls amounting to as much as 24.9 per cent. In the paper industry and the electricity industry there were drops of about 15 per cent. Mining shares were best maintained and weakened by only 1.4 per cent.

HUNGARY.

Foreign Creditors' Fund — Banks — Economic Conditions.

(FROM OUR CORRESPONDENT.)

BUDAPEST, May 27.

BOTH Houses of Parliament have extended for another year the special powers granted to the Government last August for the financial rehabilitation of the country. An unexpected storm, however, arose in the Upper House in connection with the motion of the agrarian members that the amounts deposited at the National Bank in the Foreign Creditors' Fund in pengő, on account of the untransferable interest and amortisation due in foreign currencies, should be used for agricultural relief. The incident was closed, however, by the intervention of the Prime Minister and the President of the National Bank, who explained that the Government will not raid the Foreign Creditors' Fund without previous consultations about its use with the delegates duly appointed by the various groups of foreign creditors. Unfortunately, there is no such body in sight as yet, in spite of the fact that more than five months have elapsed since the declaration of the transfer moratorium. Apart from the Standstill Agreement concluded with the British creditors on short term loans, which is of purely negative character, no progress can be recorded with the American creditors, who were the biggest lenders of the post-war period on both short- and long-term account.

The Central Corporation of Banking Institutes has published very interesting and up-to-date material in its monthly report about the position of the banks and savings banks it controls. The development of the saving deposits and current accounts with all the members' bank and at the Postal Savings Bank has lately been as follows:—

	In million pengő.
1930, December 31	2125.0
1931, June 30	2078.8
1931, September 30	1830.9
1931, December 31	1809.8
1932, March 31	1693.3

Total deposits have decreased by more than 20 per cent. since the crisis started a year ago. The heaviest withdrawals took place in July and August, but there has been a slow, steady fall ever since. Complete returns for April are not yet available, but deposits with the thirteen principal Budapest institutes have decreased by a further 27 million pengő. According to the computation of the Central Corporation of Banking Institutes, deposits in the provinces have decreased by 204 million pengő, and those in Budapest by 177 millions, making a total of 381 million pengő from June 30, 1931, until the end of March, 1932. The fall of deposits is particularly serious in the provinces. The number of the small provincial institutes which are members of the Central Corporation of the Banking Institutes (the non-member banks are not allowed to accept deposits) decreased from 455 at the end of 1930 to 422 by the end of March, but this is still very much in excess of what the country needs. A general banking reorganisation is urgently needed, but in spite of the reconstructions effected in other countries, such as Germany, Austria, Czechoslovakia and Italy, where banking business suffered from the same defects, over capitalisation and losses in syndicates, bad debts, etc., no progress was made here in this respect. Only two of the eleven important Budapest banks have effected capital reductions by cancelling own shares held in their portfolio, although practically all banks hold large batches of their own shares and would do well to follow the German and Czechoslovak examples by remodelling their balance sheets on a sound basis.

The economic distress shows no signs of abatement. Crop prospects have somewhat improved, as the fair weather in May partly made good the unfavourable and long winter. Although the sown acreage of wheat is less than last year, it is hoped that the exportable surplus will be greater, but prices are very much below the cost of production both in cereals and cattle raising. Foreign trade continues to be depressed by the artificial hindrances, and there is little, if any, prospect of an improvement so long as the monetary problems are not solved satisfactorily in the Central European States. No better example can be given as an illustration of the strangulation of foreign trade than the Hungarian figures for the first four months of 1932 as compared with that of 1930. Exports in January-April amounted to 98.9 million pengő, as against 291.1 million pengő in the same period of 1930, a decrease of 70 per cent. Imports have declined in the same period from 269.0 million to 111.2 million pengő.

JUGOSLAVIA.

Banking Difficulties — Trade — May Improvement.

(FROM OUR CORRESPONDENT.)

BELGRADE, May 18.

APRIL was in many respects the hardest month since last autumn. Prolonged wintry weather had resulted in a fodder famine and forced peasants to part with their emaciated stock at ruinous prices. Bankruptcies reached a figure double that of last year, their total for the first four months being 289, as against 156 in 1931; while compulsory settlements rose from 234 to 479. Spring floods, submerging vast areas of the most fertile country and rendering tens of thousands of people homeless, carried distress almost to breaking point. In many parts peasants refused point blank to pay taxes, while political agitators, encouraged by the changes in Government and the depressed psychological mood of the country, began to foment discontent of a distinctly mutinous character.

Added to this came the moratorium granted to the First Croatian Savings Bank, the bank with the largest deposits in the country, whose depositors are to a great extent recruited among the small investors of Croatia and South Serbia. The Bank, which has financed industry on a large scale and has extensive connections with England, had been hit both by the industrial depression and the depreciation of sterling, and has been in difficulties ever since September, having been obliged to pay to its depositors over 800,000,000 dinars out of the 2,500,000,000 held.

According to the moratorium provisions, the bank, whose assets exceed its liabilities, is not obliged to pay out deposits within the legally prescribed term, but may pay them by instalments as liquidity permits. Deposits have, however, to be paid in full.

Foreign trade has practically ceased. In order to secure for itself the foreign bills necessary for the payment of State debts and obligations, the State has made it a law that three-quarters of all incoming bills from export have to be surrendered to the National Bank. This, it is true, has so far enabled the State to meet all service on foreign loans punctually, but it has left the business market with a famine of bills. Trade is hence of necessity finding devious ways. On the one hand, we have a return to barter, as in the case of a transaction, negotiations for which are well advanced, in which a Düsseldorf heavy iron factory is to exchange 5,000,000 gold marks' worth of goods for a corresponding amount of second-class Yugoslav wheat. On the other hand, a "black" bourse is developing, in which 10 per cent. to 15 per cent. above the official market rate is paid for foreign bills. Nor is any improvement to be expected unless a greater sale of Yugoslav agricultural produce brings in a larger stock of foreign bills for distribution among importers. The moral is that Europe cannot both expect debtor countries to fulfil their obligations on State debts and hope for a revival of trade.

The disastrous state of foreign trade is best revealed by the statistics themselves. Imports for the first quarter were worth 703 million dinars, as against 1,342 million dinars in 1931 and 1,740 million dinars in 1930. Exports were worth 634.6 million dinars, as against 1,159 million dinars in 1931, and 1,696 million dinars in 1930. The deficit in the trade balance so far is 69.4 million dinars, as compared with 183 million dinars in 1931 and 44 million dinars in 1930. The present war-like condition of world trade does not so much affect the final balance of settlement as destroy the total turnover.

May fortunately has brought some relief to the situation. Crops have been sown, and, although the harvest is bound to be affected by the floods and the lateness of the sowing, there is hope of a reasonable yield unless drought should supervene. The appearance of fresh grass and the promise of a good hay harvest have relieved the fodder famine and stiffened stock prices. A clearing arrangement with Switzerland has helped to improve the dinar to a rate of 9.05 Swiss francs for 100 dinars, as against 8.95 for 100, while the egg market has revived after touching bottom. Italy, too, has concluded a commercial treaty with Yugoslavia which might serve as a model of liberality at the present time of trade war. Spring building promises to be fair, as many under the stress of circumstances seem to prefer to turn their money into bricks; and spring works of a public character, although not as extensive as usual, have slightly relieved the labour market. Finally, the State, which had exceedingly heavy obligations on foreign debts at the beginning of May, when no less than six foreign coupons fell due, will have now an easier time until November. It is expected, therefore, that with the State's diminished demand for foreign bills, a larger proportion than hitherto can be turned over to importers, and a certain slackening of the "black" market rate is hoped for in consequence. The present interval of relief is no doubt extremely welcome, but it cannot be said that the strain of the last two months has left the economic vitality of the country unimpaired. Its final recovery or otherwise is unquestionably bound up with the fate of the rest of Europe.

ROUMANIA.

Exchange Restrictions — Trade — Banking.

(FROM OUR CORRESPONDENT.)

BUCHAREST, May 23.

THE exodus of Roumanian capital, the purchase of foreign banknotes and gold for the purpose of hoarding, and the foreign exchange restrictions in other countries impeding Roumanian exports have at last produced the only

possible result: a Ministerial Decree published on May 17th enforces far-reaching restrictions in the purchase and sale of foreign exchange. In fact, the National Bank has received a practical monopoly of these transactions; banks, commercial houses and private persons are not allowed to sell or buy foreign exchange except to or from the National Bank. All export of *devisen* is prohibited. The measure has caused considerable consternation and disorientation, especially as no machinery had been devised to deal with the immediate needs of the market.

The initial cause of the movements of capital which were instrumental in leading to this drastic step are undoubtedly to be sought in the growing lack of confidence in the financial stability of Roumania. This feeling originated when last summer's banking crisis caused the large withdrawal of deposits; it was accentuated when the enormous falling off in Treasury receipts this year drew attention to the precarious Budget position. The unsatisfactory cereal and timber exports, due to the long winter, the condition of the roads and the lack of credit facilities, did its share to disquiet public opinion. But it is particularly owing to the effect of the short-sighted legislation of the last few years that the capital of this country has not found employment offering sufficient safeguards and has been driven into unproductive channels or out of the country.

The agricultural conversion scheme became law on May 1st. Already the banks in Transylvania have reduced the deposit rates, and, where the depositors wish to withdraw their funds, have arranged by common consent the payment in small instalments stretching over long periods. The agriculturists have become aware of the fact that the measure has cut off their credit. A number of them have already expressed their intention of not availing themselves of the debt reductions allowed by the law, in order to obtain in future such facilities as may still be available.

Nothing has yet transpired of the result of the examination by French experts of the financial state of Roumania. For the current year the payment of the coupons of the Roumanian foreign loans is said to be assured, but to obtain this end the Government is sacrificing its own officials, its pensioners and the industries which have supplied materials to the State. Payments of salaries to civil servants and of pensions are in arrears and are made in small instalments. The industries are not paid at all.

Foreign trade figures for the first two months of this year show an unusual balance of 475 million lei in favour of this country. The favourable balance is not, however, due to increase in exports. Compared with last year imports have fallen 43 per cent. as to quantity and 44 per cent. in value. Exports have increased in tonnage by 7 per cent. as against 1931, but their value has decreased by 17.6 per cent. Owing to the reduction in imports the Customs receipts on imported goods for the two months under review show a reduction of 32 per cent. compared with last year. The cancelling and reduction of export taxes resulted in a fall of 71 per cent. in the revenue from this source.

The leading financial and economic newspaper *Argus* gives the following figures of grain exports during the first four months of this year, compared with those of the same period of 1931:—

	1931. January 1st–April 30th.	1932. Wagons.
Wheat	7,851	3,126
Maize	57,887	24,257
Barley	7,078	26,289
Oats	35	1,647
Rye	804	1,135

The increase of wheat exports is due to the export premium. Although the export of maize shows a substantial increase its volume does not correspond to expectations. In May, grain exports are believed to have fallen considerably, as owing to the agricultural conversion law farmers are not obliged to sell for immediate payment of

debts. Besides, on account of the lateness of the season they are occupied on the land and therefore unable to come to the markets.

The balance sheets of December 31, 1931, published by the Roumanian banks show ample evidence of the crisis through which these institutions passed last year. From this point of view the balance sheets of the principal banks of Bucharest, the Banca Romeneasca, the Banque Commerciale Roumaine and the Banque de Crédit Roumain make interesting reading. Their aggregate capital and reserves amount to 1,770 million lei. Their cash and liquid resources fell during the year from 2,432 millions to 800 millions. Their investments in public securities and shares stood at 382 million lei at the end of last year, as compared with 428 millions a year before. Considering the state of the bond and share market, this drop in the value of the investments appears very small. The bills discounted and debtors amounted to 7,496 millions on December 31, 1931, as against 9,471 millions the year before, a reduction of 21.7 per cent. On the other hand, the deposits and creditors in current account were reduced in 1931 from 10,662 millions to 4,153 millions, a fall of 61 per cent. To meet, therefore, the enormous drain of 6,500 millions on their deposits the banks were only able to reduce the debtors by 2,100 millions and pay from their liquid resources 1,600 millions. For the deficiency they had to go to the National Bank, so that their rediscounts rose during the year from 175 millions to 3,155 millions.

CANADA.

Crops — Business — Railways — Parliament.

(FROM OUR CORRESPONDENT.)

OTTAWA, May 16.

ABOUT 75 per cent. of the western wheat crop has now been sown and the official forecasts of the intended acreages of the principal crops, as reported on May 1st (with the 1931 acreages within brackets), are as follows: Spring wheat, 24,671,500 (25,554,205) acres; barley, 3,688,400 (3,768,269); spring rye, 163,900 (179,023); flaxseed, 559,450 (627,430); mixed grains, 1,198,000 (1,186,877). There are prospects of a good wheat crop. Mr Beatty, the president of the C.P.R., recently predicted, on the strength of reports from his officials, that a wheat crop of between 400 and 500 million bushels was now assured. The official estimate of the stocks of wheat in Canada as at March 31st was 243,300,165 bushels, as compared with 280,095,391 at the same date in 1931; of this total some 58½ million bushels were in farmers' hands, and of this about half would be absorbed by seed requirements. The prospective carryover is still placed at a little above 100 million bushels, but the Department of Trade and Commerce claims that the "general statistical position of Canadian wheat supplies compares very favourably with that of the same date a year ago."

Business remains generally depressed. The car-loading figure for the week ending May 7th, at 41,028 cars, was actually 179 cars below the figure for the previous week and 3,506 cars below the figure for the corresponding week of 1931. Another disheartening sign is that the downward trend of prices, which seemed to have been halted, has been resumed; and the Bureau's index of wholesale prices on the base 1926 = 100 was 68.4 for April, as compared with 69.1 for March. Both wholesale and retail houses report little real gain in business, and sharp price-cutting is required to induce the public to buy freely. However, some impetus is expected to be forthcoming from the American tourist traffic, which has already begun; the natural impression would be that the slump now prevailing in the United States would seriously reduce its volume, but in 1931 it was calculated that the amount spent by American tourists in Canada (\$188,000,000) was only 7 per cent. below the figure for 1930, and apparently many Americans who formerly took a summer holiday in Europe are now, on grounds of economy, contenting themselves with a holiday in Canada. There are not many signs of

any real improvement in manufacturing industry. The comparative meagreness of the domestic demand in many lines makes the local manufacturers all the more exigent in their pressure upon Ottawa to keep tariff barriers up and check the inflow of imports; and recently there have been cases of duties being increased by Orders-in-Council. Some time ago a plant in Hamilton began to roll steel plates more than 60 inches in width, and, on the ground that these plates were of "a class or kind made in Canada," the Minister of National Revenue used his powers to clap on a duty of \$4.25 per ton on plates up to 64 inches. But a demand for the same duty on plates up to 78 inches was refused, largely as the result of protests by British interests, whose trade would be adversely affected.

There have been some very disturbing revelations before a special committee of the House of Commons which has been investigating the finances of the Canadian National Railway system. Public opinion has been profoundly shocked by disclosures of what seem to have been culpable extravagance and waste on the part of the management. Huge sums have been paid out for publicity expenses, club dues for officials, etc., and the idea evidently prevailed that with the public purse to draw upon, no expense should ever be spared. It is admitted that drastic economies have now been effected by the C.N.R. management, but confidence in some of the chief officials has been badly shaken, and, while changes may be delayed until the report of the Transportation Commission is submitted, they are inevitable.

The Government has now secured the passage of its latest Unemployment Relief measure in face of protests from the Liberals that the Government had no right to claim another blank cheque in regard to expenditures for relief. In this measure the Government also took powers to advance money to corporations, and Premier Bennett, in defending this provision, sounded a very significant note of warning. He said that from information which had reached him from very authoritative sources he apprehended that there might arise in North America during the summer a very difficult situation, and he wanted to be prepared to meet it. He even went so far as to say that it might be necessary to "bolster up" with the credit of the nation certain institutions which, while possessed of assets much greater than their liabilities, had been reduced to a condition of temporary embarrassment.

The Minister of Agriculture, after a series of conferences with members of all political parties in the Federal Parliament and agricultural and marketing experts, has announced that the Government contemplates the establishment of a National Marketing Board, whose task would be to supervise the disposal of Canada's exportable surplus of farm products. It would not deal with wheat or cheese, as the export percentage of these commodities is too high; but it would concern itself with butter, live cattle, poultry and other farm products. Apparently for butter the Minister has in mind some plan analogous to the Patterson scheme invented in Australia, under which a small levy would be made on every pound of butter produced, and the fund secured from this levy would be used to make up the gap between domestic prices and the lower world prices at which the Board would sell the exportable surplus. Mr Weir intimated that the Government would probably appoint a Commission to examine the idea of a marketing board and prepare a report so that the matter could be discussed at the Imperial Conference.

The recent formation of the Business Transfer Partnership & Property Agents Institute of Great Britain raises the status of the profession of Business Transfer Agents. A very comprehensive course dealing with B.T. can be secured for £1 1s. 0d., spread over 4 monthly payments of 5s. 3d. each. Course is sent on receipt of first payment.

Letters to the Editor.

MONETARY POLICY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—We may be grateful to Professor Robbins for having pointed out, when opposing deflation in your current issue, that an attempt to get back to the 1929 level of prices "involves something more than passive non-interference with naturally cheap money." That should be plain enough; yet the situation gets graver and nothing more is done or promised.

Is it not time to admit frankly that we ought now to adopt the two expedients which are generally recognised as efficient instruments of monetary expansion? In the first place the Bank of England should try the experiment of purchasing securities on a great scale and loading up the joint stock banks with funds. The Federal Reserve Banks have purchased more than half a billion dollars' worth of United States securities in the last six weeks. Some time must elapse before the effects of this policy can be judged. There are certain conditions peculiar to the United States at the moment, and not present in Great Britain, which must retard the natural effects of this policy there. In England the field stands clear for the experiment. The possibility must be recognised, however, that stagnation is now so great that the joint stock banks might fail to put the money placed at their disposal into active circulation.

Secondly, there is the surer and universally recognised expedient of government action. No one has seriously doubted that a government is able to inflate, and, therefore, to reflate. Few seriously doubt that deflation is urgently needed to save us from calamity. Why, then, is government action not only not advocated, but hardly mentioned? The mere suggestion of it is apt to evoke a host of foolish alarms. Inflationary orgies are recalled. History does not, however, show that controlled deflation tends to degenerate into inflationary disorder; since it provides no examples of the cause, it can teach us nothing about the probable effect. *Prima facie* there is no reason why an expansive movement, undertaken by a strong government that knows its own mind, should get out of control. The expansion may be undertaken either by the outright remission of taxation *without countervailing economies*, or by the adoption of new constructional work, financed by loans from the banks. Both methods may be attempted. Experience alone can show which would be the more effective in achieving the desired result of a rise in general prices. The important point is that so long as prices stand below the 1929 level, the government should disburse to its citizens more than it takes from them and thus get more money into circulation.

May I add a few words on the external situation, which seems to merit more attention in connection with our monetary policy than it usually receives. There are two sides to the problem with which we are faced, namely, how in the existing calamitous state of the world we can do the best for ourselves, and how we can assist the world to recovery. The second of these is usually thought of as necessarily involving international co-operation; everything should certainly be done to secure it. But this country is of such importance in world finance and trade that its every act of policy has some appreciable effect on the world situation. Unfortunately we have since last August struck two major blows, one of them willy nilly, at the rest of the world, by the depreciation of sterling, and by the tariff. It is of great importance that we should henceforward do nothing tending to affect the outer world adversely, until there are some signs of recovery there. This means that we should not allow our internal deflation to depress sterling further; we should abandon altogether for the time the attempt to force our exports upon a shrinking world market; such an attempt can now only make the external situation more critical. Once there is world recovery our exports will float up on the rising tide; it will be time enough then to think of fixing sterling at such a level as will give our exporters their fair chance. This is not the moment to try to stimulate our exports by means of currency depreciation.

The deflation, if genuine and effective, should provide a strong stimulus to our industries working for the home market. It will, of course, also tend in the direction of increasing imports. This is a crucial matter. The external world, like this country, needs a rise of prices. The only influence we can have on world prosperity operates through our willingness to buy and sell goods on the world market. All countries, especially the weaker ones, are striving to obtain a favourable balance of trade, and by this very attempt are rendering it impossible for each to succeed. For some countries this struggle is inevitable, since they have external non-trading liabilities to meet, and cannot cover these by borrowing in the existing lack of

confidence; they are seeking to secure a favourable balance out of dire distress. But others are actuated by a misplaced *purism*. It is these countries alone which can relieve the situation by being willing to endure an adverse balance for the time, and it is their paramount duty to do so. A notable example is Great Britain. Thus, if internal deflation tended to raise the volume of our imports, we should not try finally to burst the glutted world by forcing out more exports, but should be content to support sterling at a level not lower than its present one, and cover our adverse balance out of the abundance of our available assets. So and only so, can we contribute our mite towards world price recovery.

The exchange equalisation fund which was hailed on many sides with unreasonable haste, appears in fact to be a new engine of deflation. Apart from technicalities concerned with profit and loss, its main object is to prevent the foreign funds which have recently been flowing in from exerting their primary effect in expanding our circulating medium. It enables the Bank of England to pursue a neutralising policy on a grand scale, to sterilise the foreign funds, as France sterilises her gold. The normal primary effect of the inflow would be to raise by an equal amount the liabilities of the Bank of England and so increase the cash basis of the country. Instead, the money has been tucked away, and the calamity of a credit expansion in England averted! Meanwhile the authorities feel very dashing, because they are holding sterling down. It is a curious result of the one new monetary experiment we have tried during the crisis, that it should enable us to pursue the unique policy that is calculated to have a depressing effect both at home and abroad simultaneously.

To underline my view of our proper external policy, may I contrast it with one which appears to be widely held? If I asked how they hope that the world might be salvaged, there are many, I think, who would answer as follows. The leading powers should get together and, having abolished Reparations and War Debt payments, should once more carefully but bravely elaborate a scheme for lending to distressed nations. To do this, they must first have set their own house in order, and have an export surplus to make it possible for them to lend. When England, for instance, has depreciated sterling enough and imposed tariffs enough, she will at length, it is hoped, have an amply favourable balance; and, having obtained this, she will come forward and, with a generous but far-seeing policy, lend magnificently to a languishing world. Such a notion is surely quite topsy-turvy. The process of obtaining the favourable balance creates the distress which the loan is subsequently used to relieve. Meanwhile, the world is plunged into profounder gloom and fresh international indebtedness quite unnecessarily piled up. I hold that what the strong nations can and ought to do for the weak in a time of crisis is not to lend them money, but—what is diametrically opposed to that—to be prepared to buy their goods and endure for the time an adverse balance on current account. What is the much talked of international co-operation to mean if not precisely this—that the strong nations should agree to let in the goods of those nations, who must have a favourable balance on trading account to avoid bankruptcy?

With a resolute determination to reflate and to maintain the external value of sterling, England should be able to do much for herself and something for the rest of the world. Is it too much to hope that our leaders might be inspired with such a determination?—I am, &c.,

Christ Church,
Oxford.

R. F. HARROD.

FOREIGN EXCHANGE RESTRICTIONS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The admirable article on Foreign Exchange Restriction in *Danubia* in your current issue tempts me to seek the hospitality of your columns for a few remarks upon a point which has not, as yet, attracted much attention in this country.

Anybody familiar with the present plight of Central Europe can have little doubt that the exchange restrictions have not only failed to achieve the desired object, but that they have actually done more than any other single factor to aggravate the situation. And it is certain that the dwindling of trade in this area—which is the main concern of the rest of the world—is chiefly due to this one factor. Informed opinion in Germany and Austria is unanimous in condemning these restrictions, in even stronger terms than were employed in your article. This fact would probably have prevented their imposition, or at least have led to their early removal, had they been instituted by over-eager bureaucrats, if it had not been for the curious factor to which I desire to draw attention.

If one approaches any responsible person in the countries concerned and protests against these restrictions, one is

almost certain to be informed that the establishment of this régime was due not to their own choice but was done on the advice—or perhaps one should say request—of the representatives of the foreign creditors. In Austria—with whose position I am more familiar—it would have been considered indiscreet to mention this fact in public until recently; but, in a recent speech, Chancellor Brüning has mentioned the fact that in Germany, too, exchange restriction was forced upon an unwilling government by the representatives of the foreign creditors.

Now, in discussions of this kind, the creditor nations were, so far as one knows, represented by supposed experts. But is it credible that, at the present time, experts should give advice of so ruinous a nature? This would imply that we have not only failed to learn anything during the past ten years, but that we have also forgotten what we had already learned. In the spring of 1922 the Finance Commission of the International Economic Conference adopted a resolution that—

"All artificial control of operations in exchange, whether by requiring a licence for transactions in exchange, or by limiting the rates at which transactions may be effected, or by discriminating between the different purposes for which the exchange may be required, or by preventing free dealings in forward exchange, is futile and mischievous, and should be abolished at the earliest possible date."

Is it not time to ask who are the "experts" who, by advice which is in flagrant conflict with all sound scientific teaching and with the published opinion of a body of experts who had to accept responsibility for their advice, have inflicted this inestimable harm not only upon Central Europe but also upon the world as a whole?—Yours, &c.,

London School of Economics,
Houghton Street, W.C.2.

F. A. VON HAYEK.

Books and Publications.

THE NINETEENTH CENTURY.

THE publication of Dr. Knowles's last book* makes the reader deplore once again the fact that no more works will come from that vigorous pen, while at the same time he must congratulate Dr. Allan McPhee, who revised the manuscript and correlated it with the author's lecture notes, on carrying out a very difficult task with skill and judgment. Indeed, it may even be due to Dr. McPhee that this book suffers much less than some of Dr. Knowles's earliest work from redundancy and untidiness of arrangement, though even here the way in which it is planned involves the repetition of a good many statements.

* "Economic Development in the Nineteenth Century." By L. C. A. Knowles. Routledge. 12s. 6d.

PROFIT

By others' experience.

NOW READY, our latest BUSINESS SERIES List of Books by Authors of eminence in their respective spheres. Post free on receipt of post card.

Specimen Selection:—

PARTNERSHIP LAW AND ACCOUNTS.

The law relating to Partnerships is carefully and clearly explained, while the necessary accounts are fully set out and analysed.

By R. W. Holland, O.B.E., M.A., M.Sc., LL.D. 8/-

ROUTINE OF COMMERCE.

The chapters include specimen transactions as far as possible, the correspondence and documents incidental thereto being introduced in their natural order.

By Alfred Schofield, B.Sc. 4/-

OBTAINING CAPITAL.

This work shows in explicit detail the only rational methods by which small businesses can be financed; how to obtain finance for a good invention or business idea, and how to obtain finance for the purchase of a business. Indispensable to all seeking capital. Third Edition. By G. A. Bush, F.R.E.C.S. 4/6

THE BOY'S BOOK OF BUSINESS.

With a foreword by Lieut.-Gen. Lord Baden-Powell. This book should be in the possession of every boy just entering business life. By Cecil Chisholm, M.A., and Dudley W. Walton, F.I.R.S. 2/6

EFFICIENCY PUBLISHING Co.
Publishers and Booksellers,

Efficiency House, Lowlands Rd., Harrow, Middx.

The purpose of this book is to do for four other countries—France, Germany, Russia, and the United States—what Dr. Knowles has already done for Britain and the British Empire; viz., to present a picture of economic and commercial development from the mid-eighteenth to the end of the nineteenth century. And it is well and vividly done. With the exception, perhaps, of the section on American tariff policy there is not a dull chapter in the book; and the mere fact that its subject is viewed from an angle which ignores, save by casual reference, the economic growth of the British Isles is in itself sufficient of a novelty, in books by English authors, to provide an excellent stimulus.

It is true that there is a certain sensation of incompleteness about the end of the book, due to the arbitrary termination of its period. The year 1900 may seem a significant date in British history, owing to the largely accidental coincidence of the Boer War with the death of Queen Victoria and the end of the long rise in real wages; in European or American history it has no such significance. A history of Russia, for example, which stopped abruptly with the completion of the trans-Siberian railway and ignored the seizure of Manchuria and the Russo-Japanese War would be nonsensical. As a year 1900 is merely a middle point in the development of the age of imperialism; and, in fact, Dr. Knowles does trace most of her themes beyond the limits of the nineteenth century. But really there is no break at all; 1900 leads straight on to 1914, and even the war itself is less of a break in continuity than a violent concentration of forces which were growing in the 'eighties.

Dr. Knowles is rather weak on pre-war Russia, and her treatment of eighteenth-century France is still rather Carlylean and takes too little account of the achievements of French industry under Louis XVI. Her evaluation of both Napoleons, however, is excellent; and her tracing of the widespread influence of French (rather than English) experience on Europe of the mid-nineteenth century highly stimulating. She has collected a large number of important facts and woven them into a series of studies valuable to the student and interesting to the general reader. In these days, when historical writing varies between the skittish and the abysmally dull, this is indeed high merit.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

SWEDISH INDUSTRIALS.

It is unfortunate, but probably inevitable, that the Swedish industrial companies whose shares are quoted in the international markets have suffered as a result of the collapse of the Swedish Match and the scandals of the Kreuger and Toll group. There are three large concerns domiciled in Sweden whose shares are internationally held, namely, A/B Svenska Kullagerfabriken (the Swedish Ball Bearing Co.), A/B Separator, which manufactures milk-separating machines and other dairy products, and A/B Electrolux, which manufactures and markets vacuum cleaners, refrigerators and other household appliances. To a large extent their directors have already anticipated shareholders' anxieties by issuing full reports and detailed accounts for the year 1931. The Swedish Ball Bearing Company (S.K.F.) has always presented model accounts, including comparative profit and loss accounts and balance sheets for six years, with a detailed schedule of the nominal values and book values of holdings in subsidiary companies. Both Swedish Ball Bearing and Electrolux issue consolidated balance sheets. That some investors have, since the Kreuger crisis, adopted a distinctly conservative attitude towards these companies' shares may be not unconnected with certain defects in the Swedish auditing system, to which Professor Hecksher tactfully referred in his speech to the Anglo-Swedish Society last week. There are no societies of accountants in Sweden incorporated by royal charter, or operating under the public companies' Acts. Swedish auditors are merely licensed by the chambers of commerce, and any respectable and competent business man can, apparently, obtain a licence. Without criticising the skill and reliability of the auditors of Sweden, or any other country, the London Stock Exchange might well consider the pros and cons of the suggestion that the certificate of a British firm of auditors should be a condition precedent to future applications for a London quotation by companies domiciled abroad.

As regards the trading position of the three companies, each is sensitive, in different degrees, to world economic depression. The Swedish Ball Bearing Company largely reflects the condition of the heavy industries. It is the largest existing group of manufacturers of ball and roller bearings, and supplies over one-third of the world's market. It operates directly in Sweden and, through subsidiary companies, manufactures in Great Britain, France, Germany and the United States of America. Its plant in Russia was made over to the State in 1931 against payment in Russian Government bonds, whose service (interest and amortisation) has so far been punctually met. In connection with this deal, the company obtained substantial orders under the Five Years' Plan. Over the company's territory as a whole, however, while the decline in trade with the automobile industry has been offset to some extent by increased demand for roller bearings for railway and other heavy industries, total sales declined in 1931 by 6 per cent., and the orders on hand at the end of the year were nearly 20 per cent. below those of a year earlier. It has been found increasingly difficult to collect accounts in countries where the exchange position is precarious. The general tendency, indeed, has been towards extended credit, which has involved the maintenance of a larger working capital in proportion to turnover.

The Separator Company is bound up with the fortunes of the agricultural industry, and has severely felt the continued impairment of the purchasing power of the agricultural population in Europe and America. Its factories in Sweden, Germany, Austria, Hungary and the United States of America have been unable to work full time. There has been, consequently, a heavy proportionate increase in manufacturing costs and a reduction in profits despite economies on the expenditure

side. Nevertheless the directors claim that the company's share of the world's turnover in milk-separating machines has not diminished.

Electrolux, which manufactures household articles of a semi-luxury type, has fared better than its colleagues engaged in the industrial and agricultural fields. The world's consumption of vacuum cleaners and refrigerators has declined, but the company has maintained its turnover, thus increasing its share of the world trade. During the first quarter of 1932 its turnover and profits were in excess of those of the same period of 1931. The company is now, apparently, reaping the benefit of the rearrangement of its manufacture, tariffs and import restrictions having compelled it to transfer manufacture largely from Sweden to the factories of its foreign subsidiaries.

The following table gives a comparison of the three companies' ordinary capital and trading results for the past two years:—

(000's omitted.)

	S.K.F.		Separator.		Electrolux.	
	1930.	1931.	1930.	1931.	1930.	1931.
Paid-up ord. capital...	Kr. 130,000	Kr. 130,000	Kr. 81,700	Kr. 81,700	Kr. 60,000	Kr. 60,000

* Reserve for preference dividend for following year.

It will be seen that dividends have been reduced in all cases, notably in that of Separator. Profits last year declined, as compared with 1930, by 25 per cent. in the case of S.K.F., by 42 per cent. in that of Separator, and by only 11½ per cent. in the case of Electrolux. The last-named, on this showing, has established itself as the most prosperous of this Swedish family of industrials, followed at some distance by S.K.F., with Separator a bad third.

The companies have maintained their finances in liquid condition, though Separator may be suffering from the illiquidity of its agricultural customers. Electrolux finances its sales independently under hire-purchase contracts, the collection of which, according to the directors, has been maintained at the level of normal times. The "accounts receivable" in its balance sheet are shown "at amounts which can be considered collectable, and as regards hire-purchase contracts at what is considered to be their cash value, after providing for overdue or doubtful debts." The next table gives a comparison of the companies' current financial position:—

(000's omitted.)

	S.K.F.		Separator.		Electrolux.	
	1930.	1931.	1930.	1931.	1930.	1931.
Cash*	Kr. 17,113	Kr. 22,101	Kr. 27	Kr. 212	Kr. 5,932	Kr. 4,090
Debtors.....	16,395	14,960	56,158	53,305	26,064	26,308
Stocks.....	25,953	22,370	13,202	12,345	11,238	11,594
Total current assets	59,461	59,431	69,387	65,862	43,234	41,992
Creditors and taxes....	10,630	9,987	6,422	5,701	5,553	5,077
Dividends payable....	13,000	9,100	4,902	1,634	...	...
Surplus liquid assets	35,831	40,344	58,063	58,527	37,681	36,915

* Cash in case of S.K.F. includes certain bonds.

Our final table shows the course of London market quotations:—

	1931.	1932.	Present.	Div.	Div. Yield.
S.K.F. ... Kr. 100	High. 10½	Low. 5½	7½	4	4½
Separator Kr. 100	5½	1½	...	1½	7-17
Electrolux Kr. 100	7½	77/6	5½	70/-	3½

On the evidence of the above figures Electrolux appears relatively undervalued. Possibly the market considers that the products of Electrolux are more vulnerable to trade depression at this acute stage than the products of the other companies. On this point, however, there is room for variety of opinion. The figures suggest, at least, the reassuring conclusion, borne out by all available evidence, that the market is concerned chiefly with the industrial prospects of these companies, and is untroubled by fears of such "internal" complications as affect the outlook for Swedish industrial concerns involved in the Kreuger débâcle.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
June 7.	June 9.

AFTER a dull opening, the mid-week announcement of a possible world economic conference was eagerly seized upon in the market. Profit-taking in gilt-edged stocks was arrested, numerous industrial shares gained a shilling or more, and speculative values were steady on moderate Continental support. Further examination of the latest international gift horse, however, checked the firmer tendency on Thursday, though re-investment of the Five per Cent. War Loan interest disbursements maintained prices in the gilt-edged market. Technical conditions, at the moment, indeed, favour a succession of short-lived "psychological" rallies, but market feeling, at bottom, is more conservative than at any time since the slump began.

