

THE DANGERS OF DELAY.

WITHIN two months of the onset of the German crisis the Bankers' Committee, which met at Basle last August, declared with the utmost emphasis that immediate steps must be taken by the Governments to bring about "such conditions as will allow financial operations to bring to Germany—and thereby to the whole world—sorely needed assistance." Three months later the German Government, in making to the Bank for International Settlements its application for the convening of the Special Advisory Committee, specifically declared that it did so in order to "pave the way for comprehensive and joint measures on the part of the Governments"; these measures, in its opinion, required to be taken "with the utmost dispatch." A month later the Advisory Committee itself, in one of its most emphatic conclusions, asserted that the adjustment of all inter-governmental war indebtedness to the existing troubled situation of the world should take place without delay if new disasters were to be avoided.

The course of past events is clear. There is room for considerable difference of opinion as to the precise part which reparations and war debts have played in creating or contributing to the present deplorable economic condition of the world; but that they have been a factor of major importance is almost universally admitted. Both the Committees to which we have referred called attention to the disharmony in a system which requires payments of large debts between one country and another, but at the same time puts obstacles in the way of the movement of goods by which such debts must be paid. Once the flow of capital ceases or the direction of the stream is reversed, as has happened in the last two years, the course of trade under such conditions of disability must adjust itself to vast consequential changes in the balance of international payments. As a result, gold is concentrated in the hands of the chief net creditors; prices come tumbling down, and the world is landed in a crisis of unexampled severity.

In this crisis the interests involved far exceed in magnitude the actual amounts of the political debts. As compared with a total sum of £80 millions paid by Germany in a year, the export trade of seven of the chief countries of the world—as shown in an article on a later page—has shrunk since 1930 by £800 millions, or ten times the amount of the Young Plan annuity. Or, look at the matter from the budgetary point of view. In September of last year Viscount (then Mr) Snowden had the unexampled task in time of peace of filling a gap in the British Budget of £170 millions, while the anticipated deficit in the current Budget of the United States amounts to \$2,100 millions. Finally, consider the commercial debts of nations one to another which have been imperilled by the slump in prices and the trade depression. According to the last report of the Economic Section of the League of Nations, the interest and amortisation receipts of the five chief creditor nations of the world in 1929 amounted to about £500 millions. These, as well as a vastly greater volume of internal interest payments have been jeopardised by the crisis.

Now it is true that, whatever might have been the case many months ago, to-day even a final arrangement regarding reparation and war debt payments which would remove all fear of these obligations becoming a source of danger would not at once re-create confidence. The world's economic machinery has broken down so badly that it needs to be repaired in many other vital spots. But the point of immediate importance is that a solution of the debt question must first be found, since headway cannot be made in other directions until that is done. And for this reason it is bitterly disappointing that the statesmen have been unable to see any possibility of making headway by meeting at Lausanne, but, at the time of writing, appear to have allowed the Conference, on which so many hopes were based, to be postponed without any clear indication even of the future programme.

It may be said that there are better prospects of reaching agreement after the coming elections have been held in Prussia and in France than before or during those contests. But in view of the heavy price that is being paid for every day of delay—a price to be reckoned not merely in money but in the human terms of unemployment and economic inactivity—it is vital that political difficulties in this or that country should not be made an excuse for procrastination or for putting off the duty of facing unpleasant truths. The British Government took the initiative in proposing the assembly of the Lausanne Conference: it can agree to its postponement only on condition that arrangements are made in other ways to regularise the situation that will occur in July, and that there will be no break in other efforts than those of open conference to prepare the ground. It is essential that by June a radical solution should be found, and any conference that meets after the French election should be the end and not the beginning of discussions aimed at a final settlement.

That all the world fully appreciates the difficulties with which Europe is faced is illustrated by the notable article of Mr Walter Lippman, reproduced in Thursday's *Times*, portraying the dilemma of the European nations called upon to scale down their receipts from Germany without any assurance as to the attitude that will be taken by their American creditors. It is, however, significant that he sees no advantage in mere delay, but emphasises that short of a disaster which would perforce make the payment of debts to America impossible, there is only one general course open to Europe which affords substantial hope, and that is "to face the problem in Europe on the principle of European solidarity." Mr Lippman urges that the European Powers should proceed immediately "to apply the principles of the two Basle Reports, to revise reparations, to reduce tariffs, to unite for the strengthening of the machinery of peace, to reduce armaments, and to prepare for common action to stabilise their currencies." In the months immediately ahead they should, in fact, behave as if by some miracle the Congress of the United States were enlightened and sympathetic. Then let them submit the results to the conscience of the American people. We agree: there is no other sound line of policy, and no excuse for not pursuing it without delay.

Meanwhile, we have thought that it would be a convenience to our readers to bring up to date the record of reparations chronicled in earlier Supplements to the *Economist* published in 1924 (the Dawes Report), in 1925 (the Dawes Plan in Operation), and in 1929 (The Hague Conference). In the Supplement published this week we have endeavoured to present as briefly and lucidly as possible the essential factors in the history of the past thirteen years' endeavours to collect from Germany some part of the cost of the war. In addition, we set forth the liabilities which each of the European Allied and Associated Powers incurred on war account to the United States, and the arrangements variously entered into for the repayment both of these debts and of those similarly due to Great Britain. Those who are so minded can study at leisure in our Supplement's pages this ledger of victory and defeat. We venture to believe that few readers who trace carefully this "tragic bookkeeping of the war" will fail to reach the conclusion that in the aftermath of Allied "victory" all alike have been vanquished.

For while the statesmen of the creditor nations have kept in being this vast fabric of inter-governmental obligations—growing yearly more difficult to discharge with every fall in prices, every shrinkage of trade—their peoples have lost much more than money; they have forfeited the chance of an appeasement of the national phobias and hatreds which the war let loose, sixteen years ago, and which are still poisoning the wells of Europe's political and social life.

BRITAIN'S FISCAL RESPONSIBILITY.

FISCAL history will be written in 1932; and there is little doubt that Britain, if she frames her policy wisely, is better able than any other country to ensure that the record will mark a new revival not merely of our own trade but of that of the world. It has been confidently assumed by many, to whom the wish is father to the thought, that British fiscal policy has already entered irrevocably upon the slippery slope of Protection. To this premature belief a timely corrective was recently given by Sir John Simon, who, in a statement to the representatives of the foreign Press, emphasised the fact that measures hitherto taken were of a purely emergency character and that the permanent fiscal policy of Britain had not yet been decided. It is, however, clear that important decisions are under consideration, and the circumstances of the political situation render it inevitable that some statement should be made by the Prime Minister within a short time after the reassembly of the House of Commons on February 2nd.

Meanwhile, Mr Runciman and Sir John Gilmour have paused for the moment in their game of issuing schedules of selected commodities favoured with prohibitive import duties. Their activities were perhaps inevitable, in view of the strong protectionist pressure exercised upon the Cabinet both inside and outside Parliament; but unless they are to be regarded as merely temporary essays they would bear a sinister and threatening character. For not only are they based upon an entirely erroneous conception of the nature of the balance of payments problem, but they are also calculated to aggravate in no small degree the general strangulation of international trade which is the gravest symptom in the world to-day. We trust, therefore, that the Cabinet Committee which has been studying the question of fiscal policy will avoid the fatal mistake of adopting these emergency measures as the basis of a permanent policy. The considerations which that Committee have had before them are of a far broader nature than any which can apply to *ad hoc* measures to meet a passing emergency. The profound meaning of the 1931 figures of Britain's overseas trade which we reviewed in our last issue is not that imports require to be shut out, but that the heavy and continuous fall of exports requires to be checked and the tendency reversed. It is as true to-day as it was in the days of Joseph Chamberlain that a high level of export trade is indispensable to this country if the standard of living is to be maintained at anything approaching the level to which our great industrial population has become accustomed.

How are we to export more to a world in which high tariff walls and exchange restrictions are progressively damming up the flow of products? Lord Beaverbrook's answer is that we should form an Empire economic union, snap our fingers at the world outside, transfer our trade from foreigners to our own kith and kin, make the undeveloped lands of distant Empire areas flourish like a green bay tree, and all live happily ever afterwards. We yield to none in our desire to see trade within the Empire increased, and hope sincerely that the Ottawa Conference will succeed in easing the passage of goods between the various component parts of the Commonwealth. But realities have to be faced, and it does not help us to face realities to be constantly regaled with fairy stories as to the possibility of a sudden and vast diversion of trade built up upon centuries of experience, or with unfounded assumptions as to the willingness of the self-governing Dominions to scrap at one blow their own deliberately devised policies of Protection, which, as often as not, are aimed at sheltering their own secondary industries from the competition of goods made in the mother country.

Much though we may hope that Ottawa will be fruitful, we cannot afford to sit idle and trust either that the Conference will solve our trade difficulties or that there is no other direction in which the influence of sane British policy may not be exerted with sound practical effect. Although on the surface it may appear that all the efforts of Geneva to stem the tide of tariff madness in Europe have failed, there can be no doubt that every

Government is viewing with increasing alarm the steady intensification of the difficulty of exporting their commodities, both to meet their obligations and to procure from other countries necessities for the life of their people. Every Government, therefore, is constrained by the tragic march of economic events to study very carefully the obstacles which stand in the way of lower tariffs and freer trade and the way in which these obstacles may be surmounted. In this connection deep interest attaches to the conference recently initiated at Copenhagen between the representatives of the Scandinavian countries, who met to survey any possible ground for a low-tariff Customs Union. They, like other countries, find formidable difficulties in the way. The road to lower tariffs is obstructed not merely, as is commonly supposed, by such influences as nationalistic tempers, vested interests or Exchequer revenue necessities, but by many other factors as well. Among these other factors, one that merits attention is the operation of the "most-favoured-nation" clause. As hitherto interpreted, the existence of this clause in commercial treaties has had the effect of obliging any country, which wishes to reduce the imposts on goods coming from its neighbour, to give the full benefit of such reduction also to any other country with whom it enjoys commercial treaties. Hitherto, also, British policy has strongly supported this unrestricted interpretation of the clause. As a Free Trade country, Great Britain has not attempted to criticise or to dictate the nature of other countries' tariffs; but has been content to claim that, whatever tariffs they may adopt, they must not discriminate against her. And she has succeeded. British goods enter markets all over the world on as favourable terms as those of any of our competitors, and tariff discrimination has largely disappeared from the world of international trade.

But it is little comfort to be treated like everybody else if all trade is unduly restricted. It has become increasingly recognised in recent years that the old strict interpretation of the "most-favoured-nation" clause has tended to prevent the lowering of trade barriers; and the opinion is gaining ground that re-interpretation of the clause has become a necessity, not only because of its practical effect in obstructing tariff reversion, but also because it has become unjust in its application. It does not conform to the generally accepted idea of international justice that country "A" cannot make concessions to country "B," which treats its commerce on liberal lines, without making the same concession to country "C," which does its best to shut out imports by high tariff walls. Is it fair or reasonable that a European country should be unable to make concessions, let us say to low-tariff Holland, without being obliged to make the same concession to high-tariff countries like the United States?

It appears to be not impossible that along the lines of the re-interpretation of this clause something might be done at an early date to pave the way for the negotiation of low tariff agreements open to those States who are prepared to participate. If that is so, the ground should be explored without delay. Britain and Europe cannot afford to throw away chances of betterment by waiting idly for developments at Ottawa. Nor, indeed, need any progress made towards saner fiscal policy in Europe be in any way detrimental to the chances of progress at the Imperial Economic Conference. Quite the reverse. Progress anywhere may help towards progress all along the line. At the same time, with new possibilities apparently opening out, it would clearly be an act of disastrous folly for our Government to tie its hands at this juncture by the declaration of a permanent policy of high or general tariffs. Many convinced protectionists will, we think, realise that the present moment is exceptionally unpropitious for jumping wildly off the political spring-board into the raging waters of tariff warfare.

We hope, therefore, that the Cabinet Committee and the Cabinet itself are keeping two main objectives in view. The first is to lend all possible support to any movement which, by removing existing obstacles, will increase the general volume of international trade. The second is to frame our policy so that the competitive capacity of our own exporters is such as to enable them to obtain an adequate share of a reviving stream of international

commerce. If our statesmen are contemplating any permanent form of tariff system, they are confronted also, as have been the tariff makers of all countries, with a number of narrower yet vitally important problems. Many of these have recently been frankly examined in a series of articles in the *Times*. How are we to secure that a tariff is not made a shelter for industrial inefficiency? How are we to check the intrusion of log-rolling and corruption into our public life? How is it to be arranged that no price rise takes place sufficient to cause a serious addition to the costs of production and consequently a serious impediment to our export trade? Unfortunately, neither the *Times* correspondent nor anyone else can answer these questions satisfactorily. No one has yet explained how tariffs, if they are to be effective in reserving the home market for the home producer, can fail to cause a rise in prices. Again, on the point of efficiency, the proposal put forward by the *Times* writer that no industry should be granted a tariff unless it can prove its own efficiency is not practical; for precisely the same condition was inserted in the famous White Paper which governed the applications for safeguarding duties—with what result we all know. Any measure which hid the sins of ineffective production, or lessened the urgency of practical rationalisation and reconstruction, would do a grave disservice to the industrial life of this country.

Amid this welter of difficulties, dangers, false doctrines and possible new opportunities, it behoves our statesmen, whether protectionists or free traders, to maintain a clear perspective, realising, on the one hand our vital dependence upon exports, and on the other hand the strength of our position in helping to guide international policies into saner channels, so long as we keep our hands reasonably free.

POLAND'S WESTERN FRONTIER.

THE financial stability and political security which the world is desperately seeking to recover to-day are elusive will-o'-the-wisps. They are not only objective material facts but also subjective states of mind; and the spirit bloweth where it listeth. The faith on which the salvage of our civilisation depends cannot be conjured back merely by outward acts—shipments of gold or signatures of by-treaties or readjustments of boundary lines. A psycho-logical malady will only yield to psychological treatment; and the first step towards treating our present failure of nerve is not simply to translate the problem into material terms in which its essence is lost sight of, but rather to proceed, without leaving the psychological plane, from the general sense of disquiet and apprehension to the particular "complexes" round which it clusters. In this political psycho-analysis we cannot go very far without coming up against the Polish-German complex. It is coming up against this particular political problem will find safe to say that this particular political problem will find its place, willy-nilly, on the agenda of the World Disarmament Conference which is to meet at Geneva the week after next. It may, therefore, be opportune to take a preliminary glance at a problem which is one of the many causes of the world's present malaise.

A fair measure of the viciousness of the Polish-German feud is given by the mere volume of the controversial discussion which it evokes. On November 14th last, the *Economist* printed a letter on the subject, headed "An Eastern Locarno," from a British sympathiser with the German point of view, together with a brief comment of our own. The week after, we printed a reply from the Polish Press Bureau in London; and since then the flow of correspondence has not ceased. There now lie before us a pamphlet—entitled "Moral Disarmament or Chaos"—by the writer of the original letter, Mr R. G. Warmaley; a letter from the Russian publicist, Mr V. Poliakov-Augur; a letter from Professor W. Caldwell, of McGill University, Montreal; and an interesting communication from Professor Wladislaw Grabski, the President of the Polish Economic and Statistical Society of Warsaw, who tells us that the Note and letter published in the *Economist* last November have been the subject

The Premier Consideration —Your Son's Education

Afford him the best through the special plans of the
Legal & General Assurance Society Ltd.
"EDUCATION"

LEGAL & GENERAL ASSURANCE SOCIETY LTD.
Head Office: 10 Fleet Street, London, E.C.4. Estd. 1836

of a discussion at a meeting of the Society—a debate which the President sums up in his letter for our information.

This correspondence is illuminating; and we much regret that lack of space precludes us from printing it. But we cannot help ourselves; for most of the communications are long, and this for an identical reason. Whichever of the two opposing causes they happen to be advocating, they all tend to employ the same method. They seek to overwhelm their adversaries by sheer weight of metal—discharging against the enemy an accumulated mass of selected material facts. The statements of fact which are thus brought into action on either side are not for the most part incompatible with one another. An impartial critic would probably find that most of the facts marshalled in this correspondence are substantially true, and would decide that the upshot of the correspondence is inconclusive. The Polonophiles can demolish the German case, and the Germanophiles the Polish case to their respective satisfaction; but the world's case still has to be met by both parties; and the world's case is that this local dispute in Eastern Europe is one of the major obstacles to the world's recovery.

The Poles can show that, in all the *ci-devant* German territories that have been assigned to Poland under the Peace Treaty of Versailles, the population contains a respectable Polish majority. Indeed, as the Warsaw Statistical Society triumphantly points out to us, the Polish majority amounts in "the Corridor," of all places, to no less than 80.4 per cent., whereas the figure is only 69 per cent. for Poland as a whole. On the other side, the Germans can show that the pre-war "Ostmark" of the Reich was a social and economic unity which the peace settlement has crudely broken up. The present political map may do ethnographical justice, but it is none the less an economic enormity.

What is to be done? Something must be done unless we mean to let this Polish-German obstacle lie blocking the path to the world's recovery. But the Polish and the German prescriptions seem equally unpromising. *Noli me tangere*, say the Poles. "If you want to remove this source of insecurity, the way to do it is to erase the word 'Revision' from the dictionary. Once convince the Germans that the Versailles Peace settlement is going to be maintained, just as it is, *ad infinitum*, and the Germans will cease from troubling. They will tacitly and sullenly but decidedly resign themselves to the inevitable." To this the Germans reply that, on the contrary, if Europe continues to be organised as a prison-house for Germany, they will take a leaf out of Samson's book and pull the whole house down about their gaolers' ears. For our part, we take this threat seriously enough to have no desire at all to call the Germans' bluff; and we notice that the Polish Economic and Statistical Society, for their part, confess to being haunted by "a terrible ghost, a factor which would aggravate the present evil from which mankind is suffering instead of diminishing it." They give this ghost a name: it is an alliance between Germany and Russia. And therewith, in our opinion, they condemn their own prescription as incapable of effecting a cure.

Then are we to adopt the German prescription? The Germans ask us to heal a social and economic wound by restoring the pre-war frontiers, or at any rate removing the worst economic enormities of the present political map. They ask us to undo the partition of the industrial

basin of Upper Silesia, to undo the excision of Danzig from the body-politic of Germany, to wipe out the Polish corridor which now isolates East Prussia from the rest of the Reich. Very well; but the Poles assure us that they would fight to the death in order to keep the political map as it now is; and, what is more, the French and the Czechs and the Jugoslavs and the Roumanians make it clear that they would regard any attack on "the regime of the peace treaties," in any corner of Europe, as a *casus belli* for themselves. We are no more disposed to call their bluff than to call Germany's; and even if, by some miracle, the German revisionists could get their way without another general European conflagration, would the resulting situation be much better from the world's point of view? We should have removed the post-war German economic irredeat by restoring the pre-war Polish irredenta which poisoned the life of Europe throughout the nineteenth century. We should be putting back under German rule a solid block of territory inhabited by a Polish peasantry; and this would not help the German minority that is dispersed through the interior of Poland; for this German minority in Poland is urban, and its present plight—which is admittedly cruel—could not be mended by taking German lawyers and doctors and commercial travellers out of the cities of Thorn and Posen and planting them in West Prussian villages which had been reincorporated in Germany.

No; the German prescription is no good. We cannot put the clock back. But the Polish prescription is no good either; for, equally, we cannot for ever keep the hands marking time at 11 a.m., 1918—the hour at which a vanquished Germany surrendered to a victorious Entente. Victory is essentially a wasting asset. *Tempora mutantur*, and the only hope of a solution lies in moving on. We suggest, then, with all deference, that neither the Polish nor the German way of looking at the East-European peace settlement is practical politics, and that a third and more excellent way lies open for Germany and Poland and the world to follow. The East-European settlement is to be regarded neither as a permanently tenable position nor as a false step to be retraced but rather as a transitional step towards a wholly new organisation of Europe. Already there have been heard whispers of a Franco-German economic partnership—the only true cure for the ancient Franco-German political quarrel. We suggest that the partnership, when it comes, will have to be tripartite: Poland must be included. If these three countries went into closer economic partnership, there would be the germ of a nucleus round which the rest of the Continent could range itself. In that event, the fantastic outlines of military frontiers and militant tariff walls would—not vanish by magic, but gradually grow faint, fading, like the Cheshire cat in *Alice in Wonderland*. That is the prescription for the Polish-German malady as we see it.

BRITISH COAL EXPORTS IN 1931.

The fortunes of the coal industry are a sensitive barometer of the state of industry in general, and British coal exports are affected in an especially high degree by the fluctuations in world trade. They directly reflect the situation of the heavy industries abroad and the activity of the shipping industry, which, together, constitute a large part of the export demand for British coal, and they reflect also the degree of freedom or impediment obtaining in international commerce, by which this demand is met. The year which has just closed, therefore, furnished ample reason, even if account be taken only of causes which lay outside the industry itself, for the slump in coal exports, whose extent is shown in the following table:—

COAL EXPORTS.					
Monthly Average.	Quantity Thou. tons.	Av. Value per ton. s. d.	Monthly Average.	Quantity Thou. tons.	Av. Value per ton. s. d.
1913	6,116	13 11	1929	5,023	16 2
1925	4,235	19 10	1930	4,573	16 7
1927	4,262	17 9	1931	3,562	16 3
1928	4,171	15 7			

Total exports were 41½ per cent. below the pre-war level and 22 per cent. below even the depression level of 1930. The quantity shipped abroad was less than in any year, other than 1926, since 1921. A fuller analysis, based on figures for which we are indebted to the *Colliery Guardian* is given below:—

EXPORTS OF COAL, COKE AND MANUFACTURED FUEL.							
Description.	1929.		1930.		1931.		
	Quantity.	Average Value per ton.	Quantity.	Average Value per ton.	Quantity.	Average Value per ton.	
Coal:—							
Anthracite	4,217,326	24 0-7	4,105,578	26 7-4	3,406,454	27 7-9	
Steam	40,805,453	15 7-9	36,501,048	15 11-1	28,217,809	15 3-8	
Gas	7,316,673	14 10-5	6,534,906	15 4-4	5,222,319	14 7-6	
Household	1,855,364	19 10-1	1,931,683	19 8-3	1,799,391	20 1-4	
Other sorts	6,071,802	14 0-5	5,706,258	14 6-2	4,103,767	13 3-1	
Total and average	60,266,618	16 1-6	54,879,479	16 7-7	42,749,740	16 2-5	
Coke:—							
Gas	1,243,377	20 0-9	916,973	20 10-7	977,340	19 7-7	
Other sorts	1,660,460	20 1-8	1,547,245	20 2-6	1,421,927	17 9-6	
Manufactured fuel	1,230,566	19 6-9	1,006,431	20 4-8	760,179	19 5-6	
Total fuel exported and average	64,401,015	16 3-1	58,350,128	16 10-4	45,909,186	16 4-7	
Coal shipped in bunkers	16,419,627	...	15,616,691	...	14,609,545	...	

The decline in exports of steam coal is particularly marked, but with the exception of coke, every category shows a substantial drop. The reduction of one million tons in exports of bunker coal is, perhaps, less than might have been expected, but it constitutes a sufficiently melancholy comment on the state of the shipping industry.

Many of the causes of this decline are only too painfully familiar. Coal consumption throughout the world has been severely contracted by the deepening industrial depression, and most of the principal coal-producing countries have shared our experience. Moreover, the panic-stricken attempt by one country after another to dispense as far as possible with imported goods has built up a series of barriers which are increasingly difficult to surmount, and in some instances these barriers differentiate in effect against British coal. The same spirit which has led importing countries to starve themselves of foreign materials for fear of finding themselves unable to meet their commitments abroad, has also impelled exporting countries to adopt all manner of measures to expand their sales abroad. Poland, Holland and Belgium have contrived to maintain their output, and Germany, though her production is many million tons lower than in 1930, has more than held her own against British coal in certain export markets. The geographical distribution of British exports is as under:—

AVERAGE MONTHLY EXPORTS.									
Destination.	Tonnage (000's omitted).				Value per ton f.o.b.				
	1925.	1929.	1930.	1931.	1925.	1929.	1930.	1931.	
Scandinavia (a)	605	498	407	276	s. d.	s. d.	s. d.	s. d.	
Germany	347	460	411	314	17 2	14 1	15 0	14 2	
Holland	127	260	238	189	15 6	13 9	13 10	13 4	
Belgium	207	345	287	165	16 2	14 2	14 7	13 8	
France	853	1,087	1,081	879	19 9	13 7	13 10	12 11	
Italy	568	591	597	492	20 4	15 11	16 7	16 4	
S. America (b) ..	351	420	350	252	23 4	16 11	17 3	16 9	
Spain	146	149	143	109	21 10	18 1	18 5	18 1	
Egypt	164	189	151	126	21 10	16 6	17 0	16 5	

(a) Norway, Sweden, Denmark. (b) Brazil, Chile, Uruguay, Argentina.

Our losses in all the principal European markets have thus been substantial. In South America the loss was relatively greatest in our exports to Brazil, which fell from 1,204,000 tons in 1930 to 663,000 tons in 1931. Exports to the Argentine were down from 2,687,000 to 2,091,000 tons, and the Chilean market, which is very small, alone showed improvement. Hopes of better trade in the Canadian market have been disappointed.

The working of the vast machine which is at present so desperately disordered is so far beyond the power of any one country, let alone a single industry within a country, to restore, that the habit is dangerously growing of regarding the effects of the crisis on any one industry as an "act of God" due to outside causes beyond that industry's control. A glance at the columns in our first table showing average values per ton suggests, however, a reflection. The

price of coal exported from this country in 1931 was, on the average, only 4d. lower than in 1930, and almost 1d. higher than in 1929. Thus, for all the decline in the volume of coal exported, coal formed, in value, 8.9 per cent. of our exports in 1931, against about 8 per cent. in 1930, and only 6.6 per cent. in 1929. In fact, though the world market was contracting and our competitors were taking desperate steps to increase their shares of it, we were either unable or unwilling to attempt to meet this intensification of competition by a substantial reduction in prices. It is possible that the working of the quota system has in some cases been partly responsible for this rigidity, but the fundamental reason lies in our comparatively high level of costs, an obstinate problem which grows more acute with every passing year.

There is, however, some excuse for the view that in present conditions a reduction of prices only forms part of a vicious circle of international cut-throat competition. Germany has already effected substantial price reductions by means of a drastic cut in wages, and might possibly react to similar action on the part of Great Britain by a repetition of this course. A gleam of hope is afforded in this connection by the League Economic Committee on coal, in their report this week to the coming meeting of the Council, in which it is stated that the prospects of international agreement, which in 1929 was considered to be premature, are now very much brighter. The recent meeting of coal experts was unanimous in considering such an agreement to be desirable, and did not believe the obstacles presented by existing political measures to be insuperable. Recognising, however, that the negotiations involved will necessarily be of a very complicated character, the Economic Committee proposes that the committee of experts as at present constituted should be retained in being for this purpose. In view of the peculiar position occupied in industry and international trade by coal, the case for an agreement which would check the unhealthy forms of competition at present obtaining is exceptionally strong. The trade is already the subject of so much political interference that the arguments against restriction lose in this case much of their force, and there can be little doubt that a system of international non-political regulation which gave producers in each country some degree of certainty as to the output they could safely undertake might prove to give an impetus to internal reorganisation in this country. Unfortunately the British coal-owners have so far adopted the attitude that any international agreement made during the present abnormally depressed state of the British mining industry would necessarily be unduly unfavourable to them. We suggest, however, that at a time when the British share in world exports is falling, and seems likely to continue to fall, the British coal-owners might have much to gain by grasping the substance of the quota which an international association would be willing to allocate to them at present, rather than waiting for the shadow of a larger share which they have no certainty of ever regaining.

BULGARIA AND THE CRISIS.

The Financial Committee of the League of Nations have this week been considering the submissions of the Bulgarian Government with reference to the financial difficulties of that country. In the following despatch our Sofia correspondent describes the effects on Bulgaria of the impact of the world crisis.

ALTHOUGH the position of the Bulgarian Treasury has been, in recent years, a source of constant preoccupation to the Government and to public opinion, the full gravity of the problem and all its implications have become particularly obvious and disquieting since the effects of the world financial crisis began to extend in their full weight to Bulgaria. For it would hardly be an overstatement to say that, after much debating and protracted discussions, the grave issue of balancing expenditure with receipts has made no real headway since the end of the war. There has been, in the whole post-war period, almost no trace of effective attempts at systematically reducing ex-

penses to a level in keeping with the actual resources of the Budget, or at adjusting the fiscal policy of the country to the real needs of the State. Occasional legislation in this direction has consisted mainly of isolated and rather haphazard measures.

The proceeds of the Refugee Loan of 1926 and of the Stabilisation Loan of 1928 were rapidly spent, and this temporary relief has no longer been available to supplement the receipts of recent Budgets. The accounts for 1930-31 closed with a deficit of leva 1,284 millions, and according to official data, the period April 1-November 30, 1931, shows a further deficiency of leva 340 millions. In these eight months receipts fell by leva 180.6 millions, in comparison with the corresponding actual figures of the previous year, while expenditure decreased by only 90.9 millions. The total deficit accumulated at the end of the calendar year amounts, according to preliminary estimates, to some 1,730 millions. The Budget estimates for 1931-32, as voted by Parliament, provided for receipts and expenditure of leva 6,400 millions, but this revenue calculation was described at the time in the *Economist* as optimistic.

The shortage of resources of the Treasury has become severe in recent months, and salaries to State employees have been only partially paid for the month of November, 1931. The payment of pensions is creating great difficulties, and the funds for other current needs of the Treasury are almost completely exhausted. Although coupons on bonds and other fixed State indebtedness abroad have been punctually met until now, it becomes more and more clear that, unless urgent measures are taken on an extensive scale, the situation will unavoidably end in serious trouble.

The Government have prepared a financial plan for dealing with the emergency, including drastic retrenchment, suppression of whole services, cutting down of pensions and salaries, suspension of certain public works, and the imposition of new taxes. These proposals are on the agenda for the next meeting of Parliament after the New Year recess. What the eventual results will be remains an open question; a vote in favour of serious fiscal sacrifices to be spread over a large part of the population will hardly be a practical possibility, given the composition of the present majority, in which agricultural and so-called Left elements undoubtedly hold a dominating place.

The outlook is hardly more encouraging with respect to the balance of foreign payments. According to the authoritative estimates of Messrs. Dr. A. Tchakaloff and Dr. St. Zagoroff, the balance of payments resulted in a debit of 415 millions in 1930. Preliminary estimates, based on the data now available, indicate a debit balance of foreign payments for 1932 of between 500 and 550 million leva, in spite of still relatively good results of foreign trade (surplus, say, leva 850 millions). Payments abroad for State's account totalled, in 1930, about leva 1,177 millions, and the official report of the Public Debt Administration shows the foreign indebtedness of the State, on November 30th last, at 20,964 millions, including 4,607 millions due on reparations account. The interest and redemption service of a large portion of this debt (the pre-war loans) will gradually increase with the augmentation of the percentage of gold valorisation of the debt, according to agreement with foreign bondholders.

The situation is, naturally enough, having serious effects on the National Bank's reserves of foreign exchange which, on December 23rd last, stood at:—

	Leva
Gold currencies	103,175,162
Other currencies	121,114,160

The Bank's holding in gold stood at leva 1,511,315,852, which, together with the gold exchange, makes a ratio of 37.01 per cent. to its notes (Leva 2,894,073,845) and other sight liabilities.

Under existing circumstances, there appears to be no escape from the alternatives of either gradually parting with the gold holding or resorting to a still stricter apportioning of foreign exchange for payments abroad. According to trustworthy information, the first solution is out

(Continued on page 165.)

ECONOMIC DATA OF BULGARIA.

WE have assembled below a selection of available data designed to illustrate the economic situation of Bulgaria. Between the end of the war and 1928, Bulgaria had a continuous series of Budget deficits, but fiscal stability was momentarily obtained thanks to the proceeds of the 1928 Stabilisation Loan. These resources, however, as our correspondent observes in his dispatch on the previous page, have been rapidly exhausted and the deficit on Budget account at November 30, 1931, amounted to 1,624 million leva. From the Budget estimates for 1931-32, which we print below, it will be seen that the charge for the public debt amounts to approximately one-third of the total expenditure.

With regard to Bulgaria's balance of payments, Mr

Pasvolsky, in "Bulgaria's Economic Position" (The Brookings Institution, 1930), publishes an estimate of Dr. Zagoroff that in the five years 1924-28 there was a total debit balance of 7,800 million leva which was made good partly out of the proceeds of the Refugee and Stabilisation Loans (see below), partly by foreign long-term investment, estimated to amount to some 900 million leva, and partly by foreign short-term credits. Apart from the balance of merchandise trade, Bulgaria appears to have a trifling net income from emigrant remittances against which her present annual liability for interest and amortisation of foreign debts (including an annual charge of 270 million leva on reparations account) is probably in the region of 2,000 million leva.

STATISTICAL TABLES.

BULGARIA'S PUBLIC DEBT.

At November 30, 1931.

Milliard leva.

External Debt:	
Funded debt	15.8*
Reparations debt.....	4.6†
Unfunded debt	0.6
Total external debt	21.0
Internal Debt:	
Funded debt	2.5
Unfunded debt:

(Source: National Bank of Bulgaria, Monthly Bulletin.)

of the question as things stand at present. The Government appear to be determined to continue meeting their foreign obligations so long as there is foreign exchange available. If some sort of accommodation with Bulgaria's foreign creditors proves impossible, as will very likely be the case, the authorities will have to choose between private commercial payments and payments of State obligations abroad. It is hardly possible to continue both for more than a couple of months.

It would appear that the Government intend to make a full statement of the financial and exchange position at Geneva and to ask the Financial Committee of the League for their advice. For all practical purposes the course adopted will most probably be that debts in foreign currency will be paid in leva to be deposited in special accounts out of which a gradual apportioning of foreign exchange and its transfer abroad will take place, when and in so far as foreign means of payment accumulate and become available. Whether precedence will be given to State or to private commercial payments cannot be safely foretold at this stage, as the whole issue will be decided upon at Geneva. At any rate, there is every reason to believe that the gold reserve will not be touched for payments abroad.

While a gradual adjustment of the Budget to the effective balancing of revenue and expenditure could be reached at the price of a determined political effort, in which the present Cabinet would take the risk of losing much of its popularity, the weakness of the foreign exchange position is of a lasting and more disquieting nature. There is no valid chance of overcoming the difficulty on the basis of the country's own unaided resources and efforts.

WORLD TRADE IN 1931.

THE preliminary estimates of the foreign trade of the principal countries during the past year have now been published. The figures show that the economic storm which was raging over the world in 1930 had grown into a devastating hurricane by 1931:—

VALUATION OF MERCHANDISE TRADE.

(In millions.)

Period.	Net Imports.		Domestic Exports.		Balance.

* Includes transit trade.

With the exception of Italian exports, the contraction in the value of the foreign trade of the principal countries in the past year has been much greater than during the first year of the economic depression. The extent of the decline in world trade is shown in the following table, in which we have expressed the imports and exports during 1930 and 1931 as a percentage of 1929:—

FOREIGN TRADE INDICES.

(1929 = 100.)

Country.	1930.		1931.	
	Net Imports.	Domestic Exports.	Net Imports.	Domestic Exports.
France.....	90	85	72	61
Germany.....	77	90	50	73
Italy.....	80	79	54	66
Switzerland.....	94	84	82	64
United Kingdom.....	85	78	72	53
United States*.....	70	73	48	46
Canada*.....	78	75	48	50

* Includes Transit Trade.

The above seven countries combined accounted in 1930 for over 50 per cent. of the total external trade of the world. It appears, therefore, that the value of international trade has fallen by at least 40 per cent. since 1929. This shrinkage is, of course, largely due to the fall in prices. On the other hand, though precise figures are not yet available, there can be no doubt also that there has been a great shrinkage in the volume of international trade.

It will be seen that the decline has been most pronounced in the two North American countries, whose trade in 1931 was less than one-half of the 1929 total. The contraction in European countries has on the whole been less severe. Germany is an exceptional case. Owing to her inability to buy abroad, her imports have fallen by 50 per cent., while, as the result of the steps she has taken to maintain her sales and of pressure to withdraw money, her exports show the least decline of all countries. Her "forced" export surplus is now, however, progressively diminishing. The explanation of the greater resilience of the trade of the Continental countries is to be found partly in its previous distribution:—

DIRECTION OF EXPORTS IN 1929.

Exports to:	Exports from:					
	France.	Germany.	Italy.	U.K.	U.S.A.	Canada.
Europe.....	% (a) 66.5	% 73.7	% (b) 59.8	% 34.7	% 41.7	% 36.4
North America.....	7.0	8.0	10.9	11.3	18.3	47.6
Latin America.....	5.5	7.5	11.8	11.0	18.6	5.6
Africa.....	14.5	2.3	7.4	11.2	2.5	1.6
Asia.....	5.9	7.7	9.4	21.4	12.3	5.6
Oceania.....	0.6	0.8	0.7	10.4	3.6	3.2
All countries	100	100	100	100	100	100

(a) 1927. (b) 1928.

It will be seen that by far the biggest outlet for the exports of France, Germany and Italy is Europe itself. In the case of Great Britain and North America, a much larger proportion of exports are destined normally for the raw-material producing countries, which have been relatively more impoverished through the catastrophic fall in the prices of primary products.

A significant feature disclosed by Table I. is the increase in the unfavourable balance of trade of France, the United Kingdom and Switzerland, and the decline in the surplus of the United States. On the other hand, Italy and Canada have reduced their excess of imports over exports to a considerable extent. This, however, has been at the expense of an enormous reduction in imports.

The most disquieting fact revealed is that during recent months the downward trend in foreign trade has been gravely accelerated, largely because of the increase in the obstacles placed against the movement of goods by tariffs, import restrictions and foreign exchange control. The situation has been admirably summed up in the report of the Economic Committee of the League of Nations to the Council of the League. "From a general standpoint," the Committee says, "we are forced to the conclusion that the general result of national measures to cope with the effect of the crisis is almost inevitably to prolong and seriously to aggravate the latter." The question is how acute the crisis must become before political conditions favourable to international co-operative efforts at solution will materialise.

Notes of the Week.

Japan's Answer to America.—The Manchurian affair continues to move along its—not “destined” but permitted—course. One point to the good is the definite constitution of the Commission of Inquiry in pursuance of the League Council's resolution of December 10th. The names were announced on January 14th. The chairman is Lord Lytton (Great Britain); and his colleagues are General Claudel (France), Major-General McCoy (U.S.A.), Dr. Schnee (Germany), and Count Aldrovandi-Marescotti (Italy). Thus all the Great Powers other than Japan are represented (except the U.S.S.R.); and the members of the Commission, as individuals, are persons of standing and experience. Unfortunately, they can hardly be expected to arrive on the scene of their labours till late in February, and after that many more weeks must pass before even a preliminary report can reach the Council. We discuss below the question whether the Manchurian affair will come again before the Council in the meantime. Last Sunday the text of the Japanese answer to the American Note was made public in Washington. The ironies in the drafting of the document may be passed over. On points of substance, the Japanese Note refers to “the Open Door” as “the cardinal feature of the politics of the Far East,” and goes on to declare that “this policy will always be maintained in Manchuria, as in China Proper,” so far as the Japanese Government “can secure it.” In the matter of the integrity of China, it is stated that, “While it need not be repeated that Japan entertains in Manchuria no territorial aims or ambitions,” yet . . . the welfare and safety of Manchuria and its accessibility to general trade are matters of the deepest interest and of quite extraordinary importance to the Japanese people.” The last point is true; and the world will recognise Japan's claim under this head if and when it is satisfied that Japan's assurances about China's integrity and about “the Open Door” are more than diplomatic catchwords. As regards the Washington Treaty, the Japanese Note asserts that “the present unsettled and distracted state of China is not what was in the contemplation of the high contracting parties at the time.” On this point we join issue. For the precise object of the Nine Power Treaty was to “hold the ring” in China, and to prevent her territory from becoming an arena for foreign imperialisms, so long as the present state of confusion in China continues. The further contention of the Japanese Note that the situation in China was not so bad ten years ago as it is now is surely not borne out by the facts. Meanwhile, Mr Yoshizawa, whose name has become notorious as that of the Japanese protagonist during the proceedings of the League Council last autumn, has returned to Japan to receive, as his reward, the post of Foreign Minister. On his way through Moscow he is reported to have received a proposal for a neutrality treaty from the Soviet Government; but at present the indications are that Japan does not wish to tie her hands in this way—at any rate, not until her arrangements in Manchuria are complete. The latest report of Japanese intentions is that the three Manchurian provinces of China, together with the Province of Jehol, in Eastern Inner Mongolia, are to be created into a “Free State,” with its police, defence and foreign policy under Japanese control. This sounds more like the late King Leopold's former “Free State” in the Congo than those Free States in Ireland and South Africa, which enjoy the reality of freedom as well as the name.

The League Council.—When the League Council meets next week there are two questions which seem likely to stand out as important among the mass of routine business on the agenda. One of these questions relates to Iraq and the other to Manchuria. As regards Iraq, the Council will have before it the special report (already dealt with in the *Economist*) from the Permanent Mandates Commission on the termination of the British

mandate and the admission of Iraq to membership of the League. In view of the tenor of the Commission's report, it is almost a foregone conclusion that the Council will decide to terminate the mandate this session and that the Assembly will admit Iraq in September. Nevertheless, this is an occasion of a certain historic importance, since Iraq is the first mandated territory to complete the intended evolution of territories under “A” mandates into League members; and the procedure will constitute a precedent for future applications from other mandated territories of the same class (*e.g.*, Palestine, Lebanon and Syria). Moreover, there are certain points on which several members of the Council may possibly wish for precision. How, for example, will Great Britain's position *vis-à-vis* Iraq under the new dispensation compare with her position up to date? Exactly what arrangements are needed for safeguarding the rights of non-Arab minorities? And what is to be the juridical and the commercial status of foreigners? These questions will presumably be decided, if they are raised, on the lines of the Mandates Commission's report; but the Council may perhaps go further than the Commission felt itself entitled to go. As for Manchuria, it is not yet certain that it will be on the Council's agenda. In fact, the advocates of inaction may plead for delay until the League Commission of Inquiry, which was only appointed last week and which will hardly be able to start for Manchuria till some ten days hence, has arrived and sent back at least a preliminary report. The advocates of delay, however, do not include the Chinese; and the Chinese may find a fresh opening in the fact that several important European Council members, who are also parties to the Washington Nine Power Treaty, have seen fit to dissociate themselves from the American Government's action under the Washington Treaty and the Kellogg Pact. It is conceivable that, when the Council meets, the Chinese may ask these members for further light on their attitude towards the Washington Treaty. It is also not inconceivable that the Chinese may now, at last, raise the Manchurian question under the drastic Article 16 instead of the sedative Article 11. In that event, the Manchurian question might again dominate the business of the Council.

Fresh Disturbances in Spain.—It looks as though the testing time of the new regime in Spain were at hand. Will Madrid be able to come to an understanding with Catalonia, the Basque country, Galicia and other regions which are determined to have local self-government in various degrees? And will the forces of order be able to hold their own against the subversive tendencies on the extreme Left and Right wings? The Catalan question, which is by far the most serious of all the “regional” questions in Spain, was brought to a head by an attack on the Statute of Catalonia in the Cortes at Madrid on the part of Señor Maura. Last Saturday the Assembly of the Generalitat of Catalonia retorted by passing an unanimous vote of confidence in the Catalan Government and in President Macia. On Sunday there was a shooting incident in the Basque country in the industrial town of Bilbao. It began with Communist and Socialist demonstrations against a meeting of “Traditionalists” (extreme Catholic Royalists). It ended in attacks on a Catholic newspaper office and a convent; and it was followed by a local general strike next morning. On the same day (Monday) a general strike was declared at Valencia, and there were attacks on churches and convents at several places in the Valencian countryside. Isolated disturbances and acts of violence are reported from other places; so that the unrest is manifestly widespread. The fact is that the upheaval produced by the Spanish political revolution is aggravated by the local effects in Spain of the world-wide economic depression. The number of unemployed in Spain is said now to be over 500,000; and the unemployment is agricultural as well as industrial. Spanish statesmanship is facing a heavy task.

American Finances.—The announcement that President Hoover has appointed General Dawes to the Presidency of the new Reconstruction Finance Corporation suggests a desire on the part of Mr Hoover's administration that the conduct of this new undertaking should be in strong hands. General Dawes will have associated with him Mr Eugene Meyer, Governor of the Federal Reserve Board, who will act as chairman of directors of the new organisation, and also other leading bankers and financiers. Congress has still to agree on the final form of the Act setting up the new Corporation; in particular, the Senate has so far successfully resisted the desire of the Lower House to make the obligations of the Corporation eligible for rediscount at the Federal Reserve Banks. The Corporation, however, in addition to its more general powers and duties outlined in last week's *Economist*, is apparently to provide machinery to facilitate the exportation of certain commodities, such as wheat and cotton, while the *Times* Washington correspondent states that the banks are contemplating establishing export corporations, which will be authorised to borrow from the Reconstruction Finance Corporation. The Corporation will also, it appears, have power to extend loans to receivers of closed and insolvent banks, in place of a special corporation for that purpose which was to have been set up under a separate Bill, which presumably will now be dropped. All the indications are that both official and public opinion favours the initiation of a period of “controlled inflation,” and it will be of interest to see how far it proceeds, to what extent it succeeds in stimulating business, and what its reactions are at home and abroad. Meanwhile, American municipal finance is in a parlous state, largely because the task of providing for the unemployed is left in the main to the great American cities. The difficulties of Chicago and Philadelphia have been notorious for some time, but this week the financial affairs of New York City suddenly reached a critical stage. On Monday it became known that the authorities had been unable to obtain from the banks a loan of \$32.5 millions required to meet short-term obligations maturing two days later, while further accommodation up to \$150 millions required during the next four months was also being sought in vain. The bankers insisted that the New York City should be made self-supporting, a reform which would entail the abolition of the cherished flat-rate fare of one nickel. Two days later a New York bank granted a loan of \$12.5 millions, and this—together with further drafts on cash resources—enabled the obligations maturing on that day to be met. The City, however, is by no means out of the wood, for further commitments due this week will reduce its cash balance to the insignificant sum of \$2 millions, while over \$50 millions have to be found next week. The while over \$50 millions have to be found next week. The banks, it is reported, are now prepared to grant loans upon certain undisclosed conditions, so that this corner may be turned, though at a price. It is clear from this and similar episodes in other cities that the American governmental and social structure is ill-equipped to deal with an economic and unemployment crisis of the present magnitude.

Xenophobia Artistica.—Of various unwise acts of the present Government of this sceptred isle the recent decisions of the Minister of Labour, to bar from ingress and, in some cases, to eject from the country certain artistes of foreign nationality engaged by *entrepreneurs* in the entertainment industry, is the most lamentably foolish. Let us concede that the Ministry, in an epoch when “patriotism” is made to serve as substitute for value in purchasing, may elect to ignore the enrichment which any artist—the Peace Treaties and the Balance of Payments notwithstanding—confers on humanity at large. Let us admit that Sir Henry Betterton, battling for King and country against all alien imports—be they carrots or Kreisleriana—may fail to have learned that no country has attained to greatness in which the arts have not been welcome visitors. Even so, in these days of purblind economic nationalism have we fallen so low that our rulers cannot even see that a foreign artist, by attracting the public, may provide employment, which would otherwise be lacking, for ten times more of “the profession” than

his engagement is supposed, illogically, to displace? If this be our attitude, let us at least proceed to the logic of our policy: regardless of the consequential expulsion of every British actor and musician from foreign soil, let us deny the theatre, the music-hall, the concert room and the ether to every author, composer and performer who cannot produce, by grace of the Empire Marketing Board, a Foreign Office passport. A referendum, on strictly party lines, might be taken on the burning issue whether, to meet the case, say, of Beethoven, without prejudice to the reparations problem, a *laissez passer* might be issued occasionally to the dead.

Foreign Bonds in Default.—The report of the Foreign Policy Association on recent defaults of Government loans makes gloomy reading. Three years ago only one of all the Government loans listed on the New York Stock Exchange was in default, whereas now the number has reached 49, and there is grave danger that others will be added in the near future. The defaulters—not by any means all of them repudiators—range literally from China to Peru, but the greater number are in Latin America. Last year began with the suspension by Bolivia of interest payments on her external debts, and she was followed by Peru, Chile, Brazil and other countries, of which Hungary is the latest covered by the report. The latter largely exonerates the debtor Governments from responsibility for the present unfortunate situation, ascribing their insolvency to unwise lending and to the severe decline in the prices of raw materials and food-stuffs, with disastrous effects on the revenues and on the external trade balances of the debtor countries. “In addition to the danger involved in unproductive individual investments, there is an even greater menace in the too liberal extension of credit during a boom period, especially when followed, as boom periods usually are, by an abrupt reduction in the volume of available loans in a period of depression.” As a result of the fall in prices the debtor countries are being asked to pay, in terms of commodities, more in both principal and interest than is consistent with the value they received. Meanwhile the erection of tariff barriers makes payment even more difficult, and thus “it is not surprising that a number of countries have found it impossible to repay their obligations to the United States.” The following table summarises the list of Government loans in default:—

Issue.	Original Amount.	Amount Outstanding.	Interest in Arrears.
Argentina.....	1,984,125	1,487,600	178,500
Bolivia.....	68,400,000	61,103,500	3,974,400
Brazil.....	552,929,350	469,136,615	71,580,104
Chile.....	603,144,800	559,099,250	17,165,532
China.....	356,019,035	327,537,435	170,197,500
Colombia.....	12,000,000	11,230,000	361,730
Ecuador.....	17,054,050	14,492,400	12,210,800
Guatemala.....	...	...	366,300
Jugoslavia.....	1,250,000	1,003,500	75,250
Latvia.....	7,308,600	7,303,000	5,305,500
Mexico.....	738,651,231	629,163,875	479,283,050
Peru.....	128,371,068	124,175,360	3,955,625
Turkey.....	413,500,000*	372,151,850	15,431,710
United States..	95,474,000	95,474,000	297,181,250
Uruguay.....	6,000,000	5,649,000	197,715
Total.....	3,002,086,259*	2,679,007,385	1,095,464,966
Russia.....	18,758,743,500*	17,053,494,050	8,868,100,000
Grand total....	21,760,829,759	19,732,501,435	9,963,564,966

* Partly estimated.

The United States loans in default, forming roughly 4 per cent. of the total excluding Russia, include the Confederate States 7 per cent. cotton loan (\$12 millions) and obligations of eight Southern States.

The “More Looms” Question.—Important developments have taken place this week in the “more looms to a weaver” dispute in the Lancashire cotton industry. Last Saturday, writes our Manchester correspondent, a meeting of the General Council of the Operative Weavers' Amalgamation was held. The Burnley representatives advocated

calling a strike at all the Burnley mills irrespective of whether they were working the "more looms" system or not. No decision was taken, and the meeting was adjourned until January 23rd. In the meanwhile, informal discussions took place between Mr John Grey and Mr T. Ashurst, the Chairman and Secretary respectively of the Cotton Spinners' and Manufacturers' Association, and Mr James Hindle and Mr A. Naesmith, the President and Secretary of the Operative Weavers' Amalgamation. This conference was held on Monday, and it is evident that much good resulted, for on Tuesday it was announced that both sides had agreed to continue negotiations. A more hopeful view is held regarding the possibility of a settlement, and, now that the representatives from both sides have got together again, every effort will be made to prevent another deadlock arising.

Employment and the Cost of Living in December.—In addition to the usual seasonal increase before Christmas, employment in most industries showed an improvement during December. According to the *Ministry of Labour Gazette*, among the insured workers in Great Britain and Northern Ireland the percentage unemployed at December 21st was 20.9, as compared with 21.4 per cent. at November 23rd, and 20.2 per cent. at December 22nd, 1930. It is estimated that there were approximately 9,592,600 insured persons in work at December 21st, this being 82,000 more than a month ago, but 118,000 less than in December, 1930. The number of persons registered as wholly unemployed at December 21st amounted to 2,002,464, as compared with 2,070,442 at November 23rd, and 1,681,146 at year ago. Those temporarily without work totalled 403,432 on December 21st—32,273 less than a month ago and 223,296 less than a year ago—while the unemployed among persons usually in casual employment amounted to 104,025 at December 21st, as compared with 108,968 at November 23rd, and 100,497 a year ago. With regard to the cost of living, a slight fall was recorded during the month. At January 1st the index of the Ministry of Labour stood at 47 per cent. above the level of July, 1914, as compared with 48 per cent. at December 1st and 53 per cent. a year ago. For food alone the corresponding percentages were 31, 32 and 38 respectively.

Wages in 1931.—The *Ministry of Labour Gazette* for January contains the usual summary of wage changes during the past year, from which it appears that wages on the average underwent a greater decline during 1931 than in any year since 1922. In all the industries and services for which statistics are available there was an aggregate net decrease of nearly £405,000 in the weekly full-time rates of about 3 million workpeople, and a net increase of about £5,000 in those of 46,000 workpeople. The net changes, analysed by industries, are shown below:—

	Estimated net Weekly Increase (+) or Decrease (−) in Rates of Wages of all Workpeople affected.			Estimated net Weekly Increase (+) or Decrease (−) in Rates of Wages of all Workpeople affected.	
	1930.	1931.		1930.	1931.
Coal Mining	+ 325	− 39,700	Woodworking, Furniture, &c.	− 875	− 10,600
Other Mining and Quarrying	− 1,300	− 3,010	Paper, Printing, &c.	− 2,575	− 1,400
Brick, Pottery, Glass, Chemical, &c.	− 325	− 21,050	Building, Public Works Contracting, &c.	− 37,200	− 47,400
Iron and Steel	− 450	− 12,650	Gas, Water and Electricity Supply	+ 50	− 3,040
Engineering	+ 9,225	− 65,800	Transport	+ 26,850	− 46,450
Shipbuilding	+ 4,850	− 3,800	Public Administration	+ 2,750	− 20,800
Other Metal	− 125	− 24,950	Other	− 3,050	− 11,525
Textile	− 52,450	− 62,375			
Clothing	− 650	− 22,900			
Food, Drink and Tobacco	− 1,650	− 2,050			
			Total	− 56,600	− 399,500

The average decrease for all industries combined, including agriculture, is estimated at over 2 per cent. of the rates in operation at the beginning of the year. The Ministry observes that the changes in men's wages have been greater than those in the wages of women, boys and girls.

Among the most important reductions were those in the wages of engineering employees, railwaymen, woollen operatives and Scottish and Welsh miners. Miners' wages in many districts were unchanged, as were also those of employees in a long list of important industries. Among the workpeople not covered by the statistics, Government employees underwent wage reductions, and so did agricultural labourers in a few English counties and a large number of districts in Scotland. Of the total decrease of wages per week, nearly £155,000 was effected under joint standing bodies representing workpeople and employers; £37,600 under cost-of-living sliding scales other than those included under the preceding head; £41,300 was the result of arbitration or mediation; over £17,600 was effected under sliding scales based on prices or proceeds, and the rest was the result of direct negotiations or of independent action by employers. Only £30,700 of the total consisted of reductions preceded by a stoppage of work, and this was largely accounted for by the South Wales coal dispute.

National City Bank.—While the accounts of the National City Bank of New York reflect to some extent the contraction in American banking resources and the strain thrown upon the system by the crisis, they equally show the way in which this great institution is maintaining its strength in face of the existing untoward circumstances. It is true that the management have thought it wise to strengthen the bank's internal reserves, for the contingencies fund has been raised from \$8.5 to \$25.5 millions. On the other hand, deposits have only fallen by 2.8 per cent., and the 1931 ratio of cash (including money due from other banks) to deposits is 25.3 per cent. against 26.8 per cent. in 1930. The shrinkage is almost nominal and the latest figure is fully adequate. The salient features in the accounts, of which only a condensed and cable version is as yet available, are summarised below:—

	December 31st.	1930.	1931.
Liabilities:—		\$ mill.	\$ mill.
Capital		110	124
Surplus		90	90
Undivided profits		25	11
Reserves for contingencies, &c.		23	47
Deposits	1,460	1,419	1,419
Acceptances and other engagements	237	167	167
Assets:—			
Cash		170	175
Due from banks		221	184
Loans, discounts and bankers' acceptances	1,015	913	913
Investments:—			
(a) U.S. Govt. bonds, &c.		177	251
(b) State and municipal bonds		22	8
(c) Other bonds and securities		82	107
(d) Shares in other banks		15	15
Items in transit with branches		34	10
Customers' liability on acceptances		148	127

The accounts show that the National City Bank has had the same experience as many other leading banks, for there is less outlet for the bank's resources in the direction of loans and discounts, and so more money has had to be invested in securities. Acceptances are definitely lower and there has been a sharp contraction in items in transit, which points to a decreased velocity of circulation of money in New York, and so to business financial depression and stagnation.

Anglo-French Banking Corporation.—This institution has felt the untoward effects of the world financial crisis to the full, for its deposits were almost exclusively derived from abroad, mainly from France, the United States, Holland and Switzerland, and during the last six months of 1931 nearly 95 per cent. of them were withdrawn. This contraction, in addition to diminishing the earning power of the bank, threw a sudden and intolerable strain upon it, which was only met as a result of the policy of the board in maintaining in England assets roughly equivalent to its deposit and current account liabilities. Even so, the forced realisation of these assets, consisting chiefly of British Government short-term and kindred securities, involved the bank in heavy loss. Acceptances

have also been heavily reduced by the crisis, and owing to the narrowing of the discount market, the bank has been forced to withdraw the bulk of its credits other than those covered by standstill agreements. Fortunately, these withdrawals were effected without a hitch. As will be seen from the appended summary of the accounts, the bank is not at the moment free to realise many of its assets or to terminate many of the engagements of its customers. These restricted assets cover discounts and advances and also balances with or engagements by banks and other customers in countries subject to extended credit arrangements or exchange restrictions; and in the balance sheet itself, German, Austrian, Hungarian and Chilean assets and engagements are specifically mentioned. The directors state that it is not practicable for them to express any views on such assets as depend for their ultimate value upon a solution of problems connected with the liabilities of Central European and other countries to their foreign creditors, but they add that they are assured that the necessary discount facilities will be forthcoming for bills drawn against acceptances credits which the bank is bound to continue under standstill agreements.

	December 31st.	1929.	1930.	1931.
Liabilities:—		£'000.	£'000.	£'000.
Capital		1,250	1,250	1,250
Reserve		10	30	258
Deposits		2,719	3,812	3,812

Dividend		...	...	...

* British Treasury bills were included under investments in 1929.
† Described as trading profit.

As regards the 1931 results, a net trading profit of £73,000 was earned, but provision had to be made as to £49,000 for bad and doubtful debts; £147,000 for the loss in the hurried realisation of British Government and kindred securities, presumably at last autumn's depressed prices; and £42,000 for the depreciation of various securities; and £15,000 for loss in closing dollar positions opened against maturing assets in Reichsmarks covered by gold or dollar guarantees. Here the bank was caught between the standstill agreement and the British suspension of the gold standard. To meet these losses the bank has drawn £40,000 from reserve and contingencies, and is having to carry forward a loss of £142,000. The bank is apparently left with cash, call money and free assets and customers' engagements amounting to about £1,000,000 against deposits of £258,000 and the bank's own engagements of £1,844,000. Clearly it is essential that all concerned in the standstill agreements, from the German banks to the London discount market, should continue to function along their present lines until a final solution of German and other Central European difficulties can be found.

The Bank of Poland.—Our Warsaw correspondent writes:—A great deal of curiosity not unmixed with concern has been aroused by the announcement, made a few days ago, of the appointment of Colonel Koc as Commissar of the Bank of Poland. According to the semi-official Press, Colonel Koc will act as a liaison officer between the Government and the bank of issue in all matters concerning financial policy. Colonel Koc, who is publicly associated

with the so-called "Colonels Group," the governing power in Poland under Marshal Pilsudski, was named Vice-Minister of Finance a year or so ago. He now leaves the Ministry of Finance for the Bank of Poland, where he has been appointed to the Board of Directors. The assumption in financial circles is that Colonel Koc's mission at the Bank will be to keep a close watch on foreign exchange transfers in view of the far-reaching regulations made effective at the beginning of 1932 for restricting imports and facilitating exports by means of Government interference in foreign trade. If these Decrees fail to stop the gold (or foreign *devisen*) drain which has been going on steadily for several years, it is expected that Colonel Koc will supervise the enforcement of more drastic measures for controlling the movement of foreign exchange.

Barclays Bank Meeting.—Some of the wider aspects of Mr Goodenough's address to Barclays Bank shareholders on Thursday may fitly be reserved for comment in conjunction with the speeches of his colleagues yet to be delivered. There were, however, one or two minor specific points mentioned by him of considerable importance. Prominent among these was his statement concerning the bank's commitments in Germany. With the sole exception of certain Treasury bills issued by two German States where the bank has important connections, all advances granted by Barclays Bank were made solely for financing trade. Mr Goodenough expressed his confidence that all these debts would be liquidated in due course as soon as the exchange difficulties had been overcome; but even if the German position turned out badly, besides its reserve fund the bank possessed other reserves sufficient to meet any contingency that might occur. He also justified the decision of Barclays Bank to provide for the depreciation of the investments out of the investment reserve account instead of out of published reserves. This account, he explained, is largely built up out of profits realised on sales of investments from time to time, as well as profits on maturing bonds. On the same day the annual meeting was held of Barclays Bank (Dominion, Colonial and Overseas). On this occasion Mr Goodenough alluded to South African monetary policy, and described how Barclays Bank (D.C.O.), in conjunction with the Reserve Bank and the Standard Bank of South Africa, assisted in the formation of an exchange pool. He added that the Union Government were confident that with their assistance the exchange position would be successfully met, and that there would be no difficulty in remaining on the gold standard. At both meetings Mr Goodenough referred to the great loss the bank had sustained through the death of the deputy chairman, Sir Herbert Hambling, a loss which extends far beyond Barclays Bank.

Gold, Prices and Employment.—As a result of an invitation given by the Employers' Group of the Melchett-Turner Conference, the Industrial Institute has been conducting an investigation into the relation between world monetary gold stocks, and fluctuations in wholesale prices and unemployment in Great Britain over the period 1850-1912. Both long-term and short-term movements were investigated along mathematical lines, and certain tentative conclusions were reached. At this stage the work of the Institute began to receive some publicity, and was also brought to the notice of the Royal Statistical Society, who finally decided to make a paper prepared in the Industrial Institute their subject for discussion at their ordinary meeting, held on January 19th. The discussion, writes a correspondent, duly took place, and centred mainly round the mathematical methods employed by the Institute, which received somewhat severe criticism from such authorities as Mr Adney Yule, Dr. Wishart, Dr. Rhodes, Dr. Isserlis, and Dr. Greenwood. It was perhaps a pity that these criticisms, justifiable though they were, were carried to so great a length, for, as Sir Josiah Stamp pointed out at the close of the proceedings, they occupied time which the economists present at the meeting would have used to some advantage. Moreover,

even though the mathematical tools used by the authors of the paper may have been faulty or unsuitable, some interesting economic ideas were at least thrown to the surface, including such matters as whether an increase in unemployment precedes or succeeds a fall in commodity prices. Another question that might well have been explored still further is how far a historical investigation into the trend of events in 1850-1912 is of any value as a basis for investigating post-war economic and monetary problems. The general impression left by the discussion is that the mathematicians had too great a field-day, and that if the Institute and its investigators took further expert advice on their technique and then carried on their work on more suitable lines, they would almost certainly bring to the surface many problems of interest and importance.

International Cartels.—The four experts who, rather more than a year ago, submitted to the Economic Committee of the League of Nations their monographs on industrial agreements have now published a summary of their further investigations into the subject.* The report deals mainly with temporary agreements of the kind commonly known as cartels; what little space is given to trusts and other forms of close amalgamation is devoted to a discussion of the respects in which they offer the advantages of cartels in an intensified form. The conclusion reached by the experts with respect to international agreements is that they offer inducements to, and facilities for, a reduction in costs; that they help to maintain equilibrium between production and consumption; and that they tend to promote stability of prices. They also consider that it is in the interest of the members themselves to pursue a moderate price policy, in view of the potential competition both of outside producers and of substitutes. A further advantage which the experts ascribe to international cartels is the abolition of dumping, and while they do not claim that such agreements can lead to the abolition of customs duties, they suggest that their effect is to lead to the stabilisation of these duties on a moderate level. The effect on labour conditions is spoken of with unqualified approval, as leading to greater stability both of employment and wages. While the final paragraphs contain a warning against expecting too much from international agreement, Dr. Lammers and his colleagues have evidently found little in their investigations to offset the great advantages which they detect in such agreements, especially when they are concluded for long periods, and they maintain that so swift a Nemesis overtakes the cartel which pursues a mistaken policy (they instance the copper agreement) that repetition is highly improbable. The report, it will be gathered, is pitched in a key of optimism.

The Outlook for Copper.—A correspondent writes:—It is rather unfortunate for the copper producers that their newly-devised marketing scheme should have been launched at a time when international uncertainties are weighing so heavily on the business situation, for buyers all over the world are holding back in their anxiety to avoid committing themselves even a few weeks ahead. No official announcement has been made by Exporters Incorporated, but it appears that a certain amount of opposition to the new plan is being experienced in Europe, and that it may be a week or two yet before complete unanimity is reached. On the whole it seems that, although many of the old restrictions will be retained, there will be less stress laid upon the observance of the daily sales quota, and individual members will have the right to make sales at a price below the "official" quotation. If this provision allows consumers of copper to cover their sales without difficulty on any market day, then it will be a step in the right direction, for in the past the strict application of the quota rule has proved to be a great hardship to manufacturers. On the strength of a very moderate increase in export sales, the Copper Cartel

advanced its price recently to 7½ cents c.i.f. European ports, but at this level sales have been negligible, and latterly the downward trend of the London market has to some extent been reflected in New York, where custom smelters are reported to have pressed sales at 7½ cents. This is below the "official" figure and has occasioned some surprise and uneasiness; for one of the strong points in the new marketing scheme is understood to be an arrangement which allows the custom smelters priority in offering, both on the home market and abroad. If this is so, then there should not be any need for price cutting to attract business, since, bad as things are, present-day demand should be sufficient to absorb smelter output.

New Life Assurance Business, 1931.—The further figures which have appeared of new business transacted in 1931 have been of a more favourable character than those commented on in our issue of a fortnight ago. Seven additional offices have published their figures, which we print:—

	1930.	1931.	Difference.
	£	£	£
Alliance	3,210,646	3,222,795	+ 12,149
Caledonian	1,566,915	1,197,488	- 369,427
Co-operative	1,314,006	1,641,300	+ 327,294
Law Union and Rock	1,646,429	2,048,000	+ 401,571
Scottish Amicable	1,309,849	1,196,320	- 113,529
Scottish Life	1,161,741	1,407,668	+ 245,927
United Kingdom Provident	3,079,723	3,503,351	+ 423,628
	13,289,309	14,216,922	+ 927,613

In the aggregate, the new business of these seven offices shows a small increase, whereas the corresponding figures of the twenty-seven offices whose results appeared previously showed an aggregate decline of approximately 5 per cent.

Transvaal Gold Output in 1931.—In every month with the exception of May a larger output was recorded in the statistics issued by the Transvaal of mines during 1931. It is, therefore, not surprising to note that the 1931 total creates a fresh record. The 1931 total amounts to 10,874,145 ounces of fine gold, as compared with 10,719,760 ounces produced in 1930. The December output was 923,353 ounces, as against 900,510 ounces produced in November and 908,492 ounces produced in December, 1930. In the following table we show the monthly output since the beginning of 1925:—

Month of	1925.	1926.	1927.	1928.	1929.	1930.	1931.
	Fine Oza.	Fine Oza.	Fine Oza.	Fine Oza.	Fine Oza.	Fine Oza.	Fine Oza.
January	823,692	796,270	839,782	843,857	875,452	882,801	914,576
February	753,925	753,924	779,339	816,135	815,284	818,188	839,937

The following table shows the number of natives employed at the mines during the past nine months:—

	Apr., 1931.	May, 1931.	June, 1931.	July, 1931.	Aug., 1931.	Sept., 1931.	Oct., 1931.	Nov., 1931.	Dec., 1931.
Gold mines	206,770	207,109	207,209	208,155	209,409	209,424	208,987	209,270	211,552
Coal mines	13,242	13,305	13,286	13,512	13,563	13,776	13,061	12,882	12,260
Diamond mines	4,030	3,689	3,345	1,817	1,705	1,626	1,517	1,429	1,402
	224,042	224,103	223,840	223,484	224,677	224,726	223,565	223,581	225,214

The native labour force of the gold mines increased by 8,079 during the year, the total of 211,552 at December 31st comparing with 203,473 at the end of December, 1930.

Industry — Banking — Reconstruction Corporation — Budget.

(FROM OUR CORRESPONDENT.)

NEW YORK, January 12.

THE improvement in security prices and the prospect of early aid for industry have done much to improve sentiment, but as yet no real recovery has taken place in business. Along with the hardening of security prices, which has been most marked in the railroad and foreign bond list, commodity prices have shown greater firmness. Revision of the selling rules for the Copper Export Association was followed by a better price for the metal, though it remains to be seen how long this will last.

A reduction in oil output, due to the new practice of Sunday closing of wells, also has helped matters somewhat in that industry. After its year-end decline, the steel industry has improved slightly, but is still operating at not more than 25 per cent. of capacity and the unfilled orders of the United States Steel Corporation fell over 180,000 tons in December. Railroad traffic fails to increase and, while some members of the automobile industry expect to do better than last year, the consensus of opinion is that an output corresponding to that of 1931 is the most that can be anticipated. Public interest in the

national exhibit of new models held here this week is nevertheless lively.

A considerable impression has been made by the great liquidity of the year-end bank statements just published. In some cases the liquidity was more apparent than real, since a number of institutions discounted heavily at the Federal Reserve Banks in order to show large cash reserves, but much of it was actual, either in cash or United States Government bond holdings. Deposits were lower and some of the large institutions wrote down capital heavily (usually of their security-holding affiliates) to balance losses on investments. The banks themselves are blamed for the loss of deposits because of their over-emphasis on liquidity, and partly to offset this tendency some observers feel that conditions are shaping for a reduction in the next few weeks of one-half per cent. in the New York Federal Reserve Bank's discount rate. This would give notice to the banks that the central authorities wish to see a little expansion and greater liberality in making loans to industry. Open market rates have just been cut an eighth to three-eighths per cent., and the Federal Reserve Bank has also reduced its buying rate.

A sharp reduction in Federal Reserve Bank credit outstanding (\$297 millions) was shown by the statement as of January 6th, largely a reaction from the year-end expansion. Of this deflation more than two-thirds was accounted for by repayment of member bank borrowings, which still stand at \$818 millions, compared with \$292 millions a year ago. The gold outflow is now negligible, apart from frequent small shipments to France; these

Figures of Foreign Offices which are included herein are as of December 24, 1931.

are evidently being used for hoarding, since part of it is coin and none justified by current exchange rates. On the other hand, owing to the policies agreed upon at the Lima conference last month, the closer co-operation of South American Central Banks with commercial banks and the Federal Reserve Banks here is expected to shift gold reserves for these banks to New York from London.

It is expected that the proposed Reconstruction Credit Corporation will be passed this week, and the rise in markets has partly discounted it. Assured that the new credit body, which will be permitted to use capital of \$2,000 millions, probably obtained in part from the Federal Treasury and in part from the banks, with Government backing, will be under highly competent management—probably the same as guided the War Finance Corporation, it is looked forward to with high hopes. It is not expected that the Reconstruction Corporation will cure depression, but it is designed in this emergency to supply a much-needed chain connecting the still unused banking resources of the country with the needs of industry.

It will supply a fundamental defect in the country's banking system, due to legislation which prevents natural growth along territorial and economic lines and restricts operations to cramped areas, thus preventing mobilisation of resources. The 25,000 banks of the country are perforce operated as separate units in the interests of depositors and stockholders, without regard to the needs of large regions or of the country as a whole. By mobilising this unused bank credit and sending it where it is most needed, as, for instance, to railroads, much will be done to restore confidence if nothing else. Apparently agriculture is also to get some help, but it will probably be along sounder lines than that given by the Federal Farm Board.

As the time grows near for the railroad conference on wages, the expectation strengthens that voluntary reductions of 10 per cent. will be made. A few roads have already announced voluntary reductions for a portion of the union labour, and there is little hint of effective opposition to the demands of railroad management for lower wages.

Wall Street was particularly pleased this week with the decided stand taken by Mr Garner, Speaker of the House, and leader of the majority Democratic Party in the Lower House of Congress, and by President Hoover on Budget balancing. Mr Garner, speaking for his party's committee on taxation and the Budget, emphasised the necessity for burying party differences in an earnest effort to cut down expenditure and to balance the Budget for the next fiscal year. President Hoover, who in his annual message to Congress suggested a balanced Budget for 1934, has now firmly stated the need for a balance in the 1932 fiscal year and has told the country that "we cannot squander ourselves into prosperity." This determination among leaders at Washington to reject schemes for new expenditure, to reduce the old scale and to balance the Budget next June has had a decidedly heartening effect on those who above all else wish to see the country's credit maintained.

An early announcement on German short-term credits is expected here, inasmuch as Mr Wiggin is planning to return next week. It is taken for granted, of course, that an extension of the standstill agreement will be made, and that probably still another extension will be necessary, regardless of what may be done with reparations. Two of the largest banks have published the amount of their German short-term loans. The Chase Bank shows \$74 millions and the National City \$60 millions. On maturity of the Federal Reserve Bank's portion of the Reichsbank's loan next month, renewal will, of course, be given. Few on this side profess to foresee the outcome of reparations.

FRANCE.

Politics — Trade — Prices — Industry.

(FROM OUR CORRESPONDENT.)

PARIS, January 20.

THE solution of the Ministerial crisis which followed the death of M. Maginot, the War Minister, and the resignation of M. Briand—ostensibly on grounds of ill-health—of the post which he has for so long held at the Quai d'Orsay, was found by M. Laval with characteristic promptitude. The youthful Premier, in the Cabinet which he reconstituted after his failure to induce M. Herriot and the rest of the Radical Party to share in the duties and responsibilities of office, has himself taken charge of the leadership of French foreign policy, and his place at the Home Office has been filled by the former Under-Secretary, M. Cathala. M. Tardieu has been promoted to the post left vacant by M. Maginot's death, and has been succeeded as Minister for Agriculture by his former Under-Secretary, M. Achille Fould. The remainder of the former Ministers and Under-Secretaries have returned to their former posts, and the Ministry now numbers two posts fewer than before; the two Under-Secretaryships whose former holders have received promotion have been suppressed.

M. Herriot, it is now known, refused for purely electoral reasons to return to power, and thus enable a really national Cabinet to be brought into existence to deal with the numerous thorny problems confronting the country in the immediate future. M. Laval, it is also known, went so far as to offer the Radicals no fewer than five Ministerial posts, including the Foreign Ministry and other of the most important offices, in return for their co-operation. In spite of the fact that he and his friends formerly filled exactly similar posts in a Poincaré Cabinet, M. Herriot steadfastly declined the offer made—for reasons, it is alleged, which involve the possibility of a Socialist and Radical alliance at the pending General Elections. It is said to be thought possible that the elections may lead to the return of a majority really composed of the parties of the Left.

M. Herriot's decision has been the subject of a large amount of criticism, even among those who sympathise with his general programme, and he has been widely accused of having subordinated Party to national interests. His attitude is regarded as all the more inexplicable as he and most of his more prominent followers have not hesitated recently to voice exactly the same views on reparations and disarmament as those proclaimed by M. Laval and his principal supporters. A section of political opinion considers it possible that M. Herriot is basing, to some extent, his aspirations for the future on the possibility of co-operation between himself and M. Briand, after the elections, with the help of a renewal of the Socialist support which he enjoyed after the 1924 electoral contest. The combination that then resulted, however, although it succeeded in driving M. Millerand from the Elysée and M. Poincaré and his Cabinet from office—only to recall the latter back to power and undisputed authority during the second half of the life of the Chamber elected expressly for the purpose of ejecting him—had an unhappy history, which, it is to be hoped, will not be repeated.

The Second Laval Ministry's declaration of policy, although it contained nothing new, entirely reaffirmed recent French policy in regard both to reparations and to disarmament: "We will not allow the right of France to reparations to be denied," and "As to disarmament, we stand by the policy laid down in the French memorandum of July 15th last, which sets forth the national policy and which all parties have endorsed and will maintain." The declaration has been received with marked approval by the country at large, and there is little doubt as to its endorsement by a substantial majority.

The December wholesale price index of the Statistique Générale indicates a further drop in quotations for both

French and imported products. Detailed figures (1913=100) are as follows:—

	Dec., 1930.	Oct., 1931.	Nov., 1931.	Dec., 1931.
General index figure.....	498	423	417	413
French products	565	484	475	471
Imported goods	377	314	313	308
Foodstuffs (general figure)	525	460	456	463
Vegetable foods	481	467	470	475
Meats.....	602	453	438	448
Sugar, coffee, cacao.....	443	459	465	466
Raw materials (general figure)	475	392	383	370
Minerals and metals	437	374	369	367
Textiles	355	290	279	264
Various	568	465	456	436

The weighted index figure representing prices in Paris of 13 commodities of common household use (July, 1914, = 100) are returned as 523 (wholesale), against 639 in December, 1930, and 557 (retail), against 649 twelve months ago.

Industrial production index figures for November show slight declines in eight of the nine categories covered. The general figure (1913=100) is returned as 115, against 117 in October and 135 in November, 1930. Mining industries (the figure for which improved two points in October, added a further point in November. The figure for December, it is announced in advance, has been fixed at 105, however, thus cancelling out the improvement for the previous two months. The engineering figure for November shows a drop of four points (to 124), that for metallurgical trades of five points (to 89), rubber trades of 26 (to 854), and motor cars of two (to 490), against a drop of 22 points in October. Building is returned as unchanged at 121 for November (as in the previous three months), and it is announced that the December figure has advanced a point. The metallurgical, leather and textile industries are now all below their 1913 volume, although the textile figure (62 for November, against 86 in the corresponding month of 1930) is the only category seriously lower.

"In view of the many statements, often misleading and sometimes distinctly erroneous, that have been given currency respecting the balance of commercial exchanges between Great Britain and France," the British Chamber of Commerce in Paris yesterday issued on the subject an important statement which is especially interesting at the present juncture. In this statement it is pointed out that, although it is widely known that French exports to Great Britain fell off by 1,042,000,000 francs between 1928 and 1930, the proportion of the total French exports taken by Great Britain actually rose, during the same period, from 15 to 16 per cent. On the other hand, French imports from Great Britain were only 10 per cent. of the total value of French imports as a whole.

Another factor of great importance is the nature of the commodities exchanged. Two-thirds of French imports from Great Britain consist of raw materials for industry, while the exact converse is true of French exports to Great Britain, two-thirds of which consist of manufactures, a very large proportion of which are in the luxury class. In 1929, the last year for which exact details are available, out of a total of 5,828,000,000 francs of British exports to France, 3,356,000,000 francs consisted of raw materials (including coal, 1,749 millions; wool, raw rubber, hides and pelts, and pearls and precious stones in the rough), which were largely exempt from Customs duties. Manufactured goods, on the other hand, formed 64.6 of French exports to Great Britain in 1929, 69 per cent. in 1930 and 66.8 per cent. in the first ten months of 1931. Great Britain took 38.1 per cent. of French silk fabric exports (the principal French export) in 1929, 35.7 per cent. in 1930 and 39.9 per cent. in the first ten months of last year. Similarly, during the same period Great Britain took from 25½ to over 31 per cent. of the total French exports of woollen fabrics, and from 42 to 51 per cent. of French underwear and ready-made clothing exports, etc., etc. Practically one-third of French exports of table fruit, 30 per cent. of exports of potatoes and other vegetables, and one-fourth of the exports of French wines, spirits and liqueurs go to Great Britain.

GERMANY.

Agriculture — New Duties — Shares — Reichsbank.

(FROM OUR CORRESPONDENT.)

BERLIN, January 19.

THE agricultural crisis in Germany has been greatly intensified during the last few weeks. In addition to the difficulties of the grain-growing districts of the East—which may be regarded as permanent, since the poor soil of those provinces can no longer compete, even with the aid of high custom duties, against the grain-growing areas of Russia and the overseas countries, with their modern technique—there has arisen a crisis, as the result of the trade depression, among the stock farmers in the West and South, where until recently the state of agriculture was relatively satisfactory. The price of butter in the German market is far below the pre-war level, even the market for fresh milk is unprofitable, and cheese production no longer pays. The farmers can only dispose of their cattle and pigs at very low prices, and not infrequently the market is unable to absorb them at all.

The principal cause of this state of affairs is the reduced purchasing power of the town population. Butter, cheese and meat have become rare luxuries for the unemployed, and even for short-time workers; they have to content themselves with potatoes and margarine. The effect of this upon the stock farmers is evident. At the same time the policy of grain protection has reacted unfavourably upon them: in the interest of the rye market, the import of fodder barley was subjected to a very high duty, and the import of maize reduced to a minimum by means of a monopoly. Now many peasant farmers are obliged to buy barley and maize, as they have not enough grain of their own cultivation to keep their pigs and poultry, so that the increased cost of these fodder grains has greatly intensified their difficulties. Lastly, the depreciation of the Scandinavian currencies has recently contributed to the intensification of the competition of imported butter on the German market. The peasant organisations are now demanding that the effects of the crisis be counteracted by restriction of the import of foreign dairy products. Germany imports no cattle worth mentioning, but she imports large quantities of butter, chiefly from Holland and Denmark, but also from Finland, Latvia, Estonia, Sweden and Poland. In the last few weeks butter from Australia and New Zealand has also appeared on the German markets.

The Government have now decided to yield to the demands of the farmers and to raise the butter duty. The increase will, however, probably not be general. A Presidential Decree gives the Government the right "to raise compensatory duties on individual products or groups of products imported from countries whose currencies have fallen below gold parity." This power will be made use of to impose duties on butter from Denmark, the Scandinavian countries, the Border States, Australia and New Zealand. Among the important exporting countries, Holland will not be affected, as the guilder is still at par. This is very important for German commercial policy, as Holland has so far shown consideration for German interests in the quota system which she introduced recently, and if her butter exports were made more difficult she might very well undertake reprisals against German exports. The form in which these increased duties have been introduced suggests a desire to stress the transitory character of the measure and to avoid allowing it to develop into a general revision of the principles of German trade policy, which, apart from grain protection, has so far been relatively liberal. All the same, there is a danger that the countries affected, especially Denmark, may try to introduce compensatory measures, and that thus a mutual intensification of protection may come about. At the time of writing the Cabinet is still discussing the amount of the additional compensatory duty and the question whether there should not be an all-round increase in the butter duty at the same time. The effect on commercial policy will largely depend on this decision; if the additions are not prohibitive,

Denmark will not be able to raise any objection, as she herself has just introduced substantial increases in her tariff.

The wording of the new Order would permit the levying of compensatory duties on other goods, as, for example, English industrial goods, but the Government has no such intention. The majority of German industrialists desire no further concessions to the advocates of a policy of self-sufficiency, and are thankful if the farmers refrain from demanding any; they will not demand the application of the Order to foreign manufactures. That is the present situation, but the wave of protectionism which has broken over the world may, of course, bring about a change.

In the first two weeks of January the prices of German shares and loans recovered substantially. The Berlin Stock Exchange has been closed since September 18th, and the publication of the prices at which the active trade in securities, carried on by telephone among banks and brokers, is conducted is forbidden. The authorities have so far not ventured to permit the reopening of the stock exchanges, as they are afraid that an extension of the trade in securities and the publication of the present quotations might unsettle economic life in general. It is, therefore, possible to report only on general tendencies. The best German fixed-interest securities, especially the mortgage bonds of the mortgage banks, the interest on which was reduced by the December emergency decree from 8 to 6 per cent., recovered from just over 60 to 75; among leading equities, I.G. Farbenindustrie, Siemens and Halske, and Reichsbank shares rose substantially, though Farbenindustrie and Reichsbank are still well below par and Siemens less than 20 points above. The rise was due to the improved tendency in foreign markets and to the recovery in quotations for German bonds abroad. Speculative purchases in anticipation of reparation and standstill agreements, and covering purchases by "bears" coincided with purchases by the German public. There are no new issues, and the banks are only paying low rates on deposits, so that an extra demand for sound existing issues has developed. The upward movement of shares during the last few days may also be connected with the terms of the standstill agreement, though at the time of writing this has not been definitely concluded. The agreement is to give foreign creditors the option of investing a small part of their German claims in Germany, and further purchases of German shares are anticipated in consequence.

Conditions on the German money market have also resumed some degree of normality. There is once more a lively trade in short-term money; day-to-day money was dealt in last week at 7-8½ per cent.; 30-day money at something over 7 per cent., and bank acceptances at 6½-7 per cent. The condition of the Reichsbank is satisfactory as far as the claims on it of German banks and business firms are concerned. Between December 31st and January 15th its discounts fell from Rm. 4,144 millions to Rm. 3,588 millions, the lowest level since last September. The rumours of a forthcoming reduction in discount rate to which these circumstances have given rise are, however, undoubtedly premature. The reduction from 8 to 7 per cent. on December 9th was an experiment whose results cannot yet be fully estimated, and, further, the Reichsbank must take account, in its discount policy, of the state of its gold and foreign exchange reserves. In spite of all attempts to commandeer the proceeds of German exports as completely as possible, it has so far proved impossible to prevent a slow but steady drain on the reserves. The Reichsbank lost Rm. 20 millions gold and foreign exchange in December, and has lost 35 millions since the beginning of January, as it had to part with large quantities of foreign exchange to meet interest payments due abroad and capital repayments provided for by the standstill agreement. Only Rm. 1,021 millions are left of the entire German gold and foreign reserve, and against this the Reichsbank owes Rm. 630 millions abroad on short term. In these conditions the creditors will be obliged, in the next standstill agreement, to forego any claim upon the Reichsbank in respect of the repayment of further short-term credits.

ITALY.

Public Finance — Stock Exchange — Cartellisation.

(FROM OUR CORRESPONDENT.)

TURIN, January 18.

LAST week the attention of the public was focussed on the articles inspired, or rather written, by Signor Mussolini in his "personal" newspaper *Il Popolo d'Italia*. The general optimism diffused by the policy of cancellation of German reparations and inter-Allied debts had the effect of throwing into relief such unfavourable facts as are daily disclosed by official statistics or statements. The last Cabinet Council, for instance, fixed at 20,059.9 million lire the public expenditure for 1932-33, which is 736.2 millions higher than the original estimates for 1931-32. As supplementary variations have increased these 1931-32 estimates from 19,323.7 to 21,120.9 million lire, and these, in their turn, are exceeded in fact, it is to be feared that the new estimates for 1932-33 will prove insufficient. On the other hand, the revenue estimates for 1932-33 are put at 18,647.2 million lire, which is 252.3 millions lower than the original 18,899.5 million lire and 1,525.5 millions lower than the revised 20,172.7 million lire estimates for 1931-32. How the resulting deficit of 1,412.7 million lire will be provided for is not stated; the official *communiqué* is content to state that before June 30, 1933, means will be found, according to the changing general situation, to balance the Budget. Hopes are abroad that the situation will change for the better and that no further drastic cuts in the salaries of public servants or other turns of the financial screw will be necessary.

The increase of unemployment almost to the million mark—972,321 at December 31, 1931, against 878,267 at the end of November and 642,169 on the last day of 1930—failed to shake the newly-born optimism. It is, indeed, an optimism on a slender basis. Bank of Italy shares, which at January 9th were as low as 1,381 lire, closed on January 16th at 1,430; Monte Amiata (quicksilver) rose from 50 to 69; Fiat from 130 to 145; Edison (electricity) from 440 to 483; Beni Stabili (real estate) from 560 to 573. There are significant exceptions, mainly in shipping; the Cosulich (Trieste) Company sank further from 56 to 49, the General Navigation Company from 230 to 224. The public is absent from the market; or rather is devoted to fixed interest securities; for instance, 5 per cent. State nine-year bonds are as high as 101.40, and the 6 per cent. mortgage bonds of the Milan Savings Bank are also above par at 509.50. If a reaction occurs, it will not beget havoc, as nothing savouring of a boom has happened. Recent figures published by the Joint Stock Companies Association show that during 1931 reductions of capital (from winding-up, losses, devaluations) amounted to 5,760.8 million lire, thus exceeding investments, which totalled only 4,332.4 million lire. The total capitalisation of joint-stock companies thus decreased during the year from 52,280.8 to 50,852.9 million lire.

The Corporative system is being more and more utilised for purposes of industrial cartellisation. The National Rice Institute, which began its life on October 13, 1931, sold 100,000 tons of rice at an average price 200 lire per ton higher than the 450-480 lire quotations of August last. The General Confederations of Industry and Commerce have ratified the pact between machinery producers' and merchants' associations for the regulation of sales of industrial and agricultural machinery. The interesting point is that conditions of sale are now the result, not of free bargains between the interested parties, but of decisions of semi-public bodies. An even more important step in this direction was made by a legislative decree which gives authority to the Minister for Corporations to create compulsory consortiums between industrialists in the iron and steel industry aimed at the regulation of the production and sale of their products. A syndicate in this field was formed in August, 1929, but dissolved on December 31, 1931, owing to the opposition of what is described as a small minority representing 2 per cent. of

the total production. After the publication of the Minister's decree, the General Confederation of Industry is to convene a general meeting of all industrialists in this branch of production. The meeting is to be deemed valid if two-thirds of members representing four-fifths of total production are present, either personally or by proxies. The meeting will discuss regulations of the consortium; which, if unanimously voted, will become immediately operative. If unanimity is not forthcoming, the President of the General Confederation of Industry will decide finally and without appeal. The life of the compulsory consortium will be limited to September 30, 1932. It is hoped that, before that date, the industry will be reorganised. The problem is the usual one of excessive production and capitalisation, of too numerous firms, of high costs fostered by very high protection. Except during the war period, the iron and steel industry has hitherto led a chequered life, mainly at the expense of taxpayers and consumers. To lift the industry to higher productive plan, without new sacrifices for taxpayers and consumers, would be, indeed, a great feat. Meanwhile, the corporative system is being carried to its logical conclusion. Its action cannot be limited to the regulation of wages and other relations between employers and employees; it is perforce being extended to the regulation of prices, production and distribution. Wages are only one factor in the general economic equilibrium: and their public regulation implies a regulation of all other factors.

AUSTRIA.

Exchange Regulations — Banking — Credit-Anstalt — Industry.

(FROM OUR CORRESPONDENT.)

VIENNA, January 18.

NEGOTIATIONS abroad have brought no help for Austria. The 60 million credit, of which hopes were so often raised, has not been accorded, and the prolongation of the advance from the Bank of International Settlements and of that from the Bank of England was a foregone conclusion. Neither the Government nor the National Bank would have had the means to pay back the 190 million schillings, so that prolongation was inevitable.

It may now be assumed that the present strict regulation of the exchanges will be made still more rigorous, as the clearing agreements made with various countries have not brought the result anticipated. In some respects they are, indeed, very unsatisfactory. It was hoped that in clearing traffic with Switzerland an improvement would be introduced through the intervention of the Swiss Government. Up to the present, Swiss merchants who have purchased goods in Austria have done their utmost to get the invoices in terms of Austrian schillings and not in Swiss francs. A Bill is now being passed in Switzerland for the purpose of enforcing payment at the Swiss National Bank for supplies of goods drawn from Austria, and infringement of the law is punishable with fines and imprisonment up to one year. The clearing arrangements with Yugoslavia are also unsatisfactory.

These arrangements have the further disadvantage of encouraging foreigners to send to Austria those goods which they cannot sell in other countries, instead of raw materials and semi-manufactured goods. For instance, Austria delivers to Switzerland cotton goods and timber, crude and scrap metal in exchange for articles of luxury such as clocks and watches, cheese and lace. The position in regard to the clearing treaties with Hungary and Yugoslavia is somewhat better, as, although Austria gets from these countries no raw materials for its industries, it gets part of the foodstuffs it requires. Under the clearing treaties at most only 5 to 10 per cent. of the really necessary articles of importation are secured, while the remaining 90 per cent. cannot be covered in this manner. It is, therefore, impossible in the long run for Austria to secure its requirements of raw materials through clearing treaties alone. Furthermore, the clearing treaties do not afford the possibility of arranging any sort of order of precedence in imports or of excluding certain articles, whereas it is

very important for Austria to import only such articles as are absolutely necessary. This is demanded by the National Bank, whose holdings of foreign exchange have to be defended with the utmost energy. At the end of December the cover percentage of the National Bank receded to 24.2 per cent., so that any further recession would render the National Bank liable to the banknote tax. The last few weeks have, however, brought a certain relaxation of tension, and the bill portfolio has been reduced.

One of the most important questions for the Austrian National Bank, namely, that of the further management of the Oesterreichische Credit-Anstalt, is still obscure, and banking business is suffering in consequence. The men who are at present at the head of the bank do not themselves know to what extent they can take on commitments and whether or not a new general manager would cancel their plans. It is a vital matter for the Credit-Anstalt and also for Austrian economy that clarity should be obtained in regard to the management of the institution. Either the present directors should be left in office or they should be replaced by new directors; but something must be done. Within the last few days there was an unhappy reminder of the past of one of the big industrial subsidiaries of the Credit-Anstalt, namely, the general meeting of the Mitterberg Copper Works, in which the liquidation of the company was decided upon, as there is no prospect at all of saving the enterprise or of paying even a fraction of the debts.

Further progress has been made in the taxation of houses and flats. On account of the increase of the housing tax by the Municipality of Vienna the tenants are burdened with more than 11 million schillings. A further supplement has also been decided upon to cover the costs of the State housing scheme, and this is to bring in about six million schillings. The increase of rents has occurred at an unfortunate moment, as salary cuts and dismissals are still the order of the day. The textile industry is the only branch displaying any animation, and it is also working more smoothly owing to the improvement in supplies of raw material. This is due to the fact that a number of foreign suppliers of raw material are according credit to the Austrian mills and are prepared to wait for payment. However, in view of the latest foreign exchange regulations, the National Bank will certainly be more careful to see that these debts do not become too heavy, especially as the standstill agreements of the Vienna banks and firms, which are to be prolonged with the co-operation of the National Bank, have not yet been settled. Even the old debts will bear heavily upon Austria if no help is available from abroad.

HUNGARY.

Politics — Transfer Moratorium.

(FROM OUR CORRESPONDENT.)

BUDAPEST, January 18.

PARLIAMENT reassembled after the Christmas recess on January 14th, and, in the absence of urgent business, adjourned on the following day until February 4th. The Opposition, however, which has been strengthened lately by some dissentients from the Government Party, secured the necessary 50 members' signatures asking for an earlier resumption of parliamentary business, and thus succeeded in summoning the House of Deputies for January 26th. The move of the Opposition is without political significance, and demonstrates only that at last they can convoke the House, which they have not been able to do for years, if they choose to do so. Count Károlyi, who, to the great surprise of everybody, is still in power, having successfully struggled through a none too friendly Parliament for five months, has little to fear from the Opposition. The real test for his Government will be the budget debate on the estimates for 1932-33. The financial year begins on July 1st in Hungary, and the preliminaries will probably be presented to the House of Deputies in February, when members will have to decide either to vote the unpopular measures necessary to make both ends

meef or to risk the dissolution of Parliament. The travels of Count Bethlen, who is the staunchest supporter of the present Government, have attracted considerable attention. His recent meeting with Signor Mussolini in Rome and his long talk with King Carol of Roumania, though private in character, are none the less significant, as they show that Count Bethlen's eyes are cast on the future.

As Hungary's representatives were heard at the recent meeting of the Financial Committee in Geneva, public opinion here is awaiting with great interest the first quarterly report of the League's representative, Mr Royall Tyler. According to the domestic Press, Baron Korányi, the Finance Minister, had some informal parleys with certain creditors in Geneva, and discussed the situation arising out of the transfer moratorium. Unfortunately, the provisions of the transfer moratorium, notably the priority given therein to State obligations over private debts, were resented by certain creditors, especially in America. According to the *New York Times*, the American creditors have refused to sign the standstill agreement, which has been under negotiation ever since July, 1931, covering the \$35 million short-term credits lent to Hungary, and have decided to seize Hungarian banks' balances with them. An official *communiqué* which was issued to-night by the Hungarian Standstill Committee in Budapest states that equal treatment will be afforded to all foreign creditors, and the hope is expressed that American creditors will realise that Hungary had no choice but to declare the transfer moratorium, as the National Bank could not place any more foreign exchange at the disposal of the debtors without menacing the basic financial structure of the country.

As to the priorities given to certain foreign debts, it is difficult to blame the Hungarian Government for the continuance of the 1924 State Loan service (commonly known as the League Reconstruction Loan). To this loan's service (30-35 million pengő) a great part of the Treasury receipts are pledged, so that they cannot be disposed of without the assent of the League representative resident in Budapest. Next to the League Loan, the £3.2 millions Treasury bonds issued in November, 1930, and renewed afterwards, and the £3.3 millions Treasury bonds issued in August, 1931, are to receive special consideration, because they rank after the League Loan on the pledged revenues. The interest service of these bonds amounts approximately to 12 million pengő per annum. It should be borne in mind that it is out of the proceeds of the second portion of the Treasury bonds—taken up mainly by the French Government in August, 1931—that Hungary was able to meet interest and sinking fund payment on her foreign debts from August to December, 1931. Without the French loan the transfer moratorium would have had to be declared in August, 1931, and, therefore, the American and British creditors who received interest and sinking fund service from that source could hardly object to the preferential treatment of these bonds, the service of which, incidentally, is not due until August, 1932, as interest for the first year was deducted in advance. Apart from the League Loan and the Treasury bonds, the Government is anxious to meet the service of the Hungarian pre-war rentes, commonly known as the Caisse Commune, the interest rate of which is at present 1.3 per cent. The reason for this low rate is that, under the stipulations of the Innsbruck and Paris agreements, Hungary pays only about one-third of the pre-war interest rates, which ranged from 4 to 4½ per cent. The total service of the Caisse Commune amounts to 13.5 million pengő, and its discontinuance would have deprived Hungary of the favourable settlements of the agreements described above, and would, no doubt, have caused other Succession States to suspend payment on this international loan, the service of which was only resumed in 1924 after lengthy negotiations.

Though it is not mentioned either in the Government Decree or in the appended explanations, the National Bank will, of course, not fail to transfer interest on the \$20 millions rediscount credit of the B.I.S., which has just been renewed for three months, and which serves as gold cover of the National Bank's note circulation. The

annual service of the League Loan of 1924 (interest and sinking fund) and the Treasury bonds, Caisse Commune and the B.I.S. loans (interest only) amount to 65-70 million pengő, and Hungary will have done very well if she can transfer this sum in 1932.

The preferential order on other foreign services of importance has no practical significance, because their transfer prospects are very remote. Foreign creditors will soon be obliged not to quarrel about priorities of doubtful practical value, but to co-operate in their own interest to save the financial structure of the country, temporarily upheld by the application of the provisions of the transfer moratorium. The country is collectively insolvent so far as transference of the full debt service and the thawing out of frozen short-term loans are concerned. Nothing can be more disastrous both to Hungarians and their creditors than to ignore unpleasant facts—as one cannot help feeling has so far been done—and to go on waiting for miracles. The history of the last two years has clearly demonstrated that in Hungary, as well as in other countries, the various measures taken by the Government have invariably been too late to have the desired effects. It is for the foreign creditors to see that this does not happen with the transfer moratorium, the advantages of which can only be secured if Hungary's capacity to transfer is investigated, within the next six months, by the creditors, preferably in collaboration with the League and the B.I.S. under the leadership of an unbiased chairman.

HOLLAND.

Foreign Trade — Shipping — Revenue — Money.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, January 20.

THE state of trade in the Netherlands is best illustrated by the sharp decline in our exports in December, shown, with comparisons, in the following table:—

(Million guilders).

	December. 1930.	January. 1931.	December. 1930.	January. 1931.	No vember 1931.
Imports	165	141	2,418	1,893	140
Exports	117	81	1,719	1,312	101

The steep decline in exports reflects strikingly the influence of the great difficulties which Dutch industries are encountering as a result of the currency depreciation in many countries, the high import duties in England, and the obstacles to international payments resulting from foreign exchange restrictions in Central European countries. In Austria and Hungary, in particular, the severe foreign exchange restrictions render imports almost impossible. As a result of pleas made to the Government by many classes of parties interested, a Bill is being drawn up with the object of obviating the difficulties by means of a clearing system through the Central Bank, such as has already been established in some other countries. The drafting of the Bill is understood to be well in hand.

The advisory committee under the new quota law has been constituted, and it was announced a few days ago that the Dutch Government will shortly take steps to impose quota measures on a number of articles, although possibly only for a short period. In issuing import permits to a Dutch importer for a given article under a quota Order, stocks which appear to have been bought speculatively, in anticipation of the Order, will be deducted from the permit. The movement of prices, both in the wholesale and retail trade, is to be closely observed by the committee; a rise in price would be liable to influence the quota percentage fixed for the next period.

The tariff negotiations with Belgium provide another possibility of affording some relief in the present situation. The discussions in Brussels, which are expected to lead to a satisfactory solution, are to be resumed at The Hague in a few days' time.

The Dutch Association of Shipowners has brought to the notice of the Government the great distress prevailing in Dutch shipping in consequence of the crisis. In their

appeal, based upon an inquiry among all the owners represented by the Association (comprising 96 per cent. of the entire Dutch mercantile fleet), it was pointed out that the tonnage under the Dutch flag laid up on January 1, 1930, consisted of one vessel of 3,683 gross tons, whereas at the end of December, 1931, the laid-up tonnage comprised 167 vessels, totalling 781,514 gross tons. The financial position of many of the shipping companies, in consequence of the crisis, was described as very critical. For most of the companies there is not the slightest question of profit; the heavy losses suffered can hardly be covered by reserves, and the near future is regarded as very disquieting. In conclusion, the Association pointed out that in addition to the general effects of the economic crisis, two kinds of measures adopted by other sea-faring countries are menacing the existence of Dutch shipping, namely (1) the abandonment of the gold standard in Great Britain and some parts of its Empire overseas, and in the Scandinavian and other countries; and (2) the subsidising of the national shipping in one form or another in a large number of countries, notably in France, Italy, Japan, Spain and the United States. The Association finally laid special emphasis on the great importance of Dutch shipping in the general welfare of the nation, and submitted proposals for measures which are regarded as being urgently desirable in the interests of the industry.

Activity in the building trade in the Netherlands has also suffered a reverse in consequence of the general crisis, and, as a result, a very large part of the Dutch brick industry has decided to close down entirely for three months, with the intention of then resuming operations only at a greatly reduced rate of output. This, naturally, also involves still more distress in the earthenware industry of Maastricht, for now the outlet in the home market for sanitary earthenware and wall tiling is thereby diminished too. The export outlet had already practically disappeared through the depreciation of sterling and the English import duties. The industry is accordingly invoking the assistance of the Government.

The all-round unsatisfactory state of affairs is also reflected in the State revenue. The yield for the year 1931 amounted to 452.7 million guilders, as against an estimate of 469.8 millions and a yield of 504.5 millions in 1930. To provide for cash requirements, subscriptions have again been opened for 100 million guilders' worth of Exchequer bonds, part of which funds are to serve for the redemption of Exchequer bonds and warrants falling due on February 2, 1932. The new Exchequer bonds to be issued bear interest at the rate of 4½ per cent. per annum.

SPAIN.

Stock Exchange — Budget — Crops — Banking.

(FROM OUR CORRESPONDENT.)

MADRID, January 17.

THE improvement which took place on the Stock Exchange during December was not fully maintained, and the year ended with quotations below the average for the month, although higher than those of the previous months. Political uncertainty and social troubles throughout the provinces were responsible for the reaction, but the undertone is decidedly optimistic and it is generally anticipated that the New Year will see continued improvement in conditions on the Stock Exchange.

In view of the impossibility of terminating the Budget by the end of the year, a decree has been published authorising the extension of the 1931 Budget for a maximum of three months. No new credits may, however, be authorised until the 1932 Budget has been approved by the Congress. The mere threat of an increase in the tax on motor cars has caused a large number of vehicles to be withdrawn from use, and although it is now denied that the said tax is to be increased the number of automobiles in service continues to diminish.

NATIONAL BANK OF GREECE Established 1841

Head Office: Athens.
Branches throughout Greece.
New York Agency, 51 Maiden Lane.

THE BANK OFFERS EXCEPTIONAL
FACILITIES FOR BUSINESS WITH GREECE

Capital paid up and Reserves Drs. 1,205,000,000.

The number of unemployed in Spain continues its upward trend and now exceeds 500,000. While recognising the urgency of the problem, Parliament has so far done little to mitigate this evil, the measures proposed being subordinated to the balancing of the Budget. The new Finance Minister, who is credited with being a practical business man, is averse from any attempt to "socialise" industry at the present moment and this fact has inspired confidence in banking and financial circles to an extent which makes the successful issue of Government bonds more feasible than was the case a month ago. It is not probable, however, that Señor Carner will attempt to place an issue with the public in the near future; on the contrary, he has intimated that the deficit will have to be covered principally by direct taxation. While in the present economic crisis such an increase of charges is likely to be unpopular, especially in view of the advantages obtained of late by workmen and employees, there is no doubt that taxation per head is lower in Spain than in other European countries and further sacrifices will have to be made in this direction in order to balance the Budget.

The 1932 harvest of grain is likely to be poor, as social troubles have diminished the acreage sown. The same applies to the olive crop, which is an important item in Spanish exports.

Spanish banks were able to close their balance sheets in a more happy frame of mind than had been anticipated, partly owing to the rise in the quotations of the stock held in portfolio, and partly owing to the facilities afforded by the recent ruling of the Superior Banking Council in the matter of the depreciation of their reserves. The Bank of Spain increased its dividend by 5 pesetas, but it was intimated at the last general meeting of the shareholders that this measure is exceptional and that future results may be affected by the application of the new Banking Law. The shares of the national banking institution have lately been subject to fluctuations to a degree without precedent in the history of the bank.

Among the relatively few enterprises which show excellent results in spite of the economic crisis are those connected with cinemas. The films shown during the past year were practically all imported and, as regards nationality, were divided up as follows:—United States, 260; Germany, 102; Spanish films made abroad, 43; France, 36; Spanish films made in the country, three; sundries, 56. Of the latter, the proportion of British films is deplorably low.

The Municipality of Madrid is considering a project of annexation of a certain number of villages surrounding the capital, in connection with an extensive scheme of public works which includes a circular railway round the city. It is estimated that the inclusion of these villages will increase the population of Madrid by about 150,000 and will give the capital a definite lead in this respect over

Barcelona. At the present moment the number of inhabitants in both cities is slightly over 1,000,000.

The time limit for the stamping of banknotes is again to be extended, although no date has yet been given. This limit has been extended so many times that the general public has ceased to take any interest in the matter. It is probable also that the operation does not now present the same importance for the Government, as the banknotes which were being hoarded in large quantities are now coming out of their hiding places and being deposited in the banks. The current accounts of the Bank of Spain increased by 33 million pesetas between December 26th last and January 9th, and in a lesser proportion, private banks have also benefited by the gradual return of confidence.

GREECE.

Bank of Greece — Exchange Regulations — Revenue.

(FROM OUR CORRESPONDENT.)

ATHENS, January 14.

THE yearly balance sheet of the Bank of Greece has just been published. In comparison with that of last year it presents the following differences: bank notes in circulation have decreased from 4,803 million drachmas to 4,003 million drachmas; sight deposits in drachmas from 1,728 million drachmas to 702 million drachmas, and deposits in foreign exchange from 780 million drachmas to 217 million drachmas, while deposits at fixed dates in drachmas have increased from 140 million drachmas to 1,261 million drachmas. On the other hand, the gold held by the Bank has increased from 510 million drachmas to 869 million drachmas, while foreign gold exchange has declined from 3,279 million drachmas to 1,263 million drachmas. Credits granted by the Bank increased from 182 million drachmas to 380 million drachmas. The debt of the State and investments show also a small decrease.

The loss of the Bank from the depreciation of sterling is given as 175 million drachmas. The proportion of the cover to the circulation and the sight liabilities of the Bank was 40.73 per cent. on December 31st, as against 46.11 per cent. a year ago. It has since fallen to 40.04 per cent., and is expected to be less than the legal minimum of 40 per cent. in the next statement.

Owing to this decline of the reserve, the official rate of discount was again raised on January 13th from 11 to 12 per cent. On the other hand, it is anticipated that at the forthcoming International Conference of Lausanne Mr. Venizelos will ask for financial assistance in order that the country may be enabled to continue meeting its external obligations, since the moratorium on reparations is adversely affecting the financial situation of Greece.

New regulations concerning the granting of foreign exchange for the import of goods have been issued by the Bank of Greece. The aim of these regulations is to avoid complaints of the unfair granting of foreign exchange to applicants and at the same time to prevent abnormal imports. Revenue receipts for the first ten months of the current financial year amounted to 5,964 million drachmas, as compared with 6,988 million drachmas for the corresponding period of last year.

CANADA.

Business — Coal Mining — Exchange — Trade Treaty — Imperial Economic Conference — Insurance — Legislation — Gold.

(FROM OUR CORRESPONDENT.)

OTTAWA, January 12.

CANADA has entered the New Year in a confident belief that it cannot possibly produce worse troubles and embarrassments than those of 1930. So far, the winter has been the mildest for many years, with no severe temperatures and little snowfall recorded in the Eastern Provinces, a condition which has helped to mitigate the

hardships of the unemployed. The Prairie Provinces have experienced low temperatures, but the absence of any substantial snowfall, such as would help to remove the peril of another drought, is deplored.

There is no change to report in the general business situation, and retail merchants are experiencing the effects of the usual post-holiday lull in buying. Wholesale firms are resuming their normal activities and sending out their travellers with fresh samples. In the manufacturing fields, only the footwear and textile plants profess any satisfaction with conditions, and the metal industries are very short of orders. The coal industry is in a very depressed plight, to which the mildness of the winter has contributed, and the miners in Nova Scotia are resisting a cut of 12 per cent. in wages proposed by the mineowners. The provincial Government of Nova Scotia has decided to appoint a Royal Commission to investigate the whole question of coal production and marketing in the province, and it has offered the chairmanship of the Commission to Sir Andrew Duncan, who, as the result of his service on earlier Commissions, has a thorough knowledge of industrial conditions in the Maritime Provinces. Unfortunately, the news-print industry has recently received a further setback through a fresh cut in prices by the International Paper and Power Company, and its troubles are now desperate. There is a more hopeful outlook in the mining areas other than the coalfields, and even a modest rise in the price of base metals would stimulate considerable additional activity.

The past two weeks have witnessed some improvement in the exchange situation in New York, but it still continues to worry Government and private interests which have obligations maturing in New York. The total face value of such maturities in 1932 is estimated at about 350 million dollars, and, as the New York market is now virtually closed to Canadian loans, the problem of meeting them with the additional heavy premium now demanded is not simple. The province of Manitoba recently had considerable trouble in meeting certain obligations in New York, and had to receive help from the Federal Treasury in liquidating them. Apparently other provinces have decided to follow the example of Ontario and try to raise domestic loans for the purpose of coping with their foreign obligations, as there is obviously a limit to the drain which the Federal Treasury can endure with equanimity for the succour of the provinces.

Cables from Honolulu report that the negotiations which have been in progress there between Mr Stevens, Canada's Minister of Trade and Commerce, and Mr Downie Stewart, New Zealand's Minister of Finance, have resulted in a preliminary agreement about the terms of a new commercial treaty between the two Dominions. The exact terms have not been disclosed, as they await the approval of the two Ministries concerned and will be submitted for ratification to the two Parliaments, but it is understood that Canada makes concessions to New Zealand in regard to butter, wool, meats and certain other natural products of New Zealand, and New Zealand in return restores some of the tariff privileges which Canadian manufacturers formerly enjoyed but lost when the New Zealand Government initiated fiscal reprisals for Canada's treatment of New Zealand's butter. When Mr Stevens and his experts return to Ottawa, they will address themselves seriously to the problem of adequate preliminary preparations for the approaching Imperial Economic Conference. Parliament has been summoned to meet in February, and apparently the plan of the Bennett Ministry is to prorogue in May in order that the Conference may take place in June or July, and to hold a second session in the autumn at which the tariff changes necessary to give effect to the decisions of the Conference and the railway problem could be dealt with.

Meanwhile representatives of the Canadian Manufacturers' Association were recently summoned to Ottawa and requested to survey the general tariff position and make suggestions for concessions to encourage British imports, without endangering the fortunes of domestic industries. Subsequently the executive of the Manufacturers' Association issued a statement in which they expressed the view that the Conference would have a great effect upon

Canadian trade and trade policies. It pointed out that in the past two months 42 countries had raised their tariffs, and that this increasing difficulty of entering foreign markets made it all the more important to develop more trade between British countries. The statement also asserted that the experts of the association were studying every branch of Canadian industry for the purpose of discovering what it could do to promote the success of the Conference. Meanwhile it is an open secret in Ottawa that as the result of a lengthy series of orders-in-council about fixed valuations for Customs purposes and special dumping duties, the administration of the tariff has become involved in such confusion and uncertainty that importers and Customs agents often find themselves completely baffled by its complications, and there are frequent complaints voiced by importers that their business is being slowly strangled.

There has been some anxiety about the position of a leading Canadian insurance company, and the Federal Government, acting under the emergency powers conferred upon it last session, has seen fit to amend by orders-in-council the basis upon which insurance companies licensed by Ottawa may value securities for the year ending December 31, 1931. The new regulations permit bonds and debentures, held on December 31, 1930, and not since disposed of, defaulted or intrinsically depreciated, to be given the market value of December 31, 1930; and bonds acquired since that date the value of December 31, 1931. For preferred and common stocks held on June 30, 1931, the market values are to be of that date, and for stocks acquired since that date the value is to be of December 31, 1931. The *Financial Post* of Toronto thinks there is nothing alarming in these changes, which have had four precedents in Canada in the last fifteen years and eight in the United States in the last thirty years, and declares that it is only a formal acknowledgment by the authorities that the present market values of millions' worth of bonds and stocks purchased as long-term investments do not reflect the intrinsic value of these securities. The Government has also announced that it proposes to try to cure the situation created by a recent decision of the Privy Council, which declared *ultra vires* the present Insurance Act, embodying the provisions for the Federal supervision of insurance companies, and that its law officers profess their ability to draft a statute within the legislative competence of the Federal Parliament.

Figures issued by the Department of Finance covering up to the end of November show that the gold backing behind Canada's note issue has reached the lowest ebb since the end of 1929. At the end of November the Dominion note issue totalled \$197,262,136, and against these notes \$68,623,851 worth of gold, or 34.79 per cent., was held. Now there are two statutory authorities for the issuance of notes. One, the Dominion Notes Act, requires a gold reserve equivalent to 25 per cent. of the first 50 million dollars' worth of notes issued and dollar for dollar thereafter. Under this Act notes to the value of \$104,762,036 have been issued, and the gold held against them, \$12,500,000 plus \$54,762,036, makes a total of \$67,262,036, or roughly a million and a half dollars less than the whole amount held. But a second authority exists in the Finance Act which permits the issuance of Dominion notes up to any amount against the deposit of acceptable securities. Consequently there is virtually no restriction on the issue of notes, and there can be a margin of almost any dimensions between the notes outstanding and the actual gold holdings. This margin at the end of November was roughly \$128,600,000, and according to Professor C. A. Curtis, of Queen's University, Kingston, this inflation is to a large extent indirectly responsible for the weakening of Canada's monetary situation and the departures from the gold standard which have been undertaken.

Letters to the Editor.

THE CRISIS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Sir Henry Strakosch in his interesting memorandum tells us that the fall in the general level of prices, which he, like other authorities, tells us is the "root cause" of our present economic troubles, is "in the main" due to the collection of reparations and war debts and to the payment for these in gold. He does not tell us what the other factors are which he has in mind, and his statement that the export trade of the whole civilised world has "declined sharply" gives room for doubt whether, with all due respect, he fully realises the effect on prices, anyhow in this market, of Russian exports, artificially and uneconomically stimulated by the Five Years' Plan. While the exports of this and many other countries have decreased in the last two years, Russia's exports have greatly increased, though the extent of the increase tends to be masked by the continual drop in price.

The increase of Russian imports in our market in particular has been obscured by the fact that Russian exports since the Revolution had become so uncertain until the inauguration of the Five Years' Plan that very few are detailed separately in our monthly Board of Trade returns. The annual returns for 1930, however, with their much more detailed specification, have now been published, and a study of these, along with a parliamentary reply given me by the President of the Board of Trade on July 22nd last, shows clearly the effect of Russian imports on the prices of such important commodities as wheat, barley, oats, poultry, eggs, butter, timber, oil and many other foodstuffs, raw materials and commodities partly or mainly manufactured—too numerous to mention here. The following figures are an illustration:—

AVERAGE PRICES (in shillings and decimals thereof).

Commodity.	Country.	1929.	1930.	1931.
Wheat (per cwt.)	Soviet Union ... No imports	6.1	4.5	
	Canada ...	10.4	8.6	5.2
	Argentina ...	10.09	8.9	4.8
	United States... 10.5	8.6	5.3	
Barley (per cwt.)	Soviet Union ... No imports	4.4	3.5	
	United States... 9.9	8.4	7.6	
	Roumania ... 8.5	4.8	3.8	

* Latest figures available for Soviet Union.

It is important to note that the fall in price in wheat and barley did not occur until Bank rate was well on the downward trend, and it should also be mentioned that Russian oil had begun to fall on our market as far back as 1926, and Russian timber in 1927. These four important instances, therefore, were quite unconnected with the rise in Bank rate in 1929.

The returns also make clear the scale on which we have been importing from Russia. Though she sent us neither barley nor wheat in 1929 and only a trifling quantity of oats, in 1930 she was the main importer of barley on our market, and the second for oats and wheat. To the end of November, 1931, she was actually our chief source of supply for wheat. She has become our main importer of poultry, of hewn and sawn soft timber, and one of our chief importers of oil. But many and varied are the categories in which her imports are pushing up from an insignificant place to one of importance, and elbowing out our former customers.

A study of the annual returns for 1930 and of the parliamentary reply of July 22nd makes clear the tremendous influence Russian exports to the United Kingdom have had in lowering prices here, and in causing loss not only to our home producers of like commodities, but to countries both within and without the Empire from which we are wont to buy. And no one, I think, can deny the influence which prices here, in particular of the main primary products, exercise elsewhere in the civilised world.

While, therefore, I do not wish to dispute the importance of a settlement of debts and reparations and of a more equal distribution of gold, I venture to urge that much more study be given to the question I have raised. If this be done, many, I think, will be driven to the conclusion that if prices, more especially of primary products, are to be restored in the world at large, there must be limitation on this and other important purchasing markets of the artificial and uneconomic exports caused by the Five Years' Plan.—Yours, etc.,

Blair Atholl.

January 13, 1932.

KATHARINE ATHOLL.

[We agree with the Duchess of Atholl that, as things are going, the impingement of the export surplus of the U.S.S.R.

the general problems of industrial life which are characteristic of the work as a whole.

The book nowhere plunges into great depths, its psychological basis is that of enlightened common sense, and even if it shows a tendency to repetition, it is throughout eminently clear and readable. For the lucid exposition of the principles upon which firm hopes for the future progress of mankind may be based, no less than for a sane exposure of follies such as protective tariffs in countries like Great Britain and the United States, it is to be hoped that the book will find the wide circle of readers which it merits.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

England in Palestine. By Norman Bentwich. (London) Kegan Paul, Trench, Trubner and Company, Ltd., 68-74, Carter Lane. 12s. 6d. net.

An interesting and valuable account of the development of Palestine under British administration since 1917.

The Germans at Versailles, 1919. By Victor Schiff. Translated by Geoffrey Dunlop. (London) Williams and Norgate, Ltd., 38, Great Ormond Street. 7s. 6d. net.

Writing in 1929, the author discusses very fully, from the German point of view, the events at Versailles ten years before. In his opinion, they were the expression of an insanity born of the war, and he holds that surprising progress towards mental recovery has subsequently been made.

The New York Money Market. Vol. I. Origins and Development. By Margaret G. Myers. (London) Oxford University Press, Warwick Square, 33s. 6d. net.

A handsome illustrated volume which should be of the greatest interest to students and City men. The writer has contrived to present an abundance of detail in an admirably lucid and readable manner.

Economics in the Twentieth Century. By Theo. Suranyi-Unger. Edited by E. R. A. Seligman. (London) George Allen and Unwin, Ltd., 40, Museum Street. 21s. net.

A treatise of remarkable erudition, in which the author discusses the development of modern economic theory in the German-speaking, Romance, and Anglo-Saxon countries.

Questions Relating to Manchuria. By Shuhsi Hsü. (Shanghai) Chiao-Tung University.

A short paper, prepared for last autumn's session of the Institute of Pacific relations, which is especially useful in view of recent events.

Nos Grands Financiers Contre la Nation. By Albert Aymé-Martin. (Paris) Alexis Redier, 11, Rue de Sévres. 15 francs.

An attack, in the name of the small saver, upon the abuses which, in the opinion of the author, are committed by financiers in respect of the funds entrusted to them.

Le Bilan de la Guerre pour la France. By Charles Gide and William Oualid. (London) Oxford University Press, Warwick Square. 12s. net.

A Carnegie Endowment publication in which the economic cost to France of the war is discussed and her recovery examined.

The Present Position of Monetary Science. By Sir Josiah Stamp. (Manchester) Manchester University Press, 23, Lime Grove. 1s. net.

A reprint of the Ludwig Mond lecture.

Die Ursachen des Österreichischen Agrarkrisis und deren Behebung. By Leo Gestetner and Ekkehard Hauer. (Vienna and Leipzig) Verlag von Carl Gerold's Sohn.

An analysis of the causes of agricultural depression in Austria, with suggestions for its removal.

Scritti Vari di Economia e Finanza. (Firenze) Libreria Internazionale Seeker, Via Tornabuoni, 20.

A collection of articles on a wide variety of economic subjects, ranging from "Ricardo's Letters to Malthus" to "Banking Concentration in England." The text is in Italian.

International Industrial Agreements. (London) George Allen and Unwin, Ltd., 38, Great Ormond Street. 1s. net.

A report prepared for the Economic Committee of the League by Signor Benni, Dr. Lammers, M. Marlio and M. Meyer.

The South and East African Year Book and Guide, 1932. Edited by A. Samler Brown and G. Gordon Brown. (London) Sampson Low, Marston and Company, Ltd. 2s. 6d.

A reference book for the business man, the tourist and the emigrant which offers exceptional value for the money. In addition to a wide range of information and statistics, there are also maps and a bibliography.

"England Shall Stand." By Captain C. B. Lochner. Published by the author from the Oakenshaw Private Hotel, Surbiton. 1s.

A suggestion, by a visitor from New Zealand, for the reconstruction of our monetary system on the lines of a managed currency.

International Labour Review, December, 1931. (London) George Allen and Unwin, 30, Museum Street. 2s. 6d.

Includes M. Maurette's article—discussed in the *Economist* last week—on "Is Unemployment Insurance a Cause of Permanent Unemployment?"

Saggio di Commercio Estero. By C. R. Maranzana (Crema) C. Cazzamelli di G. Cattaneo e Figli.

A treatise on foreign commerce, from the Fascist point of view. *Handbook of Labor Statistics.* 1931 edition. (Washington) Superintendent of Documents. \$1.25.

A most comprehensive book of reference, containing official statistics and reports on every aspect of labour in the United States.

The Economic Record, November, 1931. (Melbourne) Macmillan and Company, Ltd. 5s. net.

Includes, among a wide range of contributions, a review of Australian monetary policy by Roland Wilson, and an article on the reports of the sugar inquiry committee by J. M. Garland.

The Hibbert Journal, January, 1932. (London) Constable and Company, Ltd., Orange Street. 2s. 6d. net.

Includes an article by Dr. L. P. Jacks on "Our Present Need for 'the Moral Equivalent for War.'"

Great Western Ports, 1932. (London) Great Western Railway, Cardiff.

An illustrated book of reference containing full information on the facilities, traffic, charges, etc., of each port. The volume is abundantly furnished with maps.

History of the Great Western Railway. By E. T. MacDermot. Vol. I., 1833-63. 21s. net; Vol. II., 1863-1921. 10s. 6d. net. (London) Great Western Railway Company, Paddington Station.

An extremely detailed chronicle.

Grossraum-Wirtschaft. By Dr. Gurge and Dr. Grotkopp. (Berlin) Organisation Verlagsgesellschaft, Leipziger Strasse, 115/116. Rm. 7.50.

A discussion of the problems which have to be solved before European unity is attained.

The Monetary Crisis. By S. Evelyn Thomas. (London) Simpkin Marshall, Ltd., Stationers' Hall Court. 6d. net.

A pocket summary of the causes and effects of the crisis.

Income Tax Guide, 1931-32. Compiled by Charles W. Chivers. (London) Jordan and Sons, Ltd., Chancery Lane. 6d.

A simple pocket guide for the individual taxpayer.

European Bills of Exchange. By C. A. Sibley. Second edition. (London) Sir Isaac Pitman and Sons, Ltd., Parker Street, Kingsway. 7s. 6d. net.

A reference book of regulations and stamp duties.

The Gold Standard. Selected Articles. By W. H. Waller. Published by the Author at 26, Corporation Street, Manchester.

The Stock Exchange.

INVESTMENT TRUSTS.

LIKE the building society and the insurance company, the investment trust company claims to secure a high degree of safety of capital for the investor by the art, or science, of "spreading" risks. In the case of the building society, this risk-spreading is confined to one class of property, and, in the case of the insurance company, more or less to loans, mortgages and fixed-interest securities. The investment trust company, however, goes further afield, and spreads its investment risks among both fixed-interest and variable-dividend securities in varying proportions. Some of its advocates have claimed that it offers the investor not only safety of capital, but the prospect of capital appreciation, as far as the market value of its ordinary stocks is concerned.

The reports of investment trust companies which are now in course of publication, covering a full year of depression, will no doubt provoke some controversy as to how far the views of their less conservative supporters must be permanently modified in the light of experience during the severest trial of investment trust principles in the present century. Two unpleasant facts must be squarely faced. First, the market values of investment trust company ordinary stocks have fallen. Second, substantial depreciation has taken place in the investments carried in the portfolios of many companies.

Taking these two points in order, we may consider, first, the present position in the investment trust market. The Actuaries Investment Index shows a decline in the index of seventeen investment trust ordinary stocks over the period from December 30, 1930, to January 12, 1932, of nearly 29 per cent. — i.e., from 84.8 to 60.4 (December 31, 1928 = 100). The following table shows the extent of the slump which has overtaken the market prices of the ordinary stocks of various leading companies—pre-war and post-war—and the relatively high yields obtainable on 1931 dividends:—

	High 1930.	High 1931.	Present Price.	Divs.	Div. Yield.
<i>Pre-War.</i>					
Army and Navy Investment def.	355½	358	275	15	5.45
British Investment def.	443	416	343	21	6.12
General Investors and Trustees ord.	322	306½	185	17	9.19
Guardian Investment ord.	211	186	159	11	6.92
Industrial and General ord.	365	327	210	18	8.57
Investment Trust def.	486	427	320	20	6.25
Mercantile Investment and General ord.	344	315	240	16½	6.87
Metropolitan ord.	407	380	323	20	6.19
U.S. Debenture ord.	264	243	187	15	8.02
<i>Post-War.</i>					
Abbotts Investment, £1 shares	18/9	15/-	9s. 6d.	4	8.42
Anglo-Celtic ord.	156½	149	94½	7½	7.94
English and New York ord.	100	85	50	5	10.00
Grange ord.	122½	73½	72	6	8.33
Independent Investment ord.	141	70	44	5	11.36
London and General ord.	102	60½	45	5	11.11
London and Holyrood ord.	120	114	92	4	4.35
Nineteen-Twenty-Eight ord.	117	93	53	5	9.43
Nineteen-Twenty-Nine ord.	103½	88	53	4	7.55

As regards the above prices and yields, it should be observed that, at the present time, the market in investment trust company stocks is in some cases of a largely "nominal" character—in other words, that a potential seller may experience difficulty in finding a buyer for a reasonable amount of stock, within a relatively short time, at anything like the quoted market price. It should not be inferred, of course, that an unduly pessimistic view is taken of the future of investment trust company "equities." The market in these stocks has always been narrow, partly because promoters of new trust companies have not infrequently placed considerable parcels of stock within a restricted circle of their own friends and connections, and partly because the companies, in the past, have taken fewer pains, possibly, than certain other types of concerns, to advertise their wares to the investing public at large.

In the recent past it has been customary to make a distinction as regards safety of capital between trusts formed in pre-war and post-war years respectively, to the dis-

advantage of the latter. It has been argued that the pre-war companies, by their conservative practice of refraining from paying out in dividends the whole of their income, have had time to build up adequate reserves to meet the abnormal depreciation in values which has fallen upon all the security markets. Further, it has been pointed out that the post-war companies, for the most part, purchased their holdings during a period of inflation of security values in this country and in America, so that their assets necessarily show larger depreciation than those of the older companies. As regards the respective ratios of reserves to issued capital, the former contention has, of course, much force; but it should not be forgotten that reserves have not been held in cash, but have been invested, and are therefore subject to the same market risks as other investments. Again, the extent of asset depreciation must depend upon the distribution of holdings, and not merely on the "age" of a given company. If a pre-war trust, for example, instead of widely distributing its portfolio in a scientific manner, had amassed disproportionately large holdings of, say, Argentine railway stocks, its assets might show, to-day, a depreciation equal to, if not greater than, that of a post-war company which had distributed its risks more evenly.

Whether certain investment trust companies should take exceptional measures to provide for the heavy depreciation of their assets by cutting dividends drastically or passing them altogether will, no doubt, become a matter for controversy as the 1931 reports are published in the next few weeks. Mr George Glasgow, author of "English Investment Trust Companies," has pointed out, in a letter to the *Times*, that the present position of the post-war investment trust companies is not without parallel. The companies which were new at the time of the Baring crisis went through exactly the same difficulties as many trust companies are experiencing to-day. Mr Glasgow instances cases where book values after that crisis were above market values for ten years, but where dividends were earned and paid throughout on the junior stocks. Some of these companies, on a hypothetical winding-up, would have shown a minus quantity for the break-up value of the junior stocks. But their stocks continued to earn and pay dividends. Mr Glasgow, in fact, rightly claims that the junior stock of an investment trust company has a market value of its own, which may be based on its position as an earner of dividends.

From this point of view it is interesting to examine certain recently published reports of various companies. In the next table, accordingly, we give an analysis of the figures of ten companies—the seven marked with an asterisk being pre-war companies—showing the book value of the investments, the present market value and percentage of depreciation, the total loan and preference capital, the total ordinary capital and the percentage of ordinary capital covered by the assets on a hypothetical winding-up:—

	Year ending	Book Value of Investments.	Market Value of Investments.	% Depreciation.	Total Loan and Pref. Capital.†	Total Ord. Capital.	% of Ord. Capital covered by Assets at Market Value.‡
(In thousands of £'s.)

* Pre-war companies.

† No credit is given for any surplus of current assets over current liabilities.

‡ It will be seen that the age of any company is no decisive criterion of the cover (on a winding-up basis) for its equity

stocks. Some of the pre-war companies—notably Metropolitan and London Scottish and American—emerge from this analysis very satisfactorily, but as regards others, like New York and General, and Government Stock and Other, there is little to choose in the matter of results in a comparison with the post-war concerns. An insufficient number of this group of companies give an analysis of their holdings to enable us to conclude how and where the less successful companies have been unfortunate.

Our analysis illustrates Mr George Glasgow's point that an investment trust ordinary stock which is not fully or even partially covered by assets on a hypothetical winding-up, nevertheless has a value of its own as an earner of dividends. The next table shows the amount of dividends earned and paid by the ordinary stocks of the companies whose recent reports we have been considering. The figures cover the last two financial years:—

	Net Revenue available for Ord. Stock.		Per cent. earned on Ord. Stock.		Per cent. paid on Ord. Stock.	
	1930	1931	1930	1931	1930	1931
Southern Stockholders	£ 43,959	£ 37,452	5.6	5.0	5.0	4.0
Second Edinburgh*	53,984	32,684	23.2	14.1	15.0	12.0
Clydesdale*	64,427	54,661	20.6	17.9	15.0	14.0
Trans-Oceanic	26,054	15,071	8.4	4.9	5.0	3.5
London Scottish American*	62,313	53,232	16.1	14.0	12.5	12.5
Great Northern	48,003	28,044	10.1	6.2	9.0	6.0

Metropolitan*	120,144	109,562	24.8	23.0	20.0	20.0
New York and General*	19,549	6,030	10.5	3.3	10.0	4.0

* Pre-war companies.

It will be seen that the three ordinary stocks (Trans-Oceanic, Great Northern and New York and General), whose break-up values are at present minus quantities, are, nevertheless, still covered by moderate earnings. In a final table we show the highest market prices of these stocks in 1930 and 1931, the present market prices and the yields obtainable on the basis of 1931 dividends:—

	High 1930.	High 1931.	Present Market Price.	Earnings Yield Per cent.	Dividend Yield Per cent.
Southern Stockholders ord. £1..	19/3	16/0	13/9	7.1	5.81
Second Edinburgh def.*	4/0	3/0	2/0	7.1	6.00
Clydesdale*	33/1	31/4	22 1/2	8.0	6.26
Trans-Oceanic ord.	106	74 1/2	64	7.7	5.47
London Scottish American def.* ..	221	206	185	7.6	6.76
Great Northern ord.	238	210	150	4.1	4.00
Omnium def.*	182	170	95	7.4	10.52
Government Stock & Other def.* ..	215	177	112	5.6	8.93
Metropolitan ord.*	407	380	323	7.2	6.19
New York and General ord.* ..	157	131	77	4.3	5.19

* Pre-war companies.

It will be seen that the post-war companies in this table are returning lower dividends than the old-established companies which we showed in our first table. The market, on the whole, would appear to be taking a conservative view as to prospects of a further reduction of earnings and dividends in 1932. If a larger number of companies published details as to the distribution of their investment holdings, investors could form a truer idea of the extent to which defaults, actual or potential, in interest payments on foreign securities, which came too late to be fully reflected in the accounts for 1931, will affect the figures for the present year. There is, in any case, a significant time-lag between a change for the better or the worse in general economic conditions, and its adequate reflection in the published statements of investment trust companies. The policy of the less fortunately situated companies, it may be presumed, will be mainly governed by the future extent and intensity of economic depression. For the present, it may be, they will continue to follow the precedent set by similar companies during and after the Baring crisis, and will refrain from definite measures, e.g., for a readjustment of their issued capital, so long as they find it possible to pay even small dividends on their ordinary stocks. Whether more drastic measures, in some instances, will eventually be found necessary will depend on numerous factors, bound up with the world's ability to settle its major international problems on a rational basis, which are beyond the control of the board of any individual concern.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET. ACCOUNT.
February 2. February 4.

AFTER four or five days of reactionary prices, the stock markets revived this week under the stimulus of Continental buying. No explanation was given of this turn in events other than the doubtful one of the firm stand taken by M. Laval over reparations. As usual, the international securities led the advance, Royal Dutch, Brazilian Traction, Krueger and Toll and Swedish Match being prominent. The gilt-edged market also moved upward on further talk of a possible reduction in Bank rate (which was not borne out) and a lowering of the rediscount rate of the New York Federal Reserve Bank. The improved tone in the New York Stock Exchange was also a helpful factor.

British funds suffered an early setback, but improved materially in mid-week, satisfactory income-tax returns being a favourable factor. Business showed some expansion, with War Loan and Funding in good demand. Indian loans recovered after initial weakness. The new Mauritius loan was heavily over-subscribed, and went to a premium.

Foreign bonds were relatively firm, German loans improving in mid-week. An unexpectedly strong demand arose for Czechoslovakian Eight per Cents. Brazilians enjoyed some popularity. San Paulo Coffee were active on the large surplus of resources over service requirements shown in the return for December.

Home rails were virtually unaltered by another batch of disappointing traffic returns. Argentine railways, however, derived advantage from improved gross traffic and a rally in the peso.

The Industrial market had a less satisfactory appearance at the outset. International issues, however, which opened under appreciable selling pressure, were the first to recover, buying orders being received for the Swedish issues, Brazilian Traction and Hydro-Electric on Paris and New York account. Breweries were a little better on unofficial talk of a possible reconsideration of the beer duty. Tobacco shares were assisted by the favourable Imperial Tobacco dividend announcement, to which reference is made on page 190. Textiles were dullish, pending a clarification of the main factors in an uncertain labour position. Electrical supply shares were in fair request, and newspaper shares had a sizeable recovery on provincial buying. Bank shares remained steady to firm, the published balance sheets giving a satisfactory impression. Insurance shares, however, suffered from slight profit-taking after last week's rise.

Little business was done in the oil share market at the start, but a marked recovery occurred subsequently in the leading issues. Royal Dutch and Shell advanced on Continental buying. Rubber shares were characteristically idle, the complete lack of news regarding the future of the industry and the fall in the price of rubber below 8d. tending to leave prices lower where changed. Tea shares advanced on Monday, but interest was not maintained.

The mining share market had an irregular trend with rather quiet conditions. Kaffirs fluctuated uncertainly, but eventually strengthened on a renewal of Paris interest, Central Mining and "Johnnies" being in request. A small turnover was recorded in "Chartered," but otherwise the Rhodesian market was stagnant. Tin shares were dull, after a mild accession of interest. Rio Tintos advanced sharply on Wednesday, largely as a result of Paris orders, but closed below the best.

FOREIGN STOCK EXCHANGES.

NEW YORK.

Markets opened hesitantly, with a tendency to drift to lower levels. After a day or two of unsettlement, however, sentiment rallied, and, although the volume of business remained restricted, prices turned upward till Tuesday's session, when irregularity developed in some quarters into pronounced weakness. The chief factor in the change was the progress made with the Reconstruction Finance Corporation, the acceptance by General Dawes of its presidency, and the hope that the settlement of differences of view between the Senate and the House of Representatives would permit of the Presidential signature to the Bill before the end of the week. Government bonds showed greater strength, gold withdrawals for Europe (including \$3,251,000 consigned to London) and reported European sales of American holdings exercising little or no effect on sentiment. More favourable reports of the industrial situation, evidenced by a rise of three points in the percentage of steel productive capacity employed, improved the quotations of a number of leading shares, a mild "bear squeeze" occurring in U.S. Steel. Although railroad issues participated to some extent in the better tendency, the course of the Chicago negotiations between the leaders of the companies and the unions was regarded as disappointing. The Labour representatives laid down as a definite condition of a wage reduction the production of figures affording clear evidence of the weakness of the revenue condition of particular railroads. They announced, indeed, that they could not consider a wage reduction for any other purpose than to enable the weaker roads to cover their fixed charges. The discussions were adjourned to allow of the compilation of the desired returns, though the market refused to abandon its belief in a favourable final outcome. Though New York City has obtained temporary banking accommodation, the financial plight of some of the larger cities, whose payments for unemployed relief have been considerable, remains precarious in the extreme. Commodity prices continue to show reassuring evidence of stability. Oil prices in the Mid-Continent market are still tending to rise. Freight-car loadings for the week ended January 9th were 572,593, as compared with 503,414 for the previous week, 714,251 in the corresponding week of 1931, and an average of 909,266 for the corresponding week over the seven-year period 1924-30. According to Bradstreets, business failures for 1931 reached the record total of 26,381, the aggregate liabilities being \$2,281 millions, against \$1,441 millions in 1930 and \$628 millions in 1929.

(Incorporated with Limited Liability under the National Bank Act of the U.S.A.)

LONDON ACTIVE SECURITY PRICES AND YIELDS.

NOTE.—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

CANADA.

The Canadian stock markets opened the year in hesitant mood, but quickly regained a measure of vitality in sympathy with New York. It was held that the establishment of President Hoover's Reconstruction Finance Corporation and an improvement in grain prices would help the general business situation all over North America. The recovery was not spectacular, but most issues experienced a steady rise, including Canadian Pacific, Brazilian Traction, Ford Canada "A", Goodyear Tire preferred, International Nickel, and some of the oil issues. Numerous stocks are now above their "pegged" level, and in some cases the "pegs" have been withdrawn. Trading, however, has remained light in volume, and one result of the request of the Government for the cessation of the purchase of foreign securities has been the development of a free "street market" in "pegged" and "banned" stocks. The bond market has been firmer, and the mining market has shared in the revival of interest.

PARIS.

After the buoyant tone of last week a rush of profit-taking occurred on Monday, and wiped out many of the previous gains. Sentiment subsequently tended to become erratic and nervous, although fresh buyers appeared to steady the market at the lowest levels. The publication of the text of the French declaration of current policy did not help sentiment. On Wednesday, however, renewed buying occurred of the more popular issues, particularly German bonds, bank shares, and electrical and chemical shares. Suez Canal were strong, and Tintos advanced sharply, but an all-round reaction occurred on Thursday which took Bank of France and other issues well below the best of the week.

	Jan. 14, 1932.	Jan. 18, 1932.	Jan. 21, 1932.
Bank of France	11,925	11,615	11,850

Rio Tinto	1,430	1,325	1,360
Royal Dutch	13,050	12,700	12,750

AMSTERDAM.

Apathetic conditions ruled early in the week, prices generally trending downwards on a marked absence of support. Royal Dutch, Unilever, Philips Lamps and Amsterdam Trading were all marked lower, and the bond market remained listless. In mid-week, however, more activity developed. Rubber shares became firmer, and tobacco shares recovered their earlier losses. In the industrial market, small advances were fairly well distributed.

	Jan. 14, 1932.	Jan. 18, 1932.	Jan. 21, 1932.
5½% German	39	37	38
Unilever N.V.	115	106	106
Philips Lamps	93	85	87

Java Outfitter	127	125	124

OTHER CENTRES.

Irregular conditions ruled on the other European bourses. At Stockholm bonds opened strong, and bank shares were favoured on the satisfactory reports for 1931. Kreuger and Toll were also more active. A heavy profit-taking reaction marked the opening of the Brussels Bourse, but a firmer tone supervened. Milan rallied after initial depression. Changes in unofficial quotations in Berlin had an irregular appearance. Dye Trust was done at 84.50 (against 84.75), Siemens at 116.00 (against 114.75), General Electric at 31.50 (against 33.25), and Reichsbank at 85.75 (unchanged).

INVESTMENT NOTES.

Stock Exchange Management.—Much interest has been aroused this week, writes a "House" correspondent, by the announcement of the retirement from the Stock Exchange of five partners in the large stockbroking firm of Buckmaster and Moore. The resigning parties, it is announced, will set up an investment banking business outside the "House" under the style of O. T. Falk and Company, while the three remaining partners of the firm will continue business on the Stock Exchange under the same title as before. A certain extraneous interest attaches to the decision as a result of the involuntary publicity secured some months ago by a circular to the firm's clients, which expressed a forthright opinion as to the relative merits of British and American stocks, made to the firm's client, and also by reason of the personality and reputation of some of the retiring partners, one of whom, for instance, is a well-known polo player, while another is a son-in-law of the late Lord Oxford. More important, however, is the bearing of the decision on certain questions of Stock Exchange membership and control. During the present century various firms, from time to time, have resigned their Stock Exchange membership in order to practise allied branches of business unshackled by the rules and regulations of the Stock Exchange. The "House," incidentally, stands within a couple of months of the end of its financial year. Its £36-paid shares are quoted at 152. Nominations, which fell recently to £170, and rose three years ago to £1,800, now stand at about £200. It may appear to the outsider somewhat anomalous that, although the Stock Exchange has been in being, in its present premises, for well over a century, the amount of "service" given by the Stock Exchange to its members has not appreciably increased during the last fifty years. Expenses have risen, in the meantime, and entrance fees, subscriptions and office expenses are much higher, while salaries and everything appertaining to Stock Exchange business, may be said to have increased in price by at least 50 per cent. *Per contra*, the rules of the "House" have been tightened up, increased difficulties have been thrown in the way of those who deliberately attempt to defraud or hood-

wink the "House" and the public, and telephone facilities are better, as, indeed, they are in practically every business. On the other hand, the scale of commissions, which has frequently been accused of being anomalous and lop-sided, has been altered a little here and a little there, but nothing has been done determinedly to readjust and rearrange charges admittedly inconsistent and perplexing. The method of voting for the Committee remains the same as always, although many members have not hesitated to declare their conviction that a whole-time paid Committee is necessary to the maximum efficiency in Stock Exchange affairs. Again, there is no guarantee fund, which, incidentally, might enable the Stock Exchange to show a firmer front vis-à-vis the banks on the "split commission" question. There is an impressive consensus of agreement that the real *fons et origo* of these complaints is the present Deed of Settlement, decades old, which stands in the way of every major attempt to modernise Stock Exchange methods. The Deed can be altered only by the consent of members who are also shareholders. Such an announcement as has been made this week may cause many members seriously to ask themselves whether the "House" should be content merely to await the time when, by mere effluxion of old members, and their substitution by others who hold, compulsorily, a fixed number of shares, the question of reform can be seriously considered.

Australian and New Zealand Stocks.—A disparity continues to be shown between the yields obtainable on Australian and on New Zealand stocks, the prices of the latter standing, on an average, about 10 points above those of Australian stocks. Improving Australian conditions, however, and the determination of the new National Government to rid itself of all budgetary deficits are tending to change market sentiment. The latest monthly bulletin of the National Bank of Australia even suggests that the trade depression in Australia may have passed its lowest point. Unemployment has fallen, a wheat harvest of 170 million bushels is expected, and higher prices are being obtained at the wool auctions. The visible trade balance for the last five months has been favourable to the extent of nearly £12 millions sterling. The return of the National Government has eliminated two possibilities which had oppressed the market, namely, currency inflation and political control of banking. The possibility of an Australian default is no longer discussed. The external interest requirements of the Commonwealth, State Governments and the public authorities are now about £31½ millions (allowing for the war debts holiday), and the exchange pool requires the Commercial Banks in London to credit the Commonwealth Bank with £3 millions per

month out of the funds accruing to Australian nationals. New Zealand has now formed an exchange pool on similar lines. The service of the New Zealand external Government debt amounts to £8 millions per annum and that of the public authorities to less than £1 million per annum. New Zealand exports for the first nine months of 1931 amounted to £27.2 millions and imports to £19.0 millions, leaving an export surplus of £8.2 millions. If the exchange pool gives priority to Government claims over commercial debts, as is the case with the Australian, there is no doubt that ample cover will be provided for the New Zealand external debt. The next table shows the comparative prices and yields obtainable on New Zealand and Australian stocks at the end of last year and to-day:—

	Prices, Dec. 31, 1931.	Jan. 21, 1932.	Flat Yield %
New Zealand 5% 1949	88	93	5 8 0
Australia 5% 1935-45	78½	84½	6 0 6
New Zealand 3½% 1940	78	79	4 9 0
Victoria 3½% 1929-49	63	65	5 9 0

Although Australian stocks had enjoyed a considerable recovery this year, New Zealand stocks have simultaneously responded to the formation of the exchange pool, so that no lessening of the disparity in the yields on the two classes of stocks has resulted.

Defaulting States and Municipalities.—During the past year the "black list" of States and municipalities which have failed to meet their external obligations has rapidly lengthened. At a time when financial integrity hinges even more on ability than inclination, it may be of interest to record which States and cities have already fallen by the way. In the following table an attempt is made to show some of the most important municipal defaulters at the present time, together with the chief loans concerned:—

Name of Municipality.	Description of Loan.

* Coupon "postponed." † Partial default.

The outcome of the negotiations between the Ethelburga Syndicate and the State of Bahia was outlined in last week's *Economist*, when it was indicated that the State had deposited 1,189 contos of reis with the Bank of London and South America on account of interest on the English loans. Brazil announced in October last that interest on her external loans could no longer be paid in cash, except on the 5 per cent. funding loan of 1898 and the 5 per cent. funding loan of 1914, and that funding bonds in two series would be issued against outstanding loans. Chile recently declared a moratorium on all her external debts. Mexico has just signed an interim agreement with the International Committee of Bankers postponing the beginning of annuity payments, as decided by previous agreements, until 1934. The position in China has gone from bad to worse during the past few months, the Salt loans and all but one of the railway loans being in arrears. Discussions with regard to the service of the Egyptian external debt have not so far resulted in any definite decision. Peru defaulted in April last after prolonged political disturbances, while the Uruguayan Government has just asked Parliament to sanction a moratorium on the country's foreign debt. Among Brazilian municipalities, the City of Santos has deferred payment of interest and sinking fund till June, 1933, interest on the 7 per cent. consolidated sterling loan of 1927 being paid in local currency into a Brazilian bank. The City of Niotheroy has decided to make payments in sterling rather than in dollars. In the meantime, the long-standing disputes regarding the foreign obligations of the Soviet Government and of eight states of the U.S.A. appear to be no nearer settlement. The debt position of the Central European States is in a condition of flux, and the extent of the unfulfilled obligations of these countries may not be clear for some few weeks. Further "default" statistics are reproduced in a "Note" on page 167.

Boot and Shoe Company Results.—If the accounts of those footwear manufacturers and traders which have so far been made public may be regarded as a fair sample, the industry would seem once again to have vindicated its reputation for stability of earnings. Of the three companies whose results we summarise below, two have maintained their ordinary dividend rate while showing slightly reduced net profits. The third, Weber and Phillips, has reduced its distribution from 12½ per cent. to 10 per cent. as a precautionary measure, but has transferred £9,000 to reserve.

Name of Company.	Date of Balance Sheet.	Net Profit.	Pref. Div.	Ord. Div.	Rate %	Other Allocations.	Inc. or Dec. in Carry-forward.
Stead and Simpson	31.xii.30 31.xii.31	£45,487 £45,259	9,794 9,794	14,000 14,000	10 10	20,000 10,000	+ 1,693 + 11,465
William Timpson	31.xii.30 31.xii.31	71,496 69,130	20,394 19,735	33,796 32,706	15 15	12,500 12,500	+ 4,806 + 4,189
Weber and Phillips	31.xii.30 31.xii.31	22,216 21,895	...	23,250 18,600	12½ 10	2,000 9,000	- 3,034 - 5,705

The report of Stead and Simpson declares that lower prices and restricted purchasing power have affected the turnover, but economy in all departments has enabled the profits to be maintained. The balance sheet reveals a not over-liquid position, but reserves total £303,226, and are equal to the issued share capital. The report of William Timpson states that in order to enable the company's subsidiary (Timpson's Properties) to repay the whole of the mortgages on its properties, the directors took up 34,000 further £1 fully-paid shares for cash at par, and lent to that company £7,000 at interest. William Timpson has a capital reserve of £108,367, which is augmented annually under the articles of association. Weber and Phillips value their "shares in a subsidiary company" at a figure which calls forth a comment from the auditors, but they hold £85,000 of 5 per cent. War Loan, and appear to be amply provided with liquid reserves. Their 10s. ordinary shares, at 9s., yield about £11 15s. per cent.

Jute Industries.—Another unsatisfactory report has been issued by Jute Industries, Limited, the post-Armistice Dundee combine, for the year ending September, 1931, although the loss for the year (£8,086) is smaller than that of the previous year (£36,498). On an average the mills operated in the last financial year at only 39 per cent. of full capacity. The policy of the Board has been to close the less efficient units and to concentrate the orders available in the lowest cost units. In spite, however, of these efforts to reduce the cost of production, it has been impossible to run plant economically on the small amount of orders available. As no useful purpose has been served by keeping the manufacturing companies in existence as separate entities, they have been liquidated voluntarily, the opportunity having been taken of writing off bad debts. The chairman, in his speech to shareholders on January 18th, stated that the company had benefited very little so far from the suspension of the gold standard, owing to the lack of purchasing power in foreign countries. Exchange restrictions in South America and elsewhere had also been an adverse factor. The jute trade had suffered for many years, he said, from Calcutta competition, but the company had been almost immune owing to the finer class of goods which it made. Imports from the Continent before 1931 had never been of large dimensions, but shipments in the first six months of last year had been in excess of the highest yearly total recorded during the last ten years. The chairman, naturally, hailed with joy the emergency tariffs recently placed on jute carpets, and also derived encouragement from the greater activity in the woollen carpet trade, the base of most carpets being composed of jute. The greatest need of the jute industry, however, he declared was to cheapen its costs of production. The average rate of wages paid per hour to-day was still more than 100 per cent. above the pre-war level. The debt balance carried forward by the company at September 31, 1931, was £36,789. The company's capital consists of £1,500,000 in 8 per cent. non-cumulative preference shares of 10s. and £150,000 in ordinary shares of 2s., and was reduced in 1929.

B.A.T. and Imperial Tobacco.—At the annual meeting of the British American Tobacco Company, on Monday last, Sir Hugo Cunliffe-Owen tempered frankness over the trials of "the most difficult year that he could remember" with a modicum of hope for the future. Sir Hugo dwelt feelingly on the tendency of Governments to seek financial relief by taxing tobacco and cigarettes, the fluctuations in exchange and the decline in the purchasing power of Eastern countries following the collapse in the value of silver. On the other hand, he declared, the prices of all commodities that the company used, including leaf tobacco, had fallen substantially, and the replacement of stocks at lower prices largely accounted for the fact that they appeared in the balance sheet at £1,377,959 less than last year. Sir Hugo's relative cheerfulness was emphasised a few hours later by the announcement by the Imperial Tobacco Company of a final dividend of 8 per

cent. and a bonus of 7½ per cent., tax free, making a total distribution for the year to October 31st last of 22½ per cent., tax free, against 23½ per cent., tax free, for 1930. The statement also indicated that £500,000 would be carried to general reserve (as last year), and that £1,278,000 (against £1,190,538) would be carried forward. Allowing for changes in taxation, the figures suggest that the company's profits have been very close to those of 1930. The dividend was, if anything, better than market expectations, and the £1 ordinary shares rose to £4. At this price their yield is about £5 16s. 6d. per cent., tax free.

Leyland Motors.—This large commercial vehicle manufacturing company announces a decline in trading profits of nearly 24 per cent. for the year to September 30th last. Net profit is struck after the inclusion of certain non-recurring items, £52,985 being allowed for an amount of directors' remuneration written back and £6,384 for profit on the sale of investments. The net figure then stands at £305,083, as compared with £366,250. The ordinary dividend rate is halved at 10 per cent. :—

Carried forward	159,347	66,011	95,406

* Seven years to December 31, 1927.

† Including all arrears.

The balance sheet shows stock in trade at £973,159, against £949,477. A liquid position is disclosed, debtors being £580,290 and cash £219,701, while outstanding liabilities are no more than £430,727. At 32s. 6d., the £1 ordinary shares yield about £6 11s. per cent.

Gestetner and the American Market.—D. Gestetner, Limited, the well-known manufacturers of duplicating machines and other office equipment, have suspended operations in the United States market. An American subsidiary was organised in the autumn of 1929 in the belief that such a venture would be profitable in a market attuned to the advantages of highly efficient business equipment, and, therefore, specially qualified to appreciate Gestetner products. Unfortunately, as the chairman stated in his speech at the last general meeting, on September 30th, the actual start coincided with the original Wall Street break. At the end of one year's operations the cost of the American venture appeared in the balance sheet of the parent company at £20,000. The indications at the time were that the peak of the depression had been passed, and it was decided to continue an aggressive sales campaign in the belief that perseverance would bring success. Unfortunately, these hopes were not borne out. Depression increased, and the parent company's last balance sheet allotted the sum of £75,000 towards the maintenance of an efficient sales organisation in the United States throughout a year when the company's business there was greatly handicapped. In his speech at the last general meeting, Mr Sigmund Gestetner described a working agreement that had been made with the Remington Rand Company, one of the biggest American operators in the same field. According to this arrangement Gestetner products and salesmen were to be distributed among the two hundred branches of the Remington Rand Company throughout the United States, and a mutual interchange of business leads and contracts was provided for. Whether this arrangement did not prove successful, or whether, proving successful, it failed to stimulate the company's business in the American market sufficiently is not known, but the Gestetner Company, it is understood, has decided to withdraw from America. One of the directors of the

company recently returned from a visit to the United States and announced the disposal of the company's patent rights in that country to the A. V. Vick Company. Business, he stated, was too bad for them to feel well advised to proceed further with a venture which, striking against the adverse side of the wheel of fortune, had cost the company £100,000.

The Rubber Position.—The rubber market is becoming somewhat discouraged as the weeks pass without official news of any definite progress as regards output restriction negotiations, and the spot price of the commodity has fallen this week below 3d. a pound. For rubber shareholders the story of last year was largely one of hope deferred. According to the securities index of *The Investors' Chronicle*, representative rubber company shares declined from 56.7 at the end of December, 1930 (December 31st, 1923=100), to 30.0 at the end of August last, and showed a modest recovery to 42.3 by the end of the year. The market, indeed, is waiting upon the world's statesmen to resolve major economic problems whose solution is a necessary condition of the revival of general prosperity, of which the price of rubber, in the last resort, is a function. The abandonment of the gold standard has afforded British growers a certain differential advantage in competition with producers in the Dutch areas. In the main, however, the epitaph on the year just past in the rubber plantation industry should be that in it the gods did little to help the industry and the industry did even less to help itself. The world's total shipments, as estimated by Messrs S. Figgis and Company, were 3.3 per cent. below the figures for 1930, which, in turn, were 4.3 per cent. below those for 1929. But the reduction was entirely insufficient to bring production anywhere near a balance with consumption, which Messrs S. Figgis estimated at 669,000 tons. The detailed figures for the last five years are shown:—

Exported from—	1927.	1928.	1929.	1930.	1931.
Ceylon (excluding re-exports)	56,000	58,000	80,500	75,600	62,300

And at NEW YORK, PARIS and ANTWERP

The inelasticity of supply is attributable to the decision of many directors, who have reduced costs to a low figure, to tap their most prolific areas rather than to put their estates on a care and maintenance basis. Demand from two countries—Russia and Japan—actually showed a large increase last year, and absorption in Great Britain, contrary to expectation, was maintained at rather more than the 1930 figure. The financial burden of carrying the additions made last year to the world's "surplus" of rubber, however, has chiefly been shouldered by America, who has increased her visible stocks by over 120,000 tons in the last twelve months. Her stocks, it is significant to note, are mainly of raw rubber, not of manufactured goods. Her inventories of tyre covers and tubes actually declined from 19,202,000 to 16,621,000 during the first ten months of 1931. A revival in American industry, would, therefore, be quickly reflected in increased demand from the large tyre manufacturers, but it is by no means certain that even a moderate rise in rubber prices would not reveal the existence of a significantly large "reserve" of productive capacity on the plantation side. Apart from the untapped capacity of British and Dutch estates, Messrs Figgis believe that the native grower in Malaya and the Dutch East Indies has now adjusted himself to the low price of rubber. He does not appear likely to be forced out of production, and it is difficult to get correct information regarding the assertion that his trees have suffered from over-tapping. Though there appears to have been little fresh planting of rubber during 1931, the heavy plantings of 1924-28 are coming progressively into bearing, and Messrs Figgis estimate that the area held by natives and Asiatics generally now exceeds that in European ownership, the figures being put at 4 million acres and 3½ million acres respectively.

Tea Position.—Although the year 1931 was one of the least profitable for tea producers in the annals of the trade, the commodity at least escaped the disastrous conditions which afflicted producers in the rubber plantation industry. Tea shares in the London market declined steadily during the first eight months of the year, rose on the average by approximately 25 per cent. in September and October, declined again, and finished at approximately the lowest point for the year. These movements broadly followed the price of the commodity, which slumped badly in the spring, after the decision to rescind the reconstruction scheme which had been operative in 1930, and the flooding of the London market in June by large quantities of Ceylon tea diverted from its normal outlet in Australia owing to the latter's economic collapse and the imposition of increased Customs duties. Early in July the London average sales' price for Northern Indian teas touched the low level of 7.58d. per pound, as compared with production costs of about 9d. shown by the most favourably situated of all the Indian producing companies in 1930. Fortunately, this level did not last long, and by the end of September the London average had touched 1s. 3.74d. per pound, while the Ceylon average had recovered from a low point of 10.28d. to 1s. 6.57d. by the middle of October. The later stages of the rise were associated with abnormal purchases in anticipation of a possible reimposition of a tea duty in the British September Budget. Costs on the gardens have been stringently reduced, wages, for example, being now at a subsistence minimum, but it is doubtful whether many even of the best producers in Assam and the Hill districts of Ceylon are making profits, while in Cachar and Sylhet, where the competition of supplies from the Dutch East Indies is keenly felt, the whole industry is probably working at a loss. Shareholders in tea companies, indeed, still have before them the possibility of lean times. The gap between world supply and demand, however, remains smaller than in the case of many other industries, and a world revival would probably find the market responsive to a moderate quickening of demand. Whether the conditions of even a few years ago can be expected to recur, even under a considerably improved world trade regime, is another matter, in view of the incalculable effect on the market, in the future, of permanently increased supplies of tea from Dutch sources.

