OTHER CENTRES.

Restricted business and considerable apprehension ruled on most of the minor European Bourses at the outset. Brussels was a disturbing influence, heavy unloading being attributed to an important failure. Stockholm was depressed, Ericsson falling to a nominal figure, while Skandinaviska Bank shares were weak. A slightly firmer tone followed the announcement of Government assistance for the bank. Conditions were dull and heavy in Milan.

INVESTMENT NOTES.

Royal Mail Scheme Approved.—On March 23rd, the approval of the Royal Mail Scheme, by meetings of creditors in respect of loans and guarantees of Harland and Wolff, completed the successful navigation of the difficult waters between Scylla and Charybdis. The decisions at the twenty-nine meetings in connection with the Scheme were either unanimous or given by sufficiently large majorities to leave no doubt of the emphatic support of those concerned. The opposition of the trustees of the Elder Dempster "A" debenture stockholders was not pushed to extreme lengths, while the trustees for the African Steam Ship 6 per cent. debenture stockholders did not go beyond somewhat frigid acceptance of a *pis aller*. The actual voting in all cases was a tribute to the efficacy of Sir William McLintock in the rôle of Orpheus. The most dangerous opposition, in effect, came from the representatives of certain banks interested as holders of discounted bills, who were finally induced to accept the terms offered. As no critics have seen fit to carry opposition to extreme lengths, the Scheme stands confirmed as an ingenious and equitable arrangement, which will come into force after approval by the Court. The rehabilitation of the fortunes of the largest shipowning group in the world is now in excellent hands, though immediate conditions in world shipping could scarcely be less favourable.

Kreuger Group Developments.—Increasing nervousness has been evident in the market in Kreuger and Toll and Swedish Match securities, which have suffered further severe depreciation. This has been due partly to rumours and partly to a preliminary statement issued by the investigating committee in Stockholm. The latter intimated that, although the investigation was by no means completed, it was already apparent that if the company were compulsorily liquidated at the present time it would not be in a position to meet all its liabilities. This was attributed by the Committee mainly to the heavy depreciation in the value of its assets, but there was a hint that further trouble might be discovered. The statement was not regarded as altogether happily worded, for the market had already realised that the company was not immediately solvent and that if it were to meet all its liabilities its assets would require to be nursed. Moreover, Messrs. Lee, Higginson and Co., the American fiscal agents of Kreuger

and Toll, declared last Saturday that the findings of the Swedish investigating committee were at variance with statements made to them by the late Mr Kreuger on his recent visit to New York. According to Messrs. Higginson, Mr Kreuger's figures showed that the company was able to meet all its obligations without further borrowing. Another disturbing development was the publication in New York of the revised list of collateral deposited as security for the 5 per cent. secured debentures. The original prospectus on which these 5 per cent. secured debentures was issued in 1929 showed that \$13 1/2 millions of French rentes had been deposited out of the total list of \$60 millions. The revised list showed that this block of French rentes had disappeared and that holdings of Yugoslavian and other Central European bonds had been substituted. This, in point of fact, would not appear directly to infringe the terms of the prospectus, which allowed a change-over of the collateral, provided that the par value of the total list was not less than 120 per cent. of the 5 per cent. secured debentures and the income not less than 120 per cent. of the debenture interest requirements. It has been announced from Sweden that application has been made for the prolongation of the moratorium until May 1st, while a semi-official statement has referred to the desirability of further measures to protect the holdings of the Kreuger companies against forced liquidation. Meanwhile the Swedish Prime Minister has issued a statement to the effect that the Government is preparing measures to help the credit institutions which have been most affected. The Skandinaviska Kreditaktiebolaget, in particular, is to receive Government support to a total of Kr. 100 millions, with a further Kr. 40 millions to Kr. 50 millions from the Swedish banks. At the moment of writing, Kreuger and Toll "B" shares are quoted at only 7s. 6d., as compared with 2 1/2 a fortnight ago, and the 5 per cent. secured debentures at 20, as compared with 45. Swedish Match "B" shares have fallen to 1 1/2, as compared with 3 1/2.

Vickers.—The very wide range of the interests covered by Vickers, now entirely a holding company, makes its annual results a species of industrial barometer. Net trading profit was reduced last year from £1,173,269 to £943,811, and the payment of an ordinary dividend of 5 per cent., in place of the 8 per cent. maintained for the previous four years, involves the distribution of earnings up to the hilt, a departure from the company's previous practice. Doubtless the directors regard accumulated reserves of £3,834,329 as adequate for the time being:—

	Years ended December 31, 1929.	1930.	1931.
Net trading profit.....	1,270,999	1,173,269	943,811
Tax and interest charges, &c.	329,028	397,343	369,318
Balance	941,971	775,926	579,493
Preference dividends	418,190	418,190	418,190
Ordinary { Earned	15.9%	11.2%	5.0%
{ Paid	8%	8%	5%
{ Amount of dividend	262,730	254,520	153,944
To reserve.....	250,000	100,000	Nil
Increase in carry-forward	11,050	3,216	2,359

Considerable changes are shown among the items composing "floating assets," which, in the aggregate, are diminished by £332,000, while "creditors" are down by £490,000. These movements will doubtless be explained in the chairman's speech next Monday. The company's position, nevertheless, remains thoroughly liquid. An item "British Government securities, £3,560,448," is the more impressive since the valuation is stated to be at or below market prices, so that substantial appreciation must have accrued since December 31st. These large free resources will permit of the company's taking full advantage of any future revival of trade. Of the two principal subsidiaries, Metropolitan-Cammell suffered a loss in 1931, and the value of Vickers' holding has accordingly been written down by £100,000. The other subsidiary, Vickers-Armstrongs, suffered a reduction in profit from £337,407 to £282,244, and also a heavy

capital loss through a drastic reduction of capital by the English Steel Corporation, which is discussed in a succeeding Note. This, however, necessitates no provision in Vickers' balance sheet, in which the holding of 5,206,800 Vickers-Armstrongs £1 ordinary shares is already valued at nil. Vickers ordinary shares, of 6s. 8d. nominal value, stand at 7s. 3d. cum dividend, and yield £4 16s. 6d. per cent.

Reorganised Coal and Steel Companies.—Four great companies whose names have been to the fore in reconstruction schemes during the past few years have just issued their reports for 1931. Together they throw light on the special difficulties which the economic depression has created for those who have been attempting to reorganise the heavy industries of Britain. Only one of the four—Vickers-Armstrongs—was able to make any distribution to its preference shareholders. This company was formed four years ago to take over all the armament and naval shipbuilding interests of Vickers, and is interested in heavy steel through the English Steel Corporation. It reports a profit of £266,868 (against £337,407 in 1930), which is struck after allocating £233,826 to depreciation. Its earnings represent only 1 1/2 per cent. on the total issued capital. The English Steel Corporation, itself the child of a reconstruction scheme as recent as 1929, has been under the necessity of writing down its capital by no less than £5,372,820 as from January 1, 1932. Vickers-Armstrongs appears to have suffered a capital loss of some £2,830,000 in connection with this writing down, for which provision remains to be made in its balance sheet. Baldwins, the South Wales coal and steel company, which carried through a capital reduction in 1928, earned £174,080 last year against £300,905 in 1930, and thus covered its debenture interest and sinking fund charges. But the income debenture stockholders, who received 3 1/2 per cent. in 1929 and 2 1/2 per cent. in 1930, are to have nothing, and in order to allocate £60,000 (against £80,000) to depreciation it has been necessary to withdraw £45,995 from the reserve and the carry-forward. Though the company suffered through the three weeks' coal strike in South Wales at the beginning of last year, the report discloses that the British (Guest Keen-Baldwins) Iron and Steel Company, which was formed two years ago to amalgamate the heavy steel interests of Baldwins and Guest, Keen and Nettlefolds, showed a manufacturing profit of £174,077, against a loss of £68,457 in 1930. This is an impressive testimony to the potentialities of "rationalisation," since the company's actual turnover may well have been lower. The other two "reconstruction" companies—the Lancashire Steel Corporation and the Wigan Coal Corporation—were formed during 1930 to take over the steel and the coal assets respectively of the Pearson and Knowles, Wigan Coal and Iron Company and associated companies in Lancashire. The Lancashire Steel Corporation, exemplifying the value of well-considered amalgamation, has raised its profits from £19,567 to £53,367 (subject to depreciation in each case) in spite of the deepening of the industrial depression. The Wigan Coal Corporation reports a net profit of £4,461, against £13,059, but the diminution appears to be more than accounted for by the recharging of £8,995 (against nothing in 1930) for depreciation of wagons. The maintenance of a small profit was achieved in spite of a decrease of 130,000 tons in the output of coal. Neither of these two operating companies is able to pay any dividend at present to the holding concerns, but both appear well placed to take advantage of revival in due course. Lancashire Steel, like Vickers-Armstrongs, has no debenture charges whatsoever, whereas Baldwins, which was left after capital reconstruction with a somewhat heavy burden of debenture stock, and has no reserve fund, may have its earnings for some time to come absorbed by payments to debenture holders. None of the companies reviewed in this Note has yet achieved assured success, but all are weathering the storm, and have the more reason to be thankful for past pruning and re-financing, without which their showing would be much sorer.

Imperial Chemical Report.—The preliminary earnings figures of Imperial Chemical Industries for 1931 (which were dealt with in the *Economist* of March 19th last, page 644) showed that gross income had fallen only by 9 per cent. The full accounts give the credit for this achievement to "a steady and successful pursuit . . . of a vigorous policy of efficiency" and afford a few general indications of the nature of the year's trading. The volume of home business in alkali products showed only a trifling fall as compared with 1930, but a sharp decline occurred in the export trade, accentuated by the catastrophic floods in China. Aggregate sales of fertilisers showed a fall of 19 per cent., but the volume of sales of dyestuffs increased by 9 per cent. As the market for the company's products is world wide, and the total international trade of countries responsible for more than half the world's commerce fell by 28 per cent. last year, the company's "vigorous policy of efficiency" has clearly stood it in good stead. Its balance-sheet figures are so large, and its subsidiary interests so ramified, that even the most informative of annual reports would leave the average shareholder peering through a glass darkly. It is clear, however, that while holdings in and advances to subsidiary companies, previously valued at £71,102,574 have been written down by £1,837,596 (which in the directors' opinion represents the value of works rendered redundant by concentration of manufacture, etc.), and approximately £1,750,000 has been expended from revenue on the maintenance of buildings and plant, nothing has been written off the book value of "marketable and other investments." The latter stand at £10,182,771, but on December 31st last had a market value £3,346,565 lower. No revaluation is, apparently, to be made "until the general financial situation is clearer." Important adjustments have been made in reserves. The "Central Obsolescence and Depreciation Fund" has received £1,500,000 from capital reserve, some £1,337,596 of which has been used to write down holdings in subsidiaries (the remaining £500,000 used for that purpose coming direct from general reserve). Out of last year's profits, as previously stated, a further £1,000,000 has been appropriated for the central obsolescence and depreciation fund, which now stands at £5,662,404. A statement at the end of the accounts makes it quite clear that this fund is to be used for the requirements of practically the whole group, the subsidiaries no longer making separate depreciation provision in their own accounts. Broadly, therefore, it may be said that the 1931 profits have been arrived at after charging £1,000,000 for depreciation, writing down investments in subsidiaries out of reserves, and leaving the question of depreciation in marketable investments in abeyance. The company's holding of cash has increased from £2,928,576 to £4,222,900.

Cunard.—The latest accounts may be read in conjunction with the announcement that discussions between the members of the North Atlantic Shipping Conference have resulted in acceptance, in principle, of a general reduction of 20 per cent. in fares, which a number of companies had previously announced independently. The Cunard's gross income for 1931 was £5,614,311, and showed a decline of nearly 30 per cent. as compared with 1930. The company covered its interest charges and part of its depreciation,

Lombard St.

but, after charging the latter at the normal rate, showed a net loss of £553,204. Some £350,000 was transferred from contingencies reserve and the carry-forward was reduced by £270,704:—

	Year to December 31,		
	1929.	1930.	1931.
	£	£	£
Gross income	9,425,606	7,945,386	5,614,311

Net profit	809,639	18,601	Dr. 553,204
Preference dividend.....	135,000	135,000	67,500
Ordinary dividend	417,770	Nil	Nil
Rate %	7½	Nil	Nil
Transferred from contingencies reserve	Nil	Nil	350,000
Reserve	50,000	Nil	Nil
Increase or decrease in carry-forward	+ 206,869	- 116,399	- 270,704

The transfer from contingencies reserve has been fully offset by credits of a non-recurring nature available during the year. The accounts, though more informative than usual, fail to make plain the extent of the company's current liabilities, since the item "due to creditors," of £3,435,068, includes the contingencies reserve, whose amount is unknown. As readily realisable assets amount to no more than £1,926,817, the company's decision to suspend the construction of its new liner is clearly justified. Sailings have been curtailed as a result of the reduced volume of business and the almost complete cessation of emigration, and arrangements have been made with certain other companies to avoid operation of redundant tonnage. Second-class travel has been abolished on all the company's steamers, and "tourist class" accommodation proportionately extended.

Morris Motors.—The accounts for 1931 show that gross profit has fallen by nearly 40 per cent. to £1,020,800. After allowances for wear and tear, losses on exchange and benevolent funds and deduction of tax, net profit is £574,637, against £955,402. The ordinary shares, which are all privately held, receive 5 per cent., against 10 per cent.:—

Year to December 31.	1929.	1930.	1931.

Government securities have been written down to market value at the date of the balance sheet, requiring a transfer of £114,882 from reserve for contingencies, which stands in the balance sheet at £245,792, and a charge of £142,661 on revenue account. Losses incurred on the sale of Government securities total £5,756. The report points out that Government securities, at the date of publication, show an appreciation of £246,572 over their written-down value. A further sum of £100,000 is used to write down patents, goodwill, etc., the item being thus reduced to £500,000. A decidedly liquid position is again disclosed. The directors have decided to meet the current economic difficulties by establishing the selling prices of the

1931-32 models at such figures as will show the lowest margin of profit consistent with business prudence in view of the reserves created in the past. The £1 Preference shares, at 23s. 3d., yield about £6 9s. per cent.

Lancashire Cotton Corporation.—A series of critical circulars issued from Manchester by Mr W. K. Waller, in which the conclusion is reached that the corporation "has failed to justify its existence," serve at least to concentrate attention on the published results for the year to October 31st last of this merger concern, which embodies the most determined practical effort made, as yet, to rationalise the Lancashire spinning industry. The profit and loss account showed a debit trading balance of £310,780, compared with a debit balance for the previous year of £140,795. After deduction of fixed charges, a debit of £556,098, against £162,368, was carried forward. The report pointed out that rapid progress had been made towards completing the legal formalities in connection with the acquisition of mills, and that the corporation had completed negotiations in respect of 107 mills. The share capital and income debenture stock had grown from £2,596,092 to £6,725,656. The total cost of fixed assets acquired amounted to £8,383,103 and £144,237 had been expended on improvements during the year. Liquid assets amounted to £1,968,112, against bills payable and sundry creditors of £321,449. The results for the past two years are tabulated below:—

	Years to October 31,	
	1930.	1931.
	£	£
Trading loss	140,795	310,780
Interest, &c., received.....	2,810	7,366
Interest and bank charges	20,133	26,375
Directors' fees	4,250	4,250
Other fees	Nil	6,353
Debenture interest	Nil	53,333†
Earned for dividends	Dr. 162,368*	Dr. 393,725*
Carried forward	Dr. 162,368	Dr. 556,098

† Paid by guarantor. * Before providing for depreciation.

The corporation was registered in January, 1929. The three years since its inception have been a difficult transition period, in which inevitable technical problems have been accentuated by unprecedented trade depression. In the circumstances, Mr Waller's dictum that "any company that cannot show justification, with all the privileges and benefits that this company has enjoyed, within a period of three years, may definitely abandon hope as to its future," is both premature and unfair. Similarly, when Mr Waller states that "in comparison with individual concerns, the corporation's methods are responsible for a deficiency of about £5,800 per 100,000 spindle mill per annum," he again entirely disregards the factor of initial and temporary disequilibrium, which is quite independent of "method." The Lancashire Cotton Corporation has still to prove its ability to produce profits from chaos, but no useful purpose can be served by expecting it completely to rectify in three abnormal years all the past misfortunes, errors and omissions of its industry.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper Ltd.,"
8, Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

MINING NOTES.

"Johnnies" Group Results.—Thanks to the richness of two of the Eastern Rand propositions, the subsidiaries of the Johannesburg Consolidated Investment Company as a whole account for some 40 per cent. of the profits of the Witwatersrand, although they produced no more than 30 per cent. of the gold. Last year that particularly high-grade property, the Government Areas, secured a working profit of £2,711,770, against £2,686,750 in 1930. The effect of a moderate expansion in costs was more than offset by a fresh advance in revenue per ton, which averaged 39s. 5d. Payment of the 20 per cent. dividend total (which had ruled for the three preceding years) left the substantially enhanced balance of £118,200 to go forward. At the second of the two mines mentioned above—the New State Areas—a renewed increase in the tonnage milled was accompanied by a fresh rise in the yield, the latter averaging 42s. 6d. per ton, against 40s. 9d. in 1930 and only 35s. 8d. two years previously. Costs, at 22s. 8d., were nearly 1s. up, but the working profit came out at £951,500, permitting the payment of 20 per cent., as compared with 17½ per cent. in respect of 1930 and 12½ per cent. for each of the three preceding periods. Capital expenditure and debenture redemption absorbed £67,400, entailing a small draft upon the carry-forward. The debenture issue has now been reduced to £186,600. While no definite pronouncement on the point is available, there would appear to be ground for the belief that, owing to the Union Government's participation in the profits—a participation recently exceeding one-half the total—these two companies will not be liable for the increase of 5 per cent. in income tax. The results of the Van Ryn Deep display a further all-round falling off, the working surplus of £335,300 comparing with £460,100 in 1930 and £497,600 in 1929. The dividend aggregate is cut from 30 per cent. to 25 per cent., but even so the carry-over is £17,400 lower at £42,270. Last year's earnings on the part of the Langlaagte Estate fell somewhat short of those of 1930, but sundries brought in rather more than before, and the appropriation account was swollen by £14,880 from sales of property and township lands. After repetition of the 1930 enhanced dividend rate of 20 per cent., £123,400 remained to go over, as against £108,200 brought in. Particular interest attaches to the showing of the Randfontein Estates, which has made such notable progress during the past two years. At £595,600 the working profit of 1931 shows a fresh expansion of £183,100. In the main this difference is attributable to improvement in grade, although increase in tonnage crushed played its part. Capital expenditure and debenture redemption again called for a large amount—£381,100—which was somewhat less than in 1930. Provision has been made for a distribution of 2½ per cent.—the first since June 1925—the balance forward being £20,600 higher at £165,000. By the year's appropriation of £146,400, the debentures issue had by

North American Company.—This company controls, through stock ownership, four main groups of American public utility companies. Gross earnings for 1931 show a decline of nearly 12 per cent., and earnings on the common stock are equal to \$3.41 per share on the average number of shares outstanding, compared with \$4.53 per share in 1930:—

	Year.	
	1930.	1931.
	\$	\$
Gross earnings	133,751,380	117,921,860
Operating expenses, &c.	69,838,439	62,792,738
Net income from operation	63,912,941	55,129,122
Other net income	7,461,528	8,077,479
Total	71,374,469	63,206,601
Deductions	28,277,176	25,427,471
Balance for depreciation, dividends and surplus	43,097,293	37,779,130
Depreciation reserves	14,274,173	13,506,179
Preference dividend	1,820,034	1,820,034
Common dividend	5,947,487	8,133,290
Surplus	21,055,599	14,319,627

The total consolidated assets of the company are now \$870,868,558, of which investments account for \$140,044,484. The sum of \$12,000,000 has been appropriated from undivided profits as a reserve for contingencies to provide for the difference between book value and market value of listed securities. Total reserves amount to \$117,482,915, an increase of \$13,812,846. Although industrial consumption of electricity in 1931 declined by 10.67 per cent. and commercial consumption by 3.51 per cent., "residential" takings increased by 7.55 per cent. Only one-sixth of the total sales of electricity by the North American company subsidiaries, however, are for household purposes.

Tin Restriction.—The International Tin Committee has just congratulated the Governments participating in the Tin Restriction Scheme on their very close adherence to the quotas allotted. There appears to be little else on which the industry can be congratulated at the moment. The figures for the first complete year of restriction showed that the adjusted totals of exports were only 36 tons in excess of the authorised quotas for the five participating countries. The congratulations of the Tin Committee are no doubt intended to prepare the Governments for a further turn of the restriction screw. It is reported that at the next meeting of the Tin Committee to be held in London on April 22nd, a further cut in production of 8,420 tons a year, corresponding to one month's production, will be considered in order to keep pace with the falling-off in world consumption. The Tin Committee, faced with an effective world output, on the 1929 basis, of 191,876 tons, started with an initial schedule of 145,000 tons as from March 1, 1931, and, as consumption continued to decline, imposed further cuts of 20,000 tons as from June 1, 1931, and of 15,000 tons from January 1, 1932, thus bringing the annual production figure down to under 110,000 tons. Consumption fell from 185,000 tons in 1929 to 156,000 tons in 1930, and the Anglo-Oriental Mining Corporation estimates consumption in 1931 at 123,701 tons, as against supplies of 182,828 tons. The total visible supply and carry-over in the Straits Settlement at the end of February, 1932, according to trade statistics, amounted to 59,703 tons, against 51,886 tons at the end of February, 1931. The restriction scheme has admittedly prevented surplus stocks from reaching more dangerous proportions, but the outlook for consumption is not promising. Deliveries in the United States have shown a somewhat startling fall this year. Over the Easter holiday the London cash price of tin fell from £126 10s. to £118 2s. 6d. a ton, partly in adjustment with the higher gold value of sterling. A further break on Thursday carried the price down to £114.

BARCLAYS BANK

The Bank has power to act as EXECUTOR and TRUSTEE under Wills and Settlements, and as Trustee for Debenture Holders. A Pamphlet stating terms and conditions for transacting business may be obtained from the Manager of the Trustee Department, or from any Branch Manager.

December 31st been reduced to £201,960, and is now only £46,760. It may be recalled that in his report for 1930 the consulting engineer gave confirmation of rumours which had been current as to a flattening of the reefs. It is now stated "there is no reasonable doubt that the flattening is and will continue to be progressive. . . . Permanent works have been designed to take advantage of the change." The principal work of the mine having a strike of some 19,000 ft. of the main reef series, the importance of this development cannot easily be over-rated. We have made no reference to the ore reserve figures, which have been published in advance and commented upon in our issue of January 31st.

Rand Mines.—The reduction in last year's receipts under the heading of dividends is chiefly attributable to the company's interests other than gold mining. A fresh shrinkage in the interest and exchange revenue is partly offset by a recovery in the net income from the reservoirs, which no longer has to be trenced upon by depreciation. Despite the conditions which have prevailed, the profits on sales and investments was fairly well maintained, though the total remains comparatively small. The net addition to investment reserve account falls below even the reduced total of 1930. The amount written off investment reserve stands at £221,400, as compared with £355,800 twelve months ago. The results of the past three years are summarised below:—

	1929.	1930.	1931.
	£	£	£
Dividends on shareholdings ...	486,530	500,510	476,120
Sundries	92,310	80,490	51,920
Investment realisation profits...	5,910	47,640	44,660
Total income.....	584,750	628,640	572,700
Administration expenses.....	29,690	24,360	23,110
Taxation	33,200	37,040	31,410
Prospecting	9,490	2,570	8,560

Earned per cent.	96.4	106.2	95.9
To reserve account	477,190	98,230	63,080
Brought forward	897,800	422,030	828,820
Carried forward†	422,030	428,820	466,710

† Including forfeited dividends refunded.

At £2,446,400 the portfolio shows a reduction of some £80,000. The principal changes comprise a lessening of the company's holding of Durban Deeps and an increase in the participation in Modder B. A small interest has been taken in the Grootvlei Proprietary. On December 31st the cash assets totalled £3,260,100, against creditors for £609,000. As a whole, the company's mining subsidiaries are giving satisfactory results. Only the oil holdings continue under a cloud, and the position of the Anglo-Spanish Construction Company is not assured. In the latter concern £248,000 debentures are held. On the basis of last year's distribution the yield shown is about 7 per cent. (in Union currency).

Robinson Deep.—The accounts for 1931 reflect a full year's working under the changed conditions as regards capital. Reduction in the tonnage crushed is accounted for by the suspension of milling at the Village Deep plant; the Robinson Deep mill treated 99,000 tons more than in the preceding period. A slight advance in costs being considerably more than counterbalanced by improvement in grade, the profits showed a fresh expansion. Disappointment was felt at the failure of the company to repeat, as interim for the past year, the rate declared in respect of the concluding session of 1930. This, it will be recollected, was due to the necessity of finding £37,500 to complete the purchase from the Village Deep. All told, capital outlay last year absorbed £118,000, as compared with £129,000 in 1930, and nothing further was required for debenture re-

demption, the balance of the issue having been cleared off. We contrast the results of the past four years:—

	1928.	1929.	1930.	1931.
Tons of ore milled	918,400	919,900	1,339,000	1,158,000
Yield per ton	23/5	23/4	23/3	24/6
Costs per ton	19/8	19/7	19/3	19/6
Profit per ton	3/9	3/9	3/11	5/-
Profit on working	£ 173,954	£ 172,830	£ 261,170	£ 291,530
Net profit	116,335	135,020	134,480	147,300
"A" shares { £	75,000	75,000	75,000	75,000
%	300	300	300	300
"B" shares:—				
Earned £	41,335	60,020	59,480	72,300
Paid £	Nil	Nil	57,180	80,050
Earned %	4.7	6.8	8.7	10.5
Paid %	Nil	Nil	8½	11½
To debenture redemption	35,700	35,700	35,800	...
Other allocations	1,714	1,714	1,716	1,000
Carried forward	76,845	99,452	64,234	53,480
Ore reserves, tons	1,407,000	1,357,000	2,397,000	2,592,000
Value, dwt.	6.1	6.0	5.9	5.9

The expansion in the ore reserves seems scarcely commensurate with an increase from 37,530 to 50,620 ft. in the development footage. This may be associated with the policy of carrying out work in areas previously classed as unpayable—a policy which, it is stated, "has in several cases disclosed highly payable reef." It should be realised, however, that some of the workings are now distinctly deep. At one point they are at a vertical depth of 9,730 feet from the surface.

Simmer and Jack.—A fresh improvement in profits occurred last year, thanks to the treatment of an increased tonnage of ore carrying somewhat better values. The working surplus of £135,800 compares with £106,140 in 1930 and £70,000 in 1929. For the last-named period there was no distribution. In respect of 1930 the shareholders received 1½d., and for the past year 2d. per unit. Despite the performance of a substantially increased development footage the ore reserves are 66,300 tons down at 1,558,700 tons. The difference is explained partly by a reduction of one inch in the estimated stoping width, and partly by the exclusion of certain blocks where the distribution of gold was found to be extremely erratic. Allowance being made for sorting, the tonnage at present available represents barely a year and a half's supply. The cash position shows a small deficit, and further capital outlay must be faced. In all the circumstances the quotation of the 2s. 6d. shares at about 3s. 6d. appears to make rather a liberal allowance for the possibilities of the future.

East Rand Proprietary.—In the case of this large-scale undertaking some expansion in tonnage milled last year, together with a small reduction in costs, more than offset a slight decline in grade, the working profit coming out at £153,200, against £137,500 for 1930 and £135,300 for 1929. Capital expenditure, at £63,600, although still considerable, fell £37,600 below the total of the preceding period, certain items having been deferred. To the policy followed in this respect the ability of the company to re-enter the dividend list is partly responsible. The payment of 5 per cent., absorbing £75,000, entailed a small draft upon the carry-forward, which now stands at £315,600. Of cash assets totalling £466,200, some £320,200 is receivable in British sterling. The performance last year of an increased footage was accompanied by an improvement in the percentage of payability which worked out at 38.3 as compared with 31.9. At 3,519,500 tons the ore reserves display an expansion of 263,900 tons, the value being slightly better than before at 6.3 dwts. Even now the ore reserve position cannot be described as strong, the quantity of material taken out of the mine last year exceeding 2,000,000 tons. The 10s. shares are quoted on the Stock Exchange at around 18s. 6d.

CAPITAL ISSUES.

Although conditions in the new issue market remain favourable for borrowers of high standing, and preparations for certain offers are advanced, the pace has slackened over the holidays. *The London and Home Counties Joint Electricity Authority* has offered £1,500,000 of 5 per cent. stock, 1955-75, at 101½, to yield approximately £4 18s. 6d. per cent. The proceeds are to be used to purchase certain electricity undertakings under the Electricity (Supply) Act, 1919, to repay bank advances, and for other purposes. The Authority's area now embraces 160 square miles in Middlesex and Surrey, and during the last three years its sales of units have increased by approximately 100 per cent. With the sanction of the Electricity Commissioners the Authority may issue stock, ranking pari passu, for a further £4,262,009. The stock is a first-class investment holding, though it is not, in the present state of the law, a trustee issue. An increasing number of important issues are being floated by way of Stock Exchange "introduction." *The Shropshire, Worcestershire and Staffordshire Electric Power Company*, for example, has issued £1,800,000 of 5 per cent. debenture stock at 94, Stock Exchange dealings beginning at 100½. *The Commissioners of the Port of Calcutta* have issued £1,075,000 of 5½ per cent. bearer debentures, 1962, with the sanction of the Government of India. These have been purchased by Haes and Sons at 93½ less a commission of ¼ per cent. The issue is of interest as the first non-Government overseas offer of importance since the resumption of activity in the capital market.

City Deep.—Thanks to completion of the revised and restricted programme of operations, small profits were earned during the latter part of 1931 in place of small losses. Thus the deficit on working amounted to only £1,600, as against £23,000 in 1930 and £139,200 in 1929. After providing for taxation, miners' phthisis and the like, the net loss totalled £35,050. This sum was re-transferred from funds previously transferred in respect of capital expenditure. The cash position shows a shortage of £404,800, the loan from the parent companies having increased to £418,350. Despite a material cut in the development footage, the ore reserves have expanded by 55,600 tons to 1,795,000 tons; the value is also a trifle up at 6.23 dwts. The available tonnage represents little more than a year's supply for the mill, but last year only 47 per cent. of the material crushed was taken from the calculated reserves. Barring unforeseen contingencies, there seems little prospect of the company's return to the dividend list.

Geduld Proprietary.—Once again the results closely correspond with those of the preceding period. The slight difference, however, is on the right side and finds reflection in the dividend rate. A small relapse has occurred in the ore reserve tonnage, but even now the total falls little short of five years' supply:—

	1929.	1930.	1931.
Ore crushed	1,008,100	1,011,000	1,012,000
Yield per ton	26/10	27/1	27/1
Cost per ton	16/6	16/5	16/3
Profit per ton	10/4	10/8	10/10
Total working profit	522,190	541,290	548,050
Net profit	471,000	488,900	494,050
Issued capital	1,460,860	1,460,860	1,460,860
Earned per cent.	32.7	33.3	33.8
Dividends	456,520	474,780	493,040
Rate per cent.	31½	32½	33½
Carried forward*	190,270	202,590	201,800
Ore reserves	5,900,000	6,000,000	5,900,000
Value	6.7	6.6	6.6

* After deduction of directors' percentages.

The company took up its proportion of the 60,000 shares recently issued by the East Geduld. This interest at cost, less credits, stands in the balance sheet at £402,900. The ore reserves of the East Geduld on December 31st last totalled 3,750,000 tons, averaging 6.9 dwts. Crushing was commenced in July, and up to the end of the year 231,700 tons had been treated for a net working loss of £33,000. These rather disappointing results are attributed to the "limited nature of operations inherent to the opening-up of the mine and to absorption of gold in the plant."

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies: Bank of Australasia, Chartered Bank of India, Australia and China, National Bank of India, London Life Association, British Insulated Cables, Midland Electric Corporation for Power Distribution, Newcastle-upon-Tyne Electric Supply, Godfrey Phillips, British Aluminium, and Provincial Cinematograph Theatres. At the annual meeting of the Newcastle-upon-Tyne Electric Supply Co., Mr Robert Sloan told shareholders that, although their supply of current for industrial purposes had been seriously affected by the depression, the domestic supply business had again shown a substantial increase, the number of new consumers connected during the year exceeding 18,000. This represented an increase of 18 per cent. over the number connected in 1930. Presiding at the annual meeting of British Insulated Cables, Sir Alexander Roger said that during the past year they had completed the Scottish Overhead Grid for the Central Electricity Board and the electrical track equipment for the Great Indian Peninsular Railway, in both cases with entire satisfaction. At the annual meeting of Godfrey Phillips, Mr Arthur Phillips stated that during the year under review the company had been able to maintain its output in spite of the fact that towards the end of the period the total clearances of raw leaf tobacco from bond had tended to fall.

Last year there was a good deal of comment in the Press about inner reserves. They appear under the heading "Bills payable

etc., including provision for contingencies." It will be seen that the changes which I have detailed in our reserves, which, under whatever name, are all in the balance sheet, emphasise the value of the provision which we have built up in happier times.

In the last forty years' history of the bank these contingency funds have been on three occasions of great value to the bank. In the bank crisis in 1892 our contingency funds were not large, and they were almost entirely utilised in providing for bad debts made during that crisis. During the severe droughts which ended in 1903, some of our large pastoral advances seemed certain to become bad debts and had to be provided for out of the contingency funds, which our additions enabled us to meet. Fortunately, during the good seasons which came after 1903, some of these apparently bad debts were ultimately paid off in full and, as we told the shareholders in March, 1904, the whole cost of the site and buildings of our fine Sydney premises were provided for out of these fortunate recoveries.

Since 1909 we have steadily added to our contingency funds, and as a result we have been able to meet the present exceptional crisis without exhausting our balance of reserve, and, as I have already said, the load placed upon them has already been lightened.

You will, I am sure, realise that, with all the storms around us, a reduction in dividends was inevitable. The 9 per cent., less tax, which we have been able to pay, though considerably less than the dividend of two years ago, is still substantial and, in consequence of the incidence of colonial income tax, is equal to £7 12s. 8d. per cent. to the shareholders.

RESTORATION OF CONFIDENCE.

It is difficult to prophesy as to the future. The measures taken by the new Federal Government have, as in this country, restored a measure of confidence. A genuine effort is being made to provide for interest payable abroad. The increase of exports, apart from gold, over imports, which, expressed in sterling, amounts to £27,000,000 for 1931, is an exceedingly good showing. The prospects of Empire trade due to our new departure in tariff are reassuring, but the period of convalescence so far as earning power is concerned must necessarily be considerable.

Authorities claim that 1932 once over, we shall have passed our most troublous time, but this can only be achieved if all parties co-operate on sound lines. Though I have deliberately avoided anything in the nature of criticism, I can assure you that no body of men realise more than the directors of this bank the danger of new fiscal doctrines which are fatal to the security of States as well as of bankers. Proceedings such as ours to-day are scanned in interested quarters, and it will greatly assist us in the pressing responsibility which we have to incur in these difficult times if our shareholders will support us not merely by their confidence but by their reticence.

I have endeavoured to put before you fully the position of the bank. I hope for your unanimous support, and move that the report and accounts be accepted. (Applause.)

Mr Harold Nelson seconded the motion.

SHAREHOLDERS' REMARKS.

Mr F. Tomkinson said he would like to express his extreme gratification, and also that of other shareholders who were not present, at the results of the past year. They thought the bank had done extremely well in a most difficult period. He also desired to thank the chairman for the lucid speech he had delivered.

Mr E. Levy said he was sorry he could not repeat his congratulations of last year on the report and balance sheet, but he did not think the directors expected it. He was quite satisfied that they had weathered, as far as it was possible, the peculiar circumstances they had had to encounter during the last twelve months. He felt sure that the state of trade was now a great deal better in Australia than it was at the time of the publication of the balance sheet.

The report and accounts were unanimously adopted.

The Chairman proposed the re-election of Mr Frederick V. C. Livingstone-Learmonth, D.S.O., Mr Harold Nelson and Mr Charles Edward Barnett as directors.

Mr John Sanderson seconded and the resolution was agreed to unanimously.

On the motion of Mr. J. H. Butterworth, seconded by Mr. G. W. Jones, the auditors (Messrs. Deloitte, Plender, Griffiths and Company) were re-appointed.

TRIBUTE TO OFFICIALS AND STAFF.

The Chairman proposed a vote of thanks to the officers of the bank in Australia and in London and said they must all be aware that the bank had done well under difficult circumstances. The conditions in Australia had been extremely trying to the general

manager in the Commonwealth and his staff. The proprietors had every reason to be satisfied at the admirable way and the resource with which the staff had met a very difficult period. He added that he, of course, included their head office manager, Mr Godward, and the London staff, in the resolution.

Mr W. A. Welch, who seconded the motion, mentioned that he was in Australia last year, and had been connected with that country for many years. He had also been a customer of the bank for over forty years, and he thought he could say it stood very well in Australia and that they had a good staff.

The resolution was carried unanimously.

VOTE OF THANKS TO THE BOARD.

A shareholder then proposed a vote of thanks to the chairman and directors and said he could assure the board that they had the fullest confidence of the proprietors.

Mr A. J. Waley seconded, and said that last year, when he proposed a vote of thanks to the directors, he expressed the hope that the optimism of the chairman would be justified. He thought to a certain extent it had been, because when they heard that the balance of trade was so largely in favour of Australia they must feel that conditions were on the move towards an improvement. In addition to their thanks, he also said last year that the directors were entitled to their sympathy. When they realised how world-wide the crisis has been, and how the responsibilities, doubts and anxieties of directors had been increased, they had every reason to thank them and to renew their confidence in them. At the same time, they could express their sympathy with the directors, who still had a very difficult time to overcome. He believed those difficulties would be overcome with the same satisfaction to the shareholders in the future that they had been in the past. (Hear, hear.) He would also like, having had business relations with the bank, to endorse what the chairman had said with regard to the staff. He did not think there was any bank where one met with a greater amount of courtesy and efficiency than the Bank of Australasia.

The resolution was carried unanimously.

The Chairman briefly replied, and the proceedings then terminated.

BRITISH ALUMINIUM COMPANY, LIMITED. USE FOR COOKING UTENSILS.

The twenty-second ordinary general meeting of the British Aluminium Company, Limited, was held, on the 31st ultimo., at Winchester House, London, E.C.

Mr R. W. Cooper, M.C., J.P. (the Chairman), said that the available profit, at £343,631, was £44,054 less than that earned in 1930, but it was to be noted that the trading profit had fallen off by £71,670, and that interest on deposits and dividends from investments had offset this drop to the extent of £27,616. The trading profit was the lowest they had experienced for ten years, but this was not to be wondered at, considering the extremely difficult conditions under which British industries had had to be carried on recently. The markets of the world were largely closed to British producers by high and ever-increasing protection, while Britain retained free entry for any and every importer. The recent duty of 10 per cent. on most imports, including aluminium, should, on balance, be of some small benefit to the industry, but that duty was still much inferior to the permanent protection enjoyed by the large producers of the metal in their own territories in other parts of the world. It was to be hoped that our present Government would speedily protect a national industry which directly and indirectly contributed so largely to employment of British labour.

It was pleasing to be able to record increasing and widening interest in certain applications of the metal and the development of further new uses. The sales of the metal for older and well-established uses had been relatively well maintained, considering the prevailing trade depression. Among such uses he would especially mention the use of aluminium for cooking utensils. The great value of the metal for this application lay in the fact that it had no deleterious effect upon foodstuffs or the human frame. The evidence of scientists was overwhelmingly in favour of the absolute non-toxicity of aluminium, and two medical journals whose names were household words, which had satisfied themselves by practical experiment and by studying the scientific evidence on the point, had endorsed this opinion.

It was not possible to offer any prediction as to the future, but if the industry was assisted by the fiscal policy of the Government, and if other conditions did not change for the worse, the board had every hope of maintaining, and possibly improving, the present position of the company.

The report was unanimously adopted, and a dividend of 5 per cent. on the ordinary shares was declared.

THE NATIONAL BANK OF INDIA, LIMITED.

SATISFACTORY RESULTS IN A DIFFICULT YEAR.

BETTER OUTLOOK IN INDIA.

SIR CHARLES MCLEOD'S SPEECH.

The ordinary general meeting of the National Bank of India, Limited, was held at the Wesleyan Hall, Bishopsgate, London, E.C., on Thursday, March 31st, Sir Charles C. McLeod, Bart. (the Chairman), presiding.

The Chairman: Gentlemen, I should like, before we start the meeting, to tell you that we have among us to-day the High Commissioner of India, and we welcome his presence here. (Applause.)

The General Manager (Mr Ross Munro) then read the notice convening the meeting, and the auditors' report.

The Chairman: Gentlemen, The report of the directors and the accounts to December 31, 1931, have been in your hands for some days, and I presume you will allow me as usual to take them as read. (Agreed.)

As was to be expected and in accordance with general banking experience, our balance-sheet figures show a reduction, the principal on the liabilities side being that in deposits, chiefly due to the fact that the Government of India was offering more attractive rates of interest for Treasury bills and short loans than it suited the banks to pay. It is possible that some part of the reduction may also be accounted for by the less prosperous condition of depositors generally. The reserve fund has been reduced by a sum of £800,000, and to this matter I will refer in a few minutes. An item of loans payable appears in the balance sheet. This was a temporary loan occasioned principally for the finance of gold shipments from India during December, which were very heavy, and at that time it would not have been a wise policy to have disposed of any of our securities at depreciated prices. Acceptances are down and reflect the poor state of the import trade into India.

CASH AND INVESTMENTS.

On the assets side cash is lower and investments show a reduction. The reduction in the latter is partly accounted for by the depreciation in the value of our securities which have been written down to and under prices ruling at December 31st by the amount taken from reserve. Bills of exchange and discounts, loans, &c., show very little variation from the figures of a year ago.

You will observe that we have made ample provision for the fall in gilt-edged securities of which our investments wholly consist. Our balance sheet must show the actual position as at December 31st last. You are aware of the considerable rise which has taken place in the value of these securities both here and in India since that date. Our securities, as we have stated in the report, are all terminable and mostly short-dated, but we have adopted the policy of writing down the whole of them to or under market value as at December 31st last. Whilst the amount required to adjust values at December 31st was a considerable one, you will observe that the reserve is still left at the satisfactory figure of £2,200,000—a figure exceeding the total of our paid-up capital by £200,000.

A STRONG BALANCE SHEET.

A reduction in the total figures was inevitable, but our balance sheet is a strong one with large liquid assets, and is a remarkably satisfactory document from the depositors' point of view, and in proof of this fact I need only draw your attention to the total of readily realisable assets in the shape of cash, securities and bills of exchange totalling some £22,400,000 against a total of deposits and other accounts of £27,800,000, but at the same time we would prefer less liquidity in the figures shown and an increase in the figures which would indicate improved trade and the finance required for same, which after all is our legitimate business. I told you a year ago that it would take a long time to get back to normal conditions, but if and when a recovery eventuates we are in a strong position to take advantage of any such improvement.

It is a commonplace to say that a bank's balance sheet must reflect the condition of business where it operates. Practically all balance sheets show reductions indicative of reduced operations, and considering that our principal business is with a country which, whilst suffering in common with the rest of the world from low prices for commodities, has in addition been in the throes of political agitation, the reduction in our balance-sheet figures must be considered moderate.

PROFIT AND DIVIDEND.

Turning to our profit and loss account, the expenses of management show a considerable reduction on the previous year and in

view of economies effected the accounts presented a year hence should reflect a further reduction. I need scarcely say that the directors have the full and loyal support of the staff in our efforts to produce satisfactory results.

The year's operations have resulted in a net profit of £470,018 18s. 7d., compared with £480,329 4s. 4d. for the previous year. With the amount brought in from the previous year the available total is £748,809 19s. 6d. We have already dealt with £200,000 of this sum in payment of an interim dividend at the rate of 20 per cent. per annum, and we now propose a further dividend at the same rate less income tax, to add £50,000 to the officers' pension fund, to transfer £20,000 to contingency account and to carry forward a balance of £278,809 19s. 6d.

When we last met I referred to the question of continuing to pay our dividend free of tax. Since then this matter has become more acute, and in common with many banks and companies, we have had to reconsider it in view of the further burden imposed by an increase in income tax to 5s. in the £, coming as it has done during a period of reduced earning power. The dividend paid by us in September last indicated the directors' attitude in this matter and on this occasion we again propose a dividend on a less tax basis. You will, however, observe from the report that in respect of the interim dividend the bank has borne the extra 6d. in the £ imposed by the Finance No. 2 (1931) Act. This is, of course, equivalent to a small increase in the dividend declared and will, I feel sure, be quite welcome. Let us hope that the Chancellor of the Exchequer will be able to afford some relief in taxation in the forthcoming Budget. I need scarcely tell you that all bad and doubtful debts are fully provided for.

Inasmuch as we have during the past year passed through a period of unprecedented difficulties, of which India has had more than her share, I trust you will agree with me that the results placed before you are satisfactory. (Hear, hear.)

THE EXPORT OF GOLD.

One of the most interesting features in connection with the trade of India during the past year or so has been the large export of gold. In normal times gold movements were largely influenced by the exports of produce. In lean years there were exports and in good years there were large imports. Thus, we have it that in 1921, a lean year, gold was exported to a value of about £15,000,000, and in 1925, a fat year, gold was imported to a value of about £45,750,000. Recent exports have, however, been occasioned partly through the low prices obtainable for produce, but mainly on account of the high premium which has been obtainable since Great Britain went off the Gold Standard in September last. The net exports of gold during the year 1931 were about £26,000,000, and since then further gold to the value of about £17,000,000 has been exported. Just recently exports have been falling off, possibly due to the boycotting of the Bullion Exchange in Bombay, and perhaps also to the fact of its being the harvest season when cultivators are able to realise their produce. Various estimates have been made as to the amount of gold held in India. These vary from £5,600,000,000 to a figure well over that amount, but it is impossible to make any proper estimate except that the sum must be an enormous one, held both in hoards and in the form of ornaments.

These gold exports which commenced on a large scale after Great Britain went off the Gold Standard have greatly benefited the Government of India's finances. From January up to September, Government had to sell Reverse Councils in order to support exchange and during that period sold £17,457,000 in this way. From October up to the end of December when gold exports were heavy, Government remitted by way of Council Bills £19,812,000, and since then they have remitted a further sum of about £20,000,000. Being in this happy position, the Indian Government repaid an outstanding loan in this market of about £15,000,000 which fell due in January, and have also notified that they will repay a loan of £6,000,000 which falls due in June.

Silver imports into India were on a reduced scale, being £7,077,000, as against £9,180,000 in 1930. There was a recovery from the lowest point touched in 1931 of 12d. to the highest point of 21½d. in that year. The Imperial Bank rate moved up to 8 per cent. in September, but has since been reduced to 6 per cent. The average for 1931 was 7.046 as against 5.887 in 1930.

INDIAN TRADE FIGURES.

The balance of trade in favour of India for the year 1931 was Rs. 61 crores as against Rs. 45 crores for the previous year. These figures are arrived at by taking into account the values of the imports and exports of merchandise and the imports and exports of treasure. Last year the exports of merchandise and net exports of treasure amounted together to about Rs. 196 crores and the imports of merchandise to about Rs. 135 crores.

It may interest you to have some comparative figures of some of the principal commodities. The total exports from India (including re-exports) have fallen from 257 crores in 1930 to 169 crores in 1931, while imports into India show a decline from 184 crores to 135 crores. Cotton exports from India fell from 60 crores to 36 crores, but imports into India rose to 7 crores, as against 4 crores in 1930, of which East Africa contributed over 3 crores worth. Imports of cotton piece-goods and yarns dropped from 36 crores in 1930 to 18 crores in 1931, the United Kingdom share being only 8 crores, as against 21 crores in 1930. The total jute exports (raw and manufactured) fell from 53 crores in 1930 to 33 crores in 1931. The exports of wheat were down to 23,000 tons, as against 193,000 tons the previous year. The Burma rice crop was about the same as the previous year, but prices were on a very low scale. India absorbed over a third of the crop.

The Bombay cotton trade has shown some improvement and cotton mills have reaped some benefit. The boycott of British goods has been and still continues to be, insistent, although there is evidence that an improvement is slowly but surely making headway.

There has been no outstanding feature in the jute manufacturing industry in Bengal. In spite of the curtailment of output by the closing down of 15 per cent. of looms and the continuance of working 40 hours per week only and a substantial reduction in the stock of manufactured goods, there has been no response from consuming countries and the outlook at present is not encouraging. A short crop of jute has not resulted in any substantial increase in price.

The coal industry shows no material improvement and coal prices are still at a low and unremunerative level.

FLIGHT OF THE TEA INDUSTRY.

The tea industry has suffered a serious set back and prices now ruling are in most cases under cost of production. This state of affairs has been brought about by excessive imports of tea from Java and Sumatra, these countries having increased their crop since 1910 by 400 per cent., whereas the out-turn in that period from India and Ceylon only increased by 65 and 39 per cent. respectively. The outlook for India and Ceylon estates, representing some £76,000,000 of British capital, is nothing short of desperate unless some measure of protection in the shape of discriminating duties is introduced in the next Budget. Assam in particular, so largely dependent on the tea industry, will feel the situation acutely.

In East Africa conditions continue unfavourable and a further fall in commodity prices does not help that colony to recover any measure of prosperity.

Conditions in India are still disturbing, and although the outlook is more reassuring, there is a long way to go before we can get back to normal times. The efforts of the Round Table Conferences are still in the melting-pot, but we are glad to notice that there is evidence of more respect for law and order, and if established firmly,

and picketing and boycotting cease, we may look to a return of prosperity for that great continent.

TRIBUTE TO MANAGERS AND STAFF.

The sustained effort and efficiency of our managers and staff, both at home and abroad, have in no small measure contributed to our efforts to show in a most difficult year the satisfactory result that the figures before you give, and to them must be accorded full credit and our appreciation of their good work.

I now beg to propose: "That the report of the directors and statement of accounts for the year ended December 31, 1931, be received and adopted, and that a dividend for the six months to December 31, 1931, at the rate of 20 per cent. per annum be paid on the shares of the company registered at this date, the same to be payable, less income tax, on and after April 1, 1932."

The resolution will be seconded by Mr Langford James, our deputy chairman, and before I ask you to vote upon it, I will be glad to answer any questions to the best of my ability.

Mr. R. Langford James (deputy chairman), seconded the resolution. Mr Joseph Nissim (late legal adviser to the Government of Bombay) said that the shareholders were very pleased to see present a distinguished representative of India in the High Commissioner, all the more because he had completed, after two years of strenuous labours, his gigantic inquiry into the banking position in India (Hear, hear.)

The resolution was carried unanimously.

The retiring directors (Sir John P. Hewett, G.C.S.I., K.B.E., C.I.E., and Mr W. Shakspeare) were re-elected, and the auditors (Messrs Cooper Brothers and Company and Messrs W. A. Browne and Company) having been reappointed, a vote of thanks to the chairman, directors and staff concluded the proceedings.

LONDON LIFE.

CLERGY MUTUAL AND METROPOLITAN.

STRONG FINANCIAL POSITION.

SUCCESS OF NEW VALUATION METHOD.

The ordinary general meetings of the above companies were held, on Wednesday, March 30th, at 81, King William Street, London, E.C. Mr Reginald B. Jacob (president of the London Life Association, Limited), in opening the proceedings, referred to the appointment as a director of Mr Maurice Hely-Hutchinson, a partner in the well-known firm of Messrs Robert Fleming and Company, and said that his wide investment experience would, no doubt, be of great value.

After referring to the easy conditions under which life assurance has been carried on since the war, the President said:—Now we have had to face a financial test more severe than the present generation has known and I think you will agree that this is an occasion on which we should take our members into our fullest confidence.

We have alluded in the report to the fact that although the system of a yearly valuation and distribution has many advantages over the usual quinquennial valuation, it is obviously a greater strain to have to provide for heavy depreciation in one year than if it is spread over a period of five years. In 1931 depreciation amounted to £1,631,000, representing some 7½ per cent. on the total funds, towards which we brought forward some £917,000 in addition to our valuation reserves.

DEPRECIATION OF SECURITIES.

He added that in the case of a life office with contracts lasting over so many years, depreciation is no more than an inconvenience except to the extent that it may be a rough measure of possible loss of income.

He then gave his reasons for thinking that it was reasonably safe to use a rate of 4 per cent. interest in calculating the liabilities. He said that "Taking a table of mortality which closely follows our own experience and making full provision for future expenses, our actuary has made a valuation of all our contracts and finds that we have funds in hand sufficient to provide for satisfactory increases in rates of reduction and for reversionary bonuses as set out in the report."

BONUS RESERVE VALUATION.

He explained that in using what is known as a bonus reserve valuation the association was breaking away from a convention which at any time is open to criticism on the grounds of lack of adaptability to changing circumstances. There was no wish to make any claim to be pioneers and he gladly paid his compliment to the "Old Equitable," whose actuary, Mr Elderton, was, he thought, the first to base a published quinquennial valuation on this method.

THE YEAR'S RESULTS.

The President continued:—We have written down values of securities by £1,000,000 and have transferred £350,000 to the investment fluctuation fund, thus bringing it up to £750,000. We have, at a cost of £343,626, declared reversionary bonuses and increases in rates of reduction which are consistent with our valuation and with the reasonable prospect of their maintenance. We have carried forward as unappropriated the large figure of £375,887, so that taking into account reserves of £300,000, we have a considerable sum in hand for future contingencies. It is satisfactory to compare the cost of bonuses declared of £343,626 with the surplus of the year, excluding investments, of £555,423.

With regard to the individual funds, we have in the case of the London Life declared an increase of two in the rates of reduction for policies effected under that system. This is the same increase as was given last year. For reversionary bonus policies we have declared a compound reversionary bonus of 35s. against 40s. last year. In the case of the Clergy Mutual the reversionary bonus is £3 per cent. both for whole life and endowment assurances, with

the usual increase in the case of the former for lives over 65. Last year the bonus was £4 per cent.

The increase in the rates of abatement for the Metropolitan is again three.

We have completed in the year net new assurances of £2,730,885. Although this figure is below our record of 1930 it has never been surpassed in any previous year. The ratio of our expenses of management to premiums has, I am glad to say, decreased from £5 12s. 7d. per cent. in 1930 to £5 7s. 9d. only in 1931, and I think we may consider these two results together and be well satisfied. It is hardly necessary for me to stress the advantage to our members of the saving to them from the low rate of expense, but some may not realise that, in comparison with the average expense ratio of all ordinary companies, it represents a saving of over £120,000 per annum.

The President concluded his address with a tribute to the services of Mr Trouncer, Mr Evans and the staff.

The formal resolutions were then put and carried and the proceedings terminated.

CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA.

A YEAR OF UNPARALLELED DIFFICULTY.

SIR MONTAGU TURNER'S REVIEW OF POSITION AND PROSPECTS.

The seventy-eighth ordinary general meeting of the shareholders of the Chartered Bank of India, Australia and China was held on the bank's premises, 38 Bishopsgate, London, E.C. Sir Montagu Cornish Turner (the Chairman) presiding.

Mr W. E. Preston (Chief Manager) having read the notice convening the meeting and the auditors' report,

The Chairman, in moving the adoption of the report and accounts, said: Since I addressed you in this room twelve months ago, the world has passed through a financial crisis of unparalleled magnitude and much has happened which would have seemed impossible in normal times. We have seen a continuance of world-wide trade depression with large increases in the ranks of the unemployed in most nations of the world. We have seen an unreasonable want of confidence in the international money markets, resulting in a flight from nearly every currency each in its turn, involving exchange restrictions and tariff barriers ever increasing. All these have combined to cause great anxiety and bewilderment to those engaged in financial operations, both in the East and the West.

Perhaps the most important of the events in the past year, certainly as affecting the interests of the Bank, has been the departure by Great Britain from the gold standard. This was no willing action on the part of our Government. We were driven from the standard by the persistent and heavy withdrawals of our gold reserves by foreign lenders in this market. We have now a world divided into gold standard countries, such as the United States, the Philippines, France, Germany, Holland, Java, Siam—and the non-gold standard, such as Great Britain and India, Australia, Sweden, Denmark and Norway. The Chartered Bank, with its branches in the East and in America, has to deal not only with sterling currencies, but also with those on a gold standard basis, e.g., gold dollars, francs, pesos, guilders, and ticals. That we should have outstandings in these currencies when Great Britain suddenly went off the gold standard was inevitable if we were to pursue the ordinary course of business, and to be in the exchange market for such business as might be and to be out of the market would mean the Chartered Bank offering. To be out of the market would mean the Chartered Bank was not doing its duty, was not functioning as an exchange bank; and so it happened that when the momentous decision was made by England to abandon the gold standard, we were faced with liabilities in respect of commitments involving risks in gold currencies, and to provide for losses occasioned by these commitments consequent on the depreciation of our currency, a transfer of one million pounds from our reserve fund was found to be necessary.

INDIA.

Conditions in India since I last addressed you have improved. Business is still difficult in the Punjab, but the political situation in the N.W. Provinces has been handled with a statesmanlike prudence and tact, and the position is in a fair way to becoming normal. Bombay, unfortunately, is still a storm centre, but even there we look for an improvement, and we may reasonably hope that the flame of non-co-operation and racial dissension fostered by interested parties is now burning itself out. There are signs that the business Indian community, whose losses must have been exceedingly heavy,

would welcome a return to peaceful trading. Meanwhile, the Ahmedabad Mills are benefiting by the misfortune of the Bombay Mills, which are in a sad plight. Apart from a terrorist area which seems to be concentrated in Bengal, it looks as though the Congress Movement is losing strength, and as a result civil disobedience is on the decline. This improvement may be due to a consideration of policy, but there is a real desire on the part of the British Government to help India reach her political goal, and this object would be advanced by India settling her communal differences—thus bringing about goodwill and good order in the country.

A remarkable feature in the world's financial transactions during the past 12 months has been shipments of gold from India's hoards of that metal. Shipments which commenced in September last and up to date amount to £42 millions, have been fairly steady, and we may take it as long as a remunerative price is offered to the sellers in India they will continue. The gold has been drawn out from hoards by the attractive profit offered. It has been a blessing in many respects and has benefited India in several ways. The holders in many cases needed cash to meet their requirements, either for agricultural or other purposes, and that cash has been obtained on very favourable terms. The Indian Government has been able to remit the funds required in this country by the Secretary of State, and provision has been made for sterling loans falling due here. Exchange has been kept wonderfully steady at the rate of 1s. 6d. and a fraction, and India has been able to show a favourable balance of trade in spite of the low prices prevailing in the consuming countries which has made business with Indian products most difficult. As a result of these operations and of the financial conditions generally as disclosed in the Budget speech at Delhi on the 7th instant, Sir George Schuster was justified in concluding his speech with these words: "We may fairly claim that there is no country in the world whose intrinsic financial position is sounder or whose ultimate prospect of economic advance in the future is more bright."

CHINA.

The unhappy differences between China and Japan have had a most detrimental effect on the trade of Shanghai—and, indeed, on the trade of the country generally. The effects of the boycott of Japanese goods which was the main reason for the starting of hostilities have meant colossal losses not only to Japan, but great hardships to Chinese traders as well. Conditions in general in China are now much worse than they were even six months ago. The fact that six provinces with a population of 150,000,000 are seriously overrun by Communists, which virtually means war between Communists and the provincial authorities, naturally restricts the volume of trade, and when it is considered that the Government had 200,000 troops fighting the Communists in Kiangsi during the first half of 1931 with unsatisfactory results, it can easily be understood that agriculture, the organisation of trade, and the purchasing power of the people suffered accordingly. The impetus which should have been given to exports by the cheaper silver prices in China did not operate fully because, owing to the interior insecurity due

to banditry and Communism, to excessive military and other taxation, and to the decline in the efficiency of communications, the cost of bringing produce to the coast has become almost prohibitive. Added to her political troubles, China has suffered from the appalling disaster caused by the floods last summer in the Yangtze valley—a disaster almost unprecedented when the area of devastation is considered and the huge numbers, estimated at 10 millions at least, who, as a consequence of these floods, are reported to be absolutely destitute. I need not go into further detail. That is fully set out in the letter which appeared in *The Times* of the 21st instant, and shows the need for early and prompt action on the part of those who can help to give the assistance needed. It would be a matter of great satisfaction to the friends of China and Japan if the present outstanding differences could be amicably adjusted at a Round Table Conference, though negotiations may be protracted. Meantime it is eminently satisfactory that active hostilities have apparently come to an end.

JAPAN.

Trade in Japan has suffered badly from the boycott of her products in China. On the other hand, Japan has benefited by the growing demand for her textiles, especially in India and Malaya. Probably, cheapness is a telling factor. In any case, the increase of her sales of cloth and the decrease of sales of Lancashire goods is very remarkable. Japan has also suffered by the absence of demand for her silk by American buyers. Her import trade has declined mainly owing to high tariffs deliberately imposed to restrict the consumption of foreign goods and create a favourable balance of trade.

FUTURE OF GOLD AND THE £.

The future of gold is very obscure indeed, and America, with the largest holding of the metal, will be the dictating factor at no distant date. With a budgetary deficit for the current year estimated at \$2,000,000,000, coupled with a big demand for currency which must ensue if President Hoover's new financial scheme is to succeed, a policy of deliberate inflation may be put into operation to meet the situation. If a similar inflation should occur in France (where there is also a huge gap in the Budget), a general fall in the value of gold is inevitable. Withdrawals of gold would immediately ensue if either or both countries went in for a policy of inflation on a large scale, and if these exports went to big dimensions, necessitating an embargo put on them, it would be tantamount to the country concerned going off the gold standard.

One final observation on this subject: our pressing need in this country is not a high exchange value for the pound, but a stable exchange value and a fixed internal value; so far, the internal value has been preserved because the pound at 13s. or 15s. has purchased as much food, clothing, and other necessities as it did at 20s.—due to the fact that there has been no inflation. With, however, a pound worth 13s. one month and perhaps 16s. or 14s. the next, it is quite impossible for traders to make forward contracts—in a word, the pound must be pegged down at some definite figure, and it is good news that the Chancellor of the Exchequer is alive to this pressing need in the interests of all concerned who have overseas commitments.

SILVER.

The range of silver prices during the period under review was the widest for many years—and we have witnessed a new low record with silver at a shilling an ounce, while the highest point touched was 21½d. Vigorous steps to secure the adoption of some method of revalorisation and subsequent stability have so far failed to provoke official action—which must obviously be of an international nature—but the sponsors of the movement who are in earnest, and seem to be actuated by altruistic motives, have the courage of their convictions and are still pursuing their objective.

FUTURE PROSPECTS.

As regards the future, taking a general view of the position affecting the well-being of this bank, I can claim that prospects have distinctly improved and the outlook is hopeful. We have gone very carefully into the matter of overhead charges; economies compatible with efficiency are being carried out, and the Chartered Bank should prosper in the future as it has in the past.

In conclusion, I would on your behalf, and of the board of directors, convey our sincere thanks to Mr Preston and his colleagues at home for their devoted labours and unwearied attention to the interests of this bank during the past year. Our thanks are also due to the staff at home and abroad for their loyalty and good work on behalf of the institution to which they are proud to belong.

I now move: "That the report now submitted, together with the balance sheet and profit and loss account, be approved and adopted."

Sir William Henry Neville Goschen, Bt., K.B.E., seconded the resolution, which was carried *nem. con.*

PROVINCIAL CINEMATOGRAH THEATRES, LIMITED.

ANOTHER SUCCESSFUL YEAR.

The twenty-second annual general meeting of Provincial Cinematograph Theatres, Limited, was held, on the 30th ultimo, at 142-150, Wardour Street, London.

Mr Mark Ostrer (the chairman) said that, taking into consideration the unprecedented depression during the period under review, he thought the shareholders were to be congratulated upon having had such a successful year. The revenue for the year amounted to £485,605, and, adding the balance brought in, there was an available balance of £600,326, out of which the board recommended a dividend of 15 per cent. on the ordinary shares, leaving £120,572 to be carried forward.

There was no doubt that the picture theatre had become an integral part of the lives of the majority of the population, but the economies introduced by the National Government, coupled with increased taxation, had considerably reduced the spending capacity of the public. The company, together with its subsidiaries, had collected on behalf of the Government approximately £450,000 for entertainments tax during the year. Since the increased tax came into operation in November last, until the end of their financial year, the amount paid in tax had increased by about £20,000 as compared with the same period last year. There could be no doubt whatever that the increased tax had seriously affected the takings at the company's theatres.

Since the end of the financial year, The Gaumont Palace, Peckham, and The Gaumont Palace, Hammersmith, had been opened, the latter being one of the largest—if not the largest—and most modern in London, accommodating approximately 4,000.

As to the future, there appeared to be signs of a slight improvement in trade, which should lead to further employment, and, provided this was maintained, and they were relieved of some portion of the present crushing taxation, he thought the company would be one of the first to benefit. They owned first-class theatres, which provided the public with a widening form of entertainment at reasonable prices, and their financial position was very sound. Shareholders would be particularly pleased to learn that an increasing number of British films had been shown at the theatres—far in excess of the number they were required by law to show—and it was very gratifying to know that these films were greatly appreciated by their patrons.

The report and accounts were unanimously adopted.

DISCOVERY.

Over 400 years ago, Balboa crossed the Isthmus of Panama from the Atlantic Coast and discovered the Pacific Ocean.

To-day, the Isthmus is traversed by the Canal, while other vital arteries of modern commerce are provided elsewhere by the great railway systems which link the two Oceans.

The great and growing trading development of the New World is also largely dependent upon complete international banking facilities, and these are afforded by

THE ANGLO-SOUTH AMERICAN BANK LTD
117 OLD BROAD ST. LONDON, EC2

MIDLAND ELECTRIC CORPORATION FOR POWER DISTRIBUTION, LIMITED.

DIVIDEND MAINTAINED—INCREASE IN DOMESTIC CONSUMERS.

EFFECTS OF DEPRESSION ON HEAVY INDUSTRIES.

DIVIDEND AND CARRY-FORWARD.

Turning to the front page of the accounts, it will be seen that profits have been maintained. To a profit of £140,164 has to be added a balance brought forward of £31,937, making a total of £172,101.

From this it is proposed to deduct:—For depreciation, £35,072; for investment reserve, £10,000; for general reserve, £30,000; for preference dividend, £14,000; for interim dividend of 2½ per cent., £17,500.

These items total £106,572, and leave a disposable balance of £65,529.

From this it is proposed to pay a further dividend of 5½ per cent. on the ordinary shares, making 8 per cent. for the year, and to carry forward the balance of £27,029 16s. 3d. to next year.

EXTENSION OF TENURE.

In 1929 the company first submitted proposals for a consolidation Order extending its period of tenure. After considerable negotiations an Order was drafted suggesting an initial reduction of 10 per cent. from all charges for electricity to the public, and thereafter variations in costs, plus or minus, taking the 1928 figures as a basis, were to be handed on to the consumer. A large majority of the Local Authorities supported this Order, but two of them raised a legal point that prices should be related to dividends and not to costs, and this was upheld.

It then became necessary to draft a new Order on standard lines, in which charges were related to divisible profits. This has now been done, and the draft deposited. The draft provides for a differentiation between the funds of the company used in the undertaking and its free reserves.

The capital of the company nominally allocated to the undertaking is fixed at a commencing figure of £900,000, carrying a standard divisible profit at the rate of 6½ per cent. per annum. An additional ½ per cent. is permitted on such original capital for the first ten years if such additional profit can be made without an increase of prices.

PROFITS AND PRICES.

Should excess profits be made they are to be used to reduce the prices charged, but the company may retain a quarter of 1 per cent. additional profit for each reduction of 2½ per cent. from the prices scheduled in the Order. It is proposed to retain the free reserves, or undistributed profits of the company, which amount to £200,000, and to use the income therefrom to supplement the income derived from the undertaking under the terms of the Special Order.

Our undertaking would, in the ordinary course of events, be subject to purchase in 1940 at its then value without allowance for goodwill. The draft Order offers us an opportunity to continue our activities and our present standard of dividend for a considerable period beyond that date.

A large measure of agreement has been reached with the Conference of Local Authorities, although some points still remain to be cleared, and negotiations to this end are continuing.

FUTURE PROSPECTS.

It is difficult to forecast the position with regard to power supply. Any revival in trade is bound to improve the output, as the company's power consumers cover an exceptionally wide range of industries. At the moment we are slightly in advance of last year.

The domestic load still offers good prospects. The use of wireless from the mains, and of small electrical domestic labour-saving devices, is helping to attract consumers who might otherwise have been content to do without electricity. At the same time lighting consumers are being educated in the advantages electricity can offer beyond its use merely for lighting purposes.

During the present year we propose to develop the company's rural area, and extensions are in hand to supply Seisdon, Trysull and Claverley.

LOYAL SERVICE.

In conclusion, I desire to express, on behalf of the board, our thanks to the management, staff and workers for the loyal service they have given throughout the year, and I feel that you will also desire to be associated with it.

I now beg to move:—"That the report and accounts for the year ended 31st December, 1931, as certified by the company's auditors, be received, approved and adopted."

The report and accounts were duly approved.

The thirty-fourth ordinary general meeting of the Midland Electric Corporation for Power Distribution, Ltd., was held, on the 1st instant, at Liverpool.

Mr G. H. Nisbett, M.Eng., J.P. (chairman of the company), presided.

Mr C. Heathcock, F.C.I.S. (secretary), having read the notice convening the meeting,

The Chairman proposed the adoption of the report of the directors and the statement of accounts for the year ending December 31, 1931. He said:—Ladies and Gentlemen,—I regret to have to commence the meeting by a reference to the death of a director. Mr J. A. Smith died suddenly on May 13, 1931. He had been a director a comparatively short time, but had earned high esteem for his business ability and the genial and pleasant manner in which he assisted the board.

ACCOUNTS.

You have had the opportunity of studying the directors' report and accounts for some days, and I assume it is your wish that they be taken as read. (Agreed.) The accounts are again printed in considerable detail, and it appears to me only to be necessary to refer to those items which are new or call for special explanation.

CAPITAL EXPENDITURE.

The year's expenditure of £65,765 is almost entirely due to mains and services for connecting new consumers, or strengthening existing provisions to meet additional domestic load. The item for transformers shows a credit on the year. The actual expenditure for new supplies was £2,300, but some large transformers, returned from power consumers who have changed over to high-tension bulk supply, are responsible for the year's transactions being shown as a credit.

A new item appears in "Installations and Apparatus on Hire Purchase." This refers to assisted schemes for the installation of wiring and apparatus. The item of £17,597 is made up by bringing together expenditure previously appearing under other headings. A further sum of £2,837 has been expended during the year. Over 3,000 consumers have now been helped by spreading the first cost of installation over periods of three years, and, with prepayment meter installations, over an average of seven years. Interest is charged on outstanding balances. The expenditure on meters is larger than usual. This is partly due to the record number of consumers connected, and also to the number of prepayment meters used, which are more expensive to purchase.

REVENUE.

You will observe the revenue from sale of electricity shows a reduction of £7,000 notwithstanding the substantial increase in the number of domestic consumers connected during the year. This is entirely due to the acute depression in the heavy industries in the company's area of supply. The reduction in the cost of electricity purchased is due, firstly, to a reduction in the scale of charges for bulk supply purchased from the West Midlands Joint Electricity Authority. The Authority has now co-ordinated the supply from its three generating stations, and is obtaining the maximum efficiency from the existing plant.

Secondly, it is due to a reduction in the number of units purchased.

The new item—Cost of Change over of Sundry Services—has been explained in the printed report, and it only remains to state that the continuation of this change over is dependent on an extension of the company's right to supply in Wednesbury beyond 1940.

PROVISION FOR BAD DEBTS.

The increased provision for bad debts reflects the special difficulties of industry at the present time.

INCREASED CHARGES.

The expenses of the Electricity Commissioners show an increase due to standardisation charges. It is expected that this item will increase steadily over the next few years. This is a statutory obligation and cannot be avoided. The expenditure should ultimately be for the good of the electricity supply industry.

BALANCE SHEET.

The figures need no explanation other than to call attention to the fall of £12,000 in the market value of investments, which has been specially provided for.

NEWCASTLE-UPON-TYNE ELECTRIC SUPPLY COMPANY, LIMITED.

DIVIDEND MAINTAINED AT 6 PER CENT.

RECORD NUMBER OF CONSUMERS.

The forty-fourth annual general meeting of the Newcastle-upon-Tyne Electric Supply Co., Ltd., was held, on the 30th ultimo, at the Central Station Hotel, Newcastle-upon-Tyne. Mr Robert P. Sloan, C.B.E., the chairman and managing director, presided. The notice convening the meeting was read by Mr M. Short (joint secretary), and the auditors' report was also read.

The Chairman said: The proposed amalgamation of companies was dealt with in considerable detail during the course of my speech last year. In order to obtain the necessary authority for this amalgamation a Bill was deposited in Parliament on November 27th last. In January and February of this year extraordinary general meetings of the various companies concerned were held, and the necessary resolutions, providing for the transfer to this company of the undertakings of certain of its subsidiary companies, were approved. As you are aware, it is intended to alter the name of the company to the North-Eastern Electric Supply Company, Limited, the reason for this being that the present name would no longer be appropriate in view of the fact that, after the amalgamation, the company will hold statutory powers and operate throughout the major portions of the counties of Northumberland and Durham, and a large portion of North Yorkshire.

The present position with regard to the Bill is as follows:—In the House of Commons, where the Bill was introduced, four petitions only were lodged against it. We were able to dispose of three of these prior to going before the Parliamentary Committee—the remaining petition being that of the Newcastle Corporation. After a hearing of a day and a half the preamble of the Bill was found by the Committee to be proved. The next step will be that, probably in the month of May, the Bill will come before a Committee of the House of Lords, and we confidently anticipate that the measure will receive Royal Assent about July or August of this year.

Good progress has been made during the past year in regard to the standardisation of frequency throughout the North-East Coast area.

1931 RESULTS.

With regard to the working results for the year, our total connections have amounted to 32,888 horse-power (h.p.), the corresponding figure for 1930 being 27,675 h.p., so that there has been a substantial increase in the rate at which we have secured new business. The profit amounted to £857,866, compared with £913,741 for the previous year.

In the early part of last year we considerably reduced our charges for lighting and domestic supplies, and I stated, at the last annual meeting, that these reductions represented concessions, to our then consumers, of about £49,000 per annum. As these reductions did not come into operation until April, 1931, they affected the results of the year under review to the extent of about £36,000. They will, of course, enable us to obtain certain additional business, but, in the comparatively short time they have been in operation, we have not yet reaped the full benefit which is likely to accrue therefrom, and this, coupled with the falling-off in sales in certain other directions, accounts for the reduction in our gross profit.

The directors have again transferred from profit to reserves sums totalling £250,000, and recommend the same rate of ordinary dividend as that of last year—namely, 6 per cent. per annum. This will necessitate drawing upon the sum brought forward to the extent of £45,428, and will leave £71,240 to be carried forward to the current year.

During the year trading conditions showed a further decline, which was most noticeable in the shipyards, marine engineering works and general engineering works. In the case of shipbuilding and marine engineering our sales of electrical energy during 1931, due to further depression in that section, showed a reduction on those of the previous year of no less than 45 per cent., and, bearing in mind that the year 1930 itself was far from normal, it is evident that we have suffered very considerably in this section of our business. The production of ships on the North-East Coast during 1931 was the lowest recorded for over 40 years.

Our colliery supply business was well maintained throughout the year, our sales in this section showing some little improvement on those of the previous year. They were not, however, commensurate with what reasonably might have been expected in view of the additional motive-power plant installed during the year by colliery companies at various mines throughout the district. Further, the output of coal for household purposes was adversely affected owing to a fall in demand, due to the very mild weather experienced during the latter part of the year.

I am glad to say that our domestic supply business again shows a very substantial increase—the number of new consumers connected during the year exceeding 18,000. This represents an increase over the number connected in 1930 of over 28 per cent., and establishes a record for us in any one year. Apart from obtaining new domestic consumers, there has been a marked increase in the consumption of electricity by many of our existing consumers of this class, largely due to their utilising additional household appliances.

I think that, having due regard to the very adverse conditions with which we have had to contend, we may in the circumstances feel reasonably satisfied with the results achieved, and that the accounts disclose a more satisfactory position than might have been anticipated.

THE OUTLOOK.

In these times of industrial depression no one who appreciates the present difficult position would predict an early trade revival, but if we are to overcome the financial difficulties with which the country is beset it is essential that we should not lose confidence and that no stone should be left unturned in our endeavour to restore industry to its own. So far as this company is concerned, every effort is being made towards this end, and it is hoped that our endeavours will assist to bring about the desired result in the North-East Coast area, however gradual the process may be.

As regards our supplies to collieries, these naturally will be affected by the "quota" allotted in our area, but as Northumberland was fortunate enough to obtain the benefit of an increased "quota" late in 1931, it is to be hoped that this may be repeated during the course of the present year. It may interest you to know that, as a result of our efforts to obtain further business during last year, no less than twelve privately owned colliery generating plants, representing a total capacity of about 20,000 h.p., have been, or will be, closed down and future supplies taken from the system. In consequence of the exceptionally large number of new domestic consumers which we secured during 1931, it is our intention to concentrate, to a great extent, on increasing the use of electricity for various household purposes, with a view to improving our revenue from this source. As approximately one-half of those whom we obtained as domestic consumers last year only became revenue-earning during the last quarter of that year, we shall receive a considerably greater revenue from this source during the current year.

Good progress has been made in connection with developments in the North Riding of Yorkshire, to which I referred at the last annual meeting. During the present month we have obtained, in that area, our first supply from the Central Electricity Board's main transmission system, and as an ample supply of electricity is now available from this source, we are proceeding rapidly to obtain more consumers. I also then referred to our associated company, the Cleveland Power Company, having acquired several electricity undertakings in that area, among which I specially mentioned that of the Northallerton Electric Light and Power Company, Limited.

During the past year we have entered into an arrangement with the War Department for a supply to Caterick Camp, which is situated to the north-west of Northallerton, and we expect to have a supply available there in a few months' time. The availability of a supply from the "Grid" will enable us to close down certain small and isolated generating stations—including one at Northallerton—and to adopt a policy of active development which, so far, has not been possible in that area.

In the northern part of our area we obtained, in December last, a Special Order, covering the North Wansbeck area, which is situated north of Morpeth, and we are taking steps to develop this area also.

Throughout the whole area the rate at which additional domestic consumers have been connected up since the commencement of this year shows a substantial increase over the rate for the corresponding period last year, which is extremely gratifying.

TOTAL CONNECTIONS.

I referred in my earlier remarks to the additional horse-power we had connected during the past year. The total connections to the system, at the end of that year, exceeded three-quarters of a million h.p., and we had, on our books, orders for additional supplies exceeding 20,000 h.p. As these large connections represent a great diversity of trades, any general improvement, whether in home or export trade, will result in an increased use of our supplies on the part of our existing consumers, and should stimulate developments involving a further application of electricity for power purposes.

The Chairman moved the adoption of the report. Mr James Tennant seconded the motion, which was carried. The chairman then moved the payment of dividends, the Hon. Robert H. Brand seconded, and the motion was carried.

The chairman moved the re-election of the retiring directors, Mr James Tennant and Mr Norbert Merz. Mr Alfred Bonnin seconded this motion, which was adopted.

BRITISH INSULATED CABLES, LIMITED.

INCREASED PROFIT—STRONG FINANCIAL POSITION.

SIR ALEXANDER ROGER'S INTERESTING REVIEW.

BIG CONTRACTS CARRIED OUT.

The thirty-sixth ordinary general meeting of British Insulated Cables, Limited, was held, on the 1st instant, at Exchange Station Buildings, Liverpool.

Sir Alexander Roger (chairman) presided over a good attendance of shareholders.

The Secretary (Mr W. Kerfoot) having read the notice convening the meeting,

The Chairman, in proposing the adoption of the report and accounts, said:—When we met at this time last year I stressed the need for economy and for reduction of costs in the administration of our business, and, taking into consideration the world conditions at the time, I viewed our immediate trading prospects with a certain amount of anxiety. It is, therefore, very gratifying to your board to be able to report a profit for the year which slightly exceeds that of the previous year.

This result has been achieved in the face of a decline in the value of the turnover consequent to a large extent on the unprecedented fall in the cost of raw materials and reduction in the selling price of your company's products, and will, I trust, be regarded by shareholders as satisfactory.

SUCCESS OF BOLD POLICY.

The electrical industry has not felt the world depression so acutely as have many other businesses, and your board consider they have been justified in the bold and aggressive policy they have pursued for some time.

In addition to spending £245,000 on maintenance and renewals, we have, during the last three years, spent £367,000 in the provision of modern machinery and buildings, etc., largely to achieve more economical output.

We have also extended manufacturing in directions other than pure cable making, and thus broadened the base of our business. We have invested in or acquired certain carefully selected allied businesses, and, in co-operation with some other of the larger cable manufacturing companies, we have been able to apply a considerable degree of rationalisation in many directions. You will be glad to know that, apart from the question of reduction of costs, these various acquisitions are justifying themselves from the purely investment point of view. I just want to add that your board has no intention of being drawn into business which is not allied to the cable business.

PROFIT, DIVIDEND, RESERVE.

The profit and loss account shows that the profit on trading, dividends on investments, etc., amounts to £589,610, as compared with £576,593 for the previous year, or an increase of £13,017. To this profit there falls to be added the balance brought forward from last year, making a total of £868,928, out of which have been paid year, making a total of £868,928, out of which have been paid directors' and trustees' fees, etc., debenture interest, preference share dividend and interim dividend on the ordinary shares, amounting in all to £192,003, leaving a disposable balance of £767,924.

We then appropriate £100,000 for depreciation on property and plant and transfer £120,000 to reserve account, thus leaving a balance of £456,924 available for dividend, out of which we recommend a further dividend of 10 per cent. on the ordinary share capital, making, with the interim dividend already paid, a total distribution for the year of 15 per cent., and carrying forward £290,258 to next account, which is £10,941 more than was brought in.

A STRONG POSITION.

May I now refer you to the details appearing on the balance sheet, from which you will see that our position is a strong one. There is no change in the amount of the capital account, nor in the amount of debentures outstanding. The reserve account will amount to £1,140,000 if our proposals to-day are approved by you.

The dividend equalisation account and compassionate fund for workpeople remain unaltered, and, as regards the latter, I am glad to assure you it continues to serve adequately its admirable and beneficent purpose.

Sir Alexander reviewed various items in the balance sheet, and, in regard to investments, said at cost they amounted to £1,012,560, showing an increase of £44,361. These had recently been carefully scrutinised, and, on a conservative basis, their present value exceeded substantially the amount at which they stood in the account. In most cases these investments had been chosen with regard to their potentiality as feeders to their manufacturing business, so that their value was not merely assessable in terms of dividend.

During the past year they had completed the Scottish Overhead Grid for the Central Electricity Board, and the electrical track equipment for the Great Indian Peninsula Railway, in both cases with entire satisfaction. They had now carried out the electrical equipment of a total of 1,215 track miles of railway. The company fully maintained its prestige in the manufacture of super tension cables, having up to the present supplied about 270 miles of 66,000-volt cable.

In what he might call the "bread and butter" every-day work, business was well maintained. The number of orders received continued to grow as a result of increase of clientele, and their range of manufactures.

FACTORY DEVELOPMENT.

During the year the reorganisation of the Helsby factory had been completed and was now one of the best-equipped factories of the kind in the Kingdom. They recently removed the enamelled wire plant from Prescott to Huyton Quarry in order to provide more room for a rapidly-growing business, and were about to commence the building of new shops at Prescott for the increased and better manufacture of fine wires and tinned wires.

"HIGHER THAN EVER."

Every endeavour was being made to take business hitherto done by the foreigner, and several additional sales branches had been opened. Last, but not least, they felt confident the company's name for good work stood higher in the electrical industry than ever it did before. (Hear, hear.)

The future of industry generally remained a matter of great anxiety, but were we not surmounting our difficulties gradually? Had we not during the past few months instituted reforms which have gone some way towards stabilisation and recovery?

Bad as the general conditions had been and still were, it seemed to him that this country had felt the depression less than many others, and we were certainly in advance of any other country in the matter of taking steps to secure a revival in trade.

OUTLOOK FOR ELECTRICAL INDUSTRY.

So far as our own business is concerned (Sir Alexander continued) it does look as if we are likely to continue for 1932 on the scale of last year. We do not think we can look forward in the immediate future to any great acceleration of progress in the extension of electric light and power supply, but up to the present there is no diminution of demand. On the other hand, the electrification of the British railways, at least for all suburban services, cannot long be further deferred. If the railways are to regain a measure of their former prosperity, which is clearly in the national interest, they must be modernised so as to provide a more frequent, faster and cheaper service in competition with road transport.

RAILWAY ELECTRIFICATION.

The day of the steam locomotive as a prime mover is over. Electric working provides economy in train staff, saves time and money in preparing and fuelling locomotives for service, gives quicker acceleration in operation, and speeds up the whole running, thus obviating the necessity of duplicating lines in busy sections. Moreover, there is a substantial saving in the cost of operation per train mile.

A proposition so obviously economical cannot be indefinitely postponed, and, when it is taken up, it will help forward the whole electrical industry immensely by loading the National Grid and so reducing the incidence of capital costs, and rendering possible the supply of cheaper power to the advantage of industry generally.

When this work is put in hand your company certainly ought to be able to obtain a large portion of the orders for cables and track equipment, as we undoubtedly have much more experience in this technique than any other firm in this country.

A CORDIAL TRIBUTE.

I cannot conclude without paying a tribute to our tireless and indefatigable managing director, Mr G. H. Nisbett. He is a tower of strength to the company, especially in these troublous and difficult times, and I am sure it is your wish that we tender to him and to the staff and to all the workers our warm thanks for their efficient and successful work during the past year. (Applause.)

The report and accounts were adopted.

GODFREY PHILLIPS, LIMITED.

GRATIFYING RESULTS DESPITE YEAR'S DIFFICULTIES

The twenty-third annual general meeting of ordinary shareholders of Godfrey Phillips, Limited, was held, on the 24th ultimo, at the registered offices of the company, 112, Commercial Street, London, E., Mr Arthur I. Phillips (chairman and managing director) presiding.

The Chairman, in moving the adoption of the report and accounts, after paying a tribute to the late Mr Philip Phillips, said that the board had been fortunate in anticipating the country's departure from the gold standard, and had contracted to buy the great bulk of their leaf requirements in sterling. They had, therefore, been spared the necessity of taking their stocks at a variable exchange value. The tobacco duty was now 9s. 6d. per lb., far too high, and was gradually killing their mythological friend, the goose with the golden eggs. Consumption was now falling. It was a popular saying that no matter how bad things were people would smoke. The truth of that fallacy was confined only to what it said, but it did not say how often or how much, and less was being smoked, and revenue was suffering.

The net profit of £150,166 compared with £178,810 for 1930, and was actually higher, because in last year's accounts a deduction of some £29,000 had to be made to cover a loss by a subsidiary— which this year had made no loss—in order to arrive at the final net profit figures. He thought they should be gratified with that figure in view of the very acute competition which had trade always brought. The board recommended a dividend on the ordinary shares of 5 per cent. for the year, that the sum of £6,183 4s. should be transferred to reserve, leaving the sum of £84,572 8s. 7d. to be carried forward. It might be suggested that, in view of the fact that the actual net profit was slightly more than that of the preceding year, the recommended distribution on the ordinary shares might be larger. As one of the biggest shareholders, his first impulse would be to agree, but with the inside knowledge he was bound to have, he realised that they could not both pay out their earnings and finance increased duties without further borrowings, a thing he was anxious to avoid. Although on the first flush it is disappointing, we must realise that we are not in business for the day, and that it would not be wise to leave ourselves too short of working capital.

In carrying forward this larger sum, your board is actuated solely by the desire to do what it deems best for the business. It should be borne in mind that for some years we have carried forward a sum towards the coming year's advertising appropriation which has gone to the credit of that account each year. This year we have not deemed it necessary, as at the moment we do not contemplate any large advertising expenditure for the purpose of introducing a new brand.

The amount carried forward is not earmarked for any particular purpose, so that it is available either for further working capital or to cover any special contingency which might arise.

During the year under review, in spite of the fact that towards the end thereof the total clearances of raw leaf tobacco from bond had tended to fall, the company had been able to maintain its output. In fact, they did a slightly bigger volume of business than in the preceding year.

The last year had witnessed the completion of a marketing scheme which the board had deemed practicable when they had first made the acquaintance in 1928 of Canadian-grown Virginia tobacco, and they had placed on the market a series of various tobaccos under the brand name "Canadian Club." The Canadian tobacco they had secured was equal to the finest raw leaf tobacco the world produced, and had all the pleasing characteristics of the United States tobacco. In fact, it was a first-class Virginia tobacco enjoying the Canadian preference. Still more recently they had placed on the market "Canadian Club" cigarettes, for which they anticipated a considerable demand.

They continued to sell large quantities of their leading brands. Their sales for "B.D.V." cigarettes for the last year showed a healthy increase. "Army Club" cigarettes still commanded a large and growing demand, and "De Reszke" cigarettes had merited further popularity by the introduction of this high-grade cigarette in a smaller size to retail at a lower popular price, namely, twenty for 8d. "B.D.V." tobacco had had a considerably increased sale, and "Grand Cut Virginia" had also increased its sale.

Quality told, and he did not think that many proprietary brands could point to having had larger sales in 1931. They took a great deal of pride in their products, and had adopted every tested appliance to enable them to turn out better and better cigarettes and milder and purer tobaccos. They would always maintain that policy.

The report and accounts were unanimously adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

The total ordinary revenue for the twelve days ended March 31, 1932, amounted to £40,755,000 against ordinary expenditure of £19,582,000. After allocating £1,362,000 to Sinking Fund and having allowed for an increase in Exchequer Balances of £2,988,000, the operations for the week, as shown below, reduced the National Debt by £16,823,000 to £7,582,550,000:—

(000's omitted.)	
Treasury Bills	+ 28,994
Post Office	+ 2,400

Messrs Samuel Montagu and Company write on March 30, 1932, as follows:—

GOLD.

The Bank of England gold reserve against notes amounted to £120,806,998 on the 23rd inst., as compared with £120,804,985 on the previous Wednesday. The s.s. "Letitia," which sailed from Bombay on the 24th inst., carries gold to the value of about £1,004,000, and the s.s. "Mooltan," which left on the 26th inst., about £500,000. Gold offered in the open market has been taken for the Continent, but operations have been restricted owing to the Easter holidays. Prices have shown rather wide fluctuations following movements in the foreign exchanges.

SILVER.

Owing to the Easter holiday the week under review contained only three working days, during which prices showed an easier tendency influenced by movements in the exchanges. After two successive falls of 1/4d., prices were fixed yesterday at 17 1/2d. for both deliveries, but there was a recovery to-day to 17 1/4d. for cash and quiet, with China inclined to sell and bears covering at the low level, whilst America has continued to give support. The tendency remains uncertain and at present seems likely to be dominated by the exchange situation.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 21st inst. to mid-day on the 26th inst.:—

IMPORTS.		EXPORTS.	
	£		£
British West Africa	30,413	Czechoslovakia	52,360
Canada	8,293	United States of America	35,700
France	5,792	Germany	4,680
Other countries	1,539	Other countries	1,608
	46,037		94,348

REPORTS AND NOTICES.

The directors of the National Mutual Life Assurance Society have appointed Mr E. H. Davenport to be a director of the society, subject to re-election at the next annual general meeting. Mr Davenport, who has been connected with Messrs Rowe and Pitman for some years, is well known as a writer and lecturer on the practical aspects of finance.

GOVERNMENT, &c.

CONVERSION OF 15s. 6d. SAVINGS CERTIFICATES.—EXTENSION OF CONVERSION PERIOD.—The Treasury announce that the offers of conversion now open to holders of savings certificates issued prior to April 1, 1922 (i.e., the first issue of certificates issued at 15s. 6d.), will remain open for a short time after March 31st in

order to give full opportunity of converting to the holders of the very large number of certificates which reach their tenth year of maturity in the last days of March. The definite closing date of the offers will be announced shortly.

MINES.

RHOKANA CORPORATION, LTD.; ROAN ANTELOPE COPPER MINES, LTD.; MUFULIRA COPPER MINES, LTD.—A communication has been received from New York stating that 90 per cent. of the copper producers of the world have agreed to a reduction in output for the remaining nine months of 1932, from April 1st, to 20 per cent. of capacity. Rhokana Corporation, Ltd., Roan Antelope Copper Mines, Ltd., and Mufulira Copper Mines, Ltd., will therefore reduce their production accordingly. This co-operative effort is intended to bring current production below consumption and includes arrangements for an orderly liquidation of existing stocks.

* The operations of these Companies were extended during 1931.

MISCELLANEOUS.

FORD MOTOR COMPANY, LIMITED.—The trading profit for year 1931 amounted to £412,143, against £1,054,286 for 1930. The sum of £506,360 is brought in from preceding year, making £918,503 available, as compared with £1,312,793. The sum of £101,014 is put to depreciation, against £43,556. Obsolescence receives £14,699, against £13,775. Directors' fees, etc., amount to £13,268, against £18,352. Taxation reserve receives £217,416, against £188,250. Loss on exchange amounted to £170,329, against nil. Loss on trading abroad for period December, 1928, to date amounted to £29,905. No dividend is being paid on ordinary shares, against 10 per cent. for each of the two preceding years. For 1929 the ordinary dividend absorbed £560,000 and for 1930 £542,500. The

OTHER METALS.

TIN.—According to the Metallgesellschaft A.G., the mine production of tin in February, at 7,553 tons, shows a reduction of 2,090 tons on January. The New York market has not been active, but prices were maintained. On the other hand, the advance in the gold price of sterling was accompanied by heavy selling at declining quotations. In New York the metal was quoted at 21.20 cents per lb. on Wednesday, against 21.75 cents per lb. a week ago and 22.15 a month ago. Wednesday's official closing quotations in London, in terms of sterling for "standard" cash, at £120 10s. to £120 15s. per ton, compares with £127 15s. to £128 on the corresponding day last week. Stocks in London and Liverpool at the end of last week, at 33,510 tons, show an increase of 40 tons on the week.

COPPER.—A communication having been received from New York stating that 90 per cent. of the copper producers of the world have agreed to a reduction in output for the nine months of 1932 from April 1 to 20 per cent. of capacity, Rhokana Corporation, Roan Antelope Copper Mines, and Mufulira Copper Mines will, therefore, it is announced, reduce their production accordingly. This co-operative effort aims at bringing current production below consumption, and includes arrangements for an orderly liquidation of existing stocks. Business in copper has been on a small scale, but prices were maintained at last week's level. On Wednesday, "Domestic" spot was quoted at 6 cents per lb. in New York against 6 cents a week ago, and 5½ cents a month ago. Wednesday's official closing price for "standard cash" in London, in terms of sterling at £31 12s. 6d. to £31 15s., compares with £32 16s. 3d. to £32 17s. 6d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 21,085 tons, show a decrease of 28 tons, while stocks of rough copper, at 950 tons, are 75 tons smaller.

LEAD.—The market in lead was quiet, and prices declined a few points both in New York and London. In New York the metal was quoted at 3.00 cents per lb. on Wednesday, against 3.15 cents a week ago, and 3.25 cents a month ago. Wednesday's official closing quotation for "soft foreign" in London in terms of sterling, at £11 15s. per ton for shipment during the current month compares with £12 on the corresponding day last week.

SPELTER.—The demand for spelter has been poor, and quotations in London declined under selling pressure. According to the Metallgesellschaft A.G., the daily average smelting output of spelter in February at 2,329, shows an increase of 8 tons per day on January. Wednesday's quotation in New York, at 2.80 cents per lb., compares with 2.775 cents a week ago and 2.75 cents a month earlier. Wednesday's official closing quotation in London in terms of sterling for "good ordinary brands" was £11 15s. per ton for shipment during the current month, against £12 8s. 9d. a week ago.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals the quotation for aluminium has been maintained at £95 per ton. Nickel declined from £230-£235 per ton to £220-£225. Foreign antimony was reduced from £28-£28 10s. to £27 10s.-£28. Platinum, at £10 6s. per ounce, shows a reduction of 7s. per ounce on the week.

TEXTILES.

THE COTTON TRADE.—Liverpool. —Imports for the week March 24th to 30th (inclusive) are 45,840 bales, of which 31,807 bales are American, 362 Peruvian, 11,052 Egyptian, 225 East Indian, 50 Argentine, and 2,344 sundries.

Manchester.—The Easter holidays and the fall in cotton prices followed by wide fluctuations, have had a disturbing effect upon business in the market. Numerous buyers have been in the mood to hold aloof, and quotations of producers have been irregular when tested. Mail advices from India continue fairly encouraging, but new business in piece goods remains on a smaller scale than a week or two ago. Scattered transactions, however, have taken place in light fabrics and fancies, chiefly for Calcutta and Karachi. There has not been any development in the demand for China, but exports continue on a free scale. Miscellaneous sales have occurred for several minor outlets, East and West, but individual contracts have not been at all important. There has not been much activity in home trade fabrics. Owing to the fall in values, manufacturers are very anxious to keep up to contract time with deliveries, as there is a danger of cancellations if goods are late. Quotations in American and Egyptian yarns have been irregular, and trade has been of limited dimensions. It is difficult at the moment for most spinners to prevent loss of ground.

THE WOOL TRADE.—Bradford.—Business has been partially suspended this week, and, writes our correspondent, there is no new feature in the situation. Nothing has happened to give a strong turn to the market for wool and tops. Just before the recess cable information came to hand, which suggested the desirability of topmakers standing out very firmly for their then current quotations, and one or two firms whose merino tops are a household name on the market, were refusing to accept anything less than 23d. for warp 64's. They were influenced in this chiefly by the information received from Geelong, but that centre does not dictate to Bradford like Sydney, though some very good wools are obtainable there. The weakness in the latter centre reported this week seems to have had a slightly depressing effect here, but generally speaking traders are satisfied that there is a big consumption of all qualities of wool down to 50's. As regards crossbred wool, it will not be easy to pass all the current supplies into consumption. The reasonable prices at which B.A. crossbreds are being offered to merchants here does not induce them to buy any big weights, and it looks as if further slight concessions in price will have to be granted before the business now pending is concluded.

THE JUTE TRADE.—Dundee.—The jute industry is still passing through very quiet times, and this is resulting in a general decline in values of practically all commodities. The Calcutta goods market has displayed distinct weakness recently, due to lack of demand, and values of heavy goods especially slumped to a considerable extent when the market reopened after the Easter holidays. Prices of raw jute were affected, though sellers are not pressing for business on account of the uncertainty surrounding the new crop. Propaganda for the restriction of sowings of the fibre for next season has been circulated freely amongst the growers, and this is expected to have the effect of curtailing the next crop to about the dimensions of the present one. The imports into Calcutta this season so far are just equal to the quantity of jute estimated from this crop, but a fair quantity of this must include old crop carried forward from the previous season, of which a considerable quantity was carried forward up-country. Not many offers are being made from Calcutta to this market, owing to the apathy of spinners. Good First Marks are nominal at £21, and Lightnings at £19, while Fuji-M First Mark is offered at £19 17s. 6d., and Asahi Lightning at £19 5s., April-May shipment, with Triangle Jajodia Lightning quoted at £18 10s., also April shipment. Spinners are not interested in shipment material, and only a few small lots are being picked up from the plentiful supply of jute on spot. Jute yarn business is so small that spinners are compelled to resort to further curtailment of production. A number of large works are off this week, and the general method of working now appears to be only on alternate weeks. Prices continue more or less nominal. Buyers are unwilling to pay 1s. 11d. for common 8 lb. cops and 2s. for 8 lb. spools, though a few spinners would accept these very unprofitable rates. The majority are still holding for 2s. for cops and 2s. 1d. for spools. Twist is very firm, because of a large business done in this commodity. The value of 3 ply 8 lb. is lowest at 3½d., but up to 3½d. is obtainable for the better class spins. Sacking yarns are quiet at 2½d. for 24 lb. web and 3½d. for 8 lb. chains, while Rove is of small interest at from £16 15s. for 200 lb. and £19 for 48 lb. The finer yarns are dull and nominal, and carpet 14 lb. warp is steady at from 3½d. to 3½d. Only trifling lots of jute cloth are being bought, and the prices accepted by manufacturers are very irregular. Quotations rule from 2½d. for 10½ oz. 40 in. and from 1½d. for 8 oz. in the narrow widths, but ½d. more can be got for the wide widths. Linoleum hessians are very slow, and only a very small trade is being done in heavy goods. Calcutta hessians were sold at 19s. for 10 oz. 40 in. and 14s. 9d. for 8 oz. April shipment. Liverpool twills were quoted down to 53s. and "B" twills at 47s. for April to September.

THE GRAIN MARKETS.

WHEAT.—In view of the Easter holidays business at the international wheat markets has been on a small scale during the past week. The sharp fall in wheat prices which was caused by rumours that the Federal Farm Board intended to dispose of its holdings, has given way to a firmer tendency when it was announced that no change in policy was contemplated. So far, quotations have, however, not recovered to the level prevailing during recent weeks. Meanwhile, supplies of home-grown wheat are running short in Continental countries. France's foreign milling quota has again been increased from 35 per cent. to 40 per cent. It is expected that before the new harvest becomes available. The market in this country was not very active, but prices declined in proportion to the rise in the gold value of sterling. On Wednesday, "May" futures were quoted at 52½ cents per bushel in Chicago, against 50½ cents on the corresponding day last week, and 57½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 32s. per 496 lbs., as compared with 32s. 9d. against 32s. 6d.; No. 2 Northern Manitoba, Vancouver, ex ship, 30s., against 29s. 6d.; Russian, on sample, 25s. 6d. to 27s., against 28s. 6d. to 30s.; Australian, ex ship, 27s. 6d. to 28s., against 28s. 6d. a week ago.

WHEAT FLOUR.—International trade in flour has been on a small scale. The demand in this country has been small, although both home-milled and foreign flour were offered at lower prices. North American shipments, at 121,000 sacks, showed a decrease of 53,000 sacks as compared with the previous week. Of this total, only 14,000 sacks have been consigned to Europe. Quotations in London Wednesday: Straight run, delivered country, 26s. per sack of 280 lbs.

THE MONEY MARKET.

As had been anticipated, money has once more become easy after the passing stringency at the end of the quarter, but the ease is not so apparent as might have been expected. On Friday and Saturday of last week the market was put in funds by the maturity of the large quantity of Treasury bills applied for on January 1st and 2nd, while further funds became available as the week progressed through the disbursement of Conversion Loan and other

DOMINION OF CANADA
THREE-AND-A-HALF PER CENT. LOAN,
1909-34.

For the purpose of preparing the Interest Warrants due 1st June, 1932, the BALANCES will be STRUCK on the evening of the 2nd May 1932, after which date the Stock will be transferred ex dividend.

Coupons must be left for examination between the hours of 10 and 2 o'clock (Saturdays excepted) three clear days prior to payment being made.

Forms of listing coupons may be had on application on and after the 16th May, 1932.

Correspondents to the Italian Treasury.

Government dividends. On Friday money was still inclined to be usable, as these new funds had hardly become available, and new money commanded 2-2½ per cent., but over the week-end the rate eased to 1½-2 per cent. Early in the current week conditions were variable, and some borrowers had to pay up to 2½ per cent., but as the Government dividend money reached the market the situation again eased, and by Wednesday rates were back at 1½-2 per cent., but on Thursday money was rather more wanted at a full 2 per cent. Renewals were charged at 2 per cent. during the whole week, with a tendency towards 1½ per cent. in places.

While applications for last Friday's Treasury bill issue were maintained at £61.9 millions, against £60.3 millions the week before, the average tender rate rose sharply from £1 16s. 11.39d. to £2 3s. 3.73d. per cent. This increase is readily explained by the fact that July bills are not nearly so useful a maturity as June bills, which are paid off just in time to put their holders in funds for the end of the half-year. As a result of this, outside interests did not take part in the tender, and the market had the field left almost entirely to itself. The amount on offer was £45.0 millions, but £1,050,000 was cut off the allotment. The discount market has been very inactive. The clearing banks have not been operating, and there was a general disposition to await Thursday's Bank rate decision, as a reduction was fairly widely anticipated. On Wednesday there was some demand by banks outside the clearing system for May bills at 2 per cent. Market rates for hot Treasury bills ranged from 2½ to 2¾ per cent. during the week, and those on three months' bank bills from 2¼ down to 2⅞ per cent. for prime bills. Standstill bills were quoted at 2¼-3½ per cent.

	Mar. 17, 1932.	Mar. 23, 1932.	Mar. 31, 1932.	Apr. 7, 1932.	Previous Rate and Date Changed.
Bank Rate	3½	3½	3½	3½	4 (Mar. 17, '32)
Banks' Deposit Rate...	1½	1½	1½	1½	2 (Mar. 17, '32)
Discount Call	1½	1½	1½	1½	2 (Mar. 17, '32)
Houses { Notice ...	1½	1½	1½	1½	2½ (Mar. 17, '32)
Market rate ("hot" Treasury bills).....	2½	2	1½-¾	2½-¾	...
Market rate (3 months' bank bills)	2½-3½	2½-3½	2-3½	2½-3½	...

The failure of the Bank of England to make any reduction in its rate was naturally the cause of some disappointment. It is true that money has this week been somewhat more usable than in March, but discount rates of 2½ and 2¾ per cent. are widely out of sympathy with a Bank rate of 3½ per cent., and on technical grounds alone there was ample room for a reduction. General grounds, too, equally call for a lower rate of 3 and even 2½ per cent. The premium upon forward sterling in New York is still equivalent to a return to American holders of three months' sterling bills of just over 2 per cent., making a total yield to them from British Treasury bills of a full 4 per cent., against 2½-¾ per cent. obtainable upon 90-day bankers' acceptances in New York. Apart from any question of confidence or lack of confidence in the two centres, this differential between London and New York rates is in itself a sufficient magnet to American funds. If official operations in forward exchange are impracticable or undesirable—and of this we are not wholly convinced—the only way of reducing this differential in favour of London, and so of checking the present embarrassing influx of short money, is to lower Bank rate to the point where it will drive market discount rates down still further.

There is another strong argument in favour of a lower Bank rate, and that is its effect upon the gilt-edged market. Two of the chief needs to-day are the diversion of idle funds from short-term to long-term channels and the facilitating of a major conversion operation. Were Bank rate reduced to the point which would make London deposit rates unattractive, there is little doubt that, in view of the rehabilitation of the national credit, there would arise a renewed demand for British Government and other high-grade stocks, which might easily render a

conversion operation practicable. It may be that from this point of view the psychological moment for a reduction in Bank rate to 2½ per cent. may not be reached until Budget week or even later, and that, in the meantime, the Bank is holding its hand as a measure of co-operation with the Treasury. Such an explanation, however, even if true, cannot be called convincing, and it is difficult to see why no change has been made this week.

The Bank return shows several wide movements. Curiously enough the note circulation has only decreased by £0.7 million, so that apparently the Easter currency is very slow in returning from circulation. In the Issue Department there has been another large turnover from Government to Other Securities, and the latter now stand at the unusually high figure of £25.8 millions. Taking both departments of the Bank together, Government Securities have risen by £9.0 millions and Other Securities have fallen by £2.7 millions. These changes possibly arise from the repayment of the balance of the Treasury's Paris and New York banking credits. Government dividend disbursements and the heavy Treasury bill maturities on April 1st and 2nd explain the contraction of £17.2 millions in Public Deposits. As a result of the foregoing movement, Bankers' Deposits have risen by £25.0 millions to £79.5 millions. In view of the size of this last figure, money should be considerably easier than it actually is.

Although the New York rediscount rate was not changed from 3 per cent. on March 31st, a reduction of ¼ per cent. was made the following day in open-market discount rates on bankers' acceptances of all maturities. This brings 90-day bills down to 2½-¾ per cent. and six months' bills down to 2½-¾ per cent. This lowering of open-market rates in part reflects the decrease in the supply of bills, and there was less talk this week of a reduction in the New York rediscount rate. Since the Reserve system started their easy money policy in the middle of February, there has been an increase of only \$38 millions in Reserve Bank credit, and all this is in the form of Government bonds, as bill holdings have decreased. Call money remains at 2½ per cent., and markets are depressed by the provisions of the new Tax Bill.

The foreign exchange market was less busy this week, and fluctuations were less frequent and within narrower limits. The undertone of sterling was firm. The New York rate was unchanged at 3.80 after being lower, as was also Montreal at 4.19. Paris improved by a half to 96½, and Brussels was unchanged on balance at 27½. Milan was rather weaker at 74.00, but Madrid closed at last week's level of 50½. Amsterdam lost 2 points at 9.42, as did Berlin at 16.02. Switzerland, after some hesitation, was unchanged at 19.50. The Scandinavian exchanges moved in varying degrees in our favour, Stockholm from 18.60 to 18.85, Oslo from 18.90 to 19.05, and Copenhagen from 18.15 to 18.20. The South American currencies are still rather nominal. Rio gained ¼d. at 4½d., Buenos Aires was weak and lost ¼d. at 36½d., while Montevideo was unchanged at 29½d. In the Far East the rupee was weaker than of late and declined by ¼d. to 1s. 6½d. The yen also fell away from 1s. 9½d. to 1s. 8½d. Batavia was unchanged at 9.45. In the forward market one month's New York remained at ½ cent discount, but three months was ¼ lower at 2 cents discount. Paris improved from 3 and 12 centimes discount to par for one month and 4 centimes discount for three. Brussels was quoted at 1 and 5 centimes discount. Milan was unchanged for one month's delivery, but improved to ¾ lira discount for three. Madrid showed no change. Berlin remains unquoted. Amsterdam three months' hardened by one point to 2 cents discount. Switzerland was better at one centime premium for one month and unchanged for three. The silver market was uncertain at times as a result of the fluctuations in sterling, and prices fell as a result of small selling in an inactive market, cash declining by ¼d. to 17d. and forward by the same margin to 17½. The close was quiet. The China silver exchanges fell away in sympathy. Hong Kong weakened from 1s. 3½d. to 1s. 3¼d., and Shanghai from 1s. 9d. to 1s. 8½d.

THE LONDON CONFERENCE.

A DOZEN years have elapsed since the making of the European "peace settlement"; yet this week the European Powers are meeting to reconsider, we do not say the peace-drawing, but in effect the financial and economic implications, of the treaty-map of South-Eastern Europe. The fact that fresh international conferences on these problems are called for at this date demonstrates—if proof be needed—that the so-called "peace settlement" was utterly inconclusive. True, this is only what was to be expected. Peace settlements after great wars are inconclusive almost as a matter of course, because the statesmen left in power at the end of a great war, in the victorious countries, are apt to have their eyes concentrated on the immediate past and to have little vision for a longer future. But the inconclusiveness of the peace settlement of 1919-20 does not need to be pointed by precedents. It is written large on the face of the post-war map.

Anyone who studies this post-war map of Europe—and, a fortiori, anybody who has been trying to live on that map during the last dozen years—must perceive that the map is provisional. A "Balkanised" Europe is not a permanent possibility in an "Americanised" world; and the sheer pressure of the gigantic overseas and Asiatic countries that are looming up over the European horizon from all sides is bound to impel the European countries, sooner or later, into some kind of "closer union"—if not outright unification. The post-war map of Europe reveals two things: first, that "closer union" can hardly fail to come in time; secondly, that this movement may take one of two alternative outward forms. One possible line of development is an accentuation of the one-sidedness of the peace treaties; a perpetuation of the status of inferiority imposed on the defeated countries; the virtual reduction of Italy to the same category as Germany; and the withdrawal of Great Britain from active participation in Continental affairs. Along this line Europe will move towards "closer union" in the form of a French hegemony. The other possible line is a re-interpretation of the peace treaties in the spirit of the League Covenant; the restoration of Germany to the status of the other European Powers; and the active participation of Great Britain in the life of a European Commonwealth in which the relations of the various members, great and small, will be comparable with those which the members of the British Commonwealth have managed to establish with one another. Along this line Europe will move towards "closer union" in the form of a European understanding within the wider framework of a world-wide League of Nations.

In defining the first alternative as that of French hegemony, we do not imply that France is influenced by motives of acquisitive aggression. As Sir Arthur Salter observes in his new book*, the fundamental desire of France is for security in the maintenance of the *status quo*. But in pursuance of this aim her policy has consistently tended to create a system of grouping, based on alliances and common sympathies, whose reactions are inevitably the growth of a counter-group, and whose basis is fundamentally opposed to that of attempts to bring about security on "collective" lines.

Which of these two alternative roads is Europe likely to follow? That is a momentous question, not only for Europe but for the world. For we shall arrive at our destination in very different condition according to our choice of route. If we achieve something like a European Commonwealth, Europe will still remain the centre of the world and the heart of Western civilisation. If we succumb to a French hegemony, the spring will have gone out of Europe's great year.

Which turn of events is the more likely? The future, unfortunately, remains as obscure as ever in this fourteenth year after the Armistice; and all that we can say at present is that, so far, neither of the two possible

alternative outcomes has succeeded in asserting itself over the other. The French have failed to establish their hegemony. Germany has shown too much recuperative power; Italy too much vitality; Great Britain and the ex-neutrals too keen a concern for the balance of power to allow the French solution to materialise. The symbol of a French hegemony—an international force at the service of the League but under the control of France—seemed still just as chimaerical when M. Tardieu re-exhibited this cherished French plan at Geneva the other day, as it seemed in 1919 when General Foch expounded it to the Peace Conference in Paris. Yet, though the French have so far failed to impose their own ideas on Europe, they have been omnipotent in their power to prevent any other ideas for the organisation of Europe from being carried out. The result is an *impasse*. In fact, we are still fast bound in the political deadlock into which we fell before the Peace Conference had half-finished its business. And this unnatural political deadlock, indefinitely prolonged, has brought the economic position in Europe to the verge of breaking-point.

Is there any sign of the political deadlock loosening? We may possibly gain some light on that question if we compare the circumstances in which the Four-Power Conference is sitting in London this week with those in which the Seven-Power Conference met in London last July. It is unfortunately possible enough that the present Conference may prove to resemble its predecessor in being economically and financially fruitless; yet, from the political standpoint, at any rate, there are certain obvious differences. In the July discussions it was Great Britain that took the initiative and France that held back. In the present instance it was M. Tardieu who wanted the discussion and the British Government that stipulated for Italian and German participation. This week, as in July, the Conference was preceded, during the foregoing week-end, by *tête-à-tête* conversations between two particular Powers. In July France tried in vain, through antecedent conversations, to drag Germany in advance; this time she has tried—as it proved, in vain—to persuade Great Britain, in a similar prelude to the Conference, to fall in with French views. This time, no doubt, as last time, it is in the power of France to say to the other parties: "Well, if you decline to do what I want, I can at any rate prevent you from doing what you want." Once again the deadlock may remain unbroken when the Conference rises. All the same, an observer of the course of European affairs is left with the impression that France to-day is distinctly less sure of herself and her position, and distinctly more anxious to secure an agreed settlement, than she was a few months ago.

Last summer France stood at what may prove in retrospect to have been the zenith of her post-war power. The military predominance which she had enjoyed on the European Continent since the Armistice had been reinforced by a financial predominance to which even America was finding herself compelled to bow. This combination of military and financial strength seemed overwhelming, and France used it effectively to win two striking European political victories. She quashed the project of closer union between Austria and Germany, and she compelled Hungary to leave the Italian orbit and to gravitate into the French orbit instead. The immediate apparent result was a conspicuous increase in French power. France was no longer merely the leader of her co-victors, Poland and the Little Entente. The whole of Eastern Europe was at her feet. Great Britain—politically eclipsed by her financial plight—was unable to play her traditional moderating rôle. Italy and Germany were helpless. The game seemed to be in France's hands; European hegemony within her grasp. To-day, however, the position of France in Europe seems by no means so brilliant.

What is it that has happened? Perhaps the fact is that

* "Recovery." By Sir A. Salter, K.C.B. Bell. 10s. 6d. net.

when France was converting financial into political values last year the political stock which she bought was really not an asset but a liability. Her victories were signal, but they were negative. By quashing the Austro-German customs union project and by bringing Hungary to heel she barred certain sporadic attempts at a reorganisation of Europe on non-French lines; but she left unattended the untenable situation which had been created in the Danubian area by the peace settlement, and took over responsibility for keeping things as they were at a moment when an impossible state of affairs was on the point of breaking down.

France has thus involved herself in a dilemma: either she must permit Hungary and Austria and the whole of South-Eastern Europe to live and move and breathe in a normal healthy way—and that is politically unpalatable to her—or else she must keep them alive, under their present unnatural duress, by a transfusion of blood from her own veins; and that is very expensive. In effect, the Danubian countries are saying to France now very much what Mr P'u, in Manchuria, is saying to Japan. Their ultimatum is: "Your money or our life."

It is not, we think, to misrepresent French policy to say that in this dilemma France has endeavoured strenuously, during recent weeks, to persuade the British Government to participate with her in a much wider sense than would be represented by a joint mobilisation of Franco-British financial resources for the salvaging of the more acutely distressed countries of South-Eastern Europe. The objective which M. Tardieu appears to have had before his eyes, and which was hailed prematurely by the Paris Press as a *fait accompli*, appears to have been little less than a revival of a political *entente* between Britain and France which would reinforce the French "group" to the exclusion of Italy, to say nothing of Germany. If an agreement on these lines is what M. Tardieu sought to obtain from Sir John Simon—and apparently with less success from Mr MacDonald—he asked too much. Any weakening of our friendly relations with Germany and Italy would be far too heavy a price to pay politically for securing economically a joint "rescue endeavour" by France and ourselves, even were the lines of rescue, of which we have more to say in the following article, more wisely planned. If the British Government ever toyed with such an idea, we trust that they will promptly dismiss it from their minds; for if there is one thing certain, it is that British public opinion is overwhelmingly in favour of "collective" as opposed to "group" attempts at international co-operation. Indeed, the very atmosphere created at the outset of the Four-Power Conference by the suggestion that there had been a Franco-British exclusive understanding appears to have proved so considerable a handicap to the progress of the Conference that there is here, if proof were needed, proof undeniable that it is not by Britain's joining in the fatal policy of "forming camps" that the political soul of Europe is to be saved.

TRUTH ABOUT THE DANUBE.

FROM the political implications of the London Conference we may fitly turn to a consideration of the economic and financial aspects of the Danubian problem, which was its genesis. Though the conference is still sitting as we write, it is obvious from the proceedings of the early meetings that the assembled statesmen are encountering heavy weather. The reason is not far to seek; for there has been no sign throughout the discussions which have led up to these negotiations that any Government has seriously faced the question as to what the future economic organisation of Europe should be, or attempted to come to an understanding as to how it should be attained.

It is true that perhaps many statesmen would pay lip-service to the doctrine propounded by the economic experts last August at Geneva, that Europe must aim at becoming, some day, a single economy unity; but unfortunately there is as yet no evidence of a willingness to begin to make the radical readjustments which a development in this direction involves. On the contrary, in

almost all quarters the tendency is to cling to the *status quo* and to insist on a minimum of change. The so-called French plan, for example, of a 10 per cent. preferential reduction in the tariffs of the five Danubian States, coupled with a loan, on terms, of some £10 millions sterling, is clearly quite inadequate either to turn the course of economic depression in the countries concerned, or even to tide them over the period of depression. A reduction of an import duty from, say, 40 per cent. to 36 per cent. in favour of neighbouring States may direct a little trade from third parties, but under the most favourable circumstances it would have next to no effect in fostering the total volume of trade. Moreover, if 10 precautions are taken to prevent it, there is every reason to fear that the experience of the British Empire preferential system would be repeated, and that the scheme would be followed by a raising of the general rate to, say, 45 per cent., leaving the preferential rate where it was before. In any case, tariff adjustments are at present of next to no importance so long as trade is in fact throttled by the control of foreign exchange, quotas, etc., which are far more effective devices for stopping the international movement of goods.

Consider again what part may be played by another loan of £10 millions. The reconstruction loans of the League of Nations alone total £82 millions, and as late as 1930 Austria raised £11.3 millions. British participation in these loans amounted to nearly £40 millions, whereas France contributed less than £2½ millions (gold). Including commercial obligations, Hungarian indebtedness to Great Britain alone is of the order of £35 millions. Indeed, Great Britain herself must have invested in South-Eastern Europe, on long or on short term, an amount much more than ten times the sum now proposed to be lent. It is difficult to see what good purpose could be served by a new loan of so small an amount. Unless there is real hope of a fundamental change in economic conditions, a loan of this kind must be regarded, not as a commercial proposition, but as a gift which the wealthier nations are prepared to lose in order to tide over a crisis, which might otherwise involve them all in a general collapse. It is from this point of view, presumably, that Germany and Italy are invited, under the French plan, to give preferential advantages to the produce of the Danubian countries in their home markets without asking any corresponding benefit or raising any objection to proposed preferences for internal Danubian trade which must to some extent prejudice their own.

The French scheme is, in fact, a relief measure coupled with a small and, in itself, unimportant departure in commercial policy which, however, points towards a future evolution in a particular direction. Whether this is a step in the right direction depends on the answer to two questions. Firstly, are the nations ready to push the scheme much further, so as to break down the present obstacles to the economic development of Europe and enable the changes in economic structure, which are essential, to take place? Secondly, is the particular grouping and method proposed the right one?

To enable trade to expand again, it is essential to start with the monetary situation and to untie or to cut through the tangle of exchange restrictions which now exist. But it is also imperative, when this is done, that serious modifications should be made in tariffs. In asking whether or not the nations are prepared to begin to make a radical modification of existing tariff systems, one raises the vital question whether they are prepared to abandon uneconomic industries or agricultural activities for the sake of the much greater development of those that can contribute to their real wealth. This is really the crux of the question, and it points, moreover, to the need of modifications not merely between a select group of countries, but in the tariffs against third parties. To attempt, without tackling the general question of European trade, simply to create new self-contained units, even if somewhat larger than the absurdly small units of the Peace Treaties, is not enough, but would merely perpetuate one of the evils which by general admission has contributed to bring about the present situation.

Next, it is pertinent to ask—even assuming that a beginning should be made with a small group of nations—

whether the proposed grouping is appropriate. If the three countries, Austria, Hungary and Czechoslovakia, were alone in question, it could at least be said that we were returning to something like the old Austro-Hungarian Empire. The inclusion of five countries, however, and in particular the admission of Roumania, means that the Danubian group would have a large agricultural surplus to dispose of. A preference system within this group would have substantial advantages for Czech and Austrian industries, but would leave a difficult agricultural question which can be solved only by arranging for markets outside the group. In itself, even if the preference were a large one, or if internal tariffs were abolished altogether, such a system would not solve the economic difficulties of the agriculturalists who form the bulk of the population. It would not, therefore, give the necessary stimulus to increase productivity or enlarge buying power. In other words, success depends on the relations established with other countries, and particularly with Germany and Italy, with whom a large part of the trade of these countries is done.

This question, as well as the discussion that has taken place as to whether Bulgaria should, or should not, be included, clearly shows that the Danubian problem is part of a much larger question. It is possible—even probable—that some departure from the old most-favoured nation rule, under which all countries benefit from a tariff change, may be necessary and that some measure of preferences will be unavoidable—at all events as a provisional stage—in moving towards the distant ideal of a single European market; but it would be a great mistake to start by creating simply, and unconditionally, a new unity in the middle of Europe and setting in motion forces that would tend to solidify a new tariff wall. Whether this new move would prove a help or a hindrance to the ultimate and inevitable development of Europe depends on two considerations: one is the nature of the tariffs adopted by the Danubian States towards third parties, and the other is the terms on which these other countries may be permitted to participate in the preferences or other special advantages of the agreement.

It is suggested that as France is likely to supply the greater part of any new money that may be put up, she is entitled to have a specially important voice in determining what form the arrangements to be made at this stage should take. This is not a claim that can be maintained. Italy and Germany are far more interested in the trade of these countries than France—and therefore stand to lose far more by any modification of their most-favoured-nation rights; while England and America both have much greater financial commitments in these countries than France, and are entitled to insist that any change which is made will lead to a condition of affairs which will restore the real basis of the credit of the nations concerned.

So far as the question of preferential arrangements and the surrender of most-favoured-nation rights is concerned, the only sound line of progress is to examine and define the conditions under which other countries may

participate. Clearly, one of the conditions must be that countries which wish to share the benefits must give equivalent advantages. But that perhaps is not all; for we must be very careful not to throw overboard the great benefits of the most-favoured-nation system in favour of a plan of bargaining and discrimination. If the old system is to be modified it must be in a form which will lead to a real reduction of tariffs, and the only way to ensure this is to lay down—and this applies to preferences in a wider field than the Danube—that countries should only be entitled to ask for special privileges if their own tariffs conform to a clearly defined standard of moderation.

In conclusion, we would add that if we have dwelt upon the difficulties with which the statesmen assembled at the Four-Power Conference were faced, and the defects in the tentative proposals which, apparently at the instance of France, were placed before them, we have done so not from any lack of sympathy with the straits in which the debtor countries of South-Eastern Europe are situated, or because we fail to recognise the urgent need of action to deal with the impingement of the crisis on what is perhaps the weakest spot in the world's economic structure. The report of the Financial Committee of the League, which we summarise on a later page, points cogently to the imperative need of taking immediate steps to arrest the present drift to disaster; and, though the Committee's recommendations, professedly of the nature of palliatives, fail to go to the root of the disease—which they rightly diagnose as centring in the world price problem—their frank admissions of the increasing inadequacy of temporary and partial measures of relief, and of the threatened position of the League loans themselves, should serve to bring home to Governments the urgency of fundamental remedial measures. Yet, necessary though it be to go beyond mere temporising stop-gaps and to seek an enduring solution of the south-eastern problem, it is the more necessary that the long-range objective at which we aim should be sound. Europe has gone so far along the road of economic folly in pursuit of economic self-sufficiency that it is a hard and painful task to retrace her steps; but retraced the steps must be. Simply to "mark time," in an effort to avoid the need for readjustments involving an immediate sacrifice, is to perpetuate the conditions which have made for increasing impoverishment.

THE MOVEMENT OF PRICES.

A NOTE published later in this issue shows the most recent movement of commodity prices, comparing them with the level of a fortnight ago; but we take the opportunity to analyse in greater detail the condition of prices at the end of the first quarter of the year, just over six months since the suspension of the gold standard. At the end of March sterling stood at a discount of about 23 per cent. on gold currencies, so that had there been since September 18th

no movement of gold prices, one would have expected sterling prices—or at all events all sterling prices which are subject to external influences—to stand about 30 per cent. higher than on that date. The combined effects, however, of the British abandonment of the gold standard and the continuation of the world depression had lowered gold prices meanwhile by 13½ per cent., so that unless the pound were falsely valued, or unless British prices were moving out of step with world prices, it would have been natural to expect a rise of about 62 per cent. in the sterling price index. Actually, the latter rose by only 6.4 per cent. between September 18th and March 30th, and stood on the latter date at only 97.1 per cent. of its level a year earlier. The percentage changes in the individual items are shown below:—

The rise in sterling prices since the suspension of the gold standard has been very unevenly distributed. Among the commodities whose prices have risen by a greater measure than that by which sterling has meanwhile depreciated are all the principal grains except rice and barley, potatoes (in which case last year's crop failure is a special factor), coconut oil, raw cotton and flax, while other commodities showing an "abnormal" rise include rice, English beef, cocoa, tobacco, most of the textile group, tinplates, copper and spelter. Commodities, on the other hand, which show a fall even of their sterling price include barley, chilled beef, mutton (both home-grown and imported) and bacon; tea, sugar and Danish butter; steam coal, cement, hides and leather, and rubber. (The last was specially affected by the failure of negotiations for a fresh restriction scheme.) Foodstuffs and textiles have much the best tale to tell, in spite of the heavy fall of mutton prices, which diminished the margin between the sterling and the gold price indices, since mutton finds no place in the latter. The cereals group is the only one to show a rise in the twelve months, and indeed the better prices now obtaining for grain form perhaps the most important feature of recent price movements. There have, of course, been sharp fluctuations from time to time, but a new basic level, for wheat and oats at least, seems to have been definitely established. It should be noted that mutton, bacon, tea and butter, as well as other commodities, are obtained principally from within the "sterling area," so it would be misleading to apply to their prices the test of the depreciation of the pound against gold. In any case, even in normal times, individual commodities show considerable variations from the average over a period of six months; and, in times like these, it is natural that individual commodities should be affected in very different degrees by special influences such as import re-

strictions (e.g., by Germany) or exceptional conditions of over-production.

In the textiles group it will be seen that the prices of American cotton, of cotton yarn and of cotton cloth have advanced by successively smaller proportions, which was only to be expected, as the costs of each stage of manufacture are relatively inelastic. The world market for cotton, wool and flax has definitely improved of recent months, on the better statistical outlook, though cotton has received a setback of late and its gold price (spot in New York) is lower than it was when we suspended the gold standard. Among metals, lead fell by over 30 per cent. in New York, the increase in the British price for this metal being thus greater than was indicated by the discount on sterling. The price of lead, which had been pegged in the United States, has since been allowed to fall to a free market level.

It may be asked at this point what light our index throws on the effect of tariffs upon prices. The answer is that the figures have little bearing on the question, since not only is a large proportion of the items (including wheat and maize, meat, tea, tobacco, raw cotton and wool, silk, coal, copper, petrol, hides, and rubber) exempt from the 10 per cent. duty, but the prices of a further group, notably rice, cheese, cotton yarns and cloth and jute, are determined, as far as the British market is concerned, almost entirely within the Empire, including Great Britain. Prices of a few commodities may have been affected by the tariff, but even where the duty applies, the quoted prices, as in the case of coconut and linseed oils and of metals, are exclusive of duty. An index number of wholesale commodity prices is an altogether unsuitable instrument for measuring the effect of a tariff on prices, as it is concerned almost exclusively with primary products which no tariff would be designed to make more costly.

On the whole, the picture given by these figures of the course of sterling prices is not altogether gloomy. In Great Britain, and presumably within the "sterling area," which covers so large a part of the world, prices are still appreciably higher than before the suspension of the gold standard. On the one hand, the perils of inflation have been avoided, while on the other gold prices have not fallen all the way to meet the depreciation of sterling. But when we turn to gold standard markets the scene at once darkens. Prices have fallen further than ever, and if the present tendency continues the whole of the discount on sterling will before long have been blotted out by the increase in the purchasing power of gold. Already the relative undervaluation of sterling, on the basis of price levels, has been removed, for in three months, while British prices fell by only 2 per cent., gold prices fell by 8 per cent., whereas the pound rose in value. It is not, however, too much to hope that, in view of the circumstances affecting individual commodities, the process will sooner or later be reversed, and that an improvement in sterling prices, through the economic improvement of this country and the relaxation of credit conditions, may draw gold prices upward also.

The experience of the past few weeks lends no support to the view that an appreciation of sterling stimulates a recovery of gold prices. Though the initial influence of the depreciation of the pound may have contributed considerably to lowering prices in "gold" markets, the recent rise in sterling (with all its attendant depressing effects in an area now much more important to international trade than the "gold" region) has not produced the reverse effect.

COFFEE VALORISATION.

Though there is nothing new about attempts to regulate the markets for staple commodities, regulation of this kind has been so very much in evidence during the past few years, and has led to such unhappy results and usually to its own undoing, that it has attracted an unusual degree of interest. Instead, however, of being merely looked at askance as "restraint of trade," attempts at conscious control will certainly continue to be made, and must receive consideration as a device which may play a permanent part in the world's economic activities. No more valuable contribution to the study of this development in modern commerce has been

made than the series of investigations which Mr J. W. F. Rowe is conducting for the London and Cambridge Economic Service, the latest of which deals with the control of the coffee market in Brazil.

Apart from the statistical section, Mr Rowe's study* falls into two parts. The first relates, as briefly as the extreme complexity of the story to be told will allow, the history of the various valorisation schemes which have been tried in Brazil; the second is a most interesting account of the liquidation which followed the collapse of September, 1929, and is still in progress, and an attempt to gauge the future prospects. A special interest attaches to this study because, as Mr Rowe points out, whereas most market control schemes are conceived in bad times and tend to be abandoned when prosperity returns, coffee valorisation has become part and parcel of the Brazilian economic system, and whatever Brazilians may think of the merits of this or that system of regulation, they are apparently convinced of the necessity of some form of permanent control. The reason for this is the extremely variable character, owing to purely natural causes, of the coffee crop, which, in conjunction with a very inelastic demand, means that the market difficulties which arise in other industries only in times of general trade depression or of exceptional bad luck are a permanent problem for the coffee planter.

Valorisation was first tried in 1906, and by the beginning of the war valuable experience had been gained and certain lessons learned—such, for example, as that the stocks which had to be carried for the purpose of regulation should be carried in Brazil and not in consuming centres. Another lesson which might have been, but apparently was not, learnt from the pre-war experience was that a permanent valorisation scheme might have to be accompanied by regulation of new planting.

Two successful experiences in 1917 and 1921—though a heavy frost had much to do with the triumph in the earlier instance—confirmed the Brazilian belief in the system, and a permanent scheme of control, by the regulation of entries into Santos, was established by the Federal Government, and handed over, in 1924, to the Government of the State of Sao Paulo, which set up the Sao Paulo Coffee Institute for the purpose. For two years control was conducted, in Mr Rowe's judgment, "with considerable skill and with benefit to the producer." At the end of 1926 the system of regulating entries into Santos was made automatic, permitted entries being based on the exports of the previous month, some increase in elasticity being made later. About the same time, the Banco do Estado de Sao Paulo was established with the aid of a £10,000,000 loan from London. The crop of the following year was so heavy that a breakdown was only averted by additional funds from London and the other coffee-producing states, which had hitherto held aloof, were induced to join the scheme.

A considerable amount of new planting had been taking place, and its effects when the new trees should come into bearing were not taken into account in considering the statistical position. How far this new planting was the result of valorisation is discussed in the Memorandum; a more immediately serious occurrence which was the direct result of, perhaps, the most serious mistake made in the course of valorisation was the development of a general trade boom. Advances made to the planters had been based, not on their minimum cash requirements, but on the full value of the security they offered, with the result that they felt unwontedly wealthy, spent lavishly, and soon created a strained exchange situation, which was only eased by further foreign borrowing. Another bumper crop in 1929, requiring extensive financing, thus found the available credit exhausted, and the Stock Exchange crash of September set the seal on the impossibility of obtaining foreign assistance.

From his study of the history of valorisation up to the collapse of September, 1929, a study of which no short summary can give any adequate idea, Mr Rowe draws several conclusions, some of which are of interest for the general question of control. In the first place he considers that the effect of the scheme in raising, as distinct from

stabilising prices, has been greatly exaggerated. Secondly, he is impressed by the very serious openings for corruption which any similar system offers, and which were probably used to the full in this case. Apart from this, the mechanism of the scheme appears to have worked smoothly. The two greatest errors in the administration of the scheme during these ten years were the granting of credit to planters beyond their requirements and the failure, until 1931, to prohibit new planting. The extent to which the scheme was used by the Government of Sao Paulo for political purposes suggests the importance, wherever it is possible, of keeping schemes of this kind in the hands of the interests concerned and avoiding administration by Governments, though Mr Rowe admits that this might prove impracticable in a newly-developing country like Brazil.

Mr Rowe's account of the liquidation which followed is most absorbing, and unfortunately does not lend itself to summarisation. He expresses the view that it was fortunate for Brazil that the crash was not postponed, since, with excessive productive capacity, stocks would have continued to accumulate, while the maintenance of the price would have meant the continuance of new planting. The policy of gradual liquidation of stocks over a number of years he approves, if only because there was no practicable alternative, but he criticises the Coffee Realisation Loan, which was raised abroad for this purpose in April, 1930, after the Federal Government of Brazil had refused its help, on three grounds. First, that the amount of the loan was excessive, for, while it is impossible to find out exactly how much new money it produced after outstanding commitments had been met, the net yield was certainly more than the Sao Paulo Government could need for coffee financing if it adhered to its express determination not to accumulate more stocks. In the second place, the terms of the loan included a rather complicated arrangement for the Government purchase of three million bags of coffee with the object of raising the price, whereas the most urgent need was for a decline in price to a level which would discourage production. Thirdly, the regulation of entries into Santos was left in the hands of the Sao Paulo Government, which would be perpetually under pressure from planters to err, since error in crop estimating is inevitable, always on the side of underestimating the crops. Apart from these three considerations, Mr Rowe reaches the conclusion that the loan was the best available means of meeting the situation.

Immediately, however, new difficulties began. Stocks were found to be several millions more than had been generally supposed and the price began to decline. A bumper crop for 1931-32 was anticipated and it was this and the general realisation of Brazil's excessive productive capacity, rather than the political situation, which led to the vicious circle of declining exchange and coffee prices which followed, since the balancing of Brazil's international accounts depends largely on remunerative exports of coffee. As the Federal Government could not face a further heavy fall in coffee prices, with its consequent effect on the exchanges, the only sound recourse was to restriction of output, though actually the Government did embark on a scheme, characterised by Mr Rowe as "the decision of a madman," of purchasing all the stocks existing in Sao Paulo on July 1, 1931. The main remedy, however, was the adoption, after a short-lived attempt to impose a prohibitive tax on planting, of a tax on exports, the proceeds of which were to be used for the purchase and destruction of surplus supplies.

* "London and Cambridge Economic Service." Special Memorandum No. 35.

Mr Rowe's discussion of the export tax device is extremely interesting. As a means of securing gradual liquidation he approves it, and he argues convincingly that those responsible never believed, whatever they may have tried to tell the public, that it could do anything more. As a means, however, of discouraging production in Brazil it has so far not been very effective, because the decline in the exchange has prevented the milreis price of coffee from falling as much as the gold price and has therefore partly counteracted the burden of the tax upon the producers, whose costs are mainly affected by the internal value of the milreis.

In discussing the prospects of a large scale reduction of capacity, Mr Rowe sees hope in the facts that weather of recent years has been exceptionally favourable, a state of affairs which presumably must soon come to an end; that cultivation has been much less careful during the last two years, and that the practice of interplanting with cereals has been growing. Nevertheless, he gives convincing reasons for believing that there is little immediate prospect of extensive abandonment of planting, especially as the immense scheme of coffee-destruction launched last December seems certain to keep the price at its present level throughout 1932. Everything, therefore, seems to depend upon the promise next summer of the 1933-34 crop.

In ending upon this note, Mr Rowe leaves his reader, whose interest has been worked up during the closing section, with the feeling commonly associated with the tantalising words "to be continued." But although his study has some of the characteristics of an instalment of a serial, it is complete in itself as a penetrating and impartial examination of a method which is obviously beset at every turn with hidden pitfalls and unexpected dangers.

COAL MINING IN 1931.

ONCE again Parliament will shortly be asked to review its past legislation on the coal industry. Part I. of the Coal Mines Act of August 1, 1930, which established schemes for the regulation of production, supply and sale of coal, expires at the end of this year. Further, unless the Act of July 8, 1931, providing for the continuation of the 7½-hour day for one year, is prolonged, the industry will automatically revert in three months' time to the 7-hour shift.

It is therefore of interest to analyse the coal-mining results for 1931, which is the first complete year covered by the Act of 1930. Combining the last four statistical summaries issued by the Mines Department (that for the three months ended December 31st last was published this week), we show in the following table comparative results of the coal industry's working during the past four years:—

Item.	1928.	1929.	1930.	1931.
Tonnage disposable (millions) ...	211.5	230.4	214.2	195.9
Wages	Mn. £. 100.2	Mn. £. 105.7	Mn. £. 99.7	Mn. £. 90.5
Stores and timber	17.0	18.0	17.2	15.0
"Other" costs	27.4	26.6	24.9	24.0
Total "net costs" (a)	150.0	156.0	147.1	134.5
Proceeds	140.2	160.2	150.8	137.3
Profit or loss	-9.8	+4.2	+3.7	+2.8
Miners employed (thousands) (b) ..	881	894	875	811
Output per man-shift (cwt.) (b)...	21.29	21.69	21.61	21.61

(a) Including royalties and miners' welfare fund contributions, and after deducting proceeds of miners' coal.
(b) Mean of quarterly averages.

It will be seen that a decline in the tonnage disposable of 18.3 million tons was accompanied by a decrease of £18.5 millions in proceeds. As the reduction in costs, at £12.6 millions, did not keep pace with the falling off in sales revenue, profits declined from £3.7 millions in 1930 to £2.8 millions in 1931. The next table shows the quarterly trend of results per ton disposable:—

Quarter ended.	Per ton disposable.						Thousand Miners Employed.	Output per Man-shift.
	Proceeds	Costs.		Profit.	Loss.			
		Wages.	Total.					
Dec., 1928 ...	s. d. 13 5½	s. d. 9 2½	s. d. 13 8½	s. d. ... 0 3	s. d. 0 3	851	Cwts. 21.80	
Dec., 1929 ...	14 3	9 3	13 3½	0 11½	...	904	21.78	
Dec., 1930 ...	14 1½	9 3	13 7½	0 6½	...	849	21.84	
Mar., 1931 ...	14 3½	9 2½	13 6½	0 9	...	839	21.78	
June, 1931 ...	13 9½	9 3½	13 11½	...	0 1½	819	21.44	
Sept., 1931 ...	13 10	9 4½	14 0½	...	0 2	788	21.35	
Dec., 1931 ...	14 1½	9 1½	13 6	0 7	...	799	21.86	

In the December quarter, the rate of output per man-shift was higher than in the corresponding period of recent years, with a consequent fall in wage costs per ton. Despite the decline in the total tonnage disposable, as compared with the December quarter of 1930, "other costs" remained unchanged, and, as was to be expected, the proceeds per ton were slightly lower. The rise in profits per ton from 6½d. to 7d. is therefore entirely due to the increase in the output per man-shift.

The subjoined table gives comparative results per ton for the principal districts in the December quarter of 1930 and 1931:—

District.	Quarter ended December 31st.					
	1930.			1931.		
	Proceeds.	Net costs.	Profit (+) or Loss (-).	Proceeds.	Net costs.	Profit (+) or Loss (-).
Scotland	s. d. 13 1½	s. d. 12 10½	s. d. +0 2½	s. d. 12 1	s. d. 12 0	s. d. +0 1
Durham	12 11½	12 7½	+0 3½	12 7	12 7	+0 0½
S. Wales	15 7½	16 1½	-0 6	15 3½	15 2	+0 0½
Yorkshire	13 7½	12 9½	+0 10½	13 10½	13 0	+0 10½
N. Derby and Notts.	13 8½	12 6½	+1 2½	14 4	12 10	+1 6
Lancs. and N. Staffs.	17 0½	16 5½	+0 7	17 2½	16 4½	+0 10½

It is interesting to note that there has been a considerable reduction in costs in Scotland and in South Wales. In both these districts economies have, however, been partly negated by a sharp decrease in proceeds. On the other hand, in Yorkshire and in North Derby and Nottinghamshire, the increase in proceeds per ton has outweighed a rise in costs.

The following table reveals that the decline in home consumption of coal has been much less pronounced than the decrease in exports. Unfortunately, the recent restrictions imposed on the importation of British coal by Germany and other countries is aggravating the situation in those districts which depend mainly on foreign markets:—

	(Million tons.)			
	1928.	1929.	1930.	1931.
Tonnage disposable	211.5	230.4	214.2	195.9
Exports (a)	53.7	64.4	58.4	45.9
Bunkers	16.7	16.4	15.6	14.6
Retained in United Kingdom	141.1	149.6	140.2	135.4

(a) Including coke.

In view of the havoc caused by the world financial crisis, the coal-mining results have not been too satisfactory. Though it is true that the regulation of production, supply and sale of coal has not yet resulted in a marked increase in the efficiency of the industry, the schemes have nevertheless prevented what might well have been a catastrophic decline in prices. At the same time, the anxieties of consumers lest supplies might be unduly limited, with a consequent rise in prices, has proved to be without foundation. The chief problem of the industry is one of surplus capacity. This difficulty must be solved before the industry can once more become profitable. The Coal Mines Reorganisation Commission set up by Part II. of the Coal Mines Act to promote the reorganisation of the industry by amalgamations has so far achieved little of concrete value. Admittedly, a complete reorganisation of a complex industry must of necessity be gradual, and it is therefore premature to pronounce final judgment yet upon the Commission's work. It is clear,

however, that only in so far as Part II. of the 1930 Act leads to greater concentration of production and the elimination of permanently redundant units, will the industry be able ultimately to reap the benefits of the powers of output and price regulation which Parliament, experimentally, conferred upon it.

THE LEAGUE AND THE DANUBE.

Report of the 45th Session of the Financial Committee of the League Council.

In view of the significance of its conclusions and their bearing on the problems before the Four-Power Conference, we print below a summary of the Report of the 45th Session of the League's Financial Committee dealing with the situation in Austria, Hungary, Bulgaria and Greece. A special meeting of the Council to consider the report has been convened at Geneva on April 12th. Earlier documents of the Financial Committee relevant to this problem are the Report on Austria and Hungary, A.55 (b), dated September 19, 1931; the Report on the Financial Position of Hungary, C.749 M.348, dated October 24, 1931; and the Report of the 44th Session of the Committee, C.91 M.46, dated January 28, 1932. In addition, there are two reports, C.34 M.18 and C.31 M.16, both dated January 12, 1932, on the financial position of Austria and Hungary, respectively, in the last quarter of 1931, submitted by the representatives of the Financial Committee in those two countries.

The present report consists of an introduction reviewing the general situation, followed by separate memoranda on the position of the four countries with whose problems the Committee is more particularly concerned.

Introduction.

Referring to the general setting in which the difficulties of Austria, Hungary, Bulgaria and Greece have to be considered, the Committee observes that whatever may be the errors in budget or loan policy which have been committed, the strain to which these countries are subjected is due mainly to world causes over which they have had but little control. In a previous report last September the Committee had declared that the success of individual methods of reconstruction recommended by them for particular countries was closely dependent on the early solution of the general world price-problem. Last autumn the Committee had entertained hopes that the Powers would be able to take prompt action in connection with certain major financial problems, such as political debts. In the event, the Lausanne Conference was postponed until June; the world situation seriously deteriorated, gravely affecting the situation of the four countries within the Committee's purview; and, in consequence, the measures hitherto suggested to help individual countries became increasingly insufficient.

The fundamental cause of the present inability of the four States in question to obtain the foreign exchange necessary to meet in full their external obligations is to be sought not in defects of internal administration or policy, but in the collapse of world prices, which has resulted in a 70 per cent. increase since 1928 in the burden of fixed charges. Faced with growing difficulties in exporting a sufficient quantity of goods to meet their obligations, and weakened in the *crise de confiance* both by withdrawals of short-term credits and inability to obtain long-term loans, the debtor countries have endeavoured, by import restrictions and control over transactions in foreign exchange, to improve their export balance and at the same time to avoid currency depreciation. But such measures must be looked upon as transitional. Unless the creditor States accept the goods in which the major part of the debts can alone be paid, the tendency is simply to still more rigorous methods of control and trade obstruction. As a result of the fall in prices and the progressive strangulation of commerce, a shrinkage of fiscal receipts everywhere menaces budgetary equilibrium; retrenchment becomes imperative, but the resistance of different interests dependent on the public revenue renders rapid readjustment difficult.

When it approved, in its earlier reports, temporary measures of exchange control, the Financial Committee was fully conscious that such a policy could be effective only for a relatively short period, and was justified only on the expectation that within that period steps would be taken to deal with the fundamental causes of the crisis. As that expectation has not been fulfilled, it is now urgently necessary that positive action should be taken to reinforce the merely negative steps which the Committee has so far recommended. At the same time, the Committee does not think that a final solution can to-day be put forward. The bases for such a solution cannot be clearly envisaged until hoped-for developments in Europe and elsewhere take place. The immediate and urgent problem is to gain a breathing space and to arrest the present tendencies to disaster.

Remedial Measures.—In order to avert the grave consequences of further financial collapse in many parts of Europe, it is necessary to preserve certain elements of financial stability on which future improvement can be based. This being so, there is urgent need for

immediate collective action in the form of loans to be raised on international markets under Government guarantees, without which financial aid could not be mobilised. Austria and Hungary are the two countries most urgently in need of aid to-day; but it is desirable to make provision in fixing the amount of the loans for other possible pressing eventualities. In connection with the flotation of the loans the following recommendations are made:—

- (1) The form of guarantees should be the same as that employed in the case of the 1923 Austria Reconstruction Loan.
- (2) The loan should be of a maturity of not more than three to five years. The Committee contemplates that it would be subsequently repayable out of the proceeds of long-term loans to be raised by the borrowing Governments.
- (3) The granting of such aid to any Government should be conditional on its acceptance of such methods as the League may suggest for assuring sound administration of public finance and of the national bank.

The Committee welcomes recent developments directed towards the establishment of closer economic relations in Central Europe (i.e., the project of a "Danubian Federation"), but suggests that Bulgaria should be included in the group of countries under consideration. The Committee further suggests that an independent person enjoying the confidence of the various Governments might be appointed to render assistance in the negotiations attending any such scheme for promoting greater freedom of Central European trade.

The League Loans.—The Committee observes that the Hungarian Government, when compelled to suspend the transfer of the greater part of Hungary's foreign obligations, decided to give priority to the service of the 1924 Loan. This decision was taken by the Hungarian Government without consultation with the Committee, but, as it has now become necessary for other States to postpone part of their foreign debt transfer, the Committee has endeavoured to form an opinion on certain general considerations affecting such cases. The Committee's view is that, in the absence of contractual provisions which decide the position, a Government which is compelled to default on any of its foreign obligations must make its choice as to priority in the light of what is in the best interests of the country concerned and its creditors as a whole. In many cases the final prospects of short-term lenders depend on the possibility of ultimate funding operations. If obligations such as those of the League loans are allowed to fall in disrepute the possibility of such funding will be very greatly decreased.

Austria.

The difficulties of Austria are steadily increasing as a result partly of the world crisis, partly of the fact that the readjustment of Austrian costs has not yet been achieved. The State Budget for 1932 (January to December) was voted at a total of 2,000 million schillings revenue, 1,900 millions expenditure, and 100 millions debt redemption. Revenue is likely to show a short-fall of 30.2 millions, and expenditure, on the present basis, an increase of 73.5 millions. It is proposed to meet the deficit by further administrative economies (80 millions) and by additional taxation. Apart from the State Budget, the railway administration anticipates a deficit of 20 million schillings, to which must be added a similar amount due to be paid on previous capital commitments. The Committee considers that no further railway commitments should be undertaken, and that in the additional Budget to be submitted to Parliament provision should be made for covering the prospective railway deficit. The floating debt of the Treasury (105 million schillings) and of the railways (104 million schillings) has already reached an unduly high figure.

After noting (a) that a plan for the reorganisation of the Credit-Anstalt has been elaborated by the new general manager, subject to future negotiations between the Austrian Government, the Credit-Anstalt and the creditors concerned, and (b) that the new president of the National Bank has initiated a conservative credit policy, the Committee observes that the foreign exchange reserve of the bank again diminished in February. Until the balance of trade can be effectively influenced by an appropriate credit policy, exchange restrictions should be rigorously enforced. Temporary measures to curtail the present volume of imports by prohibitions, or otherwise, if necessary, would appear to be advisable.

Assuming that Austria will do her utmost to solve her problems, the Committee recommends that (1) foreign short-term credits previously given to the State or the National Bank should be prolonged for a further period without reduction, and (2) that an international loan under the scheme outlined in the Introduction should be raised for the benefit of Austria to the extent of 100 million schillings.

Hungary.

The Committee is unable to report a great improvement in the position of Hungary. With regard to the Budget for 1931-32, revenue is unlikely to exceed 800 million pengő (against 890 millions estimated expenditure). For 1932-33 immediate reductions in expenditure must be made. Moreover, financial equilibrium cannot be restored until the State undertakings cease to be a burden on the State Budget.

The balance of trade has not substantially changed. Both exports and imports show a great contraction. Hungary is faced by a constantly increasing inability to dispose of her goods abroad, and it is doubtful whether clearing agreements, to which there are many objections in principle, can bring any marked improvement. Until the next harvest, the position with regard to external transfer is extremely grave. All foreign payments, other than amounts due for international railway and postal clearings, have been suspended, except service of the 1924 Loan and interest on the National Bank's foreign debt. A six months' standstill agreement with British short-term creditors has been concluded, and ought, in the

Committee's opinion, to be followed by similar agreements with other short-term creditors.

Considerable efforts have been made to meet the immediate difficulties, but it is impossible in the uncertain state of general world conditions to reach a final solution.

Bulgaria.

(1) *The Transfer Problem.*—Bulgaria has no substantial invisible exports. On an estimate of probabilities, the National Bank may expect to receive on an average during the next half-year 300 million leva a month in respect of merchandise exports, against which, however energetic be the measures of restriction, imports cannot fall below a level which will require the National Bank to disburse in foreign exchange less than 200 millions monthly. Out of the balance of 100 leva monthly there have to be met invisible imports, placed at 10 million leva monthly, and transfers on account of public debt totalling 91 millions per month, including 22.3 millions for reparation payments. In addition, there are outstanding debts of 1,300 million leva due abroad in respect of goods.

Bulgaria cannot meet all the transfer obligations which she has contracted. Monthly reparation payments, whose resumption under the Hoover Moratorium is due to begin on April 15, 1932, should continue to be suspended on the understanding that this prolongation leaves the legal position unaltered. In addition, transfers for the whole of the payments in respect of external public debt should be reduced by 50 per cent. during the six months April-September, 1932. The Bulgarian Government should continue to enter in the Budget the amounts not transferred and to pay these amounts in leva into a special blocked account opened with the National Bank. The sum standing to the credit of this account may be temporarily invested in Bulgaria by the transfer to the fund of commercial bills or Treasury bills in the possession of the National Bank. It might be permissible to allow—for a period not exceeding one year and by an amount not exceeding 100 million leva—an increase of the limit of 600 million leva fixed for the short-term borrowing allowed to the Bulgarian Government by Article 9 of the Protocol of September 8, 1928, provided that the proceeds shall be used solely to meet arrears of payments for the financial year ended March 31, 1932.

(2) *The Budgetary Problem.*—The Budget for 1931-32 (April 1st to March 31st) is likely to show a deficit of 600 million leva, and revenue in 1932-33 will probably not exceed 6,000 million leva, while expenditure is now at a level of 7,300 millions. The Bulgarian Government is prepared to introduce further economies totalling 300 millions and new taxation amounting to 320 millions, while the Financial Committee's delegation has proposed additional measures to produce 150 millions in economies and 200 millions by new taxes. The Committee considers that further energetic measures must be taken to meet the remaining deficit of over 300 millions, and that this should be possible if a radical reorganisation of the financial administration is carried out. It is suggested that, on the 20th of each month, the Minister of Finance should establish the total of receipts and expenditure in the previous month, and that, within a week, the Council of Ministers should fix the total expenditure authorised for the following month, within a limit not exceeding 90 per cent. of the three previous months.

Greece.

(1) *Present Conditions.*—There is a steady fall in the foreign exchange reserve of Greece, due partly to the depressing effects on trade of the present crisis and partly to the cessation of foreign loans. The Bank of Greece lost in 1931 about 1,100 million drachmæ in exchange, and since the beginning of 1932 has lost over 600 millions more, in spite of exchange restrictions. There is a small deficit in the current Budget year ended March 31, 1932. For 1932-33, on the previous basis, a deficit of 1,800 million drachmæ was in sight. Economies of 500 millions have been effected; and it is proposed to save 500 millions on internal debt, 300 millions by suspending repayments of State debt to the Bank of Greece and the National Bank, and 75 millions by certain other economies. This still leaves a deficit of 425 million drachmæ, in addition to which, if the present programme of irrigation works is carried out, 1,000 million drachmæ in cash must be found in 1932-33. The service of the foreign public debt of Greece may be estimated at not less than 900 million drachmæ for interest and 330 millions for sinking fund.

(2) *The Committee's Recommendations.*—The Greek Government cannot maintain in full the transfer service of its foreign debt. The Committee feels obliged to recommend that the International Financial Commission should be authorised to agree to suspend for twelve months the transfer of the sinking funds of Greek loans under its control and that similar measures should be applied to other Greek foreign loans that are not under the control of the International Financial Commission. This suspension of transfer is to apply to the League loans of 1924 and 1928.

The Committee's recommendation is subject to the maintenance by the Greek Government of the full payment in drachmæ of the amortisation, which should be paid into an account in the Bank of Greece in the name of the International Financial Commission. That Commission should be authorised to agree to these sums being temporarily employed by the Bank of Greece in advances to the Greek Government for unavoidable expenditure on the existing irrigation schemes.

The Committee raises no objections, subject to certain conditions, to the suspension of debt redemption payments to the Bank of Greece and the National Bank. Suggestions that have been made that the central bank should be re-amalgamated with one of the existing Greek banks are not approved.

The Committee considers that a foreign railway expert, to be suggested by the League, should investigate the position of the Greek railways.

A further effort must be made in order to secure a properly balanced Budget, partly by readjustment of certain taxes—including

the introduction of a turnover tax and increases in postal rates—and partly by a further reduction in expenditure. Government expenditure abroad, on other than debt services, which last year reached the very large figure of £2½ million sterling, should be reduced. At best, however, the transfer position must be regarded with anxiety; and it is of urgent importance that Greece should be included in the scheme set forth in the Introduction for the raising of guaranteed loans under international auspices. If Greece were enabled to borrow a sum of not more than \$10 millions, this would reassure the Greek public with regard to the drachma, and would enable further progress to be made on the irrigation works, the successful conclusion of which offers the best hope of ultimately enabling Greece to meet her foreign obligations in view of the resulting greater national production of foodstuffs.

Notes of the Week.

Transitional Benefit Extension.—On its resumption on Tuesday the House of Commons discussed a resolution, upon which a financial Bill will afterwards be based, to extend until June 30, 1933, the period in which "transitional" benefit may be paid. As the Minister of Labour, Sir Henry Betterton, reminded the House, transitional beneficiaries consist of two classes: firstly, those who do not satisfy the statutory condition of the unemployment insurance scheme that they shall have made 30 contributions during the past two years; and, secondly, those who, while satisfying that condition, have already received the full 26 weeks' benefit. In the absence of such legislation as is now proposed, those whose statutory benefit rights become exhausted on and after April 18th would be disqualified for passing into the category of transitional beneficiaries. Immediate new legislation is, therefore, necessary, and, on the estimate of the Ministry of Labour, it will entail a cost to the Exchequer of about £20 million between April 18, 1932, and June 30, 1933. The selection of the date June 30, 1933, is important. At that date are due to expire both the major Act passed by the Labour Government and also the Anomalies Act. It will, therefore, serve as "zero hour" for a comprehensive attempt to reform the whole unemployment insurance system in the light of the recommendations which, in the interval, will have been made by the Royal Commission now sitting. It is probable, therefore, that the Bill now contemplated will be the last of those temporary "tinkering" measures which, recurring frequently, complicate more and more what Sir Henry Betterton admitted to be a "chaotic" state of affairs. The Labour Opposition naturally seized the opportunity afforded by Tuesday's debate to call for the abolition or revision of the means test, and for the restoration of the emergency cuts in the rates of benefit. But the Minister wisely refused to deal piecemeal with various aspects of the problem, and stated the determination of the Government to "place our system of unemployment insurance next year on what I trust will be a permanent footing." The first stage in redeeming the whole system, namely, the cessation of borrowing for the fund and the stoppage of "legal abuses," has been achieved. Next year is to see the second stage—the co-ordination of a host of amending legislation. This is very much to the good, and it should not be impossible, when the time comes for a "consolidating" measure, to remove many of the anomalies and injustices which are apparently unpreventable under the present state of affairs. Should there be a continuance of the recent decline in the total of unemployed, the task of fair and just reform will grow easier. But it is too soon as yet to count upon that.

The Nazis in the Saddle.—The German Revolution has been a moderate revolution so far. Since the overthrow of the old regime at the end of the war, almost the whole of Germany has been under decent orderly government for almost the whole of these thirteen years and more. There has been a short-lived spell of "Red" government at one time or another in Kiel and Bavaria and the Ruhr, and a spell of "Pink" government in Saxony; and in 1924 Herr Hitler himself, in company with General Ludendorff, made his debut in Bavaria, where the ground had been prepared for reaction by the previous Communist excesses. These political vagaries, however, have

all been brief and local and exceptional. The solid central fact in the internal history of the German Reich during the post-war years has been the moderation and the stability of the Government of Prussia in the hands of a steady coalition of Social-Democrats and Democrats and Catholics. This regime in Prussia, which is the key-point in the domestic political situation in Germany, will be in jeopardy in the forthcoming Prussian general election, which is due to follow a week or two after the second ballot in the Reich Presidential Election. What would happen to Germany if Prussia—the premier State, which is the body and soul of the Reich—were to fall under the dominion of one of the parties of violence? The aspirants for the domination of Prussia on the present occasion are not the Communists but the Nazis; and at this moment the Nazis are giving Germany and the world a foretaste of how they will behave in Prussia, if they are victorious, by their actual behaviour in Brunswick, one of the lesser States of the Reich, where Herr Hitler's followers have been in the saddle for the past few months. Brunswick is actually an enclave in Prussian territory. It lies within a stone's throw of Hanover, and not so very far from either Westphalia or Berlin. So that what goes on in Brunswick is in the full view of the Prussian electorate; and what is going on in Brunswick now is nothing less than a National-Socialist reign of terror. In Brunswick, since the last elections, the Prime Minister (who also holds the portfolios of Finance and Justice) has been a Nationalist; but his sole colleague (who combines the Interior with Education) is a Nazi; and this Brunswickian combination of policeman and schoolmaster holds the keys of order and of anarchy. Herr Klagges has used his power to unloose anarchy; and the population of Brunswick is now at the mercy of "flying squads" of Nazi "storm detachments," who scour the country in lorries and descend upon any person or group of people who are obnoxious to them. Three killed and a hundred grievously injured in and around the town of Brunswick itself is reported to be the toll of major casualties since last September—apart from a much larger number of flesh-wounds and black-and-blue bruises and broken heads. The moral should not be lost in the second round of the Reich Presidential Election campaign.

