United British Oilfields of Trinidad.—The record of the United British Oilfields of Trinidad, which is controlled by the Royal Dutch-Shell group, has not been inspiring, and the chairman at the general meeting in July last stated that the field could not be made to pay in periods of low crude oil prices if the present costly methods of drilling did not result in more permanent wells. Further information is now disclosed in a statement issued by the directors relative to the issue of 1,050,000 8 per cent. cumulative preference shares of 6s. 8d. to existing shareholders at par in the proportion of seven to ten. The results which have been obtained from the introduction of improved drilling and production methods, according to the directors, seem to promise fair prospects of maintaining production from the company's own fields at a reasonable cost. Further geological surveys have also suggested that other areas held by the company have better prospects than were previously indicated. The company, the directors add, has suffered from a long-term crude oil purchase contract which, owing to the fall in prices, had become onerous and unprofitable. This contract, which expired at the end of 1931, had a serious effect on the earning capacity of the business. The company was therefore obliged in the last two years to incur loans from its bankers and others. The proceeds of the new issue are to pay off bank loans of about £125,000 and to provide a new refinery and better loading facilities, costing £115,000. The proceeds of the new issue will be about £340,000, so that £100,000 will remain as additional working capital. The preference dividend on the new shares will amount to £28,000, and it is estimated that the savings arising from the provision of new facilities will amount to about £30,000 per annum when the refinery is working to full capacity. The underwriters of this issue, the Anglo-Saxon Petroleum Company, are conceding to every allottee a commission of 2½ per cent.

Union Corporation Group.—The ore reserve estimates of the Rand Gold Mining subsidiaries, at the end of 1931, have now been published. At 3,750,000 tons, value 29s. 4d. over 58 ins., the East Geduld computation shows a falling off in both quantity and value, and the return has caused some disappointment. The revenue averages only just over 25s. per ton, while at the end of 1930, before the mine had had time to get into its stride, the ore reserves were valued at 29s. 9d. per ton. The Geduld

And at NEW YORK, PARIS and ANTWERP.

Proprietary estimate of 5,900,000 tons, averaging 28s., shows a small decline in quantity, though value is maintained. In the case of the Modder Deep, the tonnage of 1,600,000 has fallen 450,000 below the preceding statement, and the assay of 35s. 8d. is down by 8d. The development of the mine having been virtually completed a year ago, so far as the main ore bodies were concerned, the reduction in the reserves will occasion little surprise, but the upper leaders do not appear to be giving the results previously expected.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies: Imperial Tobacco Company (of Great Britain and Ireland), Gas Light and Coke Company, Borax Consolidated, Standard Trust, South Suburban Gas, Railway Debenture and General Trust, Railway Share Trust and Agency, and Olympia. At the annual meeting of the Gas Light and Coke Company, the chairman drew attention to a new fuel which had recently been put on the market, and named "Cleanglow." "Cleanglow" was a specially prepared fuel, suitable for burning in open fireplaces, and it had been enthusiastically taken up in London and recognised as supplying a long-felt want. Presiding at the annual meeting of the South Suburban Gas Company, Dr. Charles Carpenter said that nothing but the most up-to-date plants, special attention to the quality of coal purchased, and suitable carbonising plants designed for the particular purpose would produce coke which satisfied to the full the consumers' requirements to-day. Further discussion of the meetings of these two gas companies will be found in a note on page 425. At the annual meeting of Olympia, the chairman said they were out to do everything in their power to extend the facilities for the British Industries Fair, and make it the most important exhibition of its kind in the world.

CANADIAN PACIFIC RAILWAY COMPANY (Incorporated in Canada with Limited Liability).—At a meeting of the board of directors held February 8th, a dividend ended December 31, 1931, was declared from the ordinary capital stock for the quarter payable April 1, 1932, in Canadian funds, to shareholders of the reserve of surplus revenue. March 1, 1932. Hereafter, until further notice, the payment of such dividends of 1932 will be considered by the board at its August meeting.

MEUX'S BREWERY CO., LIMITED.—The directors announce that the profits of £153,061—and they recommend a final dividend on the ordinary shares (subject to tax) of 1s. 4d. per share, making with the interim dividend already paid 11 per cent. for the year, and that the amount carried forward be increased from £188,299 to £225,419. The annual general meeting will be held on March 1st next, and if the report is adopted by the shareholders, the dividend will be paid on March 8th next to all shareholders on the Register on March 1st next. The ordinary share registers will be closed from February 16, 1932, to March 1, 1932, both days inclusive.

MANCHESTER SHIP CANAL COMPANY.—The directors recommend the declaration of the following dividends at the ordinary general meeting to be held on the 29th instant, viz.: 3½ per cent. on the Manchester Ship Canal Corporation preference stock; 2 per cent. on the preference shares; 1 per cent. on the ordinary shares. £30,000 has been placed to reserve for contingencies and repairs, and

COMPANY MEETINGS, &c.

IMPERIAL TOBACCO COMPANY (OF GREAT BRITAIN AND IRELAND), LIMITED.

CONTINUED SUCCESSFUL TRADING.

CURRENT YEAR'S PROSPECTS.

The annual meeting of the Imperial Tobacco Company (of Great Britain and Ireland) was held at Bristol, on the 16th instant, Lord Dulverton (the chairman) presiding.

The formal notices having been read by the secretary (Mr R. J. Sinclair),

The Chairman, in the course of moving the adoption of the report and accounts, said:—Turning to the balance sheet, the first item on the assets side is land, buildings, plant and machinery—at cost, less amounts written off—£5,151,424, an increase of £31,403 over the previous year. This increase represents additions to buildings, plant, etc., at our various branches, less amounts provided for depreciation. These assets have been well maintained, and are in a high state of efficiency, and the directors believe that the value shown on the balance sheet is a moderate and very safe figure.

Investments in subsidiary and associated companies amount to £10,375,189, a decrease of £81,889. As noted in the balance sheet, the aggregate market value of investments in associated companies is largely in excess of the book value; as you are aware, a very large part of this amount represents the company's holding of ordinary shares in the British-American Tobacco Company and in its subsidiary company, Tobacco Securities Trust Company.

Loans to and current accounts with subsidiary and associated companies amount to £2,464,018, and show an increase of £15,743 over last year. Stock-in-trade, including leaf in transit at approximate cost and advances to branches abroad for purposes of leaf, etc., amounts to £28,123,906—a decrease of £821,613.

DOLLAR PURCHASES

The great part of this item is represented by the cost of our raw material—leaf tobacco. We hold, as you know, very large stocks of carefully selected leaf. The 1931 crop in the United States was sold at prices distinctly lower than in previous years, and the fortunate fact that our purchases of dollars for the season's requirements had been practically completed before the exchange went against us has meant that the figure of approximate cost as at the date of the balance sheet has been much less than it might otherwise have been.

As regards the current year, we may, of course, find when the 1932 crop comes to be marketed that the exchange is against us and that our leaf will thereby cost us more, but I hardly think I should lay too much emphasis now upon that possible future disadvantage. Our policy of building up ample stocks and making careful provision for the future minimises such a risk and has been well justified by recent events.

EMPIRE-GROWN TOBACCO

While dealing with this item of leaf tobacco, I should like to say in passing that, during the year, tobacco grown within the Empire has continued to gain public favour—a tendency which will, no doubt, be furthered by the "Buy British" campaign. The Imperial Tobacco Company (as, indeed, its name and origin almost demand) has been in the forefront in popularising Empire-grown tobaccos, and, with existing lines and certain other introductions which are in prospect, we shall be well able to cater for every taste, and to give in each class and at all price levels the best value for money.

Debtors, after making ample provision for discounts to be allowed, and for doubtful debts, amount to £6,320,473, a decrease of £281,750. Government and other securities taken at cost or market value, whichever is lower, amount to £11,246,985, an increase of £1,246,313. Loans to Corporations and Public Boards, and other investments not officially quoted, amount to £285,231. Cash at bankers and in hand amounts to £4,772,298, an increase of £104,660.

RESERVE OF £5,500,000.

The general reserve account has been increased by £500,000 transferred from profit and loss account, and now amounts to £5,500,000.

The net trading profit for the year, and interest and dividends on investments (including considerable sums derived from dividends on capital employed outside the United Kingdom) and loans, after fully providing for all charges, depreciation of property, plant, etc., bonus to customers, taxation, and £10,000 for directors' fees, amounted, with the item of transfer and other fees, to £9,876,063, a decrease of £300,982 as compared with the previous year.

Upon the ordinary share capital of £37,492,625 it is now proposed, with your approval, to declare a final dividend of 8 per cent. and a bonus of 1s. 6d. per share, both free of income tax, making a total

for the year of 22½ per cent., free of income tax, which is a decrease of 1 per cent. as compared with the tax-free dividend for the year 1930. The gross rate of dividend, however, is only one-third of 1 per cent. less than last year.

Before dealing with the present, or making any forecast for the future, it would seem appropriate to refer for a moment to my remarks of a year ago. In an enterprise such as ours, which, in colloquial phrase, is "built to last," each year is but the child of the last and the father of the next. Those of you who attended our meeting last year will remember that I then referred to the clouds which, at that time, were in different quarters darkening the industrial horizon, and I said that if these clouds did not break into a storm and the depression did not increase in intensity then I did not see why the results of the year which we had then entered upon should not be as satisfactory as the previous year.

A SATISFACTORY RESULT.

Well, ladies and gentlemen, that forecast has not proved too optimistic. The clouds certainly broke into a storm of no little severity, but, in spite of that, during the year we have now under review our total sales showed only a slight falling off from the figure of the previous year, and I believe you will agree that the fact that our trade and our profits were maintained as well as they were is by no means an unsatisfactory result. Indeed, when regard is had to the general economic condition of the country and the strenuous competition we have in our particular trade, the result is eloquent testimony to the appreciation of the public for the quality and value which our brands afford.

The Emergency Budget of September last has affected our position in two ways. Firstly, it has placed upon us a very heavy load of extra duty, and, secondly, it has set in motion a wave of personal economy which, however necessary and desirable from the national point of view, yet tends to reduce the consumption of tobacco.

TAXATION AND PRICES.

With regard to the duty, tobacco is now taxed up to the hilt. The present rate of duty on unmanufactured tobacco is 9s. 6d. per lb., and more than 60 per cent. of the net price we obtain for our manufactures—whether pipe tobacco or cigarettes—is represented by duty. Maintenance of quality has been, and will continue to be, our watchword, and when this last increase of 8d. per lb. was imposed in September we were faced with a difficult problem.

With pipe tobaccos we felt we had no alternative but to increase the price, but with cigarettes, of which the bulk are sold at the convenient prices of 10 for 4d. or 10 for 6d., we decided, after the most careful consideration, that in the present state of things the interests of the company would be better served were we to keep the volume of our trade as high as possible, even though on a smaller margin of profit. We see no reason to regret that decision, which, I think you will agree, was a wise one.

Then, with regard to the spending power of the public. Since September the figures of the clearances from bond indicate a declining tendency. That is perhaps the natural result of the first wave of economy, and I am hopeful that the present rate of decrease may not be continued throughout the year. We can, at least, derive comparative satisfaction from the fact that, since the Budget, the decreases in the clearances by our company have been at a slightly lower rate than the figures for the whole country.

For the tobacco trade in this country, then, the immediate outlook is less bright than we might wish. Your company will have, during this year, a very heavy bill to meet in the shape of increased duty without, on this occasion, being able to anticipate with confidence an increase in total consumption.

SMALLER DIVIDEND POSSIBLE.

It is far better to face facts than to ignore them. The disadvantages to which I have referred must, we believe, have the result of decreasing our earnings during the current year, and, though it is perhaps early to prophesy, it is our present opinion that the necessity for some reduction in our ordinary dividend for this year is a contingency which cannot be ignored. It is, however, true to say that these three disadvantages—higher duty, decreased consumption and lower revenue from the British-American Tobacco Company—are all factors outside our control.

It would be too much, ladies and gentlemen, to expect that the circumstances which the country has had to face would leave our position completely untouched. But the foundations of the company are strong; a conservative policy in the past has provided it with ample resources; and on this you can rely—every reasonable and proper economy will continue to be examined, every possible way of expanding our great business will be considered, and all in the company's service will do their utmost to maintain and enhance our position.

Mr J. D. Player seconded the resolution, which was carried, and a cordial vote of thanks to the chairman terminated the proceedings.

THE GAS LIGHT AND COKE COMPANY.

GRATIFYING RESULTS—INCREASED SALES.

SIR DAVID MILNE-WATSON'S REVIEW.

The ordinary general meeting of the proprietors of the Gas Light and Coke Company was held, on the 12th instant, at the chief office of the company, Horseferry Road, Westminster, London, Sir David Milne-Watson, LL.D., D.L. (the governor) presiding.

The Secretary (Mr. W. L. Galbraith), having read the notice convening the meeting,

The Governor, in the course of his speech, said:—I am glad to report that we have had an increase in the sale of gas of almost 1½ per cent., which, in view of the conditions prevailing to-day, is most satisfactory. I am afraid that most businesses with which you are acquainted unfortunately show decreases, and I feel sure that the shareholders will be gratified that in these difficult times we have been able, not merely to hold our own, but actually to increase our sales. The revenue from the sale of gas is £8,519,000, showing an increase of £78,000. There are also very satisfactory increases in respect of rentals for appliances. The rental of meters brought in £362,000, an increase of £13,000; the rental of stoves £629,000, an increase of £23,000; and the rental of fittings £526,000, an increase of £11,000. Altogether, the income from gas and rentals is £10,036,000—a total increase of £125,000.

There has been an increase in consumers of 27,000 in the year, the total number now approaching 1,400,000, and we have supplied a further 86,000 pieces of gas apparatus during the year.

With regard to coke, there has been a small drop of 4d. per ton in the net amount received, which, together with a decrease in the quantity made, has resulted in a falling off in the revenue of £90,000.

On the other hand, tar and its products have brought in £326,000, which is £6,000 more than last year. Ammoniacal liquor shows a loss of £5,000, but that, as compared with the loss of £16,000 in the previous year, is £11,000 better. Altogether, the residuals are down by £82,000, against which, however, can be set the increase from gas and rentals mentioned above, giving a net increase of £50,000 on a total income of nearly £12,000,000.

AMERICAN GAS.

Gas as a means of heating and cooking is as popular as ever, and, indeed, is becoming more so. I am not basing my remarks on the experience of this company or of the gas industry in Great Britain alone, for it is gratifying to be able to report that in the United States of America the sale of gas is increasing enormously. In the last ten years the sale of gas in the United States has actually gone up by over 100 per cent. It is true that the United States is fortunate in having large supplies of natural gas which can be obtained very cheaply, but the fact remains that gas is more than holding its own there, as against other varieties of fuel and power, whether oil or electricity, and it is encouraging to know that this is the case in a country which has such wonderful natural resources in the form of oil and water power.

OVER 3,000 INDUSTRIES USING GAS.

There is also a very large and interesting development in the use of gas for industrial purposes. We are constantly putting in new supplies of gas for use in industry, and to-day gas is used in more than 3,000 different industries, with an average of seven processes in each industry. This is a most satisfactory feature of our business, as the industrial load is a particularly good one, and we are taking steps to encourage its growth in every possible way.

For many years we have had an industrial section at Goswell Road, where apparatus has been designed and constructed for the use of gas in special industrial processes. Recently, however, we felt that it would be better if all work of this description were concentrated at one spot, and, therefore, we have removed our industrial showrooms and workshops to Watson House, which is the centre of our activities with regard to gas appliances. We think this concentration will enable us to give an even better service to industrialists than in the past.

"CLEANGLOW."

Turning to coke, some interesting developments are now taking place. We have recently put upon the market a new fuel to which we have given the name of "Cleanglow." "Cleanglow" is a specially prepared fuel suitable for burning in open fireplaces. It has been enthusiastically taken up in London as a means of supplying a long-felt want—namely, the provision of a smokeless fuel which can be burnt in open grates. We have come to recognise that, however useful and popular gas fires may be, many householders desire to have at least one open fire in their homes—either in the dining-room or the drawing-room, as the case may be—and in order to meet this special feature of British home life we have set ourselves to supply a smokeless fuel which can be burnt in an open grate, and we believe that we have solved the problem. The grate

itself has the advantage of having a gas attachment to ignite the fuel, thus avoiding the bother and dirt caused by lighting the fire with paper and wood. We think there is a great future for this new fuel.

Ordinary coke is increasingly popular for domestic boilers and furnaces, but I feel certain that you will all be glad to hear of this new development, not only as shareholders of the company, but as citizens, believing, as I am sure you do, that there is much to be gained from the point of view of health by the prevention of pollution of the atmosphere of our great cities by the abolition of smoke.

TAR AND BENZOL.

With regard to tar, it is pleasant to report that during the past year we have sold increasing quantities of tar for road-making. Not only in our own opinion, but in the opinion of others best able to judge—namely, experts on motoring—there is no question as to the superiority of tar for making not only good roads, but safe roads—roads on which you can travel in fine or wet weather without fear of skidding. As we all know, skidding contributes largely to the number of accidents on the roads. It is particularly gratifying that the gas and coke oven industries of this country can produce a British material which can make a road which is really first-class in every way and capable of taking the heaviest traffic.

Benzol, another of our products, is the only home-produced motor spirit. This year we have made no less than 2½ million gallons and we are taking steps at the present time to increase the output to something between 5 and 6 millions. In this way also we are rendering a service to the country by producing at home a motor fuel which is superior to all other motor spirits.

A VAST ORGANISATION.

I give these figures because I feel sure that many of you and many of the general public do not realise how vast an organisation is the Gas Light and Coke Company. So much has been heard of electricity and oil in the last few years that I think an erroneous impression has grown up that the day of gas is over and that we are a decaying industry. I believe that the figures I have given you will speak for themselves and show that we are one of the greatest public utility industries in the country, and if you except the coal, the greatest suppliers of fuel, and we are growing all the time.

It is my firm opinion that, with fair play, the excellence of our product and of the service which we give to the public will enable us to do far more than hold our own in the future. We ask for no favours, we only ask to be allowed an opportunity of competing for business on equal terms. I referred at some length last year to unfair competition, and I am glad to say that in certain quarters there has been an improvement in this direction. But I regret to say, there are a few municipalities which control their own electrical undertakings, and, fearing to leave the choice between gas and electricity to the tenants of new houses and flats, take the unfair precaution of excluding gas from the start. This is a tendency that we mean to fight, both as traders and as large ratepayers. We are quite confident to leave the choice between gas and electricity to the people who have to cook and wash and make their homes cheerful and warm.

IMPORTANT DEVELOPMENTS.

One of the most important developments during the past year in this company has been the erection of the new coke oven plant at Beckton. This has now started work, although it has not yet been formally opened, and promises to be a very useful adjunct to our manufacturing capacity.

The manufacturing stations of Pinner and Grays have been closed down, as we found ourselves in a position to manufacture gas elsewhere more cheaply. The men employed have been transferred to other stations.

At Brentford we have almost completed the reconstruction of the works, and during the coming year we expect to find ourselves in the possession of a completely new and up-to-date works in the centre of an important and fast-growing district.

At Richmond the low-temperature plant has been closed down, as it proved to be a commercial failure and we were losing money in working the plant. In passing, I should like to say that we are willing to adopt any process of carbonisation, whether high or low temperature, provided it can be made to pay. The cessation of the supply of "Gloco" was regretted by a number of people who had become accustomed to its use, but we sincerely hope that they will try our new and cheaper fuel, "Cleanglow," and find it equally suitable for their requirements.

New showrooms have been opened at George Lane, Mare Street, Harrow, Southall and Billericay.

From what I have said you will see that every effort has been made to keep the company thoroughly up to date in its many and varied activities.

PARLIAMENT AND INDUSTRY.

The Gas Light and Coke Company has been fortunate in its latest Act of Parliament to get some relief from the trammels which have bound it for so many years, but I regret to say that no relief has yet been given to the industry as a whole. A Committee, of which I have the honour to be a member, was appointed early last year by the Board of Trade to consider what alterations were required in gas legislation. Many meetings have been held and certain progress has been made. I can only hope that after the Committee has reported parliamentary time will be found to put its recommendations into effect, especially as they will be largely based on those made long ago by various Government committees, notably the National Fuel and Power Committee.

If I might be allowed to do so in this connection, I should like to point out that a very definite duty devolves upon Parliament to pass legislation for the industries which it has taken under its wing. At one time the number of industries which were under this form of tutelage was very limited, but there is a growing tendency to increase their number—for example, the Port of London Authority and the proposed London Traffic Control. The industries in this category are really working under the Minutes of Parliament, if I may so put it. In the board room of the Gas Light and Coke Company we are allowed to take decisions, but they are all subject to the Acts or "Minutes" of Parliament governing the company, and if Parliament takes the responsibility of acting as if they were a superior board of directors they must realise that time must be found to alter these statutory enactments which govern us. Many of the "Minutes" of Parliament affecting the gas industry go back to 1847 and 1871, and many of them are quite antiquated. I mention this because it has become a very serious matter for the industry to have to continue year after year working under out-of-date provisions, which Parliament says it has no time to alter. In my opinion, it is high time that ways and means were found to change the present parliamentary procedure. What would be said of a board of directors who gave as an excuse for not adopting the latest business methods that they could find no time to do so? This is exactly what is happening in Parliament.

THE "BUY BRITISH" CAMPAIGN.

Great Britain is now in the serious position of having in many industries a great excess of manufacturing plant, involving a serious waste of capital and thereby increasing the cost of the manufactured articles. The only chance we have as a nation of regaining our position is to produce the goods which are wanted at the lowest possible prices. This can only be done by efficient methods of manufacture and by seeing that capital is not wasted in building plants which are too big for the markets which still exist. In other words, the dead wood of unproductive works must be cut away.

Much emphasis has been given—and rightly given—in recent months to the urgent need to "Buy British," and the gas industry, which employs British capital, labour and materials, willingly responded to this appeal. But the Government wisely pointed out in its campaign that "Sell British" is the necessary complement to "Buy British." More overseas trade and less trade barriers are the need of this country in this difficult hour.

Countries, while naturally making every endeavour to develop their own resources, should remember that they cannot live in isolation, and that the greatest necessity of the world to-day is first to get rid of the nightmare of war debts and reparations and then to restart mutual trading on a rational and progressive basis. It is in this way alone that prosperity can return, and I sincerely hope that the adoption of tariffs by this country will lead ultimately to a reconsideration of the whole question of world production and world trading, in which case the present terrible world crisis will not have been all in vain.

ECONOMY AND WISE SPENDING.

This leads me to say a word on economy, in regard to which there is a great deal of erroneous thinking. Many people have interpreted economy as meaning that it is desirable for them to button up their pockets and spend no money. The reverse, however, is nearer to the truth. Liberal and wise spending was never more necessary than to-day for anyone who has anything to spend. To retire into one's shell and do nothing is the greatest disservice anyone can do to the country at the present time. What is needed is economy in public and Government expenditure, not so much in expenditure by individuals. If trade and commerce are to be assisted to the full, it will only be through wise expenditure by industries and individuals and not by the unrestricted and lavish expenditure indulged in by the State Departments and municipal bodies. Judging by the growth of public expenditure, it would seem that we as a country are spending too much on being governed. The report and accounts were unanimously adopted.

BORAX CONSOLIDATED, LIMITED.

LARGER TRADING PROFIT—REDUCED COSTS.

The thirty-fourth ordinary general meeting of Borax Consolidated, Limited, was held, on the 15th instant, at Southern House, London.

The Rt. Hon. the Earl of Leven and Melville (the chairman) said that the accounts showed an improvement in trading profit, which, having been made on a substantial reduction in tonnage turnover, could be considered satisfactory. The result was largely attributable to the lower cost of production resulting from the company's latest developed mineral, and the reorganisation of the works in the United States. Their manufacturing cost was the lowest yet obtained, and what was now required was a larger tonnage turnover, which must come with the revival in business all were earnestly hoping for.

The company possessed wonderful borate ore properties, which for cost of production could not be beaten; they had an unlimited quantity of the most economical borate ore known, the refineries were up to date, and they now wanted normal conditions of trade to enable the company to obtain an adequate profit from these advantages. At present he was sorry the board saw no signs of any substantial recovery; on the contrary, in many countries the conditions appeared to be retrograde rather than improving. It was, however, a long lane that had no turning, and they might hope that the endeavours now being made to straighten out the political, economic and monetary tangle would help to thaw out the industries in all countries from the frozen state in which they were now involved.

THE ACCOUNTS.

As to the accounts, the balance of profit and loss account was £188,249, making, with £191,248 brought forward, a total of £379,498. Having provided for first and second debenture interest £101,250, for the dividend on the cumulative preference shares £44,000, for the sinking fund for the first debenture stock £5,825, and for the buildings, plant and depreciation reserve account £30,000, there was a balance of £198,423, which the board proposed to carry forward. The balance-sheet items called for no special reference. The company's assets were all good; they possessed landed property of large value no longer necessary to their operations and which the board would realise when conditions improved. This property and also the mines and works in the United States, France and other countries were valued on the books on a sterling basis, and, therefore, from an exchange point of view, they were worth much more than the amount at which they stood in the accounts in sterling.

COMPANY'S SHARES AND MARKET QUOTATIONS.

Two years ago he made reference to the valuation placed upon the company's shares as shown by market quotations, and he then stated that some undue pessimism must exist as to the position of the company. It appeared to the board that an adequate recognition of the facts was not shown by the present market valuation placed upon the company's debentures or shares, and it was necessary to keep in mind that quotations made under prevailing conditions were not representative of the intrinsic value of the securities. The very limited amount passing through the company's transfer books did not warrant the fall in values caused by such small transactions, a feature which deserved attention. In the case of this company it was evident that the greater number of the debenture and shareholders had confidence in the future of the company, as shown by their limited offerings even under such conditions as were now unfortunately too common.

In conclusion, the Chairman said it might be gathered from his remarks that, to re-enter into another period of prosperity for the company, they required a return to normal conditions and some little time for development of their potash investment. The company had otherwise all the elements necessary for success—very fine mines, efficient works, and an organisation ready to jump at the opportunities that might come their way.

The report and accounts were unanimously adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to:—

OIL OUTPUTS.

THE ATTOCK OIL COMPANY, LTD.—Production for January, 11,280 barrels.

THE BRITISH BURMA PETROLEUM COMPANY, LTD.—A cablegram has been received from Burma reporting the production of crude oil by this company for the month of January as 30,913 barrels.

BRITISH CONTROLLED OILFIELDS, LTD.—Production for the week ended February 10th: Venezuela, 31,051 barrels; Trinidad, 30,432 barrels; total, 61,483 barrels.

THE KERN RIVER OILFIELDS OF CALIFORNIA, LTD.—The total production during the month of January amounted to 98,285 barrels, or approximately 14,041 tons.

VENEZUELAN OIL CONCESSIONS, LTD.—Production for the week ended January 16th was: Bolivar district, 85,140 metric tons; Maracaibo district, 7,570 metric tons; total, 92,710 metric tons. Production for the week ended January 23rd was: Bolivar district, 84,521 metric tons; Maracaibo district, 7,923 metric tons; total, 92,444 metric tons. Production for the week ended January 30th was: Bolivar District, 85,842 metric tons; Maracaibo District, 7,933 metric tons; total, 93,775 metric tons.

Commercial Reports.

MARKET SUMMARY.

The launching of an anti-deflationary policy by the Government of the United States has been followed by a wave of optimism which was rapidly translated into a general rise in commodity prices. How far the policy of the United States will be successful in stemming the downward movement in gold prices can, of course, not yet be foreseen. The tendency to increase the obstacles against the flow of goods between countries still persists, and the reparation and war debt problem remains unsolved. Nevertheless, the new orientation of currency policy in the United States may have far-reaching consequences. Non-ferrous metals, rubber, textile raw materials and cereals all show a rise in New York on the week. So far, consumers have, however, not given up their "hand-to-mouth" buying policy. Sterling commodities which lend themselves to grading and therefore to international arbitrage, continue to move in sympathy with international prices. Among the principal primary products whose sterling quotations show advances are non-ferrous metals, rubber, cotton, vegetable oils, cereals and dairy produce. On the other hand, there has been no improvement from various industrial centres, the coal trade shows no improvement, and activity in the iron and steel industries failed to expand. On the other hand, cotton manufacturers have been a little busier, and turnover in woollen and rayon goods has been maintained.

THE COAL TRADE.

SHEFFIELD.—Prices for best export steams are somewhat easier, quotations ranging between 17s. and 17s. 9d. f.o.b. New export business is scarce and deliveries under contract are easily met. The demand for industrial fuel fails to improve and there are surplus supplies at most pits. Demand for house coal continues poor, but prices are being maintained. Best quality South Yorkshire blast-furnace coke tends to shrink, and there is a reduced demand for foundry coke.

GLASGOW.—Business remains on a poor scale in the Scottish coal market, although in the Fifeshire districts washed nuts have been a firmer feature on some fair-sized orders. Generally, supplies are in excess of demands, and prices remain easy in trend. LANARKSHIRE.—Ell best, 14s. 3d.; splint best, 16s.; splint second, 15s. 6d.; steam, 13s.-13s. 3d.; trebles, 12s. 6d.; Hartley, singles, 9s. 6d.; pearls, 9s.; dross, 9s. FIRE.—Screened navigation, 16s. 6d.; first-class steam, 12s. 9d.; third-class steam, 12s.; trebles, 12s. 6d.; doubles, 10s. 9d.; singles, 9s. 6d.; pearls, 9s. LOTHIANS.—Prime steam, 12s.; secondary steam, 11s. 9d.; trebles, 12s. 6d.; doubles, 10s. 9d.; singles, 9s. 6d.; pearls, 9s. AYRSHIRE.—Unscreened navigation, 16s.; jewel, 17s.; steam, 13s.; trebles, 12s. 6d.; doubles, 11s.; singles, 9s. 9d.; pearls, 9s.; dross, 9s.

CARDIFF.—The most important event this week has been the statement in Parliament by Mr. Runciman that the French Government has decided to repeal the 15 per cent. surtax on coals imported from the United Kingdom. The effect of this duty was in a large measure to deprive the coal export trade of the United Kingdom of the advantages that should have accrued to it from the depreciation of sterling, as well as to increase the difficulties of marketing January were only 687,720 tons, compared with 875,900 tons in the corresponding month of last year, and 1,423,876 tons in January, 1930. The French import licensing system, however, is to remain in force, and under that system the total quantity that may be imported from the United Kingdom as from the beginning of the present month is only 64 per cent. of the monthly average imports of the three years 1928-30. The removal of the surtax will strengthen the competitive position of British coals in relation to those of other foreign countries, but our export trade is not likely to derive the full economic value of this greater competitive power owing to the measure of protection given to other foreign coals by the licensing system. The Coal Mines Reorganisation Commission is visiting Cardiff this week, and is in consultation individually

with the chairman or other authorised representatives of colliery undertakings affected by their contemplated proposals for the unification of mines within particular areas. The conditions on the market show little improvement; business continues very stagnant, and with few exceptions prices are at the minima of the schedule of the Marketing Association. The following are the current approximate quotations: Best Admiralties, 19s. 6d.; seconds 18s. 9d. to 19s. 4d.; best drys, 18s. 6d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7d.; best small steams, 13s. 6d.; cargo smalls, 11s. 6d. to 12s. 6d.; coking smalls, 13s. 6d. to 13s. 9d.; anthracite, best large, 36s. to 38s. 6d.; Red Vein, large, 22s. 6d. to 27s. 6d.; machine-made cobbles, 40s. to 48s. 6d.; stove nuts, 39s. 6d. to 43s. 6d.; ruddy culm, 8s. 3d. to 8s. 9d.; foundry coke, 32s. 6d. to 36s.; patent fuel, 19s.; pitwood, ex ship, 21s. to 24s. 6d.

IRON AND STEEL.

MIDDLESBROUGH.—Transactions during the past week have shown little, if any expansion, and an unsatisfactory feature is the hesitation shown by consumers to enter into contracts for forward delivery. Makers of Cleveland pig iron are experiencing this lack of buying, practically all the contracts entered into recently being for early periods. Some improvement, however, is looked for as markets settle down to the new conditions. Only a moderate amount of business was reported at Tuesday's weekly market, and official prices of Cleveland iron were again unchanged, viz.:—No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d., and No. 4 forge, 57s. f.o.b. or f.o.t. In hematite, transactions are almost entirely confined to parcels for early delivery. A few orders have come on the market recently, but the anxiety on the part of both makers and merchants to secure same resulted in the price being cut to 64s. for ordinary mixed numbers, and this is now the general market figure for delivery this and next month. In the finished steel trades orders in the heavy lines are still scarce, but prospects are regarded as brighter. Sheet makers are experiencing a better demand, and prices are advanced. Steel prices under the rebate scheme are unchanged, viz.:—Plates, £8 15s.; angles, £8 7s. 6d.; joists, £8 15s. Other important products are heavy steel rails, £8 10s.; iron crown bars, £10; 24-gauge galvanised corrugated sheets, £9 15s.; and 24-gauge black sheets, £8, all for home use. In the ore trade there is no new buying of importance, but the official announcement that iron ore is not subject to import duty is expected to promote business. Best rubio is nominally unchanged at 16s. 6d. c.i.f., and freights to the Tees for early tonnage are about 5s. Blast-furnace coke is in good supply, but the demand locally is only poor, as most consumers have supplies from their own coke ovens. Ordinary qualities are offering at 16s. 9d. delivered works. The number of blast-furnaces in operation in the district is unchanged at seventeen.

SHEFFIELD.—The dull conditions which have characterised the local iron and steel industry continue. Output remains at the level of a month ago, and there has been a heavy increase of unemployment since December. Operations so far this year have proved extremely disappointing. The uncertainty of future tariff arrangements is checking trade development in a good many directions. A few bright patches are to be found in the lighter branches. The only work of importance on hand in heavy engineering consists of steel plant for Russia, which is likely to provide occupation through the summer. The Russians are installing the most modern apparatus and plant that is procurable. An active demand is reported for certain types of tools and cutlery which are affected by tariffs and exchange differences. A number of Continental buyers are visiting this country with the object of fixing up British sources of supplies.

GLASGOW.—There is very little activity in the iron and steel trades in Glasgow and the Lanarkshire districts, buyers being few and their purchases small. There is a considerable amount of repair work on hand at several of the Clyde shipyards, but this is not sufficient to make any appreciable increase in demand for steel. Business remains very much as indicated a week ago, sheet-making being practically the only important branch of the industry which is maintaining a steady turnover, although here also plants are only partially employed. Prices are firmer, and to-day's price for 24-gauge galvanised and corrugated sheets is £10 per ton f.o.b., and £7 15s. for ½-in. black. In the tube trade there is no improvement.

CARDIFF.—On the Swansea Metal Exchange on Tuesday prices for tinplates were steady at 14s. 3d. to 14s. 9d. per basis box, and it was reported that more business was done on Continental account than for a considerable time past. Galvanised sheets were also at shade better at £9 10s. per ton f.o.b. Welsh steel bars are ruling at delivered. Imports of Continental bars have increased considerably during the past few weeks, and last week the Customs returns gave a total of over 35,000 tons, compared with 20,590 tons in the previous week, and 14,886 tons in the corresponding week last year. Further increases are expected in view of the operation of the new import duty as from March 1st next. At a meeting of the Welsh Plate and Sheet Manufacturers' Association on Tuesday, the new scheme for the regulation of output was considered, but a decision was deferred.

OTHER METALS.

TIN.—The policy adopted by the United States Government to widen the basis of currency has had a firming influence on the non-ferrous metal markets. The gold price of tin has been slightly firmer. In New York the metal was quoted at 22.30 cents per lb. on Wednesday, against 21.40 cents per lb. a week ago, and 22.25 on Wednesday, against 21.40 cents per lb. a month ago. Wednesday's official closing quotations in London, in terms of sterling for "standard" cash, at £140 10s. to £140 15s.

per ton, compares with £137 to £137 5s. on the corresponding day last week. Stocks in London and Liverpool at the end of last week, at 33,290 tons, show an increase of 709 tons on the week.

movement in raw material rates, the opinion gaining ground that lower values are improbable. The demand in cloth for India has continued more encouraging and some very fair contracts have been arranged chiefly for Calcutta, Karachi and Madras. Local merchants are receiving more favourable advices from the other side with regard to the trade outlook. The situation in China still causes anxiety, but occasional transactions have been put through in fancies for Shanghai and Hong Kong. Fine goods have again been in request for Singapore and the Straits Settlements. Very little has been done for Egypt and the Near East. Heavy goods have been sold more freely for East Africa and in printed and dyed goods an increased turnover has taken place for the Continent, with a few more sales for South America. Two or three idle sheds in Blackburn have been reopened. Quotations in American and Egyptian yarns have been firmer, but it has been difficult for spinners to secure higher prices. The sales in home qualities have shown some improvement and further lines have been booked in fine counts for India.

THE WOOL TRADE.—Bradford.—In spite of certain apparently adverse features, writes our correspondent, the outlook for wool can be regarded as encouraging. Too much need not be read into the cable information received this week from Australia and New Zealand. No doubt wool is on a quite sufficiently reasonable basis, and to be a profitable proposition to the selling end of the trade, prices need to improve rather than to decline. At the same time there is an undercurrent of confidence among an important section of users in this country, and there is no real justification for expecting the raw material to become available at much, if any, less than to-day's level. Some of the reports recently received from the Continent are none too good, particularly those referring to finance and the purchasing power of the public. Still the Continent is likely to be a factor in the wool market in the near future, and this is also true of the home trade, in spite of the fact that at the moment business is none too brisk. The main plank for Bradford is that the cost of tops made out of wool recently disposed of in the colonies is fully on a parity with the figures realisable in this centre. It is therefore felt that if any good is to be done out of further purchases of wool, definite resistance will have to be made to the attempts of spinners and manufacturers to buy more cheaply. The near approach of another series of London sales is naturally disposing many people to await a new lead from that centre, and with even steady values confidence in Bradford will be renewed. The worst feature locally is the scarcity of new business in tops on home trade account. Export inquiries have recently given the best support to both merinos and medium crossbreds, and are still largely responsible for values holding their own so well. Broadly speaking there has been a decline in actual selling prices since last report of about ½d. to 1d. in merinos, without much variation in crossbreds, and the aggregate turnover has not been large.

THE JUTE TRADE.—Dundee.—The jute trade has promised better during the past few days. Buyers of jute yarns and cloth have been displaying rather more interest on account of an advance in the prices of raw material and Calcutta goods. Sellers of the fibre have become more reserved, which may be due to the extensive propaganda going on amongst the growers, urging them to curtail their sowings of the next crop. Consumption of the fibre is greatly curtailed owing to the working of short time and stoppage of machinery. Business has been very depressed for some time, and this has resulted in a steady fall in prices of most commodities. Spinners and manufacturers have been desperately anxious for orders to keep their machinery running, and they have been compelled to accept anything within reason that buyers cared to offer when they had anything to purchase. In the case of raw jute, spinners have shown very little interest. The quantity already arrived here from August 1st to date amounts to 700,000 bales, compared with only 375,000 bales for corresponding period last season. It is estimated that there are about 150,000 bales of unsold jute on spot in Dundee, and, while this is being offered at cheaper prices than those ruling for shipment, sellers realise the futility of making offers of the latter. Daisie assortment is £18 15s. and fours at £17 5s., February-March shipment. The value of best First Marks is £22 and best Lightnings £20, same shipment. Little business is passing in jute yarns, though buyers are rather more interested. Common 8-lb. cops are quoted at 2s. and 8-lb. spools at 2s. 1d., and these rates are very reasonable considering the prices quoted for raw jute. Twist is being sold in small lots at from 3½d. for 3-ply 8 lb., and sacking yarns are more or less nominal at 2½d. for 24-lb. warp and 3½d. for 8-lb. chains. Fine yarns are quiet, and Rove is also dull at £17 5s. for 200 lb. and £19 10s. for 48 lb. Carpet yarns rule from 3½d. for 14 lb. warp. Only trifling

lots of jute cloth are being bought as a rule, and prices are very indefinite, ruling from 3d. for 10½ oz. 40-in. bessians and 2d. for 8 oz. Inquiry has been on an improved scale recently, but buyers are hesitating to operate. The Calcutta goods market has improved, and more activity has been reported from the primary centre. The latest quotations are 20s. 4½d. for 10 oz. 40 in. and 15s. 10d. for 8 oz., February-March, and 20s. 6d. and 16s. for April-June. The total production of the Indian Jute Mills for January last was 61,586 tons of cloth and bags, compared with 67,569 tons for January, 1931.

THE GRAIN MARKETS.

WHEAT.—There has been a distinct improvement in the wheat situation during the past week and prices recovered to the level of a fortnight ago. The anti-deflationary policy of the United States Government caused an advance in commodity prices from which wheat was not excluded. Another favourable factor is the increase in the demand from Continental countries owing to a relaxation in import restrictions. The turnover has been of considerable dimensions during the past week. Argentina, Australia and Canada had the largest shares in the transactions. As Continental imports are likely to increase in the near future, it is improbable that heavy shipments of new wheat from Australia and Argentina will depress prices below the level prevailing during January and February. On the other hand, the size of North American stocks will prevent an immediate sharp advance. On Wednesday, "March" futures were quoted at 57½ cents per bushel in Chicago, against 54½ cents on the corresponding day last week, and 55½ cents a month ago. Quotation in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 36s. per 996 lbs., as compared with 33s. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 33s. 6d., against 31s. 3d.; No. 3 Northern Manitoba, Vancouver, ex ship, 32s. 6d. to 29s. 3d., against 29s.; Russian, on sample 28s. to 29s. 6d., against 26s. to 28s.; Australian, ex ship, 29s. 3d. to 30s., against 28s. to 28s. 6d. a week ago.

WHEAT FLOUR.—Flour prices advanced in sympathy with wheat, but turnover was not on a big scale. North American shipments, at 108,000 sacks, showed a decrease of 65,000 sacks as compared with the previous week. Of this total, only 33,000 sacks have been consigned to Europe. Quotations in London, Wednesday: Straight run, delivered country, 26s. 6d. per sack of 280 lbs., as compared with 25s. 6d. last week; delivered London, 25s. 6d., against 24s. 6d. Manitoba patents, ex store, 27s. to 29s., against 25s. 6d. to 28s. 6d.; and Australian, ex store, 21s., against 19s. 6d. to 20s. 6d. a week ago.

BARLEY.—The demand for barley has generally been quiet, but Germany bought substantial quantities. On Wednesday, "May" futures were quoted at 40½ cents per bushel in Winnipeg, against 39½ cents last week and 41½ cents a month ago. Quotations in London, Wednesday: "English feeding," f.o.r., per 448 lbs., 26s. to 27s., as compared with 26s. to 27s.; Russian, landed, 25s. per 400 lbs., against 22s. 9d. to 24s. a week ago.

OATS.—Quotations have been firmer in sympathy with other cereals, but actual business appears to have been small in volume. "May" futures, which last week stood at 24½ cents per bushel in Chicago, sold at 25½ cents per bushel on Wednesday this week, against 25½ cents a month ago. Quotations in London, Wednesday: "River Plate," landed, 18s. 6d. per 320 lbs., as compared with 18s. 3d. last week; "River Plate," ex ship, 17s., against 16s. 3d.; "Chilean White," landed, 24s. 6d. to 27s., against 27s. 6d. a week ago.

MAIZE.—Maize has continued to rise in price during the past week. The firmness is ascribed mainly to the reduction in Argentine crop estimates and shipments, rather than to a substantial increase in demand. Wednesday's quotation in Chicago for "March" futures, at 36½ cents, shows a rise of 1½ cents per bushel on the week, and a fall of 1½ cents as compared with the price a month earlier. Quotation in London, Wednesday: "Plate," landed, 21s. per 480 lbs., as compared with 19s. 6d. last week; "Plate," ex ship, 19s. 9d., as against 18s. 3d.; "Plate," February-March, 21s. 9d., as against 20s. 3d. Yellow maize meal, ex wharf, was quoted at £6 5s. per ton, against £6 a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1931-32, 1930-31, 1929-30, 1928-29:—

	1931-1932.	1930-1931.	1929-1930.	1928-1929.
Estimated sales of home-grown wheat—				
1 week to February 13	105,505	101,361	217,170	277,114
24 weeks to February 13	1,893,860	2,896,549	6,232,058	6,482,568
Average price of English wheat per cwt.	5 7	5 2	9 0	9 9

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1928 to 1931:—

Weeks ended	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
Feb. 6, 1932	122,332	213,824	84,884	5 8	5 2	7 3
Feb. 13, 1932	105,505	201,982	74,774	5 7	5 3	7 3
Feb. 11, 1928	307,295	274,511	91,445	9 9	10 11	10 1
Feb. 18, 1928	277,114	234,598	88,772	9 9	10 3	9 9
Feb. 15, 1930	217,170	235,368	40,470	9 0	8 0	6 5

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks with comparative figures for 1930:—

NEAREST FUTURE.	Jan. 2, 1930.	Jan. 2, 1931.	Feb. 18, 1931.	Jan. 4, 1932.	Feb. 10, 1932.	Feb. 17, 1932.
Winnipeg (No. 1 Manitoba).....	148½	56½	63	62½	63½	65½
—Cents per 60 lb.						
Chicago (No. 2 Winter).....	130½	79½	79½	55½	54½	57½
—Cents per 60 lb.						

The visible supply of wheat in Canada at 62,206,000 bushels, shows an increase on the week of 71,000 bushels. Supplies a year ago stood at 74,971,000 bushels.

OTHER FOODS.

SUGAR.—The fear of a breakdown of the International Sugar Convention, which caused the sharp decline in raw sugar values a week ago, has given way to a more hopeful outlook. Mr Chadbourne continues his efforts to bring about an agreement on the question of adjusting the production of Cuba and Java to the reduced level of consumption. "March" futures in New York were quoted at 0.93 cent per lb. on Wednesday, against 0.89 cent per lb. a week ago, and 1.06 cents per bl. a month earlier. Wednesday's sales of "raws" include "March delivery" at 6s. 5½d. to 6s. 5½d. per cwt., against 6s. 1d. to 6s. 1½d., and "May," at 6s. 8½d., against 6s. 3½d. to 6s. 4d. on the corresponding day last week. The movements of raw sugar in London and Liverpool during last week are set out in the table below:—

	Imports.		Deliveries.		Stocks.	
	1932.	1931.	1931.	1932.	1932.	1931.
Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
London.....	902	3,706	957	935	4,122	36,723
Liverpool.....	3,817	3,715	16,278	12,433	117,701	126,533
Total.....	4,719	7,421	17,235	13,368	121,823	163,256
Last week	55,405	10,686	20,361	12,456	134,340	169,203

COFFEE.—Lower prices were realised at this week's auctions in London, but Brazilian coffee remained firm in New York. Last week's movements of coffee in London were as follows: Brazilian, landed, 12 bags; delivered for home consumption, 87 bags; exported, nil; stocks, 2,625 bags, against 2,625 bags last year. Central American, landed, 11,547 packages; delivered for home consumption, 3,685; exported, 1,673; stocks, 63,278 packages, against 78,977 a year ago. Other kinds, landed, 11,736 packages; delivered for home consumption, 2,404; exported, 416; stocks, 61,553 packages, against 83,200 a year ago.

COCOA.—The downward movement in cocoa prices appears to have been checked this week when a slight advance occurred in New York, and a more substantial rise in London. "March" futures were quoted at 3.93 cents per lb. in New York on Wednesday, against 3.79 cents per lb. a week ago and 4.02 cents a month ago. As compared with the corresponding day last week, Wednesday's quotation for Accra, fair fermented, new crop, February-April, at 23s. per cwt. f.o.b., London contract, shows a rise of 1s. 3d. per cwt. on the week. Last week's movements of cocoa in London were as follows: Landed, 12,978 bags; delivered for home consumption, 6,363 bags; exported, 95 bags; stocks, 140,047 bags, as against 191,392 last year.

TEA.—The quantities catalogued for this week's auction comprise, 50,121 packages of Indian, 26,976 packages of Ceylon, and 17,618 packages of Java and Sumatra tea. The Indian auctions last Monday passed without an improvement in demand, and lower prices were realised for common and medium grades. Ceylon teas received more attention on Tuesday, but on Wednesday, Indian tea was again in small demand, and only outstanding qualities received a certain measure of support. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account:—

RICE.—The market in rice has been steady and "spot" quotations show a further advance. Wednesday's "spot" quotation for Burma No. 2, cleaned, at 10s. 3d. per cwt., shows a rise of 6d. per cwt. as compared with last week. Movements in London during the past week were as follows: Landed, 83 tons; delivered, 261 tons; stocks, 1,210 tons, as against 445 tons last year.

POTATOES.—The demand for potatoes at the principal markets has been maintained; as supplies were, however, less plentiful, prices were slightly higher. At the Borough Market, "Best King Edward" sold from 11s. to 12s. per cwt., as compared with 10s. to 12s. per cwt. a week ago.

SPICES.—The market in spices has been quiet, but prices remained virtually unchanged. Wednesday's quotation for "Black Singapore" pepper, at 6½d. per lb., shows no change on the week. Movements of pepper in London during the past week were as follows: Black, landed, 21 tons; delivered, 13 tons; stocks, 252 tons, against 502 tons last year. White, landed, 76 tons; delivered, 88 tons; stocks, 539 tons, against 521 tons a year ago.

MEAT.—Supplies of meat have again been fully equal to demand. The prices are scarcely changed on the week. On Wednesday, Argentine beef (chilled hindquarters) was sold at 3s. to 3s. 8d. per 8 lbs., against 3s. to 3s. 6d. on the corresponding day last week, while New Zealand frozen mutton realised 2s. 6d. to 3s. 6d., as against 2s. 6d. to 3s. 4d. a week ago. According to the Smithfield Market official report, supplies of meat during last week amounted to 9,456 tons, as compared with 9,238 tons in the corresponding week last year. Imported beef, principally Argentine, formed 84.6 per cent. of the supplies, as against 83.4 per cent. a year ago; and imported mutton, mainly New Zealand, formed 78.9 per cent. of the total supply, as against 80.3 per cent. last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OLSEEDS.—The publication of the list of articles free from the proposed 10 per cent. import duty as from March 1st relieved the anxiety felt, and somewhat to the surprise of the trade it included cottonseed, rapeseed and linseed. Other oilseeds, also vegetable oils and oilcakes, will be subject to the duty, except when drawn from Empire sources. Business developed on a fairly substantial scale. Linseed from Argentina, upon which a duty was anticipated, eased on spot and in near positions, and with good supplies now arriving the premium over shipment about disappeared. For February to April shipment to Hull, business was recorded at from £8 13s. 9d. to £8 17s. 6d., and May-June to London at £9 1s. 3d. The current value of Plate on spot at Hull is around £9, and shipment £9 to £9 2s. 6d. The quantity of linseed afloat for Europe is now 216,800 tons, rather less than last week, and compares with 281,200 tons a year ago. Cottonseed is in better demand, and dearer business in Egyptian (black) on passage having been done at £6 16s. 3d., with shippers now asking £7 for seed afloat and £6 18s. 9d. for March and April loadings. Generally, vegetable oils, in consequence of the early operation of an import duty, have advanced. Raw linseed oil is irregular, but on balance dearer current value, ex Hull mill, being £15 15s. for "spot" oil and £15 10s. March-April delivery. Cotton oil is dearer, crude Egyptian, ex Hull, being held for £22 10s., and refined £25. Oilcakes are in moderate demand, but steady.

HIDE, LEATHER AND ALLIED TRADES.—There was no alteration in the price of cattle hides at the auctions held in Manchester this week. Calfskins were also unchanged in value, excepting for an advance of ½d. per lb. on 9/16 lbs. weight. Demand remains satisfactory for nearly all descriptions, the only weak feature of the market being sheepskins, for which lower prices have to be accepted in order to make sales. Inquiry for imported hides, however, continues to be restricted, and although prices have remained fairly steady the tendency is in favour of buyers. In the South American market Frigorifico ox have sold on the basis of a fraction over 4½d., while cows have realised a trifle more than

while the lack of any calling by the clearing banks on the following day left conditions equally easy. On Wednesday money was inclined to be a shade harder at 3-3½ per cent., but on Thursday the rate was back at 3 per cent., with practically no demand for funds. Billbrokers' books are known to be very low, and there is a great shortage of bills, which in itself is sufficient to explain the plethora of money. In these circumstances it is not surprising that there was some expectation of a further reduction in Bank rate this week.

Last week's fall in Bank rate was very nearly reflected in the result of the Treasury bill tender the following day. Applications for the £35.0 millions of bills on offer amounted to £59.1 millions, and tenders from quarters outside the money market were prominent. The bills were allotted in full at an average rate of £3 19s. 4.09d. per cent., against £4 15s. 7d. per cent. the week before, when only £30.0 millions were offered and £27.6 millions were allotted. The fact that the amount allotted was increased by over £7 millions possesses little significance, as maturities were also higher than in the previous week. This week there has been a keen demand for such bills as were available, and market rates have fallen still lower. On Thursday "hot" Treasury bills were dealt in at 3½ and 3¾ per cent., and "prime" three months' bank bills at 3½-4 per cent. German standstill bills were quoted at 4½ per cent., with rates of 4½ and 4¾ per cent. charged for bills remitted from Germany. Austrian and Hungarian drawn bills were charged for at 5 per cent. Four months' and six months' bills were quoted at 4½ per cent.

Unusually narrow changes are recorded in this week's Bank return. The note circulation has risen by £1.6 millions, with an equivalent reduction in the Reserve. Government securities are £2.4 millions higher, and other securities £4.0 millions lower. Discounts and advances have been reduced by £0.5 million. There has been a small decrease of £1.2 millions in public deposits, and other deposits are £0.3 million higher. The net result of these changes is that bankers' deposits have fallen by £2.5 millions to £67.9 millions. They are still high enough to promote easy monetary conditions, especially as there is at present so little demand for funds. The Proportion is 48.7 per cent., which is quite high enough to be satisfactory, and, indeed, to justify any relaxation of monetary conditions that may be thought advisable upon other grounds.

As is pointed out in a subsequent Note, at the moment the exchanges are moving in favour of sterling, and there is a general belief both at home and abroad that once the Treasury credits have been covered there is no obstacle in the way of a sharp appreciation of the pound. Contrary to a statement that has appeared this week, the Treasury credits are not yet fully covered, but it would cause no surprise to learn that about half the sum of £80 millions gold has been provided for. The Banque de France's sterling balances continue to be reduced, but they are already down to about £20 or £30 millions, and under present conditions the remainder could be liquidated without difficulty. No other substantial French balances are now held in London. An inflow of American short money has become noticeable, partly to obtain advantage of the relatively high rate obtainable upon British Treasury bills, but also because its owners are looking for substantial profits through the anticipated appreciation of sterling.

In these circumstances, a further reduction in Bank rate to 4½ or even 4 per cent. appears likely at a very early date, certainly before the end of March. On

April 15th, £116.0 millions of Treasury bonds mature and have to be replaced, and though probably well over half of these have already passed into the hands of Government Departments, it would undoubtedly facilitate the handling of the balance if Bank rate were reduced first. Gold continues to arrive from India, and the funds thereby placed at the disposal of the Indian Council are already proving a material cause of the steady weakening of discount rates. The sales of sovereigns and gold ornaments are proving substantial and may already run into several millions, and these are further strengthening the pound. Thus apart from the requirements of industry and the Treasury, it may soon be necessary to take steps to check too sudden and violent an improvement in sterling which might otherwise take place with all its unsettling effects.

The outflow of gold from the United States continues, and shipments at the week-end amounted to \$4.7 millions to France, \$2.3 millions to Holland and \$2.4 millions to Portugal. The scope of the new banking law has been widened to include all member banks with a capital of \$2,000,000 upwards, in place of an original minimum of \$5,000,000. The effect of this change is that only 139 member banks will be unable to benefit from the new law. The time-limit for loans from the Reserve Banks to member banks under the provisions of the Act has also been extended from one to two years. Call money remains at 2½ per cent. and open-market discount rates are unchanged at 3-2½ per cent. for 90-day bankers' acceptances. These rates remained in force until Thursday evening, when the New York Reserve Bank reduced its rediscount rate from 3½ per cent. to 3 per cent.

The Foreign Exchange market was rather more active this week, and sterling maintained a decidedly better tone than of late, and showed a considerable improvement against most currencies. The New York rate went from 3.44½ to 3.48½, and Montreal gained a point at 3.94. Paris, after 88½, settled on balance well in our favour at 88½, as did Brussels at 25.02. Milan lost ½ at 67, and Madrid was decidedly weaker at 45½. Amsterdam lost 12 points at 8.63, and Berlin 15 at 14.62. Switzerland fell away from 17.63 to 17.86. Of the Scandinavian currencies, Copenhagen alone was unchanged at 18.19, whilst Oslo lost three points at 18.45, and Stockholm fell away from 17.90 to 18.09. Bucharest lost 10 points at 585. The South American exchanges are still largely nominal, Rio being quoted at 4½d., Buenos Aires at 39½d., and Monte Video at 31½d. In the Far East the yen slumped badly with the recent turn of events in China and was offered at 1s. 10½d., against a fairly steady rate of 2s. 0½d. last week. The rupee was firm at 1s. 6½d., but Batavia was weaker by 15 points at 8.70. In the forward market dollars were rather firmer at narrower discounts of ½ cent and ¾ cent. Paris fell away from 15 and 55 centimes premium to 9 and 27 centimes premium. Brussels was also more offered at par for both deliveries. Milan was rather better at ½ lira and 1½ lire discount, as was Madrid at ½ peseta and ¾ peseta discount. One month's Amsterdam was unchanged at ½ cent discount, but the rate was weaker at 1½ cents discount for three months. Berlin is still unquoted, and Switzerland remained at last week's levels of ½ and ¾ franc premium. The silver market was firmer, and prices improved by ½d. to 19½d. for cash and 19½d. for forward, after being as high as 19½d. and 20½d. respectively as a result of Continental and some Eastern buying, chiefly on account of covering operations. The China silver exchanges were differently affected, Hong Kong remaining at last week's level of 1s. 5½d., whilst Shanghai improved from 1s. 11½d. to 2s., the latter no doubt as a result of hedging operations in connection with the yen.

MONTHLY TRADE SUPPLEMENT

We publish this week our Monthly Supplement, in which will be found an appreciation of the trade situation at home and abroad, together with statistical information on the foreign trade, price movements, currency, and production of the leading commercial countries of the world. Its contents include an index of electricity production, and a series of indices of British trade activity.

FIANNA FAIL'S VICTORY.

ALTHOUGH the final results of the Irish Free State general election are not yet known, it is clear that Mr Cosgrave's Government has suffered a decisive, but by no means crushing, defeat. With the result of seven seats still to come, as we write, Fianna Fail has 68 seats and Labour nine seats, against 53 Government supporters and 15 Independent members. The actual change in the relative strength of the parties is not very large, but it is, nevertheless, sufficient to turn the present Government into the wilderness of opposition. The causes of this result are not difficult to understand. Ten years of stern and financially prudent administration have given rise to unpopularity in many quarters; the Government's economic programme, though sound, has not been very spectacular; and the prevailing depression has produced a vague feeling of discontent among the farming classes. Since the last election numbers of new voters have been added to the register who are too young to remember the harsh realities of the struggles by which the Treaty was won and enforced. It is not surprising that this new element in the electorate should have been attracted by the promises of Mr de Valera rather than by the performance of Mr Cosgrave. The Fianna Fail programme is certainly calculated to enlist support, including, as it does, relief from rates, the retention of the land annuities, and increased employment. As a result of all these forces acting in combination, the pendulum has at last swung, and the oldest Government in Europe is about to fall.

It is impossible to predict at this stage what will happen when the Dail assembles on March 9th. It is almost certain, however, that Mr de Valera will not be able to take office without the support of the small Labour party of nine members, who thus hold the balance of power. Whether the arrangement between the two parties will take the form of an actual coalition or that of a working alliance is not yet known, but the latter arrangement appears the more probable. Whatever the terms of agreement between the two parties may be, it is clear that the dependence upon the Labour party will act as a brake on some of the more contentious measures in the programme of Fianna Fail. The Labour party is primarily interested in the relief of unemployment, and it is probable that, as the price of its support, Mr de Valera will be expected to emphasise the economic part of his policy rather than the more purely political proposals. There is, however, a certain minimum political programme which, it is safe to say, will not be postponed, much less abandoned, for any consideration. This programme includes such important issues as the abolition of the oath of allegiance on entry to the Dail, the retention of the land annuities, and the repeal of the Public Safety Act.

The abolition of the oath is the proposal that gives rise to most alarm among Irish supporters of the Treaty, as it is feared that it may involve friction and bad feeling between Great Britain and the Free State. Mr de Valera's attitude is that the oath is not compulsory under the Treaty but only under the Constitution, which, according to the Statute of Westminster, is a purely domestic affair, which can be altered without consulting any other member of the Commonwealth. If this interpretation of the Treaty be correct, there is nothing to fear. If, however, the British Government refuses to take this view, there is still ample room for negotiation with regard to the oath. A large number of the most ardent supporters of Mr Cosgrave's party, including many ex-unionists, take the view that Anglo-Irish friendship should not depend upon the continuance of an expression of allegiance which is, in many cases, made under protest and with mental reservations, and that true wisdom dictates the agreed removal of the principal stumbling block which has stood in the way

of universal acceptance of the Treaty. It is to be hoped that the British Government will at least consider this point of view, and will not regard the mere proposal to abolish the oath as an attempt to sever the Treaty relationship between the two countries. The next few months will call for wise statesmanship in London as well as in Dublin, and any failure to take broad and long views in either capital may be fraught with the most disastrous consequences.

The retention of the land annuities, though a prickly subject, does not give rise to the high constitutional difficulties involved in the abolition of the oath. Mr de Valera's party has, wisely or unwisely, chosen to deal with this matter on strictly legal lines. Instead of basing his claim to the land annuities on consideration of justice between nations, and on the duty of the British Government to pay for the reform of a land system the evils of which were the results of British policy in the past, he has chosen to argue that the annuities are the property of the Free State by reason of certain provisions in the Government of Ireland Act of 1920. This method of approach to the problem suggests that the destination of the annuities will finally be decided by some method of arbitration, and that acute political tension may, therefore, be avoided or at least delayed.

The third essential measure in the Fianna Fail programme is the repeal of the Public Safety Act, which was passed last year to deal, by means of a military tribunal, with political crimes. The repeal of this Act will, of course, greatly weaken the power of the executive to deal with armed disorder, but it is Mr de Valera's contention that such disorder will disappear under a more popular régime, especially as a result of the abolition of the oath, which is alleged to prevent certain parties from the constitutional expression of their views in the Dail. It is devoutly to be hoped that this optimism will prove justified, and that the new administration will be saved from the unpleasant duty of dealing with the gunman, whose shadow still lurks in the dark corners of Irish politics. One danger is definitely out of the way; the Ulster boundary will be accepted under protest, and the partition of Ireland will be admitted as a disagreeable necessity, at least for the time being.

Mr de Valera's economic policy includes increased protection for industry, and the intensification of agriculture. While the detailed proposals of this part of his programme have not yet been disclosed, it is certain that they will aim at a greater degree of self-sufficiency and, we fear, may be coloured by extreme economic nationalism. The necessity for negotiating a favourable trade arrangement with Great Britain appears, however, to be freely admitted, and it will not be at all surprising if Mr de Valera seizes the opportunity provided by the Ottawa Conference of strengthening his hand in this respect. The assistance of Mr de Valera's allies of the Labour party may be reflected in suggestions for nationalising the railways and other public services.

It is impossible to deny that the change of Government in the Free State may be followed by unpleasant consequences in Anglo-Irish relations. The possibility of such a danger, however, appears definitely less than it did before the election took place. Three reassuring factors have emerged which give ground for a mood of tempered optimism: in the first place, the spokesmen and the Press of the victorious party have been studiously moderate and conciliatory in tone; secondly, the Irish public has accepted the new situation without any signs of alarm; and, finally, Mr Cosgrave, with the patriotism that we should have expected from the record of his whole career, has called upon his followers to help and not to hinder the new administration.

WAR IN THE PACIFIC.

THE eleventh-hour attempts at mediation by the Western diplomatic representatives in Shanghai having failed, as we recorded last week, and the 24-hours' ultimatum from the Commander of the Japanese Expeditionary Force, General Uyeda, having expired early in the morning of last Saturday, February 20th, the Japanese offensive was launched that day. The attack was delivered on a front rather less than ten miles long, as the crow flies, between the south bank of the Woosung Creek on the north and the north bank of the Soochow Creek on the south—the base being the west bank of the Whangpoo River between these two points. (It is worth noticing that both the southern extremity of the Japanese front and a good half of the Whangpoo shore-line which constitutes the Japanese base lie within the boundaries of the International Settlement.) The Japanese troops were well provided with all the mechanical apparatus of "post-war" warfare—tanks, mobile heavy artillery, bombing planes and the other high-power killing machines which Delegation after Delegation in the Disarmament Conference at Geneva has been proposing to limit or to abolish outright. The Japanese have used these instruments of destruction to the full; but their efforts have been foiled by the magnificent courage of the comparatively ill-equipped 19th Chinese Army; and though on Thursday they endeavoured to wipe out, by a renewed assault, the defeat inflicted on them on Tuesday, the ground at first gained could not be held.

The object of Japanese strategy, on the present scale of operations, has been—and presumably still is—to remain stationary at the southern (i.e., the urban) end of their front, on the border between Hongkew and Chapei, where the narrow streets and crowded ruins give the advantage to a Chinese defensive, while they swing their right wing round, on this pivot, until it succeeds in crossing, successively, the lines of the Woosung-Chapei Railway, the Tachang-Chapei Road, and the Nanking-Chapei Railway. If this encircling movement were to make such progress that the Japanese Right was able to threaten the junction of the Nanking and the Hangchow railway, just west of Chapei, the Chinese defenders of Chapei would be faced with the alternative of evacuating or being caught in a trap. On the first attempt, however, this Japanese plan has completely miscarried. While the first impetus of their attack carried their centre into the village of Kiangwan, on the Woosung Railway, and their Right to the neighbourhood of Tachang, their Right has, so far, been held up by the inability of the Centre to hold Kiangwan. They have further failed to take Woosung Village and fort; and in fact have failed to gain any foothold at all on the north side of the Woosung Creek.

This very serious check to the Japanese Army has come still more as a surprise than the original discomfiture of the Japanese Marines in Chapei. What explains it? Partly, perhaps, the difficulty of the terrain (for though suburban Shanghai may be easier than urban Shanghai to operate in, the houses which obstruct Japanese progress in Chapei are replaced, further north, by the hardly less formidable obstacle of canals and water-logged rice fields). Another explanation is the skilful use which the Chinese have made of such apparatus as they possess—particularly their machine-guns. The Nanking Army has been profiting, during the past three years, by the instruction of German military experts (serving in China privately and not as a military mission from the German Government). These are important contributory causes to the Japanese reverse; but, when all is said and done, it is evidently the *moral* of the Chinese soldiers that is the main cause of the Japanese defeat. For the first time, after twenty years' of preliminary practice in an aimless civil war, the Chinese at last find themselves fighting in a cause for which they really care to fight and die; and this moral factor has counted for more than the superiority of the Japanese equipment. After being raked by intensive Japanese bombardments from heavy artillery and aeroplanes to which they could not reply, the Chinese have met the Japanese infantry and driven them back

with the bayonet. The Chinese soldier is showing himself in quite a new light; and the effects of this revelation may be far-reaching.

There is no doubt about the Japanese Army's difficulties: the facts speak for themselves. The offensive is held up; the Government at Tokyo has decided to double the Expeditionary Force's strength; the foreign journalists are being excluded from the Japanese lines, while they are being admitted into the Chinese. Greatest portent of all, the entire Japanese civil population of Shanghai is being evacuated to Japan, because the Japanese Navy and Army, which have taken the offensive ostensibly in order to look after them, are unable to protect Hongkew from a counter-fire of Chinese shells. In short, the Japanese Army has now "lost face" as badly as the Japanese Navy; and, considering the traditional temperament and present temper of the Japanese people, we may expect to see the headstrong forces now in control in Tokyo throw more of the national man-power and money-power into the furnace, and expose their country to still more formidable international risks, in an effort to retrieve Japanese prestige. The Chinese, on the other hand, after having found the League and the Powers a broken reed, are elated to discover that they are capable of standing up for themselves in a straight fight with the Japanese. They are also well aware that, in the war of attrition which they now foresee, both time and space will work mightily on the Chinese side. Thus this ghastly war, which the world should never have allowed to break out, is growing apace, and nobody can see where it is going to lead us.

Japan is in a desperate position, and her ultimate débâcle is really as certain in 1932 as Germany's was in 1914. The parallel suggests, however, that the tragedy may take three or four years to work itself out, and may finish off the monstrous process, which began in 1914, of the sabotaging of our civilisation. Already Japan has lost the stakes for which she is playing. She has lost her China trade; she has had to withdraw her commercial community from Shanghai; and even her assets in Manchuria seem likely to depreciate to zero in a welter of guerilla warfare. Thus Baron Shidehara's far-sighted policy of supporting Japan's growing population by a proportionate increase in her exports—a policy which he and his colleagues pursued with so much political patience and restraint and so much economic skill and energy during the decade ending last September—has been undone by the world economic crisis and by Japanese militarism in a crazy alliance. What two years of world crisis had spared, militarism has finished off in five months.

In this tragic and perilous situation, what is the duty of the League and the Powers? In view of the pace at which the conflagration is growing, we hold—if possible, more strongly than ever—that it is their first duty to bring the sanctions of the collective system of security to bear upon Japan, who has now finally pilloried herself as the aggressor by the terms of her answer (on which we comment on a later page) to the Council's eleventh-hour appeal. We do not deny that this policy involves an element of risk, which it would not have involved in September or even in December, now that the situation has been allowed to go so far to the bad. On the other hand, we affirm once more, with assurance, that the risk involved in letting things go on from bad to worse is incomparably greater.

The first goal, then, of collective action is to bring the war to a halt by restraining the aggressor without further delay. The ultimate goal is to take collective action for repairing the damage that has been done already and for helping the unhappy combatants—whom we ought never to have allowed to come to blows—to bind up their wounds. In their present miserable condition, both Japan and China are public dangers which the world—as this grim lesson has shown—simply cannot afford to leave untended. China is suffering from a political anarchy which we must help her to put in order; Japan is suffering from an economic constriction from which we must help her to find relief. What is the force which has overthrown Baron Shidehara and enabled the militarists to reign so disastrously in his stead? It is the closing of the world market to Japan by the shrinkage of international trade

and the raising up of national tariff walls. Japan's suicidal outbreak shows clearly that the world's present economic forces are driving the world towards a political as well as economic abyss. Our first duty is to restrain Japan; our second, but not less imperative, duty is to assist her. And that means turning over a new leaf in the economic history of the "post-war" world.

MOST FAVOURED NATION.

THAT the present British Government should speak with two voices is not surprising, but when mutually contradictory policies are expressed in published official papers it is certainly time to call for further explanation. Such a contradiction is apparent in the declarations of the Government concerning the most-favoured-nation clause in commercial treaties. The committee of economic experts which sat last summer, in connection with M. Briand's plan for European union, "to examine all means which might seem calculated to bring about closer and more profitable co-operation between the different countries with a view to improving the organisation of production and trade," clearly envisaged the negotiation of commercial agreements traducing the most-favoured-nation principle (subject to certain conditions), as part of a progress towards lower tariffs all round, though they did not wish, they declared, to modify the general basis of the most-favoured-nation clause. At the back of the committee's minds, it is legitimate to suppose, was the possibility of establishing a low tariff or even free trade union in Northern Europe, and of easing the difficulties of trade in Central and Eastern Europe by means of regional tariff preferences. In its recent official commentary on the committee's suggestions, the British Government declared:—

That it would cause conflict with the whole spirit of the most-favoured-nation clause if it were open to any countries to conclude arrangements with each other which they did not extend to other countries. Such minor exceptions to this principle as have been recognised in the past, permitting of special arrangements between countries having had long political association, do not, in the opinion of H.M. Government, constitute a justification for any group of countries to set up such arrangements in future whereby they would contract out of the most-favoured-nation clause at will.

This staunch championing of the most-favoured-nation principle in its splendid integrity, while it has long been the traditional commercial policy of this country, contrasts violently with the spirit and the letter of the present Government's fiscal policy, whose apologists have frequently repeated that the Government intends, after the Ottawa Conference, to negotiate preferential agreements with foreign countries. Clause 7 of the Import Duties Bill empowers the Treasury, on the recommendation of the Board of Trade, to order that the general 10 per cent. duty and/or any additional duty shall not be chargeable on imports from any specified foreign country. As the implementation of that clause would plainly run counter to the most-favoured-nation principle, an unequivocal de-

claration of the Government's policy towards the maintenance of that principle is urgently desirable. Yet the report of the debate on the clause in the House of Commons occupies only a single page of Hansard, and no mention whatever was made on either side of our existing engagements towards foreign Powers. When Clause 12 (Discriminatory Duties) was under debate, Mr Runciman gave no hint that the Government were considering the abrogation of most-favoured-nation agreements, and Mr Hore-Belisha, the Parliamentary Secretary to the Board of Trade, actually opposed a suggested new clause which would have enabled us to enter into a free trade union on the ground that it ran counter to the most-favoured-nation clause.

The history of the most-favoured-nation clause in our commercial relations with foreign countries is a long one. The most ancient of our treaties embodying it and still in force is the treaty of peace and commerce between the United Kingdom and Denmark, signed at Whitehall on February 13, 1660, more than 270 years ago, which declares, among other things,

That the people and subjects of the King of Denmark and Norway sailing unto any of the kingdoms, principalities, or dominions of the King of England, or exercising merchandise therein, shall pay neither more nor greater customs, tributes, tolls, and other duties, nor in any other manner than as the people of the United Provinces of the Netherlands, or other strangers trading thither, and paying less customs, do or shall pay.

This may be compared with the curter, though much more lengthily qualified and explained, modern form, of which the following, taken from our latest most-favoured-nation treaty (that with Roumania), is typical:—

Articles produced or manufactured in the territories of one of the high contracting parties, imported into the territories of the other, shall not be subjected to other or higher duties or charges than those paid on the like articles produced or manufactured in any other foreign country.

Great Britain has for many years adopted, in regard to such customs duties as she has possessed, the principle of not discriminating between different foreign countries—imperial preferences being a generally acknowledged exception—and she has in fact concluded most-favoured-nation arrangements with most of the countries of the world, as the following table shows:—

MOST-FAVOURLED-NATION AGREEMENTS.				
Country.	Instrument.	Date.	When Terminable.	
Albania	Exchange of Notes	1925	After 3 months' notice.	
Argentina	Treaty	1825	No time fixed.

* As interpreted in an exchange of letters between Sir Miles Lampson and Mr. C. T. Wang.

† Reinforced by treaties of 1670 and 1814.

‡ Applies also to the Free City of Danzig.

§ As revised by convention and notes of 1927.

|| Applies also to Liechtenstein.

¶ Renewed by conventions of 1818 and 1827.

A Convention of 1882 with France—the chief absentee from the list—guarantees reciprocal most-favoured-nation treatment in all matters other than the customs tariff, which is described as “henceforth regulated by the internal legislation of each of the two States”; in that year a French law assured most-favoured-nation treatment to English goods on their entry into France, with the exception of “colonial produce.” With Belgium we have no general commercial treaty, but an exchange of notes in 1898 established a *modus vivendi*, the British Government undertaking (on condition of reciprocity) not to make thereafter any modification in the system actually applied to the subjects and products of Belgium, except on three months' notice, while reserving the right to make “such modifications as may be made applicable to all other countries.”

In our treaty of 1849 with Costa Rica, which does not contain the usual most-favoured-nation clause as regards customs tariffs, the parties agreed:—

That any favour, privilege, or immunity whatever, in matters of commerce and navigation, which either contracting party has actually granted, or may hereafter grant, to the subjects or citizens of any other State, shall be extended to the subjects or citizens of the other high contracting party, gratuitously, if the concession in favour of that other nation shall have been gratuitous; or in return for a compensation as nearly as possible of proportionate value and effect, to be adjusted by mutual agreement, if the concession shall have been conditional.

A treaty of the same year with Liberia contains a precisely similar clause; in the treaty of 1837 with the Netherlands, a like provision follows an unequivocal undertaking to give most-favoured-nation treatment in the matter of customs duties. The clause is peculiarly interesting in that, broadly speaking, it represents what we may suppose to be the policy of the present Government towards preferential arrangements with foreign countries. Customs unions proper are, of course, a recognised exception to most-favoured-nation treatment, while in several of our treaties special qualifications have been allowed on behalf of foreign countries whose trade relations with certain third parties are exceptional. The British Government undertook, for instance, not to claim the benefit of any customs preferences which are or may be granted by Guatemala in favour of the produce or manufactures of

any other Central American country, so long as such preferences are not extended to any other foreign country, land frontier. The temporary commercial agreement with the U.S.S.R. is declared not to apply, *inter alia*, to

The special provisions relating to trade contained in treaties which the U.S.S.R. has concluded, or may conclude hereafter, with those States the entire territory of which on the 1st August, 1914, formed in all respects an integral part of the former Russian Empire or with the Continental border States in Asia.

In the treaty with Latvia, Great Britain likewise renounces her claim to the benefit of customs preferences or other facilities which are, or may be, granted by Latvia exclusively in favour of Russia, Finland, Estonia or Lithuania, the last three of whom are naturally granted a corresponding privilege. These specific exceptions in existing treaties indicate another possible line of future policy for Great Britain, namely, the negotiation of a three-decker system of tariff relations in which a limited and definite list of countries, who had accorded us special advantages, would be admitted as exceptions to the most-favoured-nation treatment guaranteed to the remainder. But unless some device were found for adding to the list that plan would not, after a certain point, allow of further progress towards lower tariffs all round by means of differential agreements.

In any case, it is clear that if we really mean to use Clause 7 of the Import Duties Bill to negotiate preferential treaties of commerce with foreign countries we must either evade our most-favoured-nation undertakings—and there are many proven subterfuges for doing so, by means of sanitary restrictions, quotas and licences, or manipulation of customs schedules—or, more honestly, denounce them. As the table indicates, by far the majority of our commercial engagements can be made to expire on giving a year's notice or less. Exceptions are the treaties with Austria, Brazil, Hungary, Panama, Roumania, Siam and Turkey. We are far from suggesting that we should forsake a principle which has served us very well in our Free Trade days until we are confident that its abandonment will bring us large compensatory advantages, but it is none too early to consider and develop a clear and firm line of policy. The country will otherwise be tempted to regard the Government's protestations of the value of Clause 7 as only another empty sham.

THE WHEAT QUOTA BILL.

THE text of the Government's Bill establishing a quota system for home-grown wheat was published on Wednesday. Its object, as officially stated, is “to provide wheat growers in the United Kingdom with a secure market and an enhanced price for home-grown wheat of millable quality, without a subsidy from the Exchequer and without encouraging the extension of wheat cultivation to land unsuitable for the crop.” Splendid! But unfortunately the effect of the Bill will be to tax the people's staple food to the tune of some 18 per cent. *ad valorem*, and to delegate the power of increasing the tax; yet so simple a matter has been enveloped in so much wordy fog as to make it politically, though not logically, possible to argue that a tax is not a tax when called a quota.

The Bill is almost incredibly verbose and complicated. A scurrilous story going the rounds of the grain trade runs that at the Cabinet meeting to which the original draft of the Bill was submitted so many members found its details incomprehensible that a special quota sub-committee was appointed “so that at any rate a few of us should understand it.” Presumably the anecdote is apocryphal, but the cumbrousness of the Bill's provisions gives it colour. A Wheat Commission is to be set up to secure that for wheat of millable quality grown in this and subsequent years growers shall get a guaranteed average price, which, for the crops of 1932, 1933 and 1934, is fixed at 45s. per quarter of 504 lbs., less the expenses of operating the scheme. The average price actually received by farmers will be ascertained at the end of each cereal year, and a “deficiency payment” (*alias* “subsidy”) will be made

on each quarter sufficient to bring the ascertained average up to the gross average of 45s. The quantity of wheat ranking for this subsidy is not to exceed a figure of “anticipated supply” which the Minister is to promulgate for each year, with a maximum of six million quarters. If actual deliveries exceed the anticipated supply, the subsidy paid on each quarter is to be reduced proportionately.

The funds to provide the “deficiency payments” to make up the “price deficit” between the “ascertained average price” and the “standard price” are to be secured from a levy (called a “quota payment,” presumably because the word quota must be preserved somewhere) on every sack of flour consumed in the country. It will actually be levied on all flour as delivered from mills or as imported, but rebates will be allowed on all exports, re-exports and shipments as stores. Procedure will be as follows: Early in each season the Commission will make an estimate of “anticipated supply” and a guess at what the average price on the free market will be; also, an estimate of what the supply of flour for home consumption is going to aggregate. The levy can then be assessed on each sack of estimated flour consumption to produce a total sum sufficient to pay on each quarter of the guessed supply enough subsidy to bring the guessed free price up to the standard price. That may not be too clear a description, but it is pellucid in comparison with the Bill's own language, which defines the levy as a payment by every miller and importer on each hundred-weight of flour of

“an amount calculated and prescribed in accordance with the provisions of this section so as to represent, as nearly as may be, a sum equal to what would have been the price deficit in respect of the quota of home-grown millable wheat which would have been used in the production of that hundredweight if the anticipated supply of such wheat for the cereal year in which that hundredweight was delivered had been used at a uniform rate per hundredweight of flour in the production of the estimated supply of flour for that year. . . .”

We commend to British farmers attentive study of the terminology of this device “specially calculated to meet the needs of English agriculture.”

Cereal seasons commence on August 1st, but, in order to accumulate funds to get the scheme going, the levies for the first season are to commence as soon as the measure is passed. Home-grown wheat at present is worth about 25s. a quarter. No member of the Commission is likely to venture a prophecy that the average price ruling in the 1932-3 season will be much higher or lower than that. If it rules at that figure, the tidy sum of £6,000,000 will be charged to consumers to make up the “price deficit” of 20s. a quarter on an “anticipated supply” of six million quarters, which is the maximum allowed in the Bill. Taking home consumption as 33 million sacks per annum, that means a levy of about 3s. 7½d. per sack. At the beginning of this month, before news of the impending levy spread, considerable quantities of flour were being sold at 20s. and less per sack, so the tax works out at about 18 per cent. *ad valorem*. The curious historian will account it not the least of his curios that a Government which could not include wheat in its 10 per cent. tariff because of its members' pledges not to tax “staple” food (“I meant wheat and meat,” quoth Mr Runciman), and because the possible repercussions on the cost of living might even have endangered “the safety of the pound,” could within the space of a fortnight introduce a measure which taxes the self-same article 18 per cent. by throwing in twenty-nine pages of cuttlefish draftsmanship.

As the fund will have more than a year's receipts out of which to make its first season's payments, the levy between the passing of the measure and July 31, 1933, is expected to be three shillings per sack. It is permissive under the Bill for the levies to be paid by a Flour Millers' Corporation on behalf of the individual members. In practice that is how the scheme is intended to be worked, namely, as an internal matter for the milling industry, much as that industry already operates a voluntary levy for rationalisation purposes. The compulsory function of the Corporation is to take over any old-crop wheat remaining unsold in the last two months (June-July) of any

COLLECTION

of Bills, etc., on all
Scandinavian places

**SKANDINAVISKA
KREDITAKTIEBOLAGET**

Göteborg — Stockholm — Malmö

cereal year, to a limit of one-eighth of the “anticipated supply,” if so required by the Wheat Commission and at such price as the Commission may decide to be the “fair market value”—a term which has no meaning at all in economics and in practice will mean whatever the Commission chooses it to mean. The Corporation is to apportion pro rata among the individual millers any losses or profits which it may make on the realisation of these compulsorily-acquired stocks.

Millers will naturally pass on their increased costs for the levy and for the contingent liability just mentioned by way of higher prices for their products, that is, for the flour which they sell to urban consumers and for the by-products (about 30 per cent. of total output) which they sell back to agriculture. Mr Chamberlain's 80,000 Northern Irish loyalist smallholders—who grow practically no wheat—have been spared the chagrin of being penalised for their loyalty by having their feed maize taxed, only to incur a greater penalty on wheat millfeeds, which are distinctly more important animal feeds than even maize.

Provision is made for a minor inquisition to obviate quota evasion. If evasion does occur, it is punishable by forfeiture plus treble payment of the evaded levy and/or three months' imprisonment. The individual forms returned for the compilation of the annual agricultural statistics are also made liable to inspection for quota purposes. As the Returns Act and the official forms themselves solemnly pledge that the returns will be used solely for statistical purposes, the Bill legalises the necessary breach of confidence.

The Commission, through the Minister, will promulgate a standard to which millable wheat must conform, but it appears to be nobody's business to see that it does in fact conform—except, of course, the consumers', and they hardly count. They have two representatives on the Commission of fourteen. In borderline cases, the decision between millable and non-millable wheat will mean a matter of twenty shillings a quarter to the grower. It may be taken as probable that the benefit of the doubt will go to the grower rather than the quality. In the earlier drafts the formation of a board under the Agricultural Marketing Act to take over the Commission's functions was made a *sine qua non* of the scheme's continued operation. In the Bill, power to transfer certain functions to such a board at some future date is retained as a pious hope, but it is difficult to forget how many of the present Government's supporters have branded the Marketing Act as “rank Socialism.”

Finally, all this complication and camouflage is necessary in order that what is, after all, only a very small and perhaps the least promising portion of British agriculture should be subsidised at the expense of the consumer without offending the strange elastic consciences of Government supporters who have forewarned taxes on food. If Sir Herbert Samuel and his Liberal colleagues in the Government are to stand by the arguments that they used to attack the Tariff Bill, if Mr Runciman is to keep faith with his constituents and his honour, they must either stretch the “agreement to differ” by attacking the Wheat Bill with all the vigour at their command, or leave a Government which they can only support at the price of abandoning the principles of truth and honesty on which British politics have hitherto been founded.

GERMAN BANKING RECONSTRUCTION.

THE measures taken in Germany to reconstruct the banking system* of the country are without parallel in economic history. Four out of the six leading Berlin joint-stock banks (Dresdner Bank, Darmstaedter und Nationalbank, Deutsche Bank und Disconto-Gesellschaft, and the Commerz- und Privatbank) and two provincial institutions (Barmer Bank Verein and the Allgemeine Deutsche Credit-Anstalt) have written down their assets by more than Rm. 1,000 millions and have reduced their capital and reserves by roughly Rm. 535 millions. For the reconstruction of four out of the six banks named the State and the Reichsbank have to provide Rm. 650 millions. As a result of these measures, in the course of which two institutions (Darmstaedter und Nationalbank and Barmer Bank Verein) will cease to exist, the State and the Reichsbank have obtained direct control of two out of the remaining four leading Berlin banks which were originally founded by private enterprise. Only the Deutsche Bank is able to write off capital and reserves out of its own resources and to raise new capital without direct assistance from the State. The Reichs-Kredit-Gesellschaft, formed in 1929 by the Vereinigte Industrie Unternehmungen A.G., the capital of which is owned wholly by the State, is unaffected by the reorganisation; but only one private institution, the Berliner Handelsgesellschaft remains completely outside the scheme, though a number of local institutions, whose business lies mainly in granting mortgage credits or who are owned by some of the South German States, have also been able to maintain order in their balance sheets without any outside help.

This dramatic reorganisation scheme must be viewed against the background of the German banking crisis created by last year's run upon German banks by foreign creditors—a run which, infecting home depositors, ultimately caused the closing of the banks last July. Leaving aside the non-German factors such as the general world depression, the American crisis and the collapse of the Austrian Credit-Anstalt, it is apparent to-day that the run on Germany could not be checked because of the growing conviction that the post-war German banking structure and economic system were inherently weak. Four factors were responsible for this weakness—the economic, budgetary and social policy of the Reich, the expansionist tendencies of the industrialists, a credit policy which was sometimes more liberal than the capital resources of borrowers warranted, and—last, but not least—reparations.

How far-reaching has been the disastrous influence of reparations upon the whole economic life of Germany is only now becoming fully apparent. It is idle to-day to argue that their very existence should have compelled Germany to follow a policy of restriction rather than of expansion; that is only the easy wisdom that comes after the event. Seven years ago when hope of freer world trade was still strong, and faith in Germany's recuperative powers was high, economic expansionism in Germany appeared to be the obvious policy for a country burdened with foreign political debt. The error, as events have proved, lay in industrialists and bankers pursuing this policy without assurance that world trade would not suddenly contract. Moreover, Germany, like other belligerents, inherited from the war an obsession for "key industries" and economic self-sufficiency, which was further stimulated in post-war days by the spell cast by American production methods. The basic industries of Germany had suffered grievously under the peace treaties, and their unemployed workers were one of the greatest dangers to the internal peace of the country. Demands from these staple industries for credit and capital to rebuild and extend their works were, therefore, always justified on patriotic grounds, however little regard they paid to the economic situation. The heavy industries already had experience of mass production, but there were others who wished to introduce it in order to supply the whole of Germany or to increase exports. Still others merely claimed that their existence and expansion

were vital to Germany. Under the stimulus of foreign offers of money and liberal credit policy abroad, the time-honoured principles of lending were thrown overboard in an effort to get the reparations-burdened ship somehow to port.

It is impossible now to say what would have been the fate of the economic enterprises started between 1924 and 1926 under conditions of freer trade and greater mobility of labour, wages and capital. Actually, trade restrictions increased, labour and wages became almost fixed, and political and other events nearly destroyed the mobility of capital. Inevitably prices fell. Only a country with accumulated reserves could have withstood this strain on its economic system; but Germany had destroyed her working capital by inflation, and credits raised for industrial and other purposes were sometimes secured rather by hopes of the future than by actual assets. Only an upward economic development, supported by a policy which gave protection to capital, would eventually have given a solid foundation to the economic structure of a Germany relieved of reparations obligations. Actually, the increasing distrust in the political stability of Germany continued to stimulate the export of such capital as still remained, whilst the budgetary policy, guided by consideration of political necessity rather than of the economic conditions of the day, absorbed increasing proportions of individual incomes, and all this at a time when social, labour, cartel and tariff legislation was also steadily undermining the basis of traditional "capitalist" enterprise.

The collapse on the Berlin Stock Exchange on the Black Friday of 1928 might perhaps have been taken as a warning of the approaching crisis. The warning passed unheeded by the authorities, but, followed as it was by the "revelations" started by the "Favag" affair, it ultimately destroyed completely the confidence of the German investor in joint-stock enterprise. The fall in world commodity prices and increasing obstacles to international trade called, if there were to be no international price refutation, for rapid adaptation by way of wage reductions and revision of debts. In fact, Germany raised her industrial tariffs and, worst of all, her duties on agricultural imports. Thus the inelasticity of the German economic system further increased and the process of capital consumption was accelerated.

The consequences of Black Friday also dealt the first serious blow to German banking. By 1930 it had become fairly apparent that, in valuing their assets, in most cases the banks could no longer rely upon being able to dispose of them at "book" prices in the open market, since by that time the economic structure had become so artificial that the free play of the market had ceased to exist. When the internal run upon the German banks started in 1931 it was no longer a case of distrust of one bank, but of almost all banks in the country. The Government was, therefore, faced with the alternative of letting things work themselves out, in which case social upheaval would have been almost unavoidable, or of assuming control of the whole economic machinery of the country. When Dr. Brüning attempted by the decree of December 9, 1931, to reconstruct the whole German economy as a unit independent of the world, he deprived Germany from imminent collapse, but he definitely destroyed the incentive to normal economic activity. After the events of July, when the State had for the first time to assist some of the leading banks, the reconstruction of these institutions became inevitable. After December it was clear that these measures could only form part of a scheme which comprised all banks whose balance sheets no longer reflected the true state of their affairs. Capital from abroad was unobtainable; at home, capital and confidence had disappeared. Thus, with confidence no longer oiling the wheels of the economic machinery, the State has been compelled to provide a substitute by guaranteeing in one form or another the smooth working of the whole.

Any attempt to predict the future of German banking must start from the premise—which is much more important than the question whether State ownership in banking is desirable or not—that the rate of economic progress is a product of the whole political, social and industrial complex, and cannot be determined by decree

unless that complex is converted in its entirety to a basis of State socialism. In the absence of economic and political stability there can be no sound "capitalist" banking. The great question facing Germany to-day is whether conditions of public confidence at home and abroad will enable her to avoid a progressively greater State regimentation of her economic life.

NEWFOUNDLAND.

(BY A CORRESPONDENT.)

NEWFOUNDLAND, in common with most other countries, is grappling with serious financial difficulties. Since the War the Dominion has borrowed too freely, using loans to balance budgets as well as to finance extravagant development schemes. At the Newfoundland Government's request, in 1931 the British Treasury sent out Sir Percy Thompson and Mr J. H. Penson to investigate the Dominion's finances. As a result, drastic action was initiated in December, and these gentlemen are remaining in the island as financial advisers with wide powers. This is a big step forward, but a glance at the present position shows that there are still great difficulties to surmount.

The total public debt is now some \$92,500,000 at par of exchange, as against less than \$45,000,000 in 1919 (the unit of currency is the dollar; its value fluctuates with that of the Canadian dollar). Of this debt there is funded approximately £5,250,000 in sterling issues in the United Kingdom; £5,650,000 payable either in sterling or United States dollars at par of exchange; \$29,000,000 in United States dollars; \$850,000 in internal bonds. At par of exchange the total funded debt comes to over \$82,000,000.

In addition, the Government guarantees principal and interest of \$10,787,000 of bonds, of which \$9,733,000 are 5½ per cent. securities of the International Power and Paper Company.

The effect of the recent variations in exchange is shown in the following table:—

APPROXIMATE ANNUAL COST OF NEWFOUNDLAND'S FUNDED DEBT.

	(In Newfoundland dollars.)		
	At par of exchange.	At present rates of exchange.	If the Newfoundland dollar came on parity with present sterling basis.
	(a)	(b)	(c)
Sterling issues.....	962,500	791,000	962,500
U.S.A. issues (including convertible sterling)	2,993,000	3,480,500	4,215,500
Internal issues.....	34,000	34,000	34,000
Total.....	3,989,500	4,305,500	5,212,000

(a) \$4.86½ Newfoundland = \$4.86½ U.S.A. = £1.

(b) \$4 Newfoundland = \$3.44 U.S.A. = £1.

(c) \$4.86½ Newfoundland = \$3.44 U.S.A. = £1.

The position of the unfunded debt is sounder in this respect, as, apart from less than \$2,000,000 due to the Imperial Government, the balance is owing to Canadian banks; but as Newfoundland's total revenue for the year 1930-31 was less than \$10,000,000, it is clear that if her debt service is not to become almost an impossible burden, the Canadian dollar should maintain a comparatively high exchange value in United States currency. It is, therefore, fortunate for Newfoundland that Canada herself has similar reasons for wishing her dollar to have a high gold value.

With the exception of a small surplus in the years 1924-5 and 1929-30, Newfoundland has not balanced her Budget since 1920. The figures for the last five years are:—

Year ending June 30th.	Revenue.	Expenditure.
	\$	\$
1927	8,932,435	10,533,409
1928	9,466,005	10,740,925
1929	10,025,649	11,132,822
1930	11,579,215	11,434,313
1931 (estimated)	9,920,500	11,895,000

In the year 1931-32 a substantial deficit is expected. Last year debt service probably required some \$4,300,000, while in the current year the figure may be about \$4,800,000. Newfoundland has peculiar difficulties in the forms of taxation that she can impose, in view of the

restricted earning power of her people, whose main industry is catching and curing fish. About 85 per cent. of her revenue is derived from Customs duties, and these decline inconveniently during periods of depression. To counteract this, it is believed that duties can be made payable on a wider range of goods and that income tax can be increased.

Newfoundland is also unfortunate in her trade distribution under present exchange conditions. The following are the island's trade figures for the last few years:—

Year ending June 30th.	Imports.	Exports.
	\$	\$
1927	25,814,000	30,840,000
1928	27,637,000	33,645,000
1929	29,237,000	36,798,000
1930	31,871,000	40,052,000

The figures for the year ending June 30, 1931, are not yet available in this country, but exports exceeded imports by some \$4,000,000. The increase in the 1929-30 figures was accounted for largely by the high price obtained for fish in that year. The trade is distributed approximately as follows:—

	Imports.	Exports.
	Per cent.	Per cent.
United Kingdom.....	17.5	21.5
Canada	41	10
United States	38	28.5
Other Countries	3.5	40

The "other countries" are represented mainly by Brazil, Spain, Portugal and Greece, who are Newfoundland's main customers for dried fish. It thus appears that the island is in a very different trading position from England under present exchange conditions, dependent as she is on Canada and the United States for some 80 per cent. of her purchases, and selling about 60 per cent. of her products to countries with depreciated currencies. This position is further aggravated for the fish merchants, who have been meeting with serious competition from Norway and Iceland, as these countries now have the added advantage of operating more or less on a sterling basis. It was realised prior to the fall in sterling that the fish industry had been losing its place in the world's markets on account of the quality of its products being poorer than that of its competitors. Efforts are being made to rectify this by better grading, improved curing, etc. For the year ending June 30, 1930, it was estimated that the island's gross production of manufactures was valued at \$45,500,000. Of this amount \$16,000,000 was ascribed to fishery products (employing 100,000 people) and \$19,250,000 to wood products (employing 6,000 people). In the same year exports of mine products were valued at some \$7,000,000. The timber and mining industries are controlled by British, Canadian and American capital, and the island does not get the full advantage of their profits.

Newfoundland's financial difficulties came to a head in May, 1931, when the Government advertised for tenders for a loan of \$8,000,000. No tenders were received, but it was announced later that the loan had been taken up temporarily on satisfactory terms by a group of Canadian banks. A more serious situation arose at the end of December, when the Government had considerable difficulty in borrowing the money required for the interest payments due in January. Eventually \$2,200,000 was borrowed from a syndicate of Canadian banks on six months' 5½ per cent. debentures, subject, *inter alia*, to the following conditions:—

(1) The Government undertook to do all in its power to balance the Budget for 1932-33 and to create in subsequent years a substantial sinking fund for repaying, first, the floating debt and then the other debts.

(2) The Government undertook to do its best to raise an internal loan to take care of the interest due on July 1, 1932.

When the Legislature recently met, the Speech from the Throne indicated that the Government intends to take immediate steps to fulfil the above conditions. There have been various reports regarding the possibility of Newfoundland selling Labrador to Canada, and a price of as much as \$100,000,000 was mentioned recently by a Minister. It can be assumed, however, that the present financial position of Canada precludes such an investment for some years.

* Full details will be found in our Berlin correspondent's dispatch on page 463.

Notes of the Week.

The Bill —The proceedings in the committee stage of the Import Duties Bill form a depressing chronicle for those who believe that the ineptitude of the Government's fiscal policy represents a deadly blow to the best interests of this country and a disastrous aggravation of the difficulties under which the world is labouring. The Liberal Free Traders and the Labour Opposition struggled manfully to eradicate some of the worst elements in a pernicious measure, but the story of their efforts is mainly one of victory to the "big battalions." On Clause 1, providing for the imposition of the 10 per cent. *ad valorem* duty, Major Lloyd George tried in vain to press an amendment providing that the duty should be imposed only "after inquiry and report," to which Mr Runciman, regardless of the strength of sterling, was content disingenuously to reply: "We have not the time to spare." This sound, delaying amendment, for whose rejection no "emergency" could logically be pleaded, was accordingly lost; and a similar fate was meted out to the proposal that the rate of duty should be reduced from 10 to 5 per cent. A minor concession was obtained from Mr Chamberlain, who agreed that "in cases of special urgency" the Treasury, on the advice of the Advisory Committee, might add articles to the free list earlier than originally proposed, i.e., before the expiration of six months from the passing of the Bill. But a most sinister amendment, which the Chancellor himself proposed, that the Treasury should have power, on the recommendation of the Advisory Committee, to make deletions from the free list by Orders-in-Council was defeated only as a result of the Chairman's ruling it out of order. Thus thwarted for the time being, Mr Chamberlain observed that he could deal with the matter in the Finance Bill. On Clause 2 the efforts of the opponents of the Bill were concentrated on endeavouring to secure that the proceedings of the Advisory Committee were attended by publicity and that importers and consumers should have a statutory right to be heard. The efforts were, of course, in vain; the Government spokesmen had little difficulty in persuading the House that the evidence lodged before the Committee must be confidential, and that the Committee must be trusted to pay as much attention to the interests of importers and consumers as was good for them. All that the Opposition could secure was a promise from the Government that the Chancellor, when making Orders on recommendations of the Advisory Committee, would give the House "as far as possible all reasonable information" as to the ground on which the recommendations were based. Curiosity as to the personnel of the Committee was scarcely satisfied by Mr Chamberlain's announcement that the chairman would be neither a civil servant, a manufacturer, a trade unionist nor an economist; and under Clause 3 nothing was done to clarify the principles which should guide the Advisory Committee's deliberations. For the rest, the Dominion and Colonial preferences were rushed through with little enough encouragement for sound hopes of much greater freedom of trade emerging from the Ottawa Conference, and the threat to the re-export trades was dismissed perfunctorily with assurances that inconvenience would as far as possible be minimised.

The List —Since approval by the House of the main structure of the Bill was a foregone conclusion, the best hopes of mitigating to some extent its evil effects lay in the possibility of securing extensions to the free list, though it remains to be seen how far Mr Chamberlain will take powers in the Finance Bill to whittle away even this relic of unimpeded trade. Deplorably, as it seems to us, the discussion of the schedule of goods to be exempted from the *ad valorem* duty was confined by the guillotine to a wholly inadequate time. Protectionist attempts to exclude meat and newsprint were happily defeated; and the Government, to their credit, voluntarily added to the list maize, all unwrought copper and all metal ores (instead of only tin ores and concentrates, as originally proposed). Exemption from duty was also extended to esparto, potassium carbonate and certain other mineral

potassium salts, whale oil produced in British floating factories, and semi-precious stones and pearls. On the other hand, the tariffists succeeded in securing the deletion from the free list of hemp—a concession to pressure from Kenya producers of sisal which is likely to deal a severe blow to the export trade of British rope and twine manufacturers. The last three hours of the debate were occupied in vigorous, but inevitably unsuccessful, efforts on the part of the Labour Opposition to obtain the exclusion of foodstuffs from the *ad valorem* duty. An unfortunate indirect result was that the case for making such obviously essential additions to the free list as, for example, timber and non-ferrous metals, was not even considered by the House, though, as we go to press, we are glad to learn that in the Report Stage flint, cork, soya beans and "true" hemp were added to the free list. Seldom in the history of the British Parliament can a measure of such importance to the future of British industry have been "railroaded" through with such unconscionable haste.

—and the Devil —With the minor modifications noted above, the Bill will have been sent to the Upper House before these words are read. How far the potentialities for evil which it holds can be neutralised will depend on the vigour with which Free Trade opinion in this country can be mobilised to bring pressure on the Advisory Committee and to induce the Government to think less of giving shelter to vested interests at home than of negotiating abroad with a view to the establishment under our lead of the widest possible area of countries on a mutual Free Trade, or at least minimum tariff, basis. A fiscal revolution in this country is a *fait accompli*, and simply to cry over spilt milk is not the policy which we shall advocate for the future. On the last occasion, however, which we shall have of appearing as a Free Trade journal in a Free Trade country, we desire to place on record our unrepentant view that the Import Duties Bill is an intrinsically vicious measure, inequitable as a means of raising revenue, handicapping through its taxes on raw materials and "semis" the manufacturers of this country who are in competition with foreign rivals in the export markets, damaging fatally our re-export trades, and opening up a deplorable vista of log-rolling, corruption and fiscal uncertainty, which will impede the essential process of reorganising British industry.

Japan's Reply to the League —The Japanese reply to the appeal from the Council of the League of Nations is an able piece of diplomatic technique, in the sense that it says offensive things in studiously courteous language, and makes preposterous statements in plausible terms. It remains to be seen, however, whether this cleverness is not really "clever-foolish." The one thing which the Note makes clear is that Japan is still as firmly resolved as she has been, ever since the militarists got the upper hand over Baron Shidehara on September 1st, to go on her own warlike way without yielding an inch to the League or the Powers. At a stage in which the Powers are afraid that Japan may bite and scratch, this policy of bland intransigence is efficacious. But snubs are not less resented for being veiled; and the snubs which the Japanese have been administering to the world during the past months will recoil on their own heads when Japan reaches the end of her tether, as she infallibly will. The latest Japanese Note is addressed "to twelve members of the Council of the League" severally, on the ground that "the Committee of Twelve" (i.e., the League Council minus the Japanese and Chinese delegates) is not "the Council" juridically. The essence of the statement enclosed in the Note is that Japan is not the wolf but the lamb, and that Japan does not recognise China as an "organised people" within the meaning of the League of Nations Covenant. On the first point, the statement remarks that "it does not appear to be suggested that Japan was wrong in resisting the attack (sic) made on her marines"! The second point has the most far-reaching implications. In fact, it implies that China is outside the law, and is to be exposed to any kind of treatment by anybody.

On this point, the Japanese have already shrunk back from the logical consequences of their own principle; for "the official spokesman" at Tokyo has made a would-be reassuring statement to limit the application of the principle, if not to explain it away. As for the Washington Nine-Power Treaty, the Japanese Note roundly denies the right of the League Council to invoke it. All this is very adroit rapier-play; but the really important fact is that the Japanese thesis, as now enunciated, is directly at loggerheads with the American thesis that has been expounded simultaneously by Mr Stimson.

American Policy in China —The open letter, dated Wednesday, February 24th, from Mr Stimson to Senator Borah on American policy in regard to China is probably the most important diplomatic document relating to the Far Eastern crisis that has been made public since the crisis began. It was the outcome of a Cabinet meeting at Washington which was followed up by *tête-à-tête* conversations between the Secretary of State and the President of the United States; and it is, therefore, as authoritative as any statement possibly could be. We, therefore, hope that Mr Stimson's words will be studied and taken to heart by H.M. Government at Westminster as well as by the Government at Tokyo. Mr Stimson not only lays down emphatically that the Nine-Power Treaty stands now just as strongly as ever, without there being any question of re-interpretation or revision. He also points out that all the treaties concluded at the Washington Conference were—and have always been recognised to be—inter-related and interdependent; and that any proposal to modify or abrogate the Nine-Power Treaty would automatically throw into the melting pot the naval limitation treaties as well. Japan's present action is condemned by Mr Stimson in very plain language. "It is clear beyond peradventure that a situation has developed which cannot under any circumstances be reconciled with the obligations of the covenants [of the Nine-Power Treaty and the Kellogg Pact]; and that, if the treaties had been faithfully observed, such a situation could not have arisen." These events, "far from indicating the advisability of any modification" of the treaties, "have tended to bring home the vital importance of their faithful observance." In conclusion, the United States Government reiterates its decision, already announced on January 7th, that it will not recognise any situation, treaty or agreement entered into by the Japanese and Chinese Governments in violation of treaties in force. The American Secretary of State calls upon the other Governments of the world to take up the same position. In this connection, we are sorry to observe that on the very day on which Mr Stimson's letter was dated it was stated in the House of Commons at Westminster by the Under-Secretary for Foreign Affairs, a propos of the installation of Japan's puppet-Government in Manchuria, that, "since this declaration had been made by the local Chinese authorities, there did not appear to be any ground for action by His Majesty's Government in the United Kingdom under the Nine-Power Treaty of 1922." This comes perilously near to British collusion with Japanese policy in Manchuria. Moreover, it is the second occasion on which our Government has conspicuously dissociated itself from the action of the American Government when in the application of the Nine-Power Treaty has been in question a propos of Manchuria. Have our Government well considered whither this line of action will lead them?

The New French Government —A new French Government was successfully constituted by M. Tardieu in the early hours of last Sunday, February 21st, and obtained a vote of confidence from the Chamber, on Tuesday, by a majority of 47 votes. The President of the Republic, M. Doumer, had entrusted M. Tardieu with the task of attempting to form a "Government of Liquidation" after M. Painlevé had tried and failed to form a "Government of National Union." (M. Painlevé is one of that characteristic school of French statesmen—the men of the Left who are ready to play the game of the

Right). In the new Cabinet, M. Tardieu himself is a kind of recurring decimal, for, besides being Prime Minister and Minister for Foreign Affairs, he is the only solid reality behind the men of straw from whose nerveless fingers all but two of the other Ministerial portfolios now dangle. The two exceptions which prove the rule are the redoubtable M. Flandin, who returns to the Ministry of Finance, and the late Prime Minister, M. Laval, who now goes to the Ministry of Labour, an appointment which indicates that the unemployment problem in France is being taken rather seriously now by the politicians. The personnel and policy of the French Delegation to the Disarmament Conference remain as they were; and thus M. Tardieu returns to Geneva with his authority at least undiminished, if not enhanced. It is some consolation to reflect that M. Paul Boncour returns to Geneva likewise; for, whether or not we altogether agree with the policy of so rigid a "Geneva Protocolite," M. Paul Boncour has at least the two merits of being sincere and of knowing his own mind. Thus, on the whole, the reconstruction of the French Government portends no change in the foreign policy of France before the elections take place, three months hence. To outward appearance, too, it involves no change in French internal politics; since, whatever Government holds office, it is bound to do the bidding of the present Chamber until the Chamber's mandate runs out. One important effect, however, of the now surmounted Cabinet crisis has been to scotch the scheme for ensuring a victory of the Right in the forthcoming elections by a manipulation of the electoral law. In whatever way the law may be furbished up before the elections, it is clear that it cannot and will not now be misused for this illegitimate purpose. Still more important is the psychological fact that the political crisis has aroused the fighting temper of the Left—a temper which was turbulently manifested in the Chamber last Tuesday, when the Socialist deputies made a mass attack across the floor of the House upon a deputy who had made abusive ejaculations against M. Blum. The French general election promises to be exciting; yet it would be a mistake to pin our hopes upon a victory of the Left; and even if the Left does win, "Plus ça change, plus c'est la même chose" is a sound and sobering maxim which should never be left out of our reckoning.

British and French Reparations Policy —Last Monday Sir John Simon, in answer to a question from Major Nathan, categorically denied that His Majesty's Government has entered into, or is in the course of negotiating with any foreign Government, any agreement or understanding, explicit or implied, which might in any way qualify the Government's complete liberty of action in endeavouring to secure acceptance at the projected Lausanne Conference of its declared policy that a comprehensive and permanent settlement of the reparations

question must be reached as soon as possible by means of a general cancellation of reparations and war debts. In reply to the further question, whether His Majesty's Government intended to press at the Lausanne Conference for a decision and immediate action in that sense, Sir John Simon referred his questioner to the declaration of the Chancellor of the Exchequer on February 2,* in which Mr Chamberlain not only emphatically affirmed that the Government held to the policy of "the clean slate," and that they would press for a permanent settlement on the basis of the findings of the Young Plan Advisory Committee, but added that as it was clear from the Committee's report that Germany is not in a position to resume the fulfilment of her obligations under the Young Plan, that fact would assuredly have to be taken into account at the Conference. These unequivocal pronouncements should finally dispose of the uneasy rumours that the British Government's hands have been in some fashion tied by an engagement preventing the abolition of reparations. As the air thus clears, the prospect for the Lausanne Conference seems more hopeful. M. Tardieu cleared it a little further in his speech to the Chamber on Tuesday. Welcoming the agreement for the holding of the Lausanne Conference in June, M. Tardieu said that his Government hoped for a general *entente* with Great Britain. It must, of course, be obvious to M. Tardieu that in reparations policy no common front between the two countries is possible except on the basis of the recognition of Germany's incapacity to pay, though it is too much to hope that the French Government has already itself adopted those principles. M. Tardieu did, however, add that the French point of view with regard to reparations might be summarised as respect for contracts, permitting of adjustments freely negotiated, but excluding the repudiation of signatures. Thus disembowelled, French policy is seen to be no more than the bare bones of legal sanctity, which may rattle fearsomely but cannot finally obstruct a flesh-and-blood settlement on the basis of fact.

The German Presidential Candidates.—Herr Hitler, it seems, is to stand for the Presidency, though whether he is a willing or unwilling candidate remains obscure. According to reports, true or untrue, the difficulty over his naturalisation is to be overcome by a whimsical expedient. To get Herr Hitler naturalised by the normal process would have been a ticklish business, since an applicant for German citizenship has first to take out his papers in some one of the seventeen *Länder* of the German *Reich*, and then the Governments of all the other sixteen *Länder* have to ratify the act of the sister *Land* before it becomes valid. When the applicant is of the convenient average obscurity, this concurrence is simply a matter of form. Herr Hitler, however, whatever else may be said of him, certainly cannot be called obscure; and if Thuringia or Brunswick had taken the initiative in carrying him half-way towards becoming a German citizen, some other German State, such as Hamburg or Prussia, could probably be trusted to throw him out in the second stage. Hence his hesitation to try this method; but a way of circumventing the ordinary procedure has now apparently been found. So great is the German regard for learning that if an Englishman or an Austrian secures appointment to a professorial chair in Germany, this suffices to turn him into a German citizen *ipso facto*, at a single stroke. Accordingly, so the tale runs, the Minister of the Interior in the National-Socialist State of Brunswick is to transform Herr Hitler into a German by appointing him Professor of Political Pedagogics at the Brunswick Technical University! We rather wonder whether Cinderella is altogether grateful to her Fairy Godmother; but there it is. Herr Hitler's position is the less eviable inasmuch as he finds himself not one of three candidates but one of four. The vote of the militant Right is to be split between the leader of the Nationalist-Socialists and the second-in-command of the *Stahlhelm* Organisation, Lieutenant-Colonel Dösterberg, who is the Hugenberg candidate. Herr Thälmann is to stand for the Communists, while President Hindenburg will have the support of the moderate Right as well as

the Centre and the Social-Democrats. The division in the ranks of the militant Right, together with President Hindenburg's personal prestige and popularity ought, on the face of things, to make Hindenburg's victory certain; yet we dare not be too confident, for in a country in which the stress and strain of life are as great as they are nowadays in Germany, anything may happen. We shall await with some anxiety the event of an election on which two other forthcoming European elections, one in Prussia and one in France, will largely turn. Meanwhile, we may note that the scene which occurred in the French Chamber of Deputies on Tuesday had its almost exact counterpart on the same day in the Reichstag, where the Nazi, Dr. Goebbels, was howled down by the Socialists and Communists for a libellous reference to President Hindenburg.

The Disarmament Conference: Chapter II.—On Wednesday, February 24th, the Disarmament Conference at Geneva concluded the first chapter of its work and entered upon the second. In the morning the preliminary statements of views by the representatives of fifty Governments were summed up by the President of the Conference, Mr Arthur Henderson. In the afternoon the General Committee of the Conference held a sitting, which was attended by Sir John Simon, M. Tardieu, Herr Nadolny and M. Litvinov among others. (Unfortunately, Signor Grandi was unable to be there in time.) The resourceful and indefatigable Dr. Benes was appointed to be the General Committee's rapporteur; not a bad appointment; for, although the country which Dr. Benes represents is definitely in one of the camps into which the states of Europe are now unhappily once more divided, Czechoslovakia is not simply a blind follower of France. She has a policy of her own which is moderate and constructive, and which is ably represented by a statesman who has taken an active and prominent part in all the international discussion on Disarmament and Security since the Peace Conference of Paris. At the same session of the General Committee Sir John Simon moved that the Draft Disarmament Convention should be used as the framework for the Committee's debate, without excluding from consideration any of the views that have been expressed during the last fortnight in the plenary meetings of the Conference. This proposal is a touchstone of the prevailing temper and intentions of the Governments represented; for, at the end of the final session of the Preparatory Commission, the Draft Convention was rejected by Germany and the U.S.S.R., while, at the beginning of the Conference itself, it was ignored by France in the Tardieu Memorandum. It is therefore satisfactory to know that Sir John Simon's motion was supported on Wednesday by Herr Nadolny, M. Litvinov and M. Tardieu. M. Tardieu entered the caveat that certain (unspecified but easily identified) articles in the Draft Convention were to be regarded as established and not subject to discussion. M. Litvinov asked that, before a decision was taken on Sir John Simon's proposal, the Soviet Government's proposal for total and complete disarmament should be put to the vote. It is reasonable that Soviet Russia should have this opportunity of formally "showing up the Capitalist Powers." On the other side, M. Litvinov has shown reasonableness in not refusing to participate in the General Committee's subsequent proceedings if—as seems a foregone conclusion—his own proposal is rejected. Meanwhile, many of the proposals that were made verbally during the general debate have been circulated as the Conference's memoranda. The United Kingdom memorandum suggests, as subjects for special study, the limitation of the number of effectives, the prohibition of mobile land-guns above a certain calibre, the abolition and prohibition of submarines, the reduction of the size of men-of-war and naval guns, and the problem of bombing from the air. The United Kingdom delegation also stresses the importance of abolishing chemical and bacteriological warfare and setting up a Permanent Disarmament Commission.

The Pound Sterling.—The behaviour of the sterling-dollar exchange during the past week has amply justified the action of the Bank of England authorities in reducing Bank rate last week from 6 to 5 per cent. So far

from the pound being adversely affected, the demand for sterling from many quarters has been a striking feature of the market, and there has been evidence of foreign purchases both of British Treasury bills and long-dated Government securities. In consequence, as we observe in our Money Market Notes, discount rates have weakened appreciably, and the fall has inspired talk of a further reduction of Bank rate. In view of the undesirability of encouraging an influx of "bad money" to London, we are of opinion that the advisability of a further reduction in Bank rate might well receive the authorities' consideration at no distant date; but a preliminary step, which is urgently required, is the removal of the Treasury restrictions on foreign exchange dealings, for whose continuance no shred of justification any longer exists. Their maintenance has been throughout an impediment to the adequate development of a free forward exchange market, and we believe that their abrogation would be welcomed to-day by all responsible sections of opinion in the City.

The Civil Estimates.—The Civil estimates and estimates for Revenue departments for 1932-33, which include pensions, education, insurance and other grants, and Exchequer contributions to local revenues, total £402,028,105 net, compared with an initial net estimate of £387,612,572 for 1931-32, raised by supplementary estimates and by the adjustments of the second Budget to £409,614,765. In order to make a fair comparison it is as well to consider those adjustments first. In presenting his second Budget of the year, Mr Snowden increased the estimates by £25 millions for Unemployment Insurance Fund borrowing and £9 millions for Road Fund borrowing, which were thenceforward to be incorporated in the Budget. For the full year 1932-33 these charges were reckoned at £60 millions and £10 millions respectively. Besides, £10 millions would have to be added to the original 1931 estimates for the extra cost of transitional benefit in 1932. These additions thus totalled £80 millions in a full year. The unemployment expenditure was calculated on a basis of a live register of 8 millions, whereas the actual figure has been more nearly 2½ millions recently. The economies which were in some measure to counter-balance those increases were reckoned at £25.8 millions for reduction of unemployment expenditure, £10 millions from increased contributions to the unemployment fund from employers and workmen, and £7,865,000 for reduced Road Fund expenditure. The net addition to the original 1931 estimates would thus have been £2,135,000 for Road Fund and £34,200,000 for unemployment. Now the actual estimates for 1932 show an increase of £2,750,000 for the Road Fund and of £19,592,000 for the Ministry of Labour vote. Assuming that the ordinary administrative expenses of the Ministry have been slightly reduced by the salary cuts, it appears that whereas the Road Fund saving has not been fully realised, the Chancellor has in respect of unemployment expenditure an advantage of about £15 millions over the estimates of his predecessor, largely, no doubt, thanks to the reduction in the live register. If we exclude those two items, the net estimates are as follows: 1931 original, £342,747,000; 1931 final, £344,049,000; 1932 original, £334,820,000. It will thus be seen that the economies, comparing the two original estimates, have amounted to £8 millions. This is rather disappointing. Apart from the items already mentioned, and the Defence services, the economies which Mr Snowden foreshadowed for 1932-33 totalled £17.7 millions, less than half of which has eventuated. The chief difference is in the Board of Education vote, which has been cut by only £5.5 millions instead of £10.3 millions—a matter concerning which we offer no complaint in view of the vital social importance of this service. Again, the Health votes were to be reduced by £1,250,000, whereas the estimates show a reduction of only £275,000; the projected cut of £580,000 in the Ministry of Agriculture vote becomes only £304,000, while the extravagant and wasteful burden of the beet sugar subsidy almost wipes that out with a rise of £250,000. The saving on police, on the other hand, is to be more than realised. The cost of the diplomatic and consular services is up by £179,000, that of widows',

orphans' and old age pensions by £2,544,000, while war pensions automatically decline by £2,817,000. Stationery and printing is to cost 134,000 more, and the Customs and Excise and Inland Revenue departments £1,061,000 more. The conclusion must be that large economies will have to be made in the defence services if the country's hopes of substantial relief from the present tax-burden are to be realised.

The New Zealand Exchange.—During the past eighteen months Australia's economic and financial problems have overshadowed those of New Zealand, but there is no doubt that the difficulties imposed by the world depression upon the latter Dominion are very real. The fall in world prices of primary products has hit New Zealand agriculturists very hard indeed, and the blow has only been partially mitigated by the limited depreciation of the New Zealand pound, which at present is quoted at £110 per £100 sterling. The depreciation of the Australian pound first to £130 and now to £125 has also conferred a competitive advantage upon Australia, though the foreign trade of both Dominions has naturally benefited during recent months from the fall in sterling itself. In these circumstances it is not surprising that a body of New Zealand opinion holds that not only should drastic reforms, based upon the Australian model, be carried out in New Zealand public finances and in the domain of fixed interest charges, but that the New Zealand exchange should be raised more into conformity with the Australian rate. On these points there is much to be said upon both sides. Dutch public opinion has resolutely refused to meet foreign competition with products of Holland and the Dutch East Indies by means of a deliberate depreciation of the florin, and now, in response to a request from the National Bank of New Zealand, Professor Gregory has cabled a guarded reply summarising the arguments against a deliberate policy of exchange depreciation. He rightly points out that such a policy would weaken New Zealand credit, render it more difficult for her to deal with maturing foreign debts, bring into being new problems of wages and prices, and encourage a false economic and business atmosphere. Furthermore, once such a policy is embarked upon, it becomes very difficult to restrain it within reasonable limits. On the other hand, there is nothing to be gained from maintaining a currency at an artificially high level, for as Australian experience showed just over a year ago, the only result is the growth of a "black" exchange market to the point which in the end forces the authorities to relax control and to allow the exchange to find its natural level. This probably is the right line for New Zealand to take. If any difficulty in obtaining foreign exchange arises or if there is any sign of the development of unofficial dealings, then her currency should at once be allowed to find its natural level; and if that accorded with the Australian exchange rate, one of New Zealand's difficulties would be removed.

Sterling and Gold Prices.—The past fortnight has witnessed a small, but welcome, rise in the level of world prices. As will be seen from the following table, the complete *Economist* index has risen by 2.1 per cent. since February 10th, while our index of gold prices has moved upwards by a little less than 1 per cent:—

SEPTEMBER 18TH, 1931 = 100.

Date.	Economic Indices.			Irving Fisher, U.S.A.	Statistique Générale France.	Milan Chamber of Commerce, Italy.	Statistische Reichsanstalt, Germany.
	Complete Index (sterling).	Primary Products (sterling).	Gold Prices.				
Sept. 30th ...	107.8	112.0	94.7	98.7	96.9	98.8	98.9

* See *Economist*, February 6, p. 292.

The indices of the price level in gold countries, which we reprint from the *Financial Times*, show a further fall in the American price level, but the downward movement in Germany has been temporarily checked, while in Italy an appreciable increase has taken place. So far as the British price level is concerned, movements during the past fortnight, with the exception of minerals, which have remained comparatively steady, have been generally in a slightly upward direction:—

"ECONOMIST" INDEX.

(1927 = 100.)

	Sept. 18, 1931.	Feb. 10, 1932.	Feb. 24, 1932.
Cereals and meat	64.5	70.3	72.3
Other foods	62.2	66.7	68.6
Textiles	43.7	52.5	53.7
Minerals	67.4	75.4	75.3
Miscellaneous	65.8	65.1	66.7
Complete Index ...	60.4	65.6	67.0
1913 = 100	83.1	90.3	92.2
1924 = 100	52.2	56.7	57.9

It will be noted that, as compared with the level of September 18th, textiles have made the biggest advance, while the miscellaneous group still shows the least signs of recovery.

British Production in 1931.—The downward movement in the industrial activity of the United Kingdom, which began early in 1930 and continued without interruption until the end of September last year, appears to have been reversed by the subsequent depreciation in the gold value of sterling. While, according to the index of production calculated by the Board of Trade, industrial activity in the past year was 9.3 per cent. lower than in 1930, and 16.2 per cent. smaller than in 1929, in the last quarter of 1931 the index rose from 89.3 (1924 = 100) to 96.8. The following table shows the comparative figures for the respective groups:—

INDEX OF PRODUCTION. (1924 = 100.)

Group.	Year 1929.	Year 1930.	Year 1931.	1931.	
				Sept. Quarter.	Dec. Quarter.
1. Mines and quarries	96.8	91.3	81.6	75.7	85.6
2. Iron and steel and manufac- tures thereof	114.0	88.8	65.9	61.0	71.6
3. Non-ferrous metals	120.5	119.1	100.1	96.7	97.4
4. Engineering and shipbuilding	121.0	116.0	94.9	89.2	89.0
5. Textiles	98.5	79.5	77.0	70.7	89.6
6. Chemical and allied trades...	115.8	102.2	94.4	90.9	92.8
7. Paper and printing	(a)	(a)	(a)	(a)	(a)
8. Leather and boots and shoes	98.5	101.4	99.3	95.4	101.3
9. Food, drink and tobacco ..	106.0	104.9	103.5	108.6	103.6
10. Gas and electricity	135.8	138.7	143.2	(b)	(b)
Total of manufacturing in- dustries (2-10)*	115.5	106.3	96.7	92.7	99.6
Total of all groups (1-10)* ..	111.8	103.3	93.7	89.3	96.8

* Including also various industries not specified above.

(a) Adequate information in respect of the paper and printing trades has not yet been available. The particulars received have been included in the general index.

(b) Complete information regarding gas production in 1931 is not yet available; a provisional estimate of the quantity made has been used for the calculation of the group index for the year 1931, but no information is available as to the quantities made in each quarter. The available data for electricity have been included in the general index numbers for the four quarters of 1930 and 1931.

A comparison of the past year with 1930 shows that the setback has been most pronounced in the branches of activity which are engaged in the manufacture of capital goods. Thus, the index for the iron and steel group shows a fall of 26 per cent., and the figure for engineering and shipbuilding one of 18.5 per cent. The output of coal was roughly 10 per cent. smaller than in the preceding year, and the absorption of non-ferrous metals decreased by 16 per cent. On the other hand, the index for food, drink and tobacco records a decrease of only 1.3 per cent. Activity in the textile trades fell by 3 per cent., and the output of boots and shoes was slightly smaller than in 1930. The gas and electricity producing industries are the only branches of activity which record an expansion in output during the past year. The index for the October-December period of 1931 shows a rise of 7.4 per cent. on the preceding quarter. The principal industries to benefit

from the depreciation of sterling were the textile and iron and steel and coal-mining industries. More recent information suggests that the improvement was short-lived, mainly because of the deepening of the depression abroad.

The North-West Frontier and Kashmir.—In one of the most deeply disturbed regions of India, two constitutional changes, both of which may have a sedative effect, were announced last week. One of these changes affects a British Indian province, the other an Indian State. In Delhi, on February 19th, the Government of India announced that the arrangements which have been put in force for bringing the North-West Frontier Province into line with the ordinary "Governors' Provinces" will be completed in April. The elections for the new North-West Frontier Province Legislative Council are to take place during the second week in April, and the Legislature is to meet a few days afterwards. Thus the North-West Frontier Province will be raised to the dyarchical status in time to move forward, with the other provinces of British India, to the status of full provincial responsibility when the new Indian Constitution is introduced. On the same day it was announced in Delhi that the changes that have just been made in the administration of Kashmir have been made entirely on the Kashmir Government's own initiative. As has been recorded in the *Economist*, the internal disturbances in Kashmir have twice lately compelled the State Government to call in British troops; and, since it is notorious that the cause of the disturbances has been flagrant misrule, these police measures have now been followed up by the more radical, but also more constructive, step of appointing an Englishman, Colonel Colvin, in place of a Hindu, as Prime Minister of this country in which the dynasty is Hindu but the population Mohammedan. This direct British intervention in the internal affairs of an Indian State has caused some perturbation among the Indian Princes, who dislike the prospect of this becoming a precedent. But the Princes are surely out in their calculations. They have nothing much to fear from the British, who are the retiring partners in the firm of the Indian Raj. The rising power, with which the Princes will have to reckon, is the power of the British Indian Démos. And it is assuredly in the collective interest of all the Indian Princes that every Indian State should have its house set in order before Démos is seated in the saddle in the provincial capitals and thereafter at Delhi. Otherwise they will be inviting future intervention from quarters whence intervention may come in a much more formidable guise. A Hindu Prince of Kashmir certainly cannot afford to leave his Muslim subjects ill-governed when two adjoining Muslim provinces of British India—the North-West Frontier Province and the Punjab—are on the eve of attaining local self-government for themselves.

Spain's "Budget of Deliverance."—Although comparatively immune from the effects of the international economic crisis, Spain is no exception to the rule of mounting expenditure which cannot be met by normal revenue. The first Budget of the Republic, which was introduced in the Cortes last Friday, reached larger dimensions than any previous Spanish Budget. This was due mainly to a laudable desire to clean up the whole financial position inherited from eight years of dictatorship. General Primo de Rivera, in his zeal for development and material progress, had launched an ambitious programme of public works which might indeed in fifteen or twenty years have repaid the capital expenditure, but which in the meantime plays ducks and drakes with the nation's finances. His amateurish counsellors had resorted to the time-dis-honoured expedient of a special budgetary section of "extraordinary expenditure." Señor Carner, the hard-headed Catalan business man who has succeeded the Socialist Señor Prieto as Minister of Finance, has made special provision for closing that account. Thus the official estimates of expenditure total 4,461,000,000 pesetas against a revenue of 4,550,000,000 pesetas, but of that sum only 3,931,000,000 pesetas is ordinary expenditure, the remainder representing the railway and cheap housing

funds and public works contracts outstanding. Señor Carner has called for departmental estimates to be cut to the bone and, in spite of grumblings and rumblings, has increased taxation on half a dozen counts; but, with the tax-yielding capacity of the Republic somewhat of an unknown quantity, he is taking no chances, and has announced an issue of Treasury bonds by way of internal loan to meet the "extraordinary" item of the account. He hopes to obtain 500,000,000 pesetas by this means. An interesting feature of his Budget speech was the frank admission that some of the early measures of the Republic, impregnated though they were with noble idealism, had had untoward financial consequences, and had in fact "produced a partial economic collapse and a fall in revenue." Very naturally, Spanish business circles continue to look askance at a Government with avowed Socialist intentions. Señor Lerroux, the Radical leader, left out of the present Governmental combination, evidently thinks that this diffidence of the business world can be turned to account by his party, which is the largest in the Cortes after the Socialists. In a magnificent speech to a mass meeting of some thirty thousand in the bull-ring at Madrid last Sunday he made his bid for support against the Socialists, urging particularly that the agrarian reform must not be rushed through at the expense of established agricultural interests. This is a strange rôle for the veteran revolutionary. One should perhaps remember that, though always a Republican, Señor Lerroux was a typical specimen of the old *políticos*, with his *caciques* and place-men in the provinces ready to support any programme that was considered expedient by their leader in Madrid. None of the other prominent men in the Republic belong to that "feudal" tradition of politics, and that is why they may justifiably lay claim to stand for "New Spain." Reductions are conspicuous in this "Budget of Deliverance," as Señor Carner called it, in the War Department and the Ecclesiastical Fund. The former is more than counter-balanced, however, by the increase in pensions, owing to the considerable sums due to the officers entitled to a "disarmament dole," i.e., who resigned their commissions voluntarily on full pay in accordance with the Azaña decree last May. Señor Carner struck a very modern note in suggesting that the very much-needed land register and cadastral survey might be undertaken by air.

The "Economist" and Hungary.—We published in our issue of February 6th an article entitled "Reality on the Danube," in which we pointed out the dangers, and the ultimate impossibility, of maintaining indefinitely in Central and Eastern Europe the present regime of extreme deflation and trade restriction. In the course of that article we wrote:—

At present, even the most discontented elements are constrained to ask themselves what purpose a revolution would serve. Nevertheless, inflammable material is rapidly accumulating which a spark might set ablaze. An unavoidable rise in the price of foodstuffs may compel the Governments to introduce requisitioning legislation and so cause a peasant rising; or the exasperation of starving workmen may lead to food riots and to marauding expeditions into peasant districts.

Criticism of our article, which has appeared in the *Pester Lloyd*, on the ground that our remarks were capable of affecting unfavourably Hungary's position, appears to be based on a misapprehension as to what we wrote. *Pester Lloyd* is of course, entitled to its own opinion—which is more hopeful than ours—regarding the ultimate results of the continuance of the present economic trend in the Danubian countries, but to exaggerate our warning into a suggestion that we heralded an imminent revolution "involving large masses of the Hungarian people" is unfair to us and damaging to Hungary. We did not suggest that the present unfortunate condition of Austria and Hungary was due to any mismanagement by their particular Governments, but we did still do believe that everything is to be gained by facing the grim facts and that, to the great advantage of Hungary, her neighbours and the world, "out of the wreck of an unsound, unreal political structure a saner Central and South-Eastern European economy may emerge."

Scottish Temperance and General.—This assurance company's report bears evidence of the difficulties of the year recently concluded. Although the company has achieved the creditable result of an increased volume of new business (the figure has grown from £1,122,000 to £1,187,000), the premium income has slightly declined. This is due partly to an actual increase in the amount paid out under claims, but also, no doubt, to the effect of an abnormal total of lapses of policies. The gross interest income, although greater than in 1930, shows a smaller increase than is customary, and the increase is more than offset by the provision for income tax at the higher standard rate. The result is that the net rate of interest earned has declined from £4 16s. 6d. per cent. to £4 11s. 2d. per cent. Expenses are somewhat higher, and the ratio of expenses and commission combined to premium income has risen from 14.0 per cent. to 14.8 per cent. But the main interest of the report, as will be the case of all financial institutions, is centred on the balance sheet. The amount invested in mortgages, British Government securities, and foreign Government securities all show a decrease on those in the preceding balance sheet, and the largest increase is shown by the investment in the company's subsidiary, Holding Trust, Limited. This company was created some years ago when the Scottish Temperance mutualised itself by the purchase of its own share capital. This capital was thereupon transferred to Holding Trust, Limited, created for the purpose, and the Scottish Temperance holds all the ordinary shares, amounting to £45,000. In addition to this investment in the ordinary shares, which itself shows an increase on that of 1930, a loan to the company standing in the 1930 balance sheet at £139,000 has been increased to £237,000. As this is the largest single investment possessed by the company, it seems very desirable that some explanation should be given as to the purpose for which this large loan is required. The company's last quinquennial valuation was made as on December 31, 1927, and the Stock Exchange securities are retained at the book value then placed upon them, such purchases being entered at cost. The auditors' certificate to this balance sheet is given subject to the depreciation on the Stock Exchange securities, so that it would appear that the hidden reserve hitherto existing in the book values has been wiped out and has been replaced by uncovered depreciation, which will fall to be dealt with at the end of this year, when the next quinquennial valuation falls due.

Pearl Assurance.—The Pearl entered on the year 1931 with an investment reserve fund of £950,000 and assets of £64 millions. Of the assets, an unusually large proportion—some 85 per cent.—was invested in Stock Exchange securities, including over £23 millions in British Government securities, £2½ millions in foreign Government securities, and £2½ millions in ordinary shares. Inevitably, therefore, the company must have suffered a very large depreciation in the year, to meet which the disclosed investment reserves were wholly inadequate. In order to deal with the situation, and at the same time to permit a distribution of bonus (albeit at the reduced rate of 36s. per cent., compared with the normal rate of 46s. per cent.), the company has relaxed somewhat the basis of actuarial valuation both in the ordinary branch and in the industrial branch. In the ordinary branch the rate of interest assumed is now 3½ per cent., compared with 3 per cent., and in the industrial branch 2½ per cent., compared with 2½ per cent., and in both branches a different table of mortality has been employed. Out of the greatly increased surplus shown as a result of these valuations, £4½ millions has been added to investment reserve. The investments in the balance sheet are retained at their book values, which are certified to be fully of the value stated, less the augmented reserve fund of £5,450,000, and it will be interesting to observe if the chairman is able to say that there is still a hidden reserve existing in the book values, apart from the investment reserve fund. The detailed valuation results of the last three years in both branches are shown in the table following.

Ordinary Branch—	1929.	1930.	1931.
Surplus earned during year	980,508	1,105,580	3,262,891
Brought forward from previous year	113,113	76,355	85,956
	1,093,621	1,181,935	3,348,847
Allocations:—			
To Policyholders' bonus	684,132	736,013	590,828
„ Shareholders' account	171,033	183,692	147,707
„ Investment reserve fund	135,196	150,000	2,250,000
„ Staff pension fund	26,905	26,274	25,804
„ Carry forward to next year	76,355	85,956	334,508
	1,093,621	1,181,935	3,348,847
Industrial Branch—			
Surplus earned during year	1,004,895	1,208,679	3,373,692
Brought forward from previous year	96,959	117,284	144,387
	1,101,854	1,325,963	3,518,079
Allocations:—			
To Policyholders' bonus	506,671	553,850	427,720
„ Shareholders' account	340,000	360,000	360,000
„ Investment reserve fund	64,804	200,000	2,250,000
„ Staff pension fund	73,095	73,726	74,196
„ Carry forward to next year	117,284	138,387	400,163
	1,101,854	1,325,963	3,518,079

The rate of reversionary bonus in the ordinary branch is, as already stated, 36s. per cent. on the sums assured, and the allocation under the profit-sharing scheme to the industrial branch policyholders is also on a reduced scale. It may, however, be noted that the surplus shown was fully sufficient to permit of bonuses on the normal scale had conditions warranted such a course. With regard to the new life assurance business, the volume of new business in the industrial branch has been extraordinarily well maintained, the number of new policies issued showing a slight increase, and the sums assured a small decrease from £19,980,000 to £19,800,000. In the ordinary branch, however, there has been a substantial drop in sums assured under new policies from £10,377,000 to £8,022,000. The falling off in new business has enabled the company to show a reduced expense ratio, the figure in the ordinary branch being 10.2 per cent., compared with 10.8 per cent., and that in the industrial branch 32 per cent., compared with 32.9 per cent. In spite of the higher rate of income tax, the net interest income has been well maintained, and the combined rate of interest earned has arisen from £4 14s. 4d. per cent. to £4 15s. 6d. per cent. The fire and accident branches show in all departments a steady increase in premium income, and the total now amounts to £718,000, in respect of which the net trading surplus, including interest income, worked out at £47,000. The fact that the company has weathered the financial crisis with so little disturbance is a great tribute to its management and to its internal reserves of strength; and the report holds out the expectation, given no further deterioration in the economic situation, of a return to the former rates of bonus. The dividend for 1931 is 47½ per cent. tax free, compared with 50 per cent. tax free, and at the present price of £10½ the yield on the dividend is £5 18s. per cent. gross.

Transvaal Gold Output in January.—The output of gold of the mines of the Transvaal during January amounted to 936,784 ounces of fine gold, comparing with 923,853 ounces produced during December and 914,576 ounces produced in January, 1931. In the following table we show the monthly output since the beginning of 1926:—

Month of	1926.	1927.	1928.	1929.	1930.	1931.	1932.
	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.
January	796,270	833,782	843,857	876,452	882,801	914,576	936,784

The following table shows the number of natives employed at the mines during the past nine months:—

	May, 1931.	June, 1931.	July, 1931.	Aug., 1931.	Sept., 1931.	Oct., 1931.	Nov., 1931.	Dec., 1931.	Jan., 1932.
Gold mines	207,109	207,209	208,155	209,409	209,424	208,987	209,270	211,552	215,752
Coal mines	13,305	13,286	13,512	13,563	13,276	13,061	12,882	12,260	12,394
Diamond mines	3,689	3,345	1,817	1,705	1,626	1,517	1,429	1,402	1,598
	224,103	223,840	223,484	224,677	224,326	223,565	223,581	225,214	229,744

The number of natives employed in all branches of mining showed an increase on the December figures.

Overseas Correspondence.

LEAGUE OF NATIONS.

Disarmament — Sino-Japanese Situation.

(FROM OUR CORRESPONDENT.)

GENEVA, February 23.

THE Disarmament Conference is under the dark shadow of the disastrous events in the Far East, and of the abdication of Great Britain and the other Powers on the Council. Meanwhile, the German proposals show what was foreshadowed in this correspondence several weeks ago: that their claim for equality of conditions is not confined only to land forces. The proposals are virtually the application of Versailles Treaty principles to all Powers, with some additions, such as the abolition of naval fortresses like Gibraltar, but the maintenance of fortresses such as those which the Germans require in the Kiel Canal. It is difficult to escape the logical conclusion that if Germany is to be held to her Treaty conditions on armaments, she can play no useful part in the Conference, and may as well go home.

The impression here is that the actual German proposals savoured rather more of auctioneering than of real business; that has been a fairly universal tendency so far. However, all the suggestions that the delegations have made are being collected and sifted. The General Committee, composed of the heads of all delegations, will first enter upon a general discussion which is expected to last until March 19th, when the Conference will adjourn for two weeks. It will be for the General Committee to set up when necessary such committees as seem essential for the work, and these committees will report to the General Committee.

In the meantime, the Japanese Government's reply to the Note sent early last week by the twelve members of the Council is awaited with limited interest only. The general tenor of the reply has already been given from Tokyo, but the feeling is that it now makes little or no difference either way. There is no particular sense of relief that Japan is not withdrawing from the League. Her withdrawal would cause no further alarm, and if Japan completely outlawed herself in this way, regrets would not be very profound. It would be a different story if China withdrew as a protest against the proved futility of having placed confidence in the Council. Perhaps Japan realises that she may still be glad to turn to the League. Her situation is regarded as precarious. There are signs that some sections of Japanese opinion are becoming anxious about the tremendous undertaking upon which Japan has embarked, and the view is growing that Japan may be preparing her own destruction. The danger is that the destruction may not be confined to herself. People here are asking whether it will be possible for the members of the League ultimately to escape their responsibilities in the matter. There will have to be a Council or Assembly decision some time on the merits of the case; they cannot shirk it indefinitely. Article 15 calls for a decision of the Council either with or without the parties, and however long the Assembly and Council may take passing the ball to each other and avoiding responsibilities, there must be a limit. Whether or not it is right or prudent to withdraw ambassadors or to enforce an economic blockade, it has yet to be claimed that Article 15 does not call for

UNITED STATES.

Bank Legislation — Industry — Prices.

(FROM OUR CORRESPONDENT.)

NEW YORK, February 16.

THE security markets have gone much further than bankers and others in concluding that the effect of Reconstruction Finance Corporation activities, supplemented by the credit-liberalising proposals of the Glass-Steagall Bill, will bring some inflation. It is difficult to see how the latest suggestion of political Washington, which this time has the united support of the banking community, to stop the forces of bank deflation, will produce actual inflation in currency in circulation, in commodity prices or in security prices.

The new measure, which is certain of Congressional and executive approval, should not be confused with the much-discussed Glass Bill amending the Federal Reserve Act. That Bill, most of whose provisions were highly objectionable to Wall Street as being deflationary, has gone back to Committee for revision, and may be held up indefinitely. The new measure, bearing Senator Glass's approval, is in letter and spirit the opposite of the other Bill. Moreover, it is an emergency measure, drawn to run for only a year, whereas the other Bill was designed as a permanent change in the central banking legislation.

The new Bill makes changes in the Reserve Bank Act which should have been made long ago. The principal section is the one allowing the substitution of Government securities as currency backing instead of the commercial paper hitherto so used. Owing to the depression in business and the change in commercial financing whereby commercial paper has grown scarcer, the law as now in effect has worked so as to make actual gold backing for Federal Reserve currency notes far greater than the 40 per cent. required. The free gold has fallen to about \$460 millions, but it is estimated that substitution of Government bonds for the full 60 per cent. backing would release over \$1,000 millions further for export or other purposes.

When the Federal Reserve banks were established, large and medium sized borrowers of bank credit were originators of commercial paper. This paper was bought by banks and, like acceptances, was rediscounted on occasion at the Reserve banks, which used it as backing for the 60 per cent. paper cover for note issues. Commercial paper to-day has been largely displaced by bank borrowing on United States Government bonds, notes or bills or other high-grade securities. About half the Federal Reserve Bank loans to member banks are secured by United States Government securities. Commercial paper in its diminished volume is tightly held by the large banks in big cities. They virtually have a corner on it and country banks have very little. Consequently the small institutions are unable to borrow at the Reserve, and the new banking Act opens the door for them. When they can borrow on their investments they will no longer be obliged to sell them, and thus it is hoped that the pressure on the bond market will be greatly relieved.

Proper safeguards are included in the new Bill, so that there is little danger of currency inflation or of excessive expansion of credit. It is realised that the currency in actual circulation is unlikely to rise and the demand for credit likely to increase until business activity grows. However, the loans of the Reconstruction Corporation combined with the Reserve Bank measure ought to put a brake on security deflation and remove some of the unfounded nervousness as to this country's retention of the gold standard.

If the security markets, especially the share market, which in a few days has risen between 20 and 25 per cent., have anticipated slackening of bank credit and investment deflation, the banks have not yet changed their course. The member bank statement for the week of February 10th shows a further reduction of \$70 millions in loans on securities and of \$44 millions in other loans. Banks sold \$80 millions in United States Government and \$8 millions in other securities, while their deposits dropped \$161 millions. Brokers' loans as

some sort of decision. While a considerable section of the English Press is hypocritically supporting the Japanese cause as an excuse for avoiding any possible action under Article 16, and while no single Government has yet uttered a word of disapproval of Japan, the League is fairly and squarely faced with Article 15.

The distressing fact is that it was only when Shanghai was threatened that some responsible sections of English opinion, and the Government itself, acknowledged that the situation was alarming. Manchuria, which all the time remains the centre of the problem, is almost forgotten; even the Japanese have ceased recording the vagaries of bandits. No word of reprobation was uttered during Friday's meeting of the Council, the most dramatic meeting in the annals of the League; Lord Londonderry, in fact, as British representative, went out of his way to water down the Note sent to Japan by the twelve members of the Council by explaining that it was nothing but a polite request.

Has any diplomatic body of Government representatives ever before been asked publicly and in such dramatic circumstances: "Well, gentlemen, what are you going to do about it?" It was a last despairing appeal from China before being left alone to face outrage and slaughter, every international treaty and every international obligation of others to protect her having been stripped away. The duel between Mr Sato and Dr. Yen was enthralling. Against the cold exposition of Mr Sato was the restrained passion of Dr. Yen, whose moral ascendancy throughout these proceedings has been triumphant. Let it be said, however, that the defence made by Mr Sato, frigid and relentless though it was, came as a welcome relief after the humbug to which Japan had hitherto treated the world. On Friday there was no nonsense about observing the Covenant and other treaties, or about chasing bandits in Manchuria; it was the nearest approach to a naked confession of Japanese policy that we have yet had, only to be mercilessly riddled by Dr. Yen. Mr Sato definitely said that Japan "would have been able to respect the Covenant" if China had been under an organised Government, but that it was in a state of complete anarchy and disorder, and Japan could not look to the League for protection. As to Manchuria, he frankly confessed that Japan supported and approved an autonomous Government, but in no circumstances would Japan accept any regime which she did not consider capable of protecting Japanese interests. Japan, he said, was determined to have a field of operations in Manchuria; her emigrants had been excluded from America, Africa and the South Seas, and she was compelled to maintain her hold in Manchuria. Many wondered whether this was a justification or a threat, since experience has proved—and Japan knows—that Manchuria is no field for Japanese emigrants.

Japan, continued Mr Sato, was only doing what other Powers had done in China, and the League had never tried to stop them. What had the League done when Russian annexed Outer Mongolia? If the League accused Japan on account of operations in Manchuria, she would protest. Dr. Yen roundly accused Japan of having, as a definite policy, encouraged and subsidised civil war and disorder in Manchuria and China, of having murdered Marshal Chang Tso Lin for refusing to make concessions he had at first promised Japan, and he asked why, if Japan considered China had no responsible Government, she had all along insisted upon direct negotiations with it. He proclaimed China's unanimous resistance to Japanese aggression, and then turned the tables on Japan. Did it point to a well-organised State, he asked, when its army and navy ran amok; when Japanese diplomats made promises which were broken; when pogroms were organised against Chinese in Korea? Japan had repeatedly declared that she had no territorial designs in Manchuria; had she not said the same thing some years ago about Korea? No other Powers had acted as Japan was acting, and as for the annexation of Outer Mongolia, this happened before the League was created.

Then came the Council's last-minute appeal to Japan to prolong the armistice. Everyone knew it must be fruitless. There were three hours to run before the ultimatum expired. Fighting began as scheduled.

reported by the Federal Reserve Board for New York have fallen to a new low record figure below half a million dollars. Federal Reserve credit in use also has decreased, the week's reduction amounting to \$31 millions. Last week money in circulation dropped \$5 millions, but it was \$1,032 millions larger than a year ago. President Hoover to-day stated publicly that the hoarding tide had turned and that he was informed the week had brought a return of \$34 millions in currency to the banks, but bankers see little evidence of it yet.

Gold exports continue, but there is a good deal of offset in release from earmark and in imports. For the first half of the month exports were \$105.5 millions and imports were \$45 millions, with a net release from earmark of \$30 millions, bringing the net loss in gold to \$30.5 millions. France has now taken more than \$130 millions of earmarked gold, having added some to the segregated metal while exports were going on. French, Swiss and Dutch currencies are now above the gold point, but there is little concern here over further loss of gold.

Trade statistics are not encouraging, and the better tone of markets is obviously in anticipation of some seasonal expansion later. Foreign trade for January fell further, exports of \$150 millions being the smallest for that month since 1910, the lowest for any month since August, 1914, and 40 per cent. lower than a year ago. Imports of \$136 millions were the smallest since the war, and the export excess of only \$14 millions compares with \$66 millions in January of last year.

Cotton consumption in January rose moderately over December, but the 435,337 bales compare with 450,117 in January, 1931. Cotton exports were 919,338 bales, against 1,181,000 in the previous month and 532,821 last year. The steel trade is making no progress and is having difficulty in maintaining prices. Railroad traffic also is barely holding steady. Motor production in January was up only about 2 per cent., according to the estimates of the National Automobile Chamber of Commerce, against a normal rise of 66 per cent. for the month. However, with the announcement by Ford of a new eight cylinder model it is expected that the industry will improve considerably, plans having been held in abeyance pending the Ford announcement.

FRANCE.

Politics — Government Finances — Gold.

(FROM OUR CORRESPONDENT.)

PARIS, February 24.

THE Ministerial crisis due to M. Laval's defeat in the Senate received on Saturday night the solution which all ordinary observers predicted as inevitable from the moment the result of the Senate's unexpected vote was known. M. Painlevé, who accepted the task of forming a new Ministry, failed to induce the Radical minority in the Chamber not to insist on the Ministry for the Interior as the price of their adhesion to what, it was hoped in some quarters, might be a more broadly national Government, and abruptly threw up the effort on Friday night. M. Tardieu, who by common consent was the first favourite of the majority in the Chamber, was eventually sent for, and shortly after midnight on Saturday he was able to present his third Cabinet to the President, who immediately endorsed the new Premier's nominations. M. Tardieu, with characteristic decision, stated categorically on Sunday morning that the new Ministry would appear before the Chamber on Tuesday, and that the same evening he would return to Geneva and resume his place as the head of the French delegation at the Disarmament Conference. The Cabinet's declaration of policy was endorsed by the Chamber by a majority of 47, and the Premier accordingly left for Geneva.

The new Government, although appreciably reduced in number, may be regarded as an approximate replica of its predecessors. M. Tardieu himself, like several previous Premiers, has taken charge of the Foreign Office; M. Flandin remains at the Finance Ministry; M. Paul

Reynaud, a former Finance Minister, has been promoted from the Colonial Office to the Vice-Presidency of the Ministerial Council and the Ministry for Justice; M. Laval, who is admittedly in need of repose after an exceptionally strenuous year as Premier, has returned to his old post at the Ministry for Labour. The most striking feature of the new Ministry is that the individual posts of Ministers for War, Navy and Aviation have been suppressed, and these three departments united under the direction of a Minister for National Defence, to which M. Piétri (hitherto Minister for the Budget) has been appointed, with MM. Fould and Riché, who formerly held Ministerial portfolios, as Under-Secretaries. The post of Home Secretary is filled by M. Mahieu, a senator from the North, who has never previously held a portfolio. The appointment is regarded as intended to placate the Upper House, as M. Mahieu is recognised as by no means a virulent party man, and as one under whose charge the Government's large secret funds—always a much-coveted instrument at election times—will be fairly and wisely administered. M. Mahieu has figured prominently as an expert on railway finance, and is the author of a very important recent report on which the official plans for replacing the lines on a sound financial basis are understood to be in course of being worked out.

The new Ministry's declaration of policy confirms the forecast made here last week that the foreign policy of the new Cabinet will be a facsimile of that of its predecessor in every respect. The text includes an especially marked reference to Anglo-French co-operation at Lausanne, and states candidly that "the whole of France aspires towards a general entente with that noble country. Both desiring peace based on right, France and Great Britain constitute, when they are in agreement, the strongest security for each other, and this dictates their duty."

The fate of the Budget still remains doubtful. The Government has decided henceforth to devote the whole of the Chamber's time to the measure, but it is evident that the question, whether the Bill can pass both Houses before the close of the session, will depend largely on whether the Opposition will consent to co-operate. The general elections must take place before the end of May, and it is fairly clear that, for several reasons, the Government will endeavour to postpone the close of the session as late as possible. Among these reasons are: (1) The urgent need to dispose of the Budget and avoid the costly and complicated resort to *douzièmes provisoires*; (2) the tactical advantage, in view of the Disarmament Conference strategy, that the French elections should follow and not precede the elections for the Prussian Landtag. On the other hand, Deputies who are seeking re-election (and particularly the Radicals and Socialists) are desperately anxious to get to their constituencies, where their opponents in the coming contest are already hard at work. The whole situation suggests the probability of ruthless obstruction on the part of the Opposition, with a view to forcing an early dissolution, which may largely militate against the passage of the Budget—which the Socialist Party, in accordance with their established practice, will not under any circumstances assist in voting. The fate of M. Mandel's unhappy Electoral Reform Bill, which contributed so largely to bringing about the recent Ministerial crisis, is apparently sealed. The Senate is practically certain to reject the clauses approved by the Chamber for women's suffrage, the suppression of second ballots, and compulsory voting, and in present circumstances it is almost certain that the Government, in such a case, would refuse to assume the risk of embittering the present latent conflict between the two Houses by insisting that the wish of the popular Chamber shall prevail. It is probable that all that will again be heard of the Bill will be in the form of endorsement by the Senate of that part of it providing for the customary redistribution of the constituencies in preparation for the pending contest.

Attention is being called to the present situation of the Treasury. Last week's Bank of France statement showed that the Treasury balance on current account amounted to only a small sum, as compared with several thousand millions a year or two ago. Such a situation, however, which a few years ago would have excited some anxiety,

leaves public opinion entirely calm now that the security of the franc is no longer in question, and in view of the fact that the Treasury has other resources besides its current account. Recovery of sufficient taxation to right the situation can scarcely be expected for some months, as in this respect the Treasury is likely to be comparatively low water for some time. Owing to the general economic crisis, taxation—particularly direct taxes—is now coming in much more slowly. Relief has already come from the Government Postal, Telegraph and Telephone Department, to which the Treasury last December made advances of 2,639,000,000 francs, and further repayments will be made shortly by the railways, of which the State lines alone are debtors to the extent of over 1,440,000,000 francs. The P.T.T. 4½ per cent. loan of 2,600 millions, which was issued early last week (ostensibly for departmental development works, but really to reimburse the Treasury for loans already devoted to such purposes), was entirely taken up within three days of the opening of the lists. Large-scale bond issues by all the railways, each company making itself responsible for a substantial amount, have in some cases actually begun, and the remainder will follow within the next few days. The Treasury, therefore, should very shortly be again in possession of ample liquid resources.

Taxation, as already indicated, is now coming in with exceptional slowness. Total recoveries from all "normal and permanent" General Budget sources during January were only 3,546,000,000 francs, as compared with 4,240,000,000 francs in January last year, and 4,420,000,000 francs at the beginning of 1930. The total yield was 520,832,000 francs below Budget estimates, representing the largest deficit for some years past. With the exception of the yield from colonial foodstuffs, every category of indirect taxation and State monopolies was appreciably lower than a year ago. The return from turnover taxes (which in this case covered Christmas trade) was over 16 per cent. less, and that from taxes on securities 20 per cent. down. Customs, latterly the milch cow of the list, produced over 98,000,000 francs less than a year ago, since when a large number of the schedules have been revised upwards.

M. Caillaux, in an article published to-day, discusses the possibility of finding a means of staying the deluge of gold which is flowing into France, and confesses that the question baffles him. A reduction of the Bank rate, he points out, would not necessarily tend to cause capital to seek better employment abroad, but would—by compelling the other banks to follow a similar course—result in funds now in the form of current accounts being transferred to the savings banks, and thus, by their withdrawal from trade and industrial uses, only aggravate the present crisis. But the other suggested remedy—subscription to foreign loans—is now practically impossible of application "because the French small capitalists, who hold 90 per cent. of the wealth of France, have still too keen a recollection of the disappointments they have suffered during recent years in this connection."

GERMANY.

Reorganisation of Banks — Presidential Election.

(FROM OUR CORRESPONDENT.)

BERLIN, February 23.

THE Reichstag was summoned for February 23rd, and the Government had given itself and the banks until the 22nd to complete their reorganised balance sheets, so that the programme of reorganisation should be complete when the Reichstag met. The negotiations have been conducted during the last few weeks with the greatest industry and discretion, and their result is a complete rationalisation of the balance-sheet position of the big banks. It also involves, however, a further penetration by the State into the sphere of banking.