Ashanti Goldfields.—Our mining correspondent writes: This West African enterprise goes from strength to strength. Not even the most sanguine of the general body of shareholders could have anticipated that the share bonus of a year ago would within twelve months be followed by another—at a lower nominal rate than before, but upon an increased capital. In our Note covering the report for 1929-30 the conclusion was arrived at that the dividend for 1930-31 might conservatively be calculated at 80 per cent. The actual total is 90 per cent. Two months ago the directors made a new departure in declaring a second interim distribution, the amount being 20 per cent. The final of 30 per cent., together with the scrip bonus of one in three, is included in the price of the shares—now just under 40s. The further expansion in last year's earnings arose from a trinity of favourable factors: the increase in both the tonnage of ore milled and in the average yield, concurrently with a reduction in the cost ratio. Pension and benevolent funds receive £15,000, against £13,000; and in place of the £30,000 last year transferred to an exploring account, £30,700 is now applied in writing down to market value the company's holding of Government stock. The latter stands at £343,500. A five-year comparison is appended:—

	Year ended September 30.

* Including Pensions and Benevolent Fund.
† With capital bonus of 50%.
‡ With capital bonus of 33½%.

The one part of the report which may arouse mild disappointment is the ore reserves position. At 667,400 tons the quantity shows a growth of 59,800 tons, but the difference appears to be accounted for by the inclusion of low-grade material formerly unpayable. To this may be, in part, attributed the shrinkage of 1.6 dwts. to 23.1 dwts. in the average value. As regards the prospects for the current year, it may be taken that the decline in the value of the ore reserves will be more than counterbalanced by the gold premium. The latter in December contributed nearly £23,000 towards the total net profit of £58,000. The Ashanti is taking a leading part in the financing of the resuscitated Bibiani, which is considered by the joint consulting engineer to possess the "makings of a mine."

Mining Trusts and Depreciation.—The annual statements of two mining finance concerns issued during the past week exhibit the feature of substantial realised profits swallowed up by depreciation on investments. In the case of the Fanti Consolidated, the revenue exceeded the 1930 total by £28,600, the sum of £44,450 being this time contributed by the difference on realisation of investments as against nothing previously. But the net profit of £70,200, together with the small balance brought forward, and £10,000 from reserve, falls to be applied towards depreciation on holdings. The latter still figure at £531,600, against a valuation of £467,900. In respect of 1930 a dividend of 6d. per 8s. share was disbursed. The principal changes in the portfolio comprise a substantial reduction in the amount of African Manganese debenture stock and of South-West Africa shares; the acquisition of £25,000 Rhodesian Anglo-American debentures, and an increase in the number of Bwana M'Kubwa and "Chartered" shares. In the case of the second undertaking—the Rand Selection Corporation—the operating profit amounts to £150,400, a decrease of £88,600 on the year. Taxation calls for only £3,070, against £29,800; but a further £200,000 falls to be written off the shares of interests held. This rather more than

wipes out the year's earnings, together with £42,500, the balance of the share premium account, leaving £92,500 to go forward, or £10,200 less than brought in. The balance sheet at September 30th shows surplus assets to the tune of about a million and a half; but the amount of actual cash is negligible. The chief interests of the Corporation are in the Eastern Rand gold-mining enterprises, De Beers and the Diamond Corporation of Rhodesia. The first-named are faring pretty well; but the rest are under a cloud. In respect of 1929-30, a dividend of 10 per cent. was paid.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies: Barclays Bank, Barclays Bank (Dominion, Colonial and Overseas), Alexanders Discount, Union Discount Company of London, National Building Society, British American Tobacco, S.T.D. Motors, Michael Nairn and Greenwich, Liebig's Extract of Meat, and British American Tobacco. Presiding at the annual meeting of Alexanders Discount Company, Mr C. F. Campbell said that since the abandonment of the gold standard high money rates had naturally been followed by a heavy fall in the price of gilt-edged securities, so that the position of discount companies had not been easy. The one redeeming feature had been the better margin they had obtained between money rates and bill rates in the second than in the first six months of the year. At the annual meeting of the National Building Society, the chairman said he was proud to know that, whereas two years ago the National was among the first twelve of the fifty larger building societies, it was now the fourth, having total assets of £17 millions. Reference is made to the meeting of the British American Tobacco Company in a Note on page 190 of this issue.

CAPITAL ISSUES.

A single public issue has been made this week, on behalf of the *Mauritius Government*, in the form of a 5 per Cent. Stock repayable 1951-71, and offering, at the issue price of 98½, a running yield of £5 1s. 6d. per cent. and a yield, presuming redemption on the latest date, of £5 1s. 9d. per cent. The proceeds are to be used for reconstruction of property damaged in the hurricane of March last. The loan is fully guaranteed by the British Treasury, and, as a trustee issue, offers an attractive yield, even at the present depressed level of Gilt-edged prices. Its amount, being relatively small, was actually subscribed between three and four times, and dealings opened at par to a small premium.

Mauritius Government.—Issue of £600,000 5 per cent. guaranteed stock, 1951-71, at £98½ per cent. The principal and interest is guaranteed by the British Treasury. If not previously redeemed, the stock will be repaid at par on August 1, 1971, but the Mauritius Government reserve the right to redeem the stock at par, in whole or part, on or after August 1, 1951, on three months' notice. The issue is made to provide funds for the reparation of hurricane damage.

Particulars of the following have been issued "for information only" with a view to Stock Exchange introduction. **Herts and Essex Waterworks Company.** Particulars of £25,000 5 per cent. debentures, redeemable at par on January 1, 1962, or at the option of the company on or after January 1, 1957, at par on six months' notice.

Further Stock Exchange information, including the latest summary of balance sheets, traffic returns, reports and notices, profit and loss accounts and dividend announcements, will be found on page 209 under the heading "Company News."

OIL OUTPUTS.

BRITISH CONTROLLED OILFIELDS, LTD.—Production for the week ended January 13th: Venezuela, 29,073 barrels; Trinidad, 37,516 barrels; total, 66,589 barrels.

THE MEXICAN EAGLE OIL COMPANY, LTD.—Production for the week ended January 9, 1932, was 234,000 barrels.

TAMPICO OIL, LTD.—The total production on the company's properties in Mexico during December was 17,944 barrels, in respect of which the royalty due to Tampico Oil, Ltd., amounted to 1,346 barrels.

TRINIDAD LEASEHOLDS, LTD.—Oil produced during September, 18,600 tons; oil purchased during September from other companies, 55,550 tons. Oil produced during October, 16,550 tons; oil purchased during October from other companies, 64,300 tons. Produced during November, 13,050 tons; purchased during November from other companies, 45,900 tons. Produced during December, 13,650 tons; oil purchased during December from other companies, 47,200 tons.

VENEZUELAN OIL CONCESSIONS, LIMITED.—Production for the week ended October 24th was:—Bolívar District, 81,399 m. tons; Maracaibo District, 9,578 m. tons; total, 90,977 m. tons. Production for the week ended November 7th was:—Bolívar district, 84,529 m. tons; Maracaibo District, 8,627 m. tons; total, 93,156 m. tons. Production for the week ended November 14th was:—Bolívar district, 82,917 m. tons; Maracaibo district, 9,396 m. tons; total, 92,313 m. tons. Production for the week ended November 21st was:—Bolívar District, 83,333 m. tons; Maracaibo District, 8,838 m. tons; total, 92,171 m. tons. Production for the week ended November 28th was:—Bolívar District, 84,341 m. tons; Maracaibo District, 8,351 m. tons; total, 92,692 m. tons. Production for the week ended December 5th was:—Bolívar District, 85,800 m. tons; Maracaibo District, 7,844 m. tons; total, 93,644 m. tons. Production for the week ended December 12th was:—Bolívar district, 84,671 m. tons; Maracaibo district, 8,019 m. tons; total, 92,690 m. tons. Production for the week ended December 19th was:—Bolívar district, 82,111 m. tons; Maracaibo district, 8,737 m. tons; total, 90,848 m. tons. Production for the week ended January 2nd was:—Bolívar district, 84,538 m. tons; Maracaibo district, 7,825 m. tons; total, 92,363 m. tons. Production for the week ended January 9th was:—Bolívar District, 84,678 m. tons; Maracaibo District, 7,562 m. tons; total, 92,240 m. tons.

.COMPANY MEETINGS, &c.

BARCLAYS BANK LIMITED.

YEAR OF WORLD WIDE DEPRESSION.

MAINTENANCE OF DIVIDENDS.

THE GERMAN DEBTS.

INTERNATIONAL TRADE AND TARIFFS.

GREAT BRITAIN AND OVERSEAS INVESTMENTS.

The thirty-seventh ordinary general meeting of the shareholders of Barclays Bank, Limited, was held, on the 21st instant, at Southern House, Cannon Street, London, E.C.4, Mr Frederick Crauford Goodenough (the chairman of the bank) presiding.

The Chairman, who was received with cheers, said:—My Lords, Ladies and Gentlemen,—I will call upon the secretary to read the notice convening the meeting and the certificate of the auditors which appears at the foot of the balance sheet that has been submitted to you.

The Secretary (Mr W. N. Seeley) then read the formal notice convening the meeting and the report of Messrs. Kemp, Chatteris, Nichols, Sendell and Company, and Messrs Price, Waterhouse and Company.

The Chairman: My Lords, Ladies and Gentlemen,—I propose with your permission to take the report and accounts as read. (Agreed.)

Before I proceed to deal with the ordinary business of the meeting, I wish to make special reference to the very sudden death of the deputy-chairman, Sir Herbert Hambling, Bart., which occurred on Tuesday morning last without warning of any kind. We all have a feeling of profound regret at the loss which we have sustained, but all those who knew him will feel thankful that he was spared any suffering or illness. Sir Herbert Hambling rendered great service to the bank as deputy-chairman during the last thirteen years, since he joined our board upon our taking over the London Provincial and South Western Bank. He was a man of great ability and experience as a banker, and he had a remarkable career, having entered the London and South Western Bank at the bottom of the ladder when he was a boy, and, subsequently, made his way to the position which he lately held. He gained well-earned distinctions through the services which he rendered during and since the war. He was a man of very lovable character, and, speaking on my own behalf and that of my colleagues, we greatly deplore his death.

I wish, also, to refer to the retirement of Sir James Smith, who decided to relinquish his seat on the board, as well as the chairmanship of our local board at Birmingham, on the ground of advancing years. His decision has been received with great regret, and I desire to place on record our appreciation of his valuable services to the bank, both in Birmingham and in London.

Mr William Henry Wiggin, D.S.O., has succeeded Sir James Smith as chairman of the local board in Birmingham, and we have also elected him to a seat on the board; his name will be duly submitted to you for confirmation.

I am also pleased to inform you that we have appointed during the year two additional general managers, namely, Mr Anthony William Tuke and Mr Norman Shillingford Jones.

THE PROFIT AND LOSS ACCOUNT.

As you will see from the report and profit and loss account in your hands, the net profit for the year ended December 31st last amounted to £1,794,825 4s., to which has to be added the sum of £559,363 12s. 6d. brought forward from the preceding year, making a total sum to be dealt with of £2,354,188 16s. 6d. During the first half of the year the profit earned by the bank was a somewhat low figure, but in the latter half the position in that respect was more satisfactory. This has enabled us, after providing out of the profits of the year for all debts considered to be doubtful and not already fully provided for in previous years, to make an addition of £200,000 to our contingency account and at the same time to maintain our dividend. The directors declared interim dividends of 10 per cent. per annum on the "A" shares and 14 per cent. per annum on the "B" and "C" shares, less income tax, for the half-year ended in June last, and they now recommend to the shareholders the payment of final dividends at the same rates on the respective classes of shares. Out of the profits for the year, therefore, after making these appropriations, there remains a balance of £565,950 0s. 5d. to be carried forward, which is slightly more than the amount brought in from 1930. Taking the results of the year as a whole, I think that the shareholders will feel that

these have been very satisfactory, and they would have been even better but for the need of making large provision for doubtful accounts.

The shareholders will notice that in respect of the interim dividend, the bank is bearing the cost of the extra 6d. in the £ in income tax, imposed in the supplementary Budget in September last.

All debts known to be bad have been written off, either out of the profits earned during the past year or out of profits which had been set aside in previous years to provide for the debts now written off, which were then considered to be doubtful, and, in addition, all debts now considered to be doubtful have been amply provided for.

THE INVESTMENTS.

The investments of the bank stand in the balance sheet at or below their market price on December 31st last, full provision for depreciation having been made out of the investment reserve account. After a setback in February, there was a substantial rise during the early part of the year in the market price of British Government securities and gilt-edged investments generally, largely as the result of the low rates then prevailing for money, and this gave us a large unrealised margin between the market value and the book value of our holdings. In the latter part of the year, owing to sales which took place from abroad and to the altered monetary conditions, there was a heavy decline in these securities, and a depreciation between the book value and the then market value of our investments. This depreciation, as I have already stated, has been met out of investment reserve account, to which we have credited for many years past the profits realised on sales of investments from time to time, as well as profits on maturing bonds as they were paid off. The shareholders will recollect that in the years 1925 and 1926 we added substantial amounts to the reserve fund out of investment reserve account.

PREMISES ACCOUNT.

I will now refer to the premises account, which stands in the balance sheet at the sum of £6,749,581 1s. 10d., being an increase of £429,434 18s. 10d. as compared with a year ago. This increase is due to the acquisition of new premises in many localities, chiefly in and around London, where we have found it necessary to open new branches for the purpose of following the development of business in those parts. It also includes a portion of the cost of the alterations and extensions now being made to our head office buildings, to which I referred in my speech to the shareholders a year ago. Part of the outlay has been added to the premises account, and a substantial portion has been written off out of profits. We have also added to the premises account the cost of the freehold of certain other portions of our head office premises, which we considered it advisable to purchase, and it is our intention shortly to rebuild on those portions. Some of this rebuilding will be paid for out of profits and the balance will be added in due course to the premises account, which will therefore show a further increase at the end of this year. Our head office premises stand in our books at a safe figure, and the premises account, taken as a whole, represents a very conservative valuation.

The shareholders will realise from what I have just said and also from my remarks on previous occasions, that in addition to setting aside to investment reserve account special profits of the character which I have mentioned, we also constantly make transfers out of the ordinary banking profits for the purpose of creating reserves to meet bad and doubtful debts and other contingencies. It is, of course, understood that dividends can only be paid out of the profits of the year after making provision for losses and depreciation out of profits or reserves. I think that it will be agreed that many of the assets of a bank are liable to fluctuate in value with the credit of its customers, and, in the case of investments, with market conditions, so that it is essential that a bank should build up and maintain strong reserves. I feel confident that the shareholders will fully

endorse the policy which the directors have consistently maintained, both in regard to dividends and also reserves, which policy, I venture to think, has fully justified itself in the difficult times through which we are now passing.

THE GERMAN DEBTS.

I wish to refer, at this stage of my remarks, to the German debts, in which we, in common with other banks all over the world, are interested. We hold certain Treasury bills issued by two of the States in Germany, where we have important banking connections. These bills will certainly, in our opinion, be paid, although the repayment will be delayed, owing to the difficulty of obtaining the necessary foreign exchange, which is one of the chief problems of the Reichsbank at the present time. In addition to these bills, we have granted accommodation on ordinary banking lines to some of the leading German banks and to a few private firms for trade purposes between the two countries. There is apparently an idea that the banks in this country have lent large sums of money to Germany for purposes of development of one sort or another and often unwisely. I do not think that such is the case. So far as we ourselves are concerned, with the exception of the Treasury bills mentioned, all our advances are granted solely for financing trade. We feel confident that these debts should be regarded as good, and that they will be liquidated in due course as soon as the exchange difficulties have been overcome, whatever may be the result of the forthcoming negotiations in regard to German war debts. Should, however, the German position turn out badly, which we do not anticipate, then, besides our reserve fund, we have other substantial surplus reserves sufficient to meet any contingency that might occur.

THE WORLD FINANCIAL CRISIS.

I will now refer to the long series of catastrophic events which occurred during the past year in many widely different parts of the world, and to the effect which they have had upon the general economic situation and upon the conditions in the London Money Market. There have been banking failures in many countries, the suspension of payments by Governments, currency and credit difficulties, and, in more than one instance, a moratorium for the payment of commercial and financial debts, besides other disturbing factors of a far-reaching character, unprecedented in number and magnitude.

I will not attempt to enumerate these events in detail, they being already a matter of common knowledge.

So far, however, as the London Money Market is concerned, in the first half of the year, money was, on the whole, plentiful and the Bank of England Rate, which, at the commencement of 1931, was 3 per cent., was reduced in May to 2½ per cent., whilst the Bank of England's stock of gold was substantially increased. In July, a rapid change occurred, and a feeling of nervousness and want of confidence led to very large withdrawals of gold, mainly to France, but also to other countries, where banks were taking steps to strengthen their liquid resources. As a result of these losses, the Bank rate was raised to 4½ per cent. by July 30th last. The inability of the Reichsbank to provide exchange for the repayment of German commercial and financial foreign debts, which eventually led to the conclusion of the Moratorium for short-term obligations, had the effect of holding back payments due from Germany in the ordinary course of business. The reaction of these developments on other centres, including the shortage of money through the non-receipt of German payments, caused a selling of sterling securities, which always have a ready market, and the consequent fall in the price of British Government securities was probably one of the reasons for the lack of confidence in sterling, which was accentuated by the serious budgetary position disclosed by the Report of the Committee on National Expenditure. An attempt was made by the British Government and the Bank of England to strengthen the position of sterling, with the help of credits arranged in Paris and New York, but, ultimately, on September 21st last, the Gold Standard was suspended and the Bank of England rate was increased to 6 per cent. with the object of checking inflation and any speculative tendency in industrial securities. Before the end of the year, however, the Bank of England was very helpful towards making comfortable conditions in the Money Market by buying bills. Several other countries have since adopted a similar decision to ourselves and have suspended the Gold Standard, partly with the object of protecting themselves against any undue loss of foreign trade, owing to the altered economic situation. These countries include Northern and Southern Rhodesia, Sweden, Norway, Denmark, Finland, Portugal and Japan, whilst many parts of the British Empire, the currencies of which had been already based on sterling, followed Great Britain. In many other countries the exchange regulations are so drastic that their currencies cannot be considered to be effectively on the Gold Standard.

SOUNDNESS OF BRITISH BANKS.

The foregoing remarks give a brief outline of the many difficulties which have been encountered and have had to be dealt with during the past year, and I think that it may be regarded as a matter for congratulation that British Government securities did not suffer an even greater depreciation than actually happened, as the result of the heavy sales that took place from abroad. There is no doubt that the ready marketability of sterling securities throughout this period of crisis proved a most remarkable and satisfactory feature. I think also that the strength, reliability and soundness of the British banks may be regarded as having been an important factor in the situation, enabling them not only to meet the requirements of the crisis, but also to stretch out a helping hand in many directions, both at home and abroad, which was of immense service to the country at that time.

The immediate cause which brought about this chapter of disasters has been undoubtedly the fall in gold prices of commodities, and it is possible that this fall may now be checked as the result of so many countries having been driven off the Gold Standard. The fundamental causes, however, are to be found in the problems of tariffs and the payment of War Debts and Reparations, which latter are about must soon be again considered at an International Conference. In this regard, there is good ground for hope, owing to the fact that there is now a much wider understanding and appreciation on the part of all Governments concerned, of the issues which are involved, and this understanding has undoubtedly produced a much better feeling between them. There is certainly a great desire on the part of the American and French Governments to endeavour to solve the problems so as to meet the situation and to help to restore the world as a whole to a sound economic basis. I feel satisfied myself that it is the desire of the French Government to co-operate in this important matter, although they have naturally their own interests to consider. If France should see her way to make a gesture to the world as great as that contained in the Balfour Note, it would, in my opinion, lead the world a long way towards the settlement of its economic problems. Having regard to existing tariff barriers, full payment under the Young Plan is clearly impossible of achievement, and, therefore, any final settlement must involve goodwill and sacrifice.

THE BRITISH TRADE POSITION.

I will now turn to our trading position, which is of special interest, owing to the recent changes in our economic situation as the result of the suspension of the Gold Standard, and of the alteration in our fiscal system. It will be understood that in the case of the latter, there has not yet been sufficient time for the full effect to be ascertained. The tendency will obviously be to curtail imports. In regard to the former, some benefit has accrued to certain industries as the result of the depreciation of sterling, but it has been less than was anticipated, due partly to the high tariffs and other restrictions imposed abroad and partly to the departure of other countries from the Gold Standard. There has been a considerable improvement in the cotton and woollen industries and in certain other directions, assisted, to some extent, by the political differences between China and Japan and the boycotting of Japanese goods by the former. There have also been signs of somewhat greater activity in internal trade, accompanied by a reduction in unemployment, and altogether there is generally a rather more hopeful feeling in regard to the outlook.

Speaking in terms of value, imports and exports for the year 1931 were substantially lower than for the preceding year, but the falling off in the value of the exports was much more pronounced than in the case of the imports. The lower level of prices, particularly of imports, was an important cause of this decline, which is confirmed by the statistics prepared by the Board of Trade, which show that the volume of imports was slightly greater than in 1930; on the other hand, the volume of total exports was about 21 per cent. lower. The reduction in exports in both value and volume is not surprising when we remember the almost prohibitive tariff barriers and other restrictions which have been raised by certain countries, with the object of excluding the entrance of foreign-made goods. The existence of these tariff barriers, especially those erected by creditor nations, also explains, in part, why the volume of our imports has been maintained at so high a figure. Many debtor countries, in order to obtain funds for the settlement of their international obligations, have been compelled to use every endeavour to sell their goods abroad, and as, until recently, Great Britain was the most important free trade country, their efforts have been mainly concentrated upon British markets. Instead, however, of using the sums received from the sale of these goods in the purchase of commodities from Great Britain, they have expended them in satisfying the debts due to other foreign creditors, largely because the latter have been unwilling to accept payment in goods and have established trade barriers. The general fall in prices has added greatly to the burden of all debtor countries, whose

commitments of principal and interest payments have been thereby greatly increased in terms of goods, and this has been an additional cause of the high level of imports sold in British markets. Moreover, it is important to understand how imports have been stimulated by the inflation of credit arising out of too large a fiduciary issue. As a result, much harm has been done to our industrial interests, and an immense amount of money has thereby been lost.

TARIFF BARRIERS.

I think it is necessary to realise the extent to which the difficulties of all kinds which are now experienced in the settlement of international debts have been caused by the tariff barriers imposed by creditor nations, and why it became necessary, in many instances, to restrict the free import of foreign goods into this country, for it was essential that, to meet the exigencies of the moment, we should safeguard our own interests and prevent the exploitation of our market by other countries to the detriment of ourselves. It becomes increasingly clear that, looking to the future, it would be wholly impossible to substantial reparation and war debt payments to continue to be made otherwise than in goods, which must therefore be allowed free access to the creditor countries (which have hitherto been receiving payment largely in gold) for their own use and consumption.

Setting aside the considerations of the moment, it is evident, from the position to which international trade has been reduced during the last two years, that the traditional free trade policy of Great Britain as a great creditor nation was justified, and that the unreasonably high protectionist attitude adopted by other creditor nations is doing immense harm. To-day many debtor nations are in actual default, whilst others are only meeting their engagements with great difficulty. These developments are due, to a considerable degree, to the unwillingness of certain of the principal creditor countries of the world to accept payment in the only form in which debts can now be paid, that is to say, in goods. The alternative method, of making payment in gold, has become virtually impossible, owing to a very large part of the available stocks of monetary gold being now concentrated in the hands of the United States and France. Unless some means can be found for gold to be circulated more freely it would seem that gold to be circulated more freely, it would seem that gold will no longer be capable of being put to its normal use as a basis of currency and credit and as a measurement of world prices. In that case, gold will lose its value and those countries must inevitably be faced with enormous losses.

INDUSTRIAL AND TRADING INTERESTS.

It is now more generally recognised that the industrial and trading interests of the world are better served by the greatest possible encouragement being given to the exchange of goods for goods, and that there is little advantage to be gained by accumulating balances abroad repayable on demand or short-notice, as distinct from permanent investment. In many cases, such short-term lending has given rise to much difficulty whenever the lending country decided to withdraw its balances. On the other hand, permanent investment of a sound character is greatly needed. In any circumstances, it would be in the interests of international trade that there should be a general reduction in tariffs, and this might even extend eventually to the tariffs imposed or about to be imposed on some imports into this country, although safeguards should be continued to avoid Great Britain again being exploited through foreign goods being thrust upon us below the cost of production. The ties of Empire could, no doubt, be strengthened to a considerable extent by the granting of some preference in certain articles to the great advantage of the Empire, the peoples of which receive so much benefit from the community of ideas and interests and also banking and financial facilities, which give opportunities for extending greater preference even than tariffs. It would also be an advantage if the war debts and reparations, which have no commercial value behind them, could be satisfactorily dealt with, as this would lead probably to a re-distribution of gold to form the basis of fresh currency and credit. Then should follow an automatic rise in prices of commodities, which would help the return to normal conditions, and to a situation in which all the peoples of the world would be in a position to trade freely with each other, which is in the best interests of mankind. The recognition and application of these facts, particularly by certain of the principal creditor Powers, would soon lead to a real and permanent improvement in international trade.

GREAT BRITAIN AND TARIFFS.

Although, for the reasons I have given, a tariff system in Great Britain may prove unavoidable for a long time to come, care should be exercised in the imposition of duties, and their effects will have to be carefully watched, as indiscriminate use of them would do us

an immeasurable amount of harm. The necessity for avoiding the creation of any obstruction in the way of our debtors and our customers discharging their obligations to us must be borne in mind, and, whenever possible, we should exert our full influence in the direction of reciprocal action for the removal of trade barriers, so as to stimulate the exchange of goods for goods, which is the essence of international trade. The size of the population of this country and our dependence upon overseas supplies make it essential for our own prosperity to have a large and growing export trade.

OVERSEAS INVESTMENT.

Our policy in the past towards our debtors has been not merely to accept goods from them in payment of the amounts due to us, but we have also provided facilities through the London money market, whereby long-term credit could be obtained by overseas borrowers, whenever it was justified. We therefore utilised our favourable balance of trade for the development of other and more backward parts of the world, to the mutual advantage of both borrowers and lenders, the investment in itself providing the means of meeting the interest, and, ultimately, of repaying the loan. The favourable trade balance was the result of our exports, together with our large net earnings in the nature of "invisible" receipts, proceeding from shipping, foreign investments, and financial and other services, exceeding our imports. The decline in the income from these invisible receipts, which formerly enabled us to invest large sums abroad, is a contributory cause of the present widespread depression and the absence during the past two years of such large sums as we were in the habit of investing for world development and new enterprise has undoubtedly had a far-reaching and paralysing effect. It is only through a return to the fuller measure of international trade that the revenue from these sources can be regained. Until that takes place, the need by overseas countries of a continuous supply of fresh capital for development will certainly make itself felt, and this will, in turn, react upon industry, not only in this country, but also elsewhere. It is to our own interests, as well as to those of the rest of the world, that we should rapidly regain the ability to make these investments overseas, which have been one of the greatest fertilising influences on the world's economic system, as well as an important factor in building up our position as a great industrial nation.

INTERNAL AFFAIRS.

Turning to our domestic affairs it will be generally acknowledged that the Report of the Committee on National Expenditure has done untold good by bringing the country face to face with incontrovertible facts in regard to our own position. I think that the evils of inflation are clearly recognised and the connection between the volume of currency and credit on the one hand, and prices and costs of production on the other, is more generally appreciated. There is ample evidence to show that the workmen and workwomen of this country are the most capable in the world, and that they have only to be given a chance under sound economic conditions to prove their skill and ability and to secure a market for their output. It must, however, be realised that it is essential, in order to achieve success, that the level of wages and other costs of production according to the quality of the goods produced must not differ widely from the corresponding level in other countries, leaving it to the skill and energy, which we certainly possess to a greater degree than any other people, to give us the advantage in the markets of the world.

We have experienced a great amount of unsound economic argument during the last thirteen years, which has largely arisen from a desire to find a short and easy road to prosperity before the actual foundations of our financial structure had been made good, following the world shocks and dislocations due to the war. Many of the suggestions made have been based upon methods of inflation, but I believe that there is now a much clearer understanding as to our real needs. There is also a greater realisation of the fact that it is essential to economise and to save wherever it is possible to do so without unduly restricting public or private expenditure of a productive and profitable character.

A HOPEFUL OUTLOOK.

There has been a great cry regarding the disinclination to work, which it is claimed exists in many directions, but I do not myself believe that much fault can be found in this respect. On the contrary, I believe that the desire to work has been both genuine and great, and that it has only been the lack of opportunity which has prevented work being done. This lack of opportunity to work has been due, in part, to the failure of the resources for world development which this country used consistently to earn and to invest abroad, and which opened up fresh markets for industry and trade. It has also been due to the foreign tariffs, which, by some means or another, must be reduced in the interests of the whole world. The adverse effects of these foreign tariffs upon world

trade are now making themselves increasingly felt and are being understood. If they can be reduced and if war debts and reparations can be dealt with, I feel that the two principal causes of the present depression will have been removed, and that we may then confidently look forward to a period of increasing prosperity. (Applause.)

I now beg to move:—"That the report of the directors produced, together with the annexed statement of the company's accounts as at December 31, 1931, duly audited, be received, approved and adopted, and that a final dividend at the rate of 10 per cent. per annum on the 'A' shares and 14 per cent. per annum on the 'B' and 'C' shares, less income tax, be declared, payable on the 1st proximo, to the shareholders registered in the books of the company on December 31 last." I will now call upon Mr W. Favill Tuke, the vice-chairman, to second that resolution. (Applause.)

THE LATE DEPUTY CHAIRMAN.

Mr W. Favill Tuke (vice-chairman): My Lords, Ladies and Gentlemen,—Before seconding the resolution I should like to associate myself with the chairman's warm words of appreciation of our late deputy-chairman's services to the bank.

I feel that the shareholders would like to hear the few remarks which the late Sir Herbert Hambling had prepared, and which he would have made to you had he been able to be present himself to-day. I will therefore read to you some notes which he wrote on Monday night last.

In rising to second the resolution moved by the chairman, I feel sure that it is your wish that I should congratulate him on his masterly and able address. In dealing with the figures for the past year he has explained item by item with great clearness and, if I may say so, the result, after a year of depression unequalled in my memory, is remarkable. You are getting the same dividend as in the past two years, the bank's investments are standing at a figure exceeding £60,000,000 written down at or below market price; bad and doubtful debts are amply provided for, leaving your reserves practically intact and the earning capacity of the bank unimpaired. More than ordinary praise is due to our chairman for the way he has navigated our bank through the troubled waters of 1931. I do not intend to say more than a few words, but I ask you carefully to study the chairman's address, which is both logical and convincing.

Settle the question of war debts and reparations. Do all that is possible to foster world trade by pulling down the high tariff walls and let loose the hoarded gold, or it will suffer the fate of any other commodity that is kept too long, rot and lose its value; if this could be done we should soon be on the high road to better times."

Those are the words that our late deputy-chairman left behind him when he passed away on Tuesday morning. I now beg to second the resolution that is before you.

SHAREHOLDERS' CONGRATULATIONS.

Mr E. T. Hargraves, after congratulating the chairman on his address, said he thought that it would be an excellent thing for this country if Chancellors of the Exchequer dealt with the national funds in the way in which the chairman and his colleagues had dealt with the funds of Barclays Bank, for they would never be guilty of not balancing their balance sheet and would never be guilty of spending capital as though it were income. Every politician could with benefit, he thought, have in front of him where he could always see it, the maxim "Whatever is economically unsound is politically inexpedient."

Mr D. M. Evans Bevan, after also expressing the shareholders' appreciation of the chairman's speech, which, he said, gave more than a glimmer of light upon the reasons for the impregnable position in which the bank found itself in spite of the severe depression experienced in all parts of the world, added that they all trusted that Mr Goodenough might be blessed with good health to preside over the destinies of the bank for years to come. He felt he must associate himself with the sentiments which had been expressed by the chairman upon the lamentable death of their deputy-chairman, Sir Herbert Hambling. At a time of stress such as the present, the benefit of so experienced a hand would have been of great value in steering them through the difficult times ahead. Sir Herbert Hambling had rendered most valuable service to the bank over many years, and his presence and wise words at their annual meetings would be much missed.

In the past Great Britain had been widely known as "A nation of shopkeepers," and British goods had been sold in every corner of the earth. In recent years, however, this country had not secured its full share of the volume of world trade, and, in some markets, had been outstripped by its competitors. As H.R.H. the Prince of Wales had plainly told the nation we must recapture the courage and enterprise of those great merchant adventurers of

the past, not, perhaps, by using their weapons, but by employing those more fitted for the work we now had to do.

He could speak with some little knowledge of one of our great industries—the coal industry. That industry had suffered severely in the post-war years as the result of the operation of factors outside its own control, and he felt that until it was revived the country would never recover its old-time prosperity. He was in entire agreement with the chairman when he stated that in this country the desire to work had been both genuine and great. He was daily in close contact with many workmen in one branch of the coal industry, and he declined to believe that they preferred to draw unemployment pay rather than to secure honestly-earned wages. Speaking of trade generally, he thought it behoved the country not to rely altogether on traditions, but to equip its industries, whether manufacturing or extractive, in the most modern and scientific way possible, so that it might compete successfully in the world's markets. He felt that our future prosperity depended very largely on sound finance and upon enterprise, both of which, working together, could bring progress.

MISTAKEN CRITICISM.

He felt that the tendency recently to criticise the policy of the banks had been unjustified and had arisen largely through lack of knowledge. It was certainly significant that the advances of their bank at the end of December last showed an increase of £2½ millions in comparison with the figure of a year earlier. He was sure he was voicing the unanimous opinion of the shareholders in offering to the chairman and the board of directors, as well as the management, their deepest gratitude for the care and assiduity which they must have exercised to produce such results, and he congratulated them most heartily upon the reward of their magnificent efforts. As to the staff, he could not imagine a more willing, helpful and efficient body of officials than the bank possessed. The attention given to every detail of a business men's requirements was beyond praise, and the goodwill thus engendered undoubtedly reflected itself in the ever-increasing number of customers who desired to place their financial affairs in its hands.

SUGGESTED CUSTOMS UNION.

The Right Hon. Lord Amulree, P.C., Q.B.E., said that they had listened to a striking address from the chairman. Bad as trade was it might have been worse. We had a narrow escape last autumn. The chairman had spoken of the soundness of British banks. That soundness was indeed remarkable, and the more so when we recollected what had happened to many banks in other countries. The chairman had also spoken of the ties of Empire being strengthened by granting some preference in certain articles to the great advantage of the Empire. He would remark that the time had come when we should devote more attention—business and political—to the affairs of our own Empire and less to the politics of Europe. We had within our Empire markets which were capable of great expansion and steady development, and the suggestion of the chairman was a step in the right direction. But it was only a step. In this hour of our distress we must seize every opportunity to extend our trade. A preference with the Dominions was right, but we should go a step further with our Crown Colonies. We should embrace them all—Great Britain and the Colonies—in one Customs Union, so that there would be free, unrestricted trading between the Mother Country and her Colonies. We had unrestricted trading within Great Britain; let us have it within Greater Britain. This was a business problem rather than a political one, and he would suggest that business men should give it their attention and consideration. He would like to draw attention to what the chairman had said about war debts and reparations, and to express the hope that the postponed Conference would meet at an early date and that some satisfactory readjustment would be brought about.

Mr Frederick Tomkinson thanked the chairman for his lucid and admirable speech, and associated himself with the remarks of the chairman regarding the loss they had sustained in the death of Sir Herbert Hambling.

The Chairman, after thanking the speakers for their references to himself and the board, reminded Lord Amulree that the bank, by establishing their Dominion, Colonial and Overseas Bank not only in certain Dominions but also in the Colonies, were contributing very largely in the direction of fostering the interchange of goods between the Colonies and the Mother Country which he so much desired to see. They looked upon that as being a definite step in the promotion of trade between the various parts of the Empire and the Mother Country.

The resolution was then put to the meeting and carried unanimously.

RE-ELECTION OF DIRECTORS.

Mr W. Favill Tuke then proposed:—"That Mr Cosmo Bevan, Mr Henry Anthony Birkbeck, M.C., Sir Frederick Charles Bowring, Mr Frederick George Hugh Clayton, Sir James Fortescue Flannery, Bart., Mr Frederick Craufurd Goodenough, Mr Follett Holt, Sir William Edgar Nicholls, Colonel the Right Hon. Lord Rochdale, and Mr William Henry Wiggin, D.S.O., the retiring directors, be re-elected directors of the company."

Mr. H. E. Seeborn seconded the resolution, which was carried unanimously.

The Right Hon. Lord Ebbisham, G.B.E., proposed the re-appointment of Messrs Kemp, Chatteris, Nicholls, Sendell and Company and Messrs Price, Waterhouse and Company as auditors.

Mr E. T. Hargraves seconded the motion, and it was unanimously adopted.

TRIBUTE TO SIR HERBERT HAMBLING.

Lord Ebbisham said that he was sure there was no one in the hall who had not been deeply touched by the references of the chairman and Mr Favil Tuke to the late Sir Herbert Hambling. He felt his death very much indeed, as he was a great personal friend whom he had known for over forty years. The reason he was making these remarks was that a letter had been received from a shareholder suggesting that the shareholders at the meeting might care to pay a tribute to their late deputy-chairman by subscribing for a wreath and that any funds remaining should be devoted to the Bank Clerks' Orphanage, an institution which Sir Herbert Hambling had very much at heart.

Mr Hargraves supported the suggestion, and the Chairman, on behalf of himself and his colleagues, associated himself with the proposal and commended it to the meeting.

THANKS TO THE GENERAL MANAGERS AND STAFF.

Lt.-Col. E. H. W. Bolitho, D.S.O., said that it was a very great pleasure to him to have the honour of proposing a vote of thanks to the staff. They had heard during the last hour the manner in which that great ship their bank had been navigated through very troubled waters. However brilliant a skipper might be, unless the officers and crew pulled together the ship got nowhere. The general managers—the officers of the ship—had been on watch many, many hours more than they had ever had to be before. The crew had pulled together, and they were what he believed all seamen wanted more than anything else—a very happy ship. He therefore begged formally to move "That the cordial appreciation and thanks of the shareholders be given to the general managers and the whole of the staff for the manner in which they had carried out their duties during the past year."

Mr J. H. Simonds seconded the motion, and it was carried unanimously.

A BIG ASSET.

Mr H. T. Mitchell (one of the general managers), in acknowledging the vote, said that in anxious and uncertain times one could generally find reassuring features which allayed to some extent any misgivings caused by adverse circumstances. Such a feature, to his mind, was present on this occasion in the fact that the shareholders appreciated that amid all the fluctuations of our commercial life one thing was stable and unchanging, and that was the quality of the staff of the bank. (Hear, hear.) The unflagging energy and the constant loyalty with which the staff performed their duties at all times, whether those times were easy or difficult, constituted an asset of the bank which was not affected by changing conditions. The possession of that asset had been a source of satisfaction in the past; it was a matter for congratulation in the present, and it was also, he ventured to think, a justification for feelings of confidence in the future. (Hear, hear.) The shareholders' recognition of that as signified by the resolution they had just passed, was a great incentive and a distinct encouragement to every member of the staff. (Applause.)

THANKS TO THE CHAIRMAN AND DIRECTORS.

Lord Amulree proposed a vote of thanks to the chairman and directors, which was seconded by Lord Ebbisham and carried unanimously.

The chairman having replied on behalf of himself and his colleagues, the proceedings terminated.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8, Bouverie Street, Fleet Street, London, E.C.4.

MICHAEL NAIRN AND GREENWICH, LIMITED.

GRATIFYING RESULTS—DIVIDEND MAINTAINED.

The tenth annual general meeting of the shareholders of Michael Nairn and Greenwich, Limited, was held, on the 18th instant, at Winchester House, Old Broad Street, London, Sir Michael Nairn, Bart. (chairman of the company), presiding.

The Chairman, in moving the adoption of the report and accounts, having referred to the loss the board had sustained by the recent death of Mr Andrew Sherran Thomson, said:—"When I addressed you at our annual meeting last year I referred to the difficult trading conditions which existed in the years 1929 and 1930, and while making no attempt to forecast the future I suggested then that the immediate business outlook was not encouraging. That has, unfortunately, proved to be correct and is fully confirmed by the experience of virtually all industrial companies in this country to-day. It was only to be expected that in the year now under review the trading results of our associated companies would be adversely affected. The balance sheet of the Greenwich Inlaid Linoleum Company, Limited, has already been published. The profits were reduced, as compared with those of the previous year, and a lower dividend paid, but the balance sheet disclosed a strong financial position, and as one of the directors of that company you may accept my assurance that when trade conditions revive, the modern works at Greenwich are well equipped to take the fullest advantage of the first signs of returning prosperity."

THE ASSOCIATED COMPANIES.

So far as the Australian company—a subsidiary company of Michael Nairn and Company, Limited—is concerned there is nothing special to say at the moment. You all know the prevailing economic conditions there, and the difficulties connected with exchange. It is clear, however, that the Commonwealth Government are making the most resolute efforts to get the country back on a sound financial basis, and those best qualified to judge are satisfied that ere long that desired result will be achieved. I mention last, but not least, our principal associated company—Michael Nairn and Company, Limited. They also have had to face heavy weather in 1931, but have stood up to the storm successfully and find themselves in the position to pay us out of the earnings in their last financial year a rate of dividend which enables this company to declare the same dividend as last year. I feel sure that our shareholders will regard this as an extremely gratifying result. The dividend declared by Michael Nairn and Company, which is a private limited company, was decided upon after proper provision had been made by them for depreciation and various forms of reserves. I have pointed out before, and at the risk of repetition I venture to mention again that the Nairn Company has, from the point of view of finance, been managed along strictly conservative lines, and it is the intention of the directors of that company to adhere to that policy.

THE FUTURE.

It is as difficult as ever to say anything definite about the future. The cloud of trade depression still hangs over the world, and no country remains unaffected by its influence. It cannot, however, last for ever, and, unfortunate as its effects have been, it is bringing home to many the much-needed lesson of the essential interdependence of the nations of the world. No nation can live to itself or long remain prosperous if other nations find themselves in financial and economic difficulties. It is not too much to hope that the realisation of this fact may eventually bring about an enlightened policy which will result in removing some of the obstacles such as reparations and international war debts, which definitely stand in the way of progress and the trade revival of which the world stands in such urgent need. I do not wish to labour this point, but I refer to it because, in my opinion as a business man, it is a most important element in the present international situation, which has such a direct bearing on world trade generally.

I referred last year to the question of national and municipal expenditure, and suggested that it was absolutely essential for our country to adopt a policy of rigid economy. A step has undoubtedly been taken in that direction by the National Government, and I sincerely hope that the policy of economy will be continued. It is only the ruthless cutting down of unnecessary expenditure which will restore the prestige of the pound sterling among the currencies of the world and pave the way for that expansion in industry which means so much to us as a manufacturing country.

The report and accounts were unanimously adopted, and the formal business having been transacted, a vote of thanks to the chairman, directors and staff terminated the proceedings.

BARCLAY'S BANK (DOMINION, COLONIAL AND OVERSEAS).

WORLD-WIDE DIFFICULTIES.

The sixth ordinary general meeting of Barclays Bank (Dominion, Colonial and Overseas) was held, on the 21st instant, at Southern House, Cannon Street, London, E.C.

Mr Frederick Craufurd Goodenough, who presided, said:—"Before I proceed to deal with the ordinary business of the meeting, I wish to refer, with deep regret, to the great loss which the bank has sustained in the sudden death of Sir Herbert Hambling, Bart., our deputy-chairman, which took place on the 19th instant."

Sir Herbert Hambling has held the position of deputy-chairman of our bank since the year 1925, when the present company was formed, and prior to that date he was a director of the Colonial Bank, now incorporated with our bank. He has rendered valuable service to the bank, and we shall feel very greatly the loss of his sound judgment and wide experience, which were of great benefit to us at all times.

I wish to refer also to the loss sustained by the bank through the death of Mr John Emrys Evans, C.M.G., which occurred at Cape Town in November last. Mr Emrys Evans was the vice-chairman of the South African local board, and his services were of great value to the bank in South Africa.

Mr Edwin Fisher, a general manager of Barclays Bank Limited, has been elected to a seat on our board, and you will be asked to confirm his election in accordance with the articles of association.

Mr Charles Norman Lewis, formerly chief agent in East Africa, has been appointed as a local director for that territory. In this position he will have more time than hitherto in which to visit the various branches and localities where we are interested, and he will be able, therefore, to give more active supervision to our East African business, which, I may add, is making steady progress.

BALANCE SHEET

Turning to the balance sheet, it should be remembered, when comparing the figures with those of the previous year, that a considerable proportion of our business is transacted in South Africa. The assets and liabilities in that country which are in South African pounds, have therefore been converted into sterling at the rate of exchange current at the date upon which the balance sheet was made up, namely, September 30, 1931. This involves an increase, when expressed in pounds sterling, of both liabilities and assets in South Africa, with the exception only of the bank's premises there, which have not been written up.

This adjustment to sterling value explains the increase in the total figures at September 30, 1931, which exceed £79,000,000, as compared with £74,000,000 in 1930. It also accounts for the increase in current and deposit accounts from £62,000,000 to £68,000,000. At the same time, it should be mentioned that as the result of the decision of the Government of the Union to remain on the gold standard, the balances with the banks in South Africa have been considerably reduced, and there is no doubt that money has been transferred out of the country during the past four months with the object of securing conversion into sterling. The amount of the notes in circulation shows some reduction, at £781,000 as against £918,000, whilst on the assets side, cash in hand, at £13,600,000, shows an increase of approximately £1,800,000, but by money at call, at £2,075,000, is less than in the previous year by almost £1,000,000. Bills discounted amount to £13,000,000, against £14,000,000, and this reduction indicates the shrinkage in the value and volume of the commodities which are being financed by the bank. Advances total £29,000,000, an increase of £4,000,000, which is partly explained by the conversion from South African pounds into sterling already referred to. I may mention that the normal credit requirements of our customers have not been curtailed.

INVESTMENTS

Investments show an increase of £1,539,000 and stand at £14,509,000. I wish to draw your attention to the note in the profit and loss account that depreciation upon these investments has been provided out of our reserve for contingencies. The bank's investments are almost entirely in securities of the British, Dominion or Colonial Governments, and a large proportion are short-dated. These securities have been taken in the balance sheet at the value on September 30th last, since which date, however, there has been some appreciation in value.

The "bank premises account" during the year ended September 30, 1931, has been increased by £148,000 to £2,235,000. The increase represents necessary items of expenditure, and I would refer particularly to the rebuilding of our local head office in Cape Town. We hope that these new premises will be completed during the present year.

PROFIT AND LOSS ACCOUNT.

The net profit for the year ended September 30, 1931, after making full provision for bad and doubtful debts, amounted to the sum of £402,753, being £63,000 less than in the preceding year. In view of the further fall in commodity prices and the world-wide depression in business, we consider that the earnings of the bank may be regarded as satisfactory, especially in view of the fact that during the greater portion of the year our liquid funds have been employed at lower rates of interest than has been the case for several years past.

Having regard to the very conservative policy which we have consistently followed since the bank was formed, both in the matter of reserves and of dividends, the board have decided to recommend the payment of dividends at the same rates as for last year.

An interim dividend on the "A" and "B" shares at the rate of 4½ per cent. per annum, was paid in July last. It is now proposed to pay a final dividend on these shares at the rate of 5 per cent. per annum, and in the case of both "A" and "B" shares the final dividend will be subject to deduction of income tax at 4s. 2d. in the £. The final dividend on the preference shares will be subject to deduction of income tax at 4s. 8d. in the £.

You are, of course, fully aware of the difficult conditions by which business has been affected in almost every country in the world during the past year, arising chiefly from the continued fall in commodity prices. These difficulties have been experienced in all the territories in which the bank is established. I have referred to the present world economic situation in the speech which I have delivered earlier to-day at the annual general meeting of shareholders of the parent company.

Of those countries in which Barclays Bank (Dominion, Colonial and Overseas) is particularly concerned, perhaps the Union of South Africa was the least affected during the early part of the year by these unfavourable conditions, but latterly there has been a contraction in the export trade and in business generally. In order to assist the South African exchange position in providing cover for remittances, we agreed to join with the Reserve Bank and the Standard Bank of South Africa in the formation of an exchange pool. The Union Government are confident that, with this assistance, the exchange position will be successfully met, and they are also confident that they will find no difficulty in continuing on the Gold Standard and that the interests of the exporters, as well as of business generally, will not suffer in the long run.

APPRECIATION OF STAFF.

The board desire to record their very cordial recognition of the services rendered to the Bank by its local boards, which have resulted in the adequate protection of the bank's resources with the continuance of reasonable credit facilities. They also wish to express their appreciation of the loyal support of the staff throughout the bank during a period of great difficulty, which has called for unremitting attention.

A summary of conditions which have prevailed in the various areas in which the bank is established will be circulated for the information of shareholders, together with a copy of the report of proceedings at this meeting, and of my address to the shareholders of the parent company.

The chairman concluded by moving the adoption of the report and accounts.

Mr R. H. Foa seconded the resolution.

The resolution was carried unanimously.

The retiring directors, Mr C. F. Wood, Mr G. C. Cassels, Mr F. C. Goodenough and Mr Edwin Fisher were re-elected.

SHAREHOLDERS' THANKS.

The Rt. Hon. Lord Ebbisham, in proposing the reappointment of the auditors, Messrs. Deloitte, Plender, Griffiths and Company, Messrs. Price, Waterhouse and Company, Messrs. Peat, Marwick, Mitchell and Company, and Messrs. Cooper Brothers and Company, said that he would like to take the opportunity of expressing the appreciation of the shareholders of the interesting address of the chairman. The chairman and the board were to be congratulated on the success which they had achieved.

Dr H. L. Carre-Smith seconded the resolution, and it was unanimously approved.

The Rt. Hon. Earl Buxton, G.C.M.G., proposed a vote of thanks to the staff. Sir Harold E. Snagge, K.B.E., seconded this vote and it was unanimously accorded.

Sir John Caulcutt (general manager) thanked the mover and seconded for their appreciative remarks and the meeting for the manner in which those remarks had been received. The year under review, he said, had been one of many difficulties, requiring the closest attention on the part of the managers and the staff generally. Loyalty and zeal had been shown by all.

A vote of thanks to the chairman concluded the meeting.

ALEXANDERS DISCOUNT COMPANY, LIMITED.

SATISFACTORY RESULTS DESPITE YEAR'S DIFFICULTIES.

WORLD CRISIS AND ITS EFFECTS.

MR COLIN F. CAMPBELL'S REVIEW.

The sixty-fourth ordinary general meeting of shareholders of Alexanders Discount Company, Limited, was held, on the 20th instant, at the office of the company, 24, Lombard Street, London, E.C.

Mr Colin Frederick Campbell (the chairman of the company) presided.

The Secretary (Mr P. C. Tong) having read the notice convening the meeting and the auditors' report,

The Chairman said:—Gentlemen,—I assume you will take the report as read as usual? (Agreed.)

When we last met we little anticipated that the year 1931 was to witness a financial crisis of the magnitude of the one we are now experiencing. Indications then pointed to a period of cheap money, and we were mainly concerned with the narrow margin existing between money and bills. At that time, however, even the most optimistic of us had some misgivings. We certainly felt anxious about the continued strain on the sterling exchange, and we were beginning to realise the dangerous situation which the payment of war debts and reparations was eventually bound to bring about. At the same time, we hoped that we could weather the storm in view of the position of our national finances in comparison with that existing in other countries, and more especially the vast resources of this country. It is true that our national finances were far from what they had been, but, when the danger was realised, energetic and satisfactory steps were taken to place our Budget position on a sound basis.

The depression in our export industries and the world fall in prices, however, continued, and, with no improvement in sight, confidence gradually declined. Business enterprise was greatly discouraged and such conditions caused money to flow into gilt-edged securities, resulting in material rises in Treasury bonds, which are specially attractive to the discount market.

CONDITIONS IN GERMANY.

The first real shock came in May, when it was announced that Austria's leading bank, the Credit Anstalt, was in difficulties. Lack of confidence throughout the world was thereby intensified, and one of its earliest reactions was felt in Germany. The credit crisis which had been simmering there since the elections in September, 1930, came to a head, and an unparalleled situation faced not only Germany but the whole world. A gleam of hope appeared in June when President Hoover made his great suggestion of a year's moratorium in respect of war debts. For various reasons this welcome gesture did not afford the measure of relief anticipated, and those foreign banks which had granted credits to Germany had no alternative but to agree to an extension of their credits for six months; otherwise Germany would have been bound to take the disastrous step of an open default. The Standstill Agreement expires on February 29th, and we are now awaiting with no little interest the results of the negotiations which are taking place in Berlin.

ABANDONMENT OF THE GOLD STANDARD.

You are only too familiar with the events of the summer months—how the crisis in Germany was followed by a lack of confidence on the part of the Continent in the financial stability of this country; the heavy withdrawals of foreign funds from London; the efforts and failure to support the exchange rate with the help of the French and American credits, culminating on September 21st in the suspension of the gold standard. This outstanding event was forced on us by the withdrawal of foreign funds from London. It is estimated that over £200,000,000 was withdrawn before the suspension, and that possibly a like amount still remained in this country. No gold standard system could withstand this strain.

The abandonment of the gold standard, of course, means that we are faced again with a period of fluctuating exchange rates, which in itself is bound to create anxiety and uncertainty. I will not dwell at length on such a vast and far-reaching subject as the working of the gold standard, but I should like to say that there is no comparison between conditions in this country arising from the important step we took in September and those which existed a few years ago in Germany, France and other countries when their exchange rates moved so adversely to them. The position here is quite different. The exchange rate of those countries reached such high figures owing to inflation, whereas in this country the internal value of the £ has been steadily maintained. As long as we are able to maintain this value the future can be faced with the highest degree of confidence.

These events, of course, led to higher money rates; Bank rate was raised from 2½ per cent. to 3½ per cent. on July 23rd, a week later to 4½ per cent., and on September 20th to 6 per cent., the rate now in force.

High money rates have naturally been followed by a heavy fall in the price of gilt-edged securities, so that our position, like that of other financial institutions, has been by no means an easy one. The one redeeming feature has been the better margin we have obtained between money rates and bill rates than existed during the first six months of the year.

What the future may bring forth no one can tell, but I have every confidence that a solution of our present financial difficulties will be arrived at.

COMPANY'S LIQUID POSITION.

Our own position is quite liquid; our securities, amounting in all to £5,139,220, consist wholly of short-dated bonds of the British and Indian Governments, of which 60 per cent. fall due within two years and the balance within five years. In our bill case the total amount of foreign domiciled bills is insignificant, the bulk being Treasury bills and first-class London acceptances.

The experiences of the last few months have possibly revealed some defects in our financial system and methods of business in London. Independence and individuality, which have been for so long characteristics of the British nation and which have played so large a part in making London the financial centre of the world, have probably been too much to the fore. In view of the developments in other countries this independence becomes a danger, and I feel sure that in future it will be necessary to maintain a closer co-operation between those who control the world of finance in London.

PROFIT AND LOSS ACCOUNT.

If we turn now to the statement of accounts, which has been sent to every shareholder, you will notice in the first place that a slight change has been made in the way the profit and loss account has been set out. This is due to the company's auditors having expressed the view that, in their opinion, the change would state the position a little more clearly.

The alteration has reference to the figure of rebate, which in past years has appeared on the debit side of the account, whereas you will see it is deducted now from the gross profit on the credit side of the account. You will also observe a note to the effect that the gross profit includes surplus on rebate at December 31, 1930, now taken credit for. This implies no change in our procedure as compared with past years, for the figure shown year by year as rebate in the profit and loss account has always included a surplus with fluctuates according to the Bank rate ruling at the end of any one year. This year, notwithstanding the high Bank rate, there is a margin in the rebate carried forward.

It is elementary, and indeed obvious, that when the Bank rate is low the surplus is greater than when the Bank rate stands at a higher figure.

VALUE OF THE SECURITIES.

The next matter to which I have to draw your attention relates to our securities and the manner in which we have dealt with the depreciation. The cost price of the securities amounted in all to £5,139,220 and, as I have already stated, they consist wholly of short-dated bonds of the British and Indian Governments, of which no less than 60 per cent. fall due within two years and the balance within five years. The market value of these securities on December 31st last was £4,995,235, so that there was a depreciation of £143,985 to be dealt with.

It could be done in several ways and your directors had to decide which, in all the circumstances, was the better course to adopt. Had the investments included War Loan or long-dated British Government securities we should have written off the amount of the depreciation definitely, but, inasmuch as the depreciation is recoverable in any case within a few years, we considered we were justified in looking upon it as being a temporary matter and that the position would be fully secured by earmarking £150,000 from the published reserve fund of £1,000,000.

Since December 31st a considerable rise in the value of short-dated securities has taken place, and to-day the depreciation on

those we hold is less by 75 per cent. than it was on that date, which in itself is an encouraging feature. (Hear, hear.)

That is to say, if you take the depreciation at £140,000, £109,000 has been recovered if you take to-day's valuation.

We could, of course, have drawn upon our contingency account and the balance in our profit and loss account for this purpose, but, in view of all the uncertainties, both political and financial, existing at the present time, we were determined to maintain these resources intact.

Before leaving this question of the published reserve, shareholders will no doubt remember that when the capital was increased in 1930 £425,000 was added to the reserve fund, thus bringing it up to £1,000,000, being the same amount as the capital.

THE DIVIDEND.

The gross profit for last year was £470,022, against £474,421 in 1930, and, after providing for the dividend which we now suggest to you, the balance to be carried forward to the next account is £62,784, against £60,396, being an increase of £2,388.

On this occasion we suggest to the shareholders that the bonus of 1s. per share, free of income tax, which has been paid for a number of years in addition to the dividend of 15 per cent., less income tax, should be dropped, and we feel sure that this policy of caution will be approved of by shareholders generally.

This company has made steady and consistent progress during recent years, which is due in great measure to a conservative and cautious policy having been maintained, and certainly this is not the moment to make any departure from it.

The total balance-sheet figures of about 29 millions show little change from those of a year ago, and the profits of the business continue to be satisfactory, so that whenever the situation appears to the directors to be more established there is no reason to suppose that the return to the shareholders will be less favourable in the future than has been the case in the past.

CLEARING HOUSE FIGURES.

The transactions of the London Bankers' Clearing House for last year give a striking illustration of the depression in trade and of the stagnation in the new capital market. The clearings were £36,236,000,000 in 1931, against £43,558,000,000 in 1930, showing a drop of over £7,000,000,000, or 16.8 per cent. Each of the eleven provincial clearing houses showed a decrease, the highest falling off recorded being in the Nottingham figures, with a reduction of 25.3 per cent. The new capital issues amounted only to £102,000,000, against £267,000,000 in 1930.

I have already given you the changes that took place in the Bank rate during the course of last year. The average rate for money was £3 3s. 11d., against £2 10s. 2d. in 1930, and for bills £3 10s. 4d., against £2 12s. 7d., and the margin between money and bills during the year averaged 6s. 4½d., against 2s. 5d. in 1930.

I hope the shareholders will be satisfied with the statement we have been able to place before them to-day, and that they will agree with the directors that very great credit is due to Mr Newcomb and those working with him for the way they have managed the business in a year of unexampled difficulty. (Cheers.)

If anybody has any questions to ask before I propose the adoption of the report and accounts, I shall be pleased to answer them.

THE RESOLUTION.

I now beg to propose:—"That the report and accounts be received, adopted and entered on the minutes, and that dividends for the half-year ended December 31st last be declared at the rate of 6 per cent. per annum on the £200,000 preference capital, and at the rate of 15 per cent. per annum on the £800,000 ordinary capital, both less income tax, payable on and after the 21st instant, and that the balance of £62,784 6s. 11d. be carried forward to next account." I will ask Sir Austin Harris to second that resolution and after that, if any shareholder wishes to ask any questions, I will endeavour to answer them before putting the resolution.

Sir Austin E. Harris, K.B.E.: I beg to second the resolution.

The Chairman: If there are no questions to be asked, those in favour of the resolution will please signify by holding up their hands; on the contrary; that is carried unanimously. The next resolution is for the re-election of directors and, as I retire, I will ask someone else to propose the resolution.

RE-ELECTION OF DIRECTORS.

Sir Austin Harris: I beg to move: "That Mr Colin Frederick Campbell and Mr Frank Newcomb be re-elected directors of the company."

Mr George C. Alexander: I have pleasure in seconding that.

The Chairman: Those in favour; on the contrary; carried unanimously. Thank you, gentlemen. I now ask a shareholder to move the reappointment of the auditors.

Mr E. D. Spring-Rice: I have pleasure in moving: "That Messrs Price, Waterhouse and Company be reappointed auditors of the company at a fee of 300 guineas."

Mr S. Herbert Alexander: I am very pleased to second that.

The Chairman: That has been proposed and seconded. Those in favour please hold up their hands; to the contrary; that is carried unanimously, and that, gentlemen, concludes our business for to-day.

VOTE OF THANKS.

Mr Herbert Alexander: Gentlemen, I should like to propose a vote of thanks to our chairman and directors, especially, if I may say so, to Mr Newcomb, for the very able way in which they have carried on the business during a most difficult time. I also wish to include the staff, who, I am sure, have done much to bring about the satisfactory results. (Hear, hear.)

Mr E. B. Baggallay: I should like to second that. (Applause.)

The Chairman: Gentlemen, on behalf of the directors and myself and also on behalf of Mr Newcomb and the staff I am extremely obliged to you for this indication of your confidence. I can only hope that the year 1932 will not be quite so troublous as the year 1931. (Hear, hear.)

The proceedings then terminated.

UNION DISCOUNT COMPANY OF LONDON, LIMITED.

A MOST EVENTFUL AND DIFFICULT YEAR.

SIR WILLIAM GOSCHEN ON THE OUTLOOK.

The seventy-fourth ordinary general meeting of the shareholders of the Union Discount Company of London, Ltd., was held, on the 21st instant, at Southern House, Cannon Street, London, E.C., the Hon. Sir William H. Goschen, K.B.E., presiding.

The Secretary (Mr C. W. Holliday) having read the notice convening the meeting and the auditors' report,

The Chairman said: Gentlemen,—I presume that you will take the accounts as read. I think that you will agree with me that the past year, which we are now reviewing, has been the most eventful year in the post-war monetary history of the whole world.

ABANDONMENT OF GOLD STANDARD.

The outstanding fact that will remain in our memories is that we witnessed the breaking down of the attempt which was made in 1925 to restore the monetary system to a gold basis. What we know as the gold standard was abandoned on September 21st last. The preceding months had all tended towards this breaking point.

The serious trouble began in May, when the failure of the Credit Anstalt became known, only to be followed by the Danat Bank suspension, and the German banking crisis in July. At this time foreign banking centres began to draw on their London balances, as fears arose that difficulties might be put in the way of the withdrawal of funds in case of need.

During July the bank lost 30 millions of gold, and the bank rate rose to 4½ per cent. So events passed rapidly on to the historic September 21st, when the bank rate rose to 6 per cent. and the pound fell to a discount of about 20 per cent.

A RETURN OF CONFIDENCE.

The formation of the National Government brought about a return of confidence, but the gravity of the situation in Central Europe, and the immobilisation of funds under the "stand still" arrangement, narrowed business down to a very considerable degree.

November showed a further depreciation in currency, and money became tight until the payment of the War Loan dividend, which was not re-invested to the usual extent but was kept in readiness for income-tax payments.

The year closed in an atmosphere of doubt and wonderment as to what the solution of the pressing problems might be.

This survey of the year, necessarily short as it has had to be, has reminded you of the abnormal difficulties which we have had to encounter.

BALANCE-SHEET ITEMS.

Proceeding now to our own account: Our capital and reserve remain at £3,000,000, as in 1930.

Our loans, deposits and other liabilities, and provision for contingencies at December 31st, were £30,300,271, against £47,521,082 at December 31, 1930.

Bills re-discounted were £9,480,539, against £15,527,440 at December 31, 1930. Rebate on bills discounted was £600,567, against £678,183.

On the other side of the balance sheet, cash in hand stands at £1,086,835, comparing with £1,350,870.

Our holding of British Government, India Government and other securities is £5,992,400, against £8,601,575. Loans on securities at call and short dates and other accounts were £212,007, against

£516,521. Bills discounted were £42,311,352, against £56,595,142. Debtors were £124,539, against £22,389.

We show freehold and leasehold premises at £75,000, the same figure as last year.

Coming to the profit and loss account, the items of directors' fees and current expenses, taken together, are £80,598, against £79,037. The rebate of £600,567 I have already referred to.

THE RISE IN BANK RATE.

The necessity for any provision for writing down our short-term securities was caused by the unprecedented rise in bank rate from 2½ per cent. to 6 per cent. in five months, and you will see from the inserted note that this depreciation has been met by contingency accounts (which were created for this very purpose), and partly out of profits made during the year.

As the average maturity date of these short-term securities of ours is well under two years, when these bonds are due for repayment at par most of the depreciation provided should then be set free again for protective purposes in the future, and obviously any reduction in the present bank rate of 6 per cent. would have an immediate effect in bringing the prices of these securities nearer to their redemption value.

The appropriation account becomes credited with the balance from profit and loss account, viz., £203,856, and to this has to be added the balance of undivided profit from the previous year, which was £299,656, which gives a total of £503,512, the allocation of which is as follows:—

	£
Trustees of the provident fund.....	10,000
Interim dividend paid in July	72,656
Proposed dividend for the final half-year at the rate of 15 per cent. less income tax	70,312
Bonus of 2s. 6d. per share, less income tax	46,875
Balance to be carried forward	303,668

This carry-forward compares favourably with the £299,656 of last year.

THE DIVIDEND.

I might add that the rate of distribution you will receive for the year is not 15 per cent., but actually 15½ per cent., as the company itself has borne the additional income tax of 6d. in the £, subsequently imposed, in respect of the interim dividend paid in July.

In reviewing the operations of the year, I should like to call your attention to the fact that, while the stock of bills on hand at December 31st last shows a reduction of £8,237,000, as compared with December 31, 1930, the turnover in bills in 1931, notwithstanding this reduction, was practically unchanged with that during 1930.

This, gentlemen, is an account of our stewardship, and I hope that you will think that, under the circumstances, the account is not unsatisfactory.

THE CURRENT YEAR.

So far as our own country is concerned, the present year opens on a much more solid foundation for building hopes of better times than was the case a year ago.

It is true that, from an international banking point of view, the London market has temporarily suffered a reverse by being driven off the gold standard. But that event may prove to be the turning point in our overseas trade relations, particularly with our own kith and kin.

It is to be hoped that the unique opportunity which the Conference at Ottawa affords this summer will be fruitful in results to ourselves and the Dominions.

With our overseas trade increased and in equilibrium once more, the old supremacy of the London market will follow as a matter of course, for its prestige and efficiency have never really been in dispute.

The report and accounts were unanimously adopted.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper Ltd.,"
8, Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

Address.....

LIEBIG'S EXTRACT OF MEAT COMPANY, LIMITED.

TRADE WELL MAINTAINED.

The sixty-seventh annual general meeting of Liebig's Extract of Meat Company, Limited, was held, on the 21st instant, at Southern House, London.

Mr Kenneth M. Carlisle (Chairman and Managing Director) said that the world's commerce and industry in general had been passing through a period of severe deflation of values, and this circumstance was reflected in a reduction in the total figures of the balance sheet. The reduction arose partly from their policy, in a period of declining prices for produce, of reducing their stocks both quantitatively and in valuation, and partly from the manner in which they had dealt with the situation arising from the heavy depreciation in the value of the Argentine currency, which had necessitated a transfer from reserve of £476,689.

Since the close of the financial year, however, there had been a considerable improvement in the quotation of Argentine currency in terms of sterling, so that a substantial proportion of the allocation made might to-day be regarded as unnecessary. They had also made a special transfer from reserve of £173,310 to meet the depreciation in market value of stocks, and the provisions they had made allowed them to go forward and face the future with a strong balance sheet. The financial and cash position, he was pleased to say, was in a very sound and satisfactory state. The profit and loss account showed a balance available of £283,077, as compared with £368,390 for the previous year, and the directors recommended a final dividend of 5s. per share, free of income tax, carrying forward £183,077.

POPULARITY OF COMPANY'S PRODUCTS.

The trade in their proprietary lines had not only been well maintained, but had in certain cases shown an encouraging increase, thus testifying to the high popularity in which the company's products were held by the consuming public. This feature, which applied both at home and in certain of their overseas markets, could be viewed with no small degree of satisfaction, having regard to the effect of industrial depression on the purchasing power of the people.

Prices for hides, tallow and other of their by-products had recently shown some tendency to improve, and, although they had since again declined, he hoped they would show some improvement in the future, thus allowing the cattle producer a reasonable return for his labours. The farming branch of their enterprise in the River Plate had been conducted under favourable conditions in respect of weather and grazing, but the low range of values prevailing for all farm produce had not been conducive of profitable returns from their estancias. The marketing of stock from their ranches in Southern Rhodesia had undergone a decline, reacting adversely on the year's results.

It was a hazardous venture in these times of economic disequilibrium and uncertainty to embark upon any forecast, but there were certain features which gave them cause to be of good heart. Some comfort could be derived from the knowledge that the numbers and quality of their breeding herds and flocks were well maintained; the producing capacity of their lands was unimpaired; and the industrial efficiency of their factories and selling organisations was as good as, if not better than, it had ever hitherto been.

They were engaged in production of some of the most primary necessities of civilised man, and when the barriers to the free exchange of commodities were removed they could look forward with confidence to enjoying a fair share of the increased trade which would follow the restoration of more prosperous conditions. The trade in their proprietary articles of long standing afforded every sign of being well established on sound foundations; the sales of last year and those in the current financial year would appear to add weight to this assumption. Owing to the drastic writing down, their trading stocks figured at values which, unless a further heavy decline in the price-level supervened, should leave a satisfactory margin of profit.

In "Oxo" they had what had become a household word throughout the length and breadth of the land, and its users were numbered by the million. This magic word spelt food in a concentrated and nourishing form which, in the guise of the Oxo cube, was within the purchasing capacity of all at a penny and was handy, requiring no expenditure of time or trouble in its preparation.

In conclusion the Chairman expressed the hope that some settlement of the difficulties and restrictions which clouded and hampered the conduct of international trade and payments might not be beyond the wit of statesmen to devise, so that the return of confidence which was so essential to pave the way to a general recovery might ease their path in this new year.

The report was unanimously adopted.

BRITISH-AMERICAN TOBACCO COMPANY, LIMITED.

RESULTS OF A DIFFICULT YEAR.

INDIA'S GOLD STANDARD—SILVER FACTOR.

SIR HUGO CUNLIFFE-OWEN ON POSITION AND PROSPECTS.

The twenty-ninth annual general meeting of British-American Tobacco Company, Limited, was held, on the 18th instant, at the Registered Offices of the Company, Westminster House, 7, Millbank, London, Sir Hugo Cunliffe-Owen, Bt. (the chairman), presiding.

The notice convening the meeting was taken as read, and the assistant secretary (Mr E. A. Blockley) read the certificate of Lord Plender, of Messrs. Deloitte, Plender, Griffiths and Company, chartered accountants.

The Chairman, in the course of his address, after referring with deep regret to the death of Mr J. D. Gilliam, a deputy chairman, said: Ladies and Gentlemen, Taking the assets side of the balance sheet first, you will observe that the item of real estate and buildings at cost less provision for amortisation of leaseholds, £912,621, shows an increase of £33,172, as compared with last year. Plant, machinery, furniture and fittings at cost or under, £769,200, shows a decrease of £117,322. This decrease is due to the transfer of certain machinery to a subsidiary company and the writing off of certain obsolete machinery. Goodwill, trade mark and patents remain at the same figure as last year, viz., £200,000, and in view of the great value of the company's trade marks, the directors remain of the opinion that this item should appear on the balance sheet even if only at the nominal value of £200,000. Investments at cost or under in (1) shares in subsidiary companies, £17,982,033; (2) shares and bonds in associated companies, £4,114,487; and (3) Dominion Government and other investments, £582,865, making a total of £22,679,386, shows an increase over last year of £704,505, and is the largest item on the assets side. This increase is accounted for by the increase in Dominion Government and other securities of £567,000, there being small increases of £85,000 and £52,480 in investments in subsidiary and associated companies respectively. Loans to and current accounts with your (1) subsidiary companies (less provision for doubtful accounts), £4,742,558, show a decrease of £201,675, and (1) associated companies (less provision for doubtful accounts) £2,093,878, show a decrease of £450,331. The combined loans and current accounts with subsidiary or associated companies show a decrease of £652,006. Stocks of leaf, manufactured goods, and materials at cost or under now stand at £6,739,287, a decrease of £1,377,959. This is mainly accounted for by the fact that we have replaced our usings of tobacco at lower prices. I may mention that our stocks of leaf are in excess of the stocks held last year. Sundry debtors, less provision for doubtful debts, and short loan deposits (£1,400,000) stand at £2,532,989, showing a decrease of £1,135,786, of which £500,000 is in respect of short loan deposits. Cash at bankers, in transit and at call, £5,886,298, as compared with £4,479,773 under this heading last year, shows an increase of £1,406,525. This increase is reflected in the decreased value of our leaf.

LIABILITIES.

Turning to the liabilities side of the balance sheet, the issued capital of £4,500,000 5 per cent. preference stock, £8,000,000 6 per cent. second preference stock, and £23,582,761 ordinary stock remains the same. Creditors, i.e., subsidiary companies, £2,197,544, associated companies, £1,632,456, and other creditors, £4,181,684, making a total of £8,001,684, represents an increase of £1,412,421. The greater portion of these balances consists of provision for payment of taxation due to British, Dominion and foreign Governments, and moneys deposited by your subsidiary and associated companies.

Employees' Benevolent Fund.—This consists of the £100,000 allocated at the general meeting held in 1930, plus the balance of the amount of interest received on this money, after charging the payments made to employees during the year.

The item of reserves for buildings and machinery now stands at £600,000, an increase of £25,000.

Premium on ordinary stock issued remains at £580,808, the same figure as last year.

Provision for redemption of coupons now stands at £81,312, an increase of £16,643.

Special reserve remains at £1,924,070. As your chairmen have stated in speeches in previous years, this account was created in which to carry profits of a capital nature.

NET PROFIT.

Profit and loss account. The accounts show a net profit for the year, after deducting all charges and expenses and providing for income tax, of £5,334,448, a decrease of £1,167,112, which under the very exceptional world conditions I trust you will find satisfactory. Last year we carried forward a balance of £1,800,144. To

this must be added the profits for the year as previously mentioned, £5,334,448, less the dividend on the 5 per cent. preference stock of £225,000, on the 6 per cent. second preference stock of £360,000, and the four interim dividends paid on the ordinary stock for the year, amounting to £3,930,460, leaving a disposable balance of £2,619,132, out of which the directors recommend the distribution on January 25 of a final dividend (free of British income tax) on the issued ordinary stock of 8d. per £1 of stock, amounting to £786,092, leaving £1,833,040 to be carried forward. The only other item I need refer to is the note with regard to a contingent liability of £669,874 8s. on shares not fully paid. There is no likelihood of any further calls being made on these shares, anyhow for the present.

DIFFICULT YEAR.

When I had the pleasure of addressing you last year—what I will term the storm of depression—was just about hitting us, and I thought it my duty to paint the picture to you as I then saw it and to sound a warning note as to the future. From a world tobacco manufacturing point of view, I do not remember a more difficult year than that which has just closed. The economic depression has continued with unabated severity practically everywhere, and Governments all over the world faced with deficits have, I regret to say, as is their custom, sought what looked to be the easiest way out of replenishing their revenue, and placed additional taxation on cigarettes. There have been more changes in this one year in taxation of cigarettes than I ever remember in any similar period. Governments, however, are beginning to realise that they cannot tax cigarettes appreciably more than other forms of tobacco without jeopardising the growth of the cigarette business and finding in the end that they get less revenue from a higher tax. Then, again, we have been hit by fluctuations in exchange, which were much worse during the year we are now reviewing as regards sterling than they are at the present time. In the last month of the financial year are at the present time. In the last month of the financial year consequence, in terms of sterling, the currencies of most countries where we sell our goods have improved in value.

EFFECT OF INDIA GOING ON GOLD STANDARD.

The prices of all commodities which the company uses, including leaf tobacco, have fallen very substantially. Our largest purchases of tobacco are made in America, but we buy very substantial supplies from other countries whose exchange has not been affected by our having gone off the gold standard. With regard to America I may say that at the time of our abandonment of the gold standard we were rather particularly well supplied with dollars. As you see by the balance-sheet figures we have ample cash resources to meet any expansion of business if and when opportunity arises. You will have noticed in the Press that there is a growing realisation in this country of the unfortunate results of India going on to the gold standard in 1927. We, as a country, with our export trade to Asia, and our enormous Eastern interests, have more to gain from stable silver at a reasonable price than any country in the world, and yet we have done more to ruin the price of silver than any other nation. Furthermore, the immediate result of India going on the gold standard was the dumping of enormous quantities of Indian surplus silver on the market, an example which was quickly followed by Indo-China, France, and in a lesser degree by other countries. The Indian peasants, whose savings have been in silver, have thus become impoverished, and our business is affected by their diminished purchasing power. The same is true of many other silver using countries.

SILVER FACTOR.

The Indian troubles are, I dare to say, very largely due to this one silver factor, and the drop in the general export business to China can also be laid at the same door. I cannot impress upon you too strongly that silver and its fair treatment is not only a matter of very great importance to you as stockholders in this company, but is of vital interest to you as British subjects.

No man to-day would, I think, dare to prophesy as to the future, but with a better world understanding of the causes of the frightful depression through which the world has passed, but which, I trust, is now lifting, I, personally, whilst, as I say, not daring to prophesy, do regard our prospects for the current year with a degree of cheerfulness that was lacking last year.

I now beg formally to move the adoption of the report and balance sheet for the year ended September 30, 1931, including the payment on January 25th instant of a final dividend of 8d. per £1 of stock upon the issued ordinary stock, free of British income tax. I may also mention that the directors have declared for the year 1931-32 an interim dividend of 10d. for £1 of stock, free of British income tax, also payable on January 25th, so that the stockholders will receive on that date 1s. 6d. per £1 of stock.

Mr S. J. Gilchrist (one of the deputy chairmen) seconded the resolution, and a cordial vote of thanks to the chairman, directors and staff terminated the proceedings.

S.T.D. MOTORS, LIMITED.**IMPROVED POSITION AND OUTLOOK.**

The twenty-sixth ordinary general meeting of S.T.D. Motors, Limited, was held, on the 8th instant, at Southern House, Cannon Street, London, E.C.

Sir Travers Clarke, G.B.E., K.C.B., K.C.M.G. (the chairman), said that in April last he had told the shareholders that the board had felt it to be necessary, in order to give shareholders a clear review of the whole financial position of their undertaking, that the financial years of the parent company and its subsidiaries should be made to synchronise. It was most important for shareholders each year to have a clear knowledge of the exact position, and, so far as S.T.D. was concerned, the board intended that there should be no uncertainties such as had been recently criticised as arising in the accounts of holding companies, but that shareholders should know the financial position in its totality. In future the accounts would cover the trading results of all the subsidiaries for a full twelve months.

The board wished that the report and accounts could have told of an immediate resumption of dividends commensurate with the past heavy sacrifices of the shareholders, but nevertheless the board asked the shareholders to believe with them that, taking into account various circumstances, the report and statement of accounts were by no means discouraging. They showed for the period under review a net loss of £4,753. After providing £58,000 for depreciation of investments in subsidiaries, a writing down which the board considered to be strictly necessary, there remained a small balance to carry forward.

With regard to the subsidiaries, there were nine trading companies, of which five had made trading profits in the period under review, and four losses. It was pleasant to learn that, in spite of adverse conditions, the Clement Talbot Company had come out on the right side. In the previous year only two subsidiaries had made a profit, so that, taking the position all round, a distinct ray of light was showing on the previous very gloomy horizon. He had said that the position in all the circumstances was not discouraging. First, they should consider the general trade position.

The company had ample proof that, as regards the Sunbeam and Talbot cars, they possessed assets with potentialities, both cars having an unsurpassed reputation as "quality" cars. He was not at all nervous that the mass production of cheap cars would have any permanently injurious effect on the production of the company's cars. Furthermore, the board were developing, and with some success, a constructive policy of seeking new outlets for the full productive capacity of the company's various plants.

The report and accounts were unanimously adopted.

APEX (TRINIDAD) OILFIELDS, LIMITED.**A HIGH RECORD OUTPUT.**

The twelfth ordinary general meeting of Apex (Trinidad) Oilfields, Limited, was held, on the 21st instant, at Winchester House, London.

Mr Walter MacLachlan (chairman and one of the managing directors) said that the net profit for the year was £188,390. That had been obtained in spite of the continued general fall in the market value of oil, mainly by reason of the increased production from their oil wells. They now proposed the payment of a final dividend of 12½ per cent., making a total dividend of 20 per cent. for the year.

The output for the year was 522,194 tons, which had been produced from 132 wells. That showed an increase of 97,000 tons over the previous year, and was thus a high record output for the property. The rate of production had followed the course of the natural development of the oilfield, and would have been greater had they not found it advisable to regulate the output in accordance with marketing conditions. It was their intention that the production for the current financial year should be maintained at approximately the same rate as that for the year under review, the necessary tonnage for which purpose was well assured.

The casing-head gasoline plant had been in operation since November, 1930, and the result of the first year's working had exceeded all the expectations which had attended its installation. Its production amounted to 889,700 gallons of high-grade petrol spirit, which had been mainly delivered under their contract with the United British Refineries. The results fully justified the extension of the plant which was now in progress, and should be completed within the next three months, when the gasoline production would be increased to between 5,000 and 6,000 gallons per day.

In accordance with their amortisation policy, £139,272 had been written off the wells during the year, and up to date 90 per cent. of the original cost of all their oil wells had been amortised. The

sound and satisfactory position of the company was to be directly attributed mainly to the amortisation policy which had been maintained since the commencement of the undertaking.

It was extremely difficult to give any serviceable expression of their views regarding the outlook for the current financial year. Overproduction, with resultant low prices for oil products, still dominated the position and, although efforts continued to be made to bring about a relief of the situation, it was hard to say whence and when that could be expected. However, with efficiency and economy in their operations, combined with the satisfactory financial position they had established, they continued to regard the immediate future with every confidence.

The report and accounts were adopted.

NATIONAL BUILDING SOCIETY.**FURTHER PROGRESS.****EXPANSION IN ALL DEPARTMENTS.**

The annual general meeting of the National Building Society, founded in 1849, was held, on Friday, January 15th, at Southern House, London, E.C.

Mr George Elkington, J.P., F.R.I.B.A. (the chairman), congratulated the members on an extremely satisfactory year's working, which, he said, had been marked by great, steady and continued progress in all departments despite the anxious and trying times through which the country was passing. The National, however, was not alone in its prosperity, for the building societies as a whole had done well during the past year. There had been a large increase in their assets and investment capital, the total assets, according to the published figures, amounting to £371,164,961 in 1930. During the recent critical period the English people had kept their heads, while millions of them, through the building societies, had also kept a roof over their heads and the wolf from the door.

TOTAL ASSETS £17,217,579.

He was proud to say that, whereas two years ago, among the fifty larger building societies in the United Kingdom, the National was in the first twelve, it was now the fourth. Its total assets were £17,217,579. Members' capital stood at £15,661,706, a net increase for the year of £4,424,216. Mortgage advances showed an increase of £1,881,352, the average loan made during the year having been approximately £700. The gross revenue amounted to £955,086, and, after providing for interest on completed and uncompleted shares at 5 per cent., free of income tax (equal to £6 13s. 4d. per cent. where the full standard rate of tax was borne), an amount of £114,142 was appropriated to reserves, this figure being £22,835 better than that of the previous year. Investments in trustee securities amounted to £911,886, and, in addition to these and other liquid assets, the society possessed the well-secured freehold ground rent of National House, which now produced £11,000 per annum.

The reserve funds now totalled £552,026.

The chairman concluded his speech by appreciative references to the staff and to his colleagues on the board.

The report and accounts were adopted, and the proceedings terminated with a cordial vote of thanks to the chairman.

Government Returns, &c.**NATIONAL ACCOUNTS.**

The total ordinary revenue for the week ended January 16 1932, amounted to £43,002,100 against ordinary expenditure of £8,765,600. After allocating £620,000 to Sinking Fund and having allowed for a decrease in Exchequer Balances of £39,260, the operations for the week, as shown below, decreased the National Debt by £33,656,000 to £7,737,430,000:—

Australia.....	Other countries.....
New Zealand.....	
British Guiana.....	
Other countries.....	
Total declared value of imports.....	Total declared value of exports.....

Messrs. Samuel Montagu and Company write on January 20, 1932, as follows:—

GOLD.

The Bank of England gold reserve against notes amounted to £120,761,529 on the 13th inst., as compared with £120,749,775 on the previous Wednesday. France has again been the chief taker of the comparatively small amounts available in the market. The shipments of gold from India have continued on a large scale, the s.s. "Rawalpindi" having left Bombay on Saturday last bearing about £2,750,000. Large quantities of gold have been engaged for shipment from U.S.A. to France.

Quotations during the week:—

January 14	Per fine ounce.	Equivalent value of £ sterling.
" 15	120s. 4d.	14s. 1-4d.
" 16	117s. 11d.	14s. 4-9d.
" 18	118s. 6d.	14s. 4-1d.
" 19	118s. 8d.	14s. 3-8d.
" 20	120s. 0d.	14s. 1-9d.
Average	120s. 0d.	14s. 1-9d.

SILVER.

The improvement in sterling attributed to a more favourable reparations outlook, and also moderate sales by the Indian Bazaars led to successive falls in the early part of the week, until quotations of 18 1/2d. and 19 1/2d. were quoted for cash and forward deliveries respectively on the 18th. Yesterday, with a slight reaction in sterling, prices recovered a fraction, but the improvement has not been maintained. Sales having been mainly for cash, the difference has widened, and it will be seen that both yesterday and to-day cash is quoted at a discount of 1/2d. The tone is steady for the moment.

The following were the United Kingdom imports and exports of silver registered from midday on the 11th inst. to midday on the 18th inst.:—

Imports.	Exports.
U.S.A.....	Palestine.....
Other countries.....	Malta.....
	Other countries.....

Quotations during the week:—

In London.	In New York.
Bar silver per oz. std. delivery.	Cash Two Months' delivery.

REPORTS AND NOTICES.

Mr W. Ross Munro, general manager of the National Bank of India, Ltd., has been elected chairman of the committee of the British Overseas Banks' Association for the ensuing year.

The Governor and Committee of the Hudson's Bay Company announce that Sir Frederick Richmond, Bart., has resigned his appointment of deputy governor of the company, and that Sir George Ernest May, Bart., K.B.E., has been elected to the vacancy.

GOVERNMENT, &c.

STATE OF BAHIA EXTERNAL LOANS.—Ethelburga Syndicate, Ltd., announce that bondholders of the above loans who assent to the scheme, as set out in their previous announcement in the Press on 14th instant, should deposit their bonds to be stamped as assenting on or after February 5, 1932, as follows: Holders of 1904 and 1913 loans, Bank of London and South America, Ltd., 6 Tokenhouse Yard, E.C.; holders of 1915, 1928 loans and 1918 Treasury bills, Anglo-South American Bank, Ltd., 117 Old Broad Street, London, E.C. Holders of 1918 Treasury bills who deposit their bonds for assenting will receive new coupon sheets. Provincial and foreign holders must forward their bonds through their bankers or agents, as in no circumstances will bonds be dealt with by post. Due notice will be given in the Press by the usual paying agents as and when coupons are payable. The Ethelburga Syndicate announces the deposit by the State of Bahia of 200 contos, being the January portion of the service of the English Loans under the proposed scheme recently published in the press.

BANKS.

STANDARD BANK OF SOUTH AFRICA, LTD.—The directors have declared an interim dividend payable in British currency, of 6s. per share (being at the rate of 12 per cent. per annum), subject to income tax. This compares with a dividend of 7s. per share (being at the rate of 14 per cent. per annum), subject to income tax, for corresponding period of 1930. The balance sheet, dated September 30, 1931, shows total assets, £87,060,800, as compared with total assets, £70,212,390, on September 30, 1930. Total cash has declined from £8,585,437 to £8,329,382, but investments are at £6,987,268, against £5,226,398. It is pointed out that these investments appear at, or under, cost and in the aggregate below market value at September 30, 1931, depreciation having been met out of contingencies account. Bills discounted, advances, &c., amount to £34,894,672, against £36,818,283 on September 30, 1930. Deposits are at £50,404,572, as against £52,124,481 a year ago.

ULSTER BANK, LTD.—The accounts just issued are for a period of thirteen months to December 31, 1931. The net profits for that period amounted to £198,981, comparing with £215,472 for the year ended November 29, 1930. The sum of £80,122 was brought in to the accounts from November 29, 1930, thus making £259,103 available. The ordinary dividend absorbed £138,667, against £128,000. The sum of £50,000 is again put to reserve fund. Nothing is put to contingent fund, against £40,000 last year. The carry-forward is £70,436, against £60,122 brought in. All ascertained bad and doubtful debts have been written off or fully provided for. Total assets are £24,734,625, as against £24,741,316 at November 29, 1930. Cash is higher, at £2,716,570, against £2,293,351. Bills discounted, advances, &c., are lower at £10,445,891, against £10,887,468. Bank premises are higher at £256,530, against £233,585. Investments in Government stocks, at £10,333,950, compare with £10,309,354 a year ago. Deposits show little change at £21,467,434, compared with £21,444,824. The meeting will be held at Belfast, on January 26th, at 12.15 p.m.

MINES.

BRAKPAN MINES, LIMITED (Acquisition of all assets of Witpoort Gold Areas).—A provisional agreement has been reached whereby Brakpan Mines, Ltd., will acquire all the assets of the Witpoort Gold Areas, Ltd. The purchase price is £200,000 (South African currency), payable in four six-monthly instalments of £50,000 each, the first of which is due on June 30 next. It is a condition of the agreement that in the event of the Union of South Africa leaving the gold standard or devaluing its currency before the payments are completed, half the purchase price, or of so much of it as is still outstanding, will be paid in gold or its equivalent in British currency in Johannesburg. Brakpan Mines, Ltd., will not be responsible for any of the liabilities of the Witpoort Company. Conclusion of the agreement is subject to confirmation by Witpoort shareholders—for this purpose an extraordinary general meeting of shareholders is being held in March next—and to Government consent. Brakpan has obtained provisional consent to the agreement from Minister of Mines and Industries. Pending final confirmation of the agreement, Brakpan, with the consent of the Government and the Witpoort company, has taken over the working of the Witpoort mine, and is continuing development.

MISCELLANEOUS.

THE LONDON STOCKHOLDERS INVESTMENT TRUST, LTD.—For the year ended December 31, 1931, the gross revenue was £30,774 (against £35,678); net revenue was £13,168 (against £20,175). The board recommends a final ordinary dividend of 1 per cent. (against 2½ per cent.), making 2½ per cent. (against 5 per cent.) for the year. Carry-forward, £3,056 (against £2,927). £4,000 has been transferred from contingency reserve account to write off the balance of expenses of increase of capital. Valuation of investments shows a depreciation of 47.95 per cent. Classifications showing the distribution and a full list of the investments are in the report.

(a) Plus bonus of 2s.
(b) Plus bonus of 2s. 8d.

ASHANTI GOLDFIELDS.—A final dividend of 40 per cent. will be paid to shareholders registered January 7th. This makes 90 per cent. for the year. The directors also recommend that reserve account be capitalised to the extent of £125,000 and that the capital be increased by that amount. The 625,000 shares of 4s. each thus created are to be issued to shareholders as fully-paid bonus shares in proportion of one bonus share for every three shares held.

MUNICIPALITY OF PELOTAS 5% STERLING LOAN OF 1911.—Erlangers, Ltd., have received a telegraphic request from the Prefect of the Municipality of Pelotas to publish the following announcement: "With reference to cables exchanged with you Municipality of Pelotas and State of Rio Grande do Sul regret that owing to the existing exchange situation in Brazil they are unable to remit necessary funds for the service of the Municipality of Pelotas 5 per cent. sterling loan of 1911 due for payment December 31, 1931. The amount in local currency which at the rate of six pence would be sufficient meet service has been deposited in a special account at the Banco do Brasil to be remitted as soon as exchange situation allows."

Commercial Reports.

MARKET SUMMARY.

In the absence of any encouraging feature, the principal international commodity markets have been characterised by dullness. Movements in gold prices have been irregular, and there are as yet no signs of a definite upward movement. There has been little buying of non-ferrous metals. Nevertheless, the New York quotations for copper have been well maintained, while tin has advanced a few points. On the other hand, spelter has been easier, and lead has been barely maintained. The strength of raw cotton has been a noteworthy feature. Among cereals wheat has been dearer while maize, oats and barley have scarcely changed on the week. Coffee has again been firm, but sugar is slightly easier. In view of the latest information on rubber, which shows a further decrease in consumption and an increase in stocks, the commodity was flat. Sterling quotations of commodities, which lend themselves to grading and therefore to international arbitrage, are moving largely in sympathy with international prices. Transactions have generally been on a small scale in this country. A feature has been the falling tendency in the price of meat and dairy produce. According to reports from various industrial centres, there has been little improvement in the situation of the coal trade. On the other hand, the iron and steel industry is a little more active. The wool industry appears to be fairly well occupied, but activity in the cotton manufacturing industry has fallen off. Unless the demand for jute goods increases soon, the recent expansion in manufacturing activity will not be maintained.

THE COAL TRADE.

SHEFFIELD.—The depreciation in the value of the £ is improving the outlook for South Yorkshire steam coal in certain of the overseas markets, but there is little change in the general position of the industry. Best steams continue firm round about 17s. f.o.b. The industrial demand tends to expand slightly, but the tonnage of

domestic fuel going out has fallen considerably during the present mild spell. Rather more blast furnace coke is going into consumption than at any time last year, and prices have been steady for some months.

GLASGOW.—Business has become quieter in the Scottish coal trade, and as a result prices are inclined to droop. The collieries, however, are not pressing the market. Nuts are all readily obtainable at a shade under recent prices, and steam coals are also now favouring buyers. Lanarkshire splint coal is a firm spot. There is little forward inquiry circulating in the shipping market. Current prices for shipment are approximately as follows:—LANARKSHIRE.—Ell best, 14s. 6d.; splint best, 16s.; splint second, 14s. 3d.; navigation, 15s.; navigation second, 14s. 6d.; Hartley, 15s. 6d.; steam, 13s. 9d.; trebles, 15s. 6d.; doubles, 13s. 6d.; singles, 10s. 9d.; pearls, 9s. 6d.; dross, 9s. FIVE.—Screened navigation, 17s.; first-class steam, 13s. 6d. 13s. 9d.; third-class steam, 12s. 6d.; trebles, 16s.; doubles, 13s. 6d.; singles, 10s. 6d.; pearls, 9s. 6d. LOTHIANS.—Prime steam, 13s.; secondary steam, 12s. 3d.; trebles, 15s. 6d.; doubles, 13s. 6d.; singles, 10s. 9d.; pearls, 9s. 6d. AYLESBURY.—Unscreened navigation, 16s.; jewel, 17s.; steam, 13s. 6d.; trebles, 15s. 6d.; doubles, 13s. 6d.; singles, 10s. 9d.; pearls, 9s. 6d.; dross, 9s. 7d.

CARDIFF.—Dull conditions prevail in the South Wales coal trade, and new orders for all grades are scarcer than for a long while. Business with the Continent is impeded by import restrictions, and severe subsidised competition, and the protracted slackness in shipping is keeping the demand for bunker coals at a low ebb. In spite of the recent decline, production is excessive for immediate requirements, and most collieries are working short time. All grades are easily available at the minimum schedule prices. Proposals are under consideration for an improvement in the coal trimming system, and it is hoped as a result of amendments that shipments will be expedited, and a greater volume of bunker business attracted to South Wales. Exports last week, including cargo and bunkers shipped foreign and coastwise totalled 375,925 tons, as against 313,580 tons in the previous week, and 111,925 tons a year ago (when the pits were idle owing to the miners' strike). The following are the current approximate quotations:—BEST ADMIRALTIES, 19s. 6d.; seconds, 18s. 9d. to 19s. 4½d.; best dry, 18s. 6d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small 17s. 9d. to 18s.; coking smalls, 13s. 6d. to 13s. 9d.; cargo smalls, 13s. 6d.; 22s. 6d. to 27s. 6d.; machine-made cobbles, 40s. to 48s. 6d.; large, 22s. 6d. to 27s. 6d.; French nuts, 40s. to 48s. 6d.; stove nuts, 39s. 6d. to 43s. 6d.; rubbly culm, 8s. 3d. to 8s. 9d.; foundry coke, 32s. 6d. to 36s.; patent fuel, 18s.; pitwood, ex ship, 23s. to 25s.

IRON AND STEEL.

MIDDLESBROUGH.—The market continues quiet. Since the last weekly market purchases of Cleveland iron have been of small quantities by local consumers for early delivery, but very little has been bought for export. Scotch foundries have purchased very sparingly since the holidays, probably owing to the fact that they have stocks on hand and that Midland irons are offering at about 2s. below Cleveland on trucks at Grangemouth. Similar conditions prevailed at Tuesday's market this week, the business reported being of small dimensions. Official prices were again unchanged, viz.: No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; and No. 4 forge, 57s. f.o.b. or f.o.t. In hematite there is the same disinclination to buy more iron than is required for immediate needs, but home requirements are on a fair scale, and a few export orders are being received. There are only four furnaces producing hematite on the North-East Coast at present, so that stocks overhead are said to have been gradually declining. Towards the end of this week, however, Dorman Long and Co., Ltd., are starting a furnace on hematite at their Cleveland Iron Works, South Bank, but the production of this will be practically all absorbed for their own requirements. Mixed numbers are still quoted by makers at 65s. for delivery up to end of March, but prompt lots have been sold down to 64s. 6d. and can still be obtained at this figure. In the finished trades new business is on a disappointing scale and the scarcity of fresh orders is causing considerable anxiety in many instances. It is expected that if satisfactory safeguarding measures are adopted by the Government a brighter era of trade will be established. In the meantime prices of steel for home use will be unchanged, viz.: Plates, £8 15s.; under the rebate scheme are unchanged, viz.: 24-gauge black heavy steel rails, £8 10s.; iron crown bars, £10; 24-gauge black sheets, £7 17s. 6d.; 24-gauge galvanised corrugated sheets, £9 5s., all for home use. There is no movement in the ore trade and dealers find it impossible to make sales. Best rubio remains nominally 16s. 6d. c.i.f. and the freight for early tonnage Bilbao/Middlesbrough is about 5s. Very little demand exists locally for coke, but producers report a somewhat better blast-furnace qualities are now asking 16s. 9d. to 17s. for ordinary blast-furnace qualities delivered works. The number of furnaces blowing in the district is so far unchanged at 17.

SHEFFIELD.—Increased trade is being experienced by individual firms, notably in alloy steels, magnets, cold wrought steel strip, and certain classes of tools, whereas the position of crude steels remains as sluggish as ever, both in the home and export markets. Nevertheless two blast furnaces which had been idle most of last year have been restarted, one in Leeds and one in Derbyshire. Imports of dutiable tools and goods are heavily down and exports tend to shrink. While selling prices remain remarkably steady, every week sees some addition to the costs of materials used in descriptions of paper and cardboard used for making cases to hold plate and cutlery have gone up substantially. Cutlery and plate

makers report demand as rather below that of a year ago, but a small proportion of firms are fairly busy. The production of steel ingots and castings in the Sheffield area last year amounted to 786,300 tons, compared with 965,700 tons in 1930 and 1,217,000 tons in 1929. The Lincolnshire area produced 393,300 tons of steel last year, against 689,000 tons in 1930.

GLASGOW.—While conditions are still quiet at the steel-making plants in the West of Scotland, there is on the whole a little more business being done, but orders placed have as a rule been for small quantities for immediate requirements. There is no material change in the position at the tube-making plants. Sheet-makers have booked a considerable tonnage of both black and galvanised and there is an increased export demand, but buyers are offering business at prices which are quite unacceptable to makers and unremunerative. There is very little new work coming in to the Clyde shipbuilders, the only new order reported this week being for a vessel which the Dumbarton firm of Messrs. William Denny and Brothers, Ltd., have secured from the Southern Railway Co., in conjunction with the French State Railway, for service on their Newhaven-Dieppe route.

CARDIFF.—A firm tone is maintained on the Welsh tinplate market and shipments are brisk, totalling 8,097 tons last week. Prices range from 14s. to 14s. 6d. Welsh bars are slow at £5 per ton delivered, while imports of foreign bars continue fairly heavy at 82s. 6d. to 85s. per ton. Galvanised sheets meet a steady enquiry at £9 to £9 5s. per ton f.o.b. Mr Frank Rees has been unanimously re-elected president of the Swansea Metal Exchange. In his presidential address he made a strong plea for protection, and urged the adoption of a co-operative scheme in the tinplate trade.

OTHER METALS.

TIN.—Tin opened easily this week, but despite the dullness of demand the metal improved slightly until Wednesday. New York quotations were somewhat higher in proportion to the appreciation in the gold value of sterling. In New York the metal was quoted at 22-25 cents per lb. on Wednesday, against 21-70 cents per lb. a week ago, and 22-00 a month ago. Wednesday's official closing quotations in London in terms of sterling for "standard" cash, at £141 10s. to £141 12s. 6d. per ton, compares with £142 2s. 6d. at £142 5s. 6d. on the corresponding day last week. Stocks in London and Liverpool at the end of last week, at 31,868 tons, show an increase of 482 tons on the week.

COPPER.—The markets in copper in London and New York have been very quiet, but in New York the recent improvement in prices has been maintained. On Wednesday, "Domestic" spot was quoted officially at 7-50 cents per lb. in New York, against 7-50 cents a week ago, and 7-25 cents a month ago. Wednesday's official closing price for "standard cash" in London, in terms of sterling, at £39 15s. to £39 17s. 6d., compares with £42 2s. 6d. to £42 5s. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 21,332 tons, show an increase of 661 tons, while stocks of rough copper, at 640 tons, were 55 tons smaller.

LEAD.—Little interest was shown in the market for lead this week. In New York prices have been maintained, but in London holders had to make concessions in order to effect sales. In New York the metal was quoted at 3-75 cents per lb. on Wednesday, against 3-75 cents a week ago and 3-75 cents a month ago. Wednesday's official closing quotation for "soft foreign" in London in terms of sterling, at £15 1s. 3d. to £15 1s. 3d. per ton, compares with £15 10s. to £15 10s. 6d. on the corresponding day last week.

SPELTER.—The market in spelter has been dull during the past week. Despite the absence of sellers, the metal declined in value, both in London and in New York. Wednesday's quotation in New York, at 3-00 cents per lb., compares with 3-05 cents a week ago and 3-15 cents a month earlier. Wednesday's official closing quotations in London in terms of sterling for "good ordinary brands" were £14 10s. to £14 16s. 3d. per ton, against £14 11s. 3d. to £15 1s. 3d. a week ago.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, the quotation for aluminium has been maintained at £95 per ton. Nickel was slightly easier at £240 to £245 per ton against £245 per ton a week ago. Foreign antimony at £28 per ton shows a further decline of 5s. per ton. Quicksilver was cheaper at £18 per flask, against £18 5s. to £18 10s. a week ago.

TEXTILES.

THE COTTON TRADE.—Liverpool.—Imports for the week January 14 to 20 (inclusive) are 33,411 bales, of which 32,527 bales are American, 47 Peruvian, 122 Argentine, 580 East Indian, and 135 sundries.

Manchester.—The larger inquiry experienced last week in the market has been maintained, and a fair amount of business has been done in small lots. A substantial part of the demand, however, has been at unworkable rates, and sellers are finding it very difficult to get buyers to come up in price. The greater firmness in raw material rates is giving confidence in some quarters, but there is a good deal of uncertainty as to the effect of international affairs. In cloth for India the business offering has shown some improvement, and rather more sales have occurred in light fabrics and fancies for Calcutta, Madras and Karachi, but reports from Bombay are unsatisfactory. Certain fine goods have again been purchased for Rangoon. Very little has been done for China, the decline in the turnover being partly due to the fall in exchange rates, but cloths for dyeing have moved off rather more freely for Java and the Straits Settlements. Not more than retail lots have been sold for

Egypt and the Near East. In printing styles, the offtake for the Continent has been rather better. There has been very little life in home trade fabrics. Quotations in American and Egyptian yarns have been firmer, and some spinners have reported an improved turnover, but prices all round are less satisfactory.

THE WOOL TRADE.—Bradford.—It is a long time, writes our correspondent, since a series of London sales proceeded in such a satisfactory fashion as the current one. During the first week the offerings were exceptionally small, and though they have been larger this week, the market has not been overfaced. The strike of dockside workers has been largely responsible, though some wools are being kept back in the hope of better prices eventually being forthcoming. There are very few withdrawals at the auctions, and prices for greasy merinos and fine crossbreds are maintained at the highest point. There is every indication of these wools continuing to find a ready outlet, for requirements are large. For good greasy New South Wales merino combing 13d. is the best price noticed this week. Many lots are changing hands at 9½d. to 11½d. Medium and low crossbreds are virtually unchanged. Low prices have to be accepted for tops, and this means that though Bradford is prepared to buy crossbred wool, the pace is not being forced. French buyers are showing more interest, and this has helped prices for both merinos and fine crossbreds. Anything of combing length is selling the best, clothing descriptions still being comparatively cheap. Fine crossbred staples are scarce, and halfbred lambs are realising up to 11½d. The position in Bradford does not call for much comment. Topmakers are impressed by the firmness of wool, and 24½d. is quoted for standard warp 64's. Really speaking, however, the market is rather slack, spinners refusing to pay more for tops. Spinning machinery is running well, and dress goods manufacturers are well placed.

THE JUTE TRADE.—Dundee.—There is very little business going on in the jute industry, and spinners and manufacturers are badly in need of orders to maintain their output. Unless matters improve in the near future, and of this there is still no sign, there will be a general return to curtailment of production. Though there are many orders on the books for yarns and cloth, specifications are slow to come in. The whole industry has lapsed into a very inactive state. Spinners have no incentive to purchase the raw material, and shippers are tired of sending offers of shipment jute, with the result that a purely nominal situation prevails. The value of Daisee assortment for January-February shipment is £18 10s. for the full group, but Madan Daisee assortment afloat can be bought at £18. White jute is very sparingly offered, and Mitsui marks are about the only Firsts and Lightnings named. Fuji-M First Mark is reduced to £21 7s. 6d., Asahi Lightning to £20 12s. 6d., and Asahi Hearts to £19 17s. 6d., while Mitsui Tossa-4 is quoted at £19 12s. 6d., and Mitsui Daisee-3 at £19 17s. 6d., January-February. A considerable quantity of jute has arrived here recently, and the total since August 1 last has reached 572,000 bales, compared with only 249,000 bales at this date last year. A fair proportion of recent arrivals is unsold, and sellers are now mainly interested in disposing of their consignments. Very little is taking place in jute yarns, and prices are more or less nominal. Common 8 lb. cops are obtainable easily at 2s. 3d. and 8 lb. spools at 2s. 4d., but buyers are not offering to pay even less, though these rates are unprofitable. Twist is being sold in small quantities at from 3½d. to 4d. for 3-ply 8 lb., and sacking yarns are practically idle at 2½d. for 24-lb. warp, and 3½d. for 8 lb. chains. Carpet yarns are of more importance, and from 3½d. to 3¾d. for 14 lb. warp, while rove is obtainable at from £20 10s. for 48 lb. and from £18 10s. for 200 lb. Fine yarns are quiet, and sellers would shade their rates to 2s. 11d. for second quality 8 lb. Rio warp, 2s. 8d. for third, and 2s. 6d. for fourth. The cloth market continues dull, and prices are not being properly tested. According to width and weight wanted, and the suitability of the order, values rule from 3½d. for 10½ oz. 40 in. hessians, and from 2½d. for 8 oz., only the narrow widths being obtainable at these limits mentioned. Linoleum hessians are very quiet, and there is very little doing in heavy goods. The Calcutta goods market has been quiet, with prices showing a tendency to decline. Sellers are naming 20s. 9d. for 10 oz. 40 in., and 16s. 3d. for 8 oz., January-March, and 21s. and 16s. 6d. for April-June. Spot values are 20s. 6d. for 10 oz. and 17s. for 8 oz.

THE GRAIN MARKETS.

WHEAT.—No developments of any importance can be recorded this week in the international wheat situation. Markets are at the present time very much influenced by reports on the condition of the winter crops, by the demand for wheat and by general conditions. Despite heavy shipments from Australia and Argentina, prices in Chicago continued to improve. Europe is not buying on

a large scale just now, but the import restrictions of several Continental countries are expected to be lessened soon, as supplies of native wheat are beginning to run short. Russia has been exporting on a larger scale recently, but as that country is not expected to ship again on the scale of last autumn during the remainder of this season, these exports did not influence the market adversely. Owing to the warm weather the British winter crop is in advance, but it appears that the plant has been attacked by diseases in some parts of the country. According to Mr G. Broomhall, the acreage sown this year is not more than 100,000 acres above that of last year. On Wednesday, "March" futures were quoted at 57½ cents per bushel in Chicago, against 55½ cents on the corresponding day last week, and 52½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 33s. 9d. per 996 lbs., as compared with 33s. 3d. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 31s., against 30s. 9d.; No. 3 Northern Manitoba, Vancouver, ex ship, 29s. 9d., against 29s. 9d.; Russian, on sample, 25s. 6d. to 28s. 6d., against 26s. to 28s. 6d.; Australian, ex ship, 28s. 3d. to 30s., against 29s. 3d. to 30s. a week ago.

WHEAT FLOUR.—Business in flour has been quiet. In this country quotations have been reduced 1s. per cwt. North American shipments, at 158,000 sacks, showed an increase of 19,000 sacks as compared with the previous week. Of this total, only 24,000 sacks have been consigned to Europe. Quotations in London, Wednesday: Straight run, delivered country, 25s. per sack of 280 lbs., as compared with 26s. last week; delivered London, 24s., against 25s. Manitoba patents, ex store, 25s. 6d. to 28s. 6d., against 25s. 6d. to 28s. 6d.; and Australian, ex store, 20s. to 21s., against 20s. 6d. to 21s. a week ago.

BARLEY.—The market in barley has remained quiet. Argentina continues to ship heavily, and as Russia has now appeared as a competitor, prices have been barely maintained. On Wednesday, "May" futures were quoted at 41½ cents per bushel in Winnipeg, against 41 cents last week and 40 cents a month ago. Quotations in London, Wednesday: "English feeding," f.o.b., per 48 lbs., 26s. to 27s., as compared with 26s. to 27s.; Russian, landed, 23s. per 400 lbs., against 24s. a week ago.

OATS.—Little interest has been shown in oats during the past week. Argentina, by offering at very low prices, has almost driven other exporting countries off the field. "May" futures, which last week stood at 25½ cents per bushel in Chicago, sold at 25½ cents per bushel on Wednesday this week, against 23½ cents a month ago. Quotations in London, Wednesday: "River Plate," landed, 18s. 9d. per 320 lbs., as compared with 18s. 9d. last week; "River Plate," ex ship, 17s. 9d., against 17s. 9d.; "Chilean White," landed, 27s., against 27s. 6d. a week ago.

MAIZE.—The demand for maize has been on a small scale during the past week. Argentine shipments, which were larger than expected, exercised a depressing influence on prices. Wednesday's quotation in Chicago for "March" futures, at 39½ cents, shows a rise of ½ cent per bushel on the week, and a rise of 4½ cents as compared with the price a month earlier. Quotation in London, Wednesday: "Plate," landed, 19s. per 480 lbs., as compared with 19s. 3d. last week; "Plate," ex ship, 17s. 9d., as against 18s.; "Plate," January-February, 18s. 3d., as against 18s. 6d. Yellow maize meal, ex wharf, was quoted at £5 10s. per ton, against £5 10s. a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1931-32, 1930-31, 1929-30, 1928-29:—

	1931-1932.	1930-1931.	1929-1930.	1928-1929.
Estimated sales of home-grown wheat—				
1 week to January 16.....	83,039	101,963	317,925	233,871
20 weeks to January 16.....	1,442,709	2,454,407	5,206,173	5,323,551
Average price of English wheat per cwt.....	5 10	5 7	9 7	9 6

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1928 to 1931:—

Weeks ended	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
Jan. 9, 1932.....	53,298	179,826	42,631	5 6	8 5	6 11
Jan. 16, 1932.....	83,039	267,093	56,021	5 10	8 5	6 11
Jan. 14, 1928.....	227,205	314,858	74,856	9 11	11 4	9 5
Jan. 19, 1929.....	233,871	419,853	86,108	9 6	10 3	9 3
Jan. 18, 1930.....	317,925	374,958	55,236	9 7	8 6	6 11
Jan. 17, 1931.....	101,963	256,912	36,612	5 7	8 1	5 9

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1930:—

NEAREST FUTUR.	Jan. 2, 1930.	Jan. 2, 1931.	Jan. 21, 1931.	Jan. 4, 1932.	Jan. 13, 1932.	Jan. 20, 1932.
Winnipeg (No. 1 Manitoba).....	148½	56½	56½	62½	63	63½
Chicago (No. 2 Winter).....	130½	79½	80½	56½	56½	57½

The visible supply of wheat in Canada, at 61,532,000 bushels, shows an increase on the week of 252,000 bushels. Supplies a year ago stood at 42,425,000 bushels.

OTHER FOODS.

SUGAR.—The raw sugar markets in London and New York have been lifeless during the past week. No real change is expected in the situation before the Conference of the International Sugar Council is held. Sterling quotations have been a little lower this week, but no alteration was made in the price of "British refined" sugar. "January" futures in New York were quoted at 1.03 cents per lb. on Wednesday, against 1.05 cents per lb. a week ago, and 0.99 cents per lb. a month earlier. Wednesday's sales of "raws" include "March delivery" at 6s. 10½d. to 6s. 11½d. per cwt., against 7s. 0½d., and "May," 1932, at 7s. 0½d. to 7s. 1d., against 7s. 2d. to 7s. 2½d. on the corresponding day last week. The movements of raw sugar in London and Liverpool during last week are set out in the table below:—

	Imports.		Deliveries.		Stocks.	
	1932.	1931.	1932.	1931.	1932.	1931.
Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
London.....	197	...	1,323	1,330	3,320	32,470
Liverpool.....	25,993	9,550	16,883	12,408	85,422	144,314
Total.....	26,190	9,550	18,206	13,738	88,742	176,784
Last week.....	6,707	27,911	19,100	13,406	80,758	180,972

COFFEE.—Coffee has again been one of the few commodities with a firm tendency. The recent improvement in coffee is, of course, largely ascribed to the stringent measures taken by Brazil in order to keep up its value. Last week's movements of coffee in London were as follows: Brazilian, landed, 140 bags; delivered for home consumption, 239 bags; exported, 18 bags; stocks, 2,529 bags, against 2,421 bags last year. Central American, landed, 3,958 packages; delivered for home consumption, 3,575; exported, 2,328; stocks, 53,057 packages, against 69,570 a year ago. Other kinds, landed, 2,107 packages; delivered for home consumption, 3,361; exported, 760; stocks, 49,335 packages, against 64,146 a year ago.

COCOA.—Cocoa has been slightly dearer in New York during the past week. The market in London was dull and easier. "January" futures were quoted at 4.02 cents per lb. in New York on Wednesday, against 3.96 cents per lb. a week ago. As compared with the corresponding day last week, Wednesday's quotation for Accra, fair fermented, new crop, February-April, at 22s. 3d. per cwt. f.o.b., London contract, shows a fall of 3d. per cwt. on the week. Last week's movements of cocoa in London were as follows: Landed, 2,688 bags; delivered for home consumption, 8,029 bags; exported, 101 bags; stocks, 128,335 bags, as against 164,667 last year.

TEA.—The quantities catalogued for this week's auction comprised 56,503 packages of Indian, 27,955 packages of Ceylon, and 15,586 packages of Java and Sumatra tea. The demand for Indian tea at Monday's auctions was quite good, but, with the exception of teas under 8d. per lb., prices show no improvement on last week. Tuesday's Ceylon sales passed quietly, the outstanding feature being poor quality of the tea. On Wednesday, the demand for common Indian teas was again strong, but medium qualities were quiet. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account:—

Week ending	AVERAGE PRICE PER LB.						Total.
	Northern India.	Southern India.	Ceylon.	Java.	Sumatra.	Nyassa-land.	
Jan. 15, 1931	s. d. 1 2-09	s. d. 1 2-80	s. d. 1 5-62	s. d. 0 10-94	s. d. 0 10-62	s. d. 0 9-84	1 2-62
Dec. 10 "	0 10-56	1 0-27	1 4-70	0 8-95	0 7-77	0 7-21	1 0-16

Jan. 14, "	0 10-32	0 11-13	1 2-75	0 8-33	0 7-45	0 6-94	0 11-16

RICE.—The market in rice, which has remained steady during the last few weeks, has suddenly become dull. Prices, both "spot" and "forward," were easier. Wednesday's "spot" quotation for Burma No. 2, cleaned, at 9s. 6d. per cwt., showed a fall of 3d. per cwt., as compared with last week. Movements in London during the past week were as follows: Landed, 5 tons; delivered, 142 tons; stocks, 1,366 tons, as against 442 tons last year.

POTATOES.—The demand for potatoes has been smaller this week, but despite large supplies, the recent advance in prices was maintained. At the Borough Market, "Best King Edward" sold from 12s. to 13s. per cwt., as compared with 12s. to 13s. per cwt. a week ago.

SPICES.—The market in spices has been quiet. "Spot" pepper was slightly cheaper. Wednesday's quotation for "Black Singapore" pepper, at 6½d. per lb., shows a fall of ¼d. per lb. on the week. Movements of pepper in London during the past week were as follows: Black, landed, 1 ton; delivered, 8 tons; stocks, 267 tons, against 461 tons last year. White, landed, 19 tons; delivered, 49 tons; stocks, 568 tons, against 390 tons a year ago.

MEAT.—The downward movement in meat prices has continued during the past week. Since December last the fall has been

considerable. It is ascribed mainly to the increase in supplies. On Wednesday, Argentine beef (chilled hindquarters) was sold at 3s. to 3s. 6d. per 8 lbs., against 3s. to 3s. 8d. on the corresponding day last week, while New Zealand frozen mutton realised 2s. 6d. to 3s., as against 2s. 6d. to 3s. 2d. a week ago. According to the Smithfield Market official report, supplies of meat during last week amounted to 9,910 tons, as compared with 9,997 tons in the corresponding week last year. Imported beef, principally Argentine, formed 84.6 per cent. of the supplies, as against 82.7 per cent. a year ago; and imported mutton, mainly New Zealand, formed 74.0 per cent. of the total supply, as against 74.5 per cent. last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OIL SEEDS.—A somewhat firmer tone has developed in the markets for oilseeds and their products. The demand for linseed, both here and on the Continent, has improved, and a good business was done in new crop Plate on passage and early shipment at £8 12s. 6d., since when values have hardened, afloat near at hand being held for £8 17s. 6d., with shipment to March quoted £8 15s. The new seed is now being shipped in fair volume and the quantity afloat for Europe has increased to 154,000 tons, or 24,000 tons more than last week, the total including 8,100 tons from India. Cottonseed is quiet on lack of demand, Egyptian (black) on spot and forward to February quoting £8 2s. 6d. In the oil section linseed oil has recovered from the low level touched last week, when as low as £13 10s. was accepted for spot and February delivery ex Hull, current value of raw oil on spot being £14 15s. and February £14 5s. Forward positions continue to maintain a good premium over near. Demand from consumers is only moderate. Crude Egyptian cotton oil is slightly steadier and offers at £17 15s., while refined is unchanged at £20. Oilseeds and meals are not so active, but mill prices are without alteration.

HIDE, LEATHER AND ALLIED TRADES.—Prices for most descriptions of hides and skins from home-slaughtered cattle remain weak, ox and heifers at the Manchester sales held this week again being from ½d. to ½d. per lb. cheaper. The bottom weight in cows also realised ½d. per lb. less money, while there was a weaker tendency in regard to the calfskin market. Slightly more interest has been shown in foreign hides, and for some sorts a fair amount of business has been passing. In the Frigorifico market Argentine ox have changed hands at 4½d., while seconds have been sold at a fraction over 4½d. Uruguays in the same selection have realised 5½d. and 4½d., and Frigorifico cows 5½d. Business in dry South Americans has been confined to small parcels only, with M.V. Americans fetching 6½d., B.As. 6½d., Cuyabanos 5½d., and B.A. Inseparables 3½d.

Sales of African hides have been moderate, and for some descriptions prices are inclined to be weaker. First and second dry Capes have sold at 4½d. and 5½d. respectively, while drysalted are quoted at 5½d. and 4½d. Unbathed Adia Abes has sold at from 4½d. to 5½d., and Mombasas at 5½d. Hardly any business has transpired in regard to Australians, and prices for the time being are unchanged. Rather more interest has been taken in sole leather, and the turnover has perhaps shown an improvement on that of recent weeks. The repairing section of the shoe trade is a fairly regular customer for English and wet-salted bends in the medium and heavy weights, in addition to which manufacturers of footwear have taken more interest in dry hide bends. In the latter description, light and medium weights are the best sale, and the quantities which have gone into consumption have shown a slight increase. Offer does not make much headway; bellies have been a rather better sale, but against this the turnover in regard to shoulders has been small. Sales of upper leathers have been confined to small quantities of certain lines, the chief of which are willow calf and glacé kid. There has been an increase in the inquiry for patent and reptiles, but so far actual sales in regard to these have not shown any great expansion. As a matter of fact, orders being received for footwear at present do not warrant large purchases of upper stock, and until there is some improvement in the latter direction business is expected to remain rather restricted.

RUBBER.—The slight improvement in rubber last week has given way to an easier tendency. Ever since Friday last week the price of this commodity has been steadily declining, and on Wednesday it fell below 3d. per lb. The main reason is, of course, the absence of any encouraging news. The statistical position continues to deteriorate. Consumption in the United States during December, at 21,408 tons, shows a further decline of 1,535 tons on the previous month. Meanwhile, world stocks are still rising. In New York, Wednesday's spot price for rubber, at 4½ cents per lb., shows a fall of ½ cent on the week. Wednesday's official closing price for standard ribbed smoked sheet in London, at 2½d. per lb., shows a fall of ½d. as compared with the corresponding day last week. In forward positions business has been done at 3½d. to 3½d. for April-

June, against 3½d.; and at 3½d. to 3½d. for July-September, 1932, as against 3½d. to 3½d. a week ago. Movements of rubber in London and Liverpool during the past week were as follows: Landed, 1,957 tons; delivered, 1,642 tons; stocks at the end of last week, at 126,934 tons, show an increase of 315 tons as compared with the preceding week.

COMMODITY PRICES IN THE UNITED STATES.

(New York quotations, unless otherwise stated.)

and balances again remained unlent at the end of the day. The extreme ease and inordinately low rates continued on Tuesday, but on that day it was decided that action was needed to make money less plentiful, and special sales of March bills at $4\frac{1}{2}$ per cent. were reported. At first it appeared that these were having no effect, but by Wednesday afternoon money had become more usable, and the rate for new money ran up to $3\frac{1}{2}$ and in places to 4 per cent., while renewals were also effected at 4 per cent. On Thursday, calling was in evidence for the first time this week, and money was distinctly more usable at $4\frac{1}{2}$ per cent. Market opinion was inclined to think that the corner had been turned, and that, despite excess Treasury bill maturities and Government dividend payments next week, the era of very cheap money had passed.

Once more the top was cut off the maximum offer of Treasury bills, for while the offer was originally for £30 millions, only £26 millions were allotted. Applications amounted to £40 millions, and this week the market were more on their guard lest they should partially miss the tender, and so the average rate fell from £4 17s. 11.5d. to £4 14s. 6.63d. per cent. Discount rates have sagged in sympathy with the lower Treasury bill tender rate, the abundance of money, and the strength of sterling as evidenced by the successful repayment of the Bank of England's credits without resource to the Bank's gold reserves. The rate on "hot" Treasury bills is reported to have fallen at one time to as low as $4\frac{1}{2}$ per cent., and first-class three-months' bank bills were dealt in at $4\frac{1}{2}$ per cent. or even lower rates. German "renewals" were quoted at $5\frac{1}{2}$ per cent. The clearing banks were buyers of March bills at $4\frac{1}{2}$ and $4\frac{3}{4}$ per cent. and Februaries at $4\frac{3}{4}$ and $4\frac{1}{2}$ per cent., and there was a keen demand for bills of all maturities. Discount rates were firmer on Thursday, with "hot" Treasuries quoted at $4\frac{1}{2}$ per cent.

The Bank return records a further small contraction in the note circulation, but for this week it was one of only £2.0 millions, and as the circulation is now down to £345.9 millions, it is clear that the New Year contraction is now at an end. The Reserve has risen by £2.0 millions and now stands at £49.9 millions, against £26.2 millions at the peak of the Christmas note circulation. Allowing for transfers of Government and Other Securities between the Issue and Banking Departments, there has been a net contraction of £5.4 millions in Government Securities and of £4.4 millions in Other Securities. Part of the former contraction probably represents maturities of Treasury bills held by the Bank, but the Bank has also been selling bills on the open market, and that helps to explain the shrinkage in these items. Discounts and Advances are lower by £1.1 millions. Among the Bank's liabilities, Public Deposits have been reduced by £5.5 millions. Here the rapid reduction of the volume of outstanding Treasury bills is pulling against the influx of revenue, and the position is further complicated by the fact that tax collections are first deposited with the joint-stock banks and only transferred to the Treasury's account with the Bank of England at a later date. Bankers' Deposits have fallen by £3.1 millions.

	Jan. 7, 1932.	Jan. 14, 1932.	Jan. 21, 1932.	Jan. 28, 1932.	Previous Rate and Date Changed.

Cover for accept., premises, &c.	158.5	160.8	153.5	145.3	144.9
Total assets	2,088.7	1,926.1	1,931.1	1,905.0	1,932.6

The increase in deposits over November is due to several causes. First comes the War Loan dividend, which had a greater effect than usual owing to the fact that it was not so freely reinvested as in previous years. Next came the relative curtailment of Christmas trade and the Christmas note expansion, which meant that the public drew less money than usual out of the banks. The expansion in the banks' cash reflects probably the release of the War Loan dividend, whose effects are spread over the first few weeks of the month, rather than the year-end making-up, which affected only one day of the month, and this suggestion is confirmed by the corresponding increase in call money. The increase in discounts may reflect the continued purchasing by the banks of end-December maturities, and it will be natural to look for a contraction in January. The remaining items call for little comment.

No further reductions have occurred in New York money rates, and call money is still quoted at $2\frac{1}{2}$ per cent., and 90-day bankers' acceptances at $3\frac{1}{2}$ per cent. On the other hand there is a definite impression that easier money conditions are favoured by the Government as the counterpart to the establishment of the Reconstruction Finance Corporation, and while too much significance should not be attached to the move, the Richmond and Dallas Reserve Banks have this week reduced their rediscount rates from 4 to $3\frac{1}{2}$ per cent. This now brings all the twelve Reserve Banks into line with New York, while it is very common for rediscount rates in the interior to be above the New York level. Gold imports for the week ended January 20th totalled \$8.3 millions, mainly from Latin America. Exports came to \$36.3 millions, of which \$24.2 millions went to France and \$8.2 millions to Belgium. Earmarkings on foreign account were reduced by \$16.1 millions.

Quiet but steady trading characterised the foreign exchange market this week, with sterling showing a decidedly firmer tendency. New York moved in our favour by $\frac{1}{4}$ to 3.47. Montreal went to 4.00, against 4.02 last week. Paris was unchanged on balance at 88½, and Brussels gained $\frac{1}{4}$ at 24½. Milan weakened from 68½ to 69½, and Madrid lost $\frac{1}{4}$ at 41.50. Amsterdam was little changed on balance at 8½, while Berlin was a trifle weaker at 14½. Switzerland remained unmoved at 17.75. The Scandinavian exchanges tended to move at one time in our favour, but were not much changed on balance. The South American exchanges are still largely nominal in the absence of normal trading, Rio being unchanged at 4½d., as was Montevideo at 31d., whilst Buenos Aires gained $\frac{1}{4}$ d. at 40d. In the Far East the rupee was firm at 1s. 6½d., but the yen lost $\frac{1}{4}$ d. at 2s. 1d. Batavia was fractionally weaker at 8.70. In the forward market one month's dollars were less offered at $\frac{1}{2}$ cent discount, three months' remaining at last week's quotation of $\frac{1}{2}$ cent. discount. Paris was at slightly reduced premiums of $\frac{1}{2}$ franc and $\frac{1}{4}$ franc for one and three months respectively. One month's Brussels was at par and three months' at $\frac{1}{8}$ belga premium. Three months' Milan was weaker at $\frac{1}{4}$ lire discount, one month's being unchanged. Madrid was at $\frac{1}{4}$ peseta and $\frac{1}{2}$ peseta discount. Amsterdam was firmer at 1 cent and 3 cents discount. No quotation was available for Berlin, and Switzerland was unchanged at $\frac{1}{4}$ franc and $\frac{1}{2}$ franc premium. Silver prices advanced by $\frac{1}{4}$ d. for cash and $\frac{1}{8}$ d. for forward to 19½d. and 19½d. respectively. Hong Kong and Shanghai silver exchanges were higher in sympathy, both gaining $\frac{1}{4}$ d. at 1s. 5½d. and 1s. 10½d. respectively.

THE FISCAL FOG.

SINCE the official announcement, a week ago, that the Cabinet had been unable to reach unanimity on proposals to implement the recommendations of its Committee on the Balance of Trade, and that a minority of the Ministers were, with the Cabinet's consent, to be at liberty to oppose by speech and vote the majority's chosen policy, much fine fury has been expended in attacking and (less vehemently) defending this innovation in Ministerial practice. Precedents have been invoked and challenged; Lord Melbourne's famous dictum has been made to work overtime; the Crisis and the Constitution, like Tweedledum and Tweedledee, have been set to fight each other might and main. The situation obviously lent itself to dramatization—be it by way of ironic comedy or high falutin' rhetoric concerning "larger loyalties"—and the Government's friends and foes alike have made full use of their opportunities.

Into this constitutional controversy we do not propose to enter deeply. The British Constitution is an essentially flexible instrument of Government, and can stand the shock of a good many innovations and experiments without cracking. Theorising as to the nice application of the doctrine of undivided Cabinet responsibility may well await a less critical juncture in the nation's affairs. Our concern and, we believe, the concern of the great majority of the electorate, irrespective of party, is rather to apply to the decision of the dissentient Ministers the pragmatic test: is their continued participation in the "National" Government to the public interest?

In asking this question, we make the not unreasonable assumption that Sir Herbert Samuel and his fellow "dissenters" intend, so far as in them lies, to make the agreed procedure "work." Patently, if polemics against the Cabinet's policy were to be delivered by the Home Secretary in the House, or active opposition mobilised by him against the Government in the constituencies, the experiment would break down forthwith. A reasoned statement of the grounds of their dissent is all that circumstances can, in practice, allow the minority Ministers; and to this extent they recognise, we presume, that they have forfeited the complete liberty of action which their resignations would have secured.

The real issues, then, are (1) why did they not resign? and (2) what good will come of their retention of Ministerial responsibility? In both cases, we suggest, judgment must be reserved until the Government's statement of "majority" trade policy is announced next week. For by the character of that statement—if it is candid and precise, as the nation is entitled to expect—Sir Herbert Samuel's apologia will be vindicated or condemned.

Let us briefly recall his arguments. The proposals which a majority of the Cabinet favoured for dealing with the balance of trade by fiscal measures were not endorsed by Lord Snowden, Sir Donald Maclean, Sir Archibald Sinclair, or himself. They considered that a case had not been established for such proposals, and that "they were open to grave objections in the national interests." On the other hand, there was no disagreement in the Cabinet over other issues—such as disarmament, reparations, currency, India and national economy—and resignations would have placed the Prime Minister in an embarrassing position. In short, Sir Herbert Samuel's implication is that Mr MacDonald, since "another Dissolution of Parliament could not be justified by the present circumstances," would either have resigned (perhaps involving Mr Baldwin and other "moderates" in his fall?) or have continued uneasily to ride a tiger now of unmitigated Tory temper. "Any change of Government that is now practicable," declared the Home Secretary to the Press, "would not weaken, but strengthen, the tendencies to which we take exception."

There is, *ceteris non obstantibus*, an undeniable element of Jesuitry in Sir Herbert's attitude. After all, fiscal policy is not a side-issue, but a question which, in the present economic crisis, is fundamental. If the forth-

coming measures are really "open to grave objections in the national interest," but are none the less to be enforced by the majority vote of the Cabinet, we are not greatly impressed by the argument that the present Ministry should be kept intact lest even worse "tendencies" prevail. (It resembles too much a plea that "good Germans" should vote Communist in order to defeat Hitlerism.) Nor is there much to be said for papering the cracks in the façade of a "National" Government, if, in fact, the real basis for coalition between Conservative and Liberal Ministers has disappeared.

The question is, has it disappeared, and, if so, why? We repeat: no satisfactory answer can be given until Parliament meets and the fiscal cards are on the table. All that the country has to go on, so far, is the unofficial, though generally accepted statement, given wide publicity in this week's Press, that it is proposed to supplement the Abnormal Importation Duties, already imposed under Mr Runciman's *ægis*, by a 10 per cent. *ad valorem* duty on a wide range of imports, including, apparently, most foodstuffs. There are rumours, too, of a Tariff Commission; but whether this is to be a mere puppet-show to amuse Lord Beaverbrook, a serious attempt to study tariff possibilities—and this would be at least a year's work—or, as has also been suggested, an indecent device for foisting some travesty of "scientific" tariff-making on to next April's Budget, the public have yet no means of knowing.

In these circumstances, we suggest, the fullest and frankest possible *exposé* is required, not merely of the immediate results which the majority of the Cabinet hope to secure by their Bill, but of the ultimate economic objectives which they have in view. Indeed, if such an explanation be not forthcoming, the dissentient Ministers will run the risk of being involved in a common discredit unless they force a candid disclosure. For in the present critical emergency there is only one thing that matters absolutely and without qualification in the attitude of statesmen to fiscal policy: is the aim self-preservation from the immediate storm and the attainment thereafter of the maximum expansion of free, international trade? Or is the annihilation of imports sought as a thing "good in itself"?

We do not profess ability to diagnose the present attitude to these questions of either the majority of the Cabinet or of the generality of more thoughtful Conservatives. The Abnormal Importation Duties, in which the Free Traders in the Cabinet acquiesced, can in no sense be regarded as indicative of permanent fiscal policy. The coming 10 per cent. tariff is not conclusive evidence—though the edge of a slippery slope is nearer—of a definitely mercantilist attitude. It is conceivable that the intention is to use such a tariff as a base from which to negotiate reciprocal agreements with as many countries as are willing to enter, with Great Britain, a large economic bloc of countries with free trade or at most low fiscal duties on their mutual trade—a policy which need not exclude the joint use of discriminatory duties against non-participants. If this be so—and some colour is lent to this interpretation by indications that erstwhile Protectionists in the Conservative ranks are becoming genuinely alarmed by the object lesson of the effects of import restriction on the Continent and elsewhere—it would clearly weaken the case for the Free Trade Ministers' dissent from the majority's policy. For though opinions may differ as to the merits of the means, the end is one desired by every Free Trader; and, in the exceptional circumstances of the crisis, some latitude for experiments may fairly be allowed. Have the "dissenters" sought and been unable to secure assurances on the ultimate objective?

That these speculations as to motives and intentions should force themselves on the mind, as they do, illustrates the confusion of thought which is befogging the whole fiscal issue in this country. Until ultimate aims are stated without ambiguity, the confusion is likely to continue; and if the dissentient Ministers decided to dis-

sociate themselves from the majority of their colleagues simply in order to ensure that the objectives of the Government should be clearly defined in Parliament, they did well. It would be an outrage on the electorate to plant a policy of progressive Protection on British trade under guise of "revenue duties," or on an insincere plea of "bargaining" necessity, or danger to the pound. The Government's conception of trade policy, not only during the crisis, but afterwards, requires urgent definition. If it prove to be the case that the majority of the Cabinet are intent—despite the spectacle of European paralysis in the fetters of import contraction—on endeavouring to suppress, not encourage, our foreign trade, then the continuance of the Government in its present form will violate every canon of political honesty.

THE WORLD DISARMAMENT CONFERENCE.

THE Conference which is to meet at Geneva next Tuesday, under the chairmanship of Mr Arthur Henderson will be more nearly representative of the nations of the world than any conference that has ever yet assembled. Its official title is "The First General Conference for the Limitation and Reduction of Armaments"; and all the words in the title are significant. The task which it is the business of the Conference to undertake is exceptionally difficult and exceptionally urgent. It is recognised, accordingly, that if a first attempt fails, or if it produces results which are good as far as they go but do not go far enough, the effort must be maintained and further World Disarmament Conferences called—always supposing that the political situation of the world, and particularly the situation which will arise if the First Disarmament Conference is a fiasco, still leaves open the possibility of reducing armaments by the leisurely tactics of attrition.

As for the difficulty of securing a limitation and reduction of armaments through an agreement between the armed Governments, it is manifestly greater to-day than it has ever been. The difficulty is inherent in certain features—all recent, but all now fundamental—in the constitution of modern society. These features are our latter-day democracy, our latter-day organising power, and our latter-day command over the tremendous forces of physical nature. Before these recent developments—in the generation, for example, of Frederick the Great—armaments almost automatically limited themselves. In an age when war was still "the sport of Kings," and had not yet become the deadly earnest of nations, a king could not safely take from his subjects more than a trifling toll of their blood and treasure for the sake of a destructive hobby in which the people who had to pay the bill felt little or no personal concern. The situation has been revolutionised by a century and a-half of "progress." The French Revolution brought the *levée en masse*; the Industrial Revolution (a British achievement) has done the rest. The two revolutions, between them, have transformed "la Guerre" into "la Guerre Totale." The motto of the modern General Staff is "*Nihil humanum a me alienum puto*"; and what this means in cold fact for men, women and children may be realised by a study of the French "Law for the Mobilisation of the National Resources in Time of War," which was passed in 1928. It is impossible to read this law without being shocked—not, be it said, at the conduct of the French Parliament in passing such a law in the situation of the world as it is. (The French were merely looking the existing facts in the face and making their preparations accordingly.) What is shocking is the situation itself; and it is against this appalling background that the World Disarmament Conference is meeting next week.

In the foreground there are other elements which are important because they loom large here and now. For example, there is the inequality of armaments-power between the ex-victorious and the ex-vanquished States in the war of 1914-18—an inequality which is the product of the peace treaties. The whole soul of the German people is now set upon recovering equality of national status with the other leading peoples of the world; and this national state of mind has governed the

policy of the German delegates on the Preparatory Commission for the Disarmament Conference, which was at work off and on during five years ending in December, 1930. The German point of view is shared to a considerable extent by the Italians and the Russians; and an ominous feature of the First Session of the Preparatory Commission was a marked tendency for the Powers to divide into two opposing camps, with Germany, Italy and Russia on one side, France and her Continental European military allies on the other, and Great Britain among the neutrals.

The Franco-Italian, as well as the Franco-German feud, bears closely upon the prospects of the Disarmament Conference. The Franco-Italian rivalry in land-power on the Continent is reflected in a Franco-Italian naval competition in the Western Mediterranean; and this affects the naval position of the British Empire. If French and Italian naval armaments increase beyond a certain point, Great Britain may feel obliged to take advantage of the "escalator clause" in the London Naval Treaty of 1930; and that might undo the comprehensive naval limitation agreement between the three "Oceanic" naval Powers—the British Empire, the United States and Japan—which has been provisionally achieved. This three-Power naval limitation agreement is vitally important because it offers a secure framework for dealing with the outstanding problem of European armaments on land. But if the Oceanic naval limitation agreement were to break down, the whole problem of disarmament would be thrown back into the melting-pot.

At this moment a tremendous strain is being put upon the three-Power naval agreement of 1930 by the action of Japan in the Far East. The essential facts, first, that Japan is employing armed force on the territory, and against the citizens of another Power as an instrument of national policy and, secondly, that neither the Covenant of the League nor the Kellogg Pact have availed to restrict her, lend formidable support to the fatal argument that the only true security lies in a decisive superiority of armaments.

The World Disarmament Conference will have before it the Draft Convention, roughed out by the Preparatory Commission, which has been on the stocks since 1927. To quote the concise and carefully-weighted words of the pamphlet published by the Information Section of the League of Nations Secretariat, "the Draft Convention is not an agreed document, but represents the nearest approach to agreement which the Preparatory Commission was able to reach." Moreover, "it prescribes" only "the ways and means; it does not prescribe figures." Thus the work of the Preparatory Commission has led up to, but not got over, the real difficulties; and it is the task of the Conference now to tackle them. The magnitude of the task is brought out by a comparison between the contents of the Convention and the outstanding controversies.

Described briefly, the Convention opens with a general article in which States agree to limit, and as far as possible to reduce, their respective armaments in accordance with its terms. It provides for the limitation of effectives in time of peace and the limitation of the period of service in conscript armies; indirect limitation of land material by means of a limitation of expenditure; the direct limitation by tonnage and gun-calibre of naval material; the limitation of expenditure on material for naval armaments; the limitation of the total number, horse-power and volume for dirigibles; the limitation of the total number and horse-power of aeroplanes; and the limitation of total annual expenditure on land, sea and air armed forces and formations organised on a military basis. It provides for publicity and exchange of information, for the prohibition of the use of chemical arms, for the creation of a Permanent Disarmament Commission, and for procedure regarding complaints.

The main outstanding controversies are whether trained reserves should be included in the limitation of personnel; whether war material for land forces should be limited directly by numbers and weight, by annual expenditure, or by some combination of these methods; and whether the provisions of previous treaties (e.g., the Versailles Treaty) in which certain States (e.g., Germany) have

agreed to limit their land, sea and air armaments are or are not to stand as they are, whatever the definitive terms of the Disarmament Conference may be.

Clearly, then, the Chairman of the Disarmament Conference, Mr Arthur Henderson, has a labour of Hercules to perform. But he will have one potent factor working on his side, which does not appear on his agenda, and that is the rapidly growing urgency of the need to surmount the world economic crisis. The economic crisis cannot be surmounted without a restoration of financial credit; financial credit cannot be restored without the establishment of political security; and political security cannot be established without a reduction of armaments. This is a powerful chain.

THE BANKERS AND GERMANY.

THE Report of the Foreign Creditors' Standstill Committee announcing the conclusion of an agreement, which we publish in summarised form in later columns, between the foreign banks which have extended short-term credits to Germany and the German Committee representing the debtor interests, is at pains to emphasise the Committee's recognition that their work can constitute no permanent solution of Germany's financial crisis. "The credit problem," it observes, "is not solved when reluctant creditors agree to prolong credits out of consideration for the debtor who is embarrassed and out of consideration for the general economic situation of the world in which the debtor occupies a vitally important place. The credit problem is solved when the creditors cheerfully and confidently continue credits which they might withdraw at their own convenience." Obviously, under existing political circumstances no such solution was attainable by means of international banking co-operation, no matter how close and well-concerted.

With the problem of Germany's future reparation obligations still unsolved, and with no arrangements yet made for a conference of Governments on the question, Germany's banking creditors could do no more than conclude an arrangement of a contingent character and for a limited period of time. The existing Standstill Agreement is therefore prolonged only for twelve months, and provision is made whereby the creditors may terminate the arrangement if the rediscount credits granted to the Reichsbank by the B.I.S. and the three leading central banks are withdrawn, or if other international developments materially endanger the Stillhalte plan. Nevertheless, the essential feature of the new scheme is its recognition that if world impoverishment and collapse are to be avoided, the aim of international banking must be not a general liquidation of the credit system, on whose basis the world's present economic structure has developed, but the maintenance and re-establishment of credits at a level permitting and facilitating economic recovery.

The Committee have decided that it is essential in the creditors' interests not to weaken the structure of Ger-

many further by any immediate repayments, but to allow, for the time being, German recuperative powers to work to strengthen it. Germany's short-term debts, they observe, represent funds which were used for business purposes and which on the whole were soundly used. That the credits were for the most part carefully given and represent strong names is demonstrated by the magnitude of repayments already made, amounting to 5 milliard marks, since the autumn of 1930. This abnormal rate of repayment forced by the crisis has weakened the Reichsbank and the whole credit structure and has affected German liquidity. Hence the Committee have aimed at a flexible plan to permit further repayments on standstill account when and as the transfer facilities of the Reichsbank permit. Credit lines, in the first instance, are to be reduced by 10 per cent., a reduction which will occasion no demands on the Reichsbank for exchange. Thereafter, instead of a fixed schedule of repayments, the future determination of what can be repaid is left to an advisory committee representative of the creditors who will from time to time consult with the German authorities. The German Government is creating a Committee for Foreign Debts to exercise, under the authority of the Government and the Reichsbank, a general control over all payments in respect of all German external indebtedness whether within or without the Standstill Agreement.

These arrangements, which have clearly an air of permanency, are supplemented by the provision of machinery for the conversion at the creditors' option of the cash advances to German banks into ten-year notes bearing interest at 6 per cent., and there are numerous other minor modifications of the original Stillhalte scheme, including a provision whereby, subject to certain very necessary restrictions, unsecured cash advances may be converted into "blocked" investments in Germany. But, as we have said, the really important feature of the agreement is the bankers' display of determination not primarily to devise machinery for an orderly "get-out" from their German commitments, but to justify the claim which they make that they are doing all that is possible to ensure that Germany shall have a period of recuperation.

Will Germany's recuperative powers, to whose magnitude the Committee pay proper tribute, have a chance to work effectively? The answer to this question, say the Committee, depends on "positive action by Governments and peoples in the sphere of international co-operation." Reviewing the present stage of the crisis, the Committee cogently observe that with international trade obstructed by growing tariff barriers and with the nations of the world contending "each for a disproportionate share of a dwindling world trade," Germany's ability to maintain the large export surplus which she has recently created is being progressively restricted. Her international liabilities cannot be liquidated in gold, and though international payments may be made by borrowing from a new creditor to pay off an old one, Germany cannot now find new creditors.

"The all-important thing is to restore the basis of credit. It is obvious that a settlement of Germany's international payments,

which are now under discussion between the Governments, is a vital element in this problem, as indeed are the inter-allied debts, which are in intimate economic connection with them. But these questions, though they profoundly affect private credit, cannot be solved by bankers. The Committee can only repeat that they endorse all that has been said by both Basle Committees on these problems. . . . The present extreme crisis must bring home to all peoples of the world the fact that all countries grow poor together. The obverse is as true. All countries grow rich together. A lightening of burdens and a greater freedom of trade, enriching one country, will enrich all."

This plea that the statesmen should work for a final settlement of the reparations and war debts problem finds powerful backing in the speeches delivered by the chairmen of the great British banks this week. Thus, Mr McKenna, at the Midland Bank meeting, emphasised that though the Hoover moratorium marked a great advance towards the fuller appreciation of the vital effects of reparations and war debts on all countries, "the world can never attain the level of prosperity justified by its own productive powers until this unhappy chapter of post-war history is finally closed." Again, addressing the shareholders of the Westminster Bank, Mr Rupert Beckett stated roundly that in the cancellation of war debts "lies our only hope" of breaking the vicious circle of increasing depression and national economic isolation. In fact, from every leader of the banking world comes an exhortation to Governments to make their essential contribution to the groundwork on which confidence can be rebuilt. If they will listen and act accordingly, the great recuperative powers, not only of Germany, but of the world as a whole, may yet be brought into play with rapid effect—though it is as well to bear in mind that the elimination of insupportable inter-governmental indebtedness would still leave to be faced the enormous problems represented by the increase in the burden of commercial indebtedness created by the price fall of the past five years. But if the first approach to the world's insistent economic problems is obstructed by policies of delay and of refusal to face facts, by insistence on barren "rights" which cannot be enforced, or by animosities which prefer revenge to co-operation, there is no magic in the hands of bankers which will suffice to save civilisation from destruction at the hands of its Governments.

BRITISH BANKING RESULTS.

BAD trade, falling commodity prices, and the general contraction of credit due to gold losses combined, last year, to reduce the resources of the big British banks, and, with low money rates in force until July, it is not surprising that the banks' earnings show a substantial falling off in comparison with previous years. Precisely how great the decline was it is impossible to say, for it is not known how great were the economies effected in administration expenses, while the banks invariably make large appropriations to reserves for bad and doubtful debts, to contingencies, and to other inner reserves before declaring their profits. In view of the troubles and uncertainties of the year it is likely that these appropriations in 1931 were larger than usual.

Be that as it may, the following table compares declared bank profits and their allocation for the years 1930 and 1931.

PROFITS AND APPROPRIATIONS.
(000's omitted.)

	Net Profits.		Dividend.		Contingencies.		Other Appropriations.	
	1930.	1931.	1930.	1931.	1930.	1931.	1930.	1931.

Williams Deacon's	279	275	234	234	50	40*	— 6	— 199†

* Includes investment depreciation account.
† Includes £200,000 transfer from reserve fund.

It should be noted that the National Provincial Bank's profits and dividends include income tax at the standard rate. In every case a substantial decrease is recorded, and in most instances the directors thought it a prudent gesture to make a slight reduction in the dividend. Shareholders and others who are inclined to deplore this decision should contrast the present strength of the British banking system with the numerous banking failures and difficulties prevalent all over the world. It is only by their traditional caution, of which their present dividend policy is the latest example, that British bankers have through many years built up their present position of exceptional strength.

One abnormal source of loss has been dealt with in an abnormal way, namely, the depreciation of the banks' investments. Judged by the total magnitude of the banks' holdings of securities, this loss is doubtless small, but it is large in comparison with the year's profits, and most of the banks have quite justifiably regarded it as a loss which could properly be met by a draft on their published reserves. There is no ground for any criticism of this decision. A subsequent table shows that even after these drafts the banks' reserve funds stand at an adequate figure, apart altogether from their undisclosed reserves. So far as can be foreseen, there is no reason why this loss should recur, and the reserve funds can be, and presumably will be, replenished in subsequent and more fortunate years. An improvement in the prices of British Government stocks, which form the bulk of the banks' investments, would at once provide the banks with a new addition to their inner reserves, for British banks never write up their investments when they appreciate. Finally, at a time when many American banks are having to obtain special leave not to write down their investments to current market values, shareholders and customers of British banks can rest assured that full allowance for the depreciation of the banks' investments has not only been made, but declared to the public in the clearest possible way.

The actual appropriations from reserve funds for this purpose, together with the banks' reserve funds (before making these appropriations) and the investments to which they are applied, are shown below:—

	Reserve Fund, end 1930.	Appropriation, £'000.	Reserve Fund, end 1931.	Investments, £'000.
Lloyds	10,000	2,500	7,500	51,327
Midland	14,248	2,748	11,500	42,190
Nat. Provincial	9,479	1,479	8,000	32,859
Westminster	9,320	1,820	7,500	51,452
Manchester & County	1,092	342	750	4,858
Martins	3,508	608	2,900	18,816
Union of Manchester	675	175	500	2,756
Williams Deacon's ...	1,000	200	800	7,409

While these appropriations amount to about 15 to 20 per cent. of last year's reserve funds—and in two cases to rather more—they rarely exceed 5 per cent. of the banks' investments. The fact that in every case these appropriations reduce the banks' published reserves to round figures suggests that transfers have also been made between inner reserves and investment depreciation accounts, and it is, therefore, of little advantage to make any comparison between these revealed appropriations, the size of the banks' investments, and the fall in the market value of gilt-edged stocks.

Coming now to the salient features of the balance sheets, as recorded in the main table at the foot of the next page, the first point noticeable is the general fall in deposits, amounting to a total figure of £155 millions. This may be ascribed to such factors as the year's gold losses of £25 millions and withdrawal of foreign funds, the contraction in public and private credit as shown by the year's reduction of £26 millions in Treasury bills, the further contraction in the supply of commercial bills and the reduction of £30 millions in the total of bank advances. Contingent liabilities, as represented by acceptances, have also fallen heavily, this being due to bad trade, lower world prices and perhaps a certain hesitancy to draw on London

SATURATION IN MOTOR TRANSPORT.

(BY A CORRESPONDENT.)

THE resistance of motor transport to the depression continues to be one of the most remarkable features of the situation in this country. The consumption of petrol for 1931 showed a small increase, in the order of 5 per cent., over the figure for 1930, which itself was 9 per cent. higher than the pre-slump record of 1929. Registrations of private cars in September, the month of highest registrations, numbered 1,083,457, compared with 1,056,214 in September, 1930, while goods vehicles numbered 860,614, compared with 348,441 in 1930. Hackney vehicles, with a reduction of 13.5 per cent. in registrations, show a rather different result, but this is largely attributable to the restrictions on omnibuses and motor coaches imposed by the Area Traffic Commissioners appointed under the Road Traffic Act, and is also partly counterbalanced by the tendency for vehicles of small seating capacity to be replaced by those of larger seating capacity.

The cry of "Wolf!" has been raised so frequently with regard to saturation point for motor vehicles that there is a risk that when saturation is approached the fact will be disbelieved and manufacturers will be led to embark on too ambitious programmes of production. A careful analysis of the latest returns seems, however, to establish definitely the fact of approaching saturation in the existing state of affairs. The general refusal of the Area Traffic Commissioners to license fresh omnibus services has established a compulsory saturation point for hackney vehicles. Goods vehicles owned by haulage contractors do not number more than 70,000, and, as their competitive position vis-à-vis the railways has not changed materially over the last two years, they may be assumed to have been handicapped by the same circumstances which caused the amalgamated railways' receipts from goods traffic to decline by 17 per cent. between 1929 and 1931. The increase in goods vehicles has probably been confined in the main to vehicles operated by firms owning their own means of transport, and there is no obvious reason why much further increase should at present be anticipated. The balance between motor and horse transport may have shifted a little in favour of the motor through greater attention being paid to the reduction of costs in times of depression; on the other hand, motor transport has been called upon to shoulder a fresh burden of taxation which horse transport does not share. The approaching saturation point for private cars is indicated by the fact that the annual increase over registrations for the previous year, as at the end of September, has fallen from 103,000 in 1927 to 96,000 in 1929, 75,000 in 1930 and 27,000 for 1931, while for November, 1931, it had fallen as low as 18,000;

since the suspension of gold payments. No information is available as to what proportion of the banks' acceptance liabilities, and also of their bill portfolios and advances, represent credits granted to nationals of such countries as Germany, Austria, Hungary and Chile, where standstill agreements or other restrictions on withdrawals of funds are in force; but in so far as acceptances are concerned, their total of all kinds bears so small a proportion to the banks' cash and liquid assets as to remove all ground for anxiety. A categorical assurance to this effect was given by Mr Goodenough at Barclays Bank meeting.

An aggregate fall of £38 millions in the banks' cash holdings probably arises from a diminution in the quantity of currency held in their tills; for, so far as can be told, bankers' deposits were as large on December 31, 1931, as a year ago. It is known that less currency was needed by the public last December than in December, 1930, and so the banks equally could operate on a smaller reserve. This lower currency demand enabled the Christmas season requirements to be met without recourse to an increase in the fiduciary note issue.

Little can be deduced from fluctuations in call money, for this item represents the margin between the banks' available resources and immediate needs, and, like every other margin, is subject to fortuitous variations. The big reduction in the banks' bill portfolio arises from the repayment of Treasury bills and the shortage of commercial paper. The banks have had to adjust their purchases of bills to the dwindling supply.

Advances are in most cases somewhat lower on the year. This again is the natural consequence of inactive trade and a lower price level. Also, the banks are more than ever having to exercise care and discrimination in respect of every individual application for accommodation, while it is conceivable that further and more stringent provision for bad and doubtful debts has affected the total.

With fewer bills available and less scope for advances, most of the banks have had to add to their holdings of securities in order to find full employment for their resources. This need was not altogether welcome at a time when even the highest grade of securities were losing part of their value, as the banks' appropriations from their published reserves bear full witness. Still, the recent improvement in British Government stocks should have offset much of last year's loss, and given the banks some addition to their inner resources. In any case, the balance sheets show that even in so difficult a year as 1931 the banks could operate without suffering any more harm than could easily be covered out of the great reserves built up through long years of traditional caution and conservatism.

* Includes "reduction of bank premises account."

† Includes call money.

for the current quarter there will probably be no increase at all.

Apart from the improbable removal of official restrictions on omnibuses and motor coaches, motor transport can postpone the coming of saturation point and accommodate an expanding manufacturing industry either by the return of a period of comparative prosperity or by a sensible reduction in the cost of motoring; but neither of these are likely in the immediate future. In other directions, the best results could be obtained from the organisation of the replacement demand and the arrangement of taxation and insurance in such a way as to have the least possible hampering effect on the use of motor vehicles, and more particularly of private cars.

The average life of a private car is calculated at seven years, and of a commercial goods vehicle at eight years. Assuming normal age distribution, this will give a replacement demand of 150,000 cars and 45,000 goods vehicles annually. Until recently, an abnormal proportion of the vehicles, and especially of the private cars registered, have been comparatively new on account of the rapid increase in the popularity of motoring, but the replacement demand has grown steadily from 57,000 in 1928 to 114,000 in 1931; and, unless the need for economy leads to an increase in the average length of life of cars, may reach nearly 150,000 in the current year. This, in conjunction with exports, will provide a fair output for British factories, although probably rather less than the record output of 182,347 reached in 1929. Commercial vehicle production, including omnibuses, reached its record of 66,859 in 1930. With a steady replacement demand for some 45,000 goods vehicles and probably 8,000 omnibuses and motor coaches annually, apart from exports, the motor industry, in spite of saturation in the home market and the restriction of exports through trade depression, has the opportunity of enjoying a very fair degree of prosperity in the current year. The chief risk is that this may be thrown away as a result of intense and uneconomic competition. British motor manufacturers might do well to study the possibilities in the domestic market of some modification of the scheme proposed for international application by M. André Citroën for relieving the pressure on the market of old vehicles by a co-operative plan for buying up and scrapping old cars. A good deal is already done unofficially by car distributors, who make generous allowances for used cars taken in part exchange for new; but a scheme which would systematise these unofficial transactions and prevent the oldest of the used cars thus taken in part exchange from finding their way into the second-hand car markets, would be far more effective.

Over a large part of the world the question for the motor industry to-day is not so much what to do to push back saturation point as how to check the reduction in the registrations and use of motor vehicles, and the possibility of this becoming the problem here also must not be overlooked. Petrol is being sold, apart from duty, at 4d. a gallon below its pre-slump price, and it would be unwise to regard the position as anything but temporary. The cost of petrol amounts to about 20 per cent. of the total cost of operating motor vehicles, so that an increase of 30 per cent. in this item would increase the total cost of motor transport by 6 per cent. Omnibuses are in a position to recoup themselves by increasing fares, while pleasure motorists can reduce their mileage, but the increase would be a serious matter for many operators of goods vehicles and react unfavourably on the road transport of merchandise. It is therefore of particular importance to all interested in motor transport to explore every avenue both for reducing commercial costs and encouraging private car traffic.

One of the most important factors limiting the use of private cars and motor-cycles is the system of collecting the tax, either in a lump sum at the beginning of the year or in equal quarterly instalments. Insurance also is a heavy item when paid in a lump sum, and cannot be economically spread over the year. The result is that 20 per cent. of motorists and 60 per cent. of motor-cyclists do not register their vehicles for the winter quarter, when the stimulus to use them is least and other financial demands greatest. This involves the Treasury in a loss of revenue, both in respect of the licence fee for the quarter and also of the lost duty on petrol which has not been

used, while it also reduces the replacement rate for old vehicles. There is no obvious reason why the payment for the quarterly licence should not be substantially reduced for the autumn and winter quarters, when the mileage run is comparatively small, and correspondingly increased for the spring and summer quarters. The insurance companies might also introduce a similar system of graded quarterly payments.

THE STANDSTILL AGREEMENT.

THE new "standstill" agreement is essentially a prolongation and modification of the agreement for the maintenance of short-term banking credits to Germany which came into force on September 17, 1931 (referred to as the "1931 agreement"). Its principal provisions are set out below, with the numbers of the clauses in which they are couched.

The Agreement has been executed by the Foreign Bankers' Committees upon condition that so long as the Agreement remains in force, the decrees of the German Reich shall render its provisions effective and in particular that there shall be no discrimination on the part of banking, commercial or industrial concerns in Germany in the making of repayment or the giving of security as between their foreign banking creditors whether adhering to this Agreement or not, or in the giving of security as between the latter and their creditors in Germany; that unauthorised movements of capital shall be prevented, and that all banking, commercial and industrial concerns in Germany who are subject to any form of indebtedness falling within the 1931 Agreement or this Agreement shall adhere to such respective Agreements.

Scope and Duration.

1. In this Agreement "Short-term credit lines" means and includes all acceptances, time deposits, cash advances and/or any other form of indebtedness arising from special agreements in currencies other than Reichsmarks in respect of which adherence to the 1931 Agreement has been or shall have been effected, together with any further such credits in currencies other than Reichsmarks actually used, existing and outstanding at any time between the 31st July, 1931 and the 8th October, 1931 (both dates inclusive) for a period of time extending beyond the 29th February, 1932 but expiring within the period of this Agreement.