"Zweiter Akt."—After the Easter holiday truce (and that was not inviolate) the campaign in Germany for the second and final ballot in the Presidential election has started again; and the pace is now fast and furious. The Nationalist candidate has withdrawn; and President Hindenburg is left to compete with the two representatives of alternative forms of violence—the Communist, Herr Thälmann, and Herr Hitler himself. Herr Thälmann is not seriously in the running; and Herr Hitler has only a theoretical chance of beating President Hindenburg, who will be elected, on the second ballot, by the mere fact of gaining more votes than any other single candidate. Nevertheless, the hope of changing the figures by a million or two in one or other direction (on a 43,000,000 electorate) is arousing both the Nazis and the anti-Nazis to unprecedented exertions. President Hindenburg's supporters aim at gaining for him that now superfluous absolute majority over all other candidates combined which he came so near to obtaining on the first ballot. Herr Hitler's supporters aim at gaining for him at least a substantial increase of votes—mainly, perhaps, for the psychological effect upon the general election for the Prussian Landtag which is to follow. Herr Hitler is conducting a lightning campaign—travelling by aeroplane all over the country—and the local branches of the National-Socialist organisation are "all out." But it is perhaps more significant that the methods of intensive political campaigning that have been elaborated by the Nazis are now being imitated by their antagonists. On April 1st the ex-Crown Prince announced publicly that he intended to vote for Hitler on the second ballot—a gesture which seems hardly consistent with the undertaking to abstain from politics which he gave to the Government of the German Republic as a condition of their allowing him to return to Germany. Whatever the propriety of

the Crown Prince's gesture, the effect is likely to do Hitler more harm than good among the margin of the German electorate which he has set himself to capture. His candidature is also likely to be prejudiced by the news of the Nazi reign of terror in Brunswick. Moreover, the evidence of provisional arrangements for a Hitlerite *coup d'état* on the first polling day of the presidential election, last month, is continuing to accumulate in the hands of the Prussian and Bavarian Governments. On the whole, there seems some possibility that these various factors may combine, not merely to give President Hindenburg a definite victory, but also to give Herr Hitler a further setback.

The Politics of the Scheldt.—On the whole, Western Europe is happily free from those standing international controversies which complicate life in the Central and Eastern tracts of the Continent. The Dutch-Belgian controversy over the navigation of the Scheldt is the exception that proves the rule. It is sullen, perpetual and occasionally even dangerous. The problem arises from the fact that Antwerp lies under one political jurisdiction, while the navigable channel of the Scheldt, through which all shipping has to pass *en route* between Antwerp and the high seas, lies under a different political jurisdiction. In fact, here, as at a score of other points which are of vital importance in the economic life of the Continent, an indivisible economic asset is politically partitioned. Hence these tears. In the Netherlands this awkward situation dates back more than three centuries, to the outcome of the Dutch War of Independence, which left a free Holland in possession of the estuary of the Scheldt and Spain in possession of a subject Belgium, in which Antwerp was included. For nearly two centuries the international problem thus created was solved by the ruthless expedient of keeping the Scheldt closed and thereby killing the trade of Antwerp. This solution satisfied everybody concerned except the Flemings, who had no say in it. The Dutch ports were relieved of a formidable competitor, Great Britain was screened from "the pistol pointed at her throat," and Spain was indifferent. So it went on till 1792, when the French revolutionary armies, which had just overrun the once Spanish and now Austrian Netherlands, unceremoniously opened the Scheldt to commerce and thereby gave Great Britain an occasion for going to war with France in vindication of the sanctity of treaties. A controversy which had thus drawn this country into the Revolutionary and Napoleonic Wars broke out again in "the eighteen thirties," when Belgium broke away from Holland, with whom she had been somewhat arbitrarily united in the peace settlement of 1814-15. The present phase of the controversy began then and has been going on ever since. There has, of course, been no question of closing the Scheldt again to the seaborne commerce of Antwerp; but trouble is inevitably bred by a situation in which the buoying and lighting of a channel in which Belgium has a vital interest is the business of Holland, who has no interest whatever in equipping the port of Antwerp to compete with the port of Rotterdam. The political problem is aggravated by the local hydrography; for the Wielingen channel, which is the principal waterway for ocean-going vessels in the estuary of the Scheldt, happens to hug the Belgian

coast right round the corner within a mile or so of Zeebrugge. Is the whole channel within Dutch territorial waters, like the estuary? In that case Holland masks not only Antwerp but Zeebrugge. Or is the outermost section of the Wielingen channel within Belgian territorial waters? In that case, the channel is alternately Belgian and Dutch and Belgian again. It will be seen that a bare century is none too long a time for arguing such a case as this; but it is to be hoped that the negotiations which are now taking place between The Hague and Brussels may at last remove a source of friction from one of the vital points of our West-European body-economic.

The Cyprus White Paper.—An official account of the disturbances in Cyprus last October has now been published in the form of a despatch from the Governor of Cyprus to the Secretary of State for the Colonies, with enclosures (Cmd. 4045, 1932). This official narrative amplifies and confirms the picture of the situation which emerged from the news at the time. It is just the regular situation which always does arise when a Nationalism and an Imperialism are at loggerheads. Four-fifths of the population of Cyprus are Greeks, and the White Paper gives us a glimpse of the movement for union with Greece starting among the lawyers, schoolmasters and ecclesiastics, capturing the mass of the Greek population in the towns, and then beginning to spread into the villages. Out of 598 Greek or mixed Græco-Turkish villages in Cyprus there were demonstrations, last October, in some 200, though positive act of anti-governmental violence were committed in less than seventy. In the history of national movements this is common form; and unfortunately the British reaction is common form in the history of Imperialism. The official British attitude is that there are no Greeks in Cyprus but merely British subjects of Orthodox religion who happen to speak Greek as their mother-tongue (though the despatch fails to keep this vocabulary up, and slips into "Greek" v. "British" before the end). The official British doctrine is that no question of the union of Cyprus with Greece exists. The official British remedy for the disturbances has been to deport six leading Greek Cypriot Nationalists (nominally, at least, for life); to abolish the Cyprus Legislative Council; to eliminate the elective element in the appointment of Cypriot village authorities and to make them the British Governor's nominees; to prohibit the unauthorised flying or exhibition of flags; and to restrict the ringing of church and other bells. These are the methods of Metternich and Francis Joseph. Is the British Empire, in its old age, slipping into the Hapsburgs' castaway shoes? There is not, of course, any likelihood that, if we choose to go on holding Cyprus by force, we shall be ejected by force within any predictable period. The Cypriot outbreak of last autumn was easily suppressed, at the cost of six Cypriot civilians killed and 30 wounded (of whom one afterwards died), and 38 casualties among the police. All the warships and troops that were rushed to the island for the emergency have been withdrawn; and the permanent garrison, which stood at three officers and 123 men before, stands at no more than four officers and 175 men now. Obviously Cyprus, unlike Ireland or India, can be held by us indefinitely against the people's will, unless and until the British Empire happens to find itself on the losing side in another general war, when the Cypriots would presumably be liberated as the Poles and the Czechoslovaks and all the others were in 1918. The contingency is infinitely remote. But do we really want to leave this Cyprus question at that? Nothing, at present, can prevent us from holding Cyprus by force; but, equally, nothing can save us, if we persist in this commonplace *basseesse*, from losing face.

Land and Labour in Spain.—A correspondent writes:—With the passage last week of the first Budget of the Spanish Republic another milestone has been passed, and members of the Cortes are enjoying a respite from the rather stuffy atmosphere of Madrid. The Finance Minister resisted the attempts to make party capital out of a blunt admission of the need for fresh revenue, and

in the end the increased taxes on tobacco and petrol were accepted without a murmur. Those of the Deputies, however, who have gone to the provinces to resume contact with their constituents will find an atmosphere of turbulence and *désarroi* that may well be a shock to them. The situation is most highly charged in Andalusia. The town of Seville itself is in sore straits, owing to financial mismanagement in the past and to the falling-off of receipts for tourist traffic this year. Consequently the seed of maleficent propaganda such as that of the harum-scarum aviator, Major Franco, for a "Workers' Republic finds a fruitful soil. The latter has recently become conspicuous again in an attempt to wean the poor unorganised proletariat (especially in Andalusia) from their "Communist" or anarchist allegiance. He has formed a new Labour Party, called the *Aleanza de Izquierdas* (Left Alliance), which is recruited from the ignorant discontented agricultural labourers who had been imbued with the idea that the Republic was going to bring with it a sort of land of Cockaigne and who have found that it has made very little difference to their lot. The programme of the *Aleanza* does not bear scrutiny, its demand for confiscation of large farms by the municipalities as a preliminary to peasant cultivation having been already implemented in the agrarian reform bill sponsored by the Socialists which will have to run the gauntlet of the Cortes next month. It is not true, of course, that the Republic has done nothing to redeem its promises to the *peones*. Big land-owners and employers of labour take a very different view. They point out, for instance, that the way was left open for convenient rent moratoria by the decree authorising workers who considered their contracts onerous to put in a claim for revision; and that the threat of expropriation, contained in another earlier decree last year, has indeed maintained production yield, but only at the price of favoured conditions for the workers which cannot possibly be upheld in any future system of land and labour regulation. The result has been to fill their heads with exaggerated ideas as to the relation of work and wages, easy enough to come by in this warm, relaxing climate, but fatal to the very project of agrarian reform which the Government has prepared. Opposition from property interests is likely to be stronger on this question than on any issue that the Cortes has yet tackled. It may well lead to the Socialist Ministers' withdrawal from the Cabinet, in spite of their undertaking to remain until all the major Supplementary Laws—Regional Statutes, Land Reform, Electoral Law and Constitutional Court—as well as the Constitution itself had gone through. When it is realised that out of Spain's three-quarter of a million unemployed seventy per cent. are agricultural workers, one gets some idea of the possibilities of unrest that are still latent. The Government is fully alive to the dangers of delay—Señor Azaña went out of his way to pay a special tribute to Spain's "simple civilisation," in a speech the other day, which the if it is going to be a race against the clock. Not until land reform is a *fait accompli* and the Catalan Statute has been approved by Madrid will it be possible to say that the Republic is living up to the high hopes that friends of Spain have placed in it.

Japan in Manchuria.—The Lytton Commission finds itself en route for Manchuria at an interesting moment; for it is evident now that the Japanese are not having things in Manchuria all their own way. Clearly, the first phase of their Manchurian adventure was the easy phase, and the business is becoming more difficult as the situation, which the Japanese themselves have created, develops on lines which they are not altogether able to control. It is one thing to occupy strategic points on railway lines by a surprise attack; it is quite another thing to police a vast country with a hostile population. And this is the Japanese crux; for, unless they can maintain at least that standard of law and order that was maintained in the three Eastern Provinces by the late local Chinese Government which they have overthrown, they will actually draw less economic profit from Manchuria than they were drawing under the previous regime, and they

will lose their last remaining chance of justifying their lawless action in the eyes of the world. Perhaps the grossest error that the Japanese have committed is the installation of their puppet "Independent Government of Manchuria" under the nominal headship of the *ci-devant* Manchu Emperor of China, Mr Henry P'u. This is a deception which deceives nobody; it costs money; it identifies Japan in Chinese eyes with the effete, defunct and discredited Manchu regime; and it gives the Chinese population of Manchuria a target to shoot at. This week two significant events are reported. First, Mr P'u has been given a loan of 20,000,000 yen (£2,000,000 at par) for five years without interest by the Japanese. (Nominally, the transaction is undertaken by the two great private Japanese firms of Mitsui and Mitsubishi, in order to keep up the solemn farce that the Japanese Government and Mr P'u have nothing to do with one another.) The other piece of Manchurian news is that a serious insurrection against the Japanese and their puppets has broken out in the mountainous and wooded eastern parts of Kirin Province. This is a good theatre for guerilla warfare, and it lies awkwardly close to the northern corner of Korea—the Achilles' heel of Japan's continental empire. Just on the other side of Mr P'u's capital (Changchun), other insurgents have been besieging a walled city, and a Japanese relief force has had to be sent to the rescue. The dispatch of reinforcements to Manchuria, "to take the place of time-expired men," has now been sanctioned by the Emperor of Japan, and, apart from this, some units of the Japanese garrison in Korea are being sent across the border into the insurgent territory on the Manchurian side. The growing unpleasantness of Japan's position in Manchuria is a salutary feature in the Far Eastern situation.

Ivar Kreuger.—Writing, three weeks ago, of the suicide of Ivar Kreuger, we spoke of his death as that of a man "who for once seemed about to combine with the profits of private enterprise a real contribution to the welfare of nations." That the Kreuger schemes might in happier circumstances have become "a great force for good in the world" we still believe, but the revelations of the chartered accountants who have examined the situation of his firm—there are dealt with more fully in a later column—disclose the stark fact that even a man who had the imagination and the courage to launch and develop an international financial system on so great a scale could not resist the temptation to follow the all too easy path of deception and manipulation of accounts when the pressure of world events became too strong for his hastily built structure. It is a humiliating story, particularly for those who look to the salvation of the world from its super men, and may well cause us to ask whether such concentration of power may safely be entrusted to any man—unless, indeed, it be exercised in conditions where every action is exposed to the fullest glare of an inconvenient but healthy publicity.

The New South Wales Default.—Following upon the default by the New South Wales Government in respect of its external debt obligations last February, it will be recalled that the Commonwealth Government passed a new Act, called the Financial Agreement Enforcement Act, empowering the Commonwealth Government to attach certain State revenues, including income tax, for the purpose of meeting this and similar defaults, and throwing upon the Commonwealth Government the duty of making good such State defaults to the foreign bondholders. As soon as the Act had been passed, the money due to New South Wales bondholders was paid out of Commonwealth funds. This Act naturally caused some misgivings to State Governments, who regarded it as an encroachment upon their rights, but it was realised that it provided the only way of dealing adequately with Mr Lang and his colleagues. Mr Lang, however, was quick to challenge the validity of the new Act, for he issued a High Court writ against Mr Lyons and his colleagues, claiming that the Act was invalid and seeking an injunction

against its enforcement. Mr Lyons at once adopted the very proper attitude of refraining from using the powers conferred upon him by the Act pending the High Court decision. This has now been delivered in the form of a majority judgment of four to two against Mr Lang. The judgment at present has been only given formally, and the arguments present in the minds of the six members of the Court are to be delivered at a later date. Meanwhile it is noticeable that the judgment has already been approved by public opinion, especially in a considered statement by Mr Hill, the Labour Premier of South Australia. The next move lies with Mr Lyons, and it is very probable that he will issue an immediate proclamation covering the sum of £924,000 which became in default on February 1st. A further £1,000,000 has since become due by New South Wales, and it is understood that between now and June 30th the New South Wales Government have further payments of £4,000,000 to meet. It is to be hoped that Mr Lang will now realise that it is fruitless for him to persist in his present obstructive attitude, and that any attempt to do so will be to the detriment not only of Australian credit but of the reputation of himself and his colleagues.

Sterling and Gold Prices.—During the past fortnight the sterling exchange has risen from approximately \$3.65 to \$3.80, an appreciation of 4.1 per cent. In the same period, as the following table shows, our index of sterling prices of primary products has fallen by 5.6 per cent. and our complete index by 2.9 per cent. :—

SEPTEMBER 18TH, 1931 = 100.

Date.	Economist Indices.			Irving Fisher, U.S.A.	Statistique Générale, France.	Milan Chamber of Commerce, Italy.	Statistisches Reichsanst., Germany.
	Complete Index (sterling).	Primary Products (sterling).	Gold Prices.				
Sept. 30th ...	107.8	112.0	94.7	98.7	96.9	98.8	98.9
Nov. 11th ...	110.3	119.3	103.5	99.3	96.0	99.3	98.3
Nov. 25th ...	109.1	114.8	98.0	98.3	94.2	98.8	97.6
Dec. 9th ...	110.3	117.3	93.0	97.3	93.3	97.1	96.1
Dec. 30th ...	108.9	117.1	94.4	96.1	93.4	96.9	94.6
1932.							
Jan. 13th ...	109.6	117.7	94.8	94.5	93.8	96.3	92.5
Jan. 27th ...	108.3	115.7	93.8	93.5	93.0	95.8	91.6
Feb. 10th ...	108.6	117.3	88.8	92.2	94.2	96.0	91.5
Feb. 24th ...	110.9	120.9	89.6	92.4	95.1	97.2	92.0
Mar. 9th ...	109.8	116.3	90.3	91.8	96.7	97.2	92.1
Mar. 22nd ...	108.1	111.9	86.5	91.5	96.3	97.0	91.4
Apr. 6th ...	105.1	105.9	85.0	...	...	...	...

As compared with the position on February 24th, since when sterling exchange has risen by 10.1 per cent., the sterling prices of primary products have fallen by 13.1 per cent., whereas gold prices have fallen by 5.1 per cent., a movement whose implications we discuss more fully in a leading article. In the next table we give a more detailed analysis of the complete *Economist* index :—

"ECONOMIST" INDEX.

(1927 = 100.)

	Sept. 18, 1931.	Mar. 23, 1932.	Apr. 6, 1932.
Cereals and meat	64.5	74.4	73.5
Other foods	62.2	66.1	64.5
Textiles	43.7	52.3	49.9
Minerals	67.4	72.8	69.1
Miscellaneous	65.8	62.9	61.8
Complete Index ...	60.4	65.3	63.4
1913 = 100	83.1	89.9	87.3
1924 = 100	52.2	56.4	54.8

It will be observed that, during the past fortnight, the reaction has been most violent in the case of the textiles group.

Cotton Trade Wages.—When the cotton-weaving operatives in Lancashire refused to ratify the provisional agreement on the "more looms" system, consideration was given by the employers to the question of demanding a general reduction in wages. On Tuesday last there was a meeting in Manchester of the Central Committee of the Manufacturers' Association, and reports were received from the district organisations. There was no official statement at the close of the meeting, but since then, writes our Manchester correspondent, it has been learned

that there was a wide difference of opinion as to the advisability of making a claim to the trade unions for a general reduction in wages. Owing to the absence of unity it was decided to ask the representatives of the trade unions to meet the employers in joint conference to discuss the trade situation "with special reference to wages." The joint meeting will take place on Tuesday next. Although this section of the industry is still doing very badly, a number of manufacturers have fair order lists, and it has been realised that if a wages reduction were claimed there would be a danger of a stoppage of production. Such a development would be very unsatisfactory to numerous firms, and the opposition has been sufficiently great to prevent drastic action. During the last few months there has been increasing irregularity in labour and wages conditions in Lancashire. Several firms have reopened their sheds with an agreement with the operatives for a reduction in wages of 10 to 12½ per cent. below the present standard. Other manufacturers are working under the "more looms" system. In the circumstances more irregularity in cloth prices is beginning to show itself, and firms that are working on special terms with the workpeople have a distinct advantage in competing for orders in the market. It is understood that at the joint conference next week the employers will point out the disadvantage of these varying conditions and suggest that it would be good for the trade for a general reduction in wages to be arranged and thus to eliminate the special cases, which are increasing in number. It is doubtful, however, whether the leaders of the operatives will agree to any suggestion of this kind.

Central Electricity Board.—The publication of the fourth annual report covering the year ending December 31, 1931, marks the virtual completion of the work of the Central Electricity Board in surveying Great Britain in connection with the development of the Grid, in obtaining the necessary wayleaves for the erection of transmission towers, and in the placing of contracts for the structural work. Henceforth the problems before the Board will turn rather upon the sale, rather than upon the generation of current. Wayleaves acquired for the Board's primary transmission lines during the year covered by the report amounted to 1,286 miles, leaving only 225 further miles to be obtained. In secondary transmission, or lower voltage lines, 424 miles of wayleaves were obtained during 1931, bringing this total to date to 779 miles out of a final estimated total of 1,059 miles. In addition, by the end of 1931, sites for 15,452 towers out of an estimated total of 17,265 required for primary lines, and 6,918 sites out of an estimated total of 8,878 sites for secondary lines had been secured. In actual construction, the year 1931 witnessed the erection of 1,143.6 miles of main transmission lines, and of 350 miles of secondary lines, bringing the totals constructed by the end of 1931 to 1,775 miles and 534 respectively. In the placing of contracts the year 1931 fell considerably behind those covered by previous reports. The actual value of these amounted to £3,584,000, compared with a value of approximately £11,000,000 of contracts placed during 1930. The fall is due, as already indicated, to the nearing in completion of the preliminary work connected with the development of the "Grid." The total value of contracts placed up to the end of 1931 by the Board with electrical manufacturers of this country amounts to £21,848,869. Examination of the details of the several schemes shows that greatest progress was made in the Central Scotland Scheme, the first to be adopted by the Commission in 1927. All the main transmission lines had been erected and were in actual operation by the end of 1931. In the Central (1928) and South-East England (1927) Schemes 364 and 370 miles respectively of main transmission lines had been erected, and in both cases approximately two-thirds of this mileage was in operation. The other scheme, in which actual operation had commenced by the end of the year was that of Mid-East England, the length of route in this respect amounting to nearly 100 miles out of a total erected of 110 miles. In order to show the relative sizes of the Schemes comprising the "Grid" the following

table has been drawn up giving, together with the related population and areas covered, details of the values of contracts entered into by the Board:—

Name of Scheme.	Area (Square Miles).	Population (1931 Census). 000's.	Contracts Entered Into. £'000's.
Central Scotland	4,980	3,785	1,774
South Scotland	4,308	252	384
North-East England ...	5,049	2,701	1,239
North-West England ...	9,082	7,131	3,209
Mid-East England	7,546	4,914	2,398
Central England	7,311	5,603	2,484
East England	3,438	783	490
South-East England ...	8,828	12,519	7,740
South-West England ...	17,090	6,298	2,130
Total schemes adopted	67,632	43,985	21,849
Remaining area	20,509	806	...
Great Britain	88,141	44,790	...

It will be noticed that the total of the nine Schemes adopted to date cover 77 per cent. of the total area, and 98 per cent. of the total population of Great Britain. During 1930 the Board's power to borrow was increased from £33,500,000 to £50,000,000, and this latter figure remained unaltered at the end of 1931. Consents for borrowing were issued by the Commissioners during 1931 to the amounts of £4,700,000 for the purposes of the Grid and £2,000,000 for the purpose of standardisation, bringing the total amounts to date to £25,200,000 and £7,500,000 respectively, or to £32,700,000 in all. Stocks issued by the Board during the period covered by the Report include £3,000,000 of Central Electricity 5 per cent. Stock 1950/70, issued privately during October and November, 1931, and £7,000,000 of Central Electricity 5 per cent. Stock 1955/75, issued in January, 1932. The total amount borrowed by the Board at the end of December, 1931, was £17,862,500, while the total amount of securities issued and outstanding was £18,943,091. Capital expenditure on all purposes at the same period amounted to £20,116,820. No details are given in the Report in the nature of an operating revenue and expenditure account.

The Motor Industry in 1931.—By the courtesy of the Statistical Department of the Society of Motor Manufacturers we are able to publish a provisional estimate of the production of motor vehicles in this country during the past year. For purposes of comparison we have added the figures for North America:—

Period.	NUMBER PRODUCED. (000's omitted.)						
	United Kingdom.			United States.		Canada.	
	Total.	Private Cars.	Commercial Vehicles.	Total.	Private Cars.	Total.	Private Cars.
1927	212	165	47	3,401	2,941	179	147
1928	212	165	47	4,359	3,821	242	197
1929	239	182	57	5,358	4,586	263	207
1930	237	172	65	3,355	2,785	154	125
1931	223	160	63	2,390	1,973	83	63

Although the output of the British motor car industry is small in comparison with that of the United States, the results for the past year are, nevertheless, encouraging. The number of motor vehicles produced in the United Kingdom in 1931, at 223,148, shows a decline of only about 6 per cent. on the past year, whereas in the United States and Canada, production decreased by 29 per cent. and 46 per cent. respectively. The drastic decline since 1929 in factory sales in North America suggests that the saturation point had been narrowly approached in that year. As a consequence, the progressive reduction in purchasing power during 1930 and 1931 had a disastrous effect on sales. The smaller decrease in the production of this country indicated that the limit of potential demand had not been reached before the world depression. The next table shows the exports of motor vehicles from North America and the United Kingdom during recent years:—

Period.	NUMBER EXPORTED. (000's omitted.)						
	United Kingdom.			United States.		Canada.	
	Total.	Private Cars.	Commercial Vehicles.	Total.	Percentage of Production.	Total.	Percentage of Production.
1927	36	16.8	Not available	384	11.3	57	32.1
1928	33	15.4	26	508	11.6	80	32.9
1929	42	17.7	34	547	10.2	102	38.6
1930	30	12.5	23	238	7.1	47	30.3
1931	24	10.8	19	130	6.6	14	16.7

The decrease in the ratio of exports to production shows that the shrinkage in demand has been even more pronounced in the principal importing countries. The Canadian motor industry has nearly been driven off the field by the enormous drop in sales at home and abroad. During the last quarter of 1931 production in Canada averaged only 1,700 units per month, and by December her exports had reached the low figure of 244 units. The decline of about 6,000 vehicles in British exports as compared with 1930 may be compared with a drop of nearly 8,000 units in imports. New registrations of motor vehicles in this country during the past year, at 204,300, were only 18,500 below those of the preceding year. Of this total, private cars accounted for 139,300, against 155,000 in 1930 and 165,000 in 1929.

French Estates.—The Government Finance Department, writes our Paris correspondent, has now published detailed statistics setting forth the number of estates which passed at death in 1930, in the form of some interesting figures from which approximate conclusions may be drawn as to present-day French family fortunes. The total number of successions declared was 360,490, of which 3,259 were estates in regard to which debts represented more than the entire value (the excess of liabilities in these cases totalling 50,670,000 francs). Of the 357,240 successions where assets exceeded liabilities, 31,458 brought in debts payable totalling 605,725,000 francs. The vast majority of the estates, numbering 325,782, had no outstanding liabilities whatever attaching to them. The general trend of private capital accumulation since the *de facto* stabilisation of the franc at its present level in 1926, may be gathered from the following table showing the comparative numbers and values of "productive" successions declared in each of the four years:—

	No. of Estates.	Net Values. Frs.
1927	381,456	12,142,639,216
1928	359,981	13,478,108,271
1929	388,620	15,894,351,656
1930	357,240	15,978,934,378

It will be noted that, while the total number of successions has appreciably decreased, the total value steadily increased each year, the value having risen 11 per cent. in 1928 and 17 per cent. in 1929, but only ½ per cent. in 1930. Classified according to their importance, the successions registered in 1930 worked out as follows:—

Categories.	No. of Estates.	Net Total Value. Frs.
1 to 500 frs.	31,505	8,538,280
501 to 2,000 frs.	51,298	66,080,278
2,001 to 10,000 frs.	113,460	636,015,468
10,001 to 50,000 frs.	112,767	2,535,556,808
50,001 to 100,000 frs.	24,911	1,667,486,489
100,001 to 250,000 frs.	14,769	2,146,988,051
250,001 to 500,000 frs.	4,668	1,581,429,596
500,001 to 1,000,000 frs.	2,102	1,482,250,818
1,000,001 to 2,000,000 frs.	1,002	1,409,635,460
2,000,001 to 5,000,000 frs.	522	1,530,020,451
5,000,001 to 10,000,000 frs.	167	1,142,627,729
10 to 50 millions	62	1,129,857,022
Over 50,000,000 frs.	7	642,386,908
	357,240	15,978,934,378

The figures suggest that the seven estates of over 50,000,000 francs averaged well below the 124,000,000 francs necessary to reach the equivalent (in sterling, par value) of the amount represented by the minimum British

millionaire estate. The seven successions of over 50,000,000 francs (10,000,000 pre-war francs, or £400,000) totalled 642,000,000 francs, as compared with five similar estates, totalling 590,500,000 francs in 1929. Total successions of over 1,000,000 francs (say £8,000 at par) numbered 1,760 in 1930, for a total of 5,584,000,000 francs, as compared with 1,684 in 1929, for a total of 5,507,000,000 francs. While the number of large estates has increased, the number of successions of 2,000 francs and less has declined. Nine-tenths of the total successions in 1930 were under 50,000 francs (say £400 at par).

The 1930 Census of Production.—Volume VIII of the preliminary reports of the Census of Production of 1930, published in a recent issue of the *Board of Trade Journal*, deals with chemicals, petroleum refining and cement. The following summary shows the gross value, the net value (gross value less cost of materials and work given out to other firms), and the net output per person employed in the various industries in 1924 and in 1930:—

Industry.	Gross Output.		Net Output.		Net Output per Employee.	
	1924.	1930.	1924.	1930.	1924.	1930.
	Thous. £	Thous. £	Thous. £	Thous. £	£	£
Chemicals, dyestuffs and drugs	54,472	50,665	24,696	25,111	369	356
Fertilisers, disinfectants and glue	7,695	5,847	2,774	2,629	287	300
Explosives and fireworks	5,306	5,252	2,803	3,055	328	325
Petroleum refining	14,062	16,128	3,411	5,208	503	926
Cement	8,071	8,077	4,899	4,637	361	417

The decline in the total value of chemicals, dyestuffs and drugs is ascribed mainly to the reduction in the cost of materials used from £29,765,000 in 1924 to £25,546,000 in 1930. While it is impossible to measure changes in the aggregate volume of the production of chemicals, the slight advance in the total net selling value, and the increase of over 5 per cent. in the operative staff, suggests an appreciable expansion of the industry as a whole between the two census years. This conclusion is confirmed by a rise of 2.2 per cent. in the official index of production. The decrease in the total net selling value of fertilisers, disinfectants and glue, conceals a substantial quantitative expansion. The total production of simple fertilisers (basic slag, superphosphates and sulphate of ammonia) rose from 1,330,000 tons in 1924 to approximately 1,600,000 tons in 1930. The increase in the net output per employee in the petroleum refining trade from £503 in 1924 to £926 in 1930 reveals a striking improvement in the technique of petroleum refining. The total output for sale in 1930, at 603,593,000 gallons—shows an advance of about 18 per cent., while the total net selling value rose by 53 per cent. The average value per gallon of imported crude petroleum in 1930 was 44 per cent. below the level of 1924. The production of cement for building and engineering purposes rose from 3,281,400 tons in 1924 to 4,943,200 tons in 1930. The relatively smaller increase in the total selling value from £6,839,000 to £7,346,000 is explained by a decline of about 30 per cent. in the average selling value per ton.

Argentina.—Our Buenos Aires correspondent writes:—The announcement of the intention to issue a "patriotic" loan of \$500,000,000 paper, part of which will to all intents and purposes be underwritten by the Conversion Office, has brought Argentine financial matters to a head. Following a series of Cabinet meetings, the plan outlined by Dr. Hueyo, Minister of Finance, was adopted, but attention may be drawn to the rather significant fact that Dr. Raul Prebisch, who has acted as Under-Secretary of Finance since September, 1930, and is particularly well posted in the inner working of the administrative side of the national finances, has resigned, being in disagreement with the policy adopted by his chief. The Government proposal is to bring budget outlay within the figures of the 1929 estimates, even although in the doing of this it will be necessary to institute salary cuts running up to 10 per cent. Thus all increased outlay approved since 1929 becomes automatically inoperative as far as the spending

departments are concerned. The Minister of Finance has not, down to the time of writing (March 24th), been able to issue a detailed statement covering the minor points of the measure, but the main aim is to supply the administration with ready funds immediately. A "patriotic" loan of \$500,000,000 paper will, therefore, be proposed, and the law relative to the system of re-discount will be amended to permit the handling of Government paper. This difficulty removed, the Government will be empowered to obtain notes, against the bonds of the proposed loan, from the Conversion Office; with the stipulation that the percentage of gold cover to the total circulation must not fall below the established 40 per cent. In practice this will mean that a sum of approximately \$223,000,000 paper will be at once obtainable; but, as and when the public subscribe to the loan, the funds they pay in, presumably through the banks, will be used to withdraw the bonds required. An autonomous committee, comprising four banking representatives, the President of the Conversion Office, and a delegate of the Rediscount Committee, will control the funds thus obtained. In a later statement to the Press, Dr. Hueyo explained that there was no time to draft a scheme for a Central Bank, the Government requiring here and now \$100,000,000 paper to meet overdue salaries, and \$300,000,000 paper for overdue accounts; and, in addition to this, there was the heavy and technically illegal Treasury overdraft in the Banco de la Nacion. Thus the Government proposals are in their essence straightforward and practicable, if Congress will but pass them as they stand without discussion. Unfortunately it is already clear that this common-sense course is too much to hope for. The fact that the funds named above must be found, here and now, will not, one greatly fears, prevent the various party groups from exercising, not only their oratory, but also their ability to veto the proposal. What will then be done is hard to say, but everything points to the likelihood that an issue of notes would then be inevitable. There are advocates of debt suspension, but they are in the minority. Argentina's financial troubles to-day are chiefly internal and, one may reasonably hope, of a temporary nature.

Bank of Scotland.—The accounts of this famous Scottish institution for the year ended February 29th last record a shrinkage in profits from £367,000 to £268,000. In part this contraction is the natural consequence of the decline in the bank's resources, for deposits have fallen from £32.5 to £30.8 millions, and advances, the most remunerative asset, from £16.7 to £15.1 millions. At the same time, the Bank of Scotland, in common with other banks, has had to deal with the problems of bad and doubtful debts and the depreciation of its investments; indeed, the report categorically states that full provision for bad and doubtful debts has been made from inner reserve. The directors have decided to repeat the previous dividends of 18 per cent., but to make no allocation to published reserves. This decision suggests that this year the directors have levied upon gross earnings a bigger toll than usual for the benefit of inner reserves, and that the actual shrinkage in profits may not be quite so big as appears from the published results. If so, the directors have done no more than is required of them in these uncertain times, when too generous provision for unforeseen events cannot be made. The salient features in the accounts are reproduced below:—

	February 29th.	1930. £'000.	1931. £'000.	1932. £'000.
Liabilities:—				
Capital	1,500	1,500	1,500	
Reserve fund	2,000	2,100	2,100	
Deposits	32,258	32,535	30,828	
Note circulation	3,041	2,995	3,064	
Acceptances	802	622	500	
Assets:—				
Cash	3,124	3,021	3,024	
Balances with other banks	252	344	364	
Cheques in transit	1,762	1,864	1,154	
Call money	2,689	2,425	2,505

From a wider aspect, the most ominous feature of the accounts is the decline in the item "cheques in transit," for this is a reliable index of the rate at which money is circulating and so of the activity of general trade. The balance sheet as a whole shows that the bank's strength has in no way been impaired, and the ratio of liquid assets to deposits still stands at 28.5 per cent., as against 29.8 per cent. last year, while a further 44.6 per cent. of the deposits are covered by investments consisting almost entirely of British Government securities.

Anglo-Portuguese Colonial and Overseas Bank.—It will be recalled that when, just over two years ago, the Banco Nacional Ultramarino became virtually the Bank of Issue for the Portuguese Colonies, it found it advisable to transfer its London business to a new British subsidiary, the Anglo-Portuguese Colonial and Overseas Bank. This subsidiary has now been in operation for two years, and the report and accounts for the second year have just become available. These show that the bank has had serious difficulties to contend with in the shape of dwindling resources, but the report ascribes the loss on the year 1931-32 to the severe fall in the prices of securities. Out of the bank's £234,000 of investments, £166,000 consist of British Government securities, and here the loss is being rapidly recovered. Another holding consists of an investment in an "Associated Company," whose character is unspecified, and here the report states that, as a result of a rearrangement with the vendors, this has been re-valued, and the bank has been relieved of the depreciation in value occurring during the year ended January 31, 1932. The investment is subject to an option which fixes its value to the bank at the figure now appearing in the balance sheet. The bank has no commitments subject to the standstill agreement in Central Europe; and, as the accounts show, 48.7 per cent. of the deposits are covered by cash. The salient features in the accounts are reproduced below:—

	Year ended January 31,	
	1931. £'000.	1932. £'000.
Liabilities:		
Capital	1,000	1,000
Loans at call	195	55
Deposits	552	427
Acceptances	652	138
Contingent liabilities:		
Forward exchange contracts	1,389	1,443
Endowments	1,234	752
Assets:		
Cash	303	208
Balances with banks abroad	38	60
Loans at short notice	83	...
Discounts:		
British bills	156	82
Foreign bills	37	32
Investments	343	233
Advances	228	265
Banco Nacional Ultramarino account	467	488
Preliminary expenses	18	...
Goodwill at cost	95	95
Net profit (+) or loss (—)	+21	—22

In judging these results, it must be remembered that the bank is a subsidiary and that the shares are not widely held. Hence criticism of such items as the £95,000 for goodwill, the treatment of the investment in the associated company, and the relatively large sum of £488,000 due by the parent bank must be qualified by the consideration that any loss arising from these items will fall upon the parent bank, which is doubtless ready to run any risk of loss as part of its general policy. The important factor is the security behind the loans at call and deposits. These are practically covered by such sound and liquid assets as cash, United Kingdom bills, and British and Indian Government securities, such assets between them amounting to £457,000, against £482,000 of outside liabilities, etc.

Skandinaviska Kreditaktiebolaget.—The reactions of the Kreuger and Toll difficulties upon this Swedish banking house, which have culminated in the resignation of Mr O. Rydbeck from the chairmanship, and in the extension to the bank of Government support to a total of Kr. 100 millions, together with further support of Kr. 40

to 50 millions from other Swedish banks, render the report for the year 1931 largely of historic interest. It may be useful, however, under present conditions, to place on record the position of the bank as shown by the most recent accounts, and these are summarised below:—

	December 31st,	1929. Kr. '000.	1930. Kr. '000.	1931. Kr. '000.
Liabilities:—				
5½ per cent. Registered certificates	100,000	100,000	100,000	
Share capital	87,188	87,188	87,188	
Reserve fund	94,812	94,812	94,812	
Deposits and savings accounts	380,670	410,831	443,426	
Current accounts:—				
At sight	109,644	120,901	137,809	
At notice	80,299	67,271	35,067	
Due to other banks:—				
Swedish	28,947	54,273	28,472	
Foreign	21,777	72,515	16,646	
Bills at sight in circulation	21,253	19,028	20,763	
Sundry accounts	23,231	35,491	38,529	
Assets:—				
Cash	14,756	16,871	13,411	
Bills at sight and foreign money	10,111	11,699	13,955	
Swedish bills	193,585	183,375	174,387	
Foreign bills	22,474	30,810	35,920	
Loans	443,290	464,625	463,583	
Current accounts	104,968	193,258	175,608	
Due by other banks:—				
Swedish	2,792	1,910	4,192	
Foreign	77,731	31,445	18,285	
Sundry accounts	38,077	71,680	45,000	
Bonds	38,764	53,490	50,258	
Shares	4,928	7,961	10,629	
Gross profits	29,373	29,330	35,987	
Expenditure	12,843	13,562	13,252	
Written off bonds	Nil	Nil	4,828	
Written off shares	Nil	Nil	2,744	
Written off debts (net)	1,943	1,343	4,126	
Net profits	14,587	14,425	11,037	
Dividend per share	Kr. 18	Kr. 18	Kr. 15	

It is noticeable that, although the report is dated February, 1932, the directors thought it advisable to allocate unusually large amounts to writing down the bank's holdings of shares and bonds and its doubtful debts, and that these appropriations reduced the net profit from Kr. 14.4 to Kr. 11.0 millions, and enforced a reduction in the dividend from Kr. 18 to Kr. 15 per share. The course of world events is reflected in the mutual reduction of liabilities between the Skandinaviska Kreditaktiebolaget and its foreign banking agents and correspondents. As regards the principal earning assets, there is naturally nothing to show the extent to which they are affected by the Kreuger and Toll difficulties, and so it is at present impossible to pass any opinion upon them. It is to be hoped that the bank will be able to re-assess these assets at their true value and to recast its balance sheet with the smallest possible delay, as only by so doing can it restore confidence in its solvency. The directors would, indeed, be well advised to issue a provisional statement delimiting the extent of their likely losses, as this would be calculated to reassure opinion.

New Capital Issues in the United States.—Through the courtesy of the *New York Journal of Commerce* we are able to supplement our recently published statistics of British capital issues during the first quarter of 1932 with a comparative table for the United States:—

	Year 1929.	Year 1930.	Year 1931.	First quarter 1932.
Foreign:—				
Government	178,816,161	688,923,588	153,612,233	Nil
Corporate	284,503,847	433,498,000	176,650,000	Nil
Domestic:—				
Municipal	1,074,476,451	1,064,402,752	1,095,359,777	225,123,948
Railroad	528,659,620	986,791,670	353,354,000	3,425,000
Public utility	1,559,144,726	2,228,859,584	1,386,768,065	115,700,000
Industrial	2,578,364,051	1,082,603,506	265,925,720	150,000
Others	2,550,867,842	582,486,938	147,197,400	60,731,500
Totals	8,754,832,698	7,067,566,038	3,578,867,195	405,130,448

No issues were made by foreign Governments and foreign corporate issues during the first quarter of 1932. New issues in the United States continue to show a downward trend.

INSURANCE NOTES.

London Life Association.—The London Life (including the Clergy Mutual and the Metropolitan) entered upon 1931 with surplus resources (over and above the actuarial reserves) of £920,000, on funds totalling £22 millions. At the end of 1931 it was faced with depreciation on Stock Exchange securities of £1,630,000, to meet which the carry forward of £920,000 and the ordinary trading profits of the year, some £550,000, were together insufficient. Moreover, the usual annual valuation and distribution of bonuses was due to be made. Following the precedent set elsewhere, a decision might well have been taken to announce a postponement of revaluation of assets and of distribution of bonuses. Instead, the association has boldly chosen, by a radical recasting of the whole basis of its actuarial reserves, to provide for the whole of the depreciation, and at the same time to set free from actuarial reserves a sum sufficient to permit a declaration of bonuses, though on a reduced scale. This apparent conjuring trick has been accomplished by the open abandonment of what is known technically as the "net premium system" of valuation in favour of the "bonus reserve system." Adequate discussion of the distinction between the two methods is impracticable here, and the briefest description must suffice. The "net premium system" implies the use of an artificially low rate of interest (usually 3 per cent., and sometimes less), and mathematical premiums on the same basis, and the net result of the assumptions made is the production of reserves vastly greater than are required to meet the liabilities for the sums assured and existing bonuses, though broadly sufficient in the aggregate to ensure the continuance of future bonuses at the current rates. To supplement the information afforded by this conventional net premium valuation and to provide more exact justification for their bonus distributions, actuaries are accustomed to revalue the existing liabilities by the more realistic method of assuming rates of interest, mortality and expenses, more in consonance with actual experience, and then to assign as a definite liability the cost of declaring bonuses at approximately the current rate for the whole future duration of the existing policies. This is what the London Life has done, with the exception that the supplementary valuation has been adopted as the published basis. The "old Equitable" set the lead a year ago, and the London Life, which has much in common with its sister institution, has followed in direct succession. In the new basis, interest has been assumed at 4 per cent., combined with a modern mortality table, and an allowance for expenses which, though unstated, may be presumed to conform to the actual expenses, and the financial results of 1931, together with those for 1930, are detailed below:—

	1930. £	1931. £
Ordinary trading profits of the year	547,322	555,423
Profits from investments realised	150,035	24,215
Amount set free by adoption of new valuation system	...	1,272,230
Taken from general reserve fund	5,000	205,000
Amount brought forward from preceding year	85,485	52,645
	787,842	2,109,513
Allocations:—		
To Bonuses to policyholders	398,221	343,626
„ Strengthening of actuarial reserves	32,690	...
„ General reserve fund	30,000	40,000
„ Amount written off investments	202,286	1,000,000
„ Investment reserve fund	72,000	350,000
„ Amount carried forward	52,645	375,887
	787,842	2,109,513

The allocations to investment reserve fund have raised the fund to £750,000, and this, together with the amount directly written off, more than suffices to cover the depreciation on December 31st last. After meeting this, it is stated that the assets exceed the actuarial liabilities by more than £600,000. Taking as an example the reversionary bonus fund of the London Life, the liabilities include the cost of declaring each year in future a reversionary bonus of 30s. per cent. compound. These two facts, taken in conjunction with interest earnings last year at the rate of £4 9s. 3d. per cent. net, compared with the

rate of 4 per cent. used in the valuation, appear to provide ample justification for the large release of reserves, and the distribution of a reversionary bonus of 35s. per cent. compound. It may, indeed, be said with truth that the London Life in this notable report has demonstrated in its own position the unshakeable solidity of British life assurance institutions.

Scottish Amicable.—It is clear that the financial difficulties of 1931 have prevented any quantitative expansion in this society, for, as a result of the operations of the year, the total assurances in force increased by no more than £40,000 on a total of nearly £23 millions; and yet the society issued during the year new policies for sums assured of £1,187,000, a figure not appreciably less than the 1930 new business of £1,810,000. Since claims occurring by death and by maturity called for much the same sum last year as in 1930, the failure of the business in force to respond to this large volume of new business must have been due to the strain of policies surrendered and lapsed. This is borne out by the fact that the society paid in surrenders on policies, and in bonuses surrendered for cash, the sum of £135,000, compared with only £94,000 in 1930. The interest income was greater but the increase was more than neutralised by the rise in the income tax, with the result that the net rate earned fell from £4 14s. 3d. per cent. to £4 11s. 5d. per cent. The expense ratio rose from 14 per cent. to 15.1 per cent., but the increase is accounted for by the fact that the 1931 accounts include the special expenses connected with the quinquennial valuation due at the end of 1930. The balance sheet, which shows total assets of £11 millions, contains few changes in the classification of the assets, and it would seem that the society's new investments last year were made almost exclusively in British Government securities. Last year it was stated in the report that the aggregate of the market values of the assets was "substantially in excess of the amount appearing in the balance sheet." On this occasion the chairman stated in his speech at the annual meeting that on December 31, 1931, the book values of the assets were some £500,000 less than the market values, and that this difference was more than covered by the general reserve fund of £500,000.

British and Foreign Marine.—This company has exemplified in its own experience the fact that it has been possible to secure in recent years a profit from the conduct of marine insurance. The evidence of this is contained in the company's record over the past five years:—

Year.	1st and 2nd Year Claims Premium and Transfer to			
	Income.	Suspense Account.	Expenses.	Surplus.
	£	£	£	£
1926	469,493	366,979	96,462	6,052
1927	502,387	385,100	93,152	24,134
1928	611,729	461,141	99,239	51,349
1929	550,408	435,158	95,222	20,028
1930	454,580	308,045	95,391	51,144

The outcome of the 1930 account has been unexpectedly satisfactory, since first-year claims in the account were rather heavier than in former years. In 1931 the premium income shows a small increase to £482,000, and as first-year settlements have been lower in absolute amount, the account enters upon its second year with 55 per cent. of the premium income in hand, as compared with 51 per cent. in the case of the 1930 account a year ago. Fire insurance business, the transaction of which was commenced in 1929, is responsible for a small income of £29,000, on which a profit was earned of £3,900. The net underwriting surplus resulting from the year's operations was £17,750, compared with £21,300 in 1930. The interest earnings are virtually sufficient to cover the dividend, which is maintained at the same rate as for 1930, namely, 18½ per cent., and is paid to the Royal, as proprietors of the company's share capital. In order to meet the depreciation on investments during the year, a general contingencies fund of £233,000 has been created by a transfer from suspense account of £165,000, and the balance from profit and loss account. This is stated to be sufficient to provide for the depreciation in the book values of the investments of £2,600,000.

Life Assurance of Scotland.—The year 1931 was the beginning of a new triennial valuation period. Bearing in mind the general circumstances of the year, and also the fact that the concluding year of a valuation period is usually accompanied by a larger influx of business, the decline in the new business transacted from £1,376,525 to £1,212,891 may be regarded as not unsatisfactory. The general difficulties of the year are reflected in a large increase in the amount paid out on surrendered policies, and in the failure of the interest income to show a normal increase. In regard to the latter, the rate of interest earned on the funds has declined from £4 12s. 6d. per cent. net to £4 9s. 2d. per cent. net. The expenses in this company are on rather a higher level than in other comparable offices, and the ratio of these to premium income at 19.4 per cent. shows some increase over that of the preceding year. The company is a proprietary one with a small paid-up capital of £100,000, consisting of 10,000 £40 shares, each with £10 paid up. The dividend is £2 per share, and the price of the shares at £45 is exactly the same as that twelve months previously. Indeed, in the Insurance Share Index, which we publish from time to time, it is shown that the shares of this company, alone amongst the companies represented in the Index, showed an appreciation during the year 1931.

Overseas Correspondence.

UNITED STATES.

Finance — Industry — Money — Prices.

(FROM OUR CORRESPONDENT.)

NEW YORK, March 28.

WALL STREET has been forced to take a rather gloomy view of the prospect for domestic recovery by the disappointing action of Congress. Due allowance must be made for the fact that this is a political year, and that even the staunchest supporters of sound economic and financial measures give way under pressure for political advantage, real or fancied, and that more attention is paid to the credit than to the cash. However, after decisively rejecting the proposed sales tax, which it was hoped would yield nearly \$600 millions in a year, Congress has floundered about with alternative schemes for making good the deficit. It has found none that give much chance of success, apart from a whole series of special excise taxes which would meet with perhaps even more determined opposition than did the general sales tax. This gives rise to the hope that after a delay of a fortnight or so leaders of both parties may again marshal enough votes to reconsider and pass a sales tax Bill.

Speaker Garner of the House has apparently taken fresh courage and is attempting to secure the support of the majority party for an early balancing of the Budget, which doubtless means reconsideration of the sales tax. The Administration is said not to be discouraged over the outlook. Markets, however, are plainly disappointed, perhaps as much by threats of special taxation on security trading and of huge appropriations for a soldiers' bonus and other forms of dole as by the muddling and the reluctance to face adequate taxation, to say nothing of reduced expenditures.

Even with no disturbing elements such as the tax uncertainty, the trade position is not one to inspire determined recovery in the markets. Although it clings to the hope of some belated rise in activity, the steel trade has lost further ground, and now, at well below 25 per cent. of capacity, is operating near the low levels of the year end. Industrial production on the whole, according to the Federal Reserve Board's review, increased slightly in February and early March, but the gain was less than seasonal. The board's index, making allowance for usual seasonal variations, declined to 70 from 71 per cent. of the 1923-25 average. Textile and shoe factories enjoyed more than seasonal gain, but motor output was 35 per cent. under a year ago, and for the first time in many years fell

below January. Output here and in Canada was 122,890 vehicles. Building contracts, on a daily average, were fairly steady to the middle of March at about 65 per cent. under a year ago. Railroad traffic felt none of the seasonal improvement, though the earning statements for February are running at only about 30 per cent. from a year ago, against a fall of 70 per cent. in January. The difference is due to the saving in expenditure on wages, the reductions having gone into effect on February 1.

Meanwhile the financial situation continues to improve. Reopenings are reported for 32 banks in February, against closings of only 115, according to the Federal Reserve Board's report, and failures are now sporadic and without effect on confidence. Currency continues to return to the banks, although almost no sales were made of the much-discussed "baby bond" offering by the Treasury designed to lure currency out of hoarding.

Last week, circulation dropped \$42 millions, and now stands only \$933 millions above a year ago. Other changes in the Federal Reserve system accounts were of no great moment. The reserve ratio was slightly higher at 70.6 per cent. and the monetary gold stock rose \$7 millions. Banking authorities and others regard the current sharp gains in foreign currencies against the dollar as threatening a resumption of gold exports, four European currencies now being at or nearly at the gold point. However, due provision has already been made for the withdrawal of foreign balances, and no anxiety will be caused so long as there is not heavy pressure on markets for liquidation of foreign-owned American securities. It is thought that before anything of the sort happens it will have become clearer that sound financial measures will be taken at Washington.

In the first three months nearly \$112 millions in gold was removed from earmark at the Federal Reserve Bank, more than half going this month. Not all this gold has been shipped abroad, but a good deal has gone to France. It is now calculated that gold under earmark is \$318 millions, the bulk being held by the Bank of France. Almost no gold was exported last week, imports were negligible, and \$3 millions were released from earmark.

Money has continued easy without special occurrence. The Federal Reserve Bank has cut its bill buying rate. This brought it into line with the open market, and does not necessarily mean the renewal of pressure for lower rates. It is unlikely that the Federal Reserve will get many bills under present conditions. The British Treasury is expected to pay off the \$30 millions in bills bought by the banking syndicate here which made available credits last summer. The \$20 millions due April 5th, it is understood, will also be retired, but this remainder of \$50 millions of the original \$200 millions credit is not expected to be cancelled at this time. Bankers here are sorry to see the bills taken up, as they found the credit a desirable employment for their funds.

Another sign of returning confidence in banks is the decision of the National Credit Corporation to return to its subscribers 15 per cent. of the money paid in. This corporation was formed by the banks to lend money to such banks as were solvent but frozen and were having or expected to have heavy deposit drains. The amount thus released was \$20 millions. Altogether the corporation has helped 1,200 banks and lent \$190 millions. It had called for payment of \$135 millions from its subscribing banks. Further repayment is expected, as banks taking aid repay their loans, and eventually the functions of the corporation will be taken over by the Reconstruction Finance Corporation.

New capital issues have shown no sign of appearing, except for municipal financing and Treasury borrowing, the former running from \$15 to \$35 millions weekly. Banks holding \$13 millions of 6 per cent. Argentine notes, due April 1, are negotiating with the Buenos Aires Government for an extension of time, and it is thought likely that this will be arranged, thus obviating a shipment of gold or a reduction in the Argentine holdings of exchange.

VIEWS

Imperial and Parochial

Soundness of judgement usually rests upon an ability to combine the 'close up' with the bird's-eye view. To encourage the wide angle, the Westminster Bank issues a periodical 'Review' of current trade conditions, with surveys based on local reports drawn from all over the country. Readers of *The Economist* may obtain copies monthly, without cost, on addressing a request to the Manager

WESTMINSTER BANK

FRANCE.

Budget — Railways — Coal — Quotas.

(FROM OUR CORRESPONDENT.)

PARIS, April 6.

THE Budget Bill has been finally approved by the Senate, and became operative as from April 1. Both Chambers have now adjourned until June 1, when a new Legislature will begin after the general elections, the date for which will, apparently, be the first two Sundays in May, by which time the German election results will be known.

The final figures of the Budget (for the nine months ending December 31st), as adopted, were as follows:—

Estimated revenue ...	41,100,883,494
Estimated expenditure ...	41,097,501,752

Estimated surplus ...	3,881,742
-----------------------	-----------

The measure, by common consent, is a makeshift, and has necessarily been balanced only by means of Treasury Bonds, manipulations of the sinking fund and other devices, which the Government has been able to justify by the notoriously exceptional circumstances with which the country's finances are now faced. The Opposition made it clear, by their attitude during the Budget discussions, that they intend to base their attack, during the elections, on the financial policy followed by the present and preceding Ministries; and the Premier showed every disposition to meet them on this ground. "The internal debt, in spite of apparent extinctions," insisted M. Bedouce, an Opposition financial expert, "is now more than 284,000,000,000 francs and larger than at the end of July, 1926" (when M. Poincaré assumed the task of restoring the situation), "and expenditure alone has increased by 124,000,000,000 francs since that date. This aggravation has been due to the simultaneous pursuit of two policies which cannot co-exist—the policy of social betterment and that of an armed peace. Socialists will denounce the latter policy to the electors, and warn them that they must choose between disarmament and bankruptcy." M. Tardieu, in a fighting final reply, said that the Government would "reply shortly" to M. Bedouce and would contest his figures, demonstrate that the expired Legislature had completed M. Poincaré's work, reduced taxation by 6,000,000,000 francs (which the Socialists, who now insist that this amount was excessive, had themselves proposed should be twice as much), and had carried out certain refloations (Compagnie Transatlantique, Banque Nationale de Crédit, etc.) and authorised by decree certain foreign loans.

The Senate Rapporteur stated in his report on the Budget that the total expenditure proposed by the

Chamber for military purposes for the coming nine months was at the rate for the year of 12,814 million francs, or equivalent to an increase of 984,000,000 francs as compared with the previous Budget credits for similar purposes. This was made up as follows: Army, 5,240,000,000 francs (or an increase of 520,000,000 francs); Navy, 3,233,000,000 francs (424,000,000 francs up); Air, 2,550,000,000 francs (350,000,000 francs up); and Overseas Defence, 1,771,000,000 francs (89,000,000 francs up), plus Colonial military expenditure of 691,557,000 francs (70,000,000 francs increase). In the Chamber discussion on March 1st, M. Bouilloux-Lafont, Rapporteur for the Army and Colonial Defence Budget, declared that the total proposed expenditure for the coming nine months was 10,831,000,000 francs, equivalent to 13,775,000,000 francs for the full twelve months. M. Pietri, Minister for National Defence, on the same occasion, stated that the total effective strength of the land and air forces provided for in the 1932 Budget represented 625,000 men, plus 67,000 representing the naval strength, or 692,000 in all. In 1913, the Minister added, M. Painlevé, the then War Minister, in an answer to a written question, stated that the total effectives amounted at that period to 736,000 men.

Complete figures for the past year are now available which indicate that in 1931 the French railways as a whole finished the year with a deficit on working of 2,579,552,000 francs, or double the deficit of 1,293,000,000 francs in 1930. The heaviest deficit was incurred by the State system, where the shortage amounted to over 734,000,000 francs, against 632,662,000 francs in 1930 (exclusive of the deficit on lines belonging to that system which are only partially worked). The P.L.M. lines came second with a deficit of 696,000,000 francs (against 373,000,000 francs). The Est lines, which alone in 1930 showed a surplus (of 63,000,000 francs) this year registered a deficit of 188,000,000 francs. In 1928 and 1929 the State lines and the Midi company alone finished with a deficit on working. The deficit in the common fund of the railways as a whole at the end of the present month will amount, it is declared, to 4,880,000,000 francs. Bond issues by the various systems have recently been authorised to a total of over 6,000,000,000 francs, to provide necessary financial resources. The unfortunate situation of the lines, as has already been pointed out, is due only to a very slight extent to the existing economic difficulties. Passenger rates remain appreciably below their pre-war level, while goods rates have been increased only to a fraction of the extent necessary to compensate for augmented expenditure due to higher cost of labour and materials, and particularly to the operation of the Eight Hours Law. Enormously increased taxation has also been imposed on the railways since the war, which the lines have been unable to pass on to users owing to the refusal of the Government to sanction adequately increased traffic rates.

Coal production figures for February, which were issued last Saturday, indicate a total output from the French mines of 3,825,000 tons, for the 25 working days, against 3,840,000 tons in January (25 days) and 4,331,000 tons in February, 1931 (24 days). Daily production during the month averaged 153,594 tons, with 270,256 labour units engaged, against 180,471 tons in February last year, when 299,105 labour units were working. Metallurgical coke production by the colliery plants in February was 275,447 tons, against 397,964 tons in February, 1931.

A strong protest has this week been forwarded to the President of the Board of Trade by the British Chamber of Commerce in Paris complaining of the "direct and indirect prejudice caused to British trade with France by imposing of quotas on imports of various classes of merchandise and the insecurity of trading resulting therefrom." The protest stigmatises "the complexity of the whole system in practice," and calls attention to the "inevitable abuses and the misuse of inside knowledge secured by certain nations or certain firms to the detriment of others." Curiously enough, protests against the present quota system are also being made to the French Government from French sources. The *Intransigeant* a night or two ago printed a striking article from one of its staff complaining of the "regrettable errors" made by

the French authorities in fixing the quota bases. The article cites the case of sheep imports, and points out that, while Hungarian sheep entries, which have been normally 1,500 a week, have been fixed at 3,800 head per quarter, Germany's quota has been fixed at 13,000 head, which that country is totally unable to furnish, and never has furnished.

GERMANY.

Elections — Trade Restrictions — Polish Agreement.

(FROM OUR CORRESPONDENT.)

BERLIN, April 5.

UPON the termination of the Easter truce, during which all political meetings were prohibited, the presidential election campaign was resumed this week with the greatest keenness. It coincides with the election campaign for the *Landtage* of Prussia, Bavaria and other States, the elections to which take place on April 24th. These elections have an especial importance because, under the German constitution, the administration of the police is in the hands of the State Governments, and the result of the presidential election will undoubtedly have a great influence upon them.

The magnitude of the issue was bound to bring about a very fierce conflict, and the antagonism between the National Socialists and the Hindenburg parties was very much intensified when the public learnt of the preparations which the National Socialists had made, on March 13th, for the possibility of a victory. The sequestration by the Prussian police of documents relating to these plans was the subject of complaint by the National Socialists to the *Staatsgerichtshof für das deutsche Reich*. The proceedings in this court, which has so far made no pronouncement, have revealed that it was Herr Groener, the Minister for the Interior, who brought these questionable preparations of the Hitler Party to the notice of the State Governments and initiated an inquiry. This means that, contrary to an impression which arose at first, Reich official circles have taken just as serious a view of the business as has Prussia. At the moment of writing, the Prussian Government has not yet published the material at its disposal, but the discoveries of the Bavarian Government, which have already been published, make it possible to guess at its content. In Bavaria, the National Socialists intended, immediately their victory was announced on the evening of March 13th, to expel all the more important Government officials who were not members of their party and replace them, by force, with people for the purpose, most of whom were entirely uneducated, and they proposed to forestall police interference with these acts of violence, principally by destroying telephone lines. Such proceedings would, of course, not have been legal even if Hitler had really become President, for not even the President may deal arbitrarily with officials, especially as this programme referred mainly to officials of the State and not of the Reich. What the National Socialists had planned was thus a thoroughgoing *coup d'état*, which would certainly not have succeeded.

The discovery of the plot has stiffened the resistance of the authorities and of the supporters of Herr von Hindenburg. The Berlin Chief of Police has ordered parts of the National Socialist headquarters to be closed, as attacks had been made from them upon passers-by of other ways of thinking. The Chancellor is travelling about in support of Herr von Hindenburg, and is finding larger audiences than Hitler.

The entry into the campaign of the former Crown Prince on Hitler's side has certainly not improved the prospects of the National Socialists. This announcement must offend everybody who remembers that Hindenburg did his best, up to the last possible moment, to maintain the monarchy in Germany. It facilitates the work of canvassing for Hindenburg's supporters, as the fight against Hitler now becomes a fight against both the Fascist and the Monarchist reaction.

The deterioration in foreign trade has caused the *Reichsverband der Deutschen Industrie* to pass a resolution calling for "greater consideration of the interests of national economy" in the allocation of bills of exchange for import purposes, and for "preference for the import of necessities of life, raw materials and certain indispensable semi-manufactured goods." The wording is somewhat obscure, but the sense is clear enough: the allocation of foreign exchange for the import of goods which could by any means be produced at home is to be especially limited, and this is even more clearly expressed in a statement addressed to the Government. The Protectionist tendency of this declaration is somewhat modified by the closing sentences, in which the *Reichsverband* expresses itself just as strongly opposed to "a policy of self-sufficiency as to the currency experiments which are associated with it." Nor was opinion in the *Reichsverband* by any means unanimous, while no less important a Chamber of Commerce than that of Hamburg recently passed a resolution vigorously denouncing the restriction of imports by withholding foreign exchange. There is, however, no doubt that opposition to these views is steadily growing, as German exports become increasingly hampered by duties and other burdens, imposed for the most part through the medium of exchange restrictions. The Reichsbank, which rigidly refrains from any misapplication of its foreign exchange policy for purposes of commercial politics, has nevertheless been obliged by the shortage of foreign means of payment to cut down its allowances of exchange to 65 per cent. of a standard requirement calculated by reference to last year's figures, with due allowance for the decline in prices and in trade. There is, therefore, a great temptation to reserve the limited amount of bills for "indispensable" imports, and very acute insight into the complex of conditions is required in order to realise that the saving on imports cannot balance the injury to export which would be involved, so that the final consequence would be, not an improvement but a deterioration in the trade balance. Nothing is more urgent, on both material and psychological grounds, than international co-operation to make a serious beginning with the removal of impediments to trade.

In one direction, trade with Poland, some small relaxation of mutual restrictions has been achieved, but only some of the measures which have been exacerbating the commercial war since the beginning of the year have been done away with. For almost all goods on which an import prohibition has been imposed since the end of 1931 Germany is to receive import licences sufficient to remove the disadvantage under which German exports were labouring as against those of other countries. The most important German concession consists in the reduction of the German duty on Polish butter from Rm. 172 to Rm. 100 and in a reduction in the duty on Polish eggs. Tariff peace with Poland is still a long way off, and there seems to be no immediate prospect of further progress. The atmosphere, however, has improved, and what is perhaps even more important an example has been forthcoming to show that even to-day, in an exceptionally difficult case, it is still possible to conclude a commercial agreement.

AUSTRIA.

Industry — Finance — Agriculture — Banks.

(FROM OUR CORRESPONDENT.)

VIENNA, April 3.

THE report of the Finance Committee states that the Federal Railways must further reduce their investment activity, at least until the report has been published of the Swiss expert, Dr. Herold, who is to make recommendations for the placing of the railways on a sound basis. Apart from bridge construction, which is obviously unavoidable repair work, the railways have given no contracts of importance. They will undoubtedly exercise still greater caution, and investment activity in Austria will thereby further decrease. Rationalisation activity has also come to a full stop. Until a year ago applications from Austrian industry for duty-free importation of machines for capital development and rationalisation

purposes numbered from 90 to 100 per week; since the beginning of this year the total has been only about 30 per week, and these applications refer almost wholly to small plant or machines. At the same time, the fact that so few orders are going abroad is not helping the Austrian machine industry very much, in view of the lack of capital and the credit difficulties in the country. The machine industry is working at most to the extent of 50 per cent. of normal capacity.

The report of the trade research institute, recently published, states that there has been no change observable within the past few months in the very depressed condition of Austria. Prices are said to be anything but uniform, sensitive prices once more showing a downward tendency. The public shows marked reluctance to buy, and even the greatly reduced prices during clearance sales fail to attract many buyers. In extensive classes there prevails a remarkable shortage of capital. For example, it is said that big firms, whose assets are but slightly burdened, meet with very considerable difficulty in raising credit to the extent of a few tens of thousands of schillings. In according fresh credits, the banks and savings banks are very reluctant. For this reason, the demands of the Vienna Chamber of Commerce that the most stringent restriction on credit should take place in Austria can only be agreed to with reservations, for there is the danger that solid enterprises, which have kept above water up to the present, might begin to flounder.

After April 24th, when the local election fever has died down, Parliament will again occupy itself with combating the deficit in the Budget which is threatening. Reform of unemployment benefit will be necessary. Last year the Federal Government had to meet a deficit of 42.2 million schillings, which could not be covered by the contribution of the workers and the employers. In previous years it was necessary for the State to make advances amounting to 84.8 million schillings, so that its claim is now 126.5 millions, and there is no hope that this money will be repaid. Further increases of the debt can only be checked by a decrease of benefits. The same process will also have to take place in regard to clerks' and employees' insurance and health insurance; and in these cases, too, the sums paid by the institute will have to be cut down. This necessity is also due to the fact that taxes are bringing in less revenue. The reduction of income from the consumption tax in January as against December was from 21.9 to 10.9 million schillings, while Customs revenue fell from 26.1 to 24.9 millions and the merchandise turnover tax from 20 to 18.8 million schillings. It will be largely thanks to considerations of State finance if the plan to issue general import prohibitions falls more and more into the background. It is feared that the consequence of applying this plan might be a big drop in revenue from Customs and from the merchandise turnover tax. Clear evidence of the effect of price advances in diminishing the revenue of the State is available in the case of the post, telegraph and telephone department. In spite of the increase in the rates for telephone service, revenue shows a drop of four million schillings for the first two months of the present year. As a result of the economic crisis, the telegraph and postal services are also declining constantly.

Farmers have been a little more contented lately, for, though they still complain that prices are low, they have a better hold on the Austrian market now as a result of the present Customs policy. It has recently been possible on the Vienna cattle market to cover requirements to an extent of nearly 90 per cent. in the case of cattle and about 75 per cent. in the case of pigs for slaughter. In regard to sugar, too, beet production may this year be such that home products will cover requirements, especially as sugar consumption is falling in Austria and is likely to be 20 per cent. lower this year than last. Furthermore, efforts are being made to become independent of foreign supplies of eggs and poultry. Imports of milk have stopped completely, while imports of butter and cheese have regressed greatly. Attempts are also being made to increase rye consumption, as against the consumption of wheat, in order to limit importation of grain.

It now appears certain that the Bankverein will distribute no dividend, while the Niederoesterreichische Escomptegesellschaft will probably pay one of 5 per cent. In industry, several enterprises will pay dividends, but they will probably be less than last year. Much will also depend upon the further development of the Credit Anstalt affair. This is once more the centre of political interest, and, in view of the approaching elections, the two big parties are trying to shelve the responsibility upon one another. In any case, the public prosecutor is again occupied with the question of the responsibility of the former management and of the board of directors, and has summoned a number of persons to give evidence. It remains to be seen whether, after the elections, the whole question will be allowed to die down again, and the matter be reduced to attending to the liability towards foreign creditors and the Austrian National Bank. Political considerations are playing a bigger part than ever in the treatment of the Credit Anstalt question, particularly as the impoverishment of the masses is progressing rapidly and the search for a scapegoat is becoming frantic.

HUNGARY.

League Report — Economic Situation — Budget.

(FROM OUR CORRESPONDENT.)

BUDAPEST, April 5.

THE Financial Committee of the League welcome the standstill agreement which the Hungarian banks and commercial concerns have just concluded with their British short-term creditors for six months, and recommend the conclusion of similar agreements with Hungary's other short-term creditors. Unfortunately neither the American nor the Swiss and French creditors show much willingness to do this. There are considerably more than 1,000 million pengő short-term loans placed by foreigners in Hungary, and it is obvious to any dispassionate observer that in view of the overborrowed status of the country all these loans are frozen and cannot be thawed out, but must be subject to a general conversion in the form of long-term bonds bearing a moderate rate of interest. The creditors, however, show little eagerness to face facts, and instead of acting together for the common good, they quarrel about priorities of little practical value.

The Budget for 1932-33 will be introduced in Parliament next week. The exhortations of the Financial Committee of the League to make further efforts to balance the Budget, including the undertakings from current revenue, but cutting down the present level of expenditure are very timely. In view of the results for the current year, the Committee do not think that next year's Budget can be balanced at as high a level as 830 million pengő, which figured in the Government's programme last October, or even at that of 810 million pengő, which has recently been publicly mentioned by the Finance Minister; they are strongly of the opinion that this level must be reduced. The probable revenue results of 1931-32—800 million pengő at best—reinforce the Committee's belief that not only must immediate reductions be made, but the Budget for 1932-33 be brought down to a considerably lower level than the figures hitherto contemplated. The League experts' view thus coincides with the opinion expressed in these columns in February, that it would be unwise to budget for more than 750 million pengő in view of the general impoverishment of the country.

Although budgetary expenditure actually incurred in January and February and estimated for March and April is within the rate of the Government's pledge to the League, and total expenditure in all probability will be less—thanks to the careful administration of Baron Kórányi—than the 890 millions limit agreed between the League and the Government in October last, a huge deficit cannot be averted, so low are the receipts of the Treasury. In all probability there will be a deficit of 90-100 in the Administration Budget and another 70 million in the State undertakings and the Boletta Fund (wheat and rye subsidy), together 160-170 million pengő for which cash will have to be found. Yet the State loan contracted in August, 1931, amounted to scarcely 135 million pengő, and this is

exhausted by now. How the Treasury is going to meet the deficit in the rest of the financial year is still the greatest problem of the day. It is understood that the Government is planning to increase certain taxes to secure additional revenue, but it is very doubtful whether any measure short of immediate cutting of expenditure could restore budgetary equilibrium. The difficulties of presenting a balanced budget are considerably enhanced by the internal political uncertainty and the unwillingness of the deputies to vote for unpopular measures. The real test for the Károlyi Government's solidity will be the Budget debate.

TURKEY.

Revenue — Monopolies Reform — Trade — Credit Bank.

(FROM OUR CORRESPONDENT.)

CONSTANTINOPLE, March 28.

THERE have been ill-founded rumours, since the Government Party's special commission reported on the financial and economic prospects of the country, that the Ismed Pasha Government, unable to meet its difficulties, was about to resign. This has been officially denied, and there is no doubt that it is incorrect, if only because there is no other outstanding personality to head a government. In any case, the finances of the State are not in a really critical condition, because they are not involved in the system of post-war loans which is keeping so many countries precariously afloat. The policy of basing the administration of the State on foreign loans was terminated at once by the Republic, and in spite of some tempting offers has never been revived. Thus the financial foundations, though meagre, are sound. It is the immediate budgetary situation which the Party's commission found to be insoluble without special measures.

It appears that the commission considers it impossible to get in a revenue of more than 155 millions (Turkish pounds), whereas the Government thinks it impossible to carry on the work of the State under 183 millions. But there are practically no home sources which have not been drained of all they can yield, so that the finding of this 28 millions is a problem. One of the methods which is to be applied is to cut out the payments to foreign groups carrying out big public works such as railways, which fall due in the coming year. Negotiations have already been opened with this object, and the principal groups involved, Swedish, German, and others, are accepting the principle. They are, however, naturally exacting conditions on their side, and it seems certain that the public works in question will be slowed up. Another payment to foreigners, which will probably be deferred or modified, is the annual payment on the Ottoman Debt, about which close negotiations are now proceeding.

The unification of the State Monopolies, which is going on owing to the constitution of a Ministry of Monopolies, has made it clear that there has been considerable extravagance and incompetence in the administration of these monopolies, and that they have needlessly increased the expenditure of the State. They have been made the homes of retired functionaries whose pensions were inadequate, and who could get an engagement in the monopolies out of favour or pity. The tobacco monopoly has swelled its employees to over 5,000, in comparison with about 2,000 when the monopoly was in the hands of a foreign Régie. It is true that the activities of this monopoly have been greatly increased, but the debate in the National Assembly revealed that retired and pensioned functionaries of the State aged over eighty had been engaged by the monopolies. It was even proposed, in view of the abuse which the monopolies have made of their position, that, in future, the employment of ex-State officials by the new unified monopoly administration should not be allowed. This was considered to be an inequitable discrimination and was ruled out. The new Ministry of Monopolies, however, obtained a retiring gratuity for over 1,100 employees of the monopolies who are to be "axed" on the ground that they are not competent for their work. During the debate it was pointed out that officialism was still the chief burden of the Treasury, and that, out of the

Treasury receipts of 140 million Turkish pounds, 80 millions are still absorbed by payments to officials.

The trade balance for 1931 is now known exactly, and is for the second time in the history of Turkey favourable. The excess of exports over imports amounted to 614,977 Turkish pounds, as compared with 3,890,668 in 1930. It was only brought about by the device of restrictive quotas for imports which was applied from the beginning of November, and which immediately reduced the monthly imports to under half the total of exports. Thus all through the year up to September, the exporting season, every month had shown an excess of imports. It was only in the last four months, and particularly in the last two, that the unfavourable difference was righted, some 15½ millions being made up in November and December. The same encouraging result of the restrictive quotas has been continued into this year, and the month of January showed imports at 5,323,132 Turkish pounds as against exports at 10,346,877. Nevertheless, the Government is not yet satisfied with the working of the restrictive quota system. It will probably apportion the quotas for goods among the various importers instead of allowing the importer landing goods first to benefit by as much of the quota as he can; and it has also sent delegates abroad to study the systems of equalising commercial exchanges between countries which it still desires to put into practice.

Though in 1931 the total value of Turkish commercial exchanges diminished by 45,073,331 Turkish pounds as compared with 1930, owing to the world crisis and the low prices of agricultural produce, the most noticeable factor was the increase in quantity of Turkish exports. This has been largely due to the record quantity of cereals which were exported in the last few months. At the same time, there has been a considerable diminution in the quantity of imports, especially of comparatively heavy products, owing to the growth of home manufactures. Turkish imports tend to become limited to relatively finer and lighter products. The principal imports in value were cotton fabrics, followed by steel and iron for the new railways and industrial equipment of the country, which is going on actively, then machinery. Woollen textiles fell to exactly half the amount imported in 1930, coming down to about 5 million Turkish pounds. This is a good indication of the progress of home industry, though part of it is also due to the diminution of the purchasing power of the peasantry. As to exports in 1931, for the first time fruits exceeded the exports of tobacco, which went down to 29 million Turkish pounds as compared with 43, 41, and 54 millions for the three preceding years. To remedy the tobacco crisis a tobacco export office is to be organised by the new unified monopolies administration.

Meanwhile the encouragement of industry is to take a new line by the organisation of an industrial Bank of Credit. Up till now the nascent industries of the country have been favoured by a special law exempting building material and machinery for factories from customs duties, but there was no effective source of credits. The Government has now drafted a new law establishing a bank of credit: customs duties will be imposed on imported material and machinery for industry, but the produce of the duties will be handed periodically to the new bank to bring its capital up to the desired amount, which is 10 million Turkish pounds. The bank will accord credits for the installation of new factories and for the exploitation of those recently created, many of which owing to mutual competition and lack of credits already find themselves in a difficult situation. The bank will act as an intermediary for procuring to the various industries the raw materials they need and will be able to guarantee payment.

CANADA.

Business — Parliament — Beauharnois — St. Lawrence — Revenue.

(FROM OUR CORRESPONDENT.)

OTTAWA, March 23.

DURING this month abnormally low temperatures have ruled and as a result the stimulus which usually comes to business from the break-up of winter in the latter half of

March has been postponed and there are few signs of any real betterment in the business situation. The carloading figure for the week ending March 12th, at 41,738 cars, showed a decline of 91 cars as compared with the figure for the previous week and of 6,368 cars compared with the figure for the corresponding week of 1931; for the year up to date the aggregate decline in carloadings is roughly 11 per cent. The inclement weather has had an adverse effect upon retail sales of spring merchandise and wholesale houses report a poor demand from the country storekeepers.

The primary industries are still in an unhappy plight, for there has been a setback in grain prices and the volume of forestry operations during the winter has been materially reduced; prices for salted fish remain deplorably low and the representatives of fishing districts on the Atlantic are now demanding that the fishermen get the same treatment as the grain growers of the prairie in the shape of a bonus for their catch or at least for their exports. In the manufacturing field, however, some evidence of improvement is claimed, and in February the Bureau of Statistics' index for manufacturing showed a gain of one point. The output of iron and steel was larger in February than in January, indicating a heavier demand from the secondary industries using iron and steel; this is confirmed by an increase in the output of motor vehicles and by the fact that one farm implement firm, on the strength of new orders, has taken on 400 extra employees. The textile mills are maintaining a reasonably steady level of production and most of the boot and shoe factories are well supplied with orders, but the furniture factories are only working part-time to fill spasmodic orders. The slaughtering figures for livestock indicate increased activity in meat-packing establishments, but the flour-milling industry is still operating far below its daily capacity and the operating ratio of the newsprint mills shows little change.

The unemployment problem is still serious and as work upon certain items of the relief programme has been shut down or curtailed, the local authorities are being compelled to spend larger sums on direct relief. The auspices for an extensive programme of new construction during the present year are not bright and the figures of the Bureau for building permits granted in the 61 leading cities during the first two months of 1932 show a value of only \$5,340,526, as compared with \$14,797,115 in the parallel period of 1931.

The Bennett Ministry had intended to bring down the Federal Budget before the Easter recess which will last from March 23rd to 29th, but its plans have been altered as the result of the persistent blockade which the Liberals have maintained for the last fortnight against the Government's Bill extending the operation of the Unemployment and Farm relief measure from March 1st to May 1st. This measure conferred upon the Cabinet a blank cheque in regard to expenditures and very arbitrary powers in respect to the maintenance of "peace, order and good government," and the Liberals, who allowed it to pass under protest a year ago, now contend that when Parliament is in session, the Government is not justified in demanding a continuance of such arbitrary powers. A series of speakers, from Mr Mackenzie King downwards, have denounced Premier Bennett as a would-be dictator and argued that the authority of Parliament is being contemptuously flouted. The Government, at the time of writing, is threatening to enforce closure and had decided that it will not introduce the Budget until the Relief Bill is disposed of.

The fortunes of the Beauharnois Corporation and correlated matters are again in the limelight. On April 1st there falls due \$900,000 interest on 30 million dollars' worth of collateral trust bonds issued to the public, and it is an open secret that there are no funds in the company's treasury to meet this obligation. For some time past its construction operations have been financed by a group of banks who are said to have advanced over ten million dollars; no official announcement has been made of the fact, but it is understood that more than half of these advances have been guaranteed by the Federal Government. Now, however, the banks will not advance

any more money until the future of the corporation is settled and the bonds are at present being offered at about one-third of their par value. The provincial Government of Quebec, which gave the company its lease of power rights, would like to turn the whole enterprise over to the Holt group of Montreal, but the Bennett Ministry, knowing that it would be accused of strengthening an existing power monopoly, fears the political repercussions of such a move. So the latest plan is that the power interests of the Beauharnois Corporation should be jointly acquired by the Montreal Light, Heat and Power Company, the Shawinigan Company and the Canadian Hydro-Electric Corporation, which is a subsidiary of the International Power and Paper Company, but so far conferences which have taken place in Ottawa with this end in view have had no definite result.

The problem of the St. Lawrence Deep Waterway is also occupying the attention of the Bennett Ministry. As the result of a series of conferences the questions at issue between the Federal Ministry and the provincial Government of Ontario have apparently been satisfactorily settled, and an agreement reached whereby Ontario is to be given the Canadian share of the large amount of power to be developed on what is known as the international section of the waterway and to pay for it a sum estimated at about 75 million dollars. A conference with Premier Taschereau, of Quebec, has been less successful, and on returning from it to Quebec City, Mr. Taschereau declared that the attitude of Quebec was unchanged and demanded that any treaty negotiated with the United States about the waterway should be submitted for the approval of the Legislature of Quebec before it was signed. The Bennett Ministry will not agree to this, taking the ground that the projected treaty will deal solely with a navigation problem about which the Federal Government has unquestioned jurisdiction and that the Quebec Legislature has no more claim to be consulted about it than about the deepening of the St. Lawrence from Montreal to tide-water. However, it is now being forecast by papers friendly to the Bennett Ministry that the treaty now being negotiated will only cover the international section and that the United States will pay the whole cost of the construction work in that section, making generous allowance for what has already been spent by Canada on the new Welland Canal. Canada would undertake to complete the rest of the waterway at her own expense; part of it is available already in the Beauharnois Canal and the only remaining link would be a canal at Lachine which would be undertaken once the other works were finished.

The latest statement of the Federal Department of Finance, covering the first eleven months of the present fiscal year up to February 28th, places the revenues for this period at \$298,008,394 as compared with \$322,729,407 for the similar period the previous year and expenditures at \$319,170,507 as contrasted with \$331,243,180. The revenue returns for February, placed at \$20,516,116, were somewhat encouraging, as for the first time in many months they showed a gain (1½ millions) over the figure for the same month of the previous fiscal year. For the decrease in the 11-month period a decline of 26 million dollars in income tax was mainly responsible. The total of the net debt on February 29th was placed at \$2,336,680,272, as compared with \$2,207,895,964 on February 28, 1931.

JAPAN.

Money — Trade — Bank Results.

(FROM OUR CORRESPONDENT.)

TOKYO, March 11.

MONEY is extremely difficult. A decidedly more stringent tendency has been in evidence this week in short loan conditions, and this tendency has communicated itself to open market rates of discount. Overnight loans are not obtainable at less than 6½ per cent. and fine bills are quoted as high as 7½ per cent. The bank return for the current weeks shows that the note circulation rose to the

level of 1,200 million yen, and advances expanded to 1,145 millions. This is attributable mainly to banking difficulties in the midland districts, where a number of small banks failed during last week, but generally the explanation may lie in the rapid rise in primary commodity and security prices since the abandonment of the gold standard.

In a conference with leading bankers on Wednesday the Governor of the Bank of Japan announced that the stringency was to be relieved by disbursement of 82 million yen of the Treasury bonds and by advancing the military loan of 22 millions to the Government, instead of offering it for public subscription. This step is regarded as inflationary in some quarters, but it is, in fact, a very conservative one that involves no undue increase of credit and currency. Although the verdict of the country in the general election, held on February 20th, was clearly in favour of an inflationist policy, the financial authorities have so far been sober enough not to yield to the prevailing temper of public opinion.

The upward movement in the general level of commodity prices continues, though at a much less rapid pace than in the preceding month. Following a sharp rise of 5.6 per cent. in January and of 2.7 per cent. in December last, the Bank of Japan's wholesale index number for February registered a further advance of 1.2 per cent. on the month, and the average level is 2½ per cent. higher than a year ago. The fall in the yen exchange is primarily responsible for the rise. The Sino-Japanese conflict, abnormally large imports, the pressure of foreign debt repayments, and fear of inflation have all combined to depress the yen.

The trade returns for February show that, in comparison with the corresponding month of last year, imports at 128,087,000 yen were 29.4 millions higher, while exports at 80,348,000 yen were 11.4 millions lower. Almost all imports increased and raw cotton rose by 18.1 millions, as compared with February, 1931. On the export side, the decreases in cotton piece-goods, paper, and rice are most conspicuous.

The earnings statements of the Japanese joint-stock banks for the December half-year made a decidedly poor showing. Combined net profits of the five leading banks in the latter half of last year totalled 15.7 million yen, as compared with 16.5 millions in the preceding half-year, and 17 millions in the corresponding half of 1930. Despite the decreased earnings those banks drastically wrote down their investments and balance sheet reserves to the tune of 33.8 millions in the aggregate. If the provisions for investments depreciation had been made, as is customary, from the past half-year's profits, their accounts would have shown heavy losses. The customary rates of dividend, however, were generally maintained except in the Mitsubishi, which reduced its dividend from 10 per cent. to 8 per cent. The earnings of the two colonial banks also showed substantial decreases. The Bank of Chosen earned a net profit of 701,000 yen, as against 921,000 yen in the preceding half-year, and paid the usual 4 per cent. dividend, while the net profit of the Bank of Taiwan amounted to only 330,000 yen, as compared with 416,000 yen, and the dividend was again passed.

HONGKONG.

Trade — Customs — Politics.

(FROM OUR CORRESPONDENT.)

HONGKONG.

For the first time for seven years the Hongkong Government is able to publish trade statistics for a full twelve months. The total imports into the Colony during 1931 amounted to \$737,700,000, and the exports to \$542 millions, an increase over 1930 of \$87,700,000 and \$42 millions respectively. Compared with 1924, the last year in which statistics were completed, there is an increase in the 1931 figures of \$124,400,000 for imports, but only \$1 million for exports. Measured in sterling, however, there is a different story to tell, for whereas the value of

1924 imports was £72,100,000, the equivalent of the 1931 imports was only £38,500,000. The corresponding figures for exports were £63,800,000 in 1924 and £28,900,000 in 1931. The rate of exchange for the former year averaged 2s. 4½d., but during 1931 it ranged from 10½d. in February to 1s. 6d. in December.

This wide difference between the rates of conversion into sterling, together with the severe decline in prices during the past seven years, makes it almost impossible to form a satisfactory comparative estimate of the volume of trade. The outstanding feature of the statistics for 1931 is the drop in Japan's share of the Colony's trade. For 1930 Japanese imports were 12.3 per cent. of the total, while they were slightly higher at 12.7 per cent. for the third quarter of 1931. The boycott came into effect at the end of September, with the result that, for the last quarter of the year, Japan's share of the import trade has fallen to 4.3 per cent. The effect of the boycott is particularly severe in the case of piece-goods; the Japanese share of this trade has fallen from 31.6 per cent. in the last quarter of 1930 to 7.6 per cent. in the last quarter of 1931, while there has been an increase in British imports of 18.9 per cent. to 30.4 per cent. for the corresponding periods. Apart from piece-goods, Japan's trade has suffered almost as severely in regard to food-stuffs and metals. There has also been a decline in the imports of Japanese coal, but this has been small, as North China is unable to increase its supply and Indian coal is a more expensive and less satisfactory substitute. The movement of treasure in and out of the Colony during 1931 was on a smaller scale than in 1930, but, nevertheless, amounted to no inconsiderable volume. The exports of silver bars were valued at \$40 millions, and those of gold bars and gold coins came to nearly \$59 millions. The exports of gold bars were destined almost entirely for the United States, and, as in the case of the recent flow of gold from India, were largely due to the sale of personal ornaments stimulated by the unprecedentedly high silver exchange value.

Cost-of-living statistics compiled by the Government show that, as compared with 1924, the last available figures for a complete year, there has been a big rise. With 1922 as the base period, the following table reveals that prices have practically doubled in the eighteen years since the pre-war period:—

	1913.	1922.	1924.	1931.
Foodstuffs	73.6	100.0	106.1	144.3
Textiles	55.1	100.0	112.5	135.8
Metals	63.2	100.0	102.3	140.9
Miscellaneous	64.2	100.0	106.3	125.4
Average all articles	64.0	100.0	106.8	136.6

The Chinese Maritime Customs returns for 1931 show that a total of Haikwan Taels 246,064,000 was collected on account of import and export duties and tonnage dues. There have been substantial increases in the collections for all the Treaty Ports, with the exception of one, and in view of the persistent interruption of traffic on the Yangtze by civil war and flood, it is surprising to find that Hankow figures have increased by Taels 2,063,000 over 1930. The official notification gives no indication of the amount remitted to Nanking, but it is to be feared that quite a large proportion of the huge revenue collected was retained by local administrations to be squandered.

With the rapid development of events in Shanghai, Hongkong has become the last sure refuge for Chinese capital. So long as the Colony is adequately protected from any outside menace, much of the capital which has sought safety here will remain. Although Hongkong is mainly a clearing house for South China, there has been a remarkable development of its industrial resources during the past few years, and this development seems likely to receive much impetus from funds seeking an outlet here instead of flowing through the usual channels into the interior of China. Hitherto local industries have been handicapped by the comparatively enlightened factory regulations of a British Colony and the consequent higher cost of labour, as compared with production costs in Canton and other industrial cities of China. It may now

dawn upon Chinese capitalists that such a handicap is compensated for by security of property and superiority of production, and when this consideration is fully appreciated there is no doubt that Hongkong will make rapid progress as an industrial centre.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

Economic Development in the Nineteenth Century. By the late C. A. Knowles. (London) George Routledge and Sons, Ltd., 68-74, Carter Lane. 12s. 6d. net.

An account of the effect of the changes of the nineteenth century in the economic history of France, Germany, Russia and the United States.

Futures Trading. By G. Wright Hoffman. (London) Oxford University Press, Warwick Square. 28s. net.

A descriptive account of the activities of the organised commodity markets in the United States.

The Silver Situation. By T. E. Gregory. (Manchester) University Press, 23, Lime Grove, Oxford Road. 1s. 6d. net.

A contribution, by an acknowledged expert, to a very live discussion.

The Economic Journal, March, 1932. (London) Macmillan and Company, Ltd., St. Martin's Street. 6s. net.

Includes, *inter alia*, articles on "Economic Conditions in Canada, 1931-32," by Professor H. A. Innis, and "Recent Italian Economics," by C. W. Guilleband.

The Future of Europe. By H. Wilson Harris. (London) Sidgwick and Jackson, Ltd., 44, Museum Street. 3s. 6d. net.

A readable and stimulating little book.

Income Tax and the Professional Man. By K. A. Coles. (London) Crosby, Lockwood and Son, Stationers' Hall Court, Ludgate Hill. 4s. 6d. net.

The Cost of the World War to the American People. By John Maurice Clark. (London) Oxford University Press, Warwick Square. 21s. net.

A Carnegie Endowment publication.

The Truth About Forced Labour in Russia. By the Duchess of Atholl, M.P. (London) Philip Allan and Company, Limited, 69, Great Russell Street. 6d. net.

Railway Economics. By K. G. Fenelon. (London) Methuen and Company, 36, Essex Street. 5s. net.

Mussolini Diplomat. By Gaetano Salvemini. (Paris) Bernard Grasset, 61, Rue des Saints-Pères. 15 frs.

The Anglo-Swedish Year Book, 1932. (London) Swedish Chamber of Commerce, 14, Trinity Square. 3s.

A useful little volume for British business men who are interested in the Swedish market.

International Labour Review, March, 1932. (London) George Allen and Unwin, Ltd., 40, Museum Street. 2s. 6d.

Contains a collection of unemployment statistics of many countries.

Agricultural Research in 1930. (London) John Murray, Albemarle Street. 1s.

Pacific Affairs, February, 1932. (Honolulu) Journal of the Institute of Pacific Relations. 25 cents.

Includes two articles on "Manchurian Backgrounds" from opposite points of view.

City of Birmingham Handbook, 1932. (Birmingham) The Council House.

The Stock Exchange.

FORD AND DAGENHAM.

THE past few months have been eventful in the history of the Ford Motor Company, Ltd., the pivot of Mr Henry Ford's European expectations. Since the publication of its 1930 accounts the company has issued 1,539,451 new £1 shares at £2 premium, which have brought in additional resources of £4,618,353. Dagenham has reached the producing stage, and the transfer of manufacturing activities from Manchester has been effected. At this, of all moments, economic depression has swept Dagenham's predestined European markets like a tornado, tariffs and trade barriers have multiplied, and purchasing power has been reduced. It now appears that Mr Ford's great venture was launched sufficiently in advance of the world slump to allow of the completion of its effective organisation, but not to assure it, immediately, of its markets.

The report for the year to December 31st last is a resultant of these conditions. Share capital has risen from £7,000,000 to £8,539,451, and capital reserve account, after various deductions, from £899,621 to £2,897,720. The company's land, buildings, plant, tools, etc., are valued at £4,926,702, against £2,475,287. The initial stage of its development is complete. It has overcome the formidable engineering difficulties involved in the construction, in a marsh, of a vast self-contained manufacturing unit, capable of an ultimate annual production of approximately 200,000 cars. In return, it will now enjoy the advantage of a deep-water frontage capable of accommodating ocean-going vessels within the boundary of the greatest port in the world. Its Continental organisation is similarly complete. Its subsidiary companies in France, Germany, Holland, Belgium, Denmark, Sweden, Finland, Spain, Italy, Turkey, etc., are all "going concerns," each with a separate organisation for the exploitation of its particular market. All are linked to the parent, directly or indirectly, by a holding company in Luxemburg, one of whose main functions is to act as banker to the group.

The capital structure bears convincing evidence of strategic foresight. The Ford Company of Detroit, with Mr Ford and his son, according to the last Somerset House return, hold 5,401,572 shares, or 63 per cent., of the (British) Ford Motor Company. Of the remaining capital of the latter, some 2,906,027 shares (34 per cent.) are held by a nominee company of the Guaranty Trust Company of New York, the majority of these shares being presumably in the hands of private American investors. Thus the British holding, at the outside, is not more than 3 per cent. of the whole. The (British) Ford Motor Company, in turn, holds investments by way of shares and loans, in subsidiary companies, valued at £4,273,178, mainly through the Luxemburg holding company, which in turn holds 60 per cent. of the capital of the European subsidiaries, the remaining 40 per cent. having been issued to the public in each of the countries concerned. The chief exceptions to this latter arrangement are the Cork company, Henry Ford and Son, Ltd., in which the British company has a direct shareholding, and the Italian company, which has issued no shares to the public, its capital being held entirely by the Luxemburg holding company.

In short, Ford-in-Europe is now a complete self-contained organisation. It has no manufacturing or selling rights in the New World or the British Empire (the latter being the prerogative of Canadian Ford), but it possesses exclusive initiative in its own territory, viz., the British Isles, Europe, and certain parts of Asia and Africa, either geographically or "colonially" related thereto. The European countries, officially, need not now import a single car part from Detroit or employ a single worker of non-European domicile. Mr Ford has a controlling voting

interest in the British company, which in turn controls each one of the subsidiaries through its share ownership in the holding company. Thus, presumably, he retains ultimate control over all matters of high policy. But the European organisation, and with it Mr Ford's reputation as the prophet of profits, must now stand or fall by its own achievements.

That the onset of European depression has been, to say the least, inopportune is suggested by the results of the British company. These do not include dividends from shares in subsidiary companies which, if and when declared, are paid to the Luxemburg holding company. The figures for the three years since the company's formation have been:—

(December 31)	1929.	1930.	1931.
Trading profit	918,230†	1,054,286	412,143
Depreciation and obsolescence ...	†	57,330	115,712
Directors' fees, &c.*	9,235	18,352	13,269
Taxation	195,000	188,250	217,416
Exceptional charges (see text below) ...	...	...	200,235
Net earnings	713,995†	790,354	Dr. 134,489
Earnings % (gross)	12.9†	14.0	0.97
Paid % (gross)	10	10.0	Nil
Amount of dividend (net)	560,000	542,500	...
Total carried forward	258,507	506,360	371,871
Paid-up capital	7,000,000	7,000,000	8,539,451

* Including interest on employees' investments and boys' training school expenses.

† Excluding £104,512 profits of affiliated companies prior to their reorganisation.

† Profits figure struck after allowing for depreciation.

The British company's operations in 1931, after deducting "normal" charges and taxation, resulted in a profit of only £65,746, against £790,354 in 1930. In addition, the company was burdened by "abnormal" charges of significant dimensions. These included £29,905 for accumulated loss on trading operations outside the British Isles, and a reserve of £170,329 for exchange loss on the company's dollar debts to Detroit. Sterling's subsequent rise will have diminished this liability by approximately one-fourth, and, in any case, the Detroit company is accommodating and has postponed payment for an indefinite period.

Heavy charges, in addition, have fallen to be made on capital account. The company's shareholding in Henry Ford and Son, Ltd., Ireland, has been entirely written off, and an asset of £224,263 thus disappears from the balance sheet. Special provision has been made, further, to the tune of £1,000,000, against contingent depreciation in the value of a loan to the same company. The migration from Old Trafford to Dagenham has required a net appropriation of £124,360, after allowing for the surplus upon revaluation of the machinery and plant purchased from the old company. These capital losses reach the imposing aggregate of £1,848,622. Some £288,532 has been provided out of the surplus arising from the sale of the company's Italian interests to the holding company, from taxation reserve not required, etc. (the nature and dimensions of "etc." are not explained), and the remaining £1,060,090 has been taken from premiums on the 1931 issue of 1,539,451 £1 shares at £3. Thus, in effect, about 23 per cent. of the new money secured last year (nearly four-fifths of which was actually subscribed from Detroit) has been required to write off losses, actual or potential, of the Cork company. For the last two years this concern, which turns out the Fordson tractor, has been the weakest link in the Ford European chain. Its production declined considerably last year, the total value of all tractors and parts exported from Ireland,

according to the Free State trade returns, falling from £2,586,639 to £516,844 last year. How far the Cork factory is being profitably employed to-day is uncertain. Last year's figures of tractor imports into Great Britain showed a sharp drop as regards consignments from Ireland, a noteworthy increase from America, and a significant growth in the figures from Germany, Switzerland and Turkey, which suggests that recent demand may have been partly met by drawing on the surplus tractor stocks of some of the Continental Ford companies.

Economic depression, in short, has necessitated the passing of the Ford dividend and the making of a substantial inroad into the new resources provided mainly by the parent company in Detroit. Nevertheless, the current financial position of the British company is liquid. On December 31st last, it had £1,433,099 in cash and Government securities and £1,024,473 on deposit with the Luxemburg company. Dagenham is on the threshold of its career as a European exemplar of Ford ideals of efficiency. What policy will be followed? Clearly, the British market cannot keep Dagenham fully employed. In the year to September last, the British market is believed to have taken about 14,000 Ford commercial vehicles. The standard "A" passenger model competes with British cars in horse-power groups in which only 45,000 new cars of all makes, on a generous estimate, were registered last year. The new "Baby" 8 horse-power car competes with other makers (already strongly entrenched), for a British market which in 1931 appears to have absorbed about 40,000 cars.

Economic exploitation of Dagenham's resources will necessitate extensive sales to the Continental companies. By the time this article is in the hands of readers, the chairman of the company will doubtless have outlined the company's policy in his speech to shareholders on Friday, April 8th. Apparently, that policy is two-fold. First, while the depression endures, European liquid resources are to be strictly conserved. Apart from the Irish, Finnish and German companies, none of the European concerns is understood to have made a loss last year, but profits in every case were carried forward, no dividends being paid. The determination to maintain a liquid position was categorically affirmed at last week's meeting of the Dutch company, when certain outside shareholders, not unnaturally, protested against the decision to distribute nothing, against 20 per cent., although the company had earned 48 per cent. on its issued capital. At the meeting of the Belgian company the chairman was even more definite. He declared that although net profits of nearly 23 million francs had been earned, against 15 million francs required for the maintenance of the previous year's 15 per cent. dividend, the British company had insisted upon the omission of any distribution. The Belgian company's profits, incidentally, were stated to have been realised chiefly during the first months of 1931, receipts having declined to a low point in December.

The second cardinal feature of Ford policy is that, with the completion of Dagenham, the Continental companies will virtually cease to take supplies from Detroit, even though Dagenham costs may be somewhat higher while production is getting into its stride. If the difference is appreciable, while the Continental companies are unable to increase their selling prices under present conditions, the effect may be to enhance the trading profits of the British company (which are distributable in cash dividends to its shareholders), and to reduce, temporarily, the profits of the Continental subsidiaries (which are not brought into the British company's revenue account). The profit-earning capacity of Ford-in-Europe, therefore, can be satisfactorily tested only when normal conditions have returned, and Dagenham has had time to win its spurs. Meanwhile, its resources should be sufficient to weather the combined effects of depression and transition. The British company's shares, however, which have fallen to 21s. 6d. from a high 1930 price of 93s., may remain, for the present, under the dual influence of conservative estimates of the company's contemporary trading experience and depressed conditions for equity shares in the American market.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.
April 19.

ACCOUNT.
April 21.

THE accountants' revelations regarding the falsification of the Kreuger and Toll accounts for 1930 (discussed on page 808), gave markets their worst shock since Mr Kreuger's suicide. They suggested not only that popular estimates of the late Mr Kreuger's character needed revision, but also that the group's troubles began earlier and probably extended further than had previously been realised. The "Danubian" conversations in London were viewed with a scepticism which their absence of achievement did something to justify. Belief in a change of Bank rate tended to widen as the week progressed, and the announcement of the "no change" decision caused a setback in gilt-edged values. Elsewhere, however, prices were relatively steady considering the unfavourable environment, London's record in this respect contrasting favourably with the weaker showing of New York.

Although slight selling of British Government stocks was in evidence at the outset, investment demand carried all prices quotably higher before the movement was checked by the maintenance of Bank rate. This was regarded in some quarters as evidence that the Government did not intend to disclose a 5 per cent. War Loan conversion scheme in this year's Budget speech. India loans were unable to hold their fairly widespread gains at the beginning of the week, but Australian issues were firm on the High Court decision, upholding the Commonwealth Finance Agreement (Enforcement) Act. New Zealand stocks were slightly easier on the new £5,000,000 issue, which was not enthusiastically received.

Business in the foreign bond market was lifeless. The market's assumption, after the MacDonald-Tardieu *communiqué*, that the Four-Power Danubian discussions would make little headway, was mainly responsible for continued selling of German issues. Sino-Japanese stocks were lower on the absence of progress at Shanghai.

Business was meagre among home rails, equity stocks attracting little interest, while prior charges were easier in sympathy with the partial reaction in gilt-edged. The week's traffic figures were not satisfactory, allowance being made for comparison of Easter week with Good Friday week of 1931. The leading Argentine rails were liquidated, traffic receipts continuing their downward trend and the peso showing unexpected weakness, which was vaguely ascribed to political factors. Canadian Pacific were unable fully to hold an early improvement.

The industrial markets were somewhat fearful of Continental liquidation at the outset, but took the shock of the Kreuger revelations better than might have been expected. Electrical shares—normally one of the steadiest investment markets in the "House"—were fractionally easier. Tobacco shares came on offer early in the week, and breweries were irregular. International Tea were firm on rumours of a pending share offer on favourable terms. Dealings in Kreuger and Toll and Swedish Match became a matter of negotiation, but British Match, after a sharp drop, were stronger on an official statement that the company was not implicated in the Kreuger difficulties. Coal and steel shares fell off slightly, the market not liking the labour outlook. Stewarts and Lloyds (whose results are discussed on page 810), were in demand on the announcement of the placing of the Iraq pipe-line contract. No interest was taken in textile shares. Dunlop receded on renewed dividend fears. United Molasses were weak on the unfavourable report (analysed on page 810). The tone of the Cunard speech caused a slight recession in shipping share values. Bank shares, as usual, followed the movements of gilt-edged, and insurance shares were dull.

After a relatively firm start, helped by talk from America, oil shares became easier on fears of Continental selling, though little stock, in fact, came on offer. Business in rubber shares dwindled to vanishing point after the uncompromising statement of the Rubber Growers' Association regarding the finality of the abandonment of

(Continued on page 806.)

LONDON ACTIVE SECURITY PRICES AND YIELDS.

NOTE.—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

(Continued from page 803.)

restriction. Dealings in tea shares, after a quiet opening, tended slightly to expand in the latter part of the week, but prices were not maintained, an exception being Nuwara Eliya, which was supported on satisfactory report figures.

In spite of the Kreuger scandal, Paris did not sell mining shares to any large extent, except in isolated instances like Langlaagte, where attempts to realise in a narrow market caused a sharp setback. The virtual maintenance of the Union Corporation profit was deemed highly satisfactory, though the dividend was paid in English currency. The absence of a Rio Tinto dividend, for the first time since 1921, had been fully discounted, but the picture of contemporary conditions presented by the report was not regarded as reassuring, the shares falling on selling from Paris. Base metal shares remained dull in sympathy with the weak tone of the commodity markets. Little interest was shown in circumstantial reports of moves for a still further tightening of tin restriction procedure.

FOREIGN STOCK EXCHANGES.

NEW YORK.

Second thoughts on the ½ per cent. tax on sales of stock, passed by the House of Representatives, were decidedly unfavourable. The Price, Waterhouse statement showing gross irregularities in Kreuger and Toll finance merely reinforced the general pessimism. Both railroad and industrial stocks broke new low ground for the present depression, offerings of the former being increased after the reduction of the Atchison dividend from \$6 to \$4. This was accompanied by a statement that

the continuation of dividend payments was contingent upon an upturn in earnings. Bond prices made no progress. The market became more or less resigned to the prospect of no reduction in the rediscount rate until the attitude of Congress towards the Budget had been more clearly defined. The difficulties of a large Middle Western concern caused weakness in utilities generally. Dealers were not unprepared for the passing of the American Smelting dividend, the weakness of other steel issues being connected rather with the view expressed in a leading trade organ that no practicable increase in demand from the automobile industry could materially improve the steel position, in the absence of better business conditions generally. That these remained to seek was shown by the March reduction in electric power consumption of 11.9 per cent., as compared with March, 1930, and the continued decline in the *New York Times* Business Index, which for the week ended March 26th was 60.0, against 61.4 in the previous week. Steel mill activity was maintained at 22 per cent. of capacity. Freight-car loadings for the week ended March 26th (which included the Easter holiday), were 561,139, compared with 584,698 in the previous week, 740,079 in the corresponding week of 1931, and an average of 936,884 during the seven years 1924-30.

* 2-hour session.

PARIS.

A cheerful tone prevailed on the Paris Bourse in the earlier sessions on substantial bear covering, and optimism was felt concerning the eventual result of the Franco-British conversations. Banque de Paris, Royal Dutch,

Tintos, and Kreuger and Toll all enjoyed a mild recovery. A reaction subsequently set in. "Young" bonds were heavy. Banque de France displayed weakness. On Wednesday all markets were seriously affected by the news of a relapse on Wall Street, and the Kreuger and Toll revelations, though liquidation was not as heavy as was feared. Rio Tintos were easy on the report, which was regarded as a discouraging indicator of immediate prospects. On Thursday a further sharp recession occurred in all sections on renewed uneasiness regarding the international position.

BERLIN.

The Berlin Bourse was depressed, the insolvency of the well-known Berlin store of Hermann Gerson creating a bad impression. One or two mining shares had a better appearance, and electrical shares were in demand, but bank, shipping and rayon shares receded. A.K.U. suffered heavily, offers being received on Dutch account. The markets were further upset by news of the Kreuger defalcations. Comparative "unofficial" prices are given below.

	Mar. 31, 1932.	Apr. 5, 1932.	Apr. 7, 1932.		Mar. 31, 1932.	Apr. 5, 1932.	Apr. 7, 1932.

February. The recession showed signs of being checked at the same low point reached in the two preceding months, but early in April Wall Street prices broke below this level, and at the moment are at the lowest point for over ten years.

Disquieting Kreuger Disclosures.—The market in Kreuger and Toll and Swedish Match securities was badly upset by the disclosure, late on Tuesday, that the investigating committee at Stockholm had received a preliminary report from Messrs Price, Waterhouse and Company, the examining auditors, declaring that the balance sheet of Kreuger and Toll, as of December 31, 1930, while in agreement with the balances appearing in the books, grossly misrepresented the true financial position. Under the late Mr Kreuger's personal direction, entries had been made eliminating substantial balances shown to be owing to the parent company by him and by subsidiaries. Other entries had either entirely eliminated liabilities to other subsidiaries or had established accounts purporting to represent substantial assets. In some instances there was reason to believe that the book assets greatly exceeded the assets they purported to represent or were entirely fictitious or were duplications of assets appearing on the books of associated companies. These manipulations evidently extended, according to the auditors, to the profit and loss accounts of the different subsidiary companies. No more devastating attack could have been made on the honesty or credit of the Kreuger group. Those who were in close touch with the late Mr Kreuger had implicit confidence in his integrity. The *Economist* always paid tribute to his apparent devotion to high ideals of financial service. Yet it appears that gross irregularities had been going on for at least the last two years. The fiscal agents, both in London and New York, have declared that the irregularities of Kreuger and Toll could only have been concealed by the most flagrant misrepresentations to them by Mr. Kreuger in word and in writing. In view of natural fear lest the investigation should disclose other irregularities, possibly prejudicing the position of the Swedish Match Company itself, shareholders of British Match will be gratified to learn that the company has made no loans to and has no shareholdings in either Kreuger and Toll or Swedish Match. It is satisfactory that steps are being taken to protect the interests of British and American bondholders and shareholders. A meeting, convened by Messrs. Higginson and Company, N. M. Rothschild and Sons, and Hambros Bank on Wednesday decided to set up a provisional committee to maintain touch with the investigating committee in Sweden, and to consider what steps should be taken to protect the interests of British holders. A similar committee is being appointed in New York, and will take up the question of the payment of the next instalment of bond interest on International Match debentures, which is due on May 1st. With regard to Sweden, the Riksdag has agreed to grant support to the Skandinaviska Bank subject to the reservation that a member of the National Debt Commission should in future act as a member of the Skandinaviska Bank board and decide the question whether shareholders shall receive dividends. The State loan to the Skandinaviska Bank of Kr. 115 millions will carry interest at 1 per cent. above the official bank rate, with a minimum of 5½ per cent. It remains to record the disastrous fall in market quotations:—

	High Prices.	Present
	1929. 1930. 1931.	Price.
	£ £ £	5s.
Kreuger "B"	42½ 33½ 27½	10s.
Do. participating debts....	47½ 36½ 28½	22
Do. (gold debts.) \$500 ...	105 105½ 99	13s. 9d.
Swedish Match "B"	24½ 17½ 13½	

The fall in the market capitalisation of the securities of the Swedish Match and Kreuger and Toll group (excluding International Match) from the high levels of 1929 now amounts to about £215 millions.

New York Weakness.—The New York Stock Exchange has now been reacting steadily for a month and during each of the last four days has broken new low ground. For some time, a resistance level was established at just above the low levels of January 5th, but the absence of any sign of recovery in business has brought the market into a state of unrelieved gloom. Indeed, being so much concerned with its own domestic problems, it was almost too numbed to feel the shock of the Kreuger disclosures. We may summarise the bad news which has led up to the prevailing break in the New York stock markets as follows:—The downward tendency of commodity prices and business indices, in particular the continued fall in electric power consumption, which shows a reduction of 11.9 per cent. as compared with the corresponding period last year; and the decline in steel mill operations to 22 per cent. of capacity; the failure of many of the leading railroads to earn their bond interest, and the passing of common stock dividends by Baltimore and Ohio; the nervousness regarding the coming dividend announcement of United States Steel and the passing of the dividend this week by American Smelting and Refining; the "rot" in the Middle West Utilities group which is unable to meet the maturing \$10 millions note issue on June 1st; and finally the behaviour of Congress in refusing, first, to balance the Federal Budget and then balancing it in a manner distasteful to the Stock Exchange by including a tax on the sales of stocks and bonds. If there had been any big volume of liquidation to come, the market would have broken by the 10 to 20 points that used to be typical of major breaks, but so liquidated is the individual investor that the worst is now an orderly daily wastage of quotations. The new rules regarding short selling appear to have been wholly ineffective in lessening the amount of short-interest. The following Dow Jones indices show the fall in the market since January, 1931:—

Date.	20 Rails.	30 Industrials.
January 6, 1931	102.21	172.77
June 27, 1931	88.31	156.00
January 5, 1932	31.36	71.24
March 5, 1932	38.65	88.49
April 1, 1932	28.53	72.18
April 2, 1932	27.53	71.30
April 4, 1932	27.43	71.19
April 5, 1932	25.77	68.07
April 6, 1932	29.40*	66.46†

* Lowest ever recorded. † Lowest since October, 1921.

The special feature of the break this week has been the pronounced weakness in the utility group and in particular in Middle West Utilities and Electric Bond and Share. It is stated that the reorganisation of the Middle West Utilities group is being considered by a group of bankers and that by a writing-down of capital the group may be saved from disintegration.

"Danubian" Loans.—The loans of the Central European States have been a difficult market for some time, with the exception of the Austrian 6 per cent. Guaranteed Loan, which is guaranteed as to 24½ per cent. each by Great Britain, France and Czechoslovakia and as to 20½ per cent. by Italy. Even this loan, however, is now quoted under par. The "League of Nations" loans have not escaped severe liquidation, for it is felt in the market that if the difficulties of transfer become insuperable for debtor countries, it will not be feasible to make distinctions in favour of holders of League loans. The Financial Committee of the League has itself proposed that Greece should suspend for one year the transfer of the sinking fund payments of all loans under the control of the International Financial Commission, while Bulgaria should reduce by 50 per cent. the transfers in respect of the entire external debt for six months. Hungary, it will be recalled, declared a moratorium last December, but made an exception in favour of the 7½ per cent. League Loan of 1924. The highest prices last year and this year and the present market price of the League Loans and other

Central European bonds are shown in the following table:—

	High Prices.	Present	Yield
	1931.	1932.	(%)
			£ s. d.

It remains to be seen to what extent the position of the bondholders will be strengthened by the Four-Power Conference regarding the Danubian Confederation, which is dealt with in a leading article on page 780 of this issue. The relief proposals include financial aid by France and Great Britain on the lines of a central pool from which contributions may be made to the different States. Whether such financial assistance should be utilised for the purpose of payment of interest on "League of Nations" loans as against other loans, is one of the difficult questions awaiting solution.

Brazilian Developments.—In pursuance of the external debt funding scheme of the United States of Brazil, which was outlined in the *Economist* of March 19th last, Messrs Rothschild announce that they are now prepared to receive coupons of four Brazilian loans for funding under the plan, viz.: 4 per cent. Railway Guarantees Rescission Bonds, 5 per cent. loan of 1895, 4 per cent. loan of 1910, and 4 per cent. loan of 1911 for £4,500,000 nominal. Although, as regards the main body of the external debt, efforts are thus being made to conserve the available resources of Brazil, it is also announced that the whole of the outstanding bonds of the United States of Brazil 7½ per cent. (Coffee Security) loan of 1922 will be repaid on October 1st next at 102 per cent., together with accrued interest. The total amount of this loan was £9,000,000, of which £7,000,000 was issued in London in sterling bonds in May, 1922, at 97, the balance being offered simultaneously in New York. The amount of the sterling loan outstanding is roughly £7,899,000, a sinking fund of 1 per cent. per annum having been provided. The Government has the right of redemption on October 1, 1932, or at any interest date thereafter at 102 per cent. The loan was secured by a general bond of the Government, and by the first hypothecation on about 4,535,000 bags of coffee, the value of which was estimated at over £13 millions. The Government undertook always to maintain in the hands of the bankers a quantity of coffee, the value of which, at 80 per cent. of its current price, together with the market value of any other security in the hands of the bankers, should be equal in the aggregate to the nominal amount of the bonds outstanding, together with one year's interest. A committee of five were empowered to sell in every year at least 453,500 bags of coffee, out of the proceeds of which the amortisation of the bonds would be provided. In point of fact, by seizing a favourable opportunity in 1923, the Government was able to dispose of the whole amount of the hypothecated coffee and with the proceeds to acquire bonds of the 1922 Coffee Loan or British Government securities. The repayment of the loan in 1932 was therefore assured nine years ago.

Cunard Policy.—Sir Percy Bates, addressing the Cunard Company's shareholders on Wednesday, chose his words carefully, but did not mince them, his speech being clearly intended to leave no loophole for complacency over the immediate outlook. The company, he declared, had suggested a cut in North Atlantic charges some time ago, but had unsuccessfully opposed it in the present instance as being a year too late, and, therefore, possibly more than a year too soon. It was apparently suggested that the Cunard's hand was forced by the decision of the White Star to follow the lead given from New York. If the Cunard is to earn the same revenue as in 1931 it will require to carry an additional 21,500 first-class, 30,000 cabin and 52,500 tourist and third-class passengers. What shareholders may not have appreciated, after hearing Sir Percy's speech, is that the "cut" may be, on balance, advantageous to the company, even if the passenger total fails to increase to anything like the extent suggested. A true economic comparison will lie, not with the numbers carried last year, but with the total which might have been expected in the absence of lower fares. Nevertheless, as the company covered only £161,000 of its £705,000 depreciation by earnings last year, the prospects of dividends in respect of 1932 on its £8,070,261 of capital are not bright. Nor is it easy to see whence the money is to come for the resumption of work on the 70,000-ton liner "No. 534," if the company adheres to its resolve to finance the operation entirely out of cash earnings set aside for depreciation and the Government maintains a *non-possumus* attitude. The vessel could be made ready for launching within five months of resumption, but the Government has turned down a further proposal which the company "had some reason to think attractive," and matters appear to be at an *impasse*. The company holds firmly to its contention that "No. 534" and her sister ship alone can secure its position in a trade in which success has always followed

COMMERCIAL SERVICE.

The Bank has over 370 Branches in Africa, and Agents and Correspondents throughout the World. The closest touch with Trade and Industrial conditions is maintained, with special attention to Commercial and Credit Intelligence. This service is available to Exporters, Importers and others wishing to develop trade with South, East and Central Africa.

THE STANDARD BANK MONTHLY REVIEW is sent post free on application. It gives the latest information on all South, East and Central African matters of Trade and Commercial Interest.

the best ships. Whatever vessel replaces the "Mauretania" must run for twenty or twenty-five years, and a cheaper unit, built for a "three-ship" instead of a "two-ship" service could not, in the company's opinion, earn an economic return for more than half its working life. Government intervention in shipping, indeed, bears upon the Cunard position in a variety of ways. The multiplication of tariffs is restricting movement by sea, while the subsidies and other differential advantages given by some Governments to their shipping services are compelling the Cunard, sturdy representative of British trade freedom that it is, to consider whether it may not one day be necessary to ask for Government help in running its Transatlantic services. This conclusion appears plainly between the lines of Sir Percy Bates' speech.

Stewarts and Lloyds.—Shareholders in Stewarts and Lloyds, the largest steel tube makers in this country, were warned a few months ago of the possibility of less favourable accounts. In view of subsequent trade conditions, the management deserves credit for avoiding a loss, and enabling the company to cover its preference dividends with £78,000 to spare. No dividend is recommended on the deferred or the "liaison" shares. Only £150,000 (against £200,000) is allocated to depreciation, and £75,000 is earmarked for a new "special reserve" of unspecified purpose.

* Including dividends on 197,500 new deferred shares and 625 liaison deferred shares issued during the year.

Bank overdrafts have been reduced from a high figure of £928,615 to £609,247, apparently by calling in debts from subsidiaries, which are down from £1,781,188 to £1,130,664. The balance sheet shows no substantial change. Though the cash situation is evidently stringent, the total of semi-liquid assets (stocks, work in progress, and trade debts owing) is fully double the total of current liabilities, including the bank loan, so that the intrinsic position is thoroughly sound. An agreement has been reached with the Scottish Tube Company. Through a previous arrangement with Tube Investments, Stewarts and Lloyds can now co-ordinate the policy of almost, but not quite, the whole of the tube industry in Great Britain. The chairman's speech on Tuesday is likely to make important reference to the future of the International Tube Cartel, in which this country participates. The Cartel was liable to lapse at the end of last month, but it is reported to have been continued, at the last moment, until 1935, with power to terminate in 1933. Stewarts and Lloyds deferred ordinary shares spurted last week on the news that the company had received a good share of the order for the new Iraq pipe-line, and they now stand at 13s. 4½d.

Cement Manufacturers' Results.—The "Blue Circle" group of cement manufacturers, which includes Associated Portland Cement, British Portland Cement, and a large number of subsidiaries, maintained their position in gratifying fashion last year. The absorption of the erstwhile "Horne" group of "Red Triangle" producers has been completed, the net profits of the acquired undertakings being included in the figures of the Associated Cement Company as from July 1st last. The trading profit of Associated Portland rose from £534,781 to £668,886, and after allowing, *inter alia*, £300,000, against £250,000, for

general depreciation, net profit was £399,963, against £387,650. The changes in the balance sheet reflect the acquisition of the "Red Triangle" undertakings. The expenses incurred have been written off partly out of trading profits and partly by a transfer from contingencies reserve. Sundry creditors and reserves for taxation and contingencies are shown in the balance sheet at £517,681 and £175,000 respectively, instead of being lumped together in one item of £530,461 last year. The general position is liquid:—

	Year to December 31,		
	1929.	1930.	1931.
Ordinary capital	3,000,000	3,000,000	3,500,000
Trading profit	575,484	534,781	668,386
Net profit	367,515	387,650	399,963
Brought forward	140,006	140,899	160,964
Preference dividend.....	126,622	127,584	137,500
No. of times covered	2.9	3.0	2.9
Ordinary dividend—			
Amount	240,000	240,000	260,000
Earned %	8.0	8.9	8.3*
Paid %	8	8	8 and 4†
Carried forward	140,899	160,964	163,427

* On average amount of capital outstanding during the year.
† 8 per cent. on 3,000,000 ordinary shares on issue before August, 1931, and 4 per cent. on 500,000 ordinary shares issued in August, 1931.

The earnings of the chief subsidiary company, British Portland Cement, have also been well maintained, net profit, after deductions, being £354,358, compared with £348,128. Preference dividend requires £100,800, and dividend on the ordinary capital, maintained at 15 per cent., absorbs £252,000, leaving £1,558 to be added to carry forward. Reserves of £163,500 for taxation and contingencies are now shown as a separate item in the balance sheet. At the annual meeting the chairman pointed out that, while an increased tonnage of Portland cement sold last year in the home market had offset declining prices, the present demand was hardly as good as a year ago. The ordinary shares of Associated Portland are quoted at 25s. 9d. to yield £6 4s. per cent. and of British Portland at £2½ to yield about £6 17s. 3d. per cent.

United Molasses.—The year 1931 has done nothing to restore this company's fortunes. Total income declined from £454,247 to £430,681, but heavy abnormal charges were incurred, and there remained to go forward a debit balance of £775,678, including the adverse balance of £64,260 brought in from the last accounts:—

	Year to December 31,		
	1929.	1930.	1931.

* And capital bonus of 50 per cent. from reserve.
† Provision for balance of losses in subsidiary and associated companies.
‡ Being £433,393, molasses run to waste; £52,289, expenses in connection with laying up of ships; £217,887, provision for losses of subsidiaries.
§ Including £110,601, capital losses incurred during the year.

The decline in the consumption of molasses continued until late in the year, deliveries falling from 1,900,000 tons in 1929 to 1,100,000 tons in 1931. Freights, even when

obtainable, were insufficient to pay more than bare running costs, and 75 per cent. of the fleet was laid up. Consumption in Great Britain and some Continental markets, however, has recently been running about 50 per cent. higher than last year, but the decline continues in America and India. Material changes have occurred in the balance sheet. Investments in and advances to subsidiaries stand at £2,095,815, compared with £4,163,279, the difference being mainly accounted for by the liquidation of the British Molasses Company and the Pure Cane Molasses Company, and the sale of the Eastern Alcohol holding. The bank loan has been reduced from £623,250 to £315,000, and amounts owing to subsidiaries from £818,592 to £125,760. The liquid position is not satisfactory, the consolidated balance sheet showing liquid assets of £796,215 against current liabilities of £1,174,927. The £1 6 per cent. cumulative preference shares are at present quoted at 8s. 9d., and the £1 ordinary shares at 7s. 6d.

First Co-operative Investment Trust.—A further decline in revenue for the half-year ended January 31st last is shown by the First Co-operative Investment Trust. A final dividend of 2 per cent. is declared, making 3 per cent. for the year, against 4 per cent. for the year ended January, 1931. Net revenue has fallen from £87,463 in the twelve months to January, 1931, to £71,084 in the last twelve months. The reduction may partly be explained by the rearrangement of the company's securities. It would appear that the Trust is hoping for a recovery in equity values, since it has reduced the percentage of its bonds and debentures to total holdings:—

	Percentage of Valuation.		
	Jan., 1931.	July, 1931.	Jan., 1932.
Bonds and debentures	55.47	53.23	46.79
Preference	14.87	15.78	17.66
Ordinary and deferred	29.66	30.99	35.55
	100.00	100.00	100.00

The geographical distribution shows an increase in the percentage represented by Germany (from 16.71 per cent. to 18.02 per cent.), although there is a reduction for other European countries from 21.13 per cent. to 18.43 per cent. The large proportion of the portfolio held in Germany was always considered a weakness of the Trust. The depreciation now shown on the Trust's investment at middle market prices for the quoted securities has increased to no less than 46.27 per cent. as compared with 35.42 per cent. six months ago and 26.2 per cent. at January 31, 1931. Even so, this gives an optimistic picture, since there is frequently a considerable difference, in today's markets, between middle prices and selling prices. Reserves and carry-forward have been deducted in arriving at these figures. If reserves are not allowed for (on the ground that they are invested reserves), the investments show a depreciation of over 52 per cent. It is difficult to see how this depreciation of capital can be made good in the near future, even if the markets improve. Something might be said for acceptance of the corollary of this view—the submission to the shareholders of a scheme for the writing-down of capital.

Industrial Profits.—During March we received 210 company reports, aggregate profits showing a decline of 13.37 per cent. compared with 6.81 per cent. February:—

Reports published in 1931.	No. of Companies.	(1931 compared with 1930).
April	217	— 10.49
May	211	— 22.3
June	192	— 21.93
July	185	— 39.46
August	55	— 19.59
September	74	— 44.02
October	170	— 58.26
November	147	— 35.59
December	157	— 68.54
		(1932 compared with 1931).
January	127	— 19.65
February	211	— 6.81
March	210	— 13.37

We set out below the figures for various industrial groups, according to reports received during the past three months:—

INDUSTRIAL PROFITS—FIRST QUARTER, 1932.

Group.	No. of Companies.	Net Profit (after Payment of Debenture Interest). Reports received during first three months of 1932.		Increase or Decrease.

Total	548	63,403,727	54,314,815	- 14.33

Among the reports received in March, that of Courtaulds was noteworthy for a decline in profits from £2,274,409 to £1,551,587. Agricultural and General Engineers showed a loss of £700,208, against a profit of £108,864, while Pinchin Johnson earned £196,017 against £315,077, and Powell Duffryn £50,970 compared with £112,309. British Oil and Cake was remarkable for an increase from £155,106 to £666,163, while profits of Thomas Tilling rose from £272,788 to £324,865, and of Home and Colonial from £588,938 to £854,325. Our usual quarterly analysis will appear in the *Economist* next week.

Canadian Pacific Report.—The revenue figures of the Canadian Pacific Railway for 1931 were summarised in the *Economist* of March 19th last, page 645. The full report adds valuable information regarding the sources of the considerable economies made in working expenses during the last two years, which totalled \$24 millions in 1930 and a further \$27 millions in 1931. Passenger train services have been reduced by 3½ million train-miles per annum, and the number of locomotives in service has been considerably curtailed. Less repair work has been undertaken. Expenditure on stores and supplies has been lowered during 1931 alone by over 42 per cent. Wages and salaries have been reduced by 10 per cent. In addition, certain expedients have been adopted which are relevant to periods of depressed earnings. For example, amounts expended on renewals, in order to aid the unemployment situation, are being charged into the company's income accounts, not immediately, but at the time the work would ordinarily have been performed. The company now has 27,156 preference and 77,046 ordinary stockholders, some 97 per cent. of the preference and 45 per cent. of the ordinary stock being held in the United Kingdom and other British countries (other than Canada). Canadian citizens hold 20 per cent. and United States citizens 29 per cent. of the ordinary stock. The company has been increasing its fixed charges somewhat rapidly of late. Last year, funded debt rose from \$447 millions to \$475 millions, and a further issue of \$12½ millions has subsequently been made. Recent issues of preferred capital have raised the latter's total by nearly \$10 millions since the end of 1930. In the same period the company's holdings of cash and Government bonds have been reduced by nearly \$15 millions. The resources, thus provided, have been used for the most part to finance capital expenditure, which has relieved Canadian unemployment and will be directly remunerative in future years. Since last year's income, however, covered fixed charges and preference dividends only 1.3 times, there is a danger of the capital structure's becoming somewhat top-heavy if the period of depression and abnormally low receipts is prolonged.

Rubber: R.G.A. Statement.—The Rubber Growers' Association has followed up the Colonial Office announcement of the abandonment of restriction negotiations by an official pronouncement, which appears not merely decisively to dispose of the matter for the present, but to preclude its being raised in the future. The Association will neither put forward any recommendations for the re-opening of official negotiations nor consider any schemes for voluntary regulation. It will concentrate its efforts on securing further relief of the burden upon growers of such charges as taxation, rents, health expenses, railway rates, wages, repatriation of workers, road and drainage schemes, etc. It is doubtful whether the Association is equally well advised in its decision to urge the Governments in the rubber-growing areas to concentrate their research activities on the problems of utilising rubber in new commercial products instead of measures for increasing estate productivity. Admittedly, the discovery of new uses for rubber opens up a wide and tempting field, while research into problems like bud-grafting may seem peculiarly inopportune at a time when the industry is faced with over-abundance of supplies, actual and prospective. Nevertheless, "quantity production" and low costs seem destined to be the strongest future weapons in the armoury of the European grower against his formidable native competitor, and to neglect the prosecution of scientific research in this direction would be, in the long run, a fatal policy. Meanwhile, it may be expected that tapping will now cease on a significant acreage owned by the less economic producers. The course of prices over the next few months may be influenced by the dimensions of possible rubber stocks, held by such producers (which have not hitherto been included in the figures of visible supply), and the policy adopted as regards their realisation. If these stocks are at all heavy, it may be hoped that their owners will endeavour to liquidate them gradually, rather than throw them rapidly on the market.

Indian Gold-Mining Results.—The rupee being linked with sterling, the companies operating on the Kolar Field obtained during the latter portion of 1931 an enhancement in the price of their product sufficient to raise the average for the year to £4 13s. 9d. Thus, there was an expansion in the rate of dividend declared by three out of the five companies—although in several cases operations were adversely affected by accident. The Champion Reef is paying 15 per cent., as against 10 per cent. previously. With the labour position "much improved," a largely increased development footage was carried out, but the ore reserves show only a modest expansion. An interesting feature of underground work is the discovery in the southern section of the mine of what may be the commencement of a new ore shoot. At the Mysore, underground work was seriously restricted and expenses were swollen by severe lockbursts. Accordingly, despite the advance in the sterling price of gold, the company is only able to pay 10 per cent., in place of 12½ per cent. The ore reserves continue their progressive decrease. At the date of the balance sheet the surplus liquid assets amounted to £263,500. The following tabulation contrasts the salient features of the results for the past three financial periods of the five companies:—

	Tons of ore milled.	Mill yield per ton. Dwt. s.	Working profit. £	Carried forward.* £	Ore reserve tonnage.
Balaghat—					
1929	50,100	13	26,040	7,080	56,000
1930	39,200	11½	16,800	†210	41,520

* Subject to directors' percentage. † Average assay value.
‡ Loss.

At the Nundydroog, ore above the average of the reserves was treated as a temporary measure to counteract the effects of the fire which broke out in the Oriental Section of the mine and caused the suspension of underground operations for seven weeks. Naturally the cost ratio was forced up. The damage exceeded that covered by insurance, and will entail further outlay during the current year. In the circumstances the fact that the ore reserves show a fresh, although small, increase must be regarded as satisfactory. The dividends totalled 27½ per cent., against 25 per cent. As regards the Ooregum, ability to pay 1s. 3d. on the preference and 3d. on the ordinary (in place of 6d. only on the preference for 1930) arose entirely from the enhancement in the price of gold. The results generally disclose a renewed falling off—especially marked in the case of the ore reserves. Perhaps the outstanding incident in connection with the group is the absorption of the Balaghat by the Nundydroog company. The arrangements—which will, it is claimed, be advantageous to both parties—found ready approval at Wednesday's meeting. They had already caused Balaghat preference to score a substantial advance, and the ordinary to double in price. It may be regarded as significant that the Mysore, Nundydroog and Ooregum companies have opened negotiations with the Mysore Government as to the terms for an extension of their leases beyond March, 1940. A dividend of 20 per cent. is likely to be declared shortly on Balaghat preference and 10 per cent. on the ordinary.

Rio Tinto.—In some quarters doubts had been entertained as to whether this company would be able to provide the dividend on its preference shares for the second half of 1931. The revenue account has been called upon to bear a new charge of £50,000 for interest on the debenture

issue made during the period; nevertheless, the net profit more than suffices to cover the full preference dividend. The balance of additional Spanish taxation, however, for the year 1923-30, amounting to £400,000, has been written off against reserve, which is reduced to £600,000. Moreover, no action has been taken in regard to the further heavy depreciation (£869,700) on the company's investments, this being regarded as amply covered by the investment and general development fund of £2,000,000, which is invested in the business. In respect of 1930, a writing-down of over half a million was made from the fund in question. Allowing for the amount required to cover the final dividend, the balance sheet shows a cash shortage of £215,000. We show below a summary of the results of the past four years:—

	1928.	1929.	1930.	1931.
	£	£	£	£
Trading profit	1,669,780	1,812,200	1,070,400	424,900
Net profit	*1,047,080	1,286,280	687,000	100,200
Issued capital	3,500,000	3,750,000	3,750,000	3,750,000
Dividends	831,250	1,250,000	506,250	81,250
Per cent. (ordy.)	40%	55%	20%	Nil
Carried forward	167,370	203,650	384,370	403,300
Property and plant ...	2,968,980	3,075,450	3,381,520	3,461,250
Investments	1,615,630	3,060,940	2,565,830	3,906,380

* Before deduction of amount carried to emergency account.

In our note on the 1930 report we referred to the low yield offered by the ordinary shares on the basis of the 20 per cent. dividend, and to the discouraging outlook. At that time the price of the shares was approximately 24. It is now about 12. In estimating prospects of the current year, account has to be taken of the fact that the price of copper is only three-quarters the average of 1931, while pyrites have fallen heavily. Fresh taxation has been imposed in Spain, and several of the American enterprises in which large interests are held by the Rio Tinto company are in a parlous condition. No revenue is likely to be received from the Rhodesian copper enterprises for some while to come.

West Rand Consolidated.—Operations having been to some extent hindered by the fire in the engine-room, last year's treatment results fell slightly below those of the preceding session. The loss of profit, as well as the damage, being covered by insurance, the "additional revenue" comes out at £49,500, in place of £18,700, giving a total surplus of £282,500, as compared with £256,800. Thanks to the disappearance during the year of the company's indebtedness, interest called for only £6,500, instead of £26,500, the actual net balance being £44,600 up at £270,200. This amount is transferred to the capital expenditure account. On December 31, 1930, the cash and cash assets showed a deficit of £241,500. The amount is now only £17,800. Even so, it is doubtful whether the company will be able to make any appreciable distribution on account of the current half-year, unless the General Mining and Finance Corporation should exercise its option on the reserve shares. There is food for reflection in the fact that, while up to the end of last year the company had made an aggregate gross profit exceeding £2,000,000, no more than £74,200 has been disbursed by way of dividend. As regards the ore reserves, 965,000 tons of low-grade material, formerly not included in the computation, is now taken into account; the ore "is being profitably worked under existing conditions." The reserves consequently total 5,018,000 tons, value 5.2 dwts. over 46 ins., as compared with 4,039,000 tons, value 5.6 dwts. over 48 ins., twelve months previously. Failing a reduction in working costs or an appreciable increase in the tonnage milled, the reduction in grade may affect the profits.

WEST RAND CONSOLIDATED MINES, LIMITED.

DIRECTORS.

SIR GEORGE ALBU, Bart. (Chairman and Managing Director); LEOPOLD ALBU; C. S. GOLDMAN; PAUL STRAKOSCH; ARTHUR FRENCH; J. FRIEDLANDER; A. G. GILL; S. C. BLACK; C. E. FARQUHARSON.

Extract of Annual Report to 31st December, 1931.

Tons crushed, 1,066,000, yield (5.39 dwts. per ton) 287,227 fine ounces.	
Working Revenue (22-85s. per ton)	£1,217,900 17 6
Working Costs (18-48s. per ton)	884,879 5 1
Working Profit (4-37s. per ton)	£233,021 12 5
Sundry Revenue	48,462 11 2
Total Profit	£282,514 3 7
Appropriated as follows:—	
Miners' Phtisis—Provision on account of outstanding liability as at 31st July, 1931 ...	£5,059 13 4
Interest on Loan	6,490 7 11
French Fiscal Tax	250 5 7
Companies Tax—Provincial Council of the Transvaal	5 0 0
Companies Licence—Government of the Union	503 15 0
Revenue appropriated for Capital Expenditure	270,205 1 9
	£282,514 3 7

Ore Reserves.—On the basis adopted at the end of 1930, the ore reserves, as calculated at the end of 1931, consist of a fully developed payable tonnage of 4,053,000 tons, of an average value of 5.6 dwts. over a stopping width of 45 inches, which, in comparison with the previous year's estimate, shows an increase of 14,000 tons, the value being unchanged, and the stopping width, due to the inclusion of a substantial tonnage of South Reef, being 3 inches lower. Over and above the tonnage mentioned there is in the mine a fully developed tonnage of ore equal to 985,000 tons, of an average value of 3.7 dwts. over a stopping width of 49 inches, which is being profitably worked, in its correct proportion, under present operating conditions.

The total fully developed payable tonnage as at the 31st December, 1931, was, therefore 5,018,000 tons of an average value of 5.2 dwts. over 46 inches.

General.—The ore crushed, at 1,066,000 tons, shows a decrease of 21,000 tons, in comparison with the previous year's figure, due to a fire which occurred in the West Shaft engine room on the 19th June, resulting in all work in this section being suspended for, approximately, six weeks. The Machinery, Plant and Buildings damaged by fire, being covered by insurance, were reinstated without loss to the Company, while loss of profits and standing charges, which is also insured, was recovered to the amount of £45,000 in British Sterling, the equivalent of which in South African currency, namely, £32,287 10s., is included in the Profit and Loss Account under the heading of "Additional Revenue."

The drop in tonnage accounts for an increase of 2d. per ton in working costs, which, however, is compensated for by an equivalent advance in the revenue from gold, and, since sundry revenue shows a substantial improvement, the total profit—at £282,514—exceeds the former return by £25,683.

The full Report and Accounts can be obtained from the London Secretary, Winchester House, Old Broad Street, London, E.C.2.

THE
FIVE YEAR PLAN
of the
NATIONAL PROVIDENT INSTITUTION
will be of interest to all Business Men. It is specially designed
to assist them in the present period of Economic Reconstruction.
48 GRACECHURCH ST., LONDON, E.C.3

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Bank of Scotland, Grand Union Canal, Wesleyan and General Assurance Society, Lancashire Electric Light and Power, Lilanely and District Electric Supply, Anglo-Portuguese Telephone, International Automatic Telephone, Vickers, John Barker, Champion Reef Gold Mines, Nundydroog Mines, Balaghat Gold Mines, and Mysore Gold Mining. At the annual meeting of the Grand Union Canal Company Mr W. H. Curtis said that it had been a handicap to this country that the ports had not had the backing of an efficient canal system to the same extent as their Continental rivals. Along 280 miles of waterway, there were innumerable sites suitable for factories, and the modern manufacturer was tending more and more to build on the banks, thereby adding greatly to the company's business. Presiding at the annual meeting of the Anglo-Portuguese Telephone Company, Sir Alexander Roger said it might interest shareholders to know that Portugal was one of the first countries to adopt the telephone on a commercial basis. The first telephone concession was granted to the Edison Gower Bell Telephone Company of Europe in 1881. On December 31st last the stations of the Anglo-Portuguese Company numbered 31,000, showing an average increase of 620 new stations a year during the last fifty years. At the annual meeting of Vickers, Sir Herbert Lawrence said that from the technical point of view it was interesting to record that the seaplane which won the Schneider Trophy outright was built by the Supermarine Company at the Southampton works, this making the fourth occasion upon which Supermarine seaplanes were successful in that international contest.

CAPITAL ISSUES.

The New Zealand Government £5,000,000 offer came just a little too soon. The desire of the Government to take advantage of the London new issue revival to fund its £4,000,000 Treasury Bills, falling due next June, was readily comprehensible. The British investor, further, has always had a high regard for New Zealand as a borrower discreet in applying the proceeds of her borrowing productively, and zealous in honouring her obligations. But the recovery of sentiment from the shock administered by earlier developments in another British Dominion was a comparatively recent phenomenon, and this sensitive plant might well have been given a little longer time for growth, or its strength have been experimentally tested, in the first place, by a somewhat smaller issue than £5,000,000. That over half the loan was subscribed (underwriters being left with 47.2 per cent.) was, in the circumstances, a reassuring indication of the extent to which investment confidence had been restored. Market dealings opened at $\frac{1}{2}$ discount.

New Zealand Government.—Issue of £5,000,000 5 per cent. inscribed stock, 1956-1971, at 98½ per cent. The issue is a trustee security. If not previously redeemed, the stock will be paid off at par on November 1, 1971, but the New Zealand Government reserve the right to repay the stock at par, in whole or part, at any time on or after November 1, 1956, on three months' notice. Of the proceeds, £4,000,000 will be used to repay Treasury bills due in London on June 18, 1932. The remainder will be used to finance productive works. It is anticipated that the year ended March 31, 1932, will close with a deficit of approximately £2½ millions. Exports from New Zealand during the calendar year 1931 exceeded imports by £10,340,000.

Liverpool Corporation.—Issue by tender of Liverpool Corporation bills to the amount of £1,000,000 in replacement of bills falling due on April 11. The bills will be in amounts of £1,000, £5,000 and £10,000, dated April 11, 1932, and will be payable at twelve months after date.

Southend Waterworks.—Offer for sale by tender of £100,000 5 per cent. irredeemable preference stock at a minimum price of £101 per cent. The stock is a trustee security. The company was incorporated in 1879, and the area of supply is about 200 square miles with a residential population of over 180,000 supplied by the company. Net profits, after payment of all charges, totalled £90,993 in 1929, £83,639 in 1930, and £88,477 in 1931. Dividends on the preference stocks for the current year, including the present issue, are estimated to amount to £48,226, so that they are well covered by earnings.

COMPANY MEETINGS, &c.

BANK OF SCOTLAND.

A VERY DIFFICULT YEAR.
DIVIDEND OF 18 PER CENT. MAINTAINED.
STRONG LIQUID POSITION.
LORD ELPHINSTONE'S INTERESTING REVIEW.

THE BANK'S BALANCE-SHEET.

If you will now turn to the bank's report, you will see that our deposits, at £30,828,263, show a reduction of £1,707,205. This is in no way connected with the withdrawal of funds from London last summer by Continental depositors. This bank had no such deposits, and the reduction in the ordinary way of business will, we hope, soon be made good.

The note circulation, at £3,063,722, shows an increase of £88,385. Drafts issued at £235,434 show a decrease of £428,733, which has no significance whatever: the amount of such drafts fluctuates daily.

The acceptances of the bank, at £500,094, show a decrease of £122,314, due to a lessened demand from our customers for such accommodation.

LARGE LIQUID ASSETS.

You will see that cash, bank balances, documents *in transitu* and money at call and short notice amount to £7,046,078, i.e., 20 per cent. of our liabilities to the public. Bills discounted (including £1,115,000 Treasury bills) and our investments amount to £15,517,414, i.e., 45 per cent., giving a total of £22,563,492, or 65 per cent. of our liabilities to the public in liquid assets, thus showing a very strong position.

ADVANCES.

Advances, at £15,080,934, show a decrease of £1,641,069, due in part to a lessened demand for such facilities, owing to the depressed state of trade and industry. In consequence of the slump in prices of Stock Exchange securities, there has also been a reduction of loans from the realisation of stocks held in security.

You will observe that on this occasion we have made full provision for all bad and doubtful debts by drawing upon the bank's inner reserve. The provision necessary this year has been of a special nature which it is hoped may not recur. I need hardly assure you that the inner reserve, after making this full provision, is of a very ample nature.

INVESTMENTS.

Investments at £13,777,285 show an increase of £493,857. These, you will observe, are, with the exception of £170,422, all British Government securities. The surplus in excess of the value in our books is very substantial.

BANK PREMISES AND HERITABLE PROPERTIES.

During the year £81,000 has been spent on the purchase, reconstruction and renovation of properties. The very handsome block of bank premises and chambers at Sauchiehall Street, Glasgow, has been completed; and at St. George's Cross, Glasgow, and Giffnock we have now excellent premises. A new building has been erected at Kilmarnock; an extensive reconstruction is almost completed at Crosshill, Glasgow, and premises for new branches at Marchmont Road, Edinburgh, and West End, Aberdeen, have been acquired during the year. Several reconstructions are presently in hand, and with these our programme of overhaul, and reconstruction where desirable, of the whole of the bank's properties during the last ten years, will be practically completed.

You will see that we have applied £50,000 to properties accounts, which will enable us to retain the total for all bank premises and let properties at £400,000. I need hardly say that that figure is far below the market value, and that in properties there is a large surplus.

RESULTS.

In view of what I have already said, you will not be surprised to hear that it has been a very difficult year, but that has apparently been the general experience of banks at home and abroad. The decline in our profits has, as you will readily understand, been the inevitable result of the conditions of industry and the serious fall in Stock Exchange prices which have affected many of our customers. In a large measure, the decrease has been caused by additional taxation, including a special charge applicable to this year, and by

The annual general meeting of the proprietors of the Bank of Scotland was held within the head office, Edinburgh, on April 5, 1932, the Right Honourable Lord Elphinstone, K.T., presiding.

In submitting the directors' report, the Chairman said:—
My lords, ladies and gentlemen, I assume that, as usual, we may hold as read the report by the court of directors of the affairs of the bank as at February 29th last, a copy of which you have all, no doubt, received.

The directors much regret the loss by death during the year of a greatly esteemed colleague, Mr Henry E. Richardson, Writer to the Signet, who has been a member of the board since April, 1909, and whose valued services were much appreciated. To fill the vacancy, the directors invited Mr John Parker Watson, Writer to the Signet, to be an ordinary director, and I am glad to say that he agreed to accept office. You will be asked to confirm the appointment by re-electing him to-day.

THE PAST YEAR.

The past year has been one of the worst which this country has ever experienced. It is true that the misfortunes have not been confined to Great Britain: the whole world is similarly affected, and the recovery of prosperity will necessarily be difficult and protracted.

Once again, I would stress the necessity for a drastic reduction in the burden of taxation. However much we value the social services of this country and believe in the desirability of a high standard of living, we can only do harm by seeking to continue these on a scale which is at present beyond our means. We have only to contrast the conditions in this country with those which are prevalent among our competitors to see that we are handicapping our industrial and commercial life beyond what can be borne. I trust that the National Government will recognise the urgency of a steady and substantial reduction in public expenditure.

The events of the past twelve months have been of an extraordinary nature. We had in the spring of last year bank rate at 3 per cent., from which it fell to 2½ per cent. in mid-May, and for a time a 2 per cent. rate was actually forecasted. The serious banking troubles which arose in Germany and elsewhere on the Continent, the subsequent heavy withdrawals of gold from the Bank of England, resulting in credits of £130,000,000 being obtained from France and the United States, the alarm at the prospect (foreshadowed by the Report of the May Economy Committee) of a large deficit in the National Budget, and at the adverse balance of trade, culminated in the practical exhaustion of the credits and the announcement on Sunday, September 20th, of the suspension of the gold standard. Bank rate, which had been rapidly rising, was simultaneously raised to 6 per cent. The existing Government on assuming office immediately took steps to balance the Budget and to remedy the adverse balance of trade. The former has now been accomplished, but the latter will take time.

Meanwhile, with the return of confidence in this country and its Government, sterling was stabilised and rapidly appreciated, and money has latterly been offered freely from the Continent. Bank rate has fallen by quick changes from 6 per cent. to 3½ per cent. and the outlook at the moment is for still cheaper money.

UNFAVOURABLE BANKING CONDITIONS.

The conditions for banking during the year have been distinctly unfavourable. With the depression in our industries, this bank has done its full share in helping those passing through difficult times. In addition to advances for trade and industry, the bank has thought it right to assist many of its customers who had accommodation against Stock Exchange securities. The catastrophic fall in values during the year—from which even British Government and other gilt-edged stocks were not immune—resulted in margins disappearing as quickly as provided, but there are grounds for hoping that eventually there will be a good recovery in the stocks of sound commercial undertakings, as there has already been in our Government securities.

an unprofitable period when rates were unfavourable. It is anticipated that, to a certain extent, these experiences are not likely to recur.

BANK STAFF.

It is a pleasure to me, on behalf of the court of directors, to express our appreciation of the services rendered by the executive, managers, agents and staff throughout a very difficult year.

Since we last met, Mr A. J. Rose, our much-esteemed secretary, has retired after long and valued service. The board have already expressed their appreciation of his work, and I am sure the proprietors will join with them in their good wishes. The board appointed Mr W. A. Tait secretary in room of Mr Rose, and Mr J. W. Macfarlane superintendent of branches in succession to Mr Tait. Both these officials have had long experience in the bank, and can be relied upon to discharge their responsible duties with efficiency.

AUDITOR.

The directors much regret the loss by death of Mr C. E. W. Macpherson, one of our auditors, who had served in that capacity for a period of sixteen years, and whose duties had always been discharged with great ability and entirely to our satisfaction. In his room you will be invited to-day to re-appoint Mr R. Arthur Morrison, C.A., who has been closely associated with Mr Macpherson for many years, and was appointed by the board recently to act until this meeting with Mr Usher as joint auditor.

DIVIDEND.

I now have pleasure in moving that the report and balance sheet as submitted be adopted, and that a dividend for the past half-year at the rate of 18 per cent. per annum, less income tax, be now declared, payable on 15th current, making, with the dividend paid in October last, 18 per cent. for the year, less income tax, being the same rate as paid for the previous year.

The motion was agreed to.

The Lord Elphinstone, K.T., and Sir Ralph Anstruther of Balcaskie, Baronet, were unanimously re-elected governor and deputy-governor respectively for the current year. Mr John Parker Watson, W.S., Mr James Gourlay, B.Sc., and Mr William Brodie, LL.D., were re-elected ordinary directors.

Mr H. L. Usher, C.A., and Mr R. Arthur Morrison, C.A., were reappointed to conduct the audit of the books for the current year, and a vote of thanks to the chairman terminated the meeting.

BALAGHAT GOLD MINES, LIMITED.

SALE OF PROPERTY APPROVED.

The twelfth ordinary general meeting of Balaghat Gold Mines, Ltd., was held at Southern House, London.

Mr Ernest R. Woakes (the Chairman) said that during the past year a slightly higher tonnage was milled than in the previous year, 41,850 tons having been treated of a somewhat higher grade, and the total production was 25,835 oz. of fine gold, an increase of 3,399 oz. as compared with 1930. There was a balance to the credit of profit and loss account of £21,941.

The report and accounts were unanimously adopted.

An extraordinary general meeting of the company was then held for the purpose of submitting a resolution approving a draft agreement providing for the acquisition by Nundydroog Mines, Limited, of the company's mining leases and certain of its other assets and the mining and milling of the company's remaining ore reserves.

The Chairman said it was now over three years since the limits of the orebody last discovered were defined, but after three years they were without any substantial discovery, and in the meantime their reserves of ore were nearing exhaustion, and a declining output was inevitable. They therefore opened negotiations with the board of

Nundydroog Mines, Limited, with the result that terms were arrived at which were now submitted for the approval of the shareholders. Briefly, the scheme was to sell to Nundydroog the Balaghat Mine, the pumping plant, and all the machinery and equipment necessary to keep the mine free of water, for £40,000, and Nundydroog to work this company's remaining ore reserves on a profit-sharing basis. A conservative estimate, based on gold at 84s. per ounce, indicated a profit of £21,000 from this source to the Balaghat Company.

When the detailed arrangements connected with the sale had been satisfactorily carried out, the shareholders would be called together to consider the desirability of winding up the company. The assets of the company, in liquidation, should be sufficient to pay off the preference capital in full, and leave a substantial balance for the ordinary shareholders.

The resolution was carried unanimously.

VICKERS, LIMITED.

STRONG FINANCIAL POSITION.

The sixty-fifth annual general meeting of Vickers, Limited, was held, on the 4th instant, at the Hotel Victoria, London, General the Hon. Sir Herbert A. Lawrence, G.C.B. (chairman of the company), presiding.

The Chairman, in the course of his speech, said: The general world-trade depression and the reduction in armaments under the influence of public opinion, both in this and in other countries, have affected adversely your company's trading results. The net profit is £574,493, a reduction of £201,433 compared with 1930, and allows the payment of a dividend of 5 per cent. on the ordinary share capital, although no transfer to reserve fund is possible on this occasion.

With regard to Vickers-Armstrongs, during the past year the concentration of the company's products in the most efficient and best-situated works has been completed.

As builders of passenger liners, we have maintained our position in the foremost rank, and during the past year have completed the "Strathnaver" and the "Strathaird" for the P. and O. Company, the "Monarch of Bermuda" for the Furness Withy Company, and the "Rangatira" for the Union Steamship Company of New Zealand. Since the end of the financial year we have received an order for a sister ship to the "Monarch of Bermuda" to replace the ill-fated "Bermuda," which was destroyed by fire.

Your directors have devoted much anxious thought to the position of the English Steel Corporation, and it was decided to reduce the capital of the company by writing off the losses occasioned by the closing down of the redundant works, together with the trading losses to date, and to modernise the works at Sheffield in order to secure greater efficiency and economy in production.

The business of Vickers-Armstrongs, both in armaments and shipbuilding, depends on the availability of the supply of that high-class steel, so your board had no alternative but to face the position and make possible the modernisation of the Sheffield works.

Vickers (Aviation), Limited, which is entirely controlled by Vickers, Limited, acquired in 1929 the whole of the share capital of the Supermarine Aviation Works, Limited, and the financial return from this aviation group has again proved satisfactory. From the technical point of view, it is interesting to record that the seaplane which won the Schneider Trophy outright was built by the Supermarine Company at their Southampton works, thus making the fourth occasion upon which Supermarine seaplanes were successful in this international contest.

The Metropolitan-Cammell Carriage Wagon and Finance Company, Limited, is almost entirely dependent on foreign railways for its orders, and, as I have indicated on previous occasions, there is a growing tendency in many countries since the war to build themselves the coaches and wagons they require, and, where this is not the case, the falling off in traffic receipts and depreciated exchanges have made it financially impossible for foreign railway companies to place orders for the renewal of their rolling stock.

With regard to the future prospects of your company, I have already indicated the position of our main activities, and, without some general revival of trade, and particularly more orders for armaments and shipbuilding, the immediate outlook is not encouraging. Administrative expenditure has been reduced in every direction and an all-round reduction in salaries has been made, but unless the volume of orders required to keep our works occupied is available, it is impossible for the trading results to be satisfactory.

The most encouraging feature is that the financial position of your company continues on a sound basis, its liquid resources having been conserved so that they may be profitably employed when a period of trade prosperity returns.

The report was unanimously adopted.

ANGLO-PORTUGUESE TELEPHONE COMPANY, LIMITED.

POLICY OF ECONOMIC EXPANSION.
POSSIBILITIES IN LISBON AND OPORTO.
SATURATION POINT NOT IN SIGHT.
SIR ALEXANDER ROGER'S STATEMENT.

The forty-fifth ordinary general meeting of the Anglo-Portuguese Telephone Company, Limited, was held on the 6th instant, at Winchester House, Old Broad Street, London, E.C., Sir Alexander Roger (Chairman of the company) presiding.

The Secretary (Mr F. Hollyer) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,—I presume that you are willing to accept the report and accounts as read. (Agreed.)

The profit and loss account shows a gross operating revenue of £217,361—an increase of £8,006—while operating and management expenses amount to £133,667, against £125,160, leaving a gross profit of £83,694, which, but for the increased charge to depreciation (£36,000, as against £30,000), would have been £5,500 more than in 1930. Loan interest and income tax have increased, the final result being a net profit of £58,537, as compared with £60,250.

In the balance sheet you will note that a new special reserve for contingencies, amounting to £20,000, has been created, and is available at any time for these purposes. Debenture stock at £112,455 is slightly reduced owing to purchases for account of the redemption fund. Loan account at £123,000 compares with £51,500, while reserve for renewals at £72,356 is £17,715 up, due to the depreciation allocation for the year being greater than the loss on plant withdrawn from service. Sundry creditors amounting to £28,647 compare with £47,056. Capital expenditure has increased by £78,302, representing the net additions to plant, land and buildings during 1931.

After transferring, as stated, £20,000 to contingencies reserve your directors now recommend a final dividend of 5 per cent., less tax, on the ordinary shares, making 8 per cent. for the year, and an 8 per cent. dividend, less tax, on the "A" ordinary shares, carrying forward to next account £41,340, compared with £54,769.

EXCHANGE PROBLEMS.

The local accounts have been converted at the rate of 110 escudos to the pound sterling. In June, 1931, the Government of Portugal issued a decree stabilising the exchange rate for sterling as from July 1, 1931, at 110 escudos. Great Britain's departure from the gold standard and its attendant effects upon the exchange rates of many other countries, particularly the United States, caused the Minister of Finance to call a conference of the bankers and representatives of the chief financial interests in Lisbon, when it was decided that should the London-New York exchange fall below \$3.32 the parity of the escudo would leave the £ and accompany the dollar on the basis of 33.40 escudos to the gold dollar. Judging from the present condition of the London-New York exchange, there seems to be little danger of it becoming operative and therefore, I think we may assume that the sterling exchange rate in Portugal—namely, 110 escudos to the £—will remain constant.

The Commission appointed by the Government to examine the company's affairs as a result of the petition referred to in the directors' report has not yet completed its investigations. These matters cannot be hurried, but a decision is expected shortly. Mr Kerr, the deputy-chairman, has been in Portugal for some time, giving the matter his personal attention.

PERSONAL IMPRESSIONS.

In August last, accompanied by Mr Kerr, I paid a brief visit to Lisbon and Oporto. I found our business to be running smoothly, the quality of the service high, the employees enthusiastic and hardworking, a satisfied public and the relations with the authorities (as they have been from the inception of the company) of the most cordial nature.

Since my previous visit in 1928 I was much impressed with the progress which had been generally made in the country. Portugal is, of course, suffering from the world depression, but in spite of adverse conditions, the country is financially sound. The capital required for extensive development of public services has been raised by over-subscribed internal loans. The Budget for the year ended June 30, 1931, showed a surplus of £1,400,000, and for the third year in succession Portugal has balanced its Budget. Within the past

few days the bank rate in Portugal has again been reduced, and stands at 6½ per cent.

A silver currency has recently been brought into use, and it is even suggested that large quantities of gold have been imported with the intention of issuing a gold coinage. The Treasury now holds in bullion a reserve of over 40 per cent. of the currency in circulation.

Taxation has been increased, but at the same time drastic economies have been effected. Snr Salazar was appointed Minister of Finance in 1928, and it is a remarkable tribute to his genius that such a complete transformation of the situation has been brought about in such a short time. The inherent financial strength of Portugal is very evident when it is remembered that all the great improvements that have taken place have been achieved without any external assistance.