The reaction in gilt-edged had run its course by last week-end, and tentative investment inquiry on Monday became sufficiently strong to raise quotations all round in mid-week. Five per Cent. Conversion was in keen request, and War Loan was bought on the correct assumption that no conversion offer would accompany the June 1st dividend warrants. The announcement of a new rupee issue did not affect quotations for India loans. Investors showed a tendency to sell out of Australians at their improved level.

Business in foreign bonds remained restricted, but prices on the whole were less depressed. Japanese received support after extensive selling. German issues were heavy as the military and Prussian character of the new Government became apparent. Other European bonds improved, however, Czechoslovakian Eighties responding to President Masaryk's strongly-worded message.

Home rails remained dull despite the announcement of "pooling" for competitive traffics on the L.M.S. and L.N.E.R. The week's revenues, which afforded comparison with Whit-Monday week in 1931, were unencouraging, and on the Southern distinctly bad. The weaker railway preference issues lost further ground. Metropolitan ordinary, exceptionally, rose nearly ten points in two days, on substantial reports of concessions secured in London Traffic Board negotiations, including an Underground offer to guarantee a 3 per cent. dividend. The foreign railway market was badly upset by the terms of the Buenos Aires and Pacific moratorium application (discussed on page 1252). All the Argentine stocks were lower, and Leopoldinas were sold on an unfavourable interpretation of the year's report.

Industrial equities continued to break new low ground until Wednesday, when liquidation dried up and American influences produced a better all-round tone. The volume of dealings, however, failed to increase, and many prices rises due to bear closing were lost within twenty-four hours. The hopeful speech of the chairman of Callender's Cable arrested the decline in electrical equipment shares. Steel shares were a shade harder on the belief that co-operation between Stewarts and Lloyds and United Steel Companies (see page 1250) might be a prelude to other arrangements under a "protected" régime. Motor shares, however, remained depressed, Ford continuing to decline. The existence of a big bear account in Courtaulds

was revealed by the extent of Wednesday's rise, which was not maintained. Store shares had an unsatisfactory week, Marks and Spencer falling on sales of "rights" by shareholders. Weakness in Unilever was attributed to sales from Holland. No interest was taken in shipping shares, the fall in P. & O. continuing unchecked. Bank shares were irregular, Anglo-South American being again liquidated. The bear movement in insurance shares, however, tailed off, and some fair recoveries occurred in mid-week.

Paris was a depressing influence in the oil share market. Prices receded, first on the reported hitch at the New York Conference regarding concessions to the Soviet viewpoint, and subsequently on the lower profits and dividends of the Anglo-Persian.

The drooping tendency of rubber caused attempted liquidation in the share market, where dealing was largely a matter of negotiation. Tea shares showed no sign of improvement, the efforts of a few "bargain hunters" being insufficient to offset moderate but consistent selling pressure.

Mining shares, as usual, were sensitive to the better mid-week tone of other markets, but business remained restricted. West Australian issues were active at the outset, for reasons discussed on page 1254. Paris tended to buy favourite South African mines. Springs improved on the disclosure of a record profit figure. The firmness of metal prices in mid-week gave Rhodesians a slightly better appearance, but Continental buying of Rio Tinto was not maintained. Tin shares remained dull, the metal rising on more favourable May statistics, but subsequently receding despite the adherence of Bolivia to the latest restriction proposals.

FOREIGN STOCK EXCHANGES.

NEW YORK.

Markets were closed on Monday for Memorial Day, and opened weak on Tuesday. The trade situation offered no ground for confidence. Operations in the steel industry, for example, were reduced from 25 to 28 per cent. of capacity, better orders from motor manufacturers having failed to offset smaller demand from other sources. The initial results of President Hoover's personal appeal to the Senate were bearish, sharp declines, particularly in utilities and rails, following the news of the defeat of the Sales Tax. The subsequent passage by the Senate of the Tax Bill occurred after hours, and prices opened on Wednesday with sharp overnight gains. The market, however, rapidly resumed its reactionary appearance, a wave of special liquidation affecting electrical shares, as a result of the Senate's adoption of a 3 per cent. tax on the gross income of electric power companies. Commodity prices, in addition, had a weak tendency. Progress was made with negotiations among bankers for a bond pool, but the prices of the best issues continued to lose

ground. The activity of the Oil Conference remained suspended, though negotiations with the Russians were brought a stage nearer agreement. Car loadings in the week ended May 21 were 515,000 (a new low record) against 517,000 in the previous week and 754,000 in the corresponding week of 1931. The *New York Times* business index reached a new low level of 55.7 for the week ended May 21, against 56.1 in the previous week.

PARIS.

The tone was irregular on the eve of the monthly settlement. Bank shares were less active, following the action of the directors of the Banque de l'Union Parisienne in calling the attention of the Public Prosecutor to false rumours concerning the bank's position. Political considerations at home continued to influence the markets, the tone becoming rather firmer on the refusal of M. Herriot to consider nationalisation as the price of Socialist support. Rentes advanced, and international securities had a better appearance. On Thursday there was a renewal of weakness in all sections, Banque de France, Suez Canal and Royal Dutch being especially affected.

	May 26, 1932.	May 30, 1932.	June 2, 1932.		May 26, 1932.	May 30, 1932.	June 2, 1932.

BERLIN.

The Brüning Government's resignation caused considerable hesitation on the Berlin Bourse. The possibility that the new administration would be forced to resort to inflationary measures induced appreciable selling of fixed-interest for equity stocks. Dye Trust, Continental Rubber and Siemens, for example, were better, while municipal loans were weak.

	May 26, 1932.	May 30, 1932.	June 2, 1932.		May 26, 1932.	May 30, 1932.	June 2, 1932.

Norddeutscher	12½	12½	13½	Svenska Tandsticks	9½	9	9

AMSTERDAM.

A general relapse occurred on the news from Germany, Royal Dutch falling heavily, while Unilever N.V. reached a new low level. Rubber shares, especially Amsterdam rubber, were pressed for sale, and tobacco shares came on offer. A fair recovery, however, occurred in mid-week on news from America, though the volume of trading remained restricted.

	May 26, 1932.	May 30, 1932.	June 2, 1932.		May 26, 1932.	May 30, 1932.	June 2, 1932.

OTHER CENTRES.

The majority of other European bourses were dull and depressed at the beginning of the week, but improved slightly on later days. Brussels was moderately cheerful, though no large amount of business was done. Stockholm quotations, however, were easier, bank shares being particularly erratic. Milan was fairly active before Thursday's holiday.

EXECUTOR AND TRUSTEE BUSINESS CONDUCTED.

COMMERCIAL SERVICE.

The Bank has over 370 Branches in Africa, and Agents and Correspondents throughout the World. The closest touch with Trade and Industrial conditions is maintained, with special attention to Commercial and Credit Intelligence. This service is available to Exporters, Importers and others wishing to develop trade with South, East and Central Africa.

THE STANDARD BANK MONTHLY REVIEW is sent post free on application. It gives the latest information on all South, East and Central African matters of Trade and Commercial Interest.

In calculating yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

INVESTMENT NOTES.

Course of Equity Share Values.—The downward movement in the prices of equity shares, both in London and New York, which started early in March and continued throughout April, was unchecked last month, when values in both cases reached new low records. Early last month, however, it appeared that a partial recovery might occur, but the movement made no headway, and prices closed at the lowest level for the month. Selling was steady rather than heavy, and reflected confirmed pessimism regarding the general trade outlook rather than distrust of the position of particular companies or groups. The period of relative stability in the first part of last month was accompanied by rapidly rising prices in the gilt-edged market. The resumption of the decline in equities coincided, significantly, with a reaction in gilt-edged. Markets have thus borne out the forecast that no recovery in equity values was to be expected before the Lausanne Conference. The uncertainty in which the prospects of that Conference are shrouded makes the present moment peculiarly inopportune for further prophecy.

Steel Consolidation.—While steel consolidations in the North-East Coast and Scotland areas, which have been under discussion for many months, continue to hang fire, an announcement has been made this week of an arrangement between two companies elsewhere, controlling about 20 per cent. of the national steel output. A committee of the industry, early this year, promised widespread reorganisation in return for a tariff, and the official announcement of co-operation between Stewarts and Lloyds and the United Steel Companies in plant extensions, sales policy, research and technical development,

has a preamble making explicit reference to the requirements of "the new situation, brought about by the imposition of tariffs." The two concerns have had a widely different post-war experience as regards profitability. Stewarts and Lloyds (with Tube Investments, with which it has a close financial liaison) holds a dominant position in the home market for tubes and controls about 90 per

cent. of British tube exports. Its £4,626,742 of deferred shares, out of a total paid-up capital of £6,327,367 (the company has no debentures), received dividends varying between 2½ and 12½ per cent. during the decade to 1930. Last year's dividend, however, was passed after a fall in profits, after depreciation, from £340,645 to £167,272. The world's tube trade is "regulated" by an international arrangement made by the chief manufacturers, among which Stewarts and Lloyds has a strong tactical position, which has enabled it to secure more favourable terms since the departure from the gold standard. United Steel Companies, which is now controlled by Steel Industries of Great Britain, is a post-war amalgamation of a group of northern concerns, including Steel, Peech and Tozer, Workington Iron and Steel, and United Strip and Bar Mills. In 1930, after a period of heavy loss and a temporary association with the financial schemes of the ill-fated Hatry group, a reduction of share capital was effected under which United Steel and United Strip and Bar became one company, and their total issued shares and loans of £14,172,163 were exchanged for ordinary shares totalling £5,022,884. The present capital is £6,616,365 in ordinary shares, with a fixed loan to bankers of £1,300,000. It is understood that, under the new arrangement, Stewarts and Lloyds will build at Corby, near Kettering, a new plant designed for large-scale production by the Basic Bessemer Process, the strip, required for tube-making, being produced by United Steel. In other words, the production of the latter will be interposed between the ore and smelting resources of the Stewarts and Lloyds group and their final tube-making operations. United Steel, in turn, will utilise part of the Corby steel output for its own more finished products. Although the official announcement makes no reference to finance, this type of association may contribute to the solution of one of the industry's greatest problems—the obtaining of much-needed additional working capital when steel demand revives.

Hotel Company Results.—With one conspicuous exception, the reports of hotel companies recently published show that profits during 1931 declined heavily. Whereas, in 1930, Burlington Hotels was the only company, of the nine whose results are shown below, to pay no ordinary dividend, in 1931 no less than five companies deemed it advisable to conserve their resources. In three other cases the ordinary distribution was reduced:—

Name of Company.	1930.		1931.		Price, June 1, 1932.	Yield, %
	Net profit.	Ord. Div.	Net profit.	Ord. Div.		
Burlington Hotels (£1) ...	£ 6,214	Nil	£ 2,582	Nil	...	Nil

(Se.)	4,151	12½	2,660	3	...	£15
Langham Hotel (£10)	119,178	10	17,803	Nil	...	Nil
Savoy Hotel (£1)	113,490	13	119,181	14	...	4.2
Strand Hotel (£1)	37,184	10	16,407	Nil	...	Nil
Waldorf Hotel (£1)						

* Eight months.

Net profits for the group as a whole declined from £495,067 to £169,510, or by 66 per cent. Though most of the companies have endeavoured to meet the consequences of the slump in activity by drastic economies, only the Strand Hotel was able to show an increased profit, earnings of £119,181 comparing with £113,490 in 1930, while the ordinary dividend was increased. The extension of the Strand Palace Hotel is now finished, and the enhanced accommodation should favourably affect the company's earning power.

Newspaper Share Values.—In recent articles (see the *Economist* of May 21 last, page 1142, and May 28, page 1190) we have analysed the position of various "national" newspaper-owning groups, as regards internal finance and external commitments, in the light of con-

temporary economic conditions. We show below the market values and earnings' yields of the securities of leading companies in each group:—

x = ex dividends.

Although newspaper equity share values have recovered appreciably, after sounding the depths of depression early this year, they are still well below the maximum figures, even of the depressed year 1931. Depreciation since the bursting of the market bubble in 1929 has been particularly heavy. Even as regards the stronger groups, its dimensions have greatly exceeded the average of about 50 per cent. common to British equity shares in general. The market values the relatively well-secured prior charges of the older "Rothermere" companies on a high-yielding basis, but demands an even higher yield, on the average, from the "Berry" fixed stocks, and has written down

BARCLAYS BANK LIMITED

HEAD OFFICE: 54, Lombard St., London, E.C.3
and over 2,080 Branches in England and Wales.

the "Inveresk" shares to "option-money" levels. The debenture stocks of the two provincial newspaper-owning concerns, Northcliffe Newspapers and Allied Northern Newspapers, continue to be conservatively valued, despite the guarantees given by the respective parent organisations. We review the outlook for newspaper earnings in a leading article on page 1227 of this issue.

J. and P. Coats.—The accounts of this giant of the cotton thread industry make no concessions to the prevailing movement for more informative accounts. The report for 1931 includes no comment whatever on the year's trading conditions, and no consolidated balance sheet is given, although a single set of items—"Investments, Loans and Advances"—accounts for £28,584,018 out of total assets of £35,301,510 in the parent balance sheet, and carries an unspecified contingent liability. Trading profit increased by 11 per cent last year, and income from other sources was higher, but £200,000 was required to cover depreciation of investments and £550,000 to meet exchange differences. A reduced ordinary dividend of 10 per cent. required a draft of £350,000 from dividend reserve and £180,637 from the amount brought forward.

* After unstated "provision for taxation."

Shareholders are left entirely without guidance as to the implications of various changes which have increased total investments, loans and advances by £4,261,521, and of a reduction in stocks from £2,483,746 to £1,552,632. The company, thirteen years after the war, still carries a war contingencies fund against certain depreciated assets taken at book values. At 1½, the £1 ordinary shares yield £5 1s. 6d. per cent., less tax.

J. Lyons and Company.—Throughout the depression this famous catering firm (which now sells more than half its wares outside its own shops) has pursued a successful development policy. Though profits for the year to March 31st last, for the first time, do not make a new "record," they reflect great credit on the management, their decline of £320 from the 1930-31 level of £942,320 being negligible. The distribution on the ordinary and "A" ordinary shares is maintained at 22½ per cent., and the proportional profit shares receive an unchanged 10.8d. per share:—

	Year to March 31,		
	1930.	1931.	1932.
Net profit	935,871	942,320	942,000
Brought forward	17,308	33,226	49,782
Preference dividends	416,353	419,353	420,353
No. of times covered	2.25	2.25	2.24
Ordinary and "A" ord. div.:			
Amount	360,849	363,661	366,474
Earned %	28.7	28.9	28.7
Paid %	22½	22½	22½
Profit share dividend	42,750	42,750	42,750
Amount per share	10.8d.	10.8d.	10.8d.
Reserve	100,000	100,000	100,000
Carried forward	33,226	49,782	62,205

A further £100,000 is added to reserve, which stands in the balance sheet at £1,400,000. No considerable capital expenditure has yet been paid for out of the proceeds of the issue of 1,000,000 7 per cent. cumulative preference shares last March, cash, at £1,494,957, being £979,719 higher than a year ago. Stocks are slightly higher at £2,359,509, but trade and other creditors have fallen from £1,769,289 to £1,673,906. At 4½, the £1 ordinary and "A" ordinary shares yield about 5 per cent.

B.A. Pacific Moratorium.—The first debenture stock of the Buenos Aires and Pacific Railway fell 11 points and the second debenture 15 points on Tuesday, after an announcement of the board's intention to ask for a three years' interest moratorium on its own 4½ per cent. second debenture, 4½ per cent. Consolidated debenture and 5 per cent. (1912) debenture stock, and on the junior debenture stock of two railways whose lines it operates—viz., Argentine Great Western 4 per cent. irredeemable second debenture, 5 per cent. debenture and 6 per cent. guaranteed preference stock, and Villa Maria and Rufino Railway 4½ per cent. guaranteed stock. Interest at 5 per cent. will be payable on all arrears. The 4 per cent. first debenture stocks of the three companies are not affected. The company expects to make a further cut in expenses for the current year (to June 30th) of about £472,000, against an estimated fall in receipts of £670,000. Loss on exchange is put at £500,000 against £330,000 last year, and net receipts at £1,003,000 against £1,370,000. The company's misfortunes have not come singly. Its capital structure is relatively "high-g geared." Last November, frost in the Province of Mendoza prejudiced the prospects of the wine traffic, from which a considerable share of its revenue is derived. To crown all, the ultra-nationalist tariff policy of Argentina and Chile has led to the closing of the Transandine Railway and the suspension of trans-continental traffic over the line. The company is in debt to its bankers and has no expectation of relief by a capital issue in the near future. The market received the news badly, being somewhat dismayed by the duration of the proposed moratorium, the unwillingness of the board to recommend the distribution to debenture holders of all profits in the meantime, and the broad hint given that circumstances might compel the company's bankers to "change their attitude." Unless the circular to debenture stock holders has been incautiously worded, the board would appear to take a decidedly serious view of possible contingencies in the next few months. Stock holders are promised a full explanation at the meetings which, under an order made by Mr. Justice Eve, will be held on June 14th.

Antofagasta Railway.—Chile's difficulties in connection with her nitrate and, to an only slightly less degree, her copper industries are reflected in the 1931 figures of the Antofagasta Railway. Gross receipts have fallen by 36 per cent., and, although expenses have declined by 29 per cent., net revenue is down by 48 per cent. The preference dividend is just covered, but nothing remains for the ordinary:—

	Year to December 31,		
	1929.	1930.	1931.
Receipts	1,997,328	1,350,454	866,120

Only one out of the 30 oficinas served by the company's system produced nitrate during the year, the total quantity transported during 1931 being 231,901 tons, compared with 363,035 tons in 1930. The tonnage of copper bars carried increased slightly, but there was a marked falling off in copper-ore traffic. Tin output restriction was also an adverse factor. The consolidated ordinary stock is quoted at 9½, the highest quotation in 1931 being 51½.

Great Universal Stores.—The report of the Great Universal Stores for the year ended March 31st last, showing an unexpected decline in net profits, before depreciation and tax, from £410,767 to £267,389, contains another surprise. The directors, personally and voluntarily, are paying into the company's banking account a sum sufficient to pay a special bonus of 1s. 6d. per share on the ordinary capital. Last year's prospectus, in which 300,000 7 per cent. preference shares of £1 were offered at par and 400,000 ordinary shares of 5s. at 20s., stated that the capital had been increased from £15,000 to £600,000 by the reinvestment of dividends, amounting to £171,168, and the capitalisation of an undivided surplus of £313,832 and of £100,000, this being part of the profits earned since March 31, 1931. The present report states that the directors desire the ordinary shareholders to receive what they would have received if the capitalisation of this £100,000 in July had not been made. What has induced the directors to become so generous since July, 1931, when the public issue of shares was made? The prospectus then gave a somewhat glowing account of the Company's prospects in the sale of household goods by orders obtained through the post. Clearly this type of mail-order business is subject to considerable fluctuation through changes in public taste and advertising appeal. As the prospectus contained no hint of any set-back, the presumption is that conditions changed for the worse some time during the last nine months. The 5s. Ordinary shares, which have been as high as 23s. 6d. this year, have recently been a reactionary market, and on the publication of the report fell from 15s. to 10s. The 7 per cent. preference shares are quoted at 16s. 3d.

Ford of Germany.—The German Ford Company, which is controlled by the English Ford Motor Company, writes our Berlin correspondent, has published surprisingly unfavourable results for 1931. In 1930 it earned Rm. 3.2 millions net profits, and was able, after generous

allocations to reserve, to pay 10 per cent. on its Rm. 15 millions share capital. The balance sheet for that year was very liquid, and the company was considered the most prosperous of all the German motor manufacturers. The results for 1931, on the other hand, show a loss of Rm. 1.7 millions, and at the same time the liquid resources have been exhausted and a short-term debt of Rm. 23 millions contracted. Of this 19 millions were borrowed from the American Ford Company, for the most part in the form of new machines from America, and the rest from the German banks. Until 1931, Ford had only a small leased factory in Berlin, and confined itself to assembling American parts. In 1931 a large factory was set up in Cologne, which cost far more than the capital issue of 1929 had produced. Almost at the same time the market shrank to a small fraction of the previous year's sales. The Ford car is at a disadvantage under the German system of taxation, and was unable to maintain its position during the crisis against the small cheap products. General Motors suffered the same experience with the Chevrolet, but is pushing the small Opel with some success. Ford is now turning over the German factories to the production of the eight-cylinder model and a very much smaller and cheaper four-cylinder car. Whether these will find a sufficiently wide market to pay the interest on the heavy debts and on the capital remains to be seen. The Ford parent company in Detroit has suffered net losses for 1931 of \$53,586,000 (£10,717,000 gold). Part of these losses are due to derangement of production during the change-over to the eight-cylinder model, and compare with losses, in exceptional circumstances, of \$42,786,000 in 1927 and over \$72,000,000 in 1928.

Philips' Lamps.—The shares of this large incandescent lamp manufacturing company are among the most active stocks on the Amsterdam Exchange. The report for 1931 is a frank and informative document. Net profit amounts to Fl. 7,518,000 compared with Fl. 12,780,000 for 1930. Of the total sum, Fl. 2,287,000 is allocated to writing off differences in exchange on outstanding debts and Fl. 1,000,000 to providing an extra reserve against debtors. The sum of Fl. 4,231,000 is left for shareholders, against Fl. 5,390,000. Preference shares again take Fl. 1,266,000, or 6 per cent., while the ordinary dividend at 4 per cent., against 6 per cent., requires only Fl. 2,785,000. The surplus is augmented to the extent of Fl. 180,000.

Fl. 1,000 to extra reserve against debtors. † Fl. 2,690 to
loss on securities, and Fl. 1,000 to debt reserve. § Written
off stocks only.

Since considerable reserves were created in former prosperous years, the directors propose to effect write-offs amounting to Fl. 19,006,000 by debiting reserve for extension, instead of charging depreciation to revenue

THE FIVE YEAR PLAN of the NATIONAL PROVIDENT INSTITUTION

will be of interest to all Business Men. It is specially designed
to assist them in the present period of Economic Reconstruction.

48 GRACECHURCH ST., LONDON, E.C.3

account. The liquidity of the company is stated to be satisfactory, cashable assets in Eindhoven amounting to about Fl. 53,600,000, a sum greatly in excess of current liabilities. The directors attribute the decrease in turnover and the consequent problems which the company has had to face, to diminished world purchasing power, import prohibitions and quotas, and foreign exchange restrictions.

New Issues in May.—In the following table we show the new capital raised in London by issue to the public or to shareholders, in May, and in recent periods:—

Monthly Average.	(000's omitted).				Total.
	United Kingdom.	British Possessions.	Foreign Countries.	£	
1924	7,051	6,023	4,370	£	17,444
1925	12,918	5,077	1,356	£	19,351
1926	10,765	4,431	4,036	£	19,232
1927	17,240	8,318	4,039	£	29,597
1928	21,965	5,263	3,526	£	30,754
1929	16,502	5,081	2,186	£	23,769
1930	14,220	5,121	2,975	£	22,316
1931	4,542	3,209	761	£	8,512
Monthly Total.	Govt. Other.				
December, 1930	850	26,914	3,361	338	31,463
December, 1931	Nil	2,503	15	Nil	2,518
January, 1931	1,800	6,331	118	Nil	8,249
January, 1932	Dr. 1,200	123	2,127	Nil	1,050
February, 1931	2,450	4,368	13,705	50	20,573
February, 1932	Dr. 600	7,660	2,470	Nil	9,530

April, 1932	Dr. 900	5,609	8,441	Nil	13,150
May, 1931	1,450	381	10,045	11	11,887
May, 1932	107,689	7,847	1,918	Nil	117,454

The month's total is swollen by the inclusion of £107,589,000, representing the whole amount of accepted tenders for 3 per cent. Treasury bonds. For the first time for some months, sales of new National Savings Certificates exceeded encashments. The remaining issues included two by overseas borrowers—British Columbia and the City of Wanganui, two home corporations—Burnley and South Shields—five electricity companies, and a number of industrial concerns, including the Metal Box Company, Bowater's Paper Mills, and Telsen Electric Company.

The Revival in West Australians.—Our mining correspondent writes:—An example of the uncertainties inseparable from mining finance has lately been provided by that doyen of West Australian gold mines, the Great Boulder Property. Two years ago the exhaustion of the property appeared in sight. The ore reserves, indeed, had shrunk to less than one year's supply. During 1930, however, drilling for joint account with the Boulder Perseverance—whose property adjoins that of Great Boulder on the north-east—had indicated the existence within the Great Boulder boundary in a virtually untouched area of an ore body of good width and high value. So impressed was the manager by the results of boring that he started two cross-cuts—one at 1,650 feet, the other at 1,800 feet—from the Hamilton shaft, which is situated in the centre of the property. The distance to be traversed was over 700 feet—in part through a dyke. Recent cables advise that, driven on south at 1,650 feet, the reef shows a width of 27 feet, average value 16 dwts. News as to the outcome of work at 1,800 feet is awaited with interest. The lode in question is known as the "X" owing to the difficulty of identifying it with any of the other deposits of the Kalgoorlie field. It was encountered in Boulder Perseverance ground, and dips into the Boulder between 800 feet and 900 feet. The Boulder Perseverance has reported encouraging results in a winze at about 1,200 feet depth, confirming indications previously given by diamond drill. These developments have been reflected, not only in a sharp advance in the shares of the two companies

more particularly concerned, but in those of other companies owning leases in Western Australia; also of holding concerns. A striking movement has also occurred in the profit-sharing notes of the Boulder Perseverance. Of these, £50,000 were offered to the shareholders at par last July for the purpose of providing new treatment plant, £18,950 being subscribed. The notes carry 10 per cent. interest and are also entitled to 50 per cent. of the profits prior to redemption, which may be commenced after June, 1936, at 120 per cent. A delicate point now at issue is whether the subscribers are entitled to 50 per cent., actual, of the profits, or to such a proportion of 50 per cent. as the amount of notes issued bears to that offered. West Australian gold producers have the benefit of the gold premium of about 30 per cent., as well as of the Australian exchange premium of 25 per cent. In addition they will receive the gold bounty of 10s.—not a very large item—per ounce in excess of the average output of 1929 and 1930. The following are the profits of the principal companies for each of the past few months:—

	Dec.	Jan.	Feb.	Mar.	April.
Boulder Perseverance.	11,050	10,470	9,440	8,050	7,410
Great Boulder	7,600	6,300	9,750	8,080	9,810
Kalgoorlie	9,760	8,140	8,330	7,510	9,090
Lake View	29,780	34,750	38,730	31,220	35,210
Wiluna	18,340	26,050	21,620	22,570	...

In some cases the Boulder Perseverance returns include a portion of the excess relative to a preceding month. The Great Boulder figures represent the estimated surplus from all sources. The Wiluna announces its total surplus for the preceding month when reporting latest operating results. Remittances to London for interest or dividend will, of course, involve the loss of the exchange premium.

Burmah Oil Company.—The report for 1931 does not divulge many details. As the trading profit declined by only 15 per cent., however, the company would seem to have fared much better than most oil concerns, especially those with an international trade. As peaceful relations have been maintained with its American competitors, there has been no serious undercutting of prices in the Indian market, although kerosene prices in the latter months of the year were reduced as a result of competition for a restricted outlet. In spite of the decline in the consumption of petroleum products in India, the company maintained its throughput at its refineries. Against a decline of 15 per cent. in trading profit the company's income from interest and dividends declined by 30 per cent. This may be attributable to the fact that, in 1931, the company received 10 per cent. on its holdings of Anglo-Persian Oil shares instead of 15 per cent., the interim dividend of that company in respect of 1931 (usually paid in December) having been passed. The decline in total net profits was 20 per cent. and the dividends were reduced from 22½ per cent. to 17½ per cent. The following table gives a comparison of the trading results and distribution of profits of the Burmah Oil for the past two years:—

	1930.	1931.
Trading profit	£ 2,614,302	£ 2,223,396
Interest and dividends on investments ..	1,430,813	998,892
Total	4,045,115	3,222,288
Depreciation	580,914	637,173
Tax	743,371	761,022
Miscellaneous expenses and deb. int.	454,817	324,598
Earned for dividends	2,266,013	1,499,495
Preference dividends	249,375	241,875
Earned for ordinary dividends	2,016,638	1,257,620
Earned for ordinary shares	34.8%	22.4%
Paid on ordinary shares	22.5%	17.5%
General reserve	500,000	300,000
Carry-forward	612,518	586,046

The balance sheet shows a strong liquid cash position, British Government securities amounting to nearly £4 millions, as against nearly £3 millions a year previously. The surplus of current assets over current liabilities amounted

to £7,257,000. The balance sheet shows that the holding of Anglo-Persian Oil shares, amounting to 3,561,990 shares, is still valued at 11s. 8½d. per share, thus including a considerable hidden reserve. The ordinary shares are quoted at 2½ to yield £8 7s. 2d. per cent. on dividends of 17½ per cent. The shares have been as high as 46s. 10½d. this year and as low as 32s. 9d.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies: Royal Insurance, London and Manchester Assurance, Eagle Star and British Dominions Insurance, City Deep, Rhodesian Anglo-American, Venezuelan Oil Concessions, Callenders Cable and Construction, and Ever Ready Company (Great Britain). At the annual meeting of the Ever Ready Company, Mr Magnus Goodfellow stated that the depreciation in the value of the pound, followed by the imposition of a 20 per cent. *ad valorem* duty on the importation of primary batteries, had resulted in the practical stoppage of imports by the end of the year 1931. Presiding at the annual meeting of City Deep, Mr C. L. Read said the reorganisation of work on a reduced scale of production, in accordance with the policy adopted a year ago, had been systematically carried out. As a direct consequence, the total labour force employed at the mine in December last showed a reduction of 14.35 per cent. on that of December, 1930, and the ore milled during 1931 was less by 136,500 tons than in 1930. At the annual meeting of Venezuelan Oil Concessions, Viscount Bearsted told shareholders that, at the beginning of 1931, practically no oil was being recovered from the new fields of East Texas, but by April they were producing at the rate of about 250,000 barrels per day, and by July at the rate of over 500,000 barrels per day.

CAPITAL ISSUES.

The capital market has reached the end of its first phase since its "re-opening." Urgent arrears having been overtaken, current offers, as might be expected, are assuming a more motley character. This week's offers include two trustee issues made, respectively, by the *Tanganyika Government* and the *South Shields Corporation*. The former, being guaranteed by the British Treasury, is fully gilt-edged and yields £4 1s. 8d. per cent. flat and £4 2s. per cent. allowing for redemption on the latest date. The price represents the cheapest borrowing by any British Colony since the war. The South Shields issue yields £4 9s. 1d. per cent. flat and £4 8s. 5d. per cent. on redemption in 1952. The issue, destined for repayment of existing short-term loans, involves no increase in total debt, which at present amounts to £23 per head, approximately one-fourth being in respect of reproductive undertakings and two-fifths in respect of housing schemes. *Bowater's Paper Mills, Limited*, is a principal manufacturer of newsprint paper in Great Britain, and supplies, *inter alia*, about 170 daily and weekly newspaper publishers. The present issue of preference shares, on a 6½ per cent. basis, will finance the acquisition of two associated concerns from newspaper companies in the "Rothermere" group (which controls Bowater's). Profits are estimated to cover dividend on the new shares approximately 3½ times while net assets cover principal 2½ times. *The Rupee Loan of the Government of India* is to be used primarily to repay 6 per cent. bonds, and to fund a substantial portion of outstanding rupee Treasury bills, which now amount to approximately 50 crores. The redemption yield of £5 16s. 5d. per cent. measures the improvement in India's borrowing position since last year, and the issue, unlike its predecessor of last year (made on an initial 6½ per cent. basis and open for three months), will be open for twelve days only.

Public Offers.

Tanganyika Government.—Issue of £500,000 4 per cent. guaranteed stock, 1952-72, at £98 per cent. Trustees are authorised to invest in this stock. If not previously redeemed, the stock will be repaid at par on January 1, 1972, but the Tanganyika Government reserve the right to redeem on January 1, 1952, on three months' notice. The payment of principal and interest is guaranteed by the British Treasury. The public debt of the Territory is about £8 millions. The proceeds of the present issue will be applied towards the refunding to the accumulated surplus balances of the Government of Tanganyika of sums expended from revenue on capital works. There is a small estimated revenue surplus for the nine months to December, 1932.

Government of India Rupee Loan, 1932.—Issue of 5½ per cent. loan, 1938-40, at 98. Subscriptions in India may be in the form of cash or Indian Treasury Bills or 6 per cent. bonds, 1932, but only the last form will be accepted in London. Six per cent. bonds, 1932, will be accepted in subscription as the equivalent of cash at par. If not previously repaid, the loan will be repaid at par on October 1, 1940, but the Government reserve the right to repay in whole or part at par on or after October 1, 1938, on three months' notice.

South Shields Corporation.—Issue of £500,000 4½ per cent. redeemable stock, 1952-62, at £101 per cent. Trustees are authorised to invest in this stock. The stock will be redeemed at par on January 15, 1962, but the Corporation reserves the right to redeem at par on any half-yearly interest date on or after January 15, 1952, on three months' notice. The estimated population is 114,200, the rateable value £482,142, and the outstanding net debt approximately £2,581,826, of which £578,826 is in respect of reproductive

undertakings and £1,021,980 in respect of housing schemes. A rate of 1d. in the £ produces £1,852. The proceeds of the stock will be used to repay certain existing short-term loans.

Bowater's Paper Mills.—Issue of 500,000 6½ per cent. cumulative preference shares of £1 each at par. The company is one of the principal manufacturers of newsprint in Great Britain. During the financial year to September 30, 1931, the mills operated to the extent of 72 per cent. of capacity, and orders on hand for the present year are sufficient to maintain the mills in operation at a rate of not less than 90 per cent. of capacity. Profits, before providing income tax and depreciation, have been as follows: 1927, £76,022; nine months to September 30, 1928, £74,206; 1928-9, £101,701; 1929-30, £150,209; 1930-31, £143,210. The net proceeds of the present issue will be utilised in meeting certain liabilities and temporary indebtedness incurred in connection with the recent acquisition of W. V. Bowater and Sons and Bowater's Mersey Paper Mills. The dividend on the present issue is likely to be covered about 3½ times.

Great Marlow Water Company.—Offer for sale by tender of £7,500 5 per cent. debenture bonds, to be redeemed at par on January 1, 1962, minimum price of issue, par; and 1,400 £10 additional ordinary "B" shares or such less number as with premiums will realise the sum of £16,105. The ordinary shares rank for a maximum dividend of 7 per cent. equally with existing similar shares. Minimum price of issue, £11 10s. per share, yielding at that price £6 ls. 9d. per cent. Net profits before charging interest and income tax were £3,292 in 1929, £3,522 in 1930, and £4,036 in 1931. The interest on the loan capital, including the present issue, will amount to £603, more than six times covered. The new capital is required for extension of works and mains.

Stock Exchange "Introductions."

Rawplug Company.—Issued capital, £75,000 in 7 per cent. cumulative first preference shares of £1 each; £50,000 in 15 per cent. cumulative second preference shares of £1; and 100,000 ordinary shares of £1. The company was registered on November 20, 1919, to take over the business of manufacturing Rawplugs. Of the above-mentioned £75,000 7 per cent. preference shares, 47,500 shares are now being offered to shareholders at 20s. per share. The object of the issue is to finance the expansion of the business. Messrs Rowe, Swann and Company have agreed for a fee of 2,500 guineas to underwrite the issue. Net profits before income tax have been: 1929, £31,900; 1930, £35,494; 1931, £37,061.