2. The provisions of this Agreement shall (except in any cases where they are specifically expressed to come into force at an earlier date) come into force on the 1st March, 1932 and shall remain in force for a period of twelve calendar months from that date, subject, however, to earlier determination by the Foreign Bankers' Committees, in addition to the grounds specified in Clause 16 of this Agreement, in any of the following events, namely

- (i) if there be declared in Germany a moratorium which affects any obligation of German Bank Debtors to Foreign Bank Creditors dealt with in this Agreement, or
- (ii) if the Central Banks' advances to Germany granted under the auspices of the Bank for International Settlements be discontinued in whole or in part, or
- (iii) if in the future international decisions of a financial or economic character create a situation in which, in the opinion of the Foreign Bankers' Committees, the carrying out of this Agreement becomes seriously endangered,
- (iv) if any of the terms contained in the preamble above have not been complied with.

The declaration in Germany of a general foreign moratorium in whatever form shall *ipso facto* determine this Agreement.

Maintenance of Credits.

3. Each Foreign Bank Creditor shall maintain during the continuance of this Agreement *vis-a-vis* his German Debtor short-term credit lines upon the following terms:

- (a) The terms and conditions shall be at least as favourable to the Foreign Bank Creditor as those existing in regard to each respective short-term credit line at any time between the 31st July and the 8th October, 1931, inclusive.
- (b) Credit balances shall during the continuance of this Agreement be maintained by German Debtors with their corresponding Foreign Bank Creditors at sufficient figures for the working of the accounts concerned, so that the Creditors can operate such accounts without extending overdraft on their regular accounts with their German Debtors.

(c) Nothing in this Agreement shall prejudice the exercise by Foreign Bank Creditors of any statutory or contractual rights vested in them in respect of short-term credit lines in so far as the exercise of such rights would not be inconsistent with the terms of this Agreement.

With regard to security (shares, bonds, merchandise or other security) nothing in this Agreement shall prejudice any right, which a Foreign Bank Creditor may have, to require delivery of, sell or otherwise deal with such security held by him or by third parties for his account prior to the coming into force of the 1931 Agreement or the present Agreement in respect of short-term credit lines included in each Agreement except that the mere fact that, in

consequence of the provisions of either Agreement, repayment has not been made on the original due date, shall not in itself constitute a sufficient reason for selling or otherwise dealing with security.

In the case excepted above, a Foreign Bank Creditor having the right to do so may nevertheless sell outside Germany, upon giving seven days' notice to his German Debtor, any security held by him or for his account prior to the coming into force of the 1931 Agreement or of this Agreement respectively, as specific collateral for credit facilities held by him at the disposal of any of his German Debtors. Provided, however, that he may not sell (i) any security which at the time of the pledge was known to the parties concerned to represent an interest or participation in a Company which is essential to the conduct of the pledger's business, or (ii) any security which was pledged as collateral for the carrying out of a commercial transaction, and Provided that he shall be obliged to secure the best possible terms and conditions reasonably obtainable in the interest of the German Debtor.

Call money loans and other short-dated advances made against stock exchange securities and against mortgages on property which by their nature may be liquidated in whole or in part through the sale of the collateral security do not fall under this Agreement.

(d) So far as commitment credits had prior to the 8th October, 1931, been arranged for a fixed period of time for which a commitment charge had been paid in whole or in part, they shall remain in force but upon terms that they shall in all cases be available only to the German Debtors for whom they were originally opened, for the purposes originally contemplated and solely for their legitimate business requirements. To the extent to which bills drawn under such credits fell due or other availments thereunder matured, within the period of the 1931 Agreement, they were included and shall be deemed always to have been included in the 1931 Agreement. To the extent to which bills drawn under such credits fall due or other availments thereunder mature after the 29th February, 1932, but prior to the 1st March, 1933, they are included in this Agreement. Upon expiration of the period for which a commitment credit was originally opened, the Foreign Bank Creditor shall maintain such credit to the greatest extent to which it had at any one time been availed of within the period of this Agreement.

(e) Campaign credits (i.e., credits financing crop-growing) are not included in this Agreement.

Reduction of Credits.

4. (a) (i) Each Foreign Bank Creditor shall have the right to require an initial permanent reduction by 10 per cent. as at the 1st March, 1932, of the total amount of the short-term credit lines held at the disposal of his German Debtors on the 8th October, 1931 (excluding the amount of the further short-term credit lines not included in the 1931 Agreement but included in this Agreement) to the extent to which such reduction can be effected by cancellation of unavailed portions of their short-term credit lines. The right to reduce the total of the short-term credit lines by 10 per cent. may be exercised by the Creditor by applying such aggregate reduction right to the unavailed portion of such short-term credit lines held at the disposal of any one or more of his German Debtors as he may elect. Notice in writing shall be given by the Foreign Bank Creditor to each of his German Debtors as to whether or not his short-term credit lines are to be so reduced, and if so to what extent, at any time prior to the 16th March, 1932. A notice when effective shall restrict the German Debtor from thereafter availing himself of an unavailed portion of any short-term credit line to such an extent as would prevent the reduction specified in the notice from becoming effective.

(ii) If owing to the fact that the total of the unavailed portions of the short-term credit lines held at the disposal of his German Debtors is on the said 1st March, 1932, less than 10 per cent. of such short-term credit lines so that the Foreign Bank Creditor cannot to that extent benefit by the provisions of paragraph (i) of this sub-clause, he shall have preferential reduction rights pro rata with other Foreign Bank Creditors similarly situated until in all cases the initial deficiency has been made up.

(c) Each Foreign Bank Creditor shall have the right to require periodical permanent reduction by each of his German Debtors in respect of the short-term credit lines held at the disposal of such German Debtor by such amounts and within such periods as shall be determined in accordance with the provisions of the next succeeding sub-clause. The Foreign Bank Creditor shall be entitled to allocate his reduction rights to any one or more of the short-term credit lines held at the disposal of such German Debtor.

(d) (i) The delegates representing the Foreign Bankers' Committees, at their meetings on the 1st July, 1932, the 1st October, 1932, and the 4th January, 1933, after consultation with the German Committee and the Reichsbank, shall fix the amount of any reduction to be made in respect of the ensuing period and the date upon which such reduction is to become effective.

(e) A Foreign Bank Creditor shall be entitled to require increased periodical permanent reduction of a short-term credit line held at the disposal of a German Bank Debtor, which is in the nature of a cash advance, time deposit or other form of indebtedness entailing advance of money, by applying to such German Bank Debtor the whole or any part of his percentage rights in respect of any German Commercial or Industrial Debtor or Debtors, but any percentage rights so transferred shall be prorated against all short-term credit lines of the nature aforesaid held at the disposal of all his German Bank Debtors.

(f) The Foreign Bank Creditor shall give to each of his German Debtors at least thirty days' notice of the extent to which he intends to reduce their short-term credit lines. If the German Debtor is unable to pay he shall forthwith notify all his Foreign Bank Creditors of his inability to do so and thereupon, unless the majority in face value of his Foreign Bank Creditors shall waive

such default upon such terms as they think fit, such German Debtor shall, at the expiration of fourteen days from the notified date of payment, cease to enjoy any benefits and privileges under this Agreement.

Trust Fund for Cash Advances.

5 (a) (i) Each German Bank Debtor shall on the date on which this Agreement comes into effect deliver to the Reichsbank particulars of all cash advances granted by Foreign Bank Creditors existing on the 29th February, 1932, unsecured by guarantee or otherwise. There shall be delivered to the Reichsbank on the same date by each German Bank Debtor, for the creation of a trust fund, assets equal in value to 15 per cent. of such unsecured cash advances (taken at their face value), which assets are estimated to represent an aggregate value of approximately two hundred million Reichsmarks. So long as any of the certificates hereinafter referred to remain outstanding, the said trust fund shall at all times be maintained by the Debtors at its full original value of 15 per cent. of the amount of unsecured cash advances existing on 29th February, 1932. Provided that, so soon as the unsecured cash advances to any German Bank Debtor have been reduced to one-half of their face value at that date, the Reichsbank shall return to such Debtor any assets contributed by it to the said trust fund in excess of 15 per cent. of its then outstanding unsecured cash advances. The Debtor may from time to time, with the sanction of the Reichsbank, substitute for assets in the trust fund other assets of at least equivalent value. If at the expiration of two years from the creation of the said trust fund no certificates in respect of a German Bank Debtor shall be issued and outstanding, such Debtor shall be entitled to the return of such assets contributed by it to the said trust fund as are in excess of an amount equal in value to 15 per cent. of its then outstanding unsecured cash advances, taken at their face value.

(ii) The Reichsbank shall create collateral trust certificates containing an unconditional acknowledgement of indebtedness signed by or on behalf of the respective German Bank Debtors, of a principal amount equivalent to the aggregate amount of their respective unsecured cash advances.

(iii) If at any time a Foreign Bank Creditor wishes to receive certificates in respect of an outstanding unsecured cash advance, he shall be entitled to require the Reichsbank to issue to him certificates of the appropriate series of an aggregate nominal value equivalent to the amount of such unsecured cash advance.

(iv) Each certificate shall be redeemable by half-yearly percentage repayments of 5 per cent. of the nominal amount of the certificate, the first of such payments commencing on the 1st September, 1932, which percentage shall however be liable to reduction so as to ensure that, so long as this Agreement or any supplementary Agreement remains in force, the aggregate repayment to a certificate holder in any one year shall not be proportionately greater than the amount which the Foreign Bank Creditor would have received had he not been a certificate holder. Any portion of the indebtedness represented by a certificate not previously repaid shall be due and payable on the 28th February, 1942. The respective German Bank Debtors shall provide the Reichsbank in advance with sufficient foreign exchange to enable it to make such redemption payments.

(v) A Foreign Bank Creditor may surrender such certificate and resume direct dealings with the German Bank Debtor.

(vi) The certificates whilst issued and outstanding shall carry interest at the rate of 6 per cent. per annum.

(x) In order to comply with the provisions of this Clause, the German Bank Debtor shall deliver to the Reichsbank assets, whether promissory notes drawn by the Bank's clients, bonds, shares, bills, notes, Reichsmarks, mortgages or other assets as the Reichsbank shall approve.

(b) (i) Any German Commercial or Industrial Debtor may in respect of unsecured cash advances from Foreign Bank Creditors existing on the 29th February, 1932, take advantage of the machinery for the creation of a trust fund and issue of certificates, provided that the consent in writing of all his Foreign Bank Creditors must be obtained.

Collateral Security.

6. (a) Every German Bank Debtor which from time to time holds from any of its clients any security, whether general or specific, as collateral for credit facilities based on foreign short-term credit lines shall hold such security in valid and effectual trust for the Foreign Bank Creditors upon the same terms as those upon which it is held by the German Bank Debtor.

(d) The German Bank Debtors agree to continue their policy, whenever it appears to them necessary for the protection of their

credits, of obtaining security from their clients and of maintaining it at an appropriate amount.

7. In respect of bills accepted for account of German Bank Debtors the following provisions shall apply:

(a) Each German Bank Debtor shall obtain from its client at the option of the relative Foreign Bank Creditor either (i) a promissory note signed by such client in negotiable form for the like principal amount, in the same effective currency and of the same due date as the corresponding bill accepted by the Foreign Bank Creditor and shall hold the same in trust for the Foreign Bank Creditor by way of collateral security, or (ii) a letter addressed by such client to the Foreign Bank Creditor unconditionally guaranteeing to the Foreign Bank Creditor the payment by the German Bank Debtor when due of its obligation in respect of the bill, and undertaking to pay such obligation in the same effective currency as the corresponding bill.

If the promissory note or letter of guarantee shall not have been signed by the client within ten days of request by the German Bank Debtor, the latter shall forthwith obtain the signing of the same by the President of the local Landesfinanzamt.

The sub-clause proceeds to lay down the conditions under which the German Bank Debtor shall obtain from its client additional security in favour of the Foreign Bank Creditor as collateral for the promissory note or letter of guarantee.

This Clause shall not be construed as impairing in any way the primary liability of the German Bank Debtor.

(b) If the Bank's client is declared bankrupt, the promissory note or letter of guarantee and all obligations thereunder shall forthwith become due and payable without demand or notice and thereupon, pending maturity of the bill, the German Bank Debtor shall deposit and maintain with the Reichsbank, as collateral security, for account of the Foreign Bank Creditor, sufficient Reichsmarks to purchase the necessary foreign exchange to cover the bill at maturity, or shall pledge other satisfactory collateral security. If the Debtor fails to do so, the Foreign Bank Creditor shall be entitled to realise any specific security held by it in respect of such bill and the German Bank Debtor shall, upon request from the Creditor, realise any specific security held by it in trust for the Creditor in respect of such bill and pay to him the proceeds of such realisation.

Liquidation of Bills.

(c) Each German Bank Debtor shall, unless the Creditor elects to go under cash advance, duly cover at maturity every bill accepted for its account by its Foreign Bank Creditor, but without thereby affecting the right of the German Bank Debtor to maintenance of its short-term credit line under Clause 3 of this Agreement.

(d) Any sums realised in connection with the transaction financed by the bill prior to maturity, shall if in the requisite foreign currency be remitted immediately to the Foreign Bank Creditor or if in any other currency be utilised in purchasing forthwith the requisite foreign exchange for immediate remittance to the Foreign Bank Creditor, but without thereby affecting the right of the German Bank Debtor to maintenance of its short-term credit line under Clause 3 of this Agreement. If it is not possible immediately to obtain the requisite foreign exchange, all such sums shall forthwith be deposited with the Reichsbank for account of the Foreign Bank Creditor (but as collateral security only and not as payment) to be converted into the requisite foreign exchange at the earliest possible date and in any case (unless replacement drafts are provided) not later than the maturity date of the relative bill.

(e) Each German Bank Debtor shall provide its Foreign Bank Creditor, for acceptance, with either eligible bills or external trade bills or other bills drawn by commercial or industrial concerns. Every bill must be drawn by or for account of a solvent client of good credit standing. In the event of any dispute arising as to the good credit standing of a client, the question shall be referred for final decision to a Committee of three persons to be nominated by the President of the Reichsbank.

(f) In the case of a cash advance resulting from an acceptance credit, the German Bank Debtor shall offer to the Foreign Bank Creditor for acceptance, upon request, bills complying with the requirements of the preceding sub-clause of this Clause.

(g) The German Bank Debtor shall, at the request of the Foreign Bank Creditor, substitute a drawer of good credit standing for a drawer who during the period that a bill is outstanding has become of notoriously bad credit standing.

(h) If owing to the bankruptcy of a client the German Bank Debtor finds itself under obligation to provide cover of so considerable an amount that it cannot be expected immediately to produce sufficient replacement bills, the German Bank Debtor shall deposit and maintain with the Reichsbank sufficient Reichsmarks, calculated at the official Berlin middle rate, to purchase the necessary foreign exchange to cover such bills. The German Bank Debtor shall then be allowed forty-five days after the date of such bankruptcy within which to provide the necessary replacement bills; otherwise it shall forthwith cover the outstanding bills by cash payment in the requisite foreign currency.

Clause 8 lays down similar provisions for covering bills at maturity, remitting sums received from the transactions financed by the bills, and providing collateral security for the creditors, where the debtor is a German commercial or industrial firm.

Conversion of Credits.

9. (a) If a German Debtor is, owing to the nature of his business, unable for the time being to avail himself in whole or in part of a short-term credit line held at his disposal, he shall not be prevented from repaying the same, but if he does so he shall be entitled subsequently, during the continuance of this Agreement, to re-avail himself of the credit.

(b) Every Foreign Bank Creditor shall have the right to arrange with his German Debtor for repayment of any time deposit or cash advance, on condition that he shall hold a corresponding amount at the disposal of the Debtor in the form of acceptance credit facilities and a Foreign Bank Creditor may at any time, in agreement with his German Debtor, convert an acceptance credit into a cash advance.

10. Foreign Bank Creditors shall have the right to convert into Reichsmarks their unsecured cash advances existing and outstanding on the 29th February, 1932 and such unsecured cash advances as were not included in the 1931 Agreement but are included in this Agreement, for investment in long-term investments in Germany of one or more of the categories mentioned below.

(a) Mortgages on German real estate, the mortgages to run for at least five years.

(b) Shares, mortgage certificates, bonds and debentures and other securities of whatever description, with the provision that these same securities shall be blocked for five years.

(c) Real estate, fixed plant and property, with a similar provision.

A condition of exercising such right is that no Foreign Bank Creditor may, unless his German Debtor agrees, convert in any consecutive six-monthly period more than 25 per cent. of his outstanding credit balances with any German Bank Debtor and as to any German Commercial or Industrial Debtor, more than 15 per cent. of his outstanding credit balances in any consecutive six-monthly period during the first two years and 20 per cent. in any consecutive six-monthly period during the third year.

All such transactions must have the approval of the Reichsbank which may withhold its approval if it considers that Germany's economic interests would be injured by any such transaction.

Commission and Interest.

11. All commission and discounting charges in keeping with usual banking practice, together with bill stamp duty, shall be paid in advance and interest shall be paid monthly in the currency in which the respective credit is maintained.

13. No guarantor, endorser or credit insurer in Germany in respect of any short-term credit line held at the disposal of a German Debtor by a Foreign Bank Creditor shall obtain any release from obligations under his guarantee, endorsement or insurance by reason of the operation of this Agreement.

Breach or Insolvency.

14. (a) If at any time during the continuance of this Agreement a Foreign Bank Creditor is of opinion that a German Debtor has failed to remedy, upon request by the creditor, a breach of any of the provisions of this Agreement (other than failure to make payment in accordance with the provisions of sub-clauses (c) or (e) of Clause 4 of this Agreement, which is specially provided for in that Clause), the Creditor may submit such claim to his Foreign Bankers' Committee. If the Committee is of opinion that such claim is justified, the Creditor shall be entitled thereupon to give to the German Debtor formal notice in writing that in his opinion such breach has been committed. If the German Debtor fails within six days of receipt of such formal notice to remedy the breach or to submit the matter to the Arbitration Committee hereinafter mentioned, the Foreign Bank Creditor may notify the Reichsbank. If after a further period of six days the German Debtor still fails to remedy the breach he shall forthwith cease to enjoy any benefits or privileges under this Agreement in respect of the short-term credit line or lines held at his disposal by the Foreign Bank Creditor. A Foreign Bank Creditor may, instead of adopting the aforesaid procedure, himself submit in the ordinary way to the Arbitration Committee a claim that a German Debtor has committed a breach of the provisions of this Agreement. If the Arbitration Committee shall give a decision adverse to the German Debtor, the above procedure shall continue as from the point of formal notification to the debtor.

(b) If at any time during the period of this Agreement a German Debtor becomes insolvent or is declared bankrupt he shall forthwith cease to enjoy any benefits and privileges under this Agreement. The question of insolvency may likewise be referred to the Arbitration Committee.

15. All figures and facts disclosed to the Reichsbank or to the Deutsche Golddiskontbank pursuant to the terms of or in consequence of this Agreement are to be treated as strictly confidential.

Responsibility of the Reichsbank.

16. (a) The Foreign Bank Creditors recognise that it is essential in the mutual interest both of Foreign Bank Creditors and of German Debtors to strengthen the Reichsbank.

(b) The Reichsbank recognises (i) the vital necessity in the interest both of Germany and of her foreign creditors generally that the international short-term credit machinery be maintained and that an adequate supply of good bills for acceptance by Foreign Bank Creditors be forthcoming, and (ii) the special nature of the claims of Foreign Bank Creditors.

(c) & (d) The Reichsbank, having had centralised in its hands the entire control of foreign exchange, shall do its best to make

available, at all times during the period of this Agreement, the necessary foreign exchange to enable the German Debtors punctually to discharge the obligations assumed by them under this Agreement.

(e) If the Reichsbank shall at any time during the period of this Agreement claim to be unable, without thereby endangering its financial position, to continue to provide the necessary foreign exchange it shall forthwith give notice to the Central Bank in each creditor country.

(f) Upon receipt of any such notice, the Foreign Bankers' Committee shall consult together to consider whether this Agreement is to continue in force upon terms that its provisions concerning the providing of foreign exchange for any one or more of the purposes hereunder shall be temporarily suspended or modified in accordance with the claim made by the Reichsbank or whether this Agreement shall be determined. Notice of any such modification must be subscribed to by representatives of Foreign Bankers' Committees constituting a majority in face value of short-term credit lines then outstanding. A notice subscribed to by such a majority shall be binding upon all parties to this Agreement.

Foreign Bankers' Committees.

17. For the purpose of conferring from time to time with the German Committee and keeping the Foreign Bankers' Committees informed of matters arising during the period of this Agreement and of performing such other duties as shall be entrusted to them, delegates representing the Foreign Bankers' Committees shall hold meetings on the 1st July, 1932, the 1st October, 1932, and the 4th January, 1933, and shall hold other meetings at such time, as the delegates may arrange. Each Foreign Bankers' Committee signatory to this Agreement shall be entitled to nominate a delegate.

All decisions of the delegates shall be taken by the vote of delegates present and representing a majority in face value of the short-term credit lines then outstanding.

18. If a German Debtor ceases at any time to enjoy any benefits or privileges under this Agreement by reason of insolvency or bankruptcy (or by reason of a breach of any of the terms of the Agreement), his indebtedness to all his Foreign Bank Creditors (or those affected by such breach) shall forthwith become due and payable and thereupon nothing shall prevent any of his Foreign Bank Creditors (or those affected) from prosecuting and enforcing his claims against the German Debtor on the same footing as any German national.

19. All indebtedness arising under short-term credit lines covered by this Agreement shall mature on the expiration hereof and Foreign Bank Creditors shall thereupon be entitled to debit the accounts of German Debtors with the amount of all bills accepted for account of such German Debtors notwithstanding the fact that the bills themselves are drawn for later maturity but so that no interest shall be chargeable until the bills mature. Special terms are laid down for the application of the clause to confirmed credits.

Arbitration.

20. In case any dispute shall occur between Foreign Bank Creditors and German Debtors or the Deutsche Golddiskontbank as to the interpretation of this Agreement or as to any matter or thing arising thereout, the same shall be referred to an Arbitration Committee constituted as follows:

(a) The Bank for International Settlements shall nominate three persons to serve as permanent members, designating one of such persons as Chairman of the Committee and a second person as Vice-Chairman.

(b) In addition, the Bank for International Settlements shall nominate three persons who shall be available to serve as alternate members of the Arbitration Committee in place of any one or more of the permanent members.

22. Adherence to this Agreement shall be effected by each Foreign Bank Creditor notifying to his German Debtor or Debtors, on or before the 1st March, 1932, his willingness to adhere, by means of a letter in standard form (specifying the short-term credit line or lines held at the disposal of such German Debtor or Debtors in respect of which adherence is made). Every German Debtor shall forward, within four days of receipt of a letter of adherence from any of his Foreign Bank Creditors, a letter confirming his adherence in standard form.

Any Foreign Bankers' Committee may, with the consent of the German Committee, extend the time within which any one or more Foreign Bank Creditors in its country may adhere to this Agreement.

The Golddiskontbank.

23. The Deutsche Golddiskontbank having, in exercise of the right reserved to it by clause 6 of the Schedule to the 1931 Agreement, required an arrangement for repayment of its obligations by three equal yearly instalments, the Deutsche Golddiskontbank's obligations shall be fulfilled as follows:

(i) Foreign Bank Creditors shall have the right at any time within the period of this Agreement to make demands upon the Deutsche Golddiskontbank within the percentages and subject to the terms and conditions contained in the 1931 Agreement, to the extent to which such demands shall not have been made prior to the 29th February, 1932. The aggregate amount upon which such percentages are calculated may be increased by the amount of any further short-term credit lines included in this Agreement but not included in the 1931 Agreement. Demands may be made for guarantee of such further short-term credit lines based upon the aggregate amount provided for in the 1931 Agreement and demands may be made for guarantee of short-term credit lines included in the 1931 Agreement

based upon the additional aggregate amount provided for in this sub-clause.

(ii) In lieu of taking-over short-term credit lines or parts thereof pursuant to the provisions of the 1931 Agreement the Deutsche Golddiskontbank shall guarantee, and be deemed always to have been liable as guarantors of, the obligations of German Debtors in respect of such short-term credit lines or parts thereof.

(iii) All security held by Foreign Bank Creditors in respect of short-term credit lines or parts thereof guaranteed by the Deutsche Golddiskontbank at the date of adherence to this Agreement shall forthwith be delivered to the Deutsche Golddiskontbank to be held by it as agents for the respective Foreign Bank Creditors. The Deutsche Golddiskontbank shall be entitled in its discretion to administer and to realise such security to the best advantage at such time or times as it thinks fit. If, however, the Deutsche Golddiskontbank realises such security, it shall forthwith pay over the proceeds of the realisation thereof to the respective Foreign Bank Creditors by way of acceleration of payment of its obligations.

(iv) The indebtedness to Foreign Bank Creditors in respect of every short-term credit line or part thereof guaranteed by the Deutsche Golddiskontbank pursuant to demands based upon the aggregate amount provided in the 1931 Agreement shall be discharged by three equal yearly instalments.

(v) The indebtedness to Foreign Bank Creditors in respect of short-term credit lines or parts thereof guaranteed by the Deutsche Golddiskontbank, pursuant to demands based upon the additional aggregate amount provided for in sub-clause (i) of this Clause, shall be discharged in the years 1935 and 1936 on a *pro rata* basis as between Foreign Bank Creditors, but the Deutsche Golddiskontbank can only be called upon to pay in the year 1935 a total amount in the relative foreign currencies which, based on the official Berlin middle rate quoted on the 2nd January, 1932, could have been purchased for two hundred million Reichsmarks, after taking into account the amounts, if any, payable in that year under the provisions of the last preceding sub-clause and of sub-clause (vii) of this Clause.

(vi) Any Foreign Bank Creditor instead of requiring repayment of the full amount of any instalment falling due within the period of this Agreement in respect of any short-term credit line guaranteed by the Deutsche Golddiskontbank may, at his option, allow payment of up to 50 per cent. of such instalment to be postponed. He shall then be entitled to require immediate repayment to an equivalent extent of other short-term credit lines not guaranteed by the Deutsche Golddiskontbank.

(vii) To the extent to which a Foreign Bank Creditor elects not to require repayment of the full amount of any instalment in respect of any short-term credit lines guaranteed by the Deutsche Golddiskontbank as aforesaid, the Deutsche Golddiskontbank shall continue as a guarantor thereof but so that it cannot be called upon to make any payment as guarantor until the primary debtor is himself under obligation to repay.

(ix) The Deutsche Golddiskontbank shall, as agent for the Foreign Bank Creditor, be entitled to collect in advance from the German Debtor whose short-term credit line or part thereof has been guaranteed by it, the instalments from time to time payable to Foreign Bank Creditors.

(x) When the contingent liability of the Deutsche Golddiskontbank in respect of any of its guarantees has become an actual liability by reason of the bankruptcy of or default in payment at the due date by the primary debtor, the Foreign Bank Creditor shall have the right to require the Deutsche Golddiskontbank, pending repayment, to carry its indebtedness in the form of an acceptance credit.

Signature.

27. This Agreement shall become effective when signed by the German Committee, the Reichsbank, the Deutsche Golddiskontbank and by Foreign Bankers' Committees constituting a majority in face value of the short-term credit lines outstanding.

New Foreign Debts Committee.

At the time of the initialling of the agreement, the German Minister of Finance wrote to Mr Wiggan, Chairman of the Foreign Bankers' Committee, as follows:—

A "Foreign Debts Committee" is to be created, one member of the Committee to be nominated by the Government as its representative, a second member by the Reichsbank as its representative, and the other three members by the Government in conjunction with the Reichsbank as representatives of the entire body of German debtors to foreign countries, i.e., not only of the debtors participating in the negotiations now in process under your chairmanship. The Government and the Reichsbank are already agreed as to the three persons to be nominated; it is intended to nominate Messrs Kastl, Jeidels and Schlieper, who have declared their readiness to accept such appointment. In order to be in a position to fulfil its objects efficiently, the Committee will have a special manager who will devote himself entirely to this task, such manager to be appointed by the Committee itself. Should a person be selected who is not a member of the Committee, he will be appointed to be a further member of the Committee.

The activities of the Foreign Debts Committee above described shall cover the entire field of the German foreign debts in such a manner that all fundamental and important matters and problems of the said foreign debt are included. It follows that the Committee will co-operate in an advisory capacity both with the Government

and with the Reichsbank, the own responsibility of the Government and the Reichsbank thereby, however, not being affected. It will be one of the tasks immediately to be taken up by the Committee to investigate into those sections of the German foreign debts, disclosed by the statistics, the individual character of which it has not yet been possible adequately to clear up. In general, the Committee will have to exercise its influence toward the adoption of a uniform policy in the treatment of foreign debts, among other things particularly by segregating the various groups of debts from each other. The Committee will further have to exercise its influence toward the starting and carrying through in good time before maturity and through suitable intermediaries of negotiations which may be necessitated by the Devisen situation in respect of such groups of debts or important single debts which are not covered by the German credit Agreement of 1932.

In welcoming this development on behalf of his Committee, Mr Wiggin observed that:—

In view of the existing exchange difficulties, no immediate cash repayments of the short-term banking credits are provided for in the new Agreement. For this reason the Foreign Bank Creditors assume that no capital repayments of other creditors will take place save such as are deemed by the new "Ausschuss für Auslands-schulden" to be absolutely essential for the maintenance of German credit. They take it that this is, in fact, what you mean in your letter by the "uniform policy in the treatment of foreign debts," and it is on this assumption that they welcome it.

Notes of the Week.

The Reassembly of Parliament.—Parliament meets again on Tuesday with a fairly heavy programme of business before it. Apart from "crisis" legislation, there is to be the Children Bill, the Town and Country Planning Bill, and possibly a Rent Bill. In addition, with Easter falling unusually early, much necessary financial business will have to be put through before the recess, and it is understood that the Government will take the whole time of the House until Easter. The outstanding issue, of course, will be the Tariff Bill, with which we have dealt in a leading article. If a Wheat Quota Bill is to be included on the agenda there will be ample room for controversy. But however closely party attention may be concentrated on Westminster, the crisis will by no means consent to be neatly confined within national boundaries; and the real centre of interest will be in Geneva and the capitals of the Continent. Parliament, when it meets, would do well to ponder over the recent conclusion of the Economic Committee of the League of Nations "that the general result of national measures to cope with the effect of the crisis is almost inevitably to prolong and seriously to aggravate it." The Speaker might do worse than chasten the spirits of some of the Government's supporters by setting up this text, duly emblazoned, above his chair.

Dartmoor.—The sensational events last week-end at Dartmoor Convict Prison, culminating in a serious riot and the burning of the administrative block of buildings, naturally made a vivid impression on the public mind. The revolt was quelled with an absence of serious casualties which says much for the steadiness and forbearance of the prison guards and their police reinforcements; and lurid tales of a vast underworld conspiracy to storm the prison from without may probably be discounted as wild exaggerations. Nevertheless, the fact that incarcerated men should have been driven to make this desperate assault on authority must leave an uncomfortable impression. However true it may be that Dartmoor is now a concentration of the worst of our imprisoned "hard cases," the question remains unanswered why long traditions of more or less orderly behaviour have now been so violently broken. The causes of the outbreak require searching investigation; and, in the interest of the community, as well as of the convicts and the prison administration, it would, we think, have been well had the Home Office decided that the official inquiry, which is being conducted by Mr Herbert du Parcq, K.C., should have been held in public.

The Viceroy's Speech.—In opening the session of the Legislative Assembly at Delhi, Lord Willingdon took the opportunity to review at length the political and economic situation in India. He spoke optimistically, more optimistically perhaps than observers in this country would have dared to speak. The budgetary position, as a result of the labours of the Retrenchment Committee, was sound enough for him to assure the Assembly that they would not be asked to consider a new Finance Bill this session. The general economic situation in India compared most favourably with that of any other country in the world. The Viceroy claimed that the decision to link the rupee to sterling had worked indisputably to the benefit of India. The floating debt had been reduced from 84 crores to 61 crores, and there had been a marked improvement in the credit of the Government of India, especially in London. Bank rate had gone down, the rise in rupee prices had considerably helped producers, and the expansion of currency was altogether normal and healthy. The export of gold, negligible in comparison with India's vast hoards, was definitely and decisively to the advantage of the country. Of the political situation Lord Willingdon said: "We are meeting to-day at a time which is perhaps the most anxious and critical this country has ever passed through, a time which is full of possibilities for future peaceful advance and prosperity in India." He then delivered a cogent justification of the Government's attitude towards the Congress. The latter had regarded the Irwin-Gandhi pact "not as a settlement at all, but as a means for consolidating their position and for making preparations for a further attack on constitutional authority." In the United Provinces and on the Frontier the Congress leaders had stirred up class hatred and insurrection in defiance of the Government's efforts to maintain peace. The reply of Congress to the counter-measures of the Government was to revive civil disobedience.

"No government worthy of the name could hesitate to accept this challenge; failure to do so would make all government in this country impossible. . . . I and my Government are determined to use to the full the resources of the State in fighting and defeating a movement which would otherwise remain a perpetual menace to orderly government and individual liberty, while the Government will take all requisite steps to guard against any abuse of the special power it has been necessary to take."

After these stern utterances the Viceroy spoke hopefully of the work being done, and to be done with all speed, to implement the programme of constitutional reform outlined by the Prime Minister. It is a remarkable comment on the generous spirit in which, in spite of the rebuffs that it has received from the Congress and others, the British Government is guiding the destinies of India, that the Viceroy can still declare it to be his privilege "to be leading India on to her promised position as an absolutely equal partner with the other Dominions under the Crown."

Japan and Shanghai.—While the Council of the League of Nations is in impotent session in Geneva, a new act has opened in the swiftly-moving Far Eastern drama. The scene has shifted from Manchuria to Shanghai—a point of extreme danger, owing to the importance and the number of the interests involved in this great international port and mart. The flame now burning in Shanghai—and already threatening a conflagration—has been lit, of course, by a Manchurian spark. The only effective Chinese retort to Japanese armed force has been a boycott of Japanese goods; and the focus of this boycott has, naturally, been Shanghai, the main gateway through which foreign goods are imported into China, not to speak of the goods manufactured for consumption in China by Japanese and other foreign mills in the Shanghai International Settlement. The boycott has led to rioting. On January 18th, in Chapei, a Chinese-administered quarter of Shanghai, five Japanese monks were attacked and two of them mortally injured by a Chinese mob. Two days later, in revenge, a Japanese mob attacked a Chinese factory and eventually police. From this point onwards, history begins to repeat itself. On January 21st, the Foreign Office at Tokyo announced that the difficulties at Shanghai were to be re-

garded as a local problem which could be settled between the Japanese Consul-General and the Chinese Mayor of Great Shanghai. On the same day, the Admiral commanding the Japanese fleet in Chinese waters issued a formal demand to the Chinese authorities for the dissolution of anti-Japanese associations and an indemnity for the attack on the monks, under threat of drastic action by the Japanese Navy to protect Japanese rights and interests in Shanghai failing a satisfactory answer. The Japanese squadron on the spot has now been reinforced and the whole business has been placed in the Japanese Admiralty's hands by the Emperor. The naval action proposed amounts to an armed occupation of all parts of Shanghai under Chinese administration: i.e., everything outside the French and the International Settlements. The Japanese naval authorities have informed the municipal council of the International Settlement that they will avoid interference with the Settlement if they can help it, and if the municipal council succeeds in safeguarding Japanese interests effectively within its jurisdiction. But these are almost impossible conditions; for the Council has a police force, but no court of law—the local court is Chinese—and, as for avoiding interference, to make war in Chapei and promise immunity to the Settlement is like promising immunity to the City of London if one is making war in Whitechapel. Shanghai is one huge continuous ant-heap; and the bounds between the International, French and Chinese municipal administrations are as invisible as those between our London boroughs. Shanghai is threatened at this moment with the fate of Smyrna. Are the Western Powers going to stand by passively at Shanghai, now, as they did at Smyrna ten years ago, and see their cherished property burnt to cinders in a dog-fight between two local nationalities?

Foreign Bonds in Default.—Some misunderstanding appears to have arisen in connection with our note last week on foreign bonds in default. The table showing by countries the capital and accrued interest on which default has occurred included, as might have been deduced from the mention of State loans in the United States, not only the indebtedness of central governments but also that of states and cities. In particular, our attention has been drawn to the figure given for Latvia, which comprised the City of Riga loan of 1924 and the Wolmar Railway loan of 1910, both incurred under the Imperial Russian régime. Similar observations would apply to the Montenegrin loans included under the head of Yugoslavia.

The Spanish Government's Ordeal.—The trouble brewing in Spain, on which we commented last week, came rapidly to a head. On January 20th, there were organised Syndicalist outbreaks at Manresa, Solient, and Berga in the interior of Catalonia. Railway lines were torn up, and for a few hours these places were isolated, under Syndicalist control, from the rest of Spain. It appears, however, that these outbreaks were confined to the industrial element in the population, which is a minority even in the most highly industrialised parts of Spain. Only two villages are reported to have taken part in the *émeute*. Thus the trouble did not spread before the Government crushed it by a prompt concentration of troops from all quarters. At the approach of the troops, the insurrectionary movement collapsed, and the Syndicalist organisation only made matters worse for itself by calling for a general strike to begin on Monday, January 25. In Bilbao and Barcelona the strike was abortive, and Seville seems to be the only place where anything like a complete cessation of work has been achieved. The Government has shown great energy and efficiency, and the net result of the events of the last few days seem likely to be a setback to the Syndicalist cause. In fact, that cause can hardly succeed so long as the Socialists, who are in chronic contention with the Syndicalists for the allegiance of the Spanish industrial workers, remain the strong supporters of the Republic that they have been hitherto. It is not to be expected that this will be the last outbreak of the kind in Spain. All that can be said is that, every time an out-

break of revolutionary disorder boils up and dies down again without the Government being overthrown, the Government's prospects of survival are distinctly improved.

The Bank of England Credits.—Early this week it was announced that the Bank of England was proposing to repay the balance of its Paris and New York credits opened in defence of sterling at the end of July. It will be recalled that originally the equivalent in francs and dollars of £50,000,000 was so raised, and that on the maturity of the original credits at the end of October, £20,000,000 were repaid (mainly by shipping £15,000,000 of gold), and the balance was renewed for three months. This balance, amounting to £30,000,000 at the par of exchange, and to considerably more at current rates, is now to be repaid, and the Bank has further announced that all the necessary exchange has been covered and that no further gold shipments will be necessary, thus obviating any need to increase further the fiduciary issue. This decision has rightly been hailed, both at home and abroad, as welcome evidence of our financial strength, and is a curious commentary on the thesis that our balance of payments is still dangerously adverse. While full tribute must be paid to the authorities for their skill in making the necessary arrangements for transferring so large a sum without affecting the stability of the pound, there is no doubt that a factor of prime importance in the operation is to be found in India's gold shipments. Just as last week it became apparent that India's gold shipments to London had enabled her to cover current debt maturities, so the reshipment of the same gold to France has helped to enable us to repay our debts to Paris and New York. In addition, repayments of loans due to London on acceptance credits by German and other debtors have doubtless been a contributory factor. It would be natural to look for an improvement in sterling now that this special need for purchasing foreign exchange is removed, especially as there is every prospect that the movement of gold will continue. It must be remembered, however, that the Treasury credits of £80,000,000 are still outstanding, and, doubtless, preparations for their repayment will now engage the attention of the authorities. There is, however, no immediate urgency here; and it may not be unduly optimistic to look for a moderate recovery in the pound during coming weeks.

Professor Rist and British Monetary Policy.—Professor Rist has retaliated on Sir Henry Strakosch and other critics who have attributed the world's difficulties to French and American monetary policy. In an article in *L'Information* he carries the war into the enemy's country and bluntly attributes the world crisis to the false monetary policy which Great Britain has pursued in the last decade. Our false pride in desiring to return to gold on the old parity—when it had become patent to "all unprejudiced observers" that our "towering war debt and the inflation . . . produced by (our) issues of currency notes made it impossible of attainment"—was responsible for the accumulation of gold in New York, a falsification of world price levels and the unparalleled Stock Exchange boom. Finally, the multiplication of foreign credits by London—when all efforts should have been devoted to strengthening our internal situation—"by upsetting the English balance of payments, ultimately put an end to the gold standard, established some years before with such great difficulty." Now, no one would care to say that our monetary policy has been blameless; but this thesis, both in its assertions and its judgments, is so extreme that it destroys its own effect. Our towering war debt—greatly swollen by the financial help given to France, Italy and Russia, and piled up in spite of the fact that we met a much larger proportion of our war expenditure out of taxation than any of our Allies—has undoubtedly been a grave incubus. But it was not Britain that allowed gold to go to the United States in the years after the war. Between 1920 and 1925 our gold reserves rose from £112 millions to £156 millions. Those of European countries, whose currencies were in chaos, were stationary or fell. Was it not

France and Italy who at Genoa refused to consider the possibility of stabilisation at anything other than the pre-war par of the franc and the lira, and the Bank of France which for years resisted all idea of stabilisation in the belief that the franc would return to 25 to the £? In 1922 the *Economist* took the view that, if there could be a general agreement on stabilisation, it would be wise for Great Britain to consider fixing the £ on a new basis. But with the march of events—of which the most important was the determination of France to obtain reparations, even if it involved occupying the Ruhr—the opportunity slipped; and three years later this country was able—and, we think, in the then existing circumstances, rightly decided—to return to gold. There was at that time no reason to doubt that it would be possible to maintain the world price level then obtaining. It is of great importance to know why this did not happen. To blame Great Britain's excessive foreign lending is hardly to the point. In recent years we have lent abroad less than before the war; though the total lent to Germany by all countries was exceptionally large, British banking advances to German trade, which has traditionally been financed in London, were not abnormal in amount; and, even if we look at the balance of trade, it leaps to the eye that it is the reduced earnings of our foreign investments and lower shipping earnings (caused by tariff-strangled trade and subsidised competition) which have turned the balance. Unless Professor Rist can show that this country—which has maintained its purchases from abroad at a higher level than any other—is responsible for the world decline of prices, his thesis fails. We can find no single argument in his article that supports such a doctrine.

Sir Basil Blackett's Views.—A more balanced view of the decade through which we have passed was given by Sir Basil Blackett in a speech at Brighton at the end of last week. "It may be," he said, "that, politically and socially and internationally, we set ourselves too hard a task in trying to manage the gold standard, but it remains true that the failure to manage it in the conditions which existed is the cause of our trouble. If the return to gold was inevitable and the return to the old parity at least defensible, subsequent action in regard to the gold standard has been a long series of national and international failures. Had the gold standard been properly worked, had the conditions been more sensible, had gold not become immobilised, the world price level would have remained reasonably stable." But the effort has failed; and now the first need of the world is a recovery in wholesale prices. Unfortunately, Sir Basil sees no early prospect of the gold standard countries taking effective steps to stop the fall. What then is to be done in view of the fact that chaos threatens a great diminution of international trade on which modern civilisation, and in particular that of Great Britain, depends? Sir Basil's solution, for the time being at all events, is to try to organise what he calls a "sterling area"—though whether the name is best suited for the international arrangement which he has in mind is a matter which might well be considered. The essence of the conception is that the countries which have left the gold standard, including the Empire, Argentina and Denmark—indeed, practically all of Scandinavia and several South American countries—Egypt, Japan and Portugal, should endeavour to reach an understanding by which they would endeavour to devise arrangements under which they would maintain both the stability of their purchasing power and their local currencies and stability of their mutual exchanges. They would thus endeavour to provide a large part of the inhabitants of the world with both stabilities, and so make it possible for these countries to make far-reaching arrangements for mutual credits and at any rate some diminution in the height of tariff walls. The plan has obvious difficulties. Few people understand the meaning of stable purchasing power unrelated to any specific commodity such as gold or silver, there is a not unnatural distrust of the mysteries of Index numbers, and no one has worked out the technique of adjusting a number of currencies to such a standard. If part of the

gold reserve leaves the country, everyone understands that unpleasant steps may have to be taken; it would be much less easy to allay dissatisfaction if credit had to be restricted because of some change in price or foreign trade statistics. Few countries are confident that in such circumstances they could resist inflation, and none of them could be expected to take an external currency such as sterling as their sheet anchor without a very clear understanding of the rules of the game. If the gold standard has, as Sir Basil Blackett asserts, been mismanaged, assurances will be doubly necessary to guard against mismanagement of a much more complex system. That is why most of the countries concerned are anxiously looking for signs of a return by Great Britain to some form of gold standard—modified it may be as compared with that which has broken down. But the world moves fast under the pressure of events, and every avenue must be explored if the world is to turn its back on the chaos with which it is threatened.

The "Managed Standard."—It was only natural that, in his annual address to Midland Bank shareholders, Mr McKenna should have concentrated upon the suspension of the gold standard, and, indeed, should have welcomed it as final confirmation of his well-known views on currency matters. There is no doubt that, in many respects, he has been proved right, especially as he has now made it clear that his real quarrel is not with a well-managed gold standard, but with the gold standard as mismanaged during recent years. In this connection he emphasised forcibly the contrast between Britain's pre-war readiness as the world's leading creditor nation to lend abroad and so keep gold in circulation, and the reluctance of the chief post-war creditor nations to re-lend their accumulations of funds in such a way as to prevent the hoarding and maldistribution of gold. Again, in preferring the phrase "a managed standard," rather than a "managed currency," as the alternative to the gold standard, Mr McKenna has given a new and better perspective to these questions, for no one will dispute that to-day currency plays a minor part in the world monetary machine. He was, perhaps, inclined to deduce a little too much from our brief experience of the past four months, but from his main conclusion few reasonable men can differ. "The immediate choice," he said, "is inescapable; either we must have a soundly managed gold standard, which can only be secured by well ordered international action, or we must definitely abandon gold and rely on a managed standard without any metallic basis at all. In either event one thing is certain: the art of monetary management will have to be relied upon more and more to obviate such catastrophes in economic life as we are witnessing to-day. We must not delude ourselves once again into thinking that if we return to gold all will be well; renewed indulgence in that comfortable idea would be fatal. Deliberate, skilled and resolute monetary management, with or without gold, is a *sine qua non* of steady economic progress." The corollary of this train of thought is that we in conjunction with other nations must agree upon and work out the necessary technique for the conduct of the world's monetary affairs, before there can be any question of permanently establishing the pound upon a new basis.

Storm Clouds over Lancashire.—As we go to press, the industrial outlook in Lancashire is menacing. A ballot of the weaving operatives in the Burnley area appears to have resulted in an overwhelming majority for a strike, and though the final decision has yet to be made by the Central Board of the Textile Trades Federation, the chance of a stoppage at the beginning of next week is unhappily far from remote. The object of the strike would be to compel the observation of agreements by the employers. Breaches of collective agreements are never defensible; and the employers who have enforced extensions of the number of looms worked by a weaver, extensions of hours, and, in some cases, wage reductions, even in respect to four loom weavers, have incurred a heavy

responsibility. At the same time, the attitude of the Weavers' Union to the "more looms" system has amounted in the past three years to a deliberate policy of procrastination and evasion. If a number of employers, in the grip of stern economic necessity to reduce costs, have been constrained to make separate settlements with their workers, the weavers' organisation has itself largely to blame. Strike action at this juncture would do nothing but injure all concerned in the industry. The best way for the organised weavers to regain their authority would be for them to come constructively to grips with the task of negotiating a really workable settlement on the "more looms to a weaver" question.

American Cotton Crop.—The United States Government has announced that up to January 15th, 15,992,000 bales of cotton have been ginned, against 15,358,000 bales a month earlier, and 13,594,000 bales at the same time last year. The report, writes our Manchester correspondent, was about equal to expectations and did not cause any change in values. There is some doubt in trading circles whether the Government estimate of the yield of 16,918,000 bales will be reached; for, during the last few weeks, the weather in the belt has not been favourable for picking and harvesting. Owing to the big supplies available, however, there is no probability of any violent price movement in world markets, and the attention of operators is now centred on the question of consumption, which shows signs of increasing. It is too early for anything to be said as to the prospects for the new cotton season in America and much difference of opinion prevails as to the curtailment in the acreage. Planting preparations by farmers will depend to some extent upon the course of prices during the next month or two.

Sterling and Gold Prices.—After a fortnight of comparative stability the course of world prices, as measured by our index, turned downwards during the second half of January, and their fall was outdistanced by the decline in sterling prices:—

SEPTEMBER 18TH, 1931 = 100.

Date.	Economist Indices.			Irving Fisher, U.S.A.	Statistique Générale, France.	Milan Chamber of Commerce, Italy.	Statistische Reichsanst., Germany.
	Complete Index (sterling).	Primary Products (sterling).	Gold Prices.				
Sept. 30th ...	107.8	112.0	94.7	98.7	96.9	98.8	98.9
Oct. 14th ...	108.3	114.3	95.7	98.9	96.9	99.7	98.0
Oct. 28th ...	108.4	114.4	101.4	99.3	95.6	99.9	98.7
Nov. 11th ...	110.3	119.3	103.5	99.3	96.0	99.3	98.3
Nov. 25th ...	109.1	114.8	98.0	98.3	94.2	98.8	97.6
Dec. 9th ...	110.3	117.3	93.0	97.3	93.3	97.1	96.1
Dec. 30th ...	108.9	117.1	94.4	96.1	93.4	96.9	94.6
1932.							
Jan. 13th ...	109.6	117.7	94.5	94.5	93.8	96.3	92.5
Jan. 27th ...	108.3	115.7	93.8	...	...	...	...

It will be observed from the four foreign indices, for which we are indebted to the *Financial Times*, that the downward movement of wholesale prices is most pronounced in Germany, followed at a short interval by France. In the next table we give the comparative figures of our complete index in greater detail:—

"ECONOMIST" INDEX.
(1927 = 100.)

	Sept. 18, 1931.	Jan. 13, 1932.	Jan. 27, 1932.
Cereals and meat	64.5	70.7	69.7
Other foods	62.2	65.9	66.1
Textiles	43.7	53.2	52.5
Minerals	67.4	77.7	76.2
Miscellaneous	65.8	65.5	64.6
Complete Index ...	60.4	66.2	65.4
1913 = 100	83.1	91.1	90.0
1924 = 100	52.2	57.2	56.5

The fall during the past fortnight is spread over all the groups with the exception of "Other foods," in whose case a fractional increase took place.

The Volume of Overseas Trade.—A fortnight ago we recorded a sharp decline in the value of the foreign trade of the United Kingdom in the past year as compared with 1930. The change in the volume of imports and exports has been estimated in last week's *Board of Trade Journal*. Previously the Board's calculations, in which variations in prices are eliminated, have been based on average values in 1924. Important changes in the structure of our foreign trade have, however, necessitated the shortening of the interval between the original base year and the present time. The year 1930, though abnormal in many respects, has been selected because in that year the fourth Census of Production was taken. The figures for 1924 have been re-calculated on the basis of the weights adopted for 1930:—

VOLUME AND VALUE OF IMPORTS AND EXPORTS.

Period.	Retained Imports.				Exports of Domestic Produce.			
	Declared Values.	Index of Average Values.	Values in terms of 1930 Values.	Index of Volume.	Declared Values.	Index of Average Values.	Values in terms of 1930 Values.	Index of Volume.
	Million £.	1930 = 100.	Million £.	1930 = 100.	Million £.	1930 = 100.	Million £.	1930 = 100.
1924	1,137	135.0	842	88.0	801	120.8	663	116.2
1930	957	100.0	957	100.0	571	100.0	571	100.0
1931	798	81.0	985	102.9	389	89.4	435	76.2

The salient features disclosed by this calculation are the growing divergence between the indices of the average values and between the volume of retained imports and that of British exports since 1930. The index of average import values has fallen 19 per cent., while export values have declined only 10.6 per cent. This is, of course, a natural reflection of the character of British foreign trade, imports consisting chiefly of food and raw materials, which have fallen more in price than the manufactured goods, which constitute the largest proportion of exports. Despite a decrease of 16.6 per cent. in the declared value of retained imports, the volume index actually shows a rise of 2.9 per cent. On the other hand, the decline of 31.9 per cent. in the declared value of exports has been accompanied by a contraction of 23.8 per cent. in the quantity. The next table shows the changes which have taken place in the various classes of retained imports and domestic exports:—

RETAINED IMPORTS.

Period.	Food, Drink and Tobacco.			Raw Materials.			Manufactures.		
	Declared Values.	Index of Average Values.	Index of Volume.	Declared Values.	Index of Average Values.	Index of Volume.	Declared Values.	Index of Average Values.	Index of Volume.
	Mn. £.	1930 = 100.	1930 = 100.	Mn. £.	1930 = 100.	1930 = 100.	Mn. £.	1930 = 100.	1930 = 100.
1924	511	135.5	88.5	324	153.3	99.6	266	122.5	76.8
1930	451	100.0	100.0	212	100.0	100.0	283	100.0	100.0
1931	397	81.3	108.2	148	74.1	93.9	244	84.9	101.7

EXPORTS OF DOMESTIC PRODUCE.

Period.	Declared Values.	Index of Average Values.	Index of Volume.	Declared Values.	Index of Average Values.	Index of Volume.
	Mn. £.	1930 = 100.	1930 = 100.	Mn. £.	1930 = 100.	1930 = 100.
1924	57	116.8	101.1	106	140.3	119.0
1930	48	100.0	100.0	64	100.0	100.0
1931	36	88.6	83.1	47	90.0	82.1

There has been a marked expansion in the volume of food imports, amounting to no less than 22.8 per cent. since 1924. The sharp contraction in the quantity of raw materials purchased by this country reflects the shrinkage in industrial activity. The story of depression in the British coal industry is told by the volume figure of raw material exports, while, as compared with 1924, the volume of manufactured exports has declined by 36.5 per cent.

Finances of Uruguay.—A correspondent writes from Montevideo:—The financial outlook in Uruguay, despite the stagnation of business, appears to be taking a turn for the better. Such a statement may seem to be contradicted by the recent decision of the Administrative Council of the Republic to suspend the sinking fund, but it is generally felt in business circles here that only by so doing can the country obtain the necessary breathing space it requires. Suspension of that fund for the year

1932 will make it unnecessary to remit an amount calculated at approximately \$4,200,000 U.S. currency. Deterioration of the export trade, coupled with the diminution of revenues based largely upon imports, has put this advanced little country into an unusually unpleasant position. Nevertheless, all who are well acquainted with Uruguayan affairs have confidence in the financial conduct of the actual Administration. An internal loan has been arranged to a total amount of \$2,000,000 for six months, renewable for a further six months. All the banks working in Montevideo have agreed to take up Treasury bills in this connection, and it has been established that such bills may, at need, be rediscounted as to 50 per cent. of their face value with the Banco de la Republica. It has been stated that the original intention was to make an issue of Treasury bills to a total amount of \$4,000,000, of which part would be used for the present operation and part taken up by the same banks in the course of a few months' time. Furthermore, approval has been given to a measure under which the Banco de la Republica is authorised to buy bonds of the Uruguayan national debt up to a total face value of \$20,000,000. These bonds can now be obtained very cheaply in the foreign markets, and will be used as currency backing at their purchase value or at their current quotation, whichever may be the lowest; such bonds will be held as part of the 40 per cent. effective guarantee referred to in Article 1 of the Bank's Statutes. It is officially declared that, thanks to stringent economies, the financial year ending on June 30th will close without a deficit, while expenditure on future administration purchases has been ruthlessly cut down. Thus, although no immediate recovery in Uruguay's trade can reasonably be expected, it would appear that her affairs are now on a sounder foundation, and she should be in a position to share in the improvement that is looked for by Argentina when world trade as a whole takes a turn for the better.

War Debts—A Correction.—A correspondent has drawn our attention to an error in the table showing the postponable portions of the war debts to the United States, published in last week's Special Supplement on war debts and reparations. The main change is the omission of any postponable allowance for Belgium, whose payments of principal, as we regret we did not observe, are not subject to postponement until after June, 1935, but in some copies there appears also to have been a printer's error in the British figure. The following are the revised figures, relating to the year July, 1932, to June, 1933:—

Debtor.	Postponable Portion. \$'000.	Remainder Payable. \$'000.
Poland	1,125	5,502
Belgium	...	8,250
Finland	58	276
Hungary	12	60
Lithuania	37	173
Latvia	37	178
Estonia	90	425
Italy	12,300	2,491
France	21,477	38,523
Great Britain	30,000	141,500

As mentioned in the Supplement, Roumania, Czechoslovakia and Jugo-Slavia have no postponement rights until 1937 or later.

Overseas Correspondence.

LEAGUE OF NATIONS.

Disarmament Conference — Difficulties and Prospects.

(FROM OUR SPECIAL CORRESPONDENT.)

GENEVA, January 27.

THE Disarmament Conference will open, next Tuesday, not only with the problem of reparations and war debts unsettled; it will open with 200,000 square miles of Chinese territory under the military occupation of Japan, and with the complete failure of the British and other

Governments on the Council to make any serious effort to observe their obligations to maintain the principles of the Covenant, not to mention the Paris Pact and the Washington Nine-Power Treaty. The Conference will thus be down to the naked question of the possibility of reduction of armaments in a world where States cannot be expected to have much confidence in the covenants to which they have been exhorted to adhere.

The second general consideration is that, even taking the chances of achievement at their best, it is well to understand at once that Germany will in any circumstances declare the results to be inadequate. It is out of the question that the Conference will succeed sufficiently to satisfy German claims of equality, by which Germany means not necessarily equality in numbers but equality in conditions; that is to say, she should be a participant on equal conditions in any new international armaments convention in place of the armaments clauses imposed upon her in the Versailles Treaty. This cannot be considered unreasonable from Germany's point of view as a member of the League and thirteen years after the war, but quite definitely it will not be accepted. If one thing is plain, it is that neither France nor any of her Allies will consent to any convention without having as its foundation the continued observance by Germany of the peace treaty conditions on armaments, and this condition is in fact embodied in the Draft Convention.

The third point is that as the time of the Conference has approached there has been a distinct hardening of the attitude of most of the Governments. Most, if not all, claim that they alone have really reduced their arms to the lowest point consistent with their security, and those who do not make this claim say that they have not yet had time to arm themselves sufficiently to be secure. Each State believes that she alone makes the claim with justification. Great Britain finds it quite impossible to understand why any foreigner should contest her peaceful need of the greatest fleet in the world, and fails to see any parallel in the French claim to superiority on land. The United States has withdrawn more and more into her Middle West shell. She is disinterested in land armaments; she will not participate in any way in strengthening the means of security; she apparently will be content, like Great Britain, to invite other Powers to follow her good example. Japan has decided that with neighbours such as Russia and China she can do nothing; Italy and France are at loggerheads, and Italy, while preparing to go to any length in reduction of armaments, makes everything depend upon her ratio not being below that of any other European Power, meaning France.

France conceives of no possible contribution unless her security is guaranteed to her satisfaction. This seems to mean an undertaking (which she will never get) that the British fleet will always be on her side. France's effort at the Conference will be to revive the Protocol of 1924. There is no hope in this direction. Russia, dissatisfied with everything that has so far been attempted, will again propose complete disarmament; the sincerity of the offer will not be acknowledged, and its acceptance is out of the question. All the Powers bordering on Russia make whatever they may do dependent upon their estimate of what Russia is doing or may be trusted to do. Great Britain is credited with some ideas about the reduction in the size of war vessels, to which America is apparently opposed. Both have equal interest in the abolition of submarines, to which all the other naval Powers object. But there is no indication from any responsible quarter of positive proposals except from Russia, Germany, and one or two smaller Powers with little influence on large policy.

One of the more serious difficulties is likely to be the question of budgetary limitation. The United States Government declines for itself any form of budgetary limitation, but is prepared to consider means of direct limitation and full publicity if other Powers accept budgetary limitation and some way can be found for measuring the equivalents. France does not accept budgetary limitation of naval material, as she considers direct limitation, together with the limitation of the

aggregate expenditure on armaments, is sufficient; Japan takes the same line as France. Great Britain and Italy make their acceptance of budgetary limitation dependent upon the attitude finally adopted by other maritime Powers. As one of the main hopes lies in some limitation of expenditure (there is no other method proposed for land material), these obstacles are serious, though there seems to be a feeling that they may be overcome.

The general prospects in any event are not bright. It would be foolish to prophesy, and it is just as well to put expectations low. So much depends upon something being done, and so profound would be the gravity of definite failure, that it must be hoped that, as a minimum, the Powers will be frightened into some measure of progress which will not be too serious a disappointment. The Conference will begin with a general debate lasting several weeks, followed probably by an Easter adjournment, after which five Commissions—Political, Budget, Military, Naval and Air—will sit. There may be other adjournments, and there will certainly be alarms, excursions and deadlocks.

UNITED STATES.

Reconstruction Corporations — Banking — Trade.

(FROM OUR CORRESPONDENT.)

NEW YORK, January 16.

THE new Reconstruction Corporation, now virtually through Congress and assured of Presidential blessing, is generally hailed as a means of arresting the rapid course of deflation, but opinions differ as to the amount of inflation which may ensue. In most quarters, particularly among the large banks and the Federal Reserve Banks, the view is held that fears of inflation are greatly exaggerated, particularly on your side of the water. Admittedly much will depend on the character of the management.

Although the new corporation will have an authorised lending power of \$2,000 millions, it is expected that it will take at the start only \$500 millions, and it is hoped that this sum may suffice for its needs during its life, especially since the main goal of the new body is the restoration of confidence. The \$500 millions will probably be provided by the Treasury, which will obtain the money from short-term borrowings among the banks. This will, of course, mean a write-up of bank credit, but in so far as the credit is used to liquidate existing frozen bank credit, no net gain will take place. Banking authorities hope to limit the Corporation's activities largely to this scope. However, in addition to making loans to banks, it is counted on to provide money to some railroads for re-funding bond issues. While banks may hold part of these issues, which cannot be refunded through public offerings, owing to the bad state of the bond market, part also are held by the public. Substitution of bank credit for public savings to some extent is therefore likely, but that will not be allowed to run far. The point emphasised here is not that inflation is desirable, but that deflation for the moment has gone far enough and certainly fast enough.

So far, the new credit-easing campaign of the Federal Reserve Banks has not been reflected in the statements of condition. Bill rates have been cut three times in the past week, the asking rate on 90-day documents being 2½ per cent., compared with a discount rate of 3½ per cent. Such a wide spread has seldom lasted long without a change in discount rate. This week, total Reserve Bank credit in use fell \$87 millions. Member bank borrowings were unchanged, for in spite of the large seasonal inflow of funds, the drop in currency circulation was only \$42 millions, whereas usually at this time it is over \$100 millions, and the Reserve system reduced its bill holdings by \$61 millions and its Government securities by \$14 millions. Next week's statement is expected to reflect more clearly the new operations, which are designed to stiffen bond prices and will at least have the effect of

making easier the credit operations of the Reconstruction Corporation and Treasury borrowing generally.

In spite of the rise in bond and stock prices to about 20 per cent. above the low levels of January 5, the market for new capital issues has not yet been tested. Offerings are very small and mostly of a Government nature. This week's new issues were \$15,140,000, against \$3,422,000 in the previous week and \$282,815,000 in the previous year. Federal Intermediate Credit Bank borrowing made up \$12 millions of the total. The week's gold movement was marked by two large transactions, one of which added \$12 millions to the earmarked stock and the other of which took \$15 millions out of earmark. Exports were \$17 millions and imports \$4 millions. January imports to date are \$20 millions, more than offset by exports of \$25 millions, with a net decrease from earmark of \$3,500,000.

An interesting summary of savings bank deposits for this district for December has just been published. Deposits of \$110 millions show a decline of \$2,897,000, whereas there is almost invariably a rise in December. Some interpret this as meaning that many depositors are now beginning to live on their capital, owing to widespread unemployment, and the explanation is also given that the low level of prices has brought some increased buying of goods, but statistics of wholesale and retail trade, industrial production and the distribution of goods do not as yet confirm this. However, none of the money is going into the securities market, so far as can be ascertained.

No alarm is yet felt lest an exodus of foreign balances on the scale of last autumn should take place, but loss of gold shows the direction of the wind. Foreign balances here are now estimated at from \$600 to \$800 millions, and the amount of gold held under earmark at the Federal Reserve Banks is about \$40 millions. This gold could be spared without appreciable effect on the money market, inasmuch as it already has been taken out of reserves.

An echo of bank failures is heard in the January 2nd report of the Comptroller of the Currency on national bank capital and circulation. The capital of all national banks was \$1,644 millions, compared with \$1,736 millions a year ago. Some of the shrinkage is, of course, due to transfer from national to State charters. In spite of the numerous small bank failures, each with its small bank note circulation, total national bank note circulation has risen to \$710 millions from \$698 millions. The national banks have found it profitable to exercise their circulation privilege at current prices for Government bonds.

Industrial news is indicative of continued slackness, with only mild seasonal rises. The steel industry is working around 23 per cent. of capacity, and buying by the motor and railroad companies fails to increase. Railroad traffic is practically at a standstill. Interest in the national motor show was gratifying, but it is yet too early to gauge public buying response to the new models offered for inspection. Most motor makers hope for at least as large an output for 1932 as was obtained in 1931.

Foreign trade figures for December show exports of \$184 millions, the smallest since September, 1914, and the smallest for December since 1909. Imports of \$153 millions were the poorest since October, 1915. They compare with exports of \$274 millions and imports of \$208 millions in the previous year. For the full year 1931 exports of \$2,424 millions and imports of \$2,090 millions compared with \$3,841 millions and \$3,060 millions for 1930. Exports were the smallest since 1914 and imports were the smallest since 1915.

After some delay the Chicago conference on railroad wages has begun. It is expected that railroad labour will wish to bargain for concessions in the matter of employment and working conditions, but will, nevertheless, be willing to accept a 10 per cent. reduction in wages rather than take their chances through arbitration on the 15 per cent. reduction formally asked by the railroads. Meanwhile arrangements are being made to make loans from the Railroad Credit Corporation available shortly, without waiting for an accumulation of surplus from the higher freight rates.

Some interest was aroused in the final consummation of the Sinclair-Prairie Oil and Prairie Pipe Line merger, which has been under negotiation for the past year. The union ought to help strengthen the oil production and price situation. American Petroleum Institute officials are planning a conference for next week in an effort to curtail output another 200,000 barrels daily, the Sunday closings not having brought down production enough to offset the recent sharp drop in consumption.

Publication this week of bank statements at the annual stockholders' meetings passed off quietly, although some surprises were given by the extent of the writings down made necessary by the drastic reduction in market value of bank investments. The strongest institutions were not immune, but the reductions have not, of course, in any way hurt their standing. All that has happened is that stockholders have had to see a shrinkage in assets. As yet, dividends have not been affected. In the next few months it is believed that the movement to eliminate security affiliates from the large banks will go so far as to leave no more than one or two important institutions maintaining security investing and trading companies.

FRANCE.

Reparations — Revenue — Agriculture.

(FROM OUR CORRESPONDENT.)

PARIS, January 27.

THE German developments in regard to a further reparations moratorium have apparently had a greater effect on French opinion of all categories than perhaps any happening since the war. The French are now visibly nervous as to the immediate future. The public statements made by Senator Eccard with regard to Germany's alleged secret expenditure on preparations for war have roused uncomfortable interest among all classes, and the man in the street has had his imagination stirred by the idea that a Russo-German onslaught against the Western nations has now become rather more than a possibility. For the time being attention is closely focussed (and this not merely on the part of the less-well-informed section of the public) on the line France may be expected to take if Germany persists in refusing to resume reparation payments.

M. Stéphane Lauzanne, in the *Matin*, suggests that the first thing to be done is for the Bank of France to refuse to renew its share of \$25,000,000 in the \$100,000,000 of credits extended to the Reichsbank through the B.I.S. (which fall due for reimbursement on February 4th), and thus put the mark in peril. "When M. Moret hinted at this at Basle a week or so ago," writes M. Lauzanne, "Dr. Luther cried out that such a course would put the mark in danger; but what does the fate of the mark henceforth matter to us?" As a second step M. Lauzanne urges that the Franco-German Customs Treaty of 1927 should be denounced, and German imports into France be subjected, in addition to the French general tariff duties, to a 26 per cent. supertax, the yield from which would be utilised to compensate France for unpaid reparation debt. M. Léon Bailby, in the *Intransigeant*, while approving these suggestions, points out that a third means of compensation might be found by France taking permanent possession of the Saar area.

How far the French leaders are in sympathy with such proposals is highly questionable. It has been asserted by several newspapers during the past few days, however, without provoking any kind of official *démenti*, that the refusal of the bankers at Basle last week to give more than a conditional promise to renew the \$100,000,000 credit was directly due to the intervention of M. Moret, the Governor of the Bank of France. Paris is now eagerly awaiting the decision of the Bank of France, which may possibly be arrived at during to-morrow's usual weekly meeting of the Regents, or, as to-night seems more probable, may be deferred "until a date in closer proximity to February 4th," when the whole amount becomes due for reimbursement.

The question of exactly what amount France has received on account of reparations has now become one of the crucial factors in the controversy between the two Governments directly interested. German official statements assert that France has already received more in actual payments on reparation account than the reconstitution of the devastated regions has cost her or will cost her at the end of the account. It is made public to-day that M. Flandin, the Finance Minister, in a statement to the Chamber Finance Commission yesterday, asserted that down to June 30th last German reparation payments totalled (payments in cash, merchandise, cessions of territory, etc., included) 21,413,383,882 gold marks, of which the French share has been 8,151,060,569 gold marks gross, or, after deducting cost of the armies of occupation and other charges, 5,165,144,047 gold marks net, or rather over 31,000,000,000 francs. In respect of compensation for losses of property, the Minister asserted, France had expended down to April 1st last 97,881,000,000 francs, which still left a further sum of between 5,000 and 6,000 millions unpaid. These figures leave out of account interest payments on sums paid by France. Further, a large proportion of the expenditure was made, it is stated, in francs of a value higher than the present currency. "In other words," the Finance Minister concluded, "reparation expenditure has cost us 175,000,000,000 francs in capital alone, the total cost, including capital and simple interest, having been effectively 250,000,000,000 francs."

The revenue returns for December are the most unfavourable registered since the beginning of the current financial year. The total recoveries from "normal and permanent" sources were 3,350,583,000 francs, against 3,910,000,000 francs in the previous month, 3,630,000,000 francs in December, 1930, and 3,842,000,000 francs in the same month of 1929. The total for the month was 166,800,000 francs less than Budget estimates (whereas for the whole of the previous months of the financial year—with the exception of May, when there was a deficit of 77,500,000 francs—there has been a surplus, due to recent increases in many of the Customs rates). Total recoveries, for the first nine months of the financial year, although 1,187,000,000 francs below those for the corresponding period of 1930, were over 49,000,000 francs above Budget estimates for the period covered. The yield from turnover taxes in December (which concerned business transactions in November) was 563,341,000 francs, or 14 per cent., less than in December, 1930. Of the other leading categories of imposts, taxes on securities alone showed a substantial increase as compared with December, 1930, the yield being 113,000,000 francs, or nearly 30 per cent. more than in the last-named month. Customs duties produced 440,000,000 francs, or 9,708,000 francs less than in the corresponding month of 1930. Registration duties were over 13 per cent. smaller. The largest decline during December was in income-tax receipts, which were 171,000,000 francs less than in December, 1930. The yield from this source for the nine months was 8,819,000,000 francs, or 769,600,000 francs below that for the previous corresponding period.

Official returns of the potato crop in 1931 state that the entire yield was 26,429,000 quintals, as compared with 11,954,000 quintals in 1930. The embargo placed on French vegetables and other agricultural products by Great Britain has had a serious effect on sowings for the new crop of potatoes. In Brittany, where some thousands of acres have for many years been devoted to raising potatoes for the British market, the closing of the latter against them has been philosophically accepted by many of the growers as permanent, and large numbers of them are reported to have already decided to devote themselves in future to the culture of tobacco. For this there is a steadily growing and constant market in France, under the direct control of the Government, home-grown supplies being always largely smaller than demand, so that the loss to the national revenue from the closing of the British potato market seems likely to be compensated for to some extent by a reduction in the tonnage of imported tobacco,

GERMANY.

Standstill Agreement — Washington Scheme — Bourse Question.

(FROM OUR CORRESPONDENT.)

BERLIN, January 26.

THE conclusion of the new standstill agreement is regarded in Germany as the one ray of light in the otherwise gloomy outlook for international politics. The fact is not overlooked that the new agreement has a great many unsatisfactory features from the German point of view: the unsolved interest problem; the linking of the extension of the agreement with the prolongation of the issue banks' credits to the Reichsbank, for example, and the compulsion upon the German banks to share the security received from their customers with the foreign lenders where these customers are granted credit out of the banks' own funds and from foreign loans. Nor, naturally, does Germany like the right which had to be accorded to foreign creditors to terminate the agreement in the event of disagreement with the Reichsbank as to the possibility of transfer. All these points involve dangers if political or economic conditions grow still more acute.

All the same, the new treaty, which is no longer officially called a standstill agreement, but "German Credit Agreement, 1932," is regarded as an important advance, not only because it frees the Reichsbank from further payments, but, above all, because it is an attempt to pave the way for a final solution of the question of the frozen credits. With the aid of a little optimism it is even possible to imagine that this agreement might be the last of its kind, for even if the representatives of the foreign banks were not in a position to make any concession for a consolidation of German short-term credits, the agreement provides for the possibility of the foreign creditors converting, on their own initiative, the short-term demands which are for the time being uncancellable into a long-term obligation. The inducement to such a course will certainly be in many cases substantial. If such transactions become frequent, Germany's short-term debt would be so much reduced that special standstill arrangements would no longer be necessary, but such an issue could not be expected for some time.

The reports of the Creditors' Committee has confirmed the estimates of the Wiggan Report as to the amount of Germany's short-term indebtedness (8 milliard marks). The four milliards by which the Reichsbank statistics exceeded this sum are believed by the Committee to consist, as to by far the greater part, of debts of German firms to foreign subsidiaries, or of German subsidiaries to their foreign parent firms, or of other forms of industrial participations which only theoretically constitute short-term indebtedness. The world-wide sensation which was caused a few months ago, when Dr. Schacht accused the Reichsbank of withholding the results of its investigations from the public, will still be remembered. It is now evident how fully justified the Reichsbank has been in the foresight which would not allow it to publish these figures without the most careful examination of their economic significance.

The President of the National Bureau of Statistics, Professor Wagemann, last week published a scheme for the reform of the constitution of the Reichsbank and for profound changes in the regulation of private banking which has attracted considerable attention. Professor Wagemann proposes to limit the requirements for gold and foreign exchange cover to notes of denominations exceeding 50 marks, but to extend them to bankers' balances at the Reichsbank. This extension, on the one hand, and limitation, on the other, do not, however, cancel out, as notes of less than 50 marks constitute 7 per cent. of the entire issue. If the Wagemann scheme were put into practice, therefore, the cover percentage of the Reichsbank would be greatly improved without any change in the Bank's real resources. Although Herr Wagemann himself is strongly opposed to any scheme of inflation, such a reform can only have the object of enabling the Reichsbank to extend its advances in a manner which might

involve danger to the currency. For this reason the proposal has found practically no supporters in Germany, but has met almost everywhere with reserve or decided negation.

The remainder of Herr Wagemann's plan is aimed at securing especial safety for the bank balances at the Central Bank which are only used for clearing purposes, and at keeping them apart from ordinary banking business so that there can be no question of the use of these short-term deposits for long-term credits. He has a series of devices for making good the sums which will thus be withdrawn from the long-term capital market. In the first place, the Reichsbank is to hold securities (the intention is that these should be principally redemption loans issued by the communes in respect of their short-term debt) against the notes of small denominations, and the purchase and sale of these securities at the same time to enable the Reichsbank to pursue a species of open-market policy. In the second place, he proposes, by the payment of extremely low interest on balances and other short-term deposits with the banks to give an inducement to every depositor to transfer from bank deposits to securities. Finally, Herr Wagemann would like to follow the example of Switzerland and empower the German banks to issue bonds and grant long-term credits out of the proceeds. This part of the scheme contains valuable suggestions, but it is very doubtful whether the transformation of balances at the banks into securities ought to be encouraged at the present moment. Welcome as a rise in German security values would be, it is even more important to maintain the liquidity of the banks, which would be reduced by the withdrawal of deposits even if this were only for the purpose of purchasing securities.

Professor Wagemann did not inform either the Reichsbank or the Government of his project before he published it. There is little doubt that the Reichsbank is completely opposed to it, and the Government is very anxious that the completely unofficial character of the document should be impressed upon the public.

Now that the new standstill agreement has been concluded, the question of reopening the stock exchange has once more been raised, as the Reparations Conference is now not likely to take place before the French elections, and the exchanges can hardly be kept closed for so long. The trading by telephone which is going on at present cannot be controlled, and as it gives rise to lack of confidence it can be no complete substitute for the stock exchanges. The Government and the Reichsbank are still afraid that violent fluctuations in security prices may have serious disturbing effects both at home and abroad, but all the same, it is probable, not that official Stock Exchange trading will be resumed, but that there will soon be private trading on the stock exchange premises, in which prices will be established and published, whereas at present the publication of prices is forbidden. Such a relaxation would suffice as a beginning, it would not be a bold experiment, and it would give time to see if any of the fears were realised. Meanwhile prices in the transactions between banks have again shown a firm tendency.

AUSTRIA.

Banking — Industry — Railways.

(FROM OUR CORRESPONDENT.)

VIENNA, January 25.

THE fight of the economic corporative bodies, which is being carried on against the restrictions on foreign currency, still continues. The main association of industrialists and the tradesmen's association have passed strongly-worded resolutions, in which they point out that export trade will cease altogether and that further closing down of factories and business will become necessary, if the present foreign exchange policy is continued. The tradesmen's association has specifically declared that it regards the statements of the head of the Government, concerning the negotiations in Geneva and the general economic situation, as far too optimistic, and that it is facing the future with the gravest concern. On the other

hand, the National Bank still adheres to the view that in accordance with the recommendations of the Financial Committee in Geneva it must deal still more stringently with the matter of foreign exchange. It also points out that it is constantly parting with foreign means of payment and that outgoings are greater than incomings. Consequently it suggested to the committees of foreign creditors that until further notice under the second standstill agreement for the banks and firms only 5 per cent. of the sums due should be repaid. It withdrew this suggestion later, and, instead, it inserted the advice that for the time being no capital repayments should be made on short-term credits, and that any fresh agreement which might be made should have a duration of at least six months. It is certain that the foreign exchange restrictions and the developments of last year have brought the National Bank but little advantage. It has large reserves at its disposal, but it wants to increase them, especially as it is necessary to write off the Credit-Anstalt shares which it took over, as the shares have really become valueless. There must also be some writing off of the bill portfolio, whereas in previous years it was the pride of the National Bank that it never had to take such action. Further, reservations are necessary on account of the various credits which the National Bank has raised; and in view of this it is the intention of the Bank greatly to reduce its dividend. There is even talk of a reduction amounting to as much as 50 per cent.

In regard to the balance sheets of the other banks, it is not yet possible to say whether the Bankverein and the Escompte-Gesellschaft will refrain from distributing dividends and strengthen their reserves or whether they will consider a curtailment of their dividends sufficient. Last year the dividend of the Bankverein was one schilling and that of the Escompte-Gesellschaft 10.50 schillings. In the case of the Länderbank, the views of the French money market come into consideration. In general, the balance sheets of the banks and of the industrial enterprises will not be easy to make up this year, and the Government, too, may see itself compelled to give guidance by special legislation for the making up of balance sheets. Several managements of enterprises demand that the losses which have been sustained on investments and shares should not be written off at once, but only over a period of several years. Again, the foreign exchange restrictions are also causing difficulties in relation to the balance sheets, as the question must be considered at what rate conversions are to be made. Current business is very poor at the banks. Issue business and the stock exchange are completely stagnant, and business in foreign exchange is centralised at the National Bank, so that there remains only the margin of profit between rates of interest for debits and credits. The consequence is that most of the banks are further cutting down their staffs. This, again, gives rise to further unemployment. There are now 350,000 unemployed in receipt of the dole in Austria, and in Vienna itself a high record has been reached.

The clearing treaties, which were expected to stimulate business, have proved a great disappointment. During the past few weeks exports have declined greatly, so that the supply of foreign means of payment has also dwindled. The conflicts arising even in the National Bank itself in regard to the treatment of the foreign-value questions, have caused the general manager, Dr. Brauneis, to hand in his resignation. It is well known that right from the beginning he was opposed to undertaking such an onerous guarantee for the Credit-Anstalt, and that he also objected to having the bill portfolio increased to its present volume. It is characteristic of the analysis of the note circulation that the greatest increase is observable in the 1,000-schilling notes, which now comprise nearly 20 per cent. of the whole circulation. This shows that the large notes are mostly being saved privately, otherwise it would be impossible to explain the increase of 150 per cent. in notes of this denomination.

Company floating stopped completely last year. There were only eight joint-stock companies and 84 limited companies founded. This illustrates the complete stagnation of financial business. On the other hand, more and more enterprises are being liquidated, especially those belonging

to the Credit-Anstalt syndicate. Negotiations are at present in progress at the Krupp Works at Berndorf for the purpose of inducing the German relatives of the head of the firm to participate financially or, at least, to take over a portion of the commitments. These negotiations are, however, very difficult, and it is therefore probable that further reduction of output will be necessary at this works. The Minister of Finance lately declared in Parliament that the position of the Federal Railways is difficult, and that, in accordance with the wishes of the Geneva Financial Committee, a stricter control of the railways is to be exercised by the Government. Further retrenchment is being practised, but the unfavourable results of the first eleven months show that the drop in transportation is greater than the possibility of saving. Revenue from passenger and luggage traffic amounted to 178.8 millions (202.3 in the year 1930), and that from goods traffic to 297.1 (against 337.4) million schillings. The Federal Railways do some repair work on wagons and locomotives under their own management. Private works have suffered on this account, but there is reluctance to give up these repair works of the Federal Railways completely, because this would mean further dismissals of employees. The Federal Railways are compelled to effect the greatest savings, because the two credits, which were raised abroad, are to come under the standstill agreement, so that a further influx of foreign capital seems hardly likely in view of the present situation of Austria in regard to foreign commitments.

HUNGARY.

Foreign Trade — Transfer Moratorium — Foreign Debt Problems.

(FROM OUR CORRESPONDENT.)

BUDAPEST, January 25.

HARDLY a day passes in Central Europe without a fresh severe blow to foreign trade. Restrictive measures to protect the currency are almost daily announced by the Danubian countries. Under such circumstances it is not difficult to forecast that, unless a miracle happens, the volume of foreign trade will further decrease. Almost simultaneously with the publication of the greatly diminished foreign trade returns for the past year, Hungary was compelled to restrict the free importation of certain commodities—ranging from cheese and apples to silk and timber—in defence of the pengő. The development of foreign trade in the last four years is as follows:—

	(In million pengő.)			
	Imports.	Exports.	Balance.	Total value of trade.
1928	1,211.4	826.0	— 385.4	2,037.4
1929	1,063.7	1,038.5	— 25.2	2,102.2
1930	832.9	910.4	+ 77.5	1,743.3
1931	543.5	572.2	+ 28.7	1,115.7

The catastrophic fall in the prices of agricultural commodities is amply demonstrated by the sudden shrinkage of the total value of trade. And yet a favourable balance of trade is the only means whereby Hungary can pay the service of her huge external debt. Even if, under the transfer moratorium, the service of the "sacrosants," amounting to 65-70 million pengő, can be transferred, there still remains 220-230 million pengő, the future of which is much discussed now in Hungary.

Before dealing with the future use of the non-transferable amounts, it must be pointed out that the priorities given to the League Loan of 1924, the Treasury Bonds of 1931, the Caisse Commune pre-war rentes, and the B.I.S. credit services are more and more resented by the other creditors. It is pointed out by the antagonists of the preferential treatment accorded to the State loans, that it would have been more equitable to transfer a fraction of the interest due on all loans, be it as low as 1 per cent. There is little doubt, however, that any fresh discrimination between the creditors at this stage would only make more difficult the final settlement arising out of the financial plight of the country.

Though Hungary was not directly interested in the Lausanne Conference, its postponement is viewed with great concern, because it is generally believed that Hungary's creditors cannot be approached to agree to a scaling down of the unbearable interest rates on Hungary's foreign debts until after the settlement of the German problem. Unfortunately, Hungary cannot afford to wait. The unsolved problems arising out of the provisions of the transfer moratorium need urgent and statesmanlike solution, which can only be arrived at after a thorough investigation of the country's capacity to pay in the next one or two years. The uneasiness displayed by the American creditors about the priorities of transfer accorded in the Decree of December 23rd makes it imperative that no further decision of importance should be made by Hungary without consulting such representatives as the creditors may, as a body, nominate.

As a matter of fact, Baron Korányi, the Finance Minister, who has just returned from Geneva, has declared in the Emergency Committee of Parliament that he has suggested to the League Financial Committee that the creditors in each country should form a group and that these groups should send delegates to negotiate with the Hungarian Government. He stated that every effort will be made to use the non-transferable amount of 220-230 million pengő in such a manner that no inflationary or deflationary consequences may follow. It would be a fatal error, however, to believe that the collection of nearly 300 million pengő of interest and sinking fund due to foreigners, whether transferred in part or not at all, is feasible without some inflationary or deflationary consequences in a country which is collectively insolvent as a result of the radical change in the price level and the partial misuse of borrowed foreign funds. It follows that the country's capacity to pay must be investigated and certain guiding principles established as to the fate of the non-transferable sums until a general scaling down of interest rates and the general recovery of the world liberate Hungary from her present paralysed state.

In the last quarter of 1931 the note circulation has oscillated between 350-450 million pengő, or 10-15 per cent. less than a year ago. On the other hand, the bill portfolio of the bank, including the rediscounts through the B.I.S. and other central banks, has more than doubled, ranging from 500-589 million pengő. The fact that the bill portfolio of the central bank is considerably higher than its note circulation is in itself a sign of extraordinary pressure on the bank, and it is a warning that this abnormal discrepancy should not be allowed to grow. Though the National Bank has reduced its discount rate on January 19th from 8 per cent. to 7 per cent., it is hoped that the decrease will not bring about an undesirable increase of the swollen bill portfolio, as the whole credit system is cut off from external influences, so that the machinery of the Bank rate has lost its regulating effect on the volume of credit. But the danger still remains that the huge interest and sinking fund service due to the foreign creditors, amounting to nearly 300 million pengő, and the considerable sums due to internal lenders, amounting to several hundred millions, cannot be met otherwise than by increasing, at least partly, the principal; and this will, of course, bring further pressure on the National Bank.

Extraordinary measures are bound to bring extraordinary results, and Hungary will soon experience the phenomenon—hitherto unknown in modern banking practice—of an inflated bill portfolio as the result of inability to meet the debt charges from current income, and, at the same time, a deflated circulation due to the piling up of the non-transferable debt service, which, if allowed to be used for reinvestment, will undoubtedly inflate the price level. But other evils will also arise from reinvestment. For instance, how can Hungary ever hope to transfer the interest on the accrued debt of the phantom pengő, which do not represent real value, if she is unable to pay now? The present foreign debt of 4,094 million pengő would grow to 5,000 millions in three or four years if there is no corresponding export surplus to meet the present debt service. Wiser counsels begin to point to the

fact that the annual merchandise surplus available for the debt service will be about 100-150 million pengő at best, so that a scaling down of the 7 and 8 per cent. interest rate to 3 per cent. is the only way to avoid a complete collapse.

There can be few optimists, either in Hungary or abroad, who believe that any merchandise trade balance of importance could be realised so long as the present paralysis of foreign trade and the control of foreign exchanges continues. In face of such tremendous difficulties, which no nation can hope to remedy without international co-operation, it would be very mischievous to undermine the economic and financial system of the country by ignoring the unsolved problems arising out of the transfer moratorium. The dangers of delay in the case of Hungary, owing to its smaller forces of resistance, are even greater than in that of Germany.

JUGOSLAVIA.

Debt Question — Finance — Trade — Prices.

(FROM OUR CORRESPONDENT.)

BELGRADE, January 16th.

DR. BRUNING's declaration regarding reparations gave rise to considerable pessimism in Yugoslavia, as evinced by the heavy fall in State securities during last week. It is felt here that his declaration was tantamount to prejudging the issue, and was therefore both a grave tactical blunder and an act of bad faith. For, it is argued, if international agreements can be repudiated by any one signatory without general consent, will not all agreements run the danger of being considered merely "scraps of paper"? General public opinion had already realised that reparation payments on the scale in force hitherto were, apart from any political and moral issue, an economic impossibility, and that a general reduction was bound to follow. But Dr. Brüning's declaration may be said to have rather stiffened Yugoslav opinion than otherwise. There can be no doubt that Yugoslavia unreservedly endorses the French attitude.

The need is strongly felt here of maintaining at least such a minimum of reparations as would ensure the service of war debts (unless these are remitted) and would cover such Government obligations as result directly from reconstruction needs (service of internal Reparation Bonds, service of Blair loan concluded in U.S.A., and war pensions), which amount annually to about £1,900,000 at par. The total present debt service of Yugoslavia amounts to 1,200,000,000 dinars, of which 400 millions are needed for internal loans, 600 millions for foreign loans, and 200 millions for war debts. This would work out for the year 1931-32 at 85 dinars per head with an income per head of 4,500 dinars, if we estimate income at 25 per cent. below that of three years ago. This in itself could hardly be called a crushing debt service if it were not that, with the cancellation of reparation payments by Germany, the Government would be faced with the problem of finding gold for transfer to the amount of 600 (or with war debts 800) million dinars annually. This, again, without adequate credits, is, in view of the present international trade war and restriction in bills, no easy matter.

The actual drain of gold from the country may be calculated from the weekly statements of the National Bank. The gold and bill cover on June 28th, the date when the first statement after the stabilisation of the dinar was issued, was 2,291,500,000 dinars, while that on December 31st was 2,096,800,000 millions. If to this difference of 200 million dinars we add the amount received from France, 550 millions, and other credits which appear to be between 150 and 200 million dinars, then the actual deficit in the balance of payments for the second half-year would equal about 900. to 950 millions. This, at a rough guess, would place the deficit in the country's balance of payment for the whole year at about 1,600 to 1,700 million dinars, which would agree fairly well with the figures for 1930 as supplied by the Zagreb Chamber of

Labour, when the deficit was estimated at 1,890 million dinars.

Other interesting sidelights on national finance are also thrown by the end-of-the-year statement of the National Bank. The increase in the circulation from 4,563,800,000 to 5,172,200,000 dinars during the second half-year clearly shows the tightness of credit and need for cash, while the increase of credits from 1,458,600,000 to 2,252,800,000 is a proof of the seriousness of the run on banks during the last quarter. It may be remarked as a tribute to the work of the National Bank that not a single bank failure was recorded. Finally, the decrease of foreign bills in the cover from 742 to 332 millions, and the increase in gold from 1,540 to 1,758 million dinars give evidence that the Belgrade National Bank has followed the lead of other banks in turning their cover into gold. During the second half-year the total cover has fallen from 41.10 per cent. to 37.51 per cent., but the gold cover has risen from 27.63 per cent. to 31.46 per cent.

Regarding Government finances, which form the central problem, we have no complete and reliable end-of-year figures. It may be noticed, however, that the Treasury has withstood the strain of the last quarter better than expected. No new cuts in salaries or new impositions have been announced since October 1st, while on the other hand the Treasury had returned by December 31st its credit of 500 million dinars advanced to it by the National Bank. That this could have been achieved only by very strict economy and by an increase in the floating debt goes practically without saying. It is interesting, however, to learn that the loss on the export of 30,000 trucks of wheat was not more than 185 million dinars. With the right of using a credit of 600 million dinars from the National Bank and the gain of 200 to 300 million dinars from the minting of silver dinars probably in the spring, the Government should be in a slightly easier position during the coming months.

Trade is practically at a standstill, and is 30 per cent. lower than in 1930. During the first eleven months of 1931 exports amounted to 3,087,000 tons, worth 4,419 million dinars, as against 4,426,000 tons, worth 6,286 million dinars; imports, on the other hand, were 1,047,000 tons, worth 4,502 millions, as compared with 1,392 tons, worth 6,437 millions, in 1930. Some small satisfaction may be had from the fact that the deficit during this period is not greater than 82 million dinars, whereas the deficit in 1930 was 151 millions. It may be remarked as of interest that, although the large majority in the country is protectionist, the free trade minority has of late been given a much more careful hearing.

With such trade conditions it is no wonder that the index of prices continues to fall. According to the *Priredni Pregled*, the end of the year index for the last five years was:—December, 1927, 1,578; December, 1928, 1,523; December, 1929, 1,413; December, 1930, 1,175; and December, 1931, 1,025. The last figure is misleading, however, as it includes wheat, which is maintained at an artificially high level through the introduction of Government monopoly. This will be obvious if we compare the index figures of the various groups separately at the end of 1930 and 1931; stock-raising products fell from 1,292 to 929, fruit from 1,040 to 780, industrial goods from 1,471 to 1,183, and groceries from 1,081 to 1,031, as against a rise in agricultural produce from 808 to 1,100.

GREECE.

Financial Situation — Debt Service — Commercial Policy.

(FROM OUR CORRESPONDENT.)

ATHENS, January 22.

BARELY a month has elapsed since the late Governor of the Bank of Greece, Mr Diomède, expressed his emphatic disagreement with Mr Maximo's plan for meeting the financial and exchange difficulties (reported in the *Economist* of December 19th last, page 1180), which he characterised as dangerous and detrimental to the interests and the credit of the country. To-day, Mr Diomède pro-

poses a similar plan, differing from the other in that it concerns the sinking fund of the public debt, instead of the interest on the external debt of the country, which was the object of Mr Maximo's plan.

In an address delivered at a meeting of the Technical Chamber of Greece, Mr Diomède, speaking on the international crisis and the economic difficulties of Greece, made a series of suggestions for remedying the situation, analogous to those expounded in recent years by economists in every country. Among these suggestions, the most effective in its immediate reaction on the financial situation of the country would be that regarding the service of the debt. On this point, after declaring that it is uneconomic to burden the present generation with too high a sinking fund, calculated to redeem within 12 years about two-fifths of the public debt, he added that the amortisation of the debt may be spread over a longer period without prejudice to anybody. The annual sinking fund is 1,100 million drachmas, not including the war debts. Of this amount, a sum of £1,200,000 is paid abroad. About 11 per cent. of the Budget expenditure represents sinking fund payments, a huge proportion, according to Mr Diomède, and one not to be found in the budgets of other States. This leaves a margin, he said, in respect of which an agreement might be reached, which, without damaging the credit of the country or injuring anybody's interests, would relieve the monetary position of the Treasury and bring about a saving in foreign exchange in a period of scarcity. It would at the same time provide funds for meeting any expenditure the suspension of which would injure the economy of the country.

Before the news of the postponement of the Lausanne Conference was received, Mr Venizelos had left for Rome and Paris. In a statement to the Press, explaining the reasons for his journey, he said that he wished to discuss with the responsible statesmen the situation created by the world crisis in every country, and particularly in Greece. For, after ascertaining the intentions of the financially stronger States, the further policy of this country will be fixed. "In any case," he stated, "I must declare that Greece, though struggling against great difficulties and believing that she is entitled to assistance, will not, even if assistance is not forthcoming, take any unilateral decision, which might be construed as a breach of engagements freely undertaken by her. The expression of such intentions, whatever its origin, does not represent the policy of the Government." The Vice-President of the Council and Minister for Foreign Affairs, in an interview with the correspondents of the foreign Press, declared that "Greece will fulfil her international obligations up to the last minute." The Government would ask at Lausanne for certain combinations and facilities which would lighten the position of the country, rendered serious on account of the moratorium on reparations and the world crisis. Asked to specify these facilities and combinations, he declined to mention them. As to the reports that Greece might suspend the sinking fund instalments on her debt, he stated that, in the present international circumstances, should any country adopt such a course it could not be blamed nor accused of bad faith. In the case of Greece, he hoped that if the Finance Minister's plans materialised the necessity of taking such a measure would be avoided.

Meanwhile the receipts of the revenues assigned for the service of the Greek debt for the first 11 months of the past year reached a total of Drs. 3,622 millions, as against Drs. 3,611 millions for the corresponding period of 1930. The receipts of November, however, taken alone, show a slight falling off as compared with November, 1930. On the other hand, public revenue as a whole is declining, and, should this tendency continue, an embarrassing situation might be created. Should Mr. Venizelos be able to secure a foreign advance, the effect would be doubly good; for, on the one hand, the foreign exchange reserve of the issuing bank will be strengthened, while, on the other hand, a breathing time will be given to the Treasury, pending a settlement of the international economic anomaly.

The proportion of the reserve of the Bank of Greece stood, on January 15th, at 39.12 per cent. of its sight liabilities, having fallen for the first time below the minimum statutory ratio of 40 per cent. In order to econo-

mise foreign exchange, the opinion is gaining ground that the import from abroad of certain articles should be prohibited. Moreover, Greek representatives in foreign countries have been instructed by the Ministry for Foreign Affairs to notify the Governments to which they are accredited that Greece wishes to conclude "compensation" agreements with them and that, to this effect, she is even prepared to denounce existing commercial agreements. At the same time plans for a monopoly of the importation of wheat and sugar are under consideration, while delegates will be sent to a conference in Constantinople between Turkey, Bulgaria and Greece for a concerted policy in the production and trade of tobacco, this country's chief export product.

Letters to the Editor.

THE CRISIS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The Duchess of Atholl's dislike of the Soviet political system appears to have drawn her into conclusions as to the effect of Russia's foreign trade upon world economic conditions, to which a dispassionate survey of the facts lends no support whatever. Your editorial note, last week, pointed out that a country which supplies only some 2 per cent. of the world's total exports cannot have any considerable effect upon world prices. What is true of Russian exports as a whole is equally true of particular commodities.

In regard to wheat, Russia in 1930-31 exported only some 100 million bushels out of a total world trade of 800 million bushels, and at a time when unsold stocks in North America available for export amounted to fully 400 million bushels. Much of the considerable drop in wheat prices during 1930 occurred, in fact, before the grain trade became aware even of the likelihood of appreciable Russian exports; thus the price in London of No. 2 Manitoba fell from 57s. per quarter at the beginning of 1930 to 39s. in the third week of July, whereas samples of the new Russian crop did not appear until the following week.

What is true of wheat is even more true of other commodities. Russia's butter exports form only about 2 per cent. of total world exports, and about 3 per cent. of British imports. Russia contributes some 1 per cent. of our total imports of eggs, and in 1930 the proportion was even smaller.

And there is not a shadow of foundation for the charge that the Russian exporting organisations or the British firms acting for them dispose of their produce at specially low prices. They frame their selling programme with due regard to their expectation of probable market conditions and get the best price the market will pay. For what conceivable reason should they make free gifts of part of the market price of their goods, to importers or distributors who would naturally resell at the full market price? In fact, if the grain market records, e.g., for the last year, are examined, it is not at all difficult to demonstrate that the selling policy of the Russians has been far more successful commercially than that of the Canadian Pools or the American Farm Board.

Nor is it irrelevant to point out that the Russian exporting organisations have not been unwilling to enter into mutual agreements with other countries for stabilising prices on a reasonable basis. This has happened in the case of mineral oils, platinum and timber, and might have happened last year in the case of wheat but for the opposition of the U.S.A.

The Duchess speaks of Russia "elbowing out our former customers." This is the very reverse of the true situation. The economic disorganisation during and since the war gave North and South America the opportunity of monopolising European consuming markets which had previously been supplied with foodstuffs from Russia and Eastern Europe in return for exports of manufactured goods. The failure of America correspondingly to expand her purchases from Europe is a major cause of the present exchange disorganisation. The recovery of Russia is now ending this situation; for she is reducing Europe's need to buy from America and at the same time is expanding her purchases from abroad concurrently with her sales.

Finally, it is significant that the prices of those goods which Russia exports have not fallen on the average any more than the prices of other goods of which she is a buyer and not a seller; for instance, tea, coffee, tin, various vegetable oils, jute, cotton, rubber and copper.—Yours, etc.,

Hazlitt House,
Southampton Buildings, W.C.2.
January 27, 1932.

E. F. WISE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—May I point out that the prices of barley from the Soviet Union, the United States and Roumania, which I gave in my letter in your last week's issue were, so far as they related to 1931, for the first three months of that year only? I had inserted a heading to that effect, but it was omitted in print. No official figures are so far available for Russian barley beyond March 31st last.

May I also say, with all due respect, that the fact that Russian exports so far have borne only a small proportion to the exports of the world as a whole, seems to me to make no difference to the effect that certain important Russian exports have had on the prices of these commodities in the British market? These effects are clear to anyone who studies the Board of Trade returns, and it seems to be inevitable that the fall here must have had a considerable influence on the prices of these commodities in other countries. German exports, though larger in volume, have not affected the prices of these commodities here, so far as our trade returns show, except possibly in the case of oats in 1929 and 1930. In both of these years, however, and in the first three months of 1931 (again the latest period for which Russian figures are available), the Russian prices were far below the German; and in 1931 imports of German oats to our market became negligible.

If, Sir, as I believe, your paper exists to extend information on economic facts, would it not be better worth while to encourage a study of the figures in the Board of Trade Returns, as I suggested, rather than to dismiss as "prejudice" an attempt to bring before your readers official figures which I believe are likely to be new to many of them, and which it seems to me impossible to ignore if it be recognised that the fall in prices is the "root cause" of our present economic troubles? We may ultimately differ in our interpretation of the figures in the Returns, but surely it should be the part of the *Economist* to encourage their study?—Yours, etc.,

KATHARINE ATHOLL.

98, Park Elm Gardens, S.W. 10.

[Our suggestion was that our correspondent's inferences from the given data were "prejudiced." The conclusion, we regret, still seems to us unescapable.—Ed., *Econ.*]

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

The Banks and Prosperity. By Lionel D. Edie. (London) Harper and Bros., 90, Great Russell Street. 7s. 6d. net.

A discussion of the part played in the economic system by the great central banks of issue, and the contributions they might make towards the restoration of prosperity.

Essays in Persuasion. By J. M. Keynes. (London) Macmillan and Co., St. Martin's Street. 10s. 6d. net.

A collection of essays taken from Mr Keynes' published work.

International Review of Agriculture, December, 1931. (Rome) Treves, Treccani, Tumminelli, 32, Via Michelangelo Caetani.

Contains the usual crop statistics, the conclusion of the article on "Land Reform in Hungary," and an article on the International Agricultural Mortgage Credit Company.

Employment and Labour Costs. By Gilbert Beard. (Manchester) Sherratt and Hughes. 6d.

A pocket booklet in which the author sets forth the causes which, in his opinion, are responsible for Lancashire's loss of trade.

Economics of the Industrial System. By H. A. Silverman. (London) Sir Isaac Pitman and Sons, Ltd., Parker Street, Kingsway. 7s. 6d. net.

A text-book on production, values and distribution.

The Stock Exchange.

THE BRITISH CAPITALIST.

BEFORE Mr Runciman's brow became sicklied over with the pale cast of abnormal importations it was his custom, at annual meetings of the United Kingdom Provident Institution, to dwell upon the large extent of the holdings of small capitalists in savings banks, National Savings Certificates, friendly societies and the like. Two years ago another writer estimated the total accumulated resources of the small investor in various "thrifty" institutions at approximately £1,700 millions.* This is an impressive total, but it tells less than the whole story, because it includes no holdings of Stock Exchange securities.

That the British are a nation of small holders, in the investment sense, has long been realised, *inter alia*, by company secretaries, stockbrokers and trustees for deceased estates. A preliminary investigation made in the *Economist*, six years ago, suggested that the ramifications of small capital ownership went considerably farther than had been generally realised. This conclusion has been confirmed by the results of extended research recently undertaken by the *Financial News*. The latter's inquiry was based on a sample of every tenth holding of the ordinary shares of ten of the best-known British industrial companies, whose securities enjoyed a free market on the Stock Exchange, some 44,276 separate holdings being examined in the course of the investigation. A summary of the resulting figures is shown in a table at the foot of this column, which affords much the most detailed picture so far presented of the distribution of industrial capital ownership in this country.

Some conclusions suggested by the figures may be briefly summarised. Apart from duplication of holdings (the net effect of which is believed to be almost negligible), the returns show that, on the average, ownership is so diffused that 40 per cent. of the total proprietors of these companies each hold less than £100 of nominal capital, while 67½ per cent. hold less than £200, and nearly 90 per cent. hold less than £500. Holders of over £5,000 represent less than 1 per cent. of the total. Some of these latter holdings are very considerable, but if the somewhat arbitrary figure of 50,000 shares be taken as the lower limit of a "major holding," it appears that only in one out of the ten companies do the owners of such shares jointly control a majority of votes. In no other case is as much as one-third of the whole capital in the hands of very large shareholders. The proportion for the whole ten companies is under 24 per cent.

The qualifications attaching to these figures do not seriously detract from their value. All prudent investors

* Mr. Hargreaves Parkinson in "The Small Investor." (Blackie and Son.)

"spread" their holdings over as large a number of companies as possible, but the incidental expenses of acquiring a small holding are relatively heavy. In any event, the disinclination of wealthy individuals or institutions with, say, £250,000 to invest, to go to the trouble of finding, e.g., 1,250 separate concerns and putting £200 into each, imposes a limit on "spreading" which is reached at an average investment per company appreciably higher than that of the majority of shareholders shown in the table. Motives of secrecy, again, no longer require the troublesome splitting up of large holdings. Any student of British share registers will discover that an increasing number of large-sized holdings tend to appear, nowadays, in the name of "nominee" concerns. The smallness of the normal shareholding in a British company more probably reflects the efforts of investors of moderate means to minimise their risks by as wide a "spread" as possible of a moderate aggregate investment. Our own earlier inquiry, finally, suggested that the distribution of ownership of fixed-interest capital did not differ greatly from that of equity capital, to which the present investigation has been confined.

The implications of the figures deserve careful consideration by all who are concerned either to tap the springs of British capital or to secure the maximum of protection for investors. The Companies Acts, in one respect, have done their work well. Their success in drawing innumerable rivulets of capital into company reservoirs has been an indispensable condition of the enormous expansion of material wealth in the last hundred years. The very extent of this success, however, has given rise to numerous problems which have been, possibly, insufficiently appreciated, and have certainly not been satisfactorily resolved. Many social reformers have spoken and written on the subject of unequal distribution of income. The extent of inequalities, however, is not generally appreciated. Official research has shown that, in the matter of savings bank deposits, and other forms of capital generally regarded as more especially pertaining to the smaller investor, a majority of owners possess a less than proportionate share of the total. The figures now under consideration disclose the application of the same "law" to the ownership of industrial capital.

As all statesmen are painfully aware, the existence of large bodies, whose influence is disproportionate to their numerical strength, raises many perplexing questions. In the company world, this condition threatens to render nugatory the basic principle of ultimate control of affairs by shareholders in general meeting. Apart from the fact that investors are widely scattered geographically, no building in the country could contain the 49,570 ordinary

shareholders of J. and P. Coats, still less the 124,690 holders of Imperial Chemical ordinary shares, if all were to exercise their undoubted right to attend each year's meeting. The system at present functions (or fails to function) under an unsatisfactory compromise. A mere handful of shareholders attend each meeting, and the remainder, in most cases, have the choice either of doing nothing or of giving their proxies in support of the directors' policy before they have heard the chairman's exposition. The inevitable result is a state of inertia, which explains the fact, to which the figures in the present table bear witness, that although control of practical affairs is known to rest with various small and compact groups (sometimes even with individuals) these groups are rarely found on examination to possess anything like a nominal voting majority. On the whole, British shareholders are well served by their directors. The system affords, however, disquieting opportunities for abuse in the hands of unscrupulous, autocratic or inefficient controllers, and is the ultimate cause of the unedifying disclosures of well-meaning but costly mismanagement, inordinate ambition and deliberate bad faith which periodically disfigure British company records.

Quis custodiet custodes? is a question whose difficulty has been enhanced rather than decreased by the wide diffusion of capital ownership. The indirect result of the so-called Kysant case may be a check upon a tendency for directorial administration to encroach upon the traditional rights of shareholders, even to the extent of claiming virtual power to withhold from proprietors knowledge of the true state of affairs. All men of goodwill rejoice that the troubling of the waters, as a result of this *cause célèbre*, has stimulated the leaders of the accounting profession—with whose specialised knowledge and functions the safeguarding of the investor's interests is so intimately bound up—to search for a closer definition of the equitable limits of disclosure in company accounts.

The roots of the problem, however, of securing the maximum coincidence between ownership and control of capital appear to go much deeper. It may be that if the vast majority of British shareholders, whose stake in any one company is small, are to be neither a functionless mass of individuals nor a howling mob, but a coherent body expressing a rational corporate will, some more effective system of elective representation must be devised. Experience in the sphere of national politics suggests numerous precedents for effective action on these lines, when a democracy becomes too unwieldy for direct action.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.
February 2.

ACCOUNT.
February 4.

THOUGH the volume of business showed no sign of early expansion, the tone of the markets was good. The extension of the "standstill" agreement was fairly well received, but a much more definitely helpful influence was the announcement that the credits due by the Bank to America and France would be repaid without drawing on the gold reserve. The repeal of the rule prohibiting contango business, though it failed to induce any appreciable increase in dealings, was not the less welcome for being overdue. Money was plentiful, but hopes of a reduction in Bank rate had become less widespread before Thursday's "no change" decision.

Gilt-edged stocks improved on Tuesday, after a hesitant period, War Loan being prominent, while Funding Loan and Victory Bonds also advanced. The movement was checked by the postponement of the MacDonald-Laval debt conversations. India loans responded strongly to Lord Willingdon's speech at the opening of the Legislative Assembly, the Four-and-a-Half per Cents. being especially sought after. The Uganda issue was popular, market dealings opening, after over-subscription, at ½ premium.

Foreign stocks were irregular, but well maintained, on

the whole. The good effect on Chinese bonds of the publication of eminently satisfactory Customs figures was offset by fears of complications at Shanghai. Japanese stocks were irregular. Among Brazilians, San Paulo Coffee was supported. The position as regards Mexican State of Bahia, and Uruguayan Bonds is discussed in a separate Note on page 246. Greek loans were nominal on Monday, following the request from the League of Nations that Sir Otto Niemeyer should visit the country. German bonds were a shade stronger.

Home rail stocks were easier, the publicity given to the attendance of the railway managers at the Ministry of Transport being a bear point, while the traffic figures again made an indifferent showing. The market was disappointed by the reduced Metropolitan dividend of 2½ per cent. for the year against 3½ per cent. Argentine rails reflected the strength of the exchange and the relatively satisfactory traffic returns.

Industrial shares moved within narrow limits, despite the removal of "carry over" restrictions. International issues attracted greatest attention, on Continental buying. Brazil Traction and Hydro Electric being in demand from Brussels. Kreuger and Toll advanced on satisfactory earnings figures (set out on page 248). Cables and Wireless improved on the December traffic returns, though the market expressed little faith in a full preference payment. There was some buying of iron and steel shares from the provinces, but brewery shares were inclined to be dull on the reduced interim dividend announcement of Watney Combe. Tobaccos strengthened, Imperial Tobacco attracting renewed investment demand. The company's position is analysed on page 247. Turner and Newall were helped by rumours of enhanced business. Among motor shares, Austin improved on modest provincial dividends. Spillers were better in anticipation of higher dividends. British bank shares, running true to form, followed the firmer trend of the Funds, but insurance shares showed little change.

The restoration of normal "carry over" conditions had singularly little effect on the speculative markets. Oil shares suffered from lack of interest in the earlier sessions, and subsequent activity from Paris was of a dilettante character. The rubber share market was oppressed by the parlous state of the industry, though a slight accession of activity followed a newspaper revival of restriction rumours. Tea shares remained dull.

The mining share market was taken by surprise by the statement of General Hertzog that a commission would be set up to consider the question of maintaining or abandoning the gold standard in South Africa. Kaffir shares were generally firmer, but no particular enthusiasm was aroused by the announcement. The greatest benefits of a possible South African departure from gold, it was recognised, would accrue to the "short life" mine. Daggafontein and Randfontein were in demand, and the Brakpan group advanced. Rhodesian copper shares were steady, but Rio Tinto reacted. Tin shares temporarily improved with the metal, but the market remained largely inactive.

FOREIGN STOCK EXCHANGES.

NEW YORK.

Markets opened in quiet fashion, the total share transactions on Monday, and again on Tuesday, being equal only to those of a normal Saturday. The psychological effect of the enactment of the Reconstruction Finance Measure having had time to wear off, operators adopted a waiting attitude, pending the dividend declarations of the largest corporations. These, made in mid-week, were a decidedly mixed bag. The reduction in the dividend of U.S. Steel to 50 cents, coupled with the revelation that the Corporation's current trading earnings were negligible, and the intimation that the maintenance of dividend depended upon improved trade, caused some weakness on Wednesday. In other cases, however, company announcements made a better showing. The Pennsylvania Railroad declared a regular quarterly dividend of 50 cents, though a warning was given that it would not be maintained in the absence of an improvement in earnings, the company having earned only \$2 per share last year. The New York, New Haven and Hartford Railroad earned \$3.04 per share against \$7.33. The Delaware and Hudson declared a regular quarterly payment of \$3.25. The Illinois Central made a net loss, after charges, of \$3,582,112, against a profit of \$9,289,590. The Norfolk and Western net earnings per share were \$14.39, against \$21.96. Among trading concerns, General Motors earned \$2.43 on its common stock, against \$3.25, but deducted non-recurring losses of \$20,639,000 from surplus. Woolworth's net earnings were \$4 per share, against \$3.56. Railroad shares showed some resistance to the downward movement, sentiment having swung round in favour of a satisfactory solution of the wages issue. The reduction of the rediscount rate of the Dallas National Bank, a member of the Federal Reserve System, from 4 to 3½ per cent. was regarded as a further official step in the direction of the expansion of credit. Meanwhile, exports of earmarked gold for France and Belgium continued. The Federal Treasury statement showed a deficit, up to January 25th, of \$1,501 millions, income tax payments being \$499 millions below the corresponding figures for 1930-31, while expenditure showed an increase of approximately \$600 millions. General trade reports indicated an absence of expansion in most industries and retail trade. Steel mill activity was disappointing, and the output of electric power reached a new low level. Freight car loadings for the week ended January 16th were 573,865, as compared with 572,593 for the previous week, 725,938 for the corresponding week of last year, and an average of 907,196 over the seven years 1924-30. The business index of *The New York Times* for the same week stood at 63.0, as compared with 64.4 in the previous week.

* 2-hour session.

PARIS.

Indeterminate conditions ruled on the Paris Bourse during the earlier sessions, but quotations quickly hardened. On Tuesday a buoyant tone developed, marked activity being shown in issues dealt in on the London Stock Exchange, on the announcement that the French and American credits would be repaid without recourse to the gold-reserve of the Bank of England. Rio Tinto improved after a poor start, and De Beers, Royal Dutch and Shell were all firmer. Disquieting rumours induced a recession on Wednesday in a number of local bank shares. Rentes became weaker on reports of a fresh Franco-British deadlock on Reparations. Renewed strength developed in Thursday's sessions, quotations of Banque de France, Suez Canal and the "Dawes" loan being prominent in the general advance.

	Jan. 21, 1932.	Jan. 25, 1932.	Jan. 28, 1932.	Jan. 21, 1932.	Jan. 25, 1932.	Jan. 28, 1932.

Chargeurs Réunis	227	231	271	Ford	127	121
Rio Tinto	1,360	1,275	1,350	De Beers	351	348
Royal Dutch	12,750	12,600	13,000	"Johnnies"	99	96

AMSTERDAM.

Business on the Amsterdam Bourse was of relatively small volume. Slight increases were recorded, at the outset, in such favourites as Royal Dutch and Unilever, but prices tended to crumble in mid-week. Sugar shares were lower on the drop in Java sugar prices. Rubber shares, however, showed greater resistance, an actual improvement taking place in Amsterdam Rubber. Tobacco and Shipping shares, however, were more depressed.

	Jan. 21, 1932.	Jan. 25, 1932.	Jan. 28, 1932.	Jan. 21, 1932.	Jan. 25, 1932.	Jan. 28, 1932.

Java Cultuur	124½	124	124	Royal Dutch	123½	120½

OTHER CENTRES.

Irregular conditions prevailed in most other European centres, though Brussels had a more cheerful aspect on Tuesday, and recorded an appreciable increase of activity. Profit taking, however, occurred subsequently. Milan became erratic after opening firm for the new account. Stockholm similarly deteriorated after showing strength in mid-week. Berlin unofficial quotations enjoyed a further rise, Dye Trust being done at 95.75 (against 84.50 a week ago), Siemens at 125.00 (against 116.00), General Electric at 34.00 (against 31.50), and Reichsbank at 100.25 (against 85.75).

DISCOUNT CORPORATION OF NEW YORK

This Corporation discounts and resells Bankers' Acceptances and approved Bank endorsed Trade Acceptances, deals in United States Treasury Certificates of Indebtedness, Treasury Notes and other Short Term Government Obligations, and receives funds repayable on demand or at fixed maturity against the security of Bankers' Acceptances, or Government Obligations.

LONDON ACTIVE SECURITY PRICES AND YIELDS.

NOTE.—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

INVESTMENT NOTES.

End of Stock Exchange Restrictions.—On Tuesday afternoon last the Stock Exchange Committee issued an official announcement that the regulation prohibiting the transaction of fresh continuation business had been repealed. This decision was widely welcomed as an indication that the Treasury (at whose instance the "House" regarded the regulations as having been imposed and gradually relaxed) was no longer in fear of either panic selling or unhealthy speculation in British securities, at home or abroad. Curiosity was expressed, at the same time, as to whether the restoration of normal Stock Exchange facilities might be viewed as a logical prelude to the alleviation of restrictions on foreign exchange business. The original "ban on speculation" by the Stock Exchange Committee was imposed, with every appearance of haste, on the third day after the re-opening of the "House," following its two-day suspension of business when Britain left the gold standard. At that time, the coincidence of a sharp decline in gilt-edged and a jump in equity prices suggested the beginning of an unhealthy "flight" from fixed-interest securities, based on the dread of currency inflation. The course of subsequent events is epitomised by the following table:—

Week ended	No. of bargains marked (Sats. excl. "Financial News")	Level on each Tuesday of Actuarial Index "All Trials."	Level of Gilt-edged (Brit. Govt.) Actuarial Index	Week ended	No. of bargains marked (Sats. excl. "Financial News")	Level on each Tuesday of Actuarial Index "All Trials."	Level of Gilt-edged (Brit. Govt.) Actuarial Index

* Wednesday.

The dangerous movement which caused the imposition of the "ban" was quickly checked in October, but it is doubtful to what extent the regulations contributed to this desirable tendency, seeing that, during the month of October, the recovery in gilt-edged prices was accompanied by a rise both in the volume of total business and the level of equity share prices. The latter movement was near its maximum when dealings for the account (without carry-over facilities) were reinstated in the middle of November. Far from stimulating business, the latter decision was followed by a period of declining activity and prices in all markets, which the removal of the ban on option business, just before Christmas, failed immediately to check. By that time, presumably, all concerned realised

that Stock Exchange dealings stood in need of a stimulus rather than of limitation, and the final removal of restrictions came, appropriately, during a phase of slow but healthy expansion of dealings which began about the turn of the year. The available evidence, in short, is inconclusive as regards the part played by the regulations during the abnormal period at the end of September, but suggests that, during subsequent weeks, they have tended rather to handicap normal business during a sluggish phase than sensibly to modify underlying tendencies.

U.S. Steel and the American Markets.—The dividend of 50 cents per share declared this week by the U.S. Steel Corporation on its common stock for the first quarter of 1932 (compared with \$1 per share for the final quarter of 1931) was not unexpected, but came, none the less, as a shock to the New York stock markets. Dividends on the common stock in 1931 totalled \$5½ per share, as against \$7 in 1930. Last July the annual rate of dividend was reduced from 7 per cent. to 4 per cent., and whether it will be maintained at even 2 per cent. depends on the trade situation in the next few months. The unpleasant truth is that the Corporation, operating below 30 per cent. of capacity, is earning nothing at all. The preliminary report for 1931 shows that net profits amounted to only \$12.9 millions (including \$19.3 millions special income), which was equivalent to \$3.60 on the 7 per cent. preferred shares. In 1930 the net earnings were \$104.4 millions. Excluding the special income of \$19.3 millions, the net loss for 1931 was \$6.3 millions. The final deficit after payment of dividends was \$49.2 millions, against a surplus of \$18.8 millions. On the publication of the report, the market took a downward tendency, but average prices, according to the Dow Jones indices, remained well above the low level reached on January 5th:—

Date, 1931.	20 Rails.	30 Industrials.
January 5	31-36*	71-24†
" 14	41-28†	85-35†
" 21	40-92	83-42
" 22	39-12	78-81
" 23	38-60	77-98
" 25	39-15	78-66
" 26	39-22	79-76
" 27	39-31	77-82

* Lowest ever recorded.
† Lowest since October, 1921.
‡ Highest for 1932.

It is expected in some quarters that before long the New York market will move upward, especially if the outcome of the railroad wage discussions is favourable. The Reconstruction Finance Corporation, which has now been authorised by both Houses of Congress, will come into operation next month. That a recovery in quotations will be maintained, however, is uncertain, failing a decided improvement in trade in the next few months. Not only U.S. Steel, but Pennsylvania Railroad and other leading companies are maintaining dividend rates which are not covered by earnings. Unless the latter improve, there is a danger that dividends may be passed by entirely by many important companies. It is this shadow over the stock markets which may restrain bullish enthusiasm.

South American Bond Negotiations.—Although provisional settlements have been effected regarding the future of the Mexican and State of Bahia external debt services—in the one case by the International Committee of Foreign Bankers and in the other by the Ethelburga Syndicate—the respective schemes have failed so far to give entire satisfaction to bondholders. Criticism of the activities of the International Committee has been voiced during the past week on the ground (a) that it is concerned far more with American commercial interests in Mexico than with the protection of the interests of international bondholders, and (b) that in its negotiations with the Mexican Government it has been unduly lenient. A suggestion for the formation of a British committee has

obtained some support. In the meantime, a deputation from the foreign market of the London Stock Exchange was understood to have waited on the Ethelburga Syndicate with a view to urging a modification of the plan discussed in the *Economist* of January 16th, page 134. Bondholders maintain that it is inexpedient to conclude a final settlement with the State at a time when her economic prosperity is considerably below normal, and that the scheme by which she will be allowed to meet the service on her loans not in sterling, as under the terms of her contract, but in Brazilian currency, is a dangerous precedent. The validity of the former argument, at a time when elsewhere debtors are pressing for an immediate settlement of their obligations as the only alternative to bankruptcy, is not unchallengeable, though a case may be made for limiting any agreement to a stated number of years. The latter claim is urged on stronger ground, since bondholders have every reason to refuse *de jure* recognition to a *de facto* situation, under which the less prosperous borrowers of many States are temporarily meeting their debt service by paying local currency into local banks. In the circumstances, Uruguay appears to have chosen the lesser of two evils. Under a Bill which has just been passed by the Uruguayan Senate, the Government is authorised to suspend the sinking fund service on foreign loans. In September, 1931, the Banco de la Republica was permitted to export five million pesos of its gold stocks, of which three millions were applied to public debt services. In the last two years, however, the bank's gold reserves have dropped from sixty-six to fifty millions, and it is considered that any further reduction would seriously imperil the stability of the note currency. The annual amortisation payments on the external debt are now Pesos 3,875,256 (excluding the Uruguayan 5 per cent. gold loan of 1896) and the total interest service Pesos 6,404,905, so that even if the amortisation funds are released for interest payment it will still be necessary for the State to find the difference, amounting to Pesos 2,529,649.

Chinese Customs Loans.—The Chinese Maritime Customs figures for 1931 have, generally, evoked favourable comment. Following the practice begun in 1930, the Inspector-General for Chinese Customs has issued the figures in Haikwan taels without giving the sterling equivalent. For purposes of comparison we have converted these figures into the sterling equivalents at the average rate of exchange for the year. We give the record of the Maritime Customs revenues since 1928:—

Year.	Haikwan taels.	Average Rate of Exchange.	Sterling equivalent.
1928 ...	85,968,000	2/11½	12,028,000
1929 ...	152,760,000	2/7½	20,248,600
1930 ...	180,570,000	1/10½	16,834,395
1931 ...	248,314,000	1/6½	19,011,541

Actually in 1930 the Haikwan tael started at a high level and declined steadily, and in 1931 it started at a low level and improved sharply after Great Britain suspended the gold standard. In any case, the publication of figures in Haikwan taels is somewhat of a formality. In January, 1930, a Government Decree enacted that the Haikwan tael was to be discontinued as the basis of duties on imports from abroad, and a new gold unit substituted equal to 19.7265 pence sterling. The general effect of this measure was to restore the import duties to the same percentage of dutiable value as at the time when the new tariff of February, 1929, came into force and to stabilise these duties on a gold basis irrespective of any fluctuations in the exchange value of the tael. Of course, where duties are actually paid in taels at so many taels to the gold unit (the original rate fixed was 1½ taels per gold unit, and the present rate is now 1½) an exchange operation will be involved if the taels are subsequently converted into sterling; but a large part of the duties is paid (always on the basis of the gold unit) by means of demand drafts on London, and to this extent exchange operations are not involved. The actual sterling receipts for the 1930 Maritime Customs were probably higher, and for 1931 probably lower, than the figures shown in our table. As

regards the cover for the loans secured on the Chinese Maritime Customs, the first charge will be that of the 4½ per cent. Gold Loan, 1898, after the final drawing of the 5 per cent. Gold Loan of 1896 has taken place on April 1st. Ranking after the 4½ per cent. Gold Loan of 1898 come the Boxer Indemnity obligations, which are also secured on the Maritime Customs. The French share of the Boxer indemnities is used as security for the 5 per cent. Gold Dollar Bonds, 1925-47, the service of which will, therefore, rank as a second charge on the Maritime Customs revenue after the 4½ per cent. Gold Loan of 1898. The Boxer Indemnity payment in 1931 was approximately £3,272,278. For the years 1932-40 the Boxer Indemnities rise to a total of £4,724,525 by reason of the saving of £1,745,579 in the service of the 4 per cent. Gold Loan, 1895, and the 5 per cent. Gold Loan, 1896. This enhances the security of the 5 per cent. Gold Dollar Bonds, 1925-47. For the period 1941-45 the indemnities revert to the present figure of £3,272,278, after which they finally cease, except for the French portion, which runs until 1947. Present prices and yields are shown below:—

	Prices, 1931.			Present	Approx. Yields %

* Rate of exchange taken at \$3.47 to £1.
 † Rate of exchange taken at \$4.86 to £1.

* Rate of exchange taken at \$3.47 to £1.
† Rate of exchange taken at \$4.86 to £1.

The interest on the 5 per cent. Boxer Loan, 1925-47, may be paid in New York in United States gold dollars, which accounts for the relatively high level at which the loan is quoted in sterling.

Imperial Tobacco.—Depression serves only to emphasise the inherent strength of this great enterprise. Net profits for the year to October 31, 1931, at £9,876,064, are nominally 3 per cent. below the level of the previous year, but as the figures are shown after taxation, gross earnings appear to have been much the same in both

periods. The accounts, as usual, are laconic, but it is probably still true to say that the larger part of the company's profits accrue from its own trading operations in the United Kingdom rather than from shareholdings in other concerns. It is known that its holding in the British American Tobacco Company consists of 6,526,074 of the latter's ordinary £1 shares. The reduction in the B.A.T. dividend rate from 25 to 20 per cent. (both tax free) was made only with the final dividend for 1931, declared last month, so that the amount received by the Imperial from this source in the twelve months ended October last was the same as in earlier years, viz., £1,631,518. If the company's income from its holding of Government and other "outside" securities, the book value of which rose over the past year from £10,000,672 to £11,246,985, were taken at 5 per cent. of the mean of these two figures, it would amount, after tax, to about £400,000. These two sources, therefore, account for about £2,000,000 net, or rather more than one-fifth of the Imperial Company's earnings last year. As regards the company's own trading, the total unmanufactured tobacco imports into this country for home consumption declined from 204 million lbs. in 1930 to 192 million lbs. in 1931, but the average untaxed price of all unmanufactured imports dropped from 1s. 3d. to 1s. 1d. per lb. A slightly wider profit margin would appear to have largely compensated the company for any decline in its turnover. What variations have taken place in the company's large stocks of leaf it is impossible to say, the necessary information being hidden in a composite stock-in-trade item which has declined over the last twelve months from £28,945,520 to £28,123,907. The appropriation of profits for the last three years is shown:—

(Years to October 31st.)			
	1929.	1930.	1931.
	£	£	£
Profit (after taxation and directors' fees)	9,967,098	10,177,046	9,876,064

† Free of tax.			

The liquidity of the balance sheet has increased beyond even the high standard of a year ago, funds realised from stocks and debtors having been used to enhance outside investments and cash, which together stand at £16,304,515 against £14,868,310. The £1 ordinary shares, at 81s. 3d., (including 15½ per cent. tax free final dividend and bonus), yield £5 15s. 6d. tax free. The company has been assisted in meeting difficult external conditions by its internal strength and strong tactical market position, and by the "inelasticity" of the demand for its products in the fall of reduced national income and high taxation. Over the last two decades a decline in pipe tobacco consumption has been more than offset by the increased popularity of the cigarette—a higher-priced product—to which the profound social change attested by the growth of smoking among women has substantially contributed. Though the national tobacco consumption as a whole has not shown a decline comparable with that, e.g., of beer consumption, a significant increase, under contemporary conditions, can scarcely be forecast. Any future enhancement of the company's profits, therefore, would appear to depend upon the level of taxation and the price of leaf tobacco. As the latter is only a small part of the taxed price paid by the retail purchaser, who generally prefers to buy in small quantities, its recent downward tendency has benefited the company's shareholders.

Kreuger and Toll Earnings.—In a preliminary statement issued this week, the directors of this Swedish world-finance concern announce that net earnings for the past year, before deducting interest on funded debt, amount to approximately Kr. 123,600,000, compared with Kr. 125,977,391. After deducting interest on the secured debentures there remains, roughly, Kr. 110,500,000, compared with Kr. 122,348,054 in 1930. This sum corresponds to approximately \$10.95 for every participating debenture of Kr. 100 and Kr. 40.86 per share of Kr. 100, as against \$15.30 and Kr. 56.72, respectively, for 1930. Some 90 per cent. of the company's gross income for 1931 was of a recurring nature. In accordance with the usual custom the dividend recommendation is withheld, pending the publication of the full accounts. All the company's marketable securities and foreign Government and other bonds are carried in the balance sheet at prices equivalent to their market value on December 31st last, this involving a writing down of values which has been provided for partly out of undivided profits and partly out of reserves, which now stand at Kr. 421,000,000. Holdings of foreign Government bonds are carried at, roughly, Kr. 263,000,000. The net assets of the company as on December 31, 1931, represent about \$80.00 per participating debenture or share of Kr. 100, while the present value is somewhat greater as a result of subsequent security appreciation. The company has exercised its right under an option of acquiring important mining properties in the Northern part of Sweden, including the Boliden gold mine, which was discovered in 1924, and is considered to be one of the largest single gold deposits in the world. The company has arranged to take an 80 per cent. interest in the Boliden Mining Company against delivery of 4,041,667 Kreuger and Toll participating debentures of Kr. 20 each, with the right reserved for Kreuger and Toll to reacquire these debentures at any time before December 31, 1934, and to substitute therefor cash in the same amount at which the company to-day holds the option. The Kr. 100 shares of Kreuger and Toll are quoted at £10, against a high level in 1931 of £27½.

Cables and Wireless Prospects.—Opinion is divided as to whether Cables and Wireless will pay its 5½ per cent. preference dividends in respect of last year. The directors stated last August that the full dividend for the half-year ending June 30th had not been earned, and that they had decided to await the result of the financial year before committing themselves to any preference payment. The estimated traffic receipts of the operating subsidiary, Imperial and International Communications, Ltd., for the year have just been issued. The figures are:—

	1930.	1931.*	Rise or Fall.
	£	£	£
January	519,485	412,908	— 106,577
February	460,052	390,461	— 69,591
March	492,316	447,668	— 44,648
April	456,120	386,706	— 69,414
May	466,279	371,704	— 94,575
June	413,471	374,502	— 38,969
July	437,220	377,774	— 59,446
August	411,090	334,326	— 76,764
September	424,138	401,216	— 13,922
October	446,097	454,279	+ 8,182
November	402,886	427,062	+ 24,176
December	436,407	451,831	+ 15,424
Total	5,365,561	4,839,437	— 526,124

* In making a comparison with 1930, the following amounts must be deducted from the 1931 monthly receipts, owing to changed conditions of sharing traffic: December, £21,000; November, £21,000; October, £24,000; September, £22,000; August, £18,500; July, £21,000; June, £21,500; May, £22,000; April, £21,500; March, £22,500. After making these adjustments, the year's receipts came out at £4,624,437, a decline of £741,124, or 13.8 per cent., as compared with 1930.

The only comfort which can be derived from these figures is that the last few months showed an improved tendency. Allowing for a decline of 13.8 per cent. in traffic receipts and for a decline of, say, 20 per cent. in investment income, which in 1930 amounted to £611,941, it would appear that Cables and Wireless should earn approximately 3½ per cent. on its preference stock. What dividends it can pay will depend upon the dividends it receives from its

operating subsidiary, from cable companies in respect of their investments and from the Marconi company in respect of its manufacturing and investment earnings. The market is inclined to regard a payment of 2½ per cent. for the year on Cables and Wireless preference stock as the maximum which can be expected. The company, however, showed a strong financial position at December 31, 1930, possessing a very considerable holding of British Government and other securities. Further, the stockholders may be assured that at the first sign of a trade revival there will be an immediate increase in cable receipts. The fall in the market capitalisation of Cables and Wireless stocks since 1930 has been severe:—

Stock.	High, 1930.	Present Price.
	£	£
5½% cumulative preference stock	23,160,741	11,232,959
7½% "A" ordinary stock	15,928,878	3,827,068
"B" ordinary stock	3,419,111	995,437
	42,508,730	16,055,464

Stockholders as a whole have suffered a depreciation of 62.3 per cent. on their investment since the "peak" of 1930.

Parent Trust's Difficulties.—The balance sheet and profit and loss account, published after an interval of twenty-nine months, show how gravely this company was involved in the "Hatry" losses. Its previous history had not been uneventful. Registered in 1896 as the Dunlop Pneumatic Tyre Co., it decided, in 1906, to transfer its goodwill and trade marks to the Dunlop Rubber Co., the bulk of whose ordinary shares it held until 1917, when the interest was sold, so far as it carried control. At the end of 1922, when a policy of broadening the basis of the company was inaugurated, its name was changed to Parent Trust and Finance, and a general financial business was undertaken. For the five years to April, 1929, the company was prosperous, the deferred shares receiving regular 20 per cent. dividends. In the autumn of 1929, however, its dealings with the Hatry group produced heavy losses, accentuated by the subsequent depression. No balance sheet was published last year, but in their report for the year ended April 30, 1930, the directors announced a loss to that date of £2,871,093. The present accounts show a loss of £4,689,278, of which it is estimated that £3 millions are due to transactions concerned with the guarantees and loans to the Hatry group and the balance to depreciation of investments, losses, and expenses. Where securities have a market quotation, their value has been reckoned at the price quoted on September 30, 1931. These amount to £619,573. The unquoted securities have been valued by the directors "at what they consider a fair price" and amount to £1,478,571, making a total of £2,098,144, spread over sixty investments. Of the unquoted securities, preference shares in Steel Industries of Great Britain account for £466,610 at par and ordinary shares for £112,000 at par. Investments in subsidiary companies are valued at £747,251. The sum of £720,655, which stood to the credit of reserve account on April 30, 1929, has been appropriated, while the credit balance brought forward from that date amounts to £118,766. There remains to be carried forward a net loss of £3,848,856. The company's losses are a commentary on the risks of finance business, and of the identification of a substantial share of resources with the fortunes of a single individual.

African and Eastern Proposals.—The directors of the African and Eastern Trade Corporation are making an effort to meet the terms of the "ultimatum," under which they must bind their company, on or before February 29th, either to subscribe £1,700,000 of new capital to the United Africa Company, or to subscribe only £500,000 and suffer a diminution of its voting power in United Africa from 45 per cent. to 20 per cent. The African and Eastern proprietors have received details of a scheme under which it is proposed that they should subscribe for £1,200,000 of convertible income stock, to be charged exclusively upon the shares of the United Africa Company retained as a result of the operation. Holders are to be

entitled to convert, at par for par, into ordinary stock of the African and Eastern at any time. The latter will have the right to redeem the income stock at 110 on six months' notice after April, 1940. On repayment, holders will be entitled to use the proceeds in taking up ordinary shares at par. The attractions of the new stock will naturally depend upon its effective yield, which, in turn, will be a function of the date and extent of improved conditions in West Africa, the ability of United Africa, with its new capital, to exploit these conditions profitably, and the extent to which the United Africa board decides to distribute future earnings. It has been proposed that, if the African and Eastern is unable to subscribe its full rateable share of new capital, and thus loses its present 45 per cent. interest, a majority of its remaining representatives on the United Africa board should have the right, in case of disagreement as to dividend policy, to appeal for a final binding decision to an outside accounting authority. This scarcely seems a workable proposition. It may be presumed that members of the accounting profession will be loth to assume responsibility for what has always been regarded as an indispensable directorial function, and to risk being placed in an invidious position if they are impelled to give a decision contrary to the feeling of a majority of the board.

Premier Oil Capital Reduction.—In a circular to shareholders, the directors of this company, which has a controlling interest in some half-dozen businesses engaged in seed cake manufacture and seed crushing, recommend a reduction of capital in accordance with a revaluation of investments in subsidiaries. A careful examination has been made of the "intrinsic value" of each of these investments. The freehold land has been taken at its approximate original cost, and the buildings and plant at a somewhat lower figure than that at which they are insured, this valuation being confirmed by the management. The goodwill and similar items have been written off, with the exception of an amount of £27,000 for goodwill in the case of John L. Seaton and Co. Taking these assets as revalued, and after adding the surplus of liquid assets over liabilities and providing for contingencies, a valuation has been arrived at as at December 31, 1930, the date of the last balance sheet, of £948,111, of which total "land, buildings and machinery" account for £705,537, "goodwill" for £27,000, and "surplus liquid assets" for £215,574. This total amount is exclusive of gilt-edged securities, standing at £112,223, and was represented in the last balance sheet by a net amount of £1,510,611. To remove this discrepancy it will be necessary to reduce the ordinary capital from £750,000 in £1 shares to £187,500 in 5s. shares. As there are also 750,000 preference shares of £1, of which £491,874 are issued and fully paid, the total capital is to be reduced from £1,500,000 to £937,500, and is then to be immediately increased to £1,500,000 by the creation of 2,250,000 5s. ordinary shares. It is estimated that the profits for the year to December 31st last should be adequate to permit the payment of the preference dividend for the year, and to leave a small credit balance to be carried forward. The preference dividend was six months in arrear at the date of the last balance sheet, but has since been met. No ordinary dividend has been paid since 1924. Ordinary shareholders may accept the inevitable with a good grace, seeing that their "sacrifice" is purely nominal, their equity rights being unchanged.

Rand Ore Reserves.—Our mining correspondent writes:—For some time past several of the Kaffir groups have published their ore reserve estimates in advance of their annual reports. Though this policy has tended somewhat to lessen the market's interest in the latter documents, it has had the merit of placing shareholders in prompt possession of vital information. Hitherto, however, the figures of the Rand gold-mining subsidiaries of the Johannesburg Consolidated Investment Company have not been available on these lines, but a new departure has now been made by the publication of the estimates with the

reports for the December quarter. The figures reveal a substantial increase in the tonnage of the Randfontein, accompanied by a small expansion in both the value and the stoping width, with a generally contrary movement in the case of the Langlaagte Estate. The estimates issued by different groups, as at December 31st, are tabulated below, with the corresponding figures for 1930:—

"JOHNNIES" GROUP.				
		Quantity. Tons.	Value. dwt.	Width. Ins.
Government Mines	1930	10,840,000	8.9	61
	1931	10,510,000	8.9	60
Langlaagte Estate	1930	1,530,000	7.4	43
	1931	1,190,000	7.2	44
New State Areas	1930	2,716,000	8.9	50
	1931	2,737,000	8.9	50
Randfontein	1930	5,293,000	6.0	41
	1931	6,324,000	6.2	42
Van Ryn Deep	1930	2,854,000	7.0	48
	1931	2,669,000	6.7	48
Witwatersrand (Knights)	1930	391,000	5.5	54
	1931	265,000	5.5	52

RAND MINES GROUP.				
		Quantity. Tons.	Value. dwt.	Width. Ins.
City Deep	1930	1,268,200	5.98	42.4
	1931	1,323,800	6.08	42.9
Crown Mines*	1930	9,974,980	6.56	46.6
	1931	10,578,940	6.53	47.8
East Rand Propy.*	1930	3,255,550	6.2	58.0
	1931	3,519,480	6.3	59.0
Geldenhuis Deep*	1930	479,700	5.60	50.1
	1931	448,200	5.48	49.5
Modder B*	1930	1,112,100	6.90	51.6
	1931	1,034,710	6.55	49.2
Rose Deep*	1930	841,900	4.80	59.0
	1931	762,700	4.5	58.0

* Available.

A feature, in the case of the Rand Mines group, is the fresh expansion of the tonnage at the Crown, where the small decline in value is fully counterbalanced by the increase in the stoping width. An improvement is revealed by the City Deep and the East Rand; but the rapidly shortening lives of some of the properties is not without influence on the figures in the table.

GOLD FIELDS GROUP.				
		Quantity. Tons.	Value. dwt.	Width. Ins.
Robinson Deep	1930	2,379,000	5.9	58
	1931	2,592,000	5.9	60
Simmer and Jack	1930	1,625,000	6.0	51
	1931	1,558,700	6.0	50
Sub Nigel	1930	1,206,000	17.3	27
	1931	1,261,000	17.3	28

ANGLO-AMERICAN GROUP.				
		Quantity. Tons.	Value. dwt.	Width. Ins.
Brakpan	1930	2,543,420	7.80	53.74
	1931	2,520,890	7.78	51.59
Daggafontein	1930	1,233,802	8.37	44.00
	1931	2,003,174	8.09	44.16
Springs	1930	3,311,370	9.34	49.36
	1931	3,452,983	9.14	48.40
West Springs	1930	2,756,150	6.00	54.37
	1931	2,737,020	5.85	53.15

No striking changes are indicated by the figures of the Gold Fields subsidiaries. With the Robinson Deep and the Sub Nigel there is some advance; with the Simmer and Jack a slight set-back. In the case of the Anglo-American group a general tendency to reduction is shown at the old mines; but a striking expansion in tonnage is shown by the figures relative to the Daggafontein, which has just started crushing.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies: National Provincial Bank, Westminster Bank, Martins Bank, Provincial Bank of Ireland, The National Bank, Canadian Bank of Commerce, Anglo-French Banking Corporation, Hungarian Commercial Bank of Pest, National Discount, Metropolitan Trust, Sedenak Rubber Estates, Ashanti Goldfields Corporation and Illustrated Newspapers. At the annual meeting of Martins Bank Mr A. A. Paton said it would be difficult to exaggerate the value to Great Britain and the Empire of the formation of an immediate Currency Union with those nations which have departed from the gold standard and are prepared to seek stability through definite co-operation to that end. Presiding at the annual meeting of the Anglo-French

Banking Corporation, Mr F. A. Szarvasy said that the Banque de France had kept its discount rate as low as was possible during the past year, sometimes almost at a nominal figure, but movements in Bank rates under present-day conditions had ceased to exercise the same effect as at a time when balanced economic conditions ruled all over the world. At the annual meeting of the Sedenak Rubber Estates, the chairman affirmed that any Government scheme to regulate supplies would have to include very strict control over further plantings, so as to prevent excessive opening of further areas under rubber, as happened during the last short-lived boom.

CAPITAL ISSUES.

Last week's successful issue by the Mauritius Government has been followed, this week, by the offer of a larger amount of trustee stock on behalf of the *Uganda Government*. The loan represents an indispensable step in the development of this East African Protectorate. Its attractive yield of £5 4s. 2d. flat and £5 4s. 8d. presuming redemption in 1971 secured it a favourable reception, larger applicants being allotted only 40 to 50 per cent. of their requirements. Incidentally, it should be pointed out that the loan involves no "exchange" transfer problem.

Uganda Government.—Issue of £2,000,000 5 per cent. inscribed stock, 1951-71, of which £600,000 was placed in the terms of the prospectus. Trustees are authorised to invest in this stock, which is raised to meet the cost of railways, roads, water supply and other public works. The loan is secured on the general revenues and assets of the Government of Uganda. The principal will be repaid at par on March 1, 1971, but the Government will have the option of redemption at par, on or after March 1, 1951, on six months' notice.

Metropolitan Water Board.—Issue by tender of bills to an amount not exceeding £2,000,000 in replacement of bills falling due. No minimum price specified.

Kreuger & Toll Company

(AKTIEBOLAGET KREUGER & TOLL)

The Chairman of the Board of Directors of Kreuger and Toll Company has issued the following statement:—

1. The net earnings of the Company for the past year before interest on funded debt amounted to approximately \$23,500,000 (Kr. 123,600,000). After deducting interest on the Secured Debentures, there remains approximately \$21,000,000 (Kr. 110,500,000) compared with \$32,789,279 (Kr. 122,348,054) for the year 1930 before providing for interest on the Participating Debentures and dividends. This corresponds to approximately \$10.95 for every Participating Debenture of Kr. 100 and Kr. 40.86 per share of Kr. 100, as against \$15.20 and Kr. 56.72 respectively for the year 1930. Of the gross income of the Company in 1931, approximately 90 per cent. was of a recurring nature. There has been excluded from the earnings reported above a small amount of income in foreign currencies the transfer of which could not be effected by the Company during 1931.

2. Interest on the Participating Debentures is dependent upon the dividend paid on the common shares and is payable the 1st of July, 1932, in dollars at par of exchange. In accordance with the usual custom, the recommendation of the Board of Directors in regard to dividends will be made when the annual report for the Company is published.

3. All marketable securities owned and foreign Government and other bonds are carried in the balance sheet at prices equivalent to market value as of 31st December, 1931. This has involved a writedown of securities which has been provided for partly out of undivided profits and partly out of reserves, which latter after this process stand at about \$80,000,000 (Kr. 421,000,000).

4. The Company's holdings of foreign Government Bonds are now carried on the books at approximately \$50,000,000 (Kr. 263,000,000). The net assets of the Company as at 31st December, 1931, correspond to about \$80.00 per Participating Debenture or share of Kr. 100, and on account of the appreciation which has taken place in securities owned by the Company since this date the present value is somewhat larger.

5. The Chairman simultaneously announces that the Company, which for a number of years has had the option of acquiring some important mining properties in the northern part of Sweden, has exercised its right under this option. The most important of the mines involved in this option is the Boliden gold mine, which was discovered in 1924 but the real importance of which as a gold-producing unit has not been fully recognised until very lately. The district of Sweden in which Boliden is located has of old shown indications of valuable minerals, but the fact that the mineral-bearing rock is covered by a heavy layer of soil has made it practically impossible to carry on any successful prospecting in this part of the country until some years ago when an invention for electrical prospecting was made by some young Swedish engineers. This invention was financed by a powerful Swedish group, which arranged a methodical prospecting of the above-mentioned district in Sweden. This work has led to the discovery of a number of mines containing valuable metals, such as gold, silver, copper, zinc, &c., the most important of these mines being the Boliden gold mine which has given its name to the company owning the other mines.

6. The Boliden mine is, as a single gold deposit, one of the largest and richest in the world. The ore contains an average of 20 grams

of gold and 60 grams of silver a ton, and has a copper content of 2 per cent., while the South African ores average 9 grams of gold per ton, and the Hollinger mines of Canada and the Homestake mines of South Dakota, U.S.A., 10 grams per ton. Part of the ore body contains large quantities of arsenic, so that the Boliden mine contains by far the largest known deposit of arsenic ore in the world. This fact presented some serious technical problems which, however, now are fully solved. When the Boliden mine was first opened, the ore was shipped for treatment in existing smelters. On account of the high contents of arsenic of the ore, only a few plants in the world had the technical equipment for treating the ore, one being in Freiberg, Germany, and another being the American Smelting and Refining Company's plant in Tacoma, U.S.A. To start with, the ore from the Boliden mine was transported in motor trucks to the coast and from there shipped to Germany or the Pacific coast. The not inconsiderable profit derived from the sale of this ore has been used to develop the mine. In 1927, however, it was decided to erect a plant at Rönnskär, on the Baltic coast about 30 English miles from Boliden, with which the plant is connected through a standard-gauge railway since 1929. The first part of this plant was completed in 1930 and has since been continually running, during which time it has been fully proved that the technical problems of treating the ore have been successfully solved. The present capacity of the plants at Boliden and Rönnskär is about 300,000 tons a year. A further extension to 600,000 tons is expected to be completed during this year. When the plant is running in full, the monthly production of gold is estimated to be about one ton with a value of \$667,000.

7. Before exercising the option, the Company has consulted prominent American, English and Swedish mining engineers, who unanimously declare that the Boliden ore deposits are of great extension and may be considered as very valuable. There are further indications that a number of the ore deposits which are owned by the Boliden Mining Company but which have not yet been fully investigated are of considerable value. There is a reasonable chance that further mines may be found to such an extent as to make Sweden a factor in the gold production of the world. Through control of methods used in the prospecting, Boliden Mining Company has a decided advantage on possible competitors in this part of Sweden.

8. The option of Kreuger & Toll Company to acquire an interest in Boliden Mining Company expires in January, 1932, and the Board of Directors of Kreuger & Toll Company considered it to be greatly to the advantage of the Company to exercise the option. At the same time it seemed hardly justified for the Company under present conditions to make a cash outlay of the importance which the exercising of the option would involve. The Company has, however, been successful in making arrangements, whereby an approximately 80 per cent. interest in the shares of Boliden Mining Company will be acquired against delivery of 4,041,667 Kreuger & Toll Company Participating Debentures of Kr. 20 each, with the right reserved by Kreuger & Toll Company to re-acquire these debentures at any time before 31st December, 1934, and substitute therefor cash in the same amount at which the Company to-day holds the option.

COMPANY MEETINGS, &c.

NATIONAL PROVINCIAL BANK, LIMITED.

REVIEW OF A MOMENTOUS YEAR.
TRADE AND THE GOLD STANDARD.
BRITAIN'S IMPROVED OUTLOOK.
CONFIDENCE IN THE FUTURE.
SIR HARRY GOSCHEN'S SPEECH.

The annual general meeting of the National Provincial Bank, Limited, was held, on the 28th instant, at Southern House, Cannon Street, London, E.C.

Sir Harry Goschen, Bart., K.B.E. (the chairman), presided.

Sir Alfred Lewis, K.B.E. (chief general manager) read the notice convening the meeting and the report of the auditors.

The chairman, in opening, referred with much regret to the absence of Lord Inchcape and Lord Reading, but said he was very pleased to inform the shareholders that he had that morning had good reports of their progress towards convalescence.

Continuing, he said:—Ladies and Gentlemen,—In submitting to you an account of our stewardship for the past year, I wish to refer in the first place in a little more detail to one or two paragraphs of our report.

LOSSES OF PERSONNEL.

It is with sincere sorrow that we have to record the loss by death during the past year of two of our colleagues. Mr Fitz-Gerald had been a director of the bank for 45 years, during which time he had devoted himself to the interests of the bank in all directions. Not only was he possessed of a profound knowledge of our business and traditions, but he had an intimate acquaintance with all matters appertaining to the staff of the bank and was deeply interested in all that concerned their welfare, social life, and especially athletic activities. He is greatly missed by us all, and by none more than by the members of our various clubs and other associations.

In Sir George Marjoribanks we lose a worthy representative of our friends Messrs Coutts and Company, of which bank he had been the chairman for many years. He was a typical banker, and was respected and admired by all who knew him. We deeply regret that we have been deprived, after so comparatively short a time, of the services of so courteous and charming a personality.

We have also to deplore the death of our friend, Mr D. J. H. Cunliffe, a local director for Bexhill and district, and formerly a senior general manager of the bank, who, during his long service in one capacity or another, had rendered the bank yeoman service. By the death of Mr E. T. Laine, a local director in Guernsey and formerly a director of the Guernsey Banking Company, Limited, and of Mr G. H. Shipley, who also served us as a local director in Lincolnshire, we lose valuable and esteemed friends.

THE NEW PRINCE'S STREET BUILDING.

As you will see by the report, our branches and agencies now number 1,374, and I would like to remind you since our last meeting our new Princes Street building has been completed and is now in full occupation. It may interest you to know that, notwithstanding a cession of part of our site to the Corporation of the City of London for public purposes (for which we received suitable compensation), we are able not only to accommodate a larger staff than formerly, but to house them in a more convenient and economical manner, to provide them with good and natural light, and with the latest improvements for healthy and comfortable working.

The architect, Sir Edwin Cooper, A.R.A., has, I think, designed a building not only worthy of the most prominent site in the City, but one admirably adapted for its purpose.

TRIBUTE TO OFFICERS AND STAFF.

I should like this year to pay a special tribute to the whole personnel of the bank for the part they have played in achieving the results I am able to lay before you, and I can assure you this is no conventional statement that I make. This has been a year of exceptional anxiety and difficulty, and, day by day, the chief general manager, our general managers and high officials have been confronted with important problems and situations of an entirely new character, many of which demanded an immediate solution and decision. The hours have been long, the work arduous, and the responsibility serious, but each problem has been faced with a cheer-

fulness, ability and courage which deserve our highest appreciation. Throughout the service our managers and staff have ably seconded their efforts, and by the steady and careful attention with which, notwithstanding the turmoil of the past year, they have efficiently carried on the business of the bank, they have maintained the best traditions of our institution.

THE ACCOUNTS.

I have now to refer to our accounts, a copy of which with the accompanying report of the directors, has already been delivered to you. The paid-up capital of the bank remains at the figure of £9,479,416, but we have transferred from the reserve fund a sum of £1,479,416 to investments depreciation fund, leaving the reserve fund at £8,000,000. By the foregoing transfer we have been enabled to show in our accounts the investments of the bank at a price equivalent to or below the market value as at December 31st last.

I might remind you that many of the gilt-edged stocks have a redemption value in excess of the present market price, and the margin of redemption value over the market value of our holdings is more than sufficient to offset the amount of depreciation in the whole of the bank's investments provided for in the accounts before you. I need hardly add that as the improvement in the market value of our investments materialises, which I anticipate must coincide with the return of more normal conditions generally, the investments depreciation fund will again become available for inclusion among the free funds of the bank.

CURRENT, DEPOSIT AND OTHER ACCOUNTS.

The current, deposit and other accounts stand at £261,503,042, being £30,702,525 less than the corresponding figures twelve months ago.

During the same period there was a contraction in the monthly averages of the deposits of the clearing banks for December, 1931, amounting to £139,000,000, compared with December, 1930. In the early months of the year the usual decline in deposits, due to the collection of taxes, was experienced by the clearing banks as a whole as well as by ourselves. But the recovery in deposits that usually happens in the latter part of the year did not show itself in 1931, owing to the withdrawals by overseas depositors and to a contraction in advances and discounts due to lower prices and slack trade which diminished the demand for credit.

Our subsidiary companies had with us balances amounting to £422,497, and the liability of the bank for acceptances and engagements shows a fall of over £860,000, mainly arising from the contraction in overseas business.

ASSETS SIDE ITEMS.

On the assets side the amount of cash in hand and with the Bank of England represents slightly over 11 per cent. of our deposits. Cheques in course of collection and money at call are slightly lower, and there is a fall of some £14,300,000 in bills held, made up of about £8,800,000 Treasury bills and about £5,500,000 commercial bills.

Our investments, to which I have already referred, are also lower, the reduction being over £5,400,000.

The investments in the affiliated banks stand at £868,750, showing a reduction amounting to £50,000 in the values at which they have been taken. Our investments in subsidiary companies are the same at £2,514,000.

THE TWO SUBSIDIARIES.

We are pleased to say that our two subsidiary companies, Coutts and Grindlays, continue to give us the fullest satisfaction, and you will be glad to know that notwithstanding the unrest in India, Grindlays' business in that great Dependency continues to enjoy unimpaired strength. This is highly creditable to those engaged in the administration of that bank.

I now come to the next important item of our assets, namely, the advances to customers. These, you will observe, show a reduction of slightly over £7,000,000, which reduction reflects a diminished demand by our customers through the various sections of the bank's business.

The net profit is £1,747,007, against £1,930,854 for the previous year, and you will also observe that the wording of the profit statement is somewhat fuller than has previously been the case. With regard to the profits, I should mention that the average level of the bank's deposits was lower than during 1930. In other words, the bank had less current resources at its disposal, combined with which the continuous depression, as reflected in reduced turnovers in so many sections of industry, affected the bank's earning capacity. On the other hand, we gained an advantage owing to the higher Bank rate which prevailed during the latter half of the year. The average Bank rate for the year was £3 19s. 5d. per cent., compared with £3 8s. per cent. for the previous year.

ALLOCATION OF PROFITS.

Including the sum of £673,814 brought forward from last year, the accounts show an amount available for distribution of £2,420,822. The sum of £758,353 has already been applied in payment of the interim dividend in July last. We have allotted £100,000 to our pension fund, and, after providing for a final dividend of 8 per cent., making 18 per cent. for the year, there remains £804,115 to be carried forward to the next account. The dividend declared represents a fall of 2 per cent. compared with the dividends which have been paid since 1924.

For the first half-year income tax was deducted at 4s. 6d. in the £, and for the last half-year tax will be deducted at the standard rate of 5s., the bank having decided to bear the extra cost of 6d. in the £ on the first half-year's dividend imposed under the provisions of the Finance (No. 2) Act, 1931. The average rate of deduction in respect of 1931 is therefore 4s. 9d., giving those shareholders who receive both dividends the benefit of 3d. in the £ on their dividends in the whole year. This slight benefit makes the dividends for the whole year before the deduction of income tax £16 5s. 4d. per cent.

You will observe that, although we have not appropriated from the profits now announced any sums for premises or contingencies, we have substantially increased the amount of the balance carried forward to next year's accounts.

GERMAN CREDITS.

A great deal was said at the time of the German crisis at the end of July regarding the amount lent to that country, and I am sure you would like me to give you some information regarding our relative position.

The amount of cash involved was quite insignificant, and, including commercial credits granted to German institutions by way of acceptances, the total amount of our claims was approximately only 2 per cent. of the whole of the amount owing to this country, as set forth under the German Standstill Agreement, and we see no reason whatsoever to doubt the solvency of our debtors.

I am glad to see that the negotiations for the extension of the Standstill Agreement have apparently reached a successful conclusion, and I should like to congratulate the representatives of the Foreign Creditors' Committee, to whose painstaking and anxious efforts this is due; I am sure you will join with me in an expression of the hope that it may materially contribute to the restoration of confidence generally.

At the end of the year we had in hand, as, indeed, is usually the case, for account of our overseas customers and correspondents, more than double the amount due to us by them, including their liability on commercial bills and foreign Government Treasury bills discounted, so that our overseas connections amply provided us, in the aggregate, with all the funds necessary to carry on that important part of our business. In other words, it was fully self-supporting.

CURRENT ACCOUNTS.

As regards the turnover on current accounts, I am pleased to say our proportion of the different sections shows a very favourable comparison with the aggregate figures of the Bankers' Clearing House returns, and, taking the whole of our figures, our fall in 1931 compared with 1930 was 12.8 per cent., compared with the fall of 16.8 per cent. in the grand total figures of the Bankers' Clearing House. The number of customers has shown a satisfactory increase, and it is also very gratifying to record the fact that our savings department has continued to show very satisfactory progress during the year.

ACTIVITY CURTAILED.

In reviewing conditions in our industries in 1931, we find little cause for satisfaction. The world-wide fall in wholesale prices, which had been such a marked feature in 1930, has continued, and industrial activity, not only in the United Kingdom, but throughout the world, has been greatly curtailed. The difficult financial situa-

tion and exchange position of many countries led to measures such as the prohibition of imports, exchange regulations and many forms of restriction, each of which has added to the already serious dislocation in international trade. Under the conditions ruling throughout the year, with one crisis following another, there was little, until the late autumn, to give encouragement to industry and commerce in this country.

When the financial events of the summer forced the Government to suspend the gold standard, to which I will refer more fully later on, it was hoped that some of the serious consequences would be partially offset by an improvement in export trade arising from the fall in the sterling exchange. There have been, however, many factors which have prevented any revival of international trade. It has been extremely difficult to conduct business operations in view of the general uncertainty, lack of confidence and restrictions in free dealing in exchange.

At present our great basic industries, such as coal, iron and steel, engineering and shipbuilding, have shown little response to the new situation, but we can draw some small measure of comfort from the fact that employment has been steadily increasing in recent weeks, in place of the continued rise in the unemployment figures which had been our unfortunate experience during the last two years. The textile trades have actually experienced some definite improvement. In September the wool and wool textile industries were in the depths of depression, and wool values had returned to about the lowest point of the year.

A DRAMATIC CHANGE.

A dramatic and immediate change came into the situation as a consequence of the decision of the Government to suspend the gold standard, followed by the introduction of the anti-dumping duties. Wool values rose 20 per cent. to 25 per cent., machinery activity increased and the position of manufacturers, woolcombers and spinners improved. Whilst the improvement was not uniform throughout the industry, many sections were exceedingly busy, and by the close of the year the numbers of unemployed in the industry had fallen by over 60 per cent. Whilst this improvement is welcome, it has yet to be seen, of course, whether or not the present activity is only a temporary phase.