The growth of Lisbon during the past few years is astonishing. Large and spacious avenues have been extended towards the north and what once were gardens, fields or quintas are now the residential quarters of the better classes. The motor-car traffic, which is reputed to be heavier in Lisbon than in any other European city in proportion to the number of its inhabitants, is extremely well controlled. Nowhere are taxi fares so cheap—about 3½d. is the initial charge—or the cars better appointed. Much has been done of late years in improving Lisbon from the hygienic point of view, and the amenities of the town and its suburbs are constantly being added to. Oporto, with its historical associations, is one of the most delightful of Continental towns, and although it is expanding in every direction under a regime which is fully appreciative of modernised conditions, it still retains its charm of long ago.

THE GROWTH OF HALF A CENTURY.

It may interest you to know that Portugal was one of the first countries to adopt the telephone on a commercial basis. The first telephone concession was granted to the Edison Gower Bell Telephone Company of Europe, Limited, in 1881. In 1887 your company acquired the business, and has provided telephone service since then in the districts of Lisbon and Oporto, the country outside these districts being operated by the State. On December 31st last the company's stations, which numbered 31,000, showed an average increase of 620 new stations a year during the last 50 years. Apart from its internal telephone communications, Portugal has for almost three years been linked up with most other European countries, and within the last few months a Transatlantic service with the Argentine, Brazil, Chile and Uruguay has been established.

Especially since the inauguration of international wireless links, the highly developed and scientific art of telephony has assumed a world-wide influence and importance. To meet the exacting demands of a modern telephone service continuous and expensive research is necessary, both in the development of scientific inventions and in the production of the most efficient methods of operation. Portugal is fortunate in these respects, as the company has at its command the whole technical, as well as the financial, resources of one of the largest groups of companies in the fields of research, manufacturing and world-wide telephone operation.

INCREASED BUSINESS.

The growth of the company's business during 1931 shows a 7 per cent. net increase, represented by 2,026 additional stations, bringing the total number of stations at December 31st last up to 31,000, as just mentioned. This rate of increase in such a year as 1931 is nothing short of remarkable, and compares with the figure of increase for the United Kingdom of 4.2 per cent. for the same period.

Towards the close of the year an intensive telephone canvassing drive was launched. We have the usual regular canvassers whose work goes on all the year round, but on this occasion it was decided to engage the whole of the company's employees on canvassing work in their spare hours. You will be gratified to learn that in five weeks 1,827 new stations were added, this number including 1,262 entirely new subscribers. (Hear, hear.) I think it is not unreasonable to assume that this is a distinct proof that telephone saturation point is very far off in Portugal.

Since the present Board took office the company has spent £535,000 on capital account as compared with £274,000 spent in the previous five years. It is our view that nothing less than a first-class modern telephone service is good enough for the areas we serve in Lisbon and Oporto, and we propose not only to meet the demands for telephones as they arise, but to push expansion in every economic direction.

The difficulties of financing experienced by many companies during these past two years or more have not been an acute problem of your company because of its association with the Telephone and General Trust, Limited. It is our practice to borrow on loan money required from time to time for capital requirements, and at stated periods we fund these loans into permanent capital. The outstanding loan has increased during the year by £71,500 and stands at £123,000, and your directors are carefully considering the question of funding this loan in anticipation of further expansion during 1932.

DEFINITELY HOLDING OUR OWN.

The company has maintained and continues to maintain a satisfactory position in times which could not well be more difficult. I will make no attempt to forecast the future but we are definitely holding our own and, unless very unfortunate conditions prevail, of which there is at present no sign, your company can look forward to very considerable further development.

Before moving the resolution adopting the accounts, I feel I am fulfilling your wishes in thanking the general manager and his entire staff in Portugal for their good and courageous work throughout a year of great difficulty.

I now beg to move:—

"That the report and accounts be received and adopted and that the dividends therein recommended be paid."

I will ask Sir Arthur Stanley to second this resolution, but before putting it to the meeting I shall be glad to answer any questions.

The Hon Sir Arthur Stanley seconded the motion, which, in the absence of question or comment, was carried unanimously.

The retiring directors, Sir Alexander Roger, the Hon Sir Arthur Stanley and Mr H. S. Bennett of the London Board, and Dr P. Chagas and Sr R. Peixoto of the local Board, and the auditors, Messrs Fitcher Head Smith and Company, were re-elected.

AN EFFICIENT ORGANISATION.

Mr W. Shand, in proposing a vote of thanks to the Chairman, directors and staff, said that a week or two ago he had had the pleasure of inspecting the buildings and plant of the company in Lisbon, and he wished to place on record that in his opinion the company had every reason to be proud of its organisation. He was taken over the Lisbon Trindade Exchange, which was fully automatic, and he could safely say that nothing better could be seen in London or elsewhere. Another thing that struck him very much was the excellent team work displayed by the whole of the personnel. He could congratulate the shareholders on the high quality of the plant possessed by the company; they were equal to anything he had seen in London. They possessed a very fine property in Portugal, where the telephone was in evidence everywhere. In that connection he might mention that the boat on which he was travelling arrived at Lisbon at 9 o'clock in the morning, and within a quarter of an hour the company's staff had established telephone communication with the mainland.

The vote of thanks was accorded by acclamation, and, the Chairman having acknowledged the compliment, the proceedings terminated.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper Ltd.,"

8, Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

GRAND UNION CANAL COMPANY, LIMITED.

IMPROVED RESULTS AND PROSPECTS.

The annual ordinary meeting of the Grand Union Canal Company was held, on the 30th ultimo, at 5 Lloyd's Avenue, London.

Mr W. H. Curtis (the chairman), in the course of his speech, said: I hope you will appreciate the significance of the results of our last half-year's working. You have before you every day in the Press some reference to the present terrific competition between our rivals—rail and road. This competition, which looks almost like a fight to the death, has had the effect of lowering transport rates in every direction, and, according to the published accounts of railways, this competition became accentuated during the last six months—July to December. In the face of all this fierce competition we are able to increase our revenue from the canal for the last half-year over that of a year ago, which was before the present world-wide depression had begun to be felt throughout every form of industry.

And so it will go on. Those canals which have made efforts to put themselves in order will reap the benefit of their very low transport costs. It is a common idea that canals represent a form of transport which has become obsolete. There could not be a greater mistake.

Just let us look at the history of transport of this country over the past ages from the time that roads were used for the conveyance of goods by means of pack-horses until the advent of the canal era in the eighteenth century. Canals suffered a partial eclipse by the construction of the railways, but, judging by recent events, the effect of motor transport upon rail traffic would appear to show that roads have again come into their own. Canal transport, however, will, by the invention of the internal combustion engine as applied to the modern power-driven barges, have an opportunity for its fullest development when the improvements which the company are carrying out are completed, and thus it would appear that the history of transport in the country has come round full circle—back to canal transport.

For several years now the waterways belonging to this company have been drastically overhauled. When finished, not only will the capacity of the canal be greater, but the cost of upkeep will be much less. When the works contemplated by the new capital scheme are finished, the company will be in possession of a waterway linking the chief Midland towns and coalfields to the Metropolis, providing a means of transport at a cost which will be much less than any other method. When one realises the importance of low transport cost to the export trades, it is not surprising to learn that the facilities the company will have to offer to the Midland manufacturers are likely to be taken advantage of to a very large extent.

It has been a handicap to this country for some time that the ports have not had the backing of an efficient canal system to the same extent as their Continental rivals. Another point should be mentioned, along 280 miles of waterway there are innumerable sites suitable for factories. The modern manufacturer, recognising the great advantage of canal transport, is tending more and more to build on the banks, thereby adding greatly to the company's business.

To sum up, we believe that our system is the most up-to-date canal in the kingdom and has a great future before it, inasmuch as it provides the cheapest form of transport with the lowest upkeep and the lowest capital cost, and we feel confident that the ordinary shareholders will soon reap the benefit of their enterprise.

With our cost so low new traffic is bound to come to us and when trade gets over its troubles we can confidently expect increased business. I do not think it can be called undue optimism if we count on getting back to 1928, or pre-amalgamation, figures in a short time. If we can double the million odd tons of traffic carried on our Grand Junction section in the year 1928 at the same average toll of about 1s. per ton, and it should not cost us any more to convey it, a simple mathematical calculation will show how much our ordinary stockholders will benefit by the patience they have displayed during the progress of development. It will give us, in fact, another £50,000 more to distribute. In every direction figures will show you how we can afford to keep steadily on in the face of present competition.

New traffic in 1931 brought us in over £2,000 increased revenue. It is interesting to note that traffic originating on our then 240 miles, which can hardly be displaced by our rivals, in 1931 amounted to 1,870,718 tons, against 1,693,905 tons in 1930 on railway-owned canals, with a length of about 900 miles.

Our dredging campaign has resulted in barges of 86 tons being able to go through from Brentford to Willemsden on our Paddington arm. This compares with 65 tons before the amalgamation. When our dredging is completed on this London section, barges of 100 tons will be able to go through.

The report was unanimously adopted.

At a subsequent extraordinary meeting resolutions were passed creating and sanctioning the issue of £500,000 five per cent. redeemable debenture stock to be designated "Grand Union Canal Development Loan No. 1," and £400,000 six per cent. preference stock.

CHAMPION REEF GOLD MINES OF INDIA, LIMITED.

IMPROVED POSITION—INCREASED PROFITS.

The ordinary general meeting of the Champion Reef Gold Mines of India, Limited, was held, on the 5th instant, at Southern House, Cannon Street, London, the Hon. A. T. J. Fraser, D.S.O., the chairman, presiding.

The secretary (Mr F. H. Williams, F.C.I.S.) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said:—The mill ran throughout the year and crushed approximately 99,000 tons, some 7,500 tons more than last year. From this current ore 56,758 oz. of gold were recovered. From old tailings re-treated 3,260 oz. were obtained, which, with 702 oz. from old mill plates, gave a grand total of 65,720 fine oz. of gold, an increase of just over 3,000 oz. compared with the previous year.

Thanks to the premium on gold, which affected the last four months' output, the value of the year's gold production has increased, not by £13,000 odd, but by £43,000, amounting for the year under review to £308,171.

After deductions for royalty and refining, and after adding interest and other receipts, the total figure for income is £297,703. After deducting £229,078 for working costs, a balance of profit is left amounting to £68,624, an increase of rather more than £26,000 compared with 1930.

The balance from last year, with dividends received, brings the credit at profit and loss to £73,589. Your directors have decided to treat this sum as follows:—The dividend paid on March 19th absorbs £39,780; £7,500 is put to depreciation, £5,500 to Heathcote's Shaft, 2,000 purchase account, £6,000 to insurance and contingency fund, and £7,000 provided for income tax. The balance, £5,809, is carried forward. The amount spent during the year on capital account was £10,900.

Progress at the mine during the year has been continuous, and work has not been interrupted by serious rockbursts, accidents or labour troubles. This has been reflected in the very satisfactory reduction in working costs, which, excluding development, are 3s. 3.66d. a ton lower than the previous year.

At this time last year we were not quite certain what had happened to the ore chute at Carmichael Shaft at the horizon of the 73rd level. Since then this level has been opened up and a rather complicated position has been more or less cleared up. We now appear to have a total length of payable reef at this point amounting to 540 ft., which compares favourably in length with the level above.

At Glen's ore shoot the 74th level has now been completed, and up to the end of the year the total length of payable reef amounted to 871 feet, a considerable improvement on the levels above. Since the end of the year a further length of 110 feet has been opened up, making a total of 981 feet, averaging 18.8 dwt. over 39 inches.

Taken as a whole, the development for the year is distinctly encouraging. It might perhaps be expected that in view of this our ore reserves might have been increased by a larger figure than 9,928 tons, the figure given in the report. The reason for this is that no tonnage has been taken into reserve in what I may call the "promising areas," where payable ore is indicated but not yet sufficiently blocked out.

In the directors' report mention is made of negotiations having been started with the Mysore State with a view to the extension of the mining rights of your company beyond 1940, the date on which the present lease expires. In mining, especially at depths such as we are now at, it is essential to plan many years ahead regarding such questions as shaft sinking and ventilation, and the terms of the new lease must have a bearing on these factors.

The premium on gold has had a very great effect on our profits in the past year. To what extent this premium will continue in the future is not for me to so much as guess. But, apart altogether from the abnormal price of gold in terms of sterling, we can safely say that the past year has been a satisfactory one, and that present indications point to the current year being also satisfactory.

I cannot sit down without referring to the great loss which we have all suffered in the death of Mr Arthur Taylor. He had for the last eight years addressed you at this annual meeting, and had for 30 years taken a leading part in the affairs of the Kolar Field. His work during that long period is as well known to you as to me. Speaking for myself and for my fellow directors, I can say that we have lost not only a colleague, but a great personal friend.

Mrs H. J. Tennant, C.H., seconded the motion, which was carried unanimously.

INTERNATIONAL AUTOMATIC TELEPHONE COMPANY, LIMITED.

CONTINUED PROGRESS—IMPORTANT CONTRACTS.

The twelfth ordinary general meeting of the International Automatic Telephone Company, Limited, was held, on the 4th instant, at the Incorporated Accountants' Hall, Victoria Embankment, London, W.C., Sir Alexander Roger (Chairman of the company), presiding.

The Chairman, in moving the adoption of the report and accounts, said that the year's profits were £148,864 as compared with £134,024 for 1930. Dividend and bonus received from the subsidiary company—Automatic Electric Company, Limited, of Liverpool—had been maintained at 10 per cent. and 2½ per cent. respectively. The directors again recommended a final dividend at the rate of 6½ per cent. on the ordinary shares, making 10 per cent. for the year, and a bonus of 2½ per cent. On the deferred shares there was again recommended a dividend of 10 per cent. with a bonus of 2½ per cent., leaving £85,695 to be carried forward, as against £92,980 brought in. The directors were of opinion that the carry-forward could safely be drawn on to the extent approximately of £7,000.

AUTOMATIC ELECTRIC COMPANY.

In dealing with the manufacturing activities of the subsidiary company, the Chairman said it was a matter for congratulation that although business generally had been very difficult, the value of turnover for 1931 had been little less than the average for the past four or five years, notwithstanding falling prices. The Automatic Telephone exchanges in Manchester and Bristol, to which he had referred last year, were brought into operation in June and November last, whilst the Mayfair (London) exchange would be brought into service about September next. That represented a total of 60,000 lines. In order to meet the present-day demand for a cheap automatic telephone service, the company's engineers had developed the "Strowger" 200 point finder system, which was a development of the system installed in Victoria, B.C., and adopted by the South African and Polish Governments.

In regard to all-electric totalisator activities, the outstanding achievement was the installation of the totalisator for Royal Ascot, the largest racecourse yet equipped with an all-electric system. As in the case of Newmarket, Ascot was inspected by their Majesties the King and Queen prior to the official opening in June last.

STREET TRAFFIC CONTROL.

Their subsidiary had acquired from America the rights in an improved and well-tried system of street traffic control known as the "Electromatic," under which the vehicles themselves actuated the signal changes. The Ministry of Transport and the police authorities had evinced keen interest in it, and a trial equipment was now in operation in London at the junction of Leadenhall Street and Gracechurch Street. The Liverpool company's past record in the development of the "Strowger" director, which solved the problem of London's automatic telephone service, the design and immediate success of the all-electric totalisator on leading British racecourses, the adaptation of "Strowger" apparatus and principles to the supervisory control of remote power sub-stations, street traffic control, &c., to name but a few of its achievements, was an indication of its versatility and capacity.

Foreign business received included a contract with the Polish Government for the installation of automatic telephone equipment. The initial order called for 17 exchanges totalling, ultimately, 29,000 lines. That was the first important automatic telephone order taken on the Continent of Europe by any British firm. A substantial order had been received from Holland for loading coils. An order had been obtained for a special telephone installation in connection with Uhl River Hydro-electric Scheme in India, and orders for additional exchange equipments for Johannesburg had also been received. In considering the outlook, they might congratulate themselves that the board had foreseen the trend of international competition, and had refrained from inflating the capital structure of the company. Their manufacturing efforts had been co-ordinated with those of other important foreign factories, and, incidentally, they had been able to maintain a considerable amount of employment in this country which assuredly would have gone elsewhere. In referring to the length to the company's British-American group relationships, the chairman said it represented a mobilisation of the world's "Strowger" technique, having in view the international standardisation of telephone operation and practice. The company was engaged in one of the most important of the essential industries, and the board proposed to remain organised and represented throughout the world in the belief that they could secure a fair share of whatever business was available or could be promoted.

The report and accounts were unanimously adopted.

WESLEYAN AND GENERAL ASSURANCE SOCIETY.**PROGRESS MAINTAINED.**

The ninety-first annual general meeting of the members of the Wesleyan and General Assurance Society was held, on the 5th instant, at Birmingham, Mr John B. Field, the society's chairman, being in the chair.

The Chairman, in moving the adoption of the reports, said:—When looking back on the year 1931, I feel impelled to express my deep feelings of thankfulness for what our beloved country has succeeded in accomplishing. The dogged determination of all classes to submit with good heart and courage to unparalleled taxation in order to re-establish our national finances on a firm foundation, gives me the greatest confidence for the future.

As members of the society, you are particularly interested in its ordinary department, but you will also want to know what progress has been made in those other departments of the society's activities which have been undertaken by you, and in which certain of your funds have been and are employed.

Commencing with the activities of the ordinary department, the report records that, during the year, 7,791 new policies were issued assuring the large sum of 1,213,040. A comparison with the report for 1930 shows that this is more than £105,000 greater than the new business of that year. The total premium income was £609,255, showing an increase of £19,710, and the net interest, after deduction of income tax, amounted to £213,715, an increase of £13,131. The payments in claims and surrender values amounted to £402,336, a sum greater by £17,940 than that for the previous year; and the ordinary department fund at the end of the year, after transferring therefrom no less than £95,000 to investments reserve, amounted to £4,773,662, an increase during the year of £213,163.

Turning to the industrial department, you will observe that, while the number of policies issued—namely, 173,106—was 3,502 more than those of the previous year, the sums assured under these policies amounted to £3,280,193, or about £18,000 less than the corresponding amount for 1930. This shows that, while the desire for assurance remains unabated, the reduced means of proposers among the industrial population has to a slight extent affected the amount of the assurance they can afford. The premium income of this department was £1,228,577, showing an increase of £10,878, and the income from interest amounted to £276,225, being £17,759 greater than that for the previous year. The amount paid in claims and surrender values was £575,537, being £56,463 greater than the corresponding sum for 1930, and the industrial department fund at the end of the year, after transferring £110,000 to investments reserve, was £5,426,759, showing an increase during the year of £293,449. These figures again are bare recitals of fact, but I ask you to reflect what it must have meant, in the matter of relief of suffering and distress, when it is borne in mind that the large sum of £441,482 was paid as the result of the deaths of lives assured.

I have referred to the transfer of £95,000 from the ordinary department fund and of £110,000 from the industrial department fund to the investments reserve. There are other smaller items of transfer of a similar character from the funds of each of the other departments, and the total of such transfers amounts to the large sum of £210,000.

An examination of the balance sheet will show that the society holds no ordinary stock or shares—it has no power so to do—and comparatively little in the form of preference stocks. On the other hand, its holding of British Government securities, Indian and Colonial Government securities, and of debenture stocks are relatively very considerable. How little the true value of the securities has depreciated is made clear when I state that with a gross interest income of over £528,000, the interest in default for the year 1931 was only £3,931.

In these circumstances, the directors had no hesitation in certifying that, in their belief, with so substantial an investments reserve fund at £450,000 taken into account, the assets are in the aggregate fully of the value stated. I need hardly add that since January 30th prices have improved much more than they did during the month of January itself, and that a valuation at current prices would show a vastly improved position.

In the ordinary department the surplus shown is £118,873; this is the amount after transferring £95,000 to investments reserve and £7,000 to the staff pension scheme fund. The gross surplus before these transfers were made was £220,873, which included £87,740 brought forward from the previous year, so that the profit for the year amounted to £142,133. On the actuary's recommendation, the directors have declared reversionary bonuses on with-profit policies in this department at the rate of £1 10s. per cent. of the sum assured for endowment assurances and £1 16s. per cent. for whole life assurances. The cost of these bonuses is £88,343, and the balance of the surplus—namely, £30,530—is carried forward unappropriated.

The report and accounts were unanimously adopted.

LLANELLY AND DISTRICT ELECTRIC SUPPLY COMPANY, LIMITED.**IMPROVING OUTLOOK.**

The annual general meeting of Llanelly and District Electric Supply Company, Limited, was held, on the 4th instant, at Winchester House, London, Mr A. H. Beatty, O.B.E. (the chairman), presiding.

The Chairman, in moving the adoption of the report and accounts, said: The account we present to-day shows in all the circumstances what I think we can regard as a satisfactory result of the year's operations. While trade conditions throughout the country were bad it is, I think, true to say that the depression was felt most acutely in South Wales. In view of these conditions I think it is a matter for congratulation that operating profit only showed a decrease of £3,200 as compared with the previous year.

The Chairman, having referred to the question of conversion to trolley bus system, continued: The output of the Llanelly station was 24,092,000 units, as compared with 24,546,000 units for 1930. This figure includes the bulk supply to Gorseinon, and in addition we purchased from the Swansea Corporation under an old agreement 602,000 units for distribution in the Gorseinon area.

The depression in the heavy industries was responsible for the decrease in consumption of the larger power users; the supplies to other classes of consumers showing a satisfactory increase. The company's policy is to endeavour to foster the greater use of electricity for domestic purposes, as this class of load has a stabilising effect on a system such as ours, supplying a large industrial demand.

The available profit is £55,318 6s. 4d., debenture and loan interest absorbed £14,264 9s. 1d., and after making appropriations for the 5 per cent. debenture stock redemption account—£5,439 15s., and for general reserve—£13,000, there is an available balance of £22,614 2s. 3d. The directors now recommend the payment of a dividend on the ordinary shares of 4 per cent., less tax, amounting to £6,000, leaving to be carried forward to next year's account £3,221 19s. 9d.

The returns to the end of March show an improvement as compared with the corresponding period last year. There are indications of a better outlook in the miscellaneous industries, but I dare not prophesy regarding improvement in the heavy industries. All I can say at the moment is that we hope to meet you with an improved account next year, and, I should like to feel, sufficiently improved to justify another advance in the rate of dividend on the ordinary shares.

The resolution was carried unanimously.

NUNDYDROOG MINES, LIMITED.**INCREASED DIVIDEND—BALAGHAT ACQUISITION.**

The eleventh ordinary general meeting of Nundydroog Mines, Limited, was held, on the 6th instant, at Southern House, London.

Mr V. Herbert Smith (the Chairman) said that during the past year 122,717 tons of ore were treated, the total production being 79,836 ozs. of fine gold—an increase of 1,090 ozs. as compared with the production in 1930. The value of the bullion returned was enhanced by the increased selling price of gold during the last few months of the year, and amounted to £378,554. There was a profit of £116,020, an improvement of £15,611, and the company had been able to make distributions of dividends amounting to 27½ per cent. on the issued capital, as compared with 25 per cent. for the previous year. It would be realised, however, that the balance available for dividend had been assisted by the extra revenue obtained from the gold premium, which had amounted to £40,460. The financial position of the company had improved, as the balance of liquid assets at December 31st last amounted to £130,482, as against £109,950 twelve months previously; while, in addition, the materials and stores on the mine and goods in transit were valued at £64,259. The year's development work in the Nundydroog Mine yielded most satisfactory results, and the reserves were increased by 16,329 tons, the estimate at December 31st last being 319,656 tons of ore.

The report and accounts were unanimously adopted.

An extraordinary general meeting was then held for the purpose of submitting a resolution approving a draft agreement made between Balaghat Gold Mines, Limited, and this company.

The chairman said that the directors had issued a circular setting out clearly the reasons which actuated the directors in recommending to the shareholders the acquisition of the Balaghat mining leases, together with certain machinery and plant. The purchase price proposed for these assets was £40,000, to be paid in cash, spread over a period of nine months, and the company was not proposing to take over any assets or machinery from the Balaghat company of which it could not make good use. There was a further proposal,

and it was with regard to the remaining reserves of ore in the Balaghat property. The larger organisation of Nundydroog and its milling capacity enabled it to mine and treat this ore more cheaply than could be done by the Balaghat company itself, and terms had been agreed for undertaking this work on a profit-sharing basis.

The resolution submitted was passed unanimously.

JOHN BARKER AND COMPANY, LIMITED.**ANOTHER SUCCESSFUL YEAR.**

The thirty-ninth annual general meeting of John Barker and Company, Limited, was held, on the 7th instant, at 63-65 Kensington High Street, London.

Sir Sydney M. Skinner, J.P. (chairman and one of the managing directors), said that the past financial year had again covered a period of continued fall in prices, and had been marked by profound political, economic and monetary disturbances throughout practically the whole world. In our own country events developed rapidly to a crisis, during which, in September of last year, the Bank of England was forced to suspend the convertibility of the pound sterling into gold. The consequent depreciation in value of the pound sterling in terms of other currencies, and the possibilities opened up by such a situation, threatened to create serious internal financial difficulties, and combined to deal a severe blow to that confidence which was vital to international trade.

The situation, however, had been faced traditionally, as our country was always ready to face any national emergency, and a strong National Government was empowered with overwhelming authority to take whatever steps might be found necessary to put our financial house in order, to balance our national Budget, and to restore that confidence in the pound sterling which made this country the financial centre of the world. These events, with their accompanying uncertainty and resultant increased taxation, had naturally made the past year a difficult one in controlling the affairs of any great business. Assisted by the strong and liquid position of the company's assets, and in spite of their rebuilding obligations, the directors had again been able to take full advantage of market opportunities in the purchase of fresh and up-to-date merchandise.

In addition to these conditions, external to the business, they had also been steadily pushing ahead with their rebuilding programme during the past year. The second section of Derry and Toms' old store premises was demolished in the earlier part of the year, and the first portion of the new store building was sufficiently advanced to enable a substantial part of the frontage lands to be surrendered to the public authority in accordance with their contractual obligations for the widening of Kensington High Street. Practically the whole of the new frontage at the street level was now free from disturbance, and its range of modern shop windows made possible very attractive displays of merchandise, and generally gave effect to a very considerable improvement to trading conditions in the High Street.

In view of the conditions obtaining during the past year, the directors considered they were in a very happy position in that they were able at its conclusion to report only a very slight decrease—£3,600—in the net trading result, and that the net profits amounted to the satisfactory figure of £462,540.

The gross profit for the year amounted to £1,753,938, an increase of £8,668 as compared with that of the previous year. This was the result of further definite progress of the undertaking, and such an achievement in a year of difficult trading and falling prices was a striking example of the confidence which the public rightly had in Barkers and in the enormous range of merchandise at outstanding values which the resources of the company were able to place at their disposal in Kensington High Street. The Zeeta business had also shown an improved result.

The final result of the year's operations was a net profit of £462,540, and it was proposed to write £25,000 off fixtures, fittings and furniture; £10,000 off plant and machinery; to place £100,000 to rebuilding and modernisation reserve; £50,000 to general reserve, and £10,000 to pension and benevolent fund; and also to declare a final dividend on the ordinary shares of 15 per cent., making 20 per cent. for the year. This rate had been maintained for thirteen consecutive years, and would leave £301,053 to be carried forward.

In conclusion, the chairman drew attention to the noteworthy advance which had been made during the year in the development of Kensington High Street as a great shopping thoroughfare, and said he looked forward to the not far distant future when Kensington High Street would be a wide and spacious thoroughfare, dignified by worthy buildings and rivaling for trading purposes some of the best-known shopping thoroughfares in the world.

The report and accounts were adopted.

LANCASHIRE ELECTRIC LIGHT AND POWER COMPANY, LIMITED.**SUCCESSFUL RESULTS—INCREASED DIVIDEND.**

An ordinary general meeting of the Lancashire Electric Light and Power Company, Limited, was held, on the 4th instant, at Winchester House, Old Broad Street, London.

Mr Alfred Shepherd (the chairman), after mentioning that on this occasion the accounts embraced a period of only nine months, said that the trade depression which marked the declining months of 1930 continued during the first five months of 1931, and for each of those months the output of their subsidiary company, the Lancashire Electric Power Company, showed a reduction as compared with 1930. In June, 1931, however, trade in the district took a more favourable turn, and for the last seven months of the year the output for each month showed an improvement on the corresponding month of 1930. This fortunate change in the state of trade had resulted in an increase in the sale of electricity by 8,547,000 units for the year.

The trade mainly responsible for the improvement was the textile trade, and he was glad to be able to report that since the close of the year this improvement had continued. The report showed that the units generated or purchased had increased from 237,279,437 in 1928 to 263,517,515 in 1931, the receipts from £582,554 to £633,458, and the profit on trading from £238,406 to £278,199, while the increase in expenditure during the same period was only £11,111.

The Ormskirk Electric Supply Company, their other subsidiary, showed a profit, after payment of interest and expenses, which admitted of a dividend of 6 per cent. on its capital being paid to the parent company.

There was an available balance of £107,437, as against £88,556 last year, and the directors recommended a dividend at the rate of 7 per cent. per annum, less income tax, on the ordinary shares, leaving £44,437 to be carried forward. A careful consideration of the net income to be received by the company at March 31st this year, with the amount carried forward, showed a sum equal to a dividend for the three months on the preference shares and on the ordinary shares at the rate now proposed. The directors therefore felt justified in increasing the dividend on the ordinary shares by ½ per cent., which would no doubt give satisfaction to the shareholders. Unless the position changed adversely, shareholders might expect the payment of an interim dividend on the ordinary shares during the current year.

The report and accounts were unanimously adopted.

MYSORE GOLD MINING COMPANY, LIMITED.**ENCOURAGING SIGNS AT DEPTH.**

The fifty-second ordinary general meeting of the Mysore Gold Mining Company, Limited, was held, on the 7th instant, at Southern House, London.

The Hon. Lionel Holland, Chairman of the company, said that the lamentable rock burst, news of which was received on the very morning of the last annual meeting, while the most severe and destructive, was unfortunately not the only one that took place during the financial year.

The damage, dislocation and delay resulting entailed a substantial reduction in the tonnage mined and milled of over 8,000 tons, compared with 1930, the return of fine gold had been 5,862 ozs. less, and at the same time the costs of production had been heightened appreciably. In spite, however, of the fewer ozs. of gold produced and marketed, the actual sum received from the sale of gold last year had been over £18,000 in excess of the sum realised in 1930. Of the total of £425,553 realised by sales of gold, over £41,000 represented the premium secured on the gold.

The ultimate disposable profit for the year was at £133,018, rather more than £8,000 down on the preceding twelve months. After making certain allocations, they were left with a balance profit of £69,451 odd, which would admit of the payment of a dividend of 1s. a share as against 1s. 3d. a share for 1930.

The general financial strength of the company had suffered no setback. Readily realisable assets such as Government securities and fixed policies, cash at the bank and on deposit, stock of gold and sundry debtors, were £263,483 in excess of current liabilities. Those surplus funds, however, were not too large for what might be needed to carry out their programme of development at depth. Signs that they would encounter deposits of value by deeper development below the main workings of the mine were increasingly encouraging, especially in the northern section.

If work was not again interrupted before the end of the current year, mining on normal lines might be rendered possible. For some months to come tonnage, output and grade of ore would continue to be affected, but he hoped there would be some set-off in the shape of a sensible addition to revenue from the present gold premium which it seemed to be generally anticipated would continue or many months.

The reports and accounts were adopted.

Government Returns, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the twelve days ended March 31, 1932, amounted to £40,755,000 against ordinary expenditure of £19,582,000. After allocating £1,362,000 to Sinking Fund and £19,582,000, having allowed for an increase in Exchequer Balances of £2,988,000, the operations for the week, as shown below, reduced the National Debt by £16,823,000 to £7,582,550,000.—

	£	000's omitted.

MISCELLANEOUS.

BRITISH MATCH CORPORATION.—The directors of the British Match Corporation, Limited, announce that the company and its subsidiary companies have no holding of shares in Kreuger and Toll or the Swedish Match Company. They have not made loans to these companies or entered into any financial guarantees.

HUDSON'S BAY COMPANY.—Sir George May, Bart., and Mr. A. K. Graham have resigned from the Board. Sir Alexander Murray, C.B.E., has been elected deputy governor and Sir Evelyn Wallers, K.B.E., has been elected a director.

LANCASHIRE ELECTRIC LIGHT AND POWER COMPANY, LIMITED.—The change in the date of closing of this company's accounts to December 31st will enable the company to hold the annual general meeting each year several months earlier than in previous years. Owing to only nine months' dividend being payable at this time, the directors are considering the advisability of paying an interim dividend during the current year. The amount carried forward and the first quarter's net earnings are sufficient to cover the preference dividends to March 31, 1932, leaving a balance available for an interim dividend on the ordinary shares. The trade depression which marked the declining months of 1930 continued during the first five months of 1931. In June, however, trade took a more favourable turn, which became still more marked towards the end

of the year, and the improvement continues. The generating stations and distributing plant and mains have been maintained efficiently out of revenue. The scheme of the Central Electricity Board for North West England has not yet come into operation, and it is not known whether any of the company's stations will be connected to the grid during the present year. During the year an issue of £400,000 5 per cent. redeemable debenture stock was made at a satisfactory price, bringing the total debenture issue to £1,400,000. The ordinary dividend for nine months was at the rate of 7 per cent. per annum. The carry forward is £44,438. Treasury bills at cost amount to £167,658. Balance at credit in Lloyds Bank Limited amounts to £27,919. Reserve account stands at £212,516.

LLANELLY AND DISTRICT ELECTRIC SUPPLY COMPANY, LIMITED.—Considering that South Wales has suffered very severely during the year from trade depression, it is satisfactory that this company is able to report an improvement in the consumption of electricity since the close of the year. The operating profit and sundry receipts amounted to £65,329, against £68,551 for 1930. The ordinary shareholders receive a dividend of 4 per cent., less tax, against 3½ per cent., less tax, for 1930. The carry forward is £3,222, against £3,481 brought in. Reserve accounts stand at £88,614, against £75,739. Loan account is £61,000, against £70,000. The meeting was held at Winchester House (Hall 174), London, on April 4th, at 12 o'clock noon.

Commercial Reports.

MARKET SUMMARY.

In the absence of any encouraging feature, the tendency of prices at the principal international commodity markets has been downwards during the past week. Among non-ferrous metals, the New York quotations for copper and tin suffered a sharp setback. The reaction in copper is particularly disappointing, as only recently the world's principal producers decided on a drastic curtailment in output. Among textile raw materials, the heavy slump in cotton is noteworthy. Rubber was again quoted at the low level reached a week ago. Among cereals, wheat recovered to the level of three weeks ago, but maize, oats and rye lost a few points. Despite the recent agreement among the members of the International Sugar Convention to effect a reduction in the current year's crops, the commodity slumped heavily. Cocoa has also been cheaper, but Brazilian coffee gained a little. Sterling commodities, which lend themselves to grading and therefore to international arbitrage, declined owing to the rise in the value of sterling in terms of gold, and because of the further decline in gold prices. According to reports from various industrial centres, the coal trade and the iron and steel industries show no improvement in activity. On the other hand, business in rayon yarn and fabrics has been maintained and the demand for Bradford goods remained steady. Business in cotton manufactures has, however, been hampered by the heavy fall in the price of the raw material.

THE COAL TRADE.

SHEFFIELD.—Business in the South Yorkshire coalfields is as restricted as ever, and overseas contracts continue to shrink. The home trade remains as before, with some improvement in boiler fuel, but rather reduced demand for steams. Prices for best steams for export are from 15s. 6d. to 16s. f.o.b. For inland the quotations are much the same, but on trucks at pits best house fetches from 21s. to 22s. at pits. Less blast furnace coke is going into consumption, but rather increased quantities of foundry coke are going out.

GLASGOW.—Business is on a disappointing scale in the Scottish coal trade. In addition to the seasonal falling off in the home market, the shipping trade has been quieter. Many foreign buyers are apparently working for lower prices and they are accordingly restricting their purchases as much as possible for the time being. All classes of coal remain plentiful, with prices on the easy side. Current quotations for the shipping trade are approximately as follows (f.o.b. district ports): LANARKSHIRE.—Ell best, 14s. 6d.; splint best, 16s.; splint second, 14s. 3d.; navigation, 15s.; navigation second, 14s. 6d.; Hartley, 15s. 6d.; steam, 13s.-13s. 3d.; trebles, 12s.-12s. 6d.; doubles, 10s. 6d.; singles, 9s. 6d.; pearls, 9s.; dross, 9s. FIFE.—Screened navigation, 16s. 6d.; first-class steam, 12s.-12s. 3d.; third-class steam, 11s. 6d.; trebles, 12s. 6d.-13s. 6d.; doubles, 10s. 3d.-10s. 6d.; singles, 9s. 3d.-9s. 6d.; pearls, 9s. LOTHIAN.—Prime steam, 11s. 9d.-12s.; secondary steam, 11s. 6d.; trebles, 11s. 6d.-12s.; doubles, 10s.; singles, 9s. 6d.; pearls, 9s. Ayrshire.—Unscreened navigation, 16s.; jewel, 16s. 6d.; steam, 13s.; trebles, 12s. 6d.; doubles, 10s. 9d.; singles, 9s. 9d.; pearls, 9s.; dross, 9s. 7d.

CARDIFF.—The South Wales steam coal market remains in a sluggish condition. Foreign inquiries are very slack, and with inland requirements tending to decline with the approach of milder weather, and with little increased activity in local industrial demand, supplies are plentiful, and prices with only one or two exceptions, are ruling on the basis of the minimum schedule figures. According to the Customs returns, the total shipments to foreign destinations in March were 1,335,140 tons, compared with 1,269,329 tons in February, and 1,487,079 tons in the corresponding month last year. France was the principal market, the deliveries to which were 433,834 tons, as against 385,902 tons the previous month, and 533,594 tons a year ago. Sized coals are about the only active grades, and while at the moment there is a good steam for patent fuel, there is no pressure of demand. Relatively the position in the anthracite trade is better, and there are fairly active inquiries for sized grades. The following are the current approximate quotations: Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 4½d.; best dries, 18s. 6d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steams, 13s. 6d.; cargo smalls, 11s. 6d. to 12s. 6d.; coking smalls, 13s. 6d. to 13s. 9d.; anthracite best large, 36s. to 38s. 6d.; Red Vein large, 22s. 6d. to 27s. 6d.; machine made cobbles, 40s. to 48s. 6d.; French nuts, 40s. to 48s. 6d.; stove nuts, 39s. 6d. to 43s. 6d.; rubbly culm, 8s. 3d. to 8s. 9d.; foundry coke, 32s. 6d. to 36s.; patent fuel, 19s.; pitwood, ex ship, 18s. 9d. to 20s. 9d.

IRON AND STEEL.

MIDDLESBROUGH.—The market for Cleveland iron is steady and although new business is still on quiet lines, there are indications that trade will gradually improve and a more confident feeling exists. Trade with Scotch consumers last month proved better than first expected, 4,704 tons Cleveland iron being sent, against 2,411 tons in February, and although Scotch foundries in many cases are only working short time, a greater proportion of iron from this district is likely to be used in the future. Deliveries to local consumers are on a fair scale, but exports abroad are poor, and were only 2,625 tons in March, against 5,087 tons in February. At the weekly market on Tuesday a moderate business was reported in Cleveland iron, mostly for early delivery. Official prices were unchanged, viz.: No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; and No. 4 forge, 57s., f.o.b., f.o.t. In hematite there is slightly more demand, and with reduced competition from merchants

who have not now control of any great quantity of iron, makers are not inclined to make concessions and hold to 63s. 6d. for ordinary mixed numbers for early delivery. The resumption of shipments of hematite to Wales is regarded very favourably, as business has been practically impossible in that market for a considerable time; 2,200 tons were sent towards the end of March, and hopes are entertained that more sales will follow. The total shipments of pig iron last month showed a gain of 2,503 tons on February and manufactured iron and steel one of 2,688 tons. In the finished departments a few orders of moderate size are coming to hand, but no further contracts of importance have been booked recently. Several large jobs, however, are under negotiation by local firms, and it is reported that Dormans are likely to secure two big bridge contracts to cost about £2,000,000 each, one for Auckland (New Zealand) and the other for Brisbane. Prices are unchanged on the week. There is nothing doing in ore, and it is impossible to name definite prices. Best rubio is nominally 15s. 6d. c.i.f., and the current freight Bilbao/Middlesbrough is 4s. 6d. Imports of all kinds of ore into Middlesbrough for March totalled only 38,617 tons, against 52,154 tons in February. Coke is weak, and although the general quotation for ordinary blast-furnace qualities is 18s. delivered works, business has been done below this. The number of furnaces in blast in the district is unchanged at 17s.

SHEFFIELD.—The heavy steel branches have not yet resumed operations fully after the holiday stoppage and the volume of work coming in for semi-manufactured steel, heavy forgings and castings and tool steel still tends to shrink. A considerable number of the workmen suspended at Easter are still unemployed. Conditions continue to brighten in certain of the light and finished sections. Confidence in a revival later in the year is not lacking. Exchange fluctuations are checking overseas business, both inward and outward. Demand for hand and engineers' small tools is expanding steadily. The position of cutlery, electro and silver plate becomes worse every month, and the present stagnation in the home market is somewhat phenomenal. The makers of a famous brand of American hacksaws are acquiring a site in Sheffield for a factory. A large German cutlery firm is equipping a disused works in Sheffield with plant for producing pocket knives. It is also reported that a foreign firm is about to produce precision tools in the Rotherham district. The German Government is discouraging the establishment of German businesses in this country by controlling the export of capital and a prohibitive export duty on second-hand machinery. A Swiss firm making twist drills is seeking a site in the Sheffield district.

GLASGOW.—Business in the West of Scotland remains very quiet, but on the whole the outlook would appear more promising than in recent weeks. There is a slightly better export demand, although invariably for small parcels, and the home market is also showing a little more activity. Semis are in poor request and although the figures quoted by Belgian makers are exceedingly low very little business is being done. Sheetmakers have booked a fair tonnage for Canadian shipment, but little business is at the moment being done for shipment to other overseas markets. It is announced this week that Messrs. Stewart and Lloyds, Ltd., have secured a contract for some 1,200 miles of pipe line from the Iraq Petroleum Company, part of which will be manufactured in Glasgow district. There has been considerable unemployment in the tube trade for some time, but the manufacture of this piping will give employment to a large number of men for a year at least. In addition to manufacturing the piping, Messrs. Stewart and Lloyds will also make the steel necessary for the contract, amounting to about 60,000 tons.

CARDIFF.—On the Swansea Metal Exchange on Tuesday current inquiries were reported to be slow, but production generally has improved, and for the March quarter the output is likely to show a considerable increase on that in the corresponding period last year. The figures for the quarter are not yet available, but in January the output was 75,500 tons, which compares with 55,600 tons in the corresponding month last year, and with a monthly average in 1931 of 59,800 tons. Prices are nominally unchanged both for tinplates and local steel bars. At a meeting of the manufacturers on Tuesday consideration was given to complaints in regard to the allocation of orders under the new regulation scheme. The quantity of tinplate boxes received from the works at the Swansea docks last week was 117,399, as against 69,616 in the corresponding period last year, and stocks totalled 203,716 boxes as against 240,163 boxes.

OTHER METALS.

TIN.—The outstanding feature of the London metal market has been the heavy slump in the prices to lowest level, since the suspension of the gold standard. The world's visible supply at the end of March, at 61,500 tons, shows little change on the previous month. In New York the metal was quoted at 19.25 cents per lb. on Wednesday, against 21.20 cents per lb. a week ago and 22.40 a month ago. Wednesday's official closing quotations in London, in terms of sterling for "standard" cash, at £108 10s. to £108 12s. 6d. per ton, compares with £120 10s. to £120 15s. on the corresponding day last week. Stocks in London and Liverpool at the end of last week, at 33,217 tons, show a decrease of 531 tons on the week.

COPPER.—Despite the drastic curtailment of world output since April 1st, the market in copper was dull, and prices declined both in London and New York. On Wednesday, "Domestic" spot was quoted at 5½ cents per lb. in New York against 6 cents a week ago, and 6½ cents a month ago. Wednesday's official closing price for "standard cash" in London, in terms of sterling at £30 2s. 6d. to £35 compares with £31 12s. 6d. to £31 15s. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 20,945 tons, show a decrease of 140 tons, while stocks of rough copper, at 919 tons, are 31 tons smaller.

LEAD.—Business in lead was on a small scale, and, as sellers predominated, the metal declined a few points in London. In New York the metal was quoted at 3.00 cents per lb. on Wednesday, against 3.00 cents a week ago, and 3.25 cents a month ago. Wednesday's official closing quotation for "soft foreign" in London in terms of sterling, at £10 16s. 3d. per ton for shipment during the current month compares with £11 15s. on the corresponding day last week.

SPELTER.—Spelter, too, was a dull market, and prices gave way in London, though the New York quotation was maintained. Wednesday's quotation in New York, at 2.80 cents per lb., compares with 2.80 cents a week ago and 2.80 cents a month earlier. Wednesday's official closing quotation in London in terms of sterling for "good ordinary brands" was £10 11s. 3d. per ton for shipment during the current month, against £11 15s. a week ago.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, the quotations for aluminium and nickel have been maintained at £95 per ton and £220-£225 per ton respectively. Foreign antimony declined from £27 10s.-£28 to £27-£27 10s. Quicksilver was quoted at £17 10s.-£18 per flask, against £18 to £18 10s. a week ago. Platinum was again sold at £10 6s. per ounce.

TEXTILES.

THE COTTON TRADE.—Liverpool.—Imports for the week March 31st to April 6th (inclusive), are 50,832 bales, of which 29,351 bales are American, 82 Brazilian, 989 Peruvian, 19,623 Egyptian, 429 East Indian, and 358 sundries.

Manchester.—Although on the whole the market during the past week has been rather steadier, the business done has been limited and it has not yet been possible to re-establish confidence amongst buyers in current prices. A certain amount of buying has taken place in yarn and piece-goods to meet urgent wants, but customers have not been prepared to anticipate future requirements. Cloth inquiry for India has been fairly encouraging and scattered sales have occurred in white shirtings, mulls and prints, chiefly for Calcutta and Karachi. Operations for China have been restricted, but bleached shirtings and poplins have been booked for Hong Kong. Most of the demand for Java and the Straits Settlements has run on fine fabrics. Business has been done in lawns for Rangoon. Not more than a retail turnover has taken place for Egypt and the Near East, and sales have been difficult to arrange for South America. Heavy goods have attracted some attention for East and West Africa. There has not been much activity in home trade cloths. The yarn market has continued generally slow. Restricted operations have occurred in American and Egyptian counts for home consumption and only occasional transactions have been reported in shipping numbers.

THE WOOL TRADE.—Bradford.—The third series of London sales will commence on Tuesday with an offering of 132,500 bales, including approximately 85,000 bales of crossbreds. The quality of the latter is large, writes our correspondent, in view of the present state of trade. The popularity of anything above 50's is well known, but lower qualities are neglected. One of the problems with which the trade is faced is how to secure an adjustment of this anomaly. Taken by itself, the demand for merino wool is all right, and prices are not likely to fall much, if anything, below their present level. If there were a bigger supply of merino wool immediately available it is probable that it could be taken up without much difficulty. This is entirely attributable to the present trend of fashion, which includes a large absorption of wool for hosiery manufacturing purposes. As regards the movement of values in London, merinos may be slightly in buyers' favour, for before Easter a slight softening in the Bradford market commenced, and it is known that some reasonable prices were accepted for merino tops—prices which did not represent the current cost of wool. Within the last week the Bradford market has begun to present a rather steadier appearance, but there is not yet any definite evidence of an upward movement, even in fine qualities. The outlook for crossbreds is just as uncertain as ever, and any forecast of the future is exceptionally difficult. South American crossbreds being available at very reasonable prices, does not point to any recovery in the balance of the New Zealand clip.

THE GRAIN MARKETS.

WHEAT.—There has been a slight but distinct improvement in the international wheat situation during the past week and prices in terms of gold have now recovered to the level of three weeks ago. International trade has been on a larger scale and, of Continental countries, France has bought considerable quantities. The foreign milling quota in France has again been raised from 40 per cent. to 45 per cent. A year ago the quota was only 20 per cent. It is expected that Continental countries will be obliged to purchase heavily until the new harvest becomes available. World stocks at the end of July will therefore probably show a reduction on last year. Another factor making for firmer prices is the unsatisfactory condition in several districts of the United States winter wheat crop. On Wednesday, "May" futures were quoted at 56 cents per bushel in Chicago, against 52½ cents on the corresponding day last week, and 57½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 32s. 3d. per 496 lbs., as compared with 32s. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 30s. 3d., against 30s.; No. 3 Northern Manitoba, Vancouver, ex ship, 29s., against 29s.; Russian, on sample, 26s. to 27s. 6d., against 25s. 6d. to 27s.; Australian, ex ship, 28s. to 28s. 6d., against 27s. 6d. to 28s. a week ago.

WHEAT FLOUR.—Business in wheat has been a little more active than a week ago. North American shipments, at 142,000 sacks, showed an increase of 35,000 sacks as compared with the previous week. Of this total, only 28,000 sacks have been consigned to Europe. Quotations in London Wednesday: Straight run, delivered country, 26s. per sack of 280 lbs., as compared with 26s. last week; delivered London, 25s., against 25s. Manitoba patents, ex store, 25s. 6d. to 28s., against 25s. 6d. to 28s.; and Australian, ex store, 20s. 6d. to 22s., against 20s. 6d. to 22s. a week ago.

BARLEY.—The market in barley has again been dull. On Wednesday, "May" futures were quoted at 4½ cents per bushel in Winnipeg, against 40½ cents last week and 43 cents a month ago. Quotations in London, Wednesday: "English feeding," f.o.r., per 448 lbs., 27s. to 28s., as compared with 27s. to 28s.; Russian, landed, 23s. to 24s. per 400 lbs., against 23s. 6d. a week ago.

OATS.—Little interest has been taken in foreign oats in this country, but other European countries have purchased considerable quantities of this grain from Argentina and Canada. "May" futures, which last week stood at 24½ cents per bushel in Chicago, sold at 24 cents per bushel on Wednesday this week, against 23½ cents a month ago. Quotations in London, Tuesday: "River Plate," landed, 17s. 9d. per 320 lbs., as compared with 17s. 9d. last week; "River Plate," ex ship, 16s. 9d., against 16s. 9d.; "Chilean White," landed, 26s., against 27s. a week ago.

MAIZE.—There has been a slight increase in turnover during the past week. Demand has been good, and Argentina and the Balkan countries have found a ready outlet at slightly firmer prices. Wednesday's quotation in Chicago for "May" futures, at 35½ cents, shows a decrease of 1½ cents on last week, and a fall of 5 cents as compared with the price a month earlier. Quotations in London, Wednesday: "Plate," landed, 21s. 6d. per 480 lbs., compared with 20s. 6d. last week; "Plate," ex ship, 20s. 9d., as against 19s. 9d.; "Plate," April-May, 19s. 3d., as against 19s. 3d. Yellow maize meal, ex wharf, was quoted at £6 per ton, against £5 17s. 6d. a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1931-32, 1930-31, 1929-30, 1928-29:—

	1931-1932.	1930-1931.	1929-1930.	1928-1929.
Estimated sales of home-grown wheat—				
1 week to April 2	Cwts. 111,390	Cwts. 61,081	Cwts. 171,659	Cwts. 135,452
31 weeks to April 2	2,441,617	3,681,218	7,523,965	8,117,590
Average price of English wheat per cwt.	s. d. 6 1	s. d. 5 2	s. d. 8 4	s. d. 9 9

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1928 to 1931:—

Weeks ended	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
Mar. 26, 1932	Cwts. 81,082	Cwts. 42,701	Cwts. 29,198	s. d. 6 1	s. d. 8 1	s. d. 7 5
Apr. 2, 1932	111,390	51,510	31,694	6 1	7 11	7 5
Mar. 31, 1928	286,826	110,069	53,854	10 0	10 11	11 0
Mar. 30, 1929	105,458	61,881	30,310	9 9	10 3	9 9
Apr. 5, 1930	171,659	123,919	28,355	8 4	7 7	6 0
Apr. 4, 1931	61,081	32,316	19,064	5 2	7 5	6 1

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks with comparative figures for 1930:—

NEAREST FUTURE.	Jan. 2, 1930.	Jan. 2, 1931.	April 8, 1931.	Jan. 4, 1932.	Mar. 30, 1932.	April 6, 1932.
Winnipeg (No. 1 Manitoba)	148½	56½	57½	62½	61½	62½
Chicago (No. 2 Winter)	130½	79½	83	55½	52½	56

The visible supply of wheat in Canada, at 64,796,000 bushels, shows an increase on the week of 1,710,000 bushels. Supplies a year ago stood at 65,290,000 bushels.

OTHER FOODS.

SUGAR.—Despite the agreement reached among the principal producers of raw sugar to curtail output during the next season, prices failed to improve. On the contrary, a further heavy fall in quotations took place during the past week. "May" futures in New York were quoted at 0.65 cent per lb. on Wednesday, against 0.75 cent per lb. a week ago, and 0.83 cent per lb. a month earlier. Wednesday's sales of "raws" include "May delivery," at 4s. 1½d. to 4s. 4d. per cwt., against 5s. 0½d., and "December," at 4s. 10½d. to 4s. 11½d., against 5s. 6½d. to 5s. 7d. on the corresponding day last week. The movements of raw sugar in London and Liverpool during last week are set out in the table below:—

	Imports.		Deliveries.		Stocks.	
	1932.	1931.	1932.	1931.	1932.	1931.
London	841	2,442	345	1,074	5,466	32,930
Liverpool	24,398	10,332	15,712	10,921	96,371	82,988
Total	25,239	12,774	16,057	11,995	101,837	115,918

Last week 47 9,504 10,643 20,207 92,655 115,139

COFFEE.—The New York coffee market witnessed a slight improvement in prices during the past week. The demand at the auctions in London was steady, and good qualities found ready buyers. Last week's movements of coffee in London were as follows: Brazilian, landed, 225 bags; delivered for home consumption, 78 bags; exported, 50 bags; stocks, 5,788 bags, against 2,872 bags last year. Central American, landed, 9,554 packages; delivered for home consumption, 1,596; exported, 1,265; stocks, 109,511 packages, against 105,276 a year ago. Other kinds, landed, 8,394 packages; delivered for home consumption, 1,880; exported, 687; stocks, 102,561 packages, against 103,475 a year ago.

COCOA.—After a period of rising prices, a slight reaction has to be recorded. "May" futures were quoted at 4.12 cents per lb. in New York on Wednesday, against 4.43 cents per lb. a week ago and 4.51 cents a month ago. As compared with the corresponding day last week, Wednesday's quotation for Accra, fair fermented, new crop, April-May, at 24s. 6d. per cwt. f.o.b., London contract, shows a fall of 1s. 3d. per cwt. on the week. Last week's movements of cocoa in London were as follows: Landed, 21,993 bags; delivered for home consumption, 11,960 bags; exported, 40; stocks, 178,381 bags, as against 211,461 last year.

TEA.—The quantities catalogued for this week's auction comprise 52,468 packages of Indian, 26,018 packages of Ceylon, and 27,360 packages of Java and Sumatra tea. The London tea auctions reopened on Monday, when there was a good demand for most Indian varieties on offer. There was keen competition for Ceylon teas of outstanding on Tuesday. Wednesday's "Indian" sales again experienced a good demand, and sellers generally realised higher rates.

RICE.—After a period of good demand and steady prices rice has been dull since the beginning of last week. Both cash and forward quotations continued to decline this week. Wednesday's "spot" price at 10s. per cwt., shows a reduction of 3d. per cwt., while forward positions at 8s. 10½d. fell 6d. per cwt. Movements in London during the past week were as follows: Landed, 6 tons; delivered, 45 tons; stocks, 809 tons, as against 496 tons last year.

POTATOES.—The principal markets were well supplied with potatoes, and prices did not rise further. At the Borough Market, "Best King Edward" sold from 12s. to 12s. 6d. per cwt., as compared with 12s. to 12s. 6d. per cwt. a week ago.

SPICES.—The market in spices, though quiet, was a little steadier. Wednesday's quotation for "Black Singapore" pepper, at 6½d. per lb., shows no change on the week. Movements of pepper in London during the past week were as follows: Black, landed, 4 tons; delivered, 2 tons; stocks, 305 tons, against 536 tons last year. White, landed, 15 tons; delivered, 41 tons; stocks, 766 tons, against 512 tons a year ago.

MEAT.—At the Smithfield Market both home-grown and foreign beef was slightly dearer, but mutton shows little change on last week. On Wednesday, Argentine beef (chilled hindquarters) was sold at 4s. 2d. to 4s. 6d. per 8 lbs., against 4s. to 4s. 4d. on the corresponding day last week, while New Zealand frozen mutton realised 2s. 8d. to 3s. 6d., as against 2s. 8d. to 3s. 8d. a week ago. According to the Smithfield Market official report, supplies of meat during last week amounted to 8,010 tons, as compared with 8,996 tons in the corresponding week last year. Imported beef, principally Argentine, formed 86.2 per cent. of the supplies, as against 83.9 per cent. a year ago; and imported mutton, mainly New Zealand, formed 79.7 per cent. of the total supply, as against 82.0 per cent. last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OILSEEDS.—Very quiet conditions continue and comparatively little business is passing. The general trend of prices has been downward and Plate linseed on passage to Hull was done at the close of last week at £7 15s., which is probably the lowest price (gold basis) on record. A steadier feeling has, however, developed on reduced Plate shipments, while the quantity afloat for Europe has again decreased. At 200,800 tons, which is 47,000 tons reduction on the week, it is still large and likely to be ample to meet requirements of crushers, both here and on the Continent. For April-May shipment £8 has been conceded, and this or less is current value, while for June and July a small premium is asked. Cottonseed is without buyers, and black Egyptian, afloat and April loading, has fallen to £5 17s. 6d. Vegetable oils of all descriptions are in poor demand and in most cases are quoted lower. Raw linseed oil on spot has declined to £13 per ton, naked, ex Hull mill. For May-August delivery £13 15s. is quoted. Cotton oil is neglected, crude Egyptian ex Hull mill being obtainable at £21 and refined at £23 10s. The demand for oilcakes and meals is fair and mill prices remain unchanged.

HIDE, LEATHER AND ALLIED TRADES.—Quotations for most descriptions of hides are now on a lower basis, and at the reduced figures a fair amount of business is passing for some sorts. At the Manchester sales this week, resumed after a fortnight's interval, prices for ox and heifers, with the exceptions of the two heavy weights, were from ½d. to ¾d. per lb. lower, while all cows realised ¾d. per lb. less money. Calfskins were a disappointing sale, as the three top weights did not change hands. The sheepskin market

pronounced at rates running down to $1\frac{1}{2}$ per cent., but since then money has become a shade more usable at $1\frac{1}{2}$ and $1\frac{3}{4}$ per cent., partly because of some absorption of short money by the gilt-edged market. Renewals were arranged at $1\frac{1}{2}$ per cent. early in the week, but latterly the rate has eased to $1\frac{1}{2}$ per cent.

At last week's Treasury bill tender it was generally understood that a higher rate would be desirable, while some reliance was also placed on the fact that the new bills represented the unpopular July maturities. Consequently tenders were made at higher rates, so much so that a certain number of applicants tendered too high and so missed the allotments. Heavy applications were made by both British and foreign banks, and in the end applications totalled £76.2 millions for the £45.0 millions of bills on offer, against £61.9 millions the week before. The average tender rate worked out at £2 8s. 4.15d., in comparison with £2 8s. 3.73d. the previous week. The higher rate, however, was not held, for a keen demand for bills sprang up from those who had missed the tender, and they rapidly drove the rate for "hot" bills down to a minimum of $1\frac{1}{8}$ per cent. By Thursday the rate had recovered slightly to $2-2\frac{1}{8}$ per cent.

	Mar. 23, 1932.	Mar. 31, 1932.	Apr. 7, 1932.	Apr. 14, 1932.	Previous Rate and Date Changed.
Bank Rate	$\frac{3}{4}$	$\frac{3}{4}$	$\frac{3}{4}$	$\frac{3}{4}$	$\frac{3}{4}$ (Mar. 17, '32)
Banks' Deposit Rate..	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	2 (Mar. 17, '32)
Discount { Call	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	2 (Mar. 17, '32)
Houses { Notice ...	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$2\frac{1}{2}$ (Mar. 17, '32)
Market rate ("hot" Treasury bills).....	2	$1\frac{1}{8}-\frac{3}{4}$	$2\frac{1}{8}-\frac{3}{4}$	$2-2\frac{1}{8}$	...
Market rate (3 months' bank bills)	$2\frac{1}{2}-3\frac{1}{2}$	$2-3\frac{1}{2}$	$2\frac{1}{8}-3\frac{1}{2}$	$2\frac{3}{8}-3\frac{1}{2}$	...

The pressure of money has also held down the market rate on three months' bank bills, which were quoted at $2\frac{1}{8}-\frac{3}{4}$ per cent. on Wednesday and $2\frac{1}{2}$ per cent. the following day. Standstill bills were quoted on Thursday at rates ranging from $2\frac{1}{2}$ to $3\frac{1}{4}$ per cent. according to the name these carried. The week has witnessed a keen demand for short bills from the banks, who are believed to be buying fresh bills in order to find an outlet for their surplus funds. This demand gradually depressed the rate on short bills, until by Thursday both May and early June maturities were dealt in at $1\frac{1}{8}-\frac{3}{4}$ per cent. It is believed that the market's supplies of May bills have been practically exhausted, and if the banks continue to absorb June maturities greater stringency than usual will prevail at the half-year.

The main change in this week's Bank return consists of a further big increase of "other" securities held by the Issue Department. This item now stands at £36.9 millions, against £25.8 millions last week, and only £6.6 millions as recently as February 24th last. This increase of £30.3 millions in seven months arises from the heavy purchases of devisen made by the Bank during this period. The note circulation has been reduced by £3.0 millions during the past week, which practically completes the return of the holiday currency. Taking both departments together, Government Securities show a reduction of £6.8 millions and Other Securities an increase of £5.0 millions. Public Deposits have risen by £2.3 millions, and Bankers' Deposits are little changed at £78.4 millions, against £79.5 millions last week. The Proportion stands at 32.1 per cent., against 29.7 per cent. a week ago.

Once more, some slight disappointment was expressed in the market at the absence of any reduction in Bank rate. In one or two quarters it is thought that a reduction has been postponed until it can be made to coincide with the announcement of a conversion scheme, possibly in conjunction with next week's Budget. Another point of view put forward is that, inasmuch as the market is convinced that Bank rate must ultimately fall to $2\frac{1}{2}$ per cent., a reduction from $3\frac{1}{4}$ to 3 per cent. would give the signal

for a further landside in market rates of discount, and so Bank rate would remain ineffective. Neither of these reasons is exactly convincing, and it is to be hoped that the decision to reduce the rate will not be delayed much longer.

The March averages of the nine English clearing banks afford definite evidence of the return of funds to London from abroad. Notwithstanding the further collection of revenue, which continued up to the end of the month, deposits have risen since February by £17.6 millions.

	March, 1931.	December, 1931.	January, 1932.	February, 1932.	March, 1932.
Capital and reserves.....	132.1	130.0	122.8	122.8	122.8
Acceptances	121.5	102.1	98.7	90.6	98.7
Deposits (including undi- vided profits, &c.).....	1,726.2	1,700.5	1,677.3	1,621.7	1,639.3
Total liabilities	1,979.8	1,932.6	1,898.8	1,835.1	1,860.8
Coin, notes, balance at bank, and cheques in course of collection	227.3	237.1	224.0	214.2	218.0
Money at call.....	110.7	116.6	113.9	106.5	109.2
Investments	320.9	305.9	292.7	284.9	290.9
Discounts	238.5	244.1	237.0	205.3	214.7
Loans and advances.....	919.4	884.0	889.3	886.3	886.0
Over for accept., premiae, &c.	163.0	144.9	141.9	133.9	142.0
Total assets	1,979.8	1,932.6	1,898.8	1,835.1	1,860.8

Acceptances have recovered to their January level. As regards the banks' assets, advances are fractionally lower on the month. Apparently loans arranged in January for income-tax purposes are being repaid. There is an increase of £3.8 millions in cash, and the banks' purchases of bills are reflected in an increase of £9.4 millions in discounts. Investments are practically unchanged.

In New York, call rate has remained unchanged at $2\frac{1}{2}$ per cent., but further reductions have been made in open market rates on bankers' acceptances, so that 90-day bills are now quoted at rates running at levels as low as $1\frac{1}{2}-\frac{3}{4}$ per cent. Last week's Federal Reserve statement recorded an increase of \$19 millions in currency in circulation, thus reducing the recent downward trend. Gold imports of \$2,000,000 were reported from Canada on Wednesday of this week, and exports of \$495,000 to Holland.

The Foreign Exchange market was not very active this week, and although sterling fluctuated to some extent, and closed below the best, the undertone was firm. New York went rather against us at 3.78, against 3.80 last week. Montreal improved to 4.18. Paris was very firm and went from $96\frac{1}{2}$ to $95\frac{1}{2}$. Brussels was considerably better at 26.97, and Milan improved by $\frac{3}{4}$ to 73 $\frac{3}{4}$. Madrid was at 49 $\frac{1}{2}$, against 50 $\frac{1}{2}$ last week. Berlin went from 16.02 to 15.90 and Switzerland from 19.50 to 19.42. The Scandinavian exchanges were weak and irregular with the Kreuger revelations, Stockholm falling away from 18.88 to 19.95 and Oslo from 19.05 to 19.40. Copenhagen was not so seriously affected and declined from 18.20 to 18.30. The South American currencies are, to a large extent, still only nominal. Rio gained $\frac{1}{4}$ d. at 4 $\frac{1}{4}$ d., and Buenos Aires was irregular and weakened from 36 $\frac{3}{4}$ d. to 36 $\frac{1}{2}$ d. Montevideo gained $\frac{1}{4}$ d. at 29 $\frac{1}{4}$ d. In the Far East the rupee was weaker at 1s. 6 $\frac{1}{4}$ d., but the yen improved by $\frac{1}{4}$ d. to 1s. 9 $\frac{1}{4}$ d. Batavia gained 7 points at 9.38. In the forward discount, three months being unchanged at 2 cents discount. Paris went from par and 4 centimes discount to 3 and 6 centimes premium. Brussels weakened to 2 and 7 centimes discount. Milan was unchanged at last week's quotations. Madrid was firmer at $\frac{1}{4}$ peseta and $\frac{3}{4}$ peseta dam improved to $\frac{1}{2}$ cent and 1 cent discount, against 1 and 2 cents discount last week. Berlin is still not quoted. 2 $\frac{1}{2}$ centimes premium. The silver market was quiet and transactions were small, but sufficient to advance prices by $\frac{3}{4}$ d. to 16 $\frac{3}{4}$ d. for cash and by $\frac{1}{4}$ d. to 16 $\frac{1}{4}$ d. for forward. The Chinese silver exchanges, however, fell away, Hong-kong declining from 1s. 3 $\frac{1}{2}$ d. to 1s. 2 $\frac{1}{2}$ d. and Shanghai from 1s. 8 $\frac{1}{2}$ d. to 1s. 7 $\frac{1}{2}$ d.

THE REALITIES OF DISARMAMENT.

In one sense the Disarmament Conference has had a bad season. It opened under the shadow of the Far Eastern conflict; indeed, the conflict had just spread from Manchuria to Shanghai on the eve of the opening day, and the initial ceremony had to be postponed in order to make way for an emergency meeting of the League Council. This week, again, when the Conference has reassembled after the Easter recess, the skies are rather dark. In the Far East the Shanghai armistice negotiations have broken down. In Europe the Four Power Conference has been abortive, and at least four Central and South-East European countries are in imminent danger of a financial breakdown. From one standpoint these grave troubles are unfavourable to the Disarmament Conference's prospects, inasmuch as they distract the attention of the statesmen and the public to the immediate day-to-day problems and at the same time create an atmosphere of tension and apprehension. From another standpoint, however, it might be argued that this menacing course of international affairs which has been the Conference's background and accompaniment points the necessity for the Conference to persevere in its labours until it has achieved something really tangible.

There are three distinct fields in which it is incumbent upon the Conference to produce substantial results. Its principal and most important is also its most obvious task. The Conference has to secure an agreed reduction, by all parties, of the effective means of destruction at the disposal of the self-governing States of the world for making war. This task is imperative on account of the formidable intensification of war in modern times, a process which has been going on for about a century and a half, and which has been advancing, crescendo and accelerando, since 1914. Owing to our remarkable modern advances in mechanical technique and in organising power, the institution of war has become vastly more destructive to the victims and vastly more exhausting to the victors than it has ever been before; and these material advances in the art of destruction must admittedly prove fatal to the society which has made them unless we counteract the danger by some kind of self-denying ordinance—denying to ourselves and to each other, by national agreement, the prize of social suicide which we can hardly fail to win if we continue the Ishmaelitic competition of all against all.

This voluntary reduction in the means of warfare—that is to say, in weapon-power and in man-power—is the Disarmament Conference's first and most important objective; but it has at least two other goals. It has to put in hand, if not to carry to completion, an equalisation between the means of warfare that have been respectively allowed to the ex-victors and to the ex-vanquished under the four European peace treaties. And it has to secure for all Governments, in a financially straitened and embarrassed world, a perceptible instalment of budgetary relief.

The goal of equalisation is, of course, the special concern of Germany. On the other hand, everybody wants budgetary relief, though many Governments are perhaps still able to persuade their constituent taxpayers that the "sacrifice" of scrapping a battleship or an army corps is greater than the sacrifice of continuing to pay for their maintenance. As for the voluntary reduction in the means of warfare, the first session of the Conference revealed a remarkable and unexpected consensus among the statesmen, at any rate in regard to the peculiarly destructive or peculiarly barbarous new-fangled weapons that have been introduced since the beginning of the Great War. All parties—in the French and in the non-French camp alike—singled out certain of these weapons and made proposals for dealing with them which differed in many respects yet had one significant point in common, namely, that it ought not to be left to the discretion of individual Governments to possess these weapons in what quantities they choose or to make use of them at their own unfettered will.

This was the common postulate of "the Tardieu Plan" and of what may be called "the Grandi Plan," since the contra-French thesis was formulated best by the Italian delegate, though it was endorsed by almost every Government that did not happen to be the French Government's military ally. In everything beyond this, of course, the French and the contra-French theses differed in toto. M. Tardieu proposed to deal with the new-fangled deadly weapons by placing them at the disposal of the League of Nations (which was interpreted by unfriendly critics to mean at the disposal of France), while the Italian and American and British delegates, supported by the representatives of the great majority of the smaller countries, classified these weapons as specifically weapons of offence, and on that ground proposed that they should be either abolished outright or else limited drastically.

The proponents of this so-called "qualitative" reduction of armaments base their case on the following grounds. Suppose, they say, we all agree to abolish, or drastically reduce, our stocks of bombing planes and tanks and mobile heavy guns, while making lesser reductions, for the time being, in our stocks of stationary heavy guns and machine guns and rifles and barbed wire, it looks as though we might be able to weight the scales of warfare very considerably in favour of the defence and to the disadvantage of the attack. With these defensive weapons in hand, every country—even a small country—might be fairly confident of being able to defend its frontiers against all comers by calling up its native inhabitants and setting them to dig trenches in their native earth. The sense of security would be increased all over the world; and sooner or later an agreed reduction in defensive armaments, likewise, would follow. Incidentally, the other two purposes of the Disarmament Conference would be served. For the offensive weapons which it is proposed to abolish or reduce to vanishing point are, perhaps, the most expensive items in all national land armaments bills, and they are also the weapons that were specifically denied to the vanquished and allowed to the victors in the peace treaties.

In the case thus stated there is not a little force, though we are not disposed to minimise the weight of the criticism that security in Europe was ill to seek, long before the invention of poison gas, the heavy mobile gun, and the tank—two of which, indeed, were not in existence in August, 1914—and that in the absence of a real will to renounce aggression human invention might be only too successful in the discovery of effective aggressive means other than those formally renounced. This criticism cannot be dismissed as irrelevant; yet a beginning must be made somewhere, and in this matter of disarmament *c'est le premier pas qui coûte*. There is, therefore, much to be said for concentrating at this stage, when the Disarmament Conference has resumed its work after the Easter recess, upon dealing with the comparatively simple problem of the offensive weapons which were singled out, with impressive unanimity, for special treatment during the first stage of the Conference's work. It may be true, as our League correspondent points out on a later page, that no real progress can be made by the Conference until a decision has finally been taken on the plan—unlikely enough of acceptance—put forward by France for the establishment in effect of an international "army of security." Yet it is something if some positive action towards disarmament can be taken even on the limited and necessarily incomplete lines of "qualitative" reduction. It is, therefore, welcome news that the American delegation has taken a prompt and vigorous initiative on these lines. Last Monday—the opening day—Mr Hugh Gibson made a definite proposal for the scrapping of heavy mobile guns and tanks, and the abolition of poison gas; and he has demanded that the Conference should discuss this American proposal within

a week. In the expectation that this discussion will duly take place, Mr Stimson, the Secretary of State himself is at this moment on his way from Washington to Geneva. This American proposal has received immediate support from the British, Italian and German delegations. It has been opposed by M. Tardieu, for reasons described by our League correspondent, but it is to be hoped that the non-French group will have the courage of their opinion and will insist upon the new "Stimson Plan" being effectively discussed forthwith. The time has come for practical action; and the Conference will stultify itself if it goes on deliberately marking time while it waits wistfully for the Far Eastern crisis to relax or for the German Presidential Election to be followed by the parliamentary elections in Prussia, and for these to be followed in their turn by the parliamentary elections in France. Instead of waiting upon events, the Conference ought now to begin to make history on its own account.

THE ROAD TO RECOVERY.

FALLING unemployment, a balanced Budget and trade returns which show that our exports are holding their own are among a number of signs that Britain is putting up a stout resistance to the further spread of trade depression. On the Continent, the victory of Hindenburg at last Sunday's polls has removed for some time to come one major cause of uncertainty in the political field. Indeed, the story of recent events generally in Germany illustrates the immense forces of resistance inherent in a great economic entity to disintegrating tendencies. But it is at best a ding-dong battle. The repercussions of the Kreuger failure, a new slump in Wall Street, the vagaries of Mr Lang in New South Wales, fresh barriers to trade and commerce in every direction are all giving, in their various ways, new shocks to the low economic vitality of the world.

Nor do well-meaning statesmen seem to be very efficient or prompt in their efforts to bring much-needed relief. The failure of the Four-Power Conference on the Danubian problem was not altogether unexpected, for no plan was proposed that went to the root of the trouble or seriously attempted to reconcile the conflicting interests which since 1918 have blocked the way to sane economic reconstruction in Central Europe. But to say this is to explain, not condone, the fiasco; and if the Four Powers could not agree, it is not surprising that the League Council, which has had before it, as a matter of urgency, its Financial Committee's recommendation of a guaranteed loan to some of these States, should have been unable to do anything more original than postpone its decision until May. The Financial Committee's plea of urgency has, in fact, had precisely the same fate as those of the Wiggan Committee and of the Young Plan Advisory Committee.

Under these circumstances, we must wait, say some, until the big issues are settled at Lausanne. Others again plead that Britain cannot be expected to take up definite position regarding economic reconstruction until after Ottawa. Ominous whisperings, however, are to be heard suggesting that it will be premature to do anything very definite in June, and that some excuse for further delay must be found. The simple truth is that the Governments of the world are a team without a leader, a council without a policy, a moving crowd without a definite sense of direction.

But if we cannot see any way out of the wood, it is the more desirable that we should try to learn from those who have been in a position to study the topography. Among those best qualified to guide us in reading the lessons of the past ten years, there is no one with higher credentials than Sir Arthur Salter, who surveys—perhaps too cursorily—in three hundred pages the chief financial, economic and political problems with which the world has to deal.* Sir Arthur writes from the point of view of an international civil servant who has spent nearly a decade in the service of the League of Nations, who pre-

viously had experience of inter-Allied administration during the war, and who was for two years secretary of the Reparation Commission. This administrative experience alone would entitle his views to respect, but Sir Arthur's international reputation stands high, not merely as an official, but as a man of initiative and imagination and as the chief architect of the reconstruction work of the League in Central Europe. His judgment on world affairs will, therefore, carry exceptional weight.

If the book is in the main a precipitation of a singularly experienced judgment on a variety of subjects, it does in passing throw very illuminating side-lights on some of the events of the recent past. Most of us, for example, have forgotten, if we ever knew, that though France as a whole rejected Germany's offer to take steps to repair the devastated areas herself, this suggestion was, in fact, welcomed and supported by the Confederation of French Labour. How much trouble would have been avoided if this far-sighted judgment had been more widely held in France ten years ago! Sir Arthur writes, too, with the first-hand knowledge of the man whose business it was to smooth the working of the machine, when he describes the unsatisfactory working of the Reparation Commission. While agreeing with Mr Lloyd George that the scheme in its original inception had merits, he points out that its success was dependent on two assumptions, both of which were proved false—the first being that the total of scheduled damage would prove within Germany's capacity to pay; the second that America would ratify the Treaty and send a representative to occupy the fifth chair at the table and ensure that there would not be a deadlock. It was America's abstention which was responsible for the device of giving the French chairman a casting vote.

Under these disabilities, especially the first, the Commission, instead of being all-powerful, independent and united, was, in fact, impotent, dependent and divided. . . . its internal organisation founded upon what one member described as the "sacred principle of international distrust." Its relations with the Government alternated between individual protests and collective compliance. . . . For a year or two it retained at least some illusion of power; thereafter it remained, like the town of Trieste, a structure built too generously for a business that had gone elsewhere.

Equally illuminating, and even more valuable in its implication for the future, is the scathing indictment which Sir Arthur brings against the wasteful expenditure of many public authorities in borrowing countries and the abuses which have arisen in connection with private foreign loans in the post-war period. There is much food for reflection in his final judgment—and in the grounds on which he arrives at it—that "with the exception of loans recommended by the League of Nations and the central banks, the bulk of the foreign loans in these years to public authorities in debtor countries would better not have been made."

If that is a fair judgment—and Sir Arthur's illustrations are drawn from many continents—it is due not merely, or, indeed, chiefly, to abuses in the system of competitive private loans, but to the fact that capital has flowed without adequate or far-sighted regard to the economic future of the countries whose individual borrowers seemed to be able to offer reasonable security. If the environment in which Austria was set to work out a new economic life were such as to make it impossible to retain her industries and commerce, Austria was a "bad risk" for any but self-liquidating short-term loans, except on the assumption that common sense would prevail over the restrictive policies that have established such a stranglehold on the commerce both of Europe and the world, and have distorted production from its natural courses. In its reconstruction work the League sought to ensure political security and budgetary stability, and it tried also to improve the economic background. But in this it was less successful. The chapter in which Sir Arthur Salter explains why it failed in this attempt and what line should now be pursued, touches the most vital problem with which we are now faced.

The story makes sorry reading. In the foreground is the action and example of the United States, which, from being a debtor, suddenly emerged after the war as a great creditor nation. But America's position as a lender was new and uncertain; it was important that to the utmost possible extent she should receive what was due to her

in the form of goods. "In other words, the American tariff needed to be the lowest in the world. In fact, it was one of the highest." To a less extent the same is true of France. The one service performed by the crisis of 1931 is to reveal as never before "the anatomy of the world's economic structure."

In 1927 the World Economic Conference recommended the reduction and then the stabilising of tariffs; its influence and the subsequent discussions was such that the chief increases in tariffs were made not in Europe, but by countries outside, who did not participate in the debate. But the negotiations for general reduction—or even for a tariff truce—produced almost no result. Here are a few of the reasons:—

Tariffs have become exceedingly complex, they are on different levels, and constructed on different principles and with differing nomenclature. General agreements to modify these barbed-wire entanglements are extremely difficult to devise, and unless done on a general scale their technicalities prevent the enlistment of any general body of public opinion in their support.

Vested interests, both of labour and capital, have steadily grown up and created an atmosphere inimical to change. Consequently, when agriculturists, for example, find themselves damaged by industrial protection, it is easier to ask for and to obtain corresponding protection than to get the offending obstacles removed.

Those responsible for commercial policy habitually think in terms not of the policy that in their judgment may be best for the country, but of the reaction of a given policy on the party groupings on which their political support depends.

The most-favoured-nation clause as at present applied means that any reductions that may be made have to apply not only to the trade of those who offer liberal treatment in return, but to that of countries whose tariffs may be almost prohibitive.

Sir Arthur's proposals for coping with these difficulties, and for initiating a more liberal tendency in Europe follow broadly the lines of the report of the Conference of Economic Experts of August last. The following are among the conditions which he lays down. There is a case for asking non-European countries to concur in special arrangements for the European nations. Even a limited Customs Union—still less one for Europe as a whole—could not be achieved at one step, but the declared object of any plan should be to reduce and finally remove the barriers between the participating States. Between these States the most-favoured-nation clause should apply, and the reductions should aim at making any "intermediate" tariffs more level. Groups must be open to the admission of other countries and not create new and exclusive groups. There must be no increase of protection against non-participating States, and other countries whose general tariffs are equal to the lowest in the group should be given the advantage of the lower rates without having to increase their tariffs against the rest of the world.

Such a plan, which clearly can only hope to succeed if tariffs are simplified and cleared of their present excessive complexities, would create a lower tariff regime between certain countries and would tend to encourage its extension by offering inducements to other countries to conform to its clearly defined conditions.

This problem, however, like all the others which he discusses, forcefully illustrates what may almost be described as the main thesis of Sir Arthur Salter's book, namely, the striking contrast between the avowed opinion of the nations of the world as a whole and the action of its individual members. While all agree that barriers must be removed, everyone adds a new tier to his tariff wall. While all agree that, if the world is to be saved from a reversion to barbarism, civilised nations must disarm and live in peace, everyone polishes up his weapons of war. Even now, with the whole world in the toils, is it not yet possible for collective wisdom to prevail over individual folly? Lausanne will give one more opportunity for the statesmen to answer this challenging question. Because the world has shown such unsuspected power of resistance to the effects of credit collapse, suspension of contractual obligations, diminution of production and the slaughtering of trade, we cannot assume that the strain can be indefinitely prolonged without disaster. Nor is it enough to prop up a corner here or repair a crack there when a whole building is in danger of collapse. It will be high time in June to take a general look round and see what must be done in every direction—and not in the limited field of reparations alone—to restore the shattered economic structure of the world.

THE OATH AND THE ANNUITIES.

THE correspondence between His Majesty's Governments in the Irish Free State and in Great Britain, relating to the parliamentary oath and the land purchase annuities, has dispelled some of the pretence that had gathered around this controversy. Mr De Valera himself had fostered the belief that his claims were made upon a legal foundation, namely, the status of the oath in the Treaty and the degree of solemnity attaching to the agreement to pay the annuities. He himself, by a reversal of front which only the single of aim can accomplish in sincerity, has exposed that illusion. On March 22nd the High Commissioner for the Free State communicated to the Dominions Secretary a statement of which the first and key clause read: "The Oath is not mandatory to the Treaty." Mr De Valera, writing on April 5th in reply to the British Government's comment on that statement, begins his letter with these words: "Whether the Oath was or was not an integral part of the Treaty made ten years ago [he is quoting Mr Thomas's phrase] is not now the issue. The real issue is that the Oath is an intolerable burden to the people of this State, and that they have declared in the most formal manner that they desire its instant removal." The main impression that one receives from reading the correspondence is that Mr De Valera is obsessed with an idea and is prepared to "damn the facts." His description of the Treaty as having given the Free State "ten years of blood and tears and besmirched the name of England wherever a foul propaganda has been able to misrepresent us" would be ludicrous to anyone who had not deliberately blinded himself to the rising prosperity of Ireland, her complete internal autonomy and her accepted equality in the concert of nations. It is, no doubt, "foul propaganda" to point out, as Mr Thomas does in his second despatch, that Mr De Valera's claim that the Treaty of 1921 meant "the consummation of the outrage of Partition" is a flat contradiction of the truth. "There can be no conceivable hope for the establishment of a united Ireland except on the basis that its allegiance to the Crown and its membership of the British Commonwealth will continue unimpaired." Even this generalisation produced a little storm in Ulster, where it was falsely interpreted as hinting that the British Government actively contemplated the incorporation of the Six Counties with the Free State even within the framework of the Treaty. Sir Herbert Samuel is reported to have given Viscount Craigavon, the Premier of Northern Ireland, an explicit denial of such intention, but it is noteworthy that, according to Mr Lloyd George, "it was the hope of the framers of the Constitution that at no distant date North and South would willingly unite." All this exposes what an Alice-in-Wonderland world Mr De Valera lives in. He is not merely crying for the moon; he imagines it to be a cream cheese.

The British Government must have been at a loss to know how to answer his Note, since he had ruled out as irrelevant the legal question that he himself had raised, and had substituted a recital of the rights and wrongs of the Irish people which no knowledgeable person could accept. The Government contented themselves with a reaffirmation of their determination to stand by the Treaty Settlement and wisely abstained from uttering even the most veiled threats. Their attitude is rather like that of a benevolent father dissuading his son, who is of age and not to be forbidden outright, from marrying the tobaccoist's assistant. "This is not a quarrel between you and me, my boy; it concerns all the family." When the young man, who is high-spirited and only too likely to defy threats, has deliberately said "To hell with the family" and put up the banns, then it will be time to explain the consequences of estrangement. But there must be no hasty cutting off with a shilling, for in this case no simple act of forgiveness would effect a return of the prodigal. Once Mr De Valera is told that Ireland can become a republic and take the consequences, he is no man to be daunted by consequences, and it might take another civil war in Ireland to undo his decision.

* "Recovery." By Sir Arthur Salter, K.C.B. G. Bell & Sons, Ltd., London.

Let Mr De Valera pass what Bills he may. The British Government will certainly not coerce Dail Eireann into voting otherwise than it thinks fit; but equally the British Government should not recognise the validity of its resolutions until the whole Commonwealth has pronounced upon them. Ottawa will give an opportunity for that, and likewise for the exposure of the commercial consequences of secession. Irish and world opinion could not then arraign us for using an economic weapon to secure political allegiance. There is no question of economic war or retaliation, but the Free State could no longer expect the advantages if she renounced the duties of membership of the Commonwealth. The Free State Government has itself transferred the dispute from the legal to the material plane. True, it appears to base its case for the retention of the land annuities upon an implicit denial that there exists any legally valid undertaking to hand them over, but, whether or no the financial agreements of 1923 and 1926 can be so described, Mr De Valera can scarcely rest his claim in this matter upon juridical interpretation when in the matter of the Oath he comes dangerously near, by implication at least, to repudiation of the Treaty of 1921. A correspondent, whose letter we print on a later page, rightly deprecates hasty prejudgment of issues awaiting responsible solution; but while we agree with his view that there may be a case for "revision by mutual consent"—and this applies not only to the Oath, but to the Treaty as a whole—Mr De Valera will obviously risk impairing the amicable relations between Great Britain and the Free State, to the mutual injury of both parties, if he bases his attitude in regard to the land purchase annuities on the crude assertion, "What we have we hold." Mr De Valera must either submit a legal claim to legal test, or accept the stigma of repudiation, with its grave reactions on the credit of his country.

THE QUARTER'S OVERSEAS TRADE.

THE March returns of overseas trade reflect somewhat violently, as was to be expected, on the imports side the after-effects of forestalling in anticipation of the 10 per cent. tariff imposed on March 1st. Compared with February, total imports are down by £9.1 millions, while exports are £1.2 millions higher, the adverse balance of trade on merchandise account being thus reduced from £34.8 millions to £24.5 millions. Comparison with the figures of March, 1931, is affected probably to some extent—though it is believed that the returns exclude for the most part entrances and clearances later than the 25th of any month—by the fact that Easter fell this year in March and last year in April. Thus, the March figures, which we tabulate below, furnish a less informative guide to the trend of our overseas trade than the subjoined figures giving comparative totals for the first quarter of the past three years:—

MONTH OF MARCH. (000's omitted.)

	Increase or Decrease as compared with					
	1932.			March, 1931.		
	£	£	%	£	£	%
Imports	61,119	— 9,482	— 15.4	— 32,330	— 34.6	
British exports	31,196	— 2,793	— 8.2	— 22,750	— 42.2	
Re-exports	5,424	— 2,236	— 40.5	— 24,986	— 40.5	
Total exports	36,620	— 2,808	— 7.1	— 24,986	— 40.5	
Excess of imports over total exports	24,499	— 6,674	— 21.4	— 7,344	— 23.1	

FIRST QUARTER. (000's omitted.)

	Increase or Decrease as compared with					
	1932.			March, 1931.		
	£	£	%	£	£	%
Imports	193,416	— 15,844	— 7.8	— 90,087	— 31.8	
British exports	92,331	— 11,015	— 10.6	— 71,801	— 43.8	
Re-exports	16,115	— 1,213	— 7.0	— 8,365	— 34.2	
Total exports	108,446	— 12,228	— 10.1	— 80,167	— 42.5	
Excess of imports over total exports	84,970	— 4,156	— 4.7	— 9,920	— 10.5	

Practically the whole of the £9.5 millions reduction in imports recorded last month fell in the category of articles "wholly or mainly manufactured." Smaller imports of iron and steel represent probably a natural reaction from previous forestalling rather than the 10 per cent. duties' powers of exclusion, but over the range of manufactured articles covered by the 50 per cent. Abnormal Import Duties the contraction, as compared with a year ago, is enormous. For example, the value of cotton yarns and manufactures imported fell by comparison with March, 1931, from £737,000 to £78,000, and that of wool textile imports from £1,207,000 to £146,000.

Turning now to the totals for the quarter, it will be seen that the combined effects of the "protective factors"—tariffs plus a depreciation of sterling, which gives, in relation to "gold" countries, a "shelter" of nearly 100 per cent. in the case of "abnormal" imports and of nearly 50 per cent. on goods covered by the 10 per cent. tariff—have resulted, in conjunction with general world trade depression, in producing no very striking change, so far, in our visible balance of payments. Including movements of bullion and specie, the excess of imports over total exports in the first quarter of this year amounted to approximately £80 millions, as compared with £82 millions a year ago. It should, however, be noted that in March—i.e., after the reaction from February forestalling and the imposition of the 10 per cent. tariff—the adverse merchandise balance had fallen to a level nearly £9 millions below the monthly average of over £33 millions last year. This enormous change in the balance of payments, with all its attendant repercussions on the economy of other countries, scarcely suggests the need of additional fiscal devices designed to "correct by a slimming process" our foreign trading account. Indeed, comparison with the corresponding figures for the first quarter of the past two years, as set forth in the table above, reveals with tragic clarity the impoverishing contraction which has taken place on both sides of the ledger.

As an aid to further elucidation of the position we give in the next table an analysis of the past quarter's figures divided into different classes:—

RETAINED IMPORTS AND BRITISH EXPORTS BY CLASSES. (£'s million.)

	Retained Imports.			British Exports.		
	First Quarter.			First Quarter.		
	1930.	1931.	1932.	1930.	1931.	1932.
Food, drink and tobacco	114.1	93.2	90.8	12.3	9.5	8.3
Raw materials and articles mainly manufactured	67.1	39.0	41.7	18.7	11.6	10.6
Articles wholly or mainly manufactured	75.0	67.7	42.6	128.4	78.4	70.2

As compared with a year ago, the changes in values, respectively, of imports of foodstuffs and raw materials approximately cancel out. In the first-named group the chief features which emerge from a study of the detailed figures are (1) an increase of some 10 per cent. in the volume of our wheat imports—larger shipments from Argentina, Australia and Canada outweighing heavy reductions in purchases from Russia and the United States—accompanied by a rise from 5s. 6d. to 6s. 4d. in the average cost per hundredweight; (2) a rise of over 20 per cent. in the volume of maize imports without appreciable change in the average value per hundredweight, the additional supplies coming from the Argentine; (3) a fall of £3 millions in the case of meat imports approximately unchanged in volume, the saving being due mainly to lower prices for imported beef; (4) a large increase, owing to the dearth of home supplies, in potato imports; (5) an increase of five million tons in volume and of £2 millions in value in respect of unrefined sugar imports; (6) a fall, at the expense mainly of the United States, of 14 million pounds weight in imports of tobacco, at a saving of £1.6 millions in cost.

Among raw materials the chief changes, as compared with a year ago, are to be found in a large increase, at lower value per pound, in the volume of imports of raw cotton, together with a substantial expansion in our pur-

chases of wood pulp and hides, as compared with a striking reduction in our imports of raw rubber. In the "wholly or mainly manufactured" group our imports of iron and steel (these, of course, are predominantly "semis") fell from 609,000 to 556,000 tons, but this would appear to represent a continuance of the progressive decline in the "capital investment" industries rather than a consequence of the 10 per cent. tariff, though forestalling in February, particularly in the case of Belgian tinsplate bars, may have swollen to some extent the 1932 totals. For the rest, the volume of our imports of non-ferrous metals has been fairly well maintained as compared with the corresponding quarter of last year, while, as already stated, the Abnormal Import Duties have nearly effaced from the trade map our imports of manufactured cotton and wool textiles. For example, as compared with the first quarter of 1931, cotton piece-goods imports fell from 11.8 to 0.6 million square yards, while our imports of woollen and worsted tissues from the Continent dropped from 10 million to 1.4 million square yards. Similar contraction is to be found in our imports of apparel, whose value fell from £5.1 millions to £1.9 millions, electrical goods, cutlery and hardware. By contrast, the value and volume of our machinery imports showed only an insignificant contraction. We conclude this side of our survey with comparative figures of the retained volume of certain leading imports:—

RETAINED IMPORTS.

	First Quarter.		
	1930.	1931.	1932.
Wheat	20,272,473 cwt.	21,874,697 cwt.	23,487,637 cwt.
Beef	2,830,298 cwt.	3,069,167 cwt.	2,834,409 cwt.
Sugar	6,969,676 cwt.	7,054,015 cwt.	11,813,453 cwt.
Iron ore	1,335,200 tons	598,097 tons	505,453 tons
Raw cotton	3,786,438 cents	2,781,684 cents	3,393,246 cents
Sheep and lambs' wool	1,973,056 cents	2,213,348 cents	2,299,276 cents
Raw silk	511,723 lbs.	480,085 lbs.	524,409 lbs.
Flax, hemp and jute	104,142 tons	69,495 tons	108,587 tons
Wood and timber, sawn, soft	577,562 loads	370,080 loads	347,463 loads
Rubber	808,973 cwt.	796,400 cwt.	309,292 cwt.
Crude petroleum	101,481 thousand galls.	108,141 thousand galls.	81,385 thousand galls.
Wood pulp	333,932 tons	309,446 tons	466,110 tons
Hides, wet and dry	281,354 cwt.	278,222 cwt.	314,720 cwt.

That tariff duties, coupled with the lower exchange value of the pound, should have resulted in a sharp curtailment of manufactured imports was so much a foregone conclusion that greater interest attaches to an endeavour to seek such inferences as may be drawn from the export side of our trade accounts. From the above table analysing classes, it will be seen that the bulk of the 10 per cent. decline recorded, in comparison with the first quarter of 1931, fell in the "wholly or mainly manufactured" group. The shrinkage in our relatively small exports of food, drink and tobacco is generally indicative of consumers' enforced economies throughout the world. In the raw materials section the predominant part is naturally played by our shipments of coal. Here a total decline of one million tons, as compared with 1931, was due, in the main, to a fall of 700,000 tons in sales to France. Italy, Belgium and Germany also curtailed their purchases of British coal to a minor extent, whereas some ground was regained, to the exclusion presumably of our "gold" competitors, in the Scandinavian and Brazilian markets.

From a study of the manufactured group of exports several features of interest emerge. The total value of iron and steel exports, at £7.1 millions, as compared with £8 millions a year ago, contrasts very unfavourably with £15.4 millions recorded in the first quarter of 1930, but some modified encouragement on a comparison with the position last year is to be derived from signs of revival in our trade with India in galvanised sheets, while shipments of tinsplates to China and Japan, the Straits Settlements, Australia and to Scandinavia all showed a welcome expansion. Proceeding from iron and steel to machinery we find that exports in the aggregate were also fairly well maintained, as compared with 1931, though the impover-

ishment of the primary producing countries was reflected in considerably lessened sales of agricultural and electrical machinery. With regard to the cotton industry, an interesting development is an appreciable increase in exports of yarn to Germany, but the picture is dominated, so far as cotton textiles are concerned, by the notable increase in sales of piece-goods to China, which absorbed 42 million square yards, as compared with less than 14 million square yards a year ago—a striking reflection of the indirect advantage to Lancashire of the Japanese boycott in China. Shipments to Hong Kong, India, Australia, British West Africa and Egypt also rose substantially, and there was an improvement in trade with Scandinavia. On the other hand, the effects of the financial crisis operating in various ways on different countries are to be seen in a curtailment of our sales to distressed countries, such as Greece, Turkey and the Argentine, while even the United States' purchases showed a fall. Moreover, though the total value of the quarter's cotton piece-goods exports amounted to £11.3 millions, as compared with £10.3 millions a year ago, it was still only half the value recorded in the first three months of 1930. In wool textiles the trend was similar. Germany and Scandinavia bought a larger quantity of tops and worsted yarns, while exports of woollen and worsted tissues were well maintained for Scandinavian destinations, but fell sharply both to the United States, Central Europe and primary producing countries overseas. The total value of wool exports, at £6.6 millions, compared with £7.4 millions a year ago and £12.2 millions in the first quarter of 1930. To conclude with a type of exports which is highly sensitive to changes in the flow of capital investment abroad, "vehicles," which includes locomotives, railway wagons, etc., as well as motor cars and ships, showed a fall of nearly 50 per cent., as compared with a year ago, this result being indicative mainly of the cessation of railway development and replacement in South America and in India. A quantitative list of leading exports is appended:—

SOME LEADING EXPORTS.

	First Quarter.		
	1930.	1931.	1932.
Coal	15,012,511 tons	10,416,201 tons	9,471,811 tons
Pig iron and ferro-alloys	106,771 tons	48,419 tons	32,933 tons
Railway material	127,062 tons	47,047 tons	19,649 tons
Total iron and steel	983,847 tons	481,187 tons	473,517 tons
Textile machinery	26,681 tons	12,287 tons	16,415 tons
Total machinery	131,421 tons	89,181 tons	34,114 tons
Cotton yarns	38,106,500 lbs.	31,403,600 lbs.	43,673,500 lbs.
Cotton piece-goods	894,046,100 sq. yds.	438,410,300 sq. yds.	562,930,600 sq. yds.
Wool tops	71,332 cwt.	70,943 cwt.	114,875 cwt.
Woollen tissues	25,572,200 sq. yds.	16,754,700 sq. yds.	14,496,500 sq. yds.
Worsteds tissues	11,409,900 sq. yds.	9,055,800 sq. yds.	8,101,400 sq. yds.
Linen piece-goods	19,703,000 sq. yds.	16,439,800 sq. yds.	19,461,400 sq. yds.
Boots and shoes	230,938 doz. pairs	161,166 doz. pairs	155,088 doz. pairs
Leather	71,963 cwt.	37,438 cwt.	38,613 cwt.
Paper and cardboard	1,217,242 cwt.	796,166 cwt.	957,685 cwt.
Locomotives	11,286 tons	8,517 tons	1,158 tons
Motor cars and chassis	8,789 number	6,529 number	9,304 number

To sum up, such evidence as is furnished by the past quarter's returns of our export trade suggests that in maintaining an average monthly figure slightly over £30 millions we are indebted to the depreciation of sterling for an ability to acquire a slightly increasing proportion of a diminishing world quantum of international trade. The fall in the pound, however, appears to have been less effective in stimulating purchases from us by countries still actually, or nominally, remaining on the gold standard, than in diverting to our market from other "non-gold" countries a greater proportion of purchases which those countries formerly made in "gold" markets. Poverty of consumers in the primary producing countries, coupled with pressure directed by the Governments of externally indebted nations towards restriction of imports has stood, and seems likely increasingly to stand, in the way of any notable expansion of the exports on whose development—and not on further contraction of our imports—the restoration of real industrial prosperity in this country depends.

THE CRISIS IN GREECE.

(BY OUR ATHENS CORRESPONDENT.)

UNTIL the summer of 1931 Greece had not felt acutely the effects of the world crisis. Production and trade were, naturally, being affected to an increasing degree; but, on the whole, the country was facing the storm fairly well, while the situation of the public finances remained satisfactory. Last summer's intensification of the crisis, however, followed by the abandonment of the gold standard in Great Britain, brought a sudden and dramatic change in the situation. In order to understand the causes of the present difficulties of the country, it is necessary to remember that Greece had always a considerable passive balance of trade, which, normally, was covered by the "invisible" export items, chiefly the remittances of Greek emigrants and the profits of the merchant marine; and that the population has increased from 5,016,889 in 1920 to 6,397,000 in 1930—this increase including over a million of destitute refugees from Asia Minor.

Before the war a continuous stream of emigration to overseas countries—principally to the U.S.A. and Canada—procured a double benefit to the country, by relieving it of its surplus population, and by increasing the national income through the important sums regularly sent home by the thrifty emigrants. With the end of the war, however, the flow of Greek emigrants to other countries practically ceased. In addition, an abnormal increase of the population took place suddenly by the arrival of the refugees. The authorities were thus confronted with the extremely difficult and urgent problem of settling these newcomers and giving them the means of subsistence, and, moreover, of providing for the annual growth of the population, which could no longer be exported abroad.

To solve this problem the settlement of the refugees was combined with the execution of a big programme of productive public works. The necessary funds were raised chiefly by means of external loans, in addition to appropriations from the ordinary Budget of the State and large issues of internal bonds distributed to exchanged refugees and other sufferers from the war. These bonds represented partly the value of immovable property under liquidation, left by the exchanged Turks, and partly a direct liability of the State. The programme of productive works included the reclamation of large areas of land and the construction of roads. By means of these works and, more generally, the economic reconstruction of the country started after the war, it was and is still hoped that the national income, especially from agriculture, will rise to such an extent that not only will it be possible to maintain the increased population, but also to raise the standard of living of the people which is, indeed, very low.

Unfortunately, the world crisis broke out before the completion of this programme. The fall of prices brought, it is true, a partial relief to Greece by diminishing the unfavourable balance of trade from £16,700,000 (gold) in 1929 to £12,329,000 (gold) in 1931. But, on the other hand, the invisible credit items diminished too. Consequently, for the last three years, the gap in the balance of international payments of the country—even after allowing for the inward movement of capital in the form of foreign loans and credits—was filled from the gold and foreign exchange reserves of the Bank of Greece, which fell from Drs. 4,240 millions at the end of 1928, to Drs. 3,115 millions at the end of 1929, Drs. 3,011 millions at the end of 1930, Drs. 1,916 millions on December 31st last, and Drs. 935 millions on March 31st of this year.

The crisis of last summer in Great Britain and other countries brought, as stated, a sudden change in the financial situation of Greece. On the one hand, the principal source—London—from which capital was drawn for the construction of public works and the importation of goods from abroad was closed. On the other hand, owing to the restrictive measures imposed on foreign exchange operations and the movement of capital, enacted for the purpose of protecting national currencies, the already heavily reduced invisible items of exports almost disappeared, what still remained of them leaking out of the country through free and illicit exchange markets. Hence the rapid decline in the cover of the circulation, which has assumed dangerous dimensions, especially in the last few

months. This decline necessitated a corresponding decrease of circulation and credit, which, in conjunction with the lessened imports, consequent upon the restrictions on the grant of foreign exchange, and a continuous falling-off in exports, as a result of world-wide trade obstacles, accentuated the hitherto relatively small trade depression and created severe difficulties for the national finances. Indeed, with State expenditure not only incapable of readjustment, but even increasing owing to larger annual payments for the service of the public debt; with decreasing revenue, and prospects of still lower receipts from taxation, the Budget for the year 1931-32, originally estimated to close with a small surplus, will hardly balance, despite the utilisation of a reserve fund of 300 million drachmas, while the Budget of the new financial year 1932-33 is anticipated to show a deficit of not less than 1,800 million drachmas.

Thus the problem of Greece is twofold: a foreign exchange and a Budget problem. To meet the situation the Greek Government prepared a plan which it submitted to the three Governments represented on the International Financial Commission in Athens and to the Council of the League of Nations. A delegation of the Council, headed by Sir Otto Niemeyer, came to Athens in January at the request of the Government, and conducted a thorough investigation of the situation. Its findings were communicated to the Financial Committee of the League, convened in Paris last month.

Briefly summarised, the Greek plan provides for: (1) A foreign loan of \$50,000,000, to be issued, with the assistance of the League, in four yearly instalments of \$12,500,000 each. The proceeds of this loan, converted into drachmas, would be utilised for completing the productive works and improving the lands being reclaimed, which are expected to render their full yield—estimated at \$28,000,000 per annum—in five years. At the same time, the foreign currencies representing the proceeds of the loan would strengthen the exchange reserve of the Bank of Greece. (2) A five years' moratorium on the sinking fund of the external debts of Greece. This would render possible a saving in public expenditure of 480 million drachmas annually, and a reduction of the debit side of the country's foreign accounts by some £700,000 to £800,000 (gold) yearly. (3) A restriction of imports from abroad to the extent of £7,000,000 (gold) per annum. (4) Postponement of annual payments of 300 million drachmas due, under the Protocol of Geneva, to the Bank of Greece and the National Bank of Greece, against the State debt to them, and compulsory conversion and unification of the internal debt, rendering possible an economy in Budget expenditure of 500 million drachmas yearly. (5) Further economy in expenditure of 575 millions per annum, mostly by cutting down expenses of administration. The combined effect of these measures would be to improve the balance of international payments by £10,300,000 (gold) yearly, covering the present deficit with a margin for a possible further reduction of exports; and to secure the equilibrium of the Budget. It should be added that there exist also private commercial foreign debts of about £5,000,000 (gold). The Government intends to pursue an arrangement allowing for their redemption by instalments spread over a long period.

After a thorough study of the problem and the suggestions of the Greek Government, the Financial Committee of the League made recommendations which were summarised in last week's *Economist*. But it will be observed that there is a serious divergence between the proposals of the Greek Government and the recommendations of the Committee.* Mr Venizelos will endeavour to obtain from the Council of the League acceptance of the Greek plan. Meanwhile, and as from April 1st, payment of the sinking fund on the national debt, external and internal, has been suspended, while interest on the foreign loans is to be paid in full with the exception of the loans contracted in pounds, the coupon on which is payable

* The chief differences were two, namely: (a) the Committee suggested a foreign loan of not more than \$10,000,000; (b) they proposed a moratorium of one year only on the sinking funds of the foreign loans.

hereafter in sterling and not in gold. The coupons on the internal loans, moreover, are reduced by 25 per cent. The Government has declared that, in case the Council of the League fails to satisfy its demands, and an immediate advance is not made to Greece, it will be unable to pay the coupons next due on external loans from the meagre reserve of the Bank of Greece. Should the Council of the League or the June Conference on Reparations not give a satisfactory solution to the Greek problem and repair the injustice done to Greece during and after the war, the Government intends to submit the whole question to arbitration, which will decide, according to a statement made by Mr Venizelos, "which proportion of the State's revenue may be appropriated for the service of the public debt without depriving the people of at least the elementary services which every civilised State should afford to its citizens, and without giving the means of a social overthrow to the enemies of social order by an exhaustion of the country's resources."

It is hoped here that the Council of the League will display a more accommodating spirit towards Greece than the Financial Committee has done. The presence of Mr Venizelos at the head of the Government is indispensable in the present circumstances, and constitutes a guarantee of order and stability in Greece, which is advisable from every point of view. If, as a result of an unfavourable solution of the Greek financial problem by the League of Nations, Mr Venizelos should resign or fail in the forthcoming general election—both of which contingencies are probable—the alternative might well be political instability, with all its concomitant evils, political, social and financial.

INDUSTRIAL PROFITS.

DURING the past quarter we have published the accounts of 548 industrial undertakings whose net profits, after payment of debenture interest, amounted in the aggregate to £54.3 millions, as compared with £63.4 millions earned in their previous year's working, a decrease of 14.3 per cent. These results are contrasted in the following table with those disclosed by reports published in the four previous quarters:—

[NET PROFITS (AFTER PAYMENT OF DEBENTURE INTEREST, &C.).

	No. of Companies.	Reports Published in		Increase (+) or Decrease (—).
		1930.	1931.	
First quarter	596	£ 75,816,474	£ 67,736,226	— 8,080,248 —10.6
Second quarter	619	79,490,653	64,051,136	— 15,439,517 —19.4
Third quarter	320	24,793,702	15,996,685	— 8,797,017 —35.5
Fourth quarter	474	26,460,390	12,292,859	— 14,267,531 —53.9
Total	2,009	206,561,219	160,076,906	— 46,584,313 —22.5
First quarter	548	1931. 63,403,727	1932. 54,314,815	— 9,088,912 —14.3

Superficially, the foregoing figures would appear to suggest that the accelerating decline in net profits which was recorded in 1931 has been checked. This conclusion, however, requires very considerable modification. It should be borne in mind that in the composition of our quarterly aggregates the "weighting" as between different types of enterprise varies greatly, i.e., there may be a great divergence from quarter to quarter in the proportion borne to the total by capital whose earning power is more or less violently affected by changes in economic conditions. Thus, out of the total of £54.3 millions net profits shown in the first quarter of this year, no less than £17.1 millions were contributed by electricity and gas companies, shops and stores, tramways and waterworks. These forms of enterprise, whose earnings have been comparatively unscathed, so far, by the depression, contributed only £420,000 out of the £12.3 millions net profits revealed in the fourth quarter of 1931, when the decline in profits, as compared with a year before, amounted to nearly 54 per cent. Moreover, it will be observed from the next table, which analyses net profits in greater detail, that £26.9 millions of the past quarter's total was accounted for by the large miscellaneous group. Of this figure, nearly £18 millions was made up of the

In contrast to the fractional increases in earnings shown by the electric light, gas, tramway and waterworks undertakings, there are to be noted the heavy declines in the profits of the iron, coal and steel group, motor and cycle manufacturing, textiles, shipping, and hotels and restaurants. In the case of the miscellaneous group, apart from the relatively good showing made, as stated, by firms catering for the smoker and the domestic table, a large range of fairly heavy percentage decreases was offset to some extent by the satisfactory results shown by a limited number of important concerns, such as Thomas Tilling, London Brick and Forders, Provincial Cinematographs, British Portland Cement, and British Insulated Cables.

Our next table shows the distribution of profits during the past five quarters:—

DISTRIBUTION OF PROFITS.

	Net Profits.	Ordinary Dividend.	Preference Dividend.	To Reserve, &c.
1931.	£	£	%	£
First quarter ...	67,736,226	42,043,943	62.1	14,731,666
Second quarter ...	64,051,136	37,090,515	57.9	17,512,738
Third quarter ...	15,996,685	11,479,274	71.8	5,337,287
Fourth quarter ...	12,292,859	9,462,779	76.9	5,315,499
Total	160,076,906	100,076,511	62.5	43,497,190
1932.	£	£	%	£
First quarter ...	54,314,815	37,438,571	68.9	11,647,128
Second quarter ...	...	...	...	...
Third quarter ...	...	...	...	...
Fourth quarter ...	...	...	...	...
Total	...	...	...	...

The allocation to reserve during the past three months compares favourably with that recorded in the two previous quarters. But here again the qualification has to be borne in mind that, of the companies whose reports are analysed in the first quarter of the year, an unusually large proportion normally consists of somewhat "sheltered" undertakings accustomed to "plough back" a safe proportion of their earnings. Moreover, not only has the reserve proportion fallen to 9.6 per cent., as compared with 16.2 per cent. a year ago and 18.4 per cent. in the first quarter of 1930, but, as may be seen from the next table, the net total of £5.2 millions put

"back into the business" represents a balance struck from widely different sectional experience:—

	Net Profits.	Ordinary Dividend.	Preference Dividend.	To Reserve, &c.
	£	£	£	£
Breweries	1,920,923	1,019,079	53.1	386,887
Elect. lighting, &c.	6,765,126	2,785,476	41.2	1,294,627
Financial, land, &c.	751,247	544,181	72.4	188,703
Gas	3,421,212	2,928,637	85.6	403,130
Hotels, restaurants, &c.	60,282	43,566	72.2	28,258
Iron, coal and steel	919,752	460,715	50.1	226,910
Motor and cycle	269,749	75,500	28.0	96,197
Rubber	Dr 117,934	6,565	...	668
Shipping	217,277	97,883	45.1	29,562
Shops and stores	5,200,631	2,916,760	56.1	1,615,701
Tees	170	Nil	...	163
Textiles	1,948,133	1,906,230	97.8	1,033,759
Tramways	933,535	491,758	52.7	154,715
Trusts	4,385,159	2,410,251	55.0	1,554,640
Waterworks	782,758	489,543	62.5	245,376
Miscellaneous	26,856,795	21,262,427	79.2	4,388,232
Total ...	54,314,815	37,438,571	68.9	11,647,128
				21.5
				5,229,116
				9.6

Consistent adherence to principles of conservative finance is again exemplified by breweries, electric light companies, iron, coal and steel concerns, motor and cycle companies, shipping lines, and tramways. The allocation, however, of only 4.5 per cent. to reserve by the miscellaneous group, as compared with 12.4 per cent. a year ago, is noteworthy; while a strikingly heavy draft on accumulated resources was made by the group of textile companies. It should, however, be appreciated in this connection that the £2.9 millions of dividends paid out by this group were in fact earned by the dividend-distributing units, the debit on reserve allocation account representing broadly the losses made and carried forward by companies which actually distributed no dividend.

We print on page 882 of this issue our usual tables showing the ratio of net profits and reserve allocations to total preference and ordinary capital, and also the average rates of debenture interest and preference and ordinary dividend. The ratio of net profits to capital in the past quarter was 8.2 per cent., as compared with 8.9 per cent. a year ago and 10.4 per cent. in the first quarter of 1930, while the ratio of amounts reserved was 0.8 per cent., as compared with 1.4 per cent. and 1.9 per cent. respectively in the corresponding quarters of the past two years. The average rate of ordinary dividend works out at 8.7 per cent., as compared with 8.5 per cent. a year ago and 10 per cent. in the first quarter of 1930. But this result was due predominantly to the relatively high rate of distribution maintained in the miscellaneous group, at the expense, be it said, of reducing to somewhat slender dimensions its reserve allocation.

Notes of the Week.

Lord Grey and Tariffs.—Lord Grey of Fallodon made one of his all too rare public appearances last week, and in a speech delivered at the annual meeting of the Liberal Council roundly condemned tariffs and trade barriers as a leading cause of the world's present discontent. "Circumstances," said Lord Grey, "are always changing, but certain truths remain true, and one of them, which is the foundation of Free Trade principles, is that trade is exchange. The Protectionist policy is to try to stimulate exports by shutting out imports. Exports are purchased by imports, and if we refuse imports we destroy the opportunity of other countries to purchase our exports." Having asserted these principles, Lord Grey turned to a review of the plight to which European nations had been reduced by tariff strangulation of commerce, and in apposite and timely phrases asked whether the medicine of freer trade, which was being prescribed for the Danubian countries, was not equally suitable to the rest of the world. The new British tariff received its full share of Lord Grey's censure. He denied that, except in a few special constituencies, the last general election gave a verdict for permanent Protection, and complained that, while Mr Runciman and Mr Baldwin were calling the new tariff "an experiment,"

Mr Chamberlain unashamedly introduced it as a complete reversal of the fiscal system of the country. Yet, in spite of his obviously full appreciation of the fiscal position, Lord Grey approves of the decision of the "dissentient" Liberal Ministers to remain in the Government. His main reason for holding this view appears to be his belief that, had they left the Government, the new tariff would have been even worse than it is. It was easy to say, some months ago, that by their presence in the Cabinet the Liberal Ministers would be able to exert a restraining influence upon the Protectionist propensities of their colleagues. But to-day we search in vain for proof that such pressure, if exerted, has been effective. Nor, apparently, is Lord Grey himself hopeful of the service which Liberal Ministers can give inside the Government to the cause of low tariffs. "We are not a very high Protectionist country yet," said Lord Grey, "but there are tendencies towards our becoming so." We see no reason for believing that Sir Herbert Samuel and Sir Donald Maclean, in a hopeless minority in the Council chamber, can do much to check these tendencies; while, on the other hand, it is certainly arguable that, by leaving the Government on this fundamental issue of a complete reversal of our fiscal system, they would stimulate and rally all the forces in this country which still believe that a liberal economic policy is essential to the well-being of Britain.

The Dominions and Ottawa.—Scarcely a week goes by now without some important pronouncement from the Dominions upon the character and possibilities of Imperial preference. From Australia, which has exposed in painful practice the fallacies of protection, now comes timely exposure of some of the futilities commonly regarded as truth among the economic Imperialists of this country. Speaking on Tuesday to a Chamber of Agriculture Convention, Mr Hawker, Minister of Markets, said that the Commonwealth's surplus wheat and wool must find markets outside the Empire, since the whole demand of Empire countries was less than the exportable surplus of Australia and her fellow-Dominions. An Imperial quota for wheat which did not raise the price to British consumers would merely dislocate trade and damage the hard-won trade relations of the Dominions with other countries without increasing the return to their own farmers. The Australian Government, therefore, did not intend to encumber its case at Ottawa by seeking preference on wool or wheat but would concentrate on tariff concessions for meat and dairy produce. It is remarkable that enthusiasm for a Dominion wheat quota, which has been rampant in Great Britain, should not be shared by the supposed beneficiaries; for it is equally well realised among Canadian grain merchants, if not among the farmers themselves, that neither tariff preference nor quota could raise the world price of wheat, which in competitive conditions they must accept. As for meat, which Mr Hawker described as "the key commodity at Ottawa," he mentioned the difficulties associated with British investments in the Argentine, but is not reported to have pointed out that the beef which we buy from the Argentine is chilled, and is therefore essentially a different product from Australian beef, which comes to us in the less attractive frozen form. From Canada, too, we have lately heard some home truths. Colonel Ralston, who is regarded by many as a potential successor to Mr Mackenzie King, declared recently that the "Canada First" policy of the Bennett Government had shut out imports, decreased employment, and maintained high prices. He criticised the Government for failing to make a fine gesture on the eve of the Ottawa Conference by embodying in the Budget reciprocal tariff concessions for the benefit of British goods in return for the advantages conferred by the British tariff. This speech is important as indicating that the Canadian Liberal party, which in the past has been a little doubtful about the merits of Imperial preference, now intends, if it can, to use it wholeheartedly as a means of getting tariffs down. For balance, its effect it can be of no advantage either to Great Britain or to the Dominions.

Hindenburg's Victory.—The second ballot in the German Presidential Election has resulted—as was a foregone conclusion—in the victory of President Hindenburg. The cost in casualties (four killed and about ten injured, throughout Germany, on election day) must be accounted light; and it is a piece of good fortune that the attempt, which was made the night before, to assassinate the President of the Reichsbank, Dr. Luther, when he was taking the train from Berlin for Basle, was unsuccessful. It remains to consider what the real significance of last Sunday's election figures may be—or, rather, what their significance may appear to be in German eyes; for this subjective aspect of the election figures is the aspect which is likely to have a practical effect upon the outcome of the now imminent general election for the Prussian Landtag. The total poll last Sunday was 36,589,000—little more than a million less than the 37,647,115 votes that were cast at the first ballot on March 13th. Out of this hardly less representative total vote, President Hindenburg this time has secured a decisive majority over all other candidates together. He has received 19,367,000 votes, whereas Herr Hitler and the Communist Herr Thälmann between them have only received 17,122,000. This gives President Hindenburg a clear absolute majority of 2,245,000 votes on the second ballot, whereas he just failed to secure an absolute majority on the first ballot. Considering that, on the second ballot, a mere plurality over any other single candidate is all that is required, President Hindenburg may be considered in one sense to have won a handsome victory. But there is another side to the picture. For President Hindenburg has only increased the absolute figure of the votes cast for him by just over 700,000, whereas Herr Hitler has risen by nearly 1,838,000 votes, from 11,339,285 to 13,177,000. If it is true that the decline in the total poll is mainly due to the abstention of Communist voters who did not feel it worth while to vote again for Herr Thälmann, then the figures indicate that Hitler has succeeded in winning about 72 per cent., and Hindenburg only about 28 per cent., of the 2,557,590 votes which were cast at the first ballot for the Nationalist candidate, Colonel Düstenberg, who refrained from standing again and whose votes were therefore the principal prize contended for last Sunday. Does this portend that nearly three-quarters of the Nationalists in Germany will line up, henceforth, behind the Hitlerites? If so, it is a considerable success for Herr Hitler.

The Prussian Elections.—The next question of international political moment is how the Hitlerite Party will fare in the forthcoming elections for the Prussian Diet on April 24th. Prophecies in the existing political conditions of Germany are more than normally dangerous, but a study of the Presidential voting suggests that the Nazis will probably return in numbers not far short of those of the middle bloc on which the Prussian Government now depends for its support. In so far as the Communists are prepared to vote with them, they may thus be able to exercise a decisive power of veto; much obviously turns on how public opinion reacts to the Reich's Government's drastic step taken last Wednesday in proclaiming by Presidential Decree the dissolution of Hitler's Storm Troops. In any case, since the Communists would presumably not consider forming a coalition Government with Herr Hitler, the election is unlikely to result in the actual supersession of the present Administration; for a Bill which the Prussian Diet passed on Tuesday makes it necessary for any future Prime Minister to be elected by an absolute majority, instead of his election being, as hitherto, from the party with the largest number of seats.

The Far Eastern Deadlock.—Once again procrastination and tortuous diplomatic manoeuvres are threatening to defeat the organised efforts of the world to find a solution for the Far Eastern conflict. It is the same story in Manchuria and at Shanghai. At Shanghai, the armistice negotiations which have been

carried on for weeks past through neutral good offices finally broke down last Monday. As for Manchuria, the Lytton Commission's itinerary has been held up by the refusal of the puppet Government of Manchukuo to allow the Commission's Chinese assessor, Mr Wellington Koo, to set foot on Manchurian territory. Lord Lytton has rightly and naturally pointed out that the Chinese and Japanese assessors are an integral part of the Commission's personnel, and that a refusal to admit Mr Koo is tantamount to a refusal to admit the Commission itself. Now the resolution of the Council of the League of Nations, setting up the Commission and defining its duties, bears the signature of Japan as well as of the other States Members of the Council; but though Japan now says that she will do all in her power to ensure Mr Koo's safety, she will not ask the Government of Manchuria to remove its ban. Thus, once again, Japan is hampering the work of the League. At Geneva she accepts the League Commission; but in Manchuria she connives at action designed to prevent it functioning effectively. Again the Shanghai armistice negotiations have now broken down because the Japanese negotiators on the spot have insisted upon conditions involving permanent alterations in the regime at Shanghai, whereas the Japanese representatives at Geneva had agreed to an unconditional withdrawal—subject only to temporary arrangements for controlling the movements of military forces on either side until such time as the Japanese withdrawal should be complete. Thus the Japanese are now displaying an intention of digging themselves in at Shanghai for an indefinite period. What is the world going to do about it? Clearly it is time for the League Assembly's Committee of Nineteen to meet again.

The Disturbances in Newfoundland.—What is the status of Newfoundland? Its obscurity is indicated by the fact that, in the official parlance of Downing Street, the place is usually described, non-committally, as "the Island of Newfoundland," in subtle distinction from the Dominion of Canada, the Commonwealth of Australia, the Irish Free State, etc., etc. At Imperial Conferences, Newfoundland is represented side by side with the four great self-governing Dominions. On the other hand, she does not share with the Dominions and India the privilege of being a State member, in her own right, of the League of Nations. At this moment, her finances are out of the hands of her own Government and under the control of a United Kingdom official from the Treasury in Whitehall; but this somewhat drastic suspension of the normal working of Dominion self-government in Newfoundland has not been sufficient, or not been in time, to avert a popular *émeute* against the local Government. At a public meeting which was held at St. John's on Monday, April 5th, and was attended by representatives of all classes, professions and religions, unanimous resolutions were passed demanding a proper investigation of certain grave charges that have been brought against members of the Newfoundland Cabinet. The resolutions were carried next day to the House of Assembly by a crowd 10,000 strong; and when there was a delay in receiving the deputation which was to present the resolutions, the crowd broke loose, overpowered the police, sacked the basement of the Parliament Building, besieged the Cabinet in the upper storeys, and mauled the Prime Minister, Sir Richard Squires, when he attempted to make a "get-away" after dark. Thereupon the Prime Minister and the Chief of Police took refuge in a private house, where they were sheltered by a screen of four clergymen until they were able to escape from the back door in disguise. The crowd consorted itself for their escape by attacking the principal Government liquor depot in the capital. A British warship has now been sent to Newfoundland from the West Indies station to preserve order. These events in a North American island last week are reminiscent, in certain respects, of the disturbances which occurred in a Levantine island—likewise belonging to the British Empire—last October. In the circumstances, an ingenious pair of Colonial and

Dominions Secretaries of State at Westminster might perhaps be tempted to deal at one stroke with two unrestful islands by the operation which chess players call "castling." Why not give Newfoundland and Cyprus an interchange of regimes: for Cyprus, Dominion self-government; for Newfoundland, the present dispensation in Cyprus? Both islands might benefit by the change, and the British Empire benefit doubly into the bargain!

The Law and the Sabbath.—Unless Parliament passes new legislation in the meanwhile, the Sunday opening of cinemas, concert halls, museums and other homes of entertainment will cease in the first week in October. Such a compulsory relapse into the old Sabbatarianism would clearly not be tolerated by public opinion to-day, and legislation is therefore generally regarded as necessary. Mr Clynes introduced a Bill last year which would have solved the problem for the time being, but the fall of the Labour Government and the arrival of the national crisis caused that Bill to be dropped. This week the Under-Secretary for Home Affairs, Mr Oliver Stanley, introduced a new measure, on the merits of which the House of Commons showed a sharp cleavage of opinion; and on a free vote the second reading was only carried by the narrow margin of 18. This is surprising, since Mr Stanley's Bill is not of a compulsory nature, but provides for local option to be exercised by local authorities. Even if the Bill be passed, no part of England need have Sunday entertainments unless it wishes to have them. Part of the opposition comes from religious bodies and represents the large volume of opinion which is scared by any approach towards the "Continental Sunday." Another part comes from the owners and promoters of entertainments which are not legalised by this measure. To the former section three questions may be put: Is it right for the law to deny to hundreds of thousands of people the chance of employing part of their weekly day of leisure in recreation outside irksome surroundings or overcrowded homes? Do they not trust local councils to interpret the wish of the majority? Again, if they regard this Bill as "the thin end of the wedge," do they not realise that that wedge will be inserted only in proportion to the demand of public opinion? As to the opposition of alternative entertainers, especially the theatres, it would seem to be short-sighted. It is certainly arguable that it is unjust to the theatres to withhold from them the facilities allowed to cinemas. But we do not hold, with Sir Alfred Butt, that that is a sufficient reason for wrecking the present Bill and producing an intolerable position. Theatre owners, surely, would be wiser to assist the passage of this Bill and remember that if and when there is evidence of a real public demand for Sunday theatres, Sunday opening facilities will doubtless be extended to them. An objection raised to Mr Stanley's Bill, from quite another angle, is that it is only one small bite at a very large cherry. There are those who regard the Bill as merely tinkering with a situation which demands complete and comprehensive overhauling. The answer to this contention is clear. The close voting at Westminster affords strong evidence that public opinion is not ripe for a complete revolution of our Sunday Observance Laws. But it is ready, in many parts of the country at any rate, for a step forward. Such a step, and a proper one, is made by Mr Stanley's Bill, and it should be passed to the Statute Book.

A Simian Conundrum.—How many legs has a monkey? This is no nursery riddle, but an actual business problem, which it falls to the lot of Mr Runciman to solve. An importer of monkeys into this country has just pleaded that, being quadrupeds, they are exempt from import duties; the officials at the port of landing argued that they were bipeds; and, on the matter being referred to the Board of Customs in London, the ruling was given that monkeys have no legs at all, only hands. An appeal against this scandalous charge of quadrumanity has been lodged. At least, that is the story as told by a London newspaper which is by no means inclined to throw its searchlight on tariff absurdities. The final decision of this momentous question rests, we presume, with the President of the

Board of Trade. Will he empanel an advisory committee of zoological professors? Or will he make a bold bid himself to interpret the mysteries of simian fiscality? Or will he take the line of least resistance and exempt the humble ape from his tariff altogether? By so doing he would offend no vested interest, for monkey-rearing in this country is not, as yet, a major industry. Of course, if simian dumping is really menacing the stability of the pound or if the imported monkey is officially deemed to be a luxury which, in these stern days, children and nut-sellers can forgo, then he will have to face the music and enrich the field of scientific knowledge by deciding

On how many toes
A marmoset goes.

Even then the President's mental strain will not be relaxed; for it is certain to be asked "What tax is due on a kangaroo?"

British Industry.—Sir James Lithgow, in his address as retiring President to members of the Federation of British Industries, was faced with an enjoyable task; for he was able to point out that the Federation's appeals for protection and national economy were at last being put into practice by the Government of the day. On the more controversial aspects of his address we need say but little, but we cannot accept his claim that those who opposed and still oppose protection should for the moment hold their peace. Protection is an experiment which, as many of its advocates will admit, requires careful watching, and we fail to see how Sir James can object to a close and critical study of its consequences. In fact, such objections suggest a lack of faith on his part in the efficacy of his remedy. On the question of national economy Sir James is on firmer ground, though his argument that "under no fiscal nor social system can productive industry act effectively as the medium for the exchange of the commodities which enable our people to live and at the same time support an annual budget of the order of those of recent years" is valid on psychological rather than economic grounds. His plea that the interests of the producer demand greater attention than they have so far received is one that might fittingly have been coupled with a still greater insistence upon the duty owed by British industry to the community. We agree with him that one of the chief needs of the moment is the restoration of the confidence of the prospective investor in British industry, and there may be some force in his argument that the conduct of industry is hampered by legislation and other regulations which may have found their origin in isolated instances of abuse. Even so, before it is possible to accept his plea that British industry should be given, legislatively, a free hand, we need more reassurance that those responsible for the conduct of our industries are able and willing to live up to the spirit of Sir James' address. Our industrial history of recent years is not entirely a happy one, nor can industrialists wholly blame others for their misfortunes. The real value of this speech is that it reminded industrialists that they have now a unique opportunity to put their houses in order. There is much that British industry can do to rehabilitate itself, both morally and materially. Unless it seizes the opportunity presented by the recent change in fiscal policy, and does not abuse it, then, to quote Sir James' own words, British industry will stand self-condemned.

The Skandinaviska Kreditaktiebolaget.—Further information as to the relations of this bank with Kreuger finances was forthcoming at the adjourned annual meeting held on April 8th and is fully discussed in our Stockholm correspondent's letter on a later page. The relations began on November 27, 1930, with the sale by the bank to M. Kreuger of 50,000 Grangesberg shares at a price of Kr. 860. Between November, 1930, and February, 1931, the bank had granted to M. Kreuger loans and credits amounting to Kr. 180 millions, and a few weeks after the latter date the bank took up temporarily Kr. 80 millions of the Kr. 32 millions Polish Government loan placed on the Swedish market. In April, M. Kreuger asked for a further loan of \$35 millions, to finance current operations in Germany. Had this loan been refused, there was grave

danger of an immediate collapse of the Kreuger interests, and in these circumstances the Riksbank promised the Skandinaviska Bank any necessary assistance in this matter. A fortnight later came the Credit-Anstalt collapse and the entry of the world crisis upon its acute stage, and it is easy to appreciate that from then onwards the bank had little hope of liquidating its commitments in this direction. M. Lauritzen, the Managing Director of the bank, informed the meeting that the collateral held by the bank was intrinsically satisfactory, and that the whole trouble was one of liquidity. At the same time he admitted that the bank might have to meet claims from foreign interests in respect of \$50 millions of its collateral, and, while such claims were not believed to be well-founded, the whole situation is obviously still very insecure. At the same time, M. Lauritzen stated that the bank had only lent Kr. 10 to 12 millions on special Kreuger securities, and that the greater part of the collateral consisted of such securities as Roumanian, Hungarian and German State bonds which could fall to half their value before the bank would be affected. It was finally decided at the meeting that the Kr. 260 millions of bills rediscounted with the Riksbank should be entered in the year's balance-sheet, so that the full extent of the bank's obligations would be visible, and that the necessary adjustments be made in the profit and loss account and dividends. With these alterations the accounts were adopted.

The New South Wales Default.—Mr Lyons has been swift to take advantage of the High Court judgment upholding the validity of the Financial Agreement Enforcement Act. On April 7th he issued a proclamation authorising the attachment of the New South Wales income tax for the purpose of compensating the Commonwealth Government for its assumption of responsibility for the discharge of the external debt obligations of the defaulting State. Simultaneously, the Commonwealth Bank issued a notice directing individual income tax returns to be paid into its office at Sydney. Four days later the Commonwealth Government served notice on all banks in Australia requiring them to surrender to it all New South Wales Government credits. Mr Lang at once retaliated by closing the Sydney income-tax office, thereby suspending the work of issuing both Federal and State assessment notices, and by repudiating the agreement of 1923 which made the State the collecting authority for both State and Federal income tax. So far as can be told, this somewhat childish gesture will hardly possess even a nuisance value. New South Wales citizens are paying income tax to the Commonwealth authorities at a very satisfactory rate, and on April 11th the Commonwealth Government took further steps by issuing a proclamation attacking the betting, race-course, totalisator and entertainment taxes and also the revenue from the State railways and tramways. Mr Lang's reply to this further move was to issue orders that railway and tramway receipts are not to be handled by the banks but to be sent to Sydney from the country centres under armed guard. He apparently has the support of the tramway and railway officers' trade union in New South Wales. The State Government is also doing the best it can in face of the attachment of its revenue by settling its accounts in cash and orders on the Treasury instead of by cheque. The whole of this resistance, however, is obviously so futile that it is difficult to believe that it can be persisted in for long. In the meantime, the Premiers' Conference has assembled in Melbourne, and it has become clear that quite apart from New South Wales, the financial position of the Commonwealth is demanding renewed consideration, especially as the reduction in the Budget deficit to date has not kept pace with that estimated in the Premier's plan of last year. Australian exchange and tariff policy will also have to be discussed, and in particular the respective arguments in favour of a high or low rate of exchange. At the moment, economic opinion in Australia favours a high (i.e., depreciated) rate, in order to assist Australian primary industries. The State Under-Treasurers, with external obligations to meet, naturally take the contrary view.

Iron and Steel Production.—There is little evidence of the normal seasonal increase in activity in the production statistics for March, published this week by the National Federation of Iron and Steel Manufacturers. The output of pig iron, at 335,600 tons, compares with 323,600 tons in February and is 21,500 tons below that of March, 1931. The number of furnaces in blast, however, has been increased from 71 at the end of February to 72 at the end of the past month. The output of steel declined from 480,600 tons in February to 462,800 tons in March, and is 37,300 tons lower than a year ago. In this connection, however, allowance has to be made for the incidence of the Easter holidays, which fell last year in April. British iron and steel prices remained substantially unchanged during March, but Continental quotations show a further decline. The London quotation (f.o.b. Antwerp) for sheet bars, at £2 18s. per ton, shows a reduction of 8s. per ton; steel bars declined from £3 11s. per ton to £3 2s. per ton; whilst joists, B.S., were offered at £3 3s. per ton at the end of March, against £3 11s. per ton a month earlier. As there has been no improvement in the principal consuming industries, it is improbable that the production of iron and steel will increase substantially during the current month.

The Shipbuilding Returns.—The shipbuilding statistics for the first quarter of this year, issued by *Lloyd's Register of Shipping*, established new low records. The sub-joined table shows work in hand and work commenced, at home and abroad, during each of the last five quarters:—

	(Thousand Tons.)			
	Work in Hand.	Work commenced.	United Kingdom.	Abroad.
1931—				
First quarter.....	693	1,306	33	209
Second quarter	556	1,271	23	211
Third quarter	417	1,114	39	134
Fourth quarter	400	1,003	105	120
1932—				
First quarter.....	373	925	26	55

The tonnage under construction in this country at the end of March was not much more than half that in hand at the same time last year, and this year's figure includes 165,000 tons on which work has been suspended. The decline in tonnage under construction abroad, though severe, is relatively less, and of the world total only 28.7 per cent. is at present being built in the United Kingdom. The figures for tonnage commenced, both at home and abroad, are evidence of the deplorable stagnation still prevalent in the industry. In this country the slight revival in new orders—entirely for small ships—placed last autumn has now "petered out," and the contraction in tonnage begun abroad has been progressive over the past fifteen months. The tonnage launched from British yards during the first three months of 1932, namely, 35,324 tons out of a world total of 125,000 tons, is the lowest ever recorded.

Cotton Trade Wages.—On Tuesday last, writes our Manchester correspondent, there was an important conference in Manchester of representatives of the cotton weaving employers and the operatives for the purpose of considering the wages question. The joint meeting was held at the request of the employers, who stated at the outset that they had decided to ask the trade unions if they were willing to discuss the question of wages in the manufacturing section of the industry with a view to reaching by agreement an all-round reduction, which they felt to be necessary in view of the continued loss of trade. The employers did not put forward a demand in specific terms nor did they suggest any figures of reduction. After considering the situation in private, the trade union officials informed the employers that the committees of the several unions would meet this week-end and a report would then be presented to the Council of the Northern Counties Textile Trades Federation on the following Tuesday, when their reply to the employers would be formulated. In trade circles there is not much hope that the representatives of the operatives will ultimately give

a satisfactory reply to the employers' statement. It will probably be urged that the slight benefit which might come to the industry as a result of lower wages would not affect the industry to a sufficient extent to remove the depression and bring about a trade revival. It is not unlikely that the trade union officials will state that in their opinion the difficulties of the present time are due to the absence of up-to-date methods in producing and distributing goods, and that the solution is to be found in wholesale reconstruction of the trade from the purchase of raw cotton to the selling of the manufactured article. It remains to be seen what further action is likely to be taken by the employers, but there will have to be much greater unanimity amongst the rank and file before a specific demand for a wages reduction can be made, as numerous employers are certainly not prepared to force an issue with the operatives.

The Sugar Beet Controversy.—The British Sugar Refiners' Association have issued a lively reply, *pro bono publico*, and, incidentally, in defence of their own interests, to those beet sugar manufacturers who have recently been besieging Parliament with demands for "bigger and better doles" for home-grown sugar. The manufacturers assert that not only was employment found for nearly 10,000 workers in 1930, but that the organisation of the industry is "simple, effective and efficient," and fully merits the "½d. per lb. on the retail price of sugar," which the subsidy costs. The refiners retort that, in fact, it is the British taxpayer who has been "simple, effective and efficient," and recall the comment of the Economy Committee that "the total assistance to the industry during 1930-31 works out at £300 per man." Home-grown sugar, they point out, has already cost over £20 per ton to produce, though raw sugar can be bought at the moment for under £5 per ton. Moreover, the reference to "½d. per lb." is "deliberately misleading," and really means that the manufacturers require ½d. for every lb. of the 4,500 million lbs. of sugar consumed in this country annually, or £6 millions on the one-fifth part of that amount which they could produce at home. In so far as the refiners desire to show that the home sugar industry is "artificial" and uneconomic, their case is proved beyond the need of argument. Beet sugar profits, of which some £1,000,000 has been distributed to foreign shareholders since 1926, are earned, not in the field or factory, but in the lobby of the House of Commons. The refiners are prepared to grant that "for social and agricultural" reasons, a case for this extravagant "dole" may be made out, but only as long as its purpose is to help the farmer, and not to subsidise an uneconomic refining industry. "There is no reason," they claim, "why the industry should be allowed to produce a finished article in competition with a similar article which can already be manufactured without a penny of State assistance, and at a cost that is lower than in any other refining country." We associate ourselves with this expression of opinion. It is high time that the eyes of the taxpayer were opened to the nature and extent of the sugar beet "ramp."

Shipping Freight Index.—Movements in the tramp shipping freight markets during March are summarised by a fractional rise of 0.2 per cent. in our index number:—

AVERAGE 1898-1913=100.

	Average, 1913.	March, 1931.	January, 1932.	February, 1932.	March, 1932.
European Waters	110.0	86.5	88.8	88.7	87.3
North America	113.1	94.0	85.2	85.5	86.3
South America	123.4	90.5	88.2	89.0	87.0
India	106.3	99.2	90.9	87.4	87.7
Far East and Pacific	117.4	91.9	98.3	95.8	95.9
Australia	127.9	105.0	101.5	99.7	103.3
Total	116.3	94.5	92.2	91.0	91.2

The volume of chartering showed little or no signs of expansion during the month. Outward coal trade was particularly dull to near Continental destinations, though a moderate volume of business was noted for Mediter-

ranean discharge. The North American group was dull and inactive, and the South American market ended the month with a weaker tendency. The homeward quotation from Australia was slightly higher, but the number of vessels was small. Movements of the various sections of our index numbers are shown in detail below:—

AVERAGE 1898-1913=100.

	Index Number.	Inc. or Dec. Points.		Index Number.	Inc. or Dec. Points.
Home trade	77.7	- 2.8	South America—		
Bay—outwards	99.1	- 5.5	outwards	65.2	...
Bay—homewards	88.7	- 3.2	South America—		
Mediterranean—			homewards	108.7	- 4.0
outwards	89.4	+ 8.6	India—outwards	82.8	+ 0.7
Mediterranean—			India—homewards	92.7	...
homewards	91.1	- 2.8	Far East, &c.	95.9	+ 0.1
North America	86.3	+ 0.8	Australia	103.3	+ 3.6

Expressed as a percentage of the average for 1913, the total figure of our index number of March works out at 78.4, compared with 78.2 in February and 81.3 a year ago.

United Kingdom Provident Institution.—Almost alone amongst the mutual life offices, the U.K.P. has succeeded in transacting during last year a substantially greater volume of new life business, the total having risen from £3,080,000 to £3,503,000. The only feature of interest in the revenue account, which otherwise shows a normal expansion, is the further considerable rise in surrenders, which were responsible last year for payments of £280,000, compared with £213,000 in 1930, and only £129,000 in 1929. The experience of the U.K.P. in this respect has been shared by other offices, and is a regrettable, though inevitable, feature of hard times making it impossible for policyholders to keep up payment of their premiums. The gross rate of interest earned is slightly higher than in the preceding year, but the net rate, owing to higher income tax, is down from £4 12s. 3d. per cent. to £4 10s. 8d. per cent. Expenses, which have for many years been at a very low level, are practically unchanged at 13.5 per cent. of the premium income. A comparison of the last two balance sheets shows that movements in the assets have been on a very much smaller scale than in former years, and that practically the whole of the new money of 1931 was invested in mortgages, in British Government securities, and in Indian and Colonial Government securities. The Stock Exchange securities are retained at their values on December 31, 1929, the occasion of the last triennial valuation, and, compared with market values on December 31, 1931, show a depreciation on book values of £1,350,000. Compared with total assets of nearly £20 millions, this is a moderate figure, and it is stated in the report that, taking into account the substantial rise in security prices since December 31st, the greater part of this depreciation has been recovered.

Norwich Union Life.—The year 1931 was the first year of a new quinquennium, and in spite of the financial difficulties, which especially beset a society transacting a world-wide business, the Norwich Union succeeded in issuing a larger number of new policies, and for a greater amount than in 1930. Although this was also true of 1930, the increase in that year was realised in spite of a falling off in foreign business. On this occasion it has been the foreign business which has been responsible for the increase in the total, as the following figures show:—

	Sums Assured under New Life Policies.		
	1929.	1930.	1931.
United Kingdom	£ 4,247,781	£ 4,677,475	£ 4,628,035
Irish Free State	384,078	378,346	448,869
Dominions	2,052,329	1,998,286	2,017,477
Foreign	1,207,473	979,527	1,155,264
	7,891,661	8,033,634	8,249,645

The 1931 accounts bear evidence of the difficulties of the year, for surrenders of policies are 50 per cent. greater than a year ago, and yet the premium income has grown by £200,000 to £9½ millions. This large premium income is a great assistance in keeping expenses within bounds,

Overseas Correspondence.

LEAGUE OF NATIONS.

Disarmament Conference — The Danube.

(FROM OUR CORRESPONDENT.)

GENEVA, April 12.

The Disarmament Conference has reopened, and the Council met this afternoon to consider the Financial Committee's report, but no definite day has yet been fixed for the resumption of the work of the Assembly Commission on the Sino-Japanese conflict. Never has the League been faced at once with a series of such difficult and important problems, and the immediate prospects are not very encouraging about any one of them. It is in reality one vast question of international relations as a whole.

The Disarmament Conference has begun to discuss the opening article of the Draft Convention, by which the contracting parties undertake to limit and so far as possible to reduce their respective armaments. Mr Gibson, the head of the American delegation, at once got down to business by proposing as a start that tanks, heavy mobile guns and gases should be abolished. He made it plain that his resolution was by no means meant to be all-inclusive and that he would make proposals later about heavy bombing aeroplanes, his purpose being to capitalise the various suggestions which had been made for weakening the power of aggression on land, and so contributing to the sense of security. The feeling of security, he argued, would not be restored until defence had recovered its superiority. Sir John Simon was in substantial agreement, asserting that the temptation to resort to armed conflict would obviously be reduced if defence were strengthened at the expense of attack. Security would be substantially promoted if agreement were reached to prohibit the monstrous weapons named. Corresponding questions would have to be considered with equal definiteness in the field of naval and air armaments. M. Nadolny, the German delegate, accepted in principle, but once again drew attention to the imperative need for reduction of armaments as a whole.

M. Tardieu succeeded in having the resolution proposed by Mr Gibson referred to the General Bureau, on the understanding that the Bureau should at the same time be asked to consider all similar proposals, whether of a general or piecemeal character. The purpose of this was evident. M. Tardieu is prepared to discuss nothing which is not related to the elaborate French plan for arming the League. He returned to the question this morning in a clever but destructive speech. He made fun of the various kinds of offensive and aggressive weapons which had been named, argued that if particular weapons were abolished, others would take their place, such as the German pocket cruiser, and they would be having other things equivalent to pocket guns and pocket aeroplanes. He regarded the whole idea of abolishing specific weapons as a mere return to the efforts of The Hague conferences which had been proved useless, and he made an assertion which, if accepted, would make any further effort to arrive at a disarmament convention abortive. The Paris Pact, he said, was a major international instrument, and if any Power decided, against its obligations, to use war as an instrument of national policy, it would have no hesitation about breaking any subsidiary international engagements. The only conclusion to be drawn from such a statement is that the Paris Pact should be left as the sole international engagement and that every Power should keep what forces it likes. Some one wittily observed that the idea seemed to be that it was no good putting a muzzle on a dog unless it had good teeth. But the purpose, of course, of M. Tardieu's illogical intervention was to demonstrate that nothing would be any use except the French plan. As this would involve very serious and complicated undertakings to place arms at the disposal of the League, why should it be supposed that States, after violating the Paris Pact, would be any more inclined to carry out their duties under such an

despite the fact that one-third of the premiums are collected from abroad, and the ratio of the expenses to premiums, at 14.6 per cent., is very moderate in the circumstances. For many years past the feature of the business from the bonus-earning point of view has been the high rate of interest earned, and the 1931 rate—though slightly lower than in 1930—is still much above the average at £4 19s. per cent. net. An unusually high percentage of investments in mortgages, and particularly in foreign mortgages, has been largely responsible for the high interest earnings, and an incidental effect of this traditional interest in mortgages is especially evident at this time; for mortgages, though similar in character to debentures, have no Stock Exchange quotation, and are not subject to the nightmare of depreciation which overcame the world last December. The society has been exempt also from the necessity of providing for depreciation on its largest assets, the controlling interest in the Norwich Union Fire, which stands in the books at the cost price of £6,088,000. Had the book value of this asset been varied from year to year to accord with the general movement in insurance share prices, a sum of £1½ millions would have been required to deal with the depreciation in 1931 of this one asset. Of the total assets of £34½ millions, only £10 millions are represented by Stock Exchange securities, and this circumstance explains the relatively small depreciation of £1,100,000 that has been written off out of accruing profits. With this sum written off, the assets are stated to stand in the balance sheet at a figure substantially less than their market value.

Norwich Union Fire.—Since the control of this society passed in 1925 from the Phoenix to the Norwich Union Life, the policy of the new parent has been gradually to eliminate the uncalled liability on the shares of its offspring. This it has been enabled to do out of trading profits, with the result that £550,000 of uncalled liability has disappeared, and the capital now consists of 44,000 fully-paid shares of £25. Thus, the way was clear for an increase in dividend, and, therefore, in the return on the Norwich Union Life Society's investment. But the world slump has intervened, the premium income has dwindled and in 1931 was superimposed the disorganisation of Stock Exchange values. And yet, though earlier hopes have not been realised, or at any rate have perforce been postponed, the society has succeeded in emerging very satisfactorily from the difficulties of 1931. On trading, the society has suffered a moderate further diminution of premium income from £4,118,000 to £4,023,000, but on the smaller total has earned a larger underwriting profit, as the following analysis shows:—

	1930.		1931.	
	Amount of Profit.	Percentage of Premiums.	Amount of Profit.	Percentage of Premiums.
Fire	66,248	3.2	68,733	3.4
Personal accident	582	.4		
Employers' liability	4,480	1.8	105,652	5.8
General	56,614	3.9		
Marine	7,500	4.4	15,000	8.8
	135,424		189,385	
Less taxes, &c.	64,155		77,242	
Less written off in investments	...		79,974	
Total net surplus ...	71,269		32,169	

The depreciation of the year has been fully provided for, and the investments stand at or under market values on December 31, 1931. The contribution for this object from trading profits was nearly £80,000, and a further £300,000 has been made available from reserves, the contingency fund of £100,000 being utilised, and £200,000 from the general reserve of £1,000,000. The dividend remains at 24 per cent.

The Movement of Prices—A Correction.—Owing to a printer's error in the article appearing under this title in last week's issue, it was stated that a rise of 62 per cent. might have been expected in sterling prices between September 18, 1931, and the end of March, 1932. The figure should have been 12 per cent.

agreement than under any other agreements subsidiary to the Paris Pact?

It is obvious that every proposal put forward will be related by M. Tardieu to the French proposals, and it would be well if these were immediately dealt with. There is no chance of their being accepted, and, doubtless, the Conference will arrive at a seriously critical point if M. Tardieu persists; but that point must be reached some time, and it is better it should be soon than that every other idea put forward should be stone-walled. The French position must ultimately be challenged, and if it is their determination to do nothing unless their plan is accepted, the earlier this is declared the better; it is difficult to believe that it is the final French word. Hovering over it all is the central problem, which still remains to be tackled—is Germany to come into the convention on the same principles as everybody else?

At present it looks as if the only promising tendency of the Conference (namely, the abolition or weakening of specifically aggressive weapons) will be resisted by France unless her so-called international force is created; there is no hope of the Conference accepting that. The deadlock must be reached before anything can be done. It is a deadlock which has always been inevitable, and when it comes it will be time to consider what the Conference can really do to avoid catastrophe. M. Tardieu virtually declined to recognise that any weapon was essentially offensive, on the argument that offence was necessary for defence. There was no word of any readiness to consider reduction except on French conditions, and the one question everywhere asked is whether France, as the most heavily armed State in Europe, could reasonably be expected to pass over to the League the great weapons to be earmarked for the League's use if France should at any time be declared an aggressor. Naturally the French reply to this is that this will never happen, and certainly no one would accuse France of any such intention; but the French seem incapable of understanding that security means something more than French security, and there is little chance of progress until they begin to face that fact. Whether the arrival of Dr Brüning and Mr Stimson this week and the expected later arrival of Mr MacDonald will change the situation, no one knows; but it is proper that these responsible Ministers should be here to deal with the critical tendencies in this and other directions.

At the request of the four Powers who took part in the Danubian conversations in London, the Council has postponed until its May meeting any consideration of raising loans, as suggested by the Financial Committee. It was explained that the financial experts of the four Governments were considering the general questions raised by the Financial Committee's report, and that they would enter into consultation with the Committee and report in time for the May meeting. The Council will hear representatives of Bulgaria, Greece, Austria and Hungary in private during the week; but as no question of loans can be considered till May, it is not easy to see what the Council can do to help any of these States meanwhile. There was some curiosity at the assertion by Herr von Bulow, the German representative, that the failure of the London meeting had been exaggerated.

UNITED STATES.

Public Finance — Reconstruction — Industry.

(FROM OUR CORRESPONDENT.)

NEW YORK, April 6.

UNCERTAINTY over the form which the new Tax Bill will take has perhaps been a more depressing factor during the past fortnight than has the continued lack of cheer in the business skies. Wall Street, for all its desire to see a Tax Bill passed which will meet proposed expenditure, has, nevertheless, been feeling much disturbed over some provisions of the House measure, now before the Senate. Hope is entertained that the Senate will at least soften some of the rougher parts of the Bill, in particular the taxes on stock and bond transfers, but so long as the

higher charges are threatened it is unlikely that the markets will take much heart.

Mr Mills, Secretary of the Treasury, has appeared before the Senate Finance Committee, which now has the Tax Bill for revision, and stated the case in opposition to the taxes, which it is feared will so hamper business as seriously to delay a business recovery. He opposed the increase in the corporation tax to 13½ per cent. from 12 per cent. (the Treasury having recommended a 13 per cent. tax); a 1½ per cent. tax on consolidated corporation reports; a tax on company dividends (now subject only to surtaxes and to some State taxes); the full extent of the estate tax, set by the House at 45 per cent.; the provision disallowing carrying of net losses of one year into the next to balance corporation income, and that section limiting the right to deduct from taxable income the amount of loss on security sales; the House Bill limiting such deduction to the amount of gain on similar sales; and the security transfer taxes.

At present the New York State tax, doubled this year, is 4 cents a share of \$100 or no par and graduated on intermediate par values, and the Federal Government tax is 2 cents a share, on a similar basis. It is now proposed in the House Bill to tax stock transfers at ½ per cent. *ad valorem*, or a minimum of 4 cents a share. The higher tax, with commission rates and narrow movements generally, would, it is feared, thin out the markets by driving out speculative dealing, to say nothing of placing heavy penalties on odd lot sales of stock going largely to small investors, that the share market would no longer be a possible means of raising corporate capital.

The higher tax proposed on bond transfers is ¼ of 1 per cent. Since bond dealers make their turn on as low as ¼, many believe that such a high tax would drive most of them out of business and cripple capital flotations. Stock Exchange memberships have dropped sharply in price, sales this week at \$83,000 comparing with a bull year high level of over \$600,000. The position taken by the supporters of the proposed security taxes shows that they are rooted in the desire to hurt Wall Street rather than to raise revenue. At the same time, some of the outcry against them is probably too loud, and in the end the investor would suffer more than the speculator. Much the same thing may be said about the proposal to increase the tax on produce transfers, notably on wheat, to 5 cents on each \$100 of sales.

If the optimistic estimates which place the revenue to be produced by the Tax Bill passed by the House at a little over \$1,000 millions are accepted, a deficit of approximately \$300 millions must be made good. The original Sales Tax Bill rejected in the House would have cleared this up, and it is now proposed to cut that amount off estimated expenditure. Few people doubt that so severe a reduction could be made, but whether the President and Congress will have the courage to do it remains to be seen. President Hoover has taken a firm verbal stand on the matter, but he is showing signs of succumbing once more to his old weakness for relegating responsibility to a Commission.

The cloud of a \$2,000 million soldiers' bonus is still hovering over Washington, but active opposition has developed among many of the ex-service men's organisations, and there is a good chance that Congress will not be able to muster the necessary two-thirds majority to carry such a measure over the veto which President Hoover has promised. The Glass Banking Bill also has yet to be settled, but it is certain to be revised, and perhaps when it again emerges from committee it will have lost much of its venom.

Improvement in financial conditions continues, and the National Credit Corporation has made a second refund of 10 per cent. to subscribing banks. A third repayment is expected shortly, partly due to the improvement in the position of banks which it has aided and partly due to the gradual taking over of bank loans by the Reconstruction Finance Corporation. The needs of the latter body will probably mean a fresh Treasury note issue in the middle of this month.

A dispute has developed between the Reconstruction Finance Corporation and the Interstate Commerce Commission over the granting of railroad loans. It was clearly the purpose of the former organisation to assist railroads with money to meet their fixed charges and current bills, provided the loans could not be otherwise obtained. Most railroads are heavy borrowers at the commercial banks, and these demand or short-term loans have in effect become frozen, since the bond market makes refunding impracticable. The banks naturally have wished to lessen their credit extensions since the reconstruction body began to act, and already a good many loans, releasing private bank credit, have been approved.

It was provided in the Reconstruction Act that, as a formal matter, the Interstate Commerce Commission should approve the railroad loans, but it was not intended that this approval should go beyond the merit of a loan to the road. Acting largely under political pressure brought to bear by one or two members of the reconstruction organisation, a few members of the Commerce Commission have given only "reluctant approval," as they call it, to railroad loans, on the ground that the banks and not a quasi-governmental body should carry them. The banks are accused by Western politicians, and particularly those of a complexion different from that of the Administration, of abandoning the railroads, little being said about the obviously shaky loans (in reality gifts) made by the Reconstruction Finance to farmers. While some anxiety has been raised by the affair, the outcome will probably be continuance of railroad lending and the avoidance of receivership for important lines.

Bank earnings for the first quarter have run in most cases above current dividend rates, but there has been a considerable drop in deposits. The member banks of the Federal Reserve system are rapidly paying off their borrowings at the Federal Reserve, which continues to buy Government securities. Many people feel that an immediate reduction in the discount rate would have no great effect, and the market is not looking for one immediately.

Trade conditions are unsatisfactory. The steel industry has been unable to recover to as high as a fourth of its rated capacity. Pig iron output in March fell to the low levels of the 1921 depression, running on a daily average about 6 per cent. under February. Railroad traffic also, after a brief spurt in the middle of March, is in a fresh slump, but it is difficult to say how much is due to decline in business volume and how much to the further inroads of motor truck and waterway competition. Railroad earnings in February were considerably better than those of January, thanks to the 10 per cent. reduction in wages.

Some trouble has developed in the Middle West among the public-utility concerns directed by the Insull interests of Chicago. Financial reorganisations are being undertaken, and some hope is held that water may be squeezed out and bank loans met without resort to the courts. The affair provides an illustration of the unwarranted lengths to which the holding company idea was carried in this country.

FRANCE.

Politics — Prices — Industry — Employment.

(FROM OUR CORRESPONDENT.)

PARIS, April 13.

THE General Elections, which have been definitely fixed by Decree to take place on May 1st (with the second ballots on the following Sunday), are now the one subject of preoccupation so far as internal affairs are concerned. The foreign situation, however, more than ever dominates all sections of opinion, and since the increase of the Hitlerist poll by 2,000,000 votes at last Sunday's German presidential contest, the outcome of the Prussian and other German Parliamentary elections on April 24 has become a predominant factor in determining the political character of the new Chamber of Deputies. Until the prorogation of the Chamber a fortnight ago there was a widespread feeling throughout the country, and even among a large

section of the supporters of the parliamentary majority, that a swing of the pendulum towards the Left was likely to be revealed by the pending French elections. Last Sunday's menacing increase of the Hitlerist vote, however, has made an enormous impression on the French mind, both in the provinces and in Paris. The feelings of nervousness as to the possibility of the advent to power of a Socialist Ministry—or at least of another Herriot Cabinet, largely controlled, as in 1924, by an augmented although non-participating Socialist Party—have disappeared; and there is now little doubt that the pending contest in this country will result in a strengthening of the Nationalist forces in the Chamber through sheer pressure of circumstances.

Whether, in view of Hitler's recent activities, a *de facto* revival of the Cartel des Gauches will now be found possible for application to the second ballots on May 8th has now become an extremely open question. On all really Nationalist questions—such as the voting of the Budget, for example—at least a large minority of the Radical leaders, if not of the rank and file, differ as widely as the poles from their possible Socialist allies for election purposes. M. Herriot and his friends, however, are faced with an awkward dilemma, which has been intensified by the death of M. Briand. Since the 1928 elections they have lost a serious number of seats to the Socialists, and the party slogan of "No enemies to the Left" appears likely to cost them many more if they persist in relying on the Marxian Socialists for salvation.

On the face of it, the future of the once omnipotent Radical Party appears to be at least doubtful, with indications pointing to the probability of a scission, the one fraction (and apparently the major one) adopting the rôle of Socialist Party Right, and the minor half, including M. Herriot himself, constituting the Centre Left, and again forming a *bloc* with the groups representing the present majority (after, possibly, the elimination of the Marin Nationalists, whose continued existence as a constituent part of the Tardieu, Laval and Poincaré majorities has latterly been M. Herriot's ostensible reason for refusing to resume co-operation with the groups of the Centre and Right Centre). So far nothing has occurred to bar the road to M. Herriot's return to co-operation with the Moderate Centre, which would at least ensure France a more stable Government than she has enjoyed for the past three years. It is a question, however, whether M. Herriot and his "Moderate" wing are in a position to shake off the trammels of the real dictators of the Radical Socialist Party—the provincial professors and other doctrinaires, who refuse to recognise that conditions have changed since the days of Gambetta and who still regard the slogan, "Clericalism is the enemy," as voicing the fundamental doctrine of a great political party whose talents and energy are required to aid in restoring European peace and prosperity.