The scheme, which was made public yesterday, leaves only one large private bank, the Deutsche Bank and Diskontogesellschaft, and even that bank is to hand over temporarily about 50 million shares to the Golddiskont-

bank, which means, in effect, to the Reichsbank. The Darmstädter Bank is to disappear, absorbed by the Dresdner Bank without leaving so much as a trace of its name. The most surprising arrangement is the transfer of an overwhelming majority of the shares of the Commerz-und-Privatbank to the Golddiskontbank. This brings the Commerz-und-Privatbank, which itself is taking over the Barmer Bankverein, under the control of the Reichsbank. Finally, the Allgemeine Deutsche Credit-Anstalt of Leipzig, which amalgamated some months ago with the Saxon State Bank, is now to be provided with fresh funds by the Reich.

So gigantic a process of rationalisation both in form and in method is utterly without precedent. Whether it was necessary and desirable to undertake it at this moment and in this form is open to doubt. It depends whether no further heavy losses on the top of those which have already been sustained are still to be feared, or whether an economic recovery might be anticipated within measurable distance of time, which would have made possible a less drastic reorganisation with less intervention by the State. The Government and the Reichsbank did not take this view. The Reichsbank has offered much more substantial assistance than it did last summer, and that in itself is a very sound proceeding. The crisis has brought the Reichsbank very large profits, which must have amounted to between 150 and 200 millions in the past year, and it is improbable that these profits will be very much less during the next five years. The Reich has a claim on the major part of these profits, partly in the form of a tax on excess note circulation and partly in the form of a percentage share in the profits. The obvious course is for the Reichsbank to make these emergency profits available for the restoration of economic activity. That could, of course, have been done by different means from those which are being adopted: the Reichsbank might have taken over the shares of all the big banks. As it does not wish to do this itself, it is increasing the capital of the Golddiskontbank from 200 million Reichsmarks to 400 million Reichsmarks, thereby enabling it to acquire the shares.

Details of the reconstruction of the individual banks are as follows:—

Deutsche Bank und Diskontogesellschaft.—A loss of Rm. 275 millions is written off, following a writing-off of 125 millions out of hidden reserves in the two preceding years. The bank believes that this will cover not only the losses already sustained, but also all the risks which can be anticipated. Of these 275 millions, 240 millions are to come from "debtors" and 35 millions out of investments and participations. The bank is covering these reductions in the book value of its assets entirely out of its own resources, without outside help. Rm. 145.6 millions are taken from reserves, 23.2 millions from the 1931 profits and 108 millions are derived from reduction of capital. Of the original capital of 285 millions, 85 millions were already in the bank's own possession at the end of 1930, and in 1931 a further 70 millions were acquired. Only 180 millions, therefore, are still held by the public. These are reduced to 72 millions by being written down to 40 per cent. of their par value, and the reserves are at the same time written down from 160 millions to 18 millions. New shares to the value of Rm. 72 millions are being issued at 115, and 22 millions of these were taken up in two days by friends and customers of the bank. The rest are being taken over for the time being by the Golddiskontbank, but they are to be sold as soon as possible. This will leave the D.D. Bank with a share capital of 144 millions and reserves of 25.2 millions.

The Danatbank-Dresdner Bank.—Only an amalgamated balance sheet is published, and the fusion is retrospective as from January 1, 1931. The two banks together have undergone losses of about 430 millions, of which about 200 millions were those of the Danatbank. The Reich has taken over 100 millions of the losses, and 321.5 millions are being written off out of the profits of the preceding year. These 321.5 millions are being covered as follows:—The Danat Bank formerly had 60 millions share capital and 60 millions open reserve. Of the shares, 35 millions were held by the bank itself, and were to be handed over

to industry; the reserves have been entirely lost. The remaining 25 millions of capital are being written down to 7½ millions, and the reduced share will be exchanged for Dresdner Bank shares in the proportion of 1 to 1. Of the original 100 millions capital of the Dresdner Bank, 34 millions were in the possession of the bank and have been cancelled, and the rest, like those of the Danatbank, have been written down in the proportion of 10 to 3. As, however, some of these shares are held by the Reich, which has relinquished them without compensation, only 12½ millions of the total ordinary share capital are left. Further the Dresdner Bank had issued 300 million preference shares to the Reich last June, and these are being written down to 200 millions, so that the total capital will amount to 220 millions with open reserves of 30 millions, also subsidised by the Reich. In addition, the bank is receiving from the Reich 60 millions in the form of credits and a guarantee fund.

The Commerz und Privatbank.—The total losses were 107 millions. The bank formerly had 40½ millions open reserves, which were used to cover part of the losses, and 75 millions share capital. Of this 37.2 million shares were held by the bank, and these are being sold at par to the Reich. The shares are to be written down in the proportion of 10 to 3, which shows a book profit of 52.5 millions. The Golddiskontbank is taking 45 million new shares at 115, and 12½ million new shares are being issued in exchange for the capital of the Barmer Bankverein, which is absorbed by the "Compri." The capital of the Commerzbank will thus amount to 80 millions, and there will also be 30 millions open reserves, provided by the Reich.

The Allgemeine Deutsche Credit-Anstalt (Adca).—The losses were 25 millions, covered by 11 millions open reserve, a book profit of 12 millions on reduction of capital, and profits of 2 millions. The capital of the bank was formerly 40 millions, but 22 millions have been recently held by the bank itself. These are to be cancelled and the rest of the capital reduced in the proportion of 3 to 1 to 6 millions. The capital is then to be increased to 19 millions and the new shares taken over by the Golddiskontbank. The Reich is to provide 6 millions reserve.

The following table shows the capitalisation of the German banks after reorganisation:—

	(Million Marks.)			
	D.D. Bank.	Dresdner.	Commerz.	Adca.
Share capital:				
Held by public.....	94	22	23.8	6
Reich.....	0	150	11.2	...
Golddiskontbank 50.		48	45	13
Creditors:				
Total	2,993	2,744	1,047	229
Foreign	686	770	280	*

* Not known.

The new Dresdner Bank will thus have the largest capital, but the D.D. Bank still leads in respect of deposits. The Commerz-bank follows very long after. Thanks to the help of the Reich its position is particularly liquid. Two large Berlin banks, which have no branches, succeeded in writing off last year's losses without cancelling any of their capital or open reserves, and are not included in the table. These are the Reichscreditgesellschaft, which is owned by the Reich, and the purely private Berliner Handelsgesellschaft. Both banks are distributing a 4 per cent. dividend for 1931 and have maintained their capital intact.

On July 13th last the Reich undertook a guarantee for all the obligations of the Danatbank. This guarantee is terminated, so far as domestic creditors are concerned, by the completion of the fusion. The new Dresdner Bank is sufficiently strong to command the confidence of its creditors without a formal Government guarantee, but any domestic creditors who consider their interests to be damaged by its termination are at liberty to withdraw their deposits at any time. As this cannot be applied to foreign creditors, owing to the standstill agreement, the Reich guarantee still holds good for the time being as far as they are concerned. Foreign credits amount to Rm. 380 millions, and negotiations are to be opened later for the withdrawal of the Government guarantee in

respect of them. The reorganisation which the German banks have just completed is an achievement which commands respect. Germany has been the first country in the world to purge her banking system of the effects of the crisis and set it in order. Every single asset of the banks has been carefully examined, every loss has been written off, and every imaginable contingency provided for by reserves. The sense of responsibility which has led the German banks to undertake this rationalisation in the midst of the crisis must strengthen their credit, and the eradication of their losses must increase their activity. Even if doubts arise as a matter of principle, in respect of this extensive encroachment of the State in the sphere of banking, these impulses to an unfavourable judgment are eclipsed by the vastness of the reorganisation itself. The effectiveness of the German banks has been restored.

The Radicals of the Right will not be able to conduct a united campaign against President von Hindenburg. Herr Hitler is standing for the National-Socialists and Herr Dusterberg for the German Nationalists. This has further diminished the prospects of the Right, for they have shown how little cohesion there is in their ranks, and this impression will not be erased even if there should be a second ballot, at which the "Harzburg front" was restored. The candidature of Dusterberg is just as pointless as that of the Communist Thälmann. The election will be a duel between Hindenburg and Hitler, between the conservative-minded leader of the German people who is endeavouring to construct a bridge between the past and the present, and who is now finding support from all parties, from Conservatives to the Social-Democrats, for the protection of the Constitution and for a policy of security, and the active counter-revolutionary who seeks to take advantage of a time of confusion and distress to establish a Fascist dictatorship in Germany. That is how this struggle will appear to the German people. It will appeal to men's imaginations more than any previous election, and will call for a more important verdict. The National-Socialists have shown, by the candidature of their leader, that they appreciate the vital importance to themselves of victory. If they are beaten, the prestige of their earlier victories will be destroyed, and the illusion that they are advancing from victory to victory will be shattered. Dr. Brüning and the parties which support him have secured a great tactical success in forcing the National-Socialists to a decisive trial of strength in circumstances which are peculiarly unfavourable for them.

AUSTRIA.

Import Prohibitions — Stock Exchange — Prices — Credit-Anstalt — Trade.

(FROM OUR CORRESPONDENT.)

VIENNA, February 22.

THE question of issuing import prohibitions will shortly be under discussion in Austria. It is not yet known what articles will be affected, nor is it decided whether strict prohibition of importation should be resorted to, or whether the importation of essential goods should depend upon application for permission to be made beforehand. It is certain that some difficulties will arise under the terms of various commercial treaties; but Austria must defend herself. The latest bank report shows a further diminution of the holdings of foreign exchange, while the metal cover has sunk below 180 million schillings. Austria must procure foreign credit, or it must take measures at home for the defence of the foreign exchange holdings. At the same time, the demands made by all circles for a reduction of the National Bank rate are becoming more and more urgent. It is pointed out that the high Bank rate affords no attractions for foreign capital, because fresh credits are confronted by the prevailing standstill agreements, while the foreign currency restrictions also constitute an obstruction. Furthermore, it is noticeable at the banks and savings banks that all the deposits made are subject to the shortest terms of notice

of withdrawal, and that nobody takes advantage of the higher rates of interest which attach to longer periods of notice. In general, savings deposits are 30 per cent. lower than they were a year ago. This is evidence of the general exhaustion of capital, of fresh losses on securities, and, finally, of the fact that hard cash is still being kept in private custody.

The bear tendency on the Stock Exchange prevailed throughout January. The index of all Austrian shares has sunk from 1,300 to 1,254. The turnover in shares amounted in January to 21.5 million schillings, as against 32.3 millions in January, 1931. For a time there was an attempt to smuggle abroad certain shares and obligations, particularly those of the Danube-Save-Adriatic Railway, with the purpose of obtaining foreign means of payment. Several individual transactions in this line appear to have been successful, but the frontier authorities now have instructions to proceed with the greatest severity. In order to reduce the export of schilling notes, especially 1,000-schilling notes, the National Bank has decided for the future to issue 1,000-schilling notes only in restricted quantities.

With regard to State finances, the Government is trying hard to effect savings, but here again certain limits are laid down, as the salaries of most of the civil servants have already reached a level which affords no more than a bare existence. In all private enterprises, too, dismissals and salary reductions have taken place, yet in the case of essential articles of consumption no price reduction is noticeable. On the contrary, the wholesale price index rose in January to 114.2, as compared with 112.4 in the preceding month. In January, 1931, it amounted to 105.5. The increase is accounted for chiefly by the rise in food-stuffs from 106 to 108.5. The retail index rose in January from 141.3 to 142.3, and the cost-of-living index from 108 to 109.2. The crisis in agriculture is very serious, and in this connection it has again been proposed in Parliament that seizures for debts should not be carried out on farms during the next few months. The explanation is that when the farms are sold up there is great reluctance on the part of buyers, and ground and buildings have often to be sold considerably below the estimated value, a fact which also contributes to the diminution of revenue from taxes. The greatest drop in revenue, however, is in customs duties and in the merchandise turnover tax. The possibilities of a lottery loan are again being discussed. In some quarters it is thought a loan holding chances of winning big prizes must be issued at 3 or 4 per cent. interest. The success of the last lottery loan, on account of the housing scheme in 1926, was very satisfactory.

The difficulties of the Credit-Anstalt are demanding some approach to a solution. This can happen only after negotiations with the creditors and with the National Bank, so that the State guarantee may be reduced and confidence in State finances renewed. The Minister of Finance and his prominent colleagues in the Budget Department may try in vain to effect savings, so long as there is no considerable alleviation of the State commitments on account of the Credit-Anstalt. In any case, the National Bank has left no doubt that under its new management it cannot countenance any further increase of liability on the part of the Credit-Anstalt, and, as a matter of fact, the Credit-Anstalt has not recently extended its obligations to the National Bank. Time after time during the past few weeks the rumour has been current that Bank notes are to be stamped with reduced face value. So far the Government has consistently denied this report.

In most branches of industry no improvement is reported. In the textile industries, which showed greater activity up to the middle of January, a slight reverse has set in. In consequence, there has been a slight increase in the price of yarn. Exports are still unsatisfactory. Whereas in comparison with January of last year importation has declined by 21.5 per cent. and exportation by 34.3 per cent., the debit balance has decreased by no more than 6 per cent. For the first time for many years exports amount to only 45 per cent. of imports, whereas generally they cover 60 to 70 per cent. The remainder was covered by the surplus on the balance of payments, but now this has become unfavourable owing to the recession

in foreign tourist traffic and the repayment of credits, which are not counterbalanced by fresh loans. In the last quarter of 1931 it was abundantly clear that importation of foreign coal was increasing; no less than 246,740 metric centners of English coal were brought into Austria on account of the depreciation of the pound. English coal is being used in small quantities on the railways, and also in the paper and chemical industries, and for domestic purposes.

HUNGARY.

Politics — Finance — Foreign Creditors.

(FROM OUR CORRESPONDENT.)

BUDAPEST, February 22.

OWING to the critical financial situation, unusual activity is being displayed in political quarters. The formation of a "National" Government in order to balance the Budget, to fight inflation and to follow a determined policy with foreign creditors for the scaling down of the intolerable debt charges, is being more and more canvassed. As recent events have proved, the present Parliament is not well fitted to carry out the necessary financial legislation. An administration of "all the talents," including Count Bethlen, Count Apponyi, Dr. Rassay and Dr. Kálay, the Conservative and Liberal leaders, and possibly the representatives of the Independent Farmers' Party, under the presidency of the present Premier, Count Károlyi, governing on the German pattern of Dr. Brüning by Emergency Decrees, is supposed to be the objective of the new political rally. It is understood that, after the restoration of Budgetary equilibrium and other urgent financial legislation, new elections will be held, probably after the harvest, by secret ballot.

According to the latest report of the Finance Minister, the Budgetary deficit in the first half of the current financial year amounted to 48 million pengő for the Administration and 11.5 million pengő for the State undertakings. Furthermore, 26.9 million pengő were advanced by the Treasury to meet other current requirements and 3.7 million pengő were allowed for investments. Thus the total deficiency in July-December, 1931, between current revenue and current expenditure amounted to 90.1 million pengő. January receipts, according to the estimates of the Treasury, fell 20 million short of the expenses, so that the deficit had been increased approximately to 110 million pengő by the end of January, 1932. From the proceeds of the Treasury bills issued in August, 1931, the Administration received 129.8 million pengő, and other capital receipts amounted to 4.5 million pengő, totalling 134.3 million pengő, out of which the deficit has been met hitherto. There remains accordingly about 20-25 million pengő for the deficiency of the period February-June, 1932. Although expenditure has been curtailed considerably, it is very likely that the deficit for the current financial year will exceed the cash reserves of the Treasury, especially on account of the large deficit of the railways and the iron-works of the State.

The draft Budget for 1932-33 is in preparation. In view of the fact that in the coming Budget all expenditure will have to be met from current revenue, it would be unwise to budget for more than 750 million pengő. Baron Károlyi has recently stated that he wants to present a real Budget before the country, which means a totally different Budget from those drawn up in recent years, when the estimates had not the slightest chance of being carried out in practice. The present level of expenditure corresponds to 850 million pengő per annum, and although it is still beyond the taxpayers' capacity, it is a great achievement when contrasted with the actual expenditure of more than 1,000 million pengő in the years 1930 and 1931. It is impossible to cut down the Budget by another 100 million pengő without a further curtailment of the pay of the civil services and other drastic reductions calling for heavy sacrifices. Depressed economic conditions make the further imposition of consumption or income taxes quite impossible. The recent riots in the south-western rural district against the tax collector—though their importance

need not be exaggerated—are a timely warning in this respect. The only source of revenue open to the Treasury is to increase the inheritance tax, which has been considerably reduced since 1924, and possibly the capital (property) tax.

The draft for the standstill agreement, presented by the British creditors to Dr. Jeleszky, seems unacceptable in its original form. Further negotiations will be conducted to reach an agreement with the British, and then the same agreement will be offered to American, French, Swiss, German, Dutch, etc., creditors. It is incomprehensible why the British creditors should object to Hungarian clearing agreements for the carrying on of trade with other countries, as that is the only way to maintain any international commerce under present circumstances. On the other hand, the British demand to offset Hungarian bank balances held in London against their debts is fully justified, because after the transfer moratorium declaration Hungarian institutions need no funds in London or elsewhere. It is surprising, indeed, that Hungarian banks should have maintained balances in London and in New York at all, instead of having surrendered them to the Hungarian National Bank, which is in such a precarious position that it cannot afford to spare any outstanding sum. It is understood in Budapest that neither the British nor the other creditors are willing to scale down the interest rates on the outstanding short-term and long-term debts. On the contrary, the interest on short-term debts has in many instances been raised considerably, in some cases from the original 4 and 5 per cent. to 8 per cent. and more. This is certainly not the way to solve the financial difficulties of Hungary.

Only four out of the ten principal commercial banks have published their balance sheets as at December 31, 1931. None of the banks have complied, so far, with the publication of monthly balance sheets suggested by the Finance Committee of the League. According to the report of the League representative resident in Budapest, a new banking law is being prepared. By Government Decree the banks are allowed to value their security holdings at the quotations prevailing on June 30, 1931, on the Budapest Stock Exchange, which has been closed since July 13th. It is probable that after the reopening of the German Stock Exchanges the Finance Minister will reconsider whether it would not be wiser to open the stock market here.

HOLLAND.

Exchange Clearing House Bill — Coal Industry — Finances — State Loan.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, February 24.

THE Bill dealing with the conclusion of treaties with foreign countries for the provision of clearing-house facilities for foreign exchange was introduced into Parliament last week. The scope of the arrangement is to be limited to payments arising from the interchange of goods between the countries concerned. The scheme, as proposed by the Netherlands Government, is to operate in the following fashion. As soon as the necessary treaties have been concluded with the countries concerned, importers will have to pay their debts to the foreign creditors through the intermediary of the Netherlands Bank. Conversely, payments for goods delivered by Dutch exporters will, as a rule, be received by them through the Netherlands Bank. The latter has signified its consent to act as clearing institution. The amounts which the Netherlands Bank accordingly receives from importers will be available for making payments to exporters. These payments, in Dutch currency, will not be made before notification has been received from the foreign clearing institution concerned that the foreign importer has made payment to them. The rate of exchange for the conversion is to be fixed by arrangement between the two circulation banks concerned or by means of special treaties concluded by the Government.

In consequence of this arrangement, importers in the Netherlands will, subject to certain exceptions to be embodied in the treaties, be compelled to make use of the intermediary of the clearing house. To ensure adequate supervision, the necessary documents are to accompany the goods imported. As soon as the importer has effected payment to the Netherlands Bank, notification thereof is to be communicated to the clearing institution abroad, whose business it then becomes to settle with the exporter there. The Netherlands Bank is to assume no liability, and it is the business of the foreign exporter to see that payment is forthcoming from his client in the Netherlands.

Whether beneficial results of any great significance can be expected from the operation of such legislation remains to be seen. In fact, the Dutch delegation referred to in our last letter, which had been to Vienna, Budapest and Prague for the purpose of conducting negotiations with regard to concluding a clearing-house treaty with the Central European powers, has returned, it appears, without achieving any positive results. The experience which Austria and Hungary have had with respect to such clearing-house treaties does not appear to have been such as greatly to encourage the conclusion of additional agreements of this kind.

Reports from industrial circles in the Netherlands continue to become more and more unsatisfactory, while in commercial circles discontent has recently been expressed at the sudden enforcement of import quotas for several classes of goods. A matter of greater significance, however, is the unsatisfactory state of affairs in the Netherlands coal-mining industry. For a long time this trade has been operating satisfactorily, and an outlet has been found for the increasing production. Now, however, 500 miners at the private pits are to be dismissed on March 1st, and the situation has taken a very unsatisfactory turn, as the quota measures abroad, especially in France and Belgium, have resulted in a great reduction in export sales. Coupled with this reduction of exports there is the fact that foreign coal can be imported into Holland without any hindrance whatever, and can be sold at dumping prices. The competition of German coal, at prices nearly half that of Dutch coal, is felt very keenly. It is evident that if the coal-mining industry of the Netherlands is to be saved, Government support is imperative in the form, for instance, of a quota system on foreign coal. The total net production of the Limburg coal mines in January, 1932, was 1,025,491 tons, against 1,057,656 tons last year, and the total number of workers employed was 37,968 on February 1st, as compared with 37,690 in 1931.

As regards State finances, the yield of State revenue in January, 1932, was 31.4 million guilders, as compared with 43.2 millions in January, 1931. On December 31, 1931, the consolidated State debt amounted to 2,338,471,100 guilders, and the floating debt to 151,019,790 guilders. For consolidation of this floating debt a new State loan for 250 million guilders has now been announced. On March 2nd subscriptions are to be opened for the public at 100 per cent. on 5 per cent. bonds to an amount of 186 millions, State funds taking the remaining 64 millions; 150 millions of this loan are to serve for the conversion of the 6 per cent. loan 1922 A, and 100 millions for consolidation of floating debt. Bondholders of the 6 per cent. 1922 A loan, redeemable on April 1st, are to be given preference in the subscription to the new loan. It is worth mentioning that, apart from conversion issues, the State has not borrowed since 1924.

It is a good sign for the success of the new State loan that the Amsterdam money market continues to be very liquid. Prolongation rates are around $1\frac{1}{2}$ per cent. The domestic bonds market remains steady, and increasing interest is being shown for State, provincial and municipal loans. In consequence several municipalities were successful in issuing some 5 per cent. and $5\frac{1}{2}$ per cent. loans. The new State loan also promises to be a success, for 69,570,100 guilders of the 186 millions have already been subscribed. For the recent issue of Exchequer Bonds, the subscriptions totalled no less than 138,056,000 guilders, whereas only 50,000,000 guilders were allotted.

AUSTRALIA.

Public Finance — Banking — Harvest.

(FROM OUR CORRESPONDENT.)

MELBOURNE, January 29.

FOLLOWING the disclosure at the September Conference that the position of public finance was changing for the worse, the revised estimates for 1931-32 presented to the Premiers' Conference now sitting show that, instead of totalling £12,220,000, the aggregate deficits of the Commonwealth and States will be £18,060,000, after allowing for the postponement of payment of about £4,000,000 in interest to the British Government in accordance with the Hoover moratorium. The earlier estimate of £12,220,000 was that of the June "Plan," with certain adjustments. Adding special accounts, loan expenditure and minor adjustments, the total cash requirements for 1930-32 are reckoned at £30,710,000, nearly the whole of which, in the absence of loan flotations, is being financed by borrowing from the banks. The total floating debt in London and Australia is at present £78,826,000, and is expected to reach £85,000,000 by June 30th next.

These figures have been received with a feeling of disappointment, as it was hoped that adherence to the "Plan" of June, 1931, would have resulted in the achievement of balanced Budgets in three years, a hope which has now to be further deferred. Meanwhile the question is that of financing the deficits in prospect, having regard to the inadvisability of adding still further to the floating debt. One great stumbling-block has been the attitude of the New South Wales Labour Government, which remains hostile to financial reform, though the difficulty of raising money is limiting its activities.

The banking position has shown further improvement on the whole during the last few months. The large volume of exports, even at low prices, is bringing in a fair amount of money to country producers, assisting them to meet their liabilities to banks and others, and furnishing something towards enlargement of deposits. On the other hand, the great reduction in import trade and the shrinkage in business generally have resulted in a decrease in trading advances, while the unwillingness of those who have funds to venture into new enterprises tends to swell bank deposits for the time being. But against the diminution in private demand for money is the pressing demand from the Governments, and while ordinary advances within Australia show a decrease of £19,844,352 as compared with a year ago, public securities held by the banks show an increase of £11,692,193. The net decrease in the two items taken together is £8,152,159, while the increase in deposits for the year is £6,560,277. The increase in securities is mainly in Commonwealth Treasury bills, which, from the banks' point of view, are practically a cash asset supplementing their own cash holdings and balances with the Commonwealth Bank. The principal totals (relating to transactions within Australia and New Zealand but excluding external business) shown by the quarterly average returns of the banks in the six Australian States and New Zealand to December 31, 1931, compare with those for the previous quarter and a year ago as follows:—

	Dec. 31, 1930.	Sept. 30, 1931.	Dec. 31, 1931.
AUSTRALIA:—			
Deposits	£263,142,289	£257,028,115	£269,702,566
Advances and securities	277,991,831	268,433,833	269,839,672
Coin and bullion	2,141,992	1,997,165	2,079,955
Australian notes and cash with Commonwealth Bank	37,590,738	43,244,640	40,832,257
NEW ZEALAND:—			
Deposits	53,232,803	53,466,003	51,976,879
Advances and securities	59,727,317	56,518,749	57,474,073
Coin and bullion	6,862,939	6,942,332	6,872,638
Legal tender notes of other banks	60,321	44,005	42,091

The Commonwealth Bank, not included in the foregoing figures, shows balances due to other banks £22½ millions for the December quarter, 1931, or an increase

of nearly £1½ millions on the year; and deposits £27 millions, or an increase of over £6 millions; while its advances (including short-term loans) within Australia are over £22½ millions or an increase of over £6½ millions, and its Government and municipal securities are £19½ millions, or a decrease of £2½ millions.

The Australian wheat harvest has turned out somewhat larger than expected, with excellent quality. European demand is inactive, but a considerable business has been done for shipment to China and Japan, and sales for these destinations now total about 30,000,000 bushels. Butter exports so far have been heavier than usual, but owing to dry weather the outlook for the next few months is somewhat uncertain. The Australian wool sales, at which 1,280,761 bales were disposed of up to December 31, 1931 (against 1,132,962 bales for the corresponding period of the previous season) have been proceeding with active competition since the reopening in January.

Letters to the Editor.

RUSSIA AND THE CRISIS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—It is hard to deprive a determined lady of the last word—and I may not succeed—but I cannot allow the Duchess to close the discussion with another misuse of statistics. She tries to convict me of inaccuracy in the statement that "wheat prices continued to fall for months (in the season 1930-31), after Russia ceased to be an important factor in the market," by claiming that only in May, June and July was Russia an unimportant factor in the market, and that in those months average import values rose from 5.1 shillings per cwt. in April to 5.4 shillings per cwt. in June, and only returned to 5.1 shillings per cwt. in July. A decimal point one way or the other is not of high intrinsic importance. But the Duchess has again been misled.

Average import values are, of course, much affected by the relative importance of expensive and cheaper varieties. Actually during May and June the proportion of British requirements met by high quality Canadian wheat was rapidly growing, and so the average import values increased. During July, on the other hand, British supplies were made up in a larger proportion of lower quality Argentine wheat, and so average import values fell again. Proper comparison of market prices can only be made by taking the quotation of a single standard grade of wheat throughout. The London spot quotation for Atlantic consignments of Canadian No. 2 Northern Manitoba ex ship was 27s. 6d. at the end of April, 25s. 9d. at the end of May, the same price at the end of June, 24s. by the middle of July, and 23s. 3d. by the end of July. Other standard grades during the period show a similar price movement downwards, and this happened, as the Duchess admits, in the virtual absence of Russian supplies from the market.

The essential point which emerges from this correspondence is that the Duchess, despite her industry and ingenuity, has found no statistical or other justification which survived examination for her attempt to show that the collapse of prices is due to Russian malevolence. Would it not have been more generous of her to admit it?—Yours faithfully,

Hazlitt House,
46 Southampton Buildings, W.C.2.
February 24, 1932.

E. F. WISE.

NEWSPAPER FIRE INSURANCE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your issue of February 20th a correspondent, in discussing the subject of newspaper fire insurance, makes some statements which can hardly be allowed to pass without comment, as it would appear that both his information and deductions therefrom are, to some extent, erroneous.

In the first place, he states "... one paper has gone so far as to tell its readers that when they take out an all-in or comprehensive policy on their furniture they give a warranty that the full value is insured, so that the policy would actually be invalidated by a newspaper fire insurance. That is rubbish." Upon this point, sir, it is the general opinion that such a warranty does, in fact, exist; and the proposal form,

completion of which is invariably required before a policy is drawn, and which is expressly stated to be "incorporated in and to form the basis of the contract," stipulates that the buildings and/or contents shall be insured for their full value, and requires details of such values. At the foot of this form is printed the following declaration: "I hereby warrant that the above statements are true, and agree that this proposal shall be the basis of the contract."

Secondly, your contributor states "... are covered by all-in or comprehensive policies which contain the average clause." Although it is true that comprehensive policies issued by underwriting members of Lloyds contain such a clause, the standard form of policy written by all tariff companies contains no such condition.

The "one paper" to which your contributor referred postulated, I believe, sir, the following case: That should a houseowner, having furniture worth £1,000, reduce his all-in policy to £500, with the intention that a newspaper scheme of fire insurance should cover the balance (this was prior to the general increase of the sum insured by such schemes to £1,000), then the insured would technically commit a breach of warranty and, accordingly, invalidate his policy. That, it seems to me, is the undoubted legal position, and I believe it bears the support of counsel's opinion.

In conclusion, even the soundness of the scheme which, it is said, exists "within limits," must be called into question, as the underwriters do not insure the whole liability of the newspapers in all cases, but only a "first loss" amount, and, accordingly, grave doubt exists as to how far a newspaper thus constituting themselves insurers stand in a legal morass, as, presumably, they have not secured and maintained the deposit of £20,000 with the Paymaster-General, as required by section (2) sub-section (1) of the Assurance Companies Act, 1909.—Yours faithfully,

79 Ealing Road,
Wembley, Middlesex.
February 20, 1932.

NORMAN W. CANT.

TRUSTEE INVESTMENTS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Your correspondent, Mr Chas. Robertson, makes some extraordinarily impracticable suggestions in his letter in your issue of February 20th. He proposes that individual trustees should not be allowed to be appointed except in conjunction with a trust corporation and that all trust monies should compulsorily be invested in the Funds. So, if a tradesman should leave a will appointing his two sons trustees to carry on his business for his family, they would be forced to dispose of the business and to invest proceeds jointly with a trust corporation in Government stocks. How much more Government interference? And trust corporations have to be paid. By all means alter the statutory trustee list of investments if that is desirable, but do not interfere with the freedom to word trust instruments so that they give a wider discretion to trustees.—Yours, etc.,

SANFORD D. COLE.

Books and Publications.

THE STOCK EXCHANGE YEAR BOOK.

THOUGH 1931 proved to be a year of greatly restricted activity in the company world, there has been no corresponding decline in the scope and usefulness of the Stock Exchange Year Book,* the amount of editorial matter having again increased. In its fifty-eighth year of publication, this exhaustive compilation again provides an excellent index, an alphabetical list of stockbrokers and a thorough treatment and helpful grouping of companies. No library could be considered complete in the sphere of company finance which did not include this work of reference.

* "The Stock Exchange Year Book, 1932." Compiled and published by Thomas Skinner & Co. Gresham House, Old Broad Street. 50s. net.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

Armaments Year Book, 1932. (London) George Allen and Unwin, 40, Museum Street. 7s. 6d.

This invaluable League of Nations' publication contains details of the defence forces and defence expenditure of every country, with the text of treaties relating to the limitation of armaments.

Looking Forward. By Nicholas Murray Butler. (New York and London) Charles Scribner's Sons.

A collection of essays and addresses, some of them historical, most of them dealing with political and economic matters of acute present-day interest.

Devisenbestimmungen des Auslandes. Supplement. Das Deutsche Devisenrecht. (London) London General Press, 6, Bouverie Street. 1 guinea (inclusive of six supplements).

Contains the text or summaries of foreign exchange regulations in all countries, translated into German.

Revue Economique Internationale, December, 1931. (Brussels) 12, Place Loix.

Includes, *inter alia*, articles on economic evolution in Turkey and Finland.

The Bankers' Magazine, February, 1932. (London) Waterlow and Sons, Limited, London Wall. 2s. 6d.

The Banker, February, 1932. (London) Financial Newspaper Proprietors, Limited, 20, Bishopsgate. 2s. 6d.

Includes an article by the Right Hon. L. S. Amery on "A Sterling Monetary System."

International Labour Review, January, 1932. (London) Allen and Unwin, Limited, 40, Museum Street. 2s. 6d.

THE COMING BOOM

6th Impression

The first general market reaction (17%) after the first general rise (32%) is terminating. The second general upswing of the new Trade Cycle is now commencing, and is likely to last for several months before the next reaction begins.

"The Course of the Coming Boom" by L. L. B. Angus explains what shares and industries to choose; and what particularly to avoid.

This publication has already proved its remarkable accuracy in practice. No investor can afford to neglect its valuable contents.

Mr. Angus now forecasts the end of the slump in America, as well as in England.

The Stock Exchange:

"KAFFIRS."

FEW things are more touching, in a hard business world, than devotion to ideals in the face of adversity. The South African Assembly has now agreed to the appointment of a Select Committee to inquire whether the country should suspend the gold standard or not, but if the Government holds to its "irrevocable determination" to remain on the gold standard, the Committee's deliberations may be somewhat academic. In the debate which preceded the Select Committee's appointment it was contended that the suspension of the gold standard would benefit the South African mines to the amount of £13 millions and the primary producers to over £5 millions a year.

Possibly, however, the Government is actuated, in part, by the feeling that a foster-mother should be prepared to sacrifice some of her interests to those of her largest child, for, as a major world gold producer, South Africa has had much to do with the "nursing" of the international system of gold currency. From 1887 to the end of 1931, the Transvaal gold mines have produced gold to the value of about 1,106 millions. In 1931 they established a new high record with an output of 10,874,145 ozs., against 10,719,760 ozs. in 1930, the value being £45,741,748 against £44,924,354. The world production of gold in 1930 was £83,500,000, so that South Africa was responsible for 54 per cent. of the total. Under normal conditions, the Rand gold mines account for 20 per cent. of the national income of the Union and about 45 per cent. of its total tax revenue. In view of the severity of the present depression in the agricultural and pastoral industries, and the diamond mines of South Africa, the continued prosperity of the gold mining companies should be regarded as of the utmost importance to the welfare of the country.

In his new edition of "The Rand Gold Mines" (to which we are indebted for numerous figures given in the present article) Mr Sturzenegger attributes the recovery of the gold mining industry since the beginning of 1930 mainly to the more adequate supply of native labour. The average number of natives employed in the Witwatersrand mines increased from 184,280 to 203,473 in 1930 and to 211,552 by the end of December, 1931. The latest figure is 216,000. This large influx of native labour has been due chiefly to the depression in the agricultural industries (accentuated lately by a prolonged drought) and partly to more intensive recruiting in Union territory after the failure to secure an extension of the recruiting area outside the Union. Increased labour forces have enabled the mines to push forward development work—which has cases beyond the annual milling requirements—which has led to a considerable increase in ore reserves. During last year satisfactory development took place in the lowest levels of the more important mines of the West and Central Rand, namely, Randfontein, Crown Mines, Robinson Deep and East Rand. The values of the reef in the lowest levels of these mines at a vertical depth of 4,000 to 7,500 feet have shown a decided improvement and arrangements have been made by some companies to sink their shafts down to a vertical depth of 8,000 feet, where profitable operations, having regard to the possibilities of a richer zone of ore, are considered possible under present working costs. On the Far Eastern Rand, developments in the newer mines have also been favourable, the Sub-Nigel in particular showing improved values in the lowest levels, both east and west. Moreover, in the Farthest West sector of the Rand a remarkable discovery was made in the Randfontein mine, where the reefs have begun to show a progressive flattening below 4,000 feet, suggesting that this feature may continue until

the reefs lie horizontally, or even assume a syncline and begin to dip in the reverse direction.

The benefits to be derived from the more plentiful supply of native labour have not, however, so far shown themselves adequately in the revenue accounts, for excess development has been charged to current working costs. Moreover, expenditure on repairs and additions to surface and underground plant, which had been neglected in the period when labour was scarce, has been increased, and its benefits will accrue at a later date. The Government Engineer has estimated that a fully adequate native labour supply is equal to a saving of 2s. per ton in working costs, but this factor must be offset to some extent by the rise in costs in the deeper workings. Nevertheless, the results for 1931 show a considerable increase in the amount of tons milled, in working revenue and in net profits of the leading companies as the following table will show:—

(000's omitted.)

Mine.	Year ended Dec., 1931.	Tons Milled.	Ore Reserves.	Working Revenue.	Net Profits.	Dividend.
Crown Mines	1930 2,905 1931 3,136	12,285 10,579	£ 3,929 4,194	£ 884 957	% 67½ 70

* Year ended June, 1931, and 6 months ended December, 1931, respectively.
† At end of December. ‡ Interim for 1931-32.

The dividends paid to shareholders in Great Britain have, of course, reflected the premium on the South African pound. The next table shows the amount of the annual dividends in South African pounds, the equivalent of these dividends in sterling (at the rate of exchange ruling on January 29th), and the dividend yield on the basis of the equivalent sterling dividends. We have added for comparison the highest and lowest prices of the shares prevailing last year:—

Shares.	1931 Prices.		Present Price.	Div. Rate (%)	Annual Div. in S.A. £'s.	Equivalent Div. in Sterling.*	Div. Yield (%) on equivalent Sterling Dividends.

* At £74 15s. S.A. per £100 sterling.

It is somewhat surprising that the market has not reacted to any greater extent the improved results for 1931 and the larger dividends payable in terms of sterling. This may be attributed to the fact that no news is so stale

* "The Rand Gold Mines." By E. Sturzenegger. Published by the author at 4 Copthall Buildings, E.C. 10s. 6d.

as news which is constantly foreshadowed but never comes. The market in South African gold mining shares has been "fed" so long on reports: first, that the country is shortly going off the gold standard; and, secondly, that the Low-Grade Ore Commission is about to make a favourable report, that the "bulls" have become as stale as the news. The Low-Grade Ore Commission was appointed by the Union Government to inquire into the possibility of giving the assistance to the low-grade mines in the matter of freight rates, duties, Miners' Phthisis Levy, claim licences, etc. The proposals submitted by the Transvaal Chamber of Mines, if accepted in full by the Government, would result in a reduction of 1s. 10d. per ton in working costs. But how the South African Government, in view of the prevailing economic depression and its subsidisation of the primary industries, can provide the money for making such concessions to the low-grade mines it is difficult to see.

As regards the difference to the profits of the companies which would be made by the suspension of the gold standard by the Union Government, we have compiled a table of approximate estimates in the light of certain of Mr Sturzenegger's figures. Our calculations are based on the assumption that the premium on gold would be the same as the prevailing premium in the case of sterling, namely, 40 per cent., and that there would be an increase in costs of 10 per cent. per ton milled. To enable the results to be better understood, we have converted working costs, sundry expenses, and the margin of profit into percentages of working revenues represented by 100. The indices for the companies we have analysed are as follows:—

	While South Africa remains on gold.				If South African suspends gold standard.				% Increase in Profit
	Revenue	Costs	Sundry Exs.	Margin of Profit	Revenue	Costs	Sundry Exs.	Margin of Profit	
Crown Mines	100	73.83	3.24	22.93	140	81.21	3.24	55.55	257.23
Govt. Areas	100	43.34	29.66	27.00	140	47.67	29.66	62.67	176.44
Geduld	100	60.15	4.28	35.57	140	66.16	4.28	69.56	135.32
New State	100	53.14	28.37	18.49	140	58.45	28.37	53.18	303.49
New Modderfontein	100	45.58	7.62	46.80	140	50.14	7.62	82.24	94.70
Bandfontein	100	81.52	1.90	16.58	140	89.67	1.90	48.43	474.50
Spring Mines	100	53.31	13.06	33.63	140	58.64	13.06	68.30	141.34
Sub Nigel	100	48.86	12.50	38.64	140	53.75	12.50	73.75	118.52

The figures, for various reasons, must be regarded as the broadest of approximations, but they illustrate the point that the increase in the profit margin is greatest in the case of those companies whose margin between revenue and costs is smallest. They must not be regarded as any indication of the potential increase in dividends, partly because the effective reduction in costs in terms of gold will induce many companies to mill ore of lower grade in order to prolong the life of the mines, and partly because it is not safe to assume the costs will increase only by 10 per cent. A demand for an increase in wages by the white labour forces would limit the advantages to be gained, under the heading of wages, from a suspension of the gold standard, to the period in which the native labour forces were content to accept their current level of money payments.

THE RAILWAYS ON THE ROADS.—II.

In an article last week (see the *Economist*, February 20, page 419) we analysed the shareholdings of the London, Midland and Scottish and the Great Western Railways, respectively, in road passenger transport concerns. Our figures were based on the returns made in the accounts for 1931, under Section 4 (a) "Subscriptions to Other Undertakings." We have now revised certain of our provisional figures, in the light of further information regarding the total capital of some of the road companies concerned. The publication of the London and North Eastern accounts enables the survey to be completed. The

following table gives the figures for each of the four main-line railways:—

Name of Company in which Shares are held.	Railway Holding.	Total Shares issued of kind held.	Proportion held by Railway.	Price per Share at which Holding carried in books.

* Non-Voting Preference Shares.

The Southern Railway accounts contain no entry under Section 4 (a), which is declared to be inapplicable to the company. The general balance sheet shows £1,384,802 as the book value of investments in road transport undertakings. The figures given in the table, as regards this railway, have been obtained from a private source, which we believe to be reliable.

Two general conclusions are suggested by this analysis. First, although the railways' interests in road transport undertakings are substantial, it is the exception rather than the rule for these to carry a majority voting power. Secondly, the railways are allied, along lines of mutual share ownership, with a great power whose ramifications in the road passenger transport world were already considerable before the railways entered the field—the Tilling and British Electric Traction interests. According to our information, there are few, if any, road passenger concerns with a substantial railway shareholding in which one of the trio, Thomas Tilling, British Electric Traction or Tilling and British Automobile Traction is not also a large shareholder. In any discussion of the future of road passenger transport as a "controlled monopoly," due account should be taken of the question of interconnected capital ownership.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.
March 1.

ACCOUNT.
March 3.

INTEREST throughout the week was centred chiefly on the Gilt-edged market, which became active immediately after last week's reduction in Bank rate, showed consistent strength on the appreciation of sterling and the note of increased confidence sounded throughout the week. Much of the rise in prices was due to "good" buying, reflecting the reinvestment, in some cases, of repatriated funds. Industrial shares had a slightly better undertone, but business remained restricted in the absence of definite signs of a change for the better in national trade. The more speculative markets remained quiet, Paris nibbling occasionally at oil shares, but being on balance a seller of South African gold mines.

Conditions in the gilt-edged market are dealt with in a Note on page 474. Funding Loan was particularly well supported, and Three-and-a-Half per Cent. Conversion Loan was consistently strong, but War Loan moved more slowly. India loans were firm in sympathy with British Government stocks. Australian issues showed a better tendency on the definite intimation of the posting of February interest warrants on New South Wales stock.

Among foreign bonds Germans showed a dull tendency, despite the fairly favourable reception of the banking reorganisation measures. Greek issues appreciated on the reduction in the Athens Bank rate and on hopes that, as a result of Sir Otto Niemeyer's advice on the financial position, interference with the debt service would be found unnecessary. Japanese bonds lost ground, for the reasons discussed in an Investment Note on page 475. Argentine issues fell on a misinterpretation of a Presidential statement regarding the sinking funds.

Little or no selling pressure occurred in the home railway market, despite the London and North-Eastern's loss of trustee status, the prior stocks sharing in the general firmness of high-grade issues. The week's traffic figures were colourless and afforded no indication of a reversal of the downward trend of revenue. Prices of foreign rails moved irregularly. Argentine issues were steady after liquidation early in the week. Buenos Aires Pacific, however, were depressed after the publication of the board's decision to ask for powers to pledge certain of its assets in priority to the charge securing the debenture stocks.

After a quiet start, a steadier tone was recorded in the industrial markets, though demand was highly selective. International stocks were irregular and obtained little consistent support from New York. Electrical supply shares attracted moderate investment interest, though the reduction of the County of London dividend disappointed the market. Iron and steel shares reacted on provincial selling after a slight rise. Motor shares were a shade harder, with the exception of Ford, which, despite the public appearance of the new "baby" car, lost ground on fears of a sharply reduced dividend. After initial selling in view of the January traffic figures, Cables and Wireless became harder on bear covering. Textiles obtained little support, Courtaulds having a downward tendency, although last week's dividend was fully up to market expectation. John Barker were firm on an excellent profit statement which is discussed on page 477. Breweries were steady, and among tobacco shares a sharp advance occurred in Gallaher, following the news of an offer to acquire half the ordinary shareholdings some shillings above the market price. Bank shares were firm in sympathy with movements in gilt-edged prices, and insurance shares showed fractional advances.

Slightly more life was seen in the rubber share market, small gains being recorded in a number of instances, partly on support from the Continent. Business in tea shares, however, remained at a low ebb, although the undertone remained steady. New York gave little support to oil shares, but a very moderate Continental demand was sufficient to maintain prices generally. The

Lobitos dividend, the first interim payment made for some years, came as a welcome surprise. Conditions in the mining market were stagnant. The market missed the recent demand for Paris favourite issues, and showed little resistance to a moderate amount of selling from that centre. Kaffirs were heavy, and Rhodesians sensitive to the week-end fall in the price of copper. The "Chartered" figures set out on page 478 were as good as had been expected, but the shares were lower on professional bear selling. Tinto was offered from the Continent. Tin shares were dull, thought movements in the metal reflected little beyond readjustment to the higher exchange value of sterling.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The markets were closed on Monday for the commemoration of Washington's birthday. The re-opening was hesitant. Government bonds remained active on hopes of aggressive open-market operations by Federal Reserve Banks to follow the Glass-Steagall Banking Reform Bill. Railroad stocks, however, were weak, and pressure was exercised against some of the industrial market leaders, especially U.S. Steel, American Telephone and General Electric. A firmer tendency occurred in mid-week, which was ascribed purely to technical factors. Business, however, remained comparatively restricted, the half-hearted appearance of the market being ascribed partly to dissatisfaction with the inelasticity of trade and industrial conditions, and partly to doubts as to the policy of the Reserve Banks after the expected signature of the Banking Reform Bill. Steel mill production was estimated at 26 per cent. of capacity, against 27 per cent. in the previous week—a disappointing showing attributed to a

February 27, 1932.] THE ECONOMIST.

In calculating yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

tendency to hold back orders from the motor industry in view of the delay in the putting on the market of the new Ford model. Freight car loadings for the week ended February 18th were 562,534, as compared with 574,834 in the previous week, 720,689 in the corresponding week of last year and an average of 923,689 for the same week over the seven years 1924-30. The markets were appreciably firmer on Thursday after the reduction of the New York Federal Reserve rediscount rate from 3 $\frac{1}{2}$ per cent. to 3 per cent.

PARIS.

The firm tone of the Paris Bourse last week-end was not maintained, the adverse influence of Wall Street and the unfavourable news from the Far East militating against

increased business. International issues were sold in the earlier sessions, and German bonds were weak. A mild rally occurred on Tuesday, banking, electrical and chemical shares being in moderate demand. A further reaction on Wednesday, however, more than cancelled the previous day's gains, South African mines especially reflecting the weakness of market sentiment. On Thursday shares again trended upwards, with most bank shares and Young bonds in request.

AMSTERDAM.

An almost entire absence of business marked the opening of the Amsterdam Bourse on Monday. German bonds were sold and most industrial shares marked down. Oils, however, held their ground fairly well, Royal Dutch being in favour. Later, the tone became easier, Unilever and Philips shedding their modest gains. Rubber shares lost their slight appearance of activity, and Amsterdam Trading were liquidated.

OTHER CENTRES.

Declining prices and apathetic conditions were general throughout the minor European Bourses. Brussels showed signs of life on Tuesday, but subsequently relapsed into inactivity. Elsewhere quiet and irregular conditions ruled. Unofficial quotations in Berlin had a downward tendency. Dye Trust were done at 98.50 (against 101.50 a week ago), Siemens at 137.50 (against 139.00), General Electric at 32.00 (against 34.00), and Reichsbank at 107.00 (against 109.75).

INVESTMENT NOTES.

Rise in Gilt-Edged.—The leading feature of Stock Exchange business this week has been the strength of the gilt-edged market. The reduction in Bank rate from 6 per cent. to 5 per cent. last week, and the improvement in the sterling exchanges have been interpreted in the market as intimating that the pound is no longer in serious danger from a withdrawal of foreign balances, that the Bank has already seen its way towards covering the £80 millions credit due for repayment in August, that Bank rate may shortly be reduced to 4 per cent., and that another period of cheaper money may be in prospect. As usual, the gilt-edged market has swung between extremes. For the time being the difficulties of the financial situation abroad have been omitted from calculation, and little stress has been laid on the association of the strength of sterling with the cessation of French selling, against the resumption of which it is, of course, impossible to give any guarantee. The following table shows the extent of the rise since February 10th in the principal long-dated Government stocks and in 5 per cent. War Loan:—

	Price, Feb. 10.	Price, Feb. 25.	Yield Per Cent. Flat.	Yield Per Cent. Redn.
Consolidated Loan 4%	84 $\frac{1}{2}$	88 $\frac{1}{2}$	4 10 9	...
Conversion Loan 3 $\frac{1}{2}$ %	75 $\frac{1}{2}$	78 $\frac{1}{2}$	4 10 6	...
Conversion Loan 4 $\frac{1}{2}$ % 1940/44	95 $\frac{1}{2}$	99 $\frac{1}{2}$	4 11 1	4 12 6
Funding Loan 4% 1960/90	86 $\frac{1}{2}$	91 $\frac{1}{2}$	4 8 4	4 9 0
Victory Bonds 4% by 1976	93 $\frac{1}{2}$	94 $\frac{1}{2}$	4 5 1	4 6 0
War Loan 5% 1929/47	98 $\frac{1}{2}$	100 $\frac{1}{2}$	5 0 8	5 0 9

The average rise has been 3 to 4 points. The improvement in War Loan has been accompanied by rumours of

a conversion scheme to be announced in the Budget in April. Though these hopes may be somewhat premature, every rise in the gilt-edged market, naturally, is helpful in such a connection, and the Treasury's prospects would be materially improved by any remission of direct taxation in the next Budget. From answers in the House of Commons, it is known that the Government do not favour any forced conversion, or any appeal to holders of the National Debt, as a whole, to accept a lower interest rate—on the model of the Australian conversion plan. It is felt that so-called "voluntary" conversion offers frequently carry a sting in their tail. The gilt-edged market on this occasion, however, has nothing to fear from the politicians.

L.N.E.R. and Trustee Status.—The accounts of the London and North Eastern Railway for 1931 are dealt with on a later page of this issue. Their outstanding feature from the viewpoint of the market was the failure of earnings to cover more than £611,742 of the £2,645,687 required for dividend on the 4 per cent. second preference stock. As the directors have decided, in view of the uncertainties of the immediate future, not to draw on accumulated resources, the dividend on the stock is limited to 1 per cent., and the whole of the company's prior stocks lapse from Trustee status, under the Rules of the Supreme Court. Under these rules, for the last five years, the securities available for trustees in England have included the prior stocks of railways paying "a dividend" (i.e., any dividend, even if less than 3 per cent.) on their ordinary stock. The consequences will be regretted, though they had been discounted by the market, which, before the announcement, was selling L.N.E.R. 3 per cent. debenture stock to yield 6 per cent., the first preference to yield 9 $\frac{1}{2}$ per cent. and the second preference over 17 per cent. on a full dividend. The event gives point to recent happenings which have not only caused anxiety to trustees and losses to beneficiaries, but have tended seriously to compromise the reputation of the Trustee List generally. The Court has not yet, apparently, given intimation of any change in its Rules, which might maintain the eligibility of L.N.E.R. stocks which are receiving full interest. It is, therefore, to be presumed that the loss of trustee status in England applies to the whole of the company's £298 million of debenture, guaranteed and preference stocks, although only £66 million of second preference stock is not receiving its full dividend. The situation thus set up is in many ways anomalous. Under Section 4 of the Trustee Act, 1925, a trustee is not liable for breach of trust by reason only of his continuing to hold an investment which has ceased to be authorised, but in some cases the instrument creating the trust provides for a sale within a given period, such as twelve months. Trustees in Scotland are amenable to the Trusts (Scotland) Act, 1921, which differs from the English Act in several important respects. As a result, L.N.E.R. debenture stocks, no longer eligible in England, remain eligible in Scotland, where the debenture stock of railway companies incorporated in Great Britain is available without reference to any dividend payment. The Guaranteed stocks of the L.N.E.R., however, fall out of the Scottish List (which requires the payment of "a dividend" on ordinary stock for ten years) as well as the English List. L.N.E.R. preference stocks ceased to be eligible in Scotland in 1927, the Scottish law requiring a 3 per cent. ordinary payment for ten years in the case of all railways' preference stocks whose dividends are contingent on the profits of each year. Under this section L.M.S. preference stocks lapsed from the Scottish List a year ago, and the Southern preference issues have lapsed this year. The latter, however, while ineligible in Scotland, are eligible in England under the "Chancery Rules." It is anomalous, again, to say the least, that L.N.E.R. debenture stocks should lose their status in England, although their interest was covered last year with preference retain their status although earnings failed to cover their full dividend by £258,000. Such a position can scarcely have been foreseen by the draughtsmen either of the Trustee Act of 1893 or the Act of 1925. Between the

two measures came the Railways Act, 1921, under which ordinary stockholders in certain of the stronger pre-amalgamation railway companies of Great Britain received fixed-interest stocks in part exchange for their holdings, in the subsequent process of "grouping." Trade depression and road competition have accentuated the effects of this "dilution" of the Trustee List. Reconsideration of the whole position would appear to be urgently demanded, lest the continuance of trade depression and a falling tendency in railway receipts should place holders of prior stocks of other British railways in the same unhappy plight as the senior security holders of the L.N.E.R.

Disclosure in Profit and Loss Accounts.—Investors have every reason to be grateful to Mr Henry Morgan, President of the Society of Incorporated Accountants and Auditors, for his pertinacity in ventilating the question of publicity in company accounts. At Manchester, last Monday, Mr Morgan repeated his contention, voiced on earlier occasions, that understatement of profits cannot be reconciled with the certification of a balance sheet as being true and correct. While recognising that no single form of profit and loss account may be appropriate for all companies, Mr Morgan declares that accountants have now reached general agreement that the utilisation of a reserve to minimise losses or increase profits should be clearly shown in every case. While recognising that a great improvement has taken place in the format of profit and loss accounts since the coming into operation of the Companies Act, 1929, the accounts of certain important companies, he believes, are still open to criticism under at least three heads: (a) Non-disclosure of amounts taken from reserve, (b) aggregation of profits on realisation of investments with trading profits, (c) omission to disclose full profits resulting from operations through subsidiary companies. Though Mr Morgan holds that Section 134 (1) of the Companies Act (which requires auditors to report "on the accounts examined by them") covers profit and loss accounts as well as balance sheets—a view in general agreement with that of the Counsel consulted recently by the Institute of Chartered Accountants—he considers that amending legislation is urgently necessary, particularly as regards disclosure in the case of holding companies. Readers of our recent article based on Sir Gilbert Garnsey's review of the latter subject (see the *Economist* of December 12, 1931, page 1131) will probably endorse Mr Morgan's view. In the meantime, his exhortation to auditors to take a wide conception of their responsibilities in harmony with the trend of opinion among other leading members of his profession. The difficulty is that published accounts are the accounts of directors. The smaller firms of auditors, who must make a living, like their fellow men, may not always, in the present state of the law, be able to carry zeal for informative accounts to its logical end, in the face of opposition from a board effectively holding the power of the purse.

Japanese Bonds.—In the foreign bond market, Japanese Government bonds are meeting with continued liquidation. Occasionally there is some improvement when the news from the Eastern front appears to suggest an early conclusion of the Sino-Japanese conflict, but there is no doubt that holders are increasingly nervous at the continued fall in the exchange value of the yen, the present rate being 28d. against a par value of 24.58d. Further, there are misgivings with regard to the budgetary position. In a leading article in the *Economist* of October 24th we stated that in the year ending April, 1932, there would be a deficit on the Budget of about 54 million yen, which was to be met as to 39 million yen by economies and postponement of works. On the resignation of the late Government this Budget lapsed, and we understand that the new Government has not yet had time to prepare a new Budget. Apart from internal finances, the external trade position of Japan is scarcely regarded with optimism in the market. The slump in raw silk prices and the boycott of Japanese goods in China have inevitably worsened the adverse balance of visible trade. In 1930 the excess of

imports amounted to 76 million yen, and in 1931 to 80 million yen:—

	(In million Yen.)		
	Exports.	Imports.	Excess of Imports.
1930	1,470	1,546	— 76
1931	1,124	1,204	— 80

Up to September, 1931, it was estimated that there was still a favourable balance of payments on international account, having regard to the invisible income, approximately 100 million yen, but conditions have now changed, and it would appear that Japan has become a debtor country on her international account. The following table shows the fall in prices of the principal sterling Japanese issues:—

	Price on Sept. 20, 1931.	Price on Oct. 21, 1931.	Price on Feb. 25, 1932.	Yield Per Cent.
Japan 4% 1899	71	59	54	7 9 7
Japan 4% 1910	68	56	52	7 16 2
Japan 5% 1907	85	74½	69	7 8 9
Japan 6% 1924	100½	87	79	7 13 1
Japan 5½% Conversion 1930	97½	104½*	89	6 4 6

* This loan commands a higher price in sterling, as it is payable in United States dollars at the fixed rate of 4/8665.

The market will remain extremely sensitive to the news from the Eastern front, and no real improvement can be expected until an end is seen of the hostilities.

Further Investment Trust Results.—Various investment trust company reports, issued since our last analysis was published (see the *Economist*, January 23, 1932, page 183) emphasise the contrast between the present position of the pre-war and post-war companies. In none of the post-war companies in the list given below is the ordinary share capital represented by tangible assets on a "break-up value" basis. Moreover, the depreciation shown in the investment portfolios of the post-war companies is much greater than that of the pre-war companies:—

	Date Formation.	Investments.		Depreciation.	Ord. Cap. covered by Assets.
		Book Value. (£'000)	Market Value. (£'000)		
Pre-War Companies.					
British Investment	1889	6,737	5,374	20.2	139
Foreign and Colonial	1879	3,599	3,140	12.7	118
Debtenture Corporation	1885	3,822	3,260	14.7	101
U.S. and General Trust	1890	2,892	2,324	19.6	Nil
Scottish-American	1873	6,031	5,006	17.0	97.7
Sterling Trust	1888	4,953	4,154	16.1	76.7
Guardian Investment	1888	1,774	1,512	14.8	52.4
General Investors and Trustees	1907	1,686	1,343	20.3	87.6

Merchants	1889	3,593	2,707	24.6	38.5
British Assets	1898	6,578	5,361	18.5	7.15
Post-War Companies.					
English and New York	1928	1,221	757	37.3	Nil
Scottish United	1924	2,430	1,621	33.2	Nil
Second British Assets	1918†	2,805	2,026	27.8	Nil

* Originally formed in 1881 as Alabama, New Orleans, Texas and Pacific Junction Railways Company. Name changed in 1917 after sale of certain American railroad holdings when the company became an investment trust.
† Registered 1878 as Edinburgh American Land Mortgage and until 1918 confined its business to investments in farm mortgages in America.
‡ At market valuation, disregarding surplus of current assets over current liabilities.

The older investment trusts appear to have had a very varied experience of the slump in investment values, which may or may not be due to management skill. The fact that British Assets, which has been one of the most successful of the Scottish investment trusts, should show only 7.15 per cent. of its ordinary capital covered by assets at market values, is due to the relatively large amount of its

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper Ltd.,"
8, Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. loan capital (£3½ millions, against £3 millions share capital). As we pointed out in our article of January 23rd, an investment trust company's ordinary stock, which is not represented by tangible assets on a "break-up value" basis, has, nevertheless, a value of its own as an earner of dividends. The next table shows the total income, the earnings and dividends paid on the ordinary stocks for 1930 and 1931, together with the values given to the ordinary stocks by the market and the dividend yields:—

	Total Income.		Earned on Ordinary.		Paid on Ordinary.		Market Price.	Div. Yield %.

Where an increase in revenue is shown, this has been due to issues of capital in the preceding year. It is fair to point out that British investments trusts concentrate upon the provision of a steady income rather than upon capital appreciation. From this point of view these companies have not shown unsatisfactory revenue results, having regard to the defaults which have occurred on a large number of foreign bonds and the reduction of company dividends. The depreciation of capital assets, running up to 37.3 per cent., in the case of one of the post-war companies, is a more serious matter. It would appear that investment trust practice has not yet found a magical formula which automatically protects capital against loss in periods of exceptional depression.

London and North Eastern.—The accounts for 1931 reveal a decline in gross receipts from £59,825,409 to £53,828,366, or a little over 10 per cent. Expenditure has fallen from £49,206,100 to £44,989,556, or by 8.6 per cent. Receipts from other sources are slightly greater at £1,507,090, while other charges have advanced by £11,393 to £921,290. Net revenue is £9,424,610, compared with £11,168,750, and as nothing is brought in from realisation of investments, and the directors, apparently, have not considered it prudent to make a draft on reserves, the 4 per cent. second preference stock receives only a 1 per cent. dividend. The company's prior stocks thus lose trustee status under the "Chancery Rules." The implications of this lapse are discussed in an earlier Note. The carry-forward is reduced from £80,047 to £30,368.

	Year to December 31.		
	1929.	1930.	1931.
Gross receipts	£ 63,295,455	£ 59,825,409	£ 53,828,366

* Full 4 per cent. dividend paid on second preference stock.
† Only 1 per cent. dividend on second preference stock.

Savings were effected in the maintenance of way and works to an amount of £487,627, while expenditure on maintenance of rolling stock was £984,625 less at

£7,359,328. Passengers carried in 1931 were 189,048,748, compared with 205,716,944, and goods traffic fell from 137,719,076 tons to 121,356,860 tons. The balance sheet shows that investments in Government securities are unaltered at £4,461,742, while investments in transport undertakings, not charged as capital expenditure, total £246,093, against £161,092. The present price of the 4 per cent. second preference stock is 18½, and the yield about £5 14s. 6d. per cent on a 1 per cent. dividend.

Manchester Ship Canal.—This undertaking has maintained its position comparatively well in the face of difficult trading conditions in Lancashire and the Mersey area, but its traffic and earnings inevitably showed a further declining tendency last year. The tonnage carried, which fell by 4 per cent. in 1930, dropped last year by a further 4 per cent., and gross revenue by 7½ per cent., after a fall of 10 per cent. in 1930. Net revenue was £58,432 lower at £643,244. The preference stock again received 3½ per cent., but the preference share dividend was halved at 2 per cent., and the ordinary share distribution halved at 1 per cent.

	1929.	1930.	1931.
Year to December 31st.			
Total tonnage	6,558,589	6,290,625	5,898,289

Expenditure on the working of the Ship Canal showed a decrease of £52,735. Capital expenditure amounted to £81,289, bringing the total expenditure on capital account to £20,056,811. The £1 preference shares, at 7s., yield about £5 14s. per cent., and the ordinary shares, at 5s., £4 per cent.

John Barker.—The preliminary statement shows that neither economic depression nor constructional inconvenience has checked the prosperity of this well-managed London store organisation. Net earnings have not varied by much more than 1 per cent. in the last three years, and the company is in a position to maintain its 20 per cent. dividend and make its usual generous allocations to reserves and "write offs":—

	1930.	1931.	1932.
Year to January 31st.			
Net profit	£ 468,685	£ 466,140	£ 462,540
Brought forward	291,010	297,254	300,954
Preference dividends	46,175	46,175	46,175
Ordinary dividend—			
Amount	221,266	221,266	221,266
Paid %	20	20	20
Rebuilding reserve	125,000	150,000	100,000
General reserve	...	10,000	50,000
Pension fund	10,000	...	10,000
Written off goodwill	35,000	35,000	25,000
Written off fixtures	25,000	...	10,000
Written off plant, &c.	297,254	300,953	301,053
Carried forward	...	...	...

The total amount allocated to reserves is the same as last year, but rebuilding reserve takes £100,000, against £150,000, while £50,000 is placed to general reserve. Altogether as much as two-fifths of the year's profits are retained in the business—a policy which, maintained over many past years, has resulted in the building up of an internal financial position of extraordinary strength. At 61s. 8d. the £1 ordinary shares yield about £6 17s. 6d. per cent., allowing for the final dividend.

Footwear Company Results.—The earnings of many boot and shoe manufacturing and retail businesses, according to the reports so far available, have shown relative stability during the general depression. Retail trade returns for the last eleven months of 1931 revealed a decline in money sales of nearly 6 per cent. compared with the corresponding period of 1930. Imports over the whole year fell in value by about 17 per cent., while exports declined by approximately 28 per cent. Of the companies whose results are tabulated below, all but Lennards have suffered some reduction in net profit, the aggregate decline being roughly 10.3 per cent.:—

Name of Company.	Net Profit, 1930.	Ord. Div.	Net Profit, 1931.	Ord. Div.	Present Price Ord. Shares.	Yield Per cent.
W. Abbott	£ 24,882	10	£ 14,329	12½	12/6	9 1 9

* Rate per annum or 7.33 per cent. actual. † Tax Free. x ex div.

In addition to the sharp decline in the profits of Phillips Rubber Soles, which is affected by somewhat different considerations from the other thirteen companies, considerable decreases have been suffered by W. Abbott, by Saxone Shoe, and by the Public Benefit Boot Company, whose "sphere of influence" has been prejudicially affected by the depression. The report of J. Darnell and Company states that last year's strong liquid position has been maintained, and at an extraordinary meeting to be held on March 7th next the directors will recommend the return of 2s. per share to the holders of the 500,000 ordinary shares, this capital not being required for the purpose of the company's business.

DAILY—TWO PENCE.

The "Chartered" Report.—Our mining correspondent writes: No surprise would have been occasioned by an even greater reduction in the dividend of the British South Africa Company for the last year than the "cut" from 8½ to 5 per cent. decided upon. It was known that several of the company's interests had had a lean period, and that the opportunities for the realisation of investments had been little better than in the preceding year. The point upon which doubt existed was the policy which would be followed by the directors in dealing with the depreciation. The accounts—which, incidentally, are made up on lines differing slightly from those previously followed—show £90,420 written off investments (less £23,050 provided by profit on sales), plus £12,160, representing the cost of uprooting citrus trees. Thus the amortisation totalled £102,580, as against only £4,200 in respect of 1929-30; and the earnings are correspondingly better than would appear at first sight. Moreover, the balance of profit and loss fully covers the distribution, whereas a year ago a draft of nearly £40,000 was made upon the carry-forward. But, in the main, depreciation is left over for the future.

On September 30th last, investments and holdings stood in the balance sheet at £6,359,869, an increase of £291,580 on the year. Of the former amount, quoted securities, accounting for £5,818,850, showed a depreciation of £942,040, or 16.2 per cent. On February 5th the net depreciation stood at £1,268,900, the increase being due to the fall in the market value of the company's holdings in the Rhodesia Railways Trust. That receipts from haulage and development schemes in Northern Rhodesia was a foregone conclusion, although the contingency appears to have been somewhat overlooked. The restriction of copper production, of course, affects traffic both ways. The directors of the Chartered Company state that as the earnings of the Rhodesia and the Mashonaland Railway companies do not cover debenture interest, application is being made for authority to increase rates and fares; meanwhile, economies in working are being effected. It is added that in any case the cash resources of the companies will enable them to meet all their engagements for some considerable time. Nevertheless, dividends can scarcely be expected, and, altogether, the early outlook for the British South Africa Company does not appear over-promising. On last year's dividend the shares yield only about 4½ per cent.

De Beers Decision.—The warning given by the chairman some weeks ago that, failing the "necessary remedies" on the part of the Union Government, all the South African diamond mines would be under the necessity of closing down, has this week been followed by the definite announcement that production will be suspended by the De Beers at the end of March. This decision has been arrived at after an attempt to meet the position by severe curtailment of output. It implies, of course, the indefinite postponement of dividends on the company's share capital. The preference distribution is in arrears since December 31, 1930; the deferred shares have received nothing for two years. A point of, perhaps, more immediate importance concerns the position which will arise in

connection with the company's fixed charge and guarantee obligations. Interest on the £2,415,000 of debentures issued last year in exchange for the shares of associated companies will call for £132,800 per annum. The De Beers Company has guaranteed 33½ per cent. of the principal and interest of £5,000,000 debentures of the Diamond Corporation, and has also a 50 per cent. participation in a similar liability with respect to £934,870 of Cape Explosives Works debentures. The accounts of the De Beers to June 30th last show that of a total revenue of £1,429,800, nearly one-half, or £699,770, represented net interest and dividends on investments. Of the latter sum, however, £375,000 was in the shape of a share bonus. In 1929-30 the dividend entry figured for £503,170. Last year, interest on debentures and on capital of leased companies called for £140,660. While no very definite figure can be arrived at, the foregoing details suggest that the company's miscellaneous income should be sufficient to cover fixed interest charges. What effective remedial measures the Union Government could have taken it is not easy to see. The trouble is far too widespread.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Great Western Railway, Anglo-International Bank, Pearl Assurance, Scottish Life Assurance, The Underground, British Assets Trust, General Investors and Trustees, Wandsworth and District Gas, and Bovril. Presiding at the annual meeting of the Great Western Railway, Viscount Churchill said it was not in the public interest that railway revenue should continue to be depleted by road competition, which in many cases was rendered possible only by the inequality of treatment accorded to the rail and road industries. As regards electrification, Lord Churchill declared that the company held to its view that in all cases the probable financial return was insufficient to justify the capital expenditure involved. Presiding at the annual meeting of the Pearl Assurance Company, Mr George Tilley said that, notwithstanding the difficulties of the year, they had written over 39,000 policies and the premium income of the ordinary branch had increased by no less than £91,472. At the annual meeting of the British Assets Trust, the chairman disclosed to shareholders that 28.4 per cent. of the company's investments were in Great Britain and 48.0 per cent. in the United States. Some 61 per cent. were held in the form of ordinary and deferred shares, 29 per cent. in preference shares, and 10 per cent. in bonds and debentures.

CAPITAL ISSUES.

An issue of £750,000 of trustee stock was made this week by the Croydon Corporation for housing, electricity, street works and other purposes. The yield of 5 per cent. was sufficient to make the stock attractive to conservative long-term holders at the present level of gilt-edged prices. Its issue was happily timed, in view of the activity of the market this week, following the reduction of Bank rate. The debt of the Borough of Croydon, including the present issue, is moderate, being about three times the rateable value, and is covered, as to a considerable proportion, by reproductive assets.

Croydon Corporation.—Issue of £750,000 5 per cent. redeemable stock, 1950-60, at £100 per cent. Trustees are authorised to invest in this stock. Redemption will take place at par on January 1, 1960, but the corporation will have the option of redeeming at par at any time on or after January 1, 1950, on three months' notice. A rate of one penny in the pound produces approximately £7,980.

Melbourne and Metropolitan Board of Works.—6 per cent. inscribed stock, maturing April 1, 1932. Offer to holders to renew into Melbourne and Metropolitan Board of Works 6½ per cent. inscribed stock, 1937-1939. On renewal, holders will receive a cash payment of £2 per cent. Stock renewed will be repaid at par on April 1, 1939, but the Board of Works has the option to redeem the stock, in whole or part, at par, on or after April 1, 1937, on three months' notice.

COMPANY MEETINGS, &c.

PEARL ASSURANCE COMPANY, LIMITED.

SATISFACTORY RESULTS DESPITE YEAR'S DIFFICULTIES.

NORMAL PROFITS FULLY MAINTAINED.

MR GEORGE TILLEY'S INTERESTING REVIEW.

The sixty-eighth annual general meeting of the Pearl Assurance Company, Limited, was held, on Thursday, the 25th instant, at the registered offices, High Holborn, London, W.C.1.

Mr George Tilley, the chairman of the company, presided. The Secretary, Mr W. N. Proddow, F.C.I.S., having read the auditors' certificate, the Chairman said:—Ladies and Gentlemen,—

THE LATE MR J. H. KEENE.

I feel sure that the shareholders, and particularly those who have for many years been associated with the company, would not wish that I should deal with the sixty-eighth annual report, or enter upon my review of our operations for the past year, without first referring to the loss we have sustained by the lamented death of our late and valued colleague, Mr J. H. Keene, which occurred in September last. Following in the footsteps of his father—the first chairman of the Pearl—he was given his first appointment in 1879, became secretary in 1892, and was elected to the board in 1914, and at the time of his death had thus spent fifty-two years in the service of the company. His sound judgment and wide knowledge and experience were allied to a character of unaffected sincerity, and his loss will be mourned not only by those of us who were his colleagues, but by all with whom he came into contact.

THE PAST YEAR.

To review for the annual meeting of shareholders the operations of the company during the past year, to record all of even the major difficulties met with, to balance these against the results achieved, and to weigh the one against the other fully and fairly would absorb such an amount of time and make such a call on your patience as would defeat its own object. I must, therefore, deal with such vast subjects in as concise a manner as is consistent with giving you a reasonably clear view of the achievements of the company and of the abnormal difficulties which have beset us in the period since we last met.

The history of the nation, and, indeed, of the world, over the year might be well described as a gradual descent into a slough of despond. In the autumn, by reason of the rapid onset of a wide-reaching economic crisis, we had the dramatic events of a break-up of the then existing Government, the formation of a new administration composed of elements from each of the principal parties, followed shortly after by an appeal to the country by a National Government, devoted to saving the country from the disastrous situation with which it was confronted.

Over the greater part of the year trade and business, taken as a whole, was slowing down, confidence was being undermined, unemployment was steadily mounting, while securities of practically every description continued to fall heavily in value. Each of these facts, by itself, would be bound to react adversely on our business, and that the cumulative effect of the whole of them combined has not be disastrous is a tribute to the inherent strength of this great organisation.

Having regard to the gloom of the background of our work which I have somewhat sketchily outlined, the picture which is shown you in the report testifies to the power and appeal of this company to the public and to the attraction of the types of assurances which we offer.

ORDINARY BRANCH.

In the ordinary branch of the company we introduced during the year a new scheme of a kind which is calculated to make a strong appeal to all those who wish to make proper provision for their dependants at a cost within their means, a matter which is not so easy as we should all like it to be. This policy is specially designed to this end, and is known as the "Family First." It provides, in the usual manner for a sum payable at death, or, if preferred, payable either on survivorship of a term of twenty years or death within that term, and, in addition, for yearly payments of substantial amount, which may be applied for maintenance of widow and children during the time the latter may normally be expected to be subjects of expense for upbringing and education. We claim,

with some confidence, that no better form of protection, combined with so modest an outlay, can be secured than the Pearl "Family First" policy. Our representatives have taken it up with enthusiasm, and we are writing under it a substantial volume of business, much of which is new connection and will extend our influence to ever-widening circles. I would appeal to every shareholder of the company to obtain a copy of this scheme and commend it to his friends and acquaintances.

Notwithstanding the difficulties of the year, I am happy to be able to record that we have written over 39,000 policies, and that the premium income of the branch has increased by no less a sum than £91,472. The total premiums, less reassurances, amount to £4,744,927 exclusive of premiums for annuities.

INDUSTRIAL BRANCH.

In the industrial branch the volume of business has been well maintained and the premium income records an increase of over £200,000. Such a result in present circumstances is a fine testimony to the efficiency and devoted work of our staff, and were it not that the times render it increasingly difficult for policyholders to maintain regular payment of their weekly or monthly premiums, the results would have been better even than those to which this company has become accustomed. We look forward to the initiation by the leaders of the nation of such measures as would lead to the amelioration of the economic troubles which are steadily depressing the prosperity of the entire world.

As explained in my address last year, in this branch we grant automatically paid-up policies to all policyholders who are unable to meet further payment of premiums, provided premiums have been paid for two years. There are now over a million paid-up policies on our books.

EXPENSES.

I am very pleased to be able to report a further reduction in the expense rates of both the industrial and ordinary branches. In the industrial branch a reduction of over three-fourths of a unit brings the rate to 32 per cent. of the premium income, and as these premiums are all collected either weekly or monthly at the homes of the policyholders, we claim that the cost of services involved will compare favourably with that of any system of insurance. In the ordinary branch the rate of expense has decreased from 10.8 to 10.25 per cent. of the premium income. In both cases the rates are the lowest ever recorded.

FIRE AND GENERAL BRANCH.

In the fire and general branch the total premium income amounted to £717,619, as against £664,568 in 1930—an increase of £53,051. Taking the figures for the individual departments, the fire department accounted for £493,166, as against £473,331 last year. The year's trading has been particularly gratifying because not only has the income been advanced by £19,835, but because both claims and expenses show appreciably reduced ratios, the former accounting for only 51.5 per cent., as against 56.9 per cent. last year, and the latter for 43.9 per cent., as against 45.1 per cent.

In the accident department progress has been somewhat more marked, the aggregate income of £224,453 showing an advance of £33,216, and this is attributable partly to the influx of business in the motor section occasioned by the introduction of the Road Traffic Act, in view of which development we are now publishing a separate account. This legislation has undoubtedly added very considerably to the difficulties with which the transaction of this class of business is surrounded, but it would be unfair to pass judgment upon the working of the Act so far as it affects us with only one year's experience behind us, and I will, therefore, reserve my comments thereon for a future occasion.

We are still pursuing our policy of steady organisation in these branches both at home and abroad with satisfactory results despite the adverse conditions, and I would like particularly to mention that we have quite recently acquired a controlling interest in the "Farmers and Settlers Co-operative Insurance Company, Limited," of Sydney, New South Wales, on terms which, I think, will make the investment an extremely profitable one for the company.

VALUATION OF ASSETS.

It is, I suppose, within the knowledge of everyone that an outstanding feature of the present depression is its effect upon the value of securities of all kinds. The securities held by an assurance company are of various kinds, as indicated, for example, in our balance sheet, and they are all affected by depreciation, though in various degrees. To meet this and possible further depreciation, you will see that the investment reserve funds have been built up to a total amount of £5,450,000, and the certificate to the balance sheet reads as follows: "A valuation of the investments as at 31st December, 1931, taking Stock Exchange securities at their middle market prices on that date, less accrued interest, is in excess of the figures appearing in the balance sheet, less the investments reserve funds taken into account." When translated into more popular language this means that the figures at which our investments stand in the balance sheet, that is, cost price or less, may be higher than the Stock Exchange quotations, but that any such difference is more than covered by the investments reserve funds in question.

I think as a company we hold a smaller proportion of unquoted securities than most insurance offices, and this puts us at once into a more difficult and at the same time a more healthy position. What I mean is that, with unquoted securities, such as mortgages, loans on rates, loans on lands and houses, considerable actual depreciation may and will exist, but there are no automatic means readily available of measuring it such as is given by market quotations in the case of quoted securities. Hence, depreciation on 80 per cent. of our securities is at once forced on our notice and obliges us to take immediate remedial measures, which, of course, is the only sound course to pursue in any case. We are fortunate as an office in having a comparatively large proportion of our assets in British Government securities, these forming nearly 40 per cent. of our total.

Another favourable type of security to which I would also call attention is the item, "Loans on the company's policies within their surrender values." This forms the most absolute security which an insurance company can hold, and the amount outstanding at £3,323,118 represents approximately a further 5 per cent. of our assets. It is a cause of great satisfaction to myself and the directors, as I do not doubt it will be to you, that the extraordinary depreciation in security values which has been so significant a feature of the past year has affected this company relatively so lightly and has been met with such comparative ease.

It is a cause for satisfaction that much of the depreciation of securities which existed at the end of the year, and for which we provided in full, has since been wiped out by a subsequent recovery and appreciation in values. Nevertheless, the full provision which we set up to meet it, although greater than is required at the moment, represents a substantial additional reserve in hand, and is a safeguard against further adverse developments should they arise in the future.

Naturally, with such abnormal depression in trade, we have experienced some loss of income from interest and dividends, but this may be fairly described as being of comparatively trifling amount, so that the average rate of interest earned on the funds has been well maintained. The maintenance of a good rate of interest is one of the most important elements in the prosperity of a life office subject always to the security of the capital upon which it is earned. It is a truism that high interest usually means inferior security, and the highest degree of skill, judgment and experience is required to follow a policy of investment which will ensure in a remunerative return of interest, coupled with the utmost security of the money invested.

PROFITS.

I would draw your attention to that paragraph in the report which indicates that the normal profits of the company have been fully maintained. The profits of a life assurance company arise from the three main sources of a higher rate of interest earned, a lower rate of mortality experienced, and a lower rate of expenditure in maintaining and increasing the business than are assumed in the calculation of the premiums. In branches other than life the factors are similar, though favourable mortality is substituted by favourable claims experience and interest is of less importance. These three sources of profit might be termed the golden tripod upon which rests the ability to provide bonuses to policyholders and dividends to shareholders. In logical sequence, bonuses to policyholders counter our existing connections and attract fresh ones, thus smoothing the path of the field staff in their daily work. Of the three legs of this golden tripod, I have touched upon two and indicated to you their strength; as to the third—mortality experience—I am glad that I can give an equally good account. The experience of any company in the matter of actual, as compared with expected, claims in any given year depends partly upon matters beyond control, such as epidemics or, perhaps, unfavourable climatic conditions; but in the long run the steady and constant factor affecting it is the care exercised in the selection of lives, or, otherwise expressed, in the underwriting. In this matter the company main-

tains a high standard, and the results are favourable in both of our life branches.

From what I have said you will see the justification for the statement that the normal profits of the company have been fully maintained. Notwithstanding this, however, we have, acting on the advice of our actuary, Mr Austin, considered it prudent to trim our sails somewhat, in consideration of the violence of the economic storm, and have modified, we hope only temporarily, the usual rate of bonus and dividend.

BONUS.

In the ordinary branch the rate for the year is 36s. per cent. of the sum assured as compared with 46s., which has been declared for the past three years. One need go back only a few years to the time when 36s. was reckoned a very good bonus, and this throws into relief the notably high figure to which our bonus has attained in recent years.

In the industrial branch we are continuing the policy inaugurated in the valuation as at December, 1929, of voluntarily allocating a substantial portion of the annual surplus towards providing a bonus to policyholders in that branch. A great step in granting greater benefits to these policyholders was taken in 1926, when we revised our tables of benefit in favour of all new entrants and made the increases retrospective by applying them to all policies then in force. That scheme increased the sums assured on the then existing business by over 9,000,000, which is probably a record figure for a benefit voluntarily granted to industrial branch policyholders in any year before or since. Our allocation this year to provide bonus amounts to £427,720, and the rates declared are 1s. for whole life and 9d. for endowment assurances of 1d. a week premium as compared with rates of 1s. 4d. and 1s. respectively in the past two years, for which more than a million pounds has been reserved. Fuller and more precise details of this distribution are set out in the report.

STAFF PENSIONS FUND.

We are again appropriating £100,000 from the surplus for the benefit of the staff pension fund, thus bringing the total to the credit of the fund to £1,158,568. In the course of the year no less a sum than £63,606 has been paid to pensioners from this fund, and the amount so payable grows and will normally continue to grow. I am very pleased, and I am sure you are equally so, that even in such a difficult year as we have passed through, whatever other allocations may be reduced, this, at least, is retained at the usual amount. Such an appropriation is a much more striking and useful mark of our appreciation of the work of our staff than any resolution of thanks, however genuinely and heartily expressed the latter may be.

AMOUNTS CARRIED FORWARD.

Other items in the allocation of surplus to which I would draw your attention are the amounts carried forward. These are £334,508 in the ordinary branch and £406,163 in the industrial branch, a total of £740,671, which may be compared with the corresponding total of last year of £224,343. The amount thus carried forward this year is nearly three and one-half times that of last year, and the increase is more than sufficient to have met the additional sum required to pay bonus at the same rates as last year had it been thought wise to do so. Such facts should be very reassuring to our existing policyholders in both branches as to the future bonus prospects of this company, and should be of great assistance to our field staff in obtaining new business.

EXTENSION OF CHIEF OFFICE.

The extension of the chief office building, to which I referred in my speech two years ago, is now practically complete. For various reasons the building operations have been subject to unforeseen delay, but the basement was finished and taken over by us some time ago, and provided the additional storage and other accommodation which had become urgently necessary. Whilst on this subject, may I say that if any shareholders would care to look round the chief office and gain some impression of the nature and extent of the work carried on here, we shall be very happy to provide the necessary facilities.

NATIONAL HEALTH INSURANCE.

A survey of our operations would not be complete without reference to the extensive and increasing participation of our company and its representatives in the vast field of National Health Insurance, and the results to which I desire to make brief reference reflect, as I think you will agree, great credit on the work of our staff and on the efficient organisation and direction of the National Amalgamated Approved Society, with which this company is associated.

During the year 1931 the number of new members admitted to that Society in the Pearl Section was 50,769, and through our representatives there was paid no less than 1,111,735 benefit payments

THE UNDERGROUND GROUP.

EFFECTS OF TRADE PARALYSIS.

LORD ASHFIELD ON THE OUTLOOK.

The annual meetings of the Metropolitan District Railway Company, London Electric Railway Company, City and South London Railway Company, Central London Railway Company, London General Omnibus Company, Limited, Metropolitan Electric Tramways, Limited, London United Tramways, Limited, South Metropolitan Electric Tramways and Lighting Company, Limited, London and Suburban Traction Company, Limited, and Underground Electric Railways Company of London, Limited, were held on Thursday last, at the Caxton Hall, Westminster, London, S.W.

The Right Honourable Lord Ashfield (the Chairman) said:—The year 1931 ran a chequered course, alternately encouraging and depressing us. It opened moderately well for our undertakings, as falling costs more than counter-balanced falling traffics, and in spite of another summer bereft of its fair share of sunshine, it fairly maintained its position, in comparison with the year 1930, until the close of the holiday season. Then the creeping paralysis in trade and industry made its insidious influence felt, and a rapidly accelerating fall in the volume of traffic has led to the total number of passengers, carried by the several companies represented here, falling by 28 millions. As spread over the whole year, the fall is relatively small, amounting to 1.2 per cent. only. The average receipt per passenger has also fallen by almost 1 per cent., which again is relatively small, but the combined effect of these small changes has adversely affected your fortunes.

GREEN LINE COACHES.

We have sought to take our part in the new demand of the public for motor coach services by the establishment and development of such services by a subsidiary company of the London General Omnibus Company, Green Line Coaches Limited, which provides services equivalent, as closely in all respects as may be, to private car services. Throughout the year we have operated 25 routes into or across Central London from and to points on the outer fringe from 25 to 30 miles away, and have carried over 12½ million passengers.

ECONOMIES IN EXPENDITURE.

The traffic receipts for the common fund companies have decreased by £291,000 in round figures. As against this decrease, there is a decrease in expenditure of £244,000. This latter decrease would have been greater if it had not been necessary to include in expenditure sums amounting to £83,000 in respect of the withdrawal from service and disposal of certain capital assets. Throughout 1931 we have indeed jealously watched our expenditure, knowing that we could not count from month to month upon our traffic receipts being maintained at the old level, but there has been no attempt to secure reductions in expenditure at the sacrifice of the services offered to the public. Rather, we have looked to secure savings from the improvements, which have been introduced in 1931 and previous years.

Small as is this share which the ordinary stockholders have in the gross revenue of the undertakings, it is upon them that the risk of success or failure eventually falls. The returns which they have received in the past have been less than moderate, for only in the last three years have they obtained dividends which approach a reasonable rate of interest upon their capital.

When I look back over these figures there is one item of expenditure which startles me by its magnitude, and which we can least of all influence. I refer to taxation. Even allowing for the exigencies of the times, it is surely unreasonable to find that motor omnibuses of the standard London type are taxed to the extent of £373 per vehicle per annum. This requires the fares of nearly two and a half passengers for every mile that the omnibuses travel. Last year the full brunt of the increased tax on petrol, imposed in the year, was not felt. For the present year, the total petrol tax will amount roundly to £1,000,000 for the London General Omnibus Company alone, and the full burden of taxation, local and national, to be met by the common fund companies will be almost £1,800,000. Taxation has indeed become the most grievous element in our budget. It is one that we can do nothing to lessen, for I doubt whether we could, by any alteration in our fares and charges, pass this burden on to the shoulders of the travelling public. In my judgment it amounts in the aggregate to a far greater burden than can equitably be imposed upon this group of companies, which are supplying public needs, are exercising all possible economies in their expenditure and are paying most modest dividends.

POLICY WITH REGARD TO STAFF.

As a consequence of the fall in our net revenues, we have reluctantly been compelled to change our policy with regard to the staff. In so far as we were free to take action, we have had to

discontinue our practice of carrying surplus and redundant members of the staff, until, by normal wastage, they can be reabsorbed into the establishment. This led to the dismissal of 377 members of the staff towards the close of 1931, and to the further dismissal of 188 since. It is with considerable regret that the management have had to have recourse to this means of partially redressing the balance of your affairs, a means which, I fear, may have to be pursued further in the coming year.

We have also had to notify the trade unions that, in our view, some deduction must be made in the earnings of our employees secured under their agreements with us. Our proposals have been framed with moderation.

Satisfactory progress is being made with the new extensions, and it is anticipated that the bulk of them will be brought into use during the year. They will, we hope, begin to earn a margin of revenue towards their cost while contributing something towards the earnings of the existing railways. They should prove a stimulus to Underground travel generally. Nevertheless, before we can resume in the future our policy of expansion and development, we must wait until the volume of traffic to be carried in Greater London once more is restored to its old level and grows. This change in our policy may bring with it difficulty and disappointment, but under present conditions our efforts must be directed to conserving our position, and this policy may involve many changes in our outlook and practice, changes foreign to our spirit and possibly disturbing to our organisation.

TRAMWAY UNDERTAKINGS.

Leaving the common fund companies, I pass to the companies in the London and Suburban Traction Group. These mainly relate to tramways. The year 1931 has shown little change in their position. Yet in this year the first substantial step has been taken to modernise and re-equip them. During the year 17 miles of tramways on the London United system have been abandoned and replaced by services of trolley buses. Their full operation has only extended over three or four months, so that I cannot give you any conclusive figures as to the results, but all the indications show that, with the improved and enlarged service worked, there has been increased traffic and reduced costs sufficient at least to justify the fresh capital expenditure. Forty-six new tramcars have been placed on the Uxbridge Road route with some improvement in receipts, though, owing to the factories along the line of route employing far fewer people, the improvement is less than was anticipated. At the same time, 54 new tramcars were put in operation on the Metropolitan Electric Tramways system, but they are insufficient to influence appreciably the results for that company, for again it serves an area which is predominantly industrial in character and therefore seriously affected by the spread of unemployment.

THE OUTLOOK.

The results for the year, while disappointing to us, are better than at one moment we expected, but unfortunately the factors, which operated to depress our fortunes in 1931, still continue to operate in 1932. The record of 1931 shows that they gathered momentum towards the close of the year. We therefore start the year 1932 at a disadvantage, and I should be concealing from you the true position of your affairs if I did not warn you that if these factors continue unabated, the results for 1932 cannot be as good as those for 1931. We shall take all such steps as are at our disposal to prevent any further decline in your fortunes, but the future and its prospects are largely out of our hands. We hope, as you all hope, that measures which are now being taken will tend to increase the commercial and industrial prosperity of our country, to alleviate the crushing burden of taxation and to encourage enterprise and effort. If that proves to be so, our anxiety will be allayed, for the revival of trade and industry must inevitably have a beneficial reaction upon our undertakings.

THE LONDON PASSENGER TRANSPORT BILL.

When I met you in general meeting at this time last year, I indicated that the proposals of the Government for dealing with the subject of London passenger transport were still unformulated, but soon afterwards the Government Bill was introduced and the terms of exchange to be given to our stockholders for the acquisition of their undertakings were provisionally settled. These proposed terms were placed before you at a meeting on May 1st last and received your approval.

I will not trouble you with the details of the Parliamentary proceedings on the Bill, only remarking that I hold as strongly as ever that there can be no true and permanent solution of the problem of London passenger transport without a unification of ownership, administration and finance, in capable and independent business hands, extending to all the local passenger transport undertakings within a widely defined London Traffic Area. The reports were unanimously adopted.

THE BRITISH ASSETS TRUST, LIMITED.

SUCCESSFUL RESULTS OF THE YEAR.

20 PER CENT. DIVIDEND MAINTAINED.

The thirty-fourth annual general meeting of the shareholders of the British Assets Trust, Limited, was held, on Wednesday, the 24th instant, at Gartshore Hall, 116 George Street, Edinburgh, Mr A. W. Robertson Durham, chairman of the company, presiding.

A representative of the secretaries having read the notice calling the meeting and the auditors' report, the Chairman said:—

I now submit for your approval the report and accounts for the year ended January 15, 1932, which have been in your hands for some time now, and which, with your permission, I propose to hold as read.

The past year, as you all know, has been one of extreme depression all over the world, and it is not surprising, therefore, that our valuation of investments at the close of the year shows a depreciation on the balance-sheet figures, and that our revenue shows a considerable setback.

As stated in the report, many of the quotations upon which the valuation is based are largely nominal. Even in New York, where in normal times there is no difficulty in dealing in thousands of shares, it is often difficult under present conditions to deal in hundreds; and in London it is difficult to deal in more than small lots without affecting the market. In these circumstances, with a large amount of forced selling, it can be readily understood that the severe fall in prices which has taken place is, in many cases, quite irrespective of intrinsic merits.

For each of the previous eight years we made substantial new issues of capital, with the result that our subscribed capital has risen from £700,000 to over £3,000,000, and our debenture capital has increased from under £600,000 to nearly £2,750,000. Under prevailing conditions we have not made any issue of capital during the year beyond the small issue of ordinary shares made at the close of last year, and we are not this year making any offer of ordinary shares to the shareholders. The only item in the balance sheet that would appear to call for comment is the item of cash, which amounts to £30,172, against cash and Call Loans in the previous balance sheet amounting to £145,727. In addition to cash, however, we also held £235,000 Treasury bills at January 15, 1932, included under investments, so that the company is still in a very liquid position.

REVENUE AND DIVIDEND.

The gross revenue for the year amounted to £421,686, which shows a contraction of approximately 5.2 per cent. as compared with the previous year, and leaves fully 29 per cent. earned on the ordinary capital. Up to the close of the previous year the earnings available for the ordinary capital had shown a material increase each year for the past five years, notwithstanding that during each of these years we made issues of ordinary shares to the shareholders on bonus terms. We are glad, however, to be able to recommend a dividend of 20 per cent., the same as that paid for the previous twelve years, and to add a substantial sum to the amount carried forward. With regard to the future, it is impossible to give any confident forecast. Under existing world conditions past experience gives a little reliable guidance, but we have prepared what we think is a conservative estimate of our income for the current year. While this shows a further decrease in income as compared with the year just ended, it still shows a surplus over the usual 20 per cent. dividend.

DISTRIBUTION OF INVESTMENTS.

It has not been our practice in the past to refer to the distribution of our investments, but in these abnormal times you may like to have some particulars with regard to this. Excluding our holding in the Second British Assets Trust, Limited, in which, as you know, we hold a very large proportion of the ordinary capital and in which the distribution of investments is very much the same as in this company, the geographical distribution of our investments, based on the book cost, is as follows:—

	Per cent.
Great Britain	28.4
United States of America	48.0
British Dominions and Colonies	9.9
Continent of Europe	6.1
Central and South America	6.0
Other Countries	1.6

And the percentages in the various classes of securities is:—

	Per cent.
Bonds and Debentures	10.3
Preference	29.0
Ordinary and Deferred	60.7

You will be interested to hear that there is comparatively little difference as shown by the valuation in the depreciation in each of these three classes, and that we believe that on the whole our holding of a large part of our capital in ordinary shares has been fully justified.

REDUCED RATES

for LIFE ASSURANCE

for the NEXT FIVE YEARS

for those who want to obtain immediate and adequate life assurance protection, but whose present incomes are either temporarily restricted or small in relation to future prospects.

Write to-day for full particulars (state age for quotation purposes) to THE

LIVERPOOL & LONDON & GLOBE
INSURANCE COMPANY, LTD.

LIVERPOOL (Head Office)
1, Dale Street.

LONDON (Chief Office)
1, Cornhill, E.C.3.

As stated in the report, Mr Harold G. Sharp, F.F.A., F.I.A., joined the board during the year, and his appointment now falls to be confirmed. I need hardly say that I think we are fortunate in having secured his services as a director.

The Chairman completed his remarks by moving the adoption of the report and accounts and the payment of the dividend recommended therein. The motion was seconded and adopted.

THE SCOTTISH LIFE ASSURANCE COMPANY, LIMITED.

RECORD NEW BUSINESS.

The annual meeting of the Scottish Life Assurance Company, Limited, was held, on the 23rd instant, in Edinburgh.

His Grace the Duke of Atholl, K.T., D.S.O., presided.

The Chairman, in moving the adoption of the report, said that his lot was an enviable one when contrasted with that of the chairmen of most commercial companies, because, in spite of 1931 having been one of the darkest years in the financial history of the world, they were able to report that their new business was greater than in any previous year. In these dismal days this was a cheering statement, and he thought that one reason for this pleasant state of matters was that the public were recognising, to an extent they never did before, the merits of life assurance as providing a secure investment for savings and an unsurpassable method of providing for those dependent upon them. Their countrymen received a severe shock when the perilous condition of the nation's finances was revealed to them, and the sobering effect of that alarming experience has caused many to pause and to reflect upon their own finances, upon the position in which they and their dependants stand, and upon the necessity of providing for the future by the one supreme method—Life Assurance.

NEW ASSURANCES.

The new assurances granted were for £1,514,000, and of that amount £107,000 was reassured with other companies, leaving a net new business of £1,407,000. This constituted a record for the office, and was a tribute to the popularity of the company. The net life premium income amounted to £511,000, the ordinary annual premium income having increased by over £17,000. Interest on life funds after deduction of tax was £297,000, being an increase of £12,000. The rate of interest, after deducting tax, was £4 14s. 3d. per cent., as compared with £4 14s. 7d. per cent. in 1930. A reduction of only 4d. was quite remarkable in a year which experienced an increase in the income tax and a heavy fall in the interest income of many institutions. Claims by death amounted to £153,000, being only 55 per cent. of the "expectation." Under maturing endowment assurances £211,000 was paid. The ratio of expenses of management (including annuity expenses) to premium income was 15.6 per cent. The total income from all sources was £944,000, and the total outgo was £874,000. The life funds increased to £8,582,000. The dividend was increased from 4s. to 5s. per share less tax.

SUCCESS IN YEAR OF DEPRESSION.

In conclusion, he stated that they must all feel impressed by the successful work of the office during the past depressing year, but their whole history as a company was such that they could heartily re-echo the recent words of His Royal Highness, the Prince of Wales: "Depression and apathy are the 'Devil's own'; they are not British; away with them."

Sir John Lorne MacLeod, G.B.E., LL.D., chairman of the board, seconded, and the report was adopted.

BOVRIL LIMITED.

INCREASED HOME SALES—EXCHANGE PROBLEMS.

The thirty-fifth annual general meeting of Bovril Limited was held, on the 24th instant, in London, Lord Luke of Pavenham (chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said that in the British Isles the sales of Bovril in 1931 exceeded those of 1930, but the export sales had been heavily down. It was, however, a relief to note that since the end of September last the export sales had each month shown an improvement upon the sales for the corresponding month in the previous year.

He was beginning to believe that the vagaries of exchange were a worse hindrance to overseas business than even high tariffs. In the case of the latter they did have something fixed to base calculations upon, but since Governments began to interfere with the exchanges ruling in their respective countries, there had been little market in forward exchange, and unless one was able to deal in exchange for a future date, it was not safe to quote for a forward contract in the currency of the buyer, and they could realise what a hindrance that was to business. They had already seen by the report how they had been hit by depreciation in overseas stocks, which was largely due to the collapse and difficulties of exchange. They had provided for this depreciation partly out of the year's profit, but to a far greater extent by the transfer of £150,000 from reserve.

"Ploughing through" the sea of difficulties which every business man had to face in 1931 had been strenuous work, and they were the more proud of such success as they had had, even though, measured by net profits, it might not equal the glories of previous years.

MEN WHO RUN THE WORLD'S BUSINESS.

The business of the world was conducted—planned, organised and managed—by a comparatively small number of people. Few acquired the balanced judgment that was essential for the successful handling of large-scale affairs. The younger generation now coming on contained, he believed, as many who were capable of acquiring that all-important quality as any of its predecessors, but there was more difficulty in singling them out, in separating the wheat from the chaff.

He thought this arose from two causes. Broadly speaking, the younger generation combined more self-assurance regarding its own capabilities with a less keen sense of personal responsibility, and it was therefore more ready to risk a gamble on the chance of attaining a high position.

He believed this accounted for many of the disastrous wrecks that had occurred throughout the business world.

Their advertising brought them a large crop of comments from the public, mostly flattering, but sometimes critical and sometimes of a humorous character. An American journal had recently published, under the title "Britain's Bottle," a lively, if somewhat highly coloured, history of the company. The writer attributed much of the success of Bovril to the directors' recognition of the fact that "The sense of fun never sets on the British Empire."

For twenty-five years, he said, Bovril had not only catered to the British appetite for beef, but had been almost an almanack of British humour, and he instanced some of their recent slogans, including "Drink Bovril—once it's in you it's sinew," and the Mr Bovril and Mrs Bovril series.

A complete set of the slogans published by the company would be a lengthy document, but mention might perhaps be made of a few of the less well known ones, such as "Don't only hope for the best—take Bovril," "Bovril is warmest when it's coldest," and "The Doctor never docked her Bovril."

The Duke of Atholl (vice-chairman) seconded the resolution.

SIR JAMES CRICHTON-BROWNE'S SPEECH.

Sir James Crichton-Browne said that as they had gathered from the report which had been circulated, and as they had been told, the directors regretted that the call of the National Government had deprived the company—for a time at any rate—of the services of Lord Hailsham, on the board. It was a great advantage to have an ex-Lord Chancellor on the board, but Lord Hailsham had so indoctrinated the other directors with his legal habits of thought that they might depend upon it that although departed, he was still with them.

They would, when the good times came, have a good deal of debility and nervous exhaustion and neurasthenia to contend with, and then he did not doubt the body building and body repairing and sustaining power of Bovril would be widely recognised. He believed in the fibre of the nation, but that fibre must be nourished, and the brain and nervous systems were structures requiring nourishment of a special kind.

The report and accounts were unanimously adopted.

WANDSWORTH AND DISTRICT GAS COMPANY.

COMPANY'S STRONG POSITION.

The ordinary general meeting of the Wandsworth and District Gas Company was held, on the 23rd instant, at the Hotel Metro-pole, W.C., Mr Frank H. Jones (chairman and managing director) presiding.

The Chairman, in moving the adoption of the report and accounts, said: Before I turn to the details of last year's history of our company I will tell you how your company appeals to some people. During last year I asked three gentlemen of great experience how they would judge, shortly, the quality of a gas company. One said the price of gas was most important; another said he would look at the balance sheet and see what assets there were compared with the liabilities of the company; and the third answer was: The market value of the company's stock. I venture to think that, singly, these views were not quite the real test, but put all three tests together, and I think you will get a good general idea of a company. Apply these three tests to the Wandsworth and District Gas Company, as naturally I did, and you will find our cheapest gas is 7.6d. per therm, and the average price from the Thames to whole of our district. Our balance sheet shows that our reserve fund, special purposes fund, and pension fund are represented very largely by British Government securities, and we own a fleet of steamers capable of bringing all the coals required by the company from the North to our Wandsworth Works. Our ordinary stock stands at about £114 per cent. I give you these facts, and, knowing myself how they compare with other South of England gas companies, I leave you each to judge, and I do not fear the judgment. I say again, even if I may bore you, that when we forget that cheap gas has largely made this company, and will maintain its prosperity, we shall be going on the "down line." also makes our "carry forward" larger. We have competition from electricity, but we have a new form of competition from imported oil, which is in some places displacing gas and coke, both products of British coal. "Buy British" is not always remembered by some people, and I can see a position arising that will suffer.

The resolution was carried unanimously.

Government Returns, &c.

NATIONAL ACCOUNTS.

The total ordinary revenue for the week ended February 20, 1932, amounted to £26,868,000 against ordinary expenditure of £10,682,300. After allocating £485,000 to Sinking Fund and having allowed for a decrease in Exchequer Balances of £88,810, the operations for the week, as shown below, reduced the National Debt by £15,789,000 to £7,638,675,000:—

(000's omitted.)	
National Savings Certificates	+ 100
Public Department Advances.	— 2,750
Income Tax	— 11,849
Excess Interest of Nat. Saving Certificates	— 750
Issues to Nat. Debt Commissioners	— 590
	+ 100
	— 15,889

A complete analysis of the National Debt at December 31, 1931, was printed in the *Economist* of January 9, 1932.

Total declared value of imports	3,620,620	Total declared value of exports	4,447,000

Messrs Samuel Montagu and Company write on February 24, 1932, as follows:—

GOLD.

The Bank of England gold reserve against notes amounted to £120,766,481 on the 17th instant, as compared with £120,765,282 on the previous Wednesday. The a.s. "Viceroy of India," which sailed from Bombay on the 20th instant, carries gold to the value of about £1,150,000. Offerings of gold in the open market are still being acquired for a destination not disclosed.

Quotations during the week:—

Average	119s. 7-3d.	14s. 2-5d.

SILVER.

Silver has shown a firmish tendency during the week, sellers being disposed to hold back in view of the situation in Shanghai. Buying for the Continent and China bear covering caused prices to advance steadily until 19 1/2d. for cash and 20 1/2d. for two months' delivery were reached yesterday; owing to hesitation on the part of buyers, there was a reaction to-day, quotations being fixed at 19 1/2d. and 19 1/4d. for the respective deliveries. America has been inclined to work moderately both ways, but the Indian Bazaars have not been active. The market has a steady appearance at the moment, but is likely to be influenced largely by developments in the Far East.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 15th instant to mid-day on the 22nd instant:—

IMPORTS.		EXPORTS.	
	£		£
United States of America	36,163	Germany	83,087
Canada	19,560	Belgium	29,138
British India	10,989	United States of America	19,235

ENGLISH ELECTRIC COMPANY.—Trading profits for 1931 amounted to £209,394, against £2,857 in 1930, and are the highest since 1924. A sum of £50,000, against nil, is allocated for depreciation; the expenses incurred in the removal of plant and stocks amounting to £31,187, have been written off, and after providing for rent and interest, &c., the net profit is £34,086, against a net loss of £103,795. Of the latter figure, £72,184 was charged against reorganisation account, and the balance of £31,611 is deducted from the 1931 net profit, leaving £2,474 to be carried forward. No dividends are to be paid on either the 6½ per cent. non-cumulative (until 1933) preference or the ordinary shares. The last payment on the preference was in 1926, while the ordinary have not received a dividend since the 5 per cent. paid in 1924. The meeting will be held at Connaught Rooms, W.C.2, on March 3rd, at noon.

IMPERIAL AND INTERNATIONAL COMMUNICATIONS, LTD.—The following are the estimated traffic receipts for the months of January, 1931 and 1932:

	1931.	1932.	Rise or Fall.
January	£ 412,908	£ 404,411*	— 8,497

* The sum of £20,000 must be deducted from the message receipts for January, 1932, in making a comparison with January, 1931, owing to changed conditions of sharing traffic.

Commercial Reports.

MARKET SUMMARY.

The movement of gold prices at the principal international commodity markets has been irregular. A slight reaction has become noticeable in those commodities which were bought heavily by speculators a fortnight ago. Chief among the latter are non-ferrous metals. On the whole, however, a large part of the advance was retained. Rubber has established a new low level in New York at 3½ cents per lb. Cotton, on the other hand, has advanced a few points. Among cereals, wheat, maize and rye are scarcely changed on the week, but oats were a little cheaper. Coffee has been steady and cocoa continued to rise. In view of the uncertainty of the results of the Cuba-Java negotiations, the price of raw sugar slumped heavily. Sterling quotations of commodities which lend themselves to grading and therefore to international arbitrage, continue to move in sympathy with international prices. The duties which will come into force on March 1st are already discounted in commodity markets. There has been a substantial advance in the price of many commodities in this country. According to reports from various industrial centres, the heavy industries, including coal-mining, are making no headway. On the other hand activity in the textile trades has on the whole been maintained.

THE COAL TRADE.

SHEFFIELD.—Supplies of best steams for export are excessive, and there has been a weakening of prices, quotations having declined to 15s. to 16s. f.o.b. There is a fair inquiry, but little business to be done at the moment. Although the surplus coal available for passing at the moment. The open market has been curtailed by the quota reduction, owners still hold considerable stocks. The call for industrial and domestic fuel is still below normal, nor are there any signs of early improvement in these sections of trade. South Yorkshire best house commands 23s. and 24s. at pits. Consumption of furnace coke has declined lately. It is worth 12s. or 12s. 6d. at ovens.

WORKINGTON.—The colder weather is responsible for a liveness in the coal trade that has not been experienced previously this winter. Despite the Lancashire and Scottish competition, owners were able to sell Irish merchants all the coal that they could produce, and in mid-week shippers were actually waiting to complete cargoes. The demand is almost entirely from Ulster, comparatively little coal being required by the Free State. Local land-sale is brisk, but industrial fuel continues to be in moderate request. Prices are steady, with best round 22s. 6d.; washed doubles, 21s.; washed singles, 19s., all f.o.b.; smalls, 16s. 6d. per ton; best house coal, 31s. 8d.; and house nuts, 30s., at station. Gas coal, 28s. per ton. West Coast coke is from 16s. 6d. to 17s. 6d. per ton.

GLASGOW.—The Scottish coal trade remains in a depressed condition. Demands generally run on quiet lines, and the collieries are experiencing considerable difficulty in disposing of their outputs. All classes of coal are plentiful, with prices inclined to droop, the only exception being Lanarkshire splint material, the output of which is limited. For the shipping trade, prices are approximately as follows (f.o.b. district ports): LANARKSHIRE.—Elliott best, 14s. 3d.; second, 14s. 6d.; Hartley, 15s. 6d.; steam, 13s. 13s. 3d.; trebles, 12s. 6d.; doubles, 10s. 9d.; singles, 9s. 6d.; pearls, 9s.; dross, 9s. 12s. 6d.; screened navigation, 16s. 6d.; doubles, 10s. 9d.; third-class steam, 11s. 6d.; trebles, 12s. 6d.; Prime steam, 12s.; singles, 9s. 6d.; pearls, 9s. LOTHIAN.—Prime steam, 12s.; second-class steam, 11s. 9d.; trebles, 12s.; doubles, 10s. 9d.; singles, 9s. 6d.; pearls, 9s. Ayrshire unscreened navigation, 16s.; jewel, 17s.; steam, 13s.; trebles, 12s. 6d.; doubles, 11s.; singles, 9s. 9d.; pearls, 9s.; dross, 9s.

CARDIFF.—The only important incident in the South Wales coal trade this week has been the official announcement of the withdrawal of the French 15 per cent. surtax on British coal as from February 25th. An announcement to this effect was made in the House of Commons on Tuesday, and nominally it means a difference of over 3s. per ton in the declared import prices of South Wales coals in the French market. To what extent, however, the demand for South Wales coal will be stimulated remains to be seen, but there

is little likelihood of any material expansion in local shipments to France owing to the operation of the licensing system under which supplies from the United Kingdom are limited to a quota of 64 per cent. of the monthly average exports in the three years 1928-30, and to the price under-cutting methods of Belgian, Dutch, German and Polish competitors. In January the exports of coal to France, according to the French official returns, were equivalent to only 66.8 per cent. of the monthly average in the datum period, although the nominal quota in that month was 72 per cent. The market otherwise has been featureless, and shipments continue below those in the corresponding period last year. The Great Western Railway Company's returns give a total of only 363,315 tons in the foreign and the coasting trades, compared with 363,735 tons the previous week and 421,289 tons a year ago. Quotations are ruling at the minimum schedule figures for practically every grade. The following are the current approximate quotations: Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 4½d.; best dries, 18s. 6d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steams, 13s. 6d.; anthracite best large, 30s. to 33s. 6d.; Red Vein large, 22s. 6d. to 27s. 6d.; machine-made cobbles, 40s. to 48s. 6d.; French nuts, 40s. to 48s. 6d.; stove nuts, 39s. 6d. to 43s. 6d.; rubbly culm, 8s. 3d. to 8s. 9d.; foundry coke, 32s. 6d. to 36s.; patent fuel, 19s.; pitwood, ex ship, 20s. to 22s. 6d.

IRON AND STEEL.

MIDDLESBROUGH.—There is little new to report in the iron and steel trades in this district, writes our correspondent, and the anticipations that as soon as the tariff measures were complete a rapid expansion in business would occur, are slow to mature. The feeling on the market is still optimistic, but as far as Cleveland foundry iron is concerned little fresh business has come to hand, such as would warrant extra furnaces being put into operation, and it is evident that it will be some time yet before any substantial improvement is experienced. The present make of Cleveland iron is only small and is practically all absorbed. Makers are offering substantial concessions in prices to Scotch consumers in order to secure more trade from that quarter, which has been taking only small quantities from this district lately. For other destinations the old official prices are maintained, viz.: No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; and No. 4 forge, 57s., f.o.b. or f.o.t. A moderate business was reported at these figures at the weekly market on Tuesday for early delivery to home consumers. For export there is very little doing owing to the severe Continental competition in most consuming centres abroad. In hematite, also, the demand lags, and purchases are practically confined to early supplies. There are only five furnaces producing this kind of iron in the district, but substantial stocks are held at some works. The price is inclined to weaken, and although 64s. is the general quotation for mixed numbers, 3d. to 6d. less has been accepted for early prompt lots. Shipments of pig iron are a little ahead of last month, the total of all kinds cleared to 23rd instant being 9,120 tons, compared with 7,200 tons to same date in January. In the finished departments new contracts are still badly needed, the orders in hand in some of the heavy lines being insufficient to keep the mills fully employed, and short time is being worked. Sheet mills are better employed, the demand especially for black sheets having been on an improved scale recently. All steel prices are unchanged from last week. The ore market is devoid of animation. There are no transactions to fix prices, consumers being fully covered and off the market. Best rubio is nominally 16s. 6d. c.i.f., and the freight Bilbao/Middlesbrough for early tonnages about 5s. The demand for coke does not improve and ordinary blast-furnace qualities are offered at 16s. 9d. delivered consumers' works. The number of blast furnaces in operation in the district is unchanged at 17.

SHEFFIELD.—Extreme quietude continues in heavy steel, steel castings, engineering and crucible steel, but there is increasing activity in stainless metals, cold-wrought strips and certain types of tools and cutlery. In the lighter branches there are numerous inquiries. Scandinavian merchants are visiting England with a view to buying here various hardware lines hitherto obtained from Germany. There are good prospects of increased trade with Denmark and Holland. The 10 per cent. duty on Swedish iron and steel, and certain ferro-alloys produced in Scandinavia, is unpopular with steel makers, who are hurrying up fresh supplies for delivery before March 1st. Ferro-chrome, the essential ingredient of stainless steels, is not made in England, and the duty is equal to from £5 to £7 per ton. Cutlery are paying increased prices for their celluloid handles, boxes and cases and paper. It is thought that duties and exchange differences will eliminate a number of articles sold in the sixpenny bazaars. Members of the silver and cutlery trades report a considerable reduction in sales of expensive goods, which are more or less of a luxury character. Local manufacturers are organising to capture more of the trade with Russia than has been coming to Sheffield in the past, and the

WORKINGTON.—The North-west Coast hematite pig-iron trade is again in a poor way. Depending as it does largely upon the consuming power of the steel industry in the district, it is severely hit by the closing down of the steelrolling mills at Barrow and by the cessation next week of operations in the mills at Workington. Half the make at times when the steel industry is fully employed goes into local consumption, so that there cannot be any revival in the iron trade until orders for railway material are sufficient to keep Barrow and Workington engaged. As stocks amount to not less than 100,000 tons, the competition for orders in the open market is severe. There are, it is true, substantial Midland needs to satisfy, and the Continent is a fairly considerable buyer of special qualities of iron, but Scotland and South Wales have only meagre orders to place. Business, therefore, is dull, and only of a hand-to-mouth character. Prices have a drooping tendency, but nominally Bessemer mixed numbers remain at the old quotations of £3 14s. 6d. per ton at Glasgow; £4 1s. at Manchester; £4 3s. 6d. at Sheffield; and £4 4s. 6d. at Birmingham, with the customary 2s. 6d. to 5s. per ton above these figures for special and semi-special descriptions of iron. Malleable iron is a slightly improved trade at £5 17s. 6d. per ton delivered at Birmingham, but there is little doing in ferro-manganese at from £10 15s. to £11 5s. per ton home. There is a fair local demand for native ore, at from 16s. to 18s. per ton, but East Coast and Scottish requirements are small.

GLASGOW.—Unfortunately, business remains exceedingly quiet in practically every branch of the iron and steel industry in the West of Scotland and competition for such work as is on the market is very keen. It is announced that a new blast furnace has been installed at the Shotts Iron Works, and it is estimated that this will give employment to some sixty men in a district where there is a great deal of unemployment at present. Large quantities of Continental semis are on offer at prices which cover for a 10 per cent. import tax but which are only a few shillings over the prices quoted previously and which left any duty to be covered by the buyer. Little business, however, is being done, as most makers are well stocked and the export demand for the finished material is very moderate. Business in the sheet trade is fairly steady, particularly for thin blacks. In the tube trade there is no improvement.

CARDIFF.—On the Swansea Metal Exchange on Tuesday conditions in the tinplate market were reported to be fairly steady, with prices ruling at from 14s. 3d. to 14s. 6d. per basis box, at from £9 to £9 5s. per ton for galvanised sheets, at between 80s. and 82s. for foreign steel bars, and at £5 for Welsh steel bars. At a special meeting of the tinplate makers a scheme for output and price control was resuscitated. The original intention to limit regulation to the adjustment of supply to demand was abandoned, and the decision was reached to wed the principle of price regulation to that of output control, and a minimum of 16s. per basis box was agreed. The scheme is supported by all the South Wales tinplate manufacturers, and this is the first occasion on which complete unanimity has been secured.

OTHER METALS.

TIN.—The past week witnessed the inevitable reaction from the advance which took place a fortnight ago as a consequence of the reorientation of currency policy in the United States. The market in tin has been quiet, both in London and New York. In New York the metal was quoted at 22-15 cents per lb. on Wednesday, against 22-30 cents per lb. a week ago, and 22 a month ago. Wednesday's official closing quotations in London, in terms of sterling for "standard" cash, at £139 5s. to £139 7s. 6d. per ton, compares with £140 10s. to £140 15s. on the corresponding day last week. Stocks in London and Liverpool at the end of last week, at 33,241 tons, show a decrease of 49 tons on the week.

COPPER.—In the absence of active buying, copper declined slightly during the past week. On Wednesday, "Domestic" spot was quoted officially at 6-250 cents per lb. in New York, against 6-375 cents a week ago, and 7-25 cents a month ago. Wednesday's official closing price for "standard cash" in London, in terms of sterling, at £35 13s. 9d. to £35 16s. 3d., compares with £38 15s. to £38 17s. 6d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 19,930 tons, show a decrease of 158 tons, while stocks of rough copper, at 975 tons, are 255 tons larger.

LEAD.—The London market in lead has been dull and prices have been slightly lower, but the New York quotation remained unchanged. In New York the metal was quoted at 3-75 cents per lb. on Wednesday, against 3-75 cents a week ago and 3-75 cents a month ago. Wednesday's official closing quotation for "soft foreign" in London in terms of sterling, at £14 2s. 6d. per ton for shipment during the current month, compares with £15 on the corresponding day last week.

SPELTER.—This metal was freely offered during the past week, and prices suffered a sharp setback. The lower level stimulated buying, and a considerable quantity of spelter changed hands during the week. Wednesday's quotation in New York, at 2-85 cents per lb., compares with 2-825 cents a week ago and 2-90 cents a month earlier. Wednesday's official closing quotation in London in terms of sterling for "good ordinary brands" was £13 5s. per ton for shipment during the current month, against £14 8s. 9d. a week ago.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals the quotations for aluminium and nickel have been maintained at £95 per ton and at £240 to £245 respectively. Foreign antimony advanced from £28-228 10s., ex warehouse, to £30 10s. Quicksilver increased from £17 17s. 6d.-£18 per flask to £18 10s.-£19. Platinum, at £11 1s. per ounce, shows a decline of 3s. per ounce.

TEXTILES.

THE COTTON TRADE.—Liverpool.—Imports for the week February 18th to 24th (inclusive) are 53,165 bales, of which 46,886 bales are American; 659 Brazilian; 134 Peruvian; 5,216 Egyptian; 50 African; and 220 East Indian.

Manchester.—The general inquiry in the market has continued more encouraging and in certain sections an increased business has been done. The larger turnover during the last two or three weeks has enabled some producers to extend their order lists. An improved demand has again been met with in piece-goods for India, and although many of the contracts have been for small lots the trade done has been on a larger scale than for some time back. Most of the orders have been for Calcutta and Karachi and light goods and fancies have attracted particular attention. Further buying has also taken place for Rangoon. The situation in China still causes anxiety, but offers have come through from Shanghai and Hong Kong in standard makes and specialties. Some useful lines have been booked for Singapore and the Straits Settlements. More bids have been reported in bleached shirtings for Egypt. Cloths suitable for printing and dyeing have moved off fairly well for South America and certain European countries. Makers of home trade fabrics have met with an increased inquiry. The turnover in American and Egyptian yarns has broadened, but there are still loud complaints as to the prices ruling. Steady buying continues to take place in export yarns for India.

THE WOOL TRADE.—Bradford.—Prices for merinos, writes our correspondent, have not been maintained at the highest point. Superfine wools have been chiefly involved in a slight ease in prices. Quality has always been recognised as a good guide to the standard of values. Even if it is recognised that there has been a change in demand, it is not encouraging to see a weakening in superfine wools and bare quality tops selling in Bradford at as much as standard combings. There is also the fact that medium and low crossbreds are not receiving any great attention, and it can be considered satisfactory if they hold their own at the London series which will commence next Tuesday. Of the total quantity carried over from the last series (61,000 bales), 38,000 bales were crossbreds, and the total quantity announced for the coming series (147,600 bales) includes 70,000 bales New Zealand and 18,500 bales Puntas. No doubt among these wools there will be a good proportion of fine crossbreds, and greasy halfbreds and comeback wools may be expected to sell readily. Continental buyers cannot be expected to exert any exceptional pressure upon the bidding, and any real recovery in values is largely dependent upon the lighting of the world depression. Topmakers in Bradford are awaiting developments, and quotations are steady in face of stronger cables from Australia. For the past fortnight it has been impossible to sell any weight without accepting less money, except in the case of a little spot demand for fine crossbreds. There are now some good inquiries for average merinos.

THE GRAIN MARKETS.

WHEAT.—The improvement in the international wheat situation has been maintained. Turnover has again been heavy, the principal sellers being Canada, Australia and Argentina. The growing scarcity of wheat in Continental countries has been confirmed by further large purchases made by France and by the substantial increase made in her foreign wheat quota by Italy. The shipments of Australia and Argentina are therefore not causing any congestion on the market. Russia is shipping very little wheat, and it reports of a shortage in certain regions are correct, it appears probable that she will not again export large quantities this season. On Wednesday, "March" futures were quoted at 58½ cents per bushel in Chicago, against 57½ cents on the corresponding day last week, and 55½ cents a month ago. Quotation in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 36s. 6d. per 996 lbs., as compared with 36s. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 34s. 3d., against 33s. 6d.; No. 3 Northern Manitoba, Vancouver, ex ship, 33s., against 32s. 6d.; Russian, on 29s. 6d. to 30s. 6d., against 28s. 3d. to 29s. 6d.; Australian, ex ship, 29s. 6d. to 30s. 6d., against 29s. 3d. to 30s. a week ago.

WHEAT FLOUR.—The market in flour has been firm and active. North American shipments, at 255,000 sacks, showed an increase of 147,000 sacks as compared with the previous week. Of this total, only 60,000 sacks have been consigned to Europe. Quotations in London, Wednesday: Straight run, delivered country, delivered London, 26s., against 25s. 6d. last week; 27s. to 29s., against 27s. to 29s.; and Australian, ex store, 21s. 6d., against 21s. a week ago.

BARLEY.—Business in barley has been quiet. Quotations were firm, and there has been little barley on offer from Russia and Danubian countries. On Wednesday, "May" futures were quoted at 43 cents per bushel in Winnipeg, against 40½ cents last week and 40½ cents a month ago. Quotations in London, Wednesday: "English feeding," f.o.r., per 448 lbs., 26s. to 27s., as compared with 26s. to 27s.; Russian, landed, 25s. 6d. per 400 lbs., against 25s. a week ago.

OATS.—There has been little activity in the market for oats, and quotations in Chicago show a decline on the week. "May" futures, which last week stood at 25½ cents per bushel in Chicago, sold at 22½ cents per bushel on Wednesday this week, against 25½ cents a month ago. Quotations in London, Wednesday: "River Plate," landed, 18s. 3d. to 18s. 6d. per 320 lbs., as compared with 18s. 6d. last week; "River Plate," ex ship, 17s. 3d., against 17s.; "Chilean White," landed, 27s., against 27s. a week ago.

MAIZE.—According to Mr G. Broomhall, Argentina has already exported 41,840,000 quarters of a total available for shipment during the current season of 44,500,000. Reports on the coming crop in Argentina continue unfavourable. In view of these factors, the tendency of prices remained firm. Wednesday's quotation in Chicago for "March" futures, at 36½ cents, shows no change, but a fall of 1½ cents as compared with the price a month earlier. Quotation in London, Wednesday: "Plate," landed, 22s. 6d. per 480 lbs., as compared with 21s. last week; "Plate," ex ship, 21s., as against 19s. 9d.; "Plate," February-March, 21s., as against 21s. 9d. Yellow maize meal, ex wharf, was quoted at £6 5s. per ton, against £6 5s. a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1931-32, 1930-31, 1929-30, 1928-29:—

	1931-1932.	1930-1931.	1929-1930.	1928-1929.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks with comparative figures for 1930:—

NEAREST FUTURE.	Jan. 2, 1930.	Jan. 2, 1931.	Feb. 25, 1931.	Jan. 4, 1932.	Feb. 17, 1932.	Feb. 24, 1932.
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.	148½	56½	62½	62½	65½	68½
Chicago (No. 2 Winter) —Cents per 60 lb.	130½	79½	79½	55½	57½	58½

The visible supply of wheat in Canada, at 61,980,000 bushels, shows a decrease on the week of 226,000 bushels. Supplies a year ago stood at 62,659,000 bushels.

OTHER FOODS.

SUGAR.—Whilst the raw sugar markets showed a little more steadiness last week, the downward movement in values was renewed on Monday last. Heavy supplies were thrown on the markets, but refiners in the United States are unwilling to purchase large quantities before the Cuba-Java negotiations have come to a satisfactory conclusion. "March" futures in New York were quoted at 0-83 cent per lb. on Wednesday, against 0-93 cent per lb. a week ago, and 1-05 cents per lb. a month earlier. Wednesday's sales of "raws" include "March delivery" at 6s. 1d. to 6s. 1½d. per cwt., against 6s. 5½d. to 6s. 5½d., and "May," at 6s. 3½d. to 6s. 4½d., against 6s. 8½d. on the corresponding day last week. The movements of raw sugar in London and Liverpool during last week are set out in the table below:—

	Imports.		Deliveries.		Stocks.	
	1932.	1931.	1932.	1931.	1932.	1931.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
London	1,986	101	1,109	700	4,999	36,124
Liverpool.....	14,192	6,379	14,797	12,430	117,096	120,482
Total	16,178	6,480	15,906	13,130	122,095	156,606
Last week ...	4,719	7,421	17,235	13,368	121,823	163,256

COFFEE.—The New York coffee market has been steady. At Tuesday's auctions in London, high qualities realised good prices, but others met a slow demand at lower rates. Last week's movements of coffee in London were as follows: Brazilian, landed, 127 bags; delivered for home consumption, 85 bags; exported, 27 bags; stocks, 2,640 bags, against 2,805 bags last year. Central

American, landed, 18,282 packages; delivered for home consumption, 2,956; exported, 1,257; stocks, 77,347 packages, against 86,786 a year ago. Other kinds, landed, 8,711 packages; delivered for home consumption, 2,429; exported, 999; stocks, 66,836 packages, against 88,748 a year ago.

COCOA.—The advance in cocoa prices which began a fortnight ago continued throughout the past week. The market was active at rising prices. "March" futures were quoted at 4-04 cents per lb. in New York on Wednesday, against 3-93 cents per lb. a week ago and 3-92 cents a month ago. As compared with the corresponding day last week, Wednesday's quotation for Accra, fair fermented, new crop, February-April, at 24s. per cwt. f.o.b., London contract, shows a rise of 1s. per cwt. on the week. Last week's movements of cocoa in London were as follows: Landed, 3,816 bags; delivered for home consumption, 7,074 bags; exported, 185 bags; stocks, 136,604 bags, as against 188,508 last year.

TEA.—The quantities catalogued for this week's auction comprise 48,776 packages of Indian, 25,921 packages of Ceylon, and 16,088 packages of Java and Sumatra tea. Monday's Indian auctions showed a distinct improvement in demand which was maintained during the "Ceylon" sales on Tuesday. On Wednesday competition became keener and the tendency of prices was firmer. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account:—

Week ending	AVERAGE PRICE PER LB.							
	Northern India.	Southern India.	Ceylon.	Java.	Sumatra.	Nyassa-land.	Total.	
Feb. 19, 1931	s. d. 0 11-42	s. d. 0 11-41	s. d. 1 3-32	s. d. 0 7-86	s. d. 0 8-98	s. d. 0 7-88	s. d. 0 11-85	
Jan. 26, 1932	0 10-57	0 11-29	1 1-16	0 7-79	0 7-12	0 6-53	0 10-91

Feb. 18, "	0 10-10	0 9-62	0 11-83	0 7-34	0 6-93	Nil	0 10-04	

RICE.—The market in rice has been quiet, but last week's advance in quotations was maintained. Wednesday's "spot" quotation for Burma No. 2, cleaned, at 10s. 3d. per cwt., shows no change as compared with last week. Movements in London during the past week were as follows: Landed, 168 tons; delivered, 393 tons; stocks, 985 tons, as against 404 tons last year.

POTATOES.—As supplies of potatoes are still sufficient to meet the demand, prices remained generally unchanged. At the Borough Market, "Best King Edward" sold from 11s. to 12s. per cwt., as compared with 11s. to 12s. per cwt. a week ago.

SPICES.—The market in spices was dull and quotations showed an easier tendency. Wednesday's quotation for "Black Singapore" pepper, at 6½d. per lb., shows no change on the week. Movements of pepper in London during the past week were as follows: Black, landed, 49 tons; delivered, 9 tons; stocks, 292 tons, against 492 tons last year. White, landed, 316 tons; delivered, 61 tons; stocks, 794 tons, against 494 tons a year ago.

MEAT.—Supplies of meat at the Smithfield Market have been plentiful and prices show little change on the week. On Wednesday, Argentine beef (chilled hindquarters) was sold at 3s. 2d. to 3s. 8d. per 8 lbs., against 3s. to 3s. 8d. on the corresponding day last week, while New Zealand frozen mutton realised 2s. 6d. to 3s. 6d., as against 2s. 6d. to 3s. 6d. a week ago. According to the Smithfield Market official report, supplies of meat during last week amounted to 9,258 tons, as compared with 9,655 tons in the corresponding week last year. Imported beef, principally Argentine, formed 83-8 per cent. of the supplies, as against 83-7 per cent. a year ago; and imported mutton, mainly New Zealand, formed 75-5 per cent. of the total supply, as against 80-1 per cent. last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OILSEEDS.—Markets practically all round have a steadier and more confident tone, and more business is being done. Crushers both here and on the Continent appear to have bought freely of linseed, and there has also been a good demand from U.S.A. Prices have thus advanced, and for Plate seed to Hull, March to April shipment, £9 to £9 2s. 6d. has been paid. Current value on spot and shipment to April is £9 5s., with later shipment at a rising premium. Indian linseed is firm, but there is no demand. Shipment of the Plate crop is proceeding on fairly substantial lines, but not to the extent of a year ago, owing to reduced demand. The quantity afloat for Europe is now 210,200 tons (including 6,300 tons from India), as compared with 291,100 tons at the same date last year. Egyptian cottonseed is firm on a sustained demand, black, for March-April loadings, being held for £6 17s. 6d. Vegetable oils have a steadier tone, and linseed oil is in fair demand and firm. Raw oil on spot, ex Hull mill, is quoted £16; February delivery, £15 10s.; and March, £16. Cotton oil is firm and dearer. Crude Egyptian, ex Hull, quoting £23, and refined £25 10s. Whale oil from British-owned factory ships, is to be included in the Free List, along with vegetable oils from Empire sources. Oilcakes are in moderate demand, and prices are steady.

HIDE, LEATHER AND ALLIED TRADES.—The only alteration the prices for hides from domestic cattle at the auctions held in Manchester this week, was an advance of ½d. per lb. on 90 lbs. and up in all classes. All other weights, together with cows, bulls and calves, sold at the previous week's figures. Sheepskins are again weaker in price, consequent upon the poor demand for wool and fellmongered pelts. Business in regard to imported hides has not so far shown any material expansion, although more interest is being taken in some sorts, and a firmer tendency is noticeable. A fair amount of activity has been experienced in the South American market for wet salted Frigorificos, and parcels of Argentine

ox have changed hands on the basis of 5d., while seconds have realised a fraction over 4d., and Uruguay ox 5d. Prices for several descriptions of dry South American hides are quoted higher, B.A. Americans being offered at up to 6d., while M.V. Americans are quoted at 7d., and B.A. Inservibles at 3d. Rather more interest has been taken in some sorts of African hides, and a fair amount of business has been put through for Capes, at 6d. and 5d., for first and second dries, with 5d. and 4d. paid for dry salted 20/30 lbs. Nigerians have also been enquired for rather more freely, as has also been the case with unbathed Adis Abebas and Mombasas. Australians remain a slow market, owing to the prices being asked for them. Business in the sole leather market has become rather more difficult, and generally speaking, sales have not been up to the standard of the past few weeks. Although manufacturers of footwear continue to take up supplies on account of orders placed some time ago, they are not inclined to consider the placing of further business, for the time being at any rate. The result is that the market for dry hide bends is quiet, while the amount of business being done in English and wet salted descriptions is inclined to be less. Enquiry for certain classes of upper stock is not quite so active. Business in regard to calf leather remains steady, but there has been less enquiry going around for patent leather. Fancy upper stock continues to sell in limited quantities, but the call in this direction is only for small parcels.

RUBBER.—The market in rubber has been dull throughout the past week. The New York quotation at 3½ cents per lb. established a new low record on Wednesday. Meanwhile, production of rubber continues in excess of consumption, and no decision appears to have been reached by the Dutch Government on the subject of restriction. In New York, Wednesday's spot price for rubber, at 3½ cents per lb., shows a fall of ½ cent on the week. Wednesday's official closing price for standard ribbed smoked sheet in London, at 2½d. per lb., shows no change, as compared with the corresponding day last week. In forward positions business has been done at 2½d. to 2½d. for April-June, against 2½d., and at 3½d. to 3½d. for October-December, as against 3d. to 3½d. a week ago. Movements of

rubber in London and Liverpool during the past week were as follows: Landed, 1,135 tons; delivered, 2,005 tons; stocks at the end of last week, at 126,828 tons, show a decrease of 780 tons as compared with the preceding week.

THE MONEY MARKET.

MONEY has remained very easy, as is apparent both from the Bank return, which records an increase in bankers' deposits to £80.5 millions, and from the fact that old money has been renewed at a consistent rate of 3 per cent. Day-to-day loans were quoted at 3 and 2½ per cent. over the week-end, with money described as abundant. On Monday, despite the absence of Treasury

ALLIANCE

ASSURANCE COMPANY, LIMITED

(Established in 1824.) ASSETS EXCEED £30,000,000

HEAD OFFICE: BARTHOLOMEW LANE, LONDON, E.C.

bill maturities, rates only rose to 3 and $3\frac{1}{2}$ per cent., while on the following day absence of calling by the clearing banks reduced the rate to a general 3 per cent. Funds were again plentiful on Wednesday and Thursday at 3 per cent. and under.

Heavy outside applications for Treasury bills, including large tenders upon Dutch account, took the market by surprise on Friday, February 26th, and the result was that the week's Treasury bills went at the very low rate of £3 5s. 5.22d. per cent., against £3 19s. 4.09d. the week before. Applications amounted to £61.6 millions for the £40.0 millions of bills upon offer, and the whole amount was allotted. The tender rate was the lowest since July 17th of last year, when Bank rate stood at $2\frac{1}{2}$ per cent., and obviously makes the present Bank rate of 5 per cent. totally ineffective. During the whole week the discount market was firmly convinced that a second reduction in Bank rate was imminent, and discount rates consistently weakened owing to a keen demand from both at home and abroad, coupled with a continued lack of bills. By Wednesday hot Treasury bills were quoted as low as $2\frac{1}{2}$ per cent. and prime bank bills at 3 per cent. This week the clearing banks have been heavy buyers of short bills at rates which have sagged steadily from $3\frac{1}{2}$ to $2\frac{1}{2}$ per cent.

	Feb. 11, 1932.	Feb. 18, 1932.	Feb. 25, 1932.	Mar. 3, 1932.	Previous Rate and Date Changed.
Bank Rate	6	5	5	5	6 (Feb. 18, '32)
Banks' Deposit Rate..	4	3	3	3	4 (Feb. 18, '32)
Discount / Call	4	3	3	3	4 (Feb. 18, '32)
Houses / Notice ...	$4\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$4\frac{1}{2}$ (Feb. 18, '32)
Market rate (3 months' bills)	5-5 $\frac{1}{2}$	4 $\frac{1}{2}$ -5	3 $\frac{1}{2}$ -4 $\frac{1}{2}$	3-4 $\frac{1}{2}$	...

The decision of the Bank authorities to make no change in the rate, the motives behind which are discussed upon another page, naturally came as a surprise to the market. The decision had no effect either upon the exchanges or upon market rates of discount, and on Thursday afternoon hot Treasury bills were quoted as low as $2\frac{1}{2}$ per cent., with some French buying in evidence, and prime bank bills at 3 per cent. Dollars were quoted at \$3.49 $\frac{1}{2}$ the same afternoon, after heavy selling by Paris in the morning, and francs at Frs. 88 $\frac{1}{2}$. Paris is taking a distinctly optimistic view of sterling, and expects to see the rate up to Frs. 95 before long.

This week's Bank return records several big changes. There has been a sudden increase of £5.3 millions in the note circulation, which now stands at £351.8 millions. Part of the increase probably arises from the normal month-end demand for currency, but this is insufficient to account for the whole of the increase, and it is highly probable that a considerable amount of currency is being needed to pay for the present heavy sales of gold sovereigns and ornaments by the public, many of which are paid for in notes. There has been a big change-over in the Issue Department from Government to Other Securities, the former having fallen by £6.0 millions and the latter having risen by the same amount. Notes held in the Banking Department have fallen by £5.3 millions.

In the Banking Department, the Reserve is reduced by £5.3 millions as the result of the increase in the note circulation. Other changes probably reflect the payment of the Victory Bonds dividend on Tuesday, and operations in connection with the repayment of the Treasury credits, to which reference is made upon another page. It is impossible to be certain upon this point, however, as the picture is blurred by such minor movements as discrepancies between Treasury bill payments and maturities. The chief changes are an increase of £13.5 millions in Government Securities, a decrease of £7.1 millions in Public Deposits, and a consequent increase of £12.6 millions in Bankers' Deposits. Other Securities

are £1.3 millions down, but, regarding the Bank as a whole, what has really occurred is an increase of £7.5 millions in Government Securities, together with one of £4.7 millions in Other Securities. The natural inference is that the Government's needs, both for the Victory Bond dividend and for the repayment of the Treasury credits, have not only depleted Public Deposits, but have necessitated some borrowing upon Ways and Means. The fact that the device required for the latter operation has been acquired well in advance does not preclude the Treasury from having had to borrow at the last moment, and probably for a short period of time.

At the same time, the increase in Bankers' Deposits, directly due to the above causes, shows that a moderate inflation of credit has taken place, and this is also indicated by the fall in the Bank's Proportion from 43.7 to 36.9 per cent. In these circumstances it is, perhaps, understandable why it was felt best to defer the further reduction in Bank rate, at least until the fresh money released by these operations has been reabsorbed.

Following upon the reduction in the New York rediscount rate, on the evening of February 25th, from $3\frac{1}{2}$ to 3 per cent., announced in last week's *Economist*, the New York Reserve Bank reduced its buying rate for bills from $2\frac{1}{2}$ to $2\frac{3}{4}$ per cent. for bills of up to 45 days' maturity, and from 3 to $2\frac{3}{4}$ per cent. for bills of from 46 to 120 days' maturity. Dealers simultaneously reduced their rates by $\frac{1}{4}$ per cent. for 30-60 day bills, and by $\frac{1}{2}$ per cent. for 120-180 day bills. On Wednesday, a cut of $\frac{1}{4}$ per cent. was made in dealers' rates for 90 and 180 day bills. The latest open-market discount rates are $2\frac{1}{4}$ per cent. for ninety day bank bills and 3- $2\frac{3}{4}$ per cent. for six months' bank bills, against respective rates of 3- $2\frac{3}{4}$ and 3 $\frac{1}{2}$ per cent. the week before. Gold exports for the week include \$4.1 millions to Belgium and \$650,000 to Holland, while \$982,000 of gold has arrived from Canada. Ear-markings upon foreign accounts have been increased by \$4.0 millions net. Several of the leading New York banks have declared their dividends. The National City Bank and the Chase National Bank have each cut their annual rate of dividend from \$4 to \$3. The Guaranty Trust Company has declared its usual quarterly dividend.

The Foreign Exchange market was only moderately active this week, but sterling maintained its recent strength. The New York rate moved from 3.48 $\frac{1}{2}$ to 3.48 $\frac{1}{2}$, and Montreal from 3.94 to 3.93 $\frac{1}{2}$. Paris at 88 $\frac{1}{2}$ was $\frac{1}{8}$ in our favour as compared with last week, and Brussels was also rather weaker at 25.03. Milan lost $\frac{3}{4}$ at 67 $\frac{3}{4}$, and Madrid $\frac{1}{8}$ at 45 $\frac{1}{2}$. Amsterdam was two points higher at 8.65, and Berlin lost 3 points on balance at 14.65 after 14.68. Switzerland was widely offered and fell away from 17.86 to 18.03, after being higher. The Scandinavian exchanges reacted differently, Stockholm losing 4 points at 18.13, Oslo gaining 5 points at 18.40, and Copenhagen 3 points at 18.15. Helsingfors fell away on the news of the internal unrest from 220 to 225. Quotations of the South American currencies are still largely nominal, and transactions are very small. Rio remained at last week's level of 4 $\frac{1}{2}$ d., as did Montevideo at 31 $\frac{1}{2}$ d., but Buenos Aires improved from 39 $\frac{1}{2}$ d. to 40 $\frac{1}{2}$ d. In the Far East the rupee was very firm at 1s. 6 $\frac{1}{2}$ d., and the yen was unchanged on balance at 1s. 10 $\frac{1}{2}$ d. after being below 1s. 10d. In the forward market the discount on dollars widened, from $\frac{1}{4}$ cent to $\frac{3}{4}$ cent for one month, and from $\frac{1}{2}$ cent to 2 cents for three. Paris went from 9 and 27 centimes premium to 8 and 12 centimes discount, and Brussels from round about par to 8 and 20 centimes discount for the two periods respectively. Lire were rather firmer at $\frac{3}{4}$ lira and $1\frac{1}{2}$ lire discount. Amsterdam weakened from $\frac{1}{4}$ cent and $1\frac{1}{2}$ cents discount to 1 cent and 2 cents discount. Geneva stood at premiums of 3 and 6 centimes. The silver market was quiet and fairly steady, but prices fell away by $\frac{1}{8}$ d. to 19 $\frac{1}{2}$ d. for cash, and by $\frac{1}{4}$ d. to 19 $\frac{1}{2}$ d. for forward, chiefly owing to Chinese sales at the close. The Chinese silver currencies fell away in sympathy, Hongkong by $\frac{1}{4}$ d. to 1s. 5 $\frac{1}{2}$ d., and Shanghai by $\frac{1}{4}$ d. to 1s. 11 $\frac{1}{2}$ d.

ALONG WHAT ROAD?

On Tuesday last there came into effect a general 10 per cent. tariff on all imports into Great Britain, with the exception of the products on a short free list. Thus the curious system of haphazard and high protection of a few products, which had grown up in the past decade under the Safeguarding system, and the still more abnormal and prohibitive duties of November last, have been supplemented by a moderate general tariff. On the same day the Government announced in the House the appointment of three members of the Advisory Committee which is to recommend, not merely what duties should replace the "abnormal import duties" when they lapse at the end of six months, but whatever duties they may think fit on any other articles—the present free list being sacrosanct only until the Finance Bill is passed. These recommendations can be acted on at once by the Treasury, subject to later approval by Parliament. Thus we are faced with the prospect of further instalments of protection, of unknown amount and of quite indeterminate character, to be imposed by administrative action and without any pretence that there can be serious control and direction by Parliament. So uncertain a plan and so complete a delegation of the initiative by a democratic Parliament must surely be without parallel in commercial history.

To read some of the panegyrics which have greeted this remarkable experiment one would imagine that Great Britain has this week been freed from shackles which have kept her in economic bondage for nearly a century. It was well, therefore, that Lord Snowden reminded the House of Lords, in almost the last speech made before the Act received the Royal Assent, what our new policy really implies. By this decision we are turning our back on a system under which these small islands have proved themselves able to carry a denser population than any other great nation, and at a standard of living unmatched except in the favoured countries of the new world. Under Free Trade we have become and remain the world's greatest seller of manufactured goods and the owner of nearly half its ships; and it has enabled us to become the world's banker, to be the world's chief commercial centre, and to accumulate assets all over the world which made it possible for us to carry the lion's share of the financial burden of the greatest war in history.

It is equally wide of the mark to suggest that, while the system may have been defensible in the nineteenth century, we must needs abandon a policy which has become obsolete and adopt new methods to fit new conditions. The fact is that it is the policy of Free Trade which is new—too new as yet to have made its place in the world secure. This week we have seen the country which has been in the van of the Free Trade movement relapse for a time to the trade restrictions of a hundred years ago. If we have fallen into line with the other countries we have reverted with them to a state of things which is becoming every day more and more like that of the Middle Ages.

That this retrograde step should have been taken is not wholly surprising, human nature being what it is. While some foreign observers have explained the lack of elasticity in our economic system and the comparative inefficiency of much of our plant and organisation as signs of industrial old age, it has been easy for our own people to attribute every difficulty to a fiscal system which hardly any have yet dared to emulate. Chaotic conditions abroad during the past decade, visibly impeding the natural international division of labour, have encouraged the demand that we should assure the home market and give the foreigner some of his own medicine. There can be no doubt that if a more liberal policy had been followed abroad—both by foreign countries and our own dominions—the progress of protectionism in this country, and the course of recent events, would have been very different. Britain's competitive position in the last decade has by no

means been solely determined by foreign tariffs. But when the British delegation to the World Economic Conference in 1927 declared in their joint report that "we can only continue to buy on the same scale if we have the opportunity of selling freely," they were uttering a warning which the world would have done well to heed. It is not without significance that the most serious warnings as to where the world's policy was leading us, have been given at Geneva and elsewhere by Free Traders, such as the late Mr William Graham. It is, we think, highly improbable that any one country will again venture in our generation to maintain a Free Trade system without much more definite assurances as to the treatment of its goods by other countries than we have had.

But this is very far from saying that we have now to write the epitaph of Free Trade. The introduction of a general tariff in Great Britain has been delayed to a moment which coincides with the greatest object lesson which the world has ever received of the folly and mutual destructiveness of a policy which strives to foster exports while stopping imports. Although the cruder fallacies of protection were very much in evidence not merely during the last General Election, but during the debates of the present Parliament, there have been clear signs that the more responsible of our protectionists, as well as some organs of their press, are realising the danger pointed out by Free Traders of hindering exports by raising prices, or of harbouring inefficiency, and that to create employment by restricting trade is not quite so easy as it looks. Even Mr Neville Chamberlain himself, in his introductory speech, though claiming that his scheme would achieve a number of contradictory objects, at the same time clearly recognised the danger of inevitable reactions to sudden interferences with trade, as well as the obvious fact that if we are to increase our exports we must expect also to increase our imports.

But perhaps the most interesting feature of the present state of opinion is the attitude of many who have acquiesced in the departure from Free Trade by Great Britain in the belief that it may lead to freer conditions of commerce among nations generally. This attitude is represented by the British National Committee of the International Chamber of Commerce, who have this week issued a further manifesto on the deplorable state of the world, in the course of which they stress the urgency of dealing not merely with Reparations, but with the whole field of debtor and creditor payments. The pronouncement ends with two propositions. On the one hand, the Committee adhere to the view expressed last September that effective action for the reduction of trade barriers can only be achieved by Great Britain closing the largest free import market and compelling high tariff countries to pause and consider their policy; on the other hand they insist that the whole effort of the nations must be concentrated on a co-ordinated attempt to raise the level of international trade.

Whether the Committee are right in thinking that a British tariff will hasten a general downward movement time will show. But as to the second proposition, there should be no room for two opinions. Will the achievement of this end—so vital to every nation, but above all to our own—become the dominating objective of our economic policy, and overcome the rampant forces of a short-sighted nationalism both at home and abroad? And by what means shall we be able to attain it? These are among the most crucial questions of the day.

As to the first, we have no doubt of the answer. We have said that the world has had its object lesson, and though at the moment countries are engaged in the cheerful task of building "super tariffs," there is ample evidence that many of the world's leading statesmen are aware that national life is being crushed and the road to prosperity blocked by these measures. Some of them are ready to act. In spite of the sceptics, we have no doubt that this action will ultimately be taken. It is only a question of how soon; for if we look beneath the surface, it is evident that the whole forces of science and

of knowledge are ranged against any return to mediævalism. Only those who take the most gloomy view of humanity can doubt that before many years pass the volume of the world's international trade will be on a scale never before known and commensurate with the opportunities which science places within our reach. It is unthinkable that the amenities and possibilities of economic development which the aeroplane and the motor-ship hold out to us will be indefinitely withheld from us, or cancelled by the inability of nations to come to a sensible understanding with one another. It is true that so far as this country is concerned there will be a strong temptation to go on playing for a time with the new toy to see how it works, but it is well to remember that the vested interests in favour of free economic intercourse—our export industries, our large commercial and banking community, and the interest as consumers of our great industrial population—are overwhelming, and must from now onwards inevitably make themselves felt with steadily increasing pressure.

But if it may be assumed that the nations are destined to move in the direction of a greatly increased commercial intercourse with one another, can we see at this moment by what means this end can best and most quickly be attained? Let us say at once that we are not among those who think that the revival of international trade will only be achieved by laboriously building up a system of international barter, and that hereafter we shall only be able to sell internationally under the control of Governments who will tell us, in their wisdom, what we must consume, where and when we may travel, and to whom we may lend our money. But if the world is to tread the more promising path of a restoration of economic activity through a wider freedom of initiative and action, conditions to-day warn us that we must move quickly. True, the discussion of ways of removing trade barriers must proceed *pari passu* with the discussion and solution of other extremely difficult questions in the realm of finance, and perhaps, too, of politics. But this is merely to say that all these problems are urgent.

We have not space here to attempt to discuss how the tariff arrangements of the world should be adjusted to the conditions of the immediate future. To this subject we shall constantly have occasion to return. Two points only can be mentioned here. The first point is that experience has shown that a whole series of individual negotiations between separate countries is not an effective method of getting a lower general level of tariff barriers throughout the world, and that the operation of the most-favoured-nation clause tends to standardise an existing situation with, at best, an occasional brick removed from one part of the tariff wall, compensated, as a rule, by two or three added somewhere else. The problem is so important that a way must be found for mobilising all the low tariff influences that are available in an effort to secure action on a large scale in a far-sighted and imaginative way. The second point is that the problem must be tackled quickly. The nature of the understandings that we are prepared to enter into with low-tariff countries should be settled now, before there has been time—whether as a result of the recommendations of the Advisory Committee or otherwise—to create and establish vested interests that will block the way.

THE "ACID TEST" OF THE LEAGUE.

MUCH has happened at both Shanghai and Geneva since last week, and much more still may happen before this week is over. In the early hours of Thursday morning the Japanese were reported to have ceased fire after following the Chinese forces up to their new positions, while the League Assembly was mustering for the first sitting of its Extraordinary Session. Is the Japanese Army going to evacuate the Shanghai area now that its declared objective—a Chinese withdrawal from Shanghai to a distance of 12½ miles—has actually been attained? And is the Assembly going to do those things that have been left undone by the Council? These questions, which at this moment lie

open, may have received their answers before this issue of the *Economist* reaches our readers' hands. At the moment we can do no more than record the events, and suggest what, in their light, would appear to be the essential points on which the Assembly should work.

The present phase of the Far Eastern crisis began last Sunday, when a British diplomatic initiative gave the situation a new turn which appeared, at the moment, to be very much to the good. On that day, at the instance of Admiral Sir Howard Kelly, the British Naval Commander-in-Chief on the China Station, a Sino-Japanese meeting with a view to an armistice took place at Shanghai on board the Admiral's flagship, H.M.S. Kent. The Chinese were represented by General Wang, the Chief of Staff of the Nineteenth Army, and by the well-known diplomatist Mr Wellington Koo. The Japanese were represented by Admiral Namura, their naval commander on the spot, and by a personal representative of the Foreign Minister, Mr Yoshizawa, in the shape of Mr Metsuokai, an able ex-diplomatist who has also been a director of the South Manchuria Railway. The discussion which was thus brought about through Admiral Kelly's good offices lasted for two and a half hours, and resulted in an agreement in principle between the Chinese and Japanese representatives present that there should be a *mutual and simultaneous* withdrawal of the Chinese and Japanese forces on the Shanghai front. The withdrawal was to be supervised by a mixed commission of Chinese, Japanese and neutrals; and the no-man's land which would thus be created was to be occupied by neutral forces drawn from those now guarding the boundaries of the two foreign settlements. The terms of this provisional local agreement were at once referred to the Governments of the two belligerent countries, and were reported by Admiral Kelly to Sir John Simon, who had been in consultation at Geneva with representatives both of the Japanese and American Governments.

Next day Sir John Simon communicated this news to the League Council; whereupon the President of the Council, Monsieur Paul Boncour, at once submitted to the Council a proposal in three articles: first, that a conference composed of Chinese, Japanese and neutral representatives should immediately be set up in Shanghai to bring about a restoration of peaceful conditions in the Shanghai area; second, that this conference should be convened on the understanding that Japan has no political or territorial designs at Shanghai, and that China is not opposed to arrangements for the integrity and security of the two foreign settlements at Shanghai and the safety of their inhabitants; third, that the meeting of such a conference must be preceded by a cessation of local hostilities. At the Council meeting at which this proposal was put forward by M. Paul Boncour it was strongly supported by Signor Grandi and by Sir John Simon. The latter expressly underlined the third point in the plan; and he also gave the Council the important information that the proposals would have the United States Government's support. (This indicated that diplomatic contact was being maintained with Washington, and that the American Government was ready to co-operate with the League in action to secure a settlement.) Thereupon Mr Sato and Mr Yen both accepted the plan, subject to the approval of their respective Governments.

Thus on Monday, at Geneva, the sky seemed to have cleared; but this gleam of light was short-lived; for the Japanese Army (which is a "Great Power" equally independent of the Japanese Navy and of the Civil Government at Tokyo) had not been represented at the armistice conference on board H.M.S. Kent on Sunday, and at that very moment strong Japanese reinforcements—believed to the figure of 60,000 men—were in the act of disembarking. All through Sunday, Monday and Tuesday, while the Japanese Navy and the Japanese Government were participating in the "peace talk," the Japanese Army was carrying on an intensive bombardment of the Chinese lines with a view to another offensive; and, after this artillery preparation, the infantry attack was duly launched on Wednesday morning (Shanghai time), just as though no armistice negotiations had been taking place and as though no proposals had been made by the League

Council. In these circumstances the Chinese Army in the Shanghai area executed a strategic retreat, which was as adroit diplomatically as it was militarily skilful. When the Japanese infantry "went over the top" on Wednesday morning in order to gain that smashing victory over the Chinese which was to retrieve the previous Japanese failures, they found that the bird had flown. The Chinese had retired during the night to previously prepared positions beyond the 12½ miles radius to which they had been summoned to retire in the original Japanese ultimatum. On Wednesday the Japanese forces cautiously occupied the evacuated ground; on Thursday morning they captured Woosung village and forts, which could no longer continue their heroic resistance now that they had been left isolated by the withdrawal of the main Chinese forces. Thereupon, the Japanese ceased fire at Shanghai an hour or two before the Assembly of the League of Nations was due to meet at Geneva. The Chinese have retreated with the honours of war, while the Japanese advance up to the 12½ mile limit has saved the Japanese Army's face. For a moment, the tension is relieved, and the opening for a settlement is propitious, although, as we go to press, it is reported that the Japanese Army Commander has demanded conditions which the Chinese are unable to accept.

In this situation the Assembly has a real opportunity—not of retrieving the Council's failure, for that is no longer possible—but of stopping the disastrous retreat of the forces of international law and order which has been going on uninterruptedly for the last five months. It will be the task of public opinion in all countries during the next few days to see that the work of the Assembly is not sabotaged by diplomatic wire-pulling behind the scenes. Attempts will undoubtedly be made to argue that there is nothing now for the Assembly to do, because the terms of a Shanghai armistice are to be arranged by a conference on the spot, while the situation in Manchuria is to be the subject of an eventual report from the League Commission to the Council. We trust that such attempts will not succeed.

What are the vital points upon which the Assembly ought to insist before it consents to terminate its session, and upon which public opinion therefore ought to concentrate? We believe they can be summarised as follows:—

(1) The Assembly ought to endorse, and make its own, Mr Stimson's letter of February 24th, which represents the considered and unalterable policy of the United States Government, and which has American public opinion behind it. The Assembly should declare, in identic terms, that it will not recognise any situation, treaty or agreement entered into by the Chinese and Japanese Governments in violation of treaties in force. It is known that the United States Government strongly desires to see this vital declaration of principle explicitly endorsed by the Assembly. It is also apparent that the Americans forebode that, if this hope is disappointed, its frustration will be due to opposition on the part of the British Government—a foreboding due to the fact that the British Government has hitherto refrained from associating itself with American declarations of this "no recognition" policy. British public opinion has an opportunity in the next few days of showing that it wishes to see this country side by side with America in this matter.