In the case of the cotton industry, the immediate effect of the depreciation in sterling was an inflow of orders from the home trade, and, in addition, many export houses found that they were able to recapture some of their lost foreign markets. This trade has also derived benefit in the Far Eastern markets from the rise in the price of silver, and we trust that such relief as has been experienced in Lancashire may be of a lasting nature.

A number of other industries have also derived material benefit from the depreciation in sterling, notably the boot and shoe trade and the hosiery trade. In the case of boots and shoes, however, manufacturers were only busy throughout October and November, but in the hosiery trade the activity in recent months was greater than has been seen for two years. Orders have come in freely since the fall in sterling and many firms are working full time. We must hope that the improvements to which I have referred will continue, and that similar improvements may extend to other trades.

THE GOLD STANDARD.

The past year has certainly been the most momentous, and in some ways the most disastrous, since the war, both for this country and for the rest of the world. It has seen England forced off the gold standard, Germany first brought into a position from which she had to be rescued by the forbearance of her short-term creditors, and then obliged to declare her inability to fulfil the obligations of the Young Plan, and the whole of the world suffering from an almost continuous fall in the prices of commodities and of securities. This fall has impaired the solvency of debtors, and weakened the security of creditors. It has brought the banking system of many countries under suspicion on the part of their customers, reduced the volume of internal and international trade, raised unemployment figures to unprecedented heights, and caused a general lowering of profits and diminution or disappearance of dividends.

But out of these disastrous events our country has been able to achieve changes in its position and outlook that give us good grounds for hope and confidence, if only international statesmanship can apply the needful remedies to the appalling situation in which Europe stands to-day. Under a hail of misfortunes we have righted our ship, cleared our decks, and set a new course with new officers in command, in whom the whole country has confidence. The fall in the pound, deplorable as it is in many respects, has given us, at least for a time, an exchange advantage that should enable our industries to compete with success whenever there is any recovery in the buying power of our overseas customers.

DRASTIC MEASURES.

We have effected drastic economies and submitted to still more severe taxation, and the combined effect of these measures will, we are assured, cover the gap between revenue and expenditure that has,

under previous administrations, been met by borrowing. We have cut down public and private extravagance. We have reformed the abuses of the dole. By anti-dumping measures, we have to some extent freed our industry from the nightmare of unfair competition; and we now hold a weapon in our hands which, if wisely used, should do good service in bringing down the height of the tariff walls abroad, which have obstructed the progress of our industry and paralysed the trade of all the world. And the most satisfactory feature is the fact that these sacrifices and privations have been endorsed and welcomed by all classes of the community, and that those who suffered most from the reductions in pay, salaries and unemployment benefits, were as ready as those in a more fortunate position, to support by their votes the National Government that found it necessary to impose them.

LONDON'S POSITION.

From the point of view of the City, the fact that the pound sterling is no longer a gold pound is naturally the most momentous event of the year; and all over the world this change was received as a portentous and almost incredible disaster. That London, always priding herself as a place of deposit for foreign funds, the owners of which could rely with certainty on turning them into gold, should be forced to suspend this right, is an event that we must all deplore. But, on the other hand, we can claim in the first place that it was forced upon us by external influences, and was not due to any weaknesses in our banking methods; and, in the second, that we did our very utmost to prevent it, and only accepted the necessity for it when all possibility of avoiding it had been found to be denied to us.

A FRENCH VIEW.

In support of the first claim I should like to remind you of the statement that has often been quoted before, of Mr Charles Rist, a well-known French monetary expert and at one time vice-president of the Bank of France. He, in an article that appeared in the *Economist* of October 3rd, said that "the pound fell as a result of the unjustifiable panic; the forces which led to its fall were largely external to England itself." He went on to explain that the assistance which London had rendered Germany, Austria, etc., had greatly hampered her in making good the withdrawals of foreign balances from London by calling in foreign credits and that London was having to "carry" not only its own currency, but that of a large part of Europe.

EFFECTS OF PANIC.

These withdrawals of foreign balances from London were chiefly due to panic on the Continent and in America. Ever since the general election in Germany in the autumn of 1930, which was marked by an alarming increase in the strength of the National and Communist parties, there had been a flight from the mark on the part of Germans and rapid withdrawals of credits from that country by Continental and American banks and firms. These banks and firms were alarmed not only concerning the situation in Germany, but also concerning their own position, because of the mistrust shown by their own people and customers, evidenced by withdrawals and hoarding of cash. In America, especially, the weakness and many failures among the smaller banks were the causes of considerable anxiety. These adverse influences were made more acute by the suspension, last May, of the Credit-Anstalt, Austria's principal bank, and, as we all remember, the Continental position then became so serious that, in June, President Hoover made the generous and statesmanlike suggestion that there should be a year's suspension of all payments on account of reparations and war debts. This proposal was hailed as an immense and timely relief, but, unfortunately, delay in accepting the proposal hindered the benefit that might have resulted from its prompt adoption.

Withdrawals of credit from Germany continued, and the London Conference of Statesmen, summoned to relieve the position, could only suggest that the banks of the countries that had money deposited in Germany and claims against her should arrange among themselves to stop the run on her and endeavour to clear up the position. This extremely difficult task, involving an immense amount of labour and co-operation, was accomplished by what is known as the Standstill Pact, by which Germany was given a six months' breathing space.

MISTRUST CENTRED ON LONDON.

But mistrust then became centred on London; because British banking was known to have treated Germany with more leniency than had been shown by other creditors; and foreign bankers, with their own difficulties increased by the Standstill Agreement, began to doubt the ability of London to repay funds that had been placed there. They therefore began to withdraw credits from this

country, more than £30,000,000 in gold being taken from the Bank of England in the last two weeks of July. Obviously, international banking can only be carried on in a sane and reasonable world. When people abroad all want to see their money and hold it in their own hands, and proceed to draw it all at once from the chief place of deposit, no banking system, however sound, could stand the pressure, unless it held cash assets against all its foreign liabilities, which would mean that it was not fulfilling its proper function as a banker in supplying credit.

DOMESTIC INFLUENCES.

At the same time, candour compels us to admit that weaknesses in our own country's financial and trade position had something to do with the mistrust of our foreign creditors. Our budgetary position, to which emphatic attention was called by the publication, at the end of July, of the May Report, and our dwindling trade balance, had long been matters of discussion in Parliament and in the Press. Criticisms of the extravagance of Governments of all parties, and especially of the Socialist administration that was in power until last August, had long been, very properly, rife.

These criticisms were echoed abroad at more than their face value, owing to the disturbed state of foreign nerves. In normal times they would have attracted little attention; for everyone knew that we could and should balance our Budget when we made up our minds to it; and an adverse balance of trade, at a time when the markets of the world were all impoverished, was a serious but not terrifying experience for a country with accumulated resources such as England possessed. Had it not been for panic abroad, our seeming weaknesses would never have led to the demands that were concentrated on us last summer.

OUR DEFENCE OF THE POUND.

That we did our best to defend the pound most of our foreign critics have admitted. The Bank of England borrowed £50,000,000, and a new Government, formed by the patriotic co-operation and self-sacrifice of all parties, with Mr MacDonald as Prime Minister, borrowed £80,000,000; both these loans were raised in Paris and New York, where the authorities readily afforded assistance, and, to diverge for one moment, may I say how gratifying it is to all of us to learn a few days ago that the Bank of England had arranged to repay on February 1st the balance remaining of the £50,000,000 Loan, and this without, as the official announcement indicates, "involving any reduction of the Bank of England's Gold Reserves." It indicates in a striking manner the country's responsiveness to sound methods in the conduct of national affairs. I am sure I shall be voicing your feelings in expressing our warm appreciation of the success attending the management of the monetary position, which has made such an achievement possible during a time of extraordinary difficulty; but, to resume, simultaneously when effecting these loans our Government, alive to the necessity of restoring the confidence of those who had entrusted us with their money in the soundness of our national finances, and in the credit of the country, at once took the unpleasant but necessary steps to carry out the financial reforms for the balancing of the Budget. The only sin of omission with which we have been charged, was leaving Bank rate at 4½ per cent. But it is pretty certain that in the then existing state of nervous hysteria abroad, a rise in the Bank rate would only have been taken as a sign of weakness, and would have increased the alarm of our creditors.

VAIN EFFORTS.

What more could we have done to save the honour of the pound? As it was, all these efforts were in vain. The criticisms of our economy measures, uttered by members of the former Government who had retired from office, made our foreign creditors still doubtful concerning the country's sentiment, and these criticisms were reflected in the exaggerated statements of a highly inflammatory nature which reached the Press in certain important centres. About this time and during the third week in September, when this event happened, acute panic was prevalent on the Continental Bourses and in Wall Street. On September 18th, the French and American Governments were consulted as to the possibility of further credits. They were, as reported by Mr Snowden to the House of Commons, friendly and sympathetic; but their replies gave no prospect of assistance on the scale necessary to rehabilitate the position. More than £200,000,000 had been withdrawn from the London Market since the middle of July, and the only thing to be done was to suspend the Gold Standard and allow the pound to find its own level.

WAS THE OLD PARITY A MISTAKE?

Now that this has happened, those who criticised our return to the Gold Standard at the old parity in 1925 have been claiming that

they were right, and that it was a mistake for us to have made this effort, which, they maintain, under the newly existing circumstances, inflicted difficulties on our industries by making our goods dear in foreign competitive markets. These contentions ignore the chief reason why the London money market, and public opinion throughout the country, favoured our return to the old parity. This country returned to gold at the old parity as a matter of common honesty.

England, having been left in charge of large sums by foreigners, had to make an effort to pay them back, if they wanted their money, in pounds as good as they had deposited here. It may have been a quixotic action on our part, but most of us who believe that England's reputation as an honest banker was an asset above all price, will agree that the effort was well worth making, though it has failed now, after years of harassing endeavour, owing to pressure of external events. Any disabilities which may have been inflicted on British trade by the restoration of the Gold Standard, might have been overcome if our industries had shown more elasticity in adapting their cost of production to conditions prevailing in the markets of the world. As we know, rigidity in wages and difficulties arising from high taxation and foreign dumping that hampered reconstruction, were against this elasticity. Now that the pound has been forced off the Gold Standard by the action of our foreign creditors, those disabilities are in a measure cleared away. As producer and trader, our country is in a stronger position, as compared with its competitors, than at any other time since the war, and can go forward with confidence and renewed strength as soon as the difficult international problems that threaten the stability of Europe and the world have been settled in a way that will restore the confidence that is essential to prosperity.

OUR CUSTOMERS' CONFIDENCE.

By far the most gratifying feature in the history of the fall of the pound from gold was the quiet calm with which it was accepted by the public in England. Nothing surprised, and one might almost say thrilled, foreign observers more than the fact that on the day after the gold standard was suspended the British banks were all open as usual, and that there was no trace or suspicion of panic on the part of their customers. We bankers have been freely criticised in recent years—sometimes by gentlemen who have not much practical acquaintance with the problems with which we have to deal; but with this magnificent proof in our hands that we have conducted our business in a way that has been approved by those who have entrusted their funds to our keeping at a time when banking difficulties were rife all over the world, we can feel that British banking methods have been endorsed by those whose opinion is most important to us.

A GREAT EFFORT TO BE MADE.

The British banks and their customers have thus every right to be proud of one another for the way in which this crisis has been met; and it gives us confidence in facing the great effort that the nation has to make in overcoming, and helping other countries to overcome, the terrible difficulties that lie in the path to recovery. The fine response made by the income tax payers to the demand for prompt payment of increased burdens is of good augury for the balancing of the Budget. Balancing our trade account is a more difficult and serious matter, because it is hard to increase exports with high tariffs, exchange restrictions and the poverty of our foreign customers impeding us on every hand; and at the same time to decrease imports does not assist the recovery of our customers and of world trade, so important to our shipping and shipbuilding industries. We want to see England still a great market, but judiciously regulated in such a way that our manufacturers, by expanding production and reducing overhead charges, may be restored to their old power to compete abroad, and so may make larger demands on those countries which supply us with many of our necessary raw materials and other products.

It may be that in the past we have relied too much on our "invisible" exports to balance our trade account. The weakness of a country that trusts to foreign investments as a source of revenue at a time when many foreign nations have been unable, owing to the fall in commodity prices, to meet the service of their debts, has been brought home to us by a series of defaults which, two years ago, would have been hardly regarded as possible. The firmest foundation for a country's financial position is, and must be, its power to sell its goods (including such commodities as shipping and other services) abroad and to meet the needs of its population as far as possible out of its own resources.

A STRONG GOVERNMENT.

With a strong and resolute Government in power, and with all classes alive to the need for determined effort, we have no need to fear that we shall not surmount our present difficulties in so far as the action of this country can ensure success. The steadiness of our internal prices, in spite of the fall in the pound, shows that

the policy of economy, glibly criticised as it has been in some quarters, has kept us from stepping on the slippery slope of inflation with its *facilis descensus Averno*.

Free spending, as a remedy for unemployment, is attractive to many who do not follow out its consequences, but what would the position of this country have been when the crisis came upon us if we had followed the advice of certain economists and politicians and embarked on huge schemes of expenditure on road making and so on financed by Government loans? Such expenditure might possibly, as is argued by its skilful champions, have indirectly and in the very long run improved our transport system and industrial equipment; but its immediate effect would have meant the locking up of capital on expenditure that could not be immediately productive and a considerable increase in imports of materials, so making our balance of foreign payments still more adverse, and further, in all probability, leading to a certain degree of inflation. If we had adopted such a policy we should have been emphasising the mistakes of extravagance and borrowing to pay our way that contributed to foreign mistrust of our financial position, and weakened our claim, so handsomely endorsed by Professor Rist, that the pound fell owing to forces largely external.

OVERSEAS PROBLEMS

This point brings us back to foreign affairs. Just as outside influences forced the pound off gold, so they now threaten to impair the effects of any effort that we may make to right our financial position and trade. We have every confidence that our Government and our monetary authorities will apply those principles of co-operation that have been their guiding policy ever since the war to the solution of the problems of Germany's commercial obligations, of reparations and of war debts.

The fall in commodity prices has made the revision of the obligations of certain debtors essential; but it is clear that commercial obligations, on the fulfilment of which all business must depend, must take precedence of inter-Governmental contracts. In fact, it cannot be denied that the charges involved by reparations and war debts are essentially different from those which result from credits and capital put into industry and development. The latter provide assets which produce revenue indirectly or directly; the former are an uncompensated burden, and the effect produced by the charges arising from them is detrimental both to those who pay and those who receive them, especially when the creditors close their markets to goods and take payment in the form of gold. These payments have been an important, perhaps the chief, cause of the maldistribution of gold and its disastrous effect on prices. I feel very strongly that there can be little expectation of real recovery in trade, and in the confidence that means everything to business, until this problem of reparations and war debts has been settled definitely in a way that is recognised as fair by all parties.

HOPES FOR THE FUTURE.

But while the political situation on the Continent and the reparations question dominate the present and future prospects of recovery or disaster, and while the affairs of Europe are difficult and threatening, we have good grounds for hope in other directions. The firm policy and determination to uphold law and order displayed by the Indian Administration, coupled with the desire to satisfy as far as possible the legitimate aspirations of the Indian people, must surely result in better opportunities for trade with that country to our mutual advantage. We look forward with keen anticipation to the forthcoming Ottawa Conference, when I trust the great ideal of Imperial Unity and Imperial Preference may be realised and result in a large increase in the trade of all members of our Empire one with another.

With these hopes, with the fresh chance which is at present being given to our manufacturing industries by the fall in the pound and by the expectation of the establishment of a scientifically designed tariff on the importation of foreign manufactured goods, and last but not least, with the prospect of recovery in our agriculture through measures which will enable it to secure reasonable profits without inflicting hardship on consumers, we may look forward to the present year with calm determination to do our utmost to meet its difficulties.

I now beg to move: "That the report and accounts, as presented, be received and adopted."

Mr Colin Frederick Campbell (deputy chairman) seconded the motion, and, the chairman having replied to shareholders' remarks, it was carried unanimously.

The Chairman then proposed the re-election of the Rt. Hon. Lord Illingworth, P.C., Mr Francis Alexander Johnston, the Most Hon. the Marquess of Reading, P.C., "G.C.B., G.C.S.I., G.C.I.E., G.C.V.O., and Sir Felix Schuster, Bt., as directors.

Mr C. G. Hamilton seconded the motion and it was unanimously adopted.

On the proposition of the Rt. Hon. Lord Ebbisham, G.B.E., seconded by Mr H. Carron Scrimgeour, Sir Nicholas Edwin Waterhouse, K.B.E. (of Messrs. Price, Waterhouse and Company) and Sir William Henry Peat, K.B.E. (of Messrs. Peat, Marwick, Mitchell and Company) were re-appointed auditors for the current year.

Mr J. Theodore Goddard moved a vote of thanks to the directors, general managers, branch managers, and other officers of the bank for their efficient management and services.

Mr H. J. Mulrenan seconded the vote, which was cordially passed, and a brief acknowledgment was made by Sir Alfred Lewis.

A vote of thanks to Sir Harry Goschen for his able conduct in the chair, proposed by Mr A. Kingsford Wilson and seconded by Mr A. W. Card, concluded the proceedings.

CANADIAN BANK OF COMMERCE.

CONDITIONS IN CANADA.

The sixty-fifth annual meeting of the Canadian Bank of Commerce was held in Toronto, on Tuesday, January 12, 1932, and Mr S. H. Logan, the general manager, in the course of his address, said:—

The financial statement just presented shows the bank to be in an even stronger position than a year ago. I refer especially to the high degree of liquidity which characterises our statement.

The outstanding feature of the assets side of the balance sheet is the high ratio of quick assets to liabilities to the public. A year ago the ratio was 55 per cent. This year it has been increased to 57 per cent., and that of quick assets to all liabilities from 50 to 51 per cent.

With full provision made for all bad and doubtful debts, our net profits for the year were \$4,775,000, and, after the payment of the regular 12 per cent. dividend and the customary appropriations, we have been able to carry forward into the current year a slightly larger surplus than a year ago.

It should be a matter of national pride that this country, of necessity in the past a large borrower, has been able to meet its external debts, increased by the premium on American funds, at a time when at least two billion dollars of other foreign Government securities and interest payments are in default, and also that, following large-scale liquidation of securities, those issued by the Dominion Government stand among the highest on the New York quotation list.

PRESIDENT'S ADDRESS.

Sir John Aird, President, in the course of his address, said:—

Canada seems to be moving steadily, though slowly, toward economic improvement and recovery.

It is a real cause for thankfulness that, while severe financial storms raged in Continental Europe, Great Britain and the United States, the Canadian banking structure has stood firm and unshaken.

Canadian banks, through adherence to sound principles of banking, not only in the extension of credit, but in the maintenance of strong liquid reserves, have saved this country from serious financial disturbance, and present again an illustration of the stability of the branch banking system in times of world depression, not less marked than its flexibility and adaptability to all reasonable requirements in periods of expansion.

I hold to my prediction, expressed a few months ago through the press, that the value of Canadian gold production will be about \$100,000,000 ten years hence, almost double that for 1931. Within the past year only a few of the world's important gold-producing countries increased their output of this metal, the largest increase being in Canada, which has not reached the limit of its productive capacity from the mines now operated, and which offers the best opportunities for new discoveries of gold. Canada's gold production has proven and will continue to be a factor of inestimable value to the Dominion in enabling us to redress our international trade balances, and in meeting the burden of our external obligations in a period when fresh borrowing is practically prohibited owing to prevailing credit conditions in foreign money markets.

I reaffirm my faith in Canada. It is a faith based not upon mere patriotic motives, but mainly upon the more than sixty years that I have spent as a servant of business and finance, which has been a period of great, though occasionally interrupted, progress.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8, Bowrie Street, Fleet Street, Londn, E.C.4.

THE NATIONAL BANK, LIMITED.

MR J. B. MEERS ON CONDITIONS IN IRELAND.

The annual general meeting of the National Bank, Limited, was held, on the 28th instant, at 13 Old Broad Street, London.

Mr J. B. Meers, C.B. (Chairman of the Bank), in the course of his speech, said:—Our deposits are up by some £694,000, which is a very satisfactory feature. There is practically no change in our total of acceptances, £23,000.

I feel sure you will agree with me when I say we have reason to congratulate ourselves upon the outcome of the operations of the bank for the past half-year.

The present state of the world is common knowledge. On several occasions during the past five years, when addressing you, it has been pointed out that there could not be any revival towards general prosperity until the war debts settlements were revised, and finally dealt with. The troubles of the majority of nations can, of course, be traced directly to the effects of the Great War: depleted resources, inflation, over-production, selling under cost of production, over-borrowing from non-productive purposes, and last, but not least, high tariffs; and until these vexed questions have been dealt with, we shall not be able to return to normal conditions.

As is usual, I will now briefly review conditions in the sister isle—Ireland, in which, as you are aware, we are so closely interested.

The coincidence of a further inclement season with the general economic depression has had its inevitable effect upon the Irish farming community during the past year, and trade generally throughout the country has been adversely affected in consequence.

AGRICULTURAL CONDITIONS.

The cattle trade, for which the year opened hopefully, collapsed badly in later months, prices dropping to levels that returned little or no profit, and graziers, who suffered particularly, have been forced to approach the New Year with caution, thus bringing about a decline in the demand for grazing land. Sheep were definitely unremunerative, and no improvement in the wool market has manifested itself. A note of liveliness has been restored to the pig trade by the recent tariff order, prior to which slump conditions prevailed. Whilst it is perhaps early to anticipate the influence of the tariff, it may be welcomed as tending to conserve stocks which, though well maintained, were threatened with depletion under pre-tariff conditions.

Despite bad weather, cattle generally maintained a healthy condition, and the mildness of the late season facilitated the carrying over of stocks and ensured adequate fodder supplies. The lower cost of feeding stuffs is a further fortuitous factor which, however, is off-set by a reduction in the season's potato yield. The tillage harvest, however, was better than might have been expected, due mainly to an improvement in the weather about gathering time. Grain crops were lower in yield and quality, and hay, while plentiful, was to a large extent indifferently saved. The acreage under beet was largely reduced owing to the dispute in the industry, and the disappointing returns from alternative crops were felt all the more severely in consequence.

Dairy farming, which was much depressed earlier in the year, showed improvement later. Milk yields were maintained up to a late season, with an improvement in commodity prices generally.

Signs of revival are still regrettably absent in the fishing industry, but kelp and carrageen are giving employment to increasing numbers at not unfavourable returns. Small-scale industries throughout the country would appear to be holding their own, and in some cases giving increased employment, but the larger industries concentrated mainly in Northern Ireland are still feeling the effects of the unprecedented depression in world markets.

FALL IN TOTAL TRADE.

In the latest available statistics for the country's external trade, and in the Exchequer returns, the degree of encroachment of the economic crisis on Ireland is indicated more clearly perhaps than elsewhere. The total trade of the country has fallen very materially, with a relapse in the adverse balance which, for years, has been under steady reduction. In view of conditions in world markets, however, some such disimprovement was to be expected; the occasion for surprise being rather that it should have been staved off so long, but it is clear from the recent trend of her external trade that Ireland is intimately and immediately concerned with the world crisis, and that while a measure of self-sufficiency derived from the agricultural character of her economy may be expected to ward off the extremes of depression that beset communities mainly industrial, there is no clear prospect of recovery or progress until world conditions return to a more normal footing.

There must, of course, always be healthy competition between banks, but it is very encouraging to be able to record the satisfactory increase during this difficult year both in our deposits and number of clients.

The reports and accounts were unanimously adopted.

WESTMINSTER BANK LIMITED.

SATISFACTORY RESULTS—BALANCE-SHEET CHANGES.

WORLD ECONOMIC PROBLEMS.

WAR DEBTS AND REPARATIONS—INTERNATIONAL CO-OPERATION NECESSARY.

THE GOLD CRISIS.

THE HON. RUPERT E. BECKETT'S INTERESTING SURVEY.

The annual general meeting of Westminster Bank, Limited, was held, on January 27, 1932, at the head office, 41, Lothbury, London, E.C.2.

The Hon. Rupert E. Beckett (the chairman) presided.

The notice convening the meeting and the auditors' report having been read by the secretary (Mr F. Mytton), the directors' report, the balance sheet, and the profit and loss account, were taken as read.

The Chairman (who was received with cheers) said:—My Lords, Ladies and Gentlemen,—It is my first duty to refer to the changes in the personnel of your board which have taken place since we last met here. The directors in their report record the death of Mr C. J. Cater Scott, though this sad event occurred just prior to the annual meeting last year, and I made reference in my speech upon that occasion to the loss the bank had sustained.

I am sorry to say that owing to continued bad health Mr Oswald Magniac retired from the board in October last, after twenty-six years' service, having joined the board of the London and County Bank in 1905.

We have lost, too, the eminent services of Mr Walter Runciman, who was appointed to this board in 1924. He, as you all know, has been translated to a higher sphere of activity, namely, the Presidency of the Board of Trade, an office that he held once before in the years 1914-16. We certainly congratulate him on his appointment, with perhaps the somewhat rueful reservation that what is the country's gain is undoubtedly the bank's loss.

I am pleased to be able to say that the chief executive officers of the bank have held their posts uninterruptedly during the past strenuous year.

THE BANK'S BALANCE SHEET.

The balance sheet for the year 1931, though presented in its usual form, shows some important changes upon which it is my duty to comment. You will notice that our current and deposit accounts are down on the year by just over £19 millions. This drop in money lodged with us commenced, as usual, with the tax-gathering of the first quarter of last year, and continued in a greater or less degree throughout the succeeding months until the end of September, during which month we touched our lowest average monthly figures for the year. Towards the close of the year, however, our figures improved, finishing at the total which appears in the balance sheet. The fall in deposits has not been peculiar to the Westminster Bank, as may be seen from the fact that our own fall over the year is 6½ per cent., and that of the Big Five 8 per cent. It is interesting to observe the similar experience of American banks, which has been, indeed, considerably more adverse. Figures for four of the largest of them have recently been published, showing a fall in total deposits of 21½ per cent. over the year. I would ask you to keep this lower level of our deposits in mind when we come to consider the profit and loss position for the year, as obviously a diminution in our trading funds must affect the bank's capacity to earn profits.

You will observe, however, that the total of our advances to customers is practically unchanged, but the low Bank rate ruling for the greater part of the year naturally had its effect upon this particular profit-earning item in the balance sheet.

MARKET VALUE OF INVESTMENTS.

An important question that your directors had to decide was the manner in which the depreciation of the market value of the bank's investments should be dealt with in the accounts. Our investments are considerable, and include short-dated securities, by which I mean Treasury bonds, as well as long-dated in the shape of War Loan and Conversion Loans. The "shorts" are all due for repayment at par at various dates between 1933 and 1936, and if they are held until maturity the bank will obviously recover the difference between the market price of December 31st last and parity. Such an early recovery in the "longs" is, of course, less definitely assured. We decided then to deal with what I trust may be but a temporary decline of value by means of a transfer from the reserve fund of £1,820,157, thus bringing the investments

into the balance sheet at or below market value. In view of the uncertainties that lie ahead, your board decided to follow this course rather than to draw upon the inner reserves of the bank for the purpose of meeting investment depreciation, and I may say that our funds for contingencies are to-day as large as when we last met.

You have no doubt noticed with satisfaction, as has your board, that during this new year the price of gilt-edged securities has continued to improve, and a substantial portion of the depreciation for which provision was made has already been recovered. We can only trust that this improvement may be maintained and even increased.

PROFIT AND LOSS ACCOUNT.

Now as regards our profit and loss account. The profit for the year 1931 amounts to £1,601,822 against £1,821,888 earned during 1930—a diminution of £220,066, or 12.1 per cent. Considering all things, and bearing in mind the decline in our current and deposit accounts to which I have already referred, I think these results may be deemed satisfactory. Perhaps with the 6 per cent. Bank rate that has been in force since September 21st last, it may have passed out of the minds of some that, during the greater portion of the year, rates were prevalent that offered narrower margins of profit to banks. Thus, with the year opening with a 3 per cent. Bank rate, the average discount rate for three months' bank bills during the first quarter was £2 9s. 5d. For the second quarter it was £2 6s. 2d., and it was not until July 23rd that an appreciable advance in the bill rate occurred, Bank rate being then increased to 3½ per cent., and the bill rate rising to £3 8s. 1d. Thereafter there were further increases in Bank rate, to 4½ per cent. on July 30th, and to 6 per cent. on September 21st, the average bill rate for the third quarter being £3 17s. 1d., and for the last quarter £5 15s. 4d. But during the year our funds available for employment in the discount market showed a substantial fall, and as the balance sheet reveals, we finished the year with the item bills discounted down by no less than £14½ millions, as compared with 1930, so that the higher discount rates ruling during the last quarter of the year did not result in any considerable increase of income. This diminution of funds available for employment in the purchase of bills was, of course, a natural consequence of the fall in our deposits.

ALLOCATION OF PROFITS.

I come now to the allocation of the available balance on profit and loss account, £2,066,123, and the question of the payment of dividends. When I met you a year ago, I indicated that although the usual dividends had been paid for 1930, it would have to be a matter for the earnest consideration of your directors whether they would be justified in maintaining in the ensuing year the same rate upon the partly-paid £4 shares. In July last, when we had to decide the question of the payment of an interim dividend, the results for the first half of the year showed a definitely declining tendency, and we deemed it prudent to reduce the dividend for the half-year from 10 per cent., less tax, to 9 per cent., less tax. For the second half-year, we have declared a dividend of 9 per cent., less tax, making 18 per cent. for the year. On the fully-paid £1 shares, we have declared a final dividend of 6½ per cent., less tax, which, with the interim dividend at the same rate, makes 12½ per cent. for the year. Over the past thirteen years 20 per cent. has been paid consistently on the partly-paid shares, and naturally it was with reluctance that we decided to depart from the standard that has prevailed for so long. In view of the diminution of profits and the general state of uncertainty, however, no other course would have been compatible with the usual conservatism of our banking practice. To officers' pension fund we have placed £200,000, the same amount as last year, which sum, as has been indicated on previous occasions, is essential to the sound actuarial upbuilding of this fund, and to contingent fund we have transferred £250,000, or £50,000 more than last year. These dispositions leave us with £431,256 to carry forward to next account, this being some £33,000 less than the amount brought in.

COMPLETION OF HEAD OFFICE BUILDING.

Last year I remarked that 1931 should see the completion of our head office building. This has been successfully accomplished, and there are now housed at Lothbury all the control offices of the bank, with the exception of the Premises Department, which remains at Threadneedle Street. In addition, as the report informs you, the foreign branch office, having long outgrown the premises at Cornhill, is also now domiciled in this building. The Bartholomew Lane office, originally the head office of the old Alliance Bank which was subsequently absorbed by Parrs Bank and made their head office, has now been closed, and the business transferred, practically in its entirety, to our Threadneedle Street office. This step saves the bank a considerable annual sum in rent and rates, and so far as I can judge has been carried through without inconvenience to our customers. The business of the bank hitherto carried on in five main City offices is therefore now concentrated in three—at our fine building here, at our recently completed Threadneedle Street office, and at 21, Lombard Street, the old head office of the London and County Bank.

I am glad to be able to report that the expenditure on head office rebuilding is now practically at an end, but one could have wished that the final payments had fallen in a prosperous year, so that they could have been met by direct allocations out of profits—a course that it has not been possible to follow for 1931. However, shareholders may be reassured when I tell them that after providing for these final payments our head office premises stand in our books at but one-third of the sum expended upon them in connection with their rebuilding.

OUR ASSOCIATED INSTITUTIONS.

Now a word with regard to our two subsidiary undertakings, Ulster Bank, Limited, and Westminster Foreign Bank, Limited.

The balance sheet and profit and loss account of the former appear on a separate print enclosed with the accounts of the parent bank, from which you will observe that owing to the fact that the accounting period has been brought to a close on December 31st instead of November 30th as hitherto, thirteen months are covered by the period under review. The result of this change in practice—which has been occasioned by the necessity of the Irish banks' having a common balance sheet date, in order to comply with the wishes expressed by the Currency Commission appointed under the Currency Act, 1927, of the Irish Free State—has been that we have been able to bring into our accounts the dividend only for the six months to May 30, 1931, as the dividend for the final seven months of the year (£74,666 13s. 4d., free of tax) has been declared in January and will therefore be brought into the next year's accounts. I am glad to report that the bank continues to contribute satisfactorily to the earnings and service of the parent institution.

As regards Westminster Foreign Bank, Limited: in view of the present state of affairs and the outlook on the Continent we have thought fit to maintain that bank in a state of complete liquidity. We are satisfied with its general position and that it continues to afford useful and adequate services to its clientele.

THE WORLD ECONOMIC POSITION.

Having given you a short review of the position and prospects of your own bank, I propose with your permission, to spend a few minutes in considering the recent trend of those broad economic and financial tendencies which have left no country, no institution, no individual, unaffected by their grave development. The year 1931 will be remembered in history, I suppose, mainly on account of one day—September 21st—on which Great Britain, after a struggle against an abnormal combination of forces, abandoned the gold standard.

The story of the stages by which the strain on London reached intolerable limits has been told and retold. The catastrophic fall in commodity prices; the proportionate aggravation of debt burdens and all fixed contractual obligations; the consequent development of the need, starting in Central Europe and spreading North, South, East and West, of country after country to repatriate the resources held on their behalf by London, the great banking centre of the world; the birth of realisation abroad that London, living by international trade, and short-term debtor to the world, was vulnerable to the abnormal economic forces; the fostering of nervousness among London's creditors by foreign propaganda; the disclosure by the reports of the Macmillan and May Committees of weaknesses in the monetary position and of a large prospective Budget deficit—all these developments, superimposing distrust of the pound upon our short-term creditors' need for cash at home, merged into a tide so formidable that neither the formation of the National Government and the balancing of the Budget, nor the assistance of New York and Paris in furnishing the Treasury and the Bank of England with large credits, could prevent the pound from being swept from its gold moorings.

CRITICISM OF BANKING POLICY.

The criticism has been made abroad that by bolder banking policy, and by stern use of the Bank rate weapon, the pound might have been saved. I do not believe that such criticism has any validity. Indeed, it seems certain that to have raised the Bank rate to an emergency figure would have been but to make a useless and wholly ineffective gesture. A steep increase in the rate would have accentuated the nervousness already apparent among foreign creditors, whilst any fresh balances attracted would have been so precariously held as to serve no useful purpose.

In my judgment, what has been called the "gold crisis" arises in a large measure from the fact that gold has been required to fulfil a purpose for which it was never designed. Gold is a token of exchange: it is the international counter, accepted by the nations as a standard, through which variations in the quantity and value of goods and services passing from country to country can be adjusted. Gold should therefore be the instrument of commerce. It should not be regarded as a commodity of commerce; yet in these post-war years the nations have tended so to treat it. In effect, country "A" says to country "B"—"You owe me many millions: please pay, but I will not take payment in goods—indeed, I have erected tariff barriers on purpose to prevent your goods from coming into my country. I will not take your paper or your promises to pay, because I do not think they are good enough, so you must give me the only other means of payment which you have, namely, gold itself." Obviously, if this process were developed indefinitely, and an attempt were made to settle all international war debts and reparations in gold, the stocks of the metal would be entirely insufficient for the purpose, and if there were gold in sufficient abundance then I anticipate that gold itself would depreciate in value.

MALDISTRIBUTION OF GOLD AND INTERNATIONAL PAYMENTS.

The connection between the maldistribution of gold and international payments is abundantly clear. Two sets of simple statistics are sufficient to illustrate it. In the years 1922-31, the net receipts in respect of war debts and reparations by France and America were approximately 650 million gold pounds: during the same period the net influx of gold into those two countries was approximately 550 millions. The close correspondence between these two figures is not a fortuitous coincidence.

The upset of the system should be regarded as one of the most conspicuous outward and visible signs of the deep-seated economic maladies from which the whole world is suffering. In a world abundantly supplied with natural resources, in an age in which science and invention have equipped man as he has never been equipped before for the efficient production and rapid transport and interchange of commodities, trade is dwindling away under a progressive process of strangulation; the spectre of unemployment is stalking throughout the earth; and there are fear and apprehension everywhere.

IMPOVERISHMENT DUE TO THE WAR.

What is the meaning of all this? How has the world got into the position in which universal plenty co-exists with general distress? In my view the explanation has, in the light of years of painful experience, been made clear. The war of 1914-18 impoverished the world. The hysteria which prevailed in the succeeding years caused the Governments and the business communities of all countries to live in a fool's paradise and prevented them from getting down to the hard work of reconstruction. If the world had spent the years from 1918 to 1922, not in playing with vast and meaningless figures of the debts that they were going to extract one from another, not with the idea that higher standards of life could easily be supported by countries whose wealth had largely been destroyed, but in realising that wealth destroyed had got to be replaced by hard work and hard living, then perhaps we should have entered ten years ago upon a phase of recovery which would have prevented the gradual development of the present crisis. But realism dawned too late upon the world and, what is even more important, the creation of amity and confidence among the nations, which was an indispensable basis for the process of recuperation—moral, economic and social—was not achieved. In spite of a score of international conferences, in spite of persistent and unceasing efforts concentrated at and radiating from Geneva, the world war is still going on, and though now located in the economic sphere, its devastating effects have not been greatly minimised.

CREATION OF VAST INTER-GOVERNMENTAL DEBTS.

The troubles which we face to-day are due not to the events of 1930 nor to the developments of 1931; their origin lies farther back. Out of the Great War came not only inevitable poverty and burdens, but, even more formidable, the spirit and policy of

narrow nationalism begotten of war fever. The victors yielded to the natural impulse to demand that the vanquished should pay the cost of the war; minorities hitherto living under alien rule demanded their own freedom, their own boundaries, their own flags, and their own commercial systems. The results were the creation of vast inter-governmental debts requiring the transference of huge sums from nation to nation without any relation to the trade passing between them, and the erection at the same time of trade barriers, so dear to nationalistic aspirations, which effectively impeded that very flow of commerce through which alone such a huge scheme of international obligations might conceivably have been carried out. Thanks to modifications and readjustments, and such as those made in the case of Reparations by the Dawes and Young Committees, Europe managed to stagger along under this load until there set in two years ago an unprecedented fall in commodity prices, which rendered the burden increasingly hard to bear.

ATTITUDE OF AMERICA.

The vital fact in the history of 1931 is that the breaking point arrived. In the early months of the summer, the bankruptcy of Central Europe became by general recognition a matter of weeks, and the whole credit system of Europe tottered on the edge of a precipice. At this critical moment there came a most welcome promise of relief from across the Atlantic in the shape of President Hoover's suggestion of a year's complete holiday from all war debt repayments. Here at last was a hope of the beginning of inter-national co-operation such as might solve the deep economic problems of the world. But seven or eight months have passed, and the hope of full co-operation has once more been deferred. The Congress of the United States has effectively checked President Hoover's international aspirations, and that great creditor country has moved with alarming rapidity back towards the repudiation of President Wilson by his people. Congress, and apparently American public opinion, will not at the moment stand either for debt cancellation or even for a prolongation of the Hoover moratorium. France clings to her rights to receive Reparations from Germany. Germany, whose ability to pay Reparations has depended largely upon the constant flow of American investment, finds that that flow has ceased entirely.

There is another aspect of the general position. In face of the world-wide economic depression, almost every country finds itself threatened not only with an unbalanced Budget, but also with an unfavourable movement in the balance of payments. There are two ways of rectifying the unfavourable movement in the balance of payments. One is to increase exports, and the other to decrease imports. The first and preferable method is precluded to countries living among neighbours whose tariff walls rise higher and higher, and therefore throughout Europe the latter course has been pursued.

INTERNATIONAL TRADE RESTRICTIONS.

This country has been compelled to impose Customs duties for the protection of her home industries. It must be borne in mind, however, that one country's imports are another's exports, and to restrict one obviously restricts the other. If this development be carried to excess, international trade is threatened with extinction. Every decrease in exports renders it more difficult for a country to obtain the means whereby to meet external obligations, and to nearly every Government has been compelled to weave a web of exchange restrictions, which in their turn add another hampering difficulty to the passage of commerce.

METHODS OPEN TO EUROPE.

That, roughly, is the situation which we face to-day. How is this vicious circle to be broken? If Washington persists in her present policy of war debts maintenance and high tariffs, what are the means by which Europe can conceivably continue to meet her liabilities? It would be possible if that were done we should sooner or later again reach the *impasse*, now evident in Germany, by which a debtor country, grown dependent on loans from the creditor, finds that the onset of suspicion and distrust at a crucial moment dries up the capital flow upon which her solvency depends. In economic theory there is another method. The industrial nations of Europe, by depressing their standard of life far below that to which they are accustomed, might be able to produce goods which would surmount any tariff barrier. But this possibility exists in economic theory alone. It is no more likely that the American public, or any other, would allow such an inflow of cheaply-produced goods to continue than that the democracies of Europe would submit to a strain which would involve the abandonment of every social advance laboriously won during centuries of progress.

A QUESTION FOR STATESMEN.

To these arguments one may perhaps add a question—and I add it because current problems cannot usefully be examined except in the light of economic and political probabilities. Is it likely that the democratically elected parliament of this country, or of France, or of Belgium, would vote the passage of a Budget, on the expenditure side of which figured full war debt payments to America, while from the revenue side were deleted all receipts from war debtors? It is for the statesmen and not for the banker to answer that question. But I may be permitted a further query, and it is this: If, as President Hoover avowed in his recent message to Congress, the grave economic and financial troubles with which the United States is at present beset arise from the great depression which has engulfed the outside world, how is it possible for the United States to achieve the ambition of many of her present legislators, namely, to seek her individual prosperity through the policy of insular isolation?

BRITAIN'S WAR DEBT RECORD.

In this matter of war debts our country and our successive Governments have nothing to be ashamed of. Britain early proposed to America the cancellation of all the war debts between the Allies. America refused. It therefore became necessary to attempt settlements of these vast international obligations, and in those settlements Britain has been more than generous to her debtors. Indeed, she remitted approximately 70 per cent. of the debts to her war allies, whereas the remission made by America to Great Britain in respect of the Anglo-American debt was something less than 18 per cent. Then again, having failed to carry the policy of all-round cancellation, this country declared, in the Balfour note, that Britain would not take from her Continental debtors more than she was required to pay to America. This declaration has been firmly adhered to; in fact, Britain has so far paid away nearly £200 millions more than she has received. Into the reconsideration of this problem, which economic forces have thrust upon the world, our country undoubtedly enters in a strong position and with a clean record.

But lest it be thought that the elimination of war debts and Reparations would create a new heaven upon earth, I must utter a word of warning. It would be misleading to suppose that such a development would enable all nations to start from scratch. There are some which, in the coming negotiations, have all to gain and nothing to lose, and others which, *directly*, have nothing to gain and all to lose. Great Britain occupies a position between these extremes. I have already referred to the provision whereby we have undertaken to demand from our debtors no more than is necessary to satisfy the claims of our creditors. If both sides of the account are expunged, then our position, so far as net indebtedness is concerned, will be unchanged—and our colossal internal debt, our burdensome taxation, will remain, whilst certain of our commercial and industrial competitors will have secured relief from their already comparatively light obligations. Sir Walter Layton has calculated that Great Britain's internal debt, per head of the population, will then amount to £150, France's to £56, Germany's to £8, and even that of the United States, the heaviest sufferer from cancellation, to only £27. These remarks are not to be construed as an argument against cancellation of war debts. On the contrary, I firmly believe that therein lies our only hope. If such a step will restore prosperity to the world, then Great Britain, even though she may gain a smaller advantage than other nations, will find her own welfare enhanced.

MEASURES OF SELF-HELP.

Insistence upon the vital importance of the internal aspect of present problems should not render us oblivious to the measures of self-help that can be adopted within our own sphere of action, and it is desirable, I think, that we in this country should take stock of our domestic position and see what has been done during the past year both to allay the uneasiness of the outside world and to rectify a position which, as we now all admit, was developing in a way that was unsatisfactory and fraught with grave danger in the light of economic law.

A certain amount has been accomplished. A National Government has been returned by an overwhelming majority of the British electorate. The Budget, which was threatened with a very serious deficit, has, as the Chancellor of the Exchequer assures us, been definitely balanced not only on paper but in actual fact. Expenditure is under control; economies are in train, adequate increased taxes are being successfully collected. Borrowing by the State for the purpose of financing unemployment relief, which in the early part of last year was becoming a menace to our financial stability, has definitely ceased; transitional benefit—popularly known as "the dole"—is being met out of current revenue. Those who are not satisfied that the freeing of the pound from gold will automatically

restore the proper balance of payments may be reassured by the prompt action which Mr Runciman, President of the Board of Trade, is taking to check such imports as the Government considers to be either unnecessary or excessive. Stability of the internal price level has been maintained; inflation has been studiously avoided; the strength and liquidity of our banking system have not been impaired. In not a few hard-pressed industries wage reductions have been put through without resort to strife. In every walk of life there is a generous response to the call for personal sacrifice to help the nation out of its difficulties. In fact, another assurance has been given, if ever it were needed, that whenever the British people are convinced that a crisis exists they rally strongly to the national cause.

NEED FOR FURTHER EFFORT.

From this we may legitimately derive some measure of satisfaction. But the time for relaxation of effort is not yet at hand. We cannot afford to assume that all that needs to be done at home has already been done, and that our own recovery merely depends upon the renewal of better international conditions. Even if the Gordian knot of world problems were to be cut to-morrow, the need for a prolonged national effort would remain. The year 1931 has rammed home the hard economic fact that a nation cannot indefinitely live beyond its means or consume more than it produces. In the year or years that lie ahead there may be other stern lessons to learn, and sacrifices may be called for from citizens of all classes, be they manufacturers, wage-earners, capitalists or rentiers. The willingness with which those sacrifices will be made will depend upon the degree of success achieved by our leaders in inculcating economic truths, and in pursuing a policy which will ensure, as far as may be, that such sacrifices are equally shared among all sections of the community.

THE FUTURE.

As to monetary policy, no forecast can serve any purpose until the major complications of reparations, debts and tariffs have been brought within manageable proportions. If and when a beginning can be made with the restoration of normal world trade, the pound sterling will quickly and naturally find its own proper economic level. There will ensue a period of *de facto* stabilisation and, after that has persisted for a time, the policy to be pursued by the Government will be made clear. Whether that policy will entail a return to a gold standard will depend partly upon whether we are assured that the main causes responsible for the unsatisfactory functioning of that standard in recent years have been removed.

Never before has Great Britain been subjected to so much critical examination, both by her own nationals and by observers abroad, as during the past memorable year. Weaknesses have certainly been revealed, and perhaps over-emphasised, but on the other side this much may be said: that in a world which has been blown out of all recognised courses by the storm of economic depression, this nation yet occupies a position which challenges comparison, financial and economic, and, I might add, in its fundamental attributes of character, with that of any other nation in the world.

INTERNATIONAL CO-OPERATION.

In closing my address to you last year I emphasised that the greatest need of that particular time was a co-operative effort on the part of the whole nation. Teamwork is as necessary to-day in our national affairs as ever it was.

But I would go further than that. The year's events have served very definitely to demonstrate an even greater need—for the spirit of co-operation to be extended to the wider international sphere. The times are critical, and momentous decisions hang in the balance. Are the foundations of a world trade revival about to be laid, or is the world to be allowed to drift into even worse chaos than exists at present? Let us hope that the statesmen of the nations, whenever and wherever assembled, will subordinate national prejudices to the greater issue of world progress, and will unite to work for the common weal. Thus and thus only will there be born anew that hope and confidence of which the world stands in such desperate need, and the weary peoples of the earth will be enabled to raise their eyes to the dawn of promise and prosperity.

The Chairman then moved the adoption of the report and accounts, and Sir Montagu C. Turner, deputy chairman, seconded the resolution, which was carried.

The retiring directors were re-elected, and Messrs. Turquand, Youngs and Company, Messrs. Kemp, Chatteris, Nichols, Sendell and Company, Messrs. Price, Waterhouse and Company, and Messrs. Stead, Taylor and Stead, were reappointed auditors for the year 1932.

VOTES OF THANKS.

A vote of thanks to the directors for the able manner in which

they had conducted the affairs of the bank was carried, and to a vote of thanks to the staff for their admirable work during the past year Mr Charles Lidbury (chief general manager) responded. Other formal votes were carried and the proceedings terminated.

HUNGARIAN COMMERCIAL BANK OF PEST.

The balance sheet for the year 1931—as approved by the board of directors in their meeting of January 20th—shows, including the amount brought forward from 1930, a net profit of P. 5,597,359.27 against P. 5,938,510.63, last year. Following an old practice, profits realised on several transactions already carried out have not been accounted for in this balance sheet.

The board of directors will submit a motion to the ninetyeth ordinary general meeting of the shareholders, to be held on February 3rd, to allocate from the net profit an amount of P. 2,500,000 for the payment of a dividend of P. 5 per share (last year P. 7), and to add P. 1,000,000 to the ordinary reserve fund. The benevolent funds of the staff are to receive P. 60,000, as last year. P. 200,000 are to be allocated to the reserve for the depreciation of the real estates, and P. 997,370.81 are to be brought forward to 1932, against P. 463,605.95 in the previous year.

The board of directors believe it to be advisable to increase considerably the amount carried forward to next year, as the earnings on interest account will probably decrease in consequence of the expected lowering of the interest rates. Profits from foreign exchange and Stock Exchange transactions probably will be less than in 1931, in consequence of Government regulations restricting dealings in foreign currencies and due to the closing of the Budapest Stock Exchange.

The securities owned by the bank were valued as in former years—in accordance with our time-honoured principles—very conservatively. The decline in the prices of the securities, which in several cases has been very heavy, was fully considered.

Net profits declined by 6 per cent. against last year. This is due, first of all, to the fact that a larger amount had to be written off for bad debts than last year. The principal reason for this decrease, however, was the necessity of holding for emergencies large cash balances leading to a considerable decrease in interest earnings.

Owing to the restrictions, and the fact that the Stock Exchange has been closed, profits on both foreign exchange and Stock Exchange business decreased.

A compensation for the fall-off in the earnings as described above was partly provided by the fact that, owing to the great confidence towards the bank, deposits began to increase already at the beginning of the year. The upward tendency was even more marked during the second half of the year, when considerable funds were received for foreign account. The savings effected in overhead expenses helped also to set off the decrease in the earnings.

The figures of the balance sheet for 1931 compare with the year 1930 as follows:—

Deposits in savings accounts increased from P. 133,968,748 to P. 156,642,121. Deposits in current accounts rose from P. 117,379,446 to P. 146,558,181. The aggregate increase of the two items is P. 51,852,000, or nearly 21 per cent. The item of other creditors, consisting only of reimbursement credits opened abroad on behalf of the clients of the bank, fell from P. 6,329,823 to P. 2,356,200.

From the assets, deposits with banks decreased from P. 27,627,656 to P. 25,515,400. On the other hand, cash on hand rose from P. 12,973,375 to P. 45,107,412, and bills discounted from P. 119,759,678 to P. 143,156,299. The three items together show an increase of P. 53,418,000, or about 33 per cent., against a rise of 21 per cent. of the deposits.

The turnover as shown on the side of the general ledger increased from P. 13,212,846,000 to P. 13,604,678,000. The turnover of the cash department also increased from P. 3,219,673,000 to P. 3,830,547,000, and that of the deposit department from P. 3,069,572,000 to P. 3,131,154,000. On the other hand, the turnover of the foreign exchange department declined from P. 5,225,654,000 to P. 4,856,395,000. The turnover of mortgage bonds and communal bonds has also increased, the bonds in circulation amounting at the end of the year to P. 52,368,390 against P. 49,804,776 at December 31, 1930.

In the meeting of the board, Mr John de Teleszky, vice-chairman, addressed Mr Philip Weiss, the chairman of the board of directors, who joined the staff of the bank fifty years ago, congratulated the jubilant warmly on behalf of his colleagues, and expressed the high appreciation of the board of directors of the remarkable services Mr Weiss rendered during half a century in connection with the development of the bank.

MARTINS BANK LIMITED.

INVESTMENTS AND RESERVES.

BRITISH TRADE OPPORTUNITY.

MR A. A. PATON ON VALUE OF CURRENCY UNION.

STEADINESS DURING CRISIS.

Turning to the events of the past year, the outstanding features were the German crisis leading to the moratorium in respect of war debts proposed by President Hoover, the suspension of the gold standard in this country, and the election by an overwhelming majority of the National Government.

It is with some measure of satisfaction that we can look back on the steadiness shown by our people throughout the crisis, as compared with the world-wide nervousness, and their response, amidst a confusion of issues, to the call to elect a Government pledged to economy and a balanced Budget.

The Government has been invested with power and freedom to an extent not known before, and has a strong weight of public opinion supporting it in the attempt to reduce expenditure, thereby leading the way towards a more widespread reduction of costs. It is not only by national and municipal effort that we can effect an improvement. Until we can reduce substantially our expenditure in all directions there can be no recovery.

IMPORTANT FACTOR.

The diminution in production costs in industry, which have increased to a point beyond our capacity to pay, is a very important factor in any effort to rehabilitate ourselves, and will do far more than curtailment of imports or other suggested measures to achieve this result.

How great is the task before the Government and the nation is evident from a review of the principal industries of our country. I will summarise now, as is my custom, the situation in those industries in which this bank is especially interested.

COTTON TRADE.

The greater part of the past year proved most difficult for spinners and manufacturers, who had many adverse factors to combat. Internally, employers have been unable to agree on any scheme of organisation or mutual co-operation; and the operatives have not been wholly willing to co-operate with employers in an attempt to find a solution of the industry's problems.

The external factors over which the industry has had no control have been very detrimental. The world crisis increased in severity as the year advanced and the cost of manufacture and distribution could not be regulated to keep pace with the continued fall in the price of basic commodities. Additional tariff walls were raised against Lancashire products, and the Indian boycott was intensified, while our trade in China was affected by the disturbances in that country.

It is clear that we have a surplus both of spindles and looms in relation to world consumptive power for some time to come, and a scheme has been proposed for the purchase and scrapping of redundant machinery. I confess to doubt whether, even if unanimity be obtained, the scheme can be financed by means of the proposed levy.

In September a definite improvement took place in the sales of yarn and cloth following the abandonment of the gold standard, but Japan's embargo on gold exports has counteracted this gain to some extent. At the same time, many spinning mills have good order books, and the immediate outlook is brighter than it has been for some years.

It is to be hoped that employers and employees will at this critical period come together in a resolute effort to save the industry.

WOOL TEXTILE INDUSTRY.

At the opening of the year wool values were below the level ruling immediately before the war, and the products were available at prices which normally should have stimulated demand. Both at home and abroad, however, the trade continued to show disappointing results.

It is true that, early in the year, some speculative activity caused an extensive buying movement for tops and yarns, which resulted in a rapid rise in prices. But with an inadequate demand for finished products prices again declined, and business became restricted in all branches.

The suspension of the gold standard acted as a stimulus and created an improvement, the effect becoming apparent during October. The depreciation in sterling placed West Riding spinners in a

The hundred-and-first annual meeting of shareholders of Martins Bank, Limited, was held on the 26th instant, at the Exchange Hotel, Liverpool.

Mr Alex. Allan Paton, C.B., presided over a large attendance.

The Chairman, in proposing the adoption of the report of the directors and the accounts for the year ending December 31st, said:—The report and accounts are in your hands, and with your permission we will take them as read. For various reasons, we departed slightly from precedent this year in making the figures available to the Press before the report could reach the hands of shareholders.

We record in the report the severe loss we sustained through the death in March of Sir George H. Fisher-Smith, chairman of the Leeds District Board, who, as stated, had rendered valuable service to the bank.

In my speech last year I referred to 1930 as the most anxious of all the post-war years, but its anxieties have easily been eclipsed by those of 1931. Let us hope it has witnessed the lowest point of the economic and financial depression which has afflicted the whole of the civilised world.

DIVIDEND 14 PER CENT.

It was difficult to employ our funds at remunerative rates in the first six months of the year, and profits were greatly reduced. The second half enabled us to regain some of the lost ground, but the improvement was insufficient to justify anything more than the maintenance of our dividend at 14 per cent., to which figure it was reduced in July last. In such difficult times it is very necessary to conserve our resources, and after making an allocation to contingency fund before arriving at our profits, we have considered it advisable to place an additional sum of £100,000 to this fund.

Our profits at £703,154 show a decrease of £90,396. We carry forward the increased amount of £130,824 to the next account after making the above-mentioned transfer and paying the dividend.

Deposits stand at £75,927,392, against £78,562,603 a year ago, and advances have contracted by £2,799,640. Acceptances are also less at £1,684,590, the figures all giving the same evidence of reduced trade in spite of the improvement in the latter half of the year.

Cash in hand gives a ratio of 11.5 per cent. to liabilities to the public. The ratio to liabilities of cash in hand, money at call and short notice, balances with other British banks, and cheques in course of collection is 24 per cent., a very satisfactory figure.

Treasury bills stand at £5,350,000, an increase of £635,000, and British bills of exchange amount to £1,730,808, against £2,436,634 at the end of 1930.

INVESTMENT VALUES.

The bulk of our investments consists of Government stocks and short-term Treasury bonds, the latter of which all mature within four years, and are shown separately on this occasion. As is well known, the price of gilt-edged securities have suffered considerable depreciation, and to provide for the shrinkage in market values of our investments we have transferred £607,872 from the reserve fund in preference to reducing our investment reserve. Our investments now stand materially below current quotations, and there will be a substantial recovery on our short-term bonds at maturity. I need hardly tell you that it will be our first care in future years again to build up our reserve fund, which in the meantime remains at the substantial figure of £2,900,000.

Immediately below investments in the balance sheet, it will be seen that we have specified our holding of Yorkshire Penny Bank shares previously grouped under other assets and accounts. The shares at cost are conservatively valued and constitute a sound and remunerative investment.

The item of premises has been increased by £230,319 during the year, principally due to the balance of the cost of rebuilding our London office and to further outlay on our new head office, which we had hoped to occupy this month. Various difficulties have delayed completion of the building, but we expect to transfer our business within the next few months. Several tenants are already in occupation of offices, and lettings so far have reached 50 per cent. of the rentable space.

more, favourable position for meeting French competition in the hosiery yarn trade, and a largely increased volume of business was done in the Midlands.

An improvement took place also in the dress-goods trade, and the general result was a substantial increase in machinery activity, with a steady reduction in the number of unemployed operatives.

The improvement in business has been largely confined to the home market, as the expectations of an increased export trade, due to the depreciation in the value of the £ sterling, have not yet been fulfilled.

The future of this industry, as of all the others by which we live, depends upon the restoration of international trade.

GRAIN TRADE.

Abundant supplies in wheat-producing countries have enabled millers to obtain their stocks on advantageous terms. Liverpool has had an increasing share of the world trade in wheat, largely owing to the popularity of the Futures market and the facilities it affords for insurance against loss caused by any large fluctuations in world prices. This applies equally to the trade in maize.

Prospects in the home markets for both grain and flour seem brighter, owing to the successful agreements made with the Government.

COAL, IRON AND STEEL.

Imports of steel have exceeded exports by no less than 715,000 tons, and there is an urgent demand by many sections of the trade for a protected home market in consequence.

The coal trade has been seriously affected, partly by the depression amongst the coal-consuming industries and also by restrictions on imports of coal by several countries. The prospects for the coming year are slightly more encouraging, as we have been better able to meet the competition of Poland in the Scandinavian countries since we went off the gold standard. There is also some improvement in the demand for bunkering coal.

SHIPPING.

Conditions have been most unfavourable.

Since September a certain number of vessels have been taken back into commission, but outward cargoes have been light in most cases.

At one time the seas were a busy highway for our trade, and the outlet which first established our commercial prosperity in the world. Now these highways are empty, due to high tariff walls, and our ships have returned home to be laid up in idleness.

It is primarily the lack of exports which has produced stagnation in the shipping industry, and whereas exports may be stimulated through the fall in sterling, they may be seriously impeded by the tariffs of this country which are likely to increase costs, and by the tariffs of other countries raised in retaliation.

AGRICULTURE.

Owing to the fall in price of live stock, and the wet weather, which made harvesting difficult, the farmers in the North of England have experienced a bad year.

Potatoes and turnips were seriously affected by the abnormal rain and lack of sunshine. Oats alone brought a better return than previously. In Cheshire conditions have not been unfavourable as compared with recent years, and dairy products improved a little towards the end of the year.

INTERNATIONAL CONDITIONS.

From the foregoing it is seen that the industries under review have without exception suffered to a degree probably unparalleled in their history. The future may, we hope, be less desperate than the past, yet there is a long effort before each industry if it is to emerge effectively from the depression.

The features of uncertainty which still overcloud our situation are mainly international. Until the War Debts and Reparations questions have been settled there can be no recovery of confidence among foreign investors, and no easing of monetary conditions in this country.

Recently the defences of our money market were considered so impregnable that international obligations in the interest of Germany and other countries were assumed which proved too burdensome, and we were forced off the gold standard. Now we suffer the double difficulty of having to meet these obligations and preserve British credit in the face of a depreciated £ sterling.

PRESSURE ON GERMANY.

It is of the utmost urgency, therefore, that the pressure on Germany and other countries in which British resources are in jeopardy should be raised, and that there should be an effective settlement of the War Debts problem. The recent meeting at Basle was primarily to discover the best method of re-establishing confidence, and to ascertain what, if anything, could be done to restore the world's faith. Apparently, it may be deemed expedient to

extend the moratorium, and to postpone the War Debts and Reparations Conference.

A further international difficulty is that foreign lending by British investors is being curtailed, partly owing to our adverse balance of trade and partly to the high value of foreign currencies. As a result, we are not only less able to assist the industrial recovery of our chief foreign customers, but we cannot provide them with funds for the purchase of British exports. This, coupled with the intensification of the tariff war, may prove a serious barrier to the recovery of the key exporting industries of Great Britain.

OPENINGS FOR SALESMANSHIP.

Against these handicaps we may set certain opportunities which, if widely used, may speed this country more certainly on its way to recovery. As is well known, every unsheltered industry previously the butt of foreign competition has now secured a form of bonus or protection through the decline of sterling. The wide campaign in favour of British goods has been reinforced through a 40 per cent. increase in the price of foreign goods in terms of sterling. There are thus exceptional openings for expert salesmanship both at home and in the foreign markets, and the future of British industry depends more than at any previous time on the energy and efficiency of its commercial arm.

This exchange advantage has been diminished recently by the suspension of the gold standard in other countries, but the loss is largely offset by the tendency of those countries to ally themselves to Great Britain and to restore confidence in British currency. Were there a strong movement towards the acceptance of sterling as a basis for the stabilisation of other currencies, the pressure on London would be lifted, and there would result a situation in which discount and interest rates might permanently be reduced. It seems, then, that although the departure of other countries from the gold standard deprives Great Britain of an exchange advantage, it none the less paves the way for our closer union with them; and it may be possible to link them together into a "Sterling Area" so that over large tracts of the international market there will be stability of exchange rates, interest rates and price levels.

SUGGESTED CURRENCY UNION.

Among the more general, though not in the long run less significant, signs of new hope, is the apparent weakening among important nations of the intensely nationalistic attitude to which much of the world's present distress is due. Great Britain has suffered grievously through its willingness to remain in association with others less ready to co-operate in the creation of stable world conditions. Nevertheless, some degree of unity of action is still essential. In a country, whose foreign trade is 25 per cent. of the whole, recovery depends above all on the development of a positive and permanent system of world co-operation. Its own attempts should no doubt be confined henceforth to forming an alliance with those countries to which it is united by a common aim. In this direction there is prospect of fairly immediate progress as is shown by the joint action of Scandinavian countries in proposing a closer alliance among northern European nations. It would be difficult to exaggerate the value to Great Britain and the Empire of forming an immediate Currency Union with those nations which have departed from the gold standard and are prepared to seek stability through definite co-operation to this end.

It is my earnest hope that the industrial position now reached, which may justly rank as one of opportunity, may be converted through the calm and energy of our people, into one of large promise.

THANKS TO EXECUTIVE AND STAFF.

Before moving the adoption of the report I would like you to join with me in expressing to the general manager and all the executive officers of the bank our appreciation of their skill and unremitting labour during the last twelve months. Their united efforts, together with the helpful co-operation of all the staffs, have evidenced a whole-hearted interest in the welfare and progress of the bank and helped materially to lighten our task.

The Chairman concluded by moving the adoption of the report of the directors.

Lord Colwyn seconded, and the motion was carried unanimously.

RE-ELECTION OF DIRECTORS.

Lord Ebbisham proposed the re-election of Lord Colwyn, Mr W. R. Glazebrook, Sir James E. Haggas and Mr. Alex. Allan Paton as directors. It was very gratifying, he said, that, during the most difficult banking years ever experienced, the directors, general manager and staff had so successfully maintained and increased the strength of the bank.

Mr J. A. Tinne second the motion, which was approved.

On the motion of Mr John H. Grey, seconded by Mr G. S. Lloyd Davies, the auditors, Harwood Banner and Son, Liverpool, Peat, Marwick, Mitchell and Company, of London, and Thomas Bowden Sons and Nephew, of Newcastle-upon-Tyne, were re-appointed.

VOTES OF THANKS.

Mr A. E. Leaf moved a vote of thanks to the directors, committee of management, the general manager and other officers of the bank for their valuable services during the past year. He described it as a resolution which deserved a floodlight of illumination after experiences such as they had recently gone through.

Mr F. Brocklehurst having seconded, the motion was carried with acclamation.

Mr A. F. Shawyer, general manager, who was cordially received, responded. They would have to go a long way back in the history of the country, he remarked, to find a more anxious time than the one recently experienced, and rarely had chairman and directors given more freely of their services. From his colleagues he had received splendid co-operation and most loyal support. (Applause.)

On the motion of Colonel James Walker, a cordial vote of thanks was passed to the chairman, whose acknowledgment terminated the meeting.

ILLUSTRATED NEWSPAPERS, LIMITED.

FINANCES ON SOUND BASIS.

The sixth annual general meeting of Illustrated Newspapers, Limited, was held on Thursday, at Southern House, Cannon Street, London.

Mr William Graham (the chairman) said that the accounts disclosed a profit for the year of £182,772, which, he regretted to say, was substantially less than the profits of the previous year. The financial position of the company was on a sound basis, and they were hopeful that in time the investments would substantially improve in value.

Continuing, the Chairman said: It is, of course, a matter of great regret to the directors that the trading shows a substantial shrinkage on the trading of previous years, but regard must be had to the exceptional condition that has prevailed in all matters commercial, financial and international, which could not but have a very serious effect upon the revenues earned by our shilling illustrated papers. It cannot be denied that they appeal to a class which has been very severely affected. Moreover, the principal source from which they draw advertisements are businesses dealing in quality products.

As you all know from reports and reduction of dividends paid by other publishing concerns, there has been a heavy shrinkage in profits, and your directors have reason to think there is some good ground for congratulation on the fact that we have done as well as we have. The experience of all engaged in the newspaper business is that the year 1931 was the worst for very many years.

GOOD RESULTS FROM TRADE EXPERTS.

I am very glad to be able to inform you that our trade papers have stood up in this world's crisis in a remarkable manner. You will observe from the balance sheet that the dividends to be received by this company from that source are very little below the dividends received for the previous year. You have, in the trade papers, stable assets of very great value.

It is difficult and dangerous to express any opinion as to the prospects in the early future, but there is a general belief growing in extent, that we have been through the worst. There is no doubt a greater confidence in trade circles and a general improvement in trade must bring with it an improvement in our revenue.

The efforts that are now being made for the purpose of balancing imports and exports and raising revenue by the imposition of tariffs and we are confident must increase production in this country, and advertising must follow in the wake of increased production, and our papers, which hold a unique position and are without competition, will be recognised, as they have been in the past, as most reliable media for advertising. It is always to be remembered that our papers pass from hand to hand—the sales of our papers, though large, are no measure of the circulation. In that respect, they are on an entirely different footing from daily and the cheaper class of journals.

CONSIDERABLE ECONOMIES EFFECTED.

Considerable economies have already been made, and we are actively engaged on a scheme for a closer centralisation of the commercial departments of our business, which will produce further savings, the benefit of which will be reflected in this year's trading. Our papers have maintained their reputation. We have paid attention in every direction to making economies where those economies do not affect the character and standard of our journals, which we are determined to maintain.

The report and accounts were adopted.

ANGLO-FRENCH BANKING CORPORATION, LIMITED.

INHERENT VITALITY OF THE ORGANISATION.

The ordinary annual general meeting of the Anglo-French Banking Corporation, Limited, was held, on the 26th instant, at River Plate House, Finsbury Circus, London.

Mr F. A. Szarvazy (the chairman), in moving the adoption of the report and accounts, said: The past year will be remembered by the business community of the world, and in particular by bankers, as one of the most anxious periods in the present generation. That our young institution has emerged from this crisis with no greater damage than is revealed by the accounts is a proof that its affairs have been conducted throughout according to the best established rules of British banking practice. When you consider that in a brief period of six months nearly 95 per cent. of our deposits were withdrawn and that at the same time we had to provide for the orderly contraction of our acceptance business by over 50 per cent., you will appreciate the strain put upon our resources, and at the same time you can judge the inherent vitality of our organisation and the soundness of our methods of management.

It is not as if these deposits, which at one time reached nearly £3,800,000, had been taken from us through want of confidence in our institution. They were withdrawn as a consequence of the flight from the £ and the after-effects of that move, which culminated in Great Britain being forced to abandon the gold standard. That is, by causes entirely outside our control, but, unfortunately, just at a moment when our bank had not yet had time to accumulate reserves for contingencies such as other old-established institutions possess, and by virtue of which the banking community as a whole has been able to weather the storm so successfully in this country.

THE OUTLOOK.

In spite of the setback suffered during the past year, I look to the future with confidence, in the knowledge that as soon as conditions return to normal our bank will be able to renew its activities and develop lucrative business.

I think, speaking in general terms, that we have seen the worst and that the outlook, more particularly in this country, is gradually getting brighter. Had it not been for the necessity imposed upon us of realising investments consisting mostly of British Government securities in order to repay deposits, and thereby incurring heavy sacrifices, the year's result, in spite of the catastrophic disorganisation of business all the world over, would have been comparatively favourable, leaving a fair trading profit, while our bad and doubtful debts, having regard to the world crisis, were quite moderate.

You notice in the profit and loss account that £98,000 of the total loss was caused by the realisation of British Treasury bonds, which, after all, must be looked upon by every banker as the highest class of security in which to invest funds, the liquidity of which must be his main concern.

Our acceptance commitments in Central Europe look heavy when compared with the reduced total of our balance sheet, but the explanation is that practically all other credit commitments have been liquidated in view of restrictions in the discount market, and that the scope in other directions where credit was required and could, in the judgment of the board, be extended with reasonable safety, was throughout very limited.

However, as a result, our commitments in other parts of the world, where critical financial situations have developed, are very moderate.

In the circumstances, little if any fresh business can be undertaken, but, on the other hand, commissions on acceptance business have been raised all round, and even at the reduced level of our acceptance circulation, our earnings from this source should not fall far short of the normal return.

At the same time, business in foreign exchange has become more profitable owing to the wider margins obtainable, and we are developing a very satisfactory connection in investment securities, for which we are favourably placed through our special connections here and abroad.

So much has been said and written in recent months about the gold reserves and monetary policy of France that it is hardly necessary for me to touch upon the subject, except to say that, in my opinion, it has not been the deliberate policy of the French monetary authorities to attract gold. The metal has flowed to that centre automatically as a result of the unsettled economic conditions, aggravated by the fact that the gold standard is not adapted to the functions which it has had to perform since the war.

The Banque de France has kept its discount rate as low as it was possible during the whole year, sometimes almost at a nominal figure, but movements in Bank rates under present-day conditions have ceased to exercise the same effect as at a time when balanced economic conditions ruled all the world over.

The report and accounts were unanimously adopted.

PROVINCIAL BANK OF IRELAND, LIMITED.

DIVIDEND MAINTAINED.
BANK'S STRONG POSITION.
CONDITIONS IN THE FREE STATE.
MR R. D. TROTTER'S SPEECH.

The half-yearly general meeting of the shareholders of the Provincial Bank of Ireland, Limited, was held, on the 27th instant, at the office of the company, 8, Throgmorton Avenue, London, E.C.

Mr Richard Durant Trotter (the chairman) presided.
The Secretary (Mr Francis S. Forde) having read the notice convening the meeting and the auditors' report,

The Chairman said:—Gentlemen,—It is my privilege to move the adoption of the report and statement of accounts for the half-year to December 31st last. The report has been in the hands of the shareholders for some time, and I trust that as usual, you will take it as read.

You will first, however, wish me to make some remarks on the statement we place before you to-day. Comparing the figures with those of a year ago, you will see we have a smaller balance available for distribution, but this was to be expected, in view of the present world-wide depression from which Ireland has not escaped.

Note circulation shows an increase of £25,000, while our deposits are higher by just over £100,000—though this is probably due to some extent to an influx of American money towards the close of last year.

BALANCE SHEET—ASSETS.

Turning to the assets side of the sheet, we find advances to customers stand at £6,720,800, practically the same as a year ago. Our cash shows the appreciable increase of £273,000. We have again introduced British Government Treasury bills which, as you know, have a three months' currency, and these with the amount at call, show an increase of £220,000 on the relative figure of twelve months ago, and I think you will agree this discloses a strong cash position, and with investments at £7,815,000 our liquid assets give the high proportion of 62½ per cent. against our liability to the public. I feel sure that you will regard this as very satisfactory. We believe that full provision has been made for all bad and doubtful debts.

We distribute the same dividend as we have done for many years past, at the rate of 1½ per cent. per annum, and you will note that income tax at 5s. only has been deducted—the bank defraying the additional sixpence in respect of the dividend for the half-year to June 30th last, imposed by the Second Finance Act, so that the shareholders have benefited accordingly. While on the subject of dividends, you will have noted that during the past year the majority of the banking institutions at this side have found it necessary to reduce their distributions to their shareholders and though we in Ireland have been able so far to keep the dividend at the old figure, we must bear in mind that this may not continue to be possible, seeing that the charges falling on the banks are steadily moving upward, with no really compensating benefit to put against them.

ABNORMAL DEPRECIATION.

You will see by reference to the report that we in common with other banks have dealt with what we regard as an abnormal situation in the depreciation which has occurred in gilt-edged securities, and your board have considered it advisable to withdraw from the reserve fund the sum of £250,000, which was more than sufficient to bring the investments into the balance sheet at or below the market price as at 31st ultimo. We could have arranged the matter by setting aside this amount from the reserve in a special account, but we decided it was better to make a clean withdrawal, and I feel confident you will agree this is the proper course to adopt, as more clearly showing the true position.

It is very satisfactory to be able to record, however, as you will have observed, that prices have since appreciated and a considerable portion of the depreciation has been recovered, and apart from this a large proportion of the bank's investments are of short date repayable at par. As I am referring to the subject of the general depreciation, it is very gratifying to find that the Free State loans maintain so consistently their par value, indicating a high standard of credit.

Meanwhile, we have added £20,000 to the reserve fund, making the present total £440,000. Our bank premises account stands at £206,000, at which figure we regard them as much undervalued.

SITUATION IN THE FREE STATE.

Turning to matters in the Free State, the various reports received from our branches indicate that, on the whole, the results of the harvest have been disappointing, and generally speaking it has been a bad year for the farmers, particularly those who have had to employ outside labour. Prices for produce have been in many cases unremunerative, while cattle have also proved a disappointing market, and, unfortunately, the export of livestock from the Free State for 1931 shows a considerable falling off both in value and in numbers from the figures of 1930.

It has, however, to be borne in mind that the exports of the majority of the world's producers show a decrease due to present world conditions, but we are confident that the Free State Government will endeavour to see that her farmers are placed, as far as possible, in a protected position, and on a remunerative scale of prices, and in this connection, it is of interest to note that some of the Free State Ministers had recently a preliminary discussion with Mr Runciman, the President of the Board of Trade, and it is to be hoped that goods results will ensue.

NORTHERN IRELAND.

Turning to Northern Ireland, we learn the demand for linen manufactures shows a considerable expansion, especially since Great Britain moved off the gold standard, with the result that spinning mills and weaving factories are better provided with orders than they have been for several years past, and I am sure we all trust this improvement may continue.

The largest ship launched from British yards in 1931 was launched at Belfast, and the fitting out of this and two other large ships launched during the year is still providing a considerable amount of employment.

The recent burning of the fine ship "Bermuda" while undergoing an overhaul at Belfast is to be greatly deplored as having thrown a large number of men out of work, and it is unfortunate that the replacement order in the matter has gone elsewhere.

There is no doubt that, when the hoped-for revival in shipbuilding materialises, the Belfast yards will be in a strong position to take immediate advantage of it, and the quality and splendid performance of the ships built there should prove a good advertisement for the North of Ireland shipbuilders.

A VERY DIFFICULT HALF-YEAR.

I do not think I need make any further comment in regard to our business, save to say that the past half-year has been a very difficult one. Political and economic causes have led to a series of such rapid changes in many parts of the world that it has been well-nigh impossible for the ordinary individual to follow them. The Austrian and German difficulties of last summer were followed by Great Britain going off the gold standard in September, when several other countries closely connected with her in trade adopted the same policy. Owing to the narrow market, exchange fluctuations became so wide that in many cases resort was had to the ancient system of barter.

The trade depression has become almost universal, and nations have adopted the policy of refusing to buy, which must, in the long run, result in their being unable to sell. War debts and reparation payments, which have led to the huge accumulation of gold in America and France, where tariffs have prevented debtor countries discharging their liabilities in goods, are blamed for most of the trouble. The consequent rise in the price of gold has led to the world-wide fall in commodity prices, and what the world needs at the present time is an increase in purchasing power. Sir Robert Horne said recently "We must raise prices to a level justifying our debts or reduce debts to a level not out of accord with prices—of the two alternatives there are few who would not choose the former."

CURRENT YEAR'S PROSPECTS.

The immediate prospects for the year on which we have just entered do not yet show any great signs of improvement, but, despite the difficulties we have had to meet and are still meeting, I feel sure you will agree that the bank has maintained its sound position.

This is in no small degree due to the efforts of our staff. In times like those through which we are now passing the value of a loyal and energetic staff to an institution such as this is very great. The

REDUCED RATES for LIFE ASSURANCE for the NEXT FIVE YEARS

for those who want to obtain immediate and adequate life assurance protection, but whose present incomes are either temporarily restricted or small in relation to future prospects.

Write to-day for full particulars (state age for quotation purposes) to THE

LIVERPOOL & LONDON & GLOBE INSURANCE COMPANY, LTD.

LIVERPOOL (Head Office) LONDON (Chief Office)
1, Dale Street. 1, Cornhill, E.C.3.

board desire to record their cordial appreciation of the services rendered to the bank by all ranks of the staff in their unremitting attention to their duties.

I now beg to move that the report and statement of accounts for the half-year to December 31st last be confirmed and adopted, and I will ask Sir William Goschen to second this proposition.

The Hon. Sir William H. Goschen, K.B.E.: I beg to second the resolution.

The resolution was then put to the meeting and carried unanimously.

RE-ELECTION OF DIRECTORS.

The Chairman: I now have to propose the re-election of Mr John Charles Denton Carlisle as a director. Mr Carlisle's knowledge of the discount market has been of great service to the board, and he is well known to you.

Mr A. B. Leslie-Melville: I have pleasure in seconding that. The motion was unanimously approved.

The Chairman: I now beg to propose the re-election of Mr Edward Ralph Douro Hoare as a director. Mr Hoare perpetuates a very old connection on the board of this bank.

Mr Robert J. Fitzgerald: I beg to second that.

The resolution was passed unanimously.

Mr Charles Montefiore: I have very much pleasure in proposing the appointment for the ensuing year as auditors of Mr Stuart R. Cooper, F.C.A., and Mr G. Brock, F.C.A., at the fee of 400 guineas.

Mr Steward: I beg to second that.

The motion was unanimously agreed to.

VOTE OF THANKS.

Mr Montefiore: I think there remains only one other matter, which I should like to put before the meeting, and that is to propose a vote of thanks to the chairman and directors. As the chairman has so rightly said, the past year has been a most difficult one for everyone engaged in banking, and that the board has been able to put before us such a satisfactory account of their stewardship is a matter on which we, as shareholders, can congratulate ourselves most sincerely. As he has indicated, there are many questions unsolved and many difficulties both for this country and for the country in which we are particularly interested, and, indeed, in all parts of the Empire, but I feel certain we can safely leave our affairs in the hands of our directors. On behalf of the shareholders I would, therefore, like to move a hearty vote of thanks to the chairman and his co-directors for the work which they have done for us during the past year.

Mr William H. Corker: I have much pleasure, sir, in seconding that vote of thanks, for the report which you have submitted is a most excellent one. As regards the Irish Free State, in which I am particularly interested, it seems to me that the most serious matter over there is the position of the Great Southern Railways, to which up to the present the Government have not been very sympathetic. It is to be hoped that they will take some measures to relieve the Railways Company from its heavy liabilities and the unfair competition of the 'buses on the road. If that were done, gentlemen, I think it would help very much to relieve some of the depression in the Irish Free State. All the same, sir, we are much obliged to you and your co-directors and also to the staff for what you have done.

The vote was unanimously accorded.

The Chairman: Mr Montefiore and Mr Corker, on behalf of my colleagues and myself I thank you very much for the kind remarks which you have made, and I can assure you that we will endeavour to continue to deserve them.

The proceedings then terminated.

ASHANTI GOLDFIELDS CORPORATION, LIMITED.

INCREASED PROFITS AND ORE RESERVE.

CAPITAL BONUS IN SHARES.

The thirty-fifth ordinary general meeting of the Ashanti Goldfields Corporation, Limited, was held, on the 28th instant, at the Holborn Restaurant, London.

Mr James H. Batty (the Chairman) said that the total profit earned was £422,509, an increase of £101,947 over last year. Investments in Government securities had increased by £27,621, after writing off about £30,000 depreciation in market value as at September 30th last. On the basis of to-day's price a substantial portion of this amount had been recovered. Cash in hand showed an increase of £64,691, practically all of which was represented by money on deposit. Two interim dividends had been paid out of the year's profit, totalling 50 per cent., and the directors now recommended a final dividend of 40 per cent., making 90 per cent. for the year.

The year under review showed a still further reduction of 3s. 11d. per ton on the working costs, and they hoped to effect savings again this year.

In calculating the ore reserves this year at 667,400 tons, Mr Watkins included some lower-grade ore in the Ashanti Mine, which the reduction in working costs had brought into the payable zone. In doing so, he had no regard to the present enhanced price of gold. The result of this decision was reflected in the increase of 60,000 tons, and a somewhat lower grade, as compared with last year.

He would shortly ask the shareholders to sanction the payment of the final dividend, and took this opportunity of informing them that in future the board proposed to pay three dividends a year; the approximate dates would be June 1st, October 1st and, say, January 31st, the last being the final dividend, which would naturally depend on the date of the annual general meeting.

It might interest them to know that during the company's existence it had paid a total of £3,466,000 in dividends, which was equal to an average of 49.6 per cent. per annum for the 35 years the company had been in existence.

CAPITALISATION OF RESERVES.

He would also ask them to pass a resolution to increase the capital of the company to £500,000 by capitalising £125,000 from the reserve account. In recommending this course, the directors had in mind the probable expenditure on a new shaft within the next two or three years. They considered it wise definitely to set aside this capital now, particularly as, so far as they could foresee at the moment, it would in no way impair the prospects of future dividends. He was confident they would approve of the precaution the board was taking at a time when liberal dividends were being paid. He also thought they would agree with the directors' action in writing off the market depreciation in Government investments at September 30th, notwithstanding the fact that, but for this, the final dividend might have been larger. The uncertain outlook in Europe and its possible influence on sterling must necessarily be taken into account in distributing profits. He hoped it might be possible at some future date to open a dividend equalisation account in their books, by which they could put aside, in the days of prosperity, sums of money which could be drawn upon, should occasion arise in the future from causes quite unseen at present.

LARGE INTEREST IN BIBIANI.

Referring to the company's interest in the Bibiani Mine, the Chairman said that they not only had a large holding in shares in that company, but they had advanced them sums to enable them to carry on development work. They had felt and still felt greatly responsible for the success of this venture. The consulting engineer's report, published last month, indicated that the development had reached a stage when he could advise the directors that they were justified in providing the capital required to erect a first unit of plant for treating 100 tons a day, and he was of opinion that this could be worked to show a margin of profit and so contribute funds for further development expenditure. This was to be a first unit of plant, to be added to as future developments warranted.

It was estimated that there were some 180,000 tons ore reserves of 8 to 10 dwt. in value now available for stoping. The nominal capital of the company was being increased from £100,000 to £400,000 in 4s. shares. The Bibiani directors were about to invite subscriptions for 750,000 shares at par, with the right to call for a further number of shares at 4s. 6d. (a premium of 6d. per share), at any time up to February 28, 1933, in the ratio of one share for every share allotted in the present issue. Shareholders of the Corporation would be given an opportunity of applying for any surplus shares.

The report and accounts were unanimously adopted, and resolutions were passed authorising the increase of capital and the proposed capitalisation of reserves and distribution of bonus shares.

NATIONAL DISCOUNT COMPANY.

A YEAR OF DIFFICULT CONDITIONS.

THE HON. SIDNEY PEEL ON INTERNATIONAL PROBLEMS.

The ordinary annual general meeting of the National Discount Company, Limited, was held at Southern House, Cannon Street, London, E.C., on Wednesday, January 27th, Colonel the Hon. Sidney Peel, C.B., D.S.O. (the chairman), presiding.

The Secretary (Mr Charles H. Gough) read the notice and the report of the auditors.

The Chairman said:—Gentlemen,—I presume that you will, as usual, take the report and accounts which have been circulated as read. (Agreed.)

In view of recent events with which we are all familiar, you will not be surprised if I tell you that we have found the past year not only a difficult one, but also one which has been less prosperous than its predecessor. Our gross profits for the year were £671,000, against £691,000, not such a bad result considering adverse factors, but that is only part of the story. With the high Bank rate now prevailing, and not a very clear future in front of us, we have to make a larger allowance for rebate, namely, £497,000, against £429,000 brought in from the previous year, and that gives us a sum of £174,000, compared with £262,000, the corresponding figure for 1930, to be added to the carry forward, and available for payment of our ordinary expenses, dividend, etc.

BANK AND DEPOSIT RATES.

We had last year to face a condition of things, namely, the rises in the Bank rate, and consequent rises in deposit rates, which always produces a loss of profit for discount houses in two directions, first, by their being forced to carry a stock of bills for some time at unremunerative rates, and, secondly, by a depreciation of gilt-edged securities. However clearly you can foresee a coming change, you can only palliate its effect. You can only slightly contract your holdings. You have to go on taking bills and taking deposits, otherwise you may lose them for good. Last year I said that a change of rates in the upward direction was inevitable some time, hoping that it would be produced by the absorption of money in improving trade, and not in the least foreseeing the actual causes which have produced the change.

Like a temperature chart of a patient, the agitated movements of the Bank of England rate form a very good graph of the troubles in which this country found itself during 1931.

We began the year with a 3 per cent. rate. A further fall was confidently expected, but did not occur until May 14th, when it fell to 2½ per cent. At this figure it remained for two months, and the fine bill rate of June was hardly over 2 per cent. Then followed two dramatic changes on July 23rd and July 30th, of 1 per cent. each time, and finally another rise from 4½ per cent. to 6 per cent. on September 21st. The rate for three months' fine bills in December was just under 5½ per cent., as against 2 per cent. in June.

DEPRECIATION OF SECURITIES.

I come now to the second question which we had to decide with regard to our year's accounts, namely, the question of the depreciation of securities. We began the year with some £4,000,000 of securities; although we had already some reserves allocated for that particular purpose, and although we had opportunely diminished our holdings before the crisis began, there was still a margin required to meet the cost of writing down securities to market price or under. This margin was not, in the circumstances, a very large one, but it had to be met. Three courses were open to us. One was to take it from the general reserve fund. This is, in my opinion, a very proper course if the depreciation is large, and has been adopted by many of the banks. The second was to provide the sum required out of inner reserve, that is, the contingency fund. This is the course we have adopted, and it seems to us the right one, first, because the amount is not so great as to cripple the efficiency of these inner reserves, and, second, because of the nature of the depreciation. As explained in the report, practically all these securities are British Government or L.C.C. short-dated bonds, and we have a right to assume that they will be paid off at par on due dates. That will more than restore the amount now applied from the contingency fund. The third course was to find the sum required out of the year's profits. This could have been done, but it would have meant a reduction of dividend. We felt, taking all circumstances into account, that the shareholders were entitled to benefit by the foresight they had exercised in previous years. Taking all these facts and figures into consideration, we came to the conclusion that we were justified in recommending a distribution of a dividend equal in amount to that of last year, and we ask you to confirm that decision to-day.

So far I have been dealing with the results of the last year, and I think we can regard these results as not at all bad under the circumstances, but I cannot, of course, conceal from myself that the

existing state of the world gives great cause for anxious thoughts about the future. The solution of the main problems lie out of our control, and belong to the sphere of international co-operation.

TRADE AND EXCHANGE SYSTEM.

The machinery of international trade and the system of exchanges have been, and are, unduly burdened by reparations and war debts. It is a commonplace, in this country at least, that the machinery can only be set going again if some steps are taken to produce a removal of this impossible burden. Unless trade flourishes, none of the other category of debts can be paid in any degree. All will perish together. We are already suffering from the inability of many nations to meet their contractual obligations. Any further failures on a large scale would have disastrous effects for us all, for we are all part of one economic whole. We must sink or swim together. I do not for one moment believe that the statesmen, who are now responsible, will allow any such disaster to occur. It seems to me a more hopeful atmosphere prevails than has prevailed for some time past. The duty of this company, then, as an important factor in the financial machinery of a great institution, is to go on doing our usual business in our own sphere as faithfully and prudently as we can, on the assumption that the world is not absolutely insane, not, I hope, a very difficult assumption. Even those who cultivate a vineyard on the slopes of a volcano proceed on the assumption that the eruption, however inevitable eventually, may be indefinitely postponed; but our dangers, though real enough, can be averted, unlike those of the volcano-dwellers, by a moderate display of human sagacity.

We are asking you to-day to confirm the election to the board of Lieut.-Colonel G. Akers-Douglas, a member of one of the most distinguished houses in the City of London. He has already proved himself a most useful and hard-working director. We have also, under the powers conferred on us by Article 59 of our articles of association, elected Mr F. Goldsmith, our manager, to be a director of the company. During the six years since his accession to the post of manager, Mr Goldsmith has not only won the confidence of his particular colleagues, but had gained a great reputation in the money market as a whole. His election, which I am sure you will cordially approve, is intended to be a small mark of appreciation, by his colleagues, of his valuable work in difficult times.

I have only to add that, in our opinion, your staff, from the manager downwards, including those whose names do not appear on the front page of the report, as well as those who do, have worked with all the skill and energy of which they are capable. I do not believe that any company possesses a more able and loyal staff than our own. From that point of view we can regard the future with great confidence.

I beg to move—"That the report and accounts now read, be received, adopted and entered on the minutes."

The resolution was seconded by Sir Sigismund F. Mendl, K.B.E. and carried unanimously.

The formal business was duly transacted.

SEDENAK RUBBER ESTATES, LIMITED.

CONSERVATIVE TAPPING POLICY.

The twenty-second ordinary general meeting of Sedenak Rubber Estates, Limited, was held, on the 27th instant, at the offices, 7, Great Winchester Street, London, Mr Philip C. Turnbull, O.B.E. (chairman of the company), presiding.

The Chairman, in moving the adoption of the report and accounts, said: In spite of the price of rubber, your estate has been able to show a profit on the year's trading, and the result is consistent with efficiency and proper upkeep of the estate.

The crop for the year is down by over 200,000 lb., but this is the result of our deliberate policy to tap conservatively, and not go "all out" for rock bottom costs by overtapping and producing maximum crops. We leave that to others who still apparently believe in the survival of the fittest.

Rubber is one of the most difficult of the world's crops to adjust in this manner, owing to the length of time it takes new areas to come into bearing, and although the Stevenson scheme was called a restriction scheme, it should have been designated as one for the regulation of output, and its chief fault was that in working it hardly proved sufficiently elastic to meet a sudden increase in demand.

For the past year the question of some scheme of output regulation has been the subject of investigation, but we do not yet know whether the Dutch and British Governments will co-operate in putting into force some effective measure.

For this perhaps the rubber trade themselves are partly to blame, as even to-day there are producers so short-sighted as to oppose the initiation and operation of such a measure. Until consumption can be extended, either by increased demands for present uses or by the application of new uses, it is hopeless to expect an improvement in the market, so long as excessive crops are being produced.

Any Government scheme to regulate supplies should include very strict control over further plantings, so as to prevent excessive opening of further areas under rubber, as happened during the last short-lived boom.

Some years ago we co-operated with the development of latex sales and made contracts in that form, and we have recently concluded agreements to manufacture a considerable portion of this company's output in a form of concentrated latex known as Revertex. Revertex itself is being utilised successfully in various new applications and will, we have no doubt, contribute its share to the expansion of the world's demand for rubber.

One item in the accounts to which I would draw your attention is the investments of £25,216, against which we are in the very fortunate position of not having to provide depreciation, for their market value to-day is £25,446, being £230 over their book value.

The resolution was carried unanimously.

METROPOLITAN TRUST COMPANY, LIMITED.

MR ROBERT FLEMING AND THE CHAIRMANSHIP.

DEPRECIATION AMPLY COVERED BY RESERVES.

MR HENRY A. VERNET'S ADDRESS.

The thirty-fourth ordinary general meeting of the Metropolitan Trust Company, Limited, was held, on the 26th instant, at the company's offices, Gresham House, Old Broad Street, London, E.C. Mr Henry A. Vernet (the chairman) presided.

The Secretary (Mr H. Carlisle) having read the notice convening the meeting and the auditors' report,

The Chairman said:—Gentlemen,—Unfortunately I am the only director present to-day. Mr Fleming is on a voyage to the West Indies, and Lord St. Davids, I regret to say, has been suffering from influenza and is unable to come out to-day. Before proceeding to the business of the meeting I ask you to allow me to refer to the retirement of Mr Robert Fleming from the chairmanship of this company. As the report tells you, Mr Fleming is in his eighty-seventh year. In spite of this, he continues to take a constant and regular interest in the doings of our company, and the practice of nearly one-third of a century is being maintained—I mean that of conferring with him on questions relating to investments, as they arise. Mr Fleming has indeed played lead for a long period with signal success and with corresponding advantage to the company: to follow him in the chair is not easy, especially in these stormy times. We have learnt much from him during our long and pleasant business and personal association, and we shall endeavour to act on the principles which he has inculcated.

I may remind you that the first report of this company, covering the period from August 9, 1899, to January 19, 1901, showed a share capital in ordinary stock amounting to £289,733 and a balance sheet adding up to a total of £361,180 ls. 6d. The dividend for that first period was at the rate of approximately £5 7s. per cent. per annum. Since then the capital has grown to £1,250,000, in equal amounts of 4½ per cent. preferred stock and ordinary stock; 4 per cent. debenture stock has been issued to an amount equal to the share capital, and the total of the balance sheet has grown to £3,293,981 8s. 5d. The rate of dividend paid on the ordinary stock has gradually risen from £5 7s. per cent. to 20 per cent., which latter rate has been paid for the last three years. This record needs no emphasising, and it is with feelings of great regret that we have accepted Mr Fleming's resignation from the chair, which he has occupied with distinction for thirty-three years.

THE BALANCE SHEET AND INVESTMENTS.

I now refer briefly to the balance sheet. The accounts of a trust company, as you know, fall naturally into two categories.

Dealing first with capital. Our investments stand in the balance sheet at £3,224,452, and the valuation made on January 1 indicated a depreciation on this figure of approximately £385,000, say, 12 per cent., upon the book cost. It has been our custom to give you, year by year, an approximate figure of appreciation or depreciation as the case might be, and we do so on the present occasion, although it must be admitted that to make an accurate valuation at this time has been a difficult and troublesome undertaking. Indeed, I do not remember a time when quotations of so many reputable securities have stood, as they do now, at figures so low as to represent an absurdity; moreover, in a large number of cases, prices are nominal. I notice that the depreciation figure of 12 per cent. is about the same as was shown on January 1, 1921. It is amply covered by the reserve and revenue balances, amounting together to £683,324. We have no loan from our bankers, and, at the date of the balance sheet, we had £57,737 of cash items. Thus our ship is well found, with ample power to keep its head to the rough seas, and to steam ahead again whenever the financial weather moderates.

REVENUE ACCOUNT.

Turning to revenue account. A decrease is shown in the gross revenue of £12,908, or rather more than 5 per cent., and when the broad geographical distribution of our securities and the world-wide troubles are considered this percentage of decline is not a matter for surprise. We have earned 23.10 per cent. on our ordinary stock and are thus able to pay the same dividend, 20 per cent., and to increase the amount carried forward on revenue account from £43,606 to £58,324. It should be mentioned that revenue last year benefited to the extent of about £5,000 through the depreciation in the £ sterling.

The total amount saved up upon revenue account since the company was founded has amounted to £289,347, of which some £180,000 has been accumulated during the past ten years. Thus, we have lived well within our income.

PROSPECTS FOR THE COMING YEAR.

Unless and until some change for the better takes place we cannot look for an increase in revenue. Indeed, some further reductions are indicated during the coming year; thus, it is not practicable to make any prediction as to what the dividend may be a year hence. Estimates of revenue are but a poor guide in prevailing circumstances. This, however, is not an occasion for recounting, at length, the trials and troubles of the year 1931, nor for enlarging upon the difficulties with which the world is faced to-day. These are well known and are the subject of constant public discussion. During the coming weeks important and weighty conferences upon reparations and disarmament are due to take place between the nations. Upon the decisions reached at these meetings much indeed will turn. For many months past the business world has been overshadowed by that worst of all obstacles, uncertainty. Take, for example, the uncertainty which has existed since September 21st as to the exchanges, particularly the value of the pound sterling. It is the fashion in some quarters to hail the departure from the gold standard as a favourable event, almost an unmixed blessing; it has undoubtedly had the effect of stimulating certain industries in this country, to some extent. The gold standard may be as bad as its many detractors make out: impracticable it undoubtedly is, if it is to be mishandled as during the past year; but a question worthy of consideration is whether a gold standard is not better than no standard. We have seen the pound sterling, as expressed in dollars, rush down from parity, \$4.8665 to (approximately) \$3.20 or fully 34 per cent. discount, which is about the same level as was touched shortly after the war. Up to the present time the depreciation of the pound has scarcely affected the cost of living in this country, owing, mainly, to the general over-supply of commodities and to the low level of world prices. How long can the pound continue depreciated—the present rate is between 28 and 29 per cent. under parity—without forcing up the cost of living? Surely a depreciation in the pound sterling furnishes but a precarious anchorage for our exporting industries. Other countries have abandoned the gold standard, other currencies can depreciate; some of our good customers abroad are worse off than we are.

Let us maintain equanimity, eschew pessimism, and take all practicable steps to improve our position; but remember that in this country, as in others, a return of prosperity is closely dependent upon improvement in conditions in the world at large.

I now beg to move:—"That the report and accounts, as presented, be and they are hereby received, approved and adopted, and that dividends of £2 5s. per cent., less income tax, on the preferred stock, making, with the interim dividend, £4 10s. per cent. for the year, and £13 per cent., less income tax, on the ordinary stock, making, with the interim dividend £20 per cent. for the year, be and the same are hereby declared."

Mr W. K. Whigham seconded the resolution, which was carried unanimously.

The retiring director (Viscount St. Davids) having been re-elected, and the auditors (Messrs. Deloitte, Plender, Griffiths and Company) having been reappointed, the proceedings terminated.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper Ltd.,
8, Boulevard Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

NATIONAL ACCOUNTS.

The total ordinary revenue for the week ended January 23, 1932, amounted to £34,912,400 against ordinary expenditure of £11,470,100. After allocating £485,000 to Sinking Fund and having allowed for a decrease in Exchequer Balances of £396,334, the operations for the week, as shown below, decreased the National Debt by £23,354,000 to £7,714,076,000:—

(000's omitted.)

	£	Revenue	£	Expenditure	£
Public Department Advances...	+ 3,700	Treasury Bills	- 26,850		
Road Fund	+ 4,400	Nat. Debt Commissioners	- 450		
		British Government Loans	- 3,227		
		Sundries	- 221		
	+ 8,100		- 31,454		

A complete analysis of the National Debt at December 31, 1931, was printed in the *Economist* of January 9, 1932.

(m) Sedanak Rubber. We regret that in January 23rd issue, page 211, we showed net profit for year ended October 31, 1931, as £15,718, and balance from last account £2,952. It should have been net profit £2,952 and balance from last account £15,718. We also gave no dividend for year ended October 31, 1930. It should have been 2½ per cent.
* For half-year.
(s) 29 months.

REPORTS AND NOTICES.

Dr W. S. McCann has been appointed joint manager of New Consolidated Gold Fields, Ltd., in South Africa.

The National Provident Institution for Mutual Life Assurance announce that the board have elected Mr Robert E. Dickinson to be chairman to fill the vacancy caused by the death of the Hon. Vicary Gibbs.

We are informed that Mr Thomas Ormiston Callender, the son of Sir Thomas Octavius Callender, deputy chairman and managing director of Callender's Cable and Construction Company, Ltd., has also been appointed a director of the company.

Mr C. G. Hamilton having retired from the chairmanship of the Law Union and Rook Insurance Company, Ltd., Mr F. W. Pascoe Rutter has been appointed chairman, and the Marquis of Reading deputy chairman. Mr Hamilton had occupied the chair for 18 years, and remains a member of the board.

It is announced that Mr H. B. G. Morgan, M.C., has resigned his seat on the board of the British Oak Insurance Company, Ltd., and that Mr Edgar Wheeler, F.C.I.L., general manager of the company, has been elected in his place. Mr Wheeler retains his general management of the company.

An amalgamation has been arranged as from January 1, 1932, between the two old-established firms of Messrs Keen, Cobb and Lee (12 Copthall Court) and Messrs Laurence, Sons and Gardner (11 Copthall Court). All partners of these two firms will join the combined firm, which will carry on business under the style of Laurence, Keen and Gardner, at 11 Copthall Court, London, E.C.2.

Messrs Brown, Shipley and Company announce that Mr H. J. D. Clerk, the manager of their West End office at 123 Pall Mall, retires as from December 31, 1931, and that they have appointed Mr Hubert Johnston, hitherto assistant manager at Pall Mall, to succeed him. Messrs Brown, Shipley and Company also announce that they have granted their full power of attorney to Mr Roger Leigh-Wood, son of their Sir James Leigh-Wood.

We are officially informed that the firm of Messrs Mathewson, McLennan and Company (who have been members of the Montreal Stock Exchange for over forty years) have amalgamated with Messrs Pitfield, Scott and Company, as from December 15, 1931. The title of the new firm is Messrs Pitfield, Mathewson and Company, with head office at 235 St. James Street, Montreal, and branch offices at Ottawa, Quebec, St. John and Halifax. It has been decided that the new firm will take over the London office of Messrs Pitfield, Scott and Company at 7 Gracechurch Street, E.C.3, and that the business will be continued at the above address under the joint management of Messrs J. R. Sorsbie and E. T. Tatham.

MISCELLANEOUS.

CUNARD STEAMSHIP COMPANY.—In a circular issued to shareholders by the board of the Cunard Steamship Co., with regard to suspension of construction of Ship No. 534, it is stated that "during the post-war years 1919-30, depreciation to the extent of £15,267,287 has been written off the Cunard Company's own ships. In the case of subsidiary companies figuring in the Cunard Company's balance sheet, depreciation has been dealt with on similar lines. During the post-war years the ship depreciation written off by the subsidiary companies has amounted to £16,133,902. Between the years 1919 and 1930 the Cunard Company and its subsidiaries have paid over £6,000,000 in income tax. No receipts from returns of excess profits' duty have been brought into the profit and loss accounts of the Cunard Company or its subsidiaries. Supported by a long history of adequate depreciation earnings, the directors felt justified when organising the financial programme for the construction of No. 534 in relying on the company's own finance without Government assistance. That her construction is at this moment suspended depends not on factors inherent in the North Atlantic trade; not on factors domestic to the company, but on international factors, which are hampering the ordinary financial machinery of commerce."

GESTETNER AND THE AMERICAN MARKET.—With reference to the Investment Note, appearing in *The Economist*, January 23rd, page 191, Messrs D. Gestetner have issued a statement giving later information as follows: "The Gestetner Duplicator Corporation of Bloomfield, New Jersey, after an exhaustive study of all the factors, decided in November last that, in view of the continuing crisis prevailing in the United States of America, the prudent course was to discontinue their operations. Arrangements which your directors regard as satisfactory, have been made with the A.B. Dick Company, of Chicago, for the acquisition by them of the U.S.A. interests. Final accounts have not yet been drawn up, but the information before your directors enables them to state that it will be unnecessary to make any further provision for losses arising out of the U.S.A. undertaking."

IMPERIAL AND INTERNATIONAL COMMUNICATIONS, LTD.—The following are the estimated traffic receipts for 12 months ended December 31, 1930 and 1931:—

	1930.	1931.	Rise or Fall.
January	£ 519,485	£ 412,908	- 106,577
February	460,052	390,461	- 69,591
March	432,316	447,668	+ 15,352
April	456,120	386,706	- 69,414
May	466,279	371,704	- 94,575
June	413,471	374,502	- 38,969
July	437,220	377,774	- 59,446
August	411,090	334,326	- 76,764
September	424,138	410,216	- 13,922
October	446,097	454,279	+ 8,182
November	402,886	427,062	+ 24,176
December	436,407	451,831*	+ 15,424
Aggregate for 12 months, January to December, 1930 and 1931	5,365,561	4,839,437†	- 526,124

* The sum of £21,000 must be deducted from the message receipts for December, 1931, in making a comparison with December, 1930, owing to changed conditions of sharing traffic.

† In comparing aggregates, regard must be had to the notes issued with the traffic figures for March to December, 1931.

OIL OUTPUTS.

BRITISH CONTROLLED OILFIELDS, LTD.—Production for the week ended January 20th: Venezuela, 28,681 barrels; Trinidad, 34,621 barrels; total, 63,302 barrels.

THE MEXICAN EAGLE OIL COMPANY, LTD.—Production for the week ended January 16, 1932, was 245,000 barrels.

SERVICE PETROLEUM COMPANY, LTD.—Returns from Romano-Africana S.A.R. show the production from the company's oil wells at Gura-Onitzi, Moreni and Captura for the weeks ended: December 27, 1931, totalling 3,160 tons (22,120 barrels); January 3, 1932, totalling 4,318 tons (30,226 barrels); January 10, 1932, totalling 4,392 tons (30,744 barrels); January 17, 1932, totalling 4,379 tons (30,653 barrels).

Commercial Reports.

MARKET SUMMARY.

There have been no signs of an expansion in the consumption of primary products. The principal international commodity markets have therefore been quiet while gold prices showed an irregular tendency. Transactions in non-ferrous metals have been small in volume, and New York prices of copper, tin and spelter have been slightly easier. Raw cotton, though losing a few points has remained relatively steady. In view of increasing world stocks and decreasing consumption rubber was flat. Cereals generally have fluctuated within narrow limits, but on balance they are scarcely changed on the week. Sterling quotations of commodities which lend themselves to grading and therefore to

international arbitrage continue to move largely in sympathy with international prices. Business has again been quiet in this country. Dairy produce has not increased in price, but meat has shown a slightly steadier tendency. The tone at the tea auctions has been less firm this week. Hides have shown a downward tendency. Petroleum products remained unchanged. According to reports from various industrial centres, there has been a slight improvement in the situation of the coal trade at Sheffield and Cardiff. On the other hand, the iron and steel industries are unable to record an expansion in activity. The demand for cotton goods is slow to expand, but Bradford manufacturers have been able to maintain the increased volume of business.

THE COAL TRADE.

SHEFFIELD.—A better tone in the export market is reported. The demand for washed doubles and singles is brisk at the moment. Association hards maintain their position for immediate shipment at 16s. 6d. and 17s. f.o.b. The call for industrial coal drags, and is below the tonnages of December, while sales of domestic fuel have fallen off considerably this month. Demand for blast-furnace coke is being maintained at previous levels, although less is being sold for central heating. Best ordinary South Yorkshire house coal is quoted at from 22s. to 24s. at pits.

GLASGOW.—The Scottish coal trade remains quiet, with the Continental as well as the home demand adversely affected by the mild weather conditions. The foreign trade is, of course, also affected by the import duties ruling in certain countries on the Continent. Practically all classes of coal are now easily obtained for early shipment, and prices generally have an easier tendency, the larger sizes of nuts being particularly dull. Lanarkshire splints are a firm spot, the collieries being well sold for this quality over the next month. Current prices for the shipping trade are approximately as follows: LANARKSHIRE.—Ell best, 14s.-14s. 3d.; splint best, 16s.; splint second, 14s. 3d.; navigation, 15s.; navigation second, 14s. 6d.; Hartley, 15s. 6d.; steam, 13s. 6d.; trebles, 15s.; doubles, 13s.; singles, 10s. 3d.; pearls, 9s. 3d.; dross, 9s. FIRM.—Screened navigation, 17s.; first-class steam, 13s. 6d.-13s. 9d.; third-class steam, 12s. 6d.; trebles, 15s.; doubles, 12s. 9d.; singles, 10s.; pearls, 9s. 3d. LOTRIANS.—Prime steam, 12s. 9d.; secondary steam, 12s. 3d.; trebles, 15s.; doubles, 12s. 9d.; singles, 10s.; pearls, 9s. AYRSHIRE.—Unscreened navigation, 16s.; jewel, 17s.; steam, 13s. 6d.; trebles, 15s. 3d.; doubles, 13s.; singles, 10s.; pearls, 9s.; dross, 9s.

CARDIFF.—There has been a slight expansion during the past week or so in the volume of shipments at the South Wales ports. In the week ended January 23rd last they totalled 477,430 tons, compared with only 375,925 tons the previous week. Business is being helped slightly by the depreciation of the sterling, and among orders diverted from the United States to this country have been some representing a fairly substantial quantity for export to Havana. On the whole, however, the market continues quiescent and the collieries are finding it difficult to find outlets for their quotas. The owners are being circumscribed by the Marketing Association with a view to finding out their attitude in their individual capacities towards the question of output and price regulation. It will be recalled that in December last the Executive Committee of the Marketing Association adopted resolutions to the effect that no control of prices could be effective without statutory authority, and that control of output was not necessary to the effective control of prices. These decisions, however, were not regarded as sufficiently indicative of the views of the individual owners, and they are, therefore, being asked (1) whether they consider that Part I of the Coal Mines Act (1930) should be discontinued or continued with amendments; (2) if Part I is discontinued whether they would join a voluntary scheme for the control of prices which would be legally binding on all owners; (3) if the answer to (2) is in the affirmative what percentage of the output of the coalfield they consider must join the scheme; and (4) if they consider that Part I should be continued whether they are in favour of its continuance (a) in its entirety, (b) control of output, and (c) fixation of minimum prices. Replies to this questionnaire must be returned not later than February 13th, and it is understood that similar inquiries are being made in other coalfields. Part I of the Act expires at the end of the present year unless Parliament otherwise decides, but the Government will be compelled to deal legislatively with the industry in the course of the next few months owing to the expiration on July 8th of the clauses suspending the operation of the 7-hour day. The following are the current approximate quotations: Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 4½d.; best drys, 18s. 6d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steams, 13s. 6d.; cargo smalls, 11s. 6d. to 12s. 6d.; coking smalls, 15s. 6d. to 13s. 9d.; anthracite, best large, 36s. to 38s. 6d.; Red Vein, large, 22s. 6d. to 27s. 6d.; machine-made cobbles, 40s. to 43s. 6d.; French nuts, 40s. to 48s. 6d.; stove nuts, 39s. 6d. to 43s. 6d.; rubbly culm, 8s. 3d. to 8s. 9d.; foundry coke, 32s. 6d. to 36s.; patent fuel, 19s.; pitwood, ex ship, 23s. to 25s.

IRON AND STEEL.

MIDDLESBROUGH.—No change has yet taken place in the situation of pig iron. Business is still restricted in volume and confined to parcels for early delivery. Owing to the uncertainty about the Government's fiscal policy, sufficient confidence has not yet been aroused to create a demand for forward delivery, but it is expected that the position will now improve in this respect. The consumption locally continues on a fair scale and the production of the furnaces after providing for makers' own requirements is practically all absorbed, but shipments are disappointing, particularly to Scotland, and prospects of expansion in that direction are not immediately encouraging. Only a moderate business was reported at Tuesday's weekly market and official prices of Cleveland were unchanged, viz.: No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; and No. 4 forge, 57s., f.o.b. or f.o.t. In the hematite department orders have been none too plentiful lately and makers have been rather pressing for business. Second hands who hold fair quantities of iron have also been offering concessions to try and get their holdings reduced, with the result that there is a general weakening in quotations, and ordinary mixed numbers are not now more than 64s. 6d. for early delivery, and might even be secured at a little less. In the finished trade there is no substantial improvement in business to report so far, but an expansion is looked for under the proposed tariff conditions. In the meantime prices are unchanged, except that 24-gauge galvanized corrugated sheets are firmer at 99 10s. In the ore market there is no new business doing and matters are unsettled owing to the troubles in Spain. Best rubio is purely nominal at 16s. 6d. c.i.f., and the freight Bilbao-Middlesbrough for early tonnage is about 5s. Coke freight Bilbao-Middlesbrough for ordinary blast-furnace qualities, is 16s. 9d. delivered works for ordinary blast-furnace qualities, although the demand locally continues only on a moderate scale. The furnace on hematite at Dorman's Cleveland Iron Works has got into operation, but as one producing ferro-manganese there is now out of blast, the number operating in the district remains at seventeen.

SHEFFIELD.—Reports from the local steelworks continue to be unfavourable, and the position of the heavy branches has been steadily weakening since the beginning of the year. Output and booking of orders are appreciably below the pre-holiday level, and unemployment is greater than a year ago. Quietude is general, although certain sections of the trade are rather more active. Makers of permanent magnets have experienced a rush of work from the wireless trade. Tool makers are rather busier, and business is good in the file department. Rollers of bright strip are moderately employed. Plate and cutlery factories have not resumed normal working since the holiday. More trade is expected when the travellers get out on the road next week. Prices of materials continue steady on the whole, with advances here and there. The upward tendency is expected to continue and expand.

GLASGOW.—Business is likely to remain quiet here, writes our correspondent, until a definite announcement is made regarding tariffs on iron and steel. While at some works preparations are on foot for putting more plant in operation in expectation of an increased demand, there is at the moment practically no new business being placed. Any activity that is in evidence is in the lighter branches and at the works of small machinery makers. Steel makers, makers of semis and re-rollers generally are obtaining very little new work. While sheet makers have still a fair amount of work on hand, bookings this week are below that of recent preceding weeks. Export business, however, is being offered at somewhat more attractive figures.

CARDIFF.—Comparatively quiet conditions are prevailing in the South Wales tinplate trade, but the industry is continuing to benefit slightly from the depreciation of sterling, one or two important North Pacific orders having latterly been diverted from the United States. Prices are firmer at from 14s. 3d. to 14s. 9d. per basis box. Welsh steel bars are stationary at 45 per ton, less rebates, but foreign bars are easier and are now quoted at from 80s. to 82s. 6d. per ton delivered. There was no appreciable improvement in the condition of the galvanized sheet trades.

OTHER METALS.

TIN.—In the absence of any encouraging news about the consumption of tin, the market has been weak and prices slightly easier. In New York the metal was quoted at 22 cents per lb. on Wednesday, against 22.25 cents per lb. a week ago, and 21.75 a month ago. Wednesday's official closing quotations in London in terms of sterling for "standard" cash, at £139 15s. to £139 17s. 6d. per ton, compares with £141 10s. to £141 12s. 6d. on the corresponding day last week. Stocks in London and Liverpool at the end of last week, at 32,281 tons, show an increase of 413 tons on the week.

COPPER.—The lack of demand for copper has caused a slight weakening in prices this week. Nevertheless, copper is now on a considerably higher level than it was before the restriction scheme was adopted. On Wednesday, "Domestic" spot was quoted officially at 7.25 cents per lb. in New York, against 7.50 cents a week ago, and 7.25 cents a month ago. Wednesday's official closing price for "standard cash" in London, in terms of sterling, at £38 15s. to £38 16s. 3d., compares with £39 15s. to £39 17s. 6d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 21,030 tons, show a decrease of 302 tons, while stocks of rough copper, at 645 tons, were 5 tons larger.

LEAD.—Although New York prices for lead have been maintained, the metal declined further in value in London. Even at the reduced level of prices, turnover remained small. In New York the metal was quoted at 3.75 cents per lb. on Wednesday, against 3.75 cents

a week ago and 3.75 cents a month ago. Wednesday's official closing quotation for "soft foreign" in London in terms of sterling, at £14 16s. 3d. to £14 17s. 6d. per ton, compares with £15 1s. 3d. to £15 1s. 3d. on the corresponding day last week.

SPELTER.—The downward tendency in the gold price of spelter continued during the past week. A new low level was touched this week in New York. Despite the low price, buyers are not forthcoming to any marked extent. Wednesday's quotation in New York, at 2.90 cents per lb., compares with 3.00 cents a week ago and 3.15 cents a month earlier. Wednesday's official closing quotations in London in terms of sterling for "good ordinary brands" were £14 6s. 3d. to £14 15s. per ton, against £14 10s. to £14 6s. 3d. a week ago.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals the quotations for aluminium and nickel have been maintained at £95 per ton and at £240 to £245, respectively. Foreign antimony declined from £28 per ton to £27-£27 10s. per ton. Quicksilver, too, shows a reduction in the price per flask from £18 to £17 15s. £18.

TEXTILES.

THE COTTON TRADE.—Liverpool.—Imports for the week January 21st to 27th (inclusive) are 74,433 bales, of which 63,127 American, 122 Brazilian, 461 Peruvian, 616 Egyptian, 1,587 African, 1,442 East Indian, 5,720 Russian, 367 Argentine and 991 sundries.

Manchester.—The market has continued steady, and the firmness of raw material prices has caused some comment. The business done has consisted largely of small lots and buyers have not been in the mood to place bulk lines with producers. Inquiry in cloth for India has continued rather more encouraging and a fair number of offers have been met with in light fabrics for Calcutta, but only occasional sales have taken place. Some useful orders have been booked for Madras and Karachi. Owing to the approach of the Chinese New Year, very little demand has come through for Shanghai, but fine goods and fancies have been in request for Java and Singapore. Not more than a retail business has been done for Egypt and the Near East. Printing and finishing styles have again attracted a moderate amount of attention for the Continent. A fair miscellaneous business has been done in home-trade fabrics. There is some nervousness in the weaving branch with regard to labour matters. Inquiry in American and Egyptian yarns has been of moderate extent, but home users and exporters have not been prepared to operate with any freedom. The turnover, however, continues rather larger than a week or two ago.

THE WOOL TRADE.—Bradford.—The date of the termination of the first series of London sales is still uncertain, one auction having been abandoned this week owing to fog. The position of the raw material, writes our correspondent, is, however, unmistakably sound. There is a very firm tendency in all overseas centres, the prices realisable for both merino and crossbred wool being such as to indicate that there is no wisdom at all in selling forward in tops or yarns at even a fraction below current prices. This week competition in London has been quite as good as earlier in the series, and prices have held their own. This is partly due to the increased buying for the Continent. France has taken a larger share of merinos and fine crossbreds, and as these qualities were already popular, the best prices of the series had been fully sustained. There has also been further buying for Germany. Good medium classes of scoured merinos are selling at 17 1/2d. to 22d. All greasy wools have done quite well, 11 1/2d. to 12 1/2d. being realised for representative lots, though on one occasion 13 1/2d. was touched. Some good new clip from New Zealand has also been offered, fine crossbred selling up to 11 1/2d. Slipper halfbred lambs have sold more freely, mostly realising 10 1/2d. to 11 1/2d. Three-quarter-bred lambs are quite 5 per cent. dearer than last sales. The Bradford market is still comparatively quiet. No big weight of new business is being done in any quality of tops, and the transactions in merinos are chiefly for export. It is possible to sell at replacement cost to the Continent, and as there is a strong probability of wool values holding their own, there is no justification in selling tops at what spinners are bidding to-day—23 1/2d. to 24d. for warp. The big lower qualities are disappointing. About 1d. per lb. clean, c.i.f. Liverpool, separates sellers and buyers of South American 40-44's.

THE GRAIN MARKETS.

WHEAT.—So far, international wheat prices have well withstood the pressure of heavy Argentine and Australian shipments. Throughout the week, despite a slow trade, quotations in Chicago

have fluctuated within narrow limits. On balance, prices are scarcely changed on the week. It is improbable that international wheat prices will again decline to the low level prevailing last summer, for there are two safety valves. Australia is finding an important outlet for her export surplus in Eastern countries. Secondly, European countries are expected to relax their import restrictions before long. It appears that Italy has already started buying in view of the fact that from next Monday millers will be permitted to use 30 per cent. imported soft wheat and 80 per cent. foreign hard wheat. According to Mr G. Broomhall, the world's visible supply on January 1st, at 608,850,000 bushels, shows an increase of 25,610,000 as compared with the corresponding date a year ago. On Wednesday, "March" futures were quoted at 55 1/2 cents per bushel in Chicago, against 57 1/2 cents on the corresponding day last week, and 54 1/2 cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 33s. per 996 lbs., as compared with 33s. 9d. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 30s. 3d., against 31s.; No. 3 Northern Manitoba, Vancouver, ex ship, 28s. 9d., against 29s. 9d.; Russian, on sample, 25s. 6d. to 28s. 6d., against 26s. 6d. to 28s. 6d.; Australian, ex ship, 28s. 3d. to 29s. 6d., against 28s. 3d. to 30s. a week ago.

WHEAT FLOUR.—Business in flour has been a little more active during the past week. The increase in demand was promptly followed by an advance in prices in North America and in this country. North American shipments, at 209,000 sacks, showed an increase of 51,000 sacks as compared with the previous week. Of this total, only 26,000 sacks have been consigned to Europe. Quotations in London, Wednesday: Straight run, delivered country, 25s. 6d. per sack of 280 lbs., as compared with 25s. last week; delivered London, 24s. 6d., against 24s. Manitoba patents, ex store, 25s. 6d. to 28s. 6d., against 25s. 6d. to 28s. 6d.; and Australian, ex store, 20s. to 20s. 6d., against 20s. to 21s. a week ago.

BARLEY.—International trade in barley is still mainly confined to Argentine supplies. Russia's offers have been too high to secure her an important share in transactions. On Wednesday, "May" futures were quoted at 39 1/2 cents per bushel in Winnipeg, against 41 1/2 cents last week and 39 1/2 cents a month ago. Quotations in London, Wednesday: "English feeding," f.o.r., per 48 lbs., 26s. to 27s., as compared with 26s. to 27s.; Russian, landed, 23s. per 400 lbs., against 23s. a week ago.

OATS.—The market in oats has been quiet. Argentine qualities are still favoured because of the low price at which they can be bought. On the other hand, Russia is now shipping considerable quantities. "May" futures, which last week stood at 25 1/2 cents per bushel in Chicago, sold at 25 1/2 cents per bushel on Wednesday this week, against 25 1/2 cents a month ago. Quotations in London, Wednesday: "River Plate," landed, 19s. per 320 lbs., as compared with 18s. 9d. last week; "River Plate," ex ship, 17s. 3d., against 17s. 9d.; "Chilean White," landed, 27s., against 27s. 3d. a week ago.

MAIZE.—Maize continues to be in good demand for feeding purposes because of its cheapness. Prices have remained steady during the past week. Argentine shipments are now decreasing, so that despite the expansion in Danubian exports, the total weekly supplies are scarcely likely to increase. Wednesday's quotation in Chicago for "March" futures, at 38 1/2 cents, shows a rise of 1/2 cent per bushel on the week, and a rise of 1 1/2 cents as compared with the price a month earlier. Quotations in London, Wednesday: "Plate," landed, 19s. per 480 lbs., as compared with 19s. last week; "Plate," ex ship, 17s. 9d., as against 17s. 9d.; "Plate," February-March, 18s. 9d., as against 18s. 3d. Yellow maize meal, ex wharf, was quoted at 25 10s. per ton, against 25 10s. a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1931-32, 1930-31, 1929-30, 1928-29:—

	1931-1932.	1930-1931.	1929-1930.	1928-1929.

THE TIMBER TRADE.—The year opened with stocks of sawn building and joinery woods lighter than in January, 1931. Receipts for last year show a decrease of 582,413 loads (of 50 cubic feet) on a total incoming of 4,266,746 loads. The deficiency in planed and dressed varieties amounted to 34,227 loads on a total import of 588,779 loads. Thus the trade had an encouraging start this year, but, writes our correspondent, the lack of spot demand during the past four weeks has upset many calculations. Forward

business, too, has been almost at a standstill on account of uncertainty with regard to the handling of the Russian supplies to come forward this year—whether by a syndicate or uncontrolled. Section of the softwood trade at home or abroad can operate safely until official news is forthcoming as to the volume of supplies to come forward this year, its handling, and the rising c.i.f. prices. There are but few signs of any appreciable immediate growth in the demand for building and joinery woods, although of course the Government's fiscal intentions may help to send the timber ball rolling once more. Many important timber traders, however, continue to have poor opinions of the prospects of building and joinery woods consumption this year. The hardwood section of the trade, too, continues to be depressed. Mahogany has just passed through its worst year on record; it is not difficult to prophesy better times because the demand could hardly go lower. The rise in imports of States lumber in December was a surprise, but it is a moot point how much of it was purchased at the high dollar rates. An analysis of the Board of Trade figures for December arrivals of States lumber gives the c.i.f. price per cubic foot as 4s. 2.9d., as against 3s. 8.5d. the previous December. Plywood was much more largely imported last month compared with December 1930, but for the year the deficiency was 19.3 million square feet on a total import of 362.7 million square feet. Stocks are lighter than a year ago, and operators on the whole are more cheerful than are those in solid woods. In plywood, of course, there are also exchange difficulties, but the most popular material that reaches this country is not much affected thereby.

RUBBER.—The markets in rubber have been dull during the past week. Few purchases were made and prices showed an easier tendency. Although no official statement has been issued, it appears that discussions have taken place on Wednesday at the Hague between Government officials and advocates of rubber restriction. In New York, Wednesday's spot price for rubber, at 4½ cents per lb., shows no change on the week. Wednesday's official closing price for standard ribbed smoked sheet in London, at 2½d. per lb., shows a fall of ½d. as compared with the corre-

sponding day last week. In forward positions business has done at 3d. to 3½d. for April-June, against 3½d. to 3½d.; and at 3½d. to 3½d. for October-December, as against 3½d. to 3½d. a week ago. Movements of rubber in London and Liverpool during the past week were as follows: Landed, 815 tons; delivered, 1,876 tons; stocks at the end of last week, at 125,873 tons, show a decrease of 1,061 tons as compared with the preceding week.

THE MONEY MARKET.

ALTHOUGH Saturday was the last working day of the month, money was as easy as usual over the week-end, with balances finally on offer at rates as low as 2½ per cent. On Monday, money was again very easy, as, although in this month, as in last, there are no Treasury bill maturities on Mondays, their absence was offset by the release of funds in the form of Government dividend payments. On Tuesday the ease became more pronounced through the absence of calling by the clearing banks, and

by the afternoon money was again unobtainable at 2 per cent., but on the next day the clearing banks were calling and money became a little more usable, at 4 and 3 per cent. On Thursday rather heavier calling took place and a fair amount of tax money was turned over to the Treasury. Money consequently hardened to 4-4½ per cent. Renewals were effected at 4 per cent. during the whole week. In addition to this week's dividend payments, a potent cause of the prevailing ease is the big excess of Treasury bill maturities over payments. It is impossible to estimate the actual margin, as a proportion of Treasury bills are always held outside the market and so do not affect the supply of funds. Still, it is relevant to point out that this week's maturities amounted to £45.0 millions, against new bills to be paid for of only £29.5 millions.

Application for Treasury bills amounted to £42.8 millions, against £40.0 millions last week. The original amount offered was again £30.0 millions, but this week practically the whole amount was allotted, only the top £480,000 being cut off. The average tender rate fell sharply to £4 7s. 6.99d., against £4 14s. 6.63d. per cent. last week. The absence of any reduction in Bank rate has brought out more commercial bills into the market, as holders are unwilling to wait any longer. Discount rates again weakened, and on Thursday of this week "hot" Treasury bills were dealt in down to 4½ per cent. or 1½ per cent. below Bank rate. The market rate on three-months' bank bills was also lower for the more acceptable classes of paper. Bills endorsed by the Eastern exchange banks changed hands at 4½ per cent., while "clearing bank" bills were dealt in at 4½ per cent. and, at times, lower rates. German standstill bills were still dealt in at 5½ per cent. The clearing banks have again been buyers of February and March Treasury bills, the former at 4 per cent. and the latter at 4½ and 4¾ per cent. March Treasuries, however, were not easy to secure. On Thursday the Bank of England sold some March bills at 4½ per cent., and this helped to contract the supply of money.

The repayment of the balance of the Bank of England's New York and Paris credits has only had a limited effect upon the Bank return. There was a decline of £5.4 millions in other Deposits (other accounts) which is almost certainly traceable to that operation, especially as a similar decline occurred when the first £20 millions was repaid three months ago. Still £5.4 millions is far too small a figure to account for the whole of an operation involving £30 millions at the par of exchange, and there is no doubt that the bulk of the repayment has been effected in other ways, spread almost certainly over a period of several weeks. It may be remarked that the Bank of England never publishes in its return a separate item giving its holdings of *devises*, and there is little doubt that big changes in the size of this item occurred at various times during the past year without having any apparent effect upon the aggregate figures published in the return.

The post-Christmas contraction in the note circulation has now definitely ceased, for this week the circulation has expanded by £1.8 millions. Public Deposits are practically unchanged, the influx of revenue having been offset by current expenditure, interest payments and the redemption of Treasury bills. The last factor probably explains also the reduction of £3.2 millions in Government securities. Other Securities and Discounts and Advances were both a very little higher on the week, and Bankers' Deposits have risen by £3.0 millions. The Proportion is 89.9 per cent., against 89.4 per cent. the week before.

Inasmuch as a powerful factor contributing to the successful repayment of the Bank of England's credits was to be found in the Indian gold arrivals and re-sales, it may be timely to cite the actual figures. From September 21, 1931, up to January 25, 1932, gold imports into England amounted to £50.0 millions, of which £19.2 millions came from South Africa and £25.2 millions from India. Exports came to £65.4 millions, this total including the Bank of England's own shipment of £15 millions at the end of last October. Of this total, £39.5 millions went to France, £11.1 millions to Holland, £8.9 millions to Switzerland, and £4.9 millions to the United States. From the point of view of our short-term position, the net result has been the very favourable one of substituting Indian for foreign sterling balances, and India has already put part of her sterling acquisitions to good use in redeeming maturing debt. On Thursday it was announced in the House of Commons that the Treasury credits of £80 millions would be duly redeemed in August next, and doubtless preparations will be made as opportunity arises. They may be facilitated by the present tendency of French interests to sell part of their dollar holdings.

Some disappointment was caused on Wall Street by last week's decision of the New York Reserve Bank not to reduce its rediscount rate, as it had been hoped that its rate would have been lowered in pursuance of the general easy money policy supposed to have been adopted early in January. Money rates are unchanged. The inside rate on call loans is still 2½ per cent., though at the end of last week money was obtainable outside at 2½ per cent. Gold movements for the six days up to February 3rd include shipments of \$20.4 millions to France, \$5.1 millions to Holland, and \$8.3 millions to Belgium. Most of these shipments were made out of gold already under earmark on foreign account. Complete figures of gold movements for January are now available. They record exports of \$107.0 millions and imports of \$22.0 millions.

The foreign exchange market was quiet this week, and the strength of sterling was on the whole well maintained. New York went against from 3.47 to 3.45, and Montreal from 4.00 to 3.95. Paris improved from 88½ to 87½, Brussels was little changed at 24½, and Milan gained 2½ at 66½. Madrid was again weaker at 44.15, as against 41.50. Amsterdam was fractionally better at 8½, Berlin was at 14.55 and Switzerland at 17.70, both little changed on the week. The Scandinavian exchanges were all fractionally better, Stockholm at 17.80 and Oslo at 18½. Helsingfors gained six points at 227. The South American currencies remain at nominal quotations, Rio at 4¾d., Buenos Aires at 39½d. and Montevideo at 31d. In the Far East the rupee was firmer at 1s. 6½d., but the yen weakened by ½d. to 2s. 0½d. Batavia was better at 8.60. In the forward market one month's dollars remained at a discount of ½ cent, but three months' were rather more offered at ¾ and discount. Paris was at premiums of 10 and 40 centimes, and Brussels at par for one month and ½ belga premium for three. Milan at ½ lira and 1½ lire discount was little changed, as was Madrid at ½ peseta and ¾ peseta discount. Amsterdam was at wider discounts of 2 cents for one month and 4 cents for three. Berlin is still not quoted and Switzerland was at rather lowered premiums of ½ franc and ¾ franc. The silver market was quiet and small transactions were sufficient to influence prices, which rose by ½d. to 19½d. for cash and by ½d. to 19½d. for forward under the influence of some China and speculative buying. Shanghai advanced in sympathy by ½d. to 1s. 5½d., but Hong Kong remained at last week's level of 1s. 10½d.

ECONOMIST INTELLIGENCE BRANCH.

Our Intelligence Branch, which has been amalgamated with Moody's Investors Service, Ltd., is available to our readers for the supply of economic, statistical and other information, at a charge proportionate to the work involved. Inquiries should be addressed to Moody's Economist Services, 8, Boulevard Street, London, E.C.4.

STARK AND UNASHAMED.

If, under the inscrutable decrees of Providence, it was predestined that the day should dawn when Britain would abandon Free Trade and adopt Protection, then it was only fitting that the proposals for the first British tariff should be introduced by one who is the son of Joseph Chamberlain. From the personal angle we can offer our hearty congratulations to Mr Neville Chamberlain on the reward which Thursday's great occasion in the House of Commons has brought to him for his consistent and unwearying filial piety. But there, we must confess at once, our willingness to congratulate comes to an abrupt and final conclusion. The speech which he delivered to the House of Commons on Thursday was at one and the same time a radically false analysis of the position that we have to face, an almost incredibly naïve review of the probable results of protective measures, a betrayal of the "national" mandate, an exploitation of emergency to perpetuate a purely party policy, and an unrepentant plunge, sword in hand, in the midst of the tariff battle which is fast bringing the world to bankruptcy.

As a preliminary to examining the details of Britain's new tariff system, it is as well to glance back over the period which has elapsed since the "national" Government was formed. That Government was formed to meet a recognised emergency, and its avowed purpose was to achieve three great national objectives. The first was to balance the Budget; the second was to save the pound; the third was to correct by any measures which the emergency might seem to demand the unfavourable trend in Britain's balance of payments. The first objective, we believe with Mr Chamberlain, has been accomplished. In its second objective the co-operation of the "national" Government and the monetary authorities failed because the forces arrayed against them were too strong. The failure to maintain the gold standard and the consequent depreciation of sterling to a level at which, as recent events have proved, it can be comfortably held, should in itself have removed the third objective from the programme of the Government. For it cannot be too often repeated that, with the pound no longer tied to gold, the balance of payments cannot do otherwise than adjust itself automatically. Nevertheless, even after the abandonment of the gold standard, there remained a large body of opinion which refused to believe that energetic artificial measures were not required to adjust the balance. And so it has come about that political thought and political pressure have been concentrated on this third objective. Bowing to this political pressure, Mr Runciman and Sir John Gilmour led off with emergency tariff schedules of a drastic nature, but whose redeeming feature was that they were avowedly and frankly temporary and emergency measures. Such was the position when Mr Neville Chamberlain rose in the House of Commons on Thursday. When he sat down, with the assurance of a large Parliamentary majority behind him, Britain knew that she was faced with a permanent tariff system starting on a so-called "revenue" basis at the comparatively low level of 10 per cent., but with all the antique paraphernalia for building upon this basis a tariff of any height or absurdity that may result from the pressure of vested interests or the clamour of partisans.

Mr. Chamberlain's method of procedure was to introduce three resolutions into the House of Commons. The first declares that as from March 1 a 10 per cent. *ad valorem* duty shall be established on all goods imported into the United Kingdom, with the following exceptions: (a) goods already dutiable; (b) goods specially excepted. Among these initial exceptions, as Mr Chamberlain explained, are to be wheat, meat, bacon, British-caught fish, raw wool and raw cotton. The second resolution refers to the establishment of a Committee which is to be set up "for the purpose of giving advice and assistance to the Treasury." This Committee may recommend any additional duties, temporary or permanent, on any imported goods which may appear to them "to be either articles of luxury or articles of a kind which are being

produced, or likely within a reasonable time to be produced, in the United Kingdom, in quantities which are substantial in relation to United Kingdom consumption." Upon receiving such recommendations the Treasury may make a direct order for additional duties to be enforced. The third resolution is designed to give the Board of Trade the power of imposing retaliatory duties up to 100 per cent. (over and above other duties already imposed) on any goods coming from countries which are "discriminating" against exports from the United Kingdom. Under a fourth heading come some "general provisions with respect to new Customs duties." Here it is laid down that Acts for giving validity to these resolutions shall provide that Treasury or Board of Trade orders for new duties shall expire unless ratified by Parliament within twenty-eight days. That, though a necessary constitutional safeguard, is of little value in a House of Commons of the present complexion. Other provisions refer to "drawbacks," Imperial Preferences, preferences for other countries, and powers for extorting information from unwilling manufacturers.

So we are to have a general 10 per cent. tariff now, from which Crown Colony exports are to be permanently, and Dominion exports temporarily, excepted. (The exception of the latter until the Ottawa Conference is held, incidentally, savours of a type of bargaining bluff which is scarcely conducive to Imperial amity.) If that were all, we should content ourselves with saying that it was unnecessary and untimely; and had it been proposed with the avowed object of "saving the gold standard" last summer, while there was yet time, it might have gained almost general acceptance as a temporary emergency measure. But to-day, when no conceivable reason for it can be found, it is to be made not only permanent in itself, but the permanent basis on which tariffs of any range or extravagance can be built. Mr Chamberlain himself avows his policy to be one of "moderate" Protection. But he surely knows enough of tariff history to be aware that, when tariffs are once imposed, "moderate" quickly becomes "high," and "high" is followed by "higher."

What are the excuses which Mr Chamberlain puts forward for revolutionising our fiscal policy? He aims at collecting revenue; he could have done this without disturbance by attacking such well-tried sources as tea, coffee, cocoa and sugar. He claims oddly that his food-taxes are necessary to prevent a rise in the cost of living through the depreciation of the pound. In his attempt to prove that the pound is still in danger he produces some figures of the balance of payments which are open to the gravest question. If the Chancellor is correct in believing that the state of the balance of payments is so unfavourable as to demand drastic and revolutionary measures, how does he explain that sterling has remained firm during a period when the Bank of England has quietly collected £30 millions worth of francs and dollars for the repayment of foreign credits, and during which the French have steadily liquidated London balances? The only other justification which he attempts is the old argument that the tariff weapon must be used for bargaining with other countries. A reference in his speech to the possibility of inducing foreign countries to join in low tariff groups would be extremely welcome if we could regard it as anything more than a perfunctory sop to add to the Free Trade Ministers' mess of pottage. Unfortunately, we cannot read into it more than that, for Mr Chamberlain's speech suggests that he has in mind chiefly the traditional tariff war, with bilateral agreement as terms of truce, and, as we have repeatedly emphasised in these columns, matters have gone much too far to be righted by that method, which has consistently failed in the past.

We can find, therefore, no saving grace in Mr Chamberlain's pronouncement. He shows not the least trace of recognition of the tariff strangle-hold which is bringing international trade to a standstill, or of the need for

Britain to give a lead towards saner policies, and, as regards tariffs in their domestic application, he is still dreaming the old, delusive dreams of Protectionists. One passage in his speech—if not more—suggests that his mentality is one which regards all imports as a curse and all “diversion” of trade as a blessing. Once again, in this year of grace, even after twenty years of constant exposure of such fallacies, he pleads that tariffs will stimulate exports, that the cost of living will not rise, that the consumer will be safeguarded, and that industrial efficiency will be increased. Such claims, we suppose, have been made by introducers of every tariff measure in the world, and we know not a single case in which they have not been proved utterly worthless.

We have, then, to face the fact that the “national” Government, elected by a trusting people to meet an emergency on national lines, with party policies forgotten, have succeeded in saddling the country with the Conservative policy of Protection stark and unashamed. The revolution of feeling among millions of disillusioned voters will be intense, and we hope that it will be organised into a form which will make itself felt. The adoption of Protection by Britain has become since Thursday a fact. The next twelve months will show whether that Protection is to be moderate or extravagant; and, unless moderate opinion is brought strongly to bear as a counter-blast to the Protectionists, who form the majority of the present Parliament, it is the latter result that we shall have to rue twelve months hence. We feel that Mr Chamberlain has given us the answer to the question which we posed last week, whether the Free Trade Ministers were justified in remaining in the Cabinet under present conditions. We are as clearly aware as anyone of the desirability of the continuance of the “national” Government in face of the grave and widespread uncertainties at home and abroad of the present position. But when the Cabinet is split, as it is now proved to be split, on a matter not of minor, but of transcendent importance—a matter which goes to the roots of international, as well as domestic, policy—then the pretence of maintaining any outward appearance of unity of purpose becomes not only a farce, but a betrayal of the electorate.

Sir Herbert Samuel told the House of Commons on Thursday that his ground of quarrel with the Cabinet was that this measure of Protection is not a temporary but a permanent policy. He was right: the whole conception of international trade inherent in the Cabinet’s “majority” proposals is that of the economic nationalism of “Little Englanders”—fatal to the recovery of the world from the crisis, and repugnant, we should have thought, to every liberal-minded statesman. We should view the future with less misgiving if the Free Trade Ministers had left the Government on grounds of honest and fundamental disagreement, and had made themselves the rallying point for the forces of political moderation and fiscal sanity.

JAPAN AGAINST THE WORLD.

WE have arrived at the crisis of the crisis—the most critical week in the history of the world since Armistice Week, 1918. Ever since the Armistice, we have been aware of the tremendous issue with which our generation is confronted. The alternatives before us are world order or the downfall of our civilisation. Through all these post-war years, and especially the last two years, it has gradually become apparent that this issue would not automatically decide itself. In retrospect, now, we can see clearly that we have been working up towards an ordeal. This week the ordeal has come, and action is required of us.

The conjunction of events is so dramatic that it suggests the workmanship of some great artist rather than a fortuitous coincidence. On Tuesday, there opened in Geneva a World Disarmament Conference. The 1,500 delegates have converged upon the city of the League of Nations and the Red Cross from all quarters of the world. Practically every fully-self-governing State in existence is represented. And their assemblage is the culmination of laborious and persistent co-operative work

for the solution of the problems of disarmament and security—work that has been going on incessantly since the Peace Conference of Paris. The representatives of the peoples of the world meet this week in council in order to take the first concerted, constructive action for ridding society of a scourge which will undoubtedly destroy civilisation if civilisation does not get the whip hand; and at this very moment the World Disarmament Conference and the world itself are greeted by an outbreak of lawless violence.

One of “the Great Powers” of the world is once more using the traditional licence of sovereignty—a licence which Japan, like the rest of us, has solemnly renounced in putting her name to the League Covenant and the Kellogg Pact. We print in diary form an impartial chronicle of the events at Shanghai, and of the steps taken by the neutral Powers, so far, to secure peace. We may leave this tale of Japanese naval aggression in the main to speak for itself. This, however, we would observe: the civilian population of Chapei is quite innocent and quite defenceless. It has no responsibility for the Sino-Japanese feud in Manchuria; and it has been at most a passive participant in the anti-Japanese boycott in Shanghai itself. Moreover, last Thursday, the Chinese Mayor of Greater Shanghai conceded all the demands presented to him, at the point of an ultimatum, by the Japanese Admiral Shiosawa. It was in these circumstances that, a few hours later, the Japanese naval commander sent his marines into Chapei to seize this Chinese quarter of Shanghai by force; and then sent his aeroplanes to bomb this part of Shanghai intensively from the air when his marines met with unexpected resistance.

The enormity of this aggression is so great that the accompanying Japanese offences against the International Settlement and the French Settlement at Shanghai, and against the Western Powers and their nationals who have vast interests there, add little to the moral indictment. The political importance, however, of these complications is capital, because, in the present state of international relations (a state which we hope to transcend), Governments and nations are still slow to realise the solidarity of their individual interests with the common weal until these individual interests are directly imperilled—as they always are, sooner or later—by an outrage against the world’s peace. To complete, therefore, the tale of Japanese misdemeanours, we have to add that this wanton commission of acts of war in the heart of Shanghai has compromised the security of the French Settlement and the International Settlement, besides devastating Chapei, which is the direct object of the Japanese attack.

The least of the dangers (though this is a serious enough danger, as it is) to which the two Settlements now are exposed is the immediate risk of becoming targets for hostile shells and bombs. What the Japanese have done by their action at Shanghai during the last few days is to shatter the whole juridical status of the Settlements, which has been carefully and successfully safeguarded since their first establishment the best part of a century ago. It has become recognised by use and wont that the Settlements are neutral ground in regard to any neighbouring hostilities and that the interested Powers have a right to protect this neutrality, when it is in jeopardy, by landing armed forces. That is what the British and other Governments did when the Chinese Civil War swept round the outskirts of Shanghai in 1927; but the Japanese this week have done precisely the opposite. Grossly abusing the privilege which they possess as one of the Powers interested in the International Settlement, they have seized a portion of the Settlement, turned out the municipal police, and used this piece of neutral territory as a base for violent military operations against a quarter of Shanghai which is outside the bounds of the Settlement and under Chinese administration. When the Powers have time to think about their individual rights and interests, they will have a long score against Japan on this account.

At the moment, however, the issue is far greater. It concerns not mere individual interests—however important in themselves—but the common weal of the international comity of nations. We are in fact confronted, at last, with the problem of “security” in a concrete form. In concrete terms, “security” may be defined as an

assurance that no State in the world—not even “a Great Power”—can resort to lawless violence as a instrument of national policy without being placed under restraint and brought to book by the corporate action of the great international society of which every State in the world to-day is a member—not only in virtue of the Covenant and Pact, but in virtue of the hard fact that, if lawless violence can still succeed, society itself can no longer survive. What is the sense of insecurity—and its obverse, the lack of credit—which is at present fast bringing our civilisation to ruin? It is nothing else than a lack of confidence in the ability of the co-operative forces of law and order to master an outbreak of lawless violence if the ordeal comes. We have never felt sure that the international organisation which we have been building up since the end of the war would be able to deal successfully, in the last resort, with a recalcitrant Great Power. To-day, at the end of these first twelve post-war years, our state of uncertainty has got to be cleared up. Japan has thrown down a challenge which can neither be mistaken nor evaded.

If we do not take this challenge up and respond to it conclusively, it will be manifest that we are unable to secure the conditions of international law and order on which our modern economic life, as well as our political life, depends. The downfall of our civilisation will then be in sight. On the other hand, if we do meet this ordeal successfully, then the Disarmament Conference—though it may have to postpone its proper agenda until it has acted as a world council for keeping the world’s peace—may eventually come to grips with the problem of Disarmament under far more favourable conditions than we had previously dared to hope. For, if Japan is successfully restrained, the problem of “security”—which has hitherto made the problem of Disarmament insoluble—will have been largely settled, and this not only for the Far East, but for the world, including Europe.

The hour is grave, but the reward of success is high enough, and the penalty of failure severe enough, to nerve us to go resolutely through the ordeal; and, after all, it is a supreme piece of good fortune that the ordeal, now that it has come, should have come in the Far East, and not in Europe. Envisaging a European crisis in which Great Britain found herself committed to taking positive action, British statesmanship has been haunted by a nightmare of the Dominions hanging back and the United States preserving a possibly unfriendly neutrality. We are quite free from this nightmare now; for, in this Far Eastern ordeal, the United States and the Dominions are, if possible, still more deeply concerned than we are, and we have France and Italy with us into the bargain. Behind the Powers stands the League, and behind the League the World Conference—fortunately assembled at Geneva at this moment. The world cannot afford not to convince Japan that, however valid may be her grievances against China in the matter of the boycott, her present lawless aggression has exposed her to the moral condemnation of the world, while her determination to flout the world’s judgment would expose her to the full weight of the Sanctions of the Covenant. For their weakness and vacillation in dealing with Manchuria, the States members of the League have much to answer. To-day they dare not fail again.

DIARY OF THE SHANGHAI CRISIS.

Tuesday, January 19th.

Five Japanese monks attacked and injured by Chinese mob in Northern Shanghai.

Wednesday, January 20th.

Japanese mob sets fire to Chinese towel factory in Chapei area and attacks Chinese police.

Thursday, January 21st.

Rear-Admiral Shiosawa, Commander of Japanese Fleet in Chinese waters, issues demand to Chinese authorities in connection with recent attack on Japanese monks, insisting on formal apology by Mayor of Greater Shanghai, arrest of the assailants, payment of an indemnity, and the dissolution of anti-Japanese associations, failing which he threatens drastic action by Japanese Fleet.

Japanese warships and marines ordered to Shanghai.

Wednesday, January 27th.

Japanese Consul at Shanghai intimates that 6 p.m., Thursday, January 28th, is the time-limit allowed to the Chinese authorities for compliance with Japanese demands.

Mayor of Shanghai orders dissolution of anti-Japanese associations.

Japanese aircraft reinforcements arrive at Shanghai.

Thursday, January 28th.

7.30 a.m.—Japanese Admiral gives foreign authorities responsible for defence of International Settlement twenty-four hours’ notice of his intention to take action against Chinese.

12 noon.—Municipal Council declare a state of emergency as from 4 p.m.

1 p.m.—Mayor of Shanghai intimates compliance with Japanese demands.

9 p.m.—Japanese Consul accepts Chinese compliance as satisfactory.

10 p.m.—Japanese Admiral announces intention of landing forces to protect Japanese nationals.

12 midnight.—Japanese marines, advancing through the International Settlement, endeavour to occupy Chapei, but meet with considerable Chinese resistance. Japanese warships engage Woosung forts, at junction of Whangpoo and Yangtze Rivers below Shanghai. Fighting in Chapei continues throughout the night. Japanese advance towards North Station held up.

Friday, January 29th.

4.25 a.m.—Japanese aeroplanes bomb Chapei and Shanghai-Nanking Railway; Chinese civilian population suffers heavily; destructive fires caused.

British and American Consuls secure promise from Japanese Admiral to “cease fire” at 8 p.m.

China appeals to League of Nations against Japanese action under Articles X and XV of the Covenant.

Saturday, January 30th.

Sniping continues in Chapei. Chinese reinforcements arrive from Nanking.

League Council instructs representatives of States members in Shanghai to report on crisis.

Sunday, January 31st.

British and American Consuls confer with Japanese Admiral and Consul, the Chinese garrison commander, and Mayor of Shanghai. They suggest (1) that Japanese forces should withdraw into International Settlement; (2) that Chinese troops should retire west of railway; (3) that foreign troops should patrol between Japanese forces and railway; and (4) that Chinese police should be responsible for order on Chinese front. Plan referred by Japanese to Tokyo Government.

Japanese Foreign Minister requests British, American and French Ambassadors at Tokyo to use their influence to have Chinese troops withdrawn beyond a neutral zone.

Chinese Government moves from Nanking to Loyang.

Monday, February 1st.

British, French and United States reinforcements sent to Shanghai.

British and American Ambassadors protest to Tokyo Government at violation by Japan of neutrality of International Settlement.

11.15 p.m.—Japanese warships shell Nanking without warning.

Tuesday, February 2nd.

2 p.m.—Truce ended by resumption of Japanese offensive in Chapei. Chinese reported to have evacuated first-line position.

Further reinforcements of Japanese marines landed.

British Foreign Minister announces in Parliament that Britain and America have submitted to China and Japan the following peace terms:—

1. Cessation of all acts of violence on both sides forthwith on the following terms:—

2. No further mobilisation or preparation whatever for further hostilities.

3. Withdrawal of both Japanese and Chinese combatants from all points of mutual contact in the Shanghai area.

4. Protection of the International Settlement by the establishment of neutral zones to divide the combatants. These zones to be policed by neutrals; the arrangements to be set up by the Consular authorities on the spot.

5. Upon acceptance of these conditions prompt advances to be made in negotiations to settle all outstanding controversies between the two nations in the spirit of the Pact of Paris and the resolution of the League of Nations of December 9 without prior demand or reservations and with the aid of neutral observers or participants.

Similar representations made by France, Italy and Germany.

Emergency Meeting of League Council is acquainted with démarche taken by the Powers.

Wednesday, February 3rd.

Japanese warships and aircraft bombard Woosung forts. Further attack by Japanese on Chinese position in Chapei; Chinese reported to have fallen back behind the railway.

China accepts Anglo-American peace proposals.

Thursday, February 4th.

Renewed Japanese attacks in Chapei meet strong resistance. Japanese army division under orders for Shanghai.

Japan accepts third and fourth terms of Powers’ peace proposals, rejects second and fifth, and conditionally accepts the first.

REALITY ON THE DANUBE.

THE progress of the crisis in Austria and Hungary during the past nine months has been described in these pages on many occasions. To-day, as things are going, these two countries are being brought rapidly face to face with a situation in which for their future livelihood they will be dependent entirely upon their own resources. If the credits owed abroad by the respective Governments and central banks are deducted from the gold and foreign exchange holdings, their note issues are left practically without any metallic cover. Hungary has already defaulted upon most of her long-term foreign indebtedness and has introduced legislation which is tantamount to a total default upon her short-term indebtedness. Austria is still managing to pay her funded foreign debt—the municipality of Salzburg can even claim credit for having paid a debt a second time when the foreign collecting agent had become insolvent after receipt of the sums involved—but the Austrian National Bank has had to ask the Austrian commercial banks to obtain from their foreign creditors relief from the terms of the first “standstill” agreement. Despite the assurances of the Chancellor and the Minister of Finance, there can be little doubt that before long Austria will be compelled to suspend the service of her foreign loans. As for Austrian and Hungarian foreign trade, the free exchange of goods has ceased; as credits are no longer obtainable, new transactions can only be carried out by barter. For the maintenance of the standard of living of even twelve months ago an import surplus was necessary; since then, the value of exports has fallen rapidly; and in order to equate the “balance of trade” the central banks in both countries have to reduce the supply of foreign exchange to importers from day to day. Austria’s “clearing” arrangements with the neighbouring States have been a total failure. The same is true of Hungary.

Until now the increasing exclusion of imports has acted as a temporary stimulant to home industries in so far as they had previously to meet competition from abroad in the home markets. But this gain has been more than offset by the rising unemployment caused in the exporting industries. Further, the day is not far off when the home industries which depend for their supplies upon imports from abroad will no longer be able to obtain their raw materials. Already the Austrian National Bank can supply importers with but a fraction of their demands, leaving it to them to obtain the rest of their foreign exchange in the “black market.” Hungary could conceivably exist on the products of her native soil, and Austria could do so after a fashion, but neither country could do so without a considerable rise in the prices of home products and formidable industrial unemployment. Yet this is the situation ahead for Austria and Hungary, a situation which no wage reduction is capable of mending, and which must lead eventually to a collapse of the political structure.

There have been many crises in Central Europe since 1919, but never before have things reached this extremity. The fact that at the moment there is no sign of revolutionary temper proves little. Revolution breeds readily only when there is something to be gained. At present, even the most discontented elements are constrained to ask themselves what purpose a revolution would serve. Nevertheless, inflammable material is rapidly accumulating, which a spark might set ablaze. An unavoidable rise in the price of foodstuffs may compel the Governments to introduce requisitionary legislation and so cause a peasant rising; or the exasperation of starving workmen may lead to food riots and to marauding expeditions into peasant districts. The outward calm which both countries present to the casual observer and the assurances given by both Governments that they are capable of maintaining order have little relation to the potentialities of the situation. In reality, only the absence of effective leadership, apathy and despair are holding the Austro-Hungarian peoples. Fourteen years after the war a blockade, this time self-imposed, has been laid round these countries. Is it safe to expect that, the war-time spirit of sacrifice being gone, the people will be ready to endure for any length of time

the privations which the situation imposes? And once the blaze has been started, who can tell where it will be possible to stop the fire?

Compared with the problems of Asia and Western Europe, the problems of Austria and Hungary may seem relatively unimportant, but just as the collapse of the Credit-Anstalt was the signal for a general flight of foreign capital from all debtor countries, so the collapse of the political structure on the Danube might only too easily have far-reaching repercussions. Therein lies the real importance of recent developments. In Hungary, the ruling party seems to all appearances to be still firmly in the saddle, although rumblings of discontent are audible to the attentive ear. In Austria things look much more ominous. The expulsion—and no other term is appropriate—of Dr. Schober from the Cabinet, and the re-appearance of Dr. Seipel in the political arena, are events whose importance is considerable. Whatever may be Dr. Schober’s failings as a politician, it will stand to his lasting credit that he successfully struck a balance between the extreme parties of the right and left. Neither side could intimidate him and he prevented both from attempting a *coup d’état*. His fall creates a new situation. Dr. Seipel and his followers officially proclaim their adherence to the constitution; but privately and—in the provinces—publicly they appear to be advocating a different policy. Austria is to be reorganised as a “Ständestaat,” the power of the Social-Democrats in Vienna is to be crushed.

Now the policy of the Social-Democrats in Vienna has contributed in no small measure to Austria’s financial difficulties, but neither the past of Dr. Seipel’s party nor his programme for the future holds out any great hope of the wiser handling of economic forces under his regime. It may be that Dr. Seipel has assurances of French political and financial support; it may be that his return to politics marks the beginning of a new period of French policy in Central Europe. (From the point of France, *qua* creditor, a Danubian Federation would doubtless be a better debtor than the existing independent States, two of which cannot live and maintain their independence.) If all this be so, Austria may find in Dr. Seipel’s return the hope of assistance which might even be worth an internal struggle with the Social-Democrats, if such should prove unavoidable. But the assumptions are large; and otherwise the outlook is black.

That things have reached this pass is not solely the fault of Austria and Hungary themselves. It would be easy to prove that past policy with regard to social reserves and wages in Austria would have hampered economic progress, even under the most favourable external conditions. There is equally no doubt that Hungary’s capacity to repay was over-estimated by foreigners and Hungarians alike. The essential fact remains, however, that both countries have never really been given a fair chance to live since the signing of the peace treaties. Contrasted with the major problems of the world after 1918, their difficulties seemed insignificant; neither time nor thought enough could be spared to trouble greatly over questions which, it was hoped, would solve themselves as soon as the major difficulties had been cleared up. In the event, the major difficulties centred on the Rhine still remain unsolved, and the Danubian countries have been told vainly to wait and, meanwhile, to put their own houses in order. They have waited for fourteen years, and now, as a last resort, they have been told to reduce expenditure and wages at home still more drastically, to deflate still more energetically, and to “force” exports. Such, in sum, is the advice with which the Financial Committee of the League, even in its latest report,* published this week, has bade the victims “restore their equilibrium.” The remedies might equally apply to the advisers’ own countries; but they can no longer cure the ills of Austria and Hungary.

What, then, is Europe to do about it? Three possible courses suggest themselves.

(1) *To leave it to France.* Crudely, the fundamental disabilities of Austria and Hungary are inherent in the peace treaties, the French “system of Europe,” and the

tariff-walled balkanisation of the South-Eastern States. If the “system” is endangered by an economic collapse on the Danube, whose repercussions might shatter the whole structure, is it not perhaps the simplest and most rational policy to look to France, as the ultimate political beneficiary, to pay for the necessary under-pinning? This, we presume, is the view-point of Dr. Seipel.

(2) *To call in the League.* If exception be taken by other States to a policy of encouraging France to increase south-eastwards her orbit of dependent *protégés*, then the League may be preferred as a medium for securing the necessary assistance to prevent Austria and Hungary from foundering in the crisis. To be effective, League intervention would obviously have to go considerably beyond the appointment of “advisers.” Unless a miracle ends the world crisis to-morrow, both countries stand in dire need of new foreign capital to enable them to maintain a standard of life sufficiently high to support their political structure. But, given the existing parliamentary opposition in both Vienna and Budapest to necessarily drastic economies, no foreign loan could conceivably be floated so long as there was any chance of League “advice” being disregarded or hesitantly followed. Salvation by the League must necessarily involve, temporarily, a real surrender of sovereignty to the League.

(3) *To leave it to “natural” forces.* This would be a grim and perilous course; but there is a case to be made out for it. Advocates of *laissez-faire*, who doubt the willingness of France to “foot the bill” on the Danube, and would not, in any case, welcome an extension of French financial hegemony in that direction, might be inclined to ask what good purpose would be served by the League, if it once more endeavoured to buttress the tottering Austro-Hungarian fabric. When all is said, even if Europe—or, at least, the States signatory to the peace treaties—admits responsibility for its work in the creation of uneconomic post-war countries, to pour fresh capital into Vienna and Budapest would be justifiable only if there were real hopes that the earning-power of the borrowing countries would in future be a positive, not a minus, quantity. Under existing conditions, do such hopes exist? If not, it might be better to tell both countries that they can expect no help, that all foreign “advisers” will be withdrawn, and that they must work out their own salvation. Chaos might follow, but there would be an end to false hopes; and out of the wreck of an unsound, unreal political structure a saner Central and South-Eastern European economy might emerge.