The general index figure for wholesale prices at the end of March indicates a rise of six points on the month and fourteen points since the end of December. The general unweighted index for the end of March (July, 1914 = 100) is 427, against 421 for the previous month, 414 January, and 413 December, which was the lowest index recorded for many years. Wholesale prices of French goods show a rise (from 486 to 493) on the month, and of 22 points since the end of December. The figure for imported products rose four points (304 to 308) on the month, and cancelled out the drop at the end of January from 308 to 300. Weighted index (1913 = 100) is returned as 444, against 446 at the end of February, 439 end of January (lowest) and a mean of 502 in 1931.

French industrial production, as shown by the monthly figures issued on Monday by the Statistique Générale, has now dropped slightly below pre-war volume. The general index returned for February, the last month fully reported on, is 100 (1913 = 100), as against 105 in January, 133 in February last year, and means of 124 in 1931 and 140 in 1930. Of the nine chief industries covered by the general figure, the heaviest drop is in engineering, output in which fell 7 points on the month (111 to 104). Building is returned as 115, or 4 points down on the month, and has since dropped to 113. Extractive industries and

metallurgy each declined a point, rubber trades output 4, textiles and leather 3 points each. The paper industry, which has improved steadily since it dropped to 102 in November, moved up another two points on the month to 107. The motor industry, which stood at a mean of 657 in 1929, is returned at 469 (against 598 in the corresponding month of 1931), representing a seasonal recovery of 5 points on the month.

Unemployment, as usual at this season, appears to be on the decrease. The total number in receipt of unemployment allowances on March 19th was 305,496, which set up a new high record (the previous highest total under this heading having been 81,916 during the crisis of 1927). During the week ending March 26th the number of persons on benefit throughout the country dropped by 2,278 units, and for the week ending April 2nd by a further 745 units (to 303,473, of whom 158,653 were in Paris and the Seine Department which surrounds it). The monthly return issued by the Labour Ministry showing the results of the systematic inquiry made by its inspectors, covering undertakings throughout the country employing 100 hands and upwards, indicates that at the beginning of March the total number of units employed was 2,407,834, as against 2,818,144 at the corresponding period of 1931, equivalent to a decrease in employment on the year of 14.53 per cent.

GERMANY.

Elections — Reichsbank — Stock Exchange.

(FROM OUR CORRESPONDENT.)

BERLIN, April 12.

THE second ballot in the Presidential election has confirmed the expectation that Herr von Hindenburg would be elected by an absolute majority. The result did, however, produce one surprise: not the fact that Hitler secured most of the votes which had been cast for the German Nationalist candidate Dürstberg in the first election, for there never could have been any doubt about that. But the transfer of some half million votes from the Communist candidate Thälmann to Hitler caused great astonishment in political circles. The close connection between the ideas of the Communists and the National Socialists is obvious to every student of German politics. Active support for Herr Hitler's candidature was completely in accordance with the election watchword of the Communists, who put up Herr Thälmann as a candidate in order to draw labour votes from Herr von Hindenburg and the anti-Hitler campaign, in order that a Hitler victory might destroy the "system"; that is, the existing democratic state, and a "revolutionary situation" might thereby be created. The only surprising thing is that Communist voters thought out this argument to its logical conclusion, and as they saw that Thälmann had absolutely no chance, and that Hitler's own party was not strong enough to carry him to victory, they voted directly for Herr Hitler. This fact, when it became known, constituted a tactical disadvantage not only for the Communists but for the Hitler Party. Hitler loves to pose, both at home and abroad, as the champion of Germany against Bolshevism, and the Communist support which has been lent him upsets this pose. The Communists, on their side, have not hitherto openly admitted to the workers in what direction their tactics were leading, but have represented themselves as the most ardent opponents of Fascism. That is precisely why it is so remarkable that so many Communist electors should have grasped the situation and acted accordingly. This union of the Communist supporters with the National Socialists will provide the Social Democrats with an effective argument in the Landtag elections.

The attempt on the life of the President of the Reichsbank has no political significance. His assailants belong to a group of monetary reformers who are particularly strongly opposed to the gold standard, and would like to abolish interest by the issue of money which would lose a prescribed proportion of its value every week. Some of the notions of this group suggest certain ideas of the National Socialists, who are deluded, in their campaign for "breaking the bonds of interest," by ideas which are

not much sounder. The National Socialist Party had, however, nothing to do with the attempt, and it is not even certain whether there was a serious intention of wreaking revenge on Dr. Luther or whether the object was merely to attract attention to the ideas of the assailant and his friends.

At the end of last week the Reichsbank decided to reduce the rate of discount by one half per cent. to 5½ per cent. The bank wishes, of course, to afford every encouragement to business that the monetary situation allows, and considers it justifiable, in the present state of its bill portfolio, to give an inducement to the offer of an increased number of bills by cheapening this form of credit in accordance with the reductions in discount rates abroad. The discounts, including Treasury bills and Lombards, are shown below:—

	(In Million Reichsmarks.)				
	Dec. 31, 1930.	Mar. 31, 1931.	Dec. 31, 1931.	Feb. 29, 1932.	Mar. 31, 1932.
Bills	2,828	2,367	4,487	3,671	3,607
Total circulation...	6,406	6,063	6,679	6,253	6,254

The rise in discounts as compared with the end of March last year is due to the credits which the Reichsbank was obliged to extend, in the form of re-discounts, during the banking crisis last summer. Relatively few re-discounts were asked for at the end of last quarter.

The Reichsbank considers the exchange regulations now to be so effective that it anticipates no flight of capital in consequence of the reduction in discount rates. Every reduction in interest reduces somewhat the pressure to liquidate stocks and the inducement to export, which is undesirable; but most undertakings have so great a thirst for employment that there is little to be feared in this direction. It therefore appeared to the Reichsbank that a maintenance of the discount rate, which cannot at the moment improve the German capital position, would, after the reductions in rates abroad, be an unnecessary burden on German economy. No doubt also it was anxious not to make more difficult, by unnecessary obstinacy on the discount rate question, its position in resisting demands that it should finance a large programme for the provision of employment.

To-day regular trading on the stock exchanges is at last resumed. Since September 20th the exchanges have been closed and the publication of the prices arrived at in outside trading forbidden. The uncertainty of the political, economic and monetary situation was the principal reason for the prolonged hesitation of the Government and the banks in deciding to resume the publication of quotations. The importance of the stock exchanges in German economic life must not, indeed, be overrated. The number of security holders is relatively small, and many of the shares of companies which are quoted on the Stock Exchange are not in circulation. All the same, the lack of activity on the Stock Exchange which was already apparent in the first half of last year is a crisis symptom of the first importance. There are no accurate turnover statistics, but reliable estimates place the decline in stock exchange transactions at 25 per cent. in two years.

In comparison with the course of stock exchange prices on many foreign bourses the present level of quotations is not unsatisfactory. The indices of share prices show a decline of only 10-15 per cent. since September, and some shares (e.g., Salzdettfurth, Gelsenkirchen, Rheinische Braunkohle) have risen, while others, such as I.G. Farben, Siemens and Reichsbank have only fallen a few points. Other leading shares, including A.E.G., Stahlverein, Hapag and Lloyd, and especially the shares of the German private banks, have lost a third and in some cases even a half of their value while the Stock Exchange was closed. Among the bank shares, Dresdner, Danat- und Kommerzbank are quoted at only 23, against a new nominal value of 30 established after the reconstruction; DD Bank, however, stands at 44, against a normal value of 40.

There have been great changes in the prices of German rentes, though after the December conversion of interest rates they almost all pay 6 per cent. on the nominal value. While the 7 per cent. Reichsbahn preference shares are quoted at 68½, the best 6 per cent. mortgage bonds of the

mortgage banks stand at 70, but city loans bearing the same rate are only 50 or less, and the 6 per cent. loan of Vereinigte Stahlwerke can even be had at 34. There is also a very wide difference between the yield on long-term loans and the interest on short-term money. Since the discount rate was reduced to 5½ per cent., bank acceptances are available at 5 per cent., and 30-day money at 6 per cent.

In comparison with the unofficial rates obtaining at the end of March, there has been an almost universal slight decline. This is explained principally by foreign influences, which are still further reducing enterprise in Germany. The Kreuger affair and the slump in the New York Stock Exchange are having repercussions in Berlin. On the other hand, opinion as to the German foreign exchange position is somewhat more optimistic at the moment. The prolongation of the \$125 millions two-year credit which the Reich took up in November, 1930, caused general satisfaction. The prolongation will, however, involve the party with foreign exchange by the Reichsbank this summer, as it was agreed to by the international consortium of bankers under the leadership of Lee Higginson on condition the Government and the Reichsbank paid back \$15.5 millions in foreign bills in July of this year.

ITALY.

Banking — Exchequer Bonds — Unemployment — Kartels.

(FROM OUR CORRESPONDENT.)

TURIN, April 4.

PERHAPS the only visible reaction of changed monetary conditions has been the reduction by the Bank of Italy of its discount rate from 7 per cent.—to which level it had been raised from 5½ per cent. on September 28th—to 6 per cent. on March 21st. This was a move preliminary to the issue of a milliard 5 per cent. nine-year Treasury bonds, to take place between April 7th and 20th. The bonds will be made attractive by 58 half-yearly premiums ranging from one million to 10,000 lire. The issue is at 97, and, including premiums, the yield works out at about 6 per cent. The proceeds will primarily be used to reimburse the 1924 4.75 per cent Treasury bonds which fall due in November, and of which there are outstanding 905.8 million lire. As subscriptions will probably exceed a milliard, the surplus will be welcomed by the Treasury, which is subjected to the strain of a budgetary deficit amounting for the first eight months of the year to 2,091.2 million lire. Owing to the usual time lag between budgeting and disbursements, the excess of actual expenditure over actual receipts has been in the same period only 633 million lire.

The Exchequer needs, however, to be relieved, particularly in view of the fact that the floating debt amounted on February 28th to 6,130.6 million lire, almost wholly due to the Deposit and Loan State Bank, a public institution to which are entrusted the deposits of postal saving banks and the funds of various social and public insurance bodies. As in France, this Deposit and Loans Bank (Cassa Depositi e Prestiti), though little known among the general public, is the biggest bank in Italy, with funds of upwards 17 milliard lire. Of these, roughly 6.6 are advanced to public bodies, provinces, municipalities, public works and other corporations, 4.6 are invested in State securities, and 6 are advanced to the State Exchequer as a current account. Thus the bank, by canalising savings to the State and other public bodies, is a major pillar of public credit.

Trade and industry grow restive from time to time under this wholesale absorption of public savings for State use. At present, however, criticism is disarmed, as it was by means of the large funds in possession of the D. and L. Bank, that the Bank of Italy was able to withstand the monetary storm of last autumn without decreasing advances to trade. As Governor Azzolini observed at the shareholders' meeting held on March 31st, the Bank of Italy had to suffer a decrease during 1931 in the total gold and gold exchange reserves amounting to 1,827 million lire, in order to satisfy the demands of importers and other

debtors. The Bank therefore decreased its note circulation during the same period by 1,385 million lire. Instead of contracting, discounts and advances—inclusive of advances to the Liquidation Institute—increased by 972 million lire, a feat which was possible only by an increase of 603 million lire in the current account of the Exchequer at the Bank. These letters have repeatedly called attention to this interesting policy, akin, in a way, to the open market operations of the Bank of England and the Federal Reserve Board. It works somewhat on the following lines: Private savings are deposited at from 5 to 6 per cent. in the postal banks, who in their turn transfer their deposits to the D. and L. Bank; the D. and L. Bank lends some of it to the State Exchequer, presumably at the same rate of interest, the Exchequer redepositing a part of it at the Bank of Italy in a 1.50 per cent. current account, thus enabling the Bank of Italy to keep the note issue within strict bounds. The system has worked out satisfactorily, partly owing to the crisis, which renders savers shy of direct investments and devout buyers instead of postal bills and of Treasury bonds. The saving public being obdurate against buying of shares and advances to industry, it is made to invest its funds in industry by these devious ways.

An interesting interpretation of the continued increase of unemployment is given in the Press. The net number of emigrants, which was 151,000 in 1930, decreased in 1931 to 58,000 and in the first two months of 1932 to 6,000. This fact does not entirely account for the increase from 642,169 unemployed at the end of 1930 to 982,321 at the end of 1931 and to 1,147,945 at the end of February, 1932, but may have been a contributory cause.

Further regulations enacted by a recent Cabinet council add interesting details to the general outlines already given of compulsory State-regulated kartels (Consortii). In the industrial field, the consent of 75 per cent. of the firms of a given branch and of 75 per cent. of capital invested, or of 90 per cent. of capital invested only, if the necessary quorum of firms is not forthcoming, is required for the constitution of such compulsory kartels. In the agricultural field a firm's quorum would not be attainable owing to the great number of farmers, and therefore the consent of 70 per cent. of production will suffice. Government factories or societies, with a 50 per cent. Government capital share, shall be obliged to become members of such kartels, or, at least, to act with them. Minorities shall have a right of appeal to a special board in case of regulations limiting their freedom of action. The State can delegate a public supervisor with a seat on the board of directors of the kartels. Nobody shall start a new business in an already cartellised field without State authorisation, and should the authorisation be granted, he must enter the kartel at once. A jute kartel has been recently formed, and many others are planned. Whether kartels are going to be an appropriate remedy for the crisis is doubtful. At the meeting held on March 31st of the shareholders of the "Montecatini," a big concern interested mainly in the field of artificial fertilisers (57 per cent. of the national production of superphosphates), it was stated that the consumption of superphosphates in Italy fell from 1,525,000 tons in 1929 to 1,287,000 tons in 1930 and to 892,500 tons in 1931. Kartels or Consortiums, however State regulated, will be of no avail against the reaction of the consuming public if they are not able to reduce costs and prices.

HOLLAND.

Belgian Treaty — Imports — Money — Capital.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, April 5.

DURING the last few weeks, public attention has largely been concentrated upon the negotiations between the Netherlands and Belgium concerning a commercial treaty and the revision of the treaties of 1839, with particular reference to the Antwerp-Rhine communications. In the Press and at meetings throughout the country, the proposed Netherlands-Belgium treaty has been a subject of active discussion for some time past, and, in consequence of rumours in circulation, considerable opposition arose.

The subject has now also been brought forward in the First Chamber of Parliament, and the Minister of Foreign Affairs made a pronouncement on the matter. The discussions have been conducted under the leadership of the Dutch ex-Minister, Dr. Colijn, and the Belgian Minister of State, Dr. Frans van Cauwelaert. The Dutch Minister of Foreign Affairs, in his statement in the First Chamber of Parliament last week, declined to give any information as to what stage had been reached in the negotiations. "The Houses of Parliament are concerned with the result of the negotiations, but the negotiations are the sole affair of the Government," the Minister declared. "Both the Dutch and Belgian Governments had hoped to find a solution to the complicated problems, before the general elections due in both countries next year. Difficulties entailing closer consideration, however, have arisen. Through the economic situation, moreover, economic rapprochement comes more into prominence than the revision of the political treaties of 1839. By means of a new commercial treaty it is hoped to tighten the bonds of friendship uniting the two nations."

From this Ministerial statement it is evident that the negotiations have been suspended for the time being, and that no agreement with Belgium will be achieved before 1933. Although it is assured that the utmost conciliation was displayed by both parties, it was found impossible to arrive at an agreement. It is said, however, that the two points of view had closely approached agreement, for which reason the negotiations are not being abandoned, although matters are at a deadlock for the time being. The divergence of opinion still concerns the Antwerp-Rhine communication desired by Belgium, but it is hoped that sooner or later complete agreement will be reached on this matter too.

The labour conflict in the Twente textile branch has been settled, and the general strike has accordingly come to an end. No employment is, however, available for 40 to 50 per cent. of the employees, owing to shortage of work in the factories.

Increasing use is being made of the provisions of the Emergency Imports legislation, and quota restrictions have now been decreed for china, earthenware, and tiles. For the period March 1, 1932, to May 31, 1932, the import of china from all countries is prohibited, in so far as the value of the imports exceeds 90 per cent. of the average per quarter imported from each country during the years 1928, 1929 and 1930. For fine earthenware, the quota is 75 per cent., for sanitary earthenware 85 per cent., and for wall tiles 60 per cent. By Royal Decree of March 24, a temporary restriction on the importation of outer and inner cycle tyres has also been enforced, the quota order reading:—

"During the period March 1, 1932, to May 31, 1932, the importation of inner and outer cycle tyres from every country is prohibited in so far as the number imported exceeds 95 per cent. of the average number per quarter imported from each country during the years 1928, 1929 and 1930."

The Amsterdam money market continues to display greater liquidity. The average rate for prolongations was 1.0542 per cent. in March, as against 1.634 per cent. in February, 1932, and 1.0443 per cent. in March, 1931. The tendency on the foreign exchange market was also satisfactory, and the guilder rate was firm, so that a small increase could be registered in the gold stock of the Netherlands Bank. The Stock Exchange, on the other hand, displayed a weak tendency, under the influence of the reaction in Kreuger securities and several disappointing annual reports issued by prominent companies.

The new issues market, however, was well maintained. In the majority of cases the issuing houses have only been undertaking the receipt of the subscriptions, without guaranteeing the success of the issue. Their rôle has accordingly become entirely passive. During March, issues of 113.6 million guilders solely for account of the State, provinces and municipalities were marketed. During the first quarter of 1932 the issues totalled 137.8 millions, as against 57.1 millions in 1931. The high figure this year is attributable to the recent State loan, which absorbed 100 million guilders of new capital from the market. Industrial undertakings did not come on the market with a single issue during the first quarter of 1932.

AUSTRIA.

Credit-Anstalt — Foreign Trade — Industry.

(FROM OUR CORRESPONDENT.)

VIENNA, April 11.

THE report of the reconstructive committee of the Credit-Anstalt has appeared, and has been passed over to a very small parliamentary committee. The report makes the most serious criticisms of the management of the former Credit-Anstalt and the balance sheets of recent years; and this criticism is said to be based on thorough investigation. The report is not to be published for the present, but the Government have stated that they will hand it over to the public prosecutor for further investigation. It is a fact that the former directors have already been cross-examined by the court, and several members of the board have been called upon for information. There are large groups in Parliament which desire to conclude from the report of the reconstruction committee that the conditions under which the Government undertook the guarantee to the creditors no longer obtain. The Government itself does not take this view.

The fact that the report is kept secret has not prevented a stream of details from leaking out. Further, a book which has just been published by the former chairman of the Boden-Credit-Anstalt, Dr. Sieghart, mentions that at the time the Credit-Anstalt took over the affairs of the Boden-Credit-Anstalt the former was already in difficulties, and that it might have been saved for a fraction of the financial expense which has subsequently proved necessary. It is certain that, when the Boden-Credit-Anstalt took over the Verkehrsbank and the Unionbank, it did not make bad bargains, and the shares of several of the subsidiary enterprises of the latter bank in particular proved to be valuable assets.

It is now stated that the surviving Austrian banks will not pay any dividends for the past year. The Bankverein, the Länderbank and the Merckbank made a private resolution to this effect some time ago. The Niederoesterreichische Escompte-Gesellschaft will probably follow suit. It would have been in a position to distribute a dividend half the size of last year's, but this plan, too, has been dropped. One reason for the passing of their dividend by the Vienna banks is the change which has taken place in the banking interests in Prague. The Vienna banks hold large batches of the shares of the Czechoslovak banks, dating from the time when they were obliged to nationalise their branches in Czechoslovakia or merge them with Prague banks, and a great deal of money will be lost on these shares. Furthermore, the present year has begun very unfavourably for the banking business. There is no new business, issue activity has stopped, foreign exchange business is becoming more and more centralised at the National Bank, and, in spite of the large sums written off from the accounts of debtors, further writings-off are necessary. The restrictions upon trade are also a disadvantage to banking business.

If the Government now announce, after the fruitlessness of the London Conference, that limitation of imports is to be introduced, this will hit commerce and, as a consequence, the banks also. There is a proposal to limit importation from those countries whose deliveries are chiefly instrumental in causing the deficit in the Austrian balance of foreign trade. Among these are Czechoslovakia, Poland and Hungary. Trade with Germany, which shows a balance in favour of Austrian exports, will be affected less, especially as Germany is inclined to facilitate tourist traffic to Austria and has also offered preferential Customs treatment. There will probably be a limitation of imports of brown coal, and various semi-manufactured articles for the textile industry will also be excluded. Importation of agricultural products is also to be affected. A special ministerial committee has been elected to speed up the necessary preliminary work. In this connection it must not be overlooked that Austrian exports to the above-mentioned countries are constantly dwindling. For instance, Austrian exports to Hungary in the year 1928 amounted to 190 million schillings, and last year to only 90 millions. Exports to Czechoslovakia

amounted to only 157 millions, against 280 millions formerly. Last year the difference between export and import values in trade with Poland was 120 million schillings on the side of imports; exports fell by a full half, while imports were reduced by only a third.

The Federal Railways are effecting savings by curtailing the service and giving up certain local lines completely. The summer service is also to start later this year. In the matter of reducing salaries, it is probable that nothing further will be done, as a further reduction of the standard of living is considered insufferable, and the clerks' association and the political parties are ready to protest strongly. The drop in purchasing is felt keenly by the shops. The weekly average showed 106 compositions and 19 bankruptcies against 62 and 15 for March of last year. The greater portion of the compositions took place with commercial enterprises, especially dealers in personal linen and ready-made clothes. Foodstuff dealers and restaurant keepers, who have long enjoyed a particularly favourable position, are now also beginning to suffer.

The movement of deposits at the savings banks, which is not so unfavourable, is slowing up, as the deposits were made chiefly by the smaller tradespeople. Still, the savings banks are now in a position to accord a few mortgage credits, whereas they formerly exercised great reserve. On the other hand, the State housing scheme has come to a standstill, as the means to continue it have run out, and there is no hope of placing the second batch of the Housing Loan in the near future. The reconstruction of the mountain road up the Glockner, which was widely announced some time ago, and in which the A.E.G. of Berlin desired to participate, has met with obstacles, especially as the estimate of 12 million schillings might not cover the material and it is not certain that even the 12 millions could be raised. An important event of last week was the fact that the National Bank of Austria came under liability for the bank-note tax. As long as the cover relation, which is at present about 23 per cent., remains below 22 per cent., the tax amounts to one per cent. over the bank rate, or eight per cent. at present.

HUNGARY.

Danube Project — Politics — Finance.

(FROM OUR CORRESPONDENT.)

BUDAPEST, April 12.

THE failure of the Four-Power Conference in London did not discourage Hungarian public opinion. It is firmly believed here that the Danubian problem, now in the forefront of the European political arena, will not disappear from it until a *modus vivendi* has been found by the Great Powers to save Central Europe from the threatening economic and financial collapse. The Tardieu plan, with its problematical preferential tariffs and moderate financial backing, was never considered here as a satisfactory or a permanent solution, but it was welcomed as a sign that France is willing to take an active part in the restoration of the Danubian States.

The lessons of the past decade prove that without far-reaching economic changes financial assistance alone will never bring about a durable recovery in any of the Succession States. The Government, realising that Hungary is largely over-borrowed, does not look any more towards new foreign loans as a desirable objective, but is concentrating its efforts on obtaining a reduction of the intolerably high interest rates on its present foreign obligations. Hungary has borrowed since 1924 almost £100 millions (gold) of which more than three-quarters was supplied by British and American capitalists. Therefore, it is obvious that, although the commercial interests of Great Britain and the United States are not significant in Hungary, their financial interests are predominant. As to the economic aspect, Hungary would welcome any solution in the Danube Valley which would bring about an economic unit sufficiently large to take her agricultural surplus products, both cereals and cattle. It should not be overlooked, however, that, with the inclusion of Roumania and Jugoslavia, the Succession States of the

Old Hapsburg Monarchy will still have a huge agricultural surplus which only Germany and Italy could take from them, as the Austrian and Czechoslovakian markets are too small. It is natural, therefore, that Hungary should be chiefly interested in a solution which would secure for her the German and Italian markets, for they are, next to the Austrian market, Hungary's chief purchasers at present.

The internal political situation is still rather unsettled, though the Government's prestige has been greatly strengthened by Count Károlyi's flat refusal to enter into negotiations with the representatives of the printers, who went on a "political sympathy" strike following the suppression of the Socialist newspaper *Vépszava*. Thus the two days' strike came to an end, and a general strike was averted. On the other hand, there is good reason to believe that the Government will reconsider the case of the Socialist newspaper.

In view of the grave financial situation calling for immediate and unpopular measures, the firm attitude of the Prime Minister was very fortunate, and it is hoped that the provisions of the recent Emergency Decree of the Government—including certain tax increases and a moderate reduction of the emoluments of the State employees and pensioners ranging from 2 to 5 per cent.—will not be torpedoed by Parliament. According to a statement of the Finance Minister, the proposed curtailments of salaries and pensions which are to come into force on July 1st, at the beginning of the next financial year, will mean a saving of 15 million pengő per annum, while the emergency taxes are expected to yield about 50 million pengő. Baron Károlyi has stated also that the Administration Budget for 1932-33 will provide for an expenditure of 806 million pengő, as against an expenditure limit of 890 million pengő for the current Budget year, and actual expenditure of over 1,000 million pengő in the past two financial years. Unfortunately, the revenue returns of the Treasury do not warrant the hope that even 800 millions could be raised. In the period July, 1931-February, 1932, receipts amounted to 542.5 million pengő only, and in the remaining four months 240 million pengő at best can be reasonably expected. Current expenditure amounted in the first eight months of the present financial year to 598.4 million pengő, leaving a deficit of 55.9 million pengő, which is further increased by the additional expenditure on funded investments and cash advances of 36.6 million pengő and 27.3 million pengő for the deficiency of the State undertakings so that the total deficit at the end of February amounted to 119.8 million pengő, which was increased by another 10 million pengő in March.

By Government Order-in-Council the wheat and rye subsidy granted to the farmers in 1930 and 1931 will be discontinued as from July 1st. In its stead the Government proposes to relieve the farmers by suspending the collection of the Land Tax and to make up the loss of the Treasury from the proceeds of the milling tax on wheat and rye, which is nothing short of a consumption tax on bread. The discontinuation of the Boletta system (wheat and rye subsidy) was promised by the Government to the Financial Committee of the League in October last, as it has involved considerable expenditure from the public Exchequer. It is a point in favour of the new relief scheme that its advantages will go to the smallholders, whereas the Boletta system benefited only the medium and large estates.

Great pressure is being brought to bear on the National Bank to reduce its discount rate, which is 7 per cent. at present. In all probability the Bank rate will be reduced shortly by $\frac{1}{2}$ per cent. The last return of the National Bank, dated April 7th, is not very satisfactory, as it shows that the credit system of the country has almost lost its flexibility. The first quarter of the year is normally marked by a seasonal decline both in the note circulation and in the bill portfolio. This year the decrease has been proportionately considerably below that of last year. In 1931 the note circulation declined from 469.2 million pengő at the beginning of the year to 366 million pengő, a decrease of more than 103 million pengő, or 22 per cent.; whereas in 1932 the contraction from 422.8 million pengő

to 360.1 million pengö is less than 15 per cent. The same phenomenon is manifest in the bill portfolio, which last year decreased from 297.7 million pengö to 236.5 million pengö, whereas this year the bills discounted (including rediscounts with the B.I.S.) have decreased from 589 million pengö on January 1st to 549.5 million pengö, a decrease of less than 7 per cent. as compared with a seasonal decline of more than 20 per cent. in the corresponding period in 1931. The gold cover of the National Bank fell to 96.4 million pengö, but the foreign exchange holding rose to 17.3 million pengö, so that the statutory cover amounted in the first week of April to 113.7 million pengö. The other liabilities of the bank have risen by 8.1 million pengö this week to 100.6 million pengö. This is explained by the fact that the "Foreign Creditors Fund," to which the non-transferable sums of the interest and amortisation services are paid in pengö, is not shown separately in the Bank's return, but figures among "other" liabilities. It is estimated that the amount held now by the "Foreign Creditors Fund" is about 40 million pengö.

SWEDEN.

Kreuger Affair — Skandinaviska Bank and National Bank.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, April 11.

SCARCELY anything has contributed so greatly towards unveiling the veil of secrecy around the Kreuger catastrophe as the report given at the meeting of the Skandinaviska Bank on to the connection of this bank and the National Bank with the Kreuger concern. The information furnished also casts an entirely new light on the whole of our economic development during the past year, and, not least, the events surrounding the abandonment of the gold standard are placed in an unexpected light. The Kreuger concern, and thereby the Skandinaviska Bank and National Bank of Sweden, are to a considerable extent responsible for Sweden's departure from the gold standard owing to the enormous credits which were asked and granted.

The report of the statement made at the general meeting of the Skandinaviska Bank is scarcely complete, but it makes the development clear in its main features. The course of events was as follows. Even at the end of 1930 the Kreuger concern had begun to suffer from difficulties of liquidity. It was, therefore, compelled in an ever-increasing degree to lay claim to the services of its special banking connection, the Skandinaviska Bank, as it became more and more impossible to procure credits on the international finance market. Between November, 1930, and February, 1931, the credits still kept to the figure of about 50 million crowns, but very shortly afterwards they jumped up so quickly that in March they were 180 million crowns. To what extent repayments were subsequently effected does not appear from the report, but in September they had further risen to 200 million crowns. On account of the enormous withdrawals of foreign investments entailed by the crisis of liquidity and confidence of the summer, the Skandinaviska Bank was no longer able to be responsible itself for its credits to the Kreuger concern, but had to call for the assistance of the National Bank, and, after this, the National Bank had to allow the concern direct further credits to the amount of 40 million crowns, in which connection a number of securities pledged with the Skandinaviska Bank were transferred to the National Bank, while the Skandinaviska Bank had to sign a guarantee for half this amount.

The co-operation between the Skandinaviska Bank and the National Bank in the financing of the Kreuger concern, which is thus revealed, had in actual fact begun much earlier. When the concern required 32 million crowns in February last year, in order to meet its loan agreement with Poland, the Skandinaviska Bank had obtained the consent of the National Bank before the credit was given, and this procedure was continued thereafter. The same applied in April when the concern had to obtain 35 million dollars in order to be able to make its

last payment of the loan to Germany. The responsibility of the National Bank for what occurred is, therefore, indisputable, and the final effect, as is now known, was that the State had to step in and assist the Skandinaviska Bank to the extent of no less than 215 million crowns in order to rescue the institution from the difficulties involved by the Kreuger crash.

The following conclusion may be drawn from the information given at the general meeting of the Skandinaviska Bank: the Kreuger concern obtained credits of 240 million crowns during the past year from the Skandinaviska Bank and the National Bank alone. It is still an open question as to what extent the concern may also have obtained credits from other Swedish banks at the same time. Sweden has, in fact been compelled, through the Kreuger concern, to finance foreign businesses outside our interests and considerably beyond our resources. It may be difficult to determine to what extent these credits have been disposed of for settlements abroad. It appears, however, more than probable that this has been done to a very large extent. It evidently happened in respect of the 32 million crowns for the Polish loan, and also the 35 million dollars for the German loan. It is, moreover, clear that about 50 million crowns of last year's distributions of dividends by the concern have gone abroad. (This is without regard to the Match Company's spring coupon for 27 million crowns, of which about 19½ million crowns would appear to have gone abroad.) These transactions alone involve about 210 million crowns, which in reality the National Bank of Sweden has placed at the disposal of the foreigner. Certainly this did not take place immediately on putting through the respective transactions, as the Skandinaviska Bank, of course, granted the credits; but the National Bank was fully aware that it would have to step in itself if the Skandinaviska Bank should get into difficulties, which in fact happened in the autumn. Moreover, it was the National Bank which finally had the responsibility for our currency reserves being drained by such enormous amounts at a time when the exchange was extremely sensitive. Even to an observer with much less information before him than had the National Bank, it was clear last spring that the adverse balance in our balance of trade would place abnormal demands on our currency reserves. For the first five months of the year, the surplus of imports amounted to 180 million crowns and the holding of currencies by the National Bank was reduced by 110 million crowns, and at the same time nobody could fail to see that the influx of foreign floating capital involved a dangerous factor of uncertainty.

Under such circumstances, how is the mode of procedure of the Skandinaviska Bank and the National Bank to be explained? It must be admitted that it was difficult last spring for anybody to foresee the devastating crisis which broke loose with the failure of the Credit Anstalt. Even apart from this, however, the consequences for our currency reserves must have been clear to the National Bank, especially during the autumn months, when, however, the grants of credits to the Kreuger concern were further increased in spite of this. It is therefore clear that both the Skandinaviska Bank and the National Bank have all along foreseen these consequences, and the National Bank would appear to have been faced for a whole year with the question whether it should take upon itself the responsibility of overthrowing the Kreuger concern.

The question arises whether it was necessary to allow the concern, in this state of affairs, to distribute dividends which, for the first half of last year, including the Match Company, amounted to 88 million crowns, and of which, moreover, about 69 million crowns would appear to have gone abroad. In reality it was, of course, the National Bank which had to advance these funds, and there is still greater reason to ask why the National Bank did not in good time last year take up the foreign currency loan which it was impossible to mobilise in September. The position is that Ivar Kreuger forced the National Bank to provide the amounts for his Polish and German loans, which amounts, according to the original

calculation, he was to have procured in the international money market. In other words, the National Bank has committed the same fault here as Ivar Kreuger, with the difference, however, that the latter speculated in the developments of the market and therefore delayed in procuring capital, but as the National Bank had to provide necessary currencies by drawing on its own currency reserve, it actually loaned floating capital to Poland and Germany. It should naturally have secured itself by taking up a long-dated loan from abroad. Reason for such action, moreover, already existed owing to the increasing adverse balance of the balance of trade. Such a loan could certainly have been placed on favourable terms in April, when the Kreuger concern got its 35 million dollars for the German loan.

Letters to the Editor.

THE ANGLO-IRISH TREATY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In spite of Mr. de Valera's retreat, in his argument about the Oath, from a legal to a moral claim, it is obviously premature—and therefore unwise—to cry out that the Treaty of 1921 is being violated. It is yet more unwise to employ spirited language as to the disagreeable punitive consequences which will be visited upon the Irish Free State for a violation of the Treaty which is, as yet, no more than hypothetical. Threats breed contentiousness, and contentiousness tends to precipitate conflicts which should, if possible, be avoided. It would be well if commentators would abstain from prejudging issues which await responsible solution. It would not, for instance, be inherently improper if a proposal for the revision of the Treaty were propounded from either side. For the Treaty has already been revised by the Agreement of December, 1925, which was duly ratified by both legislatures, and quite conceivably further cause for revision at some time or other may arise. The point is that revision must rest upon mutual consent, and not upon unilateral action. Contemporary history is rich in precedents for the procedure in such a case.

It is well to recall how profoundly the significance of Anglo-Irish relations has been changed during the post-War period. Ireland's strategic importance has waned to insignificant proportions with the coming of the League of Nations and of the Briand-Kellogg Pact. Political or constitutional control of Ireland by Great Britain has vanished with the advent of an equalitarian status for the Dominions and the Mother Country, which has been completed by the Statute of Westminster. There is an His Majesty's Government in Dublin no less than at Westminster; and it is to be hoped that nothing will be allowed to occur which would mar the decorum which ought to subsist between them, even if they come to be at issue on matters of grave importance. The gossamer threads of constitutional liaison between the component parts of the British Commonwealth of Nations are strong, and not a little of their strength has been proved to lie in their elasticity. Constitutional development from precedent to precedent has marched apace. It should not be overlooked that it is upon the basis thus attained that all the high hopes of an Imperial economic unity, or at least co-operation, to be achieved at Ottawa are founded. Thus we reach the conclusion that the truly significant factor in Anglo-Irish relations to-day is no longer strategic nor political but economic, and that the most binding ties are those which mutual economic benefit and the inter-linking of economic arrangements create with the irresistible force of natural growth. A conflict, of which there is some glib talk amongst the less responsible, would be a tragedy—an injury wellnigh insupportable to Ireland and a source of grave loss and inconvenience to Britain. Britain herself has so preponderating a weight to throw into the scale if necessary that she can afford to bear herself with a patient and forbearing courtesy in the pending discussions. It is to be hoped that stress will be laid upon matters of substance rather than upon "the letter of the bond."

For the Irish Free State as an economic body must necessarily respond to the gravitational pull of Britain's economic mass; and she scarcely can stray, or desire to stray, from her appointed orbit. Ireland can practise economic nationalism to her heart's content. If she thrives on it, her prosperity will make her a more profitable customer for Britain. If she does not, she will at the least be more dependent on Britain. And, just as Ireland with her £150 millions or more invested in Britain must be always solicitous for Britain's economic welfare,

so Britain with her predominant, virtually monopolistic, interests in Irish shipping, banking, insurance and railways must participate heavily in any economic adversity that might befall Ireland.—I am, etc.,

HIBERNIAN.

[We comment on this question in a leading article.—ED., *Economist*.]

THE VALUATION OF STERLING.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Professor Gustav Cassel has recently stated that "a simple calculation will show that . . . on the basis of its purchasing power parity the pound ought to have been (January, 1932) worth 4.35 dollars." The calculation is certainly "simple" enough, but in view of the great issues which depend upon proper realisation of the relative values of the world's currencies, a protest should be registered against applying even "simple" calculations to the entirely unsuitable data used for comparing the "purchasing power" of currencies in different countries.

Whatever the merits of the "purchasing power parity" theory may be for the purpose of reaching ideas as to the *equilibrium* values of currencies, the utility of it must depend largely upon the suitability of the data to which it is applied. Professor Cassel—as is not uncommon with economists—takes any data already conveniently available which seem to be applicable to the case, without investigating whether they really are properly applicable. The Irving Fisher index of wholesale prices in the U.S.A. (based upon the prices of 200 commodities), and the *Economist* index in this country (based upon the prices of 58 commodities), however, were not constructed in conjunction for the purpose of comparing "purchasing power" in the two countries, and it is as erroneous to assume that they are proper for this comparison as it is to assume that the comparison of the average handicaps of the members of 200 American golf clubs with the corresponding average of 58 British clubs affords a measure of the relative golfing ability of the two countries. A detailed analysis of the indices would be necessary to demonstrate fully the unsuitability of the material as a measure of comparative currency values, but two points may be illustrated.

The material for the indices in both countries includes an item for rubber. Neither country produces rubber, but both purchase it in the same markets. A comparison of the quotations for rubber prices in the two countries shows that one is generally nearly the same as the other, converted at the ruling rate of exchange. Thus, in using these indices as a means of determining the "equilibrium" exchange rates we are permitting the ruling exchange rate to exercise some influence. If only articles of this character were included in the construction of the index, the conclusion would be reached that the so-called "true" value of the exchange was the ruling value. To what extent the prices of various items occurring in the two indices are already connected through the ruling exchange it is difficult to say, but the mere fact that a number of them are must vitiate the use of the indices for determining the "equilibrium" exchange.

At the other end of the scale there may be articles in which the ruling exchange has no effect on the prices—e.g., bricks. For most of the commodities on which the indices are based, however, the ruling exchange will have some influence on the relative prices in the two countries, though it may be remote. An illustration of this type of article is afforded by the case of hides. Each country has a native supply and each country draws upon supplies from various parts of the world. The following figures (compiled from data in *The Leather World*) compare the indices of native hide prices in the two countries (and also in France and Germany) at the end of August last and the end of March:—

	United Kingdom.	United States.	France.	Germany.
End of August...	100	100	100	100
End of March ...	98	62	50	70

The rate of exchange required to give parity between the United Kingdom and United States indices is 3.07 dollars to the pound, while the figure in the case of the United Kingdom and France is 62 francs to the pound. It would take too much space to give the full reasons for the marked disparity between the movements in this country and in the others, but one of them—which is probably generally applicable—is that the question of "time lag" is much more important now than previously. The prices will tend to get on a parity at the ruling rate of exchange, but the process of doing so is now very sluggish.

If the use of data relating to certain articles employed in the indices leads to a figure of about 3.80 dollars to the pound and the use of others leads to a figure of 3.07, while, when all of them are used together, according to Professor Cassel,

[April 16, 1932.]

the figure is 4.35, it would seem that the use of others would lead to a very high figure. In other words, though the average figure may be 4.35, the variations from the average in individual cases may be as much as 30 per cent. This fact alone should cause us to be suspicious of the practical value of the "purchasing power parity" theory.

The selection of a group of articles in the two countries which can be used to form a satisfactory basis for comparing "purchasing power" in the countries is an interesting but difficult task. The more the matter is thought over the more complex it appears, and we are justified in asking that those who publish views as to what the value of sterling *should* be, based on "purchasing power parity," should show how these difficulties can be overcome; if they cannot, the figures they announce have no particular value as a contribution to the discussion of the problem of sterling.—Yours faithfully,

E. C. SNOW.

THE BEET SUGAR SUBSIDY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Nothing has so far transpired as to the intention of the Government in respect of the application for increased assistance made by the home-grown beet industry. The situation thus naturally continues to give much concern to persons dependent on the old sugar-refining industry and its associated and allied trades.

There have appeared in your correspondence columns recently interesting letters showing the extravagance of the sugar beet subsidy, and the wastefulness of encouraging the subsidised factories to produce white sugar to the detriment of the self-supporting refineries. I trust you will permit me, as representing a town which, like London and Liverpool, is closely interested in the refining of both foreign and Dominion and Colonial-grown sugar, to state a few facts on this important subject.

My chief object is to emphasise that, in the event of the Government acceding to the suggestion that the beet factories should receive assistance amounting to 16s. 4d. per cwt., this would have a disastrous effect on the old refineries—quite apart from the enormous loss to the Exchequer which would be involved. In the second subsidy period of the Act, when the assistance was only slightly over the above figure, the quantity of home-grown sugar produced was advancing at the rate of about 100,000 tons per annum, and during the last year it amounted to 420,000 tons. Had the subsidy continued at the same rate, the quantity would no doubt have continued to increase. If, therefore, it is restored to a similar level, it can be expected to advance again.

But that is by no means all. The tonnage of imported raw sugar being worked by the "home-grown" factories is also increasing to a serious extent, and amounted last year to about 240,000 tons. Now, the total consumption of the country is only about 2,000,000 tons, so that, adding the output of subsidised beet to that of imported raw, it will be easily seen what a disastrous percentage of the total consumption would be monopolised by the home-grown factories. Even as it is, the output from Greenock refineries is being restricted owing to this competition. The working of imported sugar in subsidised factories, in many cases built with money guaranteed by the Government, is, as a matter of fact, becoming as great a menace as the production of subsidised beet, and is an injustice which calls urgently for the attention of His Majesty's Government.

There are two staple industries in Greenock—shipbuilding and sugar refining. The shipbuilding industry here is almost at a complete standstill, and, therefore, any serious blow to the remaining industry of sugar refining would be a disaster of great magnitude to the town. Independently of the labour employed directly in sugar refining, there are many auxiliary trades which would be affected. These trades give employment to a large number of people—transport workers, dock labourers, coopers, box makers, tinsmiths, jute bag workers, engineers, copper-smiths, charcoal makers, &c. The annual consumption of coal in the Greenock refineries, when fully employed, amounts to about 150,000 tons, and it is estimated that an additional 30,000 tons are consumed in the allied trades, and for transport purposes.

The Greenock Harbour Trust is almost entirely dependent on the sugar trade for the revenue necessary for the maintenance of its harbours, wharves and other property.

In conclusion, I am pleased to be able to state that, appreciating the parlous condition of the industry, Glasgow, Liverpool and Greenock Chambers of Commerce passed

resolutions expressing concern at the effects which the suggested changes might have on the old-established sugar-refining industry, and suggesting that the matter should receive the Government's most careful attention.—I am, Sir,

Your obedient Servant,

JOHN DRUMMOND, JR.

Provost of Greenock.

Provost's Room,
Municipal Buildings, Greenock.

TO THE EDITOR OF THE ECONOMIST.

SIR,—It is somewhat discouraging to those who are enthusiastic in the cause of economy to find that the sum of £2,400,000 has been allocated for sugar beet subsidy in the 1932 estimates, especially when it is realised that further substantial assistance will reach the sugar beet industry through the medium of duty preferences.

I quite realise that the sugar beet subsidy was given for ten years and is therefore in the nature of a contract which cannot lightly be broken, but there are several ways in which the outpouring of national funds for this pampered industry might, at this period of crisis, be limited and controlled in the public interest.

In the first place, under the Trade Facilities Acts, loans over £2,200,000 in value have been guaranteed to the factory companies. Of this, some £171,180 has already been lost, and more may be in the future. In view, however, of the large profits made by many of the factories it is not unreasonable to suggest that some portion thereof might be allocated to making good these losses of public money.

In the second place, immediate steps ought to be taken to prevent any of the factories carrying their operations on sugar beyond the "raw" stage. To the extent that they do so and carry out refining operations, it only means that for every man they employ another is thrown out of work in one of the self-supporting refineries of Liverpool or London! It is, I believe, satisfactorily proved from experience both in this country and on the Continent that sugar beet factories can operate with equal economy if they cease operations at the raw sugar stage. To allow them to proceed farther produces grossly unfair competition between subsidised and non-subsidised undertakings, all at the taxpayers' expense.

Assistance to the sugar beet industry in this country now amounts to 12s. a cwt. on an article worth 6s. in world markets, i.e., the equivalent of a 200 per cent. *ad valorem* protection! If wheat growers were asking for the same rate of protection under the Wheat Quota Bill they would have to demand a guaranteed price of nearly 90s. per cwt.!

Finally, the sugar subsidy scheme, as at present arranged, seems to be superfluous now that the National Government is embarking on a policy of wholesale protection for agriculture, and Imperial Preference. If it were wisely controlled, our farmers would be able to concentrate on other crops at less expense to the taxpayer; our Colonies, which can produce sugar three or four times cheaper than we can in this country, would be able to offer useful markets for our manufactured goods in return for the consequent encouragement of their sugar production; whilst our refineries could work with far greater efficiency with their output increased by the elimination of redundant refining in subsidised sugar beet factories.—

Yours faithfully,

A. ENGLAND,

Ex-M.P., Heywood and Radcliffe Division.

Cannon Street,
Manchester.

TO THE EDITOR OF THE ECONOMIST.

SIR,—After the interesting correspondence which has appeared in your columns on the sugar-beet "ramp," it will be interesting to see what action is taken by the Chancellor of the Exchequer in regard to this matter in his forthcoming Budget.

At the present time the sugar duties give protection to the British sugar-beet industry equivalent to about 100 per cent. *ad valorem*. This is in addition to the subsidy, and the two together give a protection of about 200 per cent., or 12s. per cwt., as against the preference of only 3s. 9d. which we accord to our sugar-producing Colonies! Although the latter can produce sugar far more cheaply than we can in this country, such a weighting of the scales in favour of home-produced sugar damages their market very seriously.

Again, the present detailed arrangement of the sugar duties gives direct encouragement to sugar-beet factories, not only to produce "white" sugar as opposed to "raw" from British beet, but to import foreign raws for refining purposes during the "off" seasons. This has led to grossly unfair competition with the non-subsidised refineries on whose large throughput

April 16, 1932.]

THE ECONOMIST.

and consequent efficiency the consumer is vitally dependent for cheap sugar supplies.

Here are two points which clearly call for attention in the Budget that is to be opened on April 19th.—Yours, etc.,
Taunton. "TAXPAYER."

March 22nd.

RAILWAYS AND ROADS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Lord Strathspey assumes, in his letter in your issue of March 19th, that road vehicles reduce the total cost of transport. As a matter of fact, they increase it, just as I should increase the real cost of business statistics if I were a millionaire and foolish enough to start a rival to the *Economist*, offering the same kind of information. All the costs of transport in any country have to be paid by the people of that country; therefore when, as in England, we have the roads congested with heavy vehicles while railway trains are running half empty, the cost of transport is needlessly high.

It is very convenient for the spokesmen of the road concerns to lump all motor taxation together, as they obtain a nice large total. But if they had to give the amounts paid by the heavy vehicles—lorries, tractors, coaches and omnibuses—the result would be very different. These heavy vehicles cost the ratepayer from £40 to £50 millions a year directly, not to mention indirect costs; I doubt if they pay as much as £20 millions, even with the petrol duty, which is not paid if they are driven by steam, heavy oil, town gas, or electricity. I am not sure that motor owners can claim the yield of the petrol duty as their contribution to road costs; if they do, the vehicles driven by any other motive power ought to pay an equivalent either in licence duty or in a mileage tax. Does the brewer claim that the yield of the beer duty shall be used to increase the amenities of the public-house?

Industry has little to gain from road transport except the convenience of door-to-door conveyance, which is worth paying for. What the heavy industries want is lower railway rates. Road competition, by skimming the cream off the railway traffics, is more likely to raise railway rates.—Yours, etc.,

J. E. ALLEN.

2 St. Peter's Terrace, Cambridge.

March 21, 1932.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Lord Strathspey, in giving figures in the Road v. Rail controversy, overlooks the fact that the alleged injustice lies against commercial and public service vehicles, those taxed on h.p. being really outside the controversy. The private owners' sympathies must really lie more on the side of the railways, since he supplies a disproportionate amount of funds for the damage caused by him to the roads, in order to make them more dangerous for him by the introduction thereon of what are rapidly tending to become motor trains.

For the year 1930 the yield from motor vehicles taxation was £27 millions, but excluding £13.2 millions levied on the h.p. category it will be found that amounts paid were as follows:—

£9.2 millions for goods, agricultural vans, lorries and tractors;

£3 millions for motor hackney vehicles;

omitting the lesser amounts for cycles, invalid carriages, showmen's vehicles, motor ploughs, agricultural tractors, general and limited trade licences, since these can hardly enter into the controversy.

In regard to motor hackney vehicles, if the analysis of figures published in the Motor Transport Year Book be considered it will be found that there has been a pronounced shift from small capacity to the larger kind, obviously more detrimental both to the road surface as well as interests of the h.p. category.

	1927.	1930.
Seating capacity up to 32	87,242	88,605
" " 32 " 64	8,275	12,464
" " Over 64	9	58

In considering the petrol tax, it should be borne in mind that a large portion of this is not only borne by the h.p. category but also by aeroplanes, so it is hardly accurate to include this figure in respect of costs which the chief competitors of the railways have to bear.

The private motorist is probably as anxious to see a weeding-out of his formidable road rivals as the railways, for it is bad enough for a 7 h.p. to be forced into the ditch by a 64-seater as well as seeing his taxation made an excuse for multiplying his juggernaut rivals.—Yours, etc.,

The Stock Exchange.

STOCK EXCHANGE OUTLOOK.

THERE is only one part of the London Stock Exchange to-day in which business is freely and actively transacted—the gilt-edged market. In some respects this market has reverted to its position of twelve months ago, as if the departure from the gold standard and the threatened financial breakdown of Central and South-Eastern Europe were disagreeable episodes which could now be forgotten. We may recall that a year ago money was becoming cheap, Bank rate being 3 per cent. and the market rate for three months' bills 2½ per cent. The Budget of April, 1931, though it failed to restore the credit of the Government or to improve the national finances, opened the way for a striking advance in British Government funds merely by avoiding a further increase in direct taxation. Thus, the gilt-edged market a year ago advanced to a yield basis, approximately, of 4½ per cent. for British Government funds until the financial crisis abroad and at home began to upset confidence in sterling.

To-day, the market is again enjoying the benefit of cheap money, in spite of alarms and excursions abroad. The "disgrace" of the departure from gold has been lived down, the Budget has been balanced, the credit of the Government has been restored, and the protection of a depreciated exchange (not to mention a new tariff system) has suggested that the international account is by way of being balanced. Thus, although the financial crisis in Europe is worse than it was a year ago, although the postponement of the Reparations Conference to June has merely allowed conditions to deteriorate in the Central and South-Eastern States, an opinion is gaining ground which, in its highest terms, is expressed in the circular of a stockbroking firm: "This country will not have to wait upon the settlement of the Reparations problem and the European financial crisis before experiencing the full effects of the cheap money phase. Bank rate will be reduced again, and interest rates will be lowered further to first-class borrowers independently of conditions on the Continent." In short, a substantial part of the market believes that the pressure of cheap money will exert its full force—that Bank rate will fall to 2½ per cent. and the yield of Government stocks will be driven down below 4 per cent.

The market, as always, tends to swing between extremes of optimism and pessimism, and some of the hopes of its more sanguine supporters may not be completely realised. Nevertheless, the movement has undoubted vitality. The warning hint of the Chancellor of the Exchequer that the heavy burdens of direct taxpayers may have to be borne for another year—in other words, that 6d. may not come off the income tax—has had no appreciable effect upon quotations. The following figures, for which we are indebted to the Actuaries Investment Index, show the extent of the recent recovery in British Government and Home Corporation stocks:—

GILT-EDGED STOCKS.

	Price Index (December 31, 1928 = 100).				Average Yields (%).			
	Mar. 31, 1931.	June 30, 1931.	Dec. 29, 1931.	Feb. 23, 1932.	Mar. 31, 1931.	June 30, 1931.	Dec. 29, 1931.	Mar. 23, 1932.
British Government	102.0	108.4	92.9	99.1	107.9	4.42	4.16	4.85
Home Corporations	101.9	105.9	93.4	97.3	103.9	4.60	4.43	5.01

In view of the probability of a conversion operation, 5 per cent. War Loan has participated only slightly in the general advance. It is expected that the Chancellor may have something to say regarding a conversion offer in his Budget speech, but one section of opinion on the Stock Exchange, at least, declares that a waiting policy will advantage the Government—that the longer conversion is postponed, the cheaper the cost of refunding. For

all practical purposes, however, the 5 per cent. War Loan is now regarded in the market as a short-dated security. As such, incidentally, it has attracted appreciable foreign buying.

Whether activity, based upon short-term monetary prospects, should extend to every stock quoted in the gilt-edged list is more than doubtful. India stocks may have been entitled to benefit as a result of the improved financial position of the India Government—assisted by the outflow of hoarded gold—but the advance in Australian and New Zealand Government stocks from a 6½ per cent. to a 5½ per cent. yield basis appears to have been somewhat rapid. Budgetary equilibrium in these countries depends not merely upon the will of their Governments to balance expenditure with revenue, but also on economic factors such as the prices of primary products vital to their economy. Further, the Commonwealth Government has obtained judicial endorsement of its Financial Agreement Enforcement Act, but has not been able to supersede the obstreperous Premier of New South Wales. The following prices of representative Indian, Australian and New Zealand stocks given in the Actuaries' Index suggest that some of these stocks may recently have been carried forward by the momentum of British Government issues:—

DOMINION GOVERNMENT STOCKS.

	Prices (Dec. 31, 1928 = 100).		Gross Yield Per Cent. (allowing for Redemption).	
	Dec. 31, 1931.	April 13, 1932.	Dec. 31, 1931.	April 13, 1932.
Australia 5% 1945/75	90	90	6.57	5.51
Canada 4% 1940/60	81½	93	5.23	4.60
India 3½%	50	56½	7.05	5.25
New Zealand 4½% 1943/58	83	90½	6.36	5.23
South Africa 4% 1943/63	77	87	5.69	4.80

The favourable outlook for gilt-edged stocks is shared by all utility and industrial fixed-interest stocks of irreproachable security. Opinions may differ, of course, as to the meaning of the latter term. It is significant, however, that whereas in last year's period of cheap money, prices of industrial debentures and preference shares showed no appreciable rise because the industrial future of the country was held to be in jeopardy, the investor is now tending, rightly or wrongly, to regard the depreciation of the £ and the new tariff system as protective forces for British industrial earnings. The prior charges of the leading industrial companies have thus begun to react to the influences of cheap money. In its broader aspects, the upward movement of fixed-interest securities of various degrees of intrinsic security may be seen in the representative groups recorded in the Actuaries' Investment Index as follows:—

DEBENTURE AND PREFERENCE STOCKS.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

TICKET.	SETTLING DAYS.	ACCOUNT.
April 19.		April 21.

THE week was colourless, gilt-edged stocks alone showing firmness. The revealed divergence of American and French views on armaments was not a bull point for European stocks, Danubian issues, in particular, being irregular. The gilt-edged market, having expected no change in Bank rate, was not disappointed with the Bank's decision. Little interest was shown in industrials, despite the slight fillip given by the March overseas trade figures. More speculative stocks reflected the somewhat harder tone of commodity prices, and the tendency of Paris, from time to time, cautiously to "nibble" at her favourites. Generally, however, a subdued tone obtained, which was not inappropriate to a pre-Budget week in a period of wide uncertainty.

Steady investment demand caused rises throughout the gilt-edged list, not excluding War Loan. Treasury bonds were firm. India loans strengthened in sympathy. Australians were inclined to sag, but the scrip of the New Zealand Loan steadily rose towards par. Other recent issues maintained a premium, and although nearly three-fourths of the Agricultural Mortgage issue was taken by underwriters, a premium of 1½ was established.

Argentine bonds showed more resistance than had been expected to selling on the first exaggerated news of volcanic damage, and made good recovery on more reassuring reports. Despite President Hindenburg's majority, German bonds were sold at the outset on the increase in the Hitler poll, but subsequently became harder. South-Eastern European issues remained depressed. Sino-Japanese stocks were better despite the continuance of an anomalous situation.

Home rails hardened at first, but were sold on the publication of traffic figures which made disappointing comparison with Bank Holiday week last year. Prior charges were easier, but retained much of their recent rise. The sensitivity of the market for Argentine rails was illustrated by the sharp decline in quotations on the first news of volcanic disturbances, but subsequent official statements induced a mild recovery.

Though the volume of dealings in industrial shares was broadly maintained, conditions were irregular. A speculative movement arose in iron and steel shares on inspired statements of a forthcoming tariff, but lacked vitality and speedily expired. Electrical supply shares were steady, but Associated Electrical Industries were sharply marked down on a disappointing dividend. General Electric were lower in sympathy, but, looking cheap, recovered. Brewery shares were supported on prospects of Budget concessions, despite the depressing consumption figures. Kreuger and Toll and Swedish Match reached new low levels. The latest developments are recorded in an Investment Note on page 863. Cables and Wireless tended again to lose ground, the market awaiting the report with a certain impatience. Imperial Chemical were unchanged on the not over-informative speech of the chairman, which is summarised on page 865. Textiles remained dull. Tobacco shares were easier on scattered selling. Unilever were firm on the results for 1931 (set out on page 863), which the market, though unable fully to explain, considered particularly satisfactory. Quotations for insurance showed a tendency to recede, and overseas banking shares were heavy, Anglo-South American especially suffering a sharp decline.

The rubber share market showed symptoms of being oversold. Though intermittent liquidation continued, a small volume of inquiries gave quotations a steadier appearance, until unsatisfactory American consumption figures forced prices down. Dull and uninteresting conditions ruled in the tea share market at the outset, but a mild speculative inquiry was received later, inspired by optimism concerning a possible duty on imports of Dutch teas in next week's Budget. The leading oil shares were firmer, anticipated selling from Paris and Amsterdam failing to mature.

(Continued on page 862.)

Outside the range of gilt-edged and selected fixed-interest securities, however, the outlook for Stock Exchange markets is, to say the least, gloomy. The foreign bond market has gone from bad to worse. The situation of some Central and South-Eastern European countries is regarded as desperate and the prospects of international trade obscure. There is a widespread tendency, therefore, to write down an increasing number of bonds practically to "default" levels.

Finally, in the equity share markets, international countries have been unfavourably affected by liquidation from the Continent following the Kreuger collapse, the persistent weakness of the New York Stock Exchange, and the renewed fall in gold commodity prices. The position of British industrial equity shares is more complex. The expectation of a 33½ per cent. tariff on iron and steel imports caused a ripple on the surface of the iron and steel share market last weekend. It remains to be seen, however, whether the industries of this country will be able to show better results this year, or even to maintain last year's results if there is no rise in the internal price level. Companies depending on export trade can obviously expect no real revival as long as the volume of international trade continues to shrink under the blight of exchange restrictions, tariffs and falling commodity prices. No must it be forgotten that the new tariff system of Great Britain will reduce the purchasing power of the countries which formerly depended on their export trade to Great Britain.

The course of the equity share markets can be followed from the following table, based on the Actuaries' Index:—

INDUSTRIAL ORDINARY SHARES.

	Price Indexes (Dec. 31, 1928 = 100.)			Average Yields (%).		
	Apr. 7, 1931.	Dec. 29, 1931.	Apr. 5, 1932.	Apr. 7, 1931.	Dec. 29, 1931.	Apr. 5, 1932.
Coal	64.5	64.6	60.6	6.48	4.45	4.61
Cotton	46.5	42.3	44.4	5.86	3.36	2.99
Electric light and power	97.3	90.8	97.4	5.08	5.46	5.00
Gas	98.9	94.2	102.8	6.21	6.51	5.85

INDUSTRIALS (ALL CLASSES COMBINED)*	59.7	49.3	52.5	6.88	6.94	5.48

* 132 stocks and shares.

It is a significant fact that dividend yields are lower, to-day, in many groups, than they were twelve months ago. In other words, prices have not fallen so as fully to discount dividend reductions. Shareholders would appear, therefore, to be taking an optimistic long view of British industrial recovery. Whether they are justified time will show.

The wide "spread" of industrial share yields is symptomatic of an obscure situation, which is scarcely likely to clear until international factors can be more closely appreciated. Purely national causes, like cheap money, may favourably determine the immediate outlook for gilt-edged stocks, but cheap money is itself a consequence of trade stagnation. The success of Great Britain's efforts to put her financial house in order has attracted, and is attracting, appreciable amounts of foreign money to these shores, some of which is swelling the upward movement in the highest grade fixed-interest stocks. But this, again, is as much a portent of distrust of other currencies as a tribute to sterling. There have been minor price rises in British industrial ordinary shares in recent months, but they have invariably been halted after a very few days. Hope and propaganda, both powerful market agents in normal times, are to-day able, occasionally, to start movements in equities, but not to sustain them. In any case, the yield on British industrials is already lower than on the majority of ordinary shares in other countries. For the present, therefore, it may be surmised that market interest will continue to be focussed rather on the best fixed-interest stocks, whose status is beyond cavil.

LONDON ACTIVE SECURITY PRICES AND YIELDS.

NOTE.—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

(Continued from page 859.)

Business showed a slight expansion in the mining share market after a quiet start. Demand for gold mining shares came from London rather than Paris or Johannesburg. The reports of the Anglo-American group of companies (dealt with on page 867) were generally satisfactory, the announcement of an increase of capital having no depressing effect on Brakpan. Though actual recoveries in metal prices were too small perceptibly to change share quotations, both tin and copper shares had a firmer tone. The London Tin report was no worse than had been expected, and the shares remained firm on bear closing. The position regarding tin "control" is discussed on page 866.

FOREIGN STOCK EXCHANGES. NEW YORK.

Uncertainty remained the main constituent in market psychology. The Senate inquiry into short selling was unexpectedly suspended after Mr Richard Whitney, the president of the New York Stock Exchange, had given evidence. Accordingly, the covering movement in the market, which had been particularly in evidence over the week-end, was not continued, prices again turning downwards. The worst showing was made by stocks like Standard Oil of New Jersey, in respect of which the banks were reported to be forcing heavy selling from collateral loans. Railroad shares remained weak, Atchison declining further, while Union Pacific were sold on bad figures for the winter wheat crop. Utility issues showed somewhat greater resistance, despite further rumours and counter-rumours regarding the "Insull" companies, plans for the readjustment of which were later understood to be making progress. The announcement was expected, before week-end, of the names of members of an association, under official auspices, to protect foreign bondholders, in view of the

growing list of defaults, actual and prospective. A conference of Federal Reserve Governors at Washington was reported to have agreed on more vigorous "open market" operations, involving the buying of \$75 millions in place of \$25 millions of Government bonds each week. Steel production was put at 21 per cent. of capacity, against 22 per cent. The Bethlehem Steel chairman, at the annual meeting, stated the company's intention to pay the usual preferred dividends. General trade showed no change for the better. Car loadings for the week ended April 2nd were 544,982, against 561,139 for the preceding week, 728,511 for the corresponding week last year, and an average of 922,089 for the same week over the seven years 1924-30.

PARIS.

Although conditions throughout the week remained unsettled, bear covering for the mid-monthly account checked the crumbling tendency of prices. Rentes were dull. Kreuger issues continued on offer. Later quotations were favourably affected by the rise in wheat, and Bank of France led a general improvement, though the volume of business remained small. On Thursday the better tone was maintained, with further buying of bank shares and

	Apr. 7, 1932.	Apr. 12, 1932.	Apr. 14, 1932.		Apr. 7, 1932.	Apr. 12, 1932.	Apr. 14, 1932.

					94	94	98

BERLIN.

The Bourse was quiet and dull on the "official" reopening, quotations being adversely affected by the increase in Herr Hitler's presidential vote. Electrical, chemical and mining share quotations were all marked lower. Reichsbank was also adversely affected. A.K.U. resisted selling pressure, but Bemberg gave ground. The tone improved in mid-week, hopes being expressed of a further cut in the Reichsbank discount rate in view of continued easy money conditions.

	Apr. 7, 1932.	Apr. 12, 1932.	Apr. 14, 1932.		Apr. 7, 1932.	Apr. 12, 1932.	Apr. 14, 1932.

AMSTERDAM.

The market was overshadowed by news of the suspension of payments by Scheurleer en Zohnen, an important private bank. Irregular conditions, later, however, made way for a more cheerful tone, as a result of firmer commodity prices. Philips Lamps recovered 9 points. Unilever 3 and Royal Dutch 6. Amsterdam Trading and Amsterdam Rubber showed similar improvement.

	Apr. 7, 1932.	Apr. 12, 1932.	Apr. 14, 1932.		Apr. 7, 1932.	Apr. 12, 1932.	Apr. 14, 1932.

OTHER CENTRES.

The absence of any definite tendency in the main centres was reflected in irregular conditions on most of the minor European bourses. Milan opened briskly, but fell away in mid-week. Brussels recovered slightly after a weak opening. Quotations were dull in Frankfurt despite the resumption of "official" quotations on Tuesday. Stockholm remained dull and inactive.

INVESTMENT NOTES.

Further Kreuger Developments.—The further disclosures of the Kreuger débâcle, which were made at the annual meeting of the Skandinaviska Kreditaktiebolaget, are discussed elsewhere in this issue. Meanwhile, a receivership has been requested for the International Match Corporation by a holder of stocks and bonds on the charge that the Corporation has incurred a loss of \$250 millions, and the Irving Trust Company has been appointed receiver in equity. There is a possibility that an action may be brought against Skandinaviska Kreditaktiebolaget with a view to the recovery of \$50 millions belonging to the International Match Corporation, which were pledged to the bank as a collateral for loans. It is significant that the Skandinaviska Bank has declared that it holds among its collateral in Kreuger loans a block of shares of the British Match Company. This suggests that the Swedish Match Company is heavily involved in the foreign commitments which Mr Kreuger made, for the British Match Company shares were held in the portfolio of Swedish Match. It is expected that there may be many legal disputes regarding the ownership of the securities deposited with the various banks as collateral for Kreuger loans. A sensational story has been circulated to the effect that the Ericsson and International Telephone deal was cancelled some time ago on the discovery by New York bankers that the Ericsson accounts had misrepresented the true position. The International Telephone has issued a statement to the effect that it has not yet parted with any of its shares to Ericsson Telephone. The market is anxiously awaiting the official report of the Investigating Committee

in Stockholm so that the circulation of these highly complicated and alarming reports may be stopped. Meanwhile, the protective committees formed in London and New York are busy obtaining from stockholders the deposit of their securities. The secretary of the London Committee has obtained an official statement from the Stockholm body that, under Swedish law, ownership of shares in Kreuger and Toll and Swedish Match does not involve shareholders in liability for the debts of those companies.

Scottish Investment Trust Results.—The latest batch of investment trust company reports comes from Scotland, and the same marked distinction is noticeable as in the case of the English companies between the results of the pre-war and those of the post-war companies. So heavy is the depreciation in the investments of the post-war companies that after allowing for the repayment of debentures and prior capital the break-up value of the ordinary stocks is a minus quantity. Yet all these ordinary stocks are earning dividends and are fairly valued as dividend-earners in the Edinburgh and Glasgow markets. The following table gives the book and market values respectively of the investment portfolios, the percentage depreciation, the percentage of ordinary capital covered by the assets at break-up value, and the market valuation of the ordinary stocks of seven Scottish companies (whose accounts were closed for the most part on January 3rd last):—

	Date Formation.	Book Value.	Market Value.	Depreciation.	Per cent. of Ord. Capital covered by Assets.*	Market Price Ord. Stk.
Pre-War Companies.		£'000.	£'000.	%	%	
Alliance Trust	1888	10,917	9,733	10.8	22½-6	505
Caledonian Trust	1910	2,362	2,069	12.4	78-6	240
Edinburgh Investment	1889	1,962	1,503	23.4	78-6	180
Scottish Western	1907	2,745	Not stated	Unknown surplus	410-0	315
Post-War Companies.						
Second Caledonian	1927	1,072	682	36.4	Nil	125
Scottish Eastern	1924	1,361	920	32.4	Nil	71½
Third Scottish Western	1926	1,546	989	36.0	Nil	130

* Investments shown at break-up value without taking into account surplus of current assets over current liabilities.

The depreciation shown in the portfolios of these post-war Scottish companies is greater in extent than that of the London post-war companies whose reports we last examined, but we venture no comment on this fact. The next table shows that the earnings available for the ordinary stocks have declined substantially in all cases, although in all but two cases there is a fair margin between earnings and dividends paid:—

	Ordinary Capital.				Div. Yield %
	Earned.		Paid.		
	1930.	1931.	1930.	1931.	
Pre-War Companies.	%	%	%	%	£ s. d.

Third Scottish Western	8.3	7.2	6.0	7.0	5 7 9

* On deferred stock.

The most interesting report, that of the Alliance Trust, Dundee, which is one of the largest in Great Britain, refers to the difficulty experienced in collecting income from mortgages in America. In view, however, of its conservative financial policy in the past, the company has no difficulty in maintaining its dividends at the old rate. The chairman of the Scottish Western is also hopeful that dividends will be maintained this year.

Unilever Accounts.—A year's Unilever accounts are a symphony of which the investor hears only the concluding bars. From Greenland's icy mountains to Africa's sunny fountains its subsidiaries, sub-subsidiaries and sub-sub-subsidiaries extend, and all that shareholders can

conclude from the published reports is that trading profits have been satisfactorily maintained, but losses have been suffered on raw material holdings, particularly on whale oil:—

	Unilever, Ltd. 1930.	Unilever, Ltd. 1931.	Unilever, N.V. 1930.	Unilever, N.V. 1931.

* Sterling. † Gold.

The group's stocks have been made over to two new "raw material companies." Stocks whose market value has depreciated since their purchase have been taken from the raw materials companies at cost price when consumed. It is felt, however, that "circumstances are now such as to make it prudent" to create reserves against depreciation in whale oil stocks. Hence the setting aside of £350,000 by Unilever, Limited, and Fl. 13½ millions by Unilever N.V. As regards other materials, the problem has solved itself, since early this year a point was reached where their book value was lower than their replacement value. The formation of the new raw materials subsidiaries vitiates comparisons between the values of stocks carried, but the summary of the main subsidiaries given with the Unilever report shows that a marked fall has taken place in every instance. Lever Brothers, which showed an advance of 3 per cent. in net profits at £5,903,498, carried stocks valued at £719,224 at the end of last year, against £1,421,867 twelve months earlier. Jurgens, Limited, whose declared net profits of £296,271 showed a decline of 21 per cent., carried stocks totalling £107,472, against £265,639. Van den Berghs, Limited, whose net profits at £463,126 were practically unchanged, appears to have made over an even larger proportion of its stocks to the raw material company, the balance-sheet figure being only £67,539, against £621,390. Of the main Dutch subsidiaries, N.V. Anton Jurgens' profits showed a decline of 4 per cent. at Fl. 14,228,455; N.V. Van den Berghs' earnings were only 1 per cent. down at Fl. 6,019,893, and N.V. Hollandsche Vereeniging tot Exploitatie Van Margarine declared profits of Fl. 3,639,281—approximately 18 per cent. below the 1930 figure. The group investments of these main subsidiaries show very little change. Their current finances, so far as the accounts show, are rather more liquid than a year ago, the total cash items of the three British subsidiaries being £1,795,417, against £1,581,665, and of the three Dutch concerns Fl. 6,238,635, against Fl. 4,701,844. Cash held by Unilever, Limited, has increased from £259,736 to £1,227,571, and by Unilever, N.V., from Fl. 5,441,383 to Fl. 15,927,066. On the whole, the accounts suggest a creditable maintenance of the group's trading and financial position in a period of difficult external conditions.

Hudson's Bay Company.—The accounts to January 31st last show a loss on trading of £465,906, against £761,744 in the previous year. Their main interest, however, is their testimony to the energy with which the present board have prosecuted their task of reorganisation. Following an extended visit of the Governor to North America last autumn, a strong Canadian committee has been entrusted with powers of general administrative operation on the spot. The London board retains control of policy and finance, but has divested itself of the impossible task of endeavouring to hold all the threads in its hands. The financial position has been further cleaned up. Nine months ago some £476,921 was provided against the value of interests in subsidiary and

associated companies, and £296,960 allocated to buildings depreciation account to lighten the amortisation charge in future years. This year a further £199,588 is allocated to the latter account, £69,325 is written off shares in subsidiaries and associates, and £62,873 off store buildings. A total debit of £778,303 is eliminated by a transfer from share premiums account, which now stands at £2,313,715, against £4,476,672. The origin of this account was the issue of some £1,492,224 of £1 shares at premiums of 50s. to 70s. at various dates between 1926 and 1929. Subscribers to these issues have thus played an opportune, if involuntary, part. Without the working capital they provided, it is difficult to see how the company could have weathered the storm without extensive capital reorganisation and onerous outside borrowing. During last year alone net current assets were reduced from £1,526,232 to £893,799. From now on, the company will increasingly reap the fruits of internal reform, but profits and dividends are contingent on a change in Canadian economic conditions. A short wheat crop is now being marketed at low prices. Fur prices have declined further, vindicating the company's previous determination not to accumulate large unsold stocks. Store operations are being limited, and no adequate profit is to be expected for some time on a capital expenditure which, in some cases, was excessive. The land department remains depressed, and oppressed by uneconomic incidence of taxation. Cash receipts for land sales were £45,487 last year (against £97,770 in 1930-31), but taxation was as much as £124,149. The directors' detailed *exposé* should confirm the confidence of proprietors in their new broom.

Agricultural Mortgage Corporation.—The latest offer by this corporation is dealt with in our "Capital Issues" column. The corporation was registered in November, 1928, under influential auspices, to make loans on first mortgages or agricultural or farming lands. During the year ended March 31st last interest received totalled £504,669, against £436,018. Some £429,510 was paid in debenture interest, etc., against £396,838. The dividend on the 650,000 £1 shares, which are held by the Bank of England and other banks, is again 2½ per cent.:—

Year to March 31.	1930.	1931.	1932.
Interest received	£188,964	£436,018	£504,669

§ Special reserve.
|| Written off issue expenses.

Mortgage loans completed up to March 31, 1932, totalled £8,817,469, the security consisting of mortgages of 595,038 acres of agricultural land with the necessary farmhouses and buildings, valued at £13,978,630. Additional loans of £653,275 have been approved by the directors, subject to completion of the necessary formalities. Reductions totalling £176,843 were made in the principal amount of loans during the year, of which £53,332 was in respect of capital repayments as provided in the mortgage deeds and £123,511 was accepted in special reductions and repayments approved by the directors.

Allied Newspapers.—The results of the "Berry" group of companies show a decline in gross profits for 1931 of a little over 9 per cent.—from £687,221 to £624,095, which is considerably less than might have been expected in view of the effects of economic depression on advertising and other "staple" newspaper revenues. Net profit is £410,910, against £495,220, and is equal to over 8 per cent. on the ordinary shares. The directors, however, are conserving cash resources and have passed the dividend:—

	Year 1929.	1930.	1931.
Profit	£654,367	£687,221	£624,095
Income tax	...	150,000	175,000

Paid %	10	2½	Nil
General reserve	110,000	120,000	100,000
Carry forward	177,861	215,081	236,241

A further allocation of £100,000 brings reserve to £800,000. Losses have been sustained in centres where competition "has been of an abnormal character," but the trading of the subsidiaries owned by Allied Northern Newspapers "has been on the whole of a satisfactory character." "Abnormal" competition—i.e., the provincial newspaper "war"—has now ended. Every trading subsidiary of Allied Northern Newspapers is now earning profits, and the holding company this year will show a surplus. The directors, therefore, consider the moment opportune for funding the loans of the Northern Company, incurred in connection with its newspaper acquisitions. Allied Newspapers 8 per cent. cumulative preference shareholders are therefore to be asked to agree to the creation and issue of £2,000,000 6½ per cent. cumulative preference shares, ranking in front of their own. In other words, they are asked to relinquish their prior rights over the first £130,000 of the Allied Company's future annual profits. The *quid pro quo* offered them is relief from the risk that the company may be called upon to discharge some of the Allied Northern loans, which it has guaranteed, and may find it necessary to retain profits for the purpose. Detailed evidence should be furnished at the meeting as to the Northern company's ability to earn future profits commensurate with the requirements of the new shares.

Imperial Chemical Meeting.—At Thursday's Imperial Chemical Industries meeting, Sir Harry McGowan, for the most part, confined his lengthy discussion of the company's development and prospects to somewhat general terms. The policy of concentration of manufacture had, he declared, resulted in the closing down of certain plants. After the adjustments mentioned in the report (see the *Economist* of April 2nd last, page 747) the total reserves for central obsolescence and depreciation covered over 16 per cent. of the book value of land, buildings, plant and machinery, and 27 per cent. of the plant and machinery alone. Marketable and other investments (standing at £9,540,677) mainly represented investments in large industrial companies with which Imperial Chemical had trade connections, including General Motors, Du Pont, Allied Chemical, International Nickel, I. G. Farben industries, and Joseph Lucas in this country. Discussing the benefits of rationalisation, Sir Harry referred to international agreements, concluded or attempted, as regards dyes, nitrogen, and coal oil. If the results of the last three months were maintained, trading in 1932 would be somewhat better than in 1931.

Ford Meeting.—The cautionary note sounded in our leading article last week was emphasised by Sir Percival Perry at the annual meeting on April 8th. Sir Percival declared that sales of Fordson tractors had fallen by 60 per cent. throughout the world, though in Britain sales had increased in 1931 by 20 per cent. The Ford Motor Company during 1931 sold more than one-third of the new commercial vehicles registered in Great Britain and Ireland and 41.6 per cent. of the "light delivery" vehicles, with a carrying capacity under two tons. The new 8-h.p. car had had a good reception. The associated companies in Europe had been adversely affected by the "economic blizzard." Ford S.A.F. Asnières would show profits exceeding 12½ per cent., but substantial losses had been incurred by the Cologne concern. In most other countries profits, though reduced, were substantial. The policy of conserving these profits had emanated from Mr Henry Ford himself. Sir Percival's comments on the immediate prospects in view of international depression, tariffs and exchange difficulties, were naturally restrained, but the Ford organisation appears to be well equipped to take advantage of better times, whenever they arrive.

Whitbread.—The accounts of Whitbread suggest that the company has had a most successful year. The dividend is maintained at 14 per cent.

Year ended December 31.	1929.	1930.	1931.
Net profit	£314,585	£303,133	£302,483
Brought forward	243,437	213,964	72,799*
Preference dividend	43,407	43,407	43,407
No. of times covered	7.2	6.9	6.9
Ordinary dividend:—			
Amount	153,660	143,416	143,416
Paid %	15%	14%	14%
To reserve	146,991†	100,000	100,000
Amount transferred to Superann. Fund	...	...	157,475
Carried forward	213,964	230,274	88,459

* After transferring £157,475 to Superannuation Fund. † Also £91,500 to Property Reserve from net profit on sale of properties in 1928 and 1929.

The superannuation fund, in operation since 1925, has been extended to include all members of the staff. The company has guaranteed the payment of a capital sum of £275,475 by fifteen equal annual instalments, which, as far as possible, will be met by the issue of an equivalent amount of "C" debenture stock created for the purpose. The cash position of the company is satisfactory, liquid assets being well in excess of current liabilities. No losses have been sustained by any of the subsidiary companies.

London County Freehold.—Clarity in company accounts is a virtue which investors are not prone to underestimate. The accounts of the London County Freehold and Leasehold Properties, Limited, might well serve as a model to many other concerns by reason of their logical arrangement, wealth of detail and celerity of presentation. For example, loans and mortgages are duly shown on the "liabilities" side of the balance sheet, but are not taken into the total, being deducted, instead, from the value of properties on the "assets" side, so that the shareholder may see at a glance the net value of the company's "equities in properties." The company's income has been well maintained, a slight reduction in the rent roll (which totalled £835,091), being largely offset by increased rentals on reletting and income from additional purchases. The net income for the year, at £217,218, represents over 13 per cent. on the total share capital, and a dividend of 11 per cent., less tax, is paid. The assets of the company (including subsidiaries) aggregate £5,611,096, and the liabilities, £3,083,658. At 28s. 9d. the £1 ordinary shares yield £7 13s. per cent.

Greyhound Racing Companies.—Although the shares of greyhound racing companies have remained outside the orbit of many conservative investors since the melancholy collapse of numerous "boom" flotations, the survivors of that grim period have now succeeded in establishing their business, on the whole, on a stable profit-earning basis. The results of five such companies, for the last three years, are shown in the table below. Their aggregate profits increased by nearly 14 per cent. in 1930 and by over 24 per cent. in 1931. In 1929 only one company paid an ordinary dividend, but all made distributions in respect of last year:—

Name of Company	1929		1930		1931	
	Net Profit.	Ord. Div.	Net Profit.	Ord. Div.	Net Profit.	Ord. Div.
Clapton Stadium	£ 57,736	30	£ 47,398	40	£ 61,035	47½
Scottish Greyhound Racing	Dr. 551	Nil	5,309*	Nil	25,191	100†
Wembley Stadium	31,526	Nil	37,381	17½	28,566	17½
West Ham Stadium	15,343	Nil	14,611	10†	24,128	25†
Greyhound Racing Association Trust	87,519	10	113,128	10	131,867	10

* October 1, 1929, to December 31, 1930. † Deferred.

The companies' reports suggest that while severe competition obtains in certain centres, greyhound racing (in association, frequently, with motor-cycle racing) is maintaining, and even slightly increasing, a regular clientele. The increase in earnings of the Greyhound Racing Association Trust, which controls the operation of tracks in a number of urban centres, are a fair measure of the "industry's" progress.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper Ltd.,"
8, Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

March, 1932	<i>Dr. 3,250</i>	9,508	380	Nil	6,638

Net encashments of National Savings Certificates in March totalled £3,250,000, the highest figure for some time. Renewed activity was displayed in the market for high-grade issues. The Port of London Authority offered £2,000,000 of 5 per cent. inscribed stock at 101½ and the London and Home Counties Joint Electricity Authority £1,500,000 of stock on approximately the same terms. Poole Corporation issued £750,000 5 per cent. stock at 100½, of which some £341,000 was for conversion. Two successful offers were made by London railway companies, one by the Metropolitan District of £1,500,000 5 per cent. at 97½ and one by the Metropolitan of £2,000,000 on the same terms for a shorter period. Lever Bros. were responsible for a conversion issue of £3,440,000, and the Port of Calcutta offered £1,075,000 5½ per cent. debentures by way of a Stock Exchange introduction.

MINING NOTES.

Tin Developments.—In an investment note in the *Economist* of April 2nd, we referred to the report that at the next meeting of the International Tin Committee, to be held in London, on April 22nd, a further cut in production of 8,420 tons a year, corresponding with one month's production, would be considered in order to keep pace with the falling-off in world consumption. This further cut would bring world production down to about 101,000 tons. It is understood that unofficial meetings have been taking place between certain members of the Tin Committee and the Tin Pool in London with a view to the formation of a large marketing combine which might have important consequences for the London Metal Exchange. Whether some organisation in the manner of Copper Exporters Inc. is to be created for the tin industry—to finance tin at the producing points, that is, before it enters the smelters—is a matter of guesswork. As the total visible supply is now about 60,000 tons (including carry-over in the Straits Settlements), the organisation of any such finance export corporation would be a formidable undertaking. Short of some marketing organisation, the members of the Tin Pool, it is thought, might decide to increase their holdings above 21,000 tons, now that the price has slumped further to £103 15s. per ton. No doubt the Tin Pool may feel that with an uncertain currency policy it is unwise to add to their commitments, for with every rise in the gold value of the £, the sterling price of tin will fall. Actually the price has now fallen below its gold parity largely through liquidation by Paris speculators who had "bulled" tin on the supposition that inflation in Great

Britain was a certainty. It may be added that the tin held by the British-American Tin Corporation has now been taken over by Tin Holdings, Limited, while the other assets of the corporation have been acquired by the British Tin Investment Corporation. The fact that the directors of the British Tin Investment Corporation include Mr O. G. V. Hoare, of New Consolidated Gold Fields, Mr O. Lyttelton, of the British Metal Corporation, Mr J. H. C. E. Howeson, of the London Tin Corporation, and Mr C. V. Stephens, of Southern Malayan Tin Dredging, suggest that the powerful interests on the Metal Exchange are working in harmony with the Anglo-Oriental Mining Corporation and that the latter has made peace with its rivals.

Union Corporation.—Our mining correspondent writes: Having regard to the conditions which prevailed during the period, the accounts for 1931 make a fairly good showing. Indeed, the operating profit, at £286,800, exceeds the previous year's total by £12,000; but by reason of the provision of £30,000 for income tax—a charge which did not appear in the 1930 statement—the net profit comes out at £229,100, in place of £248,900. Of the former amount, £100,000 is placed to reserve, and after the payment of 2s. 6d. per share, the somewhat enhanced balance of £114,000 remains to go forward. In respect of 1930, the dividends totalled 3s. 3d. per share, of which 1s. 3d. was disbursed as interim. On the present occasion a noteworthy departure is made in the declaration of the dividend in sterling. Holders in South Africa will receive the equivalent in Union currency at the rate of exchange ruling on the day the dividend is payable. The transfer to reserve just mentioned has been made partly as provision against exchange differences, which may arise by reason of the application without adjustment of the London sterling price of securities with respect to Union of South Africa currency, in cases which it is below cost and where the London price is the only one available. The holdings in question, it is stated, represent in market value less than one-fifth of the total. As a whole the investments at current market prices "show a very substantial surplus over the amount at which they stand in the balance sheet." The principal items are contrasted below:—

	1930.	1931.
Shares, debentures, &c.	£ 2,057,150	£ 1,822,800
Temporary advances (secured)	291,140	411,950
Government, &c., securities ...	243,600	184,800
Cash	1,435,040	1,133,180

Contingent liabilities in the shape of uncalled capital, etc., are somewhat less than twelve months ago at £467,800. Last year the corporation's large interest in the San Francisco Mines was unproductive, and owing to the continuance of low metal prices, work was suspended at the end of December. The diminishing returns from the Modder Deep are by way of being replaced from the holding in the East Geduld, which "should enter the dividend-paying stage this year." Following the acquisition of an important interest in Grootvlei, the Union Corporation has taken preliminary measures to test the farm Vlakfontein. The No. 21, which lies south-east of the Daggafontein. The Corporation's industrial interests have naturally felt the effects of the prevailing depression. In their report the directors devote attention to the production and distribution of gold during recent years, arguing that the restoration of international trade is only possible by the re-establishment of a stable international monetary system.

Anglo-American Group Results.—Two of the Witwatersrand subsidiaries of this important group last year established records in several respects. With the Springs Mines the expansion in earnings was translated into dividends, the total being 7s. 9d. per share, as against 7s. 6d. for 1930, 7s. 3d. for 1929, and 6s. 9d. for 1928. The crushing of an increased tonnage was accompanied by improvement in average revenue and reduction in expenses, giving an operating surplus of £831,900, or 19s. 9d. per ton, compared with £791,700, or 18s. 11d. per ton previously. To some extent the saving in the cost ratio is attributable to

the treatment of development ore from the Daggafontein, which has been opened up from the Springs Company's workings. The Union Government's share of the profits amounted to £154,500, or 18.4 per cent. of the total. A moderate expansion in the ore reserve tonnage has been accompanied by a small decline in value. For the current year results at least as good as those of 1931 are anticipated by the consulting engineers. With the Brakpan the treatment of a substantially larger tonnage at a slightly reduced cost average was almost counterbalanced by the sharp fall in grade, the working surplus of £553,100 showing little change. The cut in the dividend rate from 8s. 9d. to 8s. per share is chiefly accounted for by the appropriation of £17,200 for capital expenditure, although the carry-forward is added to instead of being drawn upon as in the two preceding years. The trifling decrease in the ore reserve tonnage is explained by reduction in the stoping width. The consulting engineers emphasise that a record development footage was performed last year, and that a large programme is contemplated for the current session, particularly in the Western section, upon which reliance will fall to be placed in an increasing degree. Nervousness regarding the outlook will be alleviated by the acquisition of the adjoining Witbank property. To provide the purchase price of £200,000 a small share issue is apparently intended. The progressive decline in development values at the West Springs found reflection last year in a cut in the dividend rate from 2s. to 1s. 6d. per share, but £103,850 is carried forward, as against £88,440 brought in. Once again the profits were insufficient for the Government's percentage to come into effect. "The disclosures made in the Western, Southern and South-Western districts of the mine continued to be disappointing." In these circumstances much importance attaches to the outcome of further work in a section where two boreholes have given encouraging indications. With the Daggafontein, last year was a notable period as the last before the commencement of crushing. The subscription of additional shares (at a premium) raised the issued capital to £1,608,800. On December 31st the net cash assets amounted to £23,560—a modest margin. This company's entry into the production stage is notable for the fact that a profit of £6,000 was reported for the second month, followed by £14,500 in respect of March—the latter from the treatment of 36,000 tons. The capacity of the present plant is 50,000 tons per month minimum, and an increase is envisaged.

Globe and Phoenix.—Our mining correspondent writes: The enhancement in the profits of the last three months of 1931, consequent upon Southern Rhodesia's departure from the gold standard, naturally aroused hopes of an increase in the dividend total for the year. In the event not only is there no supplementary distribution, but the usual date has passed without any interim announcement on account of the current year. At £171,000 the earnings of 1931 show an expansion of £44,500 compared with those of the preceding period. But taxation now absorbs £45,250, in place of £22,350, while the allocation to depreciation is £48,000 against only £6,400. Thus, after repetition of the dividend total of 40 per cent., tax free, the balance forward is somewhat down at £34,900. The utilisation of the bulk of the increase in earnings in the manner indicated is due to the necessity of replacing the power plant. Action in this respect was prudently delayed until developments proved it to be warranted. It is estimated that the savings to be effected will redeem the cost of the plant in three years. At 124,000 tons the ore reserve total is 14,800 tons above that of twelve months ago, the value being about ½ dwt. lower at 24½ dwt. The consulting engineer sums up the development position by stating that the ground in the north end of the mine has been well explored, although the possibilities of finding more ore in this direction are not completely exhausted; in the south end of the mine there are still large areas to be explored and developed. The absence of any interim dividend may be explained by certain legal proceedings—to which no reference is made in the report. The 5s. shares are quoted on the Stock Exchange at around 14s. 6d.

Rezende.—A satisfactory feature in the position of this Rhodesian enterprise is the comparatively small extent of the shrinkage in the ore reserves. Development continued to be attended with negative results; but actual stoping last year proved the ore bodies to carry payable values over greater widths than reckoned upon, while of the ore crushed 17,600 tons came from pillars and old workings. Hence, despite the extraction from the mine of 88,300 tons, the ore reserves are only 21,000 tons down at 159,000 tons. Continuation of anything like these conditions would give the mine a life substantially in excess of the two years indicated by the reserves. The earnings of 1931 were swollen by £5,000 from bullion reserve, and at the same time costs were lowered, the profit coming out at £72,600, as against £64,000. As for each of the three preceding periods, the dividends totalled 5s. per share, the par value of which has meantime been reduced by the return of 2s. 6d. The options on the neighbouring Reliance and Monarch properties have been abandoned, results not proving encouraging enough to warrant further outlay. In their place, a small participation has been taken in an alluvial gold dredging venture in Portuguese East Africa, a mineral reservation has been secured in the same territory, and an option over a gold mine in Rhodesia. The balance sheet shows net cash assets £113,700, against an issued capital of £131,250.

St. John del Rey.—Last year the management of this veteran property took advantage of the gold premium to treat ore of lower grade than would otherwise have been profitable. Hence, although the availability of an ample supply of labour permitted the crushing of an increased tonnage, the gold yield was 7,700 ozs. down at 115,500 ozs. With the premium, however, the value was £16,300 up at £541,500. The working costs being reduced, the net profit came out at £142,300, as against £124,400. From the latter the fortunate shareholders received a "centenary bonus" of 6d. per share, making a total of 2s. 6d. The final dividend for 1931 of 1s. 3d. brings the amount up to 2s., £60,000 being transferred to capital works account, £20,000 more than on the previous occasion. It may be noted that the Brazilian exchange last year averaged only 3,932d. per milreis, instead of 5,386d. during 1930. The performance of an increased amount of development work was attended with satisfactory results, except in one of the outside properties. In the principal mine (the Morro Velho) the ore reserves, at 1,552,300 tons, show an increase of 244,100 tons on the year, although they include only material payable with gold at par. Altogether there would seem to be no reason for those who hold shares to part with their interest.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Bank of Athens, United Kingdom Provident Institution, Norwich Union Fire Insurance Society, Norwich Union Life Insurance Society, Telephone Properties, Associated Portland Cement Manufacturers, Imperial Chemical Industries, London County Freehold and Leasehold Properties, British Enka Artificial Silk, Paquin, Rio Tinto, and Ooregum Gold Mining of India. At the annual meeting of Associated Portland Cement, Mr Malcolm Stewart outlined the events leading up to the purchase by the company of the "Red Triangle" group. The purchase had involved an alteration of the working agreement with British Portland Cement, which allocated the percentage of the aggregate deliveries each company was entitled to make, and provided compensation for under-deliveries. The agreement, which had been in operation for twelve years and had worked without a hitch, had abolished overlapping of selling effort, increased economy in administration and provided for each company its fair proportion of profit from the aggregate tonnage delivered. Referring to other aspects of rationalisation, the chairman said the company's total cost of production had fallen by 28 per cent. in the last seven years, while the

cost of raw materials had remained virtually constant. The average net selling price, however, had fallen by 36 per cent., the margin of profit per ton in 1931 being approximately half that of 1925. At the annual meeting of London County Freehold and Leasehold, the chairman stated that the great majority of flat rentals averaged less than £200 a year, 1,393 producing under £100 a year, and 2,276 under £200 a year. The company was, therefore, in a favourable position to supply the demand for reasonably rented flat premises. At the Bank of Athens meeting the chairman said that the slump in raw materials and agricultural products had particularly affected the tobacco and currant industries. Greece was experiencing considerable difficulty in selling her crops.

CAPITAL ISSUES.

This week's new issues comprise two offers of trustee stock and two industrial debenture issues. The issue of the *Agricultural Mortgage Corporation, Ltd.*, was left as to 73 per cent. with underwriters. The Corporation, whose results are dealt with in a Note on page 864, is regarded as having made a satisfactory start with its useful work, and the absorption of the whole of the present issue by the permanent investor may be looked for in the very near future. The *County Borough of West Bromwich* issue is the cheapest corporation offer, from the borrower's point of view, for some time, the borough having taken full advantage of the recent rise in gilt-edged prices. More than half the proceeds are to be used to repay short-term loans. The total rate in the borough is 15s. in the £. The offer for sale of 5½ per cent. mortgage debenture stock of *Slaters and Bodega, Ltd.*, made at par by the British Shareholders Trust (who purchased at 96, paying underwriting commission and other expenses), was covered 3½ times by net assets and approximately the same number of times by profits in an old-established and progressive business. The offer by *Meccano, Ltd.*, of 6 per cent. first mortgage debenture stock at 97½ was of more speculative character, as the yield indicates. Profits have been affected by economic depression, but past finance has been conservative, and the debenture stock is reasonably well secured.

Public Offers.

Agricultural Mortgage Corporation.—Issue of £2,000,000 4½ per cent. debenture stock, 1961-91, at £95 per cent. The stock is a trustee investment. The corporation was formed in pursuance of the Agricultural Credits Act, 1928, principally for the purposes of making loans on first mortgages of agricultural or farming estates and of making loans in accordance with the Improvement of Land Acts. The company has carried on business since January 14, 1929. The principal assets of the company consist of the mortgages held by the company in respect of loans made by it, and the guarantee fund, paid to the company by the Minister of Agriculture, which now amounts to £650,000, and has to be invested in British Government securities. Interest received in 1931-2 amounted to £504,669, and in 1930-31 to £436,018. Debenture interest required £425,000 in 1931-2 and £381,250 in 1930-31. The stock will be redeemed over the years 1941-91 by the operation of a cumulative sinking fund of 11s. 3d. per cent. per annum. Any stock not previously redeemed will be repaid at par on December 1, 1991, but the company reserve the power to redeem at par on any interest date on or after December 1, 1961, on three months' notice.

County Borough of West Bromwich.—Issue of £650,000 West Bromwich Corporation 4½ per cent. redeemable stock, 1955-65, at £99½ per cent. Trustees are authorised to invest in this stock. The issue will be redeemable at par on October 1, 1965, unless previously cancelled by purchase or agreement, but the corporation will have the option of redemption, in whole or part, at any time on or after October 1, 1955, on three months' notice. The rateable value of the borough is £308,043, and a rate of one penny in the £ will produce £1,220. Of the proceeds of the issue, £395,796 will be applied to the repayment of existing short-term loans and the remainder to development purposes.

Slaters and Bodega.—Offer for sale of £350,000 5½ per cent. mortgage debenture stock at £100 per cent., secured by a trust deed constituting a first specific mortgage on 23 freehold and two long leasehold properties, and a floating charge on the balance of the company's assets. The company have the right to redeem the 5½ per cent. stock on April 1, 1953, or any subsequent interest date, at 105 per cent., on six months' notice. The business of Slaters was founded in 1828 and was amalgamated with the Bodega Company in 1928. Net profits, after charging interest on the £100,000 4½ per cent. first mortgage debenture stock outstanding, but before charging income tax and interest on loans, amounted to £69,712 (adjusted for 12 months) in 1929, £83,093 in 1930, and £86,011 in 1931. Interest on the present issue requires £19,250. The proceeds will be applied to paying off the bank overdraft and developing the company.

Meccano.—Issue of £200,000 6 per cent. first mortgage debenture stock at £97½ per cent. The stock will be secured by trust deed and will be redeemed by means of a cumulative sinking fund of 1 per cent. per annum, commencing April 1, 1932, and operating by annual drawings at 100 per cent. or by purchase or otherwise at or under 100 per cent. Any stock not previously redeemed will be repaid on April 1, 1960, at 100 per cent. The company was converted into a public company on March 12, 1932, and carried on the business of manufacture, distribution and sale of Meccano outfits. The object of the issue is to repay a bank overdraft, against which £175,000 of first mortgage debentures have been issued. These debentures will be cancelled. Net profits, after depreciation, but before charging income tax and interest, totalled £86,153 in 1929, £50,514 in 1930, and £52,141 in 1931. These figures do not include profits and/or losses of subsidiaries, which conjointly have made substantial profits over the period 1927-31.

Great Yarmouth Water Works.—Issue by tender of £40,000 5 per cent. perpetual debenture stock, minimum price £102 per £100, yielding at that price £4 18s. per cent. The net revenue of the company for the year ended March 25, 1931, was £27,272. Interest on debenture stock, including the present issue, amounts to £4,708, so that it is more than five times covered.

Stock Exchange "Introductions."

Gateshead Corporation.—Particulars of an issue of £350,000 4½ per cent. redeemable stock, 1952-62, to be redeemed at par on May 1, 1932, the Corporation to retain the option of redeeming in whole or part at any time on or after May 1, 1952, on six months' notice. The stock is a trustee security. The proceeds will be applied to local development purposes and to the repayment of debt. The stock has been sold to J. and A. Scrimgeour at £99 per cent., less ½ per cent. commission. It is secured on the Corporation funds and revenues and ranks *pari passu* with all other loans of the Corporation.

BORAX CONSOLIDATED, LTD.—The directors have decided to postpone the consideration of payment of the dividend on the preferred ordinary shares until the accounts for the full financial year terminating September 30th next are available.

COMPANY MEETINGS, &c.

IMPERIAL CHEMICAL INDUSTRIES, LIMITED.

PROGRESS WITH RATIONALISATION AND CENTRALISATION.

STRONG FINANCIAL POSITION.

TARIFF PROSPECTS AND POSSIBILITIES.

SIR HARRY MCGOWAN'S REVIEW.

The fifth annual general meeting of Imperial Chemical Industries, Limited, was held, on the 14th instant, at Central Hall, Westminster, London, S.W.

Sir Harry McGowan, K.B.E. (the chairman) said that the year's trading of Imperial Chemical Industries had exceeded expectations. That the company had been able to show a gross income before depreciation of only £461,072 less than in 1930 was ground for real satisfaction.

The expression "gross profit for the year" hitherto used in the profit and loss account had been altered so as to describe the profit and loss account of income and to make it clearer that the company's sources of income were paid before providing dividends of the principal subsidiaries were paid before providing for their depreciation of buildings and plant. The central obsolescence and depreciation fund existed for that purpose. The total disposable income for the year amounted to £5,322,168, out of which, after appropriations for central obsolescence and income tax, £4,061,773 was left for dividend purposes. Payment of the preference and ordinary dividends amounted to £3,544,948, leaving a carry-forward of £516,825, which was £136,658 less than in the year previously. It was felt that that small encroachment was justified. The amount placed to central obsolescence—£1,000,000—was double that so allocated last year, since it was essential to have a strong obsolescence fund in order continually to keep pace with the improvements in plant and machinery brought about by the advance of knowledge.

PROFIT AND LOSS ACCOUNT.

The only comment he wished to make on the profit and loss account was that the income for the year contained nothing of an exceptional nature, and related solely to the year's operations. It included neither profit arising from the sale of investments, nor any transfers from reserve funds accumulated in past years, and it was arrived at after making full provision for the reduced value of all stocks of materials, stores and finished products.

As in previous years, the dividends from the wholly-owned subsidiary companies represented their full profits, subject to the statement under the Companies Act, 1929, printed at the end of the annual report.

The directors' report for 1931 gave the shareholders particulars of the movements of the volume of trade during that year as regarded their principal products. No other explanation of the decreases was needed than the general condition of world affairs, of which the daily Press provided ample detail. No industrial enterprise to-day, however wide its ramifications, however skilful its management, or however efficient its staff and workers, could hope completely to escape from the over-riding effects of the semi-paralysis of international trade, the chaos of monetary conditions and the unrelenting pressure of a continuous fall in prices.

BALANCE SHEET.

The balance sheet showed that £1,837,596 had been written off the shares and debentures in and advances to subsidiary companies. The company had adhered to their policy of concentrating manufacture where most advantageous, and had closed down certain plants. That did not lead to a reduction in earning power but tended to increase it. As a result of inquiry at Billingham it had been decided to write off a number of specific items which in the light of improved methods did not justify the value at which they stood in the books. To provide for that writing down £2,000,000 had been taken from general reserve, which was thereby reduced to £10,725,000, central obsolescence fund being increased from £4,500,000 to £5,662,404. Nothing had been added to the general reserve out of the year's profits because a year of extreme depression was not the time to increase reserves which were already powerful.

They had continued the policy of 1930 of carrying their marketable and other investments at their book value. A time of world financial crisis defied any attempt to decide what was a reasonable normal value of an investment. The note on the balance sheet stated that, at December 31, 1931, the market or computed value of their marketable and other investments showed a depreciation of £3,346,565 on book value. That represented a fall in value during 1931 of £623,200. When conditions were more stable, it might be

necessary to review the book value of that asset. In the meantime, even on the lower values of to-day the general reserve amply covered the depreciation.

The shares and debentures in and advances to subsidiary companies, shown in the balance sheet at £69,264,978, represented in the main the company's holdings in the eight manufacturing groups referred to in the report, namely, alkali, general chemical, explosives, fertiliser and synthetic products, dyestuffs, leathercloth, lime and metals. The shares and debentures in associated companies standing in the balance sheet at £6,522,062 represented in the main their investments in African Explosives and Industries, Limited, Canadian Industries, Limited, and a number of smaller Dominion and foreign companies engaged in industrial activities cognate to their own. The marketable and other investments, standing at £9,540,677, represented investments in large industrial companies with which they had, directly or indirectly, trade connections. The main items were investments in the General Motors Corporation, Du Pont and Company and the Allied Chemical Company in the United States, the International Nickel Company in Canada, the I.G. Farbenindustrie in Germany, and Joseph Lucas and Sons in this country.

The only other item on the balance sheet upon which he need comment was the amount of cash at bankers and in hand. It showed an increase over the amount at the end of 1930 of £1,294,524, and now stood at £4,222,900. They had, therefore, ample liquid resources for a long time to come.

THE CHANGE IN FISCAL POLICY.

He was naturally gratified at the change in the fiscal policy of the country. There would be difficulties to be overcome and some temporary uncertainty as to the readjustments of trade which would follow the change. Imperial Chemical Industries were in an advantageous position for two reasons. First, most of their raw materials were home produced. Secondly, they stood to be little affected by retaliatory measures.

He believed that the new trade opportunities presented by a tariff could only be utilised satisfactorily through more closely-knit industrial entities, welding into one body existing competitive units. Imperial Chemical Industries was to-day regarded in many countries as the British prototype of large-scale business, but doubts had recently been expressed about the soundness and permanence of such concerns. Those sprang from a few striking failures. It was an elementary fallacy to assume that what was true in one or two instances must be true in general. Specific failures did not invalidate the soundness of a principle. Imperial Chemical Industries was as free as it could be made from the defects which elsewhere had led to trouble. To begin with, members of the company's board had been freed from definite executive duties so as to be able to give attention to new problems as they arose. They were daily in touch with one another. Their policy was hammered out in candid discussion.

ORGANISATION OF SUBSIDIARIES.

Their principal subsidiary companies in the United Kingdom were organised in eight groups, the names of which were given in the annual report. Every group contained a number of separate companies, the products of which were cognate to each other. For all purposes of control and administration they treated the companies that formed one group as a unit. The statutory board of each of those companies was the parent company, viz., Imperial Chemical Industries, so that there was a uniform legal controlling authority vested in their own board. That method of control ensured harmonious working and co-ordinated direction over the whole wide field of the company's activities. Group or company inter-competition was avoided, there was no conflict of authority, and wasteful duplication was eliminated. Each group had a subordinate board, which was in reality the group executive, consisting entirely of members of their staff, some attached to the companies within the group, and the remainder to head office; none of the company's directors acted in that capacity. All technical, commercial, financial and administrative problems, concerning one group were therefore studied in the first place, as affecting one

entity, although in putting decisions into effect they naturally complied with any obligations arising out of the separate legal existence of each company.

The necessary co-ordinating link between himself and his full-time colleagues on their general purposes committee and the various group executives was provided by an intermediate body which the directors called the central administration committee. It was composed of the group chairmen and a number of their headquarters senior officers, and was presided over by one of his colleagues. Through that machinery they secured both devolution of responsibility and a free channel of communication from the factories right up to the chairman and the board. Devolution encouraged decision and self-reliance. Free communication permitted of orderly reference on points of policy and rapid execution of decision.

Some people asked whether so large an organisation could be efficiently managed without losing elasticity and initiative. The company's system fostered and preserved those qualities. Apart from new policies and activities instituted by their own board, much of their management lay in harmonising the impulses for action which continually welled up from below. Their ideal was a thoroughly dovetailed executive staff, well balanced, self-supporting, with a clearly defined policy, so that its full power should not be impaired or even shaken by the loss of any one individual.

INTERNAL ECONOMIES.

This scheme of control had been used for the continuous study of internal economies, in which the centralised service departments at Millbank had played a large part. The company had steadily aimed at concentrating manufacture by fresh capital expenditure at the most appropriate point as well as by the transference of business. Some factories also had been sold, some demolished and some held for fresh developments. That physical rationalisation was not yet complete.

On the side of financial rationalisation the company had early achieved a large measure of uniformity, but much remained to be done in eliminating disadvantages arising from the separate existence of different companies. Steps were being gradually taken to reduce the number of those, one of which was the registration last week of the Imperial Chemical Industries (Explosives), Limited. Companies which had already been dispensed with had been liquidated after their assets and business had been transferred elsewhere in the group. The liquidation of an Imperial Chemical Industries company was not due to failure. He wanted to make that clear. Liquidation of any of their subsidiary companies represented not a tale of disaster but a mark of progress in the work of financial rationalisation. In the future there would be more of them, but care would be taken to see that the goodwill of their names should be preserved.

The administrative policy had to be thanked for the progress made in wage and salary adjustments, which had been achieved without friction. The fact that wage reductions were accepted in a spirit of good will was a tribute both to the workers and to the company's labour policy. In addition to economies so effected, the most careful scrutiny had been made of every class of expenditure and all outlays not judged sufficiently remunerative or promising eliminated.

NEW PRODUCTS.

The fruits of a policy of rationalised production and research were to be found in their new products. They were now manufacturing some fifty dyestuffs hitherto not manufactured in this country and had improved the quality of many others. Research in the dyestuffs laboratories had also been applied to rubber accelerators, anti-oxidants, softeners, &c. They had successfully co-operated with other concerns in the search for a British-made celluloid for safety glass.

Rapid progress was also taking place in Dulux "new process" paints and varnishes, which could be used when nitro-cellulose was not suitable. The range of low freezing blasting explosives had been extended by the introduction of more powerful compositions. Special types of black powder, one for slate blasting and one for rifle ammunition of the high velocity type, had been effected in long-range target competition, which had greatly increased accuracy in their competitive trials. That had also materially improved their competitive position. They had placed on the market a solid carbon dioxide refrigerant, developed at Billingham, and sold under the name of Drikold. It would, they believed, play a large part in enabling perishable foodstuffs to be marketed in perfect condition. It had, in addition, other important industrial applications. To develop their mineral resources at Billingham, a range of new building materials based on anhydrite was now being placed on the market. He might add that the production at Billingham of general chemicals, to which he had referred last year, namely, concentrated compound fertilisers, methanol, nitric acid, acetic acid, etc., had shown substantial progress during 1931.

INTERNATIONAL AGREEMENTS.

In some respects the purposes of tariffs and international agreements were in conflict. Unassisted as they had been in the past by tariffs, he and his colleagues had been convinced believers in the long-range wisdom of international agreements as instruments of world rationalisation of industry. Co-operation, they had always found, was better in the long run than competitive warfare.

In pursuance of that policy they had recently concluded an agreement, following protracted negotiations, with the Continental manufacturers of dyestuffs. For some years arrangements had existed between French, German and Swiss makers under which they co-operated with one another and marketed their products in an orderly manner. He was inclined to think that for some time the British dye industry had been regarded as not having proved its permanence. The agreement entered into with Continental dyestuffs manufacturers was an assurance that the British dye industry had proved its permanence. It would strengthen the international position of the industry. They had also participated in another international agreement which unfortunately was of but short duration. The International Nitrogen Convention had, during its short life, done much to assist in orderly marketing apart from its substantial contribution towards regulating production to consumption, but negotiations last summer for the continuance of the Convention had unfortunately broken down.

On the other hand, the formation of the International Hydrogenation Patents Company, in April last, was a far-sighted piece of action to avoid conflict or waste in the future world industrial development of the great scientific achievement of the production of oil from coal.

The necessity of co-operating with manufacturers in the British Dominions overseas had always been recognised by Imperial Chemical Industries. The ideas to be developed at Ottawa had long animated the company's actions, so that to-day most of their practical ends had been achieved. In Australasia, Imperial Chemical Industries of Australia and New Zealand, Limited, in Canada, Canadian Industries, Limited, in South Africa African Explosives and Industries, Limited, each had factories on the spot. The imperial character of their work had met with the sympathy of the respective governments. Though none had escaped the ravages of 1931, the fact that each company should have been able to yield rates of return almost equal to those of 1930 was a fine tribute to their soundness and initiative. There need be no fears for their future. In other overseas markets, Imperial Chemical Industries were following the same policy of close and friendly liaison with the principal makers of the same class of goods, and as world problems were solved, he believed that there would be a satisfactory growth in the trade of the Imperial Chemical Industries selling companies.

BRIGHTER OUTLOOK.

Prophecy was dangerous, but in his view the outlook was brighter than it had been for some time. Great Britain had regained her monetary freedom, so that industry had its future much more in its own hands. Behind the security of a tariff, industries which had not yet been able to organise themselves upon modern lines or talk upon even terms with their foreign competitors, would be able to look forward with more confidence. The sales of Imperial Chemical Industries products at home were so intimately tied to the prosperity of the principal industries that everything which helped them to better their conditions should improve those of Imperial Chemical Industries. So far as the evidence of the early months of 1932 was available, it went to show that British industry was becoming more active. That was a hopeful augury for the year.

The economies which Imperial Chemical Industries had been able to introduce were another encouraging factor. No organisation would be better equipped to grasp any and every opportunity which might present itself. But it must be remembered that Imperial Chemical Industries was a great international organisation. There was not a single country of importance in the world in whose prosperity, directly or indirectly, they were not interested. Even should the reparations problem of the world be solved, there still remained a huge network of international commercial debts unadjusted to the present low prices of goods. Until some broad lines of solution were agreed upon, it was to be feared that the restrictions on international trade would be continued. In so far as that happened, the trade of Imperial Chemical Industries would be affected in some part of the world or another. But it could be said that unless some unforeseen calamity should overtake the world, the results of the company's trading for 1932 should be at least as good as those for 1931. If the first three months were any index, they should be better.

The Chairman moved the adoption of the report and accounts, which was carried.

ASSOCIATED PORTLAND CEMENT MANUFACTURERS, LIMITED.

DIFFICULT TRADING YEAR.

RED TRIANGLE ACQUISITION.

The thirty-third ordinary general meeting of the Associated Portland Cement Manufacturers, Limited, was held, on the 13th instant, at River Plate House, Finsbury Circus, London, E.C., Mr P. Malcolm Stewart, chairman and one of the managing directors of the company, presiding.

Mr J. A. White (the secretary) having read the notice convening the meeting, and Mr H. Crewdson Howard, representing the auditors, Messrs Crewdson, Youatt and Howard, having read the report of his firm,

The Chairman, in the course of his address, gave a full review of the accounts and said: If you will turn to the balance sheet you will observe that the issued preference share capital has been increased by £180,280, raising the total to £2,500,000, and the issued ordinary share capital by £500,000, bringing up the total to £3,500,000. The combined share capitals stand at £6,000,000, both classes being fully issued. The 5 per cent. second debenture stock has also been increased by the sale and issue of £900,000 of stock. These increases in share and loan capital amount in all to £1,580,280, and were effected for the purpose of financing the purchase of the cement and other undertakings of the companies known as the Red Triangle Group.

Turning to the profit and loss account for the year, you will see that the profit on trading, at £668,386, shows an increase of £133,605, whereas the interest and dividends earned, at £355,622, show a reduction of £64,347, due mainly to decreased returns from the companies in which we are interested overseas. I want to make it quite clear that the trading profits benefited because we felt justified last year in making a reduced provision for taxation in view of the ample reserves previously created and that, whilst the profit and loss account has benefited from the inclusion of six months' profits from the new works acquired, our Portland cement trading account on a comparative basis showed a substantially decreased profit compared with 1930. This is due to the lower selling prices realised owing to severe competition.

The loss of profit due to low prices has to a considerable extent been offset by the improved profits earned by our subsidiary manufactures, which we have been nursing for some years; they have furnished an increased proportion of the total profits earned.

SHARE AND DEBENTURE ISSUE EXPENSES.

We have written off the whole of the expenses incurred in connection with the issue of shares and debenture stock, partly from contingencies reserve and partly from profits. I am confident that shareholders will feel gratified to learn that these expenses have been dealt with in the same year as that in which they were incurred, and that future years have been relieved of the burden of providing for them. (Hear, hear.)

The total revenue for the year was £1,024,712, an increase on last year's figure of £69,562, and we are able, after meeting our debenture stock interest and providing £427,655 for depreciation reserves and debenture stock sinking funds, and the payment of the dividend, amounting to £137,500 on the increased 5½ per cent. preference share capital, to recommend to you the payment of a dividend of 8 per cent. on the 3,000,000 ordinary shares issued prior to August, 1931, and 4 per cent. on the 500,000 ordinary shares issued in August, 1931. These dividends absorb £260,000, and there remains a balance of £2,463 to be added to the carry-forward, which will then stand at £163,427.

AN OUTSTANDING EVENT.

The outstanding event of the year was the acquisition of the manufacturing and certain marketing interests of the Red Triangle Group embraced by the Allied Cement Manufacturers, Limited, and its subsidiary companies. On several occasions we had been offered shares which it was stated would give control. These offers were consistently declined. We had definitely made up our minds that, in view of the many knots into which these concerns were tied by an undesirable interlocking of interests, life was not long enough to attempt the task of their unravelling. We were only prepared to become interested if the knots could be cut, and this involved liquidation. The assets of the allied company were of varying value; liquidation alone could give complete freedom to fit them advantageously into our own organisation.

The time came when we made the Receiver, Sir William McIntock, a definite offer for practically the whole of the assets,

provided they were bought in liquidation. This offer was declined; an improved offer, which was made on April 22nd, was accepted subjected to the confirmation of the court. This was given on August 19th. I make this statement so as to place the matter in its true perspective. We paid a fair price for the assets and I am satisfied, given fair trading conditions, we shall turn the purchase to advantage.

THE TRADING POLICY.

During the year under review trading has been carried on under difficulties of a varied character. The aggregate deliveries of Blue Circle Portland cement in all markets were but slightly below those of the previous year. It was inevitable that we should feel the effects of the world crisis and the tonnages exported showed a heavy decrease. On the other hand the deliveries in the home market were expanded, but the selling prices realised were reduced by the keen undercutting of the standard prices which had remained in force although they had not been maintained.

We are not and never have been in favour of high prices, on the contrary we are anxious to increase further the uses of cement by establishing the lowest prices compatible with the maintenance of a sound balance sheet and a fair return to the shareholders, a difficult task in an industry faced continuously with over-production. The policy of factory concentration, embarked on seven years ago, has enabled us to make successive reductions in our costs of manufacture.

Last year the margin of profit earned per ton was approximately one half of that earned in 1925. It goes without saying that we could not have so substantially reduced prices to the consumer and at the same time have earned even the modest dividends paid in the past few years had we not been successful in marketing a much increased tonnage.

PROSPECTS.

You will expect to hear something from me as to the prospects for the current year. To be frank, it is not easy to make a definite forecast, but we know the barometer has risen and, I believe, is still rising.

Although we are faced with considerable uncertainty and have to date felt the effects of the decreased activity in the building industry, I am hopeful that as the year progresses we shall benefit from an increase of wise building which should be encouraged by the remarks of the Prime Minister in a recent speech.

The Chairman concluded by moving the adoption of the report and accounts, and the approval of the dividends paid and recommended to be paid.

Major-General Sir Philip A. M. Nash, K.C.M.G., C.B., the vice-chairman, in seconding the motion, said that, with the acquisition of the manufacturing assets and certain other interests of the Red Triangle Group, it might be said that the company had successfully passed an important milestone in its progress, and he thought the occasion would be incomplete if a well-earned tribute were not paid to Mr Stewart and his fellow managing directors, who not only had had the responsibility for the daily conduct of the affairs of their large undertaking in a year of unusual difficulties, but had also to negotiate the large and important transaction which had involved eventually the taking over of the assets and interests of the Red Triangle Group. The principal burden of the negotiations had fallen on Mr Stewart himself, but it had meant also a great deal of additional work for the other managing directors and their staffs, among whom he felt sure the chairman would like him to mention their old friend, Mr Alfred Stevens. (Applause.) The company was particularly fortunate in the strength of its administrative personnel—an asset which could not be shown in its full value on the face of a balance sheet—and it was also fortunate in possessing a chairman of such outstanding business ability as theirs. (Applause.)

The report and accounts were unanimously adopted.

The Chairman proposed and Mr Alfred Stevens seconded the re-election of the retiring directors, Major-General Sir Philip Nash, K.C.M.G., C.B., the Right Hon. Lord Meston, K.C.S.I., Mr E. C. Charleton, and Mr G. F. Earle, which was carried unanimously, and the auditors, Messrs Crewdson, Youatt and Howard, having been reappointed, a hearty vote of thanks to the chairman, directors and staff, proposed by Mr T. Gilbert Scott, closed the meeting.

NORWICH UNION LIFE INSURANCE SOCIETY.

STRENGTH AND PROGRESS OF THE SOCIETY.

A SAFE AND STABLE INVESTMENT.

The 124th annual general meeting of the Norwich Union Life Insurance Society was held on April 12th at Norwich.

Mr Michael Falcon (the president) said that those who had studied closely the trend of our country's finance during the past decade knew that, instead of a readjustment of major importance on the lines of strict economy, State and municipal extravagance, accompanied by reckless company finance, led up to the crisis which culminated in the closing months of last year. The combined effect was detrimental to all enterprise and thrift. The period of readjustment had again arrived, and the outlook suggested that this time it was being grasped by all right-thinking British people. During the whole decade life assurance had been on the increase in this country, even in a troublous year like 1931.

The reason was that life assurance was recognised as a security superior in stability to all other forms of investment. The progressive figures of the Norwich Union Life Insurance Society demonstrated this, as was shown in the annual report. The net premium income of the life insurance account was £3,492,402, and included £507,180 received by way of new premiums on policies effected during the year. The total exceeded the premiums of the previous year by £188,252. The new life insurance written was £3,249,645, an increase of £216,011, or 2.7 per cent. The insurances in force at the end of the year totalled £99,053,837, and showed an increase on the amount outstanding at the beginning of the year of £6,532,814. The insurance societies were the mediums through which dependants were shielded from want; and for many their endowment policies constituted a valuable, if not the only, provision for those whose earning days were over. The large aggregate premium income, coupled with careful investment and sound economy in management, must and did ensure the stability of the fund from which all benefits to its members were derived.

INVESTMENTS.

The mortality experience for the year worked out at 70 per cent. of the expected. This compared with 61 per cent. in 1930 and an average rate of 65 per cent. over the last five years. The net income from investments amounted to £1,648,563, an increase of £53,466, and showed a net return, after payment of income tax, of £4 17s. 5d., before making provision for depreciation. The movement towards a better condition of affairs in Britain was gradually gathering momentum, but, as depreciation had affected the whole world, it had been thought best to write out of the accounts the depreciation on Stock Exchange securities as at December 31st last at a cost of £1,098,746, even although as much as £600,000 of appreciation had taken place on a re-valuation as at March 31st. The society had £11,600,000 mortgages in and outside the United Kingdom. These were all revised carefully by the directors at the end of December, 1930, and, as showing how satisfactory they were, the interest, dividends and rents outstanding in the balance sheet, amounting to £95,028, had all been received with the exception of £2,300.

STRONG FINANCIAL POSITION.

There was sufficient margin over the valuation of the liabilities to indicate that, after writing off the depreciation, bonuses at the same rates as those declared at the quinquennium could be made out of surplus, retaining all the strength of the 2½ per cent. valuation on the society's whole life and endowment assurance contracts. To make sure of this a valuation of the whole of the society's liabilities was made as at December 31st last, which confirmed the strong financial position in which the society found itself. In arriving at this conclusion no account had been taken of the balance of the favourable exchange over unfavourable exchange, which ran to over £400,000.

The strength of the society was undoubted. The stability and success of a mutual life insurance society must always be based upon carefully selected membership, the sound investment of its funds, economic management, coupled with good interest earnings. It would be abundantly clear that, in the case of the Norwich Union Life, these four factors were undoubtedly present—all proposals made by new entrants were scrupulously supervised by their medical directors; a committee of the board met every week to investigate and deal with new investments. The interest rate, at £4 19s. per cent., after allowing for the write-off, gave a margin of £2 9s. over the valuation rate, and was an important aid in the maintenance of bonuses. Here then they had a combination ensuring the stability of this great office, and, therefore, its policyholders could look forward to the future with the utmost confidence.

The report and accounts were unanimously adopted.

NORWICH UNION FIRE INSURANCE SOCIETY, LIMITED.

PROFITS IN ALL DEPARTMENTS.

The 134th annual meeting of the Norwich Union Fire Insurance Society, Limited, was held, on Monday, April 11, at Norwich.

Mr Michael Falcon (the chairman) said that the operations of the society in 1931 had been carried on under conditions which were certainly the most difficult which any of those present could remember. The fall in value of basic commodities abroad, and the diminution of export trade from home continued, while the financial position in many of the countries where they did business reached a crisis, from which, even at the present time, there was little sign of recovery. He therefore thought he was justified in feeling some pride that the trading operations of the society again showed a profit in all departments, and the volume of business was only slightly diminished.

The fire premium income, at £2,005,679, was almost exactly £70,000 less than in the previous year. The continued trade depression and fall in prices in the United States had caused a further loss of income there, and generally in the overseas field conditions had operated in the same direction, accentuated by the depreciated currency value in Australia, New Zealand and elsewhere, but their English business was maintained at almost exactly the same figure as last year. Losses had been heavier abroad, but the experience at home had been quite good. The profit realised was £68,733, which was 3.43 per cent., as compared with 3.19 per cent. in the previous year, and might be regarded as not unsatisfactory in the existing circumstances.

ACCIDENT AND GENERAL ACCOUNT.

The premium income in the accident and general account was £1,823,362, which was £48,000 less than in 1930, the shrinkage being chiefly accounted for by a diminution in the business of the Norwich Union Indemnity Company, their United States subsidiary. At home they had a very satisfactory increase and the results had been good. The outcome of the whole account was that they were able to transfer £105,652 to profit and loss, which was 5.79 per cent., as against 3.3 per cent. last year.

In the marine account the improvement referred to in the previous two years continued, and they were able to transfer £15,000 to profit and loss after closing the year 1930. This left the marine fund at £200,574, which materially exceeded all expected liabilities, and was 103.32 per cent. of the year's income of £194,124. There was an increase of some £24,000 in the premiums.

The transfers from the revenue account totalled £189,385, and provision had been made for a dividend at the same rate as in the previous year, namely, £6 per share, less income tax. In previous years the position would have been that they would have had a substantial sum either to add to the carry forward, or to dispose of as an addition to their funds. However, this was not the case, as the directors had decided to deal with the investments in the balance sheet by what they believed to be a thoroughly sound method, under which, if conditions did not improve, there would be no leeway to make up, but, if they did, the benefit would be reaped. The directors were accordingly writing off £379,974 as decreased value of investments, and, to enable them to do this, they had transferred the contingency fund of £100,000 and taken £200,000 from the general reserve, their Stock Exchange securities then standing in the balance sheet, as certified by the auditors, at or under market value at December 31st last. It would be realised that there had already been a substantial amount of appreciation since that date, owing to the betterment in quotations.

THE OUTLOOK.

In spite of the difficulties which had surrounded them, the directors had continued to look hopefully to the future. They had established the society in one or two countries in which it had not been previously represented, and had lost no opportunity of strengthening the organisation all round, so that they might not be left behind when the forward movement took place.

Insurance would continue to be a necessity in connection with almost every class of undertaking, both private and commercial. The risks of fire and accident on land and sea would always be with us, and security against their results must be available. British insurance companies were international in their activities, strong financially, and with vast experience, ready and willing to assist in this recovery, and they all looked forward to seeing the Norwich Union well to the fore in the future, as it had been in the past.

The report and accounts were unanimously adopted, and a dividend was declared in respect of the year 1931 of £6 per share, less income tax, payable by equal half-yearly instalments on May 2nd and November 1st next.

BRITISH ENKA ARTIFICIAL SILK COMPANY, LIMITED.

SMALL BUT ENCOURAGING WORKING PROFIT.
CAPACITY OF WORKS INCREASED.

The seventh ordinary general meeting of British Enka Artificial Silk Company, Limited, was held, on the 11th instant, at Winchester House, London, E.C.

Mr C. T. Potts presided, and, in the course of his remarks, said: We made in the past year a small but encouraging working profit. It amounts to £34,546, and compares with a loss of £72,139 in the previous year. The improvement is, therefore, £106,685, a remarkable and interesting turn in our affairs when you bear in mind that it occurred in a year of great depression in trade, at a time when some companies engaged in the industry have shown a falling off in profit and when we had to contend with an average level of selling prices lower than in the preceding year. This substantial progress has been possible through the steady improvement of manufacturing methods and a revision of our marketing organisation.

This moderate working profit is wiped out and converted into a net loss of £78,278 for the year, as a consequence of debenture interest and head office expenses costing £19,226 and provision for plant depreciation and the reserve for unrealised loss on exchange absorbing £95,599. It is of interest to note that we should not have shown any net loss for the year had the general level of prices remained stable at the average of the preceding year.

In the early months of the year we found business rather dull. Then demand began to improve and stocks decreased. With the improving demand, selling prices tended to be slightly harder. On this country abandoning the gold standard in September last, demand increased rapidly, but our plant was already being worked to capacity and our output had been sold in advance.

TRADE CONDITIONS

The trade improvement is confined in the main to the home market. Thus, while yarn production for the first two months of this year was over 70 per cent. higher than for the same period in 1931, exports show a comparative rise of only about 6 per cent. The conditions in the rest of the world are showing no signs of amelioration; indeed, they seem to be getting rather worse than better. We cannot close our eyes to the fact that the position in this country is delicate, for one cannot depend upon a permanent revival in trade unless and until measures are taken internationally to remove the serious obstacles standing in the way of a world industrial revival.

We naturally constantly review our position in the rayon industry. We are the second largest producer of viscose rayon in this country. Nevertheless, our productive capacity is far below that of the biggest yarn manufacturer, and as a consequence we have little or no influence on the fixing of selling prices. In fact, we have to be prepared to market our yarn at whatever level the leaders choose to sell. However, our brands are now well known, and we have had in the past year no difficulty in securing full trade prices. Should the position in this regard at any time become difficult, I am sure we should not attempt to cut prices unless compelled by undue pressure to do so, as we do not believe in creating price instability. It is bad for consumer and producer alike. Naturally, we should like to see higher prices, but we have reason to assume that these will not be raised by those in a position to do so.

COST PROBLEMS.

Our ability to earn profit depends upon price, quality, cost and quantity. Price is in effect fixed for us. Our yarns sell at full prices, and that is sufficient indication as to the quality of our production. There remain the problems of cost and quantity. Now, if we can only produce at a fair competitive cost, price must in the long run show a proper profit margin. Our problem, therefore, is largely one of reduction of cost. Having arrived at what we believe to be the probable production cost of competitors, we are led to the conclusion that the capacity of our works has been somewhat too small to be comfortable under present conditions, where the industry is disposing of its yarn at prices which leave but a small margin even to those best placed to earn profit. We were, therefore, glad of a recent opportunity to purchase a number of spinning machines and other equipment from a company that had gone into liquidation. The plant thus purchased was exceedingly cheap, unused, is the same type as our original installation, and, if anything, it is somewhat more up-to-date in design. The installation of this plant is practically complete, and it is gradually coming into operation. This enlargement, while hardly adequate, should help us in reducing our costs considerably.

In conclusion, I think we can say we have reached the stage where we can claim to be aboard a good ship, and when fair weather comes we shall sail forth, I hope, on a prosperous voyage. (Applause.)

The report and accounts were adopted.

UNITED KINGDOM PROVIDENT INSTITUTION.

LORD REVELSTOKE'S ADDRESS.

A RECORD YEAR.

THE FINANCIAL OUTLOOK.

The annual meeting of the members of the United Kingdom Temperance and General Provident Institution was held, on Wednesday, April 13, at Southern House, Cannon Street Station, London, E.C.

The Right Hon. Lord Revelstoke (chairman of the Institution) presided.

RECORD NEW BUSINESS.

The Chairman, in presenting the report and moving the adoption of the balance sheet, said: Ladies and Gentlemen,—The year 1931 has been a satisfactory one, both in regard to the number and the amount of new assurances effected, and while a large volume of new business is not necessarily a criterion of prosperity, it is undoubted evidence of the efficiency with which our Institution's affairs are being conducted, and is particularly satisfactory when it is borne in mind that this large new business has been secured at a low ratio of expense. The number of new policies issued was 5,343, assuring a net sum of £3,503,351, on which the annual premiums payable amount to £104,293. In respect of each item named, these figures surpass any previously recorded in the history of our Institution.

You will be interested in noting that of the amount paid in claims by death during the year, bonus additions accounted for £183,131, which is 44 per cent. of the sums assured under with-profit policies. In 146 cases the amount payable was more than double the original sum assured, while in 25 cases it was more than two-and-a-half times the original sum assured.

Our working expenses continue to be light; notwithstanding the large volume of new business the ratio of expenses to premium income was only 13.5 per cent., or 8.3 per cent. of our total income.

INVESTMENTS.

You will see in the report before you a reference to the depreciation which took place last year in the market value of our assets. Your Institution has naturally not been exempt from the vicissitudes which have affected all holders of Stock Exchange investments, but you will be glad to know that the depreciation with which we started this year has, to-day, been very materially reduced.

In accordance with the usual practice, no adjustment has been made in our book values, but on December 31, 1932, when our triennial valuation is due to take place, any depreciation which may then exist will, of course, be given its full effect in the balance sheet.

On the results of that valuation, of course, will depend the decision which we shall arrive at in regard to our bonus distribution, and on that head I feel sure that I shall have your approval if I refrain from anything in the nature of an explicit prophecy. Although our domestic outlook may be described as not unpromising, the international situation, about which I shall say a few words presently, contains so many elements of uncertainty that it would be wiser not to attempt any definite forecast.

IMPROVED CONDITIONS.

The Stock Exchange barometer, as you know, was unfavourable to valuations made at the end of last year. Chiefly as a consequence of improved monetary conditions it is, to-day, much more favourable. Bank rate has been lowered; there has been a flow of money into Government securities and a notable demand for first-class investments. Although this movement shows that capital is still timid, it also shows, viewed in conjunction with the balancing of the National Budget and the steady purchasing power of the pound sterling, that confidence in Great Britain is growing. A year ago, speaking in this room, I expressed the opinion that British enterprise and British craftsmanship would triumph, in time, over the difficulties which beset them, and that this country would emerge, perhaps sooner and better equipped than others, from the fiery ordeal which had then lasted ten years. In the interval, we have found ourselves forced to suspend payment in gold equivalents to our short-term creditors, and by so doing it is true that, for the time being, we renounced the financial leadership of the world. But no one has taken our place, and provided we concentrate our aim upon efficiency and can keep our public expenditure under control, there is, to my mind, no reason why this country of ours should not, whenever international trade revives, take the place that belongs to it in the front rank. Subject to these reservations, there is ground for cautious optimism at home.

NECESSITY FOR LOWERING TARIFF WALLS.

The Chairman then proceeded to review the foreign situation, which, he suggested, presented many features of difficulty and distress. Disregard of economic law had involved the whole world in a monetary deadlock which was slowly strangling trade. A solution of the reparations problem was earnestly desired, and the obvious way of bringing this about was by lowering the tariff walls which were obstructing international intercourse. While, in theory, this view was generally accepted, the prevailing nationalism prevented it from being put into practice, and the prolonged halt in trade was subjecting the fabric of capitalism to very severe strain. We could only hope that the statesmen in whose hands the future lay would be able to devise plans, without undue delay, which would bring relief to a suffering world.

The resolution was seconded by Mr E. H. Illingworth, and carried unanimously.

OOREGUM GOLD MINING COMPANY OF INDIA, LIMITED.

CURRENT YEAR'S PROSPECTS.

The ordinary general meeting of the Ooregum Gold Mining Company of India, Limited, was held, on the 13th instant, at Southern House, London, E.C.

The Hon. Lionel Holland (the chairman), in moving the adoption of the report and accounts, said that when they met last year to review the working results of the preceding twelve months, the proved to have been the most disappointing and least profitable in the history of the Ooregum Mine since it first started serious mining operations. He was afraid, he said, that the story he had to put before the shareholders that day showed no improvement upon that of 1930, except in one particular. Their revenue for the twelve months and the profit realised were something better than for 1930, and permitted, besides paying the full fixed dividend upon the preference shares, the distribution of a small dividend on the ordinary share capital. That improvement, however, was due not to any increase in the tonnage mined, nor in the grade of ore treated, but to the company's having enjoyed for the last four months of its financial year a premium upon its gold output—their gold fetching approximately the price gold commanded in London, less insurance and freight charges.

The tonnage mined and crushed—135,095 tons—was less by 8,666 tons than the tonnage crushed in 1930. The ore mined again was of slightly lower grade. The return from the mined ore last year was 49,235 oz. of fine gold—over 4,200 oz. below the 1930 return. The tonnage, however, put through the dump retreatment plant was substantially higher—260,905 tons, over 35,000 more than in 1930—and a return of more than 13,800 oz. from this and other sources reduced to just over 600 oz. the total shrinkage as compared with the previous year. That better results were not obtained was due on the present occasion not so much to less favourable development results as to the lowering of grade and reduction in tonnage following upon the rock bursts from which the property had suffered.

The output of gold realised £285,111, after deducting royalty and refining charges, as compared with £255,622 for 1930. The premium represented over £30,000 of last year's total. They were writing down their mining rights by £8,000, and after satisfying proposed to pay a dividend of 3d. a share on the ordinary shares and 3d. a share, in addition to the fixed dividend, on the preferred shares. The financial position of the company had not been impaired, the readily realisable assets exceeding the liabilities by over £148,000.

The reserves of payable ore now stood at something over 174,000 tons, a drop of 41,453 tons. Development during the year only brought into reserves some 16,000 tons of new ore; and over 12,000 tons of the old reserves had to be written off, as disturbances had rendered these blocks irrecoverable, at any rate for the present. Until the mining position had been re-established, it would not be wise to multiply the stopping areas, and it might be advisable to keep the monthly output during the current year below last year's average; but the company should get the benefit throughout the year, and not only for four months as last year, of the gold premium. While it was probable that the premium on gold would not rule so high as during the final quarter of last year, it was not likely to be extinguished before the termination of the current financial year, and unless the mine suffered from renewed disturbances, or unless the gold premium was much reduced, the coming 12 months should not show worse financial results than those for the year under review.

The report was unanimously adopted.

BANK OF ATHENS.

GREECE AND THE CRISIS.

The directors' report for 1931 may be summarised as follows: The break in World economic stability culminated during the year under review in an unprecedented crisis in all spheres, economic, financial and monetary, and Greece has felt its effects as acutely as any other country.

The slump in raw materials and agricultural products has particularly affected, of course, the tobacco and currant industries, so important to Greece. Crops have been, and are being sold with very great difficulty, possibilities of exporting are declining more and more, and decreased purchasing power reflects itself in the increase of unsold goods held by manufacturers and importers. Purchasing power has also been reduced for very many, because of the very considerable losses due to the depreciation of their sterling holdings.

Such conditions could not but have a serious effect on banking operations, as the changes in the balance sheet as at December 31st last show.

LIQUID CASH POSITION.

The different items of this balance sheet all give testimony to a constant care to maintain a liquid cash position, and the board has given further proof of its wise policy by writing-down the bank's investments (a detailed list of which, as well as of its premises and other properties, together with a statement of its position in foreign currencies, is published with the Report) to London prices of December 31st (with the £ valued at 270 only) or Athens prices of September 18th (since when the Athens bourse has remained closed), less 20 per cent., for securities quoted only there; this has involved taking Drs. 77,000,000 from reserve, reducing the latter to Drs. 149,200,000 (as against a paid-up capital of Drs. 100,800,000).

REDUCED EXPENSES.

The "general expenses," which were reduced by Drs. 10,917,000 last year, show a further reduction of Drs. 12,054,000, thanks to the vigilance and loyalty of the staff. In addition, the board has again renounced one-fifth of its statutory fees. A final dividend of 15 per cent., making a total of 20 per cent., leaves a carry forward (after provision for taxes, fees, etc., pensions and charity) increased to Drs. 5,738,311.

PAQUIN, LIMITED.

COMPANY'S PRESTIGE WELL MAINTAINED.

The thirty-fifth annual general meeting of Paquin, Limited, was held, on the 12th instant, at Cannon Street Hotel, London.

Sir Harry K. Newton, Bart. (the chairman), said he was sure that the shareholders must have experienced a feeling of considerable satisfaction with the manner in which the company had emerged from the past year. It was unnecessary for him to enlarge on the difficulties which had beset such a business as this during a period of almost unparalleled depression in every part of the world. The name of Paquin had shed none of its lustre in the gloomy months through which they had travelled, but, on the contrary, had gained added distinction, and it was their policy and intention to maintain in every way the reputation and prestige of the house.

The net profit was £42,929, or only some £4,800 less than in the previous year, there having been a total reduction under the heading of taxation of £25,598. He hoped there were good grounds for believing that the rate of English income tax would be reduced in the Chancellor's Budget statement next week, and French taxation payable by the company would show a reduction in consequence of the smaller dividend now being paid, so that he thought they might again look forward with confidence to some relief in their accounts for the current year. The directors recommended a dividend of 10 per cent. on the ordinary shares, placing £5,000 to reserve. One moiety of the £13,554 remaining was carried forward to the credit of ordinary shareholders, and the other moiety was added to the general carry-forward, which was increased by £6,777 to £33,499, subject to the rate of income tax deducted from the dividend on the ordinary shares.

The results of the current year must depend on the extent to which the company's clientèle found itself in a position to indulge its natural taste for the best clothes that the world had to offer. The effect of a continuing crisis, however, was cumulative. The longer it lasted the more severely it must affect such a business as this, and for that reason they were already feeling it more acutely still this year. He would only repeat that the prestige and reputation of the house would be fully maintained, so that when the good times came again they might receive an ever-increasing share of the custom of all women who had the supreme wisdom to desire to look and feel their best.

The report was unanimously adopted.

LONDON COUNTY FREEHOLD AND LEASEHOLD PROPERTIES, LIMITED.

POSITION WELL MAINTAINED—SATISFACTORY RE-LETTINGS.

The twenty-second annual general meeting of the London County Freehold and Leasehold Properties was held, on the 12th instant, at the registered office of the company, 114-116 Park Street, London, Mr A. C. Bourner, F.C.A. (the chairman of the company) presiding.

The Chairman, in moving the adoption of the report and accounts, said that the directors had had a difficult period to deal with, with many changes in tenants and unusual empties in all classes of flats, yet the final result made a good showing.

They had only expanded in the year under review by a very moderate amount of purchases of additional properties, the prices of most of those offered to them being unsatisfactory, but their recent purchases had proved to be very advantageous; none had so far produced less than their estimated annual income, and during the past year almost everyone of their properties had shown some increase on re-letting, in some cases very substantial increases indeed.

The great majority of their flat rentals averaged less than £200 a year, 1,393 producing under £100 a year, and 2,276 under £200 a year. The board felt, therefore, that as the rents varied from £60 upwards, they were in a most favourable position to supply the demand for reasonably rented flat premises. The company possessed 164 entirely distinct buildings within a few miles of Charing Cross, the majority being in Paddington, St. Marylebone, Kensington, Westminster, Fulham, Hammersmith, Chelsea and Barnes, all which had been carefully selected to produce satisfactory results, alike from the point of appearance, amenities and income. A brochure issued by the company showed the class of property it owned.

The eventual loss of capital invested in a wasting security—such as leaseholds—was provided for by an annual charge to revenue over the period of the leases as a sinking fund for leasehold amortisation. Therefore it would be seen that variations in value were ultimately not of consequence. The important feature with them was that there should be reasonable stability of income; the board's aim was to maintain their properties in so satisfactory a condition that that would be ensured.

The dividends paid on the share capital of the subsidiary companies were the same as paid last year, and £5,010 was added to that carry-forward; the excellence of the investments was this year again fully established. One of their subsidiaries owned most valuable properties in Gloucester Place, W.1, known as Bickenhall Mansions, and Montagu Mansions, Baker Street. When the subsidiary company owning these properties was acquired the board knew that they were in an unattractive condition, and in consequence rents were on the low side and the reversions to improved rents were valuable. They had made the interior of the premises very attractive, and had installed every modern amenity, with the result that the present rents exceeded those of three years ago by no less than £5,000 per annum, and they anticipated considerable further increases as existing tenancies expired. Out of 175 flats there were now only three just vacated, and they hoped for a continuance of, if not an improvement in, the results in the future.

The total rent roll of the company, including subsidiary companies, now amounted to £835,091, but their income for the year had been lessened by additional vacancies representing over £20,000 in rentals. These additional voids had, however, been substantially offset by increased rents of re-letting, and even if the larger losses from empties continued for a time, they anticipated obtaining for the current year increased rentals on re-letting which, with further income from additional purchases, gave some indication that the net result should continue to be satisfactory. It was of great interest to note that the company's medium-sized flats in most cases this year had produced higher rents upon re-letting and that the shop and office rentals had been well maintained. The fact that in such a period of disturbance the company's vacant premises were only about one in twenty, augured well for the future when prosperity returned. The board's policy was to maintain a dividend of 10 per cent. per annum, and only to add a bonus after providing out of the year's revenue for the proportional repayment of debentures and loans. The revenue balance sheet enabled that to be done again this year, and the board therefore recommended a repetition of last year's bonus of 1 per cent.

The redemption of loans and provision for wasting assets was secured by the allocation, generally annually, of a sum of money which would accumulate at compound interest in a given number of years to the amount required. Sinking funds and fixed redemption dates were of advantage both to lender and borrower, and were an essential element for the protection of the investor. The number of new flat erections in London during last year proved the demand for that form of residence, but the favourable rents charged by the company for larger and better accommodation made their position exceedingly strong.

The report and accounts were unanimously adopted.

TELEPHONE PROPERTIES, LIMITED.

AUSPICIOUS FIRST RESULTS.

NOTABLE ADVANCES IN TELEPHONY.

SIR ALEXANDER ROGER'S STATEMENT.

The first ordinary general meeting of Telephone Properties, Limited, was held, on the 14th instant, at the Incorporated Accountants' Hall, Victoria Embankment, London, Sir Alexander Roger, chairman of the company, presiding.

The secretary (Mr F. Hollier) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,—In accordance with practice I assume you will take the accounts as read. Those accounts, now submitted, are in respect of five months only, that is from August 4, 1931, the date of incorporation of the company, to December 31st last.

I am pleased to report that the results show a net revenue of £29,809, and, as stated in the directors' report, £3,936 has been appropriated in writing off the whole of the preliminary expenses, £5,479 in payment of a preference share dividend of 4 per cent. for the six months ended December 31, 1931, and the payment of a dividend of 4 per cent., less income tax, on the ordinary shares, which is at the rate of 8 per cent. per annum, will absorb £12,328, leaving a balance of £8,066 to be carried forward. I think you will agree it is very satisfactory that your directors are able to recommend the maintenance of the same rate of dividend on the increased capital.

You will remember that following the creation of the Compania Anonima Nacional Telefonos de Venezuela the Venezuelan assets were vested in that company in exchange for debentures and shares and by agreement dated August 6th, 1931, your company took over these investments from the Venezuela Telephone and Electrical Appliances Company, Limited, which was the predecessor of your company.

Issued share capital stands at £547,907 and includes the additional 136,975 £1 fully paid ordinary shares distributed when your shares in the old company were exchanged for shares in the present company. This distribution was made possible by the release of the accumulated reserves of the old company.

REDUCTION IN LIABILITIES.

Loans appear on both sides of the balance sheet, and show a net position of £105,743 owing by the company, which compares with £458,179 at June 30, 1931—a reduction of £352,436. This substantial reduction was effected by the sale at par to Telephone and General Trust, Limited, of Bolivares 8,750,000 eight per cent. debentures of the Nacional Company, the sterling equivalent being £346,535, and the proceeds were applied in reducing the then large temporary loans made by that trust for expansion and the general purposes of the Nacional telephone system. As soon as practicable your directors intend to take suitable measures for further improving the loan position. Sundry creditors at £24,059 include £13,147 provision for income tax and approximately £6,000 in respect of reserves for contingencies and accrued expenses. You will note that investments and loans together represent £770,542, as against £1,116,338 at June 30th last, the decrease being largely accounted for by the sale of investments just explained to you. Your directors are of opinion that the value of the investments is in excess of the figure in the balance sheet. Cash at £26,888 compares with £49,014.

A RADIO TELEPHONE SERVICE.

The progress of the Nacional Company will be readily appreciated when I tell you that at the close of the past three years, namely, 1929, 1930 and 1931, the number of telephone stations was 14,144, 16,057 and 17,077 respectively. The increase for 1931 is equivalent to a rate of 6.4 per cent., which can be regarded as exceptionally good when remembering the difficulties of the year.

The Nacional Company, whose system is now 80 per cent. automatic, is steadily equipping itself to form part of any international telephone system with complete facilities for rapid communication throughout the world, and I learn that arrangements are almost completed for the establishment of a radio service between Venezuela and Europe via the United States. Further expansion in the wireless communication field should follow as a natural corollary. The inauguration of wireless links, the latest development of the scientific art of telephony, has assumed an importance which is world-wide, and the entry of the Nacional Company into this field of communication should prove of great benefit to the international relationships of the Venezuelan community.

At the back of the telephone instrument which the public sees, it is seldom appreciated that there is a vast, complicated, scientific machine housed in special buildings, with veins and arteries of cables, wires, ducts and poles radiating in every direction, all

continually in the process of alteration and expansion to meet the demand for telephone extension, and for quicker and more reliable service. The modern telephone service never sleeps—it is expected to be at the command of the public day and night. A telephone company and its administration, if it is to be in the first rank, must at all times have at its disposal technique, research, and material of the latest type. This the Nacional Company is able to draw upon through its association with your company and, in turn, through our affiliated companies.

PERSONAL IMPRESSIONS.

I was recently in Venezuela for the first time while on a visit to South America and I was much impressed with our investment and the country generally. The depression has not been felt so acutely as in other countries. The Government has no external debt, while its internal indebtedness is in the neighbourhood of £1,000,000 only. Caracas, the capital of Venezuela, with a population of 135,000, is a fine city, situated 3,500 feet above sea-level and blessed with a wonderful climate; the town of Maracay, where the President resides, is a miniature Washington. Excellent roads have been built in all directions, whilst regular aeroplane facilities between the important towns and adjoining countries are available; the country is well governed and taxation is moderate. I think it is safe to say there remains a field for telephone development open to the Nacional Company of which. I am convinced, they will not be slow to take advantage.

You will be glad to note that Mr Wallis, who was resident director of the old Venezuela company, has joined our board, where his long experience will be of great value.

I now beg to move:—

"That the report and accounts, as submitted, be received and adopted, and that the dividend therein recommended be paid."

Mr Herbert Simmonds seconded the motion, which was carried unanimously.

The retiring directors and the auditors having been re-elected, a vote of thanks to the chairman, directors and staff concluded the proceedings.

RIO TINTO COMPANY, LIMITED.

POSITION OF THE COPPER INDUSTRY.

The fifty-ninth ordinary general meeting of the Rio Tinto Company, Limited, was held, on the 14th instant, at Southern House, London.

The Rt. Hon. Sir Auckland Geddes, G.C.M.G. (the chairman), said that in their Spanish business the company had had to face many difficulties, the aftermath of the revolution. The situation had been made more difficult by the large sums in cash which the company had had to hand over to the taxgatherers, amounting in all countries to over £800,000 in gold—a sum eight times as great as their net profits for the year, and twenty times as great as the amount which they proposed should be distributed at this time to shareholders. This drain on their liquid resources at a time when the inward cash flow was reduced in volume had deprived them of the financial elasticity they had enjoyed for many years. He did not mean from this that they were nearing the end of their resources. They had no bank overdraft, and they had considerable internal reserves in the form of produce; their mines were in good shape and well written down; and their railway, pier, plants, machinery, and, &c., were all well maintained and in first-class shape. In short, they were ready to take advantage of a recovery in the markets for copper, iron and sulphur when it came.

Two years ago he ventured to utter a warning about the future of copper, and to lay some stress upon the possibility of a copper shortage within a few years. Those—and there were many—who urged that economic laws should be permitted to have unhampered play in the field of copper production, in other words that there should be a fight to a finish—which, of course, might have to come—could hardly have envisaged the devastation that would result or the ultimate effects when the world once more was ready to advance in civilisation and the application of power.

Suppose they had such a fight and that the United States did not put a high duty on imported copper, and suppose, further, that after a desperate struggle the Chilean, Canadian and Rhodesian mines and Rio Tinto were still alive, what then? A copper famine and soaring prices would result, and, in his view, in no circumstances to-day was a copper producers' war likely to lead to a lasting solution. He preferred so long as possible to lend his aid to keeping the industry together, to preventing any further increase of productive capacity, and so to win through to a healthy industry capable of playing its part in the world without feverish attacks of high price followed by price collapse.

The report and accounts were adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

The total ordinary revenue for the nine days ended April 9, 1932, amounted to £19,586,000 against ordinary expenditure of £29,823,200. After allocating £690,300 to Sinking Fund and having allowed for a reduction in Exchequer Balances of £3,257,569, the operations for the week, as shown below, increased the National Debt by £7,670,000 to £7,590,220,000:—

(000's omitted.)

Bank of England Advances ...	£ 5,500	Treasury Bills	£ 5,879
Public Department Advances ...	15,400	National Savings Certificates ...	1,700
Land Settlement Repayments ...	8	British Govt. Loans abroad ...	5,659
	+20,908		-13,238

A complete analysis of the National Debt at March 31, 1932, was printed in the *Economist* of April 2, 1932.

Messrs Samuel Montagu and Company write on April 13, 1932, as follows:—

GOLD.

The Bank of England gold reserve against notes amounted to £120,807,239 on the 6th instant, as compared with £120,807,003 on the previous Wednesday. The s.s. "Viceroy of India," which sailed from Bombay on the 9th instant, carries gold to the value of about £272,700. Most of the gold offered in the open market has been taken for a destination not disclosed.

Quotations during the week:—

Average	109s. 3-3d.	15s. 6-6d.

SILVER.

A further decline in prices was seen during the past week. Although China was inclined to buy, the market has been poorly supported and, following re-sales by Indian Bazaar and other bulls, quotations have fallen to 16½d. for cash and 16¼d. for two months' delivery by the 9th instant. At this level, sellers showed some hesitation, and a continuation of China buying, assisted by inquiry from the Continent, caused a reaction on the 11th instant to 16½d. and 17d. for the respective deliveries. The improvement, however, was not maintained, there being little demand at the advance; and with America disposed to offer, prices again eased, being quoted to-day at 16½d. and 16¼d., which are the lowest fixed since October 3, 1931.

Quotations during the week:—

IN LONDON.		IN NEW YORK.	
Bar Silver per oz. std.		Cents per Ounce	
Cash	Two Months'	Cash	Two Months'
April 7	16½d.	16½d.	28½
" 8	16½d.	16½d.	28½
" 9	16½d.	16½d.	28½

MIDDLESBROUGH.—The prospects of a substantial increase in duties on imported iron and steel, writes our correspondent, is having a strengthening effect on this market. Already business is a little more active in Cleveland pig iron, and whereas consumers have hitherto only been buying from hand to mouth, they are now willing to purchase a little ahead, and a fair business has been put through, since particulars of the proposed increase duties became known. The weekly market on Tuesday was firm in tone, but no change was made in the official prices for Cleveland iron, which remain: No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; and No. 4 forge, 57s.

CARDIFF.—The recent improvement in the volume of the export trade in tinplates was maintained last week, when the shipments amounted to 180,432 boxes, compared with 120,552 the previous week, and 68,940 in the corresponding week last year. Production has hardly kept pace with this rate of export, and stocks are down by nearly 70,000 boxes, compared with the previous week, and to little more than half what they were a year ago. Prices are unchanged, ruling at 16s. per basis box. Galvanised sheets are steady at about £9 10s. f.o.b. for corrugated in bundles, while Welsh steel bars are unchanged at 95s. per ton net.

POTATOES.—Although the demand for potatoes at the principal markets was again good, supplies were large enough to prevent a rise in prices. At the Borough Market, "Best King Edward" sold from 12s. to 12s. 6d. per cwt., as compared with 12s. to 12s. 6d. per cwt. a week ago.

SPICES.—The market in spices has been dull, and prices were generally lower. Wednesday's quotation for "Black Singapore" pepper, at 6½d. per lb., shows no change on the week. Movements of pepper in London during the past week were as follows: Black, landed, 78 tons; delivered, 13 tons; stocks, 370 tons, against 537 tons last year. White, landed, 41 tons; delivered, 38 tons; stocks, 759 tons, against 659 tons a year ago.

MEAT.—Although supplies have been plentiful at the Smithfield Market, the firmer prices of last week have been maintained. Both Argentine and home-grown beef advanced further. On Wednesday, Argentine beef (chilled hindquarters) was sold at 4s. 6d. to 4s. 10d.

per 8 lbs., against 4s. 2d. to 4s. 6d. on the corresponding day last week, while New Zealand frozen mutton realised 2s. 8d. to 3s. 6d., as against 2s. 8d. to 3s. 6d. a week ago. According to the Smithfield Market official report, supplies of meat during last week amounted to 9,258 tons, as compared with 8,920 tons in the corresponding week last year. Imported beef, principally Argentine, formed 81.5 per cent. of the supplies, as against 85.7 per cent. a year ago; and imported mutton, mainly New Zealand, formed 80 per cent. of the total supply, as against 85.4 per cent. last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OLSEEDS.—The week has witnessed some improvement in certain sections, notably linseed and linseed oil, which have rallied and are steadier. The extremely low levels of quotations brought in buyers and some advance in values from £7 15s., which was repeated for Plate on passage to Hull, buyers

paying £7 17s. 6d. to £8 for shipment to July and £8 2s. 6d. for August. Current values are around £8 on spot, and April-May, with later positions a trifle more. There have been pretty good arrivals of seed at English and Continental ports and fair shipments from Argentina. The total afloat for Europe, at 181,300 tons, is 19,500 tons lower on the week. Cottonseed declined sharply in the absence of demand to £5 12s. 6d. for black Egyptian, which, however, is steadier, with shippers asking £5 17s. 6d. to £6 for shipment. Linseed oil, after falling to £12 10s. per ton ex Hull mill for April delivery, has firmed up on a fair measure of support from consumers, £13 10s. now being quoted for the same position and £14 5s. for May-August. Cotton oil continues neglected. Crude Egyptian is now available at £20 ex Hull and refined (technical and edible) at £22 10s. prompt. Other vegetable oils are quiet and quotations of most have undergone reduction. Oil-cakes are in fair demand and mill prices are unchanged.

HIDE, LEATHER AND ALLIED TRADES.—Prices for hides from home-slaughtered cattle recorded further reductions at the sales held at Manchester this week, all ox and heifers making from ½d. to ¼d. per lb. less money. The reduction in regard to cow hides was ¼d. per lb., while there was also an easier tendency in regard to calfskins. The sheepskin market is very poor and sales can only be effected at low figures. Business in regard to foreign hides makes no headway and the majority of quotations for these goods are again on a lower basis. In the South American market wet-salted Argentine ox are now being offered at the equivalent of a fraction under 3½d., while seconds are to be had at 3½d. The turnover of dry hides from the same source also remains small, and with the reduced amount of business passing it is possible to obtain these goods for lower figures, B.A. Americanos being offered at 5d., Inservibles at 3d., Cuyabanos at 4½d., and M.V. Americanos at 5½d. With the small amount of trade being done in Africans the market has weakened and offers of dry Capes are now coming forward at 5½d. and 4½d. for firsts and seconds, with dry-salted 20-30 lbs. at 4½d. and 3½d. Unbathed Adis Abebas, 12 lbs. and up, are being marketed in small parcels at 5d., while Mombasas are fetching from 4½d. to 4½d. Prices for most descriptions of Australians are weaker in view of the small business passing. Rather more interest has been taken in sole leather, and although orders are still confined to small quantities for immediate use, the aggregate turnover has been larger. Repairers of footwear have been good customers for English and wet-salted bends in the light and medium weights, but not much business has been done in heavier selections. Medium weight dry hide bends have also accounted for a better trade, but manufacturers of footwear are still loth to place orders for quantities, in spite of the fact that the basis of quotations is considered very low. Shoulders and bellies have been only a quiet sale. In the upper leather market the bulk

of the business done is confined to black and brown glacé kid and cheap patent. In addition, orders have come to hand for moderate quantities of suede and reptile leathers, while here and there calf leathers have accounted for fair business.

RUBBER.—The market in rubber has undergone little change during the past week. There has been a little buying by manufacturers in London and in New York and prices remained steady. In New York, Wednesday's spot price for rubber at 3½ cents per lb. shows no change on the week. Wednesday's official closing price for standard ribbed smoked sheet in London, at 1½d. per lb., shows a rise of ½d., as compared with the corresponding day last week. In forward positions, business has been done at 2½d. to 2½d. for October-December, as against 2½d. to 2½d. a week ago. Movements of rubber in London and Liverpool during the past week were as follows: Landed, 1,402 tons; delivered, 1,381 tons; stocks at the end of last week, at 124,847 tons, show an increase of 24 tons as compared with the preceding week.

DAGGAFONTEIN MINES, LIMITED

(Incorporated in the Union of South Africa.)

REPORT OF THE DIRECTORS for the Year ended 31st December, 1931.
To be submitted at the Seventeenth Ordinary General Meeting of Shareholders, to be held in the Board Room, "Ammercossa House," Johannesburg, on Thursday, the 19th day of May, 1932, at 11 a.m.