(2) The Assembly ought to insist upon an immediate withdrawal of the Japanese naval and military forces in the Shanghai area, subject to two conditions, and two only, which are both capable of being immediately fulfilled. The first condition is that the Chinese forces remain at their present distance from Shanghai, which is beyond the distance which the Japanese themselves have prescribed. The second condition is that the area between these present Chinese lines and the boundaries of the two foreign settlements at Shanghai shall be temporarily taken over by the neutral forces now guarding the boundaries of the settlements. There is no reason why these conditions should not be fulfilled, and the Japanese evacuation effected forthwith. We suggest that the Assembly should make a point of remaining in session until these arrangements have actually been carried out.

THE BRITISH LINEN BANK.

Incorporated by Royal Charter, 1746.

Capital and Reserve Funds, £3,600,000.

Head Office: 38, St. Andrew Square, Edinburgh

OVER 200 BRANCHES IN SCOTLAND

LONDON OFFICE: 38, Threadneedle St., E.O.2

Every description of Banking Business transacted.

(3) The third essential condition is that the Manchurian question should not be allowed to go by default. In the particular application of Point (1), the Assembly ought to insist that Chinese sovereignty in Manchuria, as an integral part of the territory of the Chinese Republic, shall be maintained intact; and that while Japan is entitled to receive no less than her treaty rights in Manchuria, the policy of violence is not to be allowed to gain her one jot or tittle more. The details of the Manchurian settlement may have to wait until the cessation of hostilities at Shanghai has been followed by a *détente* of feelings on both sides, and until the League Commission has presented its report to the Council. But the Assembly ought here and now to reserve its right to deal with the Manchurian question—in another extraordinary session, if necessary—when the proper moment arrives.

(4) The Assembly should make provision for a thorough investigation and full publication of all that has occurred—both in Manchuria and at Shanghai—since September 19th last, without shrinking from the duty of exposing the aggressor and making it clear that the aggressor is liable to pay damages for the enormous devastation that has been done.

The balance of success and failure in the handling of the Far Eastern crisis up to date may be cast up provisionally as follows:—On the debit side is the fact that, once again, in spite of the lesson of 1914-18, and in spite of the system of collective security which we have been attempting to build up ever since, a Great Power has been able—so far, with impunity—to break its treaties, to resort to hostilities and to coerce a weaker country by methods of barbarism. On the credit side is the fact that, still within the world's power to prove to Japan that her lawless action is going to be as unprofitable for Japan herself as it has been destructive for her victim and calamitous for everybody concerned.

RAILWAY RESULTS.—I.

THE financial results of the four main-line railway companies in 1931 were so dominated by the profound depression of industry and trade that, although substantial economies in expenditure were effected, these were completely overshadowed by a very heavy fall in revenue. Our first table shows the gross receipts of the four groups in the last two years:—

GROSS RECEIPTS.
(000's omitted.)

	Passenger Trains.		Freight Trains (excluding livestock).		Total Railway Receipts (including livestock).		Total Gross Receipts (including ancillary businesses).	
	1930.	1931.	1930.	1931.	1930.	1931.	1930.	1931.
London Midland and Scottish.....	27,217	25,389	39,575	36,505	68,241	63,223	76,445	70,754
London and North Eastern.....	18,368	16,868	33,021	29,406	52,391	47,153	59,825	53,628
Southern.....	16,564	15,598	5,492	5,320	22,396	21,226	25,890	24,373
Great Western.....	12,350	11,339	16,625	15,006	29,590	26,893	34,347	31,140
	74,499	69,194	94,713	86,237	172,618	158,495	196,487	180,095

The fall in total gross receipts, as compared with 1930, was about 8½ per cent., but whereas the London and North-Eastern experienced a much heavier fall than this, the decline in the receipts of the Southern was a good deal less. Some idea of the dimensions of the decline in the past two years is given by the statement of the chairman of the London Midland and Scottish Railway that the traffic receipts of that group fell £4 millions below those of the year of the General Strike. Passenger traffic, affected not only by the trade depression but by the absence of fine summer weather, and in the case of the Southern by the heavy decline in Continental travelling also, brought in a revenue some 7 per cent. less than in 1930, and revenue from freight trains was almost 9 per cent. lower. This is not surprising in view of the fact that a given decline in the industrial output of a district may mean a much greater decline in the goods shipped by the railway serving that district—the chairman of the Great Western quoted, for example, an estimate that, for every ton of iron and steel manufactured, the railways carry six or seven tons of raw materials and fuel. This, coupled with Sir Josiah Stamp's statement that of 241 blast furnaces on the London Midland and Scottish system 41 are working, is sufficient illustration of the cause of the decline. It appears, however, that, on the Great Western, half the decline in gross receipts since the comparatively prosperous year 1929 occurred in respect of passengers and the higher classes of merchandise, so that the influence of road competition is evidently continuing to make itself seriously felt.

Passenger traffic is analysed further in the table below:—

PASSENGER TRAFFIC.*
(000's omitted.)

	Total Number Carried.		Receipts.		Average Fare per Passenger.		Coaching Train-miles.	
	1930.	1931.	1930.	1931.	1930.	1931.	1930.	1931.
London, Midland and Scottish...	298,906	279,803	17,714	16,188	1 2-22	1 1-89	88,967	87,432
London and North-Eastern...	205,717	189,049	11,377	10,260	1 1-27	1 1-03	61,891	60,135
Southern...	216,523	212,587	11,269	10,415	1 0-49	1 1-76	52,443	53,204
Gt. Western	124,735	114,315	8,298	7,533	1 3-81	1 3-81	39,598	38,603
	845,881	795,754	48,658	44,396	1 1-81	1 1-39	242,899	239,374

* Excluding season ticket traffic.

The number of passengers carried showed falls in the neighbourhood of 8 per cent. on all the groups except the Southern, where it was only 2 per cent. The smallness of the decline on the Southern was, however, only achieved by further cheap fare concessions in the attempt to meet road competition, and this is reflected in the decline to 11½d. in the average fare. The amount of miles worked on this group actually increased.

The next table gives the corresponding analysis for goods traffic:—

FREIGHT TRAFFIC (LIVESTOCK EXCLUDED).
(000's omitted.)

	Tonnage.		Receipts.		Average Receipts per Ton.		Freight Train-miles.	
	1930.	1931.	1930.	1931.	1930.	1931.	1930.	1931.
London Midland and Scottish...	139,646	125,477	39,575	36,505	5 8-01	5 9-82	51,054	48,272
London and North-Eastern...	138,719	121,357	33,021	29,406	4 9-13	4 10-15	39,517	36,758
Southern...	17,347	17,339	5,492	5,321	6 3-98	6 1-65	7,078	7,047
Gt. Western	75,139	65,374	16,625	15,006	4 5-10	4 7-09	22,168	21,182
	370,851	329,547	94,713	86,238	5 1-29	5 2-80	119,817	113,259

The percentage decline in tonnage, aided by the coal stoppage in January, was worst on the Great Western. The Southern experienced only a negligible decline, as the heavier categories of goods were comparatively well maintained and there was a further increase in the tonnage of

Kent coal handled. From the revenue point of view, however, this was much more than offset by the decline in the more highly-rated classes of merchandise, and average receipts per ton on this railway accordingly declined. On each of the other lines they rose, owing to an increase in the average length of journeys, which presumably reflects in part a loss of short-distance traffic to the road transport companies.

Further light is thrown upon the nature of the decline in goods revenue by the table below:—

FREIGHT TRAFFIC (LIVESTOCK EXCLUDED).
(000's omitted.)

	Merchandise†.		Coal, Coke and Patent Fuel.		Other Minerals and Merchandise‡.	
	1930.	1931.	1930.	1931.	1930.	1931.
London Midland and Scottish—Tons*	19,376	17,186	65,618	60,913	23,768	19,085
Per cent. of total receipts	50.7	50.7	33.8	35.1	15.4	14.2
London and North-Eastern—Tons*	18,697	16,415	76,146	68,572	21,807	17,515
Per cent. of total receipts	43.4	44.0	40.7	41.5	15.9	14.5
Southern—Tons*	3,437	3,336	2,359	2,633	2,166	2,021
Per cent. of total receipts	55.6	54.5	28.8	30.9	15.5	14.6
Great Western—Tons*	9,677	8,855	42,099	35,375	8,259	6,853
Per cent. of total receipts	48.0	49.4	37.3	36.4	14.7	14.2
	51,187	45,792	186,222	167,493	56,000	45,474
	48.1	48.4	36.5	37.3	16.4	14.3

* Originating on the company's lines.

† Classes 7-21.

‡ Classes 1-6.

Those classes of merchandise whose value is relatively great in proportion to their bulk provided a smaller percentage of total freight revenue in 1931 than in 1930 on the Southern Railway, but on the other lines their share was maintained or increased. Coal also provided a larger proportion of the diminished revenue, except on the Great Western, and the greatest relative decline fell to the intermediate classes of goods.

While the main sources of railway revenue have thus declined almost without exception, the general decline in the gross revenue from ancillary undertakings is varied by increases in a few instances. Receipts from road services were higher than in 1930 on the London Midland and Scottish and the Southern; the London and North-Eastern and the Great Western had a higher revenue from canals, so that in each case the net loss was less than in 1930; and the Great Western also received more from its hotels and restaurants, though not sufficient to compensate for an increase in expenditure. While some of these ancillary undertakings showed a lower gross revenue, their net revenue was increased by substantial reductions in expenditure, but this side of the accounts belongs to our next article.

THE WORLD WHEAT SITUATION.

EVER since the huge world crop of 1928, wheat growers have been faced with increasing difficulties, and the successive attempts of the principal producing countries to improve their position by international co-operation have so far been unsuccessful. The Imperial Economic Committee, in its twentieth report,* has traced the developments of the wheat situation up to the end of the last crop year. By its careful objective analysis of the various factors governing the price of the cereal, the Committee has contributed much towards the better understanding of a very complex problem.

The outstanding feature emerging from a study of world production and price movements during the past decade is the inelasticity of the demand for wheat, coupled with the impossibility of bringing about a quick re-adjustment of the volume of supplies. During periods of exceptionally low prices the cereal has been increasingly used for feed-purposes, but the tendency of human consumption has been downwards in the United States and in the more advanced European countries; and this decline has been

* "The Wheat Situation, 1931." H.M. Stationery Office. Price, 6d.

only in part offset by an increase in the consumption of wheat by Far-Eastern nations.

Another factor of importance has been the rapid advance in production technique since the war, and the consequent fall in costs in relation to those of other commodities. In the words of the United States Secretary for Agriculture, "the combine, together with the tractor and the motor truck, has revolutionised the wheat growing methods in the western Great Plains." An example of variations in harvesting costs per acre with different types of machinery is set out below:—

	(Dollars per Acre.)	
10 ft. Combine.	12 ft. Header.	7 ft. Binder.
1.47	3.56	4.22

According to official estimates, comparable cost figures apply to Canada and Argentina. Moreover, the results of biological research, by the introduction of early maturing varieties of wheat, have made possible an extension of the wheat area to regions hitherto unsuitable. In the view of the United States Secretary for Agriculture, "dry" farming is changing the wheat map of the United States; and this statement applies equally to other countries, particularly Canada and Russia. It is significant, however, that the new production technique has by no means been adopted universally. Its rapid spread has been confined to regions where the size of farms is relatively large, and where soil and climate are favourable.

A chart of the course of wheat prices during the last ten years shows a sharp downward movement in 1921, followed by an upward swing beginning in 1924. The heavy crop of 1928 again set in motion a fall in prices which became sharply accentuated towards the end of 1930, and made wheat growing unprofitable over a vast area of land. The following table compares the trend of wheat prices during this period with that of the general level of wholesale prices:—

Year.	U.K.		U.S.A.	
	Wheat.	Wholesale Commodities.	Wheat.	Wholesale Commodities.
1920	(1909-13=100) 243	(1913=100) 295	(1909-13=100) 267	(1913=100) 221
1921	215	185	142	140
1922	144	154	122	139
1923	127	152	113	144
1924	148	164	126	141
1925	157	160	166	148
1926	160	148	156	143
1927	148	144	138	137
1928	129	141	151	140
1929	127	135	123	138
1930	103	114	96	124

In the view of the Imperial Economic Committee, the causes of the relatively sharp deviation of wheat prices from the general level of wholesale prices between the end of 1920 and the end of 1923 were the increased production in North America, Australia and Argentina under the impetus given by the war, the recovery in European production, the exceptional yield in 1923, and the widespread economic depression in 1920 and in 1921. From 1925 to 1927, production and consumption were roughly in equilibrium. The break in wheat prices in 1929 was occasioned by an exceptionally large world crop in 1928. The disastrous fall in the autumn of 1930 is ascribed to the re-emergence of Russia as a large exporter, to the size of stocks, to the growing intensity of the economic depression and to the increase in the import restrictions of European countries. These factors completely disorganised the wheat market. Despite the reduction in acreage in all the principal producing countries, with the exception of Canada and Russia, no recovery took place until October, 1931. As soon as it became known that the Russian spring crop was lower than expected, prices rose sharply in October, and although this advance was followed by a reaction at the end of November, prices have not fallen back to the low level prevailing throughout the summer.

Statistical information on the size of the crops harvested during the past year in the principal countries is now available. It is therefore possible to attempt a tentative forecast of the probable developments in the wheat situation during the remainder of the season ending in July. The following table, compiled by the Food Research Institute, of Stanford University, shows the production

and stocks at the end of the crop year in the principal countries since 1926:—

(Million bushels.)							
Year	United States, Canada, Australia, Argentina.			World, excluding Russia.			Russia.
	Initial Stocks.	Crops.	Total.	Initial Stocks.	Crops.	Total.	Crop.
1926	225	1,629	1,854	482	3,369	3,851	914
1927	264	1,758	2,022	521	3,591	4,112	785
1928	341	1,991	2,332	590	3,911	4,501	795
1929	529	1,407	1,936	858	3,419	4,277	703
1930	528	1,725	2,253	809	3,689	4,498	1,084
1931	603	1,579	2,182	904	3,586	4,490	...

It will be seen that world production, excluding Russia, has been smaller by 100 million bushels than in the previous year. Though a reliable estimate of Russia's harvest is not yet available, it is known that her crop has been a failure in certain regions. Mr G. Broomhall estimated Russia's probable exports during the current season at 96 million bushels. As she has already shipped 69.2 million bushels, the remainder will scarcely influence prices appreciably. Though wheat production in Europe in 1931 shows an increase of 58 million bushels on the previous year, the output of rye shows a decline of 154 million bushels, and as rye is used largely for bread in certain European countries, the International Institute of Agriculture has felt justified in estimating an increase in probable requirements of 34 million bushels on the previous year. According to the Food Research Institute, the volume of international trade in wheat may reach 840 million bushels during the current season, and world stocks, excluding Russia and China, may be reduced by 100 to 150 million bushels.

A renewed fall in prices to the June-September level of last year seems therefore improbable. In view of the growing scarcity of home-grown wheat, European countries are beginning to buy increasing quantities abroad. They are thus providing a shock-absorber for the heavy shipments of new wheat from Argentina and Australia. Among other bullish factors are the further reduction in wheat acreage and unfavourable reports of the United States winter crop. On the other hand, a substantial and lasting advance cannot be expected in the near future in view of the size of stocks overhanging the market, and until those stocks are absorbed the wheat farmer has more to hope from a reduction of costs to meet the general level of prices than from a rise in the price of his product to meet his former level of costs.

THE PRUDENTIAL.

SINCE the most important part of the annual report of any investing institution to-day is the balance sheet, it is of great importance to consider how the largest investing institution in the country has fared in this respect during the year 1931. We may consider most usefully the Prudential's investments by comparing the movements in broad groups over the past year.

	1930.		1931.	
	Amount.	Percentage of Total Assets.	Amount.	Percentage of Total Assets.
Mortgages and loans	35,442,000	14.7	33,068,000	13.0
Loans on the company's own policies	7,298,000	3.0	7,403,000	2.9
Stock Exchange securities:				
British Government	58,722,000	24.4	67,412,000	26.4
British municipalities	5,883,000	2.4	7,057,000	2.8
Indian and Dominion Government and municipalities	11,882,000	4.9	13,321,000	5.2
Foreign Government and municipalities	16,277,000	6.9	15,331,000	6.0
Debentures	37,310,000	15.5	38,158,000	14.9
Preference stocks and shares	19,630,000	8.1	20,507,000	8.0
Ordinary stocks and shares	29,956,000	12.4	32,066,000	12.5
Property investments	13,148,000	5.5	13,277,000	5.1
Life interest and reversions	273,000	0.1	247,000	0.1
Miscellaneous	5,129,000	2.1	7,947,000	3.1
	240,950,000	100.0	255,794,000	100.0

A feature of the investments, more readily discernible from a detailed study of the balance sheet items, is the widespread character of the securities. Relatively to other life assurance companies the Prudential has a rather larger stake in Stock Exchange securities, equal to 75 per cent. of the total, compared with an average of 60 per cent. A substantial proportion (which has, moreover, been increased during the year) of the total assets is invested in British Government securities, and at the other end of the scale may be noted substantial holdings (also increased during the year) in ordinary shares.

From the point of view of income return, the yield on this huge total of heterogeneous securities is quite extraordinarily large. After allowing for income tax, the net rate of interest in 1931 was as much as £5 2s. 3d. per cent. This rate shows a fall of 3s. 5d. per cent. on that for the preceding year, the difference being due partly to the rise in income tax and partly, no doubt, to defaults on foreign bonds and reduced dividends on variable interest securities. From the capital point of view, the company, with its huge total funds, has been exposed to depreciation of a formidable character. If 10 per cent. be regarded as a reasonable estimate of the extent of depreciation, it is clear that the company has suffered a loss of something approaching £25 millions. On December 31, 1930, the balance sheet contained a certificate to the effect that the assets set forth therein were in the aggregate in excess of the book values. At that time the investment reserve fund and contingency funds amounted altogether to £14,930,000, but it was known that the book values included a substantial hidden reserve in addition to this. The 1931 balance sheet certifies that the assets are in excess of the book values after taking into account investment reserve funds and contingency funds, and in the meantime these funds have been increased to £18,900,000. It would appear, therefore, that the hidden reserve has been wiped out, and a proportion, at least, of the very substantial disclosed reserves has been needed to provide for the depreciation suffered. The existence of these large reserve funds and their steady accumulation in the past have been a subject of some criticism, particularly by shareholders who considered that earnings were thus unfairly withheld from them; but the directors' policy is now seen to be fully justified, since by the aid of these reserves the company has been able to provide for all the depreciation it has suffered, without further disturbance, and without encroachment on ordinary trading profits. In this connection it may be mentioned that the appreciation that has occurred since December 31st last, particularly in British Government securities, means that a substantial portion of last year's depreciation has already been recovered.

Turning now to the transactions of the year, we find that not even the greatest industrial depression in economic history has been able to stop the steady progress of the company in all departments. Both in the ordinary life branch and in the industrial life branch the new business transacted shows an increase over that of the preceding year, while in the general branch also the premium income shows a satisfactory increase. In the ordinary life branch, new policies were issued for sums assured of £18,006,000, compared with £17,729,000, and in the industrial life branch the corresponding totals were £67,853,000, compared with £66,104,000. The total number of life policies in force in the two branches combined is now nearly 28 millions—a figure which exceeds one-half of the total population of the country. The usual annual valuation, which was made on the same bases as formerly, exhibits the following results:—

	1929. £	1930. £	1931. £
Ordinary branch:—

	6,015,991	6,443,275	6,473,071

A study of the accounts shows that this progressive increase in profits has been assisted in 1931, as in former years, by a further reduction in expenses. The expense ratio in the ordinary branch in 1931 was somewhat higher at 13.1, compared with 11.9 per cent. in 1930, but that in the industrial branch was 24.4, compared with 24.7 per cent. In both branches it may be noted that the amount immediately allocated to bonuses has been much reduced, though the amounts set aside in the respective contingency funds more than make good the difference. In the ordinary branch the reversionary bonus for 1931 is at the rate of 36s. per cent. for whole life and 30s. per cent. for endowment assurances, compared with 52s. per cent. and 46s. per cent. respectively in 1930. The sum of £950,000 set aside in suspense in the contingency fund is stated to be more than equivalent in value to the reduction in the rate of bonus. If and when the general situation shows sufficient improvement, the reduction in the bonus now allotted will be made good to the surviving policyholders, and the interests of policyholders whose policies become claims in the meantime will be protected by the addition of interim bonuses at the full normal rates. The distribution of bonus in the industrial branch has been dealt with on the same lines as that in the ordinary branch. Thus, policyholders whose policies were effected on or after January 1, 1923, will receive an ordinary reversionary bonus at the rate of 22s. per cent., as compared with the full normal rate of 34s. per cent., but the difference will be made up in the case of policies which become claims during 1932. For pre-1923 policies the rate varies with the duration in force, and the bonus is payable only in the event of a claim arising within a period of sixteen years.

The general branch, after an unhappy experience some few years ago in the marine department, has now emerged from its early troubles. The size of its premium income and the reserves which have been accumulated are such that the branch is now thoroughly established. In 1931 the premium income in this branch, comprising all classes of business—fire, accident, motor, employers' liability and marine, etc.—was £1,884,134, compared with £1,806,292 in 1930. The fire accounts show a satisfactory profit, exceeding 6 per cent. of the premiums, and the employers' liability account shows a profit of 15 per cent. of the premiums. The motor business, which is separated for the first time in the accounts, was responsible for premiums of £381,000, and showed a reasonable profit, but the loss on the miscellaneous business has turned this profit into a loss. The premiums in the marine account show again a small decrease of £110,000, and the fund is now equal to nearly four years' premium income. A

summary of the results of the past few years is shown below:—

	1927. £	1928. £	1929. £	1930. £	1931. £
Net trading surplus:—					
Marine	—546,117	—61,665	—102,970	—64,296	—21,139
Fire, accident, &c.	127,670	94,802	134,124	124,456	74,493
	—418,447	33,137	31,154	60,160	53,354
Net interest earnings	72,251	93,320	112,913	110,405	118,982
Total	—346,196	126,457	144,067	170,565	172,336

The dividend in the general branch has been raised from 25 per cent. free of tax to 31½ per cent. free of tax, and the shares, which are 4s. paid up and stand at 86s. 3d., now yield £4 12s. per cent. gross. The dividend on the “A” shares, which appertain to the life branches, has been reduced in a manner comparable with the reduction in bonuses allotted to the policyholders. The rate has, therefore, been reduced from 91½ per cent. free of tax to 84½ per cent. free of tax. The “A” shares now stand at £20, and the gross yield on the dividend at this price is therefore £5 12s. per cent. gross.

POLITICAL OMENS AT WASHINGTON.—I.

(BY A CORRESPONDENT.)

With the party conventions only four months distant, the political pot has begun to boil merrily in the United States. At Washington, Congress is having its liveliest session of recent years and the politicians, in dealing with the economic issues which are occupying their attention, are keeping a weather eye upon the political repercussions. During the winter months the economic depression has deepened and on every side its fruits have been manifesting themselves in calamitous and alarming fashion. Mr E. F. McGrady, the legislative representative of the American Federation of Labour, was recently responsible for the statement that in the United States to-day there were 24 million persons in “abject poverty,” of whom 12 millions were subsisting by public charity. He estimated that eight million workers were totally unemployed and that seven million more have during the winter been working only one or two days per week. Other authorities assert that there are 125,000 families in New York City who are desperately in need of public assistance and not getting it, and that a similar situation exists in numerous other communities. The system of the relief of unemployment by private charity, supplemented by funds from State and municipal treasuries, is proving quite inadequate to meet the situation, and great cities like Chicago and Philadelphia find themselves on the verge of bankruptcy and unable to maintain ordinary municipal services through lack of funds.

Faced with these conditions, the Hoover administration and its supporters have at last realised the need of drastic ameliorative measures, as witness the Reconstruction Finance measure and the Glass-Steagall Bill. The Democratic politicians, anxious to convince “big business” that they can safely be trusted with the government of the country, are according the administration a generous measure of co-operation in their constructive plans, although they have tried with some success to insert modifying amendments representing their own views. At present, however, a bitter fight has developed over a measure sponsored by a group of progressive senators of both parties for the appropriation of \$375,000,000 of funds from the Federal Treasury for direct relief to the unemployed. So far, the Hoover administration shows no sign of recanting from its resolute opposition to direct Federal relief, but it is by no means certain that its hand will not be forced.

Such new signs of vigour, however, on the part of the Hoover administration as are visible can do very little to revive the drooping spirits of the Republican politicians. When the National Committee of the party met in Washington in December its members were sunk in unrelieved pessimism, and vied with one another in the dolorousness of their reports about party prospects in their several localities. At by-elections Democrats continue to carry Republican strongholds; they had a striking gain in New Jersey last month, and they have now followed it

up by carrying a district in the rock-ribbed Republican State of New Hampshire, which they had not held for years. The loss of Brighton by the Conservative party of Britain would be a portent of equivalent seriousness.

The Republican managers keep hoping that through the policies now being sponsored by the Hoover administration, and by some miraculous lifting of the depression in Europe, there will come a revival of business prosperity before the date of the Presidential election, and that they will get credit for it. But at present the prestige of Mr Hoover and his party seems to have reached the lowest depths and they are being persistently assailed and criticised by papers of unimpeachable Republican traditions. A piquant episode recently occurred in Congress when a distinguished Republican senator proclaimed his belief that his party would yet be able to “sell” Mr Hoover successfully to the country, and an unkind Democratic voice interrupted with the gibe: “Sell him, why you couldn't give him away.” Mr Hoover seems assured of renomination by the Republican Convention, which will be held in Chicago, but it will be a mournful gathering, and no Republican candidate for many years will enter the Presidential contest with the omens for success so unfavourable.

The liquor problem also continues to worry the Republican managers, and the economic depression seems to have increased the strength of the popular agitation against the prohibition laws. For one thing, it has destroyed the validity of one of the favourite arguments of the “drys” that prohibition was a large factor in keeping the United States prosperous when the rest of the world was struggling in a morass of economic troubles. Again, the heavy Budget deficit has directed criticism against the enormous expenditure entailed in the obviously ineffective administration of the prohibition laws. At any rate, the conversion to “wetness” of prominent Republican politicians like Senator Davis, of Pennsylvania, who were ardent “drys,” is convincing evidence that votes are no longer to be gained by advocacy of prohibition, and the Republican “wets” in the House of Representatives have taken courage to form a definite bloc under the leadership of Mr J. M. Beck, a former Solicitor-General. Another sign of the changed times is the publication of stories to the effect that the Anti-Saloon League is virtually without funds and is plaintively beseeching its former financial backers for subscriptions to prevent the complete suspension of its activities.

Meanwhile, the Democrats think that they have evolved a liquor platform which will simultaneously ensure the support of disgusted Republican “wets” and not alienate their own “dry” element. Mr Raskob, the chairman of the Democratic National Committee, has addressed a letter to it in which he urges that the party should at its convention adopt a State “home rule” plan for liquor control as part of its official platform. He proposes that the Democratic members of both houses of Congress be instructed to vote in favour of a referendum which will give the people of the United States an opportunity to express their opinion directly on the question whether they wish to have the Eighteenth Amendment retained in the Constitution without change or whether they wish it to be modified by the following proviso:—

“Nothing in the constitution of the United States shall prevent any State from taking over complete control of the manufacture, transportation, importation and sale of intoxicating beverages within

its own territory and the exportation thereof to such other States, countries and territories as do not prohibit same, provided, however, that the plan under which that State proposes to take over such liquor control is first approved by the people of that State in a State-wide referendum."

Mr Raskob claims that the chief merit of his plan is that it commits the Democratic party to recognise prohibition as a social and constitutional issue, but it also puts it squarely up to popular decision, leaving politicians and voters alike free to work and vote either for or against rectification of the "home rule" amendment. Naturally the intransigent "drys" of the Democratic party rage furiously against this plan, but the practical politicians see in it a welcome avenue of escape from the sort of internecine feud over the liquor issue which has raged at recent conventions, and the Republican "wets" are exasperated at their impotence to persuade Mr Hoover of the merits of a similar attitude for his party.

Notes of the Week.

The Wheat Quota Debate.—The Government's Wheat Bill passed its second reading in the House of Commons on Wednesday evening after two days of debate. It was introduced by Sir John Gilmour, the Minister for Agriculture, whose exceptionally long speech was mainly devoted to an exposition of the complicated and cumbersome machinery which is to be set up, but added little to previous knowledge. When, however, Sir John turned from business to politics, and made his defence of the proposal, he delivered himself of passages which entirely confirm the criticisms which we levelled at the proposals last week. In discussing the effect of the quota on the retail prices of bread, he maintained that the quota payment of 2s. 6d. per sack of flour, which is at present contemplated, "would not justify a permanent increase of $\frac{1}{4}$ d. per 2-lb. loaf." It might be deduced from this statement that since, with our present currency arrangements, it is impossible for the retailer to raise his price to the consumer by less than $\frac{1}{4}$ d., no increase in the retail price of the loaf was likely. But a further passage in Sir John's speech made it quite clear that even he is expecting some rise in the price of bread. "Was it not thoroughly reasonable," he asked, "that our home city dwellers . . . should be prepared to offer a helping hand to the wheat growers of the home country?" The phrase "helping hand" can hardly have any meaning unless it represents the payment of a higher price by city dwellers in their capacity as consumers. A conceivable interpretation of these apparently contradictory passages in Sir John's speech may be that he expects the price of the loaf to be raised during only a part of the year, but in any case it is clear that if wheat prices remain in their present neighbourhood somebody has got to pay £1 per quarter on six million quarters. Somebody, in other words, has got to find £6 millions for the ultimate benefit of the wheat grower, and that somebody will not be the miller nor the baker, but the bread-eater. Sir Archibald Sinclair, one of the Ministerial dissentients to the Tariff Bill, supported the quota proposal on the ground that it was a "temporary lifebuoy" for a distressed section of the community. Upon that attitude we have two criticisms to make. The first is that the distressed populations of the big cities are in too great a need of lifebuoys themselves to be able to throw one to any selected or favoured section of a different industry, distressed though it may be. Our second criticism is that there is no justification for the use of the word "temporary." Indeed, many Government supporters have accepted the Bill frankly as a beginning; and there is already criticism of the minimum price of 45s. per quarter as being too low—to say nothing of talk of coming quotas for meat and other farm products. Furthermore, the Government are going to Ottawa in August with a Dominion wheat quota as a possible bargaining weapon, and it is a political probability that the quota system will be extended to imported Empire wheats. This would mean a further burden on

the bread consumer equivalent to the difference between the world price and the quota price of a large proportion of the grain commonly consumed in this country. The Quota Bill cannot be regarded as a temporary lifebuoy for farmers. It is definitely the beginning of a bread tax which, in view of the approaching negotiations with the Dominions, is far more likely to rise than to fall in the course of this year, even though there should be some recovery in the world price of wheat.

The Triumvirate.—The Government has been well advised in the difficult task of selecting the chairman and members of the Import Duties Advisory Committee, whose names were announced on Tuesday. Sir George May, who becomes Chairman, has recently been prominently before the public as Chairman of the famous Economy Committee whose proposals led to the downfall of the Labour Government. Sir George has had a long and distinguished career in the service of the Prudential Assurance Company, of which he was secretary, and has from time to time given notable public service in various directions, including valuable assistance to the Government during the war in connection with the mobilisation of American securities. Of the two other members, Sir Sydney Chapman was known before the war primarily as a distinguished economist, but since 1915 he has been in Government service. In recent years, in his capacity of Economic Adviser to the Government, he has represented this country on the Economic Committee of the League of Nations, which has endeavoured to organise collective agreements for the reduction of trade barriers and the better organisation of international commerce. Sir George Powell, who is a barrister, but who has had considerable administrative experience with the Metropolitan Asylums Board and the London County Council, has latterly been Chairman of the Food Council. The Committee is thus detached from politics, and its members have between them a wide knowledge of the commercial interests of this country, of international problems, and of the social conditions of Great Britain. Whether these qualities are adequate to enable them satisfactorily to carry out a duty so ill-defined but of such unlimited scope is another matter. The Committee are empowered to recommend additional duties of unlimited extent; they may recommend additions to the free list and, it seems, after the Budget will have the right to recommend deletions; and though their proposals will be laid before Parliament and only remain in effect with Parliament's approval, the recommendations will in fact be brought into operation on the order of the Treasury in advance of this Parliamentary sanction. In view of the fact that it is intended that the Committee should be free from political influence and is appointed for three years, it is to be presumed that the Government has given them no instructions, but it has been indicated that they will be expected to consider the need of restricting imports, though in considering any new proposals they are to have regard to the interests of consuming industries and the welfare of the country generally. Tariff enthusiasts will expect them to create employment at home by cutting out all imports which compete with British producers, while others will expect them to have regard, though in their terms of reference this is not expressly stated, to the damage which will unquestionably be done to our export industries and shipping by obstructions to the general imports of this country. We do not envy the Committee a thankless task; for it would tax the power of an archangel to reconcile all the conflicting interests involved or to devise a tariff that will stimulate exports, that will increase employment by keeping imports out, produce revenue by letting them in, and modifications of its own level secure reductions of tariffs abroad. The principles of tariff-making have clearly not been thought out in the least. The constitution of this body affords far less protection to the public interest than, let us say, the constitution of the Tariff Commission in India or even in Australia; nor has any attempt been made to define its powers, as in the case of the United States. Its greatest shortcoming is the absence of any provision to ensure the publicity either of its hearings or of its reports. The Government has chosen good men, but it has given them an impossible job.

Britain Repays.—Welcome news was given by Mr Chamberlain in the House of Commons last Wednesday. First, he announced the withdrawal of the Treasury Order restricting the purchase by British nationals of foreign exchange; and, secondly, he stated that the Treasury had repaid this week \$150 millions of its \$200 millions American credit and Frs. 1,600 millions of the Frs. 2,500 millions Treasury credit given by French bankers. The remaining Frs. 2,500 millions of the French credit was in the form of discounted Treasury bills which could not be redeemed before their maturity in August. Both these announcements created a very favourable impression in financial circles, and there is no doubt that they provide striking evidence of the restoration of world confidence in our finances. When once the foreign exchange necessary for the completion of these operations has been secured, present omens suggest that, unless special steps to the contrary are taken, there may be a marked appreciation of the pound. Here it is necessary to strike a warning note. The recovery in the pound depends, so far as can be judged, partly upon Indian gold shipments, partly upon the repatriation of British capital, and partly upon an influx of foreign capital into money market resources, Treasury bills, and British Government long-term stocks. The real effect of the Indian gold shipments through London is that we are cancelling our obligations to France and America against our claims on India. Similarly, the repatriation of British-owned capital may mean that we are strengthening the liquidity of our position by repaying short-term indebtedness out of the proceeds of sales of long-term investments abroad. Both these processes, therefore, are improving our position. But as regards such influx of foreign funds as is taking place, the effect here is that definite short-term liabilities to foreign central and commercial banks are being replaced by indefinite liabilities to other: foreign financial interests and private investors. For these reasons Mr Chamberlain was undoubtedly correct in suggesting that the recent strength of sterling should not be regarded as justification for the promiscuous flotation of foreign loans in the City.

Bank Rate.—Bank rate was unchanged on Thursday. The absence of a reduction took the market completely aback, since $4\frac{1}{2}$, if not 4, per cent. had been regarded as a foregone conclusion in view of the strength of sterling and the Chancellor's statement on Wednesday; and prime bank bills had changed hands on Thursday morning at as low a figure as $2\frac{1}{2}$ per cent. discount. Indeed, it looks as though the decision must have surprised also some of Great Britain's potential collaborators in the sterling group; for both the Swedish and Norwegian central banks had lowered their discount rates from $5\frac{1}{2}$ to 5 per cent. on Wednesday. If this apparent lack of understanding between the central banks is real it is deeply regrettable. As for the attitude of the Bank of England, we can only surmise that the ground for the decision not to reduce Bank rate was chiefly the understandable desire of the authorities to discourage too ebullient an optimism in the markets at a time when serious obstacles have still to be overcome in restoring the world's credit system to stability. The over-optimistic would, indeed, do well to realise that to some extent sterling has been strong simply because other currencies have been weak; that Central Europe is very far from being out of the wood and that adventitious exports (or, in the case of Indian consignments, re-exports) of bullion are not a healthy substitute for exports of goods and services. At the same time, little is to be gained by maintaining Bank rate ineffectively out of touch with market rate, and still less would be gained by a policy of keeping London money rates at a level which attracted "bad money" to this centre and thereby risked recreating the vulnerability which in the crisis drove us off gold. We can appreciate the force of the paradoxical argument that the inauguration of a 4 per cent. Bank rate this week, coming on top of the announcement of the substantial repayment of our foreign credits, might have had the undesirable conse-

quence of stimulating, instead of discouraging, speculative purchases of sterling. But it is at least doubtful whether maintaining Bank rate—because of possible dangers abroad—at a level which in the circumstances is highly artificial will be regarded as a bear point for sterling or keep foreign money away. For these reasons we trust that the Bank's decision to lower its rate has only been postponed for a week.

Sir Samuel Hoare on India.—Last Monday, Sir Samuel Hoare made a statement in the House of Commons on India. This Ministerial statement, which was not very reassuring, was followed by a debate which was inconclusive and was preceded by answers to parliamentary questions which were somewhat disquieting. In India, as all over the world at this moment, economic stress is proving to be a direct cause of political unrest; and it is satisfactory to have the Secretary of State's assurance that, since the suspension of the gold standard, the economic depression in India shows some sign of lifting a little. But the political part of Sir Samuel Hoare's statement was clearly the important part; and here the Secretary of State has given us no light on the crucial question: "What effect is the policy of repression having upon the Round Table Conference process of co-operative political reconstruction?" To say that "the Government were just as anxious for co-operation with representative Indians as they had ever been in the past," and that "the emergency powers were not a sign of the end of a policy of co-operation," was cold comfort for the House and for the country without a demonstration that co-operation was not in fact being crippled by repression—and no demonstration of the kind was forthcoming. None was made by Sir Samuel Hoare in his statement, and none was elicited from him in the debate. For the rest, the statement contained little more than a reiteration of the Government's well-known contentions: first, that the breakdown of the Irwin-Gandhi Pact has been due entirely to the offensive action of Congress, and that no share of the responsibility for this disaster (and it is nothing less) falls upon the British authorities in India; second, that "no Government worthy of the name could have held its hand a day longer"; third, that the emergency powers, while admittedly "formidable," are not being abused; fourth, that certain reported cases of abuse are unsubstantiated. All this may be so; but, here again, the statement contained no demonstration of the facts which it affirmed. Sir Samuel Hoare virtually asks us to take his word for his affirmations and to leave it at that; and, though we do not for a moment question Sir Samuel Hoare's good faith, we are left with an uncomfortable feeling that the picture which he has drawn for us represents only one side of a highly debatable case. In these circumstances, it is disquieting to learn that cablegrams addressed from India, by two British subjects participating in the Congress movement, to a member of the Imperial Parliament at Westminster, have been intercepted by order of the British authorities in India. This exercise of authority is not illegal, but it is assuredly not in accordance with the public interest or a long and enlightened view; and, as a specific illustration of the way in which the Emergency Orders are being administered, it does inevitably raise serious misgivings in regard to the present drift of Indian affairs.

The German Presidential Election.—The lists are now set for an election which is fateful for the future of Europe. On Thursday, February 25th, the Chancellor of the German Reich, Dr. Brüning, replied in the Reichstag to his Nazi assailants. The sitting was stormy; but the Nazis had nothing to say on the most interesting point in Dr. Brüning's statement, namely, that, when the Chancellor recently offered his resignation to the President of the Reich, the rock on which the negotiations for a possible alternative Ministry foundered was the Nazis' intransigence in demanding a monopoly of power for themselves. On February 26th, Dr. Brüning once more obtained a vote of confidence from the Reichstag—this time again, as in October, by the narrow majority of 25 votes (on a division of 289 votes to 264). An important accompaniment of this division was the virtual break-up of the German People's Party (the late Dr. Stresemann's party). The utmost exertions of party discipline have failed to carry the party *en bloc* into the camp of "the National Opposition," where statesmen with the outlook of Dr. Curtius would have found it really intolerable to serve as yoke-fellows of a Hugenberg and a Hitler. On the same day, the Government of Brunswick converted Herr Hitler into a German citizen by appointing him—not professor in the State Technological University, but Brunswickian commercial attaché in the Brunswick Legation *auprès* the Prussian Government at Berlin. It is perhaps worth noting that the oath administered to Brunswickian officials, which Herr Hitler presumably took on the 26th, when he was sworn in, is conceived as follows: "I swear loyalty to the constitution of the Reich and of the State [of Brunswick], obedience to the laws, and conscientious fulfilment of my official duties." If Herr Hitler were really likely to devote his working time during the next fortnight to the promotion of Brunswickian trade in Prussia, that would decidedly relieve the minds of Germany and the world. But, of course, he had been appointed to this Brunswickian office for the sole purpose of "running" for President of the Reich, and he has immediately plunged head over ears into his election campaign. The most striking feature (though this is no novelty) in the Nazi candidate's declarations up to date is their portentous inconsistency. With one breath, Herr Hitler declares that "more is at stake than the Presidency," and that "March 13th will decide the fate of the system of November 9th [1918]"; and he summons President Hindenburg to "step aside" in order to leave the ground clear for a pitched battle between the Nazis and the Social Democrats. The next moment, he protests vociferously against the Social Democrats' contention that "Hitler instead of Hindenburg would mean chaos and panic in Germany and throughout Europe," and "the greatest danger of bloody conflicts within our own nation and with foreign countries." With his hand on his heart, the outraged Brunswickian commercial attaché declares that, if he is elected President of the German Reich, Germany's foreign relations will not be affected, and no harm will be done to the peace and security of Europe. The "plain European" may be pardoned if he is left a little bewildered.

League of Nations.—Our Geneva correspondent, in a letter dated March 1st, writes:—The swift change in the Sino-Japanese situation seems too good to be true. Perhaps it is. After the tergiversations of the past few months, people here find it difficult to view the diplomatic moves without lingering suspicions of deals and counter-deals, and their hope lies, as it has for some time, in the skill with which the Chinese have persistently conducted their case. They put faith in this as the main chance of avoiding shuffling at the last moment; they do not put much faith in the Foreign Ministers and their Governments, whose chief anxiety seems to be to get out of a dangerous and embarrassing situation—an attitude calculated to lead to any kind of face-saving compromise at the cost of whoever is foolish enough to pay the price. Such is the state to which the futilities of the past few months have brought us. Is Shanghai being bought off for Manchuria? What was behind yesterday's talk of an adjournment of the special Assembly? It may be tempting Providence to give satisfactory answers to these

questions; but there is ground for reassurance in several factors. In the first place, China can and will prevent a deal over Manchuria, and the Assembly remains seized of the whole dispute and not only of the Shanghai element in it (which may have been more or less settled by the time the Assembly meets). The Manchurian Commission is on the spot and will eventually report, and a decision must be taken on the subject. If the powers with interests in Shanghai were foolish enough to try a deal with Japan, it would be prevented. The Assembly has not, in fact, been adjourned, and will meet, as arranged, on Thursday. The proceedings at last night's Council meeting were an astonishing contrast to the painful sitting held a few hours before the Japanese ultimatum in Shanghai expired. M. Sato was all politeness, and approved the Council's resolution, subject to his Government's acceptance. Dr. Yen announced China's acceptance not only of the resolution but of the armistice terms, which he read to the Council. If Japan at the last moment should make reservations and conditions, her position would be still more deeply compromised, and it is this, with the combination of other circumstances in which she finds herself, that leads to the hope that all will eventually go well. Opinion is so distrustful that, at the first news, it was found hard to believe Japan could accept any such reasonable conditions, and it was assumed that she was making another endeavour to attract the interests of the Shanghai Powers to take advantage of the situation. This is not now considered to be the case. If it is so, or if it were so, the Powers thus interested and the Members of the Council have called the bluff, for the conditions of last night's Council resolution seem to leave little or no loop-hole for sharp practice. In any event, the United States of America would not countenance it. As for the Disarmament Conference, the Franco-German crisis which seemed to be impending last week was avoided, though M. Tardieu and the German delegate came very near it in the procedure discussions in General Committee. It is difficult to say when the ference will get to grips with the work. M. Tardieu has been very active in conversations with Germans, Ita and others, but nothing very definite has emerged.

A Royalist Squib in Spain.—Some heartburning appears to have been caused in Madrid by the disclosure of a joint appeal to "all Spaniards of good will" bearing the signature of the two rival claimants to the Spanish throne, ex-King Alfonso and his aged relative, Alfonso Carlos, last of the Traditionalist, or Carlist, line. This document, which was at first treated as apocryphal, had been circulating privately for some little time. It was only last week-end, however, when certain Paris newspapers did their best to make a "story" of it—even suggesting that the authorities should take steps to expel Don Alfonso for breach of the conditions on which he was to be allowed to reside in France—that Republican Spain took cognisance of it. The manifesto, calling for annulment of all the legislative activity of a regime which obtained power through mere municipal elections, is in itself without interest. Some historical importance attaches to it, however, since it marks the end of ninety-nine years of dissension between the two branches of the Spanish Bourbon dynasty. Its immediate effect has been only to embarrass the not very numerous Monarchists who cherish the idea of an Alfonsist restoration, for they are certainly not prepared to subscribe to a project of recognising the Carlist Pretender as rightful King until his death, when Alfonso XIII should succeed him, nor do they see eye to eye with the federalist suggestion of confirming the *fueros* and rights of the northern and other provinces. Traditionalist circles, on the other hand, are voicing complaints of infiltration by certain elements with whom they have nothing but the name of Monarchist in common. It seems extraordinary that Alfonso XIII should have allowed his name to be connected with this Royalist gesture. He is at the moment in Syria, and probably some of his zealous supporters have blundered. Neither this damp squib nor the hurling of a heavy missile by a "Communist" last Friday has disturbed the deliberations of the Cortes. Señor Carner, the Finance Minister, is sticking to his guns

in regard to the absolute necessity for increased taxation, and the Prime Minister has made another successful appearance with a proposal for yet more stringent regulation of Army affairs. In future, newspapers will not be allowed to style themselves organs of Army opinion, and the Government is authorised to deprive retired officers of their pension rights should they yield to any temptation to work against the Republic. Señor Azaña seems to have his Chamber well in hand. But where is the Catalan Statute which was to run the gauntlet of the Cortes "early in the New Year"?

The Fascist Putsch in Finland.—The Finnish Fascists, who style themselves "Lapuan," have shown their teeth before; but they have now gone further in proclaiming something that is hardly distinguishable from civil war. Last Sunday they ordered the mobilisation of their illicitly armed organisation and announced their intention of marching on Helsingfors. Violence had already broken out the night before at the country town of Mäntsälä, where a band of armed Lapuan opened fire on the local working-men's club while a lecture was being given there by a Labour member of the Finnish Diet. The Lapuan have now occupied Mäntsälä in force, under the command of their leader, General Wallenius, a former chief of the Finnish General Staff, and their terms appear to be the resignation of the Cabinet. The Finnish Government, on its part, is putting into operation a National Security Law which was passed in 1930—under pressure from the Lapuan themselves as an anti-Communist measure! And two organised military forces now confront one another. The situation is serious, for two reasons. In the first place, the Finns, under a veneer of Scandinavian enlightenment and progressiveness, have displayed a most un-Scandinavian savagery in their civil strife. The struggle between Whites and Reds in Finland in 1918 was conducted with perhaps even greater brutality than the simultaneous struggle in Russia itself. In the second place, a Fascist outbreak is particularly dangerous in one of the five European border States that march with the Soviet Union. If the Lapuan carry the day in Finland and make themselves masters of the Government at Helsingfors by force, then the likelihood of an imbroglio on the Finnish-Russian frontier will be seriously increased. This frontier is a particularly tender point, as it runs only a few miles from Leningrad. This is one more aspect of the vicious circle in which the world is caught. For each of these political upheavals arising from the pressure of the economic crisis constitutes an additional obstacle to the curing of the very economic malady by which these political troubles are being caused.

"The Way of Escape."—In a recent issue of the *Economist* (February 13th, page 341) we expressed the view that the world to-day was witnessing a race against time between debtors' defaults, which may be devastating in their consequences, and a recovery of prices rendering intolerable the burden of indebtedness, private and governmental. Our plea for the recognition of the dangers of continued deflation received powerful support from Sir Henry Strakosch last week. Addressing the Finance and Currency Committee of the House of Commons, Sir Henry dealt at length with the disastrous results which had been brought about by what he described as the "incredible antics of a goat-like character" performed by the purchasing power of gold during recent years. He advocated pursuance of two objectives of monetary policy—one temporary and one permanent. In the first place, he proposed that additional purchasing power by currency and credit expansion should be injected into the sterling monetary system to raise sterling wholesale prices by at least 20 per cent. Such a process, in his opinion, would not create new disequilibria of any moment, since, in comparison with 1928, the retail cost of living and average wages had fallen by only 11 per cent. and 3½ per cent., respectively, as compared with a fall of 24 per cent. in wholesale prices. Thus, "reflation" back to the 1928 wholesale price level should be accompanied by only a

small advance in the cost of living, and should not necessitate any appreciable upward movement of nominal wages, while the restoration of the 1928 level of the price structure would restore the solvency of most of our debtors and would bring about a revival of confidence and trading enterprise. Thereafter the objective of monetary policy should be to maintain by "management" a stable level of commodity prices. If Britain took the lead in stabilising the internal purchasing power of sterling, other non-gold countries whose economic life was intimately bound up with British trade would merely have to pursue a monetary policy directed to keeping their rates of exchange on London stable. This, in practice, was their pre-war policy, when all gold standard countries looked primarily to the stability of their exchange on London.

— And the Obstacles.—On the day following that of Sir Henry Strakosch's address, Sir William Beveridge, in the concluding lecture of the Halley Stewart course on "The World Economic Crisis and the Way of Escape," dealt with some of the difficulties which stood in the way of the achievement of the stability of money in terms of purchasing power. At present, he observed, no central bank had sufficient control over the power of commercial banks to lend more money than people have saved, thereby creating an inflation of purchasing power which holds within itself the seeds of subsequent deflation. Secondly, if the full benefits of stable money are to be realised, there must be a great increase of co-ordinated international control, and finally there was the difficulty that apparent stability might be a prelude to a crash if prices were not allowed to decline proportionately to increased efficiency of production. The last-named consideration, however, is surely, we suggest, an argument for elasticity of monetary management rather than for the abandonment of all attempts to eliminate the anarchy of purchasing power. Indeed, Sir William himself was emphatic that in a world now laid waste by deflation, we must attempt the stabilisation of purchasing power, no matter how great the obstacles that have to be overcome. As he pointed out, whereas an absolutely general change of prices, applying equally to all transactions for all men, would make no difference to anybody, the recent catastrophic fall of prices produced by credit deflation had not only paralysed economic activity through the time element that enters into production, but it had met with unexampled rigidity in the world's economic structure, in which the greatest factor is the rigidity of debts, internal and external. No matter how greatly the working of deflation might in theory have been facilitated by absolutely smooth proportionate readjustments of wages, it is difficult to believe that even if a more systematic decline in the price level had obviated the 1931 "confidence crisis," the disequilibrium presented by the growing burden of fixed interest could have been adequately alleviated, as things in practice were going, by the natural process of conversion operations. Be that as it may, the fact remains that to-day, given the present price level, the world is in a state of latent insolvency. Failing a restoration of the price level, is there any alternative but default on a scale which the "capitalist" system, accustomed in the past only to comparatively limited remedial "blood-letting" by way of bankruptcy, has never yet had to face?

The Defence Estimates.—The estimates for the Army, Navy and Air Force in 1932-33, presented this week, allow further opportunity of checking the effectiveness of the Government's intention to carry out the economies promised by Mr Snowden in his supplementary Budget, on the basis of the Economy Committee's recommendations. The results are, on the whole, satisfactory. For the Navy, pay and pensions were to be cut by £1,828,700, and economies on other items were to total £2,000,000. The actual reduction in the net Navy estimates, which amount to £50,476,800, against £51,505,000 last year, is only £1,128,700, but an accompanying memorandum explains that, as was recognised by the Economy Committee, an increase of £2,700,000 has to be allowed in the 1932

votes to provide for the normal upward curve of expenditure on the 1930 and 1931 new construction programmes as approved by Parliament. With this proviso, the economies have been fully achieved. The Army estimates, totalling £36,488,000, against £39,930,000 for 1931-32, show a reduction of £3,442,000, which is reasonably near to the promised cut of £3,500,000. The Air estimates are the most disappointing. At a net figure of £17,400,000, compared with £18,100,000 last year, they show a reduction of £700,000, whereas the share of the Air Force in the promised cut of £8,600,000 was to be £1,300,000. It is true that the gross estimate, before deducting the Fleet Air Arm grant and other appropriations in aid, is nearly £1,500,000 less, but the fact remains that the combined defence estimates show economies of only £7,970,000 net, after allowing for naval construction; that is to say, £630,000 less than Mr Snowden foreshadowed. All the defence departments complain that their economies cannot be long sustained. "It has only been possible to achieve so large a reduction," writes the Secretary of State for Air, "by the postponement of many services, which, under normal conditions, would be regarded as essential, and by makeshift expedients which cannot be repeated." The War Office claim likewise that "this reduction of expenditure has only been achieved with the greatest difficulty by resorting to a drastic suspension or retardation of many services which are essential to the well-being and efficiency of the Army." And the First Lord declares that the estimate "must not be regarded as an adequate provision for the needs of the Navy." The complaint of inadequate provision for defence is, of course, an old one, but the need for maintaining and enlarging the economies lends additional urgency to the need for securing the success of the Disarmament Conference, which all men of good will desire on broader grounds.

Australian Exchange Problems.—When, just over a year ago, the Australian pound depreciated to the point where £130 pounds Australian became equivalent to £100 sterling, the fall in the Australian pound was a fall not only in its sterling value but in its gold value; for Great Britain was then still on the gold standard. The suspension of the gold standard in Great Britain last September, and the subsequent depreciation of sterling itself to some 70 per cent. of its gold parity at once raised in a new form the optimum relation of the Australian pound to sterling, and this point may best be illustrated in the form of two equations:—

- (1) January, 1931: £100 Aust. = £77 sterling = \$374;
- (2) November, 1931: £100 Aust. = £77 sterling = \$269.

The sterling exchange is taken in the latter month at the arbitrary figure of \$3.50.

In short, the Australian pound, while unchanged in terms of sterling, had undergone a further depreciation in terms of dollars, and then stood at only 55 per cent. of its par dollar value. *Prima facie*, some adjustment was called for, in the form of an appreciation of Australian pounds against sterling, to restore the *status quo* of Australian pounds against gold, and practical recognition of this need was given effect to in the rise in the Australian exchange rate from £130 to £125 per £100 sterling. Taking the sterling-dollar exchange again at \$3.50, this left the following equation:—

- (3) March, 1932: £100 Aust. = £80 sterling = \$280.

This represents a half-way house between the first two equations, but with a very definite leaning towards the second. Should, however, sterling improve to \$4, the Australian pound will be worth \$3.20, or almost exactly half-way between the rates in the first two equations. These calculations, though in part theoretical, are of some practical importance, as the point has been raised as to whether the December reduction in the exchange from £130 to £125 was wise. The Bank of New South Wales has issued a pamphlet, which on balance holds the contrary view. In support of the criticism of the move it both points to the wisdom of waiting for a *de facto* stabilisation of sterling against gold and also adduces certain practical and weighty arguments, such as the

dangers of further deflation in Australia at the present time, and the supreme need of preserving and stimulating Australia's export trade so as to enable fresh reserves of sterling in London to be gradually established, to meet current indebtedness and future emergencies. A long-term view of the problem, however, raises wider questions. One is whether the arrangement under which the exchange rate on London, and hence on the world, is fixed arbitrarily instead of being left to the normal forces at work in a free foreign exchange market is the best from Australia's point of view; and with this comes the practical question whether it would be possible to establish a wide enough exchange market in Australian currency. Another is whether sterling or gold is about to become the predominant medium of exchange in the world's markets. If sterling is to be the predominant partner, the Bank's case is strengthened. Finally comes the question, already raised in Canada, of the establishment of some Empire currency and exchange pool. Should they become practical politics, the rates at which different Empire currencies would exchange for each other would be one of the most important details that would have to be settled, and there is no intrinsic reason why the former parities or current rates should be the actual rates selected.

Shipbuilding Joint Conference.—At the negotiations last summer between the shipbuilding employers and the shipyard trade unions the question of wages alone was dealt with, and the employers gave notice of their intention to raise, later, other matters affecting labour costs in the shipyards. A joint conference on this subject is to be held on March 21st, and at a preliminary meeting last week Mr R. H. Green, President of the Shipbuilding Employers' Federation, made a statement explaining the urgency of the need for the unions' co-operation in revising certain agreements, notably the Oil Ships Agreement and the National Overtime Agreement, in reconsidering certain allowances, and in modifying the regulations which hamper interchangeability of labour and the introduction of the most modern equipment and methods of work. Mr Green's account of the depressed state of the industry was by no means exaggerated, and his emphasis on the need for co-operation between the Federation and the unions was apparently appreciated by the workers' representatives. As he pointed out, the terms of the last wage settlement preclude any idea that the adoption of a greater degree of interchangeability among different classes of workers is aimed at using lower paid classes of labour, as the rates paid for the actual work will in most cases be the same, regardless of the kind of craftsman who does it. This gives some hope that a restriction which is particularly wasteful of time may now be modified, and the general tone of Mr Green's speech was certainly calculated to produce, at the forthcoming conference, an atmosphere favourable to concessions which are urgently needed in the interest of the industry as a whole.

The 1930 Census of Production.—Volume V. of the preliminary reports of the census of production of 1930, published recently in the *Board of Trade Journal*, deals with the grain, milling, seed crushing, oil and tallow, and match trades. The following summary shows the gross value, the net value (gross value less cost of materials and work given out to other firms), and the net output per person employed in the various industries in 1924 and in 1930:—

Industry.	Gross Output.		Net Output.		Net Output per Employee.	
	1924.	1930.	1924.	1930.	1924.	1930.
Grain milling	Thous. £. 33,550	Thous. £. 65,198	Thous. £. 10,399	Thous. £. 9,113	£ 357	£ 368
Seed crushing	36,422	22,068	3,910	2,389	279	212
Oil and tallow	11,834	15,770	2,352	4,741	366	628
Matches	4,388	4,277	1,724	1,521	354	381

The heavy decline in the gross value of the output of the grain milling industry is ascribed mainly to the disastrous

fall in the price of cereals. But the results also reveal an appreciable decline in the output of the majority of the products of the industry. The relatively smaller reduction in the value of the net output therefore suggests that there was only a slight downward revision in the charges per ton milled. The report on the seed crushing industry shows a sharp setback in the value of both gross and net output and in the output per employee. As the decrease in the quantity of seed treated was smaller than that of the total net output, it appears that the net selling value per ton suffered a considerable decline. The survey of the animal and fish oil trades records a substantial expansion in this branch of activity since 1924. The output per employee shows an increase of 72 per cent. The total production of matches and the net selling value per 1,000 gross of boxes remained practically unchanged. The reduction in the value of the total net output in 1930 is explained by the higher excise duty.

British-Russian Trade.—A correspondent writes:—At the present time, when foreign trade is the subject of so much discussion, the following analysis of Soviet orders in the United Kingdom during the past three years is of considerable interest.

	1929.	1930.	1931.
Machinery and equipment.....	£ 2,381,275	£ 3,618,947	£ 8,905,813
Raw material and semi-manufactures	5,180,958	5,494,961	4,791,964
General consumption	2,350,200	3,284,926	1,275,341
	9,912,433	12,398,834	14,973,118

Apart from the increase in the total figure—a rise of over 50 per cent. between 1929 and 1931—the figures for the various groups are worth noting. Whereas articles of general consumption, *e.g.*, some foodstuffs, textiles, etc., had decreased in 1931 to half the 1929 figure, and the figure for raw materials had remained fairly steady, the machinery and equipment orders were more than three times their value in 1929. They represented 24.2 per cent. of the whole orders in 1929, but in 1931 they formed 59.4 per cent. It may be pointed out in this connection that, according to figures recently quoted in *Machinery* (February 11, 1932), Soviet orders in this country for machinery and equipment totalled £296,372 during the month of December, 1931, out of a total of £339,160. Thus Russian orders accounted for 87 per cent. of the whole.

South African Native Bill.—The Native Service Contract Bill, writes our Johannesburg correspondent, is again before the House. It is to be sent to a Select Committee, but is, unfortunately, not likely to suffer serious alteration. Unless pressure of other business, or the sudden collapse of the Government on the financial question, intervenes, the South African Statute Book will be disfigured by an Act embodying many of the features of slavery without giving the masters any personal interest in the care of the enslaved. The Bill authorises whipping, and extends and complicates the pass system. Worse than either of these points, a European landowner may contract with the guardian of a native minor for the service of that minor in any part of the Union until the age of eighteen. In a land where quite small native children perform simple domestic and field tasks, this opens the door for grave abuse in the event of collaboration between Europeans and natives of an undesirable type. It is hardly to be wondered at that Professor W. Macmillan and those who agree with him complain that co-operation with informed native opinion is becoming increasingly difficult.

British Linen Bank.—The accounts of this famous Scottish institution show that while it has not entirely escaped the effects of the crisis, it has maintained its position sufficiently to enable the directors to refrain from making any reduction in the dividend, which still stands at 16 per cent. The contraction in deposits is no more than might have been expected; and, indeed, the current year's figures compare very favourably with those of 1930. It is fair to point out, however, that Scotch banks were affected

to a much smaller degree than were English banks by last year's heavy withdrawals of foreign-owned balances.

	January 15, 1930.	1930.	1931.	1932.
Liabilities—	£'000	£'000	£'000	£'000
Capital.....	1,250	1,250	1,250	1,250
Reserve fund	1,850	1,900	1,900	1,900
Deposits	26,811	27,667	25,905	25,905
Note circulation	2,505	2,566	2,704	2,704
Acceptances	654	539	573	573
Assets—				
Cash and call money	6,898	6,564	6,719	6,719
Cheques in course of collection.....	1,099	1,047	1,037	1,037
British Government securities	10,242	12,746	12,560	12,560
Other investments	462	451	429	429
Discounts and advances (including Treasury bills)	14,207	13,131	11,501	11,501
Net profits	326	327	294	294
To reserve	50	50	50	50
To contingencies	...	50	100	100
Dividend	16%	16%	16%	16%

Analysis of the bank's assets is rendered difficult by the failure of the bank to separate cash from call money and discounts from advances, but the general trend is apparent. Like other British institutions, the bank has been compelled through lack of other means of employment to divert more of its funds into British Government stocks. It has not been thought necessary to make any published appropriation towards depreciation of the bank's securities, but it is noticeable that whereas a year ago published reserves and contingencies were allotted £50,000 each, this year the whole £100,000 goes to contingencies. This undoubtedly is a wise precaution.

Banca Commerciale Italiana.—Our Turin correspondent writes that the first steps have been taken towards the execution of the scheme for liquidating Comit's frozen investments, for the annual report of the directors shows that the bank has already sold to the new Società Finanziaria Industriale Italiana some 4,000 million lire of shares owned by the bank itself or by subsidiary holding companies, without the bank having incurred any loss. One-fourth of the purchase price has already been paid to the bank out of funds obtained through a credit guaranteed by the Treasury, and it is agreed that the payment by the Sofindit of the remainder of the purchase price to the Banca Commerciale will rank ahead of the repayment of credit. In fact, further payment by the Banca Commerciale can be called for as and when the bank needs additional funds, while the Sofindit in its turn can obtain special advances from the Istituto Mobiliare Italiano. The report further states that the directors are of opinion that there exists in Italy a large potential demand for gilt-edged securities and also for sound fixed-interest industrial debentures, and that consequently the Istituto Mobiliare Italiano will have no difficulty in raising fresh capital as it needs it for the discharge of its functions. The accounts of the Banca Commerciale are summarised below:—

	December 31st.	1929.	1930.	1931.
Liabilities—	Lire Mn.	Lire Mn.	Lire Mn.	Lire Mn.
Capital	700	700	700	700
Reserve funds.....	560	580	580	580
Bills payable	244	249	201	201
Commercial acceptances	700	689	263	263
Deposits	7,670	8,537	8,039	8,039
Guarantees.....	655	802	981	981
Assets—				
Cash	537	512	530	530
Bills receivable, Treasury Bonds and Government securities	3,929	4,163	5,492	5,492
Contango and loans.....	634	690	286	286
Participations in other banks and syndicates	551	688	267	267
Investments	567	699	345	345
Current accounts	3,906	4,174	2,923	2,923
Net profits	114	88	62	62
To reserve	20	Nil	Nil	Nil
Dividend	13%	12%	8%	8%

Pending the further development of the reconstruction plan, the accounts show that substantial reductions have been made in investments and banking participations. The contraction in deposits is due partly to the withdrawal of foreign funds, and partly to a diversion of savings to short-term Government securities and to the Post Office Savings Banks. The credit with the Sofindit appears partly under "bills receivable" and partly under "current accounts." Net profits have decreased, and the

dividend has been reduced from 12 to 8 per cent. The directors, however, point to the recent downward trend of insolvencies among the banks' clients, which they regard as an encouraging sign.

Transvaal Gold Mining.—Our Johannesburg correspondent writes:—The gold-mining industry, alone among South African activities, is still creating fresh records. Not only was last year's production of 10,874,145 fine ounces the highest yet recorded, but owing to the very ample supply of native labour the development footage also constituted a record. The heavy development of the last few months will be invaluable if any improvement in general production reduces the labour supply available to the mines to more normal proportions. Owing to the increased tonnage milled, many of the mines were able to reduce their grade in 1931, while maintaining or slightly increasing their profit. Total profits amounted to £13,750,000, and dividends of £8,536,000 were distributed. Some of the most striking results are shown by companies on the Central and West Rand, which only in recent years were regarded as almost moribund. Needless to say, a moderate devaluation of our currency would give the industry further stimulus.

INSURANCE NOTES.

Scottish Widows' Fund.—Once again the Scottish Widows' Fund has succeeded in transacting an enlarged volume of business, and in doing so has created a fresh record in its history. The sums assured in respect of new policies issued in 1931 amounted to £3,532,000, compared with £3,492,000 in 1930. Nevertheless, it is a striking thing that the society's total yearly premium income has declined during the year by some £11,000 in spite of the increased new business. Although the claims by death and by maturity both absorbed a larger amount than previously, the explanation is probably to be found in an abnormal rush of surrenders and of lapses. The interest earnings are higher, but the net rate of interest earned has declined from £4 12s. 3d. per cent. to £4 9s. 5d. per cent. The expenses of the management and commission together absorb a rather larger amount than in 1930, and, as the premium income is slightly smaller, the ratio has risen from 12.4 per cent. to 12.8 per cent. On December 31, 1930, the Stock Exchange securities were taken in the balance sheet at prices which at that time were substantially below their market values. In addition, the society had a reserve fund of £350,000. On December 31, 1931, the Stock Exchange securities are stated to stand in the balance sheet at or under their market values on that date, but to enable that statement to be made, it has apparently been necessary to utilise the whole of the reserve fund of £350,000, together with a fresh allocation of £150,000.

Scottish Provident Institution.—The 1931 accounts of this institution bear clear indications of the difficulties of the past year. The new business has declined from £2,891,000 to £2,620,000. The expense ratio has risen from 17.2 per cent. to 18.2 per cent., and, as a result of a decline in net interest earnings of some £55,000, the net rate of interest earned is substantially lower at £4 6s. 9d. per cent., compared with £4 15s. per cent. The amount paid in respect of death claims also shows a large increase, and surrenders are responsible, as might be expected, for larger payments. The classification of the investments shows two changes on a considerable scale and of rather a remarkable character. Mortgages on property within the United Kingdom have declined during the year from £1,294,000 to £488,000, and house properties have risen from £504,000 to £1,771,000. At the end of 1930 it was stated that, although the book values of the investments exceeded the then market values by £100,000, the difference was amply covered by the investment reserve fund of £500,000. At the end of 1931 the investment reserve fund had been raised to £1,000,000, and the 1931 balance sheet has attached to it the following statement:—

Stock Exchange Securities (with the exception of approved Redeemable Securities maturing within fifteen years, which are taken

at ledger amounts adjusted annually so as to attain to redemption value by maturity date) stand at or under ledger value, as at 31st December, 1928, the date of the Quinquennial Investigation. Investments made since that date stand at or under cost price, except in the case of Redeemable Securities as mentioned above. Due to the serious fall in the value of all classes of securities throughout the year there is a depreciation in the value of the Stock Exchange Securities (with the exception of the group above-mentioned) which, after taking into account the Reserve Fund, represents approximately 11 per cent. of their ledger values. This cryptic statement seems to require further elucidation by the chairman at the annual meeting.

National Provident Institution.—The year 1931 is the first year of a new triennium, and the accounts for the first time coincide with the calendar year, since the Institution recently decided to change the accounting day from November 21st to December 31st. As a consequence, the 1930 report covered a broken period from November 21, 1929, to December 31, 1930, and comparisons are, therefore, to some extent vitiated. The Institution has clearly experienced a substantial falling off in new business, for the total of £1,363,000, representing new sums assured issued for the full year 1931, shows a considerable reduction on that for the broken period in 1930. The funds have now nearly reached the figure of £10½ millions. The increase is less than in normal years owing to the fact that the large sum of £140,000 has been paid out in the form of bonuses taken in cash. Although the Institution declares its bonus in the normal way as a reversionary addition to the sum assured, the terms on which these additions may be encashed are such that the first year of a new valuation period is invariably attended by heavy surrenders. The ratio of expenses and commission to premium income has declined from 13.6 per cent. to 12.8 per cent., and the new rate of interest is also lower at £4 11s. 4d. per cent., compared with £4 12s. 1d. per cent., though, in view of the rise in the standard rate of tax, the reduction is small. The balance sheet certifies that the Stock Exchange securities stand at or under selling prices on December 31, 1930, and it may be inferred that a comparison with market values on December 31, 1931, would still show a not inconsiderable hidden reserve. The increased funds have again been largely applied in increasing the investments in mortgages on property, though the comprehensive group of debentures also shows an increase. The holding of British Government securities is lower than a year ago, while that of foreign Government securities shows a very considerable decline, from £311,000 to £187,000. This reduction, in view of the catastrophic fall in foreign bonds, is one on which the Institution may well congratulate itself.

National Mutual Life Assurance.—The 1931 report of the National Mutual lacks its usual savour, since it is not accompanied by a report on the annual valuation. As has already been announced, the society has decided to postpone its annual valuation—itsself an innovation which was introduced so recently as 1924—and to protect the interests of policy-holders whose policies become claims in 1932 by the payment of interim bonuses at the full normal rates. A study of the report and of the chairman's speech at the annual meeting shows that this decision was both wise and necessary. The National Mutual has been one of the principal exponents in this country of what is somewhat inaptly termed the "active investment policy." Acting in pursuance of this policy, it has embarked some 75 per cent. of its total assets in Stock Exchange securities—a figure somewhat in excess of the average—and included in its investments has been for some years past a substantial holding of ordinary shares. Consequently, and inevitably, it has suffered heavy depreciation last year. At the same time, the society has steadfastly pursued the course of exposing its true position each year to the members, and in continuance of this tradition the chairman (Mr J. M. Keynes) stated at the meeting that the depreciation and realised loss combined in 1931 equalled nearly 12 per cent. of the total assets. The bulk of this is met by the carry forward and the ordinary trading surplus of the year. In explaining the situation, the chairman quite legitimately pointed to

the fact that to the extent that the depreciation was due to a change in the rate of interest in an upward direction, it could be, and indeed in strict equity ought to be, met by a corresponding change in the rate of interest assumed in the valuation of liabilities, and if that course were adopted the depreciation would be more than fully covered. In point of fact, there has been, of course, a substantial recovery in values since December 31st last, and at to-day's market prices the society must have regained a considerable proportion of the depreciation suffered last year. British Government long-term securities, for instance, which showed a depreciation last year of 12 per cent., now stand at prices approximately equal to those obtaining on December 31, 1930. Since the society has nearly £1,000,000 invested in this group, the recent turn-round in markets has probably meant a recovery in that group alone of approximately £100,000. Indeed, the chairman was able to announce that that portion of the depreciation not met out of the carry forward and the ordinary surplus of the year had already been recovered. In regard to the society's holding of ordinary shares (a holding which has been reduced during the year from 16 per cent. to 14 per cent. of the total assets), the chairman pointed out that "at this moment of extreme deflation, when commodity prices are at so low a level that a substantial recovery in them, sooner or later, is the only alternative to a widespread default of obligations expressed in terms of money," the possession of ordinary shares is a source of strength to an investing institution whose liabilities are expressed in terms of money. Turning to the transactions for the year, the society has experienced a falling off in new business, the net total having declined from £813,000 to £706,000. As a consequence of this, and also by reason of an actual reduction in expenses, the expense ratio has declined from 14.7 per cent. to 13.7 per cent. The actual net interest income is somewhat lower, and this is responsible for a reduction in the net rate of interest from £4 18s. 10d. per cent. to £4 9s. 11d. per cent.

Stock Exchange — Finance — Prices.

(FROM OUR CORRESPONDENT.)

NEW YORK, February 19.

THE wide publicity which has been given to various proposals designed to halt deflation and stimulate business has maintained an upward tendency in the share market. A moderate rise in brokers' loans, which broke the record of twenty-three weeks of decline, points to the awakening of the speculative spirit on the buying side, and the consistent advance in bonds of all descriptions has encouraged sentiment.

No one tries to prove that the better markets rest as yet on the solid ground of business recovery, but hopes of such improvement later have been raised by current events. Chief among these is the Federal Reserve Bank credit liberalisation measure known as the Glass-Steagall Bill, which is virtually certain of passage without crippling amendments. Another step which the Hoover administration has taken, designed as a psychological appeal, is the campaign against currency hoarding. Those who have withdrawn deposits from the banks are being asked to put their money back as a patriotic duty, and the President has announced that already some thirty-four million dollars have come out of the boxes and socks of the hoarders. Evidence seems to point to a slackening of the hoarding movement, but the Federal Reserve Banks report for the week a drop of only seventeen millions in currency in circulation, while the monetary stock of gold declined thirty-four millions.

The Federal Reserve Banks report a rise of \$27 millions in member bank borrowing, a similar drop in bills held, an unchanged Government bond portfolio and unchanged figure for total credit in use. The reserve ratio at 67.4

per cent. compares with 84 per cent. a year ago. The banks report the return of a good deal of currency to deposits, much of it taken by corporations from their safety deposit boxes, and merchants are reporting the appearance of old-style currency notes.

Whether the plan of President Hoover's new anti-hoarding campaign committee to issue Government bonds in small denominations, \$50 or less, to hoarders will meet with much success provokes difference of opinion. Most people think it may do some good and is unlikely to do any harm. It is true that over \$11,000 millions existing issues of Government bonds are available in \$50 denominations, and the question will have to be answered how the Government will be able to sell at par (as it must do under the law) bonds bearing a lower rate of interest than outstanding bonds, most of which are selling below par, to yield over 4 per cent.

Opposition will probably develop if the Government offers an interest coupon to compete with the savings banks' rates, and yet it will have to offer more than the 2 per cent. now paid by the Federal Government's postal savings banks, deposits in which, incidentally, have been rising considerably. Moreover, apparently the Government will ask hoarders to run the same risks of market depreciation in bonds as other investors must take, provided they do not hold until maturity. Subscribers may turn out to be largely those who simply buy with bank deposits, in which case there would be no gain to the banks, which is the object desired; but under the spell of a country-wide appeal some of the real hoarders might be reached. Meanwhile the sale of a new "baby bond" issue would bring in cash to the Government, which must anyhow borrow large amounts in coming months.

An improvement in commercial bank earnings is noted, and the banks have virtually ceased to liquidate their United States Government bond investments. It now looks as though the stronger banks will earn something over dividend requirements in the first quarter, in spite of lower deposits. Large losses on security price deflation have stopped, and the spread between deposit rates paid and interest rates demanded has improved in favour of the banks. New issue business, on the other hand, is still slack, the week's offerings being only one public utility bond issue for \$25 millions. Banks are encouraged by the return to them of gold coin removed by hoarders on a large scale.

On the week ended February 17 gold exports were \$62.8 millions, accompanied by a drop of \$16 millions in gold held under earmark at the Reserve Banks and imports of \$6.4 millions.

Commodity prices are a trifle steadier, after rather sharp declines in January. The Bureau of Labour Statistics index for last month shows a drop of 2 per cent. Food prices fell by 6 per cent. and farm products receded 5 per cent. The index is as follows:—

COMMODITY GROUPS AND SUB-GROUPS.

	January, 1931.	December, 1931.	January, 1932.
All commodities	78.2	68.6	67.3
Farm products	73.1	55.7	52.8
Foods	80.7	69.1	64.7
Hides and leather products ..	88.7	79.8	79.3
Textile products	71.3	60.8	59.9
Fuel and lighting materials ...	73.3	68.3	67.9
Metals and metal products ...	86.9	82.2	81.8
Building materials	83.8	75.7	74.8
Chemicals and drugs	84.5	76.1	75.7
House-furnishing goods	88.3	78.5	77.7
Miscellaneous	72.2	66.8	65.6
Non-agricultural commodities	79.3	71.3	70.3

The Stock Exchange has announced new rules which have been interpreted as a curb to short selling. In effect, the new rule merely emphasises the old, namely, for a broker to require written consent from his client if stocks held for the account of the client are lent to a short seller. That is generally done now, and no practical effect is expected to follow the new rule, although its promulgation with misleading publicity set in motion a sharp covering movement this week. The new rule looks as though the Exchange authorities are willing to do something to hold short selling in check, and they are thinking more of the

effect of that on Congressmen, who are pressing to interfere with the Exchange's operations, than of actually hampering the shorts. Officially the Stock Exchange has repeatedly gone on record as upholding the principle of short selling.

FRANCE.

Budget — Politics — Foreign Loans — Industry.

(FROM OUR CORRESPONDENT.)

PARIS, March 2.

THE Budget Bill, which the majority in the Chamber is determined to push through before the end of the financial year on March 31, is now well on its way, by dint of devoting the whole time of the Lower House to the measure. Whether the Government's objective will actually be attained naturally still remains uncertain; but there are now indications that it will, particularly in view of the fact that the Opposition seems to have realised that deliberate obstruction at this period, with the elections immediately in view, will undoubtedly cause them more harm than good when they come before the electors.

The Senate, in dealing with the Electoral Reform Bill, has ruthlessly cut out the clauses concerning women's suffrage, suppression of second ballots and other controversial questions, and left merely the customary readjustment of electoral areas to be passed into law. In view of the fact that the Bill, as sent up to the Senate, received the support, in the final vote, of less than one-half of the Chamber—the bulk of the Opposition as well as of the majority, including M. Tardieu and several other members of the Cabinet, having abstained from voting—this solution is generally regarded as the most satisfactory that could be reached. M. Georges Mandel, the father of the Bill, nevertheless appears to have decided to persist in challenging the Senate to a further trial of strength, when the emasculated measure is sent back from the Chamber in its revised form, but there is little likelihood of success. In any case, this can have no effect on the passage of the Budget, which the Government, in its capacity as an interim Ministry, pending the definite verdict of the General Elections, is making its sole and practically only duty, and regards as assured.

Speculation is now active as to what the result of the pending electoral contest will be. General opinion appears to incline to the view that the Laval-Tardieu groups will appreciably increase their strength, and this conviction is being accentuated by M. Tardieu's skilful activity and apparent successes, not only at Geneva but in the matter of organising better relations with both Germany and Italy. There are signs, in the opinion of Paris, of a stronger tendency towards the adoption of some kind of common policy by France, Great Britain and Italy, in regard to both general European questions and European debts to the United States; while the attention which M. Tardieu is paying to bringing about better relations between this country and Germany, based mainly on economic interests, is giving rise to more optimistic feelings as to the possibility of the removal, in the near future, of the irritating Franco-German problem which has kept Europe in a ferment for nearly a century. Herr von Hindenburg's consent to stand again as a candidate for the Presidency of the German Republic has been received here with distinct satisfaction, and it is generally considered that the patriotic step taken by the veteran soldier has substantially diminished the probability of the advent of a Hitlerist Cabinet and the disturbance to European peace that must inevitably (from the French point of view) follow such an event.

The attitude of the Radical Party in regard to the pending elections remains inexplicable. The ideal sought for by the vast majority of the electorate would appear to be a definite revival in a modernised form of the old Centre Parties' bloc, which ruled France uninterruptedly for over a quarter of a century before the war. This would comprise eleven of the existing fourteen groups of the Chamber (of 612 deputies), and would exclude only the eleven Communists, the Second International Socialists ("Unified Socialists"), now numbering 112, who form the Extreme Left, and the Union Républicaine Démocratique group of 83 "Marin Nationalists," which now

constitutes the Extreme Right. Such a combination of the eleven more or less Moderate Parties would constitute a solid bloc of over 400 deputies, who would undoubtedly reflect the overwhelming majority of France, and would leave an active minority of just over 200 extremists of both kinds to act as an Opposition balance wheel. The followers of M. Herriot have persistently refused, since 1927, to take part in any Ministry in which the Marin Nationalists were represented or in which their party of barely one-quarter of the proposed Central bloc was not awarded a preponderating number of the principal Ministerial posts. Thanks chiefly to losses to the Marxian Socialists, the Radical Party, which secured 270 seats at the 1906 elections and 253 in 1910, dropped to 139 in 1924, the date of the triumphant victory of the Cartel des Gauches (which drove M. Millerand from the Elysée and M. Poincaré from the Premiership), and now holds only 109 seats, or 16 fewer than at the last General Elections. The preponderating power in the party councils of influential non-parliamentarian provincials of the anti-clerical vintage of Gambetta's day, and a latent split which has existed between the two wings of the Party for some years past are generally believed to be the chief reasons that have so far prevented the creation of a broad Liberal-Republican bloc in the Chamber that would endow the country with a moderately progressive programme of legislation and hold France immune from the continual Ministerial crises that have for so many years rendered French parliamentary effort largely sterile and seriously prejudiced the fair renown of the parliamentary system.

A list, alleged to be official, but "marked by a certain number of inexactitudes," having been published recently of loans issued by foreign governments on the French market since January 1, 1919, the Government has now issued an official communiqué stating that "the issues of this kind have in reality been to the following amounts":—

		Thousand francs
*1919	China, Lung-Tsing-Uhai 7 per cent. railway bonds	23,000
1922	Hungary, 6 per cent. Treasury bonds (funding)	68,846
*1923	China, Republic bonds 5 per cent. gold (Banque Industrielle de Chine)	\$43,893
1923	Austria, guaranteed stabilisation loan, 6½ per cent.	170,000
1923	Belgium, 6½ per cent. external loan	400,000
*1923	Rumania, 4 per cent. loan for consolidation of Treasury bonds	£6,943
1924	Germany, 7 per cent. Government loan (Dawes Plan bonds)	£3,000
*1925	Austria, 5 per cent. funding loan	71,172
1925	Bulgaria, 6½ per cent. 1923 loan	44,360
*1926	Austria, 5 per cent. 1926 funding loan	25,090
*1926	Austria, 5 per cent. 1923 funding loan	60,000
1927	Poland, foreign 7 per cent. gold stabilisation loan	\$2,000
*1927	Hungary, 6½ per cent. 1924 funding loan	96,000
*1928	Turkey, consolidation obligations of former Ottoman Empire Treasury bonds	99,945
*1928	Turkey, bonds representing overdue annuities of Ottoman public debt (series A, B, C)	670,216
*1928	Rumania, 5 per cent. unified rentes (in Germinal francs)	50,929
*1928	Rumania, 4 per cent. unified rentes (in Germinal francs)	269,353
1929	Rumania, 7 per cent. foreign loan (Caisse autonome des monopoles)	561,638
1929	Bulgaria, 7½ per cent. stabilisation loan, 1928... ..	130,000
1930	Chili, 6 per cent. 1930 foreign loan	135,000
1930	Germany, Young Plan international loan, 1930A	2,515,000
*1930	Hungary, 6 per cent. 1925 funding loan	56,650
1931	Rumania, 7½ per cent. gold foreign loan (monopolies)	575,000
1931	Jugoslavia, 7 per cent. loan	675,000
1931	Great Britain, 4½ per cent. Treasury bonds (September, 1931)	2,500,000
1931	Jugoslavia, Treasury bonds, August, 1931	250,000
1931	Hungary, Treasury bonds (October, 1931)	354,000

† Swiss francs.

Those "loans" marked with an asterisk, the communiqué adds, consisted in a mere exchange of old scrip against new, in application of existing agreements between the governments concerned, and involved no appeal to French credit. This note, however, omits to include the 1922 Hungarian Funding Loan in this category. It is unofficially pointed out here to-day that the official list still remains incomplete as it does not include the 5 per cent. loan of 300,000,000 francs issued here in 1930 by the Finnish Central Bank for rural credit,

the 7 per cent. loan of 25,000,000 francs issued here by the Polish National Economic Bank of Warsaw, the 6½ per cent. loan of 400,000,000 francs issued here for the Franco-Polish Railway Company under Polish State guarantee.

Coal production figures for January indicate a total output from the French mines (exclusive of the Saar area) of 3,840,000 tons, for the 25 working days, against 4,017,000 tons in the previous month (25 days). The average daily output last month was 153,594 tons, with a total labour force of 272,896 units, as compared with 160,768 tons in December (275,356 units). The output from the Saar (less local consumption) was 449,000 tons. Coke production by the colliery plants was 300,000 tons, against 424,000 tons in January last year, plus 14,000 tons (after deducting local consumption) from the French coke plants in the Saar. Imported coal during the month (exclusive of coke and agglomerates) was 1,480,000 tons (against 1,700,000 tons a year ago); of which 566,000 tons (against 716,000 tons in January, 1931, came from Great Britain. The outstanding factor of the week in the coal industry has been the suppression of the super tax of 15 per cent. levied recently on British coal entries, to compensate for the advantage derived by British coal exporters from the abandonment of the gold standard. This action of the Government has been received here with mixed feelings, and is provoking a good deal of dissatisfaction on the ground that the measure is uncalled for, in view of the fact that other countries, on the contrary, are reinforcing defensive steps against British coal. On the other hand, the fact remains that a large proportion of British coal exports to France, as in normal times, consist of highest quality Welsh anthracite, British "Admiralty" coal, and steam coal, which are indispensable to French industry and cannot be obtained in France or elsewhere than from Great Britain.

GERMANY.

Politics — Tariff — Banks — Favag Sentences.

(FROM OUR CORRESPONDENT.)

BERLIN, March 1.

THE Reichstag has destroyed the last hope of the Right that they might still be able to overthrow the Government before the Presidential election, and thus bring about a new grouping of forces for the election. The Chancellor had a majority of 25 votes against the no-confidence resolutions of the Opposition, and this was once more largely a personal triumph. The section of the Chancellor's speech which dealt with foreign politics—little heeded in the domestic political agitation, but none the less important—began with the declaration:—"I shall never allow myself to be misled by political agitation at home into pursuing a prestige policy in foreign relations which might be prejudicial in the long run to the vital interests of the German people." Dr. Brüning has decided not to take reprisals at present against the breach of the Memel Statute by Lithuania, but he has announced that he will undertake reprisals "if circumstances require it at the right moment." On the reparation question he expressly referred to his earlier statements. Germany, he maintains, cannot pay, and in all human probability never will be able to pay without plunging the world into a fresh crisis. A final solution must therefore be found which will put an end to reparations. The Chancellor defended Dr. Melchior, the German delegate at the Basle negotiations, against the reproaches of the National Socialists, and thanked him for his "vigorous, wise and courageous attitude throughout the proceedings." The German Government, he said, had no share in the responsibility for the delay in assembling the reparation conference.

The section of Dr. Brüning's speech which was devoted to home politics was the most impressive criticism of the Hitler Party ever put forward by an opponent of the National Socialists, and contained, incidentally, some

important statements. The fact that in November, 1918, Dr. Brüning belonged to the anti-revolutionary group of the German army is in accordance with his conservative principles, and nothing is more significant of present conditions in Germany than the necessity for a Conservative of his type to defend himself with all his power, not against the Left but against the extreme Right. In connection with the Presidential candidature, and even before that, the Chancellor had, he said, set himself the task of "gradually bringing even the most extremist Opposition into the Government," but he had never made any secret of the fact "that, if any question of such participation by the Opposition in the Government were to arise, I myself should not be available." It may be inferred from that that Dr. Brüning at one time thought of giving the National Socialists a chance of showing their capabilities by admitting them to the Cabinet, but that he himself had no desire to take on the burden of participation in such a coalition. He evidently became convinced later of the utter impossibility of educating the National Socialists, by giving them a share of power, to a sense of political responsibility. "I would leave my post in order to clear the way for progress, but not to make way for chaos."

The last session of the Reichstag again terminated with the withdrawal of the National Socialists, but this time they were not accompanied by the German Nationalists. Their object was frankly to avoid committing themselves on the proposal of the Social Democrats to nationalise the mining industry. To vote against it might have been detrimental to their influence with the working classes, while they could not support it without alienating important adherents among the employers. (The Bill, meanwhile, was buried in committee.) They had already been caused acute embarrassment by another division, that on the motion of the Communists to discontinue all reparation payments and cancel all private foreign debts. The National Socialists wished the voting on these two points to be taken separately, but failed to secure this. They abstained from voting, and announced that had the two points been taken separately they would have voted for the cessation of reparation payments (including those which do not come under the Hoover moratorium, such as the service of the Dawes and Young loans), but not for the interference with private debt contracts. This attempt to combine a policy of radical sentiment with *realpolitik* has placed the National Socialists in an unfortunate position, both tactically and practically, and it is very understandable that they should seek to evade further such situations by leaving the Reichstag.

The Government has agreed to the introduction of the maximum tariff which was foreshadowed in the decree of January 18th. It is only to be applied to the import of goods from countries "with which Germany has no trade treaty or which treat German goods less favourably than those of any third country." The essential purpose of this measure is to discourage all discrimination against German exports and to promote the conclusion of commercial treaties with as many countries as possible. The existence of the tariff is intended to exert pressure, but it will be actually applied only in the most extreme necessity. It seems already to have been successful in one instance. Poland has approached Germany with a view to resuming the negotiations for a tariff treaty. The German Government has expressed willingness, but only a treaty of very moderate compass will be possible. The old draft treaty of 1930 is out of date, as Germany could no longer import the quotas of coal and pigs for which it provided. Germany is anxious to complete the new negotiations as quickly as possible. Steps are also being taken towards an agreement with Australia.

The Berliner Handelsgesellschaft has caused general surprise by publishing a balance sheet which shows it to be the only big private bank in Berlin which does not require to be financially reorganised. It has maintained its capital intact, and, like the Reichscreditgesellschaft, is distributing a 4 per cent. dividend. It even intended originally to distribute 5 per cent., but adopted the lower rate in accordance with the wish of the Government. The Handelsgesellschaft has, of course, suffered losses, but the

extent of these is not revealed. The bank has contented itself with withdrawing 5 millions from its open reserves "to be used for strengthening the hidden reserves." In addition, 2½ millions are being written off the profits.

There are several explanations of the exceptionally good results of the Handelsgesellschaft. It has no branches, and works with a small number of large customers. It has been generally apparent that, in spite of the prodigious losses in respect of certain concerns which have collapsed, the banks' losses have been greater in respect of small and medium-sized customers than in respect of their more important clients. In the second place, the Handelsgesellschaft has in recent years built up its hidden reserves to an exceptional extent. It had a particularly profitable business, few expenses, and only a small share capital on which to pay dividends. Above all, it is the only big Berlin bank which does not hold any of its own shares, so that, unlike the big banks with subsidiaries, it has not suffered enormous losses on its own shares. It did acquire about five million of these by purchase over a period of time, but it sold them some months ago, through the agency of Warburgs, of Hamburg, to a foreign, mainly American, consortium, and even made a profit on their book value. That improved the liquidity of the Handelsgesellschaft at a time when the other banks had to do without any influx of foreign capital. On the other hand, it works with foreign money to an unusual extent. Even now about half the "creditors" are foreign and come under the standstill agreement. The total liabilities shown by the balance sheet are 293 million, against 297 million a year ago. Of these, 91 million, against 96 million last year, are acceptances. The contraction of one million is almost entirely due to the withdrawal of foreign credits.

In addition to the Berliner Handelsgesellschaft and the Reichscreditgesellschaft, a few important provincial banks have also kept their capital intact. These include the Frankfurter Effecten- und Wechselbank, the Hamburger Vereinsbank, and especially the two big Munich banks, Bayerische Hypotheken- und Wechselbank and Bayerische Vereinsbank (Mendelssohn concern). The two Bavarian banks are distributing 5 per cent. dividends, but these are derived exclusively from their mortgage business.

Last week the trial of the directors of Frankfurter Allgemeine Versicherungs A.G. (Favag), which failed in 1929, was concluded, after running for many months. The accused received sentences ranging from 3 months to 4 years, but the two principal offenders, the general director, Dumcke, and his successor, Becke, escaped judgment by death and serious illness respectively, so that only the minor actors in the greatest financial scandal that Germany has ever known were convicted. It is highly unsatisfactory that the proceedings should have dragged on for three years, so that judgment did not, as in similar cases in England, follow hot upon the heels of the crime. The German credit crisis really began with the collapse of the Favag, and all the later financial scandals might have been less serious, but for the mistrust aroused by the Favag case.

AUSTRIA.

Credit Anstalt — Exchanges — Industry.

(FROM OUR CORRESPONDENT.)

VIENNA, February 29.

THE big dispute over the Credit Anstalt has begun. It started with a sensational general council meeting of the Austrian National Bank, in which the decision was made, on the motion of the new president, Dr. Kienböck, to distribute no dividend for the time being, even though it would be possible to pay one of 6 per cent. The distribution is not to be made until a resolution has been passed in regard to the guarantee which the Federal Government has given for the bills handed to the National Bank by the Credit Anstalt. The bank of issue still holds about 700 million schillings' worth of bills of exchange signed by the Credit Anstalt. Some of these bills were dis-

counted under guarantee from the Federal Government, while the smaller part were taken over only after special securities had been deposited by the Credit Anstalt. It is now proposed to convert into a Federal debt that portion of the bills which is under Federal guarantee. Further, if the negotiations with the foreign creditors are satisfactorily terminated, the rate of interest on the bills is to be reduced by the National Bank.

The former president of the National Bank, Dr. Reisch, opposed the motion of the new management not to pay any dividend for the past year. He pointed out that the shares are also held by savings banks and private people, and that a bank of issue should consider the matter very carefully before refraining from distributing a dividend. The new management does not appear to share this view. However, it will become necessary at a later date to call a second general meeting, in addition to the annual general meeting, and this extraordinary general meeting will have to resolve upon alterations in the statutes. If the National Bank makes any concessions regarding writing off in the balance sheet for the year 1931 the shares of the Credit Anstalt which it took over, it will certainly insist upon having some corresponding concessions from the Government. These may apply to the prolongation of the charter or to the distribution of the profits.

The Bank refuses to discount any more finance bills of the Credit Anstalt, and its discount policy in general has been restricted. This is also affecting the Federal Railways, which are obliged to leave to a later date all such debts as need not be liquidated immediately. The firms which supply goods to the Federal Railways are complaining, and a number of them are resorting to energetic measures; but as they are anxious to remain contractors to the railways they will be obliged to agree to postponement of the payments. It has been by no means easy this month for the Federal Railways to procure the means necessary to pay wages and salaries.

An important question which must be solved in the near future is that of a reorganisation of the treatment of foreign exchange. The present restrictions have proved a complete failure. The clearing treaties with most countries have merely resulted in the import of superfluous articles and in serious declines in exports. The National Bank has consequently been obliged to permit individual clearing agreements. For example, an agreement was concluded between the paper industry and the mineral-oil importing trade with the consent of the National Bank. In accordance with this agreement, the foreign exchange accruing from the exports of paper is transferred to the mineral-oil trade for the purpose of paying for its imports.

The foreign exchange is, however, credited to the paper manufacturers at 20 to 30 per cent. above the official quotations of the National Bank. This is a matter of importance to the paper industry, because its exports to England were being paralysed owing to the fact that the English importers would not pay higher prices, despite the fall in the value of sterling. Both industry and commerce are demanding that the export of schillings should be allowed. They are also struggling against the attempt to introduce limitation or prohibition of imports. The Government has repeatedly declared that it will not continue the present commercial policy, though it has not worked out any positive alternative.

Things are bad as ever in trade and industry, though in some lines there is slight recovery as a result of the restriction of importation. The Institute of Statistics publishes authentic figures about the regression in State revenue in the year 1931. The total from taxes, duties, imposts and monopolies amounted in the year 1931 to 1,367 millions, against 1,393 millions in the year 1930 and 1,379 millions in the year 1929. The customs revenue fell from 290 millions in the year 1930 to 267 millions in the year 1931, for, in spite of the extraordinary increase in the rates of duty, foreign trade fell greatly. The working up of the foreign tourist traffic is a matter of great importance for Austria this year. Austrians themselves are being impeded from going abroad; the examina-

tion at the frontier is very strict, and only in very exceptional cases is the National Bank prepared to allow small sums in foreign currency. On the other hand, comprehensive propaganda is to be carried on to induce foreigners to come to Austria on specially low terms.

HUNGARY.

Banking — Foreign Creditors.

(FROM OUR CORRESPONDENT.)

BUDAPEST, March 1.

THOSE banking balance sheets which have been published so far, as at December 31, 1931, have been particularly disappointing after the thorough reorganisation schemes which have taken place in Germany, Austria and Italy. As no intermediate balance sheets were issued during 1931 (in spite of the suggestion of the Finance Committee of the League, in October last, that monthly statements should be regularly published), it was generally believed that the delay of the year-end returns was due to a drastic revaluation of bad debts involving sweeping reforms in the banking system. But instead of the expected rationalisation, it is somewhat puzzling that Hungarian banks should have disclosed net profits and paid dividends for 1931 without touching their open reserves.

It would be doing less than justice not to recognise that some of the Hungarian banks have been managed more carefully than others, and consequently their results for 1931 might greatly differ; but it cannot be denied that, in a country which finds itself in a state of collective insolvency, it would have been perhaps wiser for the banks not to pay any dividend. It is only human for farmers to complain of the heavy fixed charges of their onerous debts, and it is not unnatural that they should blame their creditors, the banks. The recently published bank balance sheets have prompted the agrarian leaders of all political shades to attack the banks, and they are urging the Government to tax mobile capital instead of land. More familiar with the distress on the land than with the real state of the country's credit system, the agrarians may be forgiven for their impossible demands, and the banks have nobody but themselves and their unduly optimistic balance sheets to blame for this political propaganda.

In view of the balance sheets and the dividend payments of the Hungarian banks it is not surprising that foreign creditors do not realise that Hungarian finances at present are worse than those of Germany. The result is that it has not yet been possible to conclude a standstill agreement for short-term debts with any group of the foreign creditors. It is true that negotiations with the British creditors, who are the largest after the Americans, have reached an advanced stage. The draft agreement, however, which is intended for six months, does not provide for the scaling down of interest rates. The American and French creditors have refused, so far, to negotiate on the lines proposed by the British creditors. On the other hand, the Swiss creditors have declared that they would favour the formation of national committees for the creditor group. There is little doubt that the Swiss suggestion would considerably improve the prospects of a reasonable and durable settlement, but the American and the French creditors favour individual agreements.

Banking shares dealt in the private market are sold considerably below the prices ruling on July 13, 1931, when the Stock Exchange was closed. Considering that the quotations of the good industrial and mining shares are considerably higher than those of last July, it is clear that the public is discounting in advance the bad debts of the banks, which is but another proof that a reorganisation of the banking system of the country is urgently needed. It is true that owing to the precarious situation of the Treasury the banks could not hope for any effective State assistance, but there is good reason to believe that their reserves accumulated in the fairly prosperous period of 1926-30 will enable them to carry on the necessary reorganisation without heavy inroads on their capital.

ITALY.

Exchange — Banking — Industrial Consortia — Foreign Trade.

(FROM OUR CORRESPONDENT.)

TURIN, February 16.

THE outstanding event in February has been the brilliant behaviour of the lira. After the slump of the pound sterling, the lira was marked down in New York from the par of 5.263 cents to about 5.05, where it was kept for several months by a severe restrictionist policy. On Tuesday, February 2, it touched bottom at 5.00½; but the same day it rose rapidly and closed at 5.07; on Wednesday it rose further to 5.16, and reached on Friday the pre-slump level of 5.23. This is within the legal gold points, and the feat was hailed by a unanimous Italian Press as a proof of the good impression made on foreign markets, principally New York, by the announcement of a final deficit of only 504 million lire for the fiscal year 1930-31, as against the previous provisional figure of 896 millions, and by the continued decrease of the note circulation of the Bank of Italy. The lira market is very restricted, and there is no great volume of foreign sight deposits in Italy, so that unfortunate sellers, caught short, rushed to cover.

Recently the lira has again fallen below the lower gold point, sagging slightly to 5.19½. Signor Mazzuchelli has pointed out in the daily *Sole* that the most important figure in the Bank of Italy balance sheet is not the note circulation, but the sum of note circulation and other sight liabilities (public or private deposits and circular cheques) less total reserve, which difference is the sum put by the Bank at the disposal of commerce and finance. This sum increased from 8,712 million lire at January 20, 1928, to 9,449 millions and 10,585 millions at the same date of 1931 and 1932 respectively. The portion of this sum used for discounts and advances was respectively 4,461, 4,888 and 5,350 million lire. As the slump in wholesale prices must have diminished the requirements of the market, the Bank of Italy has vastly increased in the last four years, perhaps from 60 to 80 per cent., the sums offered for the financing of internal industry and trade. The Bank of Italy resembles the Bank of France rather than the other central banks, inasmuch as it carries a direct discount business, and has a great many offices open all over the country. The present increase in active operations is, however, mainly due to rediscounts of commercial and financial paper presented by ordinary banks.

So far, this "encouragement policy" of the Central Bank has failed to infuse new life into the market. The boomlet, which culminated in a rise of the general index number of variable dividend securities from 50.06 at December 31, 1931, to 52.06 at January 31, 1932, has already subsided, the index falling to 51.17 at February 6th. On the announcement of a reduction from 60 to 40 lire of the dividend paid on Banca Commerciale shares, these were marked down from 1,100 lire to 1,085 lire. The Banca Commerciale Triestina is to be absorbed by the Banca Commerciale Italiana, which already owns almost all its shares. The Banco Nazionale del Lavoro, a public bank, will absorb the Banca Popolare di Pavia, taking full responsibility for its deposits.

The Central Corporative Committee has reached the following conclusions about compulsory industrial consortia:—(1) A big majority of interested industrialists will be the preliminary condition to their creation; (2) the competent (corporative) authorities ought to approve them from the point of view of national economy; (3) the State should limit and supervise their functions; (4) when a consortium is created, no new industrial establishments can be started or plants in existing establishments can be enlarged, without some sort of State or consortium control; (5) the Government shall have authority to revise or modify the rules of existing consortia.

These far-reaching conclusions have already some precedent in the present corporative system; as no new retail shop can be opened and no new factory in industries concerning national defence (for instance, motor-car factories) can be erected without Government authorisation. The

new rules mean the extension to all industrial fields of the scattered tentative rules hitherto adopted. Their importance lies in the fact that free competition is becoming little by little a thing of the past. Newcomers will see the way barred to them, if a sufficient majority of industrialists to create a consortium are already in the field, and if the corporative authorities, who consist of representatives of employers and employees selected from above, with a certain number of public umpires, pronounce the consortium to be useful to national ends. Independent business men will be excluded from industry, as independent political groups are deemed absurd in a unified politico-social system. Experience alone will show how costs of production and competitive aptitude will fare under such centralised organisation of vested interests. Great hope, however, can be based upon the unlimited capacity of Italians to eliminate in practice the evil consequences of apparently inflexible written rules.

The quota system has been extended from live cattle to fresh and frozen meat, the first order, which limited foreign cattle to 15 per cent. of total consumption, failed to sustain its initial beneficial effects on prices, as meat was imported instead of live cattle. The dangers of restrictions in foreign trade are becoming more and more apparent. Negotiations began to-day at Rome between Italian and French delegates as to the renewal of the commercial conventions, concluded between 1898 and 1928, which were recently denounced by France, as a retaliation against the application by Italy of differential quotas to certain French products, which, in its turn, was a retaliation against similar treatment by France of Italian imports. It is hoped that the negotiations will succeed, as otherwise the present conventions will lapse at the end of February. Italian wine growers are much concerned about the threatened suppressions of the differential tariff of 55 francs per hectolitre for common wines and 84.50 francs per hectolitre for fine wines, and hope that the fear of retaliation on champagne and other high-grade French wines will influence the French in the negotiations.

Meanwhile, international trade is slowing down: imports decreased from 1,025.3 million lire in January, 1931, to 782.3 millions in January, 1932; and exports from 692.2 millions to 526.1 millions. The deficit has also decreased from 333.1 millions to 206.2 millions; but the spectacular slump in imports is a bad omen for industrial activity in the immediate future. The number of unemployed increased from 982,381 at the end of December, 1931, to 1,051,321 at the end of January, 1932, against 722,612 at the end of January, 1931. This constitutes a record for many years.

ROUMANIA.

Agricultural Debt Conversion — Politics — National Bank — Exchange Restrictions.

(FROM OUR CORRESPONDENT.)

BUCHAREST, February 22.

THE agricultural debt conversion plan has been holding the centre of the political arena since the introduction of the Bill in November last. It is still being discussed by the Parliamentary Committee, and it is quite impossible to say what shape it will eventually take. As the discussions proceed, the difficulties which are found to stand in its way increase. It is now proposed to make a 50 per cent. reduction in the debts owed by owners of land up to ten hectares; these form by far the majority of the total. But the main stumbling block is the question of finance. Mr Argetoianu has come back empty-handed from his foreign tour, and he has told Parliament that the money will have to be found in the country. He has suggested for this purpose a forced loan to be raised in the shape of a tax of 5 per cent. on capital payable in five annual instalments of 1 per cent. each. The unanimous resistance of all the Opposition parties, however, and the objections made by the principal financial interests have caused this plan to be abandoned, and it appears now to be the intention to get the Bill passed by Parliament without provision of the funds necessary for financing it.

It is evident that in such a form the whole plan will be impossible to carry out. The measure will be quite useless unless the creditor is to be sacrificed, and this, it is asserted, will bring the majority of the financial institutions to bankruptcy. Most of the parties have agreed that a conversion of some kind is necessary, but in their declarations they are all more or less vague, and none of them has yet come forward with a definite constructive plan. It is not unlikely that the discussion will end in a deadlock, the political consequences of which it is impossible to foresee. The demoralising effects of the situation on the minds of the public are already noticeable. Meanwhile, the agricultural moratorium, which expires on February 15, has been prolonged to March 15th.

It appears that a certain disorientation in the Government Party is caused by dissension in the Government itself on the conversion question as well as on other problems. Several times, Professor Jorga, the Prime Minister, is said to have handed, or threatened to hand, in his resignation, and it was only at the last moment that an understanding was effected with his powerful rival, Mr Argetoianu, Minister of Finance. The latest difference between the two occurred over the reduction of the sugar import duty. Mr Jorga insisted on this reduction, Mr Argetoianu was against it. A compromise has been reached by which the reduction has been voted, but the Cabinet Council has power to restrict or even prevent imports. Thus, the powerful interests vested in the industry have been protected, and the Government, pledged to reduce the cost of living, has saved its face. It is evident that this state of things could not last if any of the Opposition parties thought themselves strong enough to tackle the difficult problems of the day. Continuance, however, of the policy of makeshift must have a bad effect. This seems to be recognised in high circles, and Mr Titulescu's presence in Bucharest at the moment has probably more to do with internal politics than with the foreign situation in connection with which, it was asserted, he came here.

The National Bank has issued its annual report and balance sheet. The latter shows a holding of gold of 9,675 million lei, as against 9,275 million lei a year ago, although in the winter of 1931 the bank sold gold to the extent of 804 million. The holding of foreign bills has been reduced during the year from 1,746 millions to 278 millions. The total reserve on December 31, 1931, amounted to 36.04 per cent. of the liabilities, 1.04 per cent. over the legal minimum. The gold reserve alone stood at 35.04 per cent. The stock of commercial bills rose during the year by 5,736 million lei to 13,116 million lei, a testimony to the large support which the money market received from the National Bank. The notes in circulation at the end of 1931 amounted to 23,750 millions, an increase of 4,145 millions, all of which is hoarded by the public. The loss resulting from the fall of the sterling rate amounts to 310 million lei, which has been taken over by the State. The debt of the State to the National Bank has been increased thereby to 3,767 million lei. The fall in the price of Government securities has caused a loss of 177 million lei. The net profit amounts to 156 millions, against 188 millions for 1930. It is proposed to declare a final dividend of 196 lei net per share, making a total of 346 lei for the year, or 50 lei less than the year before. The report points out that it has been possible to maintain the value of the currency without introducing any special measures for its defence. It insists on the necessity of maintaining the stability of the leu as the indispensable guarantee of the internal and external economic relations. In this connection it shows that the balance of the foreign trade for 1931 was in favour of this country thanks to the considerable export of grain and petroleum, although the prices of these articles were very much reduced. It does not mention, however, that the favourable trade balance was due mainly to the large decrease in imports.

It has at last been necessary to devise means of combating the influence on Roumania's foreign trade of the restrictions on foreign exchange transactions introduced by several European countries. Roumanian exporters have large balances outstanding in these countries which they are unable to get in, and they are threatened with the

entire loss of these markets. A clearing house for these outstanding amounts is now to be instituted at the National Bank. A Bill introduced in Parliament for this purpose obliges all debtors to the countries where foreign exchange restrictions exist to effect payment in lei at the National Bank. The Minister of Finance is authorised to conclude, with the consent of the National Bank, conventions with these States for the equalisation of payments. It should be borne in mind that these regulations are made for the sole purpose of protecting the interests of Roumanian trade in its relations with those countries, Austria, Hungary, etc., where exchange restrictions exist. In no way do they impose restrictions on imports or exchange transactions in general. The "equalisation" negotiations, however, with the States in question will be of a very difficult nature as the balance of trade with them is considerably in favour of Roumania.

CANADA.

Business — Finance — Railways — Parliament.

(FROM OUR CORRESPONDENT.)

OTTAWA, February 9.

CANADA is now experiencing normal winter conditions and some improvement in general business, accompanied by a certain revival of optimism about the outlook, is reported. Retail trade has benefited by the advent of cold weather, and a steady movement of staple commodities is being maintained, helped by the fact that prices are at their lowest level for many a long day. The car-loading figure for the week ending January 30th, while it was 6,738 cars below the figure for the parallel week in 1931, showed a gain of 621 cars over the figure for the previous week. The grain markets have been unsettled as the result of the Far Eastern crisis, but the export demand has not been brisk. Some increase in factory employment is recorded; the agricultural implement firms with an improved outlook have been taking on more hands, the tanneries and furniture plants are busier, and some newly-established industries are coming into production. There is, however, little activity in the building trades, and the iron and steel plants remain short of orders.

The light snowfall has handicapped lumbering operations in the woods, but in view of the light demand and instability of prices only a small cut had been arranged for. The lumbermen of British Columbia have been greatly agitated by news from London that British timber importers were not only arranging for contracts for heavy supplies of Russian timber, but were trying to secure from the British Government a guarantee that these contracts would not be interfered with by tariffs and preferences. Another sidelight upon the complications of inter-Imperial trade relations is provided by the agitation of the potato growers of New Brunswick for the removal of the embargo now imposed by Britain upon Canadian potatoes on account of the plague known as the Colorado beetle. The newsprint mills continue to operate at about 50 per cent. of their capacity, and the financial difficulties of the industry show no sign of being solved.

Unemployment has been taxing the combined energies of the Federal, provincial and municipal authorities, who have been co-operating in a programme of public works for its relief. In many quarters, however, misgivings have developed upon the merits of this policy, and the *Financial Post* has taken the lead in a campaign of criticism against it. The *Post* has worked out calculations which claim to show that for every day's employment provided no less than \$10 have been added to the debt charges of one or other public authority. It argues that the relief programme was unsound in conception and economically wasteful, that its results have been inadequate, and that it should be abandoned before it strains to the breaking-point the credit of the provinces and municipalities, if not of the Dominion. Moreover, the latest employment bulletin of the Bureau of Statistics shows that the employment index on January 1st, at 91.6, revealed a decline of 7.5 points since December 1st,

when it was 99.1, and compares unfavourably with the indices of 101.7, 111.2 and 109.1 recorded for January 1st, 1931, 1930 and 1929 respectively. Furthermore, owing to the bareness of many local treasuries, the Federal Government has been forced to bear a larger share of the financial burden than it anticipated, and there are indications that once the public works already begun are completed the policy for dealing with unemployment may be reconsidered.

During the past fortnight the Canadian dollar has strengthened considerably in New York, but the difficulties created by the exchange situation are relieved rather than removed. Official figures show that the Federal Treasury had advanced on December 31st \$15,007,167 to provincial administrations and, although the purposes of these loans are not disclosed it is surmised that a substantial proportion of the money was advanced to prevent defaults by embarrassed provinces. The *Press* is voicing a strong demand for economies in public expenditure and it is forecast in Ottawa that the Bennett Ministry will propose in the next Budget a cut in the salaries of Ministers, Members of Parliament and the higher-salaried ranks of the civil service.

The general contraction of business has been responsible for a sharp curtailment of the demand for credit facilities from the banks and this condition as well as the deflation of commodity and security prices is reflected in a statement about bank debits in 1931 which places them at a total of \$31,856,000,000, showing a decline of 15.7 per cent. from the figure of \$37,491,000,000 recorded in 1930.

The Royal Commission on Transportation has temporarily disbanded itself, but the members are studying separately the data which have been accumulated and on February 15th they will reassemble in Ottawa to begin the task of framing their report which the Speech from the Throne declares will be submitted to Parliament this session. Meanwhile a reduction of 10 per cent. in wages has been reluctantly accepted by large groups of employees of the two railway systems and it will probably be extended to cover every class of worker. The returns of the Canadian National Railways for the year 1931 have just been published and they give the net operating revenues as \$7,585,700 as compared with \$26,510,938, a decline of roughly 19 million dollars, or almost 70 per cent. Gross operating revenues were \$177,273,700, as compared with \$221,770,445, and gross operating expenses were \$169,688,000, as compared with \$195,259,507. There was a decline of 28 per cent. in passenger revenue and of 16 per cent. in freight revenue, and the statement asserts that during 1930 the passenger train mileage was cut by 25 per cent.

Letters to the Editor.

MEMEL.

TO THE EDITOR OF THE ECONOMIST.

DEAR SIR,—I hope that you will grant me space to rebut certain statements contained in a paragraph headed, "The Lithuanian Coup at Memel," which appeared in your issue of the 13th inst.

Seeing that under the Memel Convention of May 8, 1924, concluded between the then Allied Powers and Lithuania, the Memel Territory was placed under the "sovereignty" (not "suzerainty," as you term it) of Lithuania, it is surely misleading to speak of Mr. Boettcher as the "German President of the Administration," and of the territorial Directorate as "the German Council." Actually, Mr. Boettcher is the son of a Lithuanian mother, while the other two members of the Directorate, Messrs Zygaudas and Puodzius, are pure Lithuanians. But even if this were not so, the President and members of the Directorate, as Lithuanian citizens, would be amenable to Lithuanian laws. It is hardly necessary to remark that in no country to-day does the racial origin of the citizen minimise his obligations to the State.

The autonomous rights of the Memel Territory are laid down in Article 5 of the Memel Convention, referred to above, but one may search therein in vain to find anything that would authorise the President of the Directorate surreptitiously and without the consent or knowledge of the central Government,

to visit the capital of a foreign State and there conduct negotiations which, in the opinion of the central Government, are detrimental to Lithuanian interests. Few really impartial publicists can be so naive as to believe that, had Mr Boettcher's object been so innocent as his apologists pretend, he would have crossed the frontier without first obtaining the consent of the central Government.

To deny the right of the Governor of the territory to revoke the appointment of an official guilty of such behaviour would be, in effect, to stultify the provision of the Memel Convention extending to the Lithuanian Republic sovereignty over the Memel Territory. May I further suggest that, in the light of the facts of the case, about which your paragraph is discreetly silent, you have no proper grounds for asserting, as you do, that Lithuania has been guilty of a "flagrant violation" of the Memel Convention of 1924? No such charge is brought against Lithuania by the League of Nations in its resolution of February 20th last.

Actually Mr Boettcher was detained for one day and then released. The Governor's decree revoking his appointment in no way sought to limit the lawful competence of the local administration, as defined in Article 5 of the Memel Convention, and your statement that the "German Council" of the territory has been replaced by a "Lithuanian Council" and the whole administration "forcibly taken over" is unwarranted. After revoking Mr Boettcher's appointment, the Governor of the Memel Territory invited a member of the majority party of the Diet to form a new Directorate, and, when that member declined, the Secretary-General to the Directorate was nominated President of the Directorate *ad interim* pending the appointment of a President enjoying the confidence of the Diet. It is admittedly possible that if, in view of the political sympathies of certain elements among the present majority of the Diet, the Governor should be unable to form a Directorate enjoying the Diet's confidence, fresh elections may be deemed necessary under conditions prescribed by the Convention.

Upon such insecure foundations has been reared the German-inspired sensation about a Lithuanian *coup d'état* in the Memel Territory! It is, however, to be regretted that a serious organ like the *Economist* should have bestowed its blessing upon the story without more carefully investigating the facts beforehand.

Elsewhere in your paragraph, you institute an unjustifiable comparison between the Polish seizure of Vilna and the Lithuanian rising in Memel in January, 1923. To dispose of this parallel, it should suffice to point out that when the Poles under General Zeligowski expelled the Lithuanians from Vilna on October 9, 1920, they were guilty of a "flagrant violation" of the Suvalki Agreement signed by them only two days earlier, on October 7, under which they had pledged themselves to recognise Lithuania's right to occupy Vilna and the Vilna territory. On the other hand, the rising in Memel of January, 1923, was effected by Lithuanian residents of the region, owing to well-defined rumours that a movement was afoot to convert the territory into a so-called "Free State," in defiance of the solemn undertaking of the Allied and Associated Powers to attach the region to the Lithuanian Republic. You are, of course, entitled to your opinion that the population of the Memel Territory is "predominantly German." I will merely remind you that your view was not shared by the Allied and Associated Powers when, in their reply to the German Delegation at the Versailles Peace Conference on June 16, 1919, they declared that "the district in question has always been Lithuanian, and the majority of the population Lithuanian in origin and in speech." In this context, too, it may be usefully recalled that before the war, when the Memel region belonged to Germany, it sent to represent it in the Prussian Landtag a Lithuanian deputy in the person of Dr. Gaigalat. The fact surely speaks for itself, but hardly in favour of your contention that the population of the territory is "predominantly German."—Yours faithfully,

E. J. HARRISON,

Lithuanian Legation, London Correspondent of the
10 Palace Gate, W.8. Lithuanian Telegraph Agency
February 25th. ("Elta").

[Our correspondent's letter leaves us unrepentant. In our opinion, the gist of the situation is, and always has been, this:—In the peace-settlement, the victorious Powers took the responsibility of detaching the Memel district from Germany in order to provide the new State of Lithuania with an outlet to the sea; and thereby they avowedly incurred a responsibility for securing the legitimate rights and interests of the 25,000 people of German nationality who constitute the population of Memel town. Lithuania, on her side, has repeatedly obstructed the efforts which have been made to this end, first by the Supreme Council of the Allies, and latterly by the Council of the League. The first of these Lithuanian acts of obstruction was the military coup of January, 1923, which, according to our information, was executed, not by local Lithuanian inhabitants of the rural parts of the Memel District, but by irregular armed forces which had entered the Memel Territory from Lithuania proper.

The subsequent Memel Convention, which the Powers found great difficulty in persuading Lithuania to accept, specifically limited the extension of Lithuanian sovereignty over the Memel Territory by providing for local autonomy; and in our view the term "sovereignty" correctly describes Lithuania's relation to the Memel Territory under the resulting treaty situation—to which the Lithuanian Government has, after all, subscribed. The necessity for the Convention is illustrated by our correspondent's admission that at this moment the Government at Kovno is attempting to force upon Memel a regime which is unacceptable to a majority in the Memel Diet. It is significant that when M. Colben (Norway)—the League Council's rapporteur on the present Memel affair—suggested in his report that an opinion on the powers of the League Council under the Memel Convention should be sought from the Permanent Court of International Justice, the representative of the Lithuanian Government refused to agree. This refusal speaks for itself. We trust that the Council, which adopted M. Colben's report nevertheless, will show great firmness on a point of principle which is of real importance in the interests of international law and order.—ED., *Econ.*]

BOOKS RECEIVED.

Commercial Banks, 1913-1924. (London) Allen and Unwin, 40, Museum Street. 12s.

A League of Nations' reference book containing a remarkable collection of banking statistics, with commentaries, for each of the principal countries of the world.

Statistics of the Iron and Steel Industries (1931). (London) National Federation of Iron and Steel Manufacturers, Tothill Street. 5s. 6d. net.

A remarkable collection of iron and steel statistics covering 32 countries. For the more important producing centres it gives statistics of production of iron and steel by classes and by districts; imports and exports; production of coal and coke and lignite; and also details of materials consumed, number of blast-furnaces in operation, etc.

Memorandum on Progress of Disarmament, 1919-1932. By Stephen Heald. (London) Royal Institute of International Affairs. 2s.

A useful and concise account of the negotiations and agreements which has paved the way for the present conference.

The Stock Exchange:

THE ROYAL MAIL SCHEME.

FIFTEEN months ago Lord Kylsant ceased to be an active agent in the affairs of the Royal Mail Steam Packet Company. A triumvirate of Voting Trustees has since been grappling with the task of salving the biggest shipping group in the world. Their duty, grim enough, in all conscience, at the moment of its undertaking, has been made progressively more difficult by the subsequent world depression. The Royal Mail group threatens to collapse under the weight of its past bad finance. It is indebted and cross-indebted to a host of holders of debentures, mortgages, bank loans and guarantees, by way of obligations to ship-builders, to the money market (with which the latter have discounted short-term bills for new tonnage), to vendors of shares and of ships (including a big American group and the Commonwealth of Australia), to subsidiary and associated companies, and to the British and Northern Irish Governments. During recent months it has appeared doubtful, at times, whether human ingenuity could evolve any scheme to prevent a substantial part of the tonnage of a group interested in something like one-sixth of the whole British Mercantile Marine from coming under the hammer. Imagination boggles at the number of interviews, the patience and diplomatic *finesse*, and the sheer thankless toil involved in the task of bringing a mass of chaotic and conflicting claims into a semblance of order and agreement. The group's creditors will be united, at least, in recognition of the services rendered by those who, this week, have produced a balanced scheme, and in the sense of collective national responsibility with which the task of adjudication upon its terms must be approached.

Though the picture of claims and counter-claims will appear to the average investor inextricably complex, the fundamental points at issue are relatively straightforward. The Royal Mail group cannot meet its liabilities. Disorganised action by independent groups of creditors, at a time of world crisis, would leave all but a few of the

best secured creditors with little of value from the general wreck. It would depress the market for shipping tonnage, break up the goodwill of British companies whose names and house flags have been famous in every port in the world, involve, possibly, the transfer of thousands of tons of the finest British ships to foreign ownership, delay the return of prosperity in the shipping industry generally, and last, but not least, produce a minimum of hard cash. In short, whatever the true ratio of the Royal Mail group's resources to its liabilities, the present is of all times the least favourable for a trial by break-up.

But who can say what is the true ultimate value of the group's assets? Before the question can be answered, one must know the earning power of the group, given not merely more normal conditions in world shipping but exploitation of its own resources under rational organisation and expert administration. These desiderata were conspicuously lacking, in certain instances, under the old regime. The merit of the present scheme is not merely that it proposes a "standstill" agreement for three years, during which the relative rights of creditors are preserved essentially unaltered, but that it offers the prospect of assured reorganisation of internal management on lines which are understood to have commended themselves to the best technical brains in the industry.

On page 523 we give a summary of the Scheme. The manner in which it will function, on the operating side, may best be appreciated by reference to the chart on page 525, where the total share capitals of all the companies in the group are also set out. Tonnage operating on different geographical routes will be brought together, where necessary, under new operating companies. These will issue shares in return for the tonnage taken over from existing companies, and will thus start, with a few minor exceptions, free of accumulated debt. Holders of first mortgages or charges on vessels will, in effect, transfer

(All particulars as at June 30, 1931.)

Company.	Particulars of Fleet.				Earning Capacity.
	Number of Vessels.	Total Gross Tonnage.	Total Cost with Additions.	Total Book Value.	
Royal Mail S.P.	31	230,881	£ 9,277,628	£ 3,375,235	Trading profit, 1931, before interest and depreciation. Unlikely present income will substantially exceed 4½ per cent. Debenture interest.

† Including "Georgio," under construction, and six vessels jointly held. * Vessels owned jointly with Shaw, Savill.

their charges from the ships, etc., to the operating company's shares. Operating Company No. 1 will effectively group the assets of the Royal Mail Company and three other ship-owning concerns which (as will be seen by the diagram) are subsidiaries engaged in the East Coast South American trade. Operating Company No. 2, similarly, will work the assets of five concerns in the West African trade, namely, Elder Dempster, Elder Line, African Steam Ship, British and African Steam Navigation, and Imperial Direct Line. In other instances, where there is no question of semi-competition between group concerns in particular trades, it is not proposed to form new operating companies. Thus the Pacific trade will remain with the Pacific Steam Navigation Company, the Glen Line will carry on in the Far Eastern trade, and Coast Lines in the home port-to-port trade.

Broadly, in the case of the two new Operating Companies, the transfer will be deemed to have taken place as from December 31, 1931, or some other convenient date. The companies will be empowered to borrow only up to £100,000 without special sanction of their shareholders (*i.e.*, the existing mortgagees). Their directors will, mainly, be the latter's nominees—with a difference, for "creditors' directors" have not the best of reputations. In this case it is intended that the boards, on whose skill and enterprise so much will depend, shall be composed of experienced shipping men and not dummies. Accordingly, all appointments will be subject to the approval of a board of referees, which is to include Lord Plender, Lord Weir and Sir George Higgins. This will obviously be a strong board, which is as well, since it is a tribunal of final appeal on a host of matters in connection with the Scheme, and will have, *inter alia*, the thankless task of deciding the amounts of Operating Company shares to be issued in respect of particular vessels, if owners and mortgagees fail to agree. Finally, until December 31, 1934, no shares in the Operating Companies can be sold unless the shareholder desirous of selling procures for other shareholders an opportunity to sell on the same terms.

There are exceptions to some of these general proposals, such as the power given to certain banks holding mortgages on specified new ships of African Steam Ship and British and African Steam Navigation, in connection with bills discounted by the builders, to realise their security, if they wish, after June 30, 1933. These, however, are not unreasonable. They should neither seriously affect the balance of the Scheme nor hamper the effective operation of the companies—which is the main consideration. The case for affording the operating concerns a clear run rests not on sentiment—there is no romance about a mortgage, outside the theatre—but on the hard economic fact that, even under present depressed conditions, the group companies as a whole are not losing money so far as direct trading expenses are concerned. Few are earning sufficient to meet interest or depreciation charges, and the Oceanic S.N., for instance, is not at present clearing immediate expenses. Most of the companies on the South American and West African routes, however, are at least covering their operating costs. The position is summarised in the table on the preceding page.

The ship-owning companies in the table, excluding Oceanic Steam Navigation, have an aggregate tonnage of 1,061,236, acquired at an average cost of £42 and now carried at just under £25 per ton. Their showing in adversity is good enough to suggest their being given an opportunity to disclose their earning power under good management in normal conditions.

The first and highest hurdle which the Scheme must surmount is thus the "ordeal by secured creditor." Unsecured creditors are, broadly, given documentary titles on the future, which define and preserve their respective rights, against the time when they may have a cash value or December 31, 1934—whichever is the earlier. This is the real effect of the issue by the existing companies of deferred creditors' certificates, whose interest, though cumulative, is payable only when earnings are sufficient.

Speaking generally, certificate holders will be more than lucky if they see any hard cash within the life of the present Scheme. The certificates, however, carry five valuable rights, which apply also, in most respects, to certain debts ranking *pari passu* with them. First, holders may effectively determine on what basis net earnings are to be ascertained, subject to provisions for the protection of holders of floating charges. Secondly, their trust deeds empower holders of a voting majority of certificates in any company to demand payment at any time from the beginning of 1935 onwards. Thirdly, their companies, with certain exceptions, cannot further charge their assets unless 75 per cent. of certificate holders approve. Fourthly, all surplus revenue, after satisfying interest and arrears, is to be applied in redeeming certificates and other debts ranking *pari passu*. Fifthly, the unsecured creditors, with their secured colleagues, have valuable rights, direct and indirect, of nominating certain directors.

The Scheme, finally, makes arrangements as regards special groups of creditors. It will be seen, by reference to the summary appearing on page 523, that companies of the group which have incurred liabilities by way of guarantee, or as drawers or endorers of bills of exchange, will not be released, but their liabilities will be attached to the deferred creditors' certificates or other obligations in which the bills, etc., will be temporarily "funded." Guarantor companies, of course, will not issue deferred certificates. They will, in effect, become guarantors of the certificates or other instruments issued by the principal debtors. These provisions are of especial importance in the case of Harland and Wolff which, *inter alia*, has a contingent liability of about £3½ in respect of bills drawn on and accepted by certain companies included in the Scheme, mainly in respect of tonnage constructed. It also has a contingent liability of £3,670,569 on account of guarantees, counter-guarantees, and indemnities given on behalf of other companies, most of which are also guaranteed by the Treasury or the Northern Ireland Government. The company's unfortunate position throws a strong light on the results which may follow the close association of large shipbuilding and ship-owning organisations, and the practice of financing new tonnage construction by short-term bills.

Even the British taxpayer is an indirect party to the Scheme. In the last decade, when the Government was guaranteeing millions of pounds under the Trade Facilities Acts, in respect of new tonnage construction, the criticism was reiterated in our columns that the policy might be temporarily helpful to shipbuilding, a depressed industry, but was of questionable ultimate benefit to shipping and a danger to the taxpayer. To-day, the British and Northern Irish Governments are involved in the situation created by the inability of the Royal Mail and other companies to meet their obligations. Under the Scheme, the Governments will remain liable to pay under their guarantees. They are not, however, in the position purely of deferred creditors, since they can take the income from their specific security.

What considerations will determine the attitude towards the Scheme of the multitudinous interests which it affects? The shareholders of the various companies are, unhappily, in the painful position of mere spectators. The concerns are in the hands of their creditors, and the rôle of shareholders is limited to passive support of any proposal to keep them alive to fight another day. The trade creditors will naturally accept the Scheme, because it provides for their being paid in cash. The unsecured creditors will be mainly influenced by the fact that, if the existing organisation is broken up and the secured creditors independently realise their assets, their own prospects of securing something tangible out of the ruins are exceedingly remote. They have the soundest of reasons for a moderate postponement of their claims to better times, provided, in the first place, that no additional advantages are given to secured creditors, ranking in front of them, as the price of their support; and, in the second place, that none of their own number, as the reward of pertinacity, secures individual concessions sufficient to upset their mutual present

balance of interests. We believe, on a close inspection of the details of the Scheme, that on both these points they may rest assured. The proposals do, in fact, bear internal evidence, in one or two cases, of prolonged and possibly heated discussion around an inner council table. Speaking broadly, it may be counted a distinct achievement that a sufficient measure of agreement has been obtained, to enable a comprehensive scheme to be put forward which holds the balance so equitably between so many diverse claims.

What, then, should determine the reception of the plan by the secured creditors, whose attitude may be the pivotal factor? It need scarcely be stated that no personal emotion arising out of the past history of the companies, or any of their members, should be regarded as relevant. In due course, it will be for public opinion to investigate the causes of an unhappy chapter in the annals of a national industry, and to inquire whether, at any cost, the Law and human foresight can prevent their repetition. But to-day, the task is more immediate. The present plan is not even a scheme of reconstruction for the whole Royal Mail group. It is a scheme of arrangement among the creditors of certain companies which cannot meet their accrued liabilities. This explains why its terms apply directly only to some fifteen companies with a total paid-up share capital of £47 millions and a publicly held capital of £16 millions, whereas the analysis and chart for the whole group, which we give publicly for the first time on page 525, include 37 concerns which (*plus* Harland and Wolff) have a total paid-up share capital of £82 millions, of which the public holds £26 millions. Some companies, like Union Castle and Coast Lines, remain outside the present Scheme because, being able to look after their debts, they are not in present danger of coming into the Receiver's hands. Lamport and Holt are absent from the list for the opposite reason—that a Receiver has already been appointed.

The total creditors' claims (including inter-company claims) which are affected, directly or indirectly, by the present Scheme and its potential consequences, may be put at £42-£43 millions. One must prevent a patient from expiring before planning his future career. If the present Scheme is successful, the permanent status of all the group companies can be discussed later, presumably on the lines of closer working on separate regional bases which are being tried out, as regards two particular trade routes, in the present Scheme. Whether there should be permanent economic connection between companies in widely differing areas and trades, whose sole link hitherto has been the unwisdom of a past dictator, is another matter which may be discussed in due time.

If the secured creditors foreclosed in a general *sauf* *qui peut*, they would doubtless deem it unwise, on the narrowest interpretation of their interest, to force an immediate sale at knock-out prices in an unwilling market. Is three years too long a time to "nurse" their assets? The shortness of the period is itself a concession to their viewpoint, for on economic grounds alone, five years might have been a more suitable interval for ascertaining the potential earning power of the companies. The question comes to this: can these creditors feel convinced that the administrative arrangement proposed will enhance rather than depreciate the value of their assets during the 33 months for which they are asked to withhold their rights of foreclosure? Stated in its lowest terms, this is equivalent to asking whether they are satisfied with the personnel and powers of the board of referees, as to the potential importance of whose duties they will be under no misapprehension. The draughtsmen of the Scheme, by their successful endeavour to secure the willingness to serve, on the board, of a triumvirate whose names carry the utmost public confidence, have shown a shrewd appreciation of the really basic factor of the whole conception.

SUMMARY OF THE ROYAL MAIL SCHEME OF ARRANGEMENT.

The proposed Scheme of arrangement between the Royal Mail Steam Packet Company and certain of its subsidiary and associated companies and their respective secured and unsecured creditors applies to the following fifteen concerns: Royal Mail Steam Packet, R.M.S.P. Meat Transports, Nelson Steam Navigation, H. and W. Nelson, David MacIver and Company, Pacific Steam Navigation, MacAndrews and Company, Glen Line, Elder Dempster, African Steam Ship, Elder Line, British and African Steam Navigation, Imperial Direct Line, Harland and Wolff, and Oceanic Steam Navigation.

After a short Summary Memorandum, the Preamble to the Scheme declares that the Royal Mail and many of the other companies are unable to meet their obligations, that many cannot raise the additional monies required to continue their services, and that the moratorium granted by certain Royal Mail creditors will shortly expire.

DEFINITIONS.

It is declared that the "Board of Referees" referred to in the Scheme shall include Lord Plender, Lord Weir, and Sir George Higgins or other members appointed in pursuance of Part VII below. "Trade debts" are defined as including, *inter alia*, freights and passage monies prepaid and deferred rebates. "Trade creditors" are stated to include holders of trade creditors' bills.

SCHEME.

PART I.—OPERATION OF VESSELS.

Sections (1) and (2) lay down that specified ships shall be sold and transferred to New Operating Companies under the Companies' Act, 1929. To these will be transferred the vessels set out in the first column of the summarised table below by the companies in the second column, freed from the mortgages and charges specified in the third column.

The "Explanatory Memorandum" which prefaces the Scheme shows that the Pacific Steam Navigation, MacAndrews, Glen Line, and Oceanic Companies will continue to operate their own vessels.

Section (3) of the Scheme relates to the naming of the new Operating Companies. (4) lays down that the consideration for the transfer of the vessels shall consist entirely of fully-paid shares of one class, and (5) declares that its amount shall be apportioned having regard to the estimated value of particular vessels to the

Vessels.	Owned by.	Particulars of Mortgages and Charges.
<i>Operating Company No. 1 (South American Lines).</i>		
29	Royal Mail Company	First floating charge to trustees for 4½ per cent. debenture stock and second floating charge to trustees for 5 per cent. debenture stock.
6	R.M.S.P. Meat Transports	Specific mortgages to Midland Bank and Belfast Banking Company.
1		Specific mortgage to Harland and Wolff.
4		Specific mortgage to trustees for 5 per cent. guaranteed debenture stock and second charge to Harland and Wolff.
5	Nelson Steam Navigation	Specific mortgage to trustees for 5 per cent. guaranteed debenture stock.
1		Vessel under construction; ditto, with second charge to Harland and Wolff.
6	David MacIver	None.
<i>Operating Company No. 2 (West African Lines).</i>		
1	Elder Dempster.....	Specific charge to trustees for 5 per cent. debenture stock and ditto "A" debenture stock.
22	African Steamship	Specific charge to trustees for 6 per cent. debenture stock.
4	Elder Line	None.
4	British and African S.N.	Specific mortgage to Royal Exchange Assurance.
6		Specific mortgage to Midland Bank and Bank of Ireland.
15	Imperial Direct Line	None.
3		None.

total, with final powers of decision with the board of referees in case of disagreement. (6) suggests December 31, 1931, as the date of presumed transfer. (7) stipulates that operating company shares after allotment shall be immediately transferred to holders of first mortgages or charges, who will thereupon transfer their charges from the vessels to the shares. (8) Enumerates other working assets, etc., and trading liabilities which are to be transferred to the Operating Companies, provides for the payment by two instalments of certain bills to a total of £57,150, and declares that in case of each Transferor Company any surplus in the value of the assets over the liabilities transferred shall be paid by the Operating Company in three-year 5 per cent. unsecured notes. The latter Company will receive from the Transferor Company deferred creditors certificates in respect of any balance of liabilities over transferred assets, with special arrangements for Elder Dempster

Section (9) provides that the Transferor Companies shall lease or license all necessary offices, wharves, lighters and ancillary properties to the Operating Companies, while (10) (i) deals with the taking over of staffs (ashore and afloat) and responsibility for pension schemes, etc., and (10) (ii) covers all current contracts, including conference, chartering, freight and passenger agreements. (11) gives final powers of making all necessary apportionments to the Board of Referees.

Under Section (12) (a) the African Steam Ship Company and the British and African Steam Navigation Company are to charter to Operating Company No. 2 the following vessels, on time charters, to December 31, 1934, but determinable by the mortgagees or by the operating company at any time after June 30, 1933:—

Name of Vessel.	Book Value.	Owned by	Particulars of Mortgages.
"Henry Stanley"	144,091	African Steam Ship Co.	Specific mortgage to Union Bank of Scotland, Ltd., to secure Bills discounted.
"Mary Kingsley"	158,348	Do.	Do.
"William Wilberforce"	145,241	Do.	Specific mortgage to British Linen Bank to secure Bills discounted.
"Macgregor Laird"	144,225	Do.	Do.
"Edward Blyden"	142,700	British and African Steam Navigation Co.	Specific mortgage to Harland and Wolff as Trustee for Banks holding Bills discounted.
"Alfred Jones"	142,880	Do.	Do.
"David Livingstone"	143,400	Do.	Specific mortgage to Clydesdale Bank, Ltd., to secure Bills discounted.
"Mary Slessor"	142,500	Do.	Specific mortgage to Westminster Bank, Ltd., to secure Bills discounted.

Sub-sections (b) and (c) make further arrangements in respect of these vessels.

(13) provides for loans of £75,000 by the Royal Mail Company and £75,000 by the Nelson Steam Navigation to Operating Company No. 1 on open account at 5 per cent. per annum (or 1 per cent. over Bank rate, whichever is the higher). (14) gives arbitral powers, in case of differences, to the Board of Referees. (15) governs the Articles of Association of each operating company.

(a) Limits the powers of the directors to borrow or create any mortgage or charge in excess of £100,000, exclusive of amounts dealt with elsewhere in the Scheme. (b) Entitles each shareholder to nominate one director for each 20 per cent. of the total issued capital, and (c) gives a right to nominate one director on each Operating Company to the Transferor Companies, subject (d) to the approval of the Board of Referees. (e) Directors need not hold any qualification shares. (f) and (g) relate to their remuneration. (h) Prevents, until after December 31, 1934, the sale of any share by a member without the unanimous consent of all the other shareholders, unless he procures a reasonable opportunity for the sale by them at the same price and terms. The mortgagees of the vessels under (12) (a) above have the right to nominate one director of Operating Company No. 2.

PART II.—UNSECURED CREDITORS (EXCEPT TRADE CREDITORS) AND HOLDERS OF BILLS OF EXCHANGE (EXCEPT TRADE CREDITORS' BILLS) SECURED OR UNSECURED.

(16) Each company with creditors of the above classes shall create unsecured income obligations (to be known as "Deferred Creditors' Certificates"), carrying interest of 5 per cent., secured by a trust deed, with provisions (a) that interest, though cumulative, shall only be payable out of net earnings; (b) that the certificate of the auditors shall be conclusive as to the net earnings, after allowing such sum as they and the trustees for the certificate holders consider necessary for renewals and maintenance, bad and doubtful debts, depreciation and contingencies or reserves; (c) that no auditor shall be appointed who has not been approved by the trustees; (d) that without the approval of 75 per cent. of the deferred creditors' certificates the companies, with certain exceptions, shall not further charge their assets; (e) that surplus net earnings over interest payments must be applied in redemption of the deferred creditors' certificates the companies, with certain exceptions, be entitled to nominate certain directors, (g) with power to require full payment of their certificates if their nominees are not re-elected. (h) limits the amount of certificates, and (i) provides for full payment of certificates in case of default, liquidation, receivership, or on a 50 per cent. demand after December 31, 1934.

NOTE.—Section (16) throughout provides for the giving of corresponding rights to certain creditors whose position is declared to be *pari passu* with that of holders of Deferred Creditors' Certificates.

Section (17) specifies that certificates shall be issued, in respect of debts incurred up to December 31, 1931, in discharge of liabilities under bills of exchange (except trade creditors' bills) and the bills under clause 8, calls in arrear, debts under Part V of this Scheme, and all other unsecured debts, including payments by the Treasury under its guarantee of unsecured loans. (18) provides for the issue of certificates for payments by the Royal Mail under its guarantees on White Star Line 6½ per cent. cumulative preference shares up to February 1, 1935, payment in certificates giving the Royal Mail Company the same rights against White Star as if the amounts had been paid in cash. In the meantime, White Star preference shareholders will elect one director to the Royal Mail Court. Section (19) declares that, with a single exception, certificates will be issued in complete pounds, fractions being ignored. A schedule then shows how the boards of the companies will be constituted.

PART III.—LIABILITIES ON GUARANTEES AND AS DRAWERS OR ENDORSERS OF BILLS OF EXCHANGE.

(20) All parties having claims under guarantees shall be entitled to claim payment from the guarantor company as if they were holders of its deferred creditors' certificates. Under (21) any party receiving more than sufficient to cover interest and arrears shall apply the surplus towards the principal; but (22) any guarantor company paying any claim shall be subrogated to the rights of the principal creditor, *pro rata*, after the latter has been paid in full. By virtue of (23) the liability of all the guarantor companies shall be deemed to remain a good and subsisting guarantee, unless the Scheme provides otherwise.

PART IV.—SECURED LOANS OR ISSUES OF SECURITIES GUARANTEED BY HIS MAJESTY'S TREASURY OR BY THE GOVERNMENT OF NORTHERN IRELAND.

(24) His Majesty's Treasury and the Government of Northern Ireland shall make any interest or sinking fund payments falling due before December 31, 1934, on the loans to or securities of any of the companies which they have guaranteed, and these shall not thereupon be deemed to be in default. (25) In respect of such payments, the Treasury and the Northern Government shall be subrogated to the rights of the principal creditors, with, however, a specified limitation on their power to act before December 31, 1934. Meanwhile, (26) (i) the income from the specific security shall be applied first, in meeting current interest, instalments of principal, sinking fund payments, etc., and, secondly, in repaying to the Treasury or the Northern Government any amounts provided under guarantee, and any balance shall be applied to repayment of the principal, or invested and held as additional security. Under (26) (ii) arrangements are made as regards the application of the earnings of the Nelson S.N. Section (27) provides for the nomination of directors to specified companies by the Treasury and the Northern Government.

PART V.—SECURED CREDITORS.

Section (28) contains general provisions relating to creditors holding specific mortgages, charges or liens. Every such creditor, (a) will be entitled to receive the income produced by his security, any deficiency being payable out of net earnings of the Debtor Company, *pari passu* with interest on Deferred Creditors' Certificates, and (b) will also rank with certificate holders for repayment of principal, (c) (i) limits him from enforcing payment (whether his security shall have been realised or not) until December 31, 1934. If his security consists of vessels or assets in connection therewith, or shares in any of the companies, (26) (c) (ii) prevents him from entering into possession until December 31, 1934, but under (iii) if his security consists of properties of any other description, he retains his rights to realise it, but must act reasonably. Under (iv) the Debtor Company can redeem the security at any time on payment of principal and interest. Subsection (d) covers the application of any capital moneys received by secured creditors, and (e) describes their powers of nominating directors. (f) Makes special provisions for bills drawn by Harland and Wolff secured by a mortgage on company vessels. (g) Relates to securities held by or on trust for any creditor for any debt or liability which is satisfied by the issue of Deferred Creditors' Certificates. Section (29) describes special provisions as to particular secured liabilities of certain of the companies.

PART VI.—TRADE CREDITORS.

(30) The trade debts of the Royal Mail Company and each of the other companies shall be paid in the ordinary course of business by the respective companies or by the Operating Companies.

PART VII.—PROVISIONS REGARDING THE BOARD OF REFEREES.

(31) In the event of a vacancy on the Board of Referees, the place shall be filled by a new member appointed by the remaining members, subject to the approval of the Governor of the Bank of England. The Board may act by a majority, may regulate their own procedure, (32) may employ expert and clerical assistance, and (33) may fix the amount of their remuneration.

PART VIII.—GENERAL.

(34) Any uncalled capital shall be called up as soon as possible. (35) The respective managing agreements of H. and W. Nelson and Elder Dempster and Company, Limited, as regards certain compensation, in Deferred Creditors' Certificates. (36) The Scheme shall become operative when sanctioned by the Court. (37) The Board of Referees have a final decision as to the steps to be taken to give effect to the Scheme, and (38) incidental charges relating to modification of the Scheme by the Court, or, in the event of failure in any case to obtain the necessary assents from creditors.

APPENDICES.

The Appendices to the Scheme include a memorandum on the financial position of each of the fifteen companies, and data regarding the age and tonnage of individual vessels and the total cost and book value of the fleets.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
March 15.	March 17.

BUOYANT conditions marked the opening of the new account. Adverse influences being temporarily disregarded, the market concentrated its attention on outstanding favourable factors, such as the removal of exchange restrictions and the repayment of £43 millions of the amounts borrowed last year from France and America. Though some disappointment was felt at the "no change" Bank rate decision, it was generally realised that a period of cheap money was definitely in prospect, and rumours were prevalent regarding an early Treasury conversion operation.

Increasing foreign confidence in the fortunes of Great Britain and of sterling was expressed in the buying of gilt-edged securities, which enjoyed a large turnover and, apart from slight hesitancy over the Bank rate decision, moved steadily to the highest levels of the year. Conversion issues, War Loan, Funding Loan and Victory Bonds were conspicuous in the general advance. India loans responded to Sir Samuel Hoare's optimistic speech regarding conditions in that country, though profit taking occurred subsequently. Dealings were effected in the new Nyazaland scrip at 2 premium, while the recently issued Uganda Loan was dealt in at a premium of 4.

Among foreign government stocks, Brazils were prominent in anticipation of an early funding scheme, while hopes of a cessation of hostilities at Shanghai helped Sino-Japanese issues. Greek loans were adversely affected in the earlier sessions by fresh rumours of possible debt suspension.

Stock was short in the Home Rail market, and Prior Charges advanced quickly, while in mid-week equity stocks had a harder appearance, in spite of a further batch of unsatisfactory traffic returns. A good response was elicited by the new Metropolitan District issue. Foreign railways were largely featureless, but changes, where they occurred, were mostly in favour of holders.

Some of the activity in fixed-interest securities was reflected in the Industrial share market. Paris was a buyer of certain of the more speculative issues. Textile shares were prominent on buying orders from the North. "Bats," Imperial Tobacco, Dunlop, Turner and Newall and Imperial Chemical were in the van of the advances. Electricity shares were strong, helped by a batch of good reports (discussed in a Note on page 532), while Cables and Wireless rose on rumours of an important merger agreement. Rayons were generally steady, though Courtaulds was marked down on the full report (summarised on page 532). Brewery shares tended upwards, Guinness being a good feature. Spillers were active on anticipations of increased dividends. Harrods were in request. A satisfactory turnover was reported in Bank and Insurance shares at firm prices. Business throughout this section of the market tended to increase as the week progressed.

Oil shares followed the general upward trend and were helped by strong support from Paris and the Continent. "Shell" and Royal Dutch improved. The volume of business assumed large proportions, an active "Street" market being carried on after hours. Temporary weakness on Wednesday was followed by a renewal of orders from the Continent. Rubber shares were depressed by the discouraging attitude of Mr Lutyjes, Minister of Agriculture in the Dutch East Indies, towards the prospect of restriction. The market was further depressed by a fall in the commodity to the "record" low level of 2½d. per lb. A mild increase in activity was enjoyed on Thursday in the tea share market, support being forthcoming for Consolidated Tea and Lands. The feature of the Mining share market was the persistence with which Paris continued to support her "Kaffir" favourites. Among the list of advances, Brakpan was an outstanding feature. "Chartered" were in fresh

demand. Tintos were maintained despite a further decline in the price of copper and fears of the break-up of control. Little activity was evident among Rhodesians generally. De Beers found favour early in the week and Wilunas were strong. Tin shares were scarcely affected by the fluctuations of the commodity, and remained irregular.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The markets opened quiet and featureless, the number of share transactions on Monday and Tuesday being well below the average even for this year. Prices showed little change, the tendency of professional operators being to await concrete evidence of the results of the Government's relief policy before entering into commitments. General Electric came under pressure on dividend forebodings before this week's board meeting, but railroads were, if anything, a shade firmer on the news that the Reconstruction Finance Corporation had approved loans to a number of roads, mainly to meet fixed charges and maturing obligations. The publication of the January earnings' figures, however, was not calculated to encourage activity, the first 60 railroads to report showing total net receipts of only \$10 millions, against \$30 millions in January, 1930. On Tuesday a further reduction of ½ per cent. was made in bill rates for maturities of 90 days and over. The market was impressed by the evidences of a stronger situation and easier monetary conditions in London, and the British abandonment of exchange restrictions and the repayment of a substantial part of the American and French outstanding credits was a factor in the stronger tone of New York business from Wednesday afternoon onwards. Numerous price recoveries were recorded, particularly among railroad shares. Opposition was expressed to the proposed inquiry by the Senate Banking Committee into short selling, which was declared to have a political rather than an economic aim. The Prairie Pipe Line-Sinclair Consolidated Oil merger was approved by the stockholders of both companies. Steel mill production remained unchanged at 26 per cent. of capacity, but the feeling of industrialists was more favourable as regards a gradual improvement in activity. Freight car loadings for the week ended February 20th were 572,675, as compared with 562,534 in the previous week, 713,938 in the corresponding week of 1931 and an average of 886,571 for the same week in the seven years 1924-30. According to the National City Bank, the net profits of 900 companies last year were 53 per cent. lower than in 1930 and 73 per cent. less than in 1929. The average rate on invested capital was 3.3 per cent. for last year, 7.1 per cent. for 1930 and 18.4 per cent. for 1929.

PARIS.

Greater activity was in evidence at the opening of the Paris Bourse, option dealers in many cases conducting big covering operations. Royal Dutch, Rio Tintos and Canadian Pacifics were particularly strong, while "Kaffir" shares were in keen demand. Suez Canal advanced sharply, and bank shares came in for renewed support. Banque de France, which in December stood at little more than 10,000 francs, were quoted around 15,000 francs. A little profit-taking occurred on Tuesday, and the tone was less buoyant, but all stock was readily absorbed. On Thursday renewed strength was apparent in all sections and quotations again rose briskly.

	Feb. 25, 1932.	Feb. 29, 1932.	Mar. 3, 1932.	Feb. 25, 1932.	Feb. 29, 1932.	Mar. 3, 1932.

BERLIN.

Quiet conditions obtained on the Berlin Bourse, with few changes on balance. Reichsbank were in request at first, but the whole of the rise was not held, though other bank shares were supported. Electricity shares were reactionary, Siemens and Halske being lower on the reputed fall in the company's turnover. North German Lloyd

and Hapag declined. Dye Trust were marked down on the unconfirmed rumour that the dividend would be halved, the price on Wednesday being 97.00 (against 98.50 a week before). Siemens were done at 114.00 (against 137.50), General Electric at 30.50 (against 32.00), and Reichsbank at 115.00 (against 109.75).

AMSTERDAM.

A cheerful tone prevailed at the opening of the Amsterdam markets. Oil shares were marked higher under the lead of Royal Dutch. Unilevers and A.K.U. also advanced and rubber share prices were maintained despite the unfavourable attitude of the Dutch East Indies Minister of Agriculture towards output restriction. Some irregularity was noticeable on Tuesday, and Philips Lamps were depressed by rumours of less favourable financial results. A sharp recovery occurred on Wednesday, and the upward trend was resumed, with Royal Dutch again displaying activity.

OTHER CENTRES.

Improved sentiment in London and Paris was only partially reflected in the minor European bourses. Brussels displayed considerable activity, apart from rubber shares, which continued weak. A little profit-taking occurred in mid-week, but prices rallied subsequently. Milan was a little firmer on Wednesday after a dull opening, but Vienna and Oslo were listless. The cut in the Swedish bank rate induced a somewhat better tone at Stockholm.

SALMON P. CHASE, Secretary of the U.S. Treasury under LINCOLN

Current and deposit accounts invited. Terms may be obtained from the management on application. Complete facilities for handling all foreign exchange transactions.

THE CHASE NATIONAL BANK
of the City of New York

Capital \$148,000,000 --- Surplus \$124,000,000

LONDON OFFICES:
10 MOORGATE, E.C.2 & BUSH HOUSE, W.C.2

(Incorporated with Limited Liability under the National Bank Act of the U.S.A.)

LONDON ACTIVE SECURITY PRICES AND YIELDS.

NOTE.—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

INVESTMENT NOTES.

Gilt-Edged Strength.—The rise in the gilt-edged market, to which we referred last week, has made further headway, which culminated in a burst of strength on the announcement, on Wednesday afternoon, that restrictions on foreign exchange dealings had been removed and that more than half the £80,000,000 foreign exchange credits were being repaid. It was confidently expected that Bank rate would be again reduced this week, but the "no change" decision caused no more than a slight check to the advance. The cheapening of money rates has convinced the market that a change in Bank rate cannot be much longer delayed. If the rise in gilt-edged prices continues, conversion of 5 per cent. War Loan will be brought very much nearer the realm of practicability. The following table shows the further advance in prices:—

BRITISH AND AMERICAN INDUSTRIAL SHARE VALUES, September 1931 to February, 1932. (1928=100.)

British: "Financial News" Index of 30 Ordinary Shares. American: "Standard Statistics" Index of 50 Common Stocks.—Daily Figures.

values has been in strong contrast to the wide fluctuations of earlier months, as is revealed by the chart on page 530. Changes in British and American prices have continued to reveal a general similarity in timing and direction, with wider day-to-day fluctuations in the American than in the British curve. In both cases the perceptibly downward movement of equity values, which started about the middle of January, was over before the middle of February. Though America did not fully hold the rise which followed the announcement of the Glass-Steagall Banking Bill, the month closed with prices appreciably above the level of three weeks earlier. The chart reveals the significant fact that, in the course of recent minor rallies and recessions, prices have returned to much the same high and low points, with the slightest of downward trends. It remains to be seen whether this week's events will reverse the general direction of the British curve and whether the New York curve will follow suit. In both countries, easier credit conditions may conceivably supply motive force.

Stock Exchange Reform—Important Moves.—Two measures incepted this week—the one officially and the other unofficially—may have far-reaching effects on future Stock Exchange organisation and practice. On Tuesday, the Committee for General Purposes announced their approval, in principle, of a reduction in the proportion of commission returnable to outside agents from 50 per cent. to 33 1/3 per cent., except in the case of the banks. The decision does not at present cover remisers, clerks and half-commission men in the exclusive employment of brokers, regarding whose position the opinion of the "House" is to be taken. Definite rules will be formulated in due course, presumably by the Committee returned after this month's annual election. The split commission system, which is more or less peculiar to London, has long been recognised as an evil, both on account of the openings it offers for abuse and irregularities and of its inevitable tendency to maintain an important part of the total cost of the transfer of securities at a high level. The Committee have moved cautiously, after prolonged deliberation, and, even so, have found the problem of vested interests somewhat baffling. It may be the part of prudence not to antagonise the banks, on which the "House" depends for an appreciable share of its business. Ultimately, it may be decided that the reduction shall apply to half-commission men in the employment of members, but difficulties are foreseen in particular cases. Some firms do little business through agents; others are largely dependent on business coming to them in this way. That the Committee are determined, however, to grasp the nettle, affords further evidence of their appreciation of the fact that the willingness of the Stock Exchange to carry out necessary measures of reform, from within, may have a decisive effect on its future. Their attitude is of hopeful augury as regards the official reception of another matter mooted this week. Four members of the "House" who, twelve years ago, were prominent in an endeavour to secure the abolition of dual control (which was defeated by a meeting of Stock Exchange proprietors after securing an overwhelming majority from members) have sent out unofficial voting cards to individual members asking whether they are in favour of the "Trustees and Managers and the Committee for General Purposes revising the present Constitution and Rules in order to obtain unity of control and interests." A brochure accompanying the appeal shows that the members and shareholders of the "House" are not identical. There are approximately 3,900 members, over whose admission and "House" activities the Committee have complete control, and only 8,000 shareholders, whose interest are the care of nine trustees and managers. Having paid out its profits (derived mainly from entrance fees and subscriptions) each year, the Stock Exchange has no reserve fund or guarantee fund, and this position, apparently, cannot be altered without far-reaching changes in the Deed of Settlement of 1875. Dual control is thus not only anomalous, but harmful to the permanent interests of the Stock Exchange, which, for

example, does not possess the necessary resources to guarantee clients against the risk of default by its members, as do the banks. It is understood that the latest move commands considerable support among members. The adoption of the policy desired would raise numerous practical difficulties, but these do not appear to be insurmountable. Members have been asked to express their views on or before next Wednesday, and subsequent developments will be closely followed by a wide investing public.