On the merits of the choices open to the Powers in their attitude to the question which destiny is posing to them on the Danube, no one who appreciates the gravity of the issues involved would venture lightly to pronounce. In thus endeavouring to present a picture of the possibilities, we have sought not to pass judgment, but to awaken thought.

WHAT GERMANY HAS PAID.

MR CHAMBERLAIN’S clear statement of British policy with regard to war debts and reparations, on which we comment in a Note of the Week, brings us a step nearer to the final solution which will have to be reached—if not soon by agreement among the parties, then a little later by a general economic collapse. The choice between those alternatives lies in effect with France, and it is, therefore, important to seize upon any line of approach which promises to satisfy French, while not embittering German, public opinion. In the recent debate in the Chamber of Deputies, M. Léon Blum, the Socialist Leader, put forward the proposal that, as a preliminary to a conference for the determination of reparations, there should be an expert inquiry into the relation between France’s receipts from reparations and her expenditure on restoring the devastated areas. Such an inquiry, though it would inevitably rake up past controversies when the disputes of the moment are already excessive, would at least clear the ground for a discussion of war debts and reparations as a single problem. M. Blum’s suggestion has roused a good deal of interest in the Continental Press, and at the risk of exhuming corpses that were better

buried in obscurity, we reproduce below some figures bearing on the issue.

The most difficult question of all is that of Germany’s payments before the Dawes Plan came into force. The only official non-German basis for calculation is the reports of the Reparation Commission, which credited Germany with approximately 8 milliards of gold marks,* but as a large portion of the payments were not cash but kind, including capital assets like the German merchant fleet and State property in ceded territory, upon which different valuations might honestly be placed, the official estimate cannot be accepted without examination. The *Frankfurter Zeitung* has just published the following table (slightly abbreviated here) showing the Reparation Commission’s figures and the latest official German figures side by side:—

GERMAN PAYMENTS UP TO AUGUST 31, 1924.

(In millions of gold marks.)

	German Claim.	Reparation Commission.
1. Cash payments under London Schedule, 1921-22	1,700	1,700
2. German Reparation Recovery Act... ..	373	373
3. Coal and coke deliveries	2,334	959
4. Other deliveries in kind.....	900	681
5. Merchant fleet:		
i. Handed over	3,426	756
ii. Sequestered	1,060	...
6. Railway material	1,803	833
7. Non-military material left behind on Western Front	5,041	140
8. Private property abroad	10,080	13
9. Settlement of private claims	617	...
10. Proportion of public debt of ceded territories	657	26
11. State property in ceded territories*	9,670	2,298†
12. Work of German prisoners of war....	1,200‡	...
13. Naval vessels	1,338	...
14. Compulsory payments during Ruhr occupation	1,370	27§
15. Other payments.....	490	261
	42,059	8,067

* Excluding value of Saar mines.

† Excluding value of territory handed over.

‡ After deduction of 300 million marks for cost of maintenance.

§ Including only deliveries of dyestuffs.

The aggregate discrepancy is enormous. But it will be observed that over one quarter of the difference between the German figures and those of the Reparation Commission arises from the items of private property abroad liquidated by the Allies, and private claims of Allied nationals settled by Germany. The merits of that question, which was finally closed at the second Hague Conference of January, 1930, have been argued in these columns before,† and this is not the occasion to reopen it. Briefly, the Treaty of Versailles entitled the Allies to liquidate the German private property that they had sequestered during the war, and to use the proceeds to compensate their nationals who could establish claims against the German Government; the latter had the obligation to compensate its own nationals who had suffered confiscation or loss on account of the war, but was compelled to restore the private property of Allied nationals that it had sequestered. This arrangement, admittedly, operated to Germany’s detriment, but the fact remains that the whole of the liquidated property was not a net

* See *Economist*, Reparations and War Debts Supplement, January 23, 1932, pp. 4 and 9.

† See *Economist*, August 24, 1929, and February 22, 1930.

forfeit by Germany, as it was partly used to offset legitimate claims against her. Nor did the Allied Governments themselves receive any more than the surpluses accruing from these accounts; in the case of Great Britain, who had by far the greatest interest in the matter, the surpluses which were thus taken into the Budget totalled £16,150,000, or, roughly, 330 million gold marks. The net receipts of France and other Allies on this account are understood to have been small.

A further large portion of the difference between the two sets of figures arises from the inclusion in the German total of certain items, like the work done by German prisoners of war, the cession of naval vessels, and the public debt apportioned to the ceded territories, which are not and never have been admitted in the Allied computation of reparation payments at all. We are not prepared to discuss here the legal interpretation of the Treaty on which the question of their inclusion turns. The remainder of the discrepancy is largely the result of differences in the valuation of ceded property and deliveries in kind. There can be no doubt that the Reparation Commission's figures erred very much on the safe side; for instance, their reckoning of Armistice deliveries of non-military material was not fully inclusive. In particular, the German merchant fleet seems to have been under-valued. The Commission entered it apparently at break-up rates, whereas the Germans, equally properly from their point of view, valued it as a going concern. Into the merits of rival estimates we are not in a position to go in any detail, contenting ourselves with quoting an independent American estimate* of 15 to 16 milliards of gold marks (£750 to £800 millions) as the total paid by Germany up to September 30, 1922, including 5 milliards for State property in ceded territories and 3½ milliards for the merchant marine, but omitting altogether the vexed question of the liquidated private assets. As for the period of the Ruhr occupation, it is probable, as the table indicates, that the Reparation Commission's figure omitted certain categories of deliveries that were actually made. There were, it is true, counter-costs which the Allies might claim as an offset, but discussion of that question would raise the debatable issue of the right of the Allies thus to distrain upon Germany on the strength of a claim that she had defaulted in her reparation payments.

After the inauguration of the Dawes Plan the calculation becomes comparatively simple. Excluding the service of the Dawes loan and the payments under The Hague agreement in compensation for paper marks left in Belgium, the total reparation payments of Germany between September 1, 1924, and June 30, 1931, were just over Rm. 10 milliards, or £500 millions. The *Frankfurter Zeitung* adds to the list certain other payments by Germany, such as the cost of allied commissions of control, plebiscite commissions, delimitation of frontiers, etc., and of military, naval and industrial disarmament enforced by the Treaty of Versailles, but none of these items can strictly be included with reparations nor did they result in any net budgetary benefit to the Allied Governments.

Now let us turn to the question of what France has expended on the restoration of her devastated areas. In a statement to the Finance Commission of the Chamber on January 28th, M. Flandin, the French Minister of Finance, asserted that down to April 1st last the French Government had spent 97,881 million francs (£800 millions gold) in respect of compensation for losses of property. This was exclusive of interest, and some of the payments had been made when the franc had a much higher value than at present. M. Flandin's final calculation was that reparation expenditure had cost 175,000 million present-day francs (£1,400 millions gold) excluding interest, which, as the *Frankfurter Zeitung* points out, it is no more proper to include on the French side than on the German. The German statement, commenting on this figure, points out that the French expert, M. Pupin, calculated the losses through destruction at 8-12 milliards of marks (£400 millions to £600 millions),

and Mr Keynes at 10 milliards of marks (£500 millions). Without any imputation of bad faith it is possible to go some way towards reconciling these conflicting figures with the observation that the cost of replacing the devastated property was very greatly and extravagantly inflated by the shortage, and consequent high cost, of building labour and materials in France after the war; nevertheless, the discrepancy remains very great and might be probed further.

In view of the enormous differences in the estimates, an attempt at a comparison between France's receipts from reparations and her expenditure is hardly likely to be conclusive. An estimate of her pre-Dawes receipts would require a decision on the valuation, not merely of Germany's total payments, but of every item contained therein, in order that the division among the creditor Powers might be ascertained. M. Flandin stated that France had received from Germany 8,151 million gold marks (£400 millions gold), or, after deducting costs of armies of occupation and other charges, 5,165 million gold marks net (£250 millions.) These figures were based on an estimate of 21,413 million gold marks (£1,050 millions) for the total reparation payments of Germany, which would leave approximately 11 milliards of marks (£550 millions) for pre-Dawes payments, including cessions of territory, etc. This, it will be seen, is somewhat in defect of the American estimate quoted above. A table recently published in these columns* credited France with receipts of £273 millions net from reparations, but it was based on a very conservative estimate of total German payments, which allowed only about £130 millions for pre-Dawes payments and which excluded ceded properties altogether. France's receipts under the Dawes and Young Plans have totalled roughly £270 millions gross, and about £240 millions net, against which she has made net war debt payments amounting to about £110 millions. The question of the relation between her reparation receipts and restoration expenditure, therefore, turns entirely on the valuation of Germany's payments before 1924, a matter upon which, as we have shown, it is impossible to make at this stage any final or impartial judgment. The very inconclusiveness of this article is sound reason for urging that past scores be forgotten and attention concentrated on the pressing needs of the present and the opportunities and dangers of the future.

THE SLUMP IN SHIPBUILDING.

THE annual summary of the mercantile shipbuilding of the world in 1931, issued this week by *Lloyd's Register*, completes the tale of profound depression, whose essential features had already been indicated by past quarterly returns of tonnage launched and work begun. During the past year the output of British yards amounted to 502,487 tons, comprising 98 steamers of 269,954 tons, 37 motor-ships of 227,910 tons, and 13 barges of 4,623 tons. This production represents a decrease of 976,076 tons as compared with that for 1930, and is the lowest recorded since the first issue in 1888 of *Lloyd's Register* shipbuilding returns. The world output in 1931 amounted to 1,617,115 tons, a decrease of 1,272,357 tons as compared with 1930. The figure for the past year is the lowest recorded since 1909, with the single exception of the war year 1915. In the following table tonnage output in Great Britain and in foreign countries is compared with the average figures for 1909-13, 1922-25 and 1926-29:—

TONNAGE OUTPUT.							
Period.	Tons launched. (000's omitted.)			British Per- centage.	Output as Percentage of 1909-13.		
	U.K.	Abroad.	World.		British.	Foreign.	World.
Average, 1909-13	1,522	967	2,489	61	100	100	100
" 1922-25	1,050	1,087	2,137	49	69	112	86
" 1926-29	1,208	1,155	2,363	51	79	119	95
1929	1,523	1,270	2,793	54.5	100	131	108
1930	1,478	1,411	2,889	51	97	146	116
1931	502	1,115	1,617	31	33	115	65

* *Germany's Capacity to Pay*. By H. G. Moulton and C. E. McGuire (for the Institute of Economics).

* *Economist*: Reparations and War Debts Supplement, January 23, 1932, p. 12.

A disquieting feature disclosed by the foregoing figures is the recent progressive decline in the British percentage of total world output. In 1931, whereas the British production was less than one-third of the pre-war average, foreign output still exceeded the 1909-13 figure by 15 per cent. In this connection it is evident that the effect of subsidies given to the shipbuilding industries of a number for foreign countries has been to delay in their case the full effects of the slump. In this country, though the depression in general shipbuilding began in the autumn of 1929, the placing of large contracts for tanker tonnage kept up the figure of "commencements" to a relatively satisfactory level until the second quarter of 1930, after which the decline was precipitate; and in the fourth quarter of 1930 work begun in the United Kingdom amounted to only 132,000 tons, as compared with 289,000 tons begun abroad. Quarterly tonnages of work begun in 1931 are shown in the following table, in which the figures are also included of work in hand at the end of the past three years:—

	THOUSAND TONS.							
	Work in Hand, December 31.			Work Commenced in 1931.				
	1929.	1930.	1931.	1st qr.	2nd qr.	3rd qr.	4th qr.	
United Kingdom...	1,560	909	401	33	23	39	105	
Germany	253	218	104	3	26	29	...	
Italy	178	180	178	14	29	...	32	
France	167	174	164	69	7	13	3	
Holland	232	160	68	12	2	22	9	
Denmark	105	108	52	33	17	12	10	
Japan	184	86	53	4	11	9	39	
Sweden	98	146	95	1	17	32	13	
U.S.A.	179	232	208	46	89	2	10	
Total abroad	1,551	1,417	1,003	209	211	134	120	

It would be premature as yet to infer that the slight increase during the past two quarters in the volume of work begun in British yards is indicative of any real recovery, for the contracts placed consist mainly of small vessels chiefly for replacement purposes. The marked falling-off in new work begun abroad since the second quarter of the year suggests that, though subsidised contracts continued to be placed long after British shipowners had retired from the new tonnage market, the shipping depression has now reached a point at which even foreign shipbuilders can expect nothing but almost complete paralysis of their activities.

For, regarded from the angle of the shipowner, the past year was marked not only by a serious shrinkage in revenue from passenger traffic, illustrated by drastic cancellations of liner sailings, but also by a grave curtailment of the staple cargoes on which merchant shipping depends. It is true that in 1931 the average level of whole cargo freights, as measured by the *Economist* index number, showed a fractional improvement as compared with the previous year, the annual mean figure of the index number (1898-1913 = 100) working out at 92.6, against 92.0 in 1930, and 112.6 in 1929; but this stability at the low level established in the first year of the present great depression was achieved only as a result of enormous curtailment, through "laying up," of the available supply of tonnage. At the beginning of January, 1931, the idle tonnage laid up at British ports amounted to 1.59 million net tons. By July 1st the total had mounted to 2.04 millions, and though, after reaching a peak of 2.09 millions on October 1st, the figure fell slightly by the end of the year to 1.97 millions, the fact that some 4½ million tons of deadweight capacity were still out of commission at the end of last year provides eloquent testimony to the loss of cargo traffic.

If further evidence were required of the decline in the volume of international trade, it is to be found in the traffic returns of the Suez Canal published recently in the *Bulletin Décadaire du Canal de Suez*. The following table shows the net tonnage of vessels which passed through the Canal during recent years:—

Year.	Net Tonnage.	Percentage Change on Previous Year.
1929	33,466,000	+ 4.7
1930	31,669,000	- 5.4
1931	30,028,000	- 5.2

The shrinkage in the volume of trade has been even greater than would appear from these figures. The net tonnage of vessels in ballast actually increased from 2,829,000 to 3,169,000. On the other hand, the net tonnage of laden vessels, at 26,859,000, shows a decrease of 1,981,000, or 6.9 per cent. The most disquieting feature is the fact that the pace of the decline in traffic has quickened during the second half of the past year. During the January-June period of 1931 traffic declined by 3.2 per cent. as compared with the corresponding half-year in 1930, while the returns for the six months ended in December, 1931, show a fall of 7.3 per cent.

Until there are indications of a reversal in the falling tendency of sea-borne trade, it would be idle for shipbuilders to expect that shipowners will be inclined to undertake commitments in the way of new tonnage beyond such contracts for replacement as cannot be postponed if the efficiency of regular services and the goodwill of the lines engaged in them are to be maintained.

ECONOMIC PROGRESS OF RUSSIA.

(BY A CORRESPONDENT.)

THE conclusion, on December 31st last, of the third complete year of the Piatiletka, or Five Year Plan of Soviet economic development, marks a further stage in the industrial and agricultural metamorphosis of Russia. It will be recalled that the Plan was inaugurated on October 1, 1928, and that the estimates were revised in an upward direction at the end of the first year. The three months ended December 31, 1930, were subsequently constituted a separate "shock" quarter, in order that the second complete year of the Plan might coincide with the calendar year and be more amenable to harvest considerations. During the third year, a demand arose in official circles for the achievement of the "Five Year Plan in Four Years," and the slogan has since been popularised throughout the territory of the U.S.S.R. Soviet Russia is thus entering upon the fourth and, it is hoped, final stage of a much accelerated programme. Towards the end of December, members of the Central Executive Committee, which is the Soviet equivalent of Parliament, forgathered at Moscow to hear from responsible Ministers an account of the achievements and shortcomings of the past year, and an outline of plans for the next.

The impossibility of transforming a predominantly agricultural into a predominantly industrial country in so short a space of time as that envisaged by the Five Year Plan is emphasised by the fact that while in 1913 Russian industry accounted for only 27.4 per cent. of the national income, the corresponding figure in 1931, despite the immense increase in industrial output, is still not more than 35 per cent. The concrete achievements of the first three years of the Plan, on the industrial side, are indicated by an annual increase in production of 21.24 per cent., though in 1931, particularly, the advance of roughly 21 per cent. was considerably short of the projected figure. Coal output amounted to 57.6 million tons, against 45.7 million tons in the previous complete year. Pig iron output was 4.90 million tons, as compared with 4.97 million tons in 1929-30. Steel production, at 5.85 million tons compared with 5.55 million tons, while crude oil production totalled 21.7 million tons, against 17.08 million tons in 1929-30. Copper output, in tons, reached 53,000; zinc 11,400; and lead 19,600. No fewer than 55,000 tractors were produced on Russian soil. In the case of oil, tractors and machinery, the five-year estimates have already been exceeded. In the case of pig iron and steel, estimates were not only over-sanguine, but production fell below the output for last year.

Industrial production as a whole was planned to attain a value, at 1926-7 prices, of 30,455 million roubles by the end of the Piatiletka, and 70 per cent. of this total was actually attained in 1931. During the past year, considerable difficulties impeded the realisation of the coal production plan, particularly in the Donetz basin, where unsatisfactory living conditions induced an "unplanned" mobility of labour. Strenuous efforts will evidently be

required to produce even a reasonable percentage of the 90-million tons projected for 1932, while even if that figure is achieved, the coalfields, for technical reasons, will still be producing at less than 50 per cent. of capacity. The problem of coal production is clearly of major importance, and extensive measures are being adopted to overcome the chief obstacles to progress, some 13½ million roubles having been allocated in the coming year for the construction of new pits, and 810 million roubles for the industry as a whole.

Estimates of industrial output for 1932 appear to be on a somewhat optimistic scale. They envisage the production of 9 million tons of pig iron, 9.4 million tons of steel, 100,000 tons of copper, 28,700 tons of zinc, and 28 million tons of oil. New branches of industry are to be opened up for the production, *inter alia*, of synthetic rubber, aluminium, and potassium. The iron and steel works which are in course of construction at Magneto-gorsk, Kuznetsk, and Zaporozhe are to be completed in 1932, while no less than 1,800 million roubles are to be invested in the iron and steel industry.

A feature of the fourth year of the Plan is the additional attention to be devoted to the lighter industries. Food production, it is estimated, will advance by 36.3 per cent., sugar by 55.9 per cent., fish by 33 per cent., canned goods by 92.4 per cent., and cotton goods by 23.8 per cent. Though not a little success has been achieved in the matter of increased output from industry, the measures taken to bring about a reduction in the cost of production have been less fruitful, costs having actually increased by 2 per cent. in the past year, against a planned decrease of 7.6 per cent. It is still hoped, however, that a decrease in costs of 18 per cent. will be registered for the four years as a whole—this being a little over half of the contemplated fall.

As regards agriculture, the policy of "collectivising" individual peasant farms for co-operative production and the establishment of "sovhozi" or State farms has been pursued with vigour. Whereas in 1928, when the scheme was originated, only 1.7 per cent. of the individual holdings and 2 per cent. of the total sown area were "socialised," during the past year 62.2 per cent. of the farms and 79 per cent. of the area were brought under collective control. During 1932 it is anticipated that between 72 per cent. and 75 per cent. of all peasant farms will be incorporated in the "socialised sector," while the total area under cultivation should increase from 137½ million hectares to 141 million hectares. Even then the grain area will constitute only 95 per cent. of the total planned, though the area under "technical" crops will be 133 per cent. of the Piatiletka estimate. This year the sum of 4,360 million roubles is to be spent on agricultural development, against 3,600 million roubles in 1931. Determined efforts are to be made to increase the productivity of the sown area rather than its extent, and to provide improved equipment for the State and collective farms. Special attention is to be devoted to the breeding of stock, the shortage of which is now regarded as one of the most serious defects in the agricultural side of the Plan.

One of the major difficulties of 1931 was the inability of the transport system to cope with the increase in the amount of goods to be transported. Whereas in 1913 the Russian railways were required to carry little more than 60 million tons of industrial goods, during the first half of 1931 the amount carried totalled 115 million tons. During the forthcoming year the railways are expected to have to deal with 28 per cent. more goods than in 1931, and, though the process of modernising and re-equipping the transport system is proceeding as rapidly as resources and technical ability permit, the inadequacy of existing facilities is a factor militating against the Piatiletka's complete fulfilment.

While it is impossible accurately to estimate the extent to which currency has recently been issued for the purpose of financing the Plan, the latest returns suggest that emissions may have been made to a greater extent than that justified by the increase in the volume of consumers' goods. Currency in circulation on November 1st last amounted to 5,181.7 million roubles, being 869.9 million roubles, or some 20 per cent., more than the total for

November 1, 1930. The difficulties which were experienced at the end of 1930 regarding small change were apparently not repeated last year, while the Government was less noticeably in arrears with its wage payments. The aggregate national income is officially estimated to have increased in 1931 by 13.2 per cent. above the 35 milliard roubles of 1930. The national budget, which showed a revenue of 12.8 milliard roubles in 1930, totalled 20.4 milliard roubles in 1931, and should reach 27.4 milliard roubles in the current year.

With the advance in industrial output, some effort was apparently made to pass on a greater part of the increased wealth to the consuming masses. Average monthly earnings, which in 1929 were only 89 roubles, had increased by last year to 146 roubles, while working hours were curtailed in a large number of industries. This year, though there is to be no slackening in the tempo of industrial development, it is hoped that the seven-hour day will be completely established. It is almost impossible to arrive at reliable estimates as to the "real" income of the Russian workers in comparison with previous years. The existence of queues for commodities may be regarded as a sign, in a "controlled" economy, of the presence of nominal purchasing power in exchange for which goods are not available; and the fact that a part at least of the deficit on the planned estimates has been made good by the issue of State loans, which serve to recall a fraction of the excessive currency issued in the form of wages, may perhaps be construed as a measure to offset inflation. In the circumstances, the test of "real" improvement in living standards will be the Plan's ability to achieve the projected increase in 1932 of 20.50 per cent. in available supplies of potatoes, eggs, and tobacco, and of 50-100 per cent. in the provision of meat and butter.

If the almost astronomical estimates of economic activity for 1932 are to be realised, it does not seem that in the final drive to complete the Plan in four years there is any room for a deceleration of pace or a lessening of pressure. Stalin has his finger on the pulse of the workers, and mass enthusiasm will probably withstand another year of intensive effort without cracking. Even so, the objective difficulties in the way of accomplishing so ambitious a programme are immense. Many of the major problems which have obstructed Soviet development in the past year still remain—the problem of adequate output in the "heavy" industries, the problem of transport, the problem of "quality" as opposed to "quantity," the problem of the shortage of skilled technicians, the problem of import requirements, and the problem of correlating without waste the various branches of the national economy. On balance, it seems probable that the planned estimates for 1932 will prove an incentive to effort rather than an achievable goal. But that is not to say that a very substantial proportion of the Plan will not be realised or that the achievements to date of the Soviet industrial revolution have not made history.

PROTECTION IN INSURANCE.

MANY years ago, before the world's affairs were managed by men of that high standard of intelligence to which those in authority over us have now attained, two hamlets of moderate populations, and lying close to each other, were served by a single fire engine. One of the hamlets was called Colney and the other Hatch. The fire engine belonged to Hatch, and whenever a fire broke out in Colney, the Hatch brigade would man its engine and hurry to the outbreak, charging to the owner of the burning property an appropriate fee as extinguishing expenses; and very gratifying to the local pride of Hatch it was to see the magnificent engine speeding across the frontier that separated the hamlets to put out a fire in the neighbours' territory. But as this plan was gratifying to Hatch so was it also humiliating to Colney, and as time went by some of the Practical Business Men of Colney, the kind of men who knew what two and two made when added together, began to say among themselves, in their terse practical phraseology, that this sort of thing would not do; that Colney should be protected, or, as some said, safeguarded, against the intrusion of the Hatch brigade; and that, if the local council of Colney would not take steps

to stop it, then the local council would have to be changed and other men, more of the Practical Business Man type, should be elected to the council in place of the present members.

Under the spur of these complaints and menaces one member of the council rose from his place in the council chamber and moved a resolution in favour of reform. Having been well armed with statistics, he pointed out that there had lately been an abnormal increase in the number of the fire brigade's visits, and, as the whole town knew, every visit from the Hatch brigade was followed by an outflow of good Colney money to meet the extinguishing expenses due. Why should Hatch put out Colney fires, which could equally well be put out by Colney itself? Why should Colney be made the dumping ground of other brigades' activities? How long would the men of Colney take it lying down? It might, he said, be argued that Colney had no fire engine of its own. That was true. But so far from being an argument against safeguarding, it was strongly in its favour, for if the Hatch fire engine had to pay a fine of, say, 50 per cent. of its extinguishing expenses before it was permitted to cross the Colney frontier not only would it contribute to the revenue of Colney, but it would be kept out altogether, and a new engine would be built in Colney, the making of which would give employment to the Colney coach builder and the Colney wheelwright and the Colney ironfoundry.

The plan was supported by a series of thoughtful articles in the Colney Press, proving that efficiency and economy would be obtained only by excluding the experienced Hatch brigade; but the most valuable support came from within the council itself, for by this time there were on the council many Practical Business Men who had come to see the importance—nay, the patriotic duty—of getting themselves elected to the council so as, in a sense, to be on the spot. And, in particular, there had been elected the coach builder and the wheelwright and the ironfounder, and others who, though not actively engaged, had embarked their capital in these and kindred industries. So the scheme prospered. The Hatch engine was subjected to the revenue-raising safeguarding fine of 50 per cent. per call. The new engine was begun, and the citizens of Colney, as they watched it grow, said that this was, indeed, a good thing, adding with scorn that any one who thought otherwise was a theorist or, as one citizen wittily said, a shibboleth. The plan was, in fact, a great success. True, there was not work for two engines, and neither the Colney nor the Hatch engine had enough to do. True, the Colney brigade proved somewhat less efficient than its experienced neighbour, and both the fire wastage and the insurance rates rose in Colney by some 35 per cent. True, the scheme put 6d. in the £ on to the Colney rates. But, then, the loss of the Colney extinguishing expenses put a halfpenny on to the Hatch rates, and this was very gratifying to the local pride of Colney.

We recall this half-forgotten episode, not, of course, because it has any bearing on our own domestic politics, but because it seems appropriate to a form of protection which has become during the last few years increasingly popular with other Governments less enlightened than our own—the protection of the home insurance market from the competition of outside companies and underwriters. This protection starts, as most forms of protection do, under an alias. It is, to begin with, an attempt to protect not the local insurance office from the strength of outside companies, but the local policyholder from the weakness of unsound insurers. These outsiders, it is argued, come to our shores and give cover to our nationals against fire and other hazards; but what guarantee have we that when the time comes to pay the claims they will not fold their tents like the Arab and as silently steal away, or, in other words, welsh? To safeguard our local property owners from this danger we must see to it that anyone from abroad who accepts insurance business here must deposit a sum of money substantial enough to meet his claims in case of this unfortunate contingency. So the system of deposits is started, and, once started, it

develops swiftly and easily, under the pressure of home interests, from a measure of protection for the policyholder into a measure of strong protection for the local companies. Not less easily it develops, under the pressure of hard times and budget deficits, into an engine for the production of revenue, so that the foreigner is called upon to pay for his footing by contributing on a specially heavy scale to the taxes of the country in which he proposes to issue policies. A few years ago it was estimated that a British insurance office which proposed to transact fire business in every country of the world, in addition to paying heavy taxes, would tie up in deposits a sum of £500,000, and that if, apart from fire, it accepted also marine and accident risks, the £500,000 would have to be increased to £1,000,000, the whole of which must be deducted from its available assets and frozen in cold storage.

Since that estimate was made, the movement towards a more complete protection has advanced apace. In Canada fresh taxation is proposed, and only a dispute between the authorities of the Dominion and the authorities of the Provinces has prevented its imposition. In the Argentine a new decree has recently been promulgated, which will apparently increase by more than 100 per cent. the deposits demanded and will force a further compulsory investment by insurance companies of 19,000,000 pesos, the proceeds to be employed in meeting the first instalment of the Baring bills, so that the foreign insurers will supply the sinking fund for the redemption of the national debt. Germany has special regulations to protect her currency by placing an embargo on insurances placed outside the country. Italy for some years has practically prohibited her nationals from sending their insurances abroad, except in the way of re-insurance. In Latvia, no property may be insured against fire except with a Latvian insurance company, and in every case the Latvian Government must have a share of the re-insurance. In Spain, the law forbids insurance with foreign companies, and all the contracting parties to such an insurance are guilty of a punishable offence. In Turkey, foreign insurance interests have practically been killed. And so forth throughout the civilised world.

The folly of economic nationalism is nowhere more apparent than in these restrictions on insurance, for the essence of insurance is the spreading of risks. No country, however great or rich or powerful, can afford to say that its risks shall not be spread beyond its own frontiers, and the only sane course is to allow the individuals to make their own choice and place their risks where their judgment leads them. The checks and restrictions, which are imposed under the plea of safeguarding the nationals against weak insurance interests, must ultimately weaken the cover on which the nationals can rely, for they shut them off from the advantage of covering with strong companies, if they happen to be foreign, and drive them to weaker companies because they are native. Experience and skill acquired abroad are turned back at the frontier, and the cost of insurance increases behind the protective wall. Assets which should be liquid and available for international employment are commandeered and either sterilised in deposits or actually used to buttress up the national finances. In increased costs, in impaired efficiency, and in weakened security the community and the consumer foot the bill.

Notes of the Week.

Britain and Reparations.—The considered statement of British Government policy in regard to reparations and war debts, which Mr Chamberlain made in the House of Commons on Tuesday, should put an end to all uncertainty regarding the attitude of this country on a vital issue. Of recent weeks we have been exposed to foreign criticism for seeming to "blow hot and cold"; and there was perhaps sufficient apparent divergence between the utterances of the Prime Minister and the Foreign Secretary to warrant suggestions abroad that there was some dubiety in our position. This dubiety the Chancellor has now dispelled. The policy of His Majesty's Government, he announced, is that a comprehensive and permanent settlement of the reparations questions must be reached as soon as possible, and that this aim could best be realised by means of a general cancellation of reparations and war debts. He went on to say:—

As soon as the report of the Basle experts was received at Christmas we urged the necessity for the Governments to come together immediately to conclude a permanent settlement of the reparation question on the basis of a frank recognition of the facts established in the unanimous report of the experts. But it became apparent that the present juncture was not favourable for a settlement on such a basis. We accordingly expressed our willingness to agree to the postponement of the inter-Governmental Conference till May or June, when we hoped that conditions might be more favourable for a permanent settlement. We also suggested that some provisional arrangement should be made covering the year commencing July 1st next, in case the Conference could not be concluded before June 30th, when the Hoover moratorium will expire. An interchange of views on the subject has taken place with the French Government, but as it has not hitherto been found possible to secure full agreement in advance among the Governments chiefly concerned on the various arrangements which would be involved, it may prove to be the best course to reserve the whole question for settlement by the Conference when it meets.

Mr Chamberlain concluded with a reminder to Germany that the legal obligations laid down by the Hague Agreement cannot be annulled by unilateral action on Germany's part, to which he added an emphatic statement that, as the Report of the Basle Committee showed, Germany is not in a position to resume the fulfilment of the Hague obligations. Whether or not our acquiescence in the postponement of the Lausanne Conference until so much later in the year will be justified by the event, cannot readily be foretold. Much will depend on the success with which possibilities of agreement are explored in the meantime. Having now announced unequivocally our advocacy of the "clean slate," the next step is to see what response to this *démarche* is made by France. If the French reply be unfavourable, and if the British Government fails to find a *via media*, acceptable to Germany, between cancellation and the opposite, and economically quite impracticable, extreme of fulfilment, then the course of unilateral action which we shall be compelled to follow is clearly indicated by Mr Chamberlain's statement.

The New Ambassador.—The appointment of Mr Andrew Mellon as successor to General Dawes at the London Embassy of the United States is a significant move which will be warmly welcomed on this side of the Atlantic. In announcing the appointment, President Hoover observed that "the critical situation facing all countries as regards international relations, and the manifold economic and other problems demanding a wise solution in our national interests, call for experience and judgment of the highest order." Satisfaction at Mr Mellon's coming to London will be occasioned not merely, or primarily, by the fact of his known sympathy towards this country, but because it will be of the greatest advantage to the mutual interests both of the United States and Great Britain that an Ambassador of his breadth of view and grasp of financial detail should be in Europe at a juncture when the problem of reparations and war debts is likely to occupy the centre of the international stage.

The Russo-Polish Pact.—Simultaneous Russo-Polish and Russo-Roumanian negotiations for non-aggressive pacts, which took place last month, resulted in the breakdown of the Russo-Roumanian pourparlers at Riga on January 26th and the successful conclusion of a Russo-Polish agreement at Moscow on the preceding day. The Russians and Roumanians fell out, as they have fallen out several times before, over Bessarabia, a *ci-devant* province of the Russian Empire which was occupied and annexed by Roumania at the end of the war without Russian assent. Roumania is not prepared to relinquish her acquisition, the majority of the population of Bessarabia being Roumanians. On the other hand, the Soviet Government have always been very stiff in standing on their rights in this question, and refusing to accept the accomplished fact. The present breakdown need not be taken too tragically, since Roumania and the U.S.S.R. are both bound by the Kellogg Pact. It may be remembered that, before the Pact came into force generally, a special protocol was signed on Russian initiative by the Soviet Government and its European neighbours which brought the Pact into operation, in advance, as between these countries. Poland being one of the countries in question, it follows that the new Russo-Polish instrument does little more than confirm the already existing Kellogg Pact relation between the two parties. Nevertheless, a gesture of friendship between Poland and Russia on the eve of the Disarmament Conference is at least a small auspicious event to set against the hideous blow that has been dealt to the Conference by Japanese conduct in the Far East. Moreover, it cuts the ground from under the feet of those French "die-hards" who argue that France must avoid a Franco-Russian rapprochement for fear of arousing misgivings in Poland, France's indispensable ally. In holding aloof from Russia, the French cannot plausibly out-Pole the Poles themselves. As for the terms of the new Russo-Polish instrument, they follow the common form of post-war non-aggressive pacts of the more thorough-going type. The parties not only renounce recourse to war in their mutual relations and agree to abstain from non-warlike aggressive activities against each other. They also undertake not to help a third Power in an attack on one of the signatories, and not to take part in any international understanding openly hostile to the other country. This is all to the good. Let us take comfort where we can find it.

Fresh Trouble in Kashmir.—In the autumn, it will be remembered, the Government of India's troubles were aggravated by disturbances in the State of Kashmir. Now that the Round Table Conference Committees are starting work in India under difficulties enough, the Government has Kashmir on its shoulders once again. The underlying ground of these upheavals in Kashmir is always the same. A predominantly Muslim population is living under Hindu rule. In the earlier disturbances in the Jammu district, the communal issue was predominant. In the present disturbances in the Mirpur district, the communal issue is complicated by fiscal grievances. The peasantry complain that the land tax has been unfairly assessed and is being dishonestly collected by the State authorities. There is no reason to believe that the Kashmir administration is any better than it is painted by its indignant subjects; and the awkward fact for the Government of India is that the Mirpur district, like the Jammu district, lies close to the Punjab boundary. The head waters of the Jhelum Canal (one of the principal irrigation arteries of the Punjab) take off here. And, if the salutary flow of waters from Mirpur into the Punjab is in danger of being interrupted, there is, at least, an equal danger that the embarrassing flow of Muslim demonstrators in the other direction, from the Punjab into Kashmir, may start again. For these several reasons, British troops were once more sent into Kashmir territory on January 29th. It is to be hoped that their arrival will have as prompt and powerful a pacificatory effect this time as before. The Government of India certainly cannot afford to let these disorders in Kashmir go on; for, as it is, Punjabi opinion has been excited by the recent unrest on the North-West Frontier. But how is the chronic misrule in Kashmir to

be cured? A thorough cure could hardly be effected without the British authorities temporarily taking over the Maharajah's administration; and it is feared that this might appear to create a precedent unpalatable to other ruling princes. May we not, however assume that the ruling princes would be wise enough to see that this is a lesser evil, from their point of view, compared with the odium which will inevitably fall upon the Indian States as a whole if one of their number becomes a permanent scandal? No Government in India, British or Indian, to-day can afford to tolerate misgovernment in any part of the sub-continent.

The Change of Government in Austria.—On January 27th the Austrian Chancellor, Dr. Buresch, resigned; and on the 29th he succeeded in forming a new Cabinet. But the change goes deeper than the mere reconstruction which it appears to be; and the difference is not for the better. The most striking change is the elimination of the late Foreign Minister, on the implications of whose dismissal we comment in a leading article. The internal effects of Dr. Schober's departure in Austria are unlikely to be favourable; for the Pan-German support of the Government in Parliament will presumably cease with the reconstruction of the Cabinet; and the result is that Dr. Buresch's new Government can only count upon a minority of votes in the House (66 Christian-Socialist votes and nine Agrarian votes out of a total membership of 165). Presumably, then, the new Austrian Government will be weak, at a time when a strong and representative Government is particularly desirable; and it will not be strengthened in the long run by the inclusion of Christian-Socialists of a reactionary complexion (e.g., the new Minister of Justice, Dr. Schuschnigg). There are rumours that some of these reactionaries meditate something like a *coup d'état*, and that, if they do play that game, the Social Democrats, who have been lying low during the Cabinet reconstruction negotiations, may resort to "direct action" on their part. The mere circulation of such rumours is in itself disquieting.

Fiscal Casuistries.—As an essay in sophistry, we commend Mr Hore-Belisha's defence in the Commons on Wednesday of the Abnormal Importations Act. In December, he contended, the duties "had saved from the market"—whatever this may mean—over five million sterling worth of imported goods, and the total fall of manufactured imports in that month had been no less than £10 millions. Exports, however, had not declined, the cost of living had not increased, and there had been a reduction of unemployment. He therefore adjured Free Traders to admit that "an ounce of practice is worth a ton of principle," on the ground that this "controlled experiment in the restriction of imports" had not produced any of the ill-effects which on Free Trade theory should have accrued. It is germane, we suggest, to point out that no one but a fool would suppose that a reduction of trade in one direction would be simultaneously paralleled by a contraction in the other (conclusions drawn on the experience of one month are palpably valueless); that such a slight improvement as occurred in December in the volume of employment, in so far as it was not merely a normal seasonal rise, was due to the stimulus to British manufacturers afforded by the depreciation of sterling; and that the absence, so far, of any appreciable price rise in consumers' goods has been due (a) to liquidation of bankrupt stocks, and (b) to the general (and economically questionable) policy of distributors in refraining from adjusting prices to full replacement values. Mr Hore-Belisha's dialectic may serve to tickle the palates of Government supporters hungry for the spoils of higher and higher tariff protection, but considered in relation to a world economic system which is being paralysed by the fiscal insanity which he appears to advocate, it is an insult to the intelligence.

The Strangulation of Trade.—Recent events underline the warning of the Economic Committee of the League of Nations against the evil consequences of the growing interference with the flow of international trade. Hardly

Westminster Bank Leaflets

For the benefit of that large section of the public which finds itself bewildered by business language, the Westminster Bank issues from time to time simply worded explanations of various ways in which it is able and glad to be of use to its customers. Amongst its publications are the following: **5 Points before Travelling**, notes on the Protection of Travellers from Loss. **5 Thirty-nine Advantages of an Account with the Bank**. **5 The Saving Habit**, an outline of the Home Safe system. **5 Safeguards for Travellers**, a warning against carrying foreign notes. **5 Securities**, their Custody and Supervision. **5 Wills, Trusts, and Settlements**, the Bank as an Executor. Copies may be had on asking at almost any branch, or by addressing a postcard to the Secretary, Westminster Bank Limited

41 LOTHBURY, LONDON, E.C.2

a day passes without the imposition in some country of new restrictions in the form of foreign exchange control, increased tariffs, the prohibition of certain classes of imports or the limitation of foreign purchases by licence. Among the latest additions to the list of these countries is Denmark. According to the law passed by Parliament on January 29th, the National Bank will have complete control of foreign exchange transactions and of foreign trade. It will be within the power of the Minister of Commerce to demand that all credits and investments, including interest due to Danish nationals from abroad, shall be handed over to a special department of the National Bank. Compensation for foreign exchange will be made according to quotations at the Danish Stock Exchange and for investments at the latest quotation converted into Danish currency. All importers will require a certificate from the National Bank for each transaction. Such permits will only be granted if there is no objection to the importation for reasons of exchange. Similar, but slightly less drastic measures, have been taken by Czechoslovakia, where a Commission has been set up by the Minister of Finance to regulate the importation of a large number of commodities. Without the permission of this body the National Bank of Czechoslovakia will be prohibited from handing over foreign exchange for the purchase of any commodity included in this list. Greek importers have just been informed that, in future, every application to the Bank of Greece has to be accompanied by a certificate from the competent Chamber of Commerce in Greece. These certificates can only be issued if the applicant trades in the goods ordered, if he does not possess stocks out of proportion to his ordinary trading, if the goods are ordered at their normal season, and, lastly, if large stocks do not exist in the country. The "International Starvation Club" had, indeed, a swelling membership even before the British Government elected itself to the chairmanship.

The Means Test.—One of the mandates with which the National Government was returned last autumn was to check the exploitation of the national unemployment insurance system. That it is pursuing this task steadily in one direction at least is proved by the fact that of 1,629,009 determinations made up to January 16th by the public assistance authorities, under the Order-in-Council of October 7th, which requires applicants for transitional benefit to prove their need of assistance, in 255,949 cases it was held that the applicants did not need transitional payment, in 570,721 applications part payments were determined, and in 802,339 instances the determinations were at the rate of full benefit. The Minister of Labour who gave these figures to the House last Tuesday, stated that the original estimate of the saving to be thus effected, at the rate of £10,000,000 a year, would probably be realised. Meanwhile, a deputation representing the

General Council of the Trades Union Congress have presented a memorandum to the Minister of Labour in which they objected to the inclusion of a means test in an insurance system, to the administration of the test by the public assistance authorities, to the discrepancies caused by the varying standards adopted in different districts, and to the inclusion of trade union benefit in the calculation of applicants' incomes. With one of these complaints there is much ground for sympathy: it is regrettable, and to a large extent unnecessary, that there should be such wide scope for local variation in the treatment of similar cases. It should surely be possible, though it would require legislation, to lay down certain general regulations to which all local authorities would have to conform in setting their standards of what constitutes "necessity." The other complaints are an illustration, the more distressing because so completely unconscious, of the thorough confusion in the public mind between the principles of insurance and of public assistance, and of the destruction which that confusion has wrought in the once general reluctance to live at other people's expense. A person who insures against any contingency whatever has every right to be indemnified in the event of that contingency, even if he be a millionaire. But successive modifications of the unemployment insurance system have rendered transitional benefit less and less of an insurance payment and more and more of a free gift justified only by the acute need of the recipient. The fact that the possession of alternative resources by some of the unemployed who have exhausted their right to benefit may do them great credit is no more a reason for paying them transitional benefit than the fact that a man has maintained his health against adverse circumstances by means of a highly creditable way of living is a reason for his being allowed a free holiday in a convalescent home. We should like, as a nation, to reward thrift and resourcefulness; unhappily the funds at our disposal no more than suffice for the relief of necessity, and to that end, therefore, they must be devoted.

The Provincial Newspaper Truce.—On Friday of last week a fresh concordat appears to have been reached between the Berry and Rothermere newspaper groups in the provincial area. Lord Rothermere retires from Newcastle, whose *Evening World* is merged into the *Newcastle Evening Chronicle*, owned by the "Berry" Allied Northern Newspapers, Limited. On the other hand, the *Derby Daily Express*, which Allied Northern Newspapers, Limited, controlled, is incorporated in the *Derby Daily Telegraph*, one of Lord Rothermere's provincial organs; and Northcliffe Newspapers, Limited, at Bristol, absorb the "Allied" *Evening Times and Echo*. In the last-named city another paper owned by the Allied group, the *Bristol Times and Mirror*, has also been amalgamated with the *Western Daily Press*, owned by Walter Reid and Son, Limited. The *Times and Mirror* was a morning newspaper, and its extinction is presumably to be regarded as an inducement to the owners of the *Western Daily Press* to leave Lord Rothermere unchallenged during the evening hours at Bristol. This armistice in the provincial newspaper war has been brought about, it may be imagined, by the pressure of economic attrition on both sides. Unhappily, the war is not without its casualties in the unemployment of many innocent victims of newspaper group rivalries. There is something not a little revolting in this game of using newspapers as pawns in a financial struggle.

Cotton Trade Labour Crisis.—At the end of last week, writes our Manchester correspondent, there was a distinct danger of an immediate strike at all the cotton mills in Burnley, but at the last moment, largely owing to the conciliatory methods of Mr John Grey, the employers' chairman, the crisis was averted, and the representatives of the operatives agreed to suspend the strike for a week in order to allow a further period for negotiations between the employers and the trade union officials on the "more looms" question. The leaders of the operatives at Burnley have recently been angered by the fact that more

firms have made special arrangements with their work-people as to the "more looms" system, and some employers have been able to obtain concessions with regard to hours and wages which are a violation of agreements entered into several years back. There was a long conference, lasting over five hours, in Manchester last Friday, between representatives of the Cotton Spinners' and Manufacturers' Association, the Burnley Cotton Spinners' and Manufacturers' Association and the Central Board of the Northern Counties Textile Trades Federation. The decision to strike at once in the Burnley district was withdrawn on the employers giving an undertaking that they would strongly urge that no more firms in their Association should change on to a "more looms to weaver system" or reduce wages or increase hours of labour. During this week there have been conferences almost from day to day, at which endeavours have been made to arrange working conditions and wages. Progress has been made, and it is probable that, before the end of the week, some agreement will have been reached. The possibility, however, of a strike at Burnley from Monday next has had a disorganising effect upon the Manchester market, and many manufacturers have been afraid to sell and guarantee delivery

Shipping Freights.—The average level of open market "tramp" shipping freights, as measured by the *Economist* index number, fell by over 3 per cent. during January, and is now below the average level of last year:—

AVERAGE 1898-1913=100.					
	Average, 1913.	January, 1931.	November, 1931.	December, 1931.	January, 1932.
European Waters	110.0	88.0	91.1	91.0	88.8
North America.....	113.1	90.1	92.0	90.4	85.2
South America.....	123.4	90.1	85.0	85.0	88.2
India.....	106.3	101.3	99.1	98.1	90.9
Far East and Pacific	117.4	88.8	98.8	103.0	98.3
Australia.....	127.9	108.6	108.6	105.0	101.6
Total.....	116.3	94.5	95.8	95.4	92.2

The only features in the freight market satisfactory to shipowners during the month were the steady demand for tonnage to load Argentine grain and a revival in Russia grain chartering, though in the latter case the rates obtainable showed no improvement. The outward coal trade remained extremely depressed; European ore traffic was of negligible dimensions; the North American market was lifeless; and in Eastern waters business towards the end of the month was adversely affected by the war clouds gathering over China. A further analysis of sectional groups is given below:—

AVERAGE 1898-1913=100.					
	Index Number.	Inc. or Dec. Points.		Index Number.	Inc. or Dec. Points.
Home trade.....	75.3	- 4.5	South America—		
Bay—outwards.....	108.3	- 1.8	outwards.....	65.2	...
Bay—homewards.....	96.8	- 1.6	South America—		
Mediterranean—			homewards.....		
outwards.....	81.0	- 0.3	India—outwards...	111.1	+ 6.3
Mediterranean—			India—homewards...	84.2	- 4.2
homewards.....	96.1	- 0.6	Far East, &c.....	97.7	-10.0
North America.....	85.2	- 5.2	Australia.....	98.3	- 4.7
				101.5	- 3.6

Expressed as a percentage of the average for 1913, the total figure of our index number for January works out at 79.2 compared with 82.0 in December, and 81.2 a year ago.

Bank of England Statistics.—A welcome innovation this week has been the publication, for a limited circulation, of a statistical summary under the imprimatur of the Bank of England. For some years past it has been the practice of the Bank to prepare a monthly statistical summary for internal use and for the use of central banks in other countries, and the decision to give this summary a wider circulation has been taken in accordance with the recommendation of the Macmillan Committee on Finance and Industry. Most of the statistics included in the bulletin are obtainable from other sources, but they are here presented in a handy form and are supplemented with

an excellent series of charts. In thus developing its statistical service, the Bank of England is making a valuable contribution to knowledge, both at home and abroad, of this country's financial and economic conditions.

Census of Production—Metals.—Volume III. of the preliminary reports of the census of production of 1930, published in last week's *Board of Trade Journal*, deals with the non-ferrous metal trades, iron foundries and the cutlery trade. The following summary shows the gross value, the net value (gross value less cost of materials and work given out to other firms), and the net output per person employed in the various industries in 1924 and in 1930:—

Industry.	Gross Output.		Net Output.		Net Output per Employee.	
	Thous. £.	1924.	Thous. £.	1930.	1924.	1930.
Copper and brass	22,916	19,981	6,128	5,524	231	238
Lead, tin, zinc, aluminium	31,662	24,652	6,491	5,738	291	288
Gold and silver refining.....	15,796	39,713	985	1,220	554	544
Iron and steel foundries*	...	27,524	...	15,938	...	188
Cutlery	3,101	2,742	1,634	1,569	165	174

* Not treated as a separate industry in 1924 census.

If allowance is made for the fall in prices between 1924 and 1930, it will be seen that the net output of the non-ferrous metal industries was well maintained—a conclusion borne out by the Board of Trade index of the volume of production of non-ferrous metals. The net output per person employed shows an increase in the case of the copper and brass trades, but a decline in the lead, zinc, tin and aluminium industries. In the cutlery trade a decline in the output of knives was offset by an expansion in the output of safety razors and blades. As mass-production methods are applied in the manufacture of razors and blades, the output per person employed shows a considerable increase.

The New South Wales Default.—At the end of last week Mr Lyons had to inform the Premier's Conference that the New South Wales Government was not proposing to meet its immediate overseas debt service obligations, including the interest on the 6½ per cent. 1930-40 sterling loan, due on February 1st. On January 29th, Mr Lang, the New South Wales Premier, sought for an advance of £500,000 from the Loan Council, but the advance of £500,000 from the Loan Council, but the remaining Australian delegates to the Council rejected the application on the ground that New South Wales had not contributed her quota to the general reconstruction plan of last year. Under the terms of the Financial Agreement Validation Act of 1929, the threatened default of New South Wales thrust the responsibility of meeting the service of the loans upon the Federal Government; and, indeed, when a similar default occurred nearly a year ago, the Federal Government at once discharged its liability to the New South Wales stockholders. On this occasion, however, a different and more drastic procedure has been followed. The Federal Government began by allowing the default to take place, and the interest due last Monday has not yet been paid. This move put the New South Wales Government in the wrong, and Mr Lang did his best to counter it by cabling to the Agent-General in London asking him to negotiate with the stockholders for a year's moratorium. Mr Lyons immediately issued a statement strongly discountenancing this attempt; and on February 3rd the Federal Government made a counter-move, for which previous events had evidently been preparing the ground. A High Court writ was issued by the Commonwealth Crown Law Office to recover the money owed by New South Wales for the overseas interest payments now actually in default, and the Loan Council and the Federal Cabinet met the same day in Melbourne to discuss measures for impounding all moneys due to be paid to the New South Wales Government, including its share of loan money for public works. That is as far as matters have moved

for the present. Rightly or wrongly, it was seemingly thought necessary to allow the New South Wales Government to get into actual default, even at the cost of a technical default by the Commonwealth Government, in order to clear the ground for drastic and final action. It may be hoped that the stockholders will not have to wait long for the payment of their overdue interest, and that this repeated threat of New South Wales interest defaults will be finally eliminated. If so, the delay in payment may have been worth while.

The Reichsbank Credits.—Late last week the Council of Regents of the Banque de France decided to renew for one month its share of \$25,000,000 in the \$100,000,000 rediscount credit granted jointly by the Bank of England, the New York Reserve Bank, the Banque de France and the B.I.S. to the Reichsbank at the end of last June, and since renewed at various dates. The Banque de France followed the example of the B.I.S. in making its renewal conditional upon the remaining participants in the credit also renewing, and further stipulated that the Reichsbank should obtain from the German Government an assurance that no impediment would be placed in the way of any gold shipments that might be necessary to cover the repayment of the credit. Little significance attaches to the first condition, as is shown by the fact that on every occasion that the credit has come up for renewal the B.I.S. have made their consent dependent upon the consent of the remaining participants; and, indeed, no participant would ever have risked being left alone with its share of the credit. Nor need the second condition, which the German authorities in due course accepted, be regarded as more than a formal precaution. The most serious part of the decision was the restriction of the renewal to only one month instead of the normal period of three months, for which the Reichsbank had naturally been hoping. As the terms of the new standstill agreement provide that the creditors can cancel it if the Reichsbank's foreign rediscount credits are not renewed, it is easy to appreciate that the restriction of the renewal to only one month may cause some anxiety in Germany. We imagine, however, that there is little reason to apprehend that the Banque de France would risk bringing down the whole Central European financial house of cards by actually withdrawing its share of the credit.

Japan's Overseas Trade.—How far can Japan economically afford to neglect public opinion in other countries? The following tables of the nature and distribution of Japan's foreign trade partly answer this question:—

I.				
NATURE OF JAPANESE TRADE.				
Million Yen (January–November).				
Item.	Imports.		Exports.	
	1930.	1931.	1930.	1931.
Food, drink, tobacco	194	145	117	96
Raw materials	777	617	60	41
Semi-finished materials	222	165	482	387
Manufactures	251	192	662	517
Total	1,444	1,120	1,321	1,041

II.				
DISTRIBUTION OF JAPANESE TRADE IN 1930.				
Million Yen.				
Country.	Imports.		Exports.	
	Value.	Per cent. of Total.	Value.	Per cent. of Total.
United States	443	29	506	34
British India	180	12	129	9
Great Britain	93	6	61	4
Canada, Straits Settlements and Australia	169	11	70	5
China	162	10.5	261	18
Other countries	499	31.5	443	30
Total	1,546	100	1,470	100

It will be seen from the first table that more than one-half of Japan's imports consist of food and raw materials.

Raw cotton alone accounted for 23.5 per cent. during the first eleven months of the past year. On the other hand, exports consist mainly of semi-finished materials and manufactures. Among partly manufactured commodities, raw silk, which accounted for 31 per cent. of all exports during the January-November period of last year, is the chief item. The second table shows that the principal buyers of Japanese goods are the United States and the British Empire. The inference is obvious, and, we hope, warrants hopes of Japanese inability to defy, in the last resort, Anglo-American counsels of peace.

Budget and Tariffs in Australia.—Our Melbourne correspondent writes:—The Budget speeches and public accounts of the Commonwealth and six States show deficits amounting to £25,889,609 for 1930-31 (exclusive of £773,374 Family Endowment Fund deficit in New South Wales), and deficits aggregating £19,069,458 according to estimates for 1931-32. The latter figure contrasts with the total of £14,650,000 contemplated at the Premiers' Conference held last June, when it was decided to cut down the interest on internal debts, the difference being principally in the Commonwealth and New South Wales. The total taxation shown by the revenue accounts for 1930-31 was £76,811,932, but this does not include the New South Wales unemployment relief tax of £4,375,802 or the Family Endowment tax, amounting to £558,555. Adding these two items, the aggregate taxation for the Commonwealth and six States is raised to £81,746,289. Comparing present taxation with that of a few years ago, a notable feature is the decline in the proportion from Customs and revenue, the yield from which was £28,295,073 for 1930-31 and £28,600,000 (estimated) for 1931-32, against a yield of £41,774,391 for 1929-30. Greater reliance is now placed upon direct taxation, but, even at the enhanced rates now ruling, this is insufficient to fill the gap in Customs revenue due to the reduction in imports. Against the aggregate deficits for 1931-32 of £19,069,458, the Commonwealth expenditure is now reducible by £3,920,000 under the Hoover Moratorium scheme. In the formation of the new Commonwealth Ministry the Country Party has stood aloof, owing to the refusal of the new Prime Minister, Mr Lyons, to agree to the stipulation by Dr. Earle Page, leader of the Country Party, that if he joined the Ministry he should be Minister of Customs. This has an important bearing on the prospect of tariff revision, especially as in the election campaign a section of the manufacturers showed a decided tendency to support the Labour Party for the sake of the tariff. The duties imposed by the late Government are still in operation pending final consideration by Parliament. Some of these duties were professedly intended simply for the immediate purpose of checking imports, and as imports have now been reduced to a low level the reason for these special duties no longer exists. The late Prime Minister, Mr Scullin, referred to this point at the Imperial Conference on October 8, 1930, when he stated that "these measures are to be regarded as being wholly of an emergency nature and subject to review and in some cases to withdrawal as soon as the financial position permits." On the main question the complaint of the country districts is that the tariff is excessively burdensome, especially in view of the low prices obtainable for wool and wheat. On the other hand, the manufacturing interests are strongly entrenched. A little discussion has gone on lately with regard to the Ottawa Conference, and the basis of protectionist comment is that whatever preferences may be granted by the British Government, the Australian tariff must be maintained at a level which will effectively protect Australian manufacturers.

Prudential Assurance.—An important announcement has just been made by this company as to its intentions with regard to the annual valuation and distribution of profits due to be made as on December 31, 1931. The continuity of the annual bonus distributions is to be preserved, but in view of the uncertainty of the outlook, it has been considered wise to reduce the amount of bonus to be allocated immediately. The full bonus for 1930 in

the ordinary branch was 52s. per cent. on the sum assured for whole life assurances and 46s. per cent. for endowment assurances, and for 1931 these rates are to be cut down to 36s. per cent. and 30s. per cent. respectively; but—a novel expedient—the balance of the cost of bonuses at the full rates is to be set aside in suspense and utilised, if and when conditions improve, to make up to surviving policyholders the reduction in the ordinary bonus now suffered. So far as policies which become claims in 1932 are concerned, their interests will be protected in that interim bonuses at full normal rates will be paid. The official announcement makes it clear that the actuarial basis of valuation is being retained unaltered, and that the normal trading profits are in excess of those for 1930; and, further, that the decline in market value of the assets as at December 31, 1931, is more than covered by the investment reserve and available contingency funds. The form of the latter statement would seem to imply that the hidden reserve existing hitherto in the book value of the assets has disappeared, but that the remaining depreciation is more than covered by disclosed reserves. When the position of life offices was discussed in these columns a few weeks ago, it was estimated that on the average the depreciation in 1931 might be put at approximately 9 per cent. of the total funds. As the total funds of the Prudential amount to about £240 millions, this means that the depreciation suffered last year must have been upwards of £20 millions, which compares with disclosed investments and contingency reserves of approximately £15 millions. No reference is made in the announcement to the company's intentions with regard to dividend, and it will be interesting to see if the dividend is to be dealt with on the same lines as the bonus, or if the full normal dividend is paid in the ordinary course. Having regard to the known fact that the company must have suffered a heavy depreciation, this statement must be considered to be reassuring, and the size and influence of the company may well give a lead to other offices placed in a similar position.

Reconstruction Credit Corporation — Money — Prices.

NEW YORK, January 22.

SENTIMENT has been buoyed up by expectations of marked benefits to come from the developments of the past week; but the adverse features of the situation have not been crowded entirely off the stage. Congress has finally approved the Reconstruction Credit Corporation Bill, and the measure will shortly receive President Hoover's signature. The Corporation will have to begin with five hundred million dollars in funds supplied by the Treasury, though it is authorised to obtain two thousand millions by sale of its debentures. Judging by the experience of the War Finance Corporation, which did such a good work in promoting the recovery from war depression, not all the initial stake will be needed. It is recalled that the War Finance Corporation actually used only \$280 millions and lost no money to the Government, nor did it promote inflation.

Much loose talk has been indulged in on this side of the water over the danger of inflation. Those here who are thoroughly out of sympathy with artificial cures for the business depression or with inflation *per se*, are, nevertheless, favourable to the new credit body as providing a needed chain between unused credit resources and the business needs of the country. The new body will make loans, principally to banks and railroads, and should lessen the danger of closings for the former and receiverships for the latter, while increasing little, if at all, the amount of credit in use. Inflation as a danger, it is felt here, exists in the inability or unwillingness of the Government to balance its budget, thereby making necessary the issue of currency to fill the gap. That danger, happily, has receded into the background with the strong stand taken by

President Hoover when he reminded the country that it could not squander itself into prosperity, and asserted that the budget would be balanced. In this stand he has been ably supported by both the Democratic and Republican leaders in Congress. Both sides are now firmly pledged to paring Governmental expenditures, to increasing taxation and to balancing the budget. Unless there is a decided lapse from these positions, it is unlikely that this country will go through any inflation tending to weaken its credit.

Gold outflow has begun on a broad scale, most of the metal going to France. Belgium, also, has been taking some, and is expected to take more. The exodus is causing no alarm. The Reserve Bank authorities have expressed great equanimity over the movement, pointing out that France has around \$125 millions in gold under earmark, which can be withdrawn without effect on interest rates, and that the total earmarked metal now is about \$450 millions. Some time ago the Reserve officials assured Bank of France officials that they had no objection to the removal of Bank of France balances here. Total foreign balances are now estimated at about \$600 millions, while the amount of free gold in the Federal Reserve system is around \$1,500 millions. Naturally, there is no desire to see this metal go out, but that is not considered probable, in view of the undoubted safety of the dollar on the gold standard, once European nerves are calmed on the subject of inflation.

The Reserve system's cheap-money campaign has slowed down. Actual credit outstanding this week dropped moderately. Government security holdings were unchanged, as were member bank borrowings, while the recent cut in the bill rate failed to stop a further decline in the system's bill holdings. Currency was nominally lower, against a sharp reduction usual at this season in former years, and gold reserves were moderately smaller. Still, the easier tone in money, mostly seasonal, was reflected in the week's Treasury discount bill offering, which went at a 2.48 per cent. interest rate equivalent, against 3.25 per cent. at the turn of the year. Between now and the end of June the Treasury will have to borrow about \$2,500 millions, increasing the public debt by about \$1,500 millions. This does not include \$582 millions in Treasury bills maturing in the period, but it does include refunding certificates, providing the initial \$500 millions for the Reconstruction Corporation, the \$125 millions for the Federal Land Bank system and about \$75 millions for the proposed new Home Loan Banking system. The remainder is to make good over \$700 millions in Treasury deficit for the last few months of the fiscal year.

This financing will be done by short-term issues, and, after June 30th, it is planned to permit no further increase in the national debt, which will then be about \$19,000 millions. Naturally, the banks will have to supply most of the short-term loans, which is calculated to bring about some expansion in bank credit, but there will be many offsetting items. It is not expected that the Reserve Banks will add much to their holdings of Government securities, but member bank borrowing at the Reserve is expected to increase, and the market still looks for a lower discount rate.

Current business statistics are only mildly encouraging, and that only in patches. The steel industry has picked up somewhat, and is now operating at about 28 per cent. of capacity. Railroad traffic is running about 20 per cent. lower than a year ago. Winter stagnation rules in building and the motor industry, though cheered by the success of the national exhibition held here last week, is going ahead slowly.

The rise in wheat has slowed down with the share market. Commodity prices in general are still inclined to soften. The Bureau of Labour Statistics has begun publication of a weekly index, using the 1926 level as 100. For the week of January 9th this index stood at 68.1, a drop from the previous week of three-tenths of 1 per cent. The monthly index receded nearly 3 per cent. for December, and stood 15 per cent. lower than a year ago. Wholesale commodity prices, according to this index, are now

about at the 1915 level. The drop in farm products was 5 per cent. The indices, by groups, are as follows:—

	Dec., 1930.	Nov., 1931.	Dec., 1931.
All commodities	78.4	68.3	66.3
Farm products	75.2	58.7	55.7
Foods	81.8	70.9	68.1
Raw materials	74.2	62.0	60.2
Semi-manufactured articles	74.3	64.4	62.2
Finished products	81.9	73.2	71.0
Non-agricultural commodities	79.4	71.0	69.3
All commodities, less farm produce and foods	79.0	71.8	70.4

The National Credit Corporation—the organisation formed with authorisation to raise \$500 millions from the banks to lend to banks—has made its third call for a 10 per cent. subscription, bringing total payments to \$150 millions. Meanwhile, the Railroad Credit Corporation, formed to handle additional revenues collected under the recently granted freight rate increase and to lend the money to roads failing to cover their interest charges, has announced that there will be no railroad defaults in February.

The delay and uncertainty over reparations is far from encouraging to American business, but the outlook for a voluntary offer of cancellation, or even sharp reduction, in advance of a definite settlement of German payments to the allied creditors is as poor as ever. No initiative need be expected from this country.

FRANCE.

Elections — Revenue — Caisse des Dépôts — Coal.

(FROM OUR CORRESPONDENT.)

PARIS, February 3.

It seems likely that the general elections will take place on May 22nd, with May 29th for second ballots, if this part of the French electoral system be not suppressed before that date. These dates are the latest permissible under the constitutional law governing the duration of French Parliaments. The discussion of the proposals for the abolition forthwith of second ballots at Parliamentary elections—which for all practical purposes means the adoption of the British "bare majority" system—has been the subject of an extremely lively sitting already, and the question is again being debated to-day, when a night sitting is expected to result in a definite decision so far as the Lower House is concerned. So far, there seems to be every probability that the Bill—which is a private members' measure—will secure adoption.

The proposal to suppress second ballots was originally brought forward some months ago by a Radical-Socialist member, M. Charles Lambert, who claims that he then had the formal support of his party vote behind him. Since then the Socialist-Radicals have withdrawn their support of the Bill. M. Lambert, in token of his dissatisfaction, has resigned his membership of the party, and the Bill is now being sponsored by M. George Mandel. The object of the supporters of the Bill is obviously to prevent an alliance between the Radicals and Marxist-Socialists for second-ballot purposes. The substitution of the bare majority principle at the coming contest is expected to prove overwhelmingly advantageous to the existing Centre and Right majority parties.

The refusal of M. Herriot and several of his colleagues, from a sense of party discipline, to enter the second Laval Cabinet has been sharply condemned by many of the Socialist-Radical rank and file in the constituencies, and the effect this is likely to have on the pending election is already visible. M. Herriot himself, in an article in his Lyons newspaper, *Le Démocrate*, has definitely dissociated himself from the kite-flying article recently printed in the Toulouse *Dépêche*, the Radical-Socialist mouthpiece in the provinces, in which the advisability of a general cancellation of reparation payments was urged. M. Herriot insists that Germany is bound by the Young Plan, and that it was in view of this fact that the Allies evacuated the Rhineland in advance of the treaty date and handed back to Germany the control of her railways.

"Many good people," M. Herriot observes, "insist that if we pass the sponge over reparations there will be throughout Germany a reaction favourable to peace. I should like to think so, but I do not believe that would be the case." He adds that he has no great anxiety so far as the present year is concerned, "but I fear the fatal years 1935-36, and that is why, with all my strength, as a Frenchman and a pacifist, I defend, and I invite all free men and free nations to defend, the inviolability of contracts."

The "drama of the Budget," as the country's financial situation is picturesquely described by one leading writer, is proving much more complicated than had been expected. The Budget Minister states that the present Budget shows a deficit of 1,125,000,000 francs, of which 700,000,000 francs, or more than half, is due to a shortage in the common fund created in regard to alcohol. This he proposes to get rid of "without new taxes," by readjusting the alcohol taxes and revising upwards existing dues on motor cars and motor spirit. The average taxpayer is showing a disposition to cavil at the policy of "no new taxes" which has prevailed for several years past, by pointing out that the phrase has no longer any valid meaning, as every year, through repeated "readjustments," his taxation burden steadily increases. The cry for retrenchment of expenditure is now beginning to take vigorous forms.

Attention is being called here to the possible danger that may result from the enormous accumulation of capital now in the hands of the little-known institution officially entitled the Caisse des Dépôts de Consignations, which is the custodian of the bulk of the savings banks accumulations and many other funds. The total amount in the safe keeping of this institution on November 30, as shown by its then balance sheet, was 74,800,000,000 francs, and it is expected that the balance sheet for the end of the year, when it is made public, will show that this sum has been largely surpassed, and thus represents one of the largest accumulations in the world. The bulk of this colossal sum, according to the latest figures available, has been invested as follows:—

	Million francs.
French rentes	31,000
Post office and railway bonds	6,600
National Defence bonds	12,000
Treasury bonds	4,300
Loans to the State	5,500
Loans to departments and communes	5,500
Caisse d'amortissement bonds	2,600
Credit Foncier obligations	1,500
Industrial securities	500
Foreign State funds	100
Real estate	200

The current account of the Caisse alone represents liquid funds of between 4,500,000,000 francs and 5,000,000,000 francs. One reason for the swollen total is that the maximum limit for savings bank deposits was recently increased to 20,000 francs, and another is that the Caisse des Dépôts has during the past year or two had entrusted to it the management of the capitalisation funds of the national insurance system. From the practical point of view, the Caisse des Dépôts constitutes what is nothing more or less than the sheet anchor of the French financial world, by reason of its enormous resources. Its capacity for action largely explains why, last September, when Great Britain suddenly announced its intention of abandoning the gold standard, and the London, New York, Berlin and other stock exchanges were compelled, as a measure of precaution, to remain closed, the Paris Bourse was able, without fear of a disastrous panic, to open as usual.

Coal production figures for December indicate that the total output of the French mines during the month of twenty-five working days was 4,016,945 tons, as compared with 4,163,219 tons during the twenty-four days of the previous month, and 4,458,467 tons for the twenty-five working days of December, 1930. The average daily output was 160,678 tons, as compared with 173,467 tons in the previous month and 178,339 tons in December, 1930. Labour effectively employed totalled 276,356 units, as compared with 276,555 units in the previous month and 300,714 units in December, 1930. The yield from the

French mines during the twelve months (excluding the Saar area) was 51,062,000 tons, as against 55,026,768 tons in 1930. To this total must be added 5,826,037 tons drawn from the mines in the Saar area, and foreign imports totalling 23,068,035 tons. These figures, after deducting 3,526,524 tons, representing French exports of coal, left a grand total of 76,448,340 tons for consumption. Of the 23,000,000 tons imported, 10,767,000 tons came from Great Britain, 4,616,737 tons from Germany (including "reparations coal"), 4,420,534 tons from Belgium and Luxembourg, 2,030,547 tons from Holland, 9,178,302 tons from Poland, 80,000 tons from Russia, 63,000 tons from Switzerland, 52,338 tons from Indo-China, and 48,000 tons from the United States. Out of a total of 7,681,000 tons of coke available for consumption, Germany furnished 1,918,000 tons, Belgium and Luxembourg 556,500 tons, Holland, 911,000 tons, and Great Britain 11,453 tons. The general situation in the French coalfields remains unsettled. The problem of a readjustment of wages has not yet received complete solution, and there is a strong agitation in favour of a substantial further reduction of import quotas. Reports have been received in Paris of important discoveries of large deposits of both anthracite and petroleum in Morocco, which it is expected will contribute to rendering this country less dependent than at present on foreign supplies of these commodities.

GERMANY.

Presidential Nomination — Reichsbank — Export Surplus — Unemployment.

(FROM OUR CORRESPONDENT.)

BERLIN, February 2.

HERR SAHM, the chief Mayor of Berlin, has formed a committee for the purpose of adopting Herr von Hindenburg as candidate for the forthcoming Presidential Election. This requires 20,000 signatures, which will be obtained in a very short time. In addition, of course, Herr von Hindenburg's own consent is required, and this has not yet been given in a binding form. The signatories include distinguished men and women representing a very wide range of occupations and opinions. Even a Socialist, Herr Noske, formerly Minister for Defence, and now the Chief Mayor of Hanover, has signed the document. This reflects the spirit in which the appeal was framed; avoiding all political expressions, it declares for Herr von Hindenburg on the grounds that he is "Foremost in war, foremost in peace, and foremost in the hearts of his compatriots."

Even before Dr. Sahm formed his committee, a special committee in Bavaria (Bavaria came out strongly in support of Herr von Hindenburg's first candidature in 1925) started a movement for the re-election of the President. This emphasises the fact that the nomination of Herr von Hindenburg is by no means a purely Prussian movement or purely inspired from Berlin, and the co-operation of North and South will greatly strengthen his candidature. The National Socialists have not yet decided whether they will oppose a candidate of their own to Herr von Hindenburg, and the German Nationalists also are still hesitating.

Herr Wagemann's proposal for credit reform is still occupying the attention of the German public. In a country where almost half the industrial wage earners are unemployed, a proposal which appears to reveal a new reserve of credit which might be used for the provision of work is bound to arouse much interest, and, in addition, Herr Wagemann is conducting a very active agitation in support of his proposal. The Government and the Reichsbank, however, are opposed to any attempt to put it into effect. The Government has announced that it will undertake no such changes in the credit system as are called for by the Wagemann Plan; "The Government of the Reich and the Reichsbank have not altered their determination that nothing must be done which might have even the appearance of inflation. No change in the Reichsbank law is being contemplated."

At the end of January the Reichsbank had to record a further loss of gold, amounting to Rm. 15 millions, since the preceding week. Its gold and exchange reserve, which at the end of December still amounted to 1,156 millions, has fallen to 1,093 millions. Apart from this, conditions were easy at the end of January, and there was no great strain even on the Reichsbank. The note circulation was 4,400 millions, against 4,780 millions at the end of the year; discounts were 3,630 millions, against 4,140 millions, and the market discount rate was reduced from 6½ to 6¼.

The surplus of exports in 1931 was approximately Rm. 3 milliards, against 1.6 milliards in 1930. This was brought about by a reduction of one-third in the value of imports against a decline of only one-fifth in that of exports. That is partly due to the fact that German imports were more affected by the fall in prices than German exports, but, even apart from price changes, there was a decline of 16 per cent. in imports and only 9 per cent. in exports.

Since the middle of November, 1931, the number of unemployed in Germany has increased by more than 1.1 million. This is, indeed, less than the increase during the corresponding period a year ago, which was 1.4 million, but only because employees in the building trade, who generally fall out of work early in the winter, were for the most part already unemployed in the summer of 1931. Even so, in view of the terrible economic collapse which occurred in the summer of 1931, the increase in the unemployment figures might not seem excessive (from 4,765 millions at January 15th, 1930, to 5,966 millions at January 15th, 1931), but the absolute magnitude of these figures means an overwhelming social and economic burden which cannot be supported for any length of time. Judging by the experience of previous years, an increase of about 300,000 is to be expected before the maximum is reached in February. Of the six million unemployed, rather more than half (3.2 millions) are living on unemployment and emergency benefit; the remainder, who are for the most part dependent on communal relief, constitute a lasting menace to the financial equilibrium of the communes.

AUSTRIA.

Foreign Trade — National Bank — Housing.

(FROM OUR CORRESPONDENT.)

VIENNA, February 1.

THE crisis in the management of the National Bank has become acute. The president of the bank, Dr. Reisch, has requested the Government to accept his resignation, and there is no doubt that it will be accepted. At the moment it is not known who will be nominated as his successor. It is possible that the general manager, Dr. Brauneis, will be appointed. Last week he wished to give up his position, but his application was refused unanimously by the board of the bank. It would certainly be a matter for regret if both the leading men at the National Bank gave up their offices at the same time, for the Austrian National Bank, or, rather, the foreign currency policy inaugurated by it, occupies a central position in the economic crisis. The claims on the National Bank are tremendous. Its holdings of foreign currency are steadily dwindling, while the presentation of bills of exchange continues, so that the cover ratio is becoming worse and worse. All attempts to achieve an improvement in the holdings of foreign exchange by means of clearing treaties and checking imports have so far been vain. On the contrary, the foreign exchange clearings have proved to be injurious. From individual countries, with which such treaties exist, useless articles are entering the country, and from other countries goods are being imported on long-term invoices. For instance, it is said that French silk and other articles of luxury from France and Switzerland are being imported on credit extending over several years.

Stormy meetings have taken place with the industrialists and the merchants, in which objection has been raised to the present policy of the National Bank. The discussion with the economic corporate bodies, which was held at the

Ministry of Finance, has led to sharp conflicts between the representatives of the National Bank and of industry and commerce. The management of the National Bank defended the measure and pointed out that the situation is very grave. Their opponents declared that it would, nevertheless, be better to introduce unhampered dealings in foreign exchange, even though much higher prices might have to be paid for foreign means of payment than have so far been paid, as at present prices the National Bank is distributing scarcely any foreign money at all. One of the first measures of the new president of the National Bank will surely be to reduce the Bank rate. The present management of the bank of issue has expressed aversion from this step, because it fears that reduction of the Bank rate would interfere with the favourable trend at present observable in savings deposits.

The development of State finances is also hardly satisfactory. The Federal Customs estimate for 1931 was set at 327 million schillings. In the event, the revenue did not amount to more than 270 millions, which is actually lower than that of the years 1929 or 1930. The proceeds of the merchandise turnover tax, amounting to 220 million schillings in 1931, were also below expectations. In the current year the regression will certainly be still greater on account of the dullness in general business and of diminished importation. Consumption of beer has also fallen greatly. For the period September 1, 1930, to August 31, 1931, total consumption of beer was 4.4 million hectolitres, against 5.4 millions in the corresponding period of the previous year. In the months of September, October and November beer output was 0.46, against 0.75 million hectolitres.

The timber industry is at present experiencing a severe crisis. Exports have dropped by about 46 per cent. in comparison with the year 1930. The chief foreign markets are no longer capable of absorbing supplies. France has reduced the import quota by a third. Export to Italy has become much poorer, and Russian timber has already made its appearance in North Italy as a competitor of the

The Golden Road to Samarkand

A unique opportunity to visit the age-old cities of Central Asia, combined with visits to the lovely Crimean Riviera, the picturesque Caucasus, and other parts of the Soviet Union is offered by a special tour arranged by Intourist.

The Tour will start at Constantinople on the 7th March, thence by Soviet steamer to Odessa, Sevastopol, Yalta, Novorossysk, Tuapse, Sochi, Gagra, Sukhum, Poti and Batumi; from Batumi via Tiflis and Baku to Krasnovodsk and thence by special train consisting entirely of sleeping cars, with restaurant car and refrigerator, to Ashkhabad, Bokhara, Samarkand, Tashkent, Lugovaya (where the new Turkestan railway begins, linking Turkestan with Siberia), Alma, Ata, and thence through Southern Siberia, via Novosibirsk, Omsk, Sverdlovsk to Moscow where the tour will end on the 10th April.

The cost from Constantinople to Moscow is £222 per person. Travellers may join either at Constantinople or Odessa; in the latter case Intourist will provide free rail travel from Shepetovka (Soviet-Polish frontier) to Odessa.

Austrian product. Owing to foreign exchange regulations, Hungary has become an insignificant market.

In regard to the financial position, it is an important fact that the banks and the big finance firms, which concluded the second standstill agreement with the foreign creditors, have agreed to make no repayments of capital for the period January 20th to July 20, 1932. The interest payments are to be maintained, and they comprise a sum of about 22 million dollars. It remains to be seen whether things can be kept going with the help of this curtailment of the payment obligations. It is possible that the matter will be carried further. Some people in economic circles demand that only such payments should be made abroad as cannot be postponed. Up to the present the Government has, however, opposed this tendency, and it declares that, for the time being, it will not hear of a transfer moratorium.

The question of the management of the Credit-Anstalt is not yet cleared up. The negotiations with German bank directors have all been broken off, and there is now talk of leaving the present management in office. Banking business in general is shrinking, and more bank clerks are being dismissed. The stagnation on the Stock Exchange still obtains. Now and then individual securities in foreign values are inquired for, but no interest at all is being displayed by the public. On the other hand, the trend of deposits at the banks and savings banks is not at all unsatisfactory, and consequently the savings banks are also in a position once more to accord occasional mortgage credits. For these they demand 9 per cent. in cases where they cover a period up to five years, and 10 per cent. for periods in excess of five years. Housing financed by public funds is lagging more and more. As the Government are obliged to exercise great thrift and cannot place the housing bonds, which have dropped more than 20 per cent. since they were issued, they have scarcely 10 million schillings left at their disposal for such purposes. Furthermore, a number of houses, which were built by regular employees with the help of housing credits, are being offered for sale. The owners are no longer able to pay the present instalments on account of the reduction in their salaries. On the other hand, a little animation is anticipated in private building enterprise, especially in very cheap and small dwellings. It is hoped that it will be possible to reduce building costs by 20 to 25 per cent., especially if concessions are made in the matter of taxation. No improvement in unemployment can, however, be expected from this source, as public building is declining, and there are no signs of better business in the early part of the year.

HUNGARY.

League Report — Finance.

(FROM OUR CORRESPONDENT.)

BUDAPEST, February 1.

THE first quarterly report by Mr Royall Tyler, the League of Nations representative in Hungary, covering the period October-December, 1931, is full of interesting data. It is stated therein that the Government has carried out its undertakings to fix expenditure for the Budget year that began on July 1, 1931, at 890 million pengő; that since November 1st last, it has limited actual expenditure to an annual basis of 850 million pengő (565 million pengő for eight months) and it is preparing the 1932-33 Budget to balance at 830 million pengő. The experience of the past three months shows that it is possible to keep the Budget balanced; but in order to avoid deficits from now on, it may well be necessary to reduce expenditure below the levels at present contemplated for the rest of this year and for next year. Total receipts for the six months during December 31st amount to 405 million pengő, a figure which bears out the Financial Committee's opinion formed last October that expenditure would have to be reduced to an annual level of 800 million pengő, which was considered by the *Economist* as the utmost the country could afford to bear, when the first endeavours to balance

The report goes on to say that, in estimating the total expenditure of the State, it must not be forgotten that the undertakings which are not included in the administrative Budget are being run at a loss. The Government has announced that it will secure equilibrium in their Budgets also; but this cannot be done quickly enough to prevent them from exceeding the expenditure provided for in this year's Budget. It is probable that the total charge which the Hungarian taxpayer has to bear might be considerably lightened by rationalising the undertakings, both of the State and of the cities, and by submitting the Budgets of the cities and other autonomous bodies, which amount to half as much as the State Budget itself, to a no less drastic scrutiny than that which must be brought to bear on the State Administration itself.

Actual results for the first half of the financial year show a deficit of 48.2 million pengő, as against 63.2 million pengő in the corresponding period of 1930. Actual expenditure in July-December amounted to 453.2 million pengő, and actual revenue totalled only 405 million pengő. After the prolific receipts of November, yielding a surplus of 31.3 million pengő, there was a deficit of 5.1 million pengő in December. The Budget of the State undertakings in July-November, 1931, disclosed a deficit of 5.6 million pengő, in which the advances made to the State railways, amounting to 10 million pengő, and those to the iron works of the State, are not included, so that the total deficit of the State is over 70 million pengő in the first half of the present financial year. As, among the State undertakings, only the Post and Telegraphs Budget is balanced, while the railways and the ironworks are being operated at a loss, it is very likely that by the end of the financial year the total deficit of the Administration and the undertakings will exceed 100 million pengő. It is satisfactory to note from the report that the draft Budget for 1932-33, which is at present being prepared, is to have incorporated in it all special funds in receipts of public moneys, which was not the case hitherto.

The partial suspension of transfer can, in the opinion of Mr Tyler, only be justified if the value of the currency is maintained. This authoritative statement is a conclusive answer to hasty critics both at home and abroad who assert that the abandonment of the gold standard would have been preferable to the transfer moratorium. It has been repeatedly pointed out in these columns that neither Hungary nor her creditors could have gained anything by giving up the gold standard, because a country whose total merchandise exports are about 570 million pengő, as against an annual foreign debt charge of nearly 300 millions and no invisible exports of importance, could hardly have hoped to increase its capacity to transfer, especially when its customers are confronted with the same problem of securing a favourable balance of trade to pay foreign debts. The report states that the National Bank's available exchange utilisable for foreign debt payment amounted on December 15th to 3 million pengő, as against maturities at the end of December and beginning of January of some 20 million pengő.

In connection with the recent complaints made in London by Hambros Bank, Limited, and the Anglo-International Bank, Limited, with regard to the default of the Hungarian Land Mortgage Institute, it may be pointed out that in addition to the statement of the League representative already referred to that the National Bank had practically no means at its disposal to meet the total interest service of the foreign debt, the total gold and exchange cover of the National Bank, amounting to 118 million pengő at the end of December, 1931, was actually less than its debt to the B.I.S. and other central banks totalling 145 million pengő. It is obvious, therefore, that the only criticism which can be levelled against the Hungarian Government is that the declaration of the transfer moratorium was too late, because since August the foreign debt service was met from new short-term debts at the expense of the National Bank's own gold and exchange holding, which is owed now in its entirety to the B.I.S. and other central banks.

On the other hand, the protests against the immoral practice of purchases by Hungarian citizens and institu-

ruling are perfectly legitimate, and it must be pointed out that such actions constitute a serious breach of the exchange regulations of Hungary, as by Order-in-Council it was decreed that all foreign exchange holdings must be surrendered to the National Bank. London bankers and brokers could easily put an end to such dishonest practices, by denouncing the Hungarian speculators to the committee formed in the City to deal with Hungarian affairs arising out of the transfer moratorium. Important parleys will take place between the various groups of foreign creditors' and investors' representatives and Dr. Teleszky, the representative of Hungary who, according to the domestic press in Budapest, will endeavour during his stay in London to bring about standstill agreements for the short-term debts and discuss the fate of the non-transferable pengő deposits of the Foreign Creditors Fund.

ITALY.

Deficits — Taxation — Stock Exchange.

(FROM OUR CORRESPONDENT.)

TURIN, February 1.

OFFICIAL statements have now been published relating to past and current budget deficits. The Court of Accounts has definitely approved the accounts for the fiscal year 1930-31, closing with a deficit of 504 million lire. This is less than the deficit provisionally announced last July, which was 896 millions. The latter, according to our accounting methods, is the deficit of the budget proper, i.e., revenue and expenditure, made or to be made, relating to the fiscal year in question. On the other hand, the account of *residui*, or uncashed or unpaid balances on account of fiscal years up to June 30, 1931, closed with an increase of 341.9 million lire (from 2,393.8 millions to 2,735.7 millions) in the revenue still to be received, and a decrease of 922.5 million lire (from 6,974.2 millions to 6,051.7 millions) in the expenditure to be made. So far so good. Leaving out of account past revenue still due, which is an uncertain affair, the 504 million lire deficit of 1930-31 appears to be fairly compensated by the decrease of 922.5 millions in unpaid balances.

The situation with regard to present and future budgets is more serious. The first six months of the current fiscal year close with a deficit of 1,668.9 million lire, and the Budget for 1932-33 reveals an estimated deficit of 1,412.7 millions. It would not be an easy task to find new sources of revenue, as the limit of taxation seems to have been reached. Signor Mazzuchelli, in the January issue of the *Rivista Bancaria*, has pointed out that, notwithstanding the fact that new taxes to raise an additional yield of 459 million lire in the period from July to November, 1930, were imposed, revenue increased only by 239 millions (from 7,649 millions to 7,888 millions) compared with 1929; likewise, in spite of 365 million lire new taxation in the same period of 1931, revenue decreased by 600 millions (from 7,988 millions to 7,388 millions) compared with 1930. Signor Rocco, Minister for Justice, points out in an authoritative statement to *La Stampa* that any increase of taxation would be useless and would most probably result in a further decrease of yield, as the crushing burden of increased taxation would compel many taxpayers to go out of business. Nor is it easy to effect further economies, and, if they proved possible, they might react unfavourably upon revenue. Therefore, says Signor Rocco, the only alternative open to statesmen is to influence the economic situation in such a way as to limit the effect of the crisis. Signor Olivetti, General Secretary of the Confederation of Industry, in another statement to the Press, remarks that the best beginning to the solution of the world crisis would be the tackling of the monetary problem. It is useless to pretend that budget deficits and economic crises can be remedied while monetary systems are unstable. Nobody can work and plan on the base of unstable money. Only an international conference, however, can grapple with monetary problems.

Optimism on the stock exchanges has continued. Bank of Italy shares, which had been marked up from 1,381 on January 9th to 1,430 on January 16th, closed on

January 30th at 1,500; Fiat rose from 130 to 145 and 155 between the same dates, notwithstanding that the dividend may be passed; Edison from 440 to 483 and 493; Beni Stabili (real estate) from 560 to 573 and 583; Eridania (sugar) from 240 to 248 and 277; Snia Viscosa, which has lately increased its turnover and will distribute a dividend of 14 lire, increased from 165 to 185 (after a grouping of five old shares into one). Shipping securities are dormant; so are banking shares, with Credito Italiano pegged at about 700 lire and Banca Commerciale Italiana hovering around 1,100. The new Institute of Industrial Credit, which, it was said, would have relieved the "Sofindit" of a great part of the securities passed on to the latter from the Banca Commerciale, does not appear to have begun operations. Senator Mayer, president of the Institute, is reported as willing to assume responsibility only for sound securities with a safety margin under real values; so that it should not be necessary to call upon the State guarantee for debentures issued. Operations are therefore bound to drag on, and mobilisation of frozen bank assets is going to be slow.

HOLLAND.

Meat Duty — Exchange Regulation — Capital — Stock Exchange.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, February 3.

IN view of the critical situation of agriculture and industry in Holland, public attention is still being concentrated for the time being on the measures of commercial policy which the Government is to take. For the first time use has been made of the powers conferred upon the Government by the recently enacted quota law. The first article upon which the import quota restrictions are being imposed is beef, both fresh and frozen. The imports during the period from January 16 to April 16, 1932, will not be allowed to exceed 60 per cent. of the average imports per quarter during the years 1928, 1929 and 1930. The imports from the respective countries are to be allotted on an equivalent basis, so that the most-favoured-nation principle, as laid down in the commercial treaties, will be strictly observed.

Representatives of the Danish Government and of the Danish agricultural organisations have been conferring with the Dutch Government with regard to the measures proposed for rationing meat imports, and it was pointed out that the abnormal imports of meat which have been experienced since 1930 have made these measures imperative. Generally speaking, Holland has a surplus of beef, so that normally it is not imported into the country at all. The large imports of beef in 1930 and 1931 were due, not to causes within our frontiers, but to changed circumstances abroad. Other countries, including Germany, raised their import duties more and more in 1929 and 1930, and in September, 1931, several countries, including Denmark, abandoned the gold standard, with the result that large quantities of Danish meat, in particular, were thrown on to the Dutch market regardless of price, much to the detriment of the Dutch cattle farmers. The total imports of meat during the current year will be restricted to 2,715 tons of fresh meat and 5,730 tons of frozen, making together 8,445 tons, whereas in the past year they were 13,644 tons of fresh and 7,148 tons of frozen meat, an aggregate of 20,792 tons. The import of meat will accordingly be reduced from nearly 21,000 tons to less than 8,500 tons if the quota is maintained at 60 per cent. for the remaining three quarters of the year. Similar measures for other commodities may be expected.

On the initiative of the Netherlands it has been proposed that representatives of the signatories to the Oslo Treaty should meet at Geneva during the first week of the Disarmament Conference for the purpose of discussing the problems of commercial policy.

The statement of the German Embassy at The Hague that, pending definite arrangements, an import duty of 100 Reichsmarks per 100 kilog. is to be imposed on all butter imported into Germany from the Netherlands has

again caused much alarm in the Dutch dairy industry. In connection with this the "Crisis Dairy Bureau" has appealed to the Netherlands Government to place the export of butter to Germany under the provisions of the recent Crisis Exports Act, in order to enable the export of the quota liable to the German duty to be regulated to the best possible advantage for the Dutch producers.

A meeting has been held at The Hague of representatives of various branches of industry menaced by the abnormal imports of foreign goods, for the purpose of discussing what measures could be adopted to accelerate the application of the quota law. The meeting expressed alarm at the abnormally increased imports as revealed by the December statistics, whereas so far the quota law had not been made applicable to a single article except meat. It was generally conceded that the quota committee was not to be blamed for this in any respect. On the contrary, satisfaction was expressed as to the zealous manner in which the committee is acquitting itself of its task. The meeting also expressed disquietude as to the increasing activity of the Ministry of Foreign Affairs recently manifested in the conclusion of the protocol with Belgium, previously referred to in these columns. It was pointed out that this and similar agreements tend to nullify the operation of the crisis import law as desired by Parliament.

The threatened conflict in the coal mining industry has been obviated. A strike in which 17,000 mine workers would have been involved has consequently been averted, the management of the private mines having conceded the payment of the same contributions towards the pension funds as are made in the State mines. It was decided to entrust the pensions committee with the working out of further details. It was also decided to maintain the existing wages agreement. If, in due time, a wages cut has to be proposed, the management of the private mines are to submit figures proving the necessity for such reduction of wages. The existing arrangements for holidays and leave were renewed. In view of the increasingly difficult circumstances in the mining industry, however, the maintenance of the present level of wages is becoming impossible; it is therefore expected that proposals for a reduction in wages will soon be inevitable, in which case the proof of necessity as mentioned above will have to be provided by the mine owners.

The draft of the Bill regulating foreign exchange clearing with the Central European countries has now been passed from the Ministry of Labour to the Privy Council for examination. The Bill is to compel the use of the clearing house only for payments ensuing from transactions in merchandise, but is not to apply to payments for shipping, goods in transit, or for transactions concluded in goods which are not in this country. The law is to come into operation immediately it is passed. The Bill aims at facilitating international commercial relations and obviating hindrances to international trade resulting from the foreign exchange restrictions prevalent in various countries. It will not, however, achieve a definite and complete solution, for the system to be followed by the foreign exchange clearing institution would still entail various difficulties for the exporter. The latter will, for instance, no longer be able to negotiate on conditions of payment; the exporter of goods which were formerly delivered against cash or on short credit can now receive payment, even though the buyer has already paid, only if the institution regulating the foreign exchange clearing has sufficient balance of funds available for the purpose.

POLAND.

Import Restrictions — Textiles — Coal and Iron — Credit Withdrawals — Census.

(FROM OUR CORRESPONDENT.)

WARSAW, January 30.

THE enactment at the end of 1931 of several decrees greatly extending the import permit system, increasing Customs duties and providing for lower rates under certain conditions on a number of commodities, has caused a vast

amount of confusion among importers. The Ministry of Trade, under the new regulations, has so far allotted import quotas only in small amounts for a limited period, as the intention is to revise these quotas by countries every few months so that there can be no danger of the disappearance of the active trade balance. It is also hoped to make arrangements under the new regulations for obtaining more favourable treatment for Polish exports. An important phase of the situation which is now definitely developing is the policy of the Government to compel imports through Gdynia, partly to favour the new Polish port at the expense of Danzig, but mainly to restrict imports from or through Germany. With more than 26 per cent. of Poland's total imports in 1931 originating in Germany, and with a substantial part of the remainder passing through German hands before reaching the Polish frontier, it is clearly the intention of the Polish Government to restrict this trade by every means possible. Having made sincere—and almost humiliating—efforts during the past two or three years to bring to an end the economic conflict with Germany, the Polish authorities cannot now be blamed for their determination to fight back and make the "Customs War" a two-sided battle.

The new restrictions provide for a Customs duty on cotton imports. For the year 1932 the duty is 1.00 zloty per 100 kilogrammes; for 1933, 1.00 zloty if imported through the port of Gdynia and 6.00 zlotys if imported by any other route; for 1934, 1.00 zloty through Gdynia, 12.00 zlotys otherwise. These duties are definitely fixed. In addition, a duty of 45.00 zlotys per 100 kilogrammes is imposed, but this can be rescinded when imports are made against a permit granted by the Ministry of Finance. The purpose of the additional optional duty is to force importers to retain their membership in, and accept the production and price ruling of, the Spinners' Trust. Since the trust was re-established a year ago many of the small spinners have threatened to break away because it does not operate to their advantage. They will now be restrained from doing so because they would be put out of business by the refusal to rescind the optional duty of 45.00 zlotys. The minimum fixed duty on imports through Gdynia is, of course, to help the new port and virtually to force the Lodz textile industry to abandon—as from the beginning of 1933—the custom of many years' standing of importing cotton by rail from Bremen. It is true that the Bremen merchants have extended credit accommodation—at times on a large scale—but Polish spinners have paid dearly for it. With the staple now so low in price, and mill operations on a much reduced scale, credit accommodation is not so vitally important as formerly.

The mine owners of Upper Silesia and the Dabrowa basin announced about ten days ago a wage cut of 21 per cent., effective on February 1st. This was flatly rejected by the labour associations, whereupon the Government stepped in to avoid a strike and to provide against a possible cessation of coal exports to those markets where coal is now being shipped at a considerable loss. Government mediation is still going on, and it is hoped that the miners will finally be persuaded to accept a reduction of 10 or 12 per cent., with a promise that administration charges, directors' fees, etc., will be drastically cut. The coal industry is now feeling the full force of the depreciation of sterling. The Government have positively refused to consider any voluntary diminution in coal exports to the Baltic and Scandinavian countries, in which markets Polish coal is still sold on a sterling basis and at about one-third the domestic price. The ability of the coal companies to continue to meet British export competition has been greatly weakened by the falling-off in domestic consumption this winter, in consequence of the deepening industrial depression and the exceptionally mild weather. In addition to special transport rates to the Baltic seaboard, the Government are almost subsidising exports by allowing the coal companies a bounty of 2.50 zlotys per ton exported; but, even with a substantial wage reduction, it is hard to see how Polish exporters can continue, in the face of British competition, to increase exports to the Northern markets while sales in the home market and in neighbouring high-price countries are declining. Reports that British coal is now entering Poland, through Danzig,

have brought forth a semi-official announcement that the Customs duty on coal will be increased in the near future.

The iron and steel industry of Upper Silesia is in even more desperate straits because of the depreciation in sterling and the inability further to finance exports to Soviet Russia through German banks. While iron and steel exports to Russia during the first nine months of 1931 amounted to 292,603 tons, they fell off in October to 14,999 tons and in November to 2,521 tons. Recent reports from Upper Silesia indicate that these exports have now practically ceased.

The total of foreign credits granted to State banks, joint-stock banks, private banks, credit co-operatives, etc., declined from 659 million zlotys to 435 millions during the quarter ending September 30, 1931. Those obtained from Great Britain declined—during the quarter indicated—from 174 to 96 million zlotys; France, from 96 to 59 million zlotys; Austria, from 58 to 43 million zlotys; United States, from 62 to 35 million zlotys; Holland, from 50 to 31 million zlotys; Switzerland, from 38 to 18 million zlotys; and Sweden, from 19 to 14 million zlotys. German credits, on the other hand, increased from 90 to 101 million zlotys, so that, according to these figures—which are quoted from official sources—Germany is now the largest foreign lender to Polish banks and credit institutions. Official figures also show that the aggregate deposits of all banks and credit organisations in Poland, which amounted at the end of 1930 to 2,998 million zlotys and to 3,005 million zlotys on March 31, 1931 (the highest ever recorded), had declined to 2,921 million zlotys on June 30th and to 2,565 million zlotys on September 30, 1931. Virtually all this withdrawal took place from the joint-stock banks, and represented in large part the removal of foreign deposits.

The first returns of the census taken in December indicate that Poland now unquestionably holds "pride of place" among the Western nations for birth-rate increase. The previous census, taken in 1921, revealed a population of 26,858,000, while the first returns from the December count show a total of 31,927,000—both figures being exclusive of soldiers and sailors on active duty. There is thus registered a population increase of almost 19 per cent. over a ten-year period.

ARGENTINA.

Political Reform — Trade — Finance.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, January 15.

ARGENTINA is coming to the end of the period during which her political destinies have been directed by the Provisional Government which took office on September 6, 1930. Congress has been convened for January 20th, and it is credibly reported that the oaths of the new President and Vice-President, Señores Augustin P. Justo and Julio A. Roca, will be taken on February 20th.

It is unnecessary to recapitulate the work that General Uriburu and his colleagues have done since the Revolution. In the face of world difficulties unprecedented in their magnitude they have cleaned out a veritable Augean stable, not only as regards the national administration, but also throughout the provinces. Self-sacrifice and close co-operation are the outstanding characteristics of the régime now drawing to its close. It would, indeed, surprise many who hold the traditional belief in Latin-American laziness to know something of the details of the work that has been carried on in the Government departments, where the example of unremitting labour, frequently very ill-paid in comparison with commercial salaries, is given from the top downwards.

Unfortunately circumstances have done little or nothing to second this self-sacrificing patriotic endeavour. Argentina's foreign obligations have been punctually met, and every nook and cranny through which revenue receipts might filter away has been stopped. Economy, implying numerous dismissals, has been practised; notwithstanding

that by so doing the Government very well knew that it was risking electoral enemies. Yet in spite of all it is evident that world conditions are holding back Argentina's hardly-sought recovery. Completed figures for 1931 show that while her exports were valued at \$639,106,000 gold, as compared with \$614,104,000 gold in 1930, her shipments amounted to eighteen million tons, as against eleven million tons in 1930. (This is exclusive of specie shipments amounting to \$171,730,483 gold.) Her imports show a marked decline, and, if the trade balance be taken conjointly with the specie exported, it may reasonably be said that Argentina to-day is not only thoroughly solvent, but has placed her international trade on a much better basis than it was twelve months ago.

This effort has, however, left her financially very weak indeed, and at present that weakness is accentuated by the low prices ruling for all produce, and more especially for cereals and meat. New wheat for January shipment is quoted at \$5.90 per 100 kilos., while linseed is \$9.15; maize, relatively speaking, carries the best quotation at \$4.30. For cattle of the highest class prices have fallen away to approximately 17 cents paper per kilo. live weight, first-class chilled beef steers, as compared with 30 cents twelve months ago. Moreover, the packing houses are buying with great caution, heavy-weight steers being rejected and saleable only at a considerable discount, however fine their quality may otherwise be. Small wonder that exporters in general are nervous and depressed, looking anxiously towards Great Britain, whither the bulk Argentina's production is shipped. An Argentine commission will leave for London as soon as it has been able to gather sufficient data to prepare the Republic's case for preferential treatment. The present confused state of world trade, due to the momentary ascendancy of protectionist principles, is bringing home to Argentina, and to other South American nations, the very real loss to humanity that abandonment of the basic principle of Free Trade implies.

Meanwhile, though her financial position on capital account is thoroughly sound, Argentina at the moment is almost of her wits' end for the ready money necessary to the conduct of her complex administration. It should be remembered that here there has been nothing like the robbery and waste brought to light in connection with other South American republics. Even the misconduct of the previous régime can only be likened to petty pilfering when compared with what has happened elsewhere. For this reason one regrets that efforts are being made by a certain section of the Argentine Press to persuade the public that the time has come for a paper issue, and it is to be hoped that the new Government, when it takes office, will strain every nerve to refrain from adopting such a dangerous expedient. As it is the Government that needs the money, to an amount of at least \$200,000,000 paper, it is to be hoped that means will be found whereby a loan to that extent can be arranged. The actual amount of currency in circulation, which to-day stands at \$1,244,992,781 paper, as compared with \$1,225,990,944 paper at the end of January, 1931, is fully ample for all business needs. To use the currency as a means of providing what would be tantamount to a forced loan is a desperate course, having regard to the difficulties which currency issue has created in the past for Argentina. The best brains of the country are opposed to any such step, but, unfortunately, the mass of public opinion is only too ready to listen to specious arguments based upon temporary necessities.

IRISH FREE STATE.

Politics — Bacon Duty — Railways — Shannon.

(FROM OUR CORRESPONDENT.)

DUBLIN, January 22.

THE date of the general election has now been fixed for February 16th, and the election campaign is in full swing. There is considerable doubt about the result. On the one hand a period of economic distress and falling prices favours the Opposition, who do not hesitate to attribute all

the ills from which the country has suffered to the misdeeds of the Government, and hold out the promise of rare and refreshing fruit to the electorate. On the other hand, the very magnitude of the world crisis may dictate a policy of "safety first" among the electors. Many forces are working in favour of the Government, and, while none of these is of much importance in itself, their cumulative effect may be important. The episcopal pastoral letter, the success of the Public Safety Act, and the alliance with the ex-Nationalists are all factors which will assure additional support for the Government. Finally, it must be borne in mind that the system of proportional representation makes anything in the nature of a landslide, such as occurred in Great Britain, impossible. While the result is still extremely doubtful, the chance of obtaining a narrow majority appears to be with the present Government and their parliamentary allies.

The conversations which have taken place between Free State Ministers and Mr Runciman are not wholly unconnected with the forthcoming election. Anything in the nature of a promise on the part of Great Britain of a preference to Irish agricultural produce would be extremely popular among farmers. It is, of course, fully realised here that many difficulties confront the British Government in respect of such a promise; the Scandinavian and South American producers must not be penalised, and the decisions of the Ottawa Conference must not be anticipated. Nevertheless, it is felt that the Free State occupies an extremely strong bargaining position in relation to Great Britain. Last year it was the largest single market for British exports, and it is therefore able to give very valuable preferences in return for any that it receives. Moreover, the high quality of Irish live stock products and the proximity to the British market would enable it to profit greatly from any preferential treatment.

The anti-dumping Act has been applied to bacon, on which a graduated import duty has been imposed. The duty is high in the case of cheap bacon and is reduced by a sliding scale as the quality of the bacon improves. This duty does not apply to any imports from Great Britain or the Dominions, and there is reason to think that it will stimulate the importation of bacon from Canada. The duty is, however, only temporary, and the question of permanently protecting the bacon industry is being investigated by the Tariff Commission. The case against such protection is that it might possibly have the result simply of deflecting Irish bacon from the export to the home market at the expense of the consumer without developing the output of the industry as a whole.

The prolonged and continuous decline in the receipts of the railways has caused widespread alarm among shareholders, who have taken steps to form a Railway Protection Association. The complaint is made that, although the railways have ceased to possess a monopoly of transport since the development of road competition, they are still treated as monopolists by having their fares and their wages fixed by law. The provisions of the Amalgamation Act, 1924, that rates should be fixed so as to produce a certain standard revenue have completely broken down, and both preference and ordinary dividends are now in arrears. The shareholders claim either that the railways be decontrolled and left to fight the new competition with free hands, or, in the alternative, that road transport should be regulated and controlled. The policy adopted by the Government is to preserve a strict measure of regulation over the railway companies in regard to the railways, but to give them full and unrestricted powers of competing on the roads with independent transport agencies.

The progress of the Shannon hydro-electric scheme appears from the following figures published by the Electricity Supply Board:—

	1930.	1931.
Units generated	89,120,000	146,540,700
Units sold	65,000,000	110,000,000
Consumers	57,000	74,600

There has thus been an increase of over 57 millions in the number of units generated, and of 45 millions in the number of units sold, while the number of consumers has grown by nearly one-third.

Letters to the Editor.

THE CRISIS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—It is not surprising that Mr E. F. Wise, as a director of the Soviet Government's chief internal distributing agency—the Centrosyos—should attempt to clear Soviet exports from the charge of being an important factor in the fall of prices in many commodities on this and other markets. It is more surprising to find him misinformed in some dates and figures.

Samples of Russian wheat may not have actually "appeared" here until the last week in July, 1930, as Mr Wise states, but 3,783 tons of sample had been advertised in the *Corn Trade News* of July 7th as being on their way to this country, and were, I understand, sold while still at sea. The price at which they were quoted on July 7th was 34s. 6d. a quarter, while the price of No. 2 Manitoba, quoted on the same date, was 36s. 6d. If any of the No. 2 was quoted at 39s. in the third week of July, as stated by Mr Wise, the price must have been exceptional, as the average price of all Canadian wheat for July, as shown in the Board of Trade Returns, was 8.8 shillings the cwt., or 36s. the quarter.

Nor can 57s. the quarter for No. 2 Manitoba "at the beginning of 1930" have been anything but exceptional, as the average price of Canadian wheat in January, 1930, was 11.3 shillings the cwt., or 48.4 shillings the quarter.

It is obvious, however, that there was a fall in prices between January and July. This chiefly occurred before May and was apparently due to price-cutting alternatively by the United States and the Argentine. But in May Canadian prices rose slightly, and Canadian, American and Argentine prices remained fairly steady, until August, when a continuous fall set in which brought Canadian wheat down to 6.4 shillings the cwt., in December. American and Argentine wheat fell from 9.3 and 8.6 shillings to 6.7 and 5.9 shillings respectively, the cwt., in that period.

How largely the advent of Russian wheat contributed to this fall, is shown by the fact that from July to December the Russian average price was 6s. 1d. per cwt., and (according to a Parliamentary reply of January 28, 1931) actually only 5s. 9d. the cwt., from October to December inclusive. During these three months the Soviet Union sent us over 15 million cwts., or more than 2 millions more than Canada, the United States and the Argentine combined sold us in the same time. How can such price-cutting by so large a supplier have failed to have a profound effect on prices here and elsewhere, though no doubt its effect was intensified by the knowledge of the large unsold stocks in North America, to which Mr Wise refers?

In the face of figures such as these, Mr Wise's attempt to deny that Russian exporting organisations or the British firms acting for them "dispose of their produce at especially low prices," will not carry conviction to anyone who desires to base his conclusions on concrete authoritative facts.

Nor is Mr Wise more convincing when he turns to butter and eggs. The Trade Returns for 1931 show that butter imports from the Soviet Union in that year were over 5 per cent. of the total, not "about 3," as he states. As to eggs, it is true that in 1931 Russia sent us only a little over 1 per cent. of our total imports of eggs in shell (she does not send us any other kind), but Mr Wise must know that in 1928 she sent us about 9 per cent. and that the fall since then is due to the widespread slaughter of livestock in 1929, caused by forcing the peasants into collective farms. The 1931 imports of Russian eggs are more than three times as large as in 1930, and are likely to increase owing to the "drive" which is being made to increase all forms of livestock. But the following figures show clearly how Russia has been cutting prices in butter and eggs even with some lessened quantities:—

(In shillings and decimals thereof.)				
Commodity and Country.	1928.	1929.	1930.	1931.
Butter (per cwt.):—				
Soviet Union	157	158	121	97
New Zealand	167	172	137	111
Denmark	184	179	147	120
Australia	157	165	126	107
Eggs in shell (per gt. hundreds):—				
Soviet Union	9.8	10.6	7.3	6.3
Denmark	16.4	16.8	13.9	11.6
Netherlands	14.7	13.1	14.3	11.8
Irish Free State	12.5	13.2	11.3	9.9

Again, Mr Wise reminds us that other commodities of which Russia "is a buyer and not a seller" have also fallen in price—a fact which I have never attempted to dispute. But in the case of two of the commodities he mentions—tea and coffee—the fall between 1928 and 1931 was not more than about 20 per cent., much less than in the case of most of the commodities which Russia has influenced. And may not the fact of a greatly reduced consumption of tea in Russia due to rationing, have something also to say here?

Finally, Mr Wise includes cotton in the list of goods which Russia "buys but does not sell."

Yet the Trade Returns show that in the first three months of 1931 Russia sent in nearly as much raw cotton as Egypt and only a little less than half what we were then purchasing from the United States; and heavy falls in prices show the price-cutting to which she has made a contribution since 1930.

Can Mr Wise indeed be ignorant of this?—Yours faithfully,

KATHARINE ATHOLL.

House of Commons,

February 4, 1932.

DISARMAMENT AND WAR DEBTS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The Lausanne Conference is receding. But the Geneva Conference is approaching, and the conviction is gaining ground that the problems of "disarmament" and of inter-governmental debts cannot be solved separately.

It is sometimes said that the less America's debtors spend on armaments, the more they will have for the payment of their war debts. The fact is quite otherwise. America's debtors are prevented from paying what they have agreed to pay, not because they cannot create a sufficient surplus in their domestic budgets, but because such a surplus cannot be transferred to the United States; we have not the gold, and American tariffs keep out our goods. If America's debtors were to spend less on armaments they would not be better able to fulfil their material obligations in the matter of war debts. But they would be able to fulfil their moral obligations; for they would allow the Americans to save on armaments more than they will lose in war debts, and to do so without any diminution of security or relative strength.—Yours, etc.,

The Athenæum, S.W.1.

MAXWELL GARNETT.

January 27, 1932.

BRITAIN'S FISCAL RESPONSIBILITY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your article "Britain's Fiscal Responsibility" in the issue of 23rd inst., you consider the possibility of a re-interpretation of the most-favoured-nation clause to permit "low tariff agreements open to those States who are prepared to participate." The logical inference from this seems to be that you are prepared to consider the charging of duties by Britain on the goods of countries not prepared to participate, for failing this, what inducement are we offering to the countries with which we hope to come to an agreement?

The *Times*, in an Editorial on 19th inst., pointed out that with high tariffs the most-favoured-nation treatment "is apt to work out as most-unfavoured-nation treatment all round," to assist "the raising rather than the lowering of Tariff barriers," also that "to many of our best customers who impose low duties or no duties at all upon our trade it must be a serious discouragement that we treat their goods no better than we treat similar goods from countries which shut out our trade by high tariffs."

It is, I think, common ground that any British action should be directed towards increasing our export trade. What better method can we adopt than that which a small group has been urging for some months, namely, charging a duty based on the extent to which our trade is obstructed by the tariff action of various countries. That is definite anti-tariff action. This policy cannot lead to a tariff war, for increases in duty recoil on the head of the country making them. There need only be one exception to a duty applied on the lines suggested: it would not be charged on raw materials of which any country had a virtual monopoly (e.g., American cotton).

The proposal seems to be worthy at the least of serious discussion.—Yours, etc.,

1, North Charlotte Street,
Edinburgh.

Books and Publications.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

The Moodys-Economist Company Index. (London) Moodys-Economist Services, Limited, King William Street House, E.C.4.

This index represents a valuable new departure. It contains a list of all the companies covered by Moodys-Economist services, classified according to their occupation, so that the investor can see at a glance which are the leading companies engaged in canning, ironfounding, or the manufacture of matches. There is also an alphabetical index of companies.

The Industrial Revolution and the Economic World of To-day. By L. W. White and E. W. Shanahan. (London) Longmans, Green and Company, Ltd., 39, Paternoster Row. 6s. net.

A study of contemporary economic structure and problems in the light of historical changes. The book is primarily designed for advanced pupils in schools, but is by no means beneath the notice either of university students or of the general reader.

Le Crédit par Acceptation. By Pierre-Benjamin Vigreux. Preface by Jean Velay. (Paris) Librairie des Sciences Politiques et Sociales, 31, Rue Jacob. 50 francs.

A study of the system of acceptance credits, and a discussion of what has been done, and what remains to be done, in promoting the development of acceptance business in Paris.

Saling's Börsen-Jahrbuch für 1931-32. Edited by Walter Theimer. (Berlin and Leipzig) Verlag für Börsen-und Finanzliteratur A.-G.

A year book, in German, which gives particulars of the principal securities dealt in in eleven foreign stock exchanges.

Britain's Chance. By Stephen King-Hall. (London) The New Statesman and Nation, 10, Great Queen Street. 6d.

A suggested policy for the Government.

Canada's Western Arctic. Compiled by Major L. T. Burwash. (Ottawa) F. A. Acland.

An illustrated report on a series of investigations in the Arctic region of Canada.

Practical Income Tax. By C. W. Chivers. Eleventh edition. (London) Sir Isaac Pitman and Sons, Ltd., Parker Street. 3s. 6d. net.

A clear and useful guide, generously supplied with examples.

Voluntary Liquidation under the Companies Act, 1929. By H. W. Jordan and R. J. Blackadder. (London) Jordan and Sons, Ltd., Chancery Lane. 10s. net.

A clear and well-arranged book for the guidance of people concerned in the liquidation of companies.

Taxation of Income in India. By V. K. R. Rao. (London) Longmans, Green and Company, Ltd., 39, Paternoster Row. 10s. 6d. net.

A critical examination of the Indian income-tax system.

The World and Its Commerce. Third edition. (London) Sir Isaac Pitman and Sons, Ltd., Parker Street, Kingsway. 2s. 6d. net.

A small text-book of commercial geography.

The Stock Exchange:

INVESTMENTS IN CHINA.

THE first reactions of the Stock Exchange to the outbreak of hostilities at Shanghai were sentimental rather than logical. As if to express disapproval of the Japanese action, Japanese Government bonds were marked down last week more precipitately than the Chinese Customs loans, and when it was suggested, on Wednesday of this week, that Japan might be prepared substantially to accept the peace proposals, Japanese bonds recovered more sharply than Chinese.

The following table shows buying prices after Wednesday's recovery, as compared with similar prices on January 22nd and with the highest of 1931:—

Security.	Highest 1931.	Price, Jan. 22.	Present Price.	Yield per cent.	
				Flat.	Redn.
South Manchurian Rly. 4½%	99½	89	85	5 6 7	9 4 0
Sterling Bonds	97½	80	73	7 0 5	7 2 9
Japanese 5% 1907	78½	63	54	7 9 10	7 17 6
" 4% 1910	105½	91½	83	7 5 3	7 10 0
" 6% Sterling 1924	111	100	93	8 7 0½	8 12 9½
" 5% Conv. Loan 1930*				5 19 0½	6 0 6½
China 4½% Gold Loan 1898 ...	90½	84	79½	5 15 5	7 9 6
" 5% Boxer 1925/47*	93	85½	80½	9 1 0½	11 4 6½
" 5% Reorganisation 1913	71	60	57	6 8 5½	7 10 0
				8 17 0	9 10 9

* These are gold loans payable in dollars at par.
† Exchange at \$3.46 to £1.
‡ Exchange at \$4.86 to £1.

Investors, apparently, have not attempted seriously to balance the respective "risks" of a Japanese economic blockade of China and a decision by the League of Nations to call upon its members to enforce an economic blockade against Japan. From the investor's point of view alone the peace-making efforts of the Western Powers have been well-advised, since any interference with the trade of the Treaty Ports through which one-tenth of the total trade of China passes would undoubtedly inflict grave injury on the interests of innocent parties engaged in peaceful trade, particularly on those of Great Britain and America.

The financial position of the Chinese Government was already a source of anxiety before Japan's latest intervention. Various commercial organisations in China have recently urged the immediate calling of a National Economic Conference to devise measures for meeting the financial crisis. The Chinese Domestic Bondholders' Association, for example, called attention last month to the recent slump in bond values and to the deplorable plight of the country's finances, forecasting that, unless a national conference were convened to effect a thorough overhaul, the Government's credit would collapse, and with it the whole economic structure of the country. The Greater Shanghai Citizens' Association, similarly, have issued a nation-wide appeal to commercial interests, calling upon them to support the convening of a National Economic Conference. Meanwhile, negotiations between the Chinese Government and Chinese bankers are pending regarding the issue of a Government loan of \$48 millions, to be secured on the unissued \$80 millions 20th-year short-term currency bonds. The Government is now facing a monthly deficit of \$15 millions, and it is obvious that drastic economies are urgently required if it is to avoid complete bankruptcy.

So far the Nanking Government has not defaulted on any of its internal loan obligations—a record in striking contrast with that of Peking, of whose internal loans 60 per cent. are in default. The Nanking Government has so far issued twenty-three internal loans for a nominal sum of \$972 millions, making a grand total of \$1,608,109,588, if the loans of the defunct Peking

Government are included. Of this total, \$699,833,692 has been redeemed, leaving a balance of \$908,275,896 outstanding, distributed as follows:—

Issued by	Outstanding 1st Jan., 1932.	Overdue.
Peking	185,888,860	118,676,860
Nanking	717,387,036	...
	903,275,896	118,676,860

In 1931, no less than \$380 millions of internal bonds were authorised, of which \$300 millions were issued, the balance being reserved as security for the new loan which is under negotiation with the Chinese bankers. Although these internal bonds are nominally issued at 98 per cent. of their face value, they are sold at much below this figure in times of financial stress when money is urgently needed, so that the burdens on the Treasury are heavily increased. The prospects of the Nanking Government's being able to continue to meet its internal interest payments are not highly rated on the Shanghai market, where some of the internal bonds are currently quoted at only one-third of their face value. The Nanking Government has recently reiterated its determination not to have recourse to a moratorium, but a continuance of hostilities might well make this decision impracticable.

These considerations, however, have only a secondary interest for holders of the external Chinese loans, which are secured on the Maritime Customs, since their revenues are collected at the ports by foreign officials under a British Inspector-General of Customs and are deposited in European-controlled banks. The total amount secured on the Chinese Maritime Customs has been estimated at approximately £109,000,000. The Inspector-General deducts the necessary amounts therefrom for the full service of all the foreign loans and Boxer indemnities secured on the Customs, and, after certain administrative changes and appropriations, hands over the balance to the Chinese Government. As we stated in an "Investment Note" in last week's *Economist* (page 247) the Maritime Customs revenues for 1931 amounted to 248,314,000 Haikwan taels, as compared with 180,570,000 Haikwan taels in the previous year, the sterling equivalents at the average rates of exchange for the year being £19,011,541 and £16,834,395 respectively. The service of all the loans (shown in our first table) secured on the Customs revenues, which amounts this year to over £7 millions, has been punctually met, and this week the balance of the 5 per cent. Gold Loan of 1896 (£920,000) was paid off. It is only the railway loans and the loans secured on the salt tax which are in default. Nevertheless, the prospects of Chinese trade must not be left out of account when the future security of the Customs loans is considered.

Internal trade in China probably suffered more as a result of floods in the summer of last year than as a result of the world economic depression. The floods extended throughout eight provinces and affected about 255,000,000 mow* of cultivated land and nearly 16,000 households. It has been estimated that 36 per cent. of the total rice crop was lost, together with 24 per cent. of the cotton crop and 29 per cent. of the crop of millet and kaoliang. According to a statement prepared by Mr C. T. Chang, of the Directorate of Statistics at Nanking, the foodstuffs lost in the summer of 1931 through these floods alone would have been sufficient to feed 18,000,000 people for a whole year. About 5,000,000 tons of rice, kaoliang and millet were ruined, and the total monetary loss is

* A mow = 0.15182 acres.

estimated at \$457 millions. On the top of this natural disaster China had to suffer unnatural internal war, and on the top of internal war she had to face the invasion of Manchuria. The three eastern provinces constitute China's richest territory and are responsible for the production of the country's largest single export commodity—soya beans. Fortunately the fall in silver spared China a good deal of the evils of the world trade depression, for without the stimulus of the silver depreciation China's exports would have been very small indeed. Even so, the export trade suffered considerably, and during the last four months of the year imports from foreign countries exceeded China's exports by 100 per cent., the figures being 50 million Haikwan taels per month for exports, against 100 millions Haikwan taels for imports. The decline in the export trade was most marked in tea and raw silk. China's position as the leading exporter of tea has now been taken by Ceylon, India and Java, while Japan has been displacing China as an exporter of raw silk. At the end of 1931 about 90 per cent. of all the silk filatures in Central China had to be shut down. Nevertheless, conditions would quickly improve if China could only be effectively guaranteed against internal war or external attack. The revenues collected within the country are adequate for ordinary purposes of government, but have been devoted to the wasteful purposes of civil war. Road and railway building have been neglected, and trade has languished. But so low is the standard of life that Mr E. Kann, in the latest issue of the *Shanghai Finance and Commerce*, has declared that out of 450 million people in China, 440 millions, conscious only of the high level of domestic prices, are unaware that there exists a world trade depression.

As regards capital investments in China, it has been estimated that, at the end of 1929, the total public debt, secured and unsecured, both domestic and foreign, amounted to £246 millions. This apparently excludes capital invested on equity terms. It is difficult to estimate the British proportion of this total, but, taking equity investments as well as funded debt, the British investment in China is estimated at £200 millions, as compared with a total capital investment of American interests of 78 million U.S. dollars. The leading British commercial interests in the China trade are represented, *inter alia*, by the British American Tobacco Company, the Hong Kong and Shanghai Banking Corporation, the Shell Transport and Trading Company, the Peninsular and Oriental Steam Navigation, and the Indo-China Steam Navigation. The extent of these companies' investments in the China trade, though not precisely ascertainable, is considerable. British industrial and mining interests are represented by the Chinese and Engineering and Mining, Hong Kong and China Gas, and Hong Kong Tin, etc. The securities of these companies have not suffered to any great extent in market value as the result of the present crisis:—

	Capital.	Shares.	High, 1931.	Present Price.	Div.	Div. Yield.
Hong Kong & Shanghai Bank	£ 1,625,000	\$125	113½	97½	£ 6	£ s. d.
Indo-China Steam Navigatn.	495,890	25	42/6*	4/6	Nil	6 3 0
Chinese Engineering	1,960,000	£1	37/6	25s.	2½%	2 0 0

* Deferred ordinary.

All these companies have acutely felt the decline in Chinese trade. The Hong Kong and Shanghai Bank has paid £6 for the year 1931, omitting the bonus of £1; while the Chinese Engineering reduced its dividend for the year ending June, 1931, from 9 per cent. to 2½ per cent. To what extent the trade of the British American Tobacco and Shell Transport have suffered it is impossible to say, but a 10 per cent. decline would not be an unreasonable estimate. British commercial interests will therefore watch with considerable anxiety further developments in the relations between China and Japan. Nor will the holders of the Chinese Customs loans feel reassured until trade at the Chinese ports is allowed to flow freely without the threat of any outside interference.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.
February 16.

ACCOUNT.
February 18.

The stock markets received the news of the Far Eastern crisis in traditional post-war fashion, dealers marking down the stocks immediately affected but otherwise waiting on events before committing themselves. The news from another part of the East exercised an even more restraining influence, the decision of the Australian Commonwealth Government not to remit interest payments on certain New South Wales issues, on Mr Lang's default, creating an indubitably bad impression. Probably the strong technical position accounted mainly for the relative steadiness of sentiment, and for the immediate improvement which followed the announcement of the Anglo-American peace suggestions to China and Japan. Wall Street was a more or less "neutral" influence, but among Continental centres, Paris showed a certain liveliness, particularly in the oil share market, on rumours of favourable trade developments which appeared to be persistent rather than well-founded.

Trading in gilt-edged securities was restricted at the outset, all stocks showing a moderate decline on the news from the East, and on the decision of the Central Electricity Board to issue an unexpectedly large amount of new stock. Mid-week recovery, however, was of sizeable dimensions and prices were maintained despite the absence of a change in Bank rate, which was in accordance with general expectations. War Loan was particularly firm on Wednesday. Indian loans declined on scattered selling. Commonwealth as well as New South Wales issues were marked down heavily on the default, the implications of which are discussed in a Note on page 311. Although some selling occurred of Chinese and Japanese stocks at the opening on Monday, the extensive marking down of prices which ensued was largely precautionary, and the subsequent recovery was, similarly, of a professional nature. German bonds remained firm on a comparatively moderate amount of support, coming partly from the Continent, assisted by sinking fund operations in connection with the "Dawes" issue. After holding their ground at the beginning of the week, Austrians came on offer, the 7 per Cents. falling three points on Wednesday on fears of pending political and economic developments. Greek issues showed a modest recovery on the satisfactory figures of Assigned Revenues in 1931.

Dealings in home railway stocks were on a small scale, the dividend outlook being viewed cautiously after the reduction in the Metropolitan payment (discussed on page 312). The week's traffic figures showed no perceptible deceleration of the falling tendency in gross receipts. Little interest was taken in Argentine rails, the market remaining uncertain as to the precise explanation of the divergent movement of traffic figures on particular railways. Other South American stocks were featureless. The gains recorded by American railroads, following the wages agreement, were less than had been expected.

The new account in Industrials opened under uncertain auspices. The tone of the market remained fairly steady, but Wall Street gave little sustained assistance, and there was a general disinclination to increase commitments under the shadow of the Eastern war cloud. British-American Tobacco were slightly easier, and Hong Kong and Shanghai Banking fell 1½ points on Monday. Chinese Engineering and various textile issues also tended to sag, but the market generally showed no signs of intimidation over the prospects of companies with large stakes in Shanghai. Steadier conditions obtained after the Foreign Secretary's announcement of Great Britain's mediatory efforts. J. and P. Coats were depressed by dividend fears, and Courtaulds by liquidation in connection with a deceased estate. Cables and Wireless were lower on bear reports of a decision to pass the entire

LONDON ACTIVE SECURITY PRICES AND YIELDS.

NOTE.—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

(Continued from page 307.)

preference dividend. Dunlops showed a steady decline, attributed in some quarters to rumours of a coming debenture issue. Iron and steel shares hardened slightly in anticipation of the industry's inclusion in the Government's tariff proposals. Moderate investment support was forthcoming for selected electrical shares, Calcutta Electric being noteworthy among the supply companies. Motor shares were irregular, Ford failing to maintain its recent improvement. Marks and Spencer continued firm, expectations of a profitable year's business being enhanced by the reassuring survey of general trading conditions given by the Woolworth chairman (whose speech is dealt with on page 313). Other retail store shares were unaffected by the reduction in the Maples dividend, which was declared to be due mainly to depressed conditions in the shipbuilding industry and in South America. Bank shares had an irregularly downward trend, and insurance issues remained dull.

The leading shares in the oil market showed a "sentimental" rise, somewhat keen buying from Paris being associated with rumours of an agreement between competing interests to co-operate in the raising of the price of motor spirit. Rubber shares were inclined to sag with the commodity, the market regarding a report of the recall of the head of the Dutch East Indies Agricultural Department to Holland to discuss restriction problems as an indication that no immediate decision could be expected. Business in the tea share market was negligible, despite the unexpected announcement by Budla Beta of an interim dividend of 3 per cent.

Dealings in mining shares were reduced to a minimum. Paris showed only intermittent interest in Kaffirs. Daggafontein were slightly higher on the publication of the first return, and a little buying of Brakpan and Springs occurred on the increased working profits shown for January. A slight rise in the London price of copper served to keep Rhodesian issues steady in the face of a further cut in the copper export price in America. Rio Tinto were largely unchanged after narrow fluctuations, but tin shares weakened in sympathy with a relapse in the price of the metal. "Chartered" suffered a setback in anticipation of the reduced dividend declared on Thursday. The Panama Corporation proposal to adopt Canadian registration was not enthusiastically received.

FOREIGN STOCK EXCHANGES.

NEW YORK.

American operators were undecided in their initial interpretation of the news from China, a certain amount of irresponsible war talk finding expression in speculative buying of silver and of aircraft shares. The more responsible section of the market, however, was inclined to take a conservative view of immediate prospects at home and abroad. An early rally in prices was not maintained, dealings quickly becoming quiet and irregular. It was known at the beginning of the week that, after protracted negotiations, the railroad unions agreed to a 10 per cent. reduction in wages, but this event had been discounted for so long that it produced only a short-lived recovery in values. The market, indeed, tended rather to raise the question as to how long railway freight would be maintained, even at its present restricted level, in the absence of an early improvement in the trade position. The fact that most railroads were paying dividends which they were not earning was a restraining influence. It was widely realised that a continuance of trade depression would necessarily involve a general passing of railroad dividends. The Reconstruction Finance Corporation started operations, and is expected to make a statement of policy next week. Meanwhile, news of the general trade situation was inconclusive, but not reassuring. Steel mill production for the week ended January 30th was on the basis of 28 per cent. of capacity, as compared with 29 per cent. in the previous week and 47 per cent. in the corresponding week of 1931. The downward tendency of prices was a further unsettling factor, fresh reductions in copper prices to the lowest recorded level being regarded as evidence that the new curtailment plan had so far been ineffective. The outward movement of gold continued, over \$13,000,000 being exported on Wednesday, of which \$12,563,700 was consigned to France. Freight car loadings for the week ended January 23rd were 563,015, compared with 573,365 for the previous week, 715,690 for the corresponding week of 1931, and an average of 910,976 for the seven years 1924-30.

INVESTMENT NOTES.

An Australian Default.—In view of the improvement in the trade balance of Australia, the announcement of a default this week on certain New South Wales stocks came as a distinct shock to the market. How badly the news was taken is shown by the following table of present market prices of representative Australian stocks as compared with prices ruling a week ago:—

	Jan. 28.	Feb. 4.	Flat Yield %
Australia Commonwealth 5%, 1945-75	84	78	6 8 2
New South Wales 5%, 1945-65	78	70	7 2 10
New South Wales 4½%, 1935-45	72½	69½	6 9 6
New South Wales 6½%, 1930-40	90	79	7 11 11
Queensland 5%, 1940-60	79	72½	6 17 11
South Australia 5%, 1945-75	81	75	6 13 4
Victoria 5%, 1932-42	80½	75	6 13 4
Western Australia 5%, 1945-75	80½	75	6 13 4

In many cases dealings in Australian stocks are again a matter of negotiation. The New South Wales default has, inevitably, a political explanation. It arose because the Loan Council refused to meet the New South Wales overseas interest in London and New York. It may be recalled that last year the Commonwealth Government paid out nearly £4½ millions on behalf of New South Wales defaults, but that Mr Lang subsequently agreed to withdraw from his attitude of defiance and default, to reduce expenditure and to keep the State Budget deficit within prescribed limits. Mr Lang has failed in his undertaking, and the Commonwealth Government is apparently determined that he shall be swept from office. As New South Wales was bound under the 1929 financial agreement to provide the amounts required to meet all interest on its public debt to the extent to which such liabilities exceeded £243,000 monthly, payable by the Commonwealth under that head, the Commonwealth Government has issued a writ for the recovery of the amount due. There is even talk of putting a receiver into possession of the New South Wales Treasury. In any case, a Government which has no financial resources cannot continue in office indefinitely, and a general election may see the rout of Mr Lang's party. The Stock Exchange was inclined to regret that the National Government, which was elected largely to restore the financial credit of Australia, should have committed a default itself as one of its first actions in office. There is no doubt that the Commonwealth will eventually pay the amount to bondholders, for, under the Financial Agreement Validation Act of 1929, the Commonwealth will, in respect of the debts taken over, assume as between the Commonwealth and the States, the liabilities of the States to the bondholders. In March, 1931, Mr Scullin took counsel's opinion on this matter, which was to the effect that the Commonwealth was under a definite liability to pay, but might sue the defaulting State to cover the amount advanced. Thus not only New South Wales but the Commonwealth Government of Australia have been placed technically in default by the present postponement of payments. Meanwhile the Commonwealth Government will pay direct to bondholders the £243,000 monthly, its contribution to the New South Wales debt service, but as the total overseas debt service is about £8 millions at par, this does not help the bondholders out of their difficulty. Mr Lang has given as his reason for this default that the only alternative to the abolition of the family endowment scheme was the suspension of overseas payments. The question which faced Australia, he said, was whether she should keep her people or pay her overseas interest. According to the trade balance figures, however, the proceeds accruing in the Australian commercial banks in London from Australian export sales are adequate for the purpose of meeting all overseas obligations.

PARIS.

Markets were moderately active at the opening and prices hardened. Suez Canal shares were firm on the theory that further Sino-Japanese hostilities would increase the volume of traffic through the Canal. Hotchkiss also improved on war talk. Movements in the speculative section were generally upward, oil shares being particularly active, especially Royal Dutch, Shell and the twin Eagles. "Kaffir" shares remained dull, though the De Beers improved. On Wednesday, the "Young" and "Davies" loans were marked up appreciably, on a relatively small business, but a sizeable reaction occurred in their issues on Thursday, though markets generally remained steady.

AMSTERDAM.

The Amsterdam Bourse opened with a firm undertone. A fair demand was in evidence for leaders like Royal Dutch and Unilever. Shipping shares were also in favour, and Netherlands Shipping Union, in particular, were marked up. Rubber shares were idle, but more inquiry was received for sugar shares, especially for Amsterdam Trading. Tobacco and tea shares were more active, though business was nowhere of large proportions. More apathetic conditions returned, however, in mid-week, and though recent prices were generally held, little new business was done.

OTHER CENTRES.

Irregular conditions obtained on the majority of other European bourses, business everywhere being of less than normal dimensions. Brussels rallied slightly after an erratic opening, but remained uncertain in tone throughout the week. Swedish issues showed perceptible weakness at the outset, but recovered as the week progressed. Government issues were in moderate demand at Milan, but industrial shares were heavy. Unofficial quotations in Berlin, however, continued their recent upward trend, for the most part. Dye Trust were done at 97.75 (against 95.75 a week ago), Siemens at 126.75 (against 125.00), General Electric at 83.75 (against 84.00) and Reichsbank at 107.50 (against 100.25).

The Course of Share Values.—Despite the Far Eastern crisis, the London Stock Exchange has not lost the firm appearance which, with a few minor recessions, has been in evidence since the turn of the year. This persistence of a strong undertone, indeed, in the face of a variety of adverse external developments, has been a more significant feature than the actual net rise in prices, which has not been considerable. It may be inferred that the technical position of the market is strong, but that the stimulus necessary to bring about a definite revival is lacking. We reproduce on this page a chart showing the daily fluctuations in British and American industrial equity share values during the last six months. It will be seen that after British prices had been adjusted, by the end of September, in accordance with the devaluation of sterling, British and American equities followed a broadly similar trend. The coincidence in the "timing" even of minor changes was remarkably close, though short-period ups and downs were less extensive in the British than in the American index. Broadly, British share values rose during October owing to the effect on popular sentiment of rosy expectations of increased trade as a result of Britain's departure from gold, and to the discounting of a "National" victory at the elections. More reasonable appraisement of practical possibilities under both heads was reflected in the decline in prices, during November, almost to the identical point from which the October rise had started. Since prices returned once again to this level in January, after a temporary decline in December, it would appear to be, for the time being, a point of "dead centre." American prices, despite their November recovery, appeared to have a consistently falling trend right up to the beginning of last month. The subsequent rally proceeded by no means as far as its predecessor, and available evidence is not strong enough even to suggest that the prices of January 5th necessarily mark the low point of the present depression. If, however, the railroad wage reductions now agreed upon are followed by

measures making for more extended credit in America, and no catastrophic developments occur, say, in Europe, an appreciable rise in the American share price curve during the next few weeks, is a not impossible contingency. In view of the degree of correspondence of recent movements in London and New York, such a development might be accompanied by a rising tendency in the British index, though not necessarily of the same proportions as that of the American curve.

Metropolitan Railway Dividend.—The Metropolitan Railway declared its dividend this year a fortnight in advance of the other British railways. Its announcement was not regarded as of particularly hopeful augury by the market, which tended to mark down the value of the stocks of some of the larger railways on learning that the Metropolitan proposed to pay a final ordinary dividend of only 1½ per cent., making a total of 2½ per cent. for the year, against 3½ per cent. for 1930. The dividend on the Surplus Lands Stock was 2½ per cent., making 4½ per cent. for the year, against 4 per cent. The market's disappointment was due to two considerations. In the first place, the figures indicated that the railway had not recouped, by lower expenditure, as much as had been expected of the falling off of £88,800 in its gross railway traffic receipts for the fifty-two weeks of 1931, as compared with 1930. In the second place, the decision involved the removal of the company's prior stocks from the full trustee list for at least ten years, though these securities will still rank as trustee investments under the "Chancery Rules." As the company was shown to have increased its carry forward from £33,546 to £41,482, while the full 3 per cent. dividend required under the Trustee Acts would have necessitated only the payment of an additional £37,894, it was assumed that the directors had taken a somewhat serious view of the immediate trade outlook, and had regarded the

BRITISH AND AMERICAN INDUSTRIAL SHARE VALUES, August 1931 to January, 1932.
(1928=100.)

British: "Financial News" Index of 30 Ordinary Shares. American: "Standard Statistics" Index of 50 Common Stocks.—Daily Figures.

loss of full trustee status as a lesser evil than the depletion of their cash resources by a relatively small sum. Subsequent consideration, however, while leaving the market undecided on the question whether the two largest railway groups—the London, Midland and Scottish and the London and North Eastern—would be in a position conveniently to make full payments on the junior preference stocks (and thus retain trustee status under the "Chancery Rules"), tended to discount the Metropolitan figures as "indicators" of the general railway position. It was felt that the Metropolitan directors, knowing that the company's prior stocks would remain eligible as trustee investments in England so long as any ordinary dividend whatever were paid, were entitled to regard their dividend problem as on all fours with that of any industrial concern desirous of conserving its accumulated resources in a period of economic uncertainty. The larger railways, however, in making a similar decision will necessarily have in mind the possible consequences of a failure to satisfy even the "Chancery Rules." They may thus have an inducement to make every possible effort to meet dividend requirements on all their fixed-interest stocks, if last year's results render this possible, even at the cost of a moderate appropriation from reserves. Even in the opposite event, trustees would not be required to sell out their existing holdings, and it might be within the powers of the Court to rule, e.g., that only the stocks which were not receiving full dividends should be removed from the list. The declaration of the London, Midland and Scottish is expected to be made next Wednesday and that of the London and North-Eastern on Friday week.

London Quotations of American Stocks.—A question by a reader raises a point of interest to British investors in American stocks. Reference to the records of the New York and London Stock Exchanges will show that a considerable discrepancy exists between the quotations for identical stocks in the two centres. For example, United States Steel common were recently quoted around 41 in Wall Street and 62½ in London. The explanation is that for purposes of easy calculation American dollar issues listed on the London Stock Exchange have always been calculated as if the dollar were worth exactly 4s. In other words, they have been worked out on an exchange parity of \$5 to the pound. So long as Great Britain was on the gold standard the London price thus appeared slightly higher than the price in New York. This simple expedient was, in fact, of considerable assistance in maintaining the demand for American shares

in the London market, since it enabled the British public to make its calculations with maximum facility. Although sterling is no longer linked to gold, the practice has been continued, and American shares are still quoted in London on a basis of \$5 to the pound. Hence, with the sterling-dollar rate in the neighbourhood of \$3.45 to the pound, there is a considerable disparity between quotations in the two centres. In point of fact, of course, this difference is apparent and not real, in view of the extent of arbitrage business between the two centres, even under present conditions, which assures that during the period when dealings are possible, simultaneously, in both markets, the actual prices approximate very closely.

F. W. Woolworth.—In our issue of January 16th last (page 135) we dealt with the excellent results achieved by F. W. Woolworth and Company for the year 1931, during which the business was changed from a private to a public company. At the meeting held on January 29th, Mr W. L. Stephenson, chairman and managing director, emphasised the fact that the change was one of capital ownership only, which brought in no fresh capital and did not affect the conduct of the business. Of the total profits of £4,211,356, only 4 per cent. (£163,639) was attributable, apparently, to new stores opened during the year, and additional profit on stores operating only during part of 1930, the balance, apart from a small item of additional bank interest, being attributable to business at the older-established branches. The ratio of net increase in the latter's profits, on this showing, would appear to have been about 10 per cent.—a creditable result for a year of economic depression. Some thirty new branches were opened during the year, the opening of the remaining ten to twenty forecast in last year's share offer having been postponed to 1932, in accordance with the company's policy of avoiding the opening of new premises towards the end of a calendar year. The chairman vigorously defended the retention of a considerable proportion of last year's profits in the business, declaring that the company had, in fact, built up its interests consistently from small beginnings by ploughing back earnings, rather than by borrowing money or issuing debentures. The field in which the resources were to be employed was wide, since in addition to relatively thickly populated areas which were not yet being adequately served, the board was turning its attention to the possibilities of the smaller communities throughout the country. Altogether, during 1931 the company had ploughed back £827,175 into its business, the effect of

31st December, 1931.

which on earnings would be fully reflected only in 1932. The chairman also disclosed that, out of "sundry creditors" of £1,332,622 in the balance sheet, more than one-half was attributable to provision for the company's January income-tax payment, the company's custom of settling all trade accounts weekly having reduced the amount due to ordinary creditors to small dimensions. It was stated, in connection with the meeting, that 85 per cent. of the goods sold by the company were British made. This proportion rose during 1931, the whole of the increase in the company's business being represented by sales of British merchandise. Although the company still imports certain articles unobtainable in Great Britain, it has continuously developed a policy of purchase in this country, not from motives of sentiment, but of profit. Its present position is, therefore, largely independent of any changes in national fiscal policy. Reading between the lines of Mr Stephenson's speech, it would appear that the chairman of Woolworths is more impressed with the possibilities of assistance to British manufacturers by way of scientific purchasing and distribution than of legislative favours. In the company's experience, remarkable price economies have been found practicable by placing orders in large and definite quantities, maintaining close co-operation and rendering prompt cash payment—in short, by offering British manufacturers the facilities importers are customarily required to extend to foreign suppliers.

South Metropolitan Gas.—The accounts for 1931 show that gross revenue increased from £4,382,207 to £4,397,974. Sales of gas accounted for £3,216,101 (compared with £3,172,412), rentals for £444,204 (against £486,035), and by-products for £73,449 (a decline of £86,548). Manufacturing expenses advanced by £31,301 and distribution expenses by £45,692, though management costs were cut by £3,530. After deducting £22,020 for discount on the redemption of £734,000 6½ per cent. debentures in September last, and adding interest received, amounting to £91,242 (compared with £46,430), net income was £669,148 (against £615,498). Interest and redemption charges required £199,527 (against £165,927), leaving a net profit of £469,621. Enhanced preference requirements left £18,099 less available for ordinary dividends than a year ago, and the distribution was reduced from 6½ per cent. to 6 per cent.:

Inc. or dec. in carry forward..... — 54 +203 — 1,120
During the past year the number of consumers increased by 2,754 and sales of gas by a little more than

½ per cent. The report states that the market for tar has been better; but such a serious fall has occurred in the selling price of sulphate of ammonia, as a result of over-production, that manufacturing costs are not covered. A Bill is to be presented to Parliament, after approval by shareholders, authorising an extension of the company's capital powers and the readjustment of rental charges to slot meter consumers. The investments on account of the reserve fund have been written down by £34,285. At 97, the ordinary stock gives a yield of £6 8s. 4d. per cent., allowing for the final dividend of 8½ per cent.

Insurance Share Index.—In the following table we show the history of an investment, in 1913, of £1,000 in the ordinary shares of each of twenty-five leading insurance companies, together with an index of the total. The figures are based on the mean of the highest and lowest prices in each year except in the case of the last four columns, which relate to the middle market prices on the dates specified. In all cases where an issue of bonus shares has been offered due allowance has been made by assuming that the rights are sold and the proceeds utilised to purchase an additional holding in the original shares.

It will be observed that during the third quarter of 1931, insurance shares suffered a substantial decline. This movement was, in fact, relatively more severe than that shown by industrial shares as a whole. It was succeeded in October by a strong recovery, and insurance share values have subsequently moved, on the whole, in line with industrial share values. Thus our index exhibits a decline from December 31, 1930, to December 31, 1931, from 3277 to 2484, equivalent to approximately 25 per cent., as compared with an all-round decline in industrial shares of 23½ per cent., shown by the Actuaries' Investment Index. It may be remarked that, in face of this general decline, the shares of one company, the Life Association of Scotland, show an actual increase in value.

Company Registrations in 1931.—An analysis of new company registrations in 1931, which has been prepared by Messrs. Jordan and Sons, of Chancery Lane, shows, as was to be expected, that the steady downward trend in the number of promotions from the peak year of 1928 has been continued. In 1931, some 8,385 companies were registered at Somerset House, with an aggregate capital of £58,219,756, compared with 8,410 companies in 1930, with a capital of £108,725,362. Public companies accounted for 276 registrations and £12,726,821 of capital against 328 registrations and £45,800,535 in 1930. Private companies accounted for 8,109 registrations and £45,493,435 of capital, against 8,082 registrations and £57,924,827 of capital last year. Despite the unfavourable conditions which prevailed throughout the year,

seven companies were incorporated with capitals of £1,000,000 and upwards, of which three were private. The £4,200,000 nominal capital of Messrs Ralli Brothers, a private company, is the largest of any company incorporated since August, 1930. Messrs. Jordan and Sons point out that a feature of the year's registrations was the number of companies formed with a very small initial capital, about 1,400 flotations having capitals of only £100 each, while three were content with £1 of nominal capital. Electric and Musical Industries, which was incorporated early in the year with a capital of £100, has since increased the amount to over £6 millions, while there have also been large increases by other companies. About fifteen unlimited companies made their appearance in 1931, mostly of the landed estate and investment trust type. From the point of view of group precedence, the companies which fall under the heading "Merchants" have the largest capital at £6,303,054, though Ralli Brothers accounts for £4,200,000 of this amount. "Textiles" take second place with £5,357,063, and "Land and Houses" third with £5,222,170. The greatest number of individual companies in any one group was the 805 "Clothing" flotations, while the "Food" group accounted for 664 companies, and "Motors" for 457.

New Issues in January.—In the following table we show the new capital raised in London by issue to the public or to shareholders, in January, and in recent years:—

Monthly Average.	(000's omitted).			Total.

January, 1932	Dr. 1,200	123	2,127	Nil

The first month of the New Year was a lean period for the new issue market. The debit total of £1,200,000 for the United Kingdom was accounted for entirely by encashments of National Savings Certificates. Two important colonial loans were issued, one for £600,000 in 5 per cent. stock at 98½ by the Mauritius Government and one for £1,600,000 of 5 per cent. in Government and one for £100,000 5½ per cent. scribbled stock at 96 by the Uganda Government. The only other public offer was that of £100,000 5½ per cent. debentures by Electrical Finance and Securities Company, while £25,000 7½ per cent. debentures were issued to shareholders only by General Amusements, Limited.

Oil Share Outlook.—The strength developed by the oil share market this week is not easy to explain, except on the score of "bear-baiting." Rumours have been circulated that the price of petrol will be raised in this country by 2d. or 3d. per gallon next week, and that a new worldwide marketing agreement is being prepared by the leading oil combines. From inquiries we have made we can find no substance in any of these rumours. The outstanding fact is that the Royal Dutch-Shell group and the Anglo-Persian Oil Company have come together in the British petrol trade, forming a new joint marketing company called Shell Mex-B.P., Ltd., but that this new combine has not been joined by the Anglo-American Oil Company or any other British subsidiary of the Standard Oil Com-

pany of New Jersey. If the American group had agreed to pool its petrol-marketing organisation in this country with the Royal Dutch-Shell and Anglo-Persian, there would, no doubt, have been a rise in British petrol prices, in spite of the competition of the independent-minded Standard Oil Company of Indiana, which is undercutting the combine prices through the medium of a British marketing company. But, as far as we can ascertain, the fierce competition which exists between the Royal Dutch-Shell and the Standard Oil groups in the foreign markets has not diminished, but has been accentuated, for it is the policy of the American companies to increase their business out America at all costs, in view of the heavy stocks of oil they are carrying. When it comes to the question of dividends, the market can certainly find little encouragement. According to the report of a Stock Exchange firm which is well known for its oil circulars, the shareholders of Royal Dutch, Shell Transport, Anglo-Persian and Burmah Oil will be fortunate if they receive final dividends at the reduced rates of 1930. In fact, it is suggested that if there is no improvement in oil trade conditions by May, the final dividends may be passed altogether. The following table shows the rise which has occurred over the past week in the leading oil shares, the dividends paid in respect of 1930, and the yield at current market prices, if the final dividends are repeated at the 1930 levels:—

	Jan. 28.	Feb. 4.	Divs. 1930.		Yield %
			Int. %	Final %	
Anglo-Persian ord. £1	1½	1½	5	10	5 3 3
Burmah Oil ord. £1	1½	1½	10	12½	9 0 8
Royal Dutch ord. Fl. 100 ...	14½	16½	10	7	3 9 10
Shell Transport ord. £1 ...	1½	2½	10	7½	3 9 7
			(free)		(free)

It may be added that all these companies have passed their interim dividends for 1931, with the exception of Burmah Oil, which has reduced its interim dividend from 10 per cent. to 5 per cent.

Premier (Transvaal) Diamond.—Our mining correspondent writes:—A notable feature of the report to October 31st is the reduction which has been effected in the working costs. With operations restricted during the latter portion of the period, it is only natural that the total expenditure should be less than before. But despite this curtailment and the fact that overhead charges could not be correspondingly lessened, the cost per carat averaged nearly 5s. less than in 1929-30. Moreover, last year scarcely felt the benefit of the transfer of the administration to the De Beers Consolidated, which holds a controlling interest in the undertaking. As a result of the falling off in the demand for the stones, sales in 1930-31 amounted to only £278,400, against £680,000 in 1929-30. Mining and administration absorbed £428,500, and loss on exchange £56,000—the latter a new item. After allowing for sundry revenue there was a deficit of £190,200, as compared with a profit of £18,100. The preference dividend is in arrears since April, 1930; the last payment on the deferred was 250 per cent. in respect of 1926-27. At 11,000,000 loads, the quantity of blue ground in sight above the 610 ft. level shows a decline of 3,000,000 loads. This quantity closely corresponds to the quantity extracted during the past session.

OFFER TO NEW READERS.
Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:
To Publisher, "Economist Newspaper Ltd.,"
8, Boulevard Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

which suggests that little fresh ground was opened up. The company, however, is in a position to resume and even increase its scale of production when circumstances warrant. The leaders of the diamond industry in South Africa have done all they could to strengthen and consolidate the business. The rest depends upon a revival in demand.

San Francisco.—The tale of monthly losses reported for some time past prepared the shareholders for the unfavourable figures of the annual report. In the year ended September 30th last an operating profit of £60,900 was made; but after deducting miscellaneous expenditure, taxes and depreciation there was a net loss of £19,000, reducing the carry-forward to £193,600. At the date of the balance sheet the available cash totalled £103,500, the sums payable being somewhat exceeded by those due. Development work, although restricted, more than sufficed to maintain the ore reserve position, the total of fully and partly blocked out material now standing at 2,321,000 tons, as against 2,316,000 tons previously. As already announced, production was suspended at the end of December last. It will presumably not be resumed until a sustained rally has taken place in metal prices.

Panama Corporation.—The delay in issue of the report to May 31, 1930, is doubtless attributable in part to communication difficulties, but the showing made is far from brilliant. In the balance sheet, preliminary and underwriting expenses figure for no less than £165,800. Up to that date £1,381,300 had been expended on property account, £338,900 upon development, and £224,350 upon equipment and the like. Cash in hand amounted to only £34,300, but £157,000 remained to be called upon the issue of £250,000 debentures made towards the close of the financial period. There were sundry creditors for £21,600. The absorption of the three subsidiaries is not fully reflected in the accounts. Prospecting suggests that the greatest promise attaches to the lode formation in the western group of concessions, and in the buried alluvial deposits at El Mineral. At the Romance Mine, up to December 31st last 14,200 tons of ore had yielded bullion value £22,680—including premium. The balance due on the debentures has been called up, but "the corporation requires very extensive further finance for the development of its properties." The raising of capital in sterling, with expenditure in dollars, would involve the loss of something like one-third of the funds provided. To meet this position it is proposed to re-register the undertaking in Canada. For each £1 share now held, members will be allotted one share of no par value. Debenture stock to the amount of \$5,000,000 will be constituted, carrying—like the present issue—8 per cent. interest. Present debenture-holders will receive \$50 of the new stock for each £10 of stock now held; the British, Foreign and Colonial Corporation undertakes to subscribe for £250,000 new stock, receiving in consideration various option rights. The sum just named is obviously no more than a stop-gap. Ability to make further issues of shares and debentures will depend largely upon the nature of the returns secured and the discoveries made. The Stock Exchange values the £1 shares at about 7s. 6d. and the £100 debentures at 67-72 nominal.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Midland Bank, District Bank, Williams Deacon's Bank, United States and General Trust, Mortgage Company of the River Plate, and F. W. Woolworth and Company. Presiding at the annual meeting of the Midland Bank, Mr R. McKenna said that, since Great Britain went off the gold standard, the cost of living index, allowing for seasonal changes, had scarcely moved; it was below the figure for January, 1931, and more than 10 per cent. lower than a year earlier. There had been no inflation, and the supposed miracle of maintaining a currency stable in purchasing power without any metallic standard had been accomplished. At the annual meeting of the District Bank the chairman recalled that exports of cotton

goods had fallen in value from £61,305,000 in 1930 to £37,322,000 in 1931, while if the 1929 export figure, which itself showed a decline of 60 per cent. in relation to the pre-war volume, were taken as 100, 1930 represented 65.5 per cent. and 1931 46.8 per cent. The speech of the chairman of F. W. Woolworth and Company is discussed on p. 313.

CAPITAL ISSUES.

The market was somewhat surprised to learn, this week, that the *Central Electricity Board* were issuing, forthwith, as much as £7,000,000 of 5 per cent. stock at 95. This amount, together with earlier issues, brings the total amount of Central Electricity Board stock outstanding to £26 millions nominal. On three occasions in the autumn of last year the board placed £1 million privately, but would appear to have regarded the present time as more opportune for a large operation. The stock is likely to be absorbed by the market within a moderate period, its yield of £5 5s. 3d. per cent. flat and £5 5s. 10d. per cent., on redemption at the latest date, being reasonably attractive, although the stock is not a trustee issue. The board have powers, with the consent of the Electricity Commissioners, to issue up to a further £24 millions, ranking *pari passu* with the issues already made.

Central Electricity Board.—Issue of £7,000,000 Central Electricity 5 per cent. stock, 1935-75, at 95 per cent. The stock will rank *pari passu* with £3,000,000 Central Electricity 4 per cent. stock, 1929-39, £10,000,000 Central Electricity 5 per cent. stock, 1930-70, and £6,000,000 Central Electricity 4½ per cent. stock, 1931-73, already issued. It will be redeemed by a cumulative sinking fund, commencing not later than 1938, sufficient to repay the whole of the stock by its maturity date. The Electricity Commissioners have already given consent in respect of £32 millions of the £50 millions which the board are empowered to borrow.

COMPANY MEETINGS, &c.

MIDLAND BANK LIMITED.

POSITION OF LIQUIDITY AND SECURITY.
GREAT BRITAIN AND THE GOLD STANDARD.
OBJECTIVE OF A MANAGED STANDARD.
IMPROVED OUTLOOK FOR TRADE.
MR R. McKENNA'S OPTIMISTIC REVIEW.

The ordinary general meeting of shareholders of the Midland Bank Limited was held at Southern House, Cannon Street, London, E.C.4, on Friday, January 29, 1932, for the purpose of receiving the E.C.4, on Friday, January 29, 1932, for the purpose of receiving the report and balance sheet, declaring a dividend, electing directors, appointing auditors and transacting other ordinary business.

The Right Hon. R. McKenna (the chairman), who was received with cheers, said:—My Lords, Ladies and Gentlemen,—There can be no question that Britain's breakaway from the gold standard was the outstanding financial event of 1931. For upwards of six years our monetary authorities fought a losing battle on ill-chosen ground. Looking back upon the long-drawn struggle we read a story of great and increasing sacrifice for a mistaken ideal. Happily, the actual consequences of our abandoning gold have belied the terrible alarms expressed before the event. They have proved to be groundless, and, indeed, would never have been entertained had there been any general understanding of monetary problems and their relation to trade and employment.

Unfortunately, most people have been content to regard these problems as exclusively the business of money market experts. They are wrong, however, in thinking them to be no concern of theirs. Monetary policy has a powerful and direct influence on the perity of each one of us, and if it is misdirected no one escapes the consequences. With falling prices the rich become the prey of the tax collector; industrialists and traders see their profits dwindle to nothing; and salaried officials and wage-earners are deprived of the opportunity of earning a living at all. Adversity, as ever, is the best tunity of earning a living at all. Adversity, as ever, is the best schoolmaster. Unpleasant facts are at length bringing home to everyone the close connection between monetary developments and our own individual welfare.

WORKING OF THE GOLD STANDARD.

The world has now got so far as to admit that the long-continued depression and universal economic unsettlement are due in part at least to the inefficient working of its monetary machinery. The time has gone by for the child-like belief that, as long as a country is on the gold standard, all is well. Harsh experience has shaken this faith rudely; we have found that returning to the gold standard did not in fact bring prosperity, and going off it did not entail ruin. So far from ruin, indeed, our present trade conditions are distinctly improved, and we are getting on at least as well without the gold standard as with it.

No one can regard it as a light matter that stubborn facts like these should undermine confidence in a monetary standard hitherto accepted as an indisputable article of faith. For centuries gold has stood as the symbol of solid, substantial wealth, and has been a serviceable standard of value. As trade and commerce developed, and with them the banking system and credit, the gold standard was adapted, though somewhat slowly and incompletely, to the new conditions. Critics there have long been who recognised both the patent and latent imperfections of an insufficiently controlled metallic standard; but no one paid much attention to them for the very good reason that, down to the war, the gold standard worked tolerably well. True, it by no means succeeded in maintaining a stable value of money measured in what the money will buy, but there was certainly never such cataclysmic instability as we have seen in the last two years. Clearly, the gold standard has not worked as it did in pre-war times, and the question arises: What has gone wrong with its post-war operation?

BANK OF ENGLAND PRACTICE.

It is to be regretted that the indispensable conditions for operating the gold standard successfully have never been defined, nor apparently even consciously recognised. At the time when it was working more or less smoothly London was the only great free gold market. A very considerable surplus was due to this country on current international account, and this, if no steps had been taken to avert the natural consequence, would have been settled largely by imports of gold. Simple but adequate measures were, however, adopted by

the Bank of England. If gold was coming to London in excess of our currency requirements the rate of interest was lowered, and foreigners were encouraged to borrow from us. If, on the other hand, through excessive lending abroad, too much gold was being taken the rate for money was raised; foreign borrowing was thereby discouraged, and the favourable balance of payments rapidly replenished our gold stock. Thus the surplus on current international account was used according to the needs of the time to reinforce our gold reserves or to provide accommodation for debtor countries to develop their economic resources.

For many years before the war this system was in regular operation. It will be noted that two psychological conditions were essential for its success. In the first place, if it had been the national disposition, either permanently or under the influence of panic, to hoard currency, the Bank of England, which was bound to retain gold pound for pound against notes in excess of the fiduciary issue, would have been forced to keep an increasing stock, and the rest of the world would have been deprived of the indispensable base of credit and currency.

Again, it was necessary that the British public should have the disposition to lend, so that, when the Bank rate was low, cheap money would encourage the foreigner to borrow our surplus from ready lenders. Had we been a hoarding nation, or had we been imbued with a spirit of financial isolation, the gold standard would never have worked successfully. Gold would have poured into the vaults of the Bank of England and remained there, not from any wish that this should happen, but because of unfavourable psychological conditions. In these circumstances the Bank of England would have anticipated the more or less involuntary experience of the central banks of America and France in accumulating vast stocks of bullion, and the rest of the world would have been as starved of gold as it is to-day.