To the Shareholders,
DAGGAFONTEIN MINES, LIMITED.
Gentlemen,
Your Directors beg to submit their Report and the Audited Financial Statements for the year ended 31st December, 1931.

CAPITAL.
During the year the registered capital of the Company was increased to £1,500,000. On the 19th March, 1931, 145,000 new shares were offered to the shareholders at 37s. 6d. per share, and this issue was underwritten by the Rand Selection Corporation, Limited, in consideration of the right, until the 30th June, 1932, to take up 55,000 additional shares at 45s. per share. The shares offered to shareholders realised £271,875, while of the shares under option to the Rand Selection Corporation, Limited, 8,801 were taken up prior to the 31st December, 1931, realising £19,802 5s. The issued capital of the Company at that date therefore becomes £1,603,801 and 46,199 shares are still under option at 45s. per share to the Rand Selection Corporation, Limited.

PROPERTY.
The property of the Company is No. 9, situated in the Mining District of Johannesburg, Transvaal, in extent 4,367 morgen 183 square feet, and the roads. The farm was proclaimed on the 22nd November, 1921, and the roads. The farm has been granted Owners' Reservations over areas totalling 2,401 morgen 66 square feet. By circular dated 19th March, 1931, that the Shareholders were notified by the Government the underwriting rights in respect of approximately 722 additional claims. On survey this area was found to embrace 727.408 claims, and the claim holding of the Company is now as follows:—
Mynpacht Area No. 657, in extent 1,848.68 acres..... 1,257.785 claims.
Discoverers' Claims..... 178.999 "
Leased from the Government (1st Lease)..... 448.898 "
Leased from the Government (2nd Lease)..... 778.176 "
Leased from the Government (3rd Lease)..... 727.408 "
Leased from the Government (4th Lease)..... 172.604 "

A. E. PAGE (Incorporated Accountants) } Auditors.

The sum of £3,023 reserved in respect of the Company's liability under the Miners' Phthisis Act represents the total estimated liability of the Company to the Compensation Fund. Of this amount £1,194 was reserved in 1929-30, and the balance, after allowing for accrued interest, has been dealt with in the current accounts.

Certain of your Company's assets and liabilities are payable in British sterling. As a result of the suspension by Great Britain of the gold standard as from the 21st September, 1931, a wide difference in value has resulted between British sterling and South African currency. In making up the balance sheet as at 31st December, 1931, therefore, all assets and liabilities payable in British sterling have been converted to the equivalent in South African currency at the rate of exchange ruling on that date, namely, £71 15s. South African currency equals £100 British sterling. Debits and credits arising out of these conversions have been passed to an account styled "Currency Differences Suspense" and result in a debit balance of £11,862 0s. 5d., which appears in the balance sheet. This amount is not a realised loss. The position in this respect will only be determined when the assets and liabilities in British sterling have been disposed of. Certain of the contingent liabilities for machinery orders outstanding are payable in British sterling, and on such portion of the funds of the Company in London there will be no loss on exchange.

A statement is attached to the Balance Sheet showing General Expenses and Revenue Account to the 31st December, 1931. As operations commenced on the last day of the year the balance of this account has been transferred pro rata to the various Capital accounts.

DIRECTORATE.
In terms of the Articles of Association, Messrs. C. L. Read and H. G. Latilla retire by rotation, but are eligible and offer themselves for re-election.

AUDITORS.
Early in the current year Mr. Alex Aiken, one of the Company's Auditors, became seriously ill, and in order to carry on the work of the annual audit Mr. J. G. Carter was appointed an Auditor of the Company during Mr. Aiken's indisposition.

You are requested to fix the remuneration for the past audit, and to appoint Auditors for the ensuing year. The Auditors, Messrs. Alex. Aiken and A. E. Page, retire, but are eligible and offer themselves for re-election.

GENERAL.
With the provision of further funds referred to under the heading of Capital, the Directors decided to authorise the erection of certain sections of the plant with a capacity in excess of the 50,000 tons per month originally contemplated, and the permanent equipment for Shafts Nos. 1 and 2 was ordered with a view to de-watering the old section of the mine and bringing it into commission. It is hoped to start de-watering operations in June of the present year.

BRAKPAN MINES, LIMITED. (Incorporated in the Union of South Africa.)

REPORT OF THE DIRECTORS for the Year ended 31st December, 1931.
To be submitted at the Twenty-ninth Ordinary General Meeting of Shareholders, to be held in the Board Room, "Ammercoosa House," Johannesburg, on Thursday, the 19th May, 1932, at 2.30 p.m.

To the Shareholders, BRAKPAN MINES, LIMITED.

Gentlemen,
Your Directors beg to submit their Report and the audited Financial Statements for the year ended 31st December, 1931, accompanied by the Reports of the Consulting Engineers and the Mine Manager.

CAPITAL.—The capital of the Company remains unaltered at £1,020,000 in 1,020,000 shares of £1 each, fully paid and issued.

PROPERTY.—No change has taken place during the year in your Company's claim holdings, which remain as follows:—
Mynpacht No. 490/1919, in extent 405.754 acres, equal to 276.06 Claims.
Mynpacht No. 543/1906, in extent 888.936 acres, equal to 604.80 "
Claims on Farm Benoni No. 3, with Coal Rights on 201.59 "
73.326 Claims 68.00 "
Claims on Farm Weltevreden or Brakpan No. 5 1,811.70 "
Claims on Farm Weltevreden or Brakpan No. 5— 424.90 "
leased from Union Government
Claims on Farm Koolbult or Schapenrust No. 7 3,387.05 Claims.

The undermining rights of seven stands and four portions of stands on Farm Benoni No. 3.
Twenty-one freehold stands in Brakpan Township, on which are erected quarters for the Company's employees.

OPERATIONS.—Technical matters are dealt with in the attached Reports of the Consulting Engineers and Mine Manager, to which your attention is directed.

FINANCE.—From the Working Expenditure and Revenue £ s. d.
Account it will be seen that the profit amounted to 553,058 2 4
Deduct—Donations 3,419 19 7

Add—Dividends on Shareholdings £1,076 0 9
Interest, Commission, Exchange, etc. 5,711 16 3
6,787 17 0

Leaving a Net Balance of Revenue over Expenditure for the year of 556,425 19 9

Add—Balance to Credit of Appropriation Account at 31st December, 1930 50,376 18 4

Making a total available Credit of 606,802 18 1

Against which the following amounts have been appropriated:—
Government Taxes 247,031 12 7
Government Participation in Profits 54,283 12 6
Reserve for Liability under Miners' Phthisis Act 24,943 6 3
Dividend No. 38 204,000 0 0
Dividend No. 39 204,000 0 0
Capital Funds 17,213 14 11
551,472 6 3

Leaving a Balance unappropriated at 31st December, 1931, of... 55,330 11 10

This Balance Sheet is drawn up in South African currency and the Assets and Liabilities in British sterling have been converted into South African currency at the rate of exchange ruling on the 31st December, 1931, namely, £11 15s. South African currency equals £100 British sterling.			
	£3,498,663	9 1	

ANGLO AMERICAN CORPORATION OF SOUTH AFRICA, LIMITED, Secretaries.
Per W. WESTRUP.

To the Shareholders, BRAKPAN MINES, LIMITED.

We have audited the Balance Sheet dated 31st December, 1931, above set forth, and have obtained all the information and explanations we have required. The Company has kept proper Books and Records, and, in our opinion, the Balance Sheet is properly drawn up so as to exhibit a true and correct view of the state of the Company's affairs, according to the best of our information and the explanations given to us and as shown by the Books of the Company.

JOHANNESBURG,
3rd March, 1932.

The Capital Expenditure for the year amounted to £3,727 3s., made up as follows:—

Sinking and Equipment, as per Schedule attached to Balance Sheet	£	s. d.
Shares and Interests in Other Concerns	3,236	7 6
	490	15 6
	£3,727	3 0

Your Directors thought it advisable to capitalise a further amount of £7,000 in respect of standard stores and materials on hand, and this amount has been included in the Capital Funds appropriated.

The amount payable to the Government for the year under the terms of the Mineral Lease Agreement is estimated at £54,283 12s. 6d. This figure represents 9.756 per cent. of the total profits of the Company for the year.

The amount charged to working costs for development was £148,943. In connection with the annual reserve in respect of the Company's liability under the Miners' Phthisis Act, the amount set aside for 1931 is £24,943 6s. 3d. This, with the previous figure of £69,643 6s. 2d. and interest accrued, gives a total reserve of £94,586 7s. 9d. against the Company's total terminal liability of £225,288 as assessed at the 31st July, 1931.

DIVIDENDS.
Two Dividends were declared during the year, as follows:—

Dividend No.	Per Cent.	Rate per Share.	Total Amount.
Dividend No. 38	20	s. d.	£ s. d.
		4 0	204,000 0 0
Dividend No. 39	20	4 0	204,000 0 0
	40	8 0	408,000 0 0

DIRECTORATE.
In terms of the Articles of Association, Messrs. J. L. Jourdan and W. J. O'Brien, O.B.E., M.P., retire by rotation, but are eligible and offer themselves for re-election.

AUDITORS.
You are requested to fix the remuneration for the past audit, and to appoint Auditors for the ensuing year. The Auditors, Messrs. A. E. Page and P. Whiteley, retire, but are eligible and offer themselves for re-election.

GENERAL.
As notified to shareholders by advertisement in the press on the 21st January, 1932, the Company has entered into a provisional agreement for the acquisition of the whole of the assets of the Witpoort Gold Areas, Limited, for the sum of £200,000. The agreement is subject to confirmation by the shareholders of the Witpoort Company, for which purpose an Extraordinary General Meeting has been convened for the 31st March, 1932, and to Government consent.

If the agreement is ratified, it will mean the acquisition of a further 3,009 claims, which should have an important bearing on the effective life of your Company.

THE MONEY MARKET. THREE PER CENT.

MONEY remained easy over the week-end, with 1½ and 1½ per cent. quoted for new money and 1½ per cent. for renewals. Comfortable conditions again prevailed on Monday and Tuesday, with rates running mainly at 1½ per cent., though some borrowers had to pay 2 per cent., and others were able to satisfy their needs at 1½ per cent.

These somewhat variable conditions were again in evidence on Wednesday, but although callings by the banks were relatively light, money on the whole was inclined to be dearer, and 2 per cent. was a more common rate than earlier in the week. Even so, $1\frac{1}{2}$ per cent. continued to be charged for renewals. The more usable tendency of money was ascribed to heavier demands from the Stock Exchange. Rates were naturally unsettled on Thursday, as the result of the Bank rate reduction from $3\frac{1}{4}$ to 3 per cent., which entailed the lowering of the clearing banks' minimum rate for short loans from $2\frac{1}{4}$ to 2 per cent.

Last week's applications for Treasury bills were again unusually heavy, amounting to £78.2 millions, against £76.2 millions the week before. As the number of bills on offer had been reduced from £45.0 to £40.0 millions, it was not surprising that there was a sharp drop in the average tender rate from £2 8s. 4.75d. to £2 1s. 11.6d. per cent. This week the bills on offer are being further reduced to £35.0 millions, so that the tender rate is likely again to be low. Early in the week there was a strong demand for July Treasury bills by the clearing banks at a rate of 2 per cent. These bills were also taken by the banks at $1\frac{1}{8}$ per cent., with the rate shaded to $1\frac{1}{4}$ per cent. for end-of-June maturities. On Wednesday afternoon, prior to the Bank rate reduction, "hot" Treasury bills were quoted at $1\frac{1}{8}$ per cent., and bank bills, other than standstills, at $2\frac{1}{8}$ per cent. Standstill bills were quoted to $2\frac{1}{4}$ to $3\frac{1}{4}$ per cent.

As usual the market took some time to settle down after the Bank rate reduction, but in the end rates showed but little change. Hot Treasury bills were quoted at $1\frac{1}{8}$ per cent., against $1\frac{1}{4}$ per cent. earlier in the week. Prime bank bills eased to $2\frac{1}{8}$ per cent., and standstill bills to $2\frac{1}{4}$ per cent. Money was a little more usable at $1\frac{1}{4}$ per cent., and the clearing banks were also lending a trifle at 2 per cent. Calling by one of the leading banks and continued demands from the gilt-edged market were responsible for this.

	Mar. 31, 1932.	Apr. 7, 1932.	Apr. 14, 1932.	Apr. 21, 1932.	Previous Rate and Date Changed.

Market rate (standstill bills)	$2\frac{1}{4}$	$2\frac{1}{4}$	$2\frac{1}{4}$	$2\frac{1}{4}$	...

The main change in the Bank return is a further big increase of £14.6 millions in Other Securities in the Issue Department, which have now risen to £51.5 millions. The note circulation has fallen by another £2.5 millions to £354.3 millions, and the Reserve is increased by the same amount to £42.2 millions. Taking both departments of the Bank together, Government Securities have been reduced by £12.3 millions, and Other Securities have risen by £3.1 millions, so that with Discounts and Advances unchanged the Bank's earning assets are reduced by £9.2 millions. Against this must be set reductions of £2.5 millions in the note circulation, £3.1 millions in Public Deposits, and £5.6 millions in Bankers' Deposits; and an increase of £1.7 millions in Other Deposits. The Proportion stands at 36.1 per cent., against 32.1 per cent. last week.

The Chancellor's announcement in his Budget speech that he is proposing to establish an Exchange Equalisation Account for the purpose of curbing speculation in sterling has already taken effect. Foreign exchange dealers report that there has been a definite shrinkage in the volume of business, and that foreign operators now feel that so far as sterling is concerned there is nothing left to "go for." In fact, there is now a disposition to

look for foreign sales of sterling and for the covering of positions now open.

Apart from the Chancellor's statement, it is generally believed that no official intervention in the foreign exchange market has been necessary for the past few weeks, and, indeed, Other Securities now held by the Bank are only four millions greater than at the end of March. It is also thought that the recent demand on Wall Street for United Kingdom $5\frac{1}{2}$ per cent. dollar bonds has emanated in part from official British sources. If so, this is a wise move on the part of the authorities, for it not only provided a means of meeting the recent demand for sterling, but did so in such a way as to reduce our indebtedness to the American investor.

New York money rates remained unchanged, with call money at $2\frac{1}{4}$ per cent. and open market discount rates at $1\frac{1}{4}$ per cent. for 90-day bankers' acceptances. Gold movements for the week ended April 13th are returned at imports of \$4.4 millions, including \$3.0 millions from Canada and \$1.0 million from Uruguay; and exports at \$20.1 millions, of which \$18.7 millions went to France and \$1.1 millions to Holland. Earmarkings on foreign account were increased by \$2.4 millions. Subsequent movements include a shipment of \$1.0 million to France and the arrival of \$1.3 millions at San Francisco from Japan. Last week's expansion of \$100 millions in the Federal Reserve System's holding of United States Government securities excited some comment, especially as it was coupled with Mr Eugene Meyer's somewhat obscure statement at Washington that since the New Year the Reserve Board had had hopes of "holding the line." He is further reported to have estimated that during the current year \$250 millions of the \$1,000 millions of hoarded currency have returned to circulation.

The Foreign Exchange market was quieter this week, and fluctuations were less wide, while the tendency of sterling was to be a little weaker. The New York rate moved from 3.78 to 3.77, after touching 3.80. Montreal lost a point at 4.19. Paris was better by $\frac{1}{2}$ at 95.75, and Brussels gained seven points at 26.90. Milan improved by $\frac{1}{2}$ to 73.3, and Madrid, which is again believed to be controlled, went from 49.2 to 48.1. Amsterdam gained three points at 9.30, as did Berlin at 15.87. Switzerland was little changed on balance at 19.40. The Kreuger revelations continued to exercise a depressing influence, Stockholm at one time touching 20.80, against 19.95 last week, but later it improved to 20.25. Oslo, although not directly affected by the Kreuger collapse, fell away from 19.40 to 20.50, after touching 20.80. In contrast, Copenhagen improved to 18.27. The South American quotations are still largely nominal. Rio improved from 4.4d. to 4.4d.; Buenos Aires was hesitant and inclined to be weak, and lost $\frac{1}{4}$ d. on balance at 36.1d.; Montevideo was unchanged at 29.1d. In the Far East the rupee fell away to 1s. 6.3d., a loss of $\frac{1}{2}$ d. on the week. The yen was steady and firm at 1s. 9.4d., and Batavia improved from 9.38 to 9.36. In the forward market dollars were firmer at rather narrower discounts of $\frac{1}{2}$ cent. for one month and $1\frac{1}{2}$ cents for three months. Paris was much firmer at 5 and 14 centimes premiums, against 3 and 6 centimes last week. Brussels went from 2 to 7 centimes discount to par for one month and 2 centimes discount for three. Milan was better by $\frac{1}{2}$ for both deliveries at $\frac{1}{2}$ centesimi and $\frac{3}{4}$ centesimi discount for the two periods, respectively. Madrid improved to $\frac{1}{2}$ peseta and $\frac{3}{4}$ peseta discount. Amsterdam was unchanged at $\frac{1}{2}$ cent and one cent discount. Switzerland declined from $1\frac{1}{2}$ centimes to 1 centime premium for one month, but advanced from $2\frac{1}{2}$ to 3 centimes premium for three. The silver market was quiet with some Chinese and a little American buying, which was sufficient to advance prices in the face of small offerings at one time to 17d. for cash and 17.1d. for forward, but there was later a fall on profit-taking to 16.3d. and 16.1d. respectively, a gain of $\frac{1}{4}$ d. on balance in each case for the week. The Chinese silver exchanges advanced by $\frac{1}{4}$ d. each, to 1s. 3d. in the case of Hongkong and 1s. 8d. in that of Shanghai.

A GRIM BUDGET.

BLEAKLY presented in a cold and comfortless speech, the Budget which the Chancellor introduced on Tuesday merits respect for its integrity but leaves enthusiasm unstirred. Mr Chamberlain has rightly eschewed the temptation to court popularity by recourse to subterfuges for "raising the wind," such as the "uncovered" borrowing, or the conversion of capital assets into revenue, whereby the soundness of our national house-keeping was seriously impaired in recent years. Provided that the estimates of revenue and expenditure are not seriously upset by events, the 1932-33 Budget should make a genuine contribution towards debt redemption on a scale comparing very favourably with the experience of the past few years, in whose course the "true" sinking fund has averaged no more than £10 millions annually. For his stiff-lipped adherence to sound principles of financial rectitude the Chancellor is entitled to due credit. But the complete tale of Budget Day does not end here.

We have no criticism to raise against Mr Chamberlain's resolve to tread cautiously; nor are we among those who affect disappointment at the omission from the Budget of any immediate concessions to the taxpayer. The trend of the depression has long made it clear that, having assumed the task of financing unemployment relief wholly out of revenue, we should require to maintain, well beyond the period of a single Budget, the effort which Mr Snowden, last September, called upon the country to make. Where the present Chancellor failed to do justice to his opportunity was in his adoption of the static rôle of routine book-keeper, preoccupied seemingly with the task of balancing a difficult account, when the country looked rather for assurance that the Government are alive to the dynamics of a situation in which vast forces are influencing unprecedentedly both our national earning power and our taxable capacity. Mr Chamberlain commanded the dispirited acquiescence of the House in the grim balance sheet of a crisis whose implications he barely mentioned and to whose solution he promised little specific contribution.

In a subsequent article we give our customary analysis of the Budget accounts. In drawing them up on a basis which excludes, provisionally, all receipts and payments on reparations and war debt account, the Chancellor has acted in a spirit of sensible realism, and has provided for the potential loss of £10 millions which would result from another year of all-round suspension. Should we make to the United States the payment of interest and amortisation due next December, while receiving nothing from Germany, the Allied debtors or the Dominions, provision for \$100 millions would have to be added to the Consolidated Fund Vote; but this eventuality can well be left for consideration after the results attained at Lausanne are known. As they stand, the accounts reveal the formidable character of the burden which the country is carrying on shoulders whose vigour the unrelieved world crisis is inevitably weakening.

How severely the taxable capacity of the country has been hit by the depression is indicated by the grave drop which Mr Chamberlain has had to anticipate in the yield of Income Tax and Surtax. Here his estimate would appear to be reasonably cautious, whereas in expecting a substantial increase in receipts from Stamps and Estate Duties he is more confident than we are that security and other property values in the present financial year will recover and Stock Exchange activity expand. To attribute last year's "short-fall" in the yield from Estate Duties predominantly to an unusually—and therefore presumably non-recurrent—meagre harvest of dead millionaires is surely to overlook the attrition wrought by the depreciation of securities in the ranks of living richissimes. If, however, we may assume that Mr Chamberlain's forecast of total revenue is approximately realised—the assumption begs the question that the anticipated yield of £83 millions from a variety of Tariff Duties is obviously

problematical—then we are left with the outstanding fact that, in a year of acute economic depression, our Budget has required a tax-revenue of £732 millions. Add to this the Motor Vehicle Duties, and a figure of £755 millions is reached, as compared with £690 millions in the relatively prosperous year 1924-25, when Mr Snowden introduced his first Budget. Though the ratio between direct and indirect taxes has now been considerably altered to the detriment of the indirect taxpayer—an increase of £75 millions in Customs contrasts with a rise of only £6 millions in Income Tax, Surtax and Estate Duties' yield combined, while, despite a fall of £10 millions in Excise, Customs and Excise together are up by £65 millions, against a fall of £8 millions in total Inland Revenue—the important consideration is the formidable aggregate tax-burden confronting us even when no provision is made for resumption of debt payments to America.

It is in the light of this consideration that we regret that the Chancellor's statement was marked by so many omissions. He paid tribute to the taxpayer's efforts, and counselled "hard work, strict economy, firm courage, unflinching patience." Not only, however, did he gloss over the fact that the promised economies, outside the Ministry of Labour Vote, are still several millions short of accomplishment; he gave little indication that, in lines of major policy, the Cabinet is pursuing clearly visualised objectives whose attainment would afford promise of relief to the taxpayer, whether by way of diminished national expenditure or through recovery of national income.

Let us examine briefly Mr Chamberlain's major reticences. Firstly, there is the question of monetary policy, in relation particularly to the debt charge. In announcing the establishment of an Exchange Equalisation Account, on whose details we comment in a Note of the Week, the Chancellor was very properly strengthening the technical machinery at the authorities' disposal for neutralising the disturbances caused by short-term capital movements. But of our domestic monetary policy he had little to say either in forecast or declaration of intention. Making no estimate specifically of the probable cost of short-term Treasury financing this year, he held out no promise of the phase of ultra-cheap money which existing conditions warrant and require; and he gave no hint of any attempt at a conversion operation. Secondly, he was curiously silent as to the prospects of alleviation of our straits through fruitful action in the international sphere. Economies resulting from a successful issue to the Disarmament Conference? Measures to reverse the present tendency towards extinction of international commerce under a load of exchange restrictions, quotas and tariffs whose incidence is increasing every day with the fall of prices? The Chancellor had no word of encouragement to give, nothing but the promise of an Order erecting a superstructure of additional duties on the 10 per cent. tariff, duties whose effect, as we observe in a Note of the Week, will be to aggravate international difficulties. Nor did he indicate, beyond a vague reaffirmation of preference for a "clean slate," what precise policy the Government intended to pursue at Lausanne and *vis-à-vis* the United States.

In short, Mr Chamberlain elected to present his Budget in a form suggestive of a statement of accounts torn oddly from its context. He voiced no sense of real appreciation that unless the international credit and trade crisis is relieved, the task of maintaining the balance of a Budget on anything like the present scale must ultimately prove an impossibility, so that the primary function of the Chancellor, as of the whole Cabinet, is to visualise the budgetary problem to-day less in terms of figures than in terms of policy. The vital issue is what contribution we intend to make to the solution of the world's fiscal and monetary tangle. Ignoring this aspect of our financial question, Mr Chamberlain, whose speech had an air of almost conscious insularity, conveyed the uncomfortable impression that policy was lacking.

THE BUDGET ACCOUNTS.

HAVING dealt above with the main features of Mr Chamberlain's Budget policy, we publish below a summary of our national finances as set forth in the Financial Statement circulated, in accordance with custom, after the conclusion of the Chancellor's speech. In the first table we compare last year's revised Budget estimate of expenditure (other than the self-balancing items) with (a) the actual issues and (b) Mr Chamberlain's forecast for the coming year:—

EXPENDITURE ON EXISTING BASIS.

	Revised Estimate, 1931-32.	Actual Issues in 1931-32.	Estimate, 1932-33.	Estimate for 1932-33 compared with 1931-32 Issues.
	£ Mn.	£ Mn.	£ Mn.	£ Mn.
Cons. Fund Services:—				
Debt Interest, &c.	289.4	289.5	276.0	-13.5
Sinking Fund	32.6	32.5	32.5	...
Total	322.0	322.0	308.5	-13.5
Payments to N. Ireland	6.4	6.3	6.8	+ 0.5
Other Cons. Fund Items	3.0	3.1	3.5	+ 0.4
Total	9.4	9.4	10.3	+ 0.9
Supply Services:—				
Army Votes	39.9	38.5	36.5	- 2.0
Navy Votes	51.6	51.1	50.5	- 0.6
Air Votes	18.1	17.7	17.4	- 0.3
Civil Votes	330.8*	320.1	330.2	+10.1
Revenue Dept. Votes	11.9	11.8	12.6	+ 0.8
Total	452.3	439.2	447.2	+ 8.0
Grand Total	783.7	770.6	766.0	- 4.6

* Amount provided in revised Budget less anticipated economies of £22,000,000. The estimates finally presented for Unemployment and Road Fund were £13,300,000 less than Mr Snowden anticipated. The final estimate allowing for proposed economies should therefore be £317,500,000.

With regard to the Consolidated Fund services, it will be recalled that last September Mr Snowden reduced the fixed debt charge in 1931-32 from £355 millions to £322 millions—a reduction which took account of the fact that the second half-yearly payment of interest and the amortisation on the American debt due last December were suspended in accordance with the Hoover moratorium. The further reduction of £13.4 millions, as compared with the revised (September) estimate for 1932-33, now made on account of the debt charge is arrived at by excluding from the Budget all interest and sinking fund payments to the United States in 1932-33. Though he made no specific reference to the point, Mr Chamberlain appears to have placed his figure of domestic debt charges at about the same level as Mr Snowden did a year ago, when Treasury bills were being discounted at about 2½ per cent.

As for the Supply Services, the story of the last six months had shown that whereas the Exchequer had greatly benefited by the fact that unemployment was not so bad as Mr Snowden feared, the full tale of £22 millions of economies had not quite been made. Reviewing the current year, Mr Chamberlain reminded the House that last September it had been estimated that before the application of economies the total required for Supply in 1932-33 would be £526 millions, taking into account the decision to bear on the Votes the cost of the Unemployment Insurance Fund and the Road Fund. Total savings of £70 millions had been promised, leaving a figure of £456 millions, whereas the current estimates amounted to only £447.2 millions—a saving of £79 millions, notwithstanding the fact that concessions on pay cuts had cost £3.5 millions, while a sum of £1.25 millions previously unprovided for had had to be found for Income Tax collec-

tion and work under the Import Duties Act. It has, however, to be remembered that Unemployment and the Road Fund took £13.3 millions less in 1931-32 than Mr Snowden anticipated, and in the current estimates the Unemployment figure alone is lower than Mr Snowden's forecast by £13.5 millions. If the full economies had been made the Supply Estimates, allowing for the drop in Road Fund expenditure, should have been down by some £88 millions.

The next table compares the estimates of revenue on the basis of existing taxation with the revised estimates for 1931-32 issued last September and the actual receipts of the past year:—

REVENUE ON EXISTING BASIS.

	Revised Estimate for 1931-32.	Actual Receipts in 1931-32.	Estimate for 1932-33.	Estimate for 1932-33 compared with 1931-32 Receipts.
	£ Mn.	£ Mn.	£ Mn.	£ Mn.
Customs	131.8	136.2	173.3	+37.1
Excise	121.2	119.9	124.2	+ 4.3
Total	253.0	256.1	297.5	+41.4
Inland Revenue:—				
Income Tax	272.0	287.4	260.0	-27.4

Miscellaneous	42.8	29.9	17.5	-12.4
De-Rating Account ...	4.0	4.0	...	- 4.0
Non-Tax Revenue	75.7	60.5	34.8	-25.6
Total Revenue ...	784.7	771.0	764.3	- 6.7

With regard to Customs and Excise, Mr Snowden last September estimated that on the basis of the then existing taxes the yield in 1931-32 would be £241.5 millions, which he increased to £253 millions by additional duties on beer, tobacco, petrol and entertainments, estimated to bring in £11.5 millions. From these duties the yield in a full year was estimated at £24 millions and the total revenue from Customs and Excise for 1932-33 was provisionally put at £265.5 millions, a figure which presumed that the yield of the pre-1931 duties would be the same in 1932-33 as in 1931-32. Receipts in 1931-32 proved to be £3.1 millions in excess of expectations. Mr Chamberlain explained that there had been a short-fall of over £1 million in respect of spirits and of £1.25 millions in respect of beer, but recent large imports of sugar—presumably by way of forestalling—had yielded £1.3 millions more than anticipated, while there had been receipts of £1,165,000 from the Abnormal Import Duties, £164,000 from the Horticultural Products Duties and £760,000 from the 10 per cent. tariff imposed on March 1st. For 1932-33 Mr Chamberlain estimated that the "old" duties—i.e., all but the three forms of tariff duties above-mentioned—would yield £264.5 millions, or £1 million less than the September forecast. With regard to the "new" duties, he expected £250,000 from the Abnormal Importation Duties before their expiry on May 19th, £750,000 from the Horticultural Products Duties, which continue until next December, and "highly conjecturally" £27 millions from the 10 per cent. general *ad valorem* duty. In addition, a forthcoming Order under Section 3 of the Import Duties Act—this new precedent

of counting unhatched chickens is open to criticism—would impose fresh tariff duties estimated to yield a further £5 millions. Thus, taken together, the "new" duties would yield £33 millions, bringing the total revenue from Customs and Excise to £297.5 millions.

Turning to Inland Revenue, Mr Chamberlain had a less encouraging tale to tell. In 1931-32 Mr Snowden's revised estimate had anticipated £272 millions from Income Tax, whereas actual receipts showed a surplus of £15.4 millions. For 1932-33 Mr Snowden had to provide for a drop of £10 millions through the non-recurrence of the "acceleration" gained by making three-quarters of assessments under Schedules B, D and E payable on January 1, 1932, but had estimated that in a full year the increase in the standard rate from 4s. 6d. to 5s., together with the changes in allowances, would yield £26.5 millions more than in 1931-32. Thus, it would appear that in September Mr Snowden had calculated on 1932-33 receipts from Income Tax amounting to £288.5 millions, while his provisional estimate for Surtax was apparently £75 millions. Mr Chamberlain, however, announced that "from information received" he must anticipate a heavy fall both in Income Tax and in Surtax, which he placed at levels of £28.5 millions and £9 millions respectively below the September forecast. Estate Duties he estimated at a figure £7 millions lower than the revised estimate for 1931-32, but £11 millions higher than actual receipts. In commenting on these estimates and on that of an increase of £5.9 millions in receipts from Stamps, he observed: "I think I am entitled to expect a slow but continuous recovery in values during the current year."

With regard to non-tax revenue, Mr Chamberlain paralleled the procedure which he adopted in respect of the American debt payments. No receipts are allowed for in respect of reparations and war debts. The fall in Miscellaneous Receipts reflects also the cessation of the special transfer from the Dollar Reserve Exchange Account, from which £12.75 millions (including £4 millions accumulated interest) was taken into revenue in 1931-32.

Comparing the two foregoing tables, it will be seen that on this basis Mr Chamberlain was left with a prospective deficit of £1.7 millions. This deficiency he increased by £1.1 millions by conceding an extra shilling per hundredweight preference on all Colonial sugar imported and by granting a special supplementary preference of a further shilling on a specific quantity—limited in 1932 to 275,000 tons—of Colonial sugar, to be allocated by the Colonial Office to the various sugar-producing Colonies in proportion to their total sugar exports. Both these additional preferences are to run for the next five years, subject to adjustment if the sterling wholesale price of foreign full-duty sugar rises beyond 7s. 6d. per hundredweight.

To fill the gap of £2.8 millions thus disclosed Mr Chamberlain revived the duty of fourpence per pound on foreign tea which was repealed in 1929. Previous to the repeal there had been a preference of two-thirds of a penny on Empire tea. This preference Mr Chamberlain now increased to twopence. In addition, having regard to the present large stocks of tea, he announced that there would be an Excise duty of twopence per pound on all stocks, Empire and foreign, in individual ownership exceeding 1,000 pounds in weight. The estimated yield from the tea duty this year was £3.6 millions, and a further £25,000 would be obtained by cancelling the concession made in 1926 whereby silk apparel imported for private use and not for sale might, at the importer's option, pay a specific duty on weight instead of the stipulated *ad valorem* duty. Recent reports of abuse of this concession lend point to its withdrawal.

Mr Chamberlain's final balance sheet is therefore as follows:—

I. ORDINARY REVENUE AND EXPENDITURE, 1932-33.

ESTIMATED 1932 REVENUE.	ESTIMATED 1932 EXPENDITURE.
<i>Inland Revenue—</i> £ Mn.	<i>£ Mn.</i>
Income Tax	260.0
Surtax	66.0
Estate Duties	76.0
Stamps	23.0
Excess Profits Duty ...	1.2
Corporation Profits Tax	0.8
Land Tax, &c.	0.8
Total Inland Revenue	427.0
<i>Customs and Excise—</i>	
Customs	174.6
Excise	125.4
Total Customs & Excise	300.0
<i>Motor Vehicle Duties—</i>	
Exchequer Share	5.0
Total Receipts from Taxes	732.0
Post Office Net Receipt	11.7
Crown Lands	1.2
Receipts from Sundry Loans due to British Government	4.4
Miscellaneous	17.5
Non-Tax Receipts	34.8
TOTAL 1932 REVENUE	766.8
<i>ESTIMATED 1932 EXPENDITURE.</i>	
Interest and Management of National Debt	276.0
Payments to Northern Ireland Exchequer	6.8
Miscellaneous Consolidated Fund Services ...	3.5
Total	286.3
<i>Supply Services—</i>	
Defence:—	
Army	36.5

V. Health, Labour, Insurance (including Old Age and Widows' Pensions)	141.3
VI. Trade and Industry	11.1
VII. Works, Stationery, &c. ...	8.6
VIII. War Pensions and Civil Pensions	49.9
IX. Exchequer Contributions to Local Revenues	45.0
Total	330.2
<i>Tax Collection:—</i>	
Customs and Excise and Inland Revenue Votes (including Pensions, £944,000)	12.6
TOTAL 1932 EXPENDITURE	733.5
National Debt—Sinking Fund	32.5
Surplus	0.8
	766.8

II. SELF-BALANCING REVENUE AND EXPENDITURE.

	£ Mn.
Post Office	59.2
Road Fund	22.9
Total	82.1

The figure at which the Budget (excluding the Post Office and Road Fund items) balances, namely, £766.8 millions, contrasts with £803.5 millions a year ago, when the debt charge, including Sinking Fund, stood at £355 millions, as compared with £308.5 millions in the present accounts.

SECURITY AND TREATIES.

THE problem of security and disarmament is being debated at Geneva once again, but, for good or evil, the circumstances of the debate have changed. It is no longer a discussion in the air. A challenge to the existing "collective system" of security—the system which we have been building up laboriously ever since the end of the Great War—has been provided by the action of Japan. How has the test been stood by the two main pillars of the post-war security system—the Covenant of the League and the Kellogg Pact? It would be not only disingenuous but futile to pretend that "the collective system" has escaped unscathed from the Japanese bombardment, for it is evident that Japanese bombing planes and heavy artillery and tanks have battered "the collective system" of security as well as the Chinese city at Shanghai.

Some of the well-wishers of "the collective system" have tried to minimise the seriousness of this assault. They have sought to show that the Far Eastern conflict is a peculiar local affair which has no vital bearing upon the problem of security and disarmament in general. But their arguments bear the stamp of special pleading; and it is manifest that these arguments do not carry conviction among the representatives of the nations who are assembled now in the World Disarmament Conference at Geneva—especially the representatives of the small and weak nations, who constitute about 80 per cent. of the total number of fully-self-governing States.

It is argued that the Far Eastern conflict has no moral for the world at large on three separate accounts: because the state of China is peculiar, or because the state of Japan is peculiar, or because Manchuria and Shanghai are situated at the ends of the earth. But none of these arguments really holds water.

China, certainly, is in a state of internal disorder approaching anarchy. But, though this condition is exceptional, there always have been and always will be a certain number of countries in this condition in the world at any given moment; and these are precisely the countries that are always in most danger of being attacked by exasperated or designing neighbours. Witness the fates of Turkey and Persia and Morocco before the war. Similarly, to-day, China is in greater danger of attack than, say, Siam, and Mexico than Uruguay. In fact, China as she is to-day is just the kind of country which the Covenant and the Kellogg Pact have been framed to defend. As for Japan, it is true that the Japanese army and navy are independent—*de facto* and perhaps also *de jure*—of the civil Government at Tokyo; and this dispersion of national sovereignty (which is also a form of anarchy) is again peculiar and exceptional. But is not this just the peculiarity that is characteristic of aggressive Powers? In fact, did not the constitutional position in Germany, before the Armistice and Revolution of 1918, resemble, in a mild degree, the position in Japan to-day? It looks as though the circumstances which are alleged to be peculiar in the positions of both Japan and China are likely to be found prevailing wherever there is an aggressor and a victim and a breach of the world's peace.

As for the argument that the Far East is too remote for "the collective system" to be expected to work there, nobody in the world except a heavily-blinkered European will be convinced by it. Shanghai and Manchuria are indeed as remote from Europe as Danzig and Silesia are from America; but they play more important parts than either Danzig or Silesia in the general life of the world; and the argument obviously cuts both ways. If the Far East is "too remote" for the European countries to enforce "the collective system" of security there, then, *vice versa*, Eastern Europe is "too remote" for Canada and the United States to intervene when the issue of security is raised in Danzig or Silesia. Before the Japanese coup it was a common saying that "the collective system" might be possible to enforce if only a test case were to arise first in some region in which the overseas countries felt themselves to be directly interested. This contingency, which used to seem so unlikely, has now actually been realised. The Sino-Japanese conflict has flared up before the German-Polish. America and the Dominions are interested in the Far East to a vastly greater degree than in Europe. Yet it is in this field that "the collective system" has been challenged—so far with success. That being so, can we assume that there are any situations or circumstances or regions in which "the collective system" really would work?

So much for the arguments which seek to prove that the Far Eastern conflict has left "the collective system" of security intact. It cannot really be denied that "the collective system" has been badly battered. It is best to face this unpleasant fact and to ask ourselves how it has happened.

Is it the fault of the United States? Undoubtedly the non-participation of the United States in the League of Nations has weakened its authority and impaired the efficiency of its functioning. But is this difficulty the real cause of the present breakdown? After all, the United States Government has been in constant touch, and at times in actual co-operation, with the League of Nations since the beginning of the Far Eastern crisis. And on certain crucial occasions the State Department at Washington has taken a firmer line than, for example, the Foreign Office in Whitehall.

It is true that the United States is not prepared to use all the weapons which are in the armoury of the League of Nations, and pins its faith to the theory that the pressure of clearly and, if necessary, forcefully expressed world opinion, reinforced by the fear of the dangers resulting

from political isolation, will suffice to safeguard the treaty system. But the United States has gone farther and has made it clear that, if the League decided to use its own special weapon of the boycott, America would not stand in the way or create difficulties. In the circumstances it would be hypocrisy to lay the blame at the door of the United States.

The real cause of the dilatory and hesitating action of the nations of the world is due to a state of mind which is not peculiar to the United States and not peculiar to the Great Powers but is characteristic of the world at large at the present time. "The collective system" is threatened because Japan has shown that she will not yield to reason or conciliation or, indeed, to anything short of pressure; and it is feared that the pressure—even mere diplomatic and economic pressure—would expose the countries exerting it to a risk—however small—that Japan might retaliate by military measures. But in their anxiety to avoid any risk of the kind, the Powers are running a risk which in a long view is a far more serious danger—namely, that the whole existing system of international law and order may fall into discredit. None of them would hesitate to fight in self-defence if individually attacked; but, as long as a breach of the peace is committed at the expense of somebody else, they are strongly disposed to lie low, and, like timid onlookers at a street fight, hope that something will turn up to put a stop to the row. No society of individual human beings could exist if its members were all to feel or behave in this way and if no one were ever willing to take the responsibility of playing his part to ensure the maintenance of peace. Can a society of States exist any more effectively under such conditions?

But, it may be said, this Eastern question will, in fact, solve itself if we have patience. See how unexpectedly effective China's self-defence has proved. The policy of violence is already bringing in diminishing returns to Japanese militarism. When Japan's China trade is quite dead, Japan will probably think better of her military adventure in China, and will voluntarily return to the *status quo*. The part of wisdom, for other Powers, lies in leaving Japan to her own devices and allowing her to learn wisdom for herself by bitter experience. If you only give militarism rope, it will hang itself. But this argument really will not serve. For even if it were true that militarism sooner or later brings its own punishment upon itself, it is obvious that it may first involve years of misery to its victims, and, rather than face the risk of being the unhappy object on which the experiment is tried, the nations will arm to the limit of their resources to ensure their own security.

Since the Great War no graver issue has presented itself before the statesmen of the world. Its handling will greatly influence the fate of the Disarmament Conference and determine whether hereafter individual countries will be willing to place increasing trust in the collective support of the nations of the world, or whether they will feel that they can rely only on their own right arm. The presence at Geneva of Mr Stimson—who will this week talk with the Prime Ministers of England, France and Germany—means that there is an unexampled opportunity of securing the closest possible co-operation between America and the League, and of reaching mutual understanding. If the League will not shoot its last bolt till it has heard what its Commission has to say, it can at least be made crystal clear to Japan forthwith that the members of the League and America are at one in requiring that treaties must be strictly observed by those who expect to enjoy their advantages and that, so far as diplomatic and political action is concerned, all the great nations of the world will adopt a common attitude. If American opinion is right in thinking that a common front is in itself a potent influence, that a nation even in the heat of patriotic enthusiasm will hesitate openly to range itself alone against the whole world—and that, indeed, the joint action of England and America has already induced Japan to refrain from recognising the new independent Government of Manchuria—now is the moment to put this to the test. But it must be a genuine test. This is no time for ambiguous formulae that can be interpreted by one party in this way—by another party

in that; and the political consequences of the judgments reached must be quite clearly understood. In this problem of the Far East, as in all of the great international problems of to-day, great progress could be made if our statesmen would realise that the surest way to let things get completely out of hand is to let things drift.

POLICY AND THE PRICE LEVEL.

NEARLY a year ago the Macmillan Committee on Banking declared that stabilisation of prices at the level then existing would be "a serious disaster" for all countries of the world. Since then gold prices of primary products have fallen by not far short of 20 per cent., while British wholesale prices, notwithstanding the depreciation of the pound, now stand at approximately the same level as when the Macmillan Committee reported. With every week that passes it is becoming more and more patent that the alternative to a recovery of prices to something like the level at which they stood three years ago will be defaults in respect of fixed interest indebtedness, governmental and private, on a scale with which the capitalist system has never yet had to cope. On the other hand, with many countries "off gold" and others wondering whether they may not be compelled to follow suit, the dangers of a complete breakdown of monetary systems through inflation, if Governments do not pay their way and the situation is allowed to get out of control, is a real source of anxiety—particularly to those who have been through the mill.

The subject of our own monetary policy has this week been brought once again to the front of the stage by Mr Chamberlain's references in the Budget speech. The substance of his statement, which is more fully discussed on a later page, is to the effect that, while it would be premature for Great Britain to stabilise now, the Treasury will make funds available and assume responsibility for such action as may be possible to restrict exchange fluctuations. But what policy is to guide its operations? Two notable contributions have recently been made to the elucidation of this problem—the one a memorandum on "British Economic Policy" issued by O. T. Falk and Company, the other an article entitled "Reflections on the Sterling Exchange" by Mr J. M. Keynes, in the current issue of *Lloyds Bank Review*.

Mr Falk, who signs the first-mentioned memorandum with two associates, begins by reviewing briefly the causes which led to our enforced suspension of the gold standard. He depicts us, not without justice, as having subsisted for some years before the crash on a quasi-equilibrium maintained by offering high interest rates for short-term foreign capital, and having failed to take such measures—namely, wage reductions, increased relative efficiency of production, etc.—which might have made the position a stable one. He then proceeds to examine the effects which have been produced on gold prices by sterling depreciation, coupled with our fiscal policy. The conclusion

which he reaches is that British "protective factors," i.e., a depreciated pound plus tariff duties, have "inevitably tended to force gold prices to a still lower level and to cause a further deterioration in the general condition of insolvency, inequilibrium, business losses and unemployment abroad, while at best it has achieved for us the stabilisation, and perhaps only the temporary stabilisation, of our very depressed *status quo*." In short, present British economic policy, in resisting a rise of internal prices, curtailing public development expenditure and restricting imports, is having a disastrously deflationary effect on the economy of the world.

The question arises: What courses now lie open to us? We might reduce the "protective factors," i.e., lower our tariffs and aim consciously at an appreciation of sterling, while endeavouring to maintain the stability of our internal prices. This policy, in Mr Falk's view, would benefit the outside world, but it would go far towards reviving the industrial handicap under which we laboured previous to last September with the additional disadvantage that other countries have reduced their production costs and we have not. Alternatively, while lowering the "protective factors," we might force a reduction in our internal price level; but, Mr Falk suggests, deflation of our prices would neutralise the beneficial effect on the gold price level of reducing British "protective factors," and in view of the rigidity of our wage structure, would aggravate our internal mal-adjustment between prices and costs, apart from increasing our already intolerable debt burden. Finally, to end the list of rejected possible courses, raising the level of "protective factors," while maintaining a stable price level, would merely increase the damage wrought by our policy of recent months. Therefore, in the view of the signatories of the memorandum, the only sound policy is one which includes as its essential element a raising of internal prices. Can this objective be realised, and by what means? The answer, according to Mr Falk, is that the Bank of England can and should aim at broadening the basis of credit. The danger to-day is not extreme inflation, but a failure to check the ravaging process of deflation. The initiation of a policy designed to raise prices, coupled with an assurance that it will be maintained, would increase the demand for loans and lead to an expansion of business activity. As one of the world's largest buyers, with sterling used by a great part of the world as a basis for its currency and as a medium for its trade, we are in a peculiar degree free and able to determine the world price level without necessarily waiting for the co-operation of America and France.

In the general sense of Mr Falk's thesis there is little to which, we imagine, serious exception would be taken by Mr Keynes. In addition, however, to giving his readers a lucid analysis of the factors which led to our departure from the gold standard—incidentally he prefers to describe the event as gold's "going off sterling"—Mr Keynes puts forward a programme for British monetary policy in somewhat more specific terms. He

starts from the premise that under existing conditions, with our adverse balance of foreign payments on income account in process of rapid reduction to a figure probably below £50 millions per annum, sterling has an "equilibrium value" which he places within the limits of \$3.90 and \$3.40. The higher figure he derives from the widely-spread impression that British industrial prices would not be competitive with a lesser degree of exchange depreciation, while he points in justification of the lower limit of \$3.40 to the general feeling that a depreciation of much more than 30 per cent. would write down too drastically the value of sterling debts to us and would give British industry an uneconomic bounty likely to promote reprisals.

Within these limits, Mr Keynes thinks that the Bank of England is in a position to exercise a completely decisive influence on the rate of exchange, provided that it has a clear idea of its policy, strengthens its technique and has the approval and the co-operation of the Treasury in its actions. On the technical side he makes the following recommendations:—(1) that all exchange transactions, including purchases and sales of gold, entered into by the Bank should be on account of the Issue Department, which would mean that the final outcome of exchange dealings would go to the profit or loss of the Treasury; (2) that a large holding of foreign exchange should be built up, after which it might be advisable to accumulate gold; (3) that the Bank should operate on the forward exchange as well as "spot," thus easing the technical problem by reducing the amount of sterling cash which the Bank would have to find for its exchange operations; (4) that short-term rates in London should be brought down to a very low level, thus reducing the yield on funds held in London by foreign exchange speculators; (5) that after the Bank's purchases of gold and foreign exchange, by producing their normal effect on the volume of credit, had brought down Treasury bill rate as low as desired, further expansion of market resources should be obviated, if necessary, by replacing by gold and foreign exchange the Government securities now held in the Issue Department; (6) that the Bank should announce each week a pegged upper limit at which it would purchase gold until further notice.

Having thus defined the technical steps which he deems advisable—step (1) has now been more or less adopted officially—Mr Keynes proceeds to consider what policy the Bank should consciously follow with an eye to the level of prices and industrial employment. Prefacing his recommendations with a hint of hope that "invincible forces" are now tending to the destruction of the "unbalanced creditor positions" of France and the United States—forces which should ultimately lead to depreciation of the dollar and franc in terms of goods and a consequent appreciation of non-gold currencies—he suggests that though we are now moving out of the first phase of financial crisis, at least so far as Great Britain is concerned, it may need a prolonged interval of ultra-cheap money before the phase of industrial crisis begins to pass away. Like Mr Falk, he describes the real problem as that of arresting the present process of deflation and the real risk as being that of failure to accelerate by bold monetary policy the time-table of recovery. Since investors must be induced to consider reasonable risks once more by the yield on riskless bonds falling very low, an optimum Bank rate in existing conditions should be $2\frac{1}{2}$ per cent., with Treasury bill rate at 1 or $1\frac{1}{2}$ per cent. and deposit rate at $\frac{1}{2}$ per cent. But while these should be the lines of the Bank's credit policy, the authorities must also consider the optimum rate for sterling exchange. Here Mr Keynes suggests that the Bank should start in the neighbourhood of the existing market rate and should aim at working the exchange gradually downwards to a level of, say, \$3.40 to \$3.50. The case for such a figure he bases on the considerations (1) that recent foreign speculative purchases of pounds are a factor on which we should not rely, since we need a figure which will not put too much strain on us when we are getting no benefit from the repatriation of capital or speculative transactions; (2) that regard must be had to the need for stimulating employment and exports; and (3) that an exchange rate

of \$3.40-50, as opposed to a higher figure, would be in the interests of the raw material producing countries which belong to the sterling bloc.

We have summarised at some length these two important contributions to current discussion of our monetary policy because we find in them much with which we agree. At the same time, though we are at one with those who discern in the "reflation" of prices the only alternative to an appalling vista of defaults, from which the confidence of investors might hardly recover within a generation, we feel that there may be a danger lest proponents of "progressive" monetary policy may create among the public a false impression that central bankers are keepers of an "Open Sesame" secret formula which would magically unbar the gates to prosperity but which, from cowardice, lack of vision, or, it may be, some inscrutable *odium humani generis*, they will not pronounce.

To create false hopes in this direction would be a mistake. The practicable policy, as we see it, which our authorities should follow, is to create, very much on the lines of Mr Keynes' programme, credit conditions favourable to expansion when other factors permit enterprise to recover, and to leave no stone unturned to restore the confidence in the political, financial and economic organisation of the world, without which no offer of credit will tempt the business man to expand his activities. That the desirability of clearing the way for expansion when conditions are favourable—and, incidentally, of discouraging the "flight to the pound" which has latterly caused such an unwelcome appreciation—is appreciated by the Bank of England is shown, we hope, by the announcement this week of a further, if belated, fall in Bank rate to 3 per cent.

UNEMPLOYMENT IN THE RUHR.

(BY A CORRESPONDENT.)

IN Germany to-day out of a total population of 65 millions over 6 millions are without work. Of these, some 500,000 represent the surplus labour within 20 miles radius of the city of Essen, that is, in the industrial area of the Ruhr Basin. If the families and dependents of these half-million unemployed are taken into account, it may fairly be estimated that 83 per cent. of the $4\frac{1}{2}$ million population of the Ruhr are supported by the State or the municipalities. As a mitigating circumstance one should perhaps mention that long terms of unemployment are the exception, there being no absolute body of surplus workers, but rather a constantly shifting personnel.

The situation thus created in the industrial heart of Germany is one well calculated to cause anxiety. It is generally realised both by employers and employed that no improvement can be expected in the near future, and the view has rapidly taken root that only by international action can the conditions essential to an industrial revival be restored. In the meantime, pending such action, the unpleasant necessity remains of preventing a further deterioration which might lead to a complete disruption. It is a sign of the fundamental strength of German industry and of the sense of responsibility existing among the working class that this disheartening, because negative, task is being steadily pursued without undue disturbance. To ensure the continuance of the present tranquil conditions the prime requisite is the punctual working of the machinery of unemployment relief, a provision which is not made easier by the growing budgetary difficulties of both central and local authorities. There are rapidly dwindling receipts to meet the vast demands on the public purse.

The administration of unemployment relief in the Ruhr is as efficient as elsewhere in Germany, but in the course of the last few months certain defects and anomalies have revealed themselves. In particular, the tripartite system of insurance benefit, transitional benefit, and welfare relief sometimes works inequitably, so that in Essen, for example, an unemployed workman with a large family may enjoy a higher standard of maintenance under welfare relief than by drawing insurance benefit. Or, to give another instance, a skilled miner working full time is not paid more than 120 marks a month, however large a family he may have, a sum which corresponds exactly to the

allowance granted by the local Institute for Welfare Relief to an unemployed married man with five children. Such anomalies have developed through the division of function between the Reich labour exchanges, which control the payment of insurance and transitional benefit, and the municipal relief departments, which concern themselves with all other demands for maintenance. It is therefore now being seriously considered whether it would not be more satisfactory and at the same time more economical to abolish for the present the insurance principle (which has already been discarded in the Ruhr coal industry as a subsidy against British competition) and to rationalise the administration of unemployment relief by placing it under a single authority. The *Frankfurter Zeitung* estimates that the double reorganisation, financial and administrative, would effect a saving of 300 million marks, which is roughly 10 per cent. of the total expenditure on unemployment in Germany last year.

Where unemployment has reached such formidable dimensions as in the Ruhr it is natural that every kind of scheme for reducing the evil should have been tried. Such employment as is available is to a great extent portioned out by various methods of short time, which, however, find little popularity with the underpaid employees. Proposals have also been put forward for creating work outside the normal sphere of private enterprise. Some idea as to the practical realisation of these proposals may be deduced from the following figures for Essen, a city with a population of 640,000, of whom 80,000 are seeking work. In 1931 the municipality employed on building and reconstruction schemes 7,000 workmen, who would otherwise have been drawing the dole, but even this small number has now been reduced to 4,000. Some 3,000 more are given compulsory work, for which they obtain a small bonus on their unemployment benefit. In addition, there are a certain number of voluntary labour corps organised as a rule by religious or athletic associations, who devote their energies to laying out sports grounds and other occupations which involve no serious overhead charges. For those for whom no work can be found, paid or unpaid, an admirable system of free educational courses has been devised. In Essen itself there are no less than 90 of these schools for the unemployed, and it says much for the character of the local working class that the courses are well attended, even if the attraction of an occasional free breakfast be discounted.

Notwithstanding the vast network of official relief services, and in spite of the fact that in an industrial district such as the Ruhr but a very small section of the population enjoys a large income, charity is playing a large part in relieving distress. In particular, the middle classes, who have suffered hardship ever since the destruction of their savings during the inflation, are greatly dependent upon charity. The latter mostly takes the form of free gifts of food and clothing, cheap coal and the payment of arrears of rent, and is organised on a businesslike basis by religious and other benevolent societies.

Although there is much and very real distress in the Ruhr, and even if things do not go from bad to worse, no discernible prospect of alleviation, the casual visitor sees few outward signs of dissatisfaction or even of poverty. The admirable custom of having changing-rooms and baths at the pitheads contributes in no small degree to the smart, pleasant appearance of the man in the street. Moreover, a tradition of tidiness and responsibility prevails which makes street lounging as rare a sight as slovenly clothes. As for the extraordinary absence of malcontents, a certain explanation is afforded by the consideration that, where wages are so low, to be unemployed seems not such a very great evil. It is the irregularity and uncertainty of employment rather than the lack of it which the workman fears most. The means tests for the receipt of transitional benefit and welfare relief have provoked considerable discontent, and, as always in times of depression, the extreme political factions have gained an accretion of strength. Nevertheless, the working-man has learnt from his experience of past "putches" to distrust the efficacy of violence, and Communist propaganda falls for the most part on barren ground. It must also be added that the authorities have learnt from experience how to keep the unemployed more contented, by encouraging them to edu-

for all Scandinavian
currency transactions.

SKANDINAVISKA KREDITAKTIEBOLAGET

cate themselves and by providing them with free meals and free entertainments. The National Socialists have been even less successful than the Communists in extending their influence over the Ruhr. Among the miners they have hardly gained a single convert, owing perhaps to the hostility of the trade unions, although they have achieved better results with the small shopkeepers, clerical workers, and official classes. In the Krupp works only one man out of the thirty comprising the Workers' Council is a Nazi, while on the other hand among the fifteen members of the staff council no less than five are supporters of the Hitler movement.

To sum up, if one were asked what was the most notable feature of the crisis in the Ruhr the answer would undoubtedly be the resignation and fortitude of the working classes at a time of hardship more severe even than that of the inflation or Occupation period. Nevertheless, it can not be too strongly insisted that, with one-third of the population dependent on the public purse and on charity for a minimum livelihood, a dangerously unstable situation has been created at the most critical point in Germany's industrial life.

AN INQUIRY INTO PROFITS.

As our readers are aware, we have published for many years quarterly analyses of the net profits of joint-stock undertakings classified in accordance with usual Stock Exchange practice. While the analyses perform the useful function of measuring increases or decreases in the net earnings, reserve allocations, etc., of particular classes of companies in relation to their previous year's working, the statistical results obtained are obviously open to criticism in various respects and do not provide a completely satisfactory basis for calculating the real trend of changes in industrial profits. For example, companies operating at home and companies operating overseas are commonly lumped together in one category, whereas in any given period it may well be the case that earnings abroad and in this country show fundamentally different movements. Again, our surveys have always referred to net profits after deduction of debenture interest; but while this calculation is designed primarily to show dividend-paying capacity, the inclusion of debenture interest with profits is preferable when figures are required which show broad changes in the profitability of industry as a whole.

There are other points of difficulty also. For instance, methods of deducting income tax before declaring profits are not uniform, and, since many companies pay their dividends "tax free," a change in the standard rate of income tax has the effect of distorting the profits of such companies. Further, the delay in the publishing of profit and loss accounts after the end of the trading period to which they refer varies considerably as between companies, and an important consideration is that the time-lag is greatly increased in the case of holding companies. Again, the fact that important companies' accounts may be published in different quarters of successive years renders it difficult to carry comparisons accurately back for more than a year at a time. Particularly during the period when there is any violent fluctuation in profits, there are serious objections to multiplying the proportionate changes between year A and year B by the proportionate change between year B and year C in the hope of obtaining a figure showing the proportionate figure

between year A and year C. Finally, the Stock Exchange classification fails to bring out clearly the results obtained in different types of industrial enterprise—as witness the large conglomeration of diverse undertakings covered by our “Miscellaneous” group.

We have, therefore, attempted a re-classification which begins by isolating those industries which are shown to be important by figures of their production or volume of employment. In this re-classification we have divided joint-stock undertakings into three broad groups: (1) Manufacturing and mining, which may be defined as all industries (except building) which come within the Census of Production, including the production of gas, water and electricity. (2) Transport, distribution and services. (3) Companies operating overseas. Since it was desired to carry our re-examination back to 1924 a complete recalculation of the results of every company whose accounts we have published would have been a labour unlikely to give results of proportionate value; some selection of data was clearly necessary. Accordingly, we have eliminated from our list of companies (a) all investment trusts and financial companies; (b) companies controlling or controlled by other companies; (c) rubber companies other than those whose names begin with certain letters of the alphabet. This leaves a conveniently sized residue of some 700 companies. Next we have added to the figures of net profits shown for each company in our previous published analyses such debenture interest as was disbursed. Finally, in obtaining the totals we have obviated the difficulty arising from the fact that the returns of some of the companies were not continuously available by the use of a chain index number. In classifying the industries within each of the three above-mentioned groups we have endeavoured to construct a list comparable with the results of the Census of Production. The results of our inquiry will be published in forthcoming issues of the *Economist*.

Notes of the Week.

The Exchange Fund.—The announcement that the Government would take powers in the Finance Bill to establish an Exchange Equalisation Account formed one of the most interesting features of Mr Chamberlain's Budget statement. The new account, Mr Chamberlain said, would have as a nucleus the remaining balance of some £12 millions standing to the credit of the Dollar Exchange Reserve Account, and would be supplemented by Government “borrowing” up to £150 millions. The funds thus available would have a dual purpose. On the one hand they would permit the Treasury, operating through the agency of the Bank of England, to acquire substantial holdings either of gold or of foreign exchange. On the other hand, the funds would be utilised, for book-keeping purposes, both to cover potential losses on account of the repayment of foreign credits—their figure would depend upon the eventual level at which sterling was stabilised in relation to gold—and to provide that any foreign exchange assets held in the Issue Department as cover to the note issue should be entered in the Bank's weekly statement at the exchange of the day, any deficiency passing from the Equalisation Account to the Issue Department and *vice versa* in the event of a surplus being shown. With the general principle of increasing the resources available in the hands of the authorities for neutralising the effect on the exchanges of movements of floating capital, we are in entire agreement. Mr Chamberlain gave no detailed account of the precise technique which is contemplated. Possibly such “borrowing” as the Government undertakes for the Equalisation Account will be in the form of loans from the Bank of England, whose otherwise inflationary effect will be neutralised by sales of sterling securities now held by the Bank. Whether this is the precise procedure contemplated or not, it is clear that the account can be so operated as to avoid any dislocation of the money market. One feature, however, of the proposals appears to us to be open to question. Mr Chamberlain stated that no details of

the assets in the Exchange Account would be published. While we do not begrudge the authorities any weapon which they can usefully employ to make the path of the speculator more difficult, the concealment of the total gold and *devisen* holdings, whether held by the Bank or the Treasury, may easily stimulate, instead of discouraging, speculation based on rumours. While no one would wish to hamper the Bank in the ticklish business of attempting to restrain the vagaries of a free currency, there is an even greater danger to be feared from a policy of secrecy. Nothing has done more to undermine public confidence in the policy of the Bank than the air of mystery with which its proceedings have frequently been surrounded. Whatever their charters may say, Central Banks are public institutions with a national responsibility. Our own Bank is far behind other leading central banks in the extent to which it takes the public into its confidence. If we are to have a managed currency for some time to come, it will only be possible for management to be effected successfully if market forces automatically come into play to correct fortuitous aberrations of the exchange. The system will never be successful or inspire confidence if a single performer who knows the facts plays a lone hand against the great mass of buyers and sellers of foreign exchange working in the dark. This question, which may seem to be a minor detail, is really of very far-reaching importance, and deserves very careful consideration by the authorities. It is admittedly not an easy matter to settle, but we sincerely hope that the Treasury and the Bank will consider what can be done—both from the point of view of enabling market forces to be a help and not a hindrance, and also as an example to the Central Banks of the world.

The Cost of Education.—The debate in the House of Commons on Monday on the Education estimates produced the usual controversy between those who think we are spending too much on education and those who think that present expenditure is still inadequate. The President of the Board of Education, Sir Donald Maclean, steered a middle course. While emphasising the huge burden on the taxpayer and ratepayer, he dwelt with equal force upon the vital necessity for keeping our educational standard high, and expressed regret at the cuts which the crisis had imposed upon his department. Any occupant of this Ministerial post is entitled to sympathy to-day. For he, of all men, must be impressed with the truth that no use to which public money can be put is likely to be more reproductive socially and economically than proper and efficient education. On the other hand, Mr Chamberlain's Budget has given the sternest of reminders that, in the absence of trade revival, public retrenchment is the only possible way to alleviate an exceptional tax burden. The figures relating to expenditure on education call, therefore, for severe and critical scrutiny. Sir Donald himself opened his speech by admitting that nearly £100,000,000 is raised every year from rates and taxes for education services—a sum which is more than half the total national Budget of 1914. This figure is about £12 millions higher than in 1921, in spite of the great fall in prices during the decade. If these figures suggest the question whether we can afford it, there is another figure available which raises the equally important question whether we are getting value for money. In 1913-14 total educational expenditure per head of elementary pupils was £4 15s. 2d. For 1932-33 it works out at no less than £12 11s. 7d. Can it really be true that the value to the children and to the nation of the education provided to-day is nearly three times as great as that of the education provided before the war? If Sir Donald will concentrate upon the task of answering that question, he may be successful in finding an avenue of approach towards the achievement of substantial economy without the sacrifice of efficiency.

Mr Runciman.—Towards the close of the last Parliamentary week Mr Runciman took advantage of a debate on the Civil Estimates to review the trade position. The keynote of the speech was optimism. Between September, 1931, and March, 1932, said the President of the Board of Trade, the number of workers actually in em-

ployment increased by 250,000; forty-three new factories have been started to produce such goods as knitwear, ribbons, furnishing fabrics, clothing, electric radio apparatus, leather goods, toilet products, etc.; the signs of decadence which foreign critics described a year ago have disappeared. “I wish Mr Siegfried would come to England now,” said Mr Runciman, “and spend some time in Lancashire and Yorkshire and the industrial districts of London.” We rejoice with the President at such patches of improvement as there are in an industrial picture still unhappily blackened by the plight of coal, iron and steel, engineering, shipbuilding and shipping; and we share his satisfaction that Britain's position has improved relatively to the deterioration elsewhere. But there is much in Mr Runciman's review of the situation which provokes certain queries. “The trade of Europe,” he said, “is much the most important to which we devote ourselves. One-third of our foreign trade was until recently European trade, but, as one of our publicists said recently, with a Europe which is half angry and half afraid, there has been a very great shrinkage in European traffic.” How far, it must be asked, is Mr Runciman's own policy of import restriction responsible for the decline in our exports to Europe? “The prospect of our extending our markets in Europe has become smaller,” Mr Runciman remarked, and confined his blame to Continental prohibitions and restrictions. But he omitted to mention that, in proportion as Continental goods have been shut out of our market by tariffs, Continental capacity to purchase British exports has been reduced. By applying his famous “slimming process” to British trade, he has automatically tightened the thongs which are slowly strangling the trade of Europe. Mr Runciman's peroration showed that he still dreams of progress through tariff bargains after Ottawa to an era of freer trade all round. While his dream works itself out to fruition or inanition, the world bleeds to death. Conservative critics of the speech hailed it as marking a fresh approach by Mr Runciman to the traditional Conservative view of the blessings of Protection. We prefer to suggest that it is high time the Government's intentions towards foreign countries should be more clearly defined.

—**and Mr Baldwin.**—Mr Runciman was followed the next day by Mr Baldwin, who, boldly invading Mr Lloyd George's constituency, addressed a mass meeting at Llandudno. For the most part, the Conservative leader was content to paraphrase the parliamentary speech of Mr Runciman referred to above; for he, like the President of the Board of Trade, emphasised the brighter patches in the domestic sky, and, in effect, repeated the slogan “through Ottawa to freer trade.” It is comforting to note this insistence upon the aim of “freer and more beneficent” trade, and we trust that both Mr Baldwin and Mr Runciman will bear continually in mind that, whatever arrangements and bargains may be made at Ottawa, they will lead us nowhere if the increased preferences to British goods involve higher tariffs to the rest of the world. Each from his own angle, Mr Baldwin and Mr Runciman look to Ottawa as the starting point of a campaign to revive world trade. “A successful example in our Empire,” said Mr Baldwin, “would blaze the trail for the rest of the world.” It might do so, provided inter-Imperial arrangements are not exclusive, but, while scaling down the barriers to the trade of the Commonwealth leave the door open for the adhesion of all countries which will themselves conform to a low tariff policy. For the moment there is some satisfaction in noting that Mr Baldwin agrees with Mr Runciman that freer trade is an essential need, not merely inside the Empire, but in the world at large. Let us hope that this simple expression of an obvious truth will be printed and framed and packed in the luggage of every one of our delegates to the Ottawa Conference.

The Free List.—To one aspect of the proceedings of the House on Budget Day particular exception may legitimately be taken. Included among the Budget resolutions was an affirmation that it is expedient to amend the Import Duties Act by providing that on the recommendation of the Advisory Committee the Treasury may be

authorised to eliminate by Order any class of goods from the Free List. Debarred on a point of order from securing this objectionable amendment to the Act at the time when the Bill was under discussion, Mr Chamberlain announced that he would seek legislative powers in this sense at a later date. But to incorporate in the customary resolutions one to which he made no reference in his speech, but which commits the House on an important point of policy, is suspiciously like an attempt to stifle criticism in advance. Presumably the question will be raised afresh in the Finance Bill when, we hope, strong opposition will be made to this further attempt to remove from the purview of Parliament the imposition of fresh taxation by way of tariff duties.

The Tariff Makers.—Details of the first recommendations of the Import Duties Advisory Committee and of the schedules of new duties imposed this week by Treasury Order were made available to the Press too late for us to do more than give, in this issue of the *Economist*, our first impressions, to which we shall have more to add next week, when there will have been an opportunity of fuller study of the Order. This may be said at once: On the plea of urgent need to meet the situation arising next month, when the Abnormal Import Duties expire, the Committee, who admit naively that the erection of a “scientific tariff” is a task requiring “much inquiry,” have made a strangely unscientific leap into the dark in the direction of moderately high Protection. There are to be four stages in the tariff. On agricultural machinery and tools, most building materials, cordage, ropes and twine, dressed leather, pulp and some other articles, the duty (including the 10 per cent. already levied) is to be 15 per cent. On a wide range of manufactures, which comprise the bulk of the manufactured category—including finished iron and steel products—the rate is to be 20 per cent., while the 25 per cent. category includes the strange assortment of fruit pulp, leather trunks, pipes, sporting guns and games. Luxury articles, such as oysters, caviare, furs, jewellery, artificial flowers and toilet articles, fall under the highest rate of 30 per cent. In addition, bicycles and some chemical products are to be subject to 33½ per cent., bringing them within the “safe-guarded” category, while semi-finished steel imports are to be taxed 33½ per cent. for a minimum period of three months to check importations at a time when it is alleged that stocks are high—until Protection of a more permanent nature is devised for this industry. With regard to the duration of the other duties, the Committee indicate that they do not propose, save in exceptional cases, to recommend changes in a downward direction for twelve months. On the other hand, they are ready to propose higher duties in “appropriate cases.” The new duties come into operation at midnight on Monday, April 25th. We look in vain for any justification of the grounds upon which this escalator tariff has been imposed. It is a tariff which will undoubtedly restrict trade, delay the restoration of prosperity in countries which will be particularly affected, and hamper our own exporting industries and shipping. While there is no evidence whatsoever that our trade balance is to-day a menace to the pound, this tariff will force our foreign trade to a lower level on both sides of the account. The sole excuse that could conceivably be advanced for it is that it has been imposed in order to be taken off again if other countries will give our goods equivalent treatment. But the words of the report have an ominous sound to those who look forward to this development.

America and War Debts.—Isolated voices in the United States are to be heard urging Congress to modify its present *non-possumus* “last cent” attitude with regard to inter-governmental debts arising out of the war. Recently Dr. Nicholas Murray Butler has pleaded eloquently for drastic revision and—still more significantly—at a conference of the Democratic Party last week Mr Al. Smith made the original suggestion that the United States should “forget all about” European war debts for twenty years and meanwhile should credit each debtor country with 25 per cent. of the gross value of her pur-

chases of American goods. It is evident, however, from proceedings at Washington this week that no immediate change of Congressional policy is to be expected. On Tuesday, Senator Reed, referring to the absence of provision for debt payment in Mr Chamberlain's Budget, expressed his conviction that "no responsible American official has given the British any reason to think that these payments will not be expected," and on the following day Senator Borah made a trenchant attack on Mr Al. Smith's proposal—reminding Congress that no provision had been made in the United States Budget for non-receipt of payments from the European debtors. There was, however, one passage in Mr Borah's speech which is significant and with which we agree. If Europe, he said, cannot solve the reparations problem "it is useless to talk to the American tax-payer about aiding Europe by cancelling debts. . . . Until the fundamental questions which inhere in the European situation can be adjusted it is not within the power of the United States, however liberal and generous its policy may be, to reanimate Europe." The moral is clear. Whatever the future may hold with regard to the eventual attitude of Congress towards debt cancellation or revision, it is hopeless for the forthcoming Lausanne Conference to shelve the specifically European problem as such until American intentions are disclosed. No matter what the risk, a beginning in Europe must be made.

The Election Campaign in France.—In the intervals of discussing Reparations and Danubian Relief and Disarmament at international meetings, Monsieur Tardieu is conducting his election campaign at home; and last Sunday he made an important speech in his own constituency at Giroumagny, near Belfort. Perhaps the most interesting aspect of the speech was the picture of France and her problems which Monsieur Tardieu partly drew and partly took for granted; for the picture was less unlike everyone else's picture of his own country nowadays than a Frenchman's picture of France would have been six months or a year ago. Monsieur Tardieu shows us a France whose situation is not very different from that of Britain or even that of Germany: a France who has reached the limits of her taxable capacity; who requires positive and substantial relief from taxation if there is to be a revival of trade; a France who is at the same time anxious about the balancing of her Budget. Now if France is really finding herself in the same boat as all the rest of us, does that mean that she is becoming more inclined to make those contributions which only she can make towards the common recovery? In the matter of using the French stock of gold for investments abroad, Monsieur Tardieu defended himself against critics of the loans which France has made already. But the very fact that these somewhat exiguous loans require defence presumably means that there is little prospect of the French embarking upon foreign investment on what, from a world standpoint, would be anything like an adequate scale. For the rest, Monsieur Tardieu was concerned last Sunday to insist that, whatever the outcome of the elections might be, the new Chamber would be certain to be in favour of the same foreign policy as its predecessor. Of course, this was his inevitable cue in his rôle as the spokesman of those parties, now in power, by whom this policy has been made. We are not sure how far Monsieur Tardieu really expects to see his foreign policy survive the elections intact. All the same, it is safe not to build our hopes upon the French elections. The France with whom we shall have to collaborate in finding a solution for the world crisis may be hardly distinguishable from the France of to-day when the elections have come and gone; and we had better face this prospect in advance.

The North-West Frontier Province.—The formalities required in order to raise the North-West Frontier Province to the status of a "Governor's Province" have been completed by the holding of a general election for the new provincial legislature last week and by the investiture of the first Governor by the Viceroy last Monday. These

changes remove an anomaly; for the settled districts of the North-West Frontier Province do not differ in social character or political aptitude from the adjoining province of the Punjab, from which they were separated administratively, at the beginning of this century, for the strategic convenience of India as a whole. When the Punjab, like other Governors' provinces, was being endowed with self-government at a rapid rate, it would have been impossible to keep the North-West Frontier Province permanently under a purely bureaucratic regime. The new regime in the North-West Frontier Province is also intended to facilitate an accommodation between the Muslims and the Hindus in the projected All-India Federation. For the erection of the North-West Frontier Province and of Sind into Governors' provinces gives the Muslims two more British Indian Governors' provinces in which they predominate, and thus places them at less of a numerical disadvantage in any federal organisation. On these several grounds, the proceedings in the North-West Frontier Provinces during the last few days are to be regarded as both desirable and timely. At the same time, they have not been altogether convincing or altogether reassuring. For example, the elections gave the Red-shirt organisation an opportunity of demonstrating that, although it has been "proclaimed" under the present ordinances, it has merely been driven underground and has not been broken up. The Redshirts have had considerable success in their campaign of keeping the electors away from the polls, whether by persuasion or by force. The polling has been farcically light, not only in outlying rural areas like the Marden district, but also in the city of Peshawar itself. And even such polling as there has been has involved the intervention of police and troops, with inevitable casualties. The actual state of the province is indicated by the arrangements which were made for the Viceroy's visit. His Excellency arrived at Peshawar by air, and the aeroplane alighted in the interior of a cordon which had been drawn round the city by the troops in order to prevent the Redshirts from coming in from the country-side. In the circumstances, we doubt whether the pomp and circumstance with which the Viceroy installed the Governor next day was well advised. As the effectiveness of the Redshirt movement shows, the North-West Frontier is moving politically with the times; and there is perhaps a danger that the traditional Anglo-Indian scenic displays, à la *Grand Mogul*, may become an anachronism—with the opposite psychological effect to that which is intended.

Deadlock at Shanghai.—Since the breakdown of the long-continued armistice negotiations at Shanghai—a breakdown which could no longer be averted by the utmost efforts of the neutral authorities on the spot—the Committee of Nineteen have been wrestling with the problem at Geneva; but they seem to be making little headway. The League Assembly's Committee can only suggest that the determination of the moment when "normal conditions" may be deemed to "have been restored" at Shanghai shall be entrusted to a commission on the spot on which China and Japan shall be represented, together with France, Great Britain, Italy and the United States. The Japanese insist that this is a question which they have to decide for themselves. In other words, the Japanese are now insisting, at Shanghai as well as in Manchuria, upon continuing their military occupation as long as they choose, without admitting that either the Chinese or the neutrals have any say in the matter. And this means that the Japanese troops will remain unless and until they are forced out either by stress of the Chinese boycott or by pressure from some other quarter. The Japanese Press is now beginning to complain of Russian military concentrations on the Siberian side of the Manchurian frontiers; while simultaneously the Russian Press is adopting a much more militant tone about the Japanese adventure—particularly in regard to the flagrant Japanese trespass upon the zone of the Chinese Eastern Railway, which is in the joint ownership and under the joint management of the Chinese and the Soviet Governments. Relations between the Soviet Union and Japan will not be improved by the

foundation of a Japanese "Nazi" Party, which was accomplished—by secession from the Social-Democratic Party—at the end of last week. No doubt these Japanese Nazis are still further than their German ensamples from coming into power; yet the gesture of founding this new party suggests that the political current in Japan is still flowing in the direction of reaction and violence. Unless this is checked the Japanese will surely bring retribution on their own heads.

Greek Finances.—The trend of events in relation to the financial crisis of Greece is occasioning, not without good reason, considerable concern in London. It will be recalled that whereas the Financial Committee of the League, in its recent report on South-Eastern Europe, endorsed the Greek Government's plea for relief in respect of external indebtedness to the extent of recommending a twelve months' moratorium on the sinking funds of foreign loans and a fresh foreign loan of not more than \$10 millions, the Greek proposal had been that a foreign loan of \$50 millions should be issued in four yearly instalments and that the moratorium on the sinking funds should be of five years' extent. On Friday of last week M. Venizelos intimated bluntly to the League Council that the Greek Government "finds itself obliged to contemplate" (1) five years' suspension of sinking funds, and (2) non-payment, in the absence, at all events, of the loan recommended by the Financial Committee, of the coupons due on May 1st. To treat the issue in this somewhat high-handed manner is scarcely becoming to a debtor country or calculated to enhance Greek credit. But apart from this consideration, subsequent rumours have been current to the effect that the Greek Government intends to leave the gold standard. In view of the fact that the drachma, in common with the pengö and in minor degree the Austrian schilling, is being dealt with at a heavy discount on the Black Bourse in Athens, we are not disposed to challenge the advisability of a devaluation of the Greek currency. But in the case of Greece, as of the other States in distress, such an operation is exposed to the gravest dangers unless it be conducted with the assurance, not only of adequate external support, but, we would suggest, of supervision and co-ordination by means of some such party as the Financial Committee of the League. M. Venizelos would do well to take counsel once again before launching under existing circumstances on the precarious waters of completely "free" currency.

Australian Finance.—The Premier's Conference met last week, and among other matters proceeded to discuss a joint plan for the relief of unemployment. The proposal put forward by Mr Lyons on behalf of the Commonwealth Government was that the State Governments should all give satisfactory guarantees for the observance of last summer's "Premiers' Plan" of national economy and of the Bruce Committee's report on unemployment, and that the Commonwealth Government should co-operate with the States for the negotiation of an Unemployment Loan of £10,000,000 for half of which sum the Commonwealth Government should itself be responsible. Simultaneously Mr Lyons endorsed the Bruce Committee's recommendation that the exchange rate (i.e., of sterling) should be raised. This proposal had a very mixed reception. Mr Lang returned a flat negative, and Mr Tunnecliff, the acting Premier of Victoria, was almost as hostile. Mr Moore from Queensland and Mr McPhee from Tasmania rejected the recommendation that the exchange rate should be raised, and Mr Hill from South Australia was non-committal. Discussion dragged on for a few days, and at one moment it was suggested that New South Wales and Victoria should be omitted from the scheme and left to deal with their unemployment problems by themselves. Meanwhile, following a Government defeat in the House, the Governor-General of Victoria has granted a dissolution, and the election is due to take place next month. It is generally expected that this will result in a Labour defeat and a change of Government; and the result is that, following a fruitless insistence by Mr Lyons that the adoption of any fresh unemployment scheme

must be contingent upon the determination of all the States to balance their budgets and meet their interest obligations, the further discussion on the Unemployment Loan has been shelved pending the return to power of a new Victorian Government. The situation in New South Wales remains a deadlock. The garnishee order upon State funds in New South Wales and other banks remains in force; and, in consequence, payment of all drafts and warrants drawn by the New South Wales Government is being refused by the banks, to the considerable hardship of many of their presenters. Mr Lang and Mr Lyons have made vigorous onslaughts upon each other at the Premier's Conference. Mr Lang's thesis is that in seeking an alleviation of its external debt burden his Government has done no more than that of many other countries, to which Mr Lyons has replied that it is obviously impracticable to obtain the consent of Australia's external bondholders to a reduction of their claims, and that the only hope of relief lies in the formulation of an international scheme for the relief of debtor countries.

—and Exchange.—The objections voiced by Mr Moore and Mr McPhee to the Bruce Committee's proposal to depreciate the Australian pound have great force and are endorsed by many of the State Treasurers and also by a fair volume of banking opinion. The main ground for these objections is that a depreciated exchange adds to the cost, in Australian currency, of the service of the external debt. On the other hand, as the Bruce Committee clearly envisages, a depreciated currency would both stimulate export trade and lead to an increase in Australian internal prices, especially in those of primary materials. Provided the disadvantages of inflation can be avoided—or at all events kept strictly within bounds—this dual consequence would both assist the transfer of Australia's external debt obligations and alleviate the burden of Australia's internal indebtedness and indeed the whole cost of her public administration. The effect of currency depreciation upon the problem of transfer is too wide to be dealt with in the course of a brief note, and it also applies to a large number of countries besides Australia. We will only observe that the countries where it has occurred do not afford an example which encourages imitation. At the same time, the State Treasurers may well reflect that the alternative policy of appreciating the value of the currency for the sake of lightening external payments presents other difficulties which may well impede the solution of their problems.

The Canadian Budget.—Receipts for the past fiscal year, which ended March 31st, writes our Ottawa correspondent, were placed at roughly \$334½ million. The table below shows receipts and expenditure for the past two years:—

(In millions.)					
	1930-31.	Estimated 1931-32.		1930-31.	Estimated 1931-32.
Receipts from taxation	296.3	273.3	Ordinary expenditure	389.5	378.7
Non-tax revenues	53.3	54.4	Capital	28.2	17.0
			Special	16.8	55.1
Consolidated Fund receipts	349.6	327.7	Loans and advances	5.5	3.4
Special receipts	6.6	7.0	non-active		
	356.2	334.7		440.0	454.2

ULMACO-AVE.

Of the major items only the income tax yielded the sum forecast, and it was down by \$10 millions compared with the previous fiscal year; the heaviest fall was in Customs returns, which had shrunk from \$131½ millions to \$108 millions. Ordinary expenditure was some \$19 millions less than the estimates, but "special expenditure" was inordinately swollen by the demands entailed by the consequences of the prevalent depression. The total cost of the programme of public works undertaken was \$70½ millions, of which the Federal Government provided \$26½ millions, and the expenditure on direct relief was nearly \$9 millions, mostly spent in the drought-stricken areas of the Prairie Country. The Budget speech revealed that some of the provinces had been unable to pay their share of the cost of the relief works, and had been given loans totalling \$10½ millions. Further loans of \$11½ millions had also been made to certain Western provinces to avert their default on obligations in the United States, and at the end of the fiscal year the provinces together owed the Federal Treasury some \$22 millions, secured by their one-year Treasury notes. The gap between revenue and expenditure of roughly \$119½ millions took no account of the demands of the Canadian National Railway system, which had shown an operating deficit of about \$61 millions, but the Government had been compelled to make a total provision of \$108,976,265 for the C.N.R. Of this sum \$59 millions had been provided by the proceeds of guaranteed Canadian National bonds, \$41½ millions out of the National Service Loan and the balance had been included in the expenditures. The aggregate Federal deficit for the past fiscal year is in the neighbourhood of \$180 millions. It was largely met by borrowing, and Mr Rhodes placed the figure of the country's net debt on March 31st at \$2,381,117,486. In addition there are outstanding \$1,000,918,406 bonds guaranteed by the Federal Government on account of the railway, harbour commissions, etc. For the present fiscal year 1932-33 the ordinary and capital expenditure is estimated at \$379,500,000 which, after absorbing an increase of \$12,700,000 in interest charges, shows a decrease of \$25½ millions as compared with the previous fiscal year. Mr Rhodes forecast that on the existing basis of taxation and with a continuance of present business conditions the revenues would be roughly 319 million dollars. He therefore submitted proposals for increased taxation, calculated to yield 55 million dollars, which he claimed would balance the ordinary expenditures and leave a surplus of about \$4,300,000. Provision is, therefore, not fully made for the capital expenditures and the substantial sums which will be required for unemployment relief and railway deficit for 1932-33, which is likely to be greater, instead of less, will obviously have to be secured by borrowing. There is a sharp increase in the income tax; all the existing exemptions are cut down by 20 per cent., and there is a special surcharge of 5 per cent. on the amount of the tax payable by all persons with incomes in excess of \$5,000. The corporation tax is also raised from 10 to 11 per cent.; the sales tax from 4 to 6 per cent., and the special excise tax on imports from 1 to 3 per cent. In addition, the stamp tax on cheques is increased, and a variety of what are known as "nuisance taxes," introduced during the war, and later abandoned, are now reimposed; such levies affect sleeping and parlour car tickets, telegrams, cablegrams and long-distance telephone calls, and there is also to be imposed a tax on insurance premiums, with an exemption for life, marine and farm mutual companies. In respect to the tariff, Mr Rhodes announced that in view of the impending Imperial Conference, the Government had decided not to interfere with the British preferential rates, and this decision precluded any general adjustment of the tariff.

Sterling and Gold Prices.—As compared with a fortnight ago, sterling shows a fractional fall—from \$3.80 to \$3.77. In the same period, gold prices, as measured by our index number, have fallen by 1.6 per cent.; and this decline has proportionately communicated itself to our indices of sterling prices. That of primary products has remained comparatively stable, but our complete sterling index is down on the fortnight by fractionally over 1 per cent.:—

A feature of interest which emerges from a comparison of the four foreign index numbers, which we reprint from the *Financial Times*, is the growing divergence between the course of French and American price levels. Fuller details of the complete *Economist* index are given below:—

"ECONOMIST" INDEX.
(1927 = 100.)

	Sept. 18, 1931.	Apr. 6, 1932.	Apr. 20, 1932.
Cereals and meat	64.5	73.5	73.4
Other foods	62.2	64.5	63.0
Textiles	43.7	49.9	48.0
Minerals	67.4	69.1	70.5
Miscellaneous	65.8	61.8	60.9
Complete Index ...	60.4	63.4	62.7
1913 = 100	83.1	87.3	86.3
1924 = 100	52.2	54.8	54.2

The most pronounced decline was in the textile group as a result of weakness in the price of cotton and, to a minor extent, wool.

International Trade.—The trade returns for March of various countries abroad provide further evidence of the progressive diminution in international trade. The German figures, which are shown below, reveal a reduction of more than 9 per cent. in the total turnover:—

(Millions of Reichsmarks.)

Period.	Retained Imports.	Domestic Exports (excluding Reparations in Kind).	Export Surplus (+) Import Surplus (—).	Reparations in Kind.
1929—Total	13,447	12,663	— 783	819
1930 "	10,393	11,328	+ 935	707
1931 "	6,727	9,206	+ 2,479	393
" October	483	866	+ 383	13
" November	421	738	+ 317	26
" December	425	712	+ 287	11
1932—January	441	530	+ 91	11
" February ...	441	527	+ 86	11
" March	364	516	+ 152	11

The decline in exports was rather less than expected, but the shrinkage in imports is a striking feature. The statistics for Italy show a similar trend. Exports during the first three months of the current year, at 1,679,000,000 lire, compare with 2,390,000,000 lire during the corresponding period in 1931. During the same period imports declined from 3,087,000,000 lire to 2,210,000,000 lire. French imports in March, at Frs. 2,619,000,000, show an increase of Frs. 220,000,000 on February, but exports declined from Frs. 1,768,000,000 to Frs. 1,721,000,000.

Employment and Cost of Living During March.—Employment during March showed some improvement. According to the *Ministry of Labour Gazette*, among the insured workpeople in Great Britain and Northern Ireland, the percentage unemployed at March 21st was 20.8, as compared with 22.0 per cent. at February 22nd and 21.5 per cent. a year ago. It is estimated that on March 21st there were approximately 9,549,000 insured persons in employment, or 146,000 more than in February and

166,000 more than a year ago. The number of persons registered as wholly unemployed on March 21st was 2,042,444, as compared with 2,112,927 on February 22nd and 1,859,526 on March 23, 1931. Those temporarily without work on March 21st numbered 422,676, or 63,923 less than a month before and 181,413 less than a year before, while the unemployed among those usually in casual employment amounted to 102,212, as compared with 101,647 at February 22nd. Thus the total number of registered unemployed on March 21st amounted to 2,567,332, and showed a reduction on the corresponding figure for February of 133,841, of which 9,000 was estimated to be due to the legislative and administrative changes introduced last autumn. With regard to the cost of living during March, the index number of the Ministry of Labour stood on April 1st at 44 per cent. above the level of July, 1914, as compared with 46 per cent. on March 1st and 47 per cent. a year ago. For food alone the corresponding indices were 26, 29 and 29 respectively. The fall in the percentages during March was accounted for mainly by reductions in the prices of eggs, butter and milk.

The Ministry of Labour Report.—The annual report just published by the Ministry of Labour is a useful record of the work of the Ministry during 1931, under the headings employment, training, juveniles, unemployment insurance, industrial relations, administration of the Trade Boards Acts, statistics, and international labour. In view of the important reforms in the Unemployment Insurance Acts during 1931, special interest attaches to the chapter dealing with unemployment insurance. Direct legislation during the year consisted of two Acts raising the borrowing limit of the unemployment fund by stages to £115,000,000 and extending the period during which persons might receive transitional benefit, and the Unemployment Insurance (No. 3) Act, more familiar under its soubriquet of Anomalies Act. This last affected four classes of persons: those who habitually work for less than a full week but earn more than the normal weekly earnings for the same occupation in the same district; seasonal workers; persons who are normally employed for not more than two days in the week; and married women. Under the new regulations, benefit paid to persons in the first of these classes was reduced by the amount by which earnings plus normal benefit would exceed the normal earnings in the same occupation and district; seasonal workers were required to prove that they had been employed in their occupation during a substantial part of each of the two preceding seasons and had a reasonable chance of re-employment; benefit to the third group was only to be payable in respect of the days on which they were normally employed; and married women had to prove that they had been, and would normally continue to be, employed in insurable employment, and that they had a reasonable chance of obtaining it. Up to the end of 1931 no disallowance had been made under the first head; 19,063 cases of seasonal workers out of 25,470 had been disallowed by the courts of referees and 15 out of 28 by the umpire; 1,659 out of 2,186 had been disallowed by the courts under the third head, and there were 4 disallowances out of 5 cases referred to the umpire; and 134,089 married women out of 158,609 had been disallowed benefit by the courts of referees and 181 out of 344 by the umpire. More far-reaching were the two Orders-in-Council made under the provisions of the National Economy Act, 1931. These, following the recommendations of the Royal Commission on Unemployment Insurance (contained in its interim report) and of the Committee on National Expenditure, raised the rates of contribution, which were made equal for employers, employees and the Exchequer, reduced the rates of benefit by about 10 per cent., limited insurance benefit to twenty-six weeks in a benefit year, and substituted transitional payments, subject to a means test, for transitional benefit. It was also provided that borrowing by the Insurance Fund should cease, and that after the exhaustion of the existing borrowing powers any excess of its expenditure over income should be met by a deficiency payment from the Exchequer. The savings to be effected

by these reforms in 1932-33 were estimated in a White Paper (Cmd. 3952) as follows:—

Removal of anomalies.....	£ 3,000,000
Needs test	10,000,000
Reduction in rates of benefit	12,800,000
Increase in contributions	10,000,000
	35,800,000

The total expenditure from the Unemployment Fund in 1931 was £124,972,644, compared with £86,606,299 in 1930 and around £51 million in each of the two preceding years. The 1921 expenditure was made up as follows:—

Ordinary benefit	£ 88,197,482
Transitional benefit and transitional payments	26,378,819
Administration:—	
Ordinary benefit	5,322,627
Transitional benefit and transitional payments	1,234,666
Interest	3,555,284
Other payments	283,766
	124,972,644

The debt grew from £59,990,000 to £110,320,000 in the course of the year.

The 1930 Census of Production.—Volume VIII of the preliminary reports of the Census of Production of 1930, published in a recent issue of the *Board of Trade Journal*, covers the silk, rayon, butter and cheese, and tobacco trades. The following summary shows the gross value, the net value (gross value less cost of materials and work given out to other firms), and the net output per person employed in the various industries in 1924 and in 1930:—

Industry.	Gross Output.		Net Output.		Net Output per Employee.	
	1924.	1930.	1924.	1930.	1924.	1930.
Silk and rayon	Thous. £. 20,299	Thous. £. 22,779	Thous. £. 10,152	Thous. £. 9,235	£ 254	£ 155
Lace	8,616	6,932	2,860	2,514	165	178
Butter, cheese, condensed milk and margarine	24,441	27,369	4,316	5,668	389	490
Tobacco	93,050	113,520	23,897	30,057	620	699

The rayon industry has made rapid strides between the two census years. The output of rayon yarn and straw advanced from 21,860,000 lbs. in 1924 to 48,823,000 lbs. in 1930. During the same period the proportion of the home market held by British manufacturers increased from 60.7 per cent. to 98.8 per cent. The average value of rayon yarn declined from 6.6s. per lb. in 1924 to 4.4s. per lb. in 1930. If allowance is made for Excise duty at the rate of 1s. per lb., these figures indicate a fall in prices of 48 per cent. between the two census years. The results of the census of 1930 reveal a substantial increase in the production of butter, cheese and margarine. In 1930, 72,800 cwt. of butter were made in the creamery, as compared with 35,700 cwt. in 1924. The total quantity of butter blended for sale advanced from 681,300 cwt. to 933,500 cwt., while the output of cheese, at about 387,000 cwt., shows an increase of 314,000 cwt. In addition, 4,033,000 cwt. of margarine were made in 1930, against 3,663,500 cwt. in 1924. The total output of tobacco manufactures increased from 153,960,000 lbs. in 1924 to 202,110,000 lbs. in 1930. It is noteworthy that this expansion is due entirely to the increase in the production of cigarettes from 92,140,000 lbs. to 140,460,000 lbs. The output of cigars and all other tobacco products with the exception of snuff shows a decline as compared with 1924.

Australian Insurance Legislation.—Our Melbourne correspondent writes:—The Commonwealth Government has introduced a Bill requiring insurance companies to lodge deposits of amounts ranging up to a limit of £50,000 for life offices and up to £40,000 for other classes of insurance business. The requirement of a deposit forms part of a Bill, dealing with life assurance generally, which has been before the Commonwealth Parliament for some years past. In introducing a Bill dealing with the one point, the Commonwealth Government is endeavouring to anticipate

legislation by New South Wales, which would be superseded by Commonwealth legislation in accordance with the Constitution, which empowers the Commonwealth Parliament to legislate on insurance. The position in New South Wales is that legislation on life insurance, including deposits and other matters, after the model of the English Act of 1870, has never been enacted in that State, though the 1870 Act has been followed in other Australian States. The proposal of the New South Wales Labour Government to pass an Act requiring a deposit in cash only in that State has been brought forward simply with the object of providing the Government with upwards of £4,000,000 in cash to spend; but if the Commonwealth Bill is passed, that object will be frustrated, and the New South Wales Government will have to conduct its borrowing, if any, in co-operation with the Loan Council. The Commonwealth Bill has met with criticism from the point of view of other States in which deposits have been required for many years past, the aggregate amount being an item in their finances the disturbance of which would cause them a little embarrassment. To meet this point the Commonwealth Government has introduced an amendment to provide that existing deposits with State Governments should count as part of the amount required by the Commonwealth Bill.

Instalment Buying.—In a paper read last week before the Royal Society of Arts, Mr J. Gibson Jarvie, the chairman of the United Dominions Trust, Limited, was so carried away by enthusiasm for his subject as to claim that the system of instalment buying "may even abate, to a large extent, the causes of international strife." Among the achievements already completed which he noted to its credit in America were a rapid development of transport, including the building of roads which would otherwise not have been built, and the development of mass production on sounder lines than the war had taught in England. Mr Jarvie lamented the extreme reluctance to adopt the system which has been shown by British manufacturers. This he attributed in part to the lack of soundness with which it was administered in its early stages, when a misguided use of insurance made possible the financing of transactions which were inherently undesirable. This stage, however, he characterised as a closed book. Mr Jarvie was almost bitter in his handling of those critics who object to the system on the ground that it involves a mortgaging of future income, and maintained that "the judicious use of credit for the purchase of durable articles, and especially of productive articles, cannot in any way diminish next year's income. It must inevitably increase the national income and the national capital assets." At this point in his paper Mr Jarvie stated definitely, what was implicit in his earlier arguments, that in his opinion the system "should not be applied to consumable articles or articles of pure luxury." If this rule had always been followed, the critics would have deserved his strictures, but Mr Jarvie glosses over the fact that instalment selling has undoubtedly been used as a device for persuading people to buy luxuries which do not in any way add to their future income and which often constitute a serious strain on their resources. While abuse of a system should not be allowed to discredit the system as such, criticism of a system which lends itself to such abuses is surely legitimate. There is, however, no doubt, and Mr Jarvie cites high economic authority on his side, that instalment purchase of durable productive goods can play a valuable part in industry. If the principles laid down in his paper were universally adopted there would be less room for criticism.

Hong Kong and Shanghai Banking Corporation.—At this year's meeting, held in Hong Kong rather over a month ago, and reported more fully on a later page, Mr C. G. S. Mackie, the chairman of the bank, touched on several matters of interest and importance. The decrease in the bank's profits he ascribed to the need they were under to provide for exceptionally heavy and unusual losses due to the heavy fall in commodity prices in the

middle of the year, the rise in the Chinese exchange following the British suspension of the gold standard, and failures among the bank's customers due to speculation and over-trading. Fortunately the bank had been able to meet these losses out of current profits, which were also able to provide the sum of £110,000 needed to meet the depreciation in the bank's holding of gilt-edged securities; and there is evidence that the earning power of the bank is in no way impaired. Referring to the recent official investigation into Hong Kong currency problems, Mr Mackie advised a policy of caution, especially as the high premium on the dollar which raised the discussion has not been in evidence during the past year, and in his opinion is not likely to recur. Mr Mackie had much of interest to say on the silver question generally. He was particularly insistent upon the fact that in relation to commodities in general and not to gold, silver has remained very stable during the past few years, for the fall in gold prices has paralleled the fall in the gold price of silver. This has given China the advantage of a relatively stable price-level and also explains the increase in China's adverse trade balance during the past two years, whereas the depression of silver prices should have operated in exactly the contrary direction. For these reasons "it is not surprising that many Chinese as well as foreigners hold the view that the stabilisation of the rate of exchange between silver and gold would be a mixed blessing to China, and that a sudden artificial rise would have extremely harmful results." Nor would such a change necessarily add to China's capacity to buy foreign goods, when once the initial stimulus due to the dishoarding of silver had worn off. In the long run China's capacity to import depends like other countries on the extent to which she can export.

Amsterdamsche Bank.—Our Netherlands correspondent writes:—The annual report of the Amsterdamsche Bank is of considerable interest. It shows large losses on securities (4,973,000 guilders) and on its sterling bills (3,297,000 guilders). In the previous year there was a profit of 930,000 guilders and 812,000 guilders respectively under these heads. The gross earnings last year were not unfavourable. Interest amounted to 9,907,000 guilders, against 10,442,000 guilders in 1930, but owing to the large depreciations on shareholdings and bills, the net earnings amounted only to 255,000 guilders, against 6,302,000 guilders in 1930. The dividend has been passed, whereas in the previous year 8 per cent. was paid:—

	(In thousands of guilders.)			
	1928.	1929.	1930.	1931.
Gross profit.....	18,892	19,674	17,720	15,188
Expenses	5,877	6,068	6,209	6,063
Depreciation	1,407	1,844	1,742	8,389
To reserves	3,000	3,000	2,975	...
Net earnings	7,639	7,672	6,302	255
Dividend	9½%	9½%	8%	...
Capital.....	55,000	55,000	55,000	55,000
Reserve	47,500	48,250	49,000	49,500
Deposits	74,848	83,019	86,536	51,324

The passing of the dividend had an unfavourable effect on the stock market, and the shares dropped far below par. According to stock exchange rumours, other big banks in Holland, such as the Nederlandsche Handel Maatschappij, the Koloniale Bank and the Nederlandsch Indische Handelsbank, will also make no distribution to shareholders.

Wesleyan and General Assurance Society.—The 1931 report of this society is of particular interest, for in it the directors have demonstrated yet another method of dealing with the exceptional Stock Exchange depreciation of last year. The chairman, in his speech at the annual meeting, declared that the society was faced, in connection with its annual valuation and distribution of bonuses, with the alternative, if the assets were to be valued strictly on December 31st prices, of relaxing the stringency of the actuarial reserves in order to provide the sum needed for depreciation and for bonuses, or of declaring a greatly reduced bonus. After discussing the artificiality of the

Stock Exchange quotations as criteria of real values, he explained why both of these alternatives were rejected. In the event, the actuarial reserves have been maintained on the same bases as formerly, and the assets were valued, not on December 31st prices, but on the basis of the somewhat higher—and more rational—values ruling on January 30, 1932. Even so, as will appear from the detailed results of the valuation of liabilities, the allocation to investment reserve fund for depreciation is large, and the bonuses declared are on a greatly reduced scale:—

Ordinary Branch.		1929.	1930.	1931.
	£	£	£	£
Surplus earned during the year	125,682	131,829	136,777	
Investment profits realised.....	25,462	13,270	5,355	
Transferred from industrial branch	18,739	21,215	...	
Brought forward from previous year	74,890	70,717	78,741	
	244,773	237,031	220,873	
Allocations:—				
To Bonuses to policyholders...	111,256	118,290	88,343	
„ Investment reserve fund...	41,800	30,000	95,000	
„ Staff pension fund	21,000	10,000	7,000	
„ Carried forward to next year	70,717	78,741	30,530	
	244,773	237,031	220,873	
Industrial.				
Surplus earned during the year	139,461	171,143	153,380	
Investment profits realised	28,452	14,817	6,027	
Brought forward from previous year	34,617	37,837	42,722	
	202,531	223,797	202,129	
Allocations:—				
To Bonuses to policyholders...	56,216	63,645	7,600	
„ Investment reserve fund...	47,000	35,000	110,000	
„ Staff pension fund	24,000	40,000	33,000	
„ Bonuses to outdoor staff...	18,739	21,215	7,600	
„ Ordinary branch	18,739	21,215	...	
„ Carried forward to next year	37,837	42,722	43,929	
	202,531	223,797	202,129	

The effect of the allocations to investment reserve fund have raised this fund to £425,000, as compared with total assets of £11 millions, and the comparison shows that the society has escaped with relatively small depreciation. At the same time, the cost to the policyholders is heavy; for in the ordinary branch the reversionary bonus is reduced by 12s. per cent. to 30s. per cent. for endowment assurances, and to 36s. per cent. for whole life assurances, and these reduced rates have necessitated a considerable draft on the surplus brought forward from 1930. As regards the industrial branch, the "carry forward" has been maintained at the same level as before, but the amount available for the policyholders—to be utilised as before for the purpose of reducing the premium-paying period—is reduced to negligible proportions. The bonus to the outdoor staff has perforce been cut down, and nothing is transferred on this occasion to the ordinary branch. This omission is connected with a dispute which has arisen with the Industrial Assurance Commissioner, who has declared that past transfers of this kind were *ultra vires* and must be replaced. The principles involved are complicated and technical, and will shortly be the subject of an action for the declaration of the law on the matter. The society has also been recently subjected to very unfavourable criticism in the course of a report by an inspector—appointed by the Commissioner—on the conduct of certain aspects of its industrial business. Whatever the merits of the case may be, the society is entitled to general sympathy at thus being singled out for criticism in a report published on the very day before the activities of the inspector, in connection with a report on another society, were roundly condemned by the House of Lords, and the principle was explicitly laid down that such reports are for the information of the Commissioner only, and are not public documents.

National Guarantee and Suretyship.—This is a company centred in Edinburgh, and specialising in the business of fidelity guarantee insurance. Perhaps because the company has not sought to guarantee the fidelity of international financiers, and has confined its policies to the more ordinary doings of lesser mortals, its business has continued to prosper over a long period of years. During the seven years 1925-1931 the total premium income has amounted to £386,694, and the corresponding underwriting profit on this works out at £73,341, equal to 19 per cent. of the premiums. This high rate of profit and the consistency with which it has been earned argue skilful management and the possibility also that the premiums charged are somewhat high. The underwriting results for 1931 show a rate of profit in excess of the average, and materially higher than that for 1930, which was a comparatively poor year; the premiums were some £2,000 less at £56,972, and earned a profit of £12,179, compared with £4,516. After allowing for profit and loss account items, the net trading surplus was £9,334 last year, as against £867 in 1930. Interest earnings were slightly lower, but were sufficient to cover the cost of the 12½ per cent. dividend. The book value of the investments of £284,000 exceeded market values on December 31st last by £7,110, but the company has a large general reserve of £50,000 as well as a carry forward of £36,000. The company is controlled by the Northern Assurance Company.

World Marine and General.—This company is one of the satellites of the "Northern" group, and is itself of a respectable age, having been formed in 1894. Until the war the business was confined to marine insurance, but afterwards fire and accident business was added to its activities. But whereas the marine account even in the past few years has been uniformly successful, the newer account has been recently a source more of loss than of profit. In 1931, fire and accident premiums totalled £140,000, a decrease of £45,000 on 1930, and the marine account yielded an income of £161,000, compared with £171,000. The underwriting results were as follows:—

	1930.		1931.	
	Amount of Profit.	Per-centage of Prems.	Amount of Profit.	Per-centage of Prems.
Fire and accident.....	9,264	5.0	8,430	6.0
Marine	20,000	11.7	20,000	12.4
	10,736		11,570	
Less items debited to profit and loss account	186		205	
Net trading surplus	10,550		11,365	

The dividend has been maintained at 40 per cent., free of tax, and is covered by interest earnings. The balance sheet is a strong one, with a general reserve of £300,000 and a carry-forward of £213,000, compared with a capital of £100,000. There is a depreciation in the book value of the assets of £100,000, which is covered by an augmented investment reserve fund of the same amount.

Overseas Correspondence.

LEAGUE OF NATIONS.

Disarmament — Sino-Japanese Question.

(FROM OUR CORRESPONDENT.)

GENEVA, April 19.

THE Disarmament Conference began yesterday. The American proposal to abolish heavy guns, tanks and gases, supported by Sir John Simon, and subsequently by M. Grandi, was relegated by the Bureau to its proper place in the agenda as previously drawn up before the adjournment. The General Commission, therefore, started yesterday at the beginning of its agenda, and has been devoting its attention to resolutions of a very general nature on the

principle of reduction by stages and on the criteria to be applied. These mean little or nothing. When they have been completed the first real problem will be approached, namely, the consideration of the principle of qualitative and quantitative reduction, connected with which will be the American proposal for the abolition of heavy guns, tanks and gases; the Italian proposals; the French plan, and suggestions made by various other delegations. At the end of this week, or the beginning of next, therefore, it seems probable that the definite business will begin.

Mr Stimson appeared for the first time this morning at the General Commission of the Conference, and has had conversations with Dr. Brüning and Sir John Simon. There is, so far, no information available of any kind upon these conversations, in which Mr MacDonald and M. Tardieu will be taking part towards the end of the week. It has doubtless been useful that Mr Stimson should be on the spot during the consideration by the Special Assembly Commission of the deadlock in the Shanghai armistice negotiations. The Commission has devoted its whole attention to the question of the withdrawal of Japanese forces, and the smaller Powers have once again asserted their authority by insisting upon a resolution which would have been very different if they had not had their way. Sir John Simon at first seemed to be content that the Japanese should be allowed to withdraw when they themselves decided, but it was objected that this could not possibly be the policy of the Assembly. The question of fixing a date for withdrawal raised difficulties. Some of the members, whose motives could not be suspected, disliked the idea of fixing any date, as this might imply a recognition of the right of the Japanese forces to remain in occupation of Chinese territory. The problem, therefore, was to settle who should decide the moment of withdrawal, and how that moment should be decided. Eventually M. Hymans, President, submitted a draft resolution to which strengthening amendments were proposed by a group of States comprising Czechoslovakia, Switzerland, Spain, Sweden, Norway, the Irish Free State and Colombia. Their desire was that the Mixed Commission, including neutrals, to be set up under the armistice conditions to see to their fulfilment, should decide the date of withdrawal. Sir John Simon considered this to be a grave responsibility to put on the shoulders of the representatives of the Powers with interests in Shanghai, and the Irish Free State representatives thereupon suggested that they should merely be asked to recommend and that the Assembly itself might take the responsibility of deciding. This was supported by M. Boncour and others, and Sir John Simon was not unresponsive.

After reference to a drafting committee, the Commission has this evening unanimously adopted a resolution, the main points of which are an assertion that in accordance with the previous Assembly resolution, the Japanese troops should be withdrawn "in the near future," that the resolution of March 4th will only have been fully complied with when Japanese forces have been entirely withdrawn, and that the Mixed Commission which is to supervise the carrying out of the armistice conditions, is competent to declare, at the request of one of the parties, when the moment has come at which the complete withdrawal of Japanese troops can reasonably be effected; this commission may take its decisions by majority vote. The President is to discuss the resolution with the two parties, and a public meeting will then be summoned.

The position taken by the Assembly Commission is considered fairly good in the circumstances; it might have been worse if some members had had their way, but the diplomatic representatives at Shanghai do not command a great deal of confidence in Geneva, and it is a fairly widespread assumption that, if they can avoid it, they will make no declaration about the moment of withdrawal unless they are assured that the Japanese will agree. However, it is better, both for the League and for the Chinese Government, that the Japanese should not be left with the complete freedom which they have so dangerously arrogated to themselves in Manchuria. There is little point, at present, in fixing a date for withdrawal unless the Powers in the Assembly have decided upon a course of action in the probable event of Japanese refusal to accept.

Count Apponyi reminded the Commission that the Manchurian affair remained, and the President at once accepted it as a matter of course—it was provided for in the Assembly resolutions, and the Commission had asked the two parties to state what they had done to carry out the Council resolutions of September 30th and December 10th. Considerable interest has been evinced in a communication from General Ma on the methods employed by the Japanese to get him to take part in the so-called Manchurian Government (which he has since left) and on Japanese tactics generally in Manchuria.

UNITED STATES.

Public Finance — Stock Exchange — Industry.

(FROM OUR CORRESPONDENT.)

NEW YORK, April 12.

In the past week Congress has brought to the fore a number of threats to the country's economic peace of mind, meanwhile laying aside work on the all-important Tax Bill. The soldiers' bonus measure has come up for consideration in a form which provides for immediate payment to ex-service men of \$2,600 millions. The most specious reasons are offered in its support by its Congressional sponsors. It appears that officially, at least, the principal service men's organisation, the American Legion, is opposed to a bonus payment at this time. The American Legion gave President Hoover a pledge to that effect last summer, and it numbers among its leaders the cream of those entitled to membership. Many individual members of the Legion, however, and virtually the whole membership of another powerful organisation, the Veterans of Foreign Wars, are actively campaigning for a bonus. In Congress the movement is now shifting from its origin of charity, generosity and gratitude to a nostrum for the curing the country of business depression.

The country is asked to swallow inflation in large doses, and is told that with the bonus small merchants will be able to collect their bills and business generally will be stimulated. Fortunately, some able political leaders in Congress are outspoken in their opposition to this method of relieving the depression, and dissension in both parties over the matter suggests at this time that the Bill will at least be unable to muster enough votes to carry it over President Hoover's veto.

A good impression was created by President Whitney of the Stock Exchange in his testimony before a Congressional committee investigating short selling. Mr Whitney showed conclusively enough that liquidation and not short selling has been responsible for the decline in prices, and observed that security owners appear to be trying to "give the United States away." Short interest is only about 5 per cent. of the total, and has declined this month. Fantastic rumours of contemplated bear raids, repeated to a few Congressmen, prompted the sudden calling of the investigation. Drastic legislative action is not deemed probable.

The Treasury is meeting with a better market for its bill issues. One this week was taken at 1.05 per cent., a full 1 per cent. under the price paid for the previous tender, and open market bill rates have fallen further, the 90-day asking rate being 1½ against a Federal Reserve Bank discount rate of 3 per cent. The Reserve Banks are sticking to their policy of adding an average of \$25 millions in Government bonds weekly to their portfolio, thereby stiffening the market and aiding the member banks in paying off borrowings. Continued flight of capital from taxable income-producing securities into tax-exempt Liberty bonds is responsible for the rising prices for gilt-edged securities, and this market affords a sharp contrast to other sections.

The Reconstruction Corporation has been doing a great deal of good, but the drain on its funds has not been as rapid as has been the actual approval of loans. The Treasury subscribed at the outset \$150 millions of its capital. A bill issue of \$51 millions is due on April 27, which will be refunded. In May there will be maturities

of \$215 millions in bills. On June 1st an issue of \$101 millions is due, and another of \$102 millions falls on June 29th. The first certificate maturities are \$324 millions on June 15th. The next one is \$228 millions on August 1st and \$700 millions fall on the September tax date. As of April 9th the Treasury deficit for the fiscal year since July 1st was within \$50,000 of \$2,000 millions. Collections from all sources amounted to \$1,625 millions. Expenditure was \$500 millions greater than for the same period of last year.

For all the huge total of the deficit which will face the country at the end of the fiscal year on June 30th, the feeling in good quarters is that, after the smoke screen of talk clears at Washington at least some reduction in expenditure will be made and a tax programme drawn up which will balance the budget. The absurd rumours recently afloat in Paris over banking troubles here or the danger of departure of the country from gold were greatly disliked but were not taken seriously.

A good deal of gold has been shipped or is under consignment for shipment to Paris. Since the movement began last week a total of \$18 millions has been engaged. From the middle of January to the middle of March \$170 millions were exported to France, all from the earmarked supply of the Bank of France. In addition, \$50 millions were shipped on exchange transfers. France's withdrawal last year from our gold stock was \$345 millions.

Since the introduction in Congress, about a fortnight ago, of Bills intended to cripple stock market activities with heavy increases on transfers of stocks and bonds and commodities, it is estimated that the market value of all listed shares has dropped \$6,000 millions. Much of this liquidation has been done by holders of long standing. Brokers' loans have receded only moderately, but loans on securities made direct to clients by reporting member banks of the Reserve system fell last week over \$100 millions. The member banks continue to deplete their investment portfolios, and for the first week of the month the deflation in loans and investments totalled \$181 millions for the principal city banks, holding about 40 per cent. of the country's banking resources.

Commodity prices in general are still falling, but some isolated upturns have come. Mid-Continental oil producers have forced up crude oil to a dollar a barrel, and under the spur of a Government estimate of winter wheat crop damage the wheat market has risen sharply. Industry is showing no signs of revival. Railroad traffic is not increasing. Electric output has fallen into a more pronounced slump, and motor activity is not yet showing any beneficial effects of a strenuous selling campaign. The steel industry is working at about 22 per cent. of capacity, and this week the head of the Bethlehem Steel Corporation professed to see no improvement immediately ahead. Steel ingot output in March was 50 per cent. lower than a year ago and 3 per cent. lower than in February. United States Steel Corporation's unfilled orders as of the end of March were down 73,000 tons to the lowest total in the history of the company.

FRANCE.

Election — Revenue — Trade — Industry — Wages.

(FROM OUR CORRESPONDENT.)

PARIS, April 20.

THE general election campaign throughout France is now fully under way, and there is already every evidence that the contest will resolve itself chiefly into a severe struggle between the Tardieu Nationalists on the one hand and the Marxian Socialists on the other—with the Radical Party more or less lined up against both of the others and relying largely on a species of unwritten agreement between themselves and the Socialists to act kindly towards each other at the crucial period of the second ballots. With the recent developments in Germany and the general impression which seems to prevail as to the probable victory of the Hitlerists in Prussia, opinion is now hardening in the direction of a probable return to

office of M. Tardieu and his friends, with an appreciably reinforced majority. The Premier himself insists that he will be able, after the elections, to depend upon a stable majority of seventy. Doubts are already being expressed, however, as to whether even in that event the endorsement of the new Government by the country will enable it to overcome the opposition of what is now generally regarded as a positively antagonistic Senate.

M. Tardieu's amazing energy, which is enabling him to divide his time about equally between the duties of his official post in Paris, the Disarmament Conference at Geneva, and a continuous series of electioneering visits to his constituency on the Eastern frontier, is obviously making a marked impression on the electors. The Premier's speeches are crammed with practical plain speaking and are being hailed as an entirely new departure in Ministerial electioneering methods. M. Tardieu is himself full of confidence and his oratorical style is of a kind that is apparently being immensely relished by both his convinced supporters and by the uncertain mass of so-called "silent voters" who usually hold the destiny of parties in their hands at election times. M. Léon Blum, the Socialist leader, is limiting himself largely to destructive criticism of the present and preceding Ministries' financial accomplishments, and to insistent reiteration of Marxian doctrine, but is having some difficulty in demonstrating how it is to be possible to carry out the Socialist doctrine of land nationalisation without involving confiscation of the freeholds of the millions of peasant proprietors, whose votes it is vitally necessary for Socialist candidates to secure.

Revenue returns for March are disappointing. Total recoveries from all "normal and permanent" sources, on account of the general Budget, were 2,526,552,000 francs (as compared with 2,788,000,000 francs in the corresponding month of last year, and 2,974,000,000 francs in March, 1930). The yield for the last month of the financial year, nevertheless, was less unfavourable than that for January, which was the most unsatisfactory registered for several years, and probably marked the peak month of the present crisis, so far as France is concerned. The drop in March, as compared with Budget estimates, would have been 94,000,000 francs larger, but for the increased yield from Customs duties. The total yield from indirect taxes and State monopolies was 312,233,000 francs less than in March, 1931, and brought the drop in yield, so far as these sources are concerned, to a total of 1,433,000,000 francs for the financial year which has just ended. Indirect taxes produced 2,068,000,000 francs during the month (or nearly 90 per cent. of the total from normal sources). The yield from direct taxation during the month was only 243½ millions, or between 9 and 10 per cent. of the whole. The balance is made up by revenue from the State domains. Taxes on Bourse operations produced 2,743,000 francs more than in the corresponding month of 1931. The only other taxes which showed an increase on the month (as compared with March, 1931) were those on vanilla, colonial foodstuffs, and the surtax on motor spirit and benzol. The heaviest drop was in the turnover taxes, which yielded 446½ millions (or roughly 24 per cent.) less than in March, 1931. The yield from income tax was 234,000,000 francs, or 86,000,000 francs more than in the corresponding month last year.

The foreign trade returns for March indicate total visible exports of 1,720,000,000 francs (against 1,768,000,000 francs in the previous month and 3,061,000,000 francs in March, 1931), and imports of 2,618,000,000 francs (against 2,399,000,000 francs in the previous month and 3,939,000,000 francs in March last year). The adverse balance on the month was 898 millions, as compared with 631 millions in the previous month and 877,000,000 francs in March, 1931. The total volume of exchanges for the first quarter of the year was thus brought up to 12,652,000,000 francs, as compared with 20,201,000,000 francs for the corresponding period of 1931, representing a decrease of 38 per cent. The falling off in absolute value has been much more rapid in regard to imports than exports, consequently the deficit on the quarter is substantially less, amounting only to 2,033 millions for the first

three months of the current year, as compared with 3,413 millions in the corresponding period of last year.

Iron and steel production figures for February show a substantial reduction under both headings as compared with those for February last year. The total output of pig iron was 461,000 tons, against 726,000 tons in February, 1930, and monthly averages of 864,000 tons in 1929, 832,000 tons in 1928 and 756,000 tons (Alsace-Lorraine plants included) in 1913. Crude steel production totalled 464,000 tons against 693,000 tons in February last year, and monthly averages of 808,000 tons in 1929, 792,000 tons in 1928 and 581,000 tons (Alsace-Lorraine included) in 1913. The number of blast furnaces in activity in February was 81, as compared with 133 in the corresponding month of last year, and the number out of action or under construction was 130, against 80.

The Statistique Générale has published the results of the inquiry made annually in October as to prevailing wage rates. Analysis of the returns explains why, in spite of the prevailing crisis, there are still no signs of popular discontent in regard to either wages scales or commodity prices. The *questionnaire* sent out annually covers some 50 different categories of urban labour, exclusive of miners, railway workers and the textile and metallurgical industries. The general index (1913 = 100), covering 38 masculine occupations in all French towns except Paris, is returned as 887, as compared with 891 in the previous October. This figure concerns hourly pay. For daily pay the general figure for the same categories of workers is 729, against 732 in the previous year. For female workers the general index, covering seven categories of labour (ironers, dressmakers, glove-makers, etc.) is 1,052 (against 1,045 in October, 1930) for workers paid by the hour and 862 (against 866) for workers paid by the day. For the Paris area the index for male workers is 756 (against 774) for hourly pay (21 categories of workers), and 663 (against 668) for men who are paid by the day. The higher indices for towns other than Paris is due to the fact that wages scales in the provinces have during recent years been increased in a much larger proportion than those obtaining in the capital.

The trend of interest yield continues upward. The average rate offered by new bond issues in March was 5.52 per cent., as compared with 5.40 per cent. in February and a mean of 4.88 per cent. during last year. The average net yield from issues of fixed and variable yield in March was 4.41 per cent., as against a mean of 3.70 per cent. in 1931 from issues of fixed yield and one of 4.39 per cent. from those of variable yield. The Credit Foncier is issuing as from Monday 1,500,000,000 francs of new premium bonds, in 1,000-franc bonds (offered at 987½ and bearing interest at 4½ per cent. (free of all taxes).

GERMANY.

Socialist Demands — Trade — A.D.C.A. — Stock Exchange.

(FROM OUR CORRESPONDENT.)

BERLIN, April 19.

THE Socialist trade unions held a congress last week in Berlin, at which they called upon the Government to take immediate and comprehensive measures for the reduction of unemployment. The unions have evolved the following programme: work is to be provided for a million people; this requires two milliard marks. Towards this sum 600 millions would be released by the saving in unemployment allowances, to which would be added 300 millions from tax receipts and social insurance contributions. To cover the remaining sum of about one milliard the unions demand the floating of a special loan, and as this could not be marketed immediately they suggest that the Reichsbank should make advances against it in the form of specially designed discounts. This last suggestion would undoubtedly involve a credit expansion of a very dubious character.

The Minister of Labour, Herr Stegewald, tried to mitigate the difficulties of the unions by conceding some of their demands, in his address to the congress. He ex-

pressed willingness to meet the demand for a cessation of wage reductions and for energetic measures for the shortening of working hours, but he promised no support for their financial programme for the provision of employment. On the contrary he stressed the fact most strongly that all credit experiments which might endanger the currency are to be avoided. The maintenance of the stability of the mark during 1931, he declared, was, even from the social standpoint, the greatest achievement which could have been accomplished at such a time. On this point, therefore, the Government will resist the pressure of the trade union leaders, who themselves moreover are anxious to maintain the stability of the currency in all circumstances, and are merely not quite clear as to the effect their proposals would have. There is no doubt that in this the Government will be supported by those Socialist politicians who have some training in economics, for their opposition to the unions' proposals is scarcely concealed.

Foreign trade in March showed an export surplus of 163 millions, against 97 millions in February and 102 millions in January. March is a favourable month for foreign trade, and in March, 1931, the balance was 268 millions. Exports at 527 millions show a heavy decline as compared with 867 millions last year, but imports have fallen far more, and were only 364 millions, against 584 millions last year. Germany, having been more severely hit by the crisis than other countries, can only buy very little from the rest of the world. The decline is common to all groups:—

	Imports into Germany			
	March, 1931.	March, 1932.	March, 1931.	March, 1932.
	Thousand Tons.	Million Marks.	Thousand Tons.	Million Marks.
Food and livestock	412	176	450	115
Raw materials and semi-manufactured goods	2,738	297	1,854	188
Finished manufactures ...	109	111	83	60

The increase in imports of food is solely due to the bad grain harvest, while the reduced purchasing power of the people has curtailed fruit imports from 258,000 tons to 127,000 tons, and imports of tropical products from 827,000 to 543,000 tons. Imports of iron ore, copper, hides and leather have fallen very severely; imports of textile raw materials and of yarn have on the other hand largely escaped the decline, and in some instances, notably imports of cotton, the position has greatly improved since last year. This indication of the relatively favourable world situation of the textile industry is borne out by the export figures.

While the Reich budget, which is still in course of preparation, will be balanced, the financial difficulties of the communes are still increasing. The cause lies in the rapid increase in the number of unemployed who have exhausted their right to benefit and to emergency relief, and have therefore become a charge on the poor law authorities. The number of this class of unemployed has risen by more than 60 per cent. in the last six months. The President of the German Council of Cities, Dr. Muhlert, estimates the deficit in the budgets of the communes for 1932 at not less than 750 million marks.

The reorganisation of the largest Saxon deposit bank, the Allgemeine Deutsche Credit Anstalt of Leipzig, is now being carried through in a different form from that announced at the end of February, simultaneously with the reorganisation plans of the Dresdner and Commerz banks. The original plan was to turn A.D.C.A. into a Saxon State bank, and the State of Saxony had already taken over the guarantee for A.D.C.A.'s deposits last July. But just as the Reich has withdrawn its guarantee for the deposits of the Danatbank, the Saxon guarantee for A.D.C.A.'s deposits is now cancelled and the fusion which had been planned between A.D.C.A. and the State Bank of Saxony is not being carried out. A.D.C.A. is to be reorganised on similar lines to the Commerzbank. It remains a private institution, but the Golddiskontbank is to hold the major part of its share capital for the time being, and the losses are to be partly covered by the issue of Reich Treasury bills which will subsequently be redeemed out of the profits. In place of its 40 millions capital, most of which has been lost, A.D.C.A. is being provided with

20 millions capital and 6 millions reserve, and the Golddiskontbank is to take up 14 million new shares. The big banks which are controlled by the Reich, the Dresdner, the Commerz and the A.D.C.A., are to work quite separately for the time being, but the present arrangement is only regarded as a transitional stage.

The reopening of the Stock Exchanges has been a complete success. By the second day, the quotations published in the Press had attracted purchases from a very wide public. Although prices on the average were only 15 per cent. lower than last September, so that German shares have fallen far less during the last half year than American shares, for example, the quotations for very many shares were considered unjustifiably low. Turnover increased daily and quotations improved by nearly 10 per cent. during last week. Reichsbank, Siemens, A.E.G. and Stahlverein were the favourites. There was also a large demand for rentes, but the average yield was still over 9 per cent., a fact which will restrict the efforts which are being made to secure a further reduction in the discount rate. The note circulation and the bill portfolio of the Reichsbank have, indeed, developed very satisfactorily even during last week, but between April 7th and 15th the Bank has lost 38 millions in gold and foreign exchange, so that cover is now down to Rm. 988 millions, the first time since 1924 that it has been below 1,000 millions. In the preceding four weeks the supply and demand for foreign exchange had balanced, and the recent losses are due to especially large payments of interest and amortisation, which will not recur during the next four weeks.

AUSTRIA.

Clearing Agreements — Credit Anstalt — Industry.

(FROM OUR CORRESPONDENT.)

VIENNA, April 18.

In a speech, the pessimism of which has caused some sensation, the Minister of Finance has pointed out that the increase in unemployment is surpassing even the worst fears, and in the first three months of the present year 28 million schillings more have had to be expended for benefit purposes than was reckoned upon in the estimate. At the same time the Minister stated that the financial circumstances of the Federal Railways have grown still worse. In view of the fact that no financial support may be expected from abroad in the immediate future, he arrived at the conclusion that measures of self-defence would have to be accelerated. Within the next few days a list will be published showing the import quotas for certain articles. The distribution of these quotas among the States which export to Austria is to be the subject of negotiations. Further, the frontier control of foreign currencies is to be made much stricter, and the allotment of foreign values by the National Bank is to be even more reluctant than now.

A new agreement has been arrived at between France and Austria in regard to payments between the two countries; clearing will be done by the Compensation Office of the Paris Chamber of Commerce and the Austrian National Bank. Under the agreement, "compensation" transactions in goods are to be promoted in every way. Transit traffic is also to be taken into consideration. An agreement with Germany is also approaching conclusion, and, in accordance with its terms, schilling credits in Austria for goods exported to Austria by Germany are to be liberated for the purchase of goods in Austria for export to Germany. For the promotion of tourist traffic from Germany, an agreement has already been arrived at. Between Italy and Austria there is a prospect of a contract on the lines of the agreement with Switzerland. The treaty with Yugoslavia will be on the same basis as that with France, and the negotiations with Roumania and Russia are still meeting with great difficulties.

The conclusion of these treaties appears necessary, because the National Bank is compelled to be extremely careful with its small holdings of foreign exchange. It has again reduced the quota of foreign currencies allotted to applicants, and even the sums which have already been

allotted are not paid out at once, but often in instalments in the course of several weeks. This reserve on the part of the National Bank is the more comprehensible when the fact is taken into consideration that it is still liable to tax on the note circulation, because the cover is below the legal minimum. The credits of the B.I.S. and of the Bank of England have been prolonged for three months, but a further credit, of which eager expectations have long been entertained, is not forthcoming. Furthermore, in financial circles there is talk to the effect that the English creditors of the Credit Anstalt, who, on the occasion of the institute's fusion with the Boden-Credit-Anstalt, opened a rather large credit, are making retrospective claims upon the deposits, which were at that time made with it by the Austrian National Bank. The management of the National Bank, however, takes the view that there were entirely separate transactions, and that a compensation out of the deposits of the National Bank of the sums granted to the Credit Anstalt is not possible.

The negotiations at the Credit Anstalt itself are proceeding very slowly indeed. They are rendered more difficult by the opening of the question of the guilt of the former directors and of the board of the Credit Anstalt. As the directors of the Credit Anstalt state in their defence that they themselves were deceived in regard to the position of the Boden-Credit-Anstalt at the time fusion took place, the former managers of the Boden-Credit-Anstalt also are to be cross-examined.

The Vienna share market has suffered heavy losses through the decline in all Czechoslovakian securities. It appears that the re-opening of the Vienna market has really only afforded an opportunity for the sale in Austria of big batches of Czechoslovakian securities, which, out of exchange considerations, were quoted above parity in Vienna, and rather large batches of Hungarian securities, which were unsaleable in Budapest itself. In a relatively short time the preference shares of the Danube-Save-Adriatic Railway have undergone the severe decline of nearly 40 schillings. The non-payment of the Hungarian annuity gave rise to fears that Yugoslavia, too, would not deposit its next year's instalment. As a matter of fact, with the exception of Hungary, which wished to deposit the two instalments due in pengös only, a request which was not granted, all the States have punctually fulfilled their obligations.

The negotiations with the Germans interested in the Berndorf Krupp Works, which is now experiencing great difficulty, have led to no result. The representatives of Krupp in Essen have not yet concluded their calculations. The Escompte Gesellschaft published its balance sheet this week, and it is probable that the Bankverein will publish its returns early in May. The Finance Department will also publish a supplementary Budget shortly, as the deterioration of the economic position and the absence of foreign credits make further restriction of the Budget necessary. Impoverishment is extending, and compositions with creditors and bankruptcies continue. Though the public is not generally aware of it, one of the large industrial concerns in the heavy industries, which bears the name of a prominent industrialist of the old monarchy, was just saved from collapse within the last few days.

CZECHOSLOVAKIA.

Industry — Trade — Finance — Danube Plan.

(FROM OUR CORRESPONDENT.)

PRAGUE, April 12.

THE industrial situation has been showing no improvement lately. Building activity has been retarded owing to the late spring, and the number of unemployed has reached the figure of 626,000. The textile, iron, metal, engineering, porcelain, glass and leather industries have been hit hardest by the crisis, as these industries cater for capital investment and export. In the motor car industry great hopes were entertained of the agreement concluded between two largest concerns, the Ceskomoravská and the Skoda Works, who created a common organisation for the manufacture and sale of motor cars; this organisation,

however, soon broke down and the intensified competition only made the trade conditions worse.

The first two months of 1932 show imports at 1,329.9 million Cz.K. (against 1,727.3 million Cz.K. in 1931) and exports at 1,156.3 million Cz.K. (against 2,001.7 million Cz.K.). This fact best illustrates the sharp decline of the foreign trade and its growing passivity. A year ago Czechoslovak trade was active by 274.4 million Cz.K.; now it is passive by 173.6 million Cz.K. This development demonstrates the influence of import limitations, especially in neighbouring countries, while Czechoslovakia still adheres to a relatively liberal commercial policy.

The unfavourable situation of the home industry and events abroad have caused a further decline on the Stock Exchange. Whereas fixed interest securities have been fairly well maintained, shares have fallen to an unprecedented level. In view of this development, which involved a decline in many bank shares far below their intrinsic value, four of the leading banks decided not to support their own shares any more, but to cancel their own shares, so far as they were holding them themselves and to reduce their capital by a corresponding amount.

The National Bank held its General Assembly on February 29th. The Governor, Dr. Pospisil, explained his point of view with regard to the attempts to interpret the crisis and to remedy it, especially as far as currency and credit policy is concerned. He declared himself an adherent to the gold standard as an indispensable international basis of currency. He stressed again the necessity of co-operation among the central banks, and of greater liberty for international commerce, admitting the advisability of agreement among the various countries with regard to temporary import licences and quotas, which appear necessary under the present conditions. Dr. Pospisil emphasised the necessity of a balanced Budget and an active balance of trade. The relatively small indebtedness of Czechoslovakia had saved it, however, from the worst effects of the credit crisis. A certain credit expansion was, he said, beginning in Czechoslovakia. The National Bank could, however, not intervene more effectively owing to the volume of Treasury notes still outstanding. Dr. Pospisil touched also upon the question of remodelling the Czechoslovak banks on British lines and reforming their relations with industrial concerns. This is also the subject matter of the recently-introduced Banking Bill.

The French loan, amounting to 600 million francs, has been concluded and guaranteed by the French Government, and, on April 4th, an agreement regarding its issue was signed with nine French banks. The first 200 million francs have already been placed on Czechoslovak account at the Banque de France. Besides this alleviation for the Treasury, the Government decided to secure new sources of revenue. A Bill has been presented to the Parliament, despite the protests of some economic circles, to raise the turnover tax and adjust the alcohol, beer or yeast duty. It is expected that these Bills will be passed without much delay. The deficit resulting from the management of the State railways has been responsible for the nomination of a new Minister of Railways, who has been entrusted with their reorganisation and with solving the problem of the relations between the railways and omnibus traffic.

The most discussed subject in political and the economic circles is the question of Central Europe. This question was referred to by the Foreign Minister, Dr. Benes, in the foreign committees of the Chamber of Deputies and Senate on March 22nd. His standpoint with regard to the economic situation of the Central European States remains the same even after the unsuccessful result of the London Conference. The Czechoslovak point of view can be summed up as follows:—A regime of commercial policy as such is not sufficient to the restoration of Central Europe. An adjustment of the financial system of some of these states—especially that of Austria and Hungary—appears to be a necessary condition for commercial rapprochement. A Customs union is out of the question, both for political and economic reasons, and the only acceptable solution would be a preferential system, naturally, with equal preferences for all participating countries. Such a

system at present could include practically only five Central European countries:—Czechoslovakia, Austria, Hungary, Yugoslavia and Roumania, and these must be left to themselves to come to an agreement without dictation or influence from the Great Powers. Any inclusion of bigger States such as Germany or Italy in the proposed system would be fatal. The inclusion of Germany, in particular, would cause great disturbance to the equilibrium.

The relation of Central Europe to Germany and Italy cannot be discussed without simultaneous settling the relation of Central Europe to France or to the rest of Europe, and that can be done only when the Central European countries have reached an agreement among themselves, because this is a European and not only a Central European problem. Such a solution is only possible as a second stage. It is also advisable to begin with the small measure, where the probability of an agreement is greater instead of trying to adjust all at once the economic system of the whole of Europe or of the greater part of her economically important States.

If this agreement in Central Europe is to be left to the Central European States themselves, without any selfish interference on the part of a third Power, it is also quite clear that such an agreement is only possible with the approval of the Great Powers, because it will be necessary to maintain free passage outside Central Europe for the agricultural surplus of the Central European States and to maintain the market possibilities for those industrial goods which Central Europe cannot absorb. No Central European State can risk a trade conflict with the big States and their big markets. That is why Dr. Benes put such a great stress in his *exposé* on his determination that without the consent of the big States—in the first place without the consent of Berlin and Rome—Czechoslovakia will undertake nothing.

SPAIN.

Politics — Finance — Agriculture — Emigration.

(FROM OUR CORRESPONDENT.)

MADRID, April 15.

THE Spanish Republic has successfully weathered its first year, and the anniversary of the change of regime was celebrated with due solemnity. In spite of discontents, there is no doubt that the present regime has established itself, and even the monarchists seem to have lost hope of a return to the old order of things. As the military question has been dealt with by Señor Azaña with a firm hand, there is very little prospect of a revolt in that quarter, while the greater part of the country is principally concerned in obtaining and maintaining social peace, which is so essential to industrial progress. In view of the fact that large numbers of the unemployed are passing over to the ranks of the communist and syndicalist organisations, it will be difficult to avoid occasional disturbances in the provinces, but the members of the Government, owing to their experience on the other side of the fence, know very well how to deal with the turbulent masses, so that the threat of a Communist rising on May 1st is not taken seriously.

The economic outlook of Spain has not improved, nor are there as yet any signs that the bottom has been reached. The demand for foreign currency continues to exceed the supply, and, in spite of restrictions and regulations, the foreign exchange office has considerable difficulty in supplying the necessary currency. The peseta has, therefore, showed continued weakness throughout the month, and is now about 50 to the pound sterling. Furthermore, the export season for oranges is practically terminated, and the sales of foreign currency are diminishing in consequence. Formerly this fall of the peseta would have been sufficient to bring about the resignation of the Finance Minister, but in the present case, whether from fatigue or indifference, the fact has attracted comparatively little attention except in such circles as are directly affected, especially as the cost of living has not increased to any appreciable extent.

The issue of Treasury Bonds was, as anticipated, a complete success, and, owing to the measures taken, a large part was allotted to small subscribers. The subscription list was closed within a few hours, when it was found that bonds to the value of 628,062,000 pesetas had been applied for. Of this amount 298,884,500 pesetas were subscribed in Madrid and the remainder in the provinces. The amount of the issue is Ptas. 500,000,000 at par, the bonds bearing interest at the rate of 5½ per cent. per annum and maturing on April 12, 1934.

The publication by the Government of the projected clauses of the new Agrarian Bill has produced a rise in the quotation of the bonds of the National Mortgage Bank, as it is evident that the security will not be affected by the measures which are to be taken as soon as the Bill becomes law. The Minister of Agriculture, in a recent speech, stated that a small Commission had just been nominated by the Government, completely independent of all political influence, to study the economic situation of Spain and to advise Parliament as to the measures to be taken to remedy the present crisis. The names of the members of this Committee have not yet been made public, nor has any other official mention been made of the Committee itself. The Minister of Agriculture also stated that the Government was considering the question of taking over large tracts of land that were unfit for cultivation and not only undertaking the replanting of trees, but eventually monopolising the wood industry in an attempt to replace the large imports of wood by national production.

The figures published by the Minister of Finance for March show an increase of revenue amounting to 40 million pesetas as compared with the same month of last year. The increase of revenue for the first quarter of 1932 is 65 millions over the same period of 1931. Disbursements are stated to have been reduced by 148 millions and 128 millions during the month of March and the first quarter of 1932, respectively, as compared with the same periods of the previous year. These figures would appear eminently satisfactory; but it remains to be seen—and the statistics for the second quarter of the year will doubtless throw some light on the subject—whether some part of the reduction is not represented by payments due but deferred. Mines, motor cars and tobacco have produced considerably less income this year, and the Government has just made an all-round increase in the price of tobacco in an attempt to obtain compensation for the contraction.

The Ministry of Labour has, after considerable delay, at last published the figures of emigration from Spain during 1930. The total of emigrants was 41,560, of which the Argentine Republic alone took 31,403. The nationality of the steamers which carried them were, in the order of their importance: German, British, French, Spanish, Italian, Dutch and Portuguese. The number of emigrants diminished by 8,822 as compared with the year 1929.

CANADA.

Business — Parliament — Beauharnois Deferred Bonds — The St. Lawrence — C.N.R.

(FROM OUR CORRESPONDENT.)

OTTAWA, April 5.

THE latest business survey published by the Bureau of Statistics covering up to the end of February adduces some evidence of improvement in business compared with January, and the following are the comparative indices of different lines of economic activity corrected for seasonal variation:—

(1919-24 = 100).

	Feb., 1931.	Jan., 1932.	Feb., 1932.
Forestry	153.7	136.5	134.2
Mining	130.6	131.6	160.4
Construction	262.1	159.2	153.5
Manufacturing	128.7	117.2	119.4
Imports	119.2	82.8	87.0
Exports	102.4	88.0	89.7
Car loadings	101.2	81.5	89.4
Shares traded	279.0	49.7	53.8
Bank debits	146.1	105.6	116.4
Physical volume of business...	138.9	113.8	127.3

The unusual prolongation of winter conditions has held back the normal spring seasonal buying, and merchants report that the aggregate volume of Easter trade was less than a year ago. There has, however, been some further slight improvement in manufacturing conditions. The artificial silk mills are well employed, and the furniture and boot and shoe factories have a reasonable amount of work on hand. On the other hand, the cotton mills are operating on low schedules, and the iron and steel plants are comparatively idle. The lumber market is also dull, and the newsprint plants are still operating at little more than 50 per cent. of their capacity. Canada's exports of newsprint in February were valued at \$6,894,515, as compared with \$8,971,696 in January and \$8,086,266 in February, 1931. The March employment index of the Bureau of Statistics again declined to 88.7, as compared with 89.7 on February 1st and 100.2, 110.2 and 114.4 on February 1, 1931, 1930 and 1929, respectively. The Canadian dollar has been fairly steady in New York at a discount of around 10 per cent., but there has been a substantial appreciation in sterling. Importers are still full of complaints about the difficulties which the present system of tariff administration in Canada places in the way of conducting their business.

In the Federal Parliament the Liberal Opposition adopted obstructionist tactics against the Government's Bill for extending the operation of the unemployment and farm relief measure till May 1st with such success that they held up its passage for three weeks and upset the Ministry's plans for submitting the Budget before the Easter recess. The Liberals objected to giving the Government a further blank cheque when Parliament was in session, and took the line that they were fighting for proper parliamentary control of finance against an attempt at a dictatorship. Before they could get their Bill the Government had twice to resort to closure, which is rarely applied at Ottawa, and Mr Bennett pledged himself to call a conference of the provincial Governments to discuss ways and means of dealing with the unemployment situation after May 1st, when the authority given under the present legislation expires.

The Bennett Ministry has so far found it impossible to arrive at a decision about the fate of the Beauharnois Corporation, and in consequence the company defaulted on the interest payment of \$30,000,000 of collateral trust bonds which fell due on April 1st. By the trust agreement, ninety days of grace are available before the bondholders can take action, but they have appointed a strong committee to look after their interests. Mr Bennett told the House of Commons that this step had created a new situation, and that its implications, legal and otherwise, must be studied before the Government could make any announcement of its policy. The position apparently is that the banks will advance no more money with a Government guarantee, and the Federal Ministry says that as the corporation is now merely a power company operating under a licence from Quebec, the Quebec Government should be the guarantors; on the other hand, the Quebec Government says that, as the Federal Government has assumed ownership of the Beauharnois Canal for navigation purposes, it should provide the guarantee.

Prospects of an agreement on this point are not improved by the open divergence of opinion on the subject of the St. Lawrence waterway between the two Governments, which has lately been disclosed to the public. Following a conference at Ottawa about the waterway between Mr Bennett and Premier Taschereau of Quebec, the latter made public the contents of a lengthy letter which he had sent to the Federal Premier. In it he declared that he had submitted to his Cabinet the Federal Ministry's plans about the waterway, and they had found them objectionable in various respects. He repeated most of the arguments which have been advanced in Quebec against the waterway, and stressed the probable adverse effects of the waterway when it was completed upon the already embarrassed fortunes of the two great railway systems. He appealed to Mr Bennett and his Cabinet to desist from a project which would breed dissension disastrous to the national unity, and altogether made it

clear that his Government intended to resist to the bitter end the completion of the waterway. Moreover, his views at once received editorial endorsement from the Conservative *Montreal Gazette*. However, the Ontario Government has announced that it is satisfied with the Bennett Ministry's plans about the waterway, and negotiations with Washington are still busily proceeding.

The Government is persevering its efforts to cure the deficiencies in the Federal insurance law revealed by a recent decision of the Privy Council. After withdrawing two Bills which it introduced for this purpose, and which were unpalatable to some provincial governments and the insurance companies, it has now split its legislation into three Bills, one creating a Department of Insurance, another regulating foreign companies, and a third dealing with Dominion and British companies. Only the first two have been introduced, but they have encountered sharp criticisms in the Senate. Senator Lynch-Staunton, who is probably the ablest lawyer on the Conservative side in the Senate, held that the terms of the constitution and the decisions of the Privy Council precluded any success for this attempt of the Government to secure effective jurisdiction over insurance, and that it was beneath the dignity of the Canadian Parliament to try by such Bills to circumvent a decision of the Privy Council. The provincial governments of Ontario and Quebec have also notified Ottawa that they take strong objection to the Federal legislation and intend to fight it.

There was lately tabled the annual report covering 1931 of the Canadian National Railways. It showed a net income deficit of roughly \$60 millions, as compared with a deficit of \$29 millions for 1930, and this without any provision for interest on Government advances, which would amount to about \$32 millions. On April 1st the Minister of Railways gave a rather pessimistic account of the situation of the State-owned system. He was moving the second reading of a Bill which authorised the provision of \$61 millions from the Federal Treasury to meet the needs of the railway for 1932.

ARGENTINA.

Budget — Proposed Loan — Banking Reform.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, April 8.

THE situation of the national finances overshadows all other affairs in Argentina, and business of every kind is in suspense pending definite knowledge as to the intentions of Congress with respect to the Budget estimates and the proposed "patriotic" loan. General disappointment was felt when the new Government announced that it was budgeting for \$770,736,238 paper—a saving of barely \$14,000,000 paper as compared with the suggested budget of the Provisional Government, published but a fortnight before the latter went out of office. To add to the general *désenchantement*, Dr. Hueyo has estimated his receipts at \$800,000,000 paper, a figure quite out of the question when it is borne in mind that revenue receipts for 1931 were little more than \$630,000,000 paper.

It is felt in commercial and financial circles that to bring forward such figures showed great want of comprehension of the needs of the moment. The 1926-27 Budget amounted to \$673,000,000 paper, and was at that time subjected to severe criticism as being far beyond what the taxable capacity of the country could bear. Congress has appointed special committees to consider the present Budget, and it will undoubtedly be cut down to a considerable extent when it comes back to the legislature for discussion, though there is every reason to fear that the cut will not be as deep as present circumstances demand. It is all very well to point out that Argentina has to-day a smaller debt *per capita* than that of many nations, and to emphasise the relative lightness of existing direct taxation. Neither statement can be contested, but both overlook the fact that, in the first place, the indebtedness is

almost wholly non-reproductive, and certainly contributes nothing towards current revenues in the form of interest or profits; in the second place, the statement contains a *suggestio falsi*, inasmuch as Argentina's fiscal receipts have been obtained from time immemorial by indirect taxation. That source of revenue has latterly seriously diminished, and the expedient of imposing higher import duties has failed lamentably, unless the end sought was complete cessation of imports, which, though it may help the balance of trade, leaves all commercial enterprise high and dry with but little prospect of an early turn of the tide. The new taxes, imposed by the Provisional Government, are bringing in next to nothing, and therefore estimates based on the calculated yield from that source, and from the higher Customs dues, are completely misleading.

Congress is undoubtedly alive to the position, and it is a matter for congratulation that the legislators of Argentina appear to be determined to go to the bottom of things. They realise that the financial position at the moment is thoroughly serious and will, unless carefully handled, do irreparable damage to the credit and trade of the country, notwithstanding that, to-day, prospects for both are undoubtedly good. The fundamental soundness of Argentina's position makes it all the more regrettable that the Government should have thought it necessary to call for a "patriotic" loan, well knowing that the success of an operation of this nature was exceedingly doubtful.

The small prospects of a response have been admitted by the Government, inasmuch as they state that \$225,000,000 will be immediately rediscounted with the Conversion Office as soon as Congress has authorised the Bill relative to the loan in question. It is unnecessary yet to give full details of the various safeguards, such as the creation of an autonomous board to regulate not only the conditions of the loan, but also its treatment through the Conversion Office, with the proviso that the gold guarantee must not fall below 40 per cent. of the total circulation; for it is highly probable that this veiled emission will eventually be combined with compulsory acceptance of the bonds by banks, insurance companies, and other important commercial enterprises.

If the control of this emission is sufficiently drastic, and its proceeds are employed immediately in the liquidation of the current indebtedness of the National Government—in salaries alone there are at present some \$116,000,000 overdue—the effect on this market will be beneficial, while, as regards foreign exchange, no immediate depreciation of the peso is to be looked for. It is, however, more than ever regrettable that the whole matter of currency, and banking reform as regards the relationship between the Government and the Banco de La Nacion, was not examined, and the necessary changes carried out, at least a year ago. The present Minister of Finance has stated that for the time being he must put the idea of a central bank out of his calculations. Nevertheless, it is now more than ever obvious that only by refunding the Conversion Office gold with a State-guaranteed currency issue, subject to expert control and not to arbitrary market movements, can Argentina get clear from the entanglement that, now as in 1890, has made waste paper of the charter of the Banco de La Nacion in so far as its relations with the National Treasury are concerned. Dr. Lisandro de la Torre has publicly estimated the total indebtedness, in various forms, of the Government to the Banco de La Nacion at \$720,000,000 paper. Fortunately, no comparison can be made between the state of affairs to-day and those which prevailed in 1890, inasmuch as the Republic is now, despite all its present troubles, in a reasonably flourishing position. Argentina has immense actual, as well as potential, reserves of strength, in cash and in kind, behind her. Moreover, there is a complete absence of anything approaching a speculative position, in land, in industries, or in other national investments. Last, but not least, there is both in the Cabinet and in Congress a manifest desire to pull things straight, even at the cost of considerable personal sacrifice. This statement is not belied by what has been previously said regarding the possible result of the patriotic loan. That, as drafted, is an ill-advised measure, and has immediately been seen in that light by the general public.

Letters to the Editor.

SWEDEN AND THE GOLD STANDARD.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your issue of April 16th, your Stockholm correspondent reviews the information revealed by the report given at the meeting of the Skandinaviska Kreditaktiebolag as to the connection between this bank, the Kreuger concern and the National Bank. He arrives at the conclusion that "the Kreuger concern, and thereby the Skandinaviska Bank and National Bank of Sweden, are to a considerable extent responsible for Sweden's departure from the gold standard owing to the enormous credits which were asked and granted."

It is no doubt true that the credits thus given have played a great rôle in Sweden's balance of payments, particularly as the funds obtained were mainly utilised for payments abroad. But there are certain other points which should be borne in mind when the cause of the departure of Sweden from the gold standard is discussed:—

(1) At the beginning of 1931 the National Bank held foreign exchange to the amount of 370 million crowns. A substantial part of these holdings—perhaps more than half—consisted of money brought into Sweden by the Kreuger concern, when foreign issues had been made and the proceeds largely utilised to buy shares in Swedish companies (pulp, gold mines, &c.).

It seems rather one-sided only to emphasise the demands which the concern made upon the National Bank, without taking into account the funds it had previously brought into the bank.

(2) Your correspondent mentions that during the first five months of 1931 the surplus of imports into Sweden amounted to 180 million crowns. The previous year it had been only 97 million crowns. The aggravation of the adverse balance was not only important in itself, but was also a sign of the fact that the price level and the purchasing power in the hands of the Swedish public had not been adjusted to the lower level of prices on the main world markets. There had been hardly any credit deflation in Sweden in 1929, and the cost of living was very much the same in 1931 as in 1929. Wages had not fallen, and Government expenditure had rather shown a tendency to rise. Whilst the requirements of the Kreuger concern were still unknown, many economists in Sweden anxiously began to point out the importance which these underlying factors must have on the monetary situation. It is true that a foreign loan might have helped matters, but only if the authorities, the industrial leaders and the trade unions had realised that a strong policy of deflation was necessary—and acted accordingly. The resistance against such a policy was, however, very great, even before sterling became depreciated. After the depreciation of sterling—involving still further reduced prices in gold on Sweden's most important market—deflation in Sweden would have had to be pushed very far in order to enable the country to remain on the gold standard. It is interesting in this connection to note that in the Swedish Parliament the National Bank has been criticised for having kept too high a discount rate and not allowed prices to rise after depreciation took place.

An authority on Swedish monetary policy, Dr. E. Lindahl, in a speech at Gothenburg on the 16th instant, expressed the opinion that without a doubt the Kreuger business accelerated the movement which took place, but that a departure from the gold standard would, nevertheless, have been necessary. It is understandable, and also justifiable, that the Swedish people should carefully consider the question whether a small country like Sweden could form sufficient basis for such a huge undertaking as the Kreuger concern. But it would be manifestly wrong to make the credit transactions of the concern solely responsible for monetary developments which are as much or more due to the general economic policy, viz., unwillingness to bring down prices, expenses and costs.—Yours, &c.,

Stockholm.

AMERICAN FOREIGN INVESTMENT.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your issue of February 20, on page 403, is a note on "American Foreign Investments in 1931," which invites a rejoinder in view of the last two sentences. You quote from the report of the Foreign Policy Association that the investigations of the Senate Finance Committee into recent foreign lending "have strengthened the substantial group of persons who have come to feel that the only cure for the evils of an

unbridled foreign investment policy lies in a complete withdrawal from the international investment field." Following this, you conclude with the *obiter dictum*, "This is 'the burnt child' with a vengeance." The comment quoted from the Foreign Policy Association and your concluding remark sound overdrawn in contrast with the figures given in the article, according to which the net export movement of American capital declined from 1,101 million dollars in 1928 to 924 million dollars in 1930, and 439 million dollars in 1931.

If the investing fingers of the United States have been burnt, in whose fires were they injured? According to the data you employed, American long-term foreign investments in Europe (presumably ex-Russia) are 5,765 million dollars. In the light of the historical theory of international trade, why should this money have been loaned to Europe? Europe is not an undeveloped region, a backward continent, a part of the world still in the extractive stage. Europe was a creditor continent for centuries; from Europe proceeded the capital movements which developed the outlying regions of the globe. To-day the net foreign investments of Europe ex-Russia exceed the net foreign investments of the United States. It was an anomaly for the younger continent to lend to the older continent. If Europe felt herself constrained to reorganise her international financial affairs, this could have been done by the sale of her foreign securities instead of borrowing money in the United States, and there was ample opportunity for such sale of foreign securities at high prices between 1925 and 1929. The orthodox economist who traces the history of foreign investment from the period of Queen Elizabeth to the world-war will find it difficult to explain on traditional grounds why Europe has borrowed nearly six billion dollars from the United States on long term.

But, perhaps, it will be rejoined that the second major influence in foreign investment explains the occurrence, namely, that America loaned almost six billion dollars to Europe in order to enable Europeans to purchase export goods from the United States. This proves too much. If one will take the history of tariffs since the war, including the final act of the British tariff, to suggest that Americans have loaned six billion dollars to promote exports to Europe, and that Europe has borrowed six billion dollars to promote imports from the United States, is far-fetched indeed.

Much is to be said for the view that the normal field for American foreign investments is in the Western Hemisphere, and especially in North America. That American foreign investments in Australasia and Asia have declined is less surprising than the fact that Americans ever entered these traditional British fields. The decline in American investments in Canada and Central America has been due quite as much to unwillingness of *entrepreneurs* in those regions as to unwillingness of American lenders.

The fingers of the American foreign investors were burned because they entered into a new game with too much zest and too little caution, and because an extensive and intensive trade cycle has brought to this country the shift from bullishness to beariness upon which Keynes has laid such stress. American investors meeting with losses on loans to undeveloped and naturally debtor regions can console themselves with historical reflections. But if American investors lose money on loans to highly-developed creditor Europe, they will find it difficult to find solace in such reflections.—Very respectfully yours,

Stanford University, California. A. E. TAYLOR.

FOREIGN BONDS IN DEFAULT.

TO THE EDITOR OF THE ECONOMIST.

SIR,—On page 167 of your issue of January 23rd last, you quote a report of the Foreign Policy Association on recent defaults of Government loans, and include a table of Government loans in default.

In this table Guatemala is shown as having \$366,300 of interest in arrears, and since the loans are not mentioned, the impression given in this country is that the arrears of interest are in respect of loans quoted on the London market, namely, the 4 per cent. External Debt, 1895, 1913 and 1928, which we administer.

The Foreign Policy Report specifies that the interest is in arrear on the International Railways of Central America (Zacapa-Salvador Extension) to an amount of \$169,500 and on the Los Altos Maintenance Contract for \$196,800,

The recent formation of the Business Transfer Partnership & Property Agents Institute of Great Britain raises the status of the profession of Business Transfer Agents. A very comprehensive course dealing with B.T. can be secured for £1 1s. 0d., spread over 4 monthly payments of 5s. 3d. each. Course is sent on receipt of first payment.

EFFICIENCY PUBLISHING COMPANY. 71, Lowlands Road, Harrow

making a total of \$366,300. These two loans appear to be American commercial ones, neither being quoted in London.

The Government of Guatemala has requested us to bring the point to your notice and to ask you to be good enough to make it clear that the interest in arrear is in no way connected with the 4 per cent. External Debt of Guatemala, on which the Government has punctually met its obligations both for interest and sinking fund.—Yours, etc.,

Council of Foreign Bondholders,

RAILWAYS AND ROADS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In common with other members of the travelling public, I find thrust upon my attention in the dining saloons of trains, in hotels and elsewhere a tract distributed by the railway interests which, in view of the coming Conference on Rail and Road Transport, it seems to me it would now be a graceful act to withdraw from circulation.

I have no wish to write anything which might tend to increase the exasperation of those who have broadcast their plea for "fair play," but it is surely a fantastic twist of logic to say that because the railways have to pay for the upkeep of their own tracks, therefore the owners of motor vehicles should pay "the full current expenditure on roads" belonging, not to them, but to the community; and anyhow, motor users are already paying, including the petrol tax, £59,000,000 a year for the privilege of being what they are.

Nobody blames the railways for failing to foresee that there would come a day when their rigid tracks would fail to pay. These tracks remain a necessary feature of our national life, but it is absurd to say that they must be made solvent by bleeding their more mobile rival. And that certainly will not be a solution which will appeal to the approaching Conference.

If the railways seek fair play, they must give it; and the first step in that direction is to recall this unfortunate pamphlet.—Yours faithfully,

8, Queen Street,

Mayfair, W.1.

The Stock Exchange.

BUILDING SOCIETIES.

THE Stock Exchange has no dealings with building societies. The loss is the Stock Exchange's, for the building societies have obtained £275 millions of new "capital" in the last ten years without paying a penny in brokers' commissions. The movement has recently emerged creditably from an anxious period. Last autumn's financial hurricane caught most societies with sails fully set. The success with which the storm was weathered was a reassuring testimony to the sound lines of the ships and the navigation of the crews, though all concerned were greatly helped by external factors—Britain's attainment of Budget equilibrium before suspending gold payments, the absence of any inflationary internal price movement and the speedy re-establishment of public confidence in the national position. The crisis was short-lived. It strengthened the moral position of exponents of sound building society canons without weakening the movement. The subsequent decline in money rates and in gilt-edged yields reinstated the popular appeal of building society shares and deposits, and the rise in income tax enhanced it. The societies' operations have now resumed their former course and magnitude, but with a difference.