COMPANY MEETINGS, &c.

ROYAL INSURANCE COMPANY, LIMITED.

SATISFACTORY RESULTS IN 1931.

ALL DEPARTMENTS PRODUCE PROFITS.

TOTAL FUNDS EXCEED £42,000,000.

ADDRESS BY MR A. ALLAN PATON, C.B.

The eighty-seventh annual general meeting of the Royal Insurance Company, Limited, was held, on the 30th ultimo, in Liverpool.

Mr A. Allan Paton, C.B., the chairman, presided over a good attendance of shareholders.

The Chairman, in the course of his speech, said:—Before commenting upon the report and accounts, I would like to refer to changes in the management of the company which have taken place since we held our last general meeting. Mr Robert M'Connell, after serving the company for over thirty-five years, sought relief from the exacting responsibilities associated with his position of general manager, and your directors reluctantly consented to his retirement, which took effect from the end of December last. Mr M'Connell, who possesses outstanding and exceptional ability, held a high position in the insurance world and rendered invaluable service to the company. To fill the vacancy thus created, the board appointed as general managers Mr F. J. Williams and Mr J. Dyer Simpson, who were previously the assistant general managers.

There is also a change in London. Mr Walter Carter, our London manager, has, to our regret, expressed a wish to retire, and your directors have agreed that he should do so as from the end of this month. Mr Carter has served the "Royal" for close on forty years. He has held successively responsible positions in New York and Liverpool, and for the past three years rendered further distinguished service as London manager. To replace Mr Carter, the directors have appointed Mr F. R. Bellamy, hitherto assistant secretary in London, as London manager, and Mr A. E. Marsden, at present assistant manager of the "Liverpool and London and Globe" in London, as deputy London manager.

The report and accounts for the past year have been in your hands for some days, and I feel sure it will be your desire to take them as read.

The events of the year 1931 are fresh in all our memories. It is obvious that a disturbance of financial conditions on such an immense scale as has occurred, and the departure of Great Britain from the gold standard, with the corresponding effects upon exchange rates generally throughout the world, must necessarily have seriously affected our world-wide interests. You will probably expect some comment as to how these questions of exchange have been dealt with in our accounts. In the general foreign field a number of countries such as India and the Scandinavian countries have linked their fortunes with sterling. In others, such as France, which continued on the gold standard, the £ sterling depreciated in relation to francs, while in South America and the Far East, where we have substantial interests, the local currency suffered a material depreciation in relation to the pound. Throughout this field we have continued to use the current rates of exchange. So far as the United States and Canada are concerned, we have continued to make use of the approximate par rate of the dollar.

As you will have observed from the departmental accounts, to which, as is customary, I will refer separately, a shrinkage of our aggregate premium income of approximately 5 per cent. has taken place as compared with 1930, largely as a result of the reduction in volume and value of commodities. This fall in income naturally has an adverse effect upon our expense ratio, expressed as a percentage of premiums, as, though we have been successful in bringing about a material reduction in the actual outgo under this heading, the ratio, owing to a diminished denominator, shows an increase in both fire and accident accounts of approximately 1 per cent.

FIRE DEPARTMENT.

The premiums in the fire department show a shrinkage of approximately £525,000 or 8 per cent. The income derived from our home business has been well maintained, whilst losses have not been unfavourable, and the result is one with which we can be well satisfied. Credit for this is due not only to the efficiency of our organisation but also to the comparative stability of business conditions in this country during a very difficult period. In the general foreign field there has been some slight contraction in the premium income. The main decrease in our fire income, however,

arises from our interests in the United States of America, where, during last year, the full effect of the economic upheaval has been felt. Fire losses, including contributions to fire brigades, at £3,111,608, show a slight increase of approximately one half of 1 per cent., and, after adjusting the reserve for unexpired risks and making full allowance for all liabilities, the resulting profit amounts to £402,071, representing 6.63 per cent., a profit differing very slightly in percentage from that which we were able to report to you last year. Considering the conditions that have been ruling in North America, which furnishes a very considerable proportion of our fire premium income, and the less favourable loss experience which we in common with other companies have had there, I think the outcome of the year's operations in this department can be looked upon as eminently satisfactory. The fire fund at £6,925,085 is approximately 114 per cent. of the premium income and provides a high standard of security to our policyholders.

LIFE DEPARTMENT.

The amount of new life business completed during the year has suffered some contraction, policies having been issued for £3,737,727, a reduction of some £315,000 as compared with the figures for 1930, the falling off having occurred during the last three months of the year.

It will be seen from the combined statement circulated with the report that the premium income of all branches of the life department amounted to upwards of £2,200,000, being nearly £300,000 more than in the previous year.

total profit, which, at £117,320, is substantially less than in 1930, and in fact is much below the contribution we have been accustomed to receive from this department.

At home the results of our general accident business, including employers' liability, show little change from 1930, and with this I think we have every reason to be satisfied.

The accident and general insurances fund at the end of the year appears at £5,179,624, representing approximately 95 per cent. of the premiums.

PROFIT AND LOSS ACCOUNT.

The interest and dividends amounting to £1,350,079 brought into this account show a reduction of some £24,000 as compared with last year. This is more than accounted for by increased income tax. The profits from the various underwriting departments have already been referred to and, adding thereto £40,000, representing one-fifth of the shareholders' proportion of life profits for the past quinquennium, we reach a total profit of £684,929, a reduction of some £60,000 when compared with last year. In the light of the events of the past twelve months I think you will agree that these results are a notable tribute to the stability of insurance enterprise as undertaken by our company and to the soundness of our underwriting methods.

On the other side of the account the dividend cost appears at a lower figure than last year, due of course to a deduction of income tax at the rate of 5s. as against 4s. 6d. in the £, and it will have been satisfactory to you to learn that the directors recommend a similar dividend to last year, namely, a final payment of 3s. 3d. per share, making, with the interim dividend distributed in November, 6s. 6d. for the year.

With the exception of £500,000 provision for depreciation of investments, to which I shall refer in a moment, the other items do not call for special mention and we carry forward a balance of £1,399,126.

BALANCE SHEET.

In accordance with the requirements of the Companies' Act, 1929, we present, in addition to a consolidated balance sheet which includes the transactions of those associated companies we are accustomed to incorporate with our own, a separate balance sheet of the Royal Insurance Company itself, in which is shown, amongst the assets, a separate item consisting of our holding in shares of subsidiary companies. The value at which these are there stated is "at or below value of free funds" and, in arriving at that figure, provision has been made for all liabilities of these companies, and full allowance has been made for depreciation at December 31, 1931.

DEPRECIATION OF INVESTMENTS.

The disturbing factor of major importance which we have had to face during the past year has been the depreciation of investments. The catastrophic fall in Stock Exchange prices concentrated into the last few months of 1931 could not fail to affect us adversely, seeing that our assets, to a very large extent, necessarily consist of investments in Stock Exchange securities, not only in this country, but in many other parts of the world. To meet this depreciation we have, as will have been observed, made a provision of £500,000, but this does not cover the whole of our depreciation. Such difference, however, is more than covered by the balance which exists between the value of other assets and the figure at which they appear in our balance sheet.

In calculating the value at which we have brought into our balance sheet the whole of the American and Canadian investments of the company, we have followed our normal practice of converting dollars into sterling at approximately the par rate of exchange. As already mentioned, this same par rate has also been used in our revenue accounts with regard to our American and Canadian business.

THE OUTLOOK.

Commenting on the outlook for the current year, the chairman referred to the vastness and intricacies of the world-wide problems. Britain had reason to congratulate herself upon the practical manner in which she had faced the situation. The splendid response of this country to the demands made upon it had aroused the admiration of foreign observers, but Britain could not hope to restore herself to her former prosperity unless the Government faced the vital problem of curtailing expenditure to an extent which would provide material alleviation of the crushing burden of taxation.

The report and accounts were adopted. The retiring directors, Mr W. S. Crichton, Mr F. H. Fox, Mr W. R. Chamberbrook, Mr Hugh Lewis, J.P., Mr Evelyn S. Parker, Col. Sir F. Reynolds, Bart., D.S.O., M.P., were re-elected.

CHAIRMAN AND DEPUTY-CHAIRMEN RE-ELECTED.

At a meeting of the Board of Directors of the Royal Insurance Company, Limited, on Monday, Mr A. Allan Paton, C.B., was re-elected Chairman, and Mr A. E. Pattinson, Mr A. Kentish Barnes and Mr P. R. England, were re-elected Deputy-Chairmen.

EAGLE, STAR AND BRITISH DOMINIONS INSURANCE COMPANY, LIMITED.

A SATISFACTORY YEAR'S OPERATIONS.

The general meeting of the Eagle, Star and British Dominions Insurance Company, Limited, was held, on the 27th ultimo, at 32, Moorgate, London, Sir Edward Mount, Bart., J.P. (chairman and managing director), presiding.

The Chairman, in moving the adoption of the report and accounts, said that, in view of the difficult conditions which obtained throughout 1931 the various departments of the company showed highly satisfactory results. In the life section new policies numbering 2,244 were issued, assuring a net sum of £2,118,593, while the rate of interest earned on the total life assurance and annuity funds amounted to £4 12s. 6d. per cent., after deduction of income tax. The quinquennial valuation of the current life and annuity funds was made at December 31, 1931, the stringent bases of valuation previously adopted being maintained. The valuation showed a gross surplus in the participating sections of £229,020, of which it was decided to distribute £223,026 and carry forward the balance. In the non-participating section of the life fund the gross surplus amounted to £128,178, of which £75,000 had already been transferred to the shareholders' profit and loss account, leaving a balance of £53,178, which the board had decided to carry forward.

FIRE LOSS RATIO REDUCED.

In the fire department the net premiums amounted to £833,396, a decrease of £34,406 as compared with the preceding year. The whole of this reduction took place in connection with the North American business. The incurred loss ratio to earned premium was 51 per cent., compared with 53 per cent. in 1930.

The ordinary premiums for the year on personal accident and sickness policies amounted to £54,548, and the sum of £14,059 has been transferred to profit and loss account.

In regard to the general insurance department, it would be noted that motor insurance was now the subject of a separate account. The total premiums in the general department amounted to £396,456, and the sum of £68,942 was transferred to profit and loss account.

In the motor department, although they had been very careful in the selection of business, they were able to record an increase of £75,000 in the premium income. After making a full reserve for outstanding losses and unexpired liability the net results had been very satisfactory.

In the marine department the fund carried forward now stood at £467,572, equivalent to 113 per cent. of the premium income.

DIVIDEND OF 20 PER CENT.

Turning to the profit and loss account, the net interest worked out at £151,450, an increase of £3,836 over the previous year. The net cost of dividends for the year amounted to £140,542, so there was a margin on interest alone over the net dividend paid of £10,908. The amount credited to profit and loss account from the various trading departments was £155,544. After transferring £150,000 from the general reserve fund they were able to allocate £100,000 to the investment fluctuation account and £125,000 to exchange year, and, after allowing for expenses not charged elsewhere, the balance remaining was sufficient to provide dividends at the rate of 20 per cent. on the ordinary shares, 6 per cent. on the preference, and 10 per cent. on the preferred ordinary shares. There remained to be carried forward £72,787, an increase of £4,106 on the corresponding figure for last year.

The report and accounts were unanimously adopted, and the proceedings closed with a vote of thanks to the chairman, directors and staff.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached: To Publisher, "Economist Newspaper Ltd."

8, Boulevard Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

Address.....

CALLENDER'S CABLE AND CONSTRUCTION COMPANY, LIMITED.

SIGNS OF REVIVAL IN BUSINESS.

The thirty-sixth ordinary general meeting of this company was held, on the 31st ultimo, at the Waldorf Hotel, Sir J. Fortescue Flannery, Bt., D.L., M.Inst.C.E. (the chairman), presiding.

The secretary (Mr Howard Foulds, F.C.I.S.) read the notice convening the meeting and the auditors' report.

The chairman said he must first refer to the serious and unprecedented state of trade and finance throughout the world. Bad as were the conditions in this country, the conditions of trade and finance in other countries were worse still, but we saw signs of improvement here in advance of our neighbours in Europe or across the Atlantic. Above all, we had upheld our national character for financial stability. We were the most heavily taxed nation in the world; the most highly rated by local authorities. Money thus withdrawn was no longer available for trade improvement.

He wished to make a practical suggestion to the Chancellor of the Exchequer. If some machinery could be arranged, as he (the chairman) thought it could, by which enterprises approved and selected by a committee of the Treasury should be carried on on the understanding that if they failed the loss of money would be credited in future payments to income tax, he thought those engaged in such enterprises would have a practical relief from the handicap to which he had referred, and many enterprises of great pith and moment to the trade of the country and to employment would be encouraged and made possible which were abandoned to-day.

The company's operations were still of world-wide extension. Their cables literally extended from China to Peru. In the former country they had held a leading position in electricity for many years. Their "bread-and-butter" business had been maintained, and there was now an increasing demand for wires and cables under the Central Electricity Board scheme for providing electricity throughout the country.

The gross profit for the year was £528,882, compared with £599,547, which, bearing in mind the difficulties of trade, was a magnificent result. General expenses showed a reduction of nearly £40,000. The directors recommended a dividend of 15 per cent. and a carry forward of £292,054. So far as 1932 was concerned, the directors hoped that the worst was over, for they saw signs, slight but definite, of a revival in business. If the potential developments eventuated, he hoped next year to present accounts as satisfactory as those now submitted.

Sir Tom Callender (deputy chairman and managing director) said the depression had been very evident in the company's business and had left its mark on the balance sheet. Not only had the amount of business been smaller, but prices had been lower, chiefly by reason of the reduction in the standard prices prevailing for the leading articles used in their business, all of which had lowered their standard and had helped in the reduction of the company's profits.

Their home trade, after a period of slackness, was beginning once again to advance, and, although it was slow, the upward trend of orders was apparent, during the last few weeks especially. Their weekly return sheet showed a large number of relatively small orders from all parts of the country and indicated, in his opinion, definitely that the industry was again stepping forward. He had carefully looked through the returns from their customers who had dealt with them for many years, and, in spite of the depression, he found that the totals in the year in nearly all such cases amounted to a large and satisfactory volume of business and proved conclusively the goodwill and strength of the connection which Callender's had among most of the leading suppliers of electricity in the country.

Conditions abroad were not so satisfactory, and the company's overseas business had been greatly hindered, but they had made a strong point of maintaining their offices and connections, even at considerable loss, so as to be available immediately any improvement occurred.

When the recent developments leading to the extension of electricity were decided upon, they resolved to enter the super-tension business, and started a new research station at Shepherd's Bush, where they installed new apparatus in connection with high-tension current for testing cables and materials electrically and mechanically up to 150,000 volts. They had proved conclusively the efficient working of 66,000-volt cable.

In spite of all the difficulties, he looked forward with confidence to the future, and had every reason to hope for a long continuance of satisfactory business for their firm, which this year celebrated its jubilee.

The report and accounts were unanimously adopted.

RHODESIAN ANGLO AMERICAN, LIMITED.

INCREASED YEAR'S REVENUE.

The third ordinary general meeting of Rhodesian Anglo American, Limited, was held, on the 30th ultimo, at Winchester House London. Sir Edmund Davis (deputy-chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said: In the profit and loss account, revenue from dividends, interest and other sources, less interest paid, loss on share dealing, &c., amounts to £131,298, compared with £104,411 last year. On the other side of the account, the debit for general expenses, London, Johannesburg and Northern Rhodesia is £10,114, showing a reduction of £7,493 from last year's figure. Provision for debenture interest, however, amounts to £94,200, compared with £2,000 in last year's accounts. Directors' fees, £1,250, are the same. The balance carried to the appropriation account is £25,733, a reduction of £57,800 compared with the previous twelve months. In the appropriation account, we have brought in on the credit side the balance as at March 31, 1931, £124,007, and to this we have added the balance profit of £25,733 for the financial year under review. After the deduction of £21,214 for income tax and after transfer of £50,955 to reserve account, there remains an unappropriated profit carried to the balance sheet of £77,570.

The investments stand in the balance sheet at £4,849,083. The market value of these at March 31st last, taking Stock Exchange quotations, where available, and directors' valuation in other cases, was £4,407,932. In connection with these investments you will have noticed that we have, in a paragraph under "Accounts" in our report, stated that in our opinion the market prices of the company's shareholdings ruling during the present depression are not a measure of their true value in normal times; and though this is so, we have, as you will have gathered from my remarks, made provision for a very large proportion of the existing depreciation.

PLEA FOR EMPIRE COPPER.

Apparently sufficient attention is not given in this country to the fact that it is eminently desirable to produce within the Empire a tonnage which will not only supply the needs of the United Kingdom and of the Dominions and Colonies, but will also enable us to obtain a large share in markets outside the Empire. In other words, the Empire copper producers ought in the course of time to be the principal producers in the world, with Northern Rhodesia taking a leading part.

As regards costs, we are satisfied that our most optimistic estimates will be improved upon, and that copper is being, and/or will be, produced by the three developed and equipped Northern Rhodesian mines, viz., N'Kana, Roan Antelope and Mufulira, at a cost much below the figure estimated.

NORTHERN RHODESIAN POSITION.

At our last ordinary general meeting I stated that it was impossible to express any opinion as to what the Rhokana production might eventually be, as this depended not only upon the market price of copper, but also (and more particularly) upon the tonnage which could be disposed of, which, in turn, would be governed by the price. In this connection, should the present low price—which is a record—continue for a long time, or even for many months, I suppose that it may be reasonable to expect that many of the existing producing mines will suspend operations. This would be the easiest way of reducing production, and obviously to the benefit of Rhodesia.

On the other hand, countries which are unable to dispose of their copper production on a profitable basis under the present ruling prices may attempt by legislation to alleviate their own position. In particular there is a proposal that the United States of America should impose an import duty of 4 cents per pound on copper, which at the present rate of exchange would represent about £25 per ton. If they do, it would only be reasonable that our own Government should see that Colonial copper producers receive adequate protection from any disadvantages that may arise from the United States tariff. Of course, in this connection it must be borne in mind that the interests of manufacturers in England should not be prejudiced. Further, it has now become still more important that refining facilities for Northern Rhodesian copper should be provided in this country, where every step should be taken so that the consumers should acquire British refined metal.

I hope you do not mind our taking credit for all that our group has done in connection with the creation of this Northern Rhodesian copper industry, which in course of time should prove to be one of the greatest mineral propositions within the Empire, though at the moment, for reasons already given, we naturally have to face very heavy depreciation on the investments we have made.

Mr. J. B. Joel seconded the resolution, which was carried unanimously.

LONDON AND MANCHESTER ASSURANCE COMPANY, LIMITED.

YEAR'S RESULTS DISTINCTLY ENCOURAGING.

MR. WALTER H. BROWN'S INTERESTING REVIEW.

The sixty-third annual general meeting of the London and Manchester Assurance Company, Limited, was held, on May 18th, at the chief offices, Finsbury Square, London, E.C., Mr Walter H. Brown (the chairman) presiding.

The Chairman said:—The year that I am about to review has been fraught with numerous difficulties of an unusual and exceptional nature. For instance, the economic and financial situation has been such as to bring in its train a sequence of circumstances calculated to increase the anxieties of those whose business it is to conduct a concern of the magnitude of the "London and Manchester." As to the economic and financial situation, I consider so much has already been said by others upon this momentous subject that no useful purpose is likely to be served by my saying anything beyond expressing my firm conviction that our country possesses the qualities that should lead to its recovery from world conditions as speedily as—if not speedier than—any other country.

In the light of what I have just said, I am hopeful that you have found upon perusal of the report and accounts, sufficient justification for arriving at the conclusion that the year's results, taken as a whole, are not unworthy of the company's past traditions.

The total income from all sources amounted to nearly three and a quarter million pounds, to be precise, £3,240,885, representing an increase of £148,153 over the corresponding item in the year previous.

The premium income in all branches reached the figure of £2,605,126, an increase over the year before of £92,248.

ORDINARY BRANCH.

In the ordinary branch the premium income amounted to £994,276, an increase during the year of £73,142. Claims under policies were within anticipation, and represented a smaller percentage of the premium income than in the previous year. Expenses of management are somewhat higher, but it has to be remembered that further development in the organisation of the branch has taken place during the year, so as to ensure a continuity of expansion. New policies for sums assuring approximately 3½ million pounds were issued, this constituting a record in the branch. It is not so many years ago that we decided to pay special attention to the expansion of this branch, and the position of it now, I feel sure you will agree, gives occasion for satisfaction, somewhat remarkable progress having been made during the last ten years, and annuity business coming to us in increasing quantity.

The inherent strength of the "London and Manchester" has proved such that we have been able to repeat the ordinary branch bonus at the rate of £2 4s. per cent. per annum as declared in respect of each of the three preceding valuations.

INDUSTRIAL BRANCH.

Turning now for a few moments to the industrial branch, the premium income was £1,553,536. In this branch the progress in the last year or two has been smaller than in the ordinary branch, our endeavours having been directed more to the quality of the new business than the quantity. The time has, however, now arrived when, in the opinion of the board, a larger degree of progress can be looked forward to. I may also mention that in the course of the year steps were taken to still further consolidate the business of this branch and to deal as effectively as possible with the matter of arrears of premiums, in regard to which our company has been especially considerate and helpful to policyholders. We have for the past two years directed our efforts to obtaining a larger proportion of new industrial business on young lives, in order to reap the benefit of the decreased national mortality at the earlier ages. Claims under policies were rather more than in the previous year, due to a higher death-rate in the early part of the year under review and the larger sum paid under policies by maturity. Expenses of management show a reduction, and it is possible that in the course of the present year a further reduction will be in evidence.

Although the policyholders have no contractual claim to participate in profits, we are glad that it has been possible in such a year as the one I am dealing with to be able to repeat the liberal bonus of the previous year. Briefly stated, it is an increase of 10 per cent. of the sum assured in all cases where endowment assurances mature during the current twelve months; whole-life assurances that have been in force for ten years to be increased by an amount equivalent to ten weeks' premiums, and where the life is over 80 years of age an additional sliding-scale bonus up to age 85, at which stage further premiums are cancelled.

The business of industrial assurance, appertaining as it does to the vast majority of the population of the British Isles, has not been free from adverse criticism during the year. But the business

generally, and the "London and Manchester" in particular, has such a long record of public service liberally performed that it is not likely to be seriously harmed by any misconceived criticism. Moreover, the Government can never be unmindful of the important part which the industrial offices take in the cause of thrift among the industrial classes, and in the absorption of Government loans. Unfortunately, there are many who still think that industrial policies are lapsed without the assured getting any benefit from the premiums they may have paid over the current death risk. That is not so, because, beyond the provisions in their favour enacted in the Industrial Assurance Act, 1923, this office, in common with the other large offices, voluntarily instituted about two years ago the principle of automatic free policies attaching to all new policies which may lapse by virtue of non-payment of premiums after two years' payments have been made.

It is also a significant fact, and one that goes to show even further the benefits that the insuring public derive from industrial assurance, that in the course of the year the company paid industrial branch claims on death at the rate of over 986 policies per week. These included 1,795 policies which had only been issued during the same office year, and which, on the average, had therefore been in force but three months, and 3,461 policies taken out in the immediately preceding year. All these 5,256 claims were on lives which we believed to have been in good health on joining, and the unexpected speed with which death overtook them affords a striking example of the value of insurance.

Steady progress continues to be made in the fire and general branch, the premium income therein having well turned the £50,000 mark, the exact figure being £57,019—an increase of nearly £10,000 in the year.

The total assets at the end of the year amounted to £12,191,229, an increase of £835,340 having been made therein after applying £200,000 in writing down investments.

As regards the valuation of assets, you will have observed from the certificate at the foot of the balance sheet that all the Stock Exchange securities appear in the balance sheet at or under cost price, and in the aggregate, after taking into account the investments reserve fund, stand below the market prices (due allowance being made for accrued interest) as on March 24, 1932.

To sum up the year's working, I consider, and I trust you are of the same opinion, that the results as a whole are distinctly encouraging, accomplished as they were in a year in respect of which many well-conducted businesses had to record considerably reduced figures, and the cutting or passing of dividends.

The report and accounts were unanimously adopted.

EVER READY COMPANY (GREAT BRITAIN) LIMITED.

LARGE EXPANSION IN SALES.

The ordinary annual general meeting of the Ever Ready Company (Great Britain), Limited (manufacturers of batteries and electrical sundries), was held, on the 31st ultimo, at the Ever Ready Works, Holloway, London, N.

Mr Magnus Goodfellow (the Chairman and Managing Director), who presided, said: The past year has been an eventful one for our country and also for the company, and in the circumstances we can congratulate ourselves on having made an increased profit as shown in the accounts before you.

The sales during the year show an advance in value of nearly 30 per cent., as compared with the previous year, and expressed in units of production, the advance is greater still, for, as you will remember, our selling prices were reduced on July 1, 1931. You will realise that a great effort was made by everyone in the business to attain this result, every branch and department having contributed to the increase (with two small and unimportant exceptions).

From the records at my disposal, I have formed the opinion that there has again been an increase in consumption of all primary batteries in this country during the year, which I estimate at between 15 per cent. and 20 per cent.

The depreciation in value of the £, followed by the imposition of a 20 per cent. *ad valorem* duty on the importation of primary batteries, resulted in the practical stoppage of imports by the end of the year 1931; in fact, since January, 1932, such imports have shown a decrease of 90 per cent., and our early preparatory work has enabled us to obtain the greater part of this business.

NEW FACTORIES ACQUIRED.

In August last we purchased a freehold factory comprising some 35,000 square feet of floor space, which was of great assistance to us, and, in addition to extensions in a number of our existing factories, we purchased another freehold factory comprising some 130,000 square feet of floor space last November, which is being rapidly equipped and will be capable of coping with the increased business we hope to obtain next autumn.

The chairman then dealt fully with the items in the balance sheet, and mentioned that in view of the country's difficulties which came to a head in October of last year they had laid in large supplies of all materials on the gold basis, with the result that the stocks for use throughout this year will, broadly, have been acquired at the lowest prices ruling for more than twenty years.

He also referred to the fact that since the last issue of capital in 1929 £200,000 had been expended on buildings, plant and equipment, and stock and debtors had risen nearly £200,000, and that during the three years, after the final dividend for this year is paid, the sum of £610,000 will have been distributed to the shareholders.

In concluding his remarks, the chairman referred to the issue of ordinary shares to the shareholders, and said: "I think you will appreciate from what I have said that we are expecting a further increase of business this year. There has already been a substantial increase in sales during April and May, and if we are supported by the consumer and the trade, as we anticipate, we should be able a year hence to face you with another good report."

"I again pay my tribute to the loyal work of the managers, the executive staff, and workpeople, and I take pride in their achievements."

The report was unanimously adopted.

CITY DEEP, LIMITED.

PROFIT-MAKING POSITION REGAINED.

The thirty-first ordinary general meeting of shareholders of City Deep, Limited, was held, on Friday, April 23rd, in Johannesburg.

The Chairman (Mr C. L. Read) said:—The outstanding feature of the year was the regaining of a profit-making position, thus fulfilling the prospect held out at the annual meeting a year ago. This position was reached in August last, when, after a period of forty-one consecutive months of working losses, a working profit of £754 was declared. The two succeeding months yielded improving working profits, and it appeared as though the working losses of the first seven months of the year would be wiped out before the end of December. In November, however, an outbreak of fire underground caused a temporary disorganisation of operations, and the working profit fell to £1,556, or £1,949 less than in October. The final month of the year returned the best profit, viz., £4,636, and the year closed with the small adverse balance on working account of £1,626. After allowing for the various other items specified in the working expenditure and revenue account and the appropriation account, the year showed a net loss of £35,049, or £4,858 less than that of 1930. The figures are not altogether comparable, seeing that in 1931 a sum of £9,454 was provided towards the outstanding liability for miners' phthisis compensation, whereas in 1930 no provision was possible on that account. The year closed with a cash deficit of £502,237, or, after allowing for cash assets, a shortfall of £404,269 on the financial position.

WORK ON REDUCED SCALE.

The reorganisation of work on a reduced scale of production, in accordance with the policy adopted a year ago, was systematically effected, and was completed in August. As a direct consequence, the total labour force employed at the mine in December last showed a reduction of 24.35 per cent. on that of December, 1930, and the ore milled during 1931 was less by 136,500 tons than in 1930.

The development footage accomplished amounted to 35,175, approximately 12,000 feet less than in 1930, and an average advance of practically 3,000 feet per month. Of 15,015 feet sampled on Main Reef Leader, 7,095 feet were classed as payable, having an average grade of 32.4 inch-dwts. A small amount of development on South Reef in the eastern section of the mine indicated favourable prospects of the opening up of a considerable tonnage of medium-grade ore. The payable tonnage developed during the year was 739,200 tons, of an average value of 6.13 dwt. over a stoping width of 43 inch.

The ore reserve, as revalued at December 31st last, amounted to 1,795,000 tons, of an average value of 6.23 dwt. over a stoping width of 43.5 inch. The reserve available for stoping was 1,323,800 tons, of an average value of 6.08 dwt. over a stoping width of 42.9 inch. Compared with the available reserve a year earlier, there is an increase of 55,600 tons, and an improvement of 0.1 dwt. in the average value. The increase in tonnage is relatively more valuable on the present reduced mill tonnage basis than would have been the case had there been no reduction in the general scale of operations.

THE OUTLOOK.

Mr Read briefly stated the position of the mine in the light of recent development, and proceeded:—The foregoing summary bears out the consulting engineer's anticipation that, upon revaluation of the ore reserve at the close of the current year, a similar tonnage position will be shown, but that no improvement in grade can then be expected. The cumulative effect of five years of poor develop-

ment and the absence of continuity of payable values over any extensive stretch of ground combine to make the development prospects less attractive than could be desired. A development programme at an average of 3,000 feet per month will be maintained for the present, and I can only express the hope that it may prove productive of more satisfactory results than the similar efforts of recent years. The indebtedness to the Rand Mines, Limited, and the Central Mining and Investment Corporation, Limited, without whose consistent financial support on so large a scale it would have been impossible to continue operations, amounted at December 31st last to £418,354, in addition to which there is the outstanding liability of £327,385 in respect of miners' phthisis compensation.

During the first three months of the current year an average of 79,833 tons of ore has been milled per month, showing a yield of 5.257 dwt. and a working revenue of 22s. 4.3d. per ton milled. Costs have been 21s. 1.4d. per ton milled, and a total working profit of £14,843 has been earned.

To a company circumstanced as is the City Deep, the currency policy of the Union of South Africa is of vital interest. I will attempt to indicate in some degree the effect—as we foresee it—of a reasoned measure of devaluation of South African currency, unaccompanied by unnecessary inflation, upon the position and prospects of the City Deep mine. For this purpose let us consider the first three months of the current year, the results of which I have just stated. Assuming a premium of 25 per cent. on gold, as a result of a currency devaluation of 20 per cent.—a very conservative assumption—the working revenue per ton milled would have been 27s. 11.375d. Allowing an increase of costs to the extent of 10 per cent., the working costs per ton milled would have been 23s. 2.74d. The working profit per ton milled would then have been 4s. 8.635d. per ton milled, and on 239,500 tons of ore milled an aggregate working profit would have been made of £56,517, as against the £14,843 actually realised. On this basis we would make a working profit for the year of £226,068, and, with a continuation of the assumed conditions, the company would have a very favourable prospect of discharging its debt, making good the arrear provision towards miners' phthisis compensation, increasing its development operations with a view to the more rapid and effective exploration of its virgin mining ground and becoming re-established as a profitable enterprise. This would react to the benefit of shareholders and in no less degree to the benefit of the State and the community in general.

The motion that the directors' report, balance sheet and accounts for the year ended December 31, 1931, be received and adopted was seconded by Sir William Dalrymple and carried unanimously.

VENEZUELAN OIL CONCESSIONS, LIMITED.

A SATISFACTORY PROFIT.

FURTHER CONSIDERABLE ECONOMIES EFFECTED.

DIVIDEND OF 10 PER CENT.

The sixteenth ordinary annual general meeting of the Venezuelan Oil Concessions, Limited, was held, on the 31st ultimo, at Southern House, London, E.C.

The Right Hon. the Viscount Bearsted, M.C. (the chairman), presided.

The Secretary (Mr W. A. Turner, F.C.I.S.) having read the notice convening the meeting and the auditors' report,

The Chairman, in the course of his speech, said:—The proceeds of oil sold during the past year and the value of oil stocks amount to £2,854,081. The corresponding figure for 1930 was £4,639,084. The reduction—of £1,785,003—is due to reduced production and poorer prices. We continued our policy of voluntarily restricting production, which has fallen from 5,878,180 tons in 1930 to 4,898,792 tons in 1931, and prices showed a further considerable decline throughout the year, the average price realised being 4s. 3d. per ton less than in 1930. The gross income in 1931 amounted to £2,937,173, compared with £4,670,881 in 1930—a reduction of £1,733,718.

The expenditure side of the account shows that further very considerable economies have been effected throughout the year.

BALANCE-SHEET FIGURES.

Turning to the balance sheet, the further considerable reductions effected in stocks have, of course, helped to improve our financial position. Oil in stock at £23,254; trade debtors, etc., at £241,006; investments in British Government securities at £1,265,305; Treasury bills at £1,283,244; and cash at £38,059, give a total of £2,850,868, which compares with the corresponding total for this group of assets at the end of 1930 of £2,520,504. Against this there are current liabilities amounting to £649,125, consisting of bills payable £55,269, and trade creditors, etc., £593,856. The corresponding total of current liabilities at the end of 1930 amounted to £726,473. Adding the increase in current assets to the decrease

in current liabilities, it will be seen that the liquid position at the end of 1931 has improved by £407,712, as compared with the position at the end of 1930.

The balance of profit brought forward from 1930 was £178,097, which, with the profit for 1931 of £697,124, makes a credit balance of £875,221. Your directors recommend a dividend of 10 per cent., less income tax at 5s. in the £, on both classes of shares, amounting to £719,737, and that a balance of £155,484 be carried forward.

EFFECT OF EAST TEXAS PRODUCTION.

The world depression which industry was obliged to face in 1931 was made particularly difficult in the oil business by a sudden glut of unexpected and unwanted production from the new fields of East Texas. At the beginning of the year practically no oil was being recovered from this area, but by April it was producing at the rate of about 250,000 barrels per day, and by July at the rate of over 500,000 barrels per day. This oil was thrown on the market without thought of its demoralising effect, and new low levels for prices of all products on the American Atlantic seaboard resulted.

The competition created by the advent of East Texas as an important producer and the further falls in prices for oil products caused some companies operating in other fields to increase their production. I can see no justification for such a course. It is shortsighted and in the end must react unfavourably, not only upon the industry as a whole, but particularly upon those companies who adopt it.

It is to be regretted that one of the largest companies operating in Venezuela followed this unsound policy during the second half of last year. Despite this, however, the total Venezuelan production in 1931 was about 13 per cent. lower than in 1930.

Your company has consistently maintained its policy of producing at the stabilised rate, which was informally agreed with the other Venezuelan companies, and I think you will agree that it is something of an achievement that, following this policy and with the resulting reduction of over 16 per cent. in our production for 1931 as against 1930, we have realised a profit of about £700,000 on the year's operations. (Applause.)

Part of this profit results, of course, from the fact that our contracts are all based on American currency, and we therefore gain to some extent on the exchange.

MOST IMPORTANT FACTOR.