CREDITOR NATIONS AND GOLD.

It must be manifest to anyone who considers the subject that no metallic standard can remain operative if the great creditor nations act in such a way as to create a corner in the metal. If they do not re-lend the surplus on their balance of international payments, gold, the only ultimate medium of payment, must flow into their vaults in a continuous stream. The debtor countries, unable to obtain additional credit and confronted with default, are forced to fling their products on the world market at any price. The catastrophe is inevitable and spreads from country to country so long as debts have to be paid in a steadily appreciating medium. The present distress is an acute manifestation of this process, and the question is inevitably asked whether gold is for ever to remain the standard of money value, however well or ill it is made to work.

Obviously, the most rational answer to this question would seem to be that, if the gold standard cannot work without depressing and even ruining trade, the proper course must be to seek another and better one. I am afraid, however, that the financial authorities of the world, with their deep-rooted traditions and long-established practice, will not be easily moved to consider the question on its merits. There is still a profound conviction that the gold standard is the firmest basis for sound money, the surest protection against inflation, the best safeguard from political interference with national currencies by greedy governments.

THE QUALITY OF "SOUND MONEY."

If the operation of the gold standard were properly controlled this conviction might be well founded, but as matters stand there is little or no justification for it. The claim that it provides protection against inflation is demonstrably false, for in less than twenty years before the war the world price level rose by, roughly, 40 per cent., a marked example of inflation even with the gold standard in full operation. Again, what protection does the gold standard afford against a needy government, which can abandon it whenever it chooses? We have seen too many instances in recent years to have any illusions on this point. The gold standard may have a pro-

with the Bank of England, to suspend the gold standard, and the Treasury prohibited the purchase of foreign currency except for specified business purposes.

An immediate rise in prices of all the principal commodities, followed by a definite stimulus to our export trade, tended to obscure the other side of the picture, but it soon became obvious that other exporting countries could neutralise this advantage by following suit, while the extra cost of its raw material to any industry which depends on its supply from abroad, must to some extent, nullify the bonus it receives on its exports through the fall in exchange. Foreign exchange restrictions also add to the difficulties of the merchant shipper, especially when arbitrary discrimination occurs as between different countries or different classes of creditors, nor can we look for much amelioration here until gold resumes its proper function as a medium of international payments, or sterling is accepted in other countries as a basis for currency stabilisation.

COTTON TRADE.

With regard to the cotton trade, we have passed through a year of extreme depression, relieved only in the autumn by certain expansion in demand which enabled spinners and manufacturers to book orders for a good period ahead. Considerable buying for China, helped by the rise in silver, was a distinct feature of this improvement, in fact the figures of export to that country show the only important increase over the previous year of all our foreign markets.

Shipments of piece-goods to India have again been on a much reduced scale and trade, largely as a result of the boycott of British goods, has been definitely restricted in Calcutta, though a certain movement of goods has occurred in Western India and certain up-country markets, and one can only hope that the evident determination of the Indian Government to deal firmly with disorder and obstruction of trade may in time have good effect. The Viceroy's recent pronouncement as to the state of India's finances also encourages us to hope for an improvement in the ultimate purchasing power of that country.

From a domestic point of view, the cotton trade has been much occupied during the year with the question of more looms to be operated by a weaver, and at the time of writing, the representatives of the employers and operatives appear to be getting closer together than at any stage of this protracted dispute, and we can only hope that the threatnings of a strike on the subject at Burnley may not prejudice their deliberations. If this question can be satisfactorily arranged, it will be a definite step forward in the direction of reducing the cost of production and, in any case, a settlement for the whole trade is infinitely preferable in the interests of all, to separate arrangements on the part of individual mills.

SCHEME OF JOINT COMMITTEE.

Another feature of intense interest to the trade is the production of the scheme of the Joint Committee of Cotton Trade Organisations for lifting the industry out of the great difficulties in which the redundancy of undertakings and plants keeps it. The scheme is the work of unremitting toil by some of the most able men in the industry. I have no hesitation in expressing the conviction that this is the most promising way of ameliorating the unquestioned ills under which the industry is labouring. It aims at reducing the plants to a level at which reasonable competition will still exist. It avoids any possibility of monopoly. If and when the trade should justify the entry of new capital and new mills into the industry, they will be free so to enter. It is superior from every point of view to price agreements, limitation of hours of working or any other temporary expedients which have tided over periods of relatively insignificant difficulty in the past and which are totally inadequate to meet difficulties so deep-seated as those which have endured so long and which show no sign of being remedied by a policy of inactivity.

From another point of view, the formation of industrial development councils throughout the country and in Lancashire the Lancashire Industrial Development Council, merits a hearty welcome and every encouragement. With Lord Derby as President and Mr T. D. Barlow Chairman, and supported by the various Chambers of Commerce and local government authorities of the county, the Lancashire Council has been formed to assist by propaganda and advertising, inquirers from every part of the country and overseas to find in Lancashire the proposition most suited to the industrial enterprise which they may have under contemplation. Whatever measure of contraction Lancashire may have to face in its staple trade, it is of vital importance that every effort should be made to fill up the gaps thus created by the encouragement of fresh industries, and we wish this new Council every success in their patriotic efforts.

COAL, IRON, STEEL AND AGRICULTURE.

The coal industry has had to face another bad year—worse, in fact, than last year, both in production and exports, the quantities being less and earnings thinner.

There has been an enormous fall in the production of iron and steel during the year. It is little satisfaction to know that producers in other countries show great reductions also.

Agriculture has suffered during the past year and is hoping for better things from fiscal changes in contemplation. No one will regard unsympathetically any remedies which can wisely be applied, though in an industry so diversified in its character and operations, it is difficult to devise means helpful to all sections.

The general depression in the basic industries, with its widespread reactions, have combined to make this a very difficult year for manufacturers and traders generally—and, one may add, for bankers.

One hesitates to make any prophecy as to the future. We may all hope, but we must not forget that only hard work and hard thinking will help us. It may be a platitude, but it is certainly a truth that our future depends on the energy and resource of the individual employer and employee and the adaptability of them and their respective associations to the exigencies of our time.

GOVERNMENT'S POLICY.

In conclusion, gentlemen, though politics have no place here, I feel that the policy of the Government, as expressed in its determination to concentrate every effort on the world problem of war debts and reparations, to balance this country's Budget by the strictest economy, and to rectify, if need be, by protective measures the disparity between imports and exports, deserves the support of us all, though we must avoid, as a creditor country, the mistaken policy we censure in others of insisting that debtor countries shall discharge their obligations to us in gold, rather than in goods or services.

I hope you will all join with me in a very hearty vote of appreciation and thanks to the executive officers and staff of the bank, for their unremitting work and loyal service during the past year. We all know what a difficult year it has been, and we all thoroughly appreciate the way they have faced and overcome the difficulties. (Applause.)

The Chairman then moved the adoption of the report and accounts, which was seconded and carried.

The retiring directors were re-elected, the appointment of Lieut.-Colonel H. K. Stephenson, D.S.O., as a director was confirmed, and the auditors, Messrs. Ashworth, Mosley and Company, were reappointed.

MORTGAGE COMPANY OF THE RIVER PLATE, LIMITED.

The forty-fifth ordinary general meeting of the Mortgage Company of the River Plate, Limited, was held, on the 29th ultimo, at the offices of the company, 52 Moorgate, London.

Mr James Anderson (the chairman) said that the year under review had been one of the most difficult the company had ever had to face, and in those circumstances it was not surprising that the accounts should not be so good as usual. The reduction in profits, however, was not very serious, and the directors were still able to pay a dividend of 15 per cent. after adding £10,000 to reserve. Their assets, taking Argentine and English together, showed an increased depreciation, but whereas this year the London investments showed a depreciation of £185,000, the Argentine assets had improved to the extent of £49,000. The total depreciation of £273,000 was very amply covered by the reserve and undivided profits. The financial position of the company was very strong, and holders of ordinary shares, on which there was £7 uncalled, need not have the slightest fear of their responsibility in that respect.

As to the assets, the loan on first mortgage of freehold properties at £895,385 had been made on carefully selected properties, mainly agricultural and pastoral. They had been under a severe test during the adverse conditions of the last two years, and had come out of it very well indeed. The loans were in Argentine currency, and the depreciation on those showed the substantial reduction of £49,000. That was very helpful, in view of the shrinkage in market value of the company's London investments at £1,137,816.

As regarded the current year, they might have to face some reduction in income, but the outlook in Argentina was distinctly more hopeful, and on this side the departure from the gold standard and the expected protection from the dumping of foreign products had imparted some new life into the country's manufacturing industries.

The report was unanimously adopted.

DISTRICT BANK, LIMITED.

SATISFACTORY RESULTS IN YEAR OF DEPRESSION.

OUTLOOK FOR COTTON INDUSTRY.

LANCASHIRE'S PROBLEM.

SIR CHRISTOPHER T. NEEDHAM'S INTERESTING REVIEW.

The annual meeting of the shareholders was held, on January 29th, at the head office, Spring Gardens, Manchester, the chairman (Sir Christopher T. Needham) presiding.

The Chairman, in moving the adoption of the report and balance sheet, said:—

Ladies and Gentlemen,—I assume that you will take the report of the directors and accounts as read.

When we met a year ago we looked back upon 1930 as a year of depression and of growing unemployment. Unfortunately there is again no kind of satisfaction to be found in a review of the past twelve months; the history of 1931 is one of greatly accentuated depression in national and world trade. We have thus had two years of acute depression, and, in addition, the last six months has seen an unprecedented financial crisis.

Though there was an improvement in the numbers employed during the last quarter of the year, following the suspension of the gold standard, the Ministry of Labour returns show there was less employment at the end of 1931 than at the end of 1930, the percentage of unemployed being 20.2 at that time and 20.9 at the former date. The estimate of industrial production continued to show a downward trend for the March, June and September quarters, being 95.0, 91.9 and 89.5 respectively; the corresponding figure for 1930 was 103.3 (year 1924=100). The December quarter figure for last year is not yet available, but since there was an increase of employment during that time it is to be expected that it will show some improvement.

A very serious factor in the year's trading was a further fall in wholesale prices; the Board of Trade figure for 1931 was 62.6, as compared with 71.9 for 1930.

IMPORTS AND EXPORTS FIGURES.

Our imports and exports declined, in each case almost to the same degree, from those of 1930. The excess of imports was £409,000,000, as compared with £387,000,000 in 1930 and £382,000,000 in 1929. The falling off in exports is seen chiefly in the basic trades, cotton, iron and steel, machinery and engineering, all of which concern our own district so closely. The figures for December show a reversal of the usual seasonal trend, and one can assume that this was caused, at any rate in part, by the stimulation of exports due to our departure from the gold standard and the restriction of imports, both from that cause and from the new import duties.

The Board of Trade estimates in respect of the income last year from our invisible exports, i.e., from shipping services, overseas investments, insurance, commission, etc., are not yet available. Unofficial estimates, however, indicate that the national income from overseas transactions may show a shortage of not less than £100,000,000. This probably large adverse balance for 1931 is a cause of grave disquiet, and is a sad reversal of previous years, which have habitually shown the yearly balances from overseas transactions in our favour.

THE COTTON TRADE IN 1931.

I turn, now, to the cotton industry, which had another bad year. Export of cotton goods dropped in volume, and the value fell from £61,305,000 in 1930 to £37,322,000 in 1931. A comparison of the figures for the last two years with those of 1929, in which our exports were only some 60 per cent. of the pre-war volume, show the extent of the contraction of the export side of the industry. Taking the 1929 figure as 100, 1930 represents 65.5 per cent. and 1931 46.8 per cent. Part of the decrease in our exports is due to the heavy fall in the purchasing power of our overseas customers, but we are still handicapped in competition by our high costs of production. Even when the purchasing power of the world does increase we shall not be able to obtain our share of increased trade if we have not put ourselves into a competitive position. A further obstacle in the way of our merchants exporting abroad is the difficulty of bringing money home due to exchange restrictions in force in many foreign countries. There is also in respect of some countries the difficulty of covering forward exchange.

Trade with the Far East has continued to be subject to severe disabilities. As regards India, it was hampered, not only by the diminished purchasing power of that country, but also by increased tariffs and the boycott. Exports to India, taking 1929=100, were 56.6 per cent. in 1930 and 28.4 per cent. in 1931. The general situation would appear to be better, and recent reports state that the outlook for piece-goods is improving. As to China, whilst we de-

rived advantage from the rise in the value of silver and the boycott of Japanese goods, there is now anxiety about the risk of dislocation due to the position of affairs in Manchuria.

The makers and distributors of goods suitable for home consumption and of special goods where novelty in design or in fabric attract the foreign buyer report a fairly satisfactory year's trading.

PROSPECTS UNDER PRESENT CONDITIONS.

Following the suspension of the gold standard demand increased and a number of mills which had been stopped were again opened. It was anticipated in some quarters that this improvement was a sign of better times, but more cautious observers, taking a longer view, could not share this spirit of optimism. It is not possible at the moment to determine the measure of advantage to the cotton industry from the departure from the gold standard, because, although it is known that the demand for yarn increased considerably during the first few weeks, there are no figures available which indicate how much of that demand was speculative, how much was seasonal, and how much was a genuine increase or turnover in demand from our competitors to ourselves. The abandonment by Japan of the gold standard has brought her into keen competition with Lancashire once more, and has neutralised some of the advantage which we gained at first from our leaving gold.

It is unfortunate that the more-looms-to-the-weaver question, to which I referred a year ago, is still unsettled and that no satisfactory progress has been made in adjusting the relations between employers and operatives in other sections of the trade.

REDUNDANT COTTON MACHINERY.

It may perhaps be the case that the scale upon which the world's cotton industry has been conducted in the past will no longer fit the conditions of the future. So far as Lancashire is concerned, it appears impossible to suppose that in the future she will be able to regain the proud position of world pre-eminence she once held. Lancashire is face to face to-day with the problem of whether or not to accept the scheme which endeavours to deal with the redundancy of plant put forward by the Joint Committee of Cotton Trade Organisations. The problem is an enormously difficult one, but there is one point which I should like to emphasise. If the object of the scheme were merely to raise prices it would be doomed to disappointment unless world prices also rose. Any rise in the price level of our cotton goods would simply involve driving our customers into the arms of foreign competitors.

The condition, therefore, for a successful implementation of the scheme of the Joint Committee would appear to be that the industry should recognise that the time has passed when prices can be adjusted to the level of costs. The hope proffered by the scheme is that, by the concentration of output upon a smaller number of industrial units, it will be possible to adjust costs to prices and not prices to costs. A smaller number of firms working at fuller productive activity than the larger number now trying to survive in the industry might well find that the lower level of costs they would thereby establish would not be inconsistent with profitable working provided that they could obtain a reasonable degree of continuous running.

Apart from the cotton trade, Lancashire and its surrounding area have in certain directions maintained their position fairly well, even if there is no very marked improvement to record. Conditions in the coal trade show an improving tendency, although there is a decrease in the tonnage raised, and certain branches of engineering, particularly those dealing with electrical and specialised products, have been moderately successful.

THE LANCASHIRE INDUSTRIAL DEVELOPMENT COUNCIL.

It is satisfactory to observe the determined efforts which are being made to develop the resources of this county. The Lancashire Industrial Development Council was formed in the early part of last year to focus such efforts. It has the two-fold object of attracting new enterprises and of encouraging the extension of existing industries, and it is engaged in propaganda to draw attention to the great advantages possessed by this area in the provision of transport, power and skilled labour. This propaganda is already producing results, and it is hoped that it will meet with a considerable measure of success.

It should not be forgotten that Lancashire has already a large variety of industrial interests in addition to the staple ones of

cotton, coal and iron and steel. Agriculture, chemicals, glass, rubber, leather, paper, shipping, silk, rayon, engineering, to name only some of them, are represented in the county, but new industries will be welcomed.

WORLD CONDITIONS.

If we turn to a consideration of the present trend of world feeling, we must be aware that there is arising in Europe a large and important body of opinion which realises that the world is running grave danger of economic collapse through want of collaboration. Nations cannot live to themselves alone, and the maintenance of the extreme spirit of economic nationalism must end, sooner or later, through the strangling of international trade, in the breakdown of the standards of our civilisation as we know them.

The main causes of the world crisis have their roots in the conditions left by the war. The payment of reparations and war debts, neither of which represents productive commercial transactions, have helped to bring about the maldistribution of gold and the world fall in prices of commodities, which fall is the immediate cause of universal depression. Further, with the growth of economic nationalism we find ever-increasing tariffs, trade restrictions and exchange difficulties, each country endeavouring to safeguard its own position, and in so doing adding to its own difficulties and the troubles of the rest.

INTER-GOVERNMENT OBLIGATIONS.

Enlightened opinion sees clearly that some action must be taken in respect of the immense mass of existing inter-Government obligations, and looks to the Conference at Lausanne in the hope that from it may emerge an agreed settlement, a foundation on which may arise a world structure of stable trade relations. A definite settlement or a promise of a settlement there must be; merely to prolong the moratorium would not give that confidence upon which alone a world revival can be based. In addition, for the realisation of these hopes, hindrances to trade, especially in the form of high protective duties, should be removed or greatly modified. If, therefore, we believe, as I do, that the prosperity of nations is of necessity based on international interchange in commerce, we must recognise that a continuance of the present condition of world economic cramp must involve further unemployment in all countries and universal distress.

In this connection we may perhaps ask ourselves whether as a nation we have not added to the world's difficulties by placing restrictions on the free flow of our trade with the rest of the world. Yet we cannot lose sight of the fact that our trade balance must be adjusted, nor can we be oblivious of the need to check the tendency of foreign countries to dump their surplus products upon us. But whatever restrictions it may be thought necessary to place upon the free entry of goods into this country, we must be ready to consider any modifications of our policy of to-day in relation to changing world conditions and to keep a lively awareness of the advantages to be gained by a freer interchange of the world's commodities.

THE ABANDONMENT OF THE GOLD STANDARD.

So far as this country is concerned, the most important event of 1931 was the abandonment of the gold standard on September 21st. The effect was quickly felt throughout the world, with the result that many countries had to follow in the same way, while others, owing to their drastic exchange regulations, are not now completely on the gold standard, thus leaving America and France as the two main countries still on gold.

Our departure from the gold standard has naturally had its reaction on our trading. It is quite true that the present basis of exchange gives our exporting industries some competitive advantage, which, if it were not for the decay in which world trade has fallen, would probably have meant a considerable increase of activity in the exporting industries. We must anticipate that the world will get back to a common denominator of value, when we may hope for stabilisation of sterling on a basis which will avoid handicapping our export industries.

The mere suspension of the gold standard has not in any way invalidated the fact that Great Britain still depends to a very large extent upon foreign supplies of foodstuffs and raw materials (in 1931 these were 70 per cent. of our total retained imports), or the fact that, in view of world conditions generally, these foreign supplies of food and raw materials must, to an increasing extent, be met by the current export of goods.

REDUCED INCOME FROM FOREIGN INVESTMENTS AND SERVICES.

Events in recent months have conspired to reduce the income both from our foreign investments and from the services which we render to foreign countries as possessor of the greatest merchant marine and as the great international insurance and financial centre. Since the income from these sources which we have been in the habit of enjoying has decreased so seriously we are faced with the alternative of reducing our standard of living or of meeting our current require-

ments for food and raw materials by the export of goods on an increased scale to take the place of the services and investments, the yield from which is no longer certain. We shall thus have to adapt ourselves in a more determined way than ever to produce goods at world competitive prices.

Relative to banking and the finance of industry in this country, much of the criticism levelled at our monetary system has been shown in the Macmillan Report to be without foundation. In this connection I should like to draw your attention to the marked success with which the English banking system has withstood the strain of the past six months. There would appear to be no doubt that, in the matter of technique of banking and finance, we are in advance of the rest of the world. No one who studies the report can fail to be convinced that the root causes of the economic troubles from which the world is suffering are mainly political, and that the monetary system has been set a task which, under existing conditions, it can by no possibility accomplish. Suggestions which may perhaps be regarded as in the nature of aspirations are made relative to collaboration of central banks, with a view to the maintenance and stability of international prices through the regulation of the volume and terms of bank credit and the frequent conference of central banks with this end in view.

THE BALANCE SHEET.

I turn now to consideration of the report and balance sheet, which have been circulated.

The balance sheet shows that our position has been well maintained, notwithstanding the unexampled financial and trading difficulties of the past twelve months. Capital and reserve remain as before. Deposits are somewhat lower than last year, but it is interesting to note that the present figure, £50,322,360, is in excess of that for June last, notwithstanding the financial crisis which occurred in the second half of the year.

Acceptances and confirmed credits, which represent the financing of imports, mainly raw cotton, continue to be comparatively small, but endorsements, guarantees, and other obligations are considerably higher than last year. This item includes, *inter alia*, the liabilities of the foreign department on forward exchange contracts. The two items referred to are balanced by a contra item on the assets side of the balance sheet under the heading "Liabilities of customers for acceptances, confirmed credits, and other obligations." The bank has a progressive and well-equipped foreign department for the assistance of those who conduct export and import business. More and more customers conducting overseas trade are availing themselves of these exchange facilities, and so eliminating speculation arising from the fluctuation of exchanges, which might otherwise involve them in large and unexpected losses.

STRONG FINANCIAL POSITION.

In a period of great uncertainty we endeavour to maintain our assets in a form as liquid as possible, and I desire to draw your attention to the bank's exceptional strength in this respect. The ratio of total liquid assets to liabilities to customers on current, deposit and other accounts is nearly 68 per cent., of which cash and money at call and short notice is over 22 per cent.

Bills of exchange (including Treasury bills), at £3,887,726, show a considerable decrease. There has been a short supply of commercial bills of exchange in the bill market, which is always a feature of times of stagnant trade, as at present is the case. I may say here that we are in no way committed in relation to what have come to be known as German standstill bills, and that our holding of foreign obligations is negligible.

Advances to customers at £19,952,328 show a decline of over half a million. The amount of our resources leaves us with considerable reserves available to assist trade. In the meantime, to help our earning power, a large portion of our funds is in the form of British Government securities, which show an increase of nearly £2,200,000 over the figures for the previous year.

THE BANK'S INVESTMENTS.

The bank's investments, consisting of British Government securities, British railway debentures, corporation stocks, have long stood at a figure well below market value. This has been a source of great strength to the bank. In spite of the serious fall in values following the suspension of the gold standard, these investments stood at a figure below market prices on December 31, 1931. The item "Other Investments" includes our holding of shares in the Yorkshire Penny Bank, Limited, and in the Bankers' Industrial Development Company, Limited.

It has been the policy of banking institutions to build up from various sources an inner reserve to meet all contingencies. This bank has always pursued this policy. In relation to this point I may say that full provision has been made in connection with cotton-mill and other accounts which are still in process of liquidation.

For many years the bank property item stood at £500,000, which was increased on the rebuilding of London office and other exten-

sions to £700,000. As a result of later additions which have been made with the object of maintaining an up-to-date service in our offices, and also of extending the sphere of our operations, the net sum of £809,588 now appears in the balance sheet. We have made allocations each year in reduction of our expenditure, and this year the allocation is £20,000. The balance-sheet figure is one which is well below the actual value.

THE YEAR'S PROFIT.

Net profits for the year are shown at £432,039, and you will see from the profit and loss account that this figure has been arrived at after payment of all expenses and after making full provision for bad and doubtful debts, contingencies and income tax (other than income tax on dividend). This figure compares with £459,038 for the previous year, and I think you will agree that the result is satisfactory in the circumstances. During 1931 several factors have tended to decrease our earning power. The reduced volume of turnover for the whole year due to lower values and the general contractions of trade and the low level of money rates during the first half of the year increased the relative burden of our overhead charges, whilst bills of exchange and advances have been, as already stated, much below normal. The turnover of cheques, etc., passed through the Manchester Clearing fell from £531,750,415 in 1930 to £466,582,944 last year. I am glad to report that our proportion of these clearances was fully maintained.

After allocations for directors' fees, pensions and annuities fund, bank property and dividend, we are able to carry forward £217,903, an increase of £16,640. Reduced profits and the uncertain outlook have resulted in more conservative distributions to their shareholders on the part of the banks, and a slightly reduced interim dividend was paid by us in respect of the first half-year.

DIVIDEND PAYMENTS.

It is now proposed to repeat the interim payment upon the "A" shares, making 16½ per cent. for the year, against 18½ per cent. which has been paid for the previous two years, and to pay the maximum dividend of 10 per cent. upon the "B" shares.

The trustee department of the bank continues to expand as customers and others realise the great advantages of appointing the bank as executor or trustee. The branch of this department opened in 1930 at 46, Old Bond Street, London, is making satisfactory progress, and tributes have been received from those customers of the bank resident in or near London.

Night safe facilities have been installed in many of our branches; this additional banking facility is appreciated by customers for whose use the service was specially designed.

In a year when trade was on a less profitable basis, and when there were many financial liquidations, it would not have been altogether surprising if the total number of accounts on our books had diminished. I am, however, able to report to you that, in spite of inevitable changes, the number of current and deposit accounts kept with this bank increased during the year under review. We also had an increase in our savings accounts, which have proved to be popular since we started this class of business some years ago.

The Chairman then moved the adoption of the report and balance sheet. This was seconded and carried. Messrs. F. J. Dickens, S. Turner, G. L. McKelvie and H. H. Summers, retiring directors, were re-elected. Messrs. Halliday, Pearson and Company were reappointed auditors.

The meeting closed with the usual votes of thanks.

Government Returns, &c.

NATIONAL ACCOUNTS.

The total ordinary revenue for the week ended January 30, 1932, amounted to £30,095,000 against ordinary expenditure of £9,382,900. After allocating £650,000 to Sinking Fund and having allowed for a decrease in Exchequer Balances of £157,995, the operations for the week, as shown below, decreased the National Debt by £20,220,000 to £7,693,856,000:—

(000's omitted.)		(000's omitted.)	
Public Department Advances..	+ 1,750	Treasury Bills	— 21,624
Road Fund	+ 1,665	National Savings Certificates ..	— 200

bad and doubtful debts. Current, deposit and other accounts, largely representing balances held for foreign account, amount to £247,138, against £1,067,058 in 1930, with corresponding decreases on the assets side under money at call and short notice, bills receivable and investments. The outstandings in Germany, Austria and Hungary are shown separately in the balance sheet. A notable reduction occurred in acceptances on account of customers, which, at £1,454,736, show a reduction of 50 per cent. Whilst this was partly due to the falling off of international commerce, it was also the outcome of the board's policy to reduce engagements, with all due consideration to their customers. The directors regret that no dividend can be paid for the year. The 7 per cent. dividend on the "A" shares, being cumulative, these shares carry dividend rights as from January 1, 1931. Meeting will be held at 38 Lombard Street on February 11th, at noon.

SWISS BANK CORPORATION.—The net profit for the year ended December 31, 1931 (including the carry-forward of Frs. 1,025,434 from the previous year), amounts to Frs. 13,633,955, against Frs. 17,081,678 (including a carry-forward of Frs. 1,019,242) for 1930. At the annual general meeting, to take place on February 25th, the board will recommend the allocation of Frs. 500,000 to the pension fund, the payment of a dividend of 7 per cent., and the carrying forward of Frs. 1,523,103.

MISCELLANEOUS.

THE LINEN THREAD COMPANY, LTD.—The profit for the year ended September 30, 1931, amounted to £157,394, as compared with £151,171 for year ended September 30, 1930. The general depression in trade has adversely affected the trading results in the period covered by the accounts. The directors have, therefore, transferred £100,000 from dividend reserve account to profit and loss account. A year ago the directors transferred £100,000 from dividend reserve. The ordinary dividend absorbed £99,000 and is maintained at 6 per cent. free of income tax for the year. The carry-forward to next account is £175,989, against £179,210 brought in. Total assets are £6,049,141, against £6,191,932 a year ago. Cash has risen from £198,726 to £349,085. Investments in Government and other securities stand in balance sheet at £1,390,855. Their market value on September 30, 1931, was £1,311,426. Advances to subsidiaries stand at £1,120,563, against £1,531,293. Dividend reserve now amounts to £100,000. Reserve account stands at £600,000. The meeting will be held at 95 Bothwell Street, Glasgow, on February 12, 1932, at 3 o'clock.

TILLING AND BRITISH AUTOMOBILE TRACTION.—The accounts for 1931 of Tilling and British Automobile Traction, Ltd., show net income from investments, &c., of £276,405, against £272,772, and a net profit of £230,105, compared with £217,060. The ordinary dividend is maintained at 10 per cent. It is proposed to place £10,000, as last year, to reserve, and to carry forward £92,108, against £52,003 brought in. Investments stand in the balance-sheet at £2,555,708, against £2,459,873 last year. Meeting: 88 Kingsway, February 11th, at 2.30 p.m.

Commercial Reports.

MARKET SUMMARY.

The principal international commodity markets continue to suffer from a lack of demand in relation to supply. Price movements in terms of gold have been irregular and, on balance, the level of prices has been lower. Among non-ferrous metals, copper suffered a sharp setback in New York, and lead continued to decline. Spelter has remained unchanged, but tin declined a few points. Raw cotton, though cheaper than last week, has been well maintained. On the other hand, rubber at 4½ cents per lb. established a new low record. Cereals are scarcely changed on the week. Wheat has been a little dearer, owing to the adverse climatic conditions in the United States, and rye has also advanced a few points. Oats have been maintained, but maize suffered a slight setback. Sterling quotations of commodities which lend themselves to grading, and therefore to international arbitrage, continue to move in sympathy with international quotations. Markets in this country have generally been dull. Foodstuffs, coming mainly from countries with depreciated currencies, have scarcely risen in price since September last. The London wool auctions have closed strong. The tea auctions, on the other hand, showed an allround decline in the prices realised this week. According to reports from various industrial centres, the recent improvement in the coal trade has not been maintained. Transactions in iron and steel have been few in number, and small in volume. The situation in the cotton trade has deteriorated a little. On the other hand, the wool and rayon industries have remained active.

THE COAL TRADE.

SHEFFIELD.—Exports of steam coal continue on a restricted basis but the tonnage being bought and shipped maintains previous levels. Association hards are in abundant supply and the price has eased lately, current quotations being from 16s. to 17s. f.o.b. The home demand for manufacturing fuel continues poor, and a slight increase in boiler slacks. January was one of the poorest winter months on record for house coal, and stocks have accumulated everywhere. Best South Yorkshire house coal is quoted at 23s. to 24s. at pits. Output of furnace coke is promptly absorbed, and stocks to an increasing consumption for heating purposes, prices at blast furnaces.

GLASGOW.—The Scottish coal trade is dull, the business passing both in the home and the shipping markets being on a poor scale. Prices generally have an easier trend, the one notable exception being Lanarkshire splints, which are well booked up for this month's delivery. The London trade in nuts is moderate. Current prices for the shipping trade are approximately as follows:—LANARKSHIRE.—Ell best, 14s. 3d.; splint best, 16s. 3d.; splint second, 14s. 3d.; navigation, 15s.; navigation second, 14s. 6d.; Hartley, 15s. 6d.; steam, 13s.-13s. 3d.; trebles, 13s. 6d.; doubles, 11s. 9d.; singles, 9s. 6d.; pearls, 9s.; dross, 9s. FIFE.—Screened navigation, 16s. 6d.; first-class steam, 13s. 3d.-13s. 6d.; third-class steam, 12s. 3d.; trebles, 13s. 6d.; doubles, 11s. 6d.; singles, 9s. 9d.; pearls, 9s. LOTHIAN.—Prime steam, 12s. 3d.; secondary steam, 12s.; trebles, 13s. 6d.; doubles, 11s. 6d.; singles, 10s.; pearls, 9s. Ayrshire.—Unscreened navigation, 16s.; jewel, 17s.; steam, 13s.; trebles, 13s. 9d.-14s.; doubles, 12s.; singles, 9s. 9d.; pearls, 9s.; dross, 9s.

CARDIFF.—The South Wales coal market continues in a stagnant condition. The Great Western Railway Company's traffic returns show that in the week ended January 30th last the shipments in the foreign and coastwise trades totalled only 402,120 tons, compared with 477,430 tons in the previous week, and 443,603 tons in the corresponding week last year. Even less active conditions have prevailed this week, and on Tuesday last only one tip was employed at the Newport docks. The French Government has reduced the quota of imports under its licensing system from 72 per cent. to 64 per cent. of the monthly average imports in the three years 1928-30, and the effect of this further restriction will be to curtail supplies from the United Kingdom to a monthly rate of 626,000 tons, compared with actual average monthly shipments last year of about 900,000 tons, and in 1930 of 1,125,000 tons. South Wales will be the principal sufferer from the reduction in the quota, as normally it supplies between 50 per cent. and 55 per cent. of all the coal shipped from this country to France. Current inquiries are extremely scarce, particularly for bituminous coals, and prices are nominally unchanged for all except a few of the drier grades at the schedule minimum basis. Negotiations for an improvement of the trimming system at the South Wales ports are in progress. The following are the current approximate quotations: Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 4½d.; best dries, 18s. 6d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steams, 13s. 6d.; coking smalls, 13s. 6d. to 13s. 9d.; cargo smalls, 11s. 6d. to 12s. 6d.; anthracite, best large, 36s. to 38s. 6d.; Red Vein, large, 22s. 6d. to 27s. 6d.; machine-made cobbles, 40s. to 48s. 6d.; French nuts, 40s. to 48s. 6d.; stove nuts, 39s. 6d. to 43s. 6d.; ruggly culm, 8s. 3d. to 8s. 9d.; foundry coke, 32s. 6d. to 36s.; patent fuel, 19s.; pitwood, ex ship, 22s. to 24s. 6d.

IRON AND STEEL.

MIDDLESBROUGH.—A more cheerful tone pervades the iron and steel trades, writes our correspondent, in view of the impending imposition of a tariff on materials imported from abroad, but no important expansion of business has yet occurred. The demand for Cleveland pig iron locally is on steady lines, but trade with Scotland continues restricted, and there is no prospect of improvement just now, as foundries there are not busy. They are carrying large stocks of pig iron, mostly Continental, which they purchased some time ago at low prices. During January only 3,606 tons Cleveland iron was sent to Scotland, against 4,440 tons in December, which is a clear indication of the condition of affairs existing there at present as affecting this district, although increased quantities are going from the Midlands at lower prices than Cleveland. Export demand for Cleveland foundry iron is very light, and immediate prospects are not encouraging. At Tuesday's weekly market official prices for Cleveland iron were unchanged, viz., No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; and No. 4 forge, 57s. f.o.b. or f.o.t. In hematite a fair number of home orders are being received, and odd parcels for shipment abroad are occasionally booked, but practically all the business is for early delivery. For early delivery mixed numbers are freely offered at 64s. 6d. per ton, and slightly less than this would be accepted for tempting orders. It is reported that an important sale of West Coast low sulphur and phosphorus hematite has just been made to the States. Manufacturers of finished materials report little, if any, improvement in business, and they experience difficulty in keeping some plants in operation. A favourable item is the report that the Cleveland Bridge & Engineering Co., Limited, of Darlington, have secured a contract of the value of £238,000 for the road bridge over the Forth at Kincairdine, but this lacks official confirmation. Prices of steel materials are unchanged. Shipments from Middlesbrough for January were particularly disappointing, pig iron only reaching 8,436 tons, and manufactured iron and steel 21,857 tons. The combined total of 30,293 tons is the lowest recorded since the Coal Strike period of 1926. The ore market shows no change, there being no buyers in evidence. Best rubio remains nominally 16s. 6d. c.i.f., and the freight Bilbao/Middlesbrough is about 6s. Imports of 59,242 tons, compared with 82,552 tons in December, and 47,059 tons in November. Coke continues in full supply, but the local demand does not improve. Ordinary blast-furnace qualities are obtainable at 16s. 9d. delivered consuming works. The number of blast-furnaces in operation in the district is unchanged at seventeen.

SHEFFIELD.—In spite of tariffs and the low value of sterling there is no sign of general improvement in Sheffield's staple industries. As regards crude steel and heavy manufactured steel, the reaction which set in at the close of last year seems to be gaining force, and the position is considerably worse than when the works closed for

the Christmas holiday. Exports have declined, and in the home market consumers are buying on a niggardly scale. Tonnage orders are few and far between. Numerous transactions in ferro-alloys are reported, but all are for hand-to-mouth quantities. Controlled prices of steel have been stationary for more than six months. Some nice orders for special lines in steel are being picked, and there is a good demand for cold wrought material, but only a limited number of firms are affected. The year is opening with exceptional quietude in tools, cutlery and plate, and manufacturers report that the money stringency is more acute than at any time previously. The difficulty of securing payment of accounts is proving a serious handicap.

GLASGOW.—Steelmakers are still operating only a very small proportion of the available plant, and there is practically no new business being placed at present. They, as well as wrought iron makers, are hoping for a considerable improvement when the expected import tariffs come into force. During the present week local sheetmakers have not been fully employed, but the tonnage booked during the week is considerable, and in this branch business should be fairly steady for a few weeks. Bookings have been mainly for thin black sheets. There is no improvement in the position at the tube works, and here also it is only possible to keep a small proportion of the plant operating. In the Motherwell district much satisfaction is expressed over the further order for wagons which has been placed with a local firm.

CARDIFF.—The recent improvement in the state of the South Wales steel and tinplate markets has been maintained. On the Swansea Metal Exchange on Tuesday it was reported that good business had been done with the Far East and Canada, and that prices are steady at from 14s. 3d. to 14s. 9d. per basis box. No decision has yet been reached concerning the new proposals for the regulation of output. Welsh bars are unchanged at £5 per ton, with foreign bars quoted at from 80s. to 82s. per ton delivered. The importation of Belgian and French bars continues fairly active. The market for galvanised sheets remains dull and featureless.

OTHER METALS.

TIN.—When it became known that the world's visible supply of tin at the end of January, at 61,800 metric tons, showed an increase of 1,200 tons on the preceding month, the market became less steady, and prices weakened a little. In New York the metal was quoted at 21.90 cents per lb. on Wednesday, against 22 cents per lb. a week ago, and 21.125 a month ago. Wednesday's official closing quotations in London in terms of sterling for "standard" cash, at £138 12s. 6d. to £138 17s. 6d. per ton, compares with £139 15s. to £139 17s. 6d. on the corresponding day last week. Stocks in London and Liverpool at the end of last week, at 32,453 tons, show an increase of 172 tons on the week.

COPPER.—The rise in the gold price of copper following the agreement on output restriction reached at the end of last year has now been followed by a substantial reaction. In New York business was a little more active at the lower level, but in other centres the demand was small. On Wednesday, "Domestic" spot was quoted officially at 6.75 cents per lb. in New York, against 7.25 cents a week ago, and 7.25 cents a month ago. Wednesday's official closing price for "standard cash" in London, in terms of sterling, at £37 17s. 6d. to £38, compares with £38 15s. to £38 16s. 3d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 20,939 tons, show a decrease of 91 tons, while stocks of rough copper, at 695 tons, were 50 tons larger.

LEAD.—The London market in lead has been dull and lower prices failed to stimulate demand. In New York, however, prices have been maintained despite a small turnover. In New York the metal was quoted at 3.75 cents per lb. on Wednesday, against 3.75 cents a week ago and 3.75 cents a month ago. Wednesday's official closing quotation for "soft foreign" in London in terms of sterling, at £14 7s. 6d. per ton for shipment during the current month, compares with £14 16s. 3d. on the corresponding day last week.

SPELTER.—The price of spelter continued to decline during the past week both in London and New York. Demand was on a small scale. Wednesday's quotation in New York, at 2.825 cents per lb., compares with 2.90 cents a week ago and 3.125 cents a month earlier. Wednesday's official closing quotation in London in terms of sterling for "good ordinary brands" was £13 17s. 6d. per ton for shipment during the current month against £14 6s. 3d. a week ago.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals the quotations for aluminium and nickel have been maintained at £95 per ton and at £240 to £245, respectively. Foreign antimony, at £28 to £28 10s. per ton, ex warehouse, shows an advance of £1 per ton. Quicksilver remained unchanged at £17 15s. to £18 per flask. Refined platinum was again quoted at £11 4s. per oz.

TEXTILES.

THE COTTON TRADE.—Liverpool.—Imports for the week January 28th to February 3rd (inclusive) are 36,285 bales, of which 17,805 bales American, 269 Brazilian, 440 Peruvian; 104 Argentine, 12,029 Egyptian, 3,420 African, 1,817 East Indian, and 401 sundries.

Manchester.—A more unsettled feeling has prevailed in the market, and business has been difficult to arrange. The news from the Far East has caused anxiety, and there has been a certain amount of nervousness with regard to the labour situation in view of the threat of a strike at Burnley. Merchants with connections in Shanghai have been rather alarmed at the latest developments. Advices have been received stopping deliveries for the time being.

and of course new business has been at a standstill. The improved inquiry in cloth for India has been maintained and rather more sales have taken place in light fabrics for Calcutta, with further operations for Karachi and Madras. There are very few opportunities, however, of doing business with Bombay at the moment. Fine goods have attracted some attention for Java and the Straits Settlements. The offers for Egypt and the Near East have been scarce. Printing cloths have been sold in moderate lots for the Continent. Home trade demand has rather tended to broaden, and some fair lines have been booked in a variety of goods. Quotations in American yarns have been somewhat irregular when tested, and home users have purchased from hand to mouth. Egyptian counts have been rather stiffer, partly owing to the higher basis for cotton in Alexandria. A few more contracts have been arranged in fine counts for India.

THE WOOL TRADE.—Bradford.—The London sales, writes our correspondent, closed on Tuesday with values for almost every description of wool on a very firm level compared with the opening, and often showing an advance on the close of the December series. Average to superior greasy merinos were $\frac{1}{4}$ d. dearer than at the previous auctions, but there was little change in wool of poor condition or inferior locks and pieces. Superior merino scourings were par to $\frac{1}{4}$ d. dearer, other descriptions being unchanged. The only other wools to show any marked advance were faulty slippe lambs, which were 1d. to 2d. per lb. dearer. Greasy Puntas and Falkland Island wools were about $\frac{1}{4}$ d. dearer. There was little change in greasy Capes, except that combing wools were against the buyer. All Cape scourings were dearer, medium about 1d., and super 1d. to $\frac{1}{4}$ d. A feature of the series has been the active buying on the part of Germany, and increased operations for France. This, along with the steady purchases for the home trade, has kept the market firm. No doubt buyers have been influenced somewhat by the upward tendency in overseas markets. At the same time, operations on local account have been very largely influenced by machinery requirements, and German competition has had a distinct influence on both greasy and scoured clothing merinos, as well as fine crossbreds and the English offerings. It is estimated that the quantity sold was 116,500 bales and as the quantity announced as being available was 152,600 bales, the result can be regarded as fairly satisfactory. The home trade has been the largest buyer, having taken 65,500 bales and the Continent about 50,000 bales. The Bradford market is quiet, but prices for merino and fine crossbred tops are firm, other qualities being steady. The disturbance in the Far East and the need for a more definite pronouncement on tariff policy, has made the majority of firms rather cautious, but generally speaking the outlook for the consumption of wool is encouraging.

THE JUTE TRADE.—Dundee.—The jute trade continues to drag on slowly, and very little business is taking place in all sections of the market. The raw material maintains quite a steady tone, and sellers are still displaying a considerable amount of reserve. The imports of raw jute into Calcutta during the month of January were only 500,000 bales, which makes the total accounted for for the seven months of the season from July 1st last 5,000,000 bales, compared with the forecasted quantity for the whole season of 5,550,900 bales. It would appear as if the forecast was too low, as has so often been the case in former years. Trade in Dundee yarns and cloth is so dull that spinners and manufacturers are forced to consider the question of curtailing their output, and a number of works are now running only on alternate weeks, while others are stopping a proportion of their machinery or working three and four days each week. The fact that producers are prepared to agree to the acceptance of low prices makes no appeal to buyers, who are purchasing only the merest trifling lots to cover their immediate needs. During the past day or two, the Calcutta goods market has shown rather more signs of activity, and prices have tended to advance. The stocks of goods in the hands of the Indian Jute Mills showed an increase at the end of January compared with December of $\frac{1}{4}$ per cent. in the case of hessians, but sacking stocks were about unchanged. Hessian stocks are now 142 million yards and sackings 54 million yards. Heavy goods, especially, have firmed up in price this week. Prices for raw jute in this market are more or less nominal in the continued absence of offers or business. Daisee assortment full group could be bought at £18 and Tossa assortment at £19 10s., with fours quoted at £16 7s. 6d. and £18 respectively, February-March shipment. A good single mark of Lightnings is offered at £20 10s., same shipment. There has been a little business done in hessian yarns, and the price of 2s. 2d. has been established for common 8-lb. cops, and 2s. 3d. for 8-lb. spools. Twist is quoted at from 3 $\frac{1}{4}$ d. to 3 $\frac{1}{2}$ d. for 3-ply 8 lb., and sacking yarns remain unchanged at 2 $\frac{1}{4}$ d. for 24 lb. weft, and

3 $\frac{1}{4}$ d. for 8-lb. chains. Rove has been sold at the lower rates of £20 for 48 lb. and £18 for 200 lb. Fine yarns are rather easier at 2s. 10d. for second quality 8 lb. Rio warp, 2s. 7d. for third, and 2s. 5d. for fourth. Carpet yarns are steady at from 3 $\frac{1}{4}$ d. for 14-lb. warp. Only small quantities of cloth are being bought, and prices are not seriously tested. Quotations rule from 3 $\frac{1}{4}$ d. for 10 $\frac{1}{2}$ oz. 40 in. hessians, and from 2 $\frac{1}{4}$ d. for 8 oz. Buyers are showing little inclination to purchase. Linoleum hessians are dull and nominal. Calcutta hessians are quoted at 20s. 3d. for 10 oz. 40 in., and 16s. 1d. for 8 oz., February-March, and 20s. 5d. and 16s. 2d. for April-June. Liverpool twills are raised to 58s. 6d., and "B" twills to 52s. 3d., February-March and 58s. 6d. and 52s. respectively, April-June. Some demand is made for spot goods at 20s. 3d. for 10 oz., and 16s. 6d. for 8 oz.

THE GRAIN MARKETS.

WHEAT.—The international wheat situation has undergone little change since last week. Markets have generally been dull, and the volume of "cash" demand was small. Attention was focussed on reports of the United States winter crop, which appears to have suffered damage from frost. Another "bull" factor was the increase in the French milling quota from 3 per cent. to 10 per cent., which has the effect of decreasing the pressure of Argentine and Australian wheat. So far, reports of the British crop suggest that growth is proceeding satisfactorily. The market in British wheat has been quiet. On Wednesday, "March" futures were quoted at 57 $\frac{1}{4}$ cents per bushel in Chicago, against 55 $\frac{1}{4}$ cents on the corresponding day last week, and 55 $\frac{1}{4}$ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 33s. 3d. per 996 lbs., as compared with 33s. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 30s. 9d., against 30s. 3d.; No. 3 Northern Manitoba, Vancouver, ex ship, 29s., against 28s. 9d.; Russian, on sample, 25s. 6d. to 28s. 6d., against 25s. 6d. to 28s. 6d.; Australian, ex ship, 27s. 9d. to 29s., against 28s. 3d. to 29s. 6d. a week ago.

WHEAT FLOUR.—The volume of sales of flour has been small during the past week, but prices have generally been maintained at last week's level. North American shipments, at 187,000 sacks, showed a decrease of 22,000 sacks as compared with the previous week. Of this total, only 15,000 sacks have been consigned to Europe. Quotations in London, Wednesday: Straight run, delivered country, 25s. 6d. per sack of 280 lbs., as compared with 25s. 6d. last week; delivered London, 24s. 6d., against 24s. 6d. Manitoba patents, ex store, 25s. 6d. to 28s. 6d., against 25s. 6d. to 28s. 6d.; and Australian, ex store, 19s. 6d. to 20s. 6d., against 20s. to 20s. 6d. a week ago.

BARLEY.—The market in barley has been dull. On Wednesday, "May" futures were quoted at 39 $\frac{1}{4}$ cents per bushel in Winnipeg, against 39 $\frac{1}{4}$ cents last week and 40 cents a month ago. Quotations in London, Wednesday: "English feeding," f.o.b., per 448 lbs., 26s. to 27s., as compared with 26s. to 27s.; Russian, landed, 23s. per 400 lbs., against 23s. a week ago.

OATS.—Oats have been in better demand, particularly in Continental countries, and prices have advanced a few points in Chicago. "May" futures, which last week stood at 25 $\frac{1}{4}$ cents per bushel in Chicago, sold at 25 $\frac{1}{4}$ cents per bushel on Wednesday this week, against 26 $\frac{1}{4}$ cents a month ago. Quotations in London, Wednesday: "River Plate," landed, 18s. 6d. per 320 lbs., as compared with 19s. last week; "River Plate," ex ship, 17s., against 17s. 3d.; "Chilean White," landed, 27s. 6d., against 27s. a week ago.

MAIZE.—The market in maize has been quieter this week. In view of the large quantities recently absorbed by the principal importing countries, this was to be expected. Prices have been slightly easier. Wednesday's quotation in Chicago for "March" futures, at 37 $\frac{1}{4}$ cents, shows a fall of $\frac{1}{4}$ cent per bushel on the week, and a fall of 2 $\frac{1}{4}$ cents as compared with the price a month earlier. Quotations in London, Wednesday: "Plate," landed, 18s. 3d. per 480 lbs., as compared with 19s. last week; "Plate," ex ship, 17s., 18s. 9d. Yellow maize meal, ex wharf, was quoted at £5 10s. per ton, against £5 10s. a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1931-32, 1930-31, 1929-30, 1928-29:—

	1931-1932.	1930-1931.	1929-1930.	1928-1929.
Estimated sales of home-grown wheat—				
1 week to January 30	Cwts. 118,020	Cwts. 114,376	Cwts. 275,466	Cwts. 327,012

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1930:—

NEAREST FUTURE.	Jan. 2, 1930.	Jan. 2, 1931.	Feb. 4, 1931.	Jan. 4, 1932.	Jan. 27, 1932.	Feb. 3, 1932.
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.	148 $\frac{1}{2}$	56 $\frac{1}{2}$	60 $\frac{1}{2}$	62 $\frac{1}{2}$	61 $\frac{1}{2}$	63 $\frac{1}{2}$
Chicago (No. 2 Winter) —Cents per 60 lb.	130 $\frac{1}{2}$	79 $\frac{1}{2}$	79 $\frac{1}{2}$	55 $\frac{1}{2}$	55 $\frac{1}{2}$	57 $\frac{1}{2}$

The visible supply of wheat in Canada, at 62,086,000 bushels, shows an increase on the week of 86,000 bushels. Supplies a year ago stood at 62,391,000 bushels.

OTHER FOODS.

SUGAR.—There has been no improvement in the sugar situation this week and quotations in New York declined further. Negotiations to deal with the position of Cuba and Java have not yet been concluded. Markets in raw sugar have generally been dull. British refined qualities were advanced 3d. per cwt. "March" futures in New York were quoted at 0.99 cent per lb. on Wednesday, against 1.02 cents per lb. a week ago, and 1.05 cents per lb. a month earlier. Wednesday's sales of "raws" include "March delivery" at 6s. 9d. to 6s. 9 $\frac{1}{2}$ d. per cwt., against 6s. 9d., and "May," at 6s. 11 $\frac{1}{2}$ d. to 6s. 11 $\frac{1}{4}$ d., against 6s. 11 $\frac{1}{4}$ d. to 6s. 11 $\frac{1}{2}$ d. on the corresponding day last week. The movements of raw sugar in London and Liverpool during last week are set out in the table below:—

	Imports.		Deliveries.		Stocks.	
	1932.	1931.	1932.	1931.	1932.	1931.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
London	3,018	1,946	1,078	720	4,650	33,790
Liverpool ...	15,308	5,786	18,740	12,506	94,637	137,183
Total ...	18,326	7,732	19,818	13,226	99,296	170,973

Last week ... 30,007 13,058 17,961 13,375 100,788 176,467

COFFEE.—The improvement in the international situation of coffee has been maintained. Prices remained firm and the London auctions were characterised by a general demand. Last week's movements of coffee in London were as follows: Brazilian, landed, 430 bags; delivered for home consumption, 79 bags; exported, nil; stocks, 2,929 bags against 2,196 bags last year. Central American, landed, 6,947 packages; delivered for home consumption, 3,870; exported, 2,322; stocks, 51,955 packages, against 73,825 a year ago. Other kinds, landed, 4,793 packages; delivered for home consumption, 3,366; exported, 652; stocks, 46,771 packages against 75,122 a year ago.

COCOA.—The market in cocoa failed to improve during the past week. On the contrary, the slowness of demand caused a further decline in prices. "January" futures were quoted at 3.88 cents per lb. in New York on Wednesday, against 3.92 cents per lb. a week ago. As compared with the corresponding day last week, Wednesday's quotation for Acra, fair fermented, new crop, February-April, at 21s. per cwt. f.o.b., London contract, shows a fall of 9d. per cwt. on the week. Last week's movements of cocoa in London were as follows: Landed, 10,947 bags; delivered for home consumption, 9,133 bags; exported, 1,409 bags; stocks, 130,021 bags, as against 180,323 last year.

TEA.—The quantities catalogued for this week's auction comprised 53,318 packages of Indian, 28,090 packages of Ceylon, and 16,863 packages of Java and Sumatra tea. Monday's Indian auctions were characterised by a slow demand at declining prices. The Ceylon teas offered on Tuesday again showed a deterioration in quality which partly accounts for the low rates paid. On Wednesday a slightly better demand was evident for Indian tea. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account:—

Week ending	Northern India.		Southern India.		Ceylon.		Java.		Sumatra.		Nyassa-land.		Total.
	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.

Jan. 28, "	0 10-57	0 11-29	1 1-16	0 7-79	0 7-12	0 6-63	0 10-91						0 10-91

RICE.—The market in rice has been quiet, and the small volume of demand precluded an advance in quotations. Wednesday's "spot" quotation for Burma No. 2, cleaned, at 9s. 6d. per cwt., shows no change as compared with last week. Movements in London during the past week were as follows: Landed, 141 tons; delivered, 297 tons; stocks, 1,363 tons, as against 432 tons last year.

POTATOES.—The principal markets have been well supplied with potatoes during the past week, and prices were again slightly easier. At the Borough Market, "Best King Edward" sold from 10s. to 12s. per cwt., as compared with 11s. to 12s. per cwt. a week ago.

SPICES.—The market in spices has been steady. Wednesday's quotation for "Black Singapore" pepper, at 6 $\frac{1}{2}$ d. per lb., shows a rise of $\frac{1}{4}$ d. per lb. on the week. Movements of pepper in London during the past week were as follows: Black, landed, 19 tons; delivered, 25 tons; stocks, 244 tons, against 444 tons last year. White, landed, 75 tons; delivered, 79 tons; stocks, 586 tons, against 473 tons a year ago.

MEAT.—The firmer tendency in foreign beef prices which became noticeable at the Smithfield Market a week ago has given way to an easier tendency. On the other hand, New Zealand mutton has advanced a few points. On Wednesday, Argentine beef (chilled hindquarters) was sold at 3s. 2d. to 3s. 6d. per 8 lbs., against 3s. 6d. to 3s. 10d. on the corresponding day last week, while New Zealand frozen mutton realised 2s. 6d. to 3s. 4d., as against 2s. 4d. to 3s. 4d. a week ago. According to the Smithfield Market official report, supplies of meat during last week amounted to 9,791 tons, as compared with 9,798 tons in the corresponding week last year. Imported beef, principally Argentine, formed 84.8 per cent. of the supplies, as against 85.5 per cent. a year ago; and imported mutton, mainly New Zealand, formed 73.7 per cent. of the total supply, as against 79 per cent. last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OILSEEDS.—Markets have not been active, there being an indisposition to do business pending the declaration of the Government's tariff plans. Linseed is in fair demand in near positions, but quiet forward. Plate on spot and at hand is held for £9, and February-March shipment is steady at £8 12s. 6d., with April and May at a small premium. Indian linseed is steady but neglected. The new Plate crop is now being shipped in fair volume, and substantial quantities are afloat for Europe, viz., 212,700 tons (including 6,500 tons from India), an increase of 26,700 tons on the week, comparing with 231,000 tons a year ago. Cottonseed is firm but in poor demand, with black Egyptian quoted £6 12s. 6d. for shipment to May. Linseed oil has been in moderate request from consumers, but prices have been erratic and influenced to some extent by conjectures as to import duties. Raw oil on spot, ex Hull, is about £15, and March-April delivery the same figure, later positions being at substantial premiums. Cotton oil is firm, and dealer sellers being scarce. Crude Egyptian, ex Hull, has advanced to £22, and refined to £24. Oilcakes and meals are in only moderate demand, and mill prices of linseeds and cottons are lower.

HIDE, LEATHER AND ALLIED TRADES.—Slight alterations in prices occurred at the auctions for hides and skins held in Manchester this week. All ox and heifers, with the exception of the two top weights in first class, which made $\frac{1}{4}$ d. per lb. less money, changed hands at last week's figures. Cows advanced $\frac{1}{4}$ d. per lb. in price, while light calf were cheaper by a similar amount. Other weight in calves sold at the previous week's prices. Sheepskins are about unchanged in value. Although rather more interest has been taken in the foreign hide market, it would seem that actual turnover has not shown any material increase, and conditions generally

remain quiet. In the South American market, Argentine ox are selling in limited quantities at the equivalent of 4½d., while second ox are on offer at 4½d. First Uruguayan ox have sold at a fraction over 5½d. Dry hides from the same source are not an active market for this country, but sales have been made to the Continent on the basis of 6½d. for B.A. Americanos, 6½d. for M.V. Americanos, and 3½d. for B.A. Inservibles. Business is quiet in regard to most descriptions of African hides. Small orders have been negotiated for Capes at 6½d. and 5½d. for first and second drys, and ½d. per lb. less for dry-salted 20/30 lbs. Unbathed Adis Abebas are on offer at 5½d., while some business has transpired in Mombasas at 5½d. for 12 lbs. and up. Australians are inclined to be easier in price with perhaps a little more interest taken. Trade in regard to sole leather is still inclined to be on the quiet side, although for some sorts rather more interest has been evinced. In English and wet-salted bends, inquiry has again been concerned with the medium weights, and some fair sales have been effected. Dry hide bends have been a better market in the lighter weights, and some very satisfactory business has been done, but the call for mediums and heavies has again been slow in spite of some improvement in connection with the latter. The best section of the offal market is that for shoulders. Both pinned and rough have been in moderate request, but no headway has been made in regard to bellies. Distributors and producers of upper leathers have experienced hardly any variation in the demand. Business for the most part is centred on willow calf and glacé kid, and to a lesser degree on box calf and patent. Slightly more activity has been met with in regard to the lighter types of upper stock, and in some quarters rather better sales have been made of real and imitation reptile skins, and suede.

RUBBER. Little interest has been taken in rubber this week, and prices continued to decline both in London and New York. Nothing further has become known on the question of legislative restriction of output. In New York, Wednesday's spot price for rubber, at 4½ cents per lb., shows a fall of ½ cent on the week. Wednesday's official closing price for standard ribbed smoked sheet in London, at 2½d. per lb., shows a fall of ½d. as compared with the

corresponding day last week. In forward positions business has been done at 2½d. to 3d. for April-June, against 3d. to 3½d.; and at 3½d. to 3½d. for October-December, against 3½d. to 3½d. a week ago. Movements of rubber in London and Liverpool during the past week were as follows: Landed, 712 tons; delivered, 1,246 tons; stocks at the end of last week, at 125,339 tons, show a decrease of 534 tons as compared with the preceding week.

maturities made the stringency more pronounced; more money than usual had to be borrowed from the clearing banks at their minimum rate of 5 per cent, while 5 per cent. was also obtained by some outside lenders. Treasury bill maturities made money a little easier the following day, but on Wednesday available supplies were once more depleted, and 5 per cent. had again to be paid by some borrowers. On Thursday, $4\frac{1}{2}$ per cent. was the ruling rate.

Applications for last week's Treasury bills amounted to only £34.2 millions for the maximum amount of £30.0 millions on offer, but as only £27.0 millions were allotted the average tender rate was as low as £4 6s. 1.8d. per cent., against £4 7s. 6.99d. per cent. the week before. Subsequent events were to show that applicants had seriously misjudged the position, for by Monday the prevailing stringency had driven the rate on "hot" Treasuries up to $4\frac{3}{4}$ per cent., while by Thursday it had risen to $4\frac{1}{2}$ per cent. and even higher. Brokers consequently were faced with an adverse turn of about $\frac{1}{8}$ per cent. The market rate on bank bills has also risen. Short bills are now quoted at 5 per cent., and ordinary three months' bank bills at $5\frac{1}{2}$ per cent. Four months' bills command $5\frac{3}{4}$ per cent. and six months' bills $5\frac{1}{2}$ per cent. German standstill bills were quoted this week at $5\frac{1}{2}$ per cent.

The Bank return provides ample evidence of the increased stringency, for bankers' deposits have fallen during the week from £77.3 to £67.0 millions. The note circulation has been reduced by £1.1 millions, so that the Reserve is £1.1 millions higher. Against this, public deposits have risen by £1.6 millions, while Government securities have been reduced by £3.7 millions and "other" securities by £5.6 millions. It is these last changes that account for the decline in bankers' deposits, and so for the sudden depletion of market resources.

	Jan. 21, 1932.	Jan. 28, 1932.	Feb. 4, 1932.	Feb. 11, 1932.	Previous Rate and Date Changed.
Bank Rate	6	6	6	6	4 $\frac{1}{2}$ (Sept. 21, '31)
Bankers' Deposit Rate..	4	4	4	4	2 $\frac{1}{2}$ (Sept. 21, '31)
Discount / Call	4	4	4	4	2 $\frac{1}{2}$ (Sept. 21, '31)
Houses { Notice ...	4 $\frac{1}{2}$	4 $\frac{1}{2}$	4 $\frac{1}{2}$	4 $\frac{1}{2}$	2 $\frac{1}{2}$ (Sept. 21, '31)
Market rate (3 months' bills)	5 $\frac{1}{2}$ -7	4 $\frac{1}{2}$ -5 $\frac{1}{2}$	4 $\frac{1}{2}$ -5 $\frac{1}{2}$	5-5 $\frac{1}{2}$	...

There are various possible explanations of this change. There is no evidence of any deliberate open-market selling by the Bank, and indeed the Bank is believed to have bought a few bills. On the other hand, the Bank may well have been letting its bills run off, and have refrained from replacing maturities. The Bank's holding of Treasury bills, in common with that of outside holders, must have been affected by the steady contraction in the total number outstanding, and this is an obvious explanation of the fall in Government securities. Again, the final repayment of the Bank's New York credit has released it from the need of holding commercial bills to be lodged as collateral against the credit, and matters may well have been arranged so that a certain number of commercial bills were due to run off immediately after the repayment of the credit. In any case, market opinion is inclined to look for an increase in the supply of commercial bills now that the Bank credits have been repaid.

In interpreting the current stringency it has also to be remembered that we are now at the peak of the spring tax payments, and that heavy amounts of income tax and Excise money were turned over to the Treasury this week. Henceforward revenue is only likely to flow in at a diminished rate, the more so as special efforts were made by the majority of taxpayers to pay, this year, without delay.

We print below the January averages of the nine English clearing banks. The decline in capital and reserves arises from the decision of many banks to offset the depreciation

in their investments in part by appropriations from declared reserves. The contraction in deposits is obviously due to the heavy tax payments made during January:—

	January, 1931.	October, 1931.	November, 1931.	December, 1931.	January, 1932.
Capital and reserves.....	132.1	132.1	132.1	130.0	122.8
Acceptances	114.9	111.2	102.5	102.1	98.7
Deposits (including undivided profits, &c.).....	1,836.1	1,687.8	1,670.4	1,700.5	1,677.3
Total liabilities	2,083.1	1,931.1	1,905.0	1,932.6	1,898.8
Coin, notes, balance at bank, and cheques in course of collection	243.9	223.5	221.3	237.1	224.0
Money at call.....	141.1	111.7	106.6	116.6	113.9
Investments	306.9	313.0	309.0	305.9	292.7
Discounts	327.7	235.0	238.2	244.1	237.0
Loans and advances.....	907.4	894.4	884.6	884.0	889.3
Gover for accept., premises, &c.	156.1	153.5	145.3	144.9	141.9
Total assets	2,083.1	1,931.1	1,905.0	1,932.6	1,898.8

The fall in cash to the November level marks the restoration of the *status quo* after the end-year balance-sheet preparations. The reduction in discounts probably reflects the heavy repayments of Treasury bills out of current revenue, while the decline in investments is a counterpart to the contraction in deposits. Finally, the expansion in advances probably confirms the general view that many taxpayers were only able to meet their unexpectedly heavy liabilities with assistance from their bankers.

Money remains easy on Wall Street, with call money at $2\frac{1}{2}$ per cent., and 90-day bankers' acceptances at $3\frac{1}{2}$ per cent., or the same as a fortnight ago. The Treasury has paid to the Reconstruction Finance Corporation the first \$150 millions of the \$500 millions which it has undertaken to subscribe to its capital. It is understood that certain railroads have applied to the Corporation for loans amounting to a total of \$600 millions, but that doubts have been expressed if business of this kind falls within the proper functions of the Corporation. Meanwhile, there are rumours that the first public issue of guaranteed debentures is impending, a move one of whose objects is to check hoarding. Gold movements of the week include exports of \$15.4 millions, of which \$12.8 millions went to France and \$2.5 millions to Holland: and on arrival of \$5.0 millions at San Francisco from Japan earmarkings were reduced by \$12.6 millions.

The Foreign Exchange market was very quiet. Sterling, after holding its own during the earlier part, fell away against most of the principal currencies at the close. New York, after touching 8.41 $\frac{1}{2}$, closed at 8.43, against 8.45 last week. Montreal fell away from 8.95 to 8.99, and Paris, after touching 86 $\frac{1}{2}$, moved to 87 $\frac{1}{2}$, a gain of $\frac{1}{2}$ on the week. Brussels gained $\frac{1}{2}$ at 24 $\frac{1}{2}$. Milan, after being better, settled at 66 $\frac{1}{2}$. Madrid, after being over 45, improved by $\frac{1}{2}$ to 44 $\frac{1}{2}$. Amsterdam was firmer at 8.50, as was Berlin at 14.45. Switzerland gained 17 points at 17.53. The Scandinavian exchanges were rather inclined to move against us, but Copenhagen was 2 points worse at 18.17. Helsingfors went from 227 to 224. The South American quotations were still largely nominal, although a few small transactions in Argentine pesos have passed through. In the Far East the rupee was firm at 1s. 6 $\frac{1}{2}$ d., but the yen weakened a little to 2s. 0 $\frac{1}{2}$ d. in connection with the political complications in the Far East. Batavia improved fractionally to 8.55. In the forward market New York was unchanged at $\frac{1}{2}$ and $\frac{3}{4}$ cent discount. Paris was firmer at 11 centimes and 42 centimes premium. Brussels was quoted at par for both deliveries, and Milan at rather wider discounts of $\frac{1}{2}$ lira and 2 $\frac{1}{2}$ lire for the two periods respectively. One month's Madrid remained at $\frac{1}{2}$ peseta discount, but three months' widened to over double last week's quotation at 1 $\frac{1}{2}$ peseta discount. Amsterdam was firmer at $\frac{1}{2}$ cent and 1 $\frac{1}{2}$ cents discount. Berlin was still unquoted, and Switzerland was unchanged at $\frac{1}{2}$ franc premium for one month, but was $\frac{1}{4}$ franc better at $\frac{3}{4}$ franc premium for three. Business in the silver market was very quiet and small transactions were sufficient to influence prices, which rose by $\frac{1}{16}$ d. for both cash and forward to 19 $\frac{1}{16}$ d. and 19 $\frac{1}{16}$ d. respectively. The China silver exchanges moved upwards in sympathy, Hong Kong rising by $\frac{1}{16}$ d. to 1s. 5 $\frac{1}{16}$ d. and Shanghai by the same margin to 1s. 10 $\frac{1}{16}$ d.

THE DIRECTOR OF SLIMMING.

"WHAT we propose in the policy which I commend to the House to-day is not a surgical operation, but a slimming process. In commending these proposals to the House to-day I do so mainly as a director of slimming." . . . "I am still a Free Trader." These two statements, made by the President of the Board of Trade in his speech in the House of Commons on Tuesday, are so patently contradictory that it is with amazement that we find them in an utterance of one who is usually so clear a thinker as Mr Walter Runciman. The essence of the free trade theory, of which Mr Runciman has been so eminent an exponent, is that everything possible should be done to encourage the freest and largest volume of international trade. The vital thing about the proposals which Mr Runciman commended to the House of Commons is that they aim at adding wantonly to the restrictions on the interchange of commodities which have already so drastically reduced the trade of the world. The free trader is an expansionist whose aim is to nourish; the "slimmer," whose rôle Mr Runciman has now adopted, submits his patient to a reduction of the diet from which an expansion of trade and industry could grow. Incidentally, the word "slimming" in connection with the tariff proposals might well be used against Mr Runciman. "Slimming" we have always understood to be a temporary process which, if carried on indefinitely, would kill the patient; and yet the tariff policy now adopted by the Government is intended, as the Chancellor of the Exchequer himself has said, to be permanent, and it is certainly as a permanent policy that it is regarded and accepted by the Conservative majority in the House of Commons. Nor did Mr Runciman get out of his difficulty by the quibble that "nothing in this life is permanent." He must know, as well as any living man, that when a full tariff policy such as that now proposed is initiated no country succeeds in preventing it from continuing and growing long after the avowed reasons for its initiation have passed away. It was therefore disingenuous of Mr Runciman to confine his defence mainly to the 10 per cent. revenue tariff and to say as little as possible about the whole machinery for additional duties which may be imposed up to the rate of 100 per cent.

As an economic exposition of the case for the new tariff policy, Mr Runciman's speech was even less satisfactory than that of the Chancellor of the Exchequer. For it came from one who is not, like Mr Chamberlain, governed, in his mental attitude, by long and loyal devotion to the political conception of Protection for Protection's sake. Mr Runciman pursued the same line of argument about the "adverse balance of payments," but was no more able than the Chancellor to solve the problem of the recent maintenance of sterling quotations during a period of foreign withdrawals and the accumulation by the Bank of England of large stocks of foreign exchange. Equally unconvincing was his rather laboured statement that the balance would not adjust itself without artificial help; nor did he explain how, even if artificial help is required, tariffs will supply it. Indeed, he admitted frankly that tariffs cannot stimulate the export trade. In so far as the balance of payments may be awry, it is (as Professor Henry Clay pointed out in the *Times* on Tuesday) because of adverse movements not of merchandise, but of invisible items, including interest on overseas investments, commissions and short-term interest, profits on re-export trade, and shipping services. No tariff can deal with such in-comings save to work still greater injury to the country's profit from them. Again, in making play with the case of Holland as an example of a country where a 10 per cent. tariff had had no serious consequences, Mr Runciman was guilty of a flagrantly unreal comparison, for Holland has not so far adopted machinery for high protection like that which in our Government's proposals is superimposed upon the low "revenue" tariff. Finally, on what grounds does Mr Runciman re-echo the Chancellor's assertion that the cost of the duties will not fall on the consumer? According to

Mr Runciman's own estimate, the Treasury will get nearly £30 millions of revenue from the new duties. Who is going to pay? The only people who can pay are the consumers in this country of the food, raw materials, semi-raw materials and manufactured goods upon which the duties are to be imposed; and if prices of the taxed commodities do not rise, where, then, is the protection which the Government frankly and honestly professes to be offering to the home producer? So thin and threadbare at every point is Mr Runciman's defence, that we are forced to the reluctant conclusion that he is swimming with gusto down the political tide. Far, indeed, has it borne him from the moorings of balanced judgment, to which we had regarded him as firmly attached.

Those who believe with Lord Snowden (and there are many millions of them in the country) that the present proposals "may be disastrous to the economic life and prosperity of this country," are faced with a *fait accompli*. These proposals are going forward to the statute book. Lord Snowden, in the House of Lords on Wednesday, strongly asserted the right of himself and his dissentient colleagues to make themselves a rallying point for the forces of fiscal moderation in this country. We trust that they will use their freedom to the full. The mobilisation of moderate opinion as a counterblast to the policy of "mad economic nationalism," which Mr Runciman so sternly deplores in other countries and so complacently supports in this, is an urgent necessity, unless the forces working for high protection are to get the bit between their teeth and hurry the country along the road to ruin. But while moderate opinion is being mobilised, Ministers will be acting, and their action will be of the highest importance to the future, not only of this country, but of the world. One of the only two gleams of comfort which we can derive from Mr Runciman's speech comes from his assertion that "we have ranged ourselves quite definitely on the side, not of high tariffs, but of low tariffs." May we even yet believe that he will act as a forbidding janitor at the door to high tariffs which the Government have incontinently thrown open? The other gleam comes from Mr Runciman's belief that he can use his duties to bargain his way into low tariff agreements with other countries. But even here it is not clear that Mr Runciman's thoughts have travelled beyond the negotiation of bilateral treaties with individual countries singly. That, as all students of commercial negotiations know, is a slow, difficult and tortuous procedure. Britain and Europe cannot afford to delay, nor can we afford to let things slide now, relying upon the chance of achieving Empire agreements at Ottawa in July. We earnestly hope that Mr Runciman's policy will be aimed at attempting to create as early and as quickly as possible, by multilateral negotiation, the widest possible low tariff group, in which all countries, Imperial or foreign, may have the opportunity to co-operate. Only so can breaches be made in the Great Walls of European tariffs and the stream of trade be set in motion once more. If the Government's measure lands us, as it threatens to do, with a system of high protective duties, it will have rendered their task in this direction, not easier, but more difficult. But it is not yet hopeless; and the only alternative is the continuance of the game of "beggar-my-neighbour," now rendered more fast and furious by British participation, until all the countries are submerged into a common bankruptcy.

European negotiations there must be—quickly. In entering into them, Continental Governments may usefully reflect that the blame for the present tariff *impasse* (intensified, as it now is, by Great Britain) is more their fault than Britain's. At one conference after another British delegates have warned their Continental colleagues that, unless there was some change in the fiscal heart of Europe, it would be impossible to hold back the dogs of Customs war in this country. When the failure of the Tariff Truce followed four years of

neglect of the sermons of the World Economic Conference, that which has now come to pass in Britain became, politically, almost inevitable. But though the British Government may fairly plead that they were not the initial aggressors, such a plea in mitigation of their tariff proposals will be convincing only if they demonstrate in action that the impression created by the past week's debates was mistaken, and that Mr Runciman's advocacy of "slimming" for John Bull should be regarded not as evidence of a fatal contractionist policy but as a cynical jest.

THE DISARMAMENT CONFERENCE.

THE Disarmament Conference has opened in dramatic circumstances. Japan has just driven a coach-and-four through the Covenant of the League, the Kellogg Pact and the Nine-Power Washington Treaty—not to speak of that nebulous but much vaunted instrument for enforcing peace, the boycott-power of the British Empire and the United States acting in co-operation. The whole of the international organisation for the maintenance of peace and law and order which we have been building up so slowly and painfully since the Armistice now lies in ruins; and, in this manifest anarchy, one small European country, Lithuania, has already ventured to follow the pernicious example of a Far Eastern Great Power. Moreover, the whole world is economically prostrate as well as politically in turmoil; and the necessary psychological conditions of civilised life—security and credit—have both dwindled to vanishing point. Will history record that the World Disarmament Conference opened under an overwhelming handicap, or will it rather record that the sensational signs of the times were providentially designed to enlighten blind eyes and penetrate deaf ears?

Obstacles notwithstanding, we venture to take a hopeful view. In our belief, the worst danger to which the Conference was exposed was the danger of being divorced from reality. The technical aspect of the disarmament problem is so complicated and so abstruse, and it has been studied for so many long years by the experts, that we might have found ourselves listening to a company of pundits discussing formulæ which had little more relation to the urgent problems and crying needs of the world than the formulæ of the physicists and the astronomers. This pitfall—which might well have proved fatal—has been definitely avoided. The contributions to the work of the Conference which have been made this week are exceedingly diverse, but there is a welcome leaven of reality in them all—not excluding that of M. Tardieu, who handed the text of the French Plan to the President of the Conference on Friday, February 5th, and expounded it in a speech on Monday. Sir John Simon, Dr. Brüning, Mr Hugh Gibson, Signor Grandi, Mr Matsudaira, and M. Zaleski have all likewise enumerated the policies of their respective countries during the first three days of this week. There are enough cards now on the table to enable us to form some notion of the first hand in this fateful game whose stakes are life and death.

At first glance, we can discern several points which are distinctly favourable. In the first place, the British, American and Italian proposals not only take the Preparatory Commission's draft conventions as their basis, but all go well beyond it, and this on almost identical lines. In the second place, Dr. Brüning has shown his usual courage and high-mindedness by taking a restrained, constructive line which will undoubtedly make the work of the Conference much easier than it would have been if the representative of Germany had adopted a tone of denunciation. Dr. Brüning's earnestness and sincerity seem to have made an excellent impression, and it is noteworthy that he received some of his heartiest applause from the French Delegation. Even the French Plan—which is the most contentious contribution that has been made to the Conference so far—has at least the merit of raising one point of crucial importance:—

"The present Conference," the French Government declares, "offers the greatest opportunity which has ever occurred for a definite choice between a

League of Nations disposing of an executive authority and a League of Nations paralysed by the intransigence of national sovereignty. France has made her choice. She asks that other nations should make theirs."

M. Tardieu drove this French point home in his speech on Monday, when he submitted that the choice before the world was between peace by discipline and anarchy by egoism. Whatever we may think about it, it is an issue which we cannot evade.

At this stage, perhaps the most useful thing that we can do for our readers is to set out the points in common between the British, American and Italian proposals, and then contrast this greatest common measure of the policy of three great Powers with the policy of France, which approaches the problem from an entirely different angle. There is a striking unanimity between the British, American and Italian proposals in the points which they select for attack—though in almost every case Italy presses the attack with greater energy and demands more radical cures for manifest evils than either of the English-speaking Powers. In fact, Signor Grandi's speech has rightly given his country the moral initiative at Geneva.

All three Powers demand the total abolition of submarines and of chemical and bacteriological warfare. They also agree in demanding measures for saving the civil population from being swept into the net of war. In this connection the Americans and the British specially demand protection for civilians against aerial bombing, while the Italians (eloquently supported by current atrocities at Chapei) demand the abolition of all bombing aircraft. The Italians want to abolish, and the Americans to restrict, heavy artillery and tanks—the Americans on the ground that these are arms "of a peculiarly offensive character." This American consideration is echoed in Sir John Simon's plea for directing "special attention to such prohibition or control as will weaken the attack and so remove temptation for aggression." In regard to warships other than submarines, the British and Americans propose the prolongation of the Washington and the London Naval Agreements and the adherence of other naval Powers to their terms. With reference to this last point, Italy expresses her determination to do all that she can to arrive at a naval agreement with France, and she also proposes the total abolition of capital ships and aircraft centres. In regard to land forces, the British urge some limitation of effectives as a *pis aller* for the abolition of conscription; while the Americans, going more into detail, suggest an analysis of each country's armed forces into two categories, first the irreducible number necessary for the maintenance of internal order, and, second, the contingent for defence, which can be reduced in all countries proportionately. In introducing the consideration of "national needs," Sir John Simon was feeling after the same conception. The United States also makes a substantial concession to the European Powers in agreeing to consider budgetary limitation of war material as a complementary method to direct limitation. Coming from a country which has higher wage-costs than any other, this gesture is handsome.

This rather rough-and-ready comparative review of the principal points in the British, American and Italian proposals is enough to show that their highest common measure would provide a substantial basis for a definitive disarmament convention—an instrument which would not only fill in the blanks in the present draft, but which in many respects would go well beyond it. We hope that the Conference can achieve this, and much more into the bargain. The event will show. But, meanwhile, we cannot close our survey of this week's work without taking account of the French Plan.

The first thing to be said is that the French Plan is not in any way incompatible with the greatest common measure of the three which we have just analysed. It is not incompatible, for one reason, because it does not overlap with them at all; for, by a strange paradox, the proposal does not envisage directly any disarmament. Whereas the British, Americans and Italians propose the restriction or abolition of certain national arms, the French propose that certain national arms shall be par-

The New York Trust Company

tially internationalised by being placed at the disposal of the League of Nations. The political implications of this plan, as our League correspondent points out on a later page, raise difficult issues with regard to the Peace Treaties; but the real test of the sincerity of its promoters is whether they are prepared to accept complementary disarmament. We might fairly ask the French to meet us on our ground by accepting our proposed abolitions and restrictions, on condition that we meet the French on their ground by discussing the French plan for internationalising armaments *à propos* of those armaments which would still remain. These, in turn, would be the next armaments marked out for abolition at a latter stage, until, finally, we get down to the irreducible amount of armaments necessary for maintaining internal order in each country and for policing the high seas.

"REFLATION" OR BANKRUPTCY?

In the course of the Halley Stewart Trust lecture which he delivered last Thursday, Mr Maynard Keynes posed a question whose importance, in its bearing on the future of the world, overshadows every other economic issue. Will the present deflationary process, he asked, be relieved before the financial organisation and the system of international credit crack under the strain? Normally not diffident in the rôle of prophet, Mr Keynes on this occasion gave only a qualified and doubtful answer; but his analysis of the existing situation was so lucid, and his interpretation of tendencies so germane to our most insistent problems, that at the risk of doing less than justice to his thesis by abbreviation, we propose to summarise the main points of his admirable address.

He began with the self-evident proposition that, as compared with conditions a year ago, the world's primary problem had changed: the question was no longer how to restore economic activity from slump to normality, but how to prevent an almost complete collapse of the financial structure of modern capitalism. The catastrophic fall in the money value not only of commodities but of almost every kind of asset—including, notably, both bonds and shares—had resulted, the world over, in a situation in which the assets held against money debts no longer had a realisable value equal to the amount of the debts. The "margins," upon confidence in whose maintenance the credit structure depends, had run off; and a competitive *saute qui peut* in the direction of liquidity, initiated both by individuals and (in respect of international payment balances) by Governments, had resulted in an interneecine, "beggar-my-neighbour" struggle whose pressure was uniformly deflationary, and whose extreme conclusion must be world starvation in the midst of plenty.

Having thus apprised his audience of the possibility, even probability, of approaching catastrophe, Mr Keynes

proceeded to look for such gleams of hope as were discernible. The "system" was tough; under grievous stress it had, so far, resisted disintegration surprisingly well. The abandonment of the gold standard by the greater part of the world had checked, over a wide (and probably still widening) area, the fall of prices; and, though there was not as yet an adequate relaxation of the deflationary pressure in any part of the world, "the widespread abandonment of the gold standard was preparing the way for the possibility of such a relaxation." How, precisely? Here, Mr Keynes, in his commendable desire to avoid pessimistic conclusions, exposed himself perhaps to the charge that, as regards his prospective time-table, he was somewhat vague. The ability of the remaining gold countries (i.e., in all essentials, France and the United States) to exercise deflationary pressure on the rest of the world, by reason of their net creditor position, would gradually vanish as non-gold currency depreciation exercised in time its full effect on balances of payments. Thus eventually, when the "unbalanced creditor position" of the United States and France had been redressed by natural forces, the way would be clear for a concerted policy of capital expansion and price raising, failing which the alternative would be general default on debts and the disappearance of the existing credit system. In the necessary expansionist policy this country must take the lead; once we regained a power of initiative we should use it, without hesitation or delay, for expanding purchasing power ourselves and for helping others (by liberal foreign lending) to expand. If we lacked boldness, we should be assuming in turn the rôle of deflating the rest of the world.

There is one point, we suggest, in Mr Keynes' address on which criticism may legitimately fasten—his apparent acquiescence in patiently awaiting the outcome of existing tendencies (mitigated only by the non-gold currency check on the price fall) until France and the United States, if we understand his meaning aright, are forced off the gold standard, or become, at any rate, debtor countries on current balance of payments. To expect that eventuality to materialise in time to win the race against collapse is surely to strain optimism. It is advisable, in our opinion, to consider, as a matter of urgency, whether the policy of boldness, which Mr Keynes advocates, does not demand more immediate application.

A brief word in retrospect must here be interposed. In the initial phases of the present world crisis, long before Britain was forced off the gold standard or economic decline merged into financial paralysis, the *Economist* urged the need of a concerted international effort, through the medium of Central Banks, to "reflate" the price level back to the figure of 1928 or thereabouts. Our exhortations were vain; no such effort was even attempted. Last September, when gold payments by the Bank of England were suspended, we held the view—and we make no confession of error in our judgment—that, given the then existing psychological conditions at home and abroad, the primary objective of our monetary policy had to be the

preservation of the maximum attainable stability of sterling prices. Leading, as we did, the European retreat from gold, and faced, as we then were, with the two dangers (a) that sterling might become subject to perilous, because isolated, depreciation, and (b) that, conversely, we might be responsible for starting a risky race in competitive inflation, we had no option but to pursue tenaciously the policy of "safety first."

It is no longer arguable that the same conditions apply with equal force to-day. On the one hand, the risk of dangerous inflation (in the traditional sense) in this country has disappeared into the background; with the assurance of a balanced Budget, confidence in sterling has been almost wholly restored, inasmuch as no fear of an uncontrollable crash is anywhere entertained. No longer are we alone in our dependence on a non-gold currency basis; the bulk of the world is effectively "off gold" and is increasingly content to frame its international contracts on a sterling basis. And, on the other hand, it is becoming more patent with every day that passes that the relatively small and precarious recovery which the abandonment of gold has effected in the non-gold price-level is inadequate to afford sufficient relief to the necessities of the debtor nations, particularly those dependent on the sale of primary products.

In these circumstances is Mr Keynes' command of "safety by boldness" to be regarded as duly executed if British monetary policy centres, for an indefinite time ahead, simply on the principle of continuing to pursue a stable level of sterling prices? The question requires (and, we hope, is being given by those in authority over us) the most urgent attention. So far as can be judged from recent Ministerial statements in Parliament, the Government's one idea is "to maintain the internal purchasing power of the pound." In the absence of deflation, the tariff will certainly raise British prices. Hence, this objective's attainment must imply a countervailing contraction of credit and purchasing power. Even more disquieting is the Ministerial suggestion that the pound requires "defending"—the implication being, apparently, that its foreign exchange level must be stabilised at, if not raised above, its present figure—a policy which might well prove contradictory to the stabilisation of internal prices. If the authorities continue to fix their eyes, regardless of every other consideration, on the dollar-franc-sterling exchange equation, we may be committed to further deflation for the sake of chasing what is now the most unstable standard of value imaginable—the level of gold prices dependent on the financial duel à l'outrance between the United States and France. If the recent downward trend of gold prices is continued—since mid-September, according to our "gold" index number, there has already been an aggregate fall of 11 per cent.—the gold exchanges may be the most disastrous star to which to hitch our economic waggon. And, be it remembered, the orientation of our monetary policy governs that of an impressive number of other countries.

So impressive, in fact, is the company of nations whose currencies are now linked *de facto*, if not *de jure*, to sterling, and so great is the influence which British monetary policy, backed by the enormous pull of the sterling trade market, can exercise on prices, that—always provided our tariff policy does not provoke economic hostilities in the non-gold area, or political tension paralyse all risk-taking enterprise—we see no insuperable difficulty in this country's giving a definite lead towards "reflation" of the price level, without undue regard to the exchange with such few countries as are effectively "on gold." The adoption of such a policy by Britain does not necessarily entail the detailed realisation of the mechanism (which might involve difficulties) of a water-tight "sterling area." Prior consultation there must obviously be with other non-gold countries; otherwise our aims might be so misconceived as to create a panic-flight from sterling. But if the limits of the considered increase in wholesale prices were made known in advance, the international importance of prices in the British market and the consuming power of the British public is so great that it is legitimate to ask whether a British lead towards re-attainment of 1928 wholesale prices would not be followed universally by the rest of the world's non-gold countries for the simple reason that

they could not afford to withstand the economic strain which appreciation of their exchange against sterling would impose on them. Never more than to-day did the ultimate objectives of our monetary policy require scrutiny. Though dangers in any direction must be carefully weighed, the consideration should be paramount that as between devastating debtors' defaults, which would wreck this country's entire economic and social structure, and a recovery of prices to a level rendering tolerable the burden of indebtedness, private and governmental, it is a race against time.

ABDICATION BY THE POWERS.

EVENTS in the Far East are moving with a constantly accelerating velocity. The pace is now so fast that, since we reviewed the situation in the *Economist* a week ago, there is a whole new chapter of diplomacy to record—a chapter which is as sombre as its predecessors. It begins with the five proposals which were submitted to the Japanese Government by the American and British Governments, with the support of the French and Italian Governments, on Tuesday, February 2nd. It closes with the futile meeting of the Council of the League of Nations on Tuesday, February 9th.

For a moment, last week, it seemed as if the authorities who bear the responsibility for the maintenance of world order had really made up their minds at last to take the decisive action which the world has been expecting of them for the last four months. On Tuesday, it was dramatically announced that the opening session of the Disarmament Conference, which had been planned far ahead to take place that afternoon, was postponed for an hour in order to make time for an emergency meeting of the League Council; and at this Council meeting the British representative, Mr J. H. Thomas, spoke downright language. The British Government, he said, "feel it to be impossible that the present situation in the Far East should be allowed to continue." Fighting was proceeding over a wide area, and war was in progress in everything but name. He submitted that the League could not be indifferent to this state of things. He then recited to his colleagues on the Council five proposals which the British and American Governments, with the support of the French and Italian Governments, had submitted that very day to both the Japanese and the Chinese Governments; and, at his request, the Council formally associated itself with the four Powers' action.

The five proposals were as follows:—

- (i) A cessation of all acts of violence on both sides forthwith on the following terms:—
- (ii) No further mobilisation or preparation whatever for further hostilities;
- (iii) Withdrawal of both Japanese and Chinese combatants from all points of mutual contact in the Shanghai area;
- (iv) Protection of the International Settlement by the establishment of neutral zones to divide the combatants; these zones to be policed by neutrals; the arrangements to be set up by the consular authorities on the spot;
- (v) Upon acceptance of these conditions, prompt advances to be made in negotiation to settle all outstanding controversies between the two nations in the spirit of the Pact of Paris and the resolution of the League of Nations of December 9th, without prior demands or reservations and with the aid of neutral observers or participants.

The first impression made by these events of February 2nd was that a prompt and satisfactory settlement of the whole Far Eastern imbroglio was now in sight. The five proposals were admirable. They contained everything that was needed, and no more than what was needed, for the purpose; and, by all the canons of diplomacy—old or new—it seemed manifest that the Powers individually and the League Council collectively had made up their minds to see these proposals through. According to the usual conventions of diplomacy, a public announcement of demands at the moment of presentation implies a determination not to accept a refusal. But the incredible has happened. While the Chinese Government has accepted all five points without reservations, the Japanese Government has "called the bluff" of the Powers and the League, and called it successfully.

On February 4th the Japanese Government answered the Powers in a curtly-worded Note, in which the two key

proposals—No. 5 and No. 2—were rejected outright, while the other three were accepted with such reservations and qualifications as to make the Japanese reply a virtual rejection of the Powers' plan *in toto*. Japan rejects Proposal 5 on the ground that it presumably covers Manchuria, and that it is her "settled policy" to discuss Manchuria with China alone, without the intervention of any third party. As for the proposal that there should be no mobilisation or preparation for further hostilities, Japan had already repudiated it by a positive act before she rejected it on paper. On the day on which she addressed her refusal to the Powers, the first Japanese reinforcements—Army units this time, and not marines—were arriving off the mouth of the Whangpoo; and their arrival was reported in the Press of the world before their despatch was officially announced by the Japanese Government. Indeed, so far from announcing it, the Government had withheld the information even from its own diplomatic representatives abroad, and had allowed its Ambassador in Washington to assure Mr Stimson that no troops were being sent.

Thus the four Powers' proposals were not merely refused but refused under aggravating circumstances which might have been expected to make the Powers particularly determined not to take "no" for an answer. Yet, in face of this particularly humiliating refusal, the Powers have lain low, while the League Council has perhaps not unnaturally done nothing further to support proposals that have apparently been abandoned even by their authors.

The Council met again, at the instance of the Chinese delegate, Mr Yen, on February 9th, to consider the report on the outbreak of hostilities at Shanghai which it has now received from its "fact-finding" committee of foreign consuls. The report shows that Admiral Shio-sawa's action in sending his marines into Chinese territory at Chapei on the night of January 27th-28th was even more inexcusable than had been supposed; for, before the Japanese Admiral took this fatal step, the Chinese Mayor of Greater Shanghai had not only agreed to the terms of the Japanese ultimatum but had actually implemented them by getting the offices of the anti-Japanese boycott association closed. Yet the President of the Council wound up the proceedings with the observation that "the origin of the dispute, as was often the case, might be found in a misunderstanding," and that "by the removal of this misunderstanding the restoration of peace might be aided." Therewith the Council adjourned to await further information! And so ends China's application under Article XV. No decision by the Council, and *a fortiori* no recourse to Article XVI, is apparently in contemplation.

In other words, the League and the Powers appear to have abdicated, and the problem of Sino-Japanese relations is being left to work itself out by military force on Chinese soil. Exactly how long it will take, or exactly how heavy the cost will be for all parties, including ourselves, it is not yet possible to estimate. But it can be said with certainty, here and now, that it will be much harder for the Japanese to get their sword back into its scabbard than it has been for them to draw it and use it. The situation in the Far East to-day is ominously like the situation in the Near East on the morrow of the Greek Army's landing at Smyrna in 1919; and we know how that adventure ended. The invaders from overseas were never able to bring to end by military operations the war which they had begun; it turned into a war of attrition; and, in the end, their superiority in equipment and organisation was outbalanced by the vastness of the country which they were invading and the grimness of the opposition which their wanton invasion aroused. The *dénouement*, after three years, was the debacle of the Greek Army and the Great Fire of Smyrna, in which the century-old commerce of Europe in the Near East literally "went to blazes." We are now apparently witnessing the re-enactment of this Near Eastern tragedy on the greater stage of the Far East; and the question which we have to decide is whether we intend to go on assisting at the spectacle as passive spectators while the tragedy works itself out. If the abdication of the League and of the Powers is really an accomplished fact, this Sino-

Stock Exchange

orders on Stockholm are executed with the least possible delay on telephone Stockholm 0101; or by cable:

KREDITBOLAGET

SKANDINAVISKA KREDITAKTIEBOLAGET

Japanese war may be expected to continue until there is some catastrophic resolution of forces. We prophesy that when the accounts are cast up, China's losses will prove heavy, Japan's heavier, and ours the heaviest of all. If the forces of destruction are allowed free rein in the Far East, the Western nations stand to lose everything: their trade, their capital investments, their treaty ports, their extra-territoriality and, above all, their "face." And their losses will not be confined to the Far East. The penalty which we shall pay for failure to keep the peace and to maintain law and order there will be a failure to satisfy the world-wide craving for security.

BRITISH ELECTRICAL DEVELOPMENT.

(BY A CORRESPONDENT.)

PUBLIC attention is so apt to centre on political poultries for economic sores that genuine economic treatments, inspired in lucid moments, tend to disappear into the background. Perhaps the least ostentatious and most significant plan of economic importance being carried out in Great Britain to-day is the national grid. The latest statistics of the development of this plan show big strides which will probably mean the completion of this great undertaking before the spring of 1933. In the work of reconstruction there is no other British enterprise conceived on so large a scale or which is being carried through with such celerity.

The economic significance of this electric power network has perhaps not been fully realised. Under modern conditions of manufacture the consumption of electrical energy is becoming synonymous with industrial activity, and hence with national prosperity. The degree of electrification of production processes is considerable in the advanced countries; in Great Britain 70 per cent. of production processes are driven by electric power. Since the vital arteries of modern industry are electrical networks we cannot dissociate electrical development from economic development. Not only, then, is the future of the electrical supply industry associated closely with the national grid, but all the big power consumption industries will become more and more identified with this scheme. The competitive power of British industry depends upon its ability to reconstruct its equipment, and by this process to reduce the costs of production. In this work the existence of a cheap and plentiful supply of energy is essential, since the modernisation of plant largely means conversion to electrical operation. The replacement of belt drive by electric drive, the substitution of electrical supply for steam reciprocating primary plant, and the introduction of conveyor systems operated by electric motors, are characteristic features of the most up-to-date plants.

When the reorganisation of competitive power in the major industries of U.S.A. and Germany is studied, the emphasis on electrification is seen to be strong. If we turn to the new industrial system in Russia we realise that the basis of Lenin's conception of a national "secondary productive" unity is abundant supplies of electrical energy. In Great Britain, too, there has been a steady overhauling of manufacturing capacity during recent years. This process has not been heralded here by impressive announcements of rationalisation technique, as in Germany, but by abstaining from excessive technical zeal as applied to production, it is probable that our industries

have been saved from building up excessive production capacity, and have quietly reorganised themselves to a greater extent than is often realised.

The past year in this country has been marked by considerable electrification of industrial processes, a factor which has helped, together with the large grid contracts, to maintain the strength of the home market. Notable increases in electrical drive have been recorded in Scotland, in Lancashire and in Yorkshire. Further, the extension of electricity supply in rural areas of East England has been made in response to increased demand. Under the grid plan, schemes have been adopted for nine out of the ten supply areas, the North Scotland area remaining as the only one for which the Central Electricity Board has not yet approved a final scheme. Actually 98 per cent. of the population of Great Britain lies within the nine areas.

The grid plan as a whole is well advanced. During 1921, 1,706 miles of wayleaves were acquired, as compared with the 1930 figure of 1,000 miles. Towers erected spanned 1,495 miles, against 545 miles. In terms of expenditure the grid has involved £22,000,000 on contracts for building sub-stations and transmission lines. It has also sanctioned £8,625,000 for the work of frequency standardisation. The tower sites obtained numbered 10,690, which makes a total of 22,400, or 87 per cent. of the total needed. Compared with the totals required to complete the grid plan, 15,450 sites have been secured out of 17,250 needed for towers on primary transmission lines, and out of some 8,900 sites for secondary transmission lines, 7,000 have been obtained. This progress has been facilitated to some extent by the greater understanding of the economic function of the national scheme and of the ultimate objectives of the Central Electricity Board. Certain developments have shown up advantages of the grid. It has made possible, during 1931, the supply of electricity by undertakings to under-populated areas where public supply is otherwise not economically possible.

THE NATIONAL POWER SCHEME. Construction of Main Transmission Lines.

Scheme Area.	Approx. Length of Lines.	Towers Erected.		Lines in Operation.	
		At Dec. 31, 1930.	At Dec. 31, 1931.	At Dec. 31, 1930.	At Dec. 31, 1931.
Central Scotland	Miles. 252.2	Miles. 240.6	Miles. 240.6	Miles. 219.2	Miles. 240.6
South Scotland	375.4	...	8.1	...	8.1
North East England	180.9	...	179.2	...	23.6
North West England and North Wales	549.9	102.0	335.4	65.2	85.4
Mid East England	524.5	96.0	478.7	...	130.2
Central England	415.5	136.6	382.0	15.7	120.3
East England	154.1	...	105.4	...	...
South East England	831.0*	235.3	483.9	165.7	286.1
South West England and South Wales	786.0	5.0	94.4	...	15.7
Total, Great Britain	4,069.5	815.5	2,309.7	465.8	910.0

* Including 101.2 miles of cable.

The next step in the development of the grid is planning for the effective utilisation of this weapon. Industrial councils, supply undertakings and individual manufacturers could with advantage call the Central Electricity Board into consultation on questions of regional planning. The opportunity for national development presents itself. Those who advocate a planned economy for Great Britain already possess one large section of the national structure in planned form. What we are accomplishing in energy distribution we can accomplish in other fields.

THE PRICE OF NEW CAPITAL.

The results of our annual computation of the price of new capital in the London market clearly reflects the condition of creeping paralysis whose symptoms, discernible in 1930, reached a critical stage last year. As we showed in our annual review on December 26th last (page 1223), new issues, restricted from the outset, ceased almost completely after Great Britain's departure from the gold standard. Some £98.2 millions of new capital were raised directly to shareholders and the public in the first

nine months of the year. The net total for the last three months was no more than £3.9 millions.

The preference share practically disappeared as an instrument for the raising of new money. The importance of the equity share, both absolutely and relatively, had been sharply reduced in 1930 (after the collapse of the 1928-29 boom), and suffered little further contraction last year, but the total of new bonds and debentures, etc., (much the largest group in all years) fell to less than one-third of its 1930 dimensions. The following table shows the distribution of new issues between the three groups in 1913 and during the last four years:—

PUBLIC ISSUES OF NEW CAPITAL IN LONDON.

Class.	1913.	1928.	1929.	1930.	1931.
Debentures, bonds, &c.	£139,920,400	£212,817,900	£137,670,300	£227,658,500	£74,835,600
Preference stocks and shares	22,955,600	45,062,600	31,543,400	15,548,800	6,911,800
Ordinary stocks and shares	33,661,300	111,177,600	116,017,600	24,593,300	20,296,800
Total	£196,537,300	£369,058,100	£285,231,300	£267,800,600	£102,044,200

Last year 73 per cent. of the issues were in the form of debentures, bonds, etc., 7 per cent. in preference, and 20 per cent. in ordinary securities. In 1928, the most active year of recent times, the proportions were 58, 12, and 30 per cent. respectively.

What rates were offered on the fixed-interest securities which represented the bulk of last year's meagre offering? The answer has no meaning apart from its peculiar context. In a capital boom, like that of 1928, capital is raised by those who think they may need it. In an ordinary cyclical slump, it is raised only by those who really need it. In a crisis like that of last year, even necessity loses its compelling power. Effective borrowing is limited to companies or authorities who, at one and the same time, cannot postpone their requirements to a more convenient season, and enjoys a credit status so exceptional as to compel an unwilling and mistrustful market to loosen its purse strings. This fact tends to limit the utility of conclusions regarding "average" rates paid, such as are shown in the next table in connection with three categories of Government loans raised during the last two years:—

BRITISH, COLONIAL AND FOREIGN GOVERNMENT SECURITIES. (000's omitted.)

Yielding from—	British Government Loans.		Dominion and Colonial Government Loans.		Foreign Government Loans.		Total.	
	Year 1930.	Year 1931.	Year 1930.	Year 1931.	Year 1930.	Year 1931.	Year 1930.	Year 1931.
3½% to 3¾%	4,000	19,000	...	...	...	...	19,000	...
4% to 4¼%	21,329	...	...	2,835	...	...	2,835	...
4½% to 4¾%	7,863	...	8,124	1,147	...	...	8,124	1,147
5% to 5¼%	11,178	39,040	14,425	...	...	...	1,662	...
5½% to 5¾%	6,675	...	4,950	...	...	...	53,465	4,950
6% to 6¼%	1,392	...	12,000	21,640	...	...	12,000	21,640
6½% to 6¾%	...	...	6,930	...	...	...	6,930	...
7% to 7¼%	...	...	5,940	...	...	...	5,940	...
7½% to 7¾%	...	...	...	10,800	1,740	...	10,800	1,740
8% to 8¼%	...	...	...	2,850	...	...	2,850	...
8½% to 8¾%	...	...	...	7,680	...	...	7,680	...
9%	...	...	...	...	...	...	...	...
Total	£52,437	£58,040	£49,081	£30,572	£21,330	£1,740	£128,451	£32,312
Average Yield %	4.77	4.67	5.57	6.52	7.14	7.00	5.43	5.60

* Includes all borrowing at over 6%.

† This total of £52,437,000 includes £26,290,000 by Colonial Governments, at an average yield of 4.15%, and £26,147,000 by Foreign Governments, at an average yield of 5.31%. The British Government was not in the market.

All rates are shown subject to British income tax, and profit on redemption is allowed for when necessary. The British Government floated no loan in 1931. The total borrowings were £10,700,000, comprising net receipts from sales of National Savings Certificates. These are excluded from our table as the yield on National Savings Certificates varies according to their "life" before encashment. The effective yields on new

and foreign loans were fractionally lower last year than in 1930, because the borrowers, as a whole, were of better class, over two-thirds of the "Empire" Government total being accounted for by relatively short-term issues on behalf of the Government of India. "High-yielding" bond providers, like the South American Republics, having difficulty in meeting their existing debt requirements, remained outside the market, the sole non-Imperial borrower, in fact, being the Greek Government.

The average rates offered by municipal borrowers and by railways are shown below:—

	Amount borrowed in Years			Average Yield.		
	1929.	1930.	1931.	1929.	1930.	1931.
British municipalities, &c.	£8,316,000	£41,657,600	£8,007,300	4.96	4.98	4.66
Colonial municipalities, &c.	3,859,917	3,001,500	Nil	5.19	5.09	...
Foreign municipalities, &c.	472,500	Nil	Nil	6.90	...	...
British railways	1,920,000	13,164,500	Nil	5.36	5.12	...
Colonial railways	Nil	2,512,500	Nil	...	5.95	...
Foreign railways	2,835,000	7,615,000	2,910,000	5.30	5.66	5.87

That British municipalities were able to borrow so cheaply was due to the fact that they borrowed so little. Incidentally, the yield on existing British municipal securities, according to the Actuaries' index, was 4.53 per cent. at the beginning and 5.01 per cent. at the end of the year, as compared with an average of 4.66 per cent. paid by new borrowers of a modest £8 millions during the year.

The average rates offered by industrial borrowers are shown in the next table:—

INDUSTRIAL AND COMMERCIAL BONDS, DEBENTURES, ETC. (EXCLUDING ISSUES GUARANTEED BY BRITISH GOVERNMENT UNDER TRADE FACILITIES ACT.)

12% to 12¼%	...	Nil	Nil	237,500	Nil
12½% to 12¾%	...	122,500	50,000	Nil	33,250
Total	25,086,000	43,162,900	25,849,355	24,399,600	21,006,642
Average yield %	5.5	6.08	6.05	6.97	6.33

* Including all capital yielding over 6 per cent.

The working of the "quantity theory" is aptly demonstrated by these figures. Industrial and commercial borrowers at fixed-interest rates obtained nearly as much new money in 1931 as in either of the two preceding years, but were compelled to pay on the average a higher rate than in any year since 1922.

The average rates offered in recent years on new preference stocks and shares are shown in the next table:—

	PREFERENCE STOCKS AND SHARES.				
	%	%		%	%
1913	5.74	1924	6.27	1929	6.58
1920	8.09	1925	6.10	1930	6.00
1921	8.39	1926	6.70	1931	6.50
1922	7.17	1927	6.67		
1923	6.59	1928	7.37		

The investment public was unattracted by preference shares last year, a relatively negligible total being raised at a price ½ per cent. higher on the average than in 1930. The preference share, indeed, appears steadily to have been losing its popularity of recent years, periods of high total issues, like 1928, coinciding with the highest figures of prospective yields. Our figures take no account of the "participating" privileges offered in the last boom by

a host of "shilling deferred" companies, the majority of which have not lived to carry out their good intentions.

For purposes of record we conclude with a table of average rates for 1913, and for every year since 1920:—

	Average Bank Rate.	Average 3 Months' Bill Rate.	Average Rate Paid by all Government Borrowers.	Average Rate on New Issues of Industrial Debentures.
1913	4.77	4.37	4.77	5.5
1920	6.82	6.40	6.05	7.92
1921	6.12	5.21	6.49	8.09
1922	3.79	2.65	5.65	6.72
1923	3.49	2.70	5.34	6.4
1924	4.00	3.54	5.95	6.61
1925	4.55	4.10	4.82	6.43
1926	5.00	4.52	6.01	6.48
1927	4.65	4.24	5.09	6.18
1928	4.50	4.15	5.09	6.10
1929	5.50	5.27	5.07	6.10
1930	3.42	2.61	5.43	5.96
1931	3.93	3.55	5.60	6.33

Long-term rates, it will be seen, have fluctuated less extensively than short-term rates. Broadly, the declining tendency of long-term interest rates, which started after the war and was partially checked in 1926, has been more clearly halted in 1930 and 1931—due regard being had to changes in the composition of various borrowing groups, which have already been discussed.

At the moment, the omens are unfavourable for an early resumption of normal activity in the London capital market, whose power to lend has been impaired by reduced income at home and decreased interest remittances on its outstanding investments abroad, and whose inclination to lend has been brought to the neighbourhood of zero, as a result of the collapse of the credit of nations. The resumption of more normal activity in the issue market, as in so many other branches of the body economic, is mainly a function of the future ability of the world's statesmen to cheat Nemesis of the fruits of their past mistakes.

Notes of the Week.

The Bank Chairmen on the Crisis.—The main lines of the speeches of the bank chairmen this year were necessarily predetermined, in a common mould, by the force of insistent events. In discussing the present economic outlook they were bound to concentrate upon two main problems, (a) the suspension of the gold standard and monetary policy, and (b) reparations and war debts. On these subjects there was a marked similarity of view expressed in the various speeches. All the chairmen regarded the suspension of the gold standard as inevitable, and several of them went out of their way to traverse a widely expressed foreign view that the pound could have been saved by a rigorous Bank rate policy. As regards future monetary policy, including stabilisation and the eventual restoration of the gold standard, they all spoke cautiously, making it clear that decisions on these matters must await the progress of other events. Mr McKenna, at the Midland Bank meeting, was implicitly the most constructive, with his argument that we must either have a soundly managed gold standard or must definitely abandon gold. Mr Beckett insisted to Westminster Bank shareholders upon the need for delay until the major complications of reparations, debts and tariffs had been brought within manageable proportions. The solution of these problems, he suggested, should be followed by a period of *de facto* stabilisation, beyond which he refused to commit himself. At the National Provincial Bank meeting Sir H. Goschen lent his support to the view that the suspension of the gold standard had given, at least for a time, an exchange advantage to our industries; but Mr Dewhurst, in his address to Williams Deacons Bank shareholders, alluded to the way in which this advantage was offset by the increased cost of imported raw materials, by foreign exchange restriction abroad and by the suspension of the gold standard at home. On the question of reparations and war debts the chairmen spoke with complete unanimity in favour of

cancellation, or at least drastic modification. Mr Beckett, indeed, pointed out that the elimination of war debts and reparations would not create a new heaven upon earth or enable all nations to start from scratch; but he urged that, even so, our only hope lay in cancellation. Mr Beaumont Pease, at Lloyds Bank meeting, did not directly commit himself to cancellation, but insisted that no nation in the world could be self-dependent, and cited the "second great commandment" that we should love our neighbour as ourselves as a piece of real worldly wisdom peculiarly applicable in these days both to individuals and nations. Mr Goodenough held that, having regard to existing tariff barriers, full payment under the Young Plan was clearly impossible of achievement, and that a final settlement must involve goodwill and sacrifice. Mr McKenna called for the final closing of this unhappy chapter of post-war history, and Sir H. Goschen spoke in similar terms. As a sidelight, though one of considerable importance, on the German problem, the chairmen spoke very frankly as to the extent of their banks' commitments in bills or other credit instruments covered by the standstill agreements. They made it clear that in no case did their commitments reach serious dimensions, and that they had all been granted in the course of the banks' usual and legitimate business. Mr Pease went further still, for he completely disposed of the allegation that London financial houses had been tempted by high rates to risk huge sums of English short money for the purposes of German capital expenditure.

— **And Tariffs.**—In comparison with monetary and reparations problems, the question of Britain's fiscal policy held a minor place in the bankers' addresses. With the single exception of Mr Beaumont Pease, all the chairmen had spoken before Mr Chamberlain had laid the Government's proposals before the House; but inasmuch as they, in common with the nation at large, had a fairly accurate idea as to the general character of these proposals, they were able to give their shareholders some indication as to their views. It was noticeable that they all spoke in very guarded terms. They were disposed, it is true, to admit that a tariff had become inevitable, but they emphasised that it was a policy fraught with grave risk, and to be applied with great circumspection and a proper weighing of the consequences at home and abroad. Sir Christopher Needham, speaking as a Lancashire banker to the District Bank meeting, insisted that we must be ready to consider any modification of our policy of to-day in relation to changing world conditions, and to keep a lively awareness of the advantages to be gained by a freer interchange of the world's commodities. Mr Goodenough called for the exercise of care in the imposition of duties, and for a careful watch over their effects. Wherever possible, we should exert our full influence in the direction of reciprocal action for the removal of trade barriers, so as to stimulate the exchange of goods for goods, which is the essence of international trade. The size of the population of this country and our dependence upon overseas supplies made it essential to have a large and growing export trade. Mr Pease alluded to the madness of nations being willing to sell to others, but by tariffs, restriction of imports and control of exchange, rendering it impossible for other nations to sell to them, and in a later passage of his speech he said that if we have been compelled by force of circumstances to curtail our welcome to foreign goods, he could not help hoping that our action in this respect might be the means of opening the eyes of the world to the desirability of a wider and more hospitable range in regard to international trade. Mr Beckett spoke in similar terms, and only Mr McKenna and Sir H. Goschen expressed brief, though explicit, approval of the tariff proposals. At Martins Bank meeting Mr Paton advocated the formation of an immediate currency union between Great Britain and the Empire and those nations which had departed from the gold standard and were prepared to seek stability through definite co-operation to this end. There is little doubt that British bankers as a whole recognise the equally imperative need for the formation of a union of low-tariff countries in which England shall be left free by inter-Imperial commitments to play her full unfettered part.

The Situation in India.—The Government of India has tried conclusions with Congress by force, and has been successful in the first round. The Ordinances have done their work. Overt defiance of the Government's authority has been suppressed—except in the tribal districts of the N.W. Frontier and in the Indian State of Kashmir, which may fairly be taken as exceptions that prove the rule. Substantially, the Government has now reasserted its authority; and that means that the time has now come for the Government to begin doing something else; for repression is never a feasible permanent régime, and least of all in India now. The saying that "the one thing you cannot do with bayonets is to sit on them" is one of the profound truths of politics in all times and places; but it is peculiarly pertinent in a case where an alien ruler is in process of transferring his authority to the people of the country. That is emphatically our case now in India. The transference of authority from British to Indian hands is the accepted goal of all parties in India and in England; and the very justification for the Government of India's present militant assertion of its authority is the moral duty that is incumbent on it to hand on this authority to a future Indian Raj intact. In other words, the Ordinances are a means to an end; and they will stultify their very purpose if a too long or to or rigorous application of them makes the transfer of authority more difficult. How, for example, can we justify a perpetuation of penal measures against a "Buy Indian" campaign in India when we are conducting a raging and tearing "Buy British" campaign in Great Britain? What is sauce for the goose is sauce for the gander! And if we give the people of India any reasonable ground for suspicion that we have taken advantage of a tactical blunder of Congress, which compelled the Government to assert itself, in order to push British trade and maintain British rule in India with a high hand, we shall be in danger of undoing the joint work of years. Ordinances can do no more than forcibly prevent external breaches of the law. They cannot compel private citizens to do business with foreign business men or to co-operate politically with a former regime. The present Ordinances in India have now done their work by repressing the overt defiance of Governmental authority. But they have merely driven the resistance underground; and this underground resistance—more dangerous, by far, than any overt acts—can only be overcome by conciliation. The moment has arrived for the Government of India to put the helm over and to sail once more on the Irwin tack.

The Lithuanian Coup at Memel.—The Japanese coup in Manchuria has produced its first—but possibly not its last—repercussion in a Lithuanian coup at Memel. This Memel affair is on a petty scale; but before we dismiss it as *opéra bouffe*, we may pause to reflect that it touches Europe nearer home and that it directly concerns one great European country—Germany. Memel, in fact, is a fragment of former German territory, the north-eastern tip of pre-war Germany on the far side of the River Memel or Niemen. In the peace-settlement, the victorious Powers detached the Memel district from Germany and garrisoned it themselves pending a decision as to how they should dispose of it. In 1923, Lithuania took their decision for them. Noticing that the Polish General Zeligowski's camp at Vilna had been eminently successful, in spite of the Powers and the League, at Lithuania's expense, the Lithuanians resolved to profit at Memel by the procedure which at Vilna had been employed against them. They seized Memel from the inter-Allied garrison by force; and the Powers saved their faces by arranging that Memel, which is predominantly German in population, should enjoy autonomy under Lithuanian suzerainty. Since then, the Lithuanians have learnt from Japan the art of taking two bites at a cherry. The Japanese took their second bite at Manchuria last September, after having had their first bite in 1915 and, last Saturday, the Lithuanians—quick, as ever, to imitate the really progressive nations of the world—have taken their second bite at Memel. The Lithuanian Governor of the Memel District seized the German President of the Administration and sent him by car, under a Lithuanian military escort, to Kovno. The German Council of the territory

has been replaced by a Lithuanian Council, and the whole administration has been forcibly taken over. This is, of course, a flagrant violation of the Convention of 1924, to which Great Britain, France, Italy and Japan are parties; and when Dr. Brüning arrived in Geneva on Sunday, he brought with him a Note requesting the Secretary-General of the League to call a special meeting of the League Council to consider the affair. The meeting has been called, but the Lithuanian Foreign Minister has prayed the Council to have him excused on account of an indisposition which will last till February 23rd. Presumably that is the date by which the Lithuanians expect to have dug themselves in. What will the League do about it? What it has done about Japan? Or is it still capable of calling a small country to order?

Free Ports.—One of the first of our great industries to become aware of the injuries wrought by a tariff system was, of course, the re-export and transshipment trade. How important that business is to certain of our leading ports is shown by the fact that in London transshipments represent 38.6 per cent. of the exports of United Kingdom produce shipped from that port, in Southampton 29.2 per cent., and in Bristol 23.7 per cent., while Channel ports show even larger proportions. Hence, on the publication of the Government's trade restriction plans there was an immediate demand for the establishment of "free ports," such as now exist at Hamburg and elsewhere on the Continent, which for all intents and purposes would be regarded as outside the Customs area. It was generally expected that the Government would make proposals along those lines during the passage of the Tariff Bill. These hopes were disappointed when, in answer to Major Attlee, in the debate on Wednesday, Mr Runciman said that the Government could not embark on a system of what is called free ports in the Continental sense. The whole geography and arrangements of our ports had grown up under another system. The Government was making arrangements whereby premises would be provided so that goods would be able to pass through transshipment without undue delay and the re-export traffic and the *entrepôt* trade would be handled without any undue hampering of those engaged in it. Mr Runciman's altogether inadequate dismissal of a very important problem should be compared with the following emphatic recommendation of the 1918 Departmental Committee appointed by the Board of Trade to consider the position of the shipping and shipbuilding industries after the war:—

Reference must be made to the free port system prevailing in many foreign countries. Should it be decided, whether for revenue or other purposes, to extend widely the range of duties on imported articles, the question of creating similar free ports in the United Kingdom would become a matter of pressing importance. It is essential that the position of the United Kingdom as a great transshipment and *entrepôt* centre should not be impaired, and the best means of safeguarding these national interests would undoubtedly be by the establishment of free customs areas on a large scale at the ports principally concerned.

This quotation is the text of a well-documented report on the subject published on behalf of the Liverpool Steam Ship Owners' Association, which, on February 2nd, passed a resolution urging upon His Majesty's Government the vital necessity of ensuring the provision of adequate free port areas in the ports of the United Kingdom so as to enable the discharging, loading and handling of transshipment cargo to be carried on in such ports free from all control by the Customs. The mere acceleration and simplification of ordinary Customs procedure, such as Mr Runciman foreshadowed, is clearly insufficient. Bulk must be broken, the goods must be sorted, graded, repacked, and displayed to buyers, none of which processes can be properly carried out either within the Customs system or in ordinary bonded warehouses. That fact was fully recognised by the United States Tariff Commission, which examined the problem of the re-export trade in 1919, and which concluded:—

The business proper to a free zone consists in receiving and manipulating foreign products, and re-shipping them in the direction and at the time to take advantage of the best foreign markets. This is not only a profitable business, it is also becoming a necessary business to our industrial growth. For however wide the range of

goods we produce, and however effective our methods of production, we can sell our products to best advantage only when the purchasers are able to pay for them with products of their own. If we do not accept their products, they must sell them in some third country and transfer to us the credit they thus acquire—unless, indeed, they forego buying our goods at all and make their purchases in the country where they make their sales.

The Government, in embarking on a general tariff system, would at least do well to accept the advice of those more experienced in these treacherous matters.

Unemployment.—If the Government thought that by suspending publication of the weekly returns of unemployment it would eliminate a factor depressing to national psychology, the first of the monthly statements published under the new statistical regime suggests that its expectations were optimistic; for the position disclosed is definitely disquieting. On January 25th the number of registered unemployed (of whom 56 per cent. were applying for normal benefit, 33 per cent. for transitional payments, and 11 per cent. were uninsured or not entitled to benefit) totalled 2,728,411, as compared with 2,509,921 on December 21st last and 2,811,615 at the end of September. It will be seen that the setback since Christmas has wiped out roughly two-thirds of the apparent improvement which occurred in the first three months after the suspension of the gold standard; but the situation is even worse than would superficially appear from these figures, since administrative changes between the end of October and Christmas were estimated to have caused 90,000 persons to cease registration. Allowing for further subsequent removals from the register under the influence of the Economy Act, the volume of real unemployment appears now to be slightly greater than it was at the end of September. The increase in unemployment between December 21st and January 25th affected all the most important industrial areas, only two major industries, namely, pottery works and boot and shoe manufacture, being reported to have shown an improvement during the period. A rise in unemployment following the seasonal activity in a number of trades before Christmas is a normal feature of British labour statistics, but, as the following table shows, the deterioration this year has been greater than in either of the past two years:—

	TOTAL UNEMPLOYED.		
	Pre-Christmas.	End January.	Increase.
1929-30	1,303,557	1,491,500	187,943
1930-31	2,408,371	2,592,650	184,279
1931-32	2,509,921	2,728,411	218,490

The latest figures are a curious commentary on Mr Hore-Belisha's claim that employment had been stimulated by Customs duties. The inference is inescapable that the growing paralysis of international trade is outweighing the stimulus afforded to British industry by the depreciation of sterling.

The By-Elections.—The results of this week's two by-elections at South Croydon and the New Forest and Christchurch Division of Hampshire were never in doubt, for the Conservatives had majorities of 30,722 and 28,414 respectively in these constituencies at the General Election, the contest being a straight fight against Labour in each case. But though the Conservative Party have held both seats, the majorities have shown a large shrinkage. In the New Forest the Conservative poll fell by over 12,000 from 35,544 to 23,327, as compared with a drop of 2,000 from 7,130 to 5,135 in the Labour vote. Even more significant was the slump in the Conservative poll at South Croydon, where the majority fell to 9,937. The Labour candidate held approximately the General Election vote, while the Conservative poll totalled only 19,126, against 40,672. Making due allowance for the normal apathy of Conservative voters in a safe seat at a by-election, this result surely suggests that some of the enthusiasm for the "national" Government has evaporated. Can it be that South Croydon did not respond wholeheartedly to Mr H. G. Williams' unqualified advocacy of Protectionism?

The Vegetable Duties.—The perfunctory defence by Sir John Gilmour, in the House of Commons last Friday, of the Orders so far made by him under the Horticultural Products (Emergency Customs Duties) Act did little to dispel the impression that the Government have plunged blindly into these repressive duties on vegetables, fruit and flowers without any proper appreciation either of the objectives or the probable consequences of their action. Take the single case of new potatoes, on which the duty is to be twopence a pound up to February 29th, a penny a pound during March and a halfpenny a pound from April 1st to the end of May. So far from providing any protection to English growers, whose supplies do not reach the market in any appreciable quantity until June, these duties will merely penalise the consumer in a year in which there is an acute shortage of potatoes at the cost of doing serious damage to the British potato trade with Spain and the Canaries. These islands, in which, incidentally, a considerable amount of British capital is invested in agriculture and which acquire both their artificial manures and their seed potatoes as exports from Great Britain, have so far been a free market for British manufacturers. Hard hit by the duties not only on potatoes, but on their tomato crop, they will now doubtless indulge in tariff retaliation. But, apart from the serious interference with the normal channels of trade which is threatened for the sake of a trivial revenue (for in most cases the duty will be prohibitive), there is still no evidence that the Government has considered the disturbance likely to be occasioned in our agricultural markets when foreign supplies, accumulated during the period of the application of the duties, are released when the duties come off on the various specified dates.

The B.I.S. Meeting.—The February meeting of the board of the Bank for International Settlements was concerned mainly with routine matters. It took note of Professor Bruins' report on the Austrian situation and also of the new German Standstill Agreement, the Special Agreement between the German, Dutch, Swiss and French Banking Committees and the report of the Foreign Creditors' Standstill Committee. It authorised the President of the Bank to designate the arbitrators who, by the terms of the new agreement, are to be nominated by the B.I.S. The board raised no objection to the proposal made to the B.I.S. by the Saar Governing Commission to accept deposits from the Saar, provided that the President reaches a satisfactory arrangement with the Reichsbank and the other Central Banks responsible for the currencies to be deposited. The board finally took note of the resolutions adopted by the conference of South American Central Banks held at Lima in December and entrusted the study of these resolutions to the Monetary Department of the B.I.S. in liaison with the Statistical Services of the Central Banks. It will be noticed that the question of the renewal of the bank's share of the Reichsbank rediscount credit did not appear on the agenda. When the board of the B.I.S. renewed the credit at their January meeting, they followed their invariable practice of making their renewal conditional upon similar action by the remaining participants in the credit, and a few weeks later the Banque de France decided to renew its share for one month only. The point has been raised in financial circles that the B.I.S. share was therefore renewed for one month only, which means that it expires before the March meeting of the board. Hence some surprise has been expressed that a further renewal, on the usual conditional terms, was not authorised at the February meeting, and it is suggested that some technical difficulty may be created when the credit is due to expire at the end of the month, especially as the operation of the German Standstill Agreement is contingent upon the renewal of the Reichsbank's rediscount credit. In actual fact, no technical difficulty need arise. On several occasions last autumn outstanding credits granted by the B.I.S. to various beneficiaries were renewed by the President after receiving authority by letter, cable, or telephone from the different members of the board, and this procedure was followed in December, when the usual

monthly meeting of the board did not take place. There should be no difficulty in applying this precedent to the Reichsbank rediscount credit, so soon as the question arises.

The January Trade Returns.—The trade returns for January reflect, as did those for December, the violent contraction of imports occasioned partly by the Abnormal Importation Duties, and partly as a natural consequence of previous forestalling. Total imports were £15 millions lower than the December figure and £9.5 millions below the monthly average for last year. British exports showed a decline of £1 million as compared with December (in which month there was one less working day). The following table gives a comparison between the figures for the past three Januaries:—

MONTH OF JANUARY. (000's omitted.)					
	1932.	Increase or Decrease as compared with			
		January, 1931.		January, 1930.	
Imports	£ 62,266	— 13,282	— 17.5	— 39,575	— 38.9
British exports	31,123	— 6,441	— 17.1	— 27,139	— 46.5
Re-exports	5,239	— 798	— 13.2	— 2,935	— 35.9
Total exports	36,362	— 7,239	— 16.6	— 30,074	— 45.2
Excess of imports over total exports	25,904	— 6,043	— 18.9	— 9,501	— 26.8

On the import side, apart from the fall in manufactured imports, which amounted to only £13.3 millions, as compared with £18.2 millions in December and £20.4 millions in January, 1931, a significant and somewhat disquieting feature is the recession of £1.6 millions in the value of imported raw materials. This represents a check to the improvement of recent months and is a displeasing accompaniment to the January increase in unemployment. In the next table we compare the January figures of the quantity of our leading exports with those of the corresponding month of the two previous years:—

SOME LEADING EXPORTS. (Quantity.)				
	Month of January.			
	1930.	1931.	1932.	
Coal	5,493,410	3,271,331	3,313,073	tons
Pig iron and ferro alloys	40,445	18,743	13,401	tons
Railway material	43,597	10,694	10,034	tons
Total iron and steel	351,846	167,373	167,309	tons
Textile machinery	9,060	4,898	5,911	tons
Cotton yarns	13,156,219	32,867	28,397	lbs.
Cotton piece-goods	313,183,000	11,336,500	16,416,900	sq. yds.
Wool tops	27,197	155,629,900	179,852,000	centals
Woolen tissues	9,695,100	23,993	34,309	sq. yds.
Worsted tissues	4,394,000	6,717,300	5,402,600	sq. yds.
Linen piece-goods	6,539,200	5,677,500	3,068,600	sq. yds.
Leather boots and shoes dozen pairs	67,571	5,650,800	5,865,000	dozen pairs
Leather	22,657	48,095	46,601	cwt.
Paper and cardboard	403,583	12,886	12,657	cwt.
Locomotives	4,475	299,822	327,764	tons
Motor cars and chassis	3,211	2,498	2,815	number

With the exception of woollen and worsted tissues, the comparison with the position a year ago is not unduly discouraging, though, regarded as a datum level, January, 1931, can hardly be described as satisfactory. As for the outlook, we leave exporters to derive such comfort as they can from the consideration that the ability which they have so far enjoyed, as a result of the depreciation of sterling, to secure a slightly larger share of a diminishing total of world trade, is now to be impaired not only by an increasing network of prohibitions and controls devised abroad, but by import duties in this country on many of their essential raw materials.

The Dartmoor Report.—The report on the Dartmoor mutiny by Mr H. Du Parc, the Recorder of Bristol, who was commissioned to inquire into the trouble, makes mixed reading. Comment on some aspects of it would be improper, as the Home Secretary has since announced that criminal proceedings are to be taken against some of the ring-leaders. There are, however, several satisfactory features of the report which deserve to be noted. The

mutiny was quelled without loss of life or a single escape, and there is no evidence either that excessively humane treatment or the development of substantial grievances were a cause of the disturbance. Tribute is paid to the loyalty and efficiency of the vast majority of the prison staff, and, with the exception of his error of judgment in making a somewhat apologetic address to the prisoners immediately before the trouble broke out, the administrative skill and sense of justice of the Governor are not called in question. The mutiny is, in fact, ascribed to the leadership of a few desperate convicts, mainly of the "motor bandit" or "gangster" class, who are young, determined and adventurous, and prepared to take great risks. In this connection a memorandum prepared by the prison doctor, classifying the convicts under various headings from the "absolutely loyal" to the "real vicious brutes" is of great interest and importance. On the other hand, several disquieting facts emerge from the report. Mr Du Parc is under no doubt that a small number of officers were guilty of "irregularities and worse." This raises the questions how far Government servants ought to be asked to pass their days in so remote and inhospitable a spot and how far recent administrative economies have reduced both the staff of the prison and their emoluments to below the danger level. Nor does Mr Du Parc entirely reject the suspicion that persons outside the prison were in touch with some of the more dangerous convicts with a view to helping them to escape, though there is no doubt that many of the reports that appeared in the newspapers were exaggerated. This is a matter which is doubtless receiving the closest police investigation. The real point of the report, however, is that "Dartmoor is an unsuitable prison in which to confine prisoners of the modern dangerous type." In the old days its remoteness was its safeguard, for no convict could hope to escape both from the gaol and from "the moor." The invention of the motor car has impaired, if not destroyed, that safeguard, while the prison's remoteness from available outside assistance can, as the events of the mutiny have shown, be a positive danger. When to these facts are added the depressing and unnatural circumstances under which both prisoners and staff have to live, there is no doubt that Dartmoor should be closed at the earliest practicable opportunity, and that in allocating the prisoners to other gaols care should be taken to separate the more dangerous convicts who were the leaders in the mutiny. One final point may be mentioned. If it is intended to recognise the gallant behaviour of some of the "loyal" convicts, it will create a far greater impression if such action is taken with the smallest possible delay. The psychological effect of immediate reward should go far to turn the individuals concerned into useful citizens.

More Looms Agreement?—The official announcement was made in Manchester on Wednesday, following a joint meeting of representatives of the Cotton Spinners' and Manufacturers' Association and the Operative Weavers' Amalgamation, that a tentative agreement had been reached regarding the wage basis to be paid for certain types of cloth under the "more looms to a weaver" system. This is the first time that there has been any unity between the two sides for over two and a half years, when the question of working more looms to an operative was first raised. Mr John Grey, the chairman of the employers' association, in a statement to the Press, said that the committee had been discussing the formulation of a list along the relatively limited lines suggested by the operatives at the joint meeting on Monday of this week. This proposal was that the committee should first consider the basic price to be paid for weaving plain cloths and then discuss the basis for more complicated fabrics. The agreement reached on Wednesday is dependent upon reaching an agreement on other aspects of the question, which are stated to be quite considerable in detail and will take some further time for discussion. The trade, writes our Manchester correspondent, welcomed this distinct move forward towards peace, and it should not be difficult for the committee to reach agreement upon the outstanding points.

OBLIGATION

is the important factor in saving. Set aside a pound a month for a monthly premium policy—you will not miss it. In 20 years' time you will have £342.

Cotton Machinery Redundancy Scheme.—Our Manchester correspondent writes:—The scheme of the Joint Committee of Cotton Trade Organisations continues to be very freely discussed in Lancashire. At the beginning of January the proposals were considered by the General Committee of the Federation of Master Cotton Spinners' Associations, and after much difference of opinion had been expressed the committee decided that, although they could not recommend the scheme to the members, they were willing to take a ballot as to their approval of the scheme or otherwise. There has been some delay in taking action of this kind, but a circular has now been sent out by the Federation to the members giving the resolution which was adopted on January 5th and asking firms whether they are in favour of the proposals or not. It is requested that replies should be received not later than February 17th. The Federation has not enclosed a ballot form with the circular, so it is probable that replies of a varied character will be received, and these may have to be tabulated carefully. It is quite probable that a number of spinning employers will give a decision in favour of the scheme with qualifications. It is understood that arrangements are being made by the Joint Committee of Cotton Trade Organisations to obtain the opinion of spinners who are outside the Federation, and in this connection considerable importance is attached to the attitude of the Lancashire Cotton Corporation, Ltd., in view of the big number of spindles now controlled by that combine.

Sterling and Gold Prices.—The feature of the past fortnight's development in the world-price situation has been the growing divergence between sterling and gold prices. As will be seen from the following table, the complete *Economist* index continues to show little variation and is now almost at the same level as that at which it stood at the end of October. On the other hand, gold prices have fallen during the past fortnight by 5.3 per cent., and, as compared with October 28th, the fall has attained the catastrophic dimensions of over 12 per cent.:—

SEPTEMBER 18TH, 1931 = 100.

Date.	Economist Indices.			Irving Fisher, U.S.A.	Statistique Générale, France.	Milan Chamber of Commerce, Italy.	Statistische Reichsanstalt, Germany.
	Complete Index (sterling).	Primary Products (sterling).	Gold Prices.				
Sept. 30th ...	107.6	112.0	94.7	98.7	96.9	98.8	98.9

Feb. 10th ...	108.6	117.3	88.8	...	...	...	...

The four indices of the price level in gold countries, to which we are indebted to the *Financial Times*, point to the continuance, most pronounced in the case of Germany and the United States, of deflationary pressure on the gold price level. So far as the British price level is concerned, movements during the past fortnight, as may be

seen from the table below, have been of negligible dimensions:—

"ECONOMIST" INDEX.

(1927 = 100.)

	Sept. 18, 1931.	Jan. 27, 1932.	Feb. 10, 1932.
Cereals and meat	64.5	69.7	70.3
Other foods	62.2	66.1	66.7
Textiles	43.7	52.5	52.5
Minerals	67.4	76.2	75.4
Miscellaneous	65.8	64.6	65.1
Complete Index ...	60.4	65.4	65.6
1913 = 100	83.1	90.0	90.3
1924 = 100	52.2	56.5	56.7

It will be noted that the two groups which have shown the least recovery from the level of September 18th last are the miscellaneous group and that comprised of "other foods."

World Production of Iron and Steel in 1931.—The National Federation of Iron and Steel Manufacturers has published the following estimate of world production of iron and steel in 1931:—

(In Millions of Tons.)

	1913.	1927.	1928.	1929.	1930.	1931 (Partly Estimated).
IRON.						
United Kingdom	10.26	7.29	6.61	7.59	6.19	3.76

World Total	75.15	100.19	107.92	118.30	93.33	69.59

* Present territory.

As compared with 1929, the world production of pig iron and steel shows a decline of 43 per cent. and 41 per cent. respectively. This enormous reduction in activity illustrates strikingly the extent of the contraction in the demand for capital goods in the form of plant, machinery and ships. In the United States, where the motor industry accounts for a large proportion of the total consumption of steel, the contraction has been most pronounced. Throughout the past year activity in the iron and steel industries declined almost uninterruptedly, and there are as yet no signs of an early improvement. A noteworthy feature is the fact that the level of production of iron and steel in 1931 was considerably below that of 1913. The relatively smaller reduction in steel production is mainly a consequence of the increase in the use of scrap materials in production.

Polish Mine Wage Decrease.—The Government Arbitration Board, writes our Polish correspondent, has settled the wages dispute between the owners and mine workers by ordering a reduction of 8 per cent. in the Upper Silesian mines and of 10 per cent. in Dabrowa and other districts. Prior to the expiration on January 31st of the previous wage agreement, the owners had served notice of their intention to lower all wages by 21 per cent., so that coal exports to the northern markets need not be curtailed in consequence of the necessity of meeting depreciated sterling prices. The Government had definitely announced that such exports must be maintained at all costs, and that there should be "equality of sacrifice" in supporting the loss. The new agreement, based on an 8 per cent. reduction, is not for a fixed term, but can be abrogated after

June 1, 1932, if either side gives two weeks' notice. It is, however, binding until the beginning of June, at which time—the feeling now is—the mine-owners will insist on a further reduction unless, in the meantime, a material improvement takes place in the coal export situation. The owners, in fact, feel very strongly that the Government Arbitration Board has "let them down" in allowing a reduction of only 8 per cent., such compensation being quite inadequate to cover existing losses in export shipments to the Baltic and Scandinavian countries. The Arbitration Board, however, which is more of a political than of an economic body, had to give primary consideration to the political possibilities of too drastic a wage cut in one dose—and especially in Upper Silesia, where the minority elements know how to make trouble.

Switzerland's Balance of Payments in 1931.—The results of the international transactions of Switzerland are of particular importance in view of the fact that this little country has become a "funk-hole" for foreign capital. The following table has been compiled by the German Institut für Konjunkturforschung:—

(Millions of Swiss francs.)

Item.	1928.	1929.	1930.	1931.
Excess of imports of merchandise over exports	- 543	- 600	- 782	- 883
Excess of imports of gold over exports	- 44	- 48	- 60	- 1,150
Excess of exports of electricity and other invisible items	+ 40 (a)	+ 40 (a)	+ 40 (a)	+ 32 (a)
Net income from services	+ 127	+ 140	+ 140	+ 112 (a)
Net income from tourists	+ 315	+ 315	+ 256 (a)	+ 200 (a)
Interest on investments abroad	+ 330	+ 380 (a)	+ 446 (a)	+ 400 (a)

(a) Estimate.

It will be seen that the excess of imports over exports of merchandise has increased rapidly since 1928. Until 1930, the net income from the export of electricity and other invisible exports, from services, tourists and foreign investments was in excess of Switzerland's visible debit balance of trade. Owing to the deepening of the world depression, Switzerland's income from these sources declined from Frs. 882,000,000 in 1930 to Frs. 744,000,000 in 1931. On the other hand the excess of merchandise imports over exports increased from Frs. 782,000,000 to Frs. 883,000,000. The outstanding feature has been the influx of foreign capital. This, of course, is partly responsible for the increase in the unfavourable balance of merchandise trade. In order to check the pressure of imports, it appears that Switzerland has decided to embark upon a protectionist policy. The denunciation of the Swiss-German commercial treaty on February 4th has been the first step in this direction.

The 1930 Census of Production.—Volume IV. of the preliminary reports of the census of production of 1930, published in last week's *Board of Trade Journal*, covers the motor, aircraft and railway carriage building industries, and the rubber and hosiery trades. The following summary shows the gross value, the net value (gross value less cost of materials and work given out to other firms), and the net output per person employed in the various industries in 1924 and in 1930:—

Industry.	Gross Output.		Net Output.		Net Output per Employee.	
	1924.	1930.	1924.	1930.	1924.	1930.
Motors and cycles	£ 88,320	£ 102,883	£ 42,638	£ 42,152	244	236
Aircraft	8,776	8,776	5,598	5,598	180	188
Railway carriage building	16,235	10,081	5,302	4,062	180	188
Rubber	23,834	28,119	11,692	14,143	246	281
Hosiery	42,495	36,007	15,228	15,000	159	155

* Not treated as a separate industry in 1924 Census.

The production of private cars (including chassis) advanced from 117,302 units in 1924 to 167,651 units in 1930. The number of commercial vehicles (including chassis) produced in 1930, at 66,920, shows an increase of 30,720 on 1924. The average selling value of complete

private cars declined from £268.9 per unit in 1924 to £205.4 per unit in 1930. On the other hand, the average selling value of commercial vehicles increased from £235.4 per unit to £264.1 per unit. Allowance has, of course, to be made for the increased use of the small private car and of the motor coach and of the larger type of motor omnibus since 1924. The output of motor cycles declined from 120,092 units in 1924 to 107,690 units in 1930, and the average selling value, at £41.5 per unit, shows a reduction of £7.4. The number and gross value of railway carriages and wagons built in 1930 had declined sharply. Owing to the great reduction in the cost of materials and to the increase in the net output per person, the total net selling value had, however, been fairly well maintained. The output of rubber goods shows a considerable expansion, and the net output per person employed increased from £246 in 1924 to £281 in 1930.

Balance of Payments of the U.S.S.R.—The Birmingham Bureau of Research on Russian Economic Conditions have published an interesting memorandum in which an attempt is made to estimate the extent of Russia's international indebtedness on short-term account. The basis of the calculation is provided by official Soviet documents, but in several instances important reservations and adjustments have been made. Import figures as returned by the Soviet Customs are compiled from prices given in the invoices presented to the Soviet trading organisations by foreign suppliers. In the opinion of the Bureau, these do not make adequate allowance for credit costs. The value of exports is revised in a downward direction, on the hypothesis that the prices declared by exporters to the Customs authorities are in general a measure of "expectations" rather than "realisations" in the foreign market. Several items entering into the compilation are admitted to be little more than inspired guesses, so that the final result must be regarded with caution. In the following table we summarise the estimated changes in the balance of payments of the U.S.S.R. for the past seven years:—

SUMMARY OF BALANCE OF PAYMENTS.

Years to October 1

(In million roubles.)

Item.	1924-5.	1925-6.	1926-7.	1927-8.	1928-9.	1929-30.	1930-31
A. Expenditure.							
I. Foreign trade	841	839	810	1,024	932	1,178	1,151
II. Capital movements	6	5	46	17	52	30	35
III. Foreign labour, &c.	3	5	4	10	15	18	38
IV. Non-commercial transactions	8	26	25	21	6	25	30
V. Total	858	879	886	1,072	1,005	1,251	1,254
B. Income.							
I. Foreign trade	604	734	789	901	916	982	955
II. Capital investments—							
(a) Increase in short term indebtedness ..	69	62	41	120	45	210	230
(b) Other items	77	27	10	12	12	10	10
III. Non-commercial transactions	43	43	43	35	32	43	55
IV. Items unaccounted for above	65	13	3	4	...	6	4
V. Total	858	879	886	1,072	1,005	1,251	1,254

In the above table the adverse balance of payments in any one year is thus represented by the item B. II. (a), which in 1930-31 was estimated to be 230 million roubles, or roughly £23 millions at the official par of exchange. The total short-term debt was considered to be in the neighbourhood of 850 million roubles on October 1, 1931, against 625 million roubles twelve months before. Of the total sum, about two-thirds has to be paid off each year. Leaving aside the approximate nature of the above figures, their appearance is not such as to cause undue alarm as to the possibility of a commercial default. If the further curtailment of Soviet exports, as a result of the world slump and the deliberate creation of trade barriers, happened to coincide with a concerted refusal to renew maturing credits, a difficult situation would obviously be created, but the international repercussions of such a policy would be so harmful that its eventuation, we trust, is unlikely.

Overseas Correspondence.

LEAGUE OF NATIONS.

The Conference Opened — The French Plan — First Tendencies.

(FROM OUR CORRESPONDENT.)

GENEVA, February 9.

THE general debate at the Disarmament Conference has so far been on a high level. Every speaker—Sir John Simon, M. Tardieu, Mr Gibson, and the German Chancellor—has emphasised the decisive opportunity and the imperative necessity of satisfying the wishes of the peoples of the world, and the disasters to which failure would inevitably lead. Despite a certain air of cynicism, the Conference understands that there is no running away from the task ahead of it, and the cold comprehension of this uncomfortable condition is better than any amount of eloquence and exhortation. But the Conference has not escaped this either, for the unusual and commendable innovation of giving representatives of vast numbers of unofficial organisations an opportunity to have their say directly to the Conference, on Saturday, led to a striking demonstration, and a great deal of plain speaking from men and women representing many international groups—students, women, Socialists, trades unionists, churches, and the League of Nations Societies. Some of the words addressed to the Conference were not without a certain menace and the demonstration may well have been a salutary reminder to the delegates.

With the exception of the French Plan, little has been added to what was already known on general lines. The main new fact is America's willingness to consider limitation of expenditure on material as a complementary method to direct limitation. She has given no indication whether she will also consider British advocacy for agreed reduction in the size of ships and the maximum of gun calibre. M. Tardieu and Dr. Brüning made the most emphatic contributions, which must be viewed in the light of the French proposals circulated before the general debate began. It is certain that these proposals will have considerable influence on the trend of the discussions, but it seems no more likely that they will enter into practice than when they were pressed in other forms—but with the same objects—at the Peace Conference and at the time of the Geneva Protocol in 1924.

Before any close consideration can be given to the advisability of League development on the lines of organised force suggested by France, there is one question which must be answered. Is France, together with her European Allies, prepared to accept, as its basis, that equality of rights and duties which the German Chancellor emphatically demanded as the foundation of any satisfactory disarmament convention? France has declared many times that she would enter into no disarmament convention except on the strict observance of existing treaty conditions, comprising, of course, the military clauses of the Versailles Treaty. If she maintains that attitude, the acceptance of her plan, so far as Europe is concerned, would mean making French forces available for the League to support French policy, for Germany would have no forces to contribute under the French plan. Germany will not look at the proposals on any such terms. They are also foreign to the whole established policy of the United States. Great Britain will not enter into this enlargement of her commitments, and Italian opinion has bluntly described the proposals as bluff. Whatever opinion may be held about the French ideas, there is little or no division of opinion about their chances of success. It is difficult to see how they can possibly succeed, though there are certain elements which have something to be said for them, like the control or abolition of specially aggressive weapons.

One thing that seems to be forgotten in this renewal of the determined and persistent French effort to make the satisfaction of French security claims the basis of any and every plan for the reduction of armaments, is that it was

the definite decision of the 1928 Assembly that a sufficient degree of security had been reached to proceed towards a disarmament convention. It has not been without some impatience, therefore, that other countries find the French conditions brought forward once again on the eve of the first effort to achieve something practical by way of reductions. When this much has been said there is considerable sympathy with M. Tardieu's lament that, instead of making the fullest use of the Covenant, there has been a steady tendency to weaken its provisions, and no State has a larger responsibility in this respect than Great Britain. Unfortunately, France's policy for the full use of the Covenant is apt to be applied largely, if not exclusively, to the maintenance of the particular treaty rights she wishes to maintain, and she has not been conspicuous in any determination to see even the full moral force of the Covenant brought into action in the Sino-Japanese conflict. What is good enough for others is apparently not good enough for France, and that is an essential point in the searching scrutiny which the French thesis requires. The technical application of the French proposals would in any event be extraordinarily difficult.

The best contribution for the maintenance of world peace would be a far greater loyalty to the Covenant than has yet been demonstrated by the members of the League. This would give it all the force and authority needed. It is strange how little this is understood. It has amazed many people here that the *Times*, for instance, in its analysis of the French plan, says it would scarcely be profitable to place international forces in the hands of a Council which has shown itself so weak as in the Far Eastern affair. It is almost impossible to get into the heads of some people the fact that England and other Great Powers are members of the Council, and that the weakness of the Council is the weakness of Great Britain, unless Great Britain can show that she has desired strong action and has been unable to secure League support for it. It would be about as sensible, on the basis of the *Times* argument, to say that a weak British Government should not be allowed to possess a navy.

It is now assured that the Conference will not be short of problems and proposals; in that respect, and in respect of the form of the speeches themselves, the beginning has been good. One of the most notable things was the significantly warm welcome given to the German Chancellor on his first appearance at Geneva; the tone of his speech was impeccable. There has been a tendency so far (apart from the French plans) towards advocating the limitation, reduction or abolition of definitely aggressive weapons—a line of approach which was persuasively presented to the Conference by Lord Cecil, who addressed it on Saturday in the name of the League of Nations Societies. The first point registered, however, in these early days of what must be a protracted and difficult task, is the recognition that the Conference cannot afford to fail. If that conviction remains constant, the Conference cannot fail.

UNITED STATES.

Company Profits — Reconstruction Corporation — Banking.

(FROM OUR CORRESPONDENT.)

NEW YORK, January 29.

JAPANESE military operations in China, threats of ill-considered legislation in Congress to bring about changes in the banking system, and publication of discouraging company reports have checked any enthusiasm which might have developed over the start of the Reconstruction Finance Corporation and the near approach to an agreement on railroad wage cuts. So far as current reports are concerned, only a mild seasonal rise in trade is taking place. The steel mills are now operating between 27 and 29 per cent of capacity. This is encouraging when it is considered that the gain from the recent stagnation is one-third, but the actual rate is much below what it usually is at the end of January.

For virtually four months the steel trade has operated at under 30 per cent. of capacity. Under the circumstances it

was not surprising that at their quarterly meetings this week the two leading makers, the United States Steel Corporation and the Bethlehem Steel Corporation, reported operating deficits. United States Steel reduced its quarterly dividend by one-half, paying only 50 cents a share. Bethlehem omitted payments on the common shares altogether. In the case of United States Steel the directors made it clear that inasmuch as common share dividends have come from surplus for the past year, no further disbursements will be made until earnings definitely improve.

The Steel Corporation's earnings were the poorest in its thirty-year history, and since it holds the undisputed leadership in American industry, its performance is discouraging to lesser enterprise. General Motors, on the other hand, reported earnings of a little over \$2 a share on its 43,500,000 shares of common stock, or two-thirds the regular dividend rate. Industrial companies which have so far published reports for 1931 reveal a drop of about 40 per cent. as compared with 1930. The nine months' statements were down by over 50 per cent., and this higher percentage is likely to rule when the record is complete. Railroads in December report a drop of over 50 per cent. in net operating income, and it is now being shown that many of them failed to cover their fixed charges in 1931. Formal action has been taken in New York State to suspend for a year the provisions of the legal bond list. This will permit savings banks and trust companies to continue to hold railroad bonds which otherwise they would be constrained to sell, or at least be unable to purchase in additional amounts.

Although it has barely been started, applications for aid have begun to pour in on the Reconstruction Corporation. It is natural that a great many people caught the idea that anyone needing to borrow could be accommodated by this body; but it will, of course, help only banks, railroads and other important enterprises, hoping to avert disasters which might have a far-reaching effect and to inspire general confidence. For the first time the National Credit Corporation, the credit body formed by the banks a few months ago, has published figures of its operations, showing that it has paid out \$155 millions, in 750 separate loans to 575 different banks. The Corporation has called in subscriptions for a total of \$135 millions, and consequently another call, perhaps for 10 per cent. of the subscribed \$450 millions of debentures, is expected at any moment. The Corporation expects to operate for several months, but eventually will disappear as the Reconstruction Corporation takes over the sort of aid now being given. There is no provision in law for a merger of the two concerns.

Some anxiety was aroused over the proposed Bill of the Senate banking committee designed to amend the Federal Reserve Act. Introduced by Senator Glass, the Bill contained one or two good features, such as provision for aid to depositors in banks which have failed, but its general aim is thoroughly disliked. By placing severe restrictions, amounting under some conditions to total prohibition, on member bank lending on stock and bond collateral, the measure would tend actually to spur on deflation. Its central theme is that the Federal Reserve authorities could control the direction of credit and make it plentiful and cheap for business while withholding it from speculation. Senator Glass belongs to the school of thought which in 1927-29 was opposed to increases in the discount rate, the orthodox method of stemming credit expansion, and advocated moral suasion as a means of keeping money out of the stock market. Now, apparently, ignoring the drastic deflation of the past two years which has expiated any previous inflationary crimes, he would punish the whole country anew. Fortunately, the opposition to the measure has been so vigorous, once the terms were understood, that its recall from committee in its present form is quite unlikely. Some of its more fully considered provisions may appear in another Bill.

Another Federal Reserve Bank, the Dallas Institution, has brought down its discount rate, so that all twelve regional banks now have a rate of 8½ per cent. It is still believed likely that the New York Bank will reduce its rate to 3 per cent., though this week's operations revealed

no further steps towards ease. Money rates have remained unchanged, showing only a slightly firmer tone on month-end settlements. Currency circulation dropped \$24 millions, the same amount as the reduction in the gold stock. Member banks borrowed moderately to make good the credit taken out by the running off in reserve holding of bills. On balance, Federal Reserve credit in use dropped \$9 millions. Brokers' loans declined another \$18 millions, the total being now only \$513 millions, against a record low point in recent years of \$510 millions in 1918. Deflation of bank credit generally has continued, the reporting member bank statement showing a decrease of \$28 millions in security loans and of \$68 millions in other loans. The banks also sold \$140 millions of their investments, and these deposit-reducing operations were reflected in a decline of \$204 millions in deposits.

In a recent address here, Mr Ogden Mills, Under-Secretary of the Treasury, blamed the banks for much of the deflation of the past three months, and criticised their excessive zeal for liquidity. He urged them to relax pressure to repay loans and to stop the sale of their investments. Noting that with the bank failures and other delinquencies of the past year the weakest spots in our banking and business structure have been eliminated, that the strongest business units have so adapted themselves to prevailing conditions that with some increase in activity their operations may now be carried on at a reasonable profit, and that the Government is determined to balance the Budget, he urged that deflation be arrested. The "essence of the problem," he said, "is to make available the credit needed by American business." He thought the Reconstruction Corporation would do much along this line. Meanwhile both President Hoover and Secretary of the Treasury Mellon have firmly stated their opposition to all schemes contemplating an expansion in currency circulation or an increase in borrowing beyond this fiscal year.

There have been rumours that the New York Bank has been opposed in its easy money policy by the Federal Reserve Board at Washington, but this talk is not widely believed here. However, the heavy gold shipments must be an influence in central banking policy. With to-day's departure of \$30 millions, the country has lost about \$110 millions this month, against which it imported \$25 millions. Of the exports, approximately \$30 millions were taken from earmarked metal.

GERMANY.

Presidential Candidature — Osthilfe.

(FROM OUR CORRESPONDENT.)

BERLIN, February 9.

COMING developments in German domestic politics will be greatly influenced by the extent to which Dr. Brüning is successful at the Disarmament Conference, and by the decision of the League on the question of taking energetic measures against the violation of the Memel Statute. These international events have coincided most unfortunately with an acute state of tension in Germany. The list of signatories to Herr von Hindenburg's nomination is growing rapidly, although signatures are being collected almost exclusively in the large towns; but Herr von Hindenburg himself has not yet decided whether he will stand. He has evidently been impressed by the fact that the parties and organisations of the Right, which formerly represented a large section of his supporters, have so far not declared in favour of his candidature because he is supporting the Brüning Government in office. An attempt has been made to use this fact to bring pressure upon the Chancellor to resign voluntarily in the interest of Herr von Hindenburg's candidature, but Dr. Brüning recognises the political motive behind this movement, and it is to be hoped that he will not allow a false sense of chivalry to induce him to resign an office in which nobody at present is capable of replacing him.

It has not proved practicable to carry out according to plan the programme as laid down in the spring of 1931 of

assistance by means of credits to the farmers of the eastern provinces, as it has been impossible to release enough funds to redeem the short-term credits. In the autumn an attempt was accordingly made to put matters on a sounder basis partly at the expense of the creditors by forcing them to remit arrears of interest, reduce interest rates and, in some cases, to accept a reduction in their capital dues. Even this, however, did not solve the problem, as, on the one hand, too extensive encroachments on the rights of creditors had to be avoided, and, on the other, the uncertainty which this legislative interference with the rights of creditors entailed was completely stopping the flow of capital to agriculture in the east. The farmers themselves, as a matter of fact, realised that they would damage their own interests if they tried to take unfair advantage of the provisions of the Emergency Decree, and for that reason debtors have applied in comparatively few cases for protection against their creditors; but, even so, the psychological effect was there. It is, in consequence, almost impossible for farmers to get fresh credit for their working capital, and creditors are pressing for payment of existing short-term debts wherever they see any chance of getting it.

The problem of the funding of these short-term debts has, therefore, grown more and more urgent, and a new Emergency Decree has now been issued, which transfers the business of settling the debts from the Bank für deutsche Industrieobligationen to the Deutsche Rentenbank (not the Rentenbank Kreditanstalt). The Industriebank is only to co-operate in the technical execution of the scheme. The Deutsche Rentenbank is to issue new 4½ per cent. bonds — "Osthilfe-Entschuldungsbriefe" — which are to be issued to the farmers' creditors in place of their short-term claims. As security for these bonds there are not only the creditors' claims, which are transferred to the Rentenbank, but also the old land debts, which, at the time of the creation of the Rentenmark, were registered against all German land in agricultural use. As Rs. 600 millions have to be redeemed, and 100 millions are available in cash out of the special tax on industry, which was created by the Dawes Plan and subsequently, after the acceptance of the Young Plan, assigned in part for the redemption of agricultural debt, some Rm. 500 millions of Entschuldungsbriefe will have to be issued. They will, however, not be issued for another year or eighteen months. Whether the required sum will be forthcoming is not yet certain. The bonds are to be redeemed before 1938, principally out of the further proceeds of the industry tax, but the issue will avail little to most of the creditors, whose need is for ready money. For this reason the Reichsbank will make advances against a proportion of the bonds, and it is also to be made possible for creditors, to a strictly limited extent, to get bills discounted by the Reichsbank through the Deutsche Rentenbank.

AUSTRIA.

New Bank Governor — Trade and Industry.

(FROM OUR CORRESPONDENT.)

VIENNA, February 8.

THE new officials of the National Bank and the Credit-Anstalt have at last been appointed. After two days' interlude the former President, Dr. Reisch, was relieved by the former Minister of Finance, Dr. Kienböck. Dr. Kienböck has therefore retired from political life, and the Christian Socialist Party has lost one of its prominent leaders. The taking over of the management of the National Bank at the present moment will be an unusually difficult task. If no help is forthcoming from abroad, Dr. Kienböck, like his predecessor, will be unable to make any concessions in the allocation of foreign exchange. Perhaps he will be more accommodating in regard to individual complaints than was President Reisch, who confined his efforts to promoting the purchasing power of the schilling at home. Dr. Kienböck is a man of decided methods, and in the Ministry of Finance it has always been said that with one typist he could run the whole of the Ministry himself. In any case, nobody

was allowed to interfere with him, and the chiefs of departments had scarcely ever before his regime been reduced to such impotence. In handling the question of the banks he was not always particularly adroit, but at least he has abundant energy. Whether collaboration between him and the present general manager of the bank, Dr. Brauneis, will be possible, is still doubtful at the moment. It is possible that, not immediately but in the near future, somebody closely related with the new President will be nominated as chief official of the bank.

At the Credit-Anstalt the long-expected change has now taken place. Dr. Spitzmüller is leaving the bank altogether, and is not remaining as vice-president, as it was one time supposed he would. It is expected that the present vice-presidents will also retire, while the president, Baron Louis Rothschild, will retain his position, in accordance with the express wish of the Government. One of the first tasks of the new general manager will be to come to a new standstill arrangement with the foreign creditors, which should include relief, both as to capital and interest, for Austria, which took upon itself to guarantee the commitments of the Credit-Anstalt. Furthermore, an agreement will have to be made with the National Bank and the Government, so that the tremendous bill of exchange indebtedness of the Credit-Anstalt at the National Bank may at last be reduced or converted into some other form. As things stand at present, the National Bank is compelled to exercise the greatest reserve in relation to bills of exchange handed in for discounting purposes by the other banks and by trade in general, because the Bank cannot further reduce its percentage of cover. As the Credit-Anstalt will not for some time be in a position to redeem its bills, the only thing to be done will be to convert this bill debt, if possible, into a loan.

The new President of the National Bank will also have to face the question whether he can accord facilities in the matter of the foreign currency restrictions. The ex-president, Dr. Reisch, declared that he regarded such a step as most difficult of accomplishment so long as foreign help was not forthcoming. Apart from such assistance, holdings of foreign exchange would of necessity decline still further, and the Bank would have to pay the bank-note tax. People are continually being arrested for illicit dealings in foreign exchange; they pay prices for foreign means of payment and for gold which are up to 30 per cent. above those quoted officially. The industrialists are demanding the cancellation of the restrictions on foreign exchange dealings, and in their claim they are backed up by most of the merchants. Up to the present, however, the National Bank and the Government have not shared this opinion.

Unemployment is still alarming. The total figure is at present about 370,000 in receipt of the dole, together with 70,000 old age pensioners and about 16,000 unemployed without benefit, so that a level of 500,000 unemployed is nearly reached, and consequently every twelfth Austrian is out of work. There is no sign of an improvement in exports, for the expectations which were attached to the "clearing" arrangements are proving more and more clearly to have been optimistic. Very shortly a "clearing" contract with France will be signed. A department is being set up in Paris to function as clearing office and to do the same work in regard to Austria as, for instance, the Swiss National Bank does under the Austro-Swiss treaty. This office will probably be set up not at the Banque de France but at the Chamber of Commerce in Paris. In the past year imports from France amounted to 56.5 millions and exports to France to 63.2 million schillings.