Railway Meetings.—On page 501 of this issue we print the first of our customary analyses of the British railway accounts. Of the stockholders' meetings so far held, special interest has attached to that of the London Midland and Scottish, at which proprietors were shown the origin of some of the economies which resulted in a reduction in expenditure, last year, of £5 millions as compared with 1930 and £11 millions as compared with 1927. This reduction Sir Josiah Stamp attributed to four factors: modernisation, reduced wage rates, improved organisational control, and the withdrawal of unremunerative services. All these must tend ultimately to express themselves in terms of a lower wages bill. Although only about £900,000 of last year's reduced expenditure was attributable to the net fall in wages and salaries following the March award of the National Wages Board, the accounts are feeling the cumulative benefit of reductions of staff. In 1931 the drop in the numbers employed accounted for a saving, as compared with 1927, of £6,500,000, of which £2,800,000 was effected last year. Operating efficiency has been carried to great lengths. The company, which at the time of amalgamation had 10,316 locomotives of 893 different types, now has 9,032 of 261 types, and eventually the number of types may be as low as 20. Since 1927, although the capacity of the average engine has increased by over 6 per cent., coal consumption has diminished by 114 lbs. per 100 engine miles, and the usage of lubricating oil by 12 per cent. per engine mile. *De minimis curat lex*; reorganisation, which has achieved gratifying results as regards large items of expenditure, has simultaneously reduced the varieties of pins for office use from eleven to a single type of two lengths. As regards road transport problems, both the chairmen of the L.M.S. and the Southern expressed a desire that the London Passenger Bill should be passed into law in its present form with the least possible delay, but at the "Underground" meeting Lord Ashfield was relatively non-committal, blessing the principle of unification without indicating the attitude of his group to any possible modifications of the terms of the present Bill. On the road question generally, there is a clear division of opinion between the "Underground" and the main-line railways. The latter are concerned with road transport's "unfair advantages," while Lord Ashfield lays stress on the weight of road taxation, which, in the case of every motor omnibus of the standard London type, totals £373 per annum. Both the Southern and the "Underground" spokesmen described falling receipts as their most formidable immediate problem. The number of passengers on the former's cross-Channel services, in the last three months of 1931, was 33 per cent. below the corresponding figure for 1930. A rapidly accelerating fall in traffic occurred on the "Underground" after the end of the summer. Lord

Ashfield, incidentally, paid a merited tribute to the late Sir Edgar Speyer, who played a dominant part in extending the scope and prosperity of the "Underground" group between 1906 and 1915.

Electricity Supply Profits.—Electricity supply company accounts so far issued suggest gratifyingly steady progress in 1931. One or two concerns in the most depressed industrial areas have declared lower profits, but eight of the eleven companies given below have more than maintained their position:—

Name of Company.	1930		1931.	
	Net Profit.	Ordinary Dividend.	Net Profit.	Ordinary Dividend.
Chiswick Electricity	£ 19,768	% 12	£ 24,395	% 11
Clyde Valley Electricity	359,670	8	308,228	7
Electrical of Yorkshire	106,319	9	116,828	7
Kensington and Knightsbridge	45,002	7.992	51,678	7.992
Metropolitan Electric	288,385	10	288,647	10
Midland Counties Electric	233,196	7	249,475	7
North Metropolitan Electric	398,269	10	398,688	10
Northampton Electric	64,613	10	72,911	10
St. James and Pall Mall	70,341	7.896	73,360	7.896
Westminster Electric	184,964	8.8	151,425	8.8
Yorkshire Electric	332,558	8	319,917	8
Total	2,103,085	...	2,055,552	...

The aggregate decline in the earnings of the eleven companies is slightly over 2 per cent. Most shares, naturally, have fallen in market value since 1930, but "flat" yields continue to reflect unbroken confidence in the industry:—

Name of Company.	Highest Price, 1930.	High, 1931.	Low, 1931.	Price, March 2, 1932.	"Flat" Yield at Present Price.
Chiswick Electricity (£1)	56/-	40/-	27/6	34/-	£ 8. d. 6
Clyde Valley Electricity (£1)	39/6	35/6	28/-	28/9	4 17 6
Electrical of Yorkshire (£1)	37/9	36/3	30/-	33/-	5 9 0
Kensington & Knightsbridge (£1)	28/9	30/9	28/-	29/-	5 10 0
Metropolitan Electric (£1)	44/-	42/6	36/3	39/-	5 3 3
Midland Counties Electric (£1)	31/3	29/-	25/-	28/-	4 19 9
North Metropolitan Electric (£1)	50/-	49/3	40/3	42/6x	4 14 0
Northampton Electric (£1)	48/-	45/7½	35/-	37/6x	5 6 9
St. James and Pall Mall (£1)	28/9	30/-	27/6	29/-x	5 8 6
Westminster Electric (£1)	29/6	30/6	27/-	25/6x	6 18 0
Yorkshire Electric (£1)	25/-	34/6	28/6	32/6x	4 18 6

x = ex dividend.

Throughout the country, 11,401 million kilowatt hours were generated in 1931, compared with 10,914 million k.w.h. in 1930. The total of 1,162 million k.w.h. for January, 1932, was 21 million k.w.h. above that for January, 1931. It is anticipated that the Kensington and Knightsbridge company will shortly make an issue of capital to ordinary shareholders, while Electrical of Yorkshire has decided to offer 400,000 6 per cent. cumulative preference shares to shareholders at 21s. per share. The County of London Electric, whose report is still awaited, is paying 10½ per cent., against 11 per cent. for the year, while Bournemouth and Poole Electricity is maintaining its distribution at 15 per cent.

Courtaulds.—In a leading article in the *Economist* of February 20 (page 417) we examined the prospects of the rayon industry with special reference to the position of Courtaulds. The 1931 report states that conditions in the first eight months were the worst experienced in the English business since the introduction of rayon, although, as a result of the dual restrictions on imports imposed by a depreciated currency and an increased import duty, the factories are now working at a margin of profit. In the United States of America "considerably curtailed output and a hardly remunerative level of prices have been stabilised for some months." Continental conditions are described as "deplorable," apart from a slight improvement in Italy. Generally, the document follows the lines of its predecessors as regards the absence of stress on the more favourable features in the situation, but on this occasion, at least, facts speak more loudly than words. The profit is struck after charging no less than £2,004,538 for taxes and excise duties:—

	Year to December 31.		
	1929.	1930.	1931.
Profit	£ 3,743,827	£ 2,274,409	£ 1,101,587†
Brought forward	1,394,716	686,687	195,757
Preference dividend	400,000	400,000	400,000
No. of times covered	9.3	5.7	2.7
Ordinary dividend:—			
Amount	2,400,000	1,440,000	1,200,000
Earned %	13.9	7.8	2.8
Paid %	10*	6*	5*
Carried forward	686,687‡	195,757‡	147,344

* Tax free.

† Not including £450,000 transferred from contingencies reserve account.

‡ After allowing for £1,651,856 written off Continental investments in 1929 and £925,339 in 1930.

Interests abroad are written down by £1,000,000, of which £300,000 has been allocated from capital reserve account and £700,000 from general reserve. No credit has been taken for the improved values in sterling of the company's holdings abroad. Investments in subsidiary companies now appear at £18,117,168, and investments in and advances to industrial companies at £2,807,696. The company holds British Government and other securities valued at £11,607,758, and its reserve fund stands at £5,300,000. At 36s. 3d. the ordinary shares yield £2 16s. per cent. tax free.

Warehouse Company Profits.—At a time when trade has diminished in quantity and falling prices necessitate the writing down of stocks, the relative stability of warehouse profits may be regarded as gratifying. Of the ten companies whose results appear in the table below, nine have paid an ordinary dividend, while four have maintained their previous rate of distribution:—

Name of Company.	Net Profit, 1930.	Ord. Div.	Net Profit, 1931.	Ord. Div.	Present Price.	Yield.
Bradbury Greatorex	£ 63,358	% 12	£ 62,614	% 12	18x	£ 8. d. 6
Cook, Son and Co.	84,859	5	81,915	2½	18	8 14 6
Copestake Crampton	14,390	2	4,983	2	18	8 0 0
Crookers	Dr. 419	Nil	5,185	Nil	18	8 0 0
Devax Routledge	8,714	7½	7,752	5	18	6 13 4
Fore Street Warehouse	13,317	5	18,054	5	18	8 8 0
Poster Porter	7,094	5	6,067	2½	18	7 5 0
Hayes Candy (15s. fly. pd.)	18,132	6	14,614	5	18	12 0 0
Rylands	106,893	4	45,080	4	18	5 6 2
Selincourt and Sons	61,762	16	48,308	12	...	...

In the case of Bradbury Greatorex, the percentage decline is insignificant, while Crookers has turned a debit balance of £419 into a profit of £3,185, and the Fore Street Warehouse has increased its earnings from £13,317 to £18,054. The aggregate net profits of the ten companies reveal a decline of £85,538 from £378,110, or nearly 23 per cent., but if Rylands, whose profits fell from £106,893 to £45,080, be excluded, the percentage drop is only 8.7 per cent.

"Kaffirs" — An Addendum.—In an article on "Kaffirs" in our last issue we gave a table showing the actual margin of profit of eight companies based on their last published reports, together with the estimated margin of profit which would accrue if South Africa suspended the gold standard, the latter calculation being based on the assumption that the premium on gold would be the same as the prevailing premium in the case of sterling, namely 40 per cent., and that there would be an increase in the costs of 10 per cent. per ton milled. We think it desirable, however, to point out that the estimated margins of profit would be varied in the cases of companies whose leases from the Union Government entail payments calculated on a sliding scale, rising with the ratio of profit to the recovery value of the ore. The following table shows how the various formulae work out in the case of the three mines which are chiefly affected:—

Percentage of Profit to Recovery.	Percentage of Profits accruing to various Governments in cases of		
	Areas.	New State Areas.	Springs.
15	17.9	30.0	12.5
20	24.1	42.5	12.5
25	29.9	50.0	12.5
30	35.6	55.0	15.8
35	41.2	58.6	21.4
50	53.6	65.0	31.5
55	56.2	66.4	33.6
60	58.4	67.5	35.4
65	60.3	68.5	36.9
70	61.2	69.2	38.2

In the table in our issue of February 27th we calculated the existing margins of profit in the case of Government Areas, New State Areas and Springs Mines at 27.0 per cent., 18.49 per cent. and 33.63 per cent. respectively, and the potential margin of profit, if South Africa suspended the gold standard, as 62.67 per cent., 53.18 per cent. and 68.30 per cent. respectively. These figures must not be related strictly to the foregoing table, as our working margins of profit are not exactly comparable with the ratio of profit to the recovery value of the ore. As a rough indication, however, it may be taken that, in the event of South Africa suspending the gold standard, the percentage of profits taken by the Union Government will rise from 32.23 per cent. to 59.41 per cent. in the case of Government Areas, from 39.43 per cent. to 65.89 per cent. in the cases of New State Areas and from 19.53 per cent. to 37.76 per cent. in the case of Springs Mines.

Wiluna.—Our mining correspondent writes:—Twice within the past six months the prospects of this West Australian enterprise have undergone a marked change. In the autumn of last year, failure to secure the estimated treatment results led to an expert investigation which involved a substantial scaling down of both the quantity and value of the ore reserves estimate. About the same time, developments at depth took an adverse turn; and, altogether, the outlook for the shareholders appeared dubious in the extreme. Of late, substantial profits have been earned monthly; while exploratory work in the mine has placed quite a different complexion upon the position. There appear to be grounds for the belief that former theories as to the "pitch" of the ore bodies were erroneous. Upon two levels—the 450 and the 625 ft.—good ore has been encountered much further south than anticipated, the distance at the 625-ft. level being greater than at the 450-ft. If the ore body is struck on the 800-ft. level still further south, the belief above referred to will be regarded as warranted. Another new development consists in the discovery of a lode parallel to the original West lode and running 80 to 100 ft. west thereof. Tested by one cross-cut and a number of drill-holes this parallel ore body has so far shown a length of some 800 ft., carrying high values over substantial widths. A fact not generally known is that a somewhat similar incident has occurred in connection with the East lode—the mainstay of the mine. As far back as 1927 development gave indications of the existence of a parallel lode, but exploration was not continued in view of the necessity of pressing forward the opening up of the main ore bodies. Work has lately been

resumed—so far with encouraging results. In both cases, actual opening-up must, of course, be awaited before definite conclusions can be drawn. Reverting to the financial aspect of the position, it may be recalled that a minimum profit of 10s. per ton upon the treatment of 40,000 tons monthly was postulated. Including exchange and currency premiums, the surplus for December amounted to £18,340; and with the output on a somewhat larger scale, the total for January is expected to be around £25,000. It is obviously necessary to take account of the effect which the recovery in sterling will exert upon the "gold premium"; and further, the Australian exchange may not indefinitely remain at its present depreciated level. Still, there can be little doubt that for some time to come the company will continue to benefit from the two premiums. An average monthly profit of £18,000 for two years would leave sufficient to provide for the repayment of the £300,000 of 7 per cent. notes issued under guarantee of the Government of Western Australia. Some people are optimistic enough to hope that the £300,000 of 10 per cent. notes will be cleared off by conversion into shares.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—London Midland and Scottish Railway, Southern Railway, Manchester Ship Canal, Banca Commerciale Italiana, Prudential Assurance, National Mutual Life Assurance Society, Clerical, Medical and General Life Assurance Society, Scottish Widows' Fund and Life Assurance Society, Scottish Provident Institution, English Electric, Selfridge and Company, and Maple and Company. Presiding at the annual meeting of the London Midland and Scottish Railway, Sir Josiah Stamp said that the present delay and uncertainty regarding the London Passenger Transport Bill were causing serious difficulties, and holding up the solution of suburban transport problems which were crying for attention. At the annual meeting of the Southern Railway the chairman said that the question of reducing fares was constantly under review, but that a reduction in fare of 1d. per journey would, on the present carryings, involve the company in a loss of over £1,300,000 per annum, and it would be necessary in order to make good such a loss. Further reference to the speeches of the chairmen of the L.M.S. and Southern Railways is made in a "Note" on page 531. At the annual meeting of the Scottish Widows' Fund and Life Assurance, Mr T. J. Carlyle Gifford told shareholders that new business for 1931 had touched a high-water mark, new assurances having amounted to the gross sum of £3,794,000, of which £262,000 was reassured with other offices, leaving net new assurances of £3,532,000.

CAPITAL ISSUES.

The sunshine of recent monetary developments has rapidly broken up the ice in the new issue market. Last week's relatively small Croydon Loan was subscribed many times over, larger applicants receiving on the average about 5 per cent. of the amounts asked for. The

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper Ltd.,"
8, Boulevard Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

Name.....
Address.....

issue was quickly followed by a large offer, the *Nyasaland Government* on Monday issuing £2,000,000 of 4½ per cent. guaranteed stock, 1952-72, at 97½, carrying a flat yield of £4 12s. 4d. per cent. As the stock carried a full Treasury guarantee, and its price, on the day of issue, was several points below that of, e.g., 4½ per cent. Conversion Loan, the response was immediate and overwhelming, allotments being on a very low scale. On Thursday an offer of £1,500,000 5 per cent. redeemable debenture stock at 97½ was made on behalf of the *Metropolitan District Railway*, whose prior stocks have entered the Trustee list, the company having paid an ordinary dividend of 3 per cent. or more for the last ten years. The stock, which has been issued in connection with the "Underground" programme of extensions, etc., undertaken in agreement with the Government, is well secured and, at the present level of market prices, attractive. Other forthcoming loans include issues of fixed-interest securities by various industrial companies, and an offer of £750,000 of 5 per cent. stock of Poole Corporation at 100½. The Liverpool City Council has approved an application for sanction to borrow £1,500,800 to meet the deficiency in the estimates for the completion of the Mersey Tunnel. Early information is expected of a new issue to replace 4½ per cent. Treasury Bonds to a total of £116,467,382, maturing on April 15 next.

Nyasaland Government.—4½ per cent. guaranteed stock, 1952-72. Principal and interest guaranteed by the British Treasury. Price of issue, £97½ per cent. If not previously redeemed, the stock will be repaid at par on April 1, 1972, but the Nyasaland Government reserve the right to redeem at par

in whole or part, on or after April 1, 1952, on three months' notice. The proceeds of the issue will be spent on the construction of the Zambesi Bridge and on connected undertakings.

Metropolitan District Railway.—Offer for sale at £97½ per cent. of £1,500,000 5 per cent. redeemable debenture stock, 1985-95. This stock is eligible for the investment of Trust Funds. Grants are to be made by H.M. Treasury subject to a stipulation that the new construction programme shall be completed by December 31, 1933. The stock will be repaid at par on January 1, 1995, but is redeemable at par at the option of the company in whole or part, on or after January 1, 1985, on six months' notice.

Plymouth and Stonehouse Gas Light and Coke.—Sale by tender of ordinary stock not exceeding £75,000; minimum price of issue £117 per £100 stock, yielding at that price £6 16s. 9d. per cent. The company supplies gas to more than 45,000 consumers in Plymouth, Stonehouse, and adjacent districts.

(a) Tax free.

LONDON AND THAMES HAVEN OIL WHARVES, LTD.—The directors recommend a final dividend of 5 per cent. free of tax and a bonus of 5 per cent. free of tax on the shares, making 15 per cent. free of tax for the past year, and to carry forward the balance of £162,427 19s. 7d.

LONDON BRICK COMPANY AND FORMERS, LTD.—The directors announce that they are recommending, at the forthcoming ordinary general meeting, the payment of a final dividend on the ordinary share capital of the company of 5 per cent. (actual), making 20 per cent. (actual) for the year ended December 31, 1931. £175,000 has been placed to depreciation—the same as last year. The company again marketed one thousand million bricks.

COMPANY MEETINGS, &c.

LONDON MIDLAND AND SCOTTISH RAILWAY COMPANY.

RESULTS OF ANOTHER DIFFICULT YEAR.

DECLINE IN TRAFFIC RECEIPTS.

LARGE SAVING IN EXPENDITURE.

SIR JOSIAH STAMP ON INTERNAL REORGANISATION.

The ninth annual general meeting of the London Midland and Scottish Railway Company was held at Euston Station, London, N.W. 1, on Friday, February 26, 1932, Sir Josiah Charles Stamp, G.B.E. (chairman of the company), presiding.

The Chairman, in moving the adoption of the report and accounts, said:—The railway receipts show the heavy decline of just over £5,000,000, or 7.35 per cent. The unprecedented depression of trade all over the world and the continued effect of competition from the public roads are, shortly, the causes, and I will not spend time in discussing the circumstances which have brought our great staple industries, and, indeed, the country itself, to the brink of disaster. One example may stand for many: we have 241 blast-furnaces on our system and at the end of 1931 only 41 were at work.

So far as it is possible to measure the fall in tonnage carried by us against the fall in the total quantities available to be carried, the graph here shown gives the facts, and also the continued growth in the road vehicles which compete for the available tonnage.

MAIN FACTORS IN THE LARGE RETRENCHMENT.

The railway expenditure, on the other hand, was reduced by £4,300,000, or 7.79 per cent.—in a greater ratio than the fall in receipts. The main factors in this large retrenchment can be classed under four heads:—

- (1) Effects of modernisation.
- (2) Reduced rates of wages.
- (3) Improvements in organisational control.
- (4) Withdrawal of unremunerative services.

First.—Last year I gave details of the various yields obtained on schemes of modernisation. These have continued to give good results in both the reduction of working expenses and the increase of efficiency in the services which we sell. There has been no reduction, but, in fact, an increase, in the standard of maintenance of the track and rolling stock. The quality of the stock has been materially improved and the total quantity has been substantially reduced, thus causing a saving in both capital and maintenance.

Second.—There has been a reduction in labour prices which has resulted in a net reduction of salaries and wages of about £900,000.

This is the net difference between the saving in the rates following the award effective from April last year against the 2½ per cent. that was operative up to May, 1930. There have also been reductions, less easy to quantify, in the prices of certain materials and stores, though against this we have, of course, felt the effect of the lower prices of recovered materials of which we are large sellers.

Third.—I will deal with the organisation questions more fully a little later.

Fourth.—The further withdrawal of unremunerative services has permitted reductions of train and station expenses, and, by arrangements with our associated omnibus companies, the public requirements have been fully met.

OTHER BUSINESSES.

The road services which the company operate directly—mainly on the merchandise side—are gradually developing on satisfactory lines, and the net receipts have been increased by £19,000.

The steamboat results are excellent, and, notwithstanding the heavy decline in trade, with a reduction in gross receipts of £32,000, there is an increase in net receipts of £21,000 on the figure of £138,000 for 1930.

I am glad to say that the company's subscription in David MacBrayne (1928), Limited, of which I am a director, continues to prove remunerative, a dividend at the rate of 7 per cent. per annum, based on the *pro rata* amount of capital in use during the year having been declared for 1930. This is reflected in our dividends from investments and not in steamboat working. We have the satisfaction of having effected something like a revolution in the conditions of transport in the Western Isles. You will find a week's sailing in those romantic waters on our new vessels a holiday different from anything else in Europe.

The economies in dock working, while good, have not been sufficient to meet the reductions in receipts of £167,000, and the loss on this account, owing largely to the depression in the coal trade, has been increased from £63,000 to £80,000.

The hotels and catering department has suffered a reduction of receipts of £359,000 (equal to 11.6 per cent.), due to the decline in

NATIONAL PRODUCTION COMPARED WITH L.M.S. TONNAGES AND GROWTH IN MOTOR VEHICLES
STANDARDISED ON 1927

spending power of our clients. The hotels themselves, both in the commercial areas and in seaside resorts, etc., are a barometer of the prosperity of the commercial sections of the community, and in the year through which we have just passed the depression in commerce, as well as the increase in taxation, has left its mark on the company's hotels. Considerable savings have been made as a setoff against this reduction in receipts, and, against the decrease of £359,000 in the total receipts, the expenses incurred show a decrease of £254,000. The result will compare favourably with many other hotel businesses at this time.

Welcombe Hotel, Stratford-on-Avon, was opened on July 1st, and, in spite of the serious times through which we have been passing, the receipts have been well up to those anticipated when the directors decided upon the project, so that the undertaking shows promise of being a most satisfactory one. The opening of the new Shakespeare Theatre this year will find the town now equipped for the entertainment of visitors from home and abroad.

The loss on collection and delivery has fallen by £138,000. I have several times explained why this service in isolation does not yield a surplus, though indirectly it is profitable. Part of the reduced loss is due to economies and lower prices, but a further part is due to reduced work, and is, therefore, not really a gain in our net revenue as a whole.

Dividends on investments in other undertakings show an increase of £105,000, this item reflecting for the first time practically a full year's return from our omnibus investments. The total direct return on the latter for the year is £199,000—a little over 7 per cent. on the cost of the shares. The actual earnings give a yield of over 11 per cent., but only dividends paid or declared are brought to account.

NET REVENUE.

With a decrease of £5,070,000 in all expenses the total net revenue for the year is £12,656,000, and is thus only £771,000 less than in 1930, notwithstanding the reduction of £5,841,000 in income.

The railway problem at the present time is much the same all over the world, and the graph shows how the gross and net receipts in the United States and Germany have fared compared with our own.

You ask: Are these reductions in working expenses permanent? Or will they fade away in years to come? The answer is: There must be both "ups" and "downs," but the balance, I anticipate,

is with the latter, and that the 1931 level of expenditure will be still further reduced, apart from the additional cost of working any additional traffic, which we should be only too glad to face, and questions of price levels. The effect of import duties may work for us on the total volume of traffic, and against us on internal prices, where we rely on imported material.

We have not made drastic reductions in our train services. Where these are semi-automatic, as in the case of trains for coal and mineral traffics only, we have kept our train supplies tightly fitted up to traffic demands, but passenger, parcels and regular merchandise trains cannot similarly be rationed—the trains must run according to schedule independent of short period load variations.

A reduction of 10 per cent. in the earning power of a train does not justify its withdrawal if that course would cause the reduced net revenue to be further reduced. Even where a train net revenue has ceased to exist, it is not desirable to discontinue the train unless it is clear that it is likely to be a permanent or long time cause of loss. The disturbance or destruction of "good will" by withdrawal would not be warranted without a clear likelihood that the present circumstances will continue. Without breach of that overriding consideration we have definitively withdrawn trains representing about 1,250,000 miles per annum, and other reductions have been made of a less permanent nature without interference with the main train schedules. Of course, the possibilities of continued service by different types of vehicles are being constantly explored.

Our course will be more clear for a comprehensive review of passenger and other regular trains when we know what the long-term policy of the Government is to be in regard to road working. If the present policy is continued we must eventually take such steps as are in our power to withdraw every service which neither directly nor indirectly pulls its weight. The Government and the public cannot eat their cake and have it, and, if the thoughtless duplication of facilities is continued, out of public moneys, or is even maintained at its present level, we cannot, with reason, be asked to compete with the public purse and continue to run services rendered unremunerative by such Government action. The illusory cheapness so obtained will be expensive in the long run.

It is not a mere question of competition with the new form of transport, with its manifest advantages for many purposes, but competition with the public purse rendered more difficult by the

GROSS AND NET RAILWAY RECEIPTS
L.M.S. AND RAILWAYS OF GERMANY AND U.S.A.
YEARS 1929, 30 AND 31, STANDARDISED ON YEAR 1928-100

imposition of restrictions and regulations from which the Government roadways are free.

DIVIDEND.

Your board are glad that in this year of extreme depression, with traffic receipts at the lowest ebb since amalgamation, and about £4,000,000 traffic receipts below even those of the disastrous strike year of 1926, they have been enabled to recommend the full dividend on all the preference stocks, and a small dividend upon the ordinary stock, which will retain the Trustee status of all the pre-ordinary stocks. To do this it has been necessary to take almost £500,000 from the general reserve fund, but, as pointed out in the report of the directors, there is a substantial credit likely to accrue in respect of 1931 under the item "local rates." It will be some time before this is ascertainable, but we decided that we were bound to treat as expenditure of the year the rates levied upon us in the first instance, and to deal with the adjustment only when it became ascertained definitely. I do not propose to indicate what we estimate the final rates figure for 1931 will be, but that there will be a substantial reduction I have no doubt, and I understand there is no likelihood of our actual liability for rates from April 1, 1931, being settled in 1932.

BALANCE SHEET.

On the "liability" side there is only one item to which I need direct your attention, and that is the decrease of some £740,000 in the works and equipment maintenance fund. This fund is charged with the non-capital proportion of all new works which are not specifically covered by the ordinary renewal funds shown separately in the balance sheet, and the debit to this fund was particularly heavy in 1931, owing to the outlay upon new works constructed under our arrangements with the Government in connection with the remission of passenger duty and works to relieve unemployment.

On the "assets" side it will be seen that the cash at bankers and in hand is some £4,000,000 more than a year ago, while investments are some £4,000,000 less. As regards the reduced value of the investments, we are in a position more favourable than most, for the market value as at December 31st is below the figure in our books by only £1,370,000, of which £685,000 has been recovered by improved quotations recently. We have not quoted the surplus valuation in previous years, and these fluctuations are of small prevalence to us. For what matters is that the realisation of sent concern to us. These investments cannot be required at any one time. They have redemption dates spread out well into the future, at definite dates which would sufficiently meet our purposes, and 96 per cent. have a definite redemption price substantially in excess of our book cost.

INNOVATIONS IN ORGANISATION.

It is a platitude to state that the problems encountered when endeavouring to get the best out of the organisation and staff of a large and diversified business, are quite different from those involved in concerns of a smaller magnitude. But these differences, and difficulties are greatly increased, first where a large business, such as the L.M.S., is made up of a number of distinct technical or professional crafts necessarily working in self-contained departments; second, where it has been built up by the aggregation of a large number of different concerns with quite different practical and historical antecedents; and, third, where the period of consolidation is one of intense economic unrest, depression of trade and unprecedented subsidised competition from other quarters. We are meeting these difficulties in many different ways, starting with complete co-ordination at the top. The supreme executive control rests in the executive, and it has three vice-presidents. The executive has, up to now, consisted of four vice-presidents, but, with the experience we have had, we are now prepared to attempt an increasing degree of consolidation by reducing the number to three, one being primarily responsible for the engineering and scientific departments, one for operating and commercial aspects of the railway itself, and the third for all the financial controls and service departments. But to as great a degree as possible the vice-presidents aim at being interchangeable, understanding each other's problems and being united in final responsibility.

We have watched carefully every development that has taken place both at home and abroad, designed to improve efficiency and control in businesses of great magnitude, and to adopt every such measure, even experimentally, even though it may cross the methods and ideas of management and departmental responsibility which are traditional in this country.

I have to acknowledge the readiness with which the officers and staff have co-operated in trying these organisational experiments without undue regard for their personal or departmental interests or customs.

FEATURES OF RECENT INTRODUCTION.

We owe a great deal of the large economies of the past year, in succession to those of previous years, to the introduction of a provisional form of the budget system. It would have been difficult

to have found a time more unpropitious than 1931 for introducing such a system, which has reached its greatest success in America when there has been a reasonable continuity of market, with reasonable power to forecast output.

It sets a goal of assumed gross and net revenue, with periodical revision, and the breaking of this up into departmental budgets, leaving the officers to sub-divide their allocations between districts and different subjects of expenditure. While often yielding at different points artificial results, it has, at any rate, given a definite detailed goal to relatively junior officers which has had a different psychological effect from a more general exhortation to economise. A good deal of time and experience must elapse, and a much more stable condition of economic affairs obtain throughout the country, before the budget system can be carried to its logical implications, and give its most productive results.

Another feature of recent introduction is what is known as a "Job Analysis Committee," working as a direct arm of the executive, that measures by exact methods staff and performance in many diversified functions in different departments, and it is particularly interested in extending mechanical and organisational changes successful in one particular class of operation to others in different departments which, at first sight, seem to be only roughly similar. This committee is doing most useful work both as a co-ordinator and as a penetrating carrier of stimulus and suggestion. It does not dispense with the development sections of the departments themselves or the full departmental responsibility for results.

For several years we have had in force a system of careful independent audit of the actual results of each item of capital expenditure and new works in comparison with those that were anticipated when it was embarked upon. While this retrospect might apparently have no practical value, it has in fact yielded many points of guidance for future development and new tests of profitability. I am glad to say that its general effect has been to confirm the care and vision shown by the officers in putting forward their proposals.

OTHER NEW METHODS.

Further, we have in operation an expert investigation into departmental contacts and functions as they are revealed through printed forms. This has extended to scientific co-ordination, which has reviewed closely the types of paper used in relation to the final durability required of them, and to their special purposes. It has reduced the number of different types of paper from fifty to twenty, giving us great economies in purchasing and use. It has reduced the number of forms by 40 per cent. in four years, and the total cost of our stationery and printing up to date by an average of £70,000 per annum. This work is steadily progressing, and by the review of functions from an entirely novel angle and the elimination of stages of procedure should have its corresponding ultimate effect upon staff costs.

These are examples of new methods which we have introduced recently. Time fails to give further illustrations, and some of them, while interesting in themselves, are not of great magnitude measured by the vast interests we are discussing. In passing, however, I might mention some remarkable remedial work of a pioneer character done by one of our medical officers with members of the staff who have sustained accident, and who, under ordinary conditions, would have been capable of only the lightest routine work. Our medical officer at Crewe has developed a method of individual treatment in which the treatment itself is exactly related to the physical demands of particular railway jobs, which has enabled many men to return to their old specific tasks, and thus saved the company considerable sums of money, because otherwise continued high rates of wages would have to be paid for lower-grade tasks.

WORK OF SCIENTIFIC RESEARCH COMMITTEE.

I will conclude this section of my remarks by referring again to the Scientific Research Committee set up about two years ago. These eminent men of science, each a specialist in his own field, have now become consolidated into a team which, working with the technical officers, is a great stimulus to them, and is selecting the best methods by which some of our more fundamental problems may be attacked.

Some of the investigations have already reached a stage which justify practical adoption, and, in such cases as these, financial savings are beginning to accrue. The committee has naturally dealt first with problems of major importance in respect of expenditure, such as the life of paint and the wear of tyres, which determine the intervals between the shopping of vehicles, the life of firebox stays, and the design of rolling stock in relation to wind resistance. The research station is at the service of all departments; the results of research carried out by scientific institutions

in various parts of the world are also being regularly brought to their notice through the issue of a Monthly Review of Technical Literature, which is produced under the guidance of the committee.

I mentioned last year the appointment of a small joint committee to investigate certain problems connected with locomotive fuel and water. As the result of the completion of one phase of the work of this committee on the different methods of treating water now available, it has been decided to instal 23 water softeners between London and Carlisle. A substantial saving in the cost of boiler maintenance will be secured as the result of the use of softened water.

We are told by outside critics that the economies of 1931 are a reflection on the management in earlier years. Those of you who have attended the meetings of the company or read the proceedings will remember that I have laid stress on the fact that the wide schemes of rearrangement which we have undertaken, accompanied by heavy outlay on new plant and equipment, would have a growing value. That, the results for the year have demonstrated.

As I pointed out four years ago, rationalisation on any amalgamation requires, first, time for comparison and deliberation and choice; second, a period of transition and execution; third, an ascending period of realisation.

I should like to take this opportunity of expressing on behalf of the board, and I trust on your behalf too, appreciation of the efforts of the officers and staff of all ranks to effect such substantial economies and improvements.

CO-ORDINATION OF LONDON PASSENGER TRANSPORT.

The Bill introduced by the late Minister of Transport for the co-ordination of London passenger transport, after a select Committee hearing lasting 35 days, reached a large measure of agreement and passed the Committee stage. Circumstances, however, prevented the proceedings being concluded last year, and it was carried over, but the Government have not yet taken any steps in the direction of getting it through its remaining stages. It is earnestly hoped that the earliest possible facilities will be afforded, as some such central authority as this Bill sets up with which the railways can enter into firm arrangements, is vitally essential to us and to the public interests. The present delay and uncertainty is causing serious difficulties and holding up the solution of suburban transport problems which are crying for attention. No economic propositions for expenditure of capital for the provision of new electric suburban services can possibly be undertaken on your behalf if, in the absence of some regulating principle, our expenditure is undermined by irresponsible free lance bus competition or rival tube extensions.

RAILWAY AND ROAD TRANSPORT.

I gave you last year some detailed particulars of co-ordination of road and rail services. These have proceeded steadily on the same lines but the process, necessarily gradual, has been retarded during 1931 by the claims which the new licensing procedure and Traffic Court contests have made upon all parties, and especially the omnibus companies' staffs.

The stabilisation of the passenger side of the road industry by the new licensing system should, however, now assist the attainment of the fuller co-ordination desirable, and it is anticipated that considerable advances in this direction will be made in 1932.

The task of contending with road competition, both in connection with the conveyance of passengers and the haulage of merchandise, is rendered more difficult by the fact that our road competitors are able to quote rates instantly without reference to any other authority, whilst it is incumbent on the railway companies to give effect to the provisions of the Railways Act when making quotations of rates and charges below the standard charges.

But, in order that our representatives should be at a less disadvantage compared with the road haulier, it became imperative to rearrange the company's commercial organisation, and under the arrangements now in operation, the District Commercial Officers, who have been vested with a greater measure of local autonomy, are in closer touch with business firms and the public and matters are being disposed of locally, which previously were referred to headquarters.

CO-OPERATION WITH OTHER RAILWAY COMPANIES.

We have for some time been considering what steps could be taken with advantage to eliminate wasteful competition with other undertakings. You are aware of the arrangements made with the principal omnibus operators outside London and the satisfactory results of those arrangements, and I have also explained the proposals before Parliament dealing in a comprehensive manner for the first time with the London passenger traffic problem. Inquiries into shipping matters are also in hand, but the largest of such problems is obviously the railway one. We have certain old standing arrangements with other companies which by the efflux

of time require to be reconsidered, and the opportunity has been taken to see in what respects they can be simplified and extended comprehensively with the greatest possible measure of economy. The problem is far from simple, but our discussions have proceeded with the utmost harmony and goodwill on each side, and I am hopeful that good results will ensue. The Royal Commission on Transport gave their support to steps of this nature, and the four companies have informed the Minister of Transport in their comments on this Report that:—

"They are satisfied that considerable economies can be realised as a result of pooling arrangements with general benefit to the interests of the trading public, and it is in comprehensive arrangements of this character that they see the best hope for the future of securing diminished expenses and increased efficiency on the part of the railways."

I cannot, at this stage, deal with the question in greater detail, except to assure you that I am hopeful of advantageous results from our inquiries.

On an allied matter I may add that we have already been enabled, in conjunction with the Southern Railway, to effect economies for the two companies in the region of £60,000 per annum in connection with a joint line, and discussions with other companies from the same angle are in hand.

You will have seen in the Press that as from May next the English terminal of the Dunkirk service is to be Folkestone instead of Tilbury. The traffic on this Tilbury-Dunkirk service had grown perhaps more rapidly than any newly instituted cross-Channel service, and was fast becoming consolidated as a recognised and valuable public facility, which, in the not very distant future, would have had satisfactory financial results. Two recent events over which we had no control have, however, completely altered the prospects. In the first place, going off the gold standard put at a disadvantage in comparative fares any cross-Channel route which had the minimum of land service on this side and, in the second place, the Government's action in relation to the balance of trade and the imposition of tariffs, strikes not only at the total volume of cross-Channel traffic, but also at the particular class of traffic for which this route was adapted and developed. The effect upon the traffic was such that the prospect of making a really remunerative service was indefinitely postponed, and we felt unable to give such facilities to the French company owning the service as would enable them to continue it upon its existing basis. We hope, however, to continue to collaborate in the successful working of the Dunkirk route by giving special facilities for cross-London transfer of passengers and merchandise between our own system and the Southern Railway.

THE FUTURE.

In conclusion, you will not expect me to be a prophet on the development of trade in this country. This is not the place or time for me to dilate upon the prospects of sterling and its effects upon our manufacturing industries; nor upon the shifting of many of the channels of trade by the influence of tariffs. You will, I hope, have realised, though many people forget it very quickly, that the railway fortunes cannot move in a direction opposite to that of the national production and trade. With some recovery in the heavy and basic industries upon which the great position of this country was established, we have confident hope of increasing in our gross and net revenue, and our constant endeavour is to maintain, as we have done, our vast machine in a condition to meet the requirements of commerce and trade.

The report and accounts were adopted.

SOUTHERN RAILWAY COMPANY.

REDUCTION IN REVENUE AND EXPENDITURE.

The ninth annual general meeting of the Southern Railway Company was held, on the 29th ultimo, in London.

Mr G. W. E. Loder (deputy chairman) presided in the absence through illness of Brigadier-General the Hon. Everard Baring, C.V.O., C.B.E. (the chairman of the company), and read the speech prepared by him, in which he said that the outstanding feature of the accounts was the very large decrease in the gross revenue of the company, amounting to £1,516,000, passenger traffic showing a decline of £900,000. On the other side of the accounts he was able to report a much more satisfactory state of affairs, inasmuch as their expenditure showed a reduction of no less than £940,000, of which £325,000 was attributable to the deductions made from the wages and salaries of the whole of the staff following the National Wages Board Award of March last. Apart from that, nearly every item on the expenditure showed a decrease and clearly demonstrated that the outlay incurred during the last seven or eight years with the object of bringing about the standardisation of plant and equipment was becoming increasingly effective; great credit was due to their officers, who had spared no effort to bring about those economies.

The sum available for dividends on the ordinary stocks was £1,197,000, a decrease of £669,000 as compared with the previous year. That admitted of a dividend at the rate of 4 per cent. for the year on the preferred ordinary stock.

CHEAP TICKETS.

Cheap tickets were issued to London every day from stations within a radius of about thirty miles. Beyond that and until the coast towns were reached the issue was generally confined to early closing days, Saturdays, and Sundays. If some limit was not observed, the cheap ticket zone would eventually cover the whole of the company's system, and, as there was a considerable amount of day return travel at ordinary fares between points where cheaper tickets were not issued daily, the company's revenue would suffer. In order to meet the varying demands of the public a large number of reductions had been made in fares, each of which was intended to cater for a particular class of travel.

He was constantly being asked whether they would not benefit if fares were still further reduced. The matter was constantly under review and its importance would be realised when he said that a reduction in the fare of 1d. per journey would on the present carryings involve them in a loss of over £1,300,000 per annum, and it would be necessary for them to carry more than 26,000,000 additional passengers in order to make good such a loss.

Dealing with works in hand, he said that the electrification of the main line to Brighton and Worthing was proceeding according to programme, and they expected to commence working to Reigate and Three Bridges in July and to Brighton and Worthing early next year.

With regard to the London Passenger Transport Bill, it was earnestly to be hoped that the Government would proceed with it. In the interests of the London travelling public it might be claimed that in its present amended form no better Bill had ever been before Parliament, and it would be very unfortunate if a Bill of such importance, and which in its main principles was now so satisfactory from the point of view of the co-ordination of London traffic, did not become law.

UNFAIR ROAD COMPETITION.

With regard to the unfair road competition from which they were suffering in regard to both passenger and goods services, the railway companies had provided and maintained out of the shareholders' money the whole of the permanent way, and they had also to bear the expense of signalling and, finally, to pay rates on the profits earned on the line. Practically the whole of the capital cost of the roadways had been borne by the public, with substantial contributions from the railway companies. The road transport industry were thus making use for their private profit of accommodation and facilities provided largely at the expense of the public. It could not be denied that those undertakings did not pay their fair share of the expenditure on the roads.

The proposals which the railway companies had urged upon the Government were that the whole cost of the maintenance of the roads and the construction of main roads in future, as also the cost of traffic control, should be charged against the Road Fund and that the users of the roads should contribute to the Fund in proportion to the weight and size of the vehicles employed. The railway companies contended and desired to urge in the strongest possible manner that the position should be equalised.

The report was adopted.

MANCHESTER SHIP CANAL COMPANY.

INDUSTRIAL SITES AND FACILITIES.

The annual meeting of shareholders was held, on the 29th ultimo, in the Milton Hall, Manchester.

Mr Alfred Watkin (chairman), in the course of his speech, said:—When this country, and indeed the whole civilised world, is labouring under an economic depression the like of which we have never known, I maintain that no apology is needed for the reduced dividends upon your preference and ordinary shares, which are to-day offered for your acceptance.

The net receipts of the whole undertaking, Ship Canal and Bridge-water departments and miscellaneous receipts, amounted to £758,117, as compared with £810,313 in the previous year. Deducting therefrom chief rents, rent of grain elevators, rent of No. 9 dock, and transit sheds and warehouses, there remains an amount of £643,244, as compared with £701,676 in the previous year—a decrease of £58,432. Adding the balance from last year's accounts and deducting the interest on capital raised by loans and debenture stocks, and income tax provision, as appears in account No. 9, leaves an available balance for dividends and reserves of £216,459.

As will be seen from the report, it has been thought wise to strengthen the reserves in view of the uncertain outlook, and £30,000 has been appropriated to reserve for contingencies and repairs, leaving a balance of £186,459 for disposal.

The directors recommend the declaration of the following dividends:— $\frac{3}{4}$ per cent. on the Manchester Ship Canal Corporation preference stock, 2 per cent. on the preference shares, and 1 per cent. on the ordinary shares, absorbing a total of £154,655 and carrying forward a balance to the next year's accounts of £31,804.

The construction of the new oil dock was commenced early last year, and good progress has been made. In view of the present state of trade, we have since modified the scheme, and thereby reduced the immediate expenditure from £240,000 to £200,000.

The other constructional work mentioned last year was the provision of a wharf and lay-bye at Irlam in connection with the extension of the iron and steel works of the Lancashire Steel Corporation at that place. In both cases we have obtained financial assistance in respect of these works from Government grants.

In connection with these schemes, it will be necessary to ask your sanction for some additional borrowing powers. It will be convenient, therefore, if I were now to refer to the notice which has been given of the extraordinary general meeting, following this meeting, to authorise the raising on mortgage of further capital, not exceeding in the aggregate the sum of £350,000, at such times as the directors shall think fit.

It is necessary for us to have this power, because we have a debit balance of £81,500 on capital account, and the estimate of further expenditure, chiefly to complete the works already mentioned, is £205,914, making a total of £287,414.

Your directors are to-day asking for this authority, but the power will not be exercised until absolutely necessary; in fact, I think there is every probability that we shall not require any additional money before the end of the current year.

Last year I ventured to say that a reduction of 15 per cent. in the cost of production was necessary, to enable our basic industries to compete in the world's markets. Since then the suspension of the gold standard has greatly altered the basis of costs, and I think it can be said that we are now in a better position to take advantage of an improvement in world trade when it comes. I am afraid, however, we must look forward to a period of regulation and control of trade until the world realises the advantage of restoring the greatest possible freedom of exchange. To those who dislike any alteration in our fiscal system I would say—let us hope that our action will bring home to other nations that it is in their interests, as well as ours, to restore as quickly as possible the maximum of freedom in international trade.

The steps already taken and foreshadowed by the Government with a view to restricting, in the national interest, the importation of goods into the United Kingdom, must tend for a time to hamper the trade of our port. On the other hand, some expansion of British industry, manufacturing for export, as well as for the home market, may be expected. To those who contemplate setting up manufacturing plants in Great Britain, the Ship Canal zone offers unrivalled attractions:—A key position in the home market, and direct contact with overseas markets and sources of supply of raw materials. I can assert with confidence that no one contemplating the establishment of any important industry in this country can afford to ignore the advantages offered by the Ship Canal. Your company has extensive areas of land to sell or lease on attractive terms to industrial undertakings.

In conclusion, I can only hope that when we meet you a year hence the efforts which have been made, and are being made, to bring about better conditions of world trade will have borne fruit. In that event, I am confident that the expenditure which has been incurred in recent years in maintaining and developing the facilities of the port will be found to be fully justified.

NATIONAL MUTUAL LIFE ASSURANCE SOCIETY

RESULTS OF A DIFFICULT YEAR.

BOARD'S INVESTMENT POLICY.

The one hundred and second annual general meeting of the National Mutual Life Assurance Society was held, on the 2nd instant, at the Society's House, 39, King Street, Cheapside, London.

Mr J. M. Keynes, C.B. (chairman of the society), in moving the adoption of the report and accounts, said:—The new assurance business which we obtained in 1931, following upon a record year, showed a modest falling off at £705,979 *net*. Our expense ratio at 13.7 per cent., compared with 14.7 per cent. in the previous year, showed a very satisfactory reduction, though this was caused to some extent by the smaller amount of new business transacted. The gross rate of interest earned was £5 11s. 1d. per cent., a rate satisfactory in itself but not quite so good as in the previous year, owing partly to a transfer of resources from ordinary shares to gilt-edged securities. As a consequence of our unusually small holdings of foreign bonds the loss of interest due to defaults was negligible, amounting to about 1 per cent. of our total interest receipts.

VALUATION OF INVESTMENTS.

Owing to our decision not to make an actuarial valuation on this occasion, the usual valuation of our Stock Exchange securities at their market values on December 31, 1931, does not appear in the report which you have received. But the decision to postpone the actuarial valuation is no reason for altering our practice, long-established in our case though there are many offices which do not follow it, of stating annually the market valuation of our assets. During the year 1931 our depreciation and realised loss combined were equal to 15.8 per cent. of the mean fund invested in Stock Exchange securities or 11.8 per cent. of the mean total assets. These figures leave out of account both the carry-forward at the end of 1930 and the trading profit of 1931. The principal changes in the distribution of our securities between different classes of investments have been a reduction of our ordinary shares from 16.2 per cent. to 14.3 per cent. of the total assets, and an increase of British Government securities from 15.8 per cent. to 18.8 per cent. Our holdings of foreign government and municipal securities are, as I have said, very small at 4.3 per cent. Our investments in the United States have never been large and were 5.1 per cent. at the beginning of the year and 5.3 per cent. at the end of it.

The past year has been, of course, one of extraordinary anxiety for all those concerned with the safe investment of large funds. The actual degree of depreciation suffered by every class of security has been unprecedented. Moreover, our difficulties have been considerably increased by the "badness" of markets, in the sense that it has often proved impracticable to carry out desired changes of investments, whether by buying or selling, at the ostensible market price or sometimes even at any reasonable figure. It has been, in particular, a testing time for a society such as ours which has been a pioneer of methods of investment approaching more closely to those of an investment trust than is the case with most life offices; which holds an unusually large proportion of its funds in market securities subject to a fluctuating valuation, as compared with mortgages, for example, the book value of which is kept unchanged irrespective of market conditions; which has always taken pride in stating the exact market value of its investments and which, therefore, has had no concealed investment reserve behind which the board could take refuge in bad times.

RESULTS OF THE BOARD'S INVESTMENT POLICY.

How have we emerged from this test? In comparison with leading investment trusts, we have certainly done extremely well, with a much lower percentage of depreciation than the typical trust company. A comparison with the average of the life offices can, unfortunately, never be made, since too few of them state exact figures of the market value of their investments at the end of each year. But I should suppose that we have done slightly worse than the average, since one would expect the market valuation of investments distributed as ours are to be somewhat lower, at the bottom—or at what one hopes may be near the bottom—of the greatest industrial slump in history, than that of a holding in which ordinary shares are a much smaller proportion and mortgages and properties a much larger proportion of the whole. Nor need this disturb us. For if the slump continues, no kind of asset, however insensitive its nominal valuation may be over a short period, will escape calamity in the end; while if recovery comes, the former relative valuations will be restored. Even to-day, one would wonder what the consequences would be if all properties and mortgages had to be valued on the basis of an actual "bid" price on the analogy of Stock Exchange securities. Moreover, it may be con-

sidered a point in favour of our policy under existing conditions that we should be holding a fair proportion of ordinary shares which represent "real" values, reduced, though it is, from the figure of two years ago. At a moment of extreme deflation, such as the present, when commodity prices are at so low a level that a substantial recovery in them, sooner or later, is the only alternative to a wide-spread default of obligations expressed in terms of money, our holding of ordinary shares represents, for the policy-holder who has committed his savings to our care, a stake in the future recovery of things—failing which all investments alike will lose their basis of security—which should prove valuable when the recovery comes. Meanwhile, it is remarkable how comparatively little our holding of ordinary shares has affected the final results even in present conditions. Our aggregate depreciation on Stock Exchange securities amounted, as I have said, to 15.8 per cent., whilst the depreciation on our fixed interest securities amounted to 13.5 per cent., so that, if we had held no ordinary shares at all, the amount of our depreciation would have been less by little more than 2 per cent.

As a more absolute test it is interesting to compare the results with those shown by the leading index numbers of security prices. Taking the Actuaries' Index as the most comprehensive and modern index available, we may make the following comparison:—

	Actuaries' Index. National Mutual.	
	per cent.	per cent.
Fixed interest securities ...	12	13.5
Ordinary shares ...	23.3	24.9

This comparison, however, does less than justice to our position since the actuaries' price indexes do not purport to cover the whole field of investments in which the funds of typical British institutions have been placed. In particular, they include no foreign bonds, the losses on which last year were particularly severe; so that we get no credit for our small holdings of these bonds and our avoidance of loss in respect of them.

Nor in regard to ordinary shares is the comparison adequate, since the Actuaries' Index, being limited to concerns operating at least partially in this country, takes no account of the much heavier depreciation suffered by shares of an international character. Lastly, they include no American securities, and therefore fail to reflect the catastrophic fall in their values.

ECONOMIC SITUATION.

I have sometimes ventured at these meetings on some general remarks on the economic situation. This year I find myself moving uneasily between a cautious optimism when I consider the position of this country and a very helpless pessimism when I look abroad. Great Britain to-day is decidedly the most prosperous country in the world, and here the trend seems to me to be slightly in the right direction. But this is not saying much. It is a relief to see the United States at last taking measures to quieten their financial panic. But it is a long step from that to industrial prosperity. As I have said elsewhere, the outstanding difference between the problem of to-day and the problem of a year ago arises out of a financial crisis having been superimposed meanwhile upon the industrial crisis. To-day, it is, of course, an indispensable preliminary that we should relieve the financial crisis. Unless the really desperate situation in Central Europe upsets things, it is legitimate to hope that the first steps in this direction have now been taken. But to me it is unthinkable that we can step straight from the relief of the financial crisis to the relief of the industrial crisis without a cheap money phase intervening.

RELIEF OF INTERNATIONAL CREDIT ESSENTIAL.

As soon as we have found our feet again and feel ourselves masters of our own position and with our power of international initiative regained, I hope that we shall move with courage to the relief of international credit, lending boldly and ourselves expanding boldly. For that will be by far the safest course and will offer the best chance of salving the immense sums which we have embarked in foreign investment in former years. The pre-war gold standard worked, because it was in truth a sterling standard. When gold went off sterling last September, it doomed itself as a currency, at least for the time being. We have been forced, it is true, to step down for the moment from the position of international leadership in finance. But our place has not been taken by anyone else, and I feel confident that, unless we lack the pluck, we shall soon be strong enough to resume our old position with the heightened prestige of holding it in virtue of having surmounted present difficulties and not merely as an inheritance of past accomplishment. The report and accounts were unanimously adopted.

CLERICAL, MEDICAL AND GENERAL LIFE ASSURANCE SOCIETY.

A NEW FORM OF POLICY.

The 108th annual general meeting of the Clerical, Medical and General Life Assurance Society was held on the 3rd instant, at 15 St. James's Square, London, S.W.

Mr Francis E. J. Smith (the Chairman) said that the new life assurances amounted to £1,824,594, of which £1,801,132 had been retained at their own risk, compared with £1,913,711 in the preceding year. The premium income had again proved elastic, and the expansion of £38,718 now reported was well above the average. After meeting special bonus payments of £420,912, abnormally high surrenders, and all other outgoings for the year, the life assurance fund had increased by nearly £46,000.

With regard to the assets, the directors were custodians of some £11,000,000. Of that sum, over £5,000,000 was represented by mortgages and loans of various types. They had investigated every mortgage which had been granted on property within the United Kingdom, and in every case interest was being punctually paid, and the capital was fully secured. The mortgages on property outside the United Kingdom stood in their books at £577,000. They had formed a reserve which amounted to £12,000 and, subject to that reservation, they were satisfied that those mortgages were well secured, and should be properly retained at their face values. A further £750,000 was invested in the General Reversionary and Investment Company, and the directors were satisfied that the market value of those shares was at least £100,000 more than the figure in the balance sheet. Another £1,000,000 was invested in reversions, ground rents and purchased properties, freehold and leasehold, and the directors regarded their book values as conservative.

The remaining assets consisted mainly of Stock Exchange securities. A trial valuation of all the Stock Exchange securities, including those held by the Society's Investment Trust Company, made as at December 31, 1931, had disclosed a depreciation of about £380,000. Of that sum the greater part should, in due course, be recoverable, seeing that the bulk of those securities was redeemable at par within the next twenty years. The net depreciation was less than 3 per cent. of their total funds. A fresh valuation, based upon the prices quoted on February 24th, had disclosed a recovery of about £28,000.

MERITS OF LIFE ASSURANCE.

On more than one occasion he had drawn attention to the merits of life assurance contracts, and he ventured to emphasise the facts once again. In those difficult times of unstable capital values and depleted incomes, a life policy stood alone as a form of investment which, while immune from depreciation, actually reduced the burden of income tax. Further, a life policy, by creating an immediate asset in the event of death, afforded the most effective means of restoring depreciated estates, and of making good the losses which would otherwise fall to be borne by dependents.

There was no doubt that a demand existed for a form of policy which provided large initial cover at a low cost and, with that fact in view, the directors invited attention to a new form of policy which would, they believed, appeal especially to young married men. It enabled family protection to be secured upon a cheap and permanent basis, with premium payments kept low at first, and admitting of revision as circumstances allowed. The new policy offered a particular feature to which he wished to refer. It provided a large amount of cover which might be continued up to the age of 50 or, by a valuable option, might be converted at any age before 45, irrespective of health, to any form of whole-life or endowment assurance. In that way, extensive assurance protection could be staked out and developed later as needs dictated or means permitted. Leaflets giving full details of the scheme were available, and would be sent to anyone interested.

The report and accounts were unanimously adopted.

GENERAL MANAGER'S VIEWS.

Mr A. D. Besant (general manager), responding to a vote of thanks, said that he would like to add a few comments as to the effects of depreciation upon their bonus outlook. He could best express his own view on that all-important matter as being one of cautious optimism. A year ago they had declared the finest bonus in their history, and they had then expressed confidence in their ability to maintain that scale in future. Since then, much had happened but, apart from depreciation, all the normal bonus-earning powers of the society remained unimpaired. They still possessed their 2½ per cent. valuation, and their large additional reserves. He recognised that the financial conditions of the day affected all life assurance companies adversely, but he still believed that those who maintained their faith in the society's bonus-earning powers would, in the long run, have little cause for disappointment.

THE SCOTTISH PROVIDENT INSTITUTION MUTUAL LIFE ASSURANCE.

INCREASE IN TOTAL FUNDS.

THE EARL OF HOME'S REVIEW.

The ninety-fourth annual general meeting of the Scottish Provident Institution was held in Edinburgh on Wednesday, March 2, 1932, the Earl of Home, K.T., LL.D., in the chair.

The Chairman, in moving the adoption of the report, said: So far as the new business is concerned, the past year may be viewed as an average one, the net business completed being £2,619,786, in respect of which the premiums (single and annual), amounted to £110,175.

There was an increase in the annuity business transacted during the year, the consideration monies received being £373,455, while £1,116 was received in annual premiums.

The claims by death amounted to £946,275, the ratio of the actual to the "expected" claims being 68 per cent.

INVESTMENTS.

I would now turn your attention to the balance sheet in your hands, as it shows some important changes on both sides as compared with the balance sheets of previous years. The total funds as at December 31, 1931, amounted to £23,175,598, showing an increase during the year of £680,134, and you will see from the report that of this sum £500,000 has been transferred to the investment reserve fund, increasing it to one million sterling. The political and economic conditions throughout the world have brought about a serious decline in the value of all classes of investments, and the Stock Exchange securities included in the investments of the institution have inevitably been subjected to depreciation. In his speech last year the chairman stated that the increase in the reserve fund from £300,000 to £500,000 had been made, not because it was demanded by the then position, but as a provision against the future into which the vision of the most expert financial authorities could not penetrate to any far extent. The board at that time were apprehensive that markets had not touched bottom; but the depression which was manifest throughout 1931 has been almost unparalleled in its extent and severity. No society having to do with the investment of funds has escaped from its effects. It is not the practice of the directors to write down the values of individual investments during a quinquennium, and it is hoped that at the date of the next valuation (December 31, 1933), quotations may represent more accurately than they do at the present time the intrinsic merits of securities. But meanwhile it has been thought advisable to increase the investment reserve fund as I have stated, and after taking this into account the difference between the market values of our Stock Exchange securities and the ledger values as at December 31st shows a depreciation of under 11 per cent.

RATE OF INTEREST.

The rate of interest realised on the total funds was £5 4s. 2d. per cent., or £4 6s. 9d. per cent. after deduction of income tax. This compares with the gross and net yields of £5 11s. 9d. per cent. and £4 15s. per cent. respectively for 1930. A decline in the yield was only to be expected under the conditions which existed throughout the year.

To the great regret of the directors, the officials and the staff, Mr C. W. Thomson resigned during the year from the position of joint secretary. Mr Thomson served the institution with loyalty and devotion for 45 years. His abilities and unfailing courtesy won for him the respect and affection of us all, and he has left the service carrying with him the cordial good wishes of everyone with whom he was associated. The board appointed Mr C. S. Willis as joint secretary. Mr Willis has already proved himself, having been assistant secretary at the head office and latterly joint secretary in our London office.

The chairman last year referred to a scheme recently adopted, under which we issue policies in respect of which the premiums may be paid by monthly instalments subject to a banker's order. This has proved to be a great convenience to many, and in times like the present it will probably be adopted to an increasing extent.

EVIL OF COMMISSION COMPETITION.

From time to time reference has been made by our chairmen to the subject of commission. The manner of its payment has for long been a feature in the domain of life assurance which we regard as regrettable. It would appear as if in some quarters commission had ceased to be regarded as a remuneration for services rendered by an agent and had come to be looked upon as a weapon to be used in the competition for new business. As showing what I mean, I would take the case of a proposer whom an agent has interested

in the office for which he acts. He may even have got the length of having a completed proposal form in his hands; but at the eleventh hour a rival office gets into touch with the proposer, and, by offering him an agency appointment carrying commission on the policy about to be effected, secures the business and deprives the agent who had initiated the transaction of the fruits of his labour. Instances such as this are, I regret to say, of everyday occurrence, and not only so, but the undesirability of this form of competition is accentuated in some cases by the high commission terms offered. With the object of combating these evils, we, in company with certain other offices, entered into an agreement which came into force about a year ago. So far as we are concerned, we have found this agreement to be a strengthening factor in our policy, although we have, possibly, lost a certain amount of business from adherence to its principles. Competition on the lines I have

THE PRUDENTIAL ASSURANCE COMPANY LIMITED.

SIR EDGAR HORNE'S REVIEW.

The annual general meeting of The Prudential Assurance Company Limited was held on Thursday, March 3, 1932, at Staple Inn Hall, Holborn, London, W.C.1. Sir Edgar Horne, Bart., the Chairman of the Company, presided, and in moving the adoption of the report, said:—

I am glad to be able to announce continued progress in each of the three branches of the company's business.

The following statement deals with the general branch.

Premiums Received.	1930.	1931.	Increase or Decrease, 1931 over 1930.
	£	£	£
Fire	841,869	836,167	— 5,702
Sickness and accident	141,311	148,389	+ 7,078
Employers' liability	97,815	92,796	— 5,019
Motor	301,336	381,391	+ 80,055
Miscellaneous	302,136	315,020	+ 12,884
Marine—Old account	4,600	1,309	— 3,291
New account	117,225	109,062	— 8,163
Sinking fund	153,897	186,631	+ 32,734
All classes	1,960,189	2,070,765	+ 110,576

Loss Ratios.	1930.	1931.	Increase or Decrease, 1931 over 1930.
	%	%	%
Fire	52.6	50.7	— 1.9
Sickness and accident	34.2	36.3	+ 2.1
Employers' liability	44.8	52.1	+ 7.3
Motor	35.5	47.2	+ 11.7
Miscellaneous	63.9	69.9	+ 6.0

Note.—Motor and miscellaneous sections have now been separated in accordance with Board of Trade requirements.

With regard to the loss ratios, it is satisfactory to note the improvement in the fire section. This is obviously the most important, since the premium income for this section is by far the greatest, being more than double that of any other.

The ordinary branch statement is as follows:—

Description.	1930.	1931.	Increase or Decrease, 1931 over 1930.
	£	£	£
New sums assured	18,814,714	20,269,138	+ 1,454,424
Total prem. received, including single prem.	11,561,834	12,170,289	+ 608,455
Total prem. received, excluding single prem.	11,137,106	11,809,445	+ 672,339
Sums assured and accrued bonuses in force	195,809,243	212,885,725	+ 17,076,482
Consideration for annuities granted	370,352	675,186	+ 304,834
Death claims	2,304,947	2,422,793	+ 117,846
Endowments matured	6,527,137	5,801,027	— 726,110
Surrenders	1,602,212	1,684,911	+ 82,699

The most striking feature is the increase of nearly one and a half million pounds in the new sums assured as compared with 1930.

The following statement contains figures relating to the industrial branch:—

referred to is expressly prohibited under the laws of some of our Dominions, and also, I think, in America, and I cannot but feel that it would tend towards the general good if legislation in the same direction was adopted in this country.

I think I have dealt with the main points in our report for a year which has witnessed the abandonment of the gold standard, and, as I have said, abnormal depression in the fields of finance and of industry. In circumstances such as these the position in which the banks and insurance offices of this country stand to-day gives cause for satisfaction and confidence. I can well understand the man who reviewed his investments at the end of the year turning to life policies and wishing they were more in number and larger in amount.

The motion for the adoption of the report was seconded by Mr William Maxwell and carried unanimously.

Description	1930.	1931.	Increase or Decrease, 1931 over 1930.
No. of new policies issued	2,525,089	2,567,815	+ 42,726
Sum assured under new policies	£66,104,404	£67,853,255	+ £1,748,851
Premiums received	£18,121,855	£18,804,288	+ £682,433
Death claims paid	£5,046,997	£5,613,916	+ £566,919
Maturity claims paid	£3,681,818	£2,647,328	— £1,034,490
Surrenders paid	£2,356,710	£2,925,916	+ £569,206
Expense ratio	24.69%	24.45%	— .24%
No. of policies which became free policies	879,423	649,193	— 230,230
Total No. of policies in force	26,067,964	26,525,369	+ 457,405
Total sum assured and bonus	£488,217,702	£499,737,013	+ £11,519,311

Notwithstanding the industrial depression, it will be seen that there is no falling off in the demand for assurance by weekly and monthly premiums. The increase in the amount of new business effected during 1931 shows the appreciation of the benefits given by a Prudential policy with its annual bonus granted under the profit-sharing scheme. The total sum assured by the new policies issued during the year was nearly £68,000,000.

In May, 1930, we inaugurated the system of automatic free policies. At the same time we addressed a notice to our industrial branch policyholders intimating to any who since 1924 might have had free policies but who for any reason had not received them that the appropriate benefits would automatically attach to their policies. To give effect to this arrangement an extensive investigation was undertaken. This investigation is not yet completed, but has already resulted in a large number of policies being endorsed with the amount of the free policy to which they are entitled.

This system of automatic free policies introduced by us in May 1930, of course places the company under a legal liability in respect of these benefits, and they will pay the appropriate sum due on a claim arising whether the amount of the free policy has been endorsed on the policy or not.

After making provision for all liabilities on the same stringent bases as that previously assumed, there is an increase in the resulting surplus in each branch. The total amounts to £10,368,182, an increase of £82,963 over that of 1930. I wish to emphasise particularly that the surplus is not due to any weakening of the bases on which our assurance and annuity contracts are valued.

In the ordinary branch in respect of participating policies in force on December 31, 1931, a reversionary bonus of £1 16s. per £100 sum assured has been declared for whole life policies, and in addition an interim bonus of 16s. per £100 sum assured in respect of claims by death during 1932, making £2 12s. in all, in respect of such claims, in addition to bonuses declared in previous years.

For endowment assurances, a reversionary bonus of £1 10s. per £100 sum assured has been declared, and in addition an interim bonus of 16s. per £100 sum assured, in respect of claims by death or maturity of endowment during 1932, making £2 6s. in all in respect of such claims, in addition to bonuses declared in previous years.

The amount of surplus in the ordinary branch for 1931 exceeded that for 1930 and from the sum available, £950,000, which is more than the equivalent in value of the reduction in the reversionary bonus, has been set aside as an ordinary branch contingency fund. If and when, in the opinion of the directors, the economic situation has sufficiently improved, this sum will be dealt with in accordance

THE SCOTTISH WIDOWS' FUND AND LIFE ASSURANCE SOCIETY.

SUCCESSFUL RESULTS—ANOTHER NEW BUSINESS RECORD.

MR T. J. CARLYLE GIFFORD ON VALUE OF LIFE ASSURANCE.

The 118th stated annual meeting of the Scottish Widows' Fund and Life Assurance Society was held in the Society's Office, Edinburgh, on Tuesday, March 1, 1932, T. J. Carlyle Gifford, W.S. (chairman of the ordinary court of directors), presiding.

In moving the adoption of the report and accounts, the Chairman, after referring to the changes which have taken place in the directorate, said: I need not remind you that the year under review has been one of world-wide depression, nor need I attempt to recapitulate the political and financial happenings which have marked its course. It is sufficient to say that the continued heavy fall in the level of gold prices has long passed the point at which its effect was beneficial to those to whom payments were due, for the ability of normally solvent debtors to meet their obligations has been so undermined that creditors and debtors alike are involved in the growing disorganisation of the world. The outstanding fact of the past twelve months has been the suspension of gold payments in Great Britain. Whatever its other effects, one result has been to impart a certain stability to the sterling price level which has moved but little since October 1st last, while gold prices have continued to fall.

How has the society fared in such a year? Depreciation has occurred in the value of our investments, though when I deal later with the value of our assets I think you will find the position thoroughly satisfactory. Looking broadly at the general position of life assurance I think it may fairly be said that proof has been given of the worth of a life assurance policy in bad times.

RECORD NEW BUSINESS.

From the public we have evidence that they have not been slow to appreciate the proof which bad times bring that it is hard to find a better outlet for savings than in life assurance. A year ago the Scottish Widows' Fund was able to report a record net new business for the year. Again to-day we can say that the net new business for 1931 has touched a new high-water mark. New assurances amounted to the gross sum of £3,794,000, of which £262,000 was reassured with other offices, leaving net new assurances of £3,532,000. The increase over the figures for 1930 is £74,000 gross and £40,000 net.

INCREASED CLAIMS.

Looking at the revenue account, claims both by death and by the maturity of endowment assurances show an increase over 1930.

The stress of the times in which we are living is shown by the surrenders, which are substantially greater in amount than in 1930. One effect of this is that despite our excellent new business figures our premium income for the year 1931 shows practically no change from the preceding year.

Gross revenue from interest and dividends shows a smaller increase than usual, partly on account of the larger sums paid out to policyholders and their representatives and partly because of a slightly less favourable experience in collection of this revenue. Income tax too has been a heavier burden, while expenses of management and commission show a moderate increase due largely to the growth of new business.

On the capital side of the accounts our assurance and annuity funds have risen during the year from £29,019,000 to £29,252,000. That is the chief item on the liabilities side of the balance sheet. Last year there was another item on the same side which has now disappeared, viz. —Reserve fund £350,000. In view of the general depreciation in investment values during 1931 we have thought it proper to use that sum to write down the book value of our investments, and we have also transferred £150,000 from revenue account for the same purpose.

INVESTMENTS.

On the assets side appear our investments and you will have observed the statement on the balance sheet that the Stock Exchange securities stand at or under their market value at December 31, 1931, the date of the balance sheet. That market value has been ascertained on our usual stringent basis, taking for the securities quoted on the London Stock Exchange—which form the great bulk of our Stock Exchange investments—not the "middle" but the "bid" or "selling" price, and for other securities quotations obtained from the society's brokers. Thus it will be seen that the society has been able to meet the whole of the depreciation of values during 1931. It was stated on the occasion of our last quinquennial valuation that the market values of our investments showed a considerable surplus over the balance figures and that that surplus supplied a comfortable buffer against the possible depreciation of prices in the future. We have seen a remarkable depreciation in values since then, and the preservation of this margin in the past has

with the Articles of Association, and the reduction in bonus suffered this year will be made good.

In the industrial branch, in respect of participating policies issued on or after January 1, 1923, and on which premiums were being paid on December 31, 1931, it has been decided that a reversionary bonus at the rate of £1 2s. per £100 sum assured, shall be added if and when at least one year's premiums have been paid; also in respect of such policies on which a claim by death arises during 1932, and which are or become entitled to the reversionary bonus, an additional interim bonus of 12s. per £100 sum assured, provided all premiums thereon have been paid to the date of death. Bonus additions already declared are, of course, unaffected and will be payable. On participating policies issued before January 1, 1923, the bonuses, declared on claims by death or maturity of endowment, range from 14½ per cent. to 70 per cent., according to duration. The bonuses in the latter category are guaranteed for a period of 16 years from to-day, except in the Irish Free State where the guarantee is for one year only. The total amount allocated under our profit-sharing scheme for bonuses to our industrial branch policyholders since its inception is £25,869,929.

From the surplus of the industrial branch for 1931, the sum of £1,750,000 has been set aside as an industrial branch contingency fund which will be available for distribution as surplus in accordance with the Articles of Association if and when, in the opinion of your board, this is justifiable.

The industrial branch expense ratio still continues to show a very satisfactory decrease, having fallen by .24 of 1 per cent. to 24.45 during 1931.

So far as Stock Exchange securities are concerned, every group has suffered heavy depreciation in market value during the past twelve months. The British Government group alone in which our holding is £67,646,414, fell by about 9 per cent. in market value; and the fall was even greater in other classes.

There is no need for me to emphasise the unreality, in the case of a company such as ours, of a valuation of Stock Exchange securities based on market prices on a given day. Not only are prices, under present abnormal conditions, in many instances obviously less than real values, but such a method of valuation ignores the fact that our investments are held against long-term liabilities, and that in the normal course of our business realisation is rendered unnecessary, so long as current income continues to exceed current outgo.

It may interest you to know that, even after eliminating all cases where we think there is any likelihood of default, the margin between the market value as at December 31, 1931, and the ultimate redemption value of our redeemable Stock Exchange securities, exceeds £13,000,000; and as we never take credit in arriving at our annual surplus for any capital profit arising from the maturity of an investment standing at a discount in our books, it follows that the sum I have mentioned constitutes a large potential reserve.

It has however been decreed by custom, and to some extent by legislation, that in preparing our balance sheet we must use market quotations as the measure of value, however imperfect an instrument it may be; and it gives me both pleasure and pride to report that, even after valuing on this severe basis, the resulting depreciation in our total assets is more than covered by our investments reserve and contingency funds. Moreover, since the date on which our balance sheet was made up, there has been a substantial rise in market values, and our position has been further improved thereby.

So far as our new investments during the year are concerned, foreseeing the possibility of a further fall in values, we have placed large sums in the highest classes of short-term securities, our policy in this respect being reflected in the increase of £8,689,888 shown in our holding of British Government securities, which increase is largely due to purchases of Treasury Bonds and War Loan. We have also kept and are continuing to keep large sums in liquid form, generally on short-term loans to the money market. When we are satisfied that the outlook is definitely favourable, we shall be in a strong position for taking advantage of any opportunities for lucrative investments that may present themselves.

From a consideration of the statements relating to the transactions in each branch and to that dealing with the surplus, I think you will agree with me that our company is still steadily advancing and we have every reason to anticipate that this advance will continue. So far as the value of investments is concerned, I do not propose to prophesy. There is no doubt that in some countries the worst is yet to come, and 1932 will unquestionably prove another anxious year, although there are indications that confidence is slowly returning in this country. We, as a company at any rate, have the satisfaction of knowing that we have withstood successfully the disastrous events of 1931, not only reveals the inherent strength of our position, but enables us to face the future with confidence.

been fully justified and has proved a great source of strength to the society.

VALUE OF LIFE ASSURANCE.

It is a good custom by which the chairman at the annual meeting of an assurance society uses the occasion to reiterate the advantage which each and all of us gain from life assurance. Everyone admits the advantage, but, as I have already said, we are apt to be sadly lacking in initiative, apt to feel that just as we don't expect to die to-morrow, taking out a policy is a matter which won't take any harm if we let it lie over for another week or two. The events of the last two years have brought with them an urgency which is inadequately appreciated even by those who do not usually fail to put a proper value upon life assurance.

Grave inroads have been made by business losses, by depreciation of investments, and by taxation upon capital resources available upon death or retirement and so far as current income permits it is in many cases essential to replace what the financial and political policies of the time have swept away. By no other means than life assurance can a modest payment immediately remove the risk that death may unexpectedly make the ultimate restoration of the position impossible.

The society has prepared a special pamphlet on this subject entitled "The Economic Blizzard," which deals with five different ways in which capital and income have been adversely affected in recent years, and shows how the position can best and most quickly be improved. Members who have not yet given thought to the new situation which recent events may have created for them and their families will do well to write to the society for a copy of the pamphlet and to study it.

The directors' report and the accounts as audited were adopted unanimously.

MAPLE AND COMPANY, LIMITED.

GROWING HIRE-PURCHASE TRADE.

The forty-second annual general meeting of Maple and Company, Limited, was held, on the 29th ultimo, on the company's premises, Tottenham Court Road, London, W., Mr C. C. Regnart (the president) presiding.

The Chairman, in moving the adoption of the report and accounts, said that shareholders would realise they had passed through a year which had been quite unprecedented in the difficulties which had been met with on every hand. An examination of the company's position revealed that the decrease in turnover was responsible for the greater part of the decline in profits, and very little could be attributed to other causes. This was to some extent a matter of satisfaction. In many departments the volume of business dealt with was in excess of that of the year 1930. A reduction in turnover in those departments was entirely caused by the fact that their customers could not afford the higher class goods and contented themselves with the cheaper grades. In several instances, although the turnover was lower, the articles sold exceeded those of the previous year by a very considerable number.

The whole situation could be summed up in a few words—namely, that owing to reduced incomes and high taxation the spending power of the classes of people from which their customers were drawn had been sadly diminished, and, until that spending power had been restored, business would continue to be difficult.

The directors felt convinced that the need for the replacement of household goods and redecoration of the home must become very apparent during the next few years, and they confidently looked forward to better times when an optimistic spirit again prevailed. He wished to emphasise that there was no establishment in the world where the public could find such a vast selection of furniture exhibited, nor where the prices were so advantageous to the purchaser as at Maple's. They had a very considerable and growing hire-purchase trade. The advantages they offered were far more enticing to the public than could be obtained from other houses, particularly from those dealing exclusively in this class of trade.

During the last two years the overhead charges had been reduced by over 25 per cent.

The report and accounts were unanimously adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8, Bouverie Street, Fleet Street, London, E.C.4.

BANCA COMMERCIALE ITALIANA.

THE SALE OF INDUSTRIAL SHARES.

A DIFFICULT YEAR.

The thirty-seventh annual general meeting of the Banca Commerciale Italiana was held on February 28th in Milan.

Senator Conti, who presided, submitted the report for the year 1931, which stated that the outstanding event of the past year, as far as their institution was concerned, was the sale to the Societa Finanziaria Industriale Italiana of the whole of the industrial shares in the bank's possession or owned by the holding companies under their immediate control, for an aggregate amount of some 4,000 million lire, without any loss to them.

CREDIT FACILITIES.

The Societa Finanziaria Industriale Italiana paid towards the close of the year one-fourth of the sum accruing under this arrangement, out of funds which it had obtained by means of a special credit guaranteed by the Italian Treasury. The immediate purpose of this transaction was to place at the disposal of their institution a substantial volume of liquid means and of securities of a readily realisable type. It was, therefore, agreed that the said special credit would not have to be repaid by the Societa Finanziaria Industriale Italiana until the bank had themselves been paid off. They, on their part, had the option to demand payment in accordance with their cash requirements. In order not to disturb circulation, it was, furthermore, arranged that the Societa Finanziaria Industriale Italiana should be able to obtain the funds for their payments to the bank by means of special advances from the Istituto Mobiliare Italiano.

The capital of the Societa Finanziaria Industriale Italiana had been increased from 100,000,000 lire to 300,000,000 lire, this issue being underwritten by a number of Italian industrial undertakings which had taken it firm for a long period of years. Simultaneously the Consorzio Mobiliare Finanziario, which held a controlling interest in the capital of the bank, had now provided permanently for its own requirements with funds secured outside this institution.

After reviewing the course of events which over a number of years had led up to the important transaction referred to, the report stated that the capital requirements of industries would now be provided for by an institution eminently suited to cater for a variety of individual needs, at a minimum cost consistent with market conditions. The closer specialisation introduced into the provision of credit would enable the banks to pursue more liberally and efficiently their normal functions in accordance with the particular nature of the resources at their disposal. Their connection with their industrial clients would not thereby be lessened in any way. The latter would still need their assistance for financing current production, for campaign credits and other temporary accommodation, the self-liquidating nature of which would be assured by the normal course of business. The process of demobilisation in itself could not be carried out independently of the banks. They would provide the natural channel for placing from time to time, as occasion arose, such stocks as particularly appealed to the market, including ordinary shares as soon as there was once more a public interest in them. The Societa Finanziaria Industriale Italiana would be the natural intermediary for financial business to be submitted to the Istituto Mobiliare Italiano on behalf of the industrial group controlled by the Societa Finanziaria.

THE YEAR'S PROFITS.

The exceptional difficulties of the past year were reflected in the profits of the bank, which had fallen from 88,000,000 lire in 1930 to 62,000,000 lire in 1931. This shrinkage was partly due to the higher cost of their resources and partly to the smaller yield of financial investments. It was not compensated by a corresponding reduction of general expenses in spite of the economies achieved and of the cuts in salaries which the staff had accepted with exemplary discipline and appreciation of the situation. The smaller profits were partly the result also of the larger provision which had had to be made against bad debts, which had been written off completely. In this respect the last quarter of the past year and the first period of 1932 made an appreciably better showing, which should be a sign that the crisis had touched bottom. With the reform of the credit machinery and with the equipment with which it had now been provided by the Government, the country should be in a privileged position to reap the benefits of a revival. They were confident that the international conferences which were to take place in the course of the next few months would take heed of the inspiring call of the head of the Italian Government and would create those psychological and political conditions which were essential to any recovery.

Reference was made to the support which the bank had given to financial arrangements during the past year, including co-operation in the formation of the Societa "Italia" (Flotte Riunite Cosulich, Llo yd Sabauda, Navigazione Generale Italiana) with a capital of 720,000,000 lire. The concentration of the leading Italian shipping interests in the "Italia" and in the new "Lloyd Triestino" Com-

pany (which the former controlled through its holding of Cosulich shares) constituted one of the greatest achievements in the field of industrial rationalisation in Italy in the course of the last few years.

DIVIDEND.

The dividend recommended for the year was at the rate of 8 per cent., compared with 12 per cent. in the previous year, and 34,257,007 lire was being carried forward. It would have been possible to maintain the dividend at the previous level or at least to reduce it in smaller measure by utilising the substantial amount which was being carried forward, but shareholders would no doubt agree with the view of the directors that, as long as the horizon had not cleared, it was advisable to adhere to a strictly cautious policy even if it might appear excessive.

The balance sheet was passed unanimously, and, at an extraordinary general meeting, the proposals in respect to the absorption of the Banca Commerciale Triestina were unanimously approved.

SELFRIDGE AND COMPANY, LIMITED.

MR GORDON SELFRIDGE ON TARIFFS.

The twenty-fourth annual ordinary general meeting of Selfridge and Company, Limited, was held, on the 29th ultimo, at the company's store, Oxford Street, London, Mr H. Gordon Selfridge (chairman and managing director) presiding.

The Chairman, in moving the adoption of the report and accounts, said:—All over the world the same unhappy general conditions prevail, but we here in England are not so comparatively badly off as others. Economists have for years been telling us why things are as they are and the causes which had led up to this world depression. They have been explaining why there exists this appalling unemployment in every land, why there is too much of everything—corn, rubber, oil, copper, wood, and what not—why, even with many mills all over the world only partly employed, too much of nearly everything is being manufactured—why salaries and wages are being almost universally cut—why so many dividends are being reduced or passed. These things are being explained in words and terms which most people cannot grasp, but back of it all remains the fact that for four and a half years nearly all of Europe continued to destroy life and property at an appalling rate. This terrible condition prevailed until only fourteen years ago, which is a very short time in the life of a nation. Here in these islands we contributed a million lives and each and every day burned up and destroyed property to the extent of £5,000,000. The savings and accumulations of many years were wiped out. Europe made itself poor, and with that came to everyone a decreased buying strength, an inclination or a necessity towards strict economy, and a getting along without many things which had formerly been considered necessities. With this came a dislocation of industries and nearly every field of activity, together with the natural result of constantly lowering prices and less consumption, or consumption of less costly goods. And at the moment there is difficulty in covering any very happy change in the appearance of things in the countries other than our own. Here the creation of a tariff and the increased home demand for British-made goods should help pull us gradually out of part of our difficulties by keeping more of our money at home, by giving more men work, by restoring a certain amount of confidence, and, it is to be hoped, by causing something of a reduction in the income tax. All of these, and especially the tax reduction, would do much in restoring a better feeling. Incidentally, the income tax, which now affects incomes as low as £125 a year, is a most serious factor in psychologically reducing the buying strength of everyone. It helps to check weekly expenditures of every family.

The merchant or retail distributor instinctively objects to tariffs. He prefers to buy wherever he can buy at lowest rates, but the absurdly high tariffs which every other country has adopted make similar protection seem necessary here in Great Britain, and we therefore cast our vocal vote for that thing which, as merchants, we dislike, but as loyal citizens and well-wishers we believe to be the best for the country.

While showing that comparatively small decrease in turnover, they had served nearly 400,000 more customers; they had opened many thousands of new book accounts, had established new high records in numbers and amount in mail orders, in numbers of parcels delivered throughout Metropolitan London, etc. All of those records, while demonstrating a continual growth in the popularity of the business, went to prove the decrease of the customers' buying strength and the lower prices ruling in practically every class of merchandise. Their average stock for the year 1931 had been turned 9.2 times. On the other hand, their expenses account for the past year was up by a small fraction of 1 per cent., and that entire increase was occasioned by the pay-roll. Of the expenses of great distributing houses, over half was in salaries and wages paid. In their house, 52 per cent. of their expense was attributable

to those. During the year they had made no reductions in salaries or wages, nor had they required enforced holidays, nor had they made any dismissals—except for cause. They hoped to be able to maintain those conditions.

Their net profit was £400,269, and they declared a dividend of 8 per cent. on the ordinary shares.

In conclusion, he would add his hope and expectation that their business, their commercial ship of commerce, would sail into port a year hence after a better and more profitable voyage, carrying a richer cargo of success.

The report and accounts were unanimously adopted.

ENGLISH ELECTRIC COMPANY, LIMITED.

SOUND FINANCIAL POSITION.

Sir Holberry Mensforth, chairman, presided, on the 3rd instant, at the annual general meeting of the English Electric Company, Limited.

Referring to the balance sheet, the chairman said that the sundry creditors and estimated liabilities, at £447,158, were down by £116,319. The total of the liquid assets, £2,108,900, compared favourably with the sundry creditors, giving a margin of £1,661,742. The trading profit was £209,394, as compared with £2,857 last year, and that reflected the greatest credit on the management. The item of £31,186 for expenditure in connection with the removal and reinstallation of plant, &c., had been incurred in the best interests of the company, and was reflected in the improved results. The board had provided for depreciation a round sum of £50,000, which, in their opinion, was adequate.

The changes in organisation had placed the company in a strong position to meet whatever the uncertain prospects of trade might have in store.

Among contracts completed during the year were the electrification of the Madras suburban lines of the South Indian Railway, the supply to the London United Tramways of thirty-five trolley bus equipments inaugurating London's first trolley bus service, and the supply to an overseas tramway company of a sample double-deck car of the largest seating capacity ever built in this country. Current contracts included the supply and erection of heavy electric equipment for steel works in South Africa, and a 30,000-k.w. turbo-alternator set running at 3,000 revolutions per minute. As regards the latter, they had been the first to manufacture a machine of that type, and believed they were still ahead of other makers.

The order position had been, and still was, very difficult, but he felt they were continuing to receive their fair share of such business as was offering. He urged the shareholders to buy and recommend English Electric domestic apparatus. The Bradford works were equipped to manufacture economically railway and tramway electrical material, and this would enable the company to play its proper part in the electrification of British railways if and when this took place.

He concluded by drawing attention to the fact that the company's finances were sound, resources very liquid, and stocks and work in progress low, and with high manufacturing efficiency and low costs they ought to be able to weather the storm as well as most.

The report was unanimously adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

The total ordinary revenue for the week ended February 27, 1932, amounted to £20,930,500 against ordinary expenditure of £8,132,700. After allocating £620,000 to Sinking Fund and having allowed for a decrease in Exchequer Balances of £130,903, the operations for the week, as shown below, reduced the National Debt by £12,309,000 to £7,626,366,000:—

(000's omitted.)

Public Department Advances	£	2,250
Treasury Bills	—	8,528
Excess Interest of National Savings Certificates	—	700
National Savings Certificates	—	150
Issues to National Debt Commissioners ..	—	78
Post Office and Telegraph Money	—	600
Sundries	—	3
		— 12,309

A complete analysis of the National Debt at December 31, 1931, was printed in the *Economist* of January 9, 1932.

REVENUE.	Revised Estimate for the year 1931-32.	Total Receipts into the Exchequer.

a good deal to be desired. London has been a little more active in the market lately. Washed treble nuts are firm in the Fifeshire district, but weak in the Lothians, and doubles are about steady in each of these districts. The smaller sizes of nuts, and most qualities of round coal, are inclined to ease in price. Shipping prices are approximately as follows (f.o.b. district ports): LANARKSHIRE.—Ell best, 14s. 3d.; splint best, 16s.; splint second, 14s.; navigation, 15s.; navigation second, 14s. 6d.; Hartley, 15s. 6d.; steam, 13s. 13s. 3d.; trebles 12s. 6d.; doubles, 10s. 9d.; singles, 9s. 6d.; pearls, 9s.; dross, 9s. FIFE.—Screened navigation, 16s. 6d.; first-class steam, 12s. 6d.; third-class steam, 11s. 6d.; trebles, 12s. 6d.; 13s. 6d.; doubles, 10s. 6d.; singles, 9s. 6d.; pearls, 9s. LOTHIAN.—Prime steam, 12s.; secondary steam, 11s. 9d.; trebles, 11s. 9d.; 12s.; doubles, 10s. 9d.; singles, 9s. 6d.; pearls, 9s. Ayrshire.—Unscreened navigation, 16s.; jewel, 17s.; steam, 13s.; trebles, 12s. 6d.; doubles, 11s.; singles, 9s. 9d.; pearls, 9s.; dross, 9s. 7d.

CARDIFF.—The general situation on the Cardiff coal market is unchanged. Foreign and coastwise exports last week were 20,000 tons less than in the previous week, and 45,000 tons less than in the corresponding week last year, and it is unlikely that the figures for the current week will show any appreciable improvement. Minimum prices are ruling for practically every description, the only notable exception being dry nuts, which are firm at from 24s. to 25s., f.o.b. The withdrawal of the French 15 per cent. surtax has led to better inquiry in the Coasting and Bay trades, but it is feared that with the increasing severity of the industrial depression in France every possible effort will be made by the French authorities to limit imports to the reduced quotas. The new restrictions on the importation of British coals by Germany will not seriously affect South Wales, but it may be of interest to point out that under the latest orders of the German Controller the imports of British coals will be reduced to about 26 per cent., the average of the three years 1928-30. The South Wales audit for the three months ended last January shows a credit balance of £25,702, or 69d. per ton, compared with a debit balance in the previous three months of £57,481, or 1-52d. per ton, and brings the credit balance for the whole of the past year to £30,244, compared with £307,941 in 1930. The deficiency arising from the payment of the 20 per cent. minimum wage was £674,091, and the deficiency carried forward has thus been increased to £2,884,783. The following are the current approximate quotations: Best Admiralties, 19s. 6d.; seconds, 19s. 9d. to 19s. 4½d.; best drys, 18s. 6d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steams, 13s. 6d.; cargo smalls, 11s. 6d. to 12s. 6d.; coking smalls, 13s. 6d. to 13s. 9d.; anthracite best large, 36s. to 38s. 6d.; Red Vein large, 22s. 6d. to 27s. 6d.; machine made cobbles, 40s. to 48s. 6d.; French nuts, 40s. to 48s. 6d.; stove nuts, 39s. 6d. to 43s. 6d.; ruddy culm, 8s. 3d. to 8s. 9d.; foundry coke, 32s. 6d. to 36s.; patent fuel, 19s.; pitwood, ex ship, 22s. 6d. to 22s. 9d.

IRON AND STEEL.

MIDDLESBROUGH.—The market continues dull and uninteresting. Business does not develop as was expected and the continued depression is causing disappointment. In Cleveland iron only small quantities are being bought and for early delivery. The orders are easily supplied from the current production, so that there is no prospect of any extra furnaces being put into operation at present. It was generally thought that events would have developed sufficiently by now to induce some purchases for forward delivery, but this has entirely failed to mature and business continues on the same restricted lines as hitherto. There was very little call for iron at Tuesday's weekly market and the few transactions reported were for small lots for early delivery to home consumers. Official prices were again unchanged, viz.: No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; and No. 4 forge, 57s. f.o.b. or f.o.c., special concessions still being made for direct business with Scottish consumers. The demand for hematite is also disappointing, and although the current make of the district is still confined to five furnaces, stocks are large and there are ample supplies offering. Fairly large quantities are held in second-hands, and holders, not being able to take out the quantities due to them, have been cutting prices to try to secure orders to enable them to keep faith with the makers. The business done recently has been mainly for early delivery, there being no inquiry of importance for forward. Ordinary mixed numbers are now obtainable for prompt at 63s. 6d. per ton. Shipments of pig iron for February totalled 10,468 tons, compared with 8,436 tons for January. Clearance of manufactured iron were 1,118 tons, against 380 tons, and manufactured steel, 25,802 tons, against 21,477 tons, a combined increase of 7,095 tons. In the finished trades there is no substantial improvement to report, and works continue indifferently employed. Sheet mills have been doing better lately, but the demand has eased off, and prices are slightly easier at £9 10s. for 24-gauge galvanised corrugated sheets and £8 for 24-gauge black sheets. Prices for steel materials under the rebate scheme are unchanged, also for the other main products. The ore market continues practically idle. Best rubio is nominally 16s. 6d. c.i.f., and the current freight Bilbao/Middlesbrough is about 5s. Imports of all kinds of ore into Middlesbrough last month were 52,154 tons, compared with 59,242 tons in January and 82,552 tons in December. Coke is in plentiful supply, but the difficulty in making sales locally is causing the price to weaken, and good blast-furnace qualities can now be obtained at 16s. 6d. delivered works. The number of blast furnaces in operation in the district is unchanged at seventeen.

SHEFFIELD.—Large quantities of ferro-alloys and Swedish iron and steel material were brought to English ports last week before the 10 per cent. duty came into force and, on an average, consumers now hold two months' supplies. Demand for ordinary steel is as

sluggish as ever. The engineering position is suffering from a hold-up of numerous construction schemes resulting from a policy of economy. The open-hearth plant at Vickers' works of English Steel Corporation, Ltd., is to be reconstructed on the most modern lines. The production of open-hearth in the district is slightly down, but is better in the Lincolnshire area, where trade shows a broadening tendency. Activity is increasing in certain classes of tools, scissors and safety razors, and a further accession of trade is anticipated when existing stocks of foreign goods are liquidated. Ordinary trade in table cutlery and plate falls considerably short of the level of a year ago. Unemployment is being maintained at previous levels, with an increase in the colliery section.

GLASGOW.—Nothing has occurred this week to relieve the dullness in the iron and steel industries in the West of Scotland. At the steel-making plants it is still only possible to keep a small proportion of the available plant in operation, and here little improvement can be looked for until the position at the shipyards improves, as shipbuilding material forms a very important part of the output at many of the plants. Continental semis continue to be offered at exceedingly low prices. Rollers of steel bars report that there is a very poor demand, and the position is similar in the case of makers of wrought iron bars. Sheet makers are securing a fair amount of business, both for black and galvanised sheets, the bookings for galvanised being somewhat better this week than for some little time. In the tube trade there is very little new work being placed with local firms.

CARDIFF.—On the Swansea Metal Exchange on Tuesday it was reported that minor difficulties had arisen in connection with the new tinplate regulation scheme, but it is anticipated that they will be surmounted, and that the scheme will become operative as from next Monday. It is understood that the first payments in and out of the pool are to be on the basis of 1s. per box till early June, when they will be revised. Current business is comparatively quiet, but the new minimum price of 16s. per box is nominally operative. South Wales tinplate bars are unchanged at £5 per ton, less a rebate at 5s. per ton, but foreign bars are ruling at between £4 and £4 2s. per ton, and arrivals from Belgium have been exceptionally heavy during the past week.

OTHER METALS.

TIN.—The past week witnessed a sharp setback in the gold price of most non-ferrous metals with the exception of tin. This remained relatively steady, although there was no expansion in demand. In New York the metal was quoted at 22-15 cents per lb. on Wednesday, against 22-15 cents per lb. a week ago and 21-90 a month ago. Wednesday's official closing quotations in London, in terms of sterling for "standard" cash, at £138 15s. to £139 per ton, compares with £139 5s. to £139 7s. 6d. on the corresponding day last week. Stocks in London and Liverpool at the end of last week, at 33,457 tons, show a decrease of 49 tons on the week.

COPPER.—The market in copper was depressed and quotations declined steeply. Although the official export price is still 6½ cents per lb., sales under the new agreement were made at 5½ cents per lb. On Wednesday, "Domestic" spot was quoted officially at 5-75 cents per lb. in New York, against 6-250 cents a week ago, and 6-75 cents a month ago. Wednesday's official closing price for "standard cash" in London, in terms of sterling, at £33 2s. 6d. to £33 5s., compares with £35 13s. 9d. to £35 16s. 3d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 20,033 tons, show an increase of 103 tons, while stocks of rough copper, at 1,175 tons, are 200 tons larger.

LEAD.—Under the influence of selling pressure, lead prices declined sharply both in London and New York. The fall in New York quotations is significant, as quotations had been maintained at 3-75 cents per lb. since December last. In New York the metal was quoted at 3-25 cents per lb. on Wednesday, against 3-75 cents a week ago and 3-75 cents a month ago. Wednesday's official closing quotation for "soft foreign" in London in terms of sterling, at £12 11s. 3d. per ton for shipment during the current month, compares with £14 2s. 6d. on the corresponding day last week.

SPELTER.—In the absence of selling pressure, this metal remained relatively steady. Wednesday's quotation in New York, at 2-75 cents per lb., compares with 2-85 cents a week ago and 2-825 cents a month earlier. Wednesday's official closing quotation in London in terms of sterling for "good ordinary brands" was £13 7s. 6d. per ton for shipment during the current month, against £13 5s. a week ago.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals the quotations for aluminium and nickel have been maintained at £95 per ton and at £240 to £245 respectively. Foreign antimony again advanced from £30 10s. per ton, ex warehouse, to £31-£31 10s. per ton. Quicksilver again sold at £18 10s. to £19 per flask, and platinum remained steady at £11 ls. per ounce.

TEXTILES.

THE COTTON TRADE.—Liverpool.—Imports for the week February 25 to March 2 (inclusive) are 62,048 bales, of which 45,800 bales are American, 378 Peruvian, 13,483 Egyptian, 2,422 East Indian, and 165 sundries.

Manchester.—The improved demand in the market has been well maintained, and there have been indications of inquiry covering a wide range of goods, with increased interest in prices on the part of overseas countries. During the last few weeks certain producers have extended their order lists, and are now in a better position to present a stiffer front to customers. In the cloth section the business offering for India has continued more encouraging. Owing to larger clearances in Calcutta, dealers have been more disposed to replenish stocks, and in addition to dhooties being bought, other

tight fabrics have attracted more attention. A considerable demand has been met with for Karachi, and rather more orders have been booked for Madras, whilst further activity has occurred for Rangoon. Rather healthier advices have been received from China, and a better demand with more contracts has been experienced for Hong Kong with isolated sales for Shanghai. Steady buying has taken place for Java, Singapore and the Straits Settlements. A few more lines have been put through in grey and white shirtings for Egypt. Heavy goods have attracted attention for East Africa. Printing and finishing styles have moved off fairly well for South America and the Continent, and there are signs of rather more activity in home trade fabrics. More favourable reports are being received from certain weaving districts, especially Blackburn and Preston. The larger turnover in American and Egyptian yarns has continued, the sales being bigger than the production. Spinners, however, still find it difficult to improve prices. Export yarn demand continues more encouraging for India, and to some extent for China.

THE WOOL TRADE.—Bradford.—The opening of the second series of London sales last Tuesday, writes our correspondent, was not characterised by anything inconsistent with the state of the home trade and the expectations of buyers. Perhaps merinos were slightly cheaper than topmakers were looking for, and there was a bigger decline in superfine combing wools than in average merinos and fine crossbreds. The first day's offerings did not, however, provide an opportunity for a very thorough test of values of merinos, for New Zealand and South American crossbreds predominated the catalogues. Certainly where anything of outstanding merit in fine wool was submitted, good market prices were paid, and it was quite evident that, in spite of the failure of prices to come up to the January level, there are still buyers with actual needs to fill, and who are prepared to pay the utmost that any suitable offerings are worth. It should be borne in mind that the past month has been a poor time for Yorkshire consumers. New business has fallen off, and though making a strong fight against any reductions, topmakers have been unable to resist a decline of around 1d. per lb. in merino tops, even more in the case of the finest qualities, and ½d. in crossbreds, this being exceeded in the low sorts. With such a depreciation as this, and with prices in Australia and New Zealand selling centres moving in buyers' favour, nothing else could happen, but that London would come into line. It has been emphasised within the past few days that, if Coleman Street prices held their own compared with the January series, Bradford topmakers would be "wrong" again. The best feature of the auctions so far has been the good general competition. France seems to be the least active of the Continental section. Taking the sales all round, prices are 5 per cent. lower in average greasy merinos, and secureds par to 5 per cent. cheaper. Clothing wools are quite firm. Fine greasy crossbreds are par to 5 per cent. cheaper, and medium and coarse 10 per cent. There is little evidence of any revival in Bradford. Just before the sales commenced, some very reasonable prices were accepted for merino tops, and nothing has happened to strengthen the position of crossbreds.

THE JUTE TRADE.—Dundee.—Though business in all sections of the jute trade is quiet, prices are being fairly well maintained all round. The new crop of jute is now under course of preparation, and sowings have commenced in some districts. It is yet too early to form any idea as to the extent to which the growers are heeding the call for a small crop, which is necessary if prices are to be maintained. Production at all consuming centres is so very much curtailed. Sellers are not pressing to sell, and they appear to be content to await further developments. Offers to this market are very scarce, due to the apathy of spinners, who have already purchased sufficient to carry them through this season, the total quantity in view for the season from August 1st last being 725,000 bales, compared with 429,000 bales last year at this time. The total quantity received for the whole of last season was only 600,000 bales. The value of Daisee assortment has remained round about £17 5s. for some time now, with fours quoted at £16 to £16 5s., and Tossa at £20 2s. 6d., Asahi Hearts at £17 15s., Mitsui Daisee 4 at £16 5s., Mitsui Daisee assortment at £18, and Mitsui Tossa 4 at £17 15s., March-April. Only a few small lots of spot material are being picked up. Jute yarns are quiet at 2s. lowest for common 8-lb. cops and 2s. 1d. for 8-lb. spools. Twist runs from 3½d. for 3 ply 8 lb., and sacking yarns from 2½d. for 24 lb. wett and 3½d. for 8 lb. chains. Rove is of small interest at the low prices of £19 10s. for 48 lb. and £17 for 200 lb. Fine yarns and carpet qualities are very slow. Orders for jute cloth are of small extent, and even inquiry is of little consequence. Prices are quoted at 3d. for 10½ oz. 40-in. hessians, and 2d. for 8 oz., but there are occasions when

something less is being taken because of the necessity for orders. Linoleum hessians are dull and nominal, and heavy goods are only of occasional interest. The Calcutta goods market has been quiet and showing an easier tendency this week. The stocks of hessians in Calcutta at the end of February were increased by 1-66 per cent. to 144,291,000 yards, but heavy goods were reduced by 15-50 per cent. to 45,312,000 yards compared with the end of January. The latest prices are 20s. for 10 oz. 40 in., and 15s. 6d. for 8 oz., March; 20s. 3d. and 15s. 10d. for April-June, and 20s. 4½d. and 16s. for July-September. Liverpool twills are quoted at 57s. 6d., and "B" twills at 52s. for March and 57s. 4½d. and 51s. 9d. for April-June.

THE GRAIN MARKETS.

WHEAT.—The international wheat situation has undergone little change during the past week. Continental buying has kept up fairly well and will probably increase from now onwards until the new crop is harvested in summer. Russia is shipping little, and exports from Australia, Argentina and Canada are being readily absorbed. Primary receipts in the United States continue relatively small in the expectation of higher prices. The expectation in the United States that the Bill which provides for the distribution of 40,000,000 bushels of Farm Board wheat for relief purposes, will be passed is acting as a bull point. On Wednesday, "March" futures were quoted at 57½ cents per bushel in Chicago, against 58½ cents on the corresponding day last week, and 57½ cents a month ago. Quotation in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 36s. per 996 lbs., as compared with 36s. 6d. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 34s., against 34s. 3d.; No. 3 Northern Manitoba, Vancouver, ex ship, 32s. 6d. to 33s., against 33s.; Russian, on sample, 30s. 6d., against 29s. to 30s.; Australian, ex ship, 29s. 6d. to 30s. 9d., against 29s. 3d. to 30s. 6d. a week ago.

WHEAT FLOUR.—International trade in flour has been smaller but the demand in this country both for home-milled and foreign flour remained firm. Prices ruled slightly higher. North American shipments, at 187,000 sacks, showed a decrease of 68,000 sacks as compared with the previous week. Of this total, only 133,000 sacks have been consigned to Europe. Quotations in London, Wednesday: Straight run, delivered country, 27s. 6d. per sack of 280 lbs., as compared with 27s. last week; delivered London, 26s. 6d., against 26s. Manitoba patents, ex store, 27s. 6d. to 30s., against 27s. to 29s.; and Australian, ex store, 22s. to 23s. 6d., against 21s. 6d. a week ago.

BARLEY.—The market in barley has been firm on the Continent. Russian and Argentine varieties found a steady demand. On Wednesday, "May" futures were quoted at 42½ cents per bushel in Winnipeg, against 43 cents last week and 39½ cents a month ago. Quotations in London, Wednesday: "English feeding," i.e., per 448 lbs., 26s. to 27s., as compared with 26s. to 27s.; Russian, landed, 25s. per 400 lbs., against 25s. 6d. a week ago.

OATS.—Business in oats has been dull in this country, but Canadian and Argentine sellers found a ready market on the Continent, particularly in France and Belgium. "May" futures, which last week stood at 22½ cents per bushel in Chicago, sold at 22 cents per bushel on Wednesday this week, against 25½ cents a month ago. Quotations in London, Wednesday: "River Plate," landed, 18s. 3d. per 320 lbs., as compared with 18s. 3d. to 18s. 6d. last week; "River Plate," ex ship, 17s. 3d., against 17s. 3d.; "Chilcan White," landed, 27s., against 27s. a week ago.

MAIZE.—It has been officially stated that the yield of the maize crop in Argentina was 48,346,000 quarters and that remainder of the exportable surplus now amounts to 2,590,000 quarters. This estimate had a depressing effect on prices, which reacted somewhat from the high level reached a week ago. Wednesday's quotation in Chicago for "March" futures, at 36 cents, shows a decline of ½ cent on last week, and a fall of 1½ cents as compared with the price a month earlier. Quotation in London, Wednesday: "Plate," landed, 21s. 3d. per 480 lbs., as compared with 22s. 6d. last week; "Plate," ex ship, 20s. 3d., as against 21s.; "Plate," March-April, 20s. 9d., as against 21s. Yellow maize meal, ex wharf, was quoted at £6 per ton, against £6 5s. a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1931-32, 1930-31, 1929-30, 1928-29:—

	1931-1932.	1930-1931.	1929-1930.	1928-1929.
Estimated sales of home-grown wheat—				
1 week to February 27	Cwts. 114,812	Cwts. 112,413	Cwts. 212,459	Cwts. 312,567
26 weeks to February 27	2,118,721	3,125,399	6,672,420	7,119,697
Average price of English wheat per cwt.	s. d. 5 9	s. d. 5 1	s. d. 8 7	s. d. 9 9

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1928 to 1931:—

Weeks ended	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
Feb. 20, 1932.....	Cwts. 110,049	Cwts. 204,216	Cwts. 87,071	s. d. 5 8	s. d. 8 3	s. d. 7 3
Feb. 27, 1932.....	114,812	173,502	76,819	5 9	8 1	7 5

Mar. 2, 1929.....	312,567	183,167	74,491	9 9	10 4	9 8
Mar. 1, 1930.....	212,459	193,343	48,105	8 7	7 11	6 2
Feb. 28, 1931.....	112,413	123,657	44,239	5 1	8 1	5 10

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks with comparative figures for 1930:—

NEAREST FUTURE.	Jan. 2, 1930.	Jan. 2, 1931.	Mar. 4, 1931.	Jan. 4, 1932.	Feb. 24, 1932.	Mar. 2, 1932.
Winnipeg (No. 1 Manitoba) — Cents per 60 lb.	148½	56½	59½	62½	68½	67
Chicago (No. 2 Winter) — Cents per 60 lb.	130½	79½	79½	55½	58½	57½

The visible supply of wheat in Canada, at 61,569,000 bushels, shows a decrease on the week of 411,000 bushels. Supplies a year ago stood at 63,480,000 bushels.

OTHER FOODS.

SUGAR.—As a result of the protracted negotiations between Cuba and Java, raw sugar values were weak at the beginning of the week. The dissolution of the International Sugar Convention is, however, thought less probable now, and on Wednesday the market took a more hopeful view of the situation. "March" futures in New York were quoted at 0.84 cent per lb. on Wednesday, against 0.83 cent per lb. a week ago, and 1.01 cents per lb. a month earlier. Wednesday's sales of "raws" include "March delivery" at 6s. 1½d. to 6s. 2d. per cwt., against 6s. 1d. to 6s. 1½d., and "May," at 6s. 2½d. to 6s. 4d., against 6s. 3½d. to 6s. 4½d. on the corresponding day last week. The movements of raw sugar in London and Liverpool during last week are set out in the table below:—

	Imports.		Deliveries.		Stocks.	
	1932.	1931.	1932.	1931.	1932.	1931.
London	805	471	1,366	1,106	4,438	35,489
Liverpool	8,360	17,292	13,583	12,119	111,873	125,575
Total tons	9,165	17,763	14,949	13,225	116,311	161,064
Last week	16,178	6,480	15,906	13,130	122,095	156,606

COFFEE.—The market for Brazilian varieties remained steady in New York. At the auctions in London, however, all but the finest qualities realised slightly lower rates. Last week's movements of coffee in London were as follows: Brazilian, landed, 709 bags; delivered for home consumption, 342 bags; exported, nil; stocks, 3,007 bags, against 2,852 bags last year. Central American, landed, 8,224 packages; delivered for home consumption, 3,967; exported, 1,364; stocks, 80,240 packages, against 89,209 a year ago. Other kinds, landed, 10,066 packages; delivered for home consumption, 3,623; exported, 1,116; stocks 72,163 packages, against 93,269 a year ago.

COCOA.—The sharp upward movement in cocoa prices continued throughout the past week. "May" futures were quoted at 4.30 cents per lb. in New York on Wednesday, against 4.23 cents per lb. a week ago and 3.97 cents a month ago. As compared with the corresponding day last week, Wednesday's quotation for Accra, fair fermented, new crop, March-May, at 25s. 9d. per cwt. f.o.b., London contract, shows a rise of 1s. per cwt. on the week. Last week's movements of cocoa in London were as follows: Landed, 11,040 bags; delivered for home consumption, 9,059 bags; exported, 25 bags; stocks, 138,560 bags, against 180,620 last year.

TEA.—The quantities catalogued for this week's auction comprise 54,945 packages of Indian, 24,603 packages of Ceylon, and 19,722 packages of Java and Sumatra tea. Last week's improvement was maintained at Monday's Indian auctions. The improvement in the quality of Ceylon tea resulted in a better demand for these varieties on Tuesday. On Wednesday, Indian tea was again in good demand, particularly for medium teas between 7d. and 8d. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account:—

AVERAGE PRICE PER LB.

Week ending	Northern India.	Southern India.	Ceylon.	Java.	Sumatra.	Nyssa-land.	Total.
	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.

RICE.—The market in rice was firm and quotations again rose. The cause of this advance, which is partly ascribed to heavy purchases by Java and China, is already beginning to benefit Burman growers. Wednesday's "spot" quotation for Burma No. 2, cleaned, at 10s. 6d. per cwt., shows a rise of 3d. per cwt. as compared with last week. Movements in London during the past week were as follows: Landed, 73 tons; delivered, 176 tons; stocks, 882 tons, against 455 tons last year.

POTATOES.—The demand for potatoes remained good. As supplies are still readily forthcoming, there was no increase in prices. At the Borough Market, "Best King Edward" sold from 11s. to 12s. per cwt., as compared with 11s. to 12s. per cwt. a week ago.

SPICES.—The spot pepper market has been steady, and forward positions advanced under the influence of more inquiry. Wednesday's quotation for "Black Singapore" pepper, at 6½d. per lb., shows no change on the week. Movements of pepper in London during the past week were as follows: Black, landed, 10 tons; delivered,

20 tons; stocks, 282 tons, against 464 tons last year. White, landed, 56 tons; delivered, 81 tons; stocks, 769 tons, against 466 tons a year ago.

MEAT.—The market in meat has remained steady and prices are generally unchanged on the week. On Wednesday, Argentine beef (chilled hindquarters) was sold at 3s. 4d. to 3s. 8d. per 8 lbs., against 3s. 2d. to 3s. 8d. on the corresponding day last week, while New Zealand frozen mutton realised 2s. 6d. to 3s. 6d., against 2s. 6d. to 3s. 6d. a week ago. According to the Smithfield Market official report, supplies of meat during last week amounted to 9,931 tons, as compared with 9,085 tons in the corresponding week last year. Imported beef, principally Argentine, formed 84.5 per cent. of the supplies, as against 83.9 per cent. a year ago; and imported mutton, mainly New Zealand, formed 82.1 per cent. of the total supply, as against 77.3 per cent. last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OILSEEDS.—A very much quieter feeling prevails, the excitement in anticipation of the operation of the new import duty having subsided. Linseed is in restricted demand and values are easier. Plate on spot and for shipment to March now offer at £8 17s. 6d., later positions being at a small premium. There is practically no interest in Indian linseed, prices of which are considered out of line. Shipments from the River Plate are expanding, though the total to date is considerably below that of a year ago. The quantity afloat for Europe has increased to 251,200 tons (including 4,100 tons from India), or 41,000 tons more than last week. In the market for vegetable oils prices generally are easier and in most instances lower on the week. Linseed oil is in only poor demand and values have declined, though a steadier feeling is now in evidence. Raw oil ex Hull mill for March delivery is quoted around £15 10s. and April £16, the later month's being at a good premium. Cotton oil is neglected, and lower, crude Egyptian being obtainable at £22 10s. and common edible at £25 ex Hull. Ground-nut oil has declined sharply. Oil cakes and meals are in about normal demand and mill prices are steady and unchanged on the week.

HIDE, LEATHER AND ALLIED TRADES.—No alterations in prices for ox and heifer hides were registered at the auctions held in Manchester this week, as was also the case with cows and bulls. Calfskins, which are in poor supply, were inclined to be a firmer market on average, while sheep skins tend towards lower prices. Business in regard to foreign hides has not been on an improving scale; if anything, the position of trade is inclined to be the reverse, as for some sorts there has been a falling off in the demand when compared with the previous week. In the South American frigorifico market, although small sales have been made of Argentine ox at 5d., buyers are now making lower offers for these, and it remains to be seen whether they will be accepted. Dry South American hides are unchanged in value, B.A. Americanos being quoted at 6½d., Inservibles at 3½d., and M.V. Americanos at 7d. The business done at these figures, however, is small. A fair quantity of orders have been forthcoming for African descriptions at, in most instances, unchanged figures. Dry Capes have sold at 6½d. and 5½d. for firsts and seconds, while dry-salted 20-30 lbs. have realised 5½d. and 4½d. Nigerians have changed hands at from 6½d. to 7½d., while the figures mentioned in connection with unbathed Addis Abebas are from 4½d. to 5½d. Australians are firm, with very little business passing. Sales of sole leather have been poor both on manufacturing and repairing account, although for the latter there has been a slight improvement. In dry-hide bends the best call is for the medium weights, and for these some fair business has been put through. Inquiry in regard to English and wet-salted bends has been chiefly in connection with the lighter averages, with only a poor request for medium and heavy weights. Pinned offal continues to sell in moderate quantities, but the only call in regard to rough is for shoulders. Producers and distributors of upper leather also are not experiencing a brisk demand. Glacé kid, in both black and brown, has been in slightly less request, while there has been some falling off in the call for patent leather. Box and willow calf, however, maintain a fairly regular sale, and although individual requirements continue small, a steady trade is being done all the time. Reptile leathers are wanted in the cheaper skins.

THE TIMBER TRADE.—Board of Trade returns showed that the first month's receipts of sawn European building and joinery woods were much smaller compared with the first month of 1931, and planed and dressed woods larger. It would, however, be unwise to put too much faith in returns of statistics just now, for the Thames lightermen's strike, now over, hampered imports into the port, whilst the extra timber and woodware hurried into the country to defeat the tariffs cannot be gauged with anything like accuracy until the first quarter's returns are issued in mid-April. Actual orders during February were few, and agents, importers, merchants and consumers have had ample time to reflect on the principal points at issue—the tariff duties and the Russian timber situation. A 10 per cent. duty on all foreign timber must come as a great surprise to the foreign trade here and abroad. The only exceptions are the shipbuilding trades and pitwood to the colliery trade. The impost will hit the building and furniture trades very hard. Canada will be the principal Dominion favoured by "preference," but as our building woods supplies have come from European countries whose currencies are at or about level with the pound, any great change to Canadian woods is unlikely until the Dominion dollar is more favourable to home buyers. For all that, Canadian and other British timbers are more in the limelight than has been the case within recollection. The Russian wood is being purchased wholesale by a new company formed for the purpose, and the quantity to come forward this season is to be 450,000 Petrograd standards

balances available for the week-end, quoted at 3 per cent. to 2 per cent., actually remained unlent. The pressure of funds on Monday drove down the rate for day-to-day loans to under 2½ per cent., at which level it remained all the week. Minor fluctuations resulted from the rapid movements of sterling, which affected willingness to borrow, but though the clearing banks continued to adhere to 4 per cent., weekly loans were freely obtainable from outside houses at 2½ and even 2½ per cent.

Foreign demand for Treasury bills again took the market by surprise. Applications on March 4th totalled £52,560,000 for £40 millions of bills, and the rate at which they were allotted was only £2 9s. 9.95d. per cent., against £3 5s. 5.22d. on the previous Friday, the whole amount being allotted. This week £45 millions of Treasury bills will be on offer. The bill rate fell distinctly when the result was announced, the rise in the price of the bills having been underestimated by some applicants to the amount of 1s. per cent. or more. The rate was obviously altogether out of proportion to the Bank rate, and indeed throughout the week the market was working on an expectation of the fall from 5 to 4 per cent., which actually occurred on Thursday. The discount on Treasury bills fell to 2½ per cent. on Wednesday, though it rose to 2½ towards the close as sterling showed signs of weakening. Three months' bank bills, after falling to 3-4½ per cent. on Friday, dropped on Monday to 2½-4½ per cent., at which rate they remained until Wednesday, when the minimum rate became 2½ per cent., both home and foreign demand being in evidence. The rate on Thursday, after the reduction of Bank rate, ranged from 2½ for the best bills to 3½ per cent. for German replacement bills.

	Feb. 18, 1932.	Feb. 25, 1932.	Mar. 3, 1932.	Mar. 10, 1932.	Previous Rate and Date Changed.
Bank Rate	5	5	5	5	5 (Mar. 10, '32)
Banks' Deposit Rate..	3	3	3	2	3 (Mar. 10, '32)
Discount { Call	3	3	3	2	3 (Mar. 10, '32)
Houses { Notice ...	3½	3½	3½	2½	3½ (Mar. 10, '32)
Market rate (3 months' bills)	4½-5	3½-4½	3-4½	2½-3½	...

The reduction of Bank rate had been fully discounted by the market, and had little effect on rates. The market for sterling remained strong, and appeared to necessitate considerable purchases of foreign exchange by the Bank in order to prevent a repetition of Tuesday's unhealthy boom. Dollars were quoted on Thursday afternoon at \$3.67½ and francs at 93½ francs to the £.

The Bank return continues to show a rise in the circulation, from £351.8 millions to £354.5 millions on the week, some part of which is no doubt ascribable to the realisation of gold hoards by private citizens. The rise in sterling has frightened the bullion market into rapid disposal of recent purchases. The reserve in the Banking Department shows an equivalent reduction, the "proportion" being lowered to just over 31 per cent. In the Issue Department there was an exchange of roughly £1½ millions from "other securities" to Government securities.

The largest movement in the figures for the Banking Department is an increase of Bankers' Deposits by £13.1 millions to £98.6 millions. Public deposits also show an increase of £0.8 millions. On the other side of the balance sheet, Government securities are up by £7.1 millions, and other securities by £9.5 millions. This expansion, it may be assumed, reflects the Bank's purchases of *devisen* in an effort to curb the volatility of the sterling exchange, and it may be expected to disappear when the Bank has an opportunity to realise securities in adjustment of the position.

The table below, giving the February averages of the nine English clearing banks, shows that, generally speak-

ing, the movements recorded in the previous month have been repeated.

	February, 1931.	November, 1931.	December, 1931.	January, 1932.	February, 1932.
Capital and reserves.....	132.1	132.1	130.0	122.8	122.8

Total assets	2,035.7	1,905.0	1,932.6	1,898.8	1,835.1

The fall in acceptances reflects the diminution in the volume and value of world trade. Deposits on the one hand, and investments and discounts on the other, all show a considerable decline, indicating that trade depression, notwithstanding the slight rise since September in sterling prices, has been accompanied by a partial deflation of the total internal purchasing power. The cash reserve of the banks was proportionately reduced.

The New York market was uneventful throughout the week, the call rate remaining at 2½ per cent., and the rate on commercial paper being unchanged at 3½ to 3½ per cent. Quotations for 90-day bank bills were steady at 2½-2½ per cent., and for 180-day bills at 2½-3 per cent. Gold movements were comparatively small. \$2.7 millions was exported to Belgium, but more than twice that amount was released from earmark, and imports of gold included \$2 millions from Canada and \$1.2 millions from China.

The Foreign Exchange market was very active at times and fluctuations were wide last week. Sterling recovered strongly against nearly all currencies, and foreign speculative activity at one period threatened to stampede the market. New York went from 3.48½ to 3.68 after 3.77; Montreal from 3.93½ to 4.10 after 4.20, and Paris from 88½ to 93½, after being considerably higher. Brussels moved from 25.03 to 26½, Milan from 67½ to 70½, and Madrid from 45½ to 48½. Amsterdam moved from 8.65 to 9½; Berlin from 14.65 to 15½, and Switzerland from 18.03 to 19.00. The Scandinavian currencies alone escaped the general movement in favour of sterling, Stockholm being very little changed at 18½, and Oslo slightly better at 18½, as was Copenhagen at 18½. Helsingfors gained 9 points at 216. Bucharest weakened from 585 to 625, Constantinople from 715 to 750. The South American currencies were variable, Rio losing ½d. at 4½d. Buenos Aires moved from 40½d. to 38½d. and Monte Video from 31½d. to 31d. All quotations are, however, largely nominal. In the Far East the rupee was firm at 1s. 6½d., but the yen weakened as the result of events in China from 1s. 10½d. to 1s. 8½d. Batavia was also much weaker at 9.18, against 8.70 last week. In the forward market dollars were unchanged at ½ cent and 2 cent discount. Paris improved to 3 and 7 centimes discount, but Brussels was weaker at discounts of 10 and 30 centimes. Milan weakened to ½ centesimi and 1½ centesimi discount for the two periods respectively, and Madrid was quoted at ½ peseta discount for one month and 1½ peseta discount for three months, as against ¾ peseta and ¾ peseta respectively in the previous week. Berlin was again unquoted. Amsterdam weakened to 2 cents and 5 cents discount and Switzerland went to par for both periods. Silver fell heavily as the result of the rise in sterling and events in China, cash being 1½d. lower at 17½d. and forward 1½d. lower at 17½d. The Chinese silver exchanges declined in sympathy, Hongkong from 1s. 5½d. to 1s. 4d. and Shanghai from 1s. 11½d. to 1s. 9½d.

Our Intelligence Branch, which has been amalgamated with Moody's Investors Service, Ltd., is available to our readers for the supply of economic, statistical and other information, at a charge proportionate to the work involved. Inquiries should be addressed to Moody's Economist Services, 8, Bouverie Street, London, E.C.4.

THE POUND AND POLICY.

WHEN Great Britain went off gold it was expected that our exports would be stimulated, that our imports would be checked, and that though—in the absence of inflation—our general internal price level and, therefore, our costs of production need only rise a little, the price of imported commodities would rise substantially, perhaps by the full extent of the fall of the pound. It was, and is, important that we should avoid the vicious spiral that would be involved in any pronounced upward movement of wages, but it was hoped that the rise in the cost of living might in fact be limited to the extent to which imported goods enter into consumption; and that if, in these circumstances, we were able to limit any increase in the currency to the amount needed to finance a larger volume of production, coupled with this limited price rise, sterling would find a natural level at which our foreign payments would balance.

In the event, the situation has not developed quite in this way; at all events the fulfilment of some of these expectations has been delayed. Our exports have been impeded by severe foreign restrictions, while our imports have been subject to the adventitious influence of tariffs, resulting partly in "forestalling," partly in unnatural contraction. But more significant still, perhaps, has been the fact that exceptional forces have been at work to keep down our price level. Of these, the chief factor is that there has been a continued fall in gold prices. This is in part due to the fact that the causes of the depression are still in full swing: the reparation problem has not been settled; the drastic measures adopted last summer in Central Europe are still fully operative; there is no real sign yet of a turn in the tide in the United States; and over all still hangs the psychological depression created by the unexampled crisis of last autumn. Finally, we must not wholly exclude from this catalogue the influence of the abandonment by us of the gold standard; for this has probably contributed to lowering the level of some "gold" prices. Just as uncertainty was created in the world's markets some years ago by the depreciation of the mark and franc, so, when Britain went off gold, uncertainty arose as to the new competitive level of the prices of goods which we, and those countries which followed us off gold, were offering in world markets. There has also been a check to our ability to buy goods from gold standard countries and a tendency to switch our purchases to "non-gold" countries. For these various reasons, instead of gold prices being stable and sterling prices rising, sterling prices have risen very little, while gold prices have continued to fall substantially.

In the circumstances, the comparative stability of British prices has helped us industrially and checked any further deterioration in employment. On the other hand, the instability in the "gold" price level and the continued shrinkage of trade which has accompanied it have made it impossible as yet to say with any certainty at what level of the exchanges we could hope to resume a normal volume of international trade and balance our international payments. This uncertainty, coupled with the absence of any very definite indication of our future monetary policy, has naturally been associated with wide movements in the sterling exchange. After a considerable period of stability between 3.70 and 3.80, there followed a sharp drop to a second period of comparative stability in the neighbourhood of 3.40 to 3.50; and to-day we are faced with conditions which seem to be producing another major movement, this time in an upward direction. This in its turn has created an unwelcome and serious amount of bull speculation which has already introduced into the industrial situation a fresh disturbing element.

The recovery of sterling is not, in itself, wholly surprising. In the first place, we are approaching the season of the year when our balance of payments is normally tending to be favourable and the exchange high. Secondly, we have reached a point where our visible trade figures must be turning more in our favour. The "forestalling" of last autumn has inevitably been followed by a reduction

of imports—only slightly offset by renewed "forestalling" on a minor scale in February—while export orders, which were stimulated in the early winter by the first fall in the pound, are to some extent only now beginning to make their effect felt in the amount of trade actually passing. Our adverse balance of international payments on current account has, therefore, undoubtedly begun to fall, though until more figures are available it is difficult to say to what extent the improvement has proceeded, or whether the benefit will eventually be lost through the restrictive effects of tariffs.

A more important rôle, however, in causing the recovery of sterling has been played by capital transactions, in whose case psychological factors are of primary importance. To begin with, very few foreign observers believed that we should be able to avoid inflation; and the absence of any appreciable price-rise here has created an unexpectedly favourable impression abroad. This has been greatly strengthened by the realisation that we are, in fact, genuinely balancing our Budget and that we have already been able substantially to repay the credits which we borrowed in August last. Not only have we done this; up to the end of February we were also having to meet steady and continuous withdrawals of short-term foreign funds. The efflux produced no disastrous slump in the pound, as it was balanced by the return of British capital from abroad and by the repayment from various sources of British claims, including claims against India, which have, in part, been settled by the shipment of gold. This process of paying off short-term obligations has made Great Britain steadily less vulnerable to the pressure of foreign withdrawals, and we have been becoming increasingly masters of our situation. The heavy purchases of sterling on foreign account during the past ten days are a striking reflection of opinion abroad that the pound, on a short view at least, has passed its worst.

It is an opinion which we are by no means disposed to gainsay, and the fact has to be faced that, on the assumption that the pound is destined to rise, the volume of Britain's foreign assets now profitably convertible into sterling is very considerable; but, taking a slightly longer view, it is well to remember that the future level of sterling is far from being a certainty. Not only has there been no striking improvement yet in our economic position; but in the present state of credit paralysis throughout the world no one can foretell at what relative level of prices in Britain and elsewhere it will be possible for us to recover sufficient international trade to enable us, as a country dependent largely on imported food, to pay our way. Nor are we by any means out of the wood so far as our domestic situation is concerned. Economies and wage cuts, reduction of the dole and high taxation are now, and are likely to remain for some time to come, a heavy drag on that natural tendency to expansion which may be expected from steady prices. Moreover, little more than psychological importance is properly to be attached to the fact that Britain has repaid its recent foreign credits. As we pointed out last week, repayment has been accomplished largely by a process of cancelling foreign claims against obligations. Indeed, if the pound were to recover very substantially, we should find that we had repaid our debts at a considerable loss. In short, with the "economic" level of sterling difficult to forecast, and with no official declaration of policy suggesting that we shall aim at stabilising at a figure higher than the recently maintained rate, a big bull movement, whether it be initiated by the action of British nationals or by foreigners, is highly dangerous for the speculator. It is also very undesirable from the point of view of the monetary situation of the world.

There are several reasons why this is so. In the first place, it might foster the idea that we intended to return to gold at the old gold parity. To do this on the strength of a speculative movement would, of course, be folly. It is conceivable that a big rise in gold prices and costs in present "gold" countries might one day restore the

relation between sterling and gold on the old parity level, leaving competition reasonably equal; but, we confess, we think this is very unlikely, and in any case it cannot be expected for a long time to come. Meanwhile, though a rise of sterling might just possibly lead to some improvement of gold prices by reversing the influences which the slump in sterling exercised on gold standard countries, it would have the more serious disadvantage of starting a fresh price decline in the wide area in which sterling is the main price-determinant. It would tend to check employment in this country and in countries which have left the gold standard; it would probably stimulate the demand here for still higher tariffs; and it would certainly throw a greater burden on foreign debtors in sterling. Moreover, and this is possibly for the time being the most important point of all, a big bull movement would make us once again vulnerable by bringing to this country "bad money"—money, that is, which could be withdrawn at the slightest sign of nervousness—against which we should hold in foreign countries assets which, in the event of trouble, we might find it as difficult to realise as we found it in August and September last. In short, any such movement is to be discouraged, because it would impair the underlying stability of our position, because it would introduce a new economic dislocation as between gold countries and countries which have left the gold standard, because it would increase the difficulty of keeping the exchange stable between London and other non-gold centres, and finally, because it is almost certainly unjustified by any surplus balance on our current items of account.

What, then, should the authorities do? There is a school of thought, much supported by opinion abroad, which would like to see us return to a gold basis forthwith at, say, \$3.60. If it were certain that we could now, and permanently, hold this position, such a step would, of course, put an end to any further speculation; but for the present, at all events, this policy must be rejected. It is still uncertain whether this is the right value for sterling, either now or in the future; we are still in the dark as to the ultimate attitude of other great countries in regard to the gold standard; and the problems of reparations, tariffs and other restrictions all remain unsolved. Until these difficulties, which played a large part in forcing us off the gold standard, are overcome, Britain could not safely decide to return to gold even on a figure of her own choice.

But apart from actual revalorisation, or even an announcement of the intention to revalorise, the authorities are not without resource. It is known that the Bank of England has already acquired a very considerable amount of foreign exchange. It is possible to continue sales of sterling to a very large amount and thereby in effect to peg the exchange. We can see no reason why this policy—supported by boldly deterrent reductions of Bank rate—should not be pursued. Though certain technical difficulties might have to be eliminated, there are no insuperable obstacles or any other valid objections to the Bank's acquiring—with the co-operation, if need be, of the Treasury—large reserves of *devisen*. Moreover, if it were considered a matter of national moment and if it were justified by circumstances, a threat that restrictions on dealings might be reimposed would certainly give pause to speculators "for the rise." Many other devices, such as discriminatorily low rates for foreign deposits, or even special stamp duties, could be brought into play if the capital influx assumed dimensions whose influence on the sterling exchange it was beyond the power of the Bank of England, unaided, to check.

As matters stand, we see no reason to doubt that the Bank's power, if resolutely exercised, would be completely effective in reversing the pound's recent tendency towards untoward appreciation. In saying this, we do not for a moment suggest that the deliberate depreciation of sterling to a level giving us a greedy competitive advantage in international trade should be the objective of our monetary policy. On a long view we must clearly strike a balance between the advantage of a moderate rise in sterling prices and that of a steady sterling exchange exercising an influence which might in some directions act as an encouragement to world trade. In

steering our monetary course, with an eye to the wide repercussions inevitably produced by our policy on international commerce, we have no reason to fear a controlled expansion of credit necessary to carry such a limited upward movement of prices as was envisaged at the outset of this obstacle. Equally, we would add, though to-day conditions call emphatically for minimum money rates, eventual stability of prices may undoubtedly, from time to time, call for the use of high Bank rate.

These considerations, however, are of less immediate moment than the imperative need of decisive action to counter the present disturbing effects of demands for sterling quite extraneous to our current balance of payments on revenue account. Speculators, it seems, are "talking" the pound to \$4 and more. Whether we look at price movements (bearing always in mind the recent large reductions in producing costs abroad) or at our trading position, we can find nothing to justify economically such a figure. In fact, the real economic equation is being upset simply by movements of capital. Even in normal times these movements enter into the balance of payments of Great Britain to a much larger proportion than is the case with any other country; and at present they are the governing factor in determining the exchange—to an extent which may prove to be a grievous embarrassment, unless the authorities act with promptness and vigour. We have already suggested that, rather than allow an "uneconomic" rise of sterling to take place, with all its attendant damage to the interests of this and every other country, the Bank of England should absorb all the *devisen* offered in the market above, say, \$3.60, even if it be technically necessary, for the purpose, to create, at a certain cost to the State, some additional securities for market sale. Further, in so far as demands for sterling represent the proceeds of the sale of British-owned overseas securities, or the normal amortisation of loans by our foreign debtors, there is a surplus available which might appropriately be invested abroad at long-term, and it might well be desirable therefore to consider, before long, the terms on which, and the countries to which, we may resume the normal process of foreign lending. But if there is any chance of a further speculative bull movement in the pound developing—and we are not disposed to minimise the danger—it would, we urge, be useful if it were made clear by the actions of the Bank of England, reinforced, if need be, by a definite official statement of policy, that while no decision as to the ultimate level of sterling has yet been reached, there is, so far, no underlying justification for any substantial upward movement, and that, therefore, effective steps will be taken, by the acquisition of *l'outrance* of foreign short-term assets (or even gold), to give speculation "for the rise" its quietus.

ARISTIDE BRIAND.

By the death of Aristide Briand the world's stage has been robbed of one of the most characteristic of the figures that have dominated it in our time. The theatrical metaphor is apt, for it was Briand's histrionic and oratorical and conversational abilities that made him the force that he was. Like his contemporary and "co-Celt," Mr Lloyd George, he was an eminent representative of that type of political genius which excels by an infinite capacity for improvisation, in contrast to a Poincaré or a Curzon with an infinite capacity for taking pains. His natural medium was not ink and paper but "winged words." His colleagues and subordinates sometimes found it difficult to exact from him that minimum amount of reading and writing from which even a Minister of State cannot be excused; but when it was a question of making a speech or conducting a negotiation, Briand could be counted upon to achieve the impossible.

Briand's character—like almost all really interesting and effective characters—was a tissue of inconsistencies. He was a profound cynic and at the same time a sincere idealist; a bold and effective man of action in some situations, yet in others a passive observer, shrugging his shoulders as he watched himself being carried along by currents which he had egregiously failed to control. He was

a man of the Left who put himself at the service of the Right; the first Socialist Prime Minister in modern history and also the first Socialist Minister to use the machine of Government on the grand scale for breaking a strike. He was "a man of realisations"—an opportunist—who failed again and again to "bring off" his combinations and coups. And—invaluable quality for a politician—he was a cat with nine lives, a statesman whom his opponents used to hunt from power, only to find themselves constrained to invite his collaboration next day. Politics were the breath of his nostrils—indeed, he had no other life—and yet he never gave the appearance of grasping after power, and was always content to relapse into the life of the common people, from among whom he had originally come and with whom he never lost touch.

Perhaps the central element in Briand's character, and the main thread in his career, was his passion for peace and conciliation. Instinctively he cast himself for the conciliator's part in the sequel to each of the great political conflicts in which he was successively implicated by the chances and changes of life and history. After the struggle in France between State and Church at the beginning of the century, after the great French railway strike of 1910, and last, but not least, after the European War, Aristide Briand's rôle was each time the same. The unity beneath the inconsistencies lies here; and this ruling passion for conciliation is the key to many things: the impatience of principles and the belief in compromise and finesse; the alternations of inaction and activity; the contempt for human nature and the devotion to the welfare of mankind; the refusal to recognise defeats on the calculation that some sleight of hand might after all convert them into victories.

Aristide Briand's career would take volumes to record, because it is practically co-extensive with the histories of France and of Europe during one full third of the 20th century. In this place, we can only touch upon a few salient points. His origin, to begin with, is noteworthy; for Briand's father was a Breton and his mother of La Vendée; and he was brought up in Brittany at St. Nazaire. Thus this Socialist and sceptic—this eminently "modern" man—came out of the most conservative, clerical, traditional region in France, the region that has been the last refuge of the *ancien régime* since the Revolution. Perhaps Briand's early radicalism was a natural reaction against the mental atmosphere of his local environment. One is reminded of another portentous Breton vironment. One is reminded of another Breton sceptic, who burst upon an astonished and admiring France in an earlier generation and in a different walk of life: Ernest Renan. But, if one is an Englishman, one is inevitably reminded still more forcibly of the contemporary Celtic politician on the other side of the Channel who has likewise emerged from the Celtic fringe and achieved as great a political career in *partibus peregrinis*, among the alien English, as Briand achieved among the alien French.

Is it fanciful to trace some of Briand's qualities as a politician to this Celtic origin? For instance, his preference for short cuts or facile detours to highways and for

flanking movements to frontal attacks? And his alternations of mood from what looks like audacity to what looks like weakness? If one thinks of the historical experiences which have been common to all the peoples of the Celtic fringe, from Brittany to Wales and from Ireland to the Highlands, one may well expect to find them developing the psychology of oppressed races, and to see this psychology manifested in the great men whom the Celtic fringe here and there throws up into the limelight of the great European stage.

The difficulty about telling the story of Briand's life in headlines is that, on this deceptively reduced scale, one can tell two almost equally plausible stories which have little or nothing in common. The *Advocatus Diaboli*—a rôle which Briand would assuredly have played against himself with inimitable zest and brilliance—will sketch the picture of the lost leader who spent twenty years in building up the French Socialist movement, and was carried into office by its tide, in order to use his inside knowledge for dealing his comrades a smashing blow when, as Minister of Justice in 1910, he broke the railway strike by calling out the railwaymen on military service and ordering them to perform their civil duties under pain of military discipline. He will paint for us the anti-clerical who eventually undermined the foundations of the *Etat Laïque* by renewing the severed diplomatic relations between France and the Vatican in 1921. He will show us the awkward customer in diplomatic intercourse, the French statesmen who tried to sow discord at the Washington Conference between his British and American colleagues; who encouraged Monsieur Franklin-Bouillon to conclude a private agreement between the French Government and Mustafa Kemal; who sought to entice the United States into a bilateral peace pact with France in order to secure for France a free hand in Europe, and who then found himself committed, by an American perspicacity and adroitness for which the Breton had not bargained, to a Kellogg Pact embracing all the countries of the world; a French statesman who nearly spoilt the entry of Germany into the League of Nations by trying to secure a permanent seat on the Council for Poland, cheek by Germany's jowl; a French Minister for Foreign Affairs who did not resign office when the Cabinet of which he was a member went back upon the "gentleman's agreement" for a Franco-British-Italian naval arrangement to which France had been a party in March, 1931.

Our imaginary detractor could also give good grounds for regarding Briand's policy as not only *risquée* but unsuccessful; for Briand had a habit of suffering sudden reverses at critical moments. His experiment in forming a Centre Party proved a disastrous failure in the general election of 1914, just before the war. He became Prime Minister (for the fifth time) during the war itself in 1915, but fell in 1917 so heavily that he had no part or lot in the shaping of the peace settlement. He returned to office (but hardly to power) at the mercy of the Right in 1921, and was thrown out by the President of the Republic at a moment when, at Cannes, he was not only playing golf with Mr Lloyd George, but was negotiating with him a

comprehensive Franco-British understanding. He became Prime Minister yet again in 1925, to be thrown out next year by the Socialist-Radicals. He became Monsieur Poincaré's Foreign Minister in the same year, and continued in office because he did not choose to resign over the virtual repudiation of his famous understanding with Herr Stresemann at Thoiry. He was defeated in the Presidential Elections of 1931; and in this year (1932) he was finally superseded at the Quai d'Orsay by Monsieur Laval.

What is left of poor Aristide Briand when the Advocatus Diaboli has said his say? Let us suspend judgment till we have listened to the defendant's guardian angel (and how greatly tickled Briand would have been at the notion that he had one!). The guardian of Briand's memory need not say very much, for two sentences will be decisive. "This is the man who did more than any other single human being to reconcile Church and State in France, and France and Germany in Europe." Assuredly Briand will be remembered as the French statesman who, working hand in hand with Stresemann, divides with him the honours of the Pact of Locarno and the entry of Germany into the League and the completion of the evacuation of the Rhineland five years before the extreme treaty date. He will also be remembered as the author of the Briand Plan for European Union. At this moment, when Briand has only just gone from us, we cannot tell what will be the ultimate fate of his work. This work of appeasement may appear, in the light of history, either as a pathetic failure or as the beginning of a new and happier chapter in European history. It will still seem something momentous in either event, and Briand's personality will be bound up with it. Europe has lost a great citizen, and the international stage a great figure, whose performance it is easy to criticise in cold blood but whose charm was irresistible to all who ever came into personal contact with him—whether in the lobbies at Geneva or in the French countryside, to which Briand loved to retreat in the intervals of an unusually long and varied political activity.

THE INDIAN BUDGET.

SINCE the Government at Delhi, like that at Westminster, had already taken arms last autumn against a sea of financial troubles, rendered particularly stormy by the world economic crisis for a mainly agricultural country such as India, the Budget which Sir George Schuster opened last Monday contained, as was to be expected, few surprises and imposed no fresh taxation. Accordingly, interest centred mainly on those portions of the Finance Minister's speech which dealt with the development of India's general economic and financial position since the decision was taken last September to preserve the link between the rupee and sterling in its departure from the gold standard. In the picture which Sir George Schuster presented, the background could not be other than one of the severe trade depression which India was inevitably sharing with other countries. Although the monsoon had been generally favourable and India had had quite a good year as regards agricultural production, her foreign trade had fallen to barely half that of two years ago. In the first ten months of the current year, exports of merchandise had declined to under 185 crores, as compared with 265 crores for the first ten months of 1929-30, jute and jute products falling from 69 to 29.5 crores and raw cotton from 51 to 20.5 crores. On the other side of the account, merchandise imports had fallen from 201 to 105 crores, the most notable declines being those of cotton manufactures, which fell from 49.7 to 15.9 crores, and sugar, which fell from 13.8 crores to 4.9 crores. On the other hand, when bullion was added to the exports of merchandise India had enjoyed a favourable balance of 71 crores, as compared with 43 crores in the corresponding period of 1929-30. The rupee exchange and the sterling resources of the Government of India had been so strengthened by exports from India of "unhoarded" gold that not only had it been possible to repay the £15 millions of debt maturing in London in January, 1932, without borrowing or drawing on reserves, but it was hoped to be able to repay without re-borrowing the £6 millions of 6 per cent. sterling bonds which the

Government had an option to repay at par next June, i.e., a year before their final maturity.

Armed with this impressive evidence of the advantages which had accrued from the decision to maintain the rupee at parity of exchange with sterling, the Finance Minister was able to dispose effectively of the criticism which had been raised in some quarters against the Government's "failure" to buy up gold offered by the public and use this opportunity to build up reserves for starting the Indian Reserve Bank. He pointed out that for the Government, as the currency authority, to buy gold would be pure speculation; that the Government could not afford to buy and hold all the gold being offered, since it had its own external obligations to meet; that if currency reserves were acquired and if the Government could now afford to accumulate them, it already had its proper proportion of gold, and—in so far as the proceeds of gold exports were not required to meet the balance of payments—it was proceeding to complete an ample margin of reserve by the indirect acquisition of external securities. Meantime, the free movement of gold was tiding India over a difficult moment; the taxpayer was being saved interest charges, and the credit of the Government, as illustrated by the price of its securities both in India and in London, had so improved that it was hoped in the coming year not only to meet London maturities, but to float in India on satisfactory terms a loan sufficient both to provide for the repayment of the 1932 bonds falling due next October, and to effect a further reduction of the floating debt. Moreover, even if the sales of gold to some extent represented a forced realisation of savings, increased purchases of Post Office cash certificates, a rise in Post Office Savings Bank's deposits, and big subscriptions by small investors to the 6½ per cent. rupee Treasury bonds suggested that if a large section of the people were in dire straits owing to the trade depression, India still had a considerable amount of money available for investment. In a period of immense difficulties for all agricultural countries India could rightly take comfort from the fact that there was not a total absence of encouraging signs.

Turning from the Finance Minister's survey of the general position to the actual figures of the Budget, it may be convenient to begin with a word in retrospect. A year ago Sir George Schuster found himself with a deficit of 13½ crores in the accounts for 1930-31, a deficit which he was now able to state had eventually been reduced to 11.58 crores. Confronted last spring with a prospective deficit of 17½ crores for 1931-32 (reduced by economies to one of 14½ crores), the Finance Minister, as will be recalled, bridged the gap by higher Customs duties, estimated to yield 9.82 crores, and additional income tax, whose yield was put at 5 crores. Last September, however, when an Emergency Budget was introduced, Sir George Schuster had to inform the Assembly that the small surplus for which he had budgeted would be turned into a deficit of 19½ crores owing to an estimated shortfall of 11.33 crores in tax revenue and 8.23 crores in other receipts. On the existing basis of revenue and expenditure, about the same deficit was to be anticipated in 1932-33. To meet this situation economies were proposed amounting to 0.9 crores in 1931-32 and to 8.9 crores in the following year, while surcharges on Customs duties and income tax, together with new import duties on machinery, dyes and raw cotton, were estimated to yield fresh tax revenue of 8.1 crores in the current year and 15.1 crores in 1932-33. The result would be a deficit of 10.2 crores in 1931-32, followed by a surplus of 5.2 crores next year.

Reviewing the results up to date of his emergency proposals, Sir George Schuster was able to confirm the realisation of the promised retrenchment, but as a result mainly of foreign trade contraction it was necessary to revise downwards the estimates of tax revenue. On the current year's estimates there would be a short-fall of 5 crores in respect of Customs and of 1 crore in respect of income tax, against which, thanks to the improvement in the Government's position as a currency authority, there would be an improvement of about 2.5 crores under the heading of financial items. For next year it was anticipated that the tax short-fall would be 4.6 crores and the financial items improvement 1.5 crores. Thus the net

deterioration on balance, as compared with the estimates of last September, would be 3.5 crores and 3.1 crores respectively in the current and the following years. In consequence, the balance for 1931-32 and 1932-33 would be approximately a deficit of 13.5 crores, followed by a surplus of only 2.25 crores.

The problem with which Sir George Schuster has been faced and the way in which it has been tackled may be summarised in tabular form as follows:—

BUDGET DEFICITS AND SURPLUSES (IN CRORES).			
	1931-2.	1932-3.	Total for Two Years.
Prospective situation revealed in February, 1931.....	- 17½	...	...
Budget forecast after allowing for economies (2½) and new taxes (14½).....	+ ½	...	...
Situation revealed in September, 1931.....	- 19½	- 19½	- 39
Estimates resulting from emergency budget (economies 0.9 and 8.9, and new taxes 8.1 and 15.1).....	- 10½	+ 5½	- 5
Situation now disclosed owing to short-fall of revenue.....	- 13½	+ 2½	- 11½

The significance of these figures—which show that next year India will be bearing fresh taxation estimated at the time of its imposition to yield 30 crores, and that over 11 crores of economies are being made—will be fully appreciated when it is remembered that the tax revenue on which Government is relying in the coming year amounts only to 77 crores. On the other hand, it has equally to be borne in mind when considering the deficit of 11 crores over the two years that the budgets include provision for debt redemption amounting to 18½ crores.

Sir George Schuster is fully entitled to the congratulations which he received from many sections of the Assembly for his success in maintaining the finances of the Government of India in a position which compares very favourably with that of many other Governments. His statement will confirm the more favourable opinion that has been forming with regard to India's financial position, and, subject to all the reserves which must attach to any such assertions in these times of unexpected and large-scale changes, justifies his claim that the budgetary position is "sound."

In carrying out this task he is acting in the spirit of the famous Irwin despatch, in which it was very clearly indicated that if responsibility for the Central finances of India is to be handed over to an Indian Parliament, it is essential that India should be in a thoroughly solvent condition, with every prospect of being able to pay her way. But the results have been achieved at a price. Though the ways and means position, which not very long ago was a cause of grave anxiety, is almost miraculously improved, a main factor in the change has been the drastic curtailment of capital expenditure. Fresh railway expenditure, for example, is to be reduced next year to 4.15 crores, compared with 30 crores three years ago, while advances to the Provinces will amount to only 10 crores, against 15 crores this year.

Indeed, satisfaction at India's determination to adhere to principles of sound finance and to balance the Budget at the cost of admittedly painful efforts must be qualified by the reflection that recent developments have emphasised the financial vulnerability of a Central Government whose resources depend so largely on Customs revenue. This year the Government collected 29 crores of import duties from 201 crores of imports in 1929-30. The Finance Minister, alluding to the protective effect of the various import duties at their recently enhanced level, recognised this weakness and admitted that it will be necessary for the Central Government in the future to broaden the basis both of direct taxation and of revenue from excise on such commodities as kerosene, salt, betel nuts and spices.

The desirability of strengthening the revenue position is, indeed, underlined by Sir George Schuster's admission that many of the Provincial Governments are to-day labouring under financial difficulties in some respects greater than those of the Centre, and that some Provinces have had recourse to loans from the Centre in order to cover budgetary deficits. Taking a long view, apart from the

exigencies of the present crisis, the objective of financial policy in India must clearly be to render possible the transfer in future years of some of the Central revenue to the provinces for "national-building" services. The realisation of such an objective will plainly depend in large part on recovery of world trade and of the prices of agricultural products; but, even with this assistance, the exploration of new sources of taxation is a task with which the Central Government must increasingly pre-occupy itself if the economic and social development of India is not to be unduly postponed.

RAILWAY RESULTS.—II.

It is significant of the pass to which the railways have been brought, that during the last few years it has been to the expenditure side of the accounts that shareholders have had to turn for encouragement. We recorded last week that the four main line railways had suffered a fall of over £16 millions, or 8½ per cent., in gross receipts for 1931, while railway receipts fell £14 millions, or 8 per cent. Great efforts on the part of the companies, aided in this respect by the decline in traffic, brought about a very substantial reduction in outlay, as the following table shows:—

EXPENDITURE. (000's omitted.)					
	1929.	1930.	1931.	Decrease in 1931.	%
London Midland & Scottish	£ 66,907	£ 64,468	£ 58,999	- 5,469	- 8.5
Adjusted for wages cut ...	65,818	64,063	...	- 5,064	- 7.9
London and North Eastern	50,896	49,206	44,990	- 4,216	- 8.6
Southern.....	20,914	20,702	19,762	- 940	- 4.5
Great Western	23,209	22,226	26,053	+ 2,173	+ 7.7
Adjusted for wages cut ...	22,736	22,054	...	- 2,001	- 7.1
Total	167,926	162,602	149,804	- 12,798	- 7.8
Adjusted total.....	166,364	162,025	...	- 12,221	- 7.6

Exact comparison between the different groups is rendered difficult by the fact that for 1930 the 2½ per cent. deduction from wages and salaries which was in force during part of the year is treated by the London and North Eastern and the Southern railways as a deduction from expenditure, while the other two groups show it as an item of revenue. We have shown in italics the figures of the latter as they would have appeared if they had been calculated on the same basis as the others. The percentage reduction was greatest in the case of the London and Northern Eastern; the London Midland and Scottish and the Great Western were not far behind, but the Southern Railway, owing presumably in part to the steps taken to maintain its passenger traffic against road competition, was only able to reduce its outlay by 4½ per cent.

Purely railway expenditure was reduced by 9½ and 9 per cent. respectively on the two largest groups, by 4 per cent. on the Southern and 7 per cent. on the Great Western. The most important items in this expenditure are shown in the next two tables. To combine them in one table might be slightly misleading, owing to the differing treatment of the 2½ per cent. deduction in 1930:—

PRINCIPAL ITEMS OF RAILWAY EXPENDITURE. (000's omitted.)

	Maintenance of Way and Works.		Maintenance of Rolling Stock.		Locomotive Running and Traffic Expenses.		Total Engine Miles.	
	1930.	1931.	1930.	1931.	1930.	1931.	1930.	1931.
L.N.E.R.	£ 5,566	£ 5,078	£ 8,344	£ 7,359	£ 24,808	£ 22,853	170,525	161,159
S.R.	3,420	3,209	2,777	2,763	9,872	9,424	74,413	74,772

PRINCIPAL ITEMS OF RAILWAY EXPENDITURE. (000's omitted.)

	Maintenance of Way and Works.		Maintenance of Rolling Stock.		Locomotive Running and Traffic Expenses.		Total Engine Miles.	
	1930.	1931.	1930.	1931.	1930.	1931.	1930.	1931.
L.M.S.	£ 7,192	£ 6,566	£ 9,882	£ 8,631	£ 33,909	£ 31,320	227,258	216,133
G.W.R.	3,647	3,215	3,975	3,603	13,546	12,678	96,646	92,376

At first sight there appears to have been a substantial reduction in the expenditure of all four companies upon the maintenance of way and works, but this apparent economy is exaggerated in each case, and very substantially as far as the two smaller groups are concerned, by a larger transfer from renewal funds than was made in 1930. The Great Western actually spent more under this head last year than in 1930, but £725,970 of this expenditure was met from renewal funds, against £256,565 in 1930. As, however, economies under this heading can for the most part only be a postponement of expenditure, it is perhaps satisfactory that they have not been carried very far. The reduction, ranging from 9½ to 12½ per cent., except on the Southern, in expenditure on the maintenance of rolling stock, read in conjunction with diminutions in the neighbourhood of 5 per cent. in engine mileage, show that the great endeavours which have been made of recent years to reduce the cost of workshop repairs are still bearing fruit, and many striking examples of achievement in this direction were given in the speech of the chairman of the London Midland and Scottish. Reductions in locomotive running and traffic expenses were also greater in proportion than the reduction in engine mileage, and this is one of the respects in which the capital expenditure of recent years is now beginning to produce permanent economies in working. The Southern, for example, largely owing to the electrification of its suburban lines, worked more engine miles at a 4½ per cent. reduction in running costs.

A further analysis of locomotive running and traffic expenses, in which fuel and wages are the most important elements, is given below:—

LOCOMOTIVE RUNNING AND TRAFFIC EXPENSES—MAIN ITEMS.
(000's omitted.)

	Wages and Salaries.			Fuel.		
	1929.	1930.	1931.	1929.	1930.	1931.
London Midland and Scottish Percentage of expenditure...	£ ...	£ ...	£ 22,486	£ 5,797	£ 5,646	£ 5,375
	...	...	71.8	16.6	16.7	17.2
London and North Eastern Percentage of expenditure...	18,483	18,368	16,879	4,150	4,057	3,830
	73.7	74.0	73.8	16.6	16.3	16.7
Southern Percentage of expenditure...	6,427	6,456	6,091	2,146	2,127	2,150
	64.9	65.4	64.6	21.7	21.5	22.9
Great Western Percentage of expenditure...	...	...	9,471	2,028	1,984	1,899
	...	...	74.7	14.8	14.6	15.0

Economies in fuel were little more than in proportion to the reduced engine mileage, so that the percentage of this item of traffic expenditure increased. The reduction during 1931 in the remuneration of railway workers, combined with a certain amount of reduction in personnel, reduced both the absolute and the relative part played by wages under this heading.

It is unfortunate that the railway accounts, so admirably detailed in most other respects, do not make it possible to distinguish the share formed by wages of the total expenditure, or even of the total railway expenditure, of each group. Even in the foregoing table, the item "wages" is incomplete, as there are many items of expenditure on locomotive running and traffic, the wages element in which is not separately shown. It would have been particularly valuable this year to know just what part of the economies the railways have effected has been due to reductions in the wages bill; but the only information available is contained in various statements in the respective chairmen's speeches. Sir Josiah Stamp stated that of the £5 millions saved in 1931 and £11 millions saved since 1927 on the London Midland and Scottish, "much the greater part . . . must find its expression ultimately in reduction in the salary and wages bill." In that group, £2,800,000 were saved last year by reductions in the numbers employed, and £6,500,000 since 1927, while the saving as compared with 1927 through reductions in wages and salaries amounted to £1,500,000. On the Southern Railway, out of a saving of £940,000 in expenditure, £325,000 was due to reductions in wages and salaries. Necessary as this form of economy is—and nobody has urged a closing of the gap between sheltered and unsheltered wages more persistently than ourselves—it is on a different footing from those reductions in expenditure

which reflect a real economy in the effort needed to bring about a given result, and it is satisfactory that the railways are still pursuing successfully this more fruitful form of thrift.