The economies which have been pressed to the utmost all through our operations, have been the most important factor contributing to the results of the year. The benefits of these reductions in expenditure are being felt more effectively now than in the past, although they are to some extent offset by the necessity for substantial additional expenditure for the protection of the Lagunillas field. The average cost per barrel of oil produced in 1931 shows a reduction of about 27 per cent. as compared with the average over 1930. (Applause.)

As a result of the uneconomic levels to which prices for products fell, the price receivable under the 20 million barrel contract, as fixed by the Award of Arbitration, became unreasonably low. An arrangement was made with the buyers whereby, without alteration of the price formula, a minimum price per barrel was agreed upon. This arrangement is still in operation. Our other contracts, both with the Asiatic Petroleum Company and the Canadian Eagle Oil Company, also contain provisions for minimum prices per barrel, and these minima prevailed throughout the year. A supplemental contract with the Canadian Eagle Oil Company was concluded covering 1932, to take the place of a similar contract which applied during last year. The disposal of our large production at what can only be considered favourable prices in the present state of the world's markets was, in my view, only made possible by our association with the Royal Dutch-Shell Group.

The break in prices to which I have referred was mainly brought about by reductions in the index price of fuel, which is the main constituent of our crude. Actually these reductions amounted to more than 40 per cent. during the year. The fall became more marked as the year progressed, and prices were at their lowest at the end of the year.

THE CURRENT YEAR.

As regards the current year, I have already referred to the exchange benefits. Fuel prices show signs of improvement, but the course of prices during the next six months depends upon so many factors that I am not in a position to offer any opinion upon this year's probable revenue.

Our total production for this year up to May 21st has amounted to approximately 1,857,000 metric tons. This rate is slightly less than the average rate over last year.

Sir W. Charles Wright, Bt., K.B.E., C.B., seconded the adoption of the report and accounts, which was carried unanimously, and a cordial vote of thanks to the chairman terminated the proceedings.

NATIONAL ACCOUNTS.

The total ordinary revenue for the week ended May 28, 1932, amounted to £6,350,200 against ordinary expenditure of £6,668,000. After allocating £475,000 to Sinking Fund and having allowed for a reduction in Exchequer Balances of £1,862,904, the operations for the week, as shown below, reduced the National Debt by £1,070,000 to £7,603,875,000:—

(000's omitted.)

Public Department Advances	£ 4,500	Treasury Bills	£ 8,820
By 3% Treasury Bonds	3,150	P.O. and Telegraph Money	200
National Savings Certificates	300		
	+ 7,950		- 9,020

A complete analysis of the National Debt at March 31, 1932, was printed in the *Economist* of April 2, 1932.

Commercial Reports.

MARKET SUMMARY.

The movements of prices of primary products at the principal international commodity markets during the past week show that the downward trend in values has not yet been arrested. The absence of an increase in the demand for non-ferrous metals was reflected in the weak tendency of prices in New York. The slight

spurt in domestic copper prices, following the adoption by the United States Senate of an import duty of 4 cents per lb. soon spent itself. Lead remained pegged at 3 cents per lb., but spelter and tin were cheaper. Rubber established a new low record at 2 1/2 cents per lb. Raw cotton slumped heavily from 5 1/2 cents per lb. to 5 cents per lb. Among cereals, wheat, maize, oats, rye and barley were all cheaper. Sugar and coffee are scarcely changed on the week, but cocoa lost a few points. Sterling prices of commodities which lend themselves to grading and therefore to international arbitrage continue to move in sympathy with gold quotations. Reports from the principal industrial centres in this country fail to disclose any improvement in the principal branches of activity. The coal trade continues depressed, and production and transport have been seriously curtailed in Yorkshire. The situation in the iron and steel industries remains unsatisfactory. The cotton trade, besides being threatened with labour trouble, has experienced a slight falling off in the volume of new orders.

THE COAL TRADE.

SHEFFIELD.—Production and transport of coal have been seriously curtailed by floods, but supplies are still sufficient to meet the low level of sales. Best steams for export are rather scarce and prices are firm at 16s. to 16s. 6d. f.o.b. There is a little revival of interest in contracts for June shipment. The export trade, however, is considerably below the level of twelve months ago. Business in industrial fuel, including coke, continues sluggish and house coal trade is below the normal. The position of this coalfield as a whole has fallen off since Easter. Important Russian inquiries are about and firms interested consider that the Government limit to guaranteed credit of Russia will shut out a considerable amount of possible trade. The amount of £1,600,000 is already allocated, or nearly so. The open-hearth steel department lacks tonnage orders and, speaking generally of the local trade, the unwillingness of buyers to place substantial orders remains an outstanding feature of the situation. Overseas business is as difficult to arrange as ever. The Colonies are, however, buying more steel and tools than of late, stocks there having become exhausted. The home market for tools and cutlery is worse than a month ago. A fair amount of confidence in a revival in the early autumn is to be found.

GLASGOW.—The market maintains a steady tone, but is on the whole quiet, and the steadiness of values is due more to a better balancing of supply with demand than to any great volume of business. Import licences and quotas abroad effectively curtail British exports, but ground is being well held in Scandinavian markets. Coastwise business tends to fall off, and industrial and household requirements are quiet. Shipment prices (f.o.b. district ports):—LANARKSHIRE.—Ell best, 14s. 3d.; splint best, 15s.; splint second, 14s. 3d.; navigation, 15s.; navigation second, 14s. 6d.; Hartley, 15s.; steam, 13s.; trebles, 11s. 6d.; doubles, 9s. 9d.; singles, 8s. 9d.; pearls, 8s. 6d.; dross, 8s. 9d. FIFE.—Screened navigation, 16s. 6d.; first-class steam, 12s.; third-class steam, 11s.; trebles, 12s.-14s.; doubles, 10s.-10s. 6d.; singles, 8s. 9d.; pearls, 8s. 6d. LOTHIAN.—Prime steam, 11s.-11s. 6d.; secondary steam, 11s.; trebles, 11s.-11s. 6d.; doubles, 10s. 6d.; singles, 8s. 9d.; pearls, 8s. 6d. Ayrshire.—Unscreened navigation, 16s.; jewel, 16s. 6d.; steam, 12s.; trebles, 12s.; doubles, 10s.; singles, 9s. 9d.; pearls, 9s.; dross, 9s.

CARDIFF.—The general position on the South Wales coal market is unchanged. Current shipments are almost entirely limited to contract commitments and there appears no immediate prospect of any expansion in demand. The total quantity of coal shipped at the South Wales ports last week was 407,295 tons, which compares with 228,345 tons the previous week and 243,482 tons in the corresponding week last year, both holiday periods. Except for some of the drier sized and small coals, prices are ruling on the basis of the minimum schedule. The report of the accountants of the coalfield for the three months ended last April shows, compared with the previous month, an increase in the credit balance of '69d. per ton to 2 1/2d. per ton. Both the output and the volume of trade, however, show a decrease compared with the corresponding period last year, and the slight improvement in the credit balance compared with the three months ended last January is due entirely to a slight reduction in the working costs. The following are the current approximate quotations:—Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 4 1/2d.; best dries, 18s. 6d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7 1/2d.; best small steams, 13s. 6d.; cargo smalls, 11s. 6d. to 12s. 6d.; coking smalls, 13s. 6d. to 13s. 9d.; anthracite, best large, 36s. to 38s. 6d.; Red Vein, large, 22s. to 26s. 6d.; machine-made cobbles, 40s. to 48s. 6d.; French nuts, 40s. to 48s. 6d.; stove nuts, 38s. 6d. to 45s.; rubble culm, 8s. 3d. to 8s. 9d.; special foundry coke, 32s. 6d. to 35s.; patent fuel, 20s.; pitwood, ex ship, 18s. 9d. to 20s.

IRON AND STEEL.

MIDDLESBROUGH.—The market for Cleveland iron continues very quiet, and during the past week business has been on a particularly small scale, and practically all for immediate requirements. Trade with Scotland that has recently shown some improvement has fallen off again, and the consumption locally will be reduced by the partial, if not entire, suspension of operations at the Cochrane Grove Foundry of the Cargo Fleet Iron Company, Ltd., where several important contracts in hand are being held up for reasons of economy. It is understood that opportunity is to be taken of the stoppage, by the works management to introduce new methods of manufacture on an important scale. Most other foundries in the

London: 5, Walbrook, E.C.4. and 4 St. James's Street, S.W.1.

district are moderately employed, and consuming a fair amount of iron, but overhead the production is now scarcely all absorbed, although additions to makers' stocks are only slight so far. Very little business was reported at the weekly market on Tuesday, and official prices for Cleveland were again unchanged, viz.:—No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; and No. 4 forge, 57s. f.o.b. or f.o.t. Substantial concessions are still offered on these prices to Scotch consumers. Hematite continues in quiet demand, and the business passing is mostly for early delivery. Another cargo of 980 tons was despatched last week end to Llanelly, and this business lends a steadying tone to the market, which otherwise would be inclined to sag, as there is not much business of importance in other directions. Ordinary mixed numbers have been maintained at 63s. 6d. per ton up till recently, but some business has quite lately been done at 63s., and this is now considered the market figure for prompt and 63s. 6d. for delivery over a few months. The shipments for May totalled 8,958 tons pig iron, 3,718 tons manufactured iron, and 19,604 tons manufactured steel, against 15,927 tons, 2,213 tons and 27,678 tons respectively in April. In the finished departments orders are not coming to hand at all freely, and work is irregular in several departments. Interest locally is centred in the large order for steel plates secured by the British Steel Export Association from the Soviet Government, as it is understood that this district will be allotted an important share of the work when all details come to be arranged. Prices for steel for home under the rebate scheme are unchanged, viz.:—Plates, £8 15s.; angles, £8 7s. 6d.; joists, £8 15s. Other principal products are iron Crown bars, £9 15s.; heavy steel rails, £8 10s.; 24-gauge galvanized corrugated sheets, £9 10s.; and 24-gauge black sheets £8 5s., also for home use. The ore market continues idle, and in the absence of business it is impossible to state actual values. Best Bilbao rubio is quite nominal at 15s. c.i.f., and the freight Bilbao/Middlesbrough is about 4s. 9d. Imports of all kinds of ore into Middlesbrough for May totalled 35,027 tons, against 29,767 tons in April. Coke continues in abundant supply, and the price of good blast-furnace qualities is easy at 15s. 6d. delivered consuming works. The number of blast-furnaces in operation in the district remains at seventeen.

SHEFFIELD.—Inquiries at iron and steel works reveal no evidence of general improvement, and there are a number of instances of a further decline of orders and inquiries. Firms having satisfactory order books form but a small percentage of the whole. Unemployment continues to increase, and it is significant that several of the largest firms are finding it necessary to discharge further members of their staffs, mostly middle-aged men, who have been filling positions of responsibility.

GLASGOW.—The most promising market for iron and steel products of the West of Scotland at the moment is Canada, and it is reported that the tonnage of iron and steel booked recently is well above that of preceding years. On the whole, however, the situation at the steel works is far from satisfactory, and at the end of last week it was announced that one of the most important steel plants in the Glasgow district would be closed down for at least a week, work having been resumed there only a fortnight earlier after a short stoppage. In the tube trade there is no improvement, and it is still impossible to keep more than a very small portion of the available plant employed. Inquiries for galvanized sheets for export are more numerous than for a few weeks past, and orders booked amount to a considerable tonnage, but demand is not nearly equal to output capacity. Wrought iron and re-rolled steel bars are in poor demand, and British makers are unable to compete with the continental prices quoted.

CARDIFF.—On the Swansea Metal Exchange on Tuesday new business in the steel and tinplate trades was comparatively scarce, but exports under contracts are being fairly well maintained. Tinplates ruled at from 14s. to 15s. per basis box, Welsh steel bars at 95s., and foreign bars at about 83s. per ton delivered. There was a slight increase in the stocks which at the end of last week totalled 176,875 boxes, compared with 160,808 in the previous week, and 233,011 boxes in the corresponding week last year.

OTHER METALS.

TIN.—A small volume of liquidation in London was sufficient to drive down the price of tin on Monday by £3 10s. per ton. On Tuesday, more restricted offerings, coupled with a better support, occasioned a firmer tendency, which was further strengthened on Wednesday, when it became known that Bolivia had accepted the latest restriction proposals of the International Tin Committee, and that the "carry-over" in the Straits at the end of May shows a reduction of 1,269 tons on the previous month. In New York the metal was quoted at 20-75 cents per lb. on Wednesday, against 21-10 cents per lb. a week ago and 22-00 a month ago. Wednesday's official closing quotations in London, in terms of sterling for "standard" cash at £122 2s. 6d. to £122 5s. per ton, compares with £123 7s. 6d. to £123 10s. on the corresponding day last week. Stocks in London and Liverpool at the end of last week, at 33,395 tons, show an increase of 45 tons on the week.

COPPER.—As was to be expected, the slight improvement in domestic prices following the adoption of the United States Senate of an import duty of 4 cents per lb. on copper, was soon lost, and demand was as poor as ever. Another consequence of the American tariff policy was a further weakening of quotations in London which was, however, assisted on Wednesday by increased reserve on the part of holders. On Wednesday, "Domestic" spot was quoted at 5½ cents per lb. in New York, against 5½ cents a week ago, and 5½ cents a month ago. Wednesday's official closing price for "standard cash" in London, in terms of sterling, at £26 15s. to £26 17s. 6d., compares with £27 10s. to £27 11s. 3d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 19,728 tons, show an increase of 58 tons, while stocks of rough copper, at 769 tons, are unchanged.

LEAD.—The slight improvement in the London price of lead is ascribed chiefly to the scarcity of sellers and does not reflect an expansion in demand. In New York the metal was quoted at 3.00 cents per lb. on Wednesday, against 3.00 cents a week ago, and 3.00 cents a month ago. Wednesday's official closing quotation for "soft foreign" in London, in terms of sterling, at £10 5s. per ton for shipment during the current month, compares with £9 18s. 9d. on the corresponding day last week.

SPELTER.—The market in spelter was quiet and the volume of offerings on Tuesday, though small, caused a decline in prices. Demand was a little better on Wednesday and with the help of restricted supplies, quotations recovered to last week's level. Wednesday's quotation in New York, at 2.825 cents per lb., compares with 2.875 cents a week ago and 2.50 cents a month earlier. Wednesday's official closing quotation in London, in terms of sterling, for "good ordinary brands," was £12 1s. 3d. per ton for shipment during the current month, against £12 2s. 6d. a week ago.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals the quotations for aluminium and nickel have been maintained at £95 per ton and £225-£230 per ton respectively. Quick-silver again sold at £14 per flask, and platinum remained unchanged at £9 15s. per ounce. Foreign antimony was sold at £24-£24 10s. per ton, against £24 10s.-£25 a week ago.

TEXTILES.

THE COTTON TRADE.—Liverpool.—Imports for the week May 26th to June 1st (inclusive) are 57,077 bales, of which 34,456 are American, 3,524 Peruvian, 17,481 Egyptian, 1,230 African, 125 East Indian, and 261 sundries.

Manchester.—The market during the past week has been under the influence of a further decline in raw material rates. Owing to the fear of still lower values, business has been at a very low ebb. Buyers in all quarters have been afraid to place orders. Cloth inquiry for India has fallen off, and only retail lots of light fabrics and fancies have been sold. A few more offers have come through in bleached shirtings for China, and occasional transactions have been arranged. Operations have been very restricted for the several minor outlets East and West. It is impossible at the moment to trade with several markets owing to the difficulties in obtaining remittances. There has not been much activity in home trade fabrics, but there are now indications of rather better clearances throughout the country. There is a certain amount of nervousness with regard to the developments relating to the wages and hours question. Prices for American and Egyptian yarns have favoured buyers, and there has been considerable irregularity in quotations. Home users and exporters have purchased from hand to mouth, and spinners have not been able to sell the limited output.

THE WOOL TRADE.—Bradford.—The second week of the London sales, writes our correspondent, has seen some improvement in the demand without bringing about any definite lift in values. The curtailment of the series by three days has caused no surprise whatever. The total quantity of wool available at the beginning was not excessive, but if 50 per cent. more had been merinos and fine crossbreds instead of medium and low wools, it is just possible that several home and foreign buyers would have been prepared to take a substantial part of them. The chief trouble to-day is that wool supplies do not balance with manufacturing requirements. Some importers and topmakers are already beginning to anticipate a shortage of fine wool before the new clip begins to come round in bulk. This would accentuate the difficulties experienced by topmakers and spinners, for prices of wool, tops and yarns are out of harmony with each other, the last-named being comparatively the cheapest, and during the London sales spinners have been buying tops in Bradford at fully 1d. per lb. below the cost of replacement in the wool. This indicates that wool values are still a controlling

factor, and it is now practically certain that the sales will close with most wools as dear as at the opening. The home trade has taken a large part of the crossbreds sold. An exceptionally large quantity of Cape farmers' clips have been offered this series. Prices for all descriptions of tops have eased slightly in Bradford, but this has not been accompanied by the placing of many big orders. Deliveries of merino contracts are proceeding unabated, but nearly all topmakers find spinners only interested in buying small lots. This is also a feature in all other sections of the trade.

THE GRAIN MARKETS.

WHEAT.—The international wheat situation remains generally unchanged. In fact, there have been no important price movements since the beginning of the year. In view of the fact that the general level of commodity prices has been continually declining, the wheat market has shown remarkable resilience. Although a pronounced and lasting rise in wheat is improbable, until there is an upward movement in prices in general, the world situation of this cereal is much stronger than a year ago. The volume of business during the past week has again been substantial in view of the scarcity of home-grown wheat on the Continent. Prices have weakened a little under the influence of favourable "Spring" crop reports from North America and Europe. The English crop is still backward, owing to the cold spell of weather, but rapid progress is expected when climatic conditions become more favourable. On Wednesday, "July" futures were quoted at 55½ cents per bushel in Chicago, against 58½ cents on the corresponding day last week, and 54 cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 31s. per 496 lbs., as compared with 31s. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 29s. 6d., against 29s. 6d.; No. 3 Northern Manitoba, Vancouver, ex ship, 28s. 3d., against 28s. 9d.; Australian, ex ship, 28s. 9d. to 29s., against 28s. 6d. to 29s. a week ago.

WHEAT FLOUR.—There has been an increase in the demand for flour in this country, and on the Continent, with a consequent hardening of prices. North American shipments, at 194,000 sacks, showed an increase of 84,000 sacks as compared with the previous week. Of this total, 83,000 sacks have been consigned to Europe. Quotations in London, Wednesday: Straight run, delivered country, 25s. 6d. per sack of 280 lbs., as compared with 25s. last week; delivered London, 24s. 6d., against 24s. Manitoba patents, ex store, 25s. 6d. to 27s. 6d., against 25s. to 27s.; and Australian, ex store, 20s. 6d. to 21s., against 20s. 6d. to 21s. a week ago.

BARLEY.—Business in feeding barley both in the United Kingdom and on the Continent, has been on a small scale. On Wednesday, "July" futures were quoted at 37½ cents per bushel in Winnipeg, against 41 cents last week and 39½ cents a month ago. Quotations in London, Wednesday: "English feeding," f.o.b., per 448 lbs, 27s. to 28s., as compared with 27s. to 28s.; River Plate, landed, 24s. to 25s. 6d., against 24s. to 26s. a week ago.

OATS.—The demand for oats has been substantial, but quotations gave way under Canadian selling pressure. "July" futures, which last week stood at 22½ cents per bushel in Chicago, sold at 22½ cents per bushel on Wednesday this week, against 22½ cents a month ago. Quotations in London, Wednesday: "River Plate," landed, 17s. 9d. per 320 lbs., as compared with 18s. last week; "River Plate," ex ship, 16s. 9d., against 16s. 9d.; "Chilean White," landed, 24s. to 26s., against 24s. 9d. to 26s. a week ago.

MAIZE.—Argentina continues to dispose of her shipments in Europe without difficulty, but prices have been a little easier following an increase in "Danubian" offers. Wednesday's quotation in Chicago for "July" futures, at 29 cents, shows a decrease on last week, and a fall of ½ cent as compared with the price a month earlier. Quotations in London, Wednesday: "Plate," landed, 19s. 9d. per 480 lbs., compared with 20s. last week; "Plate," ex ship, 18s. 9d., as against 19s.; "Plate," May-June, 18s. 6d., as against 18s. 9d. Yellow maize meal, ex wharf, was quoted at £5 15s. per ton, against £5 15s. a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1931-32, 1930-31, 1929-30, 1928-29:—

	1931-1932.	1930-1931.	1929-1930.	1928-1929.
Estimated sales of home-grown wheat—				
1 week to May 28	Owts. 98,051	Owts. 101,821	Owts. 134,303	Owts. 95,098
39 weeks to May 28	3,299,377	4,437,377	8,721,225	9,198,813
Average price of English wheat per cwt.	s. d. 6 3	s. d. 5 10	s. d. 8 7	s. d. 9 9

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1928 to 1931:—

Weeks ended	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
May 21, 1932	Owts. 120,841	Owts. 14,639	Owts. 29,333	s. d. 6 2	s. d. 7 4	s. d. 8 0
May 28, 1932	98,051	7,751	16,945	6 3	7 1	8 0

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks with comparative figures for 1930:—

NEAREST FUTURE.	Jan. 2, 1930.	Jan. 2, 1931.	June 3, 1931.	Jan. 4, 1932.	May 25, 1932.	June 1, 1932.
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.	148½	56½	60½	62½	63½	61½
Chicago (No. 2 Winter) —Cents per 60 lb.	130½	79½	66½	55½	58½	55½

The visible supply of wheat in Canada, at 58,368,000 bushels, shows a decrease on the week of 1,955,000 bushels. Supplies a year ago stood at 48,573,000 bushels.

OTHER FOODS.

SUGAR.—Although the turnover of raw sugar at the principal international markets has not been on a large scale, prices are scarcely changed on the week. There has been no expansion in the consumption of refined sugar, but the technical position of the raw sugar market in New York has been strengthened by the refusal of holders to make further concessions to stimulate buying. "July" futures in New York were quoted at 0.61 cent per lb. on Wednesday, against 0.61 cent per lb. a week ago, and 0.64 cent per lb. a month earlier. Wednesday's sales of "raws" include "December delivery" at 4s. 10d. to 4s. 10½d. per cwt., against 4s. 10d. to 4s. 10½d., and "March, 1933," at 5s. 1½d., against 5s. 0½d. to 5s. 1d. on the corresponding day last week. The movements of raw sugar in London and Liverpool during last week are set out in the table below:—

	Imports.		Deliveries.		Stocks.	
	1932.	1931.	1932.	1931.	1932.	1931.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
London.....	5,143	2,162	1,164	1,401	11,480	31,474
Liverpool.....	16,206	9,896	12,881	12,036	123,075	72,544
Total	21,349	12,508	14,045	13,437	134,555	104,018
Last week	14,803	10,449	15,049	14,217	126,951	104,947

COFFEE.—The New York "futures" market showed an easier tendency in quotations. Although business in "spot" coffee was small, prices were maintained. Tuesday's London auctions were characterised by a slight falling-off in demand. There was, however, little change in quotations. Last week's movements of coffee in London were as follows: Brazilian, landed, nil; delivered for home consumption, 219 bags; exported, 2; stocks, 4,447 bags, against 2,961 bags last year. Central American, landed, 3,759 packages; delivered for home consumption, 3,443; exported, 1,938; stocks, 132,490 packages, against 129,807 a year ago. Other kinds, landed, 1,648 packages; delivered for home consumption, 2,303; exported, 2,234; stocks, 97,568 packages, against 100,504 a year ago.

COCOA.—The market in cocoa was dull and easier, both in London and New York. "July" futures were quoted at 3.84 cents per lb. in New York on Wednesday, against 4.07 cents per lb. a week ago and 4.09 cents a month ago. As compared with the corresponding day last week, Wednesday's quotation for Accra, fair fermented, June-July, at 23s. 6d. per cwt., f.o.b., London fair fermented, June-July, at 23s. 6d. per cwt. on the week. Last week's movements of cocoa in London were as follows: Landed, 3,053 bags; delivered for home consumption, 6,121 bags; exported, 58 bags; stocks, 177,076 bags, as against 229,705 last year.

TEA.—The quantities catalogued for this week's auction comprise 60,608 packages of Indian, 27,207 packages of Ceylon, and 14,423 packages of Java and Sumatra tea. The market in Indian tea was quiet on Monday, and lower rates were realised. The "Ceylon" auctions on Tuesday showed an all-round decline, and substantial quantities was withdrawn. There was no improvement in prices at Wednesday's Indian sales, and medium qualities showed a further decline in value. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account:—

Week ending	Northern India.		Southern India.		Ceylon.		Java.		Sumatra.		Nyasa-land.		Total.

RICE.—The demand for rice was quiet, and prices declined further. Wednesday's "spot" price, at 9s. 4½d. per cwt., shows a fall of 1½d. on last week, while forward positions, at 8s. 6d., show a decline of 1½d. per cwt. Movements in London during the past week were as follows: Landed, 297 tons; delivered, 95 tons; stocks, 2,312 tons, as against 598 tons last year.

POTATOES.—The principal markets have been well supplied with the potatoes. Old potatoes have been slightly easier in view of the steadily increasing supplies of new varieties. At the Borough Market, "Best King Edward" sold from 11s. 6d. to 12s. per cwt., as compared with 11s. 6d. to 12s. per cwt. a week ago.

SPICES.—The market in spices has been quiet. Pepper was steady. Wednesday's quotation for "Black Singapore" pepper, at 6½d. per lb., shows no change on the week. Movements of pepper in

London during the past week were as follows: Black, landed, 9 tons; delivered, 10 tons; stocks, 373 tons, against 577 tons last year. White, landed, 32 tons; delivered, 42 tons; stocks, 621 tons, against 616 tons a year ago.

MEAT.—The market in meat at Smithfield showed an irregular tendency. Last week's advance in home-grown beef was maintained, but Argentine beef was cheaper. English mutton was a little cheaper, and New Zealand grades did not recover from the low level reached a week ago. On Wednesday, Argentine beef (chilled hindquarters) was sold at 3s. 10d. to 4s. 4d. per 8 lbs., against 4s. 2d. to 4s. 8d. on the corresponding day last week, while New Zealand frozen mutton realised 2s. 4d. to 3s., as against 2s. 4d. to 3s. a week ago. According to the Smithfield Market official report, supplies of meat during last week amounted to 9,094 tons, as compared with 7,769 tons in the corresponding week last year. Imported beef, principally Argentine, formed 84.4 per cent. of the supplies, as against 84.4 per cent. a year ago; and imported mutton, mainly New Zealand, formed 84.3 per cent. of the total supply, as against 87.5 per cent. last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OILSEEDS.—Generally quiet conditions prevail in the markets for oilseeds and their products. Excessive imports of oils and cakes in the earlier months are being gradually absorbed and this should hasten an improvement in demand for the home-made article, an indication of this being the resumed buying of cotton oil, which had been neglected some weeks. There is, however, the usual seasonal slackening of demand to contend with and mills are running probably not more than 50 per cent. of capacity. Linseed is more or less inactive and Plate afloat has dropped again to £7 10s. and for August shipment to Hull £7 15s. has been taken. Current value afloat is £7 10s., and for shipment £7 12s. 6d. to £7 15s. The quantity of linseed on passage to Europe at 112,700 tons is 10,600 tons less than last week. Cottonseed is steadier and black Egyptian for shipment offers at £5 12s. 6d. to £5 15s., while for new crop, November-December, £6 2s. 6d. is about the value. Vegetable oils are in slow demand. Linseed oil, after a period of firmness, has again declined. Raw oil for June delivery naked ex Hull mill, is now quoted £12 15s. and July-August £13. Cotton oil has met with a good trade and is substantially dearer, crude Egyptian ex Hull mill having advanced to £20 and refined to £22. Castor and ground nut oils are cheaper. Oilcakes continue in disappointing demand.

HIDE, LEATHER AND ALLIED TRADES.—The auctions for hides and skins from home-slaughtered cattle on average show a slightly weaker tendency this week. At the sales held at Manchester the two top weights in first clear ox and heifers made ½d. per lb. more money, but on the other hand the two bottom weights were lower in price by a similar amount, as was also the case with two

The Financial News

of Monday next, June 6,

will publish a special 32-page number on economic conditions in

RUSSIA

The number is prefaced by a general survey contributed by a special commissioner who was recently sent to study conditions on the spot.

Other contributors include a number of prominent Soviet officials—who discuss Russia's problems and aims from their own point of view—and a number of British business men, with an intimate knowledge of the country, who look at Russia through the somewhat more critical spectacles of Capitalism.

The whole number thus gives a balanced picture of present-day conditions and is indispensable to all who are interested in British trade with Russia.

weights in second clears and first warbled. Clear cows were dearer by 1d. per lb., while other cattle hides were unchanged in value. At the Leeds auctions held on the same day prices were unchanged to 1d. per lb. cheaper, the reduction being most marked in regard to warbled hides. Calfskins made less money, while sheepskins are still only saleable at very low figures. Business in the imported hide market has become more difficult owing to the drop in the price of certain descriptions, and a considerable amount of uncertainty is in evidence regarding the future. This week business has been done in South American wetsalted hides at new low figures, Argentine ox having sold on the basis of 3 1/2d., while Montevideo ox have been quoted at a little over 3 1/2d. Some light B. A. Frigorific ox changed hands at 2 1/2d. Dry South American hides also are slightly weaker on average, B. A. Americanos being obtainable at 4 1/2d., Cuyabanos at 3 1/2d., and Sierra Cordobas at down to 5d. The market for Africanos has remained fairly steady, first and second dry Capes being quoted at 4 1/2d. and 3 1/2d., while dry salted are to be had at 1d. per lb. less. There has been very little change in quotations for Australians, with only a small amount of business passing. Sales of leather have, perhaps, been rather more frequent this week, and compared with the previous fortnight a fair amount of business has been done. Conditions, however, are not normal for the time of the year, and there is much leeway to be made up before the position can be considered satisfactory. In the sole leather market English and wetsalted bends have accounted for the best trade, but there has been some improvement in the inquiry for dry hide bends for shoe manufacturing purposes, particularly in the medium weights. Better business has also been done in bellies, but the turnover in regard to shoulders continues small. Steady trade continues to be done in upper leathers, although the majority of orders are for small quantities. Black and brown glacé kid is the best market, but there has been just a little more inquiry for patent. Willow calf, also, maintains a fair average, as does also certain descriptions of reptile skins.

RUBBER.—The market in rubber has been inactive in the absence of American support and prices touched new low levels. In New York, Wednesday's spot price for rubber, at 2 1/2 cents per lb., shows a fall of 1/2 cent per lb. on the week. Wednesday's official closing

price for standard ribbed smoked sheet in London, at 1 1/2d. per lb. shows a fall of 1/2d., as compared with the corresponding day last week. In forward positions, business has been done at 1 1/2d. for October-December, as against 1 1/4d. a week ago. Movements of rubber in London and Liverpool during the past week were as follows: Landed, 860 tons; delivered, 3,397 tons; stocks at the end of last week, at 116,652 tons, show a decrease of 179 tons as compared with the preceding week.

Although the allotment was cut down from £45.0 to £43.8 millions, last week's average tender rate rose fractionally to 18s. 1.48d. per cent., compared with 17s. 9.99d. per cent. the week before. "Hot" Treasury bills were quoted on Thursday at $\frac{1}{8}$ per cent., while the banks were buyers of June bills at $\frac{1}{4}$ per cent., July bills at $\frac{1}{8}$ per cent. and August bills at $\frac{1}{4}$ per cent. Three months' bank bills were quoted at 1-1 $\frac{1}{2}$ per cent., and standstill bills at 1 $\frac{1}{2}$ -2 $\frac{1}{2}$ per cent.

Apart from a turnover of a few millions from Bankers' Deposits to Public Deposits, the main changes in the Bank return are due to the Bank's sales of *devisen* and purchases of gold, for Other Securities are reduced by £4.5 millions, and gold increased by £3.1 millions. This brings the Bank's total gold acquisitions since the purchases first began on May 14th to £10.9 millions. Some curiosity has naturally been aroused as to the origin of this gold, for from May 12th to June 2nd net imports into England only amounted to £3.8 millions. In actual fact there is reason to believe that the Bank's gold purchases have involved no physical movement of gold into the Bank at all. As previously stated in the *Economist*, part of the gold's acquisitions probably represent purchases from the Treasury, and here it is pertinent to record that from April 1st up to May 12th there was a net importation of gold into the country of £9.9 millions—though possibly part of this figure represented unsold Cape gold which remained in the ownership of the South African Reserve Bank. It is also possible to relate the Bank's gold purchases to recent earmarkings in Paris and New York, especially as there have lately been shipments from New York to London of gold previously held under earmark. Even here, however, it is possible that London is only the first destination of the gold, and the fact is that now that the earmarking system means that gold is held in one centre and owned in another, it is practically impossible to reconcile physical shipments with changes in the holdings of central banks.

In view of the fact that the balance of the Paris Treasury credit falls due for repayment in August, some doubt has been expressed as to whether the Bank has been turning any of its holdings of francs into gold. It is perfectly true that the Bank has probably decided to keep at least sufficient francs in hand to meet the sum due. If, however, the Bank's franc holdings have been considerably in excess of this amount, there is no reason why part of them should not have been sold for gold. For the last few months the Bank return has shown large holdings of *devisen*, and, apart from the risk of loss, they have begun to inflate the Bank's total earning assets to a point which might hamper it in the execution of its policy.

The nature of the Bank's monetary policy is now becoming clear. At present it is limited mainly to making short money cheap and plentiful. This is shown, not only by the reduction of Bank rate last month to 2 $\frac{1}{2}$ per cent., but still more by its constant open-market purchases of bills and by the maintenance of bankers' deposits during recent weeks around £75 millions. The Bank, however, probably feels that there is nothing to be gained by infusing fresh credit into the country until the country is ready to absorb it, and that this depends upon a restoration of confidence, and so upon the outcome of international affairs. Meanwhile the trading community can rest assured that so soon as they feel it safe to enlarge their commitments, adequate supplies of credit will be forthcoming and will remain available for a considerable period. At the

moment, with short money in plentiful supply and discount rates at almost unprecedentedly low levels, mere enlargement of the basis of credit could not be relied upon to produce great effects.

The May returns of the nine English clearing banks reveal a further increase of £17.9 millions in deposits. Acceptances have also expanded fractionally by £1.4 millions.

	May, 1931.	February, 1932.	March, 1932.	April, 1932.	May, 1932.
Capital and reserves.....	132.1	122.8	122.8	122.8	122.8
Acceptances	114.1	90.6	98.7	98.1	99.5
Deposits (including undivided profits, &c.).....	1,700.0	1,621.7	1,639.3	1,643.4	1,661.3
Total liabilities	1,946.2	1,835.1	1,860.8	1,864.3	1,883.6
Coin, notes, balance at bank, and cheques in course of collection	222.7	214.2	218.0	214.2	222.3
Money at call.....	127.8	106.5	109.2	108.9	108.7
Investments	299.6	288.9	290.9	296.6	309.3
Discounts	222.1	205.3	214.7	238.2	244.6
Loans and advances.....	918.0	886.3	886.0	864.8	855.7
Cover for accept., premises, &c.	156.0	133.9	142.0	141.6	143.0
Total assets	1,946.2	1,835.1	1,860.8	1,864.3	1,883.6

The bank's cash has risen from £214.2 millions to £222.3 millions, while call money is practically unchanged. Investments show an increase from £296.6 millions to £309.3 millions, and discounts from £238.2 millions to £244.6 millions. Advances are reduced from £864.8 millions to £855.7 millions. The main lesson of the returns is that while credit is becoming more plentiful, there is no better demand for it.