Individual small industries show the worst signs of the severity of the crisis. In the Vienna luxury industries there is at present a tendency to open branch factories abroad, as export is being injured by the difficulties over foreign means of payment and the high import duties imposed in neighbouring countries. More than a year ago there were 2,800 workers engaged in the Vienna fancy leather industry, but at present there are only 150; in the hat industry the number of workers employed has sunk from 6,500 to 800. Dismissals of domestic servants are

still proceeding fast, because people are obliged to cut down expenses, particularly on account of the heavier housing tax. Under these circumstances, revenue from all taxes is bound to decline. In various branches of the metal industry there have been meetings of the representatives of the workers to advocate the prompt conclusion of a commercial treaty with Russia. The Government and the banks are, however, not inclined to extend the risk which they are already running.

Bankruptcies and insolvencies were as bad as ever in January. The weekly average was about 116 compositions and 18 bankruptcies, against 62 and 12 in January of last year. There is no animation observable on the Stock Exchange. On some days shares in terms of foreign currencies rose, and Turkish securities also underwent a considerable improvement. In general, however, the tone was very quiet and the turnover very small. The saving deposit movement is not unfavourable, but there is no improvement in the quotations of securities bearing fixed rates of interest.

HOLLAND.

New Quotas — Finance — Trade Treaties.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, February 10.

DURING the past week four new Royal Decrees have been issued under the quota law, limiting imports of boots and shoes, knitted wear, woollen and part-woollen fabrics, and outer garments respectively. The boot and shoe industry has eagerly desired the limitation of the import of foreign footwear. In consequence of intense foreign competition, prices had dropped to a disastrous level. Imports of boots and shoes during 1931 were 53 per cent. larger than in 1930; during the period October-December imports rose to 138 per cent. of the corresponding period in 1930, and in the month of December the importations were even 180 per cent. higher than in December, 1930. Exports dropped to 354,717 pairs, and the output of the leather-producing industry had to be considerably curtailed in consequence of the reduced requirements of the Dutch shoe factories. The new Decree provides that during the period from January 1, 1932, to April 1, 1932, no imports may exceed prescribed percentages of the average number of pairs per quarter imported from each country in the years 1928, 1929 and 1930. These restrictions will chiefly affect Germany and Czechoslovakia, and it is said that, in consequence of these restrictions, Bata, the great Czechoslovak shoe manufacturer, is planning to erect a factory in the Netherlands.

During the period from February 1, 1932, to May 1, 1932, the import of outer garments and underclothing, knitted or made of tricot (socks and stockings excepted), is limited to 60 per cent. of the average value per quarter imported from each country during the years 1928, 1929 and 1930. The import of fabrics, wholly or partly of wool and of outer garments is similarly restricted, but the percentages are 62½ and 50 respectively. For outer garments containing rubber it is 100 per cent. These latter restrictions involve principally England and Germany, which countries had a good outlet for these goods in the Netherlands.

The new quota regulations are gradually giving rise to loud protests on the part of importers and dealers, who consider that their means of existence are being menaced thereby. The Rotterdam port interests have also protested to the Minister of Labour, Commerce and Industry.

The wages of dock labourers in Rotterdam and Amsterdam have been reduced. The wages of labourers in the port were 5.60 guilders per day, as compared with 4.75 guilders in German ports, and 4 guilders in Antwerp. The employers have been compelled to reduce the rate of wages to 5.20 guilders per day, in connection with which they point out that the reduction should not fall unduly heavily on the employees, in view of the fact that the cost of living has dropped by 18 per cent. since 1924. Even after this wage cut, the standard of wages in the Dutch

ports will be exceptionally high in comparison with the rates prevailing in foreign ports.

A Bill has been introduced into the Second Chamber of Parliament authorising the Minister of Finance to negotiate a loan of 200 million guilders. The loan is to serve for the conversion of the 1922 loan and for the consolidation of floating debt. As expenditure has been increased by the crisis, a Bill has been introduced, providing for the imposition of a 10 per cent. increase on the sugar excise duties, and an increase in the extra duty on wine excise from 20 per cent. to 80 per cent. In addition, increases are proposed in the duties on cigarettes, as well as in the stamp fee on foreign stocks and shares, and in the import duties on semi-tropical fruits, etc. The annual yield of the measures proposed is estimated at a total of 13.2 million guilders. From this, 1.2 millions have to be deducted for super-tax exemptions on land taxes, leaving an aggregate of 12 millions. All the measures proposed, except the exemptions from land tax, are to apply until January 1, 1934.

The distress among the peasant and agricultural population of the Netherlands is very acute, and petitions for support are repeatedly being submitted to the Government by various organisations. The new import duty which Britain is to impose on tomatoes means a heavy blow to our tomato growers. The import duty on tomatoes in the months of June and July is to be equivalent to 16 Dutch cents per kg., and from August to October, inclusive, 8 cents per kg. As the price of tomatoes at the Rotterdam auction was 30 cents per kg. in June, 1931, and 9 cents in August, the duties will be ruinous to our output.

It is announced that the negotiations for a new commercial treaty with Belgium have been brought to a successful conclusion. All kinds of problems, such as the question of the Scheldt estuary and the communication with the Rhine, with regard to which there has hitherto always been divergence of opinion, have now been solved. In Brussels the signing of the Belgian-Dutch treaty is expected with certainty within a few months.

As regards the Oslo treaty, the discussions held at Geneva have failed. It was suggested by Holland that the scope of the treaty should be extended to embrace quota matters. As an example, attention was drawn to the agreement on this subject between Belgium and the Netherlands. The suggestion of the Netherlands, however, did not find favour among the representatives of the other signatories, and disappointment was generally expressed as to the practical value of the Oslo treaty. In this respect Denmark in particular drew attention to the quota measures adopted by the Netherlands to the detriment of the import of Danish meat.

HUNGARY.

Tariffs — Agriculture — Exchange Rationing.

(FROM OUR CORRESPONDENT.)

BUDAPEST, February 9.

It is the irony of fate that the Hungarian people should begin to realise the evils of high tariffs at a time when its Government is compelled to restrict foreign trade by all sorts of prohibitions, increased duties and other devices to protect the currency. However desirable a reasonable commercial policy would be in itself for all the Danubian countries, the time is not opportune for sweeping changes now, because every nation is preoccupied with its own budgetary and monetary difficulties. On the other hand, there is little doubt that time is working for a change. The question is whether a reasonable tariff policy and a close economic co-operation will forestall or follow the complete financial disaster which is threatening all the Danubian countries if the present system continues. And short of a miracle there is little hope that 1932 will bring a change for the better.

The basic industry of Hungary—agriculture—is in a pitiful state. The aggregate value of the 1931 harvest

is estimated at less than 1,000 million pengő, as against an average of 2,000 million pengő in the period of 1927-29. Prices have fallen, marketing is becoming increasingly difficult, but debt charges fixed in gold currencies remain unaltered. And, in addition to the crushing taxation and debts, the farmer has to bear the heavy burden of the mischievous tariff policy of the past and present, which has resulted in a striking discrepancy between agricultural and industrial prices, much to the detriment of the farmer. The bounty given to wheat and rye growers in 1930 and 1931 did not prove to be an effective help to agriculture, as it has delayed the necessary changes in production. The precarious state of the Treasury does not permit the continuance of the artificial "pegging" of wheat and rye, and the Government has announced that the bounty system will be discontinued as from June 30, 1932. It is not yet known what the Government proposes to do to relieve the farmers.

Complaints against the exchange regulations and the meagre rationing of the National Bank have become the order of the day. Scarcely one-third of the export *devisen* were surrendered to the National Bank in the period July 17-December 31, 1931. Though it is certain that the Statistical Department has over-stated the value of exports, returned at about 250 million pengő since the exchange restrictions came into force, it is no wonder that the National Bank could not allow more than 45.1 million pengő for imports, as the amount of surrendered export *devisen* totalled only 65.5 million pengő in the period July-December. The League Report states that the percentage of imports covered by exchanges allowed by the National Bank amounted to 13 and 23 per cent. respectively of the total merchandise imports in October and November, 1931. The prospects for 1932 are certainly not better. The various clearing and quota agreements entered into with Austria, Czechoslovakia, Switzerland, Germany, etc., have proved of little value to promote trade. Negotiations with Czechoslovakia for the conclusion of a new commercial treaty, after more than a year of Customs war, have not yet resulted in any agreement.

The difficulties arising out of the transfer moratorium declaration are almost daily increasing. Though the good faith of the Hungarian Government in the matter of giving priority to the League Loan of 1924 cannot be questioned, the other creditors are complaining of unequal treatment. It is difficult to see how the delicate problems arising out of the transfer moratorium can be solved in the absence of the creditors' representative in Budapest. More than six weeks have elapsed since the transfer moratorium was declared, and in spite of the fact that Baron Korányi, the Finance Minister, expressed in Geneva his desire to negotiate with the groups of the creditors at the earliest date, practically nothing has happened. Negotiations for new standstill agreements, as they only confirm an existing status, are matters of rather secondary importance. But even these have been unsuccessful so far.

NORWAY.

Money — Banking — Trade Policy.

(FROM OUR CORRESPONDENT.)

TRONDHEIM, February 9.

ALTHOUGH conditions in the domestic money market have shown stringency for some length of time, this tendency has lately become more pronounced, a fact which is clearly borne out by the return of the Norges Bank for January 31st. While notes in circulation at January 22nd showed some decline compared with the previous week, this item rose by the end of the month from 309.6 million kroner to 310.08 million kroner. At the same time, deposits fell off by some 8 million kroner, balances abroad by well over 4.5 million kroner, and foreign securities by about 2.6 million kroner. This somewhat unfavourable development is not, however, unusual at this time of the year, when trade figures generally decline after the seasonal expansion over Christmas, and dividend payments often cause an extraordinary drain on the resources of the private banks.

In the course of the past month most of the joint-stock banks have published their reports. Of the so-called "big three" in Oslo, the Christiania Bank og Kreditkasse at present remains as the only "free" bank, and the publication of its report naturally is eagerly awaited. It appears that it has had a favourable year, in spite of the general trade depression and the somewhat reduced resources with which it has had to work. It is maintaining a dividend of 8 per cent., and has been able also to appropriate considerable funds for depreciation. What is true of this bank may also be said—with modifications—of most of the other Norwegian banks, whose position is now generally recognised as very sound. The two or three cases of suspended payments that occurred last month refer to provincial banks with a relatively insignificant sphere of action. The work of reconstruction of the Norske Creditbank and the Bergens Privatbank is now well advanced, as sufficient new capital has been secured. It is expected that normal operations on a free basis will be resumed in the near future.

No political events of any importance have occurred at home for some time past, and the interest of politicians seems to be chiefly concentrated on international affairs. The question of a mutual preferential agreement between the British Empire and Scandinavian (as well as certain other) countries has been discussed with keen interest in this country. The commercial intercourse between Great Britain and Norway is so extensive that closer co-operation between the two countries with regard to their fiscal policy would prove of the utmost importance to Norway, as well as to Great Britain herself. Further developments in this matter are being eagerly looked forward to in Norwegian business circles.

Unemployment figures for January 15th show a slight increase since December 15th last, though the figure, 84,686, is considerably higher than a year ago, when the number of unemployed was 28,596. Operations on the Bourse were not very brisk last month. Bonds were steady, but the tendency for shares has been sagging. Recently, however, shipping shares have been firmer, especially those connected with Far East markets.

SWITZERLAND.

Foreign Trade — Industry — Budget.

(FROM OUR CORRESPONDENT.)

GENEVA, January 30.

THE economic depression has not yet reached its bottom in Switzerland, and the general situation was aggravated in December by a further drop in exports and a rise in the number of unemployed. The December foreign trade returns were unsatisfactory, not only on account of the decrease in exports, but also on account of the increased adverse trade balance. Imports totalled £8,174,100, the highest figure of the year, and that rise is due mainly to the fact that big purchases were made in anticipation of the coming increase in Customs duties and of the setting up of import restrictions. Exports, on the other hand, fell to £3,711,000, the lowest figure of the whole year.

The foreign trade results for the year 1931 show a serious contraction. Imports aggregated £90,048,181, compared with £106,568,064 during the previous year, a decrease of about 15 per cent.; exports totalled £53,951,908, as against £70,700,000, a drop of nearly 23 per cent. against 1930, which was already a low record year. The adverse balance is thus £36,096,278, compared with £35,868,001 last year, and it is not expected that it can be made good by invisible exports, as the revenue derived from securities, banking and the hotel industry will be much lower than during the previous year.

The slump in exports is particularly striking in regard to the key industries—watchmaking, silk, cotton and machinery—the aggregate sales of which show a decrease of 81 per cent. against 1930. The monthly average of exports is £4,495,992, the lowest figure recorded since 1914. During the economic depression of 1922 and 1923

the average was respectively £5,871,000 and £5,867,000, and since then wholesale prices have been reduced by about 20 per cent.

Commercial exchanges with the five principal countries were as follows:—

	(£ millions.)		(£ millions.)	
	Imports from	Exports to	Imports from	Exports to
	1930.	1931.	1930.	1931.
Germany	28.0	25.3	11.2	7.5
France	18.0	14.1	7.3	5.7
Italy	7.4	6.5	4.8	3.7
Great Britain	9.2	3.8	10.8	9.7
U.S.A.	8.0	6.2	5.3	3.4

Germany retains the first place among the purveyors to the Swiss market, while Britain remains fifth. On the other hand, Britain has taken among the chief buyers of Swiss goods the first place, which Germany held last year. Commercial exchanges with Great Britain were rather slack; imports from Britain totalled £4,144,000, as against £9,277,000 in 1930, while exports to Britain aggregated £9,900,000, compared with £10,500,000 last year, the drop being due partly to the setting up of new duties in Britain. There is at present no sign of any coming improvement in the situation, business is very difficult, and there is no great hope of Swiss foreign trade developing in the near future.

At the end of December the Swiss Parliament passed the Budget of the Confederation for 1932. Receipts are estimated at £16,364,000 and expenditure at £16,672,000, thus leaving an estimated deficit of £308,000. While receipts show an increase of £280,000 over the previous year, expenditure is £440,000 higher. The rise in expenditure is due to the fact that the instalment for the redemption of the debt has been raised from £787,000 in 1931 to £1,651,760 in 1932; moreover, a sum of £912,000 is to be paid to the reserve fund for social and old age insurance, and the growth of unemployment has made it necessary further to increase the State subsidies for the unemployed.

It has been recently stated that the 1931 accounts will show a small surplus instead of the deficit estimated; but, if business does not improve, the 1932 deficit is likely to be higher than the estimate. The Federal Government has therefore instructed the Federal departments and services to make drastic economies so as not to exceed the sums allowed to them.

The public debt stood at £196,765,520 at the end of 1930, a rise of £696,360. This is due to an increase in the total of the floating debt. On the other hand, the consolidated debt, which was £88,020,000 in 1925, was brought down to £75,880,880 at the end of 1930, and a further £520,000 was repaid in the course of the past year. Consequently the sum needed for the interest and service of the debt was reduced from £4,664,000 in 1925 to £3,999,600 in 1931, and it will only be £3,608,000 in 1932.

The financial situation of the Confederation is sound, but it is felt that the Government is too generous in the granting of subsidies to the Cantons, Communes and various organisations. In 1920 State subsidies aggregated £1,460,000; they rose to £2,400,000 in 1931, and they are estimated at £6,000,000 in 1932. Public opinion has been vainly asking the Government to put an end to this dangerous policy, but nothing has been done so far to curtail these expenses, and, should they further increase, the question would have to be examined of imposing some new form of taxation, which the electorate would certainly refuse.

NEW ZEALAND.

Election — Overseas Trade — Prices — Production.

(FROM OUR CORRESPONDENT.)

CHRISTCHURCH, December 12.

THE triennial general elections, held on December 2nd, caused less than the usual interest, and brought few surprises. New Zealand has not yet had a Labour Government, and the two parties which have alternated in power for many years formed a Coalition late in the last session of Parliament, gave the Coalition nomination to all sitting members of their parties, avoided three-cornered contests

wherever possible, and went to the country united against Labour. The Coalition party claimed that in the face of unparalleled depression and a critical economic situation, a strong Government was needed to effect economies in administration, and asked for a mandate to deal with the changing situation as necessity might demand. The Labour Party warned electors against the "Coalition menace" to the system of compulsory arbitration of labour disputes, which is to be modified, and to State education, where economies are expected; and it advocated a State Central Bank, with heavy borrowing for public works to relieve unemployment. Few people doubted that the Coalition Party would be returned with a substantial majority. The results showed that the Coalition has lost four seats and gained two, Labour lost one and gained five, while Independents lost two. Before the poll the Coalition had 52 members, Labour 20, and Independents 8. After the election the Coalition had 50, Labour 24, and Independents 6. Since most of the Independents will support the Coalition, it is practically assured of a two to one majority. The Minister of Lands, the Hon. D. Jones, ex-Chairman of the Meat Export Board, lost his seat by a narrow margin, but there were few changes, as only eleven new members, three of whom have served before, were elected in a House of eighty. Some changes and additions are expected in the Cabinet, but it is unlikely that the new Parliament will meet till June, as the immediate need is said to be for more economical administration.

The business outlook in the Dominion appears to have improved since the winter. Part of the improvement may be seasonal, but there are indications of some recovery of internal trade. Unemployment has decreased, the overseas trade balance is definitely favourable, and, apart from seasonal developments, the relation between bank advances and deposits has been improving for some months. The value of overseas trade, however, shows no improvement as yet. For the year ended October 31st, exports were £34,369,000, as compared with £47,021,000 in 1930, and £55,877,000 in 1929, while imports were £26,946,000, against £47,074,000 in 1930 and £48,935,000 in 1929. For the latest year, therefore, exports exceed imports by nearly £7,500,000. Comparing exports during the first nine months of 1931 with the average for the same period over the five years 1927-31, wool decreased slightly in quantity and realised 52 per cent. less in value; lamb increased 16 per cent. in quantity and fell 7 per cent. in value; the quantity of mutton declined slightly, but the value fell by 28 per cent.; butter increased 18 per cent. in quantity and declined 8 per cent. in value; cheese declined slightly in quantity and fell 28 per cent. in value. Over the whole group, the fall in value is 27 per cent., but the inclusion of the two years 1930-31 lowers the base of comparison. The fall in total export values since 1929 is nearly 40 per cent. The decline in imports has been even more drastic and amounts to 45 per cent. since 1929. Comparing the first nine months of 1930 and 1931, imports of motor vehicles and timber have fallen over 70 per cent.; boots and shoes, carpets, musical instruments, hardware and iron and steel over 50 per cent.; apparel, cotton piece-goods, tobacco and cigarettes, and motor spirit over 40 per cent., and woollen goods, electrical equipment and motor tyres over 30 per cent. This decrease in imports is due in some measure to unfavourable exchange rates and higher Customs duties, but is mainly the effect of decreased purchasing power consequent upon the heavy fall in export prices.

As the year draws to its close the prospects appear a little brighter. There is more confidence in financial circles, share prices have been rising, and business has been more active since Britain's suspension of the gold standard, and mortgage registrations and discharges indicate that both capital and property are moving. But the hope of substantial improvements in export prices during the 1931-32 export season shows as yet little chance of fulfilment. Prices of dairy produce and miscellaneous items have risen somewhat from their low levels at the end of last season, but meat and hides, skins and tallow are lower. The wool sales have begun, and are being anxiously watched, for wool is a large item, and is subject to the widest variations in price. The first sales at

Auckland, Napier, Wellington and Christchurch have provided keen competition and active buying for the chief wool-using countries, but it is evident that buyers have definite and fairly low limits. Generally speaking, half-bred wool and all the finer counts show advances in price over last April's sales in New Zealand, while crossbred and all the lower counts show declines. It is generally expected that, at present prices, the total yield of the wool clip may be a little greater than last year, but still much lower than in recent years, and in many cases still below cost of production. But despite low export prices and the fact that internal costs are not yet adjusted to export price levels, the general position in New Zealand probably compares favourably with the situation in most countries. The trade balance is adjusted, the Budget balanced, economies are being effected (notably in the railways since their removal from political control), unemployment is decreasing, internal trade improving slightly, and the farmers, though hard hit, appear able to carry on. The early part of the season has been dry in eastern districts, but the volume of production is likely to be little affected, and the surplus available for export is expected to continue its steady expansion.

Letters to the Editor.

THE CRISIS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I am sorry to have to trespass further on your space in commenting on the extraordinary statistical methods which the Duchess of Atholl uses in her determined effort to prove that, as usual, Russia is the villain of the piece, and that Sir Henry Strakosch is wrong in his explanation of the world crisis. She accuses me of being misinformed on dates and figures. If I am misinformed, then so are the *Economist* and the usual trade sources from which my information was taken.

The Duchess's use of average declared import values as evidence that a particular country is under-selling the market is, of course, of little value, for these figures conceal variations in quality, condition, relative market demand, and other similar factors. Is Australia constantly undercutting because, as the Duchess's own figures show, her butter is normally imported for less than New Zealand or Danish butter? Is the Irish Free State also guilty because its eggs are on the average imported for considerably less than eggs from Denmark or the Netherlands?

As for her triumph in discovering that in 1931 Russian butter formed not 3 per cent., but 5 per cent. of our butter imports, the explanation is that I was following her exactly in quoting 1930 figures, when the proportion was well under 3 per cent. But in any case, it is ridiculous to suggest that either 3 per cent. or 5 per cent. of the supplies exercise an important influence on the market price.

With regard to eggs, the Duchess now admits that in 1931 Russia contributed only about 1 per cent. of our egg imports—apart altogether from home production, but she attempts to justify her assertion that this 1 per cent. caused egg prices to fall heavily in 1931, by observing that in 1928 Russia supplied about 9 per cent. of our imports of eggs. What imports in 1928 have to do with prices in 1931 she does not say. But if there were any force in her argument for 1931, then, presumably, Russian exports proportionately nine times as great in 1928 should have produced a correspondingly greater fall in price during that year. She seems to have overlooked the fact that actually egg prices rose in the course of 1928.

The figures of wheat prices quoted by the Duchess for January and July, 1930, being averages covering all imports, are naturally in each case lower than the prices I quoted for standard grades of high quality. But in any case the proportionate drop in price is very nearly the same in both sets of figures—25 per cent. The Duchess now admits that Russia had nothing to do with this drop, but that it was due to price cutting alternately by the U.S.A. and the Argentine. If she reads Hansard for the latter months of that year, she will find that her Parliamentary friends threw much of the blame then on German dumped wheat and French dumped flour. So there seems to have been a bevy of foreign villains in this particular piece.

As for the last three months of 1930, when our imports of wheat from Russia were unusually heavy, as compared with our imports from Canada, the United States and the Argentine, trade inquiries would have shown the Duchess that in this

period (1) the total world trade in wheat was in normal quantities; (2) the Canadian Pools and the American Farm Board were deliberately keeping off the market under the mistaken impression that by this means they could force European consumers to pay higher prices; and (3) as usual, just before her new harvest, the Argentine had practically no wheat to sell. There is a world market for wheat, and its price depends on the market estimation of supplies and demand everywhere. Actually, in the last months of 1930 prices fell about as much in North America, where there was no Russian wheat, as in this country. And at that time there was good reason to suppose that wheat prices would fall considerably further, as in fact they continued to fall for months after Russia ceased to be an important factor in the market. The grain trade has good ground for its opinion that, quality for quality, Russia sold her wheat at a higher average price than those of her competitors who held for a rise and lost.

It is true that if Russia ceased to export there would be smaller supplies of certain goods on world markets. Equally, in such circumstances, Russian purchases from abroad would correspondingly fall, and manufacturers and workmen now employed on Russian orders would lose their employment, thus even further reducing the demand for goods of all kinds.

The Duchess has produced no shread of real evidence to prove that the general fall in prices is appreciably due to Russian exports, and no evidence—for none exists—that the responsible British distributing firms who have contracted to get the best price they can under existing market conditions for Russian produce are incompetent or guilty of gross breaches of trust. I am grateful to her for providing an opportunity to demonstrate how slender a basis of fact exists for a campaign which generally relies on innuendos rather than statistics, but whose purpose is dangerously mischievous to peace and to normal trade developments.—Yours faithfully,

E. F. WISE.

DIVIDENDS FROM TAXES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—During the years 1924-30 the beet sugar factories paid £17,876,934 for 9,668,854 tons of beet. (Pages 85 and 287 Ministry of Agriculture Economic Series No. 27.)

The factories made sugar from these beets and sold the sugar to the public at ordinary market prices. The result to the factories was a profit of £8 millions (page 288).

The taxpayer provided £22,366,643 in subsidy (page 291) and approximately £4½ millions by remission of duty, so that the factories had not only their roots but also their profits given to them as a present by the taxpayer.

It would therefore have cost the taxpayer £8 millions less if he had paid the farmer for his sugar beet roots and then burnt the whole lot! The only losers would have been the factory shareholders, 33 per cent. of whom are foreigners!

Yours, etc.,

Royal Empire Society, GKO. RICHARDSON.
Northumberland Avenue, W.C.2.

ENGLAND IN PALESTINE.*

PALESTINE, the home of religions and the cockpit of the pious, has provided Mr Bentwick with a double opportunity, first to display his great administrative powers in building up its new legal system, and second to prove his gifts as an historian. It was no easy task to write and make readable the tangled story of Palestine since the war, but Mr Bentwick has done it, because being a born historian he knows how to select and marshal facts, to mingle judgment with narrative, to keep to the middle of the way, and, above all (despite his rather official style), to communicate, without straining the effect, the drama that runs through these ten years of strife and restoration. And what a drama it is! The land that Joshua overran and the Crusader fought for, wrested by a British army, dedicated by a British Minister as a national home for the Jewish people, passed over by the new League of Nations to Great Britain to be a testing ground for the

* "England in Palestine." By Norman Bentwick. Kegan Paul, Trench Trubner & Co., Ltd. 12s. 6d.

newest kind of experimental government, administered first by a Jewish statesman and then by an English field-marshal, torn by racial jealousy and religious feud, riven by earthquake, withered by drought, shaken by financial crisis, civil commotions and bloody rioting, impeded by trade boycotts, scolded by press lords, admonished by commissions, and withal growing almost every year in strength and prosperity—such is Palestine in the years covered by Mr Bentwick's history.

In her first two High Commissioners the country was more fortunate than any country in this world of bad government has a right to expect. Sir Herbert Samuel, who came to Palestine "with the halo of a saviour," and left it "trailing clouds of glory," being a Jew, was from the first a stumbling block to the Gentiles; but the five years he spent in Palestine were years of healing and peaceful development, and when he came home in 1925 he could claim for his work that it was "not unworthy of the land on whose behalf it had been done." Lord Plumer, following Sir Herbert, was hailed as a saviour—this time by the Arabs—but in the main he confirmed the policy of his predecessor, and by his success proved that Palestine could be administered as effectively by a Christian as by a Jew. His presence was "worth a battalion," and no Englishman can read without pride the tale of how, when he wanted a salute fired on Armistice Day, no gun could be found in the land except an old Turkish cannon.

The third of the High Commissioners had a more difficult task. It was his bad luck that while he was on leave the riot of the Wailing Wall broke out and that the problem was handled at the London end by a not too skilful Labour Minister and a Government that was never quite certain which side of the road it was walking on. The somewhat gaseous idealism of the Prime Minister mixed unhappily with the cynical vacillation of Lord Passfield, and the period of their responsibility is not the proudest part of England's record in Palestine.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

The Stock Exchange.

HOME RAILWAY PROSPECTS.

THREE of the four main-line British railways and the Metropolitan Railway have declared their final dividends for 1931, and the announcement of the London and North-Eastern is expected next Friday. The general conclusions suggested can be briefly summarised. The second successive year of depression has reduced railway gross revenues below the figures of 1926, the year of the coal stoppage, but expenses have been reduced to a point which would have been thought inconceivable five years ago. All the railways have earned less than the 3 per cent. ordinary dividend laid down by law as a condition of the full trustee status of prior charges and preference stocks. The Great Western has maintained its trustee position by drawing half a million from internal reserves (*via* its contingency fund). The Southern and the Metropolitan have chosen to relinquish full trustee status rather than draw upon liquid resources at a difficult time. The London Midland and Scottish has taken £495,904 from reserve, paid a nominal ordinary dividend, and hence retained the status of its prior stocks in England under the "Chancery Rules." Thus the Great Western stands in magnificent isolation as the only main-line British railway which has not lapsed from full trustee status—in other words, whose equity capital is for the time being represented by any appreciable earning power. To the remaining railways, legal prestige has appeared a small matter by comparison with the conservation of internal resources in a time of stress and uncertainty. The following table shows how

the income of railway ordinary stockholders has declined with the deepening of the depression of 1930-31:—

Company.	Stock.	Dividends.			Added to (+) or taken from (—) Reserves and Carry-forward.	
		1929.	1930.	1931.	1930.	1931.

† Not yet announced.
* £500,000 appropriated from contingency fund, which was subsequently augmented by the release of reserves no longer required. The free reserves of the company now show a slight increase over the previous year.

The results achieved last year reflect a certain credit on many railway managements. In no case, so far, has a British railway fallen far short of meeting all its preference requirements, whereas many foreign railways have not even earned their bonded interest. The figures for 22 American railroads, which we show on page 381, reveal that aggregate gross receipts fell last year, as compared with 1930, by 18.6 per cent. Of the total decline, 70 per cent. was taken up by reductions in expenditure, and the decline in net receipts was 39 per cent. as compared with

"Z" CHARTS OF FOUR MAIN-LINE RAILWAYS

(Gross Receipts: 1931 compared with Average of 1925, 1927, 1928 and 1929.)

(The vertical lines show divisions by weeks, running from the first week on the extreme left to the fifty-second on the extreme right.)

LONDON MIDLAND & SCOTTISH.

LONDON & NORTH-EASTERN.

GREAT WESTERN.

SOUTHERN.

1930. As regards the British railways, the fall in gross receipts on the London Midland and Scottish was just over 7½ per cent. as regards both railway revenue and receipts from ancillary services. On the Great Western, receipts from railways and ancillary services declined by 9.3 per cent. On the London and North-Eastern gross railway receipts declined by 9½ per cent., and on the Southern by 5½ per cent. For the four lines together the falling off in railway gross revenue was of the order of 8 per cent. The L.M.S. (whose detailed figures are shown on page 366) has recouped no less than 89 per cent. of its total decline in receipts by reductions in expenditure, so that its net revenue is down by only 6 per cent. The Great Western has recouped 62½ per cent. and suffered a net decline of 18½ per cent.

These reductions in expenditure, indeed, are the chief consolatory feature of the 1931 results from the stockholder's point of view. They are the more gratifying because, in the first place, they are due only in part to the wage reductions effected as from the end of last March, and, in the second, because, while they represent a certain "economy" in maintenance, they have not been achieved at the cost of deterioration in the high standard of British railway properties. They are in the main the result of past capital expenditure and enhanced operating efficiency since "grouping" was effected—the fruits of policy initiated in earlier years, whose benefits may have been obtained, in some cases, last year (to use a Churchillian phrase), "by a certain judicious shaking of the trees."

The following table, however, suggests that the stock markets, like the railway managements, are less concerned with the benefits of reductions in working costs than with the possible trend of future revenue:—

Company and Stock.	Highest Price, 1929-30.	Present Price.	Percent Price compared with Highest, 1929-30.	Yield (%) at Highest Price, 1929-30.	Yield at Present Price allowing for accrued interest.

* Based on dividends paid for year 1930.

Broadly, quotations for railway debentures have fallen, since the present depression began, by 17 to 18 per cent. Guaranteed stocks have declined by 14 to 16 per cent. on the Great Western and the Southern, and by 25 to 30 per cent. on the London and North-Eastern and the London Midland and Scottish. Senior preference stocks have lost around a third of their value on the two best profit-earning lines, and over two-fifths on the other two lines. The junior preference stocks of the London Midland and Scottish and the London and North-Eastern are now regarded as equity stocks with a limited income, while the equity stocks of all companies, except the Great Western, stand at prices representing not much more than "option money."

It may be contended that the market is laying too much stress on the "industrial risk" as regards debentures and guaranteed stocks, and that, in view of the wide margin of earnings still available, some of these stocks are decidedly cheap at present prices. Another explanation, however, must be sought for yields of 8 and 9 per cent. on senior preference stocks. The market appears to have at the back of its mind, not only the fear of trade depression in 1932 (attested by a further decline in gross revenue on the four lines for the first five weeks of this year, as

compared with 1931, of 8½ per cent.), but apprehension that part of the railways' traffic has been lost for good. The latter impression has been intensified rather than allayed by a fresh attack by the railways, at this precise moment, on the alleged "unfair advantages" of road transport. A glance at the next table will show that the incidence of falling traffic has not been equal on all the four lines either last year or over the whole period since "grouping":—

TOTAL GROSS REVENUE FROM RAILWAY WORKING.									
(Amounts in million £.)									
Year.	L.M.S.R.		L.N.E.R.		G.W.R.		S.R.		Total-4 Companies.
	Amt.	1923 = 100	Amt.	1923 = 100	Amt.	1923 = 100	Amt.	1923 = 100	Amt. 1923 = 100

* Coal stoppage. † Approximate figures.
† Comparison since 1928 is approximate only, as a result of accounting changes, the general effect of which is to raise figures for 1928 and later by about one per cent. in each case.

Last year the falling tendency in gross railway revenue was least on the Southern and the London, Midland and Scottish, and greatest on the Great Western and the London and North Eastern. The point is graphically revealed by the charts on the previous page, reproduced by the courtesy of the *Financial News*, and of Mr T.G. Rose, author of "Business Charts."* These charts have been drawn on the "Z" principle, so that they show at a glance how gross receipts fluctuated last year, by comparison with those of an "average" period embracing the years 1925, 1927, 1928 and 1929. The "current" curve in each case is a simple plotting of each of the figures for "all traffic" during the 52 weeks. The "cumulative" curve explains itself, while the "trend" curve is based on the moving totals for 52 weeks ending with each week in question. Thus, the position of the curve at the twentieth week of 1931, for example, is determined by the total receipts for the last 32 weeks of 1930 and the first 20 weeks of 1931.

The charts show that the London Midland and Scottish and London and North-Eastern Railways had suffered most from depression before 1931 began, their "trend" line starting furthest from the average. Last year, however, the trend line of the Great Western showed a steeper fall than that of the London Midland and Scottish, while the "gradient" of the decline became noticeably less after the first few weeks of last year. The Southern, which at the beginning of last year had suffered least from depression, began to show signs of a less favourable trend on heavy goods traffic are tending increasingly to register the effects of hard times, of which other lines took the impact much earlier.

Until a decisive upturn in trade can be prophesied with more confidence, this tendency may continue. Meanwhile, it would be regrettable if better times, whenever they came, were the signal for intensification of competition between rail and road. The figures given in the last table suggest that, even in "good" years, the drain of railway traffic to the roads has been appreciable. Income tax recently levied on the roads, for Exchequer purposes, has taken the sting out of part of the transport. The problem remains, however, of effectively co-ordinating two transport agencies which ought to be complementary and not competitive. Whether its solution depends upon Parliament's acceptance of the implications of the fact that the railways no longer enjoy a "monopoly," except for a limited range of heavy goods, and the sweeping away of statutory control of rates and fares, is a very far-reaching question.

* "Business Charts" by T. G. Rose, M.I.Mech.E. (London), Sir Isaac Pitman and Sons, Ltd.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.
February 16.

ACCOUNT.
February 18.

AN easier tone throughout the markets was associated with obvious internal and external factors like the continuance of hostilities at Shanghai, fading hopes of an early reduction in Bank rate, and a large increase in the unemployment figures during January, which was regarded as more than seasonal. In view of the correspondence between movements in London and New York, to which we have repeatedly drawn attention of recent weeks, another factor may have been the total absence of any signs of the much-prophesied improvement in American sentiment. Feeling in London was, if anything, slightly better in mid-week, the earnings and dividend statements of the railways, particularly the London, Midland and Scottish, being less adverse than had been feared, while some sections of the market drew a modicum of comfort from the reduction in the adverse visible balance of British overseas trade during January, and from nebulous reports of Anglo-French agreement over financial and fiscal questions. Prevailing conditions were reflected in a slow decline in the volume of business rather than in any considerable sagging of prices, the markets suffering less from unfavourable views than reluctance to take any view.

Trading in Gilt-edged stocks remained dull and restricted, partly on the mid-week decline in sterling and partly on a little liquidation by stale bulls. Funding Loan came on offer and movements in War Loan were wider than usual, though a moderate improvement occurred on Thursday. India loans were also realised, and Australian issues again had an uncertain trend, the announcement of the prospective payment of the interest on New South Wales loans being regarded as reassuring but vague.

Only a moderate business was done in Foreign Bonds, Brazilians being particularly dull owing to delay in publishing the Funding Scheme. German bonds received rather more attention. Chinese and Japanese issues lost further ground on the continuance of hostilities, and on fears regarding the ability of Japanese finances to stand prolonged strain.

The dividend announcements by three of the "Big Four" railways are discussed on other pages. The relapse of certain stocks from full trustee status was not unexpected. On Wednesday, the statement of the large economies made by the London, Midland and Scottish put the market better, but the Great Western statement quickly caused a reaction, which affected both ordinary and preference stocks of all the groups on Thursday. The continued fall in gross receipts provoked adverse comment. The Underground dividend, announced after hours on Thursday was 7 per cent., against 8 per cent. for 1930. Argentine rails were marked lower on a small business after reports of damage to the maize crop. Canadian Pacific was weak on the intimation that future dividends would be paid half-yearly instead of quarterly.

The tendency of the Industrial Markets was uncertain, tariff prospects exerting little influence on prices, while the cautionary note of Mr Runciman's speech on the outlook appreciably affected sentiment. Investment demand for electrical shares was less in evidence. Iron and steel issues were again heavy on hope deferred. Despite the mid-week announcement of an agreement in principle on the more-looms-to-a-weaver question, textile shares were depressed. Breweries remained fairly steady, but Tobacco shares obtained little support, Carreras being particularly heavy on forced selling. Selling from New York depressed the price of Ford, whose intentions with regard to the "baby" car market, are discussed in a Note on page 367. Tate and Lyle fluctuated sharply on the news that the continuance of the Thames strike might involve the closing of the London factory. Cables and Wireless rallied on sym-bear closing. International shares were irregular in sympathy with the tone in New York, but improved slightly before the week-end in a slight revival of Continental interest. Bank shares showed little change, but altera-

tions in insurance share quotations were fractionally downwards.

Increased activity in oil shares did not last long, prices tending to recede immediately Continental support was withdrawn. A slight revival of Paris buying, however, was sufficient to put Mexican Eagle, Royal Dutch and V.O.C. better towards the end of the week. Rubber shares were as quiet as ever, and tended to sag in sympathy with the weaker conditions in the commodity market. Attempts to sell on an unwilling market caused a reduction of quotations for tea shares in mid-week, despite the steadiness of Indian tea prices in the auction room.

Business in the Mining Markets was on a small scale, though the undertone became less dull as the week progressed. Kafirs were a little harder on a modest inquiry from Johannesburg and Paris. Copper shares, however, were adversely affected by the sharp fall in the price of the metal, which is dealt with on page 368. A potential improvement in tin shares was checked, similarly, by signs of weakness in the price of the metal.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The course of the markets was irregular, slightly firmer conditions in mid-week putting a temporary end to scattered selling which had reduced a number of stocks, particularly railroad issues, to new low levels. The news that the U.S. currency is to be immediately expanded by \$2,500 millions, however, brought a mercurial rise in all sections of the market during Thursday's late session. Business was helped by a statement of the Reconstruction Finance Corporation announcing its intention of opening 17 regional agencies; and describing its loan policy. A maximum of three years is laid down for advances, which in no case can be made to new enterprises. Dealers were hopeful that a compromise might be made between the Administration and Senator Glass, whose Bill for altering the banking system is holding up measures for relieving depositors in failed banks and an "easier money" policy in general. The fresh reduction of copper prices and the reduced demand for oil unfavourably affected the more speculative markets. Trade and industry showed no signs of permanent recovery. Steel mill production for the week ended February 6th ran at 28 per cent. of capacity, as in the previous week. The unfilled orders of the U.S. Steel Corporation for the month ended January 31st were 2,648,000 tons, against 2,735,000 at the end of December and 4,132,000 tons a year ago. Automobile output was estimated at 126,518 units, a gain of 2 per cent., as compared with December and a fall of 29 per cent. as compared with January, 1931. The Ford eight-cylinder model is undergoing its final test, and production will start by the end of this month. The business index of the *New York Times* stood at 62.2 for the week ended January 30th, as compared

(Continued on page 364.)

LONDON ACTIVE SECURITY PRICES AND YIELDS.

NOTE.—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock is at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

* 2-hour session.

PARIS.

Early professional profit-taking caused a fall in numerous issues, accentuated by London selling of oil and rubber shares. The influence of Wall Street further weakened confidence, and quotations continued to decline in the early days of the week. Trading was of small dimensions, particularly on Tuesday, when business was adversely affected by the Shrove Tuesday holiday.

Banks, iron and steel and coal shares came under selling pressure, Banque de France and Credit Lyonnais reacting sharply. The Dawes Loan showed weakness, partly due to professional "switching" into Young bonds. Sharp declines occurred in the speculative markets, following the weaker tone of metal prices. A strong rally occurred in Thursday's sessions, however, and prices advanced in most departments.

AMSTERDAM.

The Amsterdam Bourse opened with an almost complete lack of business, both among professional operators and the public. Industrial shares continued to lose ground, Unilever and Philips Lamps being particularly affected. Dutch Ford were irregular on uncertainty regarding interim dividend possibilities. The fresh taxation proposals of the Dutch Government were a bear point on Tuesday, arbitrage issues simultaneously declining on weakness in New York. Sugar shares were uninfluenced by a revival of reports of a fresh tightening of output restriction measures.

	Feb. 4, 1932.	Feb. 8, 1932.	Feb. 11, 1932.	Feb. 4, 1932.	Feb. 8, 1932.	Feb. 11, 1932.

OTHER CENTRES.

Dull and unsatisfactory conditions prevailed on most of the minor European Bourses throughout the week. Stockholm was irregular throughout. Milan was flat, apart from the market in Government stocks, with a slight improvement in mid-week. Small losses occurred all round on the Brussels exchange. Unofficial quotations in Berlin again assumed a downward trend. Dye Trust was done at 91.00 (against 97.75 a week ago), Siemens at 123.000 (against 126.75), General Electric at 26.50 (against 33.75), and Reichsbank at 100.50 (against 107.50).

INVESTMENT NOTES.

Trustee Law Anomalies.—The anomalies of contemporary British law regarding trustee investments, which we found occasion seriously to criticise some time ago (see the *Economist*, September 27, 1930, page 578), have been exemplified by a number of recent developments which are causing disquietude among trustees throughout the country. The failure of the Government of the Commonwealth of Australia immediately to pay the interest on New South Wales bonds due on February 1st last, when Mr Lang failed to honour his obligations, has placed both New South Wales and the Commonwealth in the temporary position of defaulters. Under the Colonial Stock Act of 1900, however, and the Trustee Act of 1925, it would appear that no provision exists for removing from the list any Dominion security on which interest is not being paid. At the same time, the legal position of many home railway prior stocks has been affected as a result of the decline in railway earnings, to which reference is made in a leading article on an earlier page. The Trustee Act of 1893 made specific classes of railway prior stocks eligible for investment by trustees so long as not less than 8 per cent. had been paid on the ordinary capital for ten years preceding. This is reproduced in Section I. of the Act of 1925, under which availability is also conferred on "securities authorised under Rules of the Supreme Court." As regards the investment of monies under the

control of the Court of Chancery, various rules have been made. When the London and North Eastern Railway reduced its ordinary dividends to 1/2 per cent. on preferred stock only, after the coal stoppage of 1926, its ordinary stocks remained in the "Chancery list" by virtue of an Order of the Court rendering eligible debenture, preference, guarantee or rent charge stocks of railways in Great Britain or Northern Ireland which had paid any ordinary dividend during ten preceding years. Last year the London, Midland and Scottish stocks lapsed from "trustee" to "Chancery" status, and this year the prior stocks of the Southern and Metropolitan Railways have suffered the same metamorphosis. Until the London and North Eastern statement has been made, next week, the market will remain uncertain whether that company has fulfilled even the "Chancery Rules." In any case, if the present depression were to continue for many more months, the position of more than one British railway, as regards fulfilment of the "Chancery Rules," might be open to question. Though the Court might conceivably lay down that all railway securities receiving full payment were eligible, and trustees would not, of course, in any case, be under a specific obligation to sell out their existing holdings, the prestige of the framers of British Trustee Law would undoubtedly suffer a further decline. It is evident that provision should be made for more frequent overhauling of the content of the Trustee List, in harmony with changing conditions in the investment market. At present, the List is both too broad and too narrow, so that, e.g., it includes L.M.S. 4 per cent. preference stock (1923), whose dividend last year was not fully earned, and excludes the issues of the Central Electricity Board. More particularly, its provisions as regards the eligibility of Dominion issues should have regard primarily to the benefit of investors rather than borrowers.

New South Wales Loans: Announcement.—The Financial Adviser to the Commonwealth Government has issued an announcement regarding the default on the New South Wales loans, to which we referred in our last issue. The announcement is merely a repetition of a statement issued to the Australian Press by the Commonwealth Government, to the effect that it is satisfied that effective action can be taken to secure the necessary amount from the Government of New South Wales, and that it recognises that, as a result of the default, the credit of New South Wales in particular, and, to an extent, the credit of the Commonwealth as a whole, has been gravely impaired. In the interests of Australian credit, the Commonwealth Government has, therefore, decided to pay the amount due as soon as arrangements can be made, and, in the meantime, will use every available method to compel New South Wales to pay the full amount. This statement has not entirely pleased the market, and until a date for the payment of the overdue interest is definitely fixed it is unlikely that there will be any appreciable recovery in Australian stocks. New South Wales stocks, in particular, have remained a nominal market. Moreover, the revenue returns of the past seven months, which have just been published, are not a favourable market factor. The deficit on the New South Wales Budget amounts to £8,170,000, revenue being £22,999,000 and expenditure £31,169,000. The appointment of Mr S. M. Bruce, a former premier, as a Minister Resident in London is perhaps an indication that Australian credit in London will be jealously watched in future.

The Greek Debt Position.—A report current in the middle of last month that Greece intended to suspend the service of her external debt was subsequently denied by M. Michalacopoulos, but the rumour sufficed to draw market attention to the difficult financial conditions which prevail in that country at the present time. As regards the revenues assigned for the service of the debt, gross receipts from monopolies are reported to have amounted to Dr. 209,926,040 for the year 1931, against Dr. 210,161,117 for the corresponding period of 1930,

while receipts from the Piræus Customs totalled Dr. 990,431,581, against Dr. 959,842,449. Despite an improvement in the visible balance of trade during 1931, the further decline in invisible exports has resulted in an adverse balance of international payments, so that the foreign exchange reserve of the Bank of Greece has slowly fallen, the ratio being 44.42 per cent. on December 28, 1930, and only 41.18 on December 29, 1931.

So far Greece has endeavoured to balance her Budget, and M. Venizelos, the Prime Minister, has constantly stated that her financial integrity must be upheld. At the request of the Bank of Greece and the Greek Government, Sir Otto Niemeyer and an International Financial Commission are going to Athens to investigate the prevailing economic and financial conditions and to make recommendations regarding future measures. At the same time, M. Venizelos has visited a number of European capitals, and is understood to have put forward the suggestion that, in view of the difficulty of raising a further loan, an advance of some £2,500,000 should be made to the Greek Government, which would be periodically renewable, and would provide the means to

V. STASINSKAS, Governor.

J. PAKNYS, Vice-Governor.

J. MASIULIS, } Directors.

I. MUSTIKIS, }

B. MINIATAS, Chief Bookkeeper.

At the annual meeting of stockholders of the Lietuvos Bankas, held January 30th, 1932, 7 p.m., at the Bank's offices, Kaunas, presided over by Mr. J. Tubelis, reports of the Directors, of the Advisory Board and of the Auditing Committee were presented. The reports were by motion unanimously carried, ordered received and filed. It was further voted to pay to the stockholders 8 per cent. dividend.

complete the productive works undertaken in Macedonia, which are expected in due course to increase the national revenue by seven millions sterling. A rumour current in the market this week that Greece would follow the example of Uruguay and suspend sinking fund payments has not been confirmed.

L.M.S. and Great Western Results.—The accounts for 1931 of the London Midland and Scottish Railway disclose a decline, as compared with the 1930 figures, of £5,018,000 in gross railway receipts and of £673,000 in receipts from other businesses, and a fall in other net income of £150,000, making a total decline of £5,841,000. No less than £5,070,000, or 89 per cent., of the loss in gross receipts, however, has been made good by a reduction in working expenses, of which £900,000 is accounted for by alterations in wage rates. This is an excellent achievement, the reasons for which are discussed in a leading article. By drawing upon available reserves to the extent of £495,904, the company is able to cover all its prior charges and to pay a dividend on the ordinary capital of $\frac{1}{2}$ per cent., compared with 2 per cent. for 1930:—

Year to December 31.	1929.	1930.	1931.
Railway receipts	73,195,264	68,241,425	63,223,399

Ordinary dividend:—			
Amount	4,284,110	1,904,049	2,380,006
Earned %	$4\frac{1}{2}$	$\frac{1}{2}$	$N\frac{1}{2}$
Paid %	$4\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Carried forward	211,655	Nil	Nil

The amount expended on maintenance of way and works has declined by £571,459 and on maintenance of rolling stock by £1,180,615. The number of locomotives has been further reduced from 9,319 to 9,032, the latter figure including 784 stored and withdrawn from service. Although the total of engine hours has fallen by 6.4 per cent., the total engine miles run has declined only by 4.9 per cent. £1,783,384 is now invested in transport undertakings, against £1,527,541. Investments, having a market value of £15,608,048, appear on the balance sheet at £16,963,226. A statement issued by the Great Western Railway shows that gross receipts from railway and ancillary businesses for 1931 were £3,207,237, or 9.34 per cent. less than in 1930. Miscellaneous net receipts were lower by £271,006, and gross expenditure by £2,173,493, or 7.7 per cent. Net revenue at £5,682,396 was down by £1,304,750. After taking £500,000 from contingency fund, the directors recommend the payment of a final ordinary dividend of $1\frac{1}{2}$ per cent., making 3 per cent. for the year. The balance carried forward is £62,473, against £65,396 brought in.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper Ltd.,"

* Excluding amounts received from surplus lands committee.
† Costs of opposition to London Passenger Transport Bill.

The sum of £108,938, representing a dividend at the rate of $4\frac{1}{2}$ per cent. per annum on the surplus land stocks, was receivable from the Surplus Lands Committee, against £105,636 received in 1930. Some £141,000 has been expended during the year on maintenance of way and works, compared with £159,000 in 1930, while £6,000 less has been spent on the upkeep of rolling stock. Locomotive running expenses are practically unchanged, though savings were effected in traffic expenses to the extent of some £12,000. The statistical returns show that the number of passengers carried fell from 96,235,533 to 90,174,442, while goods tonnage declined from 4,324,115 tons to 4,156,477 tons. Allowing for the final dividend, the consolidated stock gives a yield of about £7 7s. per cent. at the present price of £35 $\frac{1}{2}$.

Gas Company Results.—The reports for 1931 of the Gas Light and Coke Company and the South Suburban Gas Company reveal that the consumption of gas in the areas worked by these companies is still on the upward grade. The Gas Light and Coke Company shows receipts from gas sales of £8,519,389, against £8,441,802, and from rentals of £1,516,647, compared with £1,469,662. Net profit has risen from £1,339,703 to £1,412,712, permitting the payment of the usual ordinary dividend of $5\frac{1}{2}$ per cent. and an increase of £17,066 in the carry-forward, after writing £51,114 off debenture issue expenses and crediting £18,453 received in Treasury grants. The report of the South Suburban reveals that receipts from gas sales amounted to £840,830, compared with £771,206 in 1930, while income from rents advanced from £113,122 to £119,085. Sales of residual products contributed only £159,510, against £165,366, a further small loss being returned on ammonia sales. Net profit totalled £109,509, an increase of £7,517 compared with last year; but as the new preference stock required £15,000, the ordinary dividend earnings were insufficient to cover the annual payment, reduced from $6\frac{1}{2}$ per cent. to $6\frac{1}{4}$ per cent.

Year to December 31.	Gas Light and Coke.	South Suburban.
	1930.	1931.
Sale of gas.....	£ 8,441,802	£ 8,519,389
Net profit	1,339,703	1,412,712
Earned for ord. %	$5\frac{7}{8}$	$6\frac{0}{8}$
Paid on ord. %	$5\frac{1}{2}$	$6\frac{1}{4}$
Inc. or dec. in carry-forward	- 23,236	+ 17,066

The larger company recorded an increase in gas sales of $1\frac{1}{2}$ per cent. and in the number of consumers of 27,027; the smaller company increased its sales by nearly $5\frac{1}{2}$ per cent. and its consumers by 7,545. Resolutions are shortly

to be submitted to Parliament by the South Suburban authorising the acquisition of the Sevenoaks Gas Company and the Tonbridge Gas Company, while the Gas Light and Coke Company is seeking to control undertakings at Southend-on-Sea and Brentford. The ordinary stock of the South Suburban gives a yield of about £6 4s. 0d. per cent. at its present price of 103 $\frac{1}{2}$, while the £1 units of the Gas Light and Coke ordinary stock return a yield of about £5 19s. 0d. per cent. at their present price of 19s. 3d.

Retail Store Profits.—The preliminary profit and dividend figures of a number of large retail store concerns show that the decline in earnings last year was relatively moderate. Of the four companies whose profits are shown in the following table, Lewis's, whose interests are in the North, has actually increased its earnings, as compared with 1930, by 3 per cent. Those of Harrods have fallen by $7\frac{1}{2}$ per cent., and those of its subsidiary, Dickins and Jones, by 22 per cent. In the case of Selfridge and Company, the drop in profits is equivalent to 7 per cent. The Maple dividend has been reduced from 9 to 5 per cent., and the decline in earnings is understood to be appreciable, but the company's intimate connection with the shipbuilding and export furnishing trade fully explains this phenomenon:—

Name of Company.	Profit, 1930.	Ord. Div.	Profit, 1931.	Ord. Div.	Price, Feb. 10.	Yield.
Dickins and Jones.....	£ 115,910	% 12	£ 90,065	% 10	(t) 24	£ s. d. 7 8 0

* Not available. † Deferred shares. (t) No quotation for ordinary shares. (a) 15 per cent. preferred ordinary. (m) 10 per cent. preferred ordinary.

The figures which are regularly published in the *Board of Trade Journal* suggest that the decline in retail sales of all kinds throughout the country last year, in terms of money, was of the order of $4\frac{1}{2}$ per cent. The stability shown by the results of well-established store companies, both in the North and South of England, is gratifying to shareholders, whose experience in other branches of industry has been less fortunate. It may be ascribed to various factors. "Luxury" business does not bear a high proportion to the total turnover of a general store. The amount of "fixed" capital required is moderate, and goods are turned over with a rapidity which is a valuable protection of profits in times of falling prices. The most valuable attribute of the best British store companies, however, is the ability and experience of the managements, which has seldom shown to better advantage.

A "Baby" Ford.—An authoritative announcement has been made that the Ford Motor Company will enter the European "baby" car market. This announcement may be welcomed as showing that the requirements of the European and American motor markets are to be differentiated in framing the respective policies of the American and British Ford companies. It was believed improbable that the eight-cylinder model (which Mr Henry Ford is expected to launch shortly on the American market to meet the progress of General Motors' Chevrolet) would be introduced in Europe. The announcement of a Ford 8-h.p. programme of the British company's Dagenham factory. No information regarding the new car's performance is yet available, but it is believed that the car will be shown to the public at the exhibition which the Ford company is holding from February 19th to 27th next at the Albert Hall. The car would appear closely to resemble, in outline, the "baby" cars of British makers which have built up a position in the British market. This type, in existing hands, is the result of many years

of technical improvement and running experience, and the field is already hotly contested. The news originally leaked out in telegrams announcing the departure from Detroit of twelve Fords only 10 feet long, consigned for England. This suggests that the new car has been developed in America, possibly by American engineers. At Dagenham, production of two different models may increase manufacturing costs somewhat. The Ford organisations, however, may have been actuated by the consideration that, although cars are bought out of "capital," they are run out of "income," and, in these times of economic stress and high taxation, consumers are likely to attach great importance to relative figures of running costs, including tax, insurance, petrol, oil, cleaning and garaging. On the Continent the "Baby" Austin is already locally manufactured under licence, and in both countries there are numerous competitors, including Peugeot in France and D.K.W. in Germany.

Sugar Beet Position.—The recent offer made to beet sugar growers by the Anglo-Dutch group of companies, which operate factories at Cantley, Kelham, Ely, Ipswich and King's Lynn, has stimulated fresh controversy regarding the position and prospects of this "new" industry. As the whole question of further Government assistance is under review, and a decision is not immediately expected, the Anglo-Dutch group has been obliged to proceed with arrangements for the growing of this year's crop "in the dark." The present suggestion envisages "co-operation" between the growers and the factories. The whole net proceeds from the manufacture of white sugar, pulp and molasses produced from the beets delivered by the growers are to be ascertained, under the scheme, by Messrs. Price, Waterhouse and Co., and, together with any direct or indirect Government assistance which may be forthcoming, will constitute a "common fund." The growers' share of the net proceeds is to be 80 per cent. and the factories' share 20 per cent. until such time as the

return of the growers reaches 45s. per net ton of 15½ per cent. sugar content, when the division will be on a "fifty-fifty" basis. The usual cash advances, seed supplies, etc., will be made to the farmers, while the payments on account on the usual monthly pay-days will be 35s. per net ton of 15½ per cent. sugar content, with an addition or deduction at the rate of 2s. 6d. for each 1 per cent. above or below 15½ per cent. The arrangement is to hold good for one year. The farmers, however, regard the Anglo-Dutch offer as in no case as satisfactory as the offers of factories outside the group, which in some instances give 40s. to 42s. as a guaranteed minimum instead of the 35s. of the Anglo-Dutch scheme—which, in spite of the "common fund," may prove to be a maximum price. It is relevant to recall that during the past seven years the production of some 1,300,000 tons of home-grown sugar has cost the British taxpayer, directly and indirectly, nearly £30 millions. Discussion at the moment is concerned (1) with the minimum conditions under which it will be possible for the growers to continue cultivation, and (2) as to whether the subsidised factories should not confine their operations to the production of "raws" rather than be allowed to compete with existing refineries on a subsidised basis. The mere hint of further protection must lead to bickering and "log rolling" by the rival interests, and it is difficult not to sympathise with the old-established refiners, who bitterly complain of "unfair competition." The Anglo-Dutch group of factories has enjoyed several years of prosperity at the public expense, for which competent management is no adequate compensation. Three of the group's companies have already, in the aggregate, returned more than the whole of their share capital in dividends and amassed a general reserve fund greater than the valuation of their factories in the balance sheets. If we must develop a home-grown sugar industry by artificial aid, common sense demands that the subsidy should provide an adequate return to the farmers, and should not react to the detriment of established interests.

Snia Viscosa.—The decision of the directors of Snia Viscosa (in which Aku, Glanzstoff and Courtaulds have an interest) to pay a dividend of 6 per cent. in respect of 1931 was not apparently anticipated in the market. The last dividend paid was 10 per cent. in respect of 1926 on the old capital of 1,000 million lire (about £10,900,000 at par). Since then the capital structure has been continually changed. In 1926 it was reduced from 1,000 million lire to 750 million lire, and increased again to the old figure by the issue of new shares. In 1928 the same procedure was adopted, the nominal capital being reduced to 800 million lire and then restored to 1,000 million lire. In March, 1930, a reconstruction scheme was carried through. The subsidiary Società Anonima Veroda was merged with the company and the Snia capital written down to 883,333,333 lire and then increased to 350 million lire (£3,800,000 at par). The shares were reduced to 40 lire and exchanged for new shares of 200 lire. In 1930 the net income amounted to 42 million lire and, after allowing for interest payments, the net profit to 20.4 million lire. Owing to special depreciation, which absorbed 688.2 million lire, the year showed a deficit of 666.6 million lire, which was written off under the reconstruction scheme. It would appear that if a dividend of 6 per cent. has been earned, the net profits before allowing for debenture interest amounted to much the same as in 1930, but that no special depreciation has been called for. A strong cash position, it is understood, has been maintained. The profit figures will not be known till March 5th, when a general meeting of shareholders will be held, but the dividend announcement is of special interest in view of the imminence of Courtaulds' dividend. The company has a working agreement with Courtaulds for technical and commercial collaboration. Snia Viscosa shares are quoted at 9s., and were unchanged on the dividend announcement. British shareholders should note that the voting trust for Snia Viscosa shares has been terminated in accordance with the terms of the agreement of January, 1927. Voting certificate holders, having regard to the various capital reductions, are entitled to one share in

respect of each unit of five shares specified in the certificates. These certificates should be lodged with Hambros Bank (Nominees), Ltd., without delay.

Industrial Profits in January.—Industrial profits during the first month of the New Year showed a relative improvement, due, in part, to the fact that the published reports afforded comparisons with those of a period of progressively increasing depression. During January we received the reports of 127 companies, revealing a decline in profits of 19.65 per cent. The figures for the last ten months are shown:—

Reports Published in 1931.	No. of Companies.	Variation in Net Profits (1931 compared with 1930).
April	217	— 10.49
May	211	— 22.3
June	192	— 21.93
July	185	— 39.46
August	55	— 19.59
September	74	— 44.02
October	170	— 58.26
November	147	— 35.59
December	157	— 68.54
1932.		(1932 compared with 1931).
January	127	— 19.65

We set out below the figures for various industrial groups, according to reports received during the last month:—

INDUSTRIAL PROFITS—MONTH OF JANUARY, 1932.				
Group.	No. of Companies.	Net Profit (after Payment of Debenture Interest). Reports received during January, 1932.		Increase or Decrease.
		1930-31.	1931-32.	
Breweries	5	£ 313,684	£ 286,567	— 8.64
Canals and Docks	1	80,754	Dr. 47,216	— 153.57
Electric Lighting and Power	2	446,590	427,624	— 4.25
Financial Land and Investment	3	319,573	230,266	— 27.97
Iron, Coal and Steel	3	328,764	34,023	— 89.67
Motor and Cycle	4	462,066	294,240	— 36.32
Nitrate	1	287,337	Dr. 666,671	— 328.53
Oil	1	199,347	183,390	— 8.00
Rubber	15	22,542	Dr. 58,978	— 362.31
Shipping	2	204,436	168,138	— 17.75

Textiles	7	75,097	56,712	— 24.48
Tramway and Omnibus	2	221,441	221,630	+ 0.08
Trusts	20	1,287,689	1,057,291	— 17.89
Waterworks	2	21,007	19,658	— 6.42
Other Companies	50	21,222,000	18,257,087	— 14.16
Total	127	25,558,396	20,536,921	— 19.65

The average fall of nearly 18 per cent. in profits in the "Trusts" group is particularly significant. One of the few increases during the month was that of United Tobacco (South), whose profits rose from £620,773 to £645,462. The largest item in the total was the earnings of Imperial Tobacco, which declined from £10,177,046 to £9,876,064 (after deduction of taxation at an increased rate), while the British American Tobacco figures receded from £6,501,560 to £5,334,448 (with a similar qualification).

Fall in Copper.—Last Wednesday the cash price of standard copper on the London Metal Exchange at one time fell under £35 per ton, closing at £35 12s. 6d. This followed a downward movement which has been in progress with occasional rallies for several weeks. The lowest closing level ever known on the London Metal Exchange was £27 14s. 4½d. on the Friday before Great Britain went off the gold standard. Allowing for the depreciation in sterling, Wednesday's price represents little more than £25 per ton. The event is a curious sequel to the scheme of drastic output restriction decided upon in New York recently. So far as can be judged—information on the point is not as definite as might be desired—producers representing 90 per cent. of the world's output agreed to restrict to 26½ per cent. of capacity. This decision resulted in a small recovery in American quotations to 7.50 cents per lb. for domestic metal and 7.825 cents for export. Rumours were even current of the intention of

the interests concerned to advance the price to 8 or even 10 cents. A flurry of buying on the part of some nervous consumers was succeeded by a practical cessation of demand. Indeed, on one particular day America's sales to Europe amounted to a single ton! In the hope of stimulating demand, the New York quotation was reduced, towards the end of January, first by 50 points and subsequently by a further 25 points. Last Wednesday the quotation was further reduced by 50 points to 6.375 cents (for export). In view of the fact that the latest reports of conditions of the motor and other metal consuming industries in the United States are anything but encouraging, a fresh cut in copper prices is regarded as probable in usually well-informed quarters—despite the fact that the present level of prices is unprofitable to nine out of ten producers.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Lloyds Bank, London Merchant Bank, English and New York Trust, Sterling Rubber, Steaua Romana (British), United Serdang (Sumatra) Rubber Estates, and San Francisco Mines of Mexico. At the annual meeting of United Serdang, Mr. Eric Miller told shareholders that the output of rubber during 1931 had added no less than 180,000 tons to the surplus stocks, bringing world stocks of ready rubber up to the equivalent of a year's requirements. Presiding at the annual meeting of San Francisco Mines, the chairman observed that the possibilities of improved metallurgy were limited, but they had been able to bring down costs to 14s. 6d. as compared with 19s. 1d. in 1928-29, largely as a result of increased production. At the annual meeting of the Sterling Trust, Baron d'Erlanger said that if the movement to boycott goods continued all communities would have to live upon their own fat until they woke up from their hibernation as lean as a bear.

CAPITAL ISSUES.

A speculative issue is *rara avis* in a period of financial crisis, but this has not deterred the promoters of *Universal Greyhound Totalisators, Limited*, from offering 10 per cent. participating preference shares of 10s. to the public this week. All the ordinary shares of 5s. have been issued as fully paid to the vendors, and the purchase consideration also includes £45,000 in cash. Investors will admire the courage of the promoters.

Universal Greyhound Totalisators.—Issue of 110,000 10 per cent. participating preference shares of 10s. each at par. The company has been promoted to conduct the business of installing and operating electric and mechanical totalisators on greyhound racecourses. Estimated annual profit, £20,000.

Further Stock Exchange information, including the latest dividend announcements, traffic returns, American railway receipts, summary of balance sheets, profit and loss accounts, and reports and notices will be found under the heading of "Company News" on page 380.

OIL OUTPUTS.

ANGLO-ECUADORIAN OILFIELDS, LTD.—The production for January is cabled as 18,058 tons.

BRITISH CONTROLLED OILFIELDS, LTD.—Production for the week ended January 27th:—Venezuela, 28,558 barrels; Trinidad, 32,977 barrels; total, 61,535 barrels. Production for the week ended February 3rd:—Venezuela 28,441 barrels; Trinidad 31,136 barrels; total 59,577 barrels. Production for January: Venezuela 125,948 barrels; Trinidad, 153,845 barrels; total, 279,793 barrels. Shipments for January: Venezuela, 112,096 barrels; Trinidad, 86,212 barrels; total, 198,308 barrels.

HAMILTON'S OIL CONCESSIONS (ROUMANIA), LTD.—Production for month of January, 1932, 7,991 tons, equal to 55,937 barrels.

LOBITOS OILFIELDS, LTD.—The production of the Peruvian Company for January is cabled as 25,327 tons.

PHOENIX OIL AND TRANSPORT COMPANY, LTD.—The gross production of crude oil of the Phoenix Group of Companies for January was 46,884 tons.

SERVICE PETROLEUM COMPANY, LTD.—Returns from Romano-Africana S.A.R. show the production from the company's oil wells at Gura-Ocnitzei, Moreni and Ceptura for the week ended January 24, 1932, totalling 3,763 tons (26,341 barrels).

STEAU ROMANA (BRITISH), LTD.—The production of the Steaua Romana Company, Bucharest, for the month of January was 85,711 tons.

TAMPICO OIL, LTD.—The total production on the company's properties in Mexico during January was 18,749 barrels, in respect of which the royalty due to Tampico Oil, Ltd., amounted to 1,406 barrels.

COMPANY MEETINGS, &c.

LLOYDS BANK LIMITED.

SATISFACTORY RESULTS DESPITE YEAR'S DIFFICULTIES.

CRITICISMS OF BRITISH BANKS ANSWERED.

CAUSES OF WORLD CRISIS.

TRADE RESTRICTIONS—NEED FOR CO-OPERATION BETWEEN NATIONS.

MR J. BEAUMONT PEASE'S IMPORTANT REVIEW.

The seventy-fourth ordinary general meeting of Lloyds Bank Limited was held, on the 5th instant, at Southern House, Cannon Street, London.

Mr J. Beaumont Pease (chairman of the bank) presided.

The notice convening the meeting having been read by the secretary, and the auditors' report by Sir Gilbert Garnsey, K.B.E.,

The Chairman, in moving the adoption of the directors' report, said:—I would like to commence my remarks by making some personal allusions.

TRIBUTE TO THE LATE MR PHILIP NOBLE.

Last year we lost a very valuable colleague by the death of Mr Philip Noble owing to a flying accident. I knew Mr Noble intimately all my life, and, like every one else who knew him, was strongly susceptible to the charm of his personality and character. To all his friends the news of his untimely death came with a great shock and left us with a sense of void which nothing can fill. In the bank no one will miss him more, or deplore his death more deeply, than members of the staff in our Northern branches, whose interests were always near his heart and into whose occupations and ambitions, whether inside the bank or on their playing fields, he entered with a whole-hearted sympathy.

He was a partner in the banking firm of Lambton and Company, and, after its amalgamation with Lloyds Bank, joined our board in 1912. He was a most valuable director, not only establishing himself firmly in the affections and minds of his colleagues, but bringing to their deliberations a full knowledge of men and affairs in the North. We all miss him very greatly, and often wish we still had with us his helpful counsel and charming personality. We tender once more our deepest sympathy to the members of his family.

In October last Mr Alfred Davidson retired from the position of joint general manager in Birmingham, an appointment he had held since January, 1924; but you will be pleased to know that we are not losing the benefit of his long experience of the Midlands. A Birmingham committee has been formed, to which Mr Davidson has been appointed, and that committee, which includes our directors, Mr Cyril Lloyd and Colonel Morcom, has been further strengthened by the addition to it of Mr Walter Barrow, whose name has for so many years past stood in high repute in Birmingham. Mr G. L. Potter, manager of our City office, has been appointed district manager in Birmingham, and, with these arrangements, our Midland customers will be more closely in touch with head office than hitherto.

THE BALANCE SHEET.

In going through the balance sheet I propose to point out some of the principal items of interest. On the liabilities side the capital remains the same, but, as we explain in the report, we have taken £2,500,000 from the published reserve in order that the value of the bank's investments might be written down to market value or under. We thought it wise to meet this situation in this way rather than to have recourse to our internal reserves, which in these days of uncertainty it is desirable to maintain in abundant strength. (Hear, hear.) Since December 31st there has been a very substantial recovery in the value of our investments; but in any case the depreciation did not give us undue anxiety, as a large proportion of our investments is in short-term bonds repayable in a year or two at par.

Our current and deposit accounts show a fall of £31,000,000, representing a drop of 8.4 per cent. in the year. The current and deposit accounts of all the clearing banks show a total decrease of £148,403,000 during the same period, representing a fall of 7.8 per cent.

The only other items on the liabilities side to which I desire to call your attention are those under the heading of acceptances and endorsements, etc. The acceptance figure of £2,695,520 is down by £3,300,000, and includes the amount we have outstanding on account of German banks under the standstill arrangement. Of the omnibus item, endorsements, etc., over £20,000,000 represents forward exchange transactions, to which, of course, there are counterpart items on the assets side of the balance sheet. We have included this item

for several years in our balance sheet, following the recommendations of the Cunliffe Committee, but the actual risk involved is purely a marginal one and is negligible. The balance represents bail bonds, endorsements, etc., which also have their appropriate contra entries among the assets.

GERMAN STANDSTILL AGREEMENT.

I think it is desirable that I should say a word about the German standstill arrangements, as there has been a great deal of misunderstanding and misrepresentation in regard to the City's commitments with Germany. The Basle Committee have published the figure of 12 milliard Reichsmarks, or £600,000,000 at par, as the total to all countries of German short-term obligations. A census of London banks and accepting houses shows that of this total, apart from other debts such as loans to States and municipalities, which are not governed by the Standstill Agreement and are moderate in amount, £53,000,000 represented on July 31, 1931, the amount of German acceptance credits with London banks and accepting houses, and £11,000,000 on the amount of other forms of short-term indebtedness.

An analysis of the City's acceptance figures shows that more than half of the total of acceptances was in respect of credits granted for financing the movement of goods, as the London banks and accepting houses granting the credit either see the relative documents or are provided with proof of shipment. The great proportion of the balance is stated by the institutions making the return to be also of a self-liquidating character, though in this case there is no proof of the actual movement of goods. Compensation for the risk taken consisted merely of the usual acceptance commission, ranging from, say, ½ per cent. to 2 per cent. per annum, according to the credit of the credit-taker and the class of business transacted.

REFUTATION OF CHARGE AGAINST LONDON FINANCIAL HOUSES.

These figures are a complete refutation of the charge brought against London financial houses that, tempted by the offer of high rates, they risked huge sums of English deposit money at short notice for the purposes of German capital expenditure. On the contrary, they show that the amount of the acceptance credits to a great country like Germany, with a vast import and export trade. It was a business that London had done on a large scale for many years with safety, and was arranged for the purpose of conducting the essential import and export trade of the country.

London institutions have, indeed, done nothing more in these transactions covered by the standstill arrangements than transact their normal business with Germany, which was essential for the smooth working of British, and, indeed, the world's commerce. It was the unparalleled world crisis which developed so quickly, banking short-term indebtedness, which brought into prominence the normal banking credits granted by the London banks and accepting houses to their regular German clients. From what I have already said it will also be seen that the rates charged for this credit business was not high. On the contrary, they appeared to us at Lloyds Bank unduly low compared with the risks involved, and in 1929 we drew a distinction between the rates charged for credits representing imports into Germany and exports from that country and raised our commission for the latter.

BANK'S COMMITMENT UNDER STANDSTILL AGREEMENT.

The effect has been to reduce considerably the liabilities of German banks to us, and by July 31st last year our bank's commitment under the Standstill Agreement, both in respect of acceptances and cash advances, was less than 3 per cent. of the total amount outstanding in London on that date. So many wild statements have been made on this subject that it is well to contrast this meagre figure with some of the exaggerations that have obtained publicity. (Cheers.)

The continuation of the Standstill Agreement for a year, subject to certain conditions, has recently been arranged in Berlin, and, as

chairman of the Joint Committee of British Short-Term Creditors, I should like to put on record our gratitude to our representatives, Mr Braithwaite and Mr Tiarks, for the arduous work which they have given to this task continuously since the middle of December. (Hear, hear.) I would like also to emphasise what they say in their report. The standstill arrangements were made on the recommendation of the Seven-Power Conference in London last July, with the implied promise that, if bankers held their hands for the time being, the Governments would take the necessary steps for the restoration of German credit. In the words of the report, "a Standstill in the nature of things is only a temporary measure designed to give time for a fundamental solution. Neither foreign creditors nor German debtors can control the main current of events, and both await the decisions of the Governments."

ASSETS.

To turn now to the assets side of the balance sheet, cash shows a reduction corresponding to the drop in deposits. There is a large reduction of over £10,000,000 in Treasury bills for the same reason, while the total of our liquid assets of £167,238,083 represents 50 per cent. of our public liabilities.

The next item is our investments in subsidiary companies, and the total of these has been written down very considerably below their asset value.

The demand for accommodation has been less than in the previous year, and the figure for our advances therefore is lower by £8,390,000, but represents 50.2 per cent. of our deposits, as compared with 48.2 per cent. last year. I have made the usual analysis of our advances, but it fails to show any significant changes. The only groups which have any important increase are "Local Authorities," "Banking, Insurance and Finance," and "Public Utility." On the other hand, there are large decreases under "Personal and Professional," "Retail," "Engineering," "Agriculture," "Building," "Shipping," "Foodstuffs and Tobacco," "Paper and Printing," "Cotton," "Corn" and "Stockbrokers."

The only other asset to which I need draw your attention is premises. This shows an increase of £270,000. I think we are likely to see the increases under this head diminishing in the future. (Hear, hear.)

Banks have sometimes been criticised for opening new offices in places where banking facilities were redundant. The multiplicity of branches has been to the advantage of the public, but undoubtedly there are places where the business is not sufficient to ensure satisfactory results to all the banks represented there, and, with this in mind, and by mutual arrangement with other banks, we have closed down a good many sub-offices, with a consequent saving in expense. (Hear, hear.)

PROFITS AND DIVIDENDS.

Our net profit brought in, after charging rebate and income tax, provision for bad and doubtful debts, having been made partly out of profits for the year and partly out of sums previously set aside for that purpose, amounts to £1,926,903 17s. 7d., which is about £200,000 less than last year. We have transferred £400,000 to contingencies account, and recommend the payment of a dividend of "A" shares at the rate of 13½ per cent. per annum, and a dividend on the "B" shares at the rate of 5 per cent. per annum, being the same rates as those paid last half-year. Our balance to be carried forward will be £522,055 4s. 8d., which is about £11,000 more than that brought in.

THE FINANCIAL CRISIS.

I hope these results, obtained during a period of unexampled difficulty, will not be considered unsatisfactory. The year 1931 was packed with a number of wholly extraordinary circumstances. Beginning with a low Bank rate of 3 per cent., subsequently reduced to 2½ per cent., with gilt-edged securities standing at high prices, it ended with a Bank rate of 6 per cent. and a serious depreciation in the value of Government stocks. Warnings as to the danger of our national finances given during the introduction of the first Budget in the spring were amplified in an alarming way by the report of the May Committee, and were acted upon in the second Budget passed in October, with onerous additional burdens of taxation, after a General Election of unprecedented significance.

The breakdown of credit in Germany and Central Europe and the drain of gold from this country finally brought about our departure from the gold standard. All these facts, coupled with the numerous failures of banks in nearly all countries throughout the world, except our own, and political unrest in many places, built up a situation hitherto unknown. British banks have received a large measure of congratulation from a generous Press and public for the way in which they have conducted their business and maintained their reputation for strength and soundness through all the financial convulsions of last year. Criticisms on some points were occasion-

ally made, but no cry was ever less effective or received less credence than that raised against the banks during the General Election last October. (Hear, hear.)

COUNTRY'S PATRIOTIC SANITY AND COMMON-SENSE.

I would like to pay a humble tribute to the patriotic sanity and common-sense restraint of the people of this country. Instead of running to the banks to withdraw deposits in a panic, and thus creating the very troubles they wished to avoid, they hurried to the Inland Revenue offices to pay the increased taxes which they had voluntarily imposed on themselves by their votes at the last General Election.

Three times already in this century the country has been confronted by a crisis of first-class magnitude. In each case it has withstood unflinchingly the danger of the emergency to receive an immediate response. Though sometimes slow to observe the signs, when the people have eventually realised that the country was in danger they have shown in the clearest possible manner that they were prepared to put up with any sacrifice to free it from its difficulties. About the future of a country and a people with these characteristics it is impossible to be pessimistic. (Hear, hear.)

The tragedy is that, with a people so anxious to know what their duty is and to do it, a multitude of counsellors with a great variety of conflicting counsels have so confused the political and financial atmosphere that the ordinary citizen may well be excused if he fails to have a clear vision in regard to the many issues with which he is confronted.

WORLD PROBLEMS.

We in Lloyds Bank are attempting to provide our contribution to the general knowledge. In the hope of throwing more light on the situation and giving voice to those moderating influences in Germany, France, and the United States of America, where men of good will are seeking to find a solution to the problems which perplex the world, we have arranged for the production next month of a series of articles in our Bank Review, including one setting forth the French point of view, another by an eminent German economist, and a final summing-up by Sir Arthur Salter, whose work on the Economic Council of the League of Nations is so well known.

For the moment I am going to content myself by referring to what seems to me to be the main cause of our troubles. Primarily, of course, the war is responsible, either directly by the huge destruction of wealth which it caused and the vast borrowings which were entailed for its pursuit, or indirectly by the dislocation of trade which followed in its train. The great increase of productive power and new inventions arising out of the war caused an overproduction of primary commodities relatively to the high cost of manufactured articles, and thus a lack of purchasing power was experienced by countries engaged in the production of primary commodities, both on account of the lower prices obtained for the increasing amount of their goods, and also by reason of the relatively excessive price of manufactured articles.

A further contributory factor was the disturbance to the monetary systems of the world caused by the transfer of huge sums from debtor to creditor nations, which had no commercial origin or basis and produced a constant drift of gold to the two nations which had become the chief war creditors in the world. The consequent rise in the value of gold, and its corollary, the fall in prices of commodities, still further accentuated the unfortunate position of the nations engaged in primary production, and curtailed their power of purchasing from manufacturing nations.

TRADE BARRIERS.

Confined in this vicious circle, and cut off from the possibility of normal international trade, nations of the earth have been showing an increasing tendency to think of themselves alone, and to aim at an impossible state of self-sufficiency; to be willing indeed to sell to others, but, by tariffs, restriction of imports, and control of exchange, to render it impossible for other nations to sell to them. In such a mad world a return of prosperity, the one thing we all want, has, for the time being, been made an impossibility, and international trade has been brought largely to a standstill.

INTERDEPENDENCE OF NATIONS.

Within the last few weeks a chairman has not hesitated, in the rather unusual surroundings of a company's annual general meeting, to invoke the words of a prayer initiated 2,000 years ago. I should like to follow his example and ask this meeting whether, behind the spiritual meaning of the words of another statement of an equal age and sanctity, embodied in the "second great commandment," there does not lie a real worldly wisdom, a wisdom which is peculiarly applicable in these days both to individuals and nations.

SAN FRANCISCO MINES OF MEXICO, LIMITED.

REASONS FOR SUSPENSION OF PRODUCTION.

The nineteenth ordinary general meeting of shareholders of San Francisco Mines of Mexico, Limited, was held on Monday, February 8th, at Winchester House, Old Broad Street, London, E.C., the Rt. Hon. The Earl of Denbigh, K.C.V.O., presiding.

The Chairman said: Ladies and gentlemen,—We do not come before you with a very happy picture to-day, and that, I need hardly say, is due to the extraordinary world depression which has affected almost every industry, and especially that dealing with the production of base metals. The price of lead averaged £13 7s. per ton, compared with £19 13s. 10d. in the previous year; zinc £12 12s. 3d. per ton, against £18 12s. 6d.; and silver 15d. per fine ounce, as against 20.9d., or an average reduction of 30 per cent. on the year, which, in turn, represents a fall of 22 per cent. on the year 1928-29. Present prices, when reckoned in gold, as we have to do for reasons which I will presently explain, are 56 per cent. below those of 1928-29, which is the year at the end of which the world slump commenced. The only way to combat it in our case was to improve metallurgical practice, and especially to reduce costs. The possibilities for improved metallurgy have been limited, but we have been able to bring costs down to 14s. 6d., as compared with 19s. 1d. in 1928-29, largely by reason of an increased rate of production. These economies have not sufficed to meet the reduction in revenue due to lower metal prices.

Last year we milled 393,390 tons, as compared with 337,480 tons in the previous year, but the operating profit was only £60,895, as compared with £165,359 in 1929-30, though if we had had the benefit of even the relatively low metal prices of 1929-30 it would have been raised from about £61,000 to the neighbourhood of £300,000. This operating profit of £60,895 for the year is converted into a net loss of £19,033, mainly by allowing £50,186 for depreciation of machinery, plant and buildings, and £25,801 for taxes. From May onwards we made operating losses, and we decided to suspend production at the end of December, after having stopped the production of zinc concentrates at the end of October.

Since we made the decision to suspend milling, base metal prices as quoted in sterling have risen some 35 or 40 per cent. as a result of this country going off the gold standard on September 21st, and it has been assumed by some that this fact might lead us to reverse our decision. That, however, has no bearing on our position. In effect, it may be said that the bulk of our expenses are payable in dollars and we therefore have to look to the dollar value of our revenue. Consequently, we have to reckon the gold values of metal prices, and these have hardly moved at all since September 21st.

The plant and workings are being kept in order and the mine kept clear of water, so that everything will be ready to permit of the resumption of work at very short notice. You will probably ask when production is likely to be resumed, but it is a question which cannot be answered at all definitely. I decline to forecast when and under what conditions we can seriously consider resumption of output. We know we cannot make a profit at anything like the present level of metal prices. It is worth while, however, to bear in mind that we were operating at a profit with prices as ruling in the first half of the year.

At September last our ore reserves were 1,837,270 tons of blocked out ore and 483,670 tons of partly blocked out ore. Taking the two figures together, there is a trifling increase of about 5,000 tons, and the fact that it is not more is due to the adoption, for reasons of economy, of the deliberate policy of developing only sufficient new ore to replace that sent to the mill.

We were, unfortunately, obliged to suspend operations at a most interesting period in the development of the mine. On the 9th level it is probable, as mentioned by the manager, that the lower limit of the ore shoot on the San Francisco or Main Vein is being approached. This cannot, however, be stated with certainty, as there is considerably more lateral development work to be done in the lower levels. We have yet to learn what is really in store for us. There are a number of veins from which we may anticipate to secure large quantities of ore in the future. Especially to the south of our main workings, where development has been somewhat limited, I feel we have reason to expect some happy surprises. A fair amount of development has been done on one of these veins, namely, the Brown Vein, which now figures heavily in our ore reserves. The West Brown and Bronces Veins are also attractive. We had hoped to have been able to equip the Clarines property as part of a programme of expansion, if it had not been for the economic blight that has fallen on the world. This mine is likely to become increasingly important for us.

In conclusion, I believe this mining enterprise is a sound one, and, consequently undue weight should not be attached to the situation as we find it to-day.

The report and accounts were unanimously adopted.

STEAU ROMANA (BRITISH), LIMITED.

PROBLEM OF OVER-PRODUCTION.

The eleventh annual general meeting of Steaua Romana (British), Limited, was held, on the 10th instant, at Winchester House, London.

Sir Albert G. Stern, K.B.E., C.M.G., who presided, said that the year under review had been even more difficult than preceding years for oil producers all over the world, but the international basis of Roumanian, French and British co-operation, on which the company's business was founded, had continued to the benefit of all concerned. There was little to record in the world's markets except a succession of reductions in prices. It was only by a corresponding succession of the most stringent economies that the Steaua Romana had been able to safeguard its position and survive the recent banking crisis in Roumania, and the serious losses incurred due to the fall in the pound sterling. The Steaua Romana's cash position had been maintained in spite of these adverse blows of fortune, which constituted a proof that Roumania, with the new prolific sands opened up in recent years, could compete as regarded economy of exploitation with the majority of oil-producing countries.

During the year the Steaua Romana, although no official restriction scheme existed, had restricted its drilling, and, consequently, its production, so that the quantity of its own crude oil available for refining was kept at the rate of approximately 2,500 tons per day, supplementary quantities of crude oil up to refinery's capacity of approximately 4,000 tons per day being purchased on the market.

The production of the Steaua Romana Company for the year to June 30, 1931, was 886,421 metric tons, as compared with 904,828 metric tons in the previous year, a decrease of 2 per cent. The total quantity of products exported was 959,808 tons (including 414,378 tons purchased on the market), an increase of 309,311 tons, or 47 per cent. on the previous year. The Roumanian Company had not seen its way to declare a dividend for the year 1930, due principally to the high cost of transport in Roumania and the low selling prices. Their own trading profits had been considerably reduced, due largely to the reduced earnings of the tank steamer "Oltenia." The profit for the year, after deducting the liability for income tax, was £69,687, and the directors proposed to pay a final dividend on the ordinary shares at the rate of 2 per cent. (less income tax), making 4 per cent. for the year, and to carry forward £36,012.

The report and accounts were unanimously adopted.

UNITED SERDANG (SUMATRA) RUBBER PLANTATIONS, LIMITED.

POSITION OF THE RUBBER INDUSTRY.

Mr H. Eric Miller, presiding at the twenty-fourth ordinary annual general meeting of this company, held, on the 5th instant, at Winchester House, London, said that during the past year they had had to contend with a severe fall in the selling price of rubber, and their principal preoccupation had, therefore, been to effect economies in the working of their estates.

In his survey of the rubber industry, Mr Miller said that absorption by manufacturers during 1931 they estimated at 670,000 tons, against 705,000 in 1930 and 790,000 in 1929. Practically the whole of the decline in absorption had occurred in the U.S.A., the absorption by the rest of the world having been remarkably steady at around 320,000 tons. The output of rubber during 1931 had added no less than 130,000 tons to the surplus stocks, bringing world stocks of ready rubber up to the equivalent of a year's requirements. Such persistent over-production was bound to have a disastrous effect on the market. The statements made on behalf of H.M. Government had given a clear indication of their desire to co-operate with the other Governments concerned to rescue the industry. They were still waiting to hear officially what the attitude of the Dutch and Netherlands Indies Governments was. Every week's delay was to be regretted, because it carried with it a proportionate increase to the surplus stocks.

The companies with which he was connected had reduced their production very substantially, but too many producers had continued on full production in the forlorn hope that the slightly lower unit costs which they might thereby obtain would advantage them. If all producers had been content to harvest 75 per cent. of their 1931 output there would have been no addition to stocks during the year. The idea that allowing the so-called law of supply and demand to operate unchecked would prove a happy solution for the survivors was quite illusory, for no rubber tree would cease on that account to be a potential source of supply in future.

As to the United Serdang Company, they had maintained it in a strong financial position. They had considerable areas of potentially high-yielding bud-grafter rubber coming on, and could face the future without anxiety.

The report and accounts were unanimously adopted.

THE ENGLISH AND NEW YORK TRUST COMPANY, LIMITED.

BOARD'S DIVIDEND POLICY.

The annual general meeting of the English and New York Trust Company, Limited, was held, on the 5th instant, at 27, Old Broad Street, London, E.C.

Major Rex Benson, D.S.O., M.C. (the chairman of the company), presided.

The Secretary (Mr R. C. Noakes) read the notice convening the meeting and the auditors' report.

The Chairman, in moving the adoption of the report and accounts, said:—The report and balance sheet have been circulated, and with your approval I propose as usual to take them as read.

Gross revenue amounts to £68,797 against £66,982 for last year. After deduction of expenses, interest on debenture stock and bank loans, income tax, etc., we carry £33,250 to the balance sheet against £37,353.

These earnings are equal to 7.21 per cent. on the ordinary stock against 8.57 per cent. earned in 1930. We are again proposing a final dividend of 3 per cent., making a total dividend for the year of 5 per cent.

Turning to the balance sheet you will see that debenture stock outstanding amounts to £450,412—an increase of £135,531 on last year. The selling of the balance of £49,588 of this stock must wait for more propitious times.

I am glad to say that we owe no money to our bankers; indeed, we shall have some cash in hand after paying the proposed dividend.

I find that in announcing our dividend last year I made the statement that "had times been normal your directors would be more generous in their distribution."

BOARD'S DIVIDEND POLICY.

This year the recommendation of a three per cent. dividend was only made after very careful thought and you are entitled to know the reasons which guided us and the general view that we have taken of the 1932 outlook.

Firstly, we have earned our ordinary dividend with a margin of nearly £5,000, and we shall carry forward a balance of £18,765 2s. 8d., equivalent to 8.34 per cent. on our ordinary stock; or, to put it in another way, our carry-forward is sufficient to pay a little more than one year's dividend on the preferred stock.

Secondly, your board has taken the view that in these days when the Government is asking the people to pay a large proportion of their severely-diminished incomes into the Exchequer in order that the Budget may be balanced and the country placed on a sound financial footing, investment trust companies should be as liberal in their distribution as prudence will allow.

This argument, I venture to think, is an important one, and the two combined are the factors which guided your board's dividend decision.

The valuation made on December 31, 1931, shows a depreciation on our investments of 37.99 per cent. Last year it was 19.55 per cent. and I ask you again not to exaggerate unduly the importance of this depreciation. By this I do not want you to assume that it is a matter to which your board gives little consideration—far from it: but, if you believe in the principles of trust company finance you must be guided primarily by the earning power of your investments and not be frightened into selling merely because the capital value of a bond or stock has fallen almost over-night through forced liquidation, as has happened only too often in these days of economic crises and temporary political upheavals. Twenty-six out of a total of 274 of the investments in which we are interested are giving us no income at the moment: there is no case in which we take the definite view that the earning power has gone for good.

THE FUTURE.

I cannot give a reliable forecast for 1932. We have—as we always do—attempted a Budget of our income: the difficulty of doing this to-day needs no explanation. Clearly we are not going to earn as much as we did last year, and I think it only right to warn shareholders that when July comes we shall almost certainly not be justified in paying an interim dividend larger than one per cent.

We shall await the decisions of European statesmen and watch the mental evolution of Senators and Congressmen in America. The horizon is clearer in so far that there is a better understanding of the world's problems.

In this country our leaders seemed to have reached the end of their resources in July of last year; economic nature, however, stepped in with her own remedy for an impossible situation and the calmness and sober level-headedness of the people did the rest. I believe the worst is over and this Empire has turned the corner.

International discords, however, remain to be cured. The wide divergence of views on fundamental principles held by the different countries make it difficult for their political leaders to prescribe the remedy. It seems to me that the world's troubles will not be solved so long as these leaders lack the courage, or the faith in the good sense of their people, to put forward any policy except one of short-sighted selfishness.

Let us hope that if the leaders fail and economic nature has to take charge again, she will deal as effectively with the world's troubles as she did last July with our own.

The report and accounts were unanimously adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

The total ordinary revenue for the week ended February 6, 1932, amounted to £37,110,300 against ordinary expenditure of £22,627,000. After allocating £485,000 to Sinking Fund and having allowed for an increase in Exchequer Balances of £245,876, the operations for the week, as shown below, decreased the National Debt by £13,752,000 to £7,680,104,000:—
(000's omitted.)

Road Fund.....	49	Public Department Advances.....	3,300
British Govt. Loans Abroad.....	6,856	Treasury Bills.....	14,758
Sundries.....	82	National Savings Certificates.....	500
		Treasury Bonds paid off.....	1,331
		Excess Interest of Nat. Saving Certificates.....	850
	+ 6,987		20,739

A complete analysis of the National Debt at December 31, 1931, was printed in the *Economist* of January 9, 1932.

BULLION.

The following statistics of imports and exports of gold for week ended February 4, 1932, are issued by the Statistical Department of H.M. Customs and Excise:—

Imported into Great Britain and Northern Ireland.		Exported from Great Britain and Northern Ireland.	
From—	£	To—	£
Netherlands	33,968	Poland	4,961
Iraq	17,066	Germany	7,767
U.S.A.	86,768	Netherlands	77,846
Panama	5,290	Belgium	12,600
British South Africa	1,557,174	France	3,459,609
Anglo-Egyptian Sudan	6,795	Austria	7,675
British India	2,723,449	Czechoslovakia	26,400
Straits Settlements	76,718	Other countries	584
Australia	11,530		
Other countries	2,813		

Total declared value of imports 4,572,517 Total declared value of exports 3,597,442

Messrs. Samuel Montagu and Company write on February 10, 1932, as follows:—

GOLD.

The Bank of England gold reserve against notes amounted to £120,764,630 on the 3rd instant, as compared with £120,763,338 on the previous Wednesday. The s.s. "Kaiser-i-Hind," which sailed from Bombay on the 6th instant, has on board gold to the value of about £1,500,000. In the open market, the small amounts available have been secured for a destination not disclosed.

Quotations during the week:—

	Per fine ounce.	Equivalent value of £ sterling.

Average	119s. 11-8d.	14s. 1-9d.

SILVER.

The market has continued very quiet, and only ½d. separated the highest and lowest prices of the week. The Shanghai market has been closed owing to the China New Year and because of the prevailing situation, rates, when quoted, have been only nominal. Neither the Indian Bazaars nor America has been active, but a few sales for near delivery have been made by the latter, whilst buying for the Continent has continued on a small scale.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 1st instant to mid-day on the 8th instant:—

Imports.	£	Exports.	£
Mexico	99,493	British India	60,383
Canada	14,830	Germany	22,300
France	51,611	Straits Settlements	3,782
Other countries	135	Other countries	3,185
	166,069		89,650

Quotations during the week:—

EASTWOODS LIMITED.—The interim report, dated February 1, 1932, states that the position of the company and its various associated and subsidiary interests obtaining since the date of the last report. Selling prices are somewhat lower, and the temporary limitation of credit to customers has led to some reduction in turnover and profits. Under the exceptional circumstances, however, the company has obtained its share of the available trade, and has applied its customers with an increasing proportion of goods manufactured by the companies constituting the Eastwoods group. The directors, having had under consideration the accounts for the half year to September 30, 1931, announce that the results of the trading 5 per cent. (actual) on the ordinary shares payable less tax at all shareholders of that class registered on the books of the company as at February 1, 1932.

QUALCAST, LTD.—The interim report, dated January 30, 1932, states the interim dividend is maintained at 5 per cent. actual for the period ending June 30, 1932. With regard to the activities of the company during the six months ending December 31, 1931, compared with the corresponding period last year, profits (subject to audit) are within £500 of those earned during that period, and the tonnage produced by our foundry department shows an increase of 5 per cent. The past six months have been ones of a great deal of re-organization, and we have taken advantage of the increase in business, which is anticipated will come as things in the country generally improve. As regards the duty which you will see dumped stocks are out of the way this department of the works should feel considerable benefit from the elimination of the foreigner, and the company do not anticipate that the application of duties will in any way react unfavourably to the quite a satisfactory condition. Although the company has lately added considerable extensions to their works, yet these were necessitated through the prodding of certain departments being unbalanced, and that the company has never yet had an opportunity of driving the plant all out.

REPORTS AND NOTICES.

Colonel Oswald Pearce Serocold, C.M.G., has been elected chairman of Watney, Combe, Reid and Company, Ltd., in succession to Sir Richard Garton, G.B.E., who retains a seat on the board as deputy chairman.

The Rt. Hon. Sir John Tudor Walters, P.C., and Major Eric Gore-Browne, D.S.O., have been elected directors of the Legal and General Assurance Society, Ltd. The Rt. Hon. Sir John Tudor Walters, P.C., is chairman of the Industrial Housing Association, Ltd., and Major Eric Gore-Browne is a managing partner of Messrs Glynn Mills and Company.

At a board meeting of the Anglo-Argentine Tramways Company, Ltd., Sir Cecil Henry Walsh, K.C., and Mr Bernhard Heymann, Binder were appointed as 5 per cent. debenture directors of the company, in accordance with the terms of the scheme of arrangement, recently sanctioned by the 5 per cent. debenture stockholders.

The Austin Motor Company, Ltd., announce that Mr Herbert E. the Railway Rates Tribunal, which appointment precludes him from acting as a company director; he has therefore resigned his seat on the board. At a recent meeting of the board, Mr Francis H. Pepper, of Messrs Pepper, Tangey and Winterton, solicitors, of Birmingham and London, was unanimously elected a director of the company to fill the vacancy.

BANKS.

THE DOMINION BANK.—The London office of the Dominion Bank have received a cablegram from their head office in Toronto, stating that the bank's sixty-first annual statement, as at December 31, 1931, shows a profit of \$1,322,000. This figure is \$87,000 below 1930. Deposits, at \$105,449,000, have been well maintained as against \$107,432,000 a year ago. Immediately available assets are 54 per cent. of public liabilities, which is one-half of 1 per cent. better than a year ago.

GÖTEBORGS BANK.—After providing for depreciation in bond investments, the Aktiebolaget Göteborgs Bank report for the year 1931 profits of 7.42 million kronor, from which has to be deducted the sum of 3.88 million kronor applied to writing down on claims and stocks, the net profits thus amounting to 3.56 million kronor. Upon adding to the net profits a sum of 3.21 million kronor, brought forward from 1930, there is a total sum available of 6.77 million kronor, which is placed at the disposal of the shareholders. The directors propose that a dividend of Kr. 20 per share be declared, or 8 per cent., requiring a sum of 3.5 million kronor, which leaves 3.27 million kronor to be carried forward. The general meeting will be held in Gothenburg on March 14, 1932.

MISCELLANEOUS.

BOLSOVER COLLIERY COMPANY, LTD.—A notable improvement is shown in results achieved by this company during the past year. The net profit for the year 1931 amounted to £302,409, which compares with a net profit of £163,654 secured during 1930. The total ordinary dividend for the year has been raised from 2½ per cent. paid for 1930 to 7 per cent. declared for 1931. Apart from this, £100,000 is transferred to reserve account for redemption of capital values, against £50,000 utilised for that purpose in preceding year. The carry forward is £43,157 against £43,306. The directors attribute the improved results to improved house coal trade conditions and the inclement weather during the summer months. The industrial depression affected the demand for coal for that purpose but some slight improvement was manifest during the latter part of the year. The balance sheet will be found summarised on page 381. It will be noted that bank overdraft of £211,453 has been entirely paid off, thus disappearing from the balance sheet. The securities of the company have recently secured a quotation in the London Stock Exchange Official List. The meeting will be held at Royal Victoria Station Hotel, Sheffield, on February 19th, at 2 p.m.

BORAX CONSOLIDATED, LTD.—The trading profit for the year ended September 30, 1931, amounted to £238,113, comparing with £173,912 for year ended September 30, 1930, and £161,456 for year ended September 30, 1929. Interest, &c., received amounted to £22,495, as compared with £28,203, while the amount brought in was £191,249 against £208,675. This makes £451,857 available against £410,790. Expenses were reduced from £38,667 to £37,490. Debenture service absorbed £107,075, against £106,874. The sum of £30,000 is again put to depreciation, while £34,869 is paid to Tonopah and Tidewater Railroad under the guarantee against nothing in preceding year. Preference dividend again absorbed £44,000. The carry-forward is increased from £191,249 to £198,424. Meeting, Terminus Hotel, E.C.4, February 15, at noon.

HUDSON'S BAY COMPANY'S LAND SALES.—The latest statement is as follows:—

	For Quarter ended Jan. 31, 1931.	For Quarter ended Jan. 31, 1932.	For Year ended Jan. 31, 1931.	For Year ended Jan. 31, 1932.

Sold for	£15,800	£3,200	£114,000	£18,900
Farm lots sold for	\$600	\$230	\$10,700	\$2,700
Total receipts (gross)	\$61,100	\$64,200	\$244,100	\$173,200

TOKYO ELECTRIC LIGHT CO., LTD.—Return for December 1931.—K.w. hours sold, 348,120,000. Gross revenue, Yen 9,201,000 Sterling equivalent at par of exchange, £942,335. Increase over corresponding period last year, £50,184.

WOLVERHAMPTON CORPORATION THREE PER CENT. REDEEMABLE STOCK, 1924-1954.—Williams Deacon's Bank, Ltd., give notice that in order to prepare the interest warrants due March 1, 1932, on the Wolverhampton Corporation 3 per cent. Redeemable Stock, 1924-1954, the books will be closed from February 16th to February 29, 1932, inclusive.

Commercial Reports.

MARKET SUMMARY.

The realisation that no early improvement can be expected in the world's industrial activity, and therefore in the demand for raw materials, had a depressing effect on the international commodity markets. The tendency of prices is still in a downward direction. Among non-ferrous metals, copper continued to decline in New York, thus losing the gain which followed the agreement among producers to curtail their output. Tin and lead also declined, but spelter remained steady. Raw cotton has been weaker and cereals, wheat, maize, barley, oats and rye have all been slightly

easier. Sterling commodities which lend themselves to grading, and therefore to international arbitrage, continue to move in sympathy with international prices. Meat prices have been easy, but dairy products sold at slightly higher prices. Chemicals and petroleum products have remained unchanged, but vegetable oils and oilseeds advanced a few points. According to reports from various industrial centres, the coal trade continues depressed. In South Wales the current volume of demand seems to be scarcely equal to 50 per cent. of the capacity of the industry. There has been no increase in the activity of the iron and steel industries. Manufacturers of woollen goods appear still to be well occupied, and the home demand for rayon yarn and piece-goods remains good. On the other hand, the labour situation in the cotton trade is causing uneasiness.

THE COAL TRADE.

SHEFFIELD.—Easy conditions obtain in all sections of the trade and output is more than equal to deliveries. Shipments barely maintain former levels, but inquiries are out regarding supplies over next month. Prices in the export section are not quite so firm, best hards being available at 16s. 6d. to 16s. 9d. f.o.b. Industrial consumption as a whole fails to progress, although the textile mills are taking fair tonnages of smalls. The home coal trade has been exceptionally quiet lately, causing heavy accumulations of stocks at merchants' yards and at the pits. Best South Yorkshire house commands 23s. 6d. to 24s. 6d., and Derbyshire best, 22s. to 23s. The call for furnace coke is decidedly easier, 12s. per ton at the ovens being the recognised price. Demand for coke for domestic heating continues fairly brisk.

GLASGOW.—The lower prices now ruling have led to some improvement in business in the Scottish coal trade, and the collieries are now having less difficulty in disposing of their outputs. This applies more particularly to nuts, which have recently been a poor market. The London demand for these sorts has not been good. Generally, the market remains dull in tone, and supplies are easily obtainable as a rule for early shipment on the basis of the following rates for the shipping trade, all being f.o.b. district ports:—LANARKSHIRE.—Elli best, 14s. 3d.; splint best, 16s. 3d.; splint second, 14s. 3d.; navigation, 15s.; navigation second, 14s. 6d.; Hartley, 14s. 3d.; steam, 13s. 13s. 3d.; trebles, 13s.; doubles, 11s.; singles, 10s. 6d.; pearls, 9s. FIFE.—Screened navigation, 16s. 6d.; first-class steam, 13s.; third-class steam, 12s.; trebles, 12s. 6d.; doubles, 11s.; singles, 9s. 9d.; pearls, 9s. LOTHIAN.—Prime steam, 12s.; secondary steam, 11s. 9d.; trebles, 12s. 9d.; doubles, 11s.; singles, 9s. 6d.; pearls, 9s. AYRSHIRE.—Unscreened navigation, 16s.;

† Duty on Tea repealed as from April 22, 1929, inclusive. Figures transferred from Group F to Group H.

135 bags; delivered for home consumption, 364 bags; exported, nil; stocks, 2,700 bags, against 2,146 bags last year. Central American, landed, 10,033 packages; delivered for home consumption, 3,229; exported, 1,670; stocks, 57,089 packages, against 74,479 a year ago. Other kinds, landed, 8,160 packages; delivered for home consumption, 2,835; exported, 459; stocks, 52,637 packages, against 81,158 a year ago.

COCOA.—As a result of an increase in demand, the market in cocoa improved slightly in London. On the other hand, New York quotations continued to decline to new low levels. "March" futures were quoted at 3.79 cents per lb. in New York on Wednesday,

against 3.88 cents per lb. a week ago and 4.09 cents a month ago. As compared with the corresponding day last week, Wednesday's quotation for Accra, fair fermented, new crop, February-April, at 21s. 9d. per cwt. f.o.b., London contract, shows a rise of 1½ cwt. on the week. Last week's movements of cocoa in London were as follows: Landed, 15,349 bags; delivered for home consumption, 11,057 bags; exported, 786 bags; stocks, 133,527 bags, as against 185,320 last year.

TEA.—The quantities catalogued for this week's auction comprised 55,749 packages of Indian, 27,004 packages of Ceylon, and 15,100 packages of Java and Sumatra tea. Monday's Indian auctions were characterised by an improvement in demand, but prices did not advance except in the case of high qualities. The Ceylon tea offered on Tuesday met with a dull demand. The market in Indian tea was quiet on Wednesday, and the improvement which became noticeable on Monday was not maintained.

The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account:—

AVERAGE PRICE PER LB.									
Week ending	Northern India.		Southern India.		Ceylon.		Java.		Sumatra.
	s.	d.	s.	d.	s.	d.	s.	d.	s.
Feb. 5, 1931	1	0-67	1	0-82	1	3-37	0	9-23	0

Jan. 28, "	0	10-57	0	11-29	1	1-16	0	7-71	0
Feb. 4, "	0	9-74	0	9-76	1	0-00	0	7-12	0

RICE.—There has been an improvement in the demand for rice and the market was firm. Wednesday's "spot" quotation for Burma No. 2, cleaned, at 9s. 9d. per cwt., shows a rise of 3d. per cwt. as compared with last week. Movements in London during the past week were as follows: Landed, 195 tons; delivered, 193 tons; stocks, 1,388 tons, as against 354 tons last year.

POTATOES.—There has been no shortage of potatoes at the principal markets and prices remained at the lower level to which they had receded recently. At the Borough Market, "Best King Edward" sold from 10s. to 12s. per cwt., as compared with 10s. to 12s. per cwt. a week ago.

SPICES.—The market in spices has been quiet. Wednesday's quotation for "Black Singapore" pepper, at 8½d. per lb., shows no change on the week. Movements of pepper in London during the past week were as follows: Black, landed, 5 tons; delivered, 5 tons; stocks, 244 tons, against 440 tons last year. White, landed, 35 tons; delivered, 70 tons; stocks, 551 tons, against 501 tons a year ago.

MEAT.—Meat prices at the Smithfield market are scarcely changed on the week. English mutton has been slightly firmer, but Argentine beef was again lower. On Wednesday, Argentine beef (chilled hindquarters) was sold at 3s. to 3s. 6d. per 8 lbs., against 3s. 2d. to 3s. 6d. on the corresponding day last week, while New Zealand frozen mutton realised 2s. 6d. to 3s. 4d., as against 2s. 4d. to 3s. 4d. a week ago. According to the Smithfield Market official report, supplies of meat during last week amounted to 10,204 tons, as compared with 9,521 tons in the corresponding week last year. Imported beef, principally Argentine, formed 85.3 per cent. of the supplies, as against 84.7 per cent. a year ago; and imported mutton, mainly New Zealand, formed 79.7 per cent. of the total supply, as against 77.9 per cent. last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OLSEEDS.—Markets have assumed a quieter tone following the first flush of excitement caused by the Government's decision regarding tariffs. It was a surprise that duty, though it was not unexpected that foreign vegetable oils and likely to arrive before March 1st advanced sharply in value, and though some of the grain has been lost, seed in near positions is at a good premium over shipment. For Plate seed on passage to Hull £9 has been paid this week, and this about remains the value for spot and near, while £8 12s. 6d. is that for February-March. Indian linseed is quiet but steady, Calcutta to London offering at £11 10s. The quantity of linseed afloat for Europe is now 221,600 tons, an increase of 9,000 tons on the week. Cottonseed is firm in near positions, £7 being quoted for black Egyptian on spot and afloat and £6 12s. 6d. February-March shipment. Linseed oil is steadier than for some time and a little business has been done for this month's delivery, but practically nothing is doing in later positions owing to the uncertainty regarding import duties. Current value of raw oil for February delivery ex Hull is £15 5s. and for March-April £15 15s. Cotton oil is firm and crude Egyptian held for £22, and common edible £24 10s. ex Hull. Oilcakes are in steady demand and linseeds and cottons are dearer.

HIDE, LEATHER AND ALLIED TRADES.—Ox and heifer hides were fairly steady at the auctions held at Manchester this week, as apart from a reduction of ½d. per lb. on the two top weights in second clears and first and second warbled prices were unchanged from those of the previous week. First clear cows made ½d. per lb. more money, but there was no alteration in quotations for other classes, as was also the case with calfskins. Business has ruled quieter in the foreign hide market, and prices on average are slightly lower, although Frigorifics have remained firm. In South American wet-salted descriptions Argentine ox have sold at a fraction under

PRICE REDUCTION

made possible by

INCREASED SALES

A further statement by Cadbury Bros. Ltd.

ONE reason for Cadburys' latest price reduction was that previous reductions had considerably increased sales. The two charts below show how great this increase was. Cadburys Milk Blocks have increased in sales by 78% over the last two years and Bournville Blocks by 91%.

It is the economies in production and good buying, following upon these heavier sales, which have made possible the latest price reduction from 10d. to 9½d. and from 9d. to 8½d. per ½ lb. It is already clear from our sales that this latest reduction, though smaller than before, is greatly appreciated in this time of rising prices. *At no time throughout this period has the quality of the Chocolate been altered in any way.*

5d., while lights have realised just over 4½d., and Uruguayans up to 5½d. Although prices for most descriptions of dry South American hides are quoted more or less unchanged, the amount of business being done in them is small, and it is quite possible that a weaker tone will become apparent. B.A. Americanos are offered at 6½d., while 7d. is the figure mentioned for M.V. Americanos and 3½d. for B.A. Inservibles. Rather more interest has been taken in some kinds of Africans, and business has been done in dry Capes at 6½d. and 5½d. for firsts and seconds, and 4d. per lb. less for dry-salted 20/30 lbs. Nigerians have made 6½d. and Mombasas 5½d. Prices for Australians are still too high for the trade on this side, and only a very limited business is passing. Sales of sole leather have been rather better during the week, and although trade is still far from good, the tone of the market is more promising. Shoe manufacturers have been inquiring for dry hide bends in the medium and light weights, and in some quarters an increase in the turnover has been experienced. English and wet-salted bends, however, have not met with any greater call owing to the quiet period being experienced by the repair section. Inquiry for offal has been better, particularly in regard to pinned shoulders and bellies, in which some satisfactory deals have been completed. Producers and distributors of upper stock continue to find business confined to small quantities. A steady trade is being done in black and brown glacé kid, in addition to which shoe manufacturers have been inquiring for rather larger parcels of the lower-grade skins in patent. Calf leathers show no change in regard to the volume of business being done, but there has been a little more interest taken in the market for fancy upper stock.

RUBBER.—No decision has as yet been reached by the Dutch Government on the subject of restriction. Meanwhile, stocks continue to pile up. The market in rubber has been dull, and Wednesday's quotation for rubber in New York, at 4 cents per lb., has touched a new low record. In New York, Wednesday's spot price for rubber, at 4 cents per lb., shows a fall of 1 cent on the week. Wednesday's official closing price for standard ribbed smoked sheet in London, at 2½d. per lb., shows no change as compared with the corresponding day last week. In forward positions

business has been done at 2½d. to 2¾d. for April-June, against 2½d. to 3d., and at 3½d. to 3¾d. for October-December, as against 3½d. to 3¾d. a week ago. Movements of rubber in London and Liverpool during the past week were as follows: Landed, 2,292 tons; delivered, 1,066 tons; stocks at the end of last week, at 126,565 tons; show an increase of 1,226 tons as compared with the preceding week.

THE MONEY MARKET.

FIVE PER CENT.

After its

place and the absence of any big demand for money made the ease more pronounced. Conditions were unchanged on Wednesday, with rates running from 4 down to $3\frac{1}{2}$ per cent., or at the levels at which they had stood since the week-end. On Thursday Bank rate was reduced from 6 to 5 per cent. This reduction, and especially its magnitude, came as a surprise to the discount market, and rates took some time to settle down. The clearing banks automatically lowered their minimum rate for loans from 5 to 4 per cent., while in the afternoon rates of $3\frac{1}{2}$ and $3\frac{1}{4}$ per cent. were mentioned outside the clearing banks, the last named rate being quoted for "old" money.

As a result of the stringency then apparent, last week's Treasury bills went at higher rates. Applications amounted to £35.2 millions for a maximum offer of £30.0 millions, and £27.6 millions of bills were allotted at an average rate of £4 15s. 7d. per cent., against £4 6s. 18d. the week before. Market rates were then inclined to be firm with three months' bank bills quoted at $5\frac{1}{4}$ per cent., and "hot" Treasury bills at $4\frac{1}{2}$ per cent. The latter rate remained at $4\frac{1}{2}$ per cent. until late Wednesday afternoon, when it eased to $4\frac{1}{8}$ per cent. in sympathy with easier money. The banks bought some March bills earlier in the week at $4\frac{1}{2}$ per cent., and were in the market for some more as late as Thursday morning. Three months' bank bills eased to 5 per cent. on Wednesday for first-class bills, with standstill bills still quoted at $5\frac{1}{2}$ per cent.

	Jan. 28, 1932.	Feb. 4, 1932.	Feb. 11, 1932.	Feb. 18, 1932.	Previous Rate and Date Changed.
Bank Rate	6	6	6	5	6 (Feb. 18, '32)
Banks' Deposit Rate..	4	4	4	3	4 (Feb. 18, '32)
Discount / Call	4	4	4	3	4 (Feb. 18, '32)
Houses / Notice	$4\frac{1}{2}$	$4\frac{1}{2}$	$4\frac{1}{2}$	$3\frac{1}{2}$	$4\frac{1}{2}$ (Feb. 18, '32)
Market rate (3 months' bills)	$4\frac{1}{2}$ - $5\frac{1}{2}$	$4\frac{1}{8}$ - $5\frac{1}{2}$	5- $5\frac{1}{2}$	$4\frac{1}{2}$ -5	...

On Thursday afternoon an attempt was made to adjust discount rates in conformity with the lower Bank rate. March Treasuries were quoted provisionally at 4 per cent., Aprils at $4\frac{1}{8}$ per cent., and "hot" bills at either side of $4\frac{1}{2}$ per cent. Three months' bank bills were quoted at $4\frac{3}{8}$ per cent. up to Bank rate, with four months' bills at $4\frac{1}{2}$ per cent., and six months' bills at $4\frac{1}{2}$ per cent. German standstill bills were quoted at $4\frac{1}{2}$ -5 per cent. It is early to tell whether or not the new Bank rate will remain effective, or what discount rates are thought desirable, but for the time being there is a hope that three months' market discount rates will settle down at about $4\frac{1}{2}$ for Treasury bills and first-class bank bills.

The Bank return records a contraction of £1.6 millions in the note circulation and a corresponding increase in the reserve. The Bank's earning assets are unchanged on balance. Taking the Issue and Banking Departments together, Government Securities have been increased by £1.2 millions, while Discounts and Advances have been reduced by £1.1 millions, and Other Securities by £0.1 million. Among the Bank's liabilities, Public Deposits are £1.1 millions and Other Deposits £0.7 million lower. Bankers' Deposits have consequently expanded by £3.4 millions to £70.5 millions, a movement which explains the greater ease in the money market. The Proportion of the Banking Department's Reserve to Deposits is 43.6 per cent., or a fully adequate figure.

As stated, the Bank rate reduction came as somewhat of a surprise to the market, though one or two houses had refused to sell bills upon Thursday morning at the rates current immediately before the change. Market view is that the reduction was the response partly to the low level of discount rates and partly to a general feeling that the change had become both permissible and advisable in the interests of the country. This aspect of the reduction is commented upon on a later page. It will be easier to make the new rate effective, for the repayment of the Bank's American credit has made more bills

available to the market, and the peak of the revenue collection and of the reduction in Treasury bills is now practically passed. £35.0 millions of Treasury bills are in fact being issued this week, though it should be noted that maturities are also five millions higher.

There is no doubt that our foreign short debtor position has become much more satisfactory, and that our short-term debt to Paris has now been reduced to within manageable proportions, while there is no sign that any difficulty is being experienced in covering the repayments next August of the Treasury credits. Finally, much greater confidence is now being shown by foreign centres in British banking and financial stability, and the reduction in Bank rate is calculated to add to that confidence.

Money has remained very easy on Wall Street, with call rate at $2\frac{1}{2}$ per cent. and open market rediscount rates at $3.2\frac{1}{2}$ per cent. for 90-day bankers' acceptances. The week's gold movements include arrivals of \$1.3 millions from South America and a shipment of \$2.7 millions to Holland. Earmarkings on foreign account increased by \$4.0 millions. Gold exports for the seven months ended January 31st are returned at \$573.9 millions, and imports for the same period at \$405.1 millions, thus making a net shipment of \$168.8 millions.

The Foreign Exchange market continued quiet during the past week, but sterling was maintained against the principal gold exchanges, and some slight improvements were apparent at the close, despite the reduction in Bank rate. The undertone displayed resistance to occasional relapses. New York was steady, and closed at 3.44 $\frac{1}{2}$ against 3.43 a week ago. Montreal was in better demand at 3.95, compared with 3.99. Paris, after fluctuating between 87 $\frac{1}{2}$ and 87 $\frac{3}{4}$, closed at 87 $\frac{3}{4}$, showing $\frac{1}{8}$ franc depreciation, against last week's level of 87 $\frac{1}{2}$. Brussels was also slightly more favourable to sterling at 24.70. Milan continued steady, closing at 66 $\frac{1}{2}$. Madrid was an erratic market, and after touching 44 $\frac{1}{2}$ improved to 44 $\frac{3}{4}$ at the close. Dutch guilders were 8.51, against 8.50 a week ago. Swiss francs were in good supply, closing at 17.63, a gain to sterling of 10 centimes. The Scandinavian exchanges were steady, closing with small advances in favour of sterling at 17.90 for Stockholm, 18.42 for Oslo and 18.18 for Copenhagen. Helsingfors continued its recent appreciation, being finally quoted at 220. South American exchanges continued nominal, with only small business, Buenos Aires being 39 $\frac{1}{2}$ d. and Monte Video 31 $\frac{1}{2}$ d. Rupees were unchanged at 1s. 6 $\frac{3}{4}$ d., but yen were cheaper at 2s. 0 $\frac{1}{2}$ d. Batavia remained at around 8.55. In the forward market, dollars were strongly offered, and moved to discounts of $\frac{1}{2}$ cent for one month and $1\frac{1}{2}$ cents for three months; at the close the quotations narrowed somewhat, but the market continued principally sellers. Forward Paris was in good demand, one month closing at 15 cents premium and three months at 55 centimes bid. The action of the Banque de France in increasing its minting charge from 20 francs to its legal maximum of 40 francs per kilo, and the recent announcement concerning the probability of an amendment of the Federal Reserve Act in America, had very unfavourable repercussions in the French quotations for both spot and forward dollars, the spot rate falling by approximately 5 centimes from about 25.40 to 25.35, and the forward margin for three months to a discount of approximately 27 centimes as compared with 17 centimes previously. This represents approximately the gold export point from New York to Paris in the case of spot dollars, and is considerably cheaper than demand at premiums of $\frac{3}{4}$ and $\frac{1}{8}$ for the respective one and three months periods. Milan forwards improved on last week's quotations, closing at discounts of $\frac{1}{8}$ lire and $1\frac{1}{2}$ lire. Forward Madrid was at discounts of $\frac{1}{2}$ peseta for one month and $1\frac{1}{2}$ pesetas for three months. Amsterdam forwards were nearer par at $\frac{1}{2}$ cent and 1 cent discount. Berlin continues unquoted, and Switzerland at approximately last week's levels. Silver, after minor fluctuations, closed firmer at 19 $\frac{1}{2}$ d. for spot and 19 $\frac{1}{2}$ d. for forward. Hong Kong was 1s. 5 $\frac{1}{2}$ d. and Shanghai 1s. 11 $\frac{1}{2}$ d.

PEACE OR WAR IN THE PACIFIC.

THE war at Shanghai is apparently to be resumed, and this time on the grand scale. The strenuous efforts which have been made by Sir Miles Lampson and the other foreign diplomatic representatives on the spot succeeded, on Thursday morning, in bringing the Japanese and Chinese commanders at Shanghai together to discuss an armistice. The Japanese commander communicated by word of mouth his ultimatum to the Chinese commander to retreat unconditionally to a distance of 12 $\frac{1}{2}$ miles from the city. The Chinese commander refused, and announced his intention of resisting invasion to the death. On the same day, the "independence" of Manchuria was proclaimed under Japanese auspices. From the Japanese point of view, all this is no doubt "according to plan." For who can seriously have expected that the Chinese would turn the other cheek to Japanese aggression by voluntarily retreating a dozen miles after having successfully held their ground against a flagrantly unwarrantable onslaught?

By the time this issue is in our readers' hands the operations may be in full swing. And, whenever they begin, they will be operations on a different scale, and of a different intensity, from any which have taken place during these last five months either in Shanghai itself or in Manchuria. When the Japanese army took the offensive in Manchuria, it already held all the key positions and the main lines of communication; and the theatre of war which it had chosen was an easy, open country in which the military advantages were on the side of the more efficiently organised belligerent. In Shanghai and its neighbourhood the Japanese have to fight on a very different terrain—the narrow streets and lanes of Chapei and the water-logged countryside in the hinterland, with its dearth of roads and its maze of creeks and canals. So far, the Japanese have attempted, without success, to make themselves masters of this terrain by landing marines and by dropping bombs from the air. They have now landed a regular military force, at least 20,000 strong, with all the mechanical apparatus of destruction which has been developed with sinister rapidity during and since the last Great War. On the other side, there is now a considerable concentration of Chinese forces in support of the original defenders of Chapei and Woosung. Indeed there are reported to be 100,000 troops écheloned along the Shanghai-Nanking railway, under the command of Marshal Feng Yü-hsiang. The Chinese are, of course, poorly organised and equipped by comparison with their Japanese adversaries. At the same time, the terrain is all in their favour; they have gained a certain amount of military aptitude and experience in twenty years of civil war, and the present Japanese onslaught upon China has given the Chinese soldiery, for the first time, a common cause for which they really have the will to fight. Accordingly, we have to expect a stubborn and savage war on a large scale in and around the International and the French Settlements at Shanghai. The launching of the new Japanese offensive, if it takes place, will mean that the situation has been allowed, by the League of Nations and the Powers, to get completely out of hand; and it will be impossible then to foresee where it may end.

We have still to record an unhappy contrast between the hesitating demeanour of the League and the Powers and the reckless action of Japan. The contrast was pointed once again by the two major events of last Tuesday. On that day it was announced in Tokyo, by the Japanese War Office, that the general commanding the new Japanese expeditionary force was to present an ultimatum to the Chinese commander requiring him to withdraw his troops a distance of 12 $\frac{1}{2}$ miles within 24 hours. These troops stand on territory which is not only juridically under Chinese sovereignty (as is the whole of Shanghai, the two foreign settlements included), but which is actually under Chinese administration. The Japanese ultimatum was

thus a notification of intent to commit an act of naked military aggression. On the same morning, at Geneva, the Committee of Twelve of the Council of the League of Nations met, without the participation of the Japanese and Chinese delegates, in private session, and drew up the text of a Note for presentation to Japan. To give the Council their due, this Note was distinctly stiffer in tone than any of their previous communications; and it was addressed to Japan alone, without any further attempt to keep up the hypocritical pretence that both parties to the Sino-Japanese dispute were equally to blame, with nothing to choose between them. This new Note, addressed to Japan exclusively, drew her attention to the serious character of recent events and the present situation in Shanghai, and reminded her, in the interest of her national honour, of the obligations which devolve upon her as a signatory of the Covenant and of the Kellogg Pact. Particular reference was made to Article 10 of the Covenant, under which the States members of the League undertake "to respect and preserve as against external aggression the territorial integrity and existing political independence of all members of the League."

So far so good; but the weakness of this Note was that it was not enough for the purpose. On the day on which the Japanese Government announced an ultimatum the League Council merely sent another remonstrance, which was certainly stronger in its language than its long string of ineffective predecessors, but which resembled them all in the vital point that it contained no hint of action. It was evident, by last Tuesday, that nothing but the certainty of incurring the economic sanctions of Article 16 of the Covenant was likely to induce Japan to call off her offensive. And the prevention of the Japanese offensive was the practical object which it was the urgent business of the League and the Powers to achieve. As it is, the Note was calculated to have no more effect than to impose a further delay (most welcome to the Japanese, who are manifestly playing for time) before the convocation of a special session of the League Assembly.

On the point of procedure in this connection, we may quote Sir John Simon, whose legal opinion nobody would call in question. In the House of Commons last Monday, February 15th, the Foreign Secretary stated "that, where a dispute that was before the Council was referred to the Assembly at the request of one of the parties, or by the Council itself, in either event the result was to transfer the matter to the Assembly, and under Article 15 the Council had no more jurisdiction. It might be an inconvenient result, but that appeared to be the case. China had applied within the fourteen days for the matter to be referred to the Assembly. That was within China's right, and no one would think of taking her right away. How soon the Assembly could meet, and what it could do if it met, were matters that had to be carefully considered, because it was not the desire of any responsible body to interpose delay where more prompt action was possible."

This zeal for promptness in getting to grips with the Far Eastern crisis comes somewhat strangely from the mouth of a statesman who has been sitting on the Council of the League, and bearing a heavy share in the responsibility for its procrastinations, since the crisis began. But Sir John Simon's question about promptness is easily answered. The Assembly can meet as promptly as the Council allows, since every State Member of the League is represented at Geneva at this moment by a strong and responsible delegation attending the Disarmament Conference. Whether such a meeting would be convenient to members of the Council is another matter. The morning after Sir John Simon's statement in the House of Commons at Westminster, the Committee of Twelve at Geneva postponed the exercise of China's right, which "no one would think of taking away," by addressing to Japan the Note which we have mentioned above.

What is the motive behind this persistent policy of inactivity and whither is it leading us? Do Sir John Simon and his colleagues in the Cabinet calculate that, if only they can be clever enough to avoid coming to loggerheads with Japan for long enough, the crisis will settle itself by the Japanese Army triumphantly driving the Chinese Army off the field? If that is their calculation, they are making the mistake of their lives. To begin with, the immediate result of acquiescence in this new Japanese offensive may be the abandonment of Shanghai to the fate of Smyrna. But let us suppose that the Japanese do succeed in dislodging the Chinese forces from the ruins of Chapei without the rest of Shanghai being destroyed, what then? Is it calculated that the Chinese will then capitulate and—bowing to superior force—conveniently resign themselves forthwith to Japanese domination? In that event, what kind of standing do Europe and America expect to have in the Far East, when they have lost their face by betraying their impotence either to vindicate justice or to maintain law and order or even to look after their own material interests? And what, again, in that event, will be the outcome of the Disarmament Conference, where our success or failure in putting Japanese militarism under restraint will be taken by all of us as “the acid test” of the solubility or insolubility of the general problem of “Security”?

But, as a matter of hard fact, a sensational Japanese victory at Shanghai, followed by a convenient Chinese capitulation, is not really one of the contingencies that we have to reckon with. Of course, the Japanese are capable of dislodging the Chinese from the streets and lanes at Chapei and from the creeks and marshes of the hinterland if they are willing to pay the price; and, though the price is going to be very much heavier than they originally bargained for, we think it not unlikely that they will decide to pay it. But, when they have made themselves masters of Shanghai and Woosung, they will be no nearer than before to winding up the war to which they have so rashly committed themselves. They will still, as now, be faced by some kind of Chinese forces across some kind of military front; and they will have the same alternative, as now, between attempting to disperse those forces or re-embarking their own forces and leaving the Chinese to re-occupy the territory that Japanese arms will have conquered at such cost. This will-o'-the-wisp may lead the Japanese on, step by step, from Shanghai to Nanking, from Nanking to Hankow, and from Hankow to infinity. For it is three months' journey from Shanghai to the inland frontier of China; and where China ends a friendly Russia, vaster than China herself, begins in China's hinterland.

The moment has come now when the League and the Powers must take their courage in both hands and follow up the last Note from the Council, and the four-Power five-point Note that preceded it, by action. It is obvious that economic sanctions cannot be imposed on Japan without a risk of Japanese naval reprisals; but in all the great decisions of life, public or private, it is a balance of risks that has to be cast up. Are we going to shirk the risk of a lesser evil here and now at the price of exposing ourselves to the risk of a far greater evil in the not distant future? Inaction now means letting international relations—not only in the Far East but everywhere—run rapidly down a steep place into the abyss. It means the death-knell of disarmament; and that means that all the nations will re-arm to the teeth and will run to cover in military and naval alliances. And that means the driving of a wedge through the British Commonwealth of Nations, for, in face of a Japan left free to run amok, the smaller English-speaking countries in the Pacific will assuredly seek cover with their big brother, the United States, who has a Pacific seaboard of his own to defend, and therefore cannot disinterest himself, whatever happens, in this Japanese war in the Far East.

If the League of Nations is ever to be of use to humanity, if civilisation is ever to feel secure from aggression, the Powers must place their collective strength fearlessly behind the League to-day in vindication of their resolve that the world's peace cannot be broken by Japan, or any other aggressor, with impunity.

THE IMPORT DUTIES BILL.

FORESHADOWED, as it had been, in all essentials by Mr Chamberlain's statement on the Financial Resolution, the Import Duties Bill, with its 10 per cent. “revenue” basis, its Advisory Committee, and its promise of forthcoming “additional duties” and *tarifs de combat*—all founded on a system of Dominion and Colonial Preferences—contained little that was unexpected. In moving the Second Reading last Monday, the Financial Secretary to the Treasury was content briefly to rehearse its divers incompatible objectives—revenue, assistance to sterling, protection for home industry, access to markets by bargaining—in unadorned Gregorian plain-song à l'Ecossaise. This tribute to reason paid, he was free to play, with greater gusto, sergeant-major to the expectant and loyal troops: the Bill must become law “within the narrow limits of six Parliamentary days.” According to plan, after two days' Second Reading debate, the Ayes had it by 451 to 73 votes.

But not before the Secretary of State for Scotland, in a speech equally impressive for its moderation of phrase and for its lucidity of destructive argument, had stripped the Bill of such shreds and tatters of justification as still clung to it after the Home Secretary's onslaught on its principles a fortnight ago. In particular we would pay tribute to Sir Archibald Sinclair's effective exposure of the Bill's inconsistency. The proposals were, he said, a compromise, not between Free Trade and Protection, but between different schools of Protection. Aiming professedly at revenue, the Government would miss their aim the more they protected the home or helped the Dominion producer. Aiming at an Empire constituted as a self-contained economic unit, they were stultified by their own cry of “Britain First.” Aiming at greater freedom of trade by reciprocal arrangements, they would have their hands tied by pledges to the Dominions. In dissipating our energies over all these mutually contradictory objects, “time would be wasted, opportunities missed, and obstructive vested interests would be created.” The case could not be better put against a fiscal policy imposed in gross breach of the Prime Minister's election pledges and calculated to do the maximum of damage to the “national” interests in whose defence the Government was entrusted with five years of office likely to cost a disillusioned electorate dear. But the Secretary for Scotland, no less than other critics of our masters' fiscal insanity, for all immediate practical purposes wasted his breath. As Mr Chamberlain ingenuously, if only too accurately, observed on Tuesday, “This House is no longer interested in the old arguments for or against tariffs . . . we know very clearly and definitely what it is we want to do.”

Under these circumstances the conferment by Parliament of Letters Patent on our new British-model Paradise of Profiteers is a foregone conclusion; no radical alteration of the proposals is possible; and it now only remains to be seen whether anything can be done by the Opposition, not excluding the Liberal Free Trade group among the Government's supporters, to improve the Bill in minor detail during the Committee stage. Amendments, we hope, will be concentrated in the main on two points—(a) the schedule of goods exempt from the general *ad valorem* duty, and (b) the constitution and terms of reference of the Advisory Committee. There are a number of minor matters to which attention will doubtless be paid—notably the absence of provision for “drawback” in the case of the 10 per cent. duty and the utter inadequacy of the safeguards against damage to the re-export trade—but the two issues mentioned are fundamental.

From the schedule of exempted goods, which we print in full on page 401 of this issue, it will be gathered that the aim of the Government has apparently been to interfere as little as possible with the primary raw materials expected in view of Mr Chamberlain's original statement (indeed, it is to be inferred from Sir Herbert Samuel's interjection in the House on Monday that it was considerably enlarged at the last moment under pressure, presumably, of the manufacturing interests affected). Not

only are such staple raw materials as cotton, wool, flax, hemp, hides and most oilseeds to be admitted free of duty, but the exclusion from the tariff of newsprint and pitprops and the proviso in the Bill that goods imported for use in the building or repairing of ships are to be free of duty, may fairly be regarded as a tardy recognition on the part of our Protectionists that to debar the newspaper, coal and shipbuilding industries from access to the cheapest source of the raw materials which they require would be disastrous. But, if it be the Government's policy to refrain from increasing the cost of essential raw materials, it is difficult to see how they can logically oppose the extension of the free schedule to cover timber and non-ferrous metals, while the imposition of even a 10 per cent. duty on maize and other feed grains is a senseless burden to place on British stock-raising and poultry farming. We put forward these concessions as the minimum which the Government may reasonably be expected in the name of sanity to make. Even so, the general *ad valorem* duty (and this, be it remembered, represents a “protection” of over 50 per cent. in the case of imports from countries still on gold) will be imposed not only on the cruder forms of iron and steel imports, on whose cheapness the maintenance of our export trade in iron and steel products depends, but on a far-reaching range of “semis” for which our finishing trades cannot procure adequate substitutes in terms of quantity, quality or price from home sources of supply.

The second point of attack—the constitution of the Advisory Committee—is even more crucial, for though the damage that may be done by the 10 per cent. *ad valorem* duty is possibly limited, the potentialities for mischief involved in the sections of the Bill which provide for building up a high tariff super-structure on the so-called “revenue” basis are almost limitless. The Bill as drafted could hardly be more pernicious. There is to be an Import Duties Advisory Committee consisting of a chairman and not more than five or less than two other members. These gentlemen are to be appointed by the Government and are to hold office for a period of only three years. The general instruction to the Committee, which is to have power to summon witnesses or require the submission of such returns or other information as they need, is as follows:—

“(1) Where it appears to the Committee that an additional duty of customs ought to be charged in respect of goods of any class or description which are chargeable with the general *ad valorem* duty and which, in their opinion, are either articles of luxury or articles of a kind which are being produced or are likely within a reasonable time to be produced in the United Kingdom in quantities which are substantial in relation to United Kingdom consumption, the Committee may recommend to the Treasury that an additional duty ought to be charged on goods of that class or description at such rate as is specified in the recommendation.

“(2) In deciding what recommendation, if any, to make for the purposes of this section, the Committee shall have regard to the advisability in the national interest of restricting imports into the United Kingdom and the interests generally of the trade and industry in the United Kingdom, including those of trades and industries which are consumers of goods as well as those of trades and industries which are producers of goods.”

Any additional duty recommended by the Committee may be imposed by Treasury Order (subject to Parliament's right of veto within twenty-eight days) either *ad valorem* or by reference to weight, or any other measure of quantity, for any period or periods, whether continuous or not, and at different rates if desired for different periods or parts of periods.

This, forsooth, is how a “national” Government gives concrete shape to Mr Baldwin's famous pledge last July that if he secured a mandate for Protection, “tariff adjustment must be taken away from ordinary politics . . . (and) founded on full and impartial information.” Mr Baldwin's “permanent, non-political Tariff Commission,” which was to save the British legislature from becoming a “crooks' corner,” is to be a body removable at relatively

brief intervals of three years if it dissatisfies its political task-masters, who begin by commanding it to have permanent regard to “the advisability in the national interest of restricting imports”; its recommendations are to be published by the Treasury only “in such manner as they (i.e., the Government) think fit”; there is no provision to make public hearings of evidence compulsory; there is no assurance that the consuming interests will even be heard at all. Once this Act is passed, the Government will have *carte blanche* to set up a packed Committee of whole-hogging Protectionists and thus proceed to the rapid conversion of Great Britain into a high tariff country under shelter of the plea that they are acting only on the recommendations of a “non-political” body. If the issues were not so serious and fraught with such possibilities of serious ill to the welfare of this country, the farce would be one for Homeric laughter.

But the issues are, in sombre reality, far other than fit matters for cynical jest. Our readers are welcome to derive such grim amusement as they may from speculations how a committee composed uniquely of Plato's philosopher-kings would construe the words “ought to be charged,” in the absence of any guiding principles as to price, or as to the desirability or otherwise of fostering the uneconomic duplication of productive machinery within national territories. They may, God help them, proceed to ponder how long this Committee, if its functions as a “scientific” tariff-builder were judicially exercised, would take to decide the degree of protection, in conditions where the factors of price and demand must be exposed to a multiplicity of variable exchange and customs duty influences, would be necessary to ensure “substantial” production of any specific article in this country “within a reasonable time.” All this they may do; but with better reason they may share our fear that any Advisory Committee which Mr Chamberlain, with his definite knowledge of “what we want,” may appoint, will act, with the rapidity demanded by successive Government speakers during the Second Reading debates, as a jury under Lynch Law. And this being so, the only meagre hope we see lies in the ability of the Free Traders in Parliament to wring from the Government the concession that the trials shall be held and the verdict delivered *coram publico*. If the trade by which the people of this country has prospered and yet might prosper is to be strangled, whether it be to profit sectional interests or in besotted pursuit of economic nationalism, it is surely not too much to ask that the executioners should be compelled to go about their business openly, not in a fiscal Star Chamber, and that the victim's innocent dependents should at least hear the evidence on which the sentence is pronounced.

REFLATION IN THE UNITED STATES.

“THE United States has the resources and the resilience to make a large measure of recovery independent of the rest of the world.” Thus Mr Hoover exhorted Congress in his message on January 4. Since then the United States has made two big efforts to clear the ground for recovery by internal economic reforms, and their success or failure will test the truth of the President's statement, which echoes too exactly his previous outbursts of optimism, long since disproved, to be accepted without question. In his message Mr Hoover urged Congress to adopt with haste a series of financial measures, including the creation of a “reconstruction finance corporation” to furnish credits to banks which they could not otherwise obtain; the creation of a system of home loan discount banks; the revision of national banking laws; and a relaxation of the restrictions placed upon Federal Reserve rediscounting.

The grave financial difficulties which these efforts were intended to overcome arose from three main causes. The first, both in time and fundamental importance, was the depreciation of banking assets and collateral. Such depreciation as occurs during normal movements of the trade cycle does not seriously affect a sound banking system,

since little bank money is invested in speculative assets, and since loans on security are covered by ample margins. But when trade depression is so deep that margins generally run out and the safest securities heavily depreciate, the strain on the banking system is extreme. Sudden liquidation becomes necessary, and this reacts violently on public confidence. Some light on the pursuit of this process in the United States is thrown by the figures of loans and investments of member banks. Between January 21, 1931, and January 13, 1932, their loans on securities fell from \$7,425 million to \$5,660 million, and other loans from \$8,414 million to \$7,371 million, a total decline of \$2,808 millions in less than a year. Only \$492 millions of this contraction was balanced by purchase of investments. This process, moreover, is self-aggravating, not self-correcting, and the American banking system still carries a very heavy burden of frozen assets.

The second cause of the crisis has been the rapid withdrawal of foreign funds—resulting in an outflow of gold. Between September 19, 1931, and January 9, 1932, the Federal Reserve Banks lost \$500 millions of gold. The consequential loss of deposits, combined with other factors, forced the member banks to turn bills into the Federal Reserve Banks; between the same dates their deposits with the Federal Reserve Banks fell by \$382 millions to \$2,036 millions, while their bills rediscounted rose by \$555 millions to \$818 millions. With the great fall in the number of commercial bills available, the members banks' reserve of eligible bills was running patently short, and it was this rather than the size of the system's gold reserves that set a limit to the amount of foreign withdrawals possible, since the percentage of gold held against notes is closer to 70 per cent. than to the 40 per cent. legally required.

The third cause of the financial crisis has been the hoarding of currency. It is impossible to gauge it accurately, but on February 11, 1932, the Federal Reserve note circulation was \$2,662 millions, or \$1,181 millions greater than a year beforehand, and as prices and the volume of trade were actually declining the increase of circulation may be taken as an indication of the extent of the hoarding, though some allowance must be made for the results of the loss of all banking facilities in some towns and, possibly, for a certain accumulation of American notes abroad.

That was the situation with which Congress was asked to deal. Already, in October, the National Credit Corporation had been formed by the bankers, on the initiative of President Hoover, with \$500 millions of available funds, to rediscount banking assets not eligible for rediscount at the Federal Reserve Banks. The functions of this institution have been taken over by the Reconstruction Finance Corporation, which was the first fruits of Congressional effort after Christmas. The Corporation, which has General Dawes as President, and Mr Eugene Meyer, Governor of the Federal Reserve Board, as Chairman, has a capital of \$500 millions subscribed by the Federal Treasury, and a further \$1,500 millions may be raised as needed by the sale of Government guaranteed bonds. The Corporation is authorised to lend to banks of all kinds, loan associations, credit corporations and insurance companies, and to aid in the temporary financing of railroads which are unable to obtain funds "upon reasonable terms through banking channels or the general public," the approval of the Interstate Commerce Commission being required. Loans may be made to banks closed or in process of liquidation, to a total amount of \$200 millions, and the Secretary of Agriculture is allotted \$50 millions for loans to farmers for crop production purposes.

But the Reconstruction Corporation could not by itself cure the evils from which the American banking system was suffering. It could relieve the strain a little by taking over a certain proportion of frozen assets, but it could not remedy the difficulties of the commercial banks *vis-à-vis* the Federal Reserve, which were threatening to choke the currency and gold system. It has been esti-

mated* that the surplus of gold in the United States over legal requirements is sufficient to provide for either (a) a loss of approximately \$1,400 millions through export, or (b) an increase of \$3,500 millions in domestic currency requirements. Even if the Federal Reserve Banks were to lose \$1,000 millions of gold they could still provide \$1,000 millions additional currency. But a check to these possibilities was imposed, under existing circumstances, by the lack of paper eligible for rediscount and by the restrictions upon the borrowing powers of member banks. The Bill, associated with the name of Senator Carter Glass, that apostle of banking orthodoxy, which was passed by the House of Representatives last Monday, and is before the Senate as we write, is designed to diminish the force of that check. The Bill authorises any Federal Reserve Bank to make advances to a member bank which secures the endorsement of four or more other members for its obligation, or to an individual member bank upon collateral security not now eligible for rediscount, but which shall be satisfactory to the Federal Reserve Banks under limitations to be prescribed by the Federal Reserve Board; such advances, which will not be eligible as collateral for Federal Reserve notes, will be made at rates at least 1 per cent. higher than the prevailing rate of discount of the Federal Reserve Bank. Another section of the Bill provides that for a period of one year after the date of its passage the Federal Reserve Board may authorise Federal Reserve Banks to pledge as collateral for Federal Reserve notes United States Government securities, in addition to gold and bills at present eligible.

The promotion of this measure, which has every chance of rapid passage, was approved by leading bankers and acclaimed as a powerful bull point by the stock market. The sudden flare-up of optimism on Wall Street and its sequel are discussed in an Investment Note on page 423. As for the wider economic consequences of the Bill, its possible effects have undoubtedly been exaggerated in some quarters. It is, from the European point of view, a very conservative measure. Permission to advance "Lombard loans" and to use government securities as collateral for the note issue would not be regarded as unorthodox in London. But they are unorthodox to the stricter American banking authorities, and the tendency counts for something; once having sniffed the incense of heresy the American banking system may conceivably be tempted to further apostasy.

It cannot, however, be said that the present measure itself makes inflation probable. Its purpose has been aptly described as "reflation," to prevent further deflation under the compulsion of banking stringency, and to undo some of the present extreme deflation. Its success even in doing so much depends on conditions of public confidence at home and abroad. If it is regarded in Europe as involving a threat of inflation and the consequent depreciation of the dollar, it may only serve, like the increase of the fiduciary circulation and the raising of foreign credits for London last summer, to put off the evil day and to liberate more gold for circulation elsewhere. That result would renew internal distrust, and the American banking system, though technically better off, would be in as bad a condition fundamentally as ever. Moreover, reflation would thus be rendered impossible. If, on the other hand, internal confidence is enhanced by these reforms, and money begins to come back from hoards, the Bill will have rendered itself unnecessary, remedy would automatically disappear and the brake deflationary tendencies. As a short-run expedient, therefore, the value of the Bill depends almost entirely on its effect is much clearer and more certainly advantageous. It will remove some of the dangerous rigidities in the American banking structure, and may prove, by relaxing the conditions governing reserves against currency, to be an important step towards the redistribution of gold which must take place before the international gold standard can be generally restored.

* National City Bank Bulletin, February, 1932.

THE BALANCE OF PAYMENTS.

THE balance of our international payments has become the tool of politicians and the excuse for a revolution in our fiscal policy. All the greater interest and importance, therefore, attach to the estimates of our overseas account just published by the Board of Trade, and with all the greater care must they be scrutinised. The *Economist*, foreseeing the present lines of controversy, has repeatedly urged in the past that the various "invisible" items should be more accurately and more methodically measured, and a similar demand has been reiterated by the Balfour Committee on Industry and Trade, and more recently by the Macmillan Commission. Some of the Board of Trade's figures have, indeed, now been revised, partly in the light of the *Economist's* investigations. In the following table the earlier estimates of certain items, published by the Board of Trade a year ago, are shown in italics:—

ESTIMATE OF THE BALANCE OF PAYMENTS OF THE UNITED KINGDOM 1929-31.			
Particulars.	1929.	1930.	1931.
Excess of imports of merchandise and silver bullion and specie	381	386 (387)	411
Estimated excess of Government receipts from overseas*	24	19 (21)	16
Estimated net national shipping income†	130	105	80
Estimated net income from overseas investments	250 (270)	220 (235)	165
Estimated net receipts from short interest and commissions	65	55	30
Estimated net receipts from other sources	15	15	10
Total	484 (504)	414 (431)	301
Estimated total credit or debit balance in items specified above	+ 103 (+ 123)	+ 28 (+ 44)	- 110
Excess of exports (+) or imports (-) of gold bullion and specie	+ 15	- 5	+ 35
* Including some items on loan accounts. † Including disbursements by foreign ships in British ports.			

Items involving the lending or repayment of capital have been excluded from the above table. The merchandise balance has already been commented upon in these columns*; the increase of £25 millions, as compared with 1930, in the excess of imports over exports is due to the fact that, while prices of both imported and exported goods fell, the quantity of imports was maintained, while that of exports was largely decreased. The balance of Government receipts from overseas has been slightly diminished; the Hoover Moratorium had some effect in this direction during the latter half of the year.

The Board of Trade next estimates that the national shipping income (after allowing for disbursements in foreign ports) declined in the year from £105 millions to £80 millions; this reduction is based on a decline of 20 per cent. recorded in the Chamber of Shipping index of time charter rates, on a decline of passenger traffic and fares, and on a substantial falling-off in the volume of British tonnage in commission, although whole-cargo freight rates, as calculated by the *Economist*, actually rose slightly. The Board of Trade suggest that the actual reduction may have been less than £25 millions. Indeed, in every case the figures seem to have been put at the most "unfavourable" level possible.

Perhaps the most interesting and controversial item of all is the estimated net income from overseas investments. It is worth noting that well over a year ago the *Economist* suggested† that the estimate of £285 millions originally put forward under this head for 1928 and 1929 was too high by something of the order of £30 millions, and that, as a result of our investigations and those of Sir Robert Kindersley, the Board of Trade has now reduced the figure

* See *Economist*, January 16, 1932.
† See *Economist*, November 1, 1930.

for 1929, and for previous years back to 1926, to £250 millions. This estimate, which is used as the base for later calculations, may now be accepted with far less doubt than hitherto. The Board of Trade estimates a drop of £85 millions between 1929 and 1931, which corresponds to the upper limit of our own estimate* and compares with Sir Robert Kindersley's calculation of "something like £70 millions." The Board of Trade assumes that since 1931 there was little change in the yield from Government and municipal bonds (£63 millions), while other fixed-interest (about £40 millions) dropped by 10 per cent.; this would mean that the variable income declined in the year from £117 millions to £66 millions, that is, by over 40 per cent.—a very large figure, but one with which it is difficult to quarrel in view of the enormous reductions in profits and dividends that have accompanied the fall in prices. The figure for income from short interest and commissions has also been gravely reduced; in the absence of detailed information we would not offer any criticism of the estimate except to point out that £7 millions of the £25 millions drop is accounted for by defaults on acceptance credits and cash advances, which are capital losses and ought not to enter into a table of current items, whatever may be the accounting practice of the financial houses concerned. We would, however, again question the final item—"net receipts from other sources"—which Mr H. W. Macrosty, late of the Board of Trade, has described as "a purely conventional entry." This is a strange hotchpotch, including, among other things, the proceeds of sale of old ships, emigrants' remittances, tourists' expenditure, film royalties, and expenditure by foreign Governments on their diplomatic and consular services in this country. The Board of Trade points out that there was a considerable increase in 1931 in the number of emigrants returning to this country, and a very large reduction in the number of emigrants, and this should have enlarged the surplus balance under this head. Moreover, we doubt the statement that whereas the expenditure of tourists in the United Kingdom was much less in 1931 than in previous years, the expenditure of British tourists abroad is not likely to have been affected to nearly the same extent. It is true that the suspension of the gold standard, which made foreign travel very expensive while attracting visitors here, did not occur until after the holiday season, but the travel agencies and hotels abroad were complaining of the shortage of British custom long before that. There can be little doubt that on account of tourist expenditure Great Britain has a large debit balance to meet, so that any general reduction of travel, even without any peculiar financial inducement to spend in Great Britain, diminishes the deficit. We should have been inclined, therefore, to have raised rather than lowered the final item.

The result of the Board of Trade's calculations is to show an outward balance of £110 millions, or £108 millions after deducting the capital loss unfortunately included with short-term interest. We should be inclined to reduce this figure by another £10 millions at least for the reasons mentioned, but, in round figures, it may be the case that on current account we last year incurred an international deficit of the order of £100 millions. At the same time we subscribed perhaps £40 millions to new issues for overseas, while on the other hand part of the deficit was balanced by the export of £35 millions of gold. The figures for the whole year, seriously as some may regard them, pale into relative insignificance against the withdrawals of foreign capital, estimated at £200 millions, in barely two months; and in any case there is no reason to fear that, taking capital movements into account, we will have to face as serious a position this year.

The debit balance established by the Board of Trade will undoubtedly be used in fiscal polemics, and we would therefore add one brief comment. Between 1929 and 1930 the excess of merchandise imports over exports increased by £30 millions, while in the same period our income from shipping, from overseas investments, and from our financial participation in world trade, declined

* See *Economist*, December 12, 1931.

by £170 millions. There can thus be only one answer to the question, Which is it more urgent to remedy, our own adverse commodity balance or the strangulation of world trade, which impoverishes our creditors, ruins our enterprises abroad, and decimates the profits of our great shipping and financial enterprises?

THE RICE SITUATION.

(BY A CORRESPONDENT.)

WHILE the repercussions of the slump in wheat prices are generally appreciated, little attention has been directed to the serious effects of the crisis that has developed in the great rice-exporting lands since the opening of the 1930-31 season. Only the news of the unrest in Burma has brought a somewhat faint echo of the difficult situation. Yet with the coming on the market of the crop now approaching completion in the principal producing countries a critical stage is being reached.

The comparative neglect to consider the effects of the fall in rice prices is no doubt due largely to the fact that, though rice is the staple food of probably at least one-third of mankind, it enters directly into Western commerce only to a relatively small extent: the imports into the four important Western importing countries, Germany, France, the Netherlands and Great Britain, in the five years 1926-30 amounted in all to less than 12 per cent. of the total amount of rice entering into international trade. Indirectly, however, the slump in rice has inevitably a serious effect on trade with the principal Asiatic countries, not only on that with the three great exporting lands, Burma, Indo-China and Siam, but on that with monsoon Asia as a whole. In every country in that vast area rice is the staple crop, depression in whose price means a lower purchasing-power for a very large section of the population, especially if at the same time prices for the great plantation products are greatly depressed and there is little demand for hired labour. The place of rice in the trade balances of the three great exporters is shown by the statistics of the last five years to have been 57 per cent. of the value of the total exports in the case of Burma, 66 per cent. in that of Indo-China and 69 per cent. in that of Siam. The fall in the total value of imports into Burma in 1930-31 was 23 per cent. and in that of imports into Indo-China in 1930 no less than 30 per cent.; with the more marked fall in value of rice exports in the last trade year, the latest trade returns seem likely to indicate a still more serious decline in the import trade.

Though prices had shown a downward tendency since 1926, the slump in rice came some months later than that in wheat, and a sharp decline did not occur until September, 1930. The trend of world production is indicated by the following statistics of the International Institute of Agriculture:—

	Million quintals, rough rice.
1909-14	778
1925-26	857
1926-27	853
1927-28	846
1928-29	876
1929-30	859
1925-30	858

Production in the five years ending 1929-30 was thus 10 per cent. greater than that in the pre-war quinquennium. The corresponding increase in world wheat production was 14 per cent. In the case of both commodities, the chief country excluded is China, for which no reliable statistics are available. The increase in production of rice has thus been comparatively moderate.

Rice is a native crop, and the conditions of its production have changed little. While wheat-growing has been revolutionised by the combine and the tractor and by the introduction of new varieties, rice-growing is still carried on in small holdings by primitive methods, and the area under improved varieties remains insignificant. The increase in production does not seem

excessive in relation to the probable increase in population in the rice-eating countries in the same period, while, with the possible exception of urban areas in the vicinity of the great ports, the conservatism of the great mass of the population in Oriental lands as regards the staples of its diet ensures that even the very low wheat prices do not result in any great substitution of wheat flour for rice. Decline in purchasing power seems, then, to be the cause of the general depression in rice.

One of the most important causes of reduced purchasing-power has been the fall in value of silver, the currency basis of probably the greatest rice-consuming country, China, and the main store of value of its only rival in this respect, India. The three great rice-exporters, Burma, Indo-China and Siam, have been severely affected by this monetary factor, though Burma, which had already been competing to an unprecedented degree in the Chinese market, now derives an advantage from the depreciation in sterling. Siam, whose currency remained at a higher level than those of its competitors even previously, has especially suffered from the effects of the depreciation of silver. In China, normal trade conditions have, of course, been further disturbed by the prolonged internal upheaval and interruption of the channels of trade by military operations and banditry. Owing to these conditions it remains doubtful whether the great floods in the Yang-tse Valley in 1931, affecting the principal rice-growing region of Central China, will have what would in normal circumstances be their effect in causing a great additional demand for imported rice.

A more widespread cause of the relative backwardness of demand has been the intensification of the crisis affecting the great export staples of the rice-importing lands. In Malaya, for instance, the depression in rubber, which has caused the return of thousands of rice-eating labourers to India and has made it difficult for native and Chinese rubber growers to maintain their incomes, has, no doubt, depressed rice consumption below the level it would otherwise have reached. A similar situation prevails in other important rice-importing countries such as the Netherlands East Indies, Ceylon, the Philippines and Cuba.

Lastly, the position of the great exporting countries has been rendered more difficult by the fact that the growth in production has taken place very largely in countries that formerly relied more largely on imports. Japan is an important example. Faced with a rapidly growing population in the metropolitan islands, the Government has not only encouraged such further development of rice production as was there possible, but still more the production in Korea and Formosa, with the result that the country is now, in good years, independent of foreign rice. Japan has, in fact, placed an embargo on imports—in practice affecting Burma and Indo-China particularly—and has dumped some of its surplus stocks in China and elsewhere. A similar reversal of the trade position has occurred in Brazil and Egypt. Meanwhile, too, the Governments of British Malaya, Ceylon and the Netherlands East Indies are encouraging the extension of rice-growing with a view to greater self-sufficiency.

The prospects of the 1931-32 crop now harvested or being harvested in the main producing and exporting countries are more promising from the commercial point of view. Deficiency in the rains has considerably reduced yields in Burma and very much so in Siam, and is expected to have had a similar effect in Indo-China. The export surplus in Burma is estimated at 5,853 million pounds of milled rice, against 7,063 millions last year, while the corresponding figures for Siam are 2,200 million and 4,300 million pounds. Low yields, however, while easing the commercial position, do not improve the immediate position of the cultivator. Any gain he gets in higher prices is neutralised by smaller production, so that his purchasing-power remains at the same low level. The reduction in yields and that in area which has also occurred do not mark a return to normalcy, but only a somewhat drastic means to that end. The situation in the chief importing countries at the end of the 1931-32 season remains doubtful.

As regards the proposal to "safeguard" Empire rice by imposing a tariff on foreign grades imported into the

United Kingdom, the following statistics are interesting. The average annual exports of whole rice not in the husk from British India in 1925-26/1929-30 were 10,126,000 tons (of which 180,000, or 1.8 per cent., were exported to the United Kingdom), while the average imports of such rice into the United Kingdom in 1926-30 from all countries were 353,000 tons, or only 3.5 per cent. of the total export from British India. Thus, even if the United Kingdom took all its rice imports from British India, ignoring questions of taste for certain varieties, the effect in alleviating Burma's difficulties would be negligible.

THE DIRECTION OF OVERSEAS TRADE.

THE usual statistics published with the January Trade and Navigation Returns of British imports and exports by countries of origin and destination are necessarily an analytical gloss upon a melancholy story. Total imports, which amounted to £862,174,709, were, roughly, 17½ per cent. lower than in 1930. Imports from European foreign countries fell about 11½ per cent.; imports from foreign countries outside Europe were down by 18½ per cent. and Empire imports were down by 18½ per cent. Exports of British produce, at £889,163,817, were nearly 30 per cent. down, but whereas exports to Europe were 28 per cent. lower, those to non-European foreign countries and British countries respectively fell by 39½ and 31 per cent. The differences in these relative declines of imports must, of course, be considered in the light of the fact that the prices of the goods we import from the countries of the New World have fallen far more than the prices of the manufactured goods which form the bulk of our imports from Europe; but as our exports to all countries consist mainly of manufactures, the fact that the European percentage has fallen least may be taken as some evidence of the greater stability, so far, of our European markets.

The first table shows imports from and exports to European countries (excluding the Irish Free State). Though we have included, as usual, the dependencies of European countries with the parent country, this does not alter the trend of the figures:—

TRADE WITH EUROPEAN COUNTRIES.