We indicated last week that whereas railway working showed a uniform reduction in net revenue, some of the ancillary activities of the railways, which include road transport, steamboat services, the conduct of docks, harbours and wharves and of hotels and refreshment rooms, canals, and the collection and delivery of parcels and goods, had shown an improved net result. Road transport, which is now beginning to yield a return on the outlay of previous years, yielded a very much higher net revenue on all groups. On the London Midland and Scottish the net return rose from £8,842 to £28,625; on the London and North Eastern from £3,078 to £6,247; on the Southern from £300 to £2,136; and on the Great Western a small deficit was turned into a profit. The net revenue from steamboats increased on the London Midland and Scottish, but was badly down on the other systems. The deficit on canals was reduced in three groups, and on the Southern its modest surplus was increased. The collection and delivery of parcels, which, though indirectly profitable, was a source of direct loss to all four companies in 1930, showed a reduced deficit in all cases and even a small profit on the Southern. The net effect of all these developments upon the financial position will be discussed in our next article.

COAL REGULATION.

(BY A CORRESPONDENT.)

PROVISIONAL statistics are now available relating to the administration during 1931 of Part I. of the Coal Mines Act of 1930. They show that in every quarter the output allocated was greater than that produced, and that on the average the excess was about 6 per cent. In the March quarter the national output, as returned by the Executive Boards to the Central Council, was 58.4 million tons, compared with an allocation of 62.6 million tons; in the June quarter 54.8 million tons, compared with an allocation of 58.2 million tons; in the September quarter 52.1 million tons, compared with 55.1 millions; and in the December quarter 57.8 million tons, as against an allocation of 61.6 million tons. The shortages were due chiefly to the increasing severity of the depression in the export trade. In the March quarter there were five districts in which the outputs were in excess of the allocation, and eight others where they were only slightly below the quotas. In the June quarter outputs exceeded the allocations in the Cannock Chase and North Staffs coalfields, and there were seven other districts where the average shortage was less than 2 per cent.; while in the September quarter Northumberland, Cannock Chase, North Staffs, Kent, Shropshire and Warwickshire actually exceeded their quotas, and Lancashire, Midland Amalgamated, South Staffs, Somerset returned output figures averaging only about 2 per cent. below those allocated. In the exporting districts the differences between allocations and outputs were far greater, and, on the average, allocations for those areas exceeded outputs by about 10 per cent.

The administration of the price-control provisions of the Act was accompanied by far more friction than attended those relating to output control. In the South Wales coalfield the minimum schedule previously operative under a voluntary marketing scheme was continued under the Act with few changes; in the other districts, however, there were considerable delays in the fixing of minimum prices, and in the September quarter the Central Council had to take strong disciplinary action against Scotland. At that period Scotland alone of all the districts had not put minimum prices in force, and this circumstance was held by the Central Council to justify its action in allocating a quota of only 5½ million tons, as compared with an output of 7½ million tons in the corresponding quarter of 1930, and a claim by Scotland for a quota of 7 million tons. The Central Council was over-ridden by arbitrators, but its action had the effect of compelling the Scottish colliery owners to bring their price policy into closer relation with that of the other districts.

An outstanding feature of the financial results is the improvements which they show in the position of the inland coalfields relative to that of the exporting districts. In the following tables a summary is given of the production and trading balances in the exporting districts, and in the districts mainly supplying the inland markets in 1930 and 1931:—

DISTRICTS MAINLY SUPPLYING THE INLAND MARKET.

	1930.		1931.	
	Output. Tons.	Trading Balance. £	Output. Tons.	Trading Balance. £
Yorkshire	44,409,200	1,274,443	40,607,700	864,741
Derby, Notts and Leicester	31,859,600	748,214	30,582,200	1,281,477
Staffs, Warwick, Salop and Worcester	17,601,400	598,797	16,956,600	804,493
Lancs., Cheshire & North Wales	18,394,000	-19,143	17,237,000	144,013
	112,264,200	2,602,311	105,383,500	3,094,724

EXPORTING DISTRICTS.

Scotland	31,696,800	-98,841	28,950,700	-214,343
Northumberland	13,122,800	395,972	12,573,000	44,460
Durham	35,810,400	614,366	30,481,000	-89,033
South Wales ...	45,214,100	307,941	37,522,500	30,244
	125,844,100	1,219,438	109,527,200	-228,672

In the case of the Midland coalfield, the trading balances do not cover precisely the same geographical areas as those for which the outputs are given; but this does not materially affect the value of the comparisons, from which it will be seen that while in the districts mainly supplying the inland markets there was a decrease last year in output of only about 6.9 million tons, and an actual increase in the credit trading balance of £492,000, the figures for the principal coal exporting districts show a decrease in output of 16.3 million tons, and the conversion of a credit balance of £1,219,438 into a debit balance of £228,672. It would be difficult to discover any other year in which so sharp a contrast has been provided between the respective earnings of the exporting districts and the coalfields depending either exclusively or mainly on the inland market. One of the natural effects of the statutory regulation has been to strengthen the monopoly advantages of the inland coalfields, and a secondary factor which tended in the same direction was the ban placed by the Act on fixing minimum prices according to destination in this country. Under the protection of the Act, Lancashire pit-head prices in the September quarter of 1931 were about 6½d. per ton higher than in the corresponding period in 1930; in the South Derbyshire group 11½d., in the North Derby and Notts 8½d., and in Yorkshire 2½d. per ton higher. In the exporting districts, on the other hand, there were decreases in Northumberland of about 9½d. per ton, in Scotland of 5½d., in Durham of 3½d., and in South Wales of just over 3½d. per ton. In the export trade the conditions were those of unprecedentedly severe competition, and the reduced price level was accompanied by a drop of about 13 million tons in the foreign cargo and bunker shipments. These facts are exercising a considerable influence on the attitude which the various districts are adopting towards the question of the continuance or discontinuance of Part I. of the Act after the present year. It is very probable that, if the Government decides to extend the marketing provisions of the Act for a further period, strong efforts will be made to secure for the industry statutory authority for the imposition of a national levy for the assistance of the export trade.

POLITICAL OMENS AT WASHINGTON.—II.

(BY A CORRESPONDENT.)

In the Democratic camp the past few months have witnessed some interesting developments. At the end of the summer the political experts were all agreed that Governor Franklin Roosevelt of New York had a long lead over all his rivals for the Democratic nomination. His backing was of a somewhat variegated character, including such divergent elements as Tammany, the *New York Times*,

and some western Progressive Senators like Senators Norris and Wheeler; but he was credited with having half of the potential delegates to the Democratic convention definitely committed to him, and only on rare occasions has a candidate in such a position failed to secure the nomination. More recently, however, there have been indications that since November his fortunes have undergone a setback; indeed, a very definite anti-Roosevelt movement has been steadily gathering momentum, and it is no longer certain that Roosevelt will enter the convention with a majority of the Democratic delegates.

The elements opposed to Roosevelt are as varied as his supporters. The "Big Business" elements in the Democratic Party have come to regard him as too progressive, and their suspicions have been strengthened by the eulogies heaped upon him by his radical western friends. Then, again, he has lately alienated many liberal devotees of Woodrow Wilson's memory by a sudden backsliding on the subject of the League of Nations; in a public statement he declared that he had changed his mind about the advisability of the United States entering the League, because the experience of recent years had proved that it was not the sort of League which Wilson had contemplated. But his most formidable opposition has come from a group of powerful Democratic leaders headed by ex-Governor "Al" Smith, the party candidate in 1928, Mr Raskob and local bosses in the New Jersey, Illinois and other States. They repudiate the suggestion that their opposition is animated by personal dislike of Roosevelt, and avow that it is based upon a sincere conviction that he is not the best available candidate for the party; they allege that he has neither the intellectual vigour nor the political skill which any occupant of the White House should have at his command in these troubled days. For some months past they have been bending all their energies to check the progress of Roosevelt's candidacy.

For a time they adopted the tactics of encouraging the candidacies of "favourite sons" in different States in order to prevent the delegates being pledged to Roosevelt, but now they have induced "Al" Smith to declare himself willing to accept the Democratic nomination if it is offered him. He has, however, qualified his announcement by asserting that he is not a candidate in the sense of campaigning for the support of the delegates, and that his real objective is to ensure that the Democratic Party shall have a free choice of nominees at its convention. His friends, however, have lost no time in bestirring themselves to secure delegate support for him, and they have entered his name in the Democratic primaries of a number of States. It would only be a natural ambition on the part of Mr Smith to desire another chance at the Presidency under more auspicious conditions than in 1928, but he is too clear-headed and realistic a politician to believe that he can be nominated. In 1928 the Democrats of the South and West, who hated both his religion and his views on Prohibition, acquiesced sullenly to his nomination, but they would not present a solid opposition to his candidacy. The backers of Roosevelt, moreover, who include eleven Democratic Senators, are taking counter measures, and there is evidence that they are going to be able to revive in favour of Roosevelt the old anti-Smith sentiment in the South and West. Smith can probably beat Roosevelt in the Democratic primaries of States like Massachusetts, New Jersey and Illinois, and come to the convention with several hundred delegates behind him;

but it is plain that if Smith and his allies can stop Roosevelt's nomination, the Rooseveltians will be equally able to prevent the success of Smith.*

So the view gains ground that the choice of some compromise candidate is probable, and the claims of other aspirants are being freely discussed and analysed. Governor Ritchie of Maryland was openly in the field for the nomination before anybody else, and at intervals he has outlined his political creed in speeches in different cities. He has a good record as an upright politician and sound administrator, but his addresses have revealed him as an old-fashioned individualist who believes in the unfettered working of the law of supply and demand, and untrammelled freedom for business from any interference by the State. His forthright "wetness" appeals to the enemies of Prohibition, but on all other domestic issues he is essentially conservative, and has shown little understanding of the realities of the present economic plight of his country. He has also declared against any cancellation of war debts, and offered no evidence of international statesmanship. As a result, he is unpalatable to the progressives of the Democratic Party and to independent liberal elements; and, while he will have some strength at the Convention, his nomination is only a remote possibility.

Much more acceptable to the Democratic Progressives is Mr Newton Baker of Ohio, who was Secretary for War in the last Cabinet of Woodrow Wilson, and is now a successful corporation lawyer in Cleveland. A capable platform speaker, he is an able and experienced politician, and he is also an avowed "wet." Few public men in the United States have since the war taken such an enlightened attitude upon international problems, and he has always been regarded as the lineal heir of the Wilson tradition; but within the last month he has surprised many of his friends by following Roosevelt's example and renouncing his old advocacy of American adhesion to the League of Nations. Mr Baker maintains the pose that he is not a candidate for the nomination, and he has not made any effort to enlist the support of delegates, having spent the past month in a holiday trip to South America; but, undoubtedly, if it befell that he was nominated, he would cheerfully accept the honour.

Another candidate who is accumulating considerable support is Mr Garner of Texas, who is now Speaker of the House of Representatives. He is being vigorously boomed by the Hearst papers, and has great strength in his own and adjacent States, but under present conditions his "dryness" is almost a fatal disability. The Smith group, as well as the "Big Business" elements of the Party, would probably prefer to see the nomination go to Mr Owen D. Young, but he is taking no steps to promote his candidacy, and is at present only a very dark horse. Still, as a result of recent developments, the Democratic nomination is once more a completely open question, and Roosevelt's lead, if it exists, is by no means a winning one.

The Republican Progressive group find themselves in a difficult quandary. They detest Hoover and openly proclaim their desire to compass his political extinction. They have held conferences about the question of forming a third party or of fighting him in the Republican primaries, but their best available champions, Senators Hiram Johnson and Borah, conscious probably of the unhappy experiences of third parties in the United States, have so far declined to enter the lists against him. It is true that one Republican dissident, ex-Senator France of Maryland, has entered the primaries in North Dakota for the Republican nomination, but his candidacy is not taken seriously. Some of the Republican Progressives are ready to throw their political influence to help Governor Roosevelt, but they condemn politicians like Ritchie and Baker as "just Democratic Hoovers," and if either of this pair is nominated, they seem likely to be reduced in the Presidential campaign to an attitude of sulky neutrality. Yet it is quite clear that throughout the country the Progressive vote which Mr Hoover secured in a large measure in 1928 is now lost to him.

* In the polling, this week, at New Hampshire, delegates pledged to support Mr Roosevelt were elected by unexpectedly large majorities.

Notes of the Week.

Parliament and Defence Economies.—Retrenchment proposals seldom have a good reception in the House of Commons, and to the Conservative Party, which forms so great a proportion of the present House, savings on the defence services are, traditionally, *anathema maranatha*. It is not surprising, therefore, that the debates on Monday and Tuesday on the reduced Navy and Army estimates respectively were marked by many expressions of uneasiness and anxiety, not at the size of the defence forces which the country still has to finance thirteen years after the peace, but at the smallness of the provision made for these services. The First Lord of the Admiralty, Sir B. Eyres-Monsell, and the Financial Secretary to the War Office, Mr Duff Cooper, vied with each other in emphasising that, unless there was some progress with general international disarmament, estimates as low as the present could not again be sanctioned next year either by the Army Council or by the Board of Admiralty. The gist of the speeches of both Ministers was that the Services for which they were responsible had generously contributed to the cause of economy in a great emergency, but that the cuts could not be repeated. The burden of numerous Conservative speeches which followed reveals quite clearly that, although we are spending £100 millions per annum now on defence services, the bill presented to Parliament next year cannot fail to be substantially higher unless some constructive plan for international reduction obtains acceptance at Geneva. The two debates were indeed a most timely reminder to the British taxpayer of his own personal interest in the success of the vital disarmament discussions which are now proceeding, and which the world has looked forward to ever since the Treaty of Versailles laid it down that the forcible disarmament of Germany was to be the prelude to voluntary disarmament by the victorious nations. It is clearly the overwhelming view of the present House of Commons that, in relation to present international circumstances, the Navy have been cut to the bone; and, failing some multilateral agreement, the demand that we should build up to the full amount of tonnage permitted under the Washington and London agreements may be irresistible a year hence.

The League Assembly.—The Special Session of the Assembly, which has been called at China's instance to deal with the Far Eastern situation, has shown a decidedly different temper from the Council. Although the Great Powers, as our League correspondent observes in a dispatch which we print on a later page, have continued to play a very cautious rôle, the representatives of the small countries have made it clear that they regard Japan as the aggressor; that they look upon her invasion of Chinese territory as a direct menace to their own security; that they view this as a test case of the efficacy of the League; and that they consider it essential, if the League system is to function effectively in world affairs, that it should vindicate itself by securing the withdrawal of the invader as a preliminary to the investigation of the merits of the dispute and the arrangement of a settlement in some accord with justice. Last Friday the Assembly passed a first resolution, calling upon the Japanese and Chinese Governments to take steps for ensuring that the cessation of hostilities should be effective; asking the Powers with special interests in Shanghai to keep the Assembly informed of the military situation; and recommending that negotiations should be entered into by the Chinese and Japanese representatives, with assistance from the neutral authorities on the spot, "for the conclusion of arrangements which shall render definite the cessation of hostilities and regulate the withdrawal of the Japanese forces." Using the tactics which he has so often employed triumphantly on the Council, Mr Sato contended this last phrase, in which Japan only is mentioned, but—with or without mental reservations—he gave And, on the suggestion of M. Motta (Switzerland), the vote was taken by roll-call, so that the unanimity of the

Assembly should be manifest. It is noteworthy that the feeling in the Assembly for the vindication of the Covenant is felt and expressed by the small countries of all categories: not only by the ex-neutrals—e.g., Switzerland and the Scandinavian countries—but equally by Belgium and Czechoslovakia, who are allies of France, and by Canada and South Africa, who are fellow-members, with the United Kingdom, in the British Commonwealth. The Great Powers will do well to take good note of the attitude of their smaller associates. When Sir John Simon spoke he made the positive suggestion that the Assembly should take occasion to re-affirm the terms of the Covenant and the Kellogg Pact. Such a declaration would be important, and would bring the States Members of the League into line with the attitude of the United States, as set forth in Mr Stimson's letter to Senator Borah. Indeed, it is evident that Sir John Simon is now working in Geneva in close harmony with Washington. But pious affirmations of principle *in vacuo* are obviously not enough. There can be no advance at all towards a settlement until the Japanese troops have withdrawn from Shanghai, and the Assembly will probably remain in session until that much, at least, has been accomplished.

Shanghai.—Meanwhile, there is neither peace nor truce at Shanghai, but merely a cessation of fighting; and this cessation is incomplete, for there appear to be frequent skirmishes and exchanges of fire, and any one of these incidents might lead to serious operations—as witness the whole history of these hostilities. Precise and trustworthy information is now difficult to obtain; for the front has moved to a distance from the city at which it no longer comes under the direct observation of the neutral forces that are guarding the two foreign settlements. It is manifest, however, that the Japanese have made no motion to withdraw, but that, on the contrary, they have been reinforcing their Shanghai Army—a fact which the Japanese Government admits, but defends on the ground that it has merely refrained from countermanding the reinforcements which had already been under orders to sail while the Japanese offensive was in progress. There is unofficial talk, however, of keeping at least one Japanese division quartered in the International Settlement in perpetuity. Presumably we shall hear about this when we learn the new Japanese armistice terms, which were communicated to the Chinese authorities at Shanghai, through Sir Miles Lampson, on Wednesday. In the Settlement itself, relations between Japanese and Chinese are as tense as ever; the municipal police are finding it extremely difficult to keep the peace; and the Japanese naval and military authorities are threatening once again to take the law into their own hands.

And Japan.—At this moment, the League of Nations Commission of Inquiry is en route to Shanghai from Japan, where it has been carrying out the first stage of its investigations. The Japanese authorities have assiduously flattered the Commission; but Lord Lytton and his colleagues were perhaps more deeply impressed by the fact that one of the distinguished private citizens of Japan, Baron Dan, who gave them hospitality, was assassinated next day by a young fanatic who believed that Baron Dan had been guilty of unpatriotic business transactions. The crime is sensational, owing to the prominence of Baron Dan, who is head of the firm of Mitsui—one of the two outstanding business concerns in Japan. It will be recalled that Mr Inouye, the Finance Minister in the late Government, was assassinated by another young fanatic—an associate of Baron Dan's murderer—as lately as February 8th; that Baron Shidehara's life has been threatened; and that, only last year, a former Prime Minister of Japan, Mr Hamaguchi, died of wounds previously inflicted on him in a similar attempt. On the 4th of this month Dr. Nitobe, who was an Assistant-Secretary-General of the League of Nations from 1919 to 1926, was dragged out of hospital by a party of ex-officers and compelled to recant a statement to the effect that militarists may be as dangerous as Communists. The plain fact is that in Japan, at this moment, to be both liberal-minded and distinguished is tantamount to being in danger of death by criminal assault. We do not believe that this

state of things can endure; and, if there is not sufficient public feeling and public spirit to put a decisive end to this campaign of reactionary crime, we venture to prophesy that things will end in an equally violent swing to the opposite political extreme. If the internal condition of Japan is thus extremely unstable, we must rate still lower the stability of the spurious Manchurian Government, which has been installed this week at Changchun. The *ci-devant* Emperor, Mr Henry Piu, would have been better advised to go on living happily ever after at Tientsin than to clamber on to his wall again. For Humpty Dumpty can hardly hope to survive a second fall without some breakage.

The Danubian Problem.—Once again the problem of the Danubian States is to the fore. This will always be the case, when Europe is in difficulties, until some more reasonable economic arrangement is made in that part of the world. It is not chance that made Austria the trail that set light in Europe to the financial crisis of last year, or that her troubles followed so closely on the failure of the project of an Austro-German Customs Union. It is no accident that Hungary was the first of the States of Europe to declare a moratorium on its external debt. We are faced here with the consequences of an unsound economic system which has been set up for political reasons. It is now almost universally admitted that something must be done to correct this mistake. The bankers and investors have certainly learned the lesson; and the Governments of the four chief Powers of Europe are so clearly convinced of the necessity for action that steps have been taken to promote discussions between the Little Entente Powers and Austria and Hungary. But what form is the new regime to take? On that the Powers are not agreed, and it has yet to be seen whether there is the possibility of a common opinion even among the parties directly concerned. In favour of progress there is the fact that the evident failure of the present system makes the present a more favourable moment for a *rapprochement* than any since the war. But when the parties come to close grips it would appear that none of the States is yet ready for a political confederation, even if powerful neighbours were ready to acquiesce. The stumbling-block of many unsolved political questions may—it is suggested—be overcome by a five-year political truce. But even if ambitions are confined to an economic *rapprochement*, it would seem that vested interests are too strong to permit us to envisage a complete Customs Union—one of the greatest difficulties being the perennial problem of agricultural communities with differing standards of living. We are thus driven back to the possibility of a preference system which has been so many times explored before. The experts of some of the countries concerned are once again studying together the various forms which such a scheme might take. To reach agreement will require very great determination, and M. Benes—one of the most important of the small band of statesmen from whom the impulse must come—is fully occupied at Geneva in the

important post of rapporteur to the General Committee of the Disarmament Conference. Even if internal agreement is reached, the old external difficulties remain. To what sort of preference will third parties consent, and will Germany and Italy agree to a beginning being made with a new European group to which they are not parties from the outset? To retrace—in the economic sphere at all events—the path entered upon by Central Europe as a result of the Peace Conference is a task second only in importance to that of creating real peace between France and Germany. But it is one to tax the resources of the wisest statesmanship. If the ground is carefully prepared this is perhaps one of the problems in which the Conference of Lausanne may be able to point the way to a solution.

President De Valera.—Dail Eireann met on Wednesday for the first time since the general election, and elected Mr De Valera President of the Executive Council of the Irish Free State, in the room of Mr Cosgrave, by 81 votes to 68, the official Labour Party voting, as was expected, with Fianna Fail. Mr De Valera then announced the names of his Cabinet, which is composed exclusively from members of his own party. Mr Sean Lemass, who is generally regarded as Mr De Valera's ablest lieutenant, becomes Minister for Industry and Commerce, an appointment which should please the Labour Party, who have declared that their support of the new Government is conditional upon the pursuit of a vigorous industrial and commercial policy. The importance both of external trade relations and of the Shannon hydro-electric scheme will also have weighed with Mr De Valera in choosing Mr Lemass for this post. The position of Vice-President and Minister for Local Government goes to Mr Sean O'Kelly, and Mr Sean MacEntee becomes Minister for Finance. Other Ministerial appointments are: Land and Fisheries, Mr Patrick Rutledge; Agriculture, Mr James Ryan; Defence, Mr Frank Aiken; Education, Mr Thomas Derrig; Justice, Mr James Geoghegan; Posts and Telegraphs, Mr Joseph Connolly. In the election of the Speaker, the Fianna Fail candidate, Mr Frank Fahy, received 79 votes against 71 for the outgoing Speaker, whose re-election was urged by Mr Cosgrave on the ground that the conversion of the office into a political one was against the spirit of the constitution. The complete results of the general election are now available. The distribution between parties of the first preference votes and seats secured is as follows:—

Party.	First Preferences.	Seats.	Votes per Seat.
Fianna Fail	566,325	72	7,800
Cumann na nGoedhael ...	449,779	56	8,000
Labour	98,263	7	14,000
Farmers	34,989	4	9,000
Independents	118,872	13	9,000

The above results are very interesting in two respects. In the first place they show that the system of proportional representation succeeds in apportioning seats to the voting strength of each party far more accurately than the single vote method of election. Secondly, they show that only a minority of the votes are in favour of a departure from the Treaty position. The Fianna Fail poll includes all those who are in favour of such a policy, and probably a good many who are not, having voted against the late Government for other reasons; while it may be taken that every vote cast for every other party is a vote in favour of maintaining the Treaty relationships.

Bank Rate.—For considerations which we advance in a leading article, we welcome the decision of the Bank of England authorities on Thursday to reduce Bank rate once more by a full point. So long as bull speculation in sterling maintains an abnormal premium on "forward" pounds, money rates in this centre might have to fall to a very low level before they became deterrent to an influx of foreign funds in search of profit through a rise in "spot" exchange. Indeed, it may be questioned whether the technical effects of even a 3 per cent., or lower, Bank rate could be relied upon to counter altogether the effects of bull psychology in view of the magnitude of the British-owned assets which might be repatriated if their holders were convinced that, given the outlook for sterling, such

a process would be profitable. We trust, however, that a 4 per cent. Bank rate may be regarded as evidence of the Bank's determination to make it clear by its policy that it desires to discourage a capital influx which would not be of interest to this country, and which would be bound to add a further disturbing influence to the world's entire monetary system.

February Trade.—The preliminary figures of overseas trade in February show an excess of imports over exports of merchandise amounting to £34,639,000. This balance is greater by £8,735,000 than the figure for January, and £8,638,000 greater than a year ago. Exports of United Kingdom produce and manufactures show a drop of about £1 million in the month to the figure of £30,012,000, the decline being divided among all classes of exports. Re-exports of raw materials and "semis" were on a slightly larger scale. The big change occurred in imports, which totalled £70,108,000, against £62,266,000 in January. Every class of imports, except, unhappily, raw materials and mainly unmanufactured articles, shows a big rise on the month. Imports of food, drink and tobacco, at £33,616,000, are up by £2 millions, and imports of wholly or mainly manufactured articles by £7 millions, raising that item to £20,049,000. It is impossible, however, to deduce from these figures any conclusions as to the prospective state of our trade balance, since they were undoubtedly influenced heavily by abnormal imports seeking to escape the new Customs tariff, which came into force on March 1st. The March returns may also be expected to show traces of the same movement, as imports during the last few days of February will be included therein. These none too satisfactory trade returns should be weighed against the recent rise in the value of sterling before any attempt is made to base a long-term policy on what may prove to be a fictitious and impermanent strength derived from capital movements.

Unemployment.—The latest unemployment return, relating to February 22nd, does not show any very positive trend. Following the rise of 220,000 in total numbers unemployed, which occurred between December 21st and January 25th, the figure has now fallen by 27,000 to 2,701,000. But as the official announcement states that comparisons with the previous month's figures are affected "as a result of administrative and legislative changes," the apparent slight improvement has to be discounted to allow for such numbers as may have ceased to register in consequence of being disallowed benefit under the new regulations. It is perhaps significant that women accounted for two-thirds of the month's fall in the total unemployment figure. The Ministry of Labour reports that during the past month conditions improved in the textile industries and in metal goods manufacture, whereas there was some decline in employment in coal mining and the jute industry. On the whole, we appear to be just holding our own so far as the volume of employment is concerned.

Professor Clay on Finance and Industry.—An important address was delivered last Wednesday to the Manchester Statistical Society by Professor Henry Clay, who is economic adviser to the Securities Management Trust, a subsidiary of the Bank of England. After emphasising the importance of new industries in securing the prosperity of the country, Professor Clay proceeded to analyse the means by which the capital necessary for industrial expansion was raised. The larger issuing houses had the experience, resources and prestige required, but their historical development had made them more interested in governmental and quasi-governmental loans than in industrial flotations, and in overseas rather than internal issues; while the fact that they were only agents for the investment of other people's money made them excessively cautious, so that they almost ceased to function when industry was depressed and it was most important to promote the flow of savings into industrial investment. Internal industrial issues were undertaken more usually by smaller finance companies or by individual stock

brokers and small syndicates formed for the purpose, but these agencies were limited in their operations by their small revenues and prestige. The banks had always refused to make long-term loans to industry, though they played a rather larger part in the long-term financing of industry than this principle would imply, since a good client, known to have an expanding business in which he left a large proportion of his profits, and needing an advance for some purpose usually served by a long-term loan, would usually get it. "We are left," said Professor Clay, "with the impression, which I believe is justified, that the chief source of long-term capital for new enterprise is the savings of individuals and firms which are applied direct through no intermediate agency. If the chief need of British industry, he continued, was the assistance and encouragement of firms that had found a way to turn the flank of the depression, it would appear unwise to subject these savings to drastic reduction by direct taxation. We earnestly commend to Mr Chamberlain, when he considers the distribution of any surplus he may have available in his next Budget, the possibility of relieving company reserves of some measure of taxation. Professor Clay spoke also of the tendency, which the amalgamation and extension of the joint-stock banks had fostered, for the earnings of the people to flow to the great reservoir in London, whereas part of them would, before the war, have been invested locally in some relative's or friend's business. Professor Clay would not propose that the joint-stock banks should follow Continental practice in making long-term advances, but he did declare—and we warmly endorse his suggestion—that they should consider the possibility of adopting the American practice by which banks establish and maintain subsidiary companies for the purpose of providing long-term capital.

The "More Looms" Dispute.—Our Manchester correspondent writes:—The representatives of the Cotton Spinners' and Manufacturers' Association and the Operative Weavers' Amalgamation have at last reached an agreement regarding the "more looms per weaver" system in the cotton industry, and a series of meetings are being held to discuss the proposals. Particulars of the draft agreement were issued in Manchester this week by the Cotton Spinners' and Manufacturers' Association. In a preamble, the employers state that the agreement is based on the understanding that there will be practically no more work involved in the running of more looms than under the normal four-loom system. The price list agreed will enable a weaver operating six looms and producing the standard cloth to earn an average wage of 42s. per week, but the employers state that this does not legally bind them to pay that wage as a minimum. The agreement covers only plain cloths, and where no provision is made for other fabrics the appropriate percentages contained in the existing Uniform List shall operate. The price basis is 18d. per 100,000 picks. The speed of the looms is to be reduced, the reduction recommended being 10 per cent. of the average normal speed of the four-loom system. Ancillary labour is to be provided for cleaning, sweeping, oiling and carrying heavy cloths. The mills will run 47½ hours per week. The total number of weavers regularly running less than six looms shall be limited to 20 per cent. of the total number of weavers in the mill engaged on this system, and any displacement of labour is to be carried out in such a way that minimum hardship is involved. The employers state that they cannot agree to any alteration in the present practices regarding fining. The principal point not yet agreed upon is that of the fall-back wage, and on this matter the employers have suggested a wage of 66½ per cent. of the normal average wage of weavers engaged on the system, irrespective of the number of looms stopped, and the operatives have suggested a fall-back wage of 80 per cent. with a minimum of 35s. per week. Juvenile and elderly weavers running a lesser number than six looms and other weavers who for special reasons are desirous of running a lesser number of looms are to be paid according to the new list. Both sides have yet to ratify the proposed agreement; it is expected that a final decision will be reached on March 19th.

VIEWS

Imperial and Parochial

Soundness of judgement usually rests upon an ability to combine the 'close up' with the bird's-eye view. To encourage the wide angle, the Westminster Bank issues a periodical 'Review' of current trade conditions, with surveys based on local reports drawn from all over the country. Readers of *The Economist* may obtain copies monthly, without cost, on addressing a request to the Manager

WESTMINSTER BANK

International Cotton Statistics.—The International Federation of Master Cotton Spinners' and Manufacturers' Associations has published its usual statistics of cotton consumption and stocks for the half-year ended January 31st last. The returns show a further increase in consumption; the amount of all kinds of cotton used throughout the world during the six months was 11,470,000 bales, against 11,324,000 bales in the previous half-year and 11,164,000 bales in the half-year ended January 31, 1931. In Great Britain there has been an appreciable increase; for the past half-year the amount used was 1,212,000 bales, against 988,000 bales in the previous six months and 976,000 bales in the half-year ended January 31, 1931. With regard to the different kinds of cotton, the figures show that during the past half-year there was an increase in the consumption of American qualities of 662,000 bales, compared with the same period in last year, the totals being 5,940,000 bales, against 5,278,000 bales. On the other hand, a decrease of 289,000 bales in the use of East Indian cotton is reported, the comparative figures being 2,724,000 bales, against 3,013,000 bales. As anticipated, there has been an increase in the consumption of Egyptian cotton, the figures being 485,000 bales, against 394,000 bales. With regard to sundry cottons, there has been a reduction in the consumption of 158,000 bales, the total figures being 2,321,000 bales, against 2,479,000 bales. The tables show that there has been a tendency during the past half-year for India, Japan, Germany, Italy, Czechoslovakia, Belgium, Austria, Sweden, Canada and Brazil to use more cotton, but the consumption of the United States, France, Russia, Spain, Poland, Holland, Portugal and Hungary has decreased. The total world's mill stocks of all kinds of cotton on January 31st last were 4,636,000 bales, against 4,586,000 bales on the same date last year, the figures for American descriptions being 2,710,000 bales, as against 2,427,000 bales same time in 1931. In market circles there is always considerable interest in the outlook for the consumption of American cotton, and according to the returns now issued it looks as though the consumption for this season will be between 12,000,000 and 12,500,000 bales, as compared with rather less than 11,000,000 bales in the previous season. As the crop for this season will be nearly 17,000,000 bales, the carry-over on July 31st next will probably be increased by over 4,000,000 bales, making the total about 13,000,000 bales.

Sterling and Gold Prices.—The rate of the recovery which we welcomed a fortnight ago in our index of gold prices has been checked during the past fortnight, though the latest figure, 90.3 (September 18, 1931 = 100), still shows a slight upward tendency. As was to be expected from the rise in the exchange value of sterling, our sterling index of primary products shows a sharp fall. This is

reflected to a minor extent in the complete index, which has fallen during the past fortnight by approximately 1 per cent. :—

A more detailed analysis of the regular *Economist* index of British prices is given below :—

"ECONOMIST" INDEX.

(1927 = 100.)

	Sept. 18, 1931.	Feb. 24, 1932.	Mar. 9, 1932.
Cereals and meat	64.5	72.3	74.3
Other foods	62.2	68.6	68.1
Textiles	43.7	53.7	52.4
Minerals	67.4	75.3	73.4
Miscellaneous	65.8	66.7	65.2
Complete Index ...	60.4	67.0	66.3
1913 = 100	83.1	92.2	91.2
1924 = 100	52.2	57.9	57.3

It will be observed that the cereals and meat group was an exception to the declining tendency of the others.

International Production in 1931.—In the following table we have converted the indices of the physical volume of production of various countries to a percentage of the average of 1928 :—

(a) Quarterly Index. (b) Adjusted for seasonal variations. (c) Partly adjusted for seasonal variations. (d) Provisional.

A comparison of the past year with 1930 shows that the decline was most pronounced in Canada, Germany, and in the United States. The figures for these three countries show a fall of 16.5 per cent., 18.2 per cent., and 15.7 per cent. respectively. In France, where the effects of the world depression were not felt seriously until the end of 1930, the volume of production declined by over 11 per cent. in 1931. A comparison with 1928 shows that the lowest level has been reached by the United States, Germany and Poland. At first, the setback was most marked in the industries engaged in the output of producers' goods. In 1931, however, the reduction in the spending power of the public, particularly in North America and in Germany, led to a sharp contraction in the demand for the less indispensable consumers' goods.

British Migration in 1931.—The emigration and immigration statistics for 1931, published in last week's issue of the *Board of Trade Journal*, illustrate the truth of the old saying that in bad times the sheep return to the fold. For the first time (excluding the war period) since 1876, when complete returns became available, a net inward balance of British subjects has been recorded. The number of British subjects taking up permanent residence abroad declined from 143,686 in 1929 to 92,158 in 1930, and 34,310 in the past year. On the other hand, the inward movement increased from 56,217 in 1929 to 66,208 in 1930 and 71,382 in 1931. The net movement of British migrants between the principal non-European countries and the United Kingdom is shown below for the past two years :—

Countries.	1930.	1931.
British North America	- 15,254	+ 10,244
Australia	+ 4,291	+ 7,288
New Zealand	- 837	+ 1,357
British South Africa	- 143	+ 1,225
India and Ceylon	+ 2,945	+ 3,367
Other parts of British Empire	+ 1,199	+ 2,549
Total, British Empire	- 7,799	+ 26,030
United States	- 19,405	+ 8,908
Other foreign countries	+ 1,249	+ 2,134
Total	- 25,955	+ 37,072

The inward movement has been most marked from the United States, Australia and Canada, which normally record the largest inflow of British subjects. The provisional figures of departures under the Empire Settlement Act show a total of only 1,921, against 11,509 in 1930 and 34,476 in 1929. The result of this tendency has obviously been to aggravate further the unemployment problem in this country by adding to an already congested labour market.

The Putsch in Finland.—The Fascist pronunciamento in Finland, which appeared so threatening a week ago, has had a happy ending—happy for all concerned, since the failure of the insurrection has not been followed by reprisals. The resolute preparations for the maintenance of lawful authority which were made by the Government at Helsinki were accompanied by a manifesto, in which President Svinhufvud made a personal appeal to the loyalty of the Civic Guards; and this dual action had its effect. The insurgents found themselves without support; and upon the approach of the Government forces they wisely held a religious service as a preliminary to laying down their arms, while the Government forces, on their side, were careful to give them time and to avoid any possibility of untoward incidents. The disarmed Lapuans have now peaceably dispersed, and they are hardly likely to repeat their performance in a hurry after this fiasco. The outcome ought to have a moderating influence in all the uneasy countries of Eastern Europe. Above all, it ought to reassure the Soviet Government, and to further the efforts that have been made during the last few months to bring about a political and military *détente* between Russia and her European neighbours. President Svinhufvud and his colleagues are to be congratulated on the success with which they have handled this troublesome affair.

L'Affaire Lindbergh.—The kidnapping of Colonel Lindbergh's baby forms a story which holds more than the poignancy of personal grief and more than the mere newspaper sensationalism which has made a seven days' wonder of this outrage on the household of America's popular idol. The inability of the police to find the slightest trace of the missing child, the appeals by Colonel Lindbergh to the "underworld," and the despairing recourse to the services of two well-known gangsters as potential intermediaries in negotiations with the undisclosed leaders of a supposed kidnapping "racket"—the whole extraordinary chronicle is a curiously revealing commentary on one angle of the social life of the United States. American "Big Business," individualist by strong inclination and tradition, has stood consistently for a weak, compliant administration. The nation-wide organisation of "rackets" is the price which the public

is now paying for that policy. From the doctrines of "100 per cent. pure" American capitalism, on the basis of unrestricted private enterprise, it is no very long step to Al Capone.

Sun Life Assurance Society.—Unfortunately the customary quinquennial valuation of this society fell due to be made on December 31, 1931. As is well known, the society has followed an investment policy of eschewing preference shares and ordinary shares, and of confining its Stock Exchange securities to fixed-interest securities having a fixed date of redemption. Again, its holding of British Government securities has for some years consisted preponderantly of "shorts." Nevertheless, the society has evidently suffered heavily from depreciation last year, much more heavily, indeed, than might have been expected. From a note to the balance sheet it appears that the book values of the investments are in excess of the market values by a sum equal to 5 per cent. of the total assets. Since the total assets amount to nearly £38 millions, the uncovered depreciation totals just under £2 millions. Notwithstanding this, the directors certify that the assets are in the aggregate fully of the book values (less a newly created investment reserve fund of £600,000). An examination of the items in the balance sheet would seem to indicate that the society has been hit by reason of its unusually large holding of foreign bonds, amounting to 14 per cent. of the total assets, and to a lesser extent by a substantial holding (11 per cent. of the total assets) of Dominions and Colonial bonds. As for the results of the actuarial valuation, the figures are set out below :—

	1922-26.	1927-31.
Profits from normal trading	2,323,958	4,305,213
Profits from exchange	21,653	16,246
Brought forward from previous valuation ...	156,350	297,306
	2,501,961	4,618,765
Allocations :—		
To Bonuses to policyholders	1,902,682	693,439
„ Shareholders' account	211,425	82,480
„ Superannuation fund	90,548	209,106
„ Investment reserve fund	...	600,000
„ Carried forward	297,306	3,033,740
	2,501,961	4,618,765

In commenting on these figures it may be noted that the 1931 valuation has been made on a less stringent basis than formerly, since a portion of the business has been valued at 4 per cent. instead of 3 per cent. The chairman stated at the annual meeting that, as a result of this change in the valuation basis, the sum released from reserve amounts to £150,000. In face of these figures, and of the depreciation still unprovided for, the society has wisely postponed a general distribution of surplus for one year. The sum of £693,000 now allocated to bonuses represents interim bonuses paid on claims during the last five years, together with the cost of one year's bonus at the normal rate in respect of 1927, and the distribution at the end of 1932 will, therefore, be in respect of a full quinquennial period. Hardship to the older policyholders as a result of this course will be avoided by the decision to pay interim bonuses for the current year on claims at the normal rates and on surrenders at three-quarters of the normal rates. After allowing for the cost of the year's bonus distribution now made, and for the uncovered depreciation, the carry-forward is reduced to approximately £1½ millions (approximately equal to the cost of three years' bonuses). With regard to the transactions of the year 1931, the accounts still bear clear indications of the disturbing effect of single-premium business. Surrenders are swollen as a result of the discontinuance of many of these policies. The new business of the year at £15,215,000 represents an increase over that of the preceding year by nearly £2 millions, a very creditable achievement in the circumstances. The rate of interest has declined from £5 0s. 10d. per cent. net to £4 16s. per cent. net, a measure not only of the rise in income tax, but also, no doubt, of the difficulties in the collection of interest on foreign bonds.

The Ottawa Conference.—Our Ottawa correspondent writes:—A beginning has now been made with the work of preparation for the forthcoming Imperial Economic Conference. For some weeks past officials have been collecting data bearing upon the problems facing the Conference and a special sub-committee of the Bennett Cabinet has been appointed to take charge of the organisation and preparatory work. One of its meetings was recently attended by Sir William Clark, the British High Commissioner, and he participated in a preliminary exploration of certain problems. Meanwhile, the officials of the Canadian Manufacturers' Association are working at their survey of the local industrial field and preparing a list of products made in Britain which they think could be placed in the free list, and leading industrialists have been requested by the Government to submit a report about the possible effects of a preference to British goods upon their business. Nothing more has been heard officially about the new commercial treaty with New Zealand which Mr Stevens, the Minister of Trade and Commerce, negotiated last month with a member of the New Zealand Government at Honolulu; it was subject to the approval of both Cabinets, and there is a suspicion that some adjustments have been necessary to placate objectors. This week the Government accepted and lent its influence to secure passage for a private member's resolution advocating a duty upon raw wool, and it is now expected that the Budget will include such a general duty with free preferential entry for New Zealand and Australian wool. The Commons passed a resolution asking the Government to exert all its influence to secure a removal of the British embargo upon Canadian potatoes, but the agitation, resulting in a demand for a boycott of British goods which had been fomented by Lord Beaverbrook in the potato-growing counties of New Brunswick, has been frowned upon by responsible politicians like the Premier of New Brunswick and has now died down. It could hardly prosper after it became known that Canada had in force an embargo upon British potatoes.

Overseas Correspondence.

LEAGUE OF NATIONS.

The Assembly — The Shanghai Powers — Briand.
(FROM OUR CORRESPONDENT.)

GENEVA, March 8.

The scepticism which my last week's letter reflected, a few hours only after the reported armistice conditions agreed to on the "Kent," was quickly and unhappily justified. Japan went on blandly fighting until it suited her to declare the offensive stopped for the time being; and she has been fighting more or less ever since and landing thousands of reinforcements to show her peaceful determination. The spectacle of the League's failure to enforce an effective cessation of hostilities has given rise to very genuine anxiety and apprehension.

Nothing has been more striking or more painful during the proceedings of the Special Assembly than the disquiet caused by the rôle played by Great Britain and the other big Powers on the Council. Indeed, it is said in many quarters that Great Britain, whose policy is regarded as particularly disappointing, can no longer be considered the accepted champion of the rights of small and weak Powers, and rarely, since the birth of the League, has there been so sharp a cleavage between the caution of the Great Powers and the keenness of the smaller nations to vindicate the authority of the League and to ensure the observance of its Covenants, on which their security so vitally depends. This point of view has again and again been emphasised by the steady flow of speeches from the smaller Powers, which sometimes bluntly and always in effect have condemned Japanese action and the Council's reluctance to do or even to say something effectual. The Great Powers

have been trying to manoeuvre themselves out of an uncomfortable situation by bringing the Assembly to approve what they have done and not to ask for more; but there are signs and hopes that this may be stubbornly resisted.

The Assembly began well. A resolution was tabled calling for a conference at Shanghai comprising the representatives of China, Japan, and the other Powers with interests in Shanghai, to draw up a plan to secure definite cessation of hostilities and "to regulate the withdrawal of Japanese troops." The Japanese representative at once tried to get additions covering political requirements of Japan in connection with the withdrawal of Japanese troops, and the President (M. Hymans, Belgian Foreign Minister) argued the point until his patience was tried. "Il faut que l'Assemblée parle," he almost snarled. There was a moment or two of waiting, until the Swiss Foreign Minister rose and pressed for the adoption of the resolution as it stood, observing that under Article 15 they could do so without Japan's assent. This was applauded with relief as the first outspoken word for five months. M. Benes supported, and the Japanese representative reluctantly gave way, but in the sense that he accepted the interpretation of the President, while recognising that it was only the President's own opinion. As a matter of fact, the President gave nothing away, but unless the Shanghai Powers show some sort of firmness, it is confidently assumed that Japan will insist at the Conference on her own interpretation of the President's opinion in order to press for the political conditions which the Assembly explicitly rejected.

The resolution was followed by a long series of speeches which are likely still to continue for a day or two. They have mostly been clear in their direction, except for those of the Great Powers, which have contributed little or nothing and have been mainly on the defensive. It remains to be seen whether the Assembly as a whole will have the strength to galvanise the Powers to agree to some consideration of the fundamental issues at stake; their present attitude is one of prolonged and lofty impartiality, according to their own conception, but the simple fact is that for the most part the attitude is attributed to sympathy with Japanese conduct and aims. Sir John Simon's insistence on the importance of keeping an open mind until the Assembly is fully informed suggested only that he cannot yet say whether China has invaded Japan or Japan invaded China. For the rest, his speech was an advocacy of a reaffirmation of the principles of the Covenant and the Paris Pact. That is only valuable if the principles are applied; for the application of the principles is all that matters. It is no use repeating *ad nauseam*, for example, that force must not be used; what is required is a decision as to who has wrongly used force. Sir John's speech was also supposed to be an approach to the policy laid down in the Stimson-Borah Note. It is difficult to discover it. He did not, in fact, mention the Nine Power Treaty, but if it was his intention to repair the error of failing to support America's declaration that she will not recognise any situation in violation of existing treaties, it is unfortunate that Sir John was not careful to make it plain. What is the objection to saying so as definitely as Mr Stimson to China and Japan, instead of wrapping it up in a declaration (not yet drafted) on the general principles of the Covenant, which are not disputed?

There is a general suspicion that Manchuria is being sold for peace and quiet in Shanghai, and that the so-called impartiality of the Great Powers is an excuse to avoid, as long as possible, if not altogether, a pronouncement against Japan. It is clear from Sir John Simon's over-emphasis on the duty of mediation (which has failed for five months) that it is his hope and that of the representatives of other Powers not to have to say at any time whether Japan has kept the treaties but merely to use their good offices to reach a settlement regardless of the methods employed by Japan and probably, in order to save political embarrassments, regardless even in a large measure of China's political claims in Manchuria. Such action would be fatal to everything that has been done since the war to build up a new conception of international relations, would be fatal to British interests, and would be

a deification of "the scrap of paper" philosophy amongst the nations of the world. The fight of the majority of the small States is for the kind of policy outlined in the four points summarised in the *Economist* last week. The attitude of the Great Powers towards such a comprehensive plan depends upon public opinion. Unfortunately, the deplorable attitude reflected in some English Conservative newspapers—it is worse still in Paris—gives little promise of sufficient public manifestation of opinion to encourage the Great Powers in such a course.

An event that adds to the depression here is the death of M. Briand. He was, without doubt, the greatest figure who ever represented any Government at Geneva. He lent distinction to League debates by his eloquence, humour and conciliatory temper, and, whatever his critics may have said of him, he won a solidly established reputation at Geneva as a sincere and ardent worker for peace. The future of the League depends upon those who are prepared to carry on his tradition.

UNITED STATES.

Finance — Money — Prices.

(FROM OUR CORRESPONDENT.)

NEW YORK, February 26.

THE political strategy of those with eyes glued to the general elections of next November makes it difficult to follow the Washington movements, but it is becoming clear that in administration and Congressional circles the seriousness of the economic situation is freely recognised. Congress is working hard on measures to raise enough revenue to balance the Budget.

Many people would feel better if more attention were also given to reducing Federal Government expenditure. More sincerity in that direction will probably come later as tax collections fall, but just now attention is centred on revenue-producing schemes, with side diversions such as the anti-hoarding "baby" bond issue and the Glass-Steagall bank credit measure. After opposing a general manufacturers' sales tax in favour of excise taxes on special articles, the Treasury is now helping Congress leaders to frame such a tax. It is hoped to obtain between five and six hundred millions in revenue from it in the next year. Higher income and other taxes are expected to contribute about \$450 millions, so that the gap of \$1,241 millions in estimated expenditures for 1923 is greatly narrowed.

A reduction in the Federal Reserve Bank's discount rate to 3 per cent. from the $3\frac{1}{2}$ per cent. rate ruling since last October was expected, although not this week, by the majority of the bill dealers, some of whom had made contracts at the old rates into next week. Two days ago the Federal Reserve Banks turned heavy buyers of bills, explaining that it was for replacement of maturities, which had been unusually heavy. The real reason is more apparent now, and a cut in the bill buying rate automatically followed the discount rate reduction.

That the Reserve Banks were unable to add to their bill holdings by the buying is shown by the week's statement. Bills dropped \$13 millions, bond holdings were unchanged, member bank borrowings declined \$11 millions and total reserve bank credit outstanding fell \$47 millions. Money in circulation dropped \$17 millions and the gold stock fell \$19 millions. President Hoover is released at the rate of \$20 millions a week, but his estimates are necessarily guess work. Most bankers believe that, left alone, the hoarding movement will disappear. A strenuous campaign is planned by Washington to bring more money out of hoarding and increase bank deposits, but the efficacy of the scheme is seriously doubted by many bankers, most of whom feel that it would be better to say and do nothing. The Treasury has authorised the issue of special one-year certificates in denominations as low as \$50, bearing 2 per cent. interest, and redeemable in sixty days on notice. It is planned for

the banks to sell them among the public, and, to prevent loss of deposits through subscription by those already having money in the banks, the banks will be allowed to retain the subscription money in the form of Treasury deposits, paying only one-half of 1 per cent. for it. If the Treasury makes no call for these deposits, probably no less will result, but few expect any great good to come of the matter.

Discount rate reduction is regarded as rather a bold step in the fact of gold exports, and it is expected to reassure those who have been shivering at the efflux of the metal. It is a logical step along the course adopted by the central banking authorities a few weeks ago leading toward an end of deflation. No one thinks that the lower rate will go far toward lifting business activity at this time, but it will be helpful along with other measures which have been taken, such as the widening of the lending power of the Reserve Banks under the Glass-Steagall Bill and the operations of the Reconstruction Finance Corporation. Lower discount rate will automatically make it cheaper and easier for the Treasury to put through its heavy financing programme of the next few months and will aid in financing the Reconstruction Corporation. Wall Street does not anticipate any stimulation to the gold outflow, except, perhaps, temporarily, and the Reserve feels itself well able to meet all demands for gold likely to be made upon it.

For the week ended February 25th gold exports fell to less than \$10 millions, but there was a net gain of \$12 millions of gold held under earmark. It is expected that France will take out more gold and no objection will be made to it. In its current bulletin the Federal Reserve Board notes that in recent weeks the Bank of France has once more converted a considerable amount of its foreign exchange holdings into gold.

Bank credit continues to decrease, but more slowly. Brokers' loans, after a slight gain last week, resumed their decline with a drop of \$10 millions, but total loans on securities by member banks in the New York district fell \$20 millions. Reporting member banks in the past week report a drop of \$30 millions in security loans. Investments fell nearly as much, about half in Government securities. However, the bank pressure against the Government bond market has almost disappeared, and prices have risen for a fortnight without interruption. The establishment of a central office here to handle the liquidation of national banks which have failed is helping the situation.

Treasury financing around the March 15th tax date will amount to around \$1,000 millions, and will take place entirely in short-term notes and certificates. If the year promises to bring some improvement in the financial situation, it is showing few signs so far of business recovery. The steel industry has dropped another point in its operating rate, being down to around 26 per cent., and railroad traffic is lower. Earning statements of railroads in January show, on the first reports, a decline of around 70 per cent. in net income and of 25 per cent. in gross, compared with a year ago. This is by far the heaviest cut yet suffered, and indicates that the higher freight rates which came into effect at the beginning of the year have driven some traffic to competing motor trucks. The 10 per cent. cut in wages was effective this month, but will not be fully revealed in operating statements until March. Meanwhile, the Railroad Credit Corporation has given assurance that no defaults on bond interest will be made on March 1st.

The Bureau of Labour Statistics index for wholesale commodity prices for the week of February 20th is a point higher at 66.3. The indices are as follows:—

	Week ending				
	Jan. 23.	Jan. 30.	Feb. 6.	Feb. 13.	Feb. 20.
All commodities	67.6	66.7	66.7	66.2	66.3
Farm products	54.6	51.1	52.1	50.7	50.9
Foods	65.7	63.1	63.0	62.4	62.9
Hides and leather products	79.7	79.2	79.1	78.5	78.1
Textile products	60.1	60.1	60.0	59.9	59.9
Fuel and lighting	68.0	68.2	68.1	68.0	67.8
Metals and metal products	81.7	81.6	81.3	81.0	80.9
Building materials	74.9	74.7	73.8	73.3	73.2
Chemicals and drugs	75.8	75.8	75.8	75.7	75.5
House furnishing goods	78.7	78.7	78.7	78.7	78.7
Miscellaneous	65.5	65.0	64.9	64.5	64.7

Wheat and cotton prices have shown some improvement, but metals have weakened. The copper reduction agreement of a few months ago is endangered by the fact that production has failed to keep under consumption. The revision of the Copper Export Association's rules has encountered difficulties, and there is now some pressure to permit suspensions and free selling. Companies which at the last conference worked for strict selling rules as against more drastic cuts in production are now said to have swung round to the view that the important thing is to cut production. It would not be entirely unexpected if the agreement were dissolved, and there is much feeling that only complete shut-down for principal producers, forced by weak prices if nothing else, will pave the way for recovery.

FRANCE.

M. Briand — Stock Exchange — Foreign Issues.

(BY A CORRESPONDENT.)

PARIS, March 9.

THE death of M. Briand came on France with the shock of a surprise, for nothing had been made public to suggest that the veteran statesman's illness had reached a stage at which a fatal termination might be expected. To-day, for the average Frenchman, the whole drama of the European situation is summed up in the phrase, "Aristide Briand is dead, and Adolph Hitler is candidate for the Presidency of the Reich." When Briand, in 1921, under the influence of the then universal conviction in France that "Germany will pay," attempted to enforce the reparations clauses of the Versailles Treaty, made his historic declaration that he would "seize Germany by the coat collar," and followed it up by occupying Ruhrort, Duisburg and Düsseldorf—thereby anticipating M. Poincaré's seizure of the Ruhr area for similar reasons—all France acclaimed him to the skies. His subsequent policy of concessions to Germany—Dawes Plan, Locarno Agreement, Young Plan, evacuation of Allied troops from the Rhineland—always in the belief that such obvious evidences of a desire for better relations between the two countries would lead to that moral disarmament by Germany, without which all other kinds of disarmament are worthless, has never had more than half-hearted support from the French as a whole, and its failure to produce the expected change of heart in Germany, which was its declared object, was the direct cause both of the fact that M. Briand's plan for a United States of Europe fell stillborn and of his final fall. Of Briand's sincerity and his good intentions probably no Frenchman has had any doubt, but, rightly or wrongly, so far as the average Frenchman is concerned, Hitlerism has apparently killed all chance of any revival of the Locarno policy. Whether the Tardieu plan of direct conversations with Germany, "all cards on the table," with a view to a blending of financial and economic interests, will have any better result, will evidently depend on the outcome of the pending German presidential and Prussian Landtag elections. As an alternative to friendly co-operation with a non-Hitlerist Germany there is a growing feeling here that nothing can solve the problem of restoring European economic prosperity and lasting peace except a renewed close co-operation between Great Britain and France, such as prevailed during the war. Their political interests, it is pointed out, are nowhere antagonistic, each supplements the other economically, and together they—and they alone—can enforce European co-operation.

The Parliamentary situation has improved markedly during the past week, and there is now every probability that the Budget will be passed through both Houses before the beginning of the new (nine months') financial year beginning on April 1st. The Opposition, in face of the Government's determination to secure the passage of the Finance Bill before the two Houses separate for the general elections, have formally decided to renounce everything in the way of obstructive tactics, and are now as anxious as Ministerialists to complete the Budget discussion, in order to be free to devote themselves to election-

eering. No date has yet been fixed for the elections, as to which there are three distinct courses favoured. The Socialists are anxious that the first ballots shall take place as soon as possible after the Budget is disposed of—which, according to present forecasts, should enable voting to take place during the last week in March. The Nationalist section, on the contrary, wish the date to be fixed for May 22nd, by which time the German elections will be over. Candidates belonging to the Centre Parties, on the other hand, strongly favour the selection of April 24th for the first ballots, which at present appears the most likely date to be chosen.

The Bourse, since the beginning of the year, has been actively anticipating recovery from the long-drawn-out crisis. Since December 31st quotations in the Paris market have recovered by something like 33 per cent. The general index figure representing quotations of 300 French issues of variable yield, which stood at 221 at the end of the year, is returned for the week ending last Saturday at 300, or a rise of 6 points on the week, 24 on the fortnight, and 79 since December 31st. Bank of France shares closed to-night at 14,050, against 10,950 in December, Suez Canals at 15,240 (against 11,905), Tintos at 1,740 (1,180), Royal Dutch 10ths at 1,716 (1,127), and other leaders show similar improvements. The volume of business has increased to a still greater extent, and dealings in many leading issues have, during the past week, exceeded all totals registered during the past two or three years. Dealings in Canpacs, for instance, one day last week totalled over 37,000 units of stock, as compared with a minimum during 1931 of only 245 units. Banque de Paris shares are exchanging hands at the rate of between 10,000 and 11,000 a day (against a minimum of 365 a few months back), while Wagons-lits, Royal Dutch and many others are being dealt in in almost un-hoped for volume. There is every sign that the Paris market has recovered, if not surpassed, its former activity. The public, which has persistently held aloof from the Bourse since the Oustic crash, has now returned in force to the market, and there is good evidence that a substantial proportion of the bank notes which have been hoarded for many months past has recently been transformed into active French and international stocks. If an actual boom has not yet developed, the market suggests that something very much like one has begun.

There is now a prospect that the list of foreign issues negotiated on the Paris market will be considerably lengthened by the inclusion of a number of leading American stocks, as well as several British issues which have not yet been negotiable in France. Authorisation in principle was given many months ago for the introduction here of U.S. Steel, American Telegraph and Telephone, General Electric and American Tobacco, as well as of the British Coats, Bovril and other issues, but administrative fiscal obligations have until recently placed practically insuperable difficulties in the way of the matter being carried to a practical conclusion. These obstacles have now been removed by the exemption of French banks from the heavy stamp duties hitherto imposed on them in the event of their handling such foreign issues in this country, and it is urged that all that is now necessary is for formal application to be made to the Finance Ministry for these "authorisations in principle" to be transformed into authorisations in fact, with the effect of largely broadening the scope of arbitrage business here.

GERMANY.

Politics — Konjunkturinstitut — Reichsbank.

(FROM OUR CORRESPONDENT.)

BERLIN, March 8.

THE Minister of the Interior, Herr Groener, whom Herr von Hindenburg asked to deal with Hitler's open letter to the President, has now published a reply to it. This reply is an important political document, as it shows in what irreconcilable opposition to Herr Hitler Herr Groener, whom many people here for some time suspected of a leaning towards compromise with the National Socialists,

now stands. Herr von Hindenburg himself, Groener states, could not reply to Hitler's letter, as it was published in the foreign press before the President himself had received it. "The dignity of the Head of the German State forbids a personal reply to a communication which was only formally addressed to him, and was really intended to serve as propaganda abroad."

Hitler had complained that the Social-Democrats alleged, in an election appeal, that his election would mean war and civil war. To this Herr Groener replies:—

"Though I am not a political propagandist myself, it seems to me that there is one simple way for you to defend yourself from the apprehensions which seem to you so unjust—to publish at long last a clear statement of your positive aims, and thereby to dissipate the grave anxiety which many people feel as to the development of our foreign policy and the dangers of a Bolshevistic development in the more distant future."

It is, indeed, one of the most remarkable features of this election campaign that the National-Socialist Party are avoiding any concrete statement of their objects, and especially of their economic objects. Their invariable argument is that sound economic reform is impossible until they are in power, and that therefore they will not produce their programme until then. Meanwhile they are becoming involved in the most complete contradictions. It happened quite recently that in one and the same issue of the *Völkischer Beobachter*, their principal organ, there appeared on one page an unequivocal condemnation of the proposal to nationalise the banks, while on another page was reported a National-Socialist resolution in the Landtag of Hesse calling for State banking administration. Only one thing is clear, that if the National-Socialists came into power they would introduce the highest possible protectionism.

The Institut für Konjunkturforschung, in its report for the end of February, reaches the conclusion that "with political problems still unsolved, it is scarcely possible to anticipate any definite change in the tendency of world economy during the next few weeks or months." Meanwhile, however, the Institute points out that the decline in some of the overseas raw material producing countries has been arrested, as the markets for the raw materials of the industries which produce consumers' goods have become firmer. The relaxation of the English money market is also reckoned as a favourable factor for world economy. Against this, however, must be set the intensified individualism of the various national units, in their struggle to maintain their currencies and their domestic markets, which has brought about a further decline in world trade and a complete paralysis of world credit movements.

The greatest danger of this protectionist policy of isolation lies, in the opinion of the Konjunkturinstitut, in the renewed impulse to deflation which it offers: "for no nation can afford to lag behind in the international competition to achieve the lowest level of costs, unless it wishes to see itself extruded from the steadily contracting world market, with devastating consequences to its economic life. The tempo of deflation has been especially forced, owing to the fact that the exchange of advantage enjoyed by the countries which have abandoned the gold standard has turned the race into a handicap, for in spite of the initial advantage which exchange depreciation gives these countries on the world market, their efforts to reduce costs have not been relaxed."

Deflation has not, however, been arrested, "because the hoarding of cash to the tune of many milliards—some 9-10 milliard reichsmarks in Europe and the United States since last May—undermined the deposit foundation of the banks." The Institut believes that the new legislation in America will make it easier for the banks of issue to restore to the banks by means of credits the sums which have been withdrawn from them by their depositors. The countries in which there already appears to have been a check to economic decline or even signs of revival are, according to the Institut, Great Britain, British India, Australia, the Argentine and Brazil.

In Germany, contraction has proceeded further. Apart

from purely seasonal short time, industry is only working at 40 per cent. of capacity. Industries which manufacture producers' goods are only working at 36 per cent. and consumers' industries at 50 per cent. of capacity. The most important consumers' industries, notably the textile industry, are still about 30 per cent. below the lowest level of the 1926 crisis, while the output of iron and steel in January was little over one-third of the 1926 monthly average. The greater power of resistance shown by the consumers' industries is due to the fact that real wages, at any rate those of full-time workers, are still relatively high, and also to the action of emergency benefit, in spite of successive reductions, as a sort of parachute to the fall of consumption.

The Reichsbank has reduced its rate of discount from 7 to 6 per cent. Since the reduction from 8 per cent. on December 9th, there has been ceaseless pressure for a further lowering of the rate, but the Reichsbank had good reason for resisting it. It was necessary to see first what the exchange movements would be after the turn of the year, to what extent money would flow back, and, most important of all, whether the rediscount credit would be renewed. Meanwhile, many things happened to make a reduction much easier. Of these, the most important was the development in the New York and London money markets. As America and England lowered their discount rates, the pressure from these two directions upon the German foreign exchange holdings was reduced, and in February the withdrawal of exchange from the Reichsbank practically ceased, although the foreign trade position grew perceptibly worse in January and February. This, of course, was only achieved by further tightening of the exchange regulations, restrictions in the allocation of import bills, and a ruthless closing of all remaining loopholes.

The rediscount credit was prolonged for three months after wearisome negotiations, but the Reichsbank had to agree to pay off 10 per cent., i.e., 10 million dollars. The foreign exchange position is at the moment very uncertain, but, on the other hand, the position of the Reichsbank has shown a relatively favourable development. The bill portfolio only rose 180 millions in the last week of February, against 453 millions in the corresponding week of 1931. The note circulation at the end of February this year, at 4,268 millions, was even 160 millions lower than last year, and total circulation (including the coin circulation, which was 400 millions higher) was only up by 220 millions. The volume of credit and the circulation are far below the level of the end of November, when the last reduction in discount rate took place. The return to 6 per cent. is, of course, felt as a general relief, though its stimulating effect can in present conditions only be very modest, as the scarcity of credit is still very great, and there are not even the most modest signs yet of an effective capital market. Perhaps, however, the reduction in discount rate is the first symptom of a relaxation of the paralysis which has afflicted German economy since last July.

AUSTRIA.

Finance — Trade — Industry.

(FROM OUR CORRESPONDENT.)

VIENNA, March 7.

IN spite of all efforts towards retrenchment and of the energetic endeavours of the Government to cut down expenditure, the cash position has been greatly strained recently. No further reductions can be made in the salaries of officials, for the average salary of the civil servants now amounts to only 250 schillings per month. At the same time, civil servants of sixty years of age are being superannuated, and the discharging of other dispensable civil servants is being continued.

There is again talk of raising the merchandise turnover tax, which constitutes the backbone of the Budget, and which is estimated for the year 1932 at 198 million schillings, and, on the other hand, of abolishing or reduc-

ing the social levies which are derived from the provinces and municipalities and are levied on salaries. This burden on wages constitutes a strong inducement to discharge employees, but the question now is whether the Federal State can increase its revenue sufficiently by raising the merchandise turnover tax to be in a position to compensate the provinces and the municipalities for the abolition of the social imposts. The increases in the tax on wine and in the duty on coffee, which are under consideration, are hardly likely to bring in much revenue. At least 200 million schillings and perhaps as much as 300 millions have still to be saved on expenditure, and, even then, the extent of the Financial Administration's guarantee for the commitments of the Credit-Anstalt is not reached. It is still calculated that the liability of the Federal State amounts to 400 to 500 million schillings. In addition, the State will have to assume responsibility for a portion of the bills of exchange, which the National Bank has discounted for the Credit-Anstalt under guarantee from the State. It is possible that part of these bills will be converted into a State loan. It appears that the Financial Administration will float two loans in order to cover these expenditures and to clear up the foreign obligations. One plan is to issue a lottery loan in Austria in the amount of 300 million schillings; the second aims at amortisation of the debt to the foreign creditors in the course of the next forty years through the issue of bonds bearing a low rate of interest. Definite plans have not yet been made, however.

The Pan-German Party and the Social Democrats appear to take the view that there should be an audit of all the State liabilities incurred in connection with the collapse of the Credit-Anstalt. At that time figures were laid before the representatives of the State Administration, according to which the total deficit could be covered with a sum of 140 million schillings, whereas the losses of the State now run to several times that estimate. The commercial-political facilities, which, according to the statements of the Federal Chancellor, Dr. Buresch, were to be expected from abroad, have not yet been realised.

There is again more talk of the Danubian Federation and less of union with Germany, but in economic circles here no positive help is anticipated from these sources. Neither the statements of the German Government nor those of M. Tardieu have made any difference. An inquiry is to take place into the question whether Austria's economy would benefit from prohibition of imports. Commercial people are absolutely against such a measure, while the views of the industrialists are divided; on the other hand, the banks are in favour of prohibition of imports, because it would ease the foreign exchange situation. Meanwhile several commercial agreements are being made. For instance, an agreement covering credit and customs facilities has been signed between Austria and Italy. The handling of it is to be entrusted to an Austro-Italian stock company with its office in Milan. The management in Vienna is being conducted by the Credit Institute for Public Enterprises and Works.

The housing scheme, which last year still gave employment to a great many people, will be continued this year on a very small scale on account of shortage of capital. The State is trying to obtain a credit of 28 million schillings from the banks and savings banks, which sum is needed for the completion of several buildings already financed by the State. The peak of unemployment for this year has probably now been reached, unless the crisis is aggravated in consequence of further import and export restrictions. The number of unemployed in receipt of benefit is 361,948, while at the corresponding period of last year there were only 334,041. Failures are still occurring, and one of the oldest steel works, which was formerly highly respected, the Schmied Steel Works, has become a victim of the crisis.

The first of the bank balance sheets has appeared, that of the Giro and Kassen Verein, which functions as a clearing house for the members of the Stock Exchange and for the banks. It has closed its accounts with a loss and is distributing no dividend. The Bankverein and the Escompte-Gesellschaft have not yet come to a decision in regard to publishing their balance sheets. The former will

pay no dividend, while in regard to the latter there is still uncertainty. The balance sheets of the banks reflect the fact that the industrial enterprises belonging to them are still unable to repay their debts to them.

It is hoped that the increase in the duty on lead will be of assistance to the lead industry. The agreement between the Steyr Works and the Opel Works, whereby the former is to produce a small car in Austria, is not likely to effect much improvement in the fate of the Steyr Works, though this little car will be a serious competitor with the small cars which have been imported into Austria up to the present, and the representatives of the firms in question, and especially of the French automobile factories, are already demanding an increase in their import quota and a reduction of the customs duty. It is characteristic of the present situation that railway tickets are being bought weeks in advance by people who intend to go abroad, as further restrictions on foreign travel are anticipated.

HUNGARY.

Politics — Finance — Prices.

(FROM OUR CORRESPONDENT.)

BUDAPEST, March 8.

PARLIAMENT was unexpectedly adjourned, on March 1st, for 30 days, by Order of the Head of the State, to enable the Government to prepare the Budget and other urgent financial and economic Bills for the House, when it re-assembles. The new Budget will be introduced in all probability in the first half of April. The political situation is rather unsettled; the governing party shows signs of disintegration, and it is possible that a new political rally will take its place to support the Government. It is significant that before adjourning the House the Prime Minister, Count Károlyi, made an appeal for the union of all the national forces to work for the salvation of the country, and definitely committed himself to change the electoral law, which has given rise to bitter complaints at home and did so much harm to the country's reputation abroad. It is generally believed that the franchise reform will substitute a secret ballot for the constituencies voting at present by open ballot.

Monsieur Tardieu's plan for economic co-operation among the Danubian countries has aroused great interest here. Though its details are not known—according to the domestic Press the Hungarian Government has not received any official representation in the matter so far—the idea of an economic *rapprochement* finds favour in almost all political and economic circles. It remains to be seen whether M. Tardieu aims only at the conclusion of preferential and quota treaties among the Successor States of the Hapsburg Monarchy, or whether these treaties are to be a prelude to a Customs Union of the Danubian countries financed by France and in agreement with Great Britain, Germany and Italy. There is little doubt that it is high time for the Great Powers to face realities on the Danube, but the fact should not be overlooked that a lasting economic *rapprochement* among the Danubian States depends, apart from political factors, mainly on sound finance. Yet budgets are disclosing heavy deficits and currencies are maintained by the strictest exchange control, which makes trade between neighbouring nations almost impossible. Practically all the Danubian countries are more or less insolvent, so that unless the foreign creditors are willing to come to terms at the earliest date with their debtors, according to their capacity to pay, it is to be feared that the Danubian bloc will be nothing short of an association of insolvent States. The Hungarian Minister of Foreign Affairs, Dr. Walko, has gone to Rome to confer with the Italian Government, and thence will proceed to Geneva and Paris to discuss M. Tardieu's plan.

Clearing treaties have been recently concluded with Germany, France, Austria and Italy. The German and French agreements give preferences to Hungarian wheat in exchange for Hungarian preferences to certain German and French industrial commodities. The Italian treaty is based on credit and freight facilities, the Austrian clearing on mutual premiums. Negotiations for the conclusion of

a treaty with Czechoslovakia have not yet been successful, which is again a striking evidence of the difficulties which have to be surmounted in order to set in motion an economic *rapprochement* of the Successor States. Foreign trade returns for January are the lowest since 1923. Exports amounted to 23.8 million pengő, as against 39.7 million pengő a year ago, and imports totalled 27.8 million pengő as compared with 44.1 million pengő.

The standstill agreement negotiated with the British creditors for a period of six months will be shortly signed, as all the important differences have been cleared away. Interest on the Treasury Bills of £3.2 millions, which matured on February 22nd, will be paid in pengő to the Foreign Creditors Fund at the National Bank, as there is no available foreign exchange to pay them in sterling. On the other hand, the British standstill agreement recognises the priority of the League Loan service and interest on the B.I.S. credit is to be paid in foreign exchange.

The special meeting of the Financial Committee of the League in Paris will also deal with the finances of Hungary. Mr Royall Tyler, the League's resident representative in Budapest, is on his way to Paris to confer with the Committee. The last statement of the Finance Minister shows that in the first seven months of the financial year actual expenditure of the administration Budget amounted to 519.2 million pengő, and in addition to this sum 3.9 millions have been spent on funded investments and 28.2 million pengő advanced to cover the deficit of certain State undertakings, etc., making a total of 551.2 million pengő. Revenue amounted to 458.6 millions only, leaving a net deficit of 92.6 millions, while that of the State undertakings amounted to 12.8 millions, so that the deficit of the period July, 1931-January, 1932, aggregates 105.4 million pengő. According to a statement of Baron Korányi, revenue in February fell short by three million pengő of the estimated 87.9 millions, against an expenditure estimated at 77.6 millions. The receipts of the State undertakings in February accounted for 28.8 million pengő only, as against an estimated expenditure of 38.9 millions, which means that the available meagre cash reserve of the Treasury was further depleted in February. March is not a good month for the Exchequer, so that there is no hope of improvement in the near future. According to the last return of the National Bank, public deposits totalled only 15.2 million pengő on February 29th.

The gold reserve of the national Bank has been successfully maintained at 100 million pengő and other foreign exchange cover amounted to 14.9 millions at the end of February. The bill portfolios, including 145 million pengő discounted with the B.I.S. and other central banks, totalled 541 million pengő at the end of February, as against 589 million pengő, a very moderate decrease as compared with the corresponding periods of the past year. In spite of the liberal credit policy of the National Bank, demands from agrarian circles are becoming louder every day for a reduction of the bank rate, an extension of credit facilities and an increase of the means of payments. It is very regrettable that the rate of interest and the credit policy of the National Bank, which is in the best interest of the country, is becoming the subject of a dangerous political propaganda. President Popovics, of the National Bank, has warned the public that according to the statute of the bank the Government has no right to interfere with the policy of the bank, that it has not tried to do so in the past, and that there is good reason to believe that it will not do so in the future.

Considering that Hungary is officially still on the gold standard it is curious that prices do not fall in sympathy with world gold prices. The wholesale price index of the Statistical Department (1913 = 100) shows the average of all commodities at 98 on January 31st, as against 92 a year ago. The cost of living index remained unaltered at 103. Though the computation of the price indices leaves much to be desired, the above figures clearly show that the Hungarian price level is somewhat inflated; for both wholesale and retail prices ought to have decreased as they have in all other countries which have remained on the gold standard. It is true that food prices and rents have considerably declined, but real estate prices have

risen recently, which is a purely inflationary sign. On the other hand, coal, iron and other staple industrial commodity prices have been inflated for years owing to high tariffs and other devices. The price level in Hungary certainly calls for a restrictive credit policy, if the country is to remain on the gold standard.

HOLLAND.

Import Quotas — Treaties — Money — Capital.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, March 2.

THE situation of the industries of the Netherlands continues gloomy, though the quota restrictions on imports should eventually bring some temporary revival of activity in industries catering for the home market. In the boot and shoe industry, in fact, more activity is already reported, and Van Schijndel, one of the largest factories, which was declared bankrupt some time ago, is now operating at full capacity again. No more import permits for boots and shoes are now being granted, for these articles were imported in such quantities between January 1st and February 8th that the quotas of the principal countries have already been exceeded.

As is only natural, numerous manufacturers and producers are desirous of sharing in the advantages of the new crisis import law, and are appealing to the Government to extend the quota regulations. All these applications are, however, closely investigated and sifted by the advisory committee appointed for the purpose, and the Government has recourse to the quota weapon only in instances of extreme urgency and necessity.

A Member of Parliament, in a written question in the Second Chamber, has asked the Minister of Labour whether he does not consider it high time that the import of foreign coal into Holland was restricted, and, if restriction of importation is not feasible for the time being in view of the commercial treaty between Holland and Germany, whether the Minister will consult with the Ministers of Finance and of Foreign Affairs on the question of Holland also levying import duties on foreign coal. A large number of coal miners were dismissed on March 1st, and discussions are in progress with regard to a new wages agreement to be effective from April 1st next.

Additional serious difficulties are now menacing the Dutch dairy industry. Our butter exports to Germany are doomed unless some change for the better takes place in the measures which Germany has been adopting during the last few weeks with regard to the import of butter. Since the beginning of this year, the import duty on butter imported into Germany has been raised from 50 to 100 marks per 100 kg. With such an exorbitant customs duty, that impoverished country cannot possibly afford to import our butter. Countries, however, with which Germany has a commercial treaty, are each permitted to export butter to Germany via certain frontier stations to a total quantity of 5,000 tons a year, at the tariff of 50 marks per 100 kg. So far, our butter exporters have accordingly been subsisting on that quota, but that will very soon come to an end. In any case, it does not represent a third of the quantity of butter which Holland exported to Germany even in 1931. In normal times Holland exported about 30,000 tons of butter a year to Germany, and in the crisis year 1931 the quantity reached 19,000 tons, which was almost 60 per cent. of Holland's total export of butter. In the meantime Germany has decided to divide the 5,000 tons quota into monthly quantities. The Committee of Economic Defence of the Netherlands agricultural and horticultural organisations have submitted a petition to the Government, calling upon them to take steps to ensure a change in the German policy with regard to the quota.

The negotiations with Belgium concerning the commercial treaty were to be resumed at Brussels on March 1st, the subjects for negotiation being: (1) a treaty

with regard to the residence of Dutch subjects in Belgium and of Belgians in the Netherlands, the time of military service of the respective subjects in both countries, and the operations of Dutch and Belgian companies established on the other country's territory; (2) a treaty, similar to that between Belgium and France, for the avoidance of double taxation of the subjects resident in the other's country; and (3) a commercial and shipping treaty, involving chiefly the modernisation of the treaty on this subject concluded between the Netherlands and Belgium in 1865.

The financial situation in the Netherlands is relatively satisfactory. The money market continues to be very liquid, and the average rate for prolongations was 1.634 per cent. in February as against 2.4355 per cent. in January. A return of confidence in the bonds market is also evident. A number of municipalities have been successful in issuing 5 per cent. and 5½ per cent. loans, and for municipal and State loans the tendency during the last few days has been especially firm. From the varying rates of interest of the new loans, it is evident that the interest on the capital market has an upward tendency; in September, 1931, the 4 per cent. loans were the current type on issue, in November and December 4½ per cent. loans were already being marketed, and now the 5 per cent. type has already been superseded and numerous local authorities are now appearing with offers of 5½ per cent. loans. The operating company of the State Railways has been authorised to issue a loan of 12 million guilders, so that for the time being a greater degree of activity on the Amsterdam issues market may be expected.

BELGIUM.

Industry — Customs — Banks — Finance — Budget Equilibrium.

(FROM OUR CORRESPONDENT.)

LOUVAIN, February 29.

THE situation of the Belgian collieries has become more and more unfavourable. In January stocks at the pithead increased by 175,000 tons, against 50,000 tons in November and December. Coal stocks have thus reached a new record figure of 3,720,000 tons, against 2,640,000 tons a year ago. Coal output has been reduced about 10 per cent. as compared with the average of 1929 and 1930; there has been a reduction in the number of hands employed of about 10,000, and most employees have lost two working days per month. At the same time, the rate of production per man and per day has shown a slow but persistent progress. The average output per working day and per man employed was 525 kilos. in 1913; 591 kilos. in 1931; and in January, 1932, it reached 610 kilos.

The situation of the metallurgical industries has been unchanged for three months; these industries have operated at 70 per cent. of their full capacity, which was developed in 1929. Out of 60 blast furnaces, 43 have been in activity. The textile industry, after a decline in November and December, improved slightly in January, but short time has prevailed widely. Owing to the difficulties in the inland market, as well as abroad, many producers have been agitating for a general increase of customs, basing their claim upon the depreciation of sterling, British protectionism and the French quota system. The Government has raised the nominal amount of the duties on textile fabrics by one-half. Such concessions to protectionism have met with vigorous opposition from free traders, who have stressed the fact that, thanks to free trade, the foreign trade of Belgium has put up a creditable resistance to the depression. Belgium has not been seriously injured in her trade with Great Britain, and in connection with the increase in the duties on cotton tissues it has been pointed out that in 1931 exports increased while imports slackened. A tariff increase is therefore regarded as a flouting of common sense.

A few failures occurred at the beginning of the year among small local banks. Only one of these, the Handelsbank Limited, established in Ghent, was of any great importance; it handled at one time 200 million francs de-

posits, but owed only about 100 million francs to depositors when it became insolvent. The other banking enterprises which have closed are a Liège co-operative society, the Banque Populaire de Liège, with deposits of 50 million francs, and another bank with a similar status, the Middenstandbank De Rupel at Boom-on-Rupel, with a paid-up capital of one million francs, as well as other very small banks established at Huy and at Verviers. It is expected that the losses of these institutions will involve subscribed capital and reserves; a very large portion of the deposits will be repaid. The failures have been ascribed mainly to credit pressure which caused vast withdrawals, and partly to the system of management. Besides, as far as the Handelsbank and the Banque Populaire de Liège are concerned, failure must be ascribed to that of the Comptoir Peemans, Limited, a Brussels financial company largely interested in speculation in industrials. Incorporated with a subscribed capital of 20 million francs, this public company had accumulated reserves of 20 million francs, and reported in 1930 nine million profits. At the end of 1930 several very dubious institutions merged into the company; this undermined its position. It will be liquidated in very unfavourable circumstances. The Comptoir Peemans, Limited, owes 12 million in all to the Banque Populaire de Liège.

These events have led to withdrawals from banks which have branches in the northern part of the country. Large cash reserves have enabled the banks to meet this abnormal demand for withdrawals promptly. Those balance sheets which are available show that bank deposits had ceased to grow by the end of 1931. In the State Savings Bank alone the excess of deposits over withdrawals has continued. On the other hand, an increase in bank note circulation shows that savings have still been accumulated, but they have remained for the most part unprofitable to their owners and to the country in the form of bank notes.

The Government has drawn up a plan for meeting the financial situation, and it is now before Parliament. The Budget deficit seems to amount to one and a half milliards, and most taxes, customs included, will be increased 10 per cent. Civil service salaries will be curtailed 10 per cent., according to the fall registered by the cost-of-living index figure. The cost of living is now 20 per cent. lower than in 1929, including rent. The issue of an internal loan will also be ventured in order to finance public works provided for in the Extraordinary Budget, and to fund the floating debt of the Congo Colony. It has been said that it will be issued under the form of 5 per cent. bonds, and that one or two million-franc prizes will be paid out at the drawings to certain holders. The subscription list will be open on March 14.

TURKEY.

Economic Inquiry — Revenue — Export Organisation.

(FROM OUR CORRESPONDENT.)

CONSTANTINOPLE, February 27.

The first step of the Ismed Pasha Government after the recess was to hand over to a specially created grand commission of the Government Party the task of examining the economic and financial situation of the country and proposing remedies. This was done especially in view of the forthcoming presentation of the new budget, but the examination which is being made is fundamental and concerns the general productive economy and regime of the country. It will not confine itself to the question of budgetary reductions and increases, which have already practically reached their limit, but will try to find constructive means of arresting the inroads of the world crisis on the financial stability of the country. The fact that the Government has called upon a sort of extra-parliamentary commission to fulfil this task is significant. Though the party and the National Assembly are almost duplicate bodies, the former has a wider range and freedom than the Assembly and is really the organisation which, under Kemal Pasha, determines the general policy of the State. It is called upon to express its opinion and to give its

advice whenever there is a situation of danger to the State, and the weight of its decisions is greater than that of the Assembly, which gives effect to them. The fact that the Government has asked for its intervention at the present time indicates that the economic peril to the country is considered pressing, despite the changes which were made to meet it at the end of last year.

The establishment of restrictive quotas on imports with a view to rectifying the trade balance has, it is true, fulfilled its purpose after only three months' working. The excess of exports over imports in January achieved by this means was £T.4,568,695. But against this satisfactory result has to be put a diminution in Customs receipts over the same period amounting to £T.7 millions, so that the gain to the immediate economy of the State is small. Nevertheless, there is no doubt that the system of restrictive quotas will be continued. The third instalment of quotas is about to be published, and it is learnt that the Government has given up the idea of apportioning the quotas among the different importing countries according to the ratio of their purchases from Turkey. The establishment of such a system of strict "equalisation" has been found to be too complicated at present.

It is clear that when Customs receipts show such a diminution as £T.7 millions in three months the budgetary prospects must be seriously affected. It is anticipated that the deficit on the working of the budget for the current year ending in May next will be not less than £T.26-30 millions. Some part of this deficit has already been discounted by the establishment of the "crisis tax" and by the non-utilisation of certain credits, but this will not suffice to wipe it out. The diminution of tax receipts has been phenomenal owing to the fact that the producers of wheat, cotton and tobacco have been unable to dispose of their products, or have done so at less than remunerative prices. On the business turnover tax alone there is a deficit on the current budget of £T.2½ millions. The officials are proving to be almost the only class which can be made to yield a regular tax revenue.

In these conditions the Government has decided to reduce the forthcoming budget to £T.140 millions, which compares with £T.222 millions two years ago and with £T.52 millions in the first year of the National Assembly. But as it cannot go lower without damaging the efficiency of the new State, and as the producing majority of the population is becoming untaxable, it is clear that an impasse has been reached. It is for this reason that the attention of the Government is being directed not merely to getting a full view of the economic situation, but to organising production and exports under semi-Governmental control so as to assist the scattered and individualist producers and exporters to adopt a proper modernised standardisation.

The first trade to be submitted to this sort of control was the nut trade, which was taken in hand in December last. The results have been satisfactory. The producers have co-operated with the Government in bringing their exports under corporate and scientific control. There is in this no tendency to a Sovietisation of commerce in Turkey, as some critics have interpreted it. The aim is simply to eliminate fraudulent exports, which have greatly damaged the name of certain Turkish products recently, and to bring the trade, without constituting it either a trust or a State monopoly, into line with the modern principles governing export. In this way the marketable quality of Turkish goods is enhanced, and the general economy of the country benefits. The trade remains entirely in the hands of the individual producers and exporters, but under the Government they constitute themselves into a controlling body which supervises their exportation and sees that it is in harmony with the needs of modern markets.

The experiment has been so successful with the nut trade that the Government has just called a tobacco congress and has announced that the same procedure is to be applied to tobacco. As tobacco constitutes from one-third to a quarter of the total exports of the country, this action means that the Government is setting out to remedy the grave situation of the main productive industry of the country as far as it can be remedied by reforms within

Turkey alone. The larger problem represented by the surplus world production will be met by the coming arrangements between Turkey, Greece and Bulgaria, on which there is already agreement in principle and which are being worked out into a practical plan. But meanwhile the Turkish Government is taking its own local tobacco trade in hand with the object of scientifically limiting production to areas where good quality tobacco can be produced—about fourteen areas have already been prohibited—and of presenting the various tobaccos of the country on the world markets without leaving any place for fraud and according to scientific standards of separation. It is, in fact, carrying out a sort of "rationalisation" of the tobacco trade for the purpose of improving the prospects of the main economic asset of the country.

JAPAN.

Banks — Prices — Trade — Crops.

(FROM OUR CORRESPONDENT.)

TOKYO, February 12.

THE end of the year according to the lunar calendar, which is generally followed in the rural districts, has passed easily, but monetary conditions have not relaxed to any appreciable extent. Short loans are not obtainable below 6½ per cent., and fine bills are quoted at around 8 per cent. The prevailing monetary stringency is fully revealed in the Bank return; the note circulation for the first week of this month stood at 1,158.8 million yen, or 12.7 millions more than a year ago, and bankers' deposits were down to 53.5 millions, as against 239.5 millions. The Tokyo clearing banks' statement for last week also reflects uncomfortable conditions on smaller cash resources, which shrunk to 124.5 million yen, as against 275.8 millions for the corresponding week of last year. The decrease in the banks' cash holdings, together with bankers' deposits, is roughly equivalent in amount to the banks' loss of gold during the last quarter of 1931, which must be primarily responsible for the prevailing monetary stringency. The whole position may change more or less as the year advances, but present indications point to the maintenance of tight conditions unless inflation develops rapidly.

In face of strong objection on the part of the Ministerial party, the Finance Minister granted the Yokohama Specie Bank a special licence for gold exports to settle its forward dollar contracts, to which the bank had committed itself to defend the yen before the gold embargo was re-imposed by the present Government. During January 39 million yen of gold was shipped to the United States. One of the chief difficulties in the foreign exchange market was thus finally removed, but the yen exchange is still unable to find its own economic level, and the official rates remain unquoted. Though the yen has lately hardened as a result of the partial return of funds from abroad, its future is altogether uncertain. The Sino-Japanese dispute, the unusually heavy imports, and the fear of currency inflation are a few depressing factors in the course of the exchanges.

The depreciation of the yen is clearly reflected in the price index for last month. The Bank of Japan's wholesale index number for January registered a sharp rise of 5.6 per cent. on the month, following an advance of 2.7 per cent. during December last. There was an all-round increase in almost all the important commodities that enter into international trade with the single exception of coal, trade in which was reduced by the unseasonably warm weather. The advance, however, after the abandonment of the gold standard is only 8.3 per cent., in contrast with a depreciation of more than 25 per cent. in the yen. The explanation is partly that gold prices have continued to fall and partly that a sufficient interval has not yet elapsed for domestic prices to adjust themselves to the decline in the exchange value of the yen.

The foreign trade figures for last month are rather disappointing. The January returns show that, in comparison with the corresponding month of last year, imports increased by 12,093,000 yen, while exports fell by

34,877,000 yen, thus revealing an adverse balance of 45,321,000 yen, as against a credit balance of 1,649,000 yen. Exceptional purchases made before the departure from the gold standard are primarily responsible for the all-round increase in imports, while the sharp contraction in exports is accounted for partly by the unsettled exchange and partly by the cessation of trade with China. The repercussion of the Sino-Japanese dispute is reflected, with appalling clarity, particularly upon cotton exports; what little expansion the trade made elsewhere, owing to the depreciation of the yen, was more than offset by the virtual cessation of Chinese purchases.

The rice crop for 1931 was revised by the final report of the Department of Agriculture and Forestry recently published, the year's actual yield being placed at 55,215,000 koku, a decrease of 11,660,000 koku (- 17.4 per cent.) upon the preceding year, and was 5,671,000 koku (- 9.3 per cent.) below the five years' average. The total value of the crop at the ruling price is 1,335 million yen, or an increase of some 130 million yen upon 1930. The actual cocoon crop for last year is finally put at 97,072,000 kamme, valued at 275,580,000 yen, in the report of the same Department, as against 106,463,000 kamme, valued at 304,212,000 yen. Thus the farmers' revenue from those two staple products shows, on balance, a gain of roughly 100 million yen.

SOUTH AFRICA.

Trade — Gold Standard — Unemployment — Railways — Indian Conference — Revenue.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, February 10.

DURING 1931 imports into the Union of South Africa amounted to the value of £52,974,882, compared with £64,579,696 in 1930. The corresponding figures for exports were £71,936,571 and £83,432,534. It must be remembered that the figures for 1930 were not so good as those for 1929, whilst present indications are that 1932 will be decidedly worse. With such signs already visible there is no question that taxation—and almost certainly income tax—will be materially increased in April. Apart from shortages in other revenues, income tax receipts are over £1,000,000 less than at this time last year, and the final figure is expected to show a much greater difference.

The Government has, however, shown no sign, so far, of any change of view or policy on the question of maintaining the South African pound at its existing value. In the earliest days of the Session, the Prime Minister announced that a Select Committee would be appointed to consider the question. Very shortly it appeared that the Government scheme was not to consider the matter at all but to use the Select Committee procedure to marshal evidence in favour of their policy. The debate has already been in progress for a fortnight, and seems likely to last for days yet. Whatever may have been the position in September, all informed opinion to-day is in favour of devaluation. Even the Minister of Finance himself was weak in his speech in support of his leader, and had little or nothing to say on several points which are crying aloud for defence. His best point is one which he could hardly make. Few of the protagonists refer to the fact that the question is a practical one of balance of advantage. It is believed here that the gold standard is white or black, and devaluation is black or white according to one's side. Here and there a more or less inarticulate expert, of no public importance at all, ventures to his friends a suggestion that something has been wrong with the currency position all over the world for some time past, and that devaluation is comparable to a desperate and possibly dangerous remedy for a desperate disease of trade. The Minister very probably feels that the Government back benchers are not to be trusted (seeing that they have the voting strength) with a paper currency even as a temporary expedient. If that is his view, there are people—otherwise opponents of the gold standard in present circumstances—who would be inclined to agree with him. In the meantime, Dr. A. J. Bruwer, lately chairman of the Board of

Trade and Industries, a director of the Government iron and steel works, spoken of not long since as a possible Deputy-Governor of the Reserve Bank, has vacated all his official appointments and has joined the technical opposition. Dr. Bruwer's defection is bound to affect the Government—he contributed a long article to the *Cape Times* immediately after his resignation—and may even influence their policy.

The economic position of large numbers of the population, both white and black, is giving rise to more and more anxiety. According to a speech in Parliament by a prominent member of the Opposition yesterday, over 200,000 Europeans out of our population of 1,800,000 are unemployed, employed on relief work, or in a state of indigency in rural areas. In large areas of the Union the condition of the natives is no better. On the Rand the Native Affairs Department estimates that there are 10,000 unemployed natives, 4,000 of whom are being fed by the mines. Measures are under consideration to stop natives from moving from their homes to labour areas. The current figure for natives working on the gold mines is 216,000, while European mine employees increased by 1,000 in 1931. The number of unemployed on the Reef is, however, greatly swelled by accretions from other parts of the Union and from the copper fields in Rhodesia.

As a natural consequence of the position of trade, the railways are experiencing severe and increasing losses. At April 1st last the accumulated deficit was £880,000 (£780,000 loss on previous year's working, less £105,000 transferred from rates equalisation account). During the first eight months of the current year the loss was £1,100,000, the figure for the month of November being £191,000. However reluctant the railway authorities may be to admit the position, there is no room for doubt that drastic reorganisation, including revision of labour policy, curtailment of unremunerative services and some form of recognition of the loss of capital, will be necessary before the railways pay again, whether times be good or bad.

On January 12th an important conference was opened in Cape Town between representatives of the South African and Indian Governments having for its object the harmonisation of the interests of the two countries in regard to Indians resident in the Union. The Indian delegation was led by Sir Fazl-i-Husain and included the Rt. Hon. V. S. Srinivasa Sastri, former Agent-General for Indians in the Union. There are about 160,000 Indians in the Union, of whom over 100,000 are of Union birth. They are regarded—especially in Natal—as a racial intrusion, and the fact that most of their ancestors were deliberately induced to come here as labourers is now forgotten. Many of them are of the lower classes, and this section of our population has, on the whole, very few friends. When the post of Agent-General was created, and Mr Sastri arrived, one public man made the remarkable statement that South Africans were best suited by their existing conceptions of "men of colour," and that it was unwise to disturb these conceptions by welcoming a man of Mr Sastri's culture and distinction! However, Mr Sastri became very well-known and popular—he was a most willing speaker and much the best most of us have heard—and his appointment, followed by that of Sir Kurma Reddi as his successor, undoubtedly brought intelligent consideration of the Indian problem nearer. One attempt to ease the situation (which in some parts of Natal is serious from both the economic and sociological points of view) lay in a subsidised repatriation scheme, but the repatriated Indians mostly regret their departure. It may be remembered that his treatment in South Africa played its part in the development of Mahatma Gandhi.

According to the recently published report of the Controller and Auditor-General, the audited revenue of the Union for the year ended March 31st last was £28,563,005, while the expenditure was £29,948,831. After allowing for the surplus of March 31, 1930 (£498,656), the deficit on the accounts at March 31, 1931, was thus £897,170. The public debt on the latter date was £256,845,100, an increase of about £7,200,000 during the year. The interest-bearing capital of the railways and harbours amounts to £145,147,701. Against the debt of £256,845,100, there is a sinking fund valued at market

prices at £19,905,020. Of the debt of £249,651,197 at March 31, 1930, 83.4 per cent. is regarded as productive in the sense that interest thereon is recoverable from railways, the Post Office, and other Government enterprises; interest on the balance is paid from taxation receipts.

Letters to the Editor.

NEWSPAPER FIRE INSURANCE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Mr Cant's very interesting letter in your issue of the 27th instant raises a matter of wider importance than the propriety of daily papers covering fire risks. I gather that in his opinion comprehensive policies are issued only on a warranty that the insured sum represents, and will continue to represent, the full value of the contents. If this is so, these policies are dangerous things, for an innocent under-estimate invalidates the whole insurance—fire, burglary and workmen's compensation.

And this danger must extend beyond the year in which the proposal form is signed. In 1932 the householder gives the warranty on a policy of £1,000. In 1933 the insurance continues on the same policy with a renewal receipt. In 1934 the same thing happens, and so on for the rest of time, the original warranty hanging always over the policyholder's head. By purchase of new furniture, or by a change in fashion or by the inflation of currency, or by the operation of a tariff, the value increases to £1,300, but the householder fails to notice the increase, and his whole insurance is invalidated, so that in 1944, when his house is burnt down or one of his maids is killed in the course of her employment, he has no claim because of a warranty of value that he gave in 1932.

Personally, I have never given this warranty for any comprehensive policies, and I hope I never shall, but I should be interested to know whether Mr Cant's view of the proposal form is the official view of insurance offices.—Yours, etc.,
LONDON.

The Stock Exchange.

TRUSTEE LAW ANOMALIES.

ECONOMIC depression is a refiner's fire in which even the oldest-established financial institutions suffer strange metamorphoses. The decline in national earning power has inevitably affected even the most respectable of securities, including many stamped with the hall-mark of trustee status, and, in the process, has drawn attention to various anomalies in trustee law generally. Within the last few weeks the public has learned, after a temporary Australian default, that a Colonial stock cannot be removed from the Trustee List, even though its interest is not paid, unless the Government concerned alters its basis by a definite legislative act. The second largest British railway has failed to pay full interest on a junior preference stock, and the whole of its fixed-interest securities have lapsed from trustee status in England, but its debenture stocks remain eligible in Scotland. Two more railways, the Southern and the Metropolitan, have failed to pay 3 per cent. on their ordinary stocks. All their prior stocks, nevertheless, remain eligible in England under the "Chancery Rules," but the Southern's preference issues are now ineligible in Scotland.

It appears, again, anomalous, to say the least, that L.N.E.R. debenture stocks should no longer be eligible in England although their interest was covered, last year, with an earnings surplus of £5,169,505, while the junior preference issue of the L.M.S. failed to earn its full dividend by £257,898, but retains its eligibility. The Court might helpfully use its discretionary power to reinstate senior L.N.E.R. stocks in the List. Their interest is being both earned and paid. Who knows whether other railways may not be in the L.N.E.R.'s position twelve months hence, if trade depression is not speedily relieved?

Public disquietude over these and other features of trustee law is evidenced by numerous letters we have recently received from our readers. Some of the suggestions made have been drastic but impracticable, an example being the proposal that trustee investment should be limited to British Government stocks. The correspondence, however, reveals remarkable unanimity on one point: that present difficulties are due less to the inclusion of any one group of stocks in the List than to the inability of some of the conceptions of past trustee law-makers to stand the test of time. This view directly controverts that of a Committee which reported to the Lord Chancellor, only four years ago, that any attempt to place the Trustee List upon "a sounder and more symmetrical basis" was inadvisable.

Thus, there are two opposite schools of opinion on the matter. The conservatives desire to retain the existing system with a few external repairs and a new coat of paint, and the progressives advocate the rebuilding of at least part of the structure. These differences must be read in the light of historical fact. The initial object of the Trustee List was the protection of private trustees. The List, which at first included merely Government stocks, was gradually extended in accordance with the trend of private investment. The Act of 1893 embodied the views of the 'nineties as to the best means of obtaining maximum security for a very special class of investors. The first significant departure from this principle was the Colonial Stock Act of 1900, which was designed in the interests of Dominion and Colonial borrowers rather than in those of trustee investors. Subsequent changes were made chiefly by way of amplification, the List being extended by the inclusion of the enormous war-time issues of the British Government and the securities created by the "grouping" of the railways under the Act of 1921 (which, *inter alia*, conferred trustee status on fixed-interest stock given in part-exchange for ordinary stock in some of the stronger pre-amalgamation lines). Various India and Northern Ireland stocks were included under the Trustee Act of 1925. Other stocks have also been included by special legislation, like the Housing Act, 1919, and the Agricultural Credits Act, 1928. The

creation of the office of Public Trustee, by an Act of 1906—under which some 28,081 trusteeships, to a total value of £313,878,729, are now administered under conditions which preclude any element of fraud or negligence—was a desirable administrative reform which was without bearing on the broader question of the make-up of the Trustee List.

The Trustee Securities Committee, in its 1928 report, criticised the Trustee List as being too wide rather than too narrow, and recommended its future restriction. It is not easy to reconcile their dictum that "it cannot be suggested that there is any need felt by trustees for a wider range of investment than exists at present" with the desire of certain classes of borrowers to obtain or retain trustee status on the ground that they will thereby be enabled to raise new capital at a lower interest rate than otherwise. Economists, like Mr J. M. Keynes, have argued, with force, that the List may be at the same time unduly wide and unduly narrow—unduly wide because it includes many stocks whose security, under modern conditions, is open to question, and unduly narrow because many sound stocks, by general admission, are excluded. The following is a summarised list of the groups of stocks, etc., authorised by Section I of the Trustee Act, 1925:—

(a) Parliamentary stocks, public funds, of Government securities of the United Kingdom; (b) legal mortgages on freehold property in the United Kingdom; (c) Bank of England or Bank of Ireland stock; (d) sterling loans charged on the revenues of India; (e) securities, the interest on which is guaranteed by Parliament; (f) certain Metropolitan and London County Council stocks; (g) prior charge and preference stocks of railways in the United Kingdom which have paid 3 per cent. on their ordinary stock for ten years; (h) the stock of railway or canal companies leased in perpetuity or for not less than 200 years at a fixed rental to any railway mentioned under (g) above; (i) debenture stock of Indian railways, carrying sterling interest guaranteed by the Secretary of State in Council; (j) certain annuities arising out of the purchase by the State of railways in India; (k) Indian railway stocks guaranteed by the State; (l) prior charge or preference stocks in British water companies which have paid 5 per cent. ordinary dividends for ten years; (m) stocks of British county councils or corporations with a population of over 50,000; (n) stock issued for water-supply purposes by commissioners with compulsory power of levying rates over a population exceeding 50,000; (o) securities authorised under the Colonial Stock Act of 1900; (p) local bonds under the Housing Act of 1919; (q) Northern Ireland Government securities; (r) securities authorised under Rules of the Supreme Court; in addition, the Agricultural Credits Act authorises investment in Agricultural Mortgage Corporation 5 per cent. debentures.

The List, broadly, covers stocks issued by Governments in the British Empire, the larger British municipalities and companies in two of the older "public utilities"—railways and water supply—and freehold property mortgages. Since these categories were decided on, the principal changes affecting the investment market have been the growth of building societies (which now handle the bulk of mortgage business), the loss by the railways of their "monopoly" position, and the consolidation of large operating units in British industry and banking, whose prior securities, in some cases, have a degree of stability and "earnings cover" quite unparalleled by any similar concerns in the 'eighties and 'nineties of last century. It can scarcely be contended that a lower degree of investment security attaches, *ipso facto*, to the prior securities of big gas concerns, public bodies owning first-class ports and harbours or responsible for electrical development under a nation-wide "grid" system, or large banking, insurance and industrial concerns than to railway preference stocks covered, possibly, by small, or nominal, surplus earnings, to municipal loans raised, in some cases, to provide socially desirable but non-earning urban amenities, or to issues by Dominion Governments over which the British Treasury has no direct control.

The case against the present List, therefore, has two main grounds—that the ideas of a past epoch have become rigidly stereotyped, and that more recent additions have been made in the interests of borrowers rather than of

investors. It would appear, therefore, that any official body which may be set up in the future to consider the question of reform and "modernisation" should have three guiding principles in its deliberations: (1) that the List should be more flexible, since rigid classification cannot be safely maintained in a world of ceaseless economic evolution; (2) that earnings rather than dividends should be the criterion of "security," since earning power is the ultimate reservoir for all interest payments; and (3) that the List should be drawn up with an eye to the sole benefit of *cestuis que trust*, and not to the convenience of any particular borrower.

A Committee, working on these lines, might conceivably conclude that the law should include provision for a frequent overhaul of the position, possibly at quinquennial or, at most, decennial intervals. The committee might also consider whether the List should be extended to include exceptionally well-secured prior stocks of the newer public utilities, and a necessarily small minority of the best British financial and industrial concerns (say, debentures of companies, having not less than £500,000 in issue, covered at least four times by earnings in ten successive years). At the same time, a question might arise as to the possible exclusion of future issues by municipalities, or other public bodies, whose proceeds did not appear likely to be used for soundly reproductive purposes, or whose total appeared injudicious, having regard to the outstanding obligations of the borrowers. The Committee might also consider the advisability of retaining or repealing the provisions of the Colonial Stock Act, on the argument that Dominions whose credit is good can to-day obtain adequate facilities from a well-organised and generally well-disposed London capital market without adventitious aid, while those whose credit is bad are, *ipso facto*, unsuitable repositories for trustee resources.

Sooner or later, a broad revision of the List will be imposed upon those concerned by *force majeure*. Abnormal trade depression has forced the matter into the limelight in the present instance, but the further efflux of time will serve only to render the problem more acute. To leave the matter to the discretion of the Supreme Court (which in England has powers of inclusion or exclusion without direct reference to statutory stipulations), would place too heavy a burden on the Court's shoulders. We believe that the initiative in a measure of comprehensive reform should come from the Government itself. The latter, in any case, would not in any way commit itself by a decision to set up an exploratory committee on the lines we have suggested.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET. ACCOUNT.
March 15. March 17.

The sharp buying movement of last week did not long persist, and though the general tone of markets remained firm, and dealings were of satisfactory volume, sentiment was decidedly more cautionary. Paris, in particular, lost last week's ebullience. Gilt-edged stocks were firm with sterling, but did not follow the spectacular fluctuations in the exchange. Thursday's reduction of 1 per cent. in Bank rate was welcomed, but had been discounted in advance.

Upward changes in gilt-edged quotations were on a much more limited scale than last week. Four and a Half per Cent. Conversion Loan was prominent, and Funding Loan rose further. Home corporation issues were firm, dealings opening in Poole Corporation Fives at 1½ premium. India loans were strong on the announcement that the Six per Cents. of 1932-33 would be repaid.

Foreign bonds were heavy at the outset, Japanese loans weakening on news of important bank failures. French Rentes were sold on the exchange position, but modest speculative buying of German loans was based on hopes of a favourable presidential election result. Hungarians

suffered from renewed fears regarding the debt service, and confidence in the position of Greece's finances (discussed on page 589) was insufficient to prevent a further decline in prices.

Interest in home rails at first centred in dealings in the Metropolitan District Scrip, which opened at a premium of 3. Later a fair demand arose for the junior stocks of the "Big Four" lines, following the publication of unexpectedly favourable traffic returns. The suggestions of the Minister of Transport for an early "road-rail" conference were well received. Undergrounds strengthened on unconfirmed rumours that the Passenger Transport Bill was to be dropped. Little business occurred in foreign rails, Argentines weakening with the peso, but subsequently recovering.

Irregular conditions prevailed in the industrial market. International and trans-Atlantic issues were lower on liquidation from Paris and Wall Street, and, in part, on price readjustment to the higher sterling exchange. Cables and Wireless stocks were depressed by the announcement (discussed on page 586) that the company had decided to sell its new building. Electrical supply shares remained firm. The Home and Colonial group advanced on the latest results (discussed on page 588). Iron and steel shares trended downwards in company with textiles and rayons, Courtaulds being marked lower on the chairman's restrained speech. Carreras and Imperial Tobacco were in fair demand, but brewery shares suffered from scattered selling, though Distillers were good on support from Glasgow. The Imperial Continental Gas bonus of 100 per cent. created a good impression; dealings were active around 375 on Thursday, with expectations of a further rise.

There was no renewal of Paris interest in oil shares, and the market became reactionary, despite intermittent interest in New York. Rubber shares were dull, although the price of the commodity was firmer. Tea shares continued to show a firmer tendency, though the volume of business was not considerable.

A sharp reaction occurred in the mining share market, Tinto, Brakpan, "Chartered" and Rand Mines being among the issues chiefly affected. The market showed little interest in the probable outcome of the New York discussions for a further reduction in copper production "quotas." Tin shares were dull on the heaviest decline in the price of the metal for many weeks past.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The markets opened with a reactionary tendency, but prices rose moderately on Tuesday's strength of sterling. Although there was no increase in the volume of share transactions, a certain amount of foreign buying was reported in leading issues. Profit-taking appeared, how-

ever, on Wednesday, immediately upon the reaction in sterling. The markets, generally, continued to drift, without conviction of any fundamental change in the general situation. The bond market, however, was firm, both Government stocks and the best industrial bonds touching high levels for the year. The Treasury announced the closure, after over-subscription, of the lists for the issue of \$300 millions seven months' 3½ per cent. Certificates and \$600 millions 3½ per cent. One-Year Certificates. The terms offered were from the outset regarded as favourable by the market. A certain liveliness was apparent among oil shares, on suggestions of a tax of 42 cents per barrel on imported oil, though the proposal provoked strong opposition along the Atlantic seaboard. The revival of reports of a more sympathetic attitude of the administration towards the suggested relaxation of the Anti-Trust Law, to permit the more effective control of oil production on a national scale, were regarded as significant in connection with the expected early announcement from the Royal Dutch side of a plan for world-wide co-operation. Copper prices were weak, though hope was entertained that the representatives of European and African interests would agree on more severe curtailment before sailing for home. Trade reports indicated a less than normal seasonal expansion in activity. Steel-mill operations increased last week from 26 to 27 per cent. of capacity, the absence of a more marked rise being attributed to delay in placing Ford orders owing to last-minute adjustments of the new models. The net income for January of all railroads was \$11,714,000, compared with \$34,341,000 in January, 1930. It was announced in mid-week that the Reconstruction Finance Corporation had approved loans to a total of \$183 millions, of which \$62 millions were to financial institutions, \$46 millions to railroads and \$75 millions to agriculture. Freight-car loadings for the week ended February 27th were 535,567, compared with 572,675 in the previous week, 682,000 in the corresponding week of 1931 and an average of 942,954 for the same week in the seven years 1924-30. The period included a one-day holiday.

CANADA.

At the beginning of last month the volume of trading on the Canadian stock markets remained acutely restricted in the absence of any favourable news, pessimism being aggravated by the unfortunate earnings figures of industrial corporations and a further decline in railway tariffs. Despite the announcement of the new British tariff, which promised to benefit industries like salmon canning, the market drifted until February 12th, when the upturn in New York, in sympathy with the Hoover administration's anti-deflation programme, caused a brisk upward movement. Conditions became moderately active on two successive days, but no indication was forthcoming of any serious advance. A meeting, called on February 12 to discuss the Montreal Stock Exchange executive's policy of continuing the "pegging" of certain stocks at minimum prices, produced a majority of 41 to 19 in favour of the practice, but as a concession the "pegs" have since been removed from certain stocks. The Bureau of Statistics "Investors' Index" (covering all common stocks) in mid-February was 59.2, as compared with 62.2 in the week ended January 21.

PARIS.

The strong upward movement in all sections of the Paris Bourse was decisively checked during the week-end. Quotations this week suffered a sharp setback on profit-taking, the death of M. Briand having an appreciable effect on sentiment. Large blocks of shares came on the market on Tuesday, but in a feverish session floating supplies were largely absorbed. Oil shares were very unsettled, and copper shares adversely affected by the fall in the metal. The strength of sterling, however, was regarded as a bull point, and in mid-week a strong demand arose for bank shares. Dutch, Shell and De Beers were prominent, and rubber shares firm. On Thursday quotations resumed their downward trend in most sections.

LONDON ACTIVE SECURITY PRICES AND YIELDS.

NOTE.—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain rate the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

(Continued from page 583.)

rumours that negotiations were pending for a Government credit on the pit-head coal stocks. Rayon shares were in some demand. Siemens and Halske were more active. Unofficial quotations, for the most part, showed a moderate decline on the week. Dye Trust were done at 91 (against 97), Siemens at 112 (against 114), General Electric at 30 (against 30½), and Reichsbank at 118 (against 115).

AMSTERDAM.

Dullness marked the opening of the Amsterdam Bourse, considerable profit-taking being in evidence. Unilever, however, resisted the prevailing tendency owing to the good results of Home and Colonial and Lipton. Philips Lamps reacted. A.K.U. improved on the favourable Snia Viscosa report, but subsequently weakened on the announced restriction of production. Royal Dutch trended downwards, but Rubber shares were steady. A more cheerful tone developed on Wednesday, the strength of sterling inducing a certain amount of bear covering. Amsterdam Trading was a firm feature, the Sugar market being encouraged by the large Java sales.

OTHER CENTRES.

Irregular conditions prevailed in most of the minor European centres, with no marked trend either way. Stockholm was quiet at the opening, but weakness subsequently spread from Swedish Match and Kreuger and Toll, which were marked down on adverse dividend rumours, to the market as a whole. Brussels enjoyed a recovery after an earlier recession on Paris selling. An improvement occurred in Milan after a poor start.

INVESTMENT NOTES.

Markets and "Money."—The events of last week, which may be regarded as having reached their culminating point on Tuesday, when the authorities removed the "peg," caused investors to recast their policies with dramatic suddenness. In the first place, the gilt-edged market saw the way open to an unlimited rise. A reduction in Bank rate became inevitable, and domestic buying of British Government funds was accelerated by foreign demand for 4 per cent. Funding Loan (which is free of tax to foreign holders). At the same time, the foreign gamble in sterling led to foreign buying of sterling securities which are either dealt in on the Paris Bourse or favoured by Paris speculators. Quotations for such international counters as Royal Dutch, Rio Tinto, Brazilian Traction and the South African mining shares were raised sharply in a rush of indiscriminate buying. When the inevitable setback occurred, the prices of the same counters fell almost as rapidly as they had risen. At the same time the South African gold-mining share market experienced something like a slump. Apart from the sell-

ing of Paris speculators, the British holder of these shares realised that, as the gold price of sterling appreciated, so the sterling price of his gold shares went down. On Wednesday dealings in the South African market were wide and erratic, and at first almost a matter of negotiation, though the market became more stable after the sterling rate had reached. The following table shows the further rise which has taken place in British Government funds:—

	Price Feb. 10.	Price Mar. 4.	Price Mar. 10.
Consolidated Loan, 4%	84½	93½	94½
Conversion Loan, 3½%	75½	82½	82½
Conversion Loan, 4½% 1940-44.....	95½	102	102½
Funding Loan, 4%, 1960-90	86½	96	96½
Victory Bonds, 4%, by 1976	93½	96½	96½
War Loan, 5%, 1929-47	98½	101	101½

After Bank rate had been reduced to 4 per cent., markets quietened down, and industrial shares suffered from profit-taking. The week's events, as a whole, were an object-lesson in the undesirability of extreme fluctuations in the sterling exchange.

Stock Exchange Commissions.—We stated last week that the Committee for General Purposes of the Stock Exchange had announced their approval in principle of a reduction in the proportion of commission returnable to outside agents from 50 per cent. to 38½ per cent., except in the case of the banks. This did not apply to the clerks and half-commission men in the exclusive employment of brokers, as to whose position the opinion of the House was to be canvassed. A mass meeting, attended by over 800 members, was held on Tuesday to discuss this question, and a remarkable degree of unanimity was shown. The following resolutions were put and carried unanimously:—(1) That the commission allowed hitherto by brokers to bankers and agents had been excessive; (2) that in future the allowance to bankers who were members of the British Bankers' Association should be 38½ per cent., and to all other recognised agents 25 per cent.; (3) that all agents receiving commission should be registered with the Committee, which should have power to effect or refuse registrations without assigning reasons; (4) that no commission amounting to 20s. or under on a bargain should be divisible; (5) that the sponsors of the movement should place these resolutions before the Committee, and continue their efforts in furtherance of this policy. These resolutions, in point of fact, expressed the moderate point of view. Some members suggested the total abolition of the commission-sharing system; while others pointed out that the banks deserved their commissions, seeing that orders from this source involved the broker in no financial risk and assured him of prompt payment and delivery of stock. Considering that some firms do little business with banks, while others are large beneficiaries, and that some brokers make little use of the outside half-commission man, while others are dependent on business coming to them in this way, it is remarkable that complete agreement should have been reached on these resolutions. The Committee will, no doubt, attach due importance to this weight of opinion. It is obvious that the split-commission system, as a whole, does more harm than good to the Stock Exchange, and that it is in the interests of the whole "House" to make public dealing on the Stock Exchange as cheap as possible. Unless drastic reductions in half-commission allowances are made, there is little chance of the investing public securing lower charges. It is interesting to know that the provincial stockbrokers are entirely behind this movement for reform.

Reception of the Royal Mail Scheme.—The Royal Mail Scheme, a summary of which was given in our last issue, has had, on the whole, a favourable reception. Some publicly-voiced criticisms appear to be based on incomplete appreciation of the Scheme's aims, while others have been mutually self-destructive. The London Maritime Investment Company, as trustee for the 6 per cent. debenture stockholders of the African Steam Ship Company, has criticised certain "amendments of principle,"

made after the original proposals had obtained its approval, but has declared that stockholders would be well advised not to oppose the Scheme. The fiercest criticism, so far, has come from the trustees for the "A" debenture stockholders of Elder Dempster and Company, who, in a circular, have declared that, if available assets were placed under the control of all the company's debenture-holders jointly, the "A" stockholders might obtain about 5s. in the £. They have also referred to a High Court application. Replies to this circular have come from two quarters. The trustees of Elder Dempster 5 per cent. debenture stock have pertinently pointed out that their issue ranks in priority to the "A" stock, and there is no possibility of the control of the assets being placed under representatives of the two classes of debenture stockholders. The chairman of Elder Dempster has also issued a circular dealing with a point which the "A" trustees' document scarcely made clear—namely, that Elder Dempster itself has only one ship (now laid up), its interest in the African Steam Ship and British and African Steam Navigation Companies consisting mainly of shareholdings. If the Scheme of arrangement is rejected and receivers are appointed, there is "no probability" of the assets of the two latter companies realising sufficient to meet their liabilities, in which case no value will attach to Elder Dempster's shareholding. On the other hand, if the Scheme is carried and trading conditions improve, substantially more than 5s. in the £ should be available for Elder Dempster's "A" debenture stock. The Court has directed that the meetings of debenture-holders and creditors are to be held on specified dates from March 18th to March 24th. An application for the holding of the Harland and Wolff meetings in London, however, has not been granted. The meetings will, therefore, be held in Belfast not later than April 24th. It may be hoped that debenture-holders and creditors will make every effort to attend these meetings, in order that the opinion of really representative majorities may be ascertained.

Cables and Wireless.—The passing of dividends on the £23,160,741 of 5½ per cent. cumulative preference stock of Cables and Wireless, followed by the announcement that the company will not occupy its new building on the Victoria Embankment, has naturally depressed market sentiment. The 5½ per cent. preference stock has fallen to 45, as compared with a high level of 78 last year. Indeed, it was only a few months ago that a relatively cheerful view was taken of Cables and Wireless prospects. A memorandum prepared by one of the leading dealers of the Stock Exchange last October declared that, as a result of the fall in the exchange value of the £, the company was in a position to compete successfully with the American telegraph companies. It was added that the income from investments alone in 1930 amounted to £611,941, which was sufficient to pay a dividend of 2.7 per cent. on the 5½ per cent. preference stock, and that the company held British Government and other securities valued at over £14 millions, whereas the market value of the three classes of the company's capital was then approximately £17 millions. This memorandum led to such a demand for Cables and Wireless preference stock that prices rose from 51½ to 78. How ill-considered this memorandum was is now apparent from the figures of traffic receipts of the operating subsidiary, Imperial and International Communications, for 1931, which, at £4,624,437, showed a decline of £741,124, or 13.8 per cent., as compared with those of 1930. The directors now declare that the estimated financial results of Cables and Wireless for 1931 do not permit of the declaration of any dividend for the year. In the *Economist* of January 30th we estimated that, after allowing for the 13.8 per cent. decline in traffic receipts of the Communications Company and for a decline of 20 per cent. in investment income, Cables and Wireless should earn approximately 3½ per cent. on its preference stock. It would appear from the directors' latest statement that either the investment income has declined much more heavily than we anticipated or that the company is applying a large proportion of its profits to writing-off depreciation on these investments.

It is time, we think, that the stockholders were taken into the confidence of the directors and were told the true position. A committee was set up last July by the Imperial Communications Advisory Committee, which is a Government body, to enquire into the position of the Communications Company and to suggest measures which would remedy the discrepancy between the standard revenues and the present earnings. The stockholders would seem to be entitled to have the results of this committee's work placed before them. If Cables and Wireless is over-capitalised, having regard to possible future earnings, it is essential that a drastic writing-down of capital should be carried out without further delay. The capitalisation of the company was based largely on the high prices to which the ordinary stocks of the Cable Companies and of Marconi were carried in the boom which preceded the merger in April, 1929. The following table shows the present market capitalisation as compared with the par valuation fixed at the time of the merger:—

	Par Value.	High, 1930. Quota-tion.	Market Capitali-sation.	Present Market Quota-tion.	Market Capitali-sation.
5½% cum pref stk	23,160,741	100	23,160,741	45	10,422,333
7½ "A" ordinary stock	20,686,854	77	15,928,878	15	3,103,028
"B" ordinary stk.	8,655,977	39½	3,419,111	9½	822,318
	52,503,572		42,508,730		14,347,679

It will be seen that the aggregate decline in market value has been nearly 73 per cent. from par value. The market undoubtedly feels that a serious blunder was made in arranging the merger company's capitalisation, and that an early opportunity should be taken of readjusting the capitalisation to earning capacity.

This service is available to Exporters, Importers and others wishing to develop trade with South, East and Central Africa.

THE STANDARD BANK MONTHLY REVIEW is sent post free on application. It gives the latest information on all South, East and Central African matters of Trade and Commercial Interest.

Provision Store Profits.—In spite of the adverse trading conditions of 1931, satisfactory results are shown by the latest accounts of the "Unilever" group of multiple shop provision dealers, embracing Home and Colonial Stores and its associated companies, Lipton, Maypole Dairy and Meadow Dairy. The earnings of Home and Colonial, after deduction of tax provision, rose from £564,988 to £795,825, an increase of £230,837, but of this difference some £214,940 is accounted for by the profit of Lipton, whose issued capital was acquired during the year. Both companies have distributed an ordinary dividend of 25 per cent., representing, in the case of Lipton, an increase of 5 per cent. compared with last year. The net profit of Maypole Dairy fell from £537,216 to £432,294, the reduced dividend being barely covered at 15 per cent. The decline in the earnings of Meadow Dairy was less severe, but the ordinary dividend was reduced from 30 per cent. to 25 per cent. The reserve allocations of the four companies amounted in the aggregate to £85,000, compared with £105,000 in 1930:—

	Year.	Home and Colonial.	Lipton.	Maypole Dairy.	Meadow Dairy.

The balance sheet of Home and Colonial shows investments in and advances to subsidiary companies totalling £4,918,723, while cash, Treasury bills, and investments in Government and other securities stand at £356,402, against £254,150 last year. Creditors amount to £110,054, against £185,758. Lipton has liquid assets of £1,041,745, against £1,046,779, while a new item has appeared of £112,940, representing shares in an associated company. Creditors total £573,424, against £548,723. Maypole Dairy has liquid assets of £1,696,347 to set against a creditor item of £816,009, while Meadow Dairy has available resources of £530,053 and creditors of £126,844. All the balance sheets show a reduction in stocks carried, chiefly attributable, doubtless, to the lower prices which have ruled during the year. No important changes have occurred in fixed assets.

The "Harman Group."—On Saturday last, March 5th, Mr Justice Clauson gave judgment in an action brought by Morris and Jones, Limited, wholesale grocers, of Liverpool and Manchester, etc., against Mr Martin Coles Harman and other defendants on a claim for damages for alleged breach of trust. The judge found that Mr Harman, having become a director of Morris and Jones, obtained a resolution of the board, under which the finance side of the business was detached from the grocery side, and a finance committee formed, whose subsequent decisions Mr Harman and the other defendants effectively controlled. They thus obtained powers over a sum of £150,000 of the plaintiffs' money, invested in gilt-edged securities. Between the beginning and the middle of September, 1928, they spent £100,700 in purchasing six blocks of securities, £52,500 in purchasing two other blocks and £989 in paying a broker's commission. In the course

of 1929, the two latter blocks of securities were realised, and some £53,750 of the amount obtained was used to purchase two other blocks of securities. The company at the date of the action still held the six blocks of securities bought in September, 1928, and the two blocks bought in 1929, for which it had paid an aggregate sum of £154,450. It was contended that their total value was £7,776 and that they had never been worth more. In a detailed judgment, Mr Justice Clauson found that the eight purchases referred to (which embraced the securities of concerns in the "Harman group"), were made in breach of the duty of the defendants as directors; that the finance committee were not justified in locking up the funds of a large wholesale grocery business in securities of that character which had a common characteristic of being unmarketable; and that the purchases were made in direct disregard of the plaintiff company's interests in order to further the interests of the "Harman group" companies. Accordingly, damages of £145,564 were awarded. The judge, incidentally, criticised what he described as the "most unsatisfactory position," under which dealings were marked in the Stock Exchange lists, in the various securities, when there was no evidence that a real market existed. As a result, the defendant, Harman, had been able to state at a general meeting of the company, with some show of justification, that practically the whole of the investments were quoted on the London Stock Exchange above the balance-sheet figure. This matter was commended to the attention of those responsible for the publications of the lists. The matter, it is understood, has been considered by the London Stock Exchange Committee this week. The Committee, it is well known, have already taken a firm stand against abuse of the facilities for publicity afforded by quotations in the lists, and on more than one recent occasion have suspended quotations, and even dealings, on evidence of "manipulation." It is difficult to see, however, how they can effectively guard against misuse of "marking" facilities in respect of what, for all they know, may be perfectly genuine, although small, dealings. When a quiescent share suddenly blazes into apparent activity, with a long list of markings, there is an obvious *prima facie* case for inquiry, but when a similar share has merely one or two markings, in a period of inactivity, there is no obvious means of imputing "manipulation."

London Passenger Transport Bill.—The report is current on the Stock Exchange that the London Passenger Transport Bill is to be dropped. In the *Economist* of December 5th and January 2nd last, we dealt with the objections which had been raised to the Bill by interested parties since the defeat of the Labour Government. In particular, we referred to a memorandum circulated by Thomas Tilling which alleged that since the amount of stock to be issued had been greatly increased by the better terms secured by the London County Council, while the cost of petrol had risen and receipts were showing a tendency to diminish, it was more than likely that, on Sir William McLintock's estimate of profits, the annual interest charges would not be met, and that there would be no surplus available to finance future expenditure unless fares were raised. The chairman of Thomas Tilling, at the shareholders' meeting on Wednesday, confessed, however, that, having regard to the amendments secured in the Bill, the position of Thomas Tilling was not one that called for undue anxiety. Nevertheless, he reiterated his company's objections to the Bill, which, he said, "most of us concluded would be dropped" when the Labour Government was defeated. Mr Heaton now alleges that the Bill is not in the public interest and that the Labour Minister of Transport, "anxious to get on to the Statute Book a measure which he characterised as the greatest Socialistic scheme affecting transport ever placed before the country," had cleverly appeased the powerful opponents who had presented petitions against the Bill. The latter would not bring about a relief of congestion in the streets. If the proposed transport authority was to remain solvent, the number of public service vehicles in the London area would not be reduced by a single unit. Supporters of the measure will doubtless

reply that it is late in the day to object to the London Passenger Transport Board on account of its alleged Socialistic and monopolistic character, seeing that these fundamental issues were fully considered by a Committee of both Houses of Parliament. In view of the conditions in the London area, public control in some form would seem inevitable. The chairmen of the main line railway companies have expressed their view that the co-ordination of London passenger traffic is desirable and have emphasised the need for some central authority with which the railways can enter into firm arrangements. For our part, we have never disguised the fact that there are technical objections which ought to be considered. For example, it seems inequitable to take over the Metropolitan Railway in its entirety seeing that it owns valuable real estate property in London and outside, and runs a country line into the Chilterns. Whether the Metropolitan Railway should be treated as one of the main line railways, as the company claims, is another question, seeing that it owns a branch of the Inner Circle line between South Kensington and Aldgate, which is an indispensable link in any London scheme. These technical details must necessarily be considered, but to argue that the Bill should be dropped entirely is a different matter.

The Greek Debt Position.—Although the Finance Committee of the League of Nations was summoned to an extraordinary meeting on March 3rd last to hear, *inter alia*, the report of the Commission of Inquiry sent to Greece to inquire into the state of the country's finances, no official statement has yet been made. According to a report of a recent speech by M. Venizelos in the Greek Chamber, Greece has asked for the suspension, for five years, of the service for the redemption of the external debts, while there is a suggestion, in unofficial quarters, that a default on both sinking fund and interest of the internal debt may shortly occur. As will be seen from the following table of London price quotations for the most important Greek loans, dealers have taken a very conservative view of the country's prospects during recent weeks:—

GREEK GOVERNMENT LOANS.

Description.	Prices in 1930.		Prices in 1931.		Feb. 10, 1932.	Mar. 9, 1932.
	Highest.	Lowest.	Highest.	Lowest.		
Greek 5%, 1881	77½	68	85	63	61	50½
" 5%, 1884	78	68½	85½	60	59½	50½

" 8% Exchanged Refugees Loans, 1926-28	102½	97	84	65	65	65

In several cases, stocks have lost nearly a fifth of their value since the beginning of the year, and last month every loan except the 8 per cent. Exchanged Refugees of 1926-28 suffered some recession. Nervousness is likely to continue pending the report of Sir Otto Niemeyer, who recently returned from Athens to Paris in order to present his findings to the Finance Committee of the League.

A.E.G.—The balance sheet of the A.E.G., in which the American General Electric Group holds substantial interests, is much less favourable than that of its great competitor, the Siemens group. The A.E.G., which has a capital of Rm. 200 millions, has experienced a net loss of Rm. 19.3 millions, against net profits in the preceding year of Rm. 14.2 millions. The loss is covered by a reduction of the open reserves, but this company, like Vereinigte Stahlwerke, has omitted to undertake any revision of its balance sheet in order to allow for all the effects of the

crisis upon the book value of its assets. Total sales by A.E.G. last year fell from Rm. 520 to 370 millions, a fall, like that of Siemens-Schuckert, which is also a large producer of power plant, amounting to 30 per cent. About half the output of the A.E.G. is for export, and shipments abroad have recently been rendered difficult by the increased duties and the exchange regulations of many countries. Moreover, owing to the extraordinarily severe competition, some of them have only been possible at prices which represented a loss. In the home market, on the other hand, all improvements are crippled by the lack of capital, and in any case no extension is called for with the present downward tendency of the market for electric current. The Berlin Stock Exchange, therefore, takes a somewhat unfavourable view of the prospects of A.E.G., and the shares are down to one-third of their nominal value.

New Issues in February.—In the following table we show the new capital raised in London by issue to the public or to shareholders, in February, and in recent years:—

Monthly Average.	(000's omitted).				Total.
	United Kingdom.	British Possessions.	Foreign Countries.	£	
1924	7,051	6,023	4,370	£	17,444
1925	12,918	5,077	1,356	£	19,351
1926	10,765	4,431	4,036	£	19,232
1927	17,240	8,318	4,039	£	29,597
1928	21,965	5,263	3,526	£	30,754
1929	16,502	5,081	2,186	£	23,769
1930	14,220	5,121	2,975	£	22,316
1931	4,542	3,209	761	£	8,512
Monthly Total.	Govt. 850	Other. 11,839	12,000	£	26,961
October, 1930....	Dr. 1,350	684	49	£	Dr. 617
October, 1931....	Dr. 450	2,468	Nil	£	2,918
November, 1930	1,050	6,479	6,158	£	16,580
November, 1931	Dr. 450	2,468	Nil	£	2,028
December, 1930	850	26,914	3,361	£	31,463
December, 1931	Nil	2,503	15	£	2,518
January, 1931	1,800	6,331	118	£	8,249
January, 1932	Dr. 1,200	123	2,127	£	1,050
February, 1931	2,450	4,368	13,705	£	20,573
February, 1932	Dr. 600	7,660	2,470	£	9,530

The largest borrower, the Central Electricity Board, was unfortunate in its market, but its £7,000,000 issue has now gone to a premium and been rapidly absorbed, to the relief of underwriters. The Nyasaland loan of £2,000,000, at the end of the month, struck the beginning of the improvement in sentiment, and, like the Croydon Corporation loan of £750,000, was heavily oversubscribed.

Modder B.—Our mining correspondent writes:—In his report of a year ago the consulting engineer of the Modderfontein B Gold Mines gave frank warning that a reduction in profits was likely. A more or less corresponding reduction in dividends might reasonably have been anticipated. The warning has received ample justification in the event, the net earnings of 1931 displaying a shrinkage of well over £100,000. An increased tonnage of ore was put through, with the accompaniment of a saving of 1s. per ton in the cost ratio, but the revenue per ton shrank by 4s. 5d. From the 80 per cent. total which ruled from 1926 to 1930 inclusive the dividend rate was cut to 60 per cent. Nevertheless, the sum distributed amongst the shareholders once again substantially exceeded the earnings, the appropriation account being swollen by a transfer of a credit on property and equipment. For each of the

WELLINGTON SCHOOL, SOMERSET

"BURSAR," WELLINGTON SCHOOL, SOMERSET

past two years the amount has been in the neighbourhood of £33,000. Our usual tabulation is appended:—

	Year ends December 31.		
	1929.	1930.	1931.
Ore milled (tons)	836,000	840,000	887,000
Yield per ton (dwts.) ...	7.2	7.0	6.0
Costs per ton	17/3	16/11	15/10
Profit per ton	13/9	12/11	9/7
Total working profit (£) ..	574,560	543,437	424,173
Brought forward	389,323*	337,213*	324,682*
Ordinary capital:—			
Earned (£)	507,616	481,058	370,445
Paid (£)	560,000	560,000	420,000
Earned %	72.5	68.7	52.9
Paid %	80	80	60
Carried forward	336,939	291,054	275,127
Ore reserves (tons)	1,445,400	1,226,400	1,177,460
Value (dwt.)	7.3	7.03	6.57

* Including forfeited dividends and credit on capital account.

In the circumstances, satisfaction can be derived from the smallness of the shrinkage in the calculated ore reserves, though the value is nearly $\frac{1}{2}$ dwt. less than before. That the material included in the payable category should be down only by about 49,000 tons, while over a million tons were taken out of the mine, arises partly from the more productive character of the developed footage performed and partly from the utilisation of ore not included in the payable reserves. In point of fact, the latter represent little more than one year's supply. Still, the indications are that the life of the mine will be eked out by the use of "reclamation" material. Altogether Modder B 5s. shares do not appear overvalued at the current reduced level of around 11s. The balance of cash assets over liabilities stands at £275,100, against a capital of £700,000. Here a complication is introduced by Great Britain's departure from the gold standard. Of the £538,730 on deposit, £348,090 is receivable in British sterling; and of £238,870 dividends unpaid, £28,870 is due in the same currency. Very reasonably, no provision has been made for possible losses on exchange, as their amount "can only be ascertained as and when conversions actually take place."

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies: Refuge Assurance, Britannic Assurance, Sun Life Assurance Society, Provident Mutual Life Assurance Association, Beira Railway, King Line, Metropolitan Electric Supply, Midland Counties Electric Supply, United States Debenture Corporation, River Plate Trust Loan and Agency, and B. Morris and Sons. At the annual meeting of the Refuge Assurance Company the chairman said that the company administered the National Health Insurance of a membership of 663,000, an increase of 8,000 over that of the previous year. In the course of the year 1,158,997 payments of benefit were made, amounting to £704,118, including £80,338 in respect of maternity benefit. In the preceding year the corresponding payments of benefit numbered 1,194,560, amounting in all to £749,662. At the annual meeting of the Britannic Assurance Company, Mr Murray Laing mentioned that in the industrial branch last year they had issued over 100,000 free policies to persons who discontinued the payment of premiums. This showed the value of the concession introduced in 1930, under which automatic free policies were granted after the payment of only two years' premiums. Presiding at the annual meeting of the Midland Counties Electric Supply Company, Mr George Balfour pointed out that the real measure of the company's progress last year was the increased supply to bulk consumers and power users of 12 million units and to domestic consumers of 3 million units.

CAPITAL ISSUES.

The re-opening of the capital market to borrowers of good standing has produced a number of issues which have been more remarkable for the enthusiasm with which they have been taken up than for any particular significance as regards their total. Two more municipal corporations have made public issues, that of *Poole Corporation*, for £750,000, being offered direct to the public, to yield just under 5 per cent., while that of *Grimsby Corporation*, for £625,000, is being placed by Stock Exchange "introductions." Both stocks are trustee securities, and will enable the corporations to fund certain obligations. Another trustee issue of the week was made by the *Metropolitan Railway Company*, in the form of Debenture stock covered rather less than twice by last year's profits. The stock was priced to yield, with redemption in 1962, £5 3s. 3d. per cent., and the proceeds were to be applied partly to liquidating an overdraft on capital account and partly to general purposes, including expenditure on new works which the company is energetically prosecuting in its Outer-London area. Both the Poole and the Metropolitan issues were considerably over-subscribed, the basis of allotment in the former case being 4 per cent. An issue of another type was made by the *Bristol Greyhound Racing Association*, which offered 180,000 shares of 2s. (65,000 of which had been underwritten firm), out of its capital of £25,000. Greyhound racing, in the hands of the small minority of companies which have survived the orgy of the last boom, has become a more or less settled and localised "industry." Any new concern, however, even in a large centre of population, falls into the most speculative category, and the process of financing its early years is best left to specialists in the type.

Poole Corporation.—Issue of £750,000 5 per cent. redeemable stock, 1957-1972, at £100½ per cent. Trustees are authorised to invest in this stock, which will be redeemed at par on March 1, 1972, or at the option of the corporation on or after March 1, 1957, on three months' notice. The proceeds of the issue will be utilised in repaying a bank loan raised in connection with expenditure on waterworks, &c., and to provide for the repayment of £341,011 5½ per cent. stock, 1932-52. A rate of one penny in the pound will produce £1,807.

Metropolitan Railway.—Issue of £2,000,000 5 per cent. redeemable debenture stock, 1957-62, at £97½ per cent., to yield, with redemption in 1962, £5 3s. 3d. per cent. The stock will be redeemed at par on January 15, 1962, or at the option of the company on or after January 15, 1957, on six months' notice. Trustees are permitted to invest in this stock. Net revenue of the company for the past five years has ranged from £765,866 to £844,515, so that interest on debenture stock, requiring £429,990, is amply covered. The capital is to be devoted to the furtherance of the company's development programme.

Bristol Greyhound Racing Association.—Issue of 180,000 shares of 2s. each at par, of which 65,000 shares were underwritten firm and allotted in terms of the prospectus. The company was incorporated to acquire, equip and operate a greyhound racing track at Bristol. Estimated net annual profit, £13,000, representing 60 per cent. on total issued capital.

Particulars of the following have been issued "for information only," with a view to Stock Exchange introduction:—**Grimsby Corporation.**—Particulars of an issue of £625,000 Grimsby Corporation 5 per cent. redeemable stock, 1962-1972, redeemable at par on March 15, 1972, or at the option of the corporation at any time on or after March 15, 1962, on six months' notice. The stock is a trustee security. The proceeds will be applied towards the costs of construction of the new Fish Dock at Grimsby.

COMPANY MEETINGS, &c.

REFUGE ASSURANCE COMPANY, LIMITED.

PROGRESS MAINTAINED.

PROFITS TO POLICYHOLDERS IN BOTH BRANCHES.

INCOME EXCEEDS £11,500,000.

ASSETS, £52,719,006.

DEPRECIATION COVERED BY INVESTMENTS RESERVE FUNDS.

The sixty-eighth annual ordinary general meeting of the Refuge Assurance Company, Limited, was held, on the 7th instant, at the chief office of the company, Oxford Street, Manchester.

Mr J. Wilcock Holgate (the chairman of the company) presided. The Secretary (Mr John W. Moss) having read the notice convening the meeting and the auditors' report,

The Chairman, in moving the adoption of the report and accounts, which were taken as read, after referring to the loss which the board had sustained by the death of Mr W. H. Aldcroft, F.I.A., who was appointed to the board in 1930 on his retiring from the position of general manager and actuary of the company, said:—

Gentlemen,—The report and accounts which I submit to-day indicate, I think, that notwithstanding the accentuated depression and the financial disturbances which characterised 1931, the company has again produced a record of progress and development which should give satisfaction to all who are associated with it. The year has provided many difficult problems, but the progress the company has made is evidence of the strength and adaptability of our organisation, and also of the confidence which is placed in the "Refuge" by the public.

The total premium income amounted to £9,223,551, an increase of £270,793 over that of the previous year, and the total net interest income was £2,265,147, showing an increase under that heading of £45,614. Our total funds now stand at £52,719,006, showing an increase of £3,350,759. The amount paid in claims by death or maturity during the year was £4,923,215—a figure which represents the payment of approximately £16,000 each working day—and the total sum paid under this head since the inception of the company is now £70,946,838. The aggregate surplus shown by the valuation of the two branches of the company, after transferring £2,500,000 to the investments reserve funds, is £1,884,328, which includes £648,140 brought forward from the previous valuation, and the investments reserve funds now amount to £4,350,000. It is proposed to allocate £902,393 to the policyholders, and £120,000 to the shareholders, the balance of £861,935 being carried forward.

INDUSTRIAL BRANCH.

The industrial branch, which comprises, of course, those assurances subject to weekly or monthly premiums collected at the homes of the policyholders, has had to contend with the very difficult conditions created by the long-continued depression in trade and employment, and the progress the branch has shown in 1931 is, I submit, very convincing proof of the value which the industrial community place upon their life assurances, and the efforts which they make, not only to maintain their policies in force, but also to take advantage of fresh assurance cover when the necessity arises. In very many cases when death occurs, it is literally true to say that the industrial assurance policy provides the only funds available to meet the expenses which then fall upon the survivors, and in such circumstances the prompt payment of claims with a minimum of formality, upon which the company has always prided itself, is daily proving the worth of industrial assurance and justifying its place in the social scheme.

In the industrial branch, the company issued 967,207 policies during the year for a total sum assured of £17,791,755. The premium income in this branch was £5,084,493, which shows an increase of £142,902 over the corresponding item of the previous year, and the net income from interest on investments, after deduction of income tax, was £841,403, showing a net yield of £5 9s. 2d. per cent. on the assurance fund of this branch, the corresponding figure for the previous year being £5 10s. 6d. The death claims amounted to £1,895,558, and £343,076 was paid on matured endowment policies. The expense ratio for the year was 36.47 per cent., which compares with 36.52 per cent. for 1930. The company, in common with the whole community, experienced a heavier death-rate in 1931, and the claim rate from deaths and survivals combined was 44.03 per cent. of the premium income, as compared with 41.04 per cent. for 1930 and 45.18 per cent. for 1929.

The industrial branch life assurance fund now amounts to £16,112,942, having increased by £563,813 during the year, in addition

to which there is an investments reserve fund in this branch amounting to £1,875,000, a sum of £1,000,000 having been transferred to the latter fund at the end of the year to meet the exceptional depreciation to which I refer later.

INDUSTRIAL BRANCH VALUATION.

The valuation of this branch has again been made on the basis of the English Life Mortality Table No. 8 Males, with interest at 3 per cent. for all classes of policy except adult single whole-life assurances by weekly premiums and infantile whole-life assurances by weekly premiums not exceeding one penny, which are valued at 3½ per cent. As regards these whole-life policies, a modification has been introduced, as compared with the previous year, the percentage thrown off the office premiums before valuation now varying from 32½ per cent. upwards, as against from 35 per cent. upwards last year, a net positive liability being provided in every case. The remaining policies, including the whole-life assurances by monthly premiums, have again been valued on a strict net premium basis. After the transfer of £1,000,000 to the investments reserve fund, the surplus is £291,830, which includes £73,394 brought forward from the preceding year. It is proposed to set aside £159,338 for allocation amongst the policyholders in this branch, and from the remainder to allocate to the shareholders the sum of £14,938, and to declare a dividend of 7½ per cent., absorbing £22,500. The balance of £95,054 would then be carried forward unappropriated.

The number of industrial branch policies in force at the valuation date was 6,901,492, assuring the sum of £97,049,674, and their average duration was ten years and five months.

ALLOCATION OF PROFITS TO POLICYHOLDERS IN THE INDUSTRIAL BRANCH.

I am sure you will share my pleasure that the events of the past year have not rendered it necessary to interrupt the sequence of allocations of profit to policyholders, which have become a feature of our industrial branch business. The amount available on this occasion is, as I have said, £159,338; and it is proposed to utilise it in favour of policyholders under our whole-life tables 1, 2, 3 and 12, 13, 14, by increasing to the latest and most favourable scales of benefit the amounts payable under claims in respect of deaths which occur under these tables between March 7, 1932, and March 5, 1933, inclusive, where the sum assured by the policy is less than that shown by the latest scale.

It will be recalled that, as a result of previous allocations of profit, the benefits under all other classes of policy are now permanently increased to the amounts shown by the latest and best scales of benefit.

ORDINARY BRANCH.

The ordinary branch has shown an expansion which, I think, can be regarded as gratifying. We have been able to increase the number of our existing assurances and our premium income, notwithstanding the circumstances of the times, and also the effect of another factor which is growing more important as the years go on—I refer to the large and increasing number of our ordinary branch endowment assurances which are now maturing for payment each year, upon completion of the endowment term. In spite of these two influences, our premium income in this branch increased by £127,891 in 1931, and amounted to £4,139,059.

The number of policies issued was 51,056, assuring the sum of £6,524,321, at annual premiums of £458,727, and at single premiums of £64,786. The net income from interest, after deduction of tax, was £1,423,744, and the net rate of interest earned on the assurance fund of this branch was £4 13s. per cent., as compared with £4 16s. for the previous year. Claims paid amounted for £2,684,544, comprising £810,129 paid under endowments by death and £1,874,415 on matured endowments.

The ordinary branch life assurance fund now amounts to £31,479,305, having increased by £273,853 during the year, in addition to which there is an investments reserve fund in this branch amounting to £2,475,000, a transfer of £1,500,000 having been made

to the latter fund at the end of 1931, for the same reason as that to which I referred when dealing with the industrial branch.

The expense rate in this branch was again reduced, the figure being 14.65 per cent. for 1931—a reduction of 0.50 as compared with the rate for 1930.

ORDINARY BRANCH VALUATION.

The ordinary branch has again been valued by the OM table of mortality, the premiums taken into account being the OM 3 per cent. net premiums corresponding to the ages at entry. As regards the endowment assurances and paid-up policies, the valuation rate of interest has been increased from 3 per cent. to 3½ per cent., and in respect of all other contracts remains at 3 per cent.

After transferring £1,500,000 to the investments reserve fund, the surplus is £1,592,498, out of which it is proposed to declare a reversionary bonus at the rate of £1 14s. per cent. on with-profit policies, absorbing £743,055, and to allocate £82,562 to the shareholders, the balance of £766,881 being carried forward unappropriated.

The total number of ordinary branch policies existing at December 31, 1931, was 554,082, assuring the sum of £68,955,923, including bonus additions of £7,646,150.

REVERSIONARY BONUS.

You will perhaps remember that when speaking last year of the general financial position of the country, I spoke somewhat cautiously as to the outlook. This caution has unfortunately been justified; and, having regard to the present altogether abnormal conditions and the uncertain outlook generally, it has been deemed prudent to conserve the company's resources, and to declare a reversionary bonus at the modified rate of £1 14s. per cent. This rate represents a decrease of 10s. as compared with that of the previous year; but I am sure you will agree with me that, at a time such as this, we should have been unwise to adopt any other policy than that of a complete recognition of the facts, and an acceptance of the accompanying restrictive effects.

As regards the future, I am not prepared to make any attempt to foretell when we are to see the return of what may be termed "normal" financial conditions. The immediate concern of this company, as I see it, is to take no step which is not in accordance with those principles of consolidation and caution traditional with life assurance organisations and to which so much of their just reputation for financial stability may fairly be attributed; and we have been guided by this consideration throughout.

ORDINARY AND INDUSTRIAL VALUATIONS.

You will have observed that the basis of valuation in each branch has been modified on this occasion, and I should say at once that these altered bases are well within the actual experience of the company. The changes have been made for the purpose of releasing the additional amounts which, in view of the unprecedented depreciation which occurred last year in the market values of securities, it was deemed necessary to transfer to the investments reserve funds, and in each branch the amount so transferred considerably exceeds the amount released by the modification in the basis of valuation.

INVESTMENTS.

You will observe that the total assets of the company increased during the year by £3,350,759, and now amount to £52,719,006, the principal increases having occurred under the classification of:—

British Government securities.....	£1,574,123
Indian and Colonial Government securities.....	£571,883
Railway and other debentures and debenture stocks—	
Home and foreign.....	£510,760

The only substantial reduction occurs in our foreign Government securities, which show a decrease of £137,688 at £668,312.

The gross interest received amounted to £2,579,242, being an increase of £118,967 over the previous year, and produced a gross yield on the combined invested funds of both branches of £5 6s. 1d. per cent., against £5 8s. 6d. per cent. in 1930. The net interest, as I have already stated, amounted to £2,265,147, against £2,219,533 last year, giving an increase of £45,614, and a net yield of £4 18s. 5d. per cent., as compared with £5 0s. 9d. per cent. last year.

By far the most important feature of the year as regards our investments, however, has been the severe depreciation in their market value. Having regard to the unprecedented economic disturbance which has occurred throughout the world during the period under review, it is far from probable that you would anticipate that this company could have been immune from its consequences. Nor could we as a matter of fact, having regard to the widespread nature of the disturbance, have kept clear had we seen in advance exactly what was going to happen. I am pleased to say, however, that serious as the depreciation has been, in the aggregate it is considerably less in amount than, judging by the various

published investment indexes, we should have expected; and, what is more important, I am able to state that—after making due allowance for all anticipated losses on unquoted securities—it is more than covered by the investments reserve funds of £4,350,000, leaving intact the increased amount carried forward of £861,935. It is further gratifying for us to know that since the date of the valuation on December 31st last, a material reduction in the amount of depreciation has taken place.

AUTOMATIC FREE POLICIES IN THE INDUSTRIAL BRANCH.

In my speech last year, I referred to the automatic free policy scheme which was introduced in 1930 under which industrial branch policyholders who are unable to maintain their policies in force automatically become entitled to a free paid-up policy for a reduced amount, provided at least two years' premiums have been paid (with the exception of certain infantile policies). The grant of this free policy is not conditional on application being made for it; on the contrary, the company takes active steps, once the cessation of premium payments is established, to obtain the policy, endorse it with the free policy benefit, and then return it to the policyholder, who thus becomes aware of the benefit to which he is entitled, free from any further premium payments.

The company takes every possible step to avoid lapses of its policies, and allows what I think may be fairly described as liberal periods of grace for payment of premiums before it enforces a lapse, and, further, gives facilities afterwards for revival if the arrears, or a substantial portion of them, can be paid. But with all the goodwill in the world, both on the part of the company and of the policyholder, in view of the periods of unemployment and of under-employment which are now the lot, at varying and uncertain periods, of so many of the industrial population, lapses cannot always be prevented, and where, after every effort has been made, a policyholder finds it impossible to continue his assurance, this free policy scheme automatically looks after his interests. There is no doubt that the introduction of the scheme marked a great advance in the practice of industrial life assurance, and made an industrial assurance policy a more valuable and attractive contract than before.

I should like to add, as showing the very earnest desire of the company to assist its clients, that if a policyholder has incurred arrears through lack of employment, and finds himself able to pay current premiums but not to liquidate his arrears, then, under certain conditions, the company will cancel the arrears, subject to a suitable abatement being made in the sum assured by the policy.

EVENTS OF THE YEAR.

There are two other matters to which I think some brief reference should be made. The first of these is the progress of the deliberations of the departmental committee appointed in April of last year to examine the law and practice of industrial assurance and to consider whether any amendment of, or addition to, the law was desirable. The appointment of the committee seems to me a perfectly natural sequel to the endeavour in 1923 to compress within the rigid limits of a comparatively short Act of Parliament rules and conditions which should henceforth govern the innumerable details of administration of a business so complex, and with so great a need for elasticity of control, as that in which we are engaged; and our experience of the last few years has clearly shown the need for clarification of the law on certain points and its amendment on others. A considerable body of evidence has been put before the committee during the year, including that submitted by the Association of Industrial Assurance Companies and Collecting Friendly Societies, of which, as you know, this company is a member; and I am confident that the outcome of the committee's deliberations will be such as to encourage us in our endeavour to carry on this great business with the maximum efficiency of which the industry is capable.

The second matter to which I desire to draw your attention is the widening of our appeal to prospective policy holders by the addition of a new table in each of the two branches of our activities. In the industrial branch, the new table is an improved form of one previously in force and now cancelled in those areas in which the new table is put into operation; whilst in the ordinary branch, the new contract is one which breaks entirely fresh ground. In this case, the appeal is directed principally to the young married man with a family, and a considerable amount of business of the first class has followed its introduction. We anticipate that an important proportion of our new business in future years will be secured under this table.

NATIONAL HEALTH INSURANCE.

Turning now to the company's activities in connection with the national scheme of health insurance, I have to report that on behalf of the National Amalgamated Approved Society, with which, as you know, we are associated for the purposes of the National Health Insurance Acts, the company administers the national health insur-

ance of a membership of 663,000, an increase of 3,000 over that of the previous year. In the course of the year 1,158,997 payments of benefit were made, amounting to £704,118, including £80,338 in respect of maternity benefit. In addition, the further considerable sum of £119,406 was received by "Refuge" members by way of additional treatment benefits during the year. In the preceding year, the corresponding payments of benefit numbered 1,194,560, amounting in all to £749,622. The number of new members admitted during the year to the "Refuge" section of the Society was 38,197.

The magnitude of these figures affords convincing evidence of the importance of the part played by our representatives in carrying out the provisions of the National Health Insurance Acts.

GENERAL OUTLOOK.

As regards the general outlook, there are far too many unsolved international problems, to which has recently been added the trouble in the Far East, for me to venture to prophesy as to what the immediate future has in store. It would appear that a settlement of war debts and reparations will have to precede any real revival in world trade, upon which, of necessity, this country so much depends.

At home, however, it would appear that there are some indications which would seem to offer justification for a little carefully restrained optimism. When last I had the pleasure of addressing you, I suggested that one of the preliminary requirements to a recovery was a frank facing of the facts. Well, I think the country is entitled to claim that it has now faced the facts. The burden that is being borne as a consequence is an almost intolerable one, but it is being borne with the usual British grit and determination, and there are, I think, signs already that our National Government, in whom the vast majority have entire confidence, is getting a grip of the situation. We have reason to anticipate that the Budget will be balanced, and steps have been taken by which it is hoped to balance our trade, two essential tasks which must be accomplished before the credit of this country can be fully restored. The next step, if circumstances permit, would appear to be some reduction in direct taxation, without which, I am afraid, the country cannot get firmly on its feet. If this could be realised, the psychological as well as the actual effect on our people would be very far-reaching, as it would provide a ground for confidence, which for so long has been absent. We are not yet out of the wood, but, with patience, I believe we may see a little more daylight in the not distant future.

TRIBUTE TO STAFF.

Before bringing my remarks to a close, I wish to express the board's cordial appreciation of the efforts of the field staff and the chief office staff, and of the whole-hearted manner in which their activities have been pursued in a year which has presented many problems, both on the productive and the administrative side. The conditions which characterised 1931, and which still prevail, are undoubtedly a very severe test of character and ability, but the staff as a whole have demonstrated that they are not in any degree daunted by them; in fact, judging by the results which have been achieved, the difficulties encountered have, to the great majority, served as a stimulus and incentive to go all out for every opportunity of business which, by diligent seeking, could be secured.

The relations between the company and the staff organisations during 1931 continued on the friendly and cordial basis which has always hitherto existed, and I take the opportunity of saying how helpful both to staff and company is the spirit of mutual understanding and fair play which pervades these relations.

Gentlemen, I have now much pleasure in moving the adoption of the annual report and accounts.

The report and accounts were adopted.

Messrs William Proctor Smith and James Wilcock Holgate were reappointed directors.

Messrs Walton, Watts and Company were reappointed auditors.

The meeting closed with a vote of thanks to the chairman.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper Ltd.,
8, Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

THE KING LINE, LIMITED.

WELL EQUIPPED FOR TRADE REVIVAL.

SIR F. VERNON THOMSON ON THE SHIPPING OUTLOOK.

The forty-third annual general meeting of the King Line, Limited, was held, on the 10th instant, at Winchester House, Old Broad Street, London, E.C., Sir F. Vernon Thomson, K.B.E. (the chairman), presiding.

The Secretary (Mr F. W. Matthews) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,—The report and accounts having been circulated amongst the shareholders a few days ago, may we, as usual, take them as read? (Agreed.)

As stated in our report, the shrinkage in the volume of the trade of the world during 1930 and the consequent depression in the shipping industry continued in 1931. This world-wide economic depression resulted in the crisis of last autumn. As indicating the state of shipping about 3,000,000 gross register tons are at present laid up in the United Kingdom. A large proportion of our steamers had to be laid up over most of the year, and five are still laid up.

The printed accounts set out clearly the position. The total trading profit for the year, inclusive of dividends, &c., was £35,592. After deducting £27,093 interest, providing £4,500 income tax, and transferring £4,000 to the reserve fund, the balance has been included in the total of £40,315 carried forward to 1932.

As no dividend has been earned for 1931, and having regard to the liabilities of the company and the unsettled outlook for trade generally throughout the world, the directors, whilst regretting any inconvenience that may be caused, do not recommend the distribution of a dividend out of reserves. They consider that in the long run this will be in the best interests of the shareholders.

BOOK VALUE OF THE FLEET.

The company's fleet of nine motor-vessels and eight steamships, of an average age of eight years, and of a total deadweight of 138,000 tons, now stand in the books at the reasonable average figure of £7 5s. 8d. per ton deadweight, or, allowing for the reserve fund and the amount carried forward, at £8 5s. 5d. per ton. At present it is impossible to sell steamships except at abnormally low prices, in the case of the older vessels approximating scrap prices, but the normal depreciation for a well-managed continuing steamship company has now been provided on your steamers to date.