The outflow of gold from New York continues, for shipments reported between June 3rd and June 8th inclusive amounted to \$55 millions. \$21.7 millions went to France, \$14.9 millions to Switzerland, \$13.9 millions to Holland, and \$4.1 millions to Belgium. Imports from Uruguay (\$1,000,000), Australia (\$631,800) and other countries amounted to nearly two millions, but earmarking upon foreign account increased by \$37.4 millions, and it is understood that space is booked up in Transatlantic steamers for many weeks to come. Even so, despite gold losses of over \$800 millions since September, opinion holds that the United States will succeed in maintaining the gold standard and in meeting all foreign demands for gold. Many rates are unchanged, with call money at 2 $\frac{1}{2}$ per cent., and open market rates on 90-day bankers' acceptances at 1- $\frac{1}{2}$ per cent.

The Foreign Exchange market was very quiet this week and no great changes occurred, although at one time Continental currencies were dearer in terms of sterling. New York went from 3.68 $\frac{1}{2}$ to 3.68 after 3.66 $\frac{1}{2}$, and Montreal from 4.20 to 4.28 $\frac{1}{2}$. Paris, after touching 92 $\frac{1}{2}$, was unchanged on balance at 93 $\frac{1}{2}$. Brussels was unchanged at 26 $\frac{3}{4}$, as were also Milan at 71 $\frac{1}{2}$ and Madrid at 44 $\frac{1}{2}$. Amsterdam gained two points at 9.07, and Berlin eleven points at 15.47. Switzerland was a little better at 18.80. Of the Scandinavian currencies Stockholm was weaker at 19.50 against 19.42, Oslo gained three points at 20.02, while Copenhagen lost a point at 18.30. In South America the imposition of further restrictions in the except nominally; Rio improved by $\frac{1}{4}$ d. to 5d., and Montevideo was unchanged at 29 $\frac{1}{2}$ d. In the Far East the rupee improved by $\frac{1}{4}$ d. to 1s. 5 $\frac{1}{2}$ d., the yen lost $\frac{1}{4}$ d. at 1s. 9 $\frac{1}{2}$ d., and Batavia was two points worse at 9.17. In the forward market dollars were more offered at 1 $\frac{1}{2}$ and 3 $\frac{1}{2}$ cents discount, as were francs at wider discounts of 2 and 3 centimes. Belgas remained at par for both periods. Milan was weaker at $\frac{1}{4}$ and $\frac{1}{2}$ lira discount, as was Madrid at $\frac{1}{4}$ peseta and $\frac{1}{2}$ peseta discount. Amsterdam stood at $\frac{1}{2}$ cent and 1 cent premium. One month's Switzerland was unchanged at 1 centime premium, but three months' delivery was firmer at a premium of 4 centimes. The silver market was quiet and featureless, but prices rose as a result of small Chinese and Indian buying by $\frac{1}{4}$ d. to 17d. for cash and by $\frac{1}{4}$ d. to the same level for forward. The China silver currencies improved in sympathy, Hongkong by $\frac{1}{4}$ d. to 1s. 3 $\frac{1}{2}$ d., and Shanghai by the same margin to 1s. 8 $\frac{1}{2}$ d.

LAUSANNE.

EARLY next week, under the captaincy of the Prime Minister, and former Labour Premier, a very representative team, which includes among its numbers the chief Conservative Protectionist of Great Britain in the person of Mr. Neville Chamberlain and three distinguished Liberal Ministers in Sir John Simon, Mr. Runciman and Sir Herbert Samuel, who between them undoubtedly represent the great bulk of middle opinion in this country, will set forth to the long-awaited Conference at Lausanne. The great task to which this galaxy of talent are setting their hand is, in the words of the invitation, "to agree on a lasting settlement of the question raised in the report of the Basle experts and on the measures necessary to solve the other economic and financial difficulties which are responsible for, and may prolong, the present world crisis." There is no need, at this moment, to insist on the importance of this task. But this is not the first time that it has been attempted; and the experience of conference after conference has been so disappointing that it is not surprising if the world has become thoroughly sceptical of anything resulting from these elaborate discussions.

In the present case there is, indeed, more ground than usual for anxiety. It is a perverse Fate which has plunged the world into the greatest crisis in its history and compelled us all to face the necessity for prompt action and for drastic revision of preconceived ideas at a moment when the great democracies of the world seem to have been paralysed by one general election after another. In spite of the need of haste, a series of delays has brought not only Germany, but many other nations to the brink of the precipice, so that solutions which might have been effective twelve, or even six, months ago are now inadequate.

But if the difficulties are great, the need and the opportunity are greater still. Compared with so short a time ago as 1930, the trade of the chief countries of the world has fallen by one-half, and, according to a computation of the Economic Committee of the League, the number of the industrial unemployed is some 25 millions—a figure which, with dependants, represents a population not far short of the total white inhabitants of Great Britain and the Empire, cut off entirely from economic activity—while a still larger agricultural population, scattered in all parts of the world, is in dire economic straits. The very severity of the crisis has, however, done much to bring about a considerably wider understanding than heretofore of the basic principles upon which the welfare of the world depends. Indeed, it is open to those who hold that the great masses of the people learn by experience rather than by exhortation to maintain that in certain cases—France, for example—it is possible to-day to obtain agreement to courses which would have been politically impossible before the shoe had begun to pinch.

Our delegation will have as their French colleagues the nominees of a Government which has been put into power by a vote which was a clear instruction from the people to do whatever is necessary to restore the shattered fortunes of the world and to alter the course of national policy more definitely in the direction of peaceful inter-national co-operation. There will also be present in the national council chamber the representatives of Italy, whose economic life, like our own, is vitally dependent on international trade. If the Fascist regime has in past years seemed at times to be in danger of becoming a menace to the peaceful progress of Europe, Signor Mussolini, seconded powerfully by the statesmanship of Signor Grandi, has in recent times shown himself responsive to the lessons of experience and boldly adopted a far-sighted policy of political reconciliation and economic liberalism in international affairs. In these matters his attitude to-day is closely in line with our own.

Of the German delegation this must be said: The excitement and disturbance created by the overthrow of Dr. Brüning must subside before we can form an opinion as to the authority of the new Government, its policy or

its prospects of survival. Although the change at the Wilhelmstrasse is undoubtedly due to the world's long delay in getting to grips with the critical situation which developed a year ago, it is idle to disguise the disquiet aroused in Europe by being faced at this critical moment with a Government drawn largely from the class and the party which lead Germany into the Great War. But even Prussian Junkerdom cannot have come unchanged through the ordeals of the last two decades, and the new Cabinet has strengthened itself by drawing in some of the ablest officials in Germany's service. It can at least be said with confidence that if terms can be made with the present Government of the Reich, it is not conceivable that there is any section of opinion in Germany that would repudiate them.

In fact, the German delegation can take no other position than that which has been frankly stated by Dr. Brüning from time to time. They are unlikely to adopt a truculent attitude, but will say that Germany obviously cannot now resume any reparations payment at all, in view of the extreme difficulty of maintaining the payments needed to carry on her economic life, and that to arrange for any resumption in the future would imperil the recovery of world trade generally. Seeing that this recovery, which is the second but more constructive purpose of the Conference, is of vital importance to every country, the delegation will press for the policy of complete cancellation in the general interest.

With the Conference thus set against its background of growing crisis, and with the attitude of Germany at least predictable with some exactitude, what is to be the policy pursued by the other participants? So far as Great Britain is concerned, we have already expressed repeatedly in these columns our considered and unalterable views. Except perhaps for a final payment, negligible in comparison with the full Young Plan schedule, which Germany might be asked to make after a long moratorium in complete liquidation of the account for war damage, it is clear that, on any realistic view of the facts, reparations must be written clean off the map. It is also crystal clear that unless Lausanne ends with a final definite settlement, Germany's foreign creditors on both long- and short-term commercial account stand in the gravest danger of losing the whole of their capital at stake. Mere prolongation of a reparations moratorium in Germany's favour, or even a formula of settlement hedged with reservations dependent on other contingencies, would completely fail to lay the foundations for the necessary re-establishment of confidence in the future of Central Europe. Finally, it is beyond dispute that, failing a previous agreement on the liquidation of the political debts arising out of the war, any conference which may be summoned to deal with the problems of world economic reconstruction will be stultified.

To these hard facts the British delegation must invite their French colleagues to address themselves. Not all the ingenuity of expert devisers of formulae can get the Lausanne Conference anywhere unless the statesmen of the Creditor Powers are prepared, without more ado, to accept the unpalatable fact that the Young Plan Humpty Dumpty has fallen from the wall and that all M. Herriot's horses and men cannot put him back again. In this situation, however, there is a further factor to be considered which may well be brought to the mind of the assembled statesmen by the recollection that at this Conference there will be one absentee guest: there will be no chair for Mr Hoover. Yet much will turn for good or ill on the way in which the European creditors orientate their policies with their eventual repercussions on the psychology of the United States kept clearly in sight. We have heard the argument put forward that, since few reasonable people in Europe any longer believe that there will be a resumption of any substantial inter-Governmental payments on war account, the simplest way out of the impasse would be to make things easier for M. Herriot by acquiescing in the adjournment of Lausanne without any

definite conclusion, thereby forcing Germany to declare unilaterally her default. This action, it is suggested, would be followed by consequential declarations on the part of Britain's European debtors that no further annuities would be forthcoming; so that, in the end, by a succession of defaults, including that of Great Britain, the hesitancy of the American Administration and the intransigence of Congress would be rudely terminated by a *fait accompli* which would have, in popular parlance, "to be lumped or left."

Such a line of policy would be, in our opinion, neither helpful nor hopeful. Between drastic revision or cancellation and unilateral repudiation there is a great gulf. While it is important that the statesmen at Lausanne should keep in mind that the primary purpose of this Conference is to set Europe's house in order, and that Europe cannot afford to have this task obstructed by making any agreement contingent on the endorsement of a third party, it is essential that the outcome should not leave the European nations in the position of defaulters *en série* whose predicament is to be put forward as an excuse for asking the American taxpayer to swallow a bitter pill. From such a situation the confidence of trans-atlantic investors, to say nothing of good international relationships, could scarcely be expected to revive. The only hopeful way of making Lausanne a stepping-stone towards a complete all-round settlement by agreement of all post-war political debts, is if, at its conclusion, the European Creditor Powers can say to the United States: "We have settled reparations by voluntarily wiping out 99 per cent. of our claims because we are convinced that their payment, like that of inter-Allied debts, has contributed greatly to the world crisis, is no longer economically practicable, and could not be revived—or even kept alive on paper—without disastrously obstructing every hope of world recovery. We, at least, have made our full contribution towards laying foundations for the re-establishment of trade and prosperity." If the United States were approached on these lines, we are not without hope that the answer of the American people would display equal common sense and generosity in their own interests as well as those of the world.

THE LOTHIAN REPORT.

THE Report of the Indian Franchise Committee, which has just been published as a Blue Book,* is the record of a remarkable achievement. The work, of which the results are here presented, has been done against time (the Committee as a whole started work at Delhi on February 1st and signed the Report at Simla on May 1st); the ground investigated was to a large extent unexplored; and the atmosphere in which the Committee had to hold its deliberations and hear its witnesses was stormy—for the Franchise Committee was going about its business in India at the height of the struggle between Government and Congress. In spite of these handicaps—each serious in itself and most formidable in combination—the Committee has succeeded in collecting the requisite information, in making realistic recommendations, and in keeping at unity with itself. The investigations were materially assisted by the collaboration of the provincial committees, which started operations, in advance of the Franchise Committee itself, on the basis of a questionnaire; but the unity which the Franchise Committee managed to maintain is due to the members' own good feeling and good sense, and no doubt in special measure to the good will and good humour of their chairman. The Report bears the signature of all the members, and though the signatures of three Hindu members (out of a membership of eighteen in all) are given subject to a minute of dissent, which is printed with the Report itself, this divergence of views is clearly not insuperable, even on the delicate question of the depressed classes.

The Committee's work was governed by a letter of instructions from the Prime Minister of H.M. Government at Westminster, by a statement of policy presented to and approved by Parliament last December, and by the Report of the Franchise Sub-Committee of the India

* Cmd. 4026 of 1932.

Round Table Conference. The Committee was instructed by the Prime Minister to make proposals for widening the electorate in such a way "that the legislatures to which responsibility is to be entrusted should be representative of the general mass of the population, and that no important section of the community may lack the means of expressing its needs and its opinions." They had before them a recommendation from the Round Table Conference Sub-Committee that not less than 10 per cent. or more than 25 per cent. of the population of British India should be enfranchised forthwith—adult suffrage being envisaged as the ultimate goal. The Prime Minister had underlined the importance of securing a more adequate enfranchisement of women than the existing system, and of arranging for an effective representation of Labour. And, while stating that it was not the function of the Franchise Committee to attempt a settlement of the communal question, he instructed them to obtain information on a number of matters connected with the representation of the depressed classes.

The question whether the depressed classes are or are not to be treated as a separate community from the caste Hindus is, of course, one of the burning questions in the communal controversy—which was thus brought specifically within the Committee's terms of reference, and this in a particularly delicate aspect, in spite of its exclusion in principle. Moreover, it was recognised that, until the Government at Westminster had settled the question of communal electorates and the connected question of the apportionment of seats in the various legislatures to the several communities, the Franchise Committee could not complete its work in full precision and detail. Accordingly, the Committee was authorised to proceed on the assumption that separate communal electorates would continue to form a feature of the new constitution—in so far as an assumption, one way or another, on this point might be indispensable for the prosecution of the Committee's work. This assumption—instead of the alternative expedient of reserved seats for communal candidates elected, all alike, by a general electorate—must therefore be taken as governing the present Committee's proposals. We recognise the difficulties inherent in this alternative scheme. The strongest community in the general electorate would be likely to secure election for candidates belonging to the other communities in inverse ratio to these candidates' will or power to represent their own communities' interests. At the same time, we cannot but deplore the prospect of seeing the fundamentally illiberal and factious principle of separate communal electorates built right into the new structure of Indian provincial and federal self-government. And we cannot refrain from mentioning this important issue in passing, even though it is not a matter on which the Franchise Committee was given any discretion.

Turning now to the gist of the Report, we find the Franchise Committee, in agreement with all local governments and provincial committees, rejecting complete adult franchise as impracticable, and also rejecting certain modifications of adult franchise—such as indirect voting, or the limitation of adult suffrage to people between certain ages or in certain areas—which would make the problem of numbers rather more manageable. At the same time, the Committee considers the existing basis of franchise to be unsatisfactory and inadequate, and the Report makes proposals for extending it—though this in different degrees in the case of the provinces and in the case of the All-India Federation.

In the provinces the Committee recommends two main qualifications: property and education, either of which shall qualify a British Indian subject for enfranchisement, independently of whether or not he or she likewise possesses the other qualification. The property qualification is to be made much lower than it is at present, without being standardised as between one province and another. The educational qualification is to be uniform throughout the country, but to differ as between the sexes—bare literacy being demanded from women, but a higher standard from men. The Committee further proposes to enfranchise the wives (and future but not present widows) of men who possess the relatively high property qualifica-

tions at present prescribed for the provincial councils; the members of special constituencies which are to be created for Labour; certain members of the depressed classes for whom special franchise qualifications may be prescribed; and income-tax payers. The effect of these proposals will be to increase the provincial electoral roll from 7 millions to over 36 millions—of whom 29,382,000 will be men and 6,620,000 women—and to enfranchise about 14.1 per cent. of the total population and about 27.6 per cent. of the total adult population. The Committee has aimed at securing in the electorate a proportion of about one woman to four men; and, in addition to the increased female electorate, the Report recommends the reservation for women, during the first ten years, of from 2 per cent. to 5 per cent. of seats in the provincial councils.

In the Federation the Committee endorses the allocation of seats in the Federal Legislature as between the several British Indian Provinces, that has been made already by the Federal Structure Committee. As regards the Senate, it agrees in recommending that senators shall be elected by the provincial legislatures, and it would leave these free to choose, from among their own members or from outside, whoever they think would make the best representative of the province in the Senate. As for the Federal Assembly, the Committee recommends direct, and not indirect, election for this as for the provincial legislatures; but it proposes a more restricted franchise, namely, the franchise now in force for provincial legislative councils, supplemented by an educational qualification for both men and women—in both cases on a higher standard than for the provincial legislatures, though here again the standard is to be less exacting for the women than for the men. The Report further proposes that all women enfranchised under the literacy qualification for the provincial councils should be added to the *first* Federal Assembly electoral roll. On this basis, the Committee looks forward to an electorate of approximately 8½ millions: about 1,500,000 women and about 6,800,000 men. It also proposes that each provincial legislature shall return one woman member to the Federal Assembly, making a total of nine.

This bare summary of the main recommendations gives little notion of the amount of evidence and the amount of thought and experience that has gone into the Indian Franchise Committee's work. It can truly be said that a study of the Report repays the labour, if only for the sense of encouragement with which the reader is inspired by it. At this moment, when the outlook is dark everywhere, and in India not least, it is a pleasure to read the record of a really constructive piece of political investigation and planning. The cause of Indian self-government has been well served by Lord Lothian and his colleagues.

GOLD AND THE CRISIS.

THE Final Report, whose text will be available in London this week-end, presented by the Gold Delegation of the League of Nations is a disappointing document. Published at a time when it would have been of great value for Governments to be presented with clear and unanimous findings, on whose basis sound future monetary policy could have been constructed, the Report is calculated to mystify rather than educate public opinion. The original terms of reference to the Delegation, which was appointed three years ago, were that they should report on the causes and effects of fluctuations in the purchasing power of gold, the supposition being that the restored post-war gold standard would continue to function and that the Delegation's task was to consider the need for any modifications desirable to ensure that its normal functioning would be effective and smooth. Barely, however, had the Delegation got to work than a series of developments, now painfully familiar, began to operate on the world's monetary system, with the result that the countries now remaining effectively on the gold standard can be counted almost on the fingers of one hand, while countries on and off the gold standard are alike plunged in a crisis, characterised by paralysis of credit and trade, which is threatening to

destroy the foundations of civilised life. That the Report under these circumstances must deal, not academically with questions germane to a now non-existent gold standard system, but practically with the immediate problems of the crisis, was recognised by the Delegation; but, unhappily, the distinguished experts forming its membership have failed completely to agree, not merely on the objectives of future monetary policy, but on the very causes of the crisis itself. The chairman, M. Janssen (Belgium), together with Sir Henry Strakosch and Sir Reginald Mant, has signed a note of dissent which constitutes virtually a Minority Report; in a separate memorandum of dissent Professor Cassel aligns himself generally with the Minority; while the Majority Report represents the views of the representatives of France, Czechoslovakia and Poland, together with those of Holland, Germany, Italy and the United States.

Memoranda on developments and policy in the monetary sphere do not lend themselves readily to summarisation, and we can do little more in our available space than indicate briefly the main lines of cleavage between the Majority and the Minority of the Delegation. The Majority Report prefaces its examination of the breakdown of the international monetary system with the general statement that no international currency standard can work successfully for long if the principles on which it is conducted vary widely between countries, and that whenever the general level of prices in any important country is either out of gear with world values or insensitive to monetary influences, there is a danger of a strain being placed on the international monetary standard which it may prove unable to support. The inference that "rigidity" has been the underlying cause of the present crisis permeates the whole of the Majority conclusions. The war, it is suggested, and the post-war inflations left troublesome legacies and maladjustments in the world's economic system. New gold parities were selected which involved the necessity for readjustments whose realisation proved unexpectedly difficult. In almost all countries there was a vastly increased accumulation of State debt and other international indebtedness which demanded the ultimate transference of wealth from one country to another on an unprecedented scale. The flow of capital investment, notably from the United States, was irregular; much of this investment was placed, not in the development of countries with untapped natural resources, but in Europe; and much of the investment was not carefully controlled. The unstable situation thus created was intensified by the world's failure to accept the need for the drastic changes in national economy demanded by such developments as the production of synthetic nitrates, the expansion of cotton textile manufacture in the Far East, and the extension of wheat-growing in North and South America. Up to 1929 there was rapid economic progress, but there was also "a considerable credit inflation which was superimposed upon the real measure of progress that had been achieved and introduced many unsound elements into it." Cartelisation, schemes of price control, etc., on the one side, and inflexible wages, on the other, all tended to make the whole chain of prices unduly rigid; and resistance to change was further stiffened by State intervention in the form of tariffs, bounties and other artificial props. When the industrial and speculative boom in the United States collapsed in 1929 and the flow of America's foreign investment dried up, selling pressure in the face of growing world stocks broke the commodity price structure and led to growing strain in debtor countries. The expedient of borrowing on short-term served only to delay the day of reckoning. When the final crisis culminated with the insolvency of the Credit Anstalt, the gold standard had already begun to succumb to a combination of economic forces too malignant for it to bear.

So much for the causes of the crisis. For the future the Majority record their belief that, at the present stage of world economic development, the gold standard remains the best available monetary mechanism. Its restoration, therefore, should be the immediate objective of Governments, but such restoration demands, first, the realisation of certain conditions, namely, (1) there must be a reasonable degree of freedom once more in the movement of goods and services; (2) there must be a satisfactory

solution of the problem of reparations payments and war debts; (3) there must be international agreement that gold movements will not be prevented in future from making their influence felt both in the country losing gold and in the country receiving it. If these conditions are realised, and if, in addition, individual countries take the necessary steps to restore and maintain equilibrium in the national economy by balancing their Budgets and adjusting costs of production and living to the international economic and financial position, there is no reason, in the Majority's view, why the international gold standard should not again "spread its beneficial working over a gradually extending area."

From these premises the Majority proceed to examine at length the causes and effects of variations in the purchasing power of gold, and to consider methods for improving the functioning of the gold standard itself. Their conclusions throughout are so hedged with reservations that they carry caution to the point of timidity. They recommend the reduction of percentage reserve ratios as a means, *inter alia*, for economising the use of gold, and they give an excellent analysis of the harmful effects of falling prices upon international trade. But they seem more alive to the limited efficacy of monetary policy than unanimous as to its proper objectives. They regard a rise of prices from their present level as being desirable in order to lessen the real burden of fixed charges; they are confident that such a rise will occur when business confidence returns and industry revives; but, though they admit that, where credit contraction has been carried too far, it is proper for a central bank to endeavour to check "excessive" contraction, they do not look to monetary policy alone to adjust the price level, which is influenced by many non-monetary factors. Nor are they inclined to go further than to suggest that, when prices have recovered, monetary policy should aim at "relative" stability of wholesale prices; short-term fluctuations cannot be eliminated and slow movements of the long-term trend should be accepted as necessary for the development of a "dynamic" society. In any event, monetary policy can always be stultified by non-monetary policy, and the Report ends by reverting to the necessity for international economic co-operation.

From this somewhat inconclusive statement of diagnosis and prescription, the Minority dissent with emphasis. They admit that the war and its aftermath created certain disequilibria and intensified others that existed before the war; but they point out that, between 1925 and 1929, world production and trade showed steady economic progress incompatible with the supposition that there was a parallel growth of maladjustments. They find the dominant cause of the crisis in the maldistribution of monetary gold reserves, which began in the early part of 1929 as a result mainly of the influence of reparation and war debt payments and the unwillingness of the receiving countries to take payment in the form of goods and services. This maldistribution set in motion, in countries other than France and the United States, a process of deflation which gathered fatal momentum; while in the two gold-accumulating nations the inflow of bullion was not allowed to produce its normal corrective in the form of a rise of prices.

Differing thus from their colleagues in defining the crisis as predominantly a monetary phenomenon, the Minority dissent with equal emphasis from the conclusions of the Majority with regard to the objectives of monetary policy and the influence which it can exercise. Though they admit that monetary action can be thwarted by political and fiscal interference, they are of opinion that it is both theoretically and practically possible, given international co-operation, to restore commodity prices to a suitable level and to maintain them stable at that level. Criticising the Majority's evident fear of the "bogy of inflation," they submit that the prime need of the world to-day is a concerted policy of expansion of credit by the principal gold standard countries. Meanwhile, the paper standard countries, who have now "cut themselves free from a degenerating gold standard," could do much, under the lead of Britain, to restore stability of prices at a chosen level for a great part of the world. Failing such concerted action—and, in the Minority's opinion, the gold standard is only the "best available monetary mechanism" if properly managed—the Majority's reliance on a revival of

confidence as a begetter of higher prices is misplaced. The sequelæ of deflation are now strangling to death the world's trade.

It is, we repeat, very unfortunate that the work of the Gold Delegation should have ended in such divergence of opinion. For our own part we are inclined to suggest that truth and sound judgment lie mid-way between the findings and recommendations of the Majority and of the Minority, though, pragmatically, the latter are entitled to claim that their proposals are a more positive contribution to the solution of a crisis in which bold action is imperative if civilisation is to survive. In a sequence of events so catastrophic and of such magnitude as those of the present crisis, it is almost impossible to distinguish with absolute accuracy between causes and effects. We agree with the Minority that the breakdown of the gold standard was predominantly a monetary phenomenon, *when once the forces culminating in 1929 set catastrophic deflation to work*, and that monetary policy must play a large part in getting the world out of its present straits. At the same time, it is now crystal clear that, between 1925 and 1929, the great flow of foreign investment was temporarily "papering over" cracks in the structure which were none the less threatening because outwardly all seemed to go well. We suggest that, in their diagnosis of the underlying causes which led up to the final crisis, the Minority have minimised unduly—at least by implication—the disequilibria produced by non-monetary factors. Indeed, they state specifically that reparations and war debt payments (which the Majority are inclined to exculpate) were a dominant influence in creating the conditions in which a monetary "crash" occurred. We do not believe, when all is said, that any concerted monetary policy on the part of central banks could have adjusted economic conditions in various countries to the situation required to enable these payments to have been effectively made by means of goods, or could have nullified the effects, of the malignant influence of economic nationalism.

The future, however, is of greater practical importance than the past. We have repeatedly urged in these columns that a substantial rise of wholesale prices is essential if the world is to survive the crisis without far-reaching disaster. Though we are less confident than the Minority signatories that monetary action can greatly influence recovery without international economic co-operation in the wider sphere of fiscal policy, and though the Majority, in our opinion, have done well to emphasise again and again the need for such co-operation in general and in particular that for freedom of trade, we are left, after perusal of the recommendations of the Majority Report, with a feeling of disappointment that these distinguished experts in monetary theory should have failed to point out that this crisis is eminently one of those occasions—which they admit sometimes occur—when central banks should properly encourage a freer use of credit. In effect, they have said to Governments: "If you create the conditions of confidence and freedom which lead to fresh profitable enterprise and a consequent recovery of prices, central banks may properly be asked not to block the road by their monetary policies." But central banks must always act positively or negatively, and even to avoid obstruction means that they must take definite steps. If they agreed, in face of the present collapse of prices, to act all in the same direction, it would undoubtedly influence the course of events.

IMPERIAL PREFERENCE: CANADA.

The first Dominion whose position we turn to examine in the light of the general discussion of Imperial preference which we published last week is Canada. The hosts at the Ottawa Conference will naturally be particularly anxious for success, and the leaders of the Conservative Party, headed by Mr Bennett, have recently been paying their most ardent respects to the cause of Imperial preference. Still more striking has been the attitude of the Liberals, whose historical rôle it has been to uphold the autonomous rights of the Dominion and to be very suspicious of Imperial trade agreements, but who now, under Mr Mackenzie King, have been criticising the Government for not adopting a more forward policy in the matter and for putting obstacles like the anti-dumping duties,

and variations of tariff schedules by orders-in-council, in the way of trade with Great Britain. The Opposition stands for preference by lower tariffs; the Government, backed in the past by the Canadian Manufacturers' Association with its strong protectionist bias, have hitherto been inclined—as they were at the 1930 Imperial Conference, when Mr Bennett called down Mr Thomas's description of "humbbug" upon his proposals—to seek preference rather by raising tariffs against foreign goods. There are some signs, however, that the inevitable failure of the "Canada First" policy to meet the forces of depression, combined with pressure from the agricultural West, has affected Mr Bennett's viewpoint, and that Canada's official attitude may have changed somewhat in the past two years.

To this gradual improvement in the attitude of both political parties has been added during the past year an automatic incentive in the direction of increased trade between Canada and the rest of the Empire. With the departure of Great Britain from the gold standard, the Canadian dollar depreciated in New York to an extent which greatly handicapped United States sales in the Dominion market. Partly in consequence of this, the proportion of Canadian imports which came from Empire countries rose from 21.9 per cent. in 1930 to 24.2 per cent. in 1931, and the proportion during the first eleven months of the present fiscal year was 25.3 per cent. At the same time, no party in Canada is anxious to bind the country by British agreements in such a way as would jeopardise its bargaining power *vis-à-vis* other countries. Mr Mackenzie King, for example, who has been the most vigorous denouncer of the "Canada First" policy, is equally emphatic that there must be no attempt to replace it with an "Empire First" campaign which would ruin those Canadian industries which market a large proportion of their products outside the Empire. Moreover, Canada, as a debtor country, is obliged to cultivate external markets, both British and foreign, in order to balance her international account.

In forecasting Canada's demands, two main issues must be borne in mind: first, the vital importance of the wheat problem; and second, the fact that Canada is no longer a pioneer country which lives by exporting primary products in exchange for manufactures, but a manufacturing country, many of whose industries have reached the stage where overseas markets are indispensable. In granting concessions to British manufactures she is therefore obliged to have always in mind the effect both on the domestic market and on foreign markets for her own manufactured products.

The following table shows the division of Canadian exports between the principal markets, in 1925 and 1931:—

EXPORTS OF CANADIAN PRODUCE. (In million of dollars.)		
	1925.	1931.
United Kingdom	395.8	171.4
New Zealand	15.1	4.6
Newfoundland	12.7	6.9
Australia	12.0	4.8
British West Indies	10.8	9.5
British South Africa	9.3	9.2
British East Indies	6.2	4.4
Other British Empire	13.2	9.8
Total British Empire	475.1	220.6
United States	417.4	257.1
Germany	24.2	11.5
Japan	22.0	15.7
Belgium	16.6	14.4
Italy	14.1	5.9
Netherlands	12.6	13.6
Russia	11.7	0.1
Argentina	10.3	4.6
France	10.3	17.3
China	7.8	7.2
Cuba	7.1	1.6
Other Foreign Countries	39.8	35.8
Total Foreign Countries	593.9	384.8
Total domestic exports	1,069.0	605.4

It must be borne in mind that part of the merchandise shipped to a given country is only in transit for other markets; but even allowing for this, the outstanding fact which emerges from this table is that the United States

VIEWS

Imperial and Parochial

Soundness of judgement usually rests upon an ability to combine the 'close up' with the bird's-eye view. To encourage the wide angle, the Westminster Bank issues a periodical 'Review' of current trade conditions, with surveys based on local reports drawn from all over the country. Readers of *The Economist* may obtain copies monthly, without cost, on addressing a request to the Manager

WESTMINSTER BANK
LIMITED

market has become as important to Canada as those of the entire British Empire put together, and it is therefore evident that the Dominion will have to walk warily at Ottawa for fear of offending her powerful neighbour. The most important of all Canada's manufacturing industries, the pulp and paper industry, for example, depends upon the United States for over 80 per cent. of its external market. Over this six-year period there has been a decline in the proportion of exports to the Empire, though a recovery began last year.

By far the most important export which is likely to be considered at Ottawa is wheat. The difficulties of the world wheat market in general and of Canadian wheat producers in particular are too well known to need recapitulation here. Suffice it to say that in 1930-31 Canada exported 267½ million bushels, or 34 per cent. of the world total, and still increased her carry-over to the record figure of 141 million bushels. In spite of the rise in unsold stocks, it was agreed at a representative Conference in Montreal last November that the statistics of production and consumption of wheat over a period of years justify Canada in maintaining her position as a wheat producer, and a crop of 400 to 500 million bushels has been forecast for this season. The Ottawa Conference will therefore have to reckon with a Canada whose crying need is an expanding market for her wheat.

The problem, however, is not a simple one. Last year Great Britain imported 222 million bushels of wheat, of which only 50 million bushels came from Canada, while 39 millions came from the Argentine and 21 millions from the United States (some of which was probably Canadian wheat shipped from the United States winter ports). Thus at first blush it appears that there is considerable scope for the enlargement of Canadian sales in Great Britain by Imperial preference or quota, but the figures of exports from Canada reveal a different side of the problem. Of the 195 million bushels exported in 1931, 107 million bushels were consigned to Great Britain (though, according to British statistics, only about half that quantity seems to have been landed here, the remainder being doubtless "orders" cargoes actually delivered elsewhere), 4.2 million bushels to British South Africa, less than one million each to the Irish Free State, New Zealand and Malta, and the rest to foreign countries. Thus even the substitution of Canadian wheat for our entire purchases in the Argentine would not rid Canada of the necessity of selling part of her crop in foreign markets and thus of accepting the world price for the whole of it, while international competition might thereby be disastrously intensified. This view is accepted by leading representatives of the Canadian grain trade and of the Western farmers themselves.

Exports of agricultural products other than wheat are likely to be pushed increasingly, especially if the move-

ment towards mixed farming gains headway. For animal products, Great Britain and the United States are the best markets, and it is probable that Canada will ask for preferential aid in developing still further the British market for her butter, bacon, cheese and hides. Apples also offer a promising field: Great Britain already takes the major share of the Canadian export, and could probably take more, while the other apple-producing Dominions harvest their crops at a different season and would probably be glad to develop a reciprocal trade.

The extractive industries offer a very promising field for discussion at Ottawa. Many British countries have as urgent a need to import non-ferrous metals as Canada has to export them. The United Kingdom already takes more than half Canada's aluminium, most of her copper and zinc, and a large share of her lead and nickel, though the United States are also a large purchaser of these latter. But except in the case of nickel the figures are comparatively small. At the same time, Canada's proportion of Great Britain's imports of copper in 1930 was negligible, and she only provided one-eighth of our imported lead, one-sixth of the aluminium and rather over a quarter of the zinc. In all these cases most of her leading competitors are foreign countries, though Australia surpasses even the United States as a source of this country's imports of lead; but as the whole Canadian output would not fill more than a small fraction of British needs, the process of encouraging Canadian imports without uselessly penalising British consumers would require very considerable ingenuity.

Among Canada's manufacturing industries, the motor industry is particularly anxious for export markets. Canadian motor-cars are hardly likely to find an enthusiastic welcome in this country, but with assistance from a preferential tariff they might secure some of the Empire markets hitherto dominated by the United States.

What has Canada to offer in return for the advantages she is likely to ask in British markets? That the Canadian market is at present almost completely dominated by the United States is shown by the following table of imports:—

CANADIAN IMPORTS BY COUNTRIES OF ORIGIN.
(In millions of dollars.)

	1925.	1931.
United Kingdom.....	151.1	109.5
British West Indies	14.9	11.6
British East Indies.....	12.9	7.2
British Guiana.....	6.9	4.2
Australia	2.6	6.3
British South Africa	0.1	4.4
Other British countries	6.5	8.8
Total British Countries	195.0	152.0
United States	509.8	393.8
France	18.5	14.2
Japan	7.0	6.8
Germany	6.8	12.0
Switzerland	7.8	3.9
Belgium	5.1	5.5
Netherlands	5.1	5.9
Other Foreign Countries	41.8	34.0
Total Foreign Countries	601.9	476.1
Total imports	796.9	628.1

Though the United States lost some ground in the Canadian market last year, they still were responsible for over 60 per cent. of Canadian imports. This predominance is due partly to the immense amount of United States investment in Canada and partly to the natural advantages of proximity. An important factor is the large circulation of American magazines in Canada, inculcating United States habits of life and carrying advertisements of United States products. Moreover, in some of the industries in which Great Britain is most anxious to ensure an extended market for her exports, as, for example, electrical equipment and engineering, a large share of the market is virtually reserved for the United States either by international agreements among manufacturers or by the use of American standards, or by the fact that the purchasing firms in Canada are subsidiaries of United States companies. Even where restrictions of this kind do not exist, there are many products which rank among Great Britain's most important exports, bituminous coal,

for example, which Canada imports almost exclusively from the United States.