Last year's crisis, in fact, has compelled building society directors and managers to ask whether the movement is tending, and whether the progress of the last few years can be indefinitely maintained. It is admitted that the proportion of the annual increase in the national capital which has been drawn into one particular form of investment—the ownership of medium-sized residential property—has been far greater than in any previous epoch. Between 1904 and 1913, the average annual amount advanced on mortgage by the building societies of Great Britain was £9,077,000, and the average increase in the balance due on mortgage (after deducting repayments) was little more than £1,000,000. Between 1921 and 1925 the average annual advances and increases were £32,961,000 and £15,409,000 respectively. In the next five years they were no less than £66,038,000 and £34,091,000 respectively. The following table shows the figures for each year since 1921, together with the total assets of all building societies:—

(000's omitted.)				
Year.	Total Advances on Mortgage made during Year.	Balance Due on Mortgages.	Total Assets of all Building Societies.	
1921	19,673	75,503	95,265	
1922	22,708	83,725	107,438	
1923	32,015	98,845	124,719	
1924	40,585	119,745	144,890	
1925	49,822	145,857	169,197	
1926	52,151	171,221	193,856	
1927	55,887	197,748	223,346	
1928	58,665	227,533	268,465	
1929	74,719	268,141	312,746	
1930	88,767	316,314	371,165	

The returns of individual societies so far published suggest that the total new advances on mortgage during 1931 were in the neighbourhood of £90-£100 millions, and that total building society assets passed well beyond the £400 millions mark.

These vast figures are meaningless apart from their peculiar post-war context. At the end of the war the nation was faced by an acute housing shortage. The continuance of rent restriction condemned non-occupying owners of existing small dwellings to an uneconomic return. The State urged local authorities to fill the breach, and subsidised both public and private building, directly and indirectly. The most striking response, however, came from the private owner who, finding unprecedented difficulty in obtaining a house to rent, was willing to finance the erection of his own dwelling—costing, say, from £700 to £1,000—by local speculative building enter-

prise, provided he could obtain outside financial accommodation in respect of the cost over and above a moderate initial outlay. The building societies already possessed the necessary organisation for collecting resources from general investors, and a wide experience of the technique of valuation and lending. Demand being insistent, they were able to charge remunerative rates to borrowers and offer interest to investors appreciably above the level paid by other "savings" institutions and the yield on gilt-edged stocks. Their success was enhanced by effective advertising, the infusion of new blood to supplement the skill of the older leaders (Sir Harold Bellman, for example, joining the movement in 1920), the downward tendency of general interest rates, apart from exceptional periods, and the maintenance of high standard rates of income tax. About 1,700,000 houses have been built since the war, including approximately 700,000 for letting by local authorities, and over 1,000,000 for sale to private owners, mainly with the help of building societies, which have collected the necessary resources from about 1,800,000 depositors and share investors.

A concentration of internal control has accompanied the extension of operations. At the end of 1929, one society, the Halifax, owned 19 per cent. of the total assets of the movement. The Halifax and Abbey Road together owned 25 per cent. of the total. The ten largest societies accounted for 50 per cent., and the 45 largest for 76 per cent. of the total resources of over a thousand societies. The following table gives a picture of the financial position and progress of six typical large societies during the last three years. Three of the societies have head offices in the provinces and three in London.

ASSETS, ADVANCES, &c., OF SIX SOCIETIES.

(000's omitted.)

* Unascertainable. Total investments and cash of £1,277,000 included corporation mortgages, which stood at £1,044,000 in 1931 accounts.

Though all the societies show creditable progress, which was not perceptibly interrupted last year, the experience of the "London" and "provincial" societies has not been quite on all fours. The former have advanced the more rapidly, partly through economic changes which need not be gone into here. The building society movement had its birth in the North and has been traditionally strong in the West Riding of Yorkshire. The South, however, has been rapidly "catching up." Generally speaking, Northern depositors and shareholders appear to regard their society more as a savings bank than their Southern colleagues, all the provincial societies having

a larger percentage of annual "turnover" in shares and deposits than the London societies. In one or two instances this ratio tended to increase last year, but seldom to a serious extent, investors having shown a freedom from panic creditable both to themselves and their societies.

The next table shows the average shareholdings, mortgage totals, interest rates, etc., of the six societies:—

AVERAGE HOLDINGS AND INTEREST RATES.							
Society.	Date of last Balance Sheet.	Average Deposit.	Average Shareholding.	Average Mortgage Outstanding.	Average Interest Paid to Depositors.	Average Dividend to Shareholders.	Average Rate Received from Borrowers.
Halifax ...	Jan. 31, 1932	£ 75	£ 330	£ 393	3.6	4.55	5.86
Abbey Road	Dec. 31, 1931	414	141	619	3.7	4.77	6.65
Woolwich	Sept. 30, 1931	129	310	579	3.7	5.15	6.39
National ...	Jan. 31, 1932	Nil	209	676	4.2	4.25	5.53
Leeds	Sept. 30, 1931	97	229	452	3.0	4.82	5.57
Burnley ...	Dec. 31, 1931	38	244	361			

Note.—The average "deposit" and "shareholding" figures are based on published totals, including interest. The average "interest," "dividend," and "rate from borrowers" figures are based on the mean totals of deposits, shares and mortgages outstanding between the beginning and end of the year.

The average deposit and shareholding figures vary considerably, individual shareholdings greatly exceeding deposits except in the case of the Abbey Road. Broadly, deposits tend to be lower in the provincial than in the London societies, but the difference is less marked as regards shareholdings, the biggest society of all—the Halifax—having a comparatively large average shareholding, while that of the Abbey Road is comparatively small. The ratio of numbers of depositors to shareholders, however, is 1 : 1.6 in the Halifax and 1 : 19.6 in the Abbey Road.

The size of the average outstanding mortgage is demonstrably higher in the case of the London than of the provincial societies, but this is partly a reflection of the more rapid recent increase in the business of the former, and partly of somewhat higher property values in the South of England. On the whole, the Southern societies pay higher rates to investors and charge higher rates to borrowers than the Northern societies, special arrangements being understood to obtain as regards rates charged in the London area. The distinction between "London" and "provincial" societies, however, is approximate only, some of the largest societies doing a considerable business in both areas. The existence of a special London arrangement would, of course, tend to raise the average figures of societies with provincial head offices doing an important Metropolitan business. All the average interest and dividend figures in the table are necessarily approximate, in view of extensive recent changes in the totals of investments and mortgages, and of other factors—such as the charging, in some cases, of premiums during the early years of a loan, and frequent repayments of mortgages before their due dates.

What is the outlook for the movement? The result of its recent trials has been reassuring. Last year's withdrawals by investors were moderate and shortlived. Concessions were made in some cases to mortgagors in difficulties, but for the most part the ability of borrowers to maintain payments suggested that the "placing" of past loans had been well-advised. Though many societies have prudently adopted a policy of conserving liquid assets, these would seem to have been sufficient to meet claims even had the crisis been more prolonged.

During the temporary restriction of new advances, on the other hand, the sharp contraction in the volume of speculative building suggested that the identification of the movement with the contemporary activity of one particular industry had become so complete as to be potentially embarrassing. How far building society activity has tended to augment medium-sized residential property values and building profits is an open question. The movement is protected against a much greater decline in values than has already taken place, partly owing to the fact that so many of its mortgagors are owner-occupiers, who are not likely to require to sell their houses, and partly to the practice of societies of advancing only a given percentage of their surveyor's valuation in each case.

Nevertheless, last year's events have aptly emphasised the efforts of the leaders of the movement to check

potential "over-lending." A large measure of agreement has been secured for a policy whose main features are insistence on a purchaser's having at least a 10 per cent. personal stake in his property, the protection of any advance in excess of 75 per cent. of a current valuation by guarantees and cash deposits for the balance, with concessions only in exceptional cases, and the non-release of such cash collateral security until the principal sum under the mortgage has been reduced to at least two-thirds of the original valuation. It is also understood that certain builders and "estates," whose position is regarded as unduly speculative, will not readily obtain future building society assistance.

The movement, assuredly, has not exhausted the potentialities of the special "market" it has conspicuously developed of late years. "Demand" from this direction, however, cannot maintain its recent pace indefinitely, and already shows signs of slackening. Rather than run the risk of "forcing" loans, in an effort to maintain turnover, the largest societies may decide mainly to consolidate the ground lately occupied, and to seek new extensions—possibly on a smaller scale—in fresh directions. That they will seek considerably to add to their interests in the more expensive properties is doubtful. This is a section of the market of which the societies have had little experience. At the end of 1930, out of £316 millions due on mortgages, only £10 millions was in respect of mortgages over £5,000. A year earlier, 81½ per cent. of the total represented mortgages of under £1,000.

The attention of some spokesmen appears to be turning rather to the possibilities of lower working-class housing. The most insistent demand of the time, they declare, is for houses costing about £400. The field is undoubtedly wide, but the financial security offered by poorly-paid workers for advances on normal building society lines is disproportionate to their economic need. The suggestion has been made that the Government should shoulder the risk by giving a guarantee to the building societies. Whether the Government, in present circumstances, will see its way to give such a guarantee, or whether the societies have themselves considered all its implications, is doubtful. In the meantime, the income-tax liabilities of the societies have been increased under the arrangements adopted with the authorities since last September's Budget, and the largest society has already reduced its interest to certain shareholders by ½ per cent., largely on this account. The prospects are, therefore, that the movement, while continuing to do a large annual business, will seek a policy of consolidation rather than unlimited expansion, with its corollary—a stringent determination to prevent competition for the placing of new resources from reaching lengths which may endanger the stability of the movement, and infringe its basic principles.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.	
TICKET.	ACCOUNT.
May 3.	May 5.

The Stock Exchange, which had anticipated the Budget without enthusiasm, found its contents stern, salutary and cheerless. Gilt-edged stocks were moderately firm, but inclined to falter before the welcome, though unexpected, reduction in the Bank rate confirmed the stronger tendency, dealers looking for the early establishment of long-term British Government stocks on a 4 per cent. yield basis. The advance discounting of expected favours limited the post-Budget rise in tea shares, and was responsible for a sharp decline in brewery issues, though prices recovered somewhat on Thursday, when stock failed to come in to the extent anticipated. Generally, the volume of business failed to expand appreciably, in contrast to normal Budget-week experience. The immediate influence of the Chancellor's statement, in short, was largely neutral, and its future effect may be, on the whole, reactionary.

Movements in gilt-edged values were confined between modest limits, the Bank rate reduction being a more important factor than the Budget proposals. War Loan was in request, however, after it had been made clear that the Government did not intend to launch an immediate conversion operation. India loans were neglected. Agricultural Mortgage scrip was conspicuously in demand, rising to 4 premium on Thursday. Little business was done in Australian issues, which were depressed by fears of further depreciation in the Australian pound and dissensions among the State Premiers. New Zealand scrip continued to relapse as a result of the Auckland disturbances. Business in foreign bonds remained restricted and difficult. German bonds improved slightly. Austrian stocks were liquidated, despite the renewal of the Bank of England's loan to the National Bank. Greek bonds showed signs of recovery on an optimistic forecast that interest payments would be continued despite the probable suspension of sinking funds. The weakness of Brazilians was associated with special liquidation arising out of the Kreuger position. Selling of Japanese was attributed to fears based on reports of strained relations with the Soviet.

The home railway traffic figures were the worst so far published this year, and dealers lowered quotations sharply rather than take even small amounts on their books. The reduction extended to prior charges, particularly those in the "depressed" zone. Argentine rails became dull after a mild improvement at the beginning of the week, the trend of traffic movements being by no means reassuring. The San Paulo report (dealt with on page 927) was regarded as satisfactory, though the stock failed to hold an initial rise.

The new account opened quietly in the industrial market. Breweries were in request, but reacted before the Budget speech and suffered a heavy fall on Wednesday, only part of which was regained on the following day. Iron and steel shares were little affected by the Budget, the inclusion of the industry in the list of new protectionist beneficiaries being confidently expected. A slight demand sprang up for Courtaulds, but textile shares generally did not reflect the amelioration in trade conditions suggested by the most recent trade and employment returns. Motor shares were steady, Austin being firm on the introduction of a new model. Dennis lost ground on the reduced interim dividend. Electrical supply shares were inactive, and electrical manufacturing securities easier, the Associated Electrical Industries' report (discussed on page 926) failing to soften the disappointment occasioned by the reduction of dividend. In the store market, Marks and Spencer were firm on the excellent preliminary dividend statement (set out on page 927). The passing of the P. and O. dividend cast a shadow over the whole market for shipping shares, groups like Furness Withy being affected. Bank shares were fractionally lower, moving against the trend of gilt-edged prices, and insurance shares were mainly unchanged on a very restricted business.

Dealings in rubber shares remained negligible, despite a trifling improvement in the quotation of the commodity. The reimposition of a preferential tea duty by Mr Chamberlain had been widely anticipated. The Budget statement was a signal for profit-taking, from which the best Indian estate companies were among the chief sufferers. Oil shares opened under the influence of French selling, became steady on a small professional business, and slumped badly, under the lead of Royal Dutch, on Thursday. The outlook for a number of the larger companies is discussed on page 928.

The "Kaffir" market showed a determination to extract the maximum of comfort from the Budget speech, the establishment of the Exchange Equalisation Account being used as an argument for the maintenance of the attractions of South African dividends under a pegged sterling regime. Rio Tinto was unable to hold a rise, and considerable inside buying failed to enhance the price of Rhokana. The sharp rise in tin prices had no proportionate effect on shares values, its permanence, origin and motives being looked at somewhat askance.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The market opened weak, and many issues reached new low levels. The volume of transactions, however, was lower than for some weeks. Liquidation emanated mainly from banks, in connection with frozen loans, rather than from investors proper. It was felt that the position in some respects, indeed, was slightly improving. Crude oil production showed a decrease. The drop in the latest freight car loading figures was negligible, an appreciable increase being reported in the movements of certain classes of merchandise. The first railroads reporting for March showed more clearly the effect of wage cuts and economies, several roads maintaining their 1931 net figures despite declines in gross takings. The Federal Farm Board reported evidence of conditions likely to result in heavier demand for American wheat. A reduction by the New York banks of ½ per cent. in their interest rates on foreign deposits revived the expectation, in some quarters, of a reduction in the re-discount rate of the Federal Reserve Bank, which was strengthened after the announcement of the London reduction on Thursday. The Reserve Banks as a whole continued their purchases of Government securities on a large scale. An issue was forecast of new Treasury Certificates to a total of \$300 millions, to take place at the beginning of next month. It was expected that the issue would be well taken, many New York banks having excessive amounts of unemployed money. The Business Index of the *New York Times* for the week ended April 9th was 59.6, compared with 60.2 for the previous week. Car loadings for the same week were 544,806, compared with 544,982 a week earlier.

LONDON ACTIVE SECURITY PRICES AND YIELDS.

NOTE.—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

* 2-hour session.

PARIS.

An unsettled tendency prevailed and movements were irregular throughout the week. Bear offers were mostly absorbed, but there was no inclination to increase commitments. Swedish Match and Kreuger and Toll were again marked down, the shares of a number of banks being easier on exaggerated unofficial stories of their Kreuger commitments. Tinto improved after early weakness, but Royal Dutch and Shell were sold. In the Mining section, Rand Mines, Central Mining and Geduld improved. On Thursday markets experienced one of the worst sessions for months, renewed apprehension being felt regarding the international position. Rio Tinto were heavily sold, and oil shares were among the worst sufferers.

BERLIN.

A reactionary tone obtained, due partly to the insolvency of the Deutsche Kredit-Verein, partly to the lower Reichsbank note cover, and partly to uncertainty regarding the outcome of Sunday's elections for the Prussian Diet. Losses of one to two points were general on Tuesday.

AMSTERDAM.

Conditions were listless, and price changes mostly against holders. Royal Dutch were sold at first on Paris account and later continued to relapse on adverse dividend rumours. Tobacco shares were dull, but tea shares were uninfluenced by the British Budget, the effect of the increased duty having been discounted.

OTHER CENTRES.

Business in most of the minor European centres was restricted and prices tended to sag. Frankfurt was quiet, the publication of the Dye Trust report having little effect on sentiment. Stockholm was depressed, with S.K.F. out of favour. Brussels was steady, but the volume of trading was below the level of recent weeks.

INVESTMENT NOTES.

Markets and the Budget.—The City received the Budget much as the garrison of a battered front-line trench receives new orders instead of relief after days of heavy bombardment. It was agreed that Mr Chamberlain had put sound finance in the forefront of his objectives, and that in the straitened circumstances of the Treasury there was no hope of any immediate relief for the direct taxpayer. Surprise was felt, however, that he did not refer to the possibility of a Supplementary Budget in October, in which the whole field of taxation might be reviewed in the light of a large debt conversion scheme. There is little doubt but that the conversion of 5 per Cent. War Loan will become a practical possibility before many weeks are over, now that the measures taken to stabilise the exchange have left the way clear for a further reduction in Bank rate. The gilt-edged market showed no change on the morning after the Budget speech, hopes of 6d. off the income tax having been abandoned some time ago. Prices, however, improved by the evening, and on Thursday, following the reduction in Bank rate to 3 per cent., there was an all-round advance. The prices ruling at the close of business on Thursday, as compared with a week earlier, are shown:—

	Price, April 14.	Price, April 21.	Flat Yield %
Consols 2½%	60½	60½	4 2 6
Consols 4%	94½	94½	4 5 6
Conversion 3½%	84½	84½	4 3 0
Funding 4%	96½	96½	4 2 0
Victory 4%	98	98½	4 1 6
Local Loans 3%	70	70½	4 5 6
War Loan 5%	103	103½	4 18 6

Among trustee stocks, a striking movement was the further advance to 4 premium in the Agricultural Mortgage Corporation 4½ per cent. stock which was issued recently at 95. Among equity shares, the brewery market provided a "sensation." The decision not to make any reduction in the beer duty came as a distinct shock to

dealers. The brewers had printed notices of a reduction in prices, and many shares had been marked up by several shillings in anticipation. Some sharp falls were seen on Wednesday, but part of the losses were recovered on Thursday. Watney Coombe £1 deferred shares, for example, which had been marked up by 3s. to 44s. on the eve of the Budget, fell to 36s. the morning after, and recovered to 39s. on Thursday. Gold shares derived some benefit from the measures taken for exchange stabilisation. Dealers argued that if sterling was to be kept stable the disturbing influences in the market would disappear and the shares would possess greater investment merits. As it was thought that sterling would be prevented from rising higher, holders of gold-mining shares would be assured of the prevailing gold premium in their dividends. The announcement of the tea duty did not have any immediate effect on the market, but later on the bulls began to take profits and the market became weak, Indian tea shares being particularly heavy. It was realised that while the differential duty, plus the exchange factor, would help the commoner teas in competition with the Dutch, the higher Indian and Ceylon qualities (which are not directly affected by Dutch competition) might suffer from a contraction in demand. The Stock Exchange is now left with little to "go for" after the Budget—except, possibly, a further "gilt-edged boom."

Fresh Kreuger Developments.—Every week witnesses the disclosure of further amazing frauds in connection with the Kreuger and Toll companies. On Friday of last week three directors associated with Mr Kreuger were arrested—M. Lange, an accountant of the Garanta Company of Amsterdam; M. Hult, a director of the Dutch Bank for Scandinavian Trade, and M. Holm. The indictment against these three directors declares that companies and banks were founded with the sole purpose of rendering possible the fraudulent transfer of funds, and that contracts were concluded by and loans made to companies which existed only on paper. The Garanta Company was formed for the purpose of manipulating taxation, and complicated transactions were carried out between this company and the Swedish Match, the International Match and the Continental Investment Company. According to the books, the Garanta Company was granted the rights for the retail sale of matches in Poland, but no such sales ever took place, and there is nothing to show that the contract ever existed in reality. The Dutch Bank for Scandinavian Trade, according to the indictment against M. Hult, never did any real business, but fictitious entries were made in the books relating to a loan contract with the Spanish Government in connection with a match monopoly. "Assets in bank and in safe" figured in the balance sheet of the bank at December, 1930 for a total of Kr. 109 millions, of which about Kr. 42 millions were shown in the account of the Swedish Match and the balance in that of the Dutch Kreuger and Toll. Among the fictitious assets of the Dutch Kreuger and Toll was Fl. 35 millions in the International Bank and Finanz Gesellschaft of Danzig, which had been founded at the beginning of 1931 by the order of Mr Kreuger. This deposit had been transferred from the account headed "International Finance Syndicate," which was identical with Mr Kreuger himself, and on the day before his death Mr Kreuger had ordered the re-transfer of the Fl. 35 millions to the International Finance Syndicate. The next amazing development has been the discovery among the Kreuger and Toll documents of a parcel of Italian State bonds. The Italian Government has denied that any business relations ever existed with Mr Kreuger beyond an offer made by Mr Kreuger to the Italian Government for a loan to be secured on a match monopoly, which had been refused in writing. It has been established, according to a Stockholm report, that 42 Italian bonds amounting to £500,000 each had been forged, and that Mr Kreuger alone was responsible for the forgeries. It is feared that further investigation may disclose other defalcations of a similar nature. Meanwhile, the International Match Corporation has filed a voluntary petition in bankruptcy without listing assets and

liabilities. The extent of the losses suffered by banks and investors cannot yet be estimated. The chief losses would appear to fall on investors in America. The London Protective Committee has already received particulars from over 4,000 holders. It is reported that the total engagements of French banks amount to approximately Frs. 500,000,000, of which half represents ordinary banking credits, the number of banks concerned being over twenty in number. We would ask our readers to note that the British Protective Committee is not requesting the deposit of securities, but has asked all British holders of shares or securities in Swedish Match, Kreuger and Toll, and International Match to send full particulars of their holdings to the Secretary at 80, Lombard Street, E.C.3, in order that the Committee may know the extent to which such holders are interested and may communicate with them as occasion requires.

"Insull" Group Receivership.—The fact that receivers have now been appointed for five of the holding companies of the Insull Group without involving the operating companies in disaster has come as a relief to the New York Stock Exchange, which had feared that the whole group might be disintegrated. The Insull group is one of the most complicated of the "pyramid" structures in the public utility industry, and its finances appeared to be in a hopeless tangle. Insull Utility Investments, Inc., and Corporation Securities of Chicago were the two investment trusts exercising control over the so-called "Insull Utility Empire." The principal holdings of these trusts consisted of Middle West Utilities (a holding company), Public Service of North Illinois, Commonwealth Edison Corporation, and Peoples Gas Light and Coke Corporation, the last three being operating companies. All in turn dominated various groups of smaller operating units. Each of the two trusts had substantial stockholdings in the other, and each had made substantial loans to the other. Despite a heavy shrinkage in the market value of the securities held, the two investment trusts might have been able to avoid a receivership if financial operations had been confined to the public. Unfortunately, the companies resorted to bank borrowing, and at the end of 1931 nearly 90 per cent. of the total securities held had been pledged as collateral for short-term loans. The Insull Utility Investments had no debentures maturing before 1940 and 1949, but the Corporation Securities of Chicago had \$8 millions of 5 per cent. notes maturing this year and \$7,038,000 maturing next year. Both companies passed their dividends in January this year. The Middle West Utilities, which was the holding company serving as a channel for the investments of the two trusts, had maturities of notes amounting to \$10 millions in June this year and \$10 millions each on June 1st in 1933, 1934 and 1935. Its securities were valued on December 31, 1931, at \$255,626,000, of which \$85,588,702 were pledged. Its bank loans amounted to \$75 millions. As the company does not publish a consolidated balance sheet, it was always impossible to ascertain the real financial position of the Middle West Securities stocks. The 1931 income account showed earnings of \$40 per \$6 preferred, but it was obvious that if the prior obligations of the operating companies had been allowed for there was nothing like this cover available. If Mr Insull's statement to the effect that three main operating companies of the group—the Commonwealth Edison, the Public Service of Northern Illinois, and the Peoples Gas Light and Coke Company—are not involved, implies that none of the operating properties are to be sold to raise cash, there is some hope left for the preferred and equity shareholders of the holding companies.

Corporation of Foreign Bondholders.—The fifty-eighth annual report* of the Council of Foreign Bondholders is a melancholy record of depression and default. During 1931, Colombia paid off the balance of her 3 per cent. consolidated external debt of 1896, and Costa Rica,

* Corporation of Foreign Bondholders, Council House, Moorgate, 7s. 6d.

Guatemala, Honduras, Nicaragua, Paraguay, Salvador and Uruguay maintained the services of their external debts. In January, 1932, however, Salvador intercepted the revenues pledged to the service of her external debt, while Nicaragua and Uruguay suspended remittances for their sinking funds. Colombia followed their example in March. Brazil has suspended debt payments since October, and a funding scheme has been formulated. In July, Chile declared a complete moratorium, though hitherto she had enjoyed an excellent record as a borrower. Peru suspended the service of her national debt in May till the end of the year and has failed to make any provision for its resumption. Santa Domingo suspended its sinking fund payments in October and Bolivia is in total default. Ecuador continues in default on all three of her external debts. Greece has recently sought the assistance of the League of Nations, but interest payments falling due on May 1st are unlikely to be met. The Mexican position is still obscure. Hungary declared a suspensive transfer moratorium as from December 23, 1931. Bulgaria has applied to the League for further assistance. The attitude of the Soviet Government towards Tsarist debts has not changed. No success has attended the efforts of the corporation to secure debt recognition from the Southern States of America. Turkey continues in default on the arrangement of 1928, though certain payments were made in November. China's progress towards financial equilibrium has not been expedited. Present indications suggest, unfortunately, that the Corporation this year will not lack new "copy" for its default records, in view of the straits in which depression and falling values have brought the majority of debtor countries.

Lever Brothers.—The accounts of this £60 millions soap manufacturing company for 1931 show that earnings have been maintained in gratifying fashion. After deduction of debenture interest, net profit amounts to £5,903,498, or £153,839 more than the previous year. The usual payments are made on the various classes of preference shares, while the increased ordinary capital, which is held by Unilever, Limited, receives the customary 10 per cent. dividend, absorbing £650,000, against £500,000:—

* Converted into ordinary stock, 1931.

† Including £500,000 written off balance of cost of Rotterdam Company's note issue, and further provision for closing down factory of an associated company.

‡ Special appropriations.

§ £200,000 special appropriations and £250,000 contingency reserve.

Apart from a sharp fall in stocks, from £1,421,867 to £719,224, due presumably to transfers to the new raw materials company (see the *Economist*, April 16th, pages 868-4), the balance sheet shows few important alterations. Cash and debtors together total £2,714,417, while on the other side creditors total £1,173,098 and provision for dividends £3,061,691. The 7 per cent. cumulative preference shares of £1 are quoted at 28s. to yield £6 1s. 9d. per cent., and the 8 per cent. "A" preference shares at 22s. 9d. to yield £7 2s. 8d. per cent.

Associated Electrical Industries.—The source of the drop of 23½ per cent. in the earnings of Associated Electrical Industries last year is difficult to trace. Unspecified provision has been made for exchange losses, but the volume of business appears also to have fallen. The volume of orders was less than in 1930, and in the consolidated balance sheet, stock and work in hand appear at £3,178,496, compared with £4,204,820. Receipts from British Thomson-Houston (which earned a profit of £450,046 against £462,446 and paid its normal 5 per cent. ordinary dividend), were unchanged, and as the Edison Swan and Ferguson, Pailin subsidiaries would appear to be too small to have accounted for much of the difference in A.E.I. profits, it may be that the falling off occurred chiefly on the "Metro-Vick" side.

	Years to December 31,

Forward	109,241	110,411	99,899

The lower profits and dividend are a disappointing sequel to an official statement in connection with an issue of 1,399,560 new £1 ordinary shares at 21s. to repay £1,396,390 of British Thomson-Houston 7 per cent. debenture stock last autumn. It was then declared that, subject to certain losses on exchange, for which the company had reserves, it was estimated that the profits for the current year would be substantially the same as in 1930. The report for 1931, as for 1930, states that profits are arrived at "after adjusting reserves"—an unilluminating phrase, of which a fuller explanation may be forthcoming at the annual meeting. The group has a liquid financial position, and given more settled economic conditions is well placed to take advantage of any revival. The repayment of the B.T.H. debentures has been financed mainly through the cash obtained from the reduction of stock-in-trade (and possibly, in part, by temporary borrowing reflected in a rise of £553,000 in the "creditors' item"). As only 2s. had been paid up on the new shares at the time of the balance sheet, the company has by this time obtained further cash of well over a million pounds, the shares having become fully paid at the beginning of March. The ordinary £1 shares at 18s. yield £4 18s. 3d. per cent.

Babcock and Wilcox.—Although the earnings of this prominent engineering company have again declined, the results for 1931 are not unsatisfactory in view of prevailing conditions. Manufacturing profit totalled £488,714, compared with £650,666, but receipts from investments were only slightly lower at £114,769, against £117,349. Net profit, after deduction of all charges, amounted to £549,783, compared with £590,706, but the comparison is not exact, since only £58,562 was reserved for income tax, against £193,641 in 1930. The ordinary dividend is nominally maintained at 14 per cent., but the payment is subject to tax, instead of tax free:—

	Year to December 31,

† Less tax.

The dividend is not fully covered, some £50,000 having been transferred from dividend equalisation account. The directors have also transferred from reserve fund £400,000 as a special reserve for depreciation of investments, capital employed abroad and other contingencies. The market value of investments has risen since the date of the balance sheet. Insufficient orders were secured in 1931 to keep the factories fully employed. To reduce costs the operations of the Lincoln works will be transferred to Renfrew, Dumbarton and Oldbury. At 43s. 6d. the £1 ordinary shares yield £6 18s. 9d. per cent.

Amalgamated Anthracite.—The total trading profit for 1931, at £471,022, shows a decline of 24 per cent. To a single unhappy event—the three weeks' stoppage in the South Wales coalfield in January, 1931—is attributed some £100,000 of the total decline of £150,466, and the remainder to difficult trading conditions—though the anthracite industry would appear to have been better situated in this respect than the remainder of the South Wales coalfield. The preference shares again receive no dividend, some £250,000 out of total net profits of £289,478 being allocated to depreciation and general reserve:—

	Years ended December 31,

* After bringing in £150,340 from taxation reserve.

The policy of conservation of earnings is steadily improving the liquid position. Bankers' advances are £116,000 lower at £1,515,900, and cash has increased from a negligible sum to £152,412. The auditors' certificate contains the usual qualification as regards depreciation. Capital reduction would appear inevitable, once the return of approximately normal conditions makes possible a reasonable ascertainment of future earning power.

Marks and Spencer.—This company goes from strength to strength, economic depression serving to retard the extension of its scope only slightly, if at all. The rise of 41 per cent. in net profits for the year to March 31st last, following upon a rise of 42 per cent. in the previous year, may be attributed to various factors, including increased trading by the older stores, a full year's business by the newer shops which were open for only a part of 1930-31, further progress in building new stores and enlarging earlier premises, and the bringing of new articles within the company's 5s. price limit, as a result of the continued fall in retail values. The ordinary and "A" ordinary shareholdings receive 35 per cent., against 30 per cent. in 1930-31, together with the customary capital bonus of 10 per cent. in "A" ordinary shares, and the general reserve allocation is further increased to £170,403, against £120,000:—

	Years to March 31,

* Plus share bonus of 10 per cent. in each year.

A further extension of the company's operations is planned for the coming year, new stores being opened throughout the country, at the present time, at an average rate of £51 about one each week. The ordinary 10s. shares at £51 yield £3 6s. 6d. per cent., exclusive of rights in connection with the capital bonus.

San Paulo Railway.—The report of the San Paulo (Brazilian) Railway reveals a depressing anomaly. Receipts for the main line show an increase in currency and a decrease of £386,351 in sterling, due to the fall in the Brazilian exchange. Net revenue is £482,801, a decrease of £117,295:—

	Years to December 31,

Working expenses were £971,097—or 63.71 per cent. of the gross receipts—the reduction of £319,520 being a highly creditable achievement. A drop in the number of passengers was slightly offset by an increase in the tonnage carried. During the year the company secured three increases under its sliding scale of charges, to which the higher revenue, in currency, was largely attributable.

Insurance Share Index.—The table which appears below exhibits the history of an investment, in 1913, of £1,000 in the ordinary shares of each of 25 leading insurance companies. The annual figures are based on the mean of the highest and lowest prices in each year. Where issues of bonus shares have been made, it has been assumed that the rights have been sold and the proceeds utilised to purchase an additional holding in the original shares:—

During last year's depression, insurance shares showed a depreciation exceeding that of industrial shares generally. The rebound this year is natural and on a substantial scale, the Index having risen by 19 per cent. between December 30, 1931, and March 31, 1932. Of the 25 companies whose shares are included in the Index, the shares of one only, the Gresham Life, have fallen in value, while those of three others, the Equity and Law, the Gresham Fire and the Life Association of Scotland, remain unchanged. During the same period, industrial shares, according to the Actuaries' Investment Index, have risen only by 8 per cent. The recovery has coincided with the cheapening of money rates. The assets of the companies have appreciated considerably with the rise in gilt-edged securities. The company announcements of the past three months, with the general maintenance of rates of dividend, have also been helpful factors.

Oil Dividend Prospects.—The dividend season for oil companies is drawing near, and the reactionary nature of the market suggests that no great optimism is felt over the forthcoming announcements. The most important factor as regards market sentiment will be the declarations of the Royal Dutch-Shell group. These begin with the dividend of the Anglo-Egyptian Oilfields (about May 4th), and will be followed by the Royal Dutch and Shell Transport (May 14th), Venezuelan Oil Concessions (May 21st), and Mexican and Canadian Eagle (May 30th). The Burmah Oil dividend is usually declared on May 15th, and that of the Anglo-Persian on June 3rd. Some indication of the attitude of the Royal Dutch-Shell directors towards their dividend policy may be gathered from the accounts of the Shell Union Oil Corporation, which will be published this month. In common with other large American oil companies, the Shell Union will disclose a heavy trading loss after book depreciation, but it is believed in the market that it will show a substantial increase in cash resources. The following table, giving the 1931 net earnings and dividends of leading American oil companies as compared with those of 1930, suggests that oil trading could not have been carried on at a profit in America last year:—

Companies.	1930. Net Earnings available to Common Stockholders.	1931. Net Earnings available to Common Stockholders.	1930. Common Dividends Paid.	1931. Common Dividends Paid.
Barnsdall Corp.	5,130,891	3,268,637	4,425,659	1,098,511

Standard Oil Co. of Ohio	3,116,958	1,783,785	1,400,379	1,881,167
Texas Corp.	15,073,303	9,954,478	29,553,211	24,627,878

* Includes a non-recurring profit of \$1,433,000. † Estimated.
‡ Before inventory adjustment of \$4,151,877. § Loss.

As a comment on the foregoing table, it may be added that gasoline prices in 1931 were, on the average, 40 per cent. and crude oil prices from 41 per cent. to 45 per cent. below those of 1930. As regards marketing conditions outside America, trading in the East last year was no doubt conducted at a profit, but consumption is believed to have declined. In Europe where the consumption of petrol was maintained, prices in most markets were at an uneconomic level. In Great Britain, after deducting tax at 8d., inland delivery charges, say 2d., tanker freight and landing charges ½d., and allowing, say, 2½d. for the raw material (totalling 1s. 1d.), the "combine" companies have been selling No. 3 petrol to retailers at 1s. 1½d. (or 1s. 0½d. if a "loyalty" bonus has been given), and No. 1 petrol at 1s. 3½d. or 1s. 2½d. At the present time, Russian Oil Products, whose quota agreement with the "combines" expired on March 31st, and the Standard Oil Company of Indiana are undercutting the big companies in order to obtain a larger quota of British trade. Russian petrol, for example, is being offered to certain municipalities at 10d. per gallon. Such cut-throat marketing conditions do not favour a generous dividend policy on the part of the large oil combines. The fact that the Royal Dutch-Shell group and the Anglo-Persian have maintained a strong liquid cash position and have effected large economies both in drilling and in marketing expenditures—their marketing organisations in Great Britain having been pooled—gives the shareholders some hope that, in spite of the passing of the interim dividend, some dividend, even if of modest proportions, will be declared in respect of 1931. On the other hand, the financial crisis abroad is such that if no dividends were paid, shareholders should not be surprised. Happily, the Burmah Oil Company, the only one of the large companies to pay an interim, is expected to declare a final dividend, whatever happens.

British Controlled Oilfields.—The report of British Controlled Oilfields is another illustration of the unprofitable nature of oil marketing operations to which we refer in the preceding Note. Although production increased from 2,761,992 barrels in 1930 to 3,240,524 barrels in 1931 from Venezuelan properties, and from 817,150 barrels to 1,459,717 barrels from Trinidad properties, a trading loss was made. Venezuelan sales are based on the price of petrol in Great Britain (which has fallen from 11d. to 7½d. per gallon wholesale, excluding tax), and Trinidad sales on the Gulf Coast price of crude oil (which has fallen from \$1.27 to 46 cents per barrel). The trading results for the past three years have been:—

	(000's omitted.)	12 months to July, 1929.	17 months to Dec., 1930.	12 months to Dec., 1931.
Net production income	\$	1,890	2,514	508
Other income		371	240	196
Total (less directors' fees)		2,201	2,674	675
Depreciation		524	808	865
Available for dividends		1,676	1,866	Dr. 189
Carrying forward		6,623*	168†	Dr. 21,899†

* Less write-offs 470. † Subject to income tax, if any.

The balance sheet shows a reduction in cash (\$270,000 to \$42,000), but with Government securities at \$500,000 a satisfactory financial position has been maintained and the company should be able to hold on for better times. The ordinary shares are quoted at 1s. 1½d., and the preferred at 1s. 10½d.

American Rubber Absorption.—Now that the question of rubber output restriction has been definitely settled, shareholders are inclined to turn their attention to possibilities on the demand side, whence, it is expected, the first signs of recovery will come. The Rubber Growers' Association has just published a most useful review of American conditions, which reveals a number of surprising facts. The consumption of reclaimed rubber in America is now about one-third as large as that of crude rubber, though the price of reclaimed, at the moment, is actually greater than that of crude. Motor tyre production, which normally accounts for more than 80 per cent. of American rubber production, has undergone many technical changes in the last decade. The "life" of tyres has greatly increased. The average tyre ran approximately 5,500 miles in 1920, 10,000 miles in 1928, and 20,000 miles in 1931, though economic depression in the last-named year probably induced consumers to run their tyres for a somewhat abnormal mileage. Both "new" demand and "replacement" demand for tyres fell off last year. The number of automobiles turned out declined from 5,358,000 in 1929 to 2,390,000 in 1931, and only 1.67 tyres were replaced on every "old" vehicle re-registered last year, against 2.19 in 1929. Last year, the cost of crude rubber in the average American tyre was no more than 8.7 per cent. of that tyre's selling price. Two years ago the proportion was 39.9 per cent. So far as technical conditions are concerned, however, the immediate outlook for American rubber consumption is not unencouraging. The average age of motor vehicles in service has increased perceptibly during the depression, whereas the aggregate mileage, to judge from the figures of motor spirit consumption, has not decreased. The industry has kept production, if anything, below sales, so that whereas approximately 450,000 new cars were in dealers' hands at the end of 1929, the total four months ago was only 188,000. Any increase in automobile demand after the announcement of the Ford and Chevrolet programmes will quickly be reflected in the tyre industry, where stocks represent only seven weeks' supply at the current average rate of absorption, and only one month's supply at the highest rate of the last few years.

Rio Tinto Meeting.—At the annual meeting of the Rio Tinto Company, held on April 14th last, several shareholders commented on the balance-sheet valuations. Mr George Marsden, while acknowledging that the company did not depend wholly on its Spanish mines, suggested that in view of the serious economic and political difficulties, the Tinto mine and properties should be valued at a figure nearer a liquidation basis. He criticised the amounts written off for depreciation, the absence of indication as to what proportion of the "trade debtors" item was represented by old or bad debts, and the valuations of shares in and amounts owing to subsidiaries. He asserted that the market valuation of "other investments," appearing at £3,028,444, was probably nearer £1,500,000. Another shareholder questioned the position of Davison Chemical and Silica Gel, in which the Rio Tinto Company held large interests. In reply, Sir Auckland Geddes re-emphasised that too much stress was frequently laid on the copper-producing activities of Rio Tinto, its production of sulphur in the form of pyrites being far more important. As to the company's assets, he was of the opinion that their value in the books was already too low. The major part of the debtors' item had been paid since the adoption of the report. Stocks were undervalued, and could be realised for a figure well in excess of four millions. As far as the value of investments was concerned, he "attached no importance whatsoever" to Stock Exchange values. The situation of Davison Chemical, which possessed one of the finest acid factories in the world, was sound. Rio Tinto £5 shares now stand at £13½, against a high figure for 1931 of £31.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Hong Kong and Shanghai Banking Corporation, Agricultural Mortgage Corporation, Nestle and Anglo-Swiss Condensed Milk Company, and Gordon Hotels. At the annual meeting of the Agricultural Mortgage Corporation the chairman said that the payment of interest and repayments of principal continued to be promptly made, and it was a satisfactory feature of the business that 98 per cent. of the amounts falling due were received within a week of their fixed dates. In addition to repayments in accordance with mortgage deeds, special loan reductions of £123,511 were effected by borrowers. At the Nestlé and Anglo-Swiss meeting Mr Louis Dapples said that in the opinion of the directors industrial equipment could not be valued at too low a figure in the books, and it was their ambition to be able to assure shareholders that their readily available funds, in the shape of cash, goods, or other equally liquid assets, should cover their share capital and outstanding liabilities, and that all factories and fixed assets should be reduced as far as possible to a nominal figure. The company had repaid Frs. 25 millions of obligations in 1930 and a further Frs. 66 millions in 1931.

CAPITAL ISSUES.

Conditions not unconnected with the Budget have limited this week's new public offers of capital to a single issue, made through Messrs J. Henry Schroder and Company on behalf of the *City and County of Bristol*. This was a 4½ per cent. trustee stock at 100½ per cent., and was largely a conversion issue, on profitable terms for the borrower. It will result in the replacement of £1,065,092 of 5½ per cent. redeemable stock, 1932-42, by a new security giving a flat yield of £4 9s. 6d. per cent., and in the payment of certain short-term loans. The rateable value of Bristol is steadily increasing. The City rates have now been reduced to 12s., and the outstanding debt is well covered by municipal assets.

ISSUES OF THE WEEK.

By Prospectus or Offer for Sale.

Total to date, 1931	3,873,875	...	4,198,632

City and County of Bristol.—Issue of £2,250,000 Bristol Corporation 4½ per cent. redeemable stock, 1952-62, at 100½ per cent. The stock is a trustee security. It will be repaid at par on May 1, 1962, unless previously cancelled by purchase or agreement, but the Corporation will have the option of redemption at par at any time on or after May 1, 1952, on three months' notice. Holders of Bristol Corporation 5½ per cent. redeemable stock, 1932-42, may convert their holdings into an equal nominal amount of the new stock at par. Any portion of the old stock not converted will be paid off on August 1, 1932. The rateable value of the city is £2,715,427, and a rate of one penny produces over £10,700.

Dover Gas Company.—Offer for sale by tender of £17,500 new stock, ranking for a basic dividend of 7½ per cent., subject to the sliding scale, equally with existing similar stock now receiving a dividend of 8½ per cent. per annum. Minimum price of issue, £125 per £100 stock, yielding at that price £6 16s. per cent. The net revenue of the company for the year ended December 31st last was £14,279. Interest required £2,770 and dividend on the existing stock and share capital £8,925. Dividend at 8½ per cent. on the new stock will require £1,488.

Further Stock Exchange information, including the latest American railroad receipts, traffic returns, summary of balance sheets, dividend announcements, reports and notices, profit and loss accounts and oil outputs, will be found under the heading of "Company News" on page 941.

COMPANY MEETINGS, &c.

HONG KONG AND SHANGHAI BANKING CORPORATION.

(Incorporated in the Colony of Hong Kong. The liability of members is limited to the extent and in manner prescribed by Ordinance No. 6 of 1929 of the Colony).

RESULT OF YEAR'S WORKING.

EFFECT OF ADVERSE FACTORS IN 1931.

BANK'S EARNING POWER UNIMPAIRED.

CAUSES OF WORLD TRADE SHRINKAGE.

FAR EASTERN BUSINESS AND SILVER.

TRADE DIFFICULTIES IN CHINA—HANDICAP OF POLITICAL DISTURBANCES.

MR C. G. S. MACKIE'S INTERESTING REVIEW OF CONDITIONS IN THE FAR EAST.

The ordinary yearly meeting of the Hong Kong and Shanghai Banking Corporation was held at the head office on February 27th last.

The Hon. Mr C. G. S. Mackie (chairman) presided. The Chief Manager read the notice convening the meeting.

The Chairman said:—Gentlemen,—Before proceeding with the business of this meeting I would refer with the deepest regret to the loss we have sustained since last we met through the death of Sir Newton Stabb. As many of you will remember, Sir Newton was chief manager of the bank from 1910 to the end of 1920, when he went home on leave; during 1921 he took over charge of London office, where he remained until his untimely death on December 1st last.

In the City of London, where there are so many men of note, it is no exaggeration to state that in the banking world Sir Newton was outstanding and conspicuous for his ability. He was ever ready to help both by word and deed, and not only have the City of London and all connected with business affairs in the East lost an extraordinarily able adviser but all who knew him have lost a staunch friend.

The report and statement of accounts having been in your hands for some days I shall, with your permission, take them as read.

PROFIT AND ALLOCATIONS.

It will probably not come as a surprise that the figures we are able to put before you are not so satisfactory as you have been accustomed to; after making full provision for losses and contingencies the net profits for the year amount to \$16,469,461, or about \$4,250,000 less than in 1930, while expressed in sterling they show a decrease of about £206,000.

After deducting the interim dividend, paid at 1s. 0½d., and directors' remuneration, the amount available for distribution is \$10,599,772.02, which it is proposed to deal with as follows:—

To pay a final dividend of £3 per share (subject to deduction of income tax)	\$6,678,260.87
Transfer to bank premises account	500,000.00
Carry forward to new account	3,421,511.15

\$10,599,772.02

The usual phrase that net profits have been arrived at after making provision for losses has rather more significance this year. We have been called upon to provide for exceptionally heavy and unusual losses, otherwise the result of the year's working would have compared favourably with 1930.

LOSSES MET FROM CURRENT PROFITS.

The causes of the losses are not far to seek—some are due to the heavy drop in commodity prices in the middle of the year, others to the sudden rise in China exchange *vis-à-vis* sterling caused by Great Britain going off the gold standard. Speculation and over-trading brought many large operators to grief with the result that quite a number of these disappeared and left the bank to shoulder the loss. The only pleasing factor is that we have been able to meet these exceptional losses from current profits, which shows that the earning power of the bank is in no way impaired.

With regard to investments, we have naturally felt the depression in the depreciation of gilt-edged securities. Last year my predecessor stated that our investments stood in our books at a figure much below market values, but I regret to say that it has been

necessary to utilise current profits to the extent of £110,000 to write them down to present market level, and at the end of the year our book value and market value were practically identical.

Owing to the wide difference in exchange values compared with the previous year it is more difficult than ever to make a comparison between balance sheets, but the figures shown this year reflect the absence of trade in a marked degree. Investments are considerably higher at some £17,500,000, while bills receivable show a decline of about £2,000,000 and our liability on bills rediscounted is reduced by over £1,000,000, which is not a very healthy sign of the times.

CURRENCY PROBLEMS.

Since our last annual meeting the British Government sent out a small Committee to look into our currency problems, and their report was published towards the end of the year. Without going into details, I would merely say that I think it would be wiser to let well alone in this matter of currency. The high premium on our dollar which raised the discussion has not been in evidence during the past year, neither is it likely to recur, so I cannot think it would be wise to depart from a currency which is functioning satisfactorily, in favour of one, the utility of which must be problematical for quite a long period.

It has not been customary for the chairman at these annual meetings to make more than a passing reference to international financial and economic developments—the subject of so much expert analysis and highly informed comment in the speeches delivered by the heads of the leading banks at home. The welfare of an exchange bank such as our own is, however, no more exempt from the influence of world conditions than that of those other banking institutions, and at a time of such profound disturbances as the present I feel that a few remarks are called for.

EVENTS OF 1931.

I shall refrain from quoting statistics, which, in any case, are not needed to illustrate a state of affairs only too well realised by all of us here. We are, perhaps, still too close to the events of the past year to be able fully to appraise or even comprehend them; yet there are certain facts and conclusions which, in my opinion, stand out clearly and which cannot be too strongly emphasised, because it is upon their recognition by the world at large that our whole economic structure in the immediate future very largely depends.

The major fact to be faced is that the cause of the disastrous conditions of 1931 is no mere concatenation of local and transient evils—a mere swing down of the scale—but is something fundamental. Again and again we have seen a break in the clouds only to have our hopes incontinently dashed. Taking British trade in particular, the depreciation of sterling has stimulated exports, but, like most stimulants, its effects are largely evanescent, and, as other countries follow in our wake, are bound to diminish in force.

World trade continues to shrink under the influence of falling prices, increasing national tariffs and Government control of exchange used to redress adverse trade balances. The fall in world prices of about 30 per cent. during the last two years is unprecedented, and all attempts to solve the resulting problems—industrial, commercial, and social—have till now been baffled. Great Britain's volume of trade and industry in 1931 was less by 20 per cent. than in 1930. Taking an international view, the very roots of economic relations are being attacked and the world is threatened with the destruction of its whole credit system.

BURDEN OF INTER-ALLIED DEBTS AND REPARATIONS.

It is universally recognised that President Hoover's plan for the postponement for one year of Government War Debts saved the world at the edge of a precipice. We are still perilously near the brink, and something more is required than a mere extension of the moratorium as from June of the present year. It is now perfectly apparent that the burden of inter-Allied debts and of German reparations has become intolerable and must be adjusted to what present conditions and a sense of reason demand if confidence is to be restored.

The gold reserves of the countries concerned have proved quite inadequate to provide the means of maintaining the balance of international payments by abnormal movements of gold. The transfer from one country to another of the immense sums involved in the payment of war debts and reparations, which produce no compensating return, upsets the balance of payments and intensifies the prevailing disorders.

NEED FOR CANCELLATION.

Unfortunately, in this respect, the statesmen of Europe and America have shown themselves less statesmanlike than the bankers, who have consistently maintained that cancellation of war debts and reparations is the only way out of the *impasse*. If a compromise is attempted, such as a temporary prolongation of the Hoover moratorium, this can only have the effect of piling up future liabilities and perpetuating the existing apprehension and distrust.

While it is only common sense to realise the gravity of the present situation, it would, at the same time, be foolish to exaggerate it. There is no instance in economic history of a crisis, no matter how great, which was not followed by periods of stability and prosperity. But, as things are at the present, the sands are rapidly running out.

The attempt to reinstate the gold standard has failed, and for the first time in history we may be brought face to face with a situation in which debtor countries might consider that they were justified in refusing to acknowledge liability for debts, finding themselves unable to pay either in gold—gold being no longer available—or in commodities, the export of which may be rendered impracticable by the tariff policy of the creditor countries. A return to the gold standard or a restoration of the normal value of international trade must remain extremely unlikely until the obstructive forces of reparations and inter-Allied debts have been swept out of the way.

THE SILVER MARKET.

To the continued decline in prices of raw material in general silver proved an exception, its headlong downward career—in which in the previous year it had outpaced other commodities—being checked in February last after it had touched the record depth of exactly 1s. the ounce. Measured in terms of gold it showed an inconsiderable rise in average price in the second half of the year. Sterling quotations, of course, no longer afforded an index for comparison after September 20, but for the purpose of record I may mention that the highest spot price of the year was 21½d. on November 10th.

Apart from the automatic effect of the depreciation of sterling and the transient consequences of the "Hoover" moratorium, nothing occurred in the year to produce a violent reaction in the silver market. The market was, however, stirred within moderate limits by various cross-currents. These included the rise in the Indian duty, a sale by Siam of some 20,000,000 oz. of demonetised silver, the adoption by Mexico of the silver standard, and, towards the end of the year, Germany's purchases for coinage requirements; to these must be added the operations of speculators in silver, not least in New York, which on certain occasions disturbed the market considerably.

STATISTICAL POSITION.

As regards the statistical position, estimates place the new production of the year at 190 million fine ounces (54 millions less than in the previous year), and supplies from other sources, chiefly Siam and India, at 57 millions, giving a total output of 247 millions—a 68 millions reduction from 1930. On the consumption side, shipments to India totalled 62 millions and to China 57 (a reduction respectively of 28 and 73 millions). Purchases by Governments of other countries account for 30 millions, and 40 millions is the estimated consumption by industry and the arts. The unaccounted surplus for the year is thus in the neighbourhood of 60 million ounces.

The question of silver price levels and of means and methods of stabilisation has during the past year provoked a great deal of discussion, revealing considerable divergence of opinion among bankers, economists and currency experts in the leading countries of the world. The range of discussion has widened with the growing difficulties of world gold shortage and maldistribution, which has driven those concerned with currency problems to explore the possibilities of securing relief by means of harnessing silver to gold as an auxiliary currency basis. It is not for me to pursue the

problem on to this wider plane, and I shall here only touch on the question from the limited standpoint of Far Eastern trade.

INFLUENCE ON TRADE OF CHINA.

From this special angle there are, however, one or two points which perhaps deserve rather more attention than they have generally received. In its effect on the China trade the decline of silver has naturally tended to encourage exports and handicap imports, but it is important to bear in mind that the extent of this influence on the import and export trade is measurable by the fall of silver, not in relation to gold, but in relation to the gold price of the commodities which make up China's trade.

Now this relative fall has been comparatively small, and its effect on the trade correspondingly slight, a fact which helps to explain the superficially puzzling fact that China's adverse trade balance has actually risen during the last two years in the face of a silver depression which should have operated in exactly the contrary direction. At the same time, the benefit to China, from a national point of view, of having a currency not linked to gold and consequently free to adjust itself to local commodity prices has shown itself in the steadiness which China has enjoyed, in contrast to other countries, in her domestic price levels.

The advantage of a constant price level needs no stressing in these days when we have had so many examples of the effects of fluctuating prices as reflected in costs of living, labour conditions, and so forth. It is not surprising, therefore, that many Chinese as well as foreigners hold the view that the stabilisation of the rate of exchange between silver and gold would be a mixed blessing to China, and that a sudden artificial rise would have extremely harmful results. It is frequently argued that a rise in the purchasing value of silver would render China a better customer of the world's goods. This is true to the limited extent to which silver might be brought out of hoard for the purchase of foreign products, but—as my predecessor had occasion to stress last year—China, like all countries, buys her imports by means of her exports, and it is upon the quantity of the latter, and not on the price of silver, that her capacity to buy from abroad really depends. Silver is merely the medium of exchange, the intrinsic value of which is of purely temporary importance.

TRADE AND FINANCIAL CONDITIONS.

In the midst of a period of economic depression affecting the whole world, it is not easy to strike the correct proportion when reviewing trade and financial conditions in those particular areas in which our interests lie. The shrinkage of world trade has had such a sweeping effect as to over-ride local conditions in most parts of the world and produce a uniform dreary landscape of shrunken markets, diminished purchasing power, crippled industries and general economic distress. Except in the case of China, where the silver currency introduces an outside factor and where the political events of the year have had a particular bearing on trade, a few general remarks will, in the main, suffice to describe conditions in each of the countries concerned.

With the fall in commodity prices the volume of trade which the banks are required to finance was naturally much reduced, and local merchants have, in the main, experienced difficult times. So long as sterling remained at par, British trade, especially in piece-goods, had a harder struggle than ever against ever-increasing competition in ever-contracting markets.

Our divorce from the gold standard has had in this respect very appreciable effects. The impulse to British trade has made itself noticeably felt, and British exporters have been enabled to get on to terms with foreign competitors to an extent unknown for a good many years past. The subsequent "going off gold" of other currencies, particularly the yen, of course diluted the benefit to Great Britain; we may hope, nevertheless, that our manufacturers at home will succeed in consolidating a part at least of their gains and that the fillip to British trade will prove not entirely transitory.

SITUATION IN INDIA.

Indian trade was severely hit by the reduced demand for Indian commodities combined with a long period of uncertainty concerning the sterling-rupee ratio, which caused at one time a pronounced flight from the local currency. With the removal of this uncertainty, following Great Britain's abandonment of the gold standard, an improvement set in and the outlook at the end of the year was, generally speaking, brighter.

Considerable reductions have taken place in the stocks of jute and gunnies held in India and abroad, while a reviving demand has shown itself for Burma rice and Bombay cotton. The shadow of the political situation still lies across the horizon, but here, too, I think we may indulge in a certain degree of optimism. By openly laying down a broad and liberal line of policy in regard to the future of India the British Government has done much to remove the fatal cloud of uncertainty which has darkened the situation during the last few years.

Progress will not be easy, but with the goal well defined and the road thereto lying clear, is it too much to hope for a sinking of communal differences and a renewed spirit of constructive co-operation on the part of the peoples of India? I cannot but think that we may have already come through the most difficult stage in the process of evolution through which India is passing.

STRAITS SETTLEMENTS AND MALAYA.

The Straits Settlements and Malaya, it is needless to say, have suffered very acutely from the unprecedented slump in rubber and the low market for tin. In the face of crushing difficulties the owners of rubber estates are, we are told, "grimly holding on"; there is, I fear, little success to record in the efforts to stem over-production, and we must look to the turn of the wheel in regard to world prosperity to bring to the rubber industry much needed relief.

Although the statistical position in regard to tin has become steadily worse due to declining consumption, I am glad to say that there are at the present time signs of a near improvement. Meanwhile, the general export trade has experienced some benefit from the depreciation of the local currency, cheapening Malayan produce in competition with that of the Netherlands East Indies which remain on the gold standard.

Of the Philippine Islands all to be said is that, although trade is naturally reduced and conditions not too good, the position compares favourably with that prevailing in other places in the East, chiefly on account of the assured market which Philippine sugar enjoys by virtue of free entry into the United States.

JAPAN.

Japan's share of the world distress has been aggravated by the injury of her exports caused by the boycott in China and by Chinese merchants in other parts of the East, while Great Britain's abandonment of the gold standard was a further blow to her export trade, a large part of which is done on a sterling basis. Despite this, her adverse balance of trade showed a reduction from 162 to 140 millions of yen. I shall refer later in my speech to the Sino-Japanese conflict, which at present overshadows the economic, as well as the political, future.

The only other mention I need to make concerns Japan's action in following the British example by quitting the gold standard. This occurred in the month of December subsequent to a change of Government. Released from gold, the yen fell by the end of the year just over 30 per cent., leaving the banks and the Government with the still unfinished task of liquidating foreign exchange contracts—a task which will call for a good deal of statesmanlike handling.

China's export trade should logically have benefited from the continued drop in the tael exchange in 1931, but any gain from this cause was more than offset by the weakness of foreign demand for Chinese products. The figures for 1931 will, I fear, show a further considerable growth of the unfavourable trade balance, which is becoming a serious feature for China and reflects itself in her reduced demand for silver.

TRADE HANDICAPS IN CHINA.

Trade in the centre of China was much hampered by floods and widespread banditry, and in the Manchurian provinces by the political disturbances which broke out in the autumn. Throughout the country as a whole there was little, if any, relief from the burden of military taxation, and in spite of the absence of party warfare, interference with the railways was still very general. The increase in export duties introduced on June 1st—coming as it did in the midst of a depression—proved a serious addition to the difficulties of the exporters in certain branches of trade.

Silk, as a luxury product, suffered in a special degree, the export dropping by about one-third; most of the filatures are at present closed down, and many are finding themselves in serious financial straits. The bean trade in the North was hard hit both by the local political troubles and by the exceptional weakness of the market for this produce, while the supply of eggs—which is becoming one of the chief export commodities of China—was greatly reduced by the wholesale destruction by floods of the farms in the Yangtze Valley.

REDUCED CONSUMPTION.

On the import side reduced consumption was general, except in the case of cereals. Of these unusually large quantities came in during the year, including special cargoes of about 150,000 tons of wheat, being the first shipments of nearly 500,000 tons furnished by America, on terms generous to China, for food famine relief. Australia, helped by exchange, provided most of the ordinary wheat shipments, and large quantities of rice were imported from Rangoon. The principal cause of this large introduction of food-stuffs lies in the abnormal movement of prices, the drop in the

world market resulting often in foreign-imported grain coming cheaper into the market than crops grown and transported in China.

Kerosene imports, a very large item nowadays, fell by nearly a half, partly because of a heavy increase in duty; it is a retrograde sign of the times that the poorer households are stated in many cases to have gone back to the habit of burning the local bean oil. Gasolene, too, has fallen, indicating a temporary check in the hitherto rapid development of motor transport in China.

ENGINEERING TRADE.

The engineering trade survived relatively well, but the long credit terms attached to most large contracts proved as usual a stumbling-block to importers of British goods. Railway orders were few. From now on, however, British manufacturers are beginning reap the benefit of the Sino-British agreement for the use of the remitted "Boxer" funds. The major part of these funds is earmarked for the purchase of British material to be supplied, in the form of investment, to the Chinese railways and other constructive enterprises, the funds to revert ultimately to educational purposes.

China is started on the road of producing for her own use textile machinery and other objects of more or less skilled manufacture.

The tendency to set up modern factories inside the tariff wall (although at present mainly confined to the treaty port areas) has also been stimulated by the considerable increases in China's Customs tariff. From a world point of view it cannot be said, however, that the industrialisation of China has yet advanced to a really significant extent with the single exception of cotton mills, the output of which is already making its mark on international trade.

SITUATION AT SHANGHAI.

Though I have up to the present refrained from alluding to the momentous situation at Shanghai which has developed out of the relations between Japan and China, I cannot pass on to the political record of the year without some reference to the events whose shadow lies so heavily at the present moment over the Far East, and, I may add, over the world in general.

The events now taking place are too close to us in time as well as in space to permit of our judging them in their proper perspective. I shall therefore content myself with expressing the deep concern with which we watch the struggle between two countries with whom we, as a bank, have such close and friendly connections and such intimate business relations, adding our fervent hope that they will manage to achieve a peaceful solution of their differences on a basis which will be a lasting pledge for the future.

Of the Manchurian troubles I shall also say very little, seeing that the events in that region have already received very copious attention in the world's Press. Many factors, both old and new, have combined to create in Manchuria an international problem of great complexity and of a very delicate nature. Local difficulties between China and Japan multiplied during last summer, and the position grew ever more critical till in September the Japanese attempted to cut the knot by means of military action, the final results of which still remain to be seen. Appeal to the League of Nations has brought about the dispatch of a Commission of Inquiry which is now on its way to the East. In the meantime it is satisfactory to note the reaffirmation of the "Open Door" principle explicitly laid down in the international treaties which cover Manchuria.

INTERNAL POLITICS.

As regards the internal politics of China, one regretfully has to admit that the past year has given but little sign of any radical improvement. The endless struggle between military leaders and political factions continues to check progress and to drain the resources of wealth and energy which the country needs for development. Hardly had North China settled down, early in the year, from the disturbances caused by the revolt of Feng Yu-hsiang and Yen Hsi-shan than signs of fresh trouble showed themselves in the South.

A split in the ranks of the Government took place in March and widened rapidly into a breach between those in control in Nanking and what we may broadly term the "Cantonese" party. At one time fighting was imminent, but in the end the conflict was played out in the political arena. A threatened revolt by one of the northern generals having failed to materialise, China was able at least to congratulate herself on surviving a year free from civil war, if we except the campaign against the Communists which the President undertook in the mid-summer months.

I will pass over all details of the struggle between Nanking and Canton, which reached its crisis in the last days of the year, when General Chiang Kai-shek resigned from the presidency of the National Government which he had held since 1928. A new administration then came into power, mainly composed of Cantonese party members under the leadership of Mr Sun Fo. Since then events

have taken place which, in spite of their importance, form no part of a record of the year under review.

It is profoundly disturbing to watch this untoward development of events, and one can only pray that the international effort, made since the Great War, to replace the arbitrament of force by other effective means for the settlement of disputes will prove its value in the crisis with which we are now faced.

BANDITRY AND COMMUNISM.

To return to domestic affairs in China during the past year, disbanded or unpaid soldiers and ruined and desperate farmers combined to swell the ranks of the bandits, whose numbers became so great as seriously to affect the economic life of the country. In the central Yangtze region, and especially round Hankow, banditry and communism were particularly rampant, and added greatly to the confusion and misery caused by last summer's floods. A district further south on the lower borders of Kiangsi is now an organised self-contained centre of communism. In this area Soviet government has been established and a "red" army exists, which has been substantially strengthened by large deserting units from the Government forces.

The growth of communism is causing widespread concern, and one hears grave apprehensions of the effect which the movement may have upon the foundations of social order in China if nothing is done to remove the basic causes. Communistic tendencies are not a natural growth among the Chinese people, and would, we may feel sure, cease to threaten the country if only the peasants could be relieved from the burdens of militarism (in the Chinese sense) and if the educated classes could see in the present system a better hope of stable and peaceable government.

THE YANGTZE FLOODS.

The Yangtze floods of last summer were on a scale appalling even for China, where nature is wont to stage disasters of vast proportions. Along the Yangtze alone the inundation covered a strip of nearly a thousand miles long, other basins of central China involving enormous areas. The loss of life was terrible, and a well-conducted investigation of the material damage places the latter at no less than \$2,000,000,000; as the coming spring crops will, moreover, be greatly diminished owing to water-logging and the absence of seed grain, the full magnitude of the disaster will only show itself in the course of the present year. Relief work was set on foot by the National Government, who, on the recommendation of the League of Nations, has entrusted its supervision to the able and experienced hands of Sir John Hope Simson.

On the subject of extra-territoriality I need only refer to the fact that the diplomatic conversations between H.B.M. Minister and the Chinese Minister for Foreign Affairs, which took place in the earlier part of the year, have been suspended, and that the Chinese Government on January 1st last decreed the postponement of the new regulations regarding foreigners contained in a Mandate issued in the previous May.

The weakness of civil authority in China, coupled with the experiences of the past year, have strongly reinforced the arguments for avoiding all hasty action, and there is no question of the wisdom of both the Governments concerned in "going slow" for the present.

An exceedingly valuable contribution to the study, and eventual solution, of the problem of the future of Shanghai was afforded by Mr Justice Feetham's report published last spring. Its general conclusions are too well known to call for repetition, and I would only emphasise that the report is an essentially constructive document, containing the most carefully considered suggestions and recommendations, which I trust will duly bear fruit when translated into action.

MARITIME CUSTOMS AND SHANGHAI REVENUES.

The Chinese Maritime Customs revenue for 1931 was 248,000,000 Haikwan taels. The increase of 68,000,000 is due, of course, not to larger trade, but to higher tariffs. Shanghai revenue again shows a disproportionate increase, rising this year to a full one-half of the Customs revenue of China. The discrepancy between Shanghai's rate of development and that of the rest of China can hardly be looked on as entirely healthy and desirable from the Chinese national point of view, but it should serve to bring home in all quarters the magnitude of the stake which Shanghai now represents and the immeasurable importance of assuring its safety and orderly government.

During the year the Customs once again saw its integrity challenged by local governments, and for some months Canton actually retained part of the revenue. The position is now restored. That in times of such stress and confusion the Customs held together and did not fail in its obligations, whether foreign or Chinese, is a remarkable tribute to the Inspector-General, Sir Frederick Maze, to whose loyal assistance and able championship of duty recognised

rights both the Central Government and the bondholders have reason to be indebted.

SALT REVENUE.

The Salt Revenue also has exceeded previous totals, and from the portion available to the Central Government regular payments have been made on the "sale-secured" foreign loans, though the liquidation of arrears undertaken by the Minister of Finance in 1929 has unfortunately fallen slightly short of the programme. A fact which, perhaps, is apt to escape notice is that, in origin, the Salt Inspectorate, by means of which between 150,000,000 and 200,000,000 dollars of revenue is now annually collected, owes its organisation to the scheme elaborated by the foreign banks in 1912 and 1913 in connection with the Reorganisation Loan and to the work of Sir Richard Dane and his foreign and Chinese staff engaged by the Government to put the scheme in effect.

For holders of Chinese Railway loan bonds the position has not changed, and I am bound to record that the authorities persist in ignoring the claims of British purveyors of railway material delivered and never paid for. The promise in their behalf given by the Chinese Minister for Foreign Affairs to H.B.M. Minister on the occasion of the handing back to China of the British Boxer Indemnity has, I am sorry to say, remained a dead letter.

CENTRAL GOVERNMENT'S CREDIT.

Sir Arthur Salter's visit to China last spring to advise the Chinese Government on financial matters roused hopes of a possible reorganisation of a general nature, but the subsequent deterioration of the political situation put this out of the question. With no prospect of reduction of the regional armed forces, the Government's "military expenses" continue to drain the exchequer and to add to the current deficit, which at present exceeds \$12,000,000 a month.

Outstanding domestic bonds have increased during the year by over \$200,000,000, face value, bringing the total to nearly \$1,000,000,000. The Central Government's credit, as reflected in the market price of these loans, has fallen disastrously, and the situation calls for speedy and drastic measures of reform which, to be effective, must, however, start on the political plane. Some encouragement may be gleaned from the fact that the sane and salutary influence of the Chinese bankers is apparently steadily increasing in the conduct of the national finance.

TRIBUTE TO OFFICIALS AND STAFF.

In conclusion, I wish, on behalf of the directors, to express our great appreciation of the good work done by our chief manager, branch managers and staff. The past year has been one of the most difficult in the history of the bank and a particularly trying one for Mr Grayburn, who, in addition, was handicapped by illness for a considerable period.

The figures of the last year are not so good as we have been accustomed to, but they reflect great credit on the management and all concerned. It is, therefore, with all the more regret that on this occasion the directors are unable to recommend the usual bonus to staff. I hope this is only a pleasure deferred. (Applause.)

I have now to propose the adoption of the report and accounts, and after this has been seconded I shall be pleased to answer, to the best of my ability, any questions shareholders may care to ask. (Applause.)

MR PAUL LAUDER'S SPEECH.

Mr Paul Lauder, seconding the motion, said:—Mr Chairman and Gentlemen,—Before seconding the adoption of the report and accounts I would like to associate myself with what our chairman has said in regard to the death of Sir Newton Stabb. Sir Newton was well known in this Colony and in London as an eminent banker and an able business man. It was with real feelings of pleasure that many of us used to visit him when we proceeded to London on leave, and where his kindly and helpful advice was always at our disposal. We regret his death very much indeed.

Gentlemen, the report and accounts of the bank have been awaited this year with possibly more than ordinary interest, for it was felt by many that, after the trying and troublesome year we have passed through, we could not expect equally excellent results to those disclosed in the balance sheet for the year ended December 31, 1930. Nevertheless, after making full provision for losses and contingencies, the net profit for the year amounts to over \$16,000,000, which has enabled the bank to maintain its dividend of £6 per share and to carry forward approximately the same amount in dollars as it did the previous year.

CONFIDENCE IN THE FUTURE.

It is true that no amount is being passed to the reserve fund, and the sum transferred to bank premises account is less than at the end of the preceding year, but the causes which have accounted for these differences have been stated, and the inference is that these are not likely to recur. I think, therefore, we can look forward to the future with reasonable confidence. Some of us may be somewhat

disappointed that the bonus dividend of £1 per share has been discontinued, but for my own part I think that, even if the figures had been as favourable as those disclosed in the previous balance sheet, in view of general world conditions it would not have been the time to pay a bonus dividend, and, in keeping with great banks in other parts of the world, I think the bank is wise in discontinuing the payment of a bonus distribution.

The magnitude and strength of our bank is a matter of great pride to this Colony. Unlike many similar institutions, I believe I am right in saying that its present position has been achieved by means of its own resources and initiative, and not by amalgamation with other banks. This fact bears eloquent testimony to the skill and ability with which its affairs have always been conducted.

You have, Mr Chairman, very ably reviewed the trade and economic conditions existing last year, and particularly in the countries where our bank operates, and I feel there is not a great deal I need add to what you have already told us. I would say, however, that I think if the world is successfully to overcome its present economic troubles, the various nations must be brought to realise that they are more than ever dependent upon one another, and that isolation of a country without thought of its neighbours will in the end not work out in the best interests of its own people.

NEED FOR REMOVAL OF TRADE OBSTACLES.

Great Britain has, during the past year, been forced to forsake much of her free trade methods, this action being largely necessitated by the ever-increasing tariff barriers that are being set up against her. I hope, however, that the various countries will, by common agreement, remove a number of these obstacles to trade, for I believe that the free and unrestricted exchange of the world's merchandise would go a long way to lessen the present distress. A greater measure of free trade the world over is perhaps an ideal which is a very long way from attainment, but in these hard times, when the road to security seems so difficult to find, it is, I think, more than ever necessary to keep ideals prominently in view.

We are all very much concerned about the distressing situation that has arisen in Shanghai, and with you, Mr Chairman, we earnestly trust that a speedy solution of the present differences will be found. In this connection we hope that everything will be done to preserve the great International Settlement of Shanghai, which has played such an active and dominant part in the development and trade of China. I have every confidence that those responsible for these great interests will bring the Settlement through its present difficulties with undiminished prestige and that its fine traditions will be upheld and the safety and well-being of its inhabitants preserved.

WORK OF MANAGERS AND STAFF.

The year under review has been an extremely difficult one, and it was very unfortunate that our chief manager was handicapped by illness. We are all very glad to know that he is in much better health to-day. I feel that the shareholders are much indebted to the chief manager, branch managers and staff, who, notwithstanding the great trade difficulties that existed throughout the year, have achieved excellent results. I heartily wish the bank continued prosperity.

I have now great pleasure in seconding the adoption of the report and statement of accounts as presented. (Applause.)

The report and accounts were unanimously adopted.

The retiring directors were then re-elected, and the auditors re-appointed. This concluded the business of the meeting.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper Ltd.,"

8, Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

Address.....

GORDON HOTELS, LIMITED.

EFFECTS OF TRADE DEPRESSION.

The forty-second ordinary general meeting of this company was held, on the 21st instant, at the Whitehall Rooms of the Hotel Metropole, London.

Major-General Guy Dawnay, C.B., C.M.G., D.S.O. (the chairman), said that the falling off in business of the company—and not of this company alone, for it appeared to be general throughout the hotel industry—was caused by factors which they could not control, and which they would have to wait to see eliminated largely by wise political and monetary action, both national and international. The business done during the past year had fallen by 20 per cent., and this naturally accounted for the great reduction in the balance transferred from trading account to profit and loss account. He was sorry to say that, owing to the increasingly unfavourable conditions which had prevailed, they had not been able to effect the sale of their unissued debenture stock to enable them to take up their share in the equity of the Dorchester House Syndicate, which owned the Dorchester Hotel, and they had been obliged to finance the purchase of the £274,400 second mortgage debenture stock of the Dorchester House Syndicate by arrangement with the bank.

The directors had been under the urgent necessity of attempting two things at once—first, to provide the company with a sufficiently modern installation to enable it to hold its own and to compete on equal terms in the industry in which they were engaged; and, secondly, to improve their financial position. When they embarked upon the Dorchester Hotel enterprise they believed they were adopting the best and wisest method of attaining the first of these objects, and he still believed that, in the circumstances which had then obtained, they were right, just as he believed that, in any revival of general trade they would find that the Dorchester Hotel was a property capable of earning profits on the scale which was only possible for the highest class and most modern hotel.

THE MAY FAIR HOTEL.

They acquired the May Fair Hotel for precisely the same reasons as those which decided them upon the Dorchester Hotel enterprise, and when he stated that, for the four complete years since the May Fair Hotel was built, the trading profits of that hotel—including, of course, the last most unfavourable year—had amounted to more than the combined trading profits of the Metropole and the Victoria added together, shareholders would, he thought, see some justification for pursuing a policy involving the acquisition of the most up-to-date properties.

The recent Licensing Commission recommended that there should be a license for hotels of a different character from that provided for mere public houses, and free from many of the restrictions to which the existing licensing laws subjected hotel keepers. He understood that a Bill had already been drafted with this object. It was a matter of great importance to this company, and he thought that the hotel industry was more than entitled to press upon the authorities the desirability and the justice of giving effect to the Licensing Commission's recommendations at the earliest possible moment.

Reverting to the question of the Dorchester Hotel, the Chairman said he wished to take this opportunity of stating categorically that the stories which were constantly being spread to the effect that the Dorchester Syndicate was contemplating the sale of the hotel, or that negotiations for its sale had ever been considered, or that the hotel was shortly going to be closed, or that the business of the hotel was being carried on with a skeleton staff, or any other of the variations of these rumours which were apparently put about by the ill-disposed, were all completely and wholly false.

ECONOMIES EFFECTED.

He next referred to the drastic economies which had been put into force throughout the organisation, and said that every possible effort had been made to reduce expenditure in all controllable items. Out of a total of just over £161,000 of uncontrollable expenditure—rent, rates, taxes, licenses, insurance, etc.—£92,000 represented the company's direct contribution to Imperial and local taxation.

Having mentioned that the company's Riviera hotels had naturally felt the depression to a more pronounced degree than their other properties during the past year, the Chairman said that the prospects for the current year so far as the company's business was concerned must depend upon a revival in industry and commerce and upon the extent and the speed of their recovery. He could only say that this company, with the modern installations which it now owned wholly or in part, and with the savings in administration which had been made, was prepared to take advantage of the recovery when it arrived.

The chairman concluded by moving the adoption of the report and accounts, which were seconded by Sir Francis W. Towle, C.B.E. (managing director), and carried after some discussion.

NESTLÉ AND ANGLO-SWISS CONDENSED MILK COMPANY.

WORLD-WIDE ACTIVITIES.

DIVIDEND MAINTAINED.

HIGH EFFICIENCY OF THE ORGANISATION.

MR LOUIS DAPPLES ON FINANCIAL POLICY

The sixty-fifth annual general meeting of Nestlé and Anglo-Swiss Condensed Milk Company was held, on the 15th instant, at Cham, Switzerland, the chair being taken by Mr Louis Dapples, the president of the company.

Mr Dapples expressed the hope that shareholders would share with the directors their satisfaction in having been able to justify the indications, which they had given in the past, that shareholders could count upon a certain stability of dividends, so that even this year, in spite of the universal economic upheaval, they were able to propose the same dividend as in the exceptionally good years of 1929 and 1930.

It could hardly be expected that their company should have escaped unscathed from all the difficulties of the past year, and they had naturally had to register a contraction in their profits, which was the reflection, not only of a reduced turnover, but also of reductions in their selling prices. At the same time they had maintained their organisation at the highest pitch of efficiency, and as long as they were able to follow this policy they would retain their commanding position, to the benefit of all elements of the company, whether the active staff or the shareholders.

SUCCESS OF EXTENSION PROGRAMME.

Although through their subsidiaries and participations they had established themselves in all countries, to facilitate giving their customers the best possible service even in the most remote parts of the world, they had always carefully avoided anything in the nature of piling up their activities in such a way as to lead to difficulties in supervision or to run the risk of such activities becoming, as was not altogether unknown, beyond effective control. Shareholders could visualise by a perusal of the balance sheet the extent of the company's activities and commitments, and they would see that their organisation was such as to render it comparatively easy for the management to consider carefully every step taken and thus to avoid exposing the structure of the company to danger.

As he had on previous occasions explained to shareholders, circumstances had compelled them for several years to follow a programme of extension of their industrial plants. This programme had been pursued with the most meticulous care, and the existence of these facilities of production was now of immense advantage to the company, and he wondered what their position would have been to-day if they had not followed this far-sighted policy. Their industrial programme (so far as it had been possible to fix it) was now pretty complete, so that, subject to unforeseen circumstances, it did not appear as if there would be any necessity for considerable extensions in the near future, and their aim would be to maintain all their installations on the highest plane of technical and scientific efficiency; for that purpose they would not hesitate to utilise whatever funds were necessary.

FINANCIAL POSITION.

The Chairman referred to the delicacy of the task of estimating the value of such installations in various countries of the world under the continually changing economic conditions of to-day. Factories were only of value as long as they were in active production, and when they were compelled to cease their activities they often became almost unsaleable. In this connection he pointed out that in some countries the law stipulated how much should be written off for depreciation of plant and machinery, etc., so that what was left should be considered as profit and taxed accordingly, and he had the conviction that this was a policy that was bound to foster temptation in the direction of the production of balance sheets which would be found unsound when times of serious difficulties arrived.

In their opinion, industrial equipment could not be valued at too low a figure in the books, and it was their ambition to be able to assure shareholders that in their balance sheet their readily available funds, in the shape of cash, goods or other equally liquid assets, should cover their share capital and outstanding liabilities and that all factories and fixed assets should be reduced as far as possible to a nominal figure. That this was not a mere vain aspiration was evidenced by the fact that they had repaid Frs. 25,000,000 of their obligations in 1930 and a further Frs. 66,000,000 in 1931. In May of 1933 the balance of the 7½ per cent. obligations of 1921, amounting to approximately £430,000, would fall due, and thereafter there would only remain two series of their obligations outstanding

—namely, Frs. 10,000,000 of the loan of 1915 and Frs. 5,000,000 of the loan of 1925 falling due on July 1, 1936 and 1940, respectively.

At the same time, they were careful not to reduce their liquid funds to too great an extent, as it was especially in difficult times like the present that the best opportunities presented themselves. They also had to bear in mind the fact that raw material prices were extremely low, and if they ever got back to the level of 1928, for instance, it would mean that the company would require additional working capital to the extent of Frs. 30,000,000.

The Australian company had followed a similar policy. It had gradually accumulated surplus funds which now put it in a position to repay £1,500,000 of its ordinary shares at par. This had already received the sanction of the company in general meeting and would be carried into effect as soon as certain legal formalities in Sydney had been completed.

WORLD TRADE CONDITIONS.

The condition of world business to-day could be described as one of general liquidation. All commodities had become cheaper, and no one could say whether prices might not fall still further. Under such circumstances, it was therefore a proper and reasonable policy to proceed with the liquidation of indebtedness, although unfortunately this was precisely a point which people did not seem willing or able to understand, and, in his opinion, this imprudence was partly responsible for the existing general difficulties. Loans were floated only too readily, and the future, with all its uncertainties, pledged and mortgaged, so that, when difficult times arrived, or when further borrowings were not available, people turned to the State for help, which involved all kinds of political, economic and sentimental pressure.

The results which they had so far been able to show in their own business had been achieved by pure commercial competition, and no enforced or stereotyped State administration could have produced such results. On the contrary, the ramifications of their activities all over the world had made it possible for them to ensure their profitable operation, though their profit was in truth rather modest in relation to their turnover.

A STRONGHOLD OF PRIVATE ENTERPRISE.

They would continue to be in the future a stronghold of private enterprise under which they had maintained an honourable record throughout the world for the last sixty years. Their results for the year 1931 illustrated the success that could be attained by private initiative, even in times of universal economic upheaval, provided courage was maintained and devotion to their affairs was continued with ever-increasing energy; but it was a vitally necessary condition that the State should not kill such private initiative or deprive it of the greater part of its legitimate remuneration by well-meaning and disturbing interference or by excessive taxation. The State should set a good example as to honesty, impartiality, economy and respect for constitution and law, and not jeopardise, by entering into various kinds of industrial and social ventures, the capital of the people upon whom the economic structure is built up—even more to-day than ever before.

The many dangers of socialisation were to be seen more and more plainly throughout the whole world, although England had shown how a great and really free nation understands how to recover in dignified silence without resorting to such expedients.

BIGGER AND BETTER FUTURE IN VIEW.

The Chairman concluded by remarking that he wished, with industry generally, that the results of last year compared more favourably with those of recent and more normal years, but to express such a wish without giving thought to the future value of the experiences gained and valuable lessons learned during the past year would be to ignore the fact that business trials and adversities such as those now experienced all over the world, calling for necessarily harder work and more intensive thinking and planning, have great constructive value that should lead to a bigger and better future. For after all the Nestlé Company was not so much a purely industrial concern as, one could almost say, an institution for the better nutrition of the people.

The resolutions referred to in the notice convening the meeting were duly passed, and the two retiring directors, as well as the auditors and substitute auditors, were re-elected.

THE AGRICULTURAL MORTGAGE CORPORATION, LIMITED.

NEARLY NINE MILLIONS LENT TO FARMERS.

SIR HARRY GOSCHEN'S SPEECH.

The third annual general meeting of the shareholders of the Agricultural Mortgage Corporation, Limited, was held, on the 20th inst., at Stone House, Bishopsgate, London, E.C.

Sir Harry Goschen, Bt., K.B.E. (chairman of the company), presided.

The Chairman said:—Gentlemen,—I am glad to be able again this year to report a considerable further increase in our business. (Hear, hear.) Up to March 31st last we had lent £8,817,469 in advances of a further £653,275 had been sanctioned and will be paid over to the borrowers as soon as the necessary formalities have been completed. There is now 595,038 acres of land, valued at nearly £14,000,000, in mortgage to the corporation. Of this, more than 46,000 acres is in Yorkshire and over 30,000 acres in each of the counties of Northumberland, Essex, Wiltshire and Lincolnshire, and, although the total of our loans in these counties is, in consequence, larger than in other districts, our advances are widely spread over the whole of England.

We continue to grant a large proportion of loans to the smaller farmers, and more than 25 per cent. of our borrowers have loans of less than £1,000.

Loans under the Improvement of Land Acts have increased to over £30,000, and a number of works already sanctioned by the Ministry of Agriculture are in course of construction and will be paid for by means of loans from the corporation as soon as the improvements have been completed and approved.

REPAYMENTS STILL WELL MAINTAINED.

I am very pleased to be able to report that the payment of interest and repayments of principal continue to be promptly met, and it is a satisfactory feature of our business that 98 per cent. of the amounts falling due are received by us within a week of the actual fixed date for payment. (Hear, hear.) This is particularly gratifying in view of the extremely difficult times through which farmers have recently been passing. In addition to the repayments of principal made in accordance with the provisions in the mortgage deed, special loan reductions of £123,511 were effected by borrowers, with the sanction of the directors. Many of these special repayments were made in respect of releases of large or small areas of land from the properties mortgaged, and I would like to make it clear again that we are always pleased to meet our borrowers' requirements in this direction as far as possible, provided, of course, that our loan security is not impaired.

Early in the present year Sir George E. May, one of the original directors of the corporation, accepted the office of chairman of the Tariff Committee, and, in consequence, it became necessary for him to resign his seat on our board. We much regret the absence of Sir George from our councils. His long business experience and knowledge of affairs generally, especially in the sphere of loans against property and of investments, enabled him to render the corporation most valuable service.

To fill the vacancy caused by this resignation the directors have elected Mr Robert Martin Holland-Martin to a seat on the board. His long connection with banking and finance and his keen and practical interest in agricultural matters, especially in modern fruit farming, will make him a most valuable member of the board. (Hear, hear.)

In accordance with the articles of association, Mr Holland-Martin now retires, and I shall presently propose his re-election as a director of the corporation.

ISSUE OF £2,000,000 FOUR AND A-HALF PER CENT. DEBENTURE STOCK.

I would now direct your attention to our balance sheet. The only change of importance is the considerable reduction in the other investments, which is counterbalanced by the increase in loans on mortgage. It will be obvious to you that at the close of our financial year our resources available for loans to farmers had been almost fully utilised, and we therefore decided to make a further issue of debentures to the extent of £2,000,000 in the form of four and a-half per cent. debenture stock at a price of £95 per cent.

The issue was made some ten days ago, and, although it did not meet with an immediate response from the public to the full amount offered, the stock left with the underwriters has been rapidly absorbed by the investor at a substantial premium, and still stands, I am pleased to say, at a considerably higher price than at which it was originally issued.

PROFIT AND LOSS ACCOUNT.

Turning to the profit and loss account, a most satisfactory feature is the increase in total income to over £517,000. The majority of the items in the account do not call for special comment, but you will no doubt have noticed that the proportion which working expenses bears to total income continues to fall. You will, however, possibly wish me to give you some particulars concerning the largely increased allocation to contingency account. I have already drawn your attention to the large decrease in other investments in the balance sheet, and this is chiefly due to the sale of the greater part of our holding of War Loan and other investments as funds were required for the granting of new loans, entailing in some cases a capital loss on account of the prices realisable at the time, which has had to be provided for from our contingency account. As has been the case with practically all similar institutions, a further transfer was necessary to provide for depreciation of the investments we still hold. In addition, sufficient provision was made from contingency account to cover the whole of the interest and capital repayments due before December 31, 1931, which had not been received by the end of our financial year, as well as to provide for all bad and doubtful debts.

After taking into our profit and loss account the allocation for contingency account, as well as all the various expenses, and, in addition, providing the interest accrued on our debenture stock, there remains a balance on profit and loss account, including the amount of £5,164 9s. 9d. brought forward from last year, of £30,426 7s. 8d., which has been carried to the balance sheet and allocated as follows:—

By transfer to special reserve £2,664
To writing off a part of the expenses of issue and cost of underwriting our issue of £8,500,000 5 per cent. debenture stock £10,000
leaving a balance of £17,762 7s. 8d. available for distribution.

From this amount the directors recommend the payment to the shareholders of a dividend of £2 10s. per cent., less income tax, on the share capital of the corporation. This payment will absorb £12,187 10s. of the above-mentioned amount, leaving £5,574 17s. 8d. to be carried forward to the new account.

BRIGHTER OUTLOOK.

I think the continued demand for loans and the regularity with which our clients generally have met their loan instalments all augur well for the future prosperity and usefulness of the corporation. We may even look forward to a steady and possibly increasing demand on our services. The assistance the Government is giving to agriculture, and particularly to arable farming, by the guaranteed price of milling wheat under the Wheat Bill which has just become law will, I trust, afford some relief to those who are principally engaged in that branch of farming. Other measures designed to afford the British producer a reasonable chance of competing with foreign imports appear to be under consideration, and, indeed, as far as market garden produce is concerned, are in some cases in force. I can only hope that, as a result of the deliberations which are continually taking place, we shall see in the present year some alleviation of the difficulties which have beset our farmers during the last few years, and a return even of some measure of prosperity to our oldest industry. A prosperous agriculture would undoubtedly bring increased business and prosperity to our undertaking.

TRIBUTE TO MANAGEMENT AND STAFF.

Before I move the adoption of the report I should like again to acknowledge the constant care and ability and tact with which our general manager, Mr Bonner, ably seconded by Mr Jennings, continues to manage our business. Indeed, I am happy to say that the entire staff have the interest of the corporation at heart, and it will interest you to know that we received a special commendation from our auditors on the excellent way in which our accounts are conducted, compiled and presented.

I now move: "That the report and accounts, as audited and certified by the corporation's auditors, now before the meeting, showing the position of the corporation's affairs as at 31st March, 1932, be approved and adopted."

Mr E. J. Bedford, of Williams Deacons Bank, seconded the resolution, which was carried unanimously.

The dividend of 2½ per cent., less income tax, for the year was approved; the retiring directors, Sir William Henry Neville Goschen, Bt., K.B.E., Mr William Gavin, C.B.E., and Mr Robert Martin Holland-Martin, C.B., were re-elected; and Messrs Peat Marwick Mitchell and Company were reappointed auditors.

A hearty vote of thanks was accorded to the chairman, directors and the staff, and the proceedings terminated.

Government Returns, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended April 16, 1932, amounted to £8,838,400 against ordinary expenditure of £14,853,600. After allocating £475,000 to Sinking Fund and having allowed for an increase in Exchequer Balances of £166,143, the operations for the week, as shown below, increased the National Debt by £6,656,000 to £7,596,876,000:—

(000's omitted.)

Treasury Bills	£ 13,790	Bank of England Advances	£ 1,250
		Public Department Advances	1,225
		National Savings Certificates	350
		Treasury Bonds paid off	3,900
		P.O. and Telegraph Money	400
		Sundries	9
	7,134		
	+ 13,790		

A complete analysis of the National Debt at March 31, 1932, was printed in the *Economist* of April 2, 1932.

OIL OUTPUTS.

BRITISH CONTROLLED OILFIELDS, LTD.—Production for the week ended March 30th: Venezuela, 40,012 barrels; Trinidad, 32,164 barrels; total, 72,176 barrels. Production for the week ended April 6th: Venezuela, 40,083 barrels; Trinidad, 31,736 barrels; total, 71,819 barrels. Production for March: Venezuela, 148,968 barrels; Trinidad, 160,650 barrels; total, 309,618 barrels. Deliveries for March: Venezuela, 148,991 barrels; Trinidad, 176,541 barrels; total, 324,532 barrels. Production for the week ended April 13th: Venezuela, 39,391 barrels; Trinidad, 37,616 barrels; total, 77,006 barrels.

ANGLO-ECUADORIAN OILFIELDS, LTD.—The production for March is cabled as 16,057 tons.

DACIA ROMANO PETROLEUM SYNDICATE, LTD.—Gross production for March: Dacia, 5,602 tons; Perimeter X, 4,987 tons; Star-naphta, 1,022 tons.

HAMILTON'S OIL CONCESSIONS (ROUMANIA), LTD.—Cabled advice has been received from Bucarest as follows: Production for the month of March, 1932, 8,464 tons = 59,248 barrels.

THE KERN RIVER OILFIELDS OF CALIFORNIA, LTD.—The total production during the month of March amounted to 87,384 barrels or approximately 12,484 tons.

Commercial Reports.

MARKET SUMMARY.

A survey of the principal international commodity markets offers little encouragement. Business was generally dull, price movements showed a weakening tendency, and there is as yet no evidence of an increase in the demand for raw materials. In New York, non-ferrous metals, with the exception of tin, failed to recover. A renewed decline in United States consumption of rubber in March had a depressing influence on the market. Cotton has only just been maintained at last week's level. Among cereals, wheat, maize, oats and rye all show a decline on the week. Coffee was a shade firmer, but cocoa and sugar were easier. Sterling commodities, which lend themselves to grading, and therefore to international arbitrage, moved in sympathy with gold prices. As the index of wholesale prices on an earlier page shows, there was a renewed decline in prices generally during the past fortnight. According to reports from various industrial centres, the situation in the coal trade is deteriorating, while little headway is being made by the iron and steel industries. The demand for cotton manufactures appears to have fallen off, but the wool and rayon trades are still relatively active.

THE COAL TRADE.

SHEFFIELD.—The depression in the South Yorkshire coal trade is unrelieved. Output is being curtailed and concentration of activities at the newer pits is responsible for a number of men being discharged. Contract business in steams for export is exceptionally scarce. Prices keep steady at round about 16s. In the industrial field business is largely confined to deliveries under contract and consumption of best steams lacks expansion. Small boiler fuel is in better request than of late. House coal has been moving more freely, owing to the severe weather. Prices are irregular, the nominal quotations for best ordinary quality being 22s. and 23s. at pits. Lower figures are, however, available. Blast furnace coke is a steady market with consumption on the low side.

GLASGOW.—Shippers continue to experience difficulty in negotiating new business, and the tone of the market generally is weak. The tonnages being dispatched meanwhile are largely against contracts made some time ago. Forward business is practically at a standstill. All classes of coal and nuts are plentiful, and the collieries have had to make concessions in prices to keep their outputs moving. Current prices for the shipping trade are approximately as follows (f.o.b. district ports): LANARKSHIRE.—Ell best, 14s. 3d.; splint best, 15s. 9d.; splint second, 14s. 3d.; navigation, 15s.; navigation second, 14s. 6d.; Hartley, 15s.; steam, 13s.—13s. 3d.; trebles, 12s.; doubles, 10s.; singles, 8s. 9d.; pearls, 8s. 6d.; dross, 8s. 9d. FIFE.—Screened navigation, 16s. 6d.; first-class steam, 11s. 9d.; third-class steam, 11s.; trebles, 12s.—12s. 6d.; doubles, 10s.; singles, 8s. 9d.; pearls, 8s. 6d. LOTHIAN.—Prime steam, 11s.—11s. 6d.; secondary steam, 10s. 9d.—11s.; trebles, 11s.—11s. 6d.; doubles, 10s.; singles, 8s. 9d.—9s.; pearls, 8s. 6d. Ayrshire.—Unscreened navigation, 16s.; jewel, 16s. 6d.; steam, 13s.; trebles, 12s. 3d.; doubles, 10s. 3d.; singles, 9s. 9d.; pearls, 9s.; dross, 9s. 7d.

CARDIFF.—There has been no improvement this week in the condition of business on the Cardiff coal market. The current volume of trade is from 10 per cent. to 15 per cent. less than it was a year ago, and there are no indications of the likelihood of any improvement in the immediate future. In Continental Europe, as well as in most of the more distant markets, demand is declining, and further restrictions have latterly been imposed by France and Germany on imports. South Wales collieries are finding that the reduced allocations for the June quarter are more than they can market, and in many parts of the coalfield employment is irregular. Except for some of the dry grades, prices are ruling on the basis of the minimum schedule. The following are the current approximate quotations: Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 4d.; best dries, 18s. 6d. to 19s.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7d.; Black Veins, 18s. 3d. to 18s. 6d.; best small steams, 13s. 6d.; cargo smalls, 11s. 6d. to 12s. 6d.; coking smalls, 13s. 6d. to 13s. 9d.; anthracite best large, 36s. to 38s. 6d.; Red Vein large, 22s. 6d. to 27s. 6d.; machine made cobbles, 40s. to 48s. 6d.; French nuts, 40s. to 48s. 6d.; stove nuts, 39s. 6d. to 43s. 6d.; rubbly culm, 8s. 3d. to 8s. 9d.; foundry coke, 32s. 6d. to 36s.; patent fuel, 19s.; pitwood, ex ship, 20s. 3d. to 20s. 9d.

IRON AND STEEL.

MIDDLESBROUGH.—Pending receipt of definite news in regard to the increased duties on iron and steel, there is not a great amount of business passing, but the tone is firm, and an improvement in business is generally looked for. In Cleveland iron moderate lots are being sold on home account for fairly early delivery. At are being sold on home account for fairly early delivery. At Tuesday's weekly market a fair business was reported, and official prices were again unchanged, viz.:—No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; and No. 4 forge, 57s., f.o.b. or f.o.t. These are made to meet the competition of Midland and Indian irons, and an increased business has resulted recently. Hematite is in no longer a serious competitor in that market. Hematite is in somewhat better request, and there is less competition from merchants whose holdings are now considerably reduced, and they are not inclined to sell "short" under present conditions. Makers have recently realised 63s. 6d. for ordinary mixed numbers for the prompt delivery, and are still prepared to accept this figure where the iron can be taken at once, but are asking more for forward delivery. In the finished departments there is little to report so far, but favourable developments are looked for in the near future. Mean-

time, some mills are fairly well employed, while others are only working short time. Prices are generally unchanged. The ore market is almost stagnant, best rubio is nominally 16s. 6d. per ton c.i.f., and the freight Bilbao/Middlesbrough is now about 4s. 9d. Coke is freely offered, but there is little demand. Ordinary blast-furnace qualities are obtainable at 15s. 6d. per ton delivered works. The number of furnaces in blast in the district is unchanged at seventeen.

SHEFFIELD.—Activity tends to increase in a few special lines of steel, and requirements of the automobile industry provide a considerable amount of business. A large tonnage of steel strip, both hot and cold rolled, is going out. Tool steel producers are generally on very short time, and the easier tendency in the open-hearth steel department continues. Bookings of billets and other part material have been disappointing since Easter. Production, however, is maintained at former levels. Users of Swedish iron and steel are benefiting by the high value of sterling in Sweden. Requirements of shipbuilders and railway companies have never been less, and there is a decided slump in the export of locomotives, wagons and carriages to one time very valuable markets abroad. A busy side line is the manufacture of permanent magnets for wireless purposes. Prices of steel material have undergone no change for a long period. Depressed conditions in the market for ferro-alloys are reported. There is a scarcity of business for best quality hand tools, whereas, the cheaper classes are being called for in large quantities. Makers of several brands of American tools have decided to produce in this country. Conditions in cutlery and table plate get worse rather than better, apart from contracts for gift and restaurant goods.

GLASGOW.—The situation here is practically unchanged. There is no improvement at the steel-making plants, and only a very small proportion of the available plant is in operation and so long as the Clyde shipbuilding yards have so little important work on hand, the outlook is not promising for the steelmakers. Just recently there has been a slightly better demand for structural material, but this has not been sufficient to make any apparent difference to the steelmakers. The demand for semis, either Home or Continental, is very restricted, although very low prices are still being quoted for Continental material. Some quite considerable export orders for black sheets have been booked by local makers during the present week, and a steady business is being maintained in both black and galvanised sheets for home consumers. Tube makers and others remain quiet.

CARDIFF.—General conditions in the South Wales steel and tinplate trades are unchanged, and the steel makers are disappointed

with the failure of the Chancellor of the Exchequer to announce an increase in duties on foreign bars in his Budget statement. Current inquiries are scarce, but prices are unaltered with tinplates ruling at 16s. per basis box, Welsh bars at 95s. per ton, and galvanized sheets at 99 10s. per ton. There has been a slight revival during the past week in the volume of the foreign import trade in steel bars and other partly manufactured iron and steel products.

OTHER METALS.

TIN.—As was to be expected, the violent fall in the price of tin has given way to a slight upward movement, following reports that output would be reduced further. In New York the metal was quoted at 19.375 cents per lb. on Wednesday, against 18.50 cents per lb. a week ago and 21.75 a month ago. Wednesday's official closing quotations in London, in terms of sterling for "standard" cash at £108 7s. 6d. to £108 10s. per ton, compares with £103 7s. 6d. to £103 12s. 6d. on the corresponding day last week. Stocks in London and Liverpool at the end of last week, at 32,787 tons, show a decrease of 343 tons on the week.

COPPER.—No change has occurred in the international copper situation, and prices show no improvement in New York. On Wednesday, "Domestic" spot was quoted at 5½ cents per lb. in New York, against 5½ cents a week ago, and 6 cents a month ago. Wednesday's official closing price for "standard cash" in London, in terms of sterling at £29 11s. 3d. to £29 13s. 9d., compares with £29 7s. 6d. to £29 10s. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 21,306 tons, show an increase of 285 tons, while stocks of rough copper, at 789 tons, are 25 tons larger.

LEAD.—The demand for lead in this country has been steady at firmer prices. In New York the metal was quoted at 3.00 cents per lb. on Wednesday, against 3.00 cents a week ago, and 3.15 cents a month ago. Wednesday's official closing quotation for "soft foreign" in London, in terms of sterling at £11 6s. 3d. per ton for shipment during the current month, compares with £11 on the corresponding day last week.

SPELTER.—Spelter, too, has been in better demand in London and prices show a slight improvement. Wednesday's quotation in New York, at 2.775 cents per lb., compares with 2.80 cents a week ago and 2.775 cents a month earlier. Wednesday's official closing quotation in London, in terms of sterling for "good ordinary brands," was £12 7s. 6d. per ton for shipment during the current month, against £11 2s. 6d. a week ago.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals the quotations for aluminium and nickel have been maintained at £95 per ton and £220-£225 per ton respectively. Foreign antimony declined from £26 10s.-£27 to £28 10s. Quicksilver was quoted at £17-£17 10s. per flask, against £17 10s. a week ago. Platinum was sold at £10 3s. 6d. per ounce, as compared with £10 6s. last week.

TEXTILES.

THE COTTON TRADE.—Liverpool.—Imports for the week, April 14th to 20th (inclusive) are 50,621 bales, of which 28,057 are American, 688 Peruvian, 95 Argentine, 12,311 Egyptian, 1,052 African, 8,643 East Indian, and 775 sundries.

Manchester.—A dull and depressing state of affairs has prevailed in the Manchester market during the past week. There has been a further falling off in demand, and the aggregate turnover in yarn and cloth has been much below the output of the machinery. Spinners' and manufacturers' order lists are lighter, and unless there is a speedy improvement in trade further machinery stoppages appear inevitable. Cloth buyers have been testing prices, but only small sales have been arranged. Most of the offers from India have had to be turned down. Business, however, has been done in light bleaching fabrics and fancies. Only isolated contracts have taken place for China. The turnover for the remaining minor outlets has been unimportant. America yarns have been in quiet request. Spinners' margins are worse than a month ago. In the Egyptian section sellers are reducing output rather than sacrifice margins.

THE WOOL TRADE.—Bradford.—The inability of the trade to absorb bigger weights of wool, writes our correspondent, is demonstrated by the fact that it was decided to curtail the current series in Coleman Street. The selling brokers, after consultation with the Importers' Committee, have abandoned the four sales which should have been held next week. A better tone has since developed, and it appears that the auctions will close firm. The curtailment of the auctions means an additional 30,000 bales carried forward to the May series, but even a short interval will enable a big weight of wool which is now in users' hands to be absorbed. Depressing reports have been received from Australia and South Africa, values having again fallen. This is particularly disappointing as regards Cape wool, for there is a substantial part of the clip still to clear, and imports are being offered at low prices. Big weights of crossbreds have been cleared in Coleman Street, and the demand for greasies and slipes has improved, better prices being paid for good halfbreds. Owners are rightly meeting the market, for any improvement in prices in the near future is largely dependent on the development of demand. According to Messrs Dalgety and Company, Ltd., the wool sales held in Napier, New Zealand, closed irregular, with prices slightly easier. There was little competition at the sales held in Brisbane. With the exception of greasy fleece and greasy shirtings, quotations were from 5 per cent. to 10 per cent. lower. A rather better tone has developed in Bradford. This is not attributable so much to new demands for tops as to the belief that adequate protection will be afforded to spinners and manufacturers under the Abnormal Importations Bill. A considerable weight of tops could now be sold if makers would meet spinners, but more firmness is now being shown in quotations.

THE GRAIN MARKETS.

WHEAT.—Wheat quotations during the past week have been subject to fluctuations caused by varying crop reports. The general situation shows little change. On balance, it appears that the slight recession in values is due mainly to the improvement in weather conditions in the United States. Nevertheless, it is assumed that the current year's crop in that country will be small and that the huge supplies, hitherto such a depressing factor, will be greatly reduced. Mr. Milner, of the United States Grain Stabilisation Corporation, expects the Farm Board's holdings to be reduced to 110,000,000 bushels by the end of June. On July 1, 1931, the Board's holdings amounted to 257,000,000 bushels. It is as yet too early to estimate the European crop or even the winter crop of Russia. No doubt the extent of the export surplus of the latter country will again profoundly influence the course of prices. Business in wheat has been active and Continental Europe has again purchased substantial quantities. On Wednesday, "May" futures were quoted at 57 cents per bushel in Chicago, against 59½ cents on the corresponding day last week, and 50½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 33s. 3d. per 496 lbs., as compared with 33s. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 30s. 9d., against 31s.; No. 3 Northern Manitoba, Vancouver, ex ship, 30s. 3d., against 30s.; Russian, on sample, 26s. 6d. to 29s., against 27s. to 28s. 6d.; Australian, ex ship, 28s. 6d. to 29s. 6d., against 28s. 9d. to 29s. a week ago.

WHEAT FLOUR.—Trading in flour has been a little more active and shipments from North America, mainly to non-European countries, show a substantial increase. North American shipments, at 180,000 sacks, showed an increase of 39,000 sacks as compared with the previous week. Of this total, only 14,000 sacks have been consigned to Europe. Quotations in London, Wednesday: Straight run, delivered country, 26s. per sack of 280 lbs., as compared with 26s. last week; delivered London, 25s., against 25s. Manitoba patents, ex store, 25s. 6d. to 28s., against 25s. 6d. to 28s.; and Australian, ex store, 21s. to 22s., against 21s. to 22s. a week ago.

BARLEY.—The principal buyer of barley during the past week has been Germany. A large part of these purchases consisted of Canadian barley. Prices, consequently, hardened a little. On Wednesday, "May" futures were quoted at 42½ cents per bushel in Winnipeg, against 41½ cents last week and 39½ cents a month ago. Quotations in London, Wednesday: "English feeding," f.o.r., per 448 lbs., 28s., as compared with 27s.; Russian, landed, 24s. per 400 lbs., against 23s. 6d. a week ago.

OATS.—There has been a better demand for oats in European markets and prices remained firm. The principal source of supplies is still Argentina. In North America, however, a slight decline in quotations became noticeable. "May" futures, which last week stood at 23½ cents per bushel in Chicago, sold at 22½ cents per bushel on Wednesday this week, against 23½ cents a month ago. Quotations in London, Tuesday: "River Plate," landed, 18s. 3d. per 320 lbs., as compared with 18s. 3d. last week; "River Plate," ex ship, 17s. 3d., against 17s. 3d.; "Chilean White," landed, 26s., against 26s. a week ago.

MAIZE.—Business in maize has been a little less active, with a consequent slight decline in quotations. Wednesday's quotation in Chicago for "May" futures, at 32½ cents, shows a decrease of 2½ cents on last week, and a fall of 1½ cents as compared with the price a month earlier. Quotations in London, Wednesday: "Plate," landed, 21s. 3d. per 480 lbs., compared with 21s. 6d. last week; "Plate," ex ship, 20s. 6d., as against 20s. 9d.; "Plate," April-May, 19s. 6d., as against 19s. 9d. Yellow maize meal, ex wharf, was quoted at £6 per ton, against £6 a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1931-32, 1930-31, 1929-30, 1928-29:—

	1931-1932.	1930-1931.	1929-1930.	1928-1929.
Estimated sales of home-grown wheat—	Owts.	Owts.	Owts.	Owts.
1 week to April 16	121,798	67,087	118,822	148,778
33 weeks to April 16	2,639,622	3,846,908	7,797,829	8,385,455
Average price of English wheat per cwt.	s. d. 5 11	s. d. 5 3	s. d. 8 10	s. d. 9 10

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1928 to 1931:—

Weeks ended	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
Apr. 9, 1932	Owts. 76,207	Owts. 51,508	Owts. 30,766	s. d. 6 0	s. d. 8 0	s. d. 7 3
Apr. 16, 1932	121,798	38,634	32,857	5 11	7 10	7 5
Apr. 14, 1928	217,983	67,802	39,235	10 1	10 9	11 5
Apr. 15, 1929	119,087	38,329	32,877	9 10	10 3	9 9
Apr. 19, 1930	118,822	68,294	22,035	8 10	7 9	6 7
Apr. 18, 1931	67,087	26,739	24,375	5 3	7 3	6 0

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks with comparative figures for 1930:—

NEAREST FUTURE.	Jan. 2, 1930.	Jan. 2, 1931.	April 22, 1931.	Jan. 4, 1932.	April 13, 1932.	April 20, 1932.
Winnipeg (No. 1 Manitoba).....	148½	56½	61½	62½	64	63
Chicago (No. 2 Winter).....	130½	79½	87½	55½	59½	57

The visible supply of wheat in Canada, at 66,437,000 bushels, shows an increase on the week of 770,000 bushels. Supplies a year ago stood at 64,882,000 bushels.

OTHER FOODS.

SUGAR.—Mr. Licht's estimate of sowings in Europe shows a smaller reduction than expected and it exercised a depressing influence on markets. Mr. F. O. Licht estimates the Continental beet area, excluding Russia, at 1,405,000 hectares, compared with 1,525,000 hectares last season, a decrease of about 8 per cent. The Russian area is given as 1,690,000 hectares against 1,495,000 hectares last year. Heavy liquidation in North America was again in evidence. "May" futures in New York were quoted at 0.59 cent per lb. on Wednesday, against 0.60 cent per lb. a week ago, and 0.71 cent per lb. a month earlier. Wednesday's sales of "raws" include "May delivery" at 4s. 2½d. to 4s. 2½d. per cwt., against 3s. 11d. to 3s. 11½d., and "December," at 4s. 11½d. to 4s. 11½d., against 4s. 7½d. to 4s. 10d. on the corresponding day last week. The movements of raw sugar in London and Liverpool during last week are set out in the table below:—

	Imports.		Deliveries.		Stocks.	
	1932.	1931.	1932.	1931.	1932.	1931.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
London	1,993	731	1,051	2,296	7,137	30,661
Liverpool.....	8,271	20,128	20,136	16,945	79,582	84,271
Total	10,264	20,859	21,187	19,241	86,719	114,932
Last week ...	10,791	12,869	14,986	15,473	97,642	113,314

COFFEE.—The international situation of coffee shows a further improvement and prices hardened in New York. The auctions in London revealed a good demand for East Indian varieties of good quality, but African coffee, being of poor quality, was dull. Last week's movements of coffee in London were as follows: Brazilian, landed, 20 bags; delivered for home consumption, 271 bags; exported, nil; stocks, 5,473 bags, against 2,246 bags last year. Central American, landed, 15,722 packages; delivered for home consumption, 5,795; exported, 2,249; stocks, 123,408 packages, against 116,313 a year ago. Other kinds, landed, 3,878 packages; delivered for home consumption, 2,331; exported, 468; stocks, 107,377 packages, against 106,496 a year ago.

COCOA.—The demand for cocoa was slack, which resulted in a further weakening of prices. "May" futures were quoted at 4.01 cents per lb. in New York on Wednesday, against 4.05 cents per lb. a week ago and 4.31 cents a month ago. As compared with the corresponding day last week, Wednesday's quotation for Accra, fair fermented, new crop, April-May, at 22s. 6d. per cwt., f.o.b., London contract, shows a fall of 1s. per cwt. on the week. Last week's movements of cocoa in London were as follows: Landed, 8,247 bags; delivered for home consumption, 5,189 bags; exported, 87; stocks, 191,869 bags, as against 211,867 last year.

TEA.—No auctions were held this week, but the private market was steady. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account:—

AVERAGE PRICE PER LB.

Week ending	Northern India.	Southern India.	Ceylon.	Java.	Sumatra.	Nyasa-land.	Total.
Apr. 16, 1931	s. d. 1 0-04	s. d. 1 3-71	s. d. 1 6-64	s. d. 0 7-26	s. d. 0 7-67	s. d. 0 6-74	s. d. 1 1-23

Mar. 22, "	0 10-88	0 9-32	1 3-87	0 7-39	0 6-88	0 6-59	0 10-90
Apr. 6, "	0 10-17	0 10-41	1 4-34	...	...	0 7-73	1 0-13
Apr. 14, "	0 9-89	0 11-60	1 5-96	0 7-51	0 6-78	0 7-95	0 11-67

RICE.—The market in rice has been steady. Wednesday's "spot" price at 9s. 9d. per cwt., shows a fall of 3d. per cwt. on last week, while forward positions at 9s. show a slight advance. Movements in London during the past week were as follows: Landed, 267 tons; delivered, 36 tons; stocks, 1,074 tons, as against 535 tons last year.

POTATOES.—There was a steady demand for potatoes at the principal markets, but supplies were adequate and prices remained generally unchanged. At the Borough Market, "Best King Edward" sold from 12s. to 12s. 6d. per cwt., as compared with 12s. to 12s. 6d. per cwt. a week ago.

SPICES.—The market in spices was quiet. There were small sales of pepper in the shipment section and prices remained steady. Wednesday's quotation for "Black Singapore" pepper, at 6½d. per lb., shows no change on the week. Movements of pepper in London during the past week were as follows: Black, landed, 19 tons; delivered, 20 tons; stocks, 369 tons, against 584 tons last year. White, landed, 12 tons; delivered, 50 tons; stocks, 721 tons, against 748 tons a year ago.

MEAT.—The recent advance in beef prices at the Smithfield market was almost entirely lost during the past week. On the other hand, mutton remained steady and pork was firmer. On Wednesday, Argentine beef (chilled hindquarters) was sold at 4s. to 4s. 6d. per 8 lbs., against 4s. 6d. to 4s. 10d. on the corresponding day last week, while New Zealand frozen mutton realised 2s. 8d. to 3s. 6d., as against 2s. 8d. to 3s. 6d. a week ago. According to the Smithfield Market official report, supplies of meat during last week amounted to 9,249 tons, as compared with 10,073 tons in the corresponding week last year. Imported beef, principally Argentine, formed 82.8 per cent. of the supplies, as against 84.7 per cent. a year ago; and imported mutton, mainly New Zealand, formed 81.2 per cent. of the total supply, as against 86 per cent. last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OILSEEDS.—Quiet conditions have returned and very little business is passing. Demand all round is restricted and prices generally have been on the down grade and the recent advantage gained has been lost. Large arrivals of linseed in Europe and the advent of open weather causing a reduced demand for cakes, have supplied crushers' requirements for the moment. The quantity on passage to Europe, however, is not excessive, and at 153,300 tons is 28,000 tons less than last week, and compares with 222,400 tons a year ago. This has led to some interest in forward positions and the market closes steady at the decline. Current value of Plate afloat and shipment to May is around £7 15s. Indian linseed is neglected, Calcutta to London, April-June shipment, offering at £9 15s. Cottonseed continues quiet, with black Egyptian on passage and April loading steady at £5 15s. Demand for vegetable oils continues on narrow lines. Linseed oil, in sympathy with seed, has fallen back, raw oil, ex Hull mill, for April delivery, declining to £12 10s., whereat consumers are still largely indifferent. Cotton oil is easier and lower, Egyptian crude, ex Hull, offering at £19 10s. and refined (technical and edible) at £22. Oilcakes are in less demand and mill prices are 2s. 6d. per ton down on the week.

HIDE, LEATHER AND ALLIED TRADES.—Rather more interest is being taken in the market for hides from English cattle, and at the sales held in Manchester this week prices were unchanged for all ox and heifers, cows and bulls. Calfskins continue to meet a poor inquiry, and for those weights which were sold reduced figures had to be accepted. Sheepskins also are difficult to move, as both fellmongered pelts and wool met with only a limited trade, and concessions in price have to be made in order to do business. Turnover in imported hides has not shown any expansion, and there is still a considerable amount of weakness about the prices for most sorts. In South American descriptions some sales have been made.

to the trade of this country. B.A. Frigorific ox having realised just under 3½d., while seconds have changed hands at 3d., and Montevideo ox at a fraction over 3½d. Quotations for dry hides from the same origin remain low, business having been done in B.A. Americanos at 4½d., while parcels of Inservibles are obtainable at 2½d., and M.V. Americanos at 5½d. Trade in regard to Africans is very limited; small sales of dry Capes have been made at 5½d. and 4½d. for firsts and seconds, while 4½d. and 3½d. are the figures mentioned for dry salted. Australian hides remain too dear to allow of much being done on this side. Producers and distributors of leather appear to be a little more optimistic regarding conditions, and it is hoped that from now until the Whitsun holiday trade will show gradual expansion. At the moment orders generally are on the small side, but they are coming to hand rather more frequent than has been the case for several weeks past. For shoe manufacturing requirements medium weight dry-hide bends are the best sale, and moderate quantities of these have gone into consumption. There has been a slight improvement in the inquiry for the lighter weights in this type of bend, in addition to which medium weight English and wet-salted bends have been taken up on account of the repairing section. In regard to ofal, pinned bellies have commanded the bulk of the trade passing in this direction; there has been a small amount of business done in shoulders, but rough ofal has remained quiet. In the case of upper leathers, there has been no improvement in the call for calf leathers, but a moderate turnover is being done all the time in black and brown glauc kid. Patent leather has also received more attention, in addition to which a regular, if limited, call is met with for suede and reptile leathers.

RUBBER.—The past week has been dull and featureless, and prices hardly fluctuated. Meanwhile, the demand for this commodity remains disappointing. The average daily consumption in March in the United States, at 1,031 tons, shows a fall of 274 tons per day on February. In New York, Wednesday's spot price for rubber at 3½ cents per lb. shows no change on the week. Wednesday's official closing price for standard ribbed smoked sheet in London, at 1½d. per lb., shows no change, as compared with the

corresponding day last week. In forward positions, business has been done at 2½d. to 2½d. for October-December, as against 2½d. to 2½d. a week ago. Movements of rubber in London and Liverpool during the past week were as follows: Landed, 1,984 tons; delivered, 1,812 tons; stocks at the end of last week, at 125,019 tons, show an increase of 172 tons as compared with the preceding week.

special buying of early June bills at $1\frac{1}{4}$ per cent., a procedure which was of benefit both to the market and to the authorities, for the latter will automatically find themselves in funds just in time to meet the June War Loan dividend payment. Money was perhaps at its dearest on Monday, when 2 per cent. was a common rate. On Thursday $1\frac{1}{4}$ per cent. was charged for old and new money alike.

Friday of last week witnessed another heavy application for Treasury bills, the amount applied for running up to £76.5 millions for the £35.0 millions on offer. It is believed, however, that many applicants are now in the habit of tendering two or three times over, at slightly different rates, as their opinions change as to the rate at which allotment will be made. It is further believed that if by any chance all these alternative tenders proved successful, the applicants would find themselves allotted a considerably larger number of bills than they desired. Still even allowing for this multiplication of tenders, there is no doubt that there is still a keen demand for Treasury bills, for last week's issue went at £1 16s. 3.92d. per cent., which is the lowest rate on record since July 28th, 1922. This week £40.0 millions are on offer, and, as pointed out, the steady increase in the Treasury bill issue which began with the new financial year is already beginning to make money more scarce. Hence a stiffening of the rate from this low level is not unlikely.

Immediately after the result of the tender was known, "hot" Treasury bills were quoted at $1\frac{1}{4}$ per cent., but during the current week the rate has hardened until, on Wednesday, $1\frac{1}{2}$ per cent. was a common quotation. On Thursday, $1\frac{1}{2}$ per cent. was again the general rate. Three-months' prime bank bills have been quoted consistently at 2 per cent. and a shade over. The best standstill bills, however, eased during the week to $2\frac{1}{2}$ per cent.

In spite of this week's relapse of sterling to \$3.67 and Frs. 93 $\frac{1}{2}$, and the narrowing of the discount on forward dollars to $\frac{1}{2}$ cent, foreign bank demands for British Treasury bills remain in evidence. It must be remembered that even to-day a better return is obtainable upon sterling bills than upon bankers' acceptances in New York, whose rate has now been cut to $1\frac{1}{4}$ per cent; also foreign buyers can cover themselves by forward sales of sterling. Apparently the authorities have during the last few months been concerned mainly with checking speculative and not investment purchases of sterling, on the ground that it is speculation that is the main cause of wide exchange fluctuations. This explains why their operations have been confined mainly to the spot market and why special steps were not taken to reduce the high premium at which forward sterling recently stood, and which served to attract foreign funds to London, thereby intensifying the investment demand for sterling.

This week's Bank return bears evidence of the disappearance of market funds, for mainly owing to an increase of £14.2 millions in Public Deposits, Bankers' Deposits have fallen by £14.6 millions to £58.3 millions. It must be remembered that the Bank return only reflects the position at the close of business upon Wednesday afternoon, and that a very different position may exist a few hours before or after that time. Hence this transfer from Bankers' to Public Deposits is very likely purely for-

tuitous, and represents some passing discrepancy between Treasury bill issues and maturities. It is by no means certain that it is a fair representation of the situation during the whole of the week.

The only other changes of importance in the return are an increase of £6.3 millions in Government Securities and a decline of £7.7 millions in Other Securities. It would be dangerous to assume that these movements reflect sales of *Devisen* by the Bank. The note circulation has contracted by £1.5 millions, and the Reserve has increased by the same amount. The Proportion stands at 37.3 per cent., which is little different from last week.

In New York call money remains at $2\frac{1}{4}$ per cent., but further reductions have been made in open market discount rates with the result that 90-day bankers' acceptances are now quoted at $1\frac{1}{4}$ per cent. against $1\frac{1}{2}$ per cent. last week. Last week's Federal Reserve statement recorded further open market purchases of Government Securities of \$93 millions, raising the total net acquisition by the Reserve system to \$193 millions for the preceding fortnight. The Reserve Banks are thus continuing and intensifying their easy money policy. Gold movements during the week were limited, the chief shipments being imports of \$999,000 from Canada and exports of \$500,000 to Holland. Earmarkings on foreign accounts, however, were increased by \$7.5 millions.

The foreign exchange market was active in patches during the week, almost all currencies moving fairly sharply against sterling on the closing of "bull" sterling accounts after the announcement of the creation of the sterling Exchange Equalisation Account. New York went from 3.77 to 3.67 after touching 3.65 $\frac{1}{2}$. Montreal was better by 6 points at 4.13. Paris, after 92 $\frac{1}{2}$, reacted to 93 $\frac{1}{2}$, against 95 $\frac{1}{8}$ last week. Brussels was firmer at 26.25, as was Milan at 71 $\frac{1}{2}$. Madrid improved from 48 $\frac{1}{4}$ to 47. Berlin, after hesitation on the news of the Prussian elections, improved from 15.87 to 15.42. Amsterdam was considerably firmer at 9.06. Switzerland went from 19.40 to 18.90. All the Scandinavian currencies reacted after their recent weakness, Stockholm being 25 points better at 20.00, Oslo improving from 20.50 to 19.75, and Copenhagen going from 18.27 to 18.23. Bucharest went to 615 after being for some time past quoted at 635. The first official quotation of the drachma since Greece abandoned the gold standard was given at 449 $\frac{1}{2}$ and 456 $\frac{1}{2}$. In the Far East the rupee fell away to 1s. 5 $\frac{1}{2}$ d. against 1s. 6 $\frac{1}{2}$ d. last week. The yen was unchanged at 1s. 9 $\frac{1}{2}$ d., but Batavia improved from 9.36 to 9.13. In the forward market dollars were rather more in demand at narrower discounts of $\frac{3}{4}$ cent. and $\frac{1}{2}$ cent. Paris was firmer at 6 centimes premium for one month and 16 for three. Brussels, from par and 2 centimes discount, went to round about par for both deliveries. One month's Milan remained at $\frac{1}{4}$ lira discount, but three months' weakened by $\frac{1}{4}$ to $\frac{1}{2}$ lira discount. Madrid for one month's delivery was unchanged at $\frac{1}{4}$ peseta discount, but for three months' it weakened by $\frac{1}{4}$ to $\frac{1}{2}$ peseta discount. Amsterdam, from $\frac{1}{2}$ and 1 cent discount, moved to $\frac{1}{2}$ cent premium for both periods. Switzerland was considerably firmer at 2 centimes premium for one month and 4 centimes premium for three. The silver market was quiet and transactions small. Chinese buying at the close advanced prices on the week by $\frac{1}{4}$ d. to 17 $\frac{1}{2}$ d. for cash and to 17 $\frac{1}{4}$ d. for forward. The Chinese silver exchanges reacted in sympathy, both Hong Kong and Shanghai improving by $\frac{1}{4}$ d. to 1s. 3 $\frac{1}{4}$ d. and 1s. 8 $\frac{1}{4}$ d. respectively.

MONTHLY TRADE SUPPLEMENT

We publish this week our Monthly Supplement, in which will be found an appreciation of the trade situation at home and abroad, together with statistical information on the foreign trade, price movements, currency, and production of the leading commercial countries of the world. Its contents include an index of electricity production, and a series of indices of British trade activity.

WANTED—A POLICY.

A YEAR has passed since the Credit-Anstalt affair set in motion the financial crisis, and since that date most of the efforts made to check its development have proved abortive. It cannot be claimed that much progress has been made in any direction. If since September last Great Britain has avoided being dragged down by a further slump in gold prices, we cannot pretend that we have done more than hold our own, and it is extremely difficult to find signs of improvement in any other country. This week Greece has gone "off gold," and there is no doubt that, ultimately, others will follow. If there is any ground at all for confidence it is not to be found in the achievements of statesmen or in the initiative of leaders of industry or commerce, but rather in two simple facts. One is that the 1,800 million inhabitants of this globe are all consciously trying all the time to resume their normal economic activity. The urge to live is inducing the merchant to try and sell, the agriculturalist to produce, and the carrier to find something to transport. Happily, the urge of life is stirring all the time among the masses of humanity. The other consideration is that the first shock of disease is as a rule the worst, and the physical body gradually develops powers of resistance. Similarly, the body economic has, to-day, become so used to shocks that, unless those which are still to come are of a much more violent kind than hitherto, each one will do less damage than the last.

But such comfort as these reflections may afford is not very flattering when viewed as the results of modern statesmanship, and there is, indeed, no reason why the world should be compelled to have to rebuild its economic life from its roots. Seeing that so many of our present ills are due to human shortsightedness, to prejudice and to error, we should be able to retrieve the situation by reversing mistaken policies.

In this matter, British statesmen have a great responsibility and an exceptional opportunity for leadership. The measure of our responsibility is the fact that any action we may take profoundly affects the trading conditions over a great part of the world; we are far the largest market for the world's products, of which, indeed, we have bought nearly one-fifth of all that has been exported by other countries during recent years. Even in our own interest, we cannot and dare not think in insular or even imperial terms alone. But we also have an opportunity. Whatever mistakes we have made in the past, or however distasteful our attitude may have been to other countries, it happens that at the present moment there is no Great Power which is not anxious to be on friendly terms with England, and would not feel itself strengthened by co-operation with this country. M. Tardieu has made it abundantly clear, since his accession to the Prime Ministership, that the central feature of his foreign policy is a good understanding with England, and the French Press reflects in no uncertain manner the anxiety of France to avoid isolation. Similarly, Germany for some time past has looked to this country for an understanding of her difficulties, while the readiness of the United States to co-operate with Great Britain has been greatly strengthened by the emergence of a common interest in the Far Eastern crisis. Last summer's temporary eclipse of British influence is over.

How has the National Government risen to its opportunity? On a cynical view, after a multitude of conferences, the progress made in solving the great international problems which are besetting us, whether in the political or economic field, is nil. The Indian Round Table Conference has had to refer its most critical issue to the Prime Minister for arbitration after many months of talk; the authority of the League of Nations has not yet been established in the Far Eastern dispute; in disarmament, the Powers have not yet come to grips. In the economic sphere the progress has been even less, for there has as yet been almost no concrete proposition laid upon the table on any leading question. Indeed, the only

one that may be called at all specific, namely, the proposal laid before the Four Power Danubian Conference early in April, went to complete shipwreck on the rocks of the conflicting interests created by the Peace Treaties. The vital question of reparations and war debts has been put off again and again, and the best that can be said on this topic is that at last a definite date has been fixed, six weeks ahead, for the Lausanne Conference. To-day, however, things have got to such a pass that the complete wiping out of reparations and war debts would not alone serve to turn the tide. The world can only get going again if reasonable arrangements are arrived at with regard to the two central conditions for the restoration of trade, namely, a solution of the monetary problem which will lead to stability of prices at a figure above their present depressed level, and a removal of the trade barriers which, not only in the past, but to an exceptional degree at present, are responsible for the paralysis in international trade. Our contribution towards the solution of these problems has been to leave the world in doubt as to our monetary policy, leaving the road open to speculation in the pound, which has swung during the last quarter between \$3.25 and \$3.80, and to erect a new, and in some cases insurmountable, trade barrier to international trade in the world's greatest market.

If this view does less than justice to the efforts of the National Government, it is because it does not allow sufficiently for the extraordinarily complex nature of the questions which we are to-day called upon to solve, and the serious obstacle created by the great differences in outlook with which the nations of the world approach all these questions. But to say that all the routes are rough and overgrown does not make it any the less necessary to hack a way out of the jungle and to do it quickly.

It is hardly necessary for us to repeat the view, which we have consistently reiterated, that economic revival requires the solution of the political questions of the day no less than of economic conundrums; but it is with regard to the latter that the business world not only at home, but abroad, is looking to the British Government for guidance. The general attitude of Great Britain towards war debts and reparations is quite well known. The country expects that our representatives will disclose sufficient resources of statesmanship and diplomacy to enable this problem to be cleared up finally at the Conference in June.

As to our policy on the equally pressing, and now more far-reaching, questions of currency and trade, the world is in the dark. It is in the field of currency more than any other that we have the sense of having regained the initiative. But how are we going to use it? We have heard much in recent months of the so-called "sterling" area—though the term is something of a misnomer applied to a group of countries, most of whose currencies are in no way linked to sterling. There is undoubtedly among many of them a readiness to associate themselves, through their monetary policy, with the economic prospects of Great Britain. But it is not to be expected that they can take any definite steps in this direction until it is known more clearly what Great Britain's monetary policy is. The establishment of the Exchange Equalisation Fund is a step in the right direction as an indication that resources will be made available to enable the Bank of England to exercise some influence over the exchange. But in accordance with what policy will this influence be exerted? In the absence of any indication of our intentions, other countries of the sterling group have no guide as to what their policy should be, and to associate themselves definitely with us would be a leap in the dark. It is not sufficient to say that the world will discover our policy as a result of experience, and that in the end it will prove to be the wise course to link with sterling. That course of action, or inaction, means prolonging uncertainty almost indefinitely. Nor must it be forgotten that the experience of the last three months has not been encouraging. The rise in

the sterling exchange in February and March, which caused such perturbations among our own industrialists, proved a real and serious setback to India, and began to undermine confidence in the sterling link in the most important of the currencies which are now linked to the British pound. We are well aware of the difficulties and drawbacks in forming any definite policy, but we are strongly of the opinion that the time has come for the Government and the Bank of England to formulate a definite policy, and that any risks that might be involved would be far outweighed by the advantages to the world in knowing on what course our ship is set.

But there is another point. There can be no expectation of bringing foreign countries within the orbit of sterling's influence unless we are prepared to trade with them. Whatever technical measures might be taken to try to link the given currency with a managed pound, it is quite certain that they would break down if tariffs are maintained between the two countries in question at sufficient heights to choke off trade between them. This brings us to the whole question of tariffs and the possibility of releasing the channels of trade from the obstructions from which they are becoming almost completely blocked. Here again it is said that we cannot take the initiative until after Ottawa. Even from the point of view of those who believe most firmly in the possibility of a big expansion of British trade with the Empire, this is not a valid excuse, for not only are the forms of trade with foreign countries in the main different from those within the Empire, but it would be quite easy to formulate a basis of negotiations which would not in any way prejudice our ability to give preferences to the Empire. But, though the use of a tariff for securing greater freedom of international trade stood in the very forefront of the election manifestoes of Mr Baldwin and Mr MacDonald, the truth of the matter is that the tariff is being considered purely from the protective point of view and not from the point of view of bargaining. That is to say, the interests of industries competing with imports and not those of the exporters are being considered. We do not read the statement of the Advisory Committee as barring the way entirely to any agreement with foreign countries in the next twelve months, and Mr Runciman's statement that he is prepared to take up this matter as soon as Ottawa is over must be read to mean that he at least does not consider his hands to be tied. But it would have been very much better if, when the Government approved and laid before Parliament the conclusions of the Committee, they had stated in general terms the basis on which they were prepared to make arrangements with foreign countries. The removing of exchange restrictions is actually the most urgent step to enable trade to begin once more to expand, but there can be no real recovery if, when this obstruction is removed, there is revealed behind it a new and equally effective barrier of high tariffs. Unless the Government has a policy in all these matters upon which the solution of the world economic problems depend, we must abandon hope of any important trade revival in the autumn. The longer that the Government delay in stating their policy, the more inclined will the world be to suppose that their silence denotes an absence of constructive purpose.

THE GERMAN STATE ELECTIONS.

It would be idle to deny that, in the five general elections for State Parliaments which were held in Germany last Sunday, the Hitlerites have scored a substantial success. The figures cannot be gainsaid, and unprejudiced observers will accept the fact and save their energies for the task of inquiring why this event has come to pass.

What, then, is the psychological force that has carried the Nazis, in Prussia and these other four German States, not quite into the saddle but only just short of it? The general nature of the impetus is not difficult to understand. In fact, it is something so familiar that there can be very few people left in our post-war world by this time who have not some rudiment of the same feeling

in their own breasts. The rising wave of Hitlerism is a local German exhibition of the general human exasperation with the perverse ineptitude of post-war international statesmanship. This exasperation is a sentiment that we not only understand but share. Yet any disposition to sympathise with Hitlerism on this account will not survive a moment's reflection. For if the world's statesmanship is at fault, what hope is there in a protest which surpasses even orthodox statesmanship in its folly? And if the head and front of the world's present political offending is nationalism, how in the name of reason can anyone seriously propose to remedy the evils of nationalism by a double dose of the same poison? As well try to cure a drunkard by administering brandied port.

No, this Hitlerism offers no cure for Germany's, or the world's, distemper. It is rather one of the most threatening local symptoms of a world-wide malady that is at last apparently on the point of coming to its crisis. The Nazi gains in these German elections of last Sunday can only do one conceivable piece of good; and that is to put the fear of God into the hearts of the statesmen. They may shirk the question of disarmament until after the French elections, and then perhaps postpone it once again by piling it on to the overloaded agenda for Lausanne. But their time of grace—which dates, after all, from November 11, 1918, now thirteen and a half years ago—has now almost run out; and these German election results are only one of many signs and portents which all give the same urgent and unmistakable warning.

As for the bearing of last Sunday's elections upon the internal politics of Germany, the results are unquestionably representative of the state of German political feeling as it actually is at this moment. For one thing, the combined area of the five States in which the elections were held amounts to no less than four-fifths of the total area of the Reich. Prussia alone covers two-thirds of the Reich and comprises most of the key-points: the Ruhr, Berlin, the Ostmark. Hamburg and Bavaria stand for the two extreme poles of German social life: the northern maritime, commercial, Protestant city-state against the southern, inland, agrarian, Catholic ex-kingdom. Anhalt, again, is typical of the tiny principalities that have preserved their separate identities, like flies in amber, as geographical enclaves within the overgrown body-politic of Prussia. Protestant Württemberg is a kind of middle term between North and South. It is evident that, in these five local elections, a fair sample has been taken of German national feeling.

Polling day was marked by manifestations of intense bitterness but by few physical casualties—few, at any rate, according to recent German standards. The credit for this may be partly due to Herr Hitler's determination to follow constitutional methods; but it must also be credited in part to the action—taken by the public authorities on the morrow of the second ballot in the Reich presidential election—when they disbanded Herr Hitler's "brown army." These considerations, however, make Herr Hitler's success last Sunday all the more impressive. The figures are eloquent. In Prussia, the number of Nazi seats in the new Diet will be 162, as against a previous 9; in Bavaria they will be 43 as against 9; in Württemberg, 23 as against 1; in Hamburg, 51 as against 43; in Anhalt, 15 as against 1. It is the Prussian significance can only be understood in relation to the general state of the parties and in the light of Prussian parliamentary procedure.

In Prussia (as likewise in the other four States) one of the smaller factions under the pressure of the bigger groups. Take, for example, the respective fortunes of the three parties which, in Prussia, have hitherto commanded, in alliance, a sufficient majority in the Landtag for the comfortable maintenance of a stable coalition Government. The largest of these three parties, the Social-Democrats, have been reduced from 137 seats to 93; the second largest, the Centrum (i.e., the Catholic Party), only from 71 to 67; while the smallest, namely

"the State Party" (the heir and assign of the former Democratic Party) has been virtually annihilated by its reduction from 22 seats to 2. The Christian Socialists, again, have dropped from 4 seats to 2, while cranks like the German Faction, the Economic Party and the Independents, whose seats formerly aggregated 48, have been totally wiped out. In the new Diet, they will not have one single seat among them. (Only those super-crank, the Hanoverians, have increased their representation from nought to one). Most striking portent of all is the whitening down of the old humdrum parties of the Right. The German Nationalists have shrunk from 71 seats to 31, and the People's Party from 40 to 7. In fact, the Hitlerites have poached the most heavily upon the preserves of their nearest neighbours—though they have, of course, nibbled away some support from every other party in the field with the exception of the Communists. Of the non-Hitlerite parties, the Communists alone, apart from the semi-farical Hanoverians, have added to their strength, and their gains are not sensational. They have merely raised their number of seats to 57 from 48.

What is the upshot of these figures? In the new Prussian Landtag, there will be four parties that will count; and these, in order of numerical strength, will be the Nazis, the Social-Democrats, the Centre and the Communists. If the new Landtag divides into the old coalition camp on the one side and the Nazis—with the Nationalists and the People's Party now in tow—on the other, then the Communists will be in a position numerically to hold the balance; for the old coalition forces will muster 162, and the Nazis and their satellites 200; and the 57 Communists will thus be able to place either of these two possible alliances in a minority. What practical use, however, will the Communists be able to make of this power, since conscientious scruples debar them from contracting political alliances, even if any other group were willing to have them for partners? The Communists can only obstruct, they cannot govern; and it looks as though it were not the Communists, but the Centre, that will find themselves, after all, in the key-position. Their very standing-ground in the middle gives the Centre the potential command, and their trifling loss of four seats still leaves them sufficient "mass of manoeuvre" to remain, strategically, masters of the situation. The strength of the Centre is that their co-operation is indispensable for the formation of any conceivable coalition Government; and though, in the new Landtag, their old alliance with the Social-Democrats and the State Party will no longer command a majority, there is one possible alternative coalition, commanding a substantial majority, if—and only if—the Centre Party could be induced to form it; and this, of course, is a coalition between the Centre and—the Nazis!

Will the Hitlerites in the new Prussian Landtag purchase office by going into coalition with the Centre on the Centre's terms? Or will they insist intransigently upon holding all the important ministries and settling all the important points of policy (supposing they can lay hands on a policy, for at present they have none!)? Judging by their recent tactics, intransigence will be their cue; and then, under the present rules of Prussian parliamentary procedure, we shall see the *ci-devant* coalition Government resume, after its resignation in default of any alternative coalition commanding a majority. This would mean a virtual stoppage of the Parliamentary machine. And since, in a State of the size and importance and complexity of Prussia, the work of administration and legislation simply must go on, this might lead very soon to some kind of dictatorial intervention on the part of the Government of the Reich. Seeing that the new Landtag will not meet, apparently, until June 20th, the parties have eight weeks' leisure for considering every possible permutation and combination; and by then the Lausanne Conference will be upon them and us. Is June, 1932, destined to be the month in which the world crisis will come to a head?

OUR PROTECTIVE TARIFF.

THE Additional Import Duties Order, together with the Report* of the Advisory Committee, lays open so many points of attack that it is a matter of embarrassment for the critic to choose at which point to aim his first quiver full of arrows. But, before he shoots at all, he will do well to pause and consider how this amazing target came to be placed before him. The story of the way in which the country has been manoeuvred into protection is childishly simple. Last September the Government appealed for a mandate to apply any emergency measures (including tariffs) which they might deem necessary to save the pound and "correct the balance of payments." But at the same time explicit pledges were given that, before tariffs were permanently imposed, there would be full and careful examination of all the interests involved, including those of the consumer. Political pressure drove the Cabinet speedily into the tariff field. Mr Runciman and Sir John Gilmour jumped in with schedules of prohibitive duties, which were defended as being purely temporary "crisis" expedients. Next the exigencies of the Exchange were paraded as the reason for the introduction of a 10 per cent. revenue tariff. Then the wheat grower was propitiated with a quota—which is protection trying hard to disguise itself. But ravening political wolves were in no way satisfied. All this was only a morsel—they wanted a meal; and here it is, a protectionist pottage, full and tasty. The Pound no longer gives trouble except to those who wish to keep it from rising; no one pretends that the position of the balance of payments remains critical; the revenue argument is invalid so long as the Government shirk the task of stern retrenchment. Yet here we have, thrown at the country, without discussion and without inquiry, a frankly protectionist tariff, ranging from medium to high in its incidence, extensive in its scope, permanent in its design and containing all the insidious germs of growth and expansion. It is one of the most astounding and deplorable chapters in our political history.

Those who examine the analysis of the schedules will probably reach the conclusion that the object of our tariff framers is not so much to provide revenue as to shut out goods competing with home products, and to do it by imposing duties which will equal or exceed the difference in the cost of production at home and abroad. It is the famous "compensating" principle which has led to all the high tariffs of the world, and when carried to its logical conclusion puts an end to all exchange of goods. The new Orders will certainly apply very drastically the "slimming" process to both sides of the trade account both of Britain and her foreign customers. The result cannot fail to be substantial and disastrous to some already harassed European countries, for, as a glance at our analysis shows, the schedules add gravely to the overwhelming odds against which many countries, all of them potentially our customers, many of them actually our debtors, are struggling to keep in existence the export surplus upon which their stability depends. Germany and Belgium appear to be the hardest hit. At home a grave and a dual blow is struck at our export trades; for not only is the purchasing power of our foreign customers substantially damaged, but the cost of exports will ir

* "Import Duties." Recommendations of the Import Duties Advisory Committee and Additional Import Duties (No. 1) Order 1932. H.M. Stationery Office. Cmd. 4066. Price 6d. net.

some cases be seriously raised—particularly in the absence of any provision for rebates on the materials used directly or indirectly in the manufacture of goods for export. This point have been raised in the House of Commons this week, a promise has been given to deal with the matter in the Finance Bill. The resulting proposals will require careful scrutiny, and it is indeed astonishing that a rebate system was not made an integral part of the original tariff arrangements. The need for a rebate is particularly glaring in the case of steel, where the position created by the topsy-turvy imposition of 33½ per cent. on imported "semis" and a lesser duty of 20 per cent. on finished goods is so impractical that it will certainly prove temporary. The new steel tariff is an outstanding example of the way in which political exigencies have triumphed over economic expediency. Several committees, as well as Mr Baldwin's last Government, have concluded that the introduction of a steel tariff was fraught with such far-reaching influences affecting so many important branches of national life that prolonged study was essential before any scientific scheme could be devised with proper regard to broader national inferences. To-day a high steel tariff is imposed without further inquiry, and in a form which even the most enthusiastic protectionist could not call scientific. As we have more than once shown in the *Economist*, the number of workers employed in industries using steel in some form as a raw material is nearly ten times as great as the number employed in the steel-producing industries themselves; on these consuming industries the new imposts cannot fail to have far-reaching effects.

The establishment of the protective as against the revenue aim in framing the tariff is of grave significance in many ways. It means that henceforth any industry, however inefficient (no distinction is made by the tariff between the sheep and the goats), will feel itself aggrieved unless it is afforded protection of any height necessary to exclude the competing goods of foreign producers. It will raise its voice and bring pressure to bear through political channels; and join in the process of log-rolling which so notoriously blots the public life of all high tariff countries. Moreover, the mere expectation now given to the inefficient that they will be bolstered up by State action is the greatest obstacle that could have been placed in the path of sound and efficient reorganisation, in the pursuit of which many British industries are sadly behind the times. Then, again, what of the poor consumer whose interests were to be so carefully safeguarded? We can only assume that the Chancellor of the Exchequer, who actually claimed in so many words in a broadcast speech last week that the foreigner pays all the duties, believes that the consumer needs no guarding. The most cursory glance at the experience of other tariff nations would shatter this belief into smithereens.

What explanation, then, apart from the sordid one of party politics—which were supposed to be put aside by the formation of the National Government—is there for this reckless plunge into the uncharted waters of fiscal revolution? There is one which has been repeatedly advanced by both Mr Baldwin and Mr Runciman, and it is that duties are to be used for bargaining negotiations by which the British Government hope to force down the tariff levels of foreign countries. But this explanation reads strangely side by side with the statement of the Advisory Committee that they do not propose to recommend the lowering of any duties within the next twelve months. If the Government allows its hands to be tied in the matter of tariff negotiations for the next crucial year, during which, in the absence of an increasing trade volume which can only be brought about by the lifting of present restrictions, and can only be initiated and inspired by Great Britain, the spectre of ruin and default will stalk even more victoriously around the world.

As for the actual scope of the schedules, we have made as close an analysis as the nature of the Foreign Trade Returns permits of the amount of trade in 1930 which falls under the various rates of duty and have set out the results in full on a later page. The summarised results of the analysis enable us to show how much trade falls under the original 10 per cent. import duty and how much

under each rate of the new order. The figures exclude the newly-imposed tea duty:—

IMPORTS FROM FOREIGN COUNTRIES IN 1930, SHOWING INCIDENCE OF NEW PROTECTIVE DUTIES. (In thousand £.)					
Rate of New Duty.	Food, Drink and Tobacco, Class I.	Raw Materials and Articles mainly manufactured, Class II.	Articles wholly or mainly manufactured, Class III.	Animals not for Food, Class IV.	Total.
10 per cent.	148,841	54,880	62,267	81	266,069
15 "	...	...	15,775	...	15,775
20 "	4,276	...	99,230	...	103,506
25 "	1,077	...	4,157	...	5,234
30 "	128	...	2,827	...	2,955
33½ "	...	...	15,764	...	15,764
Total	154,322	54,880	200,020	81	409,303

In a second table we have combined these figures in a general analysis of our total imports in 1930, which amounted in all to £1,036 millions—of which £736 millions came from foreign countries and £300 millions from the Empire—in order to give a general perspective of our present tariff situation:—

ANALYSIS OF TOTAL IMPORTS OF 1930 IN ACCORDANCE WITH PRESENT TAXATION. (In thousand £.)				
	Free List.	Old Revenue Duties.*	Old Protective Duties.	New Protective Duties.
Imports from foreign countries:—				
Food, &c.	87,664	55,036	...	154,322
Materials	106,777	...	...	54,880
Manufactures	3,528	61,063	12,040	200,020
Animals	359	...	...	81
Total	198,328	116,099	12,040	409,303
Imports from Empire:—				
Food, &c.	61,754	54,406	...	Exempt
Materials	68,988	...	...	61,934
Manufactures	3,495	1,257	1,036	19,814
Animals	2,482	...	...	24,979
Total	136,719	55,663	1,036	758
Total Imports	335,047	171,762	13,076	516,788

* Including tea—£4,507,767 from foreign countries subject to new duty of 4d. per lb. and £29,569,487 from the Empire subject to 2d. per lb.

Reading these two tables together it will be seen that while about £335 millions are covered by the free list, and £172 millions (if tea be excluded) are subject to "old revenue duties," which include the petrol and silk duties as well as duties on drink and tobacco, nearly £410 millions of imports from foreign countries have become subject to new protective duties. Of these, £266 millions are still subject to the general 10 per cent. duty. But of these only £62 millions fall within the category of manufactured or partly manufactured goods—half of which falls in the 20 per cent. group. Empire products that would be taxed under the new duties—but for the Empire exemption—total £107 millions in all, of which £82 millions fall within the category of food and raw materials and £25 millions of manufactures.

It may be claimed that our statistical examination shows that Britain has been placed in the medium level tariff class and has not yet achieved the dignity of membership of the highest tariff section. But it is a sombre fact to be remembered to-day that those who now occupy the highest class began with low or moderate levels of duties; unfortunately, the way in which our own tariff has been imposed and the structure of the machinery by which it is to be administered give rise to the most anxious fears that history will repeat itself in the case of Britain.

BRITISH INDUSTRIAL PROFITS.—I.

For reasons explained in our issue of April 23rd, we have conducted an inquiry into the profits since 1924 of some 700 British companies, a list which excludes investment trusts and concerns controlling or controlled by others. We have grouped the results under three heads:—(1) Manufacturing and Mining; (2) Transport, Distribution and Services; and (3) Companies operating overseas.

In the case of each industry the net profits (i.e., profits minus losses of the year 1924) are taken as a base. These

represent profits before the deduction of debenture interest or taxation. In cases where losses have been made these are shown separately, expressed in the same units as the figures of profits; thus the one can be subtracted from the other if desired. The figures of "undistributed profits" are given in the same units as the figures of total profits, that is to say, an industry showing for 1924 a profit of 100 units and undistributed profits of 20 units is one in which 20 per cent. of profits were put to reserve in that year. If, in some later year, the profits rise to 120 units, and the undistributed profits rise to 30 units, we can say that the industry is now putting back into its businesses 25 per cent. of its profits, and that the amount so saved has risen 50 per cent. from 20 units to 30. This method, in fact, enables us to compare in each industry the amount of "undistributed profits" from year to year, which can only be done indirectly if we express them in the form of percentages of total profits. Unfortunately, there is no uniformity between companies in the principles of charging depreciation. Most of the figures of net profit as returned seem to be struck after making some provision for depreciation, but not an entirely full provision. Of the "undistributed profits," therefore, some part would appear to be properly attributable to depreciation and not to represent any addition to the companies' assets.

As has been suggested above, trading periods of different companies come to an end at different dates, and it is important to define what is meant by the different years. In this investigation the income tax year has been used. This method of reckoning has the advantage that the weighted average of the terminal dates of companies thus selected is within a few days of December 31st. Further, this method nearly accords with the method used in the Census of Production.

The results for our first group are now given below. As has been mentioned above, the estimated profits and losses in each industry are shown separately, except for 1931, for which year it is impossible as yet to disentangle the estimates. The figures of undistributed profits are shown immediately below the figures of total profits. A minus sign in this case indicates that the industry has been drawing on reserves or diminishing its assets in some other way. Where the figures for total profits are divided so as to show separately profit and loss, the figures for undistributed profits are also divided, the companies which make losses being analysed separately. These companies are bound to draw upon assets in some way, at least to the extent of their annual loss, and more if they pay any dividends or debenture interest. But in any case we require some measure of the sacrifice of assets by each industry whether in the form of losses or of drawing upon reserves to pay dividends, and such quantities should be deducted from the undistributed profits placed to reserve by the more prosperous companies in the same industry. It sometimes happens, as will be seen, that an industry which is not making losses nevertheless has no net undistributed profits, but on balance draws upon its reserves to pay dividends.

The results presented in this form show some expected features, and some unexpected. Heavy and systematic losses, continued over a period of years, are shown by the textile industries, iron and steel, coal and (rather unexpectedly) the motor industry. For 1930, however, one or two industries showed heavy losses, which had not before, and although a full analysis of the 1931 figures is not yet possible, it is clear that in most cases these losses were repeated. For most industries the high-water mark of profits was in 1928 or 1929. In practically every industry there was a fall between 1929 and 1930, and a heavier fall between 1930 and 1931. This makes all the more remarkable the figures for coal-mining, which shows profits practically as great in 1930 as in 1929, with a comparatively small fall between 1930 and 1931, leaving the figure for the later year considerably higher than for 1928. The Coal Mines Act, and the partial measures of cartellisation under private auspices which preceded it, appear to have achieved their purpose. For both cotton and wool 1931 shows considerably better results than 1930. The largest of the "other textile" trades, silk and rayon, has enjoyed since 1928 much poorer fortunes than in the earlier years; this is clearly reflected in the figures.

I. MANUFACTURE AND MINING.

(Profits (a) less losses (b) in 1924 = 100.)

(a) Profits. (b) Losses. (c) Profits less dividends (i.e., net addition to assets) of companies making profits. (d) Losses plus dividends (i.e., net drawing upon assets) of companies making losses.

* Rubber, musical and scientific instruments and miscellaneous manufacture.

The prosperity of the breweries and distilleries has been steady from year to year, and there are no very surprising changes in the index number. The best year in this trade was 1930; and there was a substantial drop in profits for 1931. The other food, drink and tobacco trades show one of the most sharply rising figures, with a very small drop during the last two years. The profits of the clothing trades, and of the boot and shoe trades, move in rather a similar manner. Both show a maximum, in this case in 1927; and not so serious a drop as some industries in 1929-31. In iron and steel and engineering the maximum in 1927 is most readily explained as a result of the reaction from the stoppage of 1926. In electrical engineering, on the other hand, 1927 appears to have been a comparatively bad year. Probably this is due to the fact that the work of the Central Electricity Board only got properly under way in 1928. The movement of profits in the motor trade can best be described by saying that it shows in exaggerated form the general tendencies of the profits of industry as a whole.

The paper and printing trades, in which production and employment underwent a big increase during this period, showed a comparatively moderate increase in profits. The Stock Exchange boom of 1928 was most marked in industries which are included in the table under Miscellaneous Manufactures, but the profits of this group of industries are more marked for the severity of their fall since 1929 than for any very spectacular rise in the earlier years. The group of industries included in Class S, whose fortunes are bound up with the activity of the building and contracting trades (including roadmaking) show a remarkable violence of movement, both upwards and downwards. The sheltered position of the gas, water and electricity industries requires no comment. The electrical generation industry even contrived to increase its profits in 1931.

The total figures for manufacture and mining as a whole are perhaps not unexpected. Distinct falls are noticeable both for 1923-4 and 1924-5, due partly to the restoration of Germany as an industrial competitor, and partly to the return to gold. After the damage of 1926, and the reaction of 1927, a rising tendency, however, set in, leading to a culmination in 1929, followed by two falls of equal magnitude for 1929-30 and 1930-31.

It is interesting to compare these figures with the Board of Trade index of the volume of industrial production:—

	1924.	1927.	1928.	1929.	1930.	1931.
Net profits.....	100	109	101	109	91	73
Volume of production.....	100	106.8	105.5	111.8	103.3	93.7
Profits per unit of production.....	100	97½	96	97½	88	78

The interesting point about the calculation made in the last line is that profits per unit of production fell so comparatively little up to 1929, during a period of generally falling prices. Between 1924 and 1929 the prices of industrial finished goods, as measured by export values, fell 16 per cent. The fact that profits per unit of output fell so little suggests that costs of production were very considerably reduced. This was due partly to a reduction of labour costs owing to increasing output per head and partly to a greater relative fall in the prices of raw materials than in the prices of finished goods.

Turning now to the figures of "undistributed profits," we see first in the total figures that the rise in profits up to 1929 was used to increase dividends, the amount of undistributed profits falling slightly from 25 units net in 1924 to 23 in 1929. This figure falls to 10 in 1930 and 7 in 1931, as a result partly of diminished allocations to reserve by companies whose profits have fallen, and partly of drafts upon assets to meet losses. But it will be seen that for the period 1930-31 almost the whole burden of falling profits fell upon dividends, companies apparently making an effort to keep their placings to reserve up to the 1930 level.

When we look at the figures of undistributed profits for different industries we find wide diversities. In the textile trades such companies as were not making losses can be seen to be tending more and more to pay out the whole of their profits as dividends. In the food, drink and tobacco trades there has been a good saving made from the ample

profits earned, and a distinctly smaller provision in the clothing trades. The heavy iron and steel industry has apparently made strenuous efforts to provide itself with fresh capital out of undistributed profits—probably because it has found difficulty in raising capital any other way. The engineering trades have made less provision, but the motor and electrical trades have saved a considerable proportion of their profits. The increasing production of the printing and paper trades, commented on above, has been partly financed by considerable undistributed profits.

It remains to comment on the three public utility industries. Of these, gas and water appear to have reached equilibrium, and to have little use for any large amount of saving; but the expansion of the electrical generation industry appears to be financed out of its own savings to a considerable though perhaps decreasing extent.

THE TARIFF SCHEDULES.

On the opposite page we give a detailed analysis of the amount of imports covered by the new schedule of duties under the Additional Import Duties (No. 1) Order, in which we have indicated the principal source of supply. Owing to the fact that the Trade Returns do not in all cases give itemised figures corresponding to the descriptions in the new Order, the figures must be regarded as provisional in the absence of any official calculation. We believe, however, that the margin of error is small. Owing to the fact that we have taken total and not retained imports the figures may in some cases be a little in excess of those to which the duties would have applied. But the trade returns show that the re-export of imported manufactures is not large. Our readers will appreciate how very important these figures are for a proper understanding of the incidence of the new tariff. It is very desirable that the Government should present to Parliament an official analysis on these lines at the earliest possible date.

CAPITAL FOR BRITISH INDUSTRY.

A QUESTION of considerable importance, which has recently been driven into the background by more absorbing day-to-day developments in the crisis of international finance, is that of the provision of long-term and medium-term capital to British industry. The Macmillan Committee, in their report last year, expressed fairly definite views on the subject. They agreed that the machinery of the City of London might be more usefully co-ordinated with British industry, and they accepted the very generally held view that the City is more highly organised to provide capital to foreign countries than to British industry. In justice to the City, it is only right to add their further opinion that this is due in part to the historical organisation of British industry and to its traditional desire to remain independent of banking control, and to point out that as the proportion of our savings invested abroad has fallen, British industry has in recent years made far more use of the London capital market than ever before. But there is still room for further evolution.

Opinion, both on the Macmillan Committee and in financial circles generally, is inclined to reject the Continental precedent under which the banks are accustomed to make long-term loans or even to take definite participations in industrial undertakings, with which they may be partly responsible for their conduct.

The widespread Continental banking difficulties of the past year have not unnaturally nor without good reason stiffened the British view that such practice is exposed to serious objections. Indeed, the fact that Great Britain is banking failures or difficulties of a grave character is a very strong argument for leaving untouched the present

(Continued on page 958.)

arrangement, under which in theory the British banker contents himself with supplying industry with short-term capital, granted under stringent conditions and repayable nominally within six months. On the other hand, quite apart from the needs of industry, British banks have repeatedly been forced by the continuance of the trade depression to renew and expand their industrial advances, so that in practice the distinction between the British and Continental banking attitude towards industry has in many cases become somewhat blurred.

In one sense, therefore, the need of British industry for freer access to long-term capital coincides with the need of British banking to liquidate its outstanding frozen loans, so that in his own interest the banker should be devoting serious study to this problem. One view that commands a certain measure of support is that British banks should follow the American plan of setting up security affiliates or subsidiary undertakings charged with the duty of mobilising and providing for their industrial clients such capital as is needed. Such a view, for example, was expressed a few weeks ago by Professor Clay, who pointed his argument by emphasising the fact that the big banking amalgamations of the past fifteen years had had the effect of directing the flow of capital to London away from provincial centres, where it would have been invested in local industries. This view received a measure of endorsement in our columns at the time.

Before proceeding further, however, it is necessary to study all the implications and consequences of the American system of security affiliates; and we are therefore glad to publish, in another page in this issue, a carefully considered letter of warning from an American banker. The fundamental danger to which he calls attention is the divergence of duty between the banker and the company promoter. The banker, whose first duty is to his depositors, must view every proposition put before him with an almost jaundiced eye. He must take a pessimistic view of the ability of his customers to meet their engagements, not only at the time that he grants a loan, but during the whole course of its currency. He must always look on the worst side of things. The promoter's attitude is rather different. It is true that when a new scheme is laid before him he must examine it critically, and satisfy himself to the full both as to its chances of success and as to the character and ability of those behind it. Nevertheless, his function is to persuade people, not to put money into a venture simply in order to get it out again in six months' time, but to retain it there as a permanent and remunerative investment. Hence, once he has satisfied himself as to the soundness of a scheme—and so far he is at one with the banker—he must believe in it wholeheartedly, take an optimistic view of its prospects, and give the public the impression that it is the best thing on offer in which they can invest their money.