As will be observed from the report, under the new regime the directors deemed it well forthwith to clear up the position regarding the company's unfortunate investments in the Royal Mail group. These consist of £249,000 Royal Mail ordinary stock and 4,500 ordinary shares of £1 each in the Piracca Trust, Ltd., both of which have now been written down to a merely nominal value by the allocation of £170,191 from the reserve fund. The reserve fund thus depleted has been made up again to £100,000 by the transfer of £89,829 from the insurance fund, no longer needed in the insurance fund, which is now £27,386, our vessels being fully insured at Lloyds and the principal companies. The value of the investments in the aggregate is now more than the £153,467 at which they stand in the books of the company.

FUTURE OF BRITISH SHIPPING.

There have been signs recently of a growing feeling of confidence in the trading community, which has engendered a broadening of demand in the freight markets, but the immediate outlook for shipping is still far from encouraging. Looking ahead, however, I do not take a gloomy view of the future if, as hitherto, we can offer efficient service on a competitive basis. The whole of the vessels of the King Line fleet are in first-class condition for their type and so ready to share in any improvement in maritime trade.

In these times of fiscal change, I hope that those in authority will not lose sight of the facts (1) that there is no industry more vital to Britain than the shipping industry; (2) that as Britain is the world's greatest ocean carrier, owning as it does about a third of the tonnage of the world, it should be our aim to promote, not to restrict, international trade; and (3) that our export trades are essential not only to shipping, but to the country as a whole if our present population is to be maintained in Britain.

I now beg to propose: "That the report and accounts as submitted be received and adopted."

The Earl of Coventry seconded the resolution, which was carried unanimously.

The retiring director, the Earl of Coventry, was re-elected, and Messrs. James Brown and Sandeman were re-appointed auditors.

Mr F. Hill said that he had intended to ask some questions, but had been anticipated by the chairman in his speech. He wished, however, to propose a hearty vote of thanks to the chairman, directors and staff for the way in which they had carried on the business of the company.

The vote was unanimously accorded, and a brief acknowledgment by the chairman concluded the proceedings.

RIVER PLATE TRUST LOAN AND AGENCY COMPANY, LIMITED.

STRONG FINANCIAL POSITION.

IMPROVED OUTLOOK IN ARGENTINA.

The fifty-first ordinary general meeting of the River Plate Trust Loan and Agency Company, Limited, was held, on the 4th instant, at 52, Moorgate, London, E.C., Mr James Anderson (the chairman) presiding.

The Chairman, in the course of his speech, said that during the last fifty years the company had had to pass through many periods of crisis, at times in the River Plate and on other occasions in England, but it had rarely, if ever, occurred that they had had to meet economic crises in both countries at the same time, as was the case last year. In Argentina economic crisis was occasioned by the unprecedentedly low and unremunerative prices obtainable for the primary products of grain, meat and wool, which formed the basis of the country's income. This had entailed curtailment of income of the whole community, making it difficult for the Government, as well as private individuals, to pay their way. In England we had had heavy depression in our principal industries, resulting in reduced profits and heavy depreciation in the realisable value of invested capital. Such adverse conditions were bound to be reflected in the profit and loss account. The profits for the year were down by some £36,800, but they were still able to pay dividends of 20 per cent. on the "A" shares and 7 per cent. on the "B" shares, and pass £25,000 to the reserve. The assets, taking Argentine and English together, showed a depreciation of £633,000, or 10.90 per cent. This, however, was covered more than twice over by the reserve and undivided profits. In the circumstances, these results must be considered as very satisfactory, and had only been possible because of the large reserves accumulated in past years.

STRONG FINANCIAL POSITION.

The balance sheet disclosed a very strong financial position, the liabilities to the public being exceptionally small and the liquid assets exceptionally large. The loans on first mortgage of freehold properties, £2,003,983, were for the most part in Argentine currency gold dollars, which at the close of the year showed a depreciation of about 13½ per cent. As, however, the sterling cost of the Argentine dollar had been written down in past years, the depreciation on the book figure was only £80,500, or approximately 4 per cent. The investments stood at £3,574,000, of which £590,000 was represented by British Government securities, the remainder being investments of a general character. At the close of the year the market price of these investments, of which 97 per cent. were quoted on the London Stock Exchange, fell short of the book cost by £552,500, or roughly 15½ per cent. This was the first year in which they had had to admit depreciation in their investments. He thought they might claim that the ratio of depreciation was below the average of most investment companies. The market prices ruling at the close of the year could not be regarded as a test of the real value of the investments, and it was to be expected that, when times become normal, the present depreciation would to a large extent disappear. During the year the decline in income was approximately 9 per cent., whereas the fall in market value was over 15½ per cent. The net profit, at £270,783, showed a falling off of £36,761, due to the increased loss on exchange remittances, which amounted to £36,915, as against £15,740 in the preceding year.

The outlook in Argentina was more settled and hopeful than it was a year ago. A new Government was in power, committed to a policy of retrenchment and economy. To balance the Budget, new taxes of a somewhat onerous character had been imposed, including an income tax, which was something of a novelty to Argentine citizens. Their share of the new taxation was 5 per cent. on the profits made in Argentina. The crops just harvested had given a fairly satisfactory yield, and prices were better than they were a year ago, but a return to prosperity could hardly be looked for until there was a substantial recovery in the world price of primary products.

The report and accounts were unanimously adopted.

SUN LIFE ASSURANCE SOCIETY.

NORMAL PROGRESS MAINTAINED—QUINQUENNIAL VALUATION.

The annual general meeting of the Sun Life Assurance Society was held, on the 8th instant, at 63, Threadneedle Street, London. The Hon. Sir William H. Goschen, K.B.E. (the chairman), said, in the course of his speech:—Gentlemen,—The report will have informed you that, notwithstanding all the difficulties of last year and the various ways in which our policy holders and the potential policy holders have been affected, the new business and income and outgo of the society have followed a normal course.

A life assurance holds a very special position among the financial possessions of a policyholder. A life assurance has a stability very different from most of the forms in which people place their savings. I need not enlarge on this, as there must be few of those who have practised the commendable habit of thrift who have not seen a large portion of their savings disappearing during the past year. We can thus understand how it is that, in times like the present, a man turns to life assurance for safe keeping of his savings and for protection of those dependent upon him.

A surplus of £4,409,658 is revealed. The greater part of this would have been available for distribution had the general economic circumstances been favourable. The society would have had a very successful quinquennium and increased bonuses could probably have been declared, but under present circumstances your directors decided not to make the usual quinquennial distribution but to limit the amount now to be divided to £775,918 and to make another valuation as at the end of 1932, so postponing until then the decision regarding the distribution of the greater part of the surplus amounting to over £3,000,000.

The sum of £775,918 that your directors have decided to divide at present, has been determined by two considerations which arise out of the postponement for a year of the decision regarding the distribution of the greater part of the surplus:—

BONUS DECISIONS.

Firstly, the declaration of the normal bonus in respect of only the first year of the quinquennium, i.e., 1927, and secondly, the protection against loss of bonus, in respect of the four other years of the quinquennium, of those policyholders whose assurances may terminate during the year of postponement.

The bonuses in respect of the year 1927 will apply to with-profit assurances which, being in force over December 31st last, were effected before January 1, 1928, and will, as shown on page 9 of the report, be at rates similar to those declared at the last quinquennial distribution in 1927.

The bonuses in respect of the year 1928-32, payable in respect of assurances terminating during 1932, will depend upon the cause of the termination. The rates of bonus applicable to claims, whether caused by death or maturity, will be the same as the reversionary bonus declared in respect of the year 1927 and the rate applicable to surrenders will be equal to the surrender value of a reversionary bonus at 75 per cent. of the rate declared in respect of the year 1927.

OUTLOOK FOR 1932.

Having now described how the interests of those policyholders who leave us during 1932 have been safeguarded, I should perhaps say something regarding the position of the many thousands who will remain to share in the results to be revealed at the end of 1932. I regret that we cannot forecast what those results will be; if we could there would be no need for the postponement of our decision regarding the distribution of that £3,000,000 of surplus that we are carrying forward. The fact that substantial bonuses are being paid in respect of policies terminating during 1932 is an indication of our expectations that normal profits will be earned during that year and of our not unreasonable hopes that, ultimately, circumstances will improve and the position become sufficiently stable to justify the distribution of the greater part of that £3,000,000. If these expectations and hopes are realised during 1932 we shall have ample profits available to provide customary bonuses in respect of the five years 1928-32. In the meantime, our policyholders have the added security provided by the £3,000,000 of carried forward surplus.

I would further like to emphasise that the financial position of the society is immensely strong, but with insurance (and especially life assurance) safety and strength are paramount considerations. It is hoped, therefore, that both policyholders and proprietors will realise the advantage of the disclosure of this strength, and I think that as soon as satisfactory economic circumstances can be reasonably anticipated the society will be able to return to normal distributions; also, that in the meantime the arrangements that have been made have ensured that, as far as possible, equity shall be preserved between the various interested parties.

The report and accounts were unanimously adopted.

BRITANNIC ASSURANCE COMPANY, LIMITED.

MR J. A. JEFFERSON'S REVIEW OF THE PAST YEAR.

SOUND PROGRESS DESPITE ACUTE DEPRESSION.

INVESTED FUNDS TOTAL TWENTY MILLION POUNDS.

The sixty-sixth annual ordinary general meeting of the shareholders of the Britannic Assurance Company, Limited, was held, on Friday, March 4, at the chief offices, Broad Street Corner, Birmingham, Mr J. A. Jefferson, F.I.A., chairman, presiding.

The Assistant-Secretary (Mr F. A. Powell, F.C.A.) read the notice convening the meeting and the auditors' report.

Mr Jefferson, in moving the adoption of the report, said: Ladies and gentlemen,—My first thought in addressing you is one of great relief at the passing of the Old Year.

The events of the past year must be so well known to you that I need refer only very briefly to them. The one consolation left to those responsible for the management of any financial concern at such a time is that the conditions were quite outside the control of any individual man or company and, indeed, were to a large extent outside the control even of our own country. The position seemed to be that throughout the wide world the means of exchange and systems of credit had broken down and distress was rampant everywhere in the midst of a world abounding in plenty. What a paradox, to be sure, but the facts were that we were faced with conditions of an altogether unprecedented character.

SELECTION OF INVESTMENTS.

As trustees for the savings of our policy-holders and responsible for the due fulfilment of every one of the four million contracts in force, whether effected for the provision of dependants at the time of death or for the assured's own old age, you will appreciate the grave responsibility resting upon the directors at such a time. The commodity in which we deal is money and, in order to meet our obligations as they emerge, it is essential that we should seek remunerative outlets for the money entrusted to us. Thus we have become the holders of invested funds of upwards of twenty million pounds. The world-wide crisis of last year was reflected in very serious depreciation in every class of gilt-edged security, and we have not escaped, and like every other financial institution we have suffered depreciation.

It has been our policy in the selection of investments to have regard primarily to the safety of the capital invested, and consequently the bulk of our funds are invested in well-secured mortgages or fixed-interest bearing stocks, the proportion invested in ordinary stocks being strictly limited to securities of the highest class in each group. When it is borne in mind that the depreciation during the year in British Government securities, according to the Official Actuaries' index, was no less than 11.7 per cent., it is unnecessary for me to state that we have had to meet heavy depreciation—that you would take for granted. What it is necessary for me to tell you is that I am satisfied that the extent of that depreciation is not excessive having regard to the market values prevailing as at December 31st last. Indeed, it might conceivably have been a good deal heavier. It was, however, within our capacity to bear the whole of the depreciation, but not only so, and this is the most important announcement I have to make to-day—it was within our capacity *without resort to any weakening of the standards by which we arrive at the actuarial liabilities of our policy contracts*. With the experience of last year as a warning that in this world nothing is certain except death, the directors felt we must relax nothing in the stringency of those steps which are within our control for meeting any further, even though we must hope unlikely, periods of adversity. Therefore, we decided to face reduced surpluses rather than resort to any weakening of our valuation bases. In the adoption of this prudent course I feel sure we shall have the approval of the shareholders, just as I am certain it will have afforded to our policy-holders that greatest of all attributes to a life policy—a feeling of absolute security in regard to the sum assured even at a time when values in so many other directions have been crumbling.

PROVISION FOR DEPRECIATION.

We have made provisions for all depreciation in our securities as at December 31st, and our ability to do so may be attributed to three factors (1) that the depreciation on our investments was not abnormal having regard to prevailing monetary conditions; (2) that we had built up large reserves in the good years for the specific purpose of meeting such a position of adversity should it arise; and (3) that our trading profits in other directions were well maintained last year. By these means we were enabled to give the certificate which appears at the foot of the balance sheet in your

possession, and I am proud to be able to say even that certificate is unduly modest, for, in fact, we could have said that we had more than covered the depreciation at the date mentioned.

The steps thus taken place the company in a very strong position when better times come, as come they must, sooner or later. Indeed, already, since the close of the year a very substantial appreciation has taken place in many of our securities, but, of course, whilst that is a highly gratifying feature, it is not discounted in any way in the accounts before you or in the allocation of surplus now being recommended.

As regards our trusteeship for the year 1931, I am delighted at being able to present such a report to you.

THE ACCOUNTS.

Turning to the accounts themselves, you will notice that the trading profits of the year have been highly satisfactory. We have passed another milestone in regard to our total funds, which now amount to over twenty millions, and the net increase for the year is £1,175,707 after applying the substantial sum of £327,617 in writing down our investments, so really the actual additions to the funds before writing down amounted to over one and a half millions, which again creates a record for the company.

Our total income, excluding the general branch, shows an increase of over £246,000, which is very satisfactory, bearing in mind the conditions operating throughout the year.

The total sum paid away in claims in the life branches was £1,826,070. An interesting feature is the fact that well over one-third of the total was paid to persons who had survived to the maturity of their policies.

In the ordinary branch you will note we have again passed the two and a half million mark in new sums assured, and the premium income of £1,083,138 shows an increase of £59,027.

In the industrial branch we have issued an average of over twelve thousand new policies per week, assuring a sum of over nine million pounds, which constitutes a record for the company. The premium income shows an increase of over £117,000, which I think is very satisfactory.

Referring to the general branch, the total income now amounts to over £131,000—showing an increase of over £44,000, which means we have increased our premium income in this department during the year by over 50 per cent.

BONUSES TO POLICYHOLDERS.

With regard to bonuses to policyholders in the ordinary branch, you will note we have for the year allocated £1 12s. per £100 sum assured. Whilst we regret having to reduce our bonus we feel confident that having regard to the exceptional difficulties of the past year and the stringency of the steps we have taken to meet the position, the bonus declaration will be received with approval by our policyholders.

In the industrial branch you will notice we have set aside £60,000 to provide a bonus to policies becoming claims prior to April 1, 1933.

In regard to the staff, you will note we have once again given tangible appreciation of their efforts by transferring £65,000 to the trustees of the staff pension fund, and I am sure it needs no words of mine to recommend this transfer.

In addition to writing down our investments by £327,000 odd, to which reference has already been made, we have transferred a further sum of £350,000 to our investment reserve funds, bringing them up to the handsome figure of £1,000,000. Again I make no apology for allocating these large sums to meet the situation, and although at the present moment quite a substantial recovery in market values has taken place, still I am sure you will realise what a source of strength it will be to us in the future to have met the position as at December 31st, as we have done.

COST OF INFLUENZA EPIDEMIC.

There has been a fairly substantial increase in death claims in the industrial branch. This is mainly due to the influenza epidemic in the early part of last year, and whilst that epidemic was not as virulent as some of its predecessors, still, I calculate that it cost the company about £100,000 in extra claims.

Cash surrenders show quite a considerable increase in both branches, but that only reflects the conditions prevailing during the

past year. Under this heading you will notice we have paid over £358,000, of which sum approximately £215,000 was paid out in the industrial branch.

The next item to which I would desire to draw your attention is the very important one of expenses of management. In the ordinary branch our total expenses amount to 13.14 per cent. only of the premium income as against 13.26 per cent. in 1930. In the industrial department there has also been a small reduction in expenses, the ratio being 35.97 per cent. for the year, as compared with 36.22 per cent. for 1930.

Turning now to the balance-sheet figures it will no doubt interest you to know that our Stock Exchange securities comprise approximately 75 per cent. of our assets, and of these about 70 per cent. fall under the category of redeemable securities.

Taking the first two items on the assets side you will notice that we have the substantial sum of over £2,720,000 advanced by way of mortgage. This comprises just over 13 per cent. of our total assets, and is largely accounted for by our house purchase scheme, which I am glad to state is still showing good progress, and, despite the distressing times through which we have been passing, our experience in regard to defaulters is most satisfactory.

Loans on parochial and other public rates show an increase of over £190,000, whilst under the heading of municipal and county securities an increase of over £100,000 is shown. Together these two groups represent over 10 per cent. of our total assets.

GILT-EDGED INVESTMENTS.

Under the heading British Government Securities we show an increase of £346,000—thus increasing our total holding to over £3,774,000, which is over 18 per cent. of our total assets. It may interest you to know that we took advantage of the low prices prevailing in the latter part of the year, and the average price paid is something like seven points below the present market price.

The next item to which I would draw your attention is the substantial increase of £481,000 in our railway and other ordinary stocks. You might at first glance be somewhat perturbed that we had thought fit to invest such a large amount in this class of security, but I feel you will be reassured when I tell you that the bulk of the money has been invested in shares of well-known insurance companies and banks, and I think I am justified in saying that the reports already issued give ample justification for our having bought these securities at the low prices which prevailed at certain periods during 1931.

As regards the other classes of Stock Exchange investments the position does not call for much comment. In the main the movements were downwards, and were due almost entirely to our taking advantage of the favourable opportunities created by the unique exchange position for selling our holdings of Currency Bonds.

It has been my custom to make reference to the work the staff have been doing in connection with the National Amalgamated Approved Society, and of which no doubt you are aware I have the honour of being president. The Britannic membership as at December 31, 1931, amounted to the substantial total of 348,000. During the year the staff made no less than 576,000 cash payments, including over 20,000 maternity claims—the actual amount paid in cash being £358,000.

Taking our record for the year, I think I cannot do better than sum up the whole position by the words used in a leading article in a financial paper on the morning after our report was issued, namely, that the results were "a most creditable achievement."

ACTUARY'S REMARKS.

Mr Murray Laing, in seconding the resolution, emphasised the significance to be attached to the statement that, in the valuation of the policy liabilities, they had not relaxed in any way the stringency of the basis previously adopted. That basis was 3 per cent. for all policies, and the net premium method in all branches except "British Legal" industrial. Such a basis was recognised by actuaries as a very high standard of achievement.

Next in importance to sound assets—and those of the "Britannic" were worth 20s. in the pound on December 31st last—was a sound ascertainment of the future liabilities. If, at such a time, a life office adopting such standards as these could announce a surplus—reduced though it must inevitably be—then he was sure the policyholders would regard a modest reduction in the rate of bonus declared as a small price to pay for such a practical application of the principles of "safety first" to the security of so vital a contract as a life policy.

It was the policy of the directors to improve the benefits to policyholders as far as possible on sound lines.

Mr Laing mentioned that in the industrial branch last year they issued over 100,000 free policies to persons who discontinued the payment of premiums, thus showing the value of the concession

introduced in 1930, under which automatic free policies are granted after the payment of only two years' premiums.

Referring to the ordinary branch, Mr Laing mentioned the good reception which had been given to the new policy issued some months ago, and known as the family income policy, designed specially to meet the needs of the young married man with family responsibilities—a feature being the immediate payment of the sum assured on death, with an income thereafter for the support of the family during the remainder of a period of twenty years from the date of the policy. Substantial business was done under the scheme during the few months it was in force last year, and much better results are expected during the current year. Whatever the needs of the insuring public might be the "Britannic" was out to meet them.

The report and accounts were unanimously adopted. The retiring director, Mr W. Roscoe, was unanimously re-elected, and Messrs Flint and Thompson were re-elected auditors to the company.

Votes of thanks to the directors, officials and the inside and outside staffs of the company for their services during the past year, and to the Chairman for presiding, terminated the meeting.

BEIRA RAILWAY COMPANY, LIMITED.

IMPORTANT NEW CONTRACTS.

The thirty-first ordinary general meeting of the Beira Railway Company, Limited, was held, on the 7th instant, at 2, London Wall Buildings, London.

Sir Henry Birchenough, Bt., K.C.M.G. (the chairman), in the course of his address, said: The railway administration took energetic steps immediately there were signs of an appreciable fall in revenue, and economies were effected in every possible direction. Economies cannot be made immediately effective, and I think you will agree that a reduction in expenses in the year of nearly £100,000 is not altogether unsatisfactory.

Our net revenue of £214,673 was £150,249 less than in 1930, a result which was largely brought about by the falling off in the high-rated general merchandise import traffic, from which we received £95,350 less than in the previous year.

During the current financial year the approximate gross receipts for the first quarter—that is, October 1 to December 31, 1931—only reached £119,405, as compared with £185,112 for the same three months of 1930 and with £241,413 for the similar period in 1929. As you know, the last few months have been a period of exceptional anxiety for the whole world, and in Africa the position has been aggravated by currency difficulties owing to the Union of South Africa, Portuguese East Africa, and the Belgian Congo remaining on the gold standard, while the two Rhodesias have followed Great Britain and maintained a sterling currency.

After careful consideration we have decided upon a moderate programme of increases in charges for general goods and passengers, which we think can be imposed without inflicting any undue hardship on the public, and which will relieve our position to some extent.

Now a word as to what we are doing to secure our position for the future, so that we can take full advantage of a return to normal conditions. Our route has hitherto enjoyed a large proportion of the import and export traffic exchanged with Northern Rhodesia and the Belgian Congo, but through rail connection has now been made between Lobito Bay and the Belgian Congo. It is too early yet to say whether this new line will affect our traffics to any appreciable extent, but I can tell you what has been done by your directors to safeguard the position of our company.

We have recently concluded agreements under which all the Northern Rhodesia copper mines will import all their requirements via Beira and will export all their copper by that route for a period of 13 years.

A new agreement has also recently been made with the Union Minière du Haut Katanga whereby a substantial percentage of their copper traffic is secured to Beira until 1939.

Appreciable quantities of copper from Northern Rhodesia are now actually passing over our system, which for the last three months of 1931 amounted to 6,819 tons of copper and 8,852 tons of copper concentrates.

The report was adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8, Bouverie Street, Fleet Street, London, E.C.4.

MIDLAND COUNTIES ELECTRIC SUPPLY COMPANY, LIMITED.

CONTINUED GROWTH OF THE BUSINESS.

The nineteenth ordinary general meeting of this company was held, on the 7th instant, at Winchester House, Old Broad Street, London.

Mr George Balfour, J.P., M.P. (the chairman), presiding, in the course of his speech, said that the report and accounts would, he felt sure, be considered satisfactory. The revenue of £283,436 was derived from the trading profits of their lighting and power properties, such trading profits amounting to £402,139 after payment of income tax on the increased scale, against the trading profits for the previous year of £376,963.

The areas in which their power, lighting and transport properties were situated, in common with most areas throughout the country, had suffered from the general industrial depression, and it was therefore all the more gratifying to note that the continual expansion of their services had year after year provided new connections which not only overtook any drop in industrial demand but showed a steady growth in output and revenue. Last year was rather remarkable owing to the fact that, apart from the general effect of trade depression, two customers alone showed a drop of 14,000,000 units—one which was anticipated owing to the termination of a short-term bulk supply contract and the other a large industrial user. It was very satisfactory to note that that drop had been more than replaced by the miscellaneous demands of upwards of 8,000 new customers of the smaller class producing a better revenue per kilowatt. It was interesting to know that this year the industrial consumer to whom he had referred was taking not only his load of 1930 (i.e., the year before last) but was showing an increase over that year.

POLICY OF DEVELOPMENT AMPLY JUSTIFIED.

Their policy of forcing development, in spite of hampering legislative and industrial conditions, had been amply justified by results. They owned one of the finest power plants in the country and afforded efficient supplies alike in urban areas near the power station and in remote hamlets in the outskirts of their area.

After stating that they had rather slowed down their programme of changing over to trolley or bus in regard to their transport properties, but that they were satisfied with the progress made, he went on to say that with the two special orders granted in December last the whole of the area of the Leicestershire and Warwickshire Electric Power Company was now covered by special orders enabling that company to supply electricity for all purposes, including purely domestic lighting throughout its whole territory in addition to its power supply rights.

NEW CONNECTIONS.

During the year 8,607 new consumers were connected to their supply, almost the same number as the total number of customers served by their companies in 1925. The total number of consumers supplied directly by the operating companies at the end of 1931 was 41,860, including ten local authorities taking bulk supplies. The new connections for the first two months this year were in excess of the average monthly connections last year. Altogether they had laid and erected 273 route miles of new lines during the year, and they now owned 1,038 route miles of extra high tension lines, and 866 route miles of low tension distributors.

They generated during the year 203,368,000 units, and sold 175,430,000, an increase of approximately 930,000 units as compared with 1930. This figure, however, did not give a true indication of the growth of the business, as they dropped approximately 14,000,000 units, most of it temporarily, as already indicated. The real measure of their progress was the increased supply to bulk consumers and power users of 12,000,000 units, and to domestic consumers of 3,000,000 units. The growth of their domestic load had a stabilising effect on their revenue, and they were steadily encouraging domestic consumers to make greater use of their supply by the adoption of two part tariffs, the hiring of apparatus, and suitable propaganda.

The average revenue received by the Derbyshire and Nottinghamshire Electric Power Company during the past year from the sale of electricity to consumers throughout its area was 0.85d. per unit, and that received by the Leicestershire and Warwickshire Electric Power Company was 1.21d. per unit, while for the combined undertakings the average was 0.99d. per unit.

The report was unanimously adopted, and a final dividend was declared on the ordinary shares at the rate of 9 per cent. per annum, making 7 per cent. for the year, less tax.

UNITED STATES DEBENTURE CORPORATION, LIMITED.

DIVIDEND POLICY AND OUTLOOK.

The ordinary general meeting of the United States Debenture Corporation, Limited, was held, on the 8th instant, at Winchester House, Old Broad Street, London, Mr Frank Chaplin (chairman of the company) presiding.

The Chairman, in moving the adoption of the report and accounts, said the past year, as you all know, has been one of unparalleled financial crisis over the whole world, and so you will have been prepared for a diminution in our revenue and a fall in the value of our investments.

The charges on our income are, of course, in order of priority, the administration expenses, the debenture stock interest, and the preference stock dividend, the balance being available for the dividend on the ordinary stock. In the case of a trust company like our own, in which the debenture interest requires only 20 per cent. of the revenue, and the preference dividend only the next 25 per cent., the latter stock is certainly better secured than some full trustee investments. But, however large the proportion allotted to the ordinary stock dividend, nothing can relieve the ordinary stockholders from having to bear the brunt of any serious loss of revenue. In a company with a conservative capital structure, a fall of 5 per cent. in income probably means a fall of about 10 per cent. in the revenue available for the ordinary stockholders. So trust company ordinary stocks are bound to reflect hard times just as clearly as they reflect good times, but even so, it is safe to say that they provide a wider and sounder basis for investment than the average concentrated industrial risk.

DEPRECIATION OF SECURITIES.

In the year ended January 31, 1931, we experienced a drop of about 3 per cent. in our income from investments, and of just over 6 per cent. in valuation. At that time few people anticipated the severity of the crisis which was to come. However, the quarterly valuations which have been made during the year show how the depreciation has steadily been intensified. At the end of the first quarter the depreciation was 8.8 per cent., at the end of the second quarter 15.2 per cent., at the end of the third 19.9 per cent., and at the end of the year 24.3 per cent., but, even on the basis of market quotations on January 31st last, our ordinary capital was rather more than intact. Under the circumstances our investment revenue, with a fall of only about 6 per cent., has held up well.

But, as stockholders will realise, the depreciation of 24 per cent. is a clear indication that a further fall in revenue is to be expected during the coming year. We regret that it has been necessary to recommend a final dividend of 6½ per cent., as against 9 per cent. last year, but stockholders must bear in mind that, in the past good years, distributions have been generous. We must also warn you that even if there is an improvement in the valuation in the near future, that will not necessarily mean an improvement in revenue, and, in fact, some reduction in the dividend for the current year is more than probable. For not only are there whole classes of investments whose safety is imperilled by the present economic chaos, but an additional factor of uncertainty is introduced by the question of exchange. For instance, in theory we shall receive from our holdings in foreign Government bonds for the current year an income of about £13,000 and £110,000. But we do not know how many pounds or how many dollars we shall in fact receive, nor do we know what the dollars will be worth in terms of pounds sterling.

INVESTMENTS IN UNITED STATES.

There are one or two points which need, perhaps, a few more words of explanation. In the early months of 1931, anticipating the risk of danger to our currency, we increased our investments in the United States from 7 per cent. to 13 per cent. Practically the whole of this increase was invested in fixed-interest bearing securities, the majority of which are in companies with small prior charges and with a strong financial position. No American common stocks were bought until January, 1932, and then only on the basis of a reasonable yield. Although some of the investments made in the past two years in the United States have not fulfilled our expectations, on balance, both from the point of view of valuation and of income, we have no reason to be dissatisfied, especially taking into account the peculiar market conditions now obtaining in New York.

Our total risk in ordinary shares has increased in the past year from 15 per cent. to 19 per cent. About one-quarter of this increase of 4 per cent. represents our recent purchases of American common shares, and about one-quarter represents purchases of gold mining shares, which have recently been sold. The balance of one-half, or 2 per cent., represents purchases of sound ordinary shares of British companies.

Mr Henry P. Lawson seconded the resolution, and it was carried unanimously.

PROVIDENT MUTUAL LIFE ASSURANCE ASSOCIATION.

RECORD PREMIUM INCOME.

The annual general meeting of Provident Mutual Life Assurance Association was held, on the 9th instant, at 25 Moorgate, London, Mr Owen Hugh Smith (the chairman) presiding.

The Manager and Actuary (Mr C. R. V. Coutts, F.I.A.) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: During the past year unemployment has increased, and wages, salaries and incomes from other sources have fallen, while taxation has increased. It is not surprising, therefore, to find that the number of new policies issued during the year fell to 13,400, as compared with 21,300 in the previous year. Further, 8,000 of our existing members were forced, through economic pressure, to surrender their policies, receiving payments of £123,000. And 11,500 took advantage of the facilities we offer for borrowing on policies, thus raising the total amount of loans on policies within their surrender values to £571,000.

In spite of all these adverse conditions, it is remarkable that during the past year the total volume of the association's business has actually increased. The premium income of £927,000 is the highest on record, and shows an increase of £12,000 over that of the previous year. During the same period there has also been a record addition of £822,000 to our funds.

INVESTMENTS.

The whole of the structure of life assurance is built on the accumulation of funds at compound interest to meet liabilities spread over the next forty or fifty years. I therefore turn in the first instance to the figures showing our interest income. You will see that while the gross income increased by over £21,000, more than half this increase was absorbed by higher income tax, leaving the net increase rather over £10,000. The net rate of interest earned has fallen from £4 14s. 6d. to £4 9s. 10d. This is due mainly to the increase in income tax, but it is also due partly to the fact that during the past year we have invested a further £350,000 in British Government securities which give a low interest yield.

In surveying our financial position, we have to consider not only the interest income from our funds, but also the question of their capital value. For many years past we have kept investments in the balance sheet at their cost price. We have taken no credit for any appreciation. And in spite of the fall in market values during recent years, there was at December 31, 1930, after taking into account the investment reserve fund of £160,000, still a margin between the balance-sheet values and the market quotations. During the first six months of last year the market values still continued on balance to fall, and at June 30, 1931, the balance-sheet values, together with the investment reserve fund, were approximately equal to the then market values. Since June 30th, and more especially since sterling abandoned the gold standard, there has been a catastrophic fall in market quotations, with the result that at December 31st last, after taking into account the then investment reserve fund of £160,000, the market quotations disclosed a net depreciation of 9.9 per cent. of the Stock Exchange closed a net depreciation of 9.9 per cent. of the total assets. As during the same investments, or 8 per cent. of the total assets. As during the same six months the market value of 3½ per cent. conversion loan and 4 per cent. funding loan fell between 13 per cent. and 14 per cent., we must, I suppose, consider that we have been let off comparatively lightly in this respect.

BONUS PROSPECTS.

We are not on this occasion called upon to take any definite decision on the extremely difficult problem of the proper treatment of market quotations in ascertaining divisible surplus. This is a problem we shall have to deal with in a year's time, when our next quinquennial valuation and distribution of profits is due. Without in any way committing ourselves as to what course we shall then take, we have transferred a further £140,000 to the investment reserve fund, bringing this fund up to a total of £300,000. As you will observe, this does not fully cover the depreciation at December 31st. But since that date I am glad to say that this depreciation has been substantially reduced by the general improvement which has recently taken place in the Stock Exchange prices.

Our usual investigation shows that, apart from the question of shrinkage of capital values, to which I have referred, our profit-making power is being maintained at the level which enabled us to declare so high a rate of bonus at the last distribution. Under normal conditions, therefore, we might have confidently predicted the declaration next year of a bonus at least as good as that declared in 1928.

Mr Herman B. Sim seconded the resolution, and it was carried unanimously, no questions being asked.

METROPOLITAN ELECTRIC SUPPLY COMPANY, LIMITED.

INCREASED SALES AND REVENUE.

The annual general meeting of the Metropolitan Electric Supply Company, Limited, was held, on the 8th instant, at Winchester House, Old Broad Street, London.

Mr George Balfour, M.P. (the chairman), who presided, said that it was gratifying to be able to place before shareholders an account which could be regarded not only as satisfactory, but which registered a continuation of the progress which the company had recorded for several years. Throughout the whole of the area directly supplied, and the areas supplied by their subsidiary companies, the board were able to record increased sales and revenue. A steady policy of extending the company's services throughout their area, taking over smaller undertakings when opportunity offered, and modernising and cheapening the supplies, was gradually demonstrating the sound method of progression to a cheap and abundant supply.

Dealing with the London and Home Counties Joint Electricity Authority, the Chairman said he was still at a loss to know what service that body could render to any of the larger undertakings, or by what authority of knowledge or experience the members of that authority claimed to be able either to cheapen or to facilitate supplies. It was the hampering effect of the existence of busy-body authorities which alone retarded the more rapid and efficient combination, along natural lines, of the smaller undertakings in the London and home counties area.

He, the chairman, asked the question: Was the electricity supply industry in the country, incidentally as fine as any, if not the finest, in the world, so bankrupt of capacity that it required a costly experiment conducted by an authority which had tried, during the last six years, to train itself at the expense of the industry in the London area to be capable of acting at one and the same time as a judicial body and active competitor? He certainly would desire to co-operate with any authority which could suggest any improvements either in the company's scheme of tariffs or in its technical lay-out. So far, he was afraid, the joint authority, instead of being able to help companies such as theirs, had been going through a process of education to familiarise itself with the problems of electrical supply.

The report and accounts were unanimously adopted.

B. MORRIS AND SONS, LIMITED.

BURDEN OF INCREASED DUTY.

The annual general meeting of B. Morris and Sons, Limited, was held, on the 9th instant, at Winchester House, Old Broad Street, London.

Mr Arthur James May (the chairman and managing director), said: You will note that investments have been written down to market value. This is sound finance in these times, and possibly it is only a paper loss.

I am not going to say much about last year's trading. I am very thankful we survived and managed to make a profit. We have difficult conditions still to face, and the present Government have not made matters easier by increasing the already high revenue duty on our raw material 8d. per lb., and expecting the trade to pay the increase out of their profits. The duty of 9s. 6d. per lb. is bound to affect consumption, and the Government will realise before long that there is such a thing as a limit. If the Government were to leave the tobacco trade alone and tackle and lower the excessive cost of the internal debt, both national and municipal, which is the chief reason of the bad trading conditions, we should soon be on the road to prosperity and a more workable rate of tobacco duty than the present excessively high one.

We are chiefly concerned with cigar manufacturing, and, although we have been affected by the lack of purchasing power in 1931, our sales were fairly well maintained, and with more prosperous times in view there is no reason why the smoker should not turn to cigars. Nothing gives such satisfaction as a good cigar, and if you want the best you buy a Morris brand. I can recommend, for a medium-price cigar, our La Santera Monarchs, which are very remarkable value at the retail price of 6d. each. In view of the exchange and extra cost of imported cigars, we are developing our high-grade cigar trade, and we hope for increased sales for our Las Dos Coronas, which are manufactured entirely from imported Havana tobacco, with the exception of the wrapper, which is the finest Sumatra. This is a very old brand of ours, and retails at varying prices for sizes—up to 1s. 6d. each.

We are doing our best to develop our tobacco and cigarette trade, and before long hope to increase our sales very considerably. The financial position of your company is liquid and very sound. The report was unanimously adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

The total ordinary revenue for the week ended March 5, 1932, amounted to £25,886,000 against ordinary expenditure of £14,613,500. After allocating £1,924,000 to Sinking Fund and having allowed for an increase in Exchequer Balances of £211,874, the operations for the week, as shown below, reduced the National Debt by £9,136,000 to £7,617,230,000:—

(000's omitted.)

Bank of England Advances ...	+ 7,250	Excess Interest of Nat. Saving	— 1,650
Public Department Advances ...	+ 35,250	Certificates ...	— 200
Treasury Bills ...	+ 11,422	National Savings Certificates ...	— 61,230
Land Settlement ...	+ 22	British Govt. Loans Abroad ...	— 63,080
	+ 53,944		

A complete analysis of the National Debt at December 31, 1931, was printed in the *Economist* of January 9, 1932.

REVENUE.	Revised Estimate for the year 1931-32.	Total Receipts into the Exchequer.

GOLD MOVEMENTS.

The following shows bullion movements at the Bank of England, since March 3rd, 1932.

1932. ARRIVALS.		1932. WITHDRAWALS.	
Mar. 3 Foreign Gold bought	£	Mar. 3	£
Mar. 4 to Mar. 10	Nil	Mar. 4 to Mar. 10	Nil
Total	9	Total	Nil

Messrs Samuel Montagu and Company write on March 9, 1932, as follows:—

GOLD.

The Bank of England gold reserve against notes amounted to £120,800,686 on the 2nd inst. as compared with £120,772,648 on the previous Wednesday. The s.s. "Ranchi," which left Bombay on the 5th inst., carries gold to the value of about £1,250,000. As a result of the favourable movements of the foreign exchanges, the price of gold has fallen rapidly. About £650,000 of bar gold available in the open market yesterday was realised at 115s. 8d. To-day's quotation of 110s. 5d. shows a fall of 5s. 3d. as compared with yesterday.

Quotations during the week:—

	Per fine ounce	Equivalent value of £ sterling.
March 3	118s. 9d.	14s. 3.7d.
" 4	118s. 2d.	14s. 4.5d.
" 5	117s. 10d.	14s. 5.0d.
" 6	117s. 0d.	14s. 6.3d.
" 7	115s. 8d.	14s. 8.3d.
" 8	110s. 5d.	15s. 4.7d.
Average	116s. 3.7d.	14s. 7.4d.

SILVER.

There has been a substantial decline in prices during the week under review, the market being influenced by the rapid appreciation of sterling. The fall was gradual until the 7th inst., when 19 1/2d. for cash and 19 1/4d. for two months' delivery were quoted, but yesterday a drop of 1/2d. in both deliveries saw prices fixed at 18 1/2d. and 18 1/4d. for the respective deliveries. Selling has been fairly

general, the Indian Bazaars, America and China offering to sell, whilst the market found little support except for a moderate demand for the Continent and small purchases for China at the lower level. To-day there was a further fall of 1d. to 17 1/2d. and 17 1/4d., a continuation of the selling forcing the market down in the absence of demand. There are as yet no indications of any appreciable recovery, but the outlook is uncertain as it depends to a large extent on movements of the foreign exchanges.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 29th ult. to mid-day on the 7th inst.:—

IMPORTS.	£	EXPORTS.	£
Australia	46,100	Belgium	58,202
British India	24,398	Germany	16,480
Belgium.....	5,800	British India.....	9,100
Aden and Dependencies	5,492	Other countries	2,399
Other Countries	1,118		
	<u>82,908</u>		<u>86,181</u>

The Hon. John Mulholland has been elected a director of Gallaher, Ltd.

Colonel James A. Innes, D.S.O., has been appointed a director of the City of London Real Property Company, Ltd.

Mr Robert W. M. Arbuthnot, a director of Messrs Arbuthnot, Latham and Co., has been appointed a director of the London Assurance.

It is announced that Mr G. E. Rowland has resigned his directorship of Agricultural and General Engineers, Ltd., and the directorships of any of its associated companies that he holds.

Mr Maurice Hely-Hutchinson, a partner in Messrs Robert Fleming and Company, merchant bankers, of 8 Crosby Square, London, E.C.3, has been appointed a director of the London Life Association.

The London Committee of Companhia de Mocambique state that the Customs receipts for the Port of Beira during December was £24,720 as compared with £33,479 for same period of 1930.

Mr Alexander Macdonald, the secretary of the New Zealand Loan and Mercantile Agency Company, Ltd., has retired after forty-seven years in the company's service. The directors have appointed Mr. L. A. R. King to succeed Mr. Macdonald and Mr Walter Lewis to be chief accountant of the company.

We are officially informed that Messrs. Cazenove and Akroyds are entering into an amalgamation with Messrs. Greenwood and Company as from the end of March. The name of the new firm will be Cazenove, Akroyds and Greenwood and Company, and the business will be carried on by the existing partners of both firms.

and Brazilian coffee remained firm. In view of the uncertainty of the outcome of the Cuba-Java negotiations, the market in sugar was depressed. Sterling quotations of commodities which lend themselves to grading, and therefore to international arbitrage, declined sharply in view of the advance in sterling in terms of gold. As was to be expected, the upward movement of sterling was accompanied by heavy selling. According to reports from various industrial centres, there has been no improvement in the situation of the coal trade, though demand for heating purposes continues brisk. Iron and steel makers find it increasingly difficult to maintain production. The textile trades have not so far suffered an appreciable setback, but the total volume of business is not large.

THE COAL TRADE.

SHEFFIELD.—Further weakness has developed in the export market, and quotations for best steams have declined to 16s. f.o.b. Demand for industrial fuels, too, is easier, and some pits have reduced prices of domestic coal. Best ordinary house is quoted at round about 22s. at pits. Consumption of blast furnace coke at the furnaces is dropping, but there is a brisk demand for heating purposes; good brands are worth 12s. at ovens, or a trifle more. The production of the mines exceeds sales. There is little forward contracting.

GLASGOW.—There has been no change in conditions in the Scottish coal trades. Home trade remains fairly brisk in the household side, but export trade continues to feel the effects of the restrictions placed on the import of British coal by Continental countries. The London trade has been better during the week. There has been no notable change in prices, those for shipment being approximately as follows (f.o.b. district ports) LANARKSHIRE.—Ell best, 14s. 3d.; splint best, 16s.; splint second, 14s.; navigation, 15s.; navigation second, 14s. 6d.; Hartley, 15s. 6d.; steam, 13s. to 13s. 3d.; trebles, 12s. 6d.; doubles, 10s. 9d.; singles, 9s. 6d.; pearls, 9s.; dross, 9s. FIRE.—Screened navigation, 16s. 6d.; first-class steam, 12s. 6d.; third-class steam, 11s. 6d.; trebles, 12s. 6d. to 13s. 6d.; doubles, 10s. 6d.; singles, 9s. 6d.; pearls, 9s. LOTHIAN.—Prime steam, 12s.; secondary steam, 11s. 9d.; trebles, 11s. 9d. to 12s.; doubles, 10s. 9d.; singles, 9s. 6d.; pearls, 9s. Ayrshire.—Unscreened navigation, 16s.; jewel, 17s.; steam, 13s.; trebles, 12s. 6d.; doubles, 10s. 9d.; singles, 9s. 9d.; pearls, 9s.; dross, 9s.; all per ton f.o.b. Ayr or Troon.

CARDIFF.—The most important event in the South Wales coal trade this week has been the decision of a majority at a meeting of the South Wales colliery owners recommending the discontinuance at the end of the present year of Part I. of the Coal Mines Act of 1930, providing for the statutory regulation of output and prices. Apparently, a vote based on output was not taken, but it is notorious that the South Wales colliery owners are very sharply divided on the question of control. On December 5th last the Executive Board of the local district scheme adopted resolutions favouring the continuance of some form of control of prices, and also expressing the opinion that "no control of prices can be effected unless it has statutory authority," but a third resolution, expressing the view that control of output was necessary to the effective control of prices, was lost on a vote by show of hands. The recent questionnaire elicited the fact that owners producing 96 per cent. of output favoured the principle of control within prescribed limits, but so far it has been found impossible to secure anything like agreement between them as to the extent or character of these limits, and it is in these circumstances that the decision was reached on Monday to recommend the discontinuance of Part I. of the 1930 Act. It is understood also that this course is favoured by a small majority of the Northumberland owners as well as by a considerable proportion of those of Scotland, but Durham, Yorkshire, Notts., Derby, Lancashire, and other districts are urging the continuance of Part I. subject to amendments, and the output of these districts exceeds greatly the combined output of the coalfields which are recommending the discontinuance of statutory control. The market has otherwise been featureless, but shipments at the South Wales ports were slightly greater last week than in the preceding week. The following are the current approximate quotations:—Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 4½d.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steams, 13s. 6d.; cargo smalls, 11s. 6d. to 12s. 6d.; coking smalls, 13s. 6d. to 13s. 9d.; anthracite best large, 36s. to 38s. 6d.; Red Vein large, 22s. 6d. to 27s. 6d.; machine-made cobbles, 40s. to 48s. 6d.; French nuts, 40s. to 48s. 6d.; stove nuts, 39s. 6d. to 43s. 6d.; rubbly culm, 8s. 3d. to 8s. 9d.; foundry coke, 32s. 6d. to 36s.; patent fuel, 19s.; pitwood, ex ship, 20s. 6d. to 22s. 6d.

IRON AND STEEL.

MIDDLESBROUGH.—A little more business has been transacted in Cleveland foundry iron during the past week, but this does not indicate any sustained revival in trade, and is probably due to it being the beginning of the month when a few extra requirements generally need to be covered. In any case the demand seems to have tapered off again as very little business was reported at

Tuesday's weekly market, and there was not much inclination shown to make purchases. Official prices were again unchanged, viz.: No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; and No. 4 forge, 57s. f.o.b. or f.o.t. The market for hematite continues depressed. Demand is very quiet and the number of second-hand parcels offering on the market keeps prices down. The only transactions reported are for early delivery, for which prices are being cut, particularly by merchants, who are anxious to secure orders to enable them to take out iron due to them from makers and which are in arrears in many instances. Mixed numbers for prompt delivery can be obtained at 63s. 6d. per ton and this figure has been shaded for very prompt lots. Shipments of pig iron are only on a moderate scale, the total of all kinds cleared to 8th inst. being 4,137 tons, against 5,163 tons to same date in February. In the finished steel departments trade continues very slack, and short time continues to be worked in several departments. Prices for steel for home consumption under the rebate scheme are: Plates, £8 15s.; angles, £8 7s. 6d.; joists, £8 15s. Other products are: Iron crown bars, £10; heavy steel rails, £8 10s.; 24-gauge galvanised corrugated sheets, £9 15s.; and 24-gauge black sheets, £8, also for home use. The ore market is practically dead with consumers almost entirely off the market. Best rubio is nominally 16s. 6d. c.i.f. and the rate of freight Bilbao/Middlesbrough is about 5s. Coke is in poor request and the price is weak at 16s. 6d. per ton delivered consumers' works for good blast-furnace qualities. The number of blast-furnaces in operation in the district is unchanged at seventeen.

SHEFFIELD.—The week has seen no relief to the stagnant conditions which have prevailed in the pig iron and steel branches since the beginning of the year. The rise in the value of sterling will tend to depress further the export trade of the country, already hampered by the restriction abroad of exchange transactions. Business in billets and similar materials lacks tonnage orders. In fact in no section of the industry is there any disposition to buy forward. The execution of the naval programme will bring work to several Sheffield firms. Trade in fine steels and rolling is as quiet as ever. Tool and cutlery makers are picking up considerable business formerly done by the United States, Germany, Czechoslovakia and Sweden, Holland and Denmark, and buying British hardware goods on a much more considerable scale than the past. This new trade is largely at the expense of Germany. The usual spring revival is bringing increased orders for plate and cutlery. There is some improvement in the call for sterling silver goods. Sellers of ferro-alloys used in iron and steel making have added ten per cent. to their quotations to cover the Customs duty.

GLASGOW.—In this district the heavy steelmakers are finding it exceedingly difficult to keep plants going, and, while inquiries are more numerous, there is no increased volume of business being placed. Continental semis are being offered at still lower prices than those quoted a week ago, on account of the advance in sterling, but a surprisingly small tonnage has been bought by users here. Bar iron makers, tube makers and indeed almost every branch report no change in the unsatisfactory conditions which have now existed for a considerable time. Machinery makers are somewhat busier again and have a large amount of work on hand. The export demand for black and galvanised sheets remains steady and prices are inclined to stiffen.

CARDIFF.—At the meeting of the South Wales tinplate manufacturers on Tuesday certain differences which had arisen in connection with the administration of the new output and price regulating scheme were removed, and the scheme is now operative with the consent of all the makers. The market is settling down to the new minimum price of 16s. per basis box, and there has been a slight expansion in the volume of trade. Imports of foreign bars were phenomenally heavy last week, reaching the record figure of 40,279 tons. Quotations for both Welsh and imported bars are nominally unchanged. Galvanised sheets are a shade steadier at £9 10s. per ton f.o.b. for corrugated in bundles.

OTHER METALS.

TIN.—The London metal market has been characterised by heavy selling in view of the rise in the gold value of sterling. Liquidation has been most pronounced in the case of tin, the price of which fell £10 per ton since the end of last week. In New York the metal has been steady and was quoted at 22-40 cents per lb. on Wednesday, against 22-15 cents per lb. a week ago and 21-40 a month ago. Wednesday's official closing quotations in London, in terms of sterling for "standard" cash, at £129 17s. 6d. to £130 2s. 6d. per ton, compares with £138 15s. to £139 on the corresponding day last week. Stocks in London and Liverpool at the end of last week, at 33,525 tons, show an increase of 68 tons on the week.

COPPER.—Towards the end of last week copper prices advanced sharply in New York as a result of a report that the producers' conference had decided to curtail output to 17 per cent. of capacity. It also appears that one of the largest foreign producers has expressed his willingness to co-operate in this drastic restriction scheme. On Wednesday, "Domestic" spot was quoted officially at 6½ cents per lb. in New York, against 5-75 cents a week ago, and 6 cents a month ago. Wednesday's official closing price for "standard cash" in London, in terms of sterling at £33 2s. 6d. to £33 5s., compares with £33 2s. 6d. to £33 5s. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 20,830 tons, show an increase of 797 tons, while stocks of rough copper, at 1,226 tons, are 51 tons larger.

LEAD.—The demand for lead was quiet and prices did not recover from the low level reached a week ago. In New York the metal was quoted at 3-25 cents per lb. on Wednesday, against 3-25 cent, a week ago and 3-75 cents a month ago. Wednesday's official

closing quotation for "soft foreign" in London in terms of sterling, at £12 2s. 6d. per ton for shipment during the current month compares with £12 11s. 3d. on the corresponding day last week.

SPELTER.—Freer offerings of this metal caused a slight decline in quotations. In New York spelter has been a little steadier. Wednesday's quotation in New York, at 2-80 cents per lb., compares with 2-75 cents a week ago and 2-80 cents a month earlier. Wednesday's official closing quotation in London in terms of sterling for "good ordinary brands" was £12 15s. per ton for shipment during the current month, against £13 7s. 6d. a week ago.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals the quotation for aluminium has been maintained at £95 per ton. On the other hand, nickel and foreign antimony declined from £240-£245 to £230-£235, and from £31-£31 10s. to £30 10s., respectively. Quicksilver sold at £19 per flask against £18 10s.-£19 last week. Platinum, at £10 6s., shows a reduction of 15s. on the week.

TEXTILES.

THE COTTON TRADE.—Liverpool.—Imports for the week, 3rd to 9th March (inclusive) are 63,279 bales, of which 31,764 are American, 1,014 Peruvian, 14,480 Egyptian, 218 African, 9,773 East Indian and 6,030 sundries.

Manchester.—The outstanding event in the market this week has been the decline in raw cotton prices as a result of the remarkable rise in sterling. The larger inquiry in yarn and cloth has continued, but buyers owing to the falling tendency of values have exercised more caution in giving out orders. There is some nervousness in view of the possibility of depreciation in stocks, and this development is unfortunate in view of the bigger turnover during the last few weeks. In piece-goods for India the inquiry has again been of substantial dimensions and a fair business has been done in light bleaching descriptions, prints and fancies, chiefly for Calcutta, Karachi, and the up-country markets of Cawnpore and Amritsar. More offers have also been met with from Bombay. With regard to China most of the demand has been in white shirtings for Hong Kong and some useful lines have been booked. Fine goods have moved off fairly well for Rangoon, Singapore and the Straits Settlements. Not much has been done for Egypt and the Near East, and the off-take for South America has been rather disappointing. Steady buying has taken place in home trade fabrics. Increased irregularity has shown itself in quotations for American and Egyptian yarns and spinners have had to shade prices to secure contracts, the sales being rather smaller than recently. Some moderate lots have been booked for India and China.

THE WOOL TRADE.—Bradford.—The London sales this week, writes our correspondent, have proved to be as good in every way as those held previously during this series, and the operations of the various sections of the trade have been large enough to impart a better tone. Prices are not showing a very distinct advance, but when the saleroom is occupied by people who are determined to get wool, it does not take long before a change comes over the situation. Withdrawals are not being made quite as freely as last week, and the initial decline in prices had disappeared from all descriptions which were previously selling at less money compared with the January sales. Taking examples of the prices realised, very good West Australian greasy merinos of 70's quality have been sold at 10½d., and even 64's to super 64's quality has been sold at 9½d. The well-known Queensland mark, DSW/Terrick passed the hammer at 11d. for the top lot, which was super 64's to good 70's quality. The next two lots sold at 10½d. and 10½d. Many other examples could be given of good greasy merino wool selling at under 1s. per lb., and crossbreds are still cheap, medium wools frequently selling at about 5d. a lb. A little improvement has come about in Bradford. More business has been done in merino tops, and whereas topmakers could not sell average 64's at 22d., that price can now be realised. All crossbred qualities are also rather steadier, and there is reason for saying that more is being done in medium and low sorts than is generally admitted.

THE GRAIN MARKETS.

WHEAT.—At the principal international wheat markets prices fluctuated within narrow limits, and, on balance, little change can be recorded. Sterling prices declined in proportion to the rise in the £ in terms of gold. The smaller volume of international trade the past week is ascribed mainly to a temporary falling off during the past week in Continental buying. France, Germany and Italy are, however, expected to resume purchasing on a large scale in the near future

owing to the growing scarcity of native wheat. Crop reports from North America and Europe are so far satisfactory and the damage by frost seems to have been slight. On Wednesday, "March" futures were quoted at 57½ cents per bushel in Chicago, against 57½ cents on the corresponding day last week, and 54½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 35s. 6d. per 996 lbs., as compared with 36s. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 33s., against 34s.; No. 3 Northern Manitoba, Vancouver, ex ship, 32s., against 32s. 6d. to 33s.; Russian, on sample, 20s. 9d. to 30s. 6d., against 30s. 6d.; Australian, ex ship, 29s. to 30s., against 29s. 6d. to 30s. 6d. a week ago.

WHEAT FLOUR.—The market in flour has been quiet during the past week. North American shipments, at 162,000 sacks, showed a decrease of 25,000 sacks as compared with the previous week. Of this total, only 18,000 sacks have been consigned to Europe. Quotations in London, Wednesday: Straight run, delivered country, 27s. 6d. per sack of 280 lbs., as compared with 27s. 6d. last week; delivered London, 26s. 6d., against 26s. 6d. Manitoba patents, ex store, 27s. 6d. to 30s., against 27s. 6d. to 30s.; and Australian, ex store, 22s. to 23s. 6d., against 22s. to 23s. 6d. a week ago.

BARLEY.—Barley has again been in good demand on the Continent, and Argentina was able to dispose of substantial quantities in Germany. On Wednesday, "May" futures were quoted at 44½ cents per bushel in Winnipeg, against 42½ cents last week and 40 cents a month ago. Quotations in London, Wednesday: "English feeding," f.o.r., per 448 lbs., 27s. to 28s., as compared with 26s. to 27s.; Russian, landed, 24s. 6d. per 400 lbs., against 25s. 6d. a week ago.

OATS.—The demand for oats has been quieter on the Continent during the past week. The requirements of this country are at present met mainly by home-grown varieties. "May" futures, which last week stood at 22 cents per bushel in Chicago, sold at 23½ cents per bushel on Wednesday this week, against 24½ cents a month ago. Quotations in London, Wednesday: "River Plate," landed, 18s. 6d. per 320 lbs., as compared with 18s. 6d. last week; "River Plate," ex ship, 17s. 3d., against 17s. 3d.; "Chilean White," landed, 27s., against 27s. a week ago.

MAIZE.—The market in maize has witnessed a substantial advance in prices this week, following the setback a week ago. The advance was occasioned partly by an improvement in Continental demand

and by unfavourable crop reports from Argentina and smaller shipments from that country. Wednesday's quotation in Chicago for "March" futures, at 40½ cents, shows an advance of ¼ cent on last week, and one of 5½ cents as compared with the price a month earlier. Quotations in London, Wednesday: "Plate," landed, 21s. 9d. per 480 lbs., as compared with 21s. 3d. last week; "Plate," ex ship, 21s., as against 20s. 3d.; "Plate," March-April, 21s., as against 20s. 9d. Yellow maize meal, ex wharf, was quoted at £6 per ton, against £6 a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1931-32, 1930-31, 1929-30, 1928-29:—

	1931-1932.	1930-1931.	1929-1930.	1928-1929.
Estimated sales of home-grown wheat—				
1 week to March 5	Cwts. 127,990	Cwts. 110,664	Cwts. 178,438	Cwts. 240,677
27 weeks to March 5	2,246,711	3,234,063	6,850,858	7,432,264
Average price of English wheat per cwt.	s. d. 5 11	s. d. 5 2	s. d. 8 4	s. d. 9 9

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1928 to 1931:—

Weeks ended	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks with comparative figures for 1930:—

NAREST FUTURE.	Jan. 2, 1930.	Jan. 2, 1931.	Mar. 11, 1931.	Jan. 4, 1932.	Mar. 2, 1932.	Mar. 9, 1932.
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.	148½	56½	60½	62½	67	67½
Chicago (No. 2 Winter) —Cents per 60 lb.	130½	79½	79½	55½	57½	57½

The visible supply of wheat in Canada, at 62,144,000 bushels, shows an increase on the week of 575,000 bushels. Supplies a year ago stood at 64,498,000 bushels.

OTHER FOODS.

SUGAR.—The uncertainty as regards the probable outcome of the Cuba-Java negotiations again exercised a depressing effect on the market. Heavy selling, particularly from Cuba, caused prices to fall back. The fall in sterling prices was more pronounced because of the appreciation of the £ in terms of gold. "March" futures in New York were quoted at 0.80 cent per lb. on Wednesday, against 0.84 cent per lb. a week ago, and 0.89 cent per lb. a month earlier. Wednesday's sales of "raws" include "May delivery" at 5s. 5½d. to 5s. 8½d. per cwt., against 6s. 2½d. to 6s. 4d., and "December" at 5s. 11½d. to 6s. 2½d., against 6s. 8½d. to 6s. 10d. on the corresponding day last week. The movements of raw sugar in London and Liverpool during last week are set out in the table below:—

	Imports.		Deliveries.		Stocks.	
	1932.	1931.	1932.	1931.	1932.	1931.

COFFEE.—The New York coffee market has been steady throughout the past week. At Wednesday's auction in London competition was less keen and with the exception of outstanding qualities, lower prices were realised. Last week's movements of coffee in London were as follows: Brazilian, landed, 159 bags; delivered for home consumption, 13 bags; exported, nil; stocks, 3,153 bags, against 3,152 bags last year. Central American, landed, 9,350 packages; delivered for home consumption, 3,597; exported, 2,259; stocks, 83,734 packages, against 96,344 a year ago. Other kinds, landed, 11,990 packages; delivered for home consumption, 2,902; exported, 840; stocks, 79,411 packages, against 101,762 a year ago.

COCOA.—Cocoa prices continued to advance during the past week. "May" futures were quoted at 4.51 cents per lb. in New York on Wednesday, against 4.30 cents per lb. a week ago and 3.79 cents a month ago. As compared with the corresponding day last week, Wednesday's quotation for Accra, fair fermented, new crop, March-May, at 27s. per cwt. f.o.b., London contract, shows a rise of 1s. 3d. per cwt. on the week. Last week's movements of cocoa in London were as follows: Landed, 33,228 bags; delivered for home consumption, 11,161 bags; exported, 825 bags; stocks, 159,802 bags, as against 202,096 last year.

TEA.—The quantities catalogued for this week's auction comprise 53,049 packages of Indian, 25,818 packages of Ceylon, and 23,885 packages of Java and Sumatra tea. The market for Indian tea opened strong on Monday. Tuesday's "Ceylon" auctions witnessed keen competition and a further advance in prices owing to the improvement in the quality. At Wednesday's Indian sales a slight reaction became noticeable. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account:—

AVERAGE PRICE PER LB.						
Week ending	Northern India.	Southern India.	Ceylon.	Java.	Sumatra.	Nyasa-land.
Mar. 5, 1931	s. d. 0 9-92	s. d. 0 10-08	s. d. 1 2-61	s. d. 0 7-23	s. d. 0 8-19	s. d. 0 6-71

Mar. 3, "	0 11-47	0 9-85	1 1-00	0 7-82	0 7-42	0 10-95

RICE.—The market in rice has again been strong. Spot prices remained unchanged but "forward positions" advanced further. Wednesday's "spot" quotation for Burma No. 2, cleaned, at 10s. 6d. per cwt., shows no change as compared with last week. Movements in London during the past week were as follows: Landed, 97 tons; delivered, 133 tons; stocks, 846 tons, as against 501 tons last year.

POTATOES.—As supplies at the principal markets were sufficient to meet the demand, there was no advance in prices. At the Borough Market, "Best King Edward" sold from 11s. to 12s. per cwt., as compared with 11s. to 12s. per cwt. a week ago.

SPICES.—The market in spices has been steady. "Spot" pepper was slightly dearer. Wednesday's quotation for "Black Singapore" pepper, at 7d. per lb., shows a rise of ¼d. on the week.

MEAT.—The outstanding feature of the market in meat was the advance in beef prices, both home grown and foreign. Other meats are scarcely changed on the week. On Wednesday, Argentine beef (chilled hindquarters) was sold at 3s. 8d. to 4s. 2d. per 8 lbs., against 3s. 4d. to 3s. 8d. on the corresponding day last week, while New Zealand frozen mutton realised 2s. 6d. to 3s. 6d., as against 2s. 6d. to 3s. 6d. a week ago. According to the Smithfield Market official report, supplies of meat during last week amounted to 9,530 tons, as compared with 9,312 tons in the corresponding week last year. Imported beef, principally Argentine, formed 84.6 per cent. of the supplies, as against 84 per cent. a year ago; and imported mutton, mainly New Zealand, formed 79.4 per cent. of the total supply, as against 81.2 per cent. last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OLSEEDS.—Markets generally are quiet, but with a better demand from the Continent linseed is firmer and values show some advance on the lowest. In view of the poor sales of linseed oil, English crushers are buying very sparingly or not at all. Plate for shipment to April is now quoted £8 12s. 6d., with later positions a little more. Shipment of the Argentine crop is proceeding steadily, but is 73,000 tons behind a year ago, due entirely to the reduced European demand. The quantity now afloat for Europe is 242,800 tons (or 8,400 tons less than last week), including 4,300 tons from India. Indian linseed is very quiet, there being no buyers at the present level of shippers' quotations. Cottonseed is in slow request and easier, current value of black Egyptian being around £8 10s. for March and April loadings. Trade in linseed oil is disappointing, and prices are easier. Raw oil for March delivery, naked ex Hull mill, is quoted £15, and April £16 5s., with later positions at a substantial premium. Cotton oil is neglected and lower. Crude Egyptian, ex Hull, is available at £22, and common edible at £24 5s. Ground nut oil is again firmer, but other seed oils have an easier tendency. Oilcakes are in steady demand, with mill prices unchanged.

HIDE, LEATHER AND ALLIED TRADES.—Prices for most weights and classes of ox and heifer hides were ¼d. per lb. lower at the auctions held in Manchester, the only exception being 80/89 lbs. which sold at last prices. Cows were cheaper by a similar

HALIFAX

THE WORLD'S LARGEST BUILDING SOCIETY.

LARGE INCREASE OF BUSINESS.

TOTAL ASSETS EXCEED - £77,900,000.

ANNUAL REPORT OF THE DIRECTORS

to be presented to the Shareholders at the Annual General Meeting of the Society, to be held at Halifax, on Monday, the 21st day of March, 1932.

The Directors have great pleasure in submitting to the Members the Annual Statement of Accounts, showing the operations of the Society during the financial year ended 31st January, 1932.

It is very gratifying to the Directors to be able to report that, in a year of continued depression in trade and industry, and widespread unemployment, and through a period of the greatest anxiety in the National financial situation, there have been very substantial increases in all departments of the Society.

The following statement of the business at the end of last year, compared with the figures on the 1st February, 1928, being the date of the union of the Halifax Permanent and the Halifax Equitable Building Societies, indicates the enormous expansion and development of the business of the United Society during the last four years, viz.:—

	Number of	Open Accounts.	Invested Funds.	Assets.	Reserve Funds.
Feb. 1st, 1932	-	476,604	£75,137,211	£77,950,353	£2,813,142
Feb. 1st, 1928	-	329,224	£45,520,281	£46,981,482	£1,461,200

Increase in 4 yrs. 147,380 29,616,930 £30,968,871 £1,351,942

ASSETS.—The Total Assets at the end of the year amounted to £77,950,353, an increase of £7,909,954.

RESERVE FUND.—The Reserve Fund, after providing for all interest and bonus allotted up to the date of the account stands at £2,813,142.

INCOME.—The Income for the Year, exclusive of investments realised, was £33,458,870.

MORTGAGES.—During the year there was a very heavy demand for loans upon mortgage of property, and the total amount advanced was £17,069,830. This sum is £176,768 more than the record sum advanced in the preceding year, and the average amount of advances completed each month has again exceeded £1,400,000.

The number of new Borrowers was 30,383, compared with 29,543 in the previous

year, and the average amount advanced on each Mortgage was £561. The total amount now owing upon Mortgages is £69,775,663, an increase during the year of £6,872,879, and the total number of Borrowers is 152,035, an increase of 16,630.

Of this total, 77 per cent. are in respect of Mortgages where the debt does not exceed £500, and the average amount owing on all the Society's Mortgages is only £393 each. The Mortgage accounts are again in an entirely satisfactory condition, and there are no properties of Borrowers in the possession of the Society to be reported in the statutory Schedule.

SHARE AND DEPOSIT FUNDS.—The amount standing to the credit of Investing Shareholders and Depositors is £75,137,211, an increase of £7,382,400.

PROFITS.—The net profit of the year, after payment of all expenses and Income Tax, and after providing for all interest due to Depositors and Shareholders up to the date of the Account, is £428,641.

The Directors recommend that there shall be distributed, in addition to the interest of £3 10s. 0d. per cent., a bonus of £1 10s. 0d. per cent. upon the sum standing to the credit of Paid-up Shareholders, Class 1; and, in addition to the interest of £3 10s. 0d. per cent., a bonus of £2 10s. 0d. per cent. to the Subscription Investing Shareholders upon the total amount paid by them up to the end of the preceding year.

ACCOUNTS.—The new accounts opened during the year numbered 91,014, and the total number of Shareholders and Depositors' accounts open at the end of the year was 476,604, an increase of 37,976.

The Directors desire to congratulate the members upon the exceedingly satisfactory results of the business of the past year, and upon the very strong financial position of the Society, as revealed by the Statement of Accounts. In every respect the Society has maintained and strengthened its pre-eminent position as by far the largest Building Society in the World, a distinction it has now held for over 20 years.

amount, while calf skins were steady. Sheepskins remain a poor market, and prices are again lower owing to the difficulty of selling wool and the restricted demand for fellmongers pelts. Actual sales of imported hides have not been on a large scale, although a fair amount of interest has been taken in the market for some sorts. In South American wet-salted hides, Argentine ox are quoted at a fraction over 4½d., while 4½d. is the figure mentioned for second ox. Sales of dry South American hides have been moderate, with B.A. Americans on offer at 6½d., Inservibles at 3½d., and Cuyabanos at 5½d. Business has been done in Africans, dry Capes having realised 6½d. and 5½d. for firsts and seconds, while dry salted, 20/30 lbs., have changed hands at 5½d. and 4½d. Unbathed Adis Abebas are on offer at 5½d., and Mombasas at 5d. Australians are still held for full prices, with only a small amount of business being done in them. Turnover of sole leather has again been small, although a slight improvement in orders for footwear is reported. From the trend of events, it would seem that manufacturers of boots and shoes still have sufficient stocks of leather in hand to carry them on for some time, and are only compelled to come into the market for certain lines. Consequently, individual orders are for limited quantities. Dry hide manufacturing bends have been inquired for in the light and medium weights, and a fair amount of business has been concluded in these. The same applies to English and wet-salted bends, but the call for heavy weights is very slow. Rough shoulders have been a slightly better sale, but, generally speaking, the market for all descriptions of offal is weak. In the upper leather section, business remains moderately steady in regard to box and willow calf and glacé kid, while sales of patent have been rather more frequent in the commoner grades. Fancy upper stock has been moved off in small quantities, but, speaking generally, trade in all sections is below normal, and prospects for an improvement before the Easter holiday appear to be remote.

RUBBER.—Rumours concerning the "restriction" negotiations in Holland have dominated the market this week. A decision has not yet been taken by the Dutch Government, but the market was a little steadier than a week ago. In New York, Wednesday's spot price for rubber, at 3½ cents per lb., shows a rise of ½ cent on the week. Wednesday's official closing price for standard ribbed sheet in London, at 2½d. per lb., shows a fall of ½d., as

compared with the corresponding day last week. In forward positions, business has been done at 2½d. to 2½d., for April-June, against 2½d. to 2½d. and at 2½d. to 2½d. for October-December, as against 2½d. to 2½d. a week ago. Movements of rubber in London and Liverpool during the past week were as follows: Landed, 1,493 tons; delivered, 1,537 tons; stocks at the end of last week, at 125,747 tons, show a decrease of 44 tons, as compared with the preceding week.

AGENTS AND CORRESPONDENTS THROUGHOUT THE WORLD
A Complete International Banking Service.

BANCA COMMERCIALE
ITALIANA.

Limited Company Incorporated in Italy.

Established in 1864. Head Office: MILAN.
Capital 700 million Lire. Reserves 500 millions.
Deposits 8,220 millions.

Branches in every centre of commercial and
industrial importance in Italy; also in London,
New York, Istanbul (Constantinople), and Ismir
(Smyrna).

Affiliated and Auxiliary Institutions in France
(Paris and Riviera), Switzerland, Czechoslovakia,
Poland, Yugoslavia, Austria, Hungary, Bulgaria,
Roumania, Greece, Egypt, Morocco, U.S.A.,
Brazil, Argentina, Chile, Uruguay, Peru,
Colombia, Ecuador, etc.

London Office:

32, Threadneedle Street, E.C.2.

A. JOEL, Manager.

Correspondents to the Italian Treasury.

or only \$5.5 millions above this limit; but it must be remembered that owing to depressed trade and low commodity prices, the demand for money to-day is far below normal. Even so, it is not surprising that money has become less plentiful, and next month when the new financial year will have begun and with it the seasonal expansion in the floating debt, money may become even more usable.

At the moment, however, conditions are still very comfortable. Since the middle of last week, the rate for renewals has hardened fractionally from $1\frac{1}{2}$ to $1\frac{3}{4}$ per cent. New money was not quite so plentiful on Friday, owing to a little calling by lenders, and on Saturday a fair turnover of funds took place, with a certain amount of calling outside the clearing banks. The rate over the week-end was $1\frac{1}{2}$ per cent. On Monday new loans could be obtained fairly easily early in the day, but supplies became somewhat depleted in the afternoon, and in some quarters up to $2\frac{1}{4}$ per cent. had to be paid. On Tuesday money was again inclined to be usable at rates up to $2\frac{1}{4}$ per cent., and one of the clearing banks was calling, but on Wednesday money was definitely easier, as no fresh calling took place, and the funds taken off the market the previous day were released. It will be apparent that throughout the whole of the period rates were below the minimum level charged by the clearing banks, and this proves that money was at no time inclined to be at all scarce.

Once more the market found considerable difficulty in judging the Treasury bill tender rate. Applications again attained unusually large dimensions, as they amounted to £74.0 millions for the £45.0 millions on offer. The average tender rate worked out at £2 ls. 2.17d., against £2 11s. 5.55d. the week before, when Bank rate was $\frac{1}{2}$ per cent. higher. Thus there is still a margin of practically $1\frac{1}{2}$ per cent. between Bank rate and the tender rate. "Hot" Treasury bills were dealt in on Monday at 2 per cent., and perhaps $\frac{3}{4}$ under, but notwithstanding the easier tendency of money, the rate had hardened by Wednesday to a full 2 per cent., with $2\frac{1}{2}$ per cent. mentioned in places. Prime three months' bank bills have also eased, this week's market rate being $2\frac{1}{4}$ per cent., against $2\frac{3}{4}$ per cent. the week before. Here again there is an inordinately wide margin of $1\frac{1}{2}$ per cent. Standstill bills were dealt in on Wednesday at rates ranging from $2\frac{1}{4}$ per cent. up to Bank rate.

Early this week there was a revival of foreign purchasing of sterling for the rise, and while so far it has been possible to hold sterling down to \$3.64, it is generally believed that large official acquisitions of devisen proved necessary. There is no doubt that foreign opinion holds that sterling is under-valued, quite apart from the fact that today London banks and the sterling bill between them command the greatest confidence. Furthermore, the renewal of speculative and other operations in sterling have caused the discount on forward foreign exchange rates to widen, so that on Wednesday the discount upon three months' forward dollars was equivalent to an annual return of nearly $2\frac{1}{2}$ per cent. If this be added to the ordinary return of 2 to $2\frac{1}{4}$ per cent. obtainable on money in London, whether lodged on fixed deposit or invested in Treasury or commercial bills, it is clear that to-day American money can earn more in London than New York. Thus, quite apart from such possibilities of appreciation as the pound is believed to possess, there is a powerful incentive to American money to come to London.

There are many good reasons why an influx of foreign short money should not be permitted to drive the pound up beyond its present level. The danger to our stability arising from the presence of most of the world's nomadic short money in London, and the needs of our export industries at once to come to mind. It is equally common knowledge that to restrain the pound the authorities have had to purchase devisen to a very considerable extent. The question of technical methods is much discussed in the market. The Treasury is believed to be buying gold in order to offset the offerings of devisen, but this is hardly within the Treasury's normal functions, and places the Treasury in danger of loss should an appreciation of sterling take place after all.

It is conceivable, however, that further steps could usefully be taken. One obvious measure consists of official operations in the forward exchange market, designed to narrow the discount of forward upon spot rates and so render London a less remunerative centre to foreign currencies. The other is that London banks and other financial institutions should, as far as is practicable, add to their own holdings of devisen in order to relieve the pressure upon the authorities. It is possible that in such ways a good deal could be done to check a rise in sterling which in many ways would be most undesirable.

In New York call money remains unchanged at $2\frac{1}{4}$ per cent., but a further reduction of $\frac{1}{8}$ per cent. has been made in open market acceptance rates, and 90-day bankers' acceptances are now quoted at $2\frac{1}{4}$ per cent., against $2\frac{3}{4}$ per cent. last week. This is thought to point to a reduction in the New York rediscount rate, which so far has remained at 3 per cent., the point to which it was lowered on February 25th. The National Credit Corporation is to refund 15 per cent. of the banks' subscription to its debentures, as the loans originally made by it are being taken over by the new Reconstruction Finance Corporation. The Mexican Government has purchased 23,000,000 ounces of silver for delivery over a period of twelve months.

Except for a certain rush to buy sterling on Monday the Foreign Exchange market was very quiet. The tendency generally of the principal currencies was in our favour, but in some instances they closed below the best. New York was three points higher at 3.64. Montreal went from 4.06 to 4.07, and Paris from 92 to 92 $\frac{1}{2}$ after being higher. Milan was fractionally weaker at 70 $\frac{1}{2}$, but Brussels fell from 25.92 to 26 $\frac{1}{2}$. Madrid went from 47 $\frac{1}{2}$ to 48 $\frac{1}{2}$, and Amsterdam from 8.97 to 9.05. Berlin was rather weaker at 15.30, and Switzerland fell rather sharply to 18.87. The Scandinavian currencies reacted differently, Stockholm weakening from 18.68 to 18.87 and Oslo from 18.18 to 18.55, but Copenhagen gained point at 18.15. The South American currencies were relatively steady, but quotations are still largely nominal. Rio being unchanged at 4 $\frac{1}{4}$ d., as was Montevideo 31 $\frac{1}{4}$ d.; but Buenos Aires weakened by $\frac{1}{4}$ d. to 35 57 $\frac{1}{2}$ the Far East the rupee was steady at 1s. 6 $\frac{1}{2}$ d. 40 $\frac{1}{2}$ yen weakened by $\frac{1}{4}$ d. to 1s. 9 $\frac{1}{2}$ d., and Ba declined from 9.05 to 9.10. In the forward market 23 $\frac{1}{2}$ month's dollars remained at $\frac{1}{2}$ cent discount, 49 month's weakened by $\frac{1}{4}$ to 2 cents discount, 7 $\frac{1}{2}$ month's Paris gained a point at 4 centimes discount, three months' weakened by the same margin to 16 centimes discount. Brussels was at discounts of $\frac{1}{8}$ and $\frac{3}{8}$, and Milan at $\frac{1}{4}$ and $1\frac{1}{4}$ lire discount. Madrid remained at one peseta discount for three months' delivery, but weakened to $\frac{1}{2}$ peseta discount for one month. Amsterdam and Switzerland remained at last week's levels, and Berlin was again not quoted. Silver weakened with the rise in sterling, cash by $\frac{3}{4}$ d. to 17 $\frac{1}{2}$ d., and forward by $\frac{1}{4}$ d. to 17 $\frac{1}{2}$ d., but the market was small and inactive. The Chinese silver currencies weakened in sympathy, Hongkong from 1s. 4 $\frac{1}{4}$ d. to 1s. 3 $\frac{1}{4}$ d., and Shanghai from 1s. 9 $\frac{1}{4}$ d. to 1s. 9 $\frac{3}{4}$ d.

MR. LLOYD GEORGE AND REPARATIONS.

On the positive side, Mr Lloyd George's book* on reparations and war debts sets out a policy to which the bulk of opinion in this country will rally, and which will command the assent also of large numbers of liberal-minded folk in other countries, including France and the United States. The thesis that it would be in the best interests of the world that reparations and war debts should be entirely cancelled, but that the world can only hope to gain the full benefits of this step if it is accompanied by disarmament and by a lowering of tariff barriers, is one which has been stressed so frequently in the pages of the *Economist* that it is unnecessary here to marshal the arguments anew. We welcome, however, the emphasis which Mr Lloyd George lays on the point that, if this policy is carried out, there is no need for France to regard the end of reparations as the overthrow of the Treaty system. He is rightly at pains to show that such a conclusion would be in accordance with what was envisaged at Versailles, and could be carried out strictly in conformity with various provisions that find their place in the Treaty itself. These clauses do not merely provide for modification by the Reparation Commission of the time and form of payment, but also contemplate the possibility that part of the reparations debt itself may actually be cancelled. Cancellation, therefore, in the circumstances that have now arisen would be "good law."

In this connection, moreover, Mr Lloyd George claims, not without justification, that, in the early reparation period, the Commission worked less favourably to Germany than was fairly to be expected in 1919, owing to the fact that no American representative sat on the Commission, the result being that France had the casting vote. It can, indeed, hardly be doubted that, if America had been a member there would have been no majority declaration of default in January, 1923, and no occupation of the Ruhr. Nor would a cancellation of reparations mean that Germany has been "let off." Mr Lloyd George does not attempt to examine the various figures which have been put forward as to the total amount which Germany has paid or as to the amount which has been spent by France on the restoration of the devastated areas. But the figures given in the *Economist* a few weeks ago show that, whatever estimate is taken, France has received from Germany not merely the whole cost of the Army of Occupation, which ran into very large sums of money, but also a very substantial proportion of her cost of reconstruction. Even if we leave aside the question whether Germany should be credited with the surplus value of the property of her nationals sequestered by the belligerent countries, and accept Mr Moulton's estimate of the value of ceded property and of deliveries in kind, Germany has paid altogether some 27 milliard marks, a figure nearly seven times as large as Germany demanded from France after the Franco-Prussian war. Mr Lloyd George also reminds France that her obligation to disarm is an essential part of the system set up in 1919 and that Germany, who has met a very large part of her reparation obligations, may justly accuse France of having failed to carry out her side of the bargain.

Pronouncements on the past, however, do not dispense statesmen from the obligation to deal practically with the future; and whether bald out-and-out cancellation of all Germany's obligations is the only way out of the problem, is a point for argument. Germany's solemn undertaking at the Hague to provide the annuities of the Young Plan on her own credit, in return for the abolition of the controls of the Dawes Scheme, is a fact which cannot be simply overlooked. The harmful effect on the world's economic life which has been caused by the attempt to collect large reparation payments without providing the means for their due discharge in goods and services is now widely understood. But if the settlement of the whole complex problem can be facilitated by the payment of such modest sums as Germany may be able to pay with-

out bankruptcy to herself or dislocation to the trade of the world, that possibility must be carefully examined at Lausanne. When Mr Lloyd George observes that "it is not worth while keeping afloat any part of reparation debts. . . . Salvage operations to rescue any scrap from the deep into which it has sunk are not worth the cost and risk," he can scarcely expect French endorsement of his views.

For ourselves, we welcome all the arguments which Mr Lloyd George is able to adduce in support of a liberal solution of the present problem; but, though every reader will find many illuminating suggestions and comments both on men and on affairs, there are very few pages in this book that will not arouse acute controversy. The sharpest criticism will inevitably be directed to the description of the part which Mr Lloyd George himself played in launching the reparations problem on its ill-starred career. We are quite ready to believe that Mr Lloyd George, from the very outset, doubted the possibility of extorting from Germany the huge sums that were spoken of in the weeks immediately following the war. But that is only a small part of the story. During the first fortnight of December, 1918, Mr Lloyd George made the great mistake of his career in allowing himself to be pushed into adopting as his election programme the promise that he would bring the Kaiser to justice and that he would demand from Germany the whole cost of the hostilities, though this demand was not in accordance with the terms which we had accepted a month before. Mr Lloyd George himself gave currency to the excessive figures of the Hughes Committee, and though he always added the warning that it might not be possible to get payment in full from Germany, he was, in fact, carried into power on the cry of making Germany pay for the war. Thereafter Mr Lloyd George's great army of jingo M.P.s proved a fatal handicap to him. As Mr Rae Stannard Baker rightly observes in his life of Wilson, "Mr Lloyd George won his election in December on Cunliffe's figures," and he was compelled to appoint Mr Hughes, Lord Cunliffe and Lord Sumner as the British members of the Commission on Reparations, though he knew perfectly well that their ideas were—to use a phrase famous in subsequent reparations history—"grotesque and ridiculous."

In his desire to shelter himself behind current opinion, Mr Lloyd George rather unhappily quotes the *Economist* as supporting the "big reparations" school. We are tempted to break a lance. A sufficient answer is contained in the very relevant passage which immediately precedes the quotation which Mr Lloyd George makes from the article of December 7, 1918. It runs as follows:—

Mr Lloyd George says (we quote *The Times* of December 6th), "all the European Allies have accepted the principle that the Central Powers must pay the cost of the war up to the limit of their capacity," implying that we and our European Allies propose to get as much as we can back of our whole war cost. This is a serious variation of the terms on which we stated our readiness to make peace early in November, and on which Germany accepted the conditions of the armistice. The Allied Governments then (see *The Times* of November 7th) stated that they took President Wilson's stipulation with regard to the restoration of invaded territories to mean that "compensation will be made by Germany for all damage done to the civilian population of the Allies and to their property by the aggression of Germany by land, by sea, and from the air." These were the terms on which we were then prepared to make peace—payment for damage to civilian property. They were certainly generous, especially in view of Germany's exaction from France at the end of the Franco-German war. But to expand them now into a demand for total war cost up to the capacity of the Central Powers would be to go back on our pledged word. We can only hope that the Prime Minister has written carelessly, or has allowed his electioneering zeal to cloud his memory of a scrap of paper that binds him and his country.

A week later, referring to the same critical clause, the *Economist* expressed its views in still more pointed language:—

Any attempt to twist this phrase into meaning the whole cost of the war would be financial sophistry that would be flouted in

* "The Truth About Reparations and War Debts." By the Rt. Hon. D. Lloyd George. (London): Heinemann. 3s. 6d. net.

[March 26, 1932.]

Houndsditch; and yet the Prime Minister, and most of the Press and of the candidates, are demanding, in a joyful chorus, that we should forget our pledged word and the country's honour.

Again, taking up a quotation of some months later, Mr Lloyd George represents the *Economist* as criticising Mr Bonar Law for being pessimistic regarding what could be obtained from Germany. The passage which Mr Lloyd George quotes merely challenges Mr Bonar Law for suggesting that the visible trade figures of Germany were the test of what foreign payments she could make. This was clearly a *non-sequitur*, for Great Britain herself is an example of a country which, though having a large excess of imports, nevertheless, through her other earnings, has been able for decades to invest large sums abroad. The article in question was one in which the *Economist* spoke of Mr Bonar Law's speech as follows:—

It enabled Mr. Bonar Law to make a lucid and interesting statement on the difficulties of collecting anything like the enormous sums that have been suggested as possible, to show that he at least had made no promises during the election which could not be fulfilled. . . . It is now clear enough that the Allies will be fortunate if they are able to get from Germany even the total that she owes them on the ground of actual damage to civilian property, unexpended by Old Bailey ingenuities.

The *Economist* at the time may have underestimated the reactions which any substantial payments would have on British or other competing industries; but, in the light of these comments, it is absurd to quote the *Economist* as representative of a body of expert financial opinion which egged on the sceptical politicians to put forward inflated claims against their better judgment, or to draw the inference that "economic authority was far more confident than were the politicians that reparations could be paid." The false expectations, the illusions and their tragic influence on the peace were due to a claim which Mr Lloyd George still defends. The *Economist* has always held that the judgment of history will confirm that of Mr Keynes when he wrote that "the campaign for securing out of Germany the general costs of the war was one of the most serious acts of political unwisdom for which our statesmen have ever been responsible."

Mr Lloyd George has chosen to draft his book in a way which will evoke heated discussion on this and many other topics; his strictures on the Mellon-Baldwin settlement are not calculated to please the United States; but we do not propose to pursue in further detail these controversies of past years. The world to-day will do well to receive his sweeping and critical judgments in a spirit chastened by the recognition that the post-war policies of all the victorious nations have combined, in one way or another—be it greed or blindness or vacillation—to blast the hopes of peace. If Mr Lloyd George will have none of the white sheet of penitence for his own wear, his book is a convincing proof of the world's need to make the future atone for the past.

THE COMMUNAL PROBLEM.

LAST Saturday it was announced at Delhi that His Majesty's Government at Westminster have now decided to frame and put into effect, at the earliest possible moment, a provisional scheme for disposing, in India, of the communal problem. Although this is a very grave responsibility to undertake, the announcement of the Government's decision is, in the actual circumstances, distinctly good news; for the decision is, after all, simply a decision to shoulder, at the right moment, an obligation to which this country is already fully committed in every sense.

It is true that, though we are pledged to hand over the government of India progressively to the Indian people, we must necessarily have regard to the degree of willingness to accept an agreed constitution; but, while we retain sovereignty, we are morally bound to attempt by unilateral action to resolve the present deadlock. Again, we are committed politically; for quite apart from the question whether a deadlock, in the circumstances just envisaged, would fairly lay us open to an imputation of bad faith or not, it is evident that the process of transfer cannot be arrested at this point in practice without arousing in India a political bitterness,

and precipitating a political upheaval, which might make the task of carrying on the administration and maintaining law and order virtually impossible. In the third place, we are committed by an explicit promise—or warning—which Mr MacDonald gave, and rightly gave, in London, on December 1st last, to the Round Table Conference. The Prime Minister announced on that occasion that, if the Indian communities failed to settle the communal problem for themselves, the Government at Westminster would take it upon itself to supply this part of the Indian Constitution temporarily, by the use of its own powers, as a *pis aller* which would at any rate be less undesirable than an *impasse*.

The necessity for fulfilling this contingent undertaking has now unfortunately arisen in consequence of what has happened since then. About a month ago the Muslim members of the Consultative Committee of the Round Table Conference in India formally declared themselves unable to agree with representatives of other communities upon a settlement of the communal problem; and thereafter the Committee itself formally requested that His Majesty's Government at Westminster should give a decision in the matter. In these circumstances, the Government would have stultified itself, and have invited disaster in India, if it had held back; and the announcement of its intention to act has come at an opportune moment.

Indeed, the moment was opportune to a nicety; for it overtook the Indian Muslim leaders on board their trains *en route* to a meeting of the All-India Muslim Conference at Lahore, where they were proposing to boycott the Round Table Conference on the ground that the British Government had failed to carry out its promises. Even before the announcement of March 19th, this boycott proposal had been a contentious question on which the Indian Muslim community was by no means unanimous; and, after the announcement, the proposed resolution was dropped by its promoters on the eve of the Lahore Conference, before the proceedings actually opened. In place of the boycott resolution, the Executive Committee of the Conference accepted, at the first sitting of the Conference last Monday, an alternative resolution demanding that the British Government should settle the communal question by the end of June, and settle it on the Muslim's terms.

These terms, which are already well known, were reaffirmed on Monday by the President of the Muslim Congress, Sir Muhammed Iqbal. No settlement is acceptable to Muslims which does not satisfy their demands for separate communal electorates; for majority rights in the provinces where they have a majority; for equality between the federal units of an Indian Federation (especially equality between the North-West Frontier Province and Sind and the older "Governors' Provinces"); complete provincial autonomy; the transfer of power from the Parliament of Westminster to the Indian provinces (presumably in opposition to a transfer of powers to an All-India Government); and a one-third share of representation and control at the centre for Muslims. Broadly, the Indian Muslims' policy is to keep the Federal Government as weak as possible, since they cannot hope to possess more than a third of the power there; and to secure as much local power for the provinces as possible, in order that the provinces in which the Muslim community is in a majority may serve as Muslim citadels.

Such an arrangement, in combination with the alliance that they have contracted with the other minorities, particularly the Depressed Classes, would no doubt give the Indian Muslims a fair prospect of holding their own against the Caste Hindus, even if the British were to withdraw from the Indian arena and cease altogether to hold the view, and perhaps also from the Muslim point of view, and perhaps also from the Muslim point of view, already their failure to convince the Caste Hindus and the Sikhs of the excellence of what they propose. It is prement to intervene; and it seems extremely improbable that the arbitrator, or mediator, will give a decision precisely in accordance with the desiderata of one of the parties to

The New York Trust Company

the dispute without taking account of the other party's case. The British Government's provisional settlement of the communal problem will assuredly be something that is not wholly pleasing either to the Muslims or to the Depressed Classes or to the Sikhs or to the Caste Hindus; and therefore the announcement of the terms, when it is made, may be the signal for trouble—though certainly less serious trouble (notwithstanding the Muslims' threat of "direct action") than would arise if the Government were to shirk its plain duty. It is always an awkward business to cut the Gordian knot, for there are so many mishaps that can occur. If the cord is too slack, the sword fails to sever it and merely becomes entangled in the loops; on the other hand, if the cord happens to be too taut (and in this instance the tension is evidently extreme), the severed ends are apt to fly up and lash the operator in the face. A difficult operation, decidedly, yet one which, as things are, we cannot possibly refuse to perform.

THE QUARTER'S NEW CAPITAL.

THE market for new capital issues, like that for money, underwent an appreciable change during the first three months of 1932. At the end of last year, with Bank rate still at the "crisis" level of 6 per cent., the volume of new issues had fallen to negligible dimensions. To-day, there are unmistakable signs of greater activity, though such modest revival as has occurred is a reflection of cheaper money rather than of any recrudescence of enterprise.

In the first of the following tables we show the geographical distribution of the past quarter's issues. The debit figure of £3 millions on British Government account represents the surplus of encashments over sales of National Savings Certificates:—

DESTINATION OF NEW CAPITAL.

It will be observed that during the past quarter foreign lending has been nil; and the total volume of new financing, at less than £18 millions, represents well under half of that of even a year ago. As compared, however, with the two last quarters of 1931, when aggregate new capital issues amounted to only £9 millions and £3.9 millions respectively, the present figure betokens some reawakening of life. The distribution of the total among different classes of borrowers is more fully analysed in the table which follows:—

CLASSES OF BORROWERS. (£ million.)

	Total.	British Government.	Foreign Colonial Govt.	British Colonial and Foreign Corpns.	Foreign Railways.	Mines, Finance, and Exploitation.	Rubber and Oil.	Balance (Mainly Home Industry).
Total whole year, 1923	271.4	77.7	95.8	4.8	5.4	15.5	7.7	64.5
Total whole year, 1924	209.3	13.7	90.6	18.8	1.0	12.7	2.3	70.2
Total whole year, 1925	232.2	45.6	30.7	25.3	3.8	18.0	19.1	89.7
Total whole year, 1926	230.7	4.7	54.6	49.2	8.2	26.9	6.2	80.9
Total whole year, 1927	355.1	66.0	67.5	37.9	5.4	33.2	11.0	134.1
Total whole year, 1928	369.0	83.8	56.1	26.4	3.1	49.7	8.7	141.2
1929—1st quarter	96.9	1.9	27.2	0.3	3.8	21.2	4.9	37.6
2nd " "	77.4	Dr. 0.3	Nil	11.4	Nil	12.9	0.1	53.3
3rd " "	18.7	Dr. 1.4	2.8	0.4	4.0	2.4	1.1	13.4
4th " "	92.2	65.2	Nil	Nil	4.0	5.0	0.3	17.7
Total whole year, 1929	285.2	65.4	30.0	12.1	7.8	41.5	6.4	122.0
1930—1st quarter	87.7	38.4	14.6	15.9	2.7	1.0	6.7	8.4
2nd " "	81.9	1.6	30.9	18.8	Nil	6.3	2.0	22.3

4th " "	3.9	Dr. 1.8	Nil	1.3	Nil	...	...	4.4
Total whole year, 1931	102.1	10.7	32.2	8.0	2.9	12.2	0.2	35.9
1932—1st quarter	17.7	Dr. 3.0	4.1	9.8	Nil	0.5	0.4	5.9

Colonial Governments, British and Colonial corporations, and—in the last group—two British railways, accounted for almost the whole of the quarter's flotations. In view of this distribution it is not surprising to find from a further analysis that nearly the whole of the total took the form of issues of debentures and bonds:—

NATURE OF BORROWING.

Year	Preference		Ordinary		Total.
	Debentures, Bonds, &c.	Preference Stocks and Shares.	Ordinary Stocks and Shares.		
Year 1927	228,958,000	36,836,600	89,371,400	355,166,000	
" 1928	212,817,900	45,062,600	111,177,600	369,158,100	
" 1929	137,670,300	31,543,400	116,025,700	285,239,400	
" 1930	227,658,500	15,548,800	24,593,300	267,800,600	
" 1931	74,835,599	6,911,859	20,296,833	102,044,291	
First quarter, 1930	76,368,500	8,145,700	3,218,200	87,732,400	
First quarter, 1931	35,879,000	521,500	8,823,400	45,223,900	
First quarter, 1932	15,296,500	1,755,000	693,600	17,745,100	

A more detailed list of the various forms of new capital applications during the past quarter, in comparison with previous years, will be found on page 673. Substantially, the quarter's events in the market have been confined to ten issues, two in January, three in February, and five in March, of which three, representing a nominal amount of £4.2 millions, were Crown Colony loans; four, amounting to £12 millions nominal, were British corporation loans (including the Central Electricity Board and the Port of London Authority in this category); two were Home railway issues and one an issue of £3.4 millions in 5 per cent. debenture stock by a large industrial combine for conversion purposes. Among other operations there need only be noted an issue of £700,000 in 7 per cent. debentures at par by a firm of newspaper proprietors, an offer (to shareholders only) of one million 7 per cent. preference shares at 22s. 6d. by Messrs. J. Lyons and Company, and a relatively small issue of 8 per cent. preference stock by an oil company. Other issues under various heads were all of negligible amounts and confined to shareholders only.

In the next table we show the issue and present prices of the chief flotations:—

Month of Issue.	Name and Description.	Nominal Amount.	Issue Price.	Price, March 22, 1932.
1932.				
January	Mauritius 5% Guar. Deb.	600,000	98½	106
January	Uganda 5% Ins. Stk., 1951-71	1,600,000	96	103½
February	Nyasaland 4½% Guar. Stk., 1952-72...	2,000,000	97½	3½ prem.
February	Central Electricity Board 5% Stk., 1955-75	7,000,000	95	6 prem.
February	Oroydon Corporation 5% Red. Stk., 1950-60	750,000	Par	5 prem.
March	Poole Corporation 5% Stk., 1957-72 ..	750,000	100½	3½ prem.
March	Metropolitan District Rly. 5% Stk., 1985-95	1,500,000	97½	5 prem.
March	Metropolitan Railway 5% Stk., 1957-62 ..	2,000,000	97½	2½ prem.
March	Port of London Authority 5% Inscribed Stk., 1950-70	2,000,000	101½	2½ prem.
March	Lever Brothers 5% Deb. Stk.	3,440,000	98	...

From this it will be seen that sound borrowers have succeeded in obtaining money readily on a basis of slightly over 5 per cent. The figures of premium at which these issues are now standing and the large over-subscriptions which are known to have accompanied the majority of the offers, suggest that with the progressive cheapening of money a slightly lower yield-basis has now become practical politics. From the point of view of the psychology of investors, it is evident from this demonstration of the willingness of rentiers to invest money at fixed interest—notwithstanding the heavy losses already incurred in this sphere during the present crisis—that fears of inflation or of drastic depreciation of sterling have definitely receded; and that where confidence is placed in the security or earning capacity of borrowers, there are ample funds, untapped during the previous six months' paralysis of the new issue market, immediately available for investment. In so far as home issues or loans to Crown Colonies whose currencies are on a sterling basis are concerned, it is obviously desirable that full advantage should be taken of money market ease, both to finance reproductive capital development and to fund short-term indebtedness, thereby increasing the liquidity of banking creditors. Every encouragement in this direction should be given.

The question, however, of fostering a revival of new issues for foreign borrowers equally demands careful consideration of its advantages. On the one hand, it would be manifestly contrary to the national interests if an influx of short-term foreign money should be used as a basis for long-term lending abroad, thus re-creating the vulnerability from which we suffered during the period immediately preceding the suspension of the gold standard. On the other hand, in so far as the recent strength of sterling is a reflection of the repatriation of British-owned capital formerly invested abroad, there is everything to be said for offsetting such re-imports of British funds by re-lending abroad on long term. Otherwise, the strain on the sterling exchange, making for an appreciation unwarranted by our current trading balance, might become unmanageable. Indeed, fresh investment, eliciting exports from this country and preventing the accumulation of sterile deposits of idle money would be doubly welcome. The difficulty is obviously to find destinations for foreign lending in which the borrowers are

able to afford security satisfactory to the potential investor. So far as the debtor countries of the Continent of Europe are concerned, fresh loans to-day are a matter for the consideration of statesmen rather than the individual investor; but, however circumscribed may be the limits within which foreign lending without special Government guarantees is now a practical possibility, it would be well, perhaps, for the authorities to let it be known that the recent unofficially imposed embargo can now be experimentally withdrawn.

THE RUBBER POSITION.

THE decision of the British and Dutch Governments against official control of the supply of crude rubber is likely to prove an important milestone in the history of the rubber industry. The removal of the Stevenson Restriction Scheme at the end of 1928 found actual productive capacity much enhanced by the liberation of supplies from the whole of the well "rested" British areas. In addition, there was a great increase in potential capacity from the extensive areas of new Dutch estate and native plantings undertaken during the period of high prices resulting from restriction. The shock of the transition to unrestricted production was, however, mitigated until late in 1929 by the phenomenal increase in American absorption of rubber, while the new Dutch areas had not for the most part come into tapping. The Wall Street crash and the beginning of the world depression quickly reduced absorption; but on the production side no corresponding contraction resulted or was in prospect. European estates endeavoured to reduce costs per pound, to conform with selling prices by increased output, while the ever more imminent maturity of large new Dutch native areas foreshadowed an increase in native output.

In these circumstances an attempt was made to organise voluntary restriction by the British and Dutch European producers. The May "tapping holiday" of 1930, although well supported and ably executed, showed that voluntary restriction by Europeans—having regard to the impossibility of securing native co-operation—was inadequate to solve the difficulties of the industry, and would, indeed, only strengthen the native section of the industry at the expense of the large estates. The degree of international co-operation attained in this experiment promised, however, if directed to securing compulsory regulation through Governmental agency, to achieve the desired results. From June, 1930, to March, 1932, the political endeavour of the industry consequently centred round this objective.

At the outset the efforts of pro-restrictionist producers received a severe setback. In September, 1930, the Governor-General of Malaya, while on a courtesy visit to the Dutch East Indies, obtained from the Governor-General of the Netherlands East Indies an expression of the views of his Administration on the question of rubber restriction. These were, firstly, that restriction was contrary to the policy of his Government, and, secondly, that even if policy were reversed, the administration of the restriction of native output would be "very difficult or scarcely possible." In face of this pronouncement, the Governor-General of Malaya concluded that economic forces must be left to work themselves out. For the time being restriction appeared to be dead. And yet within six months a renewed agitation both by British and Dutch producers was in full swing. Early in 1931 a number of Commissions and Committees were instituted in Holland with a view to organising unanimous support amongst Dutch producers and informing the Minister of the Colonies of the restrictionist case. Although a minority of Dutch producers were still antagonistic to restriction, it appears that by the autumn there was overwhelming pressure in favour of action on the Dutch Minister. At this juncture the British Government, at the instance of British producers, opened direct negotiations with the Dutch Government in consultation with the Colonial Governments concerned. After the lapse of a further six months of negotiation the decision now announced was reached.

The grounds stated for this decision were that the Governments concerned were satisfied of the impossibility of framing and operating "an international scheme which would guarantee the effective regulation of the production or export of rubber." The inference, which is supported by comment in Dutch circles, is that the Dutch Government was unable to satisfy itself or the British Government that it could effectively control native output in the Netherlands East Indies. The presence and well-known opinions of Dr. Luitjes, head of the Agricultural Department of the Netherlands East Indies, on whose advice the Dutch Government had to act, lend support to this conclusion. The importance of these events is that the "appeal unto Caesar" on this question has been made, and after protracted and exhaustive investigation and discussion, a decision has been made against Governmental interference. Further, the decision is based not on the desirability or otherwise of restriction, but on its impracticability. This time it may legitimately be hoped that restriction and the inevitable uncertainties which go with it are dead.

The pros and cons of rubber restriction have for a long time attained an almost theological complexity. In view of the finality now reached, it is more profitable to consider the implications of this decision than its merits. As regards the immediate outlook, it may be said at once that the time of making the announcement was well chosen. At this time of the year shipments are at their lowest, and absorption is tending to increase to the seasonal peak. This fact, coupled with intelligent anticipation of the probabilities, is no doubt responsible for the market having taken the announcement so well. As regards the short-term outlook on the production side, distinctions must be drawn both as between producing countries and as between European and native producers. There can be little doubt that rubber producers in Malaya and the Dutch East Indies are naturally better situated to contend with the present extremely rigorous conditions than those in other countries. As regards the European producers, it is likely that a certain, not very large, proportion will cease production forthwith. Another and rather larger section, including those companies which are both strong financially and efficient in production, can ride the storm almost indefinitely. The most difficult group on which to generalise is the great bulk of producers in an intermediate position between these categories. On the whole it would seem likely, having regard to the remarkable reduction in production costs already achieved in the last two years, that many of them will proceed further in this direction on a basis of full output. Many others ultimately destined to go on "care and maintenance" will not do so until the possibilities of hanging on have been fully exhausted. On the whole, it would not, therefore, seem wise to postulate any very large reduction in estate output during 1932.

As regards native output, the Malayan native may be expected to continue production substantially at the level of recent years. In the Netherlands East Indies the native producer will be severely affected by the recent fall in prices. He has, however, in the past shown a surprising ability to accommodate himself to successive reductions in the price level, while a further counter-balancing factor is the increasing area of new rubber coming into tapping. On the whole, only a slight reduction can be anticipated from this quarter. On the basis of the statistics issued by the Commercial Research Department of the Rubber Growers' Association, production in 1931 may be put at 797,000 tons. Leaving native output substantially unchanged, it would be surprising if the output of the remaining producers were to be reduced by much more than 100,000 tons in 1932.

The absorption of rubber is unlikely to be stimulated directly by the low prices obtaining, as the cost of the raw product is insignificant in relation to the price of manufactured rubber goods. On the other hand, the removal of uncertainty with regard to possible artificial inflation of the price by restriction may foster both extended use and new uses. A further reduction of the use of "reclaim" to the minimum proportions necessary should also result. The world situation is so full of uncertainties

that nothing in the nature of a precise forecast can be attempted. There would not seem, however, to be any reason to anticipate a smaller demand for either original equipment or replacement tyres in the United States, having regard to the extremely low current level of operation, while the absorption of rubber in products other than tyres has held up surprisingly well throughout the depression. In the United Kingdom it would not seem that any reduction from last year's level of absorption need be anticipated, while in other countries, where absorption is mainly for manufactures other than tyres, demand has been maintained well during the last two years. It would, therefore, seem reasonable to anticipate no important reduction in absorption below the 670,000 tons reached in 1931.

Allowing for the necessarily wide margin of error in such approximations, it may be said that there is a prospect that demand and supply may come nearly into equilibrium during the next twelve months, as contrasted with a recorded increase in stocks of 130,000 tons between December, 1930, and December, 1931. If the position were to work out in this way, there would seem to be no reason to regret the abandonment of restriction hopes. The substantial maintenance of absorption in such a period as that through which the world is now passing augurs well for a largely increased demand for rubber as soon as the depression lifts. Although world rubber stocks at 650,000 tons equal nearly a year's world absorption, and must, therefore, in the meantime depress the price, even if demand and supply are balancing, the industry will in reality be gaining time. Meanwhile, the elimination of the high-cost producer will proceed, and a prolonged period of low prices will act as a stimulus to the efficiency and resource of active producers. Ultimately it is possible to foresee a strong European industry in a position to supply the bulk of the world demand profitably at a low price which will be stabilised by the reserve output of those native areas which have for so long been the bugbear of the rubber industry.

GETTING RICH QUICK.

(BY A CORRESPONDENT.)

A SWEEPSTAKE ticket before the draw is one of the very few things in this world with an intrinsic value. The value of war loan or of wheat or of a painting by Millais hangs on a number of varying factors, and particularly on the state of public opinion and public taste. If the majority of people interested in investment believe that money is likely to become cheaper, the value of War Loan increases in anticipation of the change; if a sufficient number of people interested in pictures think that the fashion for modern French painters is losing momentum and that the pendulum is likely to swing back to Victorian Academicians, then the value of Millais' works, resting in the respectable seclusion of provincial dining-rooms, may in a moment shoot up by as much as one hundred per cent. So relative, so sensitive a thing, with them, is value. But with sweepstakes things are different, for there (if the management is honest) each ticket possesses, in the currency in which the sweepstake is run, a definite mathematical value and, given the necessary knowledge, value can always be ascertained. If we know that a sweep is being honestly managed and that none of the money contributed is going in working expenses or being deducted for any other purpose, the mathematical value of each ticket is the sum paid for it—no more and no less. If there are 10,000 tickets of 10s. each, the value of each ticket in sterling is 10s.; and if there are 20 tickets of 10s. each, the value of each ticket in sterling is still 10s. For in the one case it gives you a ten-thousandth chance of winning £5,000, and in the other a twentieth chance of winning £10; and the two chances are of equal value.

Thus with a sweep in which there are no deductions from the pool the value of a 10s. ticket is arithmetically determined as 10s., and before the draw nothing but dishonesty can raise it to any higher figure; but the moment you begin to deduct from the pool working expenses or

commission for the man running the sweep or contributions to deserving charity the mathematical value of the tickets falls. Dishonesty alone can increase the value of an undrawn ticket above its face figure. Deductions are bound to reduce it. If, for example, you have a sweep with tickets at 10s. each and 20 per cent. of the pool is taken for expenses and charity, then the value of each ticket—the mathematical value—is 8s., and nothing but dishonesty can put it up to a higher figure. If the deductions are 25 per cent. then the mathematical value is 7s. 6d., and nothing but dishonesty can make it more than 7s. 6d.

The plain truth is that every man who buys a ticket in the Irish sweep is paying 10s. for a piece of paper which is demonstrably worth less than 10s. If the deductions for management and for the Irish hospitals are 12½ per cent. of the whole fund, then he is giving 10s. for 8s. 9d.; if 15 per cent., then he gives 10s. for 8s. 6d.; if 20 per cent., then 10s. for 8s.; if 25 per cent., then 10s. for 7s. 6d.—and so forth. If he had backed a horse or gambled on the Stock Exchange, his judgment might have proved better than the judgment of his contemporaries, and he might in consequence have bought a share that was undervalued or got money on a horse at too long odds; but when he takes part in the sweep he must be paying for what he buys with more money than it is worth.

To all this line of argument the obvious answer is "To hell with your pedantry and your arithmetic. We do not relax by long division or enjoy ourselves by rule of three. We are sportsmen, and what we want is not a mathematical chance, but a run for our money and the amusement of a small stake at enormous odds in a popular race. We may, as you say, be paying more than the ticket is worth, but the difference is more than accounted for by the fun and the excitement, and we buy our tickets in the sweep as sportsmen out for enjoyment, not as business men out for profit." Well, if anyone is so blind to the odds against him, or so easily moved as to excite himself over the thousandth fraction of an off chance that a ticket in the Irish Sweep carries with it, and if he can afford to lose his 10s., and if he really does treat the whole thing as a piece of amusement and forgets his ticket and his excitement and his hopes of getting a winner as soon as the draw is known—if all these things are true of a man, there cannot be much harm in his wasting the 2s. or 2s. 6d. that the ticket costs him over and above its true value. But a gigantic sweep is not built up on the ten-shilling notes of people who take it in this spirit. It can only reach the vast size that it has now attained by attracting the money of people who cannot afford the price of a ticket and the waste of half-a-crown, who do not regard the venture as a piece of casual amusement to be forgotten as soon as it is over, who do not understand the simple fact that the scrap of paper for which they have paid 10s. is really worth a good deal less than 10s., who think of the sweep as a business proposition and a short cut to fortune and a life of leisure. Let anyone who doubts this turn to the evening papers of March 19th and see how the result of the Grand National was treated, and where, to the experienced sub-editor, its news value lay. First come the three horses placed and then:—

"Thus is decided the fate of £1,210,000 awaiting the result in Dublin."

"A Rickmansworth baby, only one year old, shares a £30,000 ticket."

"A Teddington draper kept all his holding in the £15,000 Egremont ticket."

"What am I going to do? Clear out and enjoy things."

The motive running through it all is to get rich quick and to lodge for the rest of time the necessity to work by scooping a big fortune on one outside chance.

In the past few years, thanks to the helplessness of the law and the latitude given to hospital gambles and newspaper competitions disguised as tests of skill, there has been an enormous increase in the number of people who devote their leisure or working hours and more money

than they can afford to the pursuit of this game of fortune hunting. There is a certain weekly paper which boasts a circulation of over 600,000 and describes itself as "the paper that puts you in the prize lists"—a paper which is almost entirely given up to competitions and lives largely on the advertisements of tipsters. Here is one advertisement, typical of many:—

"Do not miss this glorious chance to get rich quick. Let —, Britain's greatest advertising solutionist, make his greatest triumph by winning this mighty Bullet fortune for you. Thanks to —, Mrs. —, Mrs. —, Mrs. — (here come three photographs of middle-aged ladies) are, now independent."

No sensible man can believe that this kind of thing, the pursuit of "the glorious chance to get rich quick," is anything but vicious, and no one with any sense of proportion can watch without qualms an enormous industry being built up to exploit the gambling spirit in the British people. One need not be a puritan or take a high moral line to realise that this widespread expenditure of money, of time, of thought, of application is wicked waste which no country struggling with economic troubles can afford and no sane Government will encourage.

Notes of the Week.

Dumbartonshire By-Election.—The result of the Dumbartonshire by-election has, presumably, given satisfaction to the supporters of the National Government. The Conservative candidate retained the seat by a majority of 3,045, his poll dropping from 28,762 to 16,749. At the General Election, in a straight contest, Labour polled 16,474, whereas on this occasion the Opposition votes were divided in the proportions of 13,704 Labour, 5,178 Scottish Nationalist, and 2,870 Communist. In a constituency in which the unemployment percentage is terrible, the unpopularity of the means test might have cost the Government dear, notwithstanding Sir Archibald Sinclair's advice to Liberals to vote for the Conservative candidate and the fact that Mr. Cochrane, who withdrew in favour of a Liberal candidate at the General Election, might be regarded as a candidate of broad views. But if the Conservatives can fairly claim to have done well in retaining the seat, their poll, like that of the Labour Party, making due allowance for the complications imported by the addition of two other candidates, shows a significant drop. If the Dumbartonshire electorate are in no mood to make James King, they do not seem ultra-enthusiastic over Charles.

The Disarmament Conference.—On Thursday, March 17th, the Disarmament Conference went into its Easter recess, from which it is to reassemble on April 11th. Its history up to date has not been quite what had been expected. On the one hand, the deep and widespread desire for disarmament, which undoubtedly exists now throughout the world, has found stronger expression in the Conference than human desires usually find in assemblages of politicians and experts. On the other hand, unexpectedly little has actually happened, so far, for good or evil. Like wasps on a cold day, the delegates have crawled sluggishly round one another and occasionally brushed one another with the tips of their antennæ, but they have not yet come to close quarters. The truth is that it is not easy for the Disarmament Conference to get to work at a time when there are so many unknown quantities in the problem of international politics. The Conference opened on February 2nd under the shadow of the Far Eastern crisis, which had then just entered upon its Shanghai phase. During the last few weeks, Geneva has been taken up with the Extraordinary Assembly of the League; the first round of the German Presidential Elections has followed; and when the Conference meets again,

BANKING ORDERS ON

SWEDEN

SKANDINAVISKA KREDITAKTIEBOLAGET

the Parliamentary elections in Prussia and in France will be impending, not to speak of the Presidential election in the United States. At this moment, nobody can foretell what the aspect of the international landscape will be by the early summer. Will the League be recognisably intact or palpably moribund? Will Tardieu or Herriot be in power in France? Brüning or Hitler in Germany? Will Mr. Stimson's policy at the State Department at Washington be in prospect of being continued or of being reversed? If some or all of these questions receive their answers, the Conference will be able to see better where it stands. But these uncertainties do not, after all, absolve it from action; and the point has now been reached at which the difficult and disagreeable and contentious business of taking action ought to begin. Already, two lines of action have been marked out. The first is the abolition of certain barbarous weapons of offence—poison-gas, bombing-planes, submarines, tanks, and mobile heavy artillery. Such abolition would be good as far as it went; it would somewhat mitigate the horrors of war and somewhat decrease the sense of insecurity. This is something which the Disarmament Conference ought to achieve as a matter of course. But that is not nearly enough. We cannot do without a reduction of weapon-power and man-power all round. The text of the Draft Disarmament Convention, which has reasonably been adopted as a basis for discussion, means nothing unless the blanks are filled in with figures; and these figures cannot possibly be inserted automatically, on some *à priori* mathematical formula. They can only be reached by a frank political discussion—a review of the relative positions of the individual countries, with an eye to the concrete factors which make every case an individual case to be considered on its merits. This concrete, empirical method is difficult and delicate; but we believe that it is the only method that will serve.

The Policy of Japan.—The one piece of good news—and apparently certain news—from the Far East is that a substantial part of the Japanese naval forces which have been concentrated at Shanghai is now being withdrawn. The negotiations for an armistice, to be accompanied by a Japanese withdrawal on land, in accordance with the resolution of the League Assembly, are also still continuing at Shanghai under the auspices of the interested neutral Powers; but it is not yet clear whether a possibility of agreement has been found. The Japanese announce their readiness to accept, as a basis for discussions, the three points: namely, that the Chinese troops shall remain in their present positions; that the Japanese troops shall withdraw "according to programme"; and that a joint commission, including representatives of the neutral Powers, shall be established to supervise the execution of the first two provisions. Are these Japanese points the same as the Assembly's points, or not? In order to answer that question, we have to know whose "programme" it is that is to be followed: the programme of the Assembly? The programme of the Civil Government at Tokyo? Or the programme of the Japanese naval and military authorities on the spot? According to all the precedents, it is likely to be the last programme of the three, and this probability does not augur well for an agreement. Meanwhile, last Tuesday, an evidently very carefully prepared speech on Japanese foreign policy was delivered in the Diet at Tokyo by the Minister for Foreign Affairs, Mr. Yoshizawa. The most important and significant passage is that relating to Japan's participation in the recent proceedings of the Assembly at Geneva. The Japanese Foreign Minister now declares that Japan participated "with an unequivocal reservation" to the effect that there was "no legitimate ground for applying Article 15" of the Covenant. "The Assembly passed a resolution on March 11th which was in more than one respect unacceptable" to the Japanese Government. "On account of this unacceptability," the Japanese representatives, "under instructions of the Government, expounded the Japanese position, declared a protest embodying the Japanese contention with regard to the application of Article 15 of the Covenant, and abstained from voting."

What do Mr. Yoshizawa's slippery sentences mean? The Assembly's resolution was undoubtedly unanimous in the legal sense, and therefore valid, since an abstention counts as absence under its rules of procedure. Mr. Yoshizawa does not explicitly admit this or deny it. Does he venture to imply that Japan is not legally bound by this resolution of March 11th? This is a question which ought to be officially taken up with Japan by her colleagues on the Assembly. For the rest, Mr. Yoshizawa spoke soft words to the Soviet Government over the fisheries question and to the British Government over the Open Door in Manchuria. He virtually invited Sir John Simon to intimate again (as he has intimated already *à propos* of the American Note of January 7th) that a formal assurance of the maintenance of the Open Door is Great Britain's sole political concern in Manchuria. But this country, at any rate, cannot deny that the resolution of March 11th is binding upon it; and this resolution lays down clearly that States Members of the League will not recognise any political change in the Far East—whether in Manchuria or elsewhere—that is brought about by force. We should have preferred to see Sir John Simon more forthright in this sense during Tuesday's debate in the House. Judicial impartiality, mediation, conciliation—these are excellent things in certain circumstances; but is it a wholly convincing defence of British policy—at least of that policy before the Assembly stung the Powers into action—to say that our relations with China and Japan have remained "perfectly friendly"? This is "moral neutrality" with a vengeance.

The Political Tension in Germany.—The immediate sequel to the first ballot in the German Presidential Elections has been a head-on conflict between the National-Socialist Party and the Prussian Government. The Prussian Government have taken energetic action against the Nazi organisation; and in this action they have not received the Reich Government's whole-hearted support—or perhaps it would be more accurate to say that the Prussian Minister of the Interior, Herr Severing, has not been supported by the Reich Minister of the Interior and Minister of Defence, General Groener. On Thursday, March 18th, the Prussian police, by order of the Prussian Government, raided National-Socialist offices and branch headquarters throughout Prussia, and also, apparently, the private houses of some of the Nazi leaders; and the Prussian Minister of the Interior had committed himself to a statement that, on the election Sunday, certain long and carefully prepared dispositions of the Nazi forces were put into effect which were tantamount to a mobilisation of the Nazi organisation for Civil War. The Prussian authorities claim to have obtained possession of Nazi plans for investing and starving out Berlin and for commandeering arms, supplies and transport for the Nazi *Sturm Abteilungen*. A more startling allegation—though this does not appear to have been made by the Prussian authorities officially—was to the effect that General Groener and the Reich Ministries for which he is responsible were cognisant of these Nazi plans and deliberately took no action to frustrate them. In a statement issued on March 18th General Groener confirmed the fact that, before the election day, the Nazi headquarters at Munich did inform him of their intention, on that day, to keep

all the "storm detachments" mustered in their assembly rooms in order to avert possible disturbances in the streets; that he saw no objection to a step by which the Nazi organisation virtually assumed responsibility for any trouble that might occur and that his non-intervention had been justified by the event, inasmuch as the elections actually went off peacefully. Meanwhile, the Nazis have taken the Prussian Government's accusation hard; and last Sunday a "declaration of legality," signed by all the principal leaders of the party, by the National-Socialist members of the Reichstag and of the Diets of the *Länder* of the Reich, by leaders of "storm detachments," and by others, was handed to General Groener by Herr Hitler's lieutenant, Captain Goering, and his legal advisers, Herr Frank. The two delegates vouchsafed, at the same time, an elaborate explanation of the alleged illegal preparations which does not read very convincingly. Herr Hitler's latest step has been to apply to the Supreme Court of the Reich at Leipzig for an injunction against the Prussian Government, on the plea that their police action has contravened the Reich constitution. The rift between the Prussian and the Reich Ministries of the Interior, which this incident has revealed, is unfortunate. At the same time, it would probably be a mistake to take the affair too tragically. We may believe that the Nazis have actually planned—and thought better of executing—some kind of *Putsch*; and even that they have received improper countenance in certain official circles of the Reich Government. But we must also remember that the Prussian Government, which has to bear the brunt of the Nazi offensive in the forthcoming elections for the Prussian Diet, has a powerful motive for getting in the first blow; and that the Nazis, on their part, having lost the Presidential election, are in want of a new "stunt" and are therefore probably delighted to assume that sympathetic rôle of injured innocents. In fact, in this affair there is a palpable cloud of electioneering smoke as well as a possible spark of revolutionary fire.

Pragmatic Liberalism in Spain.—A correspondent writes:—There were some lively exchanges in the Spanish Cortes before it adjourned for the Easter holiday. Spaniards are very touchy at anything that looks like infringement of the accepted civil liberties, and the continued suspension of one of the principal newspapers—*El Debate*—which was suppressed under the Law for the Defence of the Republic over two months ago, has mobilised a heterogeneous opposition to Señor Azaña, the Prime Minister, who is accused of apostasy from Liberalism. "The shadow of Mussolini has appeared in our midst," cried out an excited Deputy the other day, and Señor Azaña's "tyrannous rigour" is the chief topic of conversation in the lobbies and cafés. The Radical leader, Señor Lerroux, loses no opportunity for playing on this discontent, declaring that the present Government's strong position in the Cortes is not reflected in the country. Señor Azaña goes on his way undaunted, not troubling to account for the specific severity meted out to *El Debate* (the management of which has so far continued payment of salaries and wages to a staff of 200), but adjuring the public to learn to distinguish between Liberalism and liberty. "We guarantee liberty, assuring all Spaniards that they shall be free, and we do not care if we ourselves are judged anti-Liberal or not." His Socialist colleagues are evidently becoming a little restive, and the Prime Minister is wisely concentrating his energies on recruiting support for his pragmatic liberalism from the smaller parties and groups—including the Catalan deputies—other than Socialists or Radicals. The Socialist leaders, it is well known, want to withdraw from the Government as soon as they may safely do so without plunging the Republic into the eddies of intrigue and *caciquismo* which still centre round the party of Señor Lerroux. Señor Azaña's firm handling of a delicate situation may be best appreciated against the background of continued social unrest. The complicity of Royalist and Syndicalist malcontents in the recent plot was never established, but evidently it is regarded as an ever-present danger. In the meantime the police and Civil Guards are having their hands full in the Provinces of Seville and

Huelva, where clashes of Syndicalist and Socialist local leaders occur nearly every day. The Government has made no attempt to interfere with a Communist Congress which has been meeting in Seville this week. It did, however, take the opportunity to arrest one of the delegates, Ramon Casanellas, who escaped to Russia in 1921 after participation in the murder of the Conservative Prime Minister, Don Eduardo Dato. Agitation funds have been supplied from Moscow, it is claimed, to the tune of more than £50,000; nevertheless, Communism proper has made very little headway, and the Government can afford to exercise a tolerant vigilance. Trouble is brewing again in the North, a general strike having been called at Orense as a protest against the Government's decision to suspend work on the Zamora-Orense railway, which was begun as a sop to Galician local patriotism during the Dictatorship.

Exchange Restrictions.—The British National Committee of the International Chamber of Commerce recently issued a statement endorsing the campaign undertaken by the Chamber for the removal or alleviation of the restrictions on dealing in foreign exchange which are in force in so many countries. There will be general agreement as to the obstacles to trade presented by these restrictions and as to the desirability of removing them as soon as circumstances permit. At the same time, it is scarcely a wise or practical policy to urge immediate relaxation at all costs. The case of South-Eastern Europe is obviously not one in which abolition of control is immediate practical politics; but other instances also occur to mind. For example, it is true that the Scandinavian currencies have stood up to the effects of the Kreuger shock better than might have been expected; but it is equally certain that they could not have done so in the absence of official control and support. One of the Scandinavian countries, Denmark, will be called upon to make a decision in this matter at the end of the present month, when the present exchange restrictions are due to lapse or to be renewed. Farming opinion is apparently exerting pressure in the favour of allowing them to lapse; but we do not expect that the Danish authorities will see their way to take a step which might stultify their persistent and successful efforts to keep the kroner steady over recent months. The causes necessitating exchange restrictions must be removed before the restrictions themselves can be dispensed with.

Scotched but not Killed.—The luncheon organised by three Free Trade bodies, which was held in London on Tuesday, was remarkable for the size of the attendance and the variety of business interests represented; and the proceedings revealed a determination not to regard Free Trade as dead but to lend every effort to revive its scotched body. Lord Snowden and one or two other members of the Government were present, but they left the talking entirely to the business men. Mr Eric MacFadyen, one of the leading representatives of rubber and tea planting, ridiculed the idea that Lord Beaverbrook's scheme of Imperial tariffs could do anything but hamper colonial trade, and, in particular, emphasised the big loss which that system would bring to the great free port of Singapore. British agriculture had its spokesman in Mr Arthur Holgate, the Lancashire farmer, who argued that tariffs were bad for farmers and quotas unjust to the consumers. The viewpoint of the shipping industry was put forward by Mr R. D. Holt, who rubbed in the truth that all trade restrictions meant fewer cargoes and explained that British shipping must lose, not gain, from an Empire tariff ring. Professor W. A. Bone expressed the opinion that the iron and steel industry had "everything to lose and nothing to gain" from Protection. The Professor described the difficulties of the parallel industries in the Protectionist countries of Germany and the United States, and avowed that the troubles of the British iron and steel industry were due to a world-wide slump affecting Free Trade and Protectionist countries alike. This luncheon was the forerunner of an organised campaign to rally into action the forces which are still prepared to work for the recapture of the Free Trade citadel. We wish it well.

Reasonableness and Reparations.—The importance to the world's welfare of a *détente* in Franco-German relations is so great that Lloyds Bank have performed a valuable service in publishing a supplementary number of their Monthly Review dealing with this question from the angle of the world depression. In an introduction, Sir William Dampier offers much excellent advice on international monetary and fiscal policy; Dr. Schumpeter, of Bonn University, emphasises the complementary rather than the antagonistic nature of French and German economic interests; and the Financial Editor of *Le Temps* states the French thesis as regards both reparations and the causes of the crisis with studied moderation. Summing up the case, Sir Arthur Salter observes that while Germany is inclined to make cancellation of reparations a matter of principle, France, as evidenced by M. Jenny, though holding firmly to the principle, is now prepared for substantial concessions. Sir Arthur makes the suggestion that the Lausanne Conference might consider a solution on the following basis: that there should be a moratorium, either of four years or for a shorter period, with provision for extension on the basis of a pre-determined criterion; and that, thereafter, reparation annuities should be reduced to £20 millions gold, of which a part might be made in the form of deliveries in kind or direct constructive work, and the remainder paid in the form of equity shares in German railways and industrial concerns. It is, indeed, a conceivable solution; but the question arises whether, for the sake of maintaining a principle whose abstract justice is a matter for the President of the Immortals rather than man, and which has proved to be a cancer in the body politic of Europe, it is worth while to seek to maintain the payment of any reparations at all. The scale suggested is one whose yield—after all the bitter haggling likely to surround the question of their distribution—would not be of much practical utility in facilitating a solution of the cognate issue of inter-Allied debts.

The Road-Rail Inquiry.—The joint committee fore-shadowed by Mr Pybus last week has now been set up, with the following terms of reference:—

To investigate the facts relating to the total costs of the highway system (including the regulation of traffic), the incidence of those costs and the contributions of the different classes of users of mechanically propelled vehicles; to consider and report on the nature and extent of the regulation which, in view of modern economic developments, should be applied to goods transport by road and by rail; and, in the light of any conclusions reached under these heads, to make such further recommendations as they are able to frame designed to assist the two sides of the industry to carry out their functions under equitable conditions, which adequately safeguard the interests of trade and industry; and to report by the end of July.

The members of the Committee are:—Sir Herbert Walker, chief general manager of the Southern Railway; Sir Josiah Stamp, president of the London, Midland and Scottish Railway; Sir James Milne, general manager of the Great Western Railway; Sir Ralph Wedgwood, general manager of the London and North Eastern Railway; Mr W. H. Gaunt, distribution manager of Messrs. J. Lyons and Company, Limited; Mr C. Le M. Gosselin, past president of the Commercial Motor Users' Association; Mr E. Graham Guest, president of the Scottish Commercial Motor Users' Association; Mr P. R. Turner, president of the London Haulage Contractors' Association. Mr G. Cole Deacon (secretary of the Railway Companies' Association) and Mr Frederick G. Bristow (general secretary of the Commercial Motor Users' Association) were appointed as joint secretaries. The appointment of this Committee is a welcome measure, as it should afford clearer information upon the costs of road maintenance and provide at least a starting-point from which to consider the most economic distribution of traffic. The second part of the Committee's terms of reference, however, is by no means as simple as it sounds. The railways work entirely with capital provided by private enterprise for no other purpose than the transport by the railway companies of persons and goods; the road transport companies use capital, in the shape of highways, part of which has been provided from public funds for a variety of uses of which the transport of persons

and goods by public motor carriers is only one. The regulation of two competing industries whose capitalistic bases are so radically different presents issues of principle and policy which will tax the ingenuity of any body of experts.

Lancashire and the Government.—Our Manchester correspondent writes:—There has been great interest in Lancashire trade circles this week in the further developments relating to the scheme for scrapping machinery and concentrating production, prepared by the Joint Committee of Cotton Trade Organisations. At the end of last week representatives of the Joint Committee had an interview with the President of the Board of Trade; since then, Mr Runciman has informed Mr T. D. Barlow, the chairman of the Committee, that if it is decided to prepare a suitable detailed scheme for concentrating production through a levy for the purchase of redundant machinery, and if the Committee is able to secure for it a measure of support of a kind which would commend it to Parliament, he would be prepared to recommend his colleagues to authorise him to promote the legislation needed to give authority for the collection of the levy. In the circumstances the Joint Committee has decided to prepare a detailed scheme for the spinning section. The action of the Committee has met with some criticism. It is pointed out that the recent ballot showed that the owners of less than half of the spindles in Lancashire voted in favour of action of this kind, the figures being nearly 28,000,000 spindles in favour, and 17,000,000 spindles against, whilst no votes were received from the owners of over 14,000,000 spindles. It will be remembered that when the proposals were considered, two or three months ago, by the Master Spinners' Federation, the General Committee declined to recommend the members to support the scheme, but agreed that their views should be obtained. This decision showed very clearly the wide difference of opinion among the leading spinning employers, and it has certainly been believed in some quarters that the result of the recent ballot meant that the proposals would be abandoned. It is fully recognised that no Government would be likely to use its power to foster a Bill in Parliament for a compulsory levy unless it was assured that this action commanded the full consent of practically the whole of the industry. It is therefore doubtful, in the circumstances, whether the Joint Committee of Cotton Trade Organisations will be able to convince Mr Runciman that the necessary measure of support has been obtained. Bitterness is, unhappily, arising between the several sections of the industry, and it is to be feared that it is not yet possible to eliminate the extreme individualism for which Lancashire is so renowned.

The "More Looms" Dispute.—Another deadlock has arisen in connection with the negotiations in the Lancashire cotton industry for the institution of the "six looms per weaver" system. At the beginning of this month the Joint Committee of employers and operatives, after many meetings, reached a limited agreement, but on Saturday last the General Council of the Operative Weavers' Amalgamation refused to endorse the action taken by its representatives on the Negotiating Committee, and rejected the clauses in the proposals upon which agreement had

been reached. This decision was reached on a card vote, the voting being 83 to 73. On Tuesday last there was a meeting in Manchester of the Central Committee of the Cotton Spinners' and Manufacturers' Association to receive reports from their District Associations, but in view of the action of the weavers' trade union the situation was discussed and it was decided to adjourn for a fortnight to enable the position to be considered in all its aspects by the chairmen of the District Associations. The employers, writes our Manchester correspondent, feel that the action of the workpeople in not endorsing the agreement made by their representatives has brought co-operative bargaining between the employers and the trade unions to an end, especially since it has been proved that the six looms system can be worked successfully without any hardship upon the operatives. It remains to be seen what further action will be taken by the employers, but it is probable that the District Associations will endeavour to institute the system according to local requirements and on the basis of the provisional agreement. In some quarters, however, it is being urged that, owing to the importance of a reduction in production costs, the weaving employers should join the Master Spinners' Federation in a claim for a general reduction in wage rates.

American Cotton Crop.—On Monday last the Census Bureau of the United States Government issued its final ginning report on the cotton crop for this season, the amount being 16,595,000 bales, against 13,756,000 bales in the previous year and 14,548,000 bales in 1930. The ginning return is, of course, in running bales, and if the total is turned into bales of 500 lb. each the amount is 17,061,000, a total beaten only in 1926-27, when 17,977,000 bales were produced. The statistics issued at the beginning of this week had practically no effect upon prices in New York and Liverpool. The carryover from last season was about 9,000,000 bales, and thus the supplies for the year are some 26,000,000 bales, against probable consumption of 12½ millions. On the other hand, consumption tends to increase, as compared with a year ago, and larger exports are now being reported from the United States as, in relation to the price of other cottons, American descriptions are considered cheap.

Sterling and Gold Prices.—During the past fortnight, as a result of a variety of causes, in which Mr Kreuger's death was possibly a contributory factor, gold prices have fallen catastrophically, our index number showing a fall of 4 per cent., which is reflected proportionately in our sterling index of primary products and, to a less extent, in our complete index, notwithstanding the slight depreciation of sterling during the period:—

A more detailed analysis of the complete *Economist* index of British wholesale prices is given below:—

"ECONOMIST" INDEX.

(1927 = 100.)

	Sept. 18, 1931.	Mar. 9, 1932.	Mar. 23, 1932.
Cereals and meat	64.5	74.3	74.4
Other foods	62.2	68.1	66.1
Textiles	43.7	52.4	52.3
Minerals	67.4	73.4	72.8
Miscellaneous	65.8	65.2	62.9
Complete Index ...	60.4	66.3	65.3
1913 = 100	83.1	91.2	89.9
1924 = 100	52.2	57.3	56.4

The decline centred chiefly in "other foods" which were affected by a fall in sugar and butter prices, and in the miscellaneous group in which the slump in rubber played a large part. During the past month our complete index has fallen by nearly 3 per cent., a movement which suggests that, if the fall continues, it might be desirable, in the interests of preventing such an unwelcome recession, to lower the rate at which sterling is now pegged.

Eastern Banking Results.—The annual reports of the leading Indian and Eastern exchange banks have recently been published, and it is possible to form an opinion of the banking situation in that part of the world. In so far as India is concerned, the position is summarised in the report of the Imperial Bank of India for the half year ended December 31, 1931. After alluding to the suspension of the gold standard in England and the Indian Government's decision to abandon gold and link to sterling, the Bank observes that for such a drastic change surprisingly little dislocation was felt. The devaluation of the rupee in terms of gold gave a fillip to gold exports, and for the last quarter of 1931 Rs. 35 crores of gold were exported. This movement strengthened the exchange, enabling the Government to secure all their sterling requirements. Apart from some slight improvement in commodity prices, the economic position at the end of 1931 was little better. There was general lack of confidence, which affected both trade and the market value of Government securities. As a result, the Imperial Bank itself has drawn both upon inner and published reserves, the latter to the extent of Rs. 42,50,000. The National Bank of India has similarly appropriated £800,000 from its published reserves of originally £3,000,000, and the Mercantile Bank of India has transferred £450,000 from published to inner reserves. The Chartered Bank of India, Australia and China has reduced its published reserves from £4,000,000 to £3,000,000, though the smaller figure still equals its issued capital. Profits and dividends have also suffered, in some cases considerably, for the Imperial Bank and Mercantile Bank have both reduced their dividends from 16 to 12 per cent., and the Eastern Bank from 9s. to 6s. per share, while the Chartered Bank and Hong Kong and Shanghai Banking Corporation have each suspended their bonus. Still, as the Imperial Bank's report very properly points out, many of the banks' investments consist of short-dated securities, which will gradually recover their depreciation as they approach maturity. The accounts of the banks as a whole have been so much affected by the suspension of the gold standard that their interpretation in detail is extremely difficult. This particularly applies to banks possessing an extensive connection with China, and the Hong Kong and Shanghai Bank has calculated the sterling equivalent of its assets at an exchange of 1s. 1½d. for the end of 1930, and of 1s. 5½d. a year later. This represents an appreciation in exchange of 31 per cent., which has completely masked the shrinkage which has actually occurred in many of its resources when valued in dollars. The general impression left by the accounts is that the Eastern banks have had much the same difficulties to contend with as have the leading British banks. The similarity can be pressed still further, for it is equally true to say that the Eastern banks have met the emergency in the same spirit of prudence and conservatism, and are also in possession of reserves which should be ample to see them through the difficulties of the present abnormal situation.

The Miners and the Coal Mines Act.—The Memorandum on the working of the Coal Mines Act, Part I, recently issued by the Miners' Federation of Great Britain, is a restrained and business-like document. It summarises the permanent changes which have brought about increasing difficulties in the coal industry during recent years and expresses very decided approval of the effect of the Act in putting an end to the disastrous results of free competition. It complains, however, that the Act "has not succeeded in its main object," namely, "to ensure a fair margin of profits to the owners and a proper standard of living for the men." This failure is attributed

to the absence of a proper co-ordination of prices between the districts, and, while the Federation would like to see this remedied by the transference of the industry to public ownership, it recommends, in the meantime, the amendment of the Act to give the Central Council full control over prices with a view to their co-ordination throughout the country. It proposes, more tentatively, as a further means to co-ordination, that prices for the inland trade should be fixed on a delivered instead of a pit-head basis, and that minimum delivered prices should be fixed for various classes of coal in prearranged zones, in order to eliminate unnecessary transport charges and prevent wasteful competition between zones. The miners further submit that they ought to share with the owners the responsibility for the control and direction of the schemes under the Act, urging, on the one hand, that they have a genuine contribution to make, and, on the other, that the knowledge and interest that they would gain would be of great benefit to their work. Whether or not the grant of such representation would, as they claim, "mean the transformation of the relationships which at present exist between the owners and workmen in the industry," it would certainly improve feeling between masters and men, and the quality of this Memorandum shows that some, at any rate, of the miners are well qualified for such participation. The remaining recommendations are a national levy for the purpose of facilitating the sale of export coal, and the raising to a prohibitive level of the penalties for exceeding the quotas. The latter suggestion, if carried out, would remove the last trace of elasticity from a system whose principal weakness is its tendency to render supply too inflexible. As to the proposal that the domestic consumer of coal should be forced to subsidise his competitors overseas by paying more for his fuel in order that they may buy theirs below cost, it is difficult to see any justification for so uneconomic a method of supporting the mining industry in the export districts. As an emergency expedient for retaining a foothold in foreign markets which in the long run could be retained by normal methods, it might be justifiable, but the able opening section of the Memorandum shows that the Miners' Federation itself is under no delusions as to the permanence of the difficulties that encompass the world market for coal. With the plea for still closer co-operation within the industry, however, all who have the welfare of the coal-mining industry at heart will be in sympathy.

Australasian Trade and Industry.—Our Melbourne correspondent writes:—An unofficial compilation based upon the monthly official statements shows that Australian trade for the last two calendar years compares as follows (the imports being in British currency and the exports in Australian currency):—

	1930.	1931.
Imports—		
Merchandise	94,391,090	43,450,287
Bullion and specie	339,422	460,226
Total imports	94,730,512	43,910,513
Exports—		
Merchandise	90,804,396	91,529,871
Bullion and specie	24,128,298	9,829,505
	114,932,694	101,359,376*

* Or £80,043,000 in British currency.

Reckoning British currency values on both sides, the excess of exports for 1931 is £36 millions, of which several millions consists of gold drawn from stocks. The record total of Australian imports (by calendar years) was over £161 millions in 1927, and the decline of over 70 per cent. which has since taken place is the result of smaller purchasing capacity due to the low prices obtained for Australian exports and the cessation of external borrowing, which means that an excess of exports is now required to provide for interest and other external payments. Contraction in business has affected local manufacturers as well as importers. An official return just issued in New South Wales shows that the output of factories and works in that State during 1930-31 was only £118,493,534, against £167,250,618 in 1929-30, and £185,298,575 in 1928-29, while the wages paid amounted to only

THE BANK OFFERS EXCEPTIONAL
FACILITIES FOR BUSINESS WITH GREECE

Capital paid up and Reserves Drs. 1,205,000,000.

£25,197,260 for 1930-31, against £34,875,995 for 1929-30 and £38,544,687 for 1928-29. The New Zealand figures have also shown a substantial change, the total imports for 1931 being £24,812,958, against £43,025,914 for 1930, and exports £35,153,028 against £44,940,692. The excess of New Zealand exports over imports for 1931 is thus £10,340,070, against £1,914,778 for 1930, and after allowing for the swelling of export values by the adverse exchange rates (which are not so heavy in New Zealand as in Australia), the excess of New Zealand exports largely provides for interest payments.

Transvaal Gold Output in February.—The output of gold of the mines of the Transvaal during February amounted to 914,012 ounces of fine gold, comparing with 936,784 ounces produced during January and 839,937 ounces produced in February 1931. In the following table we show the monthly output since the beginning of 1926:—

Month of	1926.	1927.	1928.	1929.	1930.	1931.	1932.

Refuge Assurance Company.—This is the last of the "big four" in the industrial assurance world to issue its report, and it has followed the precedent set by the other three in declaring in its ordinary branch a reversionary bonus at a rate less by 10s. per cent. than the full normal rate. The 1931 figures of these four companies are a wonderful demonstration of the inherent strength of life assurance in general, and of these companies in particular. The combined funds of the four amount to some £355 millions, and in spite of depreciation, which must have totalled something like £35 millions, the companies have been able to deal with this out of their internal or

disclosed resources, and at the same time to maintain a distribution of bonus to policyholders, and of dividend to shareholders. In the case of the Refuge, this result has been achieved at the cost of some relaxation of stringency of the basis of actuarial reserves. In the ordinary branch endowment assurance policies and paid-up policies have been valued at $3\frac{1}{2}$ per cent. instead of 3 per cent., and in the industrial branch a somewhat smaller provision has been made for expenses and profits. The results of the valuation in each branch are set out below in detail:—

	1929.	1930.	1931.
Ordinary Branch—			
Surplus earned during the year	1,089,490	1,108,804	2,517,752
Brought forward from previous year	725,592	537,821	574,746
	1,815,082	1,646,625	3,092,498
Allocations—			
To Bonuses to Policyholders ...	924,535	964,691	743,055
„ Shareholders' Account	102,726	107,188	82,562
„ Investment Reserve Fund .	250,000	—	1,500,000
„ Carry forward to next year	537,821	574,746	766,881
	1,815,082	1,646,625	3,092,498
Industrial Branch—			
Surplus earned during the year	467,092	481,463	1,218,436
Brought forward from previous year	44,715	49,691	73,394
	511,807	531,154	1,291,830
Allocations—			
To Bonuses to Policyholders ...	164,842	164,948	159,338
„ Shareholders' Account	47,274	42,812	37,438
„ Investment Reserve Fund .	250,000	250,000	1,000,000
„ Carry forward to next year.	49,691	73,394	95,054
	511,807	531,154	1,291,830

The reversionary bonus in the ordinary branch for 1931 is at the rate of 34s. per cent. on the sums assured, compared with the full normal rate of 44s. per cent. The amount allocated to policyholders in the industrial branch is practically up to the level of the 1930 allocation, and on this occasion is to be utilised for the payment of a bonus in respect of claims occurring during the current year under certain classes of policies. The sums allotted to investment reserve fund have increased these funds respectively to £2,475,000 and £1,875,000. As a result, the company is able to certify that the book value of the assets is in the aggregate fully of the value stated, less the augmented investment reserve funds. The volume of transactions in 1931 has been on the whole well maintained. New business in the ordinary branch was for policies assuring a sum of £6,524,000, compared with £6,482,000 in 1930, the corresponding figures in the industrial branch being £17,792,000 and £17,368,000 respectively. The expense ratio in the ordinary branch works out at 14.6 per cent. compared with 15.1 per cent. in 1930. In the industrial branch the expense ratio is also slightly reduced, from 36.5 per cent. to 36.4 per cent. Due to the increase in the standard rate of income tax, the net interest yield on the combined funds of £48,000,000 is lower by 2s. 4d. per cent. at £4 18s. 5d. per cent. The dividend on the capital of £300,000, which is all privately held, has been reduced from 50 per cent. to 40 per cent., tax free.

Equity and Law Life Assurance.—The new business transacted by this society in 1931 constitutes a record in its history, and the average sum assured, at about £3,500 per policy, is again very high. The total new business was £3,006,000, as compared with £1,890,000, but of this figure £1,267,000, as compared with £22,000, is represented by sinking fund policies, by far the greater part of which have been effected by way of single premiums. A short time ago the society increased the rates which it is prepared to pay for each £100 invested with it by way of immediate annuity, and the result of these more favourable terms is reflected in a greatly increased annuity business, the society having collected in consideration money £184,000 compared with £42,000. With

regard to the investments which now total £10,000,000, the chairman was able to state at the annual meeting that the book values of the Stock Exchange securities exceeded the market values on December 31st last by no more than £160,000. This favourable result on so large a fund is due to the fact that only 25 per cent. of the total, namely, £2½ millions, is invested in Stock Exchange securities, the remainder being invested in mortgages and in reversions and life interests directly and indirectly. Moreover, the recovery since the end of last year has meant that the society has regained £100,000 out of the £160,000 needed to restore the book values.

Merchants Marine Insurance.—Founded originally in 1871, this company has been controlled since 1921 by the Employers Liability. For many years past the company has experienced a series of underwriting losses, which have drained it of its resources, and, but for the support of the parent company, must have had serious consequences. Fortunately, the losses in the last three years have been reduced to moderate proportions, and the outcome of the 1930 underwriting account shows a small loss of £10,000, compared with £30,000 as a result of the closing of the 1929 account. The premiums in the 1931 account show a further contraction to £247,000, but the result of the first year's underwriting is promising, and the fund enters upon its second year with a balance of 67 per cent. of the premiums, as compared with 60 per cent. at the corresponding stage of the 1930 account. In addition to marine business, the company has a fire and general account with premiums of £58,000, which last year yielded a small profit of £2,800, against £4,600 in 1930. The net result of the year has been an addition to the debit balance of the profit and loss account of £18,000, thus increasing that item to the considerable total of £395,000. In addition, the market value of the investments was some £61,000 less than the book values. As the issued capital amounts to £500,000, of which only £125,000 is paid up, the reorganisation of the company's affairs, when it comes, will obviously need to be drastic.

IRISH FREE STATE.

Government's Programme — Budget — Cottage Industries.

(FROM OUR CORRESPONDENT.)

DUBLIN, March 19.

THE change of Government has taken place with the utmost smoothness. The banks and the Stock Exchange have not experienced the slightest tremor, and the future is regarded with a returning confidence. An undercurrent of uneasiness prevails on account of the renewed activities of the un-uniformed army that is controlled by the extreme Republican Left Wing, but the new Ministers are apparently satisfied that the problem can be satisfactorily handled. President de Valera has stated in the Dail that the removal of the Oath of Allegiance will put an end to the excuse for any militant opposition to the established Government, and it is therefore to be inferred that any manifestations of armed resistance will be sternly repressed as soon as the Oath has been got out of the way. It is not clear what the position is to be in the meanwhile; the removal of the Oath may occupy several months, during which the Republican brigades will be augmented and reorganised without interference; and their suppression may be a dangerous and expensive undertaking six months or a year hence. It is impossible to believe that the Government is blind to these contingencies, and rumour has it that the Oath question may be dealt with much more expeditiously than is generally thought. The way will thus be opened for an early assen-

tion of the Government's determination to tolerate no overt challenge to its uniformed and constitutional forces.

In respect of its economic programme, the new Government is not displaying undue haste. It is becoming clear that any measures undertaken will be carefully considered, and mention has been heard of the setting up of an economic headquarters staff.

The official *communiqué* of the interview between the leaders of the Fianna Fail and Labour parties states that agreement between the two parties was reached regarding the following matters of policy:—Unemployment, housing, the development of the home market, widows' and orphans' pensions, the protection of flour milling, transport, and the reduction of retail prices. Nobody will question that each of these subjects provides scope for ameliorative legislation, and that some of them—housing, for example—are of urgent importance. It is important to note, however, that action in regard to most of them will entail considerable expenditure, and it is difficult to see how the necessary funds can be obtained in the present financial stringency.

It is generally thought that, unless the present expenditure is reduced and taxation rigorously raised, the Budget will disclose an estimated deficit of over a million pounds for the year 1932-33. The late Government promised to achieve economies to the extent of £450,000, but the promise has not been fulfilled, and the unpleasant task of applying the axe has devolved on their successors, who have shown a good example by a drastic reduction in their own Ministerial salaries. It is difficult to see how any reasonably feasible scheme of economies could be devised to wipe out the whole of the estimated deficit, and it is certain therefore that resort will be had to fresh taxation. Doubtless the Labour Party will clamour for an increase in the income tax, accompanied possibly by a super-tax on income from foreign investments. But the main source of new revenue will probably be found in an extension of the protective tariff. In spite of the protective policy of the late Government, the free list in the Free State is still quite long, and there are numerous important articles the taxation of which would yield a substantial revenue. It is not surprising that longing eyes are cast on the land annuities, amounting to three millions a year, which are paid to the British Government. The retention of these annuities would not only solve the Budget problem, but would in addition enable a forward policy to be pursued in regard to the social services, which are so dear to the Government's allies in the Labour Party. Much interest has been aroused by Mr de Valera's announcement that it is his intention to claim the repayment of all the annuities, amounting to about £30 millions, which have been paid to Great Britain since the Treaty. If this claim succeeds it will be possible to extinguish the whole national debt of the Free State.

Serious efforts are being made to develop the cottage industries in the backward parts of the West of Ireland. For many years the late Congested Districts Board attempted the industrial development of these areas, but without much permanent success. The provision of industrial employment is very important, inasmuch as it serves as a source of supplementary income for the peasants on the smallest holdings. There has been established in Dublin a body known as the Gaeltacht Industries Depot, which co-ordinates the work of the local weaving, knitting, embroidery, and crochet centres. This body buys the raw materials in bulk, provides looms and other appliances, directs the production in the local units, and disposes of the finished products. Great attention is paid to variety of design, and already tweeds are being produced of 140 designs and seven weights. Over 600 workers are employed in these cottage industries to-day, and it is probable that further employment will be found in the near future in the making of ties, boots and shirts. The development of rural industries throughout the country generally is part of the new Government's declared industrial policy; and some such expansion of rural employment is vitally necessary in view of the stoppage of emigration.

UNITED STATES.

Business Conditions — Production — Currency — Money Rates — Budget.

(FROM OUR CORRESPONDENT.)

NEW YORK, March 11.

As spring burgeons the picture on this side is one of gradual improvement in the financial position, but of retrogression industrially. The better feeling in the security markets is based wholly on returning confidence in banks, the subsidence of the gold efflux, credit extensions to needy companies, completion of a taxation plan whereby the Federal Government will balance its Budget for the coming fiscal year, and the apparent relaxation of credit stringency in parts of Europe. The bond market is relieved at the lessened danger of heavy Government flotations and the certainty of a long period of cheap money, and has steadily advanced for nearly a month. Stocks are little more than steady and they owe that principally to a hope of some increase in trade later in the spring.

February appears to have set a new low record for business activity. Automobile production, estimated by the National Automobile Chamber of Commerce at 160,000 vehicles, was nearly 4 per cent. under that of January and 48 per cent. below a year ago. Steel mill operations, after dropping to around 25 per cent. of capacity have recovered to about 27 per cent. United States Steel Corporation's unfilled orders dropped 102,000 tons last month to the lowest total since records were first kept, in 1910. However, daily output of pig iron rose 6 per cent. over the January figure, this being the first increase since April, 1931. The daily rate of 33,251 tons compares with 60,950 tons a year ago. The daily rate of steel ingot production increased by 3 per cent. of the January output. Railroad traffic failed to improve, but earnings probably were higher on account of the savings on wages, the 10 per cent. reduction having been effective as from the first of the month. January earnings struck a new low point, being only \$11.7 millions for all roads, or at the rate of eight-tenths of 1 per cent. on investment. Eighty roads operated at a deficit, and gross revenues fell by 25 per cent.

Loans to railroads by the Reconstruction Finance Corporation are being made steadily, the total now amounting to about \$50 millions. These loans have prevented defaults on interest payments, and enabled some lines to meet current bills. The Pennsylvania has asked for \$55 millions to provide funds for electrification of some of its lines, but such a loan would not be quite in the spirit of the emergency finance body's policy. The roads are being charged 6 per cent. Total loans made by the Corporation are approximately \$185 millions, including loans of over \$60 millions to 255 banks.

Loans to banks have been effective recently in reducing failures to negligible figures and in helping to return currency to circulation. The sums lent are greater than the \$150 millions originally provided by the Treasury, so that a fresh credit doubtless will be made available shortly, and probably will mean a new public Treasury loan. An illustration of the re-entry into favour of Treasury loans is to be seen in the latest offering of \$900 millions to cover March tax date financing. Over-subscription amounted to nearly four times the amount offered, desire for the loan being in part inspired by the shelter offered from the increased income tax rates. Demand came from all over the country, and the loan went to a premium.

Although the campaign against hoarding, conducted by committees appointed to do educational work and to sell the new "baby" bonds of the Treasury, bearing 2 per cent. interest and running for a year with privilege of redemption at sixty days, was begun rather showily, it is largely a propaganda "stunt." It is not believed here that many bonds are actually being sold, nor is it likely that there is any great sincerity behind the bond offering. What is sought is to bring realisation to the public of the absurdity of hoarding currency. Most hoarding goes on in the East, the West, perhaps, using more currency,

largely because of the lack of banking facilities. Currency circulation this week dropped \$39 millions, which was encouraging, as there is usually a gain for this season.

In other ways, the weekly statement of the Federal Reserve Banks was "favourable." The reserve banks continued their campaign for cheaper money by adding another \$25 millions to the United States bonds bought, and they increased their bill holdings by \$22 millions. However, the reduction of \$80 millions in member bank borrowings sent down total reserve bank credit in use by \$31 millions. Monetary gold stock rose \$12 millions. Since March 1st nearly \$38 millions in gold have been released from earmark. In the same period imports have been above \$7 millions and exports have reached \$32 millions. The net gain of \$12 millions has helped to ease money, and incidentally it is the first reversal of the outflow since last December.

Another indication of cheaper money, which probably will be followed before long by another cut in the New York discount rate, is this week's reduction by an eighth in bill rates. The open market rate was easy to change, because at this season there is a rapid shrinkage in the total volume of bills and in competition outside the reserve system, besides which the seasonal financial settlements drive dealers and some banks to sell bills to the Federal Reserve.

The British Treasury's success in acquiring foreign exchange has been gratifying to Wall Street, and although shortly after the pound left its gold moorings there was a good deal of pessimism in some quarters, the swing is now in the other direction. Still higher quotations for the pound are predicted, and an early announcement of the cancellation of the remaining \$50 millions of banking credit here, as well as a portion of the French credit, is expected.

It is, of course, now too late for Congress to make any changes in the tax laws in order to obtain more revenue at the mid-March collection date, but work is going forward on the Budget-balancing programme, which includes a manufacturers' sales tax of 2½ per cent. This tax, estimated to produce some \$600 millions of revenue, is meeting with a good deal of opposition, but generally it has the approval of all sections which realise that borrowing is not only undesirable, but impossible, and that a balanced Budget, even with a form of tax which ordinarily would be disliked, is the only possible goal. Wall Street would very much like to see more emphasis placed on expenditure reduction than on the ways and means of huge tax collections (more than \$1,000 millions will be raised in the measure now before Congress), and it is still apprehensive lest Congress should approve proposals to pay another soldiers' bonus. However, the Administration is at least giving lip service to the cause of economy, and the leader of the Opposition party in Congress is also committed to that policy.

FRANCE.

Budget — Revenue — Kreuger — Electrical Bill.

(FROM OUR CORRESPONDENT.)

PARIS, March 22.

It now appears practically certain that the Budget Bill will receive the approval of both Houses before the end of the current financial year on March 31st. The Finance Commission, although limited for time, appears to have done its work of revision with a good deal of care, and by eliminating clauses, concerning both revenue and expenditure, which required more thorough examination, it has reduced to a round figure of 3,000,000 francs the estimated surplus of 4,773,000 francs arrived at by the Chamber. The Finance Minister, at his last appearance before the Commission, recognised that the contention of that body to the effect that the Budget achieved only a paper balance is justified, but urged that, nevertheless, the Senate would assure its passage into law before the end of the month.