That the position of the United States in the Canadian market is not unassailable is, however, suggested by the fact that their percentage of Canada's imports fell from 65.5 to 62.6 between 1930 and 1931, while the British percentage rose from 26.6 to 27.9. The Canadian Government is known to be in favour of encouraging the British trade in iron and steel products, and in some sections of this trade, notably rolling-mill products and non-agricultural machinery, the British trade, though very much smaller, has been better maintained recently than that of the United States. In many branches of the textile, leather, clay products and chemical industries there is keen competition, and any preference for British goods would be bound to make a considerable difference. As, however, many of these industries are fairly well developed in Canada, and have been the subject of political manoeuvre, the prospect of obtaining increased preference except on the basis of a higher general tariff is rather small. The textile industries, for example, have expressed a strong disinclination to be "sacrificed to Lancashire and Yorkshire."

Until the Canadian Manufacturers' Association makes public its report it is difficult to tell just what Canada is likely in the end to offer, but from the few examples taken above, which are representative of a large number of similar considerations, it appears that when allowance has been made on both sides for all considerations of domestic policy and foreign relations, very little scope will be left to either party for concessions of real value and importance.

STEEL REORGANISATION AND TARIFFS.

OF all the formidable tasks which face Sir George May and his colleagues on the Import Duties Advisory Committee, none is more urgent or more baffling than that of securing that the tariff upon iron and steel does not do more harm than good both to the industry itself and to the wider industrial interests of the nation. Whether the performance of that task is possible is a matter upon which we hold one view and the Protectionists another; but all schools of fiscal thought will in any case approve the promptitude and energy with which Sir George May has launched his initial attack upon the problem.

The present position of the steel tariff is generally recognised to be both temporary and anomalous; for not even the wildest Protectionist could contemplate with complacency the indefinite continuance of a system in which raw and "semi" products bore an all-round, indiscriminating duty of 33½ per cent., as against the 20 per cent. imposed upon the more finished product. The continuance of that position over a substantial period would involve intolerable and even ruinous handicaps to steel users and exporters, whose economic importance to this country is, as we have frequently pointed out, many times greater than that of the steel producers themselves. The situation is both urgent and dangerous, and the chief merit of the statement which Sir George May delivered at the end of last week to a representative gathering of steel manufacturers lies in its recognition of this fact. What has happened up to now is that the Advisory Committee, instead of insisting upon effective reorganisation as a condition precedent to the grant of Protection, and using the reorganisation period for a full survey of ways and means to safeguard the interests of steel users, chose rather to accept the time-honoured plea of the manufacturers that some measure of Protection was an essential prelude to rationalisation. So an improvised measure of Protection was imposed post-haste, and the vital questions of re-organising the producers and safeguarding the users left to be solved afterwards. In adopting this method of procedure the Committee have put the cart before the horse. They have gambled rashly. But it may at least be said that Sir George May is showing determination to bring off the gamble, if it is humanly possible.

In the address, to which we have referred above, Sir George struck the right note at the outset. "The industry," he said, "cannot be prosperous unless it can sell its products; and it can only sell its products if the industries

using them are flourishing. Those industries are very largely export industries, and can only maintain and develop their exports if they can be assured of getting from the iron and steel industry the requisite material of the right quality and at the lowest possible price." The purpose of the tariff, he went on to emphasise, was to afford the industry an opportunity of putting itself in order "on the lines best adapted to this country and the diversified nature of the demands that have to be met." Then, having stated that the period of the present duties would be prolonged to allow time for rationalisation schemes to be worked out, Sir George proceeded to make a threat, and a promise. The threat was that effective re-planning of the industry was the condition of further continuance of Protection; the promise that, if effective re-planning was achieved, the industry would receive "adequate" permanent Protection. As to the threat, the industry will, we trust, take it as being seriously meant, and not a bluff. As regards the promise, the industry would do well to do some hard thinking. It must not suppose that it can ride away with high Protection in return for half-hearted, if much-advertised, efforts at reform. Nor must it assume that Sir George May or anyone else can promise permanent Protection at any level. Policy, in the long run, is decided by Governments, and Governments change. Moreover, even our present tariffist Ministers avow the main object of their tariff policy to be the creation of a weapon to beat down the tariffs of other countries and to open up the way to freer trade all round. Unless our tariff policy can succeed in this achievement, it will stand condemned as a failure without mitigations. Neither this, nor any other, Government can afford to tie its hands by long-distance promises to any industry, especially one of such outstanding importance as the steel trade.

The upshot of the meeting between the Advisory Committee and the steel manufacturers was the appointment of a National Committee, consisting of Mr Charles Mitchell, of Dorman Long, as chairman, and twenty-three members, who, although one or two notable names are missing, may be accepted as representative both of regional interests and diversifications of manufacture. From this body four Regional Committees have been appointed, representing the interests of Scotland, the North-East Coast, the Midlands, and South Wales respectively. In addition, an Executive Committee has been set up, to consist of the chairman and one other (in the case of the Midlands two other) members of each Regional Committee. This alignment of committees gives promise that a problem bristling with complications will be at least approached from the right angle. Clearly, regional amalgamations are the first essential step. If and when these can be arranged, the next step would presumably be the formation of regional programmes of production and marketing—these programmes to be co-ordinated by the Executive Committee.

But, unfortunately, to approach a complex matter on the right lines, does not make its solution a certainty; and it would be folly to underestimate the difficulties faced by the committees. There are favourable points, it is true. Amalgamation and reorganisation in the steel trade is no new project. Tentative schemes have been worked up and discussed for years. To-day the hard plight of trade and the stimulus afforded by the threat of the withdrawal of Protection, may combine to create a driving force which will compel effective results. Moreover, the committees have before their eyes the lessons of the mistakes made by rival industries in other countries. Nevertheless, anyone who has had any experience of amalgamations knows that even the first step is extremely difficult, and involves not only the most intricate interweaving of a variety of interests, but also the will both to make sacrifices and to disclose secrets on the part of a large number of firms, all probably hopeful of the tariff as a saviour of their individual existence, and all jealous of their own private affairs. Over all these obstacles the Regional Committees must climb. Even then, wider difficulties have to be faced. The crux of the problem lies in the distribution of orders and the joint organisation of sales. Moreover, the plans for the erection of Bessemer plant at Corby suggest that in the course of reorganisation there may be some change from basic

open-hearth to basic Bessemer production; but if large new plants are to be erected, the danger of creating excessive capacity must be avoided and the geographical distribution of output considered. Behind the whole problem, however, lies the question of finance. Before the distrustful and hard-hit investor can be persuaded to finance new steel projects he will have to be fully satisfied on many points. It will not be enough to show him that dead wood has been cut out and amalgamations carried out on sound lines and with reasonable capitalisation. He will wish to be assured also that the schemes of the new combinations are complementary and not internecine; and that the mistakes which have proved fatal to so many great combines are not being repeated.

Of the multitudinous problems no more need be said at this juncture. It is well that their complexity should be realised. But, on the other hand, the country has the right to expect that the steel industry should spare no effort to solve them. It has long been proclaiming that, if tariff Protection were granted, it could set its house in order. It has got tariff Protection, for good or for ill. Let it get on with the job and get on quickly; because every month that passes under the present system will make it more and more difficult for our steel-using export industries to hold what ground they still retain in overseas markets. But, whatever the prospects of success, let us in any case be grateful for one thing, namely, that our first tariff "chief" has had the courage at the outset to tell a great British industry that the first essential is efficiency.

AMERICAN ELECTION PROSPECTS.

(BY A CORRESPONDENT.)

THE political situation in the United States has, during the past two months, presented a spectacle of unparalleled confusion. The Hoover Administration from the opening of the first session of the new Congress was placed in a difficult position through its loss of control over both Houses of Congress, but there seemed a prospect of its difficulties being eased by the willingness of the official leaders of the Democratic Party to facilitate the passage of reasonable measures framed on non-partisan lines and designed to promote reconstruction. But when the Budget and other measures came before Congress for consideration the Democratic leaders found themselves unable to control their followers, who proceeded to mutilate most of the taxation and other proposals submitted by the Hoover Administration.

The reason for the bewildering irresponsibility of the Lower House is not hard to discover. A diminution of Government expenditure combined with an increase of taxes is bound to inflict hardship upon numerous people, and when measures for these ends are submitted to four hundred and thirty-five Congressmen, who have within a few months in most cases to run for renomination in a direct primary in their district, the prospective victims seize their opportunity. Many seats are safe for one party or the other, but comparatively few members of Congress on either side are in a position to ignore the possibility of opposition in their own camp. For most of them their first concern is their own political life; and they know that tax increases, cutting of salaries and curtailment of votes for public works place it in peril, while their rivals are in a position to abuse them for their pusillanimity and to make all sorts of promises. Hence it came to pass that measures which had the endorsement of the leaders of both parties were obstructed and held up by timorous Congressmen.

Meanwhile the Senate, which is an infinitely saner body but not completely devoid of irresponsible elements, has been doing its best to repair the evil done by the errors and follies of the House of Representatives. It gave a lead to the Lower House by finally hammering out the taxation measures into a form which offers some promise of raising the revenues required to come at least within an approachable distance of balancing the Budget. It was, however, the scene of some lamentable squabbles about the tariff, and the low-tariff professions of the

Democratic Party were made to look hypocritical by the action of a group of Democratic Senators in backing demands for tariff increases on oil, copper and other commodities in which their States were interested.

The truth is that in the minds of the politicians at Washington the approaching election campaign is uppermost. On the Republican side, Mr Hoover has formally made known his intention of running again by entering the primaries of several States, and it is virtually impossible to prevent a President from being renominated for a second term. The Republican managers claim that in the last two months the exhibition of political ineptitude given by the Democratic Party in Congress has disgusted a large section of the public and has improved Mr Hoover's prospects of election; but there are scant signs of any popular enthusiasm for his candidacy, and eminent Republican politicians have openly proclaimed their belief that his nomination spells inevitable defeat for his party. It was counted an ominous portent that in the Republican primaries in Maryland he polled only some 17,000 votes against 11,500 obtained by ex-Senator France; and even more disconcerting than his comparatively small majority was the fact that the total vote polled for him was about one-fifteenth of the vote recorded for him at the Presidential election in 1928.

The liquor issue also continues to be a constant source of worry to the Republican chieftains. Particularly significant was the result of the Republican primaries in Ohio, the headquarters of the Anti-Saloon League, where a fierce battle between "Wet" and "Dry" aspirants resulted in a decisive victory for the "Wets." This result has emboldened the "Wets" to increase their pressure for the inclusion in the Republican platform of a plank calling for a national referendum on prohibition; and the insertion of such a plank at the party convention which is to be held in Chicago is now freely predicted. It might keep the Republican "Wets" in the fold, but it will also be liable to drive the extreme "Drys" to an attitude of sullen hostility. Again, if the Republicans decide to support the idea of a referendum, the Democrats, who have virtually decided on a similar plan, may consider it necessary to pledge themselves to outright repeal of the prohibition laws.

At the Democratic convention, which is also to be held in Chicago, a bitter battle for the Presidential nomination now seems inevitable. Governor Roosevelt has still a long nominal lead over his rivals, and his campaign managers on May 10th issued a statement claiming that when the convention opened the line-up of delegates behind the different candidates would be as follows:—

Roosevelt	678	Reed	36
Smith	203	Byrd	24
Garner	90	Murray	23
Lawler	58	Ritchie	16
White	52	Not claimed by anyone	56

These figures total 1,236, which is 82 more than the actual convention roll of 1,154 delegates, and the discrepancy is accounted for by overlapping claims. Roosevelt would thus, even on the basis of the claims of his supporters, fall short of the two-thirds majority necessary for nomination on the first ballot, but his lead would be so decisive that it would be difficult to avert an immediate landslide in his favour. His opponents, however, do not concede the claims of the Rooseveltians, and argue that up to date only some 400 delegates have been definitely pledged in his favour. They also maintain that many of the delegates who are pledged to him are not committed beyond the first ballot and will be free to switch their votes on later ballots. Undoubtedly in the past month Roosevelt's candidature has suffered some serious setbacks, for he was badly beaten in the primaries in Massachusetts by ex-Governor "Al" Smith; he captured only half the important delegation from Pennsylvania, and in California he ran third to Speaker Garner and Smith, the former winning the State's delegation. He is also likely to lose New Jersey and has no support from Illinois. Moreover, his opponents are stressing the fact that he has shown manifest weakness in the industrial States of the East, where a Democratic candidate, to win the election, must show strength, and that the greater part of his support comes from the Southern and

Western States which almost any Democratic nominee would be likely to carry at the next election.

According to the political experts, Roosevelt's fate at the convention will probably depend upon the attitude of the delegation from New York, ninety-four strong, which is controlled by Tammany. The normal expectation would be that a Democratic Governor of New York would secure the solid support of the Democratic delegation from his own State, but apparently the destination of the New York votes is only known to one man—John F. Curry, the boss of Tammany—and he maintains tight-lipped secrecy about it. Roosevelt has generally, in State elections, had the support of Tammany; but recently, as the result of scandalous revelations made at an inquiry conducted by Judge Seabury, he has been forced to dismiss certain prominent officials belonging to the Tammany organisation, and, although he has avoided taking disciplinary action in other cases where it seemed called for, and has thereby forfeited the support of certain reforming elements, he is no longer regarded with any enthusiasm by the Tammany leaders. But "Al" Smith, who is himself a product of Tammany, is also in disfavour with the organisation.

"Al" Smith is so far easily second in the race for delegate support, but even his strongest partisans do not cherish any delusions about his ability to win the Presidential nomination. They know that, if they can succeed in their schemes to block the nomination of Roosevelt, the supporters of Roosevelt will be strong enough to place a decisive veto upon the election of Smith, and in their baffled rage will proceed to do so. In view of the possibility of such a deadlock, consideration is being given to the chances of other aspirants, of whom the most prominent are Newton Baker of Ohio, Governor Ritchie of Maryland, and Speaker Garner of Texas. Governor Ritchie is much too conservative to please the West, and Mr Garner has developed no strength outside the south-western group of States. There remains Mr Newton Baker, the ex-Secretary for War, who has not been promoting his candidature with any overt vigour, but has made known his willingness to accept the nomination. He has the advantage of coming from the pivotal State of Ohio, and, although its delegates are on the first vote pledged to support Mr White, the State Governor, they will be available as a nucleus of Baker's strength in the event of a deadlock between Smith and Roosevelt.

Considerable talk is also reviving about the merits of Mr Melvin Traylor, the well-known Chicago banker, who has for years been an active Democratic politician, and commands general respect as an able banker of inherently progressive views. But Mr Frank R. Kent, writing in the *Baltimore Sun*, mournfully predicts that the nomination will be determined finally in the same sort of "good old smoke-filled room" in which President Harding and other Presidents have been selected. He gives the names of seven State bosses, headed by Curry of Tammany, Frank Hague of New Jersey, and Tony Cermak of Chicago, who control between them 232, or more than one-quarter, of the votes, and calculates that some twenty-five men will be in a position to direct the final disposition of some 1,000 votes. The Democratic candidate for the Presidency will be selected at some secret conference of these twenty-five men.

Notes of the Week.

Irish Developments.—During this week sudden, and still puzzling, changes have come over the situation regarding the Irish parliamentary oath and its reactions on the Ottawa Conference. On Thursday of last week papers relating to British plans from the Ottawa Conference, which had been circulated to other Dominions, had not been sent to Dublin because, he said, "no good purpose could be served by entering into further negotiations with people until they show they are ready to observe agreements." This announcement, which,

though not as courteously worded as it might have been, was only to be expected in view of the general attitude which the British Government has taken up, was entitled by Mr de Valera's newspaper, the *Irish Press*, "as disgusting a piece of badly-staged hypocrisy as is recorded in British politics," and this unsympathetic description was followed by a vituperative attack on the personal qualities of the Dominions Secretary. It was, therefore, all the more surprising when, on Monday last, Mr Thomas announced that, at the invitation of Mr de Valera, he and Lord Hailsham were crossing that night to Dublin "for a preliminary discussion on the present difficulties between the two countries in relation to negotiations concerning the Ottawa Conference," and that Mr de Valera himself would come to London on Friday. Whether this remarkable turn of events is only a political manoeuvre of Mr de Valera's, or presages an amicable settlement of the dispute, can scarcely be guessed until the results of the deliberations are given to the public. The *Irish Press* says that the question of the oath is not to be reopened, and Mr de Valera told the Senate on Wednesday that his Government's attitude on the matter was unchanged. The Senate, however, which had passed the second reading of the Oath Removal Bill through the abstention of most Cumann na nGaedheal Senators, took heart from the new developments and wrecked the Bill—from the Fianna Fail point of view—by removing from it those clauses which directly affect the subordination of the Free State Constitution to the Treaty of 1921, and by appending a clause delaying the entry of the Bill into force until an agreement has been reached between the Government of the Free State and the British Government for the abrogation of Article 4 of the Treaty. This step may prove the death warrant either of the Fianna Fail Government or of the Senate itself.

M. Herriot Meets the Chamber.—M. Herriot has formed his Government at last. He has combined in his own person the Premiership and the Ministry of Foreign Affairs. M. Paul Boncour is Minister of War, M. Painlevé Minister for the Air, M. Germain Martin Minister for Finance, and M. Daladier Minister for Public Works. Thus the new Ministry represents a gamut of political groups from the left wing of M. Herriot's own Socialist-Radicals as far as M. Painlevé's central group inclusive. The new Government met the Chamber on Tuesday, and obtained a vote of confidence by 384 votes to 115, a majority of 269. This division is important, since it isolates the Right from the Centre—at least for the time being—while bringing the Socialists to the support of the Herriot Government, notwithstanding the breakdown, which we recorded last week, of the attempt to achieve a Socialist and Socialist-Radical Coalition. The new Government, however, is by no means as strong as the figures in last Tuesday's voting might seem at first sight to indicate. For M. Herriot's tactics during the last few weeks have alienated the left wing of his own supporters, and this wing had drafted a motion expressing regret at the failure to secure the Socialists' co-operation. It was not without difficulty that the Government obtained the substitution of a motion in which the Chamber simply expressed confidence that the Government would carry out a policy in conformity with the wish expressed by the majority of the country—and even this motion conveys a significant hint that M. Herriot would not be able with impunity to flout the will of the electorate as expressed at the polls the other day. What policy the new Government actually will pursue was not made clear in the statement of policy which the Prime Minister read to the Chamber before the vote was taken. The statement contained certain inevitable commonplaces which no Government in the world can afford to leave unsaid in any statement which it makes nowadays, though no Government in the world has yet brought itself to translate these fine phrases into action. "International co-operation has become no less imperative in economic affairs than in foreign relations." With regard to Reparations, the new French Government, while insisting on respect for treaties, will "be ready to discuss any project or take any initiative calculated to promote

greater stability in the world generally, or *bona fide* movements towards reconciliation in the cause of peace." With regard to Disarmament, it will "favour even partial solutions such as might permit (without prejudice to the national security) of the reduction of military expenditure as a stage on the path of progressive, simultaneous and controlled disarmament." The meaning of these words will only appear as they come to be translated into action. They are capable of meaning much that would be for the common salvation of France and the world. And, in fairness to the new French Government, we shall assume that this is what they do mean—unless and until we are disillusioned (not for the first time) by the sequel.

The New Regime in Germany.—Herr von Papen has now completed the formation of his Ministry and is well away on the war-path against "parliamentary democracy," "State Socialism," Marxism, atheism, "cultural Bolshevism," and a number of other vices with which all previous German Governments, since the revolution of 1918-19, are branded. Last Monday, President von Hindenburg signed a decree for holding a general election for the Reichstag on July 31st, as though a Prussian General Election and a Reich Presidential Election in two instalments—not to speak of elections in a number of the smaller Länder of the Reich—had not given the German people enough elections already to last them for months or years. The von Papen Government's next move has been an attack on Prussia, where the old Social-Democrat, State Party and Centre Coalition Government has been carrying on since the recent general election for the Prussian Landtag, on account of the parliamentary stalemate which this election has produced. At the moment, the Prussian Prime Minister, Herr Braun, the Social-Democratic leader, who has been the life and soul of the Prussian Government for years past, has gone, rather mysteriously, into retreat, and his place has been taken by one of his colleagues, Herr Hirtsiefer, who belongs to the Centre Party. Herr von Papen, ignoring Herr Hirtsiefer, has now addressed himself to the Nazi President of the Prussian Landtag and has requested him to convoke the Landtag before June 22nd (the date until which it now stands adjourned) with a view to the formation of a new Ministry, representative of the present majority in the Landtag, in order to carry out certain pending financial negotiations between Prussia and the Reich. This is apparently a manoeuvre to force the Centre group in the Prussian Landtag to put the Nazis into power by lending them their support, under threat of financial pressure. There is a sum of 100,000,000 marks claimed by Prussia from the Reich in respect of an outstanding transaction in land settlement bank shares; and Prussia has been counting on this sum in order to balance her budget. Herr von Papen evidently hopes to bring Prussia to heel by withholding this payment, or alternatively to throw her into such financial confusion as might give the Reich a pretext for setting the existing "business government" in Prussia aside and appointing a Reich High Commissioner to administer Prussia autocratically. The Prussian Government is showing fight; and is arranging for additional taxation, by Decree, to pay its way in case the 100,000,000 marks in question are not forthcoming. It remains to be seen whether Herr von Papen will push his Prussian offensive home. He may be deterred by the attitude of Bavaria and the other southern Länder of the Reich, which are already up in arms on behalf of "State rights." Times have changed indeed! For who, that knew pre-war Germany, would ever have dreamed that he would live to see Prussia being coerced by the Reich, and looking to Bavaria to come to her rescue?

Revolution in Chile.—Last summer, when the Chilean fleet mutinied as a protest against cuts in pay, the Chilean Air Force bombed the sister service into submission. This week, the Chilean Air Force has made a revolution of its own without having to drop an ounce of high explosive upon anybody. President Montero's regime, which represented, on the whole, the professional classes and the bankers, has been replaced by a Junta

consisting of one general and two Socialists with a radical programme; but "the live wire" in the new regime seems to be Colonel Marmaduke Grove, the new Minister of Defence and previous commandant of the School of Aviation. An attempt, on the late Government's part, to deprive this redoubtable Irish-Chilean of his post was the act which precipitated the revolution. This new convulsive turn of the political wheel in Chile has, like all Latin-American revolutions, its personal aspect. But the driving force behind this, as behind all the other political disturbances that have shaken Chile during the last year or two, has been the world economic depression. Borrowing freely abroad—and mainly from the United States—during the post-war boom, and dependent largely on a single staple export to pay the swollen interest on her foreign debts, as well as to finance her essential imports, Chile has been particularly hard hit by the slump; and violent political gestures, in the manner of Colonel Marmaduke Grove's pronunciamiento, are the Chilean way of giving expression (though hardly relief) to economic malaise. The present revolution seems frankly directed against the burden of foreign indebtedness and the incubus of foreign financial and economic control over Chilean resources and Chilean life. The revolutionaries' *bête noire* is Cosach: an organisation which is more invidious, because it is more conspicuous, than the bevy of lesser nitrate concerns which have been merged in it. The resentment against Cosach has also been increased by a technical change—the substitution of the Guggenheim for the Shanks process of nitrate extraction—which has been causing unemployment. The Junta has sworn that it will have the foreign exploiter's blood; but blood cannot be squeezed out of a body that has already been drained dry; and it cannot be very exhilarating to denounce usurers who have ceased to draw their interest already. The new Chilean Government is already showing signs of cooling off; and it will probably have its hands full in dealing with the recalcitrance of its own bankers and lawyers. The ultimate relations between Chile and her foreign creditors are likely to be determined by the remorseless working out of a very painful economic process, rather than by domestic political alarms and excursions.

United States Finances.—After the long and rough passage which the Emergency Tax Bill had in the United States Senate, the waters of the House of Representatives proved choppy but not unsubduable by an appeal to urgent national necessity. The Bill, passed last Saturday by the House without a division, and reported out by a joint conference of both Houses, was re-endorsed by the Senate on Monday and signed by the President the same evening. The Bill, which is estimated by the Treasury to bring in \$1,185 million of revenue next year, represents a success for the partisans of "soaking the rich" in so far as it omits the general sales tax that Mr Hoover himself advocated, and looks, for a great part of the money, to increased income taxes and corporation taxes, to stamps on cheques and stock transfers, and to excise taxes on petrol, motor cars and other accessories of that pursuit which the United States no longer regards as an essential item of civilised life; but there are certain other indirect taxes, and the lumber, oil and copper interests have won their tariffs. Since the deficit for eleven months of the current fiscal year is \$2,635 million, and there is no sign yet of industrial recovery, it is clear that the new measure will balance the budget only if large economies are simultaneously affected, if the war debt annuities (most doubtful of assumptions) are paid in full, and if several other questionable hypotheses are fulfilled. But that Congress should even so far have woken to its grave responsibilities is more than seemed probable a few weeks ago, and the Senate is reported to be making headway with the economy measure. Now comes another struggle over extra-budgetary expenditure. While the Senate Finance Committee has been favourably considering the Wagner Relief Bill, which would distribute \$3,000 millions of borrowed money largely through the Reconstruction Finance Corporation to profitable enterprise, the House of Representatives has passed the far more

radical Garner Bill, with its billion-dollar public works programme. The dogs are barking, for the beggars are coming to town. Seven thousand ex-service men are reported to be in Washington, assembled from all over the Union, to demand payment in full of the "veterans' bonus"—a matter of \$2,400 millions. The House of Representatives—knowing that their vote is not likely to be repeated in the Senate—may approve the payment of the bonus, if only to embarrass the Administration. At such a moment of financial crisis, it is particularly unfortunate that General Dawes should have resigned from his chairmanship of the Reconstruction Finance Corporation, for reasons which only rumour has so far detailed, but which plainly transcend his ostensible desire to attend to his Chicago banking interests. The Corporation, with General Dawes at its head, has been one of the trump cards in Mr Hoover's none too powerful hand.

Madrid and Catalonia.—The news from Spain, writes a correspondent, is chiefly concerned with the chronic anæmia from which the country's productive activities are suffering owing to the persistence of labour troubles. The Syndicalists have been successful in maintaining the general strike at El Ferrol, and it is now being extended to all the chief towns of Galicia. The Government is maintaining law and order in every district, but it is powerless to strike at the root of the trouble—which is Barcelona—until the Catalan question has been settled in Parliament. The general discussion on the status of Catalonia is now coming to an end. It has revealed the expected divergence of opinion as to the feasibility of providing for any extensive measure of home rule without detracting from the sovereign rights of the State. On the necessity for working out some scheme of autonomy, however, there was general agreement—that question having been threshed out before the Constitution was passed. Señor Lerroux, the veteran Radical leader, on whom many Monarchists had been banking to wreck the Government's project, made a speech in the early stages of the debate showing that he had no intention of playing their game. The three-hour statement of Señor Azaña, the Prime Minister, on May 27th, went rather farther in its recommendations of Catalan independent administration than was expected. He proposed that the Region should have its own system of taxation, subject only to periodical revision of financial administration by the Cortes in Madrid, should be responsible for its own expenditure and revenue, though this would mean a double system of budgetary accounts, and should make its own arrangements for public order, on the principle that power should not be divorced from responsibility. He observed, however, that there would, of course, be constant liaison with the Government in Madrid, and that the army should remain an organ exclusively of the central power. He also fixed a considerable period of transition, during which Catalan political capacity would, so to speak, be on trial. In spite of this cautionary note, the speech received a tremendous ovation and had an excellent Press in Catalonia.

The Savoy Free Zones.—Last Tuesday the Permanent Court of International Justice at The Hague delivered judgment in favour of Switzerland and against France in the Savoy Free Zones case. This judgment terminates a dispute which has been going on ever since 1919; and the prestige of International Law will be vindicated (it sorely needs it!) by country in virtue of an international legal decision. The Free Zones in question were established in the last general peace settlement but one—that is, in the re-mapping of Europe after the Napoleonic Wars—in order to render economically workable the geographical anomaly of the Geneva City is only connected by a narrow corridor along the north shore of the Lake with the main body of Switzerland; and its natural source of supply for vegetables and dairy produce is to be found in the adjoining Savoyard territory, for which, conversely, Geneva affords

the natural market. Under the Free Zone arrangement, this was made possible by setting back the Customs cordon of the kingdom of Sardinia (to which Savoy then belonged) some distance from the political frontier; and this arrangement was not affected when Savoy passed from Sardinia to France in 1859. The first move, on the French side, for the abolition of the Savoy Free Zones was the insertion of provisions to that end in the peace treaty of Versailles—a strange idea, since Switzerland had not been a belligerent in the Great War and was not a party to the treaty of peace. Thereafter the French Government sought to obtain the Swiss Government's consent to the Free Zones being abolished; and when the Swiss Government demurred, the French eventually moved their Customs cordon up to the line of the political frontier in 1923 by unilateral action. But Switzerland did not accept the *fait accompli*; and this has now been reversed in the end in Switzerland's favour. France really loses nothing, since the existence of the Free Zones has benefited the Savoyard districts included in them, without doing any economic injury to France as a whole. On the other side of the account, France will benefit now by yielding with a good grace; and, incidentally, her act will contribute towards strengthening the respect for treaty law, which France—with an eye to other treaties—has so much at heart in principal.

Lord Strickland's Apology.—As the inner history of the Maltese controversy has gradually been unfolded, it has become clear that the crux of the dispute has been a personal factor, and that the contentious personality has been Lord Strickland's. This is now confirmed; for Lord Strickland has apologised, and the domestic peace of Malta has been restored forthwith. In the circumstances, it is perhaps ungracious, but also perhaps unavoidable, to reflect that, if Lord Strickland had elected to make his apology at the beginning instead of at the end, a great many parties—including H.M. Government—might have been saved a great deal of trouble, while large numbers of Maltese, who are both good citizens and good Catholics, would have been spared much perplexity and pain. However, all that is happily now past; for Lord Strickland's apology (which appears to be very thoroughgoing) has been accepted; and, in consideration of it, the Catholic Church has withdrawn the Pastoral of May 1, 1930, in which Maltese electors were informed that they could not vote for Lord Strickland or his political friends without committing mortal sin. This was, of course, an intolerable situation in a British territory, and the British Government sought to meet it by suspending the operation of constitutional self-government in Malta so long as this religious ban upon free elections was maintained. There is now no obstacle to a restoration of normal constitutional life in Malta and of normal good relations between the Government and the Vatican.

Bank Cash and Deposits.—The latest statistical summary published by the Bank of England contains a new and useful table extending the estimates of the amount of currency (1) in circulation and (2) held by the banks, which originally appeared in the Macmillan report. The real value of the table is that it reveals the normal cash resources of the clearing banks as distinguished from the published averages of their weekly figures. To arrive at this, all that is necessary is to add together the monthly average of Bankers' Deposits at the Bank of England and the notes and coin held by the clearing banks as estimated in this new table. This gives the total of the banks' cash; for, while it is true that Bankers' Deposits include those of both the clearing and other British banks, investigation has shown that the balances held by the non-clearing banks at the Bank of England are so small as to be negligible. The result is shown in the following table, which also includes the published cash averages of the ten clearing banks, and the difference between this last

figure and the "true cash," as calculated above. All figures are in millions of pounds:—

		Notes and Coin		Banks' True Cash.	Clearing Banks' Published Cash.	Excess of Published Cash over True Cash.
		Bankers' Deposits.	held by Banks.			
1931	Jan....	64.4	102.7	167.1	197.7	30.6
	Feb....	60.1	101.7	161.8	190.0	28.2
	Mar....	60.8	99.8	160.6	184.0	23.4
	Apr....	56.6	97.6	154.2	178.5	24.3
1932	Jan....	75.6	89.6	165.2	179.8	14.6
	Feb....	70.7	86.5	157.2	172.8	15.6
	Mar....	75.0	89.4	164.4	174.0	9.6
	Apr....	72.3	87.9	160.2	173.3	13.1

For its real significance to be apparent this table should be compared with one that appears in the current issue of the *Midland Bank Review*. The Midland Bank concentrates upon Bankers' Deposits and the clearing banks' published cash, and proceeds to argue that, owing to greater reductions in the clearing banks' currency holdings, the increase in Bankers' Deposits has been accompanied by a contraction in the supply of bank cash, and so has failed to enlarge the basis of credit. These deductions need considerable modification in view of the heavy contraction in the margin between "true" and "published" cash. It must be remembered that "published" cash is the total of each clearing banks' cash on its *making-up day*, while "true" cash gives the position on the Wednesdays of each month. Bearing this in mind, it is impossible to escape the conclusion that the margin between the two is really a measure of the amount of window-dressing indulged in by the banks, and that this year the banks are window-dressing much less than before. Their partial abandonment of this practice is greatly to be commended, but when the *Midland Bank Review* proceeds to argue that the reduction in the clearing banks' "published" cash is a complete explanation of the contraction in their deposits, it is necessary to examine the figures once more. This is done below, the figures again representing millions:—

		Deposits at the Banks.	Banks' Published Cash.	Ratio of Published Cash to Deposits.		Banks' True Cash.	Ratio of True Cash to Deposits.	
				%			%	
1931	Jan....	1,873	197.7	10.6		167.1	8.9	
	Feb....	1,820	190.0	10.4		161.8	8.9	
	Mar....	1,764	184.0	10.4		160.6	9.1	
	Apr....	1,736	178.3	10.3		154.2	8.9	
1932	Jan....	1,714	179.8	10.5		165.2	9.6	
	Feb....	1,659	172.8	10.4		157.2	9.5	
	Mar....	1,676	174.0	10.4		164.4	9.8	
	Apr....	1,680	173.3	10.3		160.2	9.5	

So far from the clearing banks being the victims of extraneous circumstances, had they thought fit to operate this year on last year's "true" cash ratio, deposits this year would have ranged from £1,750 to £1,840 millions. We do not quarrel with their decision to adopt a slightly greater margin of safety in view of the uncertainties now prevailing, but this does not alter the fact that the whole of the Midland Bank's deductions are based upon camouflage rather than upon reality. It is also difficult to escape the conclusion that the amount of making-up is determined by the size of the banks' deposits, and is designed to establish a conventional cash ratio of just over 10 per cent. Now that it is possible to arrive at the true data, the last justification for window-dressing has disappeared, and the banks might well make public in their monthly returns their "true" cash holdings and cash ratio.

Metal Market Failure.—The London metal market received an unpleasant shock on Monday, when it was announced that Messrs. Lewis Lazarus and Sons, one of the oldest members of the Metal Exchange, were unable to meet their obligations. The firm's difficulties were known to arise from its commitments in tin amounting to about 5,500 tons; and, as a result, dealings in that metal were suspended for the day. Immediate steps were taken to deal with the position, notably the formation of a pool to take over the tin that might otherwise have been thrown upon the market. In accordance with the established practice of the Metal Exchange, a settlement price was also fixed at which outstanding dealings between Messrs. Lazarus and other firms could be settled, the actual price fixed being £115 per ton, against a closing

cash price of £120 per ton at the end of the preceding week. At first, matters appeared to be turning out well, and on Tuesday evening it was reported that the pool had succeeded in disposing of all the tin it had taken over, and had dissolved. Dealings in tin were resumed, and the closing cash price for June 7th was £115 10s. per ton, or a fall of only £4 10s. per ton as the direct result of the trouble. Unfortunately, these reports were premature; for the pool remains in existence, and by Wednesday night its members apparently still had 4,000 tons of "distress" tin on their hands, while on Thursday the cash price fell sharply to £109 10s. per ton. It is understood, however, that Messrs Lazarus' difficulties are not unduly serious. They arise mainly from the inability of certain foreign clients to discharge their outstanding liabilities to the firm at once, and it is conceivable that part of the cause of the mischief really lies in foreign restrictions upon the transmission of funds. In any case, it is not impossible that if all goes well the firm will eventually be able to meet its engagements in full.