To recall a simile that appeared in a novel many years ago, the banker may be compared to the austere church dignitary whose apron hung in vertical folds. The promoter is like his more festive brother whose apron ran in horizontal creases. As our American correspondent points out, it has not always proved possible to combine the two temperaments without detriment to the soundness of banking practice, and one serious consequence recently visible in the United States has been the impairment of public confidence in American banking as a result of the public's fingers being badly burnt in contact with the banks' security affiliations. It is highly desirable that a similar result should be avoided in England, and in designing any new mechanism intended to meet the needs of British industry, realisation of this danger should be borne prominently in mind.

In all probability the Macmillan Committee were not unmindful of this consideration, for their suggestions were of a very tentative character, and were in the main confined to the separation of the Bankers' Industrial Development Company from its original close relation with the Bank of England and its reconstruction as a private, self-supporting institution. They also hinted at the establishment of additional undertakings which might usefully specialise in definite industries, but there was no suggestion that each bank should establish its own subsidiary for

this purpose. Indeed, the Committee were doubtful "whether the banks can with advantage depart from their traditional banking sphere."

Two lines of approach to the problem suggest themselves. Notwithstanding a further warning by the Macmillan report that the great private houses cannot combine the high degree of liquidity necessitated by the conduct of their acceptance business with the serious liabilities that can arise from industrial financing, it is not easy to see why a house that has for long successfully assumed the risks arising out of the financing of foreign Government and public utilities could not adjust its technique so that it could safely assume what might well be lesser risks in the case of financing home industrial concerns of standing. The other possibility is that of an adaptation of the investment trust principle. The Macmillan Committee's view that existing investment trust companies do not look with favour on small issues lacking a free market may be correct, but there seems no justifiable reason why they should not divert at least a small proportion of their funds to this valuable end, especially as a large number of small businesses could be adequately financed at little aggregate cost. Moreover, there should be no difficulty in forming new houses, deriving the bulk of these funds from permanent share and debenture capital, whose function would be much the same as the security affiliates of American banks. It may well be that such companies should be entirely independent of the banks, but there would be certain advantages in their having the banking world adequately represented on their boards.

Admittedly, if British industry is to obtain fresh capital, new machinery is not enough. Such conditions must also be restored as will enable it to earn a profit. For the crux of the immediate problem is that under present conditions the investor is not confident that British industry will give him either security or an adequate return on his money. So long as he remains in that frame of mind the improvement and extension of the machinery of investment can avail little; but this is in no sense an argument against the installation of this new machinery. In fact, to-day is a singularly opportune moment at which to initiate such a task, for the simple reason that no unduly heavy demands are likely to be made upon the machinery until conditions improve, by which time it should be in working order.

Notes of the Week.

A Government Reverse.—The Government sustained their first by-election defeat at Wakefield at the end of last week. There is nothing sensational about the result. Traditionally, Wakefield is not a seat which a Conservative expects to win in a straight fight. Last September's Conservative majority of 4,107 was small, as majorities went in that moment of hysteria; and at the by-election the Socialist majority was the narrow one of 344. Moreover, on this occasion the Socialist candidate was an ex-Minister and a doughty election campaigner. Nevertheless, the result possesses significance. It should cause the Government to reflect upon the degree to which the result was affected by the introduction of a discouraging "national" Governments are immortal. There is another point of view from which the Wakefield result may be welcomed. By the return of Mr Greenwood it reinforces the debating strength of a front Opposition bench which at present entirely inadequately represents opposition opinion in the country. A few more Wakefields bringing about the return to the House of Commons of some of the authoritative spokesmen of anti-Government views would do no harm at all to the Government or to the country.

Liberal Ministers and the Tariffs.—The first statement made by the Liberal Ministers since the publication of the new tariff Orders was made in a speech delivered by Sir Herbert Samuel at the National Liberal Club on Tuesday. Sir Herbert availed himself to the full of his

liberty to criticise, and indeed riddled the new tariffs with sound and acute analysis. But almost in the same breath he made a laboured defence of the decision of the Liberal Ministers to remain inside the Government. Sir Herbert argued that so long as Liberal Ministers were at one with their colleagues over such questions as disarmament, India and Ireland, and also possessed the freedom to express their Free Trade views, they considered it their duty to retain their posts. This is not very convincing. In the first place, events have shown that Liberal Ministers have had very little power to influence the Government's tariff policy in the direction of moderation. In the second, the Protectionist programme of the Government must be taken as an outward and visible sign of a tendency for the policy of the Government to develop along lines of increasingly narrow nationalism. By staying in the Cabinet Sir Herbert and his colleagues are running certain very definite risks. They are in danger of maintaining an appearance of unity when unity no longer exists. They are depriving the forces in favour of a Liberal economic policy both of a rallying point and of leadership. They can hardly escape a share of the responsibility for a general policy which shows every sign of developing on lines repugnant to every shade of Liberal opinion. Conservatives entirely dominate both the Cabinet and the House of Commons. Conservative policy therefore will inevitably prevail. The only definite policy so far revealed is that of protection. Unless the Government quickly shows by its acts or its public declarations that it has a policy on the great issues raised in our first article it is difficult to see any advantage in the retention of their posts by the Liberal leaders.

Marking Time at Geneva.—The Disarmament Conference, since it started operations at the beginning of February, has been executing a series of long and complicated evolutions: "left incline," "right incline," "stand at ease," and even "three paces to the rear,"—in fact, almost anything rather than "forward, march." Last week, however, it at last found itself up against its objective; and, finding itself there, it has decided to mark time for ten days in order to have the French elections behind it before it goes, at last, into action. Probably these are prudent tactics. Yet the Conference must not flinch from acting as soon as the French elections are over, even if these elections do not result in the hoped-for *détente*. In view of the fact that M. Tardieu was apparently just as much in favour of postponement as were the advocates of the anti-Tardieu thesis, it would obviously be unwise to place our hopes too high. In any case, the postponement has been agreed upon, and it remains to sum up the situation as it now stands. Broadly, the principle of quantitative handling of the disarmament problem is under eclipse, and the principle of quantitative handling is in the ascendant. France and Japan struck a blow at the quantitative principle on the 19th, when they obtained from the several committees of the Conference a reaffirmation of the ruling, contained in Article VIII. of the Covenant, that, in formulating plans for reduction, the geographical situation and circumstances of each State shall be taken into account. On the other hand, the strength of the current which is now flowing in the direction of qualitative disarmament was shown by the extent of the support which was given to the motion proposed by Sir John Simon on the 20th. This motion was that "without prejudice to other proposals which fall to be discussed under later heads of the agenda, the Conference declares its approval of the principle of qualitative disarmament; that is, the selection of certain classes or descriptions of weapons with a view to prohibiting by international convention their possession or use by any State." The British delegate was tactically in a strong position, because the practical possibility of dividing armaments into an offensive and a defensive category had already been assumed in M. Tardieu's proposal for placing certain categories of national armaments at the disposal of the League. Accordingly, M. Paul Boncour, in opposing Sir John Simon's resolution, was reduced to basing his objection on the ground that it seemed to exclude discussion

of the Tardieu Plan. On the 22nd, Sir John Simon responded by proposing an amendment to his own resolution, in which the internationalisation of certain categories of armaments was now introduced as an alternative to prohibition. The amended resolution was accepted by France and her associates; and the technical committees of the Conference on land, sea and air armaments have been instructed to stigmatise the weapons which, in their respective domains, are conspicuously efficacious for offence and conspicuously threatening to the civil population. Thus the principle of qualitative handling seems to be established; but we must not rate this achievement too high, for the really vital question is whether the offensive armaments, when they have been duly branded, are to be dealt with by abolition or by internationalisation. As to the respective merits of these two alternative and rival methods which are now in the field, there can surely be no question. The current experience of the Far Eastern crisis is in itself decisive. Supposing that M. Tardieu's plan were already in force, by international convention, does anyone really believe that Japan would have refrained from using the offensive weapons in her national armoury as instruments of her national policy? Or that the neutral Powers would have placed their offensive weapons at the League's disposal for bringing Japan to heel? In the light of our actual experience in this crisis, it is surely plain that abolition, not internationalisation, is the genuinely practicable course.

The Situation in Manchuria.—Nemesis is overtaking the Japanese Army more rapidly than could have been expected. When the Japanese High Command planned the *coup* which it executed with such efficiency on September 18th-19th of last year, it evidently calculated that this scientifically aimed stroke would be a knock-out blow. Marshal Chang Hsueh-liang's Government would be destroyed, his army put permanently out of action, and the 27 million Chinese inhabitants of Manchuria would be convinced of the necessity of bowing, without further resistance, to Japanese *force majeure*. To-day, some seven months after the execution of the Japanese *coup*, it is evident that the first two Japanese calculations were right, but that the third was a mistake. Chinese public organisation in Manchuria has proved frail—as frail as the Japanese expected—but the converse of this feebleness of Chinese public organisation is the vitality and spontaneity of Chinese private mass action. This has been proved already by the efficacy of the anti-Japanese boycott throughout China, and it is being proved again now by the progress of the anti-Japanese guerilla movement in Manchuria itself. At the moment when the League of Nations Commission of Inquiry has arrived in Manchuria, the Japanese authorities are compelled to admit that they cannot guarantee the safety of the Commission outside the Japanese railway zone. The admission cuts deep; for if the Japanese Army, outside the Japanese zone, cannot protect the Lytton Commission, then presumably it cannot protect Japanese nationals there either, and, if it cannot, then the sole excuse which the Japanese Government has ever put forward for keeping its troops outside its own zone would seem to be stultified. The effectiveness of the Chinese guerilla warfare in Manchuria is not now denied by the Japanese themselves. The mountainous eastern part of Kirin

Province, which marches with Japanese territory in Korea and with Soviet territory in the Maritime Province, is now in the insurgents' hands. The Chinese Eastern Railway has been cut not more than 80 miles east of Harbin itself; and the complacency of the Manchurian puppet Government towards the Japanese does not go the length of risking life and limb. While Mr P'u is ready enough to oblige the Japanese Foreign Office by refusing its formal request that he should grant a safe-conduct to the Lytton Commission's Chinese assessor, "the Manchukuo forces display a lack of fighting spirit"; and the Japanese are now facing the fact that they will have to do the job themselves with their own blood and treasure. The Japanese General Tamon has stated frankly, in an interview given to the Press, that to "clean up" Northern Manchuria would take the Japanese Army two or three years, and would require a hundred thousand troops. This is the prospect with which Japan is now faced. And Japanese propaganda is embarking on a forlorn hope if it expects to divert our attention and win our sympathies by tales of Russian preparations for aggression. The aggressor in Northern Manchuria is not difficult to identify, and it is not Russia, but Japan, that answers to the description.

The Arrests at Delhi.—In the present trial of strength between the Government of India and Congress, the Congress has gained another tactical victory by compelling the Government to have recourse, once again, to the invidious and inconclusive procedure of making mass arrests. Having announced its intention of holding a special session in Delhi, and having elicited the expected official veto, the Indian Nationalists have successfully played the game of running the gauntlet of the police in order to compel the police to catch them. At the end of last week, when the delegates were converging upon Delhi from all parts of India, as many as 200 were intercepted by the police and arrested at that stage. The prisoners taken in the act of entering Delhi included Mrs Sarojni Naidu and Pundit Malaviya; but, of course, such conspicuous personalities were easy game. The majority of the delegates chosen for the occasion appear to have been nonentities of whom the police had no previous record; and some 500 of these are reported to have penetrated the police cordon and made their way into the city. On Saturday and Sunday last, the Forty-Seventh Session of the Congress was formally inaugurated in Delhi, five resolutions were adopted, and a number of demonstrations were carried out in public places before the police were able to put a stop to the proceedings by arresting some 400 more people. These arrests were not effected without lathi charges, and a dramatic exhibition of passive resistance was given by a party of a hundred Sikhs. Thus the Government of India has been compelled once more to take action with its left hand which militates against what its right hand is attempting to perform. The dual policy of simultaneous administrative repression and constitutional reform is proving harder and harder to carry out. In fact, time is on the *saboteurs'* side. The present situation was virtually decreed by the breach between the Viceroy and Mr Gandhi. At that time, it is possible that Mr Gandhi already saw as far ahead as the present stage. We wonder whether Lord Willingdon and his official advisers were so long-sighted.

The Exchange Equalisation Account.—The Financial Resolution antecedent to the establishment of the Exchange Equalisation Account, which was passed by the House of Commons on Monday, adds little further information as to the nature and scope of the fund. Its purpose is to strengthen the currency and to check undue fluctuations in the exchange value of sterling. The Treasury is to have power to transfer to it all or any of the assets of the Exchange Account, to issue to it sums up to an aggregate of £150 millions out of the Consolidated Fund, and to raise money in any way authorised by the relevant section of the War Loan Act, 1919; the Bank of England is also authorised to advance to the Treasury any money which the Treasury are so authorised to raise. Transfers between the fund and the Issue Department of

the Bank of England can be made for all or any of the following purposes:—(a) to compensate for any loss or gain to the Issue Department in connection with changes in the value of any foreign currency assets held by it due to variation in rates of exchange; (b) on the purchase or sale of any gold by the Issue Department to compensate for any difference between the value of the gold as required to be calculated for the purpose of the accounts of the Bank and the price in fact paid or realised therefor; (c) to make good to the Issue Department any loss, not exceeding £8,000,000, sustained in connection with the foreign credits raised by the Bank last August. It is further intended to make it clear beyond doubt that the Bank is legally entitled to hold foreign currency assets in the Issue Department. During the course of the debate on the resolution Major Elliot indicated that the fund could be expended up to a limit of £175 millions, as the existing assets of the Exchange Account amount to £25 millions. He was careful to point out that the fund would be raised and controlled under the authority of the Treasury, but it is clear from a brief perusal of the Bank return that the Bank's own resources would not permit it to operate on the scale envisaged by the limits of the fund, for outside the Issue Department, in which the Treasury as well as the Bank has an interest, the Bank's total resources are little over £100 millions. In any case, the point is of little practical importance, for there is no doubt that in this, as in other matters, the Treasury will take all necessary decisions but will listen to the advice of the Bank. To some extent participants in the debate surrounded the scheme with much needless mystery. The salient point is very simple. Both the well-being of the country, and—in a narrower sphere—the assets of the Issue Department are exposed to exchange fluctuations which in theory have no limit. As a defence against these it is necessary to have this big fund in existence, and it is essential that this fund should be in the hands of the Treasury, for as Mr Chamberlain warned the House, its operation may involve heavy and unforeseen loss of a magnitude which neither the Bank of England nor any other single institution could endure. Without this resolution and the relevant clause in the Finance Bill, the Treasury has no powers to borrow for such a purpose, and the beginning and end of the scheme is to confer these powers upon the Treasury. It may be taken for granted that the exercise of these powers will be exercised in such a manner as to cause no more disturbance to the money market than is experienced when the Treasury borrows to meet a passing gap between revenue and expenditure or to pay a War Loan dividend or for any of the thousand and one purposes for which it has to borrow to-day. It is unlikely that any specific borrowing operation will take place solely for the purpose of financing the fund.

The Budget Debates.—The Budget debates have on the whole run a normal course. As was to be expected, considerable disappointment was evinced at the absence of any reduction in the beer duty, and at one time it looked as if the malcontents might press the matter to a division. There were the usual general pleas for economy, but these were either couched in very general terms or else centred upon minor items of expenditure whose exclusion, however necessary or meritorious such an operation might be, would make little difference to the sum total of national expenditure. Apparently it is not yet realised that administrative economies, however drastic, can by upon debt conversion, disarmament and changes in policy repelling the advocates of economy by a jocular reference to the transfer of Mr Chamberlain and himself to another place in a fiery chariot. Mr Churchill made a characteristic intervention in the debate, in which he coupled an onslaught upon Viscount Snowden—described as the "Late Financial Administration"—and relegated to the neuter gender—with several constructive suggestions. These last included the raising of the tea and sugar duties to the level of 1924, thereby recovering £20 millions of lost revenue without unduly penalising the consumer, and a striking plea for the formulation of a joint monetary

policy, preferably with the United States and France, but otherwise with other members of the "sterling convoy." Fresh from his visit to America, he expressed his confidence that an invitation on these lines to the Government of the United States would not meet with a rebuff. The Exchange Equalisation Fund attracted considerable attention, and at times this portion of the debate touched a high level, as when Sir Robert Horne reviewed the consequences of the recent world fall in prices, and went on to discuss future monetary policy. It became clear, however, that Government spokesmen were not ready to put forward any considered policy, and this part of the debate must be regarded as indeterminate.

The Free State and the Oath.—The publication of the Bill to remove the parliamentary oath, now before the Oireachtas, confirms Mr Thomas's statement that "what is actually raised is nothing less than a repudiation of the settlement of 1921 as a whole"; for it purports to remove from the Free State Constitution, not merely the article prescribing the terms of the oath, but also the whole of Section 2, which subordinates the Constitution to the Treaty. Mr De Valera, in Wednesday's debate on the second reading in Dail Eireann, claimed that he had a perfect legal right to take this course. He taunted Mr Cosgrave with having insisted that the Free State was co-equal in status, not only with Canada and other Dominions, but also with Great Britain herself; and asked whether the Opposition would deny that the British Parliament could pass an Act removing its own Oath. By what was, perhaps, more than a coincidence, the House of Commons was at that very moment occupied in refusing leave to Mr McGovern, by a majority of 294 to 4, to bring in a Bill designed to assuage republican conscience-pangs by amending the Parliamentary Oaths Act. No one, indeed, suggested that such a measure was *ultra vires*, but the opposer roused cheers when he declared that "the Oath was not peculiar to that House; it was a common characteristic of every legislature throughout the British Empire." The loyal oath is, indeed, the symbol and the condition of that co-equality upon which Mr De Valera insists. His idea of co-equality apparently is to do whatever he pleases, however offensive to his partners; Mr Cosgrave's idea, as he insisted in opposing the Bill, is to discuss on level terms the alteration of any engagement concluded in mutual good faith. Mr De Valera used the still more remarkable argument that he was entitled to "put the Anglo-Irish Treaty in its proper place," because municipal law was always superior to treaties. Of course it is—in the sense that if, for instance, we were to flout our most-favoured-nation agreements no court of law would restrain a customs officer from carrying out his consequent duties. What have local courts of law to do with national or even personal honour? A cad may win a case. Indeed, when Mr De Valera is openly admitting that the removal of the oath is but a step towards the declaration of "a completely independent republic," from which action he is restrained at the moment only by the insufficiency of votes cast for him at the General Election, all his talk of the implications of co-equality and of legal justification is pure nonsense. What is at issue is not a breach of law, but a breach of faith, and it is strange that those who claim to speak with the true voice of Ireland should be the first to sully her honour.

Lord Beaverbrook and the Prince.—Lord Beaverbrook's paper, the *Daily Express*, has taken it upon itself to chide the Prince of Wales because he has lent the support of his patronage to an exhibition of British goods which is to be held in Copenhagen in the autumn. The object of this exhibition is to exhibit to the Danish people the range of British commodities available for their purchase, and thereby to stimulate British exports to Denmark, which at present fall very far short of our imports from that country. What is the ground for Lord Beaverbrook's objection to this project? We gather from the *Daily Express* article that the sole objection is that Copenhagen is not inside the British Empire. Does this mean that

the Empire Free Trade campaign has taken on a new aspect, and that we are now to be told, not only that it is wicked to buy foreign products, but that it is actually harmful to sell the output of British factories to any country outside the Commonwealth? We can hardly believe that Lord Beaverbrook is guilty of such an amazing absurdity, but, if not, where is the ground for his attack upon the latest effort of the Prince of Wales to stimulate Britain's overseas exports?

Greece Abandons Gold.—The news that Greece had abandoned the gold standard did not come as a surprise to those who had been following the trend of affairs in that country, for the Bank of Greece's holdings of gold and *devisen* have been seriously and progressively depleted during recent months. The drachma has, in fact, stood in the "black" market at a discount of at least 25 per cent., and it has for a long time been evident that unless a drastic plan under international auspices were made, the abandonment of the gold standard was only a matter of time. More interest, therefore, attaches to the measures consequent upon this step. Henceforward foreign exchange rates are to be fixed each day by the Bank of Greece, which will also control purchases and sales of foreign exchange with a view to preventing speculation. Exporters of Greek produce are to pay over to the Bank of Greece 20 to 25 per cent. of their foreign currency receipts, the proceeds to constitute a reserve fund to finance the importation of necessities. Import quotas are to be established forthwith, and it is intended that these shall bring about a reduction in imports amounting to the equivalent of £7,000,000 gold. Simultaneously M. Venizelos has outlined the new Budget proposals. There is a shrinkage of revenue of Dr. 1,600 millions, which it is intended to offset by economies of the same amount. The most controversial aspect of these economy proposals is their application to the service of the Greek external debt, where it is intended to suspend the sinking funds and also to default on the coupons due for payment on May 1st. In so far as these defaults are enforced by the difficulties Greece is experiencing in balancing her foreign payments and in checking the steady loss of foreign exchange—and in this respect, together with the proposed import restrictions M. Venizelos hopes to improve the balance by £12 millions gold—it is just possible to regard the defaults as a regrettable necessity, but when the Government proceeds to propose that the money so saved on the external debt service shall be applied to the prosecution of public works, foreign bondholders naturally feel they have grounds for complaint. Early this week Sir John Simon was questioned as to the position of the Greek 7 per cent. 1924 Refugee Loan, but all he could say was that, while the International Financial Commission would continue to press the Greek Government to carry out their obligations, the Commission possessed no real powers. On the other hand, M. Venizelos has stated this week that Greece is in need of further

assistance from abroad. He will doubtless be brought to realise that if such assistance is to be forthcoming, he must first meet the claims of Greece's foreign creditors up to the full limit of his powers. Meanwhile, the drachma was quoted on Thursday at Dr. 450 to the pound, against parity of Dr. 375. It remains to be seen—and the matter will be watched with keen interest by several other nations—if the fall in the drachma can be kept within bounds.

The Volume of Overseas Trade.—The publication by the Board of Trade of its index of the volume of foreign trade for the first quarter of this year provides further illustration of the effects of the tariff restrictions recently imposed by this and other countries. The table below shows the volume and value figures for retained imports and domestic exports during each of the last five quarters:—

VOLUME AND VALUE OF IMPORTS AND EXPORTS.

Period.	Retained Imports.				Exports of Domestic Produce.			
	Declared Values.	Index of Average Values.	Values in terms of 1930 Values.	Index of Volume.	Declared Values.	Index of Average Values.	Values in terms of 1930 Values.	Index of Volume.
	1930 = 100.	1930 = 100.	1930 = 100.	1930 = 100.	1930 = 100.	1930 = 100.	1930 = 100.	1930 = 100.
	Million £.		Million £.		Million £.		Million £.	
1924	1,137	135.0	842	88.0	801	120.8	663	116.2
1930	957	100.0	957	100.0	571	100.0	571	100.0
1931.								
1st quarter	192.5	84.5	227.7	95.2	103.3	93.2	110.9	77.7
2nd "	189.7	82.0	231.2	96.6	95.8	90.8	105.6	74.0
3rd "	191.0	79.1	241.5	100.9	93.2	87.8	106.2	74.4
4th "	225.0	79.0	284.8	119.0	96.8	86.0	112.5	78.8
1932.								
1st quarter	177.3	78.4	226.1	94.5	92.3	84.4	109.4	76.7

The downward trend in average values has continued, especially on the export side. When the influence of this is eliminated and the volume expressed as a percentage of the 1930 volume, the resulting index shows that there was an enormous rise in imports during the last quarter of 1931, when the anticipation of a tariff much more than counteracted the deterrent influence of the fall in sterling exchange, followed by a decline well below the level of any quarter of 1931, due partly to reaction after the previous "anticipatory" buying, and partly to the combined influence of the tariff and the rate of exchange. On the export side, the exchange stimulus, which had caused a sharp increase in the last quarter of 1931, was less effective in the face of a growing fence of restrictions abroad, and the volume declined somewhat, though it remained higher than in any of the two preceding quarters, but was less than a year ago. The number of influences and counter-influences at present reacting upon British foreign trade is so great that any conclusions drawn from the figures must be very provisional. On one point, however, they leave no doubt, and that is the disastrous fall in the volume of our export trade since the slump set in.

Cotton Trade Hours and Wages.—Our Manchester correspondent writes:—A further important development has taken place this week in connection with the labour situation in the Lancashire cotton industry, in that the weaving employers have decided unanimously to recommend the local associations to give the Central Committee authority to abrogate the agreement with the workpeople of July, 1919, when the weekly hours were reduced from 55½ to 49, with an advance in wages of 80 per cent. on list rates. Meetings of the district associations are to be held without delay, and the replies will be considered at a further meeting of the Central Committee in Manchester on Tuesday next. This decision is a result of the trade unions affected refusing to discuss with the employers the question of a wages reduction. Last November a similar recommendation was made with regard to the termination of all hours and wages agreements, but the district associations did not give the proposal adequate support and the matter had to be dropped. It is anticipated, however, that on this occasion the vote will be more substantial and that the employers' com-

mittee will be in a position to give one month's notice to abrogate all agreements. If this is done employers will be in a position to make special arrangements with their operatives relating to labour conditions without breaking agreements, and it is expected that such a development will result in increasing irregularities in working conditions throughout Lancashire. It may be pointed out that at the end of last year the spinning employers abrogated the agreement of July, 1919. It has been suggested that the two sets of employers, spinning and weaving, may ultimately join hands in a claim for a general reduction in wages, but action of this kind is not likely at the moment. So far as the spinning section is concerned, it must be remembered that the mills of the Lancashire Cotton Corporation are not in membership with the Master Spinners' Federation, and without the support of the Corporation it is doubtful whether any wages move would be successful. With regard to the weaving branch, although trade as a whole is depressed, quite a number of manufacturers are not prepared to join in any wages movement which might mean a stoppage of machinery to enforce the demand. The trade unions in the industry are undoubtedly passing through a very trying time. More firms are getting their operatives to accept wages and hours which are not in accordance with trade agreements and trade union membership is steadily declining. It would certainly be to the advantage of the industry as a whole for wages and hours to be on a uniform basis, and the time may not be far distant when the leaders of the workpeople will recognise this fact and be more prepared to grant concessions from the conditions existing during the last few years.

Canada and New Zealand.—The terms of the commercial agreement between His Majesty's Governments in Canada and New Zealand, which was negotiated several months back, have now been made known. Some two years ago the Canadian Government, under pressure from farmers of the eastern provinces and British Columbia, abolished the preferential entry which had been enjoyed by New Zealand butter, subjecting it to a protective rate of duty so high as to be almost prohibitive. In 1929-30 Canadian imports of butter from New Zealand amounted to \$13½ millions, other New Zealand goods imported being by comparison negligible. As a result of the duty, this trade was practically killed, and in August, 1930, the New Zealand Government retaliated by placing Canadian motor vehicles on the general tariff, thus almost doubling the rate of duty. This counter-attack proving ineffective, the British preferential treatment accorded by New Zealand to many other classes of Canadian goods was withdrawn in June, 1931. Pricked by the fact that trade between the two countries was now practically at a standstill, Mr Stewart, the New Zealand Minister of Customs, and Mr Stevens, the Canadian Minister of Commerce, negotiated, last December, amid the balmy delights of Honolulu, the agreement which has been published. The Canadian tariff on New Zealand butter is to be reduced from 8 cents a pound to 5 cents a pound; wool and hides from New Zealand will be admitted duty free and the tariff will be lowered on certain other agricultural products. For her part, New Zealand will replace Canadian motor vehicles and parts, timber, newsprint, and a number of other goods on the British preferential list. So the two Dominions stand almost where they started, with nothing to show for their quarrel but two years of recrimination and commercial loss. The conclusion of this treaty is of good augury for the Ottawa Conference, but the whole story is a warning of the dangers of the fire with which our sucking tariffists so cheerfully play. Would it be necessary for our trade with, say, Germany, to be reduced almost to zero before the folly of provocative trade restrictions was realised and undone?

Idle Shipping.—The statistics of laid-up shipping tonnage, compiled by the Chamber of Shipping, show that a welcome reduction took place in the first quarter of this

year. The figures for April 1st, and comparative figures for previous quarters, are as follows:—

	No.	Net tons.
April 1, 1931	778	1,919,786
July 1, 1931	752	2,044,092
October 1, 1931	778	2,089,443
January 1, 1932	728	1,966,417
April 1, 1932	734	1,800,000

The drop of 289,000 tons from the peak figure of October last is substantial. The April total includes 27,671 net tons of foreign shipping, the true British figure, therefore, being 1,772,239 tons, of which 744,896 tons have been idle for a year or longer. The figures do not include British tonnage laid up in foreign ports.

The Commonwealth Bank of Australia.—The report of the Commonwealth Bank for 1931 provides much interesting comment upon Australian conditions during the year. On public finance, the report remarks dryly that "one of the principal features of financial interest has been the efforts which have, or have not, been made by the various Governments to live up to the requirements of the Premiers' Plan, adopted at the May-June Conference in 1931." It adds that the banks have honoured their undertaking to provide the means required to cover the budget deficits for 1931-32. The report also alludes to the absorption by the Commonwealth Savings Bank of the Government Savings Bank of New South Wales, following the suspension by the latter last spring. Within one month of the absorption the whole of the Savings Bank deposits and current accounts in the Rural Bank section had been made available to the depositors, and the fixed deposits of the Rural Bank had been converted into fixed deposits of the Commonwealth Bank. The main point of interest in the report, however, is the explanation of the lowering of the exchange rate last December from £130 to £125 Australian to £100 sterling. Following the suspension of the gold standard in England, sterling prices of Australian exports began to rise, while there was also a reversal of the previous flow of funds from Australia to England, so that funds began to return to Australia. The banks were thus pressed by their customers to buy sterling at a premium of 80 per cent., while the demand for sterling fell away. Faced with the risk of loss on these transactions, some of the banks threatened to cease buying sterling unless they could re-sell to the Commonwealth Bank, and so shift the risk. So acute did the position become that on December 2nd the Commonwealth Bank issued a statement that it would buy sterling, at rates to be fixed by itself, from the public without restriction and from the banks up to the limit of the surplus accumulated by them. Simultaneously it fixed the new rate of £125. The report points out that this shows that it is not true that the Commonwealth Bank forced down the rate, but that by fixing its buying rate for sterling it arrested a catastrophic collapse in the Australian value of sterling. There is nothing to prevent interested parties from quoting higher rates for sterling if they desire, as has been done in the past. This certainly puts the Australian exchange controversy in a new light, for apparently all the Commonwealth Bank has done is to fix a minimum rate for sterling.

INSURANCE NOTES.

The Royal Exchange.—This well-known chartered company, founded in 1720, transacts all classes of insurance business, and, together with its seven subsidiary companies, controls funds of £23 millions and a premium income of £8½ millions. Contrary to the usual custom of composite companies, the accounts are not presented in consolidated form, and are concerned only with its own operations, affecting a premium income of £4,840,000. Each of the constituents of the group (the accounts of the principal subsidiaries are reviewed also in this issue) pursues a separate existence, competing for the same classes of business and maintaining separate organisations and different boards of directors. If there are any advantages in this wasteful form of amalgamation they are not apparent to the lay mind. The aggregate surplus for 1931 from all departments, though smaller than in 1930, is

satisfactory having regard to the exceptional conditions which, as will be seen, have borne particularly heavily on the fire department:—

	1930.		1931.	
	Amount of Profit.	Per-centage of Prems.	Amount of Profit.	Per-centage of Prems.
Fire department	129,095	7.7	62,088	3.8
General department	39,387	3.1	56,443	5.0
Marine department	19,830	3.0	19,161	4.1
Life department	26,151		26,151	
Annuity department	10,450		10,450	
Capital redemption department	2,293		2,293	
Trustee and executor department	12,754		8,568	
Less taxes, expenses, &c. .	200,300		146,832	
	93,765		83,827	
Total net trading surplus..	106,535		63,005	

The trustee department, though producing a relatively small contribution to surplus, is an interesting result of a pioneer experiment first undertaken 27 years ago. The department now administers trust funds of nearly £120 millions, and is exceedingly valuable as a feeder for insurance business. The depreciation in sterling exchange has caused some important changes on capital account; for while credit has been taken on the assets side for the increased sterling value of American investments, an exchange reserve fund of £275,000 has been set up (by a transfer from general reserve) to provide for the automatic increase in American liabilities, which have been taken into the accounts as before at par value. The feature of the life department is the revelation of the fact that only £100,000 has been needed to provide for depreciation on the funds of nearly £11 millions, thus leaving intact the bonus equalisation fund of £250,000 which was created last year following upon the 1930 quinquennial valuation. The dividend has again been maintained at 27 per cent., and the cost is more than covered by interest earnings.

London and Lancashire Insurance.—Controlling total funds of almost £27½ millions, and a premium income of £7½ millions, the London and Lancashire comprises one of the largest and—more important still—one of the most consistently successful insurance organisations in the world. Actually the group contains twenty-six subsidiary companies, six of them, including the most significant, being in Great Britain. One measure of the great financial strength of the group is that on this huge aggregation of funds only £500,000 has been needed for depreciation last year to bring the book values of the assets to a figure within market values. Of the total premium income the life department—administered by the Law Union and Rock whose accounts are separately reviewed—is responsible for £700,000. The remainder, some £6½ millions, is drawn as to £3 millions from fire, £2,200,000 from accident, and £1,300,000 from marine business. Except in the case of marine these figures are less than the corresponding totals of 1930, though the aggregate decline of rather more than £800,000 is small for so widespread a business. The underwriting results tell again the same story of consistent profit earning capacity on which the company has built its reputation and strength.

	1930.		1931.	
	Amount.	Percentage of Premiums.	Amount.	Percentage of Premiums.
Fire	324,132	10.1	345,319	11.4

Written off investments	...		240,000	
Total net trading surplus	431,076		214,589	

The dividend is maintained at 100 per cent., and costs at £560,000 compare with interest earnings of £502,000.

Law Union and Rock Insurance.—This company, with assets of over £13 millions, is a subsidiary of the London and Lancashire, and its accounts are incorporated in those of the parent concern. The company is itself the result of an amalgamation of three separate companies, the Law Union, the Rock, and the Crown. The life funds of the last two named, amounting to £2½ millions, are administered as closed series. Last year the life business showed a large increase from £1,646,000 to £2,049,000, though the latter total is still slightly below the 1929 figure. In spite of the increased business and of a smaller volume of claims, the premium income remains practically at the same level as before. Interest income is lower and the rate, viz., £4 9s. 2d. per cent. net compares with £4 10s. 9d. per cent. in 1930. After writing off the relatively small amount of £250,000 for depreciation, the book values of the assets are in the aggregate not in excess of market values. The fire and accident accounts with somewhat lower premium incomes of £494,000 and £218,000 respectively, both yielded satisfactory underwriting profits last year. Owing, however, to the need for providing in these accounts for depreciation of £25,000, the net trading surplus is lower at £81,000 compared with £110,000. Fire and accident interest earnings at £54,000 are substantially lower as a result of a special bonus dividend paid in 1930 of over £500,000. The consequence of this (combined with an increase in the rate of dividend from 14s. to 16s. per share) is that the gap which has existed for many years between interest income and cost of dividend, has been widened to the considerable total of £83,000, which has to be provided by underwriting surplus.

Legal and General Assurance.—December 31, 1931, coincided, in the case of this society, with the date of a quinquennial valuation and distribution of surplus; and the natural importance of this event was intensified by the financial conditions then—and now—prevailing. The problem the society had to solve was the double one of providing for depreciation and for distributing a bonus to the with-profits policyholders. The former difficulty, though serious enough, was not acute, for although the total assets amount to £25½ millions, only £6 millions are invested in Stock Exchange securities. At the end of 1930 the book values of the assets exceeded market values by £162,000; and during 1931 there was a further depreciation of £749,000, equal to 12.2 per cent. of the Stock Exchange securities, but only 3 per cent. of the total assets. The society has met the situation, and at the same time achieved a distribution of bonus, by a complete revision of the system of actuarial valuation, involving a release of reserves of £465,000. The new system is known as a "bonus reserve valuation," now publicly adopted by the old Equitable and, more recently, by the London Life. The reserves for the existing sums assured and bonuses are calculated by reference to assumptions, closely corresponding with actual experience, as to interest, mortality, and expenses, and to these reserves are added the value of future bonuses on the existing business. It is this definite and specific provision for future bonuses which gives the system its name and special character. In the case of the Legal and General, the "bonus reserve" method of valuation happens to be peculiarly appropriate, for the transaction of new with-profits business ceased in 1919, and the rights of then existing with-profits policyholders were limited to a maximum reversionary bonus of 88s. per cent., compounding quinquennially. So far as the most important factor in the valuation is concerned, namely, interest, 4 per cent. has been assumed (compared with an average of £4 12s. 6d. per cent. net earned in the last five years), and the provision for future bonuses has been made at the full maximum rate of 98s. per cent. The surplus resulting from this valuation amounts to £919,882, of which £800,000 has been transferred to the profit and loss account, and £119,882 carried forward. Out of the £800,000 so transferred, £750,000 has been used to increase the investment reserve fund to £1,000,000, which more than covers the depreciation in the book values of the assets. The profit and loss account has also benefited by profit on investments amounting to £286,000, and £100,000 has been transferred to the

general reserve fund, which now totals £250,000. Turning to the normal operations of the year, the new life business suffered diminution from £11,533,000 to £9,780,000, but the latter figure is much larger in proportion to size than that of any other British office. In addition, the society continues to transact a very large sinking fund and annuity business. The fire and general departments are rapidly growing, and produced premiums of £370,000 and a profit of £17,000. Interest earnings from this section alone provided £49,000 towards the cost of the dividend, which has been maintained at 42½ per cent. tax free, and requires £85,000. At the present price of £13½ for the £5 shares, with £1 paid up, the yield is £4 4s. per cent. gross.

Car and General Insurance.—This company, after twenty-eight years of experience of motor car insurance, occupies a leading position in this market, and although it preserves a separate existence it is controlled by the Royal Exchange. The total premium income is £1,147,000, of which some 80 per cent. is derived from motor insurance. The exact amount is not disclosed, for the company has taken the retrograde step of lumping together into one conglomerate mass the whole of its transactions apart from fire and marine. The underwriting results are shown below, and make a good showing:—

	1930.	Per-centage of	1931.	Per-centage of
	Amount of Profit.	Profits.	Amount of Profit.	Profits.
Fire	11,394	12.5	9,157	10.7
Accident	942	6.4	...	...
Employers' liability	11,017	15.8	...	...
Motor	34,532	4.3	37,933	3.6
Miscellaneous	6,312	5.8	...	...
Marine	10,000	21.5	...	...
Sundries	788	...	...	...
Less items charged to profit and loss account	42,361	...	47,090	...
Total net trading surplus..	15,553	...	35,262	...
	26,808	...	11,828	...

The company works on an unusually small capital of only £51,000, half of this being in 5 per cent. preference shares, so that for each £100 of ordinary capital there is some £4,300 of premium income. In consequence of this the dividend is at the very high rate of 200 per cent.

Motor Union Insurance.—The 1931 report of this important motor insurance company makes a more favourable showing than that for many years. Like the Car and General the company is controlled by the Royal Exchange, though a separate existence is preserved with all that this means in the way of separate organisation, separate board of directors, and internal competition within the group. The main cause of the bad times on which the company had previously fallen was a series of terrific losses from marine business; but any danger of recurrence of this has been permanently removed by a reduction of premium income in this department to nominal dimensions. These losses culminated in the omission of a dividend for 1927 and 1928 when the Royal Exchange acquired control. Last year the premium income was some £100,000 lower at £1,780,000, of which some 80 per cent. is derived from motor insurance, and the comparison of the underwriting surplus is given below:—

	1930.	Per-centage of	1931.	Per-centage of
	Amount of Profit.	Profits.	Amount of Profit.	Profits.
Fire	1,353	0.7	—9,683	—5.2
Accident	5,608	14.9	...	...
Employers' liability	8,353	16.5	116,608	7.4
Motor	94,812	6.3	...	...
Miscellaneous	53,492	69.0	...	...
Marine	20,000	...	...	...
Less items debited to profit and loss account	36,634	...	106,925	...
	9,847	...	1,089	...
	26,787	...	105,836	...

Dividend payments were resumed at the reduced rate of 20 per cent. in 1929, and this rate has again been declared for 1931, and the cost is well within the interest earnings. The price paid by the Royal Exchange for control in 1927 was £9 15s. per £1 share, and the yield at this very inflated price is thus only 2 per cent. gross. The general reserve has been increased to £500,000, but £100,000 of this has been taken to form an exchange reserve, and a further £240,000 for an investment reserve. After taking this investment reserve into account the book values of the assets are within the market values.

Caledonian Insurance Company.—This company suffered last year from the combined effect of adverse trading conditions and heavy Stock Exchange depreciation. As regards the former, the total premium income, of which a substantial proportion is written in the United States, is only slightly smaller at £1,404,000, but, as will be seen from the detailed statement below, the profits in most departments have fallen off considerably:—

	1930.	Percentage of	1931.	Percentage of
	Amount.	Premiums.	Amount.	Premiums.
Fire	13,356	1.5	9,260	1.1
Accident	1,241	17.7	941	10.0
Employers' liability	279	6	3,617	8.9
General	14,577	3.9	13,368	3.4
Marine	7,485	5.9	17,648	14.3
Life	39,181	...	...	...
Less items debited to profit and loss account	76,119	...	18,098	...
Total net surplus	28,729	...	22,755	...
	47,390	...	4,657	...

The fire account is the most important, and yields 60 per cent. of the total premiums. The general department is the second in importance, and here the unfavourable result is wholly due to motor insurances. The above statement does less than full justice to the 1931 figures, since no credit is taken for profits from the life department, while the 1930 credit from this department represents three years' profits as the result of the triennial valuation on December 31, 1930. The operations of the life department also bear evidence of the state of general depression, for the new business has declined from £1,567,000 to £1,197,000, and the total premium income is lower. Moreover, reduced dividends and defaults (and higher income tax) have been responsible for a falling off in interest earnings, which work out at £4 10s. 7d. per cent. net, compared with £5 0s. 11d. per cent. net in 1930. With regard to the investments, the company publishes separate balance sheets for the life department and the fire and general business, and these show assets of £7 millions and £3 millions respectively. The book values of the Stock Exchange securities in the former exceed the market values by some 10 per cent., after taking account of the investment reserve fund of £200,000, but the book values in the fire and general balance sheet are, it is satisfactory to note, still below the market values. The dividend has been maintained at the same rate as before, namely, 87½ per cent., and is virtually covered by interest income.

World Auxiliary Insurance.—This company, which was formed 12 years ago, is associated with the "Northern" group of companies by reason of a large shareholding interest held by the World Marine and General, itself a subsidiary of the Northern. All classes of business, except life, are transacted, but the chief development in recent years has taken place in fire and general business. Premiums in this branch rose rapidly in the years 1928-1930, and in the latter year, at £303,000, were more than twice the total attained in 1925. In 1931, however, there has been a very steep drop to £221,000, and the poor underwriting results of 1930 have been repeated last year and accentuated by the pressure of expenses on the attenuated income. The details of the past three years are as follows:—

	1929.	Per-centage of	1930.	Per-centage of	1931.	Per-centage of
	Amount of Profit.	Profits.	Amount of Profit.	Profits.	Amount of Profit.	Profits.
Fire, accident and general	211	1	27,197	9.0	30,551	14.1
Marine	15,000	9.1	20,000	11.4	15,000	9.7
Less items debited to profit and loss account	14,789	...	7,197	...	16,051	...
Total net surplus	9,674	...	7,855	...	2,493	...
	5,115	...	15,052	...	18,044	...

The dividend has been maintained at 6½ per cent. free of tax, and is amply covered by interest earnings. The balance sheet for so young a company is strong, for the capital of £300,000 is protected by a general reserve of £175,000, an investment reserve of £40,000, and a "carry forward" of £35,000. Although there was on December 31st last a depreciation of £81,000 on the book values of the investments, it is stated in the report that the whole of this has now been recovered by the subsequent appreciation.

Guildhall Insurance.—The 1931 report of this company, the control of which was recently acquired by the London Assurance, makes a very favourable showing; for, although the premium income has suffered a considerable diminution, the underwriting profit is greater in amount, and proportionately, therefore, higher in relation to the reduced income. The total premiums amounted to £623,000, compared with £760,000 in 1930, and are now back to the level of the year 1928. The accounts show that the brunt of the reduction has fallen on the fire department, and that the accident account has been well maintained. Thanks to a large release of reserve for unexpired risks, the underwriting profit rose from £15,103 to £21,413, and the ratio to premiums from 2 per cent. to 3.4 per cent. After allowing for expenses and taxes debited to profit and loss account, the net trading surplus of the year was £9,980, compared with £8,714 in 1930. Interest income, at £25,540, was higher, and the dividend of 10 per cent., costing only £9,375, has been maintained. With regard to the investments, totalling £692,000, the chairman was able to state that, in spite of the depreciation of last year, the book values were "fully worth the amount stated."

Overseas Correspondence.

LEAGUE OF NATIONS.

Disarmament — Reparations — Far East.

(FROM OUR CORRESPONDENT.)

GENEVA, April 26.

THE General Commission of the Disarmament Conference reached discussion on the qualitative reduction of armaments, skirted round it without coming to grips, passed a resolution approving the principle of qualitative disarmament, described as "the selection of certain classes or descriptions of weapons, the possession or use of which should be absolutely prohibited to all States or internationalised by means of a general convention"; asked the Land, Sea and Air Commissions to select those weapons whose character is more specifically offensive, of the greatest efficacy against national defence, or most threatening for civilians; and adjourned until the three Commissions report.

This adjournment, during which these three and other Commissions will be at work, has been accepted at M. Tardieu's request that neither his plan nor the general political discussion of Germany's claim for equality of principles should be seriously broached until after the French elections. If M. Tardieu's Government does not remain in office, it will not be before the first few days of June that a new Government can be formed, and this would put off any further serious debate until that time. Will the Lausanne Conference, fixed for June 16th, be another interference? These postponements of the central problems are intelligible enough in the circumstances. But all the Governments knew last year that 1932 was to

be a year of elections, and they might have arranged their conference dates with more care. They all shirked the responsibility of suggesting a later date, and have, therefore, been more or less compelled to manipulate the agenda to meet the circumstances. It is too early to take this as a sign that they are running away from the problems. It may be true that the situation is just as likely to become more difficult as easier, but the Disarmament Conference has got its claws embedded, and escape does not seem possible. It will, in any event, be a slow business.

M. Tardieu's anxiety not to have his plan discussed before the elections rather suggests that he does not anticipate acceptance. There are some who profess to see a certain withdrawal by the French delegation from the rigid attitude hitherto maintained. At the same time, the anger of some elements of French opinion at the British and American desire to get the principle of qualitative limitation or reduction accepted in simple terms does not lend much support to the theory of greater French reasonableness. The original resolution proposed by Sir John Simon made it quite clear that in asking the Conference to declare its approval of qualitative disarmament, it was to be done without prejudice to other proposals on the agenda. It would have been simpler to leave it thus, but there was opposition, and at Sir John Simon's suggestion, the resolution was ultimately adopted in the form of considering what weapons should be absolutely prohibited or internationalised. This is a postponement of the fundamental difference; but, nevertheless, it is a point gained that the technical commissions should be considering what are the most offensive weapons.

The discussion was interesting in the fact that, in reply to the supposed difficulties of differentiating between offensive and defensive weapons, Sir John Simon, arguing that it was a matter to be settled by common sense, observed that certain arms had been indicated in the Treaty of Versailles as suitable for prohibition on the ground that they were clearly calculated to assist attack against national defence. The German delegate expressly stated that qualitative disarmament could not be effected by means of internationalisation, but only by destruction and absolute prohibition of aggressive weapons; the question appeared to be settled in advance in so far as they must include those which had already been abolished by Germany and the other disarmed States. The controversy thus remains in suspense; the election results in Germany are likely neither to weaken the German stand nor to encourage the French to make a more helpful contribution towards possible achievements. We shall have to wait some weeks to know more definitely.

Meanwhile, there is not much that is encouraging either in the conversations which have taken place between all the leading statesmen or in the Far Eastern crisis. The only precise information which has emerged from the conversations is the fixing of the date of the Lausanne Conference. There has been some circumstantial talk about M. Tardieu's interviews with Dr. Brüning and Mr. Stimson, the story being that Dr. Brüning suggested a three years' adjournment of reparations, during which the whole economic situation must be tackled, and that M. Tardieu, without any recorded results, discussed with Mr. Stimson the possibility of a two years' adjournment, basing this on a clause in the French debt agreement with the United States. The general assumption is that the reason why little is known of the conversations is that there has been little in them.

The Far Eastern crisis, as seen from Geneva, becomes worse and worse, and the reported armistice agreement at Shanghai deceives no one. It is the general view that, in their anxiety to disembarass themselves of an awkward situation, the representatives of the Great Powers at Shanghai have overborne the Chinese, if it is, in fact, the truth that agreement has been reached. Those who have been following events closely here and in the East are convinced that Japan will accept nothing which takes from her the power of deciding for herself what she will do. The Great Powers are credited with following the line of least resistance, more or less regardless of the Covenant and of the Assembly resolution. They have

made it known that they are impatient with the Chinese, and all they want is any settlement anyhow. In Shanghai, therefore, everything seems to be playing into the hands of the Japanese. In Manchuria they are putting every obstacle in the way of the Lytton Commission, with threats against the lives of the Chinese attached to it. The tone used in Japan towards Russia, towards the League and towards America is the tone and spirit of the Tanaka policy. It is a miserable and humiliating prospect for the League, and the one and only hope lies in the honesty and loyalty of the smaller Powers, who are almost as unpopular as the Chinese with some of the great Powers, who, this afternoon, have taken the Assembly Committee meeting from privacy to secrecy. Lord Londonderry explained what Sir Miles Lampson had been doing. The Japanese had declined the terms of the Assembly Commission, stating the opinion that the Mixed Commission to be set up under the Armistice terms was competent to declare by a majority when the moment had arrived for withdrawal of troops. Sir Miles then suggested in its place that the Mixed Committee might state if either party were negligent in carrying out the Armistice terms, and both sides were more or less disposed to accept, the Chinese adding a paragraph safeguarding the Mixed Commission's majority right. The Assembly Commission is awaiting Japan's definite decision. There seems no reason why Japan should refuse a text which gives her virtually everything. As the Armistice terms make no provision for a withdrawal date, or for anyone to settle that date, Japan could not be declared negligent in not withdrawing. The only possible explanation given of Chinese readiness to accept is that they must have been subjected to pressure.

UNITED STATES.

Industry — Prices — Credit.

(FROM OUR CORRESPONDENT.)

NEW YORK, April 19.

WHILE the Federal Reserve system during the past week, following a meeting at Washington of the regional bank heads with members of the Federal Reserve Board, has made a public statement of policy, announcing a more determined drive to force credit into use, actual trade conditions are little changed. Little if any seasonal improvement occurred in late winter and early spring, and the trend now seems to be slightly downward in some industries.

Steel mills are still working at about 22 per cent. of capacity, according to accepted estimates, although the United States Steel Corporation, it was brought out at the annual stockholders meeting, has dropped to 20 per cent. of capacity. It was also stated that the corporation's earnings were poorer in the first quarter than in the closing three months of last year. The much-reduced common stock dividend is virtually sure to disappear when the board meets next week, but the preferred dividend will be maintained. The United States Steel Corporation will find it necessary to make another cut in wages. An announcement of reduced pay for salaried workers is shortly expected, to be followed by lower wages for labour. Other units in the industry will certainly take the same course.

First quarter earnings are now being published by the leading companies, and they confirm expectations of lack of seasonal improvement. In the aggregate, earnings for industrial companies appear to have been rather worse than for the fourth quarter of last year. Public-utility companies, also, are now feeling the increasing pressure of the blows to confidence given by the collapse of the Insull organisation, which cast some doubts on the solidity of other great holding companies that have sought to weld together operating electric and gas companies over wide stretches of the country. On the other hand, the first of the March reports for the railroads show improvement, thanks to the full force of the lower wages. Railroad investors also see a ray of hope in the efforts made on their behalf in Congress by the Inter-State Commerce Commis-

sion to repeal the recapture clause of the Transportation Act and to bring motor transportation under regulation in such a way as to give the railroads fairer treatment.

Notwithstanding the improvement in the wheat market on reports of damage to the winter crop, the trend of commodity prices is still downward. The Bureau of Labour index for March fell from 66.3 to 66, or 10 points below a year ago. Comparisons follow:—

Commodity Groups.	March, 1931.	February, 1932.	March, 1932.
All commodities	76.0	66.3	66.0
Farm products	70.6	50.6	50.2
Foods	77.6	62.5	62.3
Hides and leather products	87.6	78.3	77.3
Textile products	70.0	59.8	58.7
Fuel and lighting materials	68.3	68.3	67.9
Metals and metal products	86.4	80.9	80.8
Building materials	82.5	73.4	73.2
Chemicals and drugs	82.9	75.5	75.3
Housefurnishing goods	88.0	77.5	77.1
Miscellaneous	72.0	64.7	64.7
Raw materials	69.5	56.9	56.1
Semi-manufactured articles	72.9	61.9	60.8
Finished products	79.6	71.4	71.5
Non-agricultural commodities	77.2	69.0	69.3
All commodities less farm products and foods	77.2	71.3	70.9

Further ground has been lost in April, the weekly index for the week of April 9th being 65.7, compared with 66.5 on March 12th. Foreign trade figures for March show exports of \$156 millions, or a gain of a million over February, which means a lower daily average. Imports were unchanged at \$131 millions. Exports of cotton rose further, and consumption in domestic mills was larger than in February, but fell slightly lower than a year ago. Exports and imports of general merchandise also were far lower than last year, the figures for March, 1932, being \$236 millions and \$210 millions respectively.

Another index of trade is the decline of \$8 millions in bankers bills outstanding at the end of March. Compared with a year ago the drop was \$555 millions. Export bills went up \$10 millions, against a decline of \$13 millions in import acceptances. An indication of the fall of trade with the smaller nations was given by the drop in acceptances to create dollar exchange, the volume being the smallest in five years. The Reserve banks, the accepting banks and the dealers held 87 per cent. of all bills at the end of the month.

So far the Federal Reserve system's campaign to force out credit has been instrumental only in lowering money rates. Time funds have dropped a half per cent. in the past week to 2½ per cent., Federal funds (excess bank reserves at the Federal) are one-eighth of 1 per cent., and call loans against gilt-edged collateral is 1 per cent. The Stock Exchange maintains the official pegged call money renewal rate at 2½ per cent. There is some talk of another reduction in bank deposit rates, but it probably would not be very effective just now.

Meanwhile, the reporting member banks in leading cities have found it necessary or desirable to sell more of their securities and to liquidate loans. In the past six months the deflation in loans and investments for the city banks alone has amounted to over \$3,000 millions. For the week of April 13th loans dropped \$90 millions, the bulk being against securities, and investments, mainly Government bonds, fell \$23 millions. Against a further drop of \$80 millions in Government and time deposits, net demand deposits rose \$101 millions. This was brought about by the return of currency to the banks, the withdrawal of Government deposits, which create demand deposits, and the sale by member banks of Government bonds to the Federal Reserve Banks.

Some measure of what the Federal Reserve system proposes to do in its invigorated push for a greater use of cheap credit is given in last week's statement of condition. A full \$100 millions in Government bonds was added to the portfolio, against recent weekly average purchases of \$25 millions. A small run-off in bills and in discounts left the total increase in Reserve Bank credit at \$87 millions. Currency in circulation declined \$35 millions.

These operations have greatly increased the excess reserves of the city banks held at the Reserve Banks. In

New York the excess is now around \$100 millions, and the authorities already see some indication of a sweepage into the interior, which is the goal sought. The new drive is merely a more determined use of policy which has been followed ever since the stock market crash of 1929, and a good deal of confidence is held of its ultimate success.

Efforts to expand the use of credit within the Federal Reserve sphere of influence, but without printing and distribution of currency as proposed by the soldiers' bonus advocates, will help to stop deflation without bringing on dangerous inflation, it is felt by the sponsors of the policy, and at the same time there will be no danger of abandonment of the gold standard. Until the passage of the Glass-Steagall Bill the central banking operations were hampered by the legal restrictions on gold and collateral backing for currency, but now Government bonds may be used as a partial substitute for commercial paper, automatically increasing the free gold, now around \$500 millions, by \$1,000 millions. Success for the latest thrust against deflation depends to a considerable extent, of course, on freedom from a major catastrophe abroad, abstention from any unsound inflationary measure at home and a balance Budget.

Some progress is being made on a new Tax Bill, but Congress has engaged in such minor distractions as an investigation of short selling on the New York Stock Exchange. It is now rather gloomy in outlook for a soldiers' bonus, and there is even more hope that some of the worst features of the house tax measure, as, for instance, the sharp increase on stock and bond transfer taxes, may be eliminated before a measure passes the Senate.

Ex-Governor Alfred E. Smith's rather ingenious proposal that the foreign debt question be settled by, first, a twenty-year moratorium and then by a rebate as credit on payments of 25 per cent. of our exports to debtors was favourably received. It had the merit of a frank facing of something which everybody admits privately, namely, that little is likely to be paid on the debts for a long time, and many hold that some such plan would avoid the ill will which would follow forcing Europe into open default.

FRANCE.

Politics — Hoarding — Revenue.

(FROM OUR CORRESPONDENT.)

PARIS, April 27.

OFFICIAL returns show that for next Sunday's general elections there are over 3,600 candidates for the 615 seats to be filled, or an average of practically six for each seat, while in many of the urban constituencies as many as twelve or thirteen official declarations of candidature have been made in respect of the same seat. Over 500 of the members of the recently expired Legislature are seeking re-election, but are almost everywhere having to face an overwhelming number of new men.

As far as can be seen, electoral opinion is hardening daily in favour of the maintenance of the Moderates in power, and against the extremist parties of the Left. On the pendulum theory the Left should on this occasion again return to power. In 1919 the Right was victorious, under M. Millerand; in 1924 the Cartel des Gauches drove M. Millerand from the Elysée and M. Poincaré from power; in 1928 the Right secured their revenge. Three months ago serious observers were inclined to predict a Cartellist victory. Since then, however, the Left, as a whole, appears to have lost ground. The large Hitlerist poll, first at the German presidential election, and since then at the Prussian general elections, and the resultant chaotic outlook on the other side of the Rhine have caused a large section of the French electorate to reflect seriously, and full advantage has been taken of this changed frame of mind by M. Tardieu and his colleagues.

Many Frenchmen now incline to the view that last Sunday's German revelations should be worth an additional fifty seats to the present Government. The speeches of M. Herriot and other Radical leaders during the past

two or three days appear to support this view. M. Herriot now seems to have definitely abandoned all desire to depend for office on Socialist support and to be much more inclined towards co-operation with the rest of the Moderate Parties of the Centre. M. Caillaux, in his speech on Monday, more than hinted at the desirability, in view of the present international situation, of a Ministry of Republican concentration, leaving the Socialists in the cold shades of Opposition. There is growing evidence that the Socialists, at the same time, are finding the contest much less comforting than they had expected, especially in the South of France, which has latterly been the main theatre of their effort—after having conquered many of the Northern industrial areas—to convert the peasantry to Marxian ideas. It now appears probable that the Unified Socialists will return to the Chamber appreciably shorn of their strength as the result of the skilful ramming home of the deplorable results of Socialist Governments in Great Britain, Germany, Australia and Austria. As matters stand at the time of writing, a Tardieu landslide, although not seriously foreshadowed, is by no means improbable, as a nation-wide retort to Hitlerism.

Increasing attention is being paid to the persistent hoarding of capital by all classes in this country, the swollen volume of which is causing some nervousness, both because of the artificial inflation of the note circulation thereby and for other reasons. Evidence of hoarding on a large scale is furnished by the fact that since the end of 1926, which synchronised with the stabilisation *de fait* of the franc, the total paper circulation has risen from 52,449,000,000 francs to 83,547,000,000 francs at the end of 1931. Analysis of the categories of currency shows that during the five years the respective quantities of small notes in circulation remained fairly constant. Five-franc notes diminished from 923,000,000 francs to 788,000,000 francs. Ten-franc notes increased from 1,726,000,000 to 2,116,000,000 francs, which was obviously partially due to the diminution meanwhile from 132,000,000 to 37,000,000 francs of 20-franc notes (which have now been retired from circulation). Fifty-franc notes increased only from 3,247,000,000 francs to 3,346,000,000 francs, while 100-franc notes rose from 20,093,000,000 francs to 24,600,000,000 francs. During the same period, however, 1,000-franc notes increased from 23,169,000,000 francs to 46,262,000,000 francs, and 500-franc ones from 3,059,000,000 francs to 6,398,000,000 francs.

The increase in the total circulation, it will be noted, was in round figures 31,000,000,000 francs, or as nearly as possible 60 per cent., whereas the increase in 1,000-franc notes alone was nearly 100 per cent., and in 500-franc notes over 100 per cent. The striking increase in the number of 1,000- and 500-franc notes in circulation can only be accounted for on the theory that they are being hoarded. It is believed that a large proportion of these hoarded notes are held outside France, and particularly in countries of depreciated currency.

Two other facts are interesting in this connection. Private deposits and current accounts at the Bank of France (exclusive of those of the Treasury and the Caisse d'Amortissement) increased from 7,520 millions in 1929 to 11,284 millions in 1930, and then to 23,152 millions in 1931. "Ordinary savings bank" (that is, exclusive of Post Office savings banks) deposits at the end of 1931 amounted to 30,282,000,000 francs, or 6,275,000,000 francs more than at the end of 1930. The enormous accumulation of capital, totalling some 75,000,000,000 francs, in the hands of the Caisse des Dépôts et Consignations and largely invested in Rentes and other public securities, was referred to in the *Economist* recently.

The total assessment notes for income tax levied during the financial year ending March 31st was 9,056,000,000 francs. Of this total 8,528,000,000 francs represented assessments in respect of incomes earned during the year ending December 31, 1930, and embodied in declarations made at the end of February, 1931. The balance of 528,000,000 francs concerned outstanding assessments for 1929 and previous years collected during the past twelve months. The grand total for the year (outstanding assessments included) was made up as follows:—

Assessments on:—	Fr.
Industrial and commercial profits	3,992,433,800
Developed building land	1,000,394,800
Undeveloped building land	346,075,800
Salaries, wages and fees	983,039,900
Profits from liberal professions	207,703,700
Agricultural profits	79,939,900
For general income tax (payable by all the above-mentioned scheduled categories)	2,445,261,600
Cost of levying assessment notes	714,500
	9,055,564,000

The exceptionally favourable treatment accorded to agriculture, the most important of the nation's industries, and which alone occupies something like 47 per cent. of the population, is strikingly indicated by the fact that total assessments in respect of agricultural profits represented barely 1 per cent. of the total levied on the whole of the scheduled categories. At the end of February 1,054,000,000 francs, or 11.64 per cent. of the year's assessments, were still outstanding. On the corresponding date in 1931, out of total assessments amounting to 9,647,914,000 francs, the amount outstanding was 581,000,000 francs, or only 6 per cent. Declarations returned at the end of February, covering incomes during 1931, indicate that incomes from industrial and commercial profits last year were 40 per cent. lower than in 1930. Inquiries show that a record number of (undated) summonses for unpaid direct taxes has been served since the beginning of January, but that, in view of the general situation, proceedings against defaulters have been taken in an extremely small proportion of cases.

GERMANY.

Elections — D.D. Bank — Burbach-Kaliwerke Scandal.

(FROM OUR CORRESPONDENT.)

BERLIN, April 26.

THE National Socialists have achieved substantial successes at the Landtag elections in Prussia and some of the other German states. In Prussia they received 162 out of 422 seats. These gains, however, have mostly been made at the expense of the other parties of the Right; for example, the number of seats held by the Nationalists in the Prussian Landtag has been reduced from 71 to 30. The moderate Conservative Parties, which separated from the Nationalists when the latter came under Hugenberg's leadership, are completely wiped out; the German People's Party, which held 40 seats, now has only 7 (though out of a smaller total of 422, against 450). On the other hand, the leading parties in the former Government coalition, the Social-Democrats and the Centre, have maintained their position very well. The Social-Democrats have, indeed, lost 44 of their former 137 seats, but their total poll is not much less than it was in the Reichstag election of 1930. The Centre Party has polled more votes than in 1930.

The decline of 10 per cent. in the Communist vote since 1930 is very striking, though not wholly unexpected. At a time of acute crisis, the Communist vote naturally increases, but the Presidential Election has already shown that the mistaken tactics of the Communists have prevented them from taking votes from the Social-Democrats, and have even caused them to lose votes to the National Socialists. They denounced the Social-Democrats as the "arch-enemy" and directed the spear point of their agitation against the Braun-Severing Government. This made it easy for the Social-Democrats to demonstrate to the workers that the election of Communists would only help to leave the way clear for Hitler, who would make use of the Communist votes to destroy the hated regime of the Weimar Parties in Prussia. Discontent with the Emergency Decrees, which, in the opinion of many workers, were not resisted with sufficient determination by the Social-Democrats, could, therefore, not be turned to their own advantage by the Communists, for every Communist attack was countered by the Social-Democrats with the question: "Do you suppose the Emergency Decrees of Hitler, whom your tactics are helping into power, would be any better for the workers?"

A large number, however, of those who allowed themselves to be convinced by the Communist attacks on the Social-Democratic Party on account of its "toleration" of Dr. Brüning and its rigid administration of the Prussian police, preferred to vote National Socialist because they rightly regarded the National Socialists as the most dangerous enemies for the time being of the Socialist-Republican regime."

In consequence of the great growth of the National Socialists, who have doubled their 1930 poll, the narrow majority of the Weimar Parties in Prussia has been wiped out. No majority has been created, however, for the parties of the Right, even if the meagre remains of the Moderate Right range themselves entirely under the leadership of the National Socialists. The National Socialists and Nationalists can, it is true, with the help of the Communists, make the task of governing very difficult for the Braun Government, but they cannot themselves form a new Government, as the Communists would naturally not lend their support to a Cabinet of the Right. A Government majority would only be possible if the Centre joined with the National Socialists. Now the Centre has already announced that it is not opposed in principle to negotiations to this end, but that it will oppose one-sided dictation from any party. It will, therefore, as it did in Hesse, enter into discussions with the National Socialists as to the possibility of a joint Government, but it will refuse to place the Prussian police under their control by giving them the Ministry of the Interior. These negotiations can therefore only lead to any result if the National Socialists modify their claims very greatly. It is not very likely that they will do so, for they are undoubtedly interested, not in the mere acquisition of seats in the Cabinet, but in precisely that influence on administration of the armed forces which the Centre intends to refuse them.

It is impossible to see clearly what influence the result of these elections will have upon Reich politics. On the one hand, the moral prestige of Dr. Brüning has been weakened by the losses of those sections of the moderate Right which still supported his policy; on the other hand, it has been strengthened by the success of his own party, the Centre. The more the increase in the number of Hitler's supporters threatens all moderate and enlightened policy in Germany, the firmer stands the narrowed circle of those who are defending that policy, grouping themselves round Brüning because there is nobody else with the necessary personality and qualities of leadership.

The Deutsche Bank und Diskontogesellschaft has closed the application lists for its shares. The result has not fulfilled the expectations of the bank: only 27 million shares, at 115, have been taken up. At the end of February the bank reduced its capital in circulation from Rm. 180 to Rm. 72 millions, by writing down the nominal value of the shares from Rm. 1,000 to Rm. 400, and 72 million new shares were issued to increase the capital to 144 millions. The Golddiskontbank declared itself prepared to take over these new shares at 115, but the DD bank did not wish to allow 50 per cent. of the bank's capital to pass into the control of the Reichsbank. It was able to announce by the end of February that 20 million shares had been taken up by industrial customers of the bank. A further amount was to be disposed of by a public issue, and it is now revealed that this further amount consists only of 7 millions, so that the Golddiskontbank will have to keep no less than 45 million shares. This does indeed make the influence of the Golddiskontbank on the DD bank considerably less than on the other big banks, for it holds only something over 30 per cent. of the capital. The failure of the issue is attributable not only to the unfavourable position of the German capital markets, but also to the distaste of German capitalists for bank shares. The issue price of 115 was generally regarded as too high. Although the capital of the DD bank is very small in comparison with the volume of its business, the earning prospects of the bank are very unfavourably estimated. As the crisis is still in full swing, the current year, and perhaps also next year, will bring losses on investments and on debts. Moreover, the DD bank will have to pursue a very cautious dividend policy for the next few years, in

order to build up its reserves again. There was, in consequence, no demand worth mentioning for the shares of the bank, and the Stock Exchange quotation fell, after the closing of the lists, to 40. That is, to 100 per cent. of the new nominal value, against an issue price of 115.

The history of industrial combination in Germany has recently been enriched by another share scandal. It appears that the Burbach Kaliwerke, in consequence of an amalgamation which had hitherto been kept secret, has become heavily indebted and has had to write off large losses. Burbach is one of the largest German producers of potash and produces 18.8 per cent. of the total German output. It is also one of Germany's largest oil producers. Two years ago it discovered the largest oil well in the country in one of its potash mines, and has made large profits by selling this oil for refining to I.C. Farbenindustrie on a several years' contract. Even for 1930 the company distributed a 12 per cent. dividend on its Rm. 70 millions capital. Now it emerges that no less than Rm. 33½ millions of its capital is held by a small and hitherto almost unknown company which has bank debts to the tune of 55 millions, guaranteed by the Burbach Kaliwerke. The creditors are mostly foreign banks, and the debt comes, for the most part, under the Standstill Agreement. Recent balance sheets have given a false impression of the state of the company, which has seriously injured the interests of many shareholders. The quotation for Burbach shares, which was still 175 at the beginning of 1931, fell from 55 to 31 on the receipt of this news. The creditors will have to face the fact that their claims will for a long time be impossible to liquidate, but, as far as has been ascertained so far, the company will be able to meet the debt. The shareholders' position is, however, far from favourable; no dividends can be distributed for 1931, and a probably not inconsiderable part of the capital is lost.

AUSTRIA.

Local Elections — Banks — Foreign Trade.

(FROM OUR CORRESPONDENT.)

VIENNA, April 25.

THE profound dissatisfaction of the general public with the present economic situation has been given expression in the fact that the National Socialists have obtained successes at the Local Government Elections in several of the Austrian federal countries, namely, in Vienna, Lower Austria and Salzburg. The election results show which classes are hardest hit by the crisis. The worst off are the middle classes, which up to the present have been supporters of the moderate bourgeois parties. Last Sunday these parties received very few votes. Nevertheless, in contrast to the elections in Germany, which were held at the same time, it is characteristic that the Communists did not meet with the slightest success anywhere here. No immediate redistribution of power will result from the elections. Still, it is possible that the grouping of the parties and their relation to the Government may undergo modification. In the hotly contested Vienna constituencies the Social-Democrats again have a big majority, the distribution of seats being as follows: Social-Democrats 66 (+ 1), Christian Socialists 19 (— 16), National Socialists 15 (+ 15). This means that the notorious anti-bourgeois "Breitner taxes" and the rapid house-building out of public funds will remain in principle. It is, however, possible that sharp opposition on the part of the new radical municipal councillors may cramp the absolute rule of the Government Party a little.

The first of the Vienna big banks has published its balance sheet. This is the Niederoesterreichische Escompte-Gesellschaft, which for the first time in its eighty-year existence has decided to pay no dividend. The board declares that the net profit would have sufficed to pay a dividend of 5 per cent., against the 10½ per cent. of last year; but that it appears more advisable, in view of the present conditions, to carry the sum forward. At the same time, it was stated that all the Austrian big banks would refrain from distributing dividends for the year 1931. The net profit of the Escompte-Gesellschaft

has sunk from 6.45 million schillings to 3.09 million schillings. This is chiefly due to the unfavourable development of the foreign exchange, security and syndicate business. These items show no profit at all, whereas for 1930 they showed 1.66 million schillings. As the slump on the share markets, the absence of issues and syndicates, and the monopolisation of the foreign exchange trade by the National Bank also affect all the other institutions, these items must be regarded in the records of all the banks as the central point of the unfavourable development of revenue. Lending has also become but slightly remunerative, as foreign capital, on which the banks had to pay only 3 to 3½ per cent. interest, and which they lent at 12 per cent. and still higher rates, has been almost completely withdrawn. Loans from the National Bank, insofar as the banks could get them at all, were much dearer, the average of the official Bank rate having been 7.22, against 6.74 per cent. in the previous year. Another source of relatively cheap loans, namely, the deposits, is diminishing; at the Escompte-Gesellschaft this item has sunk from 64 million schillings to 51.6 million schillings; moreover, as the present insecurity of the banks necessitates maintaining large liquid funds for fear of runs, deposits are re-lent rather hesitatingly. The decline in business may be seen from the drop in the total of the balance sheet by 88 million schillings to 491.9 million schillings.

It was not possible to reduce overhead charges in proportion to the decline in profits; on the contrary, they have increased, personal expenses, pensions, expenses and taxes showing an increase of 0.33 million schillings to make the total 11 million schillings. Although the Escompte-Gesellschaft has no branches or exchange offices at all, 40 per cent. of the expenditure goes in salaries and pensions. Another outstanding feature of the balance sheet is the writing down of the share holdings by 3.8 million schillings to 6.5 million schillings to bring them into accordance with present-day conditions. Debtors' accounts have gone down by 57 million schillings to 352 million schillings, creditors' accounts by 73 million schillings to 340 million schillings. It is probable that no serious losses have been suffered through debtors, the reduction of the total being due simply to stricter collection. In the creditor accounts are reflected, not only the cancelling of foreign loans, but also the fact that the smaller provincial savings banks have been obliged to withdraw their deposits from the Escompte-Gesellschaft, because they themselves need them. Nothing has been allocated to open reserves. In judging the balance sheet of the Escompte-Gesellschaft, it must be kept in mind that two years ago, on the occasion of the fusion with the Vereinigte Elektrizitätsgesellschaft, an electric power department was added to the bank, and this has shown satisfactory results and fair revenue, which does not come from the net profits of the bank and which is peculiar to this institution.

The reduction of the Bank rate of the Bank of England has caused a tendency in Austria to demand a modification of the discount rate. The National Bank declares, however, that it is not at present in a position to comply, and a glance at the half-monthly report confirms this view. Reduction of outstandings is only very slight, the bill portfolio having gone down in the second week of April by 13 million schillings to 845.7 million schillings. The holdings of foreign values, however, have sunk by 10 million schillings to 48 million schillings in value, so that the sum by which the note circulation is below the minimum cover has increased by 18.7 million schillings to 58.5 million schillings; about 6½ per cent. of the circulation is now subject to taxation. Under these circumstances, greater significance attaches to the constantly unfavourable development of foreign trade. In March the deficit amounted to 67 million schillings, which was 5 million schillings more than in February and 3.8 million schillings more than in March, 1931. The surplus of imports is, therefore, more than a third higher than the total foreign-value holdings of the National Bank, so that it is easily intelligible that the allotments of foreign values for import trade are very small, and that the question of prohibiting importation is becoming more and more

urgent. The deficit in the balance of foreign trade is all the more serious, because it continues to increase in spite of diminution in the volume of foreign trade. As against March, 1931, imports have gone down from 177 million schillings to 134 million schillings, and exports as much as from 144 million schillings to 88 million schillings. Austrian exportation is meeting with steadily increasing difficulty, and, according to the latest reports, it appears that the English market has been almost completely lost. In March, exports to England amounted to only 1.5 million schillings, as against 8 million schillings in the corresponding month of last year. The payment difficulties arising from the Austrian foreign-currency regulations are contributing to the decline in foreign trade; it is estimated that Austria's debt for foreign merchandise amounts to 250 million schillings to 300 million schillings, as compared with the level of about 80 million schillings considered normal up to the autumn of 1931. In economic circles it is feared that the new compensation treaties will not make any essential improvement in the remittance difficulty.

HUNGARY.

Budget — Foreign Creditors — Bank Rate.

(FROM OUR CORRESPONDENT.)

BUDAPEST, April 19.

THE Budget estimates for the financial year 1932-33, which begins on July 1st, were laid before the House of Deputies on April 15th. The Finance Minister has made an admirable effort to meet the difficult situation, and instead of the policy of camouflage practised by his predecessor in 1930 and 1931, which led to disaster last July, Baron Korányi gave a frank and honest survey of the financial position of the country, which was deservedly well received by Parliament and by public opinion of almost all political shades. Time alone can tell, of course, how far the receipts of 806.2 million pengő provided for the expenditure of the Administrative Budget and 401.1 millions for the State undertakings, at which figures the estimates balance, can be realised. Much depends on the development of the projected economic co-operation of the Danubian States and on a satisfactory solution of Hungary's foreign debt service, but much also remains to be done by the Government at home. The Finance Minister fully realises that further economies must be made and that administrative expenditure must be reduced below 800 million pengő if equilibrium at the current revenue is to be maintained.

Below is a comparison of the estimates for 1932-33 with the administration expenditure of 1926-27 and 1930-31:—

	Actual Expenditure.		Estimate.
	1926-27.	1930-31.	
Personnel	234.1	304.7	273.7
Pensions	100	132.8	116.8
Subsidies to autonomous administrations for salaries and pensions	44.5	57.7	49
Other expenditure (material, &c.)	269.7	310.6	242.9
Debt service	137.5	105	101.6
Treasury charges	5.4	8.7	.8
Capital outlay	15.3	27	21.4
Total	806.5	946.5	806.2

The reduction of the Administration Budget to the 1926-27 expenditure level is a great achievement, especially as actual expenditure in 1929, 1930 and 1931 amounted to well over 1,000 million pengő, including the still outstanding debts incurred by certain departments without proper credits to meet them. Baron Korányi will shortly introduce a Bill to reform the Accounting Law in order to stop expenditure for which there is no provision voted by Parliament. This Bill is long overdue, for the unprovided expenditure of the departments and State undertakings resulted in an unconsolidated debt of more than 600 million pengő in the period 1929-31.

The Budgets of the State undertakings were drawn up with too much optimism. Considerable economies must be made before the State railways' deficit can be reduced

to 10.2 million pengő, and there must be an economic revival before the proposed receipts of 242.8 million pengő can be realised. It seems also that the surplus of the Post, Telegraph and Telephone services, estimated at more than 20 million pengő, is unduly optimistic. In view of the present receipts there can be little hope of realising more than 350-360 million pengő instead of the 401.1 millions estimated for the revenue of all State undertakings. The State undertakings, especially the railways, are suffering from the very high ratio of pension charges which are caused mainly by the several thousands of refugees from the succession States.

The Finance Minister has announced in his *exposé* that to cover the deficit of April, May and June the State has to borrow from the banks 50 million pengő in the form of Treasury bills bearing 7 per cent. interest, which are eligible for rediscount with the National Bank. The news that the Treasury bills are eligible for rediscount with the Bank caused some bitter comments in Parliament from the Opposition benches. As the Treasury was empty some device to procure the necessary money to pay the salaries of the employees and to maintain the State services had to be found, but it must be emphatically pointed out that such an operation cannot be repeated without plunging the country into a dangerous inflation. Baron Korányi fortunately made it clear in his *exposé* that he does not propose to have any further recourse to borrowing, and that he will endeavour to raise the necessary revenue from current resources, because the Government is anxious to maintain the stability of the currency. That, of course, depends on further economies so far as the Budget is concerned, and on an equitable solution of the foreign debt problem. It is therefore very satisfactory to note that the League Council has approved the proposal of the Financial Committee that at the request of the Hungarian Government the Committee may suggest means for securing the assistance of one or more persons of international repute who might examine the various loans and make proposals for the consideration of all parties concerned.

Contrary to the general expectation that the discount rate would be reduced by ½ per cent., the National Bank has reduced its rate by a full 1 per cent., from 7 per cent. to 6 per cent. on April 16th. The decision of the Bank was accompanied by a statement of its president that the decrease of the rate does not mean an increase of the credit facilities granted by the Bank, as the authorities are resolved to oppose any artificial increase of the circulation, and their object in reducing the discount rate was only to lighten the burden of the high interest rates weighing on production, especially on agriculture. Following the reduction of the Bank rate, the maximum interest rate on credits has been fixed at 9 per cent., a decrease of 1½ per cent. On the other hand, the interest rates on deposits and current accounts have been decreased only by ½ per cent. in order to give an impetus to saving. The National Bank has insisted that the margin of the banks should be reduced by 1 per cent., a very wholesome measure which was received with great satisfaction by the public.

NORWAY.

Government — Banking — Foreign Trade.

(FROM OUR CORRESPONDENT.)

TRONDHEIM, April 11.

FOLLOWING the death of Mr P. Kolstad, who was Premier of the Government for about seven months, a reconstruction took place in March last, whereby Mr Hundseid, Parliamentary leader of the Peasant Party, was appointed Premier. In the course of the period during which Mr Kolstad's Government was in office, the economic crisis both abroad and at home was increasing steadily in strength and extension, and it was therefore natural that the inaugural declaration of the new Government, although to a great extent identical with that of its predecessor, should stress the necessity of taking extraordinary steps to cope with the manifold problems of

the great crisis. Among other measures already taken, the appointment of a committee to discuss on a broad basis the questions connected with foreign exchange, the krone and the price level forms an important feature. This new committee is supposed to act as an advisory council to the Government in matters bearing upon the above-mentioned questions, and will not supersede the already existing exchange committee, constituted without official co-operation by representatives of trade, industry and banking.

The policy of the Norges Bank during the greater part of this year has been to maintain the krone at a level corresponding rather with its intrinsic value than with its international valuation, and has consequently kept up a sterling rate of 18.35. This rate has, however, not been effective on account of the steady rise of sterling in New York and other centres, and on March 29th last this policy had to be abandoned, and the sterling rate raised to Krs. 18.90. The krone has appreciated in relation to gold standard currency by about 8 per cent. during the past quarter of the year, a fact which corroborates the general opinion that the depreciation of the krone in relation to sterling is not due to lack of confidence, but is a natural and inevitable result of the rise in sterling. Until quite recently there has been a sufficient supply of foreign exchange to satisfy ordinary demands, but some very natural unwillingness on the part of holders to sell sterling has been noticed.

Some time ago the findings of the so-called "Crisis Committee," which was appointed to revise in detail the Budget propositions, were put before the Storting. Although the Committee has found means of reducing expenditure to a certain extent, the general opinion seems to be that there is now either no real determination or no possibility of an effective reduction of State expenditure. The only course, therefore, now seems to be to take positive steps to encourage and promote trade and industry as far as possible, and a step in this direction is said to have been taken through preliminary investigations in London aimed at an *entente* with Great Britain with regard to fiscal policy.

Several of our most important industrial concerns have published their annual reports for 1931, which to a great extent reflect the adverse effects of the world crisis. This is also the case with several shipping and insurance companies, but on account of a prudent policy during successful years many of these concerns are able to declare a dividend, although in some cases it is considerably reduced. Against the rather dark background of the present economic position, a few bright features stand out perhaps more vividly than they really deserve on their own merits. One of them is the foreign trade statistics for February, which constitute a record favourable balance between export and import. The value of imports amounted to 55.2 million kroner, against 63 million kroner in February last year, while exports amounted to 58.7 million kroner in February this year, against 48.9 million kroner for the same month last year. This result is due to exceptional circumstances—for instance, the increased activity brought about by the war in the Far East and, to a still greater extent, the heavy imports into England on account of impending tariff increases. It should be remembered, however, that the export of whale oil is not included in the official export figures, and while this was a large item in 1931, it is altogether negligible this year. An agreement has been reached between Norway and the Soviet Union according to which the Soviet will buy from Norway 200,000 barrels of spring herring and 100,000 barrels of large herring. The Norwegian Government will guarantee Soviet purchases in Norway to an amount not exceeding 20 million kroner.

Another encouraging sign, though it is perhaps not very significant in itself, is the increase of deposits with free banks, which rose during February by about 4 million kroner. On March 15th Den Norske Creditbank and the Bergens Privatbank resumed normal operations, the three months' moratorium expiring on that date. The Central-banken for Norge recently published their annual report for 1931, showing a surplus of 3.4 million kroner. The effects of the Kreuger affair in this country have not been notice-

able, as interest in investments in foreign shares is not very highly developed with Norwegian investors generally. Operations on the Bourse have not been very brisk lately, but prices on the whole have kept firm, especially as regards Government bonds and industrial shares.

TURKEY.

Finance — Import Regulations — Opium.

(FROM OUR CORRESPONDENT.)

CONSTANTINOPLE, April 12.

THE Government has found it impossible to compress the expenditure side of the Budget within 149 million Turkish pounds, the maximum probable revenue for the financial year opening in June, according to the forecast of the special Commission appointed to look into the financial prospects. The Cabinet has insisted on an expenditure of 172 millions despite the desperate increase in taxation which will be involved. This insistence produced some signs of real differences within the Government Party, and at its general meeting as many as forty votes were cast against the Government's financial policy. When it is remembered that there is only one single Opposition deputy and that the rest of the National Assembly forms a solid block behind the Government, the significance of this vote is apparent. It represents a growing public discontent with the ever-increasing burden of taxation, and a growing opinion among responsible politicians that the limit has been reached.

The crisis tax which was put upon all salaried workers at the end of last year to make up the 30 million Turkish pounds deficit which was revealing itself in the current budget is now to be supplemented by a "Budget-balancing tax." The title given to the new imposition is intended to mark its provisional character, but it is certain to become a regular part of the tax machinery of the State until some sort of economic prosperity returns, especially to the agricultural population. Fifteen million Turkish pounds is expected from this new tax, and it will bring up the tax deductions from salaries to 25 per cent. and over. First they are to be subjected to this 10 per cent. deduction, then to a 7 per cent. profits tax, and then to a deduction of from 10 to 20 per cent. for the crisis tax. This will prove a great hardship for the Government employees, though the fact that their salaries burden the Budget with an expenditure of 82 millions—or nearly half the total expenditure—may seem some justification. It is remarkable, however, how submissive the salaried population has become to the financial exactions of the Government, and how deeply impressed the population still seems to be by the success of the policy of Kemal Pasha in maintaining Turkish currency stability.

The total amount which has to be found to raise the diminishing revenue up to the amount demanded by the Government is 23 million Turkish pounds. Such economy measures as the non-payment this year of any higher-grade salaries to defence officers or Government officials who may be promoted to a higher grade are to be put into force. Other taxes are to be increased and exemptions abolished. Among the latter are some of the exemptions from import duties on raw materials used by Turkish industry, exemptions which were granted under the law for the encouragement of industry. This has raised a certain outcry among industrialists, who have complained that it is equivalent to the Government breaking faith with them as they had started their activities on the basis of the Government's promises. The Government replies that it does not intend to alter the spirit of the law. But the exemptions have proved not to be altogether to the advantage of nascent Turkish industry. Too many small industrialists took advantage of them to found factories. The

consequence was that intense home consumption cut prices, and when the critical moments came many of the smaller factories could not stand. Turkish home industry has thus been thrown back a stage.

The total obligations for State debts and contract payments are to be included in the Budget, though the negotiations with the foreign groups engaged on public works, with the object of obtaining from them deferred or reduced payments in the coming financial year, are still going on. If they reach a favourable conclusion, the credits thus save will be kept as a reserve against a possible Budget deficit at the end of the year. The sum of 3,200,000 Turkish pounds will, it appears, be included for the Ottoman debt payments, as the Government is hopeful that the present negotiations with the bondholders will result in that reduced figure and in a satisfactory permanent arrangement. This scrupulousness in providing for the payment of State debts and obligations, at least on paper, is due to the wish to keep the credit of the Republic at a high level. Government spokesmen are now being put forward to point out that Turkey has never adopted the policy of refusing a foreign loan under all conditions. The Republican Government simply wants the conditions to be more satisfactory and less politically enslaving than they were under the Sultans. It is determined not to take out loans to balance its Budgets. But for the sake of carrying on the public works which are needed in the country it would, it is now insisted, be willing to accept a loan. This is an interesting change of propaganda, and indicates that the Government is convinced that it will have to hold up the progressive material improvement and modernisation of Turkey as long as the world crisis continues; unless it can get foreign credits.

An alteration has been made in the import quota law. Hitherto the importer of the first goods to arrive could take out his consignment up to the limit of the whole quota, thus cutting out his competitors. A new decree allows the importer to take out only one-sixth of the quota. He will then have to wait his turn till his competitors have received their respective sixths. A close watch is being kept on speculation, and several important Turkish concerns have been heavily fined for taking advantage of the quota system to raise prices. Smuggling is also being strongly dealt with, and the receipts of the State monopolies are going up considerably in consequence. In the past two months over 140 cases of smuggling have come before the new courts here alone.

An agreement has been reached between this country and Yugoslavia concerning opium exportation to Europe and America. This will stop the competition which was adversely affecting the opium producers of both countries. Three-quarters of the sales will be furnished by Turkey and the remaining quarter by Yugoslavia. The centre of the sales will be Constantinople. Though there has been talk of the Angora Government establishing a State monopoly of opium production, this idea has been abandoned. But the Government is going to undertake the same sort of benevolent intervention which it is already successfully applying to the tobacco export trade.

Letters to the Editor.

CAPITAL FOR INDUSTRY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The March 12th issue of the *Economist* carried an editorial relating to the desirability of English banks organising security affiliates along the American plan, premising that such affiliates could perform the useful purpose of providing fixed capital to industry. While it is true that a number of American banks have controlled security affiliates which perform such a service, the practice is not entirely above criticism. In fact, Senator Glass has introduced a Bill in Congress to amend the Federal Reserve Act. Among the provisions of the Bill are sections which are designed materially to curtail the activity of such bank affiliations.

The inherent dangers in the operation of security affiliates were exposed during the inflationary period ending with the

stock market collapse in 1929. Senator Glass's motives in suggesting restriction of such activities were dictated by this experience, and his conclusions are believed to be shared among a conservative element of American bankers. Although superficially the operation of security affiliates supplements the benefits of ordinary commercial banking, in practice the usefulness to be derived from these operations has not justified the anticipation of their sponsors, due primarily to the fact that commercial and investment banking cannot properly share a common meeting ground. Commercial banking, of course, presupposes the conduct of a commercial bank on the basis of demand deposits, and as such is the case, the commercial bank cannot safely tender long-term or capital loans, at least in volume, and at the same time be prepared to meet its demand liability. On the other hand, the investment banker organises his business for the purpose of supplying permanent capital to industry or commerce.

The two functions of commercial and investment banking are so radically different that any attempt to reconcile them through a single medium opens a path to dangerous practice and the possibility of the commercial banking structure being undermined with capital loans. The commercial banker, in extending credit, is primarily interested in the short-term outlook of the borrower and the borrower's ability to liquidate any credit extended within a reasonable period of time. The investment banker, for his part, is looking toward the future, and, in offering capital shares to the investing public, bases his sales appeal, not so much on the ability of the business involved to meet its obligations concurrently, as on the prospective earning power of the business in question. Future earning power cannot, of course, be ascertained with certainty, with the result that the investment banker is compelled to base his conclusions on estimate, while the commercial banker, in extending credit, is concerned with only a short length of time, and can, therefore, appraise the credit risk involved with more exactness. The investment banker is primarily a salesman and, to a very considerable extent, a promoter. As is well known, no investment banker can expect success in his field as a salesman and a promoter unless he himself is thoroughly convinced of the merit of his offerings and can share his optimism in the future earning power of his promotion with the clientèle he desires to serve. The commercial banker, on the other hand, by nature must temper optimism with critical analysis of fact, and, in extending credit, should necessarily lean toward the view that the future represents an element of uncertainty which cannot be forecast.

The attempt in this country to merge the activities of commercial and investment banking has not been entirely successful because of these wide differences existing between commercial and investment banking, and because of the differences in temperament that must exist between the successful commercial and the successful investment banker. It is believed that American experience has shown that in a period of inflation and optimism the sales complex of the investment banker, with his over-confidence in the future, overbalances the temperate opinion of the conservative commercial banker. This condition resulted in commercial bankers losing control of the financial situation in 1928 and 1929 to the investment banking element. The inflationary optimism of investment bankers communicated itself to commercial bankers during this period, which added to the entire inflationary movement. Where commercial banks maintain security affiliates, the interaction of the investment banker's and commercial banker's attitude was somewhat damaging, particularly as the commercial banking attitude was subordinated during this period.

Following the collapse of the stock market in 1929, further defects have been exposed in the plan of operation of security affiliates by commercial banks. A great many share issues were, of course, sponsored by security affiliates in the inflation years. The earnings of these shares have, of course, not lived up to the expectations of the issuing houses, and in most cases the value of such shares has dropped to a very small fraction of the original price at which they were distributed. To some extent at least investors purchased such shares on the strength and good name of the issuing house. Where such a house was a security affiliate of a commercial bank, the sponsorship of the issue and a sales point enhancing its distribution was the good name of the commercial bank in question. Investors suffering from the losses on their security investments have apparently found difficulty not to connect the distress caused by their losses with the name of the commercial bank whose affiliate had sold them shares. This attitude of investors, through which they attach blame to commercial banks for losses sustained through the purchase of shares from security affiliates of such banks, has been a contributing factor to the disturbed banking situation that has existed in the United States over the past nine months and the general lack of confidence in banks.

In the writer's opinion, there is undoubtedly a place for investment brokerage houses in our national economy, but there is a very serious doubt in his mind that investment houses

should have any affiliation with commercial banks. The result of such affiliation seems to have aggravated an already unsettled banking situation. There are undoubtedly two distinct fields of financing: the commercial banking field and the investment banking field. Of the two, the commercial banking field is fundamentally the more important, and any subsidiary banking function should be eliminated from that field if its operation casts any unfavourable reflection on commercial banking. The two fields of banking are mutually dependent on each other, but the desirability of merging them into a single function is open to serious question.—Yours respectfully,

First National Bank of Portland,

A. L. MILLS, JR.

Oregon.

March 29.

[The subject raised in this letter is dealt with in a leading article on page 956.—Ed., *Economist*.]

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

Taxation of Foreign and National Enterprises. (London) Allen and Unwin, 40, Museum Street. 10s.

A League of Nations study of the tax systems and the methods of allocation of the profits of enterprises operating in more than one country. The study covers France, Germany, Spain, the United Kingdom and the United States.

The Stock Exchange. By Francis W. Hirst. Revised Edition. (London) Thornton Butterworth, Limited, 15, Bedford Street. 2s. 6d.

The Bankers' Magazine, April, 1932. (London) Waterlow and Sons, Ltd., London Wall. 2s. 6d. net.

Includes, *inter alia*, an article on "The Financial Outlook in Australia."

The Banker, April 1932. (London) Financial Newspaper Proprietors, Ltd., 20, Bishopsgate. 2s. 6d.

Contains an article on "Reorganisation in Debtor Countries."

Production Planning. By Clifton Reynolds. (London) Sir Isaac Pitman and Sons, Limited, Parker Street, Kingsway. 10s. 6d. net.

Die Volkswirtschaft Ungarns im Jahre 1931. By Dr. Georg Kemény and Josef Vágó. (Vienna) Verlag von Moritz Perles, Seilergasse, 4.

An account of all branches of Hungarian economic life during 1931.

OFFICIAL PUBLICATIONS.

The following may be obtained from H.M. Stationery Office, Adastral House, Kingsway, W.C.2.

Board of Trade: Memorandum on the Patents and Designs Bill. Cmd. 4067. 1s. net.

PROFIT

By others' experience.

NOW READY, our latest BUSINESS SERIES List of Books by Authors of eminence in their respective spheres. Post free on receipt of post card.

Specimen Selection:—

PARTNERSHIP LAW AND ACCOUNTS.

The law relating to Partnerships is carefully and clearly explained, while the necessary accounts are fully set out and analysed. 6/-

By R. W. Holland, O.B.E., M.A., M.Sc., LL.D.

ROUTINE OF COMMERCE.

The chapters include specimen transactions as far as possible, the correspondence and documents incidental thereto being introduced in their natural order. 4/-

By Alfred Schofield, B.Sc.

OBTAINING CAPITAL.

This work shows in explicit detail the only rational methods by which small businesses can be financed; how to obtain finance for a good invention or business idea, and how to obtain finance for the purchase of a business. Indispensable to all seeking capital. Third Edition. By G. A. Bush, F.R.ECON.S. 4/6

THE BOY'S BOOK OF BUSINESS.

With a foreword by Lieut.-Gen. Lord Baden-Powell. This book should be in the possession of every boy just entering business life. By Cecil Chisholm, M.A., and Dudley W. Walton, F.I.R.S. 2/6

EFFICIENCY PUBLISHING Co.

Publishers and Booksellers,

Efficiency House, Lowlands Rd., Harrow, Middx.

The recent formation of the Business Transfer Partnership & Property Agents Institute of Great Britain raises the status of the profession of Business Transfer Agents. A very comprehensive course dealing with B.T. can be secured for £1 1s. 0d., spread over 4 monthly payments of 5s. 3d. each. Course is sent on receipt of first payment.

EFFICIENCY PUBLISHING COMPANY. 71, Lowlands Road, Harrow

The Stock Exchange.

THE ROYAL DUTCH-SHELL GROUP.

AFTER the Kreuger deception it is not unnatural that the market in international securities should be subject to periodic attacks of nerves. Any great combine with world-wide ramifications, with a dominant personality at its head, with accounts that are largely uninformative (as holding company accounts invariably are) and with its trading results and dividend policy a closely guarded secret, is liable in these days to become the subject of foul suspicion or the sport of market "bears." This was the fate of the Royal Dutch-Shell group last week when its shares encountered a wave of heavy selling, Royal Dutch (Fl. 100) falling from 13 to 12½ and Shell Transport (£1) from 1½ to 1¼ in forty-eight hours. Indeed, offerings of the shares that poured in from New York, Paris and Amsterdam gave every appearance of an organised "bear" raid. On Saturday, Lord Bearsted, the chairman of the Shell Transport and Trading Company, was impelled to issue a statement charging the circulation of adverse rumours to "persons of malicious intent, having as their object the achievement of personal gain," and affirming that "the financial position of the company and of the concerns with which it is interested is as strong and as liquid as it has ever been," and that the financial strength would be maintained "in order that there can be no doubt whatsoever as to the company's capability of weathering not only the existing storm but any storm that is likely to arise in the future." This reassuring statement made a good impression upon the market, and induced "bears" to cover, but until the dividend announcements have been made next month the market will probably remain extremely sensitive to speculative, if not deliberately malicious rumours.

The directors of the Royal Dutch-Shell group need not be surprised that market gossip is busily concerned with the dividend uncertainties of the two holding companies. A short time ago, when Paris speculators were buying their favourite shares on the London Stock Exchange in anticipation of a sterling exchange profit, Royal Dutch shares (Fl. 100) were carried up to 20 and Shell Transport (£1) shares to 2½. Yet both companies in November had passed their interim dividends in respect of 1931 (against interims of 10 per cent. for Royal Dutch and 10 per cent., tax free, for Shell Transport in the previous year). Seeing that dividends at the previous "final" rates of 7 per cent. for Royal Dutch and 7½ per cent., tax free, for Shell Transport will involve a cash distribution in sterling (at current rates of exchange) of approximately £6½ millions for the two companies (or £8½ millions if 10 per cent. be paid), there may be reason for the market to question the wisdom, in these days of financial crisis, of depleting current finances by any distribution whatever, even if one has been earned. Clearly, even the best equity shares with an uncertain dividend outlook, while they stand at 200 per cent. or more of their par value, are in a vulnerable market position. Neither shareholders nor directors can expect immunity from "bear" raids until the uncertainty has been cleared away.

Apart from dividend questions, shareholders are dependent upon the usually voluble report of the Royal Dutch and the usually restrained speech of the chairman of the Shell Transport for guidance as to the trading results of their group. Lord Bearsted, in the dignified statement he made last week, declared that the Shell Company, like every other concern, must feel the effects of the general trade depression. But the accounts of the holding companies would not necessarily reflect the reduced earnings of the group, in full, if the directors decided that the operating companies should approximately maintain their dividends by drawing upon their reserves. When the interests of Royal Dutch and Shell were merged in 1907, their assets were transferred to two new companies—the Anglo-Saxon Petroleum Company, registered in England, and the Bataafsche Petroleum

Maatschappij, registered in Holland. The Anglo-Saxon is responsible for the shipping, and certain producing areas, and the Bataafsche for the production side of the business, except that the Bataafsche now holds 64 per cent. of the shares of the American subsidiary—Shell Union Oil Corporation. The distribution of 60/40, covering the respective joint interests of Royal Dutch and Shell under this arrangement, was also applied to the shares of the Asiatic Petroleum Company, which is concerned with the marketing side of the business throughout the world.

Now, the accounts of these operating companies are not disclosed to the public, and shareholders have no means of judging how each has fared in any particular year. The directors merely state that, Royal Dutch and Shell, being holding companies, their profits, apart from the interest derived from gilt-edged investments, depend on the dividends declared by their operating subsidiaries, whose profits, in turn, are shown after ample provision has been made for depreciation. It may be that the real earnings of the group are much greater than the dividends received from the operating companies, but for reasons of taxation the dividends received in each year approximately coincide with the dividends declared by the holding companies, as the following table shows:—

ROYAL DUTCH. (000 omitted.)				
	Net Profits (i.e., Divi- dends received).	Dividends Distributed.		
		Pref.	Ordinary.	Total Pref. and Ord. Divs.
1925	Fl. 94,500	Fl. 3,638	Fl. 92,564 (23%)	Fl. 96,202
1926	101,595	3,840	96,844 (23.5%)	100,684
1927	101,378	3,829	98,905 (24%)	102,734
1928	103,367	3,871	98,904 (24%)	102,775
1929	126,471	4,397	120,870 (24%)	125,267
1930	90,837	2,827	85,616 (17%)	88,443

SHELL. (000 omitted.)				
	Net Profits (i.e., Divi- dends received).	Dividends Distributed.		
		Pref.	Ordinary.	Total Pref. and Ord. Divs.
1925	£ 4,818	£ 450	£ 4,367 (22.5%)	£ 4,817
1926	5,362	450	4,914 (25%)	5,364
1927	5,370	450	4,914 (25%)	5,364
1928	5,448	450	4,997 (25%)	5,447
1929	6,483	450	6,030 (25%)	6,480
1930	5,027	668	4,221 (17.5%)	4,889

It is evident from this table that the "net profits" (i.e., the dividends received) are no index of the real earnings of the operating subsidiaries, for, in 1929 the real earnings could scarcely have increased by 21 per cent. or 22 per cent. exactly, as the dividends did. Indeed, the directors of the Royal Dutch, in their report, referred to 1929 as a year of excessive competition in which the "over-production of crude oil and its derivatives caused the selling prices in the various importing countries to drop to a level below the figure representing the export prices in the countries of origin plus freight to ports of importation and all other charges." The apparent reason why the dividends received increased by over 20 per cent. in 1929 was that the Royal Dutch and Shell were required to pay dividends on a larger capital (one new share for every five having been offered to shareholders as from January 1st, 1929). In 1930 it was apparently found that the 1926-29 dividend rates of 24 per cent. for Royal Dutch and 25 per cent., tax free, for Shell could not be earned by the operating subsidiaries on the larger capitals of the holding companies, for the rates of distribution were

reduced to 17 per cent. and 17½ per cent., tax free, respectively. On this occasion, Lord Bearsted remarked that the profits from which the year's dividends were payable were the result of trading operations and that the reserves had in no wise been depleted.

How are the trading operations of the subsidiaries in 1931 likely to compare with the results for 1930? The Bataafsche will have received no dividends on its holding of 8,415,400 shares in Shell Union, which will represent a falling-off of \$5,890,780 as compared with 1930, and of \$11,781,560 as compared with 1929. This is equivalent to a loss in dividends of 1.75 per cent. for Royal Dutch and 2.0 per cent. for Shell Transport as compared with 1930, and of 3.5 per cent. and 4.0 per cent. respectively as compared with 1929. As regards operations outside America, the consumption of gasoline was maintained in Europe, but there was a drop of 20 per cent. in consumption of kerosene in the East. If the prices of oil in America are any index of marketing conditions outside, the trading results for 1931 will show a considerable decline. On an average, it appears that gasoline prices in the United States were about 40 per cent. and crude oil prices from 40 per cent. to 46 per cent. below the level of 1930. If, therefore, the Royal Dutch-Shell subsidiaries write down their stocks to current market values, their profits this last year will be evanescent. Book losses, however, are not as serious as actual cash losses. The Shell Union, for example, showed a book loss of \$27 millions last year, as compared with \$5 millions in 1930 (see page 983), although its cash, etc., increased during the year by \$11½ millions. There is, therefore, no reason why the operating subsidiaries of the Royal Dutch should not meet depreciation on their inventories in part out of reserves.

The next question is whether, having written down their inventories to current market values, they are able to make a trading profit with the prices of gasoline and other refined products at their present low levels. The answer depends largely on the extent of the reductions they have effected in costs. The possibility of extensive economies in operating expenditures is a factor too often left out of account in consideration of the Royal Dutch-Shell position. In the first place, large savings can be made in production by stopping new drilling and reducing the strings of tools working in the fields to a "maintenance of production" basis. It has been the practice of the Royal Dutch-Shell group to write off drilling expenditures entirely out of trading profits either in one year's or two years' accounts. In view of the restriction policy which the group is following in Venezuela and in the Dutch East Indies, not to mention in its American fields, the savings on drilling must have been very considerable. Next come the economies in marketing expenditures. A large measure of rationalisation has already been carried out. In the East, the Royal Dutch-Shell and the Anglo-Persian have pooled their marketing organisations in a joint marketing company called Consolidated Petroleum. In India, the group shares with the Anglo-Persian in the Indian oil trade surplus to the requirements of the indigenous oil companies. In Great Britain last year the group pooled their marketing organisation with the Anglo-Persian in a new company called Shell-Mex & B.P. Ltd. This should undoubtedly lead to very great economies in transport, storage and distributing expenses.

In spite of economies, however, it is doubtful whether petrol to-day can be sold at a profit except in the No. 1 grades. What are the possibilities of an advance in prices? Already the prices of crude oil and gasoline have been advanced in the United States—Mid-Continent crude oil by 15 cents per barrel as from April 1st, with rises of ½ to ¾ cent per gallon in gasoline. An advance in Great Britain and the European markets will depend on the elimination of price-cutting from the Russian Oil Products, the Roumanian exporters and the Standard Oil of Indiana. As regards the last-named, an announcement of the greatest importance was made last week. This indicated that negotiations for the purchase of the foreign properties of the Standard Oil Company of Indiana by the Standard Oil Company of New Jersey were nearing completion. This purchase is understood to include the marketing organisations of the Standard Oil of Indiana in Great Britain, Germany and South America. The completion

of this deal would remove the most important source of price-cutting, leaving only the Russian Oil Products and the Roumanian exporters as the possible cause of further trouble. Up to March 31st, Russian Oil Products were marketing petrol in this country under a quota agreement with the large oil combines, and there is no fundamental reason why a similar quota agreement should not now be negotiated. But it is undeniable that the future of the oil marketing companies will not be assured until there is an international agreement, for the restriction of oil production and exports, to which the Roumanian and Russian producers are parties.

If price-cutting in the British, European and Eastern markets is to continue indefinitely, adequate cash resources are all-important for the marketing combines. In this respect the Royal Dutch-Shell position is relatively favourable. In the last three calendar years the Royal Dutch-Shell group has raised £50 millions of new capital, not all of which has gone into capital expenditure. An analysis of their balance sheets shows that Royal Dutch at December 31, had a surplus of liquid assets over current liabilities of 61 million florins and Shell of £14 millions. On the whole, it may be that the strong cash resources of the Royal Dutch-Shell group will be held to justify the distribution of a modest dividend, particularly as there is some prospect of an early termination of the worst of the price-cutting in the petrol marketing trade. We doubt, however, whether any substantial dividends can be earned at the present level of oil prices, so that recovery in the profit-earning power of this great international combine is entirely bound up with an improvement in commodity prices.

THE INSULL FAILURE.

(BY OUR NEW YORK CORRESPONDENT.)

THE receivership for the Middle West Utilities Company, the great holding organisation promoted during the boom period by the brothers Samuel and Martin Insull, marked the greatest public utility company failure in the history of the United States of America. Few receiverships of magnitude, however, have come with less shock to the financial community. The matter had been openly discussed for a fortnight, and most people had come to realise that the receivership would involve a \$300 millions holding company, rather than a group of operating companies with properties valued at more than \$1,000 millions.

The Insulls and their associates had undertaken the building up of a system of operating properties, serving a multitude of communities, interconnected by transmission lines, and radiating from strategically located power plants. Except for half a dozen large cities, of which Chicago was the chief, the operating plants were in small towns. The idea was economically sound, its basic conceptions being a central authority for operating management and a single source for financial supervision and aid. It broke on the rocks of the distressing decline in security prices. A point was reached where its bank loans were no longer adequately covered by collateral. Less powerful interests than the Insulls might have seen their securities auctioned off to satisfy their loans (as, e.g., in the case of the Tri-Utilities failure). Banking creditors, however, refrained from this course as regards the Middle West Utilities and the two Insull-managed investment trusts, in view of the great interests involved, although some of the New York banks holding Insull collateral could have sold without loss, even on the day of receivership. An attempt was made to work out a reorganisation scheme without the intervention of the courts, but the various interests were found to be too conflicting.

The operating subsidiaries of Middle West Utilities serve 4,550 communities with electricity and 300 with gas. The Insull brothers endeavoured to diversify their interests geographically, and thus to serve a greater variety of industries. Properties were controlled within the borders of thirty States. Several well integrated systems were thus built up, and some may eventually be segregated and find a haven with other interests. Many of these misallied properties were bought by the Insulls

under highly competitive conditions at high prices. Naturally, the Insulls cannot expect to obtain anything like what they paid for their properties, if the system is broken up by the sale of some of the units. The various stocks, however, are in bank loan envelopes, and it is unlikely that sacrifice sales will be made.

Criticism of the Insulls is milder than might have been expected in view of the large losses investors must suffer. The opinion is widely held that they merely erred with the rest of the market in over-estimating the value of future possibilities, and were carried away by ambition to reach too far. The primary problem before the reorganisation bankers is how best to squeeze the water out of Middle West Utilities. The view of the stock market is that Middle West common stock, worth \$570 a share in 1929, now has no equity. Preferred stockholders and owners of the \$40 millions of notes sold to the public have seen a progressive and disastrous decline in their securities, the notes now selling at less than 10 cents to the dollar. Reorganisation, it is believed, will substitute for these securities a par value of new scrip approximately equal to the present market value. A similar process will probably be followed in the reorganisation of the two Insull investment trusts, the Insull Utility Investments and the Corporation Securities Company.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

May 3.

ACCOUNT.
May 5.

CONDITIONS were unsettled, market psychology being affected by the unfavourable trend of foreign developments, particularly at Geneva, which caused a fear of liquidation from some Continental Bourses. At home, the new tariffs as a market factor were negligible and equity share values continued to lose ground. The gilt-edged market was disconcerted at first by the unexpected announcement of a large India Loan, but once it was seen that a favourable response would be forthcoming, the market regained its firm tone. The most disconcerting feature of the week was the sharp decline in home rail ordinary and preference stocks, owing to an accentuation of the falling trend of traffic receipts, which is discussed on page 981.

Among gilt-edged stocks, War Loan was well supported after going ex dividend, and 3½ per Cent. Conversion was in demand from investors. India loans were dull on the announcement of the new issue, but recovered on its successful result. Australian loans were better with the melancholy and notorious exception of those of New South Wales. Among recent issues, Agricultural Mortgage bonds were well supported.

The Foreign Bond market remained dull and apprehensive. Disturbances in North Manchuria were a bear point for Japanese stocks, budgetary possibilities at Tokyo continuing to be regarded unfavourably. A modest recovery in German bonds was maintained despite the Hitler successes in the Prussian elections, and disappointment at the departure of Mr MacDonald and Mr Stimson from Geneva, upon M. Tardieu's illness, without having effected a Franco-German disarmament rapprochement.

Home railway stocks were depressed, not merely by the week's figures but by the confirmation they afforded of an appreciable change for the worse since Easter. In every case, the junior "dividend" stocks were most affected—Great Western ordinary, Southern preferred, L.M.S. 1923 preference and L.N.E. second preference. Actual selling was not heavy, but the market was quite unwilling to take stock. Argentine rails receded to the levels established after the volcanic eruptions, owing to absence of any recovery in receipts. The postponement of payments on all Entre Rios preference stocks had been fully discounted.

Industrial shares had a heavy tone, the higher duties recommended by the Tariffs Advisory Committee affecting sentiment less than the fear that seasonal recovery in British trade had been slightly checked. The "House" had become hardened to fresh Krueger revelations, and

was inclined to put the group's stocks, if anything, rather better, but the bad results of U.S. Steel had an unfavourable influence over a large section of the market for international issues. Cables and Wireless were initially lower on the March traffic figures, which showed further recession rather than improvement, but slightly recovered later on bear covering. Electrical shares did not hold their ground, the Johnson and Phillips results (set out on page 982), and the conservative tone of the chairman's speech at the Associated Electrical Industries meeting, as regards the volume of electrical business, suggesting the possible imminence of a period of lower earnings. Brewery shares remained out of favour, no expectations being entertained of a change of mind on the Chancellor's part. Tobacco shares continued to fall in anticipation of lower national consumption. The market took a restrained view of the contents of the forthcoming Dunlop report, the shares weakening appreciably. The ante-tariff ripple of interest in iron and steel shares completely subsided. Provincial selling depressed textile shares, tariffs, in their case, being a bear point, owing to the pending removal of the Abnormal Importations Duty. Among store shares, selling of Harrods was unexpected, but persistent. Among the few issues showing slight strength were Pye Radio, on a good earnings statement (presaging a new share issue), and Spillers. Insurance shares were steady, but banking shares attracted little attention, with a few exceptions like Hambros Bank, whose results made a better showing than was expected, and Anglo-South American Bank, which recovered after a bout of weakness.

Dealings in rubber shares remained small, but the tone of the market improved perceptibly, on a slight hardening of the price of the commodity following the announcement of the cessation of production on a substantial Dutch acreage. Tea shares continued to belie the optimistic forecasts of the Government regarding the effects of the duty, which are discussed in a Note on page 982. The oil share market opened with a rally in the Royal Dutch-Shell group on Lord Bearsted's week-end *démenti*, but America and Paris subsequently became sellers, particularly after the announcement of the postponement until June of consideration regarding Canadian and Mexican Eagle first preference dividend. Business in mining shares chiefly hinged round the fall in sterling, which afforded an opportunity for professional arbitrage business. For the rest, Paris was preoccupied with election cares, and Kaffirs, after modest initial activity, became quiet and featureless. Despite the weakness of copper, Rio Tinto recovered after weakness at the outset, though the fall in the exchange made the movement largely nominal. Tin shares did not follow the commodity in its rise at the beginning of the week, and continued dull despite the cautiously optimistic tenor of the chairman's speech at the London Tin meeting.

NEW YORK.

Although the volume of business remained small, even by the standards of a depressed market, the undertone was appreciably firmer. Possibly the most reassuring factor was the way the market stood up to the United States Steel Corporation's decision to omit a common dividend for the first time since 1915, the operating deficit for the first quarter of this year being \$1,136,607. This statement had been overhanging Wall Street for some time, and, once the worst was known, it was felt that the way might be clear for a slight improvement following the better showing of numerous railroads and the continuation of the Reserve Banks' open market buying policy. The prospect of a defeat of the Soldiers' Bonus Bill were also viewed with satisfaction. Investors generally, however, remained sceptical of an improvement in general business, although the latest car-loading figures showed an increase of 21,923, and the operations of steel mills were reported at 23 per cent., against 22½ per cent. of capacity. The decision of the Pennsylvania Railroad to defer payment of a dividend on its common stock was in accordance with anticipation. The net earnings of General Motors for the first quarter of this year were disclosed at 17 cents per share, against 61 cents in the first quarter of 1931. The Ford Company was reported to be placing heavy steel orders for production of the "Eight" model at the rate of 2,000 cars daily next month. It was understood, however, that motor producers generally were pressing for reductions in steel prices. The Business Index of the *New York Times* for the week ended April 16th was 59.8, against 59.9 in the previous week.

CANADA.

Conditions have worsened in the Canadian stock markets recently. There have been short pauses in the steady downward drift of prices, but the occasional upward flurries of previous months have been absent. Bell Telephone, possibly the most seasoned stock on the Canadian exchanges, is now selling below par for the first time for many years. The bisection of the Shawinigan dividend is a bad omen for the power stocks. The volume of trading remains low, only 3,040 shares and \$19,350 of bonds being traded on the Montreal Exchange on Saturday, April 16th. It is believed, however, that if a tax on stock transfers is imposed in America, Montreal and Toronto will secure a good deal of business formerly transacted in New York. The bond market has been quiet, but reasonably steady. On the mining market, gold stocks have also been noticeably weak. The Bureau of Statistics' "Investors" index for all common stocks was 49.7 for the week ended April 14th, as compared with 58.5 on March 24th, and a "peak" of 235.4 in the summer of 1929.

PARIS.

Liquidation became heavy before the end of last week, the market suffering from a not unprecedented fit of "nerves" on the eve of the Prussian elections. On Monday, however, the bears covered in a narrow market, and prices closed much firmer. The movement, however, was entirely professional, and prices tended to relapse once more as the week progressed, and the market became increasingly preoccupied with election considerations. Renten alone remained strong. Weakness in Suez Canal was attributed to a fresh decline in receipts.

	Apr. 21, 1932.	Apr. 25, 1932.	Apr. 28, 1932.		Apr. 21, 1932.	Apr. 25, 1932.	Apr. 28, 1932.

BERLIN.

The outcome of the Prussian elections had little influence on Stock Exchange sentiment. A perceptible recovery began early in the week, became well marked on Tuesday, and on Wednesday resulted in the nearest approach to buoyancy seen since the official re-establishment of dealings. For once, evidence was available of slight public interest. The origin of the movement became clear on the announcement of the reduction in the Reichsbank discount rate from 5½ per cent. to 5 per cent.

	Apr. 21, 1932.	Apr. 25, 1932.	Apr. 28, 1932.		Apr. 21, 1932.	Apr. 25, 1932.	Apr. 28, 1932.

				Ford Motor A. G.	150	160	...

AMSTERDAM.

After an appearance of strength at the outset, sentiment became uncertain and lethargic. The market was sensitive to conflicting rumours, which put Royal Dutch up and Amsterdam Trading down. The volume of business, however, was small, and prices, outside the market ladders, moved within narrow compass.

LONDON ACTIVE SECURITY PRICES AND YIELDS.

NOTE.—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

OTHER CENTRES.

Other Continental centres were affected by the absence of progress in discussions of international questions at Geneva. Prices everywhere became weaker and business more restricted as the week wore on. Milan was consistently depressed. Brussels failed to hold an initial improvement. Stockholm, exceptionally, remained fairly firm in the face of new Kreuger disclosures, but Copenhagen lost further ground.

INVESTMENT NOTES.

The New Issue Market.—The decision of the Government of India to issue a large loan this week (see page 985), which was certainly not in contemplation by the authorities a few months ago, is a reflection both of the welcome recovery in India's borrowing status, and of the extent of the "unfreezing" of the London capital market since the passing of the "sterling crisis." For the 21 weeks between the suspension of gold payments last September and the reduction of Bank rate from 6 per cent. to 5 per cent. on February 18th last, the market was practically closed to new borrowers, however high their status. The subsequent rise in gilt-edged values, however, has been accompanied by a renaissance in new issue activity, as the following table shows:—

TOTAL ISSUES SINCE DEVALUATION OF £.

	Number of Weeks.	Total Issued.*	Average Amount per Week.	Average Amount per Issue.
Bank rate, 6%.....	21	£ 12,380,155	£ 589,531	£ 412,672
" 5%.....	3	6,936,139	2,312,046	990,877
" 4%.....	1	2,979,000	2,979,000	425,555
" 3½%.....	5	6,901,658	1,380,332	530,897
" 3%.....	1	3,600,000	3,600,000	1,800,000

* New money, excluding conversions.

Some £20 millions of new money has already been offered in the ten weeks since the lowering of the "crisis rate" of the Bank of England, whereas in the preceding twenty-one weeks only £12 millions was raised in all. The amount involved in the average issue, further, has been substantial. Below we give particulars of each issue, made at various levels of Bank rate. Unlike those of the previous table, our figures include amounts offered in conversion of earlier obligations:—

ISSUES SINCE BEGINNING OF THE PERIOD OF BANK RATE REDUCTIONS.

Issuer.	Stock, Amount and Price.	Running Yield Per cent.	Redemption Yield at Latest Date Per cent.	Present Price.

The market, clearly, remains closed to all borrowers except those of the highest standing. Of the 19 issues shown in the table, five have been made by Governments in the British Empire, four by home corporations, two by home railways, three by public bodies (Port of London, London and Home Counties Electricity, and Agricultural Mortgage Corporation), and only five by trading companies. Equity stocks are conspicuously absent from the list. The evidence suggests that new financing has been mainly limited, so far (a) to the covering of urgent requirements for capital expenditure (a significant part having already been actually incurred and temporarily financed by short-term bank loans); and (b) the replacement of high- by low-yielding funded obligations. The rates paid by borrowers have declined with each fall in Bank rate, allowing for differences in status. For example, Croydon Corporation, at the end of February, paid 5 per cent., and Poole Corporation, a fortnight later, just under 5 per cent. In mid-April, however, West Bromwich offered only a redemption yield of £4 10s. 9d. per cent., and Bristol, a week later, of only £4 9s. 3d. per cent. The high premiums now obtaining for most of the earlier issues confirm this evidence of an appreciable decline in the price of long-term capital. Recent issues have been profitable to underwriters and issue houses, only three of the 18 issues shown in the table, with a market quotation, being now at a discount.

Tariffs and Industrial Shares.—As a market factor the new tariffs have fallen flat. It is true that iron and steel shares have been inquired for, but early gains have been lost and prices are now lower than before the new tariff charges were published. As regards industrial shares generally, a continued slide in market values is apparent. It is difficult to determine whether the investor is taking the view that the tariffs can do nothing for British industry while world trade is steadily declining, or whether the prevailing fashion is to exchange from industrial equities into the gilt-edged market, where at any rate there is a chance of capital profit instead of loss. The following table of representative movements shows, however, that a gradual decline is common to most sections of the industrial and railway markets:—

	High, 1932.	Price, April 21.	Present Price.
Associated Portland Cement £1	26/-	24/6	23/-
Babcock and Wilcox £1	46/3	45/-	42/6
Bradford Dyers £1	19/-	17/6	16/-
Dunlop Rubber £1 units	15/2½	9/1½	8/3
Furness Withy £1	20/9	15/9	14/6
Great Western Ord. stock	48½	37½	34½
L.M.S. ord. stock	20½	15½	14½
Imperial Chemical £1	16/4½	15/-	14/3
Imperial Tobacco £1	4½	3½	3½

This week, persistent selling from the provinces has affected the textile market. Dunlops have been a particularly weak feature, selling being noticeable in anticipation of an adverse annual report. Tobacco shares have been affected by the fear of reduced consumption in Great Britain under the pressure of heavy taxation. And the misery of the brewery share market hardly needs further comment.

Stock Exchange Advertising—and Closing.—At the annual meeting of the proprietors of the Stock Exchange, on Friday of last week, a member boldly proposed that expenditure on advertising should no longer be incurred. His reference was to the sum of about £2,000 annually spent on informing the public that members of the Stock Exchange must not advertise, but that the Secretary of the Stock Exchange will supply an official list of members on request. This advertisement is not designed to attract business, as the Stock Exchange Committee admit. It has, in fact, been suggested that it may deter business. To receive a list of over 2,000 names which are meaningless may, it is contended, induce unsophisticated members of the public to deal with the first outside broker who writes a personal human note. To prevent business going to the outside broker, or to bank managers, or to building societies, it is argued, the Stock Exchange should allow members to advertise intelligently. At the meeting, however, the motion was defeated by a majority of nearly two to one. After the meeting the Stock Exchange adjourned till the following Monday, as the "House" was closed on the Saturday for structural repairs. A petition has subsequently been presented to the Committee, signed by over 2,000 members, requesting that the "House" be closed on Saturdays for the rest of the summer. In support of this somewhat reactionary proposal it is argued that the Paris Bourse is closed on Saturday from May till October, that the attendance of members on past Saturdays has been meagre, so that markets have been restricted and prices quoted not as "close" as they should be, and that in general Saturday opening has not been a great success or brought much business to the "House." There is some force in these arguments, but we believe, nevertheless, that the Stock Exchange would be ill-advised to give any impression that its members were reluctant to sacrifice some part of their personal convenience on behalf of the investing public.

Auditors and Company Law.—It is difficult to reconcile the views put forward in a report by a Committee of the Council of the Society of Incorporated Accountants and Auditors with the standpoint publicly taken by some other members of the profession. The Committee, which included Mr Henry Morgan, the chairman of the Council, and five other members, has reported that the Government should be asked to appoint a departmental committee to consider legislation to amend the Companies Act, 1929. Any amending legislation, it is urged, should contain provisions ensuring (a) the disclosure, in the profit-and-loss account, of a "true balance" for the period covered; (b) the separate statement of any abnormal or extraneous debit or credit items, including reserves from a previous period; (c) the disclosure of free reserves on the face on the balance sheet; (d) the publication of profits or losses of subsidiaries or sub-subsidiaries to the extent that these have not been brought into the company's profit-and-loss account. The Committee's report was adopted by the Council of the Society, and a copy has been submitted to the Board of Trade. Mr Morgan has been a spearhead of the effort to secure greater clarity in company accounts, and not the least of his services to investors is his present success in identifying one of the leading bodies in his profession with that policy. The Board of Trade, however, may well ask for more detailed examination of the practicability of principles which in themselves are excellent. Sir Mark Webster Jenkinson has already indicated some of the difficulties of defining "abnormal" or "extraneous" items, which increase with the size and complexity of a company's operations. Lord Plender has suggested that

there is a negative as well as a positive side to the limitation of directors' discretionary powers, while declaring that obscurantism, as such, is indefensible in any circumstances. The Institute of Chartered Accountants has avoided any official pronouncement, after obtaining counsel's opinion that the Kysant case elicited no new principle. One thing, however, appears to be established: that it is unfair to throw upon auditors a moral duty of persistence in advocacy of disclosure beyond the limits of the law, in the face of opposition from directors. The Board of Trade might well adopt the suggestion of the Incorporated Accountants and appoint a small committee, with carefully worded terms of reference, including in its personnel, say, one member of each of the leading associations and three other accountants of eminence. It would be desirable, however, that no accounting body should consider itself pledged to any specific programme in advance.

Home Railway Receipts.—The market for junior railway stocks has lately been depressed, owing to the unfavourable trend of receipts, more particularly since the Easter holiday. At the beginning of the year, gross weekly traffic revenues were running, on the average, about 8 per cent. below the corresponding returns for 1931. As the first half of last year, however, was a period of the steepest relative fall in receipts, and the downward curve showed a tendency appreciably to "flatten out" in the autumn and winter, it was hoped that the discrepancy between figures for identical weeks in 1932 and 1931 would tend to be reduced as the present year progressed—quite apart from any benefits accruing to the railways from a possible slight increase in British trade activity. For some weeks this anticipation appeared to be borne out. The aggregate receipts on all the four main lines for the first five weeks of 1932, as compared with 1931, showed a decrease of 7.8 per cent., while those for the first ten weeks showed a decline of only 6.7 per cent. Easter traffic, however, was somewhat disappointing, and subsequent traffic returns have been relatively unfavourable. Receipts for the first sixteen weeks of this year, as compared with last, now show an over-all decline of 7.6 per cent. The figures under various traffic headings are shown below:—

TOTAL RECEIPTS ON FOUR MAIN LINE RAILWAYS.
(000's omitted.)

	Passengers, Parcels, &c.	General Merchandise.	Coal and Coke.	Total.
First five weeks, 1931	£ 5,428	£ 5,316	£ 3,483	£ 14,227
First five weeks, 1932	5,055	4,872	3,178	13,105
1932 compared with 1931	- 6.9%	- 8.3%	- 8.6%	- 7.8%
First ten weeks, 1931	10,803	10,688	6,973	28,464
First ten weeks, 1932	10,069	9,932	6,549	26,550
1932 compared with 1931	- 6.8%	- 7.0%	- 6.0%	- 6.7%
First sixteen weeks, 1931	18,469	17,299	10,707	46,474
First sixteen weeks, 1932	17,118	15,642	10,140	42,900
1932 compared with 1931	- 7.2%	- 9.5%	- 5.2%	- 7.6%

Coal traffic has been maintained better than general merchandise or passenger traffic, and has continued its improving tendency in recent weeks, while the discrepancy in the other two classes, by comparison with last year, has been increasing. Altogether, passenger receipts so

SECURITY FIRST

Head Offices,
LIVERPOOL North John St. LONDON Lombard St.

far are down by 7½ per cent., general merchandise receipts by 9½ per cent. and coal and coke receipts by 5½ per cent. We show in the next table the figures for each of the four companies:—

TOTAL RECEIPTS ON EACH RAILWAY.
(000's omitted.)

	London, Midland and Scottish.	London and North- Eastern.	Great Western.	Southern.
First sixteen weeks, 1931	£ 18,699	£ 14,098	£ 7,803	£ 5,874
First sixteen weeks, 1932	17,399	12,851	7,244	5,406
1932 compared with 1931	- 6·8%	- 8·9%	- 7·1%	- 7·9%

The loss in gross receipts varies from roughly 7 per cent. on the L.M.S. and G.W. to 8 per cent. on the Southern and nearly 9 per cent. on the L.N.E. The Southern, presumably, is still feeling the effect of restricted Continental traffic, while the L.M.S. may have benefited from the slight improvement in activity in the textile industries of Lancashire and Yorkshire. So far, gross railway receipts are down by £1,300,000 on the L.M.S., £1,247,000 on the L.N.E., £559,000 on the G.W. and £468,000 on the Southern. How far further economies in expenditure, and a reduced wages bill as compared with the first quarter of 1931, have offset these declines is unknown. It is clear, however, that, on this year's showing so far, the L.M.S. is not fully covering the dividend requirements of its 1923 preference stock, while the L.N.E. is earning little, if anything, for its 4 per cent. second preference stock. The Great Western is probably covering its prior securities with a small margin of ordinary earnings. The Southern is earning its preferential payments with possibly a small balance for the preferred ordinary, but nothing for the deferred.

Kreuger (Continued).—Every week—almost every day—continues to produce its quota of disturbing Kreuger revelations. It is stated on the authority of Mr. Lyberg, one of the official Stockholm investigators, that the Swedish Government will be obliged to grant a further moratorium to the Kreuger and Toll combine beyond May 1st, but only for a short period of a few weeks, at the end of which the company will officially declare its bankruptcy. The Swedish Government has prepared a Bill outlining special methods of administration of the combine, in order to provide for its liquidation without forcing the sale of its assets, so as to entail the least possible loss to bondholders and shareholders. Meanwhile, further sensational disclosures have been made of the methods adopted by the late Mr Kreuger to attain his financial ends. In connection with the Boliden Gold Mine, Mr Kreuger obtained a loan of Kr. 40 millions from the Riksbank against the Boliden shares which he had withdrawn from the Skandinaviska-Aktiebolaget. The latter was given \$50 millions of German Government bonds in exchange, which Mr Kreuger took from the International Match Corporation, to whom he promised to give Italian Treasury bonds. This promise was never kept, and, as a matter of fact, as we explained in our last issue, the Italian State bonds were forged. Moreover, although the Boliden shares were deposited with the Riksbank, Mr Kreuger used these shares as a basis for a transaction in Kreuger and Toll debentures, of which he sold an amount between Kr. 60 and 70 millions at an issue price of 160 per cent. Among Mr Kreuger's papers in his room at the Swedish Match office was found a number of rubber stamps giving facsimile signatures of prominent business people in Sweden. It is thought that these stamps were used for making bogus share applications. Another portfolio which was discovered contained blackmailing letters from women, to many of whom he had paid large sums of money, while another dossier contained a list of Mr Kreuger's nominees throughout Europe, through whom he conducted his share transactions. These discoveries have made a profound impression in America, where a committee has been formed, independently of the bankers' committee, to protect all holders of Kreuger securities. Mr Bainbridge Colby, who was Secretary of State under President Wilson, is chairman, and Mr Samuel Untermyer is one of the council of this committee. As regards

the Swedish Match Company, the position will not be elucidated before the end of May, but it is thought that Mr Oscar Rydbeck, the chairman of the company, who has recently returned to Stockholm from Paris, will endeavour to draw up a plan for the reorganisation of the Swedish Match group.

The Tea Duty.—Investors, as such, are less interested in the political ethics of "breakfast table duties" than in their economic effects. The most significant contributions to Tuesday's House of Commons debate on the re-imposition of the tea duty, from this standpoint, were the statement by the Financial Secretary to the Treasury that the duty was estimated to involve an addition of about 2½d. to British retail prices, and the informative review of conditions in the industry, in the light of expert knowledge, made by Sir Walter Smiles. Sir Walter based reasoned support of the duty on the fact that the assistance given against Dutch competition would make for the greatest benefit of the greatest number of companies in India. He estimated that, with the duty, 70 per cent. of the tea companies in Assam would make a profit this year, against only 20 per cent. in 1931. He admitted that the remaining 30 per cent. would make a loss, because their gardens were old or had been planted in unsuitable soil. It is not clear, however, whether Sir Walter allowed for any decline in consumption which may follow an increase in the retail price representing about 18 per cent. on the cheapest blends. The case of Assam, unfortunately, is not quite representative of that of all India. Even under present difficult conditions, the average price secured at the London auctions by teas from Assam, this season, has been 1s. 1.37d., and from Darjeeling 1s. 4.26d. On the other hand, teas from the Doora and Terai have been marketed, on the average, at only 10.39d., and from Cachar and Sylhet at only 7.11d. These latter districts, it is true, have supplied only one-third of the Indian tea marketed this season, but the amount of British capital invested in them is far from negligible. Mr R. P. Wilkinson has estimated that, in 1930 (exclusive of producers covering several districts), £1,611,000 was invested in eleven public companies in the Doora and £1,441,000 in nineteen companies in Cachar and Sylhet, in ordinary capital alone. During that year, the Cachar and Sylhet companies made an average loss of 20.5 per cent. These companies produce the tea most subject to Dutch competition and should gain more by the protection afforded by the duty than they lose through a possible falling off in total consumption. That Dutch competition will be eliminated, however, is highly improbable, its increased intensity of late years having been due not merely to the 1929 removal of Imperial Preference in the British market, but to rapid growth of output. Between 1923 and 1929 alone, the planted area in Java and Sumatra increased from 281,000 acres to 394,500 acres, including 98,700 acres in native hands. Dutch costs, for various reasons, are low, and even the native "kampong" leaf, whose quality would be considered disgraceful on a British estate, has found buyers consistently on this side. Further, the effect of increased protection (reinforced by exchange differences), in the British market, which normally consumes more than half the world's tea exports, may well be to depress prices elsewhere. While, therefore, on a short view, the balance of advantage may be on the side of British growers, the re-imposition of the duty cannot be regarded as a short cut out of their more permanent difficulties and problems.

Johnson and Phillips.—The experience of this company in 1931 has badly belied the optimism of the chairman who, at the meeting a year ago, dwelt upon the growth of the company's order books, the possibilities of suburban electrification, and the probability of "interesting future developments." It came as an unpleasant surprise to shareholders to learn, last November, when the payment of an interim dividend was postponed, that many of the more important contracts then in hand had been suspended, that contemplated new business had been deferred, and that overseas operations had been seriously

restricted, particularly in Australia and India. The report for the year now shows net earnings only one-half of those of 1930 and one-third of those of 1929. The dividend of 5 per cent., against 10 per cent., is fully covered, but the allocation to research and development is greatly reduced and nothing is added to reserve:—

	Years ended December 31, 1929.	1930.	1931.
Net profit	102,514	78,806	35,494
Amount of dividend	60,000	60,000	30,000
Earnings per cent.	17·1	13·1	5·9
Paid per cent.	10	10	5
Research and development	...	25,000	5,000
Dividend equalisation	...	15,000	...
Inc. or dec. in carry-forward ..	+42,514	-21,194	+494

A contraction in manufacturing activity is suggested by a decline of 14½ per cent. in stock-in-trade, and it may possibly be inferred from a rise in debtors that extended assistance has been granted to some customers. The current position remains liquid, however, cash in hand and bills receivable totalling £86,893 (taking Australian balances at par), while current assets (excluding stock-in-trade and advances to subsidiaries), altogether exceed current liabilities by £318,188. The company's difficulties as regards current business may be traced largely to the importance of its overseas interests. The £1 ordinary shares are quoted at £1, yielding £5 5s. per cent., less tax, allowing for the dividend of 1s. per share.

Rubber Plantations Investment Trust.—In view of the conditions of the past year, the most noteworthy feature of the results of the Rubber Plantations Investment Trust is not that net profit is reduced to £23,537, against £157,894 in 1930, and £245,519 in 1929, but that any profit is made at all. There is, of course, no question of any dividend payment:—

	Years ended December 31, 1929.	1930.	1931.
Net profit	245,519	157,894	23,537
From dividend fund	50,000	...	...
Brought in	63,384	61,874	100,626
Available	358,903	219,768	124,163
Amortisation	11,400	7,500	...
Taxation	63,617	51,642	21,662
Loans reserve	...	60,000	...
Dividend amount	222,012	...	...
Dividend rate per cent.	12½	...	...
Forward	61,874	100,626	102,501

Some £21,662 has been transferred to taxation account, against £51,642 in 1930. The value of the company's investments (apart from its own properties) is, naturally, greatly depressed, a figure of £1,235,910 at December 31st last contrasting with the £2,278,146 balance-sheet valuation. To set against this depreciation, however, the company has a general reserve of £657,796, while the dividend equalisation reserve of £50,000 has been transferred to loans reserve account.

Shell Union.—The consolidated accounts of the Shell Union Oil Corporation and subsidiaries for 1931 disclose a net loss of \$27,008,310, after providing \$45,344,101 for depreciation, depletion, intangible drilling costs and surrendered leases. This compares with a net loss of \$5,095,574 in 1930. The amount charged for depreciation alone in 1931 was \$31,084,489, so that if the group had not followed its conservative policy of writing down stocks to cost or market values, it would have shown a profit of over \$4 millions. This indicates that the Shell Union is trading on a satisfactory cash basis. Indeed, cash, short-term and demand loans and United States Treasury short-term obligations on December 31, 1931, amounted to \$36,850,914, as compared with \$25,399,656 at the end of 1930. In addition, the company provided out of its cash resources the funds necessary in 1931 for current capital

development and investment amounting to \$16,605,880, and, further, purchased its own debentures to the amount of \$6,331,000 par value in excess of sinking fund requirements. The amount of \$1,909,805 by which the par value of debentures exceeded the actual cost of purchase was applied to the reduction of the unamortised debenture discount. The policy of reducing the debenture obligations is being extended during the current year. The comparative trading figures for 1930 and 1931 are as follows:—

	Years ended December 31st, 1930.	1931.
Gross operating income	240,297,494	177,582,783
Expenses	192,099,292	152,850,337
Balance after operating and general expenses	48,198,202	24,732,446
Depreciation, depletion, development costs and abandonments of wells	46,700,224	45,344,101
Available for fixed charges	1,497,978	Dr. 20,611,655
Interest on bonds, including amortisation	6,537,887	6,395,203
Minority interest	55,665	1,452
Preference dividends paid	2,200,000	1,100,000
Common dividends paid	9,148,867	...
Common dividends paid per share	70 cents	...
Surplus after dividends	Dr 16,444,441	Dr 28,108,310
Appropriation for Federal income taxes of prior years and other contingencies	...	Dr 3,214,000
Brought forward	35,265,642	18,821,201
Carried forward	18,821,201	Dr 12,501,109

The balance sheet shows that current assets on December 31st were \$93,521,578, as against current liabilities of \$23,240,379. As a result of the year's operations, the surplus account of \$18,821,200 was reduced to a deficit of \$12,501,109. The policy of the company has been to conserve its cash resources so as to emerge from the trade depression with its working capital unimpaired. This it seems likely to do. It has made very large economies by reducing its drilling programme and surrendering leases which are not considered necessary for the protection of its wells in wild-cat territory. The latest figures show that operating and general expenses in the first quarter of 1932 were no less than \$12 millions below the corresponding figures for 1931. The present market quotation for the 5 per cent. debenture is 62½ (New York), while the preferred shares, on which dividends are in arrears since June, 1931, are quoted at 23½, and the common shares at 2½.

Baltimore and Ohio Railroad.—The Baltimore and Ohio, like all American railroads, felt the effects of national depression far more severely in 1931 than in 1930. Total passenger miles declined by 17 per cent., freight tonnage by 25½ per cent., and ton-miles by 23 per cent. Total freight revenue, at \$132 millions, was reduced by 24 per cent., passenger revenue, at \$15 millions, by 20 per cent., and total operating revenue, at \$158 millions,

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper Ltd.,"

8, Boulevard Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

Name

Address

by 25 per cent. The company cut expenses heavily, recouping by this means approximately \$33 millions of a total drop of \$48 millions in operating receipts, but its net operating income was reduced from \$40 millions to \$26 millions, and the balance available for dividends from \$21 millions to under \$4 millions. Payment of 4 per cent. on the preferred and 3½ per cent. (against 7 per cent.) on the common stock necessitated a draft of \$7½ millions on surplus. The board regard with concern the loss of passenger traffic through the extension and improvement of competing highways. Branch line mileage has been materially reduced, and special efforts are being made to attract passengers by way of increased comfort, etc. At a total cost of \$25 millions, the company has acquired, as from July last, complete ownership of the Alton Railroad, formerly the Chicago and Alton, after a foreclosure sale. Stockholders may take heart of grace from the fact that, since January last, there has been no further decline in the trend of traffic. The company is benefiting from the operation of the 10 per cent. reduction in wages, so that, although gross receipts for the first two months of this year were \$6.7 millions below those of 1931, net income was \$0.7 millions higher. The decision, nevertheless, to suspend both preferred and common dividend payments is being maintained, in view of the necessity of conserving cash against maturing obligations.

Tin Restriction.—In an Investment Note in the *Economist* of April 2nd last (page 749), we stated that, at the meeting of the International Tin Committee, to be held in London on April 22nd, a further cut in production of 8,420 tons a year—corresponding to one month's production—would be considered, in order to keep pace with the falling off in world consumption. The committee has now decided to recommend to the four signatory Governments—Bolivia, Malaya, Dutch East Indies and Nigeria—a cut at the rate of 20,000 tons a year instead of the smaller cut at first contemplated. This is a very drastic proposal. Starting from the 1929 basis of 191,876 tons, the International Tin Committee has authorised cuts, altogether, of 101,876 tons a year:—

RESTRICTION OF WORLD TIN OUTPUT.

(1929 basis = 191,876 tons.)

	Quotas.
From March 31, 1931	145,000 tons.
From June 1, 1931	125,000 "
From January 1, 1932	110,000 "
From June 1, 1932	90,000 "

The next meeting of the International Tin Committee will be held at the Hague on May 20th, and it is hoped that some opinion will be expressed as to whether its members are contemplating the entire shutting down of the tin-producing industry. It is understood that the International Tin Pool, which at present holds 21,000 tons of tin out of visible supplies of about 60,000, will review the situation in the light of the International Committee's drastic recommendations. The proposed cut of 20,000 tons had an immediate effect upon the market, the price of tin advancing £4 15s. to £116½ a ton. Subsequently there was a reaction to £113½ a ton. The share market was more or less featureless. It is understood that the latest decision of the International Committee has caused dissatisfaction in Malaya, where some producers argue that, in an open market, demand would be sufficient to absorb a considerably higher total of Malayan tin than the scheme permits—in other words, that the sacrifices under the present regime accrue to Malaya and the benefits to Malaya's competitors.

London Tin Corporation.—In view of the conditions mentioned in the preceding Note, special interest attached to this company's meeting on Thursday, April 28th, when Mr John Howeson, the chairman, reviewed the position in

the tin-mining industry at some length. In the course of his address, Mr Howeson observed that, but for its own efforts, tin would now be in the same position as rubber. During the past twelve months stocks had been reduced 51,700 tons to 39,000 tons net, and the latest measure decided upon gave definite assurance of recovery in the situation. On the part of the four participants in the restriction scheme, there had been a progressive reduction in the quotas until now production was less than 44 per cent. of standard. Dealing with allegations relative to the International Tin Pool, Mr Howeson emphasised that its position was liquid, and that at no time had loans been incurred. The warrants representing the metal purchased were under independent control, and in accordance with the agreement no sales were to be effected under £165 per ton. Dealing with the report and accounts the chairman agreed that £765,000 was a large sum to be written off, but pointed out that it covered two years, no attempt having been made to deal with depreciation in respect of 1929-30. The accumulated reserves were sufficient to write down the investments to or below market value, and the ground had thus been cleared for the payment of dividends as soon as an expansion in profits occurred. Reduction in output had been largely offset by saving in expenditure. Some of the larger dredges were now operating at less than 3d. per cubic yard. Since the close of the accounts, funds for the financing of certain subsidiaries had been provided by the issue of 200,000 London ordinary shares at par. In conclusion, Mr Howeson referred to the comparative smallness of the available stocks of tin, and expressed a definite opinion that the worst of depression had been seen.

British Controlled Oilfields—A Correction.—We regret that, in a note in our last issue, the amount "carried forward" by British Controlled Oilfields, as at the end of 1931, was inadvertently stated to be a debit figure of \$21,899,000. The true debit (subject to income tax, if any) was \$21,899.

Waihi Gold.—Our mining correspondent writes:—In some small degree a recent experience on the part of this veteran New Zealand enterprise recalls that of the Rio Tinto. Additional taxation has been imposed—some of it of a retrospective character—entailing the provision of £71,600, of fully £43,000 more than in 1930. To offset the difference £35,000 has been transferred from various reserve accounts. At £143,440, last year's operating surplus exceeds the 1930 total by £11,800, the effect of some falling off in the value of the ore treated being more than counterbalanced by the crushing of a larger tonnage and by the enhancement in the price of gold during the last four months of the period. The final dividend of 1s. per share tax free makes a total of 2s. for the sixth year in succession. A feature is the strength of the financial position, the company holding gilt-edged securities worth at the date of the balance sheet nearly £340,000. As already announced, the payment by the New Zealand Government of £212,500 for the company's Hora-Hora hydro-electric works has been postponed until ore reserves in general account (167,020 tons), but the value is 11d. lower at 32s. With mining costs expanding depth, the profit margin is narrow; indeed, but for the opinion of the directors, be "precarious." Fortunately tinuance of a gold premium of greater or lesser extent of this material is supporting shafts and levels, and the quantity extractable at a profit is uncertain. Waihi 5s. 14s. 6d., the report having occasioned a fall of 1s. 6d.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Bank of Czechoslovak Legions, Law Union and Rock Insurance, Royal Exchange Assurance, Legal and General Assurance Society, State Assurance, General Accident Fire and Life Assurance, Scottish Equitable Life Assurance Society, Royal London Mutual Insurance Society, World Auxiliary Insurance, Hudsons Bay Company, Consolidated Water Works of Rosario, Army and Navy Co-operative Society, Associated Electrical Industries, London Tin Corporation, Apollinaris and Presta, Amalgamated Anthracite Collieries, and Simms Motor Units. The chairmen of the insurance companies, without exception, laid stress on the stability of British offices, despite the economic trials of 1931. Sir C. H. Morton, of the State Assurance, found little indication, in British operations, of any increase in the moral, physical or financial hazard. Mr A. Skeggs, of the Royal London Mutual, showed that premium income had again increased. Mr Romer Williams disclosed that only 25 per cent. of the funds of the Legal and General were invested in Stock Exchange securities, the policy of developing mortgage business having stood the society in good stead. Mr Vivian Hugh Smith, Governor of the Royal Exchange Assurance, declared that the outside world, which had been deeply impressed by the soundness of the position shown by the great British banks, would pay an equal tribute to the results achieved by British insurance companies. Mr F. A. Szarvasy informed shareholders in Amalgamated Anthracite Collieries that restrictions in the coal trade abroad had gone far to neutralise the advantages of sterling's departure from gold.

CAPITAL ISSUES.

This week's offer by the Government of India came as a surprise to the market, but the "stags," after initial hesitation, decided that the stock was worth attention, and the lists were closed within an hour. Approximately twice the total was applied for, and market dealings opened at ¾ rising to ¾ premium. It was realised that the Indian Government had decided on the issue, not through any anticipated difficulty in repaying its £6,000,000 of Six per Cent. bonds next June, but because lower rates for borrowers in London and the visible improvement in Indian political conditions, after the driving underground of civil disobedience, had presented an unexpected opportunity for new finance on profitable terms. The yield offered—5½ per cent. flat and 5½ per cent. on redemption in 1947—was much the lowest of any India new issue since January, 1929, when £10,000,000 of 1958-68 stock was floated at £5 0s. 7d. per cent. Since then India has raised in London £47 millions (excluding this week's issue) at various effective interest rates between £6 11s. per cent. and £6 per cent., the stocks having a short life, with currencies varying between two and seven years. The present issue, by contrast, has a maximum life of fifteen years. The extent of the improvement in India's credit, which has made possible this week's operation, is exemplified by the rise in existing India Three per Cent. stock, which, as recently as December 30th last, was selling in the market to yield £6 19s. 6d. per cent., but is now on a 5½ per cent. basis. The remaining issue of the week was of a public utility character, the *Swansea Gas Light Company* offering £350,000 redeemable preference stock, 1952, to yield 5½ per cent. The company is taking advantage of prevailing conditions to convert its £250,000 redeemable preference stock from a 7 per cent. to a 5½ per cent. basis, to obtain additional working capital and to repay a bank loan. The company has had an excellent record during its seventy years' existence, though the obduracy of South Wales depression is shown in a falling tendency of sales of gas during recent years. The consequent decline in total receipts, however, has been largely covered by substantial reductions in expenditure. The dividend requirements of the redeemable preference stocks are covered approximately twice.

ISSUES OF THE WEEK.

By Prospectus or Offer for Sale.

Public Offers.

Government of India.—Issue of £10,000,000 in 5 per cent. Stock, 1942-1947, at £95 per cent. The stock is a trustee security. It will be repaid at par on June 15, 1947, but the Government have the right to redeem the stock at par on or on any half-yearly interest date after, June 15, 1942, on three months' notice. The issue is made under the provisions of the East India Loans Act, 1923, and previous Acts. The proceeds of the issue will be used to provide funds for repayment of £6,000,000 Government of India 6 per cent. Bonds due on June 15, 1932; for capital expenditure on railways in India, and for general purposes.

Swansea Gas Light Company.—Issue of £350,000 5½ per cent. Preference Stock at par to be redeemed at par on June 30, 1952. This stock is entitled to a non-cumulative preferential dividend at the rate of 5½ per cent. per annum payable out of the profits of each year in priority to dividends on the ordinary stock. Holders of the maturing £250,000 7 per cent. Redeemable Preference Stock have been given the right exercisable up to April 28, 1932, to exchange either in whole or in part their holdings for a similar amount of 5½ per cent. Redeemable Preference Stock. Sales of gas in therms, total receipts, total operating expenses and interest charges, and profit before charging income tax are shown in the prospectus for the past five years. The profit for 1931 was £39,717. The annual dividend of the new stock will amount to £19,250. This is £1,750 in excess of the dividend on the existing £250,000 7 per cent. Redeemable Preference Stock, but this is counterbalanced by the fact that the present issue will provide new capital of approximately £92,000, out of which the company will repay the bank loan which amounted to £55,235 on March 31, 1932, and which has fluctuated between £84,407 and £27,329 during the five years ended December 31, 1931.

City of Chester Gas Company.—Issue by tender of £7,500 5 per cent. perpetual debenture stock, at a minimum price of £96 per £100, to yield £5 4s. 2d. per cent. Interest payable half-yearly, i.e., January 1st and July 1st. The net revenue of the company for 1931 was £4,810.

Interest on the loan capital, including the present issue, will require £1,296, leaving £3,514 available for dividends on ordinary stock. Reserve for renewals and repairs amounted to £3,065 on December 31st last. Sales of gas have expanded from 65,297,000 cubic feet in 1927 to 71,379,700 cubic feet in 1931.

The Wandsworth and District Gas Company.—Offer for sale by tender of £125,000 5 per cent. preference stock, at a minimum price of £99 10s. per £100. Tenders must be accompanied by a deposit of 10 per cent. of the nominal amount of stock, and the balance payable on or before June 30, 1932. Dividend accrues as from July 1, 1932. Particulars of sale and tender forms can be obtained from the Secretary, The Wandsworth and District Gas Company, Fairfield Street, Wandsworth, S.W.18.

Stock Exchange "Introductions."

British Gas Light Company, Limited.—Particulars of sale of 350,000 5½ per cent. "B" Cumulative Preference Shares of £1 each to Messrs Sheppards and Company at par. Payment to be made in full on May 3, 1932, a commission of 1 per cent. plus an over-riding commission of ½ per cent. being paid by the company in connection with the sale. Dividends payable half-yearly on January 1st and July 1st. Loan capital issued and outstanding amounts to £992,417. Temporary bankers' loan amounts to £278,000.

Tamworth Gaslight and Coke Company.—The directors have resolved to issue £15,000 5 per cent. debenture stock, redeemable at par on July 1, 1932. They have disposed of this stock to Messrs Seymour Pierce and Company, of 5 Lotherbury, London, at 96 per cent., less 1½ per cent. commission. This stock ranks *pari passu* with the existing debenture stock.

Further Stock Exchange information, including the latest reports and notices, dividend announcements, and profit and loss accounts, will be found under the heading of "Company News" on page 999.

COMPANY MEETINGS, &c.

BANK OF CZECHOSLOVAK LEGIONS, PRAGUE.

8 PER CENT. DIVIDEND AS LAST YEAR.

The eleventh general meeting of shareholders of the Bank of Czechoslovak Legions was held in the Lucerna Hall, Prague, on April 24th last.

Dr. Rudolf Rase (the chairman) presided. We quote the following from his opening speech: I regret having to announce the passing away of several of our collaborators last year, and among them one of our worthiest colleagues, namely, Mr Jindrich Holna, mining engineer, manager of the industrial department. We shall always cherish the memory of our deceased colleagues.

It seems to me superfluous to say much about the hard times, the economic and financial crisis. Our Republic was dragged into it more by the condition of neighbouring States and by the depreciation of the different exchanges than by home affairs. The consequences of the crisis may be observed in all branches of economy and may be easily ascertained by a glance into the Stock Exchange records and the reports of the different undertakings and institutions. The fact that we are able to pay an 8 per cent. dividend, as last year, and at the same time increase our reserves by Kc. 35,000,000 is exclusively due to the prudent management of our bank and the self-sacrificing work of the entire staff. In the first place, I wish once more to emphasise the arduous and untiring work of the general manager, Mr Sip. He is steering our bank through the stormy seas of difficult economic conditions in a prudent and far-sighted manner. Since the foundation of the bank, Mr Khyn, assistant general manager, has worked in collaboration with Mr Sip and for the bank his work is of the greatest importance. Everyone who knows Mr Khyn will agree with me that his talent for negotiating insures the best results, and his optimistic character inspires sympathy in all those with whom he comes in contact.

In the name of all present, I heartily thank and congratulate Mr Sip, Mr Khyn and all the officers and staff of our bank and of the affiliated institutions for the successful completion of last year's difficult work.

Mr Sip, the general manager, gave an exhaustive explanation of all the items of the balance sheet.

The net profit amounts to Kc. 7,120,912.60 and the payment of a dividend of 8 per cent., i.e., Kc. 16 per share, as last year, was voted by the shareholders. According to the law, the item real property was increased and thus brought nearer the real value. A fund of Kc. 35,000,000 was created and the reserves brought up to Kc. 100,000,000, which is 142.85 per cent. of the stock capital.

The retiring directors, Mr Jaroslav Sejd, Dr. Augustin Straka, Mr Josef Dolezal and Mr Pavel Varsik, were re-elected, as well as the retiring members of the auditing committee, Mr Josef Jezek and Mr Jaroslav Krysa.

The report and accounts being unanimously adopted and the general assembly closed, the board of directors held a meeting and re-elected Dr. Rudolf Rase as president, Dr. Augustin Straka as first and Mr Stanislav Zavadilík as second vice-president.

LAW UNION AND ROCK INSURANCE COMPANY, LIMITED.

ANOTHER SUCCESSFUL YEAR.

MR F. W. PASCOE RUTTER'S REVIEW.

The annual general meeting of the Law Union and Rock Insurance Company, Limited, was held, on the 28th instant, at the head offices of the company, 7, Chancery Lane, London, W.C.

Mr F. W. Pascoe Rutter (the chairman of the company) presided. The Secretary and Actuary (Mr James Stirling) having read the notice convening the meeting and the report of the auditors,

The Chairman said:—My Lords and Gentlemen,—In presiding for the first time over your annual meeting, I feel sure I shall be interpreting the thoughts of all present when I express our deep regret that circumstances have influenced Mr Hamilton to relinquish the chairmanship of this company, which position he had occupied with distinction for the long period of over eighteen years.

TRIBUTE TO MR HAMILTON.

Anybody who has been brought into close contact with Mr Hamilton, through his various vocations in the City of London, must be well acquainted with his personal activity, his acute mind, his knowledge of finance, and his assiduous attention to the duties falling to his care, all of which have contributed to the value of his work on behalf of the "Law Union" ever since it absorbed the business of the "Crown Life" in 1891.

The board have already passed a resolution recording their grateful sense of the services he has rendered, and I am sure this tribute will receive your cordial support. (Hear, hear.)

It was not my intention nor my desire to add to my responsibilities. Quite the contrary. But, in the circumstances, and for the time being, I have agreed to occupy the chair to which the directors have kindly elected me. The deputy-chairmanship having been revived, I shall thus have the valued support, in that capacity, of Lord Reading, to whose eminent services we have already been so much indebted, particularly since he became deputy-chairman of the parent company.

THE YEAR'S RESULTS.

The results for the year are very similar in total to those of 1930. They indicate the continuous regularity of our operations and the soundness of our underwriting. The figures must be very welcome to you, having regard to the troubles and drawbacks which we, like others, have had to encounter during the past twelve months.

The premium income in the fire department was £493,827, or £30,000 less than in the previous year, and the profit was £81,679, against £72,579 in 1930.

The accident premiums at £217,753 are £14,000 less than in the previous year, and the profit was £28,204, as compared with £34,733.

There is, however, a larger deduction for taxation consequent upon the increased income tax, and so the net surplus, apart from interest, is £83,475, as against £87,338 in 1930.

LIFE ACCOUNT.

In the life department, the new business for the year of £2,049,119 is a significant indication that, notwithstanding the times, it is possible, by planning and energy, to do as well as in the days of the country's flourishing prosperity.

The life premiums for the year amounted to £698,697, as compared with £695,110 in 1930.

But there is, of course, another aspect of this life account which we cannot ignore. There is little doubt that this fresh quinquennium, of which two years have now gone, can scarcely be as favourable as the last.

The year 1931 witnessed a serious fall in values, particularly of "gilt-edged" securities. December 31st, therefore, found us with an actual depreciation in the values of our Stock Exchange investments, and, notwithstanding the substantial improvement which has happened since, it is necessary to recognise strict compliance with the Assurance Companies' Act and the obligations of the auditors.

Therefore, as regards the life funds, we have set aside the sum of £250,000, which fully provides for the depreciation in the values of the Stock Exchange investments as at the end of the year.

Similarly, in the case of the proprietors' funds, apart from the life, we have met the situation by writing off, in the profit and loss account, the sum of £25,000.

The bold course which we have thus taken of fully providing in the accounts for the depreciation as it stood at December 31st,

enables us to state that those funds were then actually worth more than their book values.

You will be pleased to know that during the past four months the whole of, and even more than the £275,000 thus written off has been recovered.

As regards the remainder of the life investments, it is not practicable to assess the situation with any precision, and any definite valuation thereof will, of course, wait until the end of the current quinquennium in 1934.

You will conclude, therefore, that, having regard to all the difficult circumstances, 1931 has contributed to our successful record. When values were falling, and when investors did not know how to turn, it must have been comforting to many to be able to resort to the soundest investment of all—life assurance.

IMPORTANCE OF LIFE ASSURANCE.

It is unnecessary for me to emphasise the importance of life assurance to the community. It is really a great sheet-anchor, and this is proved all the more when we come to bad times. The capital and the incomes of individuals throughout the country have been and are steadily falling, and although payment of premiums is a tax upon any household's outgo, life assurance is, after all, the only sure investment against the future, and the only impregnable protection for one's dependents.

TRIBUTE TO MR. STIRLING.

The internal arrangements of the company are affected this year by a special event—the retirement of our secretary, Mr Stirling, who has occupied the post of chief officer for the last twelve years—practically ever since the "Law Union" came under the aegis of the "London and Lancashire." He had, indeed, already reached the age of retirement a few months ago, but by mutual consent he has remained until this meeting is over. Mr Stirling's very name indicates his character—staunch, conscientious, reliable, thorough. (Hear, hear.) He has worthily followed in the footsteps of his brother, and he is leaving us accompanied by the esteem, and the regrets, not only of the board, but of the entire staff, by whom he has been held in affectionate regard. We wish him many years of comfort and happiness in that leisure which some people seem to be fortunate enough, not only to earn, but to realise and enjoy.