M. Henry Chéron, the former Finance Minister, insisted on the necessity for the real deficit covered by the Budget, and the estimated still larger one for the following year, to be made public, in order to prevent promises of fresh expenditure and "dangerous consolidations" being made by candidates at the coming elections. The Commission decided unanimously to request the Rapporteur-Général, M. Abel Gardey, during the coming discussion in the Senate, to make public the real state of the national finances and the exact situation of the new Budget, "in order that the country may know the truth." M. Gardey's report, which is issued this evening, states that the Budget for 1930-31, when finally settled, will show a deficit of about 2,000,000,000 francs, and that for the current year one of between 2,500 and 3,000 millions, while he estimates that the Budget for the coming nine months now under consideration, although it is balanced at present with an estimated surplus of 3,000,000 francs, will result in a real deficit of over 4,000,000,000 francs.

That senatorial misgivings are not without foundation is confirmed by the fact that, during the past three months, recoveries of indirect taxes and revenue from State monopolies, which were estimated to yield 8,636,435,000 francs during that period, were 1,755,000,000 francs, or over 11½ per cent., short of that figure. Income tax recoveries during the 11 months, moreover, have been only 8,002,000,000 francs, out of an estimated 9,056,000,000 francs. It is true that the yield for March has still to come in, but with a shortage of 1,032,000,000 francs already established (as compared with the corresponding 11 months of the previous year), it is difficult to see how the recovery of the outstanding balance can be expected in the time available, notwithstanding the exceptionally large volume of summonses for unpaid income tax that have been served during the past two or three months.

The revenue returns for February indicate total recoveries from all "normal and permanent" sources of 2,504,306,000 francs, as compared with 2,890,000,000 francs in the corresponding month of last year, and 2,994,000,000 francs in February, 1930. The only encouraging factor is that, although February is always the worst month of the year, recoveries were only 314 millions (or 12½ per cent.) below Budget estimates, whereas in the previous month the deficit was 15 per cent., or the worst of the 11 months of the current financial year. Revenue from indirect taxation and State monopolies was 2,178,000,000 francs, or 303,173,000 francs lower than in February last year. This was principally due to a drop of 133,544,000 francs (or over 19 per cent.) in the yield from the turnover taxes, compared with February, 1931. The yield, during the first 11 months of the financial year, from the turnover taxes (perhaps the best gauge of the general economic situation) was 1,109,143,000 francs (or 13½ per cent.) below Budget estimates and 1,056,841,000 francs (13 per cent.) less than in the corresponding period of 1930-31. Down to the end of November, increased yield from Customs duties, due to recent revision upwards of many of the schedules, compensated for declines in total yield from other sources. This resource has now apparently dried up, owing to the steady fall of imports, and for the past three months indirect taxes and monopolies have shown a total drop of over 900,000,000 francs, notwithstanding an increased yield of 169 millions from Customs duties. Increased import duties, as a matter of fact, have produced during the 11 months 1,372,000,000 francs of extra revenue, whereas the yield from all other sources of indirect taxation was 615 millions below expectations during the same period. But for these increased Customs rates, therefore, the total yield would have shown a deficit, as compared with Budget estimates, of 1,987 millions, instead of the 615 millions actually registered.

The tragic death of Mr Ivar Kreuger, the founder of the Swedish Match Trust and its multifarious associated companies, proved a severe shock to the Paris Bourse, where stocks declined, during the session immediately following the announcement of his suicide, by an average extent of around 10 per cent. Twenty-four hours' reflection, however, which led to the conclusion that this market was less affected than perhaps any other, wiped

March 26, 1932.]

THE ECONOMIST.

685

out the effect on issues in general—with the exception of those directly associated with the Kreuger and Toll organisations—and the close of last week saw stocks on the whole very nearly back at the levels they occupied prior to Mr Kreuger's disappearance. As a matter of fact, France, like the rest of Europe, has been largely selling Kreuger issues, during the past twelve months, to America. Neither banks nor private holders here appear to have suffered appreciably from the Kreuger collapse.

GERMANY.

Politics — Foreign Trade — Shipping Companies — Schultheiss Verdict.

(FROM OUR CORRESPONDENT.)

BERLIN, March 21.

ON March 17th the Government of Prussia and Hamburg instituted a search of all National Socialist business premises and all centres of the National Socialist organisation. This action was dictated by the discovery of the police that on the day of the election the so-called "storm detachments" had been holding themselves in readiness for a signal. Only very incomplete information as to the result of the search has been made public; all that is known is that arms were found, and plans according to which a blockade of Berlin was in certain circumstances to have been undertaken. The Prussian Government considers the material before it to be proof that preparations were being made and armaments collected for a civil war.

The political effects of this action by the Prussian Government cannot yet be assessed. Herr Hitler has hastened to offer the Government fresh assurances of the legality of his programme, which he has made all the leaders and subalterns of his party sign, and, in addition, two envoys from Herr Hitler presented themselves before Herr Groener, the Minister for the Interior, to offer further assurances. A National Socialist report of the conversation with General Groener was immediately declared by the Minister to be inaccurate. The public has once more received the impression that the Reich Government is not pursuing the conflict with the National Socialist organisation with the same energy as the Prussian Government. The Right is making use of this to denounce the action of Prussia as propaganda for the Landtag elections.

The Landtag elections have been definitely fixed for April 24th, and the Government has decreed a political truce over Easter, as it did at Christmas, to last until April 3rd. This only leaves a week for the campaign for the second presidential election, a week which will be most intensively utilised by both sides. The Chancellor himself proposes to participate again by holding large meetings.

Foreign trade in February showed no improvement after the sharp decline in the January export surplus. Imports, at 440.8 millions, were almost unchanged, and exports, at 537.8 millions, were down by only 4 millions. The export surplus fell from 102 to 97 millions. The volume of exports was well maintained, but the value was reduced by falling prices. While the sharp decline in the January export surplus might be regarded as seasonal, the February figures show that a return to the big surpluses of last year is not to be hoped for at present. This is a matter of serious concern in responsible circles, for the Beneduce report has already established the fact that Germany requires Rm. 1.8 milliards a year for the service and redemption of her long-term loans alone. The Reichsbank also parted with a further 18 millions of foreign exchange last week, mainly for the payment of interest, and the responsible authorities cannot postpone their decision until the last reserves of the Reichsbank are exhausted.

The Reichsverband der Industrie and the Industrie und Handelstag have recently been preoccupied by the critical foreign exchange situation. It was inevitable that protec-

tionist tendencies should be stimulated by this extremity, and the proposal has been put forward from many quarters that the demand for foreign exchange should be checked by extensive prohibition of imports. That, however, would only increase the difficulties with which Germany is struggling in her commercial policy, for it may be presumed that all the countries which were hit by German import prohibitions would seek to defend themselves, so that German exports would decline to an even greater extent than imports. The exchange situation would thus only be made worse. The project of commandeering all German holdings of foreign securities is equally impracticable, and the Basle experts rightly recommended against it. Not only are those holdings inconsiderable, but they could not be realised without large losses and other most serious disturbance to foreign stock exchanges. There remain, therefore, only two possibilities: either Germany must import a large part of her raw materials on credit, which might be possible within limits, but would only give temporary relief at the cost of burdening the future, or else she will have to conclude with her long-term bondholders a similar standstill agreement to that already in force with her short-term creditors. Disagreeable as that would be, it can only be avoided if the restrictions on trade and exchanges which have checked German exports for several months are rapidly removed, and German exports are allowed once more to expand freely.

Since the reorganisation of the big banks was concluded, the Government and the creditor banks have been working at the reorganisation of the two big German shipping companies, Hapag and the North-German Lloyd. The immediate impulse to these negotiations was given by the fact that Rm. 140 millions bank credits fall due on April 1st. As in the reconstruction of the banks, the Government laid great stress upon the importance of complete rectification of the balance sheets. Simultaneously, with the prolongation of old bank credits and the granting of new credits which are indispensable for the continuation of the businesses, the capital of the two companies is to be so severely reduced that not only the working losses of last year and the current year, together with the losses on the depreciation of investments, can be covered, but also the book value of the fleets can be written down to a very low level. The rectification proposals, which the Government has just approved, involve a writing down of the shares in the proportion of ten to three. Both Hapag and Lloyd will thus in future have only a share capital of 48 millions instead of 160 millions. There is to be no increase of capital, at any rate for the time being, as the new shares at present could only be placed with public undertakings, and the private character of the German shipping companies is to be preserved. The German banks are placing a new credit of Rm. 46.4 millions at the disposal of the companies, and the Reich is guaranteeing it. The guarantee of the Reich for the two companies amounts in all to Rm. 70 millions, for it was only possible to secure a prolongation of the older credits with the aid of a Government guarantee. No loss is anticipated through the guarantee, for it is secured on the shipping companies' claims to compensation payments from the American Treasury, amounting to almost Rm. 200 millions. In the interest of economy, the close association which has existed between Hapag and Lloyd for two years is to be made still closer, and until the credits are paid off the Reich will have a certain voice in the composition of their advisory councils.

The largest producer of electric power in Central Germany, the Electrowerke A.G., which is controlled by the Reich, is distributing on its Rm. 90 millions capital a dividend of 5 per cent., against 7 per cent. last year. As the company is largely concerned in the supply of power to small industrial firms, its output has fallen much more than that of other power producers which have a more extensive market. Its stations produced in 1931 only 1,766 million kwh., against 2,234 kwh. in the preceding year, a decline which reflects the reduced consumption of power by the nitrate and aluminium industries.

After a trial lasting two months judgment has at last been pronounced in the case of the five directors of the Schultheiss Patzenhofer Brewery. The trial aroused

great interest, because the defendants were among the best-known leaders of German industry, and the leading Berlin bank directors participated in the transactions which are the subject of the proceedings and have given evidence. On all important counts the defendants have been acquitted. The Court found the directors not guilty of intent to defraud or of bad faith towards their firms, and decided that the concealment of certain transactions, as, for example, the purchase of shares to the value of more than Rm. 40 millions, was not criminal. Ludwig Katzenellenbogen, who a few years ago was considered one of the richest men in Germany, was, however, found guilty of falsifying the balance sheet, and has been sentenced to three months' imprisonment, as in the Schultheiss balance sheet advances to a subsidiary company which held nothing but Schultheiss shares appeared as bank balances. The Court held that Katzenellenbogen intended to deceive the public, in that, while his company was in debt, the balance sheet gave an impression of liquidity. The verdict will command general approval, as it was proved that the accused directors of Schultheiss had throughout the welfare of their company at heart and never intentionally acted contrary to its interests. They made mistakes which were grave from the economic point of view, but not criminal. The general director, Katzenellenbogen, has already expiated these errors by the loss of his office and of his property.

ITALY.

Rayon — Banking — Commercial Treaties — Wheat Quotas.

(FROM OUR CORRESPONDENT.)

TURIN, March 14.

SHAREHOLDERS' meetings, banking developments and commercial negotiations have been interesting enough in the last two weeks, but they were insufficient to arouse interest in the stock exchanges, which remained dull, dominated by the usual current of continuous purchases by the saving public of fixed-interest-bearing public securities. The subscription to the first 150 million lire issue of 6½ per cent. debentures of the Naval Credit Institute at 480 lire, with a net yield of 7.4 per cent., which should have remained open until March 15th, were closed on March 8th, as the required sum was heavily over-subscribed at that date.

The report of the Banca Commerciale Italiana has perhaps marked a turning point from which should date the final liquidation of past frozen assets, and the decrease of current commercial insolvencies. This impression was strengthened by another important shareholders' meeting, that of the Snia Viscosa, the biggest Italian producer of rayon. The directors' report stated that the world situation was better in 1931 than in 1930, production having increased from 195 to 215 million kilograms and consumption from 175 to 225, so that stocks decreased from 45 to 35 million kilograms. In this improved world situation, the Italian industry was well able to take its fair share; production increased from 30 to 34.6 million kilograms, or 15 per cent., exports from 19 to 21 million kilograms, and internal consumption from 10 to 12 million kilograms. As Italian exports in 1931 went as to 28 per cent. to China, as to 23 per cent. to Germany and 9 per cent. to India, the results achieved appear remarkable. They were possible only through reduction of costs—Snia Viscosa costs were reduced by 45 per cent. on the 1930 average, together with a reduction of 30 per cent. on salaries and wages. The 1931 accounts of the Châtillon Artificial Silk Company did not permit the distribution of a dividend, but 21.8 million lire were allocated to the amortisation fund. The company's production increased by 20 per cent., while its costs decreased by 17.3 per cent. and its selling prices by 23 per cent. The Fiat Company also had to omit the distribution of a dividend for the year 1931, owing to a decrease of 43 per cent. in its production of motor cars, but was able to allocate a sufficient sum to

reserve and to maintain at work a staff of 27,000 hands, some of them possibly on a short-time basis.

Two banking failures, that of the Banca Bergamasca di Depositi e Conti Correnti, of Bergamo, and that of the Unione Bancaria Nazionale, which, though medium-sized, had flung its net widely in the thickly industrialised districts of Bergamo and Brescia with 120 and 600 million lire deposits and correspondents' accounts respectively, originated a short-lived panic among the customers of other banks. The panic was soon checked; the Banca Bergamasca offered to depositors payment in cash up to 79 per cent. of their credits, the remaining 21 per cent. to be paid in shares of a reconstituted bank; and authorisation was therefore given for the resumption of operations. The Banca di Gallarate, to which the panic was extending, was promptly absorbed by the Credito Italiano, which took full responsibility for its deposits.

Commercial negotiations have been rife in Rome during the past few weeks; new treaties have been negotiated between Italy and France, Germany, Spain, Austria and Hungary. All of them may be characterised as provisional, the contracting States reserving to themselves far more freedom to change custom duties than in older treaties, but all of them hope for more stable and general agreements in the future. The Italian Press was unanimous as regards the instability of the Successor States in the Danubian basin, and advocated stricter commercial relationship between them all, at least by groups of two, to be sponsored by France, Great Britain, Italy and Germany. The French-Italian *modus vivendi*, while maintaining tariffs at the present level, leaves to the contracting parties greater freedom to establish quotas for special reasons and special goods. Further negotiations between interested producers are contemplated for wine and motor cars, and conferences are already being held in Paris and Rome respectively. Dr. Schüller, the well-known Austrian economist and economic section-chief at the Austrian Foreign Office, is in Rome, as special negotiations have to be conducted in consequence of the cessation as from April 10th of the Italo-Austrian Clearing Agreement. As Italian exports to Austria were greater than Austrian exports to Italy, a debt was accumulating against Austria which it seemed inexpedient to let grow indefinitely, and, therefore, the clearing agreement was denounced by Austria. Something, however, will have to be substituted if trade is to continue.

As the quota system for imports of wheat and other agricultural products from Empire and foreign countries is under examination in Great Britain, present Italian experience may be of interest. A quota system was established last autumn, under which only 5 per cent. of foreign wheat could be milled, 95 per cent. being reserved to domestic wheat. The aim was to raise and stabilise prices at about 1,000 lire per ton. The price aimed at was reached; but the system, soon proved unworkable, owing to the necessity of blending different sorts of foreign and home-grown wheat, in different proportions for different uses. Moreover, as the internal production was being gradually consumed, a higher proportion of foreign wheat was required. Unhindered by parliamentary delays, the Italian Government changed the quota proportions in a rapid series of Decrees, according to the requirements of trade. The last change is to take place on March 21st, 80 per cent. of total milled wheat. As to soft wheat, foreign imports may not exceed 50 per cent. in Northern and Central (excluding Latium) Italy and 30 per cent. in Latium, Southern Italy and Isles. It would seem clear that, should a similar plan be devised, the House of Commons should delegate to a Minister or a Commission the power to effect from time to time the needed changes in the quota; and that the problem will be made more difficult if the quota system should be the result of binding conventions between the Mother Country and the Dominions. The quota system could not have been made to work in Italy if legal proportions of foreign and domestic wheat were not promptly changeable, even by districts. Even so, the price has not been maintained at the 1,000-lire level which was deemed sufficient at the beginning,

the level having gone up at present to 1,200 lire, with no small complaint from those agriculturists who have sold their wheat at or under 1,000 lire per ton. Clearly the quota system, if it is to work at all, is a case for free administrative regulations, as opposed to legislative acts or international conventions.

HUNGARY.

Budget — Standstill Agreement — Banks.

(FROM OUR CORRESPONDENT.)

BUDAPEST, March 20.

THE spring outlook is not encouraging. The political situation is unsettled, the economic distress shows no sign of improvement, and, worst of all, the financial outlook is almost hopeless. The Treasury is practically empty, and revenue in the next six months will not suffice to cover expenditure. The proceeds of the Treasury bills issued in August, 1931, totalling 130.2 million pengő, will be exhausted by the end of March. At least 40-50 million pengő are needed to cover the deficit of the Administration and the State undertakings in the last quarter (April-June) of the present financial year, and another 30 million pengő for July and August. How the Treasury is going to raise 70-80 million pengő without causing inflation is the greatest problem of the day.

The Budget for 1932-33 is in preparation, but the Finance Minister has not so far been able to cut down expenditure to the taxpayers' capacity to meet expenses from current revenue. At best 775 million pengő can be reasonably hoped for, yet the draft submitted by the Departments would necessitate a revenue of 856 million pengő. Baron Korányi aims at an expenditure limit of 810 millions for the Administration Budget, but it is very unlikely that this sum can be raised in view of the steady deterioration of economic conditions. The Finance Minister will have to choose between the unpopular expedient of cutting salaries of State employees or resorting to a small capital levy, or, what is the worst of all, to a disguised inflation in the form of borrowing from the banks, which naturally will result in swelling the already inflated bill portfolio of the National Bank. Considering that the actual expenditure of the State Administration in 1930-31 amounted to more than 1,000 million pengő, it will be a great achievement to have reduced it by 20 per cent. to approximately 800 million pengő, but it is disquieting to see that, in spite of the apparent evils of foreign borrowing in the past, the panacea of balancing the Budget is still sought in further borrowing. As there are no foreign funds available, an internal loan is suggested. This is an absurd proposal, as the country's resources hardly suffice to meet the most vital credit requirements of production and trade. It is high time that the mischievous habit of borrowing came to an end, for the recovery of Hungary depends mainly on adapting public and private expenditure to the current resources of the people. This requires courage and determination from the leaders, and the Government which achieves it will deserve well of its country.

The State finances cannot be put on a healthy basis without drastic changes in municipal finance. The budgets of the autonomous municipalities amount to 400 million pengő, and include a great deal of wasteful expenditure, all efforts to reduce which have so far been unsuccessful. The same applies to the management of the State undertakings. Retrenchment in public finances is delayed by the passive resistance of bureaucracy.

There is good reason to believe that the Standstill Agreement with the British creditors will be signed next week, as the draft proposed by the London Committee has been accepted by the Hungarian authorities. Both the transfer moratorium decree of the Hungarian Government, issued in December, 1931, and the British creditors' draft for a Standstill Agreement for short-term loans, exclude the possibility of the repayment of principal, realising that any capital repayment at this stage would be

injurious to both debtors and creditors. Yet in some Hungarian quarters the optional right was demanded to settle capital accounts if and when the creditors are prepared to accept pengő in payment for debts contracted in foreign currency. This proposition would further embarrass the National Bank, because there are considerably more than 1,000 million pengő short-term debts owed to foreign creditors, and if only a small fraction of this sum were privately settled and paid accordingly to the account of the Foreign Creditors' Fund, it would paralyse the economic system of the country. There is little doubt that this proposition would be rejected by the British creditors, who, next to the Americans, are Hungary's biggest creditors both on long-term and on short-term account, and would gain nothing by such discrimination.

The proposed Standstill Agreement is to run for six months as from February 1st until August 1st. The British creditors are entitled to send a representative to Budapest to see the working of the foreign exchange control and that of the clearing agreements to carry on foreign trade. The thorny question of merchandise credits has been settled favourably to both parties. According to the agreement merchandise debts can only be repaid if *pari passu* new credits are granted to import goods necessary to Hungary.

All the important commercial banks have published their annual balance sheets. The following table shows the position of the eleven principal banking institutions as disclosed in their returns at December 31, 1931:—

	Own Re- sources	Total Assets and Lia- bilities (In million pengő)	Net Profits	Divi- dend paid out
Hungarian Commercial Bank	55.5	452.6	5.6	2.5
of Pest	66.7	353.9	2.6	...
Hungarian General Creditbank				
First National Savings Bank of				
Pest	34.2	240.6	2.5	1.6
Hungarian Discount and Ex- change Bank	21.3	192.4	1.8	.96
Hungarian Italian Bank, Ltd.	26.4	168.0	1.9	1.2
British Hungarian Bank, Ltd.	39.6	162.6	1.7	1.15
National Central Savings Bank	21.3	135.1	1.1	.6
Hungarian General Savings Bank	33.5	130.8	1.2	1.0
Municipal Savings Bank	10.9	110.7	.4	.27
City Savings Bank, Ltd.	15.1	74.4	.7	.48
National Banking Corporation, Ltd.	17.7	148.6	.9	.6
Total	342.1	2,069.7	20.4	10.4

These figures show practically no difference, as far as business is concerned, between banks and savings banks, as in addition to accumulating deposits, discounting bills, making advances and mortgage loans to their customers, more or less all are engaged in financing and participating in commercial and industrial undertakings. It is therefore very disappointing that the total disclosed writings-off for bad debts and depreciation of investments amounted to 6 million pengő for all the eleven institutions, especially if it is taken into account that, according to the private quotations ruling for banking shares, the total resources of the above institutions are valued at scarcely more than one-third of the disclosed 342.1 million pengő.

The computation of the items of the balance sheets leaves very much to be desired. Rediscounts with the National Bank are not disclosed at all, and the foreign short-term credits are not shown separately. The creditors are divided into three categories in the composite balance sheets of the eleven institutions as follows:—

	1930	1931
	(In million pengő)	
Saving Deposits	550.8	515.9
Current Accounts	603.1	500.9
Other Creditors	381.3	233.3
Total	1,535.2	1,250.1

The decrease of the saving deposits and current account balances is due mainly to withdrawals of home depositors, devoted partly to direct investments in real estate, repayments of other debts, etc., and partly spent on necessities owing to the reduced earnings of the depositors. On the other hand, the decline of other creditors, which item

covers chiefly the acceptance credits contracted by the banks abroad, is due to the partial repayment of foreign short-term credits in 1931.

Advances to customers have fallen to 527.8 million pengö, as against 653.8 million pengö a year ago, and the bill portfolio has decreased to 602.5 million, as compared with 718 million pengö at the end of 1930. Owing to the cessation of the inflow of foreign credits and their withdrawals, after the Credit-Anstalt collapse in May, the banks have taken refuge in the National Bank, whose bill portfolio, including its rediscounts with the B.I.S., increased to 589 million pengö at the end of 1931, as against 297.6 million pengö at December 31, 1930. Though exact details are not available, as the banks do not show rediscounts in their balance sheets, it can be safely assumed that the facilities accorded by the National Bank to these eleven banks amounted to 500 million pengö at the end of 1931, which clearly demonstrates that the central bank has done its utmost to help the banks to face the critical times.

The security holdings of the eleven banks, owing no doubt to repurchases for the support of stock market prices in the first half of 1931, increased to 59.2 million as against 50.5 million pengö a year ago, the participations, syndicates, etc., are valued at 145.2 million pengö, against 154.7 million, a very moderate writing off considering the huge depreciation during the past year. Gross profits declined to 72.9 million pengö, as against 82.6 million pengö, and the aggregate net profits amounted to 20.4 million pengö, as compared with 33.8 million pengö for 1930. It is evident from all the figures published that banking reorganisation has been again postponed. It would be unfair to the banks not to recognise the enormous difficulties which have been, and are still in the way of the necessary fusions and other changes in the banking system, but it must be emphatically pointed out that the process of reorganisation is highly desirable and cannot be long postponed.

HOLLAND.

Netherlands Bank — Trade — Coal Industry.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, March 15.

A BILL has been introduced into Parliament dealing with the means for meeting the loss sustained by the Netherlands Bank during the financial year ending March 31, 1932. The Netherlands Bank, in conformity with its foreign exchange policy as circulation bank, was in possession of a considerable sum in sterling when England abandoned the gold standard. The consequent loss suffered by the Bank will be between 28.5 and 30 million guilders. Part of the loss thus sustained during the 1931-32 financial year can be covered from the working profit anticipated, as well as by drawing upon part of the general and the special reserves. The general reserve amounts to 7,563,206 guilders, and the special reserve to 8,000,000 guilders. These are to be written down to 3 millions and 5 millions respectively, so that the amount of 7,563,206 guilders is released for writing off against the loss on sterling. Adding the working profit, the loss would accordingly be reduced to approximately 20 million guilders. The intention is gradually to work off these remaining 20 million guilders out of profits to be made by the Netherlands Bank over a number of years to come. During that period the State's annual share in the profits and the dividends of the shareholders will, in consequence, be greatly curtailed.

The new allotment of the profits is temporarily fixed as follows:—Half the annual profits are to be utilised for writing off the loss, subject to a minimum of one million guilders. The part of the profit then remaining is to be used for augmenting the general reserve to 3 million guilders if it has dropped below that level. The remainder will then be divided equally between the State and the shareholders of the Bank, to such amount as represents 5 per cent. dividend to the shareholders. Any profit then

remaining is to serve for additional writing off against the loss.

It will accordingly be seen that, irrespective of the extent of the profits, the shareholders will not get more than 5 per cent. (or 1 million guilders) for some years to come, with a corresponding limit to the share for the State. Hitherto the allotment of the profits was such that the State received the majority. Of the profits in 1930-31, amounting to some 5 million guilders, the State received 3.3 millions and the shareholders only 1.57 millions. It is thus obvious that in the long run the State will shoulder the loss sustained by the Netherlands Bank to a large extent. In recent years the profits of the Netherlands Bank available for distribution have occasionally reached 10 to 12 million guilders. At that rate the sterling loss would be completely wiped out within a very few years. It is, however, to be expected that the profits of the Netherlands Bank will be limited in future, as the large income resulting from the operation of the "gold-exchange" policy has come to an end since that policy was abandoned.

As regards the balance of trade of the Netherlands, the February returns, as summarised below, make a relatively satisfactory showing:—

(In millions of guilders.)				
	February 1931.	February 1932.	Jan.-Feb. 1931.	January 1932.
Imports	149	110	338	241
Exports	109	75	227	145

Imports of gold and silver in February totalled 41,709,919 guilders, and exports 36,521,855 guilders. The sharp rise recorded in the imports is artificial, as it is attributable to anticipation of import quotas.

The National Bank of Austria, with the approval of the Austrian Government, has agreed to the release, to Dutch exporters, of balances in schillings originating from export transactions to Austria, with the object of enabling Dutch importers to utilise such funds, subject to certain conditions, for payment for goods exported from Austria to the Netherlands. This arrangement, which is of a tentative character, has resulted from the discussions on the foreign exchange clearing problem recently held at Vienna.

No solution has yet been found to the conflict in the Dutch collieries. The employers demand a wage cut of 10 per cent. as from April 1st. They contend that the Limburg mines from April 1st to December 31, 1931, after deduction of 60 cents per ton for necessary depreciation, yielded a net surplus of only 6 cents a ton. During the month of January, 1932, figured on the same basis, the result was a loss of 44 cents a ton. The average proceeds of the output are at present lower than in 1913, whereas the wages of the pit workers are about 89 per cent. and of the other employees about 100 per cent. above pre-war level. The standard of wages in the Dutch collieries is far above that in mining districts abroad, where numerous wage reductions have already taken place. The miners originally made a counter-proposition for a cut of 5 per cent., but now offer to accept a reduction of 5 per cent. on April 1st and a second reduction of 5 per cent. on June 1st. The trade unions maintain that wage cuts are not the right means for coping with the difficulties in which the coal-mining industry is involved, and consider that Government measures are called for.

The death of Herr Kreuger was not without influence on the Amsterdam Stock Exchange. It was said at first that trading in Kreuger securities would be suspended, but no such measures were taken. The course of prices of the Kreuger securities officially quoted at Amsterdam was:—

	Mar. 12.	Mar. 14.	Mar. 15.
Swedish Match.....	67	34½	46
Kreuger and Toll shares.....	96	38½	38
" " " particip. debentures	100½	37½	49
" " " dollar debentures	54½	—	36

No great interests are involved in this country, and apparently bank credit has hardly been given at all, either to the Kreuger and Toll concern or to Sweden. It is believed that the holdings of Kreuger and Toll securities, including Swedish Match, are of no great consequence here. Holland, therefore, is not seriously involved.

Letters to the Editor.

MALAYAN RUBBER.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I have the honour to invite your attention to the article entitled "The Malayan Rubber Position," which was published on pages 1168-1169 of the *Economist* appearing on December 19, 1931. In this article the statement is made that "Malayan law allows the Chinese contractor to supply food to his coolies and make a profit out of the transaction, whereas the estate owner employing Tamils is not allowed to do this." The statement as regards Chinese contractors is incorrect, and I would ask you to be so good as to publish this correction in your columns.

Throughout Malaya an employer is prohibited from supplying food to his labourers without authority in writing from the Controller of Labour, Malaya, and no employer, be he Chinese or of any other nationality, is allowed to make a profit in the transaction.—I have the honour to be,

Kuala Lumpur,
Federated Malay States
February 12, 1932.

Sir,
Your obedient servant,
J. M. BARRON,
Ag. Controller of Labour, Malaya.

Books and Publications.

COMMERCIAL BANKS.*

THE Economic Intelligence Service of the League of Nations has recently completed a remarkable piece of work in the analysis of the statistics of the commercial banks of some 29 countries, and, undaunted by the immense labour involved, it promises more to follow in a later edition. In order to facilitate comparison between the statistics of different countries, the Economic Intelligence Service has reduced them as far as possible to a standard form. The statistics of each country are preceded by a description of the development and characteristics of its banking system, and an account of the main provisions of its banking law.

By no means the least valuable part of the volume is the introduction, which contains an excellent account of the development of post-war banking up to the beginning of the present crisis. Altogether, the work is an exceedingly welcome contribution to the available knowledge of the banking systems of the world, and its production is an achievement upon which the Economic Intelligence Service is to be congratulated.

"BURDETT."†

The new "Burdett" is out. Inevitably, after such a year as we have just experienced, it contains less new matter than usual, but its contents have been brought up to date, and 79 companies and 16 public loans have been added since the last issue. It contains, as always, the fullest information about all securities which are dealt in on the Stock Exchanges, and many which are not, and revised information about stamp duties, trustee investments, British and American income tax and other matters which concern investors. There are valuable special chapters on the finances of British local authorities and of Empire and foreign countries, and this year for the first time there is also a list of members of the Associated Stock Exchanges.

† "The Stock Exchange Official Intelligence for 1932." Edited by the Secretary of the Share and Loan Department. (London) Spottiswoode, Ballantyne and Company, Limited, 1, New Street Square. 60s. net.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

Correction.—We regret that the price of *The Mining Year Book* was incorrectly given in last week's issue. The price of the book is 20s. net.

The Theory of Social Economy. By Gustav Cassel. Translated by S. L. Barron. In two volumes. (London) Ernest Benn, 154, Fleet Street. 42s. net.

To this new and revised edition Professor Cassel has added a section in which he expounds the theory of international trade in the light of purchasing power parity. For this and other additions space has been made by certain curtailments and omissions.

Political Handbook of the World. Edited by Walter H. Mallory. (New York) Harper and Brothers, 45, East 65th Street. \$2.50.

A useful reference book giving an outline of the party programmes in each of 64 countries, with lists of party leaders and of the principal newspapers.

Canada. By Professor A. Brady. (London) Ernest Benn, Ltd., 154, Fleet Street. 18s. net.

An interpretation of the political, cultural and economic forces which are forming the Canadian nation.

The Social and Economic Aspects of the Drink Problem. (London) Victor Gollancz, Ltd., 14, Henrietta Street. 5s.

The report of a committee planned before the Royal Commission on Licensing was set up. The conclusions suggest that the impartiality required of the committee has been successfully achieved.

The Annals. January, 1932. *Power and the Public.* (London) P. S. King and Son, Ltd., Great Smith Street.

A collection of papers on the economic problems presented by the development of the electric power industry.

The Stock Exchange.

THE "ROAD COMBINE."

INVESTORS with a sense of dramatic values, pursuing the sun by road or railway this Easter, may or may not be oppressed by the realisation that they are traversing a predestined field of battle. The road versus rail controversy, after a period of quiescence, has trebly thundered of late in the Press and in Whitehall. The Committee of Eight appointed this week by the Minister of Transport will be fortunate, indeed, if they discover any basis of agreement which simultaneously placates the rival vested interests and satisfies the public demand for maximum transport facilities at minimum cost. We do not propose to enter here into the merits of the controversy, but rather to point out that, from the investors' point of view, the issue has changed profoundly since it was first raised. To-day, the disputed territory is mainly the field of goods transport by road. The question of road passenger services is to a much greater extent a *chose jugée*, thanks to two decisive legislative factors—the grant to the railways of powers, under the Railway (Road Transport) Acts of 1928, to own and operate road vehicles, and the enactment of the Road Traffic Act, in 1930, with provisions for the "elimination of unnecessary services," and the creation of boards of Area Traffic Commissioners with the object of eventually establishing a "controlled monopoly" in road passenger transport.

While the movement of goods by road remains largely a "tramping" rather than a "liner" business, in the hands of some thousands of concerns with small average capital, passenger transport interests have already become closely knit under the capital ownership of powerful representatives both of older and newer forms of transport, working, if not closely, at least in harmony. To the ordinary passenger, the provision of road services appears to be still in the hands of locally-organised units. Actually, there are few concerns which operate networks of omnibus routes outside the large towns, whose capital is not held, in part at least, by Thomas Tilling, Limited, the British Electric Traction Company, Limited, or their joint holding concern, Tilling and British Automobile Traction, Limited—with or without railway participation.

With the exception of three companies, all concerns within the group are nominally subsidiaries of Tilling and British Automobile Traction, the holding company of the group, in which Thos. Tilling has a 32.9 per cent. interest and British Electric Traction a 21.3 per cent. interest. There is, however, a well-defined demarcation of spheres of influence, within the Tilling and B.A.T. Company, between the two parent companies over a large proportion of the territory. Elsewhere the joint holding concern, Tilling and British Automobile Traction, remains in a position of control. It makes for clarity to classify the satellites according to the planet around which they revolve. This we have done in a diagram, on the opposite page, showing the chief road companies in the Tilling-British Electric Traction galaxy, and the distribution of voting power, according to the latest obtainable information.

Broadly, the "Thomas Tilling" interests shown in our table cover nine satellite omnibus concerns (excluding E. W. Rudd, who are haulage contractors), with a total voting capital of £3,405,645, of which Tilling controls £1,784,168. Two are "hundred per cent. subsidiaries," with an aggregate voting capital of £650,000, including the important National Omnibus Company, the "parent" of three other "National" concerns. In the remaining seven cases, Tilling's voting interest varies from 50 per cent. down to 27.7 per cent., with one or more of the "Big Four" railways controlling precisely the same number of votes in every case. Thus the joint will of the two parties is paramount, but neither party, in the words of the Creed, "is afore or after" the other.

The British Electric Traction company's satellites

number twelve, with a total voting capital of £3,918,521, of which the B.E.T. controls £2,801,618. Some five companies, with a total ordinary capital of £1,468,718, are hundred per cent. subsidiaries, including the National Electric Construction Company, the "parent" of Devon General Omnibus, City of Oxford Motor Services and Western Welsh Omnibus. These three concerns are numbered among the seven concerns in which the B.E.T. shares control—usually on a fifty-fifty basis—with one or more of the main-line railways. Finally, the subsidiaries Traction number seventeen, with a total voting capital of £4,612,154, of which the holding company owns £1,958,418. Only one of the smallest of these concerns is a hundred per cent. subsidiary, a nice adjustment of voting power with the railways obtaining in all other cases. Outside the Tilling and British Electric groups, the railways hold an aggregate of £830,622 of a voting capital of £1,701,130 in four concerns, of which much the most important is Scottish Motor Traction, with its subsidiary, W. Alexander and Company.

The extent to which these groups of interests dominate the "omnibus" system (outside London and certain urban areas where municipal ownership obtains), is shown by the fact that whereas the road-operating concerns already mentioned have a total voting capital of £13,637,450, the remaining twelve concerns given in our list on the next page, which are not included in one or other of the solar systems, have a total capital of only £1,135,314.

All the three central concerns have a satisfactory earnings record:—

From the investor's point of view the incidence of the appeal made by the shares of the three companies varies considerably. Thomas Tilling is an old-established "omnibus" concern with important operating interests of its own in London (where it has an agreement with the London General Omnibus Company) and elsewhere, which has consistently followed a policy of expansion, financed by earnings ploughed back into the business. Shareholders have frequently received capital bonuses, but last year something of a break was made with tradition by the issue of 527,350 ordinary £1 shares at 90s. for cash. This was associated in some quarters with possible negotiations with Scottish Motor Traction, the largest concern remaining outside the Tilling-B.E.T. network. British Electric Traction, as its name suggests, first entered the

(Continued on page 692.)

TILLING—BRITISH ELECTRIC TRACTION GROUPS.

(Note.—With a few exceptions, notably the National Omnibus group, National Electric Construction and United Counties Omnibus, the actual shareholding in the companies named is in the hands of the Tilling and British Automobile Traction Company. The percentages shown for Tilling, and for British Electric Traction, respectively, relate to effective voting control.)

					* Non-voting preference shares.

road transport industry from the electrical side. In some ways it resembles an investment trust. Its portfolio is strong in electrical and road transport securities, but includes considerable holdings of home and foreign government, railway, commercial and industrial stocks. Since 1927, when the outstanding ordinary stock was converted into 8 per cent. non-cumulative preferred ordinary, the company's capital structure has been somewhat "high-gear," with £712,744 of 6 per cent. preference stock (participating up to an additional 2 per cent.) and £1,326,263 of 8 per cent. preferred ordinary ranking in front of £202,889 of deferred ordinary stock. Since the latter's creation it has been the board's practice to pay low cash dividends, accompanied by a 10 per cent. capital bonus every year.

Tilling and British Automobile Traction is almost entirely a holding company, to which Thomas Tilling and British Electric Traction transferred most of their road subsidiaries in May, 1928, to achieve a pooling of forces in view of the granting of Parliamentary road powers to the railways. The company has been the spearhead in many of the subsequent negotiations of the joint interests with the railways. It has not merely served as a medium in the admission of the railways to share ownership in subsidiary and allied enterprises, but, in turn, has taken interests in companies with which the railways have made previous arrangements. It has only £200,000 of 8 per cent. preference shares (participating up to a further 2 per cent.) in front of £1,600,000 of ordinary shares. The profits of subsidiaries are taken into the company's accounts only to the extent of dividends actually received by the holding company. The latter has a reserve of £962,000, and its financial position is in many respects strong.

The effect of the developments of the last four years may be summarised as the creation of a basis for the future exploitation of road passenger transport as a "controlled monopoly," with a strong element of centralised capital ownership and a soul of its own. Local joint committees have co-ordinated road and rail transport in particular areas, by way of co-operative "timing" of services, omnibus calls at railway stations, and, to some extent, the avoidance of duplication of services on parallel routes. The railways, further, are understood to have made working arrangements with certain municipal authorities, like Todmorden, Leeds, Halifax and Sheffield, operating services in urban areas which fall outside the scope of their road powers under the Acts of 1928. They are also reported to be in negotiation with the authorities in other places, such as Manchester, Liverpool, Newcastle and Brighton.

Some trains have been withdrawn on country branches obviously better served by the omnibus, but further development in this direction must be a matter of time. Various road companies in which railways are interested still run long and medium distance services between different towns, at fares below those on the railways, though facilities may exist for return journeys by rail or vice versa on payment of a supplementary charge. In short, while further measures of co-ordination will doubtless be worked out in due course, it is clear that road passenger transport can still be regarded by the investor as possessing its own "equity" as a separate transport arm, and that the shares of Tilling, Tilling and B.A.T., and British Electric Traction—in that order—are directly bound up with its future development.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET. ACCOUNT.
April 5. April 7.

THE quiet tone normally in evidence before a holiday was interrupted, from time to time, by spasms of Continental liquidation. While high-grade fixed-interest securities were in steady demand, activity in industrial issues was

restricted. Cheap money helped Government stocks, but international and foreign bonds remained out of favour and speculative counters were neglected.

Gilt-edged stocks suffered at the outside from a little scattered realisation, but the undertone remained firm, and prices subsequently were steady on a good turnover. Conversion 5 per cents. were in sustained demand. Dealings in the new Port of London scrip opened at 2½ premium. Dominion stocks were favoured, and long-dated India loans strong. Irish issues, which have a narrow market, were not affected by political developments.

Increased weakness prevailed in the Foreign market. Realisation of Central European issues continued, German bonds being heavily marked down. Anxiety regarding the Greek bond position was reflected in a lowering of prices practically to default levels. Japanese stocks declined further, but Chinese improved. Brazilian issues had a heavy aspect, but Argentines were helped by the intimation that funds were in hand to meet the April coupons.

Both Home and Foreign Rails were lifeless. The week's Home Rail traffic figures were less satisfactory than their immediate predecessors, but few price changes took place. Canadian Pacific were again a heavy market.

Apprehension regarding the European position and the absence of favourable news of the domestic trade situation upset the Industrial market, though a slightly firmer tone ensued in mid-week. International issues were heavy, particularly the Kreuger group. Brazil Traction and Hydro-Electric were sold from the Continent. Cables and Wireless continued to decline at first, but rallied on better February traffic receipts. A steady investment demand kept electrical supply shares firm, though the market became irregular before the holidays. Engineering shares were dull and motors easier. Textiles were adversely affected by news of a fresh deadlock over the "more looms per weaver" question. Canadian Celanese had a firm appearance on the year's results. Turner and Newall declined on unfavourable rumours, but a reassuring official statement brought a speedy recovery. Dunlop and Harrisons and Crosfield reflected the fall in the price of rubber. Shipping shares were easier on a few scattered sales.

Oil shares were somewhat harder after initial losses, but the volume of business remained small. Paris and Brussels were intermittent sellers, Royal Dutch fluctuating sharply. Rubber shares were marked down after the Colonial Office's "No restriction" announcement and the decline in the commodity to a new low level of 1½. Liquidation, however, was not particularly heavy, and a moderate recovery ensued. Tea shares remained dull, with a conspicuous absence of business. Consolidated Tea and Lands being marked lower.

Mining shares were affected by the proximity of the holiday and the weaker Continental tone. Gold Fields and Brakpan declined, though other "Kaffir" shares held their ground in mid-week. Tinto remained on offer falling sharply. Ashanti were a good feature. A slight mid-week recovery in the price of tin had little or no effect on the shares, which remained quiet and dull.

NEW YORK.

The markets remained irregular and dull, though a firmer tone obtained temporarily at the beginning of the week on a moderate volume of short covering. Business was on a small scale, and price movements were fractional. Further selling was effected of Kreuger and Toll securities, as many as 82,000 shares being offered in a single block. Government bonds were steady. Market expectations of a reduction in the Federal Reserve rediscount rate were strengthened by the announcement, on Tuesday, that bankers' acceptance rates had been reduced by ½ of 1 per cent. for all maturities. Municipal bonds were one of the most active sections of the market, thanks in part to the sharp increase in surtaxes voted by the House of Representatives. As this puts a premium on securities carrying tax exemption, its effects by way of facilitating future municipal finance may be appreciable. Railroad issues have remained depressed on President Hoover's statement, which rules out the making of loans by the Reconstruction Finance Corporation to railroads for new construction. The National Credit Corporation is refunding 15 per cent. of the subscriptions by banks for its debentures, since the loans it has made are now being repaid, partly by way of advances from the Reconstruction Finance Corporation. General trade continues to show a lack of vitality. Steel mill production is running at 25 per cent. of capacity, against 26 per cent. earlier this month. The absence of the usual seasonal increase is attributed partly to the failure of Mr Ford, as yet, to place any large buying order.

INVESTMENT NOTES.

Stock Exchange Control: Unofficial "Referendum" Result.—In our issue of March 5th last we referred to the movement for Stock Exchange reform, which had been revived by an unofficial committee of members, familiarly known as the Dual Control Committee, who had previously launched a scheme of reform in 1920. Members were asked, this month, to vote on the question whether they were "in favour of the Trustees and Managers and the Committee for General Purposes reviewing the present constitution and rules in order to obtain unity of control and interest." The result of this unofficial vote shows that members are overwhelmingly in favour of putting their "House" in order. Of 3,912 members entitled to vote, 3,159, or 81 per cent., actually voted, and of these 2,840, or nearly 90 per cent., voted "in favour." This means that the Dual Control Committee can now lay their case before the Committee for General Purposes and the Trustees and Managers, in order that these two bodies may collectively consider the whole question of the reform of the constitution of the Stock Exchange. In view of the large and representative character of the voting majority, the Trustees and Managers will doubtless consider the advisability of calling a meeting of Stock Exchange proprietors to sanction further developments in the direction of a new constitution. No modernisation of Stock Exchange practice and procedure can be attempted until "Dual Control" is abolished and one Committee is in charge of Stock Exchange affairs. There is every reason to believe that the Committee for General Purposes views this movement for reform with sympathy. It is interesting to see that all the old Committee, who offered themselves for re-election, have now been elected, while two new members representing jobber firms were elected in place of the two jobbers who resigned. In view of the fact that a mass meeting of members had lately expressed opposition to the proposals of the old Committee, as

REDUCED RATES for LIFE ASSURANCE for the NEXT FIVE YEARS

for those who want to obtain immediate and adequate life assurance protection, but whose present incomes are either temporarily restricted or small in relation to future prospects.

Write to-day for full particulars (state age for quotation purposes) to THE

LIVERPOOL & LONDON & GLOBE INSURANCE COMPANY, LTD.

LIVERPOOL (Head Office) LONDON (Chief Office)
1, Dale Street. 1, Cornhill, E.C.3.

regards the granting of half-commissions to banks and one-third to other agents (apparently on the ground that they did not go far enough, in some respects), it was uncertain how the voting for the Committee would go. The re-election of the "old firm" implies that the half-commissions proposals will now be carried through.

No Rubber Restriction.—The Colonial Office announcement declaring the impracticability of any concrete policy of rubber output restriction (discussed in a leading article on page 678) had been foreseen and largely discounted in the market. The negotiations with the Dutch had dragged on for months without the emergence of a basis of agreement, and sentence of death was more or less officially pronounced upon them at the beginning of this month, when Mr Lutyjes, Minister of Agriculture in the Dutch East Indies, made public his continued and inflexible opposition. On that occasion the London price of rubber fell to 2½d. per pound. Last Saturday's Colonial Office statement carried prices down to 1½d., but a slight recovery subsequently took place. The share market has long been stagnant, and although most shares were marked down on Monday, there was no formidable pressure to sell. Moderate bear closing caused a firmer tone on Tuesday. The extent of recent movements in a number of leading rubber shares is shown:—

The market at least has a firmer basis for calculating future possibilities. Even after world depression has passed, it is believed that rubber prices will remain under 6d. a pound. Further, it is now possible to differentiate more sharply between those companies which have and have not reasonable future prospects. Ability to ride out the storm is not in itself a guarantee of survival, though the liquid resources of many of the stronger companies are ample for the purpose. Under conditions which will be "normal" in years to come, reasonable profits will accrue only to those companies which can obtain a large output at a low cost. Their most formidable competitor will be the native producer, who has large areas coming into bearing during the next few years. The Rubber Growers' Association has recently published an informative table summarising the world's plantation

rubber acreage at the end of 1930. At that date, "small holders" had a total planted area of 3,702,424 acres, against 4,180,982 acres in the hands of large estates. For every 100 acres in full bearing throughout the world, nearly 55 immature acres were coming into production. But whereas large estate owners had 28 acres of immature rubber per 100 mature in Malaya, and 55 immature per 100 mature in the Dutch East Indies, the Dutch "native" grower had no fewer than 129 acres coming into bearing per 100 in full production. Over the whole field, the "native" immature area was 1,617,488 acres, and the "estate" immature area 1,163,106 acres. Allowing for the forcing out of production of considerable uneconomic areas, rubber supplies should obviously be capable of taking care of increased world demand for many years. For good or ill, the low-cost native producer has become a dominant factor in the industry, and the strongest companies cannot afford to neglect any opportunity for meeting his competition by the adoption of modern methods of obtaining maximum output at minimum cost.

Inter-Railway Co-operation.—The problem of rail and road competition loomed so large at the recent railway meetings that references by the chairmen to the advisability of increased inter-railway co-operation received less attention than they deserved. The continuance of partial duplication of services in certain districts served by more than one railway company was a feature to which the Royal Commission on Transport drew attention, the Commission advising the pooling of traffic at points where two territories joined. At the annual meeting of the London and North Eastern Railway Mr William Whitelaw declared that the time was long past when one railway company could afford to waste either time, energy or money in competition with another. Discussions had for some time been in progress with the board of the London, Midland and Scottish Railway regarding the possibilities of increased co-operation, and as certain old agreements were expiring the time was ripe for closer arrangements. The directors had no doubt that economies could be realised as a result of pooling arrangements. Any "pool" would need the assent of the Minister of Transport before it could be brought into operation, and it was hoped that the two companies would shortly be in a position to submit a scheme to that Minister. At the London, Midland and Scottish meeting Sir Josiah Stamp also referred to this problem, and expressed his confidence that the not inconsiderable difficulties in the way would be satisfactorily overcome. He added that on an allied matter they had been able, in conjunction with the Southern Railway, to effect economies for the two companies in the region of £60,000 per annum in connection with a joint line.

Powell Duffryn.—The results of this South Wales company for 1931 show a smaller setback than might have been feared, considering that the year opened with a three weeks' strike in the coalfield, continued with deepening world depression, and ended with damaging restrictions on British coal exports in foreign countries. Though

OFFER TO NEW READERS.

Name.....
Address.....

neither the £260,936 of preference capital nor the £3,671,667 of ordinary is to receive a dividend, the company is better placed than many, since it is duly covering its loan charges each year out of earnings, and £61,358 of debenture stock appears to have been redeemed during the year. Net profit, after meeting all charges, fell from £112,309 to £50,970, of which £50,000 is to be allocated to depreciation.

Years ended December 31.	1929.	1930.	1931.
Trading profit	309,475*	370,468	304,502

Depreciation and reserves	...	100,000	50,000
Preference dividends	Nil	12,134	Nil
Ordinary dividend	Nil	Nil	Nil

Increase in carry-forward 44,090 175 970
* After allocating an unstated amount to depreciation.

Cash in the balance sheet stands at only £10,036, which probably explains the withholding of the relatively small sum (£12,134) required to pay full preference dividends. There is a bank overdraft of £419,356, reduced from £480,784 a year ago. A gratifying piece of news is contained in the report. Valuations of the whole of the collieries owned by the company and its subsidiaries, carried out by an independent valuer, have shown a large surplus over the aggregate balance-sheet figures. The assets, however, are not being written up, the surplus thus being treated as an internal capital reserve. At the annual meeting, which was held on Tuesday, the chairman was not encouraging as to the future of the industry, which, he declared, was in a worse state than for years past.

Rolls-Royce.—The maintenance, last year, of the profits and dividend of Rolls-Royce is a highly creditable performance. Car sales have suffered heavily, sales of the 44-horse-power vehicle falling from 444 in the calendar year 1930 to 173 in 1931. The sales of the smaller 26-horse-power model may be estimated to have declined from about 500 to 350 in the twelve months to September 30th last. On a moderate computation this contraction in the home market may have cost the company something like £638,600 in gross revenue, but the company's net declared profits on its entire business are only 2 per cent. below the 1930 figure:—

	Net Profits	Ordinary Dividend
1929—		
Fourteen months	201,706	10
Equivalent twelve months	172,900	...
1930 Twelve months	147,171	10
1931 Twelve months	144,197	10

The air engine side of the company's business, largely developed and advertised by the Schneider Trophy race, is doubtless largely responsible for the maintenance of profits, and has maintained the Derby factory in full production. Contracts with the Air Ministry have been supported by orders from foreign Governments, notably Belgium. Rolls-Royce recently acquired the business of Bentley Motors, Limited, thus eliminating a formidable competitor to its car business. While all stock of existing Bentley models has been offered to the public at a discount, the trade name is to be kept alive by a small sports type. Further progress with the design and production of this car is, however, held up pending a case, now sub judice, to define the position of Mr W. O. Bentley, inventor and designer of the Bentley cars. The application for a receivership in respect of Rolls-Royce of America, Inc., has been refused, the applicant having failed, in the opinion of the judge, to make out a case. The English company is at present supplying the American company with the chassis it requires.

County of London Electric.—Despite the reduction of the ordinary dividend from 11 to 10½ per cent., this leading supply concern has continued to make substantial progress in 1931. Sales of current and rentals have brought in £2,094,000, against £1,880,558, and after deduction

of all charges, net profit at £689,871 has increased by £56,802:—

Year to December 31.	1929.	1930.	1931.
Sales of current, &c.	1,678,522	1,880,558	2,094,000

New applications for supply totalled 55,281 kilowatts last year, against 50,942 kilowatts in 1930, while at the annual meeting on Tuesday the chairman pointed out that, whereas in 1920 the demand on the company's system was some 80,900 kilowatts, by 1931 it had risen to 178,400 kilowatts. Units sold totalled 509,528,914, an increase of 62,040,054, or 14 per cent., against a national increase of under 5 per cent. The number of consumers supplied by the company increased by over 44,000, the present total being over 246,000. The company is in negotiation to acquire the Maldon and District undertaking, whose acquisition will add 16 square miles to its "sphere of influence" in Essex. Extensions to the Barking Power Station are in progress, and contracts covering an addition of 150,000 kilowatts to its capacity have been placed. At 2½ the £1 ordinary shares give a flat yield of about £4 16s. 6d. per cent.

Scottish Power.—The 1931 profits of the undertakings owned and operated by this company amounted, after payment of income tax, to £332,605, compared with £271,635 in 1930:—

	Year to December 31.	1929.*	1930.	1931.*

* Including miscellaneous revenue.

The construction of the Tummel development of the Grampian Electricity Supply Company is proceeding according to programme, which provides for the completion of the works by the end of 1933. The Tummel works, on completion, are expected to become revenue-producing, additional supplies to the extent of over 52 million units having been contracted for in advance. At the annual meeting, held in Edinburgh this week, resolutions were carried increasing the share capital to £5,000,000 by the creation of 800,000 new shares of £1 each. Discussing the progress made during the past year, the chairman said that 170 miles of high tension and low tension transmission lines were constructed, while 8,139 new consumers were connected, consisting mainly of

domestic and small power users. Some 155 million units were generated, and 139 million sold, an increase of about 62 million units as compared with the sales for 1930. At 28s. 9d. the £1 ordinary shares yield about £5 18s. 6d. per cent.

Snia Viscosa.—The accounts of Snia Viscosa for the year ended December, 1931, confirm the favourable impression created by the announcement of a 6 per cent. dividend (the first since 1926) on which we commented in our issue of February 13th:—

	1930.	1931.
Profits	Lire. 42,136,448	Lire. 66,840,308
Expenses and sinking fund	52,696,144	21,798,570
Depreciation	657,231,243	21,500,000
Net profits	(loss) 667,790,939	23,541,737

The profit for 1931 was distributed as to 5 per cent. to legal reserve (1,177,087 lire), 3 per cent. to board of directors (670,940 lire), and 6 per cent. dividends on the shares of 200 lire (21,000,000 lire), leaving 693,711 lire to be carried forward. The trading position of the company has been improved to a surprising degree. There has been an increase in production of 30 per cent., an increase in sales of 25 per cent., a reduction in costs on the average of 1930 of 45 per cent., and on those of December, 1930, of 25 per cent., and a reduction in salaries and sundry expenses of 30 per cent. Selling prices, were, however, unsatisfactory, having shown a continual decline. The prices of exported goods were 30 per cent. below those of 1930. The balance sheet of Viscosa shows a very satisfactory cash position. Cash in hand, government securities and bonds, debentures of Snia Viscosa purchased and bills receivable, amounted to 244,933,096 lire and stocks, stores, debtors and payments in advance to 80,018,172 lire, against sundry creditors of 25,843,521 lire. The directors point out that Snia Viscosa is in a better financial position than any other artificial silk company. The ratio between share capital and production, which in the world industry is calculated at an average of 75 lire per kg. is for the Snia Viscosa 20 lire per kg., while for every 100 lire of fixed assets the world industry shows only 19 lire of liquid assets, whereas Snia Viscosa shows 125 lire of liquid assets.

World Oil Restriction Scheme.—An ingenious scheme for the "solution of the world oil crisis" has been put forward by Mr J. B. Aug. Kessler, a managing director of the Royal Dutch Petroleum Company. This is a restriction scheme designed to comply with the United States "anti-trust" legislation and to appeal to such recalcitrant producers as Russia and Roumania. There are many complicated details into which we need not enter, but briefly the scheme proposes that each producing country should estimate the "minimum" output it desires to produce under a conservation scheme, and the world oil industry should then estimate, each quarter, the world consumption of petroleum products. The estimated consumption per country will, of course, be below the desired "minimum" production per country, and in order to encourage producers to restrict output to the level of consumption Mr Kessler proposes that each producer should pay 8 cents per barrel on his "minimum" production into a central fund and be accredited with 40 cents per barrel for every barrel which he produces below his "minimum." Mr Kessler also proposes that the producers in each country, with the exception of the United States, should persuade their respective Governments to prohibit drilling altogether (or alternatively to put a tax of \$30 on each foot drilled) over and above the

WELLINGTON SCHOOL, SOMERSET

This school has made a resolute effort to solve the pressing question of fees, and it possesses every good modern development. Entrance Scholarship Exam., June 15th & 16th.

For full information, apply:

"BURSAR," WELLINGTON SCHOOL, SOMERSET

declared "minimum" production. The chief difficulty lies in the United States. Mr Kessler suggests that the American oil industry should undertake that its exports during any quarter will not be more than its imports plus 50 per cent. of the export surplus plus certain fixed quantities for each petroleum product. He hopes that the American industry will revive the now dormant Export Petroleum Association, so that it can co-operate as one unit under his scheme. This proposal, in effect, gives the United States a first call on the export markets for a certain barrelage each quarter of gasoline, kerosene and other products, which is a valuable advantage if consumption declines. The obvious criticism which will be raised Mr Kessler answers in his memorandum. It is that the insincere producer may fix his minimum production at a dishonestly high figure, and then produce at a reasonably low figure, so as to claim his 40 cents per barrel profit on the difference. This risk, Mr Kessler argues, is obviated by the fact that the payments out of the central fund are not made to producers individually but to associations representing the industry for the whole country. We understand that the scheme has received a large measure of support, that the Soviet Government is willing to co-operate, and that the American industry is calling a conference to consider the scheme in detail. There are many difficulties, such as estimating consumption accurately and inducing bankrupt producers to find 8 cents per barrel for the central fund, but if the scheme could be started it might conceivably work. That it is not an attempt to manipulate prices is at least a point in its favour.

Crown Mines.—Our mining correspondent writes:—In the case of a large low-grade proposition, an abundant supply of native labour is a factor of prime importance. The position in this respect—a position partly due to the depression prevalent in other South African industries—permitted the Crown Mines last year to maintain its development footage at the enhanced total of 1930—no less than 128,100 feet. That the exceptional values disclosed in the former period should also have been maintained could scarcely have been expected. Nevertheless, the results proved highly satisfactory. The payable percentage was somewhat higher than before though the reef declined both in width and value, giving 383 inch-dwts. as compared with 410 in 1930. Including shaft and safety pillars, which are responsible for about one-quarter of the quantity and more than one-quarter of the value, the ore reserves total 12,997,400 tons—an increase of 712,200 tons during the period despite the extraction of a record tonnage. The figures for three years are contrasted below:—

	Years to December 31.		
	1929.	1930.	1931.
Ore milled, tons	2,643,000	2,905,000	3,136,000
Revenue per ton	27/7	27/1	26/9
Costs per ton	20/5	20/3	19/3
Profit per ton	7/2	6/10	7/-
Working profit	£947,110	£990,150	£1,094,050
Net profit	£966,200	£783,960	£952,780
Earned per cent.	87.2	83.1	101.1
Paid per cent.	65	67½	70
Amount	£599,990	£636,570	£660,140
Capital expenditure	£207,440	£165,620	£273,140
Carried forward	£358,390	£440,640	£459,520
Ore reserves (available) tons	8,896,270	9,974,980	10,578,940
Value, dwt.	6.4	6.6	6.5

Last year's heavy capital expenditure was chiefly in connection with the extension of the treatment plant, the building of new compounds, the final equipment of two shafts and the initial equipment of No. 174 sub-vertical shaft. It is interesting to note that the latter, which is to be sunk to 7,400 feet in a virtually untouched section

of the property, will be the deepest vertical shaft in the world. This work, and further additions to the treatment plant, will trench upon the profits of the current year—to what extent no indication is given. Prospects generally are good, and the mine has a long life, despite the depth of many of the workings. Still, in the event of there being another "bulge" in the price of the shares such as the one which occurred a week or two ago under the stimulus of French buying, British holders would preferably do well to realise—if only with the idea of repurchasing should an appreciable setback occur. On a gold basis the yield on the 1931 dividend rate is about 6½ per cent.

Durban Roodepoort Deep.—Steady progress continues to be made by this "Corner House" subsidiary. Last year, thanks partly to improvements in the reduction plant, the record tonnage of 565,200 was put through. Reduction in grade, reflecting the lower value of the ore reserves, was more than offset by economy in costs. As a result the working profit totalled £87,500, or 3s. 1d. per ton, against £66,700, equal to 2s. 7d., in 1930. Following the financial re-organisation of the last-named period, the company—after a five-years' absence from the dividend list—made a distribution of 7½ per cent. The payments for 1931 totalled 15 per cent., and left the expanded balance of £83,000 to go forward. Of cash and investments totalling £168,000, the sum of £79,400 is receivable in British sterling. The performance of a somewhat larger amount of development work than before had the effect of raising the ore reserves by 107,100 tons to 2,150,200 tons, though the value is 0.3 dwt. lower at 6.7 dwts. Allowance being made for sorting, the quantity represents about three and a half years' supply for the mill. The plan issued with the annual report indicates very clearly that, except in the western section of the property, little fresh ground remains to be opened up. Acquisition of the dip area, which belongs to the New Steyn Estates, seems inevitable—as soon as the parties can come to terms. On the basis of last year's dividend, the yield shown is 8 per cent. in South African currency, equal to approximately 10½ per cent. to the British investor at current rate of exchange. All things considered, this is by no means excessive. The par value of the shares is 10s.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Mercantile Bank of India, Eastern Bank, Standard Life Assurance, Scottish Power, City of London Electric Lighting, County of London Electric Supply, The Employers Liability Assurance Corporation, Powell Duffryn Steam Coal, Radiation, Pinchin Johnson and Company, London and Thames Haven Oil Wharves, and Consolidated Mines Selection. At the annual meeting of the Mercantile Bank of India, Sir T. S. Catto, reviewing the outlook for the current year, said that there had been an improvement in the economic position of India since the suspension of the gold standard and the resulting large exports of gold, but like other agricultural countries, India required a revival of trade throughout the world and, above all, the cessation of political disturbances. There was no sign of improvement in the conditions in British Malaya, in view of the low prices for rubber and tin, though the prospects for rice in Burma and Siam seemed a little brighter. The fluctuations in the price of silver and the unsettled internal conditions in China continued seriously to restrict trade with that country. At the annual meeting of Pinchin Johnson the chairman mentioned that the Argentine business was proving very successful, the initial year's trading having resulted in a profit of over 14 per cent., of which only a portion had been distributed.

CENTRAL URUGUAY NORTHERN EXTENSION RAILWAY COMPANY.—Owing to the unfavourable conditions which continue to affect the company's business in respect of both its currency earnings and the depreciated sterling value of the Uruguayan dollar, the results do not permit of the payment of an interim dividend on the shares of the company.

CENTRAL URUGUAY EASTERN EXTENSION RAILWAY.—Owing to the unfavourable conditions which continue to affect the company's business in respect of both its currency earnings and the depreciated sterling value of the Uruguayan dollar, the results do not permit of the payment of an interim dividend on either the 5 per cent. preference or ordinary shares of the company.

CENTRAL URUGUAY RAILWAY COMPANY OF MONTE VIDEO.—Owing to the unfavourable conditions which continue to affect the company's business in respect of both its currency earnings and the depreciated sterling value of the Uruguayan dollar, the results do not permit of the payment of an interim dividend on either the 5½ per cent. preference shares or ordinary stock of the company.

IMPERIAL CONTINENTAL GAS ASSOCIATION.—The Imperial Continental Gas Association announce that, as a revaluation of the company's assets discloses a considerable surplus over the book value, the board have decided to recommend to the stockholders that part of this surplus be capitalised and that a bonus distribution of stock be made at the rate of 100 per cent. (one hundred per cent.), thus doubling the existing issued capital. The new stock will rank pari passu with the existing stock for the final dividend of the year ending on March 31, 1932. A general meeting will be held on March 22nd to pass the necessary resolutions. The 1931 accounts of the associated companies have been received and the board are able to indicate that they will recommend a final dividend at the rate of 7 per cent. (actual), less income tax, upon the doubled capital. This, taken with the interim dividend of 7½ per cent. (actual), less tax, paid on November 13th last, is equivalent to a rate of 10½ per cent. (less tax) for the year upon the doubled capital.

THE MERCANTILE BANK OF INDIA, LIMITED.

EFFECT OF DEPRESSION ON YEAR'S RESULTS. CHAIRMAN'S REVIEW OF CONDITIONS IN INDIA.

The thirty-ninth annual general meeting of the shareholders of this bank was held at Winchester House, Old Broad Street, London, E.C., on Tuesday, the 22nd day of March, 1932, Sir T. S. Catto, Bt., the Deputy-Chairman, presiding.

Sir T. S. Catto, Bt., in opening the proceedings, said:—Ladies and gentlemen, I am sorry to say the Chairman is ill. He has asked me to express to you his regret that, on the advice of his doctor, he is unable to be present to-day to preside over the meeting. I am glad, however, to be able to assure you that he is progressing favourably. His devoted attention to the affairs of the bank is well known to you all, and I am sure I am interpreting your wishes in asking your permission to send to him an expression of your regret at his absence and the best wishes of us all for his speedy recovery.

I know you have come to hear the Chairman deliver one of his interesting addresses. I am afraid you will find me an inadequate substitute; but it will be my privilege to read his speech to you and my duty afterwards to answer any questions that may be put to me.

Before reading the Chairman's address, may I, just for a moment, touch on one point? I would like to emphasise the difficulties of the year we are reviewing. I am sure you realise that the board and the officials of the bank have had an anxious and trying time. We all owe a tribute to the cautious policy of your directors in better years which made the financial timbers of the good ship "Mercantile Bank" so strong that she was able to ride the tempest of last year in a manner worthy of her traditions and of her place in Eastern banking.

In these uncertain times he would indeed be a rash man to prophesy the future. I do not intend to attempt it; but there is a silver lining to all clouds, even if we can see it only dimly, and so we shall go forward with courage and confidence, seared a little perhaps by the ordeal of last year, but richer by the experience.

Before I read the Chairman's speech, I will ask the chief manager (Mr J. Steuart) to read the notice convening the meeting and the auditors' certificate.

The Chief Manager read the notice and the auditors' certificate.

THE CHAIRMAN'S SPEECH.

Sir T. S. Catto:—Well, ladies and gentlemen, the Chairman's address to you is as follows:—

I would at once wish to say how much we regret the loss we have suffered by the resignation of Mr Robinson from the board. He not only took a deep interest in the welfare of the bank, but gave us valuable advice and assistance. We are sorry to lose his services, but unfortunately his health was such that he felt it was only fair to the bank he should resign. I am sure you will all join me in wishing him a quick restoration to health.

The closing of our sub-agency at Kuala Krai is due chiefly to a change in the plans and organisation of the Federated Malay States Railways and as the other business of the bank in Kelantan can be carried on at Kota Bharu.

At our meeting last year I referred to what I described as the world-wide depression in 1930, and said that the outlook for the then current year depended upon a recovery in prices generally. Unfortunately, not only has there been no such recovery, but there has been a further fall in prices and a grave world economic crisis. The suspension of the gold standard by this country is the most momentous event in post-war financial history. It is true that, so far, at any rate, the depreciation of the pound has not brought about any material rise in internal prices in this country, but this is at least partly due to the reduced purchasing power of our people is, as the result of high taxation, are finding it necessary to exercise strict economy. Any tendency to an advance in sterling prices has been offset to some extent by a fall in gold prices. This in turn has reduced the purchasing power of countries still on the gold or gold exchange standard, such as the Dutch East Indies and Siam. The causes and effects of the crisis have been ably and lucidly set out by the chairman of the "Big Five" and other banks, and there is not much left for me to say. The fall in prices resulting in loss of purchasing power and confidence is, of course, at the bottom of our troubles, and it is difficult to select the chief cause of this. I do not think it is due to monetary causes or that monetary policy can control the world price level, and certainly not in the absence of wide international co-operation. There are those who advocate a return to bi-metallism for the purpose of enlarging the basis of

credit, raising prices and, as they say, increasing the purchasing power of China and other countries. But here again a wide international agreement would at least be necessary, and at the present time particularly it would be difficult, if not impossible, to fix a ratio between gold and silver, while surely the purchasing power of a country depends upon the volume and prices of its exports visible and invisible.

INDIA'S FINANCIAL POSITION.

In spite of a satisfactory monsoon, India has had to bear her share of the world-wide economic depression, as she depends largely upon the prices obtainable for her agricultural products; unfortunately also the depression was accentuated by the civil disobedience campaign, the boycott of British goods and the closing of markets, resulting in disturbances and discouragement of trade. Of all this there is more than sufficient evidence in the figures relating to imports and exports and in the railways' deficit, all of which have necessitated the Emergency Finance Bill. The Government found it necessary to cut down expenditure, increase the import duties and raise taxation generally, while in addition to selling Reserve Council Bills to the extent of £17,000,000 to support exchange, large issues of Treasury Bills at high rates of interest had to be issued with the result that the average Bank rate has been over 7 per cent., and there was a serious depreciation in Government securities. The amount of Treasury Bills outstanding at the beginning of the year was equivalent to about £40,000,000, which was increased to £63,000,000 in September and reduced to £45,000,000 at the end of the year. But in the last quarter of the year, and as the result of our forced break with gold, and the rupee following sterling, a marked change in the situation arose as a consequence partly of the economic depression, but due chiefly to the desire to take advantage of the profit to be obtained by selling and shipping gold. The fact that by the end of the year shipments amounted to £25,000,000 proved of great assistance to the Government, the effect being that Government was able to remit £19,000,000 to this side at rates rising to 1s. 6½d. Since the end of the year these shipments of gold have continued in large volume, the total since the movement started now amounting to about £41,000,000, and this had enabled the Indian Government to obtain further sterling to an amount not only sufficient for necessary requirements, but to pay off a large amount of maturing debt. It may be said, therefore, that so far as finance is concerned, the Government of India is in a much stronger position than at any time in the last year or two, while incidentally these shipments of gold have been helpful in maintaining the value of the £ in gold currencies, the shipments in question having gone chiefly to the Continent, but also to America. As I have said, conditions in India are reflected in the trade figures for the past year. As compared with 1930 the exports of merchandise show a decline in value of £62,000,000 at £127,000,000, and at £101,000,000 the imports have fallen by £38,000,000. The imports of silver were only £5,000,000 against £9,000,000 in 1930, while instead of nearly £12,000,000 of gold imported in that year there were net exports of £25,000,000 last year. The result is that, including merchandise and bullion, the visible balance of trade in favour of India last year was £46,000,000 comparing with £34,000,000 in 1930, but this favourable result was due to reduced imports of silver and the unusual exports of gold. If the figures relating to merchandise alone are compared the balance in favour of India declined from £54,000,000 in 1930 to £28,000,000 last year. On the export side of the account the value of cotton declined from £41,000,000 to £24,000,000, raw jute from £11,500,000 to £9,000,000, jute goods from £28,000,000 to £16,000,000, tea from £17,500,000 to £15,000,000 and ground nuts from £8,750,000 to £7,500,000, these differences being accounted for chiefly by the general fall in prices. Of the imports, I will only mention the figures relating to cotton piece-goods and yarn shipped from the United Kingdom, the value of which fell from £14,750,000 in 1930 to £6,250,000 last year. Economic conditions were the main cause of this, but the boycott of British goods partly contributed, as imports from Japan did not fall to nearly the same extent. But it is the Bombay cotton mills that feel the competition of Japanese goods most in spite of the fact that they are protected to the extent of 25 per cent. It is, of course, natural that the cotton industry, the most important in the country, and which counts for so much on the Bombay side of India, should feel the effects of the economic depression and the disturbances created by the Congress

Party. The Calcutta jute mills had not to face such a heavy fall in the price of jute as in the previous year but, as the result of a poor demand for their manufactured goods, stocks accumulated and shorter hours of working had to be adopted. Then with a further decline from the already low price of tea the Companies engaged in this industry had a very lean year. The rupee fluctuated between 1s. 5½d. and 1s. 6½d., which was the high point touched in December, the average for the year being 1s. 5¾d.

REPORT OF CENTRAL BANKING ENQUIRY COMMITTEE.

The report of the Central Banking Enquiry Committee, to which I referred at our last meeting, was published in September and embodies much useful and interesting information. The chairman and the other members of the committee are to be congratulated upon the painstaking manner in which they have carried out the inquiry, which involved much time and labour. To refer to the report in detail to-day is not only unnecessary, but it would take up too much of your time. But as some of the suggestions and recommendations closely concern what are called foreign banks, under which heading British banks are included, I cannot avoid making some reference to the report. In the first place I would say that so far as the majority report goes, there is little or nothing to which we can take exception, but although this report was signed by all the members of the committee except one, who has issued a minority report, there is unfortunately a minute of dissent signed by six members which can hardly be described as fair to British banks, considering all they have done to foster and develop Indian trade. I will confine myself, however, to a few general remarks. To begin with, so far as we are concerned we would welcome the establishment of a Reserve or Central Bank, which would be free from political influence and confine its operations to the control of currency and credit, but we cannot think that a new Indian Exchange Bank is required, and it would be a new and dangerous precedent for the Government of India to provide the capital for such a bank. As we value the business of our Indian customers very highly, it is perhaps unnecessary for me to say that it would be folly on the part of British banks to discriminate against such good friends in the matter of making advances and we certainly do not do so, but we are not prepared to lock up the money of the bank in industrial debentures, as it is suggested we should do, for that is not good business or good banking, either for British or Indian banks. The suggestion that we should appoint local advisory boards at each of our branches seems not only unnecessary but might be opposed to the interests of many of our Indian customers. Then there seems to be an impression that British banks are prejudiced against sound Indian insurance companies. This is far from the case, as we are always ready to and do accept the policies of such companies. The proposals that, while British banks are to be licensed, Indian banks should not require a licence and that British banks should not be allowed to accept Indian deposits or have branches up-country are, to say the least, unreasonable. I must now refer to the conditions prevailing last year in countries other than India and where we have branches, but as no country has escaped the effects of financial stringency and the loss of purchasing power resulting from the low prices ruling for primary commodities, I have nothing encouraging to say.

CEYLON.

The shipments of tea from Ceylon show an increase in quantity, but, at £15,750,000, a decline of nearly £3,000,000 in value compared with the previous year, while the shipments of rubber declined from 75,000 tons to 62,000 tons and in value from nearly £4,000,000 to £1,750,000.

BRITISH MALAYA.

The depression in British Malaya, where the price of rubber and tin is of such importance, has been even more acute than elsewhere, and heavy losses have been made. The average price of rubber last year was only about 3d. per lb., against 5½d. in 1930, and the corresponding prices of tin £118 and £142. The net shipments of rubber, which exclude imports from the Dutch East Indies, were 422,000 tons, compared with 442,000 tons in the previous year, the respective values being, say, £12,000,000 and £23,000,000. The shipments of tin amounted to 83,600 tons, valued approximately at slightly under £10,000,000, which compares with 96,800 tons and £13,750,000 in the previous year. The total value of all merchandise imported is entered at £52,750,000, the comparative figures for 1930 being £82,000,000, while the corresponding figures relating to exports are £46,750,000 and £76,000,000. These figures, I need hardly say, speak for themselves, showing as they do the extent to which British Malaya is feeling the economic crisis.

BURMA AND SIAM.

I mentioned last year the extent to which Burma and Siam depend on the market for rice and as, until the gold standard was suspended, prices continued to fall, both suffered from this cause, in spite of larger shipments than in the previous year. The ship-

ments from Burma amounted to 3,500,000 tons and those from Siam to 1,200,000 tons. The rupee being linked with sterling, Burma has lately had an additional advantage over Siam, as the currency of the latter country is still based on gold, with the result that in order to compete with Burma and market her crop, she has been obliged to accept a lower price in teals, while the cultivator in Burma has been able to obtain a higher price in rupees. But in spite of this handicap there was a small balance of trade in merchandise in favour of Siam last year as compared with a smaller adverse balance in 1930.

CHINA.

Of China it is always difficult to know what to say. It is a land of mystery and surprises, but that it has suffered from the world depression is natural. In addition, there were serious floods and various military operations, all of which interfered with business. In spite of these disturbing features, there was a further substantial increase in the receipts of the Chinese Maritime Customs, which amounted to taels 246,000,000 last year and which compares with taels 180,000,000 in 1930, though this increase is largely due to increased duties and the continued collection of these on a gold basis. Then the action of Japan in Manchuria, resulting in an anti-Japanese boycott, which spread to Siam and British Malaya and proved of assistance to Lancashire manufacturers, inflicted losses on the importers of the large stocks of Japanese goods. The wide fluctuations in silver also presented difficulties for those engaged in the import trade in China and at Hongkong. The low price of the metal ruling during the greater part of the year ought to have given an impetus to exports, but the economic crisis in Europe and America, combined with the disturbed state of the country and difficulties of transport, checked this. In February the quotation for silver touched a new low record of 12d., the highest price of the year being 21½d., which was quoted in November, but of course this wide range is explained by the depreciation of sterling. The Hongkong dollar and the Shanghai tael fluctuated accordingly, the former ranging from 10½d. to 1s. 6½d. and the latter from 1s. 1½d. to 2s. 0½d. The sales of silver by the Government of India, who raised the duty on imports twice during the year, are estimated at 35,000,000 ounces, and it is reported that the Siamese Government disposed of about 18,000,000 ounces. The Commission appointed by the British Government to inquire into and advise upon the question of Hongkong currency issued its report in August and does not recommend stabilisation of the exchange in the meantime, but makes certain proposals for placing the currency more directly on a silver bullion basis than it is at present. An interesting feature of the proposals is that the dollar should practically cease to be legal tender and that the notes of the three banks of issue—of which we are one—should be given legal tender status.

MAURITIUS.

The cyclone in Mauritius in the early part of the year resulted in a small crop of sugar and, with large world stocks of this commodity and no recovery in the price, conditions in the island have deteriorated further. A loan had to be issued recently for the purpose of giving financial assistance to the planters.

DUTCH EAST INDIES.

The Dutch East Indies also are seriously affected by the low price of and poor demand for sugar, a large part of the 1931 crop still remaining unsold, and at present it does not look as if the Chadbourne plan to restrict the world crops of sugar is meeting with any particular measure of success. Also Java and Sumatra are suffering from the low prices of rubber and tea, and, as the guilder is attached to gold, this means that to meet competition with British Malaya and India they have to accept very low prices in local currency.

THE ACCOUNTS.

I come now to the accounts and, while of course these compare unfavourably with those of past years, I hope that, in view of the unexampled difficulties and anxieties of last year, you are not unduly disappointed with the results. It was more particularly in the second half of the year that our troubles arose as the result of the suspension of the gold standard by this country and the heavy fall in the value of British and Indian Government securities. The results of the first six months, however, were such that we deemed it prudent to reduce the interim dividend from 8 per cent. to 7 per cent., hoping then to pay a similar final dividend, and it is with regret that, in view of the unfortunate events of the latter half, we do not now see our way to recommend a final distribution of more than 5 per cent. The non-recurring losses on exchange arose in the ordinary course of our business in Siam and the Dutch East Indies and as the result of those countries remaining on gold, while the very heavy depreciation in our investments was quite beyond our control. Then you will not be surprised to hear that, arising from the further fall in prices, the decline in the value of investments generally and the universal depression, we have found it necessary to provide for more than the usual bad and doubtful debts. In

doing this I may say that, so far as it is possible to judge in times like the present, we have made ample provision and, indeed, hope it may prove we have provided too much. It was, however, impossible to provide for all these contingencies out of the profits for the year, but fortunately we had substantial inner reserves, and by transferring £450,000 from the reserve fund (leaving this still at £1,050,000, equal to the paid-up capital) and adding the former sum to our inner reserves, we have made all the necessary provision. Of our investments, I may mention that a large number are of a short-dated character, maturing within the next five years, and that, while we have written down the whole of our investments to market prices ruling on December 31st last, a valuation made on February 29th discloses that nearly all the depreciation for which we have provided has been recovered, and our inner reserves are strengthened accordingly. The balance sheet reflects a contraction in our business all round, due chiefly to a decline in the volume of trade as compared with the previous year and the fall in prices. The figures under the heading, "Current Fixed Deposit and other Accounts, &c.," show a reduction of £2,759,000, the principal explanation of this being the high rates of interest at which Treasury bills were issued in India and in this market. On the assets side, cash is lower by £1,163,000, this reduction corresponding with our smaller liabilities in respect of deposits. The decline in the value of our Government and other securities, which, as I have said, have been written down to values ruling at December 31st, is explained by this writing down. The reduction in bills receivable of £1,163,000, which curiously are also the figures relating to the reduction in cash, indicates the contraction in our turnover. At £5,285,000, our loans receivable and advances show a remarkably small decline of £164,000, and make it clear that we have not restricted the facilities we are always ready to afford our customers even in bad times. The total of the balance sheet, you will notice, is lower by £2,975,000. The profit and loss account calls for very little comment, except that unfortunately the profit shows a substantial decline. We have as usual added £15,000 to the officers' pension fund and again written £10,000 off freehold banking premises, while at £167,926 the amount carried forward is slightly increased. There is, of course, no addition to the reserve fund on this occasion. As I have said, we recommend a final dividend of 5 per cent., making 12 per cent., less tax, for the year.

STAFF AND EXPENSES.

In view of the difficult times through which we are passing and the necessity everybody is under of adjusting expenditure to income, you will no doubt expect me to tell you that your directors have been looking into the question of our expenses and considerable economies have been carried out, though the full effect of these will only appear in the current year. First of all, the directors having agreed to a reduction in their fees, the staff were then asked to accept a reduction in their salaries, and I need not say they appreciated the position and readily accepted the proposed reductions. As the bank received such loyal service from the staff it was with regret that we approached them in this matter, but in your interests we deemed it our duty to do so under existing conditions, and there was no alternative other than a reduction of their numbers. In other directions also, and with the full co-operation of the chief manager and the staff generally, we have been able to cut down our expenses to a level more in proportion with the profits of the last two years. But it is not only for meeting us so readily and helping us to reduce our expenses that our thanks are due to the staff, but also for their devotion to and unceasing work in the interests of the bank during a year carrying with it exceptional difficulties and problems. On behalf of the board, therefore, I take this opportunity of saying how much we appreciate the assistance we have received from Mr Steuart, Mr Crichton and Mr Linton, who I know have in turn been ably supported by the accountants and those in charge of other departments at the head office; while our thanks are due also to the managers, accountants, assistants and the local staff at the branches and particularly to those serving us at Shanghai, where conditions recently have been both difficult and dangerous.

OUTLOOK FOR THE CURRENT YEAR.

At this time last year I did not take an optimistic view of the outlook for the year then before us, but I ventured to say I thought we had arrived at a convalescent stage, and unfortunately in this I was somewhat premature, as the situation is more abnormal than ever, and with so many financial and international problems still to be solved it is impossible to form any reliable opinion of the future course of events. But we can at least congratulate ourselves upon the fact that, in this country, we have survived the crisis of the past year better than other countries by reason of the sturdy character of our people and their willing response when called upon to bear the burden of heavy taxation. We have had no banking failures, and there has been no hoarding. But, while the National Government have already done much in the direction of balancing the Budget, correcting the balance of payments and defending the pound sterling,

they cannot alone bring us prosperity until the trade of the world recovers and there is a marked improvement in the price level. The change in our fiscal policy by the introduction of the Import Duties Bill is admittedly an experiment the effects of which have yet to be seen, but, like the suspension of the gold standard, this may be said to have been forced upon us, and if it only results in restoring a favourable balance of trade and raising revenue we shall have cause for satisfaction. But even then there will be many international questions outstanding, the settlement of which will take time, and until the balance between production and consumption is restored by the liquidation of the existing large stocks of many primary products, I am afraid we cannot look for the essential rise in prices generally, the free exchange of goods and the restoration of confidence. It is too much to hope for a cancellation of Reparations and War Debts as the result of the coming Conference at Lausanne, but a revision of these to correspond with the price level would clear the air, while if there is to be a measure of credit expansion and a better use made of gold in America arising from recent legislation in that country, this would be helpful all round, provided there is no uncontrolled inflation. Of India it can be said there has been an improvement in the economic position since the suspension of the gold standard and the resulting large exports of gold, but, like other agricultural countries, India requires a revival of trade throughout the world, and above all a cessation of political disturbances. Money conditions in London and India are now easier than they have been for a long time and give reason for hope that 1932 may see some revival in trade, but unfortunately conditions in Central Europe are still far from stable, and one would have to be an optimist indeed to prophesy at the present time.

There is no sign of improvement in conditions in British Malaya in view of the low prices for rubber and tin. As to Burma and Siam, prospects for rice seem to be a little brighter, though due to smaller crops, resulting in some improvement in prices, the estimated surplus for export from Burma being 2,700,000 tons, and that from Siam only 900,000 tons. The position in the Dutch East Indies, where, as I have said, the currency is still attached to gold, shows no sign of improvement, and depends mainly upon the price of sugar and rubber. In China the trouble with Japan, particularly at Shanghai, where Japan is fighting for her trade, gives great anxiety, although at the moment there is a cessation of hostilities, which I hope will prove permanent. The fluctuations in the price of silver and the unsettled internal conditions in China continue seriously to restrict trade with that country.

The Chairman concluded by moving the adoption of the report and accounts.

Mr P. R. Chalmers.—I have much pleasure in seconding the resolution.

The resolution was put to the meeting and carried unanimously. The retiring directors, Mr J. M. Ryrie and Mr C. J. Hambro, were re-elected, and the auditors, Messrs Cooper Brothers and Company and Messrs W. A. Browne and Company, were re-appointed auditors of the bank.

The Chairman.—Well, ladies and gentlemen, I think that concludes the business of the meeting, and I thank you for the patient manner in which you have listened to me.

VOTE OF THANKS TO CHAIRMAN AND DIRECTORS.

Mr P. E. Gourju.—May I suggest that we pass a hearty vote of thanks to the chairman and to the board of directors? Of course, it was quite a shock to the shareholders when they heard of the reduction in dividend, and must have brought home to everybody the exceptional difficulties with which the directors have had to contend, but we are pleased to see that the results shown are quite good as compared with those of many other banks. I hope in the future we shall see better times, and then I have no doubt the board will make the most of their opportunities. Will somebody second the vote of thanks?

Mr F. G. Jones.—I have pleasure in seconding the motion. The vote was unanimously accorded.

The Chairman.—Mr. Gourju, ladies and gentlemen,—I beg to thank you very much for the cordial vote of thanks which you have passed, and I can assure you that in the current year we shall endeavour to continue to work as we have done in the past, so that as you have expressed in us in past years. (Applause.) The proceedings then terminated.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8, Bouverie Street, Fleet Street, London, E.C.4.

THE EASTERN BANK LIMITED.

A DIFFICULT YEAR.

IMPROVED OUTLOOK.

The twenty-second annual general meeting of the Eastern Bank, Limited, was held, on the 23rd instant, at 2 and 3, Crosby Square, London.

Mr J. S. Haskell (the chairman) said that the past year had been the most difficult and perhaps the most eventful in the history of banking, industry and commerce within living memory. A number of adverse circumstances coming upon the world in rapid succession, both in the economic and political spheres, had paralysed business and created one critical situation after another. Although the working profits of the bank were, in fact, a little higher than in the previous year, it could not be a matter of surprise that, in the abnormal circumstances which had prevailed, the bank should incur certain losses. Including the balance brought forward, the profits amounted to £169,291. It was proposed to allocate £20,000 to the reserve, bringing it up to the round figure of £500,000, to pay a final dividend of 3s. per share, less income tax at 3s. 10.305d. in the £, after allowing for Dominion relief, making 6 per cent. for the year, and to set aside £55,000 for contingencies, leaving £34,291 to be carried forward. All losses had been fully met out of the contingency fund. It was much to be regretted that there had to be a reduction in the dividend, after a uniform rate of 9 per cent. had been paid for over a decade, but the past year had been an abnormal one and should not be taken as a criterion of the earning capacity of the bank under normal conditions.

POSITION IN INDIA.

India, apart from its own local troubles, such as political agitations and the boycott, had also been affected by the repercussions of the events in Europe and the continued fall in world commodity prices.

It was reassuring to learn from the statement of the Finance Member recently that the Budget would be balanced, no new taxation being proposed and no fresh borrowing contemplated except for the purpose of repayment of maturing loans.

Trade had been affected by the low prices and lack of buying power in India and abroad, the balance of trade in favour of India being £25,400,000 (excluding gold and silver) as compared with £54,300,000 in 1930.

In September last, however, markets became more animated. The prices of raw cotton, jute and gunnies began to improve. During the last two months the price of rice had risen by about 50 per cent. owing to the demand from China and Japan. Imports of cotton piece-goods from the United Kingdom had likewise shown a welcome increase. The change in the economic situation was also reflected in the improvement of India's credit. All her securities had materially advanced within the last two months, testifying to the increased confidence in the soundness of her finances, and, given tranquillity and freedom from political strife, of which there seemed to be a fair prospect, India, in the words of Sir Samuel Hoare in the House of Commons, "is through the worst of the crisis, and is in a better position to take advantage of a general recovery than almost any other great country in the world."

SITUATION AT HOME.

The situation at home was also improving; the economic measures introduced by the National Government and now in force had put new heart into manufacturers and traders and greatly restored confidence, casting a brighter aspect all round. As regarded wheat, a direct duty on imports in lieu of the quota would have been preferable. It was a fallacy to assume that import duties must always be borne by the consumer. This was certainly not so in the case of wheat, which was imported from all parts of the world, Russia, the United States of America, Argentina, Canada, Australia and the United States of America, all competing with each other as to who would be the best seller. Whatever the incidence of a duty might be, it would certainly not make bread dearer than the quota, which, it was admitted, would put up the price of the loaf by one halfpenny. The advantage of a duty would be an additional yield to the revenue and a direct and simple arrangement with the Dominions for preferences. If a quota were to be allotted to each Dominion and India separately it would greatly complicate the situation. As much as 70 per cent. was mentioned as the total of the quotas, leaving very little for competing foreign countries such as Russia, the U.S.A. and the Argentine. A direct duty on imports would not be so objectionable to those countries. It was to be hoped that when this subject came up for discussion at the Ottawa Conference the question of a duty would not be ruled out, as a suitable arrangement with the Dominions on that basis would be found more sound and practical.

The reports and accounts were unanimously adopted.

SCOTTISH POWER COMPANY LIMITED.

SUCCESSFUL RESULTS DESPITE INDUSTRIAL DEPRESSION.

The twenty-second annual ordinary general meeting of the Scottish Power Company Limited was held on the 18th instant, at 10 Melville Street, Edinburgh, Mr George Balfour, M.P., chairman of directors, presiding.

The Chairman, in moving the adoption of the report and accounts, said: The report and accounts your directors submit to-day must, I think, be regarded as fulfilling our forecasts, notwithstanding the industrial depression, which not only continued, but became more acute as the year advanced.

The capacity of the generating plant installed in our various power stations totals 96,460 k.w. The total load connected at the close of the year was approximately 106,500 k.w., and resulted in a maximum demand on the generating plant of 42,500 k.w.

170 miles of high tension and low tension transmission lines were constructed during the year, and altogether underground and overhead transmission lines in the various undertakings have now been laid or erected to an aggregate of over 1,330 route miles, of which 57 miles are 132,000 volt and 770 miles are from 33,000 to 6,000 volts, the balance of 503 miles being low tension overhead lines or underground mains.

OVER THREE THOUSAND NEW CONSUMERS.

During the year, 3,139 new consumers were connected, consisting mainly of domestic and small power users, the type of business which for some years we have successfully encouraged by the introduction of two-part tariffs and propaganda directed towards popularising and extending the use of electricity. The number of consumers connected at the end of 1931 in all of the undertakings totalled 27,113, as compared with the previous year's figure of 23,974.

We generated about 155,000,000 units, and sold approximately 138,500,000 during the year, an increase of 61,500,000 units as compared with the sales for the year 1930. Of this increase, over 54,000,000 units were delivered to the Central Board at Abernethy and Bonnybridge, and the balance is attributable to the general growth in our business, notwithstanding the falling off in industrial demand, which is general throughout the country.

It may interest shareholders to know that the average revenue received by the combined undertakings for the year was .95d. per unit, a very low average figure to receive for all the supplies from such a diversified load over so large an area.

DIVIDEND.

There was brought into the accounts of the company by way of interest, dividends and management fees the sum of £249,751 2s. 6d., and the total revenue received by this company, including revenue from temporary investments and transfer fees, amounted to £251,391 10s. 3d. After deducting administration expenses, and adding £5,380 2s. 11d., the carry-forward from the previous year, there was a credit at net revenue account of £241,051 2s. 8d. Out of this amount there have been paid interest on loans totalling £3,396 4s. 6d. and the full year's dividend on the preference shares of the company amounting, less tax, to £45,000, leaving a balance of £192,654 18s. 2d., which the directors propose to deal with as follows: (1) In payment of a dividend on 3,105,250 ordinary shares for the year at the rate of 8 per cent. per annum, less tax, £186,315; (2) To be carried forward to next year's accounts, £6,339 18s. 2d.

In order to meet capital expenditure on new works and mains extension in all the undertakings, it will be necessary to make a further issue of capital during the current year. The directors, therefore, ask your approval to an increase of the share capital of the company from £4,200,000 to £5,000,000 by the creation of an additional 800,000 new shares of £1. The appropriate resolution is incorporated in the notice calling this meeting, and I will submit the resolution on the conclusion of our general business. No decision has so far been arrived at with regard to the class of capital to be issued since, as you will appreciate, this will depend on financial and other conditions at the time of issue, but you may rest assured that the directors will take all factors into account in the interests of the shareholders.

The motion was seconded by Mr Ian C. A. Murray, and after being put to the meeting, was carried unanimously.

Mr George Balfour, M.P., was unanimously re-elected a director of the company.

The Chairman thereafter submitted to the meeting as special business a resolution in the terms incorporated in the notice calling the annual general meeting that the share capital of the company be increased to £5,000,000 by the creation of 800,000 new shares of £1 each.

Mr Henry Brown seconded the resolution which, upon being put to the meeting, was carried unanimously.

The meeting terminated with a vote of thanks to the chairman.

STANDARD LIFE ASSURANCE COMPANY.**BONUS AGAIN 42s. PER CENT. ANNUAL AND COMPOUND.****STRINGENCY OF VALUATION FULLY MAINTAINED.****RECORD NEW BUSINESS.**

The hundred and sixth annual general meeting of the Standard Life Assurance Company was held, on the 22nd instant, within the company's office, at Edinburgh, Mr E. M. Beilby (the chairman) presiding.

The Chairman said:—At the annual general meeting last year I referred to the fact that 1930 had been a bad year for trade at home and abroad, and that the conditions prevailing were difficult and unsettled. Unfortunately, what I then said is again applicable, but with added emphasis. For trade and finance the past year has been one of the worst within living memory.

THE WORLD CRISIS.

Lately a great deal has been said and written about the various factors which may have contributed to the world depression. The fall in commodity prices, the drift of gold to France and America, the raising of tariff barriers and the imposition of restrictions on exchange have all been enlarged upon. I do not propose to dwell on these matters or to make more than a short reference to the great financial crisis through which we have been, and, indeed, are still passing. The effects of the suspension of the gold standard, which was forced upon this country last September, have been felt in every corner of the globe. The dislocation in the rates of exchange completely upset the normal relations between debtors in one country and creditors in another, and stock and commodity markets were violently disturbed and abnormal protective expedients were adopted by one nation after another. The resulting loss of confidence was experienced in varying degrees in all countries, but, although for some time the people of this country had anxious moments, they faced their difficulties with a resolution which astonished the world.

CONFIDENCE IN THE FUTURE.

In times of trial the true character of a nation is displayed, and looking back on the past six months we may be proud and thankful that this country has been able to weather the economic storm satisfactorily so far. Great credit must, in my view, be given to the financial institutions which serve our country, but it is perhaps the spirit of the people themselves, as exemplified in cool judgment and shrewd commonsense, which has been our greatest asset. There are, of course, some people who always take a gloomy view, whether the question at issue be our trade, our currency, or our security values. Seldom, however, is a useful purpose served by pessimism. It is true that reparations and war debts and other important financial matters are still ahead of us; it is also true that trade in general has not yet shown any marked signs of convalescence, and that the burdens of unemployment and public debt are heavy; but in the knowledge of what the people of this country can accomplish when they are called upon to make sacrifices or to endure hardship I feel confident that we shall eventually win through to more prosperous times.

THE PAST YEAR.

So far as the Standard Life Assurance Company is concerned, the results of the past year's working must be considered satisfactory, especially in view of the difficult circumstances prevailing throughout the year. Our total new business exceeded £4,700,000, being the largest amount recorded in the history of the company. We also transacted a record amount of business in immediate annuities, the total purchase money exceeding £849,000. The new premiums of £566,000 received during the year, as well as the increase in funds of over £1,500,000, were also of record amount. As to the composition of the new business, more than £2,750,000 of life assurances were completed after deduction of reassurances, a figure which is less than the previous year's total by about £380,000; but, on the other hand, leasehold assurances and the value of deferred annuities at pension age have each increased by more than £500,000 over the previous year's respective totals.

If you turn to the life revenue account you will see that in each of the previous four years we transferred £100,000 to the general reserve and it now stands at the large sum of £800,000. On the present occasion the directors have set aside £15,000 as a provision for pensions and have carried £85,000 to inner reserve as it was thought advisable, in view of the uncertain outlook, to strengthen still further our "first line of defence" by adding to this reserve. The only other item in the revenue accounts of any note is the large increase in the premium income of the capital redemption fund to which I have already alluded when discussing new business.

VALUATION RESULTS.

The valuation of the company's liabilities and assets was made as at November 15, 1931, the manager and actuary adopting the same stringent basis in valuing the actuarial liabilities as he has employed for some years past, the rate of interest assumed for the purpose of his calculations being again 2½ per cent. As regards the assets, you will see from the report that the directors, as a result of their investigation, were satisfied that our various holdings were fully of the value stated in the balance sheet; in the case of Stock Exchange securities the market value was arrived at by taking the lowest quotations on November 14, 1931. It may be remarked that market quotations have for some months past been very sensitive, and the low levels to which securities fell during the concluding months of last year involved a considerable strain on life assurance companies called upon to make their valuations, the depreciation affecting all classes of Stock Exchange investments. Last year I told you that the market value of our investments was considerably in excess of the value which appeared in the balance sheet. It was only to be expected that we should have experienced depreciation when valuing our holdings, but I am pleased to be able to report that there was still a good margin on the right side between the market and the balance sheet values of our assets.

COMPOUND REVERSIONARY BONUS OF £2 2s. MAINTAINED.

After valuing our securities and providing for the liabilities in the stringent manner mentioned above, and making the transfer to inner reserve already referred to, it was possible to provide the compound reversionary bonus at the rate of £2 2s. per cent. per annum declared last November and to carry forward over £30,000. We must count ourselves fortunate in being able to present such a satisfactory statement of affairs.

I take this opportunity of drawing attention once more to our cash bonus minimum premium scheme; in difficult times such as the present I cannot conceive a more useful form of policy, seeing that the rates are little higher than ordinary non-profit rates, the assured having nevertheless the right to participate in profits. By the operation of the cash bonuses the yearly cost of insurance under this scheme is reduced to a minimum. In particular those who require to make provision for death duties and consequently need large cover at the lowest cost should ask for quotations from one of the company's offices. I may mention that during the year a large number of policies were effected under this scheme.

CONSOLIDATED MINES SELECTION COMPANY, LIMITED.**INTERESTS AFFECTED BY WORLD CONDITIONS.**

The thirty-sixth ordinary general meeting of this company was held, on the 22nd instant, at River Plate House, London.

Mr Walter McDermott, the chairman, said that the depression in all securities relating to their sphere of action which they had to face for 1930 continued on a still larger scale during 1931, and its effect was reflected in the figures set out in the directors' report.

The profit and loss account had again suffered from the failure of the Anglo-American Corporation to pay the large dividend they had been accustomed to receive yearly up to 1930, that corporation having suffered from the universal depression in the mining industry and from the world conditions, which were destructive of the diamond trade in a manner never experienced before. The Anglo-American Corporation had to its credit the development of the Daggafontein Gold Mine into an important producer, with a sound financial position and having ore reserves of over 2,000,000 tons, averaging 8.09 dwt. in gold contents. The mill started operating in January, 1932, and could be calculated on as a regular contributor to the yearly Rand gold production in future.

Their small investment in the Botanamo Gold Mine of Venezuela proved a satisfactory one. The mine continued to yield monthly profits, and the latest reports stated that the newly opened 600 ft. level showed an ore shoot of about 130 ft. in length on an 8 ft. vein assaying about 30 dwt. gold per ton. It was a nice little mine, making profits of about £2,500 monthly, out of which they received dividends on their investment which had been written down to nothing in their books.

In conclusion, the chairman said that what they had to look forward to to-day as a basis of future success was an improvement in their Rhodesian copper interests and the revival of the diamond trade. Both of these must depend on world industrial conditions, but a refusal to believe in those conditions improving would imply an unwarranted pessimism about the earth and all its peoples. The report was unanimously adopted.

POWELL DUFFRYN STEAM COAL COMPANY, LIMITED.**LOWER COSTS—STRONGER FINANCIAL POSITION.**

The annual general meeting of the Powell Duffryn Steam Coal Company, Limited, was held, on the 22nd instant, at the Cannon Street Hotel, London, Mr Edmund L. Hann, chairman and managing director of the company, presiding.

The Chairman, in moving the adoption of the report and accounts, said that the fixed assets had in the past been written down to amounts below their true value, and during 1931 the whole of the collieries and washeries have been revalued by Mr E. O. Forster Brown, who is recognised as being one of the most eminent independent mining engineers in the country, and who also valued the collieries of the two subsidiary colliery companies, the Rhymney Iron Company, Limited, and the Great Western Colliery Company, Limited. The combined valuations show a considerable surplus over the total at which these assets and investments are held in the books of the company.

The trading profits for the year £304,280 show a decrease upon last year of £66,014. The fall in profits as compared with last year has been occasioned mainly by the miners' strike in January, 1931.

Both the directors and staff continue to waive a substantial portion of their fees and salaries.

PRODUCTS OF THE COMPANY.

Mr Hann mentioned Synthatar and Synthacold, two improved tar products which are being very successfully used for road dressings, and asked local authorities and all interested in road making to use tar produced by British firms. Synthacold, which is Synthatar in cold form, has proved a most successful tar dressing, not only for roads but for small or large garden paths, drives, etc., and is being marketed in small quantities as well as in bulk to meet the requirements of the small user.

The quality of the Powell Duffryn coals stands to-day at even a higher level than it has in the past. Shipowners are studying more than ever their fuel costs, and the use of the company's Penallta washed bunker coal and Penallta No. 2 bunker coal is increasing, but the Chairman confessed to some disappointment at the lack of interest displayed in Welsh coals by the large steam users in London. The higher calorific value, entire freedom from smoke and practical immunity from sulphur fumes should make these coals an ideal proposition in London.

For use among the smaller industries and institutions in the London area a coal is being marketed which has been found by experiment to be most suitable for vertical boilers and to which has been given the trade name of "Powell Duffryn Virticol Smokeless Coal." "PhurnoD," for domestic hot-water boilers, etc., is also finding an increasing sale.

The time has now come when this unfair burden on the industry of the Miners' Welfare Levy should be removed. There is nothing but sympathy for any practical scheme to better the lot of the miner, but to segregate from the profits of the industry a levy of some £1,000,000 per annum in a period of prolonged slump, during which profits have almost entirely disappeared, is indefensible.

THE FUTURE.

The outlook at the present time cannot be said to be very encouraging. Whilst the devaluation of the £ must be a help in rebuilding our trade, its effect has been very largely counteracted by the import restrictions imposed by foreign countries and also by the constantly diminishing trade of the world.

Parliament will have to deal again with the working hours in mines before next July, otherwise we shall automatically return to the seven hours' day which proved so calamitous to the trade and country from 1919 to 1926. The state of the coal trade to-day is far worse than it was in 1929, and Parliament should at the earliest possible moment pass a measure which will maintain unchanged the present working hours without limit of time and without any extraneous complications.

Referring to the working of the marketing scheme, the Chairman said that had it not been for the statutory powers given to the coalowners by the Coal Mines Act, 1930, the situation to-day would be infinitely worse than it is, when supply is so enormously in excess of demand the whole world over. The Act and the schemes made under it should not be scrapped but amended in the light of the experience that we have had.

This country is not yet out of its difficulties, but personally Mr Hann considered the future to be full of hope. Apart from the better demand for coke, trade at present shows little signs of improvement, but the costs of the company are lower and its financial position stronger than it has been for some time. In every way it is ready to take advantage of the good times when they return.

The report and accounts were unanimously adopted.

THE COUNTY OF LONDON ELECTRIC SUPPLY COMPANY, LIMITED.**LARGE INCREASE IN NEW BUSINESS.**

The thirty-eighth ordinary general meeting of the County of London Electric Supply Company, Limited, was held on the 22nd instant, at Winchester House, London, Sir Bernard E. Greenwell, Bart., chairman, presiding.

The Chairman said:—Once again it is my pleasure to present to you a report which, even in prosperous times, would, I think, meet with your approval.

The units sold by the company in 1931 amounted to 509,528,914, which is an increase of approximately 14 per cent. over the units sold in the previous year. New business has been increased by over 55,000 kilowatts, making a total of over 440,000 kilowatts connected, and I am glad to say that the number of consumers supplied directly and indirectly has increased by some 44,000, making now a total of over 246,000 consumers.

The revenue from sale of current shows an increase of £213,441, that is an increase of over 11 per cent., and I should like to draw your attention to the fact that our receipts from sale of current have now passed the two million mark.

With dividends and interest receivable and rents, etc., the gross revenue amounts to £2,308,679, being an increase of over 10 per cent. on the preceding year, and the balance to net revenue account shows an increase of £89,092.

Under the next item, rates, taxes, etc., there is an increase in the rates payments alone of over £50,000, an increase of nearly 20 per cent. over the previous year, and it must be remembered that this 20 per cent. increase is reflected in the cost per unit sold by us. A really unsatisfactory feature with regard to rating is the continued re-assessments which are being made on our properties in certain districts outside London; we are hardly ever free from the threat of revaluation. Although, as you know, in the areas outside the Metropolis the principle of quinquennial revaluation is laid down, there is no protection to undertakings such as ours against revaluations every six months. With the restrictions on the constant revaluation of private property and the effect of the De-Rating Act, public utility undertakings fall victims to the authorities in this matter of rating.

A SATISFACTORY BALANCE

Turning now to the net revenue account and adding to the profit for the year the balance brought forward and the interest charged to capital, there is a total on the credit side of £1,853,094. On the debit side there is interest on debenture stock and temporary loans, the provision for depreciation, sinking funds, and for the difference between issue and redemption price of debenture stock. To reserve for taxation we have placed £25,000.

The preference dividend for the year amounts to £202,915 10s., and we have already paid an interim dividend of 3 per cent. on the ordinary shares, amounting to £134,450 10s. Thus there remains a balance of £800,496. Out of this balance of £800,496 we propose to pay a final dividend on the ordinary shares of 7½ per cent., making, with the interim dividend already paid, a total of 10½ per cent. for the year.

As you will see, we were successful in January of this year in placing a further £500,000 5 per cent. debenture stock on the market in order to provide further funds. We obtained a price of 98½ for this stock, which at that time was an exceedingly good price.

Excellent progress has been made since the date on which we obtained the Electricity Commissioners' consent to the extension, which, as you know, is for two units of 75,000 kilowatts each. On the whole the works are up to scheduled time, and we are aiming at the preliminary tests towards the end of this year.

Again, as an indication of the progress, in the year 1926 the demand on the company's system was some 80,900 kilowatts, whilst in 1931 it was 178,400 kilowatts, that is, over double the amount in a period of six years; whilst in 1926 the units sent out were 177 millions, against 577 millions sent out in 1931—or between three and four times as much, which is a good indication of the improved load factor we have obtained on the system.

Now as to our own development, it was two years ago when I told you that we were embarking upon an intensive campaign for the use of power for domestic purposes, and I am glad to say that the results have justified our belief in this market. One other market which is coming to us is that of public street lighting.

With regard to those companies which are so closely associated with us, I am glad to tell you that similar good results have been enjoyed for 1931.

The report and accounts were adopted, and a vote of thanks to the directors, staff and employees, was unanimously carried.

During the meeting, the chairman described the growth of the great Barking power house and many of its interesting features, his remarks being illustrated by lantern slides.

CITY OF LONDON ELECTRIC LIGHTING COMPANY LIMITED.

PROGRESS DESPITE DEPRESSION.

The ordinary general meeting of the City of London Electric Lighting Company Limited was held, on the 23rd instant, at Falcon House, Aldersgate Street, London.

Mr J. B. Braithwaite (the chairman) commenced by expressing regret at the death of Mr Frank Bailey, M.Inst.C.E., in June last. Dealing with the results of the past year's operations, he said it had been an uneventful year in many ways, and a very difficult year owing to the depression and stagnation in trade generally, and he thought that the company was to be congratulated, and the shareholders especially, on the fact that, in spite of the depression in trade and the difficulties which they had encountered in consequence, their output had been maintained and even slightly increased. Their sales showed an increase of about 3 per cent., but their connections showed an increase of 8½ per cent. In fact, their connections were extremely encouraging. During the past year they had been in the neighbourhood of 10,000 kw., and in the previous year they had been between 5,000 and 6,000.

Translating those figures into actual cash, their revenue had increased by £26,206, which had been earned by an additional expenditure of £1,791, so that they had retained of that £26,206 £24,415 gross, or 93 per cent. Those figures were a high testimony to the continued efficiency of the operation of their generating station.

They might have hoped, therefore, that the accounts would show satisfactory results on the whole, but that additional profit and more had been wiped out by the increased assessment for rates made upon them. It seems an unfortunate thing that a great public utility undertaking such as this should be bombarded on all sides to supply cheap electricity to the public and that the same people who bombarded them in that way should have no hesitation in planting upon them very large additional rates. In a full year the additional rates which they were asking for would be £46,000, which more than wiped out their modest additional profit of £24,000. In the current account only £39,520 appeared, being three-quarters of that £46,000, but in the current year they would have the full £46,000 unless they were successful in the appeal which they were making against that assessment. That assessment had obliged them to postpone the further reduction in rates which they had planned to make to their consumers. It was impossible to make reductions to consumers if the additional economies introduced were more than wiped out by hungry local authorities and other people increasing their rates.

It was interesting to note that they had paid to the Central Electricity Board, the Joint Electricity Authority and the Electricity Commissioners, since they had been established, £16,000, which had come out of the pockets of the shareholders without any compensating benefit whatever as far as he could see. They had appealed against that assessment of £46,000 on the ground that the "A" and "B" sinking funds, which they had to provide, were statutory obligations and ought to be considered as operating expenses.

With regard to lighting and power units sold, the total was practically the same as for the previous year, but there was an increase of 2,236,772 in the number of units sold for heating, an increase of 15.8 per cent. That was very encouraging, and he hoped they might see a further increase in the heating load in the current year. As he had pointed out before, one of their difficulties had always been the smallness of the load factor for lighting, so many offices closing down in the summer without having to use any lighting units at all, but all offices had to be warmed, and he thought they might expect a considerable increase in the load factor for heating in the future.

They had for the first time gone below 2d. per unit for the total of their sales, namely, 1.98d. That was due to the inclusion of the bulk supply to Southwark. The lighting price remained the same, 3.34d., because, owing to the assessment for rates, they had been unable to carry out the reduction which they had intended. The heating supply was down to 1.25d. and the power supply to 1.1d., so that they had done their part in seeking to reduce the price to consumers on all classes of load.

As to the prospects for the coming year, they had a small increase of 1½ million units up to date, which showed that they were holding their own and tending to increase the output. Should trade improve, they would see a very rapid recovery, no doubt, owing to the increased connections to which he had already drawn attention and which had not yet brought forth their legitimate fruit in additional supplies.

At the end of the year they intended to capitalise a further £400,000 out of the special reserve and to distribute 400,000 fully-paid ordinary shares to the shareholders. After 1932 they would have to reduce the statutory dividend from 10 per cent. to 7 per cent. On the increased capital the 7 per cent. would be almost equal to the present 10 per cent., and no doubt they would be able to supplement that.

The report and accounts were unanimously adopted.

PINCHIN, JOHNSON AND COMPANY, LIMITED.

FINANCIAL STRENGTH.

MR. EDWARD ROBSON'S SPEECH.

The annual general meeting of Pinchin, Johnson and Company, Limited, was held, on the 22nd instant, at the Hotel Metropole, London.

Mr Edward Robson (the Chairman) presided.

The Secretary (Mr E. P. Thompson) read the notice convening the meeting, and Mr H. J. Gully read the report and certificate of the auditors.

The Chairman, in moving the adoption of the directors' report and balance sheet for the year 1931, said:—

A year ago I expressed the opinion that it was necessary to view the future with a great deal of caution. I am sorry to admit that conditions in 1931 became so extremely unfavourable that in the autumn the international position was unparalleled in our commercial history.

SATISFACTORY PROFITS.

It would be idle to suppose that a large and important business such as ours, with interests in almost every principal country, could not be affected. The fact, however, that in spite of these extraordinary troubles this company has been able to maintain its activities throughout the world in such a remarkable degree, and to earn a net profit exceeding that of any similar undertaking, is, I think, evidence of its fundamental strength and soundness, and an indication of the potentialities of the undertaking when we are favoured with an improvement in conditions.

Both at home and abroad difficulties have had to be met. Yet, in spite of this, it is gratifying to report that every unit of the organisation operated at a profit in the past year.

In dealing with the net profit figures, I want to make it clear that in the case of those companies which we do not own outright, but in which we have shareholdings, only our share of the actual dividends paid out is brought into our accounts. I can give you one instance where one of our largest associate companies earned in 1931 net profits four times as great as the dividends declared, the undistributed profits being left in the business.

STRONG ASSOCIATED COMPANIES.

The items in the balance sheet "Investments in Associated and Subsidiary Companies" stand at extremely conservative figures. Their actual value, on a most critical basis, is greatly in excess of the balance-sheet figures.

Without anticipating the future, I can imagine that when world conditions are more stabilised, your directors will consider the question of bringing the book value of these assets more into line with their actual value, and it is reasonable to suppose that associated companies, such as the one I have recently referred to, will also consider it desirable that a larger share of actual earnings should be distributed.

In passing, I may mention that the Argentine business is proving very successful. Its initial year's trading has resulted in a profit of over 14 per cent. on its capital. Here again only a portion of these earnings has been distributed.

CASH AND LIQUID ASSETS.

I would now refer to our cash position; this is very satisfactory, the available funds exceeding £609,000.

The disclosed reserves and carry forward, after dealing with the allocations proposed in the present report, approach the sum of £900,000.

The balance sheet indicates that the liquid assets of the company show a surplus of over £2,000,000 over our total liabilities, which latter amount to the modest figure of £234,000 only.

With regard to the outlook for the future, I still feel that restraint is desirable. One must admit that we in Great Britain have a definite confidence now established. It is an undisputed fact, however, that a settlement of some of the international political and financial problems is of vital importance.

As far as our own particular business is concerned, every effort is being made to maintain the business in the most efficient, up-to-date and progressive condition; and I am inclined to the view that we can look forward in 1932 to a measure of improvement in the results which we are entitled to anticipate.

The resolutions were carried; the directors and auditors were re-elected, and the proceedings terminated with a cordial vote of thanks to the Chairman, proposed by Mr S. H. Abbott.

RADIATION, LIMITED.

SATISFACTORY RESULTS—DIVIDEND MAINTAINED.

The ordinary general meeting of Radiation, Limited, was held, on the 21st instant, at Southern House, Cannon Street, London, Mr H. James Yates (the chairman) presiding.

The Chairman said: I am glad that we can again present to you a report which enables us to recommend the continuance of a dividend at the same rate as in previous years, and I am sure you will consider this a satisfactory result of our work during the past year.

From the profit and loss account it will be observed that the net income from the subsidiary companies, together with transfer fees and bank interest, makes a total of £293,754, compared with £295,292 a year ago.

Turning to the combined statement of assets and liabilities of the subsidiary companies, on the liabilities side it will be seen that the debentures of those companies have been reduced to £50,850 by the further purchase of debentures by the companies.

Sundry creditors have increased from £510,634 to £542,299, the increase being partly due to additional liability for taxes.

Turning to the assets side of the combined statement, the first item, freehold and leasehold land and buildings, has increased from £776,150 to £804,141, and plant and machinery from £285,043 to £308,777, the total increase in these assets being £51,725.

Stocks have decreased from £604,737 to £531,952, and sundry debtors have also decreased, the present figure being £464,652.

There is an increase in the amount of investments from £1,505,144 to £1,656,997, and the cash balances have increased from £404,589 to £484,035.

Against the figure of goodwill, £901,724, we have undistributed profits standing to the credit of profit and loss accounts in the subsidiary companies amounting to £891,743, which, if deducted from the goodwill item, would reduced the amount from £901,724 to £9,981.

"RADIATION"—THE HALL-MARK FOR GAS APPLIANCES.

Occupying the position we do as the pioneers in the development of the modern gas cooker, gas fire, gas radiator, and domestic gas-heated hot-water apparatus, we regard it as essential to devote our attention to the production of new or improved types of apparatus so that the name "Radiation" shall continue to be recognised as the hall-mark for gas appliances. I would recall to your minds that our "New World" cooker, with its automatic "Regulo" oven-heat control, when first introduced was considered so revolutionary a departure from long-established practice that certain of its features were even disparaged at that time. Now, however, these features have become the standard throughout the country, and in consequence the sales of "New World" cookers are still increasing.

You will no doubt remember my telling you last year of the growing appreciation in medical circles of the value, as a therapeutic adjunct, of infra-red energy, and since that address we have had further evidence that the heat from gas fires fitted with "Beam" radiants is of definite therapeutic value. An advance in a similar direction has been the introduction of the Radiation clinical gas lamp. This appliance has been well received, and a considerable number of the lamps are now in use. The lamp was developed primarily to provide an efficient and economical source of infra-red energy for use in hospitals and clinics, and its introduction marks the opening up of a new field for the application of gas. The gas is burned within a refractory radiant treated with a mixture of inorganic compounds to ensure the production of energy rich in short infra-red rays. The radiant is secured in position near the focus of a highly-polished parabolic reflector so that the energy can be directed in a slightly-diverging beam on to the part of the body to be treated.

Treatment with the energy emitted by the Radiation clinical gas lamp has been found to alleviate the pain and discomfort caused by such complaints as rheumatism, neuritis and sprains; it has also been found effective in clearing up eruptions such as acne, etc. We are about to place on the market a cheaper form of this lamp for home use.

Our business in gas boilers for domestic hot-water supply, fitted with the automatic "Regulo" control, has developed on a very large scale. Thousands of satisfied users are among our best advertisements of the expansion of this side of our business. We were the first to introduce a highly-efficient self-contained storage water-heater with a maximum consumption of 10 cubic feet of gas per hour, which will deliver, at a cost of a few pence per day, sufficient hot water for the domestic supply, not only in existing property, but in the many thousands of new houses that are being built to-day. We have now added to the number of designs of our hot-water apparatus of various types so as to meet the many requirements in this field.

The report and accounts were unanimously adopted.

THE EMPLOYERS' LIABILITY ASSURANCE CORPORATION LIMITED.

IMPROVED RATIO OF PROFIT.

The fifty-first ordinary general meeting of this corporation was held, on the 23rd instant, at Hamilton House, Victoria Embankment, London.

Sir Joseph G. Broodbank (chairman) first referred to their associated companies, and said that the Clerical, Medical and General had proceeded on their successful way during 1931. They had suffered some depreciation in the value of their Stock Exchange securities, but the depreciation was only a little over 3 per cent.—a remarkable record for any undertaking in these times. As to the Merchants' Marine Company, the £400,000 which had already been provided in past years would have been sufficient to cover the profit and loss debit of the company, but an additional £75,000 had been provided this year against any loss that might occur through the depreciation in their Stock Exchange investments. This was more than covered by the additional £100,000 placed to investment reserve.

In the corporation's accounts the chief point of interest to the shareholders was that the sum carried to appropriation account, £410,203, was £90,890 more than for 1930. The total premiums for the year from all departments, excluding premiums of the corporation's associated companies, amounted to £6,481,143, as compared with £7,430,057 in 1930. The decrease was mainly due to the effects of the worldwide depression in trade.

Of the total investments of £5,239,345 in Stock Exchange securities in the United States 87 per cent. consisted of first-class terminable bonds and debentures, a large proportion of which was repayable at or above par within ten years.

While the amount available in the appropriation fund was larger than in the previous year, the directors considered that, in view of the depreciation in the corporation's investments and the present international financial outlook, it would be prudent to strengthen their resources by substantial additions to its reserves, and they accordingly recommended a further dividend of 2s. 6d. per share, making 4s. 6d. per share, less income tax, for the year. Of the balance they had carried £100,000 to investment reserve and £50,482 to general reserve. The gratifying feature was that the ratio of profit had so improved that, while the decrease of premium was over 12 per cent., the amount carried to appropriation account showed an increase of 28 per cent.

The report and accounts were adopted.

THE LONDON AND THAMES HAVEN OIL WHARVES, LIMITED.

COMPANY'S BEST YEAR.

The thirty-fourth ordinary general meeting of this company was held, on the 22nd instant, at Winchester House, London.

Mr Thos. C. J. Burgess (chairman and joint managing director) said that the accounts represented the best result in the company's history. During the year the reorganisation of the company's capital had been carried out. The preference shares had been changed into ordinary shares and a further 300,000 shares issued, all at a premium of £1 10s. The total premium, amounting in all to £487,500, was added to reserve; £187,500 was subsequently written to depreciation funds, bringing the reserve to £1,300,000, equal to the issued capital of the company.

Investments in subsidiary companies now stood at £1,300,000, equal to the capital of the company and also to the reserve, which was thus covered by investments outside and entirely independent for their success from the Thames Haven concern. The disposable profits for the year were about £227,000, against £225,000 in the previous year.

The year had been full of anxiety, but the company was not directly affected by changing prices. It had been able to place at the disposal of the whole trade facilities complete, up to date and as perfect as possible, and it was due to the ultra-careful management and financing in the past that they were able in times of depression to make the return they did.

They had been instrumental in assisting their French colleagues to make the finest, most up-to-date and safest port in Northern France in a direct line of traffic from the United States, which must eventually be the only possible port for important traffic between these parts of the world. After eight years of hard work and some misunderstandings, they were now experiencing, with the French authorities and French personalities, a feeling full of confidence and reciprocal effort, which was making for complete success.

The chairman expressed disappointment that the Government had not seen fit to deal with a tariff on oil. If only some preference were shown to enable refining to be done in this country it would greatly increase the number of persons employed in the industry. The company had extensive facilities for this work and unlimited power and capacity for extension.

The report and accounts were adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

The total ordinary revenue for the week ended March 19, 1932, amounted to £22,667,000 against ordinary expenditure of £17,382,000. After allocating £485,000 to Sinking Fund and having allowed for an increase in Exchequer Balances of £562,972, the operations for the week, as shown below, reduced the National Debt by £5,363,000 to £7,599,373,000:—

(000's omitted.)

Treasury Bills	£	613
Public Department Advances	—	2,750
Excess Interest of National Savings Certificates	—	1,200
National Savings Certificates	—	800
	—	5,363

A complete analysis of the National Debt at December 31, 1931, was printed in the *Economist* of January 9, 1932.

OVERSEAS BANK RETURNS.

NOTE.—The latest return of the National Bank of Egypt appeared in the *Economist* January 9; Bank for International Settlements, Russia, and Denmark, in March 19; U.S. Federal Reserve, New York Federal Reserve, Federal Reserve Member Banks, Reichsbank, France, Italy, Norway, Greece, and Netherlands in March 18.

to-day published the results of the company's business for 1931, showing a net profit of Kr. 12,480,973-08, after deduction of depreciation on buildings and machinery amounting to Kr. 4,079,171-48 and provision for taxes amounting to Kr. 2,400,000. The board at the same time announces its intention of proposing that of the above net profits Kr. 9,100,000 be distributed to the stockholders (amounting to 7 per cent. for the year), and that the remainder, Kr. 3,380,973-08, be transferred to undistributed profits, which will thereafter amount to Kr. 18,148,595-18. Cash at banks and in hand, and bonds, amounted on December 31, 1931, to Kr. 22,100,628-76, of which amount bonds totalled Kr. 2,675,011-50. Contingent liabilities, including acceptances discounted, totalled Kr. 3,285,438-64. The general meeting will take place in Gothenburg on May 10, 1932.

BRITISH, FOREIGN AND COLONIAL CORPORATION, LTD.—We understand that notices have been sent to the shareholders in the British, Foreign and Colonial Corporation, Ltd., summoning an extraordinary general meeting for April 4th, to consider a resolution that the company be wound up voluntarily, and that Sir Gilbert Garnsey be appointed liquidator.

CRYSTALATE TO ACQUIRE VOCALION GRAMOPHONE COMPANY.—The London and Yorkshire Trust is authorised to announce that negotiations for the acquisition by the Crystalate Gramophone

Record Manufacturing Company, Ltd., of the Vocalion Gramophone Company, Ltd., have now been completed, subject to confirmation by the shareholders of the companies concerned at meetings to be held on April 8th.

IMPERIAL AND INTERNATIONAL COMMUNICATIONS LIMITED.—The estimated traffic receipts for two months ended February 29, 1932, are as follows:

	1931.	1932.	Rise or Fall
January.....	£ 412,908	£ 404,411	— 8,497
February ...	390,461	439,092*	+ 48,631
	803,369	843,503†	+ 40,134

* The sum of £20,000 must be deducted from the message receipts for February, 1932, in making a comparison with February, 1931, owing to changed conditions of sharing traffic.

† In comparing aggregates regard must be had to the notes issued with the traffic figures from March, 1931, onwards.

INSTITUTE OF ACTUARIES.—At the March meeting of the Council of the Institute of Actuaries, Mr W. Palin Elderton, C.B.E., manager and actuary of the Equitable Life Assurance Society, was elected president to succeed Mr H. M. Trouncer, whose term of office expires in June next.

OIL OUTPUTS.

BRITISH CONTROLLED OILFIELDS, LTD.—Production for the week ended February 17th: Venezuela, 30,002 barrels; Trinidad, 35,875 barrels; total, 65,877 barrels. Production for the week ended February 24th: Venezuela, 29,993 barrels; Trinidad, 34,173 barrels; total, 64,166 barrels. Production for the week ended March 2nd: Venezuela, 28,435 barrels; Trinidad, 33,562 barrels; total, 61,997 barrels. Production for the week ended March 9: Venezuela, 28,328 barrels; Trinidad, 40,437 barrels; total, 68,765 barrels. Production for February: Venezuela, 123,711 barrels; Trinidad, 136,718 barrels; total, 260,429 barrels. Shipments for February: Venezuela, 111,020 barrels; Trinidad, 82,438 barrels; total, 193,458 barrels. Production for the week ended March 16: Venezuela, 27,562 barrels; Trinidad, 36,909 barrels; total, 64,471 barrels.

Commercial Reports.

MARKET SUMMARY.

Business at the principal international commodity markets was restricted because of the approach of the Easter holidays. The trend of gold prices has been downwards and quotations in the United States have generally been lower. Among non-ferrous metals, copper has been maintained in view of the fact that the principal producers of the world have decided to reduce production below the current level of consumption. Lead, tin and spelter have been dull. Cotton has lost a few points. The official announcement against restriction by the British and Dutch Governments brings to an end a long period of uncertainty. The announcement was followed by a sharp reaction in prices. Wheat prices suffered a sharp setback following rumours that the Federal Farm Board intended to unload its large holdings. Other cereals declined in sympathy with wheat prices. The market in coffee has been steady. Raw sugar was weak in view of rumours of the breakdown of the International Sugar Convention. Sterling quotations of commodities which lend themselves to grading, and therefore to international arbitrage, moved in sympathy with gold prices. Business in this country was generally on a small scale. It is significant that sterling prices of commodities such as meat, dairy produce and tea continue to decline. According to reports from various industrial centres, the situation in the coal trade has deteriorated, and the iron and steel industries make little headway. On the other hand, the cotton and wool trades appear to have maintained their recent volume of business and the home demand for rayon fabrics shows a slight improvement.

THE COAL TRADE.

SHEFFIELD.—All sections of the South Yorkshire coal market are characterised by poor trade. Output has been reduced lately, throwing considerable numbers of men out of employment. House coal prices are easier at some pits, but the general quotations for best quality is 22s. to 23s. at pits. Export sales are extremely restricted, and the outlook for Continental trade is not favourable. Conditions are unchanged as regards industrial coals and the various types of coke.

GLASGOW.—The coal position shows little change. Some fair sized Scandinavian orders have been booked, and another interesting feature is the arrangement of some cargoes of washed nuts for the Preston Electricity Works. This, like the Liverpool contract reported last week, is a new departure for the Scottish trade. The London trade continues on steady lines. Most classes of coal are quite plentiful, and prices show little or no change.

CARDIFF.—The recent improvement in the volume of the South Wales coal export trade was not maintained last week, when the shipments, foreign and coastwise, totalled 410,445 tons compared with 457,300 tons the previous week, and 463,737 tons in the corresponding week last year. The approach of the Easter holidays has strengthened the current demand for one or two grades, and bituminous nuts, and particularly the drier classes, are scarce and commanding prices above the schedule. In the large coal market there is no material change, and supplies are easily obtainable for early loading. A contract for the supply of 75,000 tons is reported to have been placed by the Brazilian Central Railways under an arrangement whereby the German Government is to accept cargoes of coffee in exchange. A similar arrangement was made last year, but South Wales exporters have been reluctant to tender for new business with Brazil because of the delays in the settlement of accounts which have been outstanding for some years, and in regard to which representations have been made to the Board of Trade. The following are the current approximate quotations:—Trade. The following are the current approximate quotations:—Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 4‡d.; best dries, 18s. 6d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7‡d.; best small 17s. 9d. to 18s.; cargo smalls, 11s. 6d. to 12s. 6d.; coking smalls, steams, 13s. 6d.; machine-made cobbles, 40s. to 48s. 6d.; French nuts, 40s. to 48s. 6d.; stove nuts, 39s. 6d. to 43s. 6d.; French culm, 8s. 3d. to 8s. 9d.; foundry coke, 32s. 6d. to 36s.; patent fuel, 19s.; pitwood, ex ship, 19s. to 21s. 6d.

IRON AND STEEL.

MIDDLESBROUGH.—The market for Cleveland pig iron is unchanged, but a gradual expansion in business is looked for. Local consumption is not on a large scale at present, and there will be some interruption over the Easter holidays, but stocks at the furnaces

OVER ONE HUNDRED YEARS OF SERVICE.

are not likely to increase to any serious extent as the suspension of deliveries will only be slight. In spite of the substantial concessions in prices to Scotch consumers, little extra business is being secured from that quarter, as the foundry trades there continue very slack, but prospects are now regarded as brighter. The business reported at Tuesday's weekly market consisted of only a few lots for early delivery, official prices being again unchanged, viz.:—No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d., and No. 4 forge, 57s., f.o.b. or f.o.t. There is practically no improvement in the demand for hematite, and purchases are for short periods only. Makers are still booking mixed numbers at 63s. 6d. per ton for fairly early delivery, but this price would be shaded for very prompt lots, particularly by merchants. Shipments of pig iron have fallen off recently, the total cleared to 21st instant being 7,870 tons against 8,958 tons to same date in February. In the finished departments a few orders have come to hand recently, but nothing of any great volume. There are, however, some important inquiries in circulation, and it is expected that some of the business will eventually be placed in this district. All prices are unchanged. It is just announced that London Midland and Scottish Railway Company has placed orders for 40,000 tons steel rails, in which three local firms—Dorman, Long and Company, Ltd., Pease and Partners, Ltd., and Cargo Fleet Iron Company, Ltd.—will participate, but the respective quantities are not given. It is also reported that the same railway has placed an order with Dorman, Long and Company, Ltd., approaching £30,000 in value, for several bridges to be built in the Peak district. The ore market is idle. One of the largest consumers has stopped further deliveries for the present, and will only accept steamers already stemmed which, with stocks on hand, will carry them on until about August. With outlets restricted, owners are finding difficulty in keeping their mines in operation and are weaker in their prices. Best rubio is now not more than 16s. c.i.f., and the freight, Bilbao-Middlesbrough, is slightly lower at about 4s. 9d. Coke is slow of sale and, with full supplies available, ordinary blast-furnace qualities can now be obtained at 16s. delivered works, for early delivery. The number of blast furnaces in operation in the district is unchanged at 17.

SHEFFIELD.—Apart from instances of improvement in engineering work, the local trade situation fails to improve. Inquiries for heavy steel have tapered off somewhat lately, and in the absence of any improvement in this direction it will be necessary to prolong the holiday stoppage. In fact, it is certain to be longer than usual. Difficulties in arranging overseas trade increase, and less business is being booked from the Continent. Nevertheless, Australia is beginning to buy more freely than for some time past. Demand is brisk for steel strip, motor-car steel and parts, and electrical accessories. The position of silver plate and table cutlery has probably never been so bad before. Makers of scissors, safety razors and hand tools are busy for the home market.

GLASGOW.—Nothing has occurred within the past week to relieve the dullness in the iron and steel markets in the West of Scotland. There is certainly a larger number of inquiries on the market, but the resulting business is disappointingly small, and the orders placed are almost invariably for small tonnages calling for early delivery. This holds in almost every department. Continental competition for semis remains very keen, and prices quoted are tempting, but not a great deal of business is being done, mainly on account of users being already well bought. There are rather more tube inquiries on the market, and makers are hopeful that business will result shortly. There is still only a poor demand for re-rolled steel bars. Sheet makers, while more fortunately placed than other re-rollers, are still not able to keep all plants in operation. There is a fair amount of export business being offered, but at prices which are quite unacceptable to makers. The pig-iron market remains quiet, and output of the few plants in operation is more than sufficient for all demands.

CARDIFF.—The position in the tinplate trade is practically unchanged. The deliveries from the factories for shipment at Swansea last week were 132,590 boxes as against shipments of 94,028 boxes, thus increasing the stocks to 201,376 boxes. Quotations were on the basis of the new minimum of 16s., and prices of steel bars were unaltered. Imports of foreign steel bars last week totalled only 5,744 tons, and since the 10 per cent. *ad valorem* duty has been in operation these imports have averaged only 4,500 tons per week, compared with a weekly average of 22,854 tons in the nine weeks ended February 29th and 15,000 tons in the corresponding period of last year.

OTHER METALS.

TIN.—There has been no change in the international situation of tin during the past week. The New York market has been a little more active at the lower level. Quotations in London declined a few points on Monday, and there was a slight increase in demand, but prices failed to recover. In New York the metal was quoted at 21.75 cents per lb. on Wednesday, against 21.75 cents per lb. a week ago and 22.15 a month ago. Wednesday's official closing quotations in London, in terms of sterling for "standard" cash, at £127 15s. to £128 per ton, compares with £129 15s. to

£129 17s. 6d. on the corresponding day last week. Stocks in London and Liverpool at the end of last week, at 33,470 tons, show a decrease of 28 tons on the week.

COPPER.—According to a report from Brussels, the agreement between the principal copper producers of the world to effect a further reduction in output appears to be definite. As the new rate of production is based on an estimate of consumption during recent months, it is stated that the operation of the new agreement will result in a reduction of stocks. The turnover in New York and London was on a small scale. On Wednesday, "Domestic" spot was quoted at 6 cents per lb. in New York, against 6 cents a week ago, and 6½ cents a month ago. Wednesday's official closing price for "standard cash" in London, in terms of sterling at £32 16s. 3d. to £32 17s. 6d., compares with £33 7s. 6d. to £33 10s. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 21,113 tons, show a decrease of 217 tons, while stocks of rough copper, at 1,025 tons, are 75 tons smaller.

LEAD.—The demand for lead was small during the past week. In New York the metal was quoted at 3.15 cents per lb. on Wednesday, against 3.15 cents a week ago, and 3.75 cents a month ago. Tuesday's official closing quotation for "soft foreign" in London in terms of sterling, at £12 per ton for shipment during the current month compares with £12 3s. 9d. on the corresponding day last week.

SPELTER.—Little interest was taken in this metal. Although sellers were prepared to make concessions, markets remained inactive. Tuesday's quotation in New York, at 2.775 cents. per lb., compares with 2.80 cents a week ago and 2.85 cents a month earlier. Tuesday's official closing quotation in London in terms of sterling for "good ordinary brands" was £12 8s. 9d. per ton for shipment during the current month, against £12 3s. 9d. a week ago.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals the quotation for aluminium and nickel has been maintained at £95 per ton, and £230-£235 per ton respectively. Foreign antimony and quicksilver again sold at £28-£28 10s. per ton and £18 10s.-£19 per flask respectively. The quotation for platinum, at £10 13s. per ounce, remained unchanged.

TEXTILES.

THE COTTON TRADE.—Liverpool.—Imports for the week March 18th to 22nd (inclusive) are 49,620 bales, of which 32,294 are American, 1,112 Peruvian, 10,881 Egyptian, 2,200 African, 1,440 East Indian, and 1,693 sundries.

Manchester.—The market has continued to present a quieter appearance. The wider fluctuations in raw material rates have had a rather disconcerting influence upon trade in yarn and piece-goods. A little nervousness prevails with regard to the labour situation in Lancashire in view of the operatives rejecting the provisional agreement on the more looms system. Although the amount of cloth inquiry has been on a reduced scale a fair amount of business has been under consideration. Miscellaneous transactions have taken place for India in light fabrics and fancies, most of the orders being for Calcutta and Karachi. Further lines have been booked in fine cloths for Rangoon. Not much has been done for China and the decline in the price of silver has affected trade operations. Cloths suitable for printing and dyeing have moved off in moderate lots for several minor outlets east and west, but trading has not been on a free scale. Some makers of home trade fabrics have had a fair week. A slower demand has been reported in American and Egyptian yarns for home consumption and prices have been more irregular when tested. Less activity has shown itself in shipping yarns.

THE WOOL TRADE.—Bradford.—The approach of the Easter holiday, writes our correspondent, finds the wool textile trade in a fairly good position. The Australian clip has been well marketed. Last September, when the trade was faced with lifting nearly 3,000,000 bales of Australian wool, besides supplies from other sources, and considering the unsatisfactory state of the textile industry in Yorkshire, the task seemed almost too great. It is therefore not surprising to find that values have not risen a great deal, but the average cost of wool, which last September was returned in Australia at about £8 10s., is now just over £10, and it is most satisfactory that, in addition to the slight rise, a very big weight of wool has been disposed of. Next month the Australian selling season will close. Selling brokers and pastoralists have mostly met the market. The financial status of most Continental countries is not strong enough to enable them to buy heavily at much more than current prices. During the last London sales the home trade absorbed about 48,500 bales and the Continent 44,000 bales, practically nothing being taken by America. There is thus

a carry-over of 80,000 bales for the series expected to commence on April 12th. The policy of owners who have refused to meet the market will then be tested. Trade in Bradford is rather quiet, but quotations for all qualities of tops are firm, and yarns are quite steady.

THE GRAIN MARKETS.

WHEAT.—The international wheat markets were depressed during the past week, following rumours that the Federal Farm Board intends to dispose of its wheat holdings abroad. Although Mr Stone, chairman of the Federal Farm Board, denied these rumours, and stated that the Board did not consider a change in the policy adopted in July last year, prices failed to recover immediately. Nevertheless, it appears from a letter published by Mr Hyde, Secretary of Agriculture, that the Farm Board is anxious to reduce its stocks by "developing new markets." In view of the large holdings of the Farm Board, an attempt to liquidate would of course demoralise the wheat markets. International trade has not been on a large scale, but the Continent is expected to purchase substantial quantities in the near future. The foreign milling quota in France has just been raised from 30 per cent. to 35 per cent. On Tuesday, "March" futures were quoted at 50½ cents per bushel in Chicago, against 55½ cents on the corresponding day last week, and 58½ cents a month ago. Quotations in London, Tuesday: No. 1 Northern Manitoba, Vancouver, ex ship, 32s. 9d. per 496 lbs., as compared with 35s. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 30s. 6d. to 32s. 6d., against 32s. 3d.; No. 3 Northern Manitoba, Vancouver, ex ship, 29s. 6d. to 31s., against 31s. 3d. to 32s. 6d.; Russian, on sample, 28s. 6d. to 30s., against 20s. 9d. to 30s. 6d.; Australian, ex ship, 28s. 6d. to 29s., against 29s. to 30s. a week ago.

WHEAT FLOUR.—Flour has been easier in sympathy with wheat. Quotations in London, Tuesday: Straight run, delivered country, 27s. per sack of 280 lbs., as compared with 27s. last week; delivered London, 25s., against 26s. Manitoba patents, ex store, 26s. to 28s., against 27s. 6d. to 30s.; and Australian, ex store, 21s. to 22s. 6d., against 21s. 6d. to 23s. a week ago.

BARLEY.—The market in barley was easier. On Tuesday, "May" futures were quoted at 39½ cents per bushel in Winnipeg, against 42½ cents last week and 41½ cents a month ago. Quotations in London, Tuesday: "English feedings," f.o.r., per 448 lbs., 27s. to 28s., as compared with 27s. to 28s.; Russian, landed, 24s. per 400 lbs., against 24s. 3d. a week ago.

OATS.—The demand for oats was quiet. "May" futures, which last week stood at 24½ cents per bushel in Chicago, sold at 23½ cents per bushel on Tuesday this week, against 22½ cents a month ago. Quotations in London, Tuesday: "River Plate," landed, 18s. per ship, 17s., against 17s. 6d.; "Chilean White," landed, 27s., against 27s. a week ago.

MAIZE.—Business in maize was smaller this week, and prices were generally lower. Tuesday's quotation in Chicago for "March" futures, at 39 cents, shows a decline of 1½ cents on last week, and an advance of 2½ cents as compared with the price a month earlier. Quotations in London, Tuesday: "Plate," landed, 21s. per 480 lbs., compared with 22s. last week; "Plate," ex ship, 20s. 3d., as against maize meal, ex wharf, was quoted at £6 per ton against £6 2s. 6d. a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1931-32, 1930-31, 1929-30, 1928-29:—

	1931-1932.	1930-1931.	1929-1930.	1928-1929.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks with comparative figures for 1930:—

NEAREST FUTURE.	Jan. 2, 1930.	Jan. 2, 1931.	Mar. 25, 1931.	Jan. 4, 1932.	Mar. 16, 1932.	Mar. 23, 1932.
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.	148½	56½	58	62½	64½	60½
Chicago (No. 2 Winter) —Cents per 60 lb.	130½	79½	80½	55½	55½	50½

The visible supply of wheat in Canada, at 62,832,000 bushels, shows an increase on the week of 580,000 bushels. Supplies a year ago stood at 65,087,000 bushels.

A SOCIAL SERVICE of WORLD-WIDE IMPORTANCE AND MAGNITUDE

One Million Policyholders enjoy Sun Life of Canada Protection

The Sun Life Assurance Company of Canada again records substantial progress. The number of its policyholders shows a gratifying increase, income and assets are considerably greater, and the inherent strength of the Company has been fully maintained.

Throughout the World Crisis, the Company has steadfastly pursued its policy of giving the Public an ever-improving Life Assurance Service. The Public has shown its appreciation and confidence in unmistakable manner, as the following figures for 1931 testify:—

NEW ASSURANCES ISSUED IN 1931	...	...	...	...	£108,400,000
TOTAL ASSURANCES NOW IN FORCE	...	...	...	...	£626,900,000
PAYMENTS TO BENEFICIARIES AND POLICYHOLDERS IN 1931	...	...	...	...	£18,800,000
TOTAL INCOME	...	...	...	...	£40,200,000
SURPLUS AND CONTINGENCY RESERVE	...	...	...	...	£4,300,000
TOTAL ASSETS	...	...	...	...	£128,300,000

In 1931 the Income exceeded Disbursements by Twelve Million Pounds.

The business of the Company is conducted in accordance with the laws of Great Britain, and under the exacting provisions of the Canadian Insurance law. The Company's own valuation of its Policy Reserves is on an even stronger basis than that required by the Canadian Insurance Act.

In the British Isles, the total new business in 1931 amounted to Eleven Million Pounds

For Great Britain and Ireland there is a complete Head Office Organisation in London. There are 25 fully-staffed Branch Offices, with 700 trained Representatives. All Representatives undergo an intensive course of training at the Company's own Training School. Life Assurance being a highly specialised business, such training is considered indispensable in the interests of the Public.

The Sun Life of Canada offers the most up-to-date and advantageous Plans of Life Assurance and Annuities available. Policy Contracts are clearly defined, and carry real safeguards against all contingencies. They protect the policyholder in all circumstances.

Many Firms in Great Britain have arranged protection for their Employees under the Company's Special Group Life and Pension Plans. A Department is maintained for that branch of the business.

Life Assurance is the acme of security for You and for your Dependents.

OTHER FOODS.

SUGAR.—According to a report from Paris, the meeting of the International Sugar Conference came to an end on March 22nd, without having reached a final agreement. It has, however, been arranged that negotiations shall be continued between the Conference headquarters at the Hague and Cuba. Cuba has not yet announced the acceptance of the proposals made to her by the European members of the Conference and Peru. The proposals are: (1) That Cuba should reduce her 1932 crop to 2,500,000 tons; (2) that, if Cuba did this, they would reduce their exports by any amount by which Java's exports exceeded 1,500,000 tons during the year from April, 1932, to April, 1933. Measures regarding the production and export quotas for 1933 will be decided later, and the next regular meeting of the Conference will take place in Paris on June 13th. "March" futures in New York were quoted at 0.73 cent per lb. on Tuesday, against 0.73 cent per lb. a week ago, and 0.85 cent per lb. a month earlier. Wednesday's sales of "raws" to include "May delivery" at 5s. 2½d. per cwt., against 5s. 5½d. 5s. 8½d., and "December," at 5s. 8½d. to 5s. 9½d., against 5s. 11½d. to 6s. 2½d. on the corresponding day last week. The movements of raw sugar in London and Liverpool during last week are set out in the table below:—

	Imports.		Deliveries.		Stocks.	
	1932.	1931.	1932.	1931.	1932.	1931.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
London	1,300	248	764	1,030	5,675	32,668
Liverpool ...	6,412	4,999	14,295	14,847	97,676	93,174
Total	7,712	5,247	15,059	15,877	103,351	125,842
Last week	8,337	974	15,111	14,343	110,598	136,472

COFFEE.—The market in coffee has been quiet, but prices remained steady. Last week's movements of coffee in London were as follows: Brazilian, landed, 325 bags; delivered for home consumption, 136 bags; exported, 10 bags; stocks, 5,562 bags, against 2,834 bags last year. Central American, landed, 7,170 packages; delivered for home consumption, 4,499; exported, 1,557; stocks, 95,569 packages, against 101,665 a year ago. Other kinds, landed, 9,401 packages; delivered for home consumption, 2,633; exported, 889; stocks, 92,206 packages, against 98,820 a year ago.

COCOA.—The market in cocoa has been a little less active and quotations were slightly easier. "May" futures were quoted at 4.31 cents per lb. in New York on Tuesday, against 4.44 cents per lb. a week ago and 4.04 cents a month ago. As compared with the corresponding day last week, Tuesday's quotation for Acra, fair fermented, new crop, March-May, at 26s. per cwt. f.o.b., London contract, shows a fall of 6d. per cwt. on the week. Last week's movements of cocoa in London were as follows: Landed, 8,884 bags; delivered for home consumption, 6,949 bags; exported, nil; stocks, 164,534 bags, as against 201,511 last year.

TEA.—The quantities catalogued for this week's auction comprise 30,049 packages of Indian and 23,975 packages of Ceylon tea. At Monday's auctions of Indian tea, outstanding qualities found ready buyers, but other varieties were dull. The Ceylon sales on Tuesday found little support, and all plain to good medium descriptions lost 1d. to 2d. per lb. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account:—

AVERAGE PRICE PER LB.

11½d
PER OZ.

110d
FOR 1 OZ.

RICE.—The "spot" price for rice remained unchanged at 10s. 6d. per cwt., but forward positions were easier. Movements in London during the past week were as follows: Landed, 52 tons; delivered, 81 tons; stocks, 875 tons, as against 483 tons last year.

POTATOES.—Potatoes were in good demand at the principal markets, and as supplies were not quite as plentiful as recently, prices advanced a little. At the Borough Market, "Best King Edward" sold from 11s. 6d. to 12s. 6d. per cwt., as compared with 11s. to 12s. per cwt. a week ago.

SPICES.—The market in spices has been dull. Tuesday's quotation for "Black Singapore" pepper, at 6½d. per lb., shows no change on the week. Movements of pepper in London during the past week were as follows: Black, landed, 17 tons; delivered, 33 tons; stocks, 305 tons, against 549 tons last year. White, landed, 32 tons; delivered, 54 tons; stocks, 837 tons, against 484 tons a year ago.

MEAT.—The recent advance in meat prices was not maintained. The prices realised for beef, mutton and pork at the Smithfield Market this week were generally lower than a week ago. On Tuesday, Argentine beef (chilled hindquarters) was sold at 4s. to 4s. 6d. per 8 lbs., against 4s. 2d. to 4s. 8d. on the corresponding day last week, while New Zealand frozen mutton realised 2s. 8d. to 3s. 6d., as against 2s. 8d. to 3s. 8d. a week ago. According to the Smithfield Market official report, supplies of meat during last week amounted to 9,040 tons, as compared with 9,671 tons in the corresponding week last year. Imported beef, principally Argentine, formed 83.9 per cent. of the supplies, as against 85.9 per cent. a year ago; and imported mutton, mainly New Zealand, formed 78.5 per cent. of the total supply, as against 80.8 per cent. last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OILSEEDS.—Very quiet conditions indeed continue to rule in the markets for oilseeds and their products, and values generally have a downward trend in the absence of effective demand. Linseed is neglected and Plate for March and April shipment has declined to £8 5s., with later positions at a small progressive premium. The shipment of the Argentine crop proceeds on a fair scale, though to date it is below the level of a year ago. The quantity on passage to Europe has increased to 284,800 tons (including 6,100 tons from India), 11,400 tons more than last week, and comparing with 254,600 tons at the same date last year. Cottonseed also is in extremely small demand, and lower black Egyptian to Hull offering at £6 5s. March and April landings, and £6 7s. 6d. May, without attracting buyers. Vegetable oils are very quiet, and this is attributed to the considerable imports which came to hand prior to March 1st and the imposition of an excise duty. In January and February these imports exceeded 50,000 tons, and were more than twice the volume in the corresponding two months of last year. Linseed oil has consistently declined until business has been done in London at £13 7s. 6d. for March delivery and £13 17s. 6d. April. Current values ex Hull mill are £13 10s. for March and £13 15s. April. Cotton oil is without support, crude Egyptian offering at £21 10s. and refined at £24 10s. ex Hull. Oilseeds are in slow demand and quoted lower.

HIDE, LEATHER AND ALLIED TRADES.—Prices for market hides were lower at the auctions held in Manchester this week, all 60 lbs. and up ox and heifers, with the exception of second warbled, making ½d. per lb. less money than the previous week. Cows were ½d. per lb. cheaper, but there was little variation in the price of calfskins. The sheepskin market remains weak, and prices show a lower tendency. Only a small amount of business has transpired in connection with foreign hides, and although quotations for most sorts have not varied to any great extent, there is an undercurrent of weakness. In the South American wet-salted market a limited number of sales have been concluded with European buyers. Argentine ox having changed hands on the basis of 4½d., while 4½d. has been accepted for light ox and 5d. for cows. Prices for dry South American hides remain fairly steady, 6d. being the figures asked for B.A. Americanos, a fraction under 3½d. for Inservibles, 6½d. for M.V. Americanos and 6½d. for Sierra Cordobas. Business in regard to African hides is quiet, with first and second dry Capes quoted at 6½d. and 5½d., and dry salted at 5½d. and 4½d. Mombasas are offered at 5d., while 5½d. is asked for unbathed Adis Abebas. The position of Australians is unchanged. Slightly more activity has been experienced in the leather market this week, although it is thought that the additional business is accounted for by the holiday orders for footwear, and is no indication of a real improvement. In the sole leather section, shoe manufacturers have been in the market for light weight dry hide bends, in which some fair business has been concluded. Medium and heavy weights, however, remain quiet. English and wet-salted bends have also been inquired for in the lighter averages, while there has been an improvement in the call for pinned bellies and shoulders. Rough bellies. Producers and distributors of upper leathers have met with a fairly good demand for glacé kid, but other lines have been inquired for in small quantities only. As a matter of fact, business in connection with box and willow calf has been very restricted, while the call for patent leather has been confined to a few parcels of the cheaper grades only.

THE TIMBER TRADE.—Our timber trade correspondent writes that although imports of European sawn and planed wood showed large increases last month compared with February, 1931, dock stocks are lower. Demand, however, although picking up a little this month, has continued to be very disappointing throughout the

The North American Company

60 Broadway, New York, N.Y., U. S. A.

ORGANIZED in 1890, controls through stock ownership four main groups of public utility companies operating in large and important areas of the United States centering in Cleveland, Milwaukee, St. Louis and Washington, D. C. Territories served by subsidiaries have a total area of 17,959 square miles, with a population of 4,960,000, and include 684 communities receiving various classes of public utility service. The electric properties in each group form a distinct interconnected power system.

The North American Company classifies its subsidiaries only companies in which it or its subsidiaries own voting control and at least 75% of the Common Stock. The North American Company does not include in consolidated income the undistributed earnings applicable to its investments in non-subsidiary companies, chief of which are The Detroit Edison Company, North American Light & Power Company and Pacific Gas and Electric Company.

Summary of the Forty-second Annual Report to Stockholders of The North American Company for the Year 1931, by F. L. Dame, President, and Edwin Gruhl, Vice President and General Manager

THE North American Company's report for 1931 covers a period in which operations of subsidiaries were somewhat curtailed and revenues consequently diminished, these effects of the general depression having been experienced by practically all businesses. The management expresses satisfaction with the results achieved under the extremely difficult circumstances and reaffirms its confidence in the opportunities for progress in the future and calls attention to the sound financial position of the Company and its subsidiaries and to the excellent physical condition of their properties.

Under the Company's policy of paying dividends on its Common Stock in Common Stock at the quarterly rate of 2½%, earnings have been conserved and, together with the liberal provision for reserves, have provided a substantial part of the funds necessary for the development of plant facilities of subsidiaries. From inauguration of the stock dividend policy April 1, 1923 to December 31, 1931 outstanding Common Stock increased 202% while net earnings gained 232%. During the same period book value of Common Stock, after deduction of all reserves including \$12,000,000 appropriated for contingencies in 1931, increased from \$16.14 to \$31.29 per share. In addition depreciation and other reserves were equivalent to \$16.79 per share.

The business of North American subsidiaries in 1931 was influenced to a greater extent than in 1930 by lessened activities of large industrial and commercial power users, the past year's depression having borne heavily upon large industrial regions. Electric business contributed 86% of net operating revenues. Output of present subsidiaries was 4,829,446,204 kilowatt hours in 1931, a decrease of 4.49%, and customers numbered 1,074,448 at the end of the year, a slight increase over 1930.

Although industrial use of electricity in 1931 declined 10.67% and commercial use 3.31%, residential use increased 7.55%. The total amount paid by residential customers was only 3.42% greater than in 1930, and average cost for household use decreased from 4.72 cents to 4.54 cents per kilowatt hour. The average use per residential customer increased from 624 to 663 kilowatt hours.

Only one-sixth of total sales of electricity by North American subsidiaries was for household purposes and the increase in its relatively small volume fell far short of offsetting the adverse effect of industrial and commercial declines. Conversely, the upturn in manufacturing and commercial activities which will mark the return of normal conditions will be reflected in a corresponding degree in operating revenues. There is excellent promise in the preparations made by industries in the subsidiaries' territories for greater employment of electricity when business conditions justify increased activity. Manufacturers are taking advantage of the period of slackness to revamp their factories for the greater use of electricity or the substitution of central station power supply for that of their own plants.

Total plant capacity at the end of 1931 was 1,848,944 kilowatts, a net increase of 77,000 kilowatts after deduction of facilities retired from service. The principal addition was 129,000 kilowatts in the new Ohio hydro-electric plant in Missouri, placed in operation in October, 1931. Contracts for additional industrial connected load totaled 149,188 kilowatts in 1931 compared with 214,292 kilowatts in 1930. Maximum demands of subsidiaries aggregated 1,049,202 kilowatts in 1931 compared with 1,093,025 kilowatts in 1930. Owing to the static condition of industry only a part of the new business added in 1930 was reflected in 1931 revenues and the remainder, together with new business contracted for in 1931, is an important backlog.

The ratio of 56% of demand to plant capacity shows that the unused capacity was greater than required as a margin of safety to insure reliability and continuity of service even considering that large steam reserve capacity is necessary for hydro-electric operation subject to low water variations. Comparison of the capacity available and that utilized indicates that a substantial part of the capacity of North American subsidiaries was unused, with consequent effect on revenues. It does not, however, indicate that the subsidiaries have overbuilt, taking into account the steadily increasing demands prior to the severe industrial recession, the large potential demand represented by 601,757 kilowatts of new load for industrial uses alone connected during the last three years and not at present reflected in increased output, and the required margin of spare capacity. Resumption of industrial activity and employment of most of the now unused part of the

connected industrial load, including that added to the lines during the period of depression, would make necessary the present available capacity.