Shipping Freight Index.—Whole-cargo freights in May underwent a marked recession after the relative stability maintained during the previous three months. Our index number shows a fall of 4 per cent., bringing the current figure to a level of 7.6 per cent. below that of a year ago:—

AVERAGE 1898-1913=100.

	Average, 1913.	May, 1931.	March, 1932.	April, 1932.	May, 1932.
European Waters	110.0	85.0	87.3	86.1	86.3
North America	113.1	96.6	86.3	91.7	89.6
South America	123.4	94.7	87.0	86.0	81.6
India	106.3	94.8	87.7	90.8	93.5
Far East and Pacific	117.4	96.0	95.9	99.3	88.8
Australia	127.9	104.1	103.3	96.1	88.1
Total	116.3	95.2	91.2	91.7	88.0

The general volume of business suffered further contraction last month. North American chartering was again disappointing, and pressure of unfixed tonnage on the Plate market produced a serious decline in the homeward rate. Quotations from Australia also fell sharply. Outward coal rates were dull, except for Mediterranean discharge. Movements of the various sections of our index number are shown in detail below:—

AVERAGE 1898-1913=100.

	Index Number.	Inc. or Dec. Points.		Index Number.	Inc. or Dec. Points.
Home trade	73.8	- 3.4	South America—outwards	65.2	...
Bay—outwards	100.9	+ 1.8	South America—homewards	97.9	- 8.8
Bay—homewards	91.9	+ 3.2	India—outwards	84.2	+ 2.8
Mediterranean—outwards	89.4	+ 4.1	India—homewards	102.7	+ 2.5
Mediterranean—homewards	88.2	- 0.7	Far East, &c.	88.8	-10.5
North America	89.6	- 2.1	Australia	88.1	- 8.0

Expressed as a percentage of the average for 1913, the total figure of our index number for May works out at 75.6, compared with 78.8 in April and 81.8 a year ago.

Cotton Trade Labour Confusion.—On Monday last at a special meeting of the Central Board of the Northern Counties Textile Trades Federation, which embraces all the trade unions in the weaving section of the cotton industry, the result of the ballot relating to the decision of the employers to abrogate all wages and hours agreements was announced. The ballot paper was in the following terms:—

1. Are you in favour of withdrawing your labour on June 11, 1932, against the decision of the employers to end all existing hours and wages agreements?

2. Are you in favour of your officials negotiating with the employers?

The figures showed that 88,603 were in favour of a strike and 24,493 against. On the other hand, 63,279 voted for negotiations with the employers and 29,967 against. The trades union officials were confronted by a difficult situa-

tion when they met to decide their course of action, as the vote was indecisive. After discussion it was decided to refer the matter to the various executives of the several trade unions, and a further meeting of the Central Board of the Northern Counties Textile Trades Federation will be held in Manchester on Monday. It is now felt in trade circles, writes our Manchester correspondent, that this ballot has been very badly carried out, and, in view of the confused vote, the officials have no idea as to what is the opinion of the rank and file of the operatives. It is believed, however, that there will be no decision to strike, and there is every likelihood of a request being sent to the employers for a joint conference. If this action is taken, the employers will be very careful in acceding to the request without some guarantee that any agreement reached will be carried into effect, as on recent occasions provisional arrangements have been made on labour questions and have then been turned down by delegate conferences of the workpeople. In present circumstances the labour situation in Lancashire remains in a state of chaos, but in the meantime more firms are making special arrangements with their operatives for instituting the "more looms" system, and for a reduction of wages and an increase in working hours. There is ground for believing that to an increasing extent the trade unions are losing control of the actions of their members.

The Decline of World Trade.—The latest report of the Economic Committee of the League of Nations on the present world economic situation is familiar but gloomy reading. It points out with justice that the situation has continued to deteriorate during the past four months, and that the value of international trade is at the most only one-half of its value in the first (and corresponding) quarter of 1929. Simultaneously world unemployment has increased to the prodigious figure of some 25 millions. The report proceeds to allude to the measures taken by most countries to protect themselves from the worst consequences of the trade depression. Unfortunately, restrictions imposed to safeguard a country's currency, exchange reserves, or trade balance, comprehensible though they are when judged from the national standpoint, not only have a most disastrous cumulative effect upon world trade, but even fail, or, at the best, succeed very partially, in their immediate object; for current experience is showing very clearly that if every country imposes restrictions upon imports or the transfer of funds abroad, no country is able to export or to receive payments from abroad. The effect of the world crisis and of trade restrictions upon world export trade is illustrated very clearly in the following table, which we have compiled from the trade statistics of twenty-nine countries published in the League's *Monthly Bulletin*:—

EXPORTS OF 29 NATIONS.

Month.	Actual Total. \$ mill.	% of 1930. Average.
Average, 1930	1,689.1	100.0
1931—June	1,189.0	70.0
July	1,189.3	70.0
August	1,139.1	67.5
September	1,174.0	69.2
October	1,206.0	71.6
November	1,122.2	66.3
December	1,043.7	61.5
1932—January	835.8	49.5
February	853.1	50.5
March	867.0	51.0

The March figures are provisional, and, in arriving at the total, currencies are converted into dollars at the rate of exchange current during the month. The moral is obvious: something must be done. As regards future action, the report welcomes proposals for international collaboration in the solution of monetary problems. On the question of commercial treaties it strongly favours the return to the principle of the most-favoured-nation clause, though it admits that in time of crisis certain modifications must be allowed. The report apparently expresses no opinion on the new idea of a low-tariff group, nor does it seem to recognise that this conception means the abandonment of most-favoured-nation treatment.

Prices and Indian Prosperity.—At a recent meeting of the East India Association, Sir Basil Blackett, after observing that both in volume and prices India's trade has declined most seriously in the last three years, went on to say:—

"The only alternative to a big recovery in wholesale prices is to undertake the sort of operation that has been attempted to some extent in Australia and Germany—an arrangement by which you reduce all wages and all debts, Government or otherwise. An attempt to carry out such an operation in India would produce chaos at once. But this is the only possible basis upon which Indians can continue to pay their internal and external obligations unless there is a rise of 20 or 30 per cent. in wholesale prices."

Statistics to hand, writes a correspondent, indicate that during the twelve months ended March 31, 1932, exports of Indian merchandise, in crores of rupees, totalled only 155.89, compared with 220.49 in the preceding year, and 310.80 in 1929-30. Concurrently, India's imports of foreign merchandise have declined, not surprisingly, from 238.95 crores three years ago to 161.31 in 1930-31, and to 125.69 last year. Compared with 1930-31, the grand total of India's imports, exports and re-exports amounted in 1931-32 to 287 crores as against 390, a decrease of 103 crores, or 26 per cent. Exports of gold from India last year rose by 60.28 to 60.77 crores and those of silver by 1.46 crores to 4.85 crores. The shipments of gold have led, directly and indirectly, to a considerable improvement in the financial position of the Government of India; but that circumstance has not diminished, nor should it be allowed to obscure, the grave reactions, stressed by Sir Basil Blackett, of the present price level on the economic position of the country as a whole, and not least on the rural population, the burden of whose indebtedness, previously onerous, has been rendered almost intolerable by the steep decline in the prices now obtainable for agricultural produce. Preferential tariffs in India are of minor consequence compared with a recovery in prices, inasmuch as unless and until India can secure higher prices for her staple exports she will continue to lack the purchasing power necessary to enable her to import the relatively highly-priced goods which British manufacturers seek to sell but which, in so many cases, India at present lacks the funds to buy. Indeed, a continuation of the present price-level will, and can only, result in forcing India to restrict her external purchases to the poorer qualities of goods manufactured outside the Empire. Bengal affords an illustration of the sequence of events. In the last three years the value of the raw and manufactured jute exported from that province has declined, in round figures, from 79 to 33 crores. Adding a decline in the value of tea shipments of seven crores, we get a total decline in the value of these two staple exports of 53 crores. In the same period, the imports of private merchandise into Bengal have fallen from 83 to 35 crores, a fall of 48 crores. Incidentally, these figures dispose effectively of the assumption that, taking Indian imports as a whole, the decline is ascribable to political unrest; the decline in purchasing power, except in the case of piece-goods and one or two other commodities, being quite clearly the major factor. High tariffs are undoubtedly also a grave hindrance, but these also, it should not be forgotten, are traceable to some extent to the recent fall in the price-level and the consequent decline in the revenue derived by the Government of India from Customs duties; for, as prices fell, it became necessary to impose higher tariffs in order to maintain the same level of income in terms of rupees. From whatever standpoint the problem may be envisaged, therefore, the restoration of a higher price-level is not merely important to India; it is vital—alike on financial, economic and political grounds.

Germany's Food Supplies.—Whatever may be said of the means—subsidies, tariffs, stringent import restrictions and even prohibitions—it is interesting to observe the extent to which Germany has been able to render herself increasingly independent of foreign food supplies. The following table, taken from the weekly bulletin of the Institut für Konjunkturforschung, shows the ratio of im-

ports of various foodstuffs to total consumption in 1927 and in 1931:—

RATIO OF IMPORTS TO CONSUMPTION.

	1927.	1931.
Meat	% 8	% 1
Cereals (for bread)	24	4
Cereals (for feeding)	21	6
Eggs	37	30

In addition, Germany is entirely independent of foreign potatoes and sugar. Figures showing the consumption of butter, cheese and vegetables are not available. The consumer, of course, pays the penalty for disregard of comparative costs. Meat prices in Germany are roughly double those in the United States, and cereals cost three or four times as much. Clearly, "autarchy," the avowed aim of the Hitlerites, can only be achieved at the expense of a general impoverishment of the German people.

Anglo-South American Bank.—The preliminary statement which was made public on May 19th, relating to the "frozen" assets of his institution, has now been followed by the more detailed communication which was promised to the shareholders. A new company is being formed, the shareholders of which are the Bank of England and a group of important banks. This company is taking over the bank's nitrate assets of about £7,500,000 referred to in the previous statement, and is also taking up £1,000,000 of new 5 per cent. preference shares of the bank, the issue of which the shareholders are to be asked to authorise at an extraordinary general meeting, to take place on June 27th. In return, the new company is taking over a demand liability of the bank for the equivalent of these two amounts. Pending the ascertainment of the exact value of the transferred assets, the bank is guaranteeing their nominal value, together with interest at a low rate, but the guarantee ranks after all the bank's other outside liabilities. In return, the bank's articles of association are to be altered so as to give the new company voting control over the bank until the guarantee is discharged. Furthermore, in reduction of its contingent liability under the guarantee, the bank is to pay over to the new company half its net profits after the usual appropriations for contingencies and the payment of the preference share dividend. The statement concludes by saying that while the directors cannot promise that under no circumstances will a call on the ordinary shares be made, these arrangements will, it is hoped, render a call unnecessary. So far as can be judged, all the bank's doubtful assets are now being looked after, and that there is not the smallest ground for anxiety on the part of depositors. Moreover, the fact that the bank's nitrate assets are being taken over by the new company means that the bank itself should be in a better position to face any untoward consequences of the Chilean revolution. The stock market, however, has reflected, in a sharp fall in the "A" shares, the uncertainty of shareholders with regard to their uncalled liabilities.

Liverpool and London and Globe.—Apart from the life and sinking fund departments, the total premium declined from £10,752,000 in 1930 to £10,203,000 in 1931. Interest earnings fell slightly from £499,000 to £492,000, and the net trading surplus is somewhat less than one-half of the 1930 figure at £48,000, compared with £119,000. Considering the magnitude and extent of the company's operations, the chairman was justified in his speech at the annual meeting in stating that they had fared as well as could reasonably be expected. The detailed results are as follows:—

	1930.		1931.	
	Amount of Profit.	Percentage of Premiums.	Amount of Profit.	Percentage of Premiums.
	£		£	
Fire	256,340	5.5	229,441	5.1
Personal accident	2,245	1.0		
Employers' liability	26,239	15.8	-75,035	-1.4
Miscellaneous	64,968	-1.3		
Marine	29,078	8.2	42,139	13.1
Life	23,000		23,000	
	271,934		219,545	
<i>Less items debited to profit and loss account</i>	152,468		171,653	
Total net trading surplus	119,466		47,892	

The company is controlled by the Royal, and the dividend has been maintained at 67½ per cent., and costs £542,000, compared with interest earnings, as already stated, of £492,000. One of the factors which effected adversely the operations of composite companies last year was the country's departure from the gold standard. The usual practice adopted by British companies is to issue their foreign policies in the currency of the country in which the property insured is situated. The immediate effect, therefore, of the depreciation in sterling was to increase the liabilities without any corresponding increase in the premiums on current policies. No provision has apparently been made in the balance sheet for the consequential increase in liabilities; but, on the other hand, it is stated that American and Canadian assets have been valued at par of exchange. The general contingencies fund has been increased to £2,684,000 by a transfer of £2,000,000 from excess departmental reserves not required to provide for unexpired risks, and this fund is stated to cover all depreciation on securities existing on December 31, 1931.

Overseas Correspondence.

LEAGUE OF NATIONS.

Economic Committee's Report.

(FROM OUR CORRESPONDENT.)

GENEVA, June 7.

ANOTHER serious warning on the trend of affairs has just come from the Economic Committee of the League. Its report describes the daily aggravation of the situation by national restrictions of every sort in a vain effort to escape the general rot. The value of international trade to-day is only half, or perhaps less than half, of what it was in the first quarter of 1929, and during the same period the number of wholly unemployed has more than doubled. No single country has failed to apply all means in its power to prevent its national economy from being affected by the general depression; direct and indirect restrictive measures have been numberless, and each day countries invent new restrictions. If their curative virtue is more than doubtful, their general effect is only too certain. It is, to use the energetic expression of the Financial Committee, "the strangulation of international trade." Individual action has only aggravated the situation, for while, from a national point of view, it may perhaps be inevitable, the general effect is none the less internationally disastrous. No one is any longer under the illusion that it is possible for a country to restore its economic situation by unilateral measures. Even defence of the balance of payments, which is a legitimate anxiety of every country, is only assured to a very slight degree, at the cost of economic depression and of a lowering in the standard of living. By increases of duties, surtaxes, prohibitions, quotas, etc., it is possible to reduce imports, but these restrictions are inevitably accompanied by a contraction of exports. If, as is often held, goods which can no longer be exported were sold in the home market in place of those excluded, there would not be the progressive fall in purchasing power and the continual increase of unemployment which are taking place.

Most of the recent trade agreements tend to limit rather than increase reciprocal advantages; certain others are directed towards reciprocity, whereas formerly the most-favoured-nation clause was the basis of all such treaties. What remains of the equality of treatment which this clause was designed to ensure? The Committee also expresses the fear that the policy of restrictions is a further temptation to interests, always ready to profit by exceptional conditions, to bring pressure on the authorities, and too often with success under the guise of national interest, in order to obtain unjustifiable protection by which they are the only ones to benefit. The Committee repeats its former observation that the present situation of international trade is almost wholly dominated by the monetary

and financial situation. Settlement of these questions is indispensable, and the Committee specially welcomes the ideas recently expressed for international collaboration in the solution of monetary problems. Meanwhile, existing treaties should be maintained and respected, and it is desirable to conclude others. The Committee says that the unfortunate effects of the quota system might be diminished if it were applied with moderation and with the object of avoiding abnormal imports; at present the quotas are too rigidly applied and arrest international exchanges. The essential preoccupation of the Governments should be to restore international trade. The Committee holds to the doctrine that the most-favoured-nation clause must remain one of the essential principles of economic relations, and that its disappearance would bring confusion and incalculable difficulties; the Committee admits, however, that so long as economic equilibrium has not been re-established, certain modifications might be permitted, with safeguards and respect for the interests of third parties.

Finally, the Committee says that in so severely judging the results of the policy followed by most States, it does not wish to give the impression that it is lightly reproaching those who bear heavy burdens of responsibility in their respective countries. It explains, plaintively, that the members of the Committee themselves, with similar responsibilities at home, have been forced by circumstances to apply measures which, meeting together at Geneva, they recognise as giving few advantages and creating grave inconveniences. The truth is, says the Committee, that no country, acting alone, can divert the course of economic evolution in its own favour. Concerted action alone can give the necessary impetus to international trade, provided an improvement takes place in international relations in the financial situation and the monetary system. Of this concerted action a few signs, though uncertain and sporadic, appear on the horizon, and allow some belief in the possibility of early recovery. The Mixed Committee, appointed by the Council, which recently began work in Paris, the resolution of the International Labour Conference regarding a possible economic conference and submitted by the Council to the Assembly, the Lausanne Conference and the British Government's recent initiative, all seem to show that the necessity for international collaboration was beginning to be felt. Courageous action in that sense is more than ever necessary.

UNITED STATES.

Federal Reserve Policy — Public Borrowing.

(FROM OUR CORRESPONDENT.)

NEW YORK, June 1.

THE credit expansion efforts of the Federal Reserve Banks of the past fortnight have been largely fruitless because of the delay over the Tax Bill in Congress. Banks have been too timid about risking capital to be attracted by yield, and foreigners have apparently felt the same. Gold exports last week were exceptionally large, and during May the net loss was approximately \$225 millions, the largest outflow for any month since last October, when the first inflation scare alarmed Europe. All this gold export has followed the passage by the House of Representatives of the Goldsborough Bill, which is designed to bring up commodity prices through use of Reserve banking power, but which is quite unlikely to pass the Senate, or, at any rate, to receive Presidential approval.

Gold exports have, nevertheless, absorbed much of the credit pumped in by the Federal Reserve Banks. Two weeks ago the programme of \$100 millions weekly purchase of United States Government bonds was trimmed to \$80 millions. A week ago it was brought down to \$50 millions, which figure the authorities stated to be sufficient to keep member bank excess reserves stationary around \$300 millions. Member bank reserves, as shown by the weekly statement for reporting city banks, rose \$35 millions in the week of May 25th. While these banks further reduced their loans on securities by \$78 millions,

they increased their investments by \$30 millions, mostly in bonds other than United States Government obligations. The rise is the first for some time. A bond-buying corporation is expected to be formed shortly to utilise excess reserves of the banks, now that the balancing of the Federal budget is assured. This and other ways of aiding the general situation have been much discussed in the past week by the new committee of twelve leading bankers and industrialists recently appointed to devise means of promoting credit expansion. The committee, in conjunction with similar bodies formed in Chicago and elsewhere, is also considering a plan for trade acceptances guaranteed by the credit of the leading industrial organisations, such as United States Steel, General Motors, Du Pont, Westinghouse and General Electric.

Capital issues are confined almost entirely to municipal and State borrowing, along with the regular Treasury discount bills. In May, total new issues were approximately \$80 millions, exclusive of Treasury issues. The Treasury has been the principal beneficiary of the Reserve Bank cheap-money policy. Its most recent bill issue was placed at an equivalent interest rate of 0.29 per cent., against 0.43 per cent. in mid-May, 0.68 per cent. at the beginning of the month, and 2.08 per cent. at the end of March. The banks are reluctant to go beyond short maturities of unquestioned safety, and it is doubtful if long-term Government bonds, weak as they have been recently, would be selling as well without Reserve Bank support. The Treasury's June 15th tax date financing programme is still undecided. Wall Street expects new offerings somewhere between the \$600 millions of maturities and \$1,000 millions, which would provide some new money. It was announced last January that new money to be borrowed in the last half of the fiscal year would not exceed \$1,500 millions. Already \$1,800 millions have been raised. A June 15th certificate issue totals \$324 millions, and during the month two Treasury bill issues, amounting to \$203 millions, mature.

The obvious programme of new borrowings of about \$300 millions may be upset by new demands on the Treasury for cash, such as the proposal to appropriate \$300 millions to the States for poor relief, or new subscriptions by the Treasury to the Reconstruction Finance Corporation. Some look for one-year or two-year notes for June 15th and think that for the next year or so the Treasury will continue to borrow mostly on short term. Under present conditions the Treasury is scarcely contemplating conversion of its long-term bonds. The Treasury has waived its option to call the \$536 millions of First Liberty 4½ per cents., and cannot now call them until December 15th.

The spur to the Senate, which resulted in the Tax Bill's passage, was given by the special message delivered before that body by President Hoover. The President suggested that affairs had gone rapidly from bad to worse in the past few days, having in mind particularly the pressure against the dollar and the large gold exports. The first response of the markets was further weakness, on the idea that while nothing fresh had happened except continued pressure of liquidation, the country might be alarmed into thinking of hidden crises. However, the Senate, after first voting down in committee the general sales tax, favoured by the Administration, voted the alternative measures. The new taxes include a large number of excise levies, on gasoline, tyres, automobiles, theatre tickets, electric power production, and the like, and revert to the 1922 income tax schedules, which were much higher than the 1924 rates proposed by the House. The spirit of the country seems to be a forbearance with the pinching of the higher taxes in return for the relief from uncertainty as to the financial soundness of the Government. It is felt that the prospect for an early tax measure puts at rest all question, at home and abroad, of the gold standard, and that it may clear the way for some trade improvement. Meanwhile many unwelcome Bills, such as the Glass banking Bill and the Goldsborough commodity price-fixing Bill, will probably be lost in the rush to adjourn.

Trade reports disclose a slight shrinkage in railroad traffic, against the seasonal trend, and the decline of the

steel industry to a rate of around 23 per cent. of capacity. Motor output is better, as the Ford plants are increasing their production, but after June the output will probably fall considerably. Most indices of business activity show some recession. The chief consolation is that the rate of decline has decreased.

FRANCE.

New Ministry — Iron and Steel — Crops.

(FROM OUR CORRESPONDENT.)

PARIS, June 5.

M. HERRIOT confirmed in practical fashion, by refusing to accept the "conditions" laid down by the Socialist Party as the price of their participation in the new Ministry, the declaration he made during the elections that in no case would he again accept office under circumstances similar to those which prevailed in 1924. The rupture between the two leading parties to the Cartel des Gauches has been received with marked satisfaction in Paris financial circles. The Bourse expressed by a 10 per cent. average improvement in quotations its relief at this removal of all serious fear of a vast extension of confiscatory legislation.

The composition of the new Ministry, which came into existence on Friday night, has been generally approved. As was to be expected, thirteen of the eighteen Ministers are leading members of the Radical Party, and eight of the eleven Under-Secretaries belong to the same organisation. There is an unusual proportion of new blood, although nineteen of the total twenty-nine have held portfolios before, and most of them several times. The eight non-Radicals are all members of parties which have always been more or less closely allied with the Radicals, with the exception of M. Georges Leygues, who belongs to M. Tardieu's own group, but has previously held the post of Minister for Marine in many Cabinets of varying tint, and M. Paul-Boncour, who recently, on being elected to the Senate, renounced adhesion to the Socialist Party, of which he has been a leading but moderate member throughout his whole political career. M. Herriot himself has again taken the dual office of Premier and Foreign Minister, and his recent declarations have given the country good ground to believe that in his hands both French interests and the world's peace and economic restoration will be well looked after.

In financial and economic experts the new Ministry is exceptionally strong. Professor Germain-Martin, who did excellent work as Minister for the Budget in the second Tardieu Cabinet, was Finance Minister in the four weeks' Steeg Ministry which succeeded it. M. Maurice Palmade, who has had long experience as Budget Rapporteur in the Chamber, is in charge of the Budget, as M. Germain-Martin's close collaborator. M. Abel Gardey, who did effective work as Budget Rapporteur in the Senate by insisting that the country should "know the facts" prior to the recent elections, has been promoted Minister for Agriculture. The post of Under-Secretary for National Economy is filled by M. Raymond Patenôtre, the proprietor of several provincial journals, who has long enjoyed a reputation as a "coming man" and has for some time been numbered among the Cabinet's technicians. The most notable absentee from the new Cabinet is M. Caillaux, who still appears to be suffering from the effects of his unfortunate experience as Finance Minister during the collapse of the franc in 1926. M. Malvy, who was for years Radical Home Secretary, will resume his post as President of the Chamber Finance Commission, where his long experience will be valuable in the present critical situation.

The new Ministry's declaration of policy dealt in its opening paragraph with the present serious financial situation, which it attributes to methods of temporisation and successive unbalanced Budgets, and insisted that "a will for redressment, confirmed by action, should rapidly ameliorate our finances and the whole of our economy." In addition to the establishment of a great

programme of public works as the best remedy against unemployment, the Ministry pledged itself to offer safe investments for savings, to reorganise the whole system of transport, to introduce reforms rendered necessary both by the evolution of modern technical methods and by "the imperative need for economies," to simplify the national insurance system and abolish the present maximum of 180 days' unemployment pay.

In the second and minor half of the declaration, dealing with its foreign policy, the new Government undertook to do its utmost to contribute to a political *détente*, an economic *entente* and moral disarmament. As regards reparations, the Government declared that "France cannot allow to be contested the rights resulting not only from treaties but from contractual agreements protected by the honour of the signatories, but nevertheless will be ready to discuss any project that will give greater stability to the world or sincere reconciliations in peace." The Government declared itself favourable to all solutions which, without compromising national security, will permit of reduction of military expenditure and represent "a step towards progressive, simultaneous and controlled disarmament."

Iron and steel production figures for April, which were made known on Friday, again show a decline on the previous month under both headings. Crude steel output was 457,000 tons, against 464,000 tons in the previous month and 787,000 in April, 1931. Output of steel during the first four months this year was 1,853,000 tons, against 3,207,000 tons in the corresponding period of 1931. Pig iron production in April was 459,000 tons, against 469,000 tons in the previous month and 739,000 tons in April last year. Total iron output for the four months was 1,878,000 tons, against 3,034,000 tons January-April, 1931. The number of blast-furnaces in operation in April was 79 out of an existing 211. Iron exports for the first four months were only 61,414 tons, against 104,637 tons for the same period of last year, or a drop of 62½ per cent. There is some nervousness lest Great Britain may impose 33½ per cent. import duty on iron, corresponding to that existing on steel. The home market showed a slight improvement in May, partly seasonal and partly due to recent protective measures. The invitation extended to French steelmasters by 40 British steel firms to visit London, to discuss possible modifications of the British import duty of 33½ per cent. on steel, is regarded as of great importance for Continental producers, and as likely to tend towards ameliorating the present difficult situation in the international market.

Vigorous representations made to the Government by the British Chamber of Commerce in Paris, with a view to alleviations in regard to British imports suffering from the onerous effects of the French "exchange supertax" of 15 per cent., have proved successful. Under a decree promulgated on June 4 a number of categories of imports have been exempted from the supertax. These include products exported by the British dyestuff industry, on which the Chamber concentrated a good deal of its effort. Strong protests made in April by the American Chamber of Commerce in Paris, against the quota system "which in many cases prevents the entry of United States products into France," have also proved effective and resulted in widespread modifications in a system which the American protesters in April publicly stigmatised as "a manifest iniquity."

The Government crop reports foreshadow that (other things being equal) the coming wheat harvest should be both appreciably larger and of better quality than in 1931. The area under winter wheat on May 1 is returned as 13,125,000 acres, against 11,862,000 acres at the same date last year, which suggests that growers have been encouraged by the persistent efforts of the Government to aid them by protective measures. The increase of over 1,250,000 acres in winter wheat is somewhat offset by a falling off of nearly 500,000 acres in land under spring wheat, but still leaves the total wheat sowings 771,000 acres larger than in 1931. The condition of the crop on May 1 is reported as being about half-way between "fairly good" and "good."

GERMANY.

New Cabinet — Prussian Politics.

(FROM OUR CORRESPONDENT.)

BERLIN, June 7.

THE President's action in entrusting Herr von Papen with the formation of a Government was evidently due to a political miscalculation. The intention was to secure for the Right, by the appointment of Herr Papen, who is a Catholic, the support of those who had hitherto belonged to the Centre. The fact, however, was overlooked that Herr von Papen had never been an important member of the Centre Party and that it was therefore likely to be particularly resented that he should allow himself to be used by the Opposition as a decoy against so distinguished a party leader as the Centre had had in Dr. Brüning. The very first sign that the new Government received from the Catholic camp showed clearly that they had nothing to expect from this quarter but the stoutest resistance. For the first time in the history of the Republic the Centre has declined any share in Cabinet responsibility. The Bavarian People's Party, which is also Catholic and is closely associated with the Centre, has given especial emphasis to its opposition by forbidding Herr Schätzel, the former Minister of Posts, who is a member of the Party, to retain his post in the new Cabinet, although he personally would have been willing to stay. Thus, in the whole of South Germany the Cabinet is encountering united opposition from the Catholic groups and the Socialists—that is to say, from the overwhelming majority of the population. From Stuttgart and Munich come sounds of opposition which are almost fiercer than those which greeted the ears of earlier Governments of the Left who came into conflict with the wishes of the south. That is a very serious difficulty for the new Cabinet, for no German Government can take the risk of allowing a political conflict to arise between north and south, as this would let loose forces which have too often played a fatal part in German history.

One of the most important appointments to the new Cabinet is that of Count Schwerin von Krosigk as Minister of Finance. He is a particularly expert and conscientious official who seems to have accepted office in response to an extremely strong appeal by the President to his sense of responsibility, and he will not be a party to any unsound financial policy. Everything, of course, depends upon how far he can make his influence felt in the new Cabinet. The appointment of Herr von Neurath as Foreign Minister represents a guarantee against ill-considered measures in foreign policy. The Chancellor himself is a supporter of the policy of understanding with France, and he will certainly take up a less uncompromising attitude at Lausanne than any other man of the Right. That is partly due to his strong anti-Bolshevik feeling; he wishes to see all European policy influenced by the idea of defence against the Soviet Union.

The leading spirit in the new Ministry is General von Schleicher. He undoubtedly played a large part in the fall of Dr. Brüning, and the large landowners and industrialists who influenced the President in the direction of dismissing the Chancellor would certainly have had no success without Herr von Schleicher's leadership. He is far more a politician than an officer. That he has not, however, a sensitive touch in political matters has already been shown by the choice of Herr von Papen as leader of the Cabinet, which was certainly not the best possible from Herr Schleicher's point of view. All the same, General Schleicher undoubtedly has great intelligence and exceptional force of will. His influence was already great when he was under Groener and Brüning. It is to his credit that he is willing to take responsibility now, when the position is so exceedingly difficult. He has no petty vanity, as witness the fact that he has not taken the office of Chancellor himself, but he is certainly not without a generous measure of ambition.

Herr von Schleicher will certainly not content himself with remaining Minister of Defence of the Third Reich. He does not regard his Government as provisional,

whether the National Socialists and Nationalists obtain a majority at the elections, which is very improbable, or not. He is frankly counting on the Reichswehr becoming a powerful force in Germany, and not only a physical but a moral force. There can be no doubt that he has made agreements with the National Socialists. They will receive the dissolution of the Reichstag, probably the withdrawal of the dissolution of their storm detachments, and, most important of all, help in their struggle for power in Prussia. In return, they will have to abstain from attacks upon the Papen Government in the election. As the Papen Government in its manifesto made the reversal of social policy one of the most important points in its programme, this will certainly not be very easy for the Hitler Party, as they cannot afford to do without the support of wage-earners and especially of salaried workers. It must not, however, be inferred from these agreements that Herr von Schleicher is a friend of the National Socialists. He is glad to use them in his fight against the Republic, but his personal and political objects (he is a Monarchist) are hardly in accordance with theirs.

The Left will wage a vigorous election campaign; they want to make the National Socialists responsible for the acts of the Papen Government, and especially for the anti-Labour measures, and they will derive support from their alliance with the Catholics, so that their prospects are not unfavourable. But after the election the immediate decision will lie, not between the Right and the Left, but between the two rival groups of the Right, and this decision will not depend exclusively, perhaps not even mainly, upon parliamentary strength.

The road to power in Prussia does not yet lie open to the National Socialists. Even in combination with the Nationalists they have no majority in the Prussian Landtag, and their hope of restoring, with the help of the Communists, the provision by which the Prime Minister can be elected by a relative majority of votes in the Landtag has been shattered, as the Communists would not place themselves at their service for the purpose. The Papen Government now proposed to prevent the former Government of Prussia from conducting the administration by appointing a Reich Commissioner for Prussia. The pretext is the financial position of Prussia, which is even more difficult than that of the Reich. The Brüning Government had promised to take over from Prussia Rm. 100 millions of shares in the Deutsche Siedlungsbank, which they thought it desirable to hold for economic reasons. This would have relieved Prussia from the most immediate financial pressure, but the Papen Cabinet does not seem to consider itself bound by this promise. The Reichsbank could give temporary help, but Dr. Luther is adhering to the principle that he can only give credit on Treasury Bills if the Budgets are completely balanced, so that punctual repayment seems assured. Just as the new Reich Government, in spite of its reluctance, will have to introduce the employment tax which Dr. Brüning had planned, so Prussia will be unable to avoid the imposition of a duty on the slaughtering of cattle, and a further reduction in the salaries of officials. Reluctant as the Prussian Government must be to do this before the elections, they will probably be driven to it, as there is no other way out. That would, however, remove the *raison d'être* of a Reich Commissioner, and the National Socialists would not be a single step nearer the consummation of their wishes. Meanwhile, Herr Braun, the Prussian Prime Minister, has gone away on leave and left the conduct of business to the Minister of Labour, Herr Hirtsiefer, who, as a member of the Centre Party, is in a better position to defend the Prussian situation at the moment than the Social Democrat, Herr Braun.

AUSTRIA.

Finance — Banking — Foreign Exchange.

(FROM OUR CORRESPONDENT.)

VIENNA, June 6.

THE Austrian Administration of Finance is working out a new supplementary budget, which is to effect an incisive curtailment of expenditure and an increase of revenue.

The Ministerial Council has considered the draft and has rejected it, because still larger curtailments have to be made in the budget. For political reasons one of the chief provisions is that no further reduction is to be made in the salaries of civil servants, as they have already reached the lowest possible level. On the other hand, every investment activity is to be limited, and departments of State are to be combined or eliminated. Customs receipts are continually declining, and the deficit on the Federal Railways amounts to 90 to 100 million schillings, in spite of all retrenchment. The excess expenditure from the social welfare fund amounts to 60 million schillings, not including the deficits of previous years. The Post and Telegraph Department anticipates a deficit of at least 20 million schillings, and the raising of postage and telephone rates has had an unfavourable effect.

The economic policy of the Government has had one distinct success, and that is that farming is doing much better. The shutting out of foreign competition and the systematic protection of cattle and meat prices are having effect. On the other hand, the negotiations with the creditors of the Credit-Anstalt are making but little progress, and during the past week there was one critical day. However, in parliamentary and financial circles it is now believed that the threatened liquidation of the bank will not take place and that an understanding with the creditors is not impossible. It is said that the Austrians were prepared to undertake 20 million schillings in the matter of the proposed annuity, but that the foreign creditors are still demanding 26 millions. At first a period of 40 years was thought of for the amortisation of the obligations, and in the last negotiations a period of 26 years was also spoken of. On the other hand, the demand for special cover in regard to the State guarantee in the form of a claim upon the customs or the tobacco monopoly is meeting with the strongest resistance, and the Government cannot consent on account of political considerations.