* Including dependencies.

Increases have taken place, as compared with 1930, in our imports from Poland, Hungary, Italy and Czechoslovakia, and those from several other countries, notably Germany, have fallen very little. On the other hand, our imports from the Scandinavian countries, Latvia, Holland, France and Spain declined very sharply in 1931. In exports the only increase was in sales to Russia. Decreases were particularly heavy in exports to Norway, Germany, Holland, France, Belgium, Spain and Italy.

Imports and exports to foreign non-European countries, shown below, declined with particular severity:—

TRADE WITH FOREIGN COUNTRIES OUTSIDE EUROPE.
(000's omitted.)

* Including dependencies.

Imports from Japan and Argentina fell less than the average for this group; those from the United States, Chile and Brazil, on the other hand, showed especially sharp declines. On the export side, the decrease was least marked, among the more important countries, in exports to China and Japan; the figures for Persia, Cuba, Mexico, Peru, Chile, Brazil, Uruguay and the United States are all deplorable.

The next table shows trade with British countries:—

TRADE WITH BRITISH COUNTRIES.
(000's omitted.)

	Imports from				Exports to

Imports from Australia were almost maintained at the 1930 level, and those from the Irish Free State, New Zealand and Canada diminished slightly less than the average for this group. The greatest percentage reduction of importance was in imports from India and Ceylon. On the export side, India and Australia show the most striking falls.

Re-exports of imported goods show an all-round reduction:—

* Including dependencies.

During the past year the decline has been fairly evenly spread over most of our re-export markets, but if the 1931 figures are compared with those of, say, 1928, it will be found that our greatest relative loss of markets has been in Belgium, Italy, the United States and Australia, while re-export trade with Russia, the Irish Free State and South Africa has been much better maintained.

In view of the reorientation of our foreign trade which is apparently being attempted by means of the British preferences under the new tariff, it is instructive to notice the proportions in which British imports and exports have been divided between British and foreign countries during the past three years:—

PERCENTAGE OF BRITISH TRADE WITH BRITISH, EUROPEAN AND OTHER FOREIGN COUNTRIES.

	Imports.			British Exports.		
	1929.	1930.	1931.	1929.	1930.	1931.
European foreign countries	38.2	41.5	44.6	32.3	35.6	37.6
Other foreign countries.....	32.4	29.4	26.6	23.2	21.0	18.6
British countries	29.4	29.1	28.8	44.5	43.4	43.8

That is to say, while we have been allowed to buy in the markets in which it paid us to buy, very much less than one-third of our imports have come from within the Empire and less than half our exports have gone to Empire countries. At a time like this, with the stream of foreign trade so low and its flow daily more impeded, any attempted deflection of the major part of the current may well bring us many stages nearer to complete stagnation.

NEWSPAPER FIRE INSURANCE.

(BY A CORRESPONDENT.)

If there is one thing that an insurance manager likes less than another it is paying claims which should fall in whole or in part on another company. To his own policy holder he wants to be not only fair but generous. But when it comes to a rival company or to a rival underwriter who has issued, independently of himself, a policy that might be called in to bear part of the burden, then the insurance manager, being as human as the rest of us, likes to get his pound of flesh. From this very natural desire there has sprung the obtruse and complicated science of "contribution," which deals with the principles and practice of making different policies contribute in due proportion to the same claim. Its professors and experts are the firms of fire assessors who apportion the loss among the interests involved, and it is extraordinarily short of legal authority and binding judgments, but it starts from what is known as the "contribution clause," the essence of which is the following:—

If at the time of the event giving rise to a claim on this policy there is subsisting on the insured property any other insurance covering the risks covered by this policy, then this policy shall be called upon to pay only its rateable proportion of the loss.

This looks simple enough, but strange results sometimes arise even out of such a straightforward contribution clause as this; and there are cases in which nothing but goodwill and common sense on the part of the insurance companies can prevent the policy holder from suffering unfairly. A man, for example, may insure his personal effects against all risks with one company and his car with another. Both policies contain the contribution clause and the policy on the car provides for a no claim bonus to which the holder is entitled if it goes clean for twelve months. A rug worth, perhaps, £20 and specifically covered by the policy on personal effects is stolen from the car and it is then discovered that the car policy, in addition to insuring the car itself, covers rugs up to £5. By the wording of the policies both must contribute to the loss, but the effect of this is that the policy holder loses the no claim bonus on his car and so because the insurers of the car threw in an additional benefit that he did not want he himself contributes £4 or £5 towards a loss against which he had carefully and specifically insured.

This kind of impasse is bound to arise in contracts which define, as these policies do, the liability of one

party by reference to the liability of some other person who is a party to an entirely different contract; and the only thing that prevents trouble in practice is the very proper and healthy feeling of insurance managers that the public ought not to suffer through differences of opinion between two or more insurers. But there are situations in which this feeling does not function as well as it might, and such a situation has arisen in the sudden outburst of rivalry among the insuring newspapers, which for six weeks have been tumbling over themselves to offer free fire insurance to their registered readers. This development is not favourably regarded by those whose living is derived from charging the public a premium for their fire cover and there has been a good deal of talk about the danger of the newspaper scheme and the position in which policy holders who are also registered readers will be put if their furniture is burnt and their company applies the contribution clause to the loss. A certain amount of nonsense has been printed on this subject and one paper has gone so far as to tell its readers that when they take out an all-in or comprehensive policy on their furniture they give a warranty that the full value is insured so that the policy would actually be invalidated by a newspaper fire insurance. That is rubbish. If any householder were fool enough to give a warranty that he is insuring the full value of his contents he would deserve any trouble that he got; but householders do not give this warranty and, even if they did, the existence of another insurance would not *per se* break it. As there are presumably some four or five million registered readers who are now covered against fire by the newspapers, it may be worth while to set out what their position is.

In drawing up their scheme of fire insurance the newspapers have adopted what is known as a non-contribution clause, the wording of which is as follows:—

In the event of there being in force at the time of such loss or damage or claim any other insurance by which the reader is protected against such loss or damage or claim this insurance shall not be effective except for the excess over the face value mentioned in such other insurance or insurances.

The effect of this clause (which is an adaptation of a clause appearing in certain householders' comprehensive and commercial fire policies) is that the reader cannot claim for fire on his newspaper insurance until the full amount of any other fire insurances has been paid up. The newspaper insurance is an excess, not a contributing one, and cannot be brought into the relief of any other insurance. How is the registered reader affected by an insurance on these terms? He is affected as follows:—

(1) If he has no other fire insurance on the contents of his house he is (subject to the other terms and conditions of the scheme) fully protected by the newspaper policy up to the amount stated therein. He must, of course, satisfy the insurers that the conditions have been complied with; but so long as those conditions are satisfied he has a perfectly good claim for fire loss that he may suffer.

(2) He may have another fire policy on the contents of his house and this policy may be not subject to average. In this case he must claim on that other policy up to its full face value and only when that value has been paid out can he make a claim on the newspaper insurance. Unless the other insurers have inserted in their policy a clause banning any excess insurances, they cannot call the newspaper insurance into contribution and will have to pay claims exactly as they would have paid them before the newspaper insurance started.

(3) He may have another fire policy which is subject to average and as most householders are now covered by all-in or comprehensive policies, which contain the average clause, this is the situation in which most middle-class folk will find themselves. In this case the newspaper insurance is of very little use; for, owing to the average clause, they cannot claim the full amount of the policy except for a total loss, and in English middle-class homes total losses from fire scarcely ever occur. It would in fact be the height of folly for any one who is insured under a comprehensive policy to reduce the amount of his insurance on the strength of being a registered reader.

(4) He may have no other insurance but be a registered reader of more than one paper. Here there is definitely an

impasse, for neither of his two papers can be called on to pay until the other has first discharged its full liability. If the newspapers like to take as their watchword the old cry: *Que messieurs les assassins commencent*, they can apparently cancel each other out. But it seems unlikely that the newspaper insurers will be silly enough to adopt this attitude. They must, of course, see to it that the same claim is not paid twice over, once under Scheme A and the second time under Scheme B, but they are presumably shrewd enough not to "blow on" their whole insurance scheme by reducing it to a farce through jealousies. A similar point arises in connection with certain comprehensive policies which have an excess contribution clause, and a deadlock might be reached in the case of a reader insured by such a policy; but it is very unlikely that any underwriter will be rash enough to try to bring the newspaper scheme into contribution.

The conclusion of the matter seems to be that if sensibly worked the fire cover given by the newspaper schemes is, within its own limits, sound, but that a middle-class householder would be ill-advised to reduce his existing insurance because of the cover he gets as a registered reader. On the other hand, the companies would not be wise to attempt to kill the scheme by straining their contribution clause or by forcing new and more drastic contribution clauses on to the holders of their own policies.

Notes of the Week.

The Bank Rate Reduction.—The decision of the Bank of England authorities to reduce their discount rate from 6 to 5 per cent. is in every way welcome. It marks an appreciable lightening of the cost of obtaining credit; for, despite protestations to the contrary, a high Bank rate can be a heavy burden upon industry and commerce. Furthermore, it is a definite indication from those in authority that the danger and strain that dated from the suspension of the gold standard have now been alleviated, and that sterling—buttressed by a scrupulously balanced Budget—is now able to hold its own, through its own merits. This indication is the more striking because of the decision of the Bank to reduce the rate by a full point instead of by the customary half-point at a time. We hope, however, that the decision means more than this. Recent features of the monetary situation in this country have been not only the stability of prices and of the dollar sterling exchange, but a marked shrinkage in the volume of bank deposits. So far from there being the slightest sign of incipient inflation, psychological depression and lack of initiative in industrial and business circles, heightened by the recent increase of a quarter of a million in unemployment, suggested strongly that restrictive control of credit was being too rigidly exercised. With whatever justification, fears were arising that, in the minds of the authorities, considerations more relevant to the gold standard regime than to our present position were tending to outweigh the essential desirability of encouraging the revival in this country of productive activity. We hope that the Bank's decision last Thursday means a definite departure from "gold mentality" and may be taken as evidence that fears of continued irrational deflation no longer possess any basis. We are not among those who would be dismayed by a moderate rise in sterling prices, and, indeed, as we pointed out last week, "reflation" to a moderate degree is the only solution to many of our problems. We trust, therefore, that this week's Bank rate reduction is the initial stage in an ordered plan designed to ensure, with all due regard to our economic stability, that the trade of Britain and the many countries intimately connected with our commerce is not allowed to languish, or the present unbalanced relation of costs, prices and fixed charges allowed to persist, through lack of realism and boldness in our monetary policy.

The Lausanne Conference.—*Parturiunt montes*—it is a tribute to the influence which the wish can exercise over the thought that the not particularly impressive mouse born last week of the travail of the Chancelleries should

have been greeted with such a remarkable chorus of approval and satisfaction. "A very good beginning," declares Sir John Simon; "A triumph for M. Laval's diplomacy," exclaims the Paris Press; even in Berlin the agreement is hailed as at least a partial realisation of German aims.

"The Governments of Belgium, France, Germany, Italy, Japan, and the United Kingdom, after having taken note of the Basle experts' report, are agreed to recommend to the other Governments concerned the adjournment of the Lausanne Conference to the month of June."

"The object of the Conference will be to agree on a lasting settlement of the question raised in the report of the Basle experts and on the measures necessary to solve the other economic and financial difficulties which are responsible for, and may prolong, the present world crisis."

"This decision has been reached by the above Governments in the hope that it will ease the international situation."

Considering that the creditor Governments have been adjured by committee after committee from last August onwards to tackle the reparations problems as a matter of imperative urgency, the decision to defer the Lausanne Conference until the latest possible moment before the Hoover Year expires is not of itself calculated to awaken enthusiasm; nor is there any evidence to suggest that, so far, there has been any approach to agreement as to the principles of the "lasting settlement" (*règlement durable* in the French text) which the Conference is to seek. It would serve no good purpose to pretend to read into this studiously uncontroversial *communiqué* more than that there is now, apparently, a firm determination that the Conference shall meet, albeit at the eleventh hour. Whether the scope of the Conference will in fact be widened, as the agenda suggests, to include discussion of all "other" problems relating to the world crisis, we shall see in due course. If the statesmen really propose to embark on deliberations regarding not only reparations, but debts, tariffs, currencies, and the future of the gold standard, *ad lib.*, they have the prospect of a heavy summer before them; and in this connection there is one remarkable omission in the announcement. No reference is made to what is to happen on July 1st if the Conference has not concluded its labours by that date. The reason for this reticence, one presumes, is that the German Government would not consent to accept a simple prolongation of the Hoover mechanism with the accumulation of deferred indebtedness, while the French Government has not yet departed from its standpoint that there can be no question of an unconditional moratorium. Bearing in mind this consideration, it may be hoped that a date as early as possible in June will be chosen for the assembly of the Conference so that adequate time will at least be allowed to discuss, without the necessity of undue haste, the position that will arise in July. For the rest, the prospects at Lausanne remain as much an enigma as ever. The reparations problem has now become overwhelmingly a political issue; and so much water may flow, between now and June, under the political bridges that speculation as to the situation which will confront the statesmen, if and when they meet at Lausanne, is idle. The most satisfactory feature in the whole position is that the British policy, as stated by Mr Chamberlain early this month in the House of Commons, is unequivocally for a general cancellation of reparations and war debts. Foreknowledge of that attitude on the part of the other participants in the Conference should do much to prevent any misconception as to the rôle which the British representatives will play there.

Progress of the Disarmament Conference.—Since we recorded the opening of the Disarmament Conference in our issue of last week, the series of statements from the various national delegations has been proceeding, and is now nearing its end. Presumably the next stage will be to agree upon an agenda for practical work; and the Draft Convention which was elaborated with so much effect by the Preparatory Commission, will be an essential substratum for the new structure. Considering, however, that the Draft Convention has been ignored by France, in her opening contribution to the present Conference, and is also unacceptable to Germany, it is perhaps not likely to provide the most convenient immediate basis

for the Conference's work. This basis would naturally be found in the greatest common measure of the concrete proposals that have been put forward by the national delegations in the course of the last two weeks; and the crux of the problem will be to find some common ground between the French thesis (assuming that Monsieur Tardieu's memorandum still represents the policy of the French Government of to-morrow), and the Anglo-Italo-American thesis which was presented with particular force last week by Signor Grandi, and which was duly recorded in last week's *Economist*. The national spokesmen who have followed Signor Grandi fall into three groups: those who simply endorse the Tardieu Plan; those who reject the Tardieu Plan outright and adopt the Anglo-Italo-American thesis; and those who attempt to find common ground between the two. The Tardieu Plan has been swallowed whole by two members of the French military alliance—Poland and Yugoslavia—and also by Finland. On the other hand, Roumania has not been so explicit, while Czechoslovakia, represented by Dr. Benes, has shown herself independent and constructive. The Tardieu Plan has been rejected by Russia, Turkey, and New Zealand explicitly, and implicitly by Spain and Norway and the Netherlands, who have endorsed the Anglo-Italo-American thesis. The Russo-Turkish support for this thesis is on the radical Italian lines, in contrast to the somewhat diluted Anglo-American brew. The Turks, in particular, have grasped two nettles by proposing that effectives shall be reduced to the bare numbers necessary for defence, and that the manufacture of weapons of offence shall be prohibited. The most interesting feature, however, is that some kind of combination between the two main theses that have been placed before the Conference has been suggested by Czechoslovakia and Belgium—the two most progressive and independent-minded countries in the French camp—and that the same idea has been put forward by three ex-neutrals—Sweden, Denmark and Switzerland—whose moral authority is very high. Dr. Benes gave a far better exposition than Monsieur Tardieu of the case for the organisation of security. His contribution gives the impression of being more sincere and also less inelastic. What is surely wanted next is a drafting committee on which Czechoslovakia, Sweden, Belgium, Denmark and Switzerland are represented as well as the Great Powers.

The German Presidential Candidatures.—At eighty-four years of age President Hindenburg has once again displayed the courage, the straight-forwardness and the common sense by which he has always distinguished himself at critical moments in his country's fortunes and in his own career. He has announced his intention to stand for re-election on March 13th; and he has absolutely refused to accept any conditions from the parties of the militant Right in consideration of their support. He remains in firm association with Dr. Brüning; and so far from its being a case of the Chancellor clinging to office and dragging the President after him, it is evidently the President who is insisting on the maintenance of the present ministry. There are many circumstances which work together for President Hindenburg's victory next month. There is the personal esteem in which he is held by masses of people in Germany, and, indeed, throughout the world, quite apart from all political considerations. Then there is the special regard in which he is held by German ex-service men. The largest of the ex-service men's associations, the so-called Kyffhäuser League, which numbers some three million members, sent the President a re-affirmation of their confidence and loyalty the other day. The more celebrated—or notorious—Stahlhelm organisation, which numbers about one million, is under the influence of the Press-Lord, Herr Hugenberg; and the Stahlhelm have sent a deputation to the President this week in order to state the conditions of their support. The deputation had a poor reception, and the Stahlhelm organisation now finds itself in an embarrassing position. For to march at the tail of a parvenu newspaper magnate against the most distinguished living German soldier is an odd manoeuvre for ex-soldiers to find themselves executing. Another important point in favour of President

Hindenburg's candidature is that the Social-Democrats are refraining from putting up a candidate of their own, which virtually means that they are advising their rank and file to vote for Hindenburg—a hint which ought to gain the President many votes, considering the discipline and cohesion of the German Social-Democratic Party. On the other side, it appears more and more probable that the ranks of the so-called "National Opposition" will be divided, and that the Nationalists and the Nazis will each put up a candidate of their own. Herr Hugenberg has the ambition to be the Nationalist candidate himself; but, as for the Nazi candidature, there seems to be no great eagerness on anybody's part to offer himself. Hitler would like to see it played by Hitler—always supposing that Hitler can turn himself into a German citizen in time. For a party of action, resoluteness and youth, this shuffling makes a very poor show. We conclude that President Hindenburg's chances are good; and much turns on the outcome of this, which is the first of all the forthcoming elections. If Hindenburg is elected to the German Presidency again, the prospects of victories for the Moderates and Progressives in the subsequent general elections in France and in Prussia will be notably improved.

The Fall of the French Government.—Monsieur Laval's Government was defeated in the Senate last Tuesday on a vote of confidence, and resigned forthwith. The new French Government has not yet been formed at the moment of our going to press. The formal issue was whether the Senate should or should not postpone a debate on an interpellation on the general policy of the Government which had been put in by a Radical-Socialist Senator, Monsieur Albert Peyronnet. The Prime Minister demanded postponement until the 26th in order to avoid a political crisis on the French home front during the current debate in the Disarmament Conference at Geneva, and he made this a question of confidence. The Senate voted for an immediate debate by 157 votes to 134, and this threw out Monsieur Laval's Government by a majority of 23. The Senate is, of course, elected on a different system from the Chamber and, as the present crisis shows, it may muster a majority hostile to a Government which possesses in the Chamber a substantial majority of supporters. At the same time, a head-on collision between the Chamber and the Senate is an unusual occurrence; and it was only brought about this time by an unusual proceeding on the part of the parties which, till Tuesday, were in power. The parties of the Right have been leaving no stone unturned in order to secure victory in the General Election this spring. They have postponed the date to make it follow the Prussian General Election, in the hope that a sensational victory of the Hitlerites in Prussia may swing French public opinion back into their support of the Right in France. But they have done more than that. Their worst bugbear has been the electoral understanding between the Socialist-Radicals and the Socialists, which we reported in the *Economist* a few weeks ago. The present French electoral system, being based on two successive ballots, the two principal parties of the moderate Left have agreed each to put up and but each to withdraw its candidate on the first ballot, strongly supported candidate of the other party in a more second ballot in constituencies in which, on the showing of the first ballot, a divided progressive vote on the second ballot would have the effect of securing the return of a reactionary candidate. This statesmanlike agreement has evidently given the Progressives a fair prospect of joint success and, in order to checkmate it, a reactionary deputy has carried through the Chamber, with the approval of which contains certain specious provisions such as compulsory voting and the enfranchisement of women, but is essentially framed in order to abolish, practically speaking, the second ballot. To play with the whole electoral system in order to secure victory at the next elections for the parties which happen to be in power is a proceeding which is in the tradition of Latin America but not in the tradition

of France. And the overthrow of Monsieur Laval's Government by the Senate this week represents not only the resentment of the Progressive parties but the indignation of French public opinion in general at a political manoeuvre which is felt to be unworthy of the country. The new electoral Bill has now come up from the Chamber to the Senate, and the clause practically abolishing the second ballot has already been rejected. With the French Budget to pass and with the Disarmament Conference and the Far Eastern crisis in full swing, this in an awkward moment for France to find herself without a Government. The President of the Republic has to decide between obtaining a really representative Government by advancing the elections to the earliest possible date or attempting to carry on with a stop-gap administration until June.

Signor Mussolini at the Vatican.—On Thursday, February 11th, which was the third anniversary of the signature of the Lateran Agreements between the Italian Government and the Holy See, Signor Mussolini paid a visit to the Pope, which is of great interest and importance, not only for Italians and for Catholics, but for the world at large, since the world has a general interest in the appeasement of one of the world's great historic quarrels. The present reconciliation speaks still more highly for the statesmanship and the goodwill of the two parties than the original agreement of three years ago; for it is obviously more difficult to compose a quarrel which has broken out again after a settlement than to negotiate the settlement in the first instance. It will be remembered that the Lateran Pact was embodied in three diplomatic instruments—a political treaty, a financial convention, and an ecclesiastical concordat—and that a serious disagreement arose over the terms of the concordat last summer. The question was fundamental, for while it was formally concerned with the activities of the *Azione Cattolica Italiana* Association, the fundamental struggle was over the control of education. In the education of Italian Catholic children, was Church or State to have the last word? When such a question arises between two authoritarian Powers which each claim the absolute allegiance of their subjects, the collision is formidable. It is all the more remarkable that the *Azione Cattolica* controversy has now been settled amicably to the satisfaction of both the principals in the dispute. It is a happy coincidence that, on the day on which the seal was set upon the reconciliation between the Vatican and Italy, the prospect of a reconciliation in the smaller conflict which has been pending between the Vatican and the British Empire was opened up by the publication of the Royal Commission's Report on Malta. The Report brings out, what had long been suspected, that the trouble in Malta was due to a personal conflict between one individual—the then Prime Minister of Malta, Lord Strickland—and the ecclesiastical authorities in the Island, and furthermore that the quarrel was not of the ecclesiastical authorities' seeking. This personal affair produced a political deadlock in Malta which was only solved by a suspension of the constitution. The Royal Commission recommends that the constitution shall now be put into operation again. And we may evidently expect that the ecclesiastical authorities will show no desire to impede its operation when they are no longer exposed to the personal attack which led them into retaliation. These *détentes* in Malta and in Italy will bring relief to masses of people who find themselves—as good Catholics and loyal citizens—in a painful dilemma if Church and State fall out.

The Spanish Strike Fiasco.—For the second time in a month the Syndicalist leaders in Spain have attempted to hold the régime to ransom. They called a general strike last Monday by way of protest against the deportation to Spanish Guinea of some of the ringleaders in the previous risings. The Azaña Government, however, met the challenge of these avowedly anarchist elements with all the authority at its command under the Law for the Defence of the Republic, and the strike amounted to no more than

a few isolated incidents. The Home Minister, Señor Casares Quiroga, gave out a notice beforehand that such a strike, called without the shadow of an economic motive, would be regarded as illegal. The result was that few of the workers responded to the call, and those who did were soon overcome by Civil Guards or the ordinary police. Once again the admirable discipline of the Socialist General Union of Workers was demonstrated, its members going about their business as usual. As long as the Republic can count upon this formidable reserve of strength it need fear no recrudescence of the anarchy and rule by gunmen which gave Barcelona such an unsavoury reputation before the Dictatorship. The worst episode in this week's trouble took place at Tarrasa, near Barcelona, where a group of a hundred, armed with revolvers, bombs and pistols, seized the mayor of the town and hoisted the Red Flag over the town hall. In Seville, too, the anarchists ran riot in the name of "Communism," but the Government's precautions prevented any serious incidents. In Madrid the strike itself was a complete fiasco, although there was a hold-up early in the morning outside the tramway depôt (which is in a very squalid district) and a few bombs were thrown in the course of the day. To the outsider the case for confiscation of all arms and suppression of the *Sindicato Unico* organisation seems overwhelming. But Señor Azaña is probably wise to go cautiously until the delicate question of the Catalan Statute has been settled. Moreover, there is a far-reaching split in the Syndicalist ranks, and the Prime Minister is probably determined not to give any cause for a swelling of the extremist and anarchical section. There is as much danger in making martyrs of people in Spain as in Ireland. One can only hope that no further hitches have come to light in the relations between Madrid and Colonel Macia's Government. Ratification by the Cortes of the Catalan Statute will smooth out most of the present creases. Colonel Macia can be left to deal faithfully with the minority of Syndicalists that preaches violence for its own sake. It would be taking an unnecessarily pessimistic view to compare the present situation in Spain to the years immediately preceding the advent of Fascism in Italy. Spain has a Government which is resolved to govern and make no compromise with subversion. And the Spanish Socialist Party is a tower of strength, its general level of culture being one that every other country might envy. The Cortes pursues its debates undisturbed, and the estimates for the budget will shortly be completed.

The Tariff Free List.—We print below a list of the goods exempted from the general *ad valorem* duty to be imposed under the Import Duties Bill:—

Gold and silver bullion and coin.
Wheat in grain.
Meat, that is to say, beef, veal, mutton, lamb, pork, bacon, ham and edible offals, but not including extracts and essences of meat or meat preserved in any airtight container.
Live quadruped animals.
Fish of British taking, including shell-fish.
Tea.
Cotton (raw) (including unmanufactured cotton waste and unbleached cotton linters).
Flax and hemp, not further dressed after scutching or decorticating; flax and hemp tow.
Cotton seed, rape seed and linseed.
Wool (raw), including llama, vicuña, alpaca, mohair, cashmere and camels hair, whether scoured or carbonised or not; rags of wool not pulled; wool noils.
Hides and skins (including fur skins, but not including goat skins), raw, dried, salted or pickled, but not further treated.
Newspapers, periodicals, printed books and printed music.
Newsprint, that is to say, paper in rolls containing not less than 70 per cent. of mechanical wood pulp and of a weight of not less than 20 lbs. or more than 25 lbs. to the ream of 480 sheets of double crown, measuring 30 inches by 20 inches.
Wood pulp.
Rubber (raw) including crepe; rubber latex; gutta-percha and balata (raw).
Iron ore, including manganiferous iron ore, but not including chrome iron ore.
Scrap iron and scrap steel.
Iron pyrites, including cupreous pyrites.
Tin ores and concentrates.
Wooden pit-props.
Sulphur.
Mineral phosphates of lime.
Unset precious stones.
Radium compounds and ores.

Foreign readers should appreciate that this list may be modified before the Bill finally becomes law. On the recommendation of the Advisory Committee established by the Bill, the Treasury may add goods to the free list (though not until the expiration of six months from the passing of the Bill), but, as the Bill now stands, the removal of any goods from the free list requires further legislation.

Newsprint.—Strong as is the case for the extension of the proposed free list under the Import Duties Bill—a matter with which we have already dealt in a leading article—log-rolling interests have already been hard at work to get the list actually curtailed, and, at the conclusion of the second reading debate, Mr Chamberlain made the disquieting suggestion that the question of extending the power of the Advisory Committee to take things out of the free list as well as to include them was "worth considering." Among the articles selected for tariffist attack is newsprint. The Paper Makers' Association has already circularised Members of Parliament with a plea that newsprint should be subjected to a tariff in order to absorb the unused capacity of home mills, which the Association puts at 195,000 tons per annum. The suggestion is further made that potential supplies from Canada and Newfoundland could make good any and every deficiency in the home market without the need of foreign supplies. The facts behind this "ramp" merit a little study. British consumption of newsprint annually is to-day somewhat more than 900,000 tons. Gross home production is some 650,000 tons, and imports ranging from 300,000 to 350,000 tons are drawn as to two-thirds from British Empire, and as to one-third from Scandinavian countries. That is to say, foreign countries' supplies represent only a small fraction of total British consumption. This fraction, however, plays an essential part in the regulation of prices. The price at which newsprint is delivered by the newsprint section of the Paper Makers' Association is a "ring" price, but is based upon that charged by a large mill which is not a party to the price-fixing arrangement of the Association, and this "free price" is naturally governed by the price at which imported paper from foreign countries can be delivered. The "free" London price also determines the price of Canadian paper offered for sale in London, the newsprint imported from Canada being essentially surplus to that sold by Canada to the United States. But there is a further consideration. Three-quarters of the home production of newsprint is derived from mills controlled by three newspaper combines. In the event of foreign imports being subject to duty the resulting increase in the price of newsprint—and it is pertinent to recall that since the application of the Abnormal Importations Duty the price of grease-proof paper has increased in this country by £10 per ton—would be compensated for by increased profits earned by these combines' subsidiary mills. Newspapers outside the combines in question would be placed at a damaging disadvantage. It is to be inferred from the speech of the Minister of Pensions in the House on Monday that the Government is alive to the motives behind this agitation for the inclusion of newsprint in the list of dutiable articles. This instance, however, of tariffist pressure shows how important it is that future exclusions from the free list should not be left to the discretion of the Advisory Committee.

Non-Ferrous Metals and Tariffs.—A trade correspondent writes:—The inclusion of non-ferrous metals, which are the raw materials for many industries in this country, among the taxed articles in the Government's tariff Bill has come as something of a shock to the trade, which, in view of the large volume of export business handled, was hoping that free entry to the non-ferrous metals in their unwrought form would be granted. It may be speciously argued that in lead, zinc and tin the Empire can comfortably supply all our needs, and that in copper the shortage is so small as to be almost negligible. This is doubtless correct, but it does not follow that consumers here will not suffer hardships and that the country's ability to

compete on export markets will not be impaired through the application of the tariff. The advantage of a drawback does not operate, for, apart from the difficulty in arranging this when alternative duty-free supplies are available, it has been stated that the drawback will only operate in respect to taxes in excess of 10 per cent.; and it is already evident from movements in the prices of copper and spelter of Empire origin that the addition of 10 per cent. to foreign brands on March 1st is being anticipated, and that, therefore, the manufacturer competing with Continental or American firms will derive little or no benefit from purchasing the nominally "tax-free" Empire products. The bulk of copper imported is not of Empire origin, and an output curtailment scheme was instituted as from January 1st by Copper Exporters Incorporated. Canada and Rhodesia are parties to this agreement, and, presumably, also to the arrangement of limited sales quotas, which has for years past proved a serious handicap to the brass and copper industries in Britain. Surely the privilege of free entry into a taxed market should preclude participation in a scheme of production curtailment?

Tariffs and Cost of Living.—A very important point in the debate on the second reading of the Tariff Bill was raised by Major Nathan, who pointed out that many of the staple foodstuffs proposed to be taxed were not included in the official calculations of changes in the cost of living. The consequence of this is that it is quite conceivable that a genuine rise in the cost of living will be brought about by the tariff without the increase being reflected in the official index number. Such a development would give rise to much confusion of thought and argument, and would in every way be undesirable. We would, therefore, urge that immediate steps should be taken either to widen the official calculations so as to embrace all articles of present-day staple diet, or, alternatively, that a new and comprehensive index number of retail prices should at once be initiated. It is already known that this latter plan has been for some time under contemplation by the Incorporated Association of Retail Distributors and the Bank of England, as a much-needed addendum to their monthly calculations of the volume of retail trade, and the inception of the tariff would give a very convenient opportunity for them to put their plans into effect. The important point, however, is that there is no room for delay. To-day is zero hour, for next month the tariff will be in operation, and will have begun to affect prices. It would be a thousand pities if both political and industrial controversy began to arise around this question simply because of lack of adequate evidence.

The Revenue.—Great Britain's budgetary position, as revealed by the weekly Revenue returns, is being well maintained. In particular, the receipts from income tax and surtax, as will be seen from the following table, are still coming in at a very satisfactory rate, though the astonishing inflow of January has naturally to some extent abated:—

RECEIPTS OF INCOME TAX AND SURTAX. (000's omitted.)		
	Calendar Year 1931.	Calendar Year 1932.
First four weeks.....	59,284	111,037
Fifth week	28,267	30,323
Sixth week.....	23,998	25,922
Total, first six weeks.....	111,549	167,282

Total ordinary revenue at February 13th amounted to £609,010,000, as compared with £600,048,000 at the corresponding date last year, while aggregate expenditure, including provision for Sinking Fund, amounted to £683,307,000, against £698,046,000. The present deficit for 1931-32 is therefore £74,297,000, as compared with £97,998,000 at February 14th last year. With nearly seven weeks to run to the end of the financial year, there seems every prospect that the accounts will balance; indeed, it seems probable that they may show an appreciable surplus.

Germany's Foreign Trade.—The doubts expressed in the report of the Young Plan Advisory Committee as to Germany's capacity to maintain a heavy export surplus have been confirmed by the trade returns of the past three months:—

(Millions of Reichsmarks.)				
Period.	Retained Imports.	Domestic Exports (excluding Reparations in Kind).	Export Surplus (+) Import Surplus (—)	Reparations in Kind.
1929 Total	13,447	12,663	— 783	819
1930 "	10,393	11,328	+ 935	707
1931 "	6,727	9,206	+ 2,479	393
1931, July.....	563	792	+ 230	35
" August.....	454	777	+ 322	26
" September.....	448	812	+ 363	23
" October.....	483	866	+ 383	13
" November.....	482	738	+ 256	10
" December.....	491	712	+ 221	26
1932, January.....	425	530	+ 105	12

Until October last year, Germany's exports were maintained at a relatively high level, mainly by the pressure of her foreign creditors, by "forced" liquidation of stocks, and by exceptional sales to Great Britain and Russia. The sharp contraction in exports since November has been caused by the growth of import restrictions, and by the general reduction in the world's purchasing power, coupled with an intensification of competition from countries which have abandoned the gold standard. The balance in favour of Germany declined from Rm. 383,000,000 in October last to Rm. 105,000,000 in January. Had it not been for a further shrinkage in imports during that month, the excess of exports over imports would have been almost insignificant. Unless the trend of Germany's foreign trade undergoes a change, the question is whether her credit balance on merchandise account will be sufficient for the service of her commercial debt, let alone reparations; for the present tendency points to her export surplus approaching vanishing point by April or May.

The "More Looms" Dispute.—Further joint negotiations, writes our Manchester correspondent, have taken place this week between the Cotton Spinners' and Manufacturers' Association and the Operative Weavers' Amalgamation in an endeavour to reach an agreement covering the whole of the county. The officials have reported that considerable progress has been made. The two sides have already agreed to a price basis for "six looms" employed on plain cloths, but certain technical details have yet to be dealt with before a final draft agreement can be placed before the Central Committee of the two sides. A disturbing element has been the continuance of the partial strike at a number of mills in Burnley. Last week-end the employers affected put forward a truce offer and agreed to pay the operatives 7s. per loom, which would have worked out at 42s. per week. This agreement would remain in force until the "more looms" committee completed its negotiations. The Burnley Weavers' Amalgamation, however, rejected this proposal, and as matters appeared to be at a deadlock, two firms have reverted to the ordinary "four-loom" working. Eight mills are still at a standstill, but the five firms which employ non-union labour and are not members of the Manufacturers' Association are continuing with the "more looms" system.

Employment and the Cost of Living in January.—As we pointed out in last week's issue of the *Economist*, the increase in unemployment during January was considerably higher than that which normally follows the Christmas trade activity, and a number of industries not directly affected by this seasonal trend recorded a decline in employment during the month. According to the *Ministry of Labour Gazette*, the percentage unemployed among insured workers in Great Britain and Northern Ireland at January 25th was 22.4, as compared with 20.9 per cent. at December 21st, and 21.5 per cent. a year ago. It is estimated that there were approximately 9,365,300 insured persons in employment at January 25th, this being 227,300

less than a month ago, but 150,200 more than in January, 1930. The total number of persons registered as wholly unemployed at January 25th was 2,131,298. This compares with 2,002,464 at December 21st and 1,875,330 a year ago. Those temporarily stopped rose from 403,432 at December 21st to 496,408, which compares with 607,443 last year, while the unemployed among those usually in casual employment amounted to 100,705 at January 25th, a decrease of 3,320 as compared with the previous month. The cost of living during January showed little change, and the index number of the Ministry of Labour at February 1st remained at the level recorded at the beginning of January, namely, 47 per cent. above the pre-war figure. This compares with 52 per cent. a year ago. The figure for food alone was also unchanged at 31 per cent., as compared with 36 per cent. last year.

American Foreign Investments in 1931.—The almost complete cessation of long-term international lending, which is generally recognised as one of the most striking features and chief aggravators of the world economic crisis, is perhaps the most interesting aspect of the analysis of the foreign investments made in 1931 by the principal lending country, the United States, recently published by the Foreign Policy Association. In 1928 America's net new foreign investments reached the record figure of \$2,096 millions; in 1929 the superior attractions of the local boom in stocks reduced them to \$1,466 millions; in 1930 they actually rose slightly to \$1,550 millions; whereas last year they slumped to \$507 millions. Allowance for repurchase of issues floated in the United States, however, makes the change appear much less sharp, namely, from a net movement of \$1,101 millions in 1928 to one of \$924 millions in 1930 and \$439 millions in 1931. The decline, as compared with 1930, was fairly well distributed between the different borrowing continents, though South America comes first with a fall of over 80 per cent.; lending to Europe declined by 65 per cent. The chief individual issues for Europe were \$38 millions of 18-months notes of the Bank of Spain guaranteed by the Spanish Government, and \$50 millions of International Match Corporation bonds. A number of smallish loans were made to Canadian Governments, the largest being \$20 millions for the Province of Ontario; the principal flotation for Canadian corporations was a \$45 millions loan for the Canadian National Railways, which might equally well have been listed under government loans. The chief South and Central American issues were \$19 millions for the Chilean Government's two loans, totalling \$35½ millions, for "Cosach," and the capital (\$19 millions) of a newly-formed cement company operating in San José. The only other item of note was \$22.8 millions of bonds of the Taiwan Electric Power Company. The meagre aggregate for the year brought American foreign investments abroad to a total of \$17,968 millions, according to the Foreign Policy Association report, distributed as follows:—

AMERICAN INVESTMENTS ABROAD, 1931 AND 1932.
(Amount at January 1st in \$ million.)

	1931.	1932.
Europe	5,607	5,765
Canada	4,436	4,601
South America	3,014	3,079
Central America	2,985	3,015
Australasia*	995	1,012
Miscellaneous	491	496
Total	17,528	17,968

* Apparently including Asia.

The European total includes \$756 millions in Great Britain and \$1,662 in Germany. The report points out that the investigations of the Senate Finance Committee into the sale of foreign bonds "have strengthened the substantial group of persons who have come to feel that the only cure for the evils of an unbridled foreign investment policy lies in a complete withdrawal from the international investment field." This is "the burnt child" with a vengeance.

The Bank of Nova Scotia.—The management of the bank must be congratulated on the way in which they have conserved both the bank's profits and resources in these very difficult times. The latest figures may not be quite up to the 1929 level, but they represent a slight improvement over 1930, and this by itself is no mean achievement:—

December 31st.	1929.	1930.	1931.
Liabilities:—			
Capital.....	\$'000.	\$'000.	\$'000.
Reserve.....	10,000	12,000	12,000
Notes.....	20,000	24,000	24,000
Deposits not bearing interest.....	16,202	13,967	12,703
Deposits bearing interest.....	37,749	33,272	34,976
Balances due to banks—			
(a) In Canada.....	167,989	166,770	168,471
(b) External.....	3,614	3,349	2,314
Assets:—			
Coin and Dominion notes.....	2,983	2,472	1,988
Cheques on other banks.....	26,990	24,194	22,782
Balances due by external banks.....	12,415	11,085	8,858
Dominion and Provincial Government Securities.....	4,344	4,858	6,409
Other investments.....	20,356	25,637	37,233
Call and short loans—			
(a) In Canada.....	16,764	23,116	25,949
(b) External.....	32,378	30,813	13,315
Loans and discounts—			
(a) In Canada.....	12,763	7,298	4,670
(b) External.....	102,339	99,756	107,514
Net profit.....	20,643	16,114	14,586
Dividend.....	2,761	2,536	2,580
	16%	16%	16%

The progressive decline in the bank's note circulation points very clearly to the extent of the trade depression and fall in prices, leading to a smaller demand for currency. The same phenomenon is noticeable in the decline in inter-bank items, for their shrinkage again reflects a lessened velocity in the circulation of money. Among the bank's earning assets, discounts and advances are well maintained, but low-interest rates and idle stock exchange business have diverted into long-term securities much money which was formerly employed more profitably by the bank on the Canadian and New York call markets and in short loans elsewhere.

Anglo-International Bank.—Like other London houses whose connections lie mainly with the Continent, this bank has suffered heavily from the crisis, both through the withdrawal of funds by its foreign clients and through the immobilisation of large parts of its assets under various standstill agreements. As a result it has had to draw heavily upon its liquid assets and realisable investments at a time when the latter stood at depreciated values. The salient features in the accounts are summarised below:—

December 31st.	1929.	1930.	1931.
Liabilities:—			
Capital.....	£'000.	£'000.	£'000.
Reserve account.....	1,960	1,960	1,960
Deposits.....	4,415	4,548	1,202
Acceptances, &c.....	2,568	3,030	2,358
Assets:—			
Cash.....	130	199	165
Call money.....	405	525	200
Balances with banks abroad:—			
(a) "Free".....	197	171	82
(b) "Restricted".....	436	751	74
Bills receivable.....	665	689	312
British Government securities and Treasury bills.....	631	160*	115
Foreign Government sterling bonds... ..	631	593	358
Other investments.....	...	...	240
Foreign Government and State Treasury bills and notes (subject to restriction).....	...	...	240
Advances:—			
(a) "Free".....	3,761	3,324	291
(b) "Restricted".....	...	...	1,135
Customers' liability for acceptances, &c.:—			
(a) "Free".....	2,568	3,030	766
(b) "Restricted".....	118	120	82
Net profits.....	...	+50	...
To or from reserve.....	100	65	...
To contingencies.....	...	...	100
To provision for doubtful debts, depreciation of investments, &c.....	...	...	...

* Foreign Government securities.

The result of the year's operations is that the bank's unallocated profits are reduced from £23,702 to £6,172. Moreover, the balance sheet carries a note to the effect

that "assets subject to standstill or other extended credit arrangements and to foreign exchange restrictions have been taken into the accounts as recoverable in full, but their recovery in full is dependent upon the satisfactory solution of the present financial problems in the countries concerned." It may be recalled that the German Standstill Committee's report regarded the restoration of confidence and the resumption of the normal operation of all credits as the only solution of the problem. As matters stand, not only the banks concerned, but the whole world must base plans on the assumption that these credits will eventually recover their full value; any alternative assumption would mean that hope of world economic recovery is abandoned. At the same time, there is no disguising the fact that these are anxious days for banks and others who are deeply committed in Central Europe.

Life Office Bonuses for 1931.—The announcement by the Prudential last week of their intentions with regard to bonus distribution in respect of 1931 has been followed by statements from three other well-known ordinary-cum-industrial life offices. The Prudential, it will be remembered, has decided to reduce the normal rate of reversionary bonus by 16s. per cent., but the cost of this 16s. has been set aside in a suspense account, and will be allocated to the surviving policy-holders entitled if and when conditions sufficiently improve to warrant this course. The three other offices referred to are the Pearl, the Britannic and the Refuge, and it is evident that these offices have acted in concert, and have decided on a line somewhat different to that followed by the Prudential. The rate of reversionary bonus is definitely cut by 10s. per cent. in each case, so that the 1931 bonuses are 36s. per cent., 32s. per cent. and 34s. per cent. respectively. The statements of the companies suggest that their hidden reserves have been extraordinarily strong, for in each case it is declared that the depreciation in market values of securities is more than covered by hidden reserves and by investment reserve funds; and it is further stated that, apart from depreciation, the trading profits have been fully maintained. The Pearl announces, in addition, that the directors are recommending a final dividend on the ordinary shares of 22½ per cent. free of tax (compared with 25 per cent. free of tax in the preceding year), but no reference is made by the other two companies to their dividend policy. This company also expresses the hope that, given no further deterioration in the economic situation, a return to the former rates of bonus may be confidently anticipated.

Indemnity Mutual Marine.—During the whole of the post-war period this marine company, which was established in 1887, has been controlled by the Northern Assurance Company. Reviewing the 1930 report a year ago, we observed that, after the lean period through which the company had passed, there were signs of a turn in the tide. These expectations have, happily, been realised in the 1931 accounts. In accordance with common marine practice the accounts show the operation of the underwriting results of two years, and the 1931 report, therefore, deals with the closing of the 1930 underwriting account, and the results of the last six closed underwriting accounts are as follows:—

Year.	Premium Income.	1st & 2nd Year Claims.	Expenses.	Transfer to Suspense to Close Account.	Surplus + or Deficit —.
1925.....	£ 613,170	£ 550,256	£ 32,106	£ 61,366	£ 30,558
1926.....	611,516	548,762	31,587	166,167	135,000
1927.....	630,100	562,737	32,116	35,246	...
1928.....	458,016	346,711	33,505	77,800	...
1929.....	378,231	301,462	29,919	46,850	...
1930.....	361,649	242,082	24,275	95,292	...

It will be observed that, although no transfer to profit and loss account has been made, the amount carried to suspense account is more than double the 1929 figure,

although the premium income has declined somewhat. The 1931 account shows a premium income of £362,244, and the relatively favourable outcome in the first year of the 1930 account has been bettered in 1931, since the balance of the premiums remaining is 69 per cent., compared with 65 per cent. a year ago. The dividend has been maintained at the same rate as before, namely, 28s. per share, and the cost, £72,695, has been fully covered by interest earnings of £75,271. The balance sheet shows investments of approximately £2,000,000 and a year ago it was stated that "the market value of our investments is considerably in excess of the figure at which they are valued in the balance sheet." Owing to the severe depreciation suffered in 1931, however, this hidden reserve has disappeared, and the book value is now nearly £3,000 higher than the market value. The company has a reserve fund of £500,000 and a profit and loss balance of £121,000 against an issued capital of just over £1,000,000.

Scottish Life Assurance.—For the first year of a new quinquennium this company has produced a most satisfactory report. It is usual for the concluding year of a quinquennium to be characterised by an unusual inflow of new business, but in spite of this stimulating effect on the 1930 figures the company has succeeded in showing an increased new business for 1931, the figure being £1,407,668 as compared with £1,161,741. So satisfactory a result in such a year as 1931 is a tribute to the organisation of the company and to the merits of its contracts. Another feature of interest in the report is that, in spite of the rise in the standard rate of tax, the net interest income has increased from £285,000 to £297,000, so that the net rate of interest earned is only fractionally lower at £4 14s. 4d. per cent., as compared with £4 14s. 7d. per cent. The proportion of premium income absorbed in commission and expenses shows a rise from 15.3 per cent. to 17 per cent., which is in part accounted for by the increased new business and the inevitable initial expenses thereby entailed. The company has declared for the year a dividend at the same rate as before, namely, 20 per cent., but as the £5 shares are now paid up to the extent of 25s., as compared with 20s. a year ago, the dividend absorbs a larger sum. The balance sheet, which shows total assets of £6,763,000, gives no indication of any important changes during the year in the classification of the investments. On December 31, 1930, it was stated that the total market value of the Stock Exchange securities was "well in excess of the value at which they appear in the balance sheet." Since the company has no published investment reserve fund and no qualification appears in the balance sheet, it must be presumed that in spite of the depreciation which the company must have suffered last year, the market values are still in excess of the book values.

The contribution of the Italian Foreign Minister was a remarkable effort, both in substance and form, and definitely the outstanding speech of the Conference. It was brilliant in conception, and cleverly placed the Italian case on broad and progressive international lines. That case is "equality of rights between all States, and the equalisation of armaments at the lowest level." Some have professed to see in his speech a sign of less rigidity in the Italian attitude on the question of parity with France, but justification for this view is not very obvious. The claim remains, and the Italians have a strong tactical position in basing it on advocacy of the lowest levels.

The general Italian thesis goes even farther than that of Germany, which is a demand for equality of rights, but not—at any rate, immediately—for equalisation of armaments. The core of the disarmament problem is, in fact, what it has been for years: Germany insists in coming into any convention on the same conditions as all other States; Italy maintains her parity claims with France, and France admits nothing until her security is canonised. Whatever may be said about the Italian claims, it is difficult to refute the reasonableness of Germany's, and nearly everything still depends upon France and her Allies. Nobody expects France to agree in one move to parity with Germany. Great Britain would undoubtedly have a say on parity claims which must logically cover naval arms as well. On the other hand, it is considered that the time has come to make at least a start in applying reasonably fair conditions all round. The French fear that once Germany is released from the armaments clauses enforced by the Versailles Treaty it will be the beginning of the end. There lies the central political problem—Is Europe to be reconstructed on a policy of progressive conciliation or is there to be a fatal attempt to maintain lop-sided Europe, which will foster a state of bitterness and despair that must end in catastrophe? It is every State's national interest to work increasingly for a policy of sanity.

There is a tendency to attach undue importance to the American delegation's professed readiness to consider all proposals with an open mind as implying readiness to consider security problems in a way which might give satisfaction to France, or make it easier for Great Britain to do so. This is too much to hope for from America, and, in such conditions, it is not to be expected that Great Britain will find it possible to undertake further responsibilities. It looks as if the Conference will have to make up its mind what can be done irrespective of any further guarantees, except those which are themselves given by reduction of armaments. Views differ about the possibilities, but the variety of practical suggestions and the willingness to discuss seriously what are, after all, drastic steps, still encourage a certain degree of optimism.

The Spanish Foreign Minister made timely reference to the vital importance of dealing with the manufacture of arms and the traffic in arms in any satisfactory convention; events connected with the Far East show how necessary this is. The cynicism, naivety, contempt, or whatever you will, of Mr Matsudaira, the head of the Japanese delegation, would have astounded the Conference if the world had not had experience of Japanese methods of diplomacy during the last few months. It must be put on record that Ambassador Matsudaira informed the Conference that "if a Government neglects its international commitments and does not discharge its obligations, that would constitute a constant menace." He also asserted that the Japanese delegation shared the views of other delegations that air bombardment and the use of poison gases or bacteria should be prohibited. As against this, the moving and eloquent speech from Dr. Yen, the representative of China, must have been an uncomfortable experience for those States who have done little or nothing to fulfil their obligations towards his unhappy country. Incidentally, there is nothing to add to what the *Economist* wrote last week on the League and the Far Eastern situation, except to say that matters went from bad to worse during Sir John Simon's participation in the Council's discussions last week. It was a shining example of British ineptitude; the same observation might be made about M. Paul Boncour, the representative of

Overseas Correspondence.

LEAGUE OF NATIONS.

Disarmament Conference — Shanghai.

(FROM OUR CORRESPONDENT.)

GENEVA, February 16.

THE general debate of the Disarmament Conference is nearing its end; the only further point of interest now awaited is the presentation of the definite proposals promised by the German delegation, probably towards the end of this week. Many of them can doubtless be foreshadowed by reference to the various suggestions and objections made by Germany during recent years in the course of the work of the Preparatory Commission, but whether or not they will be made to fit into the practical possibilities of the moment by presentation in some new form no one yet knows.

France, a country whose main thesis at the Disarmament Conference is founded on the idea that the provisions of the Covenant have been gradually whittled down. As Mr Litvinoff asked, in a devastating analysis of the French proposals, what are the guarantees that a new international organisation, or the existing one with increased actual power, will be willing to use such power for the protection of the attacked against the attacker?

Though most speakers have properly stressed the fact that the Far Eastern situation offers an additional demonstration of the necessity of reducing armaments, there is not the slightest doubt that the tragic developments have gravely undermined the confidence that must be at the root of any international undertaking of this kind. This is only the beginning of the effects which will surely be felt for a long time to come. It is impossible to exaggerate the anxiety which exists here.

The Bureau of the Conference is to consider on Friday how the work is to proceed when the general debate is ended; it will be a question of deciding what Commissions are to be set up and what their programmes are to be. The Bureau will also decide when the Easter adjournment is to take place and what its duration is to be. Opinion is now inclined to a short adjournment of not more than three weeks.

UNITED STATES.

Commodity Prices — Production — Railroad Wage Cuts — Reconstruction Finance Corporation — Finance.

(FROM OUR CORRESPONDENT.)

NEW YORK, February 8.

ALTHOUGH it was entirely obvious that no overnight recovery in business could follow the launching of the Reconstruction Finance Corporation or the railroad wage cut agreement, some reaction from the hopes nourished on the prospect is being felt. For a while attention was turned from home economics to the fighting in China, and even the possibility of a broad-scale conflict was looked upon with some favour by those who glibly talked of the stimulus to trade that war would give. That feeling quickly disappeared in the more sober realisation that a war in the present state of affairs would be the last straw on the world's economic back.

Looking solely at domestic trade, nothing can be seen to suggest any upturn in markets. Commodity prices are still falling. The Bureau of Labour Statistics index for the week ended January 30th dropped 1.3 per cent. and is 2.3 per cent. lower at 66.7, than at the beginning of the year. The Bradstreet's index fell 2.7 per cent. for January, but the Dun's index, employing a different weighting, showed a fractional advance. The Bureau of Labour Statistics groups compare as follows:—

	Jan. 2.	Jan. 9.	Jan. 16.	Jan. 23.	Jan. 30.
Farm products	54.6	55.6	55.5	54.6	51.1
Foods	68.7	67.7	66.7	65.7	63.1
Hides and leather products	79.5	79.7	79.6	79.7	79.2
Textile products	60.5	60.4	59.6	60.1	60.1
Fuel and lighting ..	67.8	67.7	67.8	68.0	68.2
Metals and metal products	82.3	81.9	81.7	81.7	81.6
Building materials ..	76.0	75.2	74.7	74.9	74.7
Chemicals and drugs ..	76.4	76.2	75.8	75.8	75.8
House-furnishing goods	78.5	78.5	78.7	78.7	78.7
Miscellaneous	66.6	66.6	66.0	65.5	65.0
All commodities	68.3	68.1	67.9	67.6	66.7

The moderate rise in steel activity last month is not extending and operations are about where they were at the beginning of December—under 30 per cent. of capacity. Pig-iron production dropped a little less than 1 per cent. in January, amounting to 31,380 tons a day, against 81,625 tons daily in December, but the number of furnaces in blast rose from 56 to 61. Steel ingot output for January rose to an average of 26.5 per cent. of capacity, as compared with 23.5 per cent. for December, but production was the lowest for any January in the past fifteen years. Electric current output also is low. Government figures for 1931 show a drop of 4.4 per cent., and current weekly estimates are about 5 per cent. under

last year. Some of the motor companies report sales improvement, but the trade is largely waiting to see if the Ford company will produce new models and recovery has not been quite up to expectations. Railroad traffic continues to be disappointing, car loadings running between 15 and 20 per cent. under a year ago, which was about the average rate of decrease throughout last year.

Should gross revenues fail to improve, the wage reductions agreed upon this week between the railroads and the labour unions will be nullified. These reductions will not be reflected to any great extent in net earnings until the March reports, but they are then expected to save the roads about \$200 millions in expenditures. It is doubtful whether the full \$100 millions of added revenue from the higher freight rates will be realised, since the tendency is for truck and bus competition to grow. Markets have not shown much response to the wage cuts, partly because they were anticipated and partly because traffic is so slack.

Applications to the Reconstruction Finance Corporation for loans have come in a veritable flood, apparently under the illusion that the organisation would supply unlimited credit to all comers. Rules governing procedure were announced this week by Charles G. Dawes, president of the Corporation, who made it clear that loans would be made only when adequately secured, and that no funds would be available for new enterprises. The Corporation will work primarily to carry along the railroads and the banks which still are solvent.

In conjunction with the recent public denunciation by the Administration of currency hoarding, a movement is on foot at Washington to offer debentures of the Reconstruction Corporation in small amounts, to attract money from the small investor and, presumably, to entice hoarded funds into circulation. While no one defends hoarding, in serious quarters in Wall Street it is felt that it were better to make less of a stir over the matter. To begin with, it is felt that the figure of approximately \$1,300 millions used by President Hoover is much too high. That is the amount of the year's increase in currency in circulation, but from it should be deducted American currency shipped abroad, which is estimated at \$400 millions, and the natural rise made necessary by the fact that many sections of the country and towns, owing to failures, are without banking facilities. In any event, hoarding is now on the wane. Postal savings departments surely solve the problem of security. Some propose that the savings limit of \$2,500 for each depositor be lifted and that the 2 per cent. interest rate also be increased.

Bank closings are continuing, there being a net loss of 56 in the past week, against 50 in the previous week. Closings for the year to date, without reopening offsets, is set at 361. Most of these banks are small institutions, and their demise emphasises the need for a change in banking legislation to permit wide branch banking. State-wide branch banking is receiving much support, but opinion is inclined to favour broader regional branch banking, as suggested by Comptroller of the Currency Pole.

Gold exports are temporarily diminishing. France shortly will have removed the \$125 millions held under earmark which began to move out a few weeks ago. In the country's gold stock. Last week net exports were \$43 millions, and the decrease in earmarked gold was \$21 millions. New York City banks have made an informal agreement to refuse requests for shipment of gold coins abroad. The Federal Reserve Bank is in no manner a party to the agreement and is prepared to give unlimited amounts of gold coin in exchange for paper currency at any time. The commercial banks have taken the step owing to the trouble they have had to secure coin and also to the feeling that it was not to their advantage to promote the hoarding of American gold abroad, especially when the central banks of the hoarding countries had plenty of the gold and yet refused to supply coins to the public. Some feel that the action of the banks here might be misinterpreted as indicating a slide away from the gold standard by this country, but of course it means nothing of the sort. Whatever may be said by those with a wish fathering the thought, there is abso-

lutely no chance of this country abandoning the gold standard, either from choice or necessity.

New capital flotations are conspicuously absent. Last week, apart from a Treasury discount bill issue, brought no new financing, and was the third week since last October to be thus barren. The Treasury is borrowing at the rate of about \$75 millions weekly in discount bills, and has recently done nothing more than refund maturities. Since the successful outcome of New York City's financing controversy with the banks, whereby, in return for sharp reductions in expenditures, the municipality was given a loan of \$100 millions and a revolving credit of \$151 millions, other cities have come here for aid, but loans now obtained are scanty. Unable to secure underwriting banks for their bond issues, some municipalities are considering open sale, using the banks merely as distributing agents, without underwriting guarantee. It is not believed that such a plan would prove to be satisfactory.

According to the *Financial Chronicle*, new capital flotations last month were \$179,918,000 and \$14,020,000 in refunding. Only \$46,663,000 of the new issues and \$1,500,000 of the refunding was company financing. The grand total of \$193,938,000 compares with \$648,855,000 for the same month of last year. Of the company issues, a single public utility offering made up \$25,000,000 and utility total was \$44,620,000 in bonds and notes.

Although the financial district was loth to see Secretary Mellon leave the Treasury, it realised that he had accomplished a great work in debt reduction and preservation of surpluses in recent years. Moreover, the new Secretary, Ogden Mills, is well liked and will follow the Mellon policies of Budget balancing. Meanwhile, the Treasury has had to raise its estimates of revenue deficits, finding that \$455 millions more for the 1933 fiscal year will have to be found than was at first estimated. The Administration will attempt to provide for this additional figure, which results from the slump in business that has cut down revenue collections, by higher taxes and reduced expenditure. Wall Street is, of course, pressing hard for that means of keeping the Budget in balance in opposition to the scattered demand for resorting to borrowing.

The proposed British tariffs have caused no great excitement here, where the effect probably will be slight at this time. Were general trade in a more prosperous condition, more attention, doubtless, would be directed to the new tariff, but cogent as may be the arguments for lowering our own tariff walls in order to permit payment of foreign debts owed here, the country is in no good mood to try anything suggesting injury to any form of domestic manufacture, whatever may be the long-term good.

American bankers, at the suggestion of German bankers, have formed a committee with a view to negotiating some sort of standstill agreement on German municipal credits not covered by the private plan recently adopted as an extension of last summer's agreement. If the temporary committee now being formed finds the soil favourable, it will move to set up a permanent group to work out an agreement.

FRANCE.

Ministerial Crisis — Budget — Trade and Prices.

(FROM OUR CORRESPONDENT.)

PARIS, February 17.

THE defeat of the Laval Cabinet in the Senate yesterday astounded the country, so little was it expected. Practically all parties are agreed that no worse moment could have been chosen for a Ministerial crisis, and particularly one for which so little excuse can be put forward. That the blow came from the Senate, and on a mere question of procedure, is regarded as all the more inexplicable. It was known in advance that there was something in the nature of a latent conflict in existence between the two Chambers, due to long-standing irritation on the part of the Radical majority in the Upper House at the success-

ful manner in which M. Laval has for the past fourteen months emerged victorious from all the attacks launched against him in the Chamber; but probably not even yesterday's majority of 157 against 134 for one moment imagined their victory would be so easy and so swift. There are to-day even indications that the victors are somewhat puzzled how to make use of their triumph.

The present situation is due to the fact that, whereas the successive Tardieu and Laval Cabinets have enjoyed a working majority in the Chamber, they have practically always been at the mercy of an Opposition majority in the Upper House (where the Radicals alone have 134 seats, and the Socialists 18, out of a total membership of 309, of whom only 291 voted yesterday). It goes without saying that the voting by the Chamber last week of the private member's Bill for the suppression of second ballots at the pending elections, in spite of the bitter opposition of the Radicals and Socialists, was viewed with keen disapproval by the powerful group of Radical senators. Like their colleagues in the Lower House, the Radical senators foresaw that, if they approved the Bill, a severe defeat of their own party at the coming elections would be more than probable. Further, by a late addition to the Bill, the measure also provided for the extension of the suffrage to women, to which the Senate has always been hostile, as shown by its rejection of previous measures sent up from the Chamber with the same object. All this, however, is to-day generally regarded as having merely furnished the Senate with a pretext which it is alleged to have long been seeking. Just as, fourteen months ago, it dismissed M. Tardieu from office, so now it has thrown out the Laval Cabinet. By so doing the Senate has undoubtedly aroused the sharp hostility of the Chamber, and it seems practically certain that any new Cabinet that does not conform to the present majority in the Lower House is foredoomed to immediate dismissal.

Last night M. Barthou was suggested as the most likely nomination to form a new Cabinet of a more or less neutral tint, for the purpose of "carrying on" until after the elections. To-day opinion seems more inclined to predict a Ministry under M. Tardieu, who seems to be widely recognised as the appropriate successor of his old colleague and subordinate, M. Laval, and most likely to return to office with a Cabinet of the same tint as the one which has just fallen. The situation is complicated by the widespread belief that the Senate, in acting as it has done, was convinced that the President of the Republic, M. Doumer, its former Speaker, favours the advent of a broad Ministry of Concentration, extending from the Marin Nationalists to the Socialists, and including the Radicals. Whatever happens, it may be taken for granted that the country will not tolerate for a moment any serious modification of the policy applied hitherto by the Laval Ministries in regard to German reparations, the foreign debt problem, disarmament, and a closer rapprochement between this country and Great Britain.

This fresh Ministerial crisis must inevitably prove disastrous to the prospects of the Budget, which was already in a sufficiently bad case. The report on the modified Budget Bill, which was presented to deputies a few days ago, crystallises the financial proposals for the nine months ending December 31st next as follows:—

	Frs.
Estimated revenue ...	41,104,541,481
Estimated expenditure ...	41,088,953,711
Estimated surplus ...	15,587,770

The Rapporteur, M. Lamoureux, states that the Treasury is in far from the flourishing situation it enjoyed a year or two ago, its available resources at the end of 1931 having been only 2,273,000,000 francs. The deficit on the current financial year threatens to be largely increased by the suspension of German reparation payments, in which case the Treasury will be called on to advance to the Budget an amount equivalent to the sum held up by moratorium. A more important cause for the penury of the Treasury, the Rapporteur emphasises, lies in the advances which have been made to foreign Governments and to private undertakings, such as the Banque National

de Crédit and the Banque d'Alsace et de Lorraine ("in order to prevent serious loss to the public savings"). M. Lamoureux calls attention to the fact that between 1928 and 1932 proposed expenditure for a full year has been increased by 10,777,000,000 francs, or 25 per cent. The Rapporteur insists that estimates of expenditure in the new Budget are below what will be necessary, and that the realisation of certain items of revenue is questionable (such as, for example, the receipt of payments from Germany equivalent to 1,173,000,000 francs). Further, 2,463,000,000 francs of estimated receipts required to balance the Budget can only be secured by exceptional means. The new Budget, he estimates, will show a "virtual deficit" of 2,500,000,000 francs, and, as several of this year's resources will not be available in the future, subsequent Budgets may be deficient to the extent of something like 7,000,000,000 francs. "In appearance," as M. Dausset, another expert, comments, "the Budget Bill proposes credits that will both meet requirements and furnish a balance. In reality there is a real deficit of 7,000,000,000 francs, postponed or concealed, by the aid of well-known methods which necessity tolerates, but which financial sincerity reproves."

The foreign trade returns for January indicate total exchanges of 4,147,165,000 francs and 5,527,000 tons, as compared with a total in the corresponding month of last year of 7,752,750,000 francs and 6,821,000 tons. The drop of 47 per cent. in value, as compared with January last year, was obviously due mainly to the sharp fall in prices during the last twelve months, the decline of 20 per cent. in tonnage much more nearly gauging the effect of the economic crisis on French foreign trade. Imports totalled 2,341,000,000 francs and 3,680,000 tons (of which 1,077,000,000 francs and 2,917,000 tons were raw materials, and 502,000,000 francs and 172,000 tons manufactured goods), against 3,786,000,000 francs and 4,404,000 tons in the corresponding month. Exports totalled 1,806,000,000 francs and 1,877,000 tons (of which 435,000,000 francs and 1,559,000 tons were raw materials, and 1,098,000,000 francs and 212,000,000 tons manufactured goods), as compared with 2,571,000,000 francs and 2,417,000 tons in January, 1931. The month resulted in an adverse balance of 534,000,000 francs (equal to 28 per cent. of the imports), compared with 1,243,000,000 francs (or over 30 per cent. of the imports) a year ago.

Industrial production figures for December mark a drop of three points in the general index figure, which is returned as 111 (1913 = 100), against 114 in November, 194 in December, 1930, and a mean of 140 during that year. The building, leather and paper industries all show a rise of a point on the month. Textiles are returned at 59, or a further drop of three points, bringing the industry to the lowest level of output recorded for many years. Other index declines on the month are engineering 6 points, metallurgy 7, mining 3, motor-car construction 12, and rubber commodities 32 points. Output of combustibles by the French collieries in January was 3,811,000 tons (as compared with 4,017,000 tons in December, and a monthly average of 4,586,000 tons during 1930), plus 888,000 tons by the Saar mines, against 853,000 tons in December last, 1,039,000 tons in December, 1930, and a monthly average during that year of 1,103,000 tons.

The index figure representing wholesale prices (45 commodities) at the end of January moved up from 413 to 414 (gold index figure: 84), the rise being due to a somewhat sharp increase in meat and vegetable food prices, the figures for all other categories going to lower levels. The figure for French products (29 commodities) rose from 471 to 477, while that for imported goods declined 8 points.

GERMANY.

Presidential Candidature — Trade Balance — Banks.

(FROM OUR CORRESPONDENT.)

BERLIN, February 16.

HERR VON HINDENBURG has agreed to be a candidate for re-election to the office of President. "After earnest consideration I have decided, in the consciousness of my responsibility for the fate of our Fatherland, to stand for

re-election. The fact that the request to do so came not from a party but from large sections of the people makes me feel it my duty to consent. If I am elected I shall continue to serve the Fatherland conscientiously and faithfully with all my power, striving to secure for it freedom and fair treatment abroad, unity and recovery at home. If I am not elected, I shall be spared the reproach of having arbitrarily abandoned my post in a time of difficulty."

This confirmation establishes the fact beyond a doubt that Herr von Hindenburg will stand for the second poll if he should not be elected at the first voting. The difference between the President and former Commander-in-Chief of the German Army and the agitator Herr Hitler, who has become his opponent, could not be better illustrated than by the tone of this announcement. Herr Hitler has appealed for support with the mien of a victor before even the struggle has begun. Herr von Hindenburg declares that he proposes to do his duty without reference to the result. This difference will make a profound impression upon the German people.

The greatest confusion reigns among the parties of the Right. The German Nationalists and National Socialists have declared that they will not vote for Herr von Hindenburg, but that is as far as their unity on the question of the election goes. The most likely thing still seems to be that Herr Hitler will secure German nationality by some means or other and offer himself as a candidate. Apart from him, the entire Right is unable to produce a candidate who would have any chance against Herr von Hindenburg even on a second voting. The open opposition of the National Socialists and the German Nationalists has very much simplified the position of the Social Democrats in respect of Herr von Hindenburg's candidature. No official declaration has yet been made by the party, but there is no doubt that it will support Herr von Hindenburg.

Hitherto it has been possible to counter the demand for a policy of "autarchy"—that is to say the separation of German trade and credit from the rest of the world and the formation of German credit policy without reference to relations with other countries—by arguing that this would involve the sacrifice of the export business by which so large a proportion of German workpeople live. The dwindling of German exports under the influence of restrictive measures in other countries is now making it more and more difficult to resist the isolation movement within Germany. The export surplus in January was Rm. 102 millions, against 247 millions in December, 264 millions in November, and 396 millions in October. The January foreign trade returns alone are not, of course, inclusive evidence of the future destiny of German exports, especially as it is not possible completely to distinguish seasonal influences, but the German Press is quite right in regarding them as a serious danger signal. Although January was a relatively unfavourable month last year too, when the surplus was only 60 millions, the severity of the decline last month, as compared with any of the preceding eleven months, taken in conjunction with closer analysis of the figures, shows that this was in the main not a seasonal phenomenon but one due to exchange and commercial restrictions abroad.

German exports to Great Britain, which had already declined by Rm. 20 millions in December, underwent a further contraction of 50 millions, and the heavy decline in exports to Holland is probably in part a decline in indirect exports to England. Total exports were down by Rm. 196 millions, of which about 50 millions were balanced by the diminution in exports. The export surplus is a matter of vital importance to Germany on both economic and political grounds, as Germany's ability to fulfil her obligations under the standstill agreement depends upon the activity of her trade balance.

The Government are working hard to place the future of German banking on a secure foundation. Time presses, the next few weeks. The most urgent matter is to settle the fate of the two big banks which are being supported by the Reich. The original plan of amalgamating the Danatbank and the Commerzbank has been abandoned and it now seems certain that the Danatbank and the Dresdner

Bank will be amalgamated, but the terms of the fusion are still under discussion. Probably the old ordinary shares will be written down by 25 per cent., and thus be reduced to a small minority. At the same time the Reich will be released by the new amalgamated bank from its responsibility for the Danatbank's debts. That presupposes, not only that the losses of both banks will be substantially written down, but that a considerable supply of fresh funds—Rm. 150 millions are talked of—will be forthcoming.

The D.D. Bank and the Commerzbank will also have to reduce their capital considerably in order to write off their losses. Negotiations are in progress for securing fresh resources both for these banks and for some of the larger provincial banks, especially the Barmer Bankverein and Adea-Leipzig. The fund from which this money is to come is to be the profits of the Reichsbank. During the past year the Reichsbank has made enormous profits, and will in all human probability do the same in the coming year, for the withdrawal of short-term foreign credits has made the Reichsbank far more the central source of credit than it used to be, and the high rates consequent on the scarcity of credit, which presumably have come to stay, make discounts and advances correspondingly profitable. The Government is legally empowered to absorb these profits in two ways: by its graduated share of the profits and by the tax on that part of the note circulation which exceeds a prescribed level. The Government and the Reichsbank have apparently decided to use these profits resulting from the crisis for the benefit of the banks which have been injured by the crisis, undoubtedly a rational proceeding. It is anticipated that the negotiations, which are being conducted in the closest secrecy, will be concluded within a few days.

Meanwhile the first bank balance sheet to be published, that of the Reichscreditgesellschaft, whose shares are held by the Reich, shows a surprisingly favourable result. The bank is able without difficulty to distribute a dividend of 4 per cent. for 1931, against 7 per cent. for the preceding year. The balance sheet confirms the fact, which has been known for months, that the Reichscreditgesellschaft profited by the crisis of last July. Large sums which had been withdrawn from other banks flowed into it, partly because, as a Government bank, it was considered absolutely safe, and partly because it had kept itself extraordinarily liquid. In consequence, although it too had to repay by far the greater part of its foreign credits, its "creditors" only declined from Rm. 629 to Rm. 512 millions, or about 20 per cent., compared with an average decline of 35 per cent. in those of the other banks. The proportion of foreign money in the item "creditors" fell from 50 per cent. in the preceding year to 27 per cent. Its acceptances fell from Rm. 30.3 to Rm. 21.2 millions. Total liabilities are covered to the extent of 46.25 per cent. by cash, balances with other banks, bills of exchange and Treasury bills, against 42.8 per cent. last year. The share capital is unchanged at Rm. 40 millions.

The news of the proposed expansion of credit in the United States and the rise on the New York Stock Exchange have stimulated an upward movement in German shares. The question of reopening the German stock exchanges has been postponed for the time being at the wish of the Reichsbank, but the tendency is clearly shown in the telephonic dealings among bankers and brokers. During January there was a strong upward tendency, chiefly owing to a belief that the earlier prices were thought to have been too low and to a feeling of optimism in respect both of domestic political developments and of the anticipated settlement of the reparations question. At the beginning of February there was a not inconsiderable setback. In the last few days this has been made good, and the leading German shares are now being sold at rates which had not been touched since last autumn. Rises of 5-10 per cent. in a few days do not so far mean very much, as the turnover has been relatively small. Small purchases force up the quotations, as there is little inclination to sell.

AUSTRIA.

Banking Developments — Exchanges — Industry.

(FROM OUR CORRESPONDENT.)

VIENNA, February 15.

THE new President of the National Bank, Dr. Kienböck, has retired completely from political life. He is also giving up his practice as lawyer and declares that he will run the bank without political prejudice. It is, however, his desire to work in close conjunction with the Government, though he has pointed out that the bank management will retain its independence. The State finances are deeply affected by the Credit-Anstalt and also by the situation at the National Bank. A solution of the difficulties will only be reached when the State finances improve and the bank of issue is able to eliminate from its portfolio the bills of exchange taken over from the Credit-Anstalt. Whether this is to be effected by converting a portion directly into a State debt is not yet certain, but the new President of the National Bank has declared that it is not possible to concede the Credit-Anstalt any important accommodation from the bank of issue, unless in respect of commercial bills of exchange. The bank of issue already has enough finance bills. At the Credit-Anstalt itself Herr van Hengel has entered upon his duties as general manager, after the failure of the attempt to get a prominent German director for the position. Vienna directors, with whom negotiations were carried on, also refused the offers made to them.

The position of the State finances has by no means improved within the past few weeks. The deficit for the year 1931 is considerably higher than was originally anticipated. It amounted to 277 million schillings, and was 66 millions in December alone. January certainly brought no improvement owing to the poor traffic on the railways and the strangulation of trade caused by the restrictions on foreign currency. For 1932 the budgetary revenue and expenditure have been greatly curtailed, but it appears that the results for last year were still more unfavourable than was expected, and that the estimates for 1932 may have to be subjected to a further examination. The deficit on the Federal railways for the year 1931 amounts to nearly 80 million schillings, in spite of the fact that the Federal Railways, like the State, have almost completely stopped capital improvements, and that the expenditure which is made consists almost exclusively of unavoidable repairs.

On foreign exchange and gold markets there have been considerable fluctuations in the last week. For instance, the premium on gold has decreased from 42 to 36 per cent., which amounts in schillings to a decrease in the price of fine gold from 6,800 to 6,500. About four weeks ago the premium on gold was 28 per cent. For the time being, the National Bank has no intention of allowing any change to take place in its cautious policy in regard to foreign currencies, as there is no fresh influx of foreign means of payment.

The foreign currency clearing treaties, which have been concluded with various States, have so far not proved satisfactory. There is no improvement observable in either general business or in the heavy industries, and the Alpino Montan Gesellschaft will again distribute no dividend. The company, however, has succeeded in somewhat reducing its bank debt. Further dismissals are taking place in the automobile industry, especially at the Steyr Works, so that the distress in that town is further augmented. More than half the population of the town is already living on public support. Again, the hopes attaching to an improvement in the sales of Austrian brown coal are not being fulfilled. Even though the importation of foreign brown coal has receded somewhat, stocks are still very large; furthermore, the foreign coal mines—and not only those which deliver brown coal but also those which deliver hard coal—are prepared to sell their products to Austria on long-term credit. Representatives of the workers and of the brown coal industry are demanding that the Government should forbid the importation of brown coal, but this would involve difficulties in relation to trade treaties. The brewing industry is also experiencing a

serious crisis, for consumption is falling, the teetotal movement is progressing, and not only the breweries but also the State finances are suffering in consequence. Some of the breweries have also bought soda-water factories.

Nothing is known yet of the balance sheets of the banks. The banks want to see how things will develop at the Credit-Anstalt before making decisions in regard to their own balance sheets and in respect of the distribution of dividends. In the meanwhile, the dismissal of clerks is still proceeding, largely because the social charges, which the employers have to pay on their behalf, have not yet been modified.

HUNGARY.

State Debt — Agricultural Indebtedness — Foreign Creditors.

(FROM OUR CORRESPONDENT.)

BUDAPEST, February 16.

IN accordance with the Government's declaration addressed to the Financial Committee in October, 1931, that quarterly statements would be issued giving details concerning foreign and domestic debts and all other liabilities of the State and its undertakings, the position as on December 31, 1931, is shown as follows in the last monthly report of the Finance Minister:—

	Foreign.	Domestic.	Total.
	(Millions of pengö.)		
Consolidated debt.....	1,251.8	132.6	1,384.4
Floating debt	305.5	87.7	393.2
Commitments outstanding....	3.8	211.2	215
Aggregate debt.....	1,561.1	431.5	1,992.6

For the service of the State debts 95.3 million pengö are earmarked in the revised Budget for the current financial year 1931-32. There is little doubt that for the next financial year, which begins on July 1, 1932, more than 100 million pengö will be needed for the service of the State debts, because a considerable proportion of the floating debt was contracted during 1931, and interest for the first year (e.g., for the Treasury bills) was deducted in advance. As can be seen from the above statement, the major part of the floating debt was borrowed abroad, whereas the outstanding commitments of the State represent chiefly the unpaid obligations of the State and its undertakings at home with banks, industrial concerns, etc. According to the quarterly report of the League of Nations representative the Government has not given its guarantee for any loans or credits since the Financial Committee of the League reported in October last, when the total of loans guaranteed by the State was 199.8 million pengö.

The Statistical Department estimates that the total net indebtedness of agriculture outstanding on December 31, 1931, amounted to 1,690 million pengö, against 1,570 million pengö a year ago. Though the pace of growing indebtedness has slowed down somewhat in 1931 as compared with the period 1927-29 the number of mortgaged holdings has again considerably increased. About 40 per cent. of the landed property is mortgaged. Considering that the pre-war debts of Hungarian agriculture were almost entirely wiped out by the inflation before the League reconstruction scheme began to operate in 1924, and new borrowing (mainly from abroad) began only in 1925, it is appalling that within six years indebtedness proceeded so fast that owing to the high interest rates and the fall in the price level agriculture is once more in a bankrupt state. It is the small and middle-sized holdings which suffer the most from the onerous debts; the big estates are comparatively better off, thanks partly to the fact that they benefited more from the wheat and rye bounty accorded in 1930 and 1931 than the smallholders did. Moreover, indirect taxation and the discrepancy between agricultural and industrial prices hit the small farmers harder than the big landlords.

There is little doubt that the present interest rates and high taxes are quite out of proportion to the farmers' capacity to pay. At present interest rates are limited to

10½-11 per cent. in the rural districts, but no one can tell what the peasants really pay for their unconsolidated debts. In all probability the interest and sinking fund charges of agriculture, returned at 128 million pengö by the Statistical Department, are understated. The agriculturist groups of all political parties have joined hands to ask the Government for urgent help. While it is rather disquieting to see that agriculturists favour a disguised inflation—they demand an increase of the "means of payment"—there is much force in their protest that at a time when Hungary cannot meet her foreign obligations, domestic bondholders of 7½ per cent. bonds should receive interest in full. In view of the fact that Hungary is bound to ask her foreign creditors to scale down the existing 7 and 7½ per cent. interest rates to a reasonable rate, say 3 or 3½ per cent., compatible with her capacity to pay, it is unwise to create a dangerous discrimination by paying the domestic bondholders an interest rate of 7 and 7½ per cent. so long as the matters arising out of the transfer moratorium have not been settled with the foreign creditors.

The hopes that foreign creditors will come to terms with their Hungarian debtors on a moderate scale of interest compatible with the country's capacity to pay have so far proved to be in vain. Instead of working out a plan for 1932 to save the basic financial structure of the country and make the temporary good effects of the transfer moratorium durable, pending a general world recovery and the return of normality in the sphere of international trade, foreign creditors are quarrelling among themselves and with Hungary's representative about transfer priorities of doubtful value. It is understood in Budapest that the negotiations of Dr. Teleszky in London with the American and English creditors did not lead to much success. Yet it is very important that urgent decisions should be taken regarding the management of the Foreign Creditors Fund into which the untransferable interest and sinking fund payments are made.

HOLLAND.

Trade — Industry — Commercial Policy.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, February 17.

THE trade statistics for January illustrate the hard struggle we are having with the obstacles to foreign trade encountered on all sides. The trade position is summarised in the following table (gold and silver excluded) in millions of guilders:—

	January, 1931.	December, 1931.	January, 1932.
Imports	178	141	131
Exports	118	81	70
Percentage of imports covered by exports	65.9	57.4	46.5

There has been a further pronounced decline in exports, although the actual excess of imports over exports remains almost unchanged as compared with December, 1931.

The Bill providing for the establishment of a foreign exchange clearing house system with countries abroad is to be introduced into the Second Chamber within a few days, and in order to enable the measure to become effective as soon as possible after it has passed through Parliament, the Government is already endeavouring to make the necessary arrangements with the countries concerned. For this purpose a delegation consisting of Dr. H. M. Hirschfeld, Professor Dr. Bruins and a representative of the Netherlands Bank have arrived at Budapest, where they are negotiating with the Hungarian Government. After the conclusion of the negotiations with Hungary, the delegation is expected to proceed to Vienna to conduct similar negotiations with the Austrian Government, after which the authorities in Germany will probably be visited. It is thus apparent that the Government is taking active measures to "improve" the balance of trade as soon as somewhat artificial character, as they were stimulated by

Despite the unfavourable balance of trade, the position of the Netherlands balance of payments is still satisfactory. The exchanges are well maintained, and even in January the import of gold and silver reached 35,273,682 guilders, against an export of 17,317,610 guilders. The efflux of gold from the Netherlands Bank also continues to be confined within narrow limits.

Holland maintained her prominent position on the international artificial silk market very satisfactorily in 1931. This applies, however, more to the quantity exported than to the value. Whereas in 1930 the total Dutch exports of artificial yarns totalled 8,919 tons, with a value of 23,898,000 guilders, the quantity rose to 9,493 tons in 1931, but the value declined to 19,057,000 guilders. The maintenance of foreign markets is of vital importance for the Dutch artificial silk industry, for the industry is dependent upon exports for 90 per cent. of its output. As compared with an average export price of 4.97 guilders per kilogram in 1927 and 5.12 guilders in 1928, the price dropped to 4.23 in 1929, followed by a further decline to 3.58 in 1930, while for 1931 the average price was only 2.69 guilders; in December the average price even fell to 2.42 guilders. It is evident that the profits of the various artificial silk companies are likely to be disappointing for 1931. Germany was again our principal customer in 1931. Our exports to the United States of America, which were no less than 1,699 tons in 1926, have been steadily falling, and in 1931 they only amounted to 159 tons. The Dutch artificial silk industry has, however, been successful in acquiring new markets in the Far East.

The state of Dutch shipping is very gloomy indeed. The decline of shipping traffic has made itself very strongly apparent in Rotterdam, especially the last few weeks. The number of unemployed registered at the local labour exchange was 32,773 at the end of December, as compared with 19,267 on December 31, 1930. The provision of support for the unemployed is requiring 13 million guilders, as compared with an expenditure of 5.4 million guilders for this purpose in "normal years." More than half of Rotterdam's fleet of freight steamers is now laid up.

It is stated that the negotiations between the Belgian and Netherlands Governments will most likely be completed by the end of this month. It is expected that before the summer the results of the negotiations will be submitted to the Netherlands Parliament. A Dutch delegation sent to Brussels a few days ago has been studying with a Belgian delegation the situation of the meat and butter market in Belgium and Luxembourg. It proved that it is not impossible that sooner or later Belgium will be compelled to consider restrictive measures on the importation of meat and butter. Assurances were given, however, that in this event the normal extent of the exportation of meat and butter from the Netherlands into Belgium and Luxembourg will be properly taken into account.

SWEDEN.

Prices — Balance of Trade — Stock Exchange.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, February 9.

A NEW agreement has now been reached for the engineering shops, iron and metal works, and a proposal recommended by the negotiators for both parties has been submitted in regard to the sawmills. Negotiations are still in progress regarding the pulp and paper mills. The unwillingness of employees to agree to any reductions in wages is due to a fear of inflation, but, so far, the fear which seemed justified when the gold standard was dropped has not been borne out. The result, admittedly, of the great rise in the foreign rates of exchange has been an unavoidable increase in the wholesale price level, which, measured by the index of wholesale prices of *Svensk Finanstidning*, increased from 100 in September to 103 in December, while the official index of wholesale prices rose from 107 to 111. In the

weekly price index of *Svensk Finanstidning*, which is more purely an index of raw materials, the advance is even more clearly shown. It rose from 89.9 in the week before departure from the gold standard to 100.6 at the beginning of December, after which it fell slowly to 97.9 last week. So far, however, there has been no corresponding increase in the cost of living. In view of the invariable lag of retail prices behind movements of wholesale prices, it is still an open question whether the increase in prices of imported goods caused by the depreciation of the currency will not also set its mark on retail prices and the cost of living. This is, of course, not inevitable, as the policy of continued deflation by a high discount rate and a rationing of credit, which the National Bank has followed ever since September, may counteract the tendency.

The balance of trade for December turned out to be considerably more favourable than had been anticipated. The surplus of imports did not exceed 4.6 million crowns, a figure which contrasts sharply with the earlier months of last year, all of which showed a considerably higher surplus of imports, and suggests that the depreciation of the crown, in spite of everything, has begun to operate favourably upon the balance of trade. Owing largely to the December development, the result for the whole of 1931 was a surplus of imports of 312 million crowns, while earlier in the autumn there was reason to expect a debit balance of something like 350 million crowns. Even 312 million crowns, however, means an enormous change for the worse in our balance of trade, as the debit balance for 1930 was 112 million crowns. This enormous change for the worse in our balance of trade has played a decisive part in the unfortunate development during the past year which resulted in the abandonment of the gold standard. In order to close the breach which the surplus of imports produced in our balance of trade, it was naturally necessary to raid our currency reserves to a very considerable extent, even if a part, by no means insignificant, could be covered by invisible exports. No figures are yet available as to the net yield from freights, but it should be manifest that it must be considerably less than that for the year 1930, 189 million crowns. In the same way, some reduction must be anticipated in the balance from interest accruing to us from our foreign investments, which was estimated at about 20 million crowns for 1930. If we estimate both these items at a total amount of 175 million crowns, we should, however, be on the safe side, and the change for the worse in the balance of payments caused by the surplus of imports in foreign trade is then reduced to 137 million crowns.

The next most important item in our balance of payments during the past few years has been movements of capital abroad. For quite natural reasons the tendency of these movements had already reversed during the second quarter of last year and during the remainder of the year net imports of capital increased. Whilst the net export of capital, according to the estimates of the Bank Inspectorate, amounted for 1930 to 220 million crowns (according to the Board of Trade to as much as 342 million crowns), the result for 1931 was a net import of 37 million crowns. The change for the worse in the balance of trade in conjunction with the crisis has, in other words, not only prevented us from providing any balance for investment abroad, but we have even been compelled to bring home part of the investments which had been made during the preceding few years. This, however, had the favourable effect of further reducing the breach in our balance of payments. While the Board of Trade estimated the deficit in our balance of payments for 1930 at 245 million crowns, according to these estimates the change for the worse during 1931 should not have gone further than about 100 million crowns, and while only 30 million crowns of it was covered in 1930 by relying on our currency reserves so that the rest was presumably bridged over by credit transactions, we disposed last year of 300 million crowns of our currency and gold reserves in order to reach equilibrium. The settlement which should have been effected in 1930 had, in other words, to be effected in 1931, and then for two years at once.

After the almost uninterrupted fall in the market price of securities during the autumn months, January brought with it a rise in the Stock Exchange values of the "A" list securities of 313 million crowns. The figure is somewhat surprising, as the dominating factor has been the uncertainty in regard to labour disputes. Probably the January movement on the Stock Exchange would have been quite different had not the special Kreuger rise taken place. Of the profits on market quotations for the month not less than 206 million crowns are to be attributed to the Kreuger securities.

CZECHOSLOVAKIA.

Industry — Trade — New Bills.

(FROM OUR CORRESPONDENT.)

PRAGUE, January 31.

UNEMPLOYMENT persists owing to the difficulties of export, and the figure was over 480,000 at the end of 1931. The home market, however, is better, and the Christmas trade was considered fairly satisfactory. The unsatisfactory economic situation is reflected also in the increase in the number of bankruptcies and settlements, which amounted to 6,515 in 1931, or 326 more than in the previous year, and by the heavy decline in railway traffic and iron and steel output. Production of pig iron in 1931 amounted to 1,144,000 tons; this represents a decline in the output to 40 per cent. of capacity. The output of raw steel declined correspondingly to 1,529,000 tons, or 34 per cent. of the capacity of all plants. As almost two-thirds of the works are out of action, the cost of production has naturally been raised. There have been considerable extensions of plant since 1927, and the pressure of interest charges is therefore being felt very seriously. This state of things has been made worse by the decline in iron prices on the world market, as the Czechoslovak industry sells a considerable percentage of its output abroad.

The money market, after a fairly severe stringency at the end of the year, has been showing a certain relaxation, which is manifested also in the improved quotations of Government securities. Deposits in the banks and other institutions show a favourable development, though this is not uniform. The National Bank has reduced its discount rate from 6½ per cent. to 6 per cent. Whereas the previous increase in the discount rate was the subject of severe criticism, the reduction of the rate has now incurred similar censure, as it is considered insufficient. Other banks followed the lead of the National Bank in raising their rates, but have not reduced them now. A further reduction in Bank rate is likely to be considered after the French loan has been realised.

Exports have suffered considerably from foreign exchange restrictions in various countries. Imports in 1931 amounted to Cz. Kr. 11,789 millions, and exports to Cz. Kr. 13,140 millions. The foreign trade balance was active by Cz. Kr. 1,351 millions, but many frozen credits are involved, which it is impossible to realise. Total imports in 1931 declined by 25 per cent. as compared with 1930, and exports by 24.8 per cent. Exports of industrial goods, especially textiles, iron goods and sugar, have been seriously affected.

The development of foreign exchange restrictions is manifested in the decline of the foreign exchange holdings in the country. On the whole Czechoslovakia had retained unrestricted dealing in foreign exchange, whereas in the neighbouring countries rationing of foreign exchange had been severe. The result of this was that foreign exchange was leaving Czechoslovakia, while debts due from abroad could not be collected. Under these circumstances it was not possible, without endangering the currency, to retain the previous relative freedom, and Czechoslovakia was also driven to restrict foreign exchange dealing. This has been done only after other countries have done so, and the restrictions have come almost too late. After the control of foreign exchanges had been intensified, an ordinance, dated January 18th, limited the use of foreign exchange for goods enumerated on a special list.

The difficult negotiations with Hungary are being continued, and there is a hope that they will be brought to a successful conclusion shortly. Partial agreements entailing revision of some points in the commercial treaty with France have been concluded. The possibility of an economic rapprochement of some of the States in Middle and Eastern Europe is still being much discussed, but the outlook for a speedy realisation of such a plan is poor, when one takes into consideration the protectionist trade policy of almost all the countries concerned.

In the Czechoslovak Parliament a Bill has been passed authorising the Minister of Finance to raise a loan up to Cz. Kr. one milliard. This loan is to alleviate the position of the Treasury, which is encountering difficulties, owing to the fact that the revenue, compared with the Budget, has declined as the result of the crisis; on the other hand, expenditure has risen, especially on account of unemployment relief, which is estimated at Cz. Kr. 300 millions. The Government relieved the situation temporarily by issuing new Treasury Bills, payable in 1932, ordering strictest economy in all expenditure and procuring new revenue by raising the income tax and match duty. In Parliament there is also under discussion the establishment of a special Control and Economy Board. The effects of these steps will naturally appear later on; for the immediate needs credit is indispensable, and an agreement was signed in Paris on January 20th by which a loan amounting to 600 million francs for five years was contracted.

The Government are preparing a Bill aiming at a control of trusts and cartels. This is to effect an extensive limitation and control of trusts. The Bill is meeting opposition from industry, as it is feared that it may unnecessarily hamper cartel activity, which is in a certain measure economically indispensable in the present time and often serves as a basis for international trade agreements. Although the necessity for placing the cartel activities on a legal basis is acknowledged, the Bill is considered to go much too far in its provisions.

SPAIN.

Budget — Jesuits — Exchange Control — Unemployment.

(FROM OUR CORRESPONDENT.)

MADRID, February 8.

THE Minister of Finance has now published the figures of revenue and expenditure for 1931. These are as follows:—

	Pesetas.
Estimated expenditure	3,690,945,672
Payments effected to December 31, 1931	3,855,086,660
Difference	165,040,988
Estimated revenue	3,753,654,000
Effective revenue to December 31, 1931	3,656,093,733
Difference	97,560,267
Excess of payments over revenue	198,992,927

Señor Carner considers these figures satisfactory in view of conditions during the past year and states that he is very optimistic as to the future. No mention is made by him of the 400 millions to be paid by the Government to the railways—a sum which was included by the preceding Minister of Finance when he stated that the deficit would amount to 600 million pesetas. Señor Carner is bringing pressure to bear on his colleagues of the respective departments, but there is considerable scepticism on hand, as was anticipated, direct taxation is to be increased by from 5 to 30 per cent. Shopkeepers are to pay an additional 25 per cent. on their industrial tax and the net profits arising from the sale of cinematograph cameras and films, gramophones and records, are to be taxed 10 per cent. The tax on insurance premiums has also been increased, while death duties are to be put up

by 20 per cent. Mining dues will be raised by 80 per cent. and the tax on mining rents is to be increased from 10 per cent. to 15 per cent.

The Bill instituting divorce in Spain was discussed and approved by Congress with very little opposition. That which called for the dissolution of the Order of Jesuits also became law and was put into effect immediately. Here, however, a very lively opposition was put up and it was at one time feared that serious incidents might occur. The Jesuits themselves were the first to recommend submission, and the fine buildings hitherto occupied by the Order were duly vacated within the short respite allowed by the law. The fears that the measures taken might have a depressing influence on the Stock Exchange in view of the extensive interests of the Jesuits in Spanish industries, and especially those connected with the production and distribution of electricity, have proved unfounded up to the present, although the past fortnight has certainly seen a slowing down of activity in the share market. The other religious orders are eventually to be prohibited from taking an active part in any trade or industry and will not be allowed to own or run schools and colleges.

The organisation of the Central Office for Operations in Foreign Currencies has been modified in the following sense: national and foreign banks established in Spain will be allowed, as soon as they have been placed on the list of authorised establishments, to equalise purchases and sales of foreign currencies amongst themselves. In order to obtain such authorisation, banks must present a statement of all their operations in foreign currencies during the last quarter of 1931. The Central Office will then fix for each bank a maximum for the purchases of foreign currency allowed over and above those covered by clearing arrangements with other banks, and the cover for such excess will be provided by the Central Office through certain banks designated for the purpose, instead of through the Bank of Spain. All sales of currency must, of course, be justified, as hitherto, by invoices or other commercial documents, and a detailed account of all operations in foreign currency, reduced to French francs, must be submitted daily to the Central Office. It is stated that this modification is the first step towards the removal of restrictions on the free transaction of exchange operations. Since the publication of this regulation by the Central Office for Operations in Foreign Currency, the peseta has fallen, and at the present time continues weak.

Contrary to previous unofficial statements by the Minister of Finance, it is now considered very probable that as soon as the Budget has been balanced, the Treasury will make a public issue of bonds amounting to some 500 million pesetas, which amount, in view of the large funds available, should be easily absorbed by the market, especially as confidence has been somewhat strengthened by Señor Carner's reiterated statements that he will not tolerate any measures which might impair national credit.

In an attempt to reduce the number of unemployed, the Government is reconsidering the public works undertaken during the Dictatorship of Primo de Rivera, which were stopped on the advent of the Republic. In the case of such schemes as are susceptible of producing revenue in the near future work is to be proceeded with as rapidly as possible.

CANADA.

Crops — Business — Foreign Trade — Revenue — Parliament.

(FROM OUR CORRESPONDENT.)

OTTAWA, January 27.

GRAIN prices have stiffened a little, but the export demand is not strong owing to the competition of Argentina and Australia, and the stocks of wheat in store are still heavy and are estimated by the Bureau of Statistics on January 15th at 199,384,242 bushels, as compared

with 209,912,982 bushels on the same date in 1931. The final revised estimate of the Bureau of Statistics places Canada's total wheat crop for 1931 at 304,144,000 bushels from 26,114,650 acres, as compared with 420,672,000 bushels from 24,897,900 acres in 1930; the shrinkage was due to the sharp decline in the average yield per acre, which was 11.6 bushels as compared with 16.9. The same bulletin places the average price per bushel received by growers at the point of production at 38 cents, as compared with 49 cents for the crop of 1930, and the total value of all field crops at \$425,065,100, as compared with \$662,040,900 in 1930.

This drastic curtailment of farming returns has been particularly hard upon the three prairie provinces, which are having a very difficult winter, attended by real hardship for many settlers; all their governments are also suffering from acute financial embarrassments, and considerable support has been developed for a proposal made by Premier Bracken, of Manitoba, that the three provinces should be merged into a single province in order to secure the economies in administrative costs which would be possible. There are no valid objections to such a merger, which would produce a province with a smaller population than either Ontario or Quebec, but it would hurt local vested interests, which will fight it to the last ditch.

Both wholesale and retail trade are relatively quiet, and commodity prices appear for the moment to be well stabilised. Cotton, woollen and artificial silk factories are operating at a reasonably satisfactory level, but the iron and steel plants, the machinery firms and the lumber, newsprint, mining and fishing industries continue to show low production. For the year 1931 production of steel totalled 673,087 tons, as compared with 1,009,578 tons in 1930 and 1,378,024 tons in 1929. The output of motor vehicles for the year was 82,614, as compared with 153,372 in 1930. New construction work also remains at a low ebb, and in December the total value of new building contracts in 61 cities was \$7,397,984, as compared with \$15,440,281 in December, 1930. The total production of Canada's newsprint mills for 1931 was 2,230,775 tons, and the ratio of operations to capacity was 58.1 per cent., as compared with a production of 2,504,147 tons and an operating ratio of 69.4 per cent. in 1930.

The adverse exchange situation in New York, which has lately shown considerable improvement, has materially helped certain industries which were faced with American competition and has been a factor in converting an adverse into a favourable balance of trade. In December, for the seventh consecutive month, exports (\$53,255,476) exceeded imports (\$40,289,795), and for the nine completed months of the present fiscal year exports, including \$8,667,000 of re-exports, attained a total value of \$470,464,000, as compared with imports valued at \$451,355,000, leaving a favourable balance of nearly 20 million dollars, as compared with an adverse balance of over 70 millions in the parallel period of 1930.

The latest statement of the Federal revenues up to December 31st shows that in the first nine months of the fiscal year their yield has been \$254,648,150, as compared with \$290,166,044 in the previous parallel period, but it is understood that some of the leeway has been made up in January. In view of the special demands upon the Federal Treasury, it has been impossible to effect any cut in the aggregate expenditure, which, for the nine months' period, amounted to \$308,947,637, as compared with \$306,150,616, without taking account of the substantial sums which will be required to meet the obligations of the Canadian National Railways. On December 31 the net National Debt was placed at \$2,315,911,423, as compared with \$2,193,748,531 on December 31, 1930. However, further evidence that there is an abundance of money in the country available for investment was provided in January by the successful flotation of two domestic loans. The City of Montreal had no difficulty in raising \$15 millions for a 6 per cent. issue, and when the province of Ontario offered a \$25,000,000 issue, part at 6 per cent. and part at 5½ per cent., it was oversubscribed two and

a half times in a single day. Confidence is now felt that a large part of the refinancing operations which will be necessary to meet maturing obligations in the United States can be effected by Canada through domestic loans. The Federal Parliament has been summoned to meet for its second regular session on February 4th. The duration of the session will depend upon the temper and tactics of the Opposition, and there are indications, derived from a recent speech of Mr Mackenzie King, that the Liberal Opposition intends to challenge vigorously the tariff policy of the Bennett Government. In this speech Mr King made a comprehensive arraignment of the "Canada First" policy and pledged his party to reverse it at the earliest opportunity and restore the scale of duties to the level which prevailed before the special session of September, 1930. Since last session ended there has been no material change in the standing of parties in the Commons, but the Conservatives now have a definite majority in the Senate. The reorganisation of the Cabinet, which has been foreshadowed, has not come to pass, but Premier Bennett has now divested himself of the burden of the Ministry of Finance and entrusted it to Mr E. N. Rhodes, who has been serving as Minister of Fisheries.

The Canadian Government has now, with the approbation of the other British nations, fixed the third week in July as the date for the opening of the Imperial Economic Conference at Ottawa, and its officials have begun the work of collecting the necessary data and other preliminary preparations. There is evidence of some nervousness in certain manufacturing circles about the possibility of in-roads being made into their domestic preserves at the Conference, but disinterested public opinion takes the view that only by mutual sacrifices and concessions can adequate results be achieved at the Conference, and hopes that the Bennett Government will not allow its course to be dominated by the more selfish type of industrial protectionist. In the speech referred to above Mr Mackenzie King entered a caveat against Canada's participation in any " Empire First " policy of a tariff ring fence, and declared that she must retain freedom to trade with other countries.

JAPAN.

Gold Suspension — Budget — Balance of Payments.

(FROM OUR CORRESPONDENT.)

Tokyo, January 11.

THE immediate effects of the suspension of the gold standard are not as yet easy to assess. The initial impact of the depreciation of the yen is most clearly in evidence in primary commodity and security prices. The Bank of Japan's wholesale index number for December last, based on the yen prices of fifty-six commodities, recorded a rise of nearly 2½ per cent. on the month. The aggregate price of all securities quoted on the Tokyo Stock Exchange rose to 2,924 million yen at the beginning of this month, as against 2,375.8 millions a month ago. Certain industries also have been definitely benefited, and most producers in such trades have been enabled to extend their order lists. But orders are mostly on home account, and the export markets remain depressed. The stimulus afforded to the Japanese export trades by the depreciation of yen is so far apparently acting slowly. Besides various unfavourable developments abroad, the Manchurian conflict, the unsettled yen exchange and the Yokohama Specie Bank's enormous forward dollar commitments are a few serious obstacles in the way of an early trade recovery.

As an aftermath of the change of Governments and the suspension of gold payments, the settlement of the Yokohama Specie Bank's outstanding exchange contracts has been left in the hands of the new Finance Minister. It was found that the bank's dollar commitments, at the moment of the reimposition of the gold embargo, amounted to 176 million yen, and the loss automatically involved, on the basis of the ruling exchange rates, was some 50 millions. The bank's forward dollar sales being conducted in

pursuance of the former Finance Minister's policy of checking the illegitimate purchases of foreign bills, it is obvious that the responsibility of the entire loss incurred by the bank cannot be thrown upon its shoulders, nor is it possible to make good the loss by the State, if only for political reasons. No adequate or prompt solution of the problem is in sight.

The Budget estimates for 1932-33, prepared by the preceding Government, were revised by the new Government. In the revised estimates expenditure was reduced to 1,397,100,000 yen, against revenue of 1,273,500,000 yen, a saving of some 82 millions upon the original estimates. But the saving is merely technical; the items struck out will be submitted afterwards as supplementary estimates. The Budget total is expected to show an increase rather than a decrease. A definite of 123.5 million yen is to be met wholly by a new loan. The fresh taxation and tariff increase proposals of the preceding Government have been entirely abandoned.

The value figures of foreign trade for last year reflect the adverse effects of the Manchurian conflict and the new wave of protectionism and exchange depreciation, besides the persistent trade depression and falling prices. The 1931 returns show that, as compared with the preceding year, imports, at 1,235,400,000 yen, declined by 310.8 millions, or 20.1 per cent., and exports at 1,147,063,000 yen fell by 322.7 millions, or 22 per cent. The decline in imports is widely spread over the whole list, but is most substantial in foodstuffs and raw materials, except the single individual case of raw wool, while the decrease in exports is largely accounted for by textiles—raw silk, silk piece-goods and cotton manufactures among them are responsible for more than half the shrinkage. The combined trade returns for 1931 for Korea, Formosa and South Seas Islands show that imports amounted to 83,733,000 yen, and exports to 32,231,000 yen, as against 134,243,000 yen and 48,722,000 yen respectively for 1930. The adverse trade balance on the visible trade figures for the year 1931 for Japan, including her colonies and mandate, amounted in the aggregate to 139.8 millions, as compared with 161.7 millions in 1930.

According to the tentative estimate of the balance of payments in 1930, lately published by the Treasury, Japan had a debit balance of 26.9 million yen in her international transactions, as against a credit balance of 22.1 millions in 1929. While the excess of merchandise imports and net Government payments abroad totalled 174.2 millions, or 1.3 millions less than in 1929, the official estimate of invisible exports was put at 147.2 millions, or 50.3 millions lower. Invisible items, on balance, are set out below in comparison with the preceding year:—

(In million yen.)		
Debit :		
Excess of merchandise imports (including that of Korea and Formosa).....	1929.	1930.
Net Government payments abroad	152.0	160.0
	23.5	14.2
Total	175.5	174.2
Credit :		
Net income from overseas investments and business and emigrants' remittances	15.7	10.0
Net national shipping income	159.2	125.3
Tourists' expenditure, &c.....	11.6	11.1
Other items	11.1	10.8
Total	197.6	147.2
Excess of income over expenditure	22.1	-26.9

The official calculation of invisible exports for last year is not yet available, but, according to the chairman of the Yokohama Specie Bank, the 1931 merchandise excess of imports of 139.8 million yen was more than offset by net invisible items, Japan's income from international transactions, including gold and capital movements, amounting to 742.3 millions and expenditure to 271.2 millions. The chairman estimates new investments abroad during the year at close upon the net gold exports of 375 millions.

Letters to the Editor.

TARIFFS AND THE POUND.

TO THE EDITOR OF THE ECONOMIST.

SIR,—May one who has no claim to be an expert in economic questions ask for further light on certain points arising out of your leader, "Stark and Unshamed," of February 6th? You write that, since "with the pound no longer tied to gold the balance of payments cannot do otherwise than adjust itself automatically," "the depreciation of sterling to a level at which, as recent events have proved, it can be comfortably held, should in itself have removed the third objective (i.e., the correction of the unfavourable trend of our balance of payments) from the programme of the Government." Further on, you write that, the gold standard having gone, "no conceivable reason for the tariff can be found"; and ask how, if the balance of payments demands drastic measures, the Chancellor explains the fact that, while the Bank has collected £30 millions worth of francs and dollars to repay foreign debt, sterling has remained firm.

debt, sterling has remained firm. These passages leave me in some doubt whether your intention is merely to enforce the undoubted truth that the laws of arithmetic will equate payments and receipts, if left to themselves, at some gold parity or other for sterling, or whether it also includes the further proposition that the Government need not, and should not, concern itself with the level at which sterling settles, but accept whatever level the course of trade may bring out. The doubt expressed by so many about the adjustment of our balance of payments may well have been our inexact phrase for anxiety that the balancing should take place at a "better" (higher) level than the "comfortably held" present level of about fourteen shillings or the ten shillings or less which sterling reached in war-time, and that we should not stop at merely wiping out the balance on the wrong side but should restore a substantial favourable balance admitting of progressive oversea investment. At all events, such anxiety exists; and unless it be held that such questions as the level of sterling and the production of a favourable balance are not legitimate concerns of the Government, would it not follow that measures for reduction of imports and encouragement of exports would necessarily come under its consideration? The fact that certain foreign governments, by special tariffs and quota measures, have been able to obstruct the remedial effects that the classical theory attributes to currency depreciation—a condition under which, I suppose, an increased measure of depreciation may be required to produce a given effect on the balance—seems almost inevitably to make a Government matter of it. I do not enter into the question how far it may be possible in practice for our Government, by similar measures towards exports of the countries in question, to redress the balance to our gain. You call for Britain to give a lead towards saner policies instead of tariff reprisals: but is it not pertinent to ask what else we have been doing for generations, and what we have thereby effected? The old belief that no good can ever come of tariffs threatened or imposed as a counter in bargaining for freer trade has now to submit to being retested, like other faiths, under present conditions; and is there "no conceivable" possibility that the closing of the one great market hitherto open to the exports of the world, as a last resort, may so alter the conditions of the tariff game as to demonstrate once for all the limitations of tariff-making as a means to prosperity?

The protectionist claims that by tariffs under modern conditions he can so operate on imports and exports as to redress our balance of payments and to restore to our bankrupt industries that prospect of making profits which is the one, finally indispensable condition of recovery. The nation, after long and (to it) largely unintelligible controversy, has put in a National Government with authority to try out the tariff system if it could not agree on any better way. The direct method of restoring to profits the £200 millions or more annually which the price-fall has transferred to wages and salaries, seems to be considered, by all parties alike, outside the field of practical politics, and the alternative of giving more output for the same wages is apparently equally *tabu*. This illustrates better than anything else how far political sentimentality has carried us beyond the realm of economic law; otherwise nothing could be more absurd than all the proposed tariffmongering as a means of indirectly adjusting wage-levels to prices. But the tariff cry has at least the psychological advantage of giving an outlet to the urge to be up and doing *something fresh* to meet our desperate state; while the guardians of the free trade faith for ten years past have done nothing to grasp and solve the political problem of creating an employment-atmosphere in which it

can function efficiently. Even now, Sir Herbert Samuel's vague alternative policy of preparing reorganisation schemes for the consideration of an industrial commission, industry by industry, seems to combine a maximum of Government interference in the conduct of industry with a minimum certainty of the indispensable profits to enable expansion to absorb the unemployed and to attract the capital necessary for reorganisation and re-equipment. To get rid of a tariff, though far more difficult than to put one on, should not be impossible if and when full trial has demonstrated its failure under the conditions of the day; and it now seems useless to deny any longer the power to make such trial. But if free trade is really and finally dead, must it not be admitted that it was wounded in the house of its friends?—Yours, etc.,

Cookham.

February 10th.

[We must apologise if, as appears from Sir Charles Harris's letter, in the effort to compress into a short article our criticisms of a great and disastrous change in our whole fiscal system, we did not make the basis of our argument about the balance of trade quite clear. It may be briefly stated thus : " With the pound no longer tied to gold, the balance of payments cannot do otherwise than adjust itself automatically " and an infallible symptom of an unfavourable balance is a decline in the exchange value of sterling; the fact that " sterling has remained firm during a period when the Bank of England has quietly collected £30 millions worth of francs and dollars, and during which the French have steadily liquidated London balances," proves therefore that the balance of payments has already been adjusted for the time being, and " should in itself have removed the third objective from the programme of the Government." We do not believe that a tariff system can ever set right an enduring adverse balance of a country as dependent on its " invisible exports " as is Great Britain, and we believe that the temporary necessity is an illusion. We would not, however, have inferred that we do not care, or do not consider that the Government should care, at what level the pound rests. A further precipitate fall (as matters stand, unlikely in the extreme) might demand energetic defence, not excluding a temporary regulation of trade. But the maintenance of the pound at any particular level, the present or any other, must be part of a considered international monetary policy and not merely a prejudice inherited from gold standard days. In an article last week we suggested that, in co-operation with other non-gold countries, Great Britain should give a definite lead towards " reflation " of the price level, " without undue regard to the exchange with such few countries as are effectively on gold." We agree with Sir Charles Harris that we should aim at restoring " a substantial favourable balance admitting of progressive oversea investment," but we are convinced that the endeavour to do so by purely national action is doomed to failure, and that our isolated restriction will only delay the general international recovery on which both sound lending and sound borrowing depend. That, indeed, is also our main comment on the latter part of Sir Charles Harris's letter. The restoration of profits cannot be achieved by our independent attempts to manipulate the trade balance; does our correspondent suggest that if every country reduced its imports every country would be able to increase internal profits, or that our own action will stagger foreign Governments into taking the opposite course for our benefit? We agree, too, that the belief that no good can ever come of tariffs in bargaining for freer trade must be re-tested; indeed, as we said in our article, Mr. Chamberlain's reference to the possibility of inducing foreign countries to join in a low tariff group—a point which he reiterated in a speech at Birmingham last Saturday—would be extremely welcome if we could bring ourselves to hope that such a course was really the intention of the tariff majority of the Government, who still, on the contrary, cherish the illusion of protection for protection's sake.—Ed., *Econ.*]

RUSSIA AND THE CRISIS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Mr. Wise's letter is very ingenious, but he has not been able to deny the various inaccuracies I pointed out in his former letter; and I think that to most people the figures I have quoted, showing Russian prices of wheat, barley, butter and eggs keeping well below all others, will be clear evidence of the extent of her responsibility for falling prices in regard to these important commodities.

But I fear I must correct Mr. Wise in yet another inaccuracy. He states that "wheat prices continued to fall for months after Russia ceased to be an important factor in the market." On the contrary, the Trade Returns show (1) that there were only three months of 1931 in which Russia can be said to have been an unimportant factor as regards quantity, namely, May, June and July; and (2) that in these months the average

price of all imported wheat rose from 5.1 shillings per cwt. in April to 5.2 in May and 5.4 in June, and only returned in July to 5.1. Russian prices meanwhile were 4.7, 4.6 and 4.8. In August, Russia began once more importing on a large scale, and prices dropped further. From September onwards to the end of the year they rose steadily, but Russia still kept well below her competitors. The Trade Returns for January, 1932, just published, show her still pursuing the same policy, and still occupying an important position on our wheat market.—Yours faithfully,

KATHARINE ATHOLL.

House of Commons.
February 18th.

SUGAR BEET SUBSIDY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Mr Richardson's letter in your issue of February 13th shows up very well what an unreasonably extravagant proposition the sugar beet subsidy has proved. Unfortunately, such a strong vested interest has now grown up that it is unlikely that the Government will be able to escape giving financial support of some kind in the future.

It seems to me, therefore, essential that the most careful examination should be given to the whole question to ensure at least that if any support is given in the future it will be administered in a more efficient way. One particular direction in which waste could be avoided is in the redundant refining operations carried out by the subsidised beet sugar factories. In addition to the fact that about 60 per cent. of the present beet sugar output is refined in these factories, the same institutions during the past year refined no less than 250,000 tons of imported raws.

There is no reason why sugar beet factories, if they are to remain in existence, should not stop at the raw sugar stage. Indeed, the experience of those factories in this country that do so leads one to suppose that it is the more economic practice. In Czechoslovakia, there is not one sugar beet factory wholly engaged in turning out white sugar, whilst the majority of factories in Germany, Holland and Belgium adopt a similar practice.

What is more, as the Report on the Sugar Beet Industry at Home and Abroad, 1931, points out in paragraph 331, it is "possible for all the factories in this country to stop at the raw sugar stage and send their product to the refineries for finishing." It is high time this reform was made.—Yours, etc.,
Army and Navy Club,
Pall Mall, S.W. 1.
February 16, 1932.

JAMES MORTON.

TRUSTEE LAW ANOMALIES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Your Note on "Trustee Law Anomalies" deserves some following up by Parliament, for the existing Acts governing trustee investments have done much harm. But for them can one conceive the directors of the "Big Four" railways spending their reserve funds as they have been doing to pay a miserable dividend on the ordinary stocks in order to keep their prior charge securities in the trustee category of permitted investments? These Acts have also led to untold losses through Colonial loans being admitted within the charmed circle of trustee investments, for who can doubt that without that status being given to them the Australian colonies would not have been able to borrow so much and so cheaply as they have done?

In my opinion these Acts ought to be abolished. In the future we should have no private trustees, but all trust funds should be administered by the Public Trustee and/or by qualified bodies such as banks and insurance offices and investment trust companies. The choosing of the investments should be left to them, and if private trustees are thought to be desirable they should only be appointed in association with such companies as I have mentioned.

I am not at all sure it would not be well to enact that in the future all trust monies should be invested in the funds, at any rate for a term of years. This would speedily bring about such a rise in their values that an early conversion of the huge 5 per cent. War Loan might be expected. Something, at least, should be done without any long delay, for the present developments are a serious matter for testators and legates alike, and for the country.—Yours, etc.,
Lady Place,
Sutton Courtenay,
Berks.

CHAS. ROBERTSON.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

Land and Life. By Viscount Astor and Keith A. H. Murray. (London) Victor Gollancz, Ltd., 14, Henrietta Street. 5s. net.

A proposed policy for agriculture in which the authors, recognising that proposals to subsidise wheat growing are "actually prejudicial to agriculture as a national industry and... based on out-of-date views," offer alternative ways of developing the industry.

The Tragedy of the Pound. By Paul Einzig. (London) Kegan Paul, 68-74, Carter Lane. 7s. 6d. net.

In spite of its title, the thesis of this book is that the departure from the gold standard may ultimately produce beneficial results for Great Britain.

Labour's Future at Stake. By Clifford Allen. (London) George Allen and Unwin, Ltd., 40, Museum Street. 2s. 6d. net.

A discussion, by a former chairman of the I.L.P., of the events which led to the resignation of the Labour Government, with an appeal for reunification of the Labour Party.

Economic History. Supplement to Economic Journal. January, 1932. (London) Macmillan and Co., Ltd., St. Martin's Street. 6s. net.

Includes, among other contributions, an article on the history of Covent Garden market, by C. E. Wallis, and an article by J. T. W. Newbold on "the Beginnings of the World Crisis, 1873-1898."

The Slavonic Review, December, 1931. (London) Eyre and Spottiswoode (Publishers), Ltd., 6, Great New Street. 6s. net.

Contains a variety of articles on Slavonic literature and economics.

Pacific Affairs. January, 1932. (Honolulu) Journal of the Institute of Pacific Relations. 25 cents.

Includes articles on the Manchurian situation and on the future of Chinese finance.

La Pologne, la Russie et L'Ukraine. (Geneva) Bulletin d'Informations Ukrainiennes. 1 franc.

THE COMING BOOM

6th Impression
The first general market reaction (17%) after the first general rise (32%) is terminating. The second general upswing of the new Trade Cycle is now commencing, and is likely to last for several months before the next reaction begins.
"The Course of the Coming Boom" by L. I. B. Angus explains what shares and industries to choose; and what to avoid.
This publication has already proved its remarkable accuracy in practice. No investor can afford to neglect its valuable contents.
Mr. Angus now forecasts the end of the slump in America, as well as in England.
Publishers: St. Clement's Press, Portugal Street, W.C.2.

The Stock Exchange.

COURTAULDS AND THE RAYON OUTLOOK.

THE Stock Exchange now has the answer to its many guesses regarding the final dividend of Courtaulds. Secrets in the house of Courtauld are well kept. The company's preliminary announcement shows that the total dividend for the year 1931 is to be 5 per cent., free of tax, of which 2 per cent. was paid as an interim last July. This dividend compares with 6 per cent., free of tax, for 1930, and is fully up to market expectations, but it has not been fully earned. Profits, in fact, are shown at a figure only half those of 1930, their total of £1,101,587 comparing with £2,274,408. Some £450,000 is transferred from contingencies reserve, and the carry forward is reduced from £195,756 to £147,343. The company, in short, has earned 2.9 per cent., tax free, and paid 5 per cent. A further £1,000,000 has been written off Continental industrial investments, but not out of this year's profits, the total being drawn as to £300,000 from capital reserve and as to £700,000 from general reserve. Such are the figures for the most difficult year in the company's annals. What is their industrial and international context?

In the world rayon industry as a whole the first half of 1931 gave promise of recovery. Demand and production having risen somewhat above the low levels of 1930, prices and profit-margins slightly improved. In the second half of 1931 the trend was reversed for the world as a whole, although domestic consumption in Great Britain expanded. In Italy, there was a decline in domestic consumption and a sharp rise in exports—a contrary experience to that of Great Britain. In Germany, conditions were much the same as in Great Britain—an increase in consumption and a fall in exports being recorded. In France, Holland and Belgium, there was a decline in both domestic consumption and exports, while Japan showed an increase in both. Taking Europe as a whole, output increased, production being curtailed sharply in France and Belgium and slightly in Switzerland, but expanding considerably in Italy and Germany

and slightly in Great Britain and Holland. On the other hand, consumption in Europe fell off (Germany and Great Britain being the exceptions to the rule), although world consumption improved. As regards the United States, consumption expanded considerably, but there was only a small increase in production. The detailed figures for production and consumption, and exports and imports, for which we are indebted to the *Manchester Guardian Commercial*, are shown for all important countries of the world in the following table:—

(Million Kgs.)

	Production.		Consumption.		Exports.		Imports.	
	1930.	1931.	1930.	1931.	1930.	1931.	1930.	1931.
U.S.A.	53.20	56.64	48.30	59.80	0.78	0.14	2.34	0.62
Italy	28.80	34.24	12.40	9.40	14.89	20.55	0.71	1.68
Germany	20.50	24.97	26.50	28.20	7.18	5.56	11.78	11.47
Great Britain	22.60	22.76	19.20	19.50	3.10	1.97	0.54	0.61
Japan	15.80	20.96	13.90	19.25	1.10	1.31	0.35	0.72
France	19.50	17.07	13.80	10.95	8.47	6.72	0.97	1.05
Holland	7.50	9.00	1.40	1.10	8.70	7.18	1.13	1.11
Belgium	5.30	4.50	2.40	3.22	2.88	0.85	0.76	0.76
Switzerland	4.70	4.40	2.30	2.15	4.14	4.47	1.75	2.68
All others	9.65	8.11	39.60	37.40	3.59	2.75	34.75	32.81
	187.55	202.65	179.80	190.10	55.17	53.51	55.17	53.51

These figures of world production and consumption for 1931 probably give too favourable an indication of the present trading situation. The decline in consumption in Europe began only in the second half of the year. The fact that, under the trading stimulus of a depreciated pound, domestic consumption increased in Great Britain in the last part of the year does not alter the fact that the volume of international trade is now falling. Thus the fight for business in the export markets among the big producing countries has been intensified. In fact, we find Japan ranged more intensively against Europe, so that the

small profits which European producers are making in their domestic markets are often offset by losses in the export markets.

We may proceed to review the position of Courtaulds, having regard to their various interests in the world rayon industry. A picture of their world-ramifications is given by the chart on the previous page. The proportions of their profits derived from operations in Great Britain and in America have never been disclosed, but we assume that from a revenue point of view these are the two most important branches of their business. As far as Great Britain is concerned, Courtaulds have no doubt had their full share of the increase in production and consumption. Viscose prices in this country have been firm. Indeed it was thought that, following the suspension of the gold standard, prices would have been raised, but as this would have encouraged competition, Courtaulds were probably wise to make no change. Profit-margins, however, must have been improved, for a general wage reduction was effected in May after an unsuccessful strike on the part of the company's employees at Wolverhampton and Coventry, where the bulk of the production is turned out. It is also believed that several new labour-saving processes have been introduced and the speed of spinning considerably increased. The opening of the second Wolverhampton factory must have resulted in a greatly increased output with a relatively small additional expenditure. We may therefore conclude that as far as Great Britain is concerned, Courtaulds fared not much worse than in 1930.

As regards America, the Viscose Corporation, which is normally responsible for the most important part of Courtauld's profits, should have made a fair contribution to the company's revenues, apart from the premium on the dollar in terms of sterling. The Viscose Corporation is understood to have increased its production and sales last year. It reduced its prices, however, at the beginning of the year by 25 per cent. A reduction in wages of 10 per cent. and other economies may have served to offset the price-cut to some extent, but contemporary conditions in the American rayon industry can hardly be described as very favourable. On the other hand, the Canadian subsidiary of Courtaulds has enjoyed a fair measure of prosperity as a result of the high protective Canadian tariff and the extension in plant which this protection has allowed. With the exception of the Canadian Celanese, the company's subsidiary has no serious competitor in the Canadian market.

The policy adopted as regards the Continental investments of Courtaulds is decidedly conservative. Altogether, in those years, the company has written down these holdings by no less than £3,577,195. The A.K.U., in which Courtaulds hold a 10 to 12 per cent. interest, has for some time yielded nothing by way of revenue, and the shares, a year ago, were no doubt written down severely in the company's books. Through A.K.U., Courtaulds is interested in the whole of the Dutch output produced by Enka and Breda, and in the Glanzstoff and Bemberg groups in Germany. The Glanzstoff-Courtaulds Company is a separate subsidiary jointly controlled by Courtaulds and Glanzstoff. The A.K.U. group has substantial interests in the American Bemberg, American Enka and American Glanzstoff, British Enka, Breda Brisada, British Bemberg, Austrian Glanzstoff, Czechoslovakian Glanzstoff, Italian, French and Japanese Bemberg, the Asahi Company (Japan), as well as interests in many other concerns throughout the world. We may presume that the actual dividend yield likely to be derived from A.K.U. in the future is not so important for Courtaulds as the link which it gives them with the leading German and Dutch producers, who exert a great influence over the whole of the world trade.

Together with A.K.U., Courtaulds hold a controlling interest in the Snia Viscosa Company, which, for the first time since 1926, has paid a dividend this year. The large increase in Italian exports last year is probably the key to this company's recovery. With the advantage of cheap labour and sound finances, for which the A.K.U. and Courtaulds are responsible, Snia Viscosa is an asset of considerable potential value. From the point of view of output, Snia Viscosa and the Viscose Corporation of America are the two largest rayon producers in the world.

There remain the company's two main subsidiaries in France and Germany, which operate the Calais and Cologne factories. In these cases, a large amount of the production is exported. The fact that exports of rayon yarn from Great Britain declined last year does not necessarily mean that Courtaulds are losing trade, seeing that they may decide to handle their export sales from the Calais and Cologne factories, where labour and production costs are cheaper. The German market is important, because it accounts for 60 per cent. of the total European imports. Moreover, the establishment last year of the International Viscose Syndicate in Germany has helped to stabilise the German market. The syndicate began to function in October, and through its Rayon Sales Office regulates the distribution in Germany of all rayon yarn produced by parties to this agreement, which include all the producing countries except France and Belgium.

Once the company had decided not to utilise any part of their profits in writing down further their European investments, the deciding factor in the matter of this month's dividend may have been the amounts declared by the American Viscose Corporation, which will have a sterling value approximately 40 per cent. greater than their value at par of exchange. The following table shows the distribution of Courtaulds' profits during the three years for which complete results are available:—

	(000's omitted.)		
	1928.	1929.	1930.
Total profit	£ 5,172	£ 3,744	£ 2,274
Preference dividend	400	400	400
Earned for ordinary dividend...	4,772	3,344	1,874
Ordinary dividend paid	3,600	2,400	1,440
Earned per cent.*	19.9	13.9	7.8
Paid per cent. (free of tax).....	15	10	6
Reserve	1,000	Nil	Nil
Carry forward.....	1,395	687	196

* On ordinary capital of £24,000,000.

If the amounts written off Continental investments are deducted, the rates earned in 1929 and 1930 were 7 per cent. and 3.9 per cent., against dividends of 10 per cent. and 6 per cent., free of tax, respectively. The amounts carried forward in 1929 and 1930 are shown after allowing for the depreciation of Continental investments, respectively, by £1,651,856 and £925,339.

Though the company's failure to earn its dividend is disappointing, there is, at any rate, no reason to take an unduly gloomy view of the future of the rayon industry as a whole, or of that section of it represented by the British market. The steady improvement in the rayon fibre and the more varied uses of it that are now being made by textile manufacturers should assist the return to prosperity of the big rayon manufacturing companies, as soon as profit margins become more normal.

THE RAILWAYS ON THE ROADS—I.

Road transport competition appears likely to figure prominently among the topics discussed by railway chairmen at this year's meetings. By general admission, it has been responsible for a steady drain of traffic, both passengers and goods, away from the railways in recent years. Road and rail authorities, naturally, assign differing causes to the movement, the one describing rail transport as unenterprising and out-of-date in its methods, and the other denouncing road carriage as an industry "subsidised" at the State's expense. Where the truth lies between these extremes will necessarily appear in due time, for nothing seems more certain than that, while the railways must continue to be an indispensable part of the national transport system, competition by mechanically-propelled vehicles on the public highways has come to stay.

The purpose of the present series of articles is not to examine the rights and wrongs of a vexed question, but to examine the extent to which existing railway and road

companies are financially interconnected. When the four main-line railways, after a hard Parliamentary fight, obtained powers to operate passenger services on the roads, they wisely refrained from expending considerable capital on the acquisition of large numbers of their own buses, to be run in opposition to those of existing concerns in a "market" where competition was already sufficiently keen. Instead, they chose to acquire substantial shareholdings in existing companies with an established position in various districts, and to influence the councils and policy of the latter in the direction of co-operation, rather than competition, with railway services. In many cases it was stipulated that the railways' shareholdings should be equal to those of the largest proprietor, and numerous purchases were arranged, broadly, on this base, the price paid by the railways having some relation to the current market quotation, where available, for the shares.

Particulars of the shares thus acquired in road passenger transport companies are set out, in the annual accounts of the railways, under Section 4 (a) "Subscriptions to Other Undertakings." The returns show both the number and nominal value of the shares held, and the figure at which each holding is carried in the books. Unfortunately, the details are not, in all cases, exhaustive. They cover only amounts, expended in this way, which have been definitely charged as capital expenditure. The London, Midland and Scottish General Balance Sheet, as at December 31st last, shows that, in addition, some £1,783,384 had been invested in shares of, or advances to, "Transport Undertakings" which had not been charged to capital expenditure. As no particulars are available of the composition of this holding, the tables which follow perforce refer only to investments under the first head. The amount which thus escapes dissection in the case of the Great Western is relatively small.

What proportion of the capital of those road companies in which the railways have acquired interests is now in the latter's hands? The answer, as regards the London, Midland and Scottish Railway, is suggested by the table below, which also shows the average price, per share, at which the holdings are carried in the railways' books:—

LONDON, MIDLAND AND SCOTTISH RAILWAY.

Name of Company in which Shares are held.	Railway Holding.	Total Shares issued of kind held.	Proportion held by Railway.	Price per Share at which Holding carried in books.
W. Alexander and Sons.....	175,000 (Pref.)	700,000	25	20/-
Birm. and Midland Motor Omn.	50,000 (Ord.)	200,000	25	52/-

Yorkshire (Woollen District) Electric	73,689	200,000	19	...
	49,738	24,350	24	...
	4,662 (Pref.)	150,000	33	...
	36,779 (Ord.)	220,000	29.8	...
Total	73,333	2,008,656†	6,745,910	...

* One-half held by L.M.S. and G.W.R.

† Exclusive of £16,667 holding in East Midland Motor Services, carried at par.

The average holding is clearly substantial, though only in one case does the railway company's ownership confer an absolute voting majority. In two other cases it represents roughly half the issued capital in its class, while in the four other instances it accounts for a third or more of the total issue. Altogether a holding of rather more than 2,000,000 shares is spread over some 16 companies, of whose total capital, of the classes in question, the railway owns about 30 per cent. Equity shares are held in all the companies, and, in addition, preference shares in four instances. In the majority of cases the shares were acquired at a premium.

The corresponding figures for the Great Western Railway are shown in the next column.

GREAT WESTERN RAILWAY.

Name of Company in which Shares are held.	Railway Holding.	Total Shares issued of kind held.	Proportion held by Railway.	Price per share at which Holding carried in books.
Birmingham and Midland Motor Omnibus.....	160,000	800,000	20	51/-
City of Oxford Motor Services	37,000 (pf.)	74,000	50	20/-
Devon General Omnibus.....	70,875 (ord.)	141,750	50	40/-
Thames Valley Traction.....	21,000	70,000	30	44/-

Western Transport Co.....	1,043,387 (pf.)	2,286,480†	58†	20/-
Western Welsh Omnibus	283,576 (ord.)	175,000	44	23/-
	76,916	290,000	60	19/-
Total	1,888,869	3,987,230	47.4	...

* See Note to previous table.

† Provisional.

The Great Western's holdings, by numbers of shares, are nearly as large as those shown in the previous table for the London Midland and Scottish, but they are spread only over seven concerns, in three of which the railway has an interest of 50 per cent. or more. In another case—that of the Birmingham and Midland Motor Omnibus Company—the London Midland and Scottish and Great Western together hold a 50 per cent. interest. The Great Western itself has an average holding of 47 per cent. in its seven companies, over whose policy it should clearly be capable of exerting a direct interest.

The figures so far adduced suggest that the stake of the railways concerned in road passenger transport is by no means negligible. In a subsequent article, the position as regards the remaining "group" railways will be discussed.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

TICKET.	SETTLING DAYS.	ACCOUNT.
March 1.		March 3.

The bullishness of American markets last week-end provoked no major response in London. Although dealings opened this week with a firm tone, the absence of a sustained upward movement in Wall Street suggested that the market's caution was well founded. Later in the week, however, Paris came in as a buyer of its favourite speculative stocks—a movement neither accentuated nor checked by the fall of the Laval Ministry. On Thursday the unexpected reduction of the Bank of England's discount rate by a full 1 per cent. produced strength throughout the Stock Exchange. The "House," at present, is in no mood to exaggerate the immediate effects of measures like the United States Currency Bill, though the potential importance of the tendencies exemplified by this measure, on a longer view, is adequately recognised. The change in Bank rate, on the other hand, was held as an immediately encouraging sign of the confidence of British authorities in the outlook.

Trading in gilt-edged stocks was of narrow dimensions until Thursday, when the marking up of prices all round brought a more active tone. Indian stocks were weak at the outset, but improved on Thursday. Dominion issues generally, were heavy. The beneficial effect of the announcement that interest warrants for the February New South Wales payments had been posted was offset by anxiety over a statement regarding the necessity of converting Australia's overseas debt to a lower interest basis, alleged to have been publicly made by Mr Lyons. A slight increase in demand for foreign bonds served to strip the market of much of its meagre floating supply. Brazilian issues were particularly firm, the Government's celerity in the repayment of the first instalment of its £6,500,000 credit with Messrs N. M. Rothschild, in the terms of the agreement of last August, provoking favourable comment. German bonds were irregular. An increasingly serious view was taken of the Japanese situation, though peace hopes sufficed to check the recession in prices on Thursday.

Little business was done in Home Rails, apart from a certain switching from equities into junior preference stocks before the announcement of the London and North

(Continued on page 422.)

NOTE.—*Shares with a New York quotation, or with definite American interest, are distinguished by italics.*

In calculating yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date or repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

(Continued from page 419.)

Eastern dividends. The traffic figures revealed no substantial change in the downward tendency of receipts. Argentine rails were irregular, reports of crop damage offsetting the effect of firmer wheat prices. The fall in traffic receipts was attributed to the incidence of the Argentine national holidays. Canadian Pacific advanced, partly on firmer conditions in America, and partly on support from Paris.

Isolated attempts to mark up prices of industrial shares evoked no response from the public, and an uncertain tendency prevailed until the news of the lower Bank rate. International issues owed more to Continental support than to sustained buying from America, and fluctuated in irregular fashion. Among domestic securities, colliery shares improved fractionally on the removal of the French surtax on imports, but the Parliamentary progress of the Tariff Bill had little effect on steel and engineering share quotations. Electrical equipment shares were dull at the beginning of the week, but supply issues held their ground with the exception of Clyde Valley, which were marked down on dividend fears. Brewery quotations were maintained, but tobacco shares, particularly Imperial Tobacco, came on offer in mid-week, after the chairman's conservative utterance at the annual meeting. Textile shares reflected continued distrust of the labour position, but, together with many other market counters, were firmer after Thursday's Bank rate announcement. Newspaper issues improved on reports of the cessation of "gift schemes." Insurance shares were steady, but overseas bank issues had a reactionary tendency.

Business remained at a low ebb in the rubber share market, the tone being dull in the first part of the week in sympathy with the lower trend of the raw material. A moderate expansion of business on Monday, in tea shares, was not maintained, though liquidation appeared to have ceased. Oil shares did not receive consistent support from New York, but the Continent, especially Paris, showed a lively interest.

The tone in the mining market fluctuated considerably, starting firm for the New Account, falling away, and subsequently reviving on Continental support on Wednesday and a recrudescence of cautious domestic optimism on Thursday. "Kaffirs" were firm generally, Central Mining and, later, Gold Fields, advancing on Paris initiative. The rise in copper prices was accompanied by a jump in Rio Tinto, and "Chartered" had a steadier appearance. Tin shares were quiet, and failed to respond to the enhanced price of the metal in mid-week.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The response of the markets, at the end of last week, to the Government's Banking Bill, was immediate, and even spectacular, but the sharp rise in the number of shares traded and in average values was almost entirely a professional movement. The bears were well and truly squeezed, but sentiment had not been fundamentally changed, and on Monday profit-taking was seen on a fair scale. Business continued to ebb and flow, being better again on Tuesday, and easier on Wednesday, after a mid-day spurt. Thursday's reduction of Bank rate in London was welcomed as the lowering of a "crisis signal," and a token of confidence in the prospects of sterling. United States Government stocks were in strong demand on the announcement of the new banking measures, quotations reaching high points for the year. Their buoyancy was due to anticipations of open-market purchases by the Federal Reserve Banks. The setback to sentiment caused by a number of disappointing dividend statements was partially allayed by the maintenance of the American Telephone and Telegraph distribution. Railroad stocks showed increased powers of resistance, helped by a slight increase in car-loading figures, and the upturn in commodity values. Copper quotations were raised, but this step was followed by a fresh withdrawal of foreign demand. General trade reports remained undecided in tone, industrialists showing a disposition to await the tangible results of the Government's financial programme. Steel mill production, at 27 per cent. of capacity, showed a decline of 1 per cent. last week, but the industry looked for a revival of buying by railroads and automobile manufacturers, long regarded as overdue. Car loadings in the week ended February 6th were 574,834, compared with 561,234 in the previous week, 719,053 in the corresponding period of 1931, and an average of 923,503 for the same week in the seven years 1924-30. On Thursday renewed strength was apparent all round, though business was of more moderate dimensions than at the end of last week.

INVESTMENT NOTES.

New York and the Currency Bill.—The discussion of the new Currency Bill (the implications of which are discussed in a leading article on page 393) has arrested the downward tendency of prices on the New York Stock Exchange. Before its introduction, there seemed every likelihood that the market would break below the low levels recorded on January 5th. The first disclosure of the terms of the Bill caused a mild panic among the less hardened bears, and by the end of last week industrial common stocks, according to the Dow Jones indices, had jumped by no less than 20 per cent. in a couple of days. This rise was, of course, much too steep. It was, further, entirely a professional movement, the public showing no inclination to come in on a large scale. On Monday, activity quietened down, the bulls took profits and the bears again showed their heads in the market. Enthusiasm was also damped by the passing of dividends by the Kennecott, Utah and Nevada Copper companies, and by International Nickel. On Tuesday the market again moved upward on the prospect that the restrictive amendments to the new Currency Bill would be modified or even eliminated entirely. Commodity prices showed a similar upward tendency. On Wednesday there was again a reaction, both in the commodity and security markets. The opinion was voiced, in more than one quarter, that professional interests were taking advantage of the talk of inflation by running up the market to high levels so as to unload. The course of the market is shown by the following representative figures of the Dow Jones indices of 20 representative Rail shares and 30 Industrial shares:—

Date, 1932.	20 Rails.	30 Industrials.
January 5	31.36*	71.24†
February 10	33.01	71.80
" 11	35.57	78.80
" 13	39.70	85.82
" 15	38.58	82.20
" 16	40.45	85.75
" 17	38.81	82.22

* Lowest ever recorded. † Lowest since October, 1921.

The fact that General Dawes and Mr Eugene Meyer, of the Federal Reserve Bank of New York, are managing the new Reconstruction Finance Corporation, has given confidence that some good will come of the new measures of financial relief, but the irregularity of the market indicates that no party, either bull or bear, is so far willing to take a very decided line.

Building Society Finance.—The general public, rightly or wrongly, has specially distinguished two personalities in the phenomenal development of the Building Society movement in the last decade. Distinctions are invidious in a movement which, on almost every important question, has been strong in proportion to its unity, but

PARIS.

The trend of quotations on the Paris Bourse was more affected by anticipations of a domestic political crisis than by the actual fall of the Laval Government. Shares were mostly irregular in the early sessions, though Banque de France were strong and Turkish Unified in fair demand on rumours of an impending settlement of the Ottoman debt question. Offers predominated in mid-week, and there was some hasty profit-taking, while Rentes sagged perceptibly. Among the more speculative shares, however, the rise in copper encouraged a demand for Rio Tinto. Central Mining were a good feature among South African counters, and oil shares found favour. On Thursday a fairly strong tone prevailed in most sections, with a marked improvement in Rentes.

	Feb. 11, 1932.	Feb. 15, 1932.	Feb. 18, 1932.		Feb. 11, 1932.	Feb. 15, 1932.	Feb. 18, 1932.

AMSTERDAM.

Quiet and steady conditions prevailed at the opening of the Amsterdam Bourse, quotations being only slightly affected by the strong tone of New York. Selling pressure developed on Tuesday, Royal Dutch, Unilever and Philips Lamps all declining, though the former were supported from Paris. A firmer undertone was noticeable in mid-week, and advances were recorded in most sections. Rubber shares continued dull, but sugar and tobacco shares were firmer.

OTHER CENTRES.

Fairly satisfactory conditions prevailed in most of the minor European centres, a perceptible increase of business being recorded in some cases. Brussels was more active, oil and copper shares being in strong demand, while in Milan, Government issues were predominant. Stockholm developed a quiet tendency in mid-week, but the Kreuger and Toll group were firmer. Unofficial quotations in Berlin were firmer. Dye Trust was done at 101.50 (against 91.00 a week ago), Siemens at 139.00 (against 123.00), General Electric at 34.00 (against 26.50), and Reichsbank at 109.75 (against 100.50). It is understood that a date will shortly be announced for the reopening of the German Stock Exchange, under special conditions. No official quotations will be permitted, and members will be restrained from carrying out executions in default.

so far as it has been possible to distinguish a division of emphasis rather than of opinion, popular opinion has associated "leadership" with the names of Sir Enoch Hill, of the Halifax, and Sir Harold Bellman, of the Abbey Road, the largest and second largest societies in the country respectively. Early last year, Sir Harold Bellman made it clear that he foresaw a period, not exactly of difficulty, but of delicacy. Steps had already been taken to restrict large individual share holdings in the Abbey Road, and, generally, Sir Harold showed himself to have correctly diagnosed the position—that the pace of the past few years had been too hot to last, and if the economic depression persisted, some slackening must be prepared for in advance. Neither Sir Harold nor anyone else, of course, foresaw the autumn financial crisis and Britain's departure from gold, but the accounts of the Abbey Road Society, published this week, show that the preparations made were sufficient to meet the emergency. The net rise of about 9 per cent. in the funds entrusted to the company—now including £28,894,946 in shares and £4,346,948 in deposits, is a resultant of the receipt of £9.1 millions and the withdrawal of £5.6 millions of shares and deposits. It needs little inside knowledge to appreciate that the greater part of the net increase in funds was achieved before the country's departure from gold. The society, however, has evidently found the liquidity of its position ample to meet all requirements. It reduced its new mortgage advances in 1931 to £8.0 millions, against £12.3 millions in 1930. It has reduced its gilt-edged securities, loans to local authorities, cash, interest accrued, etc., by approximately £900,000. Further, the rapid increase in business in earlier years automatically ensures an increase, year by year, in receipts from the repayment of advances and in interest from borrowers, the total under these headings being £5.3 millions in 1931 against £3.8 millions in 1930. The danger of semi-panic withdrawals due to currency fears is now, it may be hoped, at an end, but the experience of the National Savings Committee, as regards encashment of Savings Certificates, suggests that the possibility of withdrawals somewhat above the normal, on account of individual economic stress, may still remain. The accounts show that the Abbey Road can meet all probable demands under this head without inconvenience, its holdings of trustee securities, cash, etc., alone being over £2 millions. Against another danger which might militate against the progress of building societies—a decline in property values—provision has already been made, by way of a general agreement to secure eminently sound conditions for the making of advances on mortgage, in the definition of which it is well known that the Abbey Road Society played a helpful part. Altogether, while measures of preparation for changed circumstances in the movement generally cannot be said to have been taken out of due time, they have been shown, up to the present, to have been well-conceived and adequate. The removal by the Abbey Road of its temporary limit of £1,000, placed on new share accounts in 1930, is also in harmony with prevailing conditions.

Royal Mail Prospects.—The details of the Royal Mail scheme, upon which the voting trustees of the group and their financial advisers have been working for many months, should shortly be in the hands of the creditors and security holders concerned. No one will begrudge the time spent upon this preparation, for the task has presented, possibly, the greatest difficulty of any industrial reconstruction of modern times—the Armstrong-Whitworth reorganisation not excepted. Its particulars it is impossible to anticipate, but a reasonable estimate of its main features can probably be made on the basis of first principles and the various statements of those concerned in connection with recent meetings and applications to the Court. In the first place, it is difficult to see how any final assessment of the potential earning power of the assets of a world-wide organisation, hitherto largely formless and incoherent, can be made at a time of acute depression in the shipping industry. Against this may be set the fact that, even under present conditions, much

of the group's tonnage is known to be at least paying its way, so far as direct expenses are concerned. The immediate problems are financial, and it may be presumed that the chief care of those concerned will be to secure the consent of a host of creditors to a waiting policy for a given period. During this time the real value of the assets—which must obviously be based on their earning power—can be adequately tested, presuming the possibility of more normal world economic conditions on the one hand, and the certainty of efficient administrative organisation on the other. If the latter condition, which is indispensable, is provided for by the scheme, creditors and security holders will in any case have the prospect of a considerably greater eventual return than they could possibly hope for by independent action at a time when the cash value of the group's assets is at its nadir. They have every right, however, to insist that their relative position shall not be changed during the period of the interim settlement. On the administrative side, there is clearly room for a great deal of immediate reorganisation. Where several companies of the group have been accustomed to run independent services, as on the South American routes, there is everything to be said for control by a single operating concern, on a "geographical" basis. If such concerns can start free of serious debt burdens, it may be worth the while of creditors and debenture holders to give them a fair run. Evidently, in some other instances, the present organisation of the group may not lend itself so readily to immediate administrative changes, but large opportunities will, doubtless, be found for far-reaching economies in expenditure. The national and international implications of the Royal Mail reconstruction are so important that any scheme which commends itself as being essentially rational should obtain sympathetic consideration from all concerned, directly or indirectly.

African and Eastern.—The issue of £1,200,000 of income debenture stock by the African and Eastern Trade Corporation has not, unfortunately, secured a favourable response. As subscriptions amounted to less than 6 per cent. of the total and it has not been possible to place the remainder of the issue in other hands, the money has been returned to subscribers, and the Corporation's voting power in United Africa will fall, in accordance with the original proposals, from 45 per cent. to 20 per cent. Though this result is regrettable, it is fortunate that the Unilever group (with the help of £500,000 to be subscribed by African and Eastern) is in a position to put in sufficient new money to prevent the operations of United Africa from being seriously prejudiced. The £3,500,000 which will be secured should be ample to see the company through its present troubles. Though the African and Eastern Corporation's share in the income from future operations will be greatly reduced, its interests are protected to the extent, first, that all trading transactions between the Lever group and United Africa are to be carried out at prices not below market values, and, secondly, that in case of disagreement as to the distribution of surplus profits of United Africa, a final verdict may be given by the senior partner of a named firm of chartered accountants, or, failing him, by the President of the Institute of Chartered Accountants. On paper, the latter is an important provision, since the income available for African and Eastern shareholders will depend mainly on dividends declared by United Africa, whereas the Unilever group are interested in United Africa rather as an assured source of raw materials than as a payer of work smoothly in practice is open to question. It is by no means certain that the handing over to any outside authority of so important a directorial duty as the making of dividend decisions is a desirable precedent. In any case, the method is open to change at any time, by an alteration of the United Africa Company's presumed new articles, in respect of which the Unilever interests will possess the necessary three-fourths voting majority. The African and Eastern, however, is no longer a free agent in the matter, and must needs accept the best terms it can

secure. Three of its directors are resigning on the ground that they are now supernumerary. In due course a scheme for the reduction of the Corporation's capital will be formulated, and although the "A" preference shares appear to be secure as regards capital and income, a drastic writing down of the "B" preference and the ordinary shares has been already discounted by market prices of 8s. 9d. and 1s. respectively.

The Gas Industry.—An encouraging review of the gas industry was given by the chairmen of the Gas Light and Coke Company and of the South Suburban Gas Company at the annual meetings last week. Sir David Milne-Watson, at the meeting of the Gas Light and Coke, stated that there had been an increase in the company's sales of gas of more than 1½ per cent. last year, in spite of the trade depression, while there was an increase in the company's consumers of 27,000, the total number now approaching 1,400,000. Dr. Carpenter, at the meeting of the South Suburban Gas Company, disclosed the fact that the increase in consumption in his company's system had been due to the "ordinary" consumer, whose use of gas had increased by 8 per cent. Sir David Milne-Watson endeavoured to show that gas as a means of heating and cooking was becoming more popular by quoting statistics from the United States of America, where the sale of gas during the last ten years had gone up by over 100 per cent. This, however, has been due to increasing supplies of cheap natural gas—which Sir David did not deny—and must be regarded as peculiar to a country which is blessed with such natural resources. It is interesting to hear that the Gas Light and Coke Company is now supplying a new coke smokeless fuel called "Cleanglow," its low-temperature plant at Richmond having been closed down as a commercial failure. Sir David Milne-Watson referred again to the antiquated legislation under which the gas industry was required to do its business. A definite duty, he said, devolved on Parliament to pass legislation for industries which it had taken under its wing. Many of the "Minutes" of Parliament affecting the gas industry went back to 1847 and 1871, and were thoroughly out of keeping with modern conditions.

Great Western Railway.—The 1931 accounts show a decline in gross receipts from £34,346,867 to £31,139,630, against which savings of £1,178,493 were effected in railway expenditure, which amounted to £26,052,984. Receipts from other sources (including the company's docks) fell from £1,553,117 to £1,303,482, and miscellaneous charges rose slightly. Net revenue was £1,304,750 lower at £5,682,396:—

	Year to December 31,		
	1929.	1930.	1931.
	£	£	£
Gross receipts	36,184,053	34,346,867	31,139,630
Expenditure	29,208,791	28,226,477	26,052,984
Other receipts	1,884,981	1,553,117	1,303,482

Carried forward	186,227	65,396	62,473

* This fund was subsequently augmented by the release of reserves no longer required, and now stands at £2,652,884, against £2,610,339 a year earlier. The general effect is thus equivalent to a partial dividend payment from internal reserves. Expenditure on maintenance of way and works amounted to £3,215,240, against £3,646,564 in 1930, and expenditure on maintenance of rolling stock to £3,603,448, against £3,975,906. Passengers carried totalled

114,314,889, compared with 124,735,287, and goods traffic 65,374,155 tons, against 75,139,498 tons. Investments in Government securities now stand in the balance sheet at £9,984,951, while subscriptions to other undertakings appear under capital account to a total of £4,167,589, of which £1,715,609 was expended during the year. The ordinary stock yields £7 12s. per cent. at its present price of 41.

Southern Railway.—The accounts for 1931 show that gross traffic receipts declined by £1,516,549, or 5.8 per cent., to £24,373,592. Expenditure fell from £20,701,720 to £19,761,665, a decline of 4.5 per cent. Miscellaneous receipts increased from £1,148,621 to £1,207,059, while other charges totalled £211,112, compared with £203,115. Net revenue thus fell from £6,133,927 to £5,607,874:—

MINING YEAR BOOK 1932

By WALTER E. SKINNER.

Price Twenty Shillings net.

Post free (Inland), 20s. 9d.; Post free (Abroad), 21s. 6d.
900 pages. In Demy 8vo, bound in RED Cloth.

The International Standard Reference Work on the World's Mines.

COMPLETE AND UP-TO-DATE PARTICULARS concerning 1,286 Mining Companies operating in all parts of the world. Gold, Diamond, Copper, Tin, Platinum, Silver, Iron, and other Mines, Collieries, Exploration and Mining Investment Companies, arranged in alphabetical order.

South African and Foreign Mining Companies are fully dealt with.

PARTICULARS given of each Company include the Directors and other officials; date of establishment; seat of operations; description of the property, with the purchase consideration; plant erected or in course of erection; present working results; ore reserves, details of capital; dividends paid; and the financial position as disclosed by the latest accounts. Highest and lowest prices of the shares for the last three years; also latest prices.

DIRECTORS (3,800) and Mining and Consulting ENGINEERS and MINE MANAGERS (800), and their addresses, and names of the Companies with which they are connected.

SUPPLEMENTARY INDEX of private, dormant, or Companies which have ceased to be of public or market interest. One of the most useful and important features of the book. It is the only List of its kind published.

STATISTICAL TABLES are given at the commencement of the volume, showing yearly outputs from the principal gold mining companies, and monthly and annual production of the World's principal Mining Fields, and the highest and lowest prices of base metals for the past eight years.

DICTIONARY OF MINING TERMS.—An up-to-date glossary covering 420 Mining terms, by the use of which Mining developments can easily be followed, and the difficulty of understanding technical phraseology quickly mastered.

To be obtained from all Booksellers, or direct from the Publishers,

216,523,392 to 212,587,026, and the goods tonnage from 17,846,631 tons to 17,339,426 tons. Investments in Government securities now total £5,138,926 while investments in road transport undertakings, not charged as capital expenditure, were shown in the balance sheet at £1,384,802, against £1,339,113. At 8½ the preferred ordinary stock yields £11 15s. per cent. on the basis of a 4 per cent. dividend.

Underground Railway Results.—The accounts of the Underground Electric Railway Company for 1931 show that income from investments amounted to £1,162,804, compared with £1,235,829 in 1930 and £1,159,028 in 1929. Miscellaneous income, at £51,310, includes the item "general interest" which stands at £34,952. Expenditure is down from £40,560 to £20,417, leaving a net revenue of £1,193,697, against £1,219,061 last year. After deduction of fixed charges, there remains sufficient to enable the payment of a 7 per cent. dividend on the ordinary capital, against a distribution of 8 per cent. for 1930:—

Year to December 31.	1929.	1930.	1931.

* Including £86,242 transferred from special reserve for equalisation of interest.

The five companies which contribute to the common fund show aggregate gross traffic receipts of £15,487,079, compared with £15,778,410 in 1930. Of the total decline of £291,331, the London General Omnibus Company, which last year was responsible for an increase of £853,717 in gross receipts, this year accounts for no less than £260,102, while the London Electric, and City and South London also record declines. The amount of £1,010,292 paid in dividends on ordinary stocks and shares compares with £1,186,018 in 1930, and represents an average rate of 5.10 per cent. compared with 5.74 per cent. in 1930. The carry-forward is slightly greater at £520,781.

charged to expenditure and £645,606 carried to reserve for contingencies and renewals. The accumulated reserves of the common fund companies now amount to £6,606,122, while in addition the trustees of the Lots Road Power House Depreciation Fund hold £273,899. The common fund companies collectively show floating assets of £11,886,353, and current liabilities of £4,883,283, giving net floating assets of £4,883,283. During the year further contracts were placed covering the whole of the construction works on the Southgate extension. The market found the results quite up to expectation, and its chief concern remains with the future of the group under the London Traffic Scheme.

Imperial Tobacco Outlook.—Although Lord Dulverton preferred to repeat his note of caution at the annual meeting of the Imperial Tobacco Company last Tuesday, there was little sign of dismay among the shareholders who, in a year of superlatively bad trade, had received an ordinary dividend of 22½ per cent., tax free. The chairman referred to the fact that investments in subsidiary and associated companies, while down by £81,889 at £10,375,189, had an actual market value largely in excess of the book value. With regard to the purchase of leaf, the 1931 crop in the United States had been sold at prices distinctly lower than in previous years, and as the company's purchases of dollars for the season's requirements had been practically completed before the exchange went against this country, the figure of approximate cost in the balance sheet was much less than it might have been. The emergency Budget of last September had affected the company in two ways—first, by placing a heavy load of extra duty on the industry, and secondly by setting up a wave of personal economy, which tended inevitably to reduce the consumption of tobacco. The present rate of duty on unmanufactured tobacco was 9s. 6d. per pound, and more than 60 per cent. of the net price they obtained for their manufactures was represented by duty. When the last increase of 8d. per lb. was imposed, they had been obliged to increase the price of pipe tobaccos, but in the matter of cigarettes, the prices of which had come to be regarded almost as "standard," it was felt that the interests of the company would be better served if the volume of trade were kept as high as possible, even on a smaller margin of profit. Since September the figures of clearances from bond indicated a declining tendency in spending power, which must needs be kept in mind in any estimate of the outlook. In view, further, of the reduction in revenue from the British-American Tobacco Company, Lord Dulverton more than hinted at the possibility of a further "cut" in the Imperial Company's distribution this year.

Agricultural and General Engineers.—In an "Investment Note" in our issue of January 2nd last we referred to an examination which was to be made into the financial position of Agricultural and General Engineers by Sir Gilbert Garnsey in co-operation with Lord Plender. Before this examination could be completed the company has gone into liquidation and Sir Gilbert Garnsey has been appointed receiver and manager. The belated report been issued, shows a loss of 235,226 and a debit balance on profit and loss account of £591,334. The 1931, have been very unsatisfactory and that the company has now come to the end of its financial resources. This is not surprising, seeing that, apart from the trade depression, the company (a holding concern) has never been able to prevent uneconomic competition between the trading companies in which it is interested. The scheme put forward by the chairman in April last year and the reduction in the number of directors from 36 to nine, not to mention the writing down of capital, became the occasion of a somewhat bitter dispute among the directors, which was only relieved by the decision—which came, as it happens, too late—to make an independent

investigation into the company's position. Resignations by directors prior to the appointment of a receiver indicated that unanimity on the board could not be attained. The former chairman resigned on February 10th, two other directors on February 12th, and the vice-chairman and another on February 13th. Practically, only the permanent directors remained. The balance sheet showed shares in and advances to subsidiary companies of £2,445,743 (out of a balance sheet total of £3,158,977), which is considerably in excess of real values. Loans from bankers amounted to £578,551; the cash holdings were negligible. It is deplorable that a company which could undoubtedly have been put on its commercial feet if "rationalisation" had been enforced upon its subsidiaries, should have been allowed to fail through the recalcitrance of some of its directors. The subsidiaries will, of course, continue to function independently.

Selfridge Position.—The accounts of Selfridge and Company for the year to January 31st last suggest that turnover has been well maintained, the decline in profits being no more than 7 per cent. Of recent years, however, the company's liabilities in respect of subsidiary and associated concerns have been onerous. The guarantee to Selfridge Provincial Stores expired in 1930, and there is no repetition, this year, of the voluntary "contribution" made a year ago. The guarantee of a 25 per cent. dividend on the ordinary shares of William Whiteley, however, remains in force until 1942, and the amounts paid out have tended significantly to increase. The last four Selfridge accounts (covering the years 1928-29 to 1931-32) show the following payments to Whiteley's under this guarantee: £46,105, £31,002, £56,508 and £77,929—a total of £211,544, which is equal to 28 per cent. on the ordinary capital of Selfridge and Company. To this factor is due, chiefly, the reduction of the dividend on Selfridge ordinary shares (held by the Gordon Selfridge Trust) from 10 per cent. to 8 per cent., against 20 per cent. paid for each of the four years to 1929-30. Even this reduced rate involved a draft of £35,559 on the carry-forward. Results for the last three years are shown:—

	Years to January 31.		
	1930.	1931.	1932.
	£	£	£

* Paid under Whiteley guarantee.

† Including £56,508 under Whiteley guarantee, and £10,000 contribution to Selfridge Provincial Stores.

The company is preparing for increased future business, new building operations having been recently started, which, on completion in approximately eight years' time, will make the company's store the largest in the world. The cost of the initial extension, part of which may be ready for business by the autumn of this year, is to be between £300,000 and £400,000, and the total cost is expected to run into "some millions of pounds." All financial arrangements are described as having been made with a subsidiary company, and it is apparently the intention of the head of the business to make no public issue of capital. At present the "free" liquid resources of the company are of moderate proportions, its reserves being mainly invested in its own business. Of the total cash item of £115,714, some £26,700 has been deposited in connection with the new building. Though the Whiteley connection, run by Selfridge methods of proved efficiency, may ultimately be profitable, it is regrettable that it should involve Selfridge and Company in a heavy liability at a

time like the present. The 6 per cent. preference shares of Selfridge are quoted at 16s. 3d. to yield £7 7s. 8d. per cent., free of tax, and the 10 per cent. preferred ordinary at 17s. 6d. to yield £12 6s. per cent.