APPOINTMENT OF MR A. H. SHREWSBURY

He will now be succeeded by Mr A. H. Shrewsbury, who joined us nearly twelve months ago, with excellent credentials, and we look forward to his being instrumental in still further enhancing the reputation and the lucrative success of the company. I am sure he will be well supported by our other officers and the staff, who have done such good work in an arduous year.

I now beg to move: "That the report, accounts and balance sheet be received and adopted and entered on the minutes."

The Most Hon. the Marquis of Reading, P.C., G.C.B., G.C.S.I., G.C.I.E., G.C.V.O., seconded the resolution, which was unanimously carried.

On the motion of the Rt. Hon. the Earl of Strafford, seconded by Mr Philip E. B. Fooks, the retiring directors (the Hon. E. C. G. Cadogan, C.B., M.P., and Col. A. G. Lucas, C.B., M.V.O.) were unanimously re-elected.

Mr Hendry proposed the reappointment of the auditors (Messrs. Peat, Marwick, Mitchell and Company), which was seconded by Mr Crossman and carried unanimously.

THANKS TO OFFICERS AND STAFF.

Mr C. G. Hamilton, in proposing a vote of thanks to Mr Stirling, the officials, staff and agents of the company for their services during the past year, said it was almost a platitude to say that this been achieved was demonstrated by the excellent reports which were received from year to year.

The vote was seconded by Mr Francis Scott and unanimously accorded.

The Hon. E. C. G. Cadogan, C.B., M.P., in moving a vote of tion to the chairman, congratulated Mr Rutter upon his elevation of his skill and ability in his presiding over the board. Col. A. G. Lucas, C.B., M.V.O., seconded the resolution, and it was carried unanimously.

The proceedings then terminated.

ROYAL EXCHANGE ASSURANCE.

SUCCESSFUL RESULTS DESPITE YEAR'S DIFFICULTIES.

The two hundred and twelfth annual general Court of the Royal Exchange Assurance was held, on the 27th instant, at the head office, Royal Exchange, London, Mr Vivian Hugh Smith (the governor) presiding.

The Secretary (Mr E. de M. Rudolf) read the notice convening the meeting and the report of the auditors.

The Governor, in the course of his speech, said:—In the life department the number of policies issued was 4,285, assuring a net sum of £2,417,000. In spite of, and possibly because of, the general condition of industry in the country, this is the largest number of life policies ever issued by your corporation in any one year, although the total sum assured was some £84,000 less than in 1930. During the year the life business of our affiliated company, the Motor Union Insurance Company, was transferred to your corporation, the sums assured and bonuses amounting to £1,188,000, with a premium income of £42,000 per annum. As the whole of the cost of the transfer was borne by the corporation and paid during the past year, there is naturally a slight increase in the expense ratio in the year under review. The healthy condition of the life fund is shown by the fact that it was only necessary to apply £100,000 at the end of the year to meet depreciation in the book value of our life investments, and after providing this figure the balance of profit on the year's working is within approximately £15,000 of the figure necessary to provide a compound bonus at the rate of £2 per cent. It is satisfactory to be able to say that the special funds, such as the bonus equalisation fund, which have been put aside from time to time from the surplus profits of the life department, as well as the carry-forward from the last quinquennium, remain intact. Had our quinquennium ended on December 31st last instead of at the end of 1930, there would have been sufficient profit in hand to provide a bonus at the compound rate of £2 per cent. in respect of the preceding five years, and, in addition, to have maintained these special funds to which I have referred.

In the annuity department 173 contracts were issued, securing annuities amounting to £13,795 per annum after deducting amounts reassured, and in the capital redemption department 44 policies were issued, assuring just under £200,000.

In the trustee and executor department the fees received at £52,000 were approximately the same as in the previous twelve months. The mechanised system of book-keeping, to which I referred last year, has been developed still further, and, owing to this and certain other expenditure, the expenses are slightly higher; but, nevertheless, we have been able to transfer a profit of £8,500 to the profit and loss account.

FIRE DEPARTMENT.

The fire department has had a very difficult year. The unsettled conditions throughout the world have naturally had their effect on the premium income, which, at £1,620,000, is some £80,000 less than in 1930.

Our experience in the home field has been satisfactory, but the condition of business abroad, and particularly in the United States, has had its effect on the results of the department.

The underwriting profit, excluding interest, was 3.8 per cent.; and, with interest, we were able to transfer the sum of £105,000 to the profit and loss account.

As a matter of interest and an example of old connections still existing which we value highly, you may like to know that an original fire policy issued by your corporation in 1815 is still in force on certain property in the City of London.

MARINE ACCOUNT.

In the marine department the premium income, at £460,000, shows a reduction of nearly £200,000. This is partly due to the deliberate policy which has been adopted, and the figures have also been affected by carrying an abnormal amount of re-insurances in the accounts before you, and also by the large amount of tonnage which has been laid up during the year, and to give you some idea of the effect of this I might say that on January 1st of this year there were nearly two million tons net of shipping laid up in the ports of Great Britain and Ireland, which was an increase of 23.4 per cent. over the tonnage laid up twelve months ago.

This department has always been liable to sudden heavy claims, and I need only mention the losses of the "Segovia" and the "Bermuda" as ships of special importance on which claims have had to be paid during recent months.

The marine fund at the end of the year stands at £859,000, which is practically 186 per cent. of the premium income shown in the revenue account.

In the general accident department we again see the effect of the disturbed conditions, as the premium income, at £1,100,000, is less by approximately £150,000 than in 1930, but the underwriting result shows a profit of slightly over 5 per cent., as compared with 3.12 per cent. in the previous year.

You will remember that last year, in referring to compulsory insurance of third party risks in connection with motor cars, I mentioned that legislation along these lines was not favoured by insurance companies for several reasons. Important among these reasons was the fear that legislation of this kind would lead to an increase in the number of claims as well as in the amounts awarded. It is unfortunately true, whatever may be the reason, that this tendency has been noted, and it can hardly be doubted that the knowledge that any compensation awarded will be paid by an insurance company has not been without its effect on many juries.

As a result of the year's trading we are able to transfer, with interest, the sum of £92,500 to profit and loss account, which is nearly £20,000 more than in the past year.

PROFIT AND LOSS ACCOUNT.

We now come to the profit and loss account, which, as you know, is the general reserve fund of your corporation. The interest income, at £103,000, is slightly more than last year, but if the interest in the fire, marine and accident revenue accounts is combined with that shown in the profit and loss account, you will find that the total interest is £201,200. This shows an increase of some £2,000.

On the other side of the accounts it is gratifying to see that the expenses not charged to other accounts, at approximately £39,000, are some £10,000 less than in 1930; and while I am referring to this question of expenses it will be of interest for you to know that nearly 10 per cent. of the total expenses shown in the accounts in front of you is paid away all over the world for taxation in one form or another, in addition to the sum of nearly £200,000 for income tax on our interest income.

EXCHANGE RESERVE FUND.

I now reach a special item, i.e., transfer of £275,000 to exchange reserve fund. The question of foreign exchange was probably the most difficult feature of our business during the past twelve months. The departure of Great Britain from the gold standard on September 21st introduced an entirely new factor into our operations, and the best method of meeting this problem has received the most careful consideration of your directors. After viewing the matter carefully, they were of opinion that it was essential that full provision should be made for these increased liabilities as at the date of the balance sheet in front of you.

Apart from the explanation which I have just given regarding the exchange reserve fund, I think the only other question on which you may like to have some information is that of the valuation of our investments. You will see in the certificate appended to the balance sheet that all the Stock Exchange investments have been valued at or below the market prices at December 31st and that they, with accrued interest, have been converted into sterling at the rates of exchange ruling on that date. You have already heard that our liabilities and the floating assets have been taken at the same rates in calculating the exchange reserve fund, so with all these factors you will understand that the balance sheet shows the true position of your corporation on December 31st last.

It is hardly necessary for me to refer to the widespread difficulties, both internal and international, which have had to be dealt with during the past twelve months. There have been difficulties of maintaining income, with a falling off in business everywhere and a great fall in insurable values; the demands of foreign governments on insurance companies trading abroad continue to increase; the movement of funds from one country to another and dealings in Exchange have been restricted; there has been a great depreciation in all investments; and, lastly, we have had the effects of our departure from the gold standard.

The small influences which these have had on our important insurance companies is a tribute to their strength and conservative management. The world was deeply impressed by the sound positions shown when the reports of the great banks were published, and I believe the same impression will be created when people all over the world see the results of the great British insurance companies.

The report was unanimously adopted, and a further dividend of 17 per cent., less income tax, making 27 per cent., less income tax, for the year, was approved.

GENERAL ACCIDENT FIRE AND LIFE ASSURANCE CORPORATION, LIMITED.

ANOTHER SATISFACTORY YEAR. GROWTH OF HOME PREMIUM INCOME.

The forty-sixth annual general meeting of the General Accident Fire and Life Assurance Corporation, Limited, was held, on the 27th instant, at the head office, Perth.

Dr. William Low, of Blebo, the chairman, said that they were again able to point to satisfactory results, notwithstanding the disastrous international depression which had prevailed in the year under review. He considered the very favourable report justified to the full his previous statements at the annual meetings as to the strength of their organisation and the outstanding ability and energy of their staff and connections in all parts of the world.

ACCIDENT AND FIRE RESULTS.

As regarded premium income, it was most gratifying to find that the accident and fire income combined was only down £22,700. It was most satisfactory that the home income in those departments was up over £300,000, unfortunately counterbalanced by a falling off in the United States income of £270,000. Their interest earnings still covered the cost of dividend and left a balance in hand sufficient to pay an additional 4s. per share, less tax, or over £54,000, which was evidence of exceptional strength in their financial position.

Their life premiums were down £67,000, but that was due to a cessation of the single premium business.

The life business completed was most satisfactory, as they showed an increase of £74,000 in new business. Their marine account continued small, but was on satisfactory lines, and would now, they thought, commence to show more adequate profits. Excluding the life department, their aggregate profits were £310,392, as compared with £425,536 in the previous year. That was a good result and the ratio was very satisfactory under existing conditions.

Their investments had decreased in value like those of every other company, but the investment reserve of £775,000 was more than sufficient to cover all depreciation as at December 31, 1931. They still had £600,000 in their general reserve, with a carry-forward of £474,000 in addition to the ample reserves which they had provided to meet every contingency in connection with the business.

Their foreign business was satisfactory, notwithstanding the present economic difficulties in all countries. In Canada, India, South Africa, Belgium and France, where they had a large premium income, their business was being ably carried on by reliable managers and the organisation was being kept up to date. Their affiliated company, the Road Transport and General Insurance Company, under the able management of Mr Smith and Mr Watson, was making great progress.

The staff, one and all, had done, and were doing, splendid work, and Mr Norie-Miller, their general manager, had worked harder than ever before in tackling difficulties and guiding the company's affairs. The directors, the executive, and the district managers owed him a tremendous debt of gratitude.

MR NORIE-MILLER'S STATEMENT.

Mr F. Norie-Miller, director and general manager, said that the year 1930 had been a difficult one, but its difficulties were as nothing compared with the difficulties they had experienced in conducting business during 1931, and it was a matter for congratulation that in that year their corporation was able to show the very satisfactory results now presented.

Their new life business had increased by £74,000, and remained over the £2,000,000 mark. The reduction in the fund was a nominal one, and was occasioned by their placing £200,000 to reserve for the depreciation of investments and writing down securities. The fire income showed a decrease of only some £3,000, and that account gave a very handsome profit. Their accident income was highly satisfactory. There was a reduction of £19,000, but he thought he was right in stating that that was the lowest reduction in income of any British company doing a world-wide business. The marine account had turned the corner and would now, he thought, show a satisfactory profit each year. They carried forward a fund in excess of 100 per cent. of the premiums.

The net profit for the year was in excess of £310,000. They paid £193,000 in dividend, and placed £30,000 to staff pension fund, which fund amounted to practically £300,000 and would earn interest of over £12,000 a year, a sum much in excess of their requirements for pensions at the present time. Their interest earnings were largely in excess of the amount they paid in dividend, so that the prospects as regarded the dividend being increased in the future were very bright.

The report and accounts were adopted.

LEGAL AND GENERAL ASSURANCE SOCIETY, LIMITED.

An extraordinary general meeting, followed by the ordinary meeting, of this society, was held, on the 26th instant, at 10, Fleet Street, London. Mr Romer Williams, D.L., J.P. (the chairman), said that they had met to consider the valuation report showing the results of the investigation of the position of the society covering the previous five years.

Full reserves had been made not only for the sums assured, existing bonuses and the new bonus now to be declared, but in addition a full reserve had been made for interim bonuses during the next quinquennium and for the declaration of the maximum rate of compound bonus of 38s. per cent. per annum for the whole future existence of the with-profit policies.

During the quinquennium the net sums assured and bonuses in force had increased from 44½ millions to over 70 millions and the society's assets from 19½ millions to nearly 25½ millions. Mortality had been generally favourable. Owing to the exceptional circumstances existing in the stock market on December 31st, they had had to face a depreciation exceeding £990,000 in their Stock Exchange securities. However, only some 25 per cent. of their funds were invested in that class of security, and the total assets showed a depreciation of less than 4½ per cent. The policy of developing mortgage business had, therefore, stood them in good stead on that occasion. They had set up an investment reserve fund of £1,000,000, but a valuation on March 31st showed a recovery of nearly £300,000. The rate of bonus proposed with that which would then have been paid for the eighth consecutive quinquennial period.

At the annual general meeting the Chairman said that the new life business transacted showed a reduction from the record figures of 1930, but was, nevertheless, substantial, and, having regard to the difficulties encountered during the year, might be deemed satisfactory. The mortality during the year compared favourably with that of the previous year. In the fire and accident departments increased figures were shown and progress had been made. The total net premium income for the year from all classes of business was £2,848,810, and the total annual revenue was £3,831,705. (Applause.)

The Chairman paid a tribute to the work of the general manager, Mr W. A. Workman, and the staff. The report and accounts were unanimously adopted.

POINTS OF SPECIAL INTEREST from the

95th ANNUAL REPORT of the

LEGAL & GENERAL Assurance Society Limited

1931 shows remarkable results

- NEW LIFE POLICIES 15,554 new Life Policies were issued during the year.
- NET NEW LIFE SUMS ASSURED for the year exceeded £9,780,000.
- NET NEW LIFE PREMIUM INCOME during the year exceeded £772,400.
- LIFE ASSURANCES IN FORCE The total number of Life Policies in force at the end of the year was 119,251. The Net Sums Assured amounted to £70,127,416.
- FIRE, ACCIDENT, MOTOR & GENERAL INSURANCES The total net Premium Income in these departments for the year was £376,175.
- TOTAL ASSETS EXCEED £25,000,000

THE STATE ASSURANCE COMPANY, LIMITED.

SATISFACTORY HOME BUSINESS.

The forty-first annual meeting of the State Assurance Company, Limited, was held, on the 25th instant, at the head offices of the company, State Insurance Buildings, Liverpool.

Sir Charles H. Morton, J.P. (the chairman), who presided, said:—At the last annual meeting I referred to the fact that, like most trading concerns, we were amidst the lean years, but that I hoped 1931 would bring about the much-desired improvement in trade. Instead, the year that has passed will surely be looked upon as one of the most vital in the history of the country, and it can scarcely be expected that a company like our own would not be affected by the financial and trade upheaval and the conditions which prevailed.

So far as the company's operations in this country are concerned, we have nothing much of which to complain. There is little indication of any increase having taken place either in the moral, physical or financial hazard. The results attained in the accident department are typical. It confines its operations almost entirely to this country, and the profit from the department continues to be satisfactory.

Again, to turn to the home fire business, whilst it is true that we have not quite maintained our income, the reduction is insignificant, and, with a normal loss experience, we have earned a satisfactory profit.

CONDITIONS IN THE UNITED STATES.

As regards our operations abroad, the financial and trade difficulties have reflected themselves adversely in our results. If our underwriting is any guide, conditions in the United States of America would seem to be much worse than with us, and we have suffered there to an unusual and unexpected degree from fires in dwellings. No section of the company's operations has received more consideration by the directors than the U.S.A., but the company has experienced a loss there during the past year. In this we share the experience of others. The outlook does not appear to be too promising, and endeavours are being made to effect a considerable curtailment of our income from this source.

Fortunately, the loss in the fire department is covered by the profits earned by the accident and marine departments, and, despite the shrinkage of premium income, it has been possible to effect a considerable saving on the expenses of all departments.

The directors have considered it prudent to establish, out of existing reserve funds, a reserve in respect of the difference between the 40 per cent. reserve for unexpired risks, as shown in the revenue account, and a reserve based on 40 per cent. of the whole year's premiums calculated at the rates of exchange ruling at December 31, 1931. This may appear to be a very stringent course to adopt, especially in applying it to our business in the United States of America, where we have dollar currency accounts available sufficient to meet any normal calls made upon us in the ordinary conduct of our business there. I do not anticipate, therefore, that it will be found necessary for us to draw upon the fund to the extent of anything like the sum we have provided.

MARINE DEPARTMENT RESULTS.

The results attained in the marine department continue to be satisfactory. The amount of £3,662 transferred from the account to profit and loss represents the profit for 1928, all liabilities having run off. It represents 8.2 per cent. of the income written. The 1929 account has been closed and shows a profit of £8,647, and following our general practice it is proposed to allow this sum to remain in the marine fund for another year before transferring it to profit and loss account. The experience up to date indicates that satisfactory results will also be earned on the business written in subsequent years.

There are few who have been spared the anxieties and difficulties of 1931, and when we consider their effect on the results of many trading concerns I feel we must consider ourselves fortunate in coming through the year without any permanent impairment of our resources. It is, as I have said on previous occasions, during difficult times like the present that we have good reason to congratulate ourselves upon taking advantage of the good years in building up our funds.

The report and accounts were adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8, Bouverie Street, Fleet Street, London, E.C.4.

WORLD AUXILIARY INSURANCE CORPORATION, LIMITED.

DIVIDEND MAINTAINED.

The thirteenth ordinary general meeting of the World Auxiliary Insurance Corporation, Limited, was held, on the 22nd instant, at Winchester House, Old Broad Street, London, Captain the Rt. Hon. C. C. Craig, D.L. (the chairman), presiding.

The Chairman, in moving the adoption of the report and accounts, dealing first with the fire, accident and general account, said that the fund brought forward from December 31, 1930, was £151,831, and, adding premiums for the year, £220,691, and interest, £9,460, there was a total of £381,982. After paying all claims, commissions and expenses and making allowance for outstanding liabilities, the fund at December 31st last amounted to £97,928. Up to the date of the departure from the gold standard currency premiums had been converted into sterling at or about par, with the result that, when the pound depreciated, it was necessary to increase the sum which it was estimated might be required for claims notified and to be notified. Had the necessity for this exchange provision not arisen they would have carried forward a fund of approximately 60 per cent. of the premium income.

MARINE ACCOUNT.

In the marine account the premium for the year amounted to £155,098, and interest to £8,031, and, adding these items to the fund of £192,122 brought in from last year, there was a total of £355,251. Claims paid on the account of 1930 and previous years amounted to £85,444, and on the 1931 account to £30,539, or 19.7 per cent., and expenses to £8,234, leaving a marine fund of £208,004, or 134 per cent., after transferring £23,031 to profit and loss account.

From the balance of £53,561 on profit and loss account the directors recommended a dividend of 6½ per cent. free of income tax, the same as for the previous year. Reviewing the year's progress as a whole, he thought that when they took into consideration the condition of depression and extreme pessimism which had reigned in the business world during the past year they had no cause to complain.

The report and accounts were adopted.

THE ROYAL LONDON MUTUAL INSURANCE SOCIETY, LIMITED.

YEAR OF PROGRESS.

The seventy-first annual general meeting of the Royal London Mutual Insurance Society, Limited, was held on the 27th instant, at Winchester House, London.

After the Secretary (Mr J. H. Skinner) had read the directors' report and auditors' certificate, the Chairman (Mr Alfred Skeggs, F.C.I.I., the managing director), in the course of his speech, said:

It is a source of very much satisfaction that the society's accounts for the past year show such substantial progress, in spite of the adverse conditions, and he also referred to depreciation of security values, stating that, on a revaluation within the last few days, the investment reserve funds and balances on profit in hand were shown to be substantially more than sufficient to cover the depreciation shown at the end of last year.

It will be noted from the general revenue account that the income from all sources during the year amounted to £8,813,697, the combined premium income being £5,571,529. The total claims (including surrenders) for the year amounted to £2,483,704.

With regard to the ordinary life branch, the premium income for the year amounted to £1,300,884, showing an increase of £84,870 over the premium income for the previous year. The total funds of this branch at the end of the year amounted to £7,248,725, having increased during the year by nearly £838,000.

The directors have decided to continue the interim bonus of £2 per cent. per annum, this being the rate of bonus allotted at the last valuation.

In the industrial life branch the premium income for the year amounted to £4,174,176, showing an increase of £144,042 over the previous year. The life funds of the branch at the end of the year stood at £17,684,688, having increased during the year by £1,179,819. The number of new policies issued during the year was 1,076,403, assuring the sum of £17,699,204. The total amount assured by policies in force in this branch at December 31st last exceeded £100,000,000. Turning to the accounts for the five departments, it would be seen that the premiums for 1931 amounted to £68,101, an increase over the previous year of £1,843. The society's assets now total £26,245,250, an increase for the year of £2,084,384.

The report and accounts were unanimously carried.

SCOTTISH EQUITABLE LIFE ASSURANCE SOCIETY.

The one hundred and first annual general meeting was held in the Society's Offices in Edinburgh, on April 21, 1932; the Rt. Hon. the Earl of Stair, D.S.O., president of the society, in the chair, when the report was submitted by Sir Robert Gilmour of Liberton and Craigmillar, Bt., chairman of directors.

He referred with deep regret to the death of Sir Robert Moncreiffe of Moncreiffe, who had served on this board for over 30 years.

General Sir Charles Fergusson of Kilkerran, Bt., G.C.M.G., the late Governor-General of New Zealand, was elected in his place, and Sir William Prescott, C.B.E., D.L., was elected an extraordinary director.

The new business returns fell very little short of £1,500,000 under an increased number of policies as compared with last year. The premium income increased by £10,000, while the net income from interest shows a drop of only £3,500, in spite of increased income tax.

The claims by death were much below the "expected" amount, and the addition to the funds was £231,147.

The balance sheet shows an increased holding of British Government securities of over £500,000.

The valuation of Stock Exchange securities as on March 1st disclosed a small depreciation, which would, however, have been a feature of minor importance had the quinquennium closed this year and had the question of bonus declaration arisen. This depreciation could have been written off without any difficulty, but it was considered more appropriate to defer dealing with this till the quinquennial valuation next year.

During the current quinquennium the actuarial trading profit had been relatively and actually larger than for the same portion of the previous quinquennium, and prospects were therefore excellent.

The Chairman referred at some length to the crippling effect on large estates of Death Duties and to the unfortunate effect which the present rule of aggregation of the proceeds of Estate Duty Policies of Assurance with the rest of the estate had in discouraging the making of provision in this manner. He contended that a strong case could be made out in favour of non-aggregation of policies specifically effected to meet Estate Duty.

APOLLINARIS AND PRESTA, LIMITED.**STRONG FINANCIAL POSITION.**

The thirty-fifth ordinary general meeting of Apollinaris and Presta, Limited, was held, on the 26th instant, at the Holborn Restaurant, London.

Mr. Alfred R. Holland, chairman of the company, presided, and in moving the adoption of the report and accounts, said that the fact that, in spite of the widespread depression, their profits had only decreased by £11,397 was due to some extent to the progress made with the sweetened beverages sold under the name of Presta—tonic water, ginger ale, etc.—the demand for which was constantly increasing.

The strong position of the company was made apparent by the figure in the balance sheet, cash at bankers, £37,781. Although they had the large carry-forward of £97,796 12s. 4d, out of which some shareholders might expect a small dividend, the company had to provide annually £51,680 in respect of prior charges, and therefore the prudent financial policy must be maintained. Through the sinking funds £81,664 had been paid off in the last eight years.

Prosperity could only be restored when some of the difficulties of the international financial and political situation had been removed. They could only hope for better business conditions all round, and given a favourable summer, could face the future with confidence.

The managing director, Mr F. J. Schilling, referred to the company's extensive and valuable interests in the U.S.A., and stated that he had paid frequent visits to the States on behalf of the company ever since 1895. Never had he found conditions so depressing as during his last visit a few months ago, when they were much worse than during the great U.S. crisis of 1907-08. To the credit of the New York management it could be said that their bad debts during 1931 were insignificant. Business naturally showed a setback, but he believed it would recover as it did after the 1907-08 crisis, for the American department, like every other, was receiving the constant and unremitting attention of everyone connected with the business.

Lord Lurgan, in thanking the shareholders for his re-election to the board of directors, referred to a visit he had paid, with the chairman to the Apollinaris spring. He could recommend shareholders to visit it as well as the neighbouring watering-place of Bad Neuenahr. He mentioned that last year over 1,000 English visitors had been to see the spring and the baths at Bad Neuenahr, which were so easily accessible from Cologne by a short motor drive.

The report and accounts were adopted unanimously.

ARMY AND NAVY CO-OPERATIVE SOCIETY, LIMITED.**LORD EBURY'S REVIEW.**

The annual general meeting of the Army and Navy Co-operative Society, Limited, was held, on the 28th instant, at Caxton Hall, Westminster, London.

Brig.-Gen. Sir Frederick Gascoigne, K.C.V.O., C.M.G., D.S.O., D.L., J.P., the vice-chairman, presided, and said he was sure all present would share with his colleagues and himself very great regret at the unavoidable absence of the chairman of the company, Lord Ebury. As many were aware, Lord Ebury met with a serious accident about a month ago, and though progressing favourably was still unable to leave his room.

The chairman proceeded to read the statement prepared by Lord Ebury which noted that his (Lord Ebury's) unfavourable forecast of a year ago, and his recital of the factors then operating had proved all too accurate both in respect of the national position and that of the society. The results now presented reflected the unfavourable conditions of trading which had prevailed during the period under review. The society had not endeavoured to maintain the amount of profit on the lower value of commodities, but had been faithful to their policy of keeping down prices in the interests of those who dealt with it. As in the past, so to-day, their business literally provided a standard whereby price levels were established, and by its policy of regulated profit could only be regarded as a public benefactor.

In the matter of comparison of retail prices there was now to be noted a greater disparity than ever between the society's prices and costs elsewhere. In 1929 over a considerable range of commodities of everyday use, the cost elsewhere had been more by approximately 2s. in the £. In the year under review the difference was no less than 2s. 8d. in the £, from which it might be legitimately inferred that contrary to the Pharisaical claims made by others of meeting the needs of the public in these hard times, those people were seeking their own salvation by securing an even larger margin of profit than in the past. Sooner or later, it was certain, the discriminating public would awaken to such "quackery of competitors" and transfer their custom to establishments such as theirs, where long years of sound trading had taught people the world over not only to trust their capacity in matters of quality, but more especially the society's integrity in matters of price.

The revenue of the year from trading account and miscellaneous revenue had amounted to £646,094—a decrease of £114,601. Expenses showed a reduction of £30,697 to £525,338, leaving a net profit of £120,756, or a decrease of £83,994. It was proposed to pay a final dividend of 10d. per share, making with the interim dividend of 5d. already paid a total of 12½ per cent. for the year.

Having dealt with the chief figures in the balance sheet, Lord Ebury referred to the position of the Indian branches to which he had paid a short visit in the past year. A year ago he had told them that whilst the position in regard to their organisation had never been as satisfactory since his connection with the society as it then was, the board were perturbed in regard to the question of what the future in India held for them. He was glad to say that he had found even fuller confirmation of the improvement in their organisation than he had expected, and the impression he had formed was most favourable both as regards the personnel, and unfavourable conditions prevailing in India were taken into account, the results were by no means unsatisfactory.

As to the prospects of trade recovery in the current year, he regretted that so far as their business was concerned he could find no evidence that the tide had turned, and unless and until some relief was extended to the taxpayer it was to be feared that the tendency to restrict expenditure would remain in force.

While it was true that in the current year the society's orders were substantially as many as in the previous year, the fall in retail prices had not been arrested, and the average value of their orders continued to be lower than last year. The effect of the new Tariff duties would unquestionably be to increase retail prices of many commodities, but the society's policy would continue to be that of keeping their prices at the existing level so long as present stocks necessary.

As regards the future generally, it was extremely difficult to express an opinion. They had had a regrettable setback, but he the society's prosperity would be fully restored. Their policy in the past had been justified by results, and unless and until it was found the success of that policy demanded all the support that shareholders and members could give to the society. If they adopted that course, they would find it to their advantage both as customers and shareholders.

The report and accounts were adopted.

ASSOCIATED ELECTRICAL INDUSTRIES, LIMITED.**SIR FELIX POLE ON THE COMPANY'S ACTIVITIES.**

The thirty-second annual general meeting of this company was held, on the 28th instant, at Bush House, Aldwych, London.

Sir Felix J. C. Pole (the chairman) said that the profit for the past year amounted to £284,829, against £372,997 in the previous year. The directors recommended a dividend of 4 per cent., less income tax, on the ordinary shares, leaving £99,899 to be carried forward. The reduction in the rate of dividend was due entirely to the fact that the directors decided to charge against profits all exchange losses in connection with trading and depreciation of investments overseas. The board most carefully considered whether they should charge these losses against reserves, and had there been a revival of trade this year that course would probably have been taken, but as the anticipations of trade revival had not materialised, it was decided to conserve the company's resources. In the consolidated balance sheet, debentures in subsidiary companies held outside had decreased £1,485,298, the principal item being the repayment of the British Thomson-Houston 7 per cent. debentures. This was the most important financial change during the year, and was facilitated by Vickers, Limited, and the International General Electric Company providing ordinary capital at 21s. without underwriting commission, less subscriptions by other shareholders. Vickers, Limited, and the associated group of companies had many interests in common, and he personally was highly pleased that Vickers again had a very large shareholding in this company. The resultant change in this company's financial structure was most beneficial, and the consequent increase of security of their prior charges, more particularly their preference shares, would be appreciated.

Having regard to the unprecedented nature of the events of last year, nationally and internationally, and to the great depression existing in many industries, due to the financial difficulties which had beset this country and, indeed, the whole world, with consequent curtailment of orders for electrical apparatus, the year's results might be regarded as satisfactory. They had secured a good share of export business. At home they had now a measure of protection. This country had long been the dumping-ground for the excess products of other (usually protected) countries, and they welcomed the change of policy, believing that it would assist home manufacturers and at the same time provide the means of negotiating fair trading arrangements with other countries.

The great achievements of their companies in the field of railway electrification should be of immense value when—as must inevitably come—more extensive schemes of railway electrification were embarked upon. Electrification of suburban railways was definitely overdue, but seemed to be awaiting the decision of the Government in regard to the London Traffic Bill—a measure which those who were familiar with London traffic problems regarded as urgently necessary.

With regard to last year's achievements of their various companies, he would refer particularly to their continued progress in electric propulsion of ships. The advantages of this form of propulsion were so outstanding that its extension was inevitable, and he was interested to see advertisements of forthcoming cruises in which there was a special appeal to the public to take a cruise in an electric ship. He might be reminded that the new giant Cunarder, of which so much had been heard, was not designed for turbo-electric propulsion. Personally, he thought it should have been. It would have been observed, however, that the British Thomson-Houston Company secured an order for seven turbo generators for auxiliary service in this Cunard liner. Unfortunately, work had been suspended, and the Government had not yet seen its way to assist the Cunard Company financially to complete the ship. He thought they should do so, particularly in view of the fact that large financial assistance had been given to other forms of transport. From an official statement of the principal measures taken by the Government in connection with unemployment, he observed that schemes estimated to cost £28,211,230 had been approved for grant under the Development (Loans Guarantees and Grants) Act, 1929. All these schemes were for the benefit of statutory companies, but, in his judgment, grants to large commercial concerns, such as shipping, iron and steel, etc., had an equal, if not greater, claim.

Last year he said that it would be rash to speak about future prospects, having regard to the difficulty of the times. The outlook was little, if any, clearer, but it was hoped that, with more settled economic conditions, a revival in trade might be anticipated. One gratifying feature was that the Central Electricity Board reported that the national production of electricity for 1931 increased by about 4.5 per cent., and Britain found herself in the position that, alone among the industrial countries, she could show a definite increase.

The report and accounts were unanimously adopted, and the dividend recommendation of the directors was approved.

LONDON TIN CORPORATION, LIMITED.**POSITION AND PROSPECTS.****BENEFIT OF INTERNATIONAL CO-OPERATION.**

The annual general meeting of the London Tin Corporation, Limited, was held on the 28th instant, at the Institute of Chartered Accountants, Moorgate Place, London.

Mr John Howeson (the Chairman) referring to what had been achieved in the tin industry by international co-operation, voluntarily undertaken on the widest possible scale, said that the industry had survived conditions that were entirely without parallel, and the recently announced decision of the inter-Governmental Committee had brought the assurance of a recovery in the tin situation that could not be very long deferred. He looked upon March and April of this year as the critical months for tin, and up on last week's meeting of the International Tin Committee as the turning point for the industry. He was confident that the future efforts of the Committee would be directed, not merely towards the maintenance of an equilibrium between supply and demand, but also towards a progressive reduction in stocks which alone could lead to the re-establishment of an economic price level. The decision taken last week meant a further reduction to only 71,000 tons per annum, which was a little less than 44 per cent. of standard. (Applause.)

THE INTERNATIONAL TIN POOL.

When things were at their worst a powerful consortium, known as the International Tin Pool, had been brought together with the concurrence and strong approval of the governments concerned in the quota agreement, and for a period of months all pressure had been removed. Unhappily, consumption had failed to respond to seasonal influences, and continued upon its downward course. There had followed a sudden and very rapid appreciation of sterling in terms of gold, which had brought in its train heavy selling of tin on Continental account. The International Tin Pool had been blamed for not standing up to that onslaught. It had even been suggested that the Pool, having borrowed up to the hilt against the tin it held and being unable to obtain further advances, had then been compelled to liquidate part of its holdings, thus adding to the debacle. He was glad to have the opportunity of stating categorically firstly, that the Pool had at no time taken loans of any kind, whether against the tin it held or otherwise; and, secondly, that the warrants representing that tin were deposited in sealed packages entirely outside the control of the participants.

The decision recorded by the International Tin Committee last week happily carried with it the assurance that the period of over-production was now finally at an end, and that whatever further measures it might be necessary for the governments to take to accomplish the declared objective of the scheme, would from now onwards be taken firmly and immediately. It was not too much to say that the industry to-day stood firmly to a man behind the five governments who had taken charge of the situation and, it must be recognised, in doing so, had been forced to grips with conditions which even two years ago would have sounded utterly fantastic.

Despite the solid front of the present international co-operation, there were still, outside the industry itself, some who for their own ends appeared to cherish the hope that it might yet be possible to drive a wedge into that solidarity. The purpose of their insidious propaganda was clear enough. It aimed at creating in the mind of the Malay producer the delusion that there was some particular virtue inherent in the concentrate he mined which rendered the resultant metal a very much more desirable product than tin derived from any other source. That mischievous theory was built upon assumptions which, however, untenable in fact, might sound not unconvincing to the casual reader.

THE OUTLOOK FOR THE METAL.

As to prospects, the total visible supplies at the present time were of the order of 60,000 tons. Of that at least 21,000 tons were held under agreement by the pool, and a minimum quantity of from 15,000 to 20,000 tons. The possible excess weighing upon the market could not therefore greatly exceed 20,000 tons, and any real and enduring change in sentiment—such as would follow immediately demand was found to be keeping substantially ahead of current supplies—would lead to re-stocking by consumers. In that way it was by no means impossible that the 20,000 or 25,000 tons in question, together also with the 21,000 tons held by the Pool, would disappear more rapidly than might at present seem possible.

The complete plans under consideration were comprehensive and adequate, and would suffice beyond any question to achieve their purpose. With a full sense of his responsibility, he was bold enough to predict that they had seen the worst as far as tin was concerned. (Applause.)

The report and accounts were unanimously adopted.

AMALGAMATED ANTHRACITE COLLIERIES, LIMITED.

SATISFACTORY RESULTS OF A DIFFICULT YEAR.

The eighth annual general meeting of the Amalgamated Anthracite Collieries, Limited, was held, on the 26th instant, at the Hotel Victoria, London, W.C.

Mr F. A. Szarvasy (chairman of the company) said that the net profit amounted to £289,478, and he thought they might well regard that as very satisfactory in the condition of things as they existed to-day. The amount disposable was £401,056. The directors had very carefully considered the claims of preference shareholders; the payment of any of the arrears of preference dividend was not at the moment a practical proposition, but it would be considered from time to time.

Their 35 collieries had worked fairly regularly throughout the year, except for the first part of January. The relations between managements and men were generally friendly. Their total output was just under 4,000,000 tons. When the value of sterling at the end of September was adjusted to the necessities of competition, it had appeared that an opportunity was provided for holding their markets at better realised prices and even for extending them, but restrictions abroad had since gone a long way to neutralise their advantage. The industrial countries of the world were all adopting, it would seem, a rigid policy of restriction, apparently preferring to believe that the cure and antidote to difficulties was in the closing of the doors for international trade.

In the struggle for markets, Canada was the one bright spot. They were being helped to increase their shipments during the present season as Canada had excluded Russian coals and had imposed a duty on foreign anthracite. He was hopeful of good results from the coming Ottawa Conference. In the Home market they were continuing, by demonstrations and exhibitions, to prove the advantages of Welsh anthracite. He was glad to be in a position to state that their forward sales over the current year were fairly satisfactory, and, as far as he could see, provided that interruptions of the working of their collieries were not allowed to take place in connection with the hours of work, their collieries should be in a position to work not less regularly on the whole than had been the case in the year under review, which was not a bad position to be in.

The report was adopted.

SIMMS' MOTOR UNITS, LIMITED.

THOROUGHLY SOUND AND STRONG POSITION.

The twelfth ordinary general meeting of Simms' Motor Units, Limited, was held, on the 26th instant, at Winchester House, Old Broad Street, E.C. Mr Frederick R. Simms, M.I.M.E., M.I.A.E., M.I.E.E. (managing director and chairman), presiding.

The Chairman, in moving the adoption of the report and accounts, said: The accounts for the past year have been a source of keen disappointment to your board of directors. For the first time since the formation of this company the accounts show a loss; there may, however, be some consolation in the fact that your works and business, including every one of your fifteen home branches, have withstood the unprecedented trade depression prevailing throughout last year. The reason for the loss incurred for the period under review is entirely due to the world depression affecting our subsidiary companies and overseas branches on account of severe shrinkage of turnover.

It will be observed that a loss of £19,007 18s. 4d. has been incurred, and which we have to offset against the carry-forward from last year of £31,048 16s. 7d. If we further deduct income tax of £3,053 10s. 11d. and the interim preference dividend (less tax) paid on July 1, 1931, of £2,906 5s., as also the preference dividend (less tax) for the period of July 1st to December 31, 1931, amounting to £2,718 15s., which it is proposed to pay on May 2, 1932, we shall still have a carry-forward of £2,362 7s. 4d. to the next account.

Although the loss in connection with our subsidiary companies and overseas branches has been completely dealt with in our accounts, your directors recommend that, as a conservative measure, £15,000 be taken from the general reserve of £43,117 and allocated to a special reserve account in order to meet any possible depreciation.

The placing on the market of our new dynamo lighting equipment, a new type of magnet, and various motor accessories, should materially assist in increasing our turnover again, whereas for future developments, both Diesel fuel pumps and Diesel motor accessories are well in hand.

It should be a source of satisfaction to us all that our business is in a thoroughly sound and strong position, and that as we are starting the year with a clean bill of health, even a very moderate increase in business should show a reasonable return.

The report and accounts were adopted.

HUDSON'S BAY COMPANY.

PROGRESS OF REORGANIZATION WORK.

MR P. ASHLEY COOPER ON THE OUTLOOK.

A General Court of the Governor and Company of Adventurers of England trading into Hudson's Bay, was held, on the 28th instant, at Beaver House, Garlick Hill, London.

Mr P. Ashley Cooper (the Governor) said that when he accepted the governorship of the company he found that the proprietors felt they were not receiving all the information which they should, and it had been his endeavour to put that right as quickly as possible. Their records showed that the report before them was by far the most comprehensive ever published by the company. They were in the midst of a world-wide economic storm of unparalleled fierceness, and in many respects old standards of values had disappeared, and it was impossible to say when they might be restored.

After referring to the changes on the board since they last met, he proceeded to deal with the accounts, and said that the operations of the stores, furs and land departments covered a full 12 months; only the figures from the London books were for eight months. As he had warned them when he addressed them last year, the company had made another heavy loss in the year's operations. While this was disappointing, proprietors would, he was sure, take some satisfaction from the fact that they had not hesitated to deal with every doubtful situation they had met.

The loss on trading, as would be seen from the profit and loss account, amounted to £465,000 compared with a loss in the previous year of £665,000. He regretted to say that that loss was contributed to by every department and every section of their business, and by each of their operating subsidiary companies. The board were hopeful of reducing the losses in some directions and cutting them out altogether in others. The depreciation policy laid down by the board last year was being followed out, and no less than £199,000 had been placed to depreciation account. Since the last general court, a most careful inquiry had been made into the values of merchandise on hand and debtors and outstanding accounts, and they believed those items had been reduced to to-day's values. Cash and Treasury bills stood at the figure of £511,000, compared with £413,000 last year.

GOVERNOR'S VISIT TO CANADA.

The period since their meeting last July had been one of great activity, working in a world where conditions had been going from bad to worse; but in spite of all they were satisfied that they had made progress. He had decided, as he had told them last year, that the first thing to do was to make a thorough examination of the company's affairs on the spot, and so after the general court he had left for Canada.

On his return to London, after completing his tour of inspection in Canada, they had at once tackled the problems which faced them here. They had now created the machinery for keeping the board regularly and promptly informed so that it might exercise the necessary control over policy and finance. A managerial organisation was being built up by which the executive officials charged with full responsibility were at work on schemes for the improvement of the company's operations. Simultaneously, they were putting into execution drastic measures of economy.

With regard to the main branches of their activities, their large stores presented a most difficult problem. In their judgment, yet a more difficult problem, and that was management. The time. The fur department was their oldest department, and it had been in recent years the department in which the greatest losses had been made. The reasons were twofold: the one was the tremendous fall in the price of furs, and the other was to be found in the department itself. He had made a close examination of that department while he was in Canada, and they were satisfied that the reorganisation taking place was making progress. If world conditions got no worse, they might certainly expect better results.

While the immediate prospect was not bright, they did not forget that Canada was a land blessed with those natural resources which, they had been taught to believe, never failed sooner or later to bring expect him to prophesy. In times like the present, no one would worse than in 1931; on the other hand, the economies and methods of administration which they had introduced would undoubtedly sufficient to prevent further loss. Neither the world nor the company that the work of restoration of the fortunes of this great company had been well begun.

The report and accounts were adopted.

REDUCED RATES
for LIFE ASSURANCE
for the NEXT FIVE YEARS

for those who want to obtain immediate and adequate life assurance protection, but whose present incomes are either temporarily restricted or small in relation to future prospects.

CONSOLIDATED WATER WORKS COMPANY OF
ROSARIO, LIMITED.
CONDITIONS IN ARGENTINA.

The thirty-seventh ordinary general meeting of the Consolidated Water Works Company of Rosario, Limited, was held on the 26th instant, in London.

Mr Norman B. Dickson, O.B.E., M.Inst.C.E., said that the decrease of £1,734 in the gross receipts—the first since 1915—was an indication that the past year had been the least prosperous the company had had for a very considerable period. The less favourable results were not surprising when the depression which had fallen upon Rosario, in common with so many other parts of the world, was considered. Conditions had led to a marked falling off in building operations, to a reduction of about 25 per cent. in rental values, an increase in the number of unoccupied houses, and the practice of rigid economy in the use of water on the part of the large industrial concerns of the city. There had also been a loss on exchange amounting to £41,592, as compared with £28,658. In the circumstances it might be regarded as satisfactory that the amount available for distribution was only £5,594 less than last year. The board were recommending a final dividend of 3½ per cent. on the ordinary shares, making 6 per cent. for the year.

With reference to the differences with the authorities of Rosario in the matter of water charges, the chairman said it was unfortunate that the Argentine Government could not assist public utility companies such as theirs when attacked by local authorities, on the ground that they were paying unduly large dividends.

The report and accounts were unanimously adopted.

Government Returns, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended April 23, 1932, amounted to £13,540,900 against ordinary expenditure of £6,081,600. After allocating £475,000 to Sinking Fund and having allowed for an increase in Exchequer Balances of £979,875, the operations for the week, as shown below, decreased the National Debt by £6,005,000 to £7,590,871,000:—

(000's omitted.)

Treasury Bills	£ 9,905	Bank of England Advances	£ 4,250

INDIA COUNCIL REMITTANCES.—India: Remittances to the Home Treasury.—There were no remittances from the Government of India to the Secretary of State for India during the week ending April 23, 1932.—India Office, S.W. 1. April 26, 1932.

BULLION.

The following statistics of imports and exports of gold for week ended April 28, 1932, are issued by the Statistical Department of H.M. Customs and Excise:—

Imported into Great Britain and Northern Ireland.		Exported from Great Britain and Northern Ireland.	
From—	To—	From—	To—
France	£ 346,859	Germany	£ 2,281
United States of America	347,045	Netherlands	247,537
Irish Free State	120	France	745,013
British South Africa	1,290,327	Czechoslovakia	4,400
British India	407,328	Other countries	158
Australia	226,901		
New Zealand	5,537		
Other countries	2,208		
Total declared value of imports	2,626,725	Total declared value of exports	999,389

Messrs. Samuel Montagu and Company write on April 27, 1932, as follows:—

GOLD.

The Bank of England gold reserve against notes amounted to £120,815,498 on the 20th inst., as compared with £120,808,347 on the previous Wednesday. The moderate amounts of gold which have been offered in the open market have been absorbed for export shipments of gold advised from Bombay total about £500,000.

Average	111s. 4.83d.	15s. 3.1d.

SILVER.

The main influence in a rather quiet market has been the tendency of sterling, but the movements of prices have not reflected the exchange fluctuations to the extent which might have been expected owing to the general lack of interest shown by buyers and an inclination on the part of speculators to sell at higher rates. China has been a buyer and small purchases have been made by the Indian Bazaars to cover bear positions. America has been rather inactive, although yesterday afternoon there was some support from that quarter above the rate.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 18th inst. to mid-day on the 25th inst.:

IMPORTS.	£	EXPORTS.	£
Netherlands	2,886	Germany	988
Belgium	5,955	French Possessions in India	3,000

(t) Ordinary. (s) Deferred

Spelter lost a few points, but the probability of a further cut in the production of tin brought about a slight improvement in the quotations of that metal. There was no improvement in the market for rubber, while cotton failed to recover. Among cereals, wheat, maize, oats and rye show a slight decline on last week. Coffee was maintained at the high level reached a week ago, but cocoa was easier and sugar shows no improvement. Sterling quotations, which lend themselves to grading, and, therefore, to international arbitrage, moved in sympathy with gold prices. The outstanding feature of British commodity markets is the progressive

MIDDLESBROUGH.—A gradual improvement in business is anticipated, writes our correspondent. Pig iron is not included in the increased duties list, but the importation into the Tees of Continental pig iron has been on the decline for some time and only amounted to 258 tons during the first quarter of this year. Similarly the imports into Scotland have practically ceased and also at other ports in this country. This has been caused by the currency depreciation and the original 10 per cent. duty. Local founders expect to benefit by an improved demand for their manufactures hitherto largely imported from the Continent or produced from Continental iron. This should cause pig iron makers to secure more business and be able to start additional furnaces. There was a firm tone at Tuesday's weekly market and a fair business was reported for early delivery. There were also some inquiries for delivery ahead, but little actual business in this direction has resulted so far. Makers wisely made no advance in the official prices as to do so would jeopardise future prospects. They therefore remain : No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; and No. 4 forge, 57s. f.o.b. or f.o.t. In the hematite trade there is a better demand for small lots for early delivery and a few inquiries are circulating for larger quantities for forward, though up to now not much business has resulted. Makers hold to 63s. 6d. for a minimum for prompt, but more is asked for forward delivery. In the finished departments there is as yet very little movement on the result of the increased tariffs, but a substantial increase in

COPPER.—The London market in copper has been a little more active, following the decline in the gold value of sterling, but there has been no improvement in demand in the United States. On Wednesday, "Domestic" spot was quoted at 5½ cents per lb. in New York, against 5¼ cents a week ago, and 6 cents a month ago.

THE TIMBER TRADE.—In dealing with timber imports, writes our timber trade correspondent, comment on the quarter's arrivals is to be preferred, as it seems likely that the Board of Trade returns for March imports included many parcels that may have arrived in late February but were not dealt with until early the following month. In building woods, sawn deals, battens and board receipts declined for the three months, compared with January–March, 1931, but there was an advance in planed and dressed woods possibly on account of expectations of a further duty on the general 10 per cent. Of the sawn woods, Canadian receipts were lower than for the first quarter of the past two years, and although more attention is being given to these descriptions, the high dollar and European competition are restricting business at present. Stocks of deals, battens, scantlings and prepared floorings (from all countries) in docks in London are smaller than in early April, 1931, and it is evident that United Kingdom consumption is still below that of a year ago. Forward business other than for the Russian wood is quiet. The former is going into distribution very well, and until the demand for it is well satisfied there is not likely to be any large business for the other European varieties. Their turn should come later, although fair business has already been

done in Finnish woods. The hardwood situation is still aggravated by the slow consumptive demand, but notwithstanding the 10 per cent. import duty and the high dollar, the American shipments of lumber to the United Kingdom were larger last quarter than for January-March, 1931. Canadian hardwood logs and lumber also have increased in import, but yet still well below the volume of United States shipments to the United Kingdom. Although more hardwoods have come in via Danzig, compared with the States woods, they are not of much account as regards volume, but likely to increase more than is usual as the year goes on. Mahogany logs have increased in receipts, and although the demand is bad for that wood at the moment, consumption will increase rather than otherwise. The receipts of pitwood during the past quarter are a little less than same period last year; whereas the French woods have declined considerably, the Portuguese wood has made great progress. The Russian shipments are much lower this year to date; presumably deficiencies will be soon made up. General spots buying is quiet. The imports of plywood last quarter were exceptionally heavy, 118 million square feet against 63 million square feet, the increase being due to defeating the import duty rather than to any uplift in the consumption. A word as to the new duties. These are confined to 15 per cent. net *ad valorem* on builders' woodwork and 20 per cent. net *ad valorem* on woodware, with slight exceptions. Otherwise timber and its derivatives bear the 10 per cent. revenue duty. Of builders' imported foreign woodwork, doors are in most plentiful supply in this country, the London docks alone holding 1,066 tons as against 218 tons in April last year; for other articles under the heading of builders' woodwork official stock figures are not forthcoming. In spite of local authorities having cut down subsidy housing, new contracts kept well up last month, but the building trade is still very backward, which not only means much to United Kingdom timber traders but producers and traders the world over.

RUBBER.—The market in rubber has been a little firmer, following a slight increase in turnover. In New York, Wednesday's spot price for rubber at 3½ cents per lb. shows no change on the week. Wednesday's official closing price for standard ribbed smoked sheet

in London, at 1½ d. per lb., shows a rise of ½ d. per lb., as compared with the corresponding day last week. In forward positions, business has been done at 2½ d. for October-December, as against 2½ d. to 2½ d. a week ago. Movements of rubber in London and Liverpool during the past week were as follows: Landed, 1,169 tons; delivered, 1,407 tons; stocks at the end of last week, at 124,781 tons, show a decrease of 238 tons as compared with the preceding week.

Treasury Bond issue depleted supplies of money, and both the money market and the Stock Exchange borrowed a fair amount from the clearing banks at 2 per cent. Outside lenders were also able in some cases to secure 2 per cent., though elsewhere $1\frac{1}{2}$ per cent. was the general rule. On Thursday, money became easier at $1\frac{1}{2}$ and $1\frac{3}{4}$ per cent. It was reported on the same day that a fair amount of money was available outside the clearing banks for a week at $1\frac{1}{2}$ per cent.

For the second week in succession the market largely missed the Treasury bill tender. On April 29th tenders for £40 millions were invited, and applications for £71.4 millions were received. It was decided, however, to cut £5 millions off the original offer, and the market obtained only part of its requirements. The average tender rate was £1 17s. 1.81d. per cent., against £1 16s. 3.92d. per cent. in the preceding week. Subsequently a keen demand for "hot" Treasury bills sprang up at $1\frac{1}{2}$ per cent., a rate which eased by Thursday of this week to $1\frac{3}{4}$ per cent., partly because the clearing banks were also buyers of late July and August Treasury bills at $1\frac{3}{4}$ per cent. Three months' bank bills were quoted at 2 per cent. in competition, but sales to meet a Continental demand were effected at $1\frac{3}{4}$ per cent. German standstill bonds were quoted at $2\frac{1}{2}$ -3 per cent.

The Treasury Bond issue had a dubious reception in the money market, largely because it was not an entirely suitable form of security. The banks, however, are inclined to rank the new bonds as "floaters," in the sense that they will accept them as collateral up to their usual limit for bonds. Even so, it was only the large houses that applied at all freely for the bonds, and they did so partly out of a sense of duty, and partly because the prevailing and growing dearth of commercial bills has deprived them of their normal means of employment for their funds. The average yield on the new bonds is about $3\frac{7}{8}$ per cent., which for the moment is relatively attractive.

	Apr. 14, 1932.	Apr. 21, 1932.	Apr. 28, 1932.	May 5, 1932.	Previous Rate and Date Changed.

Market rate (standstill bills)	$2\frac{1}{2}$ - $3\frac{1}{2}$	$2\frac{1}{2}$ -3	$2\frac{1}{2}$ -3	$2\frac{1}{2}$ -3	...

It remains to be seen if the issue has any lasting effect upon the supply of money. There seems little doubt that a large part, perhaps as much as half, of the present issue has been taken up by Government Departments; and if the net result is that the bonds replace Ways and Means Advances by Public Departments, it is difficult to see that the operation becomes anything more than a matter of inter-departmental bookkeeping. To the extent that the bonds have been taken up by the public, payments for them will reduce the supply of money, though the repayment of the 1931-33 Treasury Bonds and also any consequent redemption of Treasury bills will be off-setting factors. It is not thought in the market that any portion of the proceeds of the issue will be immediately diverted to the Exchange Equalisation Account, but it is believed that last week's Treasury bill allotment was reduced in order to divert money into the Treasury Bond issue.

This week's Bank return reflects mainly the Conversion Loan dividend payments, for Public Deposits are reduced by £13.8 millions, and Bankers' Deposits increased by £16.3 millions. The note circulation has also risen by £3.8 millions, so that the Reserve is reduced by the same amount. The Bank has added slightly to its earning assets, Government Securities having risen by £4.3 millions and Other Securities by £4.6 millions. The Bank has lately been buying early June Treasury bills at $1\frac{1}{2}$ per

cent., and it is believed that, notwithstanding the prevailing ease, this special buying has saved the market from the need of having to borrow heavily at the clearing banks.

The other important event of the week has been a sudden break in the New York exchange. At one time the rate rose as high as \$3.69, but at this point official intervention took place—it is believed, on a large scale—and the rate was brought back to \$3.67 $\frac{1}{2}$, where it was held. The break was caused by widespread Continental distrust of the American position, loss of confidence in the stability of the dollar being intensified by senatorial activities. The panic was undoubtedly exaggerated, but it has to be remembered that, though America possesses enough free gold to meet foreign withdrawals, she could not simultaneously meet an internal encashment of her currency. The forward rate has also suddenly widened from $\frac{3}{4}$ to $2\frac{1}{2}$ cents discount for three months' dollars. This is further evidence of the prevailing lack of confidence, but it also suggests that the movement of short money from New York to London for investment purposes may once more be intensified.

Money rates on Wall Street have remained unchanged, with call money at $2\frac{1}{2}$ per cent., and 90-day bankers' acceptances at $1\frac{1}{4}$ per cent. The Reserve Banks are continuing their policy of easing money through purchases of U.S. Government Securities. They bought a further \$113 millions last week, which brings the total increase in these holdings during the past three weeks to \$306 millions. Still, the statement of the condition of reporting member banks issued a week ago showed a continued liquidation of loans secured by stock market collateral, and this somewhat offsets the Reserve Bank's operations. Gold imports for the week include \$1,000,000 from Canada and \$1,105,000 at San Francisco from China. Exports to France and other Continental countries totalled \$14,000,000, and earmarkings on foreign account have risen by \$7,895,000.

The Foreign Exchange market was fairly active this week. In the earlier stages sterling fluctuated a good deal, but steadied at the close, and was little changed on balance against most currencies. On Wednesday the dollar broke sharply on heavy selling from Paris and New York, as a result apparently of fears of possible inflation in the United States. On balance, New York weakened by $\frac{1}{2}$ to 3.67 $\frac{1}{2}$, after touching 3.69. Montreal gained three points at 4.10. Paris improved by $\frac{1}{2}$ to 93 $\frac{1}{2}$, after touching 92 $\frac{1}{2}$. Brussels was firmer at 26.15. Milan gained $\frac{1}{4}$ at 71 $\frac{1}{2}$, and Madrid $\frac{1}{8}$ at 46 $\frac{1}{8}$. Amsterdam went from 9.06 to 9.04, and Berlin from 15.42 to 15.43. Switzerland was considerably better at 18.75. The Scandinavian currencies were steadier and firmer than of late, Stockholm gaining 10 points at 19.90, and Oslo being unchanged at 19.75, but Copenhagen fell away from 18.23 to 18.80. The South American currencies were fairly steady. Montevideo was unchanged at 29 $\frac{1}{2}$ d., and Rio gained $\frac{1}{4}$ d. at 41 $\frac{1}{2}$ d., but Buenos Aires lost $\frac{1}{4}$ d. at 36d. In the Far East the rupee was less firm, and weakened by $\frac{3}{4}$ d. to 1s. 51 $\frac{1}{2}$ d. The yen again improved, and at 1s. 9 $\frac{1}{2}$ d. was $\frac{1}{4}$ d. better on the week. Batavia gained three points at 9.10. In the forward market the discount on one month's dollars widened from $\frac{3}{8}$ to $\frac{1}{2}$ cent, and on three months from $\frac{7}{8}$ cent to $2\frac{1}{2}$ cents. Paris was firm at 5 and 15 centimes premium. Brussels went from par for both deliveries to 1 and 3 centimes discount for one and three months' respectively. Milan was firmer at $\frac{3}{4}$ and $\frac{1}{2}$ centesimi discount, and Madrid was unchanged at discounts of $\frac{1}{2}$ and 2 centimos. Amsterdam one month went from $\frac{1}{2}$ cent premium to par, three months being unchanged at $\frac{1}{2}$ cent discount. Switzerland remained at last week's quotations of 2 and 4 centimes premium for the two periods respectively. The silver market was fairly active, but demand was easily satisfied. China operated both ways, but was chiefly a seller, and, as a result, prices fell away by $\frac{1}{4}$ d. for both deliveries, to 16 $\frac{1}{2}$ d. for cash and 16 $\frac{1}{2}$ d. for forward. The China silver exchanges moved in sympathy, Hongkong declining by $\frac{1}{4}$ d. to 1s. 2 $\frac{1}{2}$ d. and Shanghai by $\frac{1}{4}$ d. to 1s. 7 $\frac{1}{2}$ d.

FACTORS IN RECOVERY.

I. MONETARY POLICY.

In emphasising last week the desirability of clearer formulation of constructive policy by the British Government in relation to the world crisis, we had in mind the urgent need of assurance that the Government are preparing to act, all along the line, in directions calculated to induce and foster the factors making for world recovery. Of these factors—selecting the essentials in a many-sided problem—we would place first the recovery of wholesale commodity prices, and particularly those of the products of countries which are large producers of raw produce, to the level of, say, three years ago. Failing such a development, or unless the remuneration of labour in terms of money, as well as the burden of industrial and other fixed charges, can be drastically reduced—and in few countries is a reduction of such dimensions politically practicable—enterprise will continue to languish unremuneratively and the world will be faced with defaults on a scale whose repercussions would be disastrous.

Premising, then, the desirability of a rise of, say, 30 per cent. in the level of wholesale prices, the contribution which the British Government can make to the realisation of this objective depends on its pursuance of a definite monetary policy on lines most aptly described on the other side of the Atlantic as "forward-looking." So far, there is no sign even of the adumbration of such an attitude. Spokesmen of the Government have expressed satisfaction at so many diverse monetary happenings—the "salvation" of the pound from collapse, the absence of any rise in sterling prices, the assumption by the Treasury of powers to prevent "undue appreciation" of the currency—that it is difficult to believe that the Cabinet has yet made up its mind what effects it desires, with the collaboration of the Bank of England, to produce, or by what means. It is an omission which, we trust, will be swiftly made good. The longer uncertainty in this connection persists, the more tardy will be the fruits of even the wisest measures which may ultimately be adopted.

Before coming to the question what our declared monetary policy should be, we must admit frankly that, as matters stand, decisions taken to-day are bound to be provisional, and that lines of prudent action, as we conceive them, lie necessarily in the direction of compromise. Moreover, as we have repeatedly pointed out in these columns, it is a fallacy to imagine either that unilateral action on our part in the monetary field will cure all our own ills, or even that concerted international monetary policy can by itself remove magically the world depression.

Let us elaborate briefly these limitations. Firstly, there will be something like unanimity of opinion that until the reparations and war debts issue is settled, international commerce relieved of its present abnormal restraints, the present mal-distribution of the world's gold supplies redressed, and agreement reached as to future parities appropriate to the price levels of various countries, it would be premature for any decision to be taken whether we shall return, or at what exchange rate, to the gold standard. Our policy, therefore, requires at present to be related, *ad hoc*, to the near future, subject to revision in the light of eventual developments.

Secondly, as the world's greatest trading country, we have to remember that fluctuations in exchange rates may present an obstacle to international commerce just as formidable in its reactions on industry as instability of prices. We cannot afford, therefore, in monetary policy to play, without qualification, the rôle of "the Cat who walks by itself." Not only so, but it has to be remembered that whereas an appreciation of the pound would both penalise our exporters and increase the difficulty of our commercial debtors in meeting their obligations, so a violent depreciation of sterling would not only involve a heavy loss of real wealth to Great Britain as a creditor nation, but might intensify the collapse of prices in "gold" countries.

Clearly between the two desiderata of higher sterling commodity prices (in so far as they are not paralleled by higher "gold" prices) and reasonably stable sterling exchange rates, a balance has to be struck. We cannot have it both ways. Nor, indeed, should we do well either to ignore altogether the dangers inherent in "reflation" set going on our initiative, or to pin our faith too confidently on the capacity of monetary policy to achieve all that we desire. Apart from the general consideration that in manoeuvring the level of sterling exchange and the volume of our banking credit, we cannot afford wholly to disregard the risk of setting in motion a chaotic competition in international inflation, it is not completely certain that an injection of fresh banking credit into the economic system could be so directed as to affect exclusively or predominantly the prices of primary products which it is desired to raise, without inconvenient repercussions on other elements, such as wages, a rise in which would produce renewed disequilibrium. Admittedly, if credit expansion could overcome the present reluctance of the entrepreneur and lead to some revival of purchasing, the wholesale prices of primary products would be the first to rise; and their fall has so far outrun that of the cost of living and wages in recent years that much "slack" could be taken up before any increase in retail prices or wages need occur. Nevertheless, this difficulty of preventing an undesirable extension of the upward movement is not entirely negligible.

More important still is the consideration that, when all is said, monetary policy in relation to prices must be regarded not as an end, but as a means. That is to say, the benefits of a higher price level, greatly though such a development would relieve the problem of indebtedness, would not be conclusive unless higher prices removed, concurrently, existing defects in the economic, as opposed to the financial, structure. Except in so far as a recovery of wholesale prices facilitated the removal of existing obstructions to trade and changed the mentality that has governed economic policy for the last decade, it would not radically cure the world's ills. An essential step without which no monetary policy can possibly save the world is that a new and appropriate proportion should be established, not only between the production of one country and another, but also between the world's agriculture and its industry.

Finally, the difficulty has to be faced that, as the recent experience of the United States has demonstrated, it is one thing to reduce interest rates on short-term money and expand central bank credit, and quite another to generate willingness on the part of sound borrowers to undertake capital commitments in a situation dominated by psychological pessimism and lack of confidence in the future results of enterprise. Under existing conditions, the "calculated and controlled expansion and cheapening of the supply of money," for which the Midland Bank calls in its April-May Review, can easily be neutralised either by hoarding or, more simply, by the absence of any stimulus to foster circulation of the banking credit created.

For these and other reasons we should deprecate too great a reliance on purely monetary action as a nostrum for the whole of the world's troubles. But this is not to say that our authorities are therefore absolved from the duty of framing and enunciating their policy within the limitations which we have noted. The terms of their announcement, we suggest, should be somewhat as follows:—

That this country desires a 30 per cent. rise in commodity prices; that it would welcome such a development, particularly if it occurred uniformly throughout the world; but that, if "gold" countries are not prepared to make this their aim, then our objective will be to work for some such price-rise with all countries ready

to associate themselves with the so-called "sterling area."

That the gradual restoration of prices will be encouraged by cheap money, but not by any violently inflationary means; and that the Exchange Equalisation Account will be utilised, meanwhile, to minimise disturbing short-term exchange fluctuations.

That to that end Bank rate will be reduced progressively to, say, 2 per cent., and kept at that figure for a prolonged period, i.e., until demand for banking accommodation and new capital definitely revives to an extent which calls naturally for higher interest rates.

That *entrepreneurs* can be assured that until wholesale prices have risen by 30 per cent. (always provided there is no inflationary increase in other costs, e.g., of labour, the policy of ultra-cheap money will be maintained; that a price-rise within the stated limits will not be considered to afford warrant for credit deflation; and that gradual long-term depreciation of the pound in terms of gold, as a consequence of a rise in sterling prices, will not deflect the authorities from their pre-determined course of action.

In some such terms, we suggest, the British Government should frame its provisional monetary policy. But, as we have already indicated, declaration of policy is no less important than its formulation. Not until the Government has made known its intentions will the industrialist and the merchant in this country be able confidently to make plans for the future. Still more important, an official declaration of British monetary possibility is a condition precedent to the collaboration with us of other countries—in the Empire and without—whose authorities are looking to us for a lead, and whose closer association with us in the monetary field would be of the utmost value in the common pursuance of the many other objectives on which world recovery depends.

U.S.A. AND THE WORLD.

Two authoritative and significant pronouncements on American foreign policy have been made within the last few days. On April 30th, the American Secretary of State, Mr. Stimson, made a statement to American journalists at Geneva at the close of his visit to Europe and on the eve of his return to the United States. Ten days earlier, in the Senate at Washington, the Chairman of the Senate Committee on Foreign Relations, Senator Borah, had made a speech on inter-Governmental debts. The two pronouncements differ in tone and content and length. Mr. Stimson's is short and vague and diplomatically conciliatory. Senator Borah's is reasoned and precise and senatorially uncompromising. Yet these pronouncements are not mutually incompatible; and it would not be surprising to learn that Senator Borah, as well as Mr. Stimson, was expounding the State Department's policy. In fact, we shall not go far wrong if we regard Mr. Stimson's statement and Senator Borah's speech as exhibiting two facets—the positive and the negative—of an identical outlook and intention.

Mr. Stimson, in his parting message to Europe, deliberately struck the notes of solidarity and optimism. "The conversations which he had had with the leaders of numerous delegations had given him confidence in the final success of the Disarmament Conference." He took occasion to mention that he had also had valuable conversations on other subjects besides disarmament. "Each of his visits to Europe had demonstrated more and more the utility of personal contact with the Foreign Ministers of other States. These personal contacts were of the highest importance."

While this statement was manifestly diplomatic, there is no reason to suppose that it was not sincere; for it was entirely in line with a trend in American foreign policy which has been becoming increasingly prominent during the last few years and with which Mr. Stimson himself has been personally associated throughout his tenure of the Secretaryship of State in President Hoover's Administration. This co-operative tendency declared itself under the Coolidge Administration, when the United States Government first joined in the work of the Preparatory Commission for the Disarmament Conference, and then

took an initiative of its own in bringing about the conclusion of the Kellogg Pact. This independent American gesture for promoting "the collective system" of international security, which had previously been represented by the Covenant of the League alone, has been followed, since, by American collaboration with the League of Nations itself. The presence of an American representative at the sittings of the League Council in Geneva during October and December last, and the visit of General Dawes to Paris when the Council was sitting again in November and December, were events which may be of more lasting influence upon the course of international affairs than the Far Eastern crisis itself. It would not be an overstatement to say that, at the present time, the United States is less disinclined to dispute the desirability, and even the necessity, of international solidarity than at any time since American opinion veered round against President Wilson and his policy during the Peace Conference of Paris.

So much for the positive facet of current American foreign policy. We naturally welcome it, and we venture to believe that it will not again suffer eclipse. But, on this very account, we must be careful not to ignore the other side of the picture—an aspect which may be less pleasant to contemplate, but which is certainly not less important to bear in mind.

To consider Mr. Stimson's outlook first, we may surmise that the closer collaboration with the European statesmen, which he has been conscientiously practising, has cut both ways. It must have given him greater opportunities of seeing the seamy side of European statesmanship as well as its worthier qualities; and unfortunately the seamy side has been very blatantly exposed during the negotiations over the Sino-Japanese conflict. It is true that the Assembly of the League has re-affirmed its faith in, and loyalty to, "the collective system," and has also endorsed Mr. Stimson's own doctrine of non-recognition of changes in the *status quo* that are accomplished by force in violation of existing treaties. Yet the Assembly would not have had to make this manifesto if the Council had not left undone those things which it ought to have done. And Mr. Stimson's own doctrine of non-recognition was only enunciated after the League Council had shown lamentable vacillation, and the European Powers represented on the Council a deplorable lack of public spirit, during the last quarter of last year. Moreover, both in January and in February, the Government of the United Kingdom, of all Governments, almost ostentatiously dissociated itself from the non-recognition policy when Mr. Stimson put forward this policy in public.

As for "the other subjects," besides disarmament, which Mr. Stimson has been discussing just now with European statesmen at Geneva, we may infer what these subjects were, and what Mr. Stimson felt and said about them, by studying Senator Borah's speech of April 20th; for this speech was concerned with two things—European armaments and European debts.

Mr. Borah's speech is impressive because, on the whole, it is so moderately put—moderately, at any rate, by comparison with the tirades against the Hoover Moratorium which were delivered by other congressmen when Congress reassembled last December. There are obvious omissions; for while the Senator deals faithfully with what the European debtors of the United States have done and left undone on the debit side—their mercilessness to their own debtor Germany, their rising expenditures on their own national armaments, and their total failure up to date to find any constructive, sensible, generous solution for their own European ills—he says nothing of the corresponding items in the Recording Angel's American ledger—the insurmountable tariff wall which obstructs the payment of European debts to America, and the wayward insularity for which the recent American reorientation towards "the collective system" is, after all, a tardy and incomplete amends. It is also statement on the financial position of the United Kingdom from the mouth of the Chancellor of the Exchequer taken by Mr. Borah as evidence that "there is no occasion for assuming, as has been assumed of late, that these foreign countries cannot meet their obligations." When a sagging camel glances round at his hump and remarks that

The New York Trust Company

Capital Funds \$37,500,000

BANKING FACILITIES

100 BROADWAY, NEW YORK CITY

CABLE ADDRESS: NYTRUSTCO

EUROPEAN REPRESENTATIVE'S OFFICE:
8 KING WILLIAM STREET, LONDON, E.C.4

the last straw does not seem, after all, to have broken his back, that hardly seems to justify the camel-driver in refusing to remove that final extra fardel from the animal's intolerable burden. Still, these considerations leave Mr. Borah's main thesis untouched; and it is a thesis which ought to command our attention.

Mr. Borah's argument is simple, and it is not unconvincing; for he estimates the immediate future on the basis of the recent past. He first recalls that the total war debts of European countries to the United States have been scaled down, in the post-war debt-adjustment agreements, from about \$12,000 millions to a present value of about \$5,800 millions. He also recalls that "this cancellation . . . was made in the interest of financial recovery and of economic solidarity throughout Europe." And then he points out remorselessly that "those things did not happen."

The application of this precedent to current demands for debt-cancellation is formidable.

"So long as the peace treaties remain unrevised and in their present form, there will be a continuation of intellectual, emotional and spiritual war, and there will be, in my opinion, no disarmament in Europe of any moment or of any worth . . ."

"If Europe cannot solve the reparation problem . . . it is useless to talk to the American taxpayer about aiding Europe by cancelling debts, and equally useless to talk to the American banker about lending more money to Europe . . ."

"I do not know whether the reparations question can be settled or not. I do not know whether armaments can be reduced or not . . . But we do know that, until these things are settled, the United States is powerless to aid in the readjustment of conditions in Europe."

Does it not look as if Senator Borah and Secretary Stimson were saying the same thing in different language? "For Heaven's sake," they are surely both saying to Europe, "make haste to settle the reparation problem on a practical basis, and cut away the political cankers that are poisoning the relations between France and Germany, and scale down your land armaments. If you do these things—and it is your own elementary interest to get them done—America will be willing, then, to help in the common cause of pacification and reconstruction. But do make us a proposal under which we could feel that we were making a contribution towards a genuine settlement and that we were not just being asked to let Europe off."

We shall neglect this American appeal at our peril; for the America who is addressing it to us is herself, at the moment, in a chastened and a softened mood. Effort after effort has failed to turn the tide of depression in a country which believed a short while ago that it was the happy land on whom the gods had conferred the boon of perpetual prosperity. Under the terrible stress of the world economic crisis she has begun at last to accept the idea of international solidarity, after kicking so long and so stubbornly against the pricks. Let us respond to this mood before it passes.

OUR NEW TARIFF.

THE strange-looking bark to which we have entrusted our commercial and industrial fortunes has been so hastily put together, without forethought or design, and so hurriedly launched that it is important as quickly as possible to look over the craft in which we have put to sea. Last week, therefore, we gave some tables in the *Economist* showing approximately the amount of British imports which in 1930 would have been subject to our various new Protective duties if these had then been in force. The tables enable us to form a general picture of the sort of tariff that has now been introduced into this country, and to make some comparisons with other countries.

Our calculations showed that out of about £1,080 millions of imports—of which £13 millions were subject to McKenna and Safeguarding duties and £138 millions to revenue duties—the categories of imports to which the protective duties of 1932 apply amounted to £516 millions. But as £107 millions of these were imports from the Empire, which are for the present exempt, there remained £409 millions of foreign imports liable to duty. These imports fell into the following classification:—

IMPORTS FROM FOREIGN COUNTRIES IN 1930 SHOWING
INCIDENCE OF NEW PROTECTIVE DUTIES.
(In thousand £).

Rate of New Duty.	Food, Drink and Tobacco Class I.	Raw Materials and Articles wholly or mainly Unmanufactured Class II.	Articles wholly or mainly Manufactured Class III.	Animals not for Food Class IV.	Total.
10 per cent.	148,841	54,880	62,267	81	266,069
15 "	...	...	15,775	...	15,775
20 "	4,276	...	99,230	...	103,506
25 "	1,077	...	4,157	...	5,234
30 "	128	...	2,827	...	2,955
33½ "	...	...	15,764	...	15,764
Total ...	154,322	54,880	200,020	81	409,303

Before attempting to draw any conclusions from these figures, readers should bear in mind that it by no means follows that, if the new duties had been in force in 1930, these quantities would in fact have been imported, or even that the amounts imported would have continued in the above proportions in various groups; for clearly the duties will have some restrictive effect. But until experience has been gained we cannot tell to what extent the tariff will act as a check upon imports.

Some light, however, may be thrown on this subject by the following considerations:—Assuming that all the goods subject to the new taxes had come into the country and duty had been paid on them at the rate now chargeable, our tariff on these goods would have been approxi-

mately at an average rate of 15 per cent. But it must be remembered that in 1932 our imports are running, on the whole, at a rate at least 33½ per cent. lower than in 1930, owing to the great fall in prices and the reduction of trade. We may assume, therefore, that imports for 1932 on which the new duties are leviable would only amount, even if they had continued to be free of tax, to £270 millions. If these imports paid duty at 15 per cent. the yield would be £40 millions of revenue. But we know that the Chancellor has estimated that he will get only £32 millions from this new taxation. It would seem, therefore, that the Customs and Excise authorities anticipate that the effect of Protection on the present scale will be on the whole to reduce imports in these groups by yet a further 20 per cent—the restriction presumably being more marked in the 20 and 30 per cent. classes than in the 10 per cent. class. In other words, it is expected that the duties will reduce imports—and hence also restrict the buying power of our customers and reduce the carrying trade of our merchant marine—by some £50 to £60 millions; for it is very doubtful whether an increase of Empire imports is to be expected on any large scale.

But though the preceding figures cannot be taken as an indication either of the amount or even of the proportions of trade that will be carried on—after the event, they give a very useful basis for estimating the height and incidence of our new tariff. It is not possible to measure the height of a tariff by studying the goods which come in after it is imposed; for if the tariff is high enough it will mean that only those goods will come in which are on the free list and it will appear that practically no goods are taxed by the country in question. It is a general rule that the higher the tariff the lower is the proportion of taxed goods to total trade. It is to meet this difficulty that, in making a comparison of the tariffs of various nations, the League of Nations has never taken account of the ratio of revenue—or of taxed goods—to total trade, but has calculated what the tariff charge would be on a given assortment of goods, imported into various countries. Seeing, therefore, that the test is the nature of the obstruction that would be met by trade that might otherwise take place, the preceding figures give a basis for a reasonable comparison with previous estimates of the League of Nations.

We do not think, be it said, that any useful comparison can be made between the taxation on British imports as a whole and that of other nations, owing to the exceptional nature and extent of our imports and the very large part of our Budget revenue which is based upon them. Indeed, it is not generally appreciated that our customs revenue has long been the largest in the world and that on the £151 millions of imports which were taxed in 1930 the revenue levied by the Exchequer amounted to almost exactly 100 per cent. (150 millions of taxation levied on £151 millions of taxed imports). The most striking item in the list is tobacco, in the case of which £87 millions of duty were charged on £16 millions of imports.

This part of our customs revenue has no parallel in its amount in the fiscal systems of other nations. These large revenue duties are almost entirely non-protective—being in the main imposed on goods not made at home. They are economical in the sense that almost all that the taxpayer pays finds its way to the Exchequer and it represents the greater part of the indirect taxation by which the mass of the people make their contribution to the national revenue. These taxes are, from the economic standpoint, radically different from protective duties in that the latter deliberately aim at levying a charge on the consumer not for the benefit of the Exchequer but for that of some private interest. The counterpart of these revenues in foreign countries is to be sought in part in the customs revenue, but also in turnover taxes, and in the profits of tobacco, match and liquor monopolies.

In view of these exceptional conditions it is better to base a comparison on manufactured goods only—excluding certain special items, e.g., petrol covered by previously existing revenue duties. The figures for manufactures from foreign countries in the above table, together with those subject to the McKenna and safeguarding duties, amount to £213 millions, on which the present tariff amounts to an average height of 18½ per cent. This may

reasonably be compared with the height of tariffs in other countries on manufactured goods. No calculation of this kind has been made since that of the World Economic Conference of 1927; but, except in America, Australia and India, and, to a less extent, in Holland, no general changes have been made in tariffs as a whole; indeed, so far as Europe is concerned, the situation was stabilised in the following years by commercial treaties and the long-drawn-out negotiations of Geneva. The latest restrictions by means of the quotas, surcharges, exchange controls, etc., have, of course, radically altered the conditions of international trade. But, with the exceptions mentioned, the figures of the World Conference probably do not misrepresent the height of the permanent brick walls that will be revealed if and when the barbed wire and other temporary barricades that have been superimposed on them are cleared away. The figures with which our 18½ per cent. compares are as follows:—

LEVEL OF TARIFFS ON MANUFACTURED ARTICLES.							
Countries Outside Europe.		New States of Central Europe.		Great Powers of Europe.		Scandinavian and other Low-Tariff Countries.	
United States ...	37	Poland	32	Spain	41	Sweden	16
Argentina	29	Hungary	27	Italy	22	Belgium	15
Australia	27	Czechoslovakia ..	27	France	21	Switzerland ...	14
Canada	23	Jugoslavia	23	Germany	20	Denmark	10
India	16	Austria	16	...	...	Holland	6

The table shows that our level of protection of manufactures under the new scheme is higher than that of Switzerland, Belgium and Sweden, but a little lower than that of the Great Powers of Europe. It is considerably higher than that of Holland and Denmark. In fact, we take our place among the countries of moderate industrial protection.

It should, however, be added that at the time of the World Economic Conference the British figure was given as 5 per cent. We know of no case of a country making a change comparable to the jump from 5 to 18½ per cent. It is inevitable that such a change in the greatest market of the world should have a grave dislocating effect in every direction. All that can be said on the other side is that exchange control and complete prohibition, which are being enforced in certain countries of Europe, and even overseas, are even more disturbing to the world's economic life.

Another very striking feature of the new tariff is its widespread—indeed almost universal—character. As we have already indicated, only £151 millions out of imports exceeding £1,030 millions were taxed in 1930—leaving £880 millions free. Under the new scheme only £440 millions would remain free (of which over £107 millions consists of manufactures or semi-manufactures from the Empire), while nearly £600 millions would have been subject to tax. The following further analysis brings out forcibly what a large proportion of our foodstuffs and raw materials has now come under the ban:—

IMPORTS OF 1930 BY CLASSES. (Million £.)				
	As actually Taxed.		Under Taxation of 1932.	
	Amount.	%	Amount.	%
Food and drink and tobacco:				
Free	400	38½	211	20½
Taxed	75	7¼	264	25½
Materials and partly manufactured goods:	475	46	475	46
Free	250	24½	195	19
Taxed	Nil	...	55	5½
Wholly or mainly manufactured goods:	250	24½	250	24½
Free	232	22½	32	3
Taxed	75	7¼	275	26½
Total	307	29½	307	29½
	1,032	100	1,032	100

The preceding figures give a Free List percentage under the new plan of 43 per cent. and a tax percentage of 57 per cent., as against actual percentages in 1930 of 85½ per cent. free and 14½ per cent. taxed. If the Dominions are not forthcoming at Ottawa and the present complete exemption of Empire goods is replaced—in accordance with the common Imperial practice—by a preferential duty, the Free List percentage would fall to the low figure of 33 per cent. But even without taking this possibility into account, the new figures present a marked contrast with those of the United States, where the Free List amounts to 67 per cent., this percentage having risen from 56 per cent. in 1923. Comparing these two years, both of which were years of depression, it is interesting to find that the value of America's imports under the Free List in 1930 were almost the same as seven years earlier. The imports on the dutiable list, however, had fallen by one-third. The following are the actual figures:—

AMERICA'S FREE AND TAXED IMPORTS IN 1923 AND 1930.
(Thousand \$.)

	1923.			1930.		
	Free.	Dutiable.	% Free.	Free.	Dutiable.	% Free.
Crude materials	1,091,393	315,404	77.6	834,120	168,041	83.2
Crude foodstuffs and food animals	279,222	83,810	76.9	331,179	68,946	82.8
Manufactured foodstuffs	52,164	478,044	9.8	78,153	215,295	26.6
Semi-manufactures	471,775	248,954	65.5	448,618	159,536	73.8
Finished manufactures	241,388	529,912	31.3	359,041	397,981	47.4
Total imports	2,135,942	1,656,124	56.3	2,051,110	1,009,798	67.0

The table shows that the United States has found it desirable, in spite of its financial needs, to maintain a substantial free importation of crude materials and foodstuffs. Seeing that it is essential for our export trades to compare on the most favourable terms with other nations, it may well be that we shall be forced to consider the 10 per cent. handicap which we have imposed on them. On the other hand, the United States has very much higher rates of duty on those goods which are taxed than we have. Certain American apologists have prided themselves on the rising proportion of imports under the Free List, as though it were evidence of a liberal commercial policy. It is, of course, the exact reverse, for the figures indicate that the protective duties are, in fact, acting as a prohibitive tariff.

In short, our new tariff is in the main designed as a very extensive but low level tariff, in contrast to the American type, which tends to be exclusive for the main range of industrial products, other than specialties, but admits freely the goods in which the country desires to trade. The former type interferes much less with the natural channels of trade, but it is significant that our level is substantially higher than that of Holland, which, with a practically flat rate of duty, is the chief outstanding example of this kind of tariff. If the intention had really been to reduce imports in the hope that exports would not fall so much and thus assist our balance of trade, the case for a limited number of high prohibitive duties was—as Sir Herbert Samuel has frequently insisted—much stronger than for the present form of general tariff. Nor is the case a strong one from the revenue point of view, for there are clearly many alternative ways of raising £30 millions out of a tax revenue of £750 millions. The test of the present policy will come when the Government starts to deal with foreign countries, for it will justify itself only if the protective demands of British industries can be suppressed and our tariff used to lead the world back towards something like Free Trade. As the tariff stands at present, we are in danger of combining

the extensive plan of taxing almost everything with the very dangerous game of imposing high protection on finished goods for the benefit of home producers. If we drift along much farther in this direction we shall find that we have got the worst of both worlds.

THE RUSSIAN GRAIN SITUATION.

(BY A CORRESPONDENT.)

DEFECTIVE organisation, coupled with a late Spring, appears to be causing considerable backwardness in the Russian agricultural campaign this year. Spring-sown crops are rather more than twice as important as the Autumn-sown, and are a vital factor in the national economy; but Spring sowings made by April 25th this year covered only 24,700,000 acres, against 68,450,000 acres sown by the same date in 1930. Delayed seeding not only tends to check acreage expansion, but may also affect yields adversely. For example, 1930 was a more advanced year than 1931, at least as regards the earlier stages of Spring work, and made a much better Spring wheat crop. Recently published data for the State farm "Gigant" confirm the importance of this matter. On that enormous holding (it has about a quarter of a million acres under grain) seeding in 1931 finished on April 18th—a much earlier date than on most other Russian farms. It is stated that acreage seeded before April 3rd yielded 9½ bushels per acre, while acreage seeded after April 6th averaged less than 6 bushels per acre.

Major obstacles towards the fulfilment of the official programme are the shortage and poor condition of the work stock and the shortage of Spring seed grain—for both of which shortcomings some responsibility probably rests on earlier errors and excesses of official policy. Even the official estimates, which do not usually tend to err on the pessimistic side, reckon that only one-third of this year's Spring sowing can be done mechanically through the medium of machine tractor stations. Power for the remaining two-thirds must come from horses and work-oxen, and these are still affected in numbers by the "pre-collectivisation" slaughter in 1929-30, and in condition by the arbitrary methods of grain-collecting last autumn.

When the partial failure of the 1931 Spring crops—the result of late sowing and summer drought—began to be disclosed in September, 1931, and onwards, the Russian authorities were very reluctant to modify their plans for the centralised grain collections, which provide the central Government with supplies for provisioning the towns and for export. They announced, instead, that the fulfilment of the collections schedule must have precedence over the construction of reserves for any other purpose, whether for food, animal fodder or Spring seed. Managers of collective farms who stood out against this instruction were liable to be, and in some cases were, held guilty of sabotage. This coercion enabled the collections to make a paper showing about equal to the previous season, but it has now produced grave strain. In February, 880,000 tons of grain had to be allocated from the centralised grain collections for drought relief in mid-Volga districts—a not inconsiderable quantity in total collections aggregating about 20,000,000 tons—and there may be further drains on the centralised store for seed purposes if the official Spring-sowing plans are to be even approximately completed.

Originally the plan for seed accumulation in the collective farms, which are scheduled for about three-quarters of the total acreage this spring, called for 6,350,000 tons to be set aside, but this has been scaled down several times during recent weeks, until these farms now appear to be working on a schedule of 5,090,000 tons. Even the reduced plan appears impossible without further Government grants, since the figure on April 10th was 4,877,500 tons and had been practically stationary since the beginning of March. It seems clear, in fact, that Russia over-

Powers in Shanghai would show some determination to uphold more faithfully the Assembly decision to which their principals have subscribed at Geneva, there would be good prospects of this end of the conflict being regulated. But it is useless to deny that there are expectations that China will be compelled to come to the Assembly again, a step explicitly safeguarded in the resolution.

Meanwhile, the first report of the Lytton Commission has arrived from Manchuria, and is being issued this week in Geneva. The information which has so far emerged about the contents of this document shows that there are tens of thousands of troops carrying on a three-cornered conflict in Manchuria, with the result that there is a general sense of insecurity. The Japanese say they have about 22,000 troops, the Puppet Government about 80,000 (created with the help of the Japanese), and the Japanese estimate that there are about 140,000 Chinese troops of all kinds still in the field opposing them and their Puppet Government. The deduction which the Japanese draw from this picture of the law and order which their occupation was to guarantee is that they cannot withdraw at present, and they appear to consider that withdrawal must depend on the progress of the re-organisation of the troops described as the Manchukuo Government Army. This is what the Lytton Commission reports, without comment. It would, however, appear to the ordinary observer that Japan has created by her flagrant treaty violations in Manchuria a hopelessly chaotic situation, which will probably last as long as she remains there. It is more than likely that the troops said to be serving the Manchukuo "Government" are of uncertain allegiance, and, in any event, 140,000 Chinese troops can maintain a long period of discomfort for the Japanese and the usurpers of power under Japanese tutelage. There is not the slightest doubt that Manchuria is in a far more lawless state than it was before the short length of Southern Manchurian Railway track was supposed to have been torn up by Chinese—a fact which has never yet been substantiated, and which has been categorically denied by the Chinese.

Notes of the Week.

The Tariff.—In asking for the approval of the House to the first Order made under the Import Duties Act, Mr Chamberlain, who opened last Wednesday's debate, was content, in the main, to argue that the Order was the "logical, natural and expected sequence" of Parliament's previous determinations. As for the levels at which the various scales of duties had been fixed, he found it convenient to cover himself in advance against criticism either that the duties were too high or that they were too low to afford adequate Protection, by reference to the "independent and impartial" character of the Advisory Committee on whose recommendations the Treasury had acted. On the whole, he claimed that he was entitled to feel, like Warren Hastings, surprised at his own (or the Committee's) moderation. He also endeavoured to reassure the House that inefficiency under the shelter of Protective duties would not be tolerated, though his naïve confession that the formulation of conditions of efficiency was "extremely difficult" robbed this assurance, if not of its sincerity, at least of much practical value. The main point of interest, indeed, in Mr Chamberlain's speech is to be found in his reference to the Committee's statement that it is not their intention to recommend any reduction in the general level of Protection now imposed during the next twelve months. This declaration of policy on the part of the Committee, said the Chancellor, would not preclude the Government from undertaking negotiations with foreign Governments for commercial treaties, which were outside the purview of the Advisory Committee. Ottawa must come first, but "having once exhausted the possibilities that may accrue from our conversations with the representatives of the Empire, we shall be free to discuss commercial treaties which may involve the lowering of the

duties in this country in return for a similar lowering of tariffs against us by any countries that desire to enter into negotiations with us." We could wish that Mr Chamberlain had put more positively the Government's desire to negotiate treaties leading towards freer trade, and we are under no delusion as to the strength of the opposition from vested interests that will be raised against any action proposed by the Government along these lines. In the meantime, however, we trust that these significant words of Mr Chamberlain may be taken as an augury that the Government recognises that a general removal of obstructive trade barriers is the essential objective, and that Protection for Protection's sake is for this country a counsel of despair.

Ottawa Conference Advisers.—On Tuesday Mr Thomas announced in the House of Commons the names of the industrial advisers who will accompany the United Kingdom delegation to the Ottawa Conference. Sir Edward Davson will go as adviser on Colonial trade matters and for industrial and commercial questions there will be Sir Gilbert Vyle, Lord Weir and Sir Alan Anderson, nominated by the British Committee on Empire Trade, and Mr J. Bromley and Mr W. Citrine, nominated by the General Council of the Trades Union Congress. The appointment of Sir Douglas Newton as agricultural adviser to the delegation was announced on Thursday. The team is, on the whole, a strong and representative one, but the list is notable for more than one omission. There is no representative of the important industries of coal and textiles, whose interests in the export trade are predominant, and though Sir Alan Anderson carries the great authority of a former Deputy Governor of the Bank of England, his primary concern, as one of the leading shipowners, will be with the vitally important problems of commerce; the delegation might well have been strengthened by a special adviser on monetary policy, a question which should figure prominently in the business to be discussed at Ottawa.

The Oath and the Annuities.—On April 29th Mr De Valera's Bill to remove the Parliamentary Oath from the Irish Constitution, and along with it those provisions of the Constitution which make the Treaty the supreme law of the Free State, passed its second reading by a majority of 77 to 71, and on May 4th the Committee stage was ended. Mr McDermott's interesting amendment to substitute for the existing Oath a general expression of loyalty to the Crown as the symbol of partnership in the British Commonwealth of Nations was ruled out of order by the Speaker. Mr McDermott, who had denounced the Free State Government, in the first reading debate, for "behaving like guttersnipes" in evading the real issue, asked Mr De Valera point-blank whether or not he regarded the Treaty of 1921 as morally binding on the Free State; Mr De Valera replied that, whatever might be his private views, he spoke for a Government which, in accordance with its mandate from the electorate, had decided to accept the Treaty for the time being. This doctrine that the honourable observance of public engagements depends upon the temper of a general electorate at some particular moment is an interesting contribution to the dialectic of representative government. Besides the question of honour, the legal issue is of slight importance, but it is worth recording the published opinion of Professor Berridale Keith, one of our most noted constitutional lawyers, that any measure running counter to the Treaty which purports to have been passed by the Oireachtas would have to be held invalid by the Irish courts as a mere matter of law; this conclusion, of course, is based upon the fact that Dail Eireann sat in 1922 as a Constituent Assembly, and it is in no way affected by the Statute of Westminster. A very interesting situation will arise if, when the tumult and the shouting dies, Professor Keith's view is upheld in the Free State courts, and Mr De Valera finds himself constitutionally unable to break his country's plighted word. The question of the annuities has been overshadowed recently by the fundamentally more serious issue of the status of Ireland, but Mr De Valera made an important statement on

the matter in an interview on Saturday, when he said that the whole question of the land purchase annuities is to be re-examined in view of the financial agreement of 1928 "brought to light by Mr Thomas." Incredible as it may seem that Mr De Valera could have been in office for so much as a week without having his attention drawn to the agreement by his officials, it really does appear to have come as a surprise to him, and it is possible after all that the question may be submitted to amicable arbitration.

First Ballot in France.—Pending the results of the second ballot in the French General Election, which is to take place next Sunday, the results of the first ballot—taken on Sunday last—are singularly baffling. Yet a provisional attempt to interpret them, vain exercise of the fancy though it be, is, nevertheless, irresistible in view of the profound importance of this election for the future, not only of France herself, but of Europe and the world. It turns out that, on the first ballot, only 252 definitive elections have been made, and this leaves the fate of no less than 352 seats to be decided next Sunday. The outstanding general feature about this first batch of definitive results is that the late Government and the late Opposition are very evenly balanced, and that there has been very little change. Out of these 252 deputies who are already elected, the late Government can claim 129 and the late Opposition 123. The Opposition has gained eight seats, and the Government lost nine seats net. Six of these lost seats have been forfeited by Monsieur Tardieu's own group, "the Republicans of the Left." Everything now turns on how far, at the second ballot, the parties of the Left—and principally the two largest of them, the Radicals and the Socialists—will succeed in carrying out their pre-arranged and declared plan of concerted action. Our own experience in this country last autumn indicates that this kind of electoral strategy is easier to arrange between party headquarters than to execute in the constituencies. It would be rash, therefore, to forecast that the French Left will emerge, from the second ballot, with the majority of 50 or 60 which they are entitled, on paper, to expect, on the assumption that their electoral agreement is faithfully carried out in every single constituency. It is true that, in the constituencies, arrangements on the pre-agreed lines appear to be taking shape spontaneously. It also seems to be true that there has been a considerable incline towards the Left in the French electorate. All the same, it would be unwise to credit the parties of the Left with more than a bare majority, all told; and that might mean a repetition, this year, of the situation which arose after the elections of 1924. On that occasion the Radicals took office with the countenance, but not with the collaboration, of the Socialists, and found themselves compelled to take into partnership the Left Centre, who have latterly taken part in Monsieur Tardieu's coalition. Monsieur Herriot has now declared positively that he will not take office on these conditions again. Next week we shall see.

The Disarmament Conversations.—While the technical committees of the Disarmament Conference are dealing with the detailed and complicated work of defining offensive weapons, there have been important political conversations at Geneva between the statesmen representing the Great Powers. Mr Stimson is reported to have pressed three points: first, the adhesion of France and Italy to the London Naval Treaty; second, the prohibition of certain arms of offence (the problem with which the technical committees are now grappling); and, third, a general reduction of land armaments. For this latter purpose, the Americans are reported to be taking the strength allowed to Germany under the Versailles Treaty as the standard, with allowances for Colonial requirements, special geographical circumstances, comparative military value of professional soldiers and conscripts, and so on. On the German side, Dr. Brüning has contributed an offer that Germany will bind herself not to increase her present armaments until the meeting of the next Disarmament Conference, several years hence, on condition of her being

released from certain, at least, of the more irksome "unequal" provisions in the Disarmament Chapter of the Versailles Treaty, e.g., the proviso that the Reichswehr must be recruited by voluntary enlistment for a term of twelve years. Dr. Brüning's offer is reported to have made a favourable impression on Mr MacDonald and Mr Stimson; and it is promising psychologically, for, if accepted, it will go far towards liberating Germany from her present inferior international status; and status is all-important to a nation which, like the German nation since the war, has been infected with the psychology of the "under-dog." These fruitful conversations were prematurely interrupted when Monsieur Tardieu took to his bed and Mr Stimson to the ship which is to carry him back to America. Now, unhappily, Mr MacDonald also is temporarily *hors de combat*; so that the statesmen's intention of resuming talks next week seems unlikely to be realised.

The Shanghai Armistice.—The Japanese Government has now defeated the League Assembly, as it previously defeated the League Council, over the question of a time limit being imposed, on the authority of the League, for the withdrawal of Japanese forces from Chinese territory. The question in this case concerns the Japanese forces not in Manchuria but at Shanghai. It will be remembered that, after the breakdown of the long-protracted armistice negotiations at Shanghai, the Assembly's Committee of Nineteen at Geneva drafted a resolution which provided, among other things, that a local Commission representing the League at Shanghai should be empowered to fix a date for the withdrawal of the Japanese troops there, and to take its decision by a majority vote. This provision was flatly rejected by the Japanese delegation at Geneva; and, after the problem had been referred back to the neutral representatives at Shanghai, a new formula was devised by the British representative, Sir Miles Lampson. Under this Lampson formula, the local League Commission is to advise the Japanese military authorities on the spot when, in its opinion, such normal conditions have been restored as would render a withdrawal of the Japanese forces possible. The League Commission may even go on to report "negligence," on the part of either the Japanese or the Chinese, in acting upon the Commission's advice. But the actual decision of the moment when the Japanese shall withdraw remains in the hands of the Japanese themselves. For the Japanese, this is the capital point, and the Lampson formula is therefore acceptable to them. The Chinese have accepted it under duress. And the Assembly has fallen into line by passing a resolution in the same sense at an extraordinary session held last Saturday. The Japanese delegate would not vote in favour even of this resolution, because the Japanese Government declines, "on principle," to recognise that Article 15 of the Covenant, under which the Assembly is acting, is applicable to any part or aspect of the present Sino-Japanese dispute. He was good enough, however, to allow the resolution to become technically unanimous by abstaining from voting instead of casting his vote against it. The Japanese are also taking credit to themselves for having allowed the Shanghai armistice negotiations to go forward in spite of a bomb outrage which was perpetrated at Shanghai on April 29th, by a Japanese subject of Korean nationality in Chinese territory under Japanese military occupation. In

the circumstances, the Japanese have everything to gain now by the simulation of handsome gestures. For they have compelled the League of Nations to acquiesce in their remaining in military occupation of Shanghai and its hinterland for as long as they choose.

The Lothian Report.—In the course of last week-end two events occurred in India which, when viewed in conjunction, are poignantly illustrative of the present struggle between good and evil in Indian politics. The first event was the assassination of a British official at Midnapore, in Bengal, on Saturday, April 30th; the second was the signature, at Simla next day, of the report of the Indian Round Table Franchise Committee of which Lord Lothian is the chairman. The murder of Mr Douglas is an unrelieved tragedy—one of those crimes which serve no purpose except to provide an argument for repression. On the other hand, the signature of the Lothian Report is a piece of constructive statesmanship which offers the glimpse of a better future. This much can be said with confidence already, though the text of the report (which is a voluminous document) will not be published for several weeks. The success of the Lothian Committee's work is attested by the remarkable approximation towards unanimity which this varied and representative body has achieved. And this success is to be ascribed in large measure to the chairman's personality and leadership. The Lothian Committee has not been content to take evidence on paper at second-hand. During a strenuous period of three months' activity it has travelled all over India and has made direct personal contact with the Indian people, not only in the cities but in the countryside. On at least one notable occasion, when a party of non-co-operators set themselves to make it impossible for the Committee to perform this essential part of its work, their obstruction yielded to the chairman's good humour and affability and obvious sincerity in his desire to do his part in helping the people of India along the road towards constitutional self-government. Which is going to prevail in India? The temper of the Lothian Committee? Or the spirit of political crime and political repression? Much will depend on the policy of the Government of India when the four main repressive Ordinances expire two months hence. Will the life of these Ordinances be prolonged over the whole of British India? Or in certain provinces but not in others? Or will the Government find it possible, at this stage, to dispense with the Ordinances altogether—a step which is so much harder to take than the enactment of the Ordinances in the first instance?

Trouble at Tangier.—Tangier is a kind of Moroccan Shanghai—a focus of foreign business interests and a point of contact between an old-fashioned hinterland and the great modern world beyond the sea. Happily, present-day Tangier is not cursed with anything corresponding to Chinese civil wars or Sino-Japanese hostilities. The days of Mulai Hafid, and even the days of 'Abdul Karim, are over and done with. There is peace, and an assurance of continued peace, in Tangier's hinterland. The trouble at Tangier is not home-grown. It is a product, not of indigenous Moroccan disorder, but of international jealousy between those foreign Powers that happen to have fingers in the Moroccan pie. "The Tangier Zone" of Morocco like the International Settlement at Shanghai, is a patch of urban land which has passed under an international administration while the juridical sovereignty has remained with the native Government of the country in which this international zone is an enclave. This, of course, means administrative complications—wheels within wheels, and tier upon tier. There are organs representing the local population and other organs representing, collectively or severally, the various interested Powers. The Powers have been competing for influence over the Tangerine administration for the last quarter of a century; and, in the name of international concord, they have made exemplary efforts to get rid of their mutual resentments and suspicions. At each stage, this problem of international jealousy has been solved in one invariable

fashion. The Tangerine administration has been made more and more top-heavy in order to allow this Power to appoint a judge and that Power a police-officer and this other Power a sanitary inspector. As between the Powers, the results of all these diplomatic efforts have not been in vain. The jealousies really have been overcome. But, while the Powers have called the tune, the Tangerines have paid the piper; and now at last they have struck. They have served an ultimatum upon the local Consular body, in which they "warn the authorities of the unfortunate consequences that will not fail to materialise if, as has always occurred up to the present, questions so vital to all Tangerine interests continue to be neglected for reasons which have no bearing on Tangier's welfare." Files docketed "Tangier" seem likely now to accumulate in the chanceries once again.

The Treasury Bond Issue.—An official announcement issued last Friday contained the offer of new 3 per cent. Treasury bonds, to be tendered for at a minimum price of £97 15s. per cent., and to be redeemed at par by annual drawings of not less than 10 per cent. of the nominal amount originally issued. The main purpose of the offer was to provide for the repayment, which was simultaneously announced, of £84.6 millions of 4 per cent. Treasury bonds, 1931-33, on August 15th next, but inasmuch as tenders were accepted for £110 millions, the Government has additional funds in hand as a result of this operation. The surplus proceeds of this issue will obviously be disposed of by the Government as seems best at the moment, and it is premature to assume that they will be exclusively or mainly diverted to the Exchange Equalisation Fund. In a few weeks' time they may help to cover the payment of the forthcoming 5 per cent. War Loan dividend, and in general they may permit of a reduction, or arrest an expansion, in the Treasury bill issue or in Ways and Means Advances from Public Departments. The Government rarely earmarks funds of this character for any specific purpose, and if a colloquialism is permissible in order to clarify a much-misunderstood situation, moneys thus raised, in common with all other cash receipts, invariably go "into the common pot," where they lose their identity. Various explanations have been put forward of the motives behind an issue of this character. One is that it was designed to test the gilt-edged market in preparation for a conversion operation, an aspect which is discussed in an Investment Note on a later page. Another is that it is intended to make further issues of this character with the specific object of substituting these bonds for Treasury bills. On this point we confess to some doubt. A security whose yield to some extent depends on the luck of the draw is not entirely suitable either for banks or the money market, even though the banks are apparently disposed to regard them as "floaters" up to their usual limit for bonds. It is, in fact, believed that neither the banks nor the money market took much interest in the offer, and that heavy tenders came from Public Departments. If so, the success of the operation is more apparent than real.

Coal Wage Negotiations.—As agreements which are distasteful to both participants tend to be concluded for very short periods, the prospect of a crisis in the coal industry is becoming almost an annual event. At the moment, another of these time-limits is drawing very near, namely, July 8th, on which date, in the absence of legislation, working hours in the coal mines are due to be reduced by half an hour a day. There is little question as to the Government's intention of introducing a Bill to prolong the seven and a half hour day, but so far there is no agreement between the parties concerned as to the terms and duration of this extension. The owners have offered to guarantee wages for another year if the seven and a half hour day is prolonged until the coming into effect of an international seven and a quarter hour convention. The miners, on the other hand, demand either that present wage rates be guaranteed for as long as the seven and a half hour day is continued, or that wages should be

regulated by national machinery. The first of these demands has a specious appearance of symmetry which has won it sympathy in many quarters, but actually it is a somewhat revolutionary economic theory which would tie a given wage rate indissolubly to a given length of working day. It is difficult to see how the owners could be expected to agree to bind their hands indefinitely in the face of unpredictable economic conditions, but their inability to do so makes it the more incumbent upon them to reconsider the alternative demand of the miners for a national machinery to regulate wages.

Cotton Wages.—The Cotton Spinners' and Manufacturers' Association, representing the weaving employers in the cotton industry, at a meeting in Manchester on Tuesday, decided, by a virtually unanimous vote, to abrogate the hours and wages agreement reached with the operatives in July, 1919. This particular agreement, writes our Manchester correspondent, provided for the working hours in the mills to be reduced from 55½ to 48 per week; and to compensate the operatives for reduced earnings their "list" wages were increased by 30 per cent. It is considered doubtful whether the weaving employers will attempt to force a general wages reduction, but manufacturers—when the one month's notice expires—will be able to arrange individual agreements with the workers regarding hours, wages and conditions; and it goes without saying that an increasing number of firms will come to separate terms and either reduce wages or attempt to introduce a working week in excess of 48 hours. Numerous firms have already seceded from the employers' organisations and introduced either wage reductions or an increase in working hours. This latest move ends for the time being collective bargaining and agreements, and has been brought about by the operatives' constant opposition to discussing in joint conference the more looms per weaver system or wages reductions.

The F.B.I. and Monetary Policy.—The Federation of British Industries has just issued a Report on "Industry and Monetary Policy." The introduction is mainly historical, and refers to "Britain's Pre-war Plan." According to the authors, in the pre-war period British monetary policy was directed, albeit largely unconsciously, along the lines of a consistent plan calculated to promote and foster British industry and commerce by active development of complementary as opposed to competitive countries. Thus British capital was invested in South America, the Empire, and the United States—at that time industrially undeveloped—but not in industrialised France and Germany. In those days, too, the world gold standard was, in fact, predominantly a sterling standard. All this is in a sense true, but we would be inclined to underline the word "unconsciously" so heavily as to end by suggesting that no pre-war plan really existed at all. We are also inclined to receive with some caution a recommendation of the F.B.I. that we should cease giving financial help to European reconstruction, on the ground that this involves making loans to competitive countries. After all, in 1913 Europe took £195 millions and in 1929 £235 millions of British goods, and trade of this magnitude is not to be sacrificed with equanimity. The Report finally comes to the primary objectives of British monetary policy. These are stated to be:—(a) To raise the level of sterling prices to a figure at which production can be carried on with reasonable profit; (b) the promotion thereafter of stability in the price structure and balanced production within the sterling area; (c) the conscious direction of the flow of savings into new investments calculated to secure the maximum of advantage for industry; (d) the direction of that part of the National savings available for external investment to countries within the sterling area, which are countries of complementary trade. With a view to promoting all these objectives, the opportunity of the Ottawa Conference should be seized to explore the possibility and bring about the maximum of mutual understanding, for the adoption of a common Empire monetary and industrial policy, so designed as to facilitate the admission of other countries willing and able to co-

operate with a sterling group, leaving the question of a possible universal monetary understanding to be settled at a later date, if and when monetary internationalism again becomes a practical proposition. With many of these proposals we find ourselves in sympathy, and, indeed, we think the British Government will be well-advised to recognise that Empire monetary policy will be one of the chief subjects for discussion at Ottawa. The main difficulty is how to achieve these objectives, and here we are bound to confess that some of the tentative suggestions of the F.B.I. appear more calculated to stimulate further deflation than a raising of the level of sterling prices.

Sterling and Gold Prices.—A fortnight ago the sterling exchange rate stood at \$3.77, as compared with a present level (Thursday) of \$3.67½. Notwithstanding, however, this depreciation of the pound, our complete index of sterling prices shows a fall of approximately one-half of 1 per cent. Our index of gold prices also fell fractionally, whereas our index of the sterling prices of primary products rose by about 1 per cent. The discrepancy between the movements of the latter index and of our complete index is due to the fact that tin, which rose sharply during the fortnight as a result of the "output holiday" scheme, has a much larger weight in the short list of primary products than in the complete index. It will be seen that, between April 6th and April 20th, the four foreign index numbers, for which we are indebted to the *Financial Times*, all declined, with the exception of that relating to French prices, which remained stationary. The downward movement was most pronounced in the case of America:—

In the next table we show in greater detail the sectional movements of the complete Economist index:—

	(1927 = 100.)		
	Sept. 18, 1931.	Apr. 20, 1932.	May 4, 1932.
Cereals and meat	64.5	73.4	73.1
Other foods	62.2	63.0	62.1
Textiles	43.7	48.0	46.6
Minerals	67.4	70.5	71.5
Miscellaneous	65.8	60.9	60.9
Complete Index ...	60.4	62.7	62.4
1913 = 100	83.1	86.3	85.9

The movements of prices in the textile group, under the lead of American cotton, was uniformly downward. The upward fluctuation in the minerals group reflects mainly the rise in tin.

Australian Finance.—Early this week the New South Wales State Taxation Commission bowed to the inevitable, and in compliance with the Financial Agreement Enforcement Act handed over to the Deputy Federal Taxation Commissioner in New South Wales all the documents relating to income tax assessments in his possession. The three floors of the State Taxation Office in Sydney, however, still remain locked and are reported to be "under guard" by members of the Timberworkers' Union. It certainly seems strange that this state of affairs should be allowed to continue, the more so as further defaults by New South Wales have raised the total amount to be made good by the Commonwealth Government to £3,058,000, of which only £440,000 have so far been recovered. This week a new Bill was passed, authorising the Commonwealth Government to secure part of any State revenue which had been or was to be attached for the repayment of a State default. This is apparently a technical measure, whose object is to permit the attachment of the net receipts of the New South Wales State railways and tramways, in contradistinction to the gross receipts, before defraying operating expenses. Canberra has also been concerned this week with monetary matters, for a new Government Bill has been introduced to enable the Board of the Commonwealth Bank to hold part of its "gold" reserve against the note issue in sterling, and to export all or part of its £10,000,000 gold reserve for conversion into British currency. At the prevailing rate of exchange such an operation will be highly profitable to the Commonwealth Bank and will also enhance the value (in Australian currency) of its reserve. Moreover, now that the British Government have established the exchange equalisation fund in this country, Australian opinion apparently believes that no serious loss to the Commonwealth Bank may be anticipated as a result of future fluctuations in sterling. It is understood that immediate gold shipments are not contemplated, and also that Australian banking opinion is not unanimously in favour of the Bill. It seems, however, a move in the right direction, both for Australia and the Empire.

German Discount Rate.—The Reichsbank reduced its discount rate on April 27th from 5½ to 5 per cent., the third reduction this year. It is safe to prophesy, writes our Berlin correspondent, that this will be the last reduction for some time. German banking law requires that bank rate should be not less than 5 per cent. as long as the notes of the Reichsbank are not backed to a minimum of 40 per cent. by gold and gold exchange. The cover ratio at present is 24 per cent., and there is no prospect of its being increased to 40 per cent. within the next few months. The latest reduction, the second in one month, has been freely criticised, for interest rates in the capital market have not fallen at all, and are still in the neighbourhood of 8-9 per cent., and sometimes very much higher. The Reichsbank, however, believes it to be its duty to reduce its discount rate as fast and as much as it can legitimately, in order to lighten the interest burden on German economy. A reduction of its bill portfolio, a decline in interest rates on the short-term money market, and above all the lower rates abroad, which have reduced the rates charged by the foreign banks to their German customers during the currency of the Standstill Agreement, made the reduction possible. The reduction automatically lowers the rates which the German private banks charge their debtors. The normal interest charged by the banks is now 7 per cent. per annum, inclusive of commission, against 10 per cent. three months ago. In order to cover their expenses the banks are, of course, obliged to reduce in proportion the interest they pay on deposits and they are now paying 2 per cent. on day-to-day deposits against 3½ per cent. at the beginning of the year. Time alone will show whether these rates will not lead to a great reduction in bank deposits; a counter-influence to any such tendency lies in the fact that the savings banks are still paying 4 per cent. on savings deposits. If there should be a decline in deposits a rise in the discount rate would be inevitable. The other danger evoked by the discount rate reductions, arises in connection with foreign exchange. In view of the low level of

the Reichsbank's exchange reserves the inflow of export bills has to be artificially promoted, and one encouragement to it was the relatively higher home discount rate. For the time being, it is true, the inflow and outflow of foreign bills at the Reichsbank seems to be about balanced, so that the transfer of the interest on German long- and short-term foreign debt seems for the moment to be assured.

The Dnieper Dam.—A correspondent writes:—One of the most ambitious engineering feats of all time was concluded on March 28th last, when the giant dam of Dnieperstroi, in the Ukraine, vaster even than the Lloyd Barrage, was finished. Three of the nine projected turbines have been installed, and this month the station will have a power of 372,000 kilowatts. When completed in the early part of 1933 it will boast a generating capacity of 756,000 horse-power, with an annual production of electrical energy of 2,800 million kilowatt hours, providing electricity for an area nearly one and a-half times that of England, with a population of roughly 16 million people. Power will be supplied for eight large industrial enterprises, including plants for metallurgy, coke and by-products, ferro-alloys, aluminium, firebrick, slag cement, fertilisers, and machine repairs. In addition, hydro-electrical energy will be used for the metal works at Dniepropetrovsk, Krivoi Rog and Nikopol, for the electrification of the Krivoi Rog-Zaporozhe-Donetz railway and for the agricultural areas of the lower Dnieper. Moreover, the Dnieper Dam will serve a double purpose. The level of the river above the dam will be raised more than 30 metres, thus completely covering the cataracts on the upper reaches which have hitherto impeded navigation. The river will consequently be made navigable along the whole of its course, and will form an important connecting link between the Baltic and the Black Sea. Electric engines will be used to pull vessels through a lock which will have three chambers, each with a rise of 12.5 metres, designed to deal with over two million tons of traffic per annum. The whole plant, which has been erected with the assistance of an American firm of consulting engineers, will have cost more than £20,000,000.

Record Transvaal Gold Output.—All previous records have been broken on the latest gold output statistics issued by the Transvaal Chamber of Mines. Production of gold on the mines of the Transvaal reached a new high record of 960,035 ounces of fine gold during the month of March. This compares with an output of 914,012 fine ounces in February and 910,993 fine ounces produced in March, 1931. In the following table we show the monthly output since the beginning of 1926:—

Month of	1926.	1927.	1928.	1929.	1930.	1931.	1932.
January	796,270	839,782	843,857	876,452	882,801	914,576	936,794
February	734,924	779,339	816,133	815,284	818,188	839,937	914,012
March	834,340	860,511	877,380	866,529	889,370	910,998	960,035
April	803,303	824,014	825,907	872,123	868,606	910,337	...
May	849,214	859,479	886,186	897,598	916,213	910,279	...
June	852,145	855,154	862,363	855,029	887,867	897,750	...
July	860,134	851,861	867,211	889,480	912,652	916,843	...
August	843,854	863,345	891,863	889,601	921,081	916,425	...
September	859,939	842,118	857,731	849,553	903,176	916,024	...
October	853,296	855,743	897,720	888,690	926,561	945,113	...
November	840,276	848,059	872,464	861,593	884,753	900,510	...
December	836,157	851,225	859,761	851,134	908,492	923,353	...
Total..	9,962,852	10,130,630	10,358,596	10,414,066	10,719,760	10,874,146	...

It will be noted from the abovetable that the trend of gold production has been steadily upward. The first three months of 1932 all make an excellent comparison with production in the corresponding months of the preceding years. The following table shows the number of natives employed at the mines during the past nine months:—

	July, 1931.	Aug., 1931.	Sept., 1931.	Oct., 1931.	Nov., 1931.	Dec., 1931.	Jan., 1932.	Feb., 1932.	March, 1932.
Gold mines	208,155	209,409	209,424	208,987	209,270	211,552	215,752	216,171	214,024
Coal mines	13,512	13,563	13,276	13,061	12,882	12,260	12,394	12,177	12,009
Diamond mines	1,817	1,705	1,626	1,517	1,429	1,402	1,598	1,363	NH
	223,484	224,677	224,326	223,565	223,581	225,214	229,744	229,711	226,035

The native labour force continues to decline. No natives are employed at the diamond mines against 1,363 in February. Over 2,000 less are employed at the gold mines, which makes the record production figures more noteworthy.

INSURANCE NOTES.

Equitable Life Assurance.—The detailed returns furnished to the Board of Trade following upon the quinquennial valuation on December 31, 1930, are now available, and afford the means for analysing more closely the expansionist policy which has characterised the conduct of this old society in recent years. Since the year 1926, the date of the preceding valuation, the society's renewal premium income has grown from £302,000 to £458,000—an increase of over 50 per cent. The changes in the constitution of the business in force are analysed below:—

	December 31, 1926.		December 31, 1930.	
	Sums Assured & Bonuses. £	Net Liability. £	Sums Assured & Bonuses. £	Net Liability. £
Assurances—				
With profits	7,560,000	3,944,000	8,426,000	4,399,000
Without profits ..	3,387,000	903,000	4,500,000	1,100,000
Annuities	196,000	632,000	419,000	1,169,000
	per annum.		per annum.	
Sinking fund assurances	734,000	98,000	1,359,000	236,000

These figures illustrate the changing character of the business. The annuity business and sinking fund assurances have both approximately doubled, the former largely owing to the cultivation of deferred annuities as a means of superannuation provision. "Without-profits" business shows rather surprisingly more evidence of growth than the "with-profits" section, though the Equitable is in a favoured position to attract such policies, since the absence of commission agents enables it to offer specially low rates; and, in addition, mortgage investments have, no doubt, brought to it numbers of large "without-profits" life policies by way of collateral security. The year 1931 witnessed a further increase in new business transacted. New life policies were issued for sums assured of £1,297,000, compared with £975,000 in 1930, while new sinking fund policies and annuity policies have both considerably added to the totals already in force. Interest earnings were greater in amount, but the effect of the higher rate of tax has reduced the net rate earned from £4 12s. 0d. per cent. to £4 9s. 11d. per cent. The society's total assets now amount to £8½ millions, and the Stock Exchange securities, comprising under £4 millions of this, are valued at or under market values on December 31, 1930. As compared with market values at the end of last year there is a depreciation on book values of £376,000, though, in spite of this, the society is able to state that, in the aggregate, the assets are fully equal to the stated values.

Scottish Equitable.—Although not quite up to the level of the figure reached in the preceding year—which was the society's centenary year—the new business transacted last year amounted to the substantial total of £1,375,000, and the fund now stands at £9,830,000. Interest income has been adversely affected by the rise in income tax—and no doubt also by defaults—and worked out at £4 7s. 6d. per cent. net compared with £4 10s. 8d. per cent. Expenses have been swollen by special items connected with the centenary celebrations, and absorbed the still quite moderate total of 14.7 per cent. of the premiums. The chairman's remarks on the society's investments made it clear that the society is in a strong position, though he acknowledged that the date on which the accounts are closed, namely, March 1st, was specially helpful on this occasion. On that date there was, he said, a small depreciation of minor importance which could easily be dealt with at the quinquennial valuation and distribution of bonus, which takes place a year hence. The Chairman's speech is also notable for the references it contains to the subject of death duties. It was recalled that when these were introduced in 1894 the maximum rate of duty was 8 per cent. Now the maximum rate is 50 per cent. Moreover, the effect of providing for death duties by means of a life

policy may aggravate the amount of duty payable. For life policies are aggregated with all other assets, and the existence of a policy expressly effected to provide for duties may mean that duty is payable at a higher rate. Thus, the duty payable on an estate of £150,000 is £33,000. "The effecting of a life policy for £33,000 would render the whole estate liable to taxation at an increased rate, and in order to pass on the estate intact at £150,000 it would be necessary to make provision not for £33,000 but for over £47,000." There is here a strong case for some concession from the Chancellor of the Exchequer—if not for complete exemption for estate duty policies, then at least for non-aggregation of such policies; and the life offices claim that the indirect gain to the revenue through avoidance of the break-up of large estates and the reduced incentive to deeds of gift during the lifetime of large estate owners would more than outweigh the cost of any such concession.

"State" and British Equitable Assurance.—These companies are both subsidiary concerns of the Royal Exchange. The "State" controls the British Equitable, whose accounts are incorporated in those of the State. Both companies transact fire and accident business in their own names, and the British Equitable has also a small life account. The consolidated premium income shows some reduction on that of the previous year, and amounts to just over £1 million, made up of £650,000 from fire, £180,000 from accident, £155,000 from life, and the small balance from marine business. Except in the accident section, where profits have been consistently shown, the underwriting results have recently been unsatisfactory. This has been especially true of the fire department, which derives a substantial revenue from America, and the 1931 figures make none too good a showing:—

	1930.		1931.	
	Amount of Profits. £	Per. centage of Premiums.	Amount of Profits. £	Per. centage of Premiums.
Fire	3,398	-0.5	14,900	-2.2
Accident	12,667	6.9	11,331	6.2
Marine	6,067	12.3	3,662	7.5
Gross underwriting surplus	15,336		93	
Less items debited to profit and loss account	26,078		38,655	
Net trading loss	10,742		38,562	

In face of these results it is not surprising to find that the dividend, which, of course, is paid to the Royal Exchange, has been cut down from 40 per cent. to 25 per cent. An exchange reserve fund of £54,000 appears for the first time in the balance sheet, and has been created by utilising £31,000 from the general reserve of £250,000 and £22,000 formerly specified as a contingencies fund. The need for this fund arises from the depreciation of sterling in terms of dollars, and the consequent automatic increase in current liabilities of the American business. The American assets, on the other hand, have been valued at the rate of exchange ruling on December 31st last. The new life business of the British Equitable shows a reduction from £535,000 in 1930 to £461,000 in 1931, and the fund, after writing off £30,000 for depreciation, stands at £1,689,000. It is stated that sufficient profits have been

accumulated since the last quinquennial valuation on December 31st, 1928, to meet the depreciation in book values at the end of last year. No dividend has been paid by the British Equitable since 1923, apart from a small appropriation following upon the last quinquennial valuation.

Atlas Assurance.—The Atlas reports of late years have set so high a standard as to encourage the illusion of immunity from the effects of industrial depression. The 1931 report will finally shatter any such comfortable impression; for not only have premium income and underwriting profits fallen sharply but Stock Exchange depreciation has seriously depleted the company's resources. The foundation of the business is the fire account, and here premiums have fallen by £143,000 to £2,030,000, while the surplus is nearly halved:—

	1930.		1931.
	Amount of Profit.	Percentage of Premiums.	Amount of Profit.
	£		£
Fire	194,525	8.9	102,771
Accident	36,398	7.6	55,376
Marine	22,390		24,399
Life	253,313		182,546
Less items debited direct to profit and loss account...	139,140		165,785
Total net trading surplus...	114,173		16,761

The dividend has been maintained at 32 per cent., tax free, but the payment requires an increased draft on trading surplus of £44,000. As the net trading surplus was £16,761, there was a small deficit on the year's working of £27,000. In addition, a sum of £125,000 has been taken from the reserves of the fire department in order to form an exchange reserve to cover net increase in current American liabilities, as a result of the depreciation of sterling in terms of dollars. In the life department new business has fallen heavily from £4,244,000 to £3,061,000—as a result, it is stated, of the dearth of group policies and staff schemes which have figured largely in recent totals. The rate of interest earned was over 5s. per cent. less at £5 0s. 5d. net, but expenses worked out at a lower percentage of premiums. The feature of the life account is the provision for depreciation. At the end of 1930 the book values covered a hidden reserve of £430,000. Not only has this now disappeared, but a further sum of £550,000 has been needed to bring book values down to market prices on December 31, 1931—a total depreciation of £980,000, equal to nearly 13 per cent. of the total mean assets. The source of this loss is, no doubt, the unusually large investments in foreign Government and municipal securities, which together account for over 17 per cent. of the total assets. Under normal circumstances a triennial declaration of bonuses would have been made at this time, but this has been postponed. In the meantime interim bonuses at the full rate of 48s. per cent. compound will be paid in respect of the years 1929, 1930 and 1931, but not for 1932.

Friends' Provident and Century.—The Friends' Provident is a mutual office transacting life assurance and annuity business, and since 1918 has owned, as an investment, the share capital of the Century Insurance Company. This company transacts in its own name fire, accident, and marine business, and specialises also in permanent sickness insurance, while the life department is conducted as a closed fund. This arrangement presented the Friends' Provident with a ready-made organisation which enabled it greatly to extend its business beyond the limited circle of Quakers by whom it had been founded, and among whom it had till then been confined. As an investment for the funds of the life policyholders the arrangement has, however, been conspicuously less successful; and the suspicion that the value placed on this asset in the balance sheet is excessive is strengthened by a study of the 1931 report. The detailed results of the operations of the Century during the past two years are as follows:—

	1930.		1931.
	Amount of Profit.	Percentage of Premiums.	Amount of Profit.
	£		£
Fire	19,012	5.5	4,333
Accident	1,755	.7	2,462
Marine	20,054	14.8	4,525
Less expenses, &c.	37,311		11,320
Total net trading loss ...	46,298		28,045
Plus interest income ...	43,991		37,299
Total net surplus of the year	2,307		9,254

A dividend of 12 per cent., costing £32,550, was paid for 1930, thus involving a net depletion of the company's resources by nearly £35,000, but no dividend for 1931 has been declared; and the interest income of the Friends' Provident, as parent company, is, of course, so much the less. The balance sheet of the Century shows total assets of £4,120,000, which were worth £259,000 less than book values. As there is no general reserve fund this deficit will have to be dealt with by a release from actuarial reserves of the life fund at the next valuation in 1934. Turning now to the operations of the Friends' Provident, and dealing first with new business transacted, the sums assured under new policies issued has fallen from £1,847,000 in 1930 to £1,521,000 in 1931, but against this a larger number of new annuity policies and sinking fund policies were issued, and the total assets have increased to nearly £8 millions. The investment in the Century accounts for £700,000 of this, and the absence of a dividend from the Century has reduced the rate of interest earned from £5 3s. 1d. per cent. net to only £4 8s. 3d. per cent. net. A valuation of the assets reveals a depreciation—apart from the book value of the Century investment—of £386,000. Provision for this depreciation would normally be made at the end of this year when the next valuation and distribution of profits falls due; but in the circumstances the directors have announced their intention to defer the valuation until 1934, and in the meantime to omit payment of interim bonuses for 1932.

Scottish Union and National.—This company is accustomed to maintain in the departmental accounts a reserve for unexpired risks equal to 50 per cent. of the premiums, but the figures which follow have been re-calculated, using the more customary 40 per cent. reserve:—

	1930.		1931.
	Amount of Profit.	Percentage of Premiums.	Amount of Profit.
	£		£
Fire	46,612	3.5	10,780
Accident	1,830	6.8	1,438
Employers' liability	4,467	8.2	4,107
Miscellaneous	22,840	13.4	17,606
Marine	20,000	6.1	30,000
Less items debited to profit and loss account	95,749		42,371
Total net trading surplus	21,451		86,897

These results relate to a premium income of £1,742,000, of which fire business contributes £1,155,000. Until 1929 the underwriting profits each year were remarkably stable, but in each of the last two years there has been a marked retrogression, principally due to the fire department. The dividend has been maintained for the fourth year in succession at 65 per cent., and is covered by interest earnings with a small margin. The large and prosperous life fund of £11 millions shows evidence of further expansion. New business transacted last year amounted to £2,435,000, an advance of over £200,000 on the corresponding total for 1930. The total balance sheet assets of £15,700,000 are retained at their previous book values, except that dollar assets have been valued at rates of exchange current on December 31st, and on this basis are stated to be within the market values. There is no reference to any exchange reserve to meet the automatic increase in current liabilities, unless this is the purpose of the creation of a contingencies reserve of £50,000, which has been deducted from underwriting profits in the above statement.

UNITED STATES.

Credit — Finance — Stock Exchange — Industry.

(FROM OUR CORRESPONDENT.)

NEW YORK, April 27.

WHILE Congress continues to fritter away its time, some success is beginning to attend the new drive of the Federal Reserve banks to stop credit deflation. It is wholly untrue that any new currency has been issued with Government bonds as backing in place of the gold and eligible paper provided for under the old law. Government bonds, as partial security, along with gold, for Federal Reserve notes, can be used under the terms of the Glass-Steagall Bill, but it will not be done until the present free gold is used up, and that will not be for some time. However, Federal Reserve Bank purchases of United States Government bonds continue at the rate of approximately \$100 millions weekly. This is bringing a rapid reduction in member bank borrowings in the cities, as the first use for the resulting expansion in member bank reserves is repayment of discounts. For the week of April 20th the member banks cut their borrowings by \$64 millions, but in spite of this and a small reduction in Reserve Bank bill portfolios, total Reserve credit in use rose \$14 millions. There was also a rise of \$2 millions in currency circulation, but that was without special significance.

As yet, the effect of this credit drive is being felt only in the New York district. In the past week the member banks in the New York district, for the first time in several months, reported an expansion in loans and investments. The rise was nearly \$100 millions, but deflation continued in other districts, so that the total increase in loans and investments for all reporting member banks in leading cities was only \$61 millions. In due course, Wall Street believes, the excessive credit surplus here will cause an overflow into the interior, with a consequent increase in willingness on the part of the banks to make loans and to invest in the bond market. It is difficult for the banks to find employment for their money, and with the decline in bank failures and rise in confidence of public depositors the need for liquidity has greatly lessened.

There has been some disappointment at the delay in reducing the New York discount rate, but the excuse is given that under present conditions the rate means little, one way or the other. Besides, to succeed in its campaign for stopping credit deflation, the system needs harmony, and a further reduction in the New York rate would need perhaps similar action in the other districts, and also probably awaits further repayment of discounts. A system made up of twelve district banks must necessarily move slowly. Open market rates are far below the levels which usually bring a reduction in the official rate. Asking rate on 90-day bills is $\frac{1}{4}$ per cent. Call funds are officially pegged at $2\frac{1}{2}$ per cent. on the Stock Exchange, but much money seeks employment at $1\frac{1}{2}$ per cent. to 2 per cent. in the outside market, and loans are made on Government and other gilt-edged collateral at less than 1 per cent. Excess reserves of New York member banks in the Federal Reserve Bank, which means money available for lending but unable to find takers, have been at a daily average of from \$75 to \$100 millions for some time.

Bank suspensions in March fell to only 45, and there were 28 reopenings. Closings in February were 122 and those for January were 342. The peak was reached last October, with 522 failures. The National Credit Corporation is rapidly bringing its operations to a close, partly because of less need for help from the banks and partly because the Reconstruction Finance Corporation is assuming the burden.

The Reconstruction Finance Corporation continues to dispense credit in a rather large way and with much good

to the business structure. Actual use of money has been only about \$300 millions, since the R.F.C. still has to its credit with the Treasury about \$200 millions of the original \$500 millions made available. Presumably, the whole shortly will be used, for the Treasury has agreed to subscribe to \$250 millions of the R.F.C. debentures. It had been thought that the debenture issues would be sold to the public, but it turns out to be the plan of the Treasury to borrow directly itself and then turn the money over to the R.F.C., which doubtless means a lower interest rate.

The Treasury announced this week an offering of \$450 millions of one- and two-year notes, to bear 2 and 3 per cent. interest coupons respectively, the amounts being equal for each maturity. The issues were reported as having a favourable reception. They were larger than had been expected, but it is recognised that the Treasury seized upon a favourable time to add to its already large cash balance and avoid borrowing later in the fiscal year. There is no indication that the Treasury in the last half of the fiscal year ending June 30th next will exceed the \$1,500 millions of new money contemplated for that period. If that proves to be the case only \$300 millions more will be needed.

Meanwhile, the deposit banks will find their Treasury deposits, on which they pay a half of 1 per cent., increased, and the banks probably will retain them longer than usual. In June the Treasury has \$324 millions in certificates to take up, but no other early maturities. General new capital issues are still small and confined mostly to municipal and high-grade utility borrowing. They were about \$45 millions last week.

The diversion created by the Senate's committee investigating Stock Exchange activities has been tinged with some anxiety. The inquiry was obviously inspired by the hope of the ruling party that it might develop evidence of heavy short selling by prominent politicians on the other side of the political fence. Also, the whole affair is a manifestation of the public's feeling that someone must be to blame for the business depression and the stock market losses which many have suffered. The committee at first sought to prove that short selling is largely responsible for the fall in market values and for trade slumps as well. It seems to be veering toward a mere fishing excursion into individual dealings which certain politicians might use to their advantage. Probably nothing much will come of the matter, but it is fairly certain that the Stock Exchange, well prodded out of its tendency toward lethargy, will institute some reforms on its own account which will add to its prestige.

If sentiment continues to improve under the sunlight of the Federal Reserve operations and the Reconstruction Corporation's activities, no change in actual trade conditions yet are discernible. This week some improvement in railroad traffic and a slight recovery in steel mill operations was reported, but the effect was offset by some discouraging earnings statements for the first quarter and further dividend omissions. General Motors reported earnings of only 17 cents a share on its common stock, compared with 61 cents a share in the first three months of a year ago. The United States Steel Corporation did much worse, and in the first quarter fell short by a little over \$1,000,000 in covering operating expenses and taxes. The deficit was further increased by depreciation charges and preferred share dividends. In the circumstances it was not surprising that the common share dividend was omitted. However, the Corporation has shown that in the poorest period it has yet experienced it can operate with virtually no out-of-pocket expense, and therefore the only reduction in the strong cash position will be preferred share dividend payments. These will be continued for a long time at least. All units in the steel trade are expected shortly to announce further salary and wage cuts.

The motor trade has had a disappointing response to its efforts to sell its new models, but the warmer weather is giving some encouragement. The Ford factories announce an increased schedule of manufacture. First quarter corporation reports are showing a drop in net earnings for industrial concerns of a little over 50 per cent. compared with last year, with little or no improvement

over the fourth quarter. Railroad earnings are running about 27 per cent. lower than in the 1931 first quarter, which reflects savings from the lower wage rates, the monthly average decline for some time having been nearly 45 per cent. Commodity prices are a trifle firmer.

FRANCE.

Politics — Industry — Employment.

(FROM OUR CORRESPONDENT.)

PARIS, May 4.

LAST Sunday's pollings in the General Elections resulted in the return of deputies for 249 out of the 611 seats contested—the remaining four consisting of some of the colonial constituencies, where first balloting has been fixed for Sunday next. The returns indicate an exceptionally heavy vote almost everywhere, from 80 to 90 per cent. of the electors having gone to the poll in the majority of the constituencies. The total figures show practically no transfer of votes anywhere, and prove clearly that there has been no real change in the country's opinions, except perhaps a slight hardening towards the Centre from both extremes. The total Communist vote, for instance, was about 250,000 smaller, while that of the Extreme Right was also less. All members of the present Cabinet who sit in the Chamber retained their seats, and so did the rest of the Party leaders of all shades.

The real decision now obviously depends on next Sunday's second ballots, and on the line M. Herriot will adopt when the complete results are known. It is now certain that the Cartel des Gauches is to be revived, and there is to-day some probability that these tactics may again prove successful; but exactly what form such success will take is a problem over which the whole country is now anxiously speculating. Everything depends on whether M. Herriot decides upon a Ministry of Concentration (in which case co-operation between the Radicals and most of the groups of the Tardieu-Laval majority would be assured, leaving the Extremists of both wings to form the Opposition), or upon a revival of the Cartel in the form it assumed after the 1924 elections, when the Socialists gave their entire support to a Radical Cabinet and largely dictated its policy, but refused to share Ministerial responsibility.

Meanwhile, since Sunday last, Socialist and Radical local party machines have already been hastily reviving the Cartellist agreements of 1924 and pledging themselves to withdraw in each other's favour, according to whether the one's or the other's candidate occupied the more favourable position in last Sunday's polling. At Radical and Socialist Party meetings yesterday resolutions were adopted in which each Party agreed, although in more or less veiled language, to make each other's way easier next Sunday. Similar arrangements have been come to in several constituencies between Socialists and Communists. Impartial estimates now forecast that, unless M. Herriot's dream of a Ministry of Concentration is realised, the new Chamber, thanks to the now generally expected "slight trend to the Left," will consist of two practically evenly-matched groups of parties, each commanding around 300 votes—which would render all hope of a stable majority illusory. This leaves out of the calculation, however, the possibility of many surprises next Sunday.

Coal production returns for March show a total output from the French mines of 3,888,000 tons during the 26 working days, as compared with 3,825,000 tons in the previous month (25 days) and 4,627,500 tons in March last year. Average daily production during the month was 149,538 tons, by a labour force of 267,140 units, against 153,000 tons in the previous month (270,256 units) and 177,982 tons (295,804 units) in March, 1931. The output of metallurgical coke by the colliery plants in March was 296,638 tons, against 275,446 tons in February, and 432,436 tons in March last year.

British coal exports to France are likely to be still further hit by a further series of modifications of the quota

system, which were put into operation on May 1, as the result of decisions reached after conferences between M. Tardieu and the representatives of the miners' trade unions. Henceforward import permits will be granted monthly, instead of three-monthly, and will be based on monthly quotas. Hitherto the quotas have been based on a nominal maximum tonnage equivalent to 30 per cent. less than the average imports during the corresponding periods in 1928, 1929 and 1930, while a fairly large excess margin of entries has been tolerated. This excess tonnage has latterly been estimated at 120,000 tons, which coal owners and miners' unions allege to be an under-estimate. From now onwards entries of metallurgical and ordinary cokes will be included in the coal entry quota, which will have a nominal maximum equivalent to 40 per cent. below the average entries during the three years, while excess entries will be brought down to an appreciably lower maximum. These modifications are expected to reduce total coal imports by about 3,000,000 tons a year, or 250,000 tons a month. Total imports of foreign coal, which during recent years have been about 32,000,000 tons a year, will thus be brought down to 18,000,000 tons, of which 12,000,000 tons will consist of Welsh anthracite and other special qualities which the French coalfields cannot provide. This further limitation of foreign coal entries, it is estimated by M. Maes, the Secretary of the French Miners' National Federation, will reduce unemployment among the French miners by four days per calendar month. As the men employed by most of the coal companies are at present laying off to an average of eight days a month, the new quota modifications would apparently reduce unemployment among the miners by about 50 per cent.

Iron and steel production figures for March indicate that output under both heads remained unchanged at the February figures. Total output of pig iron was 469,000 tons, against 461,000 tons in the previous month, 775,000 tons in March, 1931, and means of 836,000 tons in 1930, 864,000 tons in 1929, and 832,000 tons in 1928. In March 78 blast furnaces were in activity, against 133 in March last year. The output of crude steel in March was 464,000 tons, or exactly the same as in February, against 722,000 tons in March last year, and monthly averages of 787,000, 808,000 and 792,000 tons during each of the previous three years. The new British import duty of 33½ per cent. on foreign steel and kindred products is regarded by the French steel industry, when taken in conjunction with the 25 per cent. advantage due to the drop in the pound, as equivalent to an embargo of nearly 60 per cent. against French steel products. As French steel exports to Great Britain in 1931 amounted to 420,000 tons (out of total British steel imports of 1,258,000 tons), steel production figures from April onwards are expected to show a substantial decline.

Unemployment figures continue to decline. The number in receipt of unemployment pay on April 23 was 290,224, or a diminution of 5,310 on the week and of 15,272 during the five weeks since March 19, when the number reached the record figure of 305,416. The Labour Ministry's systematic inquiry as to the situation in all establishments employing over 100 hands indicates that at the beginning of April the total employed was 2,402,487, against 2,824,497 at the beginning of April last year, or a shrinkage of 14.94 per cent.

GERMANY.

Employment Loan — Reichsbahn — Herr Warmbold.

(FROM OUR CORRESPONDENT.)

BERLIN, May 3.

THE Government has decided to raise a loan for the provision of employment, as demanded by the trade unions at their recent congress. It is true that no formal Cabinet decision has been taken yet, but, as the plan has already been published as an official programme, the Government will have to adhere to it in any circumstances, although a number of points which are still unsettled may give rise to considerable difficulty.

One of the principal issues which has not yet been decided is whether funds are to be provided immediately, by means of advances, without waiting for the result of the issue. The unions demanded that the Reichsbank should provide a very large sum in the interval by purchasing bills from those *entrepreneurs* who execute the contracts, promising in advance to prolong them until such time as it becomes possible to redeem them out of the proceeds of the loan. The Reichsbank certainly will not agree to that. At the most, it will only advance such a sum as is absolutely certain to be recoverable during the next few months out of the proceeds of the loan. To such an advance there could be little objection, as it would have no undesirable effects on the currency, while, on the other hand, if relief works are to have any point they must be begun at once, since many kinds of work are only possible in summer. The loan is to bear a low rate of interest, and is to take the form of a premium issue with a very good chance of premature redemption. In addition, it is to be tax-free. There is to be no limit to the amount of the loan, so that, for the present at any rate, all applications will be accepted.

This rapid acquiescence of the Government in the unions' demands is not due only to the difficulties of the labour market, though these make the political position very difficult. The Government has a further object, in addition to the provision of work for the unemployed. One of the chief purposes to which the proceeds of the loan are to be applied is the settlement of small farmers in East Germany. That will create employment is so far as houses, roads and agricultural equipment are required, and the settlers themselves will be withdrawn from the labour market, but this method alone will not solve the problem of what is to be done with the land of those large farms of the East Prussian provinces which have already gone bankrupt, or for which bankruptcy is imminent. Not all the relief measures have been able to prevent a large proportion of these large farms from being declared beyond all hope of financial rehabilitation, and, therefore, outside the scope of the legislation providing for the reduction of debt. The creditors, most of whom are credit institutions, naturally wish to rescue some part of their claims, and it is in the general interest that they should be able to do so. This, however, is only possible if the market for agricultural land, which has ceased to exist in Eastern Germany except in a few districts, can be recreated. The proposal is now to buy part of this land for settlement purposes out of the funds provided for the creation of employment. If, however, the object of a maximum of relief to the labour market is to be achieved, the smallest possible amount of money will have to be spent on the acquisition of land, and in this there is a certain contradiction between the two purposes of the programme which will have to be met by compromise.

The Germany Railway Company suffered very severely in 1931 from the effects of the crisis. Its revenue fell from Rm. 4.57 milliards to Rm. 3.85 milliards. Of this decline of Rm. 721 millions (15.8 per cent.), Rm. 195 millions were in respect of passenger traffic, 532 millions in goods traffic and the rest in other forms of revenue. The fact that passenger traffic, though scarcely less sensitive to crisis conditions, declined less than goods traffic (14.5 per cent., against 18.7 per cent.), is probably due to the particular attention which the Reichsbahn has devoted to this branch of its business. It ran nearly as many passenger trains as in the preceding year, and more than in 1929, when the volume of traffic was at its highest. The number of goods trains, on the other hand, was severely curtailed.

Expenditure amounted to Rm. 3.62 milliards, against Rm. 4.09 milliards in 1930, and working profits to Rm. 226 millions, against Rm. 480 millions. Even in 1930 the profits were not sufficient to cover reparations payments and debt service, which then amounted to Rm. 660 millions and something over Rm. 100 millions respectively. The balance brought forward was requisitioned, and the Reich also contributed to the balancing of the railway budget by cancelling credits previously granted. A new way out of the difficulty had to be found in 1931. In spite of the Hoover Moratorium, there was little reduction in the railway's reparation burden. Until the

summer they had to make full payment under the Young Plan, amounting to Rm. 330 millions for the half year. When the Hoover Plan came into force, the Reich had to deposit with the B.I.S. bonds of the Reichsbahn as security for the conditional annuity. The Reichsbahn received no compensation from the Reich for these bonds. The assumption of the debt was regarded rather as a return for the reduction in the reparation levy. The Reichsbahn has thus only improved its position by the Hoover Plan to the extent that the new debt is less than the reparation levy would have been, that is, by about Rm. 25 millions from July 1st to December 31, 1931. In addition, it has the advantage of an improvement in liquidity, as the debt is redeemable in ten years, whereas the reparation payment would have had to be made in the current year. This enabled the Reichsbahn to avoid, as it would otherwise hardly have been able to do, the assumption of any kind of short-term debt.

In order to meet all payments it was necessary in 1931 to withdraw Rm. 442 millions from the so-called equalisation reserves and Rm. 76 millions from the dividend reserves. Though this has not exhausted all the reserve funds the Reichsbahn is very uneasy about the results of the current year, especially as the figures for the opening months of 1932 are anything but satisfactory.

At the moment of writing the resignation of Herr Warmbold, the Minister of Economics, seems certain, but there is no authentic information as to the reasons for it. There have probably been differences of opinion with the Minister of Labour, Herr Stegewald, on the Employment Loan and perhaps also on the legal limitation of hours of work which the unions are demanding and which the Minister of Labour wishes to carry out to a limited extent. Probably, however, a far more decisive part than the suspicious public, with its ready belief in serious political conflicts behind the scenes, is willing to accept, has been played by the desire to be free from the burden of an office in which Herr Warmbold has experienced a perpetual conflict between economic reason and political possibility, especially with the sphere of international trade relations. The Minister's resignation opens the way, of course, to all kinds of political combinations, but no serious danger to the Brüning Cabinet is at all likely.

HOLLAND.

Shipping — Import Quotas — Money.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, April 19.

It is understood that the Government is planning to provide support for the Dutch shipowners, or is at least investigating schemes to that end. As will be remembered, the Netherlands Association of Shipowners, comprising about 96 per cent. of the Dutch mercantile fleet, submitted an address to the Minister of Labour, Commerce and Industry some three months ago, drawing attention to the critical situation prevailing in Dutch shipping.

The ruinous effects of the depreciation of sterling on many Dutch shipowning enterprises are almost beyond exaggeration. The Dutch flag has been eliminated from the freight market, and the regular line services have been so badly hit that in consequence of the exchange position alone, each journey inevitably is made at a loss. It is obviously out of the question to economise in running expenses to such an extent as to compensate fully for the loss on the exchange. It is well known to what an enormous extent shipping is being subsidised in a large number of foreign countries, particularly in France, Italy, Japan, Spain and the United States. This policy of subsidising is in the first place to be blamed for the great surfeit of vessels and the excessive expansion of the capacity of the world's mercantile fleet. If a change for the better does not materialise very shortly, and if the operating charges remain so high for Dutch shipowners as to force them to give up in favour of their competitors, disastrous results will be inevitable. The Netherlands Association of Shipowners has advocated that the

Government should follow a policy of encouraging a reduction in the cost of living, thus enabling wages to be adjusted in relation to the international competition, caution in seeing that measures of commercial policy do not benefit one industry at the expense of another, encouragement to the use of Dutch vessels, the reduction of piloting and port dues, protest against the preferential rates of the German railways, and expansion of the traffic with Russia under the Dutch flag.

The annual report of the Holland-America Line, issued meanwhile, also shows only too clearly the alarming extent to which Dutch shipping is suffering under the prevailing crisis. The company's operations resulted in a deficit of 7,755,569 guilders, in 1931, against 2,355,722 guilders in 1930. The passenger traffic to and from North America declined from 31,618 to 18,898 persons. The company withdrew from the Java-New York Line, and resorted to the sale of ships. In consequence of the losses sustained, the cash position of the company has been impaired to such an extent that even the standing commitments for payment of interest and redemption could no longer be met. A scheme for reorganisation has now been submitted, involving a reduction in the share capital from 25 million guilders to 2½ millions, and in the debentures from 500 guilders to 400 guilders. Against this reduction and the arrears of interest, the debenture-holders are to receive new shares in two years' time. By means of drastic economies, the management has succeeded in making the operation account balance once more. In view of the uncertain future, however, it is quite possible that still greater losses are yet in store for the debenture-holders. Government support is accordingly becoming a more and more urgent necessity.

The meat quotas are in future to be based on the years 1929, 1930 and 1931, so that the quantities permissible become more correctly apportioned among the various countries. The quota restrictions on meat have accordingly been prolonged for three months, until July 15th. Denmark's quarterly quota is more than doubled thereby, while the quota for the Argentine has slightly decreased from 1,869 tons to 1,174 tons. The total importation of meat permissible in the next three months will now be 2,379 tons, as against 1,935 tons in the three months just expired. During the three months commencing April 1, 1932, the importation of butter from every country is restricted to the average quantity imported quarterly for such country during the years 1928, 1929 and 1930.

The yield of State revenue showed a further decrease in March; but, thanks to the operation of increased and new taxes, the decline has not been large. The revenue in March totalled 34.7 million guilders, as against 37.9 million guilders last year. In making the comparison with last year, however, a correction corresponding with the revised tax apportionment between the State and local authorities is necessary, in consideration of which correction the revenue would be 34.24 million guilders, as compared with 36.9 million guilders last year, thus reducing the decline to 2.68 million guilders. These satisfactory figures occasioned a firm tendency for State loans on the Stock Exchange, and municipal loans also registered advances.

The Minister of Finance has again announced the issue, on April 21st, of exchequer bonds to a maximum value of 130 million guilders, for the purpose of financing cash requirements. Great liquidity continued to prevail on the money market. Prolongation money was plentifully offered for 1 per cent., whilst private discount rates have dropped to ¾ per cent. The great extent to which the acceptance business in the Netherlands has declined through the abnormal circumstances is amply displayed by the following figures published by the Netherlands Bank, showing the value of acceptances in circulation (in millions of guilders):—

	1930.	1931.
First quarter.....	377.7	274.7
Second quarter.....	308.9	262.7
Third quarter.....	270.7	146.8
Fourth quarter.....	290.6	146.1
Total.....	1,247.9	830.2
In circulation at end of year.....	282.2	140.6

The gold position of the Netherlands Bank, as shown below, continues to become stronger week by week as a result of the satisfactory position on the foreign exchange market.

	14th.	March, 21st.	29th.	April, 4th.	11th.
Gold stock.....	875.6	876.1	879.4	885.7	891.8
Foreign drafts.....	84.3	84.3	84.4	84.4	84.4
Balances abroad....	34.7	36.7	42.0	35.8	34.5
Total.....	994.6	997.1	1,005.8	1,005.9	1,010.7

This gradual augmentation of the strength of the bank's position, coupled with the liquidity of the money market and the favourable level of the guilder rate of exchange, has induced the President of the Netherlands Bank, Dr. Trip, to decide upon a reduction of the discount rate from 3 per cent. to 2½ per cent., while the rate for loans on merchandise was decreased to 3 per cent.

ITALY.

Proceeds of Loan — Bank of Italy — Exchanges.

(FROM OUR CORRESPONDENT.)

TURIN, April 18.

THE outstanding event of the past fortnight was the remarkable success of the one billion lire issue of nine-year 5 per cent. Treasury Bonds, a success even more remarkable than was previously anticipated. The total sum subscribed was around 4,400 millions. This heavy over-subscription was in part due to the anxiety of capitalists anxious to secure the largest possible sum in case of allotments; but it was largely due also to a genuine offer of savings by the public. As Signor Olivetti observes in the *Stampa*, the fact that subscriptions did not proportionately reduce bank deposits, suggests that in Italy also there has been a certain amount of hoarding due to mistrust of banks and stock exchanges. The subscription, which should have remained open until April 20th, was closed at the end of the second day, and an official statement soon afterwards announced that the Treasury would keep 4 billion lire, returning the remaining 400 millions to subscribers. On April 9th a motion was voted by the Great Fascist Council to the effect that 905 million lire were to be used in repayment of the 4.75 per cent. Treasury Bonds, due on November 15th, one billion to finance public works and State purchases of industrial supplies, one billion to meet the Budget deficit, and the last billion to be credited to the Liquidation Institute, so as to enable it to reduce its debt towards the Bank of Italy. Such an allocation is highly significant, as it means that, leaving aside the first billion, which is merely substituted for the old 4.75 per cent. Bonds, the other three billions will be divided into two parts, of which two are to be put into the State Exchequer. These two billions will go far to cover the 1931-32 deficit.

The most interesting utilisation of the proceeds of the loan is, however, that whereby one billion lire is credited, through the Liquidation Institute, to the Bank of Italy. The Bank of Italy balance sheet of March 31, 1932, shows on the assets side a credit of 1,613 million lire with the Liquidation Institute, which I have previously described as a reservoir of frozen assets, which should have been dried up little by little by means of generous gifts on the part of the State and the Bank. Its origins go back to the great post-war slump of 1921-22, when about 4,000 million lire of frozen assets—which really amounted to losses—were taken over from the Banca Italiana di Sconto and the Banco di Roma. With a patient stewardship, the figure was reduced to 626 millions at the end of 1930, to go up again in the spring of 1931, reaching at last the above sum, for which the Banca Agricola Italiana, a bank connected with the many Gualino ventures, were mainly responsible. The loss should have been made good by means of a yearly gift of 200 millions from the State Exchequer and of part of certain banking taxes and of the profits of the Bank of Italy. The allocation of 1,000 million lire out of the

proceeds of the Treasury Bonds issue, will again reduce the credit of the bank to a manageable figure and enable it to reduce circulation correspondingly, or, according to the current opinion, to increase discounts and advances without resorting to inflation. In short, this Treasury Bonds issue, in so far as this one billion is concerned, would have been a device for snatching notes from timid hoarders and putting them again in circulation; a somewhat costly device, but understandable enough in these hard times. Much speculation is afoot as to who will benefit from the enlarged credit policy of the Bank of Italy. Discounts and advances reached on March 31st the total of 5,637.7 million lire, against 4,371, 3,940, 5,213, and 3,853 at the same date in 1931, 1930, 1929 and 1928 respectively. There seems to be no need in the face of these figures for any reflationist credit policy. If easier banking facilities by the Bank of Italy are deemed necessary, it will probably be not so much for the sake of stimulating industry as of easing its financial situation, which, indeed, is industry's most urgent problem at present, in Italy as elsewhere.

The solution of this problem, however, cannot be taken in hand at present, on account of the foreign exchange situation. During 1931 the gold held by the bank increased by 329.5 million lire; but the gold exchange securities diminished by 2,156.3 millions, with a net decrease of total reserves of 1,826.8 millions. During the first quarter of 1932 gold increased by 1.6 million lire, while gold exchange securities decreased by 636.5 millions. The total reserves on March 21st (5,627.9 millions gold and 1,533.7 millions gold securities) are, however, amply sufficient to guarantee a circulation reduced to 13,876 millions. The puzzle in the Italian position with regard to foreign exchanges and the balance of international payments is: since the excess of imports over exports in the first quarter of 1932 was of only 530.5 million lire, against which should be credited the invisible items of our balance of payments, certainly still favourable notwithstanding a decrease in foreigners' expenditure and emigrants' remittances, what is the cause of the decrease in the gold exchange securities held by the Bank of Italy? The recall of foreign deposits should have spent its force in 1931. Except for a rediscount of 367.8 million lire obtained by the Institute for Industrial Loans (Copsorzio sovvenzioni valori industriali) from the Bank for International Settlements at Basle, there are no current capital sums due from Italy to foreign markets. On the contrary, it is probable that Italians have large foreign balances, though these are partly frozen. Professor Mortara, in the *Prospettive Economiche* for 1932, also endeavours to solve the puzzle, quoting among other causes of the decrease of reserves in the face of a favourable balance of payments, possible purchases of future lire, exceptional credit terms to foreign buyers—Russian buyers for instance—difficulties in the cashing of foreign credits, keeping abroad by Italian exporters of their funds, and exports of capital. Reasoning from known data, and barring unforeseen developments, hopes are entertained that the tendency to a decrease in the foreign exchange securities held by the Bank of Italy may have spent its force, and that any further decrease will be due to a deliberate policy of the bank of exchanging gold securities for gold proper.

AUSTRIA.

Import Restrictions — Prices — Russian Treaty.

(FROM OUR CORRESPONDENT.)

VIENNA, May 2.

WEEK after week the Austrian National Bank sees its holdings of foreign values constantly decreasing, while there is no prospect of getting fresh supplies of foreign means of payment, either through a loan or through increasing export trade. At the end of March the National Bank's holdings of foreign exchange were still over 60 million schillings, but at the end of April they can scarcely

have exceeded 30 millions. The gold holdings of the Bank, 179 million schillings, are still intact, but the management of the Bank has relatively little say in regard to the disposal of this gold, for it is for the most part tied up in foreign countries. It is, therefore, not surprising that the Bank has used its influence to induce the Austrian Government, after long hesitation, to introduce import limitations in Austria.

About 50 items of the Austrian customs tariff will from now on be importable only with the special permission of the Government. These goods, which are not all articles of luxury, represent a sum of about 350 million schillings. As, in addition to caviar and decorative plants, the list contains such items as cattle, calves and pigs, butter and lard, cotton fabrics and motor tyres, automobiles and chemicals, it is out of the question completely to prohibit importation of these articles, and the utmost that can be saved is a sum of 200 to 250 million schillings. This represents only one-third of the yearly deficit on the Austrian balance of trade, but the purpose of limiting importation is not to constrict it to such an extent that no more foreign exchange will be necessary for the future; the new import-permit system merely represents a means of exercising pressure upon neighbouring States with the object of getting them to take more goods from Austria. The import limitations are so constructed as to favour those countries which import the larger quantities of Austrian goods.

The chief danger of the introduction of these limitations will be that the level of prices may rise. The Austrian Institute of Trade Research mentioned in its last publication that prices in Austria have corresponded fairly accurately to the depreciation of the schilling abroad, and in recent months the prices have been 27.4 per cent. above the world market (gold) level. Up to September the movement of prices in Austria was exactly parallel with that in gold standard countries. From October onwards the rise in Austria has been greater, and in April it reached the excess of 27.4 per cent. For a long time the schilling stood abroad at a discount of 31 per cent., but an enhanced demand for purposes of foreign tourist traffic and Russian purchases of schillings, have recently brought about a considerable appreciation of the schilling, so that the discount on the various foreign markets is at present fluctuating between 20 and 25 per cent. Before the issue of the importation limitations in Austria there was a certain tendency to a decline in prices in the country. Whether this tendency will be maintained after the publication of the new regulations is, unfortunately, very doubtful.

The interest which the Russians at present have in acquiring schillings is explained by the negotiations for the new Austro-Russian trade treaty. Up to the present the Russians have been selling their exports for the currencies of the various purchasing countries, and with the proceeds of the sales they have immediately bought dollars in the open market, as the payment for Russian orders has had to be in dollars. On account of the foreign exchange regulations in Central Europe, it has no longer been possible for the Soviets to use their exports to procure dollars. They have therefore been trying very hard for months to get out of their dollar obligations of the past two years and also to get permission to pay for a large portion of what they order in Central Europe in the currencies of the respective countries. After lengthy negotiations with Austria the Russians have succeeded in obtaining permission to pay a third of their old commitments, viz., 4 million dollars out of a total of 12 million dollars, in Austrian schillings, and the new orders, which the Russian desire to place in Austria, will be payable to an extent of two-thirds in Austrian schillings and only one-third in dollars. As the Russians cannot sell such a quantity of merchandise in Austria as to cover their commitments from orders to Austrian industry out of the proceeds of exports to Austria, they are naturally greatly interested in the purchase of schillings. In view of the discount on the schilling abroad, the Soviets manage to save in this way at least a quarter of the value of the goods.

HUNGARY.

Mr Tyler's Report — Finance— Trade.

(FROM OUR CORRESPONDENT.)

BUDAPEST, May 2.