Gross Earnings for 1931 were \$117,921,860. Balance for Common Stock, after all charges including Preferred dividends, amounted to \$22,452,917, a decrease of 16.85% from 1930, and was equal to \$3.41 per share on the average number of shares of 1931 compared with \$4.33 per share for 1930. The percentage of Gross Earnings represented by Appropriations for Depreciation Reserves increased from 10.67% to 11.45%, and the 1931 appropriations were equivalent to \$2.05 per share. Taxes were a relatively greater burden during a year of reduced revenue because these charges continued to mount while other expenses of operation were responsive to efficient and economical management. In Other Net Income of \$8,077,480 the principal item was dividends of \$7,613,950.

Total consolidated assets of The North American Company were \$870,868,558. Investments were carried at \$140,044,484. Company directors appropriated as of December 31, 1931 from Undivided Profits \$12,000,000 as a Reserve for Contingencies

to provide for the difference between book value and market value of listed securities, which constitute over 93% of total investments, and of United States government securities included in current and working assets, and for contingent losses on investments not dealt in on security markets.

Principal investments in non-subsidiary public utilities at the end of 1931 were 2,075,455 shares of Pacific Gas and Electric Company Common Stock, 706,011 shares of North American Light & Power Company Common Stock and 240,163 shares of The Detroit Edison Company Capital Stock.

Total Reserves on December 31, 1931 were \$117,482,915, an increase of \$13,812,846. Total Surplus was \$148,916,796, including Capital Surplus of \$30,921,600 and Undivided Profits of \$118,524,195, the latter showing an increase of \$977,081 for the year after appropriating \$12,000,000 for Reserve for Contingencies.

At the end of 1931 there were 9,503 holders of Preferred Stock and 53,854 holders of Common Stock, the latter an increase of 21% over 1930. At the end of February, 1932 Common stockholders numbered 55,799, of whom 87% held less than 100 shares each.

CONSOLIDATED INCOME STATEMENT

	Year 1931 (See Note)	Year 1930 (See Note)
Gross Earnings	\$117,921,860.35	\$133,751,380.67

quarter, owing largely to the bad state of the building trade and the heavy industries. Prices generally are steady. For forward importation the market is of a more lively character, the Russian wood leading the way, although there are also inquiries for those Finnish and Swedish varieties whose values come within the range of the Soviet productions. The hardwood section of the trade is not being hampered by large imports in these times of very quiet demand. The decline in mahogany receipts last month was heavy. Following poor February shipments of American hardwoods to the United Kingdom, this month's supplies have been poor. States shippers are meeting United Kingdom buyers on the exchange, but production on the other side is very low, and any improvement in demand in the States would immediately stiffen up f.o.b. prices for delivery to the United Kingdom. There has been a larger importation of Indian teak logs despite the slump in shipbuilding trade and railway services, as well as inquiries for the majority of other Empire woods, but what is wanted primarily for these—in the main, luxury woods—are more new offices, more high-class residences, and especially more furniture and decoration. Supplies of foreign pitwood also are much smaller this year than last, but whereas France was premier shipper of these descriptions in 1931 with Russia a close runner-up, Portugal this year has taken the lead. In this pitwood branch, as in all departments of the wood trade, the Soviet has made a bad start, although, of course, there is time to make up for deficiencies in shipments. Plywood imports were exceptionally large for the first two months this year—for obvious reasons—but, as with the legitimate woods, the great thing wanted is an increase in the actual consumption.

RUBBER.—After many months of negotiation, official announcements have been made on March 19th in this country and in Holland, that there would be no restriction. A survey of the rubber situation will be found on an earlier page in this issue. On Monday, rubber prices declined sharply both in London and New York. In New York, Tuesday's spot price for rubber, at 3½ cents per lb., shows a fall of ½ cent on the week. Tuesday's official closing price for standard ribbed smoked sheet in London, at 2d. per lb., shows a fall of ½ d., as compared with the corresponding day last week. In forward positions, business has been done at 1½ d. to 2d., for April.

June, against 2½ d. to 2¾ d. and at 2¾ d. to 2½ d. for October-December, as against 2¾ d. to 2½ d. a week ago. Movements of rubber in London and Liverpool during the past week were as follows: Landed, 1,628 tons; delivered, 1,589 tons; stocks at the end of last week, at 125,936 tons, show an increase of 39 tons, as compared with the preceding week.

for over-night money, and in some quarters as much as 4 per cent. was being paid. It was, indeed, rumoured that a small amount had had to be borrowed at the Bank, but this did not prove necessary, though it is believed that the Bank did give some assistance by buying end-of-May and early-June maturities at $2\frac{3}{4}$ per cent.

There were several explanations for this sudden stringency. First came the Easter currency withdrawals, which took nearly seven millions out of the banks, and so off the market. Next came the final revenue collections of the financial year. A third explanation lay in the recent heavy speculation in sterling, especially in the forward exchange market, which must have entailed an unusually heavy foreign exchange settlement. It is clear that, now that sterling is free to fluctuate and complete freedom to deal in foreign exchanges is permissible, heavy month-end forward exchange settlements on the scale of the years prior to the establishment of the gold standard in 1925 must be anticipated.

The main cause of the stringency, however, arose from events at the beginning of this calendar year. It will be recalled that the turn of the year fell in the middle of the week and that, in order to ease the year-end pressure for funds, the market concentrated its application for Treasury bills for that week entirely upon bills due to be paid for upon January 1st and 2nd. It is those bills that are maturing this week, and the bulk of them obviously were not due until Friday and Saturday, April 1st and 2nd. On the other hand, this week's applications for Treasury bills were mainly for those maturing on or before June 30th—so that the market could be placed in funds in readiness for the end of the half-year—and these bills fell due for payment on the earlier days of the week up to and including March 31st. Thus by Thursday the market had paid for all its new bills and had received nothing in respect of its maturing old bills, and so it is not surprising that extreme stringency had developed.

	Mar. 10, 1932.	Mar. 17, 1932.	Mar. 23, 1932.	Mar. 31, 1932.	Previous Rate and Date Changed.
Bank Rate	4	3½	3½	3½	4 (Mar. 17, '32)
Banks' Deposit Rate..	2	1½	1½	1½	2 (Mar. 17, '32)
Discount of Call	2	1½	1½	1½	2 (Mar. 17, '32)
Houses (Notice ...)	2½	1½	1½	1½	2½ (Mar. 17, '32)
Market rate ("hot" Treasury bills).....	2½	2½	2	1½-2	...
Market rate (3 months' bank bills)	2½-3½	2½-3½	2½-3½	2-3½	...

It is equally obvious that this stringency is a passing phase, for by the end of the week when the old bills have been paid off, money is likely to be as easy as ever. Moreover, the Treasury is about to redeem the balance of its New York credit, and, judging by the experience of a month ago, when the first part of the credit was repaid, the Treasury may well have to add temporarily to the floating debt and so make money more plentiful. The amount being now repaid, however, is far smaller than that repaid in early March. On the other hand, we are now at the beginning of the new financial year, and the Treasury bill issue will henceforward be steadily expanding. So it by no means follows that the unusual ease of recent weeks will persist indefinitely.

In the meantime discount rates have been very steady. In view of the general shortage of money, the demand for bills eased off in the middle of the week, but few sellers were in evidence, and the rate of $2\frac{1}{2}$ per cent. offered in connection with the special buying of bills was only accepted with reluctance. Last week's applications for Treasury bills were naturally very heavy, for, in addition to the keen foreign demand, the bills on offer represented the useful end of June maturity. Home applications for the £45.0 millions on offer ran up to £60.3 millions, and the average tender rate was as low as £1 16s. 11.89d. per cent. This week hot Treasury bills have been quoted at $1\frac{1}{8}$ per cent., rising to $1\frac{1}{8}$ - $\frac{1}{4}$ per cent. on Thursday.

Prime bank bills were quoted at 2 per cent. early in the week and $2\frac{1}{4}$ per cent. on Wednesday and Thursday, while standstill bills were quoted at $2\frac{1}{4}$ per cent. and upwards.

Taking this week's and last week's Bank returns together, the total increase in the note circulation over the fortnight was one of £6.8 millions, and the reserve is reduced by the same amount. The revenue influx and, still more, this week's divergence between the dates of Treasury bill payments and maturities has raised Public Deposits to the unusually large figure of £27.2 millions, and has contributed largely towards the reduction of Bankers' Deposits to £54.6 millions, a figure which was fully low enough to explain the temporary stringency. The past fortnight has also witnessed a reduction of £10.1 millions in the Bank's holdings of Government securities and an increase of £17.7 millions in its holdings of other securities. This last movement probably represents absorptions of *devisen* made with the object of checking the appreciation of the pound.

Apart from the major question of American public finance and its reaction on the dollar, which is dealt with in a leading article, interest centred this week upon whether or not a reduction in the New York rediscount rate was likely. On Monday the New York Reserve Bank reduced its buying rate for bills from $2\frac{3}{4}$ to $2\frac{1}{4}$ per cent. for all maturities up to 120 days, and as this move often fore-shadows a rediscount rate reduction, many were inclined to look for a change this week. Other authorities, however, regarded the cut in the Reserve Bank's buying rate as nothing more than the consequence of the recent reduction in open market rates, and it was also pointed out that the supply of bankers' acceptances was inadequate to meet the demands of both the Reserve System and outside sources. It was also doubtful if a reduction in rediscount rates would be wise under present circumstances. In the end the Reserve Bank decided to make no change in their rate, which remains at 3 per cent.

The foreign exchange market was fairly active this week, and fluctuations were frequent and wide as a result of the weakness of the dollar on the revelations in Congress as to the Budget deficit in the United States. Sterling appreciated strongly against nearly all other currencies. The New York rate rose from 3.64 to 3.80, after touching 3.82. Montreal lost 12 points at 4.19. Paris, after considerable daily fluctuations, was 4 points weaker at 96½, and Brussels lost a point at 27½. Milan fell away from 70.25 to 73.00, and Madrid from 48.25 to 50½. Amsterdam weakened to 9.40 and Berlin from 15.30 to 16.00. Switzerland was very erratic, and weakened from 18.85 to 19.50. The Scandinavian currencies were relatively steady, Stockholm moving in our favour from 18.55 to 18.60, and Oslo from 18.75 to 18.90, whilst Copenhagen was unchanged at 18.15, and Helsingfors at 216. Bucharest was weaker at 645. Quotations of the South American currencies are still largely nominal. Rio lost ½d. at 4d., Buenos Aires 1½d. at 37½d., and Montevideo 2d. at 29½d. In the Far East the rupee was weaker by ½d. at 1s. 6¾d., but the yen gained ¾d. at 1s. 9½d. Batavia fell away from 9.10 to 9.45. In the forward market, one month's New York was unchanged at ½ cents discount, but three months' delivery weakened to 2½ cents discount. One month's Paris gained a point at 3 centimes discount, and three months' also improved by 4 points to 12 centimes discount. Brussels and Madrid were unchanged for both periods. Milan was firmer for one month's delivery at ½ lira discount, but weaker at 1½ lire discount for three. Berlin is still unquoted. Amsterdam was unchanged at 1 and 3 cents discount for the two periods respectively. Switzerland declined from one centime premium to par for one month's delivery, but was unchanged at 2 centimes premium for three. The silver market was quiet. Prices fell away with the rise in sterling, and in the absence of support, cash being ½d. weaker at 17½d., whilst forward recovered at the close and remained unchanged on balance at 17½d. The China silver exchanges were weaker in sympathy, Hong Kong losing ½d. at 1s. 3¾d., and Shanghai ¾d. at 1s. 9d.

MR DE VALERA'S PREDICAMENT.

BEFORE commenting on the events which have threatened to disturb the peace of the Irish Free State, and the amity between the Free State and the United Kingdom, during the last few days, it may be well to remind ourselves of certain obvious general considerations. The first of these is that, in the existing situation which Mr de Valera proposes to alter, the Irish are in fact already masters in their own house in the political sense. The second consideration is that in the economic sphere—in which no country in the world is independent of its neighbours—Southern Ireland is not only dependent but overwhelmingly dependent upon the market of the United Kingdom. A third point which is very relevant to the present crisis is that the economic and the political elements in the existing situation are both alike dependent upon a single set of Anglo-Irish arrangements: that is to say, the Articles of Agreement of December 6, 1921, and the various subsidiary agreements, mostly on points of finance, by which these have since been supplemented. The "Dominion of Canada Status" which the Irish Free State at present enjoys or endures (whichever word one chooses to employ) involves those formal, though not substantial, restrictions upon Irish sovereign independence which have caused and are causing such heart-searchings to Mr de Valera and his followers; but the same status equally ensures to Irish farmers that the British market will be open to their produce on the same terms (bettered by geographical proximity) as apply to the produce of Canada and the other self-governing Dominions, whatever terms the United Kingdom may impose upon agricultural imports from foreign countries. It is also in virtue of one of the subsidiary Anglo-Irish financial agreements that the Irish investors who hold about £150,000,000 worth of securities in the United Kingdom are exempted from having to pay double income tax on their incomes.

It is no doubt true that the respective interests of the two parties in the economic and the political aspects of the existing arrangements—if these aspects are considered separately—are unequal. The economic relations which are vital to Ireland are of considerably less importance to Great Britain, while the political relations involved in common membership of the British Commonwealth of Nations are a matter of moment to the Government and people of the United Kingdom, but are apparently irksome to the Irish. An abstraction of the political from the economic aspect of Anglo-Irish relations is, however, quite artificial and misleading. The present relations are in fact an indivisible whole; and, taken as a whole, they are manifestly to the mutual interest of the two countries concerned.

Whence, then, the present trouble? We must say frankly that, in our opinion, the trouble has been created on one side only—and that not the English side—of the Irish Channel. To English eyes it looks as though Mr de Valera were wantonly "asking for trouble." But Mr de Valera himself would probably reply to this that, on the contrary, he is acting under extreme pressure from the left wing of his supporters, and that, if he is making a little trouble at once, he is doing so with the statesmanlike object of preventing, if he can, an outbreak of more serious trouble later on.

In instructing the Irish High Commissioner in London to inform the Government of the United Kingdom, on Tuesday, March 22nd, that he did not consider the Oath of Allegiance mandatory in the Treaty, and in declaring in the Senate at Dublin on the same day that he did not propose to continue the payment of the Land Annuities, Mr de Valera was apparently looking forward—on the assumption that he could induce the Government at Westminster to accept his demands—to healing the feud which has continued in Ireland itself ever since the conclusion of the Anglo-Irish Treaty and the defeat of the Republicans by the supporters of the Treaty in the subsequent Irish Civil War. If he can plausibly represent to the leaders of "The Irish Republican Army" that he has

obtained, by negotiation, the results which the I.R.A. exists in order to secure by force, then he can fairly call upon the I.R.A. to disband. For if the actual Irish Free State becomes identical with the ideal Irish Republic, then the Republicans' justification for maintaining a clandestine and militant "State within the State" is logically removed. This, if we rightly understand it, is Mr de Valera's policy; but its realisation is obstructed by two formidable obstacles. He is unlikely to secure the United Kingdom's assent to his demands for modifications in existing Anglo-Irish arrangements; and supposing that, by a miracle, he does secure this British assent, he is even more unlikely to secure, on that account, the disbandment of the I.R.A.

The temper of the Irish Republican Army is the really serious factor with which all parties have to reckon. That temper was clearly displayed in the parade at Dublin, and the lesser parades in many other places in Ireland, in which the Republicans commemorated on Easter Sunday the rising of Easter, 1916. The demonstrators paraded without arms—though they are believed to have arms in secret storage—and the proceedings were orderly; yet the demonstration was none the less ominous. Nor was this Easter parade really needed to prove the strength of the Republican feeling. That was proved much more effectively by the intense and ever-intensifying campaign of repression which the late Government in the Free State had to maintain in order to hold the Republicans down. There is no doubt that the Republican Movement is a formidable reality.

The worst of it is that this formidable movement cannot easily be placated by anything that either Mr de Valera or the Government at Westminster can do. If they succeed, between them, in removing this or that specific Republican grievance, the Republicans are only too likely to thank them for nothing and to set about finding some new grievances instead. For it is not any specific living grievances that make this Irish Republicanism implacable. Implacability itself is its mission and its *raison d'être*. Its stimuli, so far as we can discern them, are not specific remediable grievances but irrational and imponderable psychological forces. Irish Republicanism feeds, and feeds chiefly, we believe, on a past which is over and done with in fact, but is unforgotten and perhaps unforgettable in the minds of the generation in Ireland which was already full grown by the time when peace was established by the Anglo-Irish Agreement of 1921. Then there is a younger generation which joins the I.R.A. because it is baulked of the old Irish outlet of emigration overseas. In the third place there is the world economic crisis: a force which has precipitated revolutions during the last year or so in most of the Latin American countries, has been the making of Hitlerism in Germany, and has impelled the Japanese to run amok in the Far East. In Ireland, as a matter of fact, the incidence of the economic crisis has been less severe than in most countries. The Irish farmer—who is the typical Irish *homo economicus*—has not been hit so hard as his North American or Central European confrères. All the same, we may safely credit the crisis with a share in the maintenance of the implacable Republican spirit.

It is this spirit in the left wing of Mr de Valera's followers that makes the legal issues which he has raised rather serious. In themselves they are not vastly important, and on their merits he has not a leg to stand on; but they have to be taken seriously because they are symbolic.

As to the Treaty Oath, which is the symbol of membership in the British Commonwealth, it is perhaps sufficient to observe that as a matter of fact an oath of allegiance is taken by the members of all the parliaments in the British Empire, including Canada, and it is provided in the Agreement of 1921 that "the general constitutional position of the Irish Free State should be the same as that of Canada." This surely shows the intention with

which the form of oath was incorporated in the Agreement, and disposes of Mr de Valera's contention that it is not mandatory. Since, apparently, no fresh oath-taking falls due in Ireland for five years to come, it is perhaps premature to speculate upon the legal effect of a default. We imagine that, if the Oath is an integral part of the Agreement, and if a failure to renew the Oath legally causes the Agreement to lapse, then Southern Ireland automatically reverts to its previous legal status as an integral part of the United Kingdom. Or, on the contrary, does failure to renew the Oath automatically sever the links between the Free State and the British Empire? The Irish Republicans fancy that they would love to have it so; but would they really? Let us suppose that a non-renewal of the Oath on the part of members of the Dail automatically deprives Irish imports into the United Kingdom of Imperial preference. What will the Irish farmers say then to the Irish Republican Party's policy? At any rate, if that situation arises, we have a shrewd idea of what the Danish farmers will do. They will assuredly besiege the Parliament House at Copenhagen and compel their own M.P.s to take the Oath to His Britannic Majesty forthwith! So much for the Oath.

As for the Land Purchase Annuities, these are private debts from Irish ex-tenants, who are still paying by instalments for land, of which they have already entered into possession, to the present holders, whoever they happen to be (and they happen mostly to be Irish people domiciled in Ireland), of the bonds in which the Irish ex-landlords have been paid for land with which they have already parted. The Government of the Irish Free State, which collects the annuities from the debtors, and the United Kingdom National Debt Commissioners, who receive the money from Dublin and pay it out again to the bondholders, are merely acting as clearing-houses in what is essentially a private transaction. There is, it is true, a balance of Land Purchase Stock the service of which is not covered by the private debtors' annual payments; and this balance requires the finding from other sources of about £1,100,000 per annum; but only £134,000 of this annual balance is found by the Irish Free State Government, the remainder being paid by the Government of the United Kingdom. The Irish Government has actually paid over the annuities themselves from the beginning, and has expressly pledged itself to the present arrangement in the two Anglo-Irish financial agreements of February 12, 1926, and March 19, 1926. On the other side, the United Kingdom has remitted to the Free State that "equitable proportion" of the United Kingdom National Debt and War Pensions for which the Irish made themselves responsible in the Agreement of 1921.

The United Kingdom's case does not need, as Mr de Valera's case needs, to be laboured. It is intrinsically and manifestly so strong that the Government at Westminster can afford to go slow and speak gently though plainly in this controversy. On this matter we shall know more when the official correspondence of the last few days is published at the end of this week. But this controversy lies on the surface. The real problem—and it is Mr de Valera's problem more than Mr MacDonald's or even Mr Cosgrave's—is the temper of the I.R.A.

WASHINGTON AND THE DOLLAR.

DURING the Easter holidays the international markets in foreign exchange treated the world to a startling and most unwelcome display of pyrotechnics. On the eve of Good Friday, sterling was bought heavily in London, Continental purchasers being much in evidence; the Bank of England either withdrew temporarily from the market as a seller of pounds or its operations could not suffice to meet the demand for sterling, and the dollar rate rose from 3.64 to 3.71. On Saturday it became apparent that the strength of the pound was attributable to marked weakness of the dollar which depreciated further to 3.76½; and, on Monday, when the market in London was closed, sterling in New York rose to 3.82½, while the franc reached \$3.94½ for 100 francs against parity \$3.91½. Extensive sales of dollars in New York against purchases of sterling suggested that French and other Continental balances held in

that centre were being temporarily transferred to London. On Tuesday, when the London market reopened, sterling reacted to 3.78 after opening at 3.82; and on the following day the dollar recovered further to 3.72½, there being no signs on either day of active intervention on the part of the Bank of England. Thus the sharp upward fluctuations in the pound which developed during the week-end had been to some extent smoothed out by Wednesday evening, though not before sufficiently disturbing movements had occurred in the sterling prices of the leading internationally-traded commodities.

The primary cause of this renewed embarrassing movement of short-term funds to London is clearly to be sought not so much in belief abroad that sterling is undervalued—though confidence in the strength of the British financial position, augmented this week by the news of the repayment of the outstanding balance of the Treasury's New York credits, is still an important underlying factor—as in a somewhat exaggerated wave of distrust regarding the future stability of the dollar, which was created by political developments in Washington last Thursday. On that day the House of Representatives, which was dealing with the Tax Bill designed to fill the estimated gap of \$1,240 millions between revenue and expenditure in the fiscal year beginning July 1, 1932, decided by 223 votes to 153 to strike out from that measure the Sales Tax provisions, estimated to yield about \$560 millions. As our New York correspondent observes in a despatch which we print on a later page, the proposed 2½ per cent. tax on manufactured products had already been modified by certain exemptions, but considerable opposition had been mobilised, not without economic force, against a form of taxation which is apt to be passed on to the consumer with accretions *en route*. There was, in fact, a strong case for the rejection of a Sales Tax, always provided that alternative sources of revenue were sought. The attitude of Congress, however, during the debate on Thursday appears to have created the impression that, with the power of the "machine" much weakened by the present even distribution of parties, the House of Representatives, concerned predominantly with forthcoming electoral considerations, did not intend to adhere to the straight and narrow path of achieving a balanced Budget by taxation, but was prepared to create the risk of inflation by allowing the gap to be bridged by further Treasury borrowing. Another factor conducive to mistrust of the position was the Bill which is being promoted by a Texan Senator to provide some \$2,500 millions for encashment of outstanding war veterans' bonus certificates. These events were the signal, not merely for an ominous movement of exchanges, but also for a slump in the stock markets.

Fortunately, reassurance was forthcoming on Tuesday. After an impressive warning against "playing politics while the dollar burned" had been delivered by Mr Garner, the Democrat Speaker of the House of Representatives, the Chairman of the Ways and Means Committee introduced fresh proposals providing for a slight further screwing up of income tax and sur-tax, levies of 4 cents a share on stock sales, and of ½ per cent. on bond transfers, and a wide range of luxury duties, which, in conjunction with an increase of from 2 to 3 cents in the first-class postal rates, were estimated to be sufficient to secure a small surplus over prospective expenditure for 1932-33. The fate of the amended Tax Bill still remains to be decided, and the world is all too painfully aware of the unexpected "snags" which crop up unexpectedly in the American legislature; but at the moment of writing it seems that the Lower House of Congress has executed a complete *volte face* and that adequate steps to secure a balanced Budget next year will eventually be taken. This being so, it may be presumed that European panic with regard to the dollar will subside. Indeed, though too much importance should not be attached to cancellation of gold shipments previously arranged from New York to Paris—it would not be surprising if these cancellations were a reflection of central banking co-operation—concern regarding the future American currency was considerably reassured by the middle of the week.

As we have said, we can find little justification for the extreme pessimism which appears to have been occasioned by the temporary failure of Congress to face up to

the budgetary situation. In the case of such a country as the United States, with its creditor position on foreign payments account, its surplus of exports over merchandise imports, and its holding of well over \$1,000 millions of "free" gold, it is a long step from one or two unbalanced Budgets to enforced recourse to the printing press. During the past decade the internal debt of the United States has been enormously reduced, and such expansion of credit as would be brought about by Treasury borrowing for Budget purposes would not necessarily be alarming or even disadvantageous. Even if the present Congress, notwithstanding the great untapped resources of America, should shrink from imposing sufficiently drastic taxation to obviate some deficit in 1932-33, it is difficult to foresee a resulting situation which would drive the dollar off the gold standard, unless public opinion in America became so alarmed as to the future that a wholesale domestic flight from the dollar developed.

In saying this we do not wish to imply that the United States can afford any more than other countries to under-rate the seriousness of the situation, or that, if it is not firmly handled, periods of danger may not yet recur. Indeed, wise men will in these days endeavour to prepare themselves for every possibility. Even though the House of Representatives fully makes amends for its apparent irresponsibility of last Thursday, and even though it may be taken for granted that the veterans' war bonus proposals will not survive the Presidential veto, each week of the continued crisis renders it more questionable whether the "anti-deflation" measures, represented by the Financial Reconstruction Corporation and the Glass-Steagall Banking Act, will suffice to lift the strain of a depression whose psychological and material repercussions on the economic life of America cannot be lightly contemplated. The threatened Budget deficit is after all only one symptom of a critical economic situation which embraces the whole of American enterprise from the banking system and the railroads to the majority of the large industrial corporations. The world crisis, in fact, has reached a point at which even the strongest countries are subject to waves of mistrust, resulting in rapid and disturbing flights of capital from one country to another.

Until the United States at all events is free from such uncertainties, other countries cannot finally determine their monetary policy; for clearly, in the unlikely event of the suspension of the convertibility of the dollar, the repercussions throughout the world would be very serious. It is true that many central banks have taken warning from their unhappy experience in the case of the pound last September and have acquired gold instead of foreign exchange. It is true also that, in spite of New York's monetary importance, the dollar does not play so universal a rôle in world commerce as the "sterling" bill. Moreover, although the exchange rate of a "free" dollar in terms of gold is incalculable, there is no reason to fear that after the first flutter the dollar would seriously depreciate either in terms of gold currencies or of a free currency such as sterling. If the dollar were to go, it would be through the breakdown of the machinery for stabilising exchanges during an unexampled dislocation of trade and finance and our inability to control capital movements—not because there is any need to readjust American prices to world levels as was the case with Great Britain. But the "suspension" would undoubtedly mean that other countries which are maintaining a precarious and artificial hold upon gold would loosen their grip, and in some of these cases the result would be a currency slump which could not be controlled. In any case, an American suspension would mean another period of doubt. Its worst effect would be that it would almost certainly precipitate currency chaos—or an almost complete closing down of trade—elsewhere.

London is not only a focal point on which such disturbances would inevitably be concentrated, but is already feeling the influence of movements of capital which are the symptoms of uneasiness. Opinion is, therefore, growing in some quarters—particularly in industrial circles where the inconvenience resulting from violent

THE BRITISH LINEN BANK.

movements of the sterling exchange is most felt—that we should end exchange fluctuations by venturing forthwith to revalorise the pound at its present level. Greatly as we sympathise with the difficulties of industrialists in a situation of chaotic exchange fluctuations, we would hesitate to endorse such a proposal while the future of political international relationships is still so obscure and the course of gold prices still so uncertain. We cannot steady the situation by acting alone. Indeed, it is beginning at the wrong end for any one country to attempt to do so. For the Bank of England to peg the exchange at a specified figure, even as a temporary measure, would be a hazardous undertaking, unless it were very sure of its final goal; for, as the experience of the Bank of France has shown, if a rate is once fixed it is extremely hard to let it go, and if it proves to be the wrong figure and has to be abandoned it may be followed by something in the nature of a landslide. In the circumstances, in spite of all the disadvantages, it is difficult to see how the Bank of England can do anything other than endeavour to punish the speculator and to neutralise by buying foreign capital movements which are obviously temporary.

A GREAT BUDGET FEAT.

THE expectation that in spite of all the troubles of the past year Great Britain would achieve a balanced Budget has been fulfilled, and the country may well congratulate itself upon a very remarkable achievement. Six months ago the heavy burden of providing for our unemployed and the treacherous device of meeting what we hoped would be a temporary charge by resorting to borrowing made the task look very formidable. But a courageous lead and an appeal to the patriotism of the taxpayer—aided by what is probably the most efficient tax-raising machine in the world—have achieved the desired result and placed our finances in a position which may well be the envy of other nations.

Three weeks ago we ventured a forecast that, with the help of £23 millions (including interest), which Mr Snowden proposed to take into the year's revenue from the dollar exchange reserve fund, there would be a surplus of £13 millions. Actually, the results achieved would show, on this basis, a surplus of £10½ millions. But as the dollar reserve fund consists of money voted during the war, and is a "nest egg" that has been lying by for many years, the Treasury has quite reasonably drawn upon it only to the extent of the £12½ millions needed to square accounts and give a modest margin of £364,000.

In order to appreciate the nature of the effort that has been made, it is useful to recall the sequence of events of the last twelve months. A year ago, in spite of the fact that he was borrowing substantial sums to meet the deficit in the Unemployment Insurance Fund and that he proposed to reduce the fixed debt charge by £5 millions, Mr Snowden found, when he came to present his accounts for 1931-32, that his prospective revenue was £37½ millions short of his estimated expenditure. He met only £7½ millions of this gap by taxation, namely, an additional 2d. per gallon on petrol, the rest being covered by withdrawing £20 millions (besides the accumulated interest) from the exchange reserve fund and the balance of £10 millions by calling upon the income tax payer to pay three-quarters of his tax during the fiscal year, instead of one-half as hitherto. But this was the last of the makeshift Budgets, and the events of the summer quickly led to the great

effort of September last. The three outstanding points of the Emergency Budget were: (a) Borrowing for the Unemployment Insurance Fund and the Road Fund ceased; (b) economies in expenditure were introduced amounting to £70 millions in a full year; and (c) new taxation, estimated to yield £81½ millions in a full year, was imposed. For the year ended this week Mr Snowden had further to fill a big gap left by the need of revising downward his estimates of revenue, his second guess being practically £30 millions down as compared with his estimate five months before. Altogether, Mr Snowden was faced in the year 1931-32 with a deficit of £74.7 millions, which he arranged to cover by the following means: He expected his new taxes to yield an additional £40.5 millions before the year ended; he anticipated that his economies would save £22 millions of expenditure in the last half of the year, and he provided for the balance by reducing the Sinking Fund still further to £32½ millions. The additional taxation which he expected to obtain during the year was made up as follows:—

ADDITIONAL TAXATION, 1931-32.

	Estimated Yield.		
	(Million £.)		
	April Budget.	September Budget.	Total.
Income Tax	10	25	35
Surtax	4	4	8
Customs and Excise	7.5	11.5	19
Total	17.5	40.5	58

These new sources of revenue together with the other changes already referred to enabled him to frame the following final Budget for the year in comparison with that of 1930-31:—

	Final Actual Estimate 1930-31. 1931-32.			Final Actual Estimate 1930-31. 1931-32.	
	£ Mn.	£ Mn.		£ Mn.	£ Mn.
Customs & Excise	245.4	253.0	Cons. Fund.....	302.5	298.8
Inland Revenue	431.0	451.0	Supply Services	429.9	451.8
Motor Duties	4.9	5.0	Sinking Fund.....	66.8	32.5
Non-Tax Revenue	94.6	75.7	Surplus	...	1.6
Deficit	23.3	...			

Total*..... 799.2 784.7 Total* ... 799.2 784.7

* Excluding self-balancing items.

The extent to which these expectations have been realised is shown in detail in the following summary of actual receipts and issues published on Thursday night:—

REVENUE AND EXPENDITURE, 1931-32. (000's omitted.)

REVENUE.	Ex- chequer Receipts.	Larger (+) or Smaller (-) than 1930-31 Re- ceipts.	EXPENDITURE.	Ex- chequer Issues.	Larger (+) or Smaller (-) than 1930-31 Expendi- ture.
Customs.....	136,152	+ 14,751	National Debt Services: Interest and Manage- ment.....	289,492	+ 3,678
Excise.....	119,900	- 4,100	New Sinking Fund (1928).....	32,508	- 34,322
Total Customs and Excise.....	256,052	+ 10,651	Total Debt Services....	322,000	- 38,000
Income Tax	287,367	+ 31,320	Northern Ireland Ex- chequer.....	6,347	- 78
Surtax.....	76,700	+ 8,870	Local Taxation Ac- counts, Other Consoli- dated Fund Services..	3,052	+ 156
Estate, &c., Duties ..	65,000	- 17,610	Total	9,399	+ 78
Stamps	17,070	- 3,580	Total Supply Services (excluding Post Office).....	439,200	+ 9,350

Miscellaneous Receipts	29,913	- 4,417			
Appropriation from Rating Relief Sus- pense Account	3,990	- 12,010	Total Expenditure (except Self-bal- ancing).....	770,599	- 28,572
Post Office, net receipts	11,500	+ 1,400	Self-balancing Expen- diture:—		
Total Non-Tax Revenue	60,463	- 34,138	Post Office	58,000	- 1,000
Total Ordinary Revenue	770,963	- 4,932	Road Fund	22,519	- 347
Self-balancing Revenue: Post Office	58,000	- 1,000	Total Self-balancing Expenditure	80,519	- 1,347
Motor Vehicle Duties apportioned to Road Fund	22,519	- 347	Surplus	364	+ 23,640
Total Self-balancing Revenue	80,519	- 1,347			
Grand Total.....	851,482	- 6,279	Grand Total.....	851,482	- 6,279

* Including Corporation Profits Tax.

A few outstanding facts emerge from this table. The first is the very great increase in the receipts of income tax and super tax, which are not merely considerably in excess of the amounts received a year ago but have improved on the estimates of last September, the amounts received being £287.4 millions and £76.7 millions respectively, compared with estimates of £272 millions and £73 millions. On the other hand, estate duties have only yielded £65 millions, which is £18 millions less than the estimate—a drop largely no doubt to be accounted for by the depreciation of the securities included in the estates that have become subject to duty; while Stamps have produced £3 millions less than the estimate. Customs and Excise have exceeded the estimate by £3 millions, but of this £2 millions is due to new import duties under the various Acts that have been passed by the present Government.

On the expenditure side, the issues for the supply services amounted to £439.2 millions, against Mr Snowden's final estimate of £451.8 millions. The savings achieved this year have therefore amounted to £12.6 millions instead of the £22 millions which the late Chancellor anticipated. The chief reason for the additional saving is, of course, the fortunate fact that whereas Mr Snowden budgeted on the assumption of an unemployment figure of three millions, we have got through the winter with an average of less than 2½ millions.

But before congratulating ourselves too wholeheartedly on the results of the past year it must not be overlooked that although our statutory Sinking Funds have been maintained, there has been an actual increase in debt when all items are taken into account. Including the surplus, £33 millions have nominally been credited to Sinking Fund. Against this there have to be set £39.6 millions borrowed for Unemployment Insurance Benefit and £8.4 millions borrowed for Savings Certificate interest not covered by the debt charge, while £9 millions of the principal withdrawn from the dollar exchange reserve fund represent a capital asset used for revenue. Balancing these various items, the Sinking Fund shows a real debit of £24 millions. This calculation, of course, ignores our international payments and receipts on account of reparations and war debts, which should normally balance but are now in suspense. Nor does it take into reckoning the loss on exchange involved in the repayments of the Franco-American credits obtained last summer. Mr Chamberlain has stated that it may be possible to offset against this loss the advantage of an enhanced value in sterling of our gold reserves, but unless the pound is finally stabilised at or below its present figure, this benefit will not be realised. In view of the uncertainty as to the final value of the pound, it would be prudent to make provision for a contingent loss under this head.

To sum up, the nation's accounts tell the story of a remarkable achievement, and had Death been more relentless in his dealings with the richer section of the population, the results would have looked even more satisfactory. As it is the remarkable performance of the income tax payer, who has played so large a part in restoring the financial ship to an even keel, and the rapidity with which the yawning deficit of last autumn has been covered, are, despite the minor reservations which we have made, matter for sincere satisfaction. But this legitimate satisfaction must not delude the taxpayer into the belief that the next Budget, which Mr. Chamberlain will introduce on April 19th, can very greatly relieve the burdens which he has been asked to carry. The calculations which we made a fortnight ago suggest that the Chancellor may have a surplus of revenue over expenditure in the coming year of the order of £25 millions with which to satisfy the hungry claims of clamourers for relief. But the figure of next year's prospective surplus will be in some respects illusory. The sinking fund, as we have pointed out, needs fortification as soon as circumstances permit; the equation between international debt receipts and payments remain uncertain; world conditions are not such that a rise in unemployment can be ruled out of the list of possibilities. Indeed, all the circumstances indicate the necessity for caution; and in any case justice demands that whatever favours the Chancellor is properly able to distribute should be allocated,

not to one section alone, but with full regard to one of the initial pledges given by the National Government, namely that the aim to be pursued was an equality of national sacrifice. As and when improved conditions allow burdens to be lightened, such relief must be spread in equitable proportions among all who have been called upon to bear the brunt of a national emergency.

TOWN AND COUNTRY PLANNING.

A CONSERVATIVE Minister of Health could hardly have hoped for an easy time in persuading a Standing Committee of the present House of Commons to accept, as in the main a non-contentious measure, a Bill which was described by a former Labour Minister (Mr Morrison) as a piece of the finest Socialistic legislation ever brought before the House. Sir Edward Hilton Young has, indeed, found the Standing Committee which has been considering the Town and Country Planning Bill far from docile, and in spite of his warnings their labours have rendered the measure, in his own words, "unworkable." That he must attempt some form of compromise with the Conservative mutineers if the Bill is to proceed further is clear; that he will try to persuade the House to undo at the Report stage some of the Committee's work is equally certain. But it is not so obvious how far he will be able to carry the mass of Conservative back-benchers with him or whether, inflamed by the example of the United States Congress, the party may not pull a long nose at its leaders. Among the rebels in Committee were two Parliamentary Private Secretaries, Captain Waterhouse and Mr M. W. Beaumont, who are reported to have sought, somewhat impudently and very ominously for the future of party discipline under a "National" Government, to justify their defiance of the Whips by pleading the precedent of the "agreement to differ" over the Import Duties Bill.

The Town and Country Planning Bill, which has the support—as recent amendments equally have the opposition—of the Town Planning Institute, the Royal Institute of British Architects, the Council for the Preservation of Rural England and a great many other interested bodies, as well as of the chief local authorities and statutory regional committees, was introduced in the last Parliament after consultation with land-owners and house property-owners, sent down in a slightly amended form by the Standing Committee as an agreed measure, re-introduced in this Parliament by the new Government, and given a second reading without a division. It repeals the Town Planning Act of 1925, and those parts of the Local Government Act of 1929 which made county councils planning authorities, and it consolidates and enlarges the powers conferred on local bodies and on the Minister by those measures. Local authorities are given power (*inter alia*) to combine together in prescribing the form of development to be permitted over wide areas, including urban, suburban and rural districts. The Manchester regional scheme, for instance, which it is hoped to enforce under the new provisions, involves eighty local authorities. The essential innovation of the Bill is to extend planning powers to built-up areas, and it is therefore of special interest to great cities like London or the industrial cities of the North whose development has hitherto been haphazard and uncontrolled. Schemes may prescribe the number of buildings to be erected in any area and the space to be left open round such buildings; may regulate their design, appearance or use; reserve areas unbuilt upon for use either as public or as private open spaces; control the display of advertisements; and reserve lands for widening or constructing roads.

Amendments made in Committee alter the Bill in two vitally important respects. Sir Edward Hilton Young has been forced to concede that resolutions by local authorities to prepare planning schemes shall be subject to approval by the Minister, who shall not give his consent unless and until he is satisfied that, in the case of any

AND DRAFTS ISSUED.

land already built upon, public improvements are likely to be made or other developments are likely to take place "within such a period of time and on such a scale as to make the inclusion of the land in a scheme expedient." While that sounds innocent enough, its effect would clearly be to compel local authorities to apprise the Minister of the details of future development in the areas which they were seeking to "plan" at a stage when, normally, such details could not possibly be known. They would thus be severely handicapped in seeking to promulgate schemes for the sane development of built-over areas any considerable time before the opportunity of embarking on large public improvements might arise, whereas the only hope of reforming urban areas lies in planning far ahead of imminent necessity. A further amendment carried in Committee makes it compulsory for local authorities to pay compensation to owners of property, who claim that they are prejudicially affected by a scheme, before the scheme has been actually enforced. The Bill, it may be said, made ample provision for compensation after the loss of property-owners could be properly ascertained, and allowed local authorities the option—which it was expected they would exercise in all cases of hardship—of paying compensation at the earlier stage. If they are to be loaded from the start with the burden of hypothetical damage, authorities will obviously be most reluctant to initiate planning schemes. It was this amendment which drew from the Minister his declaration of despair.

These wrecking amendments appear to have been made at the behest of the National Federation of Property Owners and Ratepayers, which has been conducting a vigorous campaign against the Bill. Landowners do not appear to be dissatisfied with the measure; for they probably realise that in the long run no one stands to gain more from a controlled development of both urban and rural areas than the landlords, who would be thus protected against the corruption of the countryside and the confusion of the towns, with all the accompanying depression of site values. The urban property owners apparently have still to learn that elementary lesson. They and their parliamentary spokesmen would also do well to remember that the electorate did not elect the representatives of sectionalism last October merely in order to make room for sectionalism of another colour.

CANADIAN NEWSPRINT.

(BY OUR OTTAWA CORRESPONDENT.)

THE Canadian newsprint industry is struggling with grave difficulties. They began half a dozen years ago, when greedy entrepreneurs and company promoters, working in alliance with complaisant politicians, were allowed to create a serious condition of over-production which brought prices down to an unprofitable level; and they have been enormously aggravated by the great American slump which, by its drastic curtailment of advertisements, has seriously reduced the demand of the market normally absorbing more than seven-eighths of Canada's output. The following statistics give a picture of the position of the

industry in regard to production, exports and domestic consumption in recent years:—

	Production. Tons.	Export. Tons.	Domestic consumption. Tons.
1920	876,000	762,000	114,000
1928	2,381,000	2,207,000	174,000
1929	2,729,000	2,511,000	218,000
1930	2,505,000	2,331,000	173,000
1931	2,221,000	2,008,000	213,000

Output more than trebled itself between the years 1920 and 1929, but since then there has been a sharp recession, wholly attributable to the curtailment of exports. Figures of shipments in the past two years are given below:—

	1930. Tons.	1931. Tons.
United Kingdom	134,639	104,027
Cuba	9,733	5,196
Jamaica	1,111	1,083
Argentina	82,285	44,295
Other Latin America	7,795	12,038
South Africa	15,964	14,744
Australia	45,096	29,502
New Zealand	21,670	14,673
All other	6,707	29,265
Overseas	325,000	254,823
To United States	2,006,011	1,753,414
Total	2,331,011	2,008,237

During 1931, according to the Newsprint Service Bureau, the operating ratio of the Canadian mills ranged between 50 and 60 per cent. of their capacity; by December it had shrunk to 51.3 per cent. The Newsprint Bureau has now announced the cessation of its monthly reports on operating ratios, and in explaining this decision points out that

"not only are there no more machines building but it is also obvious that some machines cannot be profitably operated at present price levels. In other words, the capacity of the industry for practical purposes cannot be determined by compiling the possible speeds and trims of all existing machines—whether they are running or not—but is definitely limited by a multitude of economic factors."

It is well known to people acquainted with the industry that many machines in Canadian newsprint plants are obsolete, or the plants loaded with capital charges prohibitive of their profitable operation at the present price of newsprint; and the Bureau's statement is a frank admission that the rated capacity of 12,376 tons per diem does not coincide with the capacity which can at present be profitably employed. It is known, moreover, that certain of the larger mills, which are more happily situated in regard to pulpwood supplies, transportation facilities and other factors, have been operating far above the average

while the remainder have had an operating ratio of under 40, which is obviously hopeless from the viewpoint of dividends. But even the largest and strongest mills are sailing in troubled waters. The report of the Power and Paper Company, Limited, for 1931

shows that earnings for the year were \$5,397,152, as compared with \$7,374,338 in 1930, and that after bond interest and other obligations had been met, there was

only a margin of \$1,301,973. A further reduction of stocks, effected by using accumulated wood-piles and refraining from buying fresh supplies, has enabled a bank loan of \$4½ millions to be reduced to \$2,150,000, but the directors do not feel justified in resuming dividend payments on the preferred stocks, which were suspended some time ago. The stock market's appraisal of the value of the company's common stock, which has been without a dividend for a considerable period, can be gauged by the fact that it is selling at between 2 and 3 as compared with a peak of above 80 in 1927.

In the last quarter of 1931 the Canadian newsprint companies were deriving considerable profits from the premium on the American dollar which existed in Canada, but this advantage was only temporary, as the general upheaval in the exchanges put the newsprint manufacturers of Northern Europe in a position to reinforce the strenuous efforts which they had previously been making to secure a larger share of the American newsprint market. The result has been that, whereas the United States' imports of newsprint for the first eleven months of 1931 showed a general decline of about 9 per cent., combined imports from Finland, Sweden, Norway and Germany

actually showed an increase during this period of 15.5 per cent., and the gain largely occurred in the latter part of the year. It is true that the Canadian mills will only suffer from European competition in the areas bordering on the Atlantic and Pacific seaboard and the Gulf of Mexico, and that the more favourable location of the Canadian mills will preserve their market in inland cities like Chicago and St. Louis; but the newsprint consumption of the great cities situated on the seaboard is so large that European competition has to be reckoned with as a serious factor. Recent despatches from the Pacific coast indicate that the Scandinavian mills were offering newsprint at Los Angeles and San Francisco at prices substantially under those sought by the Canadian companies. Accordingly, over a large part of the United States the Canadian mills have been compelled to meet the price of their European competitors and have thereby had to yield practically all the benefit derived from the premium upon the American dollar. There is to-day a certain mystery about the prevailing price of newsprint, but as a result of the latest cut, which was made towards the close of 1931, the average price now being received by Canadian mills does not exceed \$50 net per ton.

Negotiations for a gigantic merger of as many as possible of the newsprint companies of Canada have been proceeding intermittently for many months, but so far have not come to any practical fruition. Most of the leaders of the industry are convinced that such a merger, which would make possible great administrative economies and might also offer an instrument for a certain measure of price control, is the only real solution of the industry's troubles; but the fundamental difficulty is that the directors of practically every newsprint corporation have a higher estimate of the value of their properties than others are willing to concede. It is an open secret in Montreal that not long ago one of the most influential personages in the Canadian business world convened a meeting of the leaders of the newsprint industry, and, confronting them with a committee of eminent bankers, informed them that as the situation of the industry was desperate and they had failed to reach any agreement among themselves, they must, if they wanted to avert a complete *débâcle*, consent to accept this committee of experienced bankers as arbiters about the value of their respective properties and the securities covering them. Most of the newsprint men who were present acquiesced in the proposal, some with obvious reluctance, but the representatives of two important units of the industry firmly declined to participate in any merger. Great pressure was brought to bear upon the dissentients, but they were not to be cajoled into any merger, and, as their inclusion was almost essential to its success, the architects of the project have for the time being suspended their efforts. Their present fear is that certain mills, which are in a receivership or about to suffer this fate, will be picked up on the bargain counter by American interests, who will wipe out all the junior securities and so be able to produce newsprint at an even lower price than now prevails. It is known that a group of American papers have been negotiating for the acquisition of a large newsprint plant in Ontario which has reached the end of its financial tether and has been shut down.

One interesting recent development in the newsprint situation has been the visible lukewarmness of the Canadian newsprint companies towards the campaign which Lords Rothermere and Beaverbrook were waging for the application of the British 10 per cent. tariff to foreign newsprint with preferential free entry for Dominion newsprint. Not only did the leaders of the newsprint industry in Canada see no advantage in such a tariff preference for themselves, but they visualised too much business in the open newsprint market in Britain owing to the lower production costs and closer proximity of their Scandinavian competitors; and, in the present petitive position in the British market has become worse. A 10 per cent. preference would be quite inadequate to overcome the heavy differential now existing between the

Canadian and Scandinavian currencies in relation to sterling; and, if the Scandinavian newsprint now sold annually in Britain lost this market it would in all probability be shipped to the United States, which it can enter without any duty. The result would be a further demoralisation of the newsprint market of the U.S.A., and as the Canadian newsprint interests regard its recovery as their paramount need, they do not want to encourage any developments which might retard this.

Nor is there any demand among the Canadian producers of wood pulp for preferential tariff treatment in Britain, because they know the costs of producing and transporting Scandinavian pulp are so much lower than their own that only a duty intolerable to British paper-makers could give them a share of the British market. Again, when a 50 per cent. dumping duty was imposed by the British Government on wrapping paper last autumn it was predicted in some quarters that Canada would benefit greatly, but so far there has been no noticeable increment of business to Canadian mills from this move. What the leaders of the pulp and paper industry in Canada realise, with a clarity denied to their would-be allies in Britain, is that their true interest lies in Britain's absorbing as large a volume of Scandinavian paper products as possible and keeping them off the American market.

DIARY OF THE CRISIS.

- Jan. 3rd. Japanese enter Chinchow.
- Jan. 4th. U.S. Democrats introduce Bill requesting, *inter alia*, international conference on tariff policy.
- Jan. 6th. Foreign Ministers of Denmark, Norway and Sweden meet to discuss Scandinavian currency and fiscal policy.
Sterling weak: \$3.35½.
- Jan. 7th. Dr. Brüning and Herr Hitler discuss possible prolongation of President von Hindenburg's term of office.
U.S. Government dispatch Notes to China and Japan refusing to recognise any agreement between these countries impairing American treaty rights in China.
- Jan. 8th. British and French Treasury officials resume reparations discussions in Paris.
Bulgarian Prime Minister states that Bulgaria will be unable to meet her external obligations without foreign assistance.
Sterling rallies: \$3.40½.
- Jan. 9th. Dr. Brüning states: "Germany's situation renders it impossible for her to continue political payments."
British Government request Japanese Ambassador to obtain confirmation of previous assurances that Japan adheres to "open-door" policy in Manchuria.
Austrian National Bank states that foreign exchange for repayment of short-term credit instalments due after January 10th will not be available. Foreign creditors invited to Vienna to discuss new terms.
- Jan. 11th. B.I.S. Board agree to renewal for three months of credits to Germany, Austria, Hungary and Yugoslavia, provided other central banks extend their shares.
Bulgarian Prime Minister announces intention of asking League Council for financial assistance.
- Jan. 12th. French Cabinet resigns.
Franco-British reparation conversations adjourned.
M. Moret intimates that Bank of France is willing to extend for one month only its share of the Reichsbank credit.
Herr Hitler and Hugenberg reject German Government's plan for prolonging the President's term of office.
Greek Bank Rate raised from 11 to 12 per cent.
- Jan. 13th. French Cabinet reconstructed under M. Laval.
Norwegian Government increase Customs duties by 20 per cent. (sugar and coffee 15 per cent.), except goods covered by treaties and those not produced in Norway.
Chinese Government assure United States that they are ready to co-operate in upholding Nine-Power Treaty.
Belgian Bank Rate raised from 2½ to 3½ per cent.
- Jan. 14th. Composition of League Commission of Inquiry in Manchuria announced: Lord Lytton chairman.
Indian Bank Rate reduced from 8 to 7 per cent.
Sterling stronger: \$3.46½.
- Jan. 16th. Japanese Note to United States on Manchuria states that Japan has no territorial aims in Manchuria.
Standstill negotiations between United States and Hungarian banks abandoned owing to inability of latter to provide payment of interest and commission.
- Jan. 19th. French Chamber reassembles. M. Laval states that France will not sacrifice any reparations due to her without a corresponding remission of her own war debts.
German decree issued empowering Government to impose compensating surcharge on imports from countries with depreciated

currency and to increase Customs duties on goods from countries with which Germany has no commercial treaty or from which she does not receive most-favoured-nation treatment.

Five Japanese monks attacked and injured by Chinese in Shanghai.

Gen. Dawes appointed president of American Reconstruction Finance Corporation.

Hungarian Bank Rate reduced from 8 to 7 per cent.

Jan. 20th. Postponement of Lausanne Conference announced. Rioting between Chinese and Japanese in Shanghai.

Jan. 21st. Japanese warships sent to Shanghai. Chinese authorities asked by Admiral Shiosawa for apology and compensation in connection with recent riots, and for dissolution of all anti-Japanese organisations.

Jan. 22nd. Announced that British Cabinet "agrees to differ" on fiscal policy.

Reconstruction Finance Corporation Bill passed by U.S. Congress.

Jan. 23rd. Report of Bankers' Standstill Committee (Germany) published.

Jan. 26th. Bank of England announces that on February 1st its outstanding credits from the New York Federal Reserve Bank and the Bank of France will be repaid in full.
London Stock Exchange restriction on "contangoes" removed.

Jan. 27th. Japanese Consul at Shanghai intimates that 6 p.m. on January 28th is the time-limit allowed to Chinese authorities for compliance with Japanese demands.
Austrian Government resigns.

Jan. 28th. Mayor of Shanghai intimates compliance with Japanese demands. Japanese Admiral announces intention of landing forces to protect Japanese nationals. Marines endeavour to occupy Chapei, but meet with considerable resistance; Woosung forts bombarded by Japanese warships.

Bank of France agrees to renew for one month further its share of Reichsbank credit on condition that the German Government will not oppose transference of gold in event of repayment.
Estonian Bank Rate reduced from 6½ to 5 per cent.

Jan. 29th. Japanese aircraft bomb Chapei; China appeals to League under Articles X. and XV. of Covenant.

Austrian Government reconstructed under Dr. Buresch.
New South Wales Government announces inability to meet forthcoming interest payments in London and New York.

Jan. 30th. Chinese reinforcements reach Shanghai; fighting continues. League Council instructs representatives of States Members in Shanghai to report on crisis.

Feb. 1st. British, French and United States reinforcements sent to Shanghai. British and American Ambassadors protest to Tokyo Government at violation of neutrality of International Settlement. Japanese warships shell Nanking.

Feb. 2nd. Japanese offensive in Chapei resumed.
British Parliament reassembles. Chancellor of Exchequer announces that British Government is in favour of cancellation of reparations and war debts.
Disarmament Conference opens at Geneva.

Feb. 3rd. Japanese warships and aircraft bombard Woosung forts; further attack on Chapei.
Reichsbank accepts French terms for credit renewal.

Feb. 4th. British Government's tariff proposals announced.
Renewed Japanese attacks on Chapei meet with strong resistance; Japanese army division ordered to Shanghai.

Feb. 5th. French put before Geneva Conference scheme for League control of certain armaments.

Feb. 6th. Austrian Government agree to appointment of M. Van Hengel as managing director of Credit-Anstalt.
Japanese troops landed at Woosung.

Feb. 7th. Sir John Simon places British proposals for reduction of armaments before Disarmament Conference.

Feb. 8th. United States disarmament proposals placed before Geneva Conference.

Japanese Finance Minister murdered in Tokyo.
Australian Government decide to meet New South Wales external obligations due on February 1st.

Feb. 10th. Import Duties Bill introduced in British Parliament.
Italy proposes to Disarmament Conference abolition of capital ships, submarines, bombing aircraft and chemical warfare.

Feb. 12th. China requests Special Session of League Assembly.
Finnish Bank Rate reduced from 8 to 7 per cent.

Feb. 13th. Agreement reached by Six Powers concerned to hold Lausanne Conference in June, with the object of agreeing on "a lasting settlement" and on the solution of "the other economic and financial difficulties" responsible for the crisis.

Feb. 15th. Powers concerned again protest against use of International Settlement at Shanghai as a Japanese base of operations.

President von Hindenburg announces that he will stand for re-election in the German Presidential election.

Feb. 16th. Committee of Twelve of League Council address Note of remonstrance to Japan.

French Government defeated; Cabinet resigns.
Austrian Chancellor invites Ministers of Great Britain, Germany, France and Italy to discuss with him Austria's financial situation.
Irish Free State General Election polling day.

Feb. 17th. Foreign representatives arrange meeting between Japanese and Chinese Commanders for February 18th.

Feb. 18th. British Bank Rate reduced from 6 to 5 per cent. Sino-Japanese truce conference breaks down. Japanese deliver ultimatum demanding, *inter alia*, the cessation of hostilities by Chinese 19th Army, the evacuation of first-line position by 7 a.m., and withdrawal to 12½ miles from International Settlement by sundown on February 20th. Chinese reject terms. Independence of Manchuria proclaimed. Swedish Bank Rate reduced from 6 to 5½ per cent.

Feb. 19th. League Council appeal to Japan to delay giving effect to ultimatum, and call meeting of Assembly for March 3rd.

Feb. 20th. Mr Henry P'u chosen as head of new State of Manchuria. Japanese offensive reopened on front extending from Woosung to Hongkew. Irish Free State election returns reveal Government defeat. Greek Bank Rate reduced from 12 to 11 per cent.

Feb. 21st. M. Tardieu forms new French Cabinet.

Feb. 22nd. German banking reorganisation scheme announced, with State participation, involving the merging of the Darmstadter und Nationalbank in the Dresdner Bank, and the drastic writing down of capital of the Deutsche und Disconto, the Commerz and other banks.

Feb. 23rd. Shanghai: Japanese advance checked. Reichstag reassembles.

Feb. 24th. Mr Stimson states that the United States will agree to no alteration of the Nine-Power Treaty.

Feb. 25th. Japanese attacks renewed. Herr Hitler appointed an official of the State of Brunswick, thereby obtaining German nationality. New York Bank Rate reduced from 3½ to 3 per cent. Indian Bank Rate reduced from 7 to 6 per cent.

Feb. 26th. Severe fighting north of Shanghai. Japanese bomb Chinese aerodromes at Hangchow. German Reichstag rejects by 289 votes to 264 motions of non-confidence in the Brüning Cabinet. Glass-Steagall Banking Bill, providing for an expansion of credit, finally passed by both Houses of Congress.

Feb. 27th. Herr Hitler formally announces his candidature for German Presidency. Japanese occupy Kiangwan.

Feb. 28th. Japanese reinforcements landed in the International Settlement and at Woosung. In order to press political claims, Finnish Lapuan leaders mobilise forces and threaten to march on Helsingfors.

Feb. 29th. British Import Duties Bill receives Royal Assent; duties operative forthwith.

Japanese forces advance at Kiangwan. Japanese and Chinese military representatives meet on board H.M.S. "Kent." Truce proposals discussed and submitted to respective Governments. Emergency meeting of League Council considers and approves plan for joint conference between Japan, China and the other Powers for final settlement of dispute. Scheme accepted by China and referred to Japanese Government.

Mar. 1st. Japanese break Chinese lines and advance towards Tazang. Japanese 11th Division disembarked in the Yangtze 20 miles above Woosung. Finnish Government orders arrest of Lapuan leaders; revolt collapses; two pro-Lapuan Cabinet Ministers resign. Lithuanian Bank Rate reduced from 8½ to 7½ per cent.

Mar. 2nd. British Chancellor of Exchequer announces partial repayment Treasury's Franco-American credits. Restrictions withdrawn on the purchase by British nationals of foreign exchange. Dollar 3.48. Owing to landing of Japanese division threatening their left rear, Chinese troops withdraw 20 kilometres from Shanghai area. Swedish and Norwegian Bank Rates reduced from 5½ to 5 per cent. respectively.

Mar. 3rd. League Assembly meets. Reichsbank announces immediate repayment of 10 per cent. of B.I.S. and Central Bank rediscount credit and the renewal of the remainder for 3 months to June 4th. Roumanian Bank Rate reduced from 8 to 7 per cent.

Mar. 4th. League Assembly passes resolution calling upon the Governments of China and Japan to take immediate steps to ensure that orders for cessation of hostilities in Shanghai be made effective; and requests the "Shanghai" Powers to inform it whether such measures have been carried out. Handelsbank Aktiengesellschaft of Berlin suspends payment. Sterling improves: Dollar 3.50½.

Mar. 5th. Memorandum containing suggestions by the French Government for economic and financial reconstruction in the Danubian States communicated to British, Italian and German Governments.

Mar. 7th. Death of M. Briand.

Mar. 8th. Details published of new German tariff, imposing heavily increased duties on certain imports from countries with which Germany has no trade treaties or which discriminate against German goods. Reichsbank Rate reduced from 7 to 6 per cent. Hungarian Finance Minister announces that the British standstill agreement has been extended until August 1st. Rapid rise in sterling: Dollar 3.71½.

Mar. 9th. Composition of new Irish Cabinet under Mr de Valera announced. Japanese peace terms transmitted to Chinese representatives by British Minister at Shanghai. German Debtors Committee request Foreign Creditors Committee to lower rates of interest and commission on standstill credits.

Mar. 10th. British Bank Rate reduced from 5 to 4 per cent. China agrees to open negotiations with Japan for definite cessation of hostilities provided that there is a complete and unconditional withdrawal of Japanese forces. Danish Bank Rate reduced from 6 to 5 per cent. Sterling reacts. Dollar 3.66.

Mar. 11th. League Assembly adopts resolution for Shanghai peace settlement; neutral zone to be established. Action approved by United States Government. Japanese Bank Rate reduced from 6.57 to 5.84 per cent.

Mar. 12th. Suicide in Paris of Mr Kreuger.

Mar. 13th. German presidential election polling day. President von Hindenburg fails by only 168,453 votes to obtain absolute majority.

Mar. 14th. Swedish Stock Exchange closed for one week. Government approves moratorium for certain Kreuger interests during investigation of the combine's financial position.

Mar. 15th. Chinese Government accept League Assembly resolution of Mar. 11th. Irish Parliament meets. Mr De Valera states that the Government intend to remove Oath of Allegiance from the Constitution. French Budget modifies imports tax imposed in 1928 from flat rate of 2 per cent. *ad valorem* to 6 per cent. on finished articles, 4 per cent. on semi-finished products, and 2 per cent. on raw materials.

Mar. 16th. Mr de Valera states that no further land annuities will be paid by Irish Free State to Great Britain. German Government replies to M. Tardieu's Danubian memorandum, suggesting that the consultations should include France, Germany, Great Britain and Italy, as well as the Danubian States. Governor of Bulgarian National Bank reports that Financial Committee of the League and the Bondholders Committee, now sitting in Paris, will make certain concessions to Bulgaria if she meets the payments due on March 15th. Government decide to pay.

Mar. 17th. Disarmament Conference adjourns until April 11th. British Bank Rate reduced from 4 to 3½ per cent. Austrian Bank Rate reduced from 8 to 7 per cent.

Mar. 21st. International Chamber of Commerce invites chairmen of its national committees in Austria, Czechoslovakia, France, Germany, Great Britain, Hungary, Italy, Yugoslavia, Poland and Rumania to attend a conference on April 16th to discuss the situation of the Danubian States. Italian Bank Rate reduced from 7 to 6 per cent.

Mar. 23rd. South African Budget imposes additional import duty of 7½ per cent. on nearly all imports. Mr Thomas states British Government's objections to Irish Free State's Oath policy.

Mar. 24th. United States House of Representatives reject Sales Tax proposals for balancing the Budget. Irish Free State impose 33½ per cent. tariff on all imports of foreign agricultural machinery, with a 25 per cent. duty on British imports. Sterling strong: Dollar 3.71½.

Mar. 26th. Heavy sales of dollars: rate on London 3.75½.

Mar. 27th. Announced that British Government has invited France, Germany and Italy to attend a conference in London early in April to discuss the Danubian Plan.

Mar. 28th. Continued heavy selling of dollars in New York. Sterling: Dollar 3.82½.

Mar. 29th. Announced that British Treasury is repaying forthwith outstanding balance of New York credit. Announced that M. Tardieu and M. Flandin will visit Mr MacDonald in London on April 4th. League Financial Committee accept suspension for one year of sinking fund payments on Greek foreign obligations. Fresh tax proposals, estimated to yield \$160 millions, approved by United States House of Representatives. Dollar steadier. Sterling: Dollar 3.77½.

Mar. 30th. United States House of Representatives approve further taxes, estimated to yield \$170 millions. Sterling: Dollar 3.76.

Notes of the Week.

The Four-Power Conference.—In the European sector of the world crisis two developments of importance fall to be recorded: M. Tardieu, a welcome guest, visits London this Sunday to discuss the situation informally with Mr MacDonald, and invitations have been issued to France, Germany and Italy by the British Government to join in a Four-Power Conference on the position of the Danubian States. The hope is that this Conference—the invitations have already been accepted by Germany and Italy, and French acceptance will probably be notified

before these lines are read—can be held next week, though Dr. Brüning's preoccupation with the Presidential Election in Germany may make his personal attendance impossible. Regrettably, a section of the Paris Press has seen fit to depict the British Government's initiative in proposing this Conference as a manoeuvre of Mr MacDonald's calculated to checkmate the supposedly promising arrangement concluded between M. Tardieu and Sir John Simon, whereby a joint understanding, first fruits of a renewed *entente cordiale*, between Britain and France was to pave the way for successful negotiations between the countries of South-Eastern Europe. To place this construction on the invitations to the Four-Power Conference—whatever the Foreign Secretary may have said to M. Tardieu—is both to misconceive and to do scant justice to British policy. Welcome as is M. Tardieu's visit, opinion in this country is overwhelmingly opposed, we will not say to hitching the British wagon to French policy, either in the matter of reparations or as regards the "system of Europe," but opposed rather to any particularist understandings exclusive of other countries. Moreover, so far as the Danubian crisis is concerned, it is patent that no useful steps preparatory to a "South-Eastern Conference" could be taken without the co-operation of Germany and Italy. So far from being inspired by any "manoeuvring" motive, the British Government's attitude in proposing a meeting of the Four Powers appears to us to be plainly to the general interest of Europe. What will come of the Conference is another matter. Apart from the obvious, if questionably sound, plan of once more "putting their hands in their pockets" in order to alleviate for a moment the menacing financial strain that extends from Vienna to the Black Sea and the Aegean, the Western Powers will have to consider if any form of trade agreement can be devised which will help these distressed countries without asking for greater privileges than the Powers are ready to concede. Preferential tariff arrangements are very much in the air; but, apart from the difficulty of securing agreement on plans that give special opportunities to A. and not to B., we must be careful lest, under the guise of helping the needy, we may be devising yet another method of tying up trade in leading strings. We are far from wishing to discourage any attempt at economic federation between the Danubian States, but it is well to realise that recovery is not to be achieved by crying, "Reconstruct" and waving a political wand.

The League and Central Europe.—On the deliberations of Mr MacDonald and M. Tardieu next week-end, and on those of the projected subsequent Four-Power Conference, the conclusions of the Financial Committee of the League on the present difficulties of Austria, Hungary, Bulgaria and Greece will obviously have an important bearing. The Committee is understood to have completed its work before Easter but, under normal procedure, its reports are submitted before publication to the League Council. The next ordinary meeting of the Council will not take place until May 9th, and, though a special meeting is to be called early in April, it is understood that this is summoned purely for dealing with Far Eastern affairs. If it is really true that five or six precious weeks are to be allowed to elapse before the Committee's urgent proposals to meet a very urgent problem are considered by the Council, the situation is most unfortunate, and we hope that the necessity of earlier consideration by the Council may yet be recognised. No official *communiqué* was issued by the Committee at the close of its proceedings but, according to the news from Athens, Greece appears to have been advised by the Committee that it is prepared to accede to the Greek Government's request for temporary relief to the extent of permitting the suspension for one year of sinking fund payments on account of foreign obligations, including the League loans of 1924 and 1928. It is apparently intended that the sums thus held in suspense should be temporarily lent for productive expenditure to the Greek Government. Although the budgetary, as well as the transfer, position of Greece confronting the Financial Committee had obviously to be recognised as critical, the situation of the other three

countries whose present straits were surveyed by the Committee is clearly such as to suggest that if the above-mentioned concessions have had to be granted to the Greek Government, temporary relief of one kind or another may well have had to be recommended in the other cases also. The *Economist* found occasion last autumn to criticise earlier findings of the Financial Committee, *e.g.*, in the case of Hungary, on the ground that the Committee failed (it may be from lack of unanimity among its members) to face squarely the crucial fact that, given the existing political structure of South-Eastern Europe, the fiscal policy of the Western Creditor Powers and, above all, the present price of primary agricultural products, the Central European States, including Austria, Bulgaria and Greece, form an area whose collective insolvency cannot be cured by individual policies of monetary deflation, budgetary economies and import restrictions. The Committee is entitled to plead that it could not foresee last autumn that the Reparations Conference would be postponed until June, 1932—a postponement which has necessarily aggravated the difficulties of the whole of Central and South-Eastern Europe. It might, however, have done much good had the Committee laid more urgent emphasis six months ago on the necessity of dealing radically with the problems of prices and trade outlets if disaster was to be avoided. How far the Committee has now been constrained to face unpalatable facts remains to be seen. But if, as seems inevitable, and as is in fact to be deduced from the disclosures already made in the case of Greece, the Committee has had to face the virtual failure of the League's attempts to restore by financial aid the post-war system of South-Eastern Europe, that very fact is a cogent reason why the Great Powers—who may indeed have to face the question whether further urgent financial aid is not imperative to avoid an economic collapse in that area—should do all in their power at the forthcoming Conference to contribute to the foundation of a basis for Central European reconstruction. Under the circumstances, we would strongly urge that the report of the Financial Committee should be made known to the public with the least possible delay, without waiting for the next meeting of the League Council.

The Indian Princes and Federation.—The Eleventh Annual Session of the Chamber of Princes was opened this Monday, March 27th, by the Viceroy; and on this occasion the rulers of the Indian States have reaffirmed their intention—originally expressed some two years ago—of entering into an All-India Federation with the British Indian provinces. The substantive passage in this week's resolution runs: "This Chamber declares that the Indian States will join an All-India Federation on the assumption that the Crown will accept the responsibility of guaranteeing to them the necessary safeguards." The resolution then goes on to lay down the conditions that the safeguards shall be embodied in the new All-India Federal Constitution as an integral part of it; that all existing treaties, *sanads* and other obligations regulating the relation between the States and the Crown shall remain inviolate and inviolable; and that the rights of internal sovereignty shall remain untouched. In one sense the new resolution goes further than its predecessor, inasmuch as it is expressed as a "declaration" instead of a mere statement of opinion in regard to the probable action which the States might be expected to take individually. The States have now definitely pledged themselves to federation as a body. At the same time, the conditions and guarantees, as re-stated, are uncompromising and comprehensive. If the States were really to stand on the letter of these conditions in perpetuity, the All-India Federation of the future might find its life and growth and movement seriously cramped; but perhaps this is not a very formidable practical danger. The great thing is that the Princes should have made up their minds definitely to enter the Federation. The histories of other federations show that, at the moment of taking the decision to merge their separate existences in a larger whole, the federating States are apt to insist upon their State rights very jealously; but that in process of time the logic of facts impels them to modify and even waive these

jealously preserved rights of their own volition. For a Federal Union, once successfully established, becomes a living thing in itself, which changes and grows and carries its parts and organs along in the movement of its own life. Thus, on a long view, the Indian Princes' resolution, taken as a whole, is not unsatisfactory, while, on a short view, it is highly opportune as a fresh practical step towards the goal of Indian self-government. It is particularly important, of course, that as many such steps as possible should be taken at a time when the Government of India is having, unfortunately, to pursue a dual policy of simultaneous constitutional advance and administrative repression.

The League, Japan and Manchuria.—The Lytton Commission has now sent an interim report to Geneva, which records its movements up to date and its future programme. Having first visited Japan (which was, perhaps, a diplomatic error), and then Shanghai and Nanking, the Commission is proposing to travel on to Manchuria via Peking, arriving in Manchuria at the beginning of the third week in April. It is at that point, of course, that the Commission's "tough job" will really begin. Pending the Commission's arrival, the Japanese are going ahead as fast as they can with their systematic endeavours to sever the links between Manchuria and the rest of China, and to gather up the whole of the Manchurian administration and Manchurian revenues into their own hands under guise of supporting their puppet Government of Manchukao. The Japanese advisers of Mr Henry P'u are reported to have given written instructions to the managers of the Customs banks at Antung and Newchang to hand over all present Customs balances and all future payments, on Customs account, that the banks receive. Similar instructions have been sent to the Commissioner of the China Salt Gabelle at Mukden. Presumably these officials will refuse these illegal demands; and presumably the Japanese puppet, backed by Japanese bayonets, will then seize their funds and papers and offices. There will be all the more material for the Lytton Commission to report upon when it arrives. In the meantime, "official circles" in Japan are airing, ostensibly for foreign consumption, the suggestion that Japan will prefer to withdraw from the League rather than assent to her dispute with China over Manchuria being dealt with under Article 15 of the Covenant. On this Japanese *ballon d'essai* there are two comments to be made. In the first place, a Japanese notification of withdrawal from League membership would make no juridical difference to the Manchurian position. Notifications of withdrawal do not legally take effect until after the lapse of two years (a provision inserted in the Covenant precisely in order to prevent Covenant-breaking States from slipping out of their obligations in this way). In the second place, the League, under the Covenant, claims the right of insisting that non-members should accept the procedure of the League in the settlement of their disputes with a State member if the State member invokes the Covenant; and the League further reserves the right to employ its sanctions against non-member States in these circumstances in case they are recalcitrant. The second point is that in losing Japan the League would not be losing a loyal and valued member, but, on the contrary, a member who, during the last few months, has persistently broken her League obligations, blocked the League procedure, and resisted and, in the last resort, defied her fellow States-members. If Japan chooses to brand herself as an outlaw by notifying intention to withdraw, that is her affair. This threat—or bluff—leaves us unmoved.

Armistice Negotiations at Shanghai.—The armistice negotiations at Shanghai still drag on; and though it always remains possible that the strenuous and unremitting efforts of the local representatives of the neutral Powers may succeed at length in bringing the belligerents to an armistice agreement, the prospect seems to become daily more remote. There seems, in fact, to be no point on which the Chinese and the Japanese are disposed to agree. The Japanese insist that the Chinese must remain in their present positions at a

radius of 20 kilometres from Shanghai, while the Japanese themselves withdraw, not from Chinese soil or even from Chinese territory outside the International Settlement, but merely to the line of the Shanghai-Woosung Railway—an arrangement which would give Japan the military command over the approaches to Shanghai by water for an indefinite time to come. The Chinese, on the other hand, are not content that they themselves shall remain in their present line; and they insist that the Japanese shall withdraw at least into the Settlement. The utmost concession they envisage is that part of the Japanese force shall remain in the extra-settlement area round Hongkew Park. Apart from this disagreement on the primary topographical issue, there is also disagreement on the conditions under which the Japanese withdrawal (to whatever line it may be) is to be made. The Chinese insist that the Japanese withdrawal must be unconditional, and indeed (in our view, quite reasonably) that compensation must be paid for the extensive damage which the Japanese have wantonly and barbarously inflicted upon Chapei. The Japanese, on the other hand, decline to withdraw until their original demands for the cessation of the anti-Japanese boycott and the protection of their nationals are satisfied, or at least until they have some guarantee that satisfaction will be secured. In these circumstances, agreement seems improbable; and we have to expect an *impasse*—continuing for an indefinite future—on the basis of the present *de facto* situation. A resumption of hostilities is improbable. The Chinese Nineteenth Army will hardly venture to counter-attack on the new front, now that the Japanese have dug themselves in. On the other side, the Japanese, who have already withdrawn a large part of their troops and warships from Shanghai, seem equally unlikely to resume the offensive against an enemy who has shown, and is still showing, fight, and who is admirably posted for defence in the midst of a maze of creeks and canals stretching away into an illimitable hinterland. It seems, therefore, that the contest of wills is to be decided by the method of economic exhaustion. As things are, the Chinese Government at Nanking will go on losing its revenues from Shanghai, Japan will go on losing her China trade through the boycott, and the Western community in Shanghai will go on losing its business. We prophesy that the Chinese will come out of this ordeal the least badly and the Westerners the worst.

The Language Question in Malta.—Malta seem fated to be in ferment. She is hardly out of one controversy before she finds herself on the verge of another. In fact, the new controversy over the Italian language in Malta has actually arisen out of a recommendation made in the report of the Royal Commission which was sent to Malta *à propos* of the recent local conflict between Lord Strickland's Ministry and the Catholic Church. The Royal Commission recommended, among many other things, that, in the primary schools of Malta, the Italian language should cease to be taught, and that in the secondary schools it should become an optional instead of a compulsory subject. The purpose of the recommendation was to make room for English as the principal supplementary language of the Maltese people. It is taken for granted that they must at any rate be educated in their own Maltese; but by some accounts, of Punic. It is spoken nowhere in the world except in Malta itself and since there are always more Maltese living outside Malta than in it, the choice of the supplementary language to be taught in Maltese schools is a question of national importance. The traditions from a now obsolete state of affairs in which Italian was the *lingua franca* of the Mediterranean (and as such language of command in the Austrian and the Ottoman Navy). Now that English has become the most widely current *lingua franca* in the world (the Mediterranean included), while Malta has become part of the British Empire instead of being the possession of the International Crusading Order of St. John, the case for giving the

English language the status formerly enjoyed by the Italian language is very strong; the more so considering the number of Maltese who find employment in connection with the British Navy. There are, however, certain complications. For instance, Italian has won a permanent place in the affections of the Maltese educated and governing classes, both ecclesiastical and secular. They think and write in Italian, because Maltese itself has never been fashioned into a literary language; and in this sense Italian has become the national language of a small but important and influential minority of the Maltese people. This bilingual minority quite humanly resents the deposition of the language which has become its own instrument of self-expression; it does not relish the prospect of being engulfed in the rising tide of a Maltese commonality which will now grow up to be Anglo-Maltese and not Italo-Maltese in its speech; and accordingly this Italianate minority in Malta finds a certain attraction in playing with Italian nationalism. On this account the British Government's decision to implement the Royal Commission's recommendation on the language question has aroused some feeling and this feeling has not been eased by the utterances which are reported to have been made by Signor Giunta, the Under-Secretary of State in the Italian Prime Minister's Department, when he was passing through Malta at the end of last week *en route* from Rome to Tripoli. Both Signor Giunta himself and the Italian Government have issued suitable *démentis*; and no "incident" has been created. But the event indicates that Malta is not yet out of the wood.

The Future of the I.L.P.—The Independent Labour Party celebrated Eastertide by holding their annual conference at Blackpool; but despite the notoriously bracing air of that seaside resort it is to be doubted whether the delegates derived much satisfaction or inspiration from their visit. The proceedings, indeed, revealed a cleavage between two sections in the I.L.P. which is hardly less fundamental than that which exists between the I.L.P. and the official Labour Party. The main question before the conference was whether the I.L.P. should secede or not secede from the parent body. On this question three votes were taken, the first rather narrowly rejecting definite disaffiliation, the second decisively turning down the continuance of unconditional affiliation, and the third showing a large majority for "affiliation on terms." The main condition on which the majority were prepared to continue affiliation is that the standing orders of the Labour party should be revised so as to accord certain privileges of independence to members of the I.L.P. Apparently the I.L.P. will only continue its official connection with the party if it is allowed to live within the movement as an autonomous minority—on terms, indeed, not dissimilar to those on which the dissentient Ministers remain within the present Cabinet. But this decision of the conference would not appear to advance matters very much, since, before the conference, Mr Arthur Henderson emphatically repudiated something very similar to the conditional affiliation proposal which the I.L.P. now has in mind. Indeed, Mr Maxton (who advocated out-and-out disaffiliation) warned the delegates that no one was likely to get more concessions out of Mr Henderson than he himself had obtained. So, after all, the I.L.P. is likely to be faced with the choice between playing second fiddle to the beat of Mr Henderson's baton—or going out into the wilderness. And the wilderness looks so much chillier and more lonely than it did a year ago. It is one thing to become an irresponsible "ginger-group" on the flank of a party which is in power; and quite another thing to break off from a party which has been temporarily shattered by the electorate and reduced to impotence in the House of Commons.

Cotton Trade Redundancy Scheme.—Our Manchester correspondent writes:—A rather important development has occurred this week in connection with the scheme in the Lancashire cotton industry for scrapping surplus machinery and concentrating production. On Tuesday last a meeting of the General Committee of the Master Spinners' Federation was held in Manchester to consider the request from the Joint Committee of Cotton Trade

Organisations for the co-operation of the Federation in preparing a detailed scheme. It will be remembered that the Joint Committee last week received a letter from Mr Runciman, the President of the Board of Trade, to the effect that he would be prepared to recommend the Government to introduce legislation providing for the necessary levy if the industry could show a satisfactory measure of support for the proposals. After a full discussion the Federation General Committee decided that it was not in a position to co-operate in the formation of a scheme, but it offered no objection to the Joint Committee preparing a detailed scheme. The Federation also announced that it was willing to supply any required information to the Joint Committee and was prepared to submit such a scheme on completion to a ballot vote of the members. It was further stated that, on the understanding that no responsibility attached to the Federation, the General Committee was not averse to any of its members co-operating in their individual capacity with the Joint Committee. It has been learned unofficially that many members of the Federation Committee were in favour of no further action being taken whatever, and the resolution ultimately adopted was a compromise. Amongst spinning employers there is some resentment against the members of the Joint Committee approaching the Government with regard to the matter in view of the relatively poor support given to the proposals at the recent ballot. A meeting of the Executive of the Joint Committee was due to be held in Manchester yesterday (Friday) to consider the situation. There is a wide difference of opinion throughout the industry with regard to the proposals for dealing with surplus machinery and some doubt is expressed as to whether the Joint Committee will be successful in securing support which will be sufficient to warrant the Government in introducing legislation. It has been suggested that in order to deal with the situation it will be necessary to scrap about 10,000,000 spindles and 100,000 looms, and the levy on the machinery remaining will provide a fund for compensating those employers who decide to go out of business and hand over their machinery.

The International Sugar Convention.—The attempt to adjust the world's supply of sugar to requirements by means of an international export restriction scheme, signed on May 9th last year, has been frustrated by subsequent events. The export quotas were based on the level of consumption at the time of the inception of the scheme. Provision was made for an increase in exports under certain conditions, but the weakness of the "Chadbourne Plan" was the absence of flexibility in case of the necessity for a downward revision of the quotas. The restriction scheme has come to grief, not because the adherents to the Convention exceeded their quotas, but because of the enormous decline in consumption which had not been foreseen. The United States was unable to absorb the Cuban quota, and Java found it impossible to dispose of her quota in the Far East. The price of raw sugar (96° centrifugal) in New York declined from 1.58 cents per lb. in July, 1930, to 1.15 cents per lb. at the end of December. In order to bring about an adjustment of supplies to the reduced level of demand, negotiations were started at the end of last year, and in March an international conference was held in Paris. That meeting came to an end on March 22nd without having reached a final agreement. Meanwhile the quotation for raw sugar had reached the low level of 0.73 cents per lb. in New York. Negotiations were, however, continued on the basis of a proposal made by the European and Peruvian members of the Convention. These proposals were that Cuba should reduce her 1932 crop to 2,500,000 tons, and that, if Cuba did this, they would reduce their exports by any amount by which Java's exports exceeded 1,500,000 tons during the year from April, 1932, to April, 1933. According to an announcement made by the International Sugar Council on Wednesday last, these proposals have now been accepted. Cuba's adherence was secured on the understanding that she might grow 2,700,000 tons during 1932, which is 200,000 tons above the original figure. The Council states that the acceptance of these arrangements has overcome the difficulties in the execution of the International Sugar Agreement.

Dock Wages Dispute.—The London ocean shipowners, tired, apparently, of waiting for the Transport and General Workers and the National Amalgamated Stevedores and Dockers to ratify an agreement which was initiated last December, have announced that as from Monday, April 11th, all piecework discharging of cargo will be paid at the rates set out in the slightly reduced tariff then agreed upon. There is time for further negotiation, but discussions aimed at a salutary reduction of the existing high piecework rates have lasted for so many years that the prospects of a fruitful outcome to negotiations of a few days' duration do not seem very bright. The shipowners' position is that the unions have openly expressed the view that the agreement which they initiated in December was fair, and that, while the postponement of its ratification during and immediately after the lightermen's strike was reasonable, its repeated subsequent postponement, followed by the announcement of the unions on March 7th that the agreement could not be accepted, leaves the employers no alternative but to enforce the agreement as it stands, subject to possible reconsideration of individual points. The unions, on the other hand, allege that the schedule was only initiated "as a correct record" and that it was always made clear that it was accepted by the union representatives only subject to ratification by the members. As both sides have everything to lose by a stoppage of work, it can only be hoped that the opposing points of view may be cleared up in the course of next week.

The Means Test.—The *Manchester Guardian* called attention a fortnight ago to the remarkable disparity between the figures of different public assistance authorities showing the numbers of claims disallowed after application of the means test. Below are some of the more extreme figures quoted:—

	Cases deter- mined.	Full rates allowed.	Partial benefit allowed.	No benefit allowed.
Great Britain	1,884,074	943,527	665,008	275,537
London City and County	99,683	54,777	19,206	25,700
Lancashire County	89,239	20,310	29,879	39,050
Yorkshire, West Riding	66,893	43,122	15,823	7,948
Glamorganshire	43,109	40,128	1,552	1,429
Staffs. administrative county	41,763	...	...	4,592

These figures, which relate in most cases to the period November 12th to January 23rd, show a very wide divergence in the proportion of claims disallowed. In Glamorganshire it was 3 per cent.; in Lancashire 44 per cent., and for Great Britain as a whole 14.6 per cent. This the *Manchester Guardian* cites as evidence of disquieting local divergence in the treatment of the unemployed. While such local divergence is a serious danger, in the stressing of which our contemporary has undoubtedly performed a valuable service, the inference of such divergence from statistics alone (the *Manchester Guardian*, it is only fair to add, adduces other and more convincing evidence) would be a *non sequitur*. The proportion of claims disallowed would, if our system of administration were uniform over the whole country, vary with the alternative sources of income available in different localities, and this, in return, varies with the age and sex composition of the working population; the extent to which the district is dependent upon a very limited number of industries; the length of time that depression has obtained in the locality; the proportion of well-to-do residents and innumerable other factors. In Lancashire, where the proportion of girls and women whose husbands and fathers may be able to contribute to their support is comparatively high, one would expect to see more claims disallowed than in the mining villages of South Wales, where few families have alternative employment. Again, in the big industrial towns there are more chances of picking up some supplementary pittance than in Welsh villages where there are few people left with money to employ odd-job men. Perfect uniformity in the principles of administration, therefore, would be reflected in a wide diversity of disallowment percentages. None the less, the Ministry of Labour has found it necessary to protest to certain Public Assistance Committees in respect of the way in which they have been administering transitional benefit, and it seems

evident that the absence of any guarantee that the underlying principles of administration will be the same everywhere is giving rise to variations which, if they are not checked, will bring this very important reform into discredit. This would be a most regrettable development, and it is to be hoped that the Ministry of Labour will find means to enforce a greater degree of uniformity.

Germany's Coal Import Quotas.—Among the steadily multiplying restrictions on international commerce few are more unfortunate for British trade than the progressive reductions in the German coal import quotas. On October 1, 1931, the British quota was reduced to 300,000 tons a month. This was further reduced to 200,000 tons on February 1; curtailed by another 50,000 tons during March and will be reduced by yet another 50,000 tons on April 1st. This is a severe hardship for the British coal industry and pressure is naturally being brought to bear upon Mr. Runciman to be "as firm as he is courteous" in pursuing his negotiations on the matter with the German Government. At the same time, unfortunate as Germany's action is for the British coal industry, it is less easy to see how she can be blamed. Her need for an active trade balance is even more imperative than that of other countries, and the decline of some 44 per cent. in the output of coal in the Ruhr district since 1929 suggests coal imports as an obvious subject of economy, while the reduction, since October, 1929, of 174,000 in the number of miners employed, shows what strong social pressure the Government is under to adopt this method of relief. The allegation that Germany is discriminating unfairly against British coal arises from the fact that Great Britain is the chief exporter of coal to Germany, and still more the chief net exporter, since most of the other countries which sell coal to Germany also buy it from her. Any step which is effectively to curtail German coal imports must therefore have the appearance of being especially directed against Great Britain, just as British restrictions on luxury imports inevitably have the appearance of being especially directed against France. The question of the violation of the Anglo-German Commercial Treaty of 1924 is more difficult than might appear at first sight. Germany was bound by that treaty not to impose import prohibitions or restrictions against British goods unless they apply to the imports of goods from any other country, but it may be argued that these quotas are not new restrictions but the application of a system of licences already in force at the time of the conclusion of the treaty—licences analogous to the British licences for German dyestuffs. Whether this extension of those licences in the present manner is in accordance with the spirit of the treaty is another matter, but in this connection it must be remembered that the treaty rested on "the favourable treatment at present accorded to goods the produce or manufacture of Germany on importation into the United Kingdom." It may reasonably be contended that the triumph of protectionism in Great Britain has somewhat altered the nature of Germany's moral obligation. The real point is that, if our monthly exports of coal to Germany, which in 1929 amounted to over 460,000 tons, are threatened with reduction to less than a fourth of that volume, the need becomes the more obvious for a settlement of reparations on a basis which will permit the restoration of Germany's economic life.

Worse than the Boll Weevil.—The contemplation of dwindled trade figures has led our well-known contemporary, the *Wall Street Journal*, to give new emphasis to certain fiscal home-truths. In an editorial in the issue of March 18th occur the following passages:—

How are we to export more merchandise when our principal customers are building up higher tariff walls, creating exchange restrictions, and imposing quotas that act almost as prohibitions? If we asked that question of them they might answer it by asking another like this: "How can you expect to sell to us when you will not buy from us?" That is the situation: how can we answer it? Trade is an exchange of goods, and, not only this country, but an increasing number of other countries, are making the exchange more difficult. . . . Instead of building more barricades and barbed wire entanglements, it would be better for all nations to join in clearing away the obstructions in the road over which international trade must travel.

THE REVENUE.

I.—An Account of the TOTAL REVENUE of the UNITED KINGDOM, in the undermentioned periods of the Year ending March 31, 1932, as compared with the corresponding periods of the preceding year.

	Quarter from January 1 to March 31, 1932, compared with the corresponding Quarter of the preceding Year.				Year ending March 31, 1932, compared with the preceding Year.

Treasury, March 31, 1932.

* Includes £29,000, the proceeds of which were not carried to the Exchequer within the period of 'the account'.

Four days later the same journal published an editorial under the caption "Worse than Boll Weevils." This caption was suggested by an address delivered before a conference of business men, in which it was affirmed by the speaker that, while the weevil destroys only a portion of the cotton crop, the tariff destroys the means of payment of those who would buy the crop. *The Wall Street Journal* comments:—

Before the war, the United States was a debtor country and an import balance of goods was not considered a benefit; accordingly, public sentiment favoured a protective tariff. The economic change in the country has come more rapidly than the change in political thinking, so we are in the position of a creditor country with our minds still those of debtors. . . . We cannot increase foreign customers' means of payment by shutting out their goods; furthermore, we cannot hope for an increased demand for our goods so long as all the nations of the world are engaged in increasing their tariffs. The protective principle for debtor countries for the present seems to be lost to sight, and nations are bent on destroying international trade at a greater rate than weevils destroy cotton.

We expect that our Wall Street contemporary would agree with us that one most hopeful approach towards a way out of the present impasse would be by way of the liberal exercise of the elastic provisions of the United States tariff law.

INSURANCE NOTES.

Employers Liability Assurance.—Being largely identified with casualty insurance business in the United States, and having also a considerable proportion of its funds invested in America, this Corporation had a difficult time in 1931. The total premium income has decreased from £7,480,000 to £6,481,000, due not only to a reduction in the volume of employment and in wage rates, but also to the fall in the value of commodities. Of the total premium income, approximately 90 per cent. is drawn from the United States. Considering the difficult position, the underwriting results as a whole have been not unsatisfactory:—

	1930 Profits.		1931 Profits.	
	Amount.	Percentage of Premiums.	Amount.	Percentage of Premiums.
Fire	27,385	6.3	20,218	5.2
Accident	25,742	6.0	12,586	3.4
General	156,157	2.4	304,110	5.2
Investment and Exchange Profits	49,218		16,373	
Gross surplus	256,502		328,115	
Less taxes	248,573		236,425	
Net trading surplus	7,929		91,690	

Interest earnings are practically unaltered at £295,000, and would virtually have sufficed to meet the dividend at the same rate as for 1930. As a precautionary measure, however, the rate has been reduced from 100 per cent. to 90 per cent. The corporation has not, of course, escaped losses on its securities, for of the total investments of £8½ millions, £6½ millions are represented by Stock Exchange securities, and of these £5½ millions are American securities. These securities are valued at par of exchange, and, on this basis, the excess of the book values over market values is £1,220,000. If the dollar securities had been valued at current rates of exchange, the book values would be increased by £1,860,000, though, on the other hand, the liabilities if valued on the same basis would have required some £1,760,000 more than their book values. There is an investment reserve which has been increased by £100,000, and now stands at £500,000, and, in addition, there is, of course, a large general reserve, exceeding £2½ millions. The report also hints that there are assets other than Stock Exchange securities which are worth considerably more than their book value. Another cause of anxiety during the year has been the operations of the corporation's subsidiary, the Merchants Marine, whose accounts are also reviewed in this issue. This company, which was purchased in 1921, for £750,000, now stands in the books at £125,000. There is, however, an uncalculated liability of £375,000, and £125,000 of this is to be called up immediately to provide funds to enable the company to repay an advance of just under £100,000 owing to its parent.

Abstainers' and General Insurance.—Founded originally in 1888 as the Blue Ribbon Insurance Company, the name was subsequently changed to the Abstainers' and General, but the company has throughout been identified particularly with Quakers and the transaction of temperance business. In pursuance of this policy a separate Abstainers' section is maintained, and life policies are issued to abstainers at a rebate on the normal rate charged to non-abstainers, it being claimed that the mortality of the former is superior. More recently fire and general business has been added to the company's activities, and the total assets now amount to £3½ millions. In the life department in 1931 the sums assured under new policies issued amounted to £695,000, compared with £730,000 in 1930. Owing to the rise in the rate of income tax, the net rate of interest earned is 2s. 5d. per cent. lower, at £4 13s. 5d. per cent., and the proportion of premium income absorbed in expenses and commission is unchanged at the rather high figure of 20 per cent. The premium income in the fire and general branches, which have shown a steady expansion each year, now amounts to £51,000, and provided last year a net trading surplus, apart from interest, of £3,300, as compared with £5,800 in 1930. Investments are carried in the balance sheet at the book values on December 31, 1930, when the last triennial valuation was made. Of the total of £3½ millions nearly £1½ millions is invested in mortgages, and £800,000 in British Government securities. With regard to the former, a large proportion of the mortgages are in the form of small advances to policyholders for the purpose of purchasing their own houses, the rate of interest generally charged being 5½ per cent.

Provincial Insurance Company.—Although this company, in common with all investing institutions, was a heavy sufferer from depreciation last year, the real feature of the 1931 report is once again the extraordinarily good underwriting results—achieved on this occasion in a particularly difficult year. Details of the last two years' accounts are set out below:—

	1930.		1931.	
	Amount.	Percentage of Premiums.	Amount.	Percentage of Premiums.
	£		£	
Fire	18,631	10.6	20,010	11.8
Employers' Liability, Accident and General	41,454	6.7	49,299	7.1
Marine	4,991	5.2	5,139	6.0
Less income tax, &c. ...	55,094		64,170	
Less losses on invest- ments realised	12,751		17,272	
Less allocation to staff pensions and profit- sharing	...		9,776	
Total net underwriting surplus	18,096		8,717	
	24,247		28,405	

Fire premiums are slightly down at £170,000, but the accident and general account shows a substantial increase in premiums from £621,000 to £698,000. The marine account shows further contraction to £86,000, and, although there is again a small loss, this represents little more than the interest earnings which have been left in the account. The total 1931 underwriting profit is stated to constitute a record in the history of the company. Interest earnings show little change at £29,500. The dividend has been maintained for the fourth year in succession at 20 per cent., and in normal times is capable of a further increase, since the cost of the preference and ordinary dividends combined is covered by interest earnings with some £12,000 to spare. The report is again overshadowed by the stock market depreciation, and this has been responsible for a further fall of approximately 10 per cent. of the invested funds, i.e., 10 per cent. of about £780,000. This result, since it is actually less than the depreciation suffered last year by British Government stocks, may be regarded as not unsatisfactory, and the depreciation has been met by an increase of £75,000 in the contingency fund, which now amounts to £110,000. General reserve has been drawn upon for £25,000, reducing the item to £180,000, and the sum of £9,600 has been released from reserve in the marine account.

Maritime Insurance Company.—The accounts of this company illustrate markedly the need for revising and extending the scope of the Assurance Companies Act, 1909, which governs the conduct of insurance business and the form of the accounts to be returned to the Board of Trade. This Act does not apply to marine companies, and the Maritime Insurance Company presents its accounts in a form wherein the claims are lumped together in one item irrespective of the underwriting year to which they relate. The only possible indication of progress, therefore, is the course of the claims paid over a series of years. Moreover, the investments in the balance sheet are lumped together in one item, which now amounts to over £1½ millions, and there is no attempt whatever to classify the investments into various groups of securities. Such indications as are afforded by the 1931 report suggest that the company, which has throughout succeeded in showing a profit on its marine business, has had a more profitable experience in 1931. The amount transferred to profit and loss account in 1931 is £30,000, compared with £20,000 in 1930, and the premium income is now £331,000. The company, which is controlled by the Scottish Union and National, is in a strong position, for, as compared with a paid-up capital of £500,000, there is a general reserve of £200,000, and a profit and loss balance of £352,000. For the first time for many years the investments stand at a book value in excess of the market value, but the difference, namely £33,000, is small.

Standard Life Assurance.—The Standard has achieved the considerable feat of maintaining unchanged its full rate of reversionary bonus for 1931, and it has done this in spite of depreciation which on assets of £22 millions must have amounted to a very large sum. A study of the 1931 accounts now published indicates that the company is fully justified in this demonstration of its strength. The valuation was made as before on a basis which, for stringency, is not excelled by any other British Life Office, and the results are as follows:—

	1928-29.	1929-30.	1930-31.
Surplus earned during the year	363,988	374,287	376,592
Surplus income transferred from guarantee fund	30,923	36,944	42,282
Brought forward from previous year	21,811	25,717	28,520
	416,722	436,948	447,394
Allocations—			
To bonuses to policyholders	291,005	308,428	317,369
„ Transfer to inner reserve	...	...	85,000
„ Guarantee Fund	100,000	100,000	...
„ Pension Fund	...	...	15,000
„ Carried forward to next year	25,717	28,520	30,025
	416,722	436,948	447,394

The ordinary reversionary bonus of 42s. per cent. compound has been earned with a smaller, though still satisfactory, margin, and £100,000 has again been transferred to reserves. On this occasion, however, £85,000 of this sum has been utilised to strengthen what are termed "inner reserves," the purpose of which is not revealed either in the report or in the chairman's speech, and £15,000 has gone to provide for pensions. The guarantee fund now amounts to £1,650,000, and was created five years ago as security for the issue of £850,000 5 per cent. perpetual stock. Thus, the fund is now nearly double the nominal liability against which it was created, and the 1931 allocations to reserve bear the impress of devices to obviate an increase in carry forward. The surplus thrown off by the company's exceedingly stringent basis of valuation is so large that it may well find itself placed in the dilemma of being forced either to raise the ordinary bonus to a level which may not be justified by the scale of premiums or to "slice the lemon" by a special distribution to the policyholders. The balance sheet shows total assets of almost £22 millions, and the chairman stated in his speech that notwithstanding the depreciation of 1931 there is "still a good margin on the right side between the market and balance sheet values of our assets." This is a revealing statement, for it must mean that, assuming the depreciation of 1931 was in the neighbourhood of £2,000,000, the hidden reserves must have largely exceeded

that figure at the beginning of the last financial year. The classification of the assets shows two movements of some interest during the year; firstly, a substantial increase in holdings of British Government securities, the amount having risen from £4,100,000 to £4,900,000, and a proportionately larger increase in holdings of ordinary shares from £1,870,000 to £2,730,000, the latter being equivalent to 13 per cent. of the total assets. With regard to the business of the year, although the sums assured under new life policies issued declined from £3,141,000 to £2,764,000, the total volume of new business issued was greater than in the preceding year, since Capital Redemption policies were effected for £644,000 compared with only £68,000, and once again a large annuity business was transacted.

Universal Automobile.—Although founded only a few years before the war, this company has devoted itself exclusively to motor car insurance, and its business has, therefore, shown a very rapid expansion. This tendency was accentuated in 1930 by the compulsory insurance conditions of the Road Traffic Act, and the premium income rose during the year by £31,000 to £154,000. The underwriting profit earned was £2,210, equal to 1.4 per cent. of the premiums, compared with £1,554, equal to 1.3 per cent., in 1930. A dividend of 12 per cent. has been declared for many years, but the interest earnings by themselves would permit this rate to be doubled. The Stock Exchange investments, which are entered at cost at £82,000, were on December 31st last worth, on market prices, £76,700. The book values have, however, been retained unaltered, and no provision has been made for the depreciation, as the directors state that, taken at to-day's prices, the market value now exceeds the book value. The company is a tempting morsel for an acquisitive composite office.

(FROM OUR CORRESPONDENT.)

NEW YORK, March 22.

WHILE political leaders have struggled to lift Congress out of the taxation morass, financial markets have marked time and trade has barely managed to hold its own. The situation at Washington is not hopeless, but it is discouraging that so much callousness can exist among Congressmen toward so pressing a problem as balancing the Budget. Special interests and the conflicting wishes of different parts of the country have inevitably come forward to attack first one and then another provision of the new revenue measure, and it is now a matter of guesswork as to which provisions will be retained and which abandoned in order to secure passage of the whole.

In its general outlines the measure, which has the sponsorship of leaders of both the Republican and Democratic parties and the Administration, seeks to raise about \$600 millions with a 2½ per cent. tax on manufactured products, to be collected at the source. An increase in income tax rates to about the 1924 levels, along with a lowering of exemptions, is to raise a similar amount. Judged solely on its merits as a taxation measure, the Bill provides much material for criticism. Business men are afraid that the tax on manufactures will multiply a few times before the goods reach the consumer, that it will be difficult to collect, and that it will tend further to depress business. Labour leaders and others of a Socialistic turn oppose it because they claim that the chief burden will fall upon the poor.

It now appears that with the elimination of food products, including tinned and bottled foodstuffs, as well as exemptions for clothing and medicines, the expected revenue from the Bill will drop by \$150 millions, but that

support enough may be obtained to pass it. Meanwhile the gap will have to be filled in, and this probably will be done through substitution of special Excise taxes, such as a gasoline tax, or possibly an increase in postage rates. The move for a 4 cents a pound duty on copper was abandoned, as it was realised that such a measure would produce no revenue, but a small import tax on oil is possible.

The proposed sales tax is disliked by nearly everyone, but it is realised that the supreme need is a balanced Budget. For this reason other features of the Tax Bill probably will be opposed only mildly. One of these is the provision to limit writing off losses on stock and bond sales to the extent of the gains in any one year, this being, of course, the equivalent of a gross receipts tax. However sharp the struggle may be, it is reasonably certain that Congress will pass a measure capable of balancing the Budget for the coming fiscal year, and may later make a real start toward reduction of expenditure. Fortunately there is full respect in the best quarters for the good standing of this country's credit, and even in Congress the opposition to an adequate tax measure is weakening.

Certain other proposals calculated to delay restoration of confidence have not yet been disposed of. There is still an active demand for another large soldiers' bonus, and also for a large Federal appropriation to be given the States for poor relief. Meanwhile, the excitement in Congress over the activities of the Stock Exchange has somewhat subsided and an investigation into short selling has at least been postponed. Markets would be relieved if as much could be said of the threat contained in the revised Glass banking Bill. Senator Glass, after joining the constructive forces long enough to lend his name and influence to the Glass-Steagall Bill, designed to halt deflation, has brought in his proposed amendment to the Federal Reserve Act before Congress in but slightly modified form. Hearings on it will be held over the next ten days.

The revised measure retains the old idea of directional flow of credit, and of severe penalties on bank loans which may be used in speculation on stocks and bonds (though real estate speculation is not restricted.) It contains provisions also for increasing the reserve required under time deposits (which bankers estimate would be the equivalent in effect to the loss of \$130 millions in gold), and altogether brings pressure which it is estimated would mean liquidation of \$2,000 millions in bank investments. The practical effect of the Bill in its present form would doubtless be to drive from national to State charters the majority of the large banks and to force them to withdraw from the Reserve system. This would, of course, be unfortunate for the central banking system. Bad as the Bill is held to be, it is disliked mainly because it is introduced just at a time when other strong measures, with a fair prospect of success, are being taken to stem deflation and restore confidence in the security and commodity markets.

The first quarterly tax date passed with virtually no disturbance to money markets. The Treasury borrowed only \$50 millions, and that was quickly paid back, but the natural slackness of the demand for credit has given money rates an easier appearance. In spite of the Treasury overdraft, Reserve system credit last week dropped \$64 millions. Member banks repaid \$87 millions to the system and bill holdings ran off \$30 millions. There was a further drop of \$22 millions in currency circulation and monetary gold stock rose \$12 millions.

New capital issues are still confined mostly to municipal borrowing, running from \$10 to \$30 millions weekly, and the bond market has lately lost some of its strength. The tax-exempt issues of the Government have drawn some investment money from industrial and railroad bonds on the threat of heavier surtaxes and continued lack of business revival. The Reconstruction Finance Corporation has adopted a more liberal policy toward railroad loans, and will probably permit no defaults. President Hoover has announced that a survey of the situation reveals less need for railroad credit than had been expected. He places probable calls for aid to meet interest, maturities and expenses at between \$300 and \$400 millions. He

thinks the Railroad Credit Corporation will supply \$50 to \$60 millions of this.

Income tax collections for the March quarter declined sharply, as was expected. For the first eighteen days collections for March were \$152.4 millions, compared with \$239.1 millions a year ago. As of March 18th the Treasury's deficit was \$1,811 millions. Another \$100 millions issue or thereabouts of Treasury bills will be announced shortly to meet maturities.

Trade statistics show little change in trend. Merchandise exports in February rose \$5 millions over January to \$155 millions, but were only two-thirds of last year's shipments. However, it was the first February in many years to show a rise over January, shipments to beat the British tariffs and larger cotton exports being responsible. Imports totalled \$131 millions, a drop of \$5 millions from January. Cotton consumption in February was 450,018 bales, against 435,337 bales in January and 433,376 bales a year ago. February payrolls increased a tenth of 1 per cent. in major industries, but employment fell three-tenths of 1 per cent., according to the Department of Labour.

Commodity prices are again unsettled. Copper is steadier on a tentative agreement for curtailment of copper production to 20 per cent. capacity and the likelihood that a number of producers will have to shut down entirely, but sugar has flattened on what appears to be abandonment of the Chadbourne plan. Rubber also has sunk to new low prices, and fears over the Farm Board's intentions have depressed wheat and cotton. The index for wholesale commodity prices of the Bureau of Labour statistics for February decreased nearly 1½ per cent. Farm products and foods lost most heavily. Prices by groups follow:—

INDEX NUMBERS OF WHOLESALE PRICES

(1926 = 100.0).

Commodity Groups.	February, 1931.	January, 1932.	February, 1932.
All commodities	76.8	67.3	66.3
Farm products	70.1	52.8	50.6
Foods	78.0	64.7	62.5
Hides and leather products	86.9	79.3	78.3
Textile products	70.9	59.9	59.8
Fuel and lighting materials	72.5	67.9	68.3
Metals and metal products	86.5	81.8	80.9
Building materials	82.5	74.8	73.4
Chemicals and drugs	83.3	75.7	75.5
Housefurnishing goods	88.1	77.7	77.5
Miscellaneous	71.5	65.6	64.7
Non-agricultural commodities	78.2	70.3	69.6
All commodities less farm products and foods	78.3	71.7	71.3

Excitement over the Kreuger episode has abated. There never was much real apprehension over difficulties on this side. It was known that short-term banking commitments here did not exceed \$9 millions, of which no more than a third was held by one house, which also had investments in Kreuger and Toll of only about a million dollars. The view here is that pessimism over the company's future has been overdone on the European side. The affair nevertheless has had one unfavourable effect in that it has brought to the fore the losses of investors in this country in foreign obligations and enterprises, perhaps making more difficult the matter of a foreign debt settlement later. At the same time, the bombastic speeches in Congress over the unshaken stand of the country on debt reduction or cancellation may be taken with much salt.

FRANCE.

Budget — M. Flandin's Defence — Politics.

(FROM OUR CORRESPONDENT.)

PARIS, March 30.

THE Budget for the nine-months "financial year" April 1st to December 31st, which the Finance Minister has just characterised as "marking the end of a chapter of French post-war finance," was disposed of by the Senate in the small hours of this morning, and will during the next twenty-four hours have been passed into law. As modified by the Upper Chamber, the Bill provides for

total expenditure for the nine months of 41,083,000,000 francs (equivalent, according to M. Flandin, to 53,182,000,000 francs for the whole year), and postulates an estimated surplus of 3,886 millions, or practically the same estimated surplus as originally forecast by the Chamber. The total expenditure, based on the full twelve months' scale, works out at 7,800,000,000 francs more than the 1929 Budget, the first voted by the present Legislature, and 10,700,000,000 francs more than the one voted for 1928 ("Stabilisation Year"). These figures, however, are admittedly purely arbitrary, and by common consent cannot be interpreted as representing the facts, for since 1928 practically no fresh taxation has been voted, expenditure has largely increased, and at the same time reductions of imposts totalling some 6,000,000,000 francs have been accorded, while during recent months the yield from taxation has proved less than Budget estimates.

The situation has been further upset by the serious reduction in revenue due to suspension of German reparation payments by the Hoover Moratorium. The present balanced Budget, nevertheless, has been arrived at in face of the fact that the expiring financial year will result, according to the Budget Rapporteur Général in the Senate, M. Abel Gardey, in a deficit of at least 3,000,000,000 francs, which will be increased to 5,000,000,000 francs if the suspension of German reparation payments be taken into account. This deficit must naturally have been substantially larger, as he points out, but for the fact that during the financial years 1930-31 and 1931-32 about 5,000,000,000 francs have been taken from the surplus funds in the hands of the Treasury towards meeting the successive deficits due to shortage from normal Budget sources. M. Gardey estimates that the drafters of the 1933 Budget will have to make provision for a deficit of certainly 3,000,000,000 francs on the coming nine months, apart from fresh expenditure already inevitable, as to the volume of which no exact total can yet be suggested. Everything points to the probability that, before the end of the present year, those responsible for the national finances will be faced with the double dilemma: (1) The necessity of securing either a resumption of German reparation payments or else a reduction or suspension of French war debt payments to Great Britain and the United States; or (2) the imposition of a heavy burden of fresh taxation, which the country's economic position will render impracticable. Striking evidence in support of the thesis that the limit of taxation has been reached, if not already surpassed, has been afforded during the past week by the remarkable action of the theatre, music-hall, cinema and other amusement industries who had made preparations to close all their establishments indefinitely as from last Tuesday and would undoubtedly have done so had not the Government at the last moment agreed to reduce forthwith the present scale of taxation on them.

The pending General Election—which it is now probable will be fixed for May 1st and 8th, immediately after those in Germany—has been the predominating factor overhanging the Budget discussions in both the Chamber and the Senate. On this occasion, however, the more or less reckless voting of demagogic expenditure which marked previous pre-general election Budget debates has been rendered impossible by the obviously difficult situation of the national finances. The Opposition has, therefore, fallen back, for the purpose of creating electioneering capital, on the expedient of endeavouring to make the present Cabinet and its predecessors responsible for the country's present financial situation, and particularly in regard to the manner in which they are alleged to have "wasted," since the early days of 1930, the plethora Treasury surplus then existing.

"On March 24, 1930," M. Chéron (the then Finance Minister) told the Senate, "I was able to announce that the reserve funds of the Treasury amounted to 19,071,000,000 francs. All that has since vanished, and now the Senate is asked to vote a Budget which is only problematically balanced. When there is a deficit in the Budget, it has to live on the Treasury, and when that is exhausted, the only way out is to raid the Sinking Fund."

M. Flandin immediately took up the challenge. The only means to muzzle electoral demagoguery, he insisted, was to tell the country the truth. The present situation of France, like that of all other countries, was due to two causes:—(1) The State had become a tentacular State, projecting its arms to a constantly greater distance and into fresh domains every day; and (2) the State had become a Providence-State, whose beneficiaries were becoming more numerous and more exigent every day. The expenditure under the last Budget of the present four years' Legislature has been 8,000,000,000 francs more than the first one in that period, and the last Budget of the previous Legislature had been 9,000,000,000 francs more than that of the first one during that term.

Dealing with the Opposition accusation that Cabinets during the past two years have frittered away the Treasury's colossal surplus of 19,000,000,000 francs, M. Flandin stated that 2,000,000,000 francs had been handed over to the Caisse d'Amortissement, under the law stipulating for this form of disposal of Budget surpluses; 1,994,000,000 francs had been utilised to repay a foreign loan contracted at an onerous rate of interest; 1,500,000,000 francs had been used as cash payments to sufferers from war losses; 500,000,000 francs had been applied to re-equipment of the national economic plant; 800,000,000 francs for frontier defence; 1,600,000,000 francs to agricultural credit organisations, cheap housing, rural electrification and water supply; 2,700,000,000 francs had been lent to the Post Office (since covered by a P.T.T. bond issue); 1,950,000,000 francs advanced to the railways to cover deficits on working during the period 1921-26; 1,400,000,000 francs represented cession of foreign currency instruments, under the law of April 10, 1930 (Article 120); 700,000,000 francs had been advanced in loans to foreign Governments; and about 3,000,000,000 francs to various banks in distress. "A year ago," M. Flandin added, "I was told that it would be impossible to keep the Treasury going until December 31st last without issuing Treasury bills and that the Government coming into power after the elections would find the Treasury empty and would be faced with insurmountable difficulties. I took up the challenge, and down to the present moment I have not issued a single one of the 5,000,000,000 francs of Treasury bills authorised by the law of 1926; and I have done this in spite of the fact that the first few months of the year are a period of low water, as the inflow of direct taxation ceases in November and does not recommence until June. The incoming Finance Minister, after the elections, will not find the Treasury empty, however, for direct taxation is again beginning to come in, and he will be able, if necessary, to issue the whole intact volume of 5,000,000,000 francs Treasury bills."

GERMANY.

Bank Reorganisations — Transfer Moratorium — Michael Concern.

(FROM OUR CORRESPONDENT.)

BERLIN, March 29.

THE big banks of Berlin have been holding general meetings this week to pass the reconstitution schemes. For the Danatbank it was the last general meeting in its eighty-year history. In the general meeting of the DD Bank Herr Oskar Wassermann discussed developments since July 13th and joined issues with the critics of the bank's policy. Herr Wassermann sees the principal causes of the economic crisis in political mistrust and the intolerable burden of international indebtedness. After the July banking crisis the DD Bank was reproached with having made the decisive contribution to the collapse of the Danatbank by refusing, for reasons of competition, to take part in a joint rescue scheme by the other banks. Herr Wassermann denies this reproach. "We were," he said, "by no means so short-sighted that we failed to see what the consequences must be for all credit institutions, including ourselves, if one of the big banks closed its doors. But the disaster could no longer be avoided. It could only have been postponed as long as the Danat-

bank's lack of liquidity could be concealed from the public. After the foreign drain the other banks were no longer so liquid that they could secretly transfer to their colleague the sums which would have been necessary to support its milliards of liabilities. We had to be satisfied with localising the crisis."

The banks had already used up their hidden reserves in 1929 and 1930 and had bought large quantities of their own shares in 1930 and 1931. The fact that public funds were used to assist the banks is justified by Herr Wassermann on the grounds that the banks had been obliged to bear the consequences of the political developments of the last two years and that if the losses had not been confined to the banks they would have fallen heavily upon a very large section of the population.

One might approve or disapprove, continued Herr Wassermann, of the fact that a large part of the banking system had come under public ownership, but a commercial bank owned by the Government was in such irreconcilable contradiction to the essence of a banking system in a non-socialised community that the compulsory nationalisation of the banks which had been inevitable would have later on to be followed by their compulsory denationalisation.

The supervisory council of the DD Bank has now been reconstructed in accordance with the reform law. The council, which formerly had 120 members, is now legally limited to a maximum of 30, and the DD Bank is for the time being only appointing 16, of whom nine are former directors. A committee is being formed of the hundred or so retiring members of the supervisory council.

Herr Jakob Goldschmidt made a farewell speech in the general meeting of the Darmstädter Bank. He, too, dealt mainly with the events of July 13th, but he did not regard the collapse of the Danatbank as an isolated phenomenon; the banking system as a whole, he pointed out, was already fighting for its very existence.

Contrary to the original plans, Herr Goldschmidt is to retire altogether. He will not be on either the board of directors or the supervisory council of the Dresdner Bank, which is taking over the Danat Bank. It is significant of Herr Goldschmidt's position that this was especially lamented in the general meeting by the officials of the bank. Of the former principals of the Danatbank only Herr Bodenheimer is being taken over by the Dresdner Bank. The former Reichskommissar, Herr Bergmann, ex-Secretary of State, is to be a director. The dismissal of Herr Goldschmidt, which will not make the carrying out of the amalgamation any easier, is due to personal and political reasons. He will, however, continue to represent the bank on the supervisory boards of the principal industrial undertakings in which it is interested, including Vereinigte Stahlwerke, Krupp and A.E.G.

The declines in quotations for German dollar bonds last week have been attributed in New York to rumours in London that a partial suspension of the service of German foreign loans was impending. Last Thursday the Government issued a most emphatic contradiction of these rumours. It is no mere chance that they have arisen just now. The German foreign exchange situation is no secret, and it goes without saying that the growing acuteness of this situation is preoccupying the responsible members of the German Government intensively, but all the responsible authorities are perfectly clear as to what the consequences would be of any decision which even resembled a transfer moratorium on private debts. It is therefore highly improbable that any important step will be taken before the Lausanne Conference unless an absolutely catastrophic deterioration in the trade balance takes place meanwhile.

Just before Easter the Industrie- und Privatbank of Berlin suspended payment. The bank acted as financier for the concern which was built up by Jakob Michael during the last ten years, and its failure means the final collapse of that formerly large and active group. Jakob Michael, especially in the years 1924-26, was regarded as one of the most prosperous German financiers, after very successful speculations in marks and in various pre-war loans. He really began in the chemical industry, but

he was most active in the real estate market and in mortgage bank and insurance business. At times he controlled large numbers of shares in the leading German mortgage banks and in some of the oldest insurance concerns. The indiscriminate construction of a variety of properties of unequal value, however, in this case as in many others, proved a mistake, and the disintegration of the concern began in 1926. One holding after another had to be disposed of, so that now only a relatively small part of German economy is effected by the failure.

AUSTRIA.

Banking — Railways — Industry — Trade.

(FROM OUR CORRESPONDENT.)

VIENNA, March 28.

At the general meeting of the National Bank the new president, Dr. Kienböck, said that they might have to make some change in the policy of the bank of issue under his management. In the first place, a restrictive discounting policy is to be adopted. This can be done with greater ease than under Dr. Kienböck's immediate predecessor, who had continually to fight against the difficulties of banks, and was obliged to discount bills in order to save them from collapse. Dr. Kienböck does not want to discount any new finance bills of the Credit-Anstalt, and he hopes also to induce the other banks not to hand in any more finance bills and to do their best to meet those maturing. The increase in the rediscount fee for finance bills of exchange from $\frac{1}{4}$ to $\frac{3}{4}$ per cent. is not, however, a very effective weapon, and the chief pressure will be the absolute refusal to discount such paper.

The National Bank is to permit a certain relaxation of the foreign exchange restrictions and particularly to facilitate the use within the country itself of schilling credits belonging to foreigners. A start in this direction was observable at the Vienna Fair, and this was the principal reason why the Fair did not show a distinctly unfavourable results. Finally, Dr. Kienböck declared that the National Bank is prepared to stand a certain amount of loss in favour of the State in the settling up of the commitments of the Credit-Anstalt. Of the bills which were discounted by the National Bank to an amount of 547 million schillings under the guarantee of the State, the greater portion will not be collectable and will have to be written off.

The policy thus announced by the new president is already being pursued, but on an average only $\frac{1}{4}$ to $\frac{3}{4}$ per cent. of the sums applied for in foreign means of payment is being allowed. The reason is that the National Bank must see to it that within the next few weeks very important sums are on hand for coupon purposes. For instance, in the first place, \$900,000 are payable abroad for the Vienna municipal loan; further, about 50 million schillings in foreign means of payment must be found for the interest and amortisation service of the League of Nations loan. In this connection, great significance is attached by Austrian economic circles to the resolution of the Financial Committee of the League of Nations, which states that Austria is in need of a loan in order to survive the crisis without giving up the service of the foreign loans. This clearly characterises the seriousness of the situation.

On the occasion of the general meeting the president of the National Bank called upon the public to be reserved in its judgment of the further development of the State finances and of the affairs of the Credit-Anstalt and to cultivate a little optimism. This appeal would be gladly responded to in Austria if so many disappointments had not already been suffered. Still, the position of the schilling abroad is somewhat firmer, especially in Czechoslovakia and Italy, particularly as there has been a demand there for schilling notes for travelling purposes and for the Vienna Fair. At the same time, the checking of foreign exchange traffic is most stringent at the frontiers.

The last reduction of the bank rate from 8 to 7 per cent. met a long-felt need of business interests, by whom it was pointed out that the high bank rate was not attracting

foreign capital. The banks have also reduced their rates of interest on credits and loans outstanding by 1 per cent. At the savings bank the state of deposits is satisfactory, and, in any case, better than at the banks. In consequence, the savings banks are again issuing modest mortgage credits, whereas they had previously been refusing practically all applications.

Attempts are being continued at the Federal Railways to bring about an improvement in the financial situation through reform of the administration. The bureaucratic apparatus is to be simplified and the train of departments bridged. It is certainly a fact that the management of the Federal Railway is much too large and more extensive than it was under the old monarchy, when there was really a big system to operate. Within the last few days some of the officials have begun to object energetically to the constant experiments in reform which are being made without any practical success. The Federal Railways intend to proceed with electrification on individual stretches, and they are of the opinion that the necessary credits might be obtainable from the electricity industry against long-term annuities. The constant deficit will not be eliminated in this manner, especially as motor competition is steadily growing.

Unemployment is being reduced at a very slow pace. In Vienna during the first half of March it was 128,650, which means 14,644 more than last year. In the whole of Austria there are 360,000 in receipt of benefit. In the provinces, too, there is no improvement as yet, but a good deal of foreign tourist traffic is anticipated for summer, and there is consequently some investment going on and requiring labour. The Alpine Montangesellschaft intend to start producing coarse sheeting again, as the agreement between the Alpine Montangesellschaft and the Czechoslovakian foundries is not to be renewed. One of the provisions of this agreement was that the Alpine should have charge of the sale of Czechoslovakian sheeting in Austria so long as it did not resume the production of sheeting at its own works at Zeltweg. Employment at the textile mills is fair, though slowing down is observable here, too. Coal raising in Austria is to be promoted by greater use of brown coal on the part of industry and the railways. Whereas the Federal Railways last year used only 25 per cent. of Austrian coal, at the present time contracts for 37 per cent. of their coal requirements have been given to Austrian mines. It is intended to cover requirements in Austria up to 50 per cent.

The clearing treaty with Switzerland continues to be unfavourable for Austria, and for this reason notice of cancellation has been served. Up to the present the Austrian payments have been almost four times as high as those of Switzerland. Fresh trade-treaty negotiations are in progress, among them an agreement concluded between Austria and France for the purpose of promoting the exportation of Austrian timber. France raised an objection, because its schilling credits in Austria could not be easily disposed of on account of the foreign-values regulations. Austrian exports of timber are now to be paid for the greater part out of the schilling credits for French account in Austria, which are estimated at 15 million schillings at least. Timber exports are, however, still to be subject to the previous contingent clauses, while Austria has been obliged to give up the privilege it previously enjoyed in regard to the French duties on timber. Under certain circumstances this might be unfavourable for Austria, and especially if the proposed big increase on all timber duties in France should take place. It is possible that the Dutch schilling credits will also be liberated in order to afford Holland the opportunity to make purchases in Austria. Roumania is also endeavouring to procure the liberation of about eight million schillings, which it has lying in Austria, the intention being to buy goods in the country. A new treaty has been concluded with Italy, covering facilities for Austria for the exportation of cellulose, paper, timber and certain manufactures to Italy against facilities for Italy in regard to exports to Austria of southern fruits, silks and canned fish. With Brazil, too, exchanges are to be arranged. These relate to increased quotas of coffee from Brazil and increased exports of Austrian industrial products to Brazil. It is hoped to reserve to Brazil 90 per

cent. of Austria's requirements of coffee, the present percentage being only about 60 per cent.

The negotiations which are now being carried on with the banks, insurance companies and savings banks in regard to the taking up of eight million schillings in Housing Loan have not proved easy, because the credit institutes are anxious to maintain and enhance the liquidity of their resources, and because resale to the public would not be an easy matter. It is now possible, however, that the national insurance institution will take up the greater part of this loan.

HUNGARY.

Danube Plan — Trade — Exchange Control.

(FROM OUR CORRESPONDENT.)

BUDAPEST, March 29.

THE news that a conference of the Great Powers has been called in London to examine the recommendations of the Financial Committee of the League and the reconstruction plan of Monsieur Tardieu concerning the Danubian States has been received here with great satisfaction. The desperate economic conditions of the Danube Valley and the financial difficulties of the Border States call for urgent and efficient action by the Great Powers, who are in a position to offer the necessary financial assistance and can use their good offices to eliminate the political divergencies between the Succession States. Hungary is willing to be a party to any big economic unit wherein she can sell her agricultural surplus products, and would favour, therefore the closest possible economic co-operation with Austria, Czechoslovakia, Germany and Italy. The trend of Hungary's foreign trade is shown in the following table:—

	1930.	1931.	1930.	1931.
	Value in	Value in	Percentage of	Percentage of
Imports from	Million Pengö.	Million Pengö.	Total Trade.	Total Trade.
Austria	94.8	69.5	11.5	12.6
Czechoslovakia	172.9	50.1	21.0	9.1
Roumania	72.9	71.2	8.9	13.0
Jugoslavia	42.1	39.8	5.1	7.2
Four Successor States together	382.7	230.6	46.5	41.9
Germany	175.0	132.6	21.2	24.1
Italy	41.4	31.7	5.0	5.8
Other countries	224.3	154.7	27.3	28.2
Total imports	823.4	549.6	100.0	100.0

As can be seen from the above figures, nearly three-quarters of Hungary's imports came from the Successor States and Germany and Italy; and, as is shown in the following table, more than three-quarters of her exports went to these States in 1930; the drop in 1931 is due only to the temporary cessation of trade with Czechoslovakia on account of the Customs war.

	1930.	1931.	1930.	1931.
	Value in	Value in	Percentage of	Percentage of
Exports to	Million Pengö.	Million Pengö.	Total Trade.	Total Trade.
Austria	256.0	170.9	28.1	30.1
Czechoslovakia	153.2	24.2	16.8	4.3
Roumania	29.4	20.1	3.2	3.6
Jugoslavia	51.8	32.6	5.7	5.7
Four Successor States together	490.4	247.8	53.8	43.7
Germany	94.1	68.4	10.3	12.6
Italy	117.3	57.3	12.9	10.1
Other countries	209.9	193.6	23.0	33.6
Total exports	911.7	567.1	100.0	100.0

Few people realise either in Britain or in Hungary that in 1931, apart from the Successor States, Germany and Italy, the most important market for agricultural exports was Great Britain. While imports from Britain declined from 34.2 million pengö in 1930 to 20.6 millions in 1931, exports to Britain increased from 51.5 to 55.4 million pengö, thus leaving a favourable balance of 34.8 million pengö, as against 17.3 millions in the previous year. The development of exports to Britain is particularly important, because though Hungary's trade is, for

instance, largely active with Austria, the Austrian currency cannot be used either for the payment of foreign obligations contracted in dollars and sterling or for the purchase of the necessary raw materials.

The total value of exports, which declined from 911.7 million pengö in 1930 to 567.1 millions in 1931, will further deteriorate in 1932, unless a miracle happens. Comparative figures for January-February in the last four years are as follows:—

January-February.	1929.	1930.	1931.	1932.
		In Million Pengö.		
Imports	153.8	127.4	86.7	53.9
Exports	105.9	140.0	80.5	47.1
Balance	-47.9	+12.6	-6.2	-6.8

As can be seen from these figures, imports have fallen to scarcely one-third of the 1929 volume, owing to the foreign exchange regulations and to the decline of purchasing power, which is determined solely by the merchandise export now that the financing of imports by foreign borrowing has stopped. The catastrophic fall in exports is due partly to the trade barriers and currency regulations of other countries and partly to the inability of Hungary to compete with Poland, Roumania, Yugoslavia, etc., owing to the inflated price level. No improvement can be hoped for so far as exports are concerned until harvest time.

The National Bank has issued a very interesting survey of the foreign exchange control, which has been in force now for eight months. It is stated that from August 1, 1931, till March 15, 1932, the amount of the export *devisen* surrendered to the bank amounted to 100.2 million pengö, which is less than one-third of the total merchandise exports in the same period. Another 30 million pengö was notified to the bank by exporters who were permitted to import raw material within the limits of the compensation scheme sanctioned by the bank. The bank has allowed 69.9 million pengö in foreign exchanges for merchandise imports, which sum, together with the 30 million pengö covered by the compensation agreements and 7.7 millions used for imports from private balances with the permission of the bank, makes a total of 108 million pengö, which is again scarcely one-third of the total value of the imported goods in the period August, 1931-March, 1932. With the building up of the commercial clearing treaties under the auspices of the bank and the more effective regulation of export, it is hoped that about two-thirds of the currency necessary to carry on foreign trade will be subject to the control of the authorities. In such circumstances there is, of course, very little hope of procuring the foreign exchanges necessary for the service of Hungary's huge foreign debt. It is worth while to remember that the value of the total merchandise exports of January and February, amounting to 23.8 million and 23.3 million pengö respectively, would not suffice to meet the monthly service of the foreign debts, amounting approximately to 800 million pengö per annum. At best it will be possible to transfer the service of the League Loan and the B.I.S. credit, which is permitted by the British Standstill Agreement.

The French creditors show little eagerness to come to terms with their Hungarian debtors on the lines of the British Standstill Agreement which is now being signed by all the creditors and debtors concerned in London and in Budapest. The great merit of the British Standstill Agreement is that it brings within the control of the National Bank and its advisers all the interest and commissions deposited in pengö at the bank. On the other hand, it is much to be regretted that investments in real estates and stocks are permitted, for these transactions would further inflate the already inflated price level and would create vested interests and discriminations between the creditors which would make the liquidation of the transfer moratorium much more difficult in the future.

JUGOSLAVIA.

Production — Foreign Trade — Financial Conditions — Budget.

(FROM OUR CORRESPONDENT.)

BELGRADE, March 15.

THE end-year industrial and trade reports show unmistakably how deep and general is the present crisis. The mining output of practically all ores has declined, and in the cases of copper and iron the fall amounts to 36 per cent. and 74 per cent. respectively, as compared with the same quarter last year. The timber industry is working at only 50 per cent. of its capacity, while the alcohol, meat products, sugar, oil, paper, glass, shoes, carbide, and artificial manure trades are equally hard hit. Agriculture is at a low ebb. New credits placed in the villages by the Privileged Agrarian Bank during 1931 amount to only 349 million dinars, against 757 millions placed during 1930, and owing to the difficulty of obtaining cash for agricultural products many villages are penniless. It is for these reasons that the internal wheat monopoly is now being rescinded, and that the discussion of the formation of a Danubian economic bloc is being followed with interest, if not with much solid hope.

Foreign trade figures place exports for 1931 at 8,323,416 tons, valued at 4,801 million dinars, against imports of 1,133,110 tons, valued at 4,800.3 million dinars, thus giving, on paper, a favourable balance of 700,000 dinars. The total volume of trade at 9,600 million dinars compares with a total volume of 13,740 million dinars in 1930, when exports amounted to 6,780 and imports to 6,960 million dinars. The full extent of the decline will best be realised, however, if we compare these figures with the total volume of 15,510 million dinars in 1929—the fall in trade during the past two years being about 40 per cent.

It cannot be said that any improvement has been noticeable during the first quarter of 1932. Unemployment, although not catastrophic in an industrially undeveloped country, is on the increase, and poor relief is being organised by many municipalities. Bankruptcies, it is true, have increased only slightly, but the figures are completely misleading, since in addition there are many "compulsory settlements," as well as latent bankruptcies which are allowed by creditors to go on for fear lest everything may be lost. Foreign trade figures for January are: exports 218.2 and imports 228.2 million dinars, as compared with 384 and 410 million dinars respectively in January, 1931.

On the other hand, financial confidence is gradually reviving, although this process has not reached a point at which new credits are being opened. Bank deposits, which at the end of September were 13,235 million dinars, and which reached their lowest ebb during November, have begun to come back, and although their total for the end of December was only 12,170 millions, it may be confidently anticipated that the end of March figures will not be far short of 13,000 millions. The Bourse has shown a bullish sentiment since the end of January, and the tightness of the money market has in general relaxed. The State, which borrowed 431 million dinars from the National Bank during January, has taken only 6 millions more during the past six weeks. Loans issued by the Bank are gradually trickling back, although at a rather slow rate. Many obligations "at sight" are being turned into "long-term obligations," which eases the problem of circulation, since only those at sight need be covered by metal. The cover itself has been reduced since December from 2,096 to 1,945 million dinars, and the circulation from 5,172 to 4,861 million dinars. The relation of cover to paper has declined from 37.51 per cent. to 36.53 per cent. At the moment it may be said that Yugoslavia is standing the financial strain better than any of the Danubian or Balkan countries on which she borders, and, given a reasonable chance of economic improvement in Europe, should be able to pull through.

Much of this is reflected in the Budget for 1932-33, which still awaits the approval of the Senate. Its total of 11,400 million dinars is 1,800 million dinars less than that for 1931-32, and is the smallest for any Budget since

1925-26. It is characterised by severe all-round cuts, the biggest being in the Ministries of War and Education. All Civil Servants' supplements and bonuses are being reduced by amounts varying between 5 per cent. and 11 per cent., this being the second reduction since October 1st, and all capital expenditure which could be postponed has been cut out. The average saving, taking each Ministry separately, is 20 per cent. One item alone is larger than in the preceding Budget, namely, State debts, amounting to 1,558 million dinars, against 1,220 millions. This is partly due to the natural increase in the scale of repayments, and partly to service of the two new loans concluded during 1931—the 1,000 million French francs stabilisation loan and the 250 million French francs credit granted in October. The scale of estimated receipts has also been considerably lowered, particularly in the case of direct taxation, which has been reduced from 1,601 millions to 1,170 million dinars. To make up for some of the losses, the Stamp Duty has been raised and educational fees introduced—education having hitherto been completely free. Two points in the Budget deserve particular mention. One is that no receipts from reparations have been entered in the estimates, and the other is the statement of the Finance Minister that the floating debt, amounting to 700 million dinars, will be repaid in the course of six years, bearing interest in the interim. The Budget has revealed some interesting figures as regards Treasury receipts during the first eight months of the financial year 1931-32. The total receipts were 7,330 millions, against 8,092 million dinars in 1930-31. Indirect taxes have declined from 2,435 millions to 2,052 millions, direct from 1,484 millions to 1,210 millions, and monopoly receipts from 1,622 millions to 1,515 million dinars. Receipts from railways, posts, telegraphs, State forests and mines were roughly the same as during the preceding year.

SPAIN.

Politics — Finances — Bank of Spain.

(FROM OUR CORRESPONDENT.)

MADRID, March 12.

THE past month has not witnessed the political changes that were anticipated; and Señor Lerroux's speech, on February 11th, the announcement of which had awakened intense interest throughout the country, did not prove entirely satisfactory either to his listeners in general or to the Radical Party. It is realised that Señor Lerroux's advanced age is beginning to tell on him, and that his aggressive spirit is on the wane. The result has been a further rise in the prestige of Señor Azaña, the Prime Minister, who continues to pull the wires within the Government. Whatever the final outcome may be, the country is grateful for a respite in political bickerings; and the Bolsa reflected, perhaps with exaggeration, the optimism which resulted.

On the other hand, the peseta continues weak, and the easing of restrictions as to trading between banks has not improved the situation. The index of the cost of living, slightly higher in 1931 than in the previous year, has not followed the course of the peseta as compared with gold currencies. At the end of 1930 the peseta showed a depreciation of 45 per cent., which increased to 53 per cent. on December 31, 1931, while the index of the cost of living in Spain only moved from 172 to 175 during the same period. This stability of prices in the face of a depreciating currency is, in a great measure, due to the world crisis which has enabled Spain to avoid the unpleasant results which have accrued in other countries under similar exchange conditions. Furthermore, the economic isolation of the country with respect to the rest of Europe has proved to be a safeguard against the repercussion of economic disasters abroad.

The issue of Treasury bonds, which is to be made shortly, is the subject of much comment on the Stock Exchange. Generally speaking, Government securities have weakened of late, probably thanks to sales made with the object of providing funds for subscription to the new issue on the supposition that the terms will present certain

advantages over previous issues. It would appear that, following the usual custom, the Bank of Spain will allow advances up to 90 per cent. of the current quotations of the new Treasury Bonds, but that institution is not in favour of a reduction of the interest rate on such advances. This would induce the banks to take up large packets of bonds, thereby eliminating to some extent the small subscribers. In the past, banks have been able to realise large profits on Government issues by exaggerating their subscriptions and paying for 90 per cent. of them with money borrowed from the Bank of Spain. The bonds allotted to them were either resold on the market at a profit or held for the difference between the interest produced by the bonds and that charged by the Bank of Spain for the advances, the latter being invariably less than the former. It is not surprising, therefore, that all Government issues made of late years in Spain have been very considerably oversubscribed.

Taking advantage of the favourable atmosphere which existed a week ago, and the proximity of the issue of Treasury Bonds, several private issues of shares and bonds have been offered to the public with satisfactory results. The market conditions have, however, changed somewhat; and, at the time of writing, owing to a revival of social troubles in the provinces, the Bolsa has lost some of its buoyancy.

The reduction of Government expenditure, which, it was announced, would be enforced with an iron hand, has been toned down to meet political exigencies. On the other hand, railway construction and hydraulic works are being carefully sifted, and only the most essential are to be authorised, while the thousands of schools which the Minister of Education announced his intention of building will probably not take tangible form for some time to come.

The annual report of the Bank of Spain indicates that during the year 1931 the bills discounted increased by Ptas. 2,278,000,000. This movement has continued during the present year; already discounts amount to 1,218 millions, compared with 773 millions in the corresponding period of last year, and these figures are an indication of the severe economic crisis through which the country is passing. The profits of the Bank of Spain amounted to Ptas. 169,261,976. Including the carry forward from 1930, and after deducting charges, the net profit was 120 million pesetas. The dividend of 26 per cent. absorbs Ptas. 46,020,000 and 64 millions go to the Treasury in income tax, stamp duty and participation of the State in the profits of the Bank.

SOUTH AFRICA.

Gold Question — Public Debt — Diamonds.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, March 9.

THE Government of the Union continues obstinately with its policy of deflation and maintenance of the gold standard with a basic coin of 113 grains of gold. Whatever the ultimate outcome of the policy may be, the course of the discussion has been curious and regrettable, and becomes more so. Originally, the Government defended their attitude on the ground that their professional advisers anticipated a rise of sterling prices, which would give the Union producer for export a paying return for his produce. Then it could reasonably be considered in October last that the future of sterling was unpromising, or, at best, indefinite, and sterling seemed to be the only reasonable alternative. It is not clear why the rise in sterling prices was expected to help a gold-standard country, unless the gold equivalents of sterling prices were expected to rise—an event of which there has never been any sign. The ethical arguments against "compounding with creditors" were made much of, and still are, although almost all South African indebtedness overseas is payable in sterling. It is to be feared that the advice of General Smuts that the Union should leave the existing gold standard was not practically helpful, as the Government side are really unable to dissociate General Smuts' political or technical

statements from their strong dislike of the General himself.

The Prime Minister's closing speech in the debate on the proposed appointment of the Select Committee on the Gold Standard was an extraordinary utterance for a Prime Minister. General Hertzog candidly eschewed technical argument and devoted the whole of his remarks to criticism of the part played by General Smuts in the controversy. In the upshot, the South African Party members of the Committee were appointed without the formality of invitation, and resigned immediately the Committee was constituted and before any evidence was heard. The party view was that the Committee is a waste of time in view of the Government's announced decision that its object is to marshal arguments for the Government case rather than to investigate the whole position. The abstention may, in such circumstances, be understood, but is felt to be unwise, as it deprives the Committee of all members who combined with any understanding of the problem an attitude of opposition to the Government case.

In the meantime, the Government is proceeding with the measures ordinarily accompanying deflation. State expenditure is being pruned as rigorously as possible. All allowances have already been abolished, and now pensionable salaries are to be reduced, also the salaries of Ministers and the allowances to Members of Parliament. With all the forces tending so strongly towards economy, it is anticipated in Government circles that it may be possible to balance the Budget, although it may be more difficult to finance the loan account this year. Ordinarily the Public Debt of the Union increases by some £7 millions per annum. The Minister of Finance has been asked how he proposes to deal with this aspect of the matter, and has replied—not unnaturally—"Wait and see." The effect of this reply is spoiled by the widely held cynical opinion that that is what the Minister himself is doing.

Since Union, the Public Debt has increased by some £140 millions. Converting the net increases, year by year, in the ratio of the index of wholesale prices for the relevant year to the index for 1931, the burden of this is now equivalent to about £180 millions. Further than that, of course, in some lines—e.g., wool—the burden of old debts in terms of the commodities whose production they were incurred to promote is now crushing. On the other hand, there may be some idea behind the Government's decision to the effect that rigid deflation will reduce our production costs and compel the writing down of the value of over-capitalised farms, as nothing else will. Moreover, the Government may quite reasonably doubt whether their supporters as a whole are to be trusted with the management of the currency. They fear that our last state might become worse than our present condition.

The diamond mines associated with De Beers and the Premier companies have been placed on a caretaking basis or are in process of being reduced to that position. It is much to be hoped that improvement in trade and some arrangement for effective control by the people who understand a highly specialised business will lead to a resumption of operations. Some £350 millions' worth of diamonds have been produced in the Union since 1870, and £25 millions have been paid to the Union Treasury since 1910, according to the Government Mining Engineer's Report. The Premier Mine alone has paid £8,000,000 to the Government as the share of profit. South Africa owes much to diamonds, and, on sentimental as well as business grounds, the present position of the industry is regrettable. The Government has admitted Mr I. W. Schlesinger to its confidence and commissioned him to carry on the cutting of diamonds from the diggings and the training of diamond cutters. Mr Schlesinger is a distinguished local financier, but his special qualifications to enter the diamond trade at a crisis in its fortunes are not obvious. The whole position has been the subject of an acrimonious debate in Parliament, and it cannot be said that the Government came through it with credit. In any case, the present Minister of Mines is not one of the Cabinet's most wisely chosen members, and it is unlikely that he will hold office again.

The present Parliament shows signs of having outlived its usefulness. The gold standard question is a sort of King Charles' head whatever the subject of debate, and only some other matter of really major interest can relieve the Whips of difficulty in maintaining a quorum. As the gold standard is before a Select Committee, members cannot discuss it on the floor of the House, and they prefer to discuss it in the Lobby to dealing with other business.

In the meantime, the gold-mining industry is revealing itself even to its most prejudiced critics as the one mainstay of the country, and if the present circumstances continue to favour an increasing scale of production, we may hear less of the fear that the world will seek some alternative currency basis.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

Economic Co-operation of Japan and China in Manchuria and Mongolia. By Yosuke Matsuoka. (Dairen) Chunichi Bunka Kyokai.

A brief exposition of the Japanese point of view.

The Stock Exchange.

STOCK EXCHANGE REFORM.

REFORM, like charity, best begins at home. There will be satisfaction among investors over the fact, announced in our last issue, that more than four-fifths of the total voting members of the Stock Exchange have taken the trouble to record their opinion in an unofficial referendum, and that nine-tenths of those who voted are in favour of joint discussions between the Trustees and the Committee for General Purposes "to obtain unity of control and interests." While we have frequently had occasion to congratulate the Stock Exchange Committee on its perseverance in the laudable task of making investment safer for the investor, we have never disguised our view that the internal government and constitution of the Stock Exchange are in some respects antiquated and inadequate. There is, indeed, a danger that, unless efforts are made from within to bring the Stock Exchange into line with the requirements of the modern investor, its business may dwindle, and attempts may be initiated, with greater prospects of success than on earlier occasions, to secure some of its connections for other bodies.

The question of dual control forms an obvious starting-point for any comprehensive plan of Stock Exchange reform. Its origin has been fully dealt with in a pamphlet* circulated to members on the occasion of the recent vote. The original Deed of Settlement of the Stock Exchange, in 1802, appointed two managing bodies—the Trustees and Managers and a Committee for General Purposes. The latter had the sole management and direction of all the business of the undertaking, but the Trustees were responsible for the treasurership and the management of the buildings, including the determination of the price at which subscribers should be admitted to transact business as brokers or jobbers. Under a new Deed of Settlement, drawn up in 1875, however, it appears that the Managers and Trustees are compelled to carry on the Stock Exchange as a commercial undertaking in the interests of the shareholders—in other words, the Stock Exchange is to be regarded merely as a block of buildings leased to a body of members who, so far as the Trustees and Managers are concerned, might as well be dealing in old iron as in stocks and shares. In 1878, a Royal Commission on the Stock Exchange commented on a "Committee of Consultation" being the only means of communication between the two bodies, but no move for closer unity was made until 1918, when certain respected members formed an unofficial committee. After taking legal advice, this body drew up a scheme of reform. It was suggested that a new company should be formed, limited by guarantee, in which all Stock Exchange members, and members alone, should participate equally. The company was to be under the control of the Committee for General Purposes, and was to take a lease of the whole properties pending their ultimate purchase at a price of £3,600,000 (equal to £180 per share), rent being paid, meanwhile, to the Trustees and Managers, on behalf of the proprietors, at a rate not exceeding £200,000 in any year, this representing entrance fees, annual subscriptions, etc., less various expenses. This rent, it was understood, would be distributed by way of dividend to shareholders. Finally, all new members, after 1918, were to pay an additional subscription of £50 a year—to maintain a fund sufficient to produce the £3,600,000 required for the purchase of the properties at the end of thirty years. After amendment and revision the scheme was recommended for favourable consideration by a large majority of members, but the Trustees and Managers were hostile, and the proposal failed to secure acceptance at a shareholders' meeting.

The outside investor is interested in the present revival of the question mainly because dual control is regarded

* "The Stock Exchange and Its Constitution." Edited by F. I. Pitman, with the assistance of E. H. Davenport.

as standing in the way of certain wider reforms. For example, the existing constitution of the Stock Exchange is believed to be responsible, in considerable part, for the absence of any Guarantee Fund to protect investors against loss arising out of the failure or defalcation of members. The Hatry failure showed that the Stock Exchange was fully alive to the necessity of protecting the public, for a Guarantee Fund of £1,000,000 was raised at short notice, but investors should not be left dependent on the charity, tempered by wisdom, of members of the Stock Exchange. The absence of any Guarantee Fund may tend, slowly but surely, to induce investors to place their dealings in the hands of other institutions who will guarantee the completion of their orders. From 1802 to 1868, Stock Exchange profits were not paid away to shareholders, but were used to improve and enlarge the buildings for the benefit of members as a whole. Subsequently this policy was radically changed, and profits began to be paid away entirely to shareholders. According to the pamphlet, to which we have previously referred, for the thirty-two years ended March, 1931, the total net revenue of the Stock Exchange amounted to £5,887,323, of which £5,698,000—some 96.78 per cent. of the whole—was paid to shareholders in dividends. If the present constitution, in fact, operates to prevent the appropriation of Stock Exchange profits for the maintenance of a Guarantee Fund, or other "internal" and useful purposes beyond the payment of dividends, there would appear to be a strong *prima facie* case for its modification.

There is, further, a substantial body of opinion which holds, rightly or wrongly, that Stock Exchange charges are high, from the viewpoint of the investing public, and that reform of the constitution would enormously strengthen the hands of the Committee in dealing with this matter. In practice, the issue largely centres round the question of the return of half-commission by stock-brokers to authorised agents. The Committee has already proposed to modify existing arrangements by making commissions returnable as to 50 per cent. to the joint-stock banks and as to 33½ per cent. to other agents, while allowing members to propose different arrangements for agents wholly employed by them. But the general public is inclined to ask whether the "House," in the last resort, must necessarily be dependent upon outside agents for new business. Is not "half-commission" the worst of all advertisements of the Stock Exchange? A policy of enlightened and controlled advertising might be more satisfactory in all respects than dependence on half-commission agents, who, in some cases, are employed not for their business qualifications, but for their social position and family connections, and whose business acumen is not infrequently conspicuous by its absence.

Some members may reply that the profitability of their business, at the present scale of commissions, is limited as much by high "overhead charges" as by the return of part-commission to agents. It will be generally admitted that increases in the price of Stock Exchange membership have been fairly frequent and onerous since the adoption of the 1875 Deed of Settlement. From £21 in 1876, annual subscriptions have been raised, successively, to £31 10s. (1879), £42 (1899), £52 10s (1917), £78 15s. (1919), and £105 (1920). The entrance fee for three-surety members was raised from £525 to £630 in 1917. In addition, no member can normally be elected unless he holds the nomination of a retiring or deceased member, which must be purchased. Thus, if an enterprising firm of brokers or jobbers has expanded its business by means of the intelligent service it provides for its clients, and finds it necessary to have more clerks to deal for its clients on the floor of the "House," it will have to apply, if it has reached the limit of "blue button" men, for another

membership. This involves the payment of an entrance fee of £630, an annual subscription of 100 guineas, the acquisition of a minimum holding of Stock Exchange shares (now standing at £155), and the purchase of a "nomination," which at present costs £150-£200, but commands a much higher figure when Stock Exchange business is active. Incidentally, the system of purchases of "nominations" implies that members are deprived of the cost of their nominations at compound interest for the term of their membership. They are thus denied of a portion of their working capital at the time they are most in need of it for the starting up of their business. If the sums paid by members for the purchase of nominations were contributed to a general fund, the results might be of much greater advantage to the Stock Exchange.

Whatever direction eventual reforms may take, it would seem that a condition precedent to their successful initiation must be the setting up of a single governing body with power to employ the receipts from its members' subscriptions in the interests of members as a whole and of the investing public. The Stock Exchange has no monopoly at law, but it has built up for itself a most valuable goodwill, which, in the general interest, it should make every effort to retain. For this reason we trust that those members who have once more raised the question of the abolition of "dual control" will not be weary of well doing, and that their proposals will be considered, by those in authority, sympathetically and on their merits.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET. ACCOUNT.
April 6. April 7.

Paucity of business marked the resumption of trading after the holiday, and dealers remained apprehensive regarding the international position. A graver view was taken of the Kreuger position and the United States budgetary situation. International issues were affected by unloading from Brussels. Home issues, on the whole, showed gratifying stability in the face of these adverse influences, and the general tone, though quiet, was by no means depressed.

Gilt-edged securities were strong at first in sympathy with the appreciation of sterling. Apart from a little with the appreciation of sterling. Apart from a little subsequent profit-taking, prices were fairly well maintained. The year, and support was forthcoming for 4 per cent. "Consols." The London and Home Counties Joint Electricity Authority issue was well received. India loans were offered, the 4½ per cents. of 1950-55 being weak. Dominion stocks encountered profit-taking, particularly Commonwealth Fives. Home Corporation stocks remained firm.

In the Foreign market, a feature was a rise in German issues on bear covering following the news that Berlin official quotations would be resumed on April 12th. Austrians responded to more encouraging reports regarding pending interest payments, while Hungarian issues improved on an official statement that no new loan was being sought. Greek and Bulgarian loans remained, however, at default levels, unofficial reports of the League of Nations' finding being not altogether encouraging to bond holders. Sino-Japanese issues were firmer, despite the hitch in the Shanghai negotiations.

Disappointing holiday "traffic" figures caused a decline in Home Rails, particularly Midland and Scottish and Great Western, prior charges being also easier. Argentine traffics also made a poor showing, but quotations improved with the peso. American rails were firmer.

The industrial share market was again overshadowed by the Kreuger débâcle. A fresh slump occurred in Swedish Match, dealings becoming largely a matter of negotiation. Brussels was a seller of Hydro-Electric and Brazilian Traction. Cables and Wireless rallied after scattered selling. A fall occurred in Anglo-South American Bank "A" shares on interim dividend fears. Electric Supply shares were helped by the success of the new loan, and a steady

investment demand continued. Engineering shares were dull. A small speculative demand was maintained for brewery shares on the prospects of taxation alleviation. Guinness recovered part of last week's "political" decline. Shipping shares were only slightly affected by the announcement of a "cut" in North Atlantic rates, and by the Cunard loss, after depreciation (discussed on page 747).

Paris was again a seller of oil shares, and most of the leaders declined in a narrow market. A further increase in United States crude oil production, however, failed to prevent the maintenance of a steady tone in mid-week. Rubber shares were lower where changed, the market reflecting the dullness of the commodity. Anglo-Dutch and Allied were marked lower. Tea shares were apathetic, as ever, apart from a small advance in Consolidated Tea and Lands.

Movements in the Mining share market were mainly by way of adjustment to the higher level of sterling. Falls occurred in the prices of all metals, tin quotations breaking sharply. "Kaffirs" were dull in the absence of Paris support. Brakpan were marked down and South African sales of Randfontein counteracted the effect of a good report. Movements in Rhodesians were few, though buyers were found for Globe and Phoenix. Wiluna rose on a satisfactory progress report.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The markets were dismayed last week-end by the failure of the House of Representatives to vote the Sales Tax, and the resulting possibility of a badly unbalanced Budget and an encashment of \$2,500 millions of veteran's bonus bonds, to make confusion worse confounded. The effect of Mr Garner's speech, on Monday, in bringing the House back to a sense of its duty was entirely favourable. Wall Street had no love for many of the specific proposals of the new financial programme, but regarded any practicable measures to balance the Budget as vastly preferable to a huge prospective deficit. Markets remained quiet, but the tone was firmer, a fair amount of short covering being induced by the imposition of restrictions on "back-wardation" loans as from April 1st. Government bonds were particularly affected by Congress developments and showed only a moderate recovery as the week progressed. Heavy liquidation of Kreuger and Toll was accentuated by the pessimistic announcement of the Stockholm Committee, blocks of as many as 50,000 securities changing hands in single deals. A sharp break in International Telephone was arrested by the issue of a statement that the company had not delivered to Kreuger interests any of its own Common stock in exchange for its participation

in Ericsson Telephone. Utility issues were unsettled by the news of a sharper decline in electric power output. Procter and Gamble was one of the few stocks which made an improved showing, the president circularising stockholders to the effect that business was running only 5 per cent. below the 1931 level, and that the regular dividend would be declared for the March quarter. Steel mill activity for the week ended March 26th was 22 per cent. of capacity, against 25 per cent. in the preceding week. Demand from automobile producers was still in abeyance, the Ford sales campaign continuing to be delayed, although dealers were called to Detroit to view the new model. Mr Myson Taylor has been elected chairman of the United States Steel Corporation in succession to Mr J. P. Morgan, who assumed the position temporarily on the death of Judge Gary. Freight car loadings for the week ended March 19th were 584,698, against 575,545 in the previous week, 741,942 in the corresponding week of 1931 and an average of 939,904 for the same week in the seven years 1924-30.

CANADA.

Though the Canadian markets have had spasmodic bursts of liveliness, their tone has remained uncertain and the volume of business meagre. The strength of Canadian Pacific Railway has been associated with rumours of pending recommendations by the Special Commission on Transportation calculated to improve the outlook for common dividends. Newsprint stocks are still out of favour. Most distillery companies have been compelled to pass or reduce their dividends. The majority of brokerage and investment houses have been making ends meet by the business arising out of numerous public offerings by the Federal Government, provincial administrations and municipalities, practically all of which have been oversubscribed, though the high rate of interest offered has aroused disquietude in some cases. Provincial bonds, for example, have been offered to yield practically 6½ per cent. The "Investors Index" of the Bureau of Statistics for the three main groups of common stocks in the middle of March was 62.9, as against 61.5, 60.0, and 60.3 for the three previous weeks, respectively.

PARIS.

Nervousness increased last week-end, and the volume of transactions was greatly reduced. The interim report of the Kreuger and Toll Committee was unfavourably received. Kreuger and Toll shares lost a third of their value in a single day, and it was deemed necessary to apply a quota system to offers of stock. The atmosphere became slightly more favourable in mid-week, and on Thursday, after a brisk session, substantial improvements were recorded in most departments.

	Mar. 24, 1932.	Mar. 29, 1932.	Mar. 31, 1932.		Mar. 24, 1932.	Mar. 29, 1932.	Mar. 31, 1932.

BERLIN.

A reaction occurred under the influence of the Kreuger Committee's statement, the shares of the group revealing marked weakness. Most of the leading home issues were simultaneously on offer. A mild recovery, however, took place on Wednesday. The German Bourses will reopen on April 12th for the transaction of business (including the marking of "Official" quotations) on the lines prevailing before September 18, 1931. Comparative "unofficial" quotations are given in the table below:—

	Mar. 24, 1932.	Mar. 29, 1932.	Mar. 31, 1932.		Mar. 24, 1932.	Mar. 29, 1932.	Mar. 31, 1932.
Reichsbank	104½	103	105	A. E. G.	28	27½	27½

Lloyd	92	90	91½	Svenska Tandsticks	33	28	24
Dye Trust							

AMSTERDAM.

Listless conditions prevailed, dealers and public alike being disposed to await some clarification of the international situation before undertaking fresh commitments. The Kreuger issues fell sharply. Among home securities, Philips Lamps and A.K.U. were weak, and Unilever reacted. Rubber shares were idle, and Amsterdam Trading lacked support.

	Mar. 24, 1932.	Mar. 29, 1932.	Mar. 31, 1932.		Mar. 24, 1932.	Mar. 29, 1932.	Mar. 31, 1932.

LONDON ACTIVE SECURITY PRICES AND YIELDS.

NOTE.—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.