An Austrian group has participated in the capital increase of the Bankverein to an extent of 10 million schillings. The National Bank supplied three million schillings, the Kreditinstitut, which is under State influence, took up shares for two millions, and the Niederoesterreichische Escomptegesellschaft participated to an extent of five millions.

The present year is proving very unfavourable for the banks. Foreign exchange business is being more and more centralised at the National Bank, and the stock exchange affords the banks scarcely any revenue. On the investment market sharp fluctuations have taken place during the last ten days. For instance, the Dollar Loan of the City of Vienna, which had fallen to 44, suddenly rose to 67, while the American *tranche* of the Federal Loan of the year 1930 went up from 32 to 50. The low quotations were partly due to foreign sales, but also to sales by bear speculators. The news that credit might possibly be forthcoming from abroad and that the transfer moratorium might be postponed caused the bears to cover.

Fresh weakness is observable in the Austrian textile industry, for stocks are increasing somewhat and operatives are being dismissed. The negotiations which were in progress for the delivery of 10,000 bales of Egyptian cotton to Austria have been broken off. It was thought that the deal might be financed in such a manner that the Austrian interests might deposit the value of the invoice at the National Bank of Austria or with the Austrian Government in schillings, and that the amount would then be paid in dollars to the Egyptian vendors in the course of two years. The National Bank is, however, not inclined to entertain such transactions at present. It

does not want to take on any more foreign exchange commitments, especially as its holdings of foreign exchange and also of gold are constantly dwindling. The report at the end of the month was very unfavourable. The Bank stated that it had been obliged to sell gold to a value of 15 million schillings, whereof 9.9 million schillings went to cover the requirements of the loan service, while the remainder was transferred to the free holdings of the National Bank. The percentage of cover has consequently fallen further. Without taking the loan debts of the State into consideration, it has gone down to 17.9 per cent., and, taking the loan debt into account, it is now 19.6 per cent. The development of private clearing of foreign values has had a favourable effect upon merchandise turnover, it is true, but the influx of foreign exchange to the National Bank is again suffering, as the rates of exchange for foreign means of payment used in private clearing by the importers and exporters are about 30 per cent. higher than the official foreign values rates of the National Bank. The decline in foreign tourist traffic this year is also telling upon the foreign exchange holdings of the National Bank. Export trade is very unsatisfactory, and the trade treaty negotiations have led to no tangible results in any direction.

HUNGARY.

Politics — Debt Service — Currency and Smuggling.

(FROM OUR CORRESPONDENT.)

BUDAPEST, June 6.

THE agrarian members of the Government party have presented an ultimatum to the Government in which they demand the reduction of Bank rate, the consolidation of agricultural debts, relief for the smallholders who cannot pay the annuities for the land allotted to them at the time of the land reform in 1920, and the raising of the price of wheat. Most of these demands, especially that for the raising of wheat prices, will have to remain unfulfilled, but it is expected that the Government will take some steps towards the consolidation of agricultural debts. There is great dissatisfaction among the debtors that under the transfer moratorium they are not relieved from exchange risk. Interest and amortisation on mortgage debts in foreign currencies, mostly dollars and sterling, are paid according to the provision of the transfer moratorium decree into the Foreign Creditors' Fund in pengő equivalent as collateral security for them until the exchange restrictions are removed. Another complaint of the debtors is that they cannot repay the principal before the scheduled time, and thus they are hampered in their economic activities. All these complaints are reasonable, and urgent action is necessary to change the stipulation of the transfer moratorium decree in order to liquidate debts in cash. On the other hand, there is a mischievous propaganda pressing the Government to change arbitrarily the provisions of the British Standstill Agreement, which prohibits the repayment of capital debts with bonds acquired by the debtor before the scheduled time so long as the transfer moratorium is in operation. Apart from the obvious immorality of yielding to this demand, the Government, if it did so, would jeopardise the stability of the currency. It is now profitable to smuggle Hungarian bonds from abroad—even at the "black market" rate for the dollar, which is fluctuating between 7 and 8 pengő instead of the parity of 5.70 pengő—owing to the fact that the coupons of these bonds are paid in full value in pengő at the counters of the National Bank from the Foreign Creditors' Fund.

The decision of the Government and the National Bank to redeem the coupons at full value is very objectionable for several reasons. In the first place, it is questionable whether the Foreign Creditors' Fund—amounting to 35.2 million pengő on May 30th, after five months of operation, during which 8.7 millions were paid out for redeeming coupons—represents genuine deposits. The fact should not be overlooked that the original debtors very often did not meet their obligations *vis-à-vis* their banks,

and that the banks have paid the interest and amortisation due to their foreign creditors in the fund at the National Bank by availing themselves more or less of the rediscounting facilities of the already swollen portfolio of the bank. Consequently the Foreign Creditors' Fund is made up to a large extent of artificial money with no real value behind it, the infusion of which into circulation must have an inflationary effect, especially since the expected deflationary effect of the transfer moratorium has been so far totally offset by the issuing of Treasury bills financed by the National Bank. Another calamity is that in addition to the smuggling of Hungarian bonds from abroad there has developed lately a profitable trade in smuggling coupons, which are obtained from their foreign holders abroad at a fraction of their face value and are redeemed here at full rates from the Foreign Creditors' Fund. The smuggling of bonds and coupons, which deprives the National Bank of a substantial part of the export *devisen*, will not cease until the Government stops the payment of interest at the full 7 and $7\frac{1}{2}$ per cent. and declares that it will not permit mortgage debts repayment with bonds.

Considering that the avowed policy of the Hungarian Government is that the only way to recovery is a general scaling down of the intolerable high interest rates, it is incomprehensible why the Government does not make an honest beginning at home by reducing the interest rate on bonds held by domestic owners from 7 and $7\frac{1}{2}$ per cent. to 3 or 4 per cent., and create a fair precedent for the negotiations with the foreign creditors. Instead of beginning to ask sacrifices from the domestic creditors, great pressure is being brought to bear on the Government to permit capital repayment with domestic mortgage bonds, which if carried out would mean that there will be an external type of Hungarian bond which will be quoted at 20-30 per cent. and probably less, and an internal type which will be in demand between 70-100 by the debtors to repay their mortgage debts. Such a step would not tend to facilitate Hungary's endeavour to reach a satisfactory settlement with the foreign creditors, and it would only benefit the smugglers and speculators who own bonds because it is obvious that the original debtor who has no cash to pay even interest would not have the money to buy the bonds. On the other hand, there is a constant demand from speculators in Budapest for mortgaged real estate in the hope of repaying the debts with the acquired mortgage bonds at one-third of the original value.

ITALY.

Gold Reserves — Trade Restrictions — Industry — Silk.

(FROM OUR CORRESPONDENT.)

TURIN, May 30.

THE downward trend of the reserves of the Bank of Italy which dated from April, 1931, seems at last to be reversed. Total reserves, after decreasing from 9,462.3 million lire on April 30, 1931, to 7,113.7 millions on April 30, 1932, increased to 7,118.4 millions on May 10th and to 7,125.8 millions on May 20th. The trend, rather than the figures, is significant; both sections of the reserves participated in the rise: gold increasing from 5,630.2 million lire on April 30th to 5,636.4 millions on May 20, and *devisen* from 1,483.5 millions to 1,499.4 millions. The increase in gold is due to miscellaneous sales of old coins and trinkets to the Bank of Italy; that of *devisen* to lesser requirements of trade. In the first four months of the year imports totalled 2,991.3 million lire, against 4,169.0 millions in 1931, and exports 2,225.9 millions, against 3,204.4 millions. The outlook is, however, uncertain. In part the change is due to restrictions on foreign imports which induce the Italian consumers to prefer national goods. Imports of cheaper foreign goods are thus stopped; but so are exports of the finer qualities of Italian merchandise. But the change is also partly due to foreign restrictions. A campaign has been conducted in the last two weeks in the Italian press against the *devisen* policy resorted to by

Germany, a policy which makes it extremely difficult for Italian exporters to be paid for goods delivered.

Apart from gold reserves, other economic indices are not improving. There has been some reduction in unemployment, but figures remain at a record level. Moreover, the improvement is limited to seasonal industries, and in the textile group there is an increase from 133,552 to 137,938. In the iron and steel industries the index of total employment (1925 = 100) was 70.5 at the end of March, 1932, against 74 at the end of December and 79.7 at the end of March, 1931. In the same industry the percentage of employees working normal hours is 60 per cent., against 69.2 per cent. at the same date (March) a year ago. Cotton bales consumed in the semester ending January 31, 1932, were 395,750, against 393,506 in the corresponding semester of 1930-31 and 532,855 in the corresponding semester of 1929-30. Production of electric energy in the first quarter of 1932 amounted to 2,396.3 million kw.h., against 2,296.7 in 1931. Producers complain very much of the campaign raging from time to time in the Press against their high price policy, which they contend is wholly unjustified as prices are not quite double the pre-war level. In the meantime nervous investors are throwing their holdings on the market, and as the markets are unable to carry the securities unloaded upon them by timid shareholders, their burden must be carried somehow. The Bank of Italy's discounts and advances, which on May 20, 1931, were at 2,942.1 and 800.5 million lire, rose at the same date in 1932 to 5,073.9 and 1,479.4 millions, an increase of 75 per cent. This is very disquieting, especially in face of the falling level of prices and of the crisis, which is discouraging current trade demands.

As in all countries, remedies for the crisis are the principal topic of discussion. The cartellisation (consorzi) cure, which some time ago was the object of much praise, seems already to be discarded. The Bill for compulsory consortiums, outlined in previous letters, had a cool reception on the floor of the Chamber. Signor Asquini, the member reporting on the bill, plainly hinted that individual errors tend to compensate and neutralise each other if many entrepreneurs are free in their economic conduct, but tend to become a general error if industry is concentrated under a unified direction. Senator Conti also was very reserved in his report to the Senate. Minister Bottai wound up the discussion in both Chambers by recognising that cartellisation was not a principle but only a temporary expedient, which could be abandoned, after the crisis had been overcome, if it proved useless.

SWITZERLAND.

Budget — Industry — Trade Agreements.

(FROM OUR CORRESPONDENT.)

GENEVA, June 3.

THE accounts of the Swiss Confederation for 1931 are more satisfactory than had been expected, though there has been a drop in receipts. While receipts totalled 428,399,843 francs—that is, 25,879,843 francs more than estimated—expenditure aggregated 426,145,035 francs—or 5,959,671 francs more than forecasted in the Budget. There was thus a surplus of 2,254,808 francs, while a deficit of 29,580,000 francs had been anticipated. These results are certainly gratifying, but receipts, for the first time since 1915, showed a decrease on those of the previous year of 4,700,000 francs. That decrease is mainly due to the reduced yield of the tax on coupons and of the Federal services, as a consequence of the economic crisis. Drastic curtailments were made in all the expenses of the Federal services, and, in spite of the extra expenditure—amounting to 9,200,000 francs—needed for unemployment relief and for helping the industries which suffer most from the depression, expenses were on the whole 200,000 francs lower than in 1930.

Prospects for the current year are rather gloomy as, during the first quarter, receipts showed a decline of about 132 million francs, compared with the corresponding period of 1931, and the Government is contemplating measures with a view to reducing expenditure and to balancing the accounts. The Swiss population is strongly opposed to Federal direct taxation. The Federal Council is therefore examining how and to what extent expenses could be further curtailed, and instructions have already been given to the various Federal services to suppress all expenses which are not urgent. On the other hand, the Government will propose to Parliament a reduction of the salaries of all Government officials by 10 per cent. as from January 1, 1933, to be maintained until the end of 1935. The drop in the cost of living—the index, which was 145 in December last (100 in 1914), came down to 138 per cent. at the end of April—allows for a readjustment of salaries, and a reduction of 10 per cent. does not seem excessive. That proposal meets with the opposition of the Federal officials as well as of all the workers' syndicates. Their argument is that a reduction of salaries will diminish the purchasing power of the working class and therefore will not help towards the improvement of the situation of trade and industry. They also fear that the example given by the Federal authorities will be followed by the Cantonal Governments as well as by all employers in trade and industry, and consider that the decrease in the cost of living is not sufficient to justify the reduction. It is clear that employers will seize the first occasion for reducing their workers' salaries, as Swiss industry has, during recent years, been heavily handicapped by the burden of the high wages bill. Salaries have already been reduced in many industries which would otherwise have been compelled to close down.

Business is very slack. In addition to the import quotas established a few months ago with a view to protecting home industry and preventing the flooding of the Swiss market by cheap foreign goods, the Federal Government has decided to set up a system of import compensations which is to come in force in a few weeks. According to that system, Switzerland will buy the raw materials and goods she particularly needs from the countries which will agree to purchase a corresponding amount of Swiss goods. This is a form of trade by barter which may perhaps help to save a number of Swiss industries, but will further complicate trade relations, which are already so much hindered by customs barriers. The details of the compensation scheme are not yet at hand, as its setting up involves long and difficult inquiries.

Agreements have so far been concluded with several countries in regard to the working of import quotas, among others with France, but a difficulty has just arisen with that country. The French Government, in contravention of the existing commercial treaties, has decided to levy a special tax on the prices of goods and profits, and, as a measure of retaliation, the Swiss Government will, it is reported, levy an extra customs tax of 4 per cent. *ad valorem* on certain classes of French goods, among others on wines, and the yield of that tax will be distributed among the Swiss industries which suffer the most from the new French tariffs. The immediate result of the different measures set up for the purpose of protecting home industries is a heavy decrease in imports, but, on the other hand, Swiss exports are dwindling more and more every month.

SOUTH AFRICA.

Reserve Bank — Trade — Maize Control.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, May 17.

In November last the Minister of Finance, when moving the second reading of the Finance Emergency Regulations Bill, dealt at length with the position of the South African Reserve Bank. At that time the bank had lost since Sep-

tember 21st about half of its capital of £1,000,000, and the whole of its £800,000 reserve fund. Its shares had fallen from the neighbourhood of £200 to £120. The Minister's statement—which he could hardly have made without consultation with the Government nominees on the board of the bank—contemplated that the bank would make about £300,000 per annum net profit, and that by 1937-38 it would once more pay 10 per cent. to its stockholders and a balance of profit to the Government. On April 18th the board, to the general surprise, announced the declaration of a dividend of 6 per cent. for the twelve months ended March 31st. The capital is now restored to its original level of £1,000,000. There is no doubt that this rapid recovery of so substantial a portion of its loss has been due to the sale, at a considerable profit, of the sterling acquired in exchange for gold, in dealing in which it enjoys a monopoly of the South African production. Its sterling discount rates have, until very recently, been about 2½ or 3 per cent. less than the calculated values, allowing for the cost of shipping, etc. During the last week or so the rates have moved nearer to a proper value. The difference between buying and selling rates for sterling is 1 per cent. The exchanges on gold standard countries are also such as to yield good profits to the bank. In the case of the United States, France, Holland and Italy the direct exchanges make Union currency in each case cheaper than the mint par, both for buying and selling rates. The bank and Government spokesmen, nevertheless, contend that South African currency has lost none of its value. The Government is for the present foregoing its claim to a share of the profits of the bank pending the restoration of the position which obtained before the losses occurred. It appears, however, that the bank has partly recouped these losses at the expense of those who have been induced by the currency position to export capital.

The Customs' Department's quarterly statement of imports and exports for the first three months of 1932 show that imports have fallen from £13.8 millions in January-March, 1931, to £8.4 millions this year. Exports amounted to £18.0 millions in 1932, compared with £18.8 millions in 1931. For the first three months of the year the Government will receive £178,000 less in revenue from duties than they received last year. Exports are substantially maintained by gold, other products showing more or less serious decreases in value.

The anticipations of the critics of the Maize Control Act are in process of fulfilment. There is a balance of some 1,500,000 bags (bag = 200 lb.) of the last crop, for which there is a market at about 3s. 6d. per bag. The Land Bank advanced 7s. 6d. per bag last year, and many of the farmers' co-operative societies are nominally solvent only because it would be harmful or useless to make them insolvent. The new crop—estimated at about 17,000,000 bags—is already on offer at a price below the advance on last season's crop. Last year the Government guaranteed the Land Bank against loss when the advance was raised from 5s. 9d. to 7s. 6d. per bag, and this guarantee will presumably have to be met. Efforts are being made to strengthen the Maize Control Act, but so far the working of the Act has been remarkable for the loopholes revealed, whilst the export quota on last season's crops was fixed at too low a figure.

The diamond position continues to excite melancholy interest. At the moment a Commission is inquiring "into the present position of the diamond industry in all its aspects and branches, with particular reference to the restricting of operations or proposed closing down of the Union Conference Producers' mines." The Government appointed as two members of this Commission Mr F. W. Beyers, a former Minister of Mines, and Mr P. Ross-Frames, sometime chairman of De Beers Consolidated Mines. Counsel for De Beers and their associates invited these gentlemen to refuse to serve on the ground that they would be judging many of their own actions. On their refusal, counsel intimated that his clients would take no part in the proceedings. Mr I. W. Schlesinger's negotiations to operate the diamond-cutting factory have broken down, while from the criminal courts and other sources evidence of I.D.B. on an unprecedented scale is being disclosed daily.

Letters to the Editor.

MONETARY POLICY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Your leading article of May 7th has provoked a most interesting discussion, but whatever help may be given by a policy, such as that recommended by Mr O. T. Falk, based mainly on monetary expansion, we must surely look deeper for the way of escape from the *impasse* into which we have been driven.

Analogies are always dangerous, but that of a contracting spiral does seem to express the economic sequence from which we are now suffering. All economic activity is being contracted by the centripetal force of this spiral movement which threatens to develop into a "spinning nosedive." Under more normal conditions this contraction would automatically correct existing maladjustments and so give place to an expanding movement. There are, however, no signs of this correction taking place, and the reason would seem to be the rigidity of our economic structure. This rigidity makes expansion impossible until the resistance which it sets up is broken down either earlier by the political acceptance of the economically inevitable or later by the complete collapse of the structure and the destruction of civilisation as we know it.

The inter-reaction of increased business activity and a rising price level is a phenomenon of an expanding spiral, but that does not prove that a rise in prices engineered by monetary policy would deflect the movement of the spiral from contraction to expansion. The experience of recent years would, indeed, suggest that attempts to raise prices by artificial means are fraught with grave danger, and that a return to healthier conditions requires more drastic treatment than the alleviation of symptoms.

The Board of Trade Wholesale Price Index, based on 1913, stands at 102.4. The United States Bureau of Labour Index stands at 94.6. Prices are not at a disastrously low level absolutely, but only relatively. They are too low in relation to the level of recent years, because falling prices always restrict business activity, but the far more important point is that they are too low in relation to the level at which a very heavy load of both productive and unproductive debts was contracted in the war and post-war periods. The real urgency for a rise in prices is not to correct their natural ebb and flow, which is a healthy movement, but to lift the burden of debt under which practically the whole world is being crushed. Perhaps the cancellation of inter-governmental war debts and reparations would adjust the position so that a measure of "reflation" would suffice to alter the trend of the spiral from contraction to expansion. It is not too late for action along these lines to be tried with a fair chance of at least partial success, but it is very doubtful whether it would prove effective in restoring prosperity unless readjustments are made in other directions.

Even after the cancellation of inter-governmental debts, the world would still be suffering from a tremendous load of debt incurred for unproductive purposes, for the war, for grandiose development schemes conceived in optimism and executed with extravagance, for social services which minister to the individual's needs without reference to his productive powers. The burden of these debts, which represent the deferred cost of wealth consumed in the past, as well as that of current expenditure on unproductive services, has to be borne by productive industry. Taking this cost into account, there seems little doubt that industry as a whole is producing less wealth than that consumed in the process of production, i.e., the costs, which include appropriations by the Government and local authorities towards the service of the public debt and other current expenditure.

This load of debt, coupled with the rigidity of other production costs, appears to have been the cause of the contraction in industrial activity and of the fall in prices, which, in turn, has made the load still more insupportable. While, apart from exceptional cases, industry is unable to earn a surplus product in the form of profits and more often incurs a net loss on production, the spiral must continue to contract. Under these conditions confidence must be entirely lacking, and no monetary policy can be capable of restoring the situation.

industry and of raising the price level. It would, of course, be possible by inflation or by extreme depreciation of the currency practically to wipe out all existing debts, but this policy would involve wholesale, if disguised, default little better than the open bankruptcy and repudiation which we are striving so hard to avoid.

Mr R. F. Harrod realises that the expansion of currency or credit by Central Banks may under the circumstances be insufficient to raise prices, and he accordingly advocates Government action. The "outright remission of taxation, without countervailing economies," might be made possible by wholesale resort to the printing press, but hardly by borrowing either from the banks or from the public. His alternative suggestion, "the adoption of new constructional work financed by loans from the banks," makes a wider appeal, and therefore calls for more careful refutation.

Expenditure by the Government on public works, preferable though it is to the grant of doles, must have the same effect as expenditure on a war unless the works are productive and required for their own sake. The construction of roads which are not really needed and of which the users are not prepared themselves to defray the cost, or the construction of handsome Government and municipal buildings which gratify civic pride, although the existing premises are still quite adequate—any expenditure of this kind which represents the consumption of wealth, but does not lead to the production of wealth, is an extravagance which this country most assuredly cannot afford. Expenditure which is not fully productive can only increase the dead weight of debt and give another turn to the contracting spiral from which we are trying to escape. Of course, heavy Government expenditure would help to raise prices; but so would another war. Expenditure undertaken in order that "the Government should disburse to its citizens more than it takes from them and thus get more money into circulation" is open to the very serious objection that it involves the consumption of wealth without regard to whether an equivalent amount of wealth is created in the process.

We cannot see the wood for the trees, but future historians will probably condemn this generation for its blindness because this is due in the main to our unwillingness to face facts and our disregard of fundamental principles. We cannot expect any real improvement until we accept politically what is inevitable economically. The sanctity of private contract was not destroyed when the Debtors Act of 1869 abolished imprisonment for debt, and there is a point beyond which the persecution of a debtor by his creditors becomes a menace to society. There must be a more willing acceptance by creditors of "equity interests" in substitution for "debenture rights," not only in industrial undertakings to which these terms more strictly apply, but also in the sphere of international debts. The "equity interest" must carry with it such control as may be practicable, and the debtor can only claim relief from his obligations to the extent necessary to preserve his earning power. All debts involve some risk of default, and if creditors refuse to cut losses which are irrecoverable and insist on the uttermost farthing to the annihilation of their debtors, the spiral will continue to contract until debts which are now easily borne become intolerable and universal bankruptcy ensues.

But if the creditor plays his part in lessening the resistance set up by the burden of debts to the forces of expansion, it is essential that his sacrifice should not be rendered useless by other remediable causes of rigidity in the economic structure. The object of lightening the burden of debts is to enable the product of industry to equal the gross costs of production. This object cannot be attained without the reduction of all unproductive expenditure by the State to the minimum consistent with a reasonable standard of civilisation, and without the abandonment of the insidious policy of basing the welfare of one man on the wealth created by another. While wealth consumed bears no relation to wealth produced, a premium is placed on inefficiency in production, and the forces of contraction are given a political stimulus which threatens the whole structure with collapse and our civilisation with destruction.

The picture painted may be too black, the remedies suggested unnecessarily drastic. The recuperative powers of industry are very great, and, serious though the situation is, our economic system has not been proved incapable of supporting the high standard of living demanded of it. But even the most optimistic must admit that something is seriously wrong. Maladjustments exist, and there are signs that failure to correct them may result in chaos. Perhaps an expansionist monetary policy may suffice, perhaps expenditure by the Government may take the place of industrial enterprise in restoring prosperity; but to many this seems to be the wrong approach to the problem. Some more fundamental adjustment is surely required in our conception of what economic activity means, what are the causes of contraction and what are the factors which create prosperity.—I am, Sir, etc.,

97, Gresham Street, E.C.2.

FREDERICK GEIDT.

June 7, 1932.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Mr Harrod says that "few seriously doubt that reflation is urgently needed." This may or may not be a correct estimate of the present state of opinion. But I wonder whether "few would seriously doubt" the desirability of unbalanced government expenditure—Mr Harrod's "surer" technique of reflation. I do not think that I can profitably encroach further on your space by expostulating with Mr Harrod on this point. If the events of the last year have not suggested to him the danger of "the government" disbursing "to its citizens more than it takes from them"—his own recommendation—nothing that I can say will do so. But I can at least be grateful to him for affording a most vivid exposition of the implications of the policy I have been attacking.

On the question of inflation, Mr Harrod, although more explicit, occupies a position not radically different from that of many others. On exchange policy he occupies a position which is surely all his own. Mr Harrod is not content with the "benefits" of inflation; he is anxious also to have the benefits of a high exchange. Now Mr Harrod is too able an economist not to be aware that, in the absence of special support for the exchange, or a parallel inflation abroad, it is not reasonable to expect sterling to remain at its present external value if prices here are driven up to the 1929 level. Other things being equal, a depreciated currency necessarily involves a depreciated exchange. It would appear, therefore, that he proposes that if we cannot induce other countries to inflate too, we should go ahead ourselves and maintain the exchange either by raising loans abroad or by realising our foreign investments. This, at least, is the only interpretation I can put upon his somewhat cryptic injunction that we should "cover our adverse balance out of the abundance of our available assets." Again I wonder whether "few would seriously doubt" the desirability of such a policy of reflation—the government disbursing to its citizens more than it takes from them at home, and "mobilising foreign securities" or raising loans abroad to support the exchange while it does so. Personally I can conceive few policies more likely to lead to a serious breakdown of confidence.—Yours, etc.,

LIONEL ROBBINS.

PUBLIC AND PRIVATE SPENDING.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Some of us will notice with surprise that the Friends of Economy, as represented by Sir Ernest Benn, are only friendly to public economy. Sir Ernest has declared, with an emphasis which leaves no room for doubt, that it is a citizen's duty at the present time to spend as heavily as he can afford. This can only mean that we ought deliberately to push up our standard of living beyond the level which at present is sufficient or prudent. The State, however, says Sir Ernest, should curtail its expenditure drastically.

It may be that it is preferable for a man to spend his own income than that "politicians and officials" should spend a large part of it on his behalf, but what has the theory of taxation to do with the Underconsumptionist Theory? The total demand for consumption goods will be no greater if the State abolishes free education, and the Friends of Economy, correspondingly relieved of taxation, spend money on home comforts which they are now denied.

In the interest of some forms of corporate expenditure, like education, which a civilised State might with advantage maintain, it ought perhaps to be observed that a transference of

A. DARBY,

THE COAL BILL.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The debates in the House of Commons on the Coal Bill were almost consistently reasonable in their attitude to coal owners.

In your article last week on the Coal Bill certain sweeping statements, ill-directed, have been used. Referring to Part I of the 1930 Act you say "... its shelter has been used by the mine owners, with certain commendable exceptions, as an excuse for obstructing the reorganisation of the industry." You do not state what you mean by reorganisation. The inefficient units are rapidly closing down and there are many efficient units who quite wisely kept out of amalgamations which had neither financial or other merits to recommend them.

The *Economist* appears to think that amalgamation implies reorganisation, but in many cases amalgamation has meant the transfer of debt from the inefficient to the efficient units and the added fixed charges more than swallow up the benefits of more efficient production.

The *Economist* appears to have closed its eyes to the great decrease in the cost of production in spite of heavier taxation in the form of increased insurance stamps and income tax, which surely implies some measure of reorganisation within the industry.

The *Economist* calls the quota system thoroughly vicious and, at the same time, demands "such essential developments as scientific export marketing." If, by scientific exporting, the *Economist* means cutting out what is often termed "unnecessary price cutting," then the minimum price scheme should please them. The fixed prices may always be altered by the districts concerned and, by application to the Central organisation, district quotas will generally be altered as the district desires. Perhaps in this Act is the machinery for what the *Economist* calls "scientific marketing."

I distrust such mechanised schemes and when, but not until, the various trade barriers in Europe and elsewhere have been pulled down I would rather trust the export of coal to the personal efforts of merchants and coal owners. Their personal efforts have, after all, built up the export coal trade, which has been so large an item in our maritime trade, representing, as it does, 80 per cent. of the bulk of cargo exported.

Finally, you suppose that wage reductions will take place at the end of the twelve months' guarantee given by the owners. Here I think you lack that optimism so essential to the nation and presuppose a continuance of present conditions, a contingency which will, I think, be averted by the intelligent action of both bankers and statesmen.—Yours, etc.,

Reform Club,
Pall Mall,
London, S.W.1.
June 6, 1932.

R. G. KILLETT.

[Apart from the point that income tax does not enter into costs of production, we would invite our correspondent's attention to the fact that in the last quarter of 1929 net costs per ton were 13s. 4d., as compared with 13s. 6d. in the last quarter of 1931. Output per man-shift and wage costs per ton were virtually unchanged. These figures scarcely confirm Mr Killett's proposition that there has been "a great decrease." Optimism with regard to the position a year hence is an attitude which

we should like to share but which demands greater complacency than we can feel as to the rapidity with which reconstruction is at present being effected. Would our correspondent deny that in many cases the quota system is seriously hampering the development of the most efficient units? We never suggested that amalgamations of a purely financial type meant salvation to the coal industry, nor does our idea of scientific export marketing bear any relation to the idea of simply eliminating price cutting.—Ed., *Econ.*]

POINTS FROM LETTERS.

Monetary Policy.

The contention that the fall in prices since 1925 was inevitable and that raising their level is impracticable owing to "modern mechanical productive technique" is one that cannot possibly be sustained. Similar theories were brought forth by Lord Farrer and the monometallists to defend the rise in the value of gold half a century ago, although production was increasing but slowly and most of the resources supposedly responsible for the decline in prices had been actively employed during the preceding twenty-five years of rising prices. In the twenty years before the war, according to all the American indices of production, industrial activity increased far more rapidly than it has done since 1924, yet output was disposed of without much difficulty at rising prices. The alleged necessity for a falling price trend in order to distribute the world's present production, therefore, seems hardly conclusive.—GEOFFREY BIDDULPH, Cherry Tree House, Bourne End.

The Depression.

There can be very little hope of arriving at the correct remedy for the depression so long as its cause is ignored. The position may be stated quite simply: the fall in prices has made industry unprofitable because prices have fallen more rapidly than wages. It is clear that the remedy must lie in one of two directions:—

- (i) Prices must be raised sufficiently to include a profit for industry; or
- (ii) Cash wages must be reduced to a point which will allow a profit for industry at the ruling prices.

Innumerable attempts have been made to control prices since Edward III granted Yarmouth a monopoly for the sale of herrings, but we know of no instance where the attempt has met with success. It is a tragedy that the country should continue to stake its future existence upon its ability to control prices. We admit that the reduction of cash wages is popularly supposed to be an unpalatable remedy, and, consequently, that it would not be in the best interests of the nation to give support to this remedy. As a reason, or an excuse, for refusing to consider the remedy this is manifestly absurd: it is the old policy of *laissez-faire*, and as a policy it is fatal. The position now is too critical for the question of wage adjustments to be ignored any longer.—PERCY WALLIS and ARTHUR REDFERN, Westacre, Kettering.

Conversions.

As a taxpayer who objects to paying more for the service of the national debt than is necessary, may I suggest a method by which it would seem possible to effect a very considerable saving? The Treasury could invite applications, at par, for bonds bearing a rate of interest, say 2½ per cent., somewhere between the current yield of Treasury bills and the lowest interest on bonds repayable at the Treasury's option (2½ per cent. Consols). Applicants to specify the date on which repayment at par was required, and the furthest dated application could be published weekly, as with Treasury bills. The proceeds could be used to purchase Consols and other debt outstanding below par and the money thus returned to the market at once. The price of 2½ per cent. Consols would rise as a bearing a low rate of interest had been created in this way, the nature of the gap between these bonds and Consols, in yield and conditions of repayment, would indicate the terms on which the 5 per cent. War Loan could be "converted" with the greatest advantage.—A. C. DOBBS, Ashurst, Killiney, Co. Dublin.

*** Correspondents are asked to bear in mind that the space which the *Economist* can give to "Letters" is limited. The Editor is desirous of publishing as wide a range as possible of readers' opinions on issues of general interest. Letters, however, will have a much greater chance of being printed if their length does not exceed, as a rule, 400-500 words.

Books and Publications.

BOOKS OF THE WEEK.

The Economic Situation.*

Books on the economic crisis—if "crisis" is still the right word to apply to a long-drawn-out, many-phased period of disintegration—continue to pour out of the publishing houses. Within a short space of time we have received the opinions of six experts who lectured for Sir Halley Stewart, the translation of Dr. Kuno Renatus' explanation and warning, a collection of reports and prognostications by many other experts, collected early in the year by the National Industrial Conference Board, and the facts for 1930, issued under the imprimatur of the League of Nations. It is a sufficient comment on the rapid changes in the face of the economic world that *International Trade Statistics*, valuable publication as it is, already reads almost like an historical document, and that the National Industrial Conference Board's volume commits itself upon its dust jacket to the statement that "the world economic situation is more favourable than it was a year ago," a prophecy which recalls to the reader those newspapers which on the strength of two warm days last month announced the impending arrival of "a series of fine summers."

The student anxious for facts will turn naturally to the two last-named publications, and will find therein a good deal of meat for consideration. The annual from New York is the seventh of its kind, and the numerous tables which it gives are by now fairly well standardised in form and content, though the appearance of new data, particularly in matters Chinese, is a welcome sign of continued effort to improve. (The Chinese charts are also adorned with thumbnail sketches of ships, trains, etc., a pleasing variation to discover in this type of work.) The articles, on the whole, are of less uniform value. The Industrial Conference Board, being a non-governmental venture, has perforce to rely for its foreign information upon such correspondents as it can discover in various parts of the world; and one can only say that some of the reports disclose a very evident and not wholly unexpected bias. It is hardly to be thought that a Japanese financier should write with complete dispassionateness upon the economic development of Manchuria; but, while an impartial treatment of that subject might perhaps be difficult if not impossible to secure, it is surely unbalanced to devote so large a space to the sins of minimum wage legislation in Australia, which cannot possibly account for more than a part of that country's present economic troubles. Nevertheless, if the bias is discounted, there is useful information in the book.

Readers seeking for remedies will probably read first the collected edition of the Halley Stewart lectures; but if they hope for strong and unified guidance they will be disappointed. Six distinguished economic physicians co-operated in diagnosing the patient's disease; but though Sir William Beveridge, who sums up, does his best, he is unable to persuade us that his colleagues are in agreement as to the remedy. Professor Clay, who grows more orthodox with the years, advises in broad lines a reversal of British post-war policy; he would make wage rates more elastic, lighten taxation, minimise Government interference in economic matters; in fact, he is less in agreement with his co-prescriptionists than with M. André

* *The World's Economic Crisis and the Way of Escape.* By Sir Arthur Salter, Sir Josiah Stamp, J. M. Keynes, Sir Basil Blackett, Henry Clay, and Sir W. H. Beveridge. 194 pp. (London) George Allen and Unwin, Ltd. 4s. 6d. *The Twelfth Hour of Capitalism.* By Kuno Renatus. Translated by E. W. Dicks. 262 pp. (London) George Allen and Unwin, Ltd. 7s. 6d. net. *A Picture of World Economic Conditions at the Beginning of 1932.* 287 pp. (New York) National Industrial Conference Board, Inc., 247, Park Avenue. \$3.00 *The Land Without Unemployment.* By Ernst Glaeser and F. C. Weiskopf. 207 pp. (London) Martin Lawrence, Ltd., 26, Bedford Row. 8s. 6d. *Socialist Economic Planning in the U.S.S.R.* 126 pp. Martin Lawrence. 5s. *International Trade Statistics, 1930 (including Provisional Summary Figures for 1931).* (London) Allen and Unwin, Ltd. 10s.
